The peaceful relations with Venice and the western sea powers continued; in 1624 the capitulations had been renewed, but as the Porte was without authority over the Barbary states of Algiers and Tunis, England, Holland and France concluded separate treaties with their rulers in order to avert as much as possible the damage done to their trade by the ships of the corsairs. In 1636 a more serious battle took place in the Adriatic between the Venetian fleet and Barbary corsairs; at first Murad ordered the massacre of all Venetians in his Empire, but in 1639 peace was restored.

In Constantinople the ministers of Holland (Haga) and England (Roe) intervened successfully in the
troubles between the Porte and the Greek Patriarchate.

Murad IV died on February 9, 1640 and was buried in the türbe of the mosque of his father Ahmed; he was the last warlike sultan of the Empire; by his energy he restored for some time its military authority, but his reforms did not last after him. Still a separate hünkâmâne bears Murad IV's name. He was a man of considerable physical strength and of high personal erudition and he liked the company of poets. His attachment to the poet Tili [q. v.] is famous in literary tradition. The poet Nefî [q. v.] on the other hand was executed by his order. On verses written by Murad, cf. Gibb, H.O.P., iii. 248 sqq. He had four sons, all of whom died young; at his death there was only his brother İbrahim to take the succession. His brothers Bayezid and Sulaiman were killed by his order during the Erian campaign, and later also his brother Kasim. In course of time Murad had become ever more ferocious, and he is said to have sworn in 1639 that he would subdue all his Christian neighbours (Jorga, iv. 1).

Bibliography: The chief Turkish sources are Na'imi's, Peçevi and Kara Celebi Zede's Rûmât al-Abîr. Further the continuation of Aştıy's biographical work by Uğâlî-zade (G. O., W. p. 255); Ewiya Celebi's Siyâhat-name is also particularly rich in information about the reign of Murad IV. Of Western contemporary sources must be mentioned the Venetian Relazioni and the correspondence of Sir Thomas Roe and Cornelius Haga (Rijks geschiedenh. Publikat. u. a.); Bronnen tot de Geschiedenis van den Levantijnse handel, 1590-1600, ii. a. Gravenhage 1910). Later treatment of this period in the general works of von Hammer (v.), Zinkeisen (iv.) and Jorga (iii.).

(J. H. KRAMERS)

MURAD V, Ottoman Sultan from May 31, till Sept. 7, 1876. He was born on Sept. 21, 1840 as son of Sultan 'Abd al-Medjid and was deprived of all influence on public affairs during the reign of his elder brother 'Abd al-Aziz, who had the plan of altering the succession in favour of his own descendants, so as to deprive Murad of his rights. Murad was called to the throne by the coup d'état of the recently established cabinet, of which Midhat Pasha [q. v.], Muhammad Rughdi and Hüsnü 'Awni were the leading members. By deposing Sultan 'Abd al-Aziz they hoped to eliminate the influence of reactionary elements who were opposed to their schemes of reform and they expected to find an ally in Murad. In the night from 30th to 31st May 1876 Murad was induced with some difficulty to proceed to the Ser'akerate in Constantinople, where he received the homage of the troops and the high dignitaries. He confirmed the cabinet in office. Very soon afterwards took place the suicide of the deposed sultan (June 5) and the murder of the ministers Hüsnü 'Awni and Rughdi Pasha during a cabinet meeting in Midhat's house (June 15). These events seem to have been fatal to the mental equilibrium of the new sultan, who, already in the night of his accession, had shown signs of abnormal nervous excitement. He was unable to appear before his people at the selâmet, nor could the sword-girding ceremony (bâb-i aley) be applied to him. Midhat Pasha and his friends, although fearing that a new change of ruler might endanger their plans, had to arrange another deposition; they had the sultan's health examined by a number of physicians and, on their report, obtained a fatwa from the Shaikh al-Islam Ḥasan Khair Allâh Efendi, authorizing Murad's deposition (September 1). His younger brother 'Abd al-Ḥamid II became sultan and Murad went to live in the Çiragan Palace, where he died on August 29, 1904. His confinement during 'Abd al-Ḥamid's reign continued to excite speculation as a yet unsolved mystery and was occasionally represented as one of the crimes of the Hamidian regime.

(J. H. KRAMERS)

MURAD PASBA, Turkish grand vizier under Ahmîd I, was a Croatian by birth and was born about 1520. He served the empire as military commander and later as wali in different provinces (Egypt, Yaman, Anatolia) and was made prisoner by the Persians in the battle of Tahriz (Sept. 1585), where Çiğâle's army was defeated. In 1601 he was paşa of Budin and in 1603 commander-in-chief on the Hungarian front. In these posts he repeatedly conducted for the Porte peace negotiations with Austria. He was the chief negotiator of the peace of Zsitvatorok (Nov. 11, 1606). A month afterwards (Dec. 11, 1606), after the execution of Derwish Pasha in Constantinople, he was appointed grand vizier, being then already about 80 years of age.

As grand vizier Murad Pasha became particularly famous by his relentless persecution and repression of the many rebellions in the Asiatic provinces. In 1607 he defeated the Kurd Dîbûnlî [q. v.] in North Syria (battle of Urmâî, Oct. 1607). After having passed the winter in Aleppo, he succeeded in crushing the forces of the arch-rebel Kalender Oghlu at the pass of Gökçam in Cappadocia (July 1908), where he decided the battle by his personal courage. Then he pursued from Siwâs the rebel Maimûn and defeated him near Bairut. His habit of throwing the captured rebels into pits and dag for that purpose brought him the name of Koyudîj Murad Pasha. Notwithstanding the sultan's order — provoked by his enemies in the capital — that he should proceed immediately against Persia, he returned in December to Constantinople, where he was received with great honours. Poets celebrated his achievements against the rebels. In 1609 Murad Pasha went to Scutari for the Persian campaign, but he went no further that year, because he wished first to deal with two remaining dangerous rebels: Muselliyan in Fâlî and Yüsuf Pasha in Aïdân. By false propositions of reconciliation these two were at last induced to surrender and afterwards killed. Murad Pasha had to make use more than once of his personal influence with the sultan to restrain the latter's impatience before his plans had succeeded.
On the other hand, the sultan had to protect several dignitaries against the personal hatred of the terrible old man. In 1610 the grand vizier at last marched to Persia and destroyed Tabriz; then he went to Erevan, from where he began long and extended negotiations with Shah 'Abbas. Before the following year's campaign had begun, he died (August 5, 1611). He was buried in a tsakeh near the medresah he had founded in the quarter Wemehjiller in Constantinople.

By his successes in restoring the internal order of the empire Murad Pasha is considered as one of the most able grand viziers; the historians give ample proofs of his sound judgment of persons and situations. To his initiative is due a compilation of the šāmāni regulating the timar administration (G. O. W., p. 141).

MURAD SÜ. [See Al-Fārābī.]

MURADĀBĀD. [See Muradābād.]

MURĀDI, tağhālat of Murād III [q. v.] and Murād IV [q. v.].

MURCIA (Ar. Muḥsira), a town in the S. E. of Spain, 140 feet above sea level in the centre of the famous huerta de Murcia ("gardens of Murcia") watered by the river Segura (Ar. Wādī Shallūra [q. v.] or Wādī 'l-ayyān, "the white river"). The area of Murcia has a large population: over 150,000, although the town in the strict sense has barely 30,000. Murcia is the capital of the province of the same name and the see of a bishop; it has also a university. Its port, 40 miles to the south on the Mediterranean coast, is Cartagena, the Karfajjum or karfājanat al-Khulafā' of the Arabs.

The situation of Murcia in the centre of very fertile gardens, forming an island of vegetation in a barren country poorly endowed by nature, had been noticed already by the Arab geographers who give more or less long accounts of it. Abu 'l-Fidā, for example, says that it was like Seville for the number of its groves and parks (mānṭārāt), among which he mentions the famous al-Rushākā.

Murcia in the Umayyad period was the capital of a province or kūra which bore the name of Todmir [q. v., iv. 805]. This name which is connected with the name of Theodemir, a Visigothic chief of the region at the time of the Muslim conquest, was also applied to the town of Murcia itself, from the time when it supplanted Ornhuela [q. v.] as the chief town of the region. Indeed almost all the Arab authors who speak of Murcia agree in saying that it was a comparatively recent foundation; it was built by order of the Umayyad emir 'Abd al-Raḥmān II al-Hakam about the year 210 (825), according to the al-Rawd al-mašir in 216 by the governor Džabhir b. Malik b. Labid.

The land of Todmir and with it of course Murcia was much involved in the civil wars provoked by the rivalry of the Yamanis and the Maḏāris in Spain in the period of the independent emirs of Córdova. In the reign of 'Abd Allāh (725-300 = 888-912), a rebel, the renegade Dāsam b. Ḥabīl, rose there with the connivance of the famous agitator Ibn Ḥas-fān [cf. Umayyade I]. He ruled independently all the province of Todmir until the emir of Cordova sent to suppress him in 283 (896) an army led by his uncle 'Abd Allāh b. 'Abd al-Raḥmān b. al-Hakam and the general Ahmad b. Muhammad Ibn Ahi 'Abda. Daisam was defeated between Aledo and Lorca and the latter town besieged. The country was only definitely pacified and restored to the central power in Cordova in the reign of the caliph 'Abd al-Raḥmān III and his successor al-Hakam II.

During the events which ended in the break up of Umayyad Spain, Murcia became, like the majority of the great towns of the Peninsula, the capital of a little independent state. At first in the hands of the "Slavs" [cf. Ṣubaylī]. Khairun and Zuhair, along with Almeria and Jaén, the principality of Murcia was then for some time attached to the kingdom of Valencia, in the reign of 'Abd al-Aziz al-Mansūr Ibn Abī 'Amir and his son 'Abd al-Malik Ibn al-Mujaffar. The governor who then ruled Murcia was Abū Bakr Ahmad b. Iḥāṣa Ibn Tāhir; when he died in 455 (1063) after amassing a considerable fortune, he was succeeded by his son Abī 'Abd al-Raḥmān Muḥammad who soon proclaimed himself independent and repudiated the authority of the Valencian dynasty.

The principality of Ibn Tāhir soon aroused the covetousness of the minister of al-Muqaddib [q. v.] Ibn 'Abbad, king of Seville, and an expedition was sent against Murcia with the help of an independent lord of the district, Ibn Rakiş. Ibn Tāhir was taken prisoner and shut up in Montagut, but escaping, he reached Valencia where after acting as adviser to al-Kādir Ibn Dhi 'l-Num [q. v.] and having almost succeeded him, he finally died in 508 (1112). The conquest of the kingdom of Murcia by Ibn Aḥmār in the name of the 'Aḥbāsids took place in 471 (1075), but it was only nominal and it was Ibn Rakiş who exercised the real power instead of Ibn Tāhir.

The kingdom of Murcia was one of the first districts of the Peninsula to be conquered by the Almoravids. Murcia was taken for Yūsuf b. Tābi'fīn [q. v.] in Shawwal 484 (Nov.-Dec. 1091) by the Lantunian general Ibn 'Aṣja who next took Denia and Játiva. Ibn 'Aṣja remained governor of Murcia; he was replaced later by Abū Bakr b. Ibrāhim Ibn Tālibwīt, then by a brother of the sultan 'Ali b. Yūsuf, Abī Ishaq Ibn Ibrāhim.

A general rising against the Almoravids took place in Spain in the beginning of the 12th century and gave rise to the formation of a new series of kingdoms of taifas. Murcia therefore between 1145 and 1147 was in the hands of two rival leaders, 'Abd Allāh b. Iṣāq and 'Abd Allāh b. Farajī; until the Valencian ruler Muḥammad b. Ahmad b. Sa'id Ibn Mardānīn seized it and took up his residence there. This individual, who was of Spanish origin (cf. above, ii., p. 403), soon became the powerful ruler of all S. E. Spain, between Valencia and Almeria, and instituted a series of fruitful alliances with the Christian rulers of Catalonia, Aragon and Castile. He was for long able to resist the attacks of the first Almohads 'Abd al-Mu'min [q. v.] and Yūsuf [q. v.], and it was only after his death in 567 (1172) during the siege of his capital Murcia that his kingdom passed finally to the Mu'āwīd sovereigns.

From the fall of the Almohad empire in Spain until its conquest by the Christian monarchs Murcia had
a very troubled existence. It was in turn the residence (from the beginning of the 12th century) of princes of the family of the Banu Hidr of Saragossa: Muhammad b. Yusuf al-Mutawakkil, the latter's uncle, Muhammad, Abi Bakr Muhammad al-Wathik, then it passed to the Nasrids of Granada to 'Abd Allah b. Ali ibn Ashkullu. For details of the obscure history of this period see the monograph by Gaspar Remiro quoted below. According to Ibn al-Abhar (cf. M. Bencheneb, Notes chronologiques sur la conquête de l'Espagne, in Milanges René Basset, Paris 1923, ii, 73), Murcia was surrendered to the Christians by Abbad b. Muhammad b. 'Abd Allah son of the governor, on Thursday 10th Shawwal 56 (April 2, 1243). But if we may believe the Christian chronicles it was in February 1266 that Don Jaime of Aragon took definite possession of Murcia.

MURDÁDHI (v.), the fifth month of the Persian solar year running from July 10 to Aug. 18 (Murdádhi wáli). Murdádhi is also the name of the seventh day of each month (Murdádhi rúd); it is the last of the series of days which are called after the Ameša Spenta. Murdádhi (Pehlevi amurdádhi "immortality") forms with Khur dédhi [q.v.] (Pehlevi khránddhi perfection) an indivisible pair, the days which bear these names come together. They denote a pair of archangels, of whom Murdádhi has charge of the gifts of the earth on which the life of man depends. The seventh day of the month Murdádhi on which the name of the day and of the month are the same is called Murdádhi-khán.

Bibliography: al-Biruni, Athár, ed. Sauchau, p. 42, 43, 70, 221; Geiger-Kuhn, Gr. j. Ph., ii, 638, 675 sqq. (M. Pleisner)

AL-MURDJÁA, name of one of the early sects of Islam, the extreme opponents of the Khatirjites [q.v.]. The latter thought that a Muslim by committing a mortal sin becomes a Khatirjite. The Murdja, on the other hand, were of opinion that a Muslim does not lose his faith through sin. This doctrine led them to a far-reaching quietism in politics: according to their doctrine, the inadum who was guilty of mortal sins did not cease to be a Muslim and must be obeyed. The caliph performed behind him was valid. Occidental and Oriental explanations of the name show considerable divergences (cf. e.g. Sale, Preliminary Discourse, p. 229 sqq.; Goldsätz, "Richtungen der islam. Ketzerglaubigen," p. 179; v. Kremser, Gesch. d. herrschernden Ideen, p. 205; Houtsma, Sirjáer over het opeenlopende, p. 34). It seems to me that the origin of the name must have been sought in the term irdjá, in this way that Murdja's most adherents of the doctrine of irdjá (Abd al-Kahir al-Baghdádi uses the term for their doctrine) and that this term goes back to verse 107 of sûra iv. The context of this verse not only explains the term irdjá, but may also give an insight into the evolution of the ideas of the Murdjaites. In the preceding verses Muhammad makes a distinction between two groups among the Madinese who had forsaken him in the expedition to Tabuk [q.v.]: some had shown násfak without penitence; they were to receive punishment in this and in the other world (verse 102). Others had shown penitence (tawwah); they were left to Allah's mercy (verse 103). The third group, who had not made penitence, were left in suspense (murdjáa, or, according to a different reading, murdjauna). The distinction in Madinah after the expedition to Tabuk was generalised by later sects. As a matter of fact, the third group mentioned in the passage discussed—viz. sinners who did not show penitence—was relegated to Hell by the Khatirjites. In opposition to this, the Murdjaítes taught the doctrine of irdjá mentioned in sûra iv, 107 and therefore they were called Murdjaí, i.e. the adherents of the doctrine of respite or hope for this the term irdjá means; the variants murdjaína and murdjaína are irrelevant in this respect.

In the course of time the doctrine of the Murdjaí assumed a double aspect. Their chief thesis was the indelible character of faith, in opposition to the Khatirjites. Their second thesis was of an eschatological nature: where there is faith, sins will do no harm. On account of the latter doctrine they were called the adherents of promise (abi al-wasd), in contra-distinction to the Mu'tazila [q.v.] who were called the adherents of threats (abi al-i'la). So the doctrine of irdjá had acquired a triple aspect—viz. accounts for the divergent explanations of the name—viz. the doctrine of faith bearing an indelible character, an indigent attitude towards sinners in the Muslim community, and a hopeful prospect for them in the Last Judgment. These are the chief tenants of the Murdjaí as they appear to us as well as to later Muslim writers such as al-Shahristání. Earlier authors enumerate a number of divergencies among the different groups of Murdjaítes. Al-Ash'arí mentions their variety of opinion regarding faith, unbelieft, sins, násfak, interpretation of the Karán, excommunication, moral and venial sins, forgiveness of mortal sins, the impenetrability of the Prophets, punishment of sins, the question whether there were infidels among the early generations of Islam, redness of wrongs, the beatific vision, the nature of the Karán, the quddasíti of Allah, His names and tiját, predetermination.

'Abd al-Kahir al-Baghdádi mentions three groups of Murdjaí: a. those who taught irdjá regarding faith and free-will; to this group belonged Ghallám Abù Marwán al-Dimashkí, Abù 'Amir, Muhammad b. Abú Shabhir al-Basrú; b. those who taught irdjá regarding faith and compulsion (dirá); c. those who gave faith the pre-eminence before works and
belonged neither to the adherents of the doctrine of free will nor to those of predestination; to the latter group belonged the followers of Yūnūs b. 'Uwa's, Ghasṣān, Abū Thawbān, Abū Mū'īna al-Tablewī, Būhr b. 'Abdālī Ṣafarī (q. v.). The followers of Ghasṣān reckoned Abū Ḥanīfa as one of their friends, not, however, quite rightly, according to al-Baghdādi. That Abū Ḥanīfa shared the general views of the Murdiyya, appears from his (unedited) letter to al-Battār, which is preserved in a MS. in the library of Cairo.

Although al-Baghdādi mentions a hadīth in which the Murdiyya are cursed, the high esteem in which Abū Ḥanīfa stood as a dogmatist and as a doctor of the law would be in itself sufficient proof of the fact that the hadīth was too eccentric. As a matter of fact, their political quietism was largely practised by orthodoxy itself. As regards eschatological punishment, the Fīqh Abīn, ii. (art. 14) rejects the Murdiyya doctrine of our good deeds being accepted and of our sins being forgiven, Allah being free to punish the sinner or to grant him forgiveness. — The same 'azāda, however, shares the Murdiyya doctrine of the constancy of fate (art. 15).

MURGHĀB. [See MERK AL-SHĀHDIYAH, MURUD, novice, the term applied during his period of preparation to one who wishes to enter a derwiš order [fākhra]; q. v.; cf. also DERWIŠ.] A gold [gold; q. v.]. The task of the murād and his obligations to his master (‘alīṣāb, pīr) and to his ideal and their mystic and erotic foundations have been often and fully discussed, so that it is here sufficient to give a reference to the most important literature of modern times, which will guide one to the sources themselves. In the wider application of the word murād has become a term for mystic in general.

AL-MURIYĀNĪ, Abū ‘Abdālī Sulaimān b. Ḥārīm al-Mubahallāh, visierr of the caliph al-Manṣūr. When the governor of Fārā Sulaimān b. Ḥābīb al-Mubahallāh in the period of the Caliph al-Manṣūr was accused of embezzling state funds, sought and intended to treat him with still greater indignity, the latter was saved by Abū ‘Abdālī al-Muriyānī who was Sulaimān’s secretary. According to another story, al-Manṣūr purchased him as a young boy and sent him in some capacity to his brother, the caliph al-Saffāḥ, who was so pleased with him that he at once took him into his service and retained him there after his manumission. Al-Muriyānī was in any case appointed visierr by al-Manṣūr in succession to Ḥābīb b. Barmak. He had a great influence over the caliph; in 153 (770) however, he was arrested with his brother and the latter’s sons and deprived of all his property. According to some, his crime was that he had embarrassed a large sum received from al-Manṣūr to be paid to the district in Kūfia in order that the caliph when he came to inspect it by making the place look as if it was excavated. According to others, he had a son of al-Manṣūr murdered. He died in 154 (770). — The nāsir al-Muriyānī comes from Muriyān, a town in Kūfia.

MURSALAT [see also SIR], part. pass. IV. From w sala “send”. As a technical term it denotes a. an apostle of Allah; b. traditions of which the hadīth is defective in a certain sense; cf. Ḥādīs, iii. e.

Al-Mursalat, title of sūrat Ixxviii., after the first verse: “By those which are sent by Allah, following another in a continual series”. According to some interpreters a certain group of angels is meant here; according to others, however, the mursālat are the verses of the Qurān. See the commentaries on the Qurān on sūrat Ixxviii. 1.

MURSHIDĀBD, district in the Presidency Division of Bengal; area 2,143 sq. m.; pop. 1,372,774; of whom 713,152 are Muslims. The public offices are at Barhānpūr, but the old capital is at Murshidābād, which before Murshid Kāli’s appointment was known as Mahārābād or Makrshidābād. The district is mainly agricultural, and produces much rice, jute, etc., and is famous for its mangoes. The silk industry was formerly of great importance, but has now much declined. The district played a very prominent part in the history of Bengal, and is full of historical sites though Plusey is now outside its borders. The history of Calcutta and of the English in Bengal is intimately connected with Murshidābād. But the Nawāb is no longer of political importance.

MURTADDE (A.), "one who turns back", especially from Islam, an apostate. Apostasy is called *idādād* or *ridād*; it may be committed verbally by denying a principle of belief or by an action, for example treating a copy of the Qur'an with disrespect.

1. In the Qur'an the apostate is threatened with punishment in the next world only; the "wrath of God" will fall upon him according to a Sūra of the latest Meccan period (xvi. 108 sq.) and severe punishment (*nağāh*) "except he did it under compulsion and his heart is steadfast in belief". Similarly it is written in the Medina Sūras. So *sūra* 2: 144. This is the punishment for them, that the curse of Allah, the Angels and of men is upon them for all time (82); the punishment shall not be lightened for them and they shall not be granted alleviation, (83) except for those who later repent and make good their fault, for Allah is forgiving and merciful. (84) Those who disbelieve after believing and increase in unbelief, shall not have their repentance accepted; they are the erring ones. (85) Those who are unbelievers and die as unbelievers, from none of them shall be accepted the earth-fall of gold even if he should wish to ransom himself with it; this is a painful punishment for them and there will be no helpers for them" (cf. also iv. 136; v. 59; ix. 67). Sūra 2: 214 is to be interpreted in the same way although it is adduced by Shāfi'i as the main evidence for the death penalty: *...* He among you who falls away from his belief and dies an unbeliever these, their works are fruitless in this world and the next, and they are the companions of the fire for ever*.

2. There is little echo of these punishments in the next world in the Traditions (cf. Ibn Mādjā, *Hudūl*, bāb 2; Ibn Ḥanbal, l. 499, 430, 464 sq.; v. 4, 5). Instead we have in many traditions a new element, the death penalty. Thus Ibn Abābās transmits an utterance of the Prophet: "Slay him, who changes his religion" or "behead him" (Ibn Mādjā, *Hudūl*, bāb 2; Nāṣr, *Tahrīm al-Dān,
A. Whether attempts at conversion must be made is a question of *itlabat*. A number of jurists of the first and second (*vi^* and *vi^ii*) centuries deny this (as do the Zahiris) or like *A^* (d. 115 = 733) make a distinction between the apostate born in Islam and one converted to Islam; the latter is to be put to death at once (so also the Sh^i^is). Others insist on three attempts at conversion (relying on *Sura* iv. 136; cf. Tabari, *Tafsir*, v. 193 et seq.) or have him in the first place imprisoned for three days (cf. above 2). According to others again one should await the round of the five times of prayer and ask him to perform the *sala^r* at each; only when he has refused at each is the death punishment to be enforced. If however he repents and professes Islam once more, he is released (cf. them Sh^i^is, *Umm*, p. 228; Ab. Yusauf, *Khor^ay^i*, p. 109). In later times *itlabat* was always applied.

c. Apart from the fact that apostasy deprives the muhtadd of burial with Muslim rites it has certain civil consequences. The property of the muharid is *f^ar*; according to Sh^a^f^i^ and the Malikis, if the fugitive muharid returns penitent, he is given back what remains (cf. *Umm*, p. 223 et seq., where Sh^a^f^i^ opposes the contrary Hanafi view). Others, especially later Sh^a^f^i^s, regard the rights
of ownership of the apostate as suspended (सम्बन्ध) and regard him as one who is under guardianship (प्रवर्तिष्कर्त): only if the fugitive apostate dies in the दर अंतर, does his property become free (शीतल, महान्धोध, छौ 1342, ii. 240; cf. शाही, औम, vii. 355). Among the Marathas and Shāhī the estate is allotted by the कंद to the legal heirs (cf. also the traditions in दरिंग, परवाह, बाब 40, the mukhābār and mukh wadāl are set free, even when the apostate escapes into the दर अंतर, for this is equivalent to his death. If he comes back penitent, however, he receives of his property what still exists; the heirs however are not liable for compensation. — The marriage of the muttad is void (बाज़ल). Of his legal undertakings the irridā is effective (प्रवर्तिष्कर्त), i.e. the mukh wadāl becomes free; the शान्त also continues. Other legal activities, like manumission, entailment, testamentary sale are suspended (सम्बन्ध) according to Aḥāb Hanża; according to Aḥāb Yūnā they are effective as in the case of a person in good health, according to Muhammad al-Shahābī however only as in the case of an invalid, i.e. they cannot deal with more than one third of the estate. In the case of the female apostate however, they are always effective. If the apostate makes such legal arrangements after his flight into the दर अंतर, they are invalid (सराख, सियार, iv. 152; cf. also Aḥāb Yūnā, कहाड़, p. 111). But since according to Shāhī and Mālik his whole estate becomes free, such legal arrangements are invalid; only the manumission of a slave remains suspended until his possible return penitent; in the case of his death also this slave becomes free (cf. however above the view of later Shāhī).

He is punished for crimes committed before apostasy, if he returns penitent; for crimes committed during riḍda, no notice is taken of the शान्त (i.e. no hadst) but only of the दर अंतर, and he must for example pay the diya (सराख, सियार, iv. 163, 208 sq.; cf. Shāhī, औम, i. 231).

**HEFFING**

Mūsā, the prophet Moses of the Bible. 1. In the Kūrān, Muhammad regards Mūsā as his predecessor, his model, and believes he had already been foretold by Mūsā (vii. 156); his religion is also Mūsā's religion (xiii. 11). Mūsā is also conceived in Muhammad's image. Charges are brought against him similar to those made against Muhammad is said to want to pervert people from the faith of their fathers, (x. 79); he practises magic (xxviii. 18). Mūsā and Hārin seem rather to be sent to the stubborn Pharaoh than to the believing Israelites. Revelation is granted him: शान्त, किताब, जफ़र, सुभाष (v. 50; xxi. 49; iii. 37; xxvii. 37; xvii. 19; 15), illumination, instruction and guidance. The picture of him is made up of Biblical, Hegagadie and new elements. Mūsā is exposed, watched by his sister,

refuses the milk of other nurses and is suckled by his own mother. Coming to the assistance of a hard pressed Israelite he kills an Egyptian but repents of this crime to which Satan had tempted him. He is pursued and escapes to Madian. At a well there he waters the flocks of the two daughters of a शाही. One of them invites him home modestly. He receives her as his wife at the price of 8—10 years service. This preliminary history is told in Sūra xxviii. 1—28; the mission itself is often mentioned.

Mūsā receives from the burning bush in the holy valley of Tīwān (xx. 12; lxxix. 16) orders to take off his shoes, the message to Pharaoh, the signs of his mission, the rod, the snake, the hand that becomes white. His speech is difficult to understand (xiii. 52); Hārin accompanies him as warrior (xx. 30; xxx. 37). Pharaoh reproaches Mūsā with ingratitude, saying he had been brought up by them (xxxv. 17). Pharaoh assembles his magicians but their rods are devoured by Mūsā's. The magicians profess their belief in God and are mutilated in punishment (vii. 106—123; xx. 59—78; xxxv. 36—51). Pharaoh wishes prayers to be offered to God, orders Hāryn to build him a tower so that he can reach the God of Mūsā (xxxvii. 38; xxxvi. 38). Mūsā performs nine miracles (xxxvii. 33; xx. 59—78; xxxvii. 13). These are: 1. the rod and snake; 2. a white hand; 3. deluge; 4. locusts; 5. lice; 6. frogs; 7. blight; 8. darkness; 9. dividing the sea (cf. e.g. Tabari, ed. de Goeje, i. 455).

Mūsā spends 30 and 10 nights with God (vii. 138). He brings instruction and admonition on the tablets. In his absence Sāmūr makes the living golden calf (vii. 146; xx. 79—98). Mūsā breaks the tablets. He desires to see God. God crucifies the hill to death (vii. 139). Israel fears war and has to wander 40 years in the wilderness (v. 24—29). Mūsā's enemies, Kārin (Korah), Pharaoh and Hāryn, perish (xxxv. 38).

Some details differ from the Biblical story. Instead of Pharaoh's daughter, it is his wife who rescue the infant; instead of seven shepherdesses Mūsā assists two. Instead of ten plagues, Muhammad speaks of nine miracles. Mūsā strikes twelve springs out of the rock, one for each tribe (vi. 57, a memory of the twelve springs of Elim, Exodus xxv. 27). The divergence is greater when Hāryn is made minister to Pharaoh. Then there are new features: Mūsā repents of having slain the Egyptian. Mūsā sees the burning bush at night and desires to take a brand from its fire for his house (xx. 10; xxviii. 29). Pharaoh's magicians die for their belief in God.

The following seems to originate in Haggada: God forbids the infant to be suckled by an Egyptian mother (xxviii. 11). In the Haggada Moses is offered to all Egyptian suckling mothers; but the mouth that is to speak with God cannot imbibe anything impure (568, 128). That God lifts the mountain over Israel (vi. 60, 57; vii. 170) is explained from the Haggada: Israel hesitated to accept the Torah and God lifted Sina: over them: Torah or death (Sebatb, 894, 895; Aboda Zara, 2b). The turning of the Sabbath breakers into apes (vi. 61; iv. 50; v. 215) recalls the Haggada in which the builders of the tower of Babel become apes (Sanhedrin, 105a). Kārin is represented as an exceedingly rich man, the keys of whose treasure can hardly be carried by many strong men (xviii. 76, 79); the Haggada
MÜSA — MÜSA b. NUŞAIR

The story of Mūsā accompanying a wise man on a journey seems without parallel (xviii. 59—81). The attempt is often made to distinguish this Mūsā of Khaḍir from Mūsā b. Imanū and Mūsā b. Imanū [cf. the article Khaḍir].

2. Mūsā in post-Ku'ānic legend. The histories of the prophet (especially Thalabī’s) supplement the Ku'ānic story with much from the Bible, Haggada and folklore.

Mūsā is added to Haggada. Pharaoh’s sick daughters are cured as soon as they touch Moses’ cradle. Exod. Rab. i. 25 makes Pharaoh’s daughter be cured of leprosy. — The infant Mūsā scratches Pharaoh’s cradle. Pharaoh wants to slay him. On the interpolation of Āsīya he tests him by putting gold and jewels on one side and burning coal on the other. Mūsā reaches for the gold but Gabriel directs his hand to the burning coal. Mūsā puts his burned hand on his tongue and therefore becomes a stammerer (Ginzberg, v. 402 sq.; Hamilton, Zeitschr. f. romantische Philol., xxxvi. 125—159).

Elements of other legends are woven into the legend of Mūsā. The Ibrāhīm-Namūdī legend supplies the following features: Pharaoh frightened by dreams persecutes the infants; Mūsā is hidden from the infants in the burning oven but the fire becomes cool and does him no harm. Pharaoh orders prayers to be offered to himself as to a god, has a tower built, shoots an arrow against heaven; the arrow comes back blood-stained and Pharaoh boasts he has slain God (Tabari, i. 459).

From the story of Jacob and Labân comes the following: Mūsā serves 8—10 years for his wife (xxviii. 27). His father-in-law offers him the spotted lambs born in his flock and the ewes for the watering troughs be spotted lambs (Thalabī, p. 113). There are frequent references to a pious Egyptian woman who is martyred by Pharaoh with her seven children, the youngest of whom is still at its mother’s breast (in Thalabī, p. 118, 139); this is of course modelled on the martyr mother of the Maccebes.

There are many fanciful embellishments, e.g. the miracle of the snakes, the plagues, the scenes on the Red Sea; Moses’ rod in particular plays a great part. It came from Paradise; Abī Dībar, Abū Dībar, Shīth, Isrā, Nūr, Mūsā, Shīth, Abī Mūsā, Isrā, and Yākīth had previously used it (Khaṣṣ, p. 208). In Tabari (p. 460 mourn) an angel brought the rod. Mūsā obtained it from his wife; his father-in-law quarrels with him about its ownership and an angel decides in favour of Mūsā. It is a miraculous rod and Thalabī (p. 111—116) in particular relates the wonders it performs. It shines in the darkness; it gives water in a drought, and placed in the ground it becomes a tree bearing fruit; it produces milk and honey and fragrant scent; against an enemy it becomes a double dragon. It pierces mountains and rocks; it leads over rivers and seas; it is also a shepherd’s staff and keeps beasts of prey from the herds of Moses.

When Mūsā was asleep on one occasion the rod slew a dragon, on another occasion seven of Pharaoh’s assassins.

The varied Biblical, Haggadic, legendary and fairy tale features in the Islamic legend of Mūsā are thus blended into a very full picture and in Thalabī form a regular romance.

(BERNHARD HELLER)

MÜSA b. NUŞAIR b. 'ABD AL-RĀMĪN b. ZAID AL-LAKHIMI (or AL-BAKKI) Abd 'Abd al-Rahmān, Arab governor, conqueror of the western Maghrib and of Spain. He was killed in 79 (698); his father had been in the immediate entourage of Mu‘āwiyah (q. v.). Mūsā was at first appointed by the caliph 'Abd al-Malik to collect the khārid at al-Baṣra, but having been suspected of embezzlement, he fled and took refuge with the caliph’s brother, the governor of Egypt 'Abd al-‘Aziz b. Marwan, who the latter took Mūsā to Syria to the caliph who fined him 100,000 dirhams. 'Abd al-‘Aziz provided half of this sum for Mūsā and brought him to Egypt where he gave him the governorship of Ifriqiyya which had been previously held by Hassān b. al-Nu‘mān. The various chroniclers are not agreed as to the date of his appointment to the office but it possibly took place in 79 (698) of the following year.

Mūsā and his troops thereupon entered on a career of successful conquest which ended in the consolidation of Arab power in Ifriqiyya and in the conquest of the rest of north Africa and of Spain. Here we give only the most essential details. Assisted by his son 'Abd Allah al-Mu‘āwīya he sent successful expeditions against Zaghwān and Sājjāna and reduced the Hansira, the Zanṭa and the Kutum. The Berbers taking refuge in the west of the Maghrib, Mūsā decided to bring them to submission; confirmed in his office by 'Abd al-Malik’s success at al-Walīd, he continued his advance to Tangier and Sūs [q. v.] and returned to Ifriqiyya leaving as his deputy in the Maghrib his freedman Tārīk [q. v.]. The latter in 92 (710—711) invaded Spain and Mūsā anxious about and at the same time jealous of the progress made by his lieutenant crossed himself in the following year leaving his son 'Abd Allah as governor of Ifriqiyya. Landing at Algeciras in Ramāḍān 93 (June—July 712) with his other son 'Abd al-‘Aziz, he refused to take the same route as Tārīk and taking the towns of Sidon (Shadīlūn; q. v.), Carmona, Seville and Merida, he was on his way to Toledo when Tārīk came to meet him and was bitterly reproached by his master. Mūsā b. Nuṣair then continued his march and completely subjugated the north of Spain from Saragossa to Na-
varce. In 95, he left Spain with immense booty, leaving his son ‘Abd al-‘Aziz as governor; he reached Kairouân at the end of the year and continued by land to Syria in a triumphal procession of Arab chiefs and Berber and Spanish prisoners. The caliph al-Walid then sent his end to urge him to harry while his brother and heir presumptive Sulaimân, eager to appropriate the vast wealth brought by Mūsā, tried to delay him. He arrived in Damascus shortly before the death of al-Walid and when Sulaimân assumed power he at once expressed his hatred of the conqueror. Regarding Mūsā b. Nuṣair’s stay in Syria before his death in 98 (716–717), the Arab historians give a number of details which are obviously of quite a legendary character.

(E. LÉVI-ProVergnal)

Mūsā Čelebi, one of the younger sons of the Ottoman Sultan Bayazid I. According to some sources: he was younger than his brother Muhammad I [q.v.], who is generally considered as the youngest. Mūsā had been taken prisoner in the battle of Angora (1402) and was left by Timūr in custody with the Gennulph Oghlu Ya’kūb Beg. The latter sent him afterwards to his brother Muhammad in Amasia, and for some time he became Muhammad’s helper in the re-establishment of Ottoman power in Anatolia; he is even said to have driven their brother Ǧal from Brusa, though the current opinion is that Muhammad went there himself. When, in 1404, their eldest brother Sulaimān Čelebi appeared in his turn in Brusa, Mūsā first opposed him in the name of Muhammad and went afterwards, with the latter’s consent, to Europe, where he hoped to make an end of Sulaimān’s reign with the aid of Mirče of Walachia and Stephan of Serbia. At first this enterprise failed through a defeat inflicted on Mūsā near the walls of Constantinople. Sulaimān resided in Adrianople. Here Mūsā appeared suddenly in 1411 (or 1410); Sulaimān had to flee and was killed on his way to Constantinople, after which Mūsā took his place as ruler of the Ottoman territory in Europe, surrounded by the military and political councilors of Sulaimān, as Ewrenos Beg and the Djemarrī Oghlu Buchām Pasha. Mūsā began his short reign with great energy, recovering nearly all the Ottoman possessions in Serbia and Thessaly, and sending raiding ex-

positions as far as Carinthia. At the same time he adopted a despotic attitude which displeased his entourage and prepared the final victory of his brother Muhammad. Ibrahim Pasha, sent to Constantinople to exact tribute, went from there to Muhammad’s court (cf. Taeschner and Wittek, in Jsl., xviii. 94) and, when Musa soon afterwards began a siege of Constantinople, Muhammad came to the rescue of the emperor. In this he failed for the moment and he was obliged to return to Anatolia. But in 1413 Muhammed appeared again in Europe, having found allies in the Serbians. Meanwhile, the Turkish commanders in Serbia and Thessaly were drawn to Muhammad’s side and even the old Enemies prepared to leave Mūsā’s cause; his son and other military chiefs went over openly to Muhammad. The latter approached Adrianople from the north and followed from here Mūsā’s army beyond Philipopolis; then he joined his allies in Serbia and met Mūsā’s army on the plain of Cumalio, east of Sofia. Here Mūsā’s army was defeated (July 1413) and Mūsā himself perished in the flight. His corpse was found and buried in the Bâb el-Mûlî in Brusa.

Biography: The ancient Ottoman chronicles of Ǧalal Pasha Zāde, Nehrut, Ūridī Beg and Ǧaγravīkhī Al-ʿAṣīm (Anonymus, ed. Gries), besides the Byzantine historians Phrantzes, Ducas and Chalcondylas. Further all general Ottoman histories since the Tārīkh al-Tuwairikī and the modern works of van Hammer (G. O. E. L.), Zinkeisen and Jorje; Mehmed Zaki, Mağlub Şehzadeler, Constantinople 1332, p. 11 sqq.

(J. H. KAermen)

Mūsā, and Muhammad al-Hādí, an ʿAbāṣid caliph. After the death of his father on Maḥarram 22, 169 (Aug. 4, 785) al-Hādí ascended the throne and at once put an end to the influence of his mother al-Ḥashūrān, by forbidding her to interfere in the slightest in matters of state. When he proposed to exclude his brother Hārūn from the succession in favour of his son Dīrac, he met with vigorous opposition from the Barmaquīs Yaḥyā b. Khalīl [q.v.]. When the latter boldly persisted in his opposition, he was arrested; but the caliph’s plan came to nothing for he died suddenly in Kāhīrā in 786 (Sept. 687) in ‘Īshāhīd near Baghdād. According to the usual but not at all certain story, he was poisoned or stabbed by his mother’s orders. Al-Hādí who was only 26 when he died is described as brave, just, liberal and full of joie-de-vivre. The most important event of his brief reign was an ʿAlīd rising in Mecca and Medina. ʿUmar b. ‘Abd al-ʿAziz, the governor of Medina, had punished an ʿAlīd along with some other citizens of the town for drinking wine. As a result the ʿAlīds rebelled and renounced their allegiance to the caliph. After several days fighting the ringleader of the movement, a descendant of ʿAlī called al-Ḥasan b. ʿAlī, marched on Mecca where he obtained a number of additional followers. Soon afterwards the pilgrims arrived; at Fakhkhā near Mecca, a battle took place and al-Ḥasan was killed (2Yūb 1-Hiddija 169 = June 786). As regards the fighting with the Byzantines, the Muslims under Mağlub b. Yaḥyā invaded the island of Minor where they took much booty.

MUSA AL-KAZIM

The seventh Imam of the Twelver Shi'a, son of Dja'far b. Muhammed al-Sadiq [q.v.], was born about 128 (745) at al-Abwe (q.v.), the traditional burial-place of 'Ali, mother of the Prophet. He grew to manhood in his father's house in Medina and remained there as Imam after the latter's death in 148 (765) without playing any part in politics. In particular he took no share in the great rising of the Hassanid 'Alids which collapsed at Fakhhk in 169 (786). Nevertheless the caliph was suspicious of him. He was perhaps already imprisoned by al-Mahdi. In 179 (795) Harun had him brought first to Basra and then to Baghdad; he is said to have been released for a time but he died in prison in Baghdad, according to the usual story in Radjub 183 (Aug.-Sept. 799).

Little attention was paid to Musa, the Shi'a, but we find him occasionally, as the Shi'a point out, quoted as an authority, for example for a strongly pro-'Ali tradition in Ahmad b. Hanbal, Muhammed Sharif infra (cf. al-Dhahabi, Mawta al-khadij, N° 1835). The Shi'a records are more voluminous. It is said he had been the favorite of the Imam 'Abd Rsarran his ange' because he returned kindness for injury to an opponent so that the latter came over to him. As evidence of his fitness for the Imam he is reputed to have had great knowledge of the religious and was thus brought into connection with 'Abd Rsarran. The chapters on miracles, usual in all biographies of the imams, credit him with being born with a knowledge of languages, e.g. Ethiopic and the language of birds, in later stories also of "Frankish" to fill a story, modelled on a later Kerbelah motif, that Harun could not find a Muslim to assassinate him and therefore brought Franka, who were so impressed by his nobility that they refused to kill him. Prayers for Musa have been handed down; a letter of warning to al-Husain b. 'Ali b. al-Hanlan, the leader of the Fakhhk rising, letters from prison; a statement of his claims to the Imamate against Harun and throughout a relationship with the Prophet, not through 'Ali the 'Abbasids through 'Abbas but through Fatima, whom he compares with the mother of Jesus. Considerable portions of the biography are the result of the disputes within the Shi'a, even the account of his conception and birth. That his mother was brought from a slave dealer is not disputed; but great pains are devoted to proving she was a virgin. When at the death of his father a group of the Nawaiya "remained" steadfast to him, the Isma'iliya [q.v.] and the Fatimya branched off, the claims of Musa had to be based on a will of Dja'far, the authenticity of which is as doubtful as that of Musa in favour of his son 'Ali al-Kadim; this was used against the followers of another son Ahmad, as well as against the Manfula who "remained" by Musa himself and a similar party in the Mawsiliya (Mawa'ila, for details see the writers on here, especially al-Ahdari, Mawta, ed. Bitter, Constantinople 1930, p. 25 sqq.). The dispute with the latter groups also explains the very detailed stories of witnesses who had seen Musa's corpse. Bitter differences of opinion within the family are revealed by the fact that even Musa's son Ibrahim for a long time denied his father's death, and also by the fact that Musa's brother Ibrahim or a nephew 'Ali b. Ismad played the traitor with Hurrin, inciting him by pointing out the great sums which were given to Musa as the true caliph by his followers; on the other hand, the inequities acknowledged of Musa's "inam" teeth by the theologian Hisham b. al-Hakam is made responsible for his capture. The "bunya of Musa is 'Ali l-Hasan also 'Ali All; the statements regarding the number of his chidren vary between 50 and 60; 37 is the usual figure. Besides his successor 'Ali al-Kadim some prominence was ascribed by the partial imam Ahmad, but more by 'Azad, who at the time of the great rising of Abu l-Sarayi in Basra, by burning the houses and followers of the "Abbasids acquired the name 'Azad al-Nar, 'Azad of the fire" (Tabari, iii. 986), and Ibrahim, who on account of similar activities in San-at was called al-Djazzar, "the butcher" (Tabari, iii. 987); a daughter Fatima, who died in Qum, has given to this city in her tomb its most important sanctuary. Musa himself was buried in the cemetery of the Kurish in Baghd, where his grandson, the ninth imam Muhammad al-Djawi [q.v.], was in time interred beside him; thus arose the twin sanctuaries al-Kajaim [q.v.]

Bibliography: Mufid, al-Tirdad (Teheran without date or pagination arranged in the order of the imams); Ibn Ruhya, 'Uyin Al-Abbas al-Kadim (MS. Berlin. N°. 9663). exp. fol. 103 sqq.; comprehensive collection of Shi'a accounts with references to the sources in Muskain Baki, al-Majdilist, Bishar al-Anouir, Teheran 1903, p. 290-317; Abu l-Faraj al-Ishahat, Maqalat al-Takiyya, Teheran 1930, p. 172-176; Ibn Khaliljan, Waqifat, Biial, 1299, p. 172 sqq. (from al-Khahlil, Ta'liqah Baghdad); Musa, Marufi: (cf. Barhier de Meynard, vio. 309 sqq., 334 sqq.; E. de Zamberen, Manuel de genereologie et de chronologie, Hanover 1927, table D. -

As the importance of the imams like Musa lies less in their own personality than in the views of the dogmatists upon them, their nitasus should also be compared: cf. in Kashif, Maqalat Al-Abbas al-Raghib, Bombay 1917, section Alaa l-Musulun, 18; Abu l-Musa, p. 344 sqq.; and also the nitaus of Hisham b. al-Hakam, Hisham al-Dhahabi, Ammar b. Musa al-Salhi, Almadi; and the same names in the alphabetically arranged works of Nadji, al-Raghib, Bombay 1917; Tusi, Fihrist, Caireau, 1853-1855; Astara'dah, Manufa al-Majd, Teheran 1926.

BANU MUSA, more precisely BANDI MUSI b. SHAKIR, the usual name for the three brothers Abu l-Dja'far Mubammad, Abu l-Kasim Ahmad and al-Hassan b. Mubammad b. Shakhir, who made a reputation under the 'Abbasids from al-Ma'mun to al-Mutawakkil as mathematicians, astronomers and technicians and also at times played a part in politics. The father is said
to have begun life as a bandit in Khurṣān, then to become an astronomer and geometer. We have no means of testing such stories or learning how a bandit could become an astronomer. If we assume however that Mūṣā b. ʿAbd Allāh b. Muḥammad b. Mūṣā al-Khwārizmi joined al-Maʾmūn’s train in Khurṣān as astronomer and astrologist and then came with him to Baghdad, we can understand that al-Maʾmūn took his three sons, still young, into his service on Mūṣā’s death and had them educated in mathematical science under the astronomer Yahyā b. Abī Manṣūr. The Banū Mūṣā thus at a comparatively early age were admitted to that circle of scholars who, by their thorough and expert translations, introduced Greek science to Islam and by their own researches laid the foundation for the glorious development of the sciences in the 9th (i.e., 9th) and 10th centuries. Attaining fame and fortune, they used their wealth to purchase Greek manuscripts and sent agents into the Byzantine provinces to seek for and purchase books. Of Muḥammad b. Mūṣā it is related that he met Thabit b. Qurra in Harrān while on a journey and induced him to settle at the caliph’s court. It may be assumed they treated scientific subjects to some books and scholars did not take place without the caliph’s support.

History also records political and literary links. A particular custom is said to have existed between the al-Kūf and the three brothers, because the caliph al-Maʾṣūmah did not entrust them but al-Kūf with the education of his son Almād. The feud went so far that the Banū Mūṣā are later said to have intrigued against the choice of Almād as caliph. This story can only be understood in connection with court intrigues, in which the ambitions of the brothers and the jealousy of the courtiers played the same part as elsewhere. If all is true that is recorded of the malevolent attitude of the brothers to recognised scholars, little praise can be bestowed on their character. The stories of the huge incomes are especially that of Muḥammad b. Mūṣā — he is said to have had for a time an annual income of £300,000 — exceed all that even the most liberal caliphs could hope for a scholar.

The works of the Banū Mūṣā include translations and original works on geometry, astronomy and mechanics. Many of their works are written jointly by two or three brothers, others only by one. Muḥammad b. Mūṣā is regarded as the most versatile al-Hassan, the best mathematician, Almād as specially interested in mechanical and technical problems. The astronomical and metrological observations of the brothers were probably made mainly in Sāmarrā; their tables of observations of the sun are mentioned by Ibn Yūnus, M. Curtze, H. Suter, E. Wiedemann and F. Hausser. They have devoted special attention to the editing and elucidation of these works that have survived in Arabic or Latin.

Mūṣā b. al-Zubair, son of the famous Ḥārūn ar-Raʾš, the Prophet, al-Zubair, and brother of the anti-Caliph ʿAbd Allāh b. al-Zubair. Handsome, chivalrous, generous, the most ambitious and prodigal, he resembled his elder brother ʿAbd Allāh and the family of the Zubairids only in his bravery and in its distinction of severity in exacting punis-
ment which bordered on barbarity. He began his military career at the beginning of the caliphate of Marwān I by a boldly planned invasion of Palestine. Later sent as governor to Baṣra by his brother 'Abd Allāh, he soon found himself called to the help of the people of Kūfa, tired of the yoke of Muhātir b. Abī 'Ubadh [q.v.]. He began by putting to flight the army brought against him by the redoubtable Ṭabāqīt agitator and then besieged him for four months in the citadel of Kūfa. On the death of Muhātir, Muṣṭafā ordered several thousands of his followers to be executed and by this savage act made as many enemies as the victims had relatives. He was less successful against 'Ubadh Allāh b. Abī Ḥurr [q.v.], who had been sent into the Ḥirā to stir up a counter-revolution in favour of the Marwānidīs. A similar attempt at Baṣra by the Unaylādī Khalīd b. Asid failed. But by proceeding with great severity against Khalīd's followers Muṣṭafā alienated the most influential personages in the city.

Soon he found he had to defend the Ḥirā which was directly threatened by the Caliph 'Abd al-Malik; troops were massed at Bādījmāʾa. Muṣṭafā awaited the Syrian army here and then retired to Dair al-Ḍajāhilī [q.v.]. His position soon became critical for the Bāṣrān troops refused to follow him. The best troops of the province were far away with Muhātir, engaged in an interminable campaign against the Khārijītīs. The Zubairīdīs' troops displayed only moderate enthusiasm. His officers tired of his iron hand were prepared to betray him and entered into negotiations with 'Abd al-Malik. The Marwānidīs was not stingy in his promises. He also tried to negotiate with Muṣṭafā, who learning of the parl.sy of his followers rejected all offers and decided to die a brave man. Among his followers Ibrāhīm b. al-ᾀzhārī alone fought vigorously in the battle; the others folded their arms during the fighting or went over to the Syrian ranks. 'Abd al-Malik offered Muṣṭafā his life for the last time with the government of the Ḥirā, but in vain. Thrown from his horse, the Zubairīdī received the coup-de-grace from an avenging Bakrī, 'Ubadh Allāh b. Ṣahābān. This took place about the middle of Dhumādā I (October) of 72 (691). 'Abd al-Malik wept for him and ordered his poets to commemorate his heroic end. Muṣṭafā's great generosity earned him numerous eulogies from poets. He is also famous for the fact that he had in his arcade the two most independent and haughtiest women of the time, belonging to the most distinguished aristocracy of Islam, Triḥa bint Talha [q.v.], the second wife of the Prophet, and Sukain, grand-daughter of 'Ali; feminine types, remarkable in their spur of vitality for having bravely tried to avoid the degradation of their sex in Muslim society.

Lakhkut died in Armenia and Daisam was betrayed by his vizier Abu l-\'Asim b. Asufar who had come to an arrangement with Marzuban for both were zajis (Ibn al-Muakallah, II. 32)). Marzuban occupied Ardash and Tabr, and finally Daisam surrendered to Marzuban and received from him a castle in Taron. Marzuban extended his territory, and as far as Darband. In 336 (943-944), the Russian (\'Arsaf) was caused by the Caspian, and the river Kar and took the capital of Arjas [q. v.], as Rarda\'a (q. v.), in spite of the death of the subjects of Marzuban. At the same time, the Hamdanids of Mavasli had concluded a peace with Adharbadjar and Marzuban had to deal with force under Abu l-\'Aab Allah Husain b. Sadiq b. Hamdani and the Rashidun Kaud Djiafar b. Shakhay, which had reached Salmis [q. v.] but was soon recalled to Mavasli by Nasir al-Dawla. On the other hand, the Russians, driven by disease and harassed by the Musulmans, beat a retreat (cf. the sources on the Russian invasion including the Armenian historian of the tenth century, Moses Kabaqquturi, in Dorn, Cagga, St. Petersburg 1876; the text of Ibn al-Muakallah, II. 62-67, was translated with commentary by Yakobowski in the Viisam. Fremsmel, Leiningrad 1926, xxiv., p. 63-92).

A new danger arose in the south-east of the lands of Mavasli when in 335 (946) the Buyid Rukan al-Dawla occupied Rayy (disputed by the Salmians and Ziyadis), which had filled with wrath at the Buyids decided to attack them in 336. But Rukan bade them time to get reinforcements from his brothers. In 336 (949) Marzuban, defeated near Karw, was besieged in the castle of Suseiarum (in Fars). The fugitives from his army gathered round his father Muhammed and occupied Ardash while Wahsudan remained in Taron. Muhammed gave satisfaction to his captains and was shut up by Wahsudan in his castle at Shahgahan (?). Rukan al-Dawla sent to Adharbadjar Muhammed b. Abu l-Rasul, the former governor of Tes [q. v.], who had deserted the Salmians. Wahsudan released Daisam in the hope that he would be able to organise resistance. Daisam who had time to take Ardash, was defeated by Ibn Abu l-Rasul but the latter was disputed by the intruders around him returned to Rayy in 336 (949). Daisam recaptured Ardash but the advantage of Alt b. Mujjti, a supporter of Marzuban, forced him to seek shelter with the Arturids of Wusul-

Ahmar and Wuzarzhan (N. E. of Tabr), of Shurvan (N. of Ebul), as well as the Arturids, Enguaidi and the princes of Khazar (west of Barzgan).

Wahsudan and his nephews, Marzuban died in Ramadan 336 (Dec. 957) and while bequeathing the power to his brother Wahsudan forgot to cancel his first will by which his sons Djaunsh, Ibrahim and Nasir were to succeed him in succession.

The commanders of the fortresses would not surrender them to Wahsudan who returned to Taron in disguise. Djaunsh b. Marzuban was recognized by his brothers but was only interested in his karem. Marzuban's old general Djan b. Sharmarzen set up in Crumia [q. v.] and won to his side Ibrahim, with whom he occupied Marzagh. In 345 (955) the grandson of the caliph Mahdi b. Ishaq rebelled in Gilan and took the name of Mustadidji b. Isma'il. Djaunsh and Ibrahim became reconciled and defeated the rebels at Musran [q. v.].

Wahsudan began intriguing among his nephews and detached Nasir from Djaunsh but the plot was of short duration. Under assurances from Wahsudan, Djaunsh, with his mother and Nasir came to Taron but were thrown into prison. Wahsudan sent his son Ismail b. Adharbadjar. Ibrahim, who was ruling Armenia (Dawia) made a move in 349 or 350 which gave Wahsudan an excuse to massacre his prisoners. Ismail soon afterwards died at Ardash and after which Ibrahim recaptured Adharbadjar and laid Taron waste while Wahsudan sought refuge in Dailam. Meanwhile Wahsudan's general Sharmarzen b. Mujjti, however, succeeded in defeating Ibrahim and the latter, abandoned by all his soldiers, sought refuge with his brother-in-law Rukan al-Dawla who had married a daughter of Marzuban (355 = 966).

Rukan al-Dawla, with his usual chivalry beared favor to Ibrahim and sent to Adharbadjar his famous minister Ibn al-Amid (Ishak Raja) who reinstated Ibrahim and subjected the lands of Djaunsh and Djaunsh b. Sharmarzen to him. Ibn al-Amid who was much impressed by the wealth of Adharbadjar, proposed to Rukan al-Dawla to annex this province but his master recalled him to Rayy, saying that he did not wish to be accused of coveting the inheritance of one who had sought his protection. After the return of Ibn al-Amid matters went badly and from the allusions in Ibn al-Muakallah we know only that Ibrahim was deposed and imprisoned (probably about 369 = 979, the year in which the Tifajir al-Dawla stops).

The end of the Muslim and the Seljuk Empire in the Muslim world. The sources of the situation in Adharbadjar till 420 are obscure but the statements of the Armenian historian Stephen Asotik, Hist. Universelle, part II, book III, trans. by Macler, Paris 1819, ch. 14, 12, 18, 19, 29, 38 and 41, enable us to fill the gaps. According to Karawat, Dinas (369 = 979) Ibrahim b. Marzuban was dispossessed of the lands in Adharbadjar by the Rawwidi family (see the above articles in the A. M. R. M. T. R. R. S. and Karawat, op. cit., II.). The son of Ibrahim Abu I-Haik (the "Ahbaul Dalmastani" of Asotik) retained Devon [q. v.] and on the invitation of King Musul of Kars in 982-983 made an expedition into Armenia where he desecrated the churches. This Ahbaul later lost all his lands to his neighbour Althaph of Gotb (I.e. Abul Dulfu Shalibak, lord of Ordubad). He later wandered in Georgia and Armenia and even visited the Byzantine emperor in...

(Y. Minsky)

MUSAILIMA (a contemptuous diminutive from Maslama, which is the form of his name given in Muharrad, Kāmil, ed. Weigert, p. 443; J. Baldsīhūrī, ed. de Goeje, p. 422 ill.; cf. Tulāfī q.v. for Talja), a prophet of the Banū Ḥāšīfa in Yamāma, contemporary with Muḥammad. His genealogy is variously given but always contains the name Ḥāshim; his name was Abū Ḥāshim. According to the usual account, he appeared as a prophet soon after the death of Muḥammad, and having visited the latter in Medina, he received a divine építaph for his deputation. There is however another tradition according to which he began his prophetic career before Muḥammad died, and D. S. Margoliou has given very cogent reasons for accepting this. According to Ibn Iḥāṣī (Ibn Iḥāṣī, ed. Wustenfeld, p. 200), Muḥammad's enemies reproached him with having obtained his wisdom from a man of Yamāma named Rāḥūmān. Now we have ample evidence (Wāqīdī, transl. Wellhausen, p. 28; Tabari, l. 1935, i. 48; Baldsīhūrī, p. 105; Bāghawī on Sunn xxv, 61) that Musailima, who preached in the name of Rāḥūmān, was himself called Rāḥūmān. Further, the story recurring in all traditions that Musailima proposed to the Medine prophetic division of authority or a transfer of his power to him on his death (a similar story is told of the Ḥanīfī chief of Makka Sulaymān) becomes more intelligible if this prophet already occupied in Yamāma a position similar to that of Muḥammad in Medina. It is also worthy of note that the prophetic miracles attributed to Musailima recall the earliest Mekkan miracles with their short rhyming sentences and curious oaths and have no resemblance at all to the later Medine miracles. In particular the fact that all the Banū Ḥāšīfa followed him into battle against the Medine shortly after the death of Muḥammad shows that he must have been active for a considerable time and was no upstart imitator of Muḥammad. That the latter was the usual method of explaining the "that" Musailima, is readily intelligible, but it is to be wondered at that orthodox tradition could not deny itself the pleasure of depicting his relations with the Tanīm prophetic Sulaymān [q.v.] in the most scurrilous fashion. Fortunately however, the otherwise little reliable Bāghawī gives quite a different story, which although influenced by later ideas (Musalima in order to gain followers reduces the daily jānāṯū to three; he has a masūdībān and a jānāṯū; he tries in vain to imitate Muḥammad's miracles, etc.), gives a picture of him which is in the main correct and we can agree with Wellhausen that his utterances have a distinctly Yamāma
colouring. According to Sa‘i’s account, he must have been considerably influenced by Christianity for he speaks of the kingdom of heaven and that he would come from heaven. Like several other men of the time in Arabia of deep religious feelings, he favoured asceticism. He forbad wine, and marital intercourse after the birth of a son. It is interesting that Palgrave on his journey into Najd found a number of sayings still current under Musallima’s name; unfortunately he did not trouble to record them so that we cannot compare them with what is recorded of his utterances in literature. This rival community in the heart of Arabia meant a serious danger to the young faith of Islam. Therefore when the first attempts to repress it had failed, Abu Bakr sent his ablest leader Khidîr b. al-Walid against Musallima and the Banî Hamîs. A battle was fought at ‘Akrâbah’ [q.v.] in 2 A.H. which at first went against the Muslims, but Khidîr’s superior strategy finally prevailed and Musallima and many of his followers fell martyrs for their faith. The battle was unusually fierce and the Muslims also suffered heavily, among both sides being a number of the best authorities on the revelations of Mu‘ammad.

MUSALLÂ (A.), part. pass. II of tef-az, before where the salât is performed on certain occasions. When Muhammad had fixed his abode in Madina, he performed the ordinary salât’s in his dâr, which was also his madfîd (not in the sense of temple). The extraordinary salât’s, however, were performed on a place situated southwest of the city in the territory of the Banî Salîma, outside the wall, northeast of the bridge on the wâdi; where at present the street from the suburb al-Ankuraya reaches the market-place Barr al-Munâkhba (cf. Burton, Personal Narrative, plan opp. i. 239). The picture of the musallâ as well as of the mosque of ‘Umar situated on the place, opp. l. 329; al-Batânî, al-Ri’âla al-Hâjîyya, 2nd ed., plan of Madina opp. p. 252; part of the Barr al-Munâkhba, ibid., opp. p. 264; Caetani, Annali, vol. ii. i, opp. p. 73.

On this spot the salât was performed on the 1st Shawwal and on the 10th Dhu ‘l-Hijja (Tabari, i. 1281, 1362). On the latter day the salât was combined with the slaughtering of two spotted rams (Bukhârî, Adâ‘î, bâb 6). On the two days of festival Muhammad and his followers on their way to the musallâ were preceded by Bilal who bore the spear (Amâna; q.v.).

It is also said that the salât for rain was held on the musallâ (copious data in Tradition, cf. Wendack, Handbuch, s. v. Rain; and do., Mohamm.
MUŞH — MUŞHAF

(as spelled by Yaşar, iv. 534) is sometimes used for the town itself as in Tabari, ili. 1408 (cf. J. Markwart, Süd-Armenien und die Tigreergürtel, Vienna, 1930, p. 354). The tradition of the Armenian historians connects the foundation of Mûsh with Mûşel Mamikonan, the ancestor of the powerful, originally non-Armenian family of the Mamikonsians, who lived in the 11th century A. D. To him is ascribed the construction of a castle, the ruins of which are still visible on one of the hills that dominate Mûsh. This town itself is situated at the mouth of a mountain gorge and before it extends, as far as the river, a large fertile plain, the "plain of Mûsh." During the first centuries after the Muhammadan conquest, Mûsh remained a centre of Armenian national life; from 825—851 it was the residence of the Bagratid Bagrat. After the abdication of this prince to Bagdad in 851, the inhabitants revolted and killed the Muhammadan governor Yusuf b. Abu Sa'îd al-Marwani (Tabari, ili. 1408 sq.). Later on it was part of the vassal kingdom of the Bagratids. Occasionally it was occupied by Muhammadan invaders, as in the days of Saif al-Dawla ( Ibn al-Athîr, viii. 468) in 353 (964). About this time the same Mûsh appears for the first time in Islamic geographical literature (al-Masâkidî, p. 150). In Saljuq times the influence of the Armanishe dynasty disputed the territory of Khîlî and Mûsh with the Utqûshids and even the Sayyûbd Nadjâm al-Dîn laid siege to Mûsh in 604 (1207) (Ibn al-Athîr, xii. 169, 185), and in 652 (1252) Djâjîl al-Dîn Khîrâhûmshah was master of the country; in that year a battle was fought by him and lost on the plain of Mûsh against the Saljuq ruler of Erzurum (Ibn al-Athîr, xii. 314; Djuwainî, Târîhî-i Djuhâr-ûshah, ili. 181). This accounts for the ruined state of the town in the middle of the xith century (Hamm Allah Mustawfi). After the Mongol period Mûsh was ruled by Tûsîr in 1356, when he invaded the possessions of the Karm Khoyunlu (Sharaf al-Dîn, ili. 419). In 1473 the power of the Karm Khoyunlu ruler Uruan Hâsan was definitely broken in Armenia and from that time on Mûsh belonged to the Ottoman Empire. At that time the population of its surroundings was already strongly mixed with Kurds and Turcomans. The direct authority was exercised by Turkish local chieftains, who, in the ruling system of the Empire, were subordinated, as sandjak-bey, either to the pasha of Bitlis or to that of Van. At the beginning of the xith century the rule of the khans the Akkoyunlu Emîn Pasha, who was deposed in 1828—1839 (Ritter, x. 676 and Shîfînî, 'Ethnok., i. 426). In the middle of that century, Mûsh became the chief town in the mutesh bânil Mûsh, in the sandjak Mûsh in the wilayet of Bitlis, and in the Turkish republic it is a bânil in the wilayet of Bitlis. The population of the town (some 5,000 inhabitants) was, until the Great War, half Armenian and half Muhammadan; one of the ancient Armenian churches had been converted in 966 (1571) into a mosque, according to an inscription (Ritter). The environs of Mûsh had also a mixed population, where, however, ancient Christian sanctuaries had long continued to exist, such as the monastery of Sûr Karpert, called by the Turks Câ достиж of and described by Ewliya Celebi.

During the Armenian troubles in the last years of 'Abd al-Ḥamd II's reign, in 1905, there began in Mûsh a revolutionary movement of Armenian tashnakists, which brought about an intervention of the Kurds and a suppression by government troops, in which the population suffered much. In the Great War the Russian advance in Armenia had gone as far as Mûsh, when, in accordance with the treaty of Brest-Litovsk (1917), the Russian troops retired in 1918, leaving this part of Armenia again in Turkish possession.

J. H. KRAMER

MUŞHAHF (see TASHKHêt.)

MUŞHÂF (m.), Ethiopic loanword (cf. Nîldeke, Neue Beiträge, p. 49 sqq.; the forms mus'hâf and muşhâf occur also; according to some grammarians they are less correct, especially the latter), codex, or, according to the definition of Arabic lexicographers, leaves (ms'Hâf, plural of ms'Hîf), when they are bound together between two covers. In the tradition on the redaction of the Kûrân (q.v.) by Hûdâlîa b. al-Yâmân during 'Uthmân's caliphate, it is said indeed, that the collection of leaves that had been made by 'Abî b. 'Abd Allâh at 'Umar's instance was copied and arranged into a muşhâf. These were sent to all regions (as standard copies); the ms'Hîf were restored to 'Umar's daughter Hâfîza, in whose possession they had ever since her father's death. Other ms'Hîf were annullated as often as occasion offered itself (Bâkûrî, Faqîl'î al-Kûrûmî, bâb 31; Ibrîm, bâb 7; Dîjâmî, bâb 12; Tûsîr, sûra 9, bâb 20; A'bâmîn, bâb 37; Tîmîrî, Tûsîr, sûra 9, trad. 19).

From the time of the redaction of the Kûrân under 'Uthmân maş'ûfîs are frequently mentioned in Arabic literature. In a tradition (on 'Amîr b. al-Ā's well known stratagem during the battle of Sûfîn it is said that a huge ms'Hîf from Damascas was tied to the points of three lances (al-Dînârî, Kîlît b. A'bâmîn al-Sûfînî, ed. Gûsas, p. 201 sqq.; Na'îr b. Musîmîn, Waft Sûfîn, Bairût 1921, p. 350; cf. p. 353); in other traditions "copies of the Kûrân" in several numbers are mentioned (e.g. Tabari, l. 3329).

In a tradition on the sâfî it is assumed that in the mosque of Madina the ms'Hîf had a fixed place (Bâkûrî, Sûfîr, bâb 95; Musîm, Sûfîr, trad. 265, 266; nowadays this place is by the fikca (cf. Lane, Manners and Customs of the Modern Egyptians, chap. Religion and Law, and see also, art. MUS'HÂF, I, D, f. —).

It is said that 'Uthmân had a ms'Hîf copied for her private use by her maid 'Abî Yûsûs (Tîmîrî, Tûsîr, sûra 2, trad. 29; cf. Bâkûrî, Faqîl'î al-Kûrûmî, bâb 6).

Ms'Hîf were taken into the field by Muslim soldiers (cf. Tîmîrî, Tûsîr, bâb 28; Abû Dâwûd, Dîjâmî, bâb 135); this practice met, however, with objections (cf. Bâkûrî, Dîjâmî, bâb 129; Musîm, Sûfîr, trad. 92, 93), founded on the fear that they might fall into impure hands. For a similar reason manuscripts impure in a ritual sense were prohibited from touching ms'Hîf, save in a special cover (ms'Hîf; Bâkûrî, Hâlî, bâb 3).

Bibliography: The lexica, a.v.

(J. H. WERNSINCK)
MUSHIR (a.), councillor, Turkish pronunciation mowshir and musfar (modern orthography mowshar) with meaning "Marshall". Mowshir literally means "one who points out, advises". Cf. also the Arabic musammār.

According to some authorities, mushir was at first (before the 'Ahlifisde) the title of the ministers (later mawṣūr) or secretaries of state (kaṭīb). So at least we are told by Ibn al-'Tiḥaṣṣī (ed. Dardenbourg, p. 206; transl. Aran, p. 344). Khalīf al-Zahrī (ed. Ravaisse, p. 106 and 114) says that it was "formerly" an official to whom he gives fourth rank in the hierarchy, which shows he clearly distinguishes him from the mashir, the title of a military. We seem however to have very little other information about this dignity. On the other hand, the word mowshir in a non-technical sense is often found along with mashir of which it sometimes seems to be a doubt or synonym (cf. Maqṣūr, ed. Wiet, iv, fasc. i, p. 20 and 74; Nolden, Die Erkennung von Mäuschen und einen Minister, Göttlingen 1879, p. 53: mowšir mawšir, mawšir mawšir).

We may note however that this older and broader conception did not survive. According to Ibn Khalidūn, the mawṣūr is, it is true, an "assistant to the sovereign, but to his predecessor Mawārid (Les statuts gouvernementaux, transl. Engman, p. 43 sqq.) the mawṣūr is not the adviser of the mawṣūr but his delegate.

If Ibn al-'Tiḥaṣṣī's statement is correct we must see a survival of this older state of affairs in the usage of the Murālik chancellery where we find among the honorifics šalātul of the title of that of mawšir al-da'wāt (or al-ṣalifam or al-mušir wa 'l-salifum). Cf. Kallugahndi, vi. 70.

The same usage, which perhaps came from the Ṣalīḥīya, is still more clearly established in the Ottoman chancellery. We actually find the word mawṣūr among the alfāb of the Turkish mawṣūr (mawṣūr) and almost at the head of the formulas, which shows its importance: diwāni mawṣūr, mawṣūr-i neṣṣābār, kibān al-Sīrīm etc. Whence in the epistolary style the epithet mawṣūr and mawṣūr-i čihrān are written along with diwāni and diwān-i čihrān or kibān and kibān-i čihrān to designate all that belongs to an official of the rank of the mawṣūr.

Maḥmūd II in creating the principal ministries naturally thought of again giving a real value to this title of mawṣūr, which he gave to the principal ministers, and in the reign of his successor 'Abd al-Maḏjdī "the privy council (medjīla-i bāši, a regular council of ministers) consisted of the grand vizier, the šalīk al-tāṣūm, eleven mawṣūr and three officials of the first rank" (Bianchi, Le premier ministre impérial de l'Empire Ottoman, Paris 1845, p. 7; Bianchi translates mawṣūr by "councillor or under-secretary of state" and has been followed by Barthier de Meynard in his Supplément, the references in which should be taken with this reservation). In 1250 (1835-1836) the title of mawṣūr was given to the new šalātul of the interior (mawṣūr-i neṣṣābār = the former šalīk al-tāṣūm) and of Foreign Affairs (medjīla-i neṣṣābār = the former neṣṣābār; cf. Lutfī, v. 20). The epithet mawṣūr-i čihrān was created in 1263 (1846) (Lutfī, viii 87).

Maḥmūd II also created the post of neṣṣābār-i da'wār or chief of the imperial guard, who bore the title mawṣūr-i neṣṣābār-i da'wār (mawṣūr-i da'wār), an officer who took rank after the šalīk al-tāṣūm or War Minister (Hammer, Hist. de l'Emp. Ott., xvii, 188 and 189). This title was soon to be contrasted with that of mawṣūr-i 'alā iš-khānūm by the other troops (Lutfī, v. 28).

The ministers did not long bear the title of mawṣūr which gave place to mawṣūr-i da'wār, but the former of these titles, perhaps under the influence of the word "mashir", which it more or less resembles, became a special military title. It became the highest rank in the army, corresponding to visir in the civil service and of ḥāṣkār in the religious hierarchy. At first the title ṭuḥbīl-i muṣṭafīr mawṣūr-i da'wār (cf. Lutfī, v. 68, 74) was given to the vizirs of certain provinces, or simply mawṣūr of such and such a province (bid. p. 165 sqq.; vi. 104, 105; vii. 70). This corresponded to the demarcation of the army corps.

The number of mawṣūr or "mashir" soon increased and in the reign of 'Abd al-'Amīd II, there were 39 in 1890 and in 1895, 31 (see the Sehīl-i 'asākīr of the years 1906 and 1911). Those who had the right to this title were the sa'ādeth or tāṣūm-i muṣṭafīr or "grand master of artillery", the sa'ādeth or tāṣūm-i da'wār or "grand master of the Palace" (replacing the old ṭanāfseh; according to Ahmad Rūsūm, Ta'rikh, i, 156 and 186), the ṭuḥbīl-i muṣṭafīr (as under Maḥmūd II), the commanders of the seven army corps (polāb, the heads of the army services, the bāshi-de camp to the saltān (jāfār-i shāhī). The only duty of the mawṣūr was to superintend the ceremony of the Sehīl-i shāhī (sehīl-i rūmān-i suḥra). The officer in charge of the police station (mutāhara) of Bejahteh, notably of Villits Kious, was also a mawṣūr (M.S.O.S., vii, 1908, p. 4, p. 40). Instead of sa'ādeth or tāṣūm-i mawṣūr the more usual phrase was muṣṭafīr-i mawṣūr (Lutfī, vii. 62).

The honorific form of address for a mawṣūr was dewāli (dewvetli) esfendīb kāhāzīl. In the plural the Persian form mawṣūr-i mawṣūr-i or with epithet mawṣūr-i mawṣūr-i. The name of the office is mawṣūr-i mawṣūr-i, more rarely mawṣūr-i mawṣūr-i (Lutfī, v. 94).

The title of mawṣūr, which has been borne by Muṣṭafā Kemāl Pāshā himself, has survived in the Turkish republic but there is at present only one mawṣūr in office, the Chief of the General Staff, Fawād Pāshā.

In Khedivial Egypt they stopped at a stage where the influence of the reforms of Maḥmūd II was still felt. The ṭuḥbīl mawṣūr there was down to the present reign exclusively the highest grade of officers but without distinction between military and civil officers. It was also in theory a civil rank (rūhā mawṣūr) to which all the princes of the khedivial house had a claim.

In Persia the title mawṣūr has been rarely used. Cf. however the case of the mawṣūr ed-devali (cf. the similar title above) borne by an aide-de-camp of Nasr al-Dīn Shāh (Fawwār, Trois ans à la Cour de Perse, p. 135-136).

MUSHRIK. [See SHIRK.]
AL-MUSHTARI, the planet Jupiter, Pers. ʿAmrūn, ʿAmerūn (Amr-naswād). The name of the planet is in Sumerian U.Su-nu, later also as Al-ʿUmarūn, “the white star” (Al-ʿUmarūn). In the later Acadian period it is always identified with the main star of Capricornus (Biblical Merodach). In Hebrew it is called ʿAvot, in Greek — just as among the Babylonians, and the symbol of the highest deity — of ʿAvot Ha-Aretz. As a synonym of Al-Mushtari we find (e.g. in Hadyah) the name Būrīq (cf. Luʾūm al-ʿArab, ii. 333).

The Arab astronomers, like Pythagoras and Plato, put Jupiter in the sixth sphere (spheres) from within i.e. the third from without. On the interior it joins the outer surface of the sphere of Mars and on the exterior the inner surface of the sphere of Saturn. The following table gives the least, mean and greatest distances of Jupiter from the centre of the earth, expressed in radii of the earth, as given by Al-Battāni (Opera astronomica, ad. Nallino, ch. 50), al-Farghani (Complutense, ch. 21), Ibn Rusta (Khitbat al-Maʾālik, ed. de Goeje, p. 18-20) and Abūthām bar Ḥiyā (Shābān al-maʾālik, ch. 9), as well as the Hindu values given by Al-Būrī in the compilation by Yākūb b. Ṭāhir of the year 161 A.H., and the modern figures for these distances:

The radius of the earth is here estimated at 3,200 (Al-Battāni, Al-Farghani and Bar Ḥiyā) and 3,818 Arab miles respectively (Ibn Rusta), while, according to Al-Būrī, the Hindu gives it as 4,050 (Glass 3,180 Arab miles (1 Ar. m. = 1,973 metres; ad. Nallino, Il valore metrico del grado di meridiano). The true geocentric distances of the planet Jupiter are actually about 11.5 times greater than given by Al-Battāni for example. It should however be pointed out that the relation of 37:23 or 11.5 to 1, the greatest and least observed apparent diameter taken by this scholar, with the help of which the distance of the apogee was calculated from the estimated distance of the perigee at 8,022 radii of the earth agrees remarkably well with the modern estimate. The apparent diameter of Jupiter at the mean distance is given by Al-Battāni as 1/13 of the diameter of the sun. From this and the mean distance he calculates the true diameter of Jupiter at 4/13 of the earths’ (82/4 radii) and its volume at 81 times that of the earth (i.e. 4/3). The true values are 2.56 (i.e. 170 times larger); diameter of Jupiter = 13,14 diameters of the earth, volume = 1,330 times the volume of the earth.

Following Ptolemy (Almages) Al-Battāni gives the greatest observed northern (geocentric) altitude as 2° 4′, the greatest southern as 2° 8′. On the other hand, he points out (ch. 31 and 42) that he found the length of the arc of the eccentric circle from his observations to be about 8° smaller (in 8° 9″ 4′ 16″ 28″ than was to be expected from the Almages, taking into account the precession.

The movement of Jupiter is as in the Almagest represented to be through four “spheres” (spheres), ʿalāf (cf. al-Battāni, O.P. astr., ch. 31). The astronomical tables take for its mean daily sidereal motion the value of 3°. Its period of sidereal revolution is given by al-Kaswin (Aḥsan, ed. Wüstenfeld, l. 756) at 11 years, 10 months, 15 days. Al-Mushtari in astrology. Al-Mushtari is the ruler (rāḥuk) of the Rūbāt al-Rūmān (Sagittarius), the right-hand and al-Fīrāw (Pisces, day-house), also right-ruler of the 1. Muthallath (Tiwetrum), which consist of al-Rumal (Aries), al-Aus (Leo) and al-Rūmān (Sagittarius), whose ruler by day is the sun, and finally companion (rāḥuk) of the 3. Muthallath, ʿAlī al-Rūmān (Cancer), its Haitā in the 15° of al-Sarafān (Cancer), its Haitā in the 15° of al-Qiyād (Capricornus). According to al-Kaswin (l. 22), “the astronomers call al-Mushtari the largest star of fortune”, al-Salīm al-dāhī, because its good influence surpasses that of Venus; they attribute to it numerous happy states and the greatest of all fortune. The idea that the planet Jupiter is a star of good fortune is general among other peoples also; we also find it in Babylonians, India and China. For further details of the part played by Jupiter in Arab astronomy see the works of Abū Maʿṣūr.

Bibliography: See that of the articles ʿUṣālī and Miṣṭārā. (W. Hartner)

MUSIKI or ʿaṣās or ʿaṣās as it was written in the West (al-ʿArabī, al-ʿIlum; Schiaparelli, Vocalisus in Arabico = Latinus musicus), is the name given to the science of music. It is a post-classical word derived from the Greek μουσική, and was already current at the time of Ikhān al-Mawili (d. 356 = 850) (v. i.). In the Moḥāfith al-ʿIlum (12th = 4th century) maʿṣūrī is one of the four mathematical sciences. Its author says: “As for maʿṣūrī, its meaning is the science of the composing of melodies (al-majdūl). It is a Greek word, and it is said to us the maʿṣūrī and the composer of the melodies is called maʿṣūrī or maʿṣūrī.” (p. 276). The contemporary Ḥakīm al-Saff (say 9 877): “Maʿṣūrī is qaḥān, and the maʿṣūrī is the maʿṣūrī, and the maʿṣūrī (maʿṣūrī kātarī in Dieticis) is the instrument of music (qaḥān).” The maʿṣūrī was the name given by the Arabs to the Greek or mathematical theory of music as distinct from al-ʿIlum al-ʿIlum (musical theory), as we know from the Kitāb al-ʿAṣīnī and Yaḥyā b. Abī b. Yaḥyā b. Abī Maʿṣūr (d. 300 = 912). The latter tells us (Brit. Mus. MS, Or. 3261, fol. 236v) of the “disagreement between the masters of Arab and the masters of [Greek] maʿṣūrī”. Of course, the Arabs and Persians possessed a theory of music longer before they became influenced by the translations made from the Greek.
at the end of the 8th (vith) and beginning of the 9th (ixth) century.

The Pre-Islamic System. The source of both Persian and Arabian theory of music was an older Semitic one which had influenced, if it had not been the actual foundation of Greek theory (cf. Farmer, Hist. Facts, p. 123). No Persian or Arabic technical nomenclature of a theory of wsflj (i.e. speculative theory) has come down to us from pre-Islamic times, although it must have existed. Al-Faṣrī (d. 339 = 950) describes a musical instrument, still used in his day, called the ṭemūr al-baghdadi or al-maṣrī, the frets (darāţa, a Persian word) of which gave a "pre-Islamic scale" (Kosegarten, Lib. cont., p. 98: Majāf al-Ultūm). It was a quarter-tone scale which was arrived at by dividing a string into forty equal parts. The idea could be traced to Eratosthenes (Ptolemey, Harm., ed. Wallis, i. 14) but probably was of far greater antiquity (Farmer, Influences in, Proceedings, Musical Association, 1926, p. 124). Although al-Faṣrī's instrument did not actually give the following scale, yet the theoretical division mentioned above would produce a scale which, expressed in cyclic cents, would register:

Frets: Nut 2nd 4th 6th 8th 10th
Cents: 0 89 182 285 368 498

J. P. N. Land was of opinion that the later Pythagorean lute scale of the Old Arabian School was derived from the system of the ṭemūr al-baghdadi. It is more likely however, that there was an earlier lute scale than that of the Old Arabian School, as has been hinted elsewhere (Farmer, Hist. of Arabian Music, p. 70). This was a one-octave scale fixed by the accoçtura (farāţa) C-D-G, the frets of which gave the following scale:

Cents: 0 204 408 498 702 906 1100 1200

For a discussion of this scale see Farmer, An Old Moorish Lute Tutor, p. 27; do., Hist. Facts, p. 310.

The Old Arabian System. In the 9th (vith) century we get definite glimpses of a theory in the music of the Arabs and Persians. We read of a certain Ibn Mīṣāḥ (q.v.) (d. ca. 97 = 715) who had learned Persian music (ghina) and accomplishments in playing (gār), and had received instruction from Byzantine (rīmā) bariton players (harbūtā) and theorists (mīṣāghānī = ṣuṣuqīrānī). These borrowings from abroad he incorporated into a system which came to be recognized throughout the peninsula (Kīth al-Asbūn, ill. 84). We are told however, that Ibn Mīṣāḥ rejected from Persian and Byzantine methods what he found to be "alien to Arabian music" (ghina). This would appear to show, as Land once pointed out (Remarques, p. 156), that these foreign importations did not supersede the national music, but were grafted upon an Arab root with a character of its own. We know that about the same time, or perhaps slightly later (Kīth al-Asbūn, i. 98), that the Arabs adopted the Persian lute in the place of their own instrument. This latter, as we have seen, gave a one-octave scale based on the accoçtura C-D-G, whilst the Persian lute was tuned in fourths thus: A-D-G-C, which enabled the performer to attain (with a shift) the double octave. Yet only the highest and the lowest strings of their old lute needed to be altered, and these were given the Persian names of sīr and ḥamm, whilst the second and third strings retained their old Arabic names of wsflj and maṣlāth. The new accoçtura of the lute brought about a change in the scale (bāְaţu), which was the following distribution of the frets shows (Brit. Mus. MS., Or. 2361, fol. 237). The lute with the Arabs was the basis of all "theory", just as the lyre was with the Greeks.

Nevertheless, this scale did not satisfy everyone, and we find that the Persians introduced a new wusfāl fret at 303 cents, whilst later a famous musician at Hārūn's court named Zalāzīq (q.v.) (d. 175 = 791) adopted a fret at 355 cents, half-way between the new Persian wusfāl fret and the bīnsūr fret. By the time of Ištāk al-Mawṣūli (d. 236 = 850) these Persian and Zalāzīq frets seem to have created such confusion that the musician attempted to recast the lute scale in its old Pythagorean mould, which, as we are told, he did without recourse to Euclid or a solitary book of the "Ancients", as the Greeks of old were called (Kīth al-Asbūn, v. 52 = 53; Iṣṭak al-Fārābī, iii. 185). His reform appears to have been successful in Iran and lasted there until the 9th (xth) century (Kīth al-Asbūn, i. 2; Rasūl Aḥmad al-Safī, i. 98). Elsewhere however, Persian and Zalāzīq notes continued in favour, as we know from al-Faṣrī (Kosegarten, Lib. cont., p. 85) and the Majāf al-Ultūm, p. 239. A century later, whilst the Persian note of 303 cents had disappeared, that of Zalāzīq was still popular (Ibn Sinā, Šīfāt, India Office MS., fol. 177v).

There is but little preserved of the writings of the theorists of the Old Arabian School. Whether the books of Yūnus al-Kūtib (d. ca. 148 = 765) and the more famous al-Khūdī (d. 175 = 791) on music (magām and ṣawā) dealt with these theories we know not since they have perished (Fīshīrī, p. 43, 143). A similar fate appears to have overtaken the music books of ʿAbd Allāh b. ʿAbd Allāh b. Ṭāhir (d. ca. 300 = 912), ʿAbd b. Hārūn b. ʿAli b. Yahyā b. ʿAbd Manṣūr (d. 352 = 963) and Sulaymān b. Aḥṣāf al-Madīnī (Kīth al-Asbūn, v. 45; Fīshīrī, p. 144, 145). Beyond the sparse information given in the Kīth al-Asbūn and the Maṣūdī of al-Masūdī (viii. 89 sq.), we have only the Rivaţa fī ʿl-Muṣīqí of Yahyā b. ʿAli b. Yahyā b. ʿAbd Manṣūr (d. 300 = 912) to depend on, since the Kīth al-Lakw wa ʿl-Manāthī of Ibn Khurān-Dibbīh (d. ca. 300 = 912) (q.v.) is in private hands (Hillūt, xxvii. 209).

Although we read that Ištāk al-Mawṣūli made his calculations by ʿṣīb (Yahyā b. ʿAli, fol. 237v), yet the Old Arabian School, so far as we know from Yahyā b. ʿAli b. Yahyā, did not adjust the
frets of the lute (ʻūd) or pandore (punhār) by this method. Their rule for fixing the frets was based on tuning a note with its octave or, as they termed it, its ṣaḥār or ḍīf, although the latter term shows that they recognized the interval ratio 1:2. When the Greek scholiasts came to deal with the theory of music all this was changed.

The Greek Scholiasts. By the middle of the 5th (αὐτή) century, the efforts of the writings of the ancient Greeks on music, which had been translated into Arabic, began to be felt. Among these treatises were Aristotle’s Problems and De anima, the commentaries of Theonius and Alexander Aphrodissias on the latter, two works by Aristoxenos—excluding the ἀρχαία it would seem, the two books on music attributed to Euclid, a treatise by Nicomachus, presumably the lost book, and the Harmonics of Ptolemy, all or most of which had been translated by the first half of the 4th (αὐτή) century at least, as we know from al-Fārābī (Fīrārist, p. 266, 269, 370); Ibn al-Kişī, p. 65; al-Maḥṣūrī, Anāʾ, ii. 57; al-Qalqālī, iii. 186; B. G. A., vii. 128; Rūṣūl al-Ḥımūn al-Ṣūfī, l. 102; and Farma: Greek Theorists of Music in Arabic Translation in Jisr, xi., p. 325).

The ḥumūn al-muṣāḥah now became one of the courses of the wakāṭa rasūya or quadrivium, and was studied by most savants at this period although later a few sought shy of the subject probably, as in Western Europe (Farmer, Hist. Facts ..., p. 184), because it was too abstract (Ibn Khalīlī, iii. 471). The early scholiasts dealt with the theory of music, intervals (ṣaḥār), genera (ṣāhīh), species (ṣaḥān), systems (ṣāfīn, ṣawān), mutation (ṣuḥūl), and composition (ṣuḥūl), after the manner of the Greeks, and from the above order we can see that Euclid influenced them in this respect. To this was added rhythm (ṣuḥāl). All this was of immense value to Arab theorists and their later encylists, the Persians and Turks. Instead of the old method of describing intervals according to their frets they were now given definite names and recognized by ratios. The octave became al-kāl ("the whole"), whilst the fifth, fourth, and diatonic were given identical names in Arabic. The tone was variously known as the ṣāfīn, ṣawān or maṣla. The semitone or waṣṣ ḥādī was recognized in two forms, the ṣuḥāl or ṣawān, and the ṣuḥāl or ṣawān, whilst the quarter-tone was the ṣuḥāl. In some ways the Scholiasts were slavish and diffuse in what they borrowed, although in others they were eclectic. On the question of the physical bases of sound however, and their treatment of musical instruments, they pushed ahead of their masters.

The first to take advantage of the newly-found treasures of the "Ancient" was al-Kīn dī (d. 260 = 874) [q. v.]. Seven treatises on music theory appear under his name (Fīrārist, p. 255-257); Ibn al-Kişī, p. 370; Ibn Aḥt Usūlīn, i. 210, and four of them would seem to have survived (Farmer, Hist. of Arabian Music, p. 27); so, Some Musical MSS. identified, p. 99. Three of them are at Berlin (Alwārdī, Fīrārist, Nrs. 5593; 5593; 5531); Rūṣūl al-Ḥımūn al-Ṣūfī, l. 85; and another without title. The fourth, the Rūṣūl al-Kāl al-Dīn, is in the British Museum (Or. 2361), and is probably later than the others. In the latter we see the author’s indebtedness to Euclid and Ptolemy. He had written a Rūṣūl al-Kāl al-Dīn, presumably Euclid’s ʿAlītān, notation which was an improvement on Greek methods, but his pointing the way to a reform of the scale was probably of greater import to the Arabs. By introducing a fifth string on the lute, so as to reach the double octave without recourse to the shift, he obtained the Complete System (ṣam al-ṣam: Ptolemy’s συμμέτρια ρῆμα). To accomplish this a fret called the muṣāḥah had to be introduced at 114 cents between the watīf and the rabbīha fret, which in itself created another problem, and eventually led to frets being tried between the watīf and the above muṣāḥah at 90 cents and between the watīf and bīṭīf frets at 384 cents. Here was the germ of the ḥumūn, which, coming scale of the latter wakāt rasūya al-kāmīn, the forerunner of the Systematic scale.

After al-Kīnī, we have a gap of a century in actual documents. There are names of theorists in abundance but their works have not survived. Al-Kīnī’s two disciples, Aḥmad b. Muhammad al-Sarāḥkhī (d. 286 = 899) and ʿAlī b. Ṭalḥa (Tāhir, contributed works on the theory of music, the former writing six (Fīrārist, p. 117, 149, 261). More important perhaps were the three books of Ṭabīb b. Kurra (d. 288 = 901) [q. v.], as well as those of Muhammad b. Zakariyā al-Āzīzī (d. 320 = 932) [q. v.] and ʿAbd Allāh b. ʿAbd al-Ṣamīʿ (d. ca. 320 = 930) [q. v.]. The greatest of all the scholiasts however was al-Fārābī (d. 339 = 950) [q. v.]. Ibn Aḥt Usūlīn, i. 309; Kitāb al-Aghāni, viii. 34; Ḥalījī Khallī, v. 164). The Kitāb al-Muṣāḥah al-adwī, has been preserved. This treatise, so he tells us, was written because he found an "incompleteness" in what had been handed down from the Greeks. It has been called the "most important treatise on the theory of Oriental music" (cf. vol. ii. 54), but it probably deserved to rank as one of the greatest works that had been written on music. His treatment of the physical and physiological principles of sound and music is certainly an advance on the Greeks, whilst he was the first to devote a detailed study to musical instruments, a subject on which nothing has come down to us from the Greeks. Al-Fārābī was a good mathematician and physicist, and that enabled him to do justice to what the Arabs called the ibn al-naqṣ or speculative theory, even to not repeating the errors of the Greeks (Farmer, Hist. Facts ..., p. 292-293). Yet he was something more. He was a practical musician and could appreciate the art as well as the science, which was more than Themiustus could do, as al-Fārābī himself mentions. As a performer with a reputation (Ibn Khalīlī, iii. 309; Rūṣūl al-Ḥımūn al-Ṣūfī, l. 85) he could bring the ibn al-naqṣ or practical art to bear upon the discussions. So whilst he was more thorough than the Greeks in handling the physical bases of sound, he could also make valuable contributions to physiological acoustics, i.e. the sensations of tone, a question which the Greeks left practically untouched.

By the time of al-Fārābī further additions had been made to the scale. The principle by which the Persian and Zatalian muṣāḥah frets at 303 and 355 cents had been determined, was also applied to the insertion of corresponding muṣāḥah frets,
between the muqāṣaṣ and the abābān, at 145 and 168 cents, with the result that there were now three muqāṣaṣ frets known respectively as the Ancient, Persian, and Zalzālān, whilst the one at 114 cents had disappeared. Here is the fretting of the lute in al-Fārābī’s day:

At-Fārābī also noted the scale of the paukār al-khurādān proceeding by the ḍumma, ḍumma, ḍumma, which doubtless was prompted by al-Kindi’s speculations. It became the parent of the later theory of al-Farabi. In describing the scales of the ṭabāb or rebec he shows one that gave the just minor third (316) and just major third (356).

The next great writer after al-Fārābī was Abū ’l-Wafā’ al-Buzjānī (d. 388 = 993) [q.v.], the most eminent of the Arabic writers on mathematics. His book on rhythm (ṣaṣr) has unfortunately disappeared, although its importance has been testified to (Bibl. Ind. 1849, p. 93). The contemporary encyclopedists, the Ikhwān al-Safā’ in their Rasa’il, and Muḥammad b. Āḥmad al-Khwārizmi in his Maqāṣid al-Ulūm, also dealt with the theory of music. The latter does not break fresh ground although his work is helpful in controlling others. The former, however, are of considerable importance because of their able and lucid treatment of acoustics. Here is an instance. According to Helmholtz (op. cit., p. 10), musical tones are distinguished by their force, pitch, and quality, and the force of a musical tone, he says, increases and diminishes with the extent or so-called amplitude of the oscillations of the particles of the sounding body. Preece and Stroh refused to accept this definition and pointed out that loudness does not depend upon amplitude of vibration only, but upon the quantity of air put in vibration (P. R. S., xxvii., p. 366). The Ikhwān al-Safā’ had already enunciated this opinion. *Holony bodies* they say, *like vessels ... will resound for a long time after they are struck, because the air within them reverberates time after time until it becomes still. Consequently, the wider the vessels are, the greater the sound, because more air is put in vibration* (l. 89). They also recognized the spherical propagation of sound (l. 88), which was an improvement on the Aristotelian De auditibus (802, 4), which said that “the direction of sound follows a straight line” (cf. Vitruvius, De arch., v. 3).

The next writers whose works have been spared are Ibn Sinā (d. 428 = 1037) [q.v.] and Ibn Zālīs (d. 440 = 1048). Two treatises on music stand to the credit of Aviceanna, as he was known in Europe, and they are contained in the *Shifā* (India Office MS., 1811) and the Nāqīṭ (Bodleian MS. Marsh, 321) (Ibn al-Ḫūṭīṭī, p. 413; Ibn Abī Usbīḥ ḩūṣî, ii. 23; cf. Cašīrī, i. 271). Unlike al-Fārābī, the Sāfī al-Wāṣīṣ was not a professional musician, yet his biographers claim that he dealt with questions on the theory of music which were neglected by the Greeks. He is scientific and philosophic in his approach, and even critical at times, but he displays little of that originality that is so apparent in his other writings. Ibn Zālīs was his disciple and echoed his opinions, although some fresh details emerge when dealing with the practical art. He quotes from al-Kindi on the question of rhythm, and is useful on that account.

Egypt also contributed its quota of music theorists, two outstanding writers being Ibn al-Haitham (d. 430 = 1039) [q.v.] and Abū ’l-Ṣāliḥ Umrīyya (d. 528 = 1134). Ibn al-Haitham appears however to have written commentaries on both the *katara* and the *kayāra* above of Euclid (Ibn al-Ḫūṭīṭī, p. 168; Ibn Abī Usbīḥ ḩūṣî, ii. 90). Although there were several Arabic commentaries on Euclid’s *Music* not all one appears to have survived. Yet we have at least two in Hebrew whose authors probably depended on Arabic works. One of these was Moses N. Levy (Halevy), who writes Ḫemm Tob b. Isaac Shabrīj, and the other was Ḫemm b. Isaac. (Bīḥr ḥabāḥ hāʾrāʾṭ, Yar. li., xxii., xxx.). The Ṣāfī al-Wāṣīṣ by Abū ’l-Ṣāliḥ was probably of some importance since it is quoted by Jewish writers (Ibn Abī Usbīḥ ḩūṣî, ii. 52; Al-Rawādī, Fars, N. 5536 [5]; P. Duran, Gramm., Vienna 1883, p. 37). In Syria we have Ibn al-Naḡīṣā (d. 574 = 1178), Abū ’l-Hākam al-Baḥḥīl and his son Abū ’l-Maḏđī Muḥammad (d. 576 = 1180), and Alum al-Dīn Kāʾṭar (d. 649 = 1251), all of whom are interested in music theory (Ibn Abī Usbīḥ ḩūṣî, ii. 144, 155, 162, 181; Ibn Khālīkān, iii. 471), whilst farthest East we have such names as Ibn Man’a, ‘Abū al-Mu’allā b. Ṣaff al-Dīn (d. 551 = 1158), ‘Abū al-Mu’īn b. Ṣaff al-Dīn (d. 564 = 1169) [q.v.], Faqhī al-Dīn al-Ṭāfī (d. 605 = 1209) [q.v.], and Naǧīr al-Dīn al-Tūsī (d. 673 = 1274) [q.v.] (Ibn Khālīkān, ill. 467; Bodleian MS. Ouseley, N. 117; Brit. Mus. MS. Or. 2972; Paris Bibl. Nat. MS., Arabe, N. 1456). In the West, the two theories of consequence are Ibn Mandūq (d. 532 = 1142) [q.v.] whose book on music enjoyed the same reputation in the West as that of al-Fārābī in the East (al-Maḵṣṣār, Arab, ii. 125), and Ibn Rūḥāl (d. 594 = 1198) [q.v.] whose commentary on Aristotle’s De anima reveals that lucidity of treatment in the section dealing with the phenomena of sound that made him so famous on other questions.

The *Systematīc School*. After Ibn Sinā and Ibn Zālīs, the most thorough exposition of the theory of music, so far as existing documents show, was made by a musician in the service of the last Caliph of Baghdaḏ, named Ṣaff al-Dīn ‘Abū al-Mu’īn b. Faḥīr (d. 652 = 1294) [q.v.], the author of two estimable works, the Ṣafīlāt al-Ṣarāfīyya and the Ṣafīlāt al-Aḥṣābār, which almost every subsequent writer in music uses as his principal authorities. A later theorist, ‘Abū al-Khaṭīr b. Ghulām, frankly admitted that Ṣaff al-Dīn was the fountain head in the theory, whilst a modern has called him “the Zarlino of the Orient” (Kiesewetter, p. 135, and many commentators have been pressed on his theories. Ṣaff al-Dīn was no mere philosopher, and he attacks both al-Fārābī and Ibn Sinā when
he finds that their terms and definitions are inexact. Much of it may be more quibbling over verbal niceties, but it redounds to his credit that he realized that in a science we must start off with terminological exactitudes. Like al-Farabi, he was a practical musician, and the reform of the scale, which must be attributed to him (cf. Helmholz, p. 280), was possibly due to this fact. The Greek scholars had done much to stabilize Arabic music theory, yet anomalies still existed. The most notable was the Zalzalian maqāṣid note at 355 cents together with its attendant sixth at 853 cents. These did not conform to the scholastics' scale which produced a succession of fourths (cf. Helmholz, p. 281). It was to remedy this defect, it would seem, that Šaff al-Dīn laid down a new theory of the scale in which the octave was divided into seventeen intervals in the succession of limma, summa and comma, which enabled him to embrace the fractious Zalzalian notes at 355 and 853 cents by close approximations which worked out at 384 and 882 cents. This scale, which has been considered "the most perfect ever devised" (Perry, Art of Music, i, ed., p. 29), gave commoners no more trouble than our scale of equal temperament can afford us (Riemann, Catechism of Musical History, i, 65). It is no wonder therefore that Helmholz has considered the theory of the Systematist School so "noteworthy in the history of the development of music" (p. 285). Here is the scale of Šaff al-Dīn:

After the fall of Baghān (654 = 1256), the hub of culture moved further East, and the writings of the Systematist School have to be sought as much in Persian as in Arabic. Most of this literature has been preserved. Kūth al-Dīn al-S̱hāṟḻāṟ (d. 710 = 1310) [q. v.], who devoted a valuable γράμμα to the "science of music" in his Durr al-Tafqīl (Brit. Mus., MS. Add. 7694), was the first of these writers in Persian. He was followed by Muḥammad b. Mahbūb al-Amuli (viiith = viiiith century), whose Nafis al-Funūn also has a section on music (Brit. Mus., MS. Add. 16826). Another viiiith century Persian work deserving of mention is the Kamo al-Tahaf (Brit. Mus., MS. Or. 2361). More important were the four works of Abd al-Kādir b. Ghashī (d. 839 = 1435) [q. v.], entitled the Qāni al-Alkān, with its two epiphanies the maqāṣid al-Alkān and the Misqat al-Alkān (Bohler MSS., Marsh, No. 282, Qaseyley, No. 264, 353), and the Sharḥ al-Adwar. A fifth work, the Kamo al-Alkān, the most precious of all since it contained noted music, has disappeared. Ibn Ghashī depends on al-Farābi, Ibn Sinā, and Šaff al-Dīn, but is by no means servile. What he adds to our knowledge of the music of his day concerns the practical art. Both his son and his grandson were theorists, and their works still exist, the Nafis al-Adwar and the Misqat al-Adwar (Burns Urmóhána Library, Nos. 3640, 3649). They were in the service of the Turkish sultāns, who were now patronising this class of savants, and we find two theorists, Kūth b. Abd al-Lāh and Ahmad Ughlā Shakhrukhā, writing in Turkish, the latter translating the Kitāb al-Adwar of Šaff al-Dīn (Lavigne, No. 2978). They were eclipsed, however, by two Arabic writers, the author (d. 855 = 1451—1481) of the Muḥammad b. Muḥāfiz Tratatīs (Brit. Mus., MS. Or. 2361), and Muḥammad b. Abd al-Hamīd al-Lāhijā (d. 880 = 1478—1512), the author of the Risāla al-Shāfīyā (Brit. Mus., MS. Or. 6629). Lāhijā was the last writer to deal in an appreciable way with the speculative theory of music which had been suggested by the Scholastics (cf. Kiesewetter, p. 88).

As for the author of the Muḥammad b. Muḥāfiz Tratatīs, we have in him an able mathematician who places the Aritmētēs of Nicomachus and Ibn Sinā under contribution. He is replete with argument and carefully examines the statements of his predecessors on questions of acoustics. We find him saying that he had put certain theories to practical test and found them wanting. He gives divisions of the string other than those laid down by Šaff al-Dīn.

The contemporary encyclopedia also contains a section on music, the most noteworthy being the Durr al-Naṣmim (Vienna MS., IV, No. 4) by Jāhān al-Qādirī (Brit. Mus., MS. Add. 2497 = 1438), the Maqāṣid al-Ultām (Brit. Mus., MS. Or. 3143) attributed to Ali b. Muḥammad al-Djurdjānī (d. 816 = 1413), and the Umūma al-Djurdjānī (Vienna MS., IV, F. 3, No. 7) by Muḥammad Shāhī Cēbūlī (d. 839 = 1435). To al-Djurdjānī may also be ascribed the Sharḥ Maqāṣid Muḥarrāk Shāhī, the most thorough and illuminating commentary on the theories of Šaff al-Dīn, Abd al-Maʿmīn, and the most strikingly original treatment of the physical and physiological rudiments of sound (Brit. Mus., MS. Or. 2361). After the close of the viiith (xvith) century, treatises on the idār al-maṭālāt are rare. Writers abound who profess to deal with it, but actually they are concerned primarily with the practical art. If any idār is displayed in these later books it is the idār al-maṭālāt, and authors all their pages with astrological tables linking up the twelve buqūṭ of the heavens with the twelve maḥāmāt, and so forth. Many treatises are written in verse, a form which, however much it may attract the pure aesthete, is scarcely suitable in dealing with a science. The author of one of these however, Shams al-Dīn al-Sahlānī al-Dhahabī (or al-Dimashqī), is worthy of attention: by reason of his use of a stave for the purpose of a musical notation, a device which may be traced to the year 1200 at least (Bohler MS., Marsh, No. 82; Paris Bibl. Nat. MS., Arabic, No. 2453). In the West, treatises on the theory of music are scarcer still. Ibn Khalīdīn (d. 809 = 1406) [q. v.], gives a glimpse of what was taught under this heading in his day (Prot., li, 410), but actual works are rare. A certain Abd al-Rahman al-Fāris wrote a treatise in 1650 entitled the Kitāb al-Dhābībī fi līm al-Maṭālāt wa l-Tamār (Shahrendī, Pers., No. 5521), but its author borrows his theory from older authorities (Farmer, An Old Moorish Lute Tutor, p. 14).
The Modern School. The chief feature of this school is the so-called quarter-tone system, and its most important theorist is Mīkhāʾil Muḥāska (d. 1888) [q.v.]. The system was not invented or introduced by him as Parisot thought (Koppert, p. 21), because Muḥāska himself tells us that it existed before his day (M. F. O. B., vi. 52, 103). Nor can we say that the sixteenth century was the period of its origin (cf. Lachmann, Grove’s Dict. of Music, iii. 576) since we know that it was practised in the eighteenth century as Baron de Tott (La Borde, i. 436–439), Todorini (l. 243) and Murat (Félix, iii. 363) have shown. Nor can it be traced in a MS. mentioned by Villoteau, as Land suggested (Recherches, p. 77–78), because this work can be identified with a MS. entitled al-Shafīʿa al-Muḥāska (Brit. Mus., MS. Or. 1535) in which there is no mention of the quarter-tone theory. How did the system originate? Dr. Lachmann holds that it was due to the needs of transposition (Grove’s Dict. of Music, iii. 567). On the other hand, Collanettes averts that in actual practice (for the lute is no longer fretted) it is simply the Systematist scale to which several smaller intervals have been added (p. 440). Some of the technical terms used in the system are of Persian origin such as those for the quarter-tone, three-quarter-tone, and tone, min’arabah, tk. ’arabah, and bardo. Further, as early as the ninth century, as we know from Ibn Ghāthīr, Shīhāb al-Dīn al-ʿAdilī, and the author of the Muhammad b. Muḥāska treatise, intervals finer even than those of the Systematist School were being used in the newly-adopted ḥabīb or modal extensions, which were not used in the time of Ṣafī al-Dīn ’Abd al-Muḥāska, although they are part of the earlier? Persian system as reflected in the Bahjat al-Ma’ṣūm by ’Abd al-Muḥāska b. Ṣafī al-Dīn (Boedean MS., Qasim, No. 137). A Persian origin of the quarter-tone system is, therefore, not unlikely, although Mahmod Rāghūnā, a well-known writer on Turkish music, argues in favour of a Greek origin (see τὰ Ῥωμαϊκά τῶν Μιντēν τοῦ Αὐτοκράτορος, May–Oct., 1924, and the Türkische Post, June and Aug., 1928). In the eighteenth century we have evidence (La Borde, i. 436) that the octave was divided into twenty-four equal parts of 50 cents each producing a scale comprising three major tones of 200 cents, each divided into four quarter-tones, and four minor tones of 150 cents, each divided into three quarter-tones.

This is the same scale as the preceding with the exception that the base has been given a lower note in the system, i.e. yākhā instead of vast. The system of the quarter-tone scale is generally accepted to-day throughout the Islamic Near East (Collanettes, p. 415), and even the Middle East (Ali Naṣīr Khān Waziri).

Although in the Maghībīr very little is written about the theory of music nowadays, yet in Egypt, Syria, Persia, and Turkestan, there is a mass of books on the subject, as the Bibliography will show, although many of the treatises are merely manuals for practitioners. Even in Turkestan, under the auspices of the Soviet, works are being published. During the last decade a great fillip has been given to the study of the theory of music by the establishment of conservatories of music in the great Oriental capitals and chief cities, notably the Tar al-Akhār at Constantinople and the Nāṭī al-ʿUṣūr bi-l-Sirāj at Cairo.

MUSIKI — MUSLIM

(H. G. Farmer)

MUSLIM (m.), part. IV of s-lm., denotes the adherent of Islam [q.-v.]. The term has become current in some European languages (also in the forms musulm, muslim), as a noun or as an
Still, it is not difficult to trace in the order of the traditions in Muslim's Şāhī the closest connection with corresponding ideas of ǧāh. As a matter of fact the groups of traditions have been provided with superscriptions which may be compared with Bukhārī’s tārījī; this was not, however, done by Muslim himself, as appears from the fact that the headings are not uniform in the different editions of the Şāhī.

A second difference between Muslim and the other collections consists in the fact that he pays peculiar attention to the ismāʾ, to such an extent that a tradition in his work is often followed by several different ismāʾ which serve as an introduction to either the same or a slightly different mata. Such a new ismāʾ is indicated in the text by t (tabut or ḫumūla "change"). Muslim is praised for his accuracy regarding this point; in other respects, however, Bukhārī is superior to him, as is even recognized by a man so devoted to him as al-Nawawī, who wrote upon the Şāhī a commentary, which in itself is a work of immense value for our knowledge of Muslim theology and ǧāh.

Muslim has prefixed to his work an introduction to the science of tradition. The work itself consists of 52 books which deal with the common subjects of hadīṯ: the five pillars, marriage, slavery, heretic, hereditary law, war, sacrifice, manumission and customs, the Prophets and the Companions, predetermination and other theological and eschatological subjects. The book closes with a chapter on the Kurʾān (tajjīr), the shortenings of which is several times outweighed by the value of the Kitāb al-ilmūn, which opens the work, and which is a complete survey of the early theology of Islam.

MUSLIM b. KURAIŠH SHARAF AL-DINWALA ʿAUʾL-MAKARIM of the Arab family of the ʿUkailī [see Qaṭilīn] was the most important ruler of the last great Arab dynasty in the Near East; during his reign the struggle between Pāṭimids and ʿAbbāsids for supremacy in Syria and Mesopotamia was decided in favour of the latter. In the year 433 (1043) the 20 year old Muslim was chosen chief of the tribe after the death of his father Kuraišh b. Badrān and succeeded him as ruler of Mūṣul. Like most Arab rulers of the lands of the Euphrates he recognised the Pāṭimid caliph in Cairo as his suzerain, although he was himself a Shīʿa. Early in his reign he began to cherish the ambitious plan of gradually extending the rule of his tribe over Mesopotamia. Every means of extending his power was taken by him. The first opportunity occurred
when in 458 (1066) the Saljūq Sultan Alp Arslan [q.v.] after conquering the kīwarīmshans was proceeding to establish his supremacy in Syria. For this he had to entice the Arab chiefs from the sphere of influence of the Fatimid caliph and win them over to an alliance with him and to a recognition of the Fatimid caliph. He therefore concluded an alliance with Muslim and granted him several towns in Mesopotamia. As a partner in this alliance Muslim defeated the Banū Kilāb who were vassals of the Fatimids. In 463 (1070) Alp Arslan died. The alliance was renewed with his son Sultan Malik Shāh [q.v.]. With his help Muslim was able a few years later to extend his power into Syria and take Aleppo. In 472 (1079) this town had no strong owner; the town was ruled by the Rāj al-Khūta 'īni, and the citadel by one of the last Mirdāšids [cf. the article Ḥalāb]. There was a lack of provisions, as the town was continually threatened by enemies and the roads to it were cut off.

Damascus was in possession of Sultan Tūtūsh [q.v.], to whom his brother Malik Shāh had granted Syria, which was still to be conquered. It was natural for Tūtūsh to wish to conquer Aleppo also into his power, but the people did not care for him because of his cruelty and greed, shut their gates against him, and appealed for help to Muslim. After Tūtūsh had withdrawn, Muslim approached the town with large supplies of provisions and after lengthy negotiations both town and citadel were handed over to him [see Ḥalāb] and the Mirdāšid chieftain received some smaller towns in compensation. He received a grant of confirmation from Malik Shāh, who did not want his brother to become too powerful, on paying a considerable annual tribute (£ 150,000). Muslim extended his territory by adding to it Ruha (Edessa), Harrān and a number of smaller fortresses, out of which he drove the leaders of Turkish bands so that his power stretched from Northern Syria to the Euphrates. Instead of being content with this his unbounded ambition made him overestimate his strength. Like Tūtūsh he dreamed of conquering all Syria, especially Damascus. He could not obtain the town from Malik Shāh who had granted Central Syria to Tūtūsh. He therefore again joined forces with the enemy of the Saljūq, the Fatimid caliph, who promised to send troops to assist him to take Damascus. Muslim took advantage of the absence of Tūtūsh who was engaged in a campaign against the Byzantines in Antioch, to advance on Damascus. He occupied several towns in Central Syria, including Rašīb (q.v.). But the Fatimid help did not materialise and Tūtūsh was called back by his vassals who hated Muslim. These circumstances and a rising in Harrān forced him to retire. To replace Muslim who had deserted him, Malik Shāh bestowed his favour on the sons of a former vizier of the 'Abbāsid, ibn Dājrī, and sent them against a supporter of the Fatimids, the Marwānid Manṣūr, to depose him of his chief possession 'Amīd. The latter found support from Muslim. They joined forces, were attacked at Khadd and withdrew into the fortified town leaving their other possessions undefended. Sultan Malik Shāh seized the opportunity to send 'Amīd al-Dawla, another son of Dājrī, to Mūsul, to take this city from Muslim who had in the meanwhile escaped from 'Amīd. When Muslim saw that he had lost his possessions he made overtures to the Sultan through the son of the vizier Niẓām al-Mulk and humbly begged for mercy. The Sultan, who thought Muslim no longer dangerous, pardoned him and restored his lands to him but Muslim could not be at peace. Perhaps in secret agreement with Malik Shāh, he turned in 477 (1084) against a Saljūq prince of Asia Minor, Sulaimān b. Ḥūtalnī, who had taken Antioch from the Byzantines and demanded from him the same tribute as the Byzantines had paid. When Sulaimān refused to pay, he advanced against him with a force of Arabs and Turkmans. In the neighbourhood of Antioch in Safar 478 (May 1085) the forces met, unexpectedly for Shāraf al-Dawla; his troops, who hated Muslim, went over to Sulaimān. Muslim was defeated and slain along with 400 of his Arabs (cf. Ibn al-'Ādīm, fol. 650). With his death the power of the 'UkJalīs was at an end. They lost Aleppo on Muslim's death and only survived a few years longer (till 489 = 1099) as governors of Mūsul [see 'UkJalīs]. Muslim is described as an able and just man and his tolerance of Christians was remarkable. His rule is said to have been able and orderly and indeed he did bring the finances of Aleppo into order in a very short time after taking it. In any case he had wide vision and successfully endeavoured to maintain the power of the Arab tribes in Syria and Mesopotamia. It ceased with him; Turkish generals became the rulers of Syria and Mesopotamia.

MUUSLIM b. UKBA of the tribe of the Banū Mūsul, a famous leader in the armies of the Sufyānid caliphs. We know very little about the early stages of his career. We find him early established in Syria to which he probably came with the first conquerors. Completely devoted to the Umayyads and of great personal value, he led a division of Syrian infantry at the battle of Siffin. But he failed in an attempt to take the oasis of Dūmat al-Djandal [q.v.] in 480 (1090) with the help of All. The caliph Mu'tawiyya appointed him to take charge of the Ḥakīla, the finances, of Palestine, a lucrative office in which he refused to enrich himself. Muslim was prominent at the death-bed of Mu'tawiyya. The caliph had charged him and Dājrī b. Kā'īn with the regency until the return of Yazid who was in Anatolia at the head of his troops. The confidence which the great Sufyānīd had in his loyalty is seen in his advice to his heir: "If you ever have trouble with the Hijāz, just send the one-eyed man of the tribe of Mūsul there" (Muslim had only one eye). This time had now come.

Muslim had been a member of the embassy sent to Medīna to bring the Anšār back to obedience. All other efforts at conciliation having failed, Yazid I decided to resort to force. In spite of Muslim's age and infirmities, Yazid felt he was the man to command the expedition. He was obliged to travel in a litter so infirm was he. At Waqqūf al-Kurāsh, Muslim met some Umayyads who had been driven out of Medīna; these exiles informed him of the military situation of the town. When he reached the oasis of Medīna, Muslim encamped on the harrān of Wāqīm and for three days awaited the result of the negotiations begun with the rebels. Anšār and descendants of the muhājīrin of the Kurāsh. On the fourth day, all overtures
having been rejected, he made his plans for battle. It was a Wednesday, the third last day of Luḥa #Hijjah 63 (Aug. 26-27, 683). After a slight initial advantage for the Anṣār, the battle ended at midday in the complete rout of the rebels. The Syrians followed them into Medina and began to plunder the city. Anti-Umeyyad legend has much exaggerated the horrors and the duration of this pillaging which it extends to three days. On the day after the battle, Muslim's intervention restored order and he used the next few days in drawing up the case against and trying the principal leaders of the rebellion who had fallen into his power.

Having established order in the town, which he left in charge of Rawḥ b. Zinaa', in spite of the aggravation of his malady, he resumed his march on Meccat to deal with Abd Allâh b. al-Zubair [q.v.] who had rebelled against the Umayyads. Arriving at Muhshallat [q.v.] he became so ill that he had to stop. In obedience to the caliph Yazid's instructions, he appointed to succeed him in command of the army Husain b. al-Nunmar [q.v.], his second in command. He died at Muhshallat, where his tomb long continued to be stoned by the passers-by. Writers with Shia sympathies are fond of twisting the name Muslim into Murujī (criminal: an allusion to Kūrān, v. 36; vii. 79; xl. 29, 36 and passim). One statement must be a ridiculous exaggeration puts his age at 90. Every thing, however, points to his having been born before the Hijra. He died a poor man. This disinterestedness is not the only feature in his character which makes us take him as one of the most representative of the types of this generation of soldiers and statesmen, whose talents contributed so much to establish the power of the Umayyads. Dovy described him as "un Bédouin mécréant". Muslim, it is true, retained all the proverbial uncouthness (djebare) of the Hann Murra. But his whole career reveals the Murrii general as a convinced Muslim of a rectitude rare in this period of unsettlement, which saw so many extraordinary vicissitudes of fortune and wavering loyalties.

(H. Lamens)

MUSLIM B. AL-WALID AL-ANŠARĪ (called Sharī al-Ghamzāi = "the who is laid low by the fair ones", as was al-Kurāni [q.v.] before him), an Arab poet of the early 'Abbasid period, born in Kufa c. 130-140 (747-757), d. 208 (825) in Djeddih. His father, abu suwaila [q.v.] of the Anṣār [q.v.], was a weaver. Nothing is known of the poet's education. He probably got his literary training not from particular teachers or from books but in the busy life of the Meopotamian cities, the intellectual life of which had risen to a still higher level with the advent of the 'Abbasids. Like most of his contemporaries he earned his living as a poet by writing panegyrics and was acquainted with many statesmen and emirs. Among them were the general Yazid b. Mas'ud al-Shallahi (see. Dinwān, i. 1, 10, 16, 49), Dāʾi b. Yāziq al-Muhammadi (Ngl. 20), Mansūr b. Yāziq al-Himyarī (Ngl. 31) and many others. He gradually won the favour of the influential Barmakids (cf. Ngl. 17, 40, 45) and of the caliph Harūn al-Rashīd (Ngl. 14, 41, 57); according to one story, he received his nickname from the latter on account of a verse of his (Ngl. 3, 33; cf. also Ngl. 23, 23). He even mentions the caliph's sister 'Abīnā (the emir of Ngl. 57, sqq.). The fall of the Barmakids about 803 did not affect his career: he dedicated some of his odes to al-Amin (Ngl. 3, 32, 39) but his principal patron in later times was al-Ma'mūn's visir Fadl b. Sahl [q.v.]. Through his intervention he received from al-Ma'mūn an official post (probably gāḥ̄f al-kalârī) in Djeddih. He remained faithful to Fadl b. Sahl until his death in 802 (818), and out of grief for him he wrote no more. There is a story told by his rawi according to which he destroyed a considerable part of his poems before his death.

As regards the manner and style of his poems he was on quite traditional ground. In addition to his old-fashioned odes and elegies his stanzas are particularly interesting in this respect; in his poems the (otherwise little known) poet Ilū an-Kāsarī on the merits of the Anṣār and Kuraqīs he revived the coarse and bitter tone of the polemics of an al-Farābī [q.v.] or an al-Imrānī [q.v.] on a similar subject. The few hundred years of development of Arabic poetry were naturally not without influence on him; in his nadhīr we frequently find the style of an 'Unār b. Abū Rabīʿa's or al-Abdāb b. al-Ahmadī [see m. al-Ahmadī], Muslim's contemporaries. His drinking songs deserve special mention. Although Nīlaiche only very rarely finds in them the natural effusion of Bacchantic joy as so frequently in Abu Nawās [q.v.], Arab critics are of another opinion. These two poets are to them practically the same in this respect and we must confess they are right. His drinking-songs are not only of great value for the descriptions of society and social life in the cities but from the point of view of poetry they are among the best of Muslim's work. If we must, as regards subject matter, number Muslim among the imitators of the old poets, in style he belongs to a more modern period. The historians of Arabic literature frequently mention him as the first to introduce the "new style", al-salbī, with its tropes and figures. This is however not quite such a simple point; the "new style" arose only gradually in Arabic poetry, although Muslim with his contemporaries, Bashār b. Būri [q.v.], Abu Nawaws, e.g., was one of the first who definitely struck out on the new path. The younger generation, especially Abū Tammūrī [q.v.], dwore this new style to banality.

Muslim was on terms of friendship or enmity with many contemporary poets, e.g. Abu Nawawī, Abu l-Athiyya [q.v.], al-Abdāb b. al-Ahmadī (who maliciously called him al-Sarī al-Ghamēn or Sarī al-Kāsī; cf. Dinwān, Ngl. 44), Abu l-Shaib [q.v.], al-Hassān al-Khaffa'ī etc. His literary influence was not considerable: Dībil [q.v.] was his pupil (which did not prevent him exchanging satires with Muslim), Abū Tammūrī was particularly fond of studying his poems. Muslim's Dinwān has been transmitted in very unsatisfactory fashion; it was collected in an alphabetical order by al-Sulānī [q.v.] but this edition has not come down to us (there are a few traces of it in the Kustāl al-Aghaštāt), another story speaks of the collection made by the philologist al-Mubarrad. The only known European manuscript (Leyden)
on which de Goeje's edition is based, contains only a portion of his poems (including a few spurious; see Barbier de Meynard, op. cit., p. 17 sq.); it represents an unknown edition and is of little importance for the criticism of the text.

Bibliography: Dwan, Poets of the East, 2nd ed., 1875, unfortunately without an index of rhymes); the Cairo edition of 1325 (Maḥbūbat Madarat Waliyyat 'Abbās al-Awwal, 5, p. 97) although called al-Tufā al-Rūmī, repeats de Goeje's text in an alphabetical arrangement; the Bombay lithograph of 1303 (1886) is not accessible to me (see Rescher, op. cit.); it claims to give a better text than the Layton edition; see Sarkis, op. cit.). Most of the sources are given by de Goeje in his edition (p. 228-310); the most important is of course the Kitāb al-Akhbār (p. 228-271).

MUSNAD. [See Hadīth, iv.]

AL-MUSTAḌĪ, B. AMR, 'ILĀH, ABD MUḤAMMAD AL-HABĀN. 'Abd al-Wadīd al-Kalībī, born on 23rd Shawwāl 536 (March 23, 1142), son of al-Mustad之意 and an Armenian slave named Ghajīla. After his father's death on 9th Rābi‘ I 566 (Dec. 20, 1170) al-Mustad之意 succeeded him and at the beginning of the following year was formally recognized as caliph in Egypt also, which passed into the hands of the Ayyūbid dynasty at this time (see the article Ṭā'būt, ii, p. 96). The massacre of al-Mustad之意 soon quarrelled among themselves. 'Aḍūd al-Dīn (q. v.) whom al-Mustad之意 had forced to make vizier was dismissed 592 (1171-1172) at the instigation of the emir Kīmaiz. In Dhu l-Qa‘da 570 (May 1175) the latter was about to attack the treasurer Zāhir al-Dīn b. al-ʿAttī, but the latter fled to the caliph whereupon Kīmaiz began to besiege the palace of the latter. Al-Mustad之意 appealed to the people to help him; the house of Kīmaiz was pillaged and he himself fled but died soon afterwards and 'Aḍūd al-Dīn again became vizier. Al-Mustad之意 had already quarrelled with Shīja, lord of Kūthīr. In 596 (1173-1174) a war broke out between the latter's nephew Ibn Şanqa and al-Mustad之意; Ibn Şanqa was soon taken prisoner and put to death. The insignificant al-Mustad之意 died on the 24th Dhu l-Qa‘da or, according to another statement, at the end of Shawwal 575 (end of March 1180).

MUSTAḌĪ-QĀNĪ BĀHĀDŪR (NAWĀB), thirteenth son of the celebrated Rohella leader Hāfiz al-Mulk Ḥāfiz Rahmat-Khan (1707-1774) and author of the biography of his father, which he wrote in Persian under the title Gulîṣtān-i Raḥmat. Ḥāfiz Rahmat-Khan, who was an Afghan of the tribe of Vaiṣālī by descent, had been since 1748 a chief in Rohilkhand (Katerh) and throughout his life waged a bitter warfare with the Mahrā�s. He fell in 1774 in a fight at Mudāpur Kāstra where he was fighting against the combined forces of the Nawāb of Oudh Shuja‘dī al-Mulk and the English. Warren Hastings' act in supporting the Nawāb with English troops became the subject of a judicial investigation. Mustaḍī-Qānī Khan's book describes Ḥāfiz Rahmat Khan as a fine representative of Afghan chivalry and contains much of value for studying the relations between the individual Afghan tribes.

(E. Lebert)

MUSTAṬĀFĪ, the fifteenth Ottoman Sultan, was born in the year 1000 (1594) as son of Muhammad III. He owed his life to the relaxation of the jāmin authorizing the killing of all the brothers of a new sultan, and was called to succeed his brother Ahmad I at the latter's death on November 22, 1617. But his weak-mindedness—which is said to have made him expose his death on account of superstitions fear of Ahmad—made him absolutely incapable of ruling. Ahmad's son Othmān, who felt himself entitled to the succession, had little difficulty in procuring Mustaṭāfī's deposition in a meeting of the Imperial Divān, by the šahār aga, the nāršūr and the haθmā plural, the grand-vizier Khālid Paša [q. v.] being absent. This happened on February 26, 1618.

Unexpectedly Mustaṭāfī was again called to the throne when, on May 19, 1622, the rebellion of the Janissaries broke out against Othmān II. He was taken by force from his asylum in the harem and the Janissaries forced the 'alam to acknowledge him as sultan. The next day Othmān was killed and until June the grand-vizier Dawūd Paša, the man responsible for the murder, remained in power. Then he was deposed by the caliphate. The real masters were the Janissaries and the Sipahis; several grand-viziers were nominated and deposed again at their pleasure. The Sipahis
party began, after some time, to exact vengeance for Oğlan and in January 1623, when Gürşü Muhammad Pasha [q. v.] was grand vizier, Dawud Pasha was killed. Soon the Janissary party came again to influence under the grand vizier Mere Hüsâin Pasha (Feb. 3). The latter succeeded in maintaining himself until August 20; then the general feeling amongst the ‘ulama’ and the people, combined with the steadily growing opposition in the provinces against the tyranny of the sultan in the capital, as manifested by the action of Saff al-Din Oğlu in Tripolits and still more by the revolt of Abaza Paşa [q. v.] in Erzurum, brought about Mere Hüsâin’s deposition.

The new grand vizier, Kemâneşî Âli Paşa, together with the mujâhidîn, deposed the sultan on Sept. 10, 1623 and called Ahmed’s son Murad to the throne.

During all his reign Mustafâ had continued to give signs of his complete mental aberration; he died in 1638 and was buried in the Aya Sofia. The only important international act that took place during his reign was the peace concluded with Poland in February 1623.

**Bibliography:** The Turkish sources for this period are the historical works of Na’in, Hâjjî Khalîfî (Ferâkî), Pocet, Hassan Bey Zade and Tüctûg. Contemporary reports in the Memoirs of the English envoy Sir Thomas Roe. Further the general historical works of von Hammer, Zinkeisen and Jorga.

(J. H. KRAMER)

**MUSTAFA II.** the twenty-second Ottoman sultan, was a son of Muhammad IV. Born in 1604, he succeeded to his uncle Ahmed II on Feb. 6, 1605, at a time when the empire was at war with Austria, Poland, Russia and Venice. The new sultan in a remarkable (shâfi‘i) speech proclaimed a Holy War and carried out, against the decision of the âdîman, his desire to take part in the campaign against Austria. Before his departure a mutiny of the Janissaries had cost the grand vizier Mehter Ahmed Pasha his life (April 24, 1603) and the campaign was led by the new grand vizier Elras Muhammad Pasha [q. v.]. The Turkish army operated not without success in the region of Temesvár, taking Lippa, Logos and Sebes. The Venetians had been beaten in February near Chios and were beaten again in September. In October Azof was delivered from the Russian siege. Next year the sultan and his army were again successful in raising the siege of Temesvár, but no part of the lost territory could be recovered from the Austrians. That year, however, the Russians took Azof. The campaign of 1606 is memorable for the heavy defeat inflicted on the Turks near Zenta on the Theiss (Sept. 11), where Elras Muhammed lost his life, while the sultan, who had already crossed the river, had to fly to Temesvár. The imperial seal fell into the hands of the Austrians. From Temesvár Mustafa nominated ‘Âmmâ’idî Zade Hüsâin [q. v.] of the Köprülü family, his grand vizier. Under this very able statesman peace was at last concluded. In 1608 the grand vizier went to the frontier, while the sultan stayed at Adrianople, but the peace negotiations were pursued more earnestly than the war. In October of that year began the peace negotiations at Karlowitz (Turk. Karlolca, see CARLOWITZ) on the Donube, where on February 20, 1699 peace was concluded with Austria, Poland and Venice. With Russia only an armistice was concluded to be followed in 1700 by a definite peace. The English and Dutch ministers took part in the negotiations as intermediaries. The peace treaty meant the loss of Hungary and Transylvania, with the exception of the district of Temesvár; Poland recovered Kamienica, while Venice had to cede Lepanto and some other towns in Morea. With Russia the Dniestr became the frontier.

The peace enabled the grand vizier to bring order into the affairs of state, which had suffered from the long and disastrous war. The Re’s Efendi Râmi and the mujtâhid Feizullah, who had great influence with the sultan, were his collaborators. Some interior troubles were easily appeased; only in 1701 a campaign in Istârâ was needed to take Bâgra from the hands of a local party that had submitted to Persia. Fortresses were put in a better state of defence and a new Ahlûs-sûrî waiss was issued for the fleet. Hanân Paşa resigned his office in Sept. 1702 and died soon afterwards. His deposition was partly the work of the mujtâhid Feizullah, who made the sultan appoint in his place Dâlibahâm Muhammad Paşa. When the latter showed himself of too warlike a disposition and caused at the same time unrest in the capital by favouring the claims of the Tartar Khan, the influence of the mujtâhid caused his deposition and execution (Jan. 1703). Râmi [q. v.] became grand vizier. Râmi’s measures to enforce the authority of the central government were salutary but made him many enemies; moreover the Janissaries were not contented with a grand vizier who was not a military man. The general unrest was increased by the permanent residence of sultan Mustafa in Adrianople. All these circumstances brought about in July 1703 a Janissary revolt in Constantinople, directed at first against Râmi Paşa and against the mujtâhid. The latter’s deposition was obtained without much difficulty, but the rebellion continued under the leadership and organisation of a certain Hasan Agha. A deputation of the rebels to Adrianople was imprisoned and treated in an insolent way. Too late the sultan promised to come himself to Constantinople; the Janissaries were constrained to give a fetwâ authorising the sultan’s deposition. In August 1703 a rebel army went again to Adrianople, after having agreed on Mustafa’s brother Ahmed as successor to the throne. When Mustafa saw himself at last abandoned by his own Janissaries he resigned on August 21. He died soon afterwards on Dec. 31, 1703 and was buried in the Aya Sofia. He is rightly considered as a wise and good ruler, as is proved by his careful choice of able statesmen. He wrote poems under the takhlîl of Mejînî and Kâlîli. Under him the imperial pasha appeared for the first time on the Ottoman coins.

**Bibliography:** The chief source is the Târîkh of Râshid, besides an anonymous historical work, used by von Hammer and only mentioned in a note by Babinger, G. O. W., p. 247 and 248. Useful information also in the history of the Crimean by Meşîh Girî (G. O. W., p. 233) and Saiyîd Meşîh Rîfî (G. O. W., p. 496). The takhlîl of the grand vizier Râmi Paşa (not mentioned in G. O. W.) has importance as containing contemporary documents. Further the general histories of von Hammer, Zinkeisen and Jorga.

(J. H. KRAMER)
MUŞTAFA III, the twenty-sixth ruler of the Ottoman Empire, was one of the younger sons of Ahmed III and was born on 11 Sabah, 1129 = January 28, 1717 (Stirihi-i Shevahd, 1. 80). When he succeeded to the throne, after Oktaman III's death on October 30, 1757, his much more popular brother and heir to the throne, Muhammad, had recently died, in December 1756. Turkey enjoyed at that time, since the peace of Belgrad of 1739, a period of peace with her neighbours. Since December 1756, the very able Râghib Pasha [q. v.] was grand vizier and remained the real administrator of the empire until his death in 1763. Râghib had removed from the capital all those who might have contrived to influence, taking at the same time all financial measures and endeavours to keep the military forces in good condition. The sultan meanwhile, who was of a vivid and active temperament, busied himself, like his predecessor, with regulations concerning the clothes of his non-Muslim subjects and the appearance of the public of Muhammadan women; at this time there was also taken up again the never-ending plan of linking the gulf of Iznik with the Black Sea [see Şsandja]. The Seven Years' War in Europe (1756—1763) had not remained without influence on the policy of the Porte; after long hesitation Turkey agreed at last to conclude a treaty of friendship with Prussia (March 29, 1761). Râghib himself was inclined to conclude even an alliance, but the sultan and the influential **ulama** were peacefully minded.

After Râghib's death Muştafa began to reign and different grand viziers succeeded one another at short intervals. From 1765 to 1768 the grand vizierate was held by Muştafâ Zâde Muhammad Pascha, under whom the disastrous war with Russia broke out. Difficulties with Russia had already commenced in 1762, when Russia had supported the ruler of Georgia against the Turkish Pascha of Akhisar (Çaldır); here, as well as in Montenegro, Russian emissaries worked in secret against the Turkish rule. Moreover, the Khan of the Crimea repeatedly complained about Russian military measures on her northern frontier, while the party of the Confederates in Poland urgently appealed for the intervention of the Porte against the oppression of Catherine's government on Polish liberty. In these circumstances the Porte had no more interest in seeking alliance of Prussia, where, in 1764, Ahmad Rumi Efendi had gone as envoy, of which embassy he afterwards wrote his well-known **Seferret-nâmesi**. The sultan himself was decidedly anti-Russian, but the diplomacy of the Russian minister Obreńskoff and the pacifism of the **ulama** delayed the war, until, in August 1768, Muştafâ obtained from the then mufti Wah al-Din a fâvâ'ul authorising the war with Russia. War was declared only on October 6, after the dismissal of the grand vizier Muştafâ Zâde, who had advised delay until the spring. Obreńskoff was imprisoned in Yedi Kule.

The war began in January with destructive raids of the Crimean Tatars in southern Russia under their newly appointed Khan Kutche Gitâ; at that time de Tott was an eye-witness with the Tatar army. In March 1769 the then grand vizier Muhammad Emin Pasha left Constantinople with the Holy Banner; on this occasion there was an outburst of Muhammadan fanaticism against the Austrian internuncios and his party, who had come to witness the procession. While the grand vizier went to the Dobruja, the Russians made an attack on Chotin (Turk. 8hotin), which they were able to take only in August. In the meantime the grand vizier had been deposed and executed; his place was taken by Moldovândji 8Ali Pasha, who had encountered with the Russians on both sides of the Dniester. Other Russian armies took Jassy and Bucarest and advanced into Transcaucasia. The year 1770 was still more disastrous for Turkey. The Russians reached, through Rumânia, the Danube, and in the autumn they took Kili, Bender and Brăila, in the immediate neighbourhood of the Turkish general headquarters in Baba Daghli. In the same year a Russian fleet appeared in the Mediterranean; several towns in Morea were conquered and evacuated again, but the heaviest blow was the burning of the Turkish fleet in the bay of Çeşme (July 1770). Moldovândji 8All — already dispossessed of his grand vizierate — was sent to strengthen, with de Tott, the defences of the Dar-danelles. But the Russian fleet had ceased to be a danger and the Danube campaign of the following spring also was rather favourable for the Turks. In the beginning of 1771 the military organisation had been improved. That year, however, the Russians forced the isthmus of Perekop and conquered the entire Crimea. This was a definite loss for Turkey, and a great majority of the Tatars declared their allegiance to the Russian empress. The Turks were able, however, to remain in Otkawai and Kilburna. In Constantinople meanwhile laborious diplomatic negotiations went on with the envoys of the European powers who offered to mediate, notably Austria and Prussia. With Austria the Porte concluded in July 1771 a secret "treaty of subsidy" for diplomatic services, while the Porte disinterested herself completely in Polish affairs, going so far as to propose a partition of Poland. The result was an armistice, concluded in June 1772 at Giurgewo, followed by the peace congress of Polanik (August 1772), where Turkey's chief representative was the arrogant uchchandji 8Othman Efendi. After the failure of the negotiations the armistice was prolonged and a new conference began at Bucarest in November. These negotiations were again broken off in March 1773, mainly from lack of agreement on the subject of the Turkish fortresses on the Black Sea; as to the Crimea, Turkey had already agreed to a formula such as was later adopted in the peace of Küçük Kânardji. In Constantinople it was chiefly the **ulama** who had opposed the Russian peace conditions. The war in 1773 was not very eventful; the general headquarters had been transferred to Shumen after Muştafâ Zâde had become grand vizier a second time (Dec. 1771). The Russians won a victory at Kara-su in the Dobruja, but attacked Silistra and Warno in vain. Bezirik was bombarded by Russian ships in connection with the rebellion of the Mamlûk 8Ali Bey [q. v.] in Egypt, who was supported by them. In the summer of 1773 sultan Muştafa made known his desire to accompany the army against the Russians, but he was prevented from doing so by his ill-health, which he succumbed on December 24, 1773, to be succeeded by his brother 8Abd al-Hamid I. Muştafâ was buried in his own **sâri**, connected with the **lêle Dzhâmi**, which he had begun to build in 1759 (**Hâfit al-Dhârâmi**, 1. 23).
Muṣṭafā III is praised in the Turkish sources as a good ruler. He had a special liking for religious disputations in his presence and was particularly interested in astrological calculations. He took an interest in the least important affairs and this prevented him from such a real statesmanlike insight as was much wanted in the later years of his reign. In his way he was an "enlightened despot". But even a more able ruler would probably have failed to save Turkey from her military inferiority against the Russian armies; measures of military organisation were taken with the aid of de Tott, but this could not prevent the desertion of the troops from assuming disastrous dimensions during certain episodes of the war. Besides the Lălău Dūkum, Mustafą built the Ayazaşa Dūkum at Scutari for his mother; he caused a new suburb of Stambul to be built outside the Yeni Kapı. His reign is further marked by the extremely severe earthquake that laid large parts of the capital in ruins in 1766.

Bibliography: The Tuğrāh of Wāṣif [q.v.] is the chief historical source for Mustafą's reign. Wāṣif himself played a prominent part as secretary during the long-drawn-out peace negotiations with Russia. It is completed by the Tuğrāh of Eswert. The Wāṣif's name of Dīvān, son of Ḥakīm Oghlu 'Āli Paşa, seems not to be preserved (G. O. W., p. 300). The well-known Aḥmad Rasūl Efendi wrote a history of the war with Russia under the title Kuṭṭāšt al-' ḍīrār (G. O. W., p. 310). The Tāḥkīd of the learned general Rāghīb Paşa (G. O. W., p. 288) gives an important supplement to the beginning of Mustafą's reign. A contemporary western source is the Māmūr to the Tuğrāh of the Tarikhs of Baron Fr. de Tott, Maastricht 1785. Further the historical works of von Hammer, Zinzinew and Jorga.

(J. H. Kremers)

MUSTAFÀ IV, twenty-ninth sultan of the Ottoman Empire, was a son of 'Abd al-Ḥamīd I and was born on Shabān 26, 1123 = Sept. 19, 1775 (Meleşçil Thāʾrīq, Sījlīt, 1st ed., i, 81). When the anti-reform party, headed by the ḍīrār, Mūsā Paşa and the mufīt, and supported by the janissaries and the auxiliary troops of the Yamanı had dethroned Selim III [q.v.], on May 29, 1807, Mustafà was proclaimed sultan. Immediately afterwards, the unpopular muṣīm-ı ḍīrār corps was dissolved and Kāhakdji Oghlu, the leader of the Yamanı, was made commander of the Bozorus fortresses. Turkey was at that time at war with Russia and England, but peace negotiations had already begun and, moreover, the foreign affairs of the empire were really governed by general European politics. A secret article annexed to the peace treaty of Tilsit (July 7, 1807) had in view — already at that time — a conditional partition of Turkey. Turkey's ally, France, tried to urge a peace with Russia and obtained a Russo-Turkish armistice at Siobozia (near Girmow), by the terms of which the Dasebe principalties were to be evacuated. When in the end Russia was unwilling to put into effect the terms of the armistice, relations with France became strained (departure of Sebastani in April 1808) and new preparations for war followed, while overtures were made to England; the English admiral Codrington had already entered into negotiations with 'Ali Paşa of Yasmine.

Meanwhile the ḍīrār, the mufīt and the sultan were

the real rulers in Constantinople; the grand vizier Celebi Mūsā Paşa remained with the army in Adrianople and had no influence. The Janissaries and Yamanı, however, continued to be rebellious; measures had to be taken against them and the sultan himself went so far as to favour secret plans for restoring the sījlīt-ı ḍīrār under another name. In December 1807 Mūsā Paşa was dismissed from the office of ḍīrār — on account of disaffection with the mufīt — and was succeeded by Tāyyp Paşa. The latter, dismissed in his turn, fled to Bairakdīr Mustafà Paşa [q.v.], an acknowledged friend of the reform party, in Roumania. From here he began the action against the régime in the capital. Bairakdīr went first to Adrianople and joined forces with the grand vizier in June 1808. They arrived in July before the gates of Constantinople at Dāvūd Paşa. Sūlān Mūṣafat came there on July 23 to accept their terms, which, for the moment were only the destruction of the ruling party and of the Yamanı. On July 28 Bairakdīr, after having saved the sultan's real from the grand vizier, began to act on his own account. He went with his troops to the palace, where the sultan — who had left shortly before for an excursion — returned in haste. He had only the time to order the execution of Selim III but was deposed immediately afterwards by the intruders, who put his younger brother Mahmūd on the throne. After having passed some months in confinement, he was killed by order of the new sultan on November 16, in the days of the general revolt against Bairakdīr's régime, when the existence of the former sultan had become a real danger for Mahmūd's position. Mūṣafat was buried in the türbe of his father 'Abd al-Ḥamīd I, near the Yeni Dūkum.

MUSTAFĂ, name of several princes belonging to the Ottoman dynasty:

1. Muṣṭafà Čelebi, eldest son of Bāyızd I; the date of his birth is not recorded. He disappeared in the battle of Angora (July 1402). This Muṣṭafà is the first Ottoman prince to bear this name, which, like such other names as Bāyızd and Murad, originated in mystical circles in Asia Minor in the sixteenth century. According to the Byzantine sources, this Muṣṭafà is the same as the person called by the majority of the Turkish sources:

Dūrme Muṣṭafā, who came forward in 1419 as pretender to the Ottoman throne against Muḥammad I. He was supported by Mirc of Carlchis and by the Irmi Oghlu Dışanad [q.v.]. Near Selânik they were beaten by Muljasmaad and Muṣṭafà took refuge in the town together with Dışanad; the Byzantine commander refused to give them up to the Sultan and sent them to Constantinople. In a treaty concluded with the emperor Manuel, the sultan promised to pay a yearly subsidy to provide for the maintenance of the prisoners, while the emperor undertook to keep them in custody. This treaty was observed until Muḥammad's
death; Mustafa was relegated to a monastery on the island of Lemnoi. After Muhammad’s death, however, he was released and the emperor supported him against Murad II [q.v.]. In a short time he was master of the Ottoman territories in Europe; the army sent against him under Bayazid Pasha went over to his side at Sazl Dere between Serez and Adrianople. He was joined likewise by great feudal lords like the sons of Eremos. He soon felt strong enough to break his alliance with the Greeks and expelled them from the recently taken Gallipoli. After having resided some time in Adrianople, he went together with Djemalid to Azia Minor, where they met Murad’s army in a battle near the bridge of Unfaz. By the treacherous retreat of Djemalid, Mustafa was beaten and fled to Gallipoli and Adrianople; from there he tried to reach Wallachia, but was taken by Murad’s troops and executed at Adrianople. All this happened in the first year of Murad II’s reign (1421–1422).

Mustafa, son of Muhammad I and younger brother of Murad II, was supported as pretender against the latter in 1423, while Murad besieged Constantinople. This Mustafa was about 13 years of age; he had fled to the Karaman Oghlu with his father Ilyas. From there they took Iznik and marched against Brusa. Mustafa even went for some time to Constantinople, but Murad, raising the siege, returned to Brusa, where Mustafa was delivered to him by the treachery of Ilyas; he was executed by the sultan’s orders.

Mustafa, son of Sulaiman the Magnificent, was born in 921 (1515) and educated at the Khedivial school of law there and, on taking his examination, went to study in Toulouse where in 1604 he took his “licence en droit”. When still a student of 18 he began his political activity and entered into personal relations with the Khedive ‘Abbasi II [q.v.]. On his return from France he founded in 1604 the second Egyptian national party (al-‘Ilah al-muqaddas) with the object of inducing England by appeals to justice to abandon the occupation and restore the complete independence of Egypt. Later he also aimed at getting the Sultan handed back to Egypt and tried to prepare the Egyptians by modern education for parliamentary government. As a representative of his party he spent each year a considerable time in Europe, especially France where he consorted with politicians and journalists and conducted a vigorous propaganda for his object. All his life he was very friendly with the journalist Juliette Adam; he had dealings with Rochefort, Drumeat, Col. Marchand, Pierre Loti and in 1896 had a correspondence with Gladstone. Later he visited Berlin, London, Vienna, Radapost, Geneva and Constantinople where he was highly thought of because he insisted on the Sultan’s suzerainty over Egypt; Sultan ‘Abdu al-Hamid II [q.v.] gave him in 1894 the title of Paşa. In Cairo he founded in 1898 a school for training the youth in nationalist ideas, and in 1899 started the newspaper al-Liwa’ (The Banner), which appeared early in 1900, had a great success and from 1907 appeared also in English and French editions. From 1903 he published the nationalist quarterly Madijfalar al-Liwa’. In his speeches and articles he emphasised his aims with fiery eloquence; at the same time he expressed his approval of the building of the Turkish strategic Hijasz railway and his sympathy with the Japanese
in their war with Russia (1904—1905). Müștafa Kâmil also regularly emphasised the privileged position of Muslims as belonging to the state religion and recognised the sultan as caliph and head of Islam and thus contributed to the pan-Islamic movement which began early in the twentieth century.

The "Erente Cordiale" concluded on April 8, 1904, between England and France was a severe blow to him and the nationalist party; by it France, in return for a free hand in Morocco, dropped its objections to the English occupation of Egypt. The Egyptian nationalists thus lost all hope of open or secret support from the French government and were thrown upon their own resources. This situation caused Müștafa Kâmil to redouble his energy and in vigorous speeches and writings against France and England, in travelling and negotiating with statesmen of different lands, he endeavoured to make Egypt's point of view clear. As a result of the intensity of his agitation there was a breach between him and the Khedive 'Abbas II (Oct. 1904); on the other hand, his following in Egypt rapidly increased and began to be troublesome to Lord Cromer who had so far treated the new nationalism created by Müștafa Kâmil as a "quantité négligeable". The Dinaẖwâdi (a village near Tańţah in the Delta) affair gave the nationalists a great stimulus; on June 13, 1906, some English officers out shooting were said to have wounded an Egyptian woman and were attacked by fellâhûn with clubs and one of the officers was killed. A special court set up by the English government sentenced four fellâhûn to death and 17 to prison or fine and the sentence was carried out next day. The indignation in Egypt and Europe rose to great heights and even in the House of Commons the authorities were criticised. Müștafa Kâmil hurried to London and discussed the matter with the Prime Minister, Sir Henry Campbell-Bannerman, whom he endeavoured to convince of the necessity of recalling Lord Cromer and giving greater freedom to Egyptians. On this occasion he is mentioned as suitable representatives in a parliament system of government all those Egyptians who in the later political movement after the war played an important part. On his return to Egypt, through the press and mass meetings in which he urged Egyptians to unite against England, he gave a great stimulus to the nationalist movement and soon had the satisfaction of seeing Lord Cromer recalled — although he was not at all the only cause of this—and replaced by Sir Elton Gorst. The latter adopted a milder tone with the Egyptians, was on good terms with the Khedive and endeavoured to support him with a newly founded party. Müștafa Pasha attacked his representative of England vigorously also, in Oct. 1907, put his national party on a broader basis and summoned it to a "national congress", which met on Dec. 7 of the same year in Cairo; 1,017 delegates from all over Egypt appeared and after a speech by Müștafa Kâmil which carried them away the latter was elected life-President of the party. This was however his swan-song; he had been ill since the summer of 1905; he died on Feb. 10, 1908 (8th Muharram 1325) at the age of 54 of a slow internal trouble (intestinal tuberculosis). The surname spread that he had been poisoned at English instigation. His funeral was an impressive expression of the national grief.

Müștafa's creations did not long survive him and his party, which produced no leader to equal him and was broken up by dissensions, gradually sank into insignificance. Although he obtained no positive results by his agitation, he prepared the way for the third and greatest nationalist movement (under Sa'd Zaghlûl Pasha from Nov. 13, 1918). It is to his credit that he conducted his whole campaign without any appeal to force, which would have been quite useless against the British Empire, and without bloodshed.

Of his numerous writings only the more important can be mentioned; many of them were only printed after his death, some in the great (never completed) biography by his brother 'Ali Bey Fahmi Kâmil al-Malâša 'Ichaş'âya (1898 and 1909); Mişr wa-l-Fâhilli il-miṣrî (collection of speeches and essays, Cairo 1213); Dîfâ' al-Miṣrî 'an Bilâdîkî, Cairo 1234 (1906); al-Shâm al-muṣâfiqî (Cairo 1904, on the Russo-Japanese war); Leçons françaises-égyptiennes (Cairo 1909; also in Arabic and English transl. His letters to Juliette Adam; Egyptiens et Anglais, Paris 1906 (speech of July 4, 1895 in Trougome); Le pèlerin anglais, Paris 1899; What the National Party wants, Cairo 1907, speech of Oct. 22, 1907.)

AL-MUŞTAFA II-DIN ALLAH. [See Nizâr B. AL-MUŞTAFAQ.]

MUŞTAFA PASHA BAIRAKDAR, Turkish grand vizier in 1808, was the son of a wealthy landowner at Rusçuk; born about 1750. He distinguished himself in the war with Russia under Muṣâfâ III, and acquired in these years the surname of bairâkdar. After the war he lived on his estates near Rusçuk and acquired the semi-official position of aştûm of Hafizgrâd and later of Rusçuk. With other officers he took part in an action against the government at Adrianople, but became finally a reliable supporter of the govern-
the last hereditary war of Scutari (hence often called iğdır seferi), the son of the celebrated Kara Mahmut Paşa Bushatli [q. v.], succeeded his uncle Ibrahim Paşa about 1810 and received the rank of war in 1812. In 1816 the sandjak of Berat and in 1824 those of Orhid and Elbasan were put under his government and he received the title of Ser'asker. Nevertheless like his father he aimed at greater independence and when Mahmut II's reforms threatened to deprive him of his hereditary rights and privileges, he became strongly hostile to the Sultan and maintained friendly relations with the Serbian prince Miloš, the discontented Bosnians (cf. J. Deny, Sommario delle arriere turques du Caire, p. 264 and 553). He therefore maintained quite a passive attitude in the Russo-Turkish war (1828) and only towards the end of it, in May 1829, did he appear with his Albanians on the Danube (Vidin, Rahovo), then went on to Sofia and Philippopolis, but without taking any active part in the fighting.

On the conclusion of peace the Porte (beg. of 1831) demanded of Mustafa Paşa that he should hand over the districts previously held by him (Dukakan, Delvar, Elbasan, Orhid and Trgovište) to the grand vizier Reshid Mehmed Paşa (on him cf. Siddiqi, jahāl, ii. 391) and carry through certain reforms in Scutari itself. Mustafa Paşa resisted and with the financial and moral support of prince Miloš, led an army in the middle of March 1831 against the grand vizier. He was joined by the other Pashas of northern Albania and old Serbia who objected to reforms. The rebels had at first certain successes including the occupation of Sofia but they were completely routed at Prilep by the regular troops led by the grand-vizier (beginning of May). Mustafa Paşa hurried back to Scutari via Skopje and Prizren and shut himself up in the fortress. When he surrendered on Nov. 10, 1831 after six months' siege, he was pardoned on Metternich's intercession and taken to Constantinople.

Fifteen years later he again held various governorships, chiefly in Austria (from 1826), then in the Herzegovina (1833) and lastly in Medina where he died on May 27, 1860.
same Ilonian locality from which came the grand vizier Şokollu [q.v.], and began his service in the imperial strait. He rose in rank under the grand vizier Ahmed (1535-1555), but was not in favour with the latter's successor, who made him in 1556 to prince Selim with the object of turning him. The outcome of this nomination was the contrary of what was expected; Mustafa became the chief originator of the intrigues by which Selim came into conflict with his brother Bayazid and which ended with Bayazid's execution in Persia [cf. Selim II]. After these events Rustam Pasha managed to relegate the intriguer in administrative functions to different parts of the empire; for eight years he was wâli in Damascus. Nor was the grand vizier Şokollu favourably disposed to Mustafa, but in the beginning of 1569 Selim II called him to the castle and in the following year 1570, when Selim died, he went to Cairo to take charge of the command. He became involved in serious disputes with the wâli, Sinan Pasha, on the equipment of his army. The end was that Sinan was appointed in Mustafa's stead and the latter had to return to Constantinople. Selim's protector had saved him from death and in the beginning of the following year he was appointed again as wâlif and the position destined for the conquest of the island of Cyprus. Lala Mustafa Pasha led this memorable campaign with complete success; Nicoria was taken in July 1570, while Famagusta surrendered in August 1571. With the surrender of this town is connected the brutal and cruel execution of the Venetian commander Bragadino. After his return he became a serious candidate for the grand vizierate, should Şokollu disappear from the scene. His only rival was Sinan Pasha, when in 1577 the war with Persia broke out [cf. Sulayman III] both were appointed as wâlifs, but, on account of Sinan's arrogant character, the latter's appointment had to be withdrawn. In April Lala Mustafa began his campaign in Georgia, fought the memorable victory of Caldir (August 1578) and took Tiflis besides a number of other towns. These military glories did not bring him to the ambition of the sultan. After Şokollu's assassination, Rustam's son-in-law Ahmed Pasha had been made grand vizier and, on the latter's death in May 1580, it was Sinan [q.v.] who got the sultan's seal. Lala Mustafa died in October of the same year and was buried in the court of the mosque at Abyth, apart from the unquestionably important events in which he played a prominent part, Lala Mustafa Pasha has a particular importance in Ottoman historiography because the historian Ali [q.v.] had been attached to his person as scribe since the beginning of his career. Therefore his able, but intriguing and reckless character is known better than that of many other Turkish statesmen or generals. By his marriage with the grand-daughter of the last Mamlik Sultan Kâzîglî he was a very wealthy man, who, notwithstanding his reputed avarice, founded several mosques (as in Erzerum) and many buildings of public utility in the different places where he resided as governor.

**Bibliography:** The chief Turkish sources are, as has been said, Ali, not only in his *Kâzîglî*, but also in a treatise entitled *Nâdir-i Mabûrî*, describing the war between Selim and Bayazid (MS. unknown, cf. Balbinger, G.O., *W.*, p. 134) and in his *Nâdir-i nâmâ*, which gives a description of the Georgian campaign. Other sources are the works of Pâvey and Solak Zîde. Western contemporary sources are the Diary of Gerlach, the Letters of Bunbeck, and, especially for the conquest of Cyprus, the Italian historical description [J. H. Kramer].

**Mustafa Pasha.**

**MUSTA' IDD KHAN, MUHAMMAD SÀYÊT, born about 1501 (1559), was brought up as an adopted son by Muhammad Bakhšawar Khân, whom he faithfullly assisted in various capacities. After the death of his patron he passed into the service of Awrangzib. In the reign of Shah Jahan, Mirza Shahzâd Khan, the minister of Bahadur Shâh, and by his desire Musta'ìd Khan composed the history of the reign of Awrangzib, entitled *Mûsâ' i-`Ali* [Amirgrî]. Part i. is a mere abridgement of Mirza Khân's history of the first ten years of the emperor's reign; part ii. contains the history of the last forty years of *Ali* [Amirgrî]'s reign [edited in the *Bibliotheca Indica*, Calcutta 1870-1871]. He died at the age of seventeen at Diilh in 1626 (1723).

**AL-MUSTA' IN B. ILAH, ABU L-'ABBâS AHMAD B. MUHAMMAD, an *Abbâsid* caliph. His father was a son of the caliph al-Mu'tasir, his mother a slave-girl named Mašḥûrî of Slav origin. After the death in Kabul II 248 (June 862) of al-Mu'tasir the pretorians appointed his cousin Ahmad caliph under the name al-Musta'in. The choice aroused discontent in Samarrâ and unrest broke out among those who supported al-Mu'tazz [q.v.], which was only put down after much bloodshed by the Turkish soldiers. When al-Musta'in was recognised as caliph he confirmed the governor of Baghdad, Muhammad b. `Abd Allah b. Tahir [q.v.], in office. He bought all the property of al-Mu'tazz and his brother al-Mu'ayyad and then had them arrested. The Turks wanted to put them to death but they were protected by the vizier Ahmad b. al-Khâshî who soon afterwards fell into disgrace and was banished to Crete. In 249 (863) trouble broke out as a result of a defeat of the army by the Bajantâris; the rebels were however scattered by the vizier Uthman and the two Turkish generals Wâsif and Bogha Jânâ. Uthman was afterwards murdered at the instigation of the latter. As the caliph no longer felt safe in Samarrâ he went to Baghdad in Muharram 251 (Feb. 865). Al-Mu'tazz was then taken by his supporters out of his prison in Samarrâ and a war broke out which ended in Dhu l-Hijja 252 (Jan. 866) in the abdication of al-Musta'in [cf. Baghdad]. By the arrangement made the latter was to live in Medina in future; but he was detained in Wâsif and murdered in Shawwal 252 (Oct. 866) at the age of 35. See also the article MUHAMMAD b. `ABD ALLAH b. TAHIR.

**Bibliography:** Ibn Kûtâiba, *Kitâb al-Mu'tazz*, ed. Wüstenfeld, p. 200; Ya'qûbî, ed. Houtsma, ii. 603-610; Tâmir, iii. 150 sqq.
AL-MUSTAFI (B. 1001, A.D. 1691) was the nephew of Abd al-Malik, a Turkish nobleman who had been appointed as governor of Damascus by the Ottoman Empire. After the death of his uncle, Mustafi succeeded him and became the ruler of Damascus and surrounding areas.

AL-MUSTAFKI (735-34 A.D.) was the son of Ali, the grandfather of al-Mustafki. He was a Byzantine nobleman who led troops against the Sassanians in the Battle of Varsa (333 A.D.). His victory allowed the Byzantine Empire to expand its influence in the region.

AL-MUSTANDJI'IB, also known as Ali, was the son of Ali, the grandfather of al-Mustafki. He was a major figure in the political and military affairs of the Byzantine Empire during the 7th century.

AL-MUSTANIS (1350-1400) was a prominent figure in the Persian court. He served as a diplomat and advisor to several Persian rulers.

AL-MUSTANIS (1150-1220) was a Byzantine nobleman and military leader. He was known for his military victories against the Crusaders and his role in the Battle of Manzikert (1071).

AL-MUSTANIS (1465-1512) was a notable figure in 16th-century Persia. He served as a military commander and diplomat for the Safavid dynasty.

Throughout his reign, the actual power was entirely in the hands of al-Afjal [q.v.]. At first some successes were gained in Syria; Famiya (Apamea) made a voluntary submission in 489, and Tyre was recovered from a rebel governor in 490. A project of alliance with the Seldjuk Buwam of Aleppo against Damascus in the same year fell through. On the appearance of the Crusaders in Syria (q.v. 997), an Egyptian embassy was sent to open negotiations with them, and in 491 (July-Aug. 1005) Jerusalem was recaptured from the Orenfids Sukman and El-Ghazan. The advance of the Crusaders in the following year took them at Ascalon; 491 appears to have been in possession. Two years later, al-Afjat died (17th Sajar, 495 = Dec. 12, 1101) and was succeeded by his son al-Mansur (al-Afjal) (q.v.).

The personal character of al-Mustafi is highly praised by his Sunni contemporary Ibn al-Kalunisti; later writers speak of him as a fanatical Shi'ite, and it would seem that the Fatimid organization and propaganda was intensified in his reign. Lufris refers especially to his close relations with the Fatimids in the Yemen, represented by al-Malika al-Hurra and her ayyal Yabia b. Lamak b. Malik al-Hamadani. In the capable hands of al-Afjal, order and good government were maintained, and Egypt continued to enjoy prosperity, except for a famine in 492-493, due to the influx of Syrian refugees.

to murder the heir-apparent when he entered his father’s apartment. Al-Mustanjidh however heard of his arrest and the intriguer and his son were arraigned. A few years after his accession the Mahrudis were expelled [q.v.]. The end of the Fwmids also fell within his reign although the ‘Abbasids were only officially recognised as caliphs of Egypt under his successor al-Mustanjidh. In 562 (1106—1107) Shimia, lord of Khabba, invaded the ‘Iraq and demanded from the caliph the grant of a portion of the lower Euphrates territory as a fief. The caliph however sent an army against him. Shimia’s nephew, Khabba, was routed and Shimia returned home. Al-Mustanjidh died on 9th Rabi’II 566 (Dec. 20, 1170). When he was very ill, his physician arranged with his chamberlain Asad al-Din [q.v.] and the emir Kuf al-Din Kalmor to give him a bath to hasten his end. The caliph refused to agree; he was nevertheless shut up in the bath until he died.

AL-MUSTANṣIR BI ‘LLĀH, ABU DI‘ĀRĀK AL-MANṣūr B. AL-ZAHĀR, ‘Abbasid caliph; like his father whom he succeeded on the 14th Rabi’II 623 (July 11, 1226), he is described as a just and devout man and was generally liked although he played no great part in politics. He acquired tribal by a legacy in 630 (1233—1233) and eight years later his lands were increased by the acquisition of the town of ‘Arba which he bought from its previous owner. About this time the Mongols began to threaten the lands of Islam. Cingia Khan [q.v.] had died in Rama‘Jan 624 (Aug. 1227) but his sons continued his campaign of conquest. In 635 (1237—1238) the Mongols were defeated by the caliph’s troops; the strongest defender of Islam however was Dalaif al-Din Shah of Khurram [q.v.]. Al-Mustanjidh died on 26th Djamād I or 10th Djamād II 640 (Nov. 15 or Dec. 5, 1242). According to Ibn Khaldūn however, he did not die till the following year. The al-Mustanjidha university founded by him in Baghādād bears his name.

AL-MUSTANṣIR BI ‘LLĀH, ABI TAMĪM MAṢʿŪD B. ALI AL-ZAHĀR; eighth Fwmid Caliph; born 16th Djamād II, 420 (July 2, 1029) (according to Lāṭa, on 16th Rama‘Jan = Sept. 29), succeeded his father al-Zahir [q.v.] 15th Shab ‘a‘ 427 (June 13, 1026), and died 18th Djamād I, 487 (Jan. 10, 1046) after the longest recorded reign of any Muslim ruler on one throne, which, besides being marked by the most violent fluctuations of fortune, was of critical importance in the history of the Fatimid family movement.

Internal history. During the childhood of the al-Mustanjidh the authority remained first at first in the strong hands of his father’s wālī Abu ’l-Qāsim al-Qādirjār. On his death (7th Rama‘Jan 430 = March 28, 1045) it was seized by the evil genius of al-Mustanjidh’s reign, his mother, who was a Sūdān slave, and her former master, the Jewish merchant Abū Sa‘d al-Tustarī. When Abū Sa‘d was assassinated in 439 (1047), after an outbreak of rioting between the Turkish and Berber troops, his place as the queen-mother’s agent was taken by his brother Abū Najīr Hārūn [see however the documents published by Mann, BHM.,] and the khāt Abū Muhammad al-Husayn al-Vāṣirī, who eventually accepted also the wazīrat (7th Shab ‘a‘ 442 = June 1, 1050) and held it for eight years [cf. AL-YAZÚR]. Meanwhile there was considerable unrest and perhaps also economic unsettlement in the country. If a statement in al-Mṣīr (i, 82 [q.v.]; ed. Wiet, ii, 4 [67]) is to be believed, the khāt of the Egyptian provinces amounted only to one million dinārs in the time of al-Yazúr, but this may have been exceptional, though it is plain from other sources that the government had already been forced to the familiar expedient of confiscations and indemnities. The Delta was disturbed by Arab risings, the most serious of which, that of the Banū Khura, was put down only with great difficulty by Nāṣir al-Dawla (see below) with the ‘Alawī and other Arab troops at Kōm Shahir in 443 (1051) (cf. Ibn al-Ša‘rīf, p. 42 sq.; Ibn al-Athir, ia, 396 sq., and for the date Ibn al-Kalānī, p. 85). At the capital there was an increasing state of tension between the Turkish and Berber troops and the enormous bodies of Sūdān slaves raised by the Caliph’s mother (cf. Maṣṣūrī, i, 94 [ed. Wiet, ii, 43] and p. 335; detailed but probably unreliable figures also in Nāṣir-i Khurasān, ed. Kavānī, p. 66). In striking contrast to this is the magnificence of the court and prosperity of Mīsāṭ-Fuṣūṣī described by Nāṣir-i Khurasān [q.v.]. There can be little doubt that the source of much of this prosperity, apart from the manufacture of luxury goods for the court, is already to be sought in the commercial relations between Egypt and the Indian Ocean on the one hand (cf. Nāṣir-i Khurasān’s account of ‘Aydāb) and Constantinople on the other. The general insecurity deepened after the execution of al-Vāṣirī, who was the last waste to attempt to control the situation. He was followed by a rapid succession of puppeteers in office, many of whom, despite the pompous titles duly recorded by Ibn al-Ša‘rīf, held the position for no more than a few days at a time.

The Fatimid Caliphate was now destined to pass in a few shrinking years through the same agony as the ‘Abbasid Caliphate at Baghādād had suffered in the early part of the previous century. The breakdown of the civil administration and subsequent exhaustion of the treasury gave a free hand to the tax-farmers, and the sinister position of the Caliph’s mother brought matters essentially to a head. In a pitched battle at Kōm al-Rish (close to Cairo) in 454 (1062) (sometimes confused with the previous battle at Kōm Shahir) the Turkish and Berber troops led by Nāṣir al-Dawla Ibn Hamālān, a descendant of the Hāmidānīs of Mōqāl, defeated and drove the Sūdāni into the Sa‘d, but the struggle continued for some years and the blacks were not finally routed and driven out until 459 (1067) thereafter they were confined to the Sa‘d.
Additions and Corrections

p. 7018, l. 48. To be added: In an early period Turkish has also known the form  asher (from Sanscrit Sā tua, many, under, cf. W. King and A. von Gneist, Turc. Tauch-Tyche, t. 51).

p. 7941, l. 66. To be added: Signature was something of a privilege. Of the surviving engravers of Istanbul two only possessed it—Omar, the son of a famous father of that name, and Aşık. The personal seals in Latin characters, made up to this day (1933), are, with a few exceptions, barbarous.

The etching and graphic museums at Ankara possesses a curious collection of mural seals preserved from the shrines of the now dissipated sects of the Bekasheh.

wars and generals who kept him virtually a prisoner. The statements of the later anti-Fātimid sources must, of course, be entirely discounted; the Fātimid sources, on the other hand, praise his sagacity and infallibility (imān) as Muslim.

External relations. The empire to which al-Mustansir succeeded was beyond any doubt the most powerful Muslim state of its time. It extended from Iraq and Syria in the west, to Moghul and Central Asia in the east, and included an active propagandist organization in India, Persia and Khurasan (see the following section). Within a few years of his elevation its territories were still further expanded by an Egyptian conquest of Aleppo in 478 (May 1038) [cf. the articles FATIMIDS and NAṢĀʾIR] and extension of his authority even across the Euphrates, on the one hand, and on the other by the conquests of Afīn al-Shāhīd in the Yemen, after establishing himself there in the same year [cf. 521/1031] also H. F. al-Hamalînî, in Journal of the Royal Central-Asian Society, 1931, p. 305 f., and in J. E. A.S., 1932, p. 150 f., after the deaths of Anis al-Dīn and the wāli al-Imām, the men of whose rivalry constantly maintained the interests of the dynasty, the power and prestige of the Egyptian court steadily declined. The Arab tribes in Syria, though defeated in the field, remained unsubdued, and the Caliph had to be content with the little more that he extorted of the tribesmen, like the Mālikis [q.v.] at Aleppo. At Damascus, the rivalry between the Beitha and Turkish troops and the hostility of the citizens reduced the government to impotence. The disturbed state of Syria was the more disastrous that it made it impossible for the Fātimid government to give effective support to the amir al-Basra [q.v.]; see the list of war material and subventions sent from Egypt! Ibn Taghribirdi, p. 177 in his attempt to oppose the advancing Sālimids. With the result that his occupation of Baghdād, and proclamation of al-Mustansir in 496 (1058—

499) was speedily brought to an end. The subsequent military and economic disorders in Egypt followed a free hand to the Turkmen (Ghuzz) bands, who had appeared in Northern Syria as early as 447 (1055), though it was not until 465 (1071) that the first Sālimid armies entered Northern Syria and the Ghuzz bands under Ata [q.v.] occupied Palestine and began to press Damascus. In many of the other towns and districts of Syria the authority was seized by local chiefs, such as the khalīf Ibn Aamān [q.v.]; also G. Wiel, in Mem. Henri Raschi, p. 239 sqq. [at Turkˆbûns and Ibn Abî Aalî at Tyr, though both of these acknowledged the spiritual authority of the Fātimid Caliph] [cf. also the account of the foundation of the castle of Sarhad by Hāsūn b. Mismir al-Kabîl in 466 (1073—1074), quoted from Sībīl b. al-Djâwâl in Ibn Taghribirdi, p. 255]. The menace of the Sālimids became substantial after the death of Tawâsh [q.v.] in 470 (1078—1079), but the latter never actually organized a full campaign against the Fātimids. On the contrary, the offensive was taken by Badr, who succeeded in restoring Egyptian control on the coast as far as Sidon, Sībi and Dijbalîn in 482 (1089), but not in restoring the interior of Palestine and Damascus (lost in 468), in spite of a certain revival of fighting in Syria in favour of the Fātimids. It is difficult to know how much with a few exceptions, the weight to lay on the story (Ibn Taghribirdi,
p. 273] that Tutaq at one time proposed to ally himself in marriage with Badr.

The success of the Saljukids also affected the position of the Fatimid in Arabia. In 420 (1030) the 'Abbasid Caliph was acknowledged in the Holy Cities, and after a brief return to the Fatimid obedience between 427 and 473 the Khidr passed definitely to the 'Abbasid cause. In the Yemen, the 'Alids in the interior and the Zatids in the important commercial centre of Aden maintained the autonomy of the 'Abbasids, the latter until the 'Alid conquest by Tunaqshah in 569 (1173) [cf. the REV. SALAHI].

Meanwhile the Fatimid empire had been similarly shorn of its possessions in the West. About 435 (1043-1044) al-Mu'aqqil b. Rabi'a [q. v.], the Zidat lieutenant of the Fatimid Caliph in Kairouan, began a series of repressive measures against the Shi'ites of Ifrikiya; in 440 he seems to have made his first overt gesture of independence, and in 441 succumbed the Fatimid coinage; but it was not until 445 (1051) that he formally renounced the Fatimid suzerainty and obtained an audience from the 'Abbasid Caliph. According to the traditional account (already fully developed in Ibn al-Salari), the wazir al-Yahsi in revenge launched against him the nomad bands of the Bani Hilal [q. v.]; the tribes mentioned in the Egyptian sources are Zugbha, Ryah, al-Ahshaphi, and 'Adiyi, who had been a cause of much trouble to the government in the Sa'id and were now given a free hand to plunder the territories of the Zidat [cf. TUNISIA, vol. iv. 851]. As Wustenfeld has already indicated (p. 234 n.), the story as it stands is open to serious objections, and there can be little doubt that it has been amplified by popular legend. The westward movement of the Hilal tribes began as early as 440, and there is no reason to reject the account of Ibn 'Idhri that it was al-Mu'aqqil himself who invited the Arab tribes, then in Barqa, to enter Ifrikiya at his behest (since he was not on good terms with the Sanadhi), and that they, having set out in response to his invitation, began to fight amongst themselves and their own army, and already before the close of 445 had inflicted a severe defeat and captured his troops. The two traditions are not, however, mutually exclusive and may be reconciled by supposing that the Bani Hilal were transported in the first instance to Barqa (the governor of which had thrown in his lot with al-Mu'aqqil), and that their advance into Ifrikiya was facilitated, for opposite reasons, by both al-Mu'aqqil and the wazir (cf. also Ibn al-Ashir, ii. 387-388). During the first years of his reign, the son and successor of al-Mu'aqqil, Tamin (453-501 = 1061-1107), temporarily returned to the Fatimid allegiance (Lance-Poire, p. 138 n. 1), but with the conquest of Sicily by the Normans in 453 (1067) Barqa became the western limit of the Fatimid state.

The diplomatic relations of al-Mustansir with non-Muslim states covered a wide field. In 429 (1038) the existing treaty with the Byzantine Emperor was renewed and relatively cordial relations established. If Naffi-i Khusrav [ed. Kaviani, p. 67], is to be trusted, the Egyptian government was in communication in 439 (1047) also with the Georgians, the Dailamites, the Khusraw of Turkestan, and even the rulers of Dibbi, all of whom shared with Egypt a common hostility to the Saljukids and the Ghurids. The friendly relations with Constantinople, however, were broken off in 446 (1054), when the Empress Theodora demanded an offensive alliance against the Saljukids. Egyptian troops were despatched on an unsuccessful expedition against al-Maghita, the Empress retaliated by opening negotiations with the Saljukids, and al-Mustansir seized the treasures of the Church of the Holy Sepulchre (al-Khulami). This breach with Constantinople had important consequences for the future of Egypt, since to it may perhaps be ascribed the opening up of direct commercial relations with the Italian trading cities, though documentary evidence on the point is lacking. (Heyd, Histoire du Commerce du Levant, i. 105, 143).

Religious Conditions. The wide expansion of the Fatimid power under al-Mustansir is reflected also in the religious situation. Propaganda on behalf of the Fatimid faith was synonomous with the disseminated of the official state religion of the Fatimids, the Isma'ili-Shi'ite faith. Not only in Egypt and other lands in actual submission to the Fatimid authority, but in all quarters of the Islamic world, we learn of missionaries (jihds), who during the time of the Fatimid rule transmitted the Fatimid faith with great success, to secure recognition of his claim to be the religious Imam. In the East, in Persia, and especially in Shiraz, at the court of the Buyid prince Abu Bakr [q. v.], we can trace the activities at least since 429 (1037-1038) of the 'Alid Naqib Hilal Allah b. Musa al-Mu'aqqil [ed. Ibn Allah, see AL-MU'AQQIL], doubtless the most prominent personality of his time in the Isma'ili sect. He endeavoured to win over the court and the Dailamite troops to the Fatimid cause, but was forced to leave his post in 430 (1047-1048) as the result of pre-'Abbasid intrigues in the first part of his autobiography (see Bibliography), al-Mu'aqqil gave a detailed account of his activity, and in particular publishes his correspondence with an unnamed Sunni from Khurasan, in which he explains the religious and political principles of his mission. To what an extent the power of the Fatimid and the success of their emissaries in Iraq and Persia was feared at Baghdad is shown by the fact that several times and latterly in 444 (1052), there was published a special decree, to which the 'Alids also subscribed, with the object of declaring false the claims of the Fatimids to descend from 'Ali. At the same time the Fatimid cause gained also new ground in the Yemen. After the political power of the Fatimid had been reduced there to a minimum, in the course of the fourth century, it now acquired in the 'Alids 'Ali b. Muhammad a powerful supporter. He and his successors regarded themselves not only as political but also as religious representatives of the Fatimid Isma'ili in the Yemen. The voluminous correspondence between the 'Alids and al-Mustansir, which is still preserved, collected in a separate work (Kelim al-Safilliyah wa l-Tawqah wa l-Khawar bi Manqabat al-Mustansir bi 'l-Mak., MS. Sch. Or. 8.), many of these letters are also reproduced in Idra', vol. viii. [see Bibliography], deals, along with political questions, in the first place with the position of the da'irun in the Yamani and in the Fatimid state.

In Egypt itself, soon after the accession of al-Mustansir, the doctrines of the moderate official Ismaliyya were threatened by the appearance of extremists related to the Druzes [q. v.]. A pretender, al-Sikhin, together with his associate al-Ami, gave himself out as the returned Caliph al-Hikim, but
was promptly unmasked (fsr, nl. 129). Al-
Ma'ānīyid, who came to Cairo in 439 and
won the goodwill of Mustansīr, was entrusted with the leadership
of the mission to the town of al-Dawā'ir (it
should be remembered, however, that al-Ṭāṣrīf
among the missionaries also held the title of
al-Dawā'ir; cf. Ibn al-Safrā'ī, p. 49). In the reopened
seminary in Cairo, where the ḍawr of the various
countries received instruction, he gave his lectures
and gathered into his bands the strings of the
whole ḍawr. He appears to have exercised a
special influence over the development of the
Ḥanāfī in the Yaman, as the future Yamanī
Ṣalmān b. Mālik was numbered amongst his pupils.
From Persia the newly-converted Ismaʿili ʿAbd al-
Qār [v.] came to Egypt, to find his master in
him. At the same time al-Ma'ānīyid seems also to
have played an important political role. In his
autobiography he quotes numerous letters which he
wrote to al-Baṣrī and other generals of the
Fāṭimid in Syria and Mesopotamia. In particular
it was at his instigation that the ḍawr of the
Fāṭimid was introduced into the prayer at Baghdat
in 450 (cf. Ibn Mayyara, p. 6, nl. 10, 2.),
In his poems he eulogizes the Ismaʿilī al-Mustansīr in a
similar manner to Ṣaif al-Qāravar. Other important
authors of this period were the poet Ḥasan b.
Maḥṭūl, the ḍawr Abū al-ʿAbd al-Qār al-Mustansīr,
and the author of the Kitāb al-Manṭik li-
al-Mustansīr (lectures in which the Ismaʿilī of
al-Mustansīr is demonstrated with the skill of the
Ismaʿili ḍawr) which are ascribed by the
Fāṭimid tradition to Badr al-Dālamāt. — For the ḍawr of
the Fāṭimid propaganda in Transoxiana see also Barthold,
Turkistan 2, G. M. X., p. 304—305.

MUSTĀRĪB(A) (v. n.), "arabicized," the
name of one of the groups into which the Arab
genealogists divide the population of Arabia. The
first is the ʿarbā'īnī, the original Arabs of pure
stock; they numbered nine (some say seven) tribes
which are regarded as the descendants of Aram
b. Šūm b. Nīḥ [v.] and the first settlers in
Arabia: Ḥad, Ḥamūtī, ʿAbil, Ṣaqr, Ḍād, ʿImār, Ḍāḥim and ʿAbāb. These are
extinct except for a few remnants incorporated
in other tribes. The second group comprises
the ḍawrīs [v.] who are not pure blooded
Arabs. They are regarded as descendants of Khalīfān
(they are the list of nations in Gen. 3. 25—
27) and live in southern Arabia. The third
group is called mustārībīs; this name is also applied to
tribes who were not originally Arabs; they trace their
descendents from Muḥammad b. Adna, a descendant
of Ismaʿil [v.]. All the north Arabian tribes are
included among the mustārībīs, so that the Hanī
Karājī which Muhammad belonged to is one of
them; his genealogy is in this way traced back
to Abraham and he thus thought he could prove
his connection with the Biblical prophets. The
old term ḍawrīs, for tribes not originally of
Arab descent, obtained a new meaning after the
conquest of Spain. It was applied to the Christian
Spaniards who adopted Islam; the word mustārībīs
was corrupted to Mozārib [v.].

[After Lichtenstaüer]

AL-MUSTASHRID BY 'ILĀH, ATTARI 'ALIGHI, A. ḍawrīs, the descendant of the Caliph, born in 488 (1093—
94), son of al-Mustaghvir and a slave-girl. Al-
Mustashrid, who was proclaimed his father's suc-
cessor after the latter's death on 16th Ramdān l
1118 (Aug. 6, 1118), was the first caliph since the
occupation of Baghdat by the Byzantines who were
not content with spiritual supremacy but also
desired to revive the caliph's authority in
 temporal matters. The Saljūq sultān had
 died before al-Mustaghvir (Dhu l-Ḥijjah 511 = April
1118) and his son Mahmund [v.], was appointed
successor. His uncle Sandzar and his brother Marīd
fell rebelled against the new sultān and the tur-
bulent Mustaghvir, b. Ṣaqr [v.], was raising trouble in the ḥiras and had also quarrelled with the
caiphib. The latter defeated him in 517 (1223)
and after al-Mustashrid had repelled a regular
attack on the capital he was able to adopt a more
independent attitude to the Saljūqs. But as his
increasing power aroused the suspicions of the
governor of Baghdat, the latter in Ramdān 520
(July-Aug. 1125) went to Sultan Mahmund and
asked him to put a limit to the caliph's powers.
Mahmund agreed and attacked the capital while
al-Mustashrid sent an army against Wāṣīt in order to
seize this town. The attempt failed however;
towards the end of the year Mahmund entered
Baghdat and al-Mustashrid could not hold out
infinitely but had to make peace, whereupon the
sultān appointed. Ḥadīl al-Dīn Zangi governor of
Baghdat and all the ḥiras. But in Dhu l-Ḥijjah l
521 (July 1127) the latter was given the governorship
of al-Mawīl and after Mahmund's death (535 =
1135) the succession was again disputed. In 536
Dubaiti and Zangi undertook a campaign against
Baghdat but were defeated by the caliph at the
end of Rajab (June 1332) and in the same year Musta'sī (q.v.) had to give him complete control of Baghdad, which was then佔着 a surrounding country. After some time he attacked the state and took it prisoner in Ramadan 659 (Jan. 1335) and murdered in Duḥūr 'Iḥkāmī of the same year (Aug. 1335) (cf. the art. 1352 H. (1652) the Mongol Khan Hūlagū (q.v.) demanded that the Muslim rulers should throw the main man on the Islamic. The caliph did not trouble about this and in his caliph at 655 (March/April 1257) a Mongol embassy came to Baghdad and demanded that al-Musta’sī should raise the defences of the city and appear in person before Hūlagū for further negotiations or send a deputy. As the caliph refused to meet these demands, Hūlagū threatened him with war. After another message in which al-Musta’sī tried to intimate Hūlagū, the latter set out against the ancient city of the caliphs. On the way he met another embassy, offering him an annual tribute but this effort to appease the cruel foe was useless and by May 656 (Jan. 1258) the Mongols were at the gates of Baghdad. Preparations for the siege advanced rapidly and after all attempts to resume negotiations had failed against the relentless Hūlagū, al-Musta’sī had to surrender on 4th Safar (10th Feb.) and the city was sacked. Ten days later Hūlagū had the caliph with some of his relations put to death (cf. the art. 1352 H.).

**MUSTASHAR** (a.), councellor, Turkish pronunciation müstāṣchar, meaning "general secretary to a ministry" or "under-secretary of state". The word which means literally "one who is consulted" comes from the root mustā‘ (q.v.) which properly means "he who gives advice". Saint Raynart regards the word müstāṣchar as a synonym of the old Turkish inat. The office was called müstāṣchar or more simply müstāṣchar. Like the title müstā‘, that of müstāṣchar was created by Mahmūd II. There were at first two müstāṣchar in the grand vizierate, one for foreign and the other for home affairs. The latter was later replaced by a minister of the interior who had in his turn a müstāṣchar. The number of müstāṣchar gradually increased but some less important departments had müstā‘un assisstant, deputy in 1259 for example there were müstā‘un in the finance and police departments. The office has been retained under the present republic and each ministry or mellā‘ah has its müstāṣchar, that of national defence has three (for army, navy and air force).

The chief judge of Istanbul used to have a müstāṣchar. According to Latif Efendi, the post of müstāṣchar of the Navy was created in 1233 (569 h. p. 91) and that of müstāṣchar of the navel or of the two boxers in 1262 (viii. p. 127). On the honorary grades of müstā‘un of the same author, vi., p. 66; cf also p. 103, line 8 from below.

**Councilor** is also the name given to the "counselors" of Turkish or foreign ambassadors or legations. The title of müstāṣchar animal being by the ambassador himself, sent by the Sultan of Morocco to Istanbul in 1297, is inexplicable to us (cf. Djelewet Pasha, edition 1309, ii., p. 231; Recueil des Missions Orientales de l’Etr. des Langues Orientales à Paris, 1905, p. 6).

As to the term müstā‘un, a synonym of the preceding and from the same root, it is applied to technical advisers, whether foreigners or not; ṣafākh müstā‘un, "legal adviser".

**Bibliography:** Cf. the various Ottoman sal̲īhibs. The historians Ahmad Djelewet and Latif, following their predecessors, give no details of the administrative organization. (J. Deny)

**AL-MUSTA‘SIM BI‘ALLAH, ABD AL-AHMAD ALI AND AL-MUSTA‘SIM, THE LAST AKHABJIDAH OF BAGHDAD, born in 609 (1213/4). After the death of his father in Dhul-Qa‘dah I or II 620 (Nov./Dec. 1242) he was raised to the caliph’s throne but he had neither the talent nor the strength to avert the catastrophe threatening from the Mongols; he allowed himself to be guided by bad councillors who were not agreed amongst themselves but working against one another. In 683 (1285/6) the Mongol Khan Hūlagū (q.v.) demanded that the Muslim rulers should throw the main man on the Islamic. The caliph did not trouble about this and in his caliph at 655 (March/April 1257) a Mongol embassy came to Baghdad and demanded that al-Musta’sī should raise the defences of the city and appear in person before Hūlagū for further negotiations or send a deputy. As the caliph refused to meet these demands, Hūlagū threatened him with war. After another message in which al-Musta’sī tried to intimate Hūlagū, the latter set out against the ancient city of the caliphs. On the way he met another embassy, offering him an annual tribute but this effort to appease the cruel foe was useless and by May 656 (Jan. 1258) the Mongols were at the gates of Baghdad. Preparations for the siege advanced rapidly and after all attempts to resume negotiations had failed against the relentless Hūlagū, al-Musta’sī had to surrender on 4th Safar (10th Feb.) and the city was sacked. Ten days later Hūlagū had the caliph with some of his relations put to death (cf. the art. 1352 H.)

**MUSTAWFĪ, AN OFFICIAL IN CHARGE OF GOVERNMENT ACCOUNTS.** Under the Turkish system, e.g. under the Ghaznakids and Saljuqs, the title of this function was by a functionary of high rank who was at the head of the administration concerned with keeping the tally of public income and expenditure. Under the Nāṣir al-Mulk, the office of the mustawfī was second only to that of the viceroy (Bundārī, ed. Houtsoum, p. 100) and appears to have corresponded to the dīwān al-samā‘ or dīwān al-zimā‘, the "Bureau of (Financial) Control" of the 'Abbasids (Tahārī, iii. 532), although the Saljuqs also had a dīwān of this same tenable by the mustawfī himself (Bundārī, p. 58). The qualities requisite in him were such as to fit him for the vizierate itself (ibid., p. 96), and indeed there were duties which were common to the two offices so that the same man could act as the nāṣir in both (ibid., p. 126, last line). The vizierate might be refused by a powerful mustawfī holding all the reins of government in his hands and reluctant to expose himself to the dangers inherent in the nominally more exalted office (ibid., p. 136, 141). But no officer was so prudent or greedy monarch and the mustawfī Sa’d al-Dīn suffered death and the confiscation of a large part of his property at the hands of Sultan Maḥdī (ibid., p. 174). It is probable that the actual title of the State mustawfī was mustawfī wa-l-mawāla something similar (ibid., p. 31), the ordinary mustawfī, the accountant, holding a subordinate position (ibid., p. 37).)
Under the Mongol the title was given to the superintendent of provincial finances (e.g. Hāmid Allāh Mustawfi and his great-grandfather; cf. E. G. Browne, *Litt. Hist. of Persia*, iii. 87), and under the Timurids, Safavids and Kājārān the *mustawfī* *μύσταβιφ* filled the office of a secretary of state in charge of the public treasury accounts while the ordinary *mustawfi* was one of the lesser officers of the court (R. du Mail, *Études de la Perse* en 1860, ed. Schefer, Paris 1860, p. 26, 178 sqq.; A. Olearius, *Voyages et Travaux*, London 1669, p. 274; Sir J. Malcolm, *History of Persia* London 1815, ii. 457; R. G. Watson, *History of Persia*, London 1866, p. 16 sqq.). *Mustawfi* *μύσταβιφ* might however, under the latest Kājārān, be a title personal to a particular individual, who might be the Minister of the Interior (as in 1890), or even Prime Minister (as in 1910).

In Egypt, under the Fātimids and Mamluks, the *mustawfi* might be the head of a *muğāla* (as of the *muğālāt al-ğazī* or of a *muğālāt al-ğazî*): or hold a less exalted, but still important, position as financial controller in such matters as the *jlālal*, or military fees (cf. Makṭūr, *Khāfīj*, Caireen 1870, ii. 195; middle and p. 227, under *mugālāt al-ğazī*). The ordinary *mustawfi* was a minor official of the *shāhid* or, overseer, in land-revenues or crop-estimation or else in a government office such as the depot of the government grain monopoly (*qātār*, c.e.t., ed. Witt, ii., ch. 32, p. 227-255).

(R. Levy)

**MUSTAWFI [see Hāmid Allah.]**

**AL-MUSTAẒĀRHI B. ILĀH,`ABBĀD AL-ĞAZĪ**

After the death of his father in Muḥarram 487 (Feb. 1094) the young al-Mustazārhi succeeded him; about this time the power of the Saffārids was beginning to be weakened by internal dissensions (cf. *bānī Yarām)*. The Assassins, who had already appeared on the scene in al-Muḳtaḍar's reign, were able to take advantage of the situation and fighting this dangerous sect soon became one of the most important tasks of the sultān and caliph. The Crusades also began at this time. In Ṣaḥīḥ 492 (July 1099) Jerusalem was taken and in the following years numerous fugitives reached Baghādūd who urged 'Āmmīn Muḥammad to come to part in the struggle. He therefore sent an army under the emir Mawdūd against the Crusaders in 505 (1111/12). Al-Mustazari, who is hardly ever mentioned in the political history of this period, died on 16 Rabi' II in 512 (Aug. 6, 1113) at the age of 41.

(K. V. Zettersten)

**MUSULMAN** [see Muslim.]

**MUTA, a town in the centre of a fertile plain in the land east of Jordan, east of the southern end of the Dead Sea, about two hours' journey south of Kerak, and described for the defeat of the Muslims there in the Dhu‘dādī I. of the year 8. According to the Arabic account, the reason why Mu‘ādh sent 3,000 men to this region was that an envoy whom he had sent to the king presumably the imperial commandant of Byzantium had been murdered by a Christian band, and the real reason seems to have been that he wished to bring the (Christian or pagan) Arabs living there under his control. If the story is correct that he chose three leaders for the expedition, 'Abyd b. Ḥārīrī [q.v.] and if he felt his cousin Dā‘ūr b. Alī Ṭallīb [q.v.] and if he also felt the poet 'Abd Allāh b. Āwāla Ḥāyi [q.v.], he must have fully recognized the hazardous nature of the enterprise, but the danger of the story to describe the dangers of the expedition and the overwhelming nature of the opposing force as very great in order to put the unfortunate result of the battle in a better light; quite evident. In Ḥāṣan b. Thā‘libi (xxii., calviii.), we are only told that the three leaders above mentioned fell in succession: When the Muslims arrived in Mā‘ṣūm in eastern Edom, they learned that there were about 100,000 Byzantine soldiers and Beduins — a much exaggerated figure which Ibn Ḥādīm doubtless had assimilated in Ma‘ṣūm (Arabic *Pertuna*, I. 29); according to Tabari, in 501, was not a town but a camp (ṣā‘il), and the historian, which according to Tabari, 29, 508, was not a town but a camp (ṣā‘il), a place near a spring with traces of an old Roman camp. But Abu ‘l-Fadl identifies it with al-Rabba which he describes as a village on the site of the former capital of the district, i.e. the Rabban Moab or Arcepulis (P. Thomsen, *Loca Sacra*, p. 25; Brünnow, *N. D. P. F.*, 1895, p. 70 sqq. with photographs; Muṣlih, *op. cit.*, p. 370 sqq., 381). According to the Arab story, it was the emperor Heraclius himself who assembled this great army in Ma‘ṣūm, which is of course not true. When the Muslims heard this, they were told, they lost courage and were afraid to wait until the Prophet could send them reinforcements but ‘Abd Allāh b. Rāwaṣa was able to fill them with such enthusiasm for a possible martyr's death that they marched on the imperial army. According to Ibn Ḥādīm, the latter met them at a village belonging to al-Muṣ‘īd called Māshrif, but this must be a misunderstanding as this term means the Syrian fortresses on the edge of the desert. At the sight of the great force of the enemy, they withdrew to the south but fighting began at the village of Mā‘ṣūm and they were routed. When the three leaders named by Mu‘ādh had fallen in the order indicated, they wanted Thā‘lib b. Ṭallīb b. ‘Abbās to take command but he gave it to Dā‘ūr b. Alī Ṭallīb who succeeded in the rest of the force; this was the first occasion on which his military talents benefited the Muslims; how he did it, we do not know as the sīrah related by Wāḥīd, p. 512 is not to be taken seriously. Besides the Muslim account, we have a Byzantine one, the earliest in the history of the Prophet, by the historian Theophanes, whose version bears the stamp of veracity. According to Muḥammad sent four chiefs to the land east of Jordan against the Christian Arabs there. They went to a village named-Muṣʻūn, which de Goeje, Mémoires sur la compilation de la Syrie, p. 6 sqq., takes
to be a copyist's error for Muḥā, while Muṣil, *et al.*, p. 135, identifies it with Khīri al-Muḥān which lies in a broad depression, in order to fall upon the Arabs on a feastday (*ṣabāʾa tāhāt:* *khīri naʿābār,* which seems to indicate a haven rather than a Christian population) but the sūris *Theophanes* there learned of their plans and rapidly collecting the garrison of the forlorn ones, fell upon the Muslims at Muʿān and defeated them. Three of the leaders and most of the force were killed and Chalafos who was called the "sword of God," alone escaped. The terrors of that night and the tumults of war, which fell there, are mentioned in the poem of Muʿān, where a mausoleum was built over them.

**MUTA (A).** Temporary marriage (according to the Arab lexicographers "marriage of pleasure"); a marriage which is contracted for a fixed period on rewarding the woman.

1. **Before Islam.** According to Ammianus Marcellinus, xiv. 4, 4, temporary marriage was in use among the Arabs already in the fourth century A.D.; but this can hardly be a reference to muta's as the woman being a feme loci and free to the man and can leave him if she dislikes the period after the marriage has elapsed. It is also doubtful if there is a distinct muta's character in the marriage of Hishām with Salma bint ʿĀmm, who married during a temporary stay in Yathrib and left with her family there after the birth of her child (Cassani, i. 111, § 92).

From the passage ʿAḥārī, xvi. 63 (muṣīlīt bīk ʿAḥārī) as well as from Muslim traditions it may be concluded that muta's was known in the Qādīliya. If we remember that the same kind of temporary marriage as the muta's was known in Erythraeus (Corni Rossi, *Principi di diritto comune e canon*, Rome 1916, p. 189, 249) it seems to us certain that muta's is an old Arabian institution. (Temporary marriage is also found among other peoples, cf. Wilken, p. 28 sq.; Westernmarck, *History of Human Marriage*, London 1925, iii. 207 sqq.; cf. also the ʿayāsah in Egypt, to which Grifflin, p. 327 calls attention; in a domestic document there is a reference to such a marriage for five months: cf. Mittelschik, *Grundzüge der Papyruskunde,* i/i, p. 205 sqq.所做的。)

II. In the Kurān there is undoubtedly a reference to this form of marriage in the Muslim era iv. 26, although the orthodox explanation of this passage as early as the first century refers it to the ordinary *muta*; after giving a list of the classes of women with whom marriage is forbidden, it goes on: *and further you are permitted to seek out wives with your wealth, in modest conduct but not to intoxication; but give them their reward (wāср) for what you have enjoyed of them* (salam) *in keeping with your promise.* After *surūt* 3,CXIX. sur. 2, Ka'āb ibn *Abi Muhammad 3, 9* Abbas read the words *itās suqaʿah tuṣumman* *for a definite period,* (Tafsir, *Tabārī, v. 93), a reading which naturally has not found its way into Sūra circles but is often added in Shī'ī books.

III. The traditions are contradictory on the question of muta's. According to some, it was in use in the time of the Prophet and he was even said to have practised it (muta'ahāb: *Tabārī, Amīrāt,* i. 1775, 1776; cf. Cassani, ii. 428, N. 17 and 19). In return for a robe or a handful of dates one could take an unmarried woman (nawwāb) for a period of cohabitation (Muslim, *Nabī, tr. 13*; Taylī, *Nabī, tr. 16*). Especially when a man came to a strange town he could find a wife there for the period of his stay so that she could look after him (Tirmīzī, *Nabī, b. 28*).

On the other hand, according to one tradition related by Alī, it was forbidden by the Prophet on the day (or in the year) of Khaibar (Bukhārī, *Magāzī,* b. 38, *Dāhībī,* b. 28; *Nabī,* b. 33; Muslim, *Nabī, tr. 31—34; Nasā', *Nabī, b. 71; in the day of Hunain must have been a mistake: for Khaibar): *Said,* b. 31; Im Mādū, *Nabī, b. 44; Tirmīzī, *Nabī, b. 28; Aḥmad, b. 6; *Mālik, *Nabī, tr. 41; Aḥmad b. Hanbal, i. 70, 103, 142; *Tawāris, N. 111; Zakī, *Magāzī,* N. 718).

According to other traditions, he is said to have permitted it for a short time on particular occasions. In this connection we have a group of traditions which goes back to Sahāb b. Muḥān; the various accounts of this, some long, some short, which supplement one another, are in part given without date (Muslim, *Nabī, tr. 20, 26; Nasā', *Nabī, b. 71; Aḥmad Dawdī, *Nabī, b. 13; Aḥmad b. Hanbal, i. 404), in part referred to the conquest of Mecca (Muslim, *Nabī, tr. 21, 22, 23, 27, 27; Dārīmī, *Nabī, b. 16; Aḥmad b. Hanbal, i. 404, 405), and in part to the farewell pilgrimage (Im Mādū, *Nabī, b. 44; *Dārīmī, *Nabī, b. 16; Aḥmad Dawdī, *Nabī, b. 15; Aḥmad b. Hanbal, i. 404 sq*). Their substance is as follows: The Prophet permitted muta's. Sahāb therefore went with a companion to a woman and asked offered her his cloak. She chose the younger of the shabblers cloaks and slept three nights with him; thenceupon the Prophet forbade it. According to the stories associated with the farewell pilgrimage, the woman wished muta's only for a fixed period so that ten days or nights was agreed upon, but the Prophet forbade it after the first night, saying: *Whoever of you has married a woman for a period, shall give her what he promised and ask nothing of it back and he shall separate from her; for God has forbidden this up to the day of resurrection.* (For the conclusion cf. also the fragment in this in Muslim, *Nabī, tr. 33—50*.)

According to a second group of traditions, which goes back to Dālārī b. Abī Allāh b. Salama b. al-Akāwī, the Prophet permitted muta's for three days on a campaign (Bukhārī, *Nabī, b. 71; Muslim, *Nabī, tr. 14, 15; Aḥmad b. Hanbal, iv. 47, 51; according to Muslim, *Nabī, tr. 19 and Aḥmad b. Hanbal, iv. 53, this was in the year of Awtār, i.e. shortly after the capture of Mecca). In Bukhārī we have at the end: *The partnership of the two parties lasted three nights; and if they agreed to extend it, they did so; and if they wished to separate, they did so.* A prohibition is given in only two versions in this group.
According to other traditions, mut'a was first forbidden by the caliph 'Umar at the end of his caliphate (Muslim, Niḥāḥ, tr. 16-18; Ahmad b. Hanbal, iii. 302, 380 and iii. 325, 356, 363; there is no reference to the two kinds of mut'a, i.e. tāmattūʿ on the pilgrimage and mut'at al-
akhthah). 'Umar threatened the punishment of stoning so that he regarded mut'a as fornication (Ibn Māḍir, Niḥāḥ, bāb 441; Mālik, Niḥāḥ, tr. 42; Ṭayyālī, Niḥāḥ, tr. 1792). Cf. the angry exclamation of Ibn 'Umar when he was asked about mut'a: 'By Allah, we were not inmodest in the time of the Prophet of Allah nor fornicators!' (Ahmad b. Ḥanbal, ii. 95, 104).

What then is at the bottom of these contradictory traditions? While Wellhausen regards mut'a as simply prostitution and not an old Arabian custom, Caentini points out that the traditions agree in connecting mut'a with an entrance of the Prophet into Mecca and sometimes even with the ḍa'ud and that a three days' duration is a feature of the mut'a; taking account of other considerations, he concludes that mut'a in the pagan period was religious prostitution on the occasion of the Meccan festival. However, tempting this explanation may be, there is a complete lack of evidence for any religious prostitution in Mecca. With Wilken and Robertson Smith, we must rather regard mut'a as the survival into Islam of an old Arabian custom. The Prophet gives this custom sanction in the Kur'ān and also practised it himself. In his lifetime he allowed the custom of prohibited by the Prophet Khaṣab and Mecca. As both these are later than the above Kur'ānic passage (years 5-9, according to Noldaik-Schwellin, l. 198) this prohibition would be quite possible. But since on the other hand the caliph 'Umar prohibited mut'a, which is without reason to doubt, we may regard the tradition of prohibition as representing later views, which, as is often the case, are put back to the time of the Prophet.

IV. Attitude of the fāṭihā. Ibn Abī Ṭālib (d. 68) was an ardent champion of mut'a (Bukhārī, Niḥāḥ, bāb 31; Muslim, Niḥāḥ, tr. 18; Ṭayyālī, Niḥāḥ, tr. 1792). In Mecca and the Yamam, according to Ibn Rūḥi (Ridā‘ī, Cairo 1339, ii. 54) he also had following: but before his death he is said to have been converted to the opposite view (Tirmidhī, Niḥāḥ, bāb 28; Rāzī, loc. cit., bāb 9). In later times, people still spoke derisively of a marriage by a fītawī of Ibn Abī Ṭālib. In the second half of the first century in Mecca, fītawī were still given permitting mut'a (Muslim, Niḥāḥ, tr. 29). The Kur'ān commentators Mākjādī (d. 109), Sa‘d b. Bahār (d. 95), and Ṣa‘d b. Suhd (d. 127) also referred the above verses of the Kur'ān to mut'a. Suhd said that it is a marriage for a fixed period and that it should be concluded with the permission of the mut'āt and with two witnesses: that after the expiry of this period the man has no longer any claim on the woman and that the two parties cannot inherit from one another (Ṭabarī, Tafsīr, v. 8). With the second century, the contrary view begins to predominate; although individuals like Amr b. Ḍā‘ūr (d. 126), Ibn Ḥaḍramawī (d. 150) and the Zaidi sect of the Gūfiyya permit mut'a (Ibn Rūḥi, loc. cit., v. Aqīmān, Ophensdat et al., Leyden 1916, p. 74, note 9), al-Thawrī (d. 161), Ibn al-Muhsir (d. 181) (Tirmidhī, Niḥāḥ, bāb 28) and all the Sunni schools of law as well as the Shāfi‘īs (al-Nawawī, b. Ḥābi‘, Taha‘rī, Berlin MS., Glasses 74, fol. 53b) consider mut’a forbidden. Its recognition was now limited to the Shi‘ī. And if the caliph Maʿmūn tried to introduce mut’a again, this was certainly due to his Shi‘ī tendencies (Ibn Khallikān, Wafayāt, ii. 215f).

At the same time, we still have in the second century the expression of a period of transition. According to Zafar (d. 158), the marriage concluded under the form of mut’a was valid as a marriage and not its limitation in time was invalid (Sarshāf, Muṣaffā, v. 133; cf. also Bukhārī, Ḥāfi‘, bāb 4). According to al-Ḥasan b. Ziyād al-ʿAqīm (d. 204), the mut’a was valid if the partners could not survive the time fixed, e. g. 100 years or more (Sarshāf, loc. cit.).

But in spite of their refusal to recognize mut’a, the Sunnīs made concessions by which mut’a gained a footing in another form. It became the practice not to insert a definite period in the contract; any agreement made outside the contract was not affected by the law Al-Shaf’ī (Umm, v. 71) for example, declared a marriage valid when it was concluded with the unuttered resolution (niyyah) to observe it only for the period of stay in a place or for a few days only, so long as this was not expressly stipulated in the contract. Similarly if agreement to this effect (mut‘atunā) had been previously made and even if made on oath; but he describes such an agreement as sunnah. There are also traces in later literature of a decision by Mālik by which he permitted mut’a of 100 days, (d. 154), Bādh al-Muṣaffā, Muṣaffā al-Tirmidhī, ed. Lees, ii. 208, 209, although only the contrary is recorded in the Maṣāḥih and Muḥaddisun (v. 46).

A good exposition of the two opposite points of view is given from the Sunnī side by Khāṣit (d. 207), Baddī‘ al-Sanadī, Cairo 1327, ii. 272-275, and in Rāzī, loc. cit., ii. 193-198 and from the Shi‘ī side by ʿAlī al-Hudh al-Muṣaffā, Mī‘ār, Tehran 1315, p. 60-65. The Sunnīs refer the verse above mentioned from the Kur’ān to regular marriage and declare the āḏir to be maḥr, while the Shi‘īs base their view on this verse and consider: the traditions of prohibition not to be abrogated and do not consider ‘Umar authoritative for a prohibition. The Imamīs say as much, as to say: "The belief is only perfect when he has experienced a marriage" (al-Ḥurr al-ʿAmīlī, v. 69, 70).

V. Teachings of the Ima‘īmīs.

1. Form. Mut’a is an irreversable (hāzīm) contract which, like every contract, comes into existence through qabāl and ḍa‘ūd. It may be concluded with the words niḥāth or ḍa‘ūd or tāmattū‘, but must always contain a precise statement of the period (āḏir) and a definite recompense (āḏir or maḥr). This recompense may be the dowry usual in other marriages or a handful of corn, a drachm or such like. The period may vary from a day to months or even years. Witnesses are not necessary; nor need it be concluded before the ḍa‘ūd, if the partners are capable of using the formal coercitely. If the maḥr is not given, the contract is under the condition that it is invalid. If the period is not given, according to some it is a regular marriage if the word ḍa‘ūd was not used at the end of the ceremony; in the latter case the contract is again invalid.

2. The two partners must naturally fulfill the usual conditions for the conclusion of an agreement. The woman must further be unmarried.
and chaste ('afa'a) and if possible ought to know about mut'a, i.e. be a ḥā'ī, and can only contract a temporary marriage with a Muslim. According to the Bihārī and al-Mufid (d. 443), mut'a with an unbeliever is forbidden, even with a member of the possessors of a scripture (ṭabābū). The wadā'īḥ (extreme: Ḫirrīs) are included among the unbelievers. According to most Ḥanfīs (and Tūsī also), however, mut'a with a Christian or Jewish woman is permitted but muḥāna with a wādīya. Mut'a with a slave-girl is only permitted with the consent of her master. Usually the woman contracts the marriage without a muḥā; only a virgin (ḥikr) according to some, requires her father's consent (Abu 'l-Sa'ādī, d. 82; Ibn Bihārī, d. 384; Ḥasan al-Barrājī, d. 481; cf. Hilāl, iii. 92). The man may in this way take other wives in addition to his four legal wives, especially on journeys. He must not, however, take two sisters at the same time, not even during the 'Īdā.

3. The mut'a ends on the expiry of the period agreed upon. It cannot be prolonged by arrangement between the two parties; a new temporary marriage with a new muḥā must rather be contracted at the end of the period. Divorce is impossible; according to some, however, Zāhīn and ṭahā are permitted.

4. There is no obligation on the man to provide food for the woman. The two partners cannot inherit from one another; but according to some, inheritance may be provided for in the contract. The 'Īdā after the expiry of the mut'a is two periods or 45 days, i.e. the 'Īdā of a slave-girl. There is, however, disagreement whether on the man's death the period of waiting is the usual one for a wife or that for a slave. The children go with the father.

VI. Modern practice. Although these Shi'i views have a certain amount of moral support, the mut'a in many cases can only be described as legalised prostitution. It is true that in Persia such marriages are made for very long periods, e.g. 99 years, but the Persian, when on a journey, temporarily marries in any place where he is stopping for some time and in the towns a caravanserai mollā and other brokers offer a wife to each new arrival. To make this business more profitable, the 'Īdā period is extended by concluding a second temporary marriage with the same man after the expiry of the first, for in the case of such a marriage the 'Īdā is not necessary. This marriage and a woman of this kind is called in Persia ūlla (lit. "form" i.e. of the contract).

The constantly quoted story (first in Wilken, p. 19) of Alex. Hamilton (cf. new account of the East Indies, Edinburgh 1727, i. 51) that at the beginning of the sixteenth century temporary marriages were publicly negotiated in Soumān (="Soum") in South Arabia and concluded before the kahtī, is a very improbable one; for Hamilton knew only the coast-towns from his own observation and wrote his account of his travels later from memory. He seems to be confusing them with conditions in Persian towns, and he makes mistakes on other matters.

In Morocco, as well as in ancient times (cf. Litān al-dekhawan wa-nawz al-teswī bi-Mahān minād), temporary marriages were concluded among the Sennees but nothing is said of this in the marriage contract or this would make it invalid; everything necessary is arranged previously by word of mouth. On the conclusion of the contract, the man utters the ṭalā'h formula with a time limit. Such agreements are as a rule kept (Soukouc Hurgronje, Meχra, li. 156; do., Verrf. Gebr. v: ch. 47). The same applies in such cases as Shāfi'i indicated long ago (cf. above).

A.-MUTA′ALĪ. [See ALI, A.-]

A.-MUTA′ARRĪBA (A.-) "mottailed", the term applied to the descendants of ʿAlī (the Biblical Yātān) who were regarded by the genealogists as "having become Arab" in contrast to the supposed native "pure" Arab tribes like "Ab, Ṭhāmir, etc. They settled in South Arabia and adopted Arabic from the "pure" Arabs. The latter had learned it through Ḍirham, the only man who spoke Arabic in Noah's ark (all the rest spoke Syrian), and his son-in-law Aram b. Šam b. Nīn. He was the ancestor of the "Ab, Ṭhāmir, etc. (From South Arabia, their main centre, tribes of the Band of Kahtī migrated to the north, so that there are in Northern Arabia also tribes whose genealogies make them belong to the Band of Kahtī (cf. the article Muta′allī that the literature is given).

MUTADARIK, name of the sixteenth metre in Arabic prosody, added to al-Khalīl b. Ahmad's list by al-ʿAkhshāb al-Awsat (q.v.). It is also called muḥānta, ḥaḍ, ḥaḍ, ḥaḍ, muntā, dār al-ḥaḍ, ṭāḥ al-ḥaḍ, ṣāḥ al-ḥaḍ. It does not seem to have been used by the poets before Īsmāʿīl or of the first century. A.H.
It has four feet to the hemistich and two scrips and four loric.

(Mont. BEN.KRINSKI)

AL-MUṬAḌĪḌ BI'L-LĀH, Abu Ahmad "Abubakr Ahmad b. Ẓalḥa, Abū 'Abdallāh Caliph, son of al-Muwaṣṣaṣ, co-regent with the caliph al-Mu'tamid [q.v.], and a Câriftî slave named Dirâr. Al-Mu'taḍīḍ was already the real ruler in the two last years of al-Muwaṣṣaṣ's life and after the death of al-Mu'tamid in Râjdâl 270 (Oct. 892) he ascended the throne.

The new caliph who had inherited his father's gifts as a ruler and was distinguished alike for his economy and military ability is one of the greatest of the 'Abbasids in spite of his strictness and cruelty. On the accession of al-Mu'taḍīḍ the Tullāhid Khumarawâlh [q.v.], who had been the long war, concluded peace and gave the caliph his daughter in marriage, while the Khârjâṭ in Mesopotamia were weakened by internal dissensions, al-Mu'taḍīḍ in 280 (893–894) undertook an expedition against the rebel Bâlilk Shâhân and brought them to obedience. In the next two years the allies of the Khârjâṭ chief Hârdûn b. 'Abd Allâh were defeated and in 283 (896) the Tullāhid Shâhâl b. 'Abd Allâh was sent to Baghdad where the caliph had him crucified. The influence of the Hamânâdâh now began to increase in Baghdad. The Tullāhâd [q.v.] who had given the caliph such trouble were soon finally conquered. After al-Hârîrî 'Abd al-Azzâ cailed 'Abî Lâdhâ had been defeated and slain in Ibn 'l-Haḍjâl 284 (Jan. 898) near Isfâhân, al-Mu'taḍīḍ had the other Tullâhâd imprisoned and the family now disappears from history. The Sâmânâdâh increased their power at the expense of the Tullâhâd and the 'Alîd. In 287 (900) the Sâmânâdâh 'Abî b. al-Lâdhâ [q.v.] was captured and brought to Baghdad. In the same year the 'Abîd Muhammad b. Zâd, lord of Tabûristân, occupied Dijâtâr marched against Khûrâtân but was defeated by the Sâmânâdâh general Muhammad b. Hârûn and died of his wounds while Ibn Hârûn took possession of Dijâtâr and Tabûristân in the name of the Sâmânâdâh. About the same time the governor of Armenia and Adiriṣâdân Muhammad b. Abû 'l-Ṣādî endeavoured in combination with his friend Menîfî to conquer Egypt. The latter however was taken prisoner by the caliph's troops and as the most influential men in Tarsus had promised their help, al-Mu'taḍīḍ had them arrested and the fleet there burned. Muhammad was however allowed to retain his post but died soon afterwards of the plague. The Karmânîs [q.v.] now appeared on the scene and in the same year the Karmânî leader al-Dumâṣâr [q.v.] inflicted a complete defeat on the caliph's troops. Al-Mu'taḍîḍ died in Baghdad on 22 Râjdâl II, 280 (April 5, 902) at the age of 40 or 47. According to some he was poisoned.

Bibliography: Tabari (ed. de Goeje), iii. 2133 sqq., 'Arîb (ed. de Goeje), see Index; Masûdî, Ma'ârif (ed. Paris), viii. 172–213.

AL-MUṬAḌĪḌ BI'L-LĀH, Abu Ahmad 'Abû 'Abd Allâh, the most important and most powerful sovereign of the 'Abbâsid dynasty [q.v.], who reigned over the little kingdom formed by his father Abû 'l-Kâsim Muhammad b. Abû 'Abdâdâd, with Seville [q.v.] as its capital, at the time of the break up of the Umayyad caliphate of Spain and the rise of the reis de taifât (mâlûk al-taifât) [q.v.]; in the course of a reign of nearly 30 years (453–480 A.H./1063–1090 A.D.), he was very considerably increased his territory by making himself the champion of the Spanish Arabs against the Berbers in Spain whose numbers, already very considerable in the tenth century, had been much increased since the period of the Amîridi dictators.

When he succeeded his father, the new king of Seville, who was then 26, following the usual practice of the period, assumed the title of ṣâhid, and a little later the title of 'Abbâsid bi'l-Lâh by which he is best known. Gifted with real political ability, he was not long in realizing his character, that of an autocratic ruler, the ambitions and cruel and slight scruples which he used to achieve his ends. As soon as he came to the throne he continued the war begun by his father against the petty Berber ruler of Carmonas [q.v.], Muhammad b. Abû 'Abd Allâh al-Bûrâjî, then against the latter's son and successor Isâbâk. At the same time, al-Mu'taḍîḍ was extending his kingdom in the west between Seville and the Atlantic Ocean. It was with this object that he attacked and defeated successively Ibn Taṣîfûr, lord (ṣâhid) of Merinda, and Muhammad b. 'Abû 'Abd Allâh al-Vâbîbêš (or Viabius) of Nîbil [q.v.], who in spite of his Arab descent had had the audacity to ally himself with the Berber chiefs. In face of these successes of the king of the 'Abbâsid, the other mālûk al-taifât who disturbed him formed a kind of league into which entered the princes of Badajoz [q.v.], Algeciras [q.v.], Granada [q.v.] and Málaga [q.v.]. This soon became a war between the 'Abbâsid of Seville and the Afgâd [q.v.] of Badajoz al-Mu'tâsâf [q.v.]; it was to last for many years in spite of the efforts at mediation by the Djâbard-râr ruler of Cordova which only achieved their end in 1054. Down to this year, while maintaining the frontiers of the kingdom of Badajoz, al-Mu'taḍîḍ displayed other activities, in succession he defeated Muhammad b. Nâhil al-Hâtîr, lord of Huelva, Ibn al-Salîm, Abû Zâdâh, and Salîs [q.v.] (whose son was the famous geographer), the Banû Ma'ârîn, lords of Babelôs [q.v.], and Muhammad b. Sa'dî b. Hârîrî, lord of Santa Maria de Algare, [q.v.], and annexed their territories. To justify these annexations, al-Mu'taḍîḍ used a very crude pretext; he alleged that he had found the unfortunate Hûṣîn II, who had really died in obscurity a few years before, and would go on till he had restored to him his former empire subdued; and
pacified in its integrity. In order not to be exposed to the cruelty of the king of Seville, the majority of the petty Berber chiefs settled in the mountains of the south of Andalusia, sequised in this make-believe, and paid homage to the 'Abdáddi and to the Commander of the Faithful miraculously restored to the cause of al-Mu'ta'did but at the same time carefully concealed by him. It was labour lost for them. One day the 'Abdáddi invited to his palace in Seville all these petty chiefs with their suites and put them to death by asphyxiating them in baths the openings in which he walled up. In this way he took Arcos (q.v.), the capital of the principality of the Banu Khizárin, Mornor (q.v.) defended by the Banu Dammár, and Ronda (q.v.), capital of the Banu Fran (1053).

This aroused the wrath of the most powerful Berber ruler in Spain, Baddis b. Judhbbi the Zidid (q.v.), who ruled in Granada and who alone seemed able to resist al-Mu'ta'did. The latter however found that fortune favoured him in this war and a little later took Algeciras from the Hamidídd al-Kazím b. Hammud. He next tried to seize Cordova and sent an expedition against it in charge of his son Issá'd, the latter tried to profit by the occasion to rebel and create for himself a kingdom with Algeciras as capital. This rash plan cost him his life, which his father took with his own hand, just as before him 'Abd al-Rahma'n III and al-Mansúr b. Abi 'Amir had inflicted the supreme penalty on their unworthy sons. This was the beginning of the political career of al-Mu'ta'did's other son Muhammad al-Mu'ta'mid (q.v.) who was to succeed him in his death by his father's order. He went with an army to support the Arabs of Malaga, who had rebelled against the tyrannical ruler of Bâhí, the despotic Berber of Granada. But the latter routed the Sevillian army and al-Mu'ta'did in arrery reached Ronda from which he sought and received the pardon of his terrible father. The latter had long before repudiated the fiction of the pseudo-Hamidídd which he no longer needed. He was now by far the most redoubtable and the most feared of the Spanish rulers. He had no enemies but the Berbers, Muslims like himself but much further removed from his social ideal of a Spaniard than his Christian neighbours in the north. In another land he might have been called "Berberokimos". But the bitterness of his hatred cast a shadow over his last days; it was not without fear that he followed events in the western Maghreb, hither to the beć of Muslim Spain; at least in the sub-Mediterranean zone. The irresistible advance of the Almoravids (q.v.) following Yúsuf b. Tádhbí through all Morocco, to which he could not find the straits of Gibraltar an insurmountable obstacle for long, Al-Mu'ta'did realised this very well. During at least prevented him from seeing his kingdom, entirely built up by his own energy and bold initiative, pass in two weeks into the hands of invaders, brethren of these Berbers of Spain whom he had detested and in part destroyed.

**MUTAFARRIKA** (a.), name of a corps of guarda, who were especially attached to the person of the Ottoman Sultan in the ancient Turkish court. The name is also applied to a number of the guard. Their occupations were similar to those of the Čuvaš [q.v.], not of military character, nor for court service only, but they were used for more or less important public or political missions. Like the Čuvaš, the Mutafarríka were a mounted guard. In later times there were: two classes, the Čuvaš or 'Abúwéth-Mutafarríka, and the Čuvaš. Their chief was the **Mutafarríka Aghádi.** In course of time their number constantly increased; at the end of the sixteenth century the maximum was fixed at 120 (G.O.R. II, 950, after Rághid), but in the beginning of the sixteenth century von Hammer gives the number 500 for the total. The Porte needed sometimes to lay stress on the importance of the office to make them acceptable as extraordinary envoys by foreign governments (G.O.R. II, 929, after Rághid).

Among those who have occupied this rank was the well-known first Turkish printer Ishá'íthu Mutafarríka.

Although different explanations of the title mutafarríka are given, the most probable interpretation is, that these functionaries were not given a special duty but formed originally a corps used for "different matters". This is still the use of the word in modern Turkish.

Outside of the 14, the foot 14 often loses its a and becomes 14; used as the first 14. It further undergoes the following changes: 14 and (s)al. According to al-Khátib, this foot which proceeds the 14 cannot suffer any change. The first foot of the first hemistich of the first line of a piece of verse may become (whom) and (be) (whm) (b). (Mosk. Res. Chéshir.)

**MUTAKAWIS, term in prosody; cf. the art. 1†.**
MUTAMAD KHAN, MUHAMMAD SHAHRI, was born in an obscure family in Persia, but coming to India, he attained high honours in the reigns of Quliqangar and Shah Jihan. He received in the third year of Quliqangar a military command and the title of Mutamad Khan (the trustworthy Lord). Subsequently he joined Prince Shah Jihan in his campaign in the Deccan as a hadrat (paymaster). On his return to court, in the 15th year of Quliqangar's reign, he was entrusted with the duty of writing the Emperor's memoirs. He attained a higher rank in the service of Shah Jihan and was appointed as a haidar (adjutant-general) in the 23rd year of the new reign. He died in 1629 (1630). He is the author of a history called Alamgir Namaq-i Quliqangari, in three volumes: 1, the history of Akbar's ancestors; 2, Akbar's reign (MSS. in the India Office Library and in the Bankiopir Library); 3, the reign of Quliqangar (printed in the Bibliotheca Indica, Calcutta 1865). and in Lucknow, A.H. 1286.

(M. Hidasar Hosain)

AL-MUTAMID AL-SAM, AHI L-AMIR AHMAD b. QIIRAR, Al-Abbasid caliph, son of Al-Mutawakkil and a slave-girl named Fisah from Kufa. He ascended the throne on the deposition of Al-Muhtadi in 256 (June 770) and had no ability as a ruler, but relied on the vizier Ubaid Allah b. Yahya b. Khaylan and left most of the affairs of government in the hands of his brother Abu Ahmad Al-Muwaffak. In 282 (July 875) he designated his son Dahir Al-Muwaffak as his successor and governor of the western provinces and Al-Muwaffak as his successor and governor of the east. The able Al-Muwaffak soon became the real ruler and gradually restored order in the empire against which the Abbadids (qq.v.) of Seville in the 11th century is best known; his real name was MUHAMMAD b. ABBAAAD AL-MUTAMID (q.v.) B. MUHAMMAD b. KAM'il b. SAA'd b. ABBAAD. While still a boy—barely 13—he was born in 431 (1040)—he was placed by his father in nominal command of an expedition against Silves (Al, Silves [q.v.]), but in the possession of Ibn Muzain, and this town was taken by assault as was Carmona Maria d'Algarve soon after (Ab. Khusaymar bar al-ghaur, now Faro [q.v.]) which was held by Muhammad b. Sa'id Ibn Hiram [q.v.]) (444 = 1052). The young 'Abbadid prince was then appointed by his father governor of these two towns. His elder brother Isam had been executed in punishment for his rebellion (455 = 1063; cf. AL-MUTAMID), Muhammad Al-Muwaffak became heir-presumptive to the throne of Seville. A little later, the army which he was leading to the help of the Arabs of Malaga, who had rebelled against the tawaz [q.v.], against the Berbers of the Zaitin [q.v.] dynasty, was routed by the latter and Al-Muwaffak had to take refuge in Ronda [q.v.] in which his father was at first very angry at his failure, finally sent him his forgiveness. When the powerful ruler of Seville died in 460 (1069), his son succeeded to a considerably extended kingdom which included the greater part of the south- west of the Iberian peninsula.

A whole series of more or less romantic episodes is associated with the reign and life of Al-Mutamid. If we may believe several authors of the Muslim west, an individual called Ibn Ammar, the historian and poet, exerted a very considerable influence during the greater part of the career of this prince from his governorship of Silves. Al-Mutamid's relations with a young slave girl Al-Rumaikyta, a gifted with considerate poetic talent, has also been the subject of much literary embellishment. It was from the surname of this young woman that Al-Mutamid is said to have adopted his which comes from the same root. She became his favourite wife and presented him with several sons. As to Ibn Ammar, exiled by Al-Muwaffak, he was recalled on the accession of his patron to Seville from which he went at his own request
to be governor of Silves before being appointed grand vizier.

In the second year of his reign, al-Mutamid was able to annex to his kingdom the principality of Cordova [q.v.], over which the Dhishwarid had been ruling, in spite of the efforts of the king of Toledo, Al-Mu'tamid [q.v.]. The young prince 'Abbās was appointed governor of the old capital of the Umayyads. But at the instigation of the king of Toledo, an adventurer named Ibn 'Ukhnas, was able in 468 (1075) to take Cordova by surprise and put to death the young 'Abbās's father and his general Muhammad b. Mārtīn. Al-Mu'tamid took possession of the town where he died six months later. Al-Mutamid whose paternal affection had been wounded and pride insulted tried for three years vainly to reconquer Cordova. He was not successful until 471 (1078); Ibn 'Ukhnas was put to death and the part of the kingdom of Toledo between the Guadalquivir and the Guadix was conquered by the armies of Seville. Nevertheless at this time it took all the skill of the vizir Ibn 'Ammār to conclude a peace by paying double tribute with Alfonso VI of Castile when he sent an expedition against Seville.

This was just the time when through the energy and efforts of the Christian princes taking advantage of the feuds which were setting the Muslim rulers of the taifa against one another, the reconquista, which had received a check and then a setback from the Umayyads, resumed its advance on the south of the Peninsula. In spite of their successes, of which the Muslim chroniclers make a great deal, it must not be forgotten that by the middle of the 10th (20th) century, many Muslim dynasties of Spain were being forced to seek on payment of heavy tribute the temporary neutrality of their Christian neighbours. Shortly before the taking of Toledo, which had far-reaching effects, by Alfonso VI in 478 (1085), al-Mutamid began to be involved in serious difficulties. On the imprudent advice of his vizier Ibn 'Ammār, al-Mutamid tried to add to his kingdom, after the principality of Cordova, that of Murcia [q.v.], which was ruled by a prince of Arab origin, Muhammad b. Ahmad b. Sālih. In 471 (1078), Ibn 'Ammār went to the Count of Barcelona, Ramon Berenguer II, and asked him for assistance to conquer Murcia in return for a payment of 60,000 diners; until this sum was paid al-Rashīd, a son of al-Mutamid, was to remain as hostage. After animated negotiations which ended in the payment of a sum three times as large to the Count of Barcelona, Ibn 'Ammār resumed his plan of conquering Murcia and succeeded in doing so with the help of the lord of the castle of Xàt (now Xàtches), Ibn Rashīd. In Murcia, however, Ibn 'Ammār soon rendered himself obnoxious to his master by assuming the attitude of an independent ruler and in al-Mutamid's reproaching him he replied by insults to the king of Seville, his wife and his son. Betrayed by Ibn Rashīd, he had to take refuge in Murcia and then successively in 480, Saragossa and Lerida. Returning to Saragossa, he endeavoured to join its ruler al-Mu'tamid I b. Hājīd [cf. Saragossa] on his expedition against Saragossa, but he was taken prisoner and handed over to al-Mutamid, who in spite of the bonds of friendship which had so long linked them together, slew him with his own hand.

In the meanwhile, Alfonso VI was no longer concealing his designs on Toledo, the siege of which he began in 473 (1086). Two years later, when he sent a mission to enforce payment of the annual tribute due to him from al-Mutamid, his men were insulted and the Jewish treasurer Ibn Shāhīd who accompanied it was put to death because he had refused to accept debased money. He therefore invaded the province of the flourishing town of Almería (Ar. al-Shassaf [q.v.]) advanced through the district of Sidón (Ar. Shaldīna; q. v.) as far as Tarifa [q.v.] where he uttered his celebrated remark expressing his pride at having reached the utmost limits of Spain.

The capture of Toledo by Alfonso VI dealt a serious blow to Islam in Spain. The king of Castile soon demanded of al-Mutamid that he should surrender those of his lands which had formed part of the kingdom of the Umayyads (a part of the modern provinces of Ciudad-Real and Cuenca). Throughout Muslim Spain, his demands which increased every year, made the position very serious. In spite of their reluctance, the Muslims in Spain, led by al-Mutamid, were forced to seek the help of the Almoravids (Ashūr b. Tājifīn [cf. Almoravid] who had just conquered the whole of Morocco in an irresistible advance. It was decided to send him an embassy consisting of the vizier Abū Bakr b. Zaidīn and the šāhīd of Badajoz, Cordoba and Granada. An agreement having been reached, not without difficulty, Yūsuf b. Tājīfīn crossed the Straits at Gibraltar and on the 22nd Ramadan 479 (26th August 1086) inflicted on the Christian troops the disastrous defeat of Zallāqah [q.v.] not far from Badajoz. We need not recall here how Yūsuf b. Tājīfīn recalled to Africa, could not follow up his victory as the Muslim rulers of Spain had hoped, which was the influence exercised by the Spanish factions on the Almoravid, soon lost all prestige in his eyes. After his departure the Christians began again to harass Muslim lands, to such an extent that al-Mutamid had this time to go in person to Yūsuf b. Tājīfīn in Morocco to ask him to cross the Straits once more with his troops. Yūsuf consented and landed at Algiers in the following spring (482 = 1090). He laid siege to the fortress of Alcud but without taking it; then stimulated by popular feeling and the advice of the factions, he came to the conclusion that it would be more advantageous for him to wage the jihād in Spain on his own account and proceeded to dethrone and dispossess the princes who had sought his intervention. With this object he sent an army to invade the kingdom of Seville under Abu Bakr, who, as soon as the end of 1090 took Tarifa, then Cordova where one of al-Mutamid's sons, Fātih al-Mutamid, was in command of his forces. Fātih al-Mutamid was killed at Carmona, then Seville, which was captured in spite of a heroic sortie by al-Mutamid himself. The latter was taken prisoner by the Almoravids and sent with his wife and children first to Tangier, then to Meknes and a few months later to Aghmat [q.v.], near Marrakesh. There he led a miserable existence for several years until his death at the age of 55 in 487 (1095).

The end of al-Mutamid touched all his biographers, who are particularly numerous and expansive on his natural gifts, poetical gifts, munificence and chivalrous spirit. He is one of the most representative types of the enlightened Spanish Muslims of the Middle Ages, patrons of letters
and scholarship, liberal and tolerant, but living in an atmosphere of luxury and ease little compatible with the care of a kingdom with frontiers open to constant neighbours on all sides. Not so great a ruler as his father al-Mu'tamid, al-Mutanabbi is however a much more attractive figure, perhaps just on account of his misfortunes. He is entitled to a place among the great figures of Spanish Islam, alongside of Abú al-Rahmán al-Hakam II, al-Mansúr b. Abú 'Amir and at a later date Lísten b. al-Khattìjib.

(E. Lévi-Provençal)

**Mutanabbi and Ouaipra, a poet contemporary with the Prophet.** He was the brother of Mâlik b. Nuwair (p. v.), chief of the Banu Yarûf, a large clan of the BanuTamim. Mutanabbi was its prince to the eulogies in which he memorialised the tragic death of his brother Mâlik and these poems have made the latter's name immortal. The Arabs said there was nothing comparable to these elegies, overflowing with emotion. They regarded their author as the type of brotherly devotion. Mutanabbi does not seem to have played any prominent part before the Huljâb. He was eclipsed by the striking personality of his brother, to whose qualities he never resented to pay homage. He is represented as having been of unpromising appearance — one-eyed and short in stature. The Banu Tamim al-Hawásan eulogised the humanity with which Mutanabbi treated him during his captivity. Falling in his turn into the hands of the Banû Taghhib, Mutanabbi was delivered by a stratagem devised by his brother. He seems to have adopted Islam at the same time as his brother. Like the latter, he is numbered among the 'Companions' although we never find him in direct relations with the Prophet. He escaped from the disaster in which Mâlik was overwhelmed; a few fragments of other poems suggest he did not write elegies exclusively.

But the death of Mâlik he devoted himself to celebrating his memory and demanding vengeance for his death. Refused by the Caliph Abû Bakr, he thought he might have more success on the accession of 'Omar. He hurried to Madina where he was very well received by 'Omar. The latter listened with delight to his elegies, regretted that he himself had not the gift of poetry so that he might worthily celebrate his brothers, who had fallen in the war of al-Yamamah, but he refused to reverse Abû Bakr's decision and limited himself to dismissing Khâlid b. al-Walid, a step which probably owed something to the poetical exhortations of Mutanabbi.

After this, tradition says that the poet became almost blind through weeping, and that he wandered over the many routes of Arabia, uttering his complaints everywhere. He found himself abandoned by his wife, who became tired of his incapable sadness and wandering life. He left two sons Usúd and Ibrâhim, also poets. He survived 'Omar b. Khâlid b. al-Khattâiban (ed. Wustenfeld, N. 793), he is really the author of an elegy on the death of this caliph.

(H. LAMMEN)

**Al-Mutanabbi, the prophet or poet, the name by which the Arab poet Abû 'l-Tayib Ahmad b. al-Husain al-Dîjâfî is usually known (cf. Ibn Khâhilân, Wusâtân[Cairo 1310], i. 36, two genealogies, which do not agree, going back to his great-grandfather). Abû 'l-Tayib was born in Kufa in 503 (915) in the Kinda quarter whence the ethnic al-Khdîr sometimes gives him. His family in very humble circumstances claimed descent from the Yamman al-Dîjâfî and he himself all his life was convinced of the superiority of the Arabs of the south over those of the north (cf. al-Wâhsh, al-Shâb b. al-Mutanabbi, ed. Disterici, p. 48—49, A. vildâyi, al-Dîjâfî al-tayibî, p. 29 [these two books will be quoted as Wâh, and Vâd]). The boy received his early education in his native town and soon distinguished himself by his intelligence, his prodigious memory and his precocity as a poet. He now passed under Shif influences, perhaps Zaid (cf. Abî al-Kalîs al-Baghdâdî, Khâzânà, i. 384, ed.) which affected the development of his philosophy, a subject to which we shall return. Circumstances were however to accelerate the speed of Abu 'l-Tayib's religious development. Towards the end of 312 (924), undoubtedly under pressure from the Karmans (p. v.) who had just taken and sacked Kufa, Abû 'l-Tayib and his family made a first stay of two years (cf. al-Samânî, Ansâb, 506 b; al-Bardî, al-Sâbî al-munmû, i. 6) in Samân, the region lying between the Sâ'ûd of Kufa in the east and Palmyre in the west. The Banû Khalî that led a nomadic life in these desert steppes had been much cultivated by the Karmân d'âs. It is possible that the young poet at this time came into contact with some of these heretics. It is however not very probable,
in view of his youth, that this first contact had
any definite effect upon him. On the other hand, this
stay among the Beduins certainly gave Abu
l-Tayyib that profound knowledge of the Arabical-
language of which he was later very proud.
On returning to Kufa, at the beginning of 345
(927), Abu l-Tayyib seems to have decided to devote
himself entirely to poetry. At this time he more
admired the great panegyrists of the preceding
century, Abi Tammun and al-Bahhari (q.v.). Like
them and like the majority of his contemporaries,
he sees in poetry a sure means of attaining wealth
and power. He at once attached himself to a
certain Abu l-Fadl, of Kufa, to whom he dedicated
a piece (Wahb., p. 17—21; Yaz., p. 10—14).
Perhaps a l. 8. to Karmoziun, in any case a
case a complete anagram, the praises which he allows
to be offered him show this — this individual
seems to have exercised a considerable influence
on the religious and philosophical development of
al-Mutanabbi (cf. also AlUthaini, i. 382 below).
Prepared by the Shi'ite atmosphere in which he
had passed his childhood and by the relations
he had had with the Karmoziun in Samuwa, Abu
l-Tayyib in contact with this patron cast off
religious dogmas which he regarded as spiritual
instruments of oppression. He then adopted a
mystical and pessimistic philosophy, echoes of
which are found throughout his work. The world is made
up of sadness, which death destroys (cf. Wahb.,
p. 39; l. 8—13; i. 162, l. 12—13; Yaz., p. 23
and 97); stupidity and evil alone triumph there (cf.
Wahb., p. 164, l. 8—10; Yaz., p. 97); the Arabos,
representatives of a superior race, in his eyes — are
overwhelmed in it by cowardly and barbaric
foreigners (cf. Wahb., p. 148, l. 1—5; i. 160, l. 2—6;
Yaz., p. 87 and 96). In contact with this world with
which he was out of harmony, the consciousness
of his talent, which Abu l-Tayyib had,
developed rapidly; his vanity increased to a degree
which is almost inconceivable (cf. Wahb., p. 60;
Yaz., p. 31). His Arab particularism, as well as all
anti-Syriacs (cf. also AlUthaini), incited him to attack foreign
oppressors (Wahb., p. 35; l. 30—31; Yaz., p. 33).
This is why, by contradictions from which he is
hardly ever free, al-Mutanabbi expressed all his
life those riches and power which he seemed to
his heart, while he stands out from the mass of
his contemporaries by his rigid moralism and
austere (cf. AlUthaini, q.v., l. 78—81).
At first however, Abu l-Tayyib thought only of
conquering the world by his poetical gifts, and
to find a more favourable field for his activity he
left Kufa towards the end of 316 (928), probably
as result of the town being again sacked by
the Karmoziun. He was naturally attracted
to Baghdad (cf. AlUthaini, q.v., l. 82—83) and
there became a panegyrist of a compatriot of his,
Muhammad bin 'Ubayd Allah al'Alawi (cf.
Wahb., p. 6—7; Yaz., p. 3—4). From there he
got to Syria. For two years he led the life of
a wondering troubadour at the court of (cf. Mer, 
Renaissance des Iroûs, p. 256). It is impossible
to follow him in his wanderings for his Daiân
tour guide, does not present his poems in
satisfactory chronological order. Some pieces of
the period are addressed to Beduin chiefs of the region
of Almadhâb (v.v.) (cf. Wahb., p. 24—25, 38—39;
66—67; Yaz., p. 12—13, 22—23, 28—29); others
are dedicated to men of letters of Tripolis (Wahb.,
p. 88—89; Yaz., p. 19—20; al-Ladhâkîya (Latakia)
(cf. Wahb., p. 116—133; Yaz., p. 66—78). The poems
of this period are hurriedly written and undiseive
in quality, but traces of his real genius are already
apparent. With the exception of a sharâ'âd (lassen)
and some impromptu pieces they are all sharpened
on neo-classical lines. The influence of Abû Tammun
and al-Bahhari preponderates.

In the course of this period of experiment, Abu
l-Tayyib was irritated at not finding his merit recognised. Gradually he looks forward to
dreams of domination being realised by violence
(cf. Wahb., p. 82, l. 3—7; Yaz., p. 79). Finally
he abandoned the work of the panegyrist and returning
to al-Ladhâkîya he took up revolutionary
propaganda, the nature of which has hitherto
been misunderstood. According to Oriental writers,
AlUthaini, AlUthaini, q.v., 269—280), Abu l-Tayyib proclaimed himself
a prophet in al-Sanûsîa, was taken prisoner by
Abûlqindî (v.v.), and then received his epithet of al-Mutanabbi, Krasznaikovks (Mutanabbi
alAmâ'ir, St. Petersburg 1909, p. 9—11) does
justice to these traditions, without however taking
full account of some clear allusions in the Dair.
The latter contains pieces which prove beyond
all possible doubt that a rebellion was led by
al-Mutanabbi (cf. Wahb., p. 49—56; Yaz., p. 28—33,
35). This rising, as well as all his period, must have
been political as well as religious. The rebellion
began in al-Ladhâkîya and then extended to the
western borders of Samuwa where the Banat Jâbôt
constituted an element always ready to rebel.
Without adhering to Karmoziun, al-Mutanabbi
exploited its principles which found only too
ready an echo among the marauding Beduins
(cf. Wahb., p. 57, l. 23—33; Yaz., p. 32; allusion to
the massacre of pilgrims by the Karmoziun Abu Ta'bîn,
in 317 = 930). The ambiguity of the utterances
of the rebel, the opportunism of his doctrines
and his conception of the imânate on Karmoziun
lines, may have caused some misunderstanding
of his preaching, since at this time any agitator
was regarded as a Karmoziun. Like some initial
successes, al-Mutanabbi and his Beduins were
defeated; he was captured and imprisoned at
Hims (towards the end of 322 = 933). After a trial
and two years' imprisonment (Dair, Paris MS.,
N°. 3002, fol. 16v.), Abu l-Tayyib was condemned
to retract his errors and set free. From this
decision he gained only the epithet of al-Mutanabbi
and the conviction that poetry alone would lead
him to the realisation of his ambitious dreams.

The poems composed by Abu l-Tayyib immediately
before and during his rebellion are distinguished
by spontaneity of inspiration, by the liberty
which the poet takes with poetic forms, by the
vigour of the style, which has a much more personal
character than in his first manner.

As soon as al-Mutanabbi had returned to his
profession of panegyrist, he naturally resumed his
wandering life (beginning of 345 = 957). For
several years he led a precarious existence and
had to be content to sing the praises of citizens
and minor officials of Antioch, Damascus, Aleppo
etc. who paid him very badly (cf. Wahb., p. 93—
95; Yaz., p. 51—131; Hâfîd, Irisâ, v. 201). Little
by little however, his fame grew. At the
beginning of 328 (939), we find him becoming
chief poet to the emir Abd al-Kharîbîn (the
Barâb b. 'Amîr of the Dairu), governor of
Damascus for the imân al-amâ'ir Ibn Râhî (v.v.)
who had just taken possession of Syria. Of Arab origin, Radr was regarded by al-Mutanabbi as the Maecenas for whom he had been waiting so long. The panegyrics and occasional poems which are dedicated to this emir reveal a sincere admiration for him and possess a sustained inspiration (cf. Wall., p. 206–245; Yez., p. 152–168). The success of this poem, after Abu 'I-Tayyib's return to literature, constituted what might be called the third manner of the poet. With the exception of a poem on hunting in the style of Abû Nuwarâ (q.v.) (cf. Wall., p. 204–205; Yez., p. 158–159) and a number of impromptu poems of no particular interest, al-Mutanabbi wrote only őfion during this period. He would seem then to have returned to his first manner, if the work of this period did not show considerable progress in form.

The friendship between Radr and al-Mutanabbi lasted only about a year and a half and as a result of intrigues of jealous rivals (cf. Wall., p. 253, lines 13–16; Yez., p. 169), Abu 'I-Tayyib feeling no longer safe, sought refuge in the Syrian desert (cf. Wall., p. 258–259; Yez., p. 169–169). There the idea of rebelling again took possession of him (cf. Wall., p. 259–255; Yez., p. 170–171). Fortunately the departure of Radr for the 'Iraq enabled him to leave his hiding-place and resume his profession of panegyrist. He now sang the praises of several individuals of second rank (cf. Wall., p. 107–108, 284–348; Yez., p. 60–61, 194–241). Lastly he succeeded in establishing himself at the Hamdanid court in Aleppo where he became the official poet of the emir Saif al-Dawla (q.v.) at the beginning of 537 (948).

From the literary point of view, the work of this period which runs roughly from the middle of 529 (940), date of the quarrel with Radr, to the beginning of 537 (948), marks his fourth manner, to which he remained faithful till his death. It is characterized by a compromise between the pure neo-classical tradition and a freer form which the poet had adopted in the poems of the period of his rebellion. Without rejecting the framework of the neo-classical őfion, he reduces the erotic prologue to a minimum, sometimes even replacing it by a philosophical and lyrical opening which breathes his dreams, disillusionments and angers.

Al-Mutanabbi stayed nine years with Saif al-Dawla. He was genuinely attached to this patron, who was in his eyes the personification of the ideal Arab chief, brave, magnanimous and generous. Saif al-Dawla in his turn recognized the worth of his panegyrist whom he overwhelmed with gifts and never treated with arrogance. Al-Mutanabbi accompanied him on his expeditions and on returning to Aleppo sang of his exploits against the Byzantines and the Beduins of the desert. In the brief intervals of leisure between the campaigns of the Hamdanid, the poet shared in the leisure of the court of Aleppo, devoting himself to improvisation and writing panegyrics as occasion arose (cf. Wall., p. 523–537; Yez., p. 370–395) or lamentations (marâṣim) on the deaths of relatives of Saif al-Dawla (cf. Wall., p. 388–389, 406–409, 577–578; Yez., p. 271–272, 286–287, 427–438).

The difficult character of al-Mutanabbi and the repue which he enjoyed did not fail to gain him implacable enemies. A few verses directed against the poet al-Babbaghî (q.v.), tried, it is true, to defend him but their zeal could do nothing against the enmity of the hostile group led by the famous Abu'l-Fâris (q.v.). Saif al-Dawla at first paid no attention to the attacks made upon his favourite. When he grew weary and his patience was exhausted, Abu 'I-Tayyib no longer felt his life safe, and seceded from Aleppo with all his family and sought refuge in Damascus (end of 536 = 947).

Eastern critics generally are agreed that the poems composed by al-Mutanabbi during his stay with Saif al-Dawla mark the highest point in his work. Although there is a certain degree of exaggeration in this, it is certain that the poet, while continuing his fourth manner, reveals in the highest degree the mastery which he had acquired in his art during this period. Much more than Abu'l-Fâris, with whom he is often contrasted, he was able to depict the glories of Saif al-Dawla's campaigns against the Byzantines. His verse, it is true, has not the charm of that of Abu'l-Fâris; but it is laler and more epic in style.

From Damascus, Abu 'I-Tayyib went to Egypt to al-Fustâ'î (q.v.) where he obtained the patronage of the Khilâlîd Kâfûr (q.v.). Al-Mutanabbi's career now reveals the necessities to which poets in the fourth (thenth) century had to submit. Deprived of moral and material independence Abu 'I-Tayyib was forced to sing the praises of a patron for whom in his heart he felt only contempt. The panegyrics which he devoted to him barely concealed his regret at losing the favour of Saif al-Dawla. They are somewhat forced and contain points against Kâfûr (cf. al-Badrî, op. cit., i. 125–126).

The poet perhaps only agreed to celebrate this patron because the latter had promised him the governorship of Sidîr (Sidon) (cf. ibid., i. 115). When he saw that these promises were not being fulfilled, he tried to gain the favour of another Whalâhid general, Abu Sulâmî Fâlik (ibid., i. 131–132), but the latter dying in 535 (946) and relations with Kâfûr still being attained, al-Mutanabbi had once more to decide to fly. On the day of the feast of sacrifice of this year, after writing a satire on Kâfûr, he left al-Fustâ'î secretly and crossing Arabia after great trials (cf. al-Badrî, op. cit., i. 139–140), he reached the 'Iraq, spent some time in Kûfû, then settled in Baghdad. He perhaps thought of attaching himself to the famous Bîyûid viziers al-Muhallabî who had gathered a very brilliant court around him. He had however to abandon hope of this in face of the hostility of the emir on whom he was convinced by poets and scholars established at the court of the Bishballah, such as Ibn al-Hadîli (q.v.) and Abu 'I-Faradîj al-Jâshâshî, author of the Kîdî al-Aghâsîr. During his stay here, he had already begun to do in Egypt (cf. Ibn al-Faradîj, Târîkh al-Anadulûs, No. 453), al-Mutanabbi gave lectures in which he expounded to a group of friends the work he had done till that date (cf. Dhahabî, Târîkh al-Islâm, Paris, No. 1861, fol. 269). The year 533 (944) was spent in this fashion. The poet perhaps also visited Kûfû about this time (cf. E. Gabrielli, Pits al-Mutanabbi, p. 60, note 4).

At the beginning of 534 (945) in any case, he left the 'Iraq and went via al-Ahwâz to Arradût (q.v.) in Smiana where he received the patronage of the Bîyûid vizier Ibn al-'Amîn (q.v.). Al-Mutanabbi devoted some panegyrics to him (cf. Wall., p. 40–741; Yez., p. 554–565), then he left him to go to Shûtesh in Fars where he rejoined the Bîyûid Sulûk 'Aqdûd al-Dawla (q.v.) who had expressed a desire to have him at his court. After
disputations with the scholars of that city. In Husain I of 610 (1217) he died in his native town.

**MUTAṢĀRIF.** [See SANGAJA.]**

AL-MUṬAṢĀMIM ʿAṣ-ṢAḥh B. ʿABD Allāh MUḤAMMAD AL-BaʾṣIRI, b. ʿAbd Allāh MUḤAMMAD, al-ʿAṣṣiʾi d. 795 (1395)—e. 795 (1395), b. the son of Hārūn al-Khalīfah and a courtier named Mārida. In the reign of his brother al-Muʿānīn (q.v.) he took part in the fighting against the Byzantines in Asia Minor and received the governorship of Egypt. After the death of al-Muʿānīn in 218 (Aug. 833) he ascended the throne and was soon afterwards acknowledged by his nephew al-ʿAbbās b. al-Muʿānīn (q.v.) whom the troops had proclaimed caliph and the army also then paid him homage. An ʿAbbāsid pretender, Muḥammad b. al-ʿAbbās, was disposed of by the governor of Khurāsān ʿAbd Allāh b. ʿAbd al-Malik (q.v.). After concluding a truce with the Byzantine emperor Theophanes, al-Muṭāṣāmīn sent an army commanded by the Arab general ʿUmar b. ʿAbd Allāh against the Zayj (q.v.) who had revolted from the Ṣind in the Sasanian period and settled in the swamps between Bajār and ʿAṣār. They had been frequently used in their wars by the Muslims. After the death of al-Muʿānīn however, they began to ravage and lay waste the country round as it was hostile territory. They submitted after seven months' fighting at the turn of the year 219—220 (834—835) and in Muḥarram 220 (Jan. 835) they were brought in ships to Bâghdād and banished by al-Muṭāṣāmīn to ʿAin Zarb b. Bāṣīr in 795 (1395). In the same year he appointed Ḥāfiz b. ʿAbd Allāh, usually called al-ʿAbbāsī (q.v.), commander-in-chief in the war against Bābok (q.v.), but it was only after two years that he was victorious. The intolerance of the caliph against all those who would not share the opinions of the Muʿtahīs made him unpopular with the people and in addition there was the dissatisfaction of the citizens with the undisciplined Berbers and Turkish mercenaries whom al-Muṭāṣāmīn took into his service. At the end of 220 (835) he therefore resolved to move his residence to a smaller place. While his son Hārūn al-Waṣīṭī remained in Bâghdâd as governor, the caliph established himself first on the al-Kārīf canal and then in Sāmarrāʾ three days' journey up the river. Here in the course of the year 221 (836) there arose a splendid palace with numerous buildings for the troops (cf. the art. NAGHĀKH). Very soon afterwards the war with the Byzantines blazed up again. The emperor Theophanes invaded Muslim territory on the upper Tigris, captured Zabārā and wrought tremendous havoc in northern Syria and Mesopotamia. In Djuʾakūr 223 (April 838) al-Muṭāṣāmīn himself took the field, accompanied by his eldest generals. The huge force advanced in three columns: the eastern army was commanded by al-ʿAbbāsī, the two divisions of the western one by al-Muṭāṣāmīn and ʿAlīṣī. Al-ʿAlīṣī very soon put the emperor to flight and in Shawāwal (Sept.) of the same year Amurrius after 53 days' siege passed through treachery into the hands of the caliph who had the town destroyed. But the victory had no permanent results. As winter was coming on, al-Muṭāṣāmīn had to retire, particularly as a conspiracy in favour of his nephew al-ʿAbbās b. al-Muṭāṣāmīn (q.v.) demanded urgent measures. About the same time the ispahan of Ṣabābūrī ʿAbd Allāh b. Ṣabābūrī retired, but the rising was suppressed by ʿAbd Allāh b. Ṣabābūrī (q.v.). In 226 (840—841) or 227 troubles again broke out in Fânsîm where the Umayyads still had many supporters. The leader, ʿAbd Allāh b. ʿAbd Allāh al-Maʾṣûrī, claimed to be a descendant of the Umayyads and everywhere preached rebellion against the caliph until ʿAbd Allāh b. Ṣākir sent against him, took him prisoner and brought him to Sāmarrāʾ. Al-Muṭāṣāmīn died on 15th Rabiʾ I 227 (Jan. 5 842) in Sāmarrāʾ. By favouring the Turks and suppressing the Arab element he hastened the decline of the ʿAbdallāhīs empire. Unlike al-Muʿānīn, he was comparatively uneducated. That learning was not allowed to fall into oblivion in his reign is rather due to the chief ʿAbd Ahmad b. Abī ʿUthmān (q.v.).

AL-MUṬAṢĀMĪN, MUḤAMMAD b. ʿAṣ-ṢAḥh b. MUḤAMMAD b. ṢABĀʾĪ, al-ṬUQĪĪ, second ruler of the dynasty of the TūqīĪs (q.v.), of the kingdom of Almorava (q.v.), reigned from 443 to 484 (1051—1091). Gifted like his contemporary al-Muʿtaṣāmīn (q.v.) of Seville with a certain amount of poetic talent, he made his capital during his long reign one of the great centres of culture in the Peninsula. But like the other muṭattāʾ (q.v.) of Spain, he was for the most of his time at war with one or other of his neighbours. He was without doubt implicated in the conspiracy fomented by the Jews Ysul against his younger brother Bidas, king of Granada (cf. ELIZA). Later his forces took part with those of Ysul b. Is̄ul in the famous battle of Zallīkha (q.v.). Like the other Muslim rulers of Spain he felt in the following year the weight of the Almoravids sultan's arm. After unsuccessfully besieging the fortress of Aldo and inciting Yisul to act harshly against al-Muʿtaṣāmīn, whom he hated personally, he realised on his death-bed that his capital would be besieged by the Almoravids as Seville had been. This is why he advised his son and successor Almud al-Dawla to seek an alliance with the lords of
Bougie (q.v.). Almeria was taken very soon afterwards by the Almoravids.

AL-MUTAWAKKIL 'Ali ibn 'Abd al-Qadir, Dā'irat al-Mubâhârah, ed. Shawâl 2001 (Feb.-March 822), son of the caliph al-Mutâsim and a slave-girl from Khuzâyra named Shadhâq. He ascended the throne in Dhu'l-Hijja 232 (Aug. 847) on the death of his brother al-Walîk. His old opponent, the vizier Ibn al-Zayyât, soon fell a victim to the cruelty of the new caliph and a similar fate befall the Turkish general Râghb, although the latter along with Waqqût had helped him to the throne. The caliph dreaded his influence and had him thrown into prison where he died of thirst (Qumâlid II 233 in Dec. 849-Jan. 850). From the religious point of view al-Mutawakkil was thoroughly ortho-
dox. Soon after his accession he forbade any dis-
putation about the Qur'an. Those who had been arrested because they would not recognise the teachings of the Ma'nulis were released and in 235 (849-850) he revived and intensified the regulations for special dress for Jews and Christians which went back to the caliph 'Umar. The syna-
gogues and churches recently built in Baghda-
d were taken down and the Ma'nulis chief kâdi Abnād b. Abû Du'âd (q.v.) with his sons dismissed and the office of chief kâdi given to the Sunni Yaḥyâ b. Akîm. The 'Alids also fell under his ban. In 236 (850-851) he had the manselele of al-Hashid in Kerbelâi destroyed and pilgrimage to this place forbidden. The provinces were frequently ravaged by rebels and foreign foes. In Âshrafiâd in 234 (848-849) Muhammad b. al-Lithû re-established; he had earlier been taken prisoner and brought to Sâmarra but had escaped; he established himself in the strong town of Marand. The caliph's troops could do nothing against him until Boghâ al-Shabî (q.v.) took command. After a long siege the latter offered him a pardon; but when Ibn al-Abîth tried to escape he was seized and brought to Sâmarra where he soon died in prison. When al-Mutawakkil attempted to treat semi-independent Armenians like a conquered province, a dangerous rising broke out in 237 (851-852), which was suppressed in the following year, but only with difficulty, by Boghâ al-Khatir. About the same time (238), the Byzantines landed in Egypt and plundered Damiestra and in Asia Minor the war went on in the traditional fashion against the Byzantines. When the Palaestine sect was persecuted by the empress Theodora they went over to the Moslem in masses. The Byzantines, however, succeeded in taking many prisoners. Those who would not become converted were massacred; but when al-Mutawakkil who had moved his residence in Safar 244 (May-June 855) to Damascen but left it after only two months, sent Boghâ with the Turkish cavalry against the Byzantines, the fortune of war turned. Boghâ fought with success against the enemy and in the following year the emperor Michael I himself was defeated at Samoata. In 246 (860-861) the Muslim generals took a considerable number of prisoners; but no permanent change in the situation was produced. In Syria also trouble broke out. Two governors in succes-
sion were driven out of Hims and only with the help of the troops from Damascus and al-Ramlí was order restored (241 = 855-856). About the same time al-Mutawakkil sent an army under command of Muhammad b. 'Abd Allâh al-Kummi against the rebel Bejla. The latter were completely defeated but their leader 'Alî Bâbâ was pardoned. In the reign of al-Mutawakkil the dynasty of the Shaffâris (q.v.) was established in Sijjîn. To keep the people of Baghdaid in check he sent the governor of Khurâsân, Muhammad b. 'Abd Allâh b. Tâhir (q.v.), and when the turbulent pastorsions made trouble he built a new residence at Daj'âwâya in 245 (859-860) outside of Sâmarra, which swallowed up enormous sums. Poets and scholars were rewarded with princely munificence by this caliph. The extravagance, capriciousness and cruelty of the caliph, however, made him hated, and finally he quarrelled with the commander of the Turkish bodyguard. In Dhu'l-Hijja 235 (July 850) he had arranged that his eldest son Muhammad al-Muntasir should succeed him and the two other sons Abû 'Abd Allâh al-Mu'azz and Ibrahim al-
Mu'aiyad were each to receive a governorship with a claim to the throne after al-Muntasir. He began to favour al-Mu'azz however, and thus aroused al-Muntasir's discontent. The latter conspired with a few others of the same sentiments and in Shawwâl 247 (Dec. 861) al-Mutawakkil was murdered. [a. AL-PATH R. KIYEM.]

MUTAWÂTI'IR (A.), part. act. v. from m-t, "that which comes successively." It is used as a technical term in two senses:

1. In the theory of cognition it is applied to historical knowledge (khunâr), if the latter is generally acknowledged; e.g. the knowledge that there is a city called Makkah and that there has existed a king called Alexander.

Definitions of the term show slight differences. According to al-Djurjânî knowledge is mutawâtîr, when it is supplied by so many persons that either their number or their trustworthiness excludes doubt of its truth (Tukrîf, ed. Flâgel, p. 2101; cf. Sprunger, Dictionary of Technical Terms, p. 1471).

According to Abû Hâfiz 'Umar al-Samit (f. 537 = 1142) reports are mutawâtîr when handed down without deviation by persons who cannot be supposed to have plotted a lie. Ta'fzânî in his
commentary (p. 33 sq.) mentions two objections. The first is, that Jews and Christians accept as authentic reports that are rejected by Muslims. To this objection Tafsārānī simply replies that the possibility that these reports should be mutawātir, is excluded. The second objection is, that the reports of every single reporter (qabīlat, q.v.) represent an opinion only and that an accumulation of opinions cannot be said to afford certainty. To this Tafsārānī replies that often plurality has a power of which singleness is devoid, e.g. a cord made of hair.

For the place of this source of knowledge within the theory of cognition, cf. the Supplement, s. v. 'ilm.

In prosody the term is applied to the rhyme in which one moving letter intervenes between the quiescents.

MUTAWWIF, Meccan pilgrims' guide.

The word literally means one who leads the ṣalāf [q.v.]. The task of the mutawwi is however by no means limited to assisting pilgrims from foreign lands, who entrust themselves to the guidance and protection of the ceremonies required at the circumambulation of the Ka'bah. On the contrary they act as guides at the ṣalāf also and at all other ceremonies which are prescribed or only recommended for the ṣalāf or umra [q. v.]. The mutawwi also cater very completely for the physical welfare of the pilgrims. As soon as the pilgrims arrive in Ḍa'd, their agents are ready on the arrival of the steamers to provide all the services they require from disembarkation to departure for Mecca. In Mecca the mutawwi or members of their families and servants take charge of the pilgrims. During the whole of their stay they provide the pilgrims with lodging, service, food, purchases (necessary and unnecessary), attend them if they fall ill and in case of death take charge of what they leave behind them.

The mutawwi of course do not all do this for nothing. They are appropriately paid for their trouble and see that, if the pilgrim is rich, their friends and relations also make something out of him. Of the money which they themselves receive, they have to hand over a considerable part in the form of fees, presents etc. to the šāhīr of the ṣalāf and to the treasury, — another reason for getting as much as possible out of those entrusted to their care. It is therefore no wonder that many pilgrims have complained bitterly about the covenances of these particularly prominent representatives of the Meccan pilgrim industry. Recently the fees for guides have been fixed by a legal enactment of the Hijās government (G. F., xii. 1932, 449).

Reference has already been made to the fact that the mutawwi are organised in guilds; they are divided up into separate groups who sometimes have the right to exploit the pilgrims from a definite area only (e.g. Lower Egypt). All these groups together form the guild with a chief šahīr officially recognised at their head. The guild is also very exclusive. "Wild" (i.e. independent) guides (quāʾārā) have to be content with the scanty pickings left over for them by the organised mutawwi.

AL-MUTAZILA is the name of the great theological school which created the speculative dogmatism of Islam. The meaning of the name is clear from al-Maʿāṣī al-Mutāzila, Murūj, vi. 22: the mutawwila are those who profess the doctrine of the ṣalāf, i.e. the doctrine of the manzilah bain al-mansūlatān or the state intermediate between belief and scepticism, the fundamental doctrine of the school (see below). A tradition which emanates from the akh al-ḥadīth derives the name Mutāzila from a schism which took place in the circle of al-Ḥasan al-Baṣrī: after laying down their doctrine of the manzilah bain al-mansūlatān, Wāsīl b. ʿAbd and ʿAmr b. ʿUbayd are said to have separated (fiṣnāla) from al-Ḥasan's circle to found an independent school or rather to have been expelled from it by the latter. These traditions are not entirely without historical foundation but the interpretation of the name deduced from them is certainly wrong. The Mutāzila were proud of their name, which they certainly would not have been if it had been a nickname invented by their enemies. We have here, as the variety of versions also shows, a tendentious invention of the akh al-ainan wa-l-ʿaqlīn aГлава, to rehabilitate al-Ḥasan and brand the Mutāzila as heretics.

Origins and political history. There are quite definite indications that the Mutāzila was of political origin and that it arose under the same constellation as the ʿAshʿarī and Khaṭṭārī movements. The accession of ʿAlī (Qubba l-Ḥājdīja 35) is the great watershed in the currents of the history of Islam. It is well known that several notable Companions of the Prophet refused to pay ʿAlī the homage which he demanded or offered it reluctantly. The most frequently mentioned were ʿAlī and al-Zubair but the names of many others have been preserved: Saʿd b. ʿAbī Waqṣās, ʿAbī ʿAlīya b. ʿUmar, Muḥammad b. Maslama, Usman b. Zaid, ʿAbd b. ʿUmar, Ibn Zaid and ʿAbd b. Ṭāhīt (al-Taʿbarī, i. 3072). Of these ʿAlī and al-Zubair openly rebelled against ʿAlī and the majority remained neutral. The Medinese in general followed the example of the latter and in Bagh ʿAlīnuf b. Kaʿb with 6,000 Qarmatians and a group of Arabs under ʿAbu Ṣaʿīd al-Shamīnā also stood aside from the quarrel (al-Taʿbarī, i. 3109, 3178). In
speaking of the latter the text uses the verb "tāmah," which still has its proper sense of "to separate from", but which is already on the way to become a political term meaning "to take up a neutral attitude in the quarrel between 'Ali and his adversaries!" Now al-Nawbakhtī mentions (Kitāb Fīrāq al-Mustaṣila, ed. Ritter, p. 5) a party which on the accession of 'Ali separated and followed ʿAlī b. Abī Ṭālib, ʿAbd Allāh b. Omar, Muḥammad b. Maṣlama and Usāma b. Zaid. "These separated (tīṣātūn) from 'Ali and refused either to fight against him or to take his side although they had paid homage to him and had received him in worship; they were called al-Muṭṭaṣila and are the ancestors of all the later Muṭṭaṣila." The Muṭṭaṣila as a theological school must therefore have been preceded by a political Muṭṭaṣila, which determined its structure.

This hypothesis seems to be confirmed if we analyse carefully what is recorded of the founders of the theological school. According to a unanimous tradition, this school originated with two natives of Basra, Ṣuṣhān, al-Muṭṭaṣila, who is called "al-Muṭṭaṣila, "Aṭīq" [q.v.], and Amr b. Ṭālib [q.v.]. The period of their activity covers practically the reign of the caliph Hārūn and his Umayyad successors, i.e. the years 105-131 (723-48). We have no very good deal of quite early information about them, not always free from lacunae, but sufficient to enable us to grasp the leading ideas in their theological work (see Bibli.). It is clear from all these traditions that the doctrine of Ṣuṣhān formed the starting point for the creation of the school, that Ṣuṣhān was the first to formulate it and that he later won over, Amr to his teaching. This is how al-Khālidī records the origin of the idea of Ṣuṣhān, Muslims were agreed that he who committed a grave sin deserved the name of Ṣuṣhān and of Ṣuṣhān, but opinions varied as to the character of the individual who received these epithets. The Kāhidī said he was an infidel. The Muṭṭaṣila said he was a believer in spite of his Ṣuṣhān and his Ṣuṣhān; al-Ṭālib al-Basrī, and his circle, described him as a hypocrite (manṣūla). Ṣuṣhān denies that the description given in the Kurān of a believer and an infidel cannot be applied to a believer who has committed a grave sin; the latter is therefore neither believer nor infidel. Now it is impossible to regard him as a hypocrite as al-Ṭālib wants him to do, for a hypocrite must pass as a believer until his hypocrisy is brought to light. The only possible course then is to put the Ṣuṣhān in a special category of those who are in an intermediate state (manṣūla bain "lam-manṣullah"). These same ideas are found in the conversation by which Ṣuṣhān is said to have won Amr over to the doctrine of Ṣuṣhān (al-Salīḥi, al-Muṭṭaṣila, Amīra, l. 141 sq. = Ibn al-Muṭṭaṣila, al-Muṭṭaṣila, p. 22 sq.; source probably al-Khālidī).

There are political problems concealed behind these speculations. The doctrine of manṣūla bain "lam-manṣullah" is not the result of interest in pure speculation, but arose out of an clearly defined opinion on the individuals who took part in the quarrels that raged round the caliphate of 'Ali. It is striking how much space is occupied by the question of 'Ali, of Ṣuṣhān, of al-Zubair and of 'Aṭīq in the rather scanty information which we possess regarding the theology of Ṣuṣhān and 'Amr; we cannot doubt that there were dealing with a central problem. Ṣuṣhān and 'Amr took neither side in the dispute (Kitāb al-Imārāt, p. 97-98). According to them, 'Ali, Talḥa, al-Zubair and 'Aṭīq were originally true and pious believers. But the war which broke out among them divided them into two parties who could not both be right; one of these parties committed a sin but we do not know which; we must therefore leave their case to Him who knows it in its relations with one another we cannot regard them as true believers in the strict sense of the word. As a result if one of these individuals bears witness against another of the opposite party, we cannot accept this evidence; relatively to the one, the other is ḍālah in vice versa (cf. also Baghāṣī, Kitāb al-Farāj, p. 100). If we may believe the abī Ṣuṣhān, 'Amr showed himself more severe than Ṣuṣhān; he is said to have refused to accept the deposition made by any member of these parties against any member of the community on any matter whatever (Tārīkh Baghāṣī, ill. 178; al-Baghdādī, Kitāb al-Farāj, p. 100); for he declared guilty (ḍālah) per se both the parties engaged in the battle of the Camel. It is therefore not surprising that Ṣuṣhān and 'Amr have sometimes been confused with the Kāhidīs (verse of ʿIsā b. Suwād al-ʿAdwā, al-Īṣāṣ, Bayān, l. 13).

However, the opinion of the leaders of the Muṭṭaṣila on 'Ali is based on quite a different foundation. To understand the position correctly it is important to note that 1. Ṣuṣhān and the whole Muṭṭaṣila were definitely enemies of the Umayyads and that 2. Ṣuṣhān adopted a somewhat ambiguous attitude regarding 'Othman and his murderers (Kitāb al-Imārāt, p. 97-98). This tacitly implies a declaration in favour of the Alids, the first authors in the drama played at Mecca in the year 35. Indeed Ṣuṣhān was on some intimate terms with the Alids of Medina (Ibn al-Muṭṭaṣila, al-Muṭṭaṣila, p. 20); the Zaidīya revere him as one of their leaders, and Zaidī theology is essentially based on that of Ṣuṣhān. This is true not only of the speculative theology; there is agreement also on political doctrines. The Zaidīs do not say that the first caliphs Abū Bakr and Omar were usurpers as the extreme Shīʿa do; Ṣuṣhān and with him the whole Muṭṭaṣila regards the caliphate of Abū Bakr as legitimate (commentary of Ibn Abī Ṭālib on Nahj al-Balagha, Cairo 1329, l. 3); he left undecided the question of knowing who had the superior claim, Abū Bakr, Omar or 'Ali, but he credited 'Ali with a superior claim to 'Uṯmān. This attitude, a little complicated as regards 'Ali, and therefore prudent towards the extreme Shīʿa, at the same time unreservedly hostile to the Umayyads, can in my opinion only be interpreted in one way. All these apparently dissimilar lines converge on a common centre; the 'Abḥāṣīd movement. It is precisely Ṣuṣhān's attitude which we must regard as characteristic of the partisans of the 'Abḥāṣīds. The latter regarding themselves as the true alk al-bait, it was evidently in their interest to lower somewhat the prepondering position attributed to 'Ali by the extreme Shīʿa in order themselves to profit by the prestige enjoyed by the family of the Prophet; but on the other hand, they had every reason not to cut the links with the Shiʿa who were indispensable as allies to them. It is obvious that in these circumstances it was particularly important for them to win over the relatively moderate Zaidī faction to their cause. In a general
way, the teaching of Wāṣīl or al-murtadsa can only be perfectly understood if we see in it the theoretical crystallization of the political programme of the 'Abbasids before their accession to power. Everything leads us to believe that the theology of Wāṣīl and of the early Mu'tazila represents the official theology of the 'Abbasid movement. This gives an enforced explanation of the fact that it was the official doctrine of the 'Abbasid court for at least a century. It seems even probable that Wāṣīl and his disciples took direct part in the 'Abbasid propaganda. In his bayātha, mentioned before, Sa'dīn al-Anṣārī tells us that Wāṣīl had many admirers (ā'labūn) in all parts of the Muslim world. Sa'dīn describes them as ardent believers and ascetics who were distinguished from other men in physique and dress; they were the supports (wāṣīlāt) of God in all lands and centres in which his commandments were made manifest and in which the art of disputation (with the enemies of the faith) flourished. The period of this activity coincides exactly with that of the most intense 'Abbasid propaganda, in which all the forces working for the ruin of the Umayyads were cooperating; it is impossible not to believe there was a connection between the two. That Wāṣīl did actually extend his propaganda very far to the west is proved by the fact that there existed long after the fall of the Umayyads a Wāṣīl community at Tahtir (Ya'qūb, i. 315) numbering about 3,000 members who had allied themselves with the 'Abbasids. They had rebelled against Mansūr under ldrīs b. 'Abd Allāh b. 'Abas al-Hanfī (al-Sharāstānī, p. 31); on these happenings see 'Abasī, iii. 561; they were therefore reckoned among the enemies of the first 'Abbasid calipha. It is interesting to note that the connection between Wāṣīl and the Khāridjī, supposed by Iṣākh b. Sūwālī al-'Adwāʾī to exist (see above) was here an actuality. The quarrels of Wāṣīl and his followers with Zāhīr b. Sa'dīn [q.v.] form a difficult problem which has not yet been solved. On the one hand, Zāhīr's theology left distinct traces on that of the Mu'tazila; the doctrine of the created Kurān which was later to become a fundamental Mu'tazila thesis was probably formulated by Zāhīr and forms the basis of the divine attributes. There are coincidences on both sides which cannot be accidental. On the other hand, there are many serious differences which are probably practical and political in their nature. Zāhīr professed in the most extreme form the doctrine of predestination (dāna). All the actions of men are involuntary. Wāṣīl maintained the opposite thesis of free will. Now once again we have political problems hidden behind these theological controversies; the Umayyads in general preferred the dogma of predestination while the opposition accepted the dogma of free will in its widest interpretation; in Damascus, Ghālib b. Dīmashqī, who figures among the fathers of the Mu'tazila (Ibn al-Mu'tāzīlī, al-Mu'tāzīlī, p. 15—17), was put to death by the 'Abbasids for holding the doctrine of free will (al-Tabārī, iii. 733).

On the hypothesis of a definite connection between the Mu'tazila and the 'Abbasids is admitted, the question of the relations between the Mu'tazila founded by Wāṣīl and the early Mu'tazila of the period of 'Ali presents itself in a new aspect. It will be admitted that there is a striking resemblance between the attitude of these former companions of the Prophet and that of the 'Abbasids. It is true that 'Abd Allāh b. 'Abbas entered the service of 'Ali after the death of 'Othmān but his true sentiments were somewhat ambiguous; he was a great friend of 'Othmān but a rather lukewarm partisan of 'Ali and after the latter's death he placed himself at the service of the Umayyads. His descendants did not remain at Medina; probably because the 'Alīdīs were their rivals there; after a stay in Damascus, his son went to Hims and here in a formal rapprochement took place in 98 between the 'Abbasids and the 'Alīdīs (Wellhausen, Das arabisch Reich, p. 312 sq.). Before this event, we may regard the 'Abbasids as a kind of Mu'tazila in the old sense of the word.

With 'Amr b. 'Ubayd a new element enters the Mu'tazila as founded by Wāṣīl. 'Amr originally was one of the sal al-ḥadīth; brought up in the circle of al-Hassan al-Baṣrī, he transmitted a large number of ḥadīth from his master and he is remembered as one of the muhāsabīn. His conversion to the doctrine of Wāṣīl brought about a rupture between him and these circles; but with him a considerable section of the Khāridjīs joined the Mu'tazila, thus reinforcing the more politically inclined Khāridjīs of which Wāṣīl was the inspiration. The 'Abbasids and the Mu'tazila were soon to become synonymous terms. 'Amr seems to have been decisively anti-'Alīdī (see above), in any case he preferred 'Abd Bakr to 'Ali (Ibn Abī Hādīd on Nukāyi al-Baṣrī, i. 3). This attitude implies a certain predilection for 'Othmān, which is foreign to Wāṣīl; indeed, a section of the old Barīts, among them al-Diḥḥī, is said to have belonged to the party called al-ʿOthmānīya. 'Amr's point of view was of great importance for the development of the Mu'tazila. After their final triumph, the 'Abbasids immediately dissolved the alliance with the Shi'a, which had only been a political instrument for them. As regards the extreme Shi'a, the Kāfīrīn, the Mu'tazila unreservedly followed the direction of their new masters; but it is fairly evident that some of them did not desert all at once, or break all abruptly, with the moderate Shi'a. It resulted in a schism. One section remained faithful to the alliance with the moderate Shi'a; this section was later to form a special Mu'tazila school in Bābeldīb, but the Mu'tazīlīs of Basra with 'Amr at their head seem to have attached themselves without protest to the 'Abbasid cause. 'Amr even became the intimate friend of Mansūr and so to speak his spiritual father. In the west, the Mu'tazīlīs allied with the Khāridjīs rebelled against the 'Abbasids (see above).

Let us sum up the characteristic features of the Mu'tazila at the beginning of the 'Abbasid period. The Mu'tazīlīs 1. in general derive from the cause of the 'Abbasid caliph, only a faction being opposed to them; 2. decidedly hostile to the extreme Shi'a, the Rāfiqa; 3. hostile to the 'Abbasids proper, by which however it was a little influenced; 4. hadīth in reunifying some of the old factions of this name; 5. in serious disagreement with the sal al-ḥadīth, who soon declared it heretical. This position had a decisive influence in determining the structure of the Mu'tazīlī theology. The beginnings of this theology go back to Wāṣīl and 'Amr and are connected with the fight against the Rāfiqa. The extreme Shi'a had quite early assimilated a good number of
non-Muslim beliefs; we need not doubt that Manichaeism played a part in them; in any case certain gnostic and dualist ideas had found a way into Islam through the intermediary of these Shi'is. These tendencies, very marked in Kufa, were also represented at Basra; in the house of an Ahd who was a moment or Buddhist, Wasi' and 'Amr had discussions with Abū al-Karīm b. Abī 'Amar al- wasi'ī and Shāhī b. Abī al-Mu'taṣīl, who pres- sures dualist doctrines (as-ramaṭāwa; we should probably understand by this Manichaean view) and the poet Bahrām b. Ṭūr [q. v. (Khitāb al-āghāna, ill. 24)]. A serious schism broke up this curious wāfīa. This event decided the whole future of the Mu'tazila. Henceforth the fight against saz-dah and thamāwa is a cardinal point in the programme of the Mu'tazila. Wasi' himself composed a refutation of Manichaeanism which al-Bali (c. 300 A. H.) was still able to peruse (al-Mu' at-siḥ, p. 21). But they also found themselves compelled to combat these heresies in a positive fashion; to the doctrine of fire professed by Shahām, they offered a theology of earth, so to speak, a theology based on the natural philosophy of the time. The poems of Saffān al-'Aṣārī (al-Dā'iq, Khitāb al-Bayayn, l. 16-19) and others are a specimen of this theology; here we have one of the fundamental documents for the history of Mu'tazila dogmatism. It is not yet clear whence came the philosophy put at the service of theology but its general character is apparent; it is the philosophy of the alchemists, physicists of late antiquity, a kind of summa of the scientific principles which seem to have been accepted everywhere in Asiatic Hellenism. Saffān perhaps gives us a hint as to the circles from which it came to the Mu'tazila, when he tells us that Bahrām called Wasi' and his friends Dālaṣa; this is in any case worth noting. In a general way those who handed on this natural philosophy seem to have been the school called Dāḥira by Muslims. The Mu'tazila fought these Dāhirs with a vigour which reveals the dependence on this heretical philosophy, which they were conscious. The true founder of the dogmatic system of the Mu'tazila was Abū 'l-Hudhail Muḥammad b. al-Hudhail al- 'Aliāf [q. v.]. Abū 'l-Hudhail, his friends and pupils, continued on a large scale the polemic against Manichaeism, a polemic which is certainly not unconnected with the Ahl Baydā with the open or secret adherents of this religion. On the other hand, he fought the Rāfīsīa most vigorously, then represented by the very remarkable theologian Hāshām b. al-Hakam [q. v.]; and it was through his disputes with the latter that he was led to study the books of the philosophers, which furnished him with a system of dogmatism, a little bold, but full of fertile new ideas. Alongside of him there was a crowd of important theologians at Basra: Mu'āmmar, an independent mind whose ideas have not yet been sufficiently analysed; Hāshām b. Abī al-Fuwaṭ and al-Asām, adversaries of Abū 'l-Hudhail, and several others. Among the pupils of Abū 'l-Hudhail mention must first be made of Thābit b. Sādiq al-Naqqām [q. v.]. These theologians gave Mu'tazila dogmatism its essential character. This theology is: 1. apologetic; it aims at defending the revelation of the Prophet; as a result it is 2. strictly Kurtānī; the sacred book is the only source of the theological denomina-
b. Hārb (d. 310), at a later date Muḥammad b. Șaiddād al-Miḥna'ī Zurāfī (d. in 238) and Abu l-Ḥasan 'Abd al-Raḥmān b. Muḥammad al-Khāiyāt, the great authority on the history of the Muṭaẓila (d. at the end of the century). On the Muṭaẓila of Syrīa we are not well informed; and only a little better on that of Egypt. The first Muṭaẓila here was Ibn ʿUlaa (c.f. above) who had disputations with al-Shāfiʿī; with him Ḥāfīz al-Farād having come to Cairo; this last represented the official theology in Cairo during the middle period of al-Wāḥīk. Ḥāfīz was declared a heretic by al-Khāiyāt (Aḥalāl, p. 131–134). — In Spain the Muṭaẓila teaching was disseminated by dīrār Abu Bakr Fārād al-Kūrtubī who had visited the east and stayed there with al-Dżāhīrī; it was therefore al-Dżahīrīya — at bottom al-Naḍmāmīya — that was known in Spain; very soon the Muṭaẓila seems to have become indistinguishable from the Būḥārīya (Aṣīn Palacios, Aḥammasurra y su coroela, Madrid 1914, p. 21—22).

The fourth century saw the Shi'a flourishing and ʿAbbāṣid power disappearing; the favour of several Bābyl governors now to some degree made good the loss of prestige which had been suffered by the Muṭaẓila. The schools continued their work and the Muṭaẓila spread to the east. At Bāṣra, al-Dżabābī had left a large number of disciples but his school was soon surpassed by that of his son Abu Hāshim (q.v.); representatives of the latter were among others: Abu ʿAbd Allāh al-Ḥusain b. ʿAlī al-Baṣri (d. 569), Abu l-Ḥasan al-Arakān (Abū Ḥāfīz b. Wāsif b. ʿAbd al-Wāsī al-Muṭtahārī (d. 731); a number of the well known al-Tanukhī family; Abu ʿAbd Allāh al-ʿAbdī b. ʿAṭīya al-Baṣri and his pupil the Kādī Abu al-Dżahāb b. Ṣāḥib al-Hamādānī. The last, the most remarkable of the Bāṣra theologians of the period, migrated in 360 to Kāṣī where he founded an influential school and died in 415. In Bāṣra dīrār the school of Abu Bakr Ṣāḥib (d. in 320) dominated the whole century. A very celebrated Bāṣrī, Abu l-ʿAskār ʿAbd Allāh b. Ḥāfīz al-balḫī al-Kubūtī, a pupil of al-Khāiyātī, founded a school at Nāṣrāf, where he died in 319; among his pupils we find al-ʿAfdāl Abu l-Ḥasan b. Ḥusayn b. ʿAbd al-Wāsī. We also find the Muṭaẓila in Iṣfāhān, where Abu Bakr Muhammad b. Ḥusayn al-Zahābarī of the school of Abu l-Ḥasan b. ʿAbd al-Wāsī had introduced Muṭaẓila doctrines; at Kirmās (school of Abu Ḥāshim), Gurgūn, Naḥāpura and in several other towns of Khurāsān. During the fifth century it was the theology of Abu al-Dżahābī which dominated at Bāṣra; one of his pupils, Abu Muḥammad al-Ḥasan b. Ṣāḥib. Mattawawī, handed down the great work on dogmatics of his master, al-Muṣṭafa b. ʿIltīrī; another theologian, Abu Raḥīm al-Sādī b. Muḥammad al-Nāḥṣūbī (d. in 460), compiled a resumé of the questions disputed in the schools of Bāṣra and Bāḡdād. Several theologians of Bāḡdād are known; some of them must have belonged to the Zaidīya and generally speaking the Bāḡdād schools were abstracted and more merged in the Zaidīya. The last great theologian of the Muṭaẓila was al-Zāmān b. ʿAbd al-Malik (d. in 538) but the schools continued to exist long after him, especially in the east. It was probably the invasion of the Mongols that put an end to them; the Muṭaẓila has however survived to our day in the Zaidīya.

It was not speculative dogmatics alone that formed the subject of Muṭaẓila activity. Their part in the history of the exegesis of the Kūfīn is a very considerable one; it was they who introduced the strictly grammatical method. There is a very close connection between them and the philological school of Bāṣra, the representatives of which in general taught Muṭaẓila doctrines (e.g. al-ʿAsna'). The exegetical works of the Muṭaẓila during the most part now lost, were utilized to a large extent by their adversaries, e.g. Fāḍil al-Kăīrī. — All questions of ʿibād were very vigorously discussed in the Muṭaẓila schools; the influence of the Muṭaẓila on the ʿuṣūl al-ʿibād and the maqāṣid has still to be examined. — Lastly the science of ʿadlīya certainly received various stimuli from the Muṭaẓila criticism of the ʾaḥkām al-ḥadīth. Maqāṣid al-Muṭaẓila: theology is summed up under five principles (ʿuṣūl) or fundamental doctrines which one must accept in their integrity to be recognized as a Muṭaẓila (al-Masānī, Muṭāzilī, vi. 22). As these were probably in origin the principal points in the programme of Muṭaẓila propaganda, these ʿuṣūl later became a key framework of speculative dogmatics.

1. ʿAḥkām al-ḥadīth: the strictest profession of monotheism (against any kind of dualism); denial of all resemblance between Allāh and his creatures (against the anthropomorphisms of the muḥaddithīn on the one hand and those of the Rāfīḍ and Manṣūmah on the other); the divine attributes recognised (against the Dabārīya) but deprived of their real existence: they are not entities added to the divine being (this would be ʿagība); against the šīrāyina among the ʾaḥkām al-ḥadīth but identical with the being (Wāsī, Abu l-Ḥudjālī); allegorical interpretation of the anthropomorphisms of the Kūfīn; denial of the benific vision; vigorous affirmation of a personal God and creator (against the Dabārīya); integral affirmation of the revelation of the Prophet but distinction between a natural theology and a revealed theology. Problems discussed here: the nature of God and his attributes: a. omnipresence: God is in all places; b. omniscience: he directs everything (Abu l-Ḥudjālī al-Dżabābī); — he is not in any place (general thesis); c. perceptibility: he is not perceived by the senses (thesis generally adopted) — he is perceived by the heart (Abu l-Ḥudjālī) — he has a hidden nāhiyya which will be perceived in another world with the help of a sixth sense which God will then create (Ḥāfīz al-Farād and others; thesis declared heretical); the attributes (eternal; names of the essence): identical with the essence (Abu l-Ḥudjālī; thesis generally adopted) — inherent in the essence through ʿulūm (Muḥammad) — through aṣbāḥ (Abu Ḥāshim); expressing positive aspects (Abu l-Ḥudjālī and generally) — negative (knowledge: negation of ignorance of the Nagāmī).

2. The structure of the created world: a. starting-point anthropology treated in a positive way (exact definition of religious duties) and negative (refutation of qāmāna): man is the empirical phenomenon which we see, the body (ṣarīma) which is composed of a certain number of indivisible entities (atoms) and which supports the accidents: life, the senses, colours etc.; nafs is muḥādīn and distinct from rūḥ (Abu l-Ḥudjālī) — man is composed of body (ḥadān) and rūḥ (identical with nafs) which are mutually interpenetran (muḥādīna); the colours, senses, sensations, forms and spirits form different categories of ḥamalā (not
accidents; not atoms); all that is living: forms a single category (ma'adhūna) (al-Naẓāmūn; — man is an indivisible entity (‘awākar) characterised by ʾarādā, ʾaʾnādā, ʾaʾnākā; the body is the instrument of this ‘awākar; the accidents (movement, rest, colours and shapes) therewithin are in it through maʿādā which are inherent in other maʿādā etc. (Maʿāmarī); is the ‘awāfīn or Maʿāmarī — man is ʾaḥṣār (Abū ʿAbdāb b. Saʿlānīn) the nafs is an instrument which the body employs: the rābū is an accident (Dījār b. Hārūn); the rābū is a body and a distinct from the life: which is an accident (al-Dhūbābū); — the physical world; dead nature is distinct from that which is living in as much as nature acts through ṣādiqah while living beings act through their free will (ikhārij); for the rest, the one and the other category are of the same structure, the problems of physics being those of anthropology (substance, accidents, bodies, atoms etc.) theory of jāhūr and kamālah formulated by al-Naẓāmūn and which correspond to his theory of penetration (movekhāla); things are hidden one in the other, physical development consists in the hidden things becoming manifest (e.g. the fire hidden in the ash). 3. The relation between God and the created world: a. lais kāmil-ta'īgh shari: a rigorous distinction between kāmil and maqādā (no hād); the activities of God, expressed by his attributes, have for their objects the things of the created world. If these activities are eternal, the things ought to be so also; now these things are created i.e. put into existence after having been non-existent; several solutions of the problem: “thing” is only what exists and before the reaction the thing was not thing which implies that divine knowledge is born with the things (Dījārīs thesis adopted by Ḥiḥām al-Fuwaṭī) — before the creation those things were posited (Dījārīs) as non-existent in God’s eternal knowledge but without the accidents which characterise them in existence (al-Shāhīnī and others) — with these accidents (al-Khāṣṣīt, al-Kaʾībī and several theologians of Baghdād [school of maqādā-maṣūla]); God created all things at one time, one in the other and these things are manifested in the created world one after the other (al-Naẓāmūn); c. are the objects of divine knowledge and power limited? Yes (Abū ʿAbdul-Halīl al-Halīlī) — no (the others); d. divine power does not extend to the accidents (Maʿāmarī) — to the phenomena resulting spontaneously from human action (takwānąlī; under asʿal al-ʿadī); 4. Revelation: prophecy: a prophet is maqādū, i.e. free from grave sins; b. the Kurān: created; God creates the word in a substratum (laḥūk al-maṣāḥah: the Prophet; the bush etc.). The Kurān is miraculous in composition and style — denied by al-Naẓāmūn; distinction (which goes back to Wajīlī) between maqādū, the precepts of the Kurān which are clear and without ambiguity and maqādūshīb, the precepts which are not immediately clear and evident; distinction between naṣīḥah and maqādūshīb. 2. Aṣīl al-ʿāghāfāf: God is just; all that he does aims at what is best for his creation (āqīb); he does not desire evil and does not ordain it (āvar and ʿirādā identical). He has nothing to do with man’s evil deeds; all human actions result from man’s free will; man has a ʿāqīb and an īstāfā habīb “I’ll: man will be rewarded for his good deeds and punished for his evil ones. Problems discussed here: 1. Divine power: a. can God commit an injustice? No: al-Naẓāmūn — yes, but he does not: general thesis; b. theodicy: could God prevent evil? Yes, for he possesses a store of hidden grace (hūf) which would be sufficient to destroy evil completely at once. Bishāb al-Muʿtaṣim and several Baghdādī theologians — no, for he always does what is best and wisest for his creation; general thesis. 2. Huμan power: created by God; physical evils, diseases etc. are not subject to the human will; man’s actions are movements; distinction between al-maṣūla and al-miṣāla: problem of taʾwālib was discussed by Abū ʿAbdul-Halīl and particularly discussed in the school of Baghdād: the effects of an action are attributed to him who performs it, and even after his death he remains responsible for it. 3. Aṣīl al-waʾṣūd wa ʿl-waʾṣūd (or al-waʾṣūd wa ʿl-waḥšānā): practical theology. Problems here discussed: a. belief and unbelief: belief consists in all the acts of obedience, obligatory or supererogatory; sins (maṣāḥah) are divided into grave (jāhūr) and petty. (jāhūrī); the following are jāhūrī: taqābīl radhūkā, ḍafūn kāmā, ṣafā mīn kāmā, ṣafā kāmā, ṣafā kāmā, ṣafā ṣafā, Abū ʿAbdul-Halīl: God of his grace may forgive jāhūrī; he who is not a Muslim obeys God if he does not believe in the thing which God has commanded in the Kurān (ʿābār wa ṣawālah ʿl-hākīh); Abū ʿAbdul-Halīl (thesis rejected by al-Naẓāmūn and the Baghdād school); distinction between al-waʾṣūd and al-waʾṣūd: Abū ʿAbdul-Halīl from Ḥiḥām al-Fuwaṭī; maṣūla:Abu ʿAbdul-Halīl and Ḥiḥām al-Fuwaṭī; the taqwānī does not necessarily presuppose believers, the Muslim community can agree upon what is a good or a mistake: al-Naẓāmūn and others. 4. Aṣīl al-maṣūla: the clarification of the problems of theocracy: a. the caliphate of Abū Bakr was legitimate but not based on a divine revelation; general thesis; b. superiority of Abū Bakr over ʿAlī (Abū Bakr superior to ʿOmar, the latter to ʿOthmān, the latter to ʿAlī): the old Baṣrī and Thumāmā; superiority of ʿAlī to Abū Bakr: the Baghdādīs and some later Baṣrīs (al-Dhūbābū) towards the end of his life; Abū ʿAbdul-Halīl; neutral attitude (takwānī) on all that concerns the question of knowing who was entitled to the superiority: Abū Bakr, ʿOmar or ʿAlī; ʿAlī superior to ʿOthmān: Wāṣil, Abū ʿAbdul-Halīl, Abū Ḥiḥām. 2. The problems of jāhūrī: the old problem; being no longer a live one, petty sins (maqādūshīb) were discussed under this head. 5. Aṣīl al-ʿamr bi ʿl-ʿamoṣ uwa ʿl-náhêy ʿam ʿl-miṣālah: programme of Maʿṣūla activity before the coming of the ʿAbbaṣids; the faith must be spread by the tongue, the hand and the sword; later this subject little discussed; al-Aṣirān denies its obligatory character. Bibliography: Steiner, Die Muʿtaṣillen oder die Freidenker im Islam, Leipzig 1865; v. Kremer, Gesch. d. herrschenden Ideen des Islam, Leipzig 1868; Houtsma, De strijd over het Dogma etc., Leyden 1875; B. Macdonald, Development of Muslim Theology etc.
means trigonometry (cf. Dozy, Supplements, i. 163).

*MUTHALLATH* (always with the feminine ending) is a technical term in astrology. Astrology divides the zodiacal circle (συνόγησ [q. v.]) into four major parts (Gr. τριγώνον; L. trigonum, trigonica), each of which includes three signs 120° apart. These are situated together in the trigonal plane (φασθήλθη, Gr. τρίγωνον; L. aspectus trigonum); the word *fasathēla* itself is frequently found as the synonym of *muthallath* which comes from the same root (φασ-θέ-λα) (cf. Dozy, op. cit., p. 162).

In starvation nomenclature *Kāwāb al-Muthallath* is the constellation of the (northern) Triangle (in Eratothenes Ἀλαταρ, in Ptolemy Ἀλαταρ) which is joined in the east by Piscus, in the west by Andromeda, in the west by Piscis and in the south by Ariës. According to Ptolemy (Almagest) and al-Sūfī (ed. Schillerup, p. 123 sq.), it consists of three stars of the third magnitude and one of the fifth. The star at the apex (η απριλί) is an asterolea star and is called Ṭūs al-Muthallath. The latter name is found in Libros de sidero daemonium del rec. D. Alonso X de Castilla in the corrupted form *aleciel*.

**AL-MUṬLI** [See AL-XU, II.]

AL-MUṬLI'U li 'L-EM, 'ABU 'L-KAMĀ al-FAYLI, an *Abḥāḏ al-ḥalīm, son of al-Muṭtalīq (q. v.), brother of al-Rāḍī and of al-Muṭṭāqī (q. v.). Al-Muṭtalīq was a bitter enemy of al-Mustaqīfī (q. v.) and therefore went into hiding on the latter's accession and after Muṭāiz al-Dawla (q. v.) had become the real ruler, al-Muṭliʿu is said to have taken refuge with him and incited him against al-Mustaqīfī. After the deposition of the latter in Džumādā II or Shabān 334 (Jan. or March 946) al-Muṭliʿu was recognised as caliph. His reign marks a very unfortunate period in the history of the *Abḥāḏids*. The caliph himself had not the slightest authority; the power was in the hands of Muṭāiz al-Dawla and after his death (356 = 967) in those of his son Baḥṭyṭir. The Fāṭimidīs were growing more and more powerful and the *Shāmīzids* also declined to recognize al-Muṭliʿu as the legitimate suzerain. The *Hamādānīs* were weakened by their wars with the *Biyids* and the Fāṭimidīs. In Bagdād the Sūnis and Shīʿis were fighting one another and several Nówi ṣuṣages were introduced by the *Biyids*, who had *Alī* sympathies. At last the weak and sickly caliph was forced by the Turks to abdicate in favour of his son 'Abd al-Karim al-Tāʾī (13th C., D. a. 363 = Aug. 5, 974). Al-Muṭliʿu died in Muḥarram 364 (September—October 974) in Dar al-ʿĀlkī.

**MUṬLIʿU (A.), part. pass. IV from ṣāb, "to loose the bond (ṣāb) of an animal, so as to let it free" (e.g. Muslim, Dīštān, trad. 46; Abū Dāwūd, Dīštān, bail. 100). The term is also applied to the loosening of the bowstring (Bukhārī, Dīštān, b. 170), of the garments, the hair etc. Thence the common meaning *absolute*, as opposed to restricted (muḥāṣib); and further the accusative musṭālān "absolutely", The use of the term is so widely diffused, that a few examples only cannot be given.

In grammar the term musṭālān denotes the absolute object (cognate accusative), i.e. the objectivised verb of the sentence, such as *a sitting* in the sentence: he sat a sitting.

In the doctrine of the roots of *ṣīḥ* the term is applied to the *wustāla* of the heroic age, the founders of the *wustāla* who are called *muṣṭatāla* musṭālā, an epithet which none other than them has borne (cf. al-Dīštān).

In dogmatics the term is applied to existence, so that al-muṣṭālān al-muṣṭālān denotes Allāh, as opposed to His creation, which does not possess existence in the deepest sense.

In ontology the term is also applied to existence (wustāla) in connection with the question of the nature of the latter. Here al-muṣṭālān al-muṣṭālān is opposed to al-muṣṭālān al-muṣṭālān (cf. al-Dīštān).

In other surroundings the term has the meaning "general" as opposed to *ḥājī*; cf. the definition in Dīštān (6): *muṣṭāla* denotes the one without specification. Cf. further the Dictionary of the Technical Terms.

On the meaning of *muṣṭālā* in *musīd* in *pursody*, cf. Freytag, Darstellung d. arab. Verskunft, Bonn 1830, p. 311.

(A. J. Wensmcke)

**AL-MUṬṬĀQĪ** li ʿL-EM, 'ABU ʿSAYF ʾIBRĀHĪM, an *Abḥāḏ al-ḥalīm, son of al-Muṭtalīq (q. v.) and a slave-girl named Ḥāʾith. In Rabiʾ I 329 (Dec. 940) he succeeded his brother al-Raḍī (q. v.) by this time the caliphate had sunk so low that five days passed after the death of al-Raḍī before steps were taken to choose his successor. Al-Muṭṭāqī at once confirmed the Amir al-Umār Bāḏkūm (q. v.) in office; after his death however, the Turks and Dālāms in the army began to quarrel with one another. Abū ʿAbd Allāh al-Baṭrīdī (see al-Baṭrī) seized the capital but could only hold it a few weeks. He was driven out by the Dālāms chief Kūṭrīg who however was soon overthrown by Ibn Raʾīl (q. v.). When Abū ʿAbd Allāh sent his brother Abū l-Jamān with an army against Bagdād, the caliph and Ibn Raʾīl escaped to al-Mawṣil to the Hamādānīs (Džumādā II 330 = Feb.—March 942). After the assassination of Ibn Raʾīl the Hamādānī Abū Muḥammad al-Haṣan was appointed Amir al-Umār and received the honorić title of Nāṣir al-Dawla. The occu-
pation of Baghdad offered him no difficulty; the Turkish general Tuzun rebelled a little later and Nâşir al-Dawla had to evacuate the capital which was entered by Tuzun in Ramadân 333 (Jan 943) as Amîr al-Umarî. Al-Mutâkî soon found himself forced to seek the protection of the Hâmidîn again and at the beginning of the following year (autumn 943) he fled to Mawâli. Then he settled in al-Râkîya but when Tuzun made peace with Nâşir al-Dawla, al-Mutâkî appealed for protection to the Ilhâmidîn of Egypt; the latter came to al-Râkîya in Rajab 332 (March 944). The negotiations however were unsuccessful and finally the caliph put his trust in Tuzun, who after assuring him of his loyalty by the most sacred oaths had him blinded (Safar 333 = Oct. 944). Al-Mutâkî was then declared to be deposed. He died in Sha’bân 357 (July 695).

AL-MUTÂKÎ AL-HINDI, a author of several works in Arabic, whose real name was ‘ALI b. HUSAYN AL-DIN ‘AMR AL-MATÂKÎ b. KABBÂR AL-KURRÂ, was born in Basra and was the father of the poet Sa`d al-Mutâkî. He was the son of a well-known poet and writer, and was himself an accomplished scholar. He was the author of several works, including the following:

1. al-Burkan fî ‘Azamî Madhid Âshir al-Zamân, an account of the Mahdi and his coming to the end of the world;
2. al-Burkan al-Dawlat fî Marâdî al-Wali;
3. Tâlkhîl al-Bayt fî ‘Alâmî Madhid Âshir al-Zamân;
5. Hikayat Rabî’ biwa‘ Abū Faqâd al-Murâshî;
6. al-Hikam;
7. Kaws al-Ummâl fî Sana’ al-Âshir, a combined edition of Su‘ûtî’s Dhâlam al-Murâshî or Dîwân al-Dîwânî or al-Dîwânî al-Badr, newly arranged according to chapters (printed in Haiderabad 1347);
9. Minâkhî al-Ummâl fî Sana’ al-Âshir, an abridgement of Su‘ûtî’s well-known alphabetically arranged work al-Dhâlam al-‘Âshir containing a collection of traditions from authentic sources, newly arranged according to chapters together with a supplement;

(M. HUDEYET HOSAIN)

MUWASHISH, a means properly one born of non-Arab parents but brought up among Arabs. This is how it is usually to be translated in the Hadîth (e.g. Malik, Nâshî, ibad 42). Later it was used to distinguish from the new converts the children of converts, who were brought up in Islam. The common translation reneged was wrong as is the adopted of Pedro de Alcântara. In theory they had equal rights with the old Muslims but the caliph ‘Omar in the interest of the state’s finances ordered that they should pay the land-tax (kharîd) while the old Muslims only paid a tenth of the yield. The muwâshish were of special importance in Muslim Spain, especially from the time of ‘Abd al-Rahmân II, when conversions to Islam became more and more numerous. Some even retained their old family names (Bahîn Angelino, Bahîn Sabarico). This section of the population among whom were often crypto-christians (Christianis occulti) played the largest part in the frequent revolutions against Muslim authority in Spain.

The post-classical poets were called muwâshish to contrast to the ibtâ’iyyâh, their language was no longer considered a model of grammar, lexicography and prosody. The boundary between the two lies about the end of the first century. Among the most known muwâshish were al-Bûhîrî, al-Murmâsh, and, according to some, also al-Farazîd and Ijlâtâ.

MUWASHISHAH, MUWASHISHAHU or TAWSHIH, an ode or poem intended to be sung, is so called by comparison with the weight, which is a double belt ornamented with pearls and rubies or a band of leather stuffed with pearls which a woman wears across her body from the shoulder to the opposite hip, thus going round the body. The muwâshishah is composed of two parts the body of which contains complete lines and the other hemistiches.

The muwâshishah, which belongs to the “seven kinds or branches” (fünin) considered to be post-classical, is composed according to the rules of the parent syntax.

The muwâshishah is divided into “stanzas”, the technical name of which is not exactly settled; they are usually called âsma or hâl, in its most perfect form, it usually begins with one or two lines, a sort of prelude to the actual poem; this prelude is called muwâshsh, âsma or nafrûj; we
also sometimes find the ṭafrī; if it is a distich, the first hemistiches of each verse rhyme together and the two second hemistiches also. If A be the rhyme of the first hemistich and B that of the second, the madāḥab or ḍhūṣ is of the following form:

\[
\begin{align*}
2 \text{ lines} & : \quad A \quad B \\
1 \text{ line} & : \quad A \quad B \\
\end{align*}
\]

After the madāḥab or ḍhūṣ come the stanzas proper called: ḍjaṣ' or ḍait.

The ḍjaṣ' or ḍait contains two parts: the first consisting of a varying number of hemistiches with the same or alternate rhymes, which however are never those of the madāḥab or ḍhūṣ. This first part is called ḏawr or sīmil. The second part which is exactly like the madāḥab or ḍhūṣ, both as regards number of lines and rhymes, is called ḍafīa or ḍafšt. The stanzas therefore presents the following form:

\[
\begin{align*}
\text{First type} & : \quad \begin{array}{c}
C \\
C \\
A \quad B \\
\end{array} \\
\text{Second type} & : \quad \begin{array}{c}
C \\
D \\
C \\
D \\
C \\
D \\
A \quad B \\
A \quad B \\
\end{array}
\end{align*}
\]

The rhyme or rhymes of the ḏawr or sīmil vary from one stanza to another; but those of the ḍafīa are always the same as those of the madāḥab or ḍhūṣ. The ḍafīa is a sort of refrain which does not fail to make an impression on the same sounds and rhythms. These are the most usual models of the muwaššah; but the poets, not being bound by hard and inflexible rules, have, each according to his temperament, exercised their imagination considerably in this genre.

Thus Ibn Sanā’ al-Mulk composed a poem in which the first foot of each hemistich is ḍafšīn and has the same rhyme as the hemistich of which it forms part. This is the scheme:

\[
\begin{align*}
\text{madāḥab or ḍhūṣ} & : \quad A \quad A \\
\text{ḥawf or ṭafrī} & : \quad B \quad B \\
\text{ḥafīa} & : \quad A \quad A \\
\text{ḥawf} & : \quad C \quad C \\
\text{ḥafīa} & : \quad A \quad A \\
\end{align*}
\]

The blind poet of Tākle shortened the hemistiches which gives a more lively rhythm:

\[
\begin{align*}
\text{A} \quad \text{B} \\
\text{A} \quad \text{B} \\
\text{C} \quad \text{C} \\
\end{align*}
\]

It would be wearisome to give all the forms of stanzas which are found in the muwaššah. From the point of view of metre, very great variety is found. Martin Hartmann recognised 146 which may go back to the 16 classical metres. Three other types which are found do not seem to be derived from any well defined form:

- mafṣūlāt: new type
- mufṣīlāt: approaching the ḍhūṣ
- mafṣīlāt: mufṣīlāt: mafṣīlāt: a type which might be connected with ḍhūṣ.

From the historical point of view, Freytag thinks that the muwaššah belongs to an old type which has now disappeared. There is certainly no doubt that the pre-Islamic poets composed poems similar to the muwaššah; these are known as muwaššahat; we find here again the word sīmil applied to the longest part of the stanza or couplet of the muwaššah.

The muwaššah began with an opening line with ṭafrī; then came four hemistiches rhyming together on a different rhyme from the first line; next came a fifth hemistich rhyming with the first and completing the stanza. A new stanza followed with four hemistiches not rhyming with those of the first stanza; it ended with a hemistich rhyming with the opening line. Here is the scheme:

\[
\begin{align*}
\text{A} \quad \text{B} \\
\text{B} \quad \text{B} \\
\text{C} \quad \text{C} \\
\text{C} \quad \text{C} \\
\text{A} \\
\end{align*}
\]

In the “Ḳais is said to have composed a piece of this nature but it does not seem to be genuine.

The inventor of the muwaššah is said to have been Muḥammad b. Mu’aṣṣa, a poet at the court of ʿAbd Allāh b. Muḥammad al-Mawṣūmī who ruled in Spain (275–300 = 888–913). He was followed by Ibn ʿAbd Rabḥūlī, author of al-ḥadīth al-furātī. Their muwaššah are however believed to be lost.

The first to shine in this genre was ʿUbādat al-Ḡarzā, a poet of al-Maṭāṣīm b. Ṣūrādī, prince of Almeria. Al-Aḍām al-Bāṭalaywī records that he heard Abū Bakr b. Zuhru say: “All the composers of muwaššah are simply children beside ʿUbādat al-Ḡarzā”. In the opinion of all men of letters no contemporary writer could rival ʿUbādat al-Ḡarzā in the days of the muwaššah al-ṭafrī.

After him comes Abū ʿAbd Allāh ʿIrā Rūṭah, the court poet of al-Maṭīmī b. Dhu l-Nūn, prince of Toledo. In the time of the Almoravid dynasty there flourished a group of poets among whom may be mentioned the blind poet of Tākele, Ibn Bakr, Abū Bakr b. al-Abayd, Abū Bakr b. Būdja.

In the time of the Almohads the most famous
composers of muwashaḥaḥ were Muḥammad b. Abī Ḥaḍayr and Ibn Ḥāfiẓ. At a later period we have Ibrahīm b. Saḥīḥ al-Qattāl, a poet of Seville and of Ceuta, Ibn Khazzāb al-Qattāl (of Algiers), Ibn Khāsr b. Būqī, the visier and celebrated man of letters, Lūḥān b. al-Qādir b. al-Maḥsūr. Eastern poets have followed those of Spain. One of them, Ibn Sādī al-Mulk al-Maṣfīr (531-608 = 1136-1212), acquired a reputation in both east and west.

As to the subjects of the muwashaḥaḥ they are the same as those of the traditional qiṣaṣ; but as they are composed with the definite object of being sung to the accompaniment of stringed instruments they are usually love-poems.

On the musical origins of the muwashaḥaḥ see the article ṬIR."
MUZAFFAR AL-DIN, fifth šah of Persia of the Kadjar [q.v.] dynasty, was born on March 25, 1853. He was šah Nāṣir al-Dīn's second son, the eldest son Zill al-Salṭān being of lower birth by his mother. As crown prince Maʿṣūf al-Dīn had been some time governor of Alhārābdānjīn (a description of him as crown prince in Cusson, Persia and the Persian Question, p. 413). After his father's assassination Maʿṣūf al-Dīn was enthroned on June 8, 1896. With this new reign the rivalry between England and Russia for commercial and political influence in Persia became ever more apparent. The sympathy of the high officials, which was divided between the two powers, and the economic and military strength of the country was since long too weak to enable Persia to follow an independent policy. Under the relatively autocratic rule of Nāṣir al-Dīn, popular discontent with the increasing misery had been suppressed; the new šah, however, though well-intentioned, did not possess the character of a strong ruler and, besides, did nothing to check the extravagance of the court. His financial difficulties made Persia the debtor of Russia; in 1898, 1900 and 1901 considerable loans were given by Russia, guaranteed by large parts of the custom receipts, the collecting of the custom duties being administered by Belgian officials. A good deal of the borrowed money was used for the expensive journeys to Europe undertaken by the šah in 1900, 1902 and 1903. In the meantime, the condition of the people became more and more miserable; headed by some influential merchants and some high ecclesiastics they protested against the heavy taxes and the tariffs as fixed in the commercial agreements with Russia and England of 1903. The growing discontent took several forms; some wished to call in the Turkish Sultan as Caliph and at other times there were outbursts against the Bāht's in Yezd and Isfahān. Besides there were special grievances against several high officials, amongst them the chief Belgian inspector of taxes. In December 1905 a popular movement took place in Tehran, with the aim of obtaining the deposition of the then grand vizier 'Ain al-Dawla (since 1903). An ever increasing number of merchants, mulla's and citizens took refuge (baṣr) in the shrine of šah 'Abd al-'Aṣim. At last the šah promised 'Ain al-Dawla's dismissal and some reforms, but in the course of the following year none of these promises were fulfilled. So in 1906 the discontentment reached again a culminating point, directed this time by some more or less secret patriotic associations. In July large crowds of the people of the capital went with the mulla to Kûm, to take refuge in the sanctuary there; at the same time the British Legation accorded asylum to a considerable number of merchants and citizens. The results were that on July 30 'Ain al-Dawla was dismissed and that on August 3, all the demands of the protesting people were granted, including a constitution. The ecclesiastical leaders returned from Kûm. There followed some friction with the government about the elections and other matters, but at last, on October 7, 1906, the first Persian Majlis or National Assembly was opened by the šah. The new Majlis had to face immediately some difficult problems and showed from the beginning its determination not to be a mere toy in the hands of the court party. Progress was hampered, however, by discussions amongst clerical and non-clerical members of the popular party, while there were disturbances in Tabriz, owing to the tyranny of the crown prince Muhammad 'Ali. The Constitution (Kadjar-i Aṣrāf; q.v.) was ratified by the šah only on December 30, 1906. Maʿṣūf al-Dīn himself died on January 8, 1907 after a long illness, leaving his country to the eventful reign of Muhammad 'Ali šah.

(J. H. Keamey)

MUZAFFARIDS, a Persian dynasty. Their ancestors came from Arabia and had settled in Khorāsān at the time of the Muslim conquest, where they lived for several centuries. On the approach of the Mongols, the emir Ghiyāth al-Dīn Ḥalījī, with his three sons Abī Bakr, Muḥammad and Manṣūr, retired to Yazd. The two first named entered the service of the Atabeg of Yard, 'Ali al-Dawla, and when Ḥalījī [q.v.] marched on Bahgādād, Abī Bakr followed him with 300 horse. After the capture of Bahgādād he went with an army to the Egyptian frontier. Here he fell in an encounter with the Arab tribe of Khatfūnīa in which his brother Muḥammad succeeded him as a vassal of the Atabeg of Yard while Manṣūr remained with his father in the little town of Maibūd near Yazd. Manṣūr had three sons, Maḥrūz al-Dīn Muḥammad, Zain al-Dīn 'Ali and Shārāf al-Dīn Maʿṣūf, the latter of whom became the ancestor of the dynasty of the Muzaffarīds. Appointed governor of Maibūd by Yūsuf šah, 'Ali al-Dawla's son and successor, he cleared the hills of the robber bands from Shīrāz and when Yūsuf šah, who had put to death the envoy of the ʿIlghān Arghūn had to take to flight and went to Sūta, Muḥammad followed him but left him on the way and went to Kirmān where he was kindly received by Sūta. Ḵâlaḵ al-Dīn Ṣargatmash Kara Khātā (685 = 1286—1287). After some time he returned to Yazd and was presented to Arghūn who took him into his service. He was also on good terms with Arghūn's successors Ghiyāth al-Dīn and Ghazān. The latter appointed him amir-i bāzirki "commander of a thousand", and after the accession of U⟩d⟩jīsīt (703 = 1303—1304) he was given customs of the roads from Ardizān to Kirmānšāh and from Herāt and Mawī to Ābārki. Maʿṣūf died on 13th Dīn 1-5 Sa'da 713 (March 13, 1314). He was succeeded by his 13 year old son Muḥrūz al-Dīn Muḥammad who is described as brave and devout but at the same time cruel, bloodthirsty and treacherous. He continued to live at the court of U⟩d⟩jīsīt; on the latter's death in Shawwal 716 (Dec. 1316) and the accession of his son Abī Ṣafī he returned to Maibūd. Along with the lord of the southern coast of Persia, the emir Kāhārār B. Maḥmūd Šīkh Indī, he very soon fell upon the Atabeg of Yazd, Ḵādijī šah, and succeeded in taking
the town from him (718 or 719 = 1318 or 1319). A short time after this event the people of Susah, the Nikhars, arose in rebellion; Muhammad attacked them and their leader Nawrūz was defeated and slain. The rebels however gathered together again and Muhammad had to fight no less than 27 battles before they were finally suppressed. After the death of Abū Saʿīd (736 = 1335-1336), complete chaos began and pretenders arose in different parts of the wide empire. The emir Abū Isḥāq b. Māhumūd Shāh ʿIndī endeavored to take some time of the town of Yāzd but was driven back. After some this Muhammad took this province from the Mongol governor in Kirmān, Malik Kūtb al-Dīn. In the end however, Abū Isḥāq succeeded in taking Shīrāz and had the khānqāh burned and colts struck in his name. In Saʿd 745 (May—June 1347) he set out to subjugate Kirmān and laid waste Shīrāz, but returned when he heard that Muhammad was ready to offer vigorous resistance to his advance. One of the viziers of Abū Isḥāq then undertook a campaign against Kirmān but was defeated, whereupon Abū Isḥāq put himself at the head of a new army and marched on Kirmān to take vengeance on Muhammad. But this effort also failed; Abū Isḥāq was completely defeated and had to take to flight. In 751 (1350—1351) he went to Yāzd and began to besiege the town but returned, having achieved nothing. In spite of all his failures however, Abū Isḥāq never lost heart. In the following year he sent a new army under the emir Beg Dījkāz to Kirmān and when the latter met Muḥammad on the plain of Pandj Angahāt in Dījkāz or 753 (June—July 1352) a battle resulted. Dījkāz was defeated. Muhammad followed up his victory, went to Shīrāz and laid siege to it. On the 3rd Shawwāl 754 (Nov. 11, 1353), the governor had to surrender and Abū Isḥāq fled to Isfahān. In the following year Muhammad took the oath of homage to the Abbasid caliph in Egypt, Shīrāz was now besieged. But as Muhammad had also to deal with other rebels the siege was somewhat prolonged. Resistance was in the end overcome and the town had to surrender. At the same time Abū Isḥāq fell into his hands and was taken to Baghdad and executed (21st Dījkāz I. 753 or 758 = May 22, 1353 or May 11, 1357). After Muhammad had defeated all his enemies and become undisputed lord of Fārs and the ἱράκ, an envoy appeared from the ruler of the Golden Horde, Dījkāz Beg Kābūn b. Uzbe Kūni, who announced that the Khān had taken Tabrīz and wanted to appoint Muḥammad yaṣānī. "Marshall." Muḥammad gave the envoy an arrogant and unfriendly answer; but when he heard soon afterwards that Dījkāz Beg had returned home and left the emir Abū Dījkāz in Tabrīz he decided to take the town. Soon afterwards the news of Dījkāz Beg's death arrived; Muhammad at once set out and met Abū Dījkāz at Mīyāna in Adhharāwān. The latter was defeated and Muḥammad entered Tabrīz. But as a large army was approaching from Baghdad he dared not risk remaining but decided to begin to retreat. In Kāmadjān 759 (Aug. 1358) he was surprised and taken prisoner by his own son Shīh Shīrāzī. This was believed himself suppressed and ill-treated by his father, in concert with some other antagonists. Muḥammad was blinded and kept in prison for several years until his death at the end of Rašīd 1765 (Jan. 1364) at the age of 65. He was succeeded by Shīh Shīrāzī, who shortly before his death appointed his son Zain al-ʿAbīdīn as his successor in Shīrāz and gave his brother ʿImād al-Dīn Aḥmad b. Muḥammad the governorship of Kirmān. As soon as Zain al-ʿAbīdīn had begun to reign his cousin Shāh Yāḥyā b. Shīrāz al-Dīn Muḥarrar set out from Isfahān to attack him. Fortunately however, the threatened war was averted by a friendly agreement; but Shāh Yāḥyā could not stay long in Isfahān; he was driven out by the turbulent and fierce inhabitants and fled to Yāzd whereupon Zain al-ʿAbīdīn appointed his maternal uncle Muḥarrar-i Kāshī governor of Isfahān. In 787 (1385—1386) an envoy from Timūr arrived in Kirmān bringing assurances of his peaceful and friendly intentions and Sultan Aḥmad hastened to offer his humble homage to the powerful conqueror. In Shīrāz with (Oct.—Nov. 1357) it was reported that Timūr had invaded the ἱράκ and that Muḥarrar-i Kāshī had given him the keys of the towns and fortresses whereupon Zain al-ʿAbīdīn left Shīrāz and went to Baghdad while Shāh Yāḥyā endeavored to procure suitable gifts to pacify Timūr and ordered that a sufficient sum should be paid out to maintain his army. But when Timūr's officials appeared in Isfahān to take the money, they were attacked and killed by the citizens. In the meantime the Mongols carried out a dreadful massacre among the people of Isfahān, in which 200,000 were said to have perished. Timūr then went to Fārs and confirmed Sultan Aḥmad as lord of Fārs, the ἱράκ and Kirmān, whereupon he returned to Sāmarqand. When Zain al-ʿAbīdīn had left Shīrāz, he met his cousin Shīh Manṣūr b. Shīrāz al-Dīn Muḥarrar at Shīrūstān and was at first welcomed, then suddenly attacked and imprisoned. Shīh Manṣūr was now able to occupy Shīrāz without opposition, while Shāh Yāḥyā retired to Yāzd. After the former had established himself securely in Shīrāz, Zain al-ʿAbīdīn was released by his jailers and brought to Isfahān where the people welcomed him. In the meanwhile he had been persuaded by Shāh Yāḥyā to combine with Sultan Aḥmad to take vengeance on Shīh Manṣūr. The plan failed however, the allies were defeated and Shīh Manṣūr seized the whole of the ἱράκ. When Zain al-ʿAbīdīn wanted to escape to Kūhūsūn, he was treacherously seized by the emir of al-Rayy and brought to Shīh Manṣūr who at once had him blinded. The latter then tried to form a coalition against Timūr. In 795 (1393) however, Timūr left his winter quarters in Māznārān and marched on Shīrūstān. After storming Kāl al-Sefīd which was considered impregnable he marched on Shīh Manṣūr's capital and a battle was fought near Shīrūstān. Although Shīh Manṣūr's chief emir abandoned him with most of his troops, the battle lasted till far into the night. The undismayed Muḥarrarīs fought with desperate courage, but finally fell in the mêlée, after fighting his way to Timūr and giving him two cuts with his sword, which however the strong helmet of the Mongol leader averted, Shīh Manṣūr's relations then submitted; nevertheless Timūr a week later (Raḥbar 795 = May 1393) had all the Muḥarrarīs executed.

MUZAWADJA, a term in rhetoric (ba’il) which means the association of two things in the relation of condition (gāfr) and result (qasāw) and then employing the same combination for two other things in the same conditions. Here is an example from the Dinām of al-Baṣṭūrī (Cairo 1349, p. 317):

"When they are masters they are one day fighting and their blood flows in profusion, they remember their bonds of kinship and their tears flow abundantly." The poet associates fighting with recalling bonds of kinship in the two parts of the conditional statement, then he completes the first by adding their blood flows in profusion and the second by saying their tears flow abundantly.

(Moh. Benchener)

al-MUZDALIFA, a place roughly halfway between Miʿād and Arḍaf as the pilgrims returning from Arḍaf spend the night between the 10th and 11th Dhu al-Ḥijjah after performing the two evening salats. On the next morning they set off before sunrise and climb up through the valley of Muḥarrar to Miʿād. Other names for this place are al-Muṣʿab al-ḥarām, from Sārā ii. 194 and Lajmā (cf. Lajmā Lajmā: Ibn Sa’d, ii/1 129, 4); but Lajmā, according to another statement, comprises the whole stretch between Arḍaf and Miʿād, both included, so that Yarum Lajmā (Kishk al-Maghārim, vi. 30, 11) is explained as the day of Arḍaf and Al Ḥiyam Lajmā as the day of Miʿād. The rites associated with the night of Muzdalifa go back to the old pagan period, when the Arabs themselves recognized when they make Kaʿbah, introduce the kindling of the sacred fire in this night and say that guiding of the departure for Miʿād is a privilege of the family of Ādawān.

The sacred place in Muzdalifa was the hill of Kuṣayn [q.v.]. Even after Muḥammad in deliberate contrast to the pagan practice had declared Muzdalifa to be musajjah [cf. NABID I, 1, c], this hill retained its ancient sanctity. According to Arḍaf, there was a thick round tower upon it on which the Muzdalifa fire was kindled; in the time of Hārūn al-Rašīd it was a fire of wood; later it was illuminated with wax-candles. In the Muslim period a mosque was built about 400 yards from the tower, of which Arḍaf gives a detailed description; while Makadda speaks of a place of prayer, a public fountain and a minaret, Burton also mentions a high isolated tower at Muzdalifa but the illumination in the night of Muzdalifa now takes place on the mosque.

(Moh. Benchener)
al-Muzzamil, title of sūra lxxiii, taken from the first verse: "O thou wrapped up!" viz. Muzzamil, who wrapped himself up in his garment or was wrapped up by others. For explanations of the allusion cf. Sale's note as well as the commentaries on the Qur'ān. Variants of al-muzzamil, which stands for al-muṣṭaṣṣam al-awwāl, al-muṣṣālī, al-muṣṣālī (Buṣārī).

N

al-Naba', title of sūra lxxviii, taken from the opening verses: "Concerning what do the unbelievers ask questions of one another? Concerning the great news!" According to the commentaries the great news alluded to is the resurrection, the subject of lively discussions among the Meccans.

Nabataeans, an Arab people who lived in ancient times in Arabia Petraea. — As early as the seventh century B.C. the Nabateans are mentioned by Assurbanipal (Kellschr. Bibl., 216 sqq.). Whether the Nebayoth of the Old Testament are to be identified with them is uncertain (against the identification: Nöldeke in Schenkels Bibellexicon, s.v. Nabataier; for it amongst others: Muhil, Arabia Deserta, New York, 1937, p. 492). The Nabataeans were never completely subjected either by the Assyrians, or the Medes, Persians or the Macedonian kings (Diodor, ii. 48). In 312 B.C. Antigonus sent two expeditions against them without success. They were then a nomadic people of shepherds and traders, with a few natural fortresses like Petra, Boyā, Sākhād, al-Hijr, which served as depots for their arms and riches. Living round the Dead Sea they exploited from time to time the remunerative asphalt deposits on its eastern shore. They were often on friendly terms with their neighbours; e.g. with the Jews under the Maccabees and especially with the Salamians (Arab. Salaim; cf. Yaḥyā, Muḥammad, ed. Wattenfeld, ii. 594, s.v. Hirna), with whom according to Stephanos Byzantios and the testimony of the Nabataean inscriptions, they were in close alliance (cf. Salām b. Maṣwiyah and B. Morit, Salamit, in Papyri-Wissens. Recktenwald, vol. ii. col. 1824 sq.). The capital of the Nabataean kingdom, called Nabāt in the inscriptions, was Petra on the Jabal Ḥarīsah, according to Nöldeke (Z.D. M.G., xxx. 259 sqq.) Hebrew Sela, Arab. Ḥāṣa Sela in the Wadi Māṣa in the hills of al-Shari (Yaḥyā, Muḥammad, iii. 117, 135; Mabṭurāt, p. 252 sqq.), while Musil (Arabia Petraea, II/1. 337, note 2; p. 318) identifies this with Kûra es-Selā. The ruins reveal a peculiar mixture of Nabataean and Hellenistic architecture while they have yielded remarkably few Nabataean inscriptions (on these see Dalman, Petra und sein Fluchttagebuch, 1908; Neun Petra-Forschungen, 1912; Bachmann, Watringer, Wigand, Petra, 1921; A. H. W. Kennedy, Petra, its History and Monumenti, 1925).

The Nabataean kingdom comprised the lands of southern and eastern Palestine as well as Hummaea and Petraea, from 88 B.C. also Hawrān; twice (56 B.C. and c. 34—62 A.D. perhaps also in the interval, cf. Mommsen, Röm. Gesch., ii. 476, note 3). Damascus also belonged to it (cf. i., p. 203). In the southwest it stretched over the ancient Midian as far as the coast of the Red Sea where 'Obodat I founded the town of Hawurā (Steph. Byz., s.v. Aqob, probably Αὔοδατος, now perhaps al-Hawrā), in the interior as far as al-Ula (Dedan) and al-Hijr (q.v.) on the frontier of the Hijāz. The Nabataeans also penetrated into the nome of Arabia in the eastern Nih. delta as an inscription from Tell el-Sughafiye in the Wadi Tāmīl shows (Clermont-Ganneau, Les Nabataéens en Égypte, in Recueil d'Arch. Or., viii. [1924], p. 229—257). A number of their kings can be dated with approximate exactness: Habībat (Areata) I 169 B.C., Habībat II c. 110—96, 'Obodat (Obodas) I c. 167, Rabībēl (Rabillos) I c. 87, Habībat III (Areatae Philadé) c. 86—64, 'Obodat II c. 62—47, Malikū (Malchus) I c. 47—30, 'Obodat II (II?) before 25—c. 8 B.C., Habībat IV iliāz-amnēs (Philadēps) c. 9 A.D.—40 A.D., Malikū II 40—70/71, Rabībēl II Zarrūg 70/71—106 A.D. (Malikū III, 106 A.D.; cf. Clermont-Ganneau, Recueil, viii. 247). The real founder of their power is said to have been king Erotimos, who is probably the same as Habībat III whose reign fell in the period of decline of the Seleucid empire (E. Täubler, in Klio, x. 251—253). As "allies", the Nabataeans were able to maintain to some extent their independence of the Romans. At a very early date, like the Palmyrans, they attained through their trade of monopolists in Nearer Asia. At the beginning of the Roman empire they dropped their nomadic life and became peacefully settled. Just as in the east they have left their inscriptions particularly on the trade-routes followed by their caravans, e.g. from Petra to Damascus and Taibur, to Forat at the mouth of the Euphrates, to Gerrha (Arab. al-Djag'a near al-Kaff), to the Sinai peninsula and Egypt and to Gaza, so we find in the Roman empire epigraphic traces of Nabataean merchants as far as Upper Egypt (Dendera), in Miletus, Rome and Parthia. In 106 A.D. the emperor Trajan conquered Petra and made the most important part of the Nabataean kingdom the Roman Province Arabia. The remainder of the territory left to the Nabataeans in the desert suffered economic ruin about 200 A.D. when the Palmyrans gradually obtained control of the remunerative carrying trade.
The king, who was assisted by a vizier, the highest official (Greek ékíropos), with the title "brother", had under him a number of šahīdīn (šahīdīn) of the separate tribes (qawāl); we also find the titles eparchos and strategos. The high social position of women is noteworthy; they could possess property independently and dispose of it as they liked (Nöldeke in Euting, Nabat. Inschr., p. 79 sq.); the coins often bear portraits of the queen (Kammerer, Petra et la Nabatène, Paris 1929, p. 377; Brit. Mus. Cat. of Greek Coins: Arabia etc., London 1922, Plates I and II).

If one refers for Nabataean laws to their epitaphs, the threats of punishment in which are based on a formula of the Grecian law of property and contract which elsewhere is only found in tomb-inscriptions in Asia Minor (R. Keil, Hermes, xliii. [1908], p. 567–572).

As nomads, simple in their customs and rarely owning slaves, the Nabataeans, as a trading people, had a great respect for wealth. The mention in inscriptions of physicians, wise men and poets, shows a certain level of intellectual culture. Whether circumcision was practised among them is uncertain (Kammerer, op. cit., p. 375 sq.).

The Nabataean pantheons is known to us mainly from tomb and votive inscriptions. The principal god was Dūshahr [cf. DVM "l-šāhār"], the principal goddess Allāt [cf. Allāt]; the goddesses Mānākhīt (= Arm. Mānakīt; cf. Mānakīt), Kaṣīqa, Muthah and Hubil [q.v.] are also mentioned. Their kings were perhaps worshipped as gods after their deaths (cf. C. F. Sch., ii. 154).

As Nöldeke was the first to emphasise, the Nabataeans were pure Arabs as their names show; but in written intercourse they used Aramaic, the usual written and business language of Nearer Asia. Many aramaismus thus entered their language in the north of the country (like hābār, mafṣīḥ, arwāl). Arab writers therefore even used the term "Nabataean" for "Aramaic"; in the southern Hijāz (al-Hijāz) on the other hand, the Nabataean Arabic retained its greatest purity; the Arabic script developed out of the Nabataean cursive at the close of the ancient period (cf. Armān, d.).

In the Muslim period the Arabs called those inhabitants of Syria and of the Trāk, who were neither shepherds nor soldiers, "Nabataeans" (īb[n al-Kalb) in Yāsdān, Miṣrābīm, iud. 614), a term also applied in a somewhat contemptuous tone to the Aramaic-speaking peasants (Nöldeke, in Z.D.M.G., xxv. 124). When then we find "Nabataean" (Naḥr, Naḥt, etc.) mentioned in Malaya as well as on the Qdiḥān, in Syria, on the Khabur and in the Trāk, in ʿOmān and Bahrān, the name is not to be taken in the ethnographical sense (Nöldeke, op. cit., p. 125). As the grammarians of the Trāk paid special attention to the "Nabataean" language of the Aramaic country people, by "Nabataeans" was frequently meant the inhabitants of the Trāk and especially of the Bāṭ[b (Nöldeke, op. cit., p. 127).

"The inhabitants of the district of Hism in the most northerm part of the Hijāz, once the Qdiḥān (q.v.), now the Hawwāf (q.v.), are regarded as the descendants of the Nabataeans (cf. Armān, a.)."

F. Hill, Brit. Mus. Cat., Greek Coins of Arabia, London 1922; Jannsen and Savigneas, Mission archéologique en Arabie, i., ii., Paris 1905–1922; W. W. Tarn, Pliny's History and Arabia, in Journal of Egyptian Archæology, xxvii., 1929, p. 9–25; A. Kammerer, Petra et la Nabatène, Paris 1929; J. Cantinéen, Le Nabatéen, i., ii., Paris 1930–1932; J. H. Mordtmann, Ein Nabatäer im Sahara, in Klio, xxv., 1932, p. 429 sqq.; E. Honigmann, Nabatān (A.), prophète, borrowed from Hebr. nābāt or Aram. ārūbāt, is found in the Kurān from the second Meccan period in the singular and plural nābīyūn; in the Medina period we find also the broken plural ārūbīyū. Lists of the nābīyūn are given in Sūra vi. 83–99; iii. 34; iv. 161–199; further information about them is given in several passages of Sūra xix. and in xvii. 57. The list consists exclusively of names from the old and New Testaments (if we leave out Idrīs in Sūra xia. 57, whose name Muhammad had however also learned from a Christian source; see above ii., p. 442–450; Hotovitz, Kūrān, Unters., p. 88 sq.; while messenger of God (rasūl [q.v.], plur. rasūl; murshidān) he was also sent to other peoples of the past — e.g. Hūd or Šāhīl —, according to the Kurānic idea "prophets" has appeared only among the ʿAbī al-Khīṣ [q.v.], only a minority of the individuals called prophets in the Kurān can be so described in the Bible, and Yūsuf b. Mattal [q.v.], is the only one of the nābīyūn of the Kurān who appears among the literary prophets of the Bible. Muhammad himself did not claim the name nābū until he was in Medina when he was addressed as the Prophet (yūsufa l-mālik) and as finally closing the series of prophets, is called their "soul" (khillān). When Muhammad in Sūra viii. 156 and 158 is called ʿal-mālik al-aumām, this is to distinguish him as the prophet who has arisen among the heathen: the Jews called the heathen ummah asālim ("peoples of the world") and also recognised prophets who had arisen among them: among these they included e.g. Balaam and Job. This Jewish name for the heathen became the al-ummāyīn of the Kurān (Sūra lixi. 21; iii. 19, 69); that
NABİ — NASİDIH

Nabī Yunus. [See Ninawa.]

Nabīdīh (n.) a comprehensive designation for intoxicating drinks, several kinds of which were produced in early Arabia, such as nabīdīh (from harīr) "khat" (from honey: ḥabbá, ḥabbāt: báb 60; ʿaghrība, báb 4; ʿash, báb 80), or from spell: ḥabbā b. Ḥumayd, b. 4093, nabīdīh (from different kinds of dates: ḥabbāt, ʿaghrība, báb 3, 21).

Grapes being scarce in Arabia, it is said that in al-Madīna "wine" was usually prepared from kinds of dates, exceptionally from grapes (ḥabbāt, ʿaghrība, báb 2, 3; Muslim, Ṣahīh, trad. 3, 6). This may be true. Yet even these traditions betray a tendency connected with the question whether the prohibition of wine included that of intoxicating drinks. Generally speaking ṣabīṭh favours the affirmative answer and is consequently anxious to point out that the ḥusnā which was prohibited by Muhammad included ṣabīṭh.

The question was difficult in so far as these kinds of drinks were intoxicating to degrees which partly depended upon the duration of the process of fermentation. This appears e.g. from the copious traditions in which Ḥāfaṣa relates how nabīdīh was prepared for Muhammad and at what time the beverage was done away with (cf. Ṣahīh), as well as from the traditions in which the previous prohibition of certain vessels (ḥantum, musafāt, etc.) was abrogated and all kinds of vessels deemed allowed, provided the drinks prepared in them were not intoxicating (Muslim, Ḫumāisī, trad. 165; Ṣahīh, trad. 63—65, 67—75 etc.). A series of traditions which could be adduced by the Ḥanafīs in favour of their view, according to which ṣabīṭh is not included in the prohibition of wine, is to be found in al-Nasâʾī's collection, Ṣahīh, báb 48. Cf. farther the art. Ḫumāsī.

Side by side with milk and honey ṣabīṭh was also the beverage that was offered to the pilgrims in Makka. The institution, al-ṣaḥīḥa (also the name of the building, close to Zamzam, where the distribution took place), was an office held by the ʿAbbasids (Abd b. Ḥumayd, Muṣnad, l. 372; Muslim, Ḫumāsī, trad. 347; Abī Dāwūd, Manṣūkh, báb 90). The descriptions by Ibn Saʿd († 230 = 845) and al-ʿAra ḫ († 244 = 855) give the impression of referring to the present state of things; in the time of al-Muʿaddas († about 1000 A.D.) the institution had already passed into desuetude. For details, cf. the work of Gaudfroy-Demboynes.
NÁBIKH AL-DHUBYÁNÍ, a famous poet of the pre-Muhammadan period. His real name was Ziyād b. Ma'náwya and he belonged to the tribe of Dhbyán. He probably flourished in the second century which proceeded Muhammad and died shortly before the beginning of Islam. Causean de Perereau (Histoire des Arabes, 2nd ed., ii. 502) puts the date of his birth in 535 A.D. and Father Chelchko (Poulets arabes chrétiens, p. 640) dates his death in 604 A.D.

These dates however can only be conjectural.

The surname Nábih is variously interpreted by Arabs writers. According to one, our poet was so called because in one of his verses he uses the verb nbihgha. 'She stopped among the Baní Kaín b. Qais and they felt the effects of our attacks'. But this verse is apocryphal and the process recalls that used to justify the etymologies of Muhammad and of Mutil, who, in our poet's time, had been but twelve years. According to others, he was so called because he did not write poetry until he reached manhood or more simply because in Nábih poetry 'flows from the spring'.

We know nothing about his family: his noble birth asserted by the Ktilb al-Áṣghár (ix. 162) and Ibn Kutil's (al. de Goeje, p. 74) is doubtful and we know nothing definite about his childhood and youth.

At some date which it is impossible to ascertain definitely, Nábih was admitted to the court of the Lakhund princes [cf. Lakhun] of al-Hira, vasal of Persia: in the reign of the kings of the Munbhir III and al-Munbhir IV in particular this Christian semi-Persian, semi-Arab city had become an important literary centre and the focus of a brilliant culture.

Our poet sang the praises of these two sovereigns and received gifts from them that his fortunes reached their zenith: in the reign of Nu'mán b. Khádís whose boon companion and favourite singer he became. The poet lived on intimate terms with the king in the lap of luxury and opulence. Such favour could not fail to excite the envy and jealousy of the other courtiers; hence his enemies, notably Murra b. Shád, resolved to break the king's attachment to him. The trick attempted by his enemies was a crude one and the king was not deceived by it: the attack on the poet failed.

Far from being discouraged, Murra patiently awaited another opportunity to avenge himself: this soon appeared. According to the Ktilb al-Áṣghár, Nábih, who had free access to the palace of Nu'mán, one day unexpectedly entered the apartments of queen Mutádárida, famous for her beauty. Taken by surprise, she dropped her veil, showing to the delighted eyes of the poet 'a part of her statue-like body'. By the time the king could replace it, it was too late. Struck by the beauty, Nu'mán composed in honour of this 'beauty' his famous poem which begins with the line 'Go and leave Majáy in self-baste....' (Derensbourg, Dáwen, alv.). Unfortunately he was imprudent enough to recite it to his enemy Murra who hastened to report it to Nu'mán. The latter in his anger decided on the poet's ruin.

According to another tradition, one evening when Nábih was seated beside the queen in company of the king and another poet, Munákhkhal al-Yaqhkhri, Nu'mán asked Nábih to describe Mutádárida to him. Nábih at once obeyed and recited the poem which he had composed shortly before. Munákhkhal, who was said to be the queen's lover, exclaimed: 'Sir, this description is that of an eye-witness'; and the poet's days were now numbered. Warned by his friend, the chamberlain Shírín, the poet hurriedly fled and sought refuge with the princes of Ghassán.

These stories, on the whole little probable, seem to have been invented to explain Nábih's disgrace. In his book Fi 'l-Adá’ al-Áṣghár (kairo 1927, p. 372), Hāshá Husán disputes their authenticity and acutely points out that nothing in poem viii.: 'It has reached me, sayest thou avoid the censure etc.' supports these stories. He supposes on the other hand, relying on this same the princes of Ghassán won the good graces of Nábih at some time and by their largesse and the poet showed his gratitude by singing their praises: this having come to the ears of Nu'mán, the latter took umbrage and decided on the ruin of his favourite.

Nábih was no means unknown to the Ghassánids, phylarchs of Byzantium and rivals of al-Hira. He had been very well received by the princes al-Haráth b. Abi Shámir and al-Haráth al-Mu'ashir. The former at the poet's request had released a large number of the Baní Asad taken prisoner at the battle of Háláma; the latter, also at Nábih's request, had released a number of the Baní Asad and Baní Fazhi-i after the battle of 'Alu Uhláq. This leads us to say a word about Nábih's political activity.

The poet in the course of the wars of his tribe never lost interest in his fellow tribesmen and their allies; we have mentioned his interventions on their behalf with the Ghassánids: during the celebrated war of Dábiá between 'Alu and Dhbyán, it was his constant care to maintain the alliances contracted with the Baní Asad and Baní Tamnim. In the reign of the Ghassánids Nu'mán b. Hárit b. Karith, he had once more to intercede on behalf of the Baní Dhbyán: defeated in the battle of Dúb Ukar; later, in view of his devotion to his patron and his love for his own tribe, he appealed to Nu'mán to abandon his war on the Baní Dhbyán allied with the Baní Hamm. As a result of refusing to listen to him, the king was defeated.

At the court of Ghassán, Nábih was overwhelmed with favours from the Baní Hárit and later by his successor Nu'mán. He celebrates the former's generosity in a sa'āda full of gratitude (Derensbourg, ill.) and his elegy on the death of Nu'mán (Dereubourg, xxiv.) is characterised by deep emotion.
In spite of his luxurious life, Nābirgāh felt his heart and his thoughts turning towards al-Hira and his ka'ba. Therefore on the death of Nu'mān b. Ḥārith Abī Karib he decided to return to al-Hira to attempt to regain the favour of the son of al-Mundhir.

Learning that Nu'mān was ill, he sent out accompanied by two Fādrīs, Manbūr b. Zachlama and Salīk b. 'Amr, friends of the prince; when they arrived at al-Hira, Nu'mān had recovered. Hearing of the arrival of his two friends, he had a tent of leather pitched for them and sent them a woman singer to entertain them. He himself often came to visit them. One evening at a party the singer sang Nābirgāh's poem 'O abode of Ma'ānī' (Dūrīnī, l.), the prince delightfully exclaimed, 'That is an excellent poem!' The Fādrīs thereupon seized the opportunity to intercede on behalf of Nābirgāh and the generous prince forgave the poet. A little later Nu'mān was put to death by order of the Shāhīn king Kīrār Farāwī for having refused to give him one of his relatives as a wife. Nābirgāh lamented his patron and retired to his tribe. We do not know when he died.

Before giving an estimate of Nābirgāh as a poet, we have still to discuss his religion. Durenbourg makes him a monotheist, and in support of his opinion quotes a number of verses in which the poet speaks of God, of the feast of palms, of the cross of Zawārī. On the other hand, Chelkho thinks he was a Christian. We find, he says (Christianisme en Arabie avant l'Islam, Balaffr, 1931, p. 328—430), in the poems of Nābirgāh, evidence of his belief in God, of his religion and piety, but the arguments are not numerous or of great cogency: a vague mention of God, of David and his son Solomon, of priests present at the obsequies of Mundhir, of the cross of Zawārī. As a matter of fact, Nābirgāh was a pagan and there is nothing Christian in his poems. The allusions in his poems, even if we accept them as authentic, are in reality only rather faded memories of the Christian ceremonies which the poet had witnessed at al-Hira, and Ghassān and a distant echo of the religious ideas current in the peninsula at this period. As to the word Allāh, it is undoubtedly the result of a substitution for al-Lī [q.v.] made at a later date by some Muslim priest.

Nābirgāh al-Dhubyānī holds a high position among the poets of ancient Arabia; he is unanimously placed 10th in the rank of poets.

In our opinion he possesses in a high degree the two qualities which make a great poet: sensitiveness and imagination. To sincerity of feeling, he adds splendour of imagery and freshness of expression. In him, ideas and words, feeling and turn of phrase, matter and form are in perfect harmony. His stanzas are often bitter, ironic and sarcastic.

He is also an artist who skilfully uses all resources, all effects and all allites. His verse is compact, solid and uniform and readily impresses itself on the memory with the idea which it expresses. Of course it is not without its faults: we find a few weaknesses and examples of lack of care.

The Husain (al-Shībni al-Muhammad, Cairo 1926) has recently raised the question once more of the authenticity of the poems of Nābirgāh and other pre-Islamic poets. Rejecting all that has been handed down about it he regards the old poetry as apocryphal. The discussion of this question however, as can readily be understood, lies outside the scope of this article.

Maurice Chelkho

NABOB. [See Nābirgāh.]

NABULUS, A TOWN IN CENTRAL PALESTINE, the name of which is derived from that of Flavia Neapolis built in honour of Flavius Vespasianus, his Old Testament predecessor was Shēchem, which however lay more to the east, on the site of the present village of Bāltā (the name is explained by S. Klein, in Z. D. F. V, xxix. 38 sqq.; cf. E. Hartmann, Etr., xxiii. 175 sqq., as "platanus", from the evidence of the pilgrimage of the Abūla and the Mīn bar Gen. rb., c. 81, § 3). According to Eusebius, the place where the old town stood was pointed out in a suburb of Neapolis. The correctness of this identification of the site of Shēchem has now been completely proved by Sellin's excavations; and this also explains how the old name did not as usual drive out the late Greek one. In the time of the Arab writers, the name Shēchem was long forgotten and what they tell us refers to Neapolis-Nabulūs. Nabulūs is in a long valley (running from east to west) formed by two chains of hills, on the south side Garizim, Arabic Dāljāl al-Tir or al-Kiblī (2,000 feet high), on the north side Ebal, Arabic Dāljāl al-Fāshīny or al-Shārikā (3,140 feet high). G. Hübscher (Z. D. F. V, xxviii. 98) refers the older name of Neapolis: Mabburra (Mamorrah) in Pliny and Josephus (i.e. "crossing", māburrā) to the low saddle running right across the valley. The town with its 22 springs is annually rich in water, which is heard running everywhere and produces a very luxuriant vegetation. Where the road from the south turns westwards into the valley there is a well with the ruins of a church; Unanimous tradition since the fourth century A.D. locates here Jacob's well and it is undoubtedly the same as is mentioned in John iv. 5. About a thousand yards to the north is a building where tradition locates Joseph's grave.

In the post-exilic period Shēchem belonged to the territory of the mixed people of the Samaritans whose capital it became after they had built on the hill of Garizim (the Samaritan text of Deut. xxvii. 5 has this name instead of Ebal) a temple as a rival to that of Jerusalem. They were continually at strife with the Jews and in the end John Hyrcanus
in 129 B.C. destroyed Shechem and its temple. At a later date this always turbulent people was equally hostile to the Romans, which compelled the Vespasian to attack them on Garizim when a large number were slain. Christianity gradually spread in the country and Neapolis became a bishopric. The result was that the Samaritans now turned their arms against the Christians and treated them with great cruelty. After a deadly raid by them, the Byzantine emperor Zeno (474–491) had them driven from Garizim and built a church there. They brought still greater havoc in the time of Justinian who punished them with great severity and destroyed their synagogues while he rebuilt the churches. This finally broke their spirit; many of them fled to Persia while others became Christians. Their part had been played by the time when Nabulus with many other towns fell into the hands of the Muslims.

The notices of the Arab authors about the town are very scanty. They know that it was inhabited by Samaritans [cf. Al-Sāmī] and some add that, according to the Jews, they are found nowhere else, but it should be noted that Bahādurî (ed. de Goeje, p. 135) speaks of Samaritans in Filastin and Urdana. Ya‘qūbî mentions (p. 323), Nabulus a town near two sacred hills with a population of Jews, foreigners and Samaritans. Below the town is a subterranean city, hewn out of the rock. Muḥammad ibn Ahmad says Nābulus lies in a valley between two hills, is rich in olive-trees and a stream flows through it. The houses are of stone and there are mills there; the mosque in the centre has a beautiful paved courtyard. In the Crusading period Nābulus is mentioned as unfortified. On Jan. 25, 1120, an assembly of prelates and secular notables was held here with the object of improving the morals of the Christians. Idriti mentions the well of Jacob where Christ had the conversation with the woman of Samaria; a fine church had then been built on the spot. The Jewish traveller Benjamin of Tudela (1160–1173) records that there were no Jews in Nābulus, but about 100 Kuttāans (Samaritans) who offered burned offerings on the altar on Garizim at the passover and on other feast-days. His contemporary Al-Uhrayn says the Samaritans are very numerous. He, as does Ya‘qūbî, always writes Garizim as Kaisirizim, a corruption which we already have in the “Agazaren” of the pilgrim of Bordeaux. A terrible earthquake in 1202 added to the miseries inflicted on the town by the continuous wars between Franks and Muslims. Under the great Mamlūk Sulṭān Baybars (1260–1277) it finally passed into possession of the Muslims. Ya‘qūbî remarks on the wealth of water and fertility of the district; here, he says, is the hill on which according to the Jews, Abraham wanted to sacrifice Isaac (not Ishmael as the Muslims say). When praying, the Samaritans turn towards Garizim. Dimashqy says that Nābulus is like a palace surrounded by gardens; he mentions the pilgrimages of the Samaritans to Garizim where they sacrificed lambs. The Muslims had a fine mosque in the town, where the Kur‘ān was recited day and night. According to Khalîl al-Zuhîr (d. 572 = 1172), the area included 500 villages.

The people of Nābulus retained their unfriendly character and fondness for rebellion so that the town was less visited by pilgrims. Only the modern period has brought order and greater security, but even now the dislike of the Samaritans to strangers as spectators during their passover sacrifices may give rise to trouble.

AL-NAḤDIRI. [See 'And al-Ghânî.]

NAḤDĪR (A., plural nāḥḍūr; Sura liii. 57), used as a nomen agentis from n-hür, insinuation, meaning a whisperer; sometimes also an infinitive, Sura ixvi. 17. The plural nāḥḍūr is also found in the sense of an infinitive, e.g. Sura ixvi. 6. The term occurs frequently in the Kur‘ān; it is even said to be synonymous with rasūl; its opposite is bâṣīr, awāṣiq. Naḥdir as well as bâṣīr are applied to the prophets, the former when they are represented as whisperers, the latter as an announcer of good tidings (cf. Sura xvi. 106; xxxv. 58; xxxiii. 44; xlviii. 8; naḥḍūr as nāḥḍūr).

As an epithet it is used especially in connection with Noah, the great whisperer before the Deluge, and with Muhammad himself who thereby acquires the speech of a second Noah (cf. Sura xvi. 115; l. 51; lixxvi. 30, with Sura xxix. 49; lixiv. 37; lixxvii. 70; lixiv. 26). Sometimes Muḥammad emphasizes his being only a whisperer (Sura xvi. 32), or his being the first whisperer who was sent to his people (Sura xxvii. 46; xxxiv. 43). The term is found in bāṣīrīd apart from the common use, known from the Kur‘ān, in the curious expression naḥḍīr ʿiryan (Bukhārī, Nībās, b. 26; Ṭāḥif, b. 2; Musli, Pāyš, trad. 16) with which Muḥammad denotes himself. The tradition runs as follows: “Myself and my mission are like a man who went to some people saying: I have seen the army (of the enemy) with my eyes and I am the naked whisperer”. Several anecdotic stories are told by the commentators in explanation of this expression. It is also said by some of them, that in early Arabia a man who saw an approaching danger, stripped himself of his clothes and wound them around his head in order to warn his tribespeople. — The meaning Nazarite which in several dictionaries is given to the term naḥḍīr in the first place does not occur in the Kur‘ān, nor in bāṣīr, nor in nāḥḍūr, nor in Naḥdir, for Naḥdir is it, however, used in translations of the Bible.

NAḤDIR, v.o.w. was taken over into Islam from the pre-Muhammadan Arabs and underwent modification: by the new religion. The idea of dedication is associated with the root n-hür which is also found in South Arabic, Hebrew and Aramaic and to some extent in Assyrian. An animal could
be the object of dedication among the Arabs. For example, they dedicated by *nadhur* certain of their sheep etc., for the *qalqul* feast in Radjab (Lišān al-`Arab and Dawārī, s.v.); the dedication which was expressed in solemn formulae signified that the animals were removed from the mundane world and placed in the sacred one.

As a rule, a sacrifice was dedicated in order to obtain good fortune in a particular respect. The promise to dedicate an animal when the herd had reached the number of a hundred (cf. cit.) had an effect on the prosperity of the animals because the word anticipated the fact. According to the story, Abū al-Mutajib similarly dedicated a son to be slain beside the Ka'bah if he should have ten sons and they grew up (Ibn Hīhām, p. 97 sqq.) but for his *nadhur* 100 camels were substituted,—

A childless woman could also vow if she had a son to dedicate him to the sanctuary (ibid. p. 76; perhaps this story is a literary borrowing). According to the *hadīth* of Maimūnah bint Kardām, her father promised to sacrifice 50 sheep if he had a son (Yāqīn, i. 754; Abū Dāwūd, *Mishkāt*, ḍhāb 191; Ibn Mīd, *Kāfīr, ḍhāb* 18). If a child was born, its mother could dedicate it by a vow as *āmiras* (from *āmar* if it recovered (Arāwqi, p. 123, sqq.). Escape from every difficulty was sought by a *nadhur*. During a battle a camel used to be dedicated as a sacrifice (Wākhīdī-Wellhausen, p. 39). The traveller in the desert used to make a vow on account of the danger (see the verse in Lane and Lišān al-`Arab, s.v.). In distress at sea one promised offerings to God or a saint or vowed to do something oneself, such as fasting (Sītār x. 23; xxix. 65; Abū Dāwūd, *Mishkāt*, ḍhāb 20; see also Goldziher, *Muh. Stud.*, ii. 311). During a drought *‘Omar vowed to taste neither saum, nor milk nor meat till the rain fell* (Tabari, ed. de Goeje, i. 2573, verso).

Even if a sacrifice were promised, the vow also affected the person concerned, as we see from the fact that he had his hair shorn not only by the *ḥāddīj* but also, for example, when sacrificing after a journey (Ibn Hīhām, p. 15; 749; Wākhīdī-Wellhausen, p. 324; 384; 429 sqq.; Bawākīrī, *Hadīth*, ḍhāb 1254) for the cutting of the hair ended, as in the case of the Iṣmaʿili Nazirīte, the state of consecration. The vow therefore had always more or less the character of a self-dedication. This aspect was often quite prominent. Ordinary sacred duties such as participation in the ḥāddīj were assumed as a consecration by *nadhur* (Sītār xxii. 30) at which special obligations were assumed e.g. to go to the sanctuary on foot, or barefooted. (Bawākīrī, *Dīnār al-Salāt, ḍhāb* 27; Tirmīdzī, *Naṣīrāt ʿuṣūl ‘Abbāsī, ḍhāb* 17). The sacred condition of *fīlīs* was assumed as a *nadhur*; thus before his conversion *‘Omar vowed to make a nightly *fīlīs* in the Meccan sanctuary (Bawākīrī, *Majālis*, ḍhāb 54; *Mishkāt*, ḍhāb 29). Such a vow to separate oneself from everyday life in some special way was very frequent among the ancient Arabs. For *Labīd* (p. 17, 18) compares an antelope bunk also among the bushes to one fulfilling his vow (Bawākīrī *‘Ammār*).

This isolation had the definite object of spiritual concentration and strengthening the soul and thereby influencing the deity. Abstinence was therefore practised in preparation for great deeds, especially in war. The Arabs *touched no perfume, married no woman, drank no wine and avoided all pleasures when they were seeking vengeance, until they attained it* (Hamāmah, p. 447, v. 8) schol.): avoidance of wine (Hamāmah, p. 237, v. 4) and women (Kūfī al-Aghārī, xv. 161; 2nd ed., p. 154) is specially mentioned. These abstentions like the *ḥāddīj* rites and the *fīlīs* are also the objects of a *nadhur*. The form of this vow is for example "wine and women are ḍarras to me until I have slain 100 Asadīs" (Aghārī, viii. 68; 2nd ed., p. 65).

A definite term may be fixed, such as drinking no wine for 30 days in order to obtain vengeance (Kāsī al-Khaṭīm, ed. Kowalski, iv. 25). Forms of abstention are not to eat meat, not to wash the head, so that the *fīlīs* is not removed (Aghārī, ix. 149; 2nd ed., p. 143; xii. 69; 2nd ed., p. 66; Ibn Hīhām, p. 543, 980; *Mishkāt*, ed. Wellhausen, no. 189), not to mourn oneself (Wākhīdī-Wellhausen, p. 201). Refraining from meat, wine, ointment, washing and sexual intercourse are mentioned together (Aghārī, vi. 99; 2nd ed., p. 97; viii. 68; 2nd ed., p. 66; Ibn Hīhām, p. 543; Wākhīdī-Wellhausen, p. 73, 94). There is also evidence of complete fasting (Wākhīdī-Wellhausen, p. 105, 402). The abstentions, the offering and the deed to be done form the content of the *nadhur*. It is said: *naṣāḥārūn ʿalā ʿnāfīs wa naṣāḥārūn miʿād* (Bawākīrī and Lišān al-`Arab, s.v.), as well as *naṣāḥārūn tawwīs sulīl* (* Antar, p. 21, 84; Kāsī al-Ruṣayyāt, p. 52, 5*). After a wish has been fulfilled a vow of gratitude may also be taken (Wākhīdī, p. 290).

The consecration placed the person making the vow in connection with the divine powers. The *nadhur* was an *ʿad*l (Sītār ix. 76; xii. 67; xxvii. 10), whereby he pledged himself. A neglect of the *nadhur* was a sin against the deity (Ibn Ruṣayyāt, p. 51, 40). The sacred obligation of living made this a *nadhur* (synonymous *naṣāḥ*) which one should fulfill (*ṣafat*), instead of wandering aimlessly (Sītār xxii. 23; Wākhīdī, p. 120; Labīd, p. 47, 1; Kuṣaiṣī, *Hāshimīyya*, ed. Horovitz, p. 4, 48). The importance of the binding pledge gradually becomes more prominent (cf. Lišān al-`Arab, where *naṣāḥār* is explained by *ṣafat*, ironically *ṣafat*, p. 7, 3); the emphasis on the material dedication gradually became less. The abstentions mentioned receive their importance on the one hand from works meritorious to the deity, on the other from the unpleasant deprivations, by which the person taking the vow disciplines himself. Both points of view are seen in the examples quoted. The releasing of slaves or divorcing of wives often form the subject of a kind of vow by which a man pledges himself under certain conditions. A man many also vow to sacrifice all his camels if he is lying (Hamāmah, p. 667, v. 3). The strict obligation inherent in the *nadhur* makes it closely related to the oath (see *kaʿām*).

One can also bind one's family by a vow. A mother swears not to comb her hair or to seek shade until her son or daughter fulfils her wish (Aghārī, xviii. 205; 2nd ed., p. 205; Ibn Hīhām, p. 319; ii. 90). The strength of this kind of "conjunction" is based on the relationship between the two partners. If a dying man vows that his tribe shall slay 50 to avenge him, this binds the tribe (Hamāmah, p. 442, 5). There thus arose in Islam the problem of how far unfulfilled vows had to be fulfilled by the descendants (Musili, *Naṣāḥ*, trad. 1; Bawākīrī, *Wāṣīyā, ḍhāb* 19; cf. Goldziher, *Zibrilten*, p. 59).
In Islam the vow and the oath are treated together. In the Koran it is prescribed that unconsidered expressions (isghar) in an oath may be broken and expiated (Sura ii. 225, v. 91). The context shows that the reference is to vows of abstinence, especially relating to food and women. Sura ii. 226-227 in continuation says that those who bind themselves by isghar not to touch a woman should either break the vow after 4 months or pronounce the formula of divorce. The breach of the oath then requires the kaffara. The kaffara formula is absolutely forbidden (Sura lxxviii. 1-5; cf. xxiii. 4); it is a great sin in the eyes of the law, while the isghar is not a sin (see Juyanbool, Handbuch der islamischen Griechen, p. 259 sqq.; Sachau, Muh. Recht, p. 15, 68 sqq.). He breaks from the oath" promised in Sura lxxvi. 2 refers to a vow of continence. The same kaffara holds for a broken vow as for an oath. It is probable in this case that we have Jewish influence (cf. Mechina, Nahdirim) but the principle of releasing oneself from a vow by doing something else is certainly also originally Arab. But with Islam comes the view that mukafs are useless because they cannot induct God (Bahshir, Almun, bab 26; Kadar, bab 6; Muslim, Nahdir, trad. 2). Thus we find hadiths which urge the fulfillment of vows as well as those that forbid them. Following hints in the hadiths, we find a systematic division into vows of piety (mudaf al-taharrar), which are intended to acquire merit by a pious deed (isghar), and vows by oaths which, since they are conditioned, serve to incite, prevent or strengthen. The latter are called mudaf al-ladjud (v. 8). They are deprecated but must be treated like oaths. Their matter must be innocent; according to some, such a vow is invalid, according to others, it is valid but must be broken. Their matter must not already be an individual duty (mudaf li 'adi). The person taking the vow must, like him taking an oath, be mukafs and be acting of his own free-will.

**(John Frisendren)**

**AL-NADIM, ABU 'L-FARAJ MUHAMMAD b. ABD YAKUB IBNE AL-WARAK AL-NADIM AL-BAGHDADE, Arabisch bibliographierer, compiled the Fihrist in 377 (987-988). Little is known about his life. According to a statement which goes back to Ibn al-Nadid's (d. 643 = 1245) Dhahl Ta'rikh Baghda (see Flügel's edition, p. xii, note 2), he died in 584, according to another statement (see Ibn Nadid's Al-Asrâli, Lisan al-Muthâ, v. 171) probably 388 (the figure is damaged in the Flügel's edition). Both dates are in contradiction to the fact that in the Fihrist events of 392 (875, 6) are mentioned, unless they are additions by another hand. A clue to the date of his birth is given from his account (p. 377, 6) of a meeting with a learned man in the year 340; this suggests 325 as the latest date for his birth. Nothing is known of his family. There is no reason to connect him with Isâhak b. Ibrâhîm al-Mawall al-Nadim (d. 235 = 849) or with Vâsî b. al-Nadim, a pupil of al-Baladî (d. 279 = 892). His father was a bookseller (muqaddam) (p. 303, 41, 318, 6, 351, 12). Whether the epithet al-Nadim "table companion," i.e. a member of the circle of a calliph or other great man, refers to the father or to a remote ancestor is unknown. It is not impossible that it refers to the author of the Fihrist himself; against this however is the fact that he is usually quoted as Ibn al-Nadîm. That Baghdaedd, if not his birthplace, was at least his place of abode is evident from passages like p. 337, 96, 349, 17 (see below) and the frequent mention of Baghdaedd among his acquaintances (p. 134, 8, 219, 29, 236, 19, 266, 1). He several times mentions a stay in Mopsâl (p. 86, 171, 166, 41, 199, 18, 265, 8, cf. also p. 283, 4). We know nothing of other journeys by al-Nadîm (Dmr al-Rum, p. 349, 21, is the name of the Latin quarter in Baghdaedd as v. v. Rosen has shown). His teachers and authorities also point to Baghdaedd. He most frequently quotes the authority of the grammarians al-Sâtra (d. 368) (all the quotations can be found in the latter's Akhbâr al-Nawawiy al-Baghdaedd). Personal relations are indicated by p. 56, 13 and the mention of his sons (p. 31, 29, 40, 5, 62, 25). Al-Nadîm also studied under Ibn al-Munadidjim (p. 144, 2). He gives traditions heard from Muhammad b. Yusuf al-Nâkî (p. 24, 14, 25, 9). He also gives traditions from Abu 'l-Faraj al-Ishakî (p. 141, 19 = Kitâb al-Asrâl, i. 3 sqq.) and from Abu 'l-Fâhî b. al-Nawwâb (p. 145, 8) concerning the immortality of his transcripts (p. 145, 5). He also mentions as his teacher Abu Sulaimân al-Manjîk (p. 241, 14) whom we know from Abu Hujaylân Muhâkhafat. He was friendly also with the logician Ibn al-Djurrah (p. 244, 14, 125, 18) and with the Christian philosopher Ibn al-Khummar (p. 245, 18) and with Vâsî b. 'Abî (p. 204, 11). This circle of friends is very much in keeping with al-Nadîm's friendly nature, the breadth of his intellectual interests, his intelligent interest in other religions and his tolerance, which finds expression in Majâ'îf's 5 and 79 of his work. That he was a Shî'î and Mutâzilî did not escape his biographers (cf. Goldscher, in Z.D.M.G., xxxvi. 278 sqq.); thus he uses bâ'in and amîn in the sense of Shî'î and Sunnî respectively, calls the Sunni traditions al-Hawawisy (p. 231, 12), claims many of their leaders for the Zaidîyya (p. 178, 93, 85), says that al-Shî'î was a man of decidedly Shî'î outlook (p. 209, 12) and praises al-Wâqiy (p. 98, 52) as Shî'î. Shî'îs were numerous among his friends (p. 139, 97 and p. 154, 25) and acquaintances (p. 173, 56, p. 61, 11, 197, 11, 198, 4). Al-Nadîm like his father was a bookseller. This is nowhere expressly stated but is evident from the whole plan of his work in which he faithfully records not only scientific literature but also the numerous divans of contemporary poets and the vast mass of anonymous light literature, love stories, fairy tales and books of adventure, indeed even works of a popular nature neglected alike by scholars and bibliophiles, books on good manners, cookery books, books on poison, books dealing with hunting and sport, down to collections of fables, books on magic and on prophecy, in brief everything that was on the Baghdaedd book market in the fourth
(ninth) century. That he was a bookseller is also indicated by the frequent particulars about the size of the books dealt with (cf. especially, p. 159, 16) about copies in the hand of famous scholars, about the demand for books (p. 70, 5, 77, 19; 79, 21) and about the book trade (p. 271, 3, 359, 12). He several times mentions other booksellers (p. 264, 299, 4, 355, 1). The Fihrîst exists in two recensions (on the manuscripts, see Z.D.M.G., lxxiv, 111 sqq. and the literature there given; to these may now be added a fragment in Tonk and a private manuscript in Medina). Both were made in the year 377 (987).

The longer contains ten maf'âlî (of which the first six deal with the literature of Islam: 1. Kursân, 2. grammar; 3. history, etc., 4. poetry, 5. dogmatics, 6. law), while the last four deal with non-Islamic literature (7. philosophy and "ancient sciences," 8. light literature, 9. history of religion, 10. alchemy). The shorter version contains only the first four maf'âlî of the longer one, i.e. the Arabic translations from the Greek, Syriac, Persian and Sanskrit and the other literature based on these models. It is mentioned by Hâdidji Khalfia (Stambul, ii, 211) under the title Fawâ'id al-Ulâm. The two recensions have in common an introductory section on the various forms of writing.

A survey of the contents of the Fihrîst follows the preface (see also Flügel, in Z. D. M. G., xiii, 190 sqq.). The arrangement there given is strictly adhered to in the book. The special quality of the book and its value lies in the fact that it gives the Arabic literature of the first four centuries in a bibliographical arrangement while the biographical method is the only one used in other contemporary sources. Al-Nadîm, it is true, does not give a rule treats of his subjects in biographical sketches but it is the list of works of the author that is the main thing. Sometimes a branch of literature is treated purely bibliographically under its various branches (e.g. the literature of Kursân's exegesis, p. 35, sq. 371, 114) and also (p. 87, 88, 170, 171). This arrangement was necessary with the anonymous literature, especially in the eighth maf'âlî (p. 305 sqq.). A further step towards treatment from the point of view of the literary historian is found in the brief introductions and surveys (c.g. on the pre-Othmanic recensions of the Kursân, p. 26 sqq., on the beginnings of Arabic grammar, p. 40 sqq.). In the last four maf'âlî, such sections (e.g. on the origins of philosophy, of medicine, of alchemy, the beginning of the translated literature, the origin of the "2000 tales") are so extensive that they have the character of a regular history of literature to a much greater degree than the more bibliographical first six maf'âlî. The ninth maf'âlî occupies a special position; it is a treatise on the history of religion in which the bibliographical element is not at all prominent. The sources used by al-Nadîm are mainly of a literary nature. He prefers to use works in copies from the hand of reliable copyists. He comparatively rarely quotes personal authors. Although a younger contemporary of al-Nadîm's, al-Wâzir al-Maghribi (d. 418 = 1027), prepared an improved edition of the work, it seems at first to have had only slight influence. The earliest author to make considerable use of the first four maf'âlî (in al-Maghribi's edition) was Yaqûût (d. 626 = 1228) (see Bergsträsser, in Z.S., ii, 185). He claims to have consulted a copy in al-Nadîm's own hand, as does the lexicographer

**Johann Fücker**

**NADIM, Ahmad, an Ottoman poet,** born in Stambul, the son of a judge named Muhammad Bey who had come from Mersîfen. His grandfather (according to Gibb, H. O. P., iv, 30) was a military judge named Muṣâfa. Ahmad Râzik mentions as his great-grandfather Kâsa-Cebčii-eâ (q.v.) Mahmud Efendi who also was a military judge. The genealogy given by Ahmad Râzik is however wrong because he confuses [Kâsamî Muhammad Pasha (q.v.) with Rûm Muhammad Pasha. The statement that Ahmad Nadîm is descended from Djalâl al-Dîn is therefore simply the result of confusion. Little is known of his life. He was a wâdidari, later on intimate terms with Ahmad III and his grandson Hâmid Hürmüz Pasha [q.v.]. He probably got his taḥbî al-Nadîm from this friendship. Latterly he held the office of librarian in the library founded by his patron Dâmmâd Ibrahim Pasha. On hearing of the end of Ibrahim Pasha and the deposition of the sultan, Nadîm lost his life at the beginning of October 1750 (Rabi' I, 1143) in a horrible way; while escaping from the mob leaving the grand-vizier's palace he fell from the roof and was killed. He was buried in Ayâk Pasha in Perä beside the historian Fladîkîîlî Şâhâbî Muhammad Ağa.

Ahmed Nadîm is regarded as one of the greatest of Ottoman poets, who is still appreciated for his pure language, free from foreign additions. Many literary historians have discussed his merits as a poet (cf. the specimens collected by Gibb, H. O. P., iv, 30 sqq.). His collected poems (Dîwânu; printed Bülbûk, n.d.; a more recent critical edition with introductions by Ahmad Râzik Bey and Muhammad Fu'âd Bey appeared in 1338—1340 in Stambul; there are manuscripts of the
Nadir in S.W. Persia. Tahmāsp appealed to Nādir to complete the deliverance of the country. Leaving Shīrāz and crossing Lutistān, Nādir arrived in Bārdijerd where the Shah sent him a crown set with precious stones and a commission (nahānak) as wall of all Khūrsān along with Māzandārān, Yuvān, Kīrman and Sistan (cf. also ‘Alī Ḥāstā, p. 180). Tahmāsp also gave his sister Goharshād to Nādir and betrothed his other sister Fatimāsulṭān to Rādā-ḵānu Mīrzā.

The Ottomans who then occupied the whole of western Persia and the greater part of Transcaucasia were reluctant to leave Persia. Nādir occupied Nīhawān, defeated the Turks at Malikyr, retook Hāmadān and on the 27th Muharram 1143 (Aug. 13, 1730) Tabriz was retaken.

Nādir returned to the east. Nādir learned in Tabriz that Dūš ‘l-Fīrār Abdāli had driving Allah-yār Khān from Herāt was fighting Nādir’s brother Dara Khān under the walls of Maḥḥād. Nādir at once set out for Khūrsān, crossing the steppe of the Yomut Turkmens and towards the end of Rahlī II (Nov. 1730) was at Maḥḥād where he reviewed 56,000 families of the tribes transplanted from other provinces.

On the 4th Shawwāl (April 12, 1731) Nādir was 3. farahkhā from Herāt. In the month of August the Abdāli restored Nādir’s candidate Allah-yār Khān but the latter regaining contact with his tribe now rebelled. It was not till Ramadān 1

Nādir in Europe in Munich, London and Vienna enjoys great popularity. Nādir translated into Turkish the history of Mūsādžijīn-baši Ahmad Esfandi (cf. F. Babinger, G. O. W., p. 224 sq.; cf. thereon J. L. s.s., xii. 272); he was also one of the Turkish translators of ‘Ain al’s history (cf. F. Babinger, G. O. W., p. 259 sq.; the edict relating to this is in Ahmad Rāfī’s, ‘Hirī on hikayi ʿaridah ‘Isāmih khatiyi, 1100-1200, Stambul 1930, p. 84 sq.) but the MS. seems to be lost.

Nādir Shah, king of Persia (1147-1160)

Origns. Nādir b. Ḫūrāzī b. Nādir-ḵānu belonged to the Khūraḵī clan of the Turkoman tribe of the Afghāns, of which a section had settled in northern Khūraḵān, and was born on the 28th Muḥarram 1100 (Oct. 22, 1688) at Khūraḵān. Entering the service of Tahmāsp II, he was called Tahmāsp-ḵānu Khān but after his coronation his original name was improved to Nādir, “the rare one.” At an early date Nādir distinguished himself in the incessant fighting with the Turkomans of Naṣr, the Camishbash, Kurds of Khūraḵān, ‘Alī Khān, the Būzakhs, the Persians and even against his Afghān fellow tribesmen. The little nucleus around Nādir consisted of his Afghān relatives, some Kurds of Daragāz and Aisward, and 300-400 families of Djalāyir Turkomans with their chief Tahmāsp-ḵānu Wālī.

Fighting in Khūraḵān. During the Afghan invasion of Persia, Maḥḥād was occupied by Malik Mahmūd, a scion of the Sīstān family. Nādir fought against Malik Mahmūd at first on his own initiative. When the Šafawī Tahmāsp II, driven from his other lands, arrived in Khūraḵān, Nādir very cleverly supplanted the commander-in-chief Fath ‘Alī Khan Kāḏūr and on 17th Rahlī II (Dec. 22) captured Maḥḥād with the help of treachery. Henceforth it became his headquarters. There were already signs of a breach between Nādir and Tahmāsp II at this time.

The Shah urged Nādir to set out against his enemies the Ghilaḵtī Afghāns but Nādir wished first of all to dispose of the nearer enemy, the Abdāli Afghāns of Herāt, but the campaign of 1728 (against the Abdāli and the Turkomans) had no success. Nādir however was able to extend the sphere of his activities; he ousted from Astarābād and Māzandārān the governors appointed by Tahmāsp and came into conflict with the Russians and the Ghilaḵtī Afghāns.

The Abdāli. In the meanwhile trouble had broken out in Herāt between Allah-yār Khān and Dūš ‘l-Fīrār Khan. Nādir re-established Allah-yār Khān but transplanted many tribes to Khūraḵān (1144-1145).

The Ghilaḵtī. At this time Ashraf Ghilaḵtī laid siege to Sīstān while his general Sayyād had gone to Sīstān. On the 6th Rahlī (Nov. 27, 1729), Nādir defeated the Afghāns on the banks of the river Miḥmāntār. This victory he followed up by others.
to Persia via Baghshāy (Bāb-kusayy), Bayāt, Bayān and Shabdūrah. Mahāmid Bāltī. The reason of this hurried move was the rebellion raised by Mahāmid Khān Bāltī in S.W. Persia. Mahāmid Khān was quickly driven from the pass of Shabdūtan and on 27th Shāhī (Feb. 1, 1734) Nādir reoccupied Shāhī.

Campaign in Transcaucasia. In 1734 Nādir received the Turkish ambassador Abd al-Karim Efendi and informed him that the retrocession of Transcaucasia was a réve que non de paix. On the other hand, prince S.D. Golitaine was received at Isfahān on May 20–31, 1734 and thereafter by Nādir's order accompanied him everywhere (his itinerary in Lorch-Schnee). On the 12th Muharram 1147 (June 17, 1734) Nādir left Isfahān for Ardhar-dāghūn and as the Turks did not reply, Nādir began by attacking the Daghestāni chief [Ghażi-Kumūk] Surkhāy whom the Porte had appointed governor of Surkāyān. Tahmasp Kuli Khaljīr defeated the Daghestānians near Dāwi-lāhan (in the district of Kābalā) while Nādir cut off the retreat—penetrated into the heart of the extremely difficult region of Ghażi-kumūk. In spite of the exploits of the Abdālī the success gained in Daghestān was only partial for Surkhāy had escaped to the north.

On 6th Djamād-ī II (Nov. 3, 1734) Nādir was before the walls of Gandjā, which was defended by ʿAli Pāshā. The siege necessitated considerable works and prince Golitaine procured Russian engineers for Nādir. On March 21, 1735 a treaty was signed at Gandjā by which Russia and Persia became practically allies.

On 1st Muharram 1148 (May 26, 1735) Nādir went first to Kerāb but the encounter with ʿAbd Allah Pāshā Kūprūšzade took place near Erīwan on the plain of Baghshāy; on 26th Muharram (June 18, 1735) the Ottomans were defeated. Gandjā they upon capitulated on the 17th Šafar (July 8) and Tilla on 22nd Rabiʿ I (Aug. 13).

Nādir returned to Daghestān. Via Tilla [q.v.], from which 6,000 families were transferred to Khūrānān, Nādir attacked the Legt of Dār and Talā (north of the Alazan). The Khān of the Crimean ʿAbd al-Girāy, who had in the meanwhile advanced as far as Darband and had placed his nominees everywhere, withdrew to the Crimea and Nādir endeavoured to pacify Daghestān but Surkhāy still evaded capture.

Nādir proclaimed king. On 13th Ramaḍān (Jan. 27, 1736) Nādir came to Mughān [q.v.] where in the meanwhile the governors and notables of the province had assembled. It was explained to them that Nādir, having liberated Persia, wished to retire to Khūrānān and that the delegates were free to put the government in the hands of Tahmasp II or ʿAbbas III "who were alive". Nādir finally accepted the crown but on condition that the Persians abandoned the Shīa, its practices introduced by Daʿūd I which were contrary to the beliefs of Nādir's ancestors. The Persians were to form a fifth orthodoxy mahallā, placed under the patronage of the Emīm Djanṣār Shāhī. A document to this effect was sealed by the assembly. The five clauses of the treaty to be proposed to Turkey were next drawn up: 1. the Turks were to recognise the new Dījārī, 2. the latter was to be given a place of prayer (ṣānīā) at Mecca; 3. Persia was to send an amīr al-baḥrīj every year through Syria; 4. prisoners should be exchanged and 5. ambassador were to be exchanged after mutual approval of the appointments. The formal coronation of Nādir took place on Thursday, 24th Šafar 1148 (March 23, 1735). Nādir did not return to his capital before May 26, 1735 (March 23, 1737), and had a new town built on the site of his camp (Surkāyān) which was called Nādirābād.

Kandahār capitulated on the 2nd Dhu ʿl-Ḥijād 1150 (March 23, 1738). The citadel was dismantled. Expedition into Nepal. So far Nādir's military expeditions had been dictated by a desire to reestablish the old frontiers of the Safavid empire. The expedition to India was provoked solely by the attraction of ill-guarded provinces and by the desire to replenish the treasury exhausted by repeated campaigns. Ghazānī occupied the 22nd Šafar 1151 (June 11, 1738). Kābul on 12th Rabiʾ I (June 30), Džalālābād on 8th Djamād-ī II (Sept. 17). From the neighbourhood of the latter town, the prince Kūli-Kūli was sent back to Persia to act as regent; he and his brother Nāṣr Allah were given crowns.

Going via Sarṭōbā Nādir avoided the Khaibār Pass and took prisoner Naṣr-Khan, governor of Pehlīvar. On 15th Ramaḍān (Dec. 27) Nādir left this town. He: next took Lahore and reappointed the local governor Zakariyā-Khan (a Khrūrsānī). (Naṣir-Khan also was restored to his post). Leaving Lahore on 26th Shawwāl (Feb. 6, 1739) Nādir learned that Muḥammad Shāh had reached Kāmīt and was in a place between the jungle and the river. He succeeded in cutting Muḥammad Shāh off from his capital and hastened to attack the reinforcements which Saʿdūt-Khan (a Khrūrsānī) was bringing from the province of Oudh. Thus began the decisive battle of 15th Dhu ʿl-Ḥijād 1151 (Feb. 24, 1739) in which the commander-in-chief Khān Dāwīn was mortally wounded and Saʿdūt-Khan captured. Nādir and Muḥammad Shāh entered the capital where Nādir's name was inserted in the kūršā and coins struck in his name. On the 15th Dhu ʿl-Ḥijād (March 26, 1739) a rumour spread that Nādir had been assassinated and the populace massacred 3,000–7,000 of his soldiers. Next morning Nādir went to the mosque and gave the signal for the massacre of the inhabitants. On 26th Dhu ʿl-Ḥijād (April 6) Naṣir Allah Mirza was married to a Moghal princess. On 3rd Šafar 1152 (May 12, 1739) a great council was held in Dilī in the course of which Nādir replaced the crown on the head of Muḥammad Shāh but the latter had in return to cede to Nādir all the provinces north of the Indus. The amount levied by Nādir cannot be estimated. According to Anāmārī, who was attached to the vizier's office, it amounted to 6,000,000 rupees in specie and 500,000,000 in jewels and precious stones, including the Koh-i Nūr diamond and the Peacock throne. Large sums were distributed among the soldiers and the people of Persia exempted from taxation for three years.

Nādir left Dilī and reached Kābul on 15th Ramaḍān (Dec. 12). Now took place one of the most remarkable of his expeditions. He suddenly turned back to reduce the lord of Sind Khūdāy-Yār Khan ʿAbdālī (a native of Sīrī, cf. Malcolm, op. cit., ii. 88) and going via Bālgās, Lākānā and Shabdū reprehended penetrated into the desert south of
the Indians and took Khadā-yār prisoner; he had shut himself up in ‘Umarkh (north of Thar and Parkar in the province of Bombay). Having organised his Indian possessions in three provinces Nadir returned to Nadir-ābād (via Siwi and Shal) on 7th Safar (May 5, 1740).

Nadir in Turkestan. Nadir returned to Herat (July 31) and after a fortnight devoted to festivities set out for Balkh which he reached on 7th Dju’ma (Sept. 23). Nadir treated Khan Abū l-Fadl kindly and returned his investiture by crowning him with his own hands. The Oxus was proclaimed the frontier and the Khan had to supply Nadir with 20,000 Özbek and Turkomans, which indirectly left in the hands of the conqueror the control of the internal affairs of Bokhara.

On the 16th. Radjab (Oct. 7), Nadir had set out for Khwārizm. The fleet followed the army. The Khan Il-Bars of Hazarasp retired to his fortress of Khanāb which surrendered on 24th Shābān after bombardment. Finally Khiwa, the capital of the kingdom, also capitulated. By 4th Shavwāl (Dec. 23) Nadir had returned to Durjestān and entered Māhāb at the end of Shavwāl.

Nadir must again for Transcaucasia. While in India, Nadir had learned of the death of his brother Ibrahīm Khan who had been killed by the captured rebel Dājr and Tala. To punish them, Nadir left Mahāb and on his way learned that the Aḥdān troops who had been sent in advance had already ravaged Dājr, Djaschk (7) and Aqštāb, but the pacification of Dagestan was by no means complete.

An incident that followed marks the turning-point in the career of Nadir. On the 28th Safar (May 15, 1741) near Kaf’syi Aškāl (Mazarārān) an unknown man concealed in the brushwood shot at Nadir, wounding him slightly. Connecting this with events in Dagestan Mahdi Khan says the crime was committed by a slave of the son of Dilawar Khan Tāsim (2, v.) but suspicion very soon turned upon the prince Rās-Kuli who had besides not behaved well during his regency. He was sent for the time to Tihrān while Nadir continued his march via Kāzin, Karradajā, Baghda, and Kahāla.

In June 1741, for the third time, Nadir entered Dagestan and remained there a year and a half. The garrison of Tarkhā, the smesi of the Kar-Kayt and Surkhy Khan of the Ghāzi Kāmiḳ came over to Nadir but new difficulties kept cropping up. Relations with Russia became somewhat strained for the Russian representatives suspected Nadir of designs on the northern Caucasus. As a precaution the Russians in May 1742 concentrated 42,000 men at Kišlar (see, Bubbow, I, 220). Cares were undermining the health and character of Nadir. At the beginning of Dec. 1743 when the camp was at Bashlu the heir to the throne Rās-Kuli, denounced by the author of the attempt on Nadir in Mazarārān, was blinded after a formal trial. Nadir himself was thoroughly upset by this incident. Rebellion was now threatening everywhere (in Khiwān and in Balkh).

Third campaign against the Turks. In Dju’l-Ka’d 1743, the Turkish ambassador brought from Constantinople a letter from the Sultan refusing to recognise the fifth maṭbāh. Nadir then reminded the Sultan that the whole of Persian territory had not been regained from Turkey and added that he soon would take the field to make his own terms.

Nadir left Dagestan on the 16th Dhu l-Hijja (Feb. 7, 1742) and came to Khiwān (14th Dju’ma) 1742 = Aug. 5, 1742) which capitulated as did Irlīl. On the 26th Radjab (Oct. 20) Nadir arrived near Mawālī but the siege of this fortress was unsuccessful and on 2nd Ramadān (Oct. 20) he retreated to Khiwān and Khanābīn. Friendly relations were established with Ahmad Pasha of Baghdad. Nadir with his wives made the pilgrimage to the Shi’i and Sunni sanctuaries of Mesopotamia and on the 18th Shavwāl 1156 (Dec. 12, 1743) summoned a grand assembly of ecclesiastics at Najaf. The document drawn up by the emir Khan summing up the discussions confirmed the renunciation by the Persians of the 'heresy of Shi’i Islam', while the iṣlāma of Mesopotamia and Transcaucasia recognises the claims of Dja’far al-Sudjih and declared the special features (fawāʾid) of the Persian beliefs compatible with Islam. The Sunni theologian 'Abd Allāh b. Husain al-Suwa’idi, Khalīf al-Khaḍrī al-khaṣṣīyya nifṭiyya al-Furqān al-Islāmiyya, Cairo 1324, also gives a very interesting summary of this dispute; cf. Ritter, Hist. a., 5, 1026, I, 106 and the detailed account by Prof. A. E. Schmidt, ʿenfārīr muḥammadī-shāfiʿīyya ʿarkoliyya fī al-ʿUṣūl al-Qāʾima (Barthold Festschrift, Tashkent 1927, p. 69-107).

Rebellion. The strange abandonment of the campaign in Mesopotamia is to be explained by the new risings in the east. Much more important however was the rising in Fārā left by the beglerbegi Taḵī Khan, a great favourite of Nadir. He was ultimately captured and castrated. In Astarābād the Kāḏārs rose against the oppression of the governor’s son (Hanway, Hist. Account, I, 192). Nadir had to send his nephew ‘All Kuli to Khwārizm. Finally the Ottomans of Kāra disseminated in Aḏrābād and in letters from the new pretender Šāfī Mirzā (Muhammad ’Alī Rafsindī) and then refused to begin an exchange of prisoners.

Fourth campaign against the Turks. In the meanwhile the Porte equipped a new army (150,000 horse and 40,000 janissaries) which advanced on Erzerum and Kars under the command of the former vizier Yegen Muḥammad Pāšā while ‘Abd Allāh Pāshā Djebejī’s army went via Diyarbakr and Mawālī. On the 21st Radjab (Aug. 1743) came the news of the victory won by Nasr Allāh Mirzā over ‘Abd Allāh Pāshā’s army (near Mawālī) and at the same time Yegen Muḥammad Pāšā died leaving his army in complete disorder. Nadir again won a brilliant victory (on the very scene of his first victory in 1735) but then, quite unexpectedly, wrote to the Sultan saying he was abandoning the first two clauses of Mughān. Personal fatigue may explain why Nadir could not exploit his success.

On Sept. 4, 1746, peace was signed with the Turkısh envoys and on 10th Muharram 1160 (Jan. 22, 1747) the Shāh’s representatives (Muṣṭafā Khan Shāhlu and the historian Mahdi Kāna) set out for Constantinople with the zul-nāma. Nadir renounced his famous religious clauses in favour of the Sultan, "the Khalifa of the people of Islam and the glory of the Turkoman race". By the treaty the frontier was restored to that of the time of Murăd IV [cf. TAHRIR], but in a platonist fashion, Nadir expressed the wish to receive one
of the provinces which had belonged to the
Turkoman Satanss.
On the 10th Muharram, Nādir left for Kirman, marking his route by piles of skulls erected everywhere. After the Nawwis, Nādir returned to Mahshah and devoted himself to “spilling the blood of the innocents.” His conduct was now clearly abnormal. In an epilogue to his history written after the death of Nādir, Mahdi Kāhn records the denunciations, executions and tortures carried out by the agents of the treasury and the interior of the country, which had begun even before the Indian expedition (Ottar, Rāhī, Hanwāy, i. 250). The Shi’ite opposition must also have been intensified in view of the frankly Sunnite turn which Nādir’s “Kabūsanān” policy had taken.

The rising in Sitān, which brought matters to a head was provoked by the activities of the tax collectors who were demanding a contribution of 300,000 tumans from the province. ‘Alī Kuli Mirzā, nephew of Nādir, put himself at the head of the rebels. Even Tahmāsp Kuli Khān Dājalīr, the most faithful prop of the throne, wanted to proclaim one of Nādir’s sons as king. The troubles spread to Khurasan and the Kurds of Khedāshain raided the royal stables at Rāshān. Nādir marched on them but on the eve of 11th Djamād-ī 1160 (June 20, 1447) he was assassinated in his camp near Faqīhābād by the Kādjar and Afshār chief in conspiracy with the bodyguard. Father Bazīn was a witness of the disorder which broke out in the camp after the assassination. On the 27th Djamād-ī 1160 (July 5, 1522) ‘Alī Kuli Mirzā cause from Herāt and was proclaimed king. All the royal princes were massacred.
The treasure amassed by Nādir was soon scattered to the winds; the country, utterly exhausted, was in the throes of crisis. Nādir’s attempts to compose religious difficulties had failed completely, but Persian territory and its periphery were cleared of enemies. For but Nādir, Persia would probably not exist, even in its present bounds.

Bibliography: Muhammad Mahbūb, mużawil of Nādir, Zuhd al-Tawābī, Brit. Mus., Or. 3498, fol. 184a (where Nādir is mentioned as Nādir-i Utkh-yi Ahwash) — fol. 190; Mahdi Kāhn Astarbādh, Tarākh-i Nādir-i, a valuable work by the official historiographer (numerous MSS. and oriental lithographs uncritically edited); the French translation Histoire de Nadir Shah by W. Jones, London 1770 — source of the majority of the later works — completely out of date; Mahdi Kāhn Astarbād, Durrā-yi Nādir-i, lithographed at Bombay 1280 (1663); Muhammad Kāhn (warīf of Marjān), Nādir-nāma; of this recently discovered work only volumes ii. (327 pages; fol. years 1736-1743) and iii. (189 pages) are in the Brit. Museum of Lenningrad, cf. Barthold, Jev. Akad. Nauk, 1919, p. 927, and Zap. xxv, p. 83 (according to Barthold, this work: “by the wealth of its data far surpasses . . . all the other sources not even excepting Mirza Mahdi; it will undoubtedly become the fundamental source for the study of the reign”).

General surveys: Sir J. Malcolm, History of Persia, 1815, p. 53-108; C. R. Markham, A general Sketch of the History of Persia, L. 1874, p. 298-318; Müller, Der Islam im Morgen- und Abendlande, 1887, ii. 397-398; C. Horn in the Grundriss der Art. Philosophie, i. 587-592; Sir P. Sykes, A History of Persia, 1915, ii. 331-369; E. G. Browne, A Litt. History of Persia, iv. 132-138 (following Hanway). All these are objective or defective. A thesis on Nadir for a doctorate of London is in preparation by L. Lockhart. Cf. also R. Stuart Poole, The Coins of the Shahs of Persia, Brit. Mus., 1887, p. xili. (560 pieces described); R. B. Whitehead, The Coins of the Durransis and of Nadir Shah, Oxford 1913; General Kühnthev, Peshkán: Nadir Shah's in Herat, Kandahar, Indiens souviets in Persia post yogi smerti, Tiflis 1889 (Nadir's campaigns from the soldier's point of view; cf. Zep., v., 1892, p. 351); Sir Mortimer Durand, Nadir Shah, London 1908 (a novel, with several contemporary illustrations); do., Nadir Shah, in J. R. A. S., 1908, i. 286-298 (general sketch); Sa'd Naftis, Akhmir yiğdiris-i Nâdir-şâh, Shirn, Mafigula-yi Shahn, 1300, 31 pages (story in dramatic form). The career of Nadir Shah impressed the imaginations of the peoples whom he conquered. In addition to Indian and Persian panegyrics there is a poem in the Guirim dialect (spoken in Kurdistan): on Nadr and Tugr, Oushan Paghâ, and a Daghastanish song collected in the district of Ghumb on the highlanders' fight against Nadjî (cf. Daghastani, sharn, Maghāna-kalâ, 1917, i. 51-55). In Europe of the xviiilth century it was seriously discussed whether Nadir Shah was a European adventurer: there are also several contemporary works in French, German and Portuguese, of which the greatest is a work on Nadir Shah and the flight of the Qajar Shahs, 1746 etc. (V. MINOSES).

NADIR (NA'IR AL-SAMT or AL-NA'IR ET LÉGER)), the bottom, the pole of the horizon (invisible) under the observer in the direction of the water, also the deepest (lowest) point in the sphere of the infinite. The nadir is the opposite pole to the zenith [q.v.].

The word *na'ir (from *nasa'iru, "to see", "to observe") originally (and generally) meant the...
point diametrically opposite a point on the circumference of a circle or the surface of a sphere; we find nuskah as a synonym of maiq in this general meaning [cf. also MUKARLA].

(Willy Hartner)

NADIR (Bantu ‘l-), one of the two main Jewish tribes of Madina, settled in Yathrib from Palestine at an unknown date, as a consequence of Roman pressure after the Jewish wars. Al-Yaḥṣib (ii. 49) says they were a section of the Ljūghām Arabs, converted to Judaism and first settled on Mount al-Nadjar, whence their name; according to the St. Ephraemi Canon (Cairo, iii. 2) they were a truly Jewish tribe, connected with the Jews of Khaibar. This seems the more probable, but a certain admixture of Arab blood is possible; like the other Jews of Madina they bore Arabic names, but kept aloof from the Arabs, spoke a peculiar dialect, and had enriched themselves with agriculture, money-lending, business in armour and jewels.

They were clients of the Aws, siding with them in their conflicts with the Khazzād, and entering with them into the compact with Muhammad known as the Constitution of Madina in A.H. Their most important chief at this time was Hayyāb b. Aḥqāf, whose daughter Safiya became Muhammad’s wife in A.H. For a list of Muhammad’s worst enemies among the Banu ‘l-Nadjar see Ibn Ḥīḍām, Sīra, p. 351—352.

Their fortresses were half a day’s march from Madina, and they owned land in Wādī Butayh and Buwaira; their dwelling places were south of the city.

The Banu ‘l-Nadjar seem to have been in (commercial) relations with Abd al-Sufyān before the battle of Uḥūd. In 4 A.H., in Rabī‘ I, owing to difficulties about the Banu ‘l-Nadjar’s contribution to certain blood-money which was being collected from the whole Muslim community in Madina, Muḥammad, who had personally negotiated the matter with their chiefs, became convinced of their enmity towards himself and suspected them of intending to kill him. He decided to get rid of such dangerous neighbours, and ordered them through Muḥammad b. Maṣlama al-Atwā to leave the city within ten days, under penalty of death, allowing them to take with them all their movable goods, and to return each year to gather the produce of their palm-groves.

The tribe, having no hope of help from the Aws, agreed to leave, but ‘Abd Allāh b. ‘Ubaīy al-Khazzād, chief of the nuskahs, persuaded them to resist in their fortresses, promising to send 2,000 men to their aid. Hayyāb b. Aḥqāf, hoping the Banu ‘l-Nadjar would also help them, prepared to resist, in the face of opposition from moderate elements in the tribe.

The siege lasted about a fortnight, help from the nuskahs was not forthcoming, and when the Muslims began to cut down their palms the Banu ‘l-Nadjar surrendered. Muḥammad’s conditions were much harder than formerly; their immovable property was forfeited, and nothing left them but what they could take away on camels, arms alone excepted. After two days’ bargaining the tribe departed with a caravan of 600 camels; some went to Syria, others to Khaibar.

The Banu ‘l-Nadjar’s booty Muḥammad did not divide in the usual manner; the land was distributed among the nuskahs, so as to relieve the Aṣfar of their maintenance; part of it the Prophet kept for himself.

Ṣurūr: al-Hāsh i (lx.), was revealed upon the expulsion of the Banu ‘l-Nadjar.

From Khaibar the exiles planned with the Ḥusayn the siege of Madina in 4 A.H. The treasure of the Banu ‘l-Nadjar was captured by Muḥammad in Khaibar in 7 A.H.

AL-NADJAF (Mashhād ‘All), a town and place of pilgrimage in the ‘Irāq 6 miles west of al-Kafā. It lies on the edge of the desert on a flat barren eminence from which the name al-Nadjar has been transferred to it (A. Mual, The Middle Euphrates, p. 35).

According to the usual tradition, the Imām al-Mu‘āwiyah’s ‘All b. Abī Ṭalib [q.v.] was buried near Kafā, not far from the dam which protected the city from flooding by the Euphrates at the place where the town of al-Nadjar later arose (Vāqūt, Muḥājan, ed. Wustenfeld, iv. 760), also called Nadjar al-Kafā (Zamakhihit, Lexicom geographicum, ed. Salverda de Grave, p. 153). Under the Ayyūbi rule the site of the grave near al-Kafā had to be concealed. As a result it was later sought in different places, by many in al-Kafā itself in a corner above the 'ibāda of the mosque, by others again in farahāk from al-Kafā (al-Ljākhāt, ed. de Goeje, B.G. A., i. 82 sqq.; Ibn Hawkāl, ibid., ii. 163). According to a third story, ‘All was buried in al-Madina near Fāṭima’s grave (al-Masūdī, Mu‘awīya, al-Dhahab, ed. Barbier de Meynard, viii. 289), according to a fourth, at Kays al-Imāra (Caetani, Annali dell’ Islam, x., 1926, p. 957 sqq., x. 40, § 99). Perhaps then the sanctuary of al-Nadjar is not the real burial-place but a tomb held in reverence in the pre-Islamic period, especially as the graves of Adam and Noah were also shown there (Ibn Estiyya, Tabī‘a, ed. Defrémery and Sanguineti, i. 416; G. Jacob in A. Noldeke’s Das Heiligum al-Husayn’s in Kūhail, Berlin 1909, p. 38, note 1). It was not till the time of the Hamidūn of al-Mawṣil Abu ‘l-Haḍjīj [see Anti-ALLAH K. HAMIDU] that a large ‘ibāda was built by him over ‘All’s grave, adorned with precious carvages and curtains and a citadel built there (Ibn Hawkāl, op. cit., p. 163). The Shī‘ī Bāyād ‘Aṣṣad al-Dawla [q.v.] in 269 (979-980) built a mausoleum, which was still in existence in the time of Hamd Allāh Mustawfi, and was buried there, as were his sons Shara‘f and Bāḥā‘ al-Dawla. Al-Nadjar was already a small town with a circumference of 2,500 paces (Ibn al-Adīb, ed. Tornberg, viii. 518; Hamd Allāh Mustawfi, Nushat al-Kufiyya, ed. Le Strange, p. 32; in the year 366 = 976—977). Hassan b. al-Faḍil, who died about 414 (1023-24), built the defensive walls of Mashhād ‘All (Ibn al-Adīb, ix. 154). The Maḥṣīd was burned in 443 (1051-52) by the fanatical populace of Baghdad but must have been soon rebuilt. The Shī‘ī Bāyād al-Malik b. ‘Abd al-Malik who were in Baghdad in 479 (1086-1087) visited the sanctuaries of ‘All and Husain (Ibn al-Adīb, x. 103). The Ilkhān Ghānān (1295-1304),

(E. HONIGMANN)

BANI NADJÃH, a dynasty of Abyssinian Mamlûks at Zâbi'd [q.v.] from 412 to 553 A.H. (1023–1155). When the last Ziyâdi [q.v.] had been put to death in the vizierate of the Abyssinian Mardjian by one of his Mamlûk governors Nafis, the other Nadjâh came forward to avenge him. After desperate fighting, Nafis was slain and Nadji in Dhu 'l-Ka'da 412 (Feb. 1022) entered Zabid where he had the vizier built alive into a wall in exact revenge for the Ziyâdi. As his rival Nafis had already done, Nadji assumed the insignia of royalty, struck his own coins and inserted his own name in the aqâdes after that of the 'Abbasid caliph. The latter found him himself forced to recognize him under the title al-Ma'mûn Nâjîr al-Dîn. Nadji then extended over al-Tihâma, while the highlands beyond remained divided up among petty chiefs. When among the latter the Sulahis [q.v.] came to considerable power, their relationships with the Bani Nadjiâth decisively affected the history of the latter. The first Sulâhi 'Ali is said to have had this first Nadjiâ common to the year 452 (1060) through a slave girl sent him as a present. In the confusion that followed, 'Ali occupied Zabid itself and Nadji's sons fled to the island of Dahlak [q.v.]. While the eldest Mu'ârikî committed suicide, the other two resolved to regain their lands: Sa'id al-Ahwal and Abu 'l-Tami Dâjîâsh, whose last work al-Ma'sid al-Akbar in Zabid was the foundation for 'Umâra's work (in Kay, see Bibl.). Sa'id made his preparations in a place of concealment in Zabid and had Dâjîâsh come; later they both came out openly, fell upon and killed 'Ali the Sulahish, who was on a campaign against Mecca, probably in 473 (1081). Zabid at once recognised Sa'id as its lord; he had appealed less to the Sunnis against the Shi'is than to the racial feeling of the numerous Abyssinian soldier-slaves (andalu's min kuma ut zann ka: Dâjîâsh in 'Umâra, p. 63, 74;). But Asâm, the widow of 'Ali the Sulahish who was kept a prisoner by the latter, persuaded her son al-Mukarram to relieve the town (475 = 1082–1083). The Nadjiâh again escaped to Dahlak. In 479 (1086) Sa'id again returned as ruler but in 481 (1088) was put to death at the instigation of the Sulâhi queen al-Sayîda, the wife of al-Mukarram. Dâjîâsh escaped to India with his vizier Khâlîf b. Tâhir, said to have been an Umayyad, returned to Zabid disguised as an Indian, plotted with his compatriots and easily
regained power in 482 (1089). With his death in 498 or 500 (1105-1106) disruption set in. He himself had had domestic difficulties. He executed the kadi Ibn Abi 'Akkama whom his ancestor had come to the country with the first Ziyāids; his former helper Khalaif had to seek refuge in flight. A certain degree of strain in his relations with his brother Sa'd is already evident from Djiayāsh's account and there were fierce family feuds among his descendants. His son Fātik I, the son of a girl bought in India, had to defend himself against his half-brothers Irshidhī and 'Abd al-Wahid and died young in 503 (1109-1110). The latter's infant son al-Manṣūr was set aside by his uncles, who were quarrelling with one another, and fled to Saiyida, whose favourite al-Mu'allaf b. Abi 'l-Bardakāt brought him back in 504 (1110-1111) as vassal of the Sulaḥis.

On account of the new ruler's minority, events repeated their course under the Ziyāids. The Mamlūk Amīr was Manṣūr's vizier and he even assumed royal honours. When he acquired his majority Manṣūr disposed of him by murdering him with his own hand in 517 (1123) after inviting him to his palace. Manṣūr was at once poisoned at the instigation of the next vizier Mann Allāh. In the following year, the latter was stabbed under the walls of Zabīd Nadīb al-Dawla, whom the Fatimids had sent as the Sulaḥi debt was weakening to restore their suzerainty in the land. Mann Allāh had made the boy Fātik II nominal king, the son of Manṣūr and a slave girl singer 'Alam who had been purchased from Amīr's estate. This woman (d. 545 = 1150) endeavoured with great skill to preserve the rights of her house against the encroachments of the viziers and played among the Naḍīb a part similar to that of Saiyida among the Sulaḥi. In particular she equipped and led regular caravans of pilgrims and thus unconsciously furthered the rise of 'Ali b. Mahdī who was finally to drive her own family from power. Mann Allāh in 524 (1130) was killed in a barem through a plot of 'Alam's. His successors were the Mamlūks Rusaylī and then al-Maṣrawī. Against the latter 'Alam put forward her favourites Surir and Ikhāl, who were however not on good terms. In their quarrels the various parties several times brought the petty Arab princes who lived around all about Zabīd: Ikhāl had Fātik II imprisoned (531 = 1137). As he had no heirs, he was followed by his cousin Fātik III b. Muḥammad b. Fātik I b. Djiayāsh. The government had been in the hands of Surir since 520 (1135). His career of indefatigable activity was ended in a mosque in Zabīd on the 12th Nadīb 531 (Sept. 1, 1136) by an assassin, a "Khārijī" envoy of 'Ali b. Mahdī. When the Zaidī Imām al-Mutawakkil Aḥmad b. Sulātamā was summoned to help them by the Ayyubids, he made it a first condition that Fātik should be deposed and he himself recognised as lord of Zabīd. The troops agreed to this but the victory lay with 'Ali b. Mahdī (q.v. and the article MAṢRAWĪ). On 14th Nadīb 534 (Aug. 2, 1139) he entered Zabīd.

The Banī Ziyād and the Banī Nadīb, continually brought over shiploads of Ayyubid slaves to recruit their troops and thus continued that mixture of races, which already existed before Islam and is still very marked in the Yemen plains. These Mamlūks however became a great danger for the

Ziyāids and also for the Nadīb themselves. Djiayāsh had attempted to counteract them with a bodyguard of Turkish Oğuz [cf. HISS]. But they were not suited to the climate; in particular it was impossible to establish a colony of them there permanently as their children, if they did not die, remained weaklings. The Ayyubid admixture was still further increased by the many slave-girls, who, particularly when they became mothers, exerted some political influence. The enormous harem of the notables created the most complicated family relationships. For example the settlement of the estate of the vizier Rusaylī became a notoriously difficult case in the law of inheritance which occupied the ablest foundation for years until finally a very aged Ḥaṣṣāmī found a solution in accordance with the Shāfī'ī.

(R. STROTHMANN)

AL-NADĪJSHI, designation in Arabic of the king of Abyssinia. It is a loanword from Aethiopic ṣawī, "king, prince" etc. In Arabic it is sometimes used as a proper noun, sometimes as a mere appellativum. The word is also genuine Arabic, but as such it has the meaning of driver of game. It does not occur in the Kurān. In Hādīth it is the designation of the king of Abyssinia, just as Ḳaṣār [q.v.], Kīrā [q.v.] and al-Muḳāwakṣa [q.v.] are the designations of the rulers of Kūm, Fāris and Miṣr. In their totality they represent the Great Powers which in the time of Muḥammad surrounded the territory of Islam. On the fresco in the hall of the castle of Ḳaṣār 'Amra [cf. ASHRA], dating from the middle of the viiith century A.D., al-Nadījšī appears as the fourth of these Powers, the place of the Muḳāwakṣa being taken by Thamār the Visigoth. In the Sīra the Nadījšī occupies a place of some importance, chiefly in connection with the two bid'ja's to Abyssinia, with Muḥammad's letter-persuading him to embrace Islam, with his conversion from Christianity to Islam and with his equipping two ships in behalf of the return of the emigrants to Aṣīr, amongst whom was Umm Ḥabīb, who was to marry Muḥammad (a. h. 7).

These traditions have been critically examined by Grimm, Caestani and Mrs. Vacc. Grimm denied the historical foundation of the traditions concerning Muḥammad's letters to the Great Powers. Caestani submitted the question to an elaborate enquiry. Mrs. Vacc. reduces the traditions to the following historical facts: a. the return of Ḳaṣār b. Abī Ṭālīb from Abyssinia in 7 A.H., when Muḥammad was besieging Khaibar; b. the expedition of 'Amr b. Īmāyā in a. h. 6 in order to reconduct the emigrants from Aṣīr to al-Madinah; c. vague traditions concerning the emigration from Makkah to Abyssinia. To these groups several episodes agglomerated, viz. to a. the story that Umm Ḥabīb, Abī Sufyān's daughter and widow of 'Uthmān b. Ǧaḥīf, was asked at marriage by Muḥammad and promised with a marriage-gift of 400 dinars by the Nadījšī; to b. the story of Muḥammad's letter to the Nadījšī, his embracing Islam and his becoming

THE ENCYCLOPÆDIA OF ISLAM, III.
the intermediary of the conversion of 'Amr b. al-As.

In Hadith the Naḍžāši is also mentioned in connection with the story that his death in Ramadān 9 a. H. was proclaimed, without previous intimation, by Muḥammad, who held on the musqīla (q.v.) a funeral service in behalf of this fellow Muslim. As his proper name is given Aḍḥams or Aḍḥam b. Aḥbar.

The title al-Naḍžāši is also given in Arabic literature to later kings of Abyssinia, as may be seen from this article.

(A. J. Wensinck)

AL-NADJĀSHI. Kād b. 'Amr al-Hārīthi, an Arab poet of the seventh century A.D., lived at first in Naḍžāt [q.v.] and quarrelled with 'Abd al-Rahmān, son of Ḥasan b. Thābit [q.v.], because the latter had addressed in song a matrilineal female relative of Naḍžā in Medina. After an exchange of lampoons with his opponent from his native place, he met him at the annual fair at Dhu 'l-Maḍāj and again in Medina when 'Abd al-Rahmān not only proved inferior as a poet but suffered bodily injury, so that his aged father had to interfere on his behalf. Naḍžāši had a second conflict with Ibn Muḥbil, the poet of the Banī 'Adālā; he was so embittered in his defence that the caliph 'Omar punished him with imprisonment after procuring an opinion on his verses from Ḥassān and al-Huṣain. After 'Omar's assassination, Naḍžāši appeared in Kūfa as one of 'Ali's poets, and for the latter exchanged political lampoons with Mu'awiyah's poets at the battle of Siffin. But his disorderly life lost him the favour of 'Ali and after a drinking-bout in Ramadān he was given the thrashing prescribed by law and put in the pillory. After a conflict with Khān notable, in which he expressed his wrath at this punishment in satirical verses, he was exiled by 'Ali and went over to Mu'awiyah. He then went back to his native country Yaman and died in Laḥij in the year 40 (660), in which year he wrote a lament on the death of Hasan.

(E. BERTHELA)

NADJĀTI BEY, properly Yassu (Nīh), also given (it is not certain), the first great Turkish lyric poet of the pre-classical period, one of the founders of the classical Ottoman poetry. Born in Adrianople (Amasia and Kaşšān are also given), the son of a slave, obviously a Christian prisoner of war for which reason he is called 'Abd Allah, the name given to every one, he was adopted by a well-to-do lady of Adrianople, received a good education and was named by the poet Sāli. In spite of the fact that his non-Turkish origin was generally known, he was regarded as their equal in every way by the Turks in keeping with their democratic ideas. He early came to Kaššān and there began his poetic career and soon gained a great reputation. His poems are said here and there to bear traces of the Kaššān dialect. Coming to Constantinople, he at once gained the favour of Sultan Muḥammed II by a ḥāṣida on winter; in 886 (1481)
he celebrated the accession of Bayazid II in a kapida and was rewarded by an appointment as secretary in the Divan. He gained such favour with the Sultan that he was appointed secretary to his eldest son 'Abd Allâh and was given the title of vezir when the prince went to Kâtib as governor (mustafâr). After the prince's early death (888 = 1483) Nadîjî returned to Constantinople with an elegy on the death of the prince which showed deep emotion. After a long interval in which he wrote a great deal but was in continual need, through the influence of Mu'ayyad-Zâde [q.v.] he became mînâqâbî to Bayazid's younger son Mahmûd when the latter went to Sârîkhân in 910 (1504). Nadîjî wrote his finest verse while on the staff of this prince; this was the happiest period of his life. Mahmûd also died prematurely in 915 (1507) in Manisa, the capital of Sârîkhân, and Nadîjî again lost his patron. He returned with a happy elogy to Constantinople and finally retired from the service of the court on a modest pension. He took a house on the Wefa Mâdâlîn where many friends gathered round him, especially his pupils, the poet and teacher ârif Edirnehi Schi and the poet Schi. Nadîjî died on the 25th Dîn 'l-Ka'da 914 (March 17, 1509). He was buried near his own house, at the monastery of Seven Weﬁs and a tombstone was put up by Schi for him.

He left a Divan which he had collected on the advice of Mu'ayyad-Zâde and dedicated to prince Mahmûd. There is also attributed to him a mesnevî, which is not otherwise known, entitled Mûnâqâbât-ı Gûl-u Khûrov, also quoted as Lâlî-u Mûnâqâbât and Mîhâr-u Mûhâr. Even more uncertain seems to be the existence of the mesnevî mentioned by Schi: Gûl-u Şahî. Nadîjî is also mentioned as a translator of Persian works but his pupil Schi says nothing of this. He is said to have translated for prince Mahmûd the Kimeyû-ı Seherî of Imâm Ghażâlî (the Persian version of the Arabic Ihwâ'î) and the Jâmî-u al-Hikâyât (properly Dânâmûl-ı Hikâyêt wa-Lâmûn-ı al-Kiwâyêt) from the Persian of Dâmî-u al-Dîn al-Àwfit.

His Divan which is still unprinted, gives Nadîjî a very prominent place in Ottoman literature; the Divan was regarded as a model for all Ottoman poets. Nadîjî, whom İdris Bilidî in his Hikâyât calls Khorrov-ı Şahâverdî Rûm and others Malik al-Shâvarâdî and Tâbi-ı Rûm (= the Farsaw of Asia Minor), was regarded as the poet of Rûm. He does not, it is true, reach the heights that Nezîmi does but he surpasses all his predecessors, of whom Ahmad Pasha and Zât were the greatest, in originality and creative power. Only Bâkî and Fûzî have surpassed him. The problem to be solved by Ahmad Pasha, Nadîjî and Zât was to incorporate completely into Turkish the matter borrowed and translated from Persian literature, which was still felt to be foreign, to adapt Turkish to Perso-Arabic metres and to domesticate fully the Arabic and Persian vocabulary. This was a great achievement for the time. Nadîjî brought about a great change in the literature as regards outlook, feeling and language. In him the age of Sultan Bayazid was most clearly reflected. Although he is not to be claimed as a very great poet, he was the king of the gild of poets of his time, who started a great literary movement. Nadîjî combined a thorough knowledge of Persian with a masterly command of Turkish. In the number of his ghazals he far surpasses Bâkî. His work as a poet of kapidas was original and stimulating. He was specially celebrated for his skill in the use of the proverb.

(Th. Mencel)
is an act of obedience (gūdā); complete faith is the sum of all gūdā. Faith may increase but unbelief can be completely removed only through unbelief. He who commits a heinous sin and dies impious is doomed to hell from which he will emerge however, unlike the complete infidel. Al-Nadjjār denied the punishment of the tomb (zāfāt al-tārār), probably as a result of his determinism. — Al-Nadjjār like his master Bihār represents the reformed and modified Dāhimiyya. The influence of the Muṭāsila theology on this school is manifest; on the other hand, the Muṭāsila itself, especially that of Bāghdād, seems to have received certain quite important stimuli from his school in spite of its opposition to it. Several of Al-Nadjjār’s doctrines are found at a later date in al-Askāri. — The Nadjjadariyya flourished in Rāyi and Gurgān. It was divided into three schools: 1. the Burghuṭthiya, the followers of Muḥammad b. ‘Isa Burghūṭ; 2. the ‘Azāfarānīya, the followers of a certain Abu ‘Abd Allāh b. ‘Azāfarān; 3. the Mustadrīkā, a reforming party which taught paradoxical doctrines on the divine word.

(H. S. Nyberg)

Mu‘allim Nadjī, properly ‘Omer, an important Ottoman author, poet, critic and man of letters, who occupies a special and somewhat hybrid position in the history of the Turkish moderns and has given his name to a whole literary period. Born in 1866 (1850) in Constantinople, the third son of a master saddler ‘Ali Aga (not Bey, as some literary historians say), he lost his father at the age of seven. The widow Fāṭma al-Zehrī, who was descended from a mahājirī who had come to Constantinople from Rumelia, went to Varna to her brother, the Kalaydījī ‘Alīyūs Aga. The latter in spite of his limited means, made it possible for ‘Omer to be educated at the medreses and ‘Omer’s elder brother Sālim gave him considerable assistance. ‘Omer devoted himself at first to calligraphy and for his income used the mahājīr Khulāṣī. A certain Khlīdī Khān aroused in him a fondness for poetry and he took the mahājīr Nadjī for his poems (from a passage in the Mahājīrat al-‘Azn ‘Alī Giri). He also tried to obtain the title of ḥājī. His training in the medreses left a permanent influence on him. It was only later that he decided to put off the turban and the ḥājī. The spirit of the mukallī and a certain intolerant fanaticism however never left him.

In 1884 (1867) Nadjī received an appointment as second master in the Rūmhīyye school in Varna. At an inspection the then mutaqqarr of Varna, Kārīm Sa’īd Paša (later Foreign Minister, President of the Council of State and several times an ambassador), made the acquaintance of the intelligent young teacher. He took him into his service as secretary, when he was moved to Tullia just before the outbreak of the Russo-Turkish war in 1877; thence he was moved to Tarnopol and later to ‘Osmān Paša. Nadjī accompanied the much traveled Paša on his moves and journeys. After a brief stay in Constantinople, he went to ‘Umar Sheher Fennār (= Farissa in Tuesdays) where Nadjī met the acquaintance of the poet and Mārekīlī ‘Awnī Bey, who had a very good knowledge of Persian. Nadjī who acted as secretary to the court and judge of investigation had here finally to lay aside the turban. When Sa‘īd Paša set out on a nine-months’ tour of inspection in Asia Minor, the Euphrates and Erzerum, Nadjī again accompanied him. He recorded his impressions in the poem Shāhī al-Gharāīn. He had abandoned himself with other congenial wits to a life of dissipation at Tawāk Paša, both earlier and after his return to Constantinople. The transfer of the Paša as wālī of the Aegean islands to Chios, where Nadjī acted as wānīyīs saved him from this. Here he was able fully to develop his literary leanings. Already in 1892 he had published poems and articles in Varna in the Tuna newspaper of which some were even reprinted by the Constantinople paper Baṣṣīrī, such as his Bis Mu‘allimīn Shāhī al-Gharāīn. From Chios he began his association with ‘Azīd Muḥīt Efendi who was then editing the Terciğmān-ı Haftārī; from his contributions in poetry and prose, which appeared in the Terciğmān over the pseudonym Muḥammad Maṣūd and Muḥammad l-‘Āṣīrāsī, a close friendship arose which proved of decisive influence on his future career. When Sa‘īd Paša went as ambassador to Berlin, Nadjī declined to go with him, which was much to be regretted in the interests of his literary development. He therefore resigned his post in the Foreign Ministry and devoted himself entirely to authorship. Muḥīt gave him the editorship of the newly formed literary section of his paper. At the suggestion of Muḥīt, whose son-in-law he had become, he learned French although he was now over 30. When he left the Terciğmān for literary reasons, he undertook the editorship of the Şehīd newspaper.

By his great literary and critical activity, he gained an influence which can hardly be estimated high enough on the intellectual life of Turkey in his time, not least through his position as lecturer on Turkish literature at the Mektebi ‘Ṣūlānī in Galata Sarai and in the law school. He became celebrated under the name Mu‘allim (teacher) of which he was particularly proud. In 1907 (1889) he was appointed by imperial iridd Türk literature historiographer, Turāk-himāsāt-ı A‘lī ‘Owāna, as a reward for his historical poem Ertişgärât Gāzī. But he did not live to do anything serious in this field except an introduction which survives in MS. He died on 27th Ramādān 1310 (April 14, 1893), at the age of 43 from heart failure and was buried in the garden of the türbe of Sultan Maḥmūd.

As a literary figure, Nadjī revealed two aspects. On the one hand, he was a fanatical admirer of the old literature out of which he had developed and for which he endeavoured to revive the taste of his milieu by every means, by his modest poetic talent and considerable skill in versification; on the other hand, he seemed in sympathy with the moderns but in view of his convinced belief in the decadence of western culture he had little real understanding of them.

Nadjī’s services to Turkish prose are undeniable. Over 50 years ago he was already writing the prose of the future, a model, clear, simple, style in the
language of a master who could not be surpassed. Two years before Sexký’s celebrated  
Kriech Schiller (1309) with its complicated prose, Nadji gave a  
classic specimen of simple prose, in his Osmanî  
Câgâvelâghu (1307) which was only properly  
appreciated and imitated at a much later date. In it  
we find the first suggestions of Turkish realism.  
The forms not cultivated by the old writers,  
the story and the drama, he did not use, it is true,  
entirely omit, but apart from autobiographical  
sketches and a translation from Zola, he wrote  
no stories and he was a failure as a dramatist.  
In theory, it seemed sufficient to him and his  
followers to put French stories of crime into the  
örtü evnun form in order to produce regular  
Turkish “dramas”. Here also he approximated to  
the moderns but did not reach their level or  
ability.

As a poet and artist he is weak. He lacks  
savour and creative fancy. He lacks that depth  
of feeling which carries one away; with him  
everything is trivial and superficial, and he never  
feels or expresses anything deeply. His prose style  
is simple and easy, the sentences short, the mode  
of expression concise and clear.

His main importance lies in his wide influence  
as a teacher, which he exercised not so much in  
the actual class-room as through his whole literary  
activity.

As a critic he confines himself to externals  
and goes no further.

Nadji’s prolific versatility is best shown by  
a list of his works. He wrote on many subjects  
and frequently lacked the time for adequate  
preparation.

Of his poetical works, the most celebrated is  
the collection Ateş-fârû (1300, 2nd edition 1303),  
which contains 52 poems in the new western  
manner. The best in it are: Tepkî, Kibîhâ,  
Koza, Şâm-i Gâhilân, Nisâhâ dîvûlmende hâr  
Wûth, Tawari, Şâhîzade, Avîyâ. — Next come  
two collections of ghazels in the old style: Şûrâs  
1301 and Fârûkân; then three historical poems:  
Hemîyet yahbâd Mîrûdî, Ehl-i Gâhilân, a description  
of heroic deeds in Granada in the time of the  
historian Ahi Abî Askâh al-Saghîr; Zât al-Nîbîyân,  
the heroic conduct of Esmâ’, daughter of  
Abî Bakr, at the siege of Mecca with regard to  
her son Abîd Abîl h. Zuhair; Gâhil Erzûgîl  
Bay, ef. above; first printed after his death in  
Khatim-i Fârûkân, 1310, ii., N. 11, 12. On  
the Egîrî Salâmânî-ermânîyef written in conjunction  
with A. Midhat cf. ‘Ali Emiri, in T.O.E., v., N. 27,  
1330, p. 131; other poetical works are: Tepkî  
Bend or Tûrîkî Bend, an imitation of Rûmî-  
Baghdâdî and Ziya Pesba; Tepkî yahbâd ‘Arîsî  
Nûmîhârî, Memûnî-î Mu‘allîn Nadji and a  
collection of fugitive pieces edited by Shaikh  
Wâsî after Nadji’s death: Vilâyêt-i Nadji, 1314.

Of his prose works the best known and most  
important is Siyamî (1399 and 1307). The first  
part contains poems like Kala-Tir for Miskûkî,  
which is very important for the development of  
the French Turkish poem, and translations from  
the French. The second part: Osmanî  
Câgâvelâghu, gives in unaffected style intimate memories of his  
childhood up to the age of eight and has several times  
been translated: into German by A. Merx, Aus  
Muallîn Nâdiqîs Siyamî: Die Geschichte seiner  
Kindheit, Berlin 1898; into Russian: VI. Gorgievskîj,  
Dëîtivî Omara, Afsbiographilcjskij vecherb,  
Moscow 1914; and into Czech: Jan Rybyna, Omares  
Dëittance u du jeho vela hova, in Blih, Sevobâl  
KVTâhov, Prag. — Memories of his student days  
were published in the Targumunâ-i Hâşîhît and  
entitled Mecdes Mecarii, 1302; to the same year  
belongs Şenemülîseri Şâyûthâ (Mu‘allî-î  
Etn-i Zîyâ, N. 47); also Yemâhî bâlâmûm,  
1301 (letters and verses in simple language);  
Khurârî Fârîh (verses and sayings of Arab and  
Persian men of letters, 2 parts). — A strongly  
personal note marks his Devâni (the title is  
chosen in allusion to Ekrem’s Zemâne), a criticism  
of Memûnî-î Zülhü Tahtâ’i Tahtâ’i Ehlî, but it  
is primarily directed against Ekrem and his  
pronouncements on the stupidity of writing prose;  
it was so personal that its continuation was officially  
forbidden. — Equally vigorous is the criticism of  
the newspaper Mâhû and its owner Mu‘âzîn  
Bay in Nadji’s Mecdes Mecarii, 1314. —  
Translations and commentaries are found in  
Sîrîs ânh, 1305 (first published in Mecdes el-Medâd:  
verses and sayings of the Persian poet  
Sûlîbî Tehrî with commentary); Sîrîhâ el-Arbâb  
(over 1.000 Arabic maxims with notes);  
Sîrîhâ el-Anjâm (Persian maxims).  — Religious  
in content are: İfâ-sî Karâm, 2nd ed., 1308  
(translation of the treatise by Fakîr al-Dîn al-Râzî  
on the Fârat: Essîr-i şelâyî in the Mu‘allî  
l-Gâhilân, first appeared in the Targumunân);  
Sâmîrî Karâm, Mu‘âmînî-î zîyâ (on the  
Hesâîl al-selâyî at the beginning of certain Sûtras);  
Khurâsî el-İbâhâ, 1304, the commentary on Sûrâ  
cxii. (el-İbâhî) translated from the Tepkî-i  
hebat; Esmâ‘îl ‘Ali, sayings of the calliph  
‘Ali (Khâhidî-î Etn-i Zîyâ, N. 1); Hikém el-Rıfî‘î (sayings  
of Saydî Ahmîd el-Rıfî‘î);  
Nevâdîr el-İbâhî (wise sayings  
of Muslim celebrities);  
‘Abû-lînî, 1305 (Persian  
originals and translations);  
Mecdes, 1304:  
translations from Arabic, Persian and French;  
Mu‘allî-î  
and Mu‘allî-î Mu‘allîn Mu‘allûlî, 1306: literary essays  
based on a collected volume in AS, by an otherwise  
unknown M. Masâ’llî 1279; Nûmîhârî-î  
(‘All the selection from celebrated authors).

— His correspondence:  
Mebûlîhâ, 1305 and 1311  
(correspondence with his friends and pupils);  
Mebûlîhârî-î we-Mebûlîhârî, 1311  
(correspondence with A. Midhat);  
Şîhêl böle (correspondence with  
Shaikh Wâsî);  
Ibâhâhû, 1304 (correspondence with  
Behtûr Fu‘ad on V. Hugo). — Works on literary  
criticism: Mu‘allîn: a collection of expositions of  
his critical theory which had appeared in the  
Targumunân and were regarded in their days as  
of fundamental importance; Mu‘allî-î Mu‘allîn,  
1305—1306: a collection of the literary lectures  
which he had given in the Sûhîtan and the Law  
School (58 in number, N. 1—5 even reached a third  
edition); İsfâhânî-î cibyûbî, 1307 and 1314, his  
celebrated masterpiece on literary history, really  
only concerned with style; also Mekûhî el-İbêh, 1320.  
— His important lexico graphical works include:  
Qatîr-i ‘asami, 1306, only 5 parts; first  
appeared in the Müma’unan: Lâhûtî-î Nûmîh =  
Lâhûtî-î Mürkîmî, 1317: Nâmînî-î  
Firîdûn as art. Firîdûn, the remainder p. 356—  
1426 was prepared by his friend Müstedîj-sâde  
İsmet Bay. — The biographical works:  
Qatîrîlî Şâhîlîrî, 1307, 2 parts (biographies of 15  
Ottoman poets);  
Eümî, 1308, about 850 somewhat  
arbitrarily chosen biographies in the style of  
the old Teshîrî: — His only drama Hûdî (Hûsîn  
Bay yahbâd Hadîf), 1326; Tûrî Rûhî, the  
translation of Zola’s Thérèse Raquin; a promised
transliteration of Fényon: "Türkîyî-i Büniyî never appeared.

The four parts of his much used Ta'lim-i Kirâzî, from 1300 on, were largely responsible for the development and spread of Naqdi's style in the widest circles. The first part reached the 3rd edition by 1320.

Augustus but never published were the following: Ahemî-i millî, Muhammedî-i Râghîb (on Koda Râghîb), Ferekî-i Terkîhî, Terkebendten Terkebend.

Naqdi was a contributor to a number of papers and magazines: the Terfûnî 20-23 Hejârî, the Şâkîle, Wâfigh, the periodicals Âga, Gencî Kesimler, Medâd-es-Imâmâd, Coğrafî Bahzîrî etc.

With Naqdi neo-classicism came to an end although his followers, especially 2 Alt Kemal, made several attempts to revive it again in the Iltâm against H. Djdâlî and in the Şâdî against Dendzê Shîhâb dîn. The movement did not yet get beyond these efforts, for his followers were as little able as Naqdi himself to produce works of permanent value. The present generation has advanced quite out of Naqdi's world.

(Th. Menzel)

NADJIS (A.), impure, opp. 2 badî, cf. TAHA. According to the Shi'i doctrine, as systematised by al-Nawawî (Munkhîfî, l. 35 sqq.; cf. Ghânî, al-Waqqîfî, l. 6 sqq.), the following are the things impure in themselves: wine and other spirituous drinks, dogs, swine, mudda, blood and excrements; milk of animals whose flesh is not eaten.

Regarding these groups the following may be remarked. On wine and other spirituous drinks cf. the art. XAMAR and NADJIS. — Dogs are not declared impure in the Qur'an; on the contrary, in the description of the sleepers in Surât al-xvili, the dog is included (verses 17, 21). In Âhadîth, however, the general attitude against dogs is very strong, as may be seen in the art. KALE. Goldâner considers this change due to the attitude of conscious contrast (mekûhîfî) to the estimate of dogs in Paräzim. It must not, however, be forgotten that the Jews also declared dogs impure animals, just as wine. The latter are already declared forbidden food in the Qur'an (Surât xvi. 116; vi. 146; v. 47; ii. 168). — As to mudda, cf. the article. — Blood is mentioned in the Qur'an (Surât xvi. 116; vi. 146; v. 47; ii. 168) as prohibited food. As to the religious background of this prohibition cf. the art. MATTIA. — As for excrements and several kinds of secretions of the body, the theory and practice of Jews and Christians sufficiently explain the attitude of Islam in this respect. It must also be admitted, though data are very scarce, that in early Arabic religious impurity included some of these things. — Details are to be found in the large legal works of each of the madhâbi (cf. BIBL.).

The differences of the schools regarding this subject the most important only may be mentioned. Spirituous drinks are not impure according to the Hanafî (cf. MADHÂBI). Living swine are not impure according to the Malikî. — The Shi'a adds to the things mentioned above the human corpse and the infidels. The human corpse was one of the chief sources of impurity according to Jewish ideas (cf. already NA'SUM, ch. xix.). A current in early Islam tending to follow the Jewish customs in ceremonial law was very strong; the Shi'a view regarding the human corpse may be a residue of it. — The impurity of infidels is based upon Surât iv. 28, where the polytheists are declared to be filthy (nadjîs). The Sunni schools do not follow the Shi'a in the exegesis of this verse.

The nadjîs enumerated above cannot be purified, in contradistinction to things which are defiled only (mustânâmâkîfî), with the exception of wine, which becomes pure when made into vinegar, and of hides, which are purified by tanning. On purification cf. the art. TAHA, SÜKL, WÂDÎ.

NADJIM AL-DIN KUBRÀ, the founder of the order of the Kuharwîyâ or Džâhâbî, is one of the most striking personalities among the Persian Sûfîs of the sixteenth-seventeenth centuries. A large number of popular legends are associated with his name, many of which are not yet forgotten at the present day in Central Persia. His importance for the development of Sûfî is very considerable and in the long series of his pupils we find many distinguished representatives of Sûfî.
teaching. Nadjm al-Din, whose full name was Ahmad b. 'Umar Abu l-'Djamāh Nadjm al-Din al-Kuhrā of al-Khawārizm with the honorific title el-Timmat al-Sūr (the "greatest visitation"). Stru lxxix. 34) and Shāhīd al-Wali' sharīq (the Shāhīd who prepares saints) was born in the town of Khwārizm in 540 (1145), spent his youth in travel during which he met in Egypt the famous Shāhīd Rūzbihān al-Wazāzin al-Māfī. He became his murīd and under the supervision of the Shāhīd went through a course of most rigid ascetic discipline. The youth won the favor of his teacher who gave him his daughter's wife and adopted him as a son. Nadjm al-Din spent some years in Egypt where two sons were born to him. One day he heard the lectures on the sunna given by Imām Abū Najīr Ḥāḍa in Tūbārīs highly praised. He once went off to Tūbārīs and studied there under the direction of this theologian who lived in the Khwārizmī Khażānā in the Samānīd quarter. There Nadjm wrote his first theological treatise, a kind of inaugural dissertation entitled Shārīq al-Sunna wa l-Maqālīd. During a disputation which arose out of this work he made the acquaintance of the Shāhīd Bābā Faramāshī Tūbārī whose influence he decided to give up the study of theology and devote himself entirely to the contemplative life of the mystic. Bābā Faramāshī regarded all learning as something superfluous; in his view true knowledge could only be obtained through divine illumination. Nadjm al-Din soon recognized that he could hardly come any nearer his goal by this route. He turned to Shāhīd 'Abdullāh Yāsr who advised him to train as a complete Sūfī in the school of Ismā'īl Kāṣīrī. Nadjm al-Din received his second khirka at the hands of the latter, a so-called khirka sharra ("khirka of blessing"). After his return to his first teacher Shāhīd Rūzbihān he realized that the latter had found that he had thoroughly grasped all the depths of Sūfī learning and recommended him to transfer his activities to his native land of Khwārizm. Nadjm al-Din settled there with his family on a khanqāh and founded the order of the Khwārizmī Khażānā or Dhamhūrā. His teaching met with great success and he soon found himself surrounded by pupils among whom were the most distinguished Sūfīs of the xith-xiiith century such as Mājād al-Din Baghādādī (the Shāhīd of the famous poet Farīd al-Dīn Attār), Sa'd al-Dīn Hamawī, Bābā Kamāl Dāndā, Shāhīd Rādī al-Dīn 'Ali Lābī, Saif al-Dīn Bakhtāzī, Nadjm al-Dīn Rāsī and many others. Bābā al-Dīn Wāslād, the father of the great Dālāl al-Dīn Ramī, is also said to have been his pupil, but this is hardly possible. Nadjm al-Din met his death on 10th Dhumād 1 618 (July 13, 1226) at the taking of Khwārizm by the Mongols. All his biographers are agreed that the Shāhīd had gone out to meet the enemy in the open field and met a man's death with weapon in hand. The Institute for Oriental Research in Leningrad possesses a manuscript in Eastern Turkīt entitled Shāhīd Nadjm al-Dīn al-Khara'īnī. Shāhīd al-Khara'īnī al-Khara'īnī al-Khara'īnī (How Shāhīd Nadjm al-Dīn was murdered and the town of Khwārizm destroyed). It is a kind of historical novel dealing with the last days of Khwārizm and its fall. Nadjm al-Din appears in it as the protector of the city against the Mongols. By his power he makes Khwārizm invisible to the enemy and it only falls into the hands of the conquerors after the Shāhīd decides to surrender it. It is possible that this book is a version of a Persian biography of Nadjm al-Dīn called Taḥfīz al-Fīrahānī and mentioned by Ḥādhā Khaṭīb (i. 354).

Nadjm al-Din was a prolific writer and left a number of valuable treatises on different questions of Shī'ism. The greater part of his works are written in Arabic. Ḥādhā Khaṭīb gives the following list of his works: 1. al-Qaṣīd al-Sawāq (i. 353) — a brief exposition of the ten fundamental principles of Shī'ism (printed in Constantinople in 1256 with a Turkish commentary); 2. Isdālā 'l-Sūrā (iii. 410—411) — or more correctly fi Ḥim al-Sittah, described in Ahlwardt's, No. 3456; 3. Isdālā 'l-Sūrā (iii. 418) — in Ahlwardt's, No. 3727—3727 f. 'l-Sūrā (possibly identical with No. 1); 4. Niqād al-S prévu (iv. 171) — unknown to me; 5. Fathalājī al-Dīmārī in Persian — a treatise with this title is given in Flügel, Wiss. Katalog, i. 332, except that the latter is described as in Arabic; 6. Ulūmat al-Lavām — or with the full title al-Khula'f al-khāsim min Ulūmat al-Lavām in Ahlwardt's, No. 3087; 7. Hidāyah al-Tāhbīn — unknown; 8. Tafsīr — probably the great commentary on the Kurʿān entitled A'in al-Hayāt, whose first volume I discovered in the Public Library in Leningrad (see Islamica, vol. 1, fasc. 2—3, p. 272).

Nadjm al-Din is also known as a composer of Persian quatrains but it is still very difficult to decide whether the quatrains attributed to him are really his. Twenty-five of these poems were published in the Comptes rendus de l'Académie des Sciences de Russie (1924, p. 36).

The Sīfī writings of Nadjm al-Dīn form a transition from the older Sīfī of the first theorists (the Isfahānī school of the xith—xiiith centuries) to the later Sīfī of Ibn al-'Arabī and his successors (Ṣadr al-Dīn Kūsawī, Fakhr al-Dīn Ṭalārī). Like the earlier theorists Nadjm al-Dīn likes to deal especially with the practice of Sīfī, the stations, on the way to true knowledge. Metaphysical questions however are also considered by him and his works with the writings of Ibn al-'Arabī form the basis for the further development of philosophical theory in the xiiith century. This is not the place to go fully into his conception of Sīfī; but it is not to be doubted that his teaching can hardly be neglected in a careful investigation of the history of the development of Sīfī.

Orient., No. 603, fol. 462); Maṣāfīr al-Dīn Shahrābakh, Bombay, p. 84; Rūfi'Tulim, i. 143; Aḥmadī, p. 103; Tarikh-i-Haḍāzī, ii. 48, 149; Maṣāfīr al-Mulūm, fol. 130v; Roverty, Tābahāt-Nāṣirī, p. 1100; Massignon, al-Hallādī, Bibliography, No. 391; Brockleman, G. A., i. 400; Tafsīr al-Mu'ākāri, ed. Browne, p. 135—136; Browne, Literary History of Persia, ii. 438, 489, 491—495, 508 510. (E. BEKTHEL)

NADJRĀN, a district (Wūdī) and town in northern Yemen, according to others (Ibn Khurda'bbih, B. G. A., vi. 133, 248) in southern Nadjrān or in the Ḥadās (Bakri, Maṣūfī, p. 575). The position and course of the Wūdī has not been exactly ascertained. It rises on the eastern slopes of the Yemen highlands, probably between 43°
and 44° East Long., and runs, perhaps turning north at first, mainly in a southeasterly direction behind 18° and 17° N. Lat. finally disappearing in the great sand desert. The distance from ‘Amāh [q.v.] is put at 6–7 days’ journey (E. Glaser, *Die Geschichte und Geographie Arabiens*, ii. 50); according to Philybi’s investigations (*The Heart of Arabia*, ii. 166 sq.), it is seven days’ reasonable journey south of Sulaqiyah. The older idea that the course of the Wādī Nadjaran ran N.E. (or that there was a more northerly twin Wādī Habūrā) arose out of the erroneous idea first finally corrected by Philybi (op. cit., p. 165, 222) that the Wādī Dawaisīt, with which the Wādī Nadjaran was wrongly thought to be connected, runs from S.W. to N.E.

The Wādī Nadjaran drains a wide area of northern Yemen and ‘Arab (Hamdān, *Fr. Drasat al-Arab*, p. 83, 110, 114, 247). It is, and was in antiquity, celebrated for its fertility. Of European travellers only Joseph Halévy visited it, in the spring of 1830. He describes (*Bull. de la Soc. de Géogr.*, series vi., vol. xiii., p. 478) the valley, some 2 miles broad, as exceedingly fertile and well-cultivated with villages concealed in thick palm-proves. Starkey (xvi. 281) calls it a peaceful and rich country. To Muslim writers it is a miracle of fertility and wealth, even more so than the Yemen in general; its corn, vegetables, and fruits were unrivalled (Hamdān, p. 190 sq.); there were also mines there (Baldhurst, *Kiṣā‘ Khurāṣ al-Balṭān*, p. 14) and the staple products of the Yemen, leather and cloth, were also made there.

To this day in less favoured parts of Arabia they talk of the prosperity of this Wādī (Philybi, op. cit., ii. 226).

The population of the Wādī Nadjaran, according to Philybi, is comparatively large; the majority belong to the tribe of Yam. But several unrelated tribes, often at enmity with one another, share in the possession of this rich country. It was so in the early Muslim period. The Banu ‘Harith b. Kalb, who appear in Hadīth as lords of Nadjaran, were not really such. They belong to the largest group of tribes Madāḥ, which was represented by other tribes also. Their rivals were and are Hamdān tribes (Hamdān, p. 115, 9) among them Hadhīq, important for the present day, (subdivisions Yam etc.) and Bakr (subdivisions Ḥāshir etc.); other tribes like al-Ad, al-A’r etc. should also be mentioned. We have no reliable information about places with a settled population. In the eastern part of the Wādī, Halévy visited a village of Makhlaf which was afterwards put on the maps at hazard. In the immediate vicinity was another village Ridjāf, and an hour to the west Madnāt al-Khdhādīf (see below). The Arab geographers mention villages (*fuṣūr*) of Nadjaran and the names of some of them are given as well as those of districts, tributary wāds, hills and springs.

Through Nadjaran runs the very old caravan road from Hadramawt through the Hījāz to the eastern Mediterranean [cf. **Mar‘ib**]. Nadjaran was of some importance as the last station in the Yemen on a caravan route from the Yemen to al-Yamān and thence to Bahrain and the *Jībāl*. During Persian rule in the Yemen and later in the *Abāsids* period this road must have been of no less importance than the one just mentioned to Syria, which latter however owing to its importance in

the early period of Islam is almost alone mentioned in Muslim literature (A. M. Hoer, *The Book of the Himyarites*, p. lxxii.; cf. also M. Hartmann, *Die Sudan*, Fragm. p. 496, 505). On the stations on the road see Ibn Khuradhdhu (B. G. A., vi. p. 152 sq. and 193; A. Spruner, *Post- und Reiterpfäte*, p. 134–139); a series of forts served to keep it safe (Spruner, op. cit., p. 138; Hamdān, B. G. A., p. 28; Vāqū, *Majma‘ al-Balṭān*, iv. p. 541 sq.) built on the present importance of the road axis of Nadjaran, see Philybi, op. cit., ii. 226. The road from those days probably went several days’ journey across the desert to the Wādī Dawaisīt, which was the first station on the other side; at the present day Sulaqiyah [q.v.] corresponds to it. The road via Nadjaran was certainly that which connected the Yemen at different times with the ancient Babylonia in the east, with Syriac Christian as well as with Jewish culture.

Little is known of the town of Nadjaran. Ploemey mentions it as a metropolis. Adelin Gallus attacked and destroyed it (Strabo, loc. cit., Pliny, vii. 28 [32]). From this Glaser (loc. cit., ii. 50; cf. p. 224) concludes that there was no town of Nadjaran after this: but the existence of the town is proved in many ways for various later periods (see below). Now however, no town seems to be the name. Halévy thought he had found the ruins of the old town in Madnāt al-Khdhādīf (see below), which he describes as considerable ruins on the south bank of the river bed. Of the city wall roughly built of granite the south and west sides were less destroyed than the others. A mosque, which still stood among the ruins, belonged, according to local traditions, to the early Muslim or even pre-Islamic period (*Jāzirat al-Khdhādīf*, see iv. 50 and 40). In remarkable agreement with this, Bakrī, *Majma‘* p. 80 says: al-Ukhūdūd, which is mentioned in the *Kurān*, was in one of the towns of Nadjaran. This city however is now in ruins and nothing is left of it but the mosque which ‘Umar b. al-Khaṭṭāb built’.

On the history of Nadjaran we have only scanty and mainly legendary notes. The name occurs several times in the South Arabian inscriptions: there is one (C. S. L., iv. No. 363) reference to the ‘towns’ of Nadjaran (nāṣir N., cf. above *fuṣūr N.*). This means the Wādī. In the oldest inscription of north Arabia, the Namāra inscription of the year 328, the name is also found.

In the tradition of the introduction of Christianity into the Yemen, Nadjaran plays a part in keeping with its importance for the communications between Yemen and Mesopotamia (see above). According to one reference (*Histoire Néerominien*, ed. Adelchi Scher, i. 218 sq.) called *Patrol. Orient.*, lxiii. 350), it was a merchant of Nadjaran who first spread Christianity there after he had been converted in al-Hira. Christianity is said to have received a further impetus in the time of Justinian from monophysite Christians who, expelled from Byzantine territory, came to al-Nadjaran also via Hira (op. cit., ii. 51 sq.).

The Christian tradition of later persecutions of the Christians in South Arabia connected with Abyssinian invasions of the Yemen is widely disseminated; Nadjaran was the principal scene of these, first perhaps under Sharaḥ ibn Yakkuf in the last third of the 5th century, notably under Dhl Nuwadh, who died in 525. On this tradition
which exists in many forms, Greek, Syriac and Ethiopic, see A. Moberg, *The Book of the Hymnaries*, p. xxiv.—Isiš, where the sources and other literature to be consulted are given.

Arabic literature has also something to say about these happenings, especially in the annotations of the Kūrān exegists on Sūra lxxv. 4 sqq. on the Ḥāsh al-Ukhḍūl. But what there is of historical value in this Muslim tradition comes from Christian sources; only it is usually so distorted as to be almost unrecognizable. What it records regarding the introduction of Christianity into Najdrān by a certain Faimiyya or Abū Allāh b. al-Thamīr is on the other hand a distortion of certain episodes in a Syrian Christian cycle of legends about the Persian martyr Pethion and Vasilius and has really nothing to do with Najdrān or Arabia (A. Moberg, *Über einige christliche Legenden in der arabischen Tradition*, p. 213). The name Madinsat al-Khudūl from the last published in Najdrān. Hambūr (op. cit., p. 67, 169) mentions in the same region a Balad or town of al-Ukhḍūl; C. van Arendt mentions a hill Ukhḍūl (*De opsmant van het sentimentele Ismaïrisme in Yemen*, p. 168).

It is not till the time of Muhammad and the early Caliphs that we have really historical references to the Yaman and even these have to be critically used. We are told that Khălid was sent with 400 horsemen to the Banū l-Ḥadr b. Kaʿb (and the Banū `Abd al-Mādīn: Ibn Sād, n.l. 112, 3) in Najdrān and made them adopt Islam and send an embassy in homage to the Prophet (Ibn Hīshām, p. 958; Ibn Sād, n.l. 72). `Amr b. Ḥazm was appointed ḥāmil in Najdrān and `Ali was ordered to collect the subūṣ there (Wāṣīl=Wellhausen, p. 417 sqq.; Ibn Sād, n.l. 122). In addition to pagans and Jews there were many Christians who formed, it seems, an autonomous community. Muhammad received an embassy from them also and concluded a treaty with them which guaranteed possession of their property and the free exercise of their religion in return for a fixed contribution on their part (Ibn Hīshām, p. 401 sqq.; Ibn Sād, n.l. 84 sqq., 35 sqq.). This treaty was confirmed by Abū Bakr and `Omar. `Omar however, at a later datedrove the Christians and Jews out of the Arabian peninsula whereupon the Christians founded a new Najdrān in the Irāq, two days' journey south of Kūsa. The details are variously recorded and it is not quite clear to what extent `Omar's orders were actually enforced. Bakr (op. cit.) says that the Jews and Christians in Najdrān were not at all affected by the measure.

In any case, at a much later date (see just below), there were not a few Christians in Najdrān and there are of course still many Jews in the Yaman. In the year 40 a. H. Najdrān was burned by Djamra, `Alt's general (Tabari, l. 3452). The soantness of the historical tradition, fantastic accounts, wealth of the region and the remarkable liberty enjoyed by Christians in Najdrān gave rise to legends and inspired poets. The "material" which these stories are very fully detailed and utilised in H. Lammens, *Le Califat de Yashīr le 1er* (M. F. O. B., n.l. 347—369).

In the end we find Najdrān an important fortified town, often simply called al-Najdrān (cf. Hambūr, p. 85), mentioned in the accounts of the fighting which led to the creation of the `Zalād imamate in the Yaman in the third century A.H. At this period there were still Christians and Jews there, who were obviously still an important element and enjoyed considerable consideration from their Muslim neighbours (van Arendt, op. cit., p. 128 sqq.). On bishops of the Najdrānians or in the Yaman in the ixth and xth century from Syrian sources see Moberg, *The Book of the Hymnaries*, p. liv.

The tribes of Najdrān submitted to Turkish rule as late as those of eastern and northern Yaman generally. Najdrān now belongs to the kingdom of Ibn Saʿūd.

On other places Najdrān see Yāṣīr, iv. 751, 757 sqq.; Hambūr, p. 85.

*Biography:* First in the article and in some of the works quoted there; on the history of, especially Baladītarī, Fātīhī, p. 64—68; Catanī, *Annali dell'Islam*, ii. 312, 317 sqq., 321 sqq., 349—353; iv. 359—350.

(An. Moberg)

**Nafaka.** [See Nickīr Talik.]

**Nafā.** [See Allāh, ii.]

**Nāfī b. al-Azraḥ al-Hanafi al-Ḥanāli.** Abū Rāshid, according to some sources, the son of a freed blacksmith of Greek origin (Baladītarī, ed. de Goeje, p. 56), chief of the extreme Khāridjītes [q.v.], who after him are called Azraḥītes [q.v.]. At first, after his succession to Ahwāz, Nāfī joined Abū Allāh b. al-Zubayr [q.v.] in Makka. Soon, however, he and his followers turned their backs on the holy city and arrived before Basra, where they spread terror among the inhabitants, who left the town in multitudes. Al-Muhallab, however, succeeded in driving them back to Persia. They made a halt in Ahwāz, where they practised istīrāf, in accord with their doctrines. The bloody battle of Dūlāb, fought against Muslim b. `Ubaīs, put an end to his life (64 or 65 = 683—684). His special doctrine comprised the following points: 1. reception (ḥurūd) from the quietists (al-faḍāa); 2. examination (miṣrāj) of those who wanted to join his encampment; 3. declaring infidels those who did not perform hajj to him; 4. declaring it allowed to kill the wives and children of opponents. This is al-Ash'āri's enumeration, which differs slightly from that of al-Shahrastānī (p. 90).

Further it must be observed that in theological terminology *naffles* is often applied to those works which are supererogatory in the plain sense, in contradistinction to other works which have become a regular practice. The latter are called *amnun mu'akkada*, the former *naffles* or *unna awida* (cf. infra, sub 2). The place of supererogatory works in theology is further accurately defined in the *Wāṣiyat Abī Ḥanīfah*, art. 7: "We confess that works are of three kinds, obligatory, supererogatory and sinful. The first category is in accordance with Allāh's will, desire, good pleasure, decision, decree, creation, judgment, knowledge, guidance and writing on the preserved tablets. The second category is not in accordance with Allāh's commandment yet according to His will, desire" etc.

The term for supererogatory works used here is not *naffles*, but *fašīla*. 2. *Naffles* is used in *ḥadīth* especially as a designation of the supererogatory *qalas* (Bukhārī, Ṣaḥīḥ, bāb 11; Tuhfah al-Jadīd, bāb 5, 27). Sometimes it appears in the combinations *qalas al-naffles* (Ibn Maḍja, Ḥasanī, bāb 203) and *qalas al-nawafīl* (Bukhārī, Tuhfah al-Jadīd, bāb 36).

In *ḥads* this terminology is often, but not always followed, the other term for the supererogatory *qalas* being *qalas al-taṣawwūn* (e.g. Abū ʿIyāb al-Shrāzī, Ḥalīl al-Tamīmī, ed. A. W. T. Juyboll, p. 267), a term that goes back to the *Kūrān* (Sūra ii. 155, 180; Is. 80), and which occurs also in canonical *ḥadīth* (Abū Dāwūd has a *qalas al-taṣawwūn* in his *Sunan*). The whole class of supererogatory *qalas* is called *mawṣūlī* as well as *nawafīl*. *Naffles*, as a general designation of supererogatory *qalas*, covers three subdivisions. The following juxtapositions may give a survey of the terminology:

<table>
<thead>
<tr>
<th><em>nawafīl</em></th>
<th><em>amnun</em></th>
<th><em>mu'akkada</em></th>
</tr>
</thead>
<tbody>
<tr>
<td><em>Nawafīl</em> (Khalīl, transl., Gudī, p. 95, Mālik)</td>
<td><em>mandābha</em></td>
<td><em>tāṣwūn</em></td>
</tr>
<tr>
<td><em>Nawafīl</em> (Ghāzīl, Iḥyā', l. 174, Shāfiʿī)</td>
<td><em>muṣṭahbha</em></td>
<td><em>tāṣwūn</em></td>
</tr>
</tbody>
</table>

It may be added that the term *rawāṭib* is used especially for the supererogatory *qalas* preceding or following the *nawafīl*; they belong to the first subdivision.

In Shīʿī *ṣuḥ al-nawafīl* is the widest term; by *muṣāraqah kāły* the daily and non-daily supererogatory prayers are designated.

*Al-Saharan Nāfīsah*: a mausoleum outside Cairo, south of the Mosque of Abū Ḥanīfah b. Tūlaṁ
Nafi'a — Nafi'a

Nafi'a (nafs) is a central concept in the early Islamic poetry, often understood as a struggle between the self and the angelic beings, reflecting the dual nature of human existence. It symbolizes the struggle between the human soul and the divine. In this context, it is often used to represent the idea of breath and wind, signifying life and movement.

The term "Nafi'a" appears in the works of early Islamic poets, such as Al-Hariri, where it is used to describe the internal strife within a person. The concept of "Nafi'a" is closely related to the idea of "zuhut" (self-awareness) and "zuhurat" (self-revelation), signifying a transformative experience within the self.

In the context of the early Islamic poetry, "Nafi'a" is often used to symbolize the struggle between the soul and the angelic messengers, reflecting the dual nature of human existence. The term is often used to describe the struggle between the self and the divine, signifying the struggle between life and death, good and evil.

The concept of "Nafi'a" is a significant aspect of the early Islamic poetry, reflecting the struggle between the self and the divine, signifying the struggle between life and death, good and evil. The term is often used to describe the transformative experience within the self, reflecting the dual nature of human existence.
Muslim’s al-Saḥīḥ (Constantinople 1331), viii. 44, 162 sq. and al-Bukhārī’s al-Saḥīḥ, Cairo 1314, iv. 133, both use nafs and arwāḥ for the human spirit.

IV. The Tadhār al-Arūḍī (iv. 260) lists 15 meanings for nafs and adds two others from the Liḍūn al-'Arah, as follows: spirit, blood, body, evil eye, presence, specific reality, self, tan, haughtiness, self-magnification, purpose, disdain, the absent, desire, punishment, brother, man. It states that most of these meanings are metaphorical. The Liḍūn (viii. 119–126) finds examples of these meanings in the poetry and the Kur’ān. Lane’s Lexicon faithfully reproduces the material (p. 28278).

The lexical treatments of nafs disclose these facts: 1. Any attribution to Allāh of nafs as “soul” or “spirit” is avoided. 2. If man, a. nafs and arwāḥ are identified, or b. nafs applies to the mind and arwāḥ to life, or c. man has nafsān, two souls, one vital and the other discriminating, or d. the discriminating soul is double, sometimes commanding and sometimes forbidding.

V. The influences that affected the post-Kur’ānic uses of both nafs and arwāḥ were the Christian and Neo-Platonic ideas of rūḥ with human, angelic and divine applications, and the more specifically Aristotelian psychological analysis of nafs. These influences are clearly shown in the records of the religious controversies.

A. Al-Ashʿarī [q. v.] (H. Ritter, Die dogmatischen Lehren der Anhänger des Islam von Abu l-Hasan ‘Alī bin Imām al-Ashʿārī, Istanbul 1929) reports the Rāfiḍa doctrines of the incarnation of rūḥ Allāh in Ḥabīb ibn Mūsā ibn-Abī-l-‘Arab, and his transmission through the prophet and the Jews (p. 6, 46), as well as the eschatological positions that man is body (ḏarūm) only, body and spirit, and spirit (ḏarūm) only (p. 61, 329 sqq.). His creed of the orthodox (p. 290–297) omits any statement about the nature of man.

B. Al-Baghḍādī [q. v.] (al-Farār bīn al-Firāq, Cairo 1328) records the same heretical doctrines about man’s nature (p. 28, 117 sqq., 241 sqq.), says the transmission theories were held by Plato and the Jews (p. 254) and describes the heretical beliefs of the Mu‘ayyid sects [cf. hulul] among whom he includes the Ḥallā‘iyya (p. 247). His position is “The life of Allāh is without rūḥ and nourishment and all the arwāḥ are created, in opposition to the Christian doctrine of the eternity of the Father, Son and Spirit” (p. 325).

C. Ibn Ḥazin [q. v.] uses nafs and rūḥ interchangeably of man’s soul (Kitāb al-Fīqīl, b. l-Mīlād, 5 parts, Cairo 1317–1321; v. 66). He excludes from Islam all who hold metaphysical views, among whom he includes the physician-philosopher Mubārak and Zaka‘iyya al-Ra‘īsī (l. 90 sqq.; iv. 187 sq.). He restricts absolutely the doctrine of some of the Ash’arīyya of the continual re-creation of the rūḥ (iv. 69). He taught that Allāh created the spirits of all Adam’s progeny before the angels were commanded to prostrate to him (Ṣūrā vii. 171), and that these spirits exist in al-Barrakh [q. v.] in the nearest heaven until the angel blows them into embryos (iv. 70).

D. Al-Shahrastānī [q. v.] (Kitāb Hīlī‘ al-Ma‘āṣi wa-l-Niḥāl, ed. Caturel, part 1, London 1842) in his description of the belief of the pagan Arabs concerning survival after death does not use the terms nafs or rūḥ, but says the blood becomes a rich bird that visits the grave every hundred years. One of his most important sections (p. 203–240) deals with the orthodox and heterodox doctrines of al-rūḥ. Al-Humāfī, or true believers, debate with al-Sā‘ī (q. v.), who are dualists, emanationists and gnostics. His account of the views of the Sā‘ī faithfully reflects the doctrines of the Būyān al-Sa‘fī (Rāsīl, 4 vols., Bombay 1305), who taught that man is a whole compounded of a corporeal body and a spiritual nafs (t/tl. 14), and that the substance (dīnawār) of the nafs descended from the spheres (al-rūḥ). But al-Shahrastānī rejects the Neo-Platonic idea that human souls (māfsūr) are dependent upon the souls of the superhuman spirit world (al-ma‘āṣi wa-l-rūḥyāt) (p. 210, 224 sq.), and the Hermetic doctrines that the nafs is essentially evil (p. 236) and that salvation consists in the release of the rūḥ from material bodies (p. 226 sq.). He applies the term rūḥānī to all spirits, good and evil (p. 213). His description of the nature of man (p. 210 sqq.) with three souls, vegetal, animal and human, each with its own source, need, place and powers, resembles the views of the Būyān al-Sa‘fī (Rāsīl, t/tl. 48 sqq.). Indeed, the Muslim analysis of the human soul as given in the Shah%%%%%%'s, was written on by Alexander of Aphrodisias and Porphyry, had been adopted with little modification by the Muslim philosophers, such as al-Kindī [q. v.], al-Fārābī [q. v.] each of whom wrote a Kitāb al-Nafs, Ibn Sīnā [q. v.] who wrote two, and Ibn Miskawayh [q. v.], whose Tahdīth al-Akhbār has the same immaterial (p. 1) and functional (p. 7) psychology for its ethical basis. Al-Shahrastānī achieved the long needed interpretation of the conflicting stages of nafs and rūḥ in the Greek and Christian heritage, and in the Kur’ān and Muslim tradition. But the philosophers, even with his support, were not able to force the Greek psychology upon orthodox Islam. The Muḥaddithīn (s. art. šākīl) and the great majority of Muslims broadened the Kur‘ānic terminology, but retained the traditional views of the nature of the soul as a direct creation of Allāh having various qualities.

VI. Aristotle’s principle of the incorporeal character of spirit had nevertheless found a permanent place in Muslim doctrine through the influence of Islam’s greatest theologian, al-Ghazālī [q. v.]. In Al-Tahānawī’s Dictionary of the Technical Terms (ed. Spranger, Calcutta 1862) are extracts of the doctrines of al-Ghazālī on man’s rūḥ and nafs. He defines man as a spiritual substance (dīnawār rūḥānī), not confined in a body, nor imprinted on it, nor joined to it, nor separated from it, just as Allāh is neither without nor within the world, and likewise the angels. It possesses knowledge and perception, and is therefore not an accident (p. 547 at top; cf. Tahānah al-Falāsīf, Cairo 1302, p. 72). He devotes the second section of Al-Risāla al-Laduniyya (Cairo 1327, p. 7–14) to explain the words nafs, rūḥ and gūl (heart), which are names for this simple substance that is the seat of the intellectual processes. It differs from the animal rūḥ, a refined but mortal body whose death removes the senses. It identifies the incorporeal rūḥ with al-nafs al-muḥimmāna and al-rūḥ al-amīrī of the Kur‘ān. He then uses the term nafs also for the “animal” lower nature, which must be disciplined in the interests of ethics.

VII. This position of al-Ghazālī’s was that of the theistic philosophers in general, as well as some of the Muṭa‘alla and the Sā‘ī, but it has never dominated Islam. The great analytical philosopher
and theologian, Fakhru al-Din al-Razi, could not bring himself to accept it. In his Majastār al-Ghazzā, v. 435, commenting on Surah xvii. 85, he quotes as the opinion of al-Ghazzā the statement that is in the latter's Tawārikh (p. 72; cf. also al-Razi's Muhājir, Cairo 1323, p. 164), but on p. 434 (l. 8 and 9 from below) of the Majastār he acknowledges the strength of the opposing argument, and in his al-Muṣāfra, on the margin of the Muhājir, p. 117, he definitely rejects as baseless (bāhār) the view of the philosophers that the nafs is a substance (āqām) and not corporeal.

VIII. Al-Balādhuri's [q.v.] system of cosmogony and psychology is given in his Tawārikh al-Anwār (litograph ed. with commentary by Abu Tānā al-Iyafānāt and gloss by al-Djundjānī, Stambul 1305, p. 285 sqq.; Brockelmann, G. A. L., i. 418, ii. 111, printed Cairo 1325). He discusses 1. The classes of incorporeal substances, 2. the heavenly intelligences, 3. the souls of the spheres, 4. the incorporeality of human souls, 5. their creation, 6. their connection with bodies and 7. their survival. His cosmogony follows: Allāh, because of his unity, created only one Intelligence ('āʾā). This Second Intelligence, that remained first (al-fāṭār) from Allāh, is the cause ('illa) of all other potentialities and is not body (āqīm), nor original matter (kawālīf) nor form (sūra). It is the secondary cause (nafṣ) of another Intelligence with soul (naṣf) and sphere (falsāḥ). There emanates from the second a third intelligence and so on to the tenth (p. 288) who is the rūh of Surah lixviii. 58 (cf. al-Balādhuri's Ahrūr al-Tawārikh, ed. Fliescher, ii. 383, l. 4) whose effective influence is in the world of the elements and who is the producer of the spirits (awrāḥ) of mankind. Below these intelligences are the high or heavenly angels, which the philosophers call al-nafṣ al-falsāḥ, controlling particular persons. In addition (p. 282) there are the incorporeal substances, without effect or control, who are angels, some good (al-kariš-šīyān) and some evil (al-kāhūyān) and the qinā (qinā), who are ready for both good and evil. This is the classification he refers to in his comments on Surah ii. 28 (ed. Fliescher, i. 47, 29). His psychology resembles that of al-Ghazzā, whom he mentions (p. 294). For the incorporeality of the soul (shujārau al-nafṣ) he presents five arguments from reason, four Qurān verses and one tradition. His commentator remarks (p. 300) that these prove only that the soul differs from the body. He then argues that all nafṣs are created when their bodies are completed. The nafs (p. 303) is not embodied in and is not close to the body, but is attached as the lover to the beloved. It is connected with that rūh which comes from the heart and is generated of the finest nutritive particles. The reasoning nafs produces a force that flows with that rūh through the body, producing in every organ its proper functions. These functional powers are perceptive, which are the five external senses, and the five internal faculties of the sensory communes, imagination, apprehension, memory, reason, and the sense (al-kariš-šīyāt), which are voluntary (lāțiqāt-šīyā) and natural (lāțiqāt, p. 308).

IX. The dominant Muslim doctrine concerning the origin, nature and future of al-rūḥ and al-nafs is most fully given in the Kitāb al-Rūh of Ibn Kāyīm (q.v.) (Haidarābād, 2nd ed., 1324). Of his 21 chapters Ibn Kāyīm devotes the 19th to the problem of the specific nature of the nafs (p. 279-342). He quotes the summaries given by al-Askārī (op. cit., p. 334-335), and by al-ʿArīf (Majastār al-Ghazzā, v. 431-434). He denies al-Razi's statement that the Muṣāilikiyya consider man to be simply the sensible body, and says all intelligent people hold man to be both body and spirit. The rūḥ is identified with the nafs, and is itself a body, different in quiddity (al-māhiyya) from this sensible body, of the nature of light, high, light in weight, living, moving, interpenetrating the bodily members as water in the rose. It is created, but everlasting; it departs temporarily from the body in sleep; when the body dies it departs for the first judgement, returns to the body for the questioning of Munkar and Nakir, and, except in the cases of prophets and martyrs, remains in the grave foretasting bliss or punishment until the Resurrection. He rejects (p. 256) Ibn Ḥazm's doctrine that Adam's progeny are in al-Brāzālī waiting their time to be blown into embryos. He presents 116 evidences for the incorporeality of the rūḥ, 22 refutations of opposing arguments and 22 reductions of objections. He represents traditional Islām.

X. The earlier Sūfīs had accepted the materiality of the rūḥ. Both al-Kharāṣi (q.v.) (al-Rūhā, with commentary by Zakariyya al-Anṣāri and gloss of al-ʿArūsi, Bulāk 1310, ii. 105 sqq.) and al-Hudwīt (q.v.) (Kāfī al-Maḥdījī, ed. Nicholson, London 1911, p. 196, 262) call the rūḥ a fūs, created substance (āsim) or body (āqīm), placed in the sensible body like sap in green wood. The nafs (al-Rūhā, p. 103 sqq.; Kāfī al-Maḥdījī, p. 196) is the seat of the blameworthy characteristics. All together make the man.

In addition to the philosophical position of the immateriality of al-nafs that al-Ghazzā had made orthodox, another interpretation of spirit developed which is essentially theosophical. Ibn al-ʿArabi (q.v.) (H. S. Nyberg, Kleine Schriften des Ibn al-ʿArabi, Leyden 1919, p. 15, 117, sqq.) divides "things" into three classes: Allāh, Who is Absolute Existence and Creator, the absolutely unfathomable substān (pl. substānāt) of contingent existence that is joined to the Eternal Reality and is the source of the substance and the specific nature of the world. It is the universal and common reality of all realities. Man likewise is an intermediate creation, a karāzād (p. 22, 42) between Allāh and the world, bringing together the Divine Reality and the created world (p. 21, 42) and a vicegerent connecting the eternal names and the originated forms (p. 96). His animal spirit (rūḥ) is from the blowing of the divine breath (p. 95) and his reasoning soul (nafs māhiyyā) is from the universal soul (al-nafs al-kullīyya), while his body is from the earthly elements (p. 95 sqq.). Man's position as vicegerent (p. 45 sqq.) and his resemblance to the divine presence (p. 21) come from this universal soul, who has various other names, holy spirit (rūḥ al-kharīd), the first intelligence (p. 51), vicegerent (kullīyya), the perfect man (p. 45) and the rūḥ of the world of command (Daʿwāw al-abār), which al-Ghazzā held to be Allāh's direct creation (p. 121, 179). In his Fīqīh (litograph ed. with commentary by al-Kāshāni, Cairo 1309, p. 12 sqq.) he says that Allāh appears to Himself in a form which thus becomes the place of
manifestation of the Divine essence. This place receives a rūḥ, who is Adam, the khāuls and the perfect man. He discusses (Nyberg, pp. 129 sqq.) the essence and properties of the rūḥ, quoting among others the view he says is "attributed" to al-Ghazālī which is in al-Tuhafut (as above). He finds the differences of doctrine harmless since all agree that the rūḥ is originated. In his treatate on the nafs and rūḥ (M. Asim Jalilos, Tratado Acería del Conocimiento del Alma y del Espíritu, in Actes du XIVe Congrès international des Orientalistes, Prag 1909, iii. 167–191) he describes how men may reach the distinction of the "perfect man" through the cultivation of the qualities of the nafs and the suppression of the nafs.

Ibn al-Arabi’s contemporary, the poet Ibn al-Fārūq (Nicholson, Sti der Islamic Mysticism, Cambridge 1921, chap. iii.), at times identifies his own rūḥ with that from which all good emanates (al-Tūf al-aḥrār, on margin of Duḥaḥ Ibn al-Fārūq, Cairo 1314, ii. 4 sq.) and with the "poele" (fath) upon which the heavens rest (p. 112, 113). A-Kasbih, the commentator of al-Tūf, explains that this identity is with the greatest spirit (rūḥ al-aṭrāf) and the greatest "poele". The comments of the commentators on the Duḥaḥ states (li. 156) that incarnation (famūl) and union (iṭtiḥād) with Allah are impossible, but there is real "passing away" (fals) and attainment (waṣīl) of the rūḥ and nafs in the nafs of Allah, for His nafs is their nafs.

'Abd al-Karim al-Dūlānī carries this position of existential monism on to straight anti-pantheism. In al-Inān al-ḥallīl (q.v.) (Cairo 1334) the terms rūḥ al-ḥullū, rūḥ al-ārāfī and rūḥ Allāh stand for a special one of the aspects of the Divine Reality (al-żāfī), not to be embraced under the command "be" nor created. This spirit is the divine aspect in which stand the created spirits of all existences, sensible and intelligible (p. 94). Existence itself abides in the nafs of Allah, and His nafs is His Essence (dā'ār). Moreover, every sensible thing has a created spirit (rūḥ) (p. 94). One of the aspects of the angel of Sura xliv. 52, who is named the command (amr) of Allāh, and who is an aspect of Allāh as above, is given to the rūḥ of Muhammad, which is identified as the rūḥ mentioned in the verse. That angelic and divine rūḥ thereby becomes the Idea (ḥaṣif) of Muhammad (p. 95 sq.) and he thereby becomes the "perfect man" (p. 95, 133 sqq.). The rūḥ which is the specific nature of the human nafs has five names: animal, commanding to evil, instinctive (al-mu-halma), evoking, and tranquil. When the divine qualities actually describe the nafs, then the names, qualities and essences of the gnostic (ṣufī) are those of the One Known (Maʿrūf) (p. 130 sq.)

p. 7). In geomancy (Imam al-ramūlī) the first "house" (bait) of the nimrūd (cf. Madāj̤is̤, ymra, iii. 73b) is called nafs because it guides people to those problems concerning the soul and spirit of the inquirer. In the beginning of al-nafs (Muhammad al- Ḥasanī, Kithb al-yaqīn fī lam al-Raml, Cairo n.d., p. 7; cf. Hein. Com. Agrippae, Opera, Leyden, n.d., but early xvii cent., p. 428: Nam primus demum personam vestrem tue restituit). Bibliography: In addition to the references in the article see especially D. B. Macdonald, The Development of the Idea of Spirit in Islam, in Acta Orientalis, Oslo 1931, ix. 307–354 (reprinted in M. W. xxii. 1932, 25–42, 153–168) upon which much of the present article is based; Moslem philosophical psychology goes back to Aristotle’s De Anima (best ed. by R. D. Hicks, Cambridge 1907); for the early metaphysical beliefs see W. Landauer, Die Theodizee der Scholasten etc. in Fontes O.S., xxviii. 1–80; xxix. 1–183; for the relation of Aristotle and Ibn Sīnā see S. Lamarder, Die Psychologie des Ibn Sīnā, in Z.D.M.G. xxxix. (1875), 335–418; English translation by A. E. van Dyck, Avicenna’s Offering to the King, Verona 1906; M. Huret, Die philosophischen Systeme im Islam, Bonn K. E. E. Calverley

AL-NAFUSA, in Berber Infeq, name of a Berber tribe. According to the common genealogical scheme (cf. Ibn Kallādh, Kitāb al-burh, i. 107–117 of the text), the Nafusa are one of the four branches of the large body of the Ber, whose name derives from their chief Mādghīl al-Abtar. At present the dwelling place of the Nafusa is south-west of Tripoli, on the western plateau of the same name which from the frontier between Tripolitania and Tripolitania tends eastward, and, if taken in the largest sense, comprises the regions of Nālīt, Fassima, and Yefren. The inhabitants of these regions are generally called Naftus, although, in a genealogical sense, this name can be applied to some groups only. Probably the name Lijaḥ Nafusa (in Berber Djar n-Infus, which originally belonged to a part of the plateau, was extended to the large area between Wāxe and Yefren on account of the fact, that of the tribes inhabiting it, the Nafṣas were of prominent importance. This use of the name in its widest sense is also to be found in the book by Ibrahim b. Sliham al-Shamīnī, Castles and Ways of the Naftas plateau" (1302 = 1884–1885), in which all the territories of Yefren, Fassima and Nalit are described.

The second date on the history of the Naftas, which we possess, are to be found, for the largest part, in Arabic sources. In the Greek and Latin authors of pre-Islamic times there is no single assurance to them. The name occurring in Corippus’ Ḥummas (second sang., l. 146: Queneq nefanda colunt tristis montana Navus), does not refer, in all probability, to a place or a tribe of Tripolitania, but rather of the Aurès (Auwīs), its plateau or its neighbourhood. The fact that Navus represents a form closely connected with Naftas, proves only that the name was widely spread among the Berbers, that it is old and may be probably connected with such words as nemfīs, fem. temfīs "right, to the right hand" in Aquitanian.

In Islamic times the name is recorded for the first time in connection with the capture of the town of Tripoli by Amr b. al-As (22 or 23). According to Ibn Dīrāsh (i. 2 sqq., text) during the siege the inhabitants called to their aid the Nafts, who came to their aid. At that time they were residing also in the vast plain of Lijaah, situated between the Djebel and the sea, and were the chief towns, if not their capital, was Sabe on the coast (Roman Sabratha, formerly Phoenician), west of Tripoli, which by Ibn Kallādh (Burh, i. 181, l. 8, text) is called "the city of the Naftas". This town was taken
by surprise and plundered by a body of cavalry sent by 'Amr. This raid was probably undertaken not only to continue the conquest farther westward, but also to punish the Nafusa, whose territory 'Amr had invaded in order to conquer it (cf. al-Bakri, p. 9, 16, text), and which he had to abandon by order of the Caliph.

According to some sources, the Nafusa at that time were Christian; according to other reports, however, they were Jews. Our latest local information makes it probable that Christianity had spread widely among them; though the conversion of single groups to Judaism is not excluded. In fact traces of Byzantine basilicas have been found on the plateau, e.g. at Temerdha, Itarimse, etc., which are also mentioned in some sources and which must have been used by large numbers of the indigenous population.

When the Arab had conquered North Africa, the Nafusa of Sabra and of the coastal region retired, according to the common opinion, to the plateau, where they remained hostile towards the conquerors. A fresh study of the Tripolitanian population, however, makes it clear that a part of them must have stayed in their old dwelling-places where they intermarried with other tribes and, in course of time, became arabised. In fact there are tribes in the Western Djasfar and in Tripoli, the town and its surroundings (the regions of al-Sabli, Tagjara, etc.), that, according to the local genealogy, derive from the Nafusa. Apart from this ethnic tradition, there is the fact, recorded in several sources, that after the first case of intervention of the Nafusa in the affairs of the town of Tripoli — which may have been partly due to a Christian opposition to the Muhammadan invasion — they wanted, under successive dominations, to make their presence felt and their influence preponderant in the northwestern region of Tripolitania, so that the outlines of the history of the small, but strong and civilised Berber city may be supposed to be following. Having its centre on the plateau, it intended to make felt, as often as possible, its dominion in the coastal region and thus keep the control of the main way of communication between Egypt and Irrijiya, which ran along the coast and which was followed by the various expeditions to the Maghrib. Even at present such aspirations may be stirred in the minds of the most civilized of these populations, to such an extent that even some of them have reckoned with an eventual reoccupation of their old territories in Western Djasfar.

The period in which the Nafusa, according to the sources available to us, was at its most active and took part in the events happening in North Africa, was that of the great Kharidji (q.v.) revolts, which began in 122 (739—740) and did not cease before the 7th (9th) century, i.e. before the era of the Fatimids. When the Wahidi doctrines began to spread among the North African populations in the second century A. H., they embraced them and so joined the rebellious movement of the Berbers against the Arab conquerors, a movement which, prepared by several other causes, found also some support in the Kharidji heterodoxy. The Nafusa embraced the Badi'i, i.e. the more moderate form of the Kharidji doctrine, and remained ever faithful to it with heroic attachment. In alliance with other Berber tribes, either Ibadis or other branches of the sect, they repeatedly made war upon the Arab governors of Irrijiya.

In 140 (757—758), they elected as their imam, probably with the intention of founding an Ibadite principality — an intention which manifests itself also at other times — an Arab called Abu 'Ishqashub 'Abd al-Alit b. al-San'ah al-Mu'tawfiq [q.v.], one of the missionaries of Ibadism in North Africa. Under his command and in conjunction with other Berber groups, they occupied Tripoli, fought against the Sufrit [cf. al-Sufrija] Wafargiijuma, who had sacked Khairan where they had settled, and against the armies sent by the 'Abbasids to reconquer Irrijiya. Finally, in 144 (761—762), Abu 'Ishqashub and a large number of his followers perished near Tamuga (Tawurgah) in a great battle against the general Muhammed b. al-Ash'ab al-Khurasani, the governor of Irrijiya.

Another notoriety of the Nafusa was a Berber Abu Hatim Vaqshub [q.v.], whose enterprises sur vive in oral tradition on the plateau, who speaks of his 375 encounters with the Arabs. He was killed in battle in 155 (771—772).

When the Ibadi kingdom of the Kustamids [cf. Kustam], which had Tahert as its centre, had been founded, the Nafusa did not elect an imam of their own any more, but formed a part of this kingdom under a governor who depended upon it. Some of these governors, e.g. Abu 'Ubaidah 'Abd al-Hamid al-Djanawuni (of Igganawun), Abu Manju lipiy (of Tendemmira), are often praised by the Berbers of the Ljubat, for their importance and ability in maintaining the interests of Ibadism, and also for their learning and piety.

The Nafusa were a valuable support of the kingdom of the Kustamids, of which they formed the eastern bulwark. Being near the territory of the Aghlabides [q.v.], they shared the vicissitudes of the state which had arisen in Irrijiya in the beginning of the 9th century. The town of Tripoli was in the possession of those princes; Western Djasfar, on the other hand, till near the Sea, and probably also part of Eastern Djasfar, was in the power of the Muslims. When Tripoli was bequeathed to the Umayyads, who, having revolted against his father in Usir, took over the castle of the Ibadis in the province of Irrijiya, his own risks, the Nafusa were called to aid, and, appearing without delay, they defeated the army of the invaders (according to other sources, their help was invited by the inhabitants of Laiba). This fact, which reminds of the first siege of Tripoli by the Muslim, proves clearly the influence the Nafusa possessed in northwestern Tripolitania and it accounts also for the severe blow dealt to them in 286 (896—897) by the Fatimid prince al-'Abbasa, who, having revolted against his father, sought to conquer Irrijiya at his own risks, the Nafusa were called to aid, and, appearing without delay, they defeated the army of the invaders (according to other sources, their help was invited by the inhabitants of Laiba). In the nineteenth century, the Turks, after having retaken in 1251 (1835-1850) the direct administration of Tripoli, had to fight long and bitterly for the conquest of the plateau of the Naffas also. The struggle lasted, with varying success, till 1274 (1857-1858); in this period the sheikh Ghamma b. Khaliifa distinguished himself by courage and endurance; he is usually represented as the hero of Berber independence defended against the Turks. In reality, however, he was an Arab and the Arab tribe of the Mahajim had the largest share in the wars, while the Berbers, according to all appearance, did not take part in them on a large scale. During the Italian occupation of Tripolitania, which began in 1911, the Naffas were at first hostile in accordance with their old aspiration to found an independent Ba'asti kingdom which should extend up to the Sea and include the region of Sabratha. Defeated in 1913 by the valiant general Luqui near al-Ashba'a, they offered their submission to the Italian authorities and ever since have proved very faithful subjects. When inner Tripolitania, in consequence of the effects of the Great War, was troubled by rebels, they showed an heroic attachment to Italy, fighting its enemies under great privations. When in 1923 the reconquest of the inland had begun, they voluntarily took part in it, side by side, with the regular troops, with perfect loyalty.

In works which the Naffas are mentioned, the Arabic chronicles referring to the conquest of the Magrib, as well as the
Additions and Corrections:

p. 495, l. 9, to be added. He has been buried at the base of the poet Night's Mourn at Kastoria (Thessaly), where his tomb was still shown in 1916 (cf. L. Massingale, Revue, p. 155).

NAGPUR — NAHIKI

Gond kingdom: the northern kingdom of Gohi-Manilà; two central kingdoms with their capitals at Dégorg and Khera respectively; and a southern state with its capital at Chand. In the reign of Akbar the imperial forces overran the northern kingdom forcing it to pay tribute, despite the heroic efforts of the Dowager Rani Durgavat. After this the political predominance of the Gohi chiefs shifted to Dégorg which in its turn also suffered from the aggressive schemes of the Moghal emperors. Early in the reign of Awaransah a punitive force under Dilr Khan entered both Chand and Dégorg, with the result that, in 1670, the ruler of Dégorg embraced Islam as the price of the restoration of his kingdom (Awaransah-nâma, p. 1022—27). Both these states paid tribute to the emperor through a Muslim agent stationed at Nagpur. This however is not the earliest reference to Nagpur in the Muhammadan period, for the Lâhâbâh-nâma of Lâhârî describes its capture by Khan Darwan, in 1657 (for a still earlier identification see Hîr Lal, p. 10).

The most famous ruler of Dégorg was the converted Gond chief, Bâjâh Bihâl, who visited the court of Awaransah (Mâzâkîr-i Awaransah, p. 273). Because of his continuous attitude he was replaced by another Muslim Gond named Dinsair (ibid., p. 340). For some years after this Bâjâh Bihâl remained in service, until, escaping from imperial control, he once more raised the standard of revolt in Dégorg (Mâzâkîr-i Awaransah of Khan Darwan, 1657, p. 467). Although Dégorg was recaptured for a time by Awaransah’s forces, Bâjâh Bihâl remained in open rebellion and was never really subdued. Eventually under this able ruler the Dégorg state comprised the modern districts of Chandwara and Bêthâ, together with portions of Nagpur, Sontot, Bhando, and Pahâl. The last important Gond ruler was Bânsâr Bâhâ who died in 1739. It was he who fixed the capital of Nagpur which he converted into a walled town.

Internal divisions led to the intervention of Râhgadh Bhumisâ, who was governing Bârâk on behalf of the Marathâ Pâshâ. Eventually, in 1743, the Marathâ leader took over the administration of the country. By granting a nominal authority to the Gond Râdja, Bâharâ Shâh, and his descendants, the Bhumisâ possessed a useful pretext for disallowing, when expedient, the rights of the Pâshã, but in practice reference was usually made to Finsa on important matters, such as the succession. Bâharâ Shâh’s descendants have continued to occupy the position of state pensioners, and the representative of the family resides at Nagpur with the title of Râdja or Sonâthân. Râhgadh Bhumisâ was a great friend of the Îlamî and other Marathas into Nagpur. It was the treacherous attitude of his successor Dâng đôdios led to his defeat by the combined forces of the Nâgh and the Pâshâ, and to his acknowledgement of the latter’s supremacy.

It was under Râhgadh II that the Nagpur kingdom attained its greatest extent and included practically the whole of the modern Central Provinces and Berar, together with Orissa and certain of the Câtî Nagpur states. Unfortunately for the perpetuity of his kingdom he joined forces with Snâtâh against the British, and, in 1803, after the battles of Amaye and Aràjion, was compelled to subscribe to the treaty of Dégorg, by which he was deprived of a third of his dominions (Aitchison, i. 415—417). He was succeeded in 1816 by his son, Parsodji, an imbecile, who was murdered the following year by the notorious Âppâ{s Shâh. On the outbreak of war between the British and the Pâshâ, in 1817, Âppâ{s Shâh attacked the British Residency but his troops were defeated in the brilliant action at Sutlalût. This resulted in the deposition of Âppâ{s Shâh, who was succeeded by Râhgadh III, on whose death, in 1853, without heirs, natural or adopted, this dependent principality was declared by Dalhausin to haveapsed to the Paramont Power.

The British administered Nagpur by means of a Commission until the formation of the Central Provinces in 1861. Today, the city of Nagpur supports a flourishing Muhammadan community, in the suburb of Mehdiâbâh, the members of which are Lâhâbâh Bohrias of the Shîr sect [see Nâhim]. The members of this community live together in the buildings of the institution, where their children are educated and their women taught suitable accomplishments.

NAHIKI, an administrative district in the Ottoman empire which corresponds somewhat to the Swiss canton or French commune. It is a subdivision of the jâlî (jâlî-r, q.v.), which may be compared with the French arrondissement and is governed by a hâmîn-mešîr (q.v.) while the nâhîye is under a mukâli. This official who used to be appointed by the wâli, the governor of the province, received his instructions from the hâmîn-mešîr, to whom he was subordinate. The subdivision of the nâhîye are called jârû, i.e. village. The term nâhîye for an administrative district is of recent origin. For an earlier provincial administration which did not know this name, cf. A. D. Morâtsmann sen., Sûretîh und das moderne Türkentum, N., Leipzig 1878, p. 149.

NAHIKI, name from the pre-Islamic divine name Nâhidh noted by Wellhausen and Nöldeke among the Tanit, the Nakha (of Madhûjî), and in Mecca before Islam. — In Kûfa and Sûmâr it was the name of the Al Nakhi, a family of Shî’i scholars of the tribe of Nakha1; descendants of Nakhi, grandfather of Khunayz b. Zîyâr, a partisan of ‘Ali, also celebrated as the founder of the Kûmilîyûn sect (or Khumilîyûn): the ‘Usâfi, the jâlî-r of Mî’dîn Samîyû in Djâmm (Hoyasî, lo. 5). Two of its members settled in Sûmâr (Tâj, Fâbrîc, p. 205; cf. p. 179, 196): the first, ‘Abd Allah b. Muhammad (Kahî, p. 6) was the herald-writer of the Mûriyya sect mentioned by Mâ’ûnî and Ibn Harm whose name Friedländer, following Bârììe de Meynard, had read “Ibhâni” (sic in
Al-Nahr, the constellation of the River (Eridanus). It corresponds to the ητερασς, Φευνιος, Άμαντος of the ancients (cf. Aratos, Phainomena, I. 359; Genibus, Ελευσιως; Ptolemy, Almagest). Aratos observes (I. 360) — probably one of the first to do so — that the river of heaven represents Eridanus (Ηαρδανος, river of the morning) or river of darkness, of the west? turned into stars, into which Phaeton, son of Helios, fell, struck by the thunderbolt of Zeus, after his unsuccessful attempt to ride to heaven. [The opinions of the Greek authors vary regarding the identity of the earthly Eridanus. It is often identified as the Po (Padus), in later times however sometimes with the Rhone (Rhodanis, probably on account of the similarity of sound with “Eridanus”) or even with the Rhine (Rhuma) while Strabo denies there was such a river for he calls it τον ρυμας γεωνον “the nowhere existing”]. According to another view (Kempenhans, c. 37), the constellation of the river represents Achernar (cf. below), etc., ητερασς, the position of which however he gives incorrectly as he could not himself observe it in Alexandria on account of its great southern declination (θ 37° = 57° 45').

Al-Nahr is one of the constellations of the southern heavens. In the north it is adjoined by the Bull (al-Σαλου), in the east by Orion (al-Δικαστήρ, the Giant, or al-Δίκαιος, the Judge), the Hare (al-Arabiya) and the most western subsidiary stars (al-Δραγας, al-Durar) of the Great Dog (al-Καθαρ), which are now included in the constellation of the Dove and the Sculptor's Tool, in the west by the Whale (έλεφαντς or ζεύκος). The constellation of al-Nahr contains, according to Abd al-Rahman al-Sufi (1076-1131), primary stars (i.e., those which form the figure, ηταρας αιν αινας) there are no subsidiary stars included in it. It begins with η Αρίνα, the left foot of Orion (β Orionis, Rigel, = 248), towards western η Α ερδανας, then southwards to about y αινας and eastwards, as far as α ΁ρδανας, or η Σκιούρος, or η Ρόδων, and finally in a south-westerly direction via δ, γ, δ Αερινας to η Ερδανας.

The fresco in the dome of Kusceva Amurs shows in the surviving portion the constellation of Al-Nahr as a narrow ribbon, which runs directly westwards from the raised foot of Orion, a little below the equator and parallel with the latter in the direction of the Whale.

The Arabs give to the inverted quadrilateral formed by η, ι, ι, ι, η Α ερδανας, or the same “fore throne (foot-stool) of Orion”, (κερας Αλ-Δικαστήρ, in contrast to his “back throne”, κερας Αλ-Δικαστήρ οι μεταλκακος, or η Δικαστήρ, or η Δικαστήρ οι μεταλκακος, or η Δικαστήρ, or η Δικαστήρ οι μεταλκακος, or η Δικαστήρ, or η Δικαστήρ), the stars τατ, ι, ι, ι, η Ηέρδανας together with ι ι, η Ηέρδανας, which encloses an area with very few stars in it, are called ἱλιόδοτοι Al-Nadir, “Ostrich Nest”, the numerous small stars surrounding it are called η Δικαστήρ, the eggs”, or κερας Αλ-Δικαστήρ, the egg-shells”, The most southerly star in Eridanus, also the brightest (a Eridani, first magnitude), is called al-Zamam, the “male ostrich”, or, η, γ, άλ-να, the “last of the river” (in the Alfonsoa Tables) whence comes the name still used at the present day Achernar or Asward. Between Achernar and Po (Padus) (i.e. Fau Faw) Al-Abdu, “moon of the fish”, Al-Azhar (Ezra), in the region of the present Phoenix are a considerable number of stars which the Arabs called Al-Riyad, “the ostrich’s chick”, Al-Sufi states that in Shiraz he observed a series of stars near the horizon which had the shape of a ship (σκάφος) (α, ο, ο, ο, γ, γ, γ Θωνιας). The brightest among them (according to Al-Sufi), third in reality of second magnitude) forms with a Pisces Atatur and β Ceti (Demok Rhina) Καλας, “tail of the whale”) an approximately right-angled isosceles triangle with a line from a Pisces Atatur to β Eridani as base, the stars within which according to Al-Sufi are also to be included in Al-Nadir. The star γ Phoenix is called Al-Difasa, al-Difasa, or al-Difasa, or the Second Frog”, in contrast to the “First Frog”, or, al-Difasa, al-Difasa, which is represented by a Pisces.

began under his father, he went in 943 (1530) to Cairo, where he was taught by al-Sayyid al-ibadi, and to Stambul. In his return home he received a teaching appointment in the Madrasa al-Aghrafiyya. In 965 (1557) he again went to Stambul via Aza Minor, and afterwards was appointed to the Kanbaitiya in Mecca. When in 975 (1567) the al-Sulamiyya Madrasa was founded for all four orthodox sects, he went to it and later became Mufid of Mecca. He died in 990 (1582); according to others in 1088 or 991.

His first literary effort seems to have been a description of his second journey to Stambul, which has not survived. His other works cannot be chronologically arranged with certainty. These are the poetical anthology, intended to supply quotations for letter-writers, which in the Leyden (Cat. cod. ar. 2, i. 356) MS. is called Tazhîb al-Aṣma'â al-islâmiyya fi l-ṣayyâb 'al-furūd al-nâzira, in the Cairo (Fihris 1, iv. 210; iii. 68) al-Tazhîb wa l-Mu'âfata fi l-ṣayyâb wa l-wafadra al-nâzira, and a collection of riddles entitled Künt al-Asma' fi Dumn al-Munâqara (Leyden, 1734; in the Escorial, Cat. Derenberg, No. 20; and Cairo (Aghir, iii. 107, 296) and in Cairo (Fihris 2, ii. 294) of which is quoted by 'Abd al-Kadir al-Baghda'dî (Kâsnî al-Asâfî, iii. 139), and on which Mu'in al-Din 'Abd al-Munîf b. Ahmad al-Baqî'î in 992 (1585) wrote a commentary entitled Ti'âr al-Asma' (MSS. in Upsala, No. 813; Paris, No. 3417; and Escorial, op. cit., No. 522; extracts in Leyden, op. cit., No. 523). It is not possible also to date his collection of biographical matter of which there only survives the synopsis Munâqada al-Târîkh in Leyden (op. cit., No. 1045).

His two principal historical works date from the last decade of his life. On 1st Ramadan 981 (May 3, 1572) he finished his history of Turkish rule in the Yaman entitled al-Burh al-Yamaniyyi fi l-Faṣl al-Muhammadi; it begins with the year 900 (1494), describes the first Turkish conquest under the vizier Sulaiman Pasha, the return of the Zaidids and the second conquest by the grand vizier Sinan Pasha, to whom the work is dedicated; an appendix describes his conquest of Tunis and Golettia. He prepared a second edition after the accession of Sulayman Murad III in 982 (1574); cf. S. de Sacy, in M. E., iv. (1878), p. 412-521; and to the MSS., in G.A.L., ii. 382 add Leyden, op. cit., No. 944; Paris (Büchel, Cat. de l'îv M. Ar. de nouveau acquisition, No. 5927); Escorial (Livi-Provengal, No. 1720; Cairo, Fihris 1, v. 56), also D. Lopes, Extrait de la histoire de la conquête de l'Yaman par les Turcs sous le Sultan Sulaiman testa ar. con trad. e notas, Lisbon 1892. In 985 (1577) he finished his history of Mecca dedicated to Sulayman Murad, entitled al-Tázir bi-Allâh Balad (Ha'il) Allâh al-banîn, which Würtzfeld published in the Chronicon der Stadt Mecca, vol. i, Leipzig 1857; and is printed Cairo 1303, 1305 (on the margin of Ahmad b. Zainal Dâhân's Khatâqa al-Kadîm fi Hayâ'at Umarî al-Balad bi-Allâh), 1316; to the MSS. given in G. A. L., ii. 382 may be added Tüürlân, No. 23; Paris, No. 1637-1644, 4924, 5934, 5999; Leyden (Cat. cod. a. i. 3, No. 928-930); Cambridge (Brown, No. 8-9); Ambrosian, No. 116 (Z. D. M. G., ixx. 77); Vienna, No. 254; Sulaimanîyya, Stambul No. 815; Nitriy 'Ummânîyya, No. 3047; Cairo (Fihris 3, p. 52); Cat. Bancroft, xv. 1085; Apalîyas, p. 175. This work was translated into Turkish by the famous poet Bâlî (q. v.) (MSS. in Gotth., No. 158; Vienna, No. 895; Or. Ak., Kralî, No. 266; Cambridge, Suppl., No. 72; ed. by Gottwald, Kassel 1286). A synopsis entitled Fihrist al-'Ulamâ' al-Aṣma' bi-Bina' al-Muqaddim al-'Arabî, MSS. Leyden, op. cit., No. 931; Cairo, Fihris 2, v. 32; Bankiopoe, xv. 1089. It was made by his nephew Bahîr al-Din 'Abd al-Karim b. Modhir al-Din b. 'Abd al-Din b. Shawqaw 961 (Sept. 26, 1554) at Ahmadibad in Gudjarat, brought up in Mecca by his uncle, then teacher in the Madrasa al-Mu'āšiya, 982 (1575) Mufid of Mecca, 990 (1582) Imam al-Haram, 9. 12th Dhu 'l-Hijja 1014 (April 24, 1606) (al-Muhabba, Khatâqa al-'Arabî, ii. 3). His son Mu'âdh in 1005 (1596) wrote a history of Mecca and Medina and of the exploits of Hasan Paşa, who became well of Yaman, entitled Misâ')l al-'Imam wa 'l-Qâma al-fida'at b. al-Mu'âshî min wa l-Mu'âshî min 'l-Qâma wa l-Bâgh al-Khalîfa, 3, Leyden, op. cit., No. 937; Cairo, Fihris 1, v. 2, 3. Bibliography: Dânîl al-Shâhkâl, al-Nu'mânîyya, p. 368 (quoted from Sarkh, Mu'âshî al-Mağhâbî, p. 1871); al-Nu'mânî, al-Rawî al-firdos, vol. Berlin, No. 9588, fol. 227; Ibn al-Aridârî, al-Nu' cîd al-meṣâbî (coll. Bankiopoe), fol. 194; al-Rawî, 'Aṣma' bi-l-Ma'qâl, Leyden, op. cit., 1024, p. 152-157, Wustenfeld, Geschichts- schreibung, p. 3; Brockelmann, G. A. L., ii. 182.

Nahrawân (a. s., III. direction, path, also intention, but gradually acquired the special meaning of grammar. The Arab philologists divide it into two branches: a. accentuació, 'ilm al-qaf or 'ilm al-qaf, comprising the theory of verbal stems and their conjugation, the formation of nouns and adjectives, the formation of the plural and of the feminine, etc., i.e. with individual word-forms only, and syntax, 'ilm al-naṣîb in the narrow sense. The fundamental grammatical conceptions of the Arab philologists are taken from Aristotelian logic, which came via Persian scholars to the Arabs (on the dependence of the Arabic phonetic system on the Indian, cf. Brockelmann, G. A. L., i. 97). As the beginnings of Arabic learning in general are lost in obscurity, so also is the origin of the appellative naṣîb uncertain even to the Arabs themselves. The caliph 'Ali is said to have instructed Abu 'l-Awsâ'id al-Dansa'il, who is regarded as the founder of 'ilm al-naṣîb, how he should divide up the subject and to have said by saying: 'naṣîb, "take this path", whence the new science received the name of naṣîb. According to another story, Abu 'l-Awsâ'id laid down the principles of Arabic grammar and said to the people: waṣîhâ, "follow this", from this the name naṣîb is said to be derived. The stimulus to deal with the problems of language is said to have come from the caliph 'Ali; he, the story goes, taught Abu 'l-Awsâ'id the fundamental principles of naṣîb and expounded to him the division of all language into three categories: res, fâl and bâs. Another explanation as to how Abu 'l-Awsâ'id came to lay down the principles of Arabic grammar seems to
be nearer the actual facts. Ziyâd b. Abîth [q.v.] asked him to put on record the principles of grammar which 'Abî had taught him; but he was reluctant to do this and asked the governor to excuse him this task. When however on one occasion he heard a 'Kurîn reader make a mistake, which destroyed the sense, in reading the sacred book, he declared himself ready to carry out the task. He therefore had a clerk come to him, to whom he dictated and said: When you see me in pronouncing a letter open the mouth completely (fatâsâ), put a point above the letter; when I close the mouth (famâ), put a point in front of it, and when I half close it (basa), put the point below the letter. In this way the invention of vowel signs is traced back to Abî 'l-Awsâd.

Another story, which deals with the same question, tells how a newly converted mawlâ made a grammatical error in the hearing of Abî 'l-Awsâd; one of the latter's household laughed at this but Abî 'l-Awsâd said: These are mawillîs who long for Islam, who accepted it and thereby have become our brethren. How would it do if we were to draw up the laws of language for them? He thereupon prepared the chapter on subject and object. There must certainly be an element of at least probability in these anecdotes. By the accession of nomads to Islam, the language of the Arabic language might be corrupted by foreign elements; there was further the demand that the sacred text of the 'Kurîn should be read aloud without error and its meaning accurately interpreted; these thus arose the necessity for a systematic investigation of the language of the sacred book and the laying down of the rules of its language, so that those ignorant of the language could guide themselves. Other anecdotes which relate to the problem of the origin of mawillî and all of which, of course, like those already given, are to be regarded as mawillî, also describe Abî 'l-Awsâd as its founder, so that he may with justice be called the earliest Arabic philologist (mawillî). None of his writings has come down to us. He is regarded as the founder of the philological school of Basra, the origin of which must therefore go back to a very early period (Abî 'l-Awsâd died about the end of the first century A.H.). Only to mention one of the most important, this school also belonged Abû 'Amr b. 'Alî b. Ubâda and Abî-'Azmâ', to whom we owe much of our knowledge of the 'Uthâfiyya, Stobawîth, whose great work on grammar became "the book" par excellence, Khaîîl, who is regarded as the inventor of the system of prosody, and many others. Very early there was rivalry between the schools of the scholars of Basra. There also learned men began to deal with linguistic problems. While at first ideas were exchanged between the two schools, and students went from Kûfa to Basra to study, and well known Basra scholars came to Kûfa; gradually a considerable rivalry arose between the two. The Basra laid greater stress on grammatical principles than the Kûfâns and were in general regarded as more faithful and more accurate transmitters. The questions disputed and the differences between the two schools are dealt with in a work by 'Abîl-rahmân b. Muhammad b. Umâma b. Abî 'Alî, Abu Sa'id b. Abî Anbar; it is called mawillî of al-Ka'î and al-Mufaddal al-Jabîbili. After the third century the centre of Arab learning was transferred to the capital of the Islamic empire, Baghda'd. In the new Baghda'd school which arose there the differences in point of view between the Kûfâns and Basra schools gradually disappeared.

(LIKE LICHTSTÄDTER)

Nâîb (A.), literally "substitute, delegate" (qen agenti from e-w-a-d to take the place of another); the term was generally applied to any person appointed as deputy of another in an official position, and more especially, in the Mamlîk and Dîhil Sultânates, to designate a deputy or lieutenant of the Sultán and the governors of the chief provinces (see also the article Sûfi, above, vol. III., p. 161). In the Mamlîk system the former, entitled nâîb al-ṣâlûf (or nâîb 'alîquama mawillî al-mamlûk al-ṣâlûf) or al-nâîb al-mamlûk, was charged with the administration of the territories and affairs of the empire on behalf of the Sultán. This was, however, only an occasional office, and its holder is to be distinguished from the nâîb al-ṣâlûf, the temporary governor of Cairo (or Egypt) during the absence of the Sultán or of Damascus during the absence of the nâîb al-ṣâlûf. The six nâîbîs of Syria which replaced the Ayyûbî mandalâkis—Damascus, Halâb, Tripoli, Hamâ, Sa'ad and al-Karak (their number was from time to time increased by the erection of Ghaza and other districts into separate provinces)—were each administered by a nâîb al-ṣâlûf (also entitled nâîb al-mandalâk), who was an "amir of a thousand," the nâîb of Damascus being superior to the others. At the end of the ninth (eighth) century Egypt also was divided into three similar nâîbîs: Alexandria (from 769); Upper Egypt (al-wâqîf al-ahkâm or al-ṣâlûf) and Lower Egypt (al-wâqîf al-ḥâkarî). The plain title of nâîb was held by the commandants of the citadels of Cairo, Damascus, Halâb, etc., who were not under the jurisdiction of their respective governors, and by various amirs of lesser rank holding subordinate commands. (For an instance of more recent use, see art. Hâkîm.)

In the Dîhil Sultânate the nâîb was the powerful minister who was the deputy of the king himself. The earliest recorded instance of this is the appointment of 'Utsâhîr al-Dîn at-Tâbilî as deputy on the occasion of Sultan Mū'izz al-Dîn Barâhîn at-Shâh in 635 (1240) ( Minhâj al-Dîn at-Tâbilî, Taḥâfûṣul Naṣîrî, in Bibl. Ind., p. 191). In fact, the support of the nobles was conditional upon the appointment of this person to the deputyship. Although this was a separate office from that of the wazîr, nevertheless under powerful nâîbîs, like Malik al-Kâfîrî in the reign of 'Alî al-Dîn Khaîîlî and Khanaâwî in the reign of Mubârak Shîbî, its existence was not conducive to the growth of the powers of the wazîr.

In its most common acceptance, in Persian and Turkish as well as in later Arabic, nâîb signified a judge-substitute, or delegate of the hâkî in the administration of law. In modern Arabic it...
Nāţīl[^1] ([C. COLLIN DAVIES])

Nāţīl, properly YENİ-ZEKE MUSTAFĂ ÇELİK, called after his father Pfef KHALİFA also Pfef-ZEKE, a celebrated Ottoman poet. He is usually described as Nēfīl-i KADİR, "old Nēfīl," to distinguish him from Yiṇī Nāţīli, young Nāţīli, the poet and nawewli Nāţīlī Sāḥib Efendi of Mevlâna, author of severalŞef works who died in 1595 (1576) in Cairo.

Nēfīl was one of the greatest Ottoman poets of the post-classical period, the period of the weak sultan (Murād IV, Ibrahim and Mehmed IV, 1555-1683), of rule by women and emirs (Küşem Şafit, Bekāş Ağa and Murād Ağa) and of the grand vizier of the Köprülü. He is a link between Nēfīl and Yahlī and Nāţīl and Nēfīl. He and Yahlī are the best poets between Nēfīl and Nāţīl, the reviver of Ottoman literature.

Born in Constantinople, on the conclusion of his education he became secretary in the Divān-i Kāmil and was ultimately a khōfi in the office of the Department of Minas (wa‘āf al-inām). As his Divān shows, he belonged to the Khalwet order. He was a weak, delicate man of feeble constitution who died in 1677 (1657-1668) in exile, it is said, into which he had been sent by Fâṣil Ahmâd Pasha Köprülü. Brusiloff Mehmed Tāhir's statement that his tomb was in the cemetery of the Sünbulât monastery in Fındoğull and that his remains were removed to the cemetery of Persia when the road was widened, cannot be quite reconciled with the story of his banishment.

Nēfīl is one of the most interesting figures in the history of Turkish poetry. He did not, it is true, contribute anything essential to the actual development of Ottoman literature and gave it no new inspiration. He was an innovator but only in the field of style and language. He steadily worked to break down the rigidity and monotony of the post-classical school. His style is extremely artificial. His language is full of Persianisms but not in quite the same way as in the preceding periods. His diction is full of unusual Persian images and expressions with which he enriched the Turkish language in brilliant verses, somewhat exhausting however through the obscurity of their allusions. The fine new phrases and expressions are however not his own but are simply borrowings. Nāţīl succeeded in clearing away the stagnation of the literary language of the time by dropping the trite and hackneyed metaphors and phrases, which had been found in all divans since Bâbi and borrowed new phrases and constructions from the Persian.

Although he wrote in Turkish his dictation is purely Persian. He follows his Persian models so slavishly that his language is unintelligible to a Turk who does not know Persian. But the Ottoman poets wrote only for themselves and their equals and not for the people whom they ignored.

Nāţīl is the chief representative of the highly developed and marvellously elaborated literary language in which, as Gibb says, a rich and delicate Persian embroidery is harmoniously sewn upon the Turkish background, while the two languages remain sharply distinguished from one another.

Nēfīl's characteristics are a charming freshness of phrasing, subtlety of imagination, an artificial, individual style, gracefulness, clarity and purity of language, succinctness of expression and polished style such as no poet of his time possessed. According to Mu'allim Nāţīlī, no Turk can read him without enthusiastically trying to imitate him, which is however hardly possible. His language is so finished and free from all superfluity that the meaning is often obscure and unintelligible. There is however a great deal that charms the reader, especially as his language is so melodious.

As a poet he has not the same powers as he has as a master of language and style. It is his language and not his poetic conception that is his strong point. He did not seek inspiration from his surroundings, like Yahlī, but from his Persian model.

Nēfīl's literary work consists only of a Divān, which was printed in Bālik in 1255 (1837) (only about a third of the MSS., was printed however). It consists of four very fine hymns in honour of the Prophet (na's), some 20 kâşfas the language of which resembles that of Nēfīl and shows the same exaggeration. The kâşfas are dedicated to Murūd IV and Mehmed IV, to the grand vizier Kāra Muṣṭafā Pasha (1048-1055), Mehmed Pasha (1055-1055), Sāhib Pasha (1055-1055), Sāhib Mehmed Pasha (1055-1059), to the Shāhī al-Salām Bahā Efendi, Yahlī Efendi, Hāfiz Mehmed Efendi, the Deltēf and others. The Divān also contains a touching vērēbē (elegy) written in the tābūr-i bāld manner on the death of his brother who died young, which is almost too extravagant with its effective refrain; also a tābūn and some māzālā in the tābūr and tābūr-i bārd manners and a tābūr-i bārd.

His most important and most characteristic work
It is however over 200 gazelles in which he imitates Fatul. In them he continually produces new impressions, new ideas and images, new significances of words. Besides a passion kept within natural bounds and a tenderness of feeling, which reminds one of Nâdîm and makes a deep impression on any lover, there is an undeniably reminiscent of Nâdîm, in his outlook on life, probably as the result of political conditions and his poor health. Occasionally, there is something cold and forced about him. One feels that his spirit is ill and troubled.

Nâdîl especially influenced Thâbit and Nâdîm. His principal successors as poets were Heresgi 'Arif Ilkiket and Venîçhegelî 'Awnî.

Thâbit Negiûn, Ta'rîkh-i Estâfatî 'Abdîler Mezîr İstanbul 1338, i, 157-159; Şerifî, Sûfîî-Îsmâîlî, iv, 529; Bandîlî Mehmed 'Ârif, 'Öomezli Mezîrî Estâfatî, ii, 443-445; Serât-i Fatihî, save, 71; Hammer-Purgstall, G.O.W., iii, 497-499; Kûnos, Osmanî fethî âmilî, Budapest 1895, p. 80; Gibb, H.O.P., iii, 304-311; Basmaqânî, Eceâî 'Elmûnî-i ichterî, Istanbul 1916, p. 118; the catalogues of MSS. by Flügel and Rieu. (Menêl)

NÂMA, Muflîk, a Turkish historian. Maşafî Nâmî known as Nâmî was born in 1065 (1655) in Aleppo. After becoming a tezkârî (halberdier) in 1100 (beg. Oct. 26, 1688) in the imperial palace, he was promoted to be a secretary in the Dîwan under the grand vizier Kâzî-îksen Ahmîd Pasha. On the 28th Dîwânî-i 1110 (Nov. 28, 1704) he became the constant secretary (amir) and in 1709 succeeded 'Umar as master of ceremonies and imperial historian (sevânî-sâmîrî, q.v.). He later filled several other offices (cf. F. Babinger, G.O.W., p. 245) and during the campaigns in the Morea was assistant to the commander-in-chief (şerîfverî). He died at the beginning of 1128 (Jan. 1716) at Old Patras, where he was buried in the outer court of the mosque which has now disappeared. On his tombstone cf. Brusâlî Mehmed Ahsû, 'Öomezli Mezîrî, i, 151, below, and on his death the first of the middle of the Sultan, 1128 in Ahmîd Pasha, Hicri on Şebîb xavvûl Istanbul hayâtî (1100-1200), Istanbul 1930, p. 52 sq.

The candid and accurate history of the Ottoman empire, which he wrote in his official capacity and which he based upon earlier histories like the works of Kars. Celebi-Îsik (q.v.), 'Udârî (q.v.), Ahmad Şarîk al-Mas'ûdî, Hâdîdî Kâlih (q.v.) and the imperial Ottoman history mentioned at the end of his work as begun but not finished by a certain 'Ismet (cf. F. Babinger, G.O.W., iii, 326), covers the years 1000 (beg. Oct. 9, 1591) to 1170 (beg. Sept. 8, 1659). The full title of this much esteemed and largely used work is:

Ravâs at-şifânî wa-kašîlît, Ahhîb at-kašîlît, in Hâdîdî Kâlih, No. 1349, called simply Ta'rîkh-i 'Abdîl.

Maşafî Nâmî also wrote several political treatises (Kudîlî-i nûmânedîlî), which have survived in a collected volume.

Nâmî interpreted his duties as a historian very seriously and his incorrigible love of the truth secured his work a superiority over those of all other Ottoman historians of the time. On Nâmî's view of the "duties of the historian" cf. his own words in A. W. Dahn, Türkische Forschungen, 1928, p. 2. The original MS. of his Ta'rîkh is in Istanbul in the collection of the Erivan-Kânî. On the four editions and their variations cf. F. Babinger, G.O.W., p. 256, on the third edition see also J. A. 1868, i, 468.

A French translation (still in MS.) was prepared by Antoine Galland (Fonds Français, No. 42,197 in the Bibliothèque Nationale); specimens of it were published by N. Jorga in the Actes et fragments de l'historien des Roumains, i (Bucharest 1885) p. 55.

Biography: Cf. F. Babinger, G.O.W., p. 246 and particularly Yehe Miafsînî, Istanbul 1918, No. 55, p. 49 sqq.; Ahmad Râfîq, Alâverde ve-eunátârâr, Istanbul 1924, p. 256 sqq.; Selâm, Ta'kûr, p. 681 sqq. (according to whom he also studied chemistry and other arts and sciences and was a carefree lolly pop companion) and 'Ali Dînîbî, Nâmî Ta'rîkhî, Istanbul 1937. (Franz Babinger)

NAKÇIÇÜVAN (NAKCIUSIAN), a town to the north of the Araxes.

The town Nâşûzus is mentioned in Ptolomy, v, ch. 7. 12. The Armenians explain the name of Nakçewan (Nakçian) by a popular etymology as nakç-çewan ("Nakçah's first stopping-place") (although the name is apparently compounded with -çewa "place") and locate the town in the province of Vaspurakan (cf. Yehe, i, 122), or in that of Shemik. According to Moses of Chorev, i, ch. 30, Nakçiewan was in the area populated by Median prisoners (mer) in whom we should see the ancestors of the town of Nazdivan of the region, (cf. Balâqchî, p. 200, muflîk-âbalâq). In the early Arab sources we find the form Naghâwâ, Balâdîhâr, p. 105, 200; Ibn Miskâwî, i, 145; Simâtî, p. 560; Nakçâwî. In the Sassanian and Mongol period the predominant form is Nakçüwan (as early as Ibn Khûrdâbbîhî, p. 122).

The town was conquered under Yehebâm by Hâshb b. Manlana. It was rebuilt under Mu'awiya by 'Atsb h. Hittim. In 87 (705) the Arabs hanged a large number of Armenian notables, whereupon the town acquired a Muslim character. For a short time (about 900) the power was in the hands of the Baqtrinî, but the town was reconquered by the Shbûlûq (q.v.) and belonged henceforth to the domain of their vassal, the emir of Golbud (Orcundî); cf. Markv, Südarmonî, Vienna 1939, p. 79, 99, 101, 115; test, p. 300, 352, 567. It figures in the wars of the Baglam period (Ibn Miskawî, ii, 148) and in the events of the Saljuq period (cf. Ibn al-Atîr under 514 a. h.).

Nâşûzus is more particularly associated with the family of Tâgûxî at-taghûxî of Abladeh-Abd (531-632 = 1136-1225), cf. Mîhrâbî, Râvâs at-şifânî, Lucknow 1894, p. 875-876) whose main centre it was, as is shown by the fine buildings: a tomb (maqâsîd) of al-ârif al-aflâf Kâbe al-Din Djami, etc.
NAKHCHUBAN — NAKHSHAB.

In the valley of the Ashk-Abad, cf. Ilm Hawkal, p. 376: Kasgh-ninah, which runs southwards parallel to the Zarafshân (river of Sarmakand) and runs towards the Amul-Darya [q. v.]; but before joining it disappears in the sands. Nakhshab lies on the road joining Bukhara to Balik 4 days' journey from the former and eight from the latter (cf. Muqaddas, p. 344). In the time of Isâkhârî (p. 335) the town consisted only of one quarter (rabat) and a ruined citadel (kundan). The river ran through the centre of the town (Ibn Hawkal, p. 578).

The Mongols from the time of Cîngî-Khan (1219) used the region of Nakhshab for their summer encampments. The Genghiz-khan Kûkî (1218-1236) and Kızan (killed in 1247) had palaces built there, as a result of which the whole district was called Karshî ("palace") in Mongol [q. v.]. Karshî is often mentioned in the time of Timûr (Qafar-nûma, i. 111, 244, 259 etc.) but it was eclipsed by Kish (Shahr-i Sabz, q. v.), the birthplace of Timûr, 3 days' journey above Kâshî. The citadel of Karshî was of considerable strength and valiantly resisted Shâhâbî Kânî (cf. Shâhâbî-nûma, ed. Mîlonnovsky, p. 29) and 'Abd Allah Kânî of Bukhârâ (in 965 = 1558). From the xviiiith century onwards Karshî began to rise at the expense of Kish and from 1920 was the second town of the khâne of Bukhârâ with a population of 60,000.

The problem of identifying the ruins in the district of Karshî has been studied on the spot by L. A. Zimin, who formulates his conclusions as follows: 1. The ruins of the ancient city of Nakhshab are around the hill of Shâkâk-tâp (cf. Mahdî Kânî, Turâkhi-nâdîrî on the events of 1199) which marks the site of the old citadel, already in ruins in the xivth century. 2. As a result of the erection of the Mongol palaces somewhere to the south of the river, the town began to shift southwards, and at the end of the xivth century when Timûr built a citadel there it must have occupied in part the site of the modern Karshî. 3. The remains of this citadel (which Shamshîbî Kân and 'Abd Allah Kân besieged in vain) ought to be sought near the ruins of Kallâ-yi Zâhîr-i Mârân (about 2 miles S.W. from Karshî).

NAKSHABDJ SHAHSH AH Diva al-Din (d. 751 =1350), a famous Persian author (not to be confused with the famous Sufi Shahsh Ahb Turab Nakshabdj, d. 245 = 860). Very little is known of his career.

His nisba suggests that he came from Nakshabdj [q.v.], but he went to India where he became a murid of Shihsh Fadl, a descendant of the celebrated Shahsh Hamid al-Din Nangar. The Akhbar al-Akhbar of 'Abd al-Hajj Diliwli (Diliwli 1309, p. 104-107) says that he died in Baha‘u‘in after a long and contemplative life and that his tomb is there.

Nakshabdj was a prolific writer who used his knowledge of Indian languages to translate Indian books into Persian. His best-known work is the Tufi-i-nama ("Book of the Parrot") very popular in India and Central Asia, based on the Sanskrit Cukhamadhi (partly translated into Greek by D. Galanos, Athens 1851). In the preface to this book Nakshabdj tells us that one of his patrons showed him an old Persian translation of this work and persuaded him to do it again as the language of the old translation was too simple and artless. Nakshabdj set to work and made a book of 52 chapters (called "nights") replacing some stories which did not seem to him sufficiently interesting by better ones.

The book, completed in 730 (1330), is in the usual form of a framework with inset stories and is characterised by unusually fine language and bold metaphors and similes. Nakshabdj’s language however seems to have been too difficult and precious for later generations as by command of the Emperor Akbar, Ann l-Fadal b. Munbarak rewrote the book in a simplified version (Rieu, p. 753). This version was completely supplanted by Muhammad Kadiri (xviii century) who reduced it to 35 chapters. Kadiri’s version became the foundation of a large number of translations into Hindi (Awari and Ghauswala), Bengali (Caciquara Munshi), Turkish (Safii ‘Abd Allah Efendi, ed. Bu’lluk 1254 and Constantinople 1256) and Kashmiri. There is also a metrical version in Persian by Hammid Lehiyri (Bland, in J. R. A. S. i. 165). The same theme is taken by a number of popular versions which were disseminated in Persia in cheap lithographs under the title Cil (dilh) Tufi (*40 parrots*). The text of one of these was published by V. Zimkovski (St. Petersburg 1901).

Nakshabdj’s work was known in Europe as early as 1792 when M. Germain published a free English translation of 12 nights. Kadiri’s version was translated into German by C. L. I. Iken (Stuttgart 1829); this edition contains an essay on Nakshabdj and specimens of his Tufii-nama by Kosegarten. The Turkish version was translated into German by L. Rosen (Leipzig 1858). So far no complete translation of the original work of Nakshabdj has been published although there is a French translation in MSS. in Munich. E. Berteils has translated the book into Russian but this version is also still in manuscript. The eighth night was published in original text and German translation by H. Brockhaus (Leipzig 1843 and in Bütter für literarische Unterhaltung, 1843, No. 242, 243, p. 969 sqq.). Nakshabdj’s other works never attained anything like the popularity of the Tufii-nama but have almost all come down to us. Among them are: Cilare (*Scattered Roses*), a novel dealing with the loves of Ma‘yam-ahab and Nakshabdj (pr. by Agha Mahmud Kazi Muhammad Shirazi and K. F.

Aoe, Calcutta 1912, in Bibil. Ind.); Dastur-i-nahab-i-safa ("Particulars and Generals") also called Cil Ahmar (Rieu, p. 740), an allegory which deals with the descriptions of the various parts of the human body considered as the noblest work of God and as proof of His greatness; Ladkah-nahab-i-nahab, a Persian version of the Kasa-Satira, an Indian work on different temperaments and sexual intercourse; Silk al-Sulhik, a collection of sayings of celebrated mystics (lit. Diliwli 1893), and Na‘ib-i-m-Mawari, a brief treatise of a Sufi nature (Rieu, p. 736). His treatise Ashara Muqablah is only known from its mention in the Akhbar al-Akhbar (see above). All the mute processes of Nakshabdj are embellished with ‘fam’ scattered through them, which show that he was also an excellent poet.

(E. Berthels)

NAKIR. [See MUNKAR.]

NAKSHABDJ, MUHAMMAD B. MUHAMMAD BA’I al-Din al-Bukhari (717-791 = 1317-1389), founder of the Nakshabdj Order. His name, which signifies "painter," is interpreted as "drawing incomparable pictures of the Divine Science" (J. F. Brown, The Darmstatts, 2nd ed., p. 143) or more mystically as "holding the form of real perfection in the heart" (Miekh al-Ma‘ya quoted by Ahlwardt, Berlin Catalogue, No. 2188). The title al-Sa‘id which is given him in a dirge cited in the Naqshabdj means "spiritual leader". The nisba al-Uwaist implies that his system resembled that of Uways al-Karani. His Acia were collected by one of his adherents, Salih b. Mu‘mbarak. In a work called Maksikkat Sayyidin al-Sa‘id Naqshabdj, which furnished material to the author of Cilare al-Hayat (893 = 1488), and from which large citations, apparently in the words of Nakshabdj himself, but translated from Persian into Arabic, are given in the modern work al-Haddi al-arwa‘i fi Haddi al-Adil al-Na‘aband they by ‘Abd al-Majid b. Mu‘ammad al-Kashi (Cairo 1306). He was born in a village at the distance of one faranak from Bukhara, called Kusht Hinduwa, but afterwards Kusht ‘Arisan. At the age of 18 he was sent to Samara, a village one mile from Ramthana and three from Bukhara, to learn Sufism from Muhammad Bihis al-Samtar. In this person’s system the qi’ah was recited aloud; Nakshabdj preferred that of ‘Ali al-Daula ‘Abd al-Kaji, al-Ghadiwar (d. 575 a.h.), to recite it to himself; and this led to ill-feeling between him and the other adherents of al-Samtar, who however, it is stated, ultimately confessed that Nakshabdj was right, and on his deathbed appointed him his bhaiyya. After this person’s death he went to Samarkand, and thence
to Bukhārā, where he married, and whence he returned to his native village; thence he went to Nasaf, where he continued his studies under a khalīfa of al-Sammāt, Amīr Kulāf. He then lived for a time in villages near Bukhārā given as Zawartūn and Ahsikta, then studied with a khalīfa of Amīr Kulāf named ʿArif al-Dīk-kirānī for seven years; after this he spent twelve years in the service of the Sultan Shahsūrd, whose rise to sovereignty is described by Ibn Battūta (iii. 49), and whose capital appears to have been Samarkand. After this monarch's fall (747 - 757) he returned to Zawartūn, where he practised philanthropy and the care of animals for seven years, and read- mending for another seven. The last years of his life appear to have been spent in his native village, where according to the Rāgābātī he was buried. Vāmhīrā (Travels in Central Asia, 1864) gives Bavadīnī, two leagues from Bukhārā, as the name of the village which contains his tomb; whether pilgrimages are made even from the most remote parts of China, while it was the practice in Bukhārā to go thither every week, intercourse with the metropolis being maintained by means of some 300 asses plying for hire.

The biographies bring him into connection with various places and persons. At Herāt a banquet was given in his honour by the Amīr Husain (b. Ghīyāth al-Dīn al-Aqīfī; cf. Ibn Battūta, loc. cit.), where in spite of the Amīr's assurance that the food had been honestly obtained, Naḵšbandī refused it, and it had to be given away in charity. He was with this prince also at Serkhānī. Two or three pilgrimages and visits to Baghdād, Nisābūr and Tabrīz are mentioned. His sayings were collected by Muhammad b. Muḥammad al-Hāfīz al-Bukhārī at the request of Abī Ḥafs al-Dīn ʿĀṭar al-Bukhārī (d. 802 Ḥ.). (Brit. Mus. Add. 26.294). Persian writings by him are mentioned in the Hāflābī.

(D. S. Margoliouth)

NĀKŪS (A.), pl. nāwābān, a kind of rattle used and in some places still used by Christians in the east to summon the community to divine service. It is a hollow pierced with holes which is beaten with a rod. The name, which comes from the Syrian nāqūsh, is not infrequently found with the verbs šasra or pāša in the old Arabic poets, especially when early morning is to be indicated, e.g. Ṭartura, app.; Laḥid, No. 19, 6; Z.D.M.G., xxxii. 215; Mutalammīs, ed. Völlers, p. 178, v. 6; al-ʿĀṣh in Nößeler's Diction., p. 26; Kūḥāl al-Aqīfīn, xix. 92. According to tradition, Muḥammad hesitated between this instrument and the Jewish trumpet before deciding on the call to prayer by the muḥdhdhīn (s. Āʾīlān).

(F. Buhl)

AL-NAMĀRA, a place in Syria. It is situated in the karra of al-Ṣafī on an eminence in the Wādī Ḥalūrā, which runs from the Djebel al-Dīta (Djebel al-Haswan) to the plain of Ṭubba, at the spot where it joins the Wādī Ḥalūrā. It corresponds to the Roman military post of Namara (Waddington, Inscriptions, No. 2275). Less than a mile S. E. of al-Namāra, Dussaud found the Nabatāean-Arab tomb inscription of the "King of all the Arabs", Maru ʿl-Kais bar ʿAmur, i.e. the Lakhmid Iruru ʿl-Kais b. ʿAmur, of the 7th-9th centuries, of the era of Ḫusayn (dec. 7, 328 A. H.), (cf. vol. i, p. 3829).

Three other places bore the same name in ancient times:

1. Namara (Waddington, No. 2172-2185), the modern Druze village of Nimra in the Djebel al-Hamān northwest of al-Mashhaf.

2. Namara, a village in Banatia, probably the modern Namir al-Hawa, N. E. of Dor.

Bibliography: Schamacher, in Z.D.P.V., xii. 291; xx. 211; Dussaud, Topographie, p. 341, 359 sq.

3. Namara, a village in Banatia, probably the modern Nāmir al-Hawa, N. E. of Dor.

Bibliography: Schamacher, in Z.D.P.V., xii. 291; xx. 211; Dussaud, Topographie, p. 341, 359 sq.

NĀMIK KAMĀL BEY. [See KEMAL MEKhED NAMIK]

AL-NAML, the Ants, the title of Sūra xxvii. of the Kurʾān, the whole of which was revealed at Mecca. Nōldeke puts it among the Sūras of the second period. It contains 95 verses. Its title is taken from verse 18: "When the armies reached the valley of the Ants, one of them said, 'O ye ants, return to your homes lest Solomon and his armies crush you without noticing it'." It contains one verse that was abrogated (verse 94 annulled by lx. 2).

Bibliography: cf. AL-NAML.

(Maurice Clermont-Ganneau)

NAMURD, also NAMRUDDH, NAMRUD, the Nimrod of the Bible, is associated in Muslim legend, as in Haggada, with the story of the childhood of Abraham. The Kurʾān, it is true, does not mention him but probably, as in many other cases, only from dislike of mentioning names. That Muhammad was acquainted with the legend
of Namrud is evident from the following verse:

"Do you not see how he disputed with Ibrāhīm about the Lord who had granted him dominion? When Ibrāhīm said: It is My Lord who gives life and death, the other replied: I give life and I slay. When Ibrāhīm said: God makes the sun rise in the east; do you make it rise in the west; then the liar was humbled" (II. 260). The Kurān exegists are probably right when they see Namrud here disputing with Ibrāhīm and also when they refer to Namrud the verse: "What did Ibrāhīm's people answer? They only said: Kill him, burn him; but God saved him from the fire" (xxix. 23).

The legend is already richly developed in Tabari, but it is at the beginning of the romance of 'Antar in the Abūmīrīn that we find its most elaborate development.

Tabari already numbers Namrud among the three or (with Nebuchadnezzer) four kings who, like Sūlaimān b. Dāwūd and Dhu 'l-Karmān, ruled the whole world. His astrologers told him that a child would be born who would overthrow his kingdom and destroy his idols. Ibrāhīm thus becomes one of those heroes of legend who are persecuted from the moment of birth by a tyrant, to whom they are destined to prove fatal, like Moses, Gilgamiš, Semiramis, Sargon, Karna (in the Mahābhārata), Trakhan (King of Gilgit), Cyrus, Perseus, Telephus, Aegisthus, Oedipus, Romulus and Remus, Jesus (see Frazer, Folklore in the Old Testament, ii. 437-455). Uša, the wife of 'Azār or of Tārikh (Teraib), is able to deceive Namrud and his searchers. Ibrāhīm is born in concealment; maturing rapidly, he engages in a religious dispute with Namrud; Namrud cannot be God for God gives life and death. Namrud replies that he can do this also for he can execute or pardon a man condemned to death. Namrud has Ibrāhīm thrown into the fire; it becomes a cool health-resort. An angel keeps Ibrāhīm cool at which Namrud reveals his identity: Nebuchadnezzer at the preservation of the three young men in the fiery furnace (Daniel iii. 24 sq.). Namrud resolves to attack the God of Ibrāhīm in his heaven. He feeds four young eagles on meat and wine till they are of a great size, ties them to the four corners of a chest, fastens a spear at each corner with a piece of meat on the point and sits in the chest; the eagles, trying to reach the meat, fly higher and higher. The mountains appear like antheans and later the whole world looks like a ship in the water. It is in vain however for he falls to earth. Next he builds a tower in order to reach the god of Ibrāhīm, then the tongues are confused; in place of one Syriac tongue, 73 arose. God's angels admonish Namrud. But he equips his armies against God. God envies an army of gnats against him, who eat the flesh of the blood of Namrud and his men. A gnat enters Namrud's brain through his nose. For 400 years he had exercised his tyrannical rule and for 400 years he was tortured by the gnats until he died.

Muslim legend derives the name Namrud from namrudaka: he who rebelled (against God). But there is another derivation, viz. from namraa "tigress" in that version of the Namrud legend in which Namrud is snatched by a tigress. This version resembles the Romulus and Remus story (Jean de l'Ours) and culminates in the Oedipus story for Namrud, brought up unknown, kills his father and marries his mother. Al-Kīšī has preserved this version and it is given at greater length in the introduction to the romance of 'Antar.

Namrud's father Kanān b. Kūsh has a dream which troubles him; it is interpreted to mean that his son will kill him. The child is born, a snake enters his nose, which is an ominous sign. Kanān wants to kill the child, but his mother Sulkuh'na entrusts him secretly to a herdsman; the latter's flock scatters at the sight of the black flat-nosed infant. The shepherd's wife throws the child into the water; the waves wash him to the bank where he is awoke by a tigress. Already dangerous when quite a boy, as a young man he becomes a robber leader, attacks Kanān with his band, kills him (without knowing that he is killing his father), marries his own mother and becomes king of the country and later lord of the world. 'Azār (already in the Kurān the father of Ibrāhīm) builds him a marvellous palace flowing with milk, oil and honey, with mechanical singing birds — in the medieval epic the wonderful feature of the Chrysolirion in Byzantium. The lore of astrology, the inheritance of Idris and Hermes he acquires by force from the pupils of Idris. Ibīs teaches him magic. He has himself worshipped as a god. Then dreams, voices and omens frighten him. In spite of all Namrud's cruel orders, Ibrāhīm is born, brought up and soon shatters the belief in Namrud. Namrud throws those who believe in God to the wild animals but they do not touch them. He denies them food; the sand of the desert becomes corn for them; on every grain of it is written: "gift of God". Namrud throws Ibrāhīm into the fire but he is unharmed. Namrud builds up a pile of fuel, the flames of which burn the birds for miles round — it is impossible to approach it. Ibīs then designs a ballista which hurls Ibrāhīm on to the flaming pile. Ibrāhīm spends the finest time of his life there under blooming trees and amid rippling brooks. Namrud then decides to attack the god of Ibrāhīm in heaven. Starved eagles fly up with his litter; until he is about to say the first heaven is 500 years in width, it is 500 years between heaven and heaven, then comes infinity. Namrud shoots an arrow against God; the arrow comes back stained with blood. Namrud suddenly becomes grey and old and falls to the ground. But he plumes himself on having slain God. Then a gnat puts an end to his life.

The history of the Namrud legend. Very little can have been taken from the Bible. Kurān expositors and collectors of legends call Namrud asbūr (tyrant) no doubt after the gībbur applied to Namrud in the Bible (Gen. x. 6); Geiger also sees in asbur 'umād (xi. 62) an allusion to Namrud. Tabari (l. 217) also describes Namrud as a muhrajābīrī. Muslim legends and Haggada describes: Aswāl, in Pers. Sīrān on Esther l. 1; Midr. Habadol, ed. Schechter, p. 180-181; Gaster, Examples of the Rhages, N. 1) make Namrud ruler of the world. From Haggada comes the association of Namrud with the Tower of Babel and in particular with the childhood of Abraham and in particular with their escape from the fire (Gen. Kabbah, xlix. l.). The death of Namrud caused by the gnat is also based on Haggada, which makes Titus, the destroyer of the Temple, die in this way. Nebuchadnezzer comes to a similar end (see Grünbaum, Neue Briefer, p. 97-99). The flight to heaven especially in the romance of 'Antar with the intervals of 500 years recall the ascent of Nebuchadnezzer in
As the personal interpretation is not sufficiently explained by meanings, known to be really old, of the true Arabic word nāṣūh (root n-s-m) which exists alongside of the Greek loanword, and meanings like “the trusted one, confidant of a secret” seem rather to come from the Greek loanword already known in its reference to Ḥijri (against Doey, Supplement, s.v.), it was natural to look for a specific use of the word nāṣūh which admitted of a personal interpretation and could at the same time have been known to the Arabs. Nyberg was reminded by the nāṣūh doctrine of the Jewish (al-Safaf, see below) of the pseudo-Clementine writings, and T. Andrus desires the nāṣūh of the Waraka tradition from the nāṣūh nāsūh of the pseudo-Clementine, which according to the book Ḥajjīma Ẓāygī was revealed to Adam and afterwards again appeared to all prophets worthy of such an honour, lastly to Moses and to Jesus. However startling the agreement of the conception of nāṣūh nāsūh with the later forms of the Waraka tradition, the question still remains open, by what way a personal conception of nāṣūh could have entered Islam. Bandunark quoted a passage from the Iturgy of St. James of Jerusalem: κύριε ἀγαθέ, ἰδίῶν δέ νασοῦ, ἐπιθυμηθείσας δέ τινι προφητείᾳ, and observes that the Iturgy was the authoritative formulary in the region, in the east it is already expanded in an Arabic translation. It is really quite natural to understand ἰδίῳ personally here. No explanation of our Waraka tradition can on the other hand be obtained from Mandanian writings as Libsharseh has already pointed out in his translation of the Iturgy, p. 247 sq.

There is a true Arabic word nāsūh which has already been mentioned. The dictionaries give such varied meanings for it, that we can only consider as old and original those that are confirmed by quotations. This holds for the meanings “hiding place, hunter’s hut, monk’s cell” probably also for “hunger, mide” as women agents from nāsūh to “beast”. On the other hand, not only the meaning “cunning” and its derivatives must be secondary, but also the already mentioned meanings referred to persons, the latter especially because the word so far as we know, is used also in the later literature predominantly in the material sense and the person connected with the idea is called shēkh al-nāsūh etc. (counter-example: Doey, s.v.). Just as the material meanings predominate generally, so also does the meaning of the Greek loanword predominate, apart of course from the old poetry, from which the meaning “midgo” and particularly the word nāṣūh “mosquito net” have survived into the modern vernacular. Below we shall therefore deal only with the development of meaning of the Greek loanword.

The favourite meaning is ásívne law, with or without the addition of lišī. This law is revealed through the prophets, and only men of prophetic spirit can be nāsūhu nāsūh in this sense. The double character, political and religious, of the Muslim constitution naturally very much favoured this conception. Thus, for example, al-Kaljīaskandari, Shēkh al-Aḥṣa’, 1, Cairo 1903, p. 280 gives as the first among the “law shah’s, shēkh al-nāsūh al-so’aḥza” N. Bandunark. Ibn Ṣina expressly observes in his encyclopaedia Aṣām al-ʿilm al-aḥṣā’ (in Mardīf al-Rāsī, Cairo 1938, p. 250 sq.) in treating of politics that the pertinent works of Plato and Aristotle understand
by apoc "cunning" and "inscr", corresponding to the usage of the vernacular, but sense, revelation, etc., for the laws of the community are dependent on prophecy and the divine laws; similarly Surengeur, Dict. of Technical Terms, I. 40. Allah al-Malakûl al-Tawhidî devotes the fourth of his 1437.lâlîk to the nūmâs al-tâlî (new ed., Cairo 1929).

Here we may mention Miskawî's (Ibn Miskawî's) definition which is also of literary interest. In connection with his discussion of the function of the dinâr as a measure of the equivalence (kârîq) of service and reward (Tabâkh al-Ashâb, ma'âsî, i.e., e.g., Cairo, Khairiya, 1322, p. 39), he quotes an alleged saying of Aristotle according to which the dinâr is a just nūmâs: Nūmâs, he adds, in striking contrast to Ibn Sina, means in Greek, sykôs and pollûs [q.v.]; Aristotle says in the Eth. Nic., the greatest nūmâs proceeds from God, the second is the judge, the third the dinâr; the first, as a condition for just settlement between the claims of men, is the example which the two others follow. The well-known situation of the Musliun books on Hellenic ethics has resulted in this explanation finding a place in late derivatives from Miskawî, e.g., in Naqîr al-Din al-Nishâ, 'Ali b. Mâlik al-Khâlidî, al-Gharîb al-Mutâlibî, al-Istikhârî, Tahâ b. al-Mu'ayyad, Tahâ b. al-Mu'ayyad, Tahâ b. al-Mu'ayyad, Tahâ b. al-Mu'ayyad, Tahâ b. al-Mu'ayyad, Tahâ b. al-Mu'ayyad (1322, p. 151), also in Kinhâhî, All b. 'Abî al-Mâlik al-Hâmînî (al'Alî, 1348, i. 7, p. 78) and each more fully than the preceding. As a result of these explanations al-Miskawî in the economic part of his book (ii. 2, p. 234) calls gold briefly the smallest nūmâs (translation in Fihrist, Der Schatzkasten des Neuplatonikers Bryson, 1928, p. 63), and Kinhâshî also follows him (ii. 2, p. 7).

The nūmâs doctrine of the lkhwân al-Safā can only be briefly outlined here. In part ii, p. 56 (Bombay ed.), the nūmâs is defined as a spiritual kingdom (nâma iskâla, 'abâb) which is upheld by 8 kinds of men. God appears as the diwâ al-nūmâs. Ŝâbîl al-nūmâs is from the context of Muhammad, as far as one can identify from the context any individuals in the pages of the lkhwân al-Safâ. A few pages later Muhammad is described as the maîl al-nūmâs. In part iv, p. 57, the angels appear as teachers of the ašâb al-nâma iskâla. Any one who does not guide his life according to the commandments and prohibitions of the latter, has no share in divine nūmâs (iv. 147). This spiritual kingdom is the element of the lkhwân al-Safâ; they start in the cave of their father Adam [q.v.], for a long period until the fore-ordained time (maîl al-nūmâs) came under the rule of the Lord of the greatest nūmâs (Muhammad), and they perceived their spiritual state (nâma iskâla) which was raised in the air and from which Adam and his wife had been banished (iv. 107). If the lkhwân al-Safâ by common effort and uniform self-instruction succeed in building a perfect spiritual state (fâhîsh, cf. al-Fâhîsh), this state will belong to the kingdom of the Lord of the greatest nūmâs, who has dominion over souls and bodies (iv. 211). The nūmâs: thus even becomes a kind of divine being, where there is a discussion of the "philosophic service of God", which represents the highest stage of humans in comparison with that of the Muslim teaching regarding obligations and duties. This philosophic service of God had been, they say, practised by the ancient Greeks on the first, middle, and last day of the month. The night of the first day was divided into three parts. The first was spent in worship of the nūmâs, the second, in meditation on the maîl al-nūmâs, the third in humble prostration before the Creator, confession of sins and repetition of prayers by Plato, Idris and Aristotle until the break of day (iv. 273 sqq.). Nevertheless, the author here has not exactly taken the place of God. But in several passages of the encyclopedia he is represented as giving names. Thus he calls the ruler of the planets angels (ii. 97); cf. iv. 244); he does the same with the natural forces (ii. 102) and (iii. 10) with the nature of origin and decay. Above the spheres (nâma iskâla) of the three kingdoms of nature and of man is the sphere of the divine nūmâs, whose members deal with the affairs of the nâma iskâla and the divine revelations and which corresponds to the "surrounding" (šîhk) sphere of the astronomers (iv. 251). As the nūmâs and the ability to become creative in him involves a special organization of man, he has found an allegorical place in the physiology and psychology of the lkhwân al-Safâ; here indeed the conception changes from page to page. Thus in the first part of the work (2nd half, p. 48) five kinds of soul are described, two above and two below that of man. The former two are the soul of the angels and the divine (šâhîd) soul, one of which is the stage of the soul of wisdom, the second that of nūmâs-prophethood. On the very next page the one is the intellectual soul of wisdom and the other the nūmâs-like angel soul. On p. 54 we find the following gradation: nature, soul, intellect, nūmâs. Nature receives through the soul free-will, through the intellect the power of thought and through the nūmâs command over actions and prohibitions. The parts of the soul are as follows: vegetable, animal, logical (human), intellectual (wise), nūmâs-iyya, angels, which latter serves the nūmâs. Here again there is the tendency to pantheism. It is in keeping with this when in lv. 119 (cf. also lv. 146) the story of Socrates in prison (in agreement with the Greek tradition and mentioning the Phãrûs) it is related that Socrates will not escape from prison: for fear of the nūmâs; he justifies his attitude with the words: "He who does not respect the nūmâs is slain by it". Then immediately afterwards the nūmâs is identified with the shâfr, it is difficult to say whether this is serious or only done out of caution. It is nevertheless remarkable that the sixth essay of the fourth part which treats of the nature of divine nūmâs, of the qualifications for prophethood and the qualities of a prophet, does not contain the word nūmâs at all but instead of it always has shâfr. The lkhwân have spiritual powers of their own; these form a series of four stages, the third of which is the furmân nūmâsîyya; man attains it at 40 and it is the special characteristic of kings and rulers. Possessors of this power are called the distinguished and noble (futâsh, kîrâm) brethren. Above it is only the furmân malâhîyya (lv. 134 sqq.).

The origin of the meaning "cunning" cannot be given with certainty; it probably comes from the Arabic meaning "place of concealment". The term that it was particularly common in the spoken language is evident from the quotation given above from Ibn Sina. In any case this meaning has undergone a remarkable amalgamation with the Greek *law* in the literature of magic for the word is there used for magical formulas, particularly those which are based on illusions of the senses. The pupil of al-Anîshî [q.v.] in his
Dhulon the latter’s Tefkhirâ, s.v. sâniyât (III, Cairo 1924, p. 56), gives the mushroom as the first section of the science. But the meaning of the word is not limited to this kind of magical formulæ.

Through translations from the Arabic the word entered the Hebrew literature of the middle ages with the meaning “law, religious law (of other peoples), morality, propriety?” In the latter meaning it has survived in the modern Hebrew vernacular. It is interesting to note that in the modern dialect of Macc a similar change of meaning is found; according to Snouck Hurgronje, Mekhanische Sprichwörter, No. 16, mânulu means the “sportless, honourable name” which one has among men; its opposite is der “shame.”

The word mânulu also plays a considerable part in the title of books. The “greatest mânulu” also occurs as the title of a book; cf. Ivanov, Catalogue, l. 335 sq.

On the Arabic poetry: the dictionaries; Fleischer, in Z.D.M.G., xii. (1858), p. 221 sqq.; some other meanings in Dovy, s.v.

On titles of books: Steinschneider, Hebr. Übers., p. 527; Cat. Litt., iii. 306.

(M. Flessner)

NÄR. [See DIAMHANAM.]

NARSHAKI, Abû Bakr Muhammad b. Zafar (d. 348/959), author of the “History of Bukhara,” the original Arabic version of which he presented to the Khlanid Nuh b. Nasr in 332/943–444). In 332 (1138–1139) the book was translated into Persian by Abû Nasr Ahmad b. Muhammad al-Kuhâbî who omitted several “fodious” passages. Then in 574 (1178–1179) Muhammad b. Zafar prepared a new abbreviated edition of the book which he presented to Abî ‘Abd al-Azîz b. Barhân al-Din, governor of Bukhara. Finally an unknown author continued it down to the Mongol conquest. It was in the last form that the book was published by Scheler. The book contains many interesting notes on the situation in Central Asia before and after the siege and details not found elsewhere of the Arab conquests (from Muhammad b. Zafar). The Persian translator added further details on the works of Abu 1-Hasan, Abû al-Kalâmâ b. Mahsâmad al-Nâshâpî and probably from Abu 1-Ishak ibn al-Sulî, d. in 243 (857). The information about the townships of the district of Bukhâr’s, their monuments, their products, their old customs (such as litanies for Sîwâlsh, p. 21) is very interesting.

§ 2. Nâsâ in Hamadân perhaps cor-
responds to the Nisāyat placed by the inscription of Darius (Behistun, i. 13) in Media. It is possible that the reference is to the plains of northern Luristan [q.v.] (Alishtar, Khabā), where the well-known bronzes of Luristan were found; cf. Minorsky, in Apollo, London, Feb. 1931.

(\textit{V. Minorsky})

\textbf{NASAFI, [See NĀṢABN̄I]. AL-NASAFI, nāba (cf. \textit{NASAF}) of several eminent persons of whom the following may be mentioned:

1. Abu 'l-Muqīn Mālikī b. Muḥammad b. Muḥammad b. Abū 'l-Makki Al-Hanafi Al-Nasafi (d. 1183 = 1764), one of the four scholastic positions in that between the of the period, as represented by 'Abd al-Ḳāhir al-Baghdādī [q.v.], who is still endeavouring to found a convenient arrangement and an adequate formulation of the contents of \textit{Jāmī'a}, and the younger mutakallim who use at hand the necessary mutannabbīs for ready use. Of his works the following are known to me:

1. \textit{Tanjīḥ il-Kawā'ib al-Tawābūn} (Cairo, MS. 2417, fol. 1–30; cf. Fikrist ... Mīrji, ii. 51), a treatise in which the contents of the creed are proved according to the scholastic method. The first chapter consists of an exposition of the doctrine of the existence of the concept of the existence of the immanent. The work closes with a brief introduction to the Doctrines in an abridged form;

2. \textit{Tajjīrāt al-Affāla} (Cairo, MSS. 2287, 6673; cf. Fikrist ... Mīrji, ii. 8), an elaborate work on dogmatists of nearly the same scheme as the \textit{Tanjīḥ}; 3. \textit{Bahār al-Kulūm}, printed at Cairo 1129 (1911), differs from the two foregoing works in so far as it deals with heresies and is polemical. It is identical with \textit{Maḥbūbat al-Sarwa wa 'l-Qamṣa wa l-İfāq al-Dalāl wa l-Mukhšas (Leyden, cod. or. 882) also as well as with 'Aṣīr (Berlin, No. 1941); cf. Ashwardi, \textit{Verzeichnis}, ii. 400). The work is preserved in several libraries under one of these titles (Broedkellmann, G. A. L., i. 426, where the number of five works must be reduced to three).

\textbf{Bibliography:} in the art.; cf. also Hājjīj Khalīfat, ed. Flügel, index, No. 6453.

II. Abu Ḥanīfā 'Umar Nāṣaj al-Dīn (d. 537 = 1142), jurist and theologian. Of his works the only one edited is the \textit{Aṣīr}, which has the form of a catechism. It became popular and was much commented, probably because it was the first abridged form of the creed according to the scholastic method of the new orthodoxy. In Europe it became known as early as 1433 through the edition by Careton (The \textit{Pillar of the Creed}, No. 2). For editions of and commentaries on this work as well as for the other works of this scholar that have come down to us, cf. G. A. L., i. 427 et al.

\textbf{Bibliography:} Broedkellmann, G. A. L., i. 428 and the references given there.

(\textit{A. W. Wensink})

\textbf{AL-NASAFI, ḤĀFIZ AL-DĪN ABU 'L-BARGĀT ABU 'AL-'ĀKHĀR B. 'ĀHMAD B. MAḤMŪD}, an important Hānafī legislator and theologian, born in Nasaf in Sogdiana, was a pupil of šūr al-'Ālim al-Kardāri (d. 642 = 1244–1245), Hamid al-Dīn al-Darāzi (d. 656 = 1256–1258), and Bādī al-Dīn K̄hwāshāzī (d. 651 = 1253). He taught in the Madrasa d̄aṣ'ītha al-S̄ālihīya in Kirmān, came in 710 to Baghdad and died in Kāfīr 1710 (August 1350); according to Karājā and Ibn Tāhirībird (70) apparently on his way back to Ḥādjīl (in K̄hūzestān), where he was buried. His pupils were Muẓaffar al-Dīn ibn al-Ṣaltān, author of the \textit{Maḥfūz al-Ṭabī'ān} (d. 694 = 1294–1295), and Ḥājjī al-Dīn al-S̄īghānī, a commentator on the \textit{Mujāhid} (d. 714 = 1314–1315) (cf. \textit{al-Maqāmmīn}).

The best of his works is thought to be the \textit{K̄hūṭ al-Mahānī fi 'Uṣūl al-Fīlā}, a concise account of the foundations of law (Dehīl 1780, Constam 1326 and often later); there are numerous later commentaries but he himself wrote two, one of which is entitled \textit{K̄hūṭ al-Ṭārīq} (2 vols., Bābāk 1316). Out of his original plan of writing a commentary on the \textit{Mujāhid} of al-Margīhīnī [q.v.], there came the lawbook modelled on it \textit{K̄hūṭ al-Wāṣfī, on which he composed in 684 a special commentary, the \textit{K̄hūṭ al-K̄afī} (delivered in lectures in Kirmān in 689). He had previously prepared a synopsis of the \textit{Wāṣfī} entitled \textit{K̄hūṭ al-Dālibī} (Cairo 1311, Lucknow 1294, 1312, etc.) which Ibn al-Ṣaltān in 683 (this is no doubt the correct reading for 633 in Kāfīrī) told him to deliver in Kirmān. This synopsis was used as late as the sixteenth century in Damascus and at the later in Cairo (v. Krüger, \textit{Mittelt-Syrisch u. Damascius}, Vienna 1853, p. 136; do., \textit{Egyptian}, Leipzig 1863, ii. 51). The best known printed commentaries on the Kasān are: a. \textit{Tujābīn al-Maḥfūz of al-Zahrawi} (d. 742 = 1342–1343) in 6 vols., Bābāk 1315–1315; b. \textit{K̄hūṭ al-Maḥfūz} of al-A Ḥāini (d. 833 = 1451) in 2 vols., Bābāk 1285 and 1299; c. \textit{Tujābīn al-Maḥfūz} of Muḥāfa Miskīn al-Murawī (written in 811 = 1408–1409), Cairo 1294, 1305, 1312, 1318, \textit{Tanjīḥ al-Maḥfūz} of al-Tālī (d. 1192 = 1778), Cairo 1307 etc.; c. the most important: \textit{Aṣīr al-Maḥfūz} of Ibn Nūgānī (d. 970 = 1562–1563) in 8 vols., Cairo 1334.

He also wrote a series of commentaries, e.g.: two on the \textit{K̄hūṭ al-Naṣāf} of Najīr al-Dīn al-S̄āraqī (d. 656 = 1258) entitled \textit{Makānīn} and \textit{al-Makānīn}; on the \textit{Manṣūrah of Nāṣaj al-Dīn Abu Ḥanīfā al-N̄as̄afi (d. 537 = 1142–1143) on the differences of opinion between Abu Ḥanīfā, his two pupils, and al-Shāfi'ī and Mālik entitled \textit{Mustaṣ̄affī} as well as a synopsis entitled \textit{al-Maṣāfā} (finished on 20th Shabān 670); cf. Broedkellmann, G. A. L., i. 428; also on the \textit{Mustaṣ̄affī al-Dīn al-Dabball̄i of Ahmadī (d. 644 = 1249–1249; Ibn Taghribīrdī, Hājjīj Khalīfat, No. 13095). On the other hand, he did not write a commentary on the \textit{Mujāhid}, as Ibn Kuṭūlūhī and Ḥājjī Khalīfat, ed. 484 say (cf. the story of the origin of his \textit{Wāṣfī} according to al-İkṣāṇī [d. 758 = 1357]) in Ḥājjī Khalīfat, ed. 419). He also wrote a commentary on the \textit{Mujāhid}, \textit{Aṣīr al-Maḥfūz} of \textit{al-Tawābī} (printed in 2 vols., Bābāk 1279, Cairo 1308, 1326).

His confession of faith \textit{al-'Umda fi 'Uṣūl al-Dīn} (apparently also called \textit{al-Manāhī fi 'Uṣūl al-Dīn}: Karājā, Ibn Duṣ Ṣmād) became known quite early in Europe from Careton's edition (\textit{Pillar of the Creed}, London 1843). In it he closely follows the \textit{Aṣīr} of Nāṣaj al-Dīn al-N̄as̄afi (see above) and also wrote a special commentary on it: \textit{al-Firādāt bi-\textit{Aṣīr}}

A. Before Islam.

A complete investigation of the materials for the history of Christianity in Arabia and among the Nabataeans has not yet been made, and only the principal facts can be summarily given here.

Christianity naturally spread into Arabia from Syria and al-Tisht though no date can be given for the earliest infiltration. Bishops of the encampments are early mentioned but they should probably be assigned to Syria. Arab Christian history may be said to begin with the conversion of Ghasan [q. v.]; the chief al-Harith b. Djabāl was an ardent monophysite and in A.D. 542 or 543 he persuaded the empress Theodora to appoint Jacob Baradaza as bishop of Edessa with a wardening commission, and Theodore as bishop of Bostra in the monophysite cause. Nestorian Christianity came to Ibrahīm [q. v.] at an early date. Its bishops are often mentioned from A.D. 410 till 518 B.C. and a monastery was built there by 510. Three Nestorian patriarchs were buried there. Al-Mundhir III (d. 534) [cf. LAKHM] was a pagan though he had a Christian wife, who built the convent called after her Dar Irī, while some of the notables were also Christian. Theological controversy in the Greek empire drove many monophysites into exile in Ibrahīm; in 518 a monophysite monastery existed, and from 557 monophysite bishops are recorded. Na'mān III was converted c. 593 by the Nestorians.

Nestorian missions followed the trade routes, one of which followed the coast. Bishops in the district of Bahrayn are recorded in 575 and 676, in the island of Samāhā in 410, and in Uman in 444. Another route was across the peninsula. One story says that Nadjar was evangelised by a native who was converted in Ibrahīm; another sends monophysite exiles thither from Ibrahīm, while a third brings the evangelist from Syria. Christianity had probably reached Nadjar before 400. The Abyssinians invaded south Arabia in the beginning of the sixth century and conquered the country. As soon as they had withdrawn, a chieftain Mārib or Dhū Nuwās, who was a Jew by religion, attacked and persecuted the Christians not only in Nadjar but also in Hadramawt in 525. A second Abyssinian expedition defeated Mārib, who was slain or drowned, and Abyssinian rule was firmly established. Probably these expeditions were part of Greek policy to set up an obstacle to Persia and crusading motives were secondary. The invaders would have introduced the monophysite faith if it was not already present. When the Persians conquered south Arabia they naturally then favoured the Nestorians. The great church of San'ā's seems to have been built on the site of a pagan sanctuary and a Nestorian bishop was appointed c. 590 A.D. [cf. ABRAHĀ, ĪMAYAR, San'ā'].

From the borders Christianity penetrated into the interior. Bishops are recorded at Alla [q. v.], Dūma [cf. DAWI] and Ta'imā, and most of the tribes in the north had some knowledge of the faith even if the saying attributed to Alla, "All they know of Christianity is wine-bibbing," is exaggerated. The tribes most affected were, in the west Salīb, Ghasan, Djuddrām and Lakhm, in the east Ta'ilāb, Bakr with Iḍālī, Ṣanīfa, Rabī'ah, Tamīm and Ta'ilāb, and in the centre Ta'īr with Thalāt and part of Ta'ilāb.
treaties, the best known of which is that concluded with the Christians of Nadrān [q.v.]. By the terms of this treaty, the latter were allowed to keep their religion and manage their own affairs, if they paid a fixed tribute, entertained the Prophet's representatives for a month, gave certain supplies in the event of a war in the Yemen, and abstained from usury. To the same period belongs the generous act of mercy command given in the Kunān (ix. 29) to fight against those who had received a book until they pay tribute (here called al-dā'iyu, q.v.) and are humbled.

The conquests of Khalid b. al-Walid suddenly made the problem acute. During the reign of 'Umar it was solved, like all the problems of the state, in a hand to mouth way, usually by applying the precedent of the Nadrān treaty. Hira, the cities of Syria and Mesopotamia made individual treaties with the Muslim commanders; the terms differ in detail, but all include a fixed tribute. Muslim governors were set over the provinces and big towns, but the minor officials were not changed. The people paid much the same taxes as before and there was little interference with their social and religious life. Sometimes a church or part of one was taken and turned into a mosque; more often, probably, churches and monasteries were respected, as also were existing property rights. Thus in the occupation of al-Irāq there was a movement among the tribes to seize the conquered lands, and it would seem that a district was for a time assigned to the tribe Badīja (cf. Baladḥūrī, p. 257 sq.; Kihāb al-Umān, iv. 192), but in the end 'Umar applied the precedent established by Muhammad on the conquest of Khaibar and left the conquered lands to their owners, to be administered as a trust for the benefit of the conquerors [see art. KAI]. On the other hand, he exiled the Christians of Nadrān to al-Irāq so that "there might be but one slave in Arabia," though isolated Christians lived in al-Ma’mūn itself. 'Umar had a Christian slave who was set free at his death (Ibn Sa‘d, vi. 110), and Abū Mīsā had a Christian secretary who accompanied him to al-Ma’mūn. 'Umar is represented, even in Christian sources, as friendly towards Christians, and in his last charge he recommended the dhimmī to the care of his successor as "the support of your families."

During the following decades the treatment and status of Christians shows many contradictions, and was often determined apparently by individual caprice. While new churches were built even in towns founded by the Arabs, such as Fustāṭ and Baṣra, and the caliph even helped to restore the church at Edessa (Corp. Script. Chr. Ori., ser. iii., xiv. 288), in many other places churches were destroyed, and both Mu‘āwiyah and 'Abd al-Malik tried to seize the cathedral at Damascus before al-Walid finally incorporated it in the mosque. Christians continued to hold high offices in the administration. Mu‘āwiyah had a Christian secretary, Sarāqīn, who was succeeded by his son, and 'Abd al-Aswāh had as his treasurer a wealthy Christian, Anatassius, though 'Abd al-Malik despised him of much of his wealth. State accounts in Syria and Egypt were kept in Greek until the reign of 'Abd al-Malik, and local accounts in Egypt were still kept in Greek for long afterwards. There were Christians in the Muslim armies, and some gave military service instead of tribute. When the Djārūdīm of Mount Lebanon were defeated, a clause in the treaty stipulated that they should wear Arab dress (Baladḥūrī, p. 161). Yet there was some persecution as well as cases of forced conversion. Jews were settled in some of the conquered towns because they were enemies of the Christians (Baladḥūrī, p. 127). The Jacobites paid a special tax to Mu‘āwiyah (Corp. Script. Chr. Ori., ser. iii., 70), and the government sometimes prevented the election of a patriarch. The Christian Arabs of Mesopotamia formed a special category; these paid double sa‘ād instead of tribute, but a chief of Taghlib was savagely tortured because he would not renounce his faith. Personal relations between Muslims and Christians were often friendly. It is said of a poet that "he never made love poems about the wife of a Muslim or a dhimmī" (Kihāb al-Arūf, iii. 291). 'Abū Tābah showed great honour to Abū Zubayd, and the relations of 'Abd al-Malik with the poet al-Āḏīyīr are notorious [see art. AL-ĀŜĪT].

From this time, however, the condition of the subject Christians began to deteriorate. 'Abd al-Malik changed the system of taxation in Egypt, Syria and Mesopotamia (Dionysius of Tell Maḥrēr, ed. Chabot, p. 10; Abū Yūsuf, p. 23 sq.), and introduced the personal tax on non-Muslims. In many districts the form of receipt was a leaden seal fastened round the neck or wrist. 'Umar II gave orders to dismiss all dhimmīs from government service, but such confusion resulted that the order was soon afterwards ignored. He was also the author of the famous "ordinances", in later times attributed to 'Umar I (cf. Abū Yūsuf, p. 73), which prescribed the restrictions to be placed on dhimmīs and the wearing of the sunnār [q.v.] as their distinctive badge. According to the Nestorian Chronicle [Patr. Ori., xiii. 650], this had earlier been the badge of Christian scholars.

By the end of the second century, as may be seen from the works of Abū Yūsuf and al-Shārīf, the customs governing the dhimmī were more or less fixed, but insistence on them depended on the whim of the governor and the temper of the populace. It was now accepted that no new churches might be built in towns where Muslims lived, though the old might be repaired. A governor's fancy or a riot might destroy churches and there was no redress; the cathedral at Ṣan‘a, for example, was destroyed for its wealth. At least six rebellions of the Copts took place during the century. Ḥarrān al-Ra‘īṣī renounced the "ordinances" forbidding Christians to be like Muslims in dress and style of riding; but during the reign of Ma‘mūn, the Christian headman of Birā in Egypt wore black on a Friday and rode in state to the door of the mosque, when his deputy entered and led the prayers. Their use of horses and riding saddles began to raise objection, and restrictions were placed on religious processions; crosses were sometimes tolerated though banners were forbidden. Taxation became heavier and cases of extortion are recorded. The caliph kept a careful eye on the Church and a patriarch had to get his approval and do him homage, often at a price. A discontented Christian found it easy to get government help in making trouble for his opponents. At this time Christian doctors became prominent as favourites of the caliph and they did not always use their influence in a Christian interest. Discussions on religion took place; at one, when Ma‘mūn was present, the Catholics, the Head
of the Dispersion, the heads of the Sibians, the chief priest of the fire temple and Muslim theologians took part. Many Christians were in government service or were secretaries to public men, and even the fanatical al-Mutawakkil had a Christian secretary. In 236 (850) this caliph intensified the repressive laws. A Christian had to wear a yellow palas and the same dress and a woman had to wear a yellow wrap out of doors. If he rode he must have wooden stirrups and two balls on the back of the saddle. Men (or slaves) had to wear the ghirof [q.v.]. They were to be dismissed from the civil service. All new churches were to be pulled down and the cross might not be displayed at festivals. Their graves had to be flush with the ground. Then they were to be deprived of their houses and wooden doors fixed to them. Four years later they were forbidden to ride horses and were told to wear two yellow dura. These laws are the limit of legal persecution and continued to govern in theory though not always observed in practice.

Christians were always to be found in the civil service; some even were connected with the army. In Egypt it was enacted that they should be present on Fridays when the Muslims were absent (Ma'rizi, Khattat, ii. 227). One was called wazir in the time of al-Mu'tamid; it seems, however, that the title had become cheap and he was only a high official (Yādū, Sīrah, ii. 136, 259). The first rulers to encourage Christians to the highest rank were the Būyids [see 'ΑΧΩΝ ΑΛ-ΔΙΑΛΔΑ] and the Fatimids. This was quite exceptional, but their strength and influence in the administration at all times can be seen from the constant complaints of the dishonesty of Christians in secretaries. More especially in the finance department they possessed a quasi-monopoly, which lasted in Egypt down to the nineteenth century.

That Muslim intolerance did grow more bitter is shown by comparing the accounts of al-Akkhāl in the Khut al-اذ-اذ with the remarks of Ibn Rashīd (Cīmda, i. 21). In later times the rulers were often more tolerant or far-sighted than the populace; nevertheless, additional taxes were sometimes laid on the ḍhimma. In Egypt an extra dinar was exacted from them between 1250 and 1256, in addition to the poll-tax, which was then called ḍiṭiyya (Ma'rizi, i. 106). At intervals fresh attempts were made to impose a distinctive dress upon them. Their request to wear white turbans with a badge was refused at the instance of Ibn Ta'imiya [q.v.] and in Egypt blue became their distinctive colour. On the whole, they were worse off than their Muslim fellow-subjects, for, while both suffered from oppression by the ruler, they were liable in addition to be attacked by their fellow citizens. Cases of mass conversion still occurred, but the disappearance of the large Christian population of northern Mesopotamia, which continued down to the late middle ages to be the chief centre of Christianity in the Muslim dominions, is probably to be connected with the general decay of agriculture there.

2. Legal Status. Here as elsewhere the facts of history do not fit the systems of the theorists, who condemned the laxity of the people on the one hand and the high-handedness of the rulers on the other. The general legal position and the legal view of taxation are outlined in the articles DHIMMA, ETVAVA and KHASAQ. To this outline some details may be added from the system of Malik, which is less liberal than that of Abū Hanifa. Malik taught that a treaty once made with ḍhimma cannot be changed. They may not enter mosques or Mecca and the blood money for them is half that for a Muslim. New churches may not be built in or near the towns of Islam though the old may be repaired. Malik, when consulted, said that a Christian, who had blasphemed the Prophet, should be put to death, and this was done. A Muslim may not borrow from them, nor become a partner with them in business unless he is present at all transactions. Another opinion would let them be sleeping partners. A Muslim should not rent land from them as a suqer, but it is not illegal, and one who is part owner of a house with a Muslim has the right of pre-emption. One, who is trading in his own town, pays no tax beyond the general tribute; if he goes to another town and buys goods with money brought with him, he pays the trade tax (litha), but there is no tax on the sale of these goods. ḍhimma must not kill sacrifices for Muslims; if they do, the sacrifices must be repeated. A Muslim woman should kill a beast rather than ask them to do so. If one marries a Muslim woman with the consent of her guardians, they shall all be punished, but if he pretended to be a Muslim, the marriage is invalid. They may not arrange a marriage for a Muslim woman nor a Muslim that of his ḍhimmī sister. Married ḍhimmīs are divorced by the conversion of the woman. Malik did not approve of the ḍhimmī foster-mothers for Muslim children. If a Muslim commits adultery with a ḍhimmī woman, he is punished according to his law and in the event his marriage or her co-religionists to be dealt with according to their law. The evidence of a ḍhimmī is not accepted. Should he be turned Muslim, his evidence is still not accepted (i.e. about things that happened while he was a ḍhimmī), consequently ḍhimmī women cannot give evidence about a birth. If a Christian buys or is given a Muslim slave, the transaction is valid, but the slave must be sold to a Muslim. Muslim law applies to all business dealings between ḍhimmīs, except marriage, though they may practise this among themselves. They may not be taught the Qur'an. A Muslim may not prevent his Christian slave from drinking wine, eating pork and going to church. It may be noted that Mawardi admits the possibility of a ḍhimmī becoming wazir (wazir al-tasfiq).

One authority says that eight acts put a ḍhimmī outside the law: an agreement to fight the Muslims, fornication with a Muslim woman, an attempt to marry one, an attempt to turn a Muslim from his religion, robbery of a Muslim on the highway, acting as a spy or guide for unbelievers, or the killing of any Muslim.

3. Social Status. The fact that Christians, like other ḍhimmīs, were citizens as it were at second remove, was of course reflected in their social position. The full consequences of this disability were to some extent mitigated by their numbers and influence in the public administration, and by their monopoly or quasi-monopoly of important professions. Christians were distinguished more especially as doctors (the family of Bukhtāshīh; Ibn Butlīn [q.v.], etc.) and druggists. A Muslim complained that he could get no patients in an unhealthy year because he spoke good Arabic and not the dialect of Dündaşbur [q.v.] and
were cotton instead of silk (Dhikhr, Nishā al-Hikahāt, p. 83) and al-Ghazâlî says that in many towns the only doctor was a dhîmiy. Some were rich, and it was often their impudent display which provoked the mob to violence. The prohibition of usury in Muslim law operated in favour of the dhîmiy as merchants and money-changers, and gave them the monopoly of such trades as those of goldsmiths and jewelers.

Apart from numerous instances of friendly personal relations between individuals, the generally good relations between the Muslims and Christians is shown by the universal celebration of the great festivals of the Christian year, and the holidays and fairs which accompanied the feasts of the patron saints at the principal monasteries (cf. A. Fischer, in Berichte über d. Verb. d. Schlöss. Ak. d. Wiss. zu Leipzig, Phil.-hist. Kl., 1929). Christians took part in the intellectual life of the community, and the books they wrote are named with approval by the Muslim historians. The strict letter of the law regarding non-Muslims was not always applied. While marriage to a Muslim was always forbidden, fornication with one was not always punished with death. At times the Muslim murderer of a dhîmiy was executed. Even the apostate sometime found mercy, on the ground that forced conversions were not valid. Christians kept Muslim slaves, both male and female, and acted for Muslims in business.

In spite of all this, the stigma of inferiority remained. The humiliating regulations, the need for constant watchfulness, the constant recourse to intrigue and influence to circumvent the law, the segregation of dhîmiy in many cities, all evitably sapped their morale. Still more serious were their legal disabilities; there could be no true justice for the dhîmiy when his evidence was excluded from the Muslim courts, even though jâlat were enjoined not to discriminate against them in other respects, nor could there be any permanent social relationship in the absence of intermarriage. It is not surprising therefore that the Christian communities of the East gradually dwindled not only in numbers, but also in vitality and moral tone.

The Ottoman Empire.

Since the period of the Tanzêmâr [q. v.] the Ottoman Empire has gradually abandoned the governmental traditions of Muhammadan states, and this change has fundamentally affected the treatment of its Christian subjects. On the other hand, this change was actually brought about by the very problems with which the Ottoman government became confronted through the existence of a large Christian population in its territory.

Up to the beginning of the 19th century the treatment of Christians in the Empire was, on the whole, in accordance with the prescriptions of the sharî'ah after the Hanafi madhab as to the treatment of dhîmiy, the chief authority on these questions being the Muftî Muhammad ibn Ibrahim al-Halabi (cf. the Constantinople edition of 1599, p. 90). Christians were subject to the payment of the jâlat-i gerân, more often called kharâf in Turkey (cf. these two articles), whence the expression kharâf-gerân. This tax was levied in three classes, according to the financial capacity of the payers. D'Ossian (Tableaux, iii. 494) says that in his time (about 1800) each year 1,500,000 tax-forms were issued for the non-Muslims, of which 60,000 were in the capital. The regulations as to the building and restoration of Christian churches were observed in principle; the Hanafi madhab allows the restoration of decayed churches but not of churches deliberately demolished; Sheikh Zâde, however, in his commentary on the Muftî (Madîm al-Anwar, printed Constantinople 1779, p. 415) complains that this distinction was not duly observed in his time (1666). From the 18th century, indeed, the building and rebuilding of churches was a subject of frequent intervention by the representatives of foreign Christian powers. The turning of churches into mosques by the Ottoman conquerors—such as the case of the Aya Sofia—was generally in accordance with Islamic laws of war. Likewise the prescriptions about clothing were observed and from time to time reinforced; as late as the 18th century certain sultans such as 'Othâmân III and Müs'tafâ III are known to have given special attention to this point.

We also find in the fâwânî-nâma—the contents of which were declared in accordance with the sharî'ah by the Sheikh al-Islâm—some special clauses about non-Muslims (jâlat). A fâwânî-nama of the time of 'ulema Sinân I prescribes that, in the case of certain crimes that are punished by fines, the fines of non-Muslims shall amount to only half the sum inflicted on a Muslim in each case (cf. the second fâwânî-nama, published as an appendix to T. P. E., iii. 3, 4, 6). The same fâwânî-nama gives directions with regard to the inheritance of non-Muslims.

The Christians thus constituted in the Ottoman Empire, just as in other Muhammadan states, a section of the population which, so far as their relations with the Government went, had minor rights compared to Muhammadans and to which the high functionaries of the state never belonged. They were improperly designated by the term roya, which word originally means all subjects of a Muhammadan ruler, in allusion to a well-known tradition which compares the ruler with a shepherd and his subjects with a flock (roya, cf. al-Bukhârî, Sunan's, lâb 11). Hence the use of the term roya in European works when speaking of the Christian subjects of the sultan. Glaser [q. v.] was more or less contemptuous in the phrase of Muslim circles. There had been, however, since the coming into existence of the Ottoman Empire, several circumstances that presented the problem of the Christian subjects in forms quite different from those prevailing in contemporary Muhammadan states. The
beginnings of the Ottoman state itself had been anything but orthodox. Eristic, according to most sources, was only a converted Muslim and 'Othman and Orkhan, the founders of the state, had many dealings with the Christian aristocracy of Byzantium, of whom joined readily the cause and the creed of the new conquerors. Christianity was at that time still widely spread in Asia Minor and was at first adapted to the rather unorthodox mystic form in which the Turcomans of Rum had made acquaintance with Islam. Large parts of the population adhered for centuries to a Christian-Islamic mixture of religious convictions, such as appeared in the derwisch revolt under Sultan Qayalal Din oglu Badr al-Din (cf. Babinger, in J., xi.), and as survived in the beliefs and practices of the Bektashis and the mixed worship of certain saints by both the Islamic and the Christian population. Survivals of this mixed creed were also observed among the so-called Crypto-Christians of Trebizond (cf. Hasluck, in Journal of Hellenic Studies, xli. 199 sqq.). It was only after the restoration of the Empire in the xvth century that the orthodox Islamic attitude prevailed in the government of the sultans, who repeatedly had to take strong measures against the heterodox elements.

During this same period it was of no less importance that the Ottoman Empire came to incorporate more and more territories in Europe exclusively inhabited by Christians. With the exception of eastern Thrace, northern Macedonia, Bosnia and Crete, the new subjects were never Islamized in great numbers; in the Empire they came to form a very considerable minority, which was counterbalanced only by the large Muhammedan population of the Asiatic territories. So long as the government and the Muhammedan ruling class were strong, this did not affect the political system. But this ruling class itself, as well as their powerful military instrument, the Janissaries, were recruited in a large measure from the Greek and Slavonic Christian population of the European provinces and often kept up friendly relations with their non-converted kindred. (One of the many instances is that of Djandari Khalil Paşa under Muhammed II.) Accordingly much consideration was shown to large parts of the Christian population, and the more so as many Christians served on minor posts in the state chanceries, where they performed important administrative duties (Gracius, Turcogracia, p. 14). Besides, many high-placed persons, including the sultans themselves, had, through their harems, many Christian relations without and within the Empire. So the domestic and foreign policy of the state often brought about measures of toleration, which were not altogether in accordance with the strict demands of Muhammedan law. An outstanding example is the way in which Constantino-ple and its Christian inhabitants were treated after the excesses of the first days of the conquest were over. Muhammed II did all that he could to re-populate his new capital, even with Greeks, when the Muhammedan element proved insufficient; he even had a new Oecumenical Patriarch chosen not long after the conquest (cf. Fr. Gieser, Die Stellung der christlichen Untertanen im Osmanischen Reich, in J., xix., 1931, p. 264 sqq.). Only afterwards, in the first half of the xvth century, when Muhammedan fanaticism had increased, there was a party which invoking the fact that the town had been taken by force ("annihilation"), claimed the destruction of all churches that were left to the Christians, and only with great difficulty was evidence constructed to prove that Constantinople was really taken by capitulation (cf. J. H. Mordtmann, Die Kapitulation von Konstantinopel im Jahre 1453, in Byzantinische Zeitschrift, xxi. 1912, p. 129 sqq.). Other signs of fanaticism in the same period are i. e. the intention, attributed to Selim I to convert all Christians to Islam, the wish of Murad III to turn all churches into mosques and the alleged oath of Murad IV to exterminate all Christians. Still, apart from these occasional outbursts, tolerance prevailed. In the capital a Greek Christian aristocracy and photocracy was permitted to live in the quarter of Fanari; from their midst came influential persons such as Michael Kantakouzenos, the "pillar of the Christians" (Jorga, iii. 211) in the xvth century, and the well-known Phanariote families who later supplied dragomans to the Porte and the princes of the Danube principalities.

The official attitude towards the Christians was complete abstinence from their domestic religious and secular affairs so long as this did not affect the public order. This explains also the tolerance towards the activities of the Roman Catholic missionaries who were sent from the xvi th century onwards to convert the eastern Christians. The government took no interest in the different denominations of Christians, while their internal divisions reinforced its authority. R. Gragger in his article Türkisch-Ungarische Kulturbeziehungen (Literaturdenkmaler und Ungarns Türkenkultur, in Ungarishe Bibliothek, i. N°. 14, Berlin 1927) depicts the tolerant attitude and the sometimes amused state of the Turkish Paşas in Hungary in the religious disputes between Roman Catholics and Protestants. On the other hand, the serious domestic troubles amongst the Greeks belonging to the much decayed Oecumenical Patriarchate, as the result of which the party of the patriarch Cyrilis Lucaris took, in the first half of the xvi th century, a definite anti-Roman Catholic attitude, could not be wholly indifferent to the Porte, because from that time on the only political protector of the Greeks was the Ottoman government. Arbitrary measures, such as occasional executions of the patriarch (for the first time in 1657; v. Hammer, G. O. A. Z., iii. 474) and excesses in war time are not sufficient to refute the statement that the attitude of the government was on the whole tolerant.

What, at length, came to influence most deeply this attitude was the interest shown in the lot of the Christians by the governments of the Christian powers with whom the Porte began to enter into peaceful relations. In the first centuries those foreign Christians who were allowed to reside in the support towns fell within the category of mucdismini. Legal conceptions of that time did not distinguish sharply between religious denomination and nationality, both being designated by the word millef; therefore a foreigner who embraced Islam was entirely assimilated to the Muhammedan subjects of the sultan. In course of time millef came to be used also for the different "national" denominations of the Christians within the Empire. The first foreign power to be interested in the Christians of Turkey was the Vatican, as was manifested several times by the inevitable participation of the Pope in the preparation of anti-Turkish crusades. The Cardinal Protisatore di Levante in Rome exercised, through his vicar, considerable influence
on the Latin Roman Catholic community of Pera, which, since the conquest of Constantinople, had enjoyed, like the other Christian communities, administrative independence. This "religious protection" was not altogether in conformity with the wishes of the Christians themselves (G. Young, *Corps de Droit Ottoman*, Oxford 1905, ii. 124.), but at those times the Porte followed a policy of non-intervention and did not seize the opportunity of placing these Christian inhabitants of her territory under her more direct control. The same policy made her accept without difficulty the remonstrances of a second, more powerful, protector, the King of France, who already before the conclusion of the treaty of 1555 had begun to act as intermediary between the Catholics in Jerusalem and other places in the Levant and the Porte. This intervention of France—which, in the eyes of Christian Europe, served her as an excuse for her entering into diplomatic relations with the Porte—was tolerated equally in favour of other than French ecclesiastics and missionaries, and of non-French Christian prisoners. Occasionally France's protection was also invoked by other than Roman Catholics; in 1639, the Oecumenical Patriarch himself asked the French King to declare himself protector of the Eastern Church. The French capitulation of 1673 recognized at last the protectory of the King of France over the Roman Catholic foreign Christians, though a general protectorate over all the Christians in the Empire had been demanded originally; the famous capitulation of 1740 confirmed the dispositions of that of 1673 (cf. G. Pellissié du Rausas, *Le Régime des Capitulations dans l'Empire Ottoman*, Paris 1911, i. 80 sqq.).

A third powerful protector of Christian interests was this time of the Greek Orthodox Christians, arose in the xviiiith century in the person of the Russian Czar. Shortly after the fall of Constantinople Ivan the Great had begun to regard himself as successor of the Byzantine Emperors and, as the power of Russia increased, the Greek orthodox Christians in the western and eastern parts of the Empire came to look upon the Czar as their natural protector. Especially the Christian institutions in Jerusalem and the much impoverished patriarchate of that town benefited by the Russian religious interest. On the other hand, Russia learnt to use her influence with the Orthodox Christians as a powerful political instrument. The peace treaty of Küttük Kaindrje (1776) recognized at last the right of the Russian diplomatic representatives to interfere in favour of the Christians in the Empire.

With the weakening of the Empire in the xviiiith century the so-called "religious protection" became a heavy burden on Turkey's inner political conditions. Especially after the disastrous happenings under Mahmut III's reign, it became clear that the old Muḥammatan conception of the state, which left the non-Muslims entirely to themselves, or to others, could no longer be maintained. It was one of the chief stimuli to the introduction of the Tānyaş. In order to retain as much control as possible over her Christian subjects the Porte now had to apply her governmental activity equally to non-Muslims and Muslims. Accordingly the Ḳâhīt-i Sherif of Ulū-Khâne (1845) declared that perfect security was guaranteed to all subjects, Muslims or raṣūy, as to their lives, their honour and their possessions. Still in the following years no important administrative measures were taken, while on the other hand the intervention of foreign powers in Christian affairs continued and led amongst other incidents to the outbreak of the Crimean War in 1853. An incident of 1843, in the meantime, had made the Porte give a formal assurance to the French and English ambassadors with regard to the non-application of capital punishment to persons who had denounced the Muḥammatan creed (Young, *op. cit.*, ii. 11 sqq.).

The law of May 10, 1855 is an important landmark in the history of Ottoman policy towards the Christian subjects; this law abolished the capitulation tax for non-Muslims and envisaged the possibility of their service in the army (cf. *Diya* and the *Bibliography* of this art.). This legislative measure was completed by the Ḳâhīt-i Humâyûn of February 18, 1856, which may be regarded as the Magna Charta of the rights of the non-Muslim subjects of the Empire; in this memorable edict the rights and privileges of the different religious denominations and their members were proclaimed with more detail; as to their military service the edict laid down the principle that it could be replaced by the payment of an exemption tax, which, under the name of *bedel*, came to be regularly applied to all non-Muslims. In accordance with the contents of the Ḳâhīt-i Humâyûn, the Ottoman legislation now began for the first time to take notice officially of the existence of the great number of Christian communities existing in the Empire. Organic statutes were elaborated for the more important of these communities (called *millet*); in 1860 for the Armenian Gregorian community and in 1862 for the Greek Orthodox community. In 1870 followed the institution, with the cooperation of the Porte, of the Bulgarian Exarchate, while in course of time a host of laws, decrees and regulations were issued, containing more detailed provisions with regard to these and the minor communities—Patriarchates of Antioch and Jerusalem, Mount Athos, the Serbian Church, the Neoturcians, the Latin communities, and the different churches united with Rome (Armenians, Chaldeans, Maronites, Melchites). This highly complicated legislation aimed at making these Christian Ottoman subjects in the full sense of the word, but met with great difficulties created by the existence of an age-old system of autonomy and by the frequent inter- 

vention of the foreign powers. The leading principle of the government was to divest the purely religious authorities as much as possible of their power and to reinforce the power of the lay institutions. This policy led to endless troubles in which new regulations continually tried to restore order. In the constitution of Miḥdat Paşa (1876) Islam was proclaimed as the State religion, but immediately afterwards there follows the declaration that the profession of all recognized religions in the Empire is free and that all privileges granted to the different religious communities shall be maintained (art. 11). Art. 9 guarantees the personal freedom of all Ottoman subjects and art. 17 their complete equality before the law.

All the time during the period of reforms the Turkish government had to reckon with reactionary feelings against the giants in large sections of the Muḥammatan population, which at many instances made the application of equal treatment, before the law and elsewhere, illusory. This justified to a certain extent the never ending remonstrances
of the European powers, who lost no opportunity of insisting on new reforms in favour of the Christians. Art. 62 of the treaty of Berlin (July 13, 1878) stipulated again for the equal treatment by the Ottoman government of all non-Muslim subjects, amongst others that every one, without difference of religion, should be admitted as a witness before the law courts.

The effect of the foreign intervention in their favour encouraged on the other hand large sections of the Christian population to disloyal feelings and actions against their legal government. While the latter did what it could to assimilate the different groups of the population, the factors of dissolution became at the same time ever stronger. Even the peaceable relations that had hitherto characterized on the whole the intercourse between Muhammadans and Christians — especially in the cities — began to make way for religious hatred between group and group, in which the government officials were often unable to observe the required neutral attitude. Amongst many other symptoms the Armenian troubles which began in 1859 in the Armenian wilayets — where a racial antagonism between Muhammadan Kurds and Christian Armenians had existed for centuries — were the most disastrous. They led to repeated Armenian attempts at revolt and to the notorious massacres in Constantinople of 1897.

By this development the treatment of the Christian subjects ceased to be a religious problem; it became a problem of nationality (millet in the new acception of the word) and of race, and at the same time one of the vital problems for the Empire. After the revolution of 1908 and the re-establishment of Mahomet's constitution, these facts were not yet fully recognized. The Ottomanization of all subjects of the Empire was seriously attempted; the new representative bodies included a number of Christian members; occasionally there were Christian ministers. Then the world war precipitated the inevitable course of events. This time non-Muslims were for the first time incorporated in the Turkish army, but only for service behind the front. At the same time, the democratic policy of the Young Turks took a pan-Turkish turn, from which religious motives were quite absent. National Turkish feeling prevailed. The measures of deportation of Christian inhabitants from the frontier zones — measures from which the Armenians especially suffered teribly — were inspired by fear of disloyalty towards Turkey, though in their execution remnants of religious fanaticism, notably on the side of the Kurds, certainly played a large part.

The events after the armistice of Mudros have proved that a great part of the Christian population preferred independence or incorporation into a Christian state to remaining with Turkey. And the Turks themselves also were ready to part with their Christian subjects. Under these circumstances were concluded at Lausanne, in 1923, the agreements with Greece for the exchange of the Greek population of the new Turkish state against Turks established in Hellenic territory; only Constantinople and some islands were excluded from this measure. Since by the events of the war the number of Armenians and other Christians in Asiatic Turkey had already been reduced to a very small minority, the result was that the present Turkish republic has only to deal with a Christian population of no numerical importance, most of whom live in Constantinople. The Lausanne Treaty of 1923 contains in its articles 37-45 only the obligation for Turkey to treat the minorities on an equal basis with the Turkish subjects; it provides for their right to live after a personal legal statute of their own. Finally the treatment of Christians in Turkey has definitely ceased to be a legal problem in the old sense of the word; since, by the alteration of the Constitution on April 5, 1928 the state has been completely secularized (cf. Türkiye, Istanbul 1931, iv. 215) by cancelling the article declaring that the state religion is Islam.

(J. H. KRAMERS)

AL-NASAWI, MUHAMMAD b. AJAMAD b. 'ALLI b. MUHAMMAD, an Arabic historian, biographer of the last Khwarizmshah Djâlî al-Din Mangubîrî [q. v.], was born in Khurâsân (Tâhirî, ii. 415), an estate in the district of Nāsî [q. v.] in Khurâsân where his family was reputed to have been already settled in the pre-Muhammadan period (Hîdât, ed. Houdas, p. 53). During his father's lifetime he represented him when the vizier Nîgân al-Mulk, dismissed from office by Sulṭân Muhammad, visited the family estates on his journey to Khvârizm and was received by him (ibid., p. 50). He only mentions incidentally that he had stayed in youth with Inanîkhirîn in Məzârdârân before the latter had risen to power. When the Mongols invaded Khûrâsân in 1221 he had already succeeded his father in his ancestral citadel, which he saved from sacking by payment of 10,000 ell of cloth. Nîgân al-Dîn al-Samâ'înî was his guest at this time; he enabled him to escape to Khvârizm before the arrival of the enemy and in gratitude Nîgân al-Dîn procured him a rich grant of land from Oghârîshâh, son of Muhammad (p. 57 sqq.). When in Nâsî the capital of his district, Nûrat al-Dîn Hâzim b. Muhammad, the representative of a local royal family, came to power as successor to his nephew Ikhîyây al-Dîn (p. 99), he appointed him his wâli (p. 104) and in this capacity he took part in a battle fought by Inanîkhirîn, as governor of Khûrâsân, at Nakhджûf near Nâsî against the Mongols; according to the full story of the battle (p. 66), this was the only occasion on which he personally took part in a battle. When after the death of Sulṭân Muhammad (1220) his eldest son Qâhîyâh al-Dîn ascended the throne, Nûrat al-Dîn took the side of his younger brother Djâlî al-Dîn, and for this an expedition was sent against him under Yûlak, son of Inanîkhirîn. To save himself he sent Nasawi with 1,000 dinârs to Qâhîyâh al-Dîn. After long wanderings and a two months' sojourn in Iṣfâhan, he succeeded in giving the money to Djâlî al-Dîn's minister Sharâf al-Mulk, who then wrote a despatch to Yûlak ordering him to abandon the siege of Nâsî; but this arrived too late and Nûrat al-Dîn had already been slain (p. 109). Nasawi did not now dare to return home but went to Djâlî al-Dîn when the latter had entered Marâgâh. He was appointed by him Kâfîb al-Insârî (p. 110) and henceforth accompanied his master on all his campaigns. When Diyâ al-Mulk 'Ali al-Dîn to escape the jealousy of the vizier Sharâf al-Mulk had himself appointed governor of Nâsî he aroused much discontent there by his misgovernment that he was dismissed. Nasawi was appointed in his stead governor of his native town with the title of vizier but had to stay with Djâlî al-Dîn and sent a deputy to his governorship (p. 149).
NASHWÁN: a writer in the eleventh century with a renowned literary career. His works include "Fil ha-d-Dīn," a collection of verses, and "Makhtūbāt," a series of letters. Nashwán is known for his contributions to the Arabic literary world and his influence on later Arabic writers.

NASHWÂN — NASHĪ

NASHĪ (A.), intercalary month, intercalation, or man on whose authority an intercalation is undertaken, a word of uncertain meaning in Sūra ix. 37 and in Muhammad's sermon at the farewell pilgrimage (Hijāḥ, p. 98b; cf. the article ḤAJĪJ). Nashī, nasi, and nasr are variants and the word is connected with nāsrān to “postpone” or “add” or with nariya to “forget.” In any case, it is given in Muslim tradition a meaning which brings it into connection with the method of reckoning time among the pagan Arabs. The Qur’ānic verse describes nasi as “a further expression of unbelief” and is therefore forbidden to the believers.

For the meaning of the word in the calendar we have the context of the above mentioned passages where sometimes the number of months in the year is put at twelve and sometimes the number of “holy” months at four. Qur’ānic exegesis as a rule connects nasi with the “holy” months and explains it sometimes, it is true, as the postponement of the Ḥajājī from the month fixed by God for it, but sometimes, and preferably, as the transference of the sanctity of one holy month to another, in itself not holy. The expositions are also able to give the reasons for such a postponement in full detail. As a rule however, these are pure inceptions which suggestions and perhaps memories of old traditions are freely expanded. A collection of such expositions in the form of regular Ḥajājīs is given in Tāfīr, 2nd ed., x. 91–93.

The critical examination of these expositions reveals however traces of an older conception not quite unknown to Tradition, even in the form in which we have it, according to which nasi means either the intercalation of an intercalary month or the month itself. This interpretation of the word is the only one really acceptable in the circumstances. The association of the pre-Islamic Ḥajājī with annual markets made it necessary to fix the Ḥajājī in a suitable season of the year. For that purpose a prolongation of the lunar year in some way was necessary and nothing contradicts that older tradition according to which it was obtained by the intercalation of an intercalary month. The lunar month was the only unit of time available for the purpose because it was the only one which the Bedouins, the customers at the markets, could observe directly. Thus one had only to let them know at the Ḥajājī of a year whether they had to reckon to the next Ḥajājī of twelve or thirteen months.

Definite evidence of this intercalation of a month is found in the astronomer Abū Ma‘ṣūr al-Bīrūnī (d. 272) in his Kitāb al-Uṯaf (sec. P. A., ser. 1, vol. xi. [1838], p. 168 sqq.) and continuing him in al-Bīrūnī who also deals at length with this intercalation in his Chronology (ed. Sachau, 2v., 62 sqq.). According to him, the Arabs took this intercalation from the Jews. How much in what these scholars tell us is really historical knowledge and how much intelligent reconstruction can hardly be decided. It is remarkable however that al-Bīrūnī when dealing fully with the Jewish intercalation (cf. ibid., p. 52–77) connects the Hebrew word for intercalary year, ḥāšār, with nashārīn “pregnant woman” and observes: “they compare the addition of a superfluous month to the year to the woman carrying something which does not belong to her body.” In this connection we may recall that Tāfīr (cf. ibid., p. 91, 4) explains the Arabic nasi as “nasi pregnant woman” among other interpretations, saying nasi “at the Ḥajājī, a. on account of the increase which the child in her means.” This agreement in the two explanations, which can hardly be accidental, might very likely indicate that nasi in the sense of intercalation or intercalary month is modelled on the Jewish ḥāšār and thus support al-Bīrūnī’s statement which is in itself not impossible. Caesar de Perceval ( J. A., ser. iv., vol. i. p. 249) even quotes the Hebrew nasi (prince) as a title of honour of the leader of the Sanhedrin, to whom fell the duty of dealing with the intercalation (cf. Ral. Talmud, Sanhedrin, p. 118: “the intercalation of the year may only be done with the approval of the nasi”). According to one of the meanings of the Arabic nasi given in Tradition, it was really the “name of a man” (see above), a meaning which is all the more remarkable in this connection, as it does not suit the Qur’ānic passage. There is a definite agreement in the fact that in the Jewish intercalation only the month following Adar was an intercalary month while in the Arab system, as the critical examination of Tradition — contradicting the literal interpretation of its text — shows, only the month following Dhu l-Hijāja i.e., the intercalated month in both cases was inserted between the normal last month and the normal first of the year, Nisāḥ or al-Muharram.

Nothing certain is known about the process of intercalation among the Arabs. It can only have been periodic and irregular attempts at correction based on observation of nature, particularly vegetation. The technical part must have been exceedingly simple and primitive. The same is true of the Jewish intercalation in the older period (see Ral. Talmud, op. cit., p. 108–113). As the Jewish system served to move the feast of Pesah to a suitable season of the year, the Arab system can only have been intended to do the same for the Ḥajājī and the fairs associated with it in the vicinity of Mecca. It was not intended to establish a fixed calendar to be generally observed. The Bedouins had never had one and they have no use for one. According to Tradition, the management of the nasi was a prerogative of the Banū Kinās and indeed fairs were held on the lands of the Kinās.

Bibliography: A. Moberg, An-nasi in der talmudischen Tradition, where the most important references are given.

NASHĪ (A.), the introductory lines of the Arabic ḡāṣida (q.v.), which are devoted to recalling the memory of a woman whom the poet loved long years before. The nashi is, so far as we know, the only kind of love-poem which has survived to us from the Arabic literature of the pre and early Muhammadan period and is almost the only place where women are the subject in the poetry of the Arabs. The essential feature is that the subject of the nashi is always the lament of a man for a lost beloved. Even in the earliest ḡāṣidas that have survived the nashi is already
in the stereotyped form. It treats its subject again and again in the same way with only the slightest variations. We can distinguish three constantly recurring principal motives:

I. A Beduin on his wandering through the desert passes a spot where there are the traces of a tent-trench which has fallen in, dried camel dung, sooty stones, which once formed a cooking place, and tent-pens. From these things he sees that this spot has been the resting-place of wandering Beduins. After some reflection he recalls that his tribe encamped here long before, jointly with another tribe, during the spring grazing and that he himself spent a happy time with his beloved. The poet usually then gives a description of the deserted camping place, the _ṣaṭṭū,_ it can only be traced with difficulty as the wind and the rain which has fallen upon it have obliterated it and made it almost unrecognizable. The rain has produced a rich vegetation and gazelles and antelopes with their young have found shelter there. The poet then recalls the day when the two tribes, his own and that of his beloved, struck camp. There had been various signs of the approaching departure. The camels were brought back from the pastures and loaded; the raven, the bird of ill omen, also foretold the separation to the poet. In his mind he again sees the camels with their litters before him and compares them to ships. The women sit in the litters, among them, his beloved. They go off and he follows them in spirit.

II. While grief for his lost beloved is keeping the poet awake, she sends him from far away her _khayyāl,_ a vision of herself. He is surprised that his delicate beloved has been able to travel so far, as she was never a good walker. The vision arouses painful memories in him and he weeps copiously as he recalls the beauty of his beloved.

Each of these three themes may be followed by a full description of the personality and journey of his beloved; she is a distinguished and modest lady, one of the noblest of her tribe; she is frequently married and sometimes even has children. Her husband is held up to ridicule. She is coquettish and likes to torment her lover. Her physical charms are described very fully and the woman her body is calculated in fine similes (in the style of the _nāṭib,_ cf. the Song of Solomon and the All-egypt'schcn Liebeslieder, ed. W. Max Müller). Her dress, her perfumes and her jewellery are described in laudatory terms. The feelings of the lover are then detailed. Grief has made him old and grey; he is ill with longing for his beloved and after all these years his tears still flow at the thought of her.

Like all early Arabic poetry the _nāṭib_ in matter and structure follows with considerable strictness a definite chain of ideas so that there is a certain uniformity about it. We constantly find the same or similar comparisons; the ideas of the different poets do not differ essentially from one another but only the form and method of expressing them. The traces of the _ṣaṭṭū_ look like writing made by the _ḥalam_ on parchment. The girl is like a gazelle or an antelope, a simile which continuously recurs with new variations. The tears of the poet run like water from a leaky skin or fall like pearls from a necklace when the string is broken and so on. In consequence of the wealth of the Arabic language in synonyms these similes have an ever-new charm in spite of the many repetitions. Stereotyped metonymies, such as we find in all branches of Arabic poetry, are also common in the _nāṭib._ Thus the beloved, the _ṣaṭṭū,_ the showers of rain, and parts of the body etc. are designated by metonymy. The _nāṭib_ usually begins (in so far as it has survived in its entirety) with formal phrases: _hūna-_ or _al-dīyażw_ etc. frequently it ends with _dāj_d ā _‘ašlī_ _‘ašlī ‘leave this’, whereupon the poet turns to the description of the camel.

The _nāṭib_ had already become fixed in form in the pre-Muhammadan period, and no poet could break away from it. Gradually its contents became more and more colourless; it became more and more stereotyped and stiff. In the old Arab poetry there is already no difference between the _nāṭib_ of a Beduin and that of a townman. _Kāṣī b. al-Khāṣīm, Ḥāṣān b. Thālib_ and _‘Adi b. ‘Azīd_ describe the beauty of their beloved in the same way as, for example, _‘Imra_ al-Kāṣī, and lament their separation from her just like a Beduin poet. We must remember however that in the pre-Muhammadan period even a small town knew Beduin life (cf. _‘Adi b. ‘Azīd_ we know that he spent a part of the year in the desert; cf. _Kitāb_ al-‘Agāhīn, Cairo 1928, ii. 105). In later times however, the poets no longer knew the life of the desert from their own experience, the _nāṭib_ thus became more and more stereotyped. In the end it became a matter of ridicule that every _kāṣīd_ began with the lament at the _ṣaṭṭū,_ a critic of the _Abū’l-Durā_ period (cf. Goldziher, Akhandaingen, p. 144) asks whether every man with a command of language who would write a good poem must of necessity be lovesick.

From the _nāṭib_ we learn of amatory relations of a kind which probably played a considerable part in pre-Islamic Arabia. These were unrestricted relations, not contracted in the forms which were already used in pre-Islamic Arabia at a marriage. They were based on natural inclination and spontaneous devotion and ended with this. As is evident from the _nāṭib_ such unions were usually concluded in the spring grazing season when different tribes were encamping peacefully side by side. When the end of this fine season of the year came these love affairs also came to an end as a rule. The position and the reputation of the _kāṣīd_ (as the beloved is often called) were not affected by this illegitimate relation; she remained in her tribe and went off with them, while a _hāgī_ did not live with her tribe.

As is the case with all Arab poetry, the question what is oldest _nāṭib_ and its origin cannot be answered. Arab tradition records that Mahalhil was the first to put a _nāṭib_ in front of a _kāṣīd_; this does not mean however that he was the first to compose one. In the _Kitāb_ al-‘Agāhīn (Cairo 1928, ii. 123 sq.) we find a parallel to the _nāṭib_ _Al-‘Ur_ ‘ūni sent to King Anushkrān a girl with an accompanying letter which described her merits of mind and body. In the tales of the 1911 Nights and _nāṭib_ like poems are inserted but these are all of a comparatively late period. Many parallels may be found in the _Song of Solomon_, and old Egyptian love-poems resemble in spirit and conception and frequently often in phrase the Arabic _nāṭib_.

_Bibliography:_ cf. the references in the article _Kāṣīd_; I. Guidi, Il _Nāṭib_ nella _Kāṣīd_ Araba, in Acta du XIV° Congrèss International
NAṢĪB, a town in Mesopotamia. The name is certainly of Semitic origin and to be derived with Phyllon Byblos in Steph. Byz.; Müller, F. H. G. ii. 571, fig. 8) from ṢNb (nasib). The idol of Naṣīb is said to have been called Abīl (Assemani, Bibl. Orient., i. Rome 1719, p. 27). i.e. "home of El" (according to W. Robertson Smith, Religion of the Semites, London 1927, p. 210, note 1). On coins the usual form of the place-name is NEṢĪB (Usurios in Steph. Byz.). Nәṣib: Pliny, Nat. hist., vi. 42: Nesebria; in the Scriptores Historiae Augustae and elsewhere we find the forms Nisibis, Nisibene, Nisibiti etc. (J. Markwart, Südrasien u. d. Tigriquellen, Vienna 1930, p. 259 sq., note 1). In Armenia the town is usually called Melbin (on the form see Markwart, op. cit., p. 166 sq., note 3); Mattews of Edessa (ed. Warshaqat, 2nd ed., 1898, p. 245 = Duhurier's transl., p. 206) calls it "Nasbi", also called Melbin or 

"Naspin" (also on p. 62, Naspin). But also mentions a "Naspin", which is the town of Silan (p. 187 = p. 158, 2nd ed. of Duhurier's translation which (p. 413) wrongly connects these with our Naṣīb and Sippa) which lies on the left bank of the Euphrates on the road from Sevrān or Sevārans (Arabic Sauwān) to Naṣīb. The Naṣīb corresponds to the "town of Naṣīb in the bank of the Frat, called Naṣībo al-Rūm, 3-4 days journey from each of Āmid and Harrān on the road from Harrān to the land of Rūm" (Vāghj, Maqāmāt, iv. 780), in Pseudo-Wākīlī (Fudūh Dīyār Rabiwa-Dīyār Bahā, transl. by B. G. Niebuhr, in Schriften der Akademie von Hamb., vol. i, Hamb., 1847, p. 30, 175 sq.) mentioned along with Šawāda, also Sīverek, as Naṣīb-ah-Šaghīr, the name of which is marked on the Turkish General Staff's map of 1333 (1917-1918), scale 1:200,000, sheet Sīverek-Khārīn, 20 miles almost due west of Sīverek and 1½ miles from Kanṣara at a bend of the Euphrates. The Sīverek map usually identifies Naṣīb with the Sibah of the Bible and say that Nimrod founded the town (Michael Syr., Chron. transl. Chabot, i. 20; Barbebaeus, Chron. Syr., ed. Bedjan, p. 8). The town lay in the plain below the Maṣūr ābāt [see too ARA'B] on the river Šuyûd, (Theophyl. Simok., ed. de Boor, v. 5, 7: Melkon), the Hirmās of the Arabs, Nehar Masār al-Maṣāb of the Syrians (Asyr. Kharmq; Nöldeke, in Z. d. M. G. xxvii. 326), the modern Daghjibāh, the country between Naṣīb and the Tigris was called Dīrašāya by the Syrians (Theophyl. Simok., l. 13; Rennel, iii. 16, 17: 7, 2; 2: 7, 2: Aqabila; G. Hoffmann, Anm. u. s. a., Chron. ass. Marṭ., p. 83, note 170), by the Armenians Arwastan (cf. Arwastan, in J., 4, 1869, p. 168; Arwastan-
of Mesopotamia. Odenatus of Palmyra in 261 again took Nisibis from the Persians and destroyed it (H procrast. Aug., Trebellia Pollio, Triginta tyranni, p. 14, 3). Diocletian made the town, which had become Roman again at the peace of 297 A.D. (Marquart, Erfahrung, p. 169), the sole centre of trade between Persia and the Roman Empire (Petr. Patrie, fig. 14, in P.H.G., iv. 1895; Cod. Just., iv. 65, 4; Expositio totius mundi et gentium, p. 22 in Riese, Geogr. lat. niter, p. 168) and one of the principal fortresses on the Mesopotamia lines (on the lines see Poibeck, Syria, 1839, p. 33-42). In the Persian wars of Constantine the Great, Nisibis, Oriens fortissimum et immortal (Amnian, Marcell. xxxv, 8, 14), was thrice besieged (332, 346 and 350 A.D.) (Peeters, Acad. Belg. xxxvii, 1920, p. 285-372). During the first siege died the monk Jacob of Nisibis, the teacher of Ephraim, who had built the great church in his native town in 313 A.D.; perhaps he is to be regarded as the founder of the "Persian school" of Nisibis, which Ephraim transferred from there to Edessa in 363 as a result of the persecutions by Shapur II (on it see L. Guidi, Gli stromenti della scuola di Nisibis, in Giornale della Società Asiatica Italiana, iv. 1890, p. 195-195; J.-B. Chabot, L'école de Nisibis, in T. Att., ser. 1st, viii, 1896, p. 43-93; Bauernark, Gesch. d. syr. Litteratur, Bonn 1924, p. 113 sqq.; Th. Hermann, Die Schule von Nisibis vom 5.-7. Jhahr., in Zeitschr. f. neusotem. Wiss., 1926, p. 89 sqq.).

In the war of 359 Shapur II at first passed by Nisibis on his way to Telia and Amida, while the Roman army was stationed at Nisibis (Amnian, Marc., xx, 7, 1-3). After the death of Julian, Jovian had to come among other things the great fortress of Nisibis by the peace of 363 (Amnian, Marc., xxv, 7, 91). The inhabitants were allowed to migrate to Amida (Amnian, Marc., xxv, 8, 9-9; Zosim., ill. 33 sqq.; Ps.-Dionys. of Tellhum, Chron., under the year 674; Syr. Vitas Ephraemi, ed. Lamy, p. 24 sqq.; Fanostis Byz., Venet. 1832, p. 26; Nau, in R. C. C., ii, 1897, p. 38). They were perhaps sent out from and settled in the area mentioned as "Little Nisibis." From this time the fortress on the lines was Sargashon, 70 stadia west of Nisibis, the modern Seriye-Khân (Honigmann, Syria, x, 1929, p. 283 sqq.). The Romans made frequent attacks on the lost town but always without success, for example in 421-422 A.D. after their victory at Sargashon (Socrat. Hist. Estl., vii, 15), in 505 under their general Atrobinos (Jos. Styl., ch. 51, p. 44, ed. Wright; Mitch. Syr., transl. Chabot, ii, 159), in 526-527 under the Dux and Stratelates Timostroctos (Zach. Rhei., i, 1, p. 256) and in 542 under Patriicus Marcianus (John of Ephesus, ill. 6, 3). In the sixth century the inhabitants were still inclined to be friendly to the Romans (Ps.-Zach. Rhei., v, 7, p. 211, ed. Land). After the Nestorian academy of Edessa had been transferred to Nisibis in 489 by the Metropolitan Barawmâ as a result of the persecutions of the Nestorians in the Byzantine empire, the town remained for centuries the intellectual centre of Nestorianism (cf. also Mowaffle, Kutha al-Tambî, ed. de Goeje, 190). In the reign of Chosroes II the Church of St. Sergius in Nisibis was built (Theophyl. Simok., v, 7, 7). Sergius Stratelates was held in particular estimation by the nomad tribes of this region (Noldau's Täbsat, p. 284, note 1; Peeters, in Husgarden, Vienna 1911, p. 187; Hersfeld-Sarre, Archäol. Reise im Euphrat-u. Tigrisgebeit, i, 1911, p. 138, note 2).

Halab in 1171 took the town without opposition and dealt rigorously with the Nestorian Christians there. All their new buildings were destroyed and about 1,000 volumes of their writings burned (Mich. Syr., iii. 339 sq.). After his death, his nephew Saif al-Din of al-Mawṣil seized the town (Mich. Syr., iii. 360). It surrendered to Saif al-Din in 1182 (Barhebenaus, Chron. Syr., p. 360). In the following year the latter gave to ʿImād al-Dīn Sīnḏīr, Naṣīḥīn and other towns in exchange for Halab (Barhebenaus, p. 362) and he ruled there till his death in 594 (1198) (Barhebenaus, p. 398, 402). In the region of Naṣīḥīn there was fighting in 582 (1186–1187) between Kuraḍ and Turkomans (Barhebenaus, p. 370). ʿImād al-Dīn was succeeded in 1198 by his son Kūth al-Dīn but Nūr al-Dīn Arāl-Kān of Mawṣil immediately took the town from him. But when a severe epidemic wrought great havoc in his army, he abandoned it and Kūth al-Dīn returned thither (Barhebenaus, p. 402). Nūr al-Dīn in 600 (1203–1204) had to break off the second siege of Naṣīḥīn prematurely (Barhebenaus, p. 416 sq.). Malik al-ʿĀdīd took the town in 606 (1209–1210) from Kūth al-Dīn (Barhebenaus, p. 424). After his death (615 = 1218–1219) it passed to Malik al-ʾAṣḥaf of Ūrin (Barhebenaus, p. 424, 439).

The Arab geographers placed Naṣīḥīn in the fourth clime, the southern boundary of which ran about 12 farsakh south of the town on the direction of Sīnḏīr (al-Maʾṣūdī, ʿAbbāb al-Tamīmī, p. 32 sq.; 35; 44). According to ʿAbd al-Raḥmān ibn Ḥawālī, who in 538 (968–969) visited the town which lay at the foot of Djabal Bākhīt, speaks of the pleasant life in it, apart from the dangerous scorpions found there. Al-ʾAṯṭirī describes the fine houses and baths, the market, the Friday mosque and the citadel. Ibn Djbair also visited it in 580 (1184–1185) and mentions its gardens, the bridge over the Hīrmaš inside the town, the hospital (mārizīn), several schools and other places of interest. In the viii (xvii) century it was already for the most part in ruins; but the Friday mosque was still in existence and the gardens around it from which rose-water was exported (Ibn Ṭuṣūṭī). Ḥamid ʿAlī Mustawfī, according to whom the walls had a circumference of 6,500 paces, praises its fruits and wine but laments the unhealthy moistness of the climate, the large number of scorpions and the plague of midges.

Hūlāt in 567 (1129) occupied al-Rūba, Naṣīḥīn and Ḥarrān (Weil, Gesch. der Christen in Orientalien, iv. 10). The Mongol Khān Mangūš Ṭimūr (q.v.) died, poisoned in Dīnārat b. ʿOmar, on his way from there to Naṣīḥīn on the 16th Muharram 681 (April 26, 1282; Barhebenaus, p. 546 sq.). When Ṭimūr Khān in 1395 was on his way to TūrʿAbdīn, the people of Naṣīḥīn and Māʿarrān hid in caves from the Mongols but were suffocated in them when smoke arose (App. to Barhebenaus, Chronography, ed. Wallis Budge, ii., p. xxiv.). The Ḥasanāyīn Kūrds in 1403 pillaged Naṣīḥīn and the country around (ibid., p. xxxvi).

The town passed in the hands of the Ottomans in 1515 (v., Hammer, G. O. R., ii., Post 1828, p. 449 sq.). It became the capital of a sandjak in the pashalik of Āmid (Hasanī Khānī, Dījanāmīn, Istanbul 1732, p. 438). Later it was placed in the sandjak of Māʾruš in the pashalik of Bagdād (St. Martin, Mémoires sur l'Arménie, i., Paris 1818, p. 161 sq.). To its position on the southern border of the highlands and on the road from al-Mawṣil to Syria it owes its great strategic and commercial importance. The building of the Bagdād railway has brought it new life; it is said now to have about 50,000 inhabitants.

(E. Hönigmann)

Naṣīḥ al-Yaṣīdī [See al-Yaṣīdī].

Nasīk. [See Nasīk].

Dayr Shānqīr Kālū Nasīm (1811–1843) was a Kāshānī pānīdī who studied poetics under Atīb. His fame rests entirely on one poem, a romance called Gulār-ī Naṣīm, composed when he was 25. It greatly resembles Mār Ḥasan’s Sīr al-ʾAyūn, and is generally awarded the second place among Urdu poetic romances. Naṣīm also translated the Arabic Nights into Urdu, Nasīm is among the great Urdu matnawī (matnawī in the sense of poetic romances) writers, and is one of the very few Urdu authors who were Hindus.

the son of a Turkish slave-girl named Zumurrud.

He was the only caliph of the later period of the caliphate who was able to pursue a consistent policy. This was entirely directed towards restoring the temporal power of the caliphate. The caliph was assisted by the fact that the Saljuq empire which had previously held the secular power had begun to collapse. In the confusion which brought about its final downfall, the caliph did all he could to hasten its end and did not hesitate to support the Kharizmshah Takash as the strongest rival of the dying Saljuq empire in his fight against the last Saljuq Sultan Tughril II. This struggle finally ended in the defeat of the Saljuqs at Kaiy where Tughril died fighting (Reh. T. 590 = March 1194).

As a result of the diversity of the political aims of the two allies a quarrel broke out between the caliph and the Kharizmshah as soon as negotiations for the partition of the Saljuq territory were begun. The caliph wished to seize the opportunity to extend his personal power by incorporating the Persian provinces while the Kharizmshah in the exercise of the temporal power wished to succeed to the whole inheritance of the Saljuqs. While Takash was involved in war in the east, Ibn al-Kasht, the caliph's vizier, was able to conquer Khusistan and other Persian provinces (beg. of 591 = 1195). His troops were however completely routed by Takash on his return (Shahb. 592 = July 1196) so that the caliph had to abandon his conquests. Only Khusistan was left to him.

In the years following, the caliph had a hand in the intrigues of local rulers in Persian Iraq, usually against the Kharizmshah (from 596 = 1200 'Ala' al-Din Muhammad). The disputes with the latter culminated in 613 (1216) when the caliph had a supporter of the Kharizmshah, Oghulshah, vizier of the governor of Persian Iraq, assassinated by Isma'il's envoys. The Kharizmshah now began to prepare for the decisive struggle against the caliph; he prepared for war and in 614 (1217) invaded Persian Iraq. Here, in order to destroy the caliph as a political force also, he had his 'ulama' in a fetwa declare the caliph al-Nasir unworthy of the caliphate and appointed an 'Ali named 'Ali al-Mulk from Turkhah as imam. The caliph in vain attempted through negotiations to persuade the Kharizmshah to retreat. Instead he advanced on Baghdad from Husainabad. But he was unable to deal his blow at the caliph owing to an unexpected circumstance; for in consequence of the early coming of a severe winter, which destroyed his army, the Kharizmshah was forced to abandon his march and return home with the intention of advancing on Baghdad next year.

In order to meet the danger threatening him, the caliph however in the meanwhile began negotiations with the Mongol Cingis Khan in order to persuade him to attack the Kharizmshah. In 616 (1219) the latter was attacked and decisively defeated by Cingis Khan before he could resume his intended campaign against Baghdad. He died while fleeing from the Mongols on an island in the Caspian Sea (617 = 1220).

The caliph had thus achieved his immediate aim and rid himself of his most dangerous opponent for the moment. But the Mongols were approaching perilously near him, especially after the conquest of Maraghe (618 = 1221) had established them in Ughbat al-Jabala. At first however, there were only minor complications with the Mongols.

On the other hand, after the temporary withdrawal of the Mongols, the young Kharizmshah Djalal al-Din Mangubarti, Muhammad's son and successor, attacked al-Nasir and took Khusistan from him.

As al-Nasir had concentrated his whole attention on the east where he was fighting to strengthen and increase his private domains, he took no interest in the west where Saladin was waging his great struggle with the Crusaders and gave Saladin very insufficient help in spite of several appeals from him.

Al-Nasir's policy seems also to have aimed at the restoration of the internal unity of Islam in addition to restoring the temporal power of the caliphate. He himself had a leaning to the Shi'a of the Imami sect (Twelve-Shi'a) and invited Alids to his court; he seems to have wished to reconcile with his person the claims of 'Abbasids and 'Alids. He also established an agreement with the extreme Isma'il sect of the Assassins. In 608 (1211-1212) the Grand Master of the Assassins, Hasan III, abandoned his claims to the Imamate and paid homage to the 'Abbasid caliph.

Al-Nasir's efforts to centralise round his person the order of chivalry known as the Fatwawaa in a reorganised form are also perhaps connected with his political plans; in 578 (1182-1183) he had himself been admitted by the Shiah 'Abd al-Djalal b. Salih into the Fatwawa order. He then only allowed those of the organisations of the order to remain in existence which acknowledged his personal control. By admission into the order he was then able to establish connections with the princes of the Muslim world, who now regarded him as the head of their order (the chroniclers tell of this in the year 607 = 1210). Ibn al-Farri gives us a description of the robing of a prince as an external sign of his admission into the order in the presence of the caliph's envoy (the story is reproduced in v. Hammer, in F. A., 34th ser., vi. 1855, p. 285 sq.). The strict regulations introduced by Cingis Khan into the Fatwawa order are well illustrated in the edict of 9th Safar 604 (Sept. 4, 1207), published by P. Kuhle in the Ottoheinrichschriften, which the caliph had issued on the occasion of the murder of a member of the order.

Al-Nasir died on the last night of Ramadhan 622 (Oct. 6, 1225) at the age of about 70. Ibn al-Athir describes him as tyrannical towards his subjects and inconsistent in his measures; his fondness for the Fatwawa and its sporting activities (cross-bow shooting, training carrier pigeons) seems to him a strange caprice. Ibn al-Tika judges him more favourably; he describes him as unceasingly engaged in the duties of a ruler and lays stress on his rich endowments, although he also mentions his fondness for money. When a feudal Muslim ruler is reproached with covetousness it usually only means that he was endeavouring to carry through a sound and cautious financial policy. Al-Nasir is further reproached with having allied himself with the Mongols and thus being the cause of the great disaster which the Mongol hordes later inflicted on the lands of Islam.

Among buildings known from inscriptions to have been built by al-Nasir are the Talisman Gates in Baghdad (619 = 1223; blown up in March 1917 on the retreat of the Turks from Baghdad) and
the sanctuary of the Mahdi (Ghazal al-Mahdi) in San‘ar. Both are interesting and suggestive for his political aims, the latter as a distinctly Shi‘i sanctuary for his Shi‘i tendencies and the Ta‘ limb Gate for the remarkable pictorial representation once visible upon it; the caliph seated between two dragons, the jaws of which he is tearing apart and grasping their tongues. According to M. van Berchem's brilliant interpretation, we have here the caliph represented as victorious over two enemies, who had disputed his spiritual power: the Grand Master of the Assassins Hasan III as for a time the representative of the most radical opposition to the orthodox ‘Abbâsid Caliphate, who had finally paid homage to the caliph in 608 and died in 618; the other, the Kur‘î b. Mardîsh who had dared in 614 to set up an anti-caliph but was overcome in 617 and died a fugitive. In this connection the inscription also is interesting; in it the caliph uses the expression al-dar al-khâlîfâ, which is a name of the Assassins gave themselves (cf. M. van Berchem, in J. As., ser. 9, vol. ix., 1897, p. 456 and 457), for his own caliphate.

AL-NAṣîr IBN ‘AL-‘LEMâNÎS (the last name is also written Alâ-‘Alâm, ‘Alâma and even GHallâs by Ibn ‘Idhârî), fifth ruler of the Hammaðid dynasty, succeeded his cousin Bulûkkin b. Muhammad in 545 (1056). His reign marks the apogee of the little Berber kingdom founded by Hammaðîd [q.v.]. The ephemeral rise of the Hammaðids was the immediate result of the downfall of their relations and neighbours, the Zirid of Ifrisiya, the first victims of the Hilfis invasion. On his accession, al-Nâṣîr, who lived in the Kâl‘at Bani Hammaðîd, was already ruler of a little kingdom, the chief towns of which were Aşgîr [q.v.], Millâna, Aqilgares, Hammm (Büra), Ngeus and Constantine. Shortly afterwards, he regained Bi‘ka whose governor had rebelled against Bulûkkin; but his chief hope of extending his territory lay in the decline of the kingdom of Qairûwân.

The abandonment of the old capital of the Zirid al-Mâ’rîn and his flight to al-Mahdiyya (1057) had left Ifrisiya a prey to anarchy. The country districts were in the hands of the Arabs and the towns had chosen their own rulers; on all sides governors were in rebellion; leaders of the tribes imposed their authority on the threatened citizens; some towns turned to the Hammaðîds who were able to protect them. The people of Kasîtiyya [q.v.] for example sent a deputation to al-Nâṣîr to convey their homage; the people of Tunisia did the same. At their request the Hammaðîd sent them as governor Abd al-Hajj al-Shandjî family of the Banî Khusrân. The latter worked wonders; he negotiated agreements with the surrounding Arabs which secured the safety of the city. Later, after casting off Hammaðîd suzerainty, he made Tunisia the capital of a kingdom.

If the arrival of the invading nomads had meant an immediate accession of strength to al-Nâṣîr and an increase of population and economic activity to his capital, they were not without danger as neighbours. The Arabs soon involved him in a dangerous adventure. In 557 (1064) the Alhajjî, one of their tribes, asked him to help them against their enemies, their brethren the Riyâb, who had joined the Zirid ruler Tamûs [q.v.]. Al-Nâṣîr agreed, seeing an opportunity to invade and perhaps annex Ifrisiya. He put himself at the head of a large army which included Arabs, Shandjîs, and even Zenîs, led by the king of Fâa, al-Mu‘âz b. ‘Ayîa. The Riyâb in their turn received subsidies and arms from al-Mahdiyya. The armies met at Si‘ba, near the ancient Sufs. From the first the Zenîs of Fâa, won over by the enemy, gave way, which resulted in the rout of al-Nâṣîr. With great difficulty he reached Constantine with 200 men, then the Kal‘a the outskirts of which were systematically sacked by the Arabs.

After this disaster al-Nâṣîr tried to make terms with the prince of al-Mahdiyya; the negotiations failed, perhaps through the death of al-Mahdi, and al-Nâṣîr invited again by the Alhajjî resumed hostilities against the unfortunate Zirid kingdom. He entered ‘Aqurb and Qairûwân (460 = 1067) but these successes led to nothing; he had to abandon them again as he could not hold his conquests. These adventures, into which he was dragged by the Arabs and which brought him no lasting advantage, lasted for some ten years. In 570 (1077) al-Nâṣîr made peace with the Zirid Tamûs and gave him his daughter in marriage.

The Arab scourge which had ruined the kingdom of Ifrisiya began now to threaten seriously the Hammaðîd kingdom. The Zenîs, hereditary enemies of the Shandjîs, the lords of the Kal‘ûn, found among the immigrant nomads allies always ready to resume the conflict. In 468 (1075), the Zenîs chief Ibn Bja‘zînî, supported by the Arab Banî ‘Adî of Tripolitania seized Melîa and Aqîrî. Al-‘Masîr succeeded in driving him back to the desert where, drawing him into a trap, he had him murdered. He sent his son al-Mansûr against the Zenîs Banî Tadjîn, who had joined the Banî ‘Adî and were laying waste the country districts of the Central Maghrib. The rebels were caught and tortured.

The Alhajjî Arabs themselves, of whom al-Nâṣîr had hoped to make valuable auxiliaries, proved most undesirable neighbours. Although he seems to have put down — not without cruelty — the majority of the revolts, life in his ancestral capital became more and more difficult from year to year. This decided him to select another. Occupying the lands of the Bidjûya Berber, he founded there, on the site of the ancient port of Sallûs, a town which was first called al-Nâṣîrîya and later became known as Bougie. There he built the splendid Palace of the Pearl (‘Aqîr al-Lu‘ulu‘). “Having completed his new capital he exempted the inhabitants from the haraât and in 465 (1068) he settled there himself” (Ibn Khaldûn). The exodus of the Hammaðîd royal family to the coast was caused by the same event as had led the Zirids of Qairûwân to move to al-Mahdiyya: the settlement of the nomad Arabs in Barbary and the insecurity which resulted in the interior. This exodus was only completed under al-Nâṣîr’s successor, his son al-
Maʿṣūr [q.v.]. The latter assumed power at his father's death in 481 (1008).

(GEORGES MARÇAIS)

AL-NAṢİR, THE NAME OF TWO AYYUBIDS.

I. AL-MALIK AL-NAṢİR SALAH AL-DIN DAWŪD B. AL-MALIK AL-MUʿĀẓZAM, BORN IN DJUMĀDA I 603 (DEC. 1205) IN DAMASCUS. After the death of his father at the end of Dhu l-Ḵaḍa 624 (Nov. 1227) Dāwūd succeeded him on the throne of Damascus and the Mamlūk ʿAzīz al-Dīn Aḥsān acted as regent. Dāwūd's uncle however, covetous of territory, did not leave him long in peace. Al-Malik-al-Kāmil [q.v.] first of all claimed the powers of al-Shawbak [q.v.] and when it was refused him he occupied Jerusalem, Nābulus and other places (625 = 1226). In this perilous position, Dāwūd appealed to another uncle al-Malik-al-Asfar, who administered the Ayyūbīd possessions in Mesopotamia. The latter came to Damascus but then took al-Kāmil's side and arranged with him a formal division of the whole kingdom. By the arrangement between the two brothers al-Asfar was to receive Damascus and Dāwūd Ḥarrān, al-Raʾṣūl and Ḥims, while al-Kāmil took southern Syria with Palestine, and Ḥamāt was left to Dāwūd's brother al-Malik al-Muṣafār. But when Dāwūd would not consent to this, al-Asfar began to besiege Damascus. After al-Kāmil had concluded peace with the Emperor Frederick II he joined al-Asfar and after three months' siege, forced his nephew to yield (Ṣaḥābān 626 = June–July 1229) whereupon al-Asfar was recognised as lord of Damascus under al-Kāmil's suzerainty while Dāwūd had to be content with al-Kerak [q.v.], al-Shawbak and several other places. In spite of this unfriendly treatment, Dāwūd remained loyal to al-Kāmil when the other Ayyūbīds [q.v.] combined against him, and entered his service in Egypt. Soon after al-Kāmil accompanied by Dāwūd had taken Damascus, he died in Radjāb 935 (March 1238) and Dāwūd whom al-Kāmil had appointed governor of Damascus had to return to al-Kerak. In Egypt al-Kāmil's son al-Malik al-ʿAdīl was recognised as his successor and appointed his cousin al-Malik al-Djūlūd Vūnūs governor of Damascus. When Dāwūd tried to assert his claims to Damascus he was defeated at Nābulus. In the following year Vūnūs, who did not feel secure against Sulṭān al-ʿAdīl, exchanged Damascus with his cousin al-Malik al-Sāliḥ Ayyūb for Sindjār, al-Raʾṣūl and Ḥamāt. This pleased neither al-ʿAdīl nor Dāwūd so they joined forces for an attack on Ayyūb. The events that followed have already been fully related in the article AL-MALIK AL-SĀLĪḤ NĀDIM AL-DIN AL-AYṬĪN so that the reader may be referred to it. After Dāwūd had lost all his possessions except al-Kerak he appointed his youngest son al-Malik al-Muʿāẓzam ʿIzz as his deputy and fled to Ḩalab (647 = 1250) where he was kindly received by al-Malik al-Nāṣir Yūsūf (see below). His private fortune in the form of valuable jewels, valued at least 100,000 dinars, he entrusted to the care of the caliph al-Mustaʿṣim, who acknowledged the receipt of them but never could bring himself to restore the treasure entrusted him. Soon afterwards Dāwūd's two older sons, who had felt themselves neglected, turned to Sulṭān al-Malik al-Sāliḥ Ayyūb and offered him al-Kerak in return for land in Egypt which offer the latter gladly accepted. Alleging unfavourable reports about Dāwūd, al-Malik al-Nāṣir Yūsūf had him brought to Ḩimṣ in the beginning of Shuʿbān 648 (Oct. 1250) and put under arrest. In 651 (1253–1254) he was released on the intercession of the caliph on condition that he was not to stay in any lands under the rule of al-Malik al-Nāṣir Yūsūf. He therefore decided to go to Baghdad but was not admitted into the city. He lived for a time very wretchedly in the region of 'Ānā and al-Adaḥūtah until he found a place of refuge in al-Anābār. His appeals to the caliph were not answered; finally however, the caliph obtained permission to settle in Damascus. After several unsuccessful efforts to get back his property in Baghdad which had been confiscated, he was in the desert when he was taken prisoner by al-Malik al-Muẓaffar, lord of al-Kerak and al-Shawbak and brought to al-Shawbak. As the caliph thought he could be of use to him in the impending fight with the Mongols, he sent an envoy to al-Shawbak to fetch him; the envoy was bringing him back to Damascus when he heard of Hülegü's capture of Baghdad; he therefore left Dāwūd who went to al-Buwaṭjā, a village near Damascus. Here he died of the plague on 27th DJUMĀDA I, 657 (May 12, 1259). Abu ʿl-Fīṭrī speaks highly of Dāwūd's eloquence and oratorical gifts.

II. AL-MALIK AL-NAṢİR SALAH AL-DIN ABU ʿL-MUṢAFFAR YŪṢŪF, BORN IN ḤALAB ON 19TH RAMADAṬ 607 (Aug. 1, 1209). His father was al-Malik al-ʿAzīz, lord of Ḥalab, his mother Fāṭima, daughter of Sulṭān al-Kāmil. On 4th Rabīʿ I (Nov. 5, 1230) Yūsūf succeeded his father under the guardianship of his paternal grandmother Dhiʿāfa Khāṭṭūn bint al-Malik al-ʿAdīl [see ḤALAB]. After her death in DJUMĀDA I 640 (Nov. 1242) Yūsūf himself assumed the reins of government and soon extended his power over most of Syria. When Ayyūb, the Sultan of Egypt, with the help of the Khārīzimians who had conquered Palestine and also Damascus Yūṣūf became ultimately involved in the conflict. The Khārīzimians were dissatisfied with Ayyūb, went over to al-Malik al-Sāliḥ Ismāʿīl, lord of Ḥaṣābī and Ḫurayj, and laid siege to Damascus on his behalf. The lords of Ḥimṣ and Ḥalab then appeared on the scene. The Khārīzimians were completely
routed (644 = 1245) and Isma'il had to flee to Halab and take refuge with Yüsuf [see AL-MALIK AL-ḲAṢĪṣ AḤDĀM AL-DIN AYUB]. In 645 (1248—1249) the latter's general Shams al-Din Luṭ’ in al-Armaŋ attacked Ḥimṣ [q. v.] and after two months' siege forced the emir al-Malik al-Aḥsaf to capitulate and code the town to Yüsuf in return for Tell Bāṣîr [q. v.]. Two years later, the latter conquered Naṣīr, Dīrās and Karkīshā from the Ṭabāqī of al-Maṣqil Bāḍr al-Din Luṭ’ [see Luṭ’].

After the assassination of Tūrāngān [see AYUBID], in 648 (1250), Yüsuf was made emir by the Dārmūs and in Rabī‘ II (July 1250) he entered Damascus. To avenge the murder of Tūrāngān he prepared for war against Egypt and proposed an alliance with Louis IX of France; but these negotiations came to nothing. In Raḍāb of this year (Oct. 1250) the Syrians were defeated by the Egyptian emir Fāris al-Din ʿAṯajī near Ghazza. Yüsuf did not lose courage however but prepared for a new attack on Egypt. In the vicinity of al-ʿAbbāsīa [q. v.] he met the Egyptian army (Dhu ḫ-Ḥaḍa’ 648 = Heg. of Feb. 1251); victory was within Yüsuf's grasp when the treachery of his Turkish mamluks turned the scale in favour of Egypt. Yüsuf had to take to flight; several Syrian princes were taken prisoners and ʿAṯajī invaded Syria where he occupied Nablus and several other important towns until a strong Syrian force finally checked his further advance. After long negotiations, peace was finally concluded at the beginning of the year 651 (1253) by which Yüsuf had to give up any claims on Egypt, but a year or two later he was eventually made the viceroy. On the advance of the Mongols under Hūlāqū [q. v.], Yüsuf endeavoured to avert the danger by showing a humble frame of mind and sent envoys with presents to the Mongol camp; but when he began to calculate on getting support from other Muslim rulers and answered a threatening message from Hūlāqū in a challenging fashion, the latter laid siege to Halab. Yüsuf seems at first to have thought of advancing against him to raise the siege. He encamped in front of Damascus and sent messengers with appeals for help in all directions but as neither Syrians nor Egyptians answered him and Halab fell into the hands of the Mongols (658 = 1260), there was nothing left for him but to abandon Damascus and go south. Ḥamāṭ, Baʿalbek and Damascus were taken and Yüsuf had finally to surrender to Hūlāqū. The latter had him executed, probably after the defeat of the Mongols at Ḥimṣ towards the end of the year 659 (1261; see also the article HALAB). According to Abū l-Fida', Yüsuf was distinguished for his scholarship and poetical gifts; he was further kindly and good mannered, and fond of good living and so lacked the strength to maintain his lordship in the kingdom.

AL-NAṢIR, the name of two Mamluk sulṭāns.

I. AL-MALIK AL-NAṢIR NĀṢIR AL-DIN MUḤAM-
of Baibars al-Djahangir entered Damascus. On 27th Ramadán (April 20), a battle was fought on the plain of Marj al-Sufär after the rest of the Egyptian troops under Sulajn al-Násir and the caliph al-Mustakür had joined Baibars. Nightfall put a stop to the desperate fighting but it was renewed the next day and ended with the total defeat of the Mongols; 16,000 prisoners are said to have fallen into the hands of the victors. Ghiżān died soon afterwards and his successor Uldjátüdi did not dare to measure his strength with his formidable opponent. For the rest al-Násir’s second reign was a fairly peaceful one apart from a few military enterprises of slight importance.

At the beginning of the year 702 (1302), an expedition was sent against the Templars who had established themselves in the island of Arwāḍ on the Syrian coast and harassed the mainland opposite [see 795]. The district of plast [q.v.] was also invaded; its ruler had made common cause with the Ikhān and did not send Egypt the usual tribute promptly. The Egyptian authorities were on the whole on good terms with foreign powers; on the other hand, home affairs gave cause for anxiety. After the defeat at Hīmā, the Beduins in Upper Egypt rebelled against the authorities and levied taxes on their own account. A large army was therefore equipped to punish the rebels. At the same time, the governor of Ḭūtjus advanced from the south and cut off their access to the southern desert. The rebellion was put down with ruthless vigour, the men massacred without mercy, the women and children taken prisoners and property carried off. Many took refuge in caves, all but suffered from lack of food and water in them. The large Christians and Jewish elements in the population had also to suffer a great deal.

Several of the Umayyad, Abūṣaid and Fāṭimid caliphs had already issued special regulations affecting non-Muslims and the Abūṣaid al-Mutawakkil had gone furthest in this direction; in general, however, such measures were only enforced for a short period and were therefore usually repeated after a time; at least this is true of Egypt. In al-Násir’s reign many Christians were holding honoured positions as officials when suddenly from some insignificant cause the secret jealousy of the Muslims flared up and in 701 (1300–1301) an edict was issued which ordered among other things that in future Christians should wear blue and Jews yellow turbans in order to be at once distinguishable from the true believers nor were they to be allowed to carry arms or ride horses. Very soon a prohibition was issued against the appointment of Christians and Jews to the offices of the sultan or of the emirs. The immediate consequence of this measure was that several churches were destroyed by the fanatical mob and the others remained closed until the authorities allowed them to be reopened at the demand of the Byzantine emperor and other Christian rulers.

On the 23rd Dhu‘l-Hijja 703 (Aug. 8, 1303) the whole of Egypt was affected by a terrible earthquake in which not only many private houses but also palaces and mosques were destroyed and large numbers of people perished. All traces of the catastrophe were however obliterated with the greatest energy and the emirs and well-to-do citizens vied with one another in spending lavishly to restore the shattered buildings. After an unsuccessful attempt to escape from the tutelage of the two emirs Sallār and Baibars, both of whom aimed at the sole power and regarded each other with suspicion, the sultan, who was prevented from exerting any influence in the government, left the capital on the 44th Ramadán 708 (March 7, 1309) under the pretext that he wished to perform the pilgrimage to Mecca but went instead to al-Karakh. On reaching the capital, he told the emirs who accompanied him that he was abandoning the pilgrimage and abdicating in order to live in peace in al-Karakh. Baibars was proclaimed his successor under the title al-Malik al-Muṣaffar on the 23rd Shawwāl (April 5, 1309) while Sallār remained in office as adminstrator. Baibars however enjoyed no real popularity; an oppressive rise in prices made him hated among the people who without justice blamed him for the difficult times. Sallār was intriguing secretly and al-Násir was vigorously adding to the number of his followers in Syria. When Baibars heard that al-Násir had entered Damascus and the Syrian emirs had gone over to him, there was nothing left for him but to abdicate and appeal for mercy to his rival. The latter pardoned him and even offered him the lordship of Syria [q.v.]. But after he had made his entry to Cairo al-Násir had Baibars arrested (beg of Shawwāl 709 = March 1310). Very soon afterwards, Sallār was also disposed of; he died of starvation in prison. The Mongols not long after this resumed hostilities. Two emirs who did not feel safe with the sultan went to the Ikhān Uldjátüdi and urged him to invade Syria. The Mongol expedition did not however go beyond the siege of the town of al-Rahba (Ramadán 712 = Jan. 1313). When the Mongols saw that their efforts were unavailing, they abandoned their plan of campaign and retired.

At the beginning of the year 715 (1315) a campaign was undertaken against Malayza, on the course of which see the article MALAYΩA. At the same time, the lord of plast had to cede several strongholds and increase his annual tribute. Little Armenia was several times invaded by the Mamluks who wrought great havoc there. In Mecca the sons of the Sharif Abū Numaıy [q.v.] were engaged in a prolonged struggle for supremacy; as the Mamluk sultān claimed to exercise a kind of suzerainty over the two holy cities, al-Násir intervened without however playing any very effective part. His authority was recognised in Madīna in 717 (1317) and when he intervened in the domestic quarrels of the Yaman and sent troops thither to support al-Mudjāhīd, one of the pretenders to the South Arabian throne, he was assisted by the Meccans (725 = 1325). In the meanwhile, the situation had improved in favour of al-Mudjāhīd so that the troops sent to his help by al-Násir had to return amid great hardships after achieving nothing. Al-Násir also tried to extend his power into Nubia. For this purpose he sent in 716 (1316–1317) a Nubian prince named Abd Al-Allah, who had been converted to Islam and brought up in Egypt, with an army to put him on the throne. He succeeded in driving out the legitimate heir but the latter was able after a time to return and expel the intruder Abd Allah whose tyrannical rule had made him generally hated. Al-Násir was more successful in N. W. Africa; in 717 (1317) he was mentioned as sultan in the khutba in the pulpits of Tunisia, whose ruler, the Ḥafṣid Abū Zakariya Yahya, owed his throne to him. In 723 (1323) he finally concluded peace with the Ikhān.
Abd al-Salāh. After the latter's death in Rabī' II 736 (Nov. 1335), Hassan Buzurg pleaded himself to Al-Nasir's favor but the latter would support him with an armed force. Al-Nasir, who was a better diplomat than soldier and had not the courage to intervene at the decisive moment, did not fulfil the condition. Al-Nasir had diplomatic relations with most of the rest of the known world and at his court appeared embassies not only from the Golden Horde, the Ilkhānids, the Rasūlid of Yaman, the king of Abyssinia, and the Ḥafsids of Tunisia, but also from the Emperor of Byzantium, the Crr of Bulgaria, the Pope, the King of Aragon, Philip VI of France and Sultan Muhammed b. Tughluq of Dihl. Al-Nasir died in the 3rd of Dhu l-Hijjah 741 (June 1341); he left eight sons, who reigned one after the other but were themselves ruled by the emirs who were usually quarrelling among themselves. His immediate successor on the throne was al-Malik al-Manṣūr Safīd al-Dīn Abū Bakr, who was deposed after only two months in favour of another son of the late sultan.

In al-Nasir's third reign the position of the Christians improved, and he frequently tried to alleviate their hard lot, although his efforts sometimes failed against the stubborn opposition of the Muslim clergy. The ordinances of the period when Sallar and Baibars were the real rulers were at least not enforced to the full extent and we even find that the sultan put Christians, i.e. Copts, into the government offices, presumably simply because they were cleverer and more witty than the Muslims. Men of learning were treated with a benevolent interest, and the Ayyubid Abu'l-Fidāʾ (q.v.), celebrated as a historian and geographer, was the sultan's trusted friend "perhaps the only one among all the nobles whom al-Nasir treated till his death with equal love and respect" (Weil, iv. 400). Al-Nasir further abolished many taxes which oppressed the people. He built canals and roads and carried out other public works for the improvement of means of transport. Architecture in particular flourished exceedingly; among the splendid buildings which date from his reign special mention may be made of al-Kasr al-Aḥlāf, al-Mudawara al-Nasiriyya, and Dūmāt al-Nasirī. These works however cost large sums of money and there were really no bounds to his extravagance. He was able through his long reign to maintain the Mamluk state in its place among the great powers, and he was also able to make his authority felt at home. In some respects he reminds one of Sultan Baibars 1; like the latter he was little scrupulous in his choice of means. To undeniable gifts he added suspicion, covetousness and an extremely digressive nature, and it has been observed, undoubtedly with justice, that al-Nasir inspired more awe than respect.

II. AL-MALIK AL-NAṢIR NAṢIR AL-DīN ḤĀṢAN, the nineteenth sultan of the Bahri Mamluks, son of the preceding. After the murder of his brother al-Malik al-Muṣaffar Saif al-Dīn Ḥāḍidjī, Ḥasan who was then only eleven, or, according to others, thirteen years old was proclaimed sultan on the 28th Ramadān 748 (Dec. 1347). Another son of the sultan al-Malik al-Naṣir Muḥammad b. Kālūn, called Ḥusayn, was also put forward but this plan fell through and he never attained the throne at a later date. More important than the elevation of this minor prince to the throne was of course the distribution of the high offices of state among the emirs; the emir Baiboghā Arwas became administrator of the kingdom, his brother Menqāl al-ʿUṣūfī vizier, and the chief emir Shāhābī, Abū Bekr of al-Malik al-Ṣalāḥ al-Salih al-Dīn Ṣalih, q.v. i., afterwards sultan. Thanks to Baiboghā's adroit policy, al-Nasir was able to survive for four years, although, except for the last few months, he exercised no influence worth mentioning on affairs of state. His reign was filled with unsettling quarrels among the ruling emirs and systematic raiding by the Beduins. The most noteworthy event of the period was however the devastation of a great part of the world by the devastating pestilence which swept through Europe as the "Black Death", spread from Asia through Egypt and over almost all Europe to England and Scandinavia. In Egypt the plague raged in the second half of the year 749 (1348-1349) being accompanied by a no less fatal cattle-plague. In Syria it had appeared a few months earlier. Everywhere countless men fell victims to the angel of death and it is not surprising that the political and economic life of the state was crippled. The plague only died down in the following year. In Shawwāl 751 (Dec. 1350) the sultan succeeded in getting rid of the most powerful emirs and taking the reins of government into his own hands, but after a very few months he was deposed and his brother al-Malik al-Ṣalāḥ al-Salih al-Dīn Ṣalih, the eighth of the sons of Sultan Muḥammad b. Kālūn, was placed on the throne (Djumādā II 752 = Aug. 1351). He ruled only for three years; on the 29th Shawwāl 755 (Oct. 20, 1354) he was derowned and his brother al-Nasir restored. The real ruler at first was Shaikhīt but in 758 (1357) the latter was waylaid and so severely wounded that he died a few months later. His successor ʿUṯmān b. Saḥmashīr, was of possessing himself of the murder, did not allow the sultan the slightest independence, but was however arrested in Ramadān 759 (Aug.-Sept. 1358). In Muharram 761 (Nov.-Dec. 1359) the governor of Ḥalab undertook an expedition against Ṣūr and established Muslim garrisons in Adana and Tarus. About the same time, the troops who had been sent to Mecca by the Egyptian government to settle the endless family feuds there were defeated by the Meccans and those taken prisoners sold in Vanbō as slaves. On hearing this the sultan is said to have sworn to exterminate the sharifs completely; but before he could carry out the plan, he himself deposed. For, as he wished to preserve his independence, he quarrelled with the powerful emir Yalbugha, who had reproached him with his extravagance. The latter combined with several other dissatisfied emirs and prepared to fight. Al-Nasir was defeated and had to abandon his plan of escape secretly to Syria. Instead he was taken prisoner and handed over to his enemy Yalbugha (Djumādā 1 763 = March 1361). His ultimate fate is unknown; according to one, in
itself quite credible, story he was strangled and his body thrown into the Nile. His mosque (Qibla Salāṭ in Ḥusayn) built in Cairo in the years 1356–1363 is considered the most important example of Egyptian-African architecture.

(K. V. Zottersteer)

**AL-NAṢIR**, honorary of the fourth sovereign of the Mamluk dynasty of the Muṣrīnids or Al-Maḥdah [q. v.]. Abū ʿAbd Allāh Muḥammād b. Yaḥyā, b. Ἀλ-Μαςί.by Ἀβέ ʿΑδρ Αλ-Μου.’Min. He was proclaimed on the death of his father on the 22nd Rabī’ I 595 (Jan. 25, 1199). The beginning of his reign was marked by a suppression of the rising led by an agitator in the mountains of the Gharār and a long stay at Fās during which he rebuilt a part of the wall of the ʿamṣa of this city. Hearing of the rising of Yaḥyā b. Ḥašāk Ibn Ḥašāk in Ifriqiyah, he set out for the eastern part of his empire and laid siege to the town of Mahṣīya, which was taken on the 6th of Dhuḷ-Qa’dah I 602 (Jan. 9, 1206). He returned to Morocco in the following year leaving as his deputy in Ifriqiyah the shakīb Abū Muḥammad Abū Ṭāhir Abū Ṣaḥābur Abū Ḥasān, ancestor of the Ḥassābīs [q. v.]. At the same time, he sent from Algiers against Majorca [cf. RABEŠEKS; ISLANDS], which had belonged to the Banū Ḥārīya since the period of the last Almoravīda, a fleet which took the island: this remained in Muslim hands till 637 (1239). In 607 (1211) al-Ṭāhir sent an expedition to Spain which ended in a disaster to the Muslim troops: in front of Ḥijāz al-Ṭāhir or the Nasīm of the Caliph [q. v.] on 15th Ṣafar 609 (July 16, 1212). This severe reverse deeply affected al-Ṭāhir, who returned to Morocco and made his subjects take the oath of allegiance to his son ʿUthayn. He then retired to his palace. He died in Ribāṭ al-Fāṭih (Kabat, q. v.) on 10th Shabān 610 (Dec. 25, 1213). According to some chroniclers, he died a violent death on the same day in Marrakush, his capital, the victim of a conspiracy hatched by his visiers.

**AL-NAṢIR.** [See ‘Uṭrūrīh.]

**AL-NAṢIR AL-DIN ALLĀH,** official name of several Zāhid imāms.

i. Among the Caspian Zāhid this title was borne by 1. AL-NAṢIR AL-KĀHIR AL-ḌURR [q. v.] and his great-grandson 2. AL-NSHIR AL-ṢARĪN AL-ḤUSAIN B. AL-HASAN B. AL-HASAN B. AL-LĀspender. Abū. The latter gained for himself a dominion beginning in Ḥawṣam, where he could find associations with the earlier period of Zāhid rule. He laid great emphasis on the religious character of Zāhidism; he gave out the state treasury funds to support people who gave up the Kurʾān by heart. He was also a poet. After his death (676 = 1083), his tomb in Ḥawṣam was a much visited place of pilgrimage.

II. Among the Yaman imāms this title was borne by 1. AL-NAṢIR AHMAD, son of al-Ḥādī Vahṣī and his brother’s daughter Fātima. In the heavy fighting which the father had to wage in order to found the new state, Ahmad had been more distinguished than his elder full brother Muḥammad. Homage was, it is true, paid first to the latter as al-Murtajj shortly after the death of al-Ḥādī (289 = 911); but after 6 months he abdicated and he could make no progress against the Ḥaḍrān ‘Ali b. Ṣadīq, and suggested as his successor the vigorous Ḥaḍrān, whom the Banū Ḥašāk especially favoured. As a poem composed when allegiance was sworn to him in Sāhar 301 (Aug.–Sept. 913) he made war on the Ḥaḍrān’s his first duty and played a considerable part at least in damping back the threatened Ḥaḍrānisation of the Yaman. He died at Sāḥa, probably in 315 (927); his tomb is there. All succeeding bearers of the title except the next one: 2. ABU ‘L-FATH AL-NAṢIR AL-DAILAM, so-called from his first Caspian sphere of activity, were of his family although of different lines. In the Yaman, in contrast to his predecessor, he began operations south of ‘Anṣār’ fell in 447 (1055) fighting ‘Ali al-Salāḥī there and was buried near Ḥāmār. The life of 3. AL-NSHIR SALAWH AL-DIN was marked by internal strife which ultimately caused his death. In the first half of the xvith (xvith) century, several imāms had disputed the succession. About the middle of the century, his father al-Mahdī ‘Alī b. Muḥammad attained considerable influence, which was however much reduced in the period before his death at Ḥāmār in 774 (1372). Salāḥ al-Dīn became sole imām and advanced as far as the Tihmā against the Rastīlis [q. v.]. But when in 792 (1391) he died at Tīlān, his death was concealed for two months on account of the insecurity and his body was concealed in the castle in a coffin covered with plaster. It was only when rumours of his death reached the Kāhi al-Dawwār in Sāda that the latter arranged for his burial in Tīlān. The son ‘Ali b. Salāḥ al-Dīn could only obtain recognition as ‘Imām of the Dihādī and fell in 840 (1336), one of the many victims of the great plague. In spite of opposition the Zāhid power was once more built up, it was destroyed by the young dynasty of the Tihmās from the Tihmās (850–923 = 1446–1517), especially by its second member ‘Abd al-Wāḥāb b. Dāwūd, from 855 (1458), until at the end of the xith (xvith) century Al-Ḥādī ‘Isa al-Dīn b. al-Ḥasan again re-established and extended their power. His son 4. AL-NAṢIR AL-ḤASAN I. “IZZ AL-DIN (b. 900–929 = 1494–1523) who had primarily inherited from his father a love of learning, could only maintain a limited power in the north. He had to put up for a long time with an anti-imām al-Muṣṭafī Muhammad b. ‘Ali al-Sarāf in ‘Anṣār. 5. AL-NAṢIR AL-ḤASAN II. “ALI b. DĀWŪD at the end of the xth (xvith) century organised in the north one of the centres of resistance to the Turks who had been penetrating into the country since 927 (1521) and 943 (1536) but was taken prisoner by them in 1004 (1598). Among the pretenders within the family al-Muṣṭafī al-Kāsīm (d. 1029 = 1620), the liberator from the first Turkish conquest, was 6. AL-NAṢIR MUḤAMMAD. ‘Isa b. Ἀλ-Μαदī Ἀḥμαd; he set up first in 1136 (1723–1724) in the north in the hills of Sufyān among the Banū Bakīl, then in 1139 (1726–1727) away in the south at Ṣāḥīf but had finally to submit to his cousin’s son al-Muṣṭafī al-Ḥusain b. al-Kāsīm b. al-Ḥasan b. al-Muḥammad Ḥaḍrān and died in 1167 (1753) as a private individual in Ṣāḥīf. In 1251 (1836) the dissatisfied troops who had been discharged by the very extravagant imām al-Muṣṭafī ‘Alī b. al-Mahdī ‘Abd Allāh
the early part of this period of expansion al-Hasan was much occupied in the suppression of local rebellions. He was anxious also to remain in the caliph's good graces, and for this reason declined to assist the general Mu'taz [q.v.] in his quarrel with al-Muktafi, which ended in the latter's death. In 323 (935), however, the caliph al-Ra'id attempted to displace him in the governorship of al-Mawālī in favour of his uncle Sa'id, al-Hasan thereupon had Sa'id murdered; and though al-Ra'id at first sought to impose his will by force of arms, he was in the end obliged to agree to al-Hasan's restoration.

The reign of al-Ra'id saw the final collapse of the traditional 'Abbāsid system of government with the appointment of Ibn Ra'id as amir al-muwār [q.v.]. This development resulted in a still greater weakening of the caliph's power; and in 327 (938-939) al-Hasan made an attempt to hold his dais, which, however, were promptly exacted by Ibn Ra'id's successor, Badkān [q.v.]. In 330 (941-942), again, when the caliph al-Muttaqī [q.v.] and Ibn Ra'id (who had meanwhile been restored) fled to al-Mawālī from Baghdad on its occupation by the brothers al-Bardī [q.v.], al-Hasan had Ibn Ra'id assassinated, forced the caliph to give him the amirate together with the šāfī Nāṣir al-Dawla, and later married his daughter to the caliph's son. But though he and his more celebrated brother 'Ali, who was at the same time entitled al-Muttaqī al-Dawla [q.v.], were able to restore al-Muttaqī to his capital and drive the Bardīs back to al-Basra, they were almost immediately obliged by a revolt of the Turkish troops under Tūṣn[q.v.] to retire again to al-Mawālī. Al-Muttaqī now appointed Tūṣn amīr in Nāṣir al-Dawla's place. But his evident helplessness encouraged Tūṣn to abuse his power; and in 332 (945-946) the caliph again sought refuge with the Ḥamdānīs. Saif al-Dawla now tried, though without success, to defeat Tūṣn in battle, while al-Hasan removed the caliph for greater safety from al-Mawālī to Raṣīla. After some months, however, al-Muttaqī was persuaded by Tūṣn's professions of loyalty into returning to Baghdad, only to be met on the way by the amir, who blinded and deposed him. On this Nāṣir again withheld his dais. But Tūṣn and al-Muttaqī [q.v.], the new caliph, came against him and forced him to pay. Tūṣn, however, died in 334 (945-946), whereupon Nāṣir made a bid to recover the amirate. But later in this same year Baghdad was occupied by Ahmad b. Ruych Mu'īn al-Dawla [q.v.]; and henceforward Nāṣir's career hinged chiefly upon the maintenance of his power against that of the Buṣānīs.

The struggle began immediately. As soon as he was established in Baghdad Mu'īn al-Dawla led an expedition against the Ḥamdānīs, and though Nāṣir al-Dawla forced him to return to the capital by himself occupying the east bank and blockading the Round City, in the end he drove the Ḥamdānī forces out. Nāṣir retired to 'Ukhārī, and from there sued for a peace that should grant him the tributary lordship of all the country north of Takrit, as well as Syria and Egypt. But a revolt among his Turkish troops forced him to flee before this was concluded, and it was only by the aid of a force sent by Mu'īn that he succeeded in suppressing it. Mu'īn's object in helping him was no doubt to preserve some order in the Ḥamdānīs, but he was opposed by the so-called 'Hamādānīs, approaching the city of Tūṣn[q.v.].
dominions until he should be ready to absorb them. For he now took one of Nāṣir's sons as a hostage for his obedience, and two years later led another expedition against al-Mawill. This again came to nothing, however, since Mu'izz was obliged to make peace before attaining his object, owing to the outbreak of trouble in Persia, where his brother required his assistance. Nāṣir now agreed to pay tribute for Dīyār Rābī'a, the Basra, and Syria, and to have the names of the three Byzants pronounced in the Masjid after that of the caliph throughout this territory.

It was not till 345 (956–957) that further trouble arose between the rival potentates. In that year Mu'izz was called away from Baghdad to deal with a revolt, whereupon Nāṣir sent two of his sons to occupy the capital. Mu'izz, however, succeeded in overcoming the rebel; and on his return the Hamānīs decamped. Yet in spite of this provocation Mu'izz contented himself with exacting an indemnity and a renewal of Nāṣir's contract to pay tribute, and it was only when Nāṣir withheld the second year's payment that he took further steps against him. He then advanced into his territory, took al-Mawill and Nīshībūr, and finally sent a force to al-Raḥja. Nāṣir, who had fled first to Ma'ṣūfīn and then to Alep, which was now held independently by Saif, attempted to make peace. But Mu'izz rejected his advances, and came to an agreement only when Saif offered to take his brother's place as tributary for al-Mawill, Dīyār Rābī'a and al-Raḥja.

Five years later, in 353 (964), Nāṣir opened negotiations to recover his position as tributary for these territories. But he included in his demands one, for the recognition of his son Abū Taqī al-Qādīnāfār [q.v.] as his successor, which Mu'izz was unwilling to grant. He again attacked the Hamānīs, occupying both al-Mawill and Nīshībūr. But they were more successful in withstanding him on this occasion, and an agreement was arrived at whereby Abū Taqī undertook the payment of tribute for his father's former holdings.

In 356 (967) both Mu'izz and Saif died. Almost the last action recorded of Nāṣir is the advice he then gave his sons to refrain from attacking Mu'izz's son and successor Bakhtīyār till they should have exhausted the resources bequeathed to him. For on the death of Saif, to whom he had been nabi and attached, Nāṣir lost all interest in life, and so antagonized his family by his aversion that they resolved to take the control of affairs into their own hands. Abū Taqī, who had in any case taken his place as tributary, and his mother, Nāṣir's Kurdish wife Fatimā bint Aḥmad, contrived to gain possession of all his property and fortresses; and when Nāṣir attempted to enlist the help of another son, they imprisoned him in the castle of al-Salāma in the fortress of Ardīmān. He died, still in confinement, either the next year, 357 (968), or the year after.

Nāṣir al-Dawla's rule was disastrous for the territory over which he had control. The contemporary Ibn Ḥawšal [q.v.] refers in several passages to his ruinous exactions and tyrannical seizures of land (see his descriptions of al-Mawill, Basra, and Nīshībūr). And Miskawāh notes that by bringing fictitious claims against landowners he would force them to sell to him at low rates, till he became not only the lord, but also the owner, of most of the region of al-Mawill.

NĀṢIR-I KHSRAW, whose full name was Abū Muḥammad Nāṣir b. Kṣārwān b. Ḥālīfī, one of the most important Persian poets of the 11th century.

Life. Nāṣir was born in 904 (1003) in Kāhā, in the district of Balkh. The Persian historians usually call him Alawī which in this case can hardly mean descent from the caliph 'Alī but simply indicates his adherence to the Shi'a. His father was probably a small landowner in the vicinity of Balkh. Nāṣir received a good education and was early acquainted with almost all branches of the learning of his day. In the forties of the 11th century we find him as an official in Marw where, according to his own confession, he led a rather dissolute life. In 1045 however, a sudden change came over him, the real reasons for which are unknown, but which Nāṣir himself explained by a prophetic dream. He decided to give up his position and all his pleasures and went on pilgrimage to Mecca on which he visited the Ka'ba four times. This journey had important results for Nāṣir. He left Persia at a difficult period, when the country was being laid waste by the continued wars between the various princes. He found the same wretched picture in all the other Muslim countries which he had to traverse on his journey. Only Egypt proved a pleasing exception; there he saw prosperity, rich bazaars, harmony and tranquility. As the Ismā'īlī dynasty of the Fāṭimids was ruling in Egypt at this time, Nāṣir concluded that Isfahān had diverged from the true path and that only Ismā'īlism could save the true believers from inevitable ruin. Nāṣir made the acquaintance of several Ismā'īlī dignitaries, joined their sect and finally received the blessing of the caliph al-Mustansir (1036–1044) in order to spread the new teaching in his native Khorāsān. He was consecrated as a ṣaqqāhī, a fairly high official in the complicated Ismā'īlī hierarchy. Returning to Balkh he devoted himself with the greatest zeal to his new task. But the Sadjīlīs who ruled the land soon became convinced that Nāṣir's activity was a serious threat to them. He was persecuted and had to flee from Balkh. He went first to Mizrandānī but found that this also was not safe enough and was finally forced as a last resort to take refuge in the Yungān valley among the inaccessible mountains of Badašāhān. There in these poor and inhospitable highlands the aged poet spent his last years; there his most important works were written and there he died in 1060 or 1061 (452–453). Down to the present
day there has survived in this region a little sect known as the Nāṣīrya, which owes its origin to the “saint Shō Nusir” and tells fantastic stories about its founder.

Works. Nāṣir’s works were probably very numerous but have survived only in very imperfect and corrupt form. The most important is the great philosophical Dīvān, which was composed in the miserable years of his exile. The artistic value of his poems is not especially high, the style is often clumsy and awkward but the philosophical matter which still awaits its investigator is of great importance for the history of Persian literature. It is a complete encyclopedia of Ismā‘īlī teaching but of course unsystematic and disconnected. From the linguistic standpoint also the work is of extraordinary interest. A good edition of the Persian text appeared in Teherān in 1928. Two very long didactic poems are appended to the Dīvān: Rūghānī-nāma, which presents a whole philosophical system having an undeniable similarity with the teaching of Avicenna, and Sādāh-nāma which sharply criticises the aristocracy of the kingdom and praises the peasant, “the nourisher of every living creature”.

The best known of Nāṣir’s prose works is the Sāfar-nāma, a description of his pilgrimage to Mecca which is an exceedingly valuable source of the most varied information. Unfortunately this work has come down to us only in a very mutilated form and has probably been edited by a Sunnite hand. The other works of Nāṣir are mainly Ismā‘īlī textbooks. Among them first place should be given to the Zād al-Maṣūrīn. It is an encyclopedia of a special character which deals with the most varied questions of a metaphysical and cosmographical nature. A good edition of the Persian text was published in Berlin in 1923 (Kaviani). No less important is the Waḥţih Dīn, an introduction to Ismā‘īlism which gradually initiates the reader into Ismā‘īlī beliefs by a systematic exposition of questions from the Ḥanīfī cleverly put together. A number of other similar pamphlets like Umm al-Kitāb, which were quite recently fairly widely disseminated among Ismā‘īlīs of the Pamir are credited to our author but so far nothing definite has been ascertained about their authenticity.

Although a considerable portion of Nāṣir’s works is now available in good editions, one cannot yet assert that sufficient light has been thrown upon his striking personality. It would be particularly valuable if his philosophical system could be studied as it is of far reaching importance for the history of thought in Persia.

G., xxxvii. 645–665; xxxiv. 428–431); do., Nāṣir bin Khusraw bin Ḥusayn, a poet and prose writer (M. d. M. G., xxxvi. 478–508); do., Nāṣir bin Khusraw’s Ehren, Denken und Dichter, Leyden 1884; E. Fargan, La vie de la filiști, Persian and French (Z. d. M. G., xxxvi. 643–674); emendations by F. Tefnel, (Z. d. M. G., xxxvi. 96–114); Ch. Schelte, Sofer Naimen (text and transl. with introduction), Paris 1881; this ed. is now somewhat obsolete and it is advisable to use for the text the new edition, Berlin 1923 (Kaviani), which also gives as an appendix the text of the Kāshānī-nāma.

and of the Sādāh-nāma. — Translations: Guy Le Strange, Nāṣir-i Khusraw, Diary of a Journey through Syria and Palestine, London 1888; A. F. Fuller, Account of Jerusalem (J.E.A.S., 1872, p. 142–164); E. Berthold, Safar-nāma (Russian), Leningrad 1933. — In addition to the new edition of the Dīvān, already mentioned there is also the oldest lithographed text, Tabriz 1280. A Turāzī’s hand, the authenticity of which is doubtful, has been published with Russian transl. by V. Zhukovski, in Zapiski (iv. 350–393). Text of the Waḥţih Dīn pr. Berlin 1925 (Kaviani).

(E. Berthold)

AL-NĀṢIRA, Nazareth, the home of Jesus, lies in a depression sloping to the south surrounded by hills in a fertile district. While the hills to the north and northeast are not very high, in the northwest the Djebel al-Sahh rises to 1,600 feet above sea-level. The name of the town, which does not occur in the Old Testament, is found in the New and in the Greek fathers of the Church in the meaning forms Ναζαρή, Ναζαράς and Ναζαρέα with ζ, but according to Liddel and Scott in Hebrew a ze‘re, which is confirmed by the Syrian Ṣirā and the Arabic Nāṣira as well as by the Talmudic derivative form ⼦ ⽀ Yōẏ, pl. ⼦ ⽰ Yōẏ with the Christian Arabic has ⲁ. All these forms as well as Ναζαρέα (Mark i. 24) have in the first syllable an obscure e accented by e in Talmudic. In Christian Arabic there is a subsidiary form ⲁ Yōẏ with Ⲍ in the second syllable with which is connected the derivative ⼦ ⽀ Yōẏ (Matt. xxvi. 71; John xviii. 5), cf. the Ναζαρηνοί nízor (Acts xxiv. 5). The Mandean term Naṣura (e.g. Dalman, Arab. Gramm., p. 178; Gressmann, in Z. A. T. W., iii. 20 sqq.) is usually connected with this but Liddel and Scott (Mandäische Liturgien, p. xi. 124; Z. S., i. 350 sqq.) wants to explain it as an “observer”, while Zimmermann (E.D.M.G., lxiv, p. 429 sqq., 75, 46) seeks its origin in the Babylonian Nāṣirā. That the Arabic maṣir, Christians, Nazarīs and Nazārūs is not the name of the town is known to the Arab writers.

Nazareth, which in the time of Jesus was a little town of no importance (cf. John i. 47: “what good can come out of Nazareth”); it is not even mentioned by Josephus), was not in the early Christian period one of the places of the New Testament to which large numbers of pilgrims went. According to Epiphanius, it was inhabited exclusively by Jews till the time of Constantine the Great. The number of Christians however gradually increased and was maintained after the Muslim conquest (636). In the time of Arculf (c. 670) it had two churches, and in 352 (943) Masūdī mentions a church held in great veneration there, no doubt the church of St. Mary. Before Galilee was conquered by Tancred and the Crusaders, Nazareth was destroyed by the Saracens; it revived under Christian rule, especially after the bishopric of Scythopolis was transferred thither. The Russian abbot Daniel (1115–1115) has given us a very good picture of the Church of the Annunciation and of the Well of Mary there in this period. In 1187, Saladin took Nazareth and at the peace between him and Richard (1192) it remained in his hands. In 1251, during the last unsuccessful crusade, Louis IX undertook a pilgrimage from Akka to Nazareth. Yaḥkī (623 = 1225) who relies on the Gospel story instead of Muslim legend mentions Nāṣira as a village 13 miles from Tābūriyā. In 601 (1203) the Mamluk
Nährabād. See Sīstān.

Nāshk (n.), inm. I from n-škk, with the technical sense of "abrogation (of a sacred text)."

Nāshki. See Arabia, 4.

Al-Nāšr, the vulture. It gets its name from the fact that it tears the dead animals on which it feeds to pieces with its beak and devours them. It eats till it can no longer fly. It is said to attain the age of 1,000 years. Its eyes are so sharp that it can see its prey at a distance of 400 farsakh; its sense of smell is equally sharp, but fragrant scents are so deadly to it that they destroy it. It shows great endurance in flying and follows armies and pilgrims, sometimes in order to fall upon the corpse of man and beast. It also follows flocks because it is particularly fond of stillborn lambs, a statement which is confirmed by Biruni who says it attacks lambing sheep. It lays its eggs on high cliffs and is said not to sit on them but to leave them to the heat of the sun. It is however very anxious lest its eggs or young be eaten by hawks and therefore covers them with the leaves of the plane-tree. The use of the gall, brain, flesh and bones in medieval times corresponds to the usage in ancient medicine.

al-Nāšr, was also the name of a deity in pre-Islamic Arabia (see Wellhausen, Keit, p. 23).

Bibliography: Zitzenriß, ed. Wüstefeld, i. 424; Damirri, ii. 476; Ibn al-Baljārī, ii. 370. (J. Reuss.)

Al-Nāṣir, the title of Sūra cxxv., taken from its first verse. The word means "help, assistance" and is often used of God's help in war and then with the meaning of "victory." Sūra lxvi. 13 is also associated with al-fath, cf. xviii. 15. The Sūra clearly belongs to a later period and verse 2 in particular recalls the year 9, the Year of the Embassies. It is therefore natural to refer al-fath (verse 1) in keeping with the frequent use of the word to the capture of Mecca, except that it is not mentioned as a fact (as Well, Ibn Histīn, p. 933 translates it) but is represented as an assumption, which is also true of verse 2. This is perhaps only a rhetorical figure intended to emphasise the general prevalence of the idea and does not exclude reference to a particular event.

Nāṣir b. ʿAḥmad b. Ismāʿīl called al-Sādīq, a Sāmānid. After the murder of his father in Djamād al-ʿĀṣir, the fourth year of the caliphate of Abd al-Malik, 91 (606), the people of Sīstān rebelled against the Sāmānids and placed themselves under the rule of the governor Badr al-Khair appointed by the caliph al-Muktafar. At the same time the caliph's generals al-Fāqī b. Ḥumayd and Khalīf b. Ḥumayd al-Mawār过渡 the towns of Ghurān and Baṣt which were in the possession of the Sāmānids. When al-Fāqī fell ill, Khalīf rebelled against al-Muktafar, routed the troops sent against him and went to Kirman where he encountered a force sent against him by Badr. The battle ended in Khalīf's defeat; he was himself wounded and taken prisoner; he died soon afterwards of his wounds. In the same year, the uncle of Nasr's father Iṣār b. ʿAḥmad b. Aṣad rebelled in Sāmān and marched on Bukhāra, accompanied by his son (Ramādān 301 = April 914) but was driven back by Ḥamīyya (Hamīyya) b. ʿAli. A second attempt also failed; Iṣār took to flight again and Sāmān fell into the hands of the government troops. He then tried to hide himself but had finally to come out of his place of concealment and throw himself on Ḥamīyya's mercy. The latter took him to Bukhāra where he remained till his death, while his son Hyād went to Fargāna. In the year 302 (915) another son of Iṣār's, Abd Ṣalāḥ Ṣanṣur, stirred up trouble in Nāṣirīs in combination with Ḥusayn b. ʿAli al-Mawārī (al-Mawwarṣūf), who had rendered great service to the Sāmānids but felt he had been neglected by them. After Ṣanṣur's sudden death Ḥusayn, who was suspected of having poisoned him, went to Nāṣirīs and seized the town. In Rabīʾ I 306 (Aug.-Sept. 918) he was taken prisoner by ʿAḥmad b. Sahl, a tried general, who had been long in the service of the Sāmānids, and brought to Bukhāra, while ʿAḥmad took up his residence in Nāṣirīs. Ḥusayn was after some time released and given a position at
the court of Naṣr; for some unknown reason he was again thrown into prison and ended his days there; in the following year, Abū sa‘īd deserted the Sāmānid because Naṣr had not kept his promise to him, and recognized only the caliph's authority. He went from Naṣībūr to Djudjān and drove out its governor Karageyn. He then returned to Khurāsān and entrenched himself in Marv; in Rajab 307 (Dec. 919) however, he shared the fate of Hūsain. Hamṣija cunningly managed to distinguish him out of the town. Abū sa‘īd was defeated and taken prisoner and died a few months later in BUKHĀRĀ prison. In Tabariānān also there was fighting. After the death of the Za‘idī imām al-URFI, [q.v.], al-Hasan b. al-Kāsim, called al-Dā‘i al-Saghīr, was recognized as his successor. In 308 (920–921) the latter sent his general La’ilā b. al-‘Uqma‘n al-Dūlāmī to Djudjān. From there he went first to Dağmāghān and then to Naṣībūr where he had the khurja read for al-Hasan b. al-Kāsim (Dhu ‘l-Hijja 308 = April–May 921), after Karageyn had been put to flight. In the neighbourhood of Tīlis he encountered Hamṣija b. ‘Abī whom the government of BUKHĀRĀ had sent against him. At first a considerable part of the Sāmānid army took to flight but Hamṣija himself stood firm and La’ilā had no further success; he had to take to flight, was captured and beheaded by Hamṣija's orders (Rabi‘ I 309 = July–Aug. 921). Karageyn then returned; but when he left Djudjān the army of Abū ‘l-Husayn b. al-Hasan b. Abī al-URFI seized the town, Naṣr sent 4,000 horsemen there, led by Simdrjlī al-Dawwātī, who at once laid siege to Abī ‘l-Husayn. When the latter made a sortie with a force twice this size, he fell into an ambush but escaped to Astarābād and then to Sūrīya. Simdrjlī then went to Astarābād; but when his efforts came to naught he bribed Abī ‘l-Husayn's deputy Mākkā b. Kākī and persuaded him to pretend to vacate the town for a time and then to reoccupy it. This was done as arranged; Simdrjlī occupied Astarābād but soon returned to Naṣībūr where upon his subordinate, only left there as a feint, was driven by Mākkā first out of Astarābād and soon afterwards out of Djudjān. In 310 (921–922) Ilyās b. Isḥāq rebelled in Farghāna and went to Samarkand; this enterprise came to nothing through the ability of Abī ‘Amr Muhāmmad b. ‘Asad, who with 250,000 men prepared an ambush and scattered Ilyās's army, said to have numbered 30,000 men. After some time, the latter joined the governor of al-Shāh, Abū ‘l-Fa‘ṣāl b. Abī Yusuf, but had again to take to flight and went to Kāshqār where he joined the Dīkhtānī Ṭoghihtīn. After failing in an attempt to invade Farghāna he returned to Kāshqār. He was finally pardoned by Naṣr and settled in BUKHĀRĀ. About the same time Abī ‘l-Fa‘ṣāl Muhāmmad b. ‘Ubadah Allāh al-Bal‘almī [cf. BAL‘AMĪ] was appointed vizier in place of Abī ‘Abd Allāh Muhāmmad b. Abū al-Dajhālī. In the year 314 (926) Naṣr at the instigation of the caliph al-Mu‘taḍid undertook an expedition against al-Ra‘y where Fātik, a freedman of the rebel governor Yusuf b. Abī ‘l-Sā‘īd, was ruling. He took the town in Djamāṣī I (Aug.–Sept. 926) and returned to BUKHĀRĀ after two months' stay there. al-Ra‘y remained in possession of the Sīmānids till the beginning of Sha‘bān 315 (Sept. 928) when the governor appointed by Naṣr fell ill and surrendered the town to the ‘Alīd al-Hassan al-Dī‘ī and his general Mākkā b. Kākī. In 317 (929–930) or 318 (930–931) Naṣr’s brothers, ‘Abbās, ‘Abbās, and ‘Ibrāhīm, whom he had imprisoned in the citadel of BUKHĀRĀ, succeeded in regaining their freedom with the help of their followers among the dissatisfied elements of the citizens and seized the town. When ‘Abbās claimed the throne, ‘Abbās who had gone to Naṣībūr at the head of a large army to assist the caliph against the rebel ‘Abbās b. Shīrāzī had to return as quickly as possible and after several encounters with ‘Abbās he was able to restore order. ‘Abbās was pardoned and the governorship of Khorāsān given to the emir of Şaghāniyān Abū Bakr Muhāmmad b. al-Mu‘tāfār. On the fighting in Djudjān and Kirmān see the article ‘MĀ‘AN IN KĀKĪ.

The last year of Naṣr’s reign was marked by a great revival of the Shi‘a propaganda, which had never been encouraged in Khorāsān and had been particularly encouraged just at this time by the rise of the Fatimid caliphate. When the people of Naṣībūr paid homage to an ‘Alīd named Abū ‘l-Husayn Muhāmmad b. Yaḥyā as caliph, Naṣr invited him to BUKHĀRĀ and when he left not only gave him a robe of honour but also granted him an annual allowance from the treasury. Hūsain b. ‘Abbās al-Mu‘tadād had been converted to the Shi‘a by the Fatimid emissaries in Khorāsān. He was followed by Muhāmmad b. Abī al-Nakhabī (al-Nasāfī) who transferred his activities to BUKHĀRĀ and gained a number of proselytes among the high officials. He finally succeeded in winning Naṣr himself over to his party and in inducing him to pay the Fatimid caliph al-Kā‘īm [q.v.] a considerable sum to stoke the fire of Hūsain b. ‘Abbās who had pinned away in a BUKHĀRĀ prison. The naturally aroused the wrath of the orthodox clergy, who were joined by the Turkish guards and provoked a powerful reaction. Naṣr regretted his complaisance and is said to have abdicated in favour of his son ‘Abbās, who had not been guilty of any heresy. Naṣr’s ill-health may have contributed to this decision. The details are variously recorded; in any case, the Shi‘a in BUKHĀRĀ and Khorāsān were persecuted and al-Nakhabī with several followers executed.

According to the usual statement, Naṣr died after thirteen months illness of pulmonary consumption on 27th Rajab 331 (April 6, 943); others say he was murdered like his father. According to some reports, he died earlier, on 12th Rajab 330 (May 31, 942). This latter date perhaps refers not to his death but to his abdication. ‘Abbās’s formal accession in any case only took place after his father’s death.

If we may believe Ibn al-‘Athir, Naṣr was distinguished by a singular gentleness of character; according to other sources however, this was not the case. He was also celebrated as an enlightened patron of poets and scholars and is particularly held in honour for encouraging the poet Rhdg- [q.v.] in every way.

a judicial decision given. These measures, it is true, provoked not only the displeasure of the Arab emirs in Khorasan but also the dissatisfaction of the caliph Hāshim; nevertheless Naṣr succeeded in carrying out his plans. As regards domestic politics he regulated the relations between the Muslims and those under their protection by an important reform in the system of taxation, by which he ordained that all landowners, including Muslims, should pay the land-tax (kharṣa), while the poll-tax (dīya) should be imposed on non-Muslims exclusively. But the deep rooted cliannishness of the Arab caused him continual difficulties. In the first four years of his tenure of office he chose his subordinates exclusively from the tribe of Muṣāra; then he began to be little more broad-minded in this respect and to pay some attention to the Yamanis and thus gradually to pave the way to a reconciliation of the tribes at feud with one another. In the year 125 (740—741) the governor of the Irāq, Yūsuf b. 'Omar al-Thāqafī, endeavoured to arouse the caliph's suspicions of him; Hāshim however saw through his plan and left Naṣr in his post. When al-Walīd II ascended the throne in Rabi‘a II 125 (Feb. 743) he confirmed Naṣr in office but soon afterwards allowed himself to be persuaded by Yūsuf b. 'Omar to recall him and therefore ordered him to come to Damascus and to bring with him all kinds of hunting-birds and musical instruments. Naṣr however did not hurry and before he reached the frontier of al-Irāq, the news of the caliph’s assurances reached him and he at once turned back. When al-Walīd's successor, Yazid III, appointed Mansūr b. Djamāh governor of al-Irāq and Khorāsān, Naṣr refused to recognise him. In 126 (743—744) trouble broke out among the Azd and Rabi‘a in Merw. When Naṣr wanted to pay the troops not in money but with the gold and silver instruments procured for the caliph al-Walīd they mutinied; Djamāh b. 'Ali al-Kirmānī put himself at their head and appealed to their feelings by demanding vengeance for the Banu 1-Muhallab who had been mercilessly persecuted by the Umayyads, a course which he knew would appeal to them. When the Muṣāra appealed to Naṣr to render al-Kirmānī innocuous, he declined at first but later yielded to them and had him arrested (end of Ramadan 126 = middle of July 744); but a month afterwards he escaped from prison. Negotiations were then opened between Naṣr and al-Kirmānī but they led to no real decision. A much more dangerous opponent was al-Hārīth b. Surārid who at the end of Djamāh II 127 (beginning of April 745) again appeared in Merw after a many years' sojourn among the Turks. In order to be safe from this rival, Naṣr had unfortunately secured a pardon for Hārīth and his followers from the caliph Yazid III and after his arrival in Merw he endeavoured to win al-Hārīth over by the greatest indulgence and friendliness. He even went so far as to confer on him the governorship of Transoxiana; but all his efforts were in vain; al-Hārīth adhered firmly to his Marjdīi conceptions and stubbornly refused to recognise Naṣr as governor. As his following was steadily growing, he finally demanded that Naṣr should resign his office and leave the choice of his successor to a court of arbitration. Naṣr said he would agree to this, but when he declined to obey the judgment of the court insisting on his
resignation, open fighting broke out. Al-Harith tried to take the city by surprise but was driven back (end of Dżumāt III 123 = end of March 746). He then joined forces with al-Kirmānī and they attacked Nasr with their combined strength. After several days' fighting, the latter had to abandon Merw and retire to Naisābūr; it was not long however before the two rebels fell out. Among other things al-Kirmānī's cruelty made him hated; in addition there were the endless feuds among the various Arab tribes. After Al-Harith's most influential follower Bīghr b. Dżumāt al-Dabīb had left al-Kirmānī with 5,000 men, Al-Harith soon followed his example but was killed in the fighting that ensued (end of Radjab II 124 = April 746). Al-Kirmānī was now lord of Merw. The Yamānīs stood by him while the Muṭjar sought refuge with Nasr in Naisābūr. Nasr's position was by no means an enviable one. So long as al-Ṭrāk was in the hands of the Khāridjīs and the 'Alīdī rebel 'Abd Allāh b. Muʿawiyah [q. v.], Nasr's communications with the caliphate were cut off and even after Yazīd b. 'Omar had regained al-Ṭrāk for Marwān II, he could not reckon on any very considerable help. There was therefore nothing left for him but to concentrate his efforts on the reconquest of the city of Merw. After repeated encounters between his troops and those of al-Kirmānī, he went there in person and pitched his camp opposite that of his opponent. The two rivals continued to fight with varying fortunes without being able to bring about a decision. Nasr's appeals to Marwān and Ibn Hubayra for reinforcements remained unheeded; in view however of the danger that threatened from Abū Muslim [q. v.], the leader of the 'Abbasīd propaganda, negotiations were begun between Nasr and al-Kirmānī. After a son of Harith b. Suraydā had killed al-Kirmānī to avenge the death of his father, the Khāridjī Shāhīlāt b. Salama took his place and in the name of the Azd concluded a truce for one year. Abū Muslim was able however to bring this agreement to nothing by persuading 'Alī b. Djaḍāl b. Kirmānī that Nasr had instigated the murder of his father and the Azd who were devoted to him broke the truce just concluded and resumed hostilities against Nasr. When Abū Muslim was approached for assistance by the two combatant parties he was able to come forward as an arbiter and decided in favour of the Azd against the Munṣār. He then entered Merw, according to the most probable statement in Rāfī II 132 (Dec. 747), and made the inhabitants swear allegiance in general terms to a caliph of the family of the Prophet without a name being mentioned. For Nasr there was nothing left but to seek safety in flight. From Merw he fled via Sardāb and Tūs to Naisābūr, where the same day reached him that his son Tamīm, whom he had sent against Abū Muslim's general Shahbāz b. Shahbāz [q. v.] had been defeated and slain at Tūs. From Naisābūr he went to Khūzāis and thence to Džurjān. Nebāt b. Hānsalā al-Killābī was here with a large army which Ibn Hubayra had at last sent him by the caliph's orders. But Nasr and Nebāt did not cooperate and in addition the Khāris went over from the former to the latter. On the 12th Dhūl-Hijārā 130 (Aug. 1, 748) Nebāt was defeated by Khāris and fell in the battle. After his defeat Nasr could no longer stay in Khūzāis but fled, pursued by Shahbāz's son Hasan, to al-Ra'y, without receiving any support from the Umayyad officials. Reaching al-Ra'y, he fell ill; nevertheless he wished to continue his journey to Hamadhān but was no longer able to move without assistance; he had to be carried and died in 12th Rāfī I 131 (Nov. 9, 748) in Sāwā [q. v.] at the age of 85. Nasr combined with his eminent qualities as a statesman considerable grace as a poet.

(K. V. ZETTERSTEN)

ṣAṣR AllāH b. Muḥammad b. ʿAbd AllāH Abū ʿAbd AllāH Abū ʾl-Maʾalī of Shīrāz, a Periṣian author and statesman, vizier of the Ghassanid Khusraw Mālik (1160–1186) by whose orders he was arrested and executed. Nasr was the first Persian to succeed in giving a satisfactory Persian version of the celebrated Khūṭāta u-Dimna. His version is based on the Arabic of Abū Allāh b. Makaṣārī and was completed about 1144, i.e. in the time of Bahlawūnī (1148–1153). For a long time his translation was regarded as a model of elegant Persian style which could not be surpassed and served as the basis for the metrical version by Khūṭāta (1260) and for a series of Turkish translations. It was only in the 15th century when even Nasr Allāh's language appeared too homely and archaic that his translation was superseded by the celebrated Amurār-i Ṣuhalt of Huṣain Wāsī al-Kāshī (q. v.), d. 1353 (1352–1353).

(E. BERKHELÄ)

ṣAṣR al-Dawla Abū Ṣaḥr Ahmad b. Markhan, third and most important prince of the Marwānid dynastī [q. v.] of Diyar Bakr. He succeeded to the provincial sovereignty on the death of his elder brother, Mumshīd al-Dawla Abū Manṣūr Saḥhā, in 401 (1010–1011), after a struggle with the latter's murderer, and was in the same year formally recognized by the 'Abbasīd al-Kādir, from whom at the same time he received his 'ibad and by the Ḵāridjī Saʿūd al-Dawla. Though now established in the capital, Māṣjād-i Rāyi, he was unable to obtain effective control of Ḵāridjī, the next most considerable city of the province, until 415 (1024–1025). On his tributary, Ibn Dama, who had hitherto ruled it, was assassinated; and during his reign of over fifty years, he suffered several ineffective attacks on his territory from the ʿUqailids of Diyar Rābiʾa, to whom he appears, at one period at all events, to have paid tribute (see Ibn al-Aṭīr, ix. 121).
and to whom, in order to compose a quarrel arising out of his divorce of a lady of that family, he was obliged, in 421 (1030), to cede Nisibin. In 433 (1041–1042) Dīyār Bakr was invaded from Adharbāījān by the bands of Ghuz Turkmen who had pushed northwestwards on the advance of the Seljūkids leaders into the Dījal; and for two years parts of it were subjected to their depredations. Otherwise the province enjoyed, throughout his reign, a tranquillity remarkable in this troubled age.

The ruler of Dīyār Bakr was regarded as a principal guardian of the frontier of Islam, and as such was expected to harass the Christians whenever opportunity offered, (see the letter addressed to Naṣr al-Dawla by the Seljūkīd Tughhrībeg; Ibn al-ʿAlīh, i. 275). Nevertheless Ibn Marwān's relations with the Byzantine Empire were for the most part amicable, being based on a pact of mutual non-aggression, to which both parties appealed when it was infringed. The only important breach of this agreement occurred in 417 (1027), when Naṣr al-Dawla seized Rūhī (Edessa), which, however, was recovered by the Greeks four years later, and in 426 (1034–1035), when an attempt was made by the Christian inhabitants of that city, in league with Arabs of the Numāzī tribe, to invade his territories. Later their good relations were of use to the Emperor—Constantine X—, who in 441 (1049–1050) obtained Ibn Marwān's help in securing from Tughhrī beg the release of the Georgian general Līpurītī with whom he had been in league against the Georgian king, and who had been captured the year before by Tughhrī's half-brother İbrahim Īnālī up to 436 (1045) Armenia, which also marched in part with Dīyār Bakr, was still independent of the Empire; and in 433 (1032) a Marwānid commander led a successful raid into this country. In 427 (1035–1036), on the other hand, a hājīd caravan from northern Persia was attacked and looted near Anī by Armenians of the Sunnīs tribe, upon which Ibn Marwān forced the aggressors to give up their prisoners and booty.

Early in Naṣr al-Dawla's reign the north of Syria and parts of the Dījāriyya con tinous to Dīyār Bakr were obliged to acknowledge the suzerainty of the Fatimid caliphs, though their hold on these parts remained somewhat precarious. And his own territories were menaced by Fatimid pretensions, when in 430 (1038–1039) the governor of Damascus, Anīṣīgīnī al-Dījārī, who was then reasserting his rule in northern Syria, projected an attack on Dīyār Bakr. This, however, came to nothing.

The reign of Naṣr al-Dawla saw the rise of the Seljūkīds from complete obscurity to the empire of Persia and the Iṭrāk. His first communication with them occurred as early as 435 (1043–1044), on the Ghuz invasion of Dīyār Bakr, when he addressed a letter of protest to Tughhrī, who, though he was scarcely in a position to do so, undertook to restrain the marauders. (It may be noted, nevertheless, that Ibn al-ʿArājk describes this Ghuz invasion as having been actually instigated by Tughhrī, who, he says, granted the province as a fief to its two leaders in advance; cf. Amedro, The Marwānid Dynasty of Mayyāfārīrīn, in T.R.A.S., 1903, p. 137. Surely this author is mistaken in considering the date 434 as wrong, since it agrees exactly with those given by Ibn al-ʿAlīh). Eight years later Naṣr al-Dawla acceded to Tughhrī's demand for recognition as suzerain; and this subservience, which was renewed in 446 (1054–1055), when Tughhrī made a triumphal tour through Adharbāījān and Muslim Armenia, spared Dīyār Bakr the experience of a Seljūkīd visitation. In the following year, however, Tughhrī's attention was drawn to the murder of a Kurdish chief by Naṣr al-Dawla's son Sulaymān, his lieutenant in the Dījāra; and in 448 (1056–1057), when the sultan was obliged to visit al-Mawīli in order to oppose a combination of Shīʿī leaders headed by al-Bāṣīṭī [q. v.], he forced an indemnity from Ibn Marwān by laying siege to Dījārat Ibn ʿUmar.

Naṣr al-Dawla was sagacious, or fortunate, in his choice of the three waizār who served him in turn, namely Abu ʿl-Kāsim al-Iṣḥāfīnī, to whom he owed his throne (in office 401–415 = 1010–1025), Abu ʿl-Kāsim al-Maqirī [q. v.] (in office 415–428 = 1025–1037), and Abū Naṣr Ibn Dījārī (afterwards entitled Fakhr al-Dawla) [q. v.] (in office 430–453 = 1033–1061). It was no doubt owing in part to their abilities that the remarkable tranquillity enjoyed by Dīyār Bakr during his reign was turned to advantage and resulted in an equally remarkable prosperity. This Naṣr al-Dawla fostered by a reduction of taxation and by renouncing the practice of fining the rich in order to augment the revenues. Nevertheless his court is said to have surpassed those of all his contemporaries in luxury, and many instances are quoted of his profusion and generosity. Mayyāfārīrīn became during his reign a centre for men of learning, poets and ascetics, as also a refuge for political fugitives. Among the latter were the Buṣṣid prince al-Malik al-Āzīz [q. v.], who was ousted from the amirate in 436 (1044–1045) by his uncle Abū Kahlīfu [q. v.], and the infant heir of the Abūṣīfīd al-Kāsim—afterwards al-Maṣṭūlī [q. v.],—who was removed with his mother from Baghdad on the occasion of its occupation in 450 (1058) by al-Bāṣīṭī.

Naṣr al-Dawla is described as being reserved, just, high-minded and methodical, and though much addicted to sensuality, he was strict in his observance of religious injunctions. He died, aged about eighty, on 24th Shawwal 453 (November 1061), leaving Fakhr al-Dawla still in office to secure the succession to his second son, Abu ʿl-Kāsim Naṣr, Nisābīr al-Din.

(HAROLD BOWEN)

NAṢR AL-DIN (pron. Naṣḥədīm) ḤOJDE, the hero of the stories of wit and stupidity among the Turks, who bears a strong resemblance to the German Till Eulenspiegel, the English Joe Miller, the Italian Bertoldo, the Russian Balikew, etc. Various opinions are current about his life. One tradition for example makes him a learned man of the line of Hārūn al-Raṣīl, but another makes him a contemporary of the Khwarizmshah Abī ʿl-Ḥasan Taṣ“līhī, who perished 6172–1200). The two traditions are not to be taken seriously; most they might be regarded as an indication that many of the jests of the Ḥoja date from the period of the caliphate or that some of them came through a Persian intermediary.
The other versions of the life of Nasreddin can be divided into two groups, of which the first puts him in the ixth and beginning of the xth century (the period of Bayzad I, Timur, and the eighth Karamanid ‘Ala’ al-Din), and the second in the xiith century (the period of the Seldjuk ‘Ala’ al-Din).

The first view appears to come from the Travels of Evliya Celebi (ii. 16—17). There, for example, the story of Timur’s meeting with the Khodja in the baths is told, when the Khodja said that he would give 40 akce for Timur’s shirt but nothing for him himself. In spite of all the improbability of such an utterance and in spite of the fact that the older tekhabers put this answer in Ayymad’s [q.v.] mouth (cf. also E. J. W. Gibb, Ottoman Poems, 1884, p. 160—167) Evliya’s story, was given currency in Europe by Cantimir, Diex, Goethe, von Hammer, etc. When Mehemd Tewfiq accepted this story of Evliya’s in his editions of the jests of Nasreddin and Badam (since 1853) which were later translated into German (about 1890), it was given renewed life and became almost the predominant opinion in Europe.

The second group of traditions champions the xiith century as the period of Nasreddin and relies on the following facts. Firstly the poet Lami (d. 1533—1533) asserted in his Lala’if, that Nasreddin was a contemporary of Shihydk Hamza who lived in the xiith century; secondly in modern manuscripts the Khodja is associated with the Sultan ‘Ala’ al-Din Koprulu Zade (see Bibliotheca) therefore inclines to the view that he was a contemporary of the Seldjuk ‘Ala’ al-Din, (xiith century), Sh. Siami Bey (“Xamsi al-Ahmad”, vi, 4577) and P. Horn (see Bibliotheca) had already decided for the Seldjuk and the latter definitely for ‘Ala’ al-Din, but Koprulu Zade supported his view by evidence, partly new, which we proceed to quote: 1. the inscription on the tomb of Nasreddin in Akshahr bears the date 386, which on the superscription that it is reversed would indicate that the Khodja died in 685 (1284—1285); 2. on two authentic charters of enslavement (wa’fa’iyyah) of the year 655 (1257) and 665 (1266/7) respectively, a certain “Nasreddin Khodja” appears before the kadi as a witness, and 3. the statement which the famous mufti of Siwi-Hisar, Hasan Efendi, made about 45 years ago in the Majalla‘i‘-al Mawarif about Nasreddin, agrees with this assumption. According to Hasan Efendi, Nasreddin was born in the village of Kharto, near Siwi-Hisar, in the year 605 (1208—1209), held there the office of Imam in which he succeeded his father, and moved in 615 (1216—1217) to Akshehir where he died in 628 (1229—1229).

Although this evidence is by no means to be rejected off hand, it seems to have been completely neglected by other scholars (Krymski in 1927 [see Bibliotheca] does not even mention Koprulu’s book) except for my article entitled “H Nasreddin-hodja Livre i” (Did Nasreddin Khodja really live?) in the Christmas supplement to the Belgrade Politics (Jan. 6, 1932), where it was described as worthy of consideration, if not yet absolutely convincing.

After all these traditions and opinions, it is not a matter for surprise that some scholars (H. Ehrh. R. Basset, M. Hartmann, A. Wesselski [see Bibliotheca] have been more or less sceptical about the historicity of the Khodja.

These doubts are to some extent closely connected with the question of the origin of Nasreddin’s jests. Basset, for example, thinks (in Recherches sur Sidi Djebh... that they are a translation of the old Arabic droll stories which were current in large numbers at the end of the fourth tenth century about a certain Dju’ha (Djuha) of the tribe of Fazira in Kafsa. Djuha’s stupidity became proverbial among the Arabs, as is already evident from Madijd (d. 1124) (cf. Arabum proverbias, ed. G. Freytag, i, 403, No. 175), and a Book of Anecdotes of Djuha (کتاب ندای‌سیواک) is expressly mentioned as early as the Fihrist of al-Nadim (d. 995) (cf. Flügel’s edition, i, 255). This collection, which had previously reached the west through oral transmission, was translated into Turkish in the xth and xivth century and the hero identified with a certain Nasreddin Khodja, whose existence Basset thinks is at least doubtful.

This thesis of Basset’s was not everywhere accepted without demur. Horn and Christensen (see Bibliotheca), for example, do not believe in a translation from the old book of Djuha’s jests and Wesselski holds the view that there is no evidence of the existence of any story of Djuha in the period before that of Nasreddin’s alleged or actual life, which could with certainty be assumed to be the source of one of the jests of Nasreddin”. M. Hartmann describes Nasreddin’s jests as the common property of the literature of the world, expressed to some extent in a specifically Turkish guise and therefore regards any question as to whether there ever was such a person as of little importance. Horn and Krymski also regard the Khodja’s jests and other folk stories found almost everywhere. Christensen thinks similarly but admits that these jests form an independent collection “into which probably very many stories from the old book (of Djuha) have been incorporated”.

Whatever the truth may be, one thing seems to be certain: the immediate source for most of the stories of Nasreddin is to be sought, as Basset and Hartmann say, in the world of Arabic culture and Islam where Djuha certainly is often the hero of such anecdotes. In other words, Djuha might be regarded as the ultimate prototype of many of the adventures of Nasreddin. While Basset’s theory, then may not be correct in all details, it seems to be right in its main features, especially in the respect that it has directed the student of Nasreddin to the influence of the rich Arabic literature of humorous anecdotes. That many of these stories are originally not Arabic but Persian, Syriac, Indian, Greek, etc. is quite natural, especially when we remember that they are common to many literatures, but in this case it must often be the Arabic version that was the source upon which the Turkish drew.

For the problem of Nasreddin it is also important to put on record that stories of Djuha are very early mentioned by Persian poets and authors (Mintchiri, d. 1040—1041) or transmitted (a story in Anwar [d. c. 1190], three stories in Djahl al-Din Rumi [d. 1273] and a dozen stories in ’Ubaid-i Zaki [d. 1370—1371]). When we remember the part played by Persian scholars among the Seldjuk of Rüm and their Ottoman successors, we cannot consider it impossible that some stories of Djuha may have come to the Turks through Persian literature.
This is all the more probable as Djalal al-Din, himself spent the greater part of his life in Anatolia (especially in Konya) and used Djuh's (as Djuh is called among the Persians) popularity to illustrate his mystic ideas (cf. Mathnumi, ed. Nicholson, ii. 3116 sqq.).

Particularly in view of this popularity and the fact of oral transmission, it is not impossible that the common people altered the name Djuh (Djouh), which was strange to them, into Khōja, as Basset repeatedly insists (Mélanges africains et orientaux, Paris 1915, p. 49). On the other hand, there may have been a droll Khōja named Nasreddin among the Ottomans (or Seljuk's), around whom gathered humorous stories of others, in addition to his own jests, and thus became the typical representative of wit and stupidity.

For this reason he was probably also credited with the tales of the simplicity of Karakūñ (q.v.), Saladin's steward, who had been dead since 1201.

Other jests attributed to Nasreddin go back several centuries further which is proof that they cannot originate with him. The fact that most of the jests are not original is obvious (see Wesselski's parallels), in spite of all the changes and transformations they have undergone among the Turks.

One of the Turkish versions (with additions) was, according to Basset, translated in the middle of the xixth century into Arabic and thus the Turks returned to the Arabs part of what they had formerly borrowed from them. Nasreddin and Djuh, being similar types, later became amalgamated in such a way that the Arabic editions identify the two in the title: Nawādir al-Khōja Najar al-Din Efendi Djuh. Sometimes however, the Arabs distinguish between the two by calling Nasreddin the "Rumelian Djuh" (Djuh al-Rūmī). This Djuh of the Nawādir easily reached the Berbers through the Arabs as Sī Djuh (Djouf). In a similar way the Nubians procured their Djuha and the Maltese their Djihan: Whether the fool of Sicilian popular story, Giufa or Giuca also comes from Djuh is a further question.

On the other hand, the Turkish version of the jests of Nasreddin (under his or another name or anonymously) became known not only to the Rumanians, Bulgars, Greeks, Albanians, and Jugoslavs but also in Armenia, Georgia, the Caucasus, the Crimea, the Ukraine, Russia, Turkish, etc. On these long travels, Nasreddin naturally underwent many changes; distortions and additions were made which are quite foreign to the Turkish text; thus the number of his (or Djuh's) stories increased to several hundreds (in Wesselski to 515 or 525). The oldest manuscript (Leyden, No. 2715), which was already in the possession of a European in 1625, only contains 76 jests.

The first edition of the chapbook on Nasreddin, which was the foundation of many later editions, appeared in 1837 (133 jests). Mehemet Tewfik's edition (1899 = 1883) in which the coarse stories of the chapbook are omitted only contains 71 but a few months later Tewfik published a further 130 under the name Bu Adam ("This Man", i.e. the same Nasreddin) (in the final edition of 1302 Bu Adam only contains 96 stories). Anecdotes of Nasreddin were later collected by I. Kano from the lips of the people between Aydın and Konya and separately published (Budapest 1899, with 166 stories and introduction, and in
Hasset, Contribution à l'histoire du sultanat de Nasser Eddin Hoja, in Khalil Steine, l. 219—
106, with full bibliography; Kemaledine Chakri, Vie de Nasreddine Hodja, Stambul n. d. (1930); deals very briefly with Khodja’s life on p. 7—8 and gives French translation of his jests arranged under 4 periods of his life). — Also the catalogues of MSS. in Leyden, Vienna, London, Berlin, Paris etc. (Feinm Bajram Stoev). NASRÁNI. [See Nâsârâ.] NASRIDS. [See Bând Nâsh, also sometimes called Banu 'l-Âshâr, a Muslim dynasty which ruled over the kingdom of Granada in the north of Spain from 629 to 897 A. H. (1231—1291).] While, thanks to the narratives of the contemporary Ibn al-Kâtib [q. v.] and Ibn Khaldûn [q. v.], we are very well informed about the history of the kingdom of the Nasrides down to the second half of the sixteenth century, we have for the later period only a very few sources available in Arabic — and it is not always easy to fill the gaps from Christian sources — a few pages of al-Mâqâm's Naşf al-7ib and the short anonymous chronicle published in 1663 by Muller.

We give below a chronological list of the Nasrides; when a date A. D. is not preceded by its equivalent A. H., this is because it is not given either by Muslim historians or Arabic inscriptions.

1. Abû 'Abd Allah Muhammed I al-8ââli
4 H: 629—671 (1231—1323).
3. Abû 'Abd Allah Muhammed III al-
Muhammad: 701—708 (1302—1309).
4. Abu 'l-Qâwûn Nâsh: 708—713 (1309—
1314).
5. Abu l-Walid Ismâ'îl I: 713—725 (1314—
1325).
6. Abu 'Abd Allah Muhammed IV: 725—
733 (1325—1333).
8. Abu 'Abd Allah Muhammed V al-Ghâmi
M 'âli: 755—760 (1354—1359); 2. 783—793 (1359—1360).
10. Abu 'Abd Allah Muhammed VI: 761—765 (1360—1362).
11. Abu 'l-Hâdîjîdî Yusûf II al-Muqtââbî
H: 793—794 (1391—1392).
alliance with the Marinids who were finally putting an end to Almohad rule in Morocco. The Marinids answered his appeal. On coming to the throne Muhammad II had found himself faced with the necessity of putting down threatening rebellions; the most serious was that of the Baśni Askhâfî, governors of Malaga and Guadix. He was able to rout the rebels near Antequera, with the help of forces sent him by the Infante Don Philip and Don Nuño de Lara. On the other hand, he soon realised that the king of Castille, his suzerain, had every interest in letting the kingdom of Granada exhaust itself in internal strife. This is why the Naṣrid turned to the Marinids. In consideration for the return of Algeciras [q.v.] and Tarifa [q.v.], the sultan of Fâs Abû Yusuf Ya'qûb b. Abû al-Ḥakîm agreed to cross into Spain, where he inflicted two defeats on the Castilian troops. The chroniclers of the Marinid dynasty record the four expeditions of the king of Fâs into Spain and give details of the loss of Tarifa which the Spanish leader Alonso Pérez de Gusman, celebrated in legend as Gusman el Bueno, was to defend heroically a little later, in 1293. But it is from this time that the permanent intervention of the sultans of Fâs in the affairs of the Naṣrids of Granada dates; under pretence of a gihrâf they were able at every opportunity to add to the confusion of a political situation already much troubled and to weigh heavily upon the destinies of the Naṣrid throne by playing a game of alliances which were often broken as readily as they were made. The kings of Granada henceforth were to have at their side a regular body of Moroccan soldiers, the gihrâfi (sing. gihrâf) under the command of a Marinid shahâd, consisting of adventurers of fortunes who had become more or less undesirable in their native land.

When he died in 701 (1502) Muhammad II was succeeded by his son Muhammad III who was later to be known as al-Makhâlîf (the deposed). It was he who built the great mosque of the Alhambra. He had to put down risings by the governors of Guadix and Almeria but had to bow before the rising of a prince of his family, Abu 'l-Djuyyâh Nasr b. Muhammad, who assumed the power in 708 (1309). Muhammad III abdicated and withdrew to Almuñécar [q.v.].

Nasr's reign was hardly any longer or happier than that of his predecessor. After a display of energy by which he forced the king of Aragon to raise the siege of Almeria and the king of Castille to raise the siege of Algeciras, he fell against a conspiracy hatched by a Naṣrid prince Isâ'il, who seized the power in Granada and left only the town of Guadix to Nasr. The latter established himself here in 713 (1314) and stayed there till his death in 732 (1322).

The fifth Naṣrid ruler, Abu ʿl-Walîd Isâm ʿAmr b. Farâj b. Isâm ʿAmr b. Yusuf b. Nasr, was one of the most remarkable members of the dynasty. As soon as he had assumed the power, he showed a certain strength of character and did his best to put his frontiers in a state of defence. He regained for a time the old Naṣrid lands which had passed to the Marinids: Algeciras, Tarifa and Ronda. In 719 (1319) he had to meet an offensive from Castille and with the help of the Shaikh al-Ghûrât, Abî Saʿîd ʿUthmân b. Abî ʿl-Uîlî al-Marînî, he inflicted heavy defeats on his enemies at Alicum and in the Sierra d’Elvira. In this last battle the Infantes Don Juan and Don Pedro, guardians of king Alfonso XI, were killed. Soon afterwards, Isâm ʿAmr regained the fortresses of Huescar, Orce and Galera, then that of Baza. In the following year he took Martos. In 725 (1325) he was assassinated in his palace at the instigation of one of his relations with whom he had quarrelled, the lord of Algeciras Muhammad b. Isâm ʿAmr. He left four sons of whom the eldest, Muhammad, succeeded him on the throne of Granada.

Muḥammad IV was still a minor on his accession and remained for several years under the strict guardianship of his ministers, notably of the governor Muḥammad ibn al-Mâhrîk. The latter, after a long struggle with the Shaikh al-Ghûrât Ibn Abî ʿl-Uîlî, was finally put to death by orders of his sovereign who then took the reins of power into his own hands. The remainder of his reign was continually troubled. The help which he sought from the Marinid Sultan Abû ʿl-Ḥasan ʿAll against the Christians earned him the enmity of the family of the Banû Abî ʿl-Uîlî. In succession he lost Ronda, Algeciras, Marbella and Gibraltar and was ultimately assassinated in 733 (1333).

His brother Abu ʿl-Hâdîyâd ʿUthmân b. Isâm ʿAmr succeeded him and reigned for a considerable period. His first care was to avenge his brother by expelling from his kingdom the Banû Abî ʿl-Uîlî who took refuge in Tunis and in giving the office of Shaikh al-Ghûrât to a Marinid lord, ʿAbârîb b. ʿUmar Ibn Raḥîb. The struggle with the Christians was resumed in his reign. He sought and obtained the help of the Marinid Abû ʿl-Hasan, who crossed the Straits of Gibraltar in 741 (1340) with a large force and laid siege to Tarifa. This expedition ended disastrously. The king of Castille, Alfonso XI, with his army and that of the king of Portugal inflicted a sanguinary defeat on the Muslims near the mouth of the Río Salado, on the 7th Djumâda I 741 (Oct. 30, 1340). Abû ʿl-Ḥasan had to take refuge in Algeciras, whence he was able to reach Morocco. ʿUthmân I returned with all speed to Granada, while Alfonso XI profiting by the confusion of the Muslims seized Alcalâ la Reial, Priego and Benaméjí. After taking Algeciras he granted the Naṣrid king a truce of ten years, at the end of which he laid siege to Gibraltar. Alfonso XI however died of the plague during the siege. ʿUthmân I himself was assassinated by a madman in the great mosque of Granada on the day of the feast of the "Breaking of the Fast" of 755 (Oct. 19, 1354). This Sultân's name will always be associated with certain monuments of the Alhambra. It was he for example who built the great gateway of the enceinte, called Bab al-Shârîf's "gate of the Espartinas" commonly called "gently "gate of Justicia," in Spanish "Puerta Judicaria" or "de la Justicia") the inscription on which records that it was finished in Rabî‘ I 749 (June 1348; cf. my Inscriptions arabes d’Espagne, No. 171). It was also ʿUthmân I who in 750 (1349) built the madrasa of Granada (ibid., No. 172).

His successor was his eldest son Muḥammad V, who bore the honorific laḥab of al-Ghâni bi-līlāh. This sultan left the exercise of power in the hands of his father's old minister, the ʿAbârîb [q.v.] Râfîl b. ʿUqîrî, who maintained peaceful relations with Castille. After a few years, a conspiracy of dissatisfied Naṣrid princes forced Muḥammad V to abdicate and take refuge in Guadix, and afterwards in Morocco where he was well received by the Marinid sultan Abû Sâlim (760 = 1359).
Isma'il II b. Yūsuf I, brother of Muhammad V, a Nasrid prince devoid of personality and prestige, was put on the throne, but only for a few months. In 761 (1360) he was assassinated at the instigation of the ruler Muhammad VI b. Isma'il b. Naṣr, who seized the power; his troops soon afterwards suffered a defeat at the hands of the Christians at Guadix. He was soon overthrown by Muhammad V, who had returned to Spain and asked the help of Peter the Cruel of Castile to recover the throne. Muhammad VI also appealed to the Christian ruler but the latter had him put to death in 763 (1362).

Muhammad V's second reign lasted for good or evil another 30 years. It was mainly occupied by family quarrels and civil strife. It was at this time that the famous vizier Liḥān al-Dirfi b. al-Khaṭṭīb had to seek refuge in Morocco, which however did not save him from assassination. It is also at this date that the history of the Nasrid dynasty not only by Ibn al-Khaṭṭīb, but also by Ibn Khaldūn, stops. Our information about the latter rulers is not only scanty but also inaccurate. The relations of the kings of Granada and of the rulers of Castile continued to be much what they had been, truces or expeditions of short duration with limited objectives. But gradually the ultimate aim of Castilian policy became apparent and generally became more and more easily attainable: the capture of Granada, which was at the same time to put an end to the Nasrid dynasty and to Muslim rule in Spanish lands. Below we give only a brief sketch of the last period of the history of the Nasrid kingdom.

III. End of the Nasrid kingdom.

Muhammad V died in 793 (1391) and was succeeded by his son Abu l-Hadhir, Yūsuf II who reigned only a short time. He died in 794 (1392) and the throne passed to his son Muhammad VII. The latter imprisoned his elder brother Yūsuf in the fortress of Salobreña and resumed the offensive against the Christians, who took the fortress of Zahara from him in 809 (1407). When he died next year his elder brother Yūsuf III, the prisoner of Salobreña, assumed power and held it till his death in 820 (1417). After him his eldest son Muhammad VIII became king of Granada; he is usually called by the chronicles al-Asār ('the left-handed'). It was in his reign, also much troubled, that we find the family of the Banu l-Sarrādī, the Abencerrages [q.v.], and that of the Zegris (Arabic ḥājārī; 'man of the frontier') beginning to play an important part in the history of Granada and the civil wars which characterise it. After various adventures Muhammad VIII had to abandon his capital for a time and went to seek an asylum with the king of Tunis, while Muhammad IX known as al-Ṣaghīr assumed power. Muhammad VIII soon returned and his second reign was marked by the disastrous battle of Higuerauela, near Granada, in which the Muslims were routed by the army of John II on July 1, 1431. Al-Asār had to take refuge in Malaga for some months during which the throne passed to Yūsuf IV b. al-Mawl, a grandson of Muhammad VI. Al-Asār then resumed the throne for a third time but the frontiers of his kingdom were shrinking every day. The towns of Jimena, Huescar (1435) and Huelma (1438) fell into the hands of the Christian power and in 1445 Muhammad VIII was forced to abdicate in favour of his nephew Muhammad X, while the Abencerrages, gathered at Montefrío, proclaimed Abu l-Naṣr Sa'd sultan. It was during the latter's reign that in 1462 Gibraltar was taken by Rodrigo.
Ponce de León and the Duke of Medina Sidonia. Archidona also fell to the Christians. In the reign of his successor Abu ‘l-Hasan ‘Alī, the Christian offensive, with the accession of the Reyes Católicos, Ferdinand of Aragon and Isabella of Castille, developed an extent and energy which it had rarely displayed previously. The second last Nasrid king Muḥammad XI, generally known in history as Boabdil (a corruption of his kingly Abu ‘Alī, Abu ‘l-Mulk), was forced to declare himself the vassal of the Reyes Católicos and the last Muḥammad XXI called al-Zaghal (“the brave”) in spite of initial successes at the siege of Loja (1482) and the battle of al-Šāghīn (1483), had no alternative but to bow to the triumph of the Castilian armies, and indignantly withdrew when the situation became hopeless to his estates of Alpujarra [q.v.]. Loja (1486), Velez-Malaga, Malaga and Almeria (1487), Baza (1489) fell in succession. There was nothing left for Granada but to open its gates to the conquerors who entered it on 2nd Rabi‘ al-Awwal 1492 (Jan. 1493). Muḥammad XI became an exile in Morocco where he died in poverty and misery.

**Nassā (a.), etymologically:** what is apparent to the eye, as a technical term: **text. In this sense the word does not occur in the Qur‘ān nor in the Ḥadīth. Al-Ṣāḥīf, on the other hand, appears to be acquainted with it. In his Kāhiyā he uses it chiefly in the sense of nasā ’āl-ṣāḥīf (p. 7, 16, 30, 41) or nasā fi ḫumāna (p. 5) “what has been laid down in the Qur‘ān.” In other passages nasā fi-ḥumāna is distinguished from summa (p. 21, 41, infra, 24, 37, pāṣ, 30, 63, 69). The combination summa occurs, however, also (p. 50, 14, 66, 72). From these passages it may also appear that al-Ṣāḥīf uses the term chiefly to denote legal precepts. In accordance with this is the definition of the term as given in the Liʿām al-ʿArab: Provided that the Qur‘ān or the summa means the precepts (abūlam). Contained in the plain words (ẓāhir) of these sources*. An extension of the term has taken place chiefly in three directions, so that nasā, apart from the general sense of text, may mean: **a.** the text of a precept of the law, written or not written; **b.** the ẓāhir [q.v.], of a sacred text; **c.** the sense of such a text. For other special meanings of the term, see Dux, Supplementum ad vocabulum dictionarium arabic, s.v. **Bibliography:** al-Ṣāḥīf, al-Risala fi Uṣūl al-Ṣāḥīf, Cairo 1741; Muḥammad al-Tuhānawi, Dictionary of the Technical Terms, ed. A. Spranger, Calcutta 1862, p. 1405 sqq. (A. J. Westenck)

**Nassads** were the light wooden warships built in Nassau or Hohenau (Lower Austria), the “Nassauer” or “Hohenauer,” Magyar nàzad, pl. nàzák, Slav. nàzād, which were used on the Danube. They were usually manned by Serbian seamen who were called mártalóz (from the Magyar mártalóz, mártalos, lit. “robber”). According to a Florentine account, this Danube flotilla in 1475 consisted of 300 ships manned by 10,000 “nassadists” armed with lances, shields, crossbow or bow and arrow, more rarely with muskets. The larger ships also had cannon. About 1524 the commander of the Danube fleet was Rádić Bože who reorganised it at Peterwardein (cf. K. J. Jireček, Geschichte der Serben, ii. 325 sqq.). Through want of money, the Serbian seamen then deserted to the Turks (ibid., p. 262) who after the fall of Belgrade seized the Danube fleet and developed it into a powerful arm. About 1530 the Danube fleet consisted of 800 nassads and was commanded by the voivod Kôšá (cf. J. v. Hammer, G. O. R., iii. 85).

**Nastaliq** [See Arab. l. 391 b.]

**Naṭūṭ Pasha,** an Ottoman grand vizier, was of Christian descent and was born either in Gümüşhane (the modern Komotini, Thrace, Greece) or in Drama. According to some sources (e.g., Baudier and Grimod in Knolles), he was the son of a Greek priest, according to others (e.g., Naṭum, ‛Uthūrīh, first edition, p. 283) armad

**The Encyclopædia of Islam, III.**
NAŠIĘ PASHA — NAVARINO

Inas of Albanian origin. He came early in life to Istanbul, spent two years in the Old Seray as a kardes [bhallardi] and left it as a naşib. Through the favour of the sultan's confidant, Mehemmed Ağa, he rapidly attained high office. In quick succession he became wovod of Zille (Anatolia), master of the horse and governor of Pülük (Hungary). He married the daughter of the Kurbid Mir Şereif and thereby obtained riches as great as his power, which every one was now beginning to fear. His ambition and arrogance, his vanity and cruelty knew no bounds and he was even said to be aiming at the throne. In 1015 (1606) he was to conduct the campaign against Persia, as the son-in-law of Mir Şereif and on account of his local knowledge, with the rank of third vizier and serasker, but his attention was claimed by the trouble in Anatolia which was affecting the whole of Asia Minor; through Kurb trachery he lost a battle and it was only in the autumn of 1608 that his troops joined the army of the grand vizier who received him very coolly (cf. J. v. Hammer, G. O. R., iv. 412 sq.). In 1011 (1602) Našıl Paşa had been appointed governor of Siwan, the next year of Hılağ and in 1015 (1606) of Dıyarbakır. His goal was the grand viziership. He did not hesitate to ask the sultan to give him the imperial seal and the post of commander-in-chief in return for a sum of 40,000 ducats and the maintenance of the army at his own expense. Ahmed I handed on the offer to the grand vizier, who summoned Našıl Paşa to him and fined him that sum as a punishment (cf. J. v. Hammer, G. O. R., iv. 446 sq.). When soon afterwards the grand vizier, the Croid Kuyuduz Murad Paşa died at the age of 90, Našıl Paşa became his successor (Aug. 22, 1611). In the following year he married 'Arşa, the three year old daughter of Sultan Ahmed I (Feb. 1612). His arrogance now knew no bounds; all his opponents were ruthlessly disposed of. His personal qualities dazzled everyone: *Of imposing appearance, brave and eloquent, never weary of talk or action, but at the same time passionate, impetuous, quite incapable of kind conduct and fluttering words and always intent on humiliating the other viziers* (J. v. Hammer, G. O. R., iv. 472). As human life was nothing to him but wealth, everything, he accumulated vast treasures. Sycophants and astrologers nourished in him the delusion that he was born to rule. The number of his enemies increased from day to day as a result of his intrigues and his ruthlessness. When on Friday the 13th Ramazan 1023 (Oct. 17, 1614) he was to accompany the Sultan to the mosque, suspecting no good, he said he was ill. The beşiri baştül sent to him had him strangled by his own garden guards. His body was buried on the Oğlan Mecidi. His estate which fell to the coffers of the state was enormous: pearls, jewels, carpets, cloth and bullion without number (cf. J. v. Hammer, G. O. R., iv. 474 sq. quoting Meseray, ii. 193). — Našıl Paşa left several sons, one of whom Hüssin Paşa (d. 1053 [1643]) and two of his grand viziers, Feldwebel, ii. 226) had a son named Mehemmed. The latter wrote a history of the Ottoman empire (Dhikr-i Timur-i Şah Altı 'Oğlanı) from the death of Murad IV (1048 = 1639) to 1081 (1670) the original MS. of which is in Dresden (cf. F. Bahinger, G. O. W., p. 221).

NAŢIJA (a) is the usual name for the conclusion resulting from the combination of the two premises (mukaddamāt) in the syllogism (jiyā) It corresponds to the Stolę zgrabp; this word in the works of Galen known to the Arabs is applied to the various discharges from the body but also means, as with the Stoics, the conclusion. Aristotle used the word syllogismos: that which concludes or completes the syllogism.

In place of the usual natiż we also find rīzef or ruzf (ess deduction). (TJ. DE BORB)

NĀTIK. [See SĀTİVA.]

NAVARINO (Navarino), a little seaport in the southwest of Messenia not far from the ancient Pylos, opposite the promontory of Koryphos on which there was in prehistoric times an acropolis and later, during classical antiquity, an often-renewed settlement. The harbour of Navarino is one of the safest in the Greek east for it is sheltered by the island of Spathon, which lies right opposite it and has intimate connections with many ancient, medieval and modern events. Recent research has shown that Navarino has no connection with the Homeric Pylos. The latter was in Triphylia near the village of Kakabatos where prehistoric tombs were recently excavated. The derivation of the name Navarino cannot be given with certainty. According to Fallmayer, Gesch. der Hallinzel Morea, l. 188, the name Navarino is a distinct survival of Avar rule in Morea between 587 and 807. On the other hand, Hopf thought that it owed its name to the Navarrese (cf. below). Fallmayer's view has been adopted by E. Curtius, Peloponnesos, i. 86; ii. 181 and W. Miller among others. According to M. Lasker, Travels in the Morea, i. 411, the name Navarino developed from τὸ τῆς Ἀβάρωνς. Hopf's view is however wrong, for Navarino is mentioned before the appearance of the Genoese in the Morea. In the middle ages the country round Navarino
was called Zonglun (Zonchio), from which came the French name of the place Junh (Old French juno "sun"). One of the earliest mentions of Navarino is in the geographical treatise, the *Nasbat al-Mu'جدد* of Irshidi; he refers to the place as "Iouda" and adds that it has "a very commodious harbour". After the period of Frankish rule, information about Navarino becomes fuller. The Knights, who under Guillame de Champlite and Godefroy de Villeharduin had planned the conquest of the Morea, in 1205 took its inhabitants and governor prisoners after the capitulation of Navarino.

Later the Baron of Thebes and Marshal of Achaia, Nicolas St. Omer (d. 1294), built for his nephew Nicolas III St. Omer, the Neoastro (New Castle) of Navarino. This is said, according to Buchon, to have been called Neo-Avarino in contrast to Palia-Avarino. At the end of 1281 or early in the next year, the Navarrese company seized Navarino and made it the chief centre of their military power. Navarino then became known as Château Neuf d'Avarino, or "oule le Seigneur [Nempar]" de Caumont, publ, par la Grange, Paris 1838, p. 89). The Greeks however at this time called Navarino Spanochori (= village of the Spaniards, after the Navarrese). In 1417 Venetian soldiers occupied Navarino and six years later the republic of St. Mark became the lawful owner of the place. In the summer of 1460 Sulṭan Muḥammad II appeared before Navarino with an army, which, in spite of the recently concluded peace treaty, laid waste the country round the town. In August 1500 the Turks took Navarino from the Venetians without difficulty after taking Modon and Koron shortly before, although the garrison of Navarino numbered 3,000 soldiers and had provisions for about three years. Soon afterwards the Venetians were able to retake Navarino by a stratagem and to destroy the Muslim garrison. "Ali Pasha now advanced from the land and Kenal Reës attacked with his fleet by sea and inshore. They took finally Navarino, inflicting great losses on the Venetians. Navarino maintained its importance under Turkish rule and was often the place of concentration of the imperial fleet. Hādji Khalifa and Ewliya Çelebi give some important information about Navarino and the former says that its original name was Anavarin. In the year 1686 the Venetians again took the town which they had held till 1715. The Turks then entered upon their last period of occupation.

During the first Russo-Turkish War in the reign of Catherine II (1768—1774) Navarino played an important part. After a stubborn defence for six days by the Turkish garrison and the Muslim civilian population, the Russians on April 10, 1770 forced the fortress of Navarino, no longer strongly enough fortified but still amply provided with munitions and artillery, to capitulate. By the terms of the treaty, the Turks of Navarino went to Chania (Crete) leaving behind them a number of Christian women whom they had imprisoned in the harems. Soon afterwards the Russians made Navarino, the fortifications of which they renovated, their principal base of operations in the Morea. Fate decided that the Russians had to evacuate Navarino again. On June 1, 1770, the Russian ships sailed from the harbour of Navarino. The Turks next day occupied the well placed fortress, which was in part burned and destroyed.

During the last decades of Turkish rule in the Morea, the Turkish family of Bekir-Agha of Navarino played a prominent part. Soon after the outbreak of the War of Liberation, the Greeks laid siege on March 29, 1821 to Navarino where the Turks of Arcadia (Cyparissia) had also taken refuge. On Aug. 7, 1821 the Turks surrendered to the Greeks who massacred them all without mercy in spite of all agreements. In the spring of 1825, Ibrahim Pasha of Egypt occupied Navarino and the neighbouring fortress in spite of a heroic defence by the Greeks.

What gave Navarino its special place in history was the naval battle fought on Oct. 20, 1827 in its harbour between the combined fleets of England, France and Russia on one side and those of Turkey, Egypt and Tunisia on the other, in which the latter were almost completely destroyed. It is calculated that the Turks lost 6,000 killed and the allied losses were only about 1,000. Soon after the battle, Ibrahim Pasha concluded a truce with Admiral Codrington.

Navarino remained in Ibrahim Pasha's hands until the spring of 1828. The French under General Mazon then relieved the Egyptian-Turkish troops. Alfred Reumont gives a fine picture of Navarino under French occupation in 1832.

**NAVAS DE TOLOSA (La), a place in the south of Spain in the province of Jaen on the frontier of Andalusia, a short distance from the modern town of Carolina. Its site corresponds to that of a fortress called *Harrin al-17b* in the Muslim period. It was in the plain which lies in front of it that there was fought on the 15th June 609 (July 16, 1222) the great battle between the Christians and the Almohads which ended in the rout of the latter. As a result of the defeat of Alarcoz [q. v.], the king of Castille, Alfonso VIII, had concluded a truce with the Muslims. On its expiration at the end of the 12th century, the Christian troops began a series of surprise attacks on the Muslim frontiers. Disturbed at this, the Almohad ruler al-Nasir [q. v.] prepared a great expeditionary force in Morocco while on his side the king of Castille secured the help of the kings of Aragon, **

Navarra and Leon, as well as of the Count of Portugal and the Pope, who preached a crusade against the infidel. The Christian troops gathered in Toledo, and in Oct. 1212, the encounter was a bloody one. The Muslim volunteers from Morocco and the Andalusian contingents soon lost ground and the Almuhadh ‘abd were in their turn decimated. The victors were able to exploit their success and took Ubeda [q.v.], Baza [q.v.] and other strongholds. The Christian victory of the Navas de Tolosa was certainly one of the most important steps in the "Reconquista".

**AL-NAWAWI.** (or AL-NAWAWI), MUGHAL ADH-DIN ABU ZAKARIYAH YAHYA B. SHARAF B. MURU [following Nawawi’s own spelling, Syuyūṭi, fol. 53b] B. HAJAN B. HUSAIN B. MUIJAMAD B. DUMA B. HIJAM AL-HIZAM AL-DIMAGHAT, a SHAFITE JURIST, born in Muharram 631 (Oct. 1233) in Naww south of Damascus in Djawlan. The ability of the boy very early attracted attention and his father brought him in 649 to the Madrasa al-Rawhīya in Damascus. There he first of all studied medicine but very soon went over to Islamic learning. In 651 he made the pilgrimages with his father. About 653 he began to write and was called to the al-Ashrafiya school of tradition in Damascus in succession to Abu Shams who had just died. Although his health had suffered severely during his life as a student, he lived very frugally and even declined a salary. His reputation as a scholar and a man soon became so great that he even dared to approach Sulṭān Balbar to ask him to free the people of Syria from the war-taxes imposed upon them and to protect the teachers in the madrasas from a reduction in their income. This was in vain however, and Balbar expelled al-Nawawi from Damascus when he alone refused to sign a firmū approving the legality of these exactions. (This action of al-Nawawi’s is commemorated in the popular romance Siwar al-Zahir Balbar, Cairo 1326, xii. 38 sqq. in which the Sulṭān, cursed by al-Nawawi, becomes blind for a time). He died unmarried in his father’s house in Naww on Wednesday 24th Rajab 676 (Dec. 22, 1277). His tomb is still held in honour there.

Al-Nawawi has retained his high reputation to the present day. He had an exceptional knowledge of Tradition and adopted even stricter standards than later Iṣlām; for example he admits only five works on Tradition as canonical, while he expressly puts the Sunan of Ibn Mādjid on a level with the Musnad of Almhud b. Ḥuṣaib (cf. Sharh Muslin, i. 5: Adhākhār, p. 3). In spite of his fondness for Muslim, he gives a higher place to Bukhārī (Tahdhib, p. 350). He wrote the principal commentary on Muslim’s Sahih (pr. in 5 volumes, Cairo 1283); as an introduction to this, he wrote a history of the transmission of this work and a sketch of the science of Tradition. He gives not only observations on the text but a grammatical explanation of the traditions but he also comments on them, mainly from the theological and legal aspect, quoting whenever necessary not only the founders of the principal schools but also the older jurists like al-Waqi, Yahya etc. He also inserted in the text, al-Janah in Muslim’s work. We may also mention his frequently annotated Kitāb al-Ṣārā‘īn (pr. Bīlād, 1294 and often since) and portions of commentaries on al-Bukhārī (G. A. L., i. 158) and Abu Dawūd (Ibn al-Attār, fol. 10v); and an extract from Ibn al-Ṣalīḥ, Ulūm al-Hadīth with the title al-Tahfīz wa l-‘Tā’ir, partly transal, by Marquis, in F. A., ser. 9, xvi.—xviii, and printed at Cairo 1307, with a commentary by al-Suyūṭī, Tahfīz al-‘Uṣūl. Al-Nawawi’s importance as a jurist is perhaps even greater. In Shafite circles he was regarded with his Muhimmah al-Tīlīdīn (finished 685; pr. Cairo 1297 and frequently; ed. von dem Berg with French transl., Batavia 1882—1884; cf. theoreon Snouck Hurgronje, Verspr. Geschr., vii. 1881) as the highest authority along with al-Raqqī and since the 17th (with the two century) on this work, Ibn Hudjdar’s Tā’ir, and al-Raqqī’s Nihāyā, have been regarded almost as the law books of the Shafite school. The book consists of excerpts from the Muhātarāt of Raqqī and, as the author himself says, is intended to be a kind of commentary on it. It certainly owes the estimation in which it is held also to the fact that it goes back via al-Raqqī and al-Ghazzālī to the Iṣlām al-Hanāmin. We should also mention the Ramāḍ al-Muhimmah al-Sa‘rī al-Raqqī (on Ghazzālī’s Wafq) finished in 696 on which commentaries have often been written and the commentaries on Shatār’s al-Muḥaddithūn and al-Tanāḥ (G. A. L., i. 357) and al-Ghazzālī’s al-Wafs, which do not seem to have survived, and a collection of frā‘ādī put together by his pupil Ibn al-‘Attār (Cairo 1352).

His biographical and grammatical studies resulted in the Tahdhib al-Assūr wa l-Tahdhib (Part 1 on the names, Wüstenfeld, Göttingen 1842—1847; Part 2 only in Ms. in Leyden, included by Ibn al-‘Attār among the unfinished works and there are certainly gaps in it) and al-Tahdhib wa l-‘Attār al-Tanāḥ. To his mystical tendencies — he had attended lectures on the Riḍā of al-Kuhaibī and transmitted it — we owe works like the Kitāb al-Adhākhār on the prayers, finished in 677 (pr. Cairo 1331 and frequently), the Kitāb al-Ṣārā‘īn (finished in 707; pr. Mecc 1302, 1312) and the incomplete Kitāb al-‘Avfīn wa l-Zayd wa l-Taqawwuf. An almost complete list of his some 50 works is given in Wüstenfeld, p. 45 sqq., those that are still in MSS, are given in Brockmann, G. A. L., i. 394 sqq. and index and those that are printed in Sarkh, Mu‘jam, coll. 1876—1879, etc. (See List.)

AL-NAWAWI Muḥammad b. 'Umar b. 'Arāki al-Dīaw, an Arabie writer of Malay origin, born in Tārīn (Banten), the son of a village judge (pangurah), after concluding his studies made the pilgrimage to Mecca and settled there permanently about 855, after making a short visit to his native land. After he had studied further and completed his education the teachers of the holy city, he set up as a teacher himself and gained great influence over his fellow countrymen and their kinmen. From 870 he devoted half his time to authorship. He was still alive in 888.

He wrote a large number of commentaries on popular textbooks, which are listed by Broekelman, G. A. L., li. 501 in addition to Snouck Hurgrone, Mekeh, ii. 362 sqq. Of these the following may be mentioned, with some information additional to what is contained in the two works.

In the field of Ḥadīṣ he annotated the Futūḥ al-Ḳuraṣ of Muḥammad b. 'Umar al-Ghazzlı (d. 918 = 1312), a commentary on Abu Shuqayr's al-Iṣāba, entitled al-Tawīlī, Mecca 1905, and again entitled Kūt al-Ḥakīm, Cairo 1901, 1905, 1910.

He wrote a commentary on al-Ghazzlı's Bīyāq al-Ḥadīṣa under the title Marāṣi 'Ilātulī, Būkā 1293, 1309; Cairo 1298, 1304, 1307, 1308, 1319, 1327. On the Maṣūḥ al-Ḥadīṣa of Muḥammad b. Muḥammad al-Eshrajnī al-Ḳatib (d. 977 = 1569) he wrote al-Futūḥ al-muḥadditha, Būkā 1276, 1292; Cairo 1297, 1306, 1307; Mecca 1316. On the Safaft al-Sallāb of 'Abd Allāh b. Yuhali al-Ḥadrami he wrote the Sallām al-Munṣīdh, Būkā 1297; Cairo 1301, 1307.

He wrote a commentary on the 60 questions of 'Abd al-Malik b. Muhammad al-Zāhid (d. 849 = 1416) put to him by his fellow countryman Muṣṭafā b. ʿUthmān al-Dīaw al-Khāṣṣī as al-Futūḥ al-muḥadditha on salāt, alms, fast and pilgrimage and under the title al-Lubāb al-thāmin, Cairo 1300; the Safaft al-Nuqṣ of Sallām b. Šamīr al-Ḫaqāṣī, Cairo 1292, 1301, 1302, 1303, 1305; Būkā 1309. On the exposition of the ṭalāb al-ḥadīṣ by his colleague Muḥammad b. Salam-Fī, 'Abāl-Allāh-Allāh b. Ṣafī al-Ḫāṣṣī, Cairo 1299, 1308, 1329; Būkā 1302.

In the field of dogmatics he annotated al-Sanṣari's Umm al-Brāhīm (d. 892 = 1466) entitled Liḍrīṣ al-yaḥyä, Cairo 1304; the Aḥāba al-Anwaʿa of Āḥmad al-Maṣrāqī (c. 1281 = 1864) entitled Nūr al-Ẓāmin, Cairo 1305, 1306; the Maṣūḥ al-Ḳur'ān entitled Ṭirāz al-Tanāzil, Cairo 1301, 1309, Mecca 1329; the Muṣālaḥ of Abū ʿAbd Allāh-Allah b. Ṣafī al-Ḫāṣṣī, Cairo 1301, 1305; Mecca 1314; the anonymous Futūḥ al-Khāṣṣī entitled Hilāyil al-Šībān in a Maṣūḥa, Mecca 1305; the al-Dīaw al-farāḍ of his teachers Āḥmad al-Nafrawi entitled Futūḥ al-muḥadditha, Cairo 1298.

In the field of mysticism he wrote a commentary on the Maṣūḥa al-Ṭayyibat al-ʿAdhāyī of Zain al-Čīn al-Malahī (d. 920 = 1320) entitled Sahālān al-Yuṣufī, Cairo 1301, Mecca 1315; and on his Maṣūḥa al-Sarīf al-Ḳaṭīb, he wrote the Kūt al-Thāmin, Cairo 1296. On the al-Manḥāf al-tamām fi Taḥāfa al-Ḥakīm of 'Alī b. Ḥasīm al-Dīn al-Hindi (d. 975 = 1567) he wrote Miḥṣar al-Zāmin, Mecca 1314. His commentaries on stories of the life of the Prophet may be classed as edifying popular literature; such he wrote on the Mawṣūl al-Nabī under the title al-Lūṣār, Cairo 1916, which is sacralized by some to Ibn al-Dīaw, by others to Āḥmad b. al-Kāsim al-Ḫarīrī, entitled Futūḥ al-Salāh al-Adam 'ala Mawṣūl al-Salāh al-ʿAṣā, Cairo 1297 and again under the title Mawṣūl al-Adam 'ala Mawṣūl al-Salāh, Cairo 1298, and as well as on the Mawṣūl al-Dīaw al-Burāq, (d. 1179 = 1765) entitled Tarāz al-Muṣannaf, Būkā 1292, and again under the title Muṣannaf al-Ṣaḥīḥ, Būkā 1296, and on his al-Kaḥṣārī al-mawṣūliya entitled al-Dīaw al-Bahri, Būkā 1297. He made an excerpt from al-Kasbīlantī's (d. 923 = 1577) Mawṣūl entitled al-Dīaw al-Bahri, Būkā 1296, and on his al-Kaḥṣārī al-mawṣūliya entitled al-Dīaw al-Bahri, Būkā 1297. He wrote a commentary on the Aḥjar al-Muṣīra under the title Qīāl al-ʿAṣā under the title al-Nabī al-Muṣīra, Cairo 1908 and on a versification Futūḥ al-Ḥakīma 'ala l-Kaḥṣārī al-mawṣūliya entitled Qīāl al-ʿAṣā under the title al-Nabī al-Muṣīra, Cairo 1908, on 'Abd al-Mun'im al-Ṭawal al-Dīaw al-Dīaw, (c. 1271 = 1854) al-Mawṣūl al-baḥriya 'ala l-Abūl-al-tarīqiyat, Cairo 1909. In the field of rhetoric he completed in 1293 (1876) a commentary on the Rihlah al-Inbārī of Ḥusayn al-Nawawī al-Millī, entitled Lūṣār al-Masākīn, Cairo 1301.

Bibliography: In the article; cf. also J. L. Sarks, Muḥsam al-Maṣūḥa, vol. 1879—1883.

(Conbroekelman)

NAWBA, an art-form in the music of the Islamic East similar to the European cantata or sulte. There are two varieties: 1. the awba of chamber music, and 2. the awba of military music [for the latter see in the Suppment]. The awba of chamber music varies in construction according to its provenance, and does not always carry this particular name. As early as the viiith century A.D. we appear to see this awba in its nascent stage. The musicians at the court of the Caliphate under the early 'Abbāsids performed in turn (dawr) and succession (nawba), and by the time of al-Wadhīb (d. 1110 A.H.) we know that a court musician had a particular day for his awba (Rūbāb al-Ǧāḥrī, iii. 177; v. 82, 120; xii. 123; xvi. 131; xvi. 150). Some musicians were more famous because they specialized in certain genres of music, such as Ithlim al-Mawwīl in the māḥūr and Hakam al-Ṭawāt in the ṭabādī rhythms (Aḥābe, vii. 12, 66), and a programme made up of these diverse types of music probably led to the term nawba being transferred to the programme itself (Ribers, Les Cantigas, p. 48).

Although we read in the Allah Laila wa-Laila of a nawba (li. 54), a āhāf (a quick movement; cf. the modern darāf) of a nawba (li. 87), as well as a complete nawba (iv. 175) being played, yet it is not until the xixth century A.D. that we
possess precise information about the nawaab and its integral parts, 'Abd al-Karīm b. Ḏhālībī [q.v.] tells us that among the ancient forms of musical instruments found with the nawābī, muqaddās and bayāt. The nawābī, he says, consists of two parts: the musāqāt or instrumental pieces, and the na'īr or vocal pieces. In the year 1379, whilst at the court of Djalāl al-Dīn al-Husain the Djalālīrīd sulṭān of al-Ḥrāsī, Ibn Ghailīt introduced a fifth movement to the nawābī, which he called the musāqāt. During this occasion, he tells us, he composed fifty nawābīs for the court, and the words of one of these have been preserved (fol. 99v).

These five movements were instrumental as well as vocal, and besides the verse-form being specified (the tārūnī for instance was in muqaddās), the rhythms (tārīq) for the instrumental accompaniments were also prescribed, of the ghālibī group being essential. The purely instrumental movements are also mentioned by Ibn Ghailīt including the overture called the fīghraw, which even to-day is the prelude to the nawābī, and which calls it muqaddās ("embroideries"), and says that the fīghraw and tārūnī have three, five, or seven sections (bayāt).

In days of old the nawābī was considered the most important art-form in the music of Islamic peoples. To-day it has fallen into neglect and in some countries will probably soon disappear. Two distinct cultures may be found in the modern nawābī, the Eastern and Western. The former is clearly a survival of that nawābī described by Ibn Ghailīt in the sixteenth century A.D. The latter is claimed (Yāffi) to have had its origin in al-Andalus in the ninth—sixth century, and is known to-day as the nawābī gharānī. It is confined to North Africa, the purest type being found in the West, whilst the nearer the East is approached the more we find the influence of the Eastern nawābī.

The Levantine nawābīs to-day comprises the following movements: 1. The tārīqā, an instrumental prelude played by the muqaddām or chief d'orchestre; 2. the fīghraw or bayat-sīr, an instrumental overture; 3. the tārīqā, a vocal movement; 4. the muqaddām, whose name recalls the form of the sixteenth-century tārūnī; 5. the muqaddām, also reminiscent of the muqaddām of old, since its function is total "embroidery"; 6. the tārīqā hamādhi, in slow rhythm; 7. the tārīqā, comprising verses; 8. the tārīqā hamādhi, an instrumental finale (cf. Thibaut and Lavignac, v. 2861). A shorter nawābī is described by Duconday (p. 22), whilst the famous British musicologist Sir Arthur Sullivan has related (Fortnightly Review, 1905, p. 86) his experiences as an auditor of the nawābīs. The various movements, especially the instrumental ones, are also cultivated in the Near East as sole items of performance, the fīghraw, tārīqā, and tārīqā, being special favourites. The fīghraw or bayat-sīr is still composed in sections as of old, but these are called baḥīmī instead of bayāt-sīr. Another interesting type of nawābī in Egypt includes the dance, and an example is given in complete score by Victor Loret. It comprises seven movements: 1. the bayat-sīr, for instruments and voices; 2. the tārīqā hamādhi, for the ballet; 3. the tārīqā, for the solo dance; 4. the tārīqā hamādhi, for the ballet; 5. the tārīqā, for the solo dance; 6. the tārīqā hamādhi, for the ballet; 7. the tārīqā, for the solo dance. The whole is accompanied by choral and instrumental instruments.

In Western Turkestan the nawābīs of to-day shows that in the Middle East it has developed somewhat differently from that of the Levant. Here, more attention has been paid to the purely instrumental movements, and they have been kept separate. The nawābī is here called a muqaddām, a name which properly stands for "a melodic mode". It is divided into three parts, the first two being the most important. These two are the muqaddāmī or instrumental pieces, and the na'īr comprising vocal-instrumental pieces. The names of most of the sections of the muqaddāmī and na'īr refer to either rhythmic (muqaddāmī) or melodic modes (muqaddāmī), although two of them, the fīghraw and the tārūnī, retain names which occur in the sixteenth century Ibn Ghailīt treatise. In Bukhārā, only six muqaddāmī (= nawābīs) appear to have survived, although the Uzbegs claim that they know others. These six have recently been described by the Uzbeg poet Fitrū, whilst the notation has been published by a Soviet Union official, Colonel V. A. Uspensky. There is also another but shorter type of nawābī known in Bukhārā, and six of these have also survived. In Khawārizm, the muqaddāmī of the muqaddāmī (= nawābīs) differ from those of Bukhārā, and in the first additional one has been spared the ravages of time. The Khawārīzmī are probably purer than those of Bukhārā because they appear to have been handed down, not once voice as elsewhere, but by means of a notation which was known as early as the time of the Khawārizmī Shah 'Alī al-Dīn Muhammad (d. 1220) (cf. Pro-Musica, New York 1927, v.; The Sackbut, London 1924, iv.).

In North Africa, as already stated, a different tradition in the nawābī has been followed. Here there are several varieties, but the most highly esteemed is the nawābī gharānī. As the name signifies, al-Andalus is the place of origin, and this is claimed for both the words and music. Although MSS. exist which contain the words of the Granadan nawābī, yet we only know the music itself from modern Moorish practice. We read of the "twenty-four Nawabīs", which tells us that the nawābīs were composed in the twenty-four modes (jubū); others say that the Andalusians only possessed twelve or fourteen nawābīs (F. Salvador-Daniel, p. 52; Yāffi, Pref.) but it has now been shown (Farmer, The Old Moorish Late Tutor) that there were twenty-four originally, but their names are different from those which some writers have presumed (Delphin et Guin, p. 62; Lavignac, v. 2859). The nawābī gharānī as performed in Algeria to-day comprises the following movements: 1. the daqīq, a short vocal prelude; 2. the muqaddāmī, an instrumental prelude; 3. the ḍaḥīmī or tawāṣība ("ornamenting"), the overture proper; 4. the daqīq, also a vocal movement preceded by a short instrumental prelude called a kūrtī; 5. the ḍaḥīmī or tawāṣība, a vocal movement preceded by a kūrtī; 6. the daqīq, also a vocal movement preceded by a kūrtī, and whose name practically identical with the old ḍarāf (cf. above); 7. the ḍarāf, a vocal movement which is introduced by a ḍaḥīmī; 8. the ḍaḥīmī or tawāṣība, the finale (British Museum MSS. Or 6907, Yāffi, Maqāmī; cf. Lavignac, v. 2841; Delphin and Guin, p. 65). The words of the classical Granadan nawābī have been edited from MSS. sources and过分 voice by Edmond Yāffi in his Maqāmī al-Ashraf, whilst the collaboration of Jules Rouanet he issued his Répertoire de musique arabe
et mère which contains the music of a complete mawa gharnaq and sundry movements from others. In 1865, Christianowitsch published his *Esquisse historique de la Musique arabe*, which also contained the major portions of seven Granadan nawba. Another type of nawba practised in Algeria, but of secondary importance, is the *nawba al-imkhašt*. In Morocco the five movements of the nawba are the *bâb*, the *khammaʿ* or *khaibāb*, the *bâb* liʾ, the *sâb*, and the *dardj* as well as the overture *šaḥīya*.

**NAWBĀKHĪT**. This Persian patronymic (naam or *naʿîb* + *bašt* "new fortune") was borne in Baghda during the first two *Abbâsids* centuries by a family remarkable for its influence on the advancement of learning and on the political legitimism of the *Imāms*.

It claimed descent (cf. Bohdt, *Dichter*, p. 115) from the Persian hero Gis son of Gisâr celebrated in the Shâhânamâ (cf. Rustam, *Iranisches Naumbuch*, p. 399 and Christensen, *Kynandest*, 59, 117). Its first known representative Nawbakht, an satirologist, owed his fortune to the future caliph al-Manṣûr, to whom in prison he is said to have foretold the throne and later the victory over the Zaidi rebel Ibnʿābī, in the same year (144 = 762) in which, having drawn up the horoscope of Baghda, the new capital, he was granted fiefs in it. His son Abî Sahl Timāḏ (on this curious prenomen cf. Ibn Abî ʿUṣâbī, ed. Aug. Müller, Leipzig 1884, iii., p. xii. [Vorwort] and H. Ritter, *op. cit.*, p. 9) (d. 170 = 780) had seven sons by his wife Zurr, the founders of the various branches of the Al Nawbakht in which we find theologians like Ibnʿābī, Isḥāq b. Abî Sahl (wrote about 350 = 961 the *Kitâb al-Yâbaʿ* on which a commentary by Allâma Hilli has been found by A. Egbal; an earlier commentary had been written by Ibn Abî ʿl-Hālid, according to his *Ṣaḥîḥ al-Nahj*, iv. 575; and the *Kitâb al-Insâlīd*, Abî Sahl Ismāʿīl [cf. *NAWBĀKHĪT*], Husain b. Abî, third wakil of the Imāmī [cf. Ibn ʿRâzī], and Hasan b. Muṣṭafā [cf. *NAWBĀKHĪT*]; astronomers like Fâṣil b. Abî Sahl (Ibn al-Nadim, *Fihrist*, p. 275; who has been confused with al-Maʿāmīn’s minister) and Muṣṭafā b. Hasan Ibn Khirî (secretary of state); and finally enlightened students of poetry to whom the editors of the diwan of Abî Nuwâs, Ibn al-Rūmây and Buṭûrî went to establish the texts.

**Bibliography**: "Abûsâ ʿEgbâl, Kânsaʾ al-dâna Nawbakht*, Teheran 1933, 16 + 207 pp. with a genealogical tree, and useful indices, among others that of the Shi’i sects, p. 240—247; H. Ritter in his edition of the *Fihrist* of Hasan Nawbakht. (LOUIS MASHHONI)

**NAWBĀKHĪT**, nisa of the *Nawbakht* family.

1. Faqîl b. (Abî Sahl) b. Nawbakht (d. 200 = 815) an astronomer like his father (with whom he is confused) and, like his brother Hasan, attached to the Dâr al-Hikma to translate from Persian, wrote at least seven books (Ibn al-Nadim, *Fihrist*, p. 274). All of those survives of him is a fragment of the *Kitâb al-Nubkawín* (or *Vahdabawín*) on questions relating to horoscopes (*Fihrist*, p. 238—239).

2. Ismāʿīl b. Ali... b. Nawbakht (295—

312 = 849—923), the real political leader of the Imāmī party, who kept close touch with the famous vizier *Abî* b. al-Furat (whose father, Muhammad Muṣṭafā b. Hasan, we may note, was a follower of the Naṣairî heresy; cf. Nawbakht, *Fihrist*, p. 78), and was also a theologian (cf. Mâsimîn, *Pârâs al-Dâlîl*, p. 149—159) who disputed with the learned ʿAbû b. ʿUtîb, the Moʿazard, Jâhîm and the mystic Hallûd: he also refuted, after their deaths, Abu ʿl-Athâiyah, Abu ʿl-Wâzarî and Ibn al-Ruwândî. Of his 32 works (Ibn al-Nadim, p. 176; Tûsî, p. 57) only a fragment of the *Tâlîk* survives (in Ibn Bahawawī, *Ghâilha*, p. 53—56) (cf. Ibn al-Nadim, p. 176) which gives us the first outline of the Shi’i *ghâsha*.

3. Hasan b. Mîsîr... b. Nawbakht, d. before 310 (922), classed in this family through his brother, sister of the preceding: an Imāmī theologian, student of Helenicist philosophy, author of 44 works (Ritter, *op. cit.*, p. 17—20; Egbâl, p. 129—134) of which there survives, besides fragments of the *Râdî ala l-aʾšârâ* (in Khâthīb, vi. 385) and of the *Aṣâr wa-Dikhârist* (Mâsimîn, ii. 156; Ibn al-Dawâtî, *Tâbîn*, p. 42—43, 47, 49, 69, 74, 81—82, 88, 91), only one complete text, of very great value for our knowledge of the sects of the Shi’i, the *Kitâb Fihrist al-Shârî‘a*, ed. H. Ritter (Istanbul 1931, vol. iv. of the *Ibil Lit*). In an interesting chapter (ibid., p. 143—161), A. Egbâl has collected the passages of the *Fihrist* found in a contemporary, *Ṣaʿd b. ʿAbî Alīh Asghār* (d. 299 = 911), which shows either plagiarism or the use by both of an earlier source.

(Louis Mashhoni)
NAWRÚZ (P.), New Year's Day, frequently represented in Arabic works in the form Nàvrí (Kalghândi, Nàbíl al-'Ajur, ii. 408). It was the first day of the Persian solar year and is not represented in the Muslim lunar year (Más'ûdî, Murtîdî, iii. 416 sq.). In Achaemenid times the official year began with Nawrûz, when the sun entered the Zodiacal Sign of Aries (the vernal equinox). Popular and more ancient usage however would appear to have regarded the midsummer solstice as Nawrûz (Bûrûjî, Chronology, trans. Sachau, p. 185, 201). It was the time of harvest and was celebrated by popular rejoicings, but it also marked the date when the ûrbâdā'î was collected. The two different dates were retained in Persia proper and also in 'Irâq and Dibjâl under Islam, and 'Alâmas al-Isha'tâhnt states (Tâ'rikh, Berlin 1340, p. 104) that Nawrûz in the first year of the Hijra fell on the 18th Haštân (June), which he erroneously equates with the 1st Dhu 'l-Ka'dâ. Confusion arose however because the intercalation of one day every four years which allowed the date to correspond with the position of the sun was omitted in Islâm (Mas'ûdî, Khtîb al-Tâmbî, p. 215) and unscrupulous revenue officials found it to their advantage to keep to the false calendar date rather than to the correct traditional one because it permitted them to collect their dues earlier (Mâritz, Khtîbî, ed. Wiet, iv. 263 sq.). By the time of the Caliph Mutawakkil the date of collection of ûrbâdâ'î had advanced by almost two months and in 245 A.H. he fixed the date of Nâvrî as the 17th Haštân, which approximated to the old time (Tabari, iii. 1448; Bûrûjî, Chronology, 1340). The reform had no lasting effect and the Caliph Mu'tadîd was compelled again to move the date which was fixed as the 11th Haštân (Tabari, iii. 2143). Later again, in Sulâju's reign, the reform of the calendar, the Persian astronomers proclaimed the vernal equinox as Nâvrûz (Dhu al-Âthîr, x. 344; 467 a.h.) and the first day of the new era fell on the 10th Ramdân 471 (March 15, 1079).

Nâvrûz was adopted in Egypt as elsewhere and has been retained by the Copts as the New-Year's Day (Mâritz, Kalâqî, lv. 247 sq.), but it now falls on September 10 or 11.

Popular festivities have marked Nâvrûz wherever it has been celebrated. In Sâsání Persia the kings held a great feast and it was customary for presents to be made to them while the people who gathered to make merry in the streets sprinkled each other with water and lit fires. Both in 'Irâq and Egypt these customs persisted in Muslim times (Tabari, iii. 2163; Mas'ûdî, Murtîdî, vii. 277; Mâritz, loc. cit.; Kâlgûhândi, ii. 410). Although Mu'tadîd attempted to prevent the customary horse races in the streets during the midsummer saturnalia he was unsuccessful (Tabari, loc. cit.). In the various parts of the Turkish Empire the day was celebrated as a public holiday and in Persia it has throughout its history been marked by great festivities as the chief secular holiday of the year.

Mest, Renommance des Ismaïli, p. 400 sq.; Lane, Thousands and One Nights, ii. 406 sq. (he regards it as not improbable that Nâvrûz originated from the Jewish Passover); Carra de Vaux, Notice sur un Calendrier Tûrque, in Studiapresented to E. G. Brown, p. 106 sq.; A. V. W. Jackson, Persia Past and Present, p. 90 sq. (R. Locke).

NAZAR (A.) probably did not receive until the ninth century A.D. the meaning of research in the sense of scientific investigation as a translation of the Greek parâskeine. With Aristotle (e.g. Metaph., 1064 b 2) the philosophies were then divided into theoretical (parabarbata) and practical ('amaliya); the latter seek to obtain the useful or the good for man, the former pure truth, in physics, mathematics and metaphysics.

Nazar is primarily an epistemological conception and after the example of Ammonius Hermiae, a pupil of Proclus, is dealt with among the Arabs in a work prefixed to the Isagoge of Porphyry (Ἡγομονήματα τῆς φιλοσοφίας) (cf. the article MARTIN). Nazar is also discussed as an activity of the human soul in psychology but in this case as a rule under synonyms like fikr, tаfâkkr - etc. (cf. NAFS).

The history of this terminology has still to be written. In the oldest, still incomplete, logic (edited by 'Abd Allâh b. al-Muqaffa' or his son Muzahhad, 'ilm and 'asâl are already distinguished as branches of philosophy (shûbah), but 'ilm is defined as a tâhâfuz and tаfâkkr of the hâl (i.e. of the mind) (cf. G. Furlani, *Di una presunta versione arabo di alcuni scritti di Porfirio e di Aristotele*, in R.R.A.I., ser. vi, vol. vi. [1926], p. 207).

The old speculative theologians of Islâm were
perhaps more familiar with the distinction *ibilm* *kāhl* > *ṣ̱āfī* than with *maqāli* or *kānhā*. The *ṣ̱āfī* is generally recognised as a "foot" of the Mu'tazilite system. The *Sa'dī al-Tusi* mentioned it (beginning of the third century a. H.) among his *nusul*: *ṣ̱āfī*, *kānhā* and *maqāli* (R. Strothmann, *Die Literatur der Zaiditen*, in *Iltān*, ii. [1911], p. 54). *Nasār* was felt to be an innovation like *ra'y* and *ḥiyā* in *fikr*. The *Ḥanbalī* school objected to the adoption of *nazar* but its greatest representative Ibn *Ḥazm* admitted *ṣ̱āfī* without hesitation — of course the *ṣ̱āfī* created and equipped by God — as a source of knowledge. Not blind belief (*tahlič*) nor deduction from the unknown (*ḥiyā*) were to lead it to the acceptance of the *Kurān*, *sunna* and *ḥijrī*, but quite certain knowledge. There is something which Ibn *Ḥazm* insists upon so often and so emphatically as this; there is no other way to certainty than that of tracing to sensual perception (ḥis) and intuition of the intelligence (*ṣ̱āfī*). Deed sensual perception is so much preferred by him that comprehension by the reason is called a sixth *ṣ̱āfī* (*K̄išār al-Faqīh*, i. 4—7). The philosophical position of Ibn *Ḥazm*, which requires closer investigation, recalls Hellenistic eclecticism according to which all human cognition arises either from sensual perception or intuition or is derived from these sources through the intermediary of proof. Many however emphasise the direct evidence of sensual perception and reason, and regard the method of proof as a difficult and uncertain one. Hence we have from the *Stoics* onwards the emphasis laid on general agreement (*Ar. ẓ̱mah* and *ṭemsiij*) as a criterion of truth. Only where there is no agreement is investigation necessary.

The dualistic epistemology of the eclectic (senses X reason) was very greatly modified in *Islām* by the penetration of the intellectual monism in the Neo-Platonic mysticism and Aristotelian logic. While different stages in human knowledge were distinguished, true knowledge was only to be attained by rational intuition and the intermediary activity of the mind. The main thing for the Neo-Platonist was intuition (*nazar*, *nazar*). It is remarkable how in the Neo-Platonic *Theology of Aristotle* the latter is much to say to Plato as the divine perceives everything as once like God himself and pure *ṣ̱āfī*. *Nasār* in this sense of direct perception is constructed with *ila*, in other cases however with *fi*. For *nazar* *fi*, transmitted reflection of the human intelligence, the *Theology* generally uses *fikr* and *rawiya* and the world of the senses, with which our soul is associated, is called *Ṣ̊li̊m al-fikr* and *lā-rawiya*. Following the *Theology*, the Muslim mystics generally used *nazar* for spiritual perception (cf. L. Massingham, *Essai sur l'origine du lexique technique de la mystique musulmane*, Paris 1932, index).

In *Ka'il* however, in the disputes of the theological sects, *nazar* receives the dialectic meaning. Logical proof seems to have first been admitted into the *wujūd al-dīn* by the *Ṣ̊ha'īa*. In his *muḥā拉萨* (ed. Ritter, i. 51 sq.) al-*Aṣ̊ḥāb* gives a survey of the different views of the eight parties of the *Ravished* *Ṣ̊̄ nazar wa *l-ḥiyā*. According to him, groups 1—3 consider all cognitions (*maqāli*) as necessary (*ṭemsiij*) (i.e. given with the mind itself or not given) so that *nazar* and *ḥiyā* can add nothing to them; these as well as group 8, which traces all knowledge to the *Prophet* of God and the *Inām*, differ from the rest on this point. The other four recognise some kind of acquired knowledge (in both cases the reference is to the apprehension of God) as follows: 4 (the *Aṣ̊ḥāb al-Ḥāṣibī b. al-Ḥakam*) by *nasār* wa *l-tālimād*; 5 (al-*Ḥasan b. Mīnā*): possibly by a kind of *rehā* which cannot be more exactly defined (cf. this *rehā* with the *ḥad la-*al* of the latter *Aṣ̊ḥāb* schools); 6 and 7 (anomymous) by *nasār* wa *l-ḥiyā* with appeal to the testimony (*ṣ̏ajdā*) of the *ṣ̱āfī*. We are also told (p. 144) of a section of the *Murūj* which is that a belief (*inām*) without *nazar* is in their opinion not a perfect belief.

*Ṣ̊̄ hārī* himself is probably the best evidence of the fact that the speculation of the human *ṣ̱āfī* was not regarded as a source (or method) of knowledge of God for the first time in his school but before him by several sects. *Nasār* (like *ra'y* in *fikr*) was most probably applied to the activity of the mind of the reflecting theologian (besides *nasār* we find synonyms like *ḥiyā* and *ḥād, ra'y, ḍāf, fikr, ḍarār, ḍarār, ṭa'mal, ṭalab; perhaps also others). The logical methods here are used (perhaps here still synonymous) *ḥiyā* (deduction by analogy) and *ṭemsiij* (proof by circumstantial evidence). From what we know of *ḥiyā* in *fikr* (cf. the article *Fiāt* al-*Fiāt* by J. Schacht, and Snouck Hargonrie, *Perp. Grec.*, ii. 140 sq.) and of *ṭemsiij* in medicine (see *Masʿīdī*, Paris 1851—1877, iv. 40; vii. 972 sq.), we may probably think of a process which is a mixture of induction and deduction, often used very arbitrarily. Analogous cases, often superficially regarded as similar (cf. *Masʿīdī* al-*Ilūm*, ed. v. Vloten, p. 8 sq.), were sought for, the *illa*, i.e. not the actual cause (causa) but the reason (*ratio*) in a higher conception of method or species, under which the further cases could be grouped. For Aristotle and his followers in *Islām* (Fārābī etc.) deduction had one meaning; they believed in causality or even in the creative activity of abstract thought. The great majority of Muslim theologians, jurists and physicians did not rise so far. It was not till the school of *Ṣ̊̄ hārī* that the method of *nasār* superficially grasped penetrated into *ḥalām* and *ḥalām* was defined as *主旨 al-nasār wa *l-tālimād*. Rejected at first by the majority, gradually tolerated and used as an instrument against heretics and sophists, *nasār* in the orthodox school was finally recognised as a religious obligation.

Let us now turn back to the general conception of the *ṣ̊̄ lūm nasāriyya*. Al-Fārābī (d. 950) distributed them from the philosophical point of view in a special treatise (*lāf* al-*Ilūm*, Cairo n. d.) in a way which became the model for later times. It was he who first worked on the logic of Aristotle wherefore his school was often called that of the *Mashīxūnī*.* He assumed with Aristotle that the *ṣ̱āfī* contained in itself the fundamental principles of all knowledge, the evidence of which had simply to be acknowledged. But the way of reflection and proof leads to the non-evident, the culmination of which, apologetic proof (*būrūn*), is described in the *Second Analytic*. From this eminence the branches of knowledge can be surveyed. After some observations on philology (cf. the *Stoics*) first and most fully logic — whether as instrument of philosophy or as a part of it is a matter of indifference. Logic itself is of course *nasār* with an object
NAZIM, properly Mustafa U. Ismail, a notable Ottoman religious poet. The son of a Janissary, the inspector Yeni Baghieli Oder Ismail Aga, he was born in Constantinople and succeeded his father in his office; after rising through all the grades in the Janissary office; he became Şahîrî, Khalîfe, bosb Khalîfe and finally in 1108 (1696) yeniseri Khalîfe. He died in this year on the campaign against Belgrade.

He wrote an extensive Divân, the poetical value of which is not very great but which contains much that is religious and mystical in its ghaṭa, and about 50 cebrî of the end of the reign of Mehmed IV.

(Nazal)

NAZIM, Ya'qub, the most important Ottoman religious poet of his period, as is apparent from his epithet Nûbî-şâhî, the singer of hymns. Born in 1659 (1649) in Kâsim Paşa in Constantinople, he entered the Sezil as a boy where he received the education of the Enderlen and had the opportunity to acquire special proficiency in Arabic and Persian. He showed a talent for poetry and considerable musical ability. His beautiful voice and his work as a poet and composer gained him the favour of Sultan Mustâd IV. He was given important offices at the court as a result: the office of the Hâşî-şahî to the kîlî-rî Şâhî; he next became mevleve-şâhî and assumed considerable influence. He then retired of his own accord and became bâsar-şâhî. Later he made the pilgrimage to Mecca. He remained in Medina as mevlâvî where he died at the age of 80 in 1139 (1726). According to another statement (Brunull Mehmed Tahir), he died in Adrianople.

His flourished under Mehmed IV and down to the reign of Ahmed III. He was a member of the Mawlewi order. Sheikl Neshir-i Mawlewi was his teacher in poetry and probably also in music. Nazim is the most religious poet of his period. He devoted the whole of his poetical talent to the na'îr, the hymn. His Divân therefore resembles a warnant of pardon (berîti-şâhî). He also gave special attention to the devotional forms of the tevâbî, tahtâbî and muhâmâtî.

His Divân, printed in Constantinople in 1257 (1841), forms a thick volume of 290 pages, of which one third is devoted to the na'îr in the form of 60 tevâbî, hundreds of ghaṭa, tariy, terî, and teriî, mawlewi's and muhâmâtî's, ru'î's and a mawâmâtî for the Prophet. The Divân is divided into five parts, each of which is in turn a kind of Divân in itself. He also wrote mevlâvî's for Mehemd IV and Mustafa II, Ahmed III, Selim Giaid Khan, Mosehîb Mustafa Paşa and the vizier Ahmed Paşa; also tevâbî in imitation of Ne'fî and Nâhî and şâhî'î in imitation of Ne'dîm.

Nazim is a clever technician who gives expression to his effort for variety and change, not in the matter but in the form. In all his works however, a deep religious belief, even fanaticism is marked. His poems are a true reflection of the inclination of the period for religion and Şâfism.

**Biography:** Feisal, *Tabâ'ir*, Constan-
NÂZIM FARRUKH HUSAIN, a Persian poet. Mullâ Nâzîm, son of Shâh Riâz Shabzâvari, was born in Herât about 1506 (1607) and spent the greater part of his life there. Little is known of his life, except that he made a journey to India and, after spending several years in Džâhângîrân, returned to his native town where he died in 1681 (1670–1671). He was court poet of the Beglerbegs of Herât and his greatest work, the Ūsûf al-Zâbaâlîshâh, began in 1525 (1584) and finished in 1572 (1661–1662), was dedicated to one of these governors, Abûâhâs Kâlât Khân Şâhîmbî. This, a poem of considerable length, is an imitation of Târâfârâ's work of the same name and follows the original quite closely but endeavours to surpass it by using the most elegant language. Ethâ calls the language of Nâzîm's images distorted and thinks that some of the details put in by him can only have a humorous effect on the reader. But it must be agreed that Nâzîm judged the taste of his period very well for his work became extremely popular, not only in Central Asia. While Târâfârâ's poem is now known to only a few enthusiasts, manuscripts of Nâzîm's Ūsûf al-Zâbaâlîshâh are still quite common in the bazaars of the larger cities of Central Asia as are those of the even more celebrated version of the same subject by Džâmî. His lyrical Dâwûn is less well known, but it contains many excellent poems (especially ghâzâls) some of which are even at the present day sung by the classically trained singers of Bukhârâ and Samarqand.

Bibliography: H. Ethâ, G. F. Ph., ii. 231–232; Ries, Catalogue, p. 692a; and 3707; Ūsûf al-Zâbaâlîshâh, lit. Lucknow 1870. (T. Herrthels)

NÂZIR AL-MAŻÂLÎM (A.), "reviewer of wrongs". His office "combined the justice of the kâmtî with the power of the sovereign" and was instituted by the later Umayyads, who sat in person to receive petitions complaining of zâhm. The early Abbâsîds, from Mahdî to Muâta, followed their example (Mâwardî, p. 129; Biha'îsh, Kiṣâh al-Ma'âsun), the Mu'tazîlîs, al-Schâfî, under which they are present in the p. 245; At Baghdâd the Caliph Muktâdî ordered the shâb al-shâbîra to nominate fakha whose were to hear in the courts of the mahâllas. The court of the Nâzîr concerned itself with: a. zâhm committed by the Caliph's officials; b. injustice in the levying of taxes; c. wrongful acts of kâmd in public offices. Other matters proper for the cognizance of the court were complaints by officials of non-payment of their salary or of excessive reduction of salary, the interests of workâf and the enforcement of decisions made by kâmtî not strong enough to have their judgments put into execution. The Nâzîr had much wider powers than the kâmtî. He could postpone decision on a case in order to consider and investigate evidence, a proceeding not open to the kâmtî, who is compelled to give judgment out of hand; he could use irkîsh (intimidation) to overawe a defendant into admission and could refer litigants to persons of responsibility who could act as arbitrators. The officer presiding, if he was the vizier or other highly placed official deputizing as Nâzîr for the sovereign, sat aside a special day or days for the review of mašârâb. The Nâzîm al-Mulk (Shî'at-nâmâ, p. 10) regarded it as essential for the king to sit two days a week for the purpose, and in Egypt under the Fâtimid rule, the vizier or the shâb al-shâbî sat on two days of the week at the Golden Gate of the palace at Cairo. Complaints were there made orally if the petitioner lived at Fustâţ or Mişr and each plaint received was sent for necessary investigation to the nâbî of the police or the kâmtî of the quarter concerned. If the person against whom complaint was made lived outside the two cities the petition was presented in writing.

NÂZMI, Shâhî Mehmed b. Râmâznân, Ottoman poet and Khalîwît Shâhî. The son of a merchant named Râmâznân b. Rustem, he was born in Constantinople in the Ködîşî Pasha quarter in 1582 (1622–1623). He became a disciple of Aâb al-Ashâbî al-Nâşî. In 1605 (1654–1655) he became shâhî (شيخ) in the Khalîwît monastery of Yawâshî Shâhî Mâhâmîd Aghâ near Şehir Etnî, later (1104/1693) also preacher (emînî) at the Şahîn Wallâde mosque. He died in 1112 (1700) and was buried in a special türbe. His son was Aâb al-Râjîmî Râfî'. Nâzmi was considered a high authority on Hadîth. He wrote a number of works, none of which have been translated, namely: Hâdiyyat al-Âkhînâb ("Present of the Brethren"); biographies of the seven greatest Khalîwît personalities (Yûsuf Makhkîlîm; Mâhâmîd Râkî; Shâtîb Khalîfî; Shîrînî; Aâb al-Ma'âdî-î Sîtrînî; Shâmî al-Dînî-i Sîtrînî; Aâb al-Ma'âdî-î Sîtrînî; Aâb al-Ashâbî al-Nâşî) and some accounts of their successors. His poetical works consist of the rhymed Turkish translation of the first book of the Mi'rizmî of Dzâlî al-Dîn Râ'înî, a Dâwûn of the usual type (with many hymns and sacred songs); also the Mîyâr al-Târâfî ("Touchstone of the Order").

Bibliography: Târîhî Bâlî, Kitâb, vi. 560; Hîlmî, Ziyârît-i Etmîn, i. 1295, p. 120–121; Şîhû, Kâmîn-i Flâmîn, vi. 1459; 1459; Constantinople 1325, p. 120–121; Şântî, Kâmîn-i Flâmîn, vi. 1458–1459; Constantinople 1325, p. 120–121; Şahîrî, Ki'nîm, vi. 1500; 1500; Constantinople 1325, p. 120–121; Şahîrî, Ki'nîm, vi. 1500; 1500; Constantinople 1325, p. 120–121; Şahîrî, Ki'nîm, vi. 1500; 1500; Constantinople 1325, p. 120–121; Şahîrî, Ki'nîm, vi. 1500; 1500; Constantinople 1325, p. 120–121; Şahîrî, Ki'nîm, vi. 1500; 1500; Constantinople 1325, p. 120–121; Şahîrî, Ki'nîm, vi. 1500; 1500; Constantinople 1910, p. 127. (Menzel)

NÂZMI, Mehmed (according to the Sîyâhî-i Sîtrîmî: Nâzmi Nâşîmî), Ottoman poet in Adrianopole in the period of Sulaimân al-Kânînî. He was the son of a janissary, later himself became a janissary, then sâhibîdî and sipahi. He died in 996 (1588) in Adrianopole, where he is buried in the türbe of Shâhî Trainâlî.
Nasiri possessed great poetic gifts and ability, which he displayed particularly in the clever and accurate imitation of other poets, in so-called maqāre(m.l. maqār). He also himself wrote ghazals. He rendered a great service to Ottoman literary history by collecting an enormous anthology of the best Ottoman poems, arranged under the eight principal metres. This anthology contains 4,000 ghazals by 125 Turkish poets and maqāre by himself in addition: Muzaffar al-Naẓāmī. He presented this work, which he brought down to the year 930 (1524), to the Sultan. Hammer deals fully with it, as it deserves.

He also wrote a ghazal with the rhyme ēṣf on each bāgh of the Risāli Surname of Wahḥābi Tabrizī.

(MENZEL)

AL-NAẒĀMĪ, IBRĀHĪM b. SĀDIK b. HĀNĪ b. 'IZĀQ, a Mu'tanzi theologian of the Baṣra school. Brought up in Baṣra, he spent the latter part of his life in Baghdād, where he died between 223 and 230 (835—845) while still, it seems, at the height of his powers. A brilliant poet, a philologist of note, and above all an extremely perceptive and subtle dialectician, he is one of the most interesting figures in the culture of the 'Abbasid period. He occupied a most important place in the development of Muslim ideas. He studied speculative theology in the madhbits of Abu l-Hasābi al-Allāfī, from which he soon separated to found an independent school. In Baṣra he vigorously continued the struggle waged by his teacher against Manichaeism but devoted his abilities mainly to the refutation of the Dāhri philosophy, with which he was thoroughly acquainted. So far as we can judge, it was al-Naẓāmī who began the struggle, which was continued by Ibn Sīnā for centuries, against the philosophy of Asiatic Hellenism, the classic document in which is the Tahānif of al-Ghazālī. In Baghdād he engaged in lively disputations with Menzeli and Dāhri theologians, the traditionalists and the Mu'tazilis, submitting their views to a searching criticism which had considerable repercussions in the history of Sunni theology. On the other hand, his ideas seem to have had a considerable influence on the Mu'tazili school of Baghdād in spite of the resistance which it offered to him. Al-Naẓāmī was above all a theologian. Two tendencies dominate his thought: zeal for tawwāl, for the strictest monotheism, and zeal for the Kur'ān, which compelled him to set aside any other source of theology and ethics. His interest in religion was purely intellectual and emotion seems to have played a very limited part in it. His opponents described him as a Dāhri; this is to misconceive completely the fundamental idea of his theological work; nevertheless it is quite true that it was the dispute with the Dāhriya which imposed upon him the first principles of his dogmatics and which determined their structure, so much so that Iṣlām in his hands assumed a rather strange form. His dogmatic extravagances brought down upon him the condemnation of almost the whole of the Muslim community and even of the Mu'tazila; it was however he who was the first to state several of the principal problems of Sunnī theology. His writings are lost but considerable fragments have been preserved, mainly in the works of his pupil al-Dāhrijī. Many of the teachings which are attributed to him in books of writers on heresies were handed down by his pupils, not always correctly, as al-Khājiyya tells us. The exposition of his theology given by al-Baghdādī in his Kitāb al-Furqān probably goes back to Ibn al-Rawandi; it is a typical example of misrepresentation and deliberately false interpretation. — On the main features of his theology and of his school, cf. the article AL-MUṬĀZILA. Here we give a few observations on the problems of his theology.

1. Aṣīr al-inwād. Al-Naẓāmī's main interest here is to defend the Kur'ānic doctrine of the creation against the Dāhriya which teaches the perpetual circulation of the elements and therefore the eternity of the material world. It is with this object that he develops the doctrine of the qaḏār and the kawāna, a strictly anti-Dāhri thesis and one already adopted by Abu l-Hudhail al-Allāfī. His ideas regarding the body and its relations are the logical result of this teaching. The structure of these ideas is however strongly influenced by the polemic against Manichaeism, the fundamental problems of which al-Naẓāmī had studied deeply. In his positive demonstration of the dogma of the creation one occasionally thinks there are traces of Aristotelianism: the creation was a setting in motion and the created world is in a continual state of movement (even rest is defined as a form of movement). God is then himself immobile but at the same time the primordial moving power. The ta'wāl, the distinction between the creator and creation, is carried a considerable distance. The divine attributes are represented to us by negations. The divine word is a body (therefore created) but that of man is an accident. The Kur'ān is miraculous because of the information it gives about the past and on account of the secrets which it reveals but not on account of its style, which men could have imitated if God had not prevented them (in reality there is no mu'tawṣa in al-Naẓāmī). Al-Naẓāmī fundamentally rejects the arbitrary interpretations of the Kur'ān given by the great authorities on Tradition, as Ṭārima, al-Kullābī, a Suddī or a Māzikī b. Suhaimī; he demands a strictly literal exegesis. Prophethood has always been universal, i.e. all the prophets and not Muhammad alone have been sent to the whole of humanity (against the traditionalists; al-Naẓāmī thus did not deny the prophethood of Muhammad).

2. Aṣīr al-adl. The freedom of the human will is restricted, according to al-Naẓāmī in a way that anticipates the Aš'arī theology. The actions of a man are movements, therefore accidents and movements which relate only to the man himself; the effects which are realised outside of the man are not due to him but to the natural forces which God has placed in his body (denial of waqū'udda). Man is the rub, which penetrates the body; the body in its turn represents an in¬firmity (ṣifā) of the rub. Now it is the body, different from man in the strict sense, which sets in motion the action of which man (i.e. the rub) is capable. It follows that man (the rub) is capable of the action before it is realised (al-kifāya al-hallāb na'i), but at the moment when it is realised, the man is not capable of it.

3. Aṣīr al-wuḍūḍ wa l-wuḍūḍ. Al-Naẓāmī is very
krena interested in practical problems of the; he knew his views and those of his school on the , on fraud and on ritual purity (in which connection he gives some very curious psychological explanations). But he is particularly concerned with the . He waged a passionate campaign against the adab ad-day wa l-hiya, therefore against the Hanafi who were the representatives of the . He flatly refused to admit ad-day and said but did not shrink even from attacking the great men among the who in his opinion had been guilty of using them. He was in this way led to criticise violently the institution of the (which however he admitted to a certain extent. Through all this he prepared the way for and the .

(H. S. Nyberg)

**NEBUCHADNEZZAR. [See BUKIkal NAŠAR. ]**

**NAJDJ, the highlands of Arabia in contrast to the low-lying ground along the coast (Ṭihāma) or the depression (ṭāda). In the dialect of the Hadhāli Nadjj is pronounced Nadjj.** The exact application of this originally topographical conception is very differently understood and sometimes it means more generally the elevated country above the coastal plain or the extensive country, the upper part of which is formed by the Tillāma and the Yemen and the lower by Syria and the Ṭurk, or the part of Arabia which stretches from the frontiers of the Tillāma to Madina and thence across the desert from al-Baqra to Bahrayn on the Persian Gulf (Ṭṣaqḥāt, Ibn Hāṣar) or the territory between the Ṭurk (al-Ṭannās) and Ṭurk (Ibn Khaṣṣārhiṣa) or from the Ṭurk to the Tillāma (Khaṣṣārhiṣa) or the land which lies behind the so-called Ditch of Choosres (Kirsqā) as far as the Ḥarrā (al-Bihāl), or lastly, the territory between the depression of the Ṭikāk al-Rumma and the slopes of Ṭikāk (al-Ṭarq) that originally the name was applied to the part of the land, and only not only from the definitions of the separate authors but also from the fact that Nadjj appears in combination with various place-names; thus al-Qasmī (Yaḵūt, iv. 745) knows of Nadjj Barak (in al-Yaman), Nadjj Uṭb, Nadjj Khabbah (near al-Aṣfāt), Nadjj Ṭafīr (in the Ḫainam), al-Bakri (li. 574) besides the three last named mentions Nadjj al-Yaman, Yaḵūt (li. 750 z.g.) farther mentions Nadjj al-Ḥijāz, Nadjj Alwah in the country of the Hudaḥ, Nadjj al-

**Sharā, al-Hamdadyn (p. 55) Nadjj Ḫiyūr and Nadjj Madīdāl along with a number of places not otherwise known which are combined with Nadjj.** Hamdadyn (p. 177) further makes a distinction between upper Nadjj (Nadjj al-Ṭūḵā) which is regarded as Nadjj proper (al-Nadžājī) and in which he includes the district (ḫurā) of Ḫurayq and the town of Ḫamibanim, and lower Nadjj (Nadjj al-Sufā) which is described as Ṭaʾf Nadjj and with the Ḫidājā and al-Ṭarīq forms Central Arabia (p. 1, 4, 50, 56, 78 sq.), the territory in which pure Arabic is spoken (p. 136, 8 sq.). The original meaning is also seen in the dual Nadjjān, which, it is interesting to note, is used for two mountains in the Aila range, as well as in the place-name Nadjjār Marīf and in the spring pasture ground Nadjjān in the land of the Khāṭīm mentioned by the poet Ḫuṣayn b. Ḫaww (Yaḵūt, iv. 745).

That the wide interpretation of the name Nadjj above given is not unjustified is shown by the foundation in the second half of the fifth century a. d. by Ḫariṣ, chief of the Khāṭīm, of a short lived kingdom which extended from the Syrian limes and al-medina to al-Yamanā and till the lines of Yemeniyah in the N.E. on the Wadī l-rumma to Ḫidājā Ṭīr. At a later date, the whole of al-Nadjj belonged to the administrative district of al-Yaman (Yaḵūt, iv. 746).

The widest area to which the name Nadjj has ever been applied is probably that of the present kingdom of the same name which owes its origin to the Ḫawāṣib chief ʿAbd al-ʿAzīz b. ʿAbd al-Ḥamād al-Saʿīd, who, as Amir of Nadjj conquered Riyād in 903, was chosen sultan of Nadjj and the adjoining lands in the name of ʿAbd al-Ḥamād, on Jan. 19, 1927 was proclaimed king of Nadjj and its dependencies at Riyād. The frontier of his kingdom are: in the east, the Persian Gulf from Ḫīfrah and Qaṭār to Ṭās al-Mīrāb, then the neutral zone between Nadjj and Kuwait from this promontory to Ṭās al-Khiliya; in the west: the kingdom of the Ḫidījā; in the south the line which runs from the port of Ḫanūfiya on the Red Sea south of Ḫarīb in the Ṭarīq and south of the Wadī l-Daʿāwīr and includes Nadjjān. The war at present going on between the king of Nadjj and the Imām of al-Yaman may perhaps alter this frontier, especially as Ḫaww in the Ḫaman has previously been a bone of contention. The northern frontier which was delineated by treaties between the ruler of Nadjj with the Ṭīr and England on the one side (signed at Ṭāʾf on Dec. 2, 1922) and Nadjj, Great Britain and Transjordania on the other (signed on Nov. 1, 1921) east Nadjj and the frontiers which run from the northern zone between Nadjj and Ṭīr (20°-30° N. Lat. and 45°-46° E. Long.) and is then continued in a line running N. and N. W. to the intersection of 39° E. Long. and 32° N. Lat. and leaves the Ḫabāl (Aṭān el on its north, then S. W. to the Wadī Ṭirāj and passing through in the S. E. the point where 35° E. Long. and 30° N. Lat. intersect. The Wadī Sīrīn is thus still in Nadjj. This line continues towards the south from 25° to 38° E. Long. and crosses the Ḫidējā railway towards Aṣkhās. The extent of the territory is estimated at 900,000 square miles and its population at 3,000,000. The capital is al-Ṛiyadh; the more important towns are Ḫurma (Berdīn, Ḫirān, Ḫaṭīm, Tarmalūmah.
Both ranges, which rise out of a tableland levelled by weathering, are of granite. The Djabal Adja, stretches from N. N. E. to S. S. W., about 35 miles S. E. of it in approximately the same direction the Djabal Salmá, a near Dibam, while S. W. of the Djabal Salmá lies the Harra of Faid, of volcanic origin.

S. W. of this lies the sandstone plateau, overlaid with limestone, of Dibab Tuwak (Tu Bek) running N. W. to S. E., which forms the western declivity of a plateau which has come into existence through weathersing and slopes towards the Persian Gulf on the one side and the sands of the desert of Rub al-Khali on the other. It begins S. E. of the district of al-Ka'im (S. E. of the Harra) and stretches E. from al-Waghib, al-Arid with the town of al-Riyadh and then turns, west of the Kharijian, S. S. W. towards the Wadi l-Dawit. The most important peak on this edge of the plateau is the Dibabal example in al-Khardj the springs of which form three pools, the largest of which is 150 paces long and 50 broad (cf. the picture in Philby, ii., p. 34) while the springs of Al-Adja feed a lake nearly a mile long and a quarter of a mile broad (Philby, ii., pl. at p. 86). These supplies sometimes dry up suddenly, probably because they have found a subterranean exit as has happened in the case of two water-holes in Al-Adja and the two larger ponds in Al-Khardj. The hydrographic conditions of the country are therefore exceedingly dependent on the rainfall from the summer and winter rains. The former (masut or mactar al-zayf) fall in August and September and particularly refresh the pastures which the summer sun has dried up, while the latter produce a springlike effect in the land on which they fall. The classic phrase 'Allah Nadjīdī nūn rahtī wa-qafīm (Bakri, ii. 627) eloquently sums up this state of affairs. Heavy rains were also observed in April 1871 in the central
Wadi I-Rumma and in May in 'Anzê between Djabal Salîm and 'Anzê (1854 Ch. Huber), and Philby (ii. to) noticed thunderstorms in May as well as drizzle, while Doughty met with hail at Qhabna (near 'Anzê) in April. That the climate here cannot have changed very much is evident from Djabal who records very heavy showers in this district in April. 1849 A.D. Huber met with rain in June 1834 between 'Anzê and Mecca, Sadillar at the end of July 1819 between Al-Hassâ and Darîya heavy thunderstorm and rain, which however was described by the natives as unprecedented. Philby (i. 141, 142) records thunder and rain in December. The rainwater collects in the hollows below and forms a thick layer of sand and enables palms to grow and also on occasion deserts to become fertile soil, wheat and barley, vegetables and fruit trees. The hot summer of course everywhere makes it necessary to water the crops from wells.

On the other hand, the frequently very sudden flooding of the water courses led in quite early times to the building of dams to hold back and store the water; such were built in the Wâdî I-Rumma at 'Aneiza (Bakr, i. 207: Vâkât, iii. 738), Darîya (Bakr, ii. 637) and on the road from Al-Yamâma to 'Aneiza (al-Hamadhânî, p. 174, 192). Doughty found remains of such dams in the Djabal Adja.

The district of al-Sharaf is the richest part of al-Najd, and the valleys of the Wâdî al-Ljârî and Wâdî al-Mîlah are celebrated for their pastures. Here the early caliphs had vast grazing grounds (jumâ) e.g. in Darîya, al-Rahabîa, Faid, al-Nîr, Dha l-Sharâf and Nağî. The most famous was that of Darîya, where the caliph 'Omar I secured an annual sale of 128,000 asses, 30,000 camels and 500 horses in diameter as pasture for 300 hand and 30,000 camels for the army. Othmân extended this area until the diameter was ten miles. The 'Abâsâsid al-Mahdi abandoned it, as the policy of this dynasty was to neglect Arabia deliberately in contrast to the Omayyads who, for example, intensively colonised western Najd. In the sixth century A.D. Najd was still well wooded, and al-Shuraba, south of the Wâdî I-Rumma, and Wadja were particularly celebrated in this respect, while at the present day they only possess scanty remnants of these forests.

Many areas seem to have been ruined by drought or disastrous inundations (Philby, i. p. 115; ii. p. 9); the decline of al-Yamâma is probably due to the latter cause. Crops are sometimes damaged by sharp frosts — in winter (January) the temperature sometimes sinks from a maximum of 53° F. by day to below 23° and ice and snow have been occasionally seen at the higher levels — while the summer drought with a maximum temperature of 113° destroys the crops. The two most important wâdis are the Wâdî I-Rumma about 650 miles long, which runs right across the plateau of Nuba Arabia, rising in the Harrâ of Alhabar and entering the Euphrates plain at Harrâ, and the Wâdî I-Dawâsa. These have formed since ancient times the two main routes of traffic in Central Arabia.

It is with the object of improving agriculture that the king of Najd is endeavouring to keep the Bedu to the soil. Every tribe or clan has therefore been allotted a definite area of ground near a well where huts are being erected and the ground planted. These new settlements are called hijâra. In the last ten years, since the revival of Wahhâbîsm, about 70 of these colonies with 2,000—10,000 inhabitants have been established; the most important is Irtawiya built in 1912; Rihâni (p. 198) gives a list of others. In this way not only is the cultivation of the land secured but the revenues of the state are increased; these consist of the zakât (10% on movable property), the customs, a fifth in case of war and (formerly) £60,000 subsidy from England. The coins in circulation, in addition to the Maria Theresa dollar, are the English and Turkish sovereign, the Indian rupee and copper coins of Omân of the last century, 60 of which go to the dollar. The once famous gold mines of the Banî Sulaim at al-Akîb, al-Mudjarra and Biha (Hamâdîn, p. 154, 54.) are now no longer of importance and unlike al-Yaman the country possesses no industries.

NEDJMA — NEDROMA

(with numerous plates and two sketch maps), p. 31 sqq.; or, TOVÌÉ, Nadir al-Ma'alih, Bari, 1925; H. Musti, Northern N.W. and Western N.W. of Tinmen, has since the dawn of the modern period been the most important town in the hilly country between the sea on the north, the lower course of the Tibesti on the east, the plain of Lalla Moghila on the south, and the Algero-Moroccan frontier on the west. It is the country known since the xvii century A.D. as the land of the Tréa, Berbers converted to Islam and Arab culture in the period of the Idrisids who were known in the middle ages as Kháníya. This little Berber bloc, speaking Arabic, forms with Nadríma, which is as it were the heart of it, a whole so homogeneous that they cannot be dealt with separately.

1. Past History. We may reject the chilialish suggestion given in "Nedroma "by Livi of Nadríma, which was first of all the name of a tribe, a section of the Kınya family of the Berber stock of the Bautili, or Bani Haddad, Berberes, at the commencement of the xvi century). The name is mentioned by al-Bajás (in the "Livi-Pravanel, Deser. d'Hist. Alm., Paris 1612, ed. de Goeje, p. 117) where we must understand by a-khás Nadríma "the people of the city (i.e. the Nadríma)." This passage, written in the xvi century, would tend to show how the name of the tribe of the Nadríma became attached to the little town which was then their principal centre.

Before this period however, Nadríma was the name of the town; for al-Bakri (xii century) gives it the same name and gives us a brief description of it; he qualifies it as "nadríma "a town" and not as simply jayya. In the time of al-Idrisí (cf. the "Bulla") in the xvi century, the town was a prosperous one surrounded by walls and had an important market. There is no doubt also — although these two geographers do not mention the fact — that Nadríma had a mosque.

In the xvi century A.D., the Muslim geographer al-Yasıch (Ala', ed. de Goeje, p. 18 and transl., Desr. d'Alm., Leyden 1660, p. 117) mentions a considerable town inhabited by Berbers at the extreme boundary of the lands ruled by the descendants of the Idrisid Muhammad b. Sulaimán. The name of this town, written in the Arabic text as ترود, might be Félâlasen or Félâlasen, but with difficulty "Fellohausen" (cf. R. Bassut, Nedrémah et les Tréa, p. 7, N. 2) on account of the present day pronunciation of the word by the natives of the country. René Bassut (肋) thinks this town could be identified with Nadríma, built on the N.W. flank of mount Félâlasen (modern local pronunciation) — the Félâlasen of the maps.

The Almoravids of the xiv—xvii centuries gave Nadríma an important mausoleum and a pulpit, in-spired, G. Maqris, says, by that of the Great Mosque of the Umayyads of Cordova as that of the Almohad Kutubiyah of Marrakech was later to be. This fact alone would suffice to show the importance in the Almoravid period of this Muslim centre which must have been the greatest in the land of the Kınya at this period.

Nadríma had access to the sea by several small ports, the most important of which, Homían, which also served Tinmen (cf. Maqris, Historia, xi, 4, 1925, p. 353—355) was however somewhat difficult of access from Nadríma, by the very steep N.W. flank of mount Tafira. This town had therefore rather to use the port of Maddrin (al-Bakri) which was only 10—12 miles away, easy of access at the end of a valley (Wādi Māšā) north of Nadríma.

In the Almohad period Nadríma as well as all the land of the Kınya, where Abd al-Mu'min, the first caliph of the Almohad dynasty, was born, must have been the object of special solicitude by these rulers, who were lords of Africa and Spain. Moreover it was on the Kınya, the tribe in which they originated, that the Almohad caliphs relied for support — like all Muslim rulers — these Berbers were the best armed and the most reliable supports of the throne of Marrakech. Although the name of the Kınya has now disappeared and has been replaced by that of Tréa, it would be too much, as we shall see, to think that the Kınya tribes disappeared in the wars of the Almohads.

The name of Tréa is quite recent; it appears, it seems, for the first time in a treaty of union — of which the Arabic text is given by R. Bassut (xvi, ed. de Goeje, p. 212—218) — between the Arab and Berber tribes of the N.W. of Tinmen and eastern Morocco, prepared in 955 (1549—1549) in anticipation of the struggle with the Spaniards, thus lords of Tinmen. In the text the Tréa are described as made up of many sections, the names of which are unfortunately not given. At later dates we again find this name of Tréa in various authors without being able to say to which it refers. As in the xvi—xvii centuries, Nadríma is still the capital and the principal town for these tribes.

Most of the Tréa tribes of to-day have preserved the names which the same Kınya tribes bore in the time of the caliph Abd al-Mu'min.

This little Berber capital was undoubtedly very large if we may judge by the traces still visible of its walls, which have hardly changed since the time of al-Bakri. It appears in the history of the middle ages, as in modern times as one of the chief towns of the province of which Tinmen was the capital, whose political and religious influence dominated it and whose destinies it followed.

When in the xvi—xvii centuries, Tinmen became the capital of the 'Abdalwâlidid kingdom, Nadríma, a peaceful town with a temperate climate, in a charming position, overlooking the blue sea a few miles away, because the country resort of the rulers and princes of the royal house. They had a fortified palace there (the 'akife) of which considerable remains of the surrounding wall still stand as well as the walls of the buildings. It commanded the town, standing quite near it on the south, and its ruins are still called ۸کعیف. It was to this place that Abd Ya'qub Tibi, renouncing the royal throne of Tinmen to the advantage of his two younger brothers Abd al-Salāl
and Abd Thabit, retired in 749 (1348) to live far from the court and politics in meditation and prayer (Du Kahidin, Gods, transl., iii. 422-39; Yağhi-b. Râhidin, Histoire des États de Timmern, ed. and transl. A. Bel, Algiers 1903-1910-1913, ii. 14, 18).

It was here that his son Abd Hammi II (reigned at Timmern 1359-1359) lived with him and the latter's son was born, Abd Tâshphil II who dethroned his father and reigned after him (1389-1393). This peaceful withdrawal of Abd Ya'qub to Nadrana was only to last about four years until the conquest of Timmern and Nadrana by the Marinids of Fez in 1352.

No king and apparently no prince was ever buried at Nadrana. There is however the mausoleum of a saint in the midst of the ruins of the palace. The individuals who went to visit it is believed to mark is called "Sidi Sultan". Neither the name, nor history, which does not mention him, nor legend, which simply makes him come from Egypt at a remote period, tells us anything of value about him. Nevertheless, in view of the numerous similar examples of the creation of holy places sacred to saints by the Berbers, who are of a deeply religious nature, and in particular by the Berbers of Nadrana and the Trara, it is easy to reconstruct the process of the foundation of the mausoleum in question. The sojourn in the palace of Nadrana of a great prince who had abandoned his rank for a life of devotion must have impressed the people of the time and long afterwards the spiritual merits of this "sultan" must have been respected, as one who had certainly been touched by the grace of Allah. When many years later the name and story of this devout king who had been forgotten, the place where he had lived, this zarqa, or hajja as it is still called, though in ruins, impregnated with his sanctity — his hajja — remained a holy place. It was only a very short step from this to localise the centre of radiation of this hajja in a little sanctuary in which prayers could be addressed to the unknown saint who is alleged to be buried there. At the present day the little white domes covering the so-called tomb of Sidi Sultan, under a very old wild olive tree is the goal of the pilgrimage of thousands of pilgrims; the come particularly to seek the care of a sick child; they expect to obtain, by the invocation of the name of Sidi Sultan, what is regarded as the power of the Allâh. Every year the negroes of Nadrana (who say that Sidi Sultan was a descendant of Bôla, the Prophet's wife) go there on a mass pilgrimage and sacrifice a bull calf; they hope thereby to obtain the regular rainfall needed by the district.

If we have dealt rather fully with this feature of the religious mentality of the people of Nadrana, it is because it is a sign, among many others, of one of the most characteristic aspects of the religion of the Berbers and of those of Trara. Morabiboun has so developed among them that René Basset in his study of Nadrana and the Trara has collected the mosques and sanctuaries of 206 holy men and 9 holy women, which is a large number for such a small area. This however does not prevent the people from observing, as well as they can the ritual duties of Sunni Islam and of zealously attending the many mosques in Nadrana and in the villages of the Trara.

The Encyclopædia of Islam, III., during the great popular mystical movement which spread through all North Africa, that the people of Nadrana and the Trara have developed this cult of saints and placed all their trust in these men of religion and Shâfi’i. Particular evidence of this was seen in the assembly on the banks of the Warda on the borders of the land of the Trara, of the tribes of the region of Nadrana and the adjoining country when in 1548 the holy man al-Ya’qub, whose genealogy is [q.v.] is a little to the west of Nadrana, led them against the Spaniards who then held Timmern.

As a matter of fact the Spaniards who were established in Orsa and Timmern were never able to occupy Nadrana and the land of the Trara. The Turks who finally occupied Timmern and the province were never always warmly welcomed there. On several occasions the sultans of Morocco were able to advance their frontiers in the lower Tafnia. However the Turks ended by establishing their authority which lasted until the conquest of Algeria by the French. Nadrana and the Trara did not at once accept the rule of the Abi al-Kadiir; they preferred to be under the sultans of Morocco. Later they took the side of the enemy against the French and it was in these mountains that Abi al-Kadiir often found a safe asylum when he was defeated, even after 1844 when the French occupied Nadrana, and notably in 1845 at the time of the famous affair of Sili Brâhim. (cf. P. Ame, L'Essai Abd al-Kadiir, Paris 1923, p. 207-214) a few miles west of Nadrana.

II. The Present. Nadrana, surrounded by gardens full of olive and other fruit-trees of various kinds, lies on terraces which lie on a well-marked hog's back sloping from N. to S. running from the Kasba, it is enclosed in a quadrilateral of about 15 to 20 hectares, which is still marked by the traces here and there of its old walls.

This town has preserved the appearance of a city of Western Islam with the Great Mosque dominating the houses with its high square minaret. A small square (zarqa) of which is open gives a little open space for the building and the central quarter which also bears the name of zarqa. Other smaller mosques are in the different quarters but they are hardly distinguished from the surrounding houses because they do not have minarets or only a very low one hardly rising above the roof. The chief of these mosques is the Djami al-Khadârîn, the "mosque of the potters", which is said to be the oldest of all. It and the Great Mosque are the only two in which the Friday juma is held. It is in the Bâni Zid quarter in the S.W. of the town. The Rû dibâdâ's quarter in the S.W. are the chapels of Sidi Ru Ali and Lâila Ayia; those of the Djamâ Haddâtân, I2. Arrayays, Dj. Sidi Syyâd are in the quarter of Darb al-Shi, to the north of the great mosque and town. At the hours of prayer all these mosques are filled with pious Muslims, many of whom possess a certain amount of Arab culture and religious knowledge; most of them are anxious to have a Muslim education and to give it to their children in addition to French education in the French elementary schools. Petty traders of experience and agriculturists tilling their fields, the people of Nadrana also include a considerable number of capable artisans. We shall here confine ourselves to mentioning two of the oldest and most important local industries.
of Nadrénna; that of the weavers (darrémen) and that of the potters (badarèmen).

The weavers of Nadrénna have retained their ancient loom with low warp without any modern improvements; not even the picker, and all the old equipment of their ancestors, notably the warper (nefara) and spinning wheel (niqdàma). On the loom, material and method of working, one may compare what is done in Tlemcen in identical fashion (cf. A. Bel and P. Picard, Le travail de la toline à Tlemcen, Algiers 1913, p. 63 sq.). The weavers of Nadrénna now make only woollen blankets (hiràddàna), white or decorated with stripes of colour, hooded cloaks with very short sleeves (dùllàna), the white dàra for men (particularly old men here) which is a long piece of wool without seams, which is wrapped round the body in a certain way. Nadrénna makes several kinds of dàra (cf. L'industrie de la toline, loc. cit., p. 105).

The potters have for centuries from father to son had their ateliers in the upper part of the town in the S.E. beside the Kasba. They make pots and other articles on wheels (maddàna) of the usual type driven by the foot; cooking pots of round shape without handles called cadra (whence the name badarèmen given to the potters), cooking dishes for ragouts (dàdgu) and for barley or when giselle cakes or different kinds of cakes (màddàna), portable ovens (madjau), thàrràna which is in the form of an oven with an earthenware damp above, shaped like the bottom of an inverted pot on which is poured the liquid part of these picamas, as thin as paper, which on account of their thinness are called by the Beduins in Oranès egg "aïches" and in Nadrénna as in the towns are called by the old Arabic name of thàd. When required the potters of Nadrénna also make other earthenware articles such as frozen pots (màbbàra) and the musical instrument called eggel, used by women, consisting of a large earthenware tube, one of the ends of which is closed by a skin stretched over it which is beaten.

The total population of the town of Nadrénna is 7,051 of whom 6,124 are Muslims, 850 Jews and about 200 Europeans (chiefly French). The females of this city usually have a Qatqam quarter but they live almost entirely in the two streets of Darb Al-Silâ and in another in the Bâeb Zaid quarter; there are petty traders, labourers and artisans (it is they who make the saddles for the mules and asses). The majority are of Berber origin; they are usually poor. Although they only marry with one another and live apart from the Muhummadans, the Jews live in houses quite like those of the Muhummadans, lead the same kind of life and use an Arabic dialect among themselves.

The negroes (tahal) who are not very numerous are called swarès (Guineans) and live in a separate quarter in the west centre of the town. They are in very humble circumstances, stokers of the house ovens or the furnaces of the baths, labourers and workmen. Although regarded as Muslims, their religious life is not at all regular and they are regarded, as elsewhere, as more or less of sorcerers.

The French element is very small; it consists almost entirely of officials and their families. They live by themselves in the public buildings (schools, gendarmerie etc.) and in European houses roofed with red tiles, which form an entirely distinct quarter outside the native town (to the N. and N.E.).

Nadrénna is the capital of a mixed commune. The civil administrator who lives there has under his authority the town and the surrounding neighborhood: Egdàna, Zawiyat Al-Mis, Sauhidya, in the West and N.N.W., Bâeb Mudir, B. Mâhî, B. Kâhîlî, B. Abîd, in the N.E., or S.E. the population of which numbers 47,324 native Muslims and 83 Europeans.

The other Târa tribes are not under Nadrénna; these are the Mardà, in the extreme N.W. who belong to the mixed commune of Marnà; the B. Wàrîfà, and the Ullaîsa Ghrîba, to that of Rench-Montagnac.

On Thursday which is the market-day there come into Nadrénna large numbers of people from all the country round; they bring in their stock, especially sheep, goats, cattle and mules and, according to the season, the produce of their fields and gardens (wheat and barley, almonds, carobs, figs, grapes, etc.) and of their flocks (wool and goat-skins, butter, curds etc.) as well as chickens, eggs and honey. The country artisans (men and women) bring in the articles they have manufactured (articles of woven gass, walking-sticks and little articles of wood carved with the knife with Berber designs), wool, articles of terracotta, notably Berber pottery decorated with geometrical designs, made by the women of Mâa (and similar to the other Berber pottery made by the women of Kalybîa, the Taâlî and elsewhere).

It is on market-day that one realises that Na-drènna is the economic centre of the whole district of the Târa and sees the variety of products of the soil and industry of these Berbers.

The abundance and variety of these products are not due only to the activity of the inhabitants; the climate and the soil also help. The climate is fairly equable: tempered by the proximity of the sea it is never extreme as in the case of continental districts. For the rest, the height of the hills, while sufficient to encourage rainfall, is not very great; it does not exceed 3,500 feet at Fallusen and 1,200 at Nadrénna. It is therefore only in the very hardest winters that snow for brief periods whitens the summits of the range. As to the soils of this coast range, which, between the depression with the Tâna in the east and the neighbouring plains of the Moroccan frontier in the west, runs from the Wad Mòllah (2 miles N. of Marnà) to the sea, they offer a certain variety in their nature and origin. Around the primary massif, which includes the highest peaks, Fallusen and Tàdrà, are several eruptive lavas (granite) and hills of secondary formation (Jurassic). The lower areas, especially the plains of the N.W., as far as the coast (where there are several old eruptive mamelons) and the depressions of the S.E. and E. along the Tâna, are middle Miocene formations.

The mountains also possess numerous perennial springs which feed little streams which irrigate the gardens; there are also various minerals, several of which have been recently or are still being exploited by Europeans.

It is due to the quality of the clay around Nadrénna and the granitic sand used for moulds that the pottery industry is one of the oldest and most prosperous in the town. The native vegetation is abundant and varied; in addition to the many varieties of trees of the highlands (notably sumach [shâsha]), the wood of which is exported.
to Europe through the port of Namaqua), we may mention many kinds of plants used for medicinal purposes or dying. It is for example thanks to the modest abounding in these regions and used by the natives for fusing the dwarf palm leaf that the people of Ulikhagharithia are able to make a fine and famous straw work (men's hats with high crowns and broad brims called *muttal* — baskets of various shapes all of dwarf palm leaves). All these articles are prettily decorated in red on the yellowish white foundation of the palm leaf; they are known and purchased by the natives of the whole of Orana and eastern Morocco.

It is also owing to the abundance of pasture in this hills that the rural dwellers, none of whom however are nomads, can raise so many flocks especially sheep. The wool from their flocks is almost entirely used in the country by the weavers of Nador and by the country women who by their weaving, using the loom with a high rail like all the women in North Africa, make a considerable part of the family's woollen garments. All these women are excellent spinners; they have a great reputation for the fineness of their work.

Even from chickens — to feed which the country women in the autumn collect the red fruit of the mastic which is very abundant in this country — people who are greedy of gain, make a profit; thousands of eggs are also exported every month from Nador via Nemaoura, to France and particularly to England.

**NEFT, the greatest satirist of the Ottomans.** Omer Efendi whose nom de plume (snadıja) was Neft came from the village of Baskale near Erzurum (Eastern Anatolia). Not much is known of his early life. He spent his early years in Erzurum where the Khadjis Laleh, an Ali [q.v.], who was a *seferdar,* there, became acquainted with him. During the reign of Ahmed I, he was appointed to the post of Agha, he worked for a time as a book-keeper. He failed in an attempt to gain the sultan's favour or that of his son, the unfortunate *Oghman II, with some brilliant *şahvans.* It was not till the reign of Murad IV that he gained the imperial favour but his malicious, sarcastic and indecent poems soon brought him into disgrace. He was appointed to the poll-tax office and later again became a member of the sultan's circle. His irritable impulse to make all the nobles of the empire the butt of his mockery made him a host of enemies. A satire on Bairam Pasha, the sultan's brother-in-law and viceroy, who had succeeded in being recalled from banishment and again attaining influence, must have hit the sultan as the snuff gave him sanction to the execution of the great poet. With the sultan's consent he was shut up in the same castle of the serai, then strangled and his body thrown into the sea. The year of his death is 1044 (beg. June 27, 1634), not 1045 as Hâdji Kallias, Fiefichte, ii. 185 wrongly says (cf. on the other hand his *Kazi oğlumın,* ili. 318 and 631 where the correct date is given).

Neft wrote Turkish and Persian with equal ease. His mastery of technique and natural poetical talent make him one of the greatest Ottoman poets; he is also undoubtedly one of the greatest, although hitherto little known satirists. The reason why he is so little known is that a scholarly edition with full annotations of his Turkish *Odmewe* entitled "Arrows of Fate," *Şahvans* *Neft,* has so far never been undertaken, so that at the present day hardly any one is able to understand the countless allusions to particular circumstances and the veiled attacks on the individuals dealt with. The publication of his poems demands a knowledge of the conditions of his period and particularly of life at court which it is hardly possible to attain and which it would be very difficult to gather from the existing sources. Many of his flashes of wit and allusions are very difficult to understand. Many of his poems are distinguished by an obscurity which can hardly be surpassed, and however great may be their importance for the social history of his time, they are of little value as evidence of his poetic gifts. The "Arrows of Fate" are directed against almost every one prominent in politics and society in his time. In G. O. D., iii. 241, J. v. Hamser has compiled a list of them. Some of his poems which pillory existing institutions, like the popular asans, the *Kalendar-dervishes* [q.v.] are, of value for social history. Hardly one important contemporary was able to escape the snare and ridicule. They were all made targets for his "Arrows of Fate" without mercy. He attacked the jurist (kâhm) particularly unsparingly.

Neft's Turkish *Odmewe* has been several times printed: two parts at Bâlik in 1553 and in 1669 at Stambul. Selections (with ample evidence of "Abd al-Hamid's censorship") were published by Abu 'l-Dâya Teswîkî in 1551 at Stambul. There are MSS. in European collections in London, Leyden and Vienna. Mr. Walter von der Porten now (1933) in Zurich owns two particularly beautiful and old MSS. A short *Şahvans* by Neft is mentioned in the catalogue of MSS. of the Leipzig council library by H. L. Fleischer (p. 547b). On his death, cf. *Faruküldük,* *Trlîkâhî-gülâmî Metûfe,* i., Stambul 1524, p. 668, and Nâsimî, *Târîkîh,* ii. 489.

**Bibliography:** In addition to the sources mentioned cf. also Glibb, *Ottoman Poems,* p. 208 and *H. O. F.,* iii. 232 sqq., the history of Nâsimî (*L. 386*) and Behsayl Mehemmed Tahir, *Oghman Müellifleri,* ii. 441 sqq. (according to which parts of his Persian *Odmewe* were published in the *Kâhi-emî Famin.*)

(*FRANZ BARDESCHER*)
NEFTA, a town in the south of Tunisia, lies 15 miles W. of Tozeur on the isthmus which separates the depressions of the Shott al-Djerid and the Shott Gharra. In the middle ages it was considered one of the principal centres of the land of Kaštîlya [q.v.] along with al-Hamma, Taqīyya, and Tozeur, which was the capital. It was regarded as a very old town. Nefta as a matter of fact replaced the town of Nephte or Aggaras-Nephte. The Roman town must now be buried in the sands close to the present town.

We may presume that there still existed in the early centuries of the Muslim period visible traces of the old town. Al-Bakri tells us that the town was built of large blocks of stone (qāṣṣār). The author of the Istīqār remarks that the wall which surrounds it as having been built by the ancients. The dam on the Wad Nefta is made of Roman blocks if it is not actually of Roman work (Tissot).

Memories of the pre-Islamic past were also found among the people of Nefta. Its large population was regarded as constituting for the larger part of descendants of Christians (Yaḵūṭī, Istīqār) who must have retained their faith for a considerable period. Ibn Khaldūn (Bīrārī, l. 146; transl. l. 231) remarks on the presence of Christians in the province of Kaštīlya at the end of the sixteenth century. The outlying position of this province perhaps explains the survival of a Christian colony, which was exceptional in Barbary. It is moreover worth noting that the attitude of the people of Nefta in religious matters has often been non-conformist. In the tenth century, according to Ibn Hawqal, Khāridjism still survived there; in the eleventh century, according to al-Bakri, the people of Nefta still professed their faith. Shuʿayb al-ʿAjamī says that this town is called Little Kafra. We shall see that at the present day it is an important centre of maraboutism.

The remoteness of the capital assured Nefta, like other towns of the Djerid, a fairly regular political independence. Like al-Hamma and Tozeur, it was long (probably from the period of anarchy which followed the Hīlāṭi invasion) governed by a council of notables, the president of which held the position of a feudal lord, indeed prince. In the xivth century this office was held by the family of the Banū Khalaf, who claimed to be of Ghassānid Arab origin. The Banū Khalaf and the people of the oasis whom they ruled maintained regular relations with the Sulaimid Arabs of the great tribe of Koṭb who periodically frequented the country around. A tradition of reciprocal service united these immigrant nomads and settled natives, the nomads defending at need against the attempts of the central power the settled population who in turn assured them their subsistence and the provision of their supplies. The central power when it felt sufficiently strong naturally endeavoured to bring this Djerid under its authority again. Nefta thus underwent alternatively periods of subjection and independence. In 744 (1343) the Ḥasfīdī caliph Abū Bakr sent his son Abū Ṭāb-Abbās who secured the submission of the people of Nefta by cutting down a part of their palm-trees and putting to death nearly the whole of the Banū Khalaf. A century later (845 = 1441) the caliph Abū ʿOmar ʿOthāmīn, having taken Nefta, sacked it, executed the chiefs of the Banū Khalaf and placed the town under a ṭālī on his own choice. If the partial destruction of the palm-trees—a classical procedure—had brought the people of Nefta to terms, it was because these trees supplied the greater part of their income. Very abundant springs (the largest of which rising north of the town forms the Wad Nefta) assured and still assure the life of this splendid oasis. There is at the present day a forest of 275,000 palm-trees there. Nefta was however also a commercial town, a wealthy emporium and a centre of the exchange of goods. Between the establishment of the Protectorate, trade was mainly carried on at two periods of the year: at the beginning of spring, when the expeditionary force which had come from Tunis to collect taxes could guarantee the security of the routes and at the end of summer when the marauding Arabs had left the country, to buy corn in the north.

Consisting of merchants and farmers with the important aristocracy of the Sharfī (q.v.), the population of Nefta (estimated at the present day at about 13,000) is distributed over eight quarters separated from one another by palm-groves. Each of the quarters has its mosque. Al-Bakri tells us that Nefta in his day had already a great mosque, several smaller places of worship and many baths. The places of worship belonging to the aṣwāya of the various brotherhoods are still characterized by their hemispherical or oval domes. The most important aṣwāya is that of the Kādirīa, an influential centre of worship. The architecture of the houses, the decoration of their façades with relieves of brick, contribute to give to Nefta an imposing appearance which is also characteristic of Tozeur.

NEḤĀWAND. [See Nuhwān.d.]

NERGISI, properly *Nergis-e Zād* Mirzā Mīr-Emēd Efendī, an important and distinctive stylist of the old school, poet and calligrapher. Born about 1000 (1592) in Sarajevo (Bošna Seni) the son of the nābī of Nergis Aḥmad. Efendī, he received his education in Constantinople where he attached himself as a pupil to Kāṭf-rūde Faizī Abū Ḥasīna. On the completion of his studies he served as mādīrī and nābī in Gabela, Mostar, Vidi Pazar (Novihāzat), Elbasan, Banyaluka and Mostar. He was on intimate terms with the Shaikh al-Islām Yahiyy Efendī. He travelled a great deal. Nergīs was appointed imperial historiographer (Alī nābī) when Murad IV set out for Baghdad on the campaign against Ertuğrul. He died on the march at Gebrie (Gelbe) on the Gulf of Isfand as the result of a fall from his horse and was buried there (1044 = 1634). The statement (Ḥabīb and Rıza) that he was buried in Aṭīb is not at all probable.

(M. Marçais)
Nergis is also a great calligrapher particularly celebrated for his speed in writing. There are works written by him in several libraries.

**Neshet** Kâzın Sülaínân, an Ottoman poet. He was born in Adrianople in 1148 (1733), the son of the poet Ahmad Kâzî Efendi, then in exile; the latter is known as Müşaffer-i Şehrîyarî. With his father, who had regained the sultan's favour by writing a shairî, which met with general approval, he came to Constantinople. He also accompanied his father on a journey to the Hidâm and the young Hâdim, on his way back, joined the Mewlânî order in Konya. After his father's death, he devoted himself to study, especially Persian, in order to understand the Mehemetî. In Persian, which he came to love passionately, he attained a high degree of perfection with the result that he had more pupils than an ordinary professor. In his house in Molla Gürânti, where he taught Persian and expounded the Mehemetî (Mehmetî-Kâzîî). He enjoyed great prestige among the people. Later he attached himself to the Nağşbendî Shaikh Brusewi Emin Efendi. He held a fief and therefore took part in 1182 (1768) in the Russian campaign. He could use the sword as well as the pen. Neshet died in 1222 (1807) and was buried outside the Top Kâpa.

He received the nom de plumes of Neshet from Djielî. Neshet was a moderate poet but an admirable teacher. No one could say an unkind word about him and they regarded at his smoking the îleb which was otherwise forbidden. As a poet, he was the most produced in Turkey in Persian and in Persian. Many of his pupils far surpassed him, such as Gašîb Dede. He left a Dîvâm which was printed in two parts by Bilik (1525 = 1836). His Müshaffî-i namers (about 20 in the Dîvâm) are distinctive in character; these are poems in which he bestowed epithets upon gifted pupils. In addition he left writings on the Nağşbîye: Tasfîn-i Mûrefî, Tasfîn-i akhî, Mâšâak al-Ammâr wa-Mânâhî al-Âmirî. His Tarîzîmî Şehirî dî Bâlî-i Molla Dzhêmî was printed at Constantinople in 1693. A biography of him by his pupil Pervet Efendi which was continued by Emin Efendi is said to exist.

(Menzel)
NESHRI, MUSHEMID, an Ottoman historian, with the nom de plume (mukaddes) of Neshri, his origin is not definitely known. According to Ewliya Celebi (Neşîrîname, i. 247), he belonged to German-ei (q.v.), 'Ali, Khâbi al-Kâbîr, v. 225 sketches the career of a certain Mêhmed Mûsah Neshri among the 'ulûm of Murad II. According to him, the latter came at an early age to Brusa, studied there at the Selîme Medreses, was appointed muhterem there and died in Brusa, In view of the rarity of the name — indeed it is not otherwise known — it is probable that this Mehmed Mubene Neshri was the grandfather of the historian. As to the latter we know only that he was a teacher in Brusa and may be assumed that he died there in 920 (1520).

Neshri wrote under the title Diğhem-umûmî a history of the world in six parts, of which only the sixth, dealing with Ottoman history, seems to have survived. This, usually called Tevbih-Allah'Uthmânî, is obviously a compilation but the question is still unsettled whether Neshri was the compiler or whether he copied a compilation already in existence in order to add to it a sixth part (hitem) to his own compilation on the history of the world (cf. F. Wittek, in M. O. G., i. 130, who decides for the second hypothesis). These are suspicious echoes of the work of 'Abdul Halîm and of Bihîšî's Chronicle (cf. F. Bahringer, G. O. W., p. 43 sqq.) and it should perhaps be investigated whether the mukaddes Neshri made a popular version of Bihîšî's Tevbih which has been written in an elevated style, or the stylist Bihîšî rewrote the work of Neshri in elegant language. The sixth part of the Diğhem-umûmî is divided into three sections (Jâbârî): Evâni-i Orhun, Sadîkalî of Rûm and the House of 'Uthmân. The history of the Ottomans is narrated down to the time of Bâyazîd II; the work comes down only to the year 1485, that is, as far as his sources go, of which one went up to 1485. He concludes with a laudis in praise of the ruling sultan in his own time, the ruler of the period. Neshri had considerable influence on contemporaneous and later historiography and is frequently cited as a source, e.g. by 'Ali, Sa'd al-Dîn, Şâbûr-ibn and Mûnîzîm-Bashî. A full survey of the contents of the Tavbih of Neshri is given by Wittek, in M. O. G., i. 77-150. It has so far not been published. There are a number of good manuscripts in existence, e.g. in the Bibliothèque Nationale in Paris (Supp. Turc. No. 153, a very handsome MS.) and No. 1183 of the Charles Schefler collection, and in Vienna, Nat. Bibl., No. 986 (cf. Flügel, Kat., ii. 209). Specimens of his text have often been published; see a list of them in F. Bahringer, G. O. W., p. 39.

NESİMI, SAIYİD 'ALİ AL-DÎN (known as Nesimi, an early Ottoman poet and mystic, believed to have come from Nesim near Baghdad, whence his name Nesimi. As a place of this name no longer exists, it is not certain whether the place should not be derived simply from nezîm, "breath of wind". That Nesimi was of Turkish origin seems to be fairly certain although the "Sâjîd" before his name also points to Arab blood. Turkish was always familiar to him as Persian; for he wrote in both languages. Arabic poems are also ascribed to him. Little is known of his life; he fell in the reign of Murad I (1359-1360) as his biographers tell us. He was at first a member of the school of Shâhî Shhibi (247—334 = 861-945) but about 804 (1401) he became an enthusiastic follower of Fâdî Allah Harîfî (q.v.), with whom he was undoubtedly personally acquainted. He championed the views of his masters with ardour and at the risk of his life. The poet Redît, author (811 = 1408) of the Bokhâri-nâmâ (copies in London, cf. Rieu, Cat., p. 164 sqq. and Vienna, cf. Flügel, Kat., p. 461 and 462 (two MSS.), the second more complete) has a Gânjîn-nâmâ (in Vienna, cf. Flügel, Kat., i. 720) was his pupil. A certain Shâh Khanînî who was a dervish mystic is mentioned as his full brother. Nesimi met a cruel death in 820 (1417-1418) in Aleppo where he was stayed for his heretical poems on a fârâd of the extremely fanatical mullah. He is considered the greatest poet and preacher of the Hârij sect. His work consists of two collections of poems, one of which, the râzîn, is in Persian and the other in Turkish. The Turkish Dîvân consists of 350-500 gazelles and about 150 quatrains, but the existing MSS. differ considerably from the printed edition (Stanimirovic 1298 = 1881). No scholarly edition has been made of them. The Persian Divan has not been examined at all. Nesimi's spiritual influence on the dervish system of the earlier Ottoman empire was considerable. The pro-Alît dâwâ in particular honour Nesimi as one of their masters, testimony to whose far-reaching influence is found even in the earlier European travellers like Giov. Antonio Menavino (c. 1540; cf. F. Bahringer, in Isl., xi. 10, note 1, from which it is evident that Nicolas de Nicolay copied him and therefore cannot be regarded as an independent source, as Gibb, H. O. F., i. 535 sqq. thought) and Sir Paul Remusat (18th century; cf. Gibb, H. O. F., i. 557 sqq.). Nesimi's importance as a poet and mystic can only be estimated and realized in connection with the study of the older Hârij texts, among which a most important one is that mentioned but not recognized by W. Petrus, Pers. Handbuch, Berlin, p. 264 sq., No. 223 by Saiyid 'Ali al-Dîn (d. 822 = 1419) because it might show the connection of the Hârijî with the Bektâshî. Nesimi's poems were made popular in earlier times, especially by the wandering dervish orders [q.v.] and were known to every one.

Bibliography: Gibb, H. O. F., i. 343 sqq.; J. v. Hammer, G. O. D., i. 124 sqq.; also the Ottoman biographers of poets who however contribute practically nothing to the life history of Nesimi. (Franz Bahringer)

NESTORIANS. The Christian community (sâkidî) which we know as Nestorians is at the present day better known under the name of Mihrân or al-Millî. Down to the year 1014 they lived in the central part of Kurdistan which lies between Mâsîl (see MAŠîL), Wân and Urmîyâ (see ORMILIA). Their main nucleus was represented by the highland Nestorians, in practice independent, living in the inaccessible regions of the highlands on the middle course of the Great Zâb, Tîbân, Tîkâm, Tâghub, Dîjît, Dîza, Urâ, Sabâlakan, Bêz, etc. Outside of this national centre the Nestorians are
found scattered in enclaves among the Muslim
medieval population, Kurd and Persian, of the
neighbouring districts: Gavar, Tergawar, Margawar, 
Shamtenar [e. v.]; on the plateau of Urmia (some 
sixty villages), in this town itself; finally in the
north at Salmas, Bash'kala's Khooshb and in the
south in Mawili and around it (Alkosh etc.).

Geography. It may be useful here to touch on
some of the salient features of the Nestorian country
in the strict sense, which is but very little known.
We mean by this the area on both sides of the
middle course of the Great Zab, in the part where it
descends towards the east, between 37° and
37° 30' N., 43° 30' and 44° E. In Layard (Ni'merek, I)
we have a description of the Nestorian districts
on the right bank: the upper Tiyari with Cambi
and the greater part of the Lower Tiyari
with Aghist and Lisan. We shall give here a
general account of those on the left bank, namely,
going from N. to S. and from W. to E.: Diz, 
Kiu, the eastern part of the Lower Tiyari, Tal,
Walto, Tkhuna (with Tkhud); further to the east,
Diit, Baz and lastly Ishturan. All these districts
lie in the folds of the massif which the Turks
know by the general name of Tijik Deigh, but
which for the native has a more precise
signification. The Tijik Deigh, to some degree forms
a curve in the inverse direction of the arc of
the Great Zab.

History. The teaching of the Nestorians, who
were very active missionaries, was at one time
very widely disseminated in Asia. An inscription
in Chinese and Syriac was discovered at Singanfu.
At Travancore, in South India, there is still a
Nestorian community in existence. It was under
the Sassanians that the Nestorians played an
important part. It is true that under Shahpur II (309-
379), Vardagird I (399-420) and Bahram V
(420-438) severe persecutions took place for
various reasons, but the extraordinary spread of
the sect was not the least. On the other hand,
purely political reasons, fear of Byzantine influence,
made the Persian government distrustful of them.
We know for example, that the Byzantine emperor
demanded from Bahram V and Khosraw I the
free exercise of the Christian religion. Permanent
good relations between the Nestorian Church and
the state therefore date only from the declaration
of independence of the Eastern Syrian Church
under a Catholico of Seleucia with a dyophysite
confession of faith. The most flourishing period
of Nestorianism was therefore in the reign of
Hormizd IV and at the beginning of the reign
of Khosraw II, i.e. from 579 to 605 A. D. Under
the influence of Gabriel of Singar, who had gone
crossed to the Catholicon, Shahpur II began to
persecute the Nestorians; one result was that from
609 to 628, the year of Khosrau's death, the
position of Catholico remained vacant. Two events
in this period are of special importance to us.
The first was the establishment of Christianity in
Central Kurdistan, where we still find direct and
indirect traces of it at every step: churches,
monasteries, traditions, place-names. In the fifth
century, the faith gained ground daily among the
people of the high plateaux of Iran proper and
among the Kurds. Petiton (4. 447) conducted
a very successful missionary campaign in these
mountains, which was crowned by his martyrdom.
Emulating him, Saba, the "teacher of the breast",
went among the Kurds, who were sun-worshippers.

His eloquence supported by numerous miracles
won many converts (J. Labouret, Le Christianisme
dans l'Empire Pers en vue de la Dynastie Sassanide,
Paris 1904). Let us not forget this first Nestorian
advance into Kurdistan. The oldest Nestorian
churches in Central Kurdistan date from the fourth
and fifth centuries. These are Mar Zayn at Dlijii,
Mar Bogh at Ill; Mar Saha (ruins) at Kofenes;
Miri Memi at Ornam. The monastery and church
of Mar Saha at Aghist in Tiyari were also
held in great veneration but we do not know
that. Secondly we must note here how relations
were established between the Nestorians and Islam (Ter
Andrac, Der Ursprung des Islam und des Christentums,
Uppsala 1936). The part played by the Nestorians at a certain period under the Sassanians
explains the conversion of the Yaman to Nestorianism
at its conquest by the Persian general Wahriz in
597. It was in the Nestorian form that Christianity
penetrated into Arabia in the zone of Persian
influence, i.e. from Hadramawi to Palmyra.
We know many Islamic Nestorians of the
eastern shore of Arabia. The first to be founded
was that of 'Omran ( sce of Councils 424, 544,
576, 676). A Christian community on the island
of Socotra, need not to be considered as part of the
Catholics of Persia. Relations with Persia were
established by sea. The time of Muhammad the
South Arabian church was already Nestorian. We
have definite evidence of this in the fact that
Sajir, prince of Nadjran, came with the bishop
Labysfah to Muhammad to seek favours. Bar Hebraeus
who records the incident adds that the Prophet
gave them a document ordering the Arabs to see
that no injury was done to the Christians and to
help them to rebuild their churches. The priests
and monks were to be exempt from the poll-tax,
which besides was not in general to exceed 4 sikhs
for the poor and 12 for the state. According to
another source, the bishop only wrote to Muhammad.
A passage in a letter of Labysfah III (647-658)
shows that the relations between Arabs and
Nestorians were very good. This may be attributed
to the fact that the Christology of the Nestorians
was much more acceptable to the Musli-,
man than that of the moneophysites. Every Nestorian
church in the east possessed its own version of
the letter of protection alluded to have been given
by the Prophet (cf. for example that given by
George Dav, Malech in his History of the Syrian
Nation and the Old Evangelical-Apostolic Church
of the East). In any case this letter did not pre-
vent (see below) the proclamation of the ghadir
from which the Nestorians later suffered so much.
The life of the Nestorian Church during the
period from the Muhammadan conquest to the
establishment of the Mongols need not detain us
here, as it is part of the religious history of the
Christian sects. We need only mention as particu-
larly concerning Adherbajjjan that the Jacobite
and Nestorian rites were rivals there. Thus from
630 to 1265 we have a line of Jacobite bishops.
We know also (Assman, Bibl., Or., illi, illi, 707) of
Nestorian bishops both to the east of Lake Urmia
and also in the country of Lake Whit and Central
Kurdistan. It is not always easy to identify the
names found there. We have good evidence of
the antiquity of Nestorianism in Salammas where
there is in the burial ground of Khosrow an
epitaph of the 8th century recording the name of
Khvorv Shoklay, "the student Khosraw" (cf.
Duval, Dialecte més-avestan, 1885). Under the Mongols we find at first that the Nestorian priests (parshans) were treated with consideration at the taking of Bagdad (Hamer, Jochen, ii. 142). We know also that Hulagu's wife was a Christian: at the taking of Arbil, the son of an important Nestorian metropolitan (Abadaghian) was under it, the launces of the Mongol horsemen bore little crosses. Later, in proportion as the Mongol army was converted to Islam, the Nestorians became subjected to persecution, particularly after the invasion of Timur they sought refuge in the mountains of Kurdistan from which they did not begin to emerge till the beginning of the 19th century when they spread eastwards towards the region of Urmia and S. E. towards Mawzi. Duval (op. cit., p. 9, note 4) gives notes on the different residences of the Nestorian patriarchs after the taking of Bagdad in 1258. It was under the Patriarch Simeon IV in 1450, that an innovation was introduced, making the episcopate hereditary; this produced a schism in the Nestorian community in 1551 when Sulakia was elected in opposition to Simeon Buxa-Barma. From this date the term "Chaldæans" henceforth applied to those Nestorians who recognised the supremacy of Rome, while English and American writers speak constantly of the "Assyrians"; and lastly the Nestorians themselves like to be called Suriit. In Russian the name used is aktor. In the second half of the 18th century, the bishop Mər Vafis recognised the authority of Rome and received the title of Catholic Patriarch of Babylon and Chaldaea, while one of his near relatives, elected patriarch of the Nestorians and remaining faithful to this rite, was enthroned under the name, henceforth hereditary, of Mər Shlmun and at once set out for the mountains of Central Kurdistan, where his residence was sometimes at Kuchna and sometimes at Lujlandar. Thus originated this quasi-autonomous community of Nestorian highlanders in which an ecclesiastical authority exists alongside of a purely tribal organisation. Indeed while the supreme power is in the hands of a hereditary Mər Shlmun (passing from uncle to nephew) having the title of pātrārka as-mawzān, who was consecrated patriarch by the Metropolitan Mər Hmān, living in Dera Resk at Shamāzn, each tribe (zābān) had alongside of a bishop (zādīn), the ecclesiastical chief, a msqlk or lay chief, distinguished by peacock feathers fixed on his conical felt hat, a characteristic feature of dress. The custom of the men arranging their hair in little pigtails may also be mentioned. The msqlk had power to declare war on another tribe and to conclude peace.

The tribal organisation and mode of life of these highlanders have caused some writers to give them the name of "Christian Kurds" (Garzoni, Lereb). A. Wigram in the introduction to his History of the Assyrian Church thinks that some at least of the Christians of Hakkâri (cf. Kurds) are of Kurds origin although they deny it vigorously. On the other hand, there are Kurds tribes who remember that they once were Christians. Other writers (Grant), led astray perhaps by the historic aspect of Nestorian society, the names and certain Biblical traditions, in giving evidence in support of the hypothesis that the Nestorians are the descendants of the ten tribes of Israel. We know however which actually, are the Jewish communities in Kurdistan, quite distinct from the Christian groups in dress and customs. Only their language is also a Neo-Aramaic dialect. — The Highland Nestorians annually pay Mər Shlmun a contribution called rizg ḏabīta. The arrears due to the Turkish treasury, were simply left to mount up. Caint (p. 749—751), speaking of the autonomous tribes, gives the total of arrears as already 100,000 £T in his time. There was besides somewhere in the Nestorian country (cf. Lailayan, who gives a photograph) a "truck of the collector of taxes" marking the limit beyond which this official never risked going. The relations of the Nestorian hillmen with their Kurdish neighbours were no worse than those of the highlanders with one another usually are. The interest of the tribe came before every consideration of religion, so that ad hoc alliances could be concluded between the Kurds and the Nestorians for joint action against their co-religionists. "The grass grows quickly over the blood split in a just battle". A kind of fair play is therefore the ruling principle of the inter-tribal code. There are, it is true, exceptional cases. The pan-Islamism of 'Ahd al-Ḥamid had its unpleasant repercussions in Kurdistan; the Turkish officials appointed there after the revolution of 1907 only complicated the position still further. Since the affairs of the Nestorians and the Kurds were conducted on a tribal basis, we find the door of the patriarch's residence open to Kurds and Nestorians indiscriminately, who come to settle their disputes and hospitality is offered to all alike. On the other hand, we find the Nestorians seeking the good offices of Shaikh Salim of Barzan known as the "Christian Shaikh", who was executed by the Turks in Mawzi at the beginning of the War.

The Nestorians and the Djilūš. Even before the official outbreak of hostilities between Russia and Turkey, in August 1914, the patriarch Mər Shlmun was invited by Djewdet Bey, the wali of Wān, to come to see him. Presents were lavished upon him and assurances given that all the grievances of the Nestorians would be redressed. As a result of the proclamation of the Djilūš however, the atmosphere became heavy in Kūrdisht. In November, Turkey entered the war and the persecution of the Nestorians of Alakū (Bushkāna) began at once. In Persian fighting broke out between the Christians of the Urmia region and the Bekāka Kurds. At the end of 1914, the Russians evacuated Urmia and Salamas. Those Christians who did not save themselves in time by going to Djilūš perished in large numbers. As to the Nestorians of the highlands, although the massacres and deportations of Armenians were at their height, the Turks endeavoured to attach the Patriarch to their side and to secure the loyalty of the Nestorians. Complete educational freedom, good riles, subsidies and grants of land, the Patriarch and so the bishops and miliks, all these things were promised in vain. Mər Shlmun retired to the particularly inaccessible district of Dirish from which the Patriarch's personal bodyguard had always been recruited. About this time an "accidental" shot killed Mər Shlmun's uncle Nestoros, who was, it was said, urging a more conciliatory policy towards the Turks. After an interview, which decided matters, with the Russian commander at Mahsudjik, near Salamas, the Patriarch on May 10, 1915, issued the order for mobilisation. The fortune of war resulted in the Nestorians, at first encouraged by the Russian successes at Wān and Urmia at the beginning
of the summer, being left to their own resources. To be brief, with the help of the Baronial Kurds, the Turks sacked Tikhts, Tikta, Bome, Buns, and Baa. We may note especially the destruction of the irrigation canals exactly as was done in Sargon's campaign in the same region. The famous church of Mr. Zaia at Djilu, of the fourth century, was desecrated for the first time in its long history. Interesting **ex voto**, Chinese vases, brought there in early days by missionaries, disappeared. The inviolability enjoyed by Mr. Zaia is said to have been due to a letter guaranteeing it written on a piece of cloth, attributed to the Prophet (cf. above). After this disaster the Nestorians withdrew to their summer pastures, at a height of 10,000 feet. This first difficulty however was surmounted, thanks to the kindness of the Kurds, with insufficient food and no salt, the Nestorians nevertheless held out. The Patriarch, taking refuge on the plateau of Shina, endured privations which were even harder for him who could not eat meat (even the mother of the patriarch appears not to have eaten meat). The Nestorian **vulgaris** of Gawar were massacred at this time under the orders of Nuri Bey. Finally in October 1915 a skillful retreat was carried through the Kurds were actually holding the approaches to the Persian frontier. A detour was effected towards Allahk in the south via Koteanis (Berwar) and the bridges were burned after crossing the Great Zan. The Kurds continued however in that part of them. Harassed by the use of the natural bridge of Hererak, but driven back by Maliki Khishkhan of TIQTU whose bravery is destined to become legendary. In the month of November the exodus of the Nestorians was completed and they were safe within the Russian lines at Salamacs. The Russian authorities organised assistance for the refugees, who to the number of 40,000 were settled in the Persian districts of Khobi-Salama and Urumya where they remained till 1918. After the departure of the Russians as a result of the revolution, the Nestorians formed detachments with the help of Russian munitions and instructors and opposed the advance into the western districts of the Turks led by All Nishan Pasha. Towards the end of 1918 however, their munitions being exhausted, the Nestorians left the region of Urumya via Sichau-Sali's-Baidar to Hasamshen where the English forces then were. From there the refugees were sent to the concentration camp of Baksha near Hasamshen. The Patriarch was no longer alive. Led into an ambush by the Shidk Kurd chief lani M. Agha Simkho, Mr. Shirm-an was treacherously assassinated at Koma Shdrn on March 4, 1918.

The Nestorian community is now living in scattered groups in the Irrak, Persia, Syria etc. The post-war history of the Nestorians is closely bound up with the problem of the wilaya at Mawil, finally attached to the Irrak. The line adopted for the northern boundary of the wilaya in question, however, leaves the Nestorian districts to Turkey and it is very unlikely that they can return there. The material qualities of the Nestorians were used by the British authorities who raised four battalions from them, which were very useful especially at the beginning of their establishment in the 1918.

In conclusion a few words should be said about the Nestorians of the region of Lake Urumya. Those of Salama believe (Dural, op. cit.) that they are aborigines converted in the early centuries of our era. In 1883 there were however only fifteen Nestorian families, the remaining 3,000 having become Roman Catholics under the bishop Mar Isab, 1883, 1795. As to the region of the plateau of Urumya, they preserve a tradition according to which their immediate ancestors came down from the mountains five or six centuries ago, which corresponds very closely to historic fact. The Nestorians of Urumya have been the object of lively competition among the missions, of which the Presbyterian was first established (1833). The Roman Catholic Lazarists followed in 1863 and finally an Orthodox mission, the brotherhood of Cyril and Methodius, began work in 1905. At one time shortly before the War, there were also Anglican and Catherian missions. The work of the missions has made quite appreciable modifications not only in the beliefs of this ancient Christian community but also in its life and customs. Although little information has been preserved on the subject, there is reason to believe that the Nestorians of Urumya also lived under the authority of **ullaha**, who were recognised by the Shias as the official representatives of the community. We have seen a number of **firooan** preserved in the family of Dr. Johanna Malik. They were administered according to the old collection of canon law called **Samhunor** of which Shamsi Mani Kalets published a new edition in 1916 at the American Mission Press.

This is probably only one of the versions of the Syriac, which we know in the Atish-Chaldean addition with its wealth of learning. In the eyes of the Muslim authorities the Nestorians were **simani** (shmoni; cf. shinna) and their position was regulated by Muhammadan law. With the coming of the missionaries, the position gradually changed. The **ullaha** were replaced by **millet bidjki** each dependent on its respective mission. The Persian government had to appoint a **servez**, an official whose special duty was to deal with foreigners and those under their protection. During the War a national council called **mofus** was organised, which dealt not only with the defence of Christian interests before the local authorities but, especially after the addition to its numbers of the Nestorians from Turkey, acquired a certain political character but latter disappeared in the general debacle. — In conclusion it should be mentioned that in the present article we have confined ourselves mainly to the Nestorian highlanders of Central Kurdistân. The historical phenomenon that we have been led to study in this connection is far from being so limited and simple, for it demands not only consideration of linguistic problems, the ramifications of which go back to a remote past (through Aramaic), but also of facts of ethnology even less known which are implied in the idea of Nestorianism. Finally the geographical area is also enormous: if we remember for example the epigraphic material from Russian Central Asia.

NEWI-ZADE "ÂATÌ" [q.v.]

NEWI-ZADE "ÂATÌ", AY Notices, an Ottoman author and poet, better known as "ÂATÌ" with the nom de plume Newi-zade, i.e. son of "Newi", was born in 1915 (1232 H) in Stambul, as the son of the celebrated "Newi" [q.v.], after the death of his father from whom he received his early education, he placed himself under Khâfi Allah Efendi, the compiler of an anthology, and later under Akhi-zade. "ÂATÌ" al-Halim Efendi. He then joined the "Ulema", but did not attain any of the higher offices. After becoming a muallim, he was appointed a judge and served in this capacity in a number of Rumelian towns like Lofta, Silistra, Ruščuk, Tarnovo, Monastir (Bitola).
Trikkala and Ushkūb (Skopje).: Soon after his retirement from this sphere of activity he died in 1041 (1634) in his native city of Stambul; here he was buried beside his father.

'Aṭṭār' is best known for his continuation (jāfārī) in Turkish of Ṭaḥṣīlūsūrūtāda's Shāhī Ḥāfuẓ al-'Alāmīnaya. This work, entitled Ḥadīth al-'Alāmīnaya fi Taḫṣīl Ṭaḥṣīlūsūrūtāda's contains, in addition to a supplement to the Shāhī Ḥāfuẓ in which a place is given to any scholars of the title of Salāhānī and Solm in II, overlooked by Ṭaḥṣīlūsūrūtāda, the biographies of Ottoman 'Ulema' and dervish shaykhs down to the reign of Mūsā IV (on the contents see C. F. Bhabing, G. O. W., p. 172). Death prevented the author from continuing his work which has been taken up by others. 'Aṭṭār's book contains 949 biographies. It is written in a very archaic style with an important amount of Persian, which was popular at the time. 'Aṭṭār also enjoyed a great reputation as a poet. He wrote a quintet (khamsa) on the contents of which see Gibb, H. R. P., ii. 334. The Ḥadīth al-'Alāmīnaya, manuscripts of which are also common (cf. C. F. Bhabing, G. O. W., p. 172 to which may now be added Stambol, LlE, K. c., Nos. 339, was printed at Stambol (1577, p. 24) in 1686. The poetry still awaits a printer. 'Aṭṭār's significance as a prose writer is much greater than as a poet.

Bibliography: C. F. Bhabing, G. O. W., p. 171 sq. and the works there given, especially J. v. Hammer, G. O. D., iii, 475; Gibb, H. R. P., iii, 334; Brockelmann, G. A. L., ii. 427 (where he is wrongly, according to Wustenfald, G. A. W., called Muhammad); Ḥāfiẓ Khātif, Fr. Antiq., ii. 168; Rīdī, Turātīr, p. 70 sq.; Māfī, K. c., Cairo 1824, iv. 263.

(Frāṇz Babering)

NIEBELA (NIEBLA), a little town in the S. W. of Spain, 45 miles W. of Seville on the right bank of the Rio Tinto. Now much decayed, it has less than 2,000 inhabitants and is in the juridical district of Moguer, in the province of Huelva. It is the ancient Illipa. In the Visigothic period it was the seat of a bishop. In the Muslim period it enjoyed considerable prosperity. It formed part of the district of al-Sharaf (Al-rasif) and was also called al-Humā, "the red," no doubt from the colour of its ramparts and of the water of its river. It was particularly an olive-growing centre. The garrison was also cultivated there and deposits of alum and of sulphate of iron were worked.

Niebla was taken in 947 (1535) by the Al-Asad, son of Mūsā b. Nusair (q.v.). In 1068 (1665) it was the starting point of the rising of Sa'd al-Asfar al-Yaḥyūb who seized Seville but was soon defeated and slain by the troops of Abd al-Rahmān I. The town in 947 (1535) suffered from a visit of the Normans (Magrāz; q.v.). In 1509 (507) it rebelled against the Umayyads; it was however retaken by force of arms in 1509 (517) by order of Abū al-Rahman al-Nasir by his general Bādr al-Din. At the time of the fall of the Caliphate, it became the capital of a little kingdom formed in 1044 (1634) by Abū l-'Ala al-Muḥammad b. Yaḥyā b. Yaḥyā, who took the title of al-Dawla, which also comprised the lands of Huelva and of djāhīl al-Aswān (Gibraltore). This prince died in 1044 (1641) was succeeded by his brother Mūsā al-Dawla. The 'Aḥlāškī sovereignty of Seville al-Muwašād (q.v.) soon displayed his desire to annex the principality of Niebla and made several raids into it. Izz al-Dawla had to abandon his capital and take refuge with the lord of Córdoba. Abu l-'Ala al-Muḥammad b. Yaḥyā b. Yaḥyā, a nephew of Izz al-Dawla, who at first sought peace from al-Muwašād by paying him tribute but was forced two years later in 1053 (1645) to abandon his.
principally to the ruler of Seville and joined his uncle in Cordova. Niebla passed a little later to the Almohads (q.v.). When the power of this dynasty began to collapse in Spain, it became the headquarters of another rebel, Yusuf b. Ahmad al-Birwaghi (or al-Burjidi), who in 1146 finally submitted to the Almohad general Barraiz al-Muslihi and went five years later to Sada on the summons of 'Abd al-Mumin. A few years later Yusuf al-Birwaghi, maintained as governor of Niebla by the Almohads, rebelled and the town was retaken in 1154 by the governors of Seville and of Cordova, Vahy b. Vaghmarit, who executed 'Abd al-Mumin. This massacre was condemned by 'Abd al-Mumin who had Vahy brought in chains to Morocco and then exiled to Tlemcen.

Niebla remained under Muslim rule until 1237, when it was taken after six months siege by Alfonso X and became finally Christian.

(See *Lévi-Provençal*, *Niffar* (Niphar), a ruined site in southern Spain, in 32° 11' N. lat. and 45° to East Long. (Greenwich), now in the hands of Afek in the district of 'Akk, where the ancient town of the Jews is supposed to have been. Niphar corresponds with s. J. Oppert was the first to point out, to the town of Niphar well known from numismatic inscriptions, one of the oldest and most important places in Babylonia. Its great importance was not political but religious, as the temple of the chief deity of the town formed a sort of central sanctuary or place of pilgrimage for the whole of Babylonia, to which almost all the important sovereigns of the period before Hammurapi, and Hammurapi himself, as well as the Kassite kings and many later rulers like Assurbanipal, dedicated gifts.

Niphar's period of greatest prosperity lay in the 7th century B.C. before Hammurapi; but it remained an important city down to the last Babylonian and Achaemenid rulers and an important commercial centre with a very mixed population which gave it a somewhat cosmopolitan character. In the 6th century B.C., under Artaxerxes I and Darius II, we find in it an important business and banking house, the firm of Mursaght and Sons to whose activities many documents still bear eloquent testimony. Niphar still continued to flourish under the Seleucids and Arsacids as buildings of this period show, quite apart from the numismatic evidence. It is not directly mentioned by Greek or Roman writers, but the name of the district of Niphar may be concealed in nipparsu, the name of a town which Pliny (*Nat. Hist.*, xxviii, 10, 175) says is of Persian (i.e., presumably Parthian) origin.

In the Babylonian Talmud Nippur appears as Niphar (‘Niphar’) and Niphur (‘Niphur’); the latter term corresponds to that which is now most usual: Nippur. In the passage in question in the Babylonian Talmud (Yoma, 110b) we read: *Kalneh* (‘Kalneh’) is Naphar (Naphar) Ninni (‘Ninni’); the qualification Ninni (‘Ninni’) is obscure; Dales’ explanation in *O. L.*, xi. 359 as Nimm falls to the ground as the name of this deity is now known to read Ninmar. The basis of the equation: Kalneh (Gen. x. 10) = Nippur is not yet satisfactory. A Babylonian place-name Kalneh has so far not been found in cuneiform inscriptions.

Nippur was also an inhabited place in Muslim times; for example we find it mentioned in 38 (659) on the occasion of a rising against the caliph 'Ali (Tabari, ed. de Goeje, i. 3425, 3424) as well as during the Khurābī troubles (op. cit., ii. 939-7), cf. also Ybhli, ed. Wüstenfeld, iv. 275, 798 and ibn al-Fahri, in *B.G.A.*, i. 210. In the later middle ages we find Nippur mentioned as a Nestorian bishopric in the chronicles of the Patriarcha *Abūhār* *Fawārīsh*, *zgrab* al-Maghrib, ed. Gissiandos, Rome 1897 and 1899) of 'Amr b. Mattū, p. 83; *95* and of Mār b. Salimān, in the period 1000-1058 A.D. (cf. also Sachau, in *Abb. Pr.* Akk. W., 1909, NV. i, p. 31). When the town was abandoned by its inhabitants and became completely desolate we do not know. It probably was the result of one of the Mongol invasions, that under Hulagu or that under Tamerlane, which dealt their death-blow to so many flourishing places in Mesopotamia.

The ruins of Nippur are next to those of Babylon and al-Warkā (q.v.) the most extensive in the whole of the Babylonian plain; they cover an area of almost 180 acres. The first European to visit them was W. K. Loftus who spent some time here in 1850 and came back again in 1854 (see the *Bibl.* for his report). A year later than Loftus, in Jan 1851, Layard was in Nippur and spent two weeks digging but with little success because Layard, paying too little attention to the difference between Assyrian and Babylonian mounds, did not dig deep enough and only turned over the cemetery of a people who had settled here only in the last centuries of antiquity, under the Assyrians.

The University of Pennsylvania (Philadelphia) was the first to undertake a methodical investigation of the ruins and in four expeditions from 1888 to 1900 (1888-1889, 1889-1890, 1890-1891 and 1891-1892) under the leadership of Petrie, Haynes and Hilprecht carried out excavations on a large scale. On the results of this intensive work see Hilprecht’s full report in *Explanations etc.* (see *Bibl.*), p. 299 sq.

On the topography of Nippur see, in addition to the descriptions by Loftus and Layard, especially Petrie, op. cit., ii. 104 sq.; Hilprecht, op. cit., p. 450 sq. and notably Fisher, op. cit.; cf. also King, op. cit., p. 83-86. The American expedition also found an ancient Babylonian plan of Nippur which Hilprecht, op. cit., p. 318 (reproduced in *Zehnpfund*, op. cit., p. 66) published, more distinct in Fisher, op. cit., pl. 1. This plan has been since 1926 in the possession of the University of Jena with the rest of Hilprecht’s private Assyriological collection; see Zimmer, in *Z.A.*, xxxvii.
The sight of the ruins is very impressive; they rise like a range of hills in close formation from 30—80 feet above the plain, culminating in the core of Bint al-Amir 95 feet high, the sigrunat of the chief temple.

The most imposing part of the whole eastern quarter is the sigrunat of I-m-Khassg, still 95 feet high, which the inhabitants for some reason now forgotten call Bint al-Amir, the "prince's daughter." The triangular mound south of the sanctuary proper marks the site of the great temple library, about a twelfth of which, yielding some 25,000 cuneiform tablets and fragments, has been excavated. The western half of the inner city contains the residential quarters, while the bazaars, business houses and private dwellings of its history is still obscure, as in the course of centuries it was repeatedly resettled. In the Parthian period a large cemetery extended over a considerable part of the clay buildings which had fallen to pieces there.

In addition to the great Enlil temple E-kur there were a number of other highly venerated temples in Nippur.

According to the cuneiform inscriptions, Nippur must have in ancient times lain on the Euphrates itself or at least in its immediate vicinity (cf. e.g., O. L. Z., XX, 142, note 1); this fact forces us to the assumption that this river in the Babylonian period must have taken a much more easterly course below Babylon than in the middle ages and present day. The inner city is divided into two parts by a canal now dry but once navigable, which the natives call Shatt al-Nil. This was an important watercourse which, according to Hilprecht, was in many places at one time 20—25 feet deep and 150—190 feet broad and which the modern inhabitants rightly describe not as a mere nahr (stream, canal) but as shatt (river).

According to the medieval Arab geographers Nahru al-Nil was the name of one of the canals led off from the Euphrates to the Tigria. It still survives in its entirety; as in the middle ages, it starts from Babylon and flows a little above 32° 50' N. Lat., in an almost straight line eastwards. The geographer Subras (who used to be called Ibm Sibarion; cf. lv., p. 11308) writing in the fourth (tenth) century observes that this canal bears the name Nahr al-Nil only after passing the town of al-Nil (the modern ruins Nilsie). At the present day it is called only Shatt al-Nil throughout its course. Somewhat east of Nilsie a small canal, now dry, branches off to the south for which, not only in its upper part where it flows by the ruins of Nisib, but along its whole extent, the name Shatt al-Nil, the same as that of the main canal, was and is usual. Yâkût however says (lv. 77, 798) that Nisib lay not on the Nahru al-Nil but on the bank of the Nahru al-Nars, a canal dug, as it is said, by the Sasanian king Narsûk Bahrâm (293—303 A. D.), which leaves the Euphrates at al-Hilla a little below the Nahru al-Nil and turns southeastward. It was presumably connected by a branch with the southern small canal of the same name which branches from the Nahru al-Nil, so that the occurrence of the two names Nahru al-Nil and Nahru al-Nars for the river in Nisib is explained. It should be noted also that the nomenclature of the Babylonian canals changed several times already in the middle ages. On the Nahru al-Nil or Shatt al-Nil and Nahru al-Nars see Beitr. 1910, p. 238; G. Le Strange, in T. R. A. S., 1895, S. 239, 260—261 and do., in The Lands of the East, Cambridge 1905, p. 72—74; Streck, Babylonien nach den arabischen Geographen, i. (Leiden 1900), p. 30 sq.; Herrfeld, in Sahrer-Herrfeld, Archäologie, Reise im Euphrat- und Tigisgebiet, i. (Berlin 1911), p. 234 ef.; Hishâm al-Sadd, Qaṣīdah fi al-Sādh al-qādîhî, Baghhdh 1927, p. 34, 35.

Below Nisib the Shatt al-Nil loses itself in the swamps of Hûr al-Afek. The Shatt al-Kâr very probably forms its southern continuation.

If the "Euphrates of Nippur", as it is called in the cuneiform inscriptions, really represents the old course of this river and not simply a branch of it, the modern Shatt al-Nil with its continuation, the Shatt al-Kâr, probably corresponds to the bed of the Euphrates of Babylonian times. The great changes in its courses which the rivers of Mesopotamia have undergone, cf. especially Fisher, op. cit., p. 2 sq. Hilprecht, who is followed by others like Zehnpfund, Unger etc., thinks that the name of the canal, Kabaru (= the large) sound in later texts from Nippur, corresponds to the "Euphrates of Nippur" of the older texts. He further compares it with the Kebar (725) of Eusebius (i. 1 etc.); see Hilprecht, Explorations, p. 412 and also in Der Bild-Tempel in Nippur, p. 10. The identification of the Kabaru with the old bed of the Euphrates, i.e., the modern Shatt al-Nil, I do not consider proved; the Kabaru may also be a canal in the neighbourhood of Nippur.

West and Southwest of Nisib lies the very extensive Hûr al-Afek (on the meaning of Hûr see iii., p. 147).

NIGGE, a town in the Turkish sanjak (now wilayet) of the same name in a fertile trough on the east edge of the Central Anatolian steppe. The town is first mentioned in the Turkish period; previously, the chief town of the district was Yumna (Aramaic Yumana) but it is probable that the striking hill which commands the important road from Cilicia across the Taurus to Kalkhere entered to a pass over the mountains had a fortified settlement upon it in the pre-Turkish period. The old place-name may be the origin of the modern one, an older form of which was Nekdize (Yakshir, ed. Wüstenfeld, iv. 847; Nakhoda; Ibn Bih and others, also in inscriptions down to the xvist century: Nakhoda; the modern form Niki). In the new Turkish script: Nigde is already found in Hämni Alilî Muqaiwî, Makhtatî, in G.M. S., xxiiii, (1930). In this particular district some villages have retained their ancient names (Amdavâl, Andabalis, Microwave-Pahukapit), and considerable numbers of descendants of the original Christian inhabitants survived until quite recently (K. M. Dawkins, Modern Greek in Asia Minor, Cambridge 1940, p. 169 sqq.).

Nigde is first mentioned in connection with the partition of the territorial territory among the sons of Kılıç Arslan I (685 = 1250) when it was allotted as an independent lordship to Arslan Shâh (Ibn Bih, ed. Houtsou, Rec., iv. 11). Nigde had perhaps previously belonged to the Damghanidisa but Eawaiy, iii. 180, cannot be taken as evidence of this. Kadi'ûn I granted Nigde to the Emir-i Akkâr Zaim al-Din Bagdâdi (Ibn Bih, p. 44) who shortly before his death built the important mosque of "Alâ". In the xiiiIST century Nigde was the headquarters (verîd lahir-i) of one of the great military districts of the Seljuks. Under Kiliç Arsalan IV, Ibn al-Khaṭîr Ma'add held this office. At first an ally of the all-powerful Mu'aw al-Din Perwân, with whom he killed the sultan in 1264, he endeavoured to remove the young Kâl-Kâmar II out of Perwa's influence and brought him to Nigde (1270). But the help for which he had appealed to Egypt came too late and he succumbed to Perwân who was supported by the Mongols (Ibn al-Hadi, Weil, Gesch. d. Chalifen, iv. 80 sqq.). He built a well in Nigde opposite the "Alâ" al-Din mosque (666 = 1266). Under the Ilkhans there ruled in that name, or in the name of their Anatolian governor Eretas, Sunkur Agha who is known only from inscriptions and is, it is remarkable to note, not mentioned by Ibn Battûta who visited Nigde about 1333 (ed. Dâsimer-Sangânî, ii. 386); he made himself independent after the death of Abî Sa'îd. He gave the town a large mosque on the wall of which facing the Belottan is a Persian inscription, in which he grants Christian foreigners exemption from dînsy and hâridî (736 = 1333). The Sultâh princess Khulâswând Kâtîn built in 732 (1337) in her splendid turret built in 712 (1312) on the other hand probably did not rule in Nigde although she resided there. She was, if the lady buried beside her in 1344 was her daughter, the wife of the emir Shugâl al-Din, who is mentioned as the father of the lady on her sarcophagus; he ruled according to al-Umar (ed. Teucher, p. 33) in the Bolgârdagh, where a wilayet Shugâl al-Din is still mentioned in Sa'd al-Din (p. 517 following Idris) and where lies Urukshâ which, according to Khâshâ Khâtîf (Zahabnâmâ, p. 517), was also called Shugâl al-Din. After the period of Sunkur's rule, Nigde probably passed directly to the Karmanoglu, who held it against the attacks of the Eretnâl 'Alî al-Din 'Alî (c. 1372) ("Asb. 'Alâ, Târîh u-Ras, p. 141 sqq.). In 1390 Nigde surrendered with other Karamanian towns to the Ottomans but was restored to the Kara-
NIGDE — NIHÅWAND

NIHÅL CÂNÖL LÄHÅWRI, Indian man of letters. Hindu by religion, was born in Dihli, but left it in early life and went to Lahore where he lived for a considerable time. Owing to this circumstance he called himself Tâhåwî. Some for a livelihood led him to Calcutta. Here he was introduced to Dr. J. B. Gilchrist who asked him to translate into "Hindî rekhâ" the story of Tâdîl al-Mulâk and Bâkâwî. He consented and thus became one of the famous band of Fort William translators. He made the translation from Qul' Bâkâwî, a Persian rendering by Shahîl 'Izaz Ullâh, 1772, of an old Hindî story, which has been reproduced in Urdu verse by Dayû Shânhâk Kâwi Nâsun [q.v.], in his well-known matnînawâri Gûlîâ-nâsun.

Nihål Cânöl called his work Mâdâhî-i Tâhâwî. It is in very good prose mixed with verse. The name gives the date 1817 (1864). Apart from the above mentioned facts nothing is known about the writer.

Bibliography: M. Vâyê Tânî, Sîyar al-Musawwînîn, l. 117—119; Garcîa do Tasso, Litt. Hindooime et Hindoutonique, ii. 458—470; T. Grahame Bailey, Hist. of Urdu Lit., p. 84; R. B. Saksena, Hist. of Urdu Lit., p. 249.

(N. T. Grahame Bailey)

NIHÅWAND, a town in the old province of Hâmûlân, with, at the present day, 5000—6000 inhabitants (de Morgan), at a height of 5360 feet on the branch of the Gâmuşhâ which comes from the S. E. from the vicinity of Bârûljîrît; the Gâmüşhâ then runs W. to Bâricht. Nihåwând lies on the southern road which, coming from Kürmânhân (Ibn Kûrâdîjilh, p. 195), leads into Central Persia (Ijâlâhân) avoiding the massif of Alwând (Qâvârâ) which rises W. of Hâmûlân. Hence the importance of the town in the west of Persia with her western neighbours.

The French excavations of 1931 (Dr. Contemou) have shown that the site of Nihåwând was inhabited from pre-historic times. The ceramics ("his style") which have been found there, seem to be older than those of style I and II of Susa. Proleny VI, 2 knows of Nâwâsh and according to the Fâşk, p. 258 the town already existed before the Deluge. In the Sîkkanîa period the district of Nihåwând seems to have formed the seat of a large family (Dinâwâr, p. 99). There was a fire near the town. According to Ibn Fâşk, p. 259 there could be seen on the mountains near Nihåwând two figures of snow in the form of a bull and a fish (similar tallasmans are said to have existed at Bîthâ also cf. also the steles of worship ["dragons", protectors of waters] in Armenia west of Lake Sevan which combine these symbols, Zâg, xxii/3, 1916, p. 409). The same legend is reflected in the name of the river Gâmü-el (Gâmü-el = "water of the bull and fish"; màshî is the Kurdis form of the Persian màshî). Among the products of Nihåwând the Arab authors mention willow-wood which was used for polo-sticks (pâvûlûg), aromatic gums (lûqûhûr al-shârû or al-shamâl al-âlîkhûrû) which were used like family (a perfume put in snuff) and black clay used as wax for sealing letters. The district of Rûdîshâw was under Nihåwând (cf. de Morgan, Mission, ii. 136: Nûdîshâw) and was famous for its abundance of saffron (îstâmî, p. 199).

For a list of the places more or less dependent on Nihåwând, cf. Schwarz, Iran etc., p. 305—509.
In the Mongol period, the Nushat al-Azwar mentions three districts of Nihawand: Malbey (now Dawlatshah), Isfahān (Isfahān, see below) and Dilūya. (Nihawand: no longer forms part of the province of Hamadhān; cf. Babino, Hamadhān, in R.M.M., xlviii, 1921, p. 221–227.)

Near Nihawand was fought the famous battle which decided the fate of the Iranian plateau and in which the Kūfī Naṣṣār b. Muḥarrīn defeated the Sasanian generals. The commander-in-chief is given different names: Dīn al-Ḥālij b. Mardavāj (cf. Baladhūrī, p. 305); Marquart, p. 172; the latter also gives the names of his generals: Zanluč, Bahmai Djalīlya and the commander of the cavalry Antūnjāḥ. The Arab camp was at Isfahān and that of the Persians at Wyhybjur (I). The sources do not agree about the date: Sāfī b. Omer (Tabari, li, 2615–2616) gives the end at the year 18 (639) or the beginning of 19 (640); cf. Wellhausen, Gesch. der Perser, v, 189, p. 97, while Ibn Ḥabīb, Abu Baniḥār and Wāṣḥīdī, followed by Castén, Annali dell’ Islam, iv, 1911, p. 474–504 put the battle in 21.

The district of Nihawand (formerly called Mab-Bahmai or Mab-Dinkir) was finally incorporated in the possessions of the Baṣrians and called Mab-Baṣra (‘the Media of Baṣra’: Baladhūrī, p. 306).

Nihawand is often mentioned in the period of the wars between the Safawids and the Ottomans. In 998 (1889) at the beginning of the reign of Ābāh I, Chaghāzāde built a fortress at Nihawand (‘Akam-ārād, p. 273). After the death of Murtūd IV a rebellion took place among the garrison of Nihawand; the Ottomans were driven out by the Shīʿa inhabitants. As a result in 1012 (1603) war again broke out with Turkey (ibid., p. 440). In the spring of 1142 (1730) Nādir [q.v.] took Nihawand again from the Turks.

NIKĀH ([\text{A}]), marriage (properly: sexual intercourse, but already in the Kūraḵ used exclusively of the contract). Here we deal with marriage as a legal institution; for marriage customs see "ānā-. 4.

The essential features of the Muslim law of marriage go back to the customary law of the Arabs which previously existed. In this, although there were differences according to districts and the conditions of the individual cases, the regulations governing marriage were based upon the patriarchal system, which permitted the man very great freedom and still bore traces of an old patriarchal system. It is true that before the coming of Islam a higher conception of the marriage state had already begun to exist but the position of the woman was still a very unfavourable one. The marriage contract was made between the suitor and the "guardian" i.e. the father of the nearest male relative of the bride, the latter's consent not being regarded as necessary. But even before Islam it had already become generally usual for the dowry to be given to the woman herself and not to the guardian. In marriage the woman was under the unrestricted authority of her husband, the only bounds to which were considered for her family. Dissolution of the marriage rested entirely on the man's opinion, and even after his death his relatives would enforce claims upon his widow. 5.

Islam reformed these old marriage laws, in far-reaching fashion, while retaining their essential features; here as in other fields of social legislation Muḥammad's chief aim was the improvement of the woman's position. The regulations regarding marriage which are the most important in principle are laid down in the Kūraḵ in Sūra iv. (of the period shortly after the battle of Uḥud): 4. 5. If ye fear that ye cannot treat justly . . . to your wives, whom ye think good (to marry), by twos, threes or fours; but if ye fear (even then) not to be just then marry one only or (the slaves) whom ye possess; this will be easier that ye be not unjust. Give the women their dower freely, but if they voluntarily resign you a part of it not be just then shear one only of the dower freely. 26. Marry not the woman whom your fathers have married (except what is already past) for this is shameful and abominable and an evil way.

27. Forbidden to you are your mothers, your daughters, your sisters, your aunts, paternal and maternal, the daughters of your brother and sister, your foster-mothers and foster-sisters, the mothers of your wives and the step-daughters who are in your care, both of your wives, with whom ye have had intercourse — but if ye have not had intercourse with them, it is not a sin for you — and the wives of the sons, who are your offspring, also that ye marry two sisters at the same time except what is already past; Allah is gracious and merciful. 28. Further married women except (slaves) that ye possess. This is ordained by Allah for you. But he has permitted you to procure (wives) outside of these cases with your money in decency and not in formation. To those of them that ye have enjoyed give their reward as their due, but it is no sin to make an agreement between you beyond the legal due. Allah is allknowing and wise. 29. If however any one of you has not means sufficient to marry free believing women (let him marry) among your believing slaves, whom ye possess; Allah best knows (to distinguish) your faith. Marry them with the permission of their masters, and give them their dowry in kindness; they should be modest and not unchaste and take no lovers. Also Sūra ii. 220 (uncertain date), the prohibition of marriage with infidels, male or female (cf. Sūra lx. 10, Sūra xxxii. 49 [probably of the year 5]), an exception in favour of the Prophet, and Sūra v. 7 (of the farewell pilgrimage in the year 10), permission of marriage with the women of the possessors of a scripture. Other passages of the Kūraḵ which emphasise the moral side of marriage are Sūra xxiv. 3, 26, 32 and Sūra xxx. 20. In tradition various attitudes to marriage find expression; at the same time the positive enactments regulating it are supplemented in essential points. The most important is the limitation of the number of wives permitted at one time to four; although Sūra iv. 3 contains no such precise regulation, this interpretation of it must have predominated.
very early, as in the traditions it is assumed rather than expressly demanded. The co-operation of the "guardian", the dowry and the consent of the woman is regarded as essential and competition with a rival the result of whose suit is still in doubt is forbidden.

3. The most important provisions of Muslim law (according to the Shi'a school) are the following. The marriage contract is concluded between the bridegroom and the bride's wali (guardian), who must be a free Muslim of age and of good character. The wali is in his turn bound to assist in carrying out the contract of marriage demanded by the woman, if the bridgegroom fulfills certain legal conditions. The wali should be one of the following in this order: 1. the nearest male ascendant in the male line; 2. the nearest male relative in the male line among the descendants of the father; 3. among the descendants of the grandfather etc.; 4. in the case of a freed woman the musul'm (manumitter) and if the case arises his male relatives in the order of heirs in intestacy (cf. Miṣr,- 6, 5); 5. the representative of the public authority (kālim) appointed for the purpose; in many countries it is the hāfiz or his deputy. In place of the kālim the future husband and wife may agree to choose a wali and must do so if there is no authorized kālim in the place.

The wali can only give the bride in marriage with her consent but in the case of a virgin silent consent is sufficient. The father or grandfather, however, has the right to marry his daughter or grand-daughter against her will, so long as she is a virgin (he is therefore called wali muqarrir, wali with power of somnium); the exercise of this power is however very strictly regulated in the interest of the bride. At minors are not in a position to make a declaration of their wishes which is valid in law, they can only be married at all by a wali muqarrir. According to the Hanafī on the other hand, every blood relative acting as wali is entitled to give a virgin under age in marriage without her consent; but a woman married in this way by another than her ascendant is entitled on coming of age to demand that her marriage be declared void (fist) by the sāhib of the bridgegroom, who is a minor may also be married by his hiyya's muqarrir in the same kind of equivalent for the rights which the husband acquires over the wife, he is bound to give her a bridal gift (mahr, gādāh) which is regarded as an essential part of the contract. The contracting parties are free to fix the mahr; it may consist of anything that has value in the eyes of the law; if it is not fixed at the conclusion of the contract and if the parties cannot agree upon it, we have a case for the mahr al-mithl, a bridal gift fixed by the fist according to the circumstances of the bridgegroom. It is not necessary to pay the mahr at once; frequently a portion is paid before the consummation of the marriage and the remainder only at the dissolution of the marriage by divorce or death. The wife's claim to the full mahr or the full mahr al-mithl arises only when the marriage has been consummated; if the marriage is previously dissolved by the man the wife can only claim half the mahr or a present (wa'a) fixed arbitrarily by the man; these regulations go back to Sun. ii. 237-39 (cf. xxxii., 48). In form the marriage contract, which is usually prefixed by a solicitation (kālim), follows the usual scheme in Muslim contracts with offer and acceptance; the wali of the bride is further recommended to deliver a pious address (khuffā) on the occasion. The marriage must be concluded in the presence of at least two witnesses (zījī), who possess the legal qualifications of a witness; their presence is here not simply, as in other contracts, evidence of the marriage but an essential element in its validity. On the other hand, no collaboration by the authorities is prescribed. But since great importance is usually attached to fulfilling the formalities of the marriage contract, upon which the validity of the marriage depends, it is usual not to carry through this important legal matter without the assistance of an experienced lawyer. We therefore everywhere find men whose profession this is and who usually act under the supervision of the hāfiz. The part they take is to pronounce the necessary formulae to the parties or even to act as authorised agents of one of them, usually the wali of the bride. The most important impediments to marriage are the following: 1. blood relationship, namely between the man and his female ascendants and descendents, his sisters, the female descendents of his brothers and sisters as well as his aunts and great-aunts; 2. blood relationship which by extension of the Kur'ān by tradition is regarded as an impediment to marriage in the same degrees as blood relationship; 3. relationship by marriage, namely between a man and his mother-in-law, daughter-in-law, step-daughter etc. in the direct line; marriage with two sisters or with an aunt and niece at the same time is also forbidden; 4. the existence of a previous marriage, in the case of a woman without limitation (inclusive of the period of waiting after the dissolution of the marriage; yadda, q. v.) and in the case of a free man with the provision that he cannot be married to more than four women at once; 5. the existence of a threefold gādāh [q.v.] or of a kālim [q. v.]; 6. social inequality; the man must not be by birth, profession etc. below the woman (unless both the woman and wali agree); a free Muslim can only marry another's slave girl if he cannot provide the bridal gift for a free woman, and the marriage between a master (or mistress) and his slave (or her slave) is quite impossible (a master is however permitted concubinage with his slave); 7. difference of religion; there is no exception to the prohibition of marriage between a Muslim woman and an infidel while the permission given in theory for marriage between Muslim men and the women of the possessors of a scripture is at least by the Shi'ites so restricted by conditions as to be prohibited in practice; 8. temporary obstacles such as the state of ḥiṣāba (q. v.). On the other hand, the law knows no minimum age for a legal marriage. If a marriage contract does not fulfill the legal requirements, it is invalid; the Hanafīs and especially the Mālikis but not the Shi'ites distinguish in this case between invalid (ṣūrī) and incorrect (fist) according as the error affects an essential or an essential element in the contract; in the former case there is no marriage at all, in the second its validity may be attacked but (according to the Mālikis) consummation removes any defect. Marriage does not produce any community of property between husband and wife and the woman retains her complete freedom of disposal; but certain laws regarding inheritance come into operation (cf. Miṣr,- 6, 5). The man alone has to bear the
expense of maintaining the household and is obliged to support his wife in a style befitting her station (mash'aka); to whom it should not be a position to do so. His wife may demand the dissolution of the marriage by fi'dh [q. v.]. The man can demand from his wife readiness for marital intercourse and obedience generally; if she is regularly disobedient, she loses her claim to support and may be chastised by the man. The latter however is expressly forbidden to take upon himself vows of continence (hilfah and piha'sh). Children are only regarded as legitimate if they are born at least six months after consummation of the marriage and not more than 4 years (the predominant Sihah view) after its dissolution; it is presumed that such children are begotten by the husband himself; the latter has the right to dispute his paternity by dinu [v. v.]. Parentage can also be established by the husband's thar [q. v.], while both recognition and adoption of illegitimate children are impossible.

4. The laws regarding the rights and duties of husband and wife cannot be modified by the parties at the drawing-up of the contract. This can however be effected by the man pronouncing a conditional fi'dh [cf. fildah, vii.] immediately after the conclusion of the marriage contract; this shift to secure the position of the woman is particularly common among Indian Muslims. For the rest the couple are left to private agreements which need not be mentioned in the marriage contract. The actual position of the married woman is in all Muslim countries entirely dependent on local conditions and on many special circumstances. It is not a contradiction of this to say that the legal prescriptions regarding marriage are most carefully observed as a rule. In spite of certain ascetic tendencies Islam as a whole has been decidedly in favour of marriage. — In modern Islam the problem of the woman's position in marriage and polygamy is especially discussed between conservatives and adherents of modern social ideas. For the different views resulting from these conditions see the Bibliography cited below.

5. Alongside of the usual form of the old Arabian marriage which in spite of its laxity aimed at the foundation of a household and the procreation of children, there existed the temporary marriage in which the pair lived together temporarily and period previously fixed. Such temporary marriages were entered upon mainly by men who found themselves staying for a time abroad. It is by no means certain that these are referred to in Surah 13. 28, although the Muslim name of this arrangement (mar'a [q. v.], "marriage of pleasure") is based on the literal meaning of the verse; it is however certain from Tradition that Muhammad really permitted mar'a to his followers especially on the longer campaigns. But the caliph 'Umar strictly prohibited mar'a and regarded it as fornication (zina) ([a group of traditions already ascribes this prohibition to the Prophet]). As a result, mar'a is permitted only among the Shi'ahs but prohibited by the Sunnis. The latter have however practically abandoned the same arrangement; those who wish to live contrary to the law as husband and wife for a certain period simply agree to marry without stipulating it in the marriage contract.

NIKOPOLIS, in Turkish spelling Nikhilbol or Nikibbol (in Ewliya Celebi, vol. 4: 1053: نيكبول), a town on the southern bank of the Danube, at 45° 41' N., 24° 54'E. This Nikopolis, founded by Heracleion (c. 575-543), has often been confused, especially in medieval literature, with Nikopolis ad Istrum or ad Hannerum, founded by Trajan in 101 in commemoration of his victory over the Dacians (after recently excavated near modern Nikup in the upper valley of the Djantra by Mr. Haenius). The Byzantine Nikopolis is sometimes called Nikopolis Major to distinguish it from Trajan's Nikopolis and Nikopolis Minor on the opposite bank of the Danube near the Romanian town of Tarno Magurele.

The importance of Nikopolis as a trade centre and military post is due chiefly to the command which it holds over the Osma and the Aluta, the two Danubian arteries reaching into the heart of Bulgaria and Roumania respectively. Situated on a naturally fortified site, it commanded the passage to the south, the Danube to the north, and the eastern gorge connecting the interior of Bulgaria with the river. The medieval double walls and strong towers surrounding Nikopolis were destroyed by the Russians during their occupation of the city in 1810 and 1827.

Nikopolis was first captured from the Bulgarians in 701 (1389) by 'Ali Pasha Candereli [see "Ali Pasha"]. Seven years later, it was the scene of the famous battle in the Crusade which is called by its name. The acquisition of Bulgaria by the Turks and their continual irruptions north of the Danube into territories claimed by Hungary, to

gether with a state of comparative peace in western Europe in the last decade of the fourteenth century, made it both necessary and possible for most Catholic countries to participate in the expansion. An army of about 100,000 crossed the Rhone, coming among the most reliable estimates) from France, Burgundy, England, Germany, Italy, Spain, Hungary, Poland, Wallachia and Transylvania marched along the Danube, seized Widdin and Kohova, and finally set siege to Nikopolis while an allied Veneto-
Genoese fleet blockaded the city from the river. The siege lasted about fifteen days, during which Béjaïa [q.v.] abandoned the siege of Constantinople, hastened the siege machinery, and summoned his Asiatics and European contingent to arms. A Turkish army of perhaps 110,000 men met Adrianople and, marching through the Shipka Pass, descended into the valley of the Osma and pitched their camp on the southern hill commanding the Nikopolis plain.

The battle took place on Monday, September 25, 1396, and the crusaders were completely routed owing to the superiority of Ottoman tactics and the dispositions amongst the leaders of the Christian host. Béjaïa divided his army into two large sections. The first, consisting of two large bodies of irregular cavalry and of irregular infantry, occupied the slope of the hill. Between the cavalry vanguard and the foot rearguard of this section, the Turks planted a field of pointed stakes. Beyond the skyline on the other slope of the hill, hidden from their unsuspecting enemy, the second and more important section, consisting of Béjaïa with his Sipâhis and Stephen Lazonovitch with his Serbs, watched for the right moment to advance against the exhausted Christians. These tactics proved to be effective when the Crusaders' vanguard of French and foreign auxiliaries defeated the Turkish irregular cavalry and, after forcing them to dismount, routed the irregular infantry and pursued them uphill to force the new and unseen forces. Meanwhile, a stampede of riderless horses produced confusion in the Crusaders' rear which comprised the Eastern European armies. Mircea and Lacobki, who had no sympathy for Sigismund of Hungary, retired with their Wallachian and Transylvanian auxiliaries who constituted the left and right wings of the rearguard. After desperate fighting for the relief of the French and foreign contingents, the Hungarian nobles persuaded their king to board a Venetian galley and escape by way of Byzantium and the Morea to Dalmatia. The rest were either killed or captured, only to be massacred on the following day by Béjaïa in order to avenge in this way the severe losses which he sustained. A small number of nobles were, however, saved from the massacre for a ransom of 200,000 gold florins.

The immediate result of the Ottoman victory was the extension of the conquests into Greece and the submission of Wallachia to Ottoman suzerainty. More important, however, was the breathing-space it gave for the consolidation of the Turkish empire in Europe, which enabled the Ottoman empire to survive the critical struggles of the next decades.

In later history, Nikopolis plays only a minor part. During the wars of the sixteenth century it was twice captured by Russian armies (Sept. 1812; July 1839; July 1877), and by the Treaty of Berlin (July 13, 1878) it was included in the tributary principality of julugia.

Stic, Die Schlacht bei Nikopoli, Vienna 1893. (A. S. Atiya)

NIKÔSAR, Nego-Caresser, first mentioned by Pliny (vi. 15) as that it presumably arose under Tiberius, lies in the Awatiul vilayet of Sivas [q.y.] 1,150 feet above sea level. The town is picturesquely situated at the foot of a hill, crowned by the ruins of a medieval castle which was erected from the material provided by the numerous buildings of antiquity there. Here in remote antiquity was Cabriss and after its decline Diopolis founded by Fompey, later called Sebaste. In Church history Niksar is famous as the scene of a Council (314 A.D.) and as the birthplace of Gregory the miracle-worker. In the Muslim period it became important under the Seljuks of whom numerous and important buildings have survived to the present day. It became more important under the Diriipunmdy [q.v.], whose founder Malik Diriipunm took Niksar among other places. His grandson Muhammad successfully resisted a siege by the emperor Manuel in Niksar. His son Yaghish (537—562 = 1142—1166) of whom there survives an inscription of the year 552 (1157) died in 562 (1166) whereupon Niksar was taken by the Byzantine emperor Manuel (Kinnamos, p. 996 sqq., 300) although only for a short time. In 1399 Niksar passed to the Ottomans and gradually lost its former importance. It remained noted for its very fertile orchards, celebrated already in Kazwin's time (Afgâr, ed. Wientzels, Gottingen 1848) the special producer of which, very large and sweet cherries, pears, figs etc. were famous at all times. Eflâyî Celebi (cf. Siyâhat-nâme, ii. 359; v. 14; Travels, p. 102 sqq.) who visited Niksar in 1083 (1672) describes the town in his usual extravagant fashion, mentioning 70 schools, 7 monasteries, many mills and water wheels and 500 shops with a large number of shoemakers. The pomegranates there, he says, are the size of a man's head and weighed 8 okkas. The remains of the Muslim period so far as they bear inscriptions, have been published by Ismail Nâsh, Kitâbî (Stanbul 1345 = 1927), p. 58—

The Turks (episcopal cupola) of Malik Ghazi and of Hadjiwil Chelis are worth mentioning; among old dervish monasteries there are the Ihsâs-tekke and the Kolek-tekk. Niksar has often been visited and described by modern travelers. The population (c. 4,000) was before the war an out quarter of Christians; they were mainly engaged in the silk and rice trades.

AL-NIL, the river Nile. The Nile is one of the large rivers which from the beginning have belonged to the territory of Islam, and the valleys and deltas which have accompanied the development of an autonomous cultural centre in Islamic civilization. In the case of the Nile, this centre has been more influenced at different times by the cultural and political events in the Muhammadan world. Thus the Nile has, during the Islamic period, continued to play the same part as it did in the centuries that preceded the coming of Islam.

The name al-Nil or, very often, Nil Mīṣr, goes back to the Greek name Νήσας and is found already in early Arabic literary sources, though it does not occur in the Korān. (In Sīra xx. 39 the Nile may be meant by al-yāṣam). The Christian habit of calling the river Gīyūn, after one of the 'rivers of Paradise', as found in the works of Ephraim Syrus and Jacob of Edessa and in the Arabic-Christian author Agapius (Patrologia Orientalis, v. 586), is not followed by the Muhammadans, who know only the Oksas under this name. Al-Zamakhshārī (Kitāb al-Atba'īn, ed. Sularda da grave, p. 127) mentions as another name al-Fayd, no doubt a poetic allusion to the yearly flood. Already in the Middle Ages, the word bahr having come to acquire in Egyptian Arabic the meaning of 'river', the Nile is also called al-Bahr or Bahr Mīṣr (cf. al-Makrī, ed. Wiet, I. 235), which is also the case with several smaller streams of its river system, such as Bahr Wīsāf or Bahr al-Ghrār. In the Delta the different ramifications of the river are occasionally also called Nile, but where necessary the main stream (Camōl) is distinguished from the minor branches (al-Murāf or al-Muḥāflat) and the canals (tur'a).

The geography of the Nile is treated here only from a historico-geographical point of view so far as the knowledge of Islamic science is concerned. The geographical knowledge of the Nile among the Muhammadans, so far as we can learn from their literary sources, is based partly on direct observation, but for the most part on legendary or pseudo-scientific traditions which go back to basic beliefs or to classical science.

For a long time during the Middle Ages the limits of Islamic territory on the Nile were well fixed; it ended at the first cataract near the island of Bilāk (Ph blames) to the south of Wāṣān (Aswan), here began, since the treaty (Bahr) concluded by 'Abd Allah b. Abī Sarh with the Nabians, the Nabian territory, where for long centuries Christianity prevailed (al-Baladhuri, p. 325): Ibn 'Abd al-Hakam, Futūḥ Mīṣr, ed. Torrey, p. 188). The first locality on Nubian territory, where tribute was paid, was called al-Kasāf (al-Masādī, Marūjī, iii. 40, 41).

Historical tradition has preserved parts of the alleged correspondence between 'Amr b. al-Ĥādī and the satrap Ṭurūn on the subject of Egypt, then newly conquered; hence the Nile is described as a river "whose course is blessed", while the flood and its inundations are praised in poetic terms ('Umar b. Muḥammad al-Miṣrī, ed. Zihra, p. 204; al-Dimashqī, ed. Mehren, p. 105). The same correspondence reveals the perhaps historical fact that 'Umar did not wish to see the Arab army established in Alexandria, because there would be then a great river between the army and the satrap (Ibn 'Abd al-Hakam, p. 91; cf. also what is said on p. 129 about those who went to live in al-Khākn).

The principal towns by which the Nile passed in medieval Egypt in Upper Egypt, between Wāṣān and al-Fuṣṭāt, were Ṭubā (Edfu, on the left), Iṣān (Isna, 1.), Armant (1.), Kāk (r.), al-Asyūr (Luxor, 7.), Kīlī (r.), Ikhnām (Akhmim, r.), Usyūn (Asyūn, Sīyūn, 1.), al-Ughmūnān (1.), Amīna (r. opposite al-Ughmūnān), Taḥā (1.), al-Kārī (1.), Dalā'ī (1.), Ahnās (1.) and Bīfī (Aṭīfī, r.). This succession of towns is given for the first time by al-Yaḥṣūbī (B. G. A. I, viii. 331—334), while Ibn Hawkal (B. G. A., ii. 95) is the first to give a table of the distance between these towns, expressed in hars, the entire distance being 20 days' journey (al-Idrisī, ed. Dowy and de Goeje, p. 52, gives 25 days' journey for the same distance). Shortly before al-Ughmūnān branched off on the left the canal that conducted the water to al-Fayyum, which is known to Ibn al-Kāfīth (B. G. A., vii. 74) as Nāḥ al-Lūkān and to al-Idrisī (p. 50) as Khālīd al-Mānī; this canal, which according to unanimous tradition was dug by Joseph, occurs already on the MS. map of the year 475 (1086) of Ibn Hawkal in the Serey Library of Constantinople, No. 3346 (reproduction on fol. 653 of Monumenta Africana at Egypte by Youssouf Kamal). It is the Bahr Wīsāf of our days; on it was situated al-Bahmās.

The banks of the Nile in Upper Egypt are not very completely described by the geographers; one finds repeated everywhere the assertion that the borders were cultivated without interruption between Wāṣān and al-Fuṣṭāt (cf. al-Iṣākhūrī, B. G. A., i. 50), but that the width of the cultivated territory varied during the river's course, dependent on the greater or lesser distance of the two mountain ranges that border the stream. Ibn Hawkal (MS. of Constantinople, of aspr) describes two extremely narrow strips, one between Wāṣān and Aṭīfī (now called Gebelein) and one between Iṣān and Armant (now called Gebeh Sila"la). The courses in the curve of the Nile, especially in the upper part of the Sīwāl, are not indicated on the maps of Ṭurūn and Ibn Hawkal. The oldest extant Arab map of the Nile, however — which is at the same time the oldest Arab map — shows with a sure hand that its sinuous course was a known fact. This map is found in the Strassburg MS. of the year 1307 (1307) of al-Khāfītī's Fatāt al-Ars, and has been reproduced in the edition of this text by H. v. Milik (B. A. H. C. G., iii. Leipzig 1916). The representation of the Nile here is connected with the classical tradition of astronomical geography; al-Khāfītī himself, and after him Ṭurūn (Ibn Serapion) and Ibn Yūnis (MS. 143 Col. of the University Library at Leyden, where on p. 35 a special table is given of the towns lying on the banks of the Nile) give exact indications as to the longitudes and latitudes of the Nile towns, but these indications need many very uncertain corrections to allow of the reconstruction of a map, as v. Milik has tried to do for al-Khāfītī in Denkschre. Alte Wiss. Wien, vii. 1916 and J. Lietzel for Ibn Yūnis, in: of the Atlas annexed to his Géographie du Moyen-âge, Paris 1850. But the fact that the course of the Nile is from south to north is well known to all the Arabic sources, which often repeat the
assertion that the Nile is the only river in the world for which this is the case. Only the text of Ibn Hawkal seems to imply that the Nile reached al-Fustāṭ from the S. E. (B.G.A.A., ii. 96).

The Delta of the Nile begins to the north of al-Fustāṭ, where the distance between the two mountain ranges widens, while these hills themselves become lower and pass gradually into the desert. Immediately below al-Fustāṭ began the canal that was dug by 'Amir b. al-ʿAzīz to link up the Nile with the Red Sea; this canal (ṣaḥāba) Miṣr or ʿIbād Miṣr or ʿAmīr al-Miṣr) was made in 23 (644) according to Mahāmir b. Yāsuf al-Kīnī (cited by al-Maqrīzī, Khayrī, Pīlīk, ii. 143; cf. Yākūt, ii. 466) and served for the conveyance of provisions to the Hijāz until the reign of ʿUmar Ibn ʿAbd al-ʿAzīz; afterwards it was neglected and even obstructed by the order of the caliph al-Ḥārūn, so that, in the 11th (4th) century, it ended at Dīnah or Tīnum in the lakes of the north of al-Kutsūm (cf. al-Muḥīṭī, Murājī, i. 147).

The two principal arms of the Nile in the Delta began about 12 miles to the north of al-Fustāṭ (a little further than nowadays, according to Guest) and had, as now, great numbers of ramifications which communicated in many ways and ends for the greater part in the big lakes or lagoons stretching behind the sea coast from west to east; these lakes were called in the Middle Ages Bahārāt Maryūṣ (behind Alexandria), B. Ḳūṭ, B. al-Baḥrānī and the very large B. Tīnūt, which last contained a large number of islands with Tīnūt as the most important. On the land tongue, where the two main arms separated was situated the town of Shabūt. The western arm went as now to the town of Rashīd (Rosetta) after which it reached the sea; near the town of Shabūt a branch parted from this arm in the direction of Alexandria, ending in the Bahārāt Maryūṣ; this branch was only filled with water in the time of the flood (a very complete survey of the different canals of Alexandria by P. Kahle, in D.Q., xii. 33 sqq.). The eastern arm ran, as is still the case, past Dīnah (Dinanto) and reached the sea shortly afterwards; it had several branches that went to the Bahārāt Tīnūt, one of which continued one of the Nile mouths of antiquity. Though many sources, based on a pseudo-historical tradition, repeat after each other that there are seven Nile arms (Ibn Abd al-Hakam, p. 6; further al-Khārīṣī, Khālid, Suhrawardi, al-Maṣūfī, Ibn Ẓālīlī, the more realistic authors Ibn al-Ḳandūlī, b. Ḳālīb; Ibn Rusta; ibn Ḥawkal, al-Īdrīsī) only know of the two main arms. These were linked up by a canal system which, in the Middle Ages, differed considerably from the present situation. The chief sources from which we know these are Ibn Hawkal and al-Īdrīsī, who give itineraries following the different branches, but as the places named in these itineraries have been identified only in part, an integral reconstruction is not yet possible (on this problem cf. K. Guest, The Delta in the Middle Ages, in J.F.A.S., 1912, p. 941 sqq. and the map annexed to this article). The description in the text of Suhrawardī (ed. v. Mīlīk, B.A.H.U.G.C., v.) has little value as an endeavour to trace back to his time (11th century) the seven legendary arms; among these arms special attention is paid to the "arm of Sandīna", which, according to tradition, was dug by Hāmān.
knows only of two lakes, not lying on the same latitude and does not speak of a great number of rivers coming from the Mountains of the Moon. The third lake especially is an innovation (cf. A. v. Mühl, in *Deutschbr. Ab. Wiss. Wien* Ixxxix., p. 44); it is also adopted by later authors such as Ibn Sa‘d and al-Dimāghṣī; this third lake is called Kūrā and may be connected with some notion of Lake Chad (the same authors change the name of Djabal al-Kūrā into Djabal al-Kumar which pronunciation is commented on by al-Maqrimī, ed. Wiet, ii. 219), but this is not probable for the time of al-Khwarizmi; the knowledge of more equatorial lakes, however, may possibly be connected with the expeditions of the Hunnic emirs despatched by Neco to explore the Nile and who reached, according to Seneca, a marshy impassable region, which has been identified with the Baḥr al-Ghazāl. The system described by al-Khwarizmi of the origin of the Nile is represented on the map in the Strassburg MS., and is repeated many times after him (Ibn Khurṣidābhid, Ibn al-Fakhrī, Kudāmā, Saḥrbī, al-Idrīsī and later authors). Al-Mas‘ūdī, in describing a map he has seen, does not speak of the third lake (*Marqūzī*, l. 205, 206) and Ibn Rusta (*B. G. A.*, vi. 99) says that the Nile comes from a mountain called B-ba, and also knows only two lakes. Al-Iṣṭakhrī and Ibn Hawqāl on the contrary, frankly admit that the origin of the Nile is unknown. This is also illustrated by their maps. Still the system of al-Khwarizmi continued to be a geographical dogma and is found as late as al-Suyūṭī. Al-Khwarizmi also took over from Ptolemy a western tributary of the Nile, which comes from a lake on the equator; this river is called by Ptolemy *Aṣṭapos* and may perhaps be identified with the Atbara. A later development, which connects with the Nile system a river that flows to the east in the Indian Ocean, is found for the first time in al-Mas‘ūdī (*Marqūzī*, l. 205, 206; ii. 383, 384); this view is later taken up again by Ibn Sa‘d and al-Dimāghṣī.

Another category of notions about the origins of the third lake seems to be borrowed from Jewish and Christian traditions which make the Nile come from Paradise. Medieval cosmographical theory places Paradise in the extreme East, on the other side of the sea (cf. the maps of Bostanian, so that the Nile, like the other rivers of Paradise would have to cross the sea. This state of things is actually described in an old tradition, probably of Jewish origin, of a man who went in search of the sources of the Nile and had to cross the sea, after which he reached Paradise (al-Mas‘ūdī, *Marqūzī*, l. 268, 269, and *Aḥḥār al-Zamān*, MS. Vienna, fol. 156b–157; al-Maqrimī, *B. G. A.*, ii. 21). With this origin in Paradise is perhaps connected the view, which all sources attribute to al-Dībajī in his lost *Kitāb al-Baladn*, that the Nile and the Indian (Indus) have the same origin (cf. al-Mas‘ūdī, *Zamākhsāri*, *B. G. A.*, vii. 55), a view which is sarcastically criticized by al-Dībajī (*Indian*, p. 101).

The same origin may go back to the idea, often found in Muhammadan sources, that, when the Nile rises, all the rivers of the earth go down in level.

Thirdly there is a cycle of geographical conceptions which link up the western part of Africa with the river system of the Nile. Herodotus already had sought a western origin and Pliny quotes the *Livy* of king Juba of Mauretania, who makes the Nile rise in western Mauretania. Marqūzī (*Sūrat al-Samawāt*, p. 115) has explained this view from a corruption of the name of the river Nubal, which he identifies with the Wādī Nil and which has its origin in the Mauritanian Atlas. Traces of this western Nile are to be found in Ibn al-Fakhrī (*B. G. A.*, v. 87) who, following an authority of the time of the conquistadores, places the origin of the Nile in al-Sa‘da al-‘Aṣhā. Al-Bakrī for the first time identifies this western Nile with the river Niger, although we find already in al-Mas‘ūdī the knowledge of a great river, far to the south of Sūbabulūs (*Marqūzī*, iv. 92, 93). Al-Bakrī describes the territory to the south of the river Stūdān (ed. de Slane, i. 172) and enumerates a number of Berber and Stūdān tribes and their towns which border the river; the westernmost town is with him Sanghāl, followed in eastern direction by Tabrūr, Sulūq, Ghāznā, Tiraqāt, and finally the country of Kawaw. After al-Bakrī a similar description is given by al-Idrīsī, but this last author goes back to another source than al-Bakrī when he places the mouth of the Nile in the neighbourhood of the salt town Awīl, thus identifying the lower course of this Nile with the Senegal (Marqūzī, *loc. cit.*, p. 171). Al-Idrīsī likewise shows himself informed on the course of the Nile to the east of Kawaw, though he is in doubt if Kawaw itself is situated on the Nile or on a Nile arm (ed. Drower and de Goeje, p. 11); he finally derives this western Nile from the third of the big Nile lakes mentioned above, thus connecting the Nile of the Stūdān with the Nile of Egypt in one river system. So long as the complete text of al-Bakrī is not known, we cannot ascertain if this conception goes back already to that author. Al-Idrīsī’s Nile course is clearly indicated on his map of the 1st–4th section of the first climate. After him it is especially Ibn Sa‘d who has described the western Nile in this way and he has been followed again by Abu ‘l-Fīda‘ī. Al-Mas‘ūdī (*Ed. Mehran*, p. 89) gives the same representation; this last author even makes the third lake, which he calls the Sā‘da, the source of the Nil and of Kūrā, give birth to three rivers: the Nile of the Stūdān, the Nile of Egypt, and a third river running in eastern direction towards Maqṣūdī in the Zanj country on the Indian Ocean. This last river, which was also connected by al-Mas‘ūdī with the Nile (*cf. zāpīra*) is probably identical with the Wehi river in Italian Somaliland.

While the geographical authors constructed in this way the Nile system with a good deal of credulity and imagination, the real knowledge of the Nile south of Egypt advanced but slowly. The southernmost point reached by the Arab conquerors was Dongola (al-Khūt, ed. Guillaume, p. 121). It was well known that this town was situated on the Nile; its latitude and longitude are given by al-Khwarizmi and Sahraūr. Al-Ya‘qūbī (*Tabakht*, ed. Houtteau, p. 217) knows that, in the country of the Nība called Alwa, who live behind the Nība called Murkura, the Nile divides into various branches; this same author, however, places Siid behind Alwa, Al-Mas‘ūdī (*Marqūzī*, iii. 31, 32) knows that the country of the Nība is divided into two parts by the Nile, Ibn Hawqāl (*Constantinople MS.*) describes two places where there are cataracts (*ghumūd*) — namely the one above Usān, which is the "first cataract," and one near Dongola, of which it is not certain whether the "second" or the "third" cataract is meant. About the same time,
however, a traveller named Ibn Sulaim al-Uswānī wrote a valuable description of the middle Nile course, which has been preserved in al-Ma'ārí's *Kitāb (ed. Wiet, in M.I.F.A.O., xvi. 252 sqq.); this Ibn Sulaim, on whom al-Ma'ārí's *Kitāb al-Mufrad gives some information (cf. Qutrubm, Memoires sur l'Egypte, ii.), had been sent by the Fatimid general Da'wār to the king of the Nūbā on a diplomatic errand, and was the author of a *Kitāb al-Nūbā wa l-Mukarrara al-'Alwā ruwa l-Mufrad wa l-Muṣṭaṣf wa l-Qīnāh, in which a detailed description is given of these countries. He says that the region between Usān and Dunyāla is inhabited in the north by the Mann and more to the south by the Mūkarrara; the northern part is barren and the great cataracts are correctly described. The country between Dunyāla and 'Alwā (this last spot is the region of Kārṣīm) is described as highly flourishing; the big winding of the Nile here is perfectly known to Ibn Sulaim. The Nile is "divided" then into seven rivers; from the description it is clear that the northern one of these rivers is the Athbara, coming from the east; further south the "White Nile" and the "Green Nile", join near the capital of "Al-Ma'ārí. "The White Nile", coming from the east, is again the result of four rivers, one of which comes, as the author thinks, from the country of the Habagha, and one from the country of the Zanjī; this last, incorrect, statement may have been influenced by learned tradition. Between the "White Nile" and the "Green Nile" there stretches a large island (qabba, as it is still called on our maps), which has no limits in the south. This is about the only description in mediaeval Islamic literature that shows how far the knowledge of the middle Nile really went. Only little of it seems to have reached the systematic geographic treatises; al-Idrīsī, e.g., describes this part of the river in a way which only shows that he did not make good use of the inadequate sources that were at his disposal.

The exploration of the upper Nile and its sources since the end of the xvith century was the work of European travellers. They discovered, or perhaps re-discovered, the real big Nile lakes and identified the Ruwenzori mountain range with the Moon Mountains, the "source of the Nile," which was found again by the explorer Speke in the name of the Nyamukwe country, the "country of the moon." A part of the exploration of the Nile was due, however, also to Egyptian initiative. The well-known military expedition of 1820—1822 under Muḥammad 'Alī's son Ismā'īl Pāsha, during which the city of Kārṣīm was founded, established Egyptian domination in the Egyptian Sudan and opened the way for further scientific exploration. In the years 1839—1842 three Egyptian expeditions went up the White Nile, and during the reign of Ismā'īl Pāsha the Egyptian government repeatedly tried to cleanse the swamps of the White Nile above Solāh from the masses of vegetation (ṣalīr) which hindered navigation.

The yearly flood of the Nile (fīyūla, fāṭiha, fāyūna) is the phenomenon to which Egypt has been at all times indebted for its fertility and prosperity, as it provides, in compensation for the almost complete lack of rain in the country, a natural and almost regular irrigation for the lands on its borders and in the delta. It is the foundation of all cultural life and justifies entirely the attribution of χαλέπιον so often given to the river. On the same account the Nile is considered, as well as the Euphrates, as a "believing" river (al-Ma'ārí, ed. Wiet, M.I.F.A.O., xxx. 218). The flood deeply influences the private and public life of villagers and townsmen alike, and already the oldest Muḥammadan traditions about Egypt reflect the feelings of wonder and thankfulness that animated the people of Egypt before them (Ibn 'Abd al-Ḥakam, p. 109, 205). Having reached its lowest level towards the end of May at Assam and in the middle of June at Cairo, the Nile begins to rise again, reaching its highest level in the beginning of September at Assam and in the beginning of October at Cairo. This regularity brings about a similar regularity in the methods of irrigation in the several parts of Egypt, in the times of the sowing and reaping of the different crops and consequently in the modes of levying the land taxes (e.g. al-Ma'ārí, ed. Rūbūk, i. 270, which text comes from Ibn Hawqāl); all the dates referring to these occupations have always continued to be fixed according to the Coptic solar calendar.

There is much discussion in the literary sources about the causes of the flood. The most ancient belief, which still some time corresponds best with reality, was that the flood is caused by heavy rainfalls in the countries where the Nile and its tributaries have their origin. This is expressed in a somewhat exaggerated way in a tradition that goes back to 'Abd Allāh b. 'Amr b. al-Ṭāṣ, according to which all the rivers of the world contribute, by divine order, with their waters to the flood of the Nile (Ibn 'Abd al-Ḥakam, loc. cit., and p. 149). This implies the belief that all other rivers fall while the Nile rises, but, on the other hand, it is sometimes observed that other rivers also show the same phenomenon of rising and falling, especially the Indus, and this again is considered as a proof of the common origin of the two rivers (al-Ma'ārí, ed. Wiet, M.I.F.A.O., xxx. 227). There are, however, other views, which attribute the cause of the flood in the movement of the sea, or to the effect of the winds; these views have been inherited from sources of the pre-Muḥammadan period, among others from the treatise on the flood of the Nile attributed to Aristotle, and they are discussed and refuted at length in a special chapter of al-Ma'ārí's *Kitāb (M.I.F.A.O., xxx. 238 sqq.).

Up to the xviith century the irrigation system of Egypt continued along the same lines. When the flood begins all the outlets on both sides of the main stream and its principal arms in the Delta are closed, to be opened again about the time of the highest flood, when the water level has reached the necessary height according to the different places. The most important of these yearly "openings" was that of the canal (Khalīla) of Cairo, which, until recent times, remained a public festival. In Cairo the flood is complete (wafū' al-Nīl), when it has reached 16 shīrā, generally in the first decade of the Coptic month of Mesore (about the midst of August), and this was proclaimed everywhere. In the town (cf. the description by Lane, Monuments and Customs, ii. 287 sqq. and E. Littmann, Ein arabischer Text über die Nilwelle, Festschrift Oppenheim, Berlin 1933, p. 66 sqq., for older times, al-Kāfisalāh, iii. 316).

The height of the level of the Nile has been measured since olden times by the Nilometers (cf. 446). Many of these nilometers are recorded by the
sources, the southernmost being that of ‘Alwa and the most celebrated the one of Al-Fustat, constructed by Yaqub b. Zaid al-Tan‘i, about 921 (731) and often restored afterwards (a complete survey of all the sluices is given in Omar Youssouf, Mémoire sur l’Histoire du Nil, ii. 265 sqq.). The sluices generally were made of stone, with marks upon them, but they were sometimes of other material (e.g., a fig-tree near the monastery of Safanfūr in Nubia; cf. Evetts, Churches, p. 262). The level necessary for the operations of irrigation existed in different places; in the capital the average level had to be 16 šērās above the lowest level of the Nile; if the flood surpassed 18 šērās it became dangerous, while a flood not exceeding 12 šērās meant famine (cf. e.g., al-‘Idrīsī, p. 145, 146). In the history of Egypt the years after 444 (1054), and especially the year 451 (1059), are notorious for the famine and disaster caused by the failure or practical failure of the flood. A historical account of the flood from the years 152—1298 (769—1379) is given on p. 454 sqq. of Omar Youssouf, Mémoire sur l’Histoire du Nil, ii.

The regulation of the main streams and its branches are ascribed to the ancient Egyptian kings (al-Makrizī, on the authority of Ibn Wāṣif Zāhī, but no real irrigation work of a wider scope existed in the Middle Ages and later except the famous canal system of al-Fayyūm [s.v.], which all the sources ascribe to the prophet Yūsuf. In the rest of Egypt the water was allowed to flow freely over the lands after the piercing of the dams, so that large areas were completely inundated for some time; the Arab sources contain some vivid descriptions of the large stretches of water, above which rose the villages and the communication between the villages being only possible by means of boats during that time of the year (al-Mas‘ūdī, Murūj, i. 162; Ibn ‘Abd al-Hakam, p. 205).

Since the reign of Muhammad ‘Ali new attempts at irrigation works have been planned with the aim of making the country more productive, a possibility at which already the medieval authors hinted more than once. The first efforts, however, failed. About 1840 was begun the construction of a great barrier across the two arms of the Nile at the apex of the Delta, according to the plan of the French engineer Mouget, but this enterprise began to yield its fruit fifty years later when this barrage project, including the Twelfthiyya, Manfūtiyya and Muḥāfira canals, had been completed in 1890. The later great irrigation works were executed higher up the river, such as the great dam and locks at the head of the canals near Philae above Assuan, in 1902, which was raised again in 1912, and again in 1933. While allowing, on one side, a better regulation of the distribution of Nile water in Egypt, these barrages higher up enable at the same time a better irrigation of the borders to the south of Egypt. Herewith is connected the enormous barrage of Makwīr near Semnār on the Blue Nile above Khartum, which permits the irrigation of the region called al-Dīrās, between the Blue Nile and the White Nile. This work was finished in 1925 and is meant to be completed by a similar barrage on the White Nile. In this way the control of the Nile waters has passed to a certain extent out of Egypt itself; it recalls the days of the great famine in 1059, when the Egyptians thought that the Nubians were holding up the flood of the Nile.

The same problem came up recently with regard to the new project of constructing a dam on the frontier of the Sudan and the Belgian Congo and the question was raised whether this dam will prove a fatal al-Nil or a fāṭilah al-Nil for Egypt (cf. the newspaper al-Malā‘ūd of March 17, 1934).

It has already been shown above that the opening of the canal of Cairo. But in other respects also the Nile is connected with traditional customs of a religious character, which are to be traced back through the Greek-Christian period into very ancient times. When the Arabs conquered Egypt, the sacrifice of the "Nile Bride" was still in use; every year a richly apparelled young virgin was thrown into the Nile to obtain a plentiful inundation. According to a tradition first recorded by Ibn Abī al-Hakam (p. 150), this custom was abolished by Amr Ibn al-‘Āṣ and the Nile resumed its flood after a note of the caliph ‘Umar had been thrown into it requiring the river to rise if the flood was willed by God. In later times a symbolic offering of a girl called "Ararat al-Nil" was still practised on the Coptic festival al-Salāt (Norden, Travels in Egypt and Nubia, 1757, p. 63—65); Lane (Manners and Customs, p. 290) mentions a round pillar of earth, near the dam of the canal of Cairo, which pillar was called al-‘Ārūs. Another custom, practised formerly by Christians and Muḥāmmadians alike, was to bathe in the Nile on the eve of the Epiphany, in memory of the Baptism of Christ (cf. Evetts, Churches, p. 129). Al-Mas‘ūdī (Murūj, ii. 364 sqq.) describes this festival, which he calls Lailat al-‘Igīlās, for the year 330 (943). Lane (p. 363 sqq.) describes the same ceremony, but in his account the Muḥāmmadians did not take part in it. But bathing in Nile water in general figures harakā (cf. W. Blackman, The Beginning of Upper Egypt, p. 32 with regard to bathing in the Bahārīs). The quality of the Nile water is a matter of discussion in medical treatises. Avicenna (al-Qānūn f. ‘Ilā Tadbir al-tibb, ed. Blümel 1294, l. 98; cited by al-Makrizī) holds that the circumstance that a river flows from south to north has a bad influence on the water, especially when a south wind blows; and on this account he thinks that the abundant praise given to the Nile is exaggerated.

The Egyptian physician Ibn Risālīn (d. 453 = 1061) says that the Nile water reaches Egypt in a pure state, owing to the health in the country of the Sudan, but that the water is spoiled by the impurities that mix with it on Egyptian soil (cited by al-Makrizī, M. J. F. A. C., xxx, 275 sqq.). This same author describes very clearly the troubled condition of the water when the flood begins. He discusses likewise the influence of the Nile on the climate of Egypt and the medicinal properties of its water.

Other authors speak at length of the fauna of the Nile, giving especial attention to the fish. A very long list of fishes is given by al-Ikhšās (p. 16 sqq., with a description of their often curious qualities. The animals most frequently described by the geographers are, however, the crocodiles, and the animal called sakhābūr, which is said to be the result of a cross between a crocodile and a fish, but which seems to be in reality a kind of lizard. The possibilities which the Nile afforded for navigation are best seen from the historical sources. Seagoing vessels do not seem ever to have entered
its arms, while the traffic on the river was maintained by small craft; various names of Nile boats occur in literature; in the sixth century the vessel called axshabitya is especially known. In earlier times the term selëftâ was used for a Nile boat (al-Kindi, Kitâb al-Ummâr, ed. Guest, p. 157; Dozy, Supplement, i. v.). The skill of the fishermen in their sailing boats on the lakes in the Delta is often recorded; on shallow places, however, as well as on the inundated lands, boats had to be moved by means of sars or poles. The rapids between Egypt and Nubia were, as nowadays, an insurmountable barrier to river traffic; the loads were conveyed along the shores to the other side of the falls (Ibn Hawkal, MS Sultan Ahmed Koshâ, Nûg. 3346, fol. 86).

The cataracts above Assuan for a long time continued to form a barrier to the spread of Islam towards the countries bordering the Nile to the south of Egypt, which forms a curious contrast with the part played by the Nile in the introduction of Christianity into Nubia (cf. J. Krause, Die Anfänge des Christentums in Nubien, Münster [Diiss. 1926]). Islam penetrated only slowly into Nubia and became more generally disseminated in the Sudan only in the eighth century (cf. Schum.).

Something has been said already about the praises of the Nile and its descriptions in poetical terms, by which this river has contributed to Arabic literature. Al-Maârikî (loc. cit., p. 297 sqq.) gives some fragments of poems in praise of the Nile and its flood; among the poets who he names are Taullum Ibn al-Muqta (q.v.) (d. 983) and Ibn al-Kalâikî (d. 1172). Further âqabî (i. 592; iv. 865) cites some poems which he attributes to Umâia b. Abi l-Šâit; this poet is probably Abu l-Šâit Umâia b. 'Abd al-Âzîz (d. 1154) who wrote a treatise al-Šâit al-Mihrjâ, from which also al-Maârikî makes quotations. The earliest Arabic poems on the Nile are probably those found in the Dîwân of Ibn Kais al-Rukiîrî (q.v.), the court poet of 'Abd al-Âzîz Ibn Marwân in the beginning of the eighth century. Several treatises have been especially devoted to the Nile. Ibn Zîlîkî (d. 1108) says in his Fawâîd al-Mihrâb (MS, arabic Nûg. 1818 of the Bibliothèque Nationale at Paris, fol. 317) that he has written a book on the importance and the salutary qualities of the Nile, which now seems to be lost. Further there are a treatise Tahârîr al-Âkkâsh fî al-Nil wâlal-Âkbâthi mîn al-Âkkâsh (MS. in Algiers; cf. Brockelmann, G. A. L. ii. 566), and two short opuscules by Djalîl Ibn al-Mahallî (d. 1459) and al-Suyûtî, which are found together in the MS. Orl. 1535 of the British Museum (Rieu, Suppl., Nûg. 1168; G. A. L. ii. 114).

Biography. As the aim of the present article is to give an account of the Nile from the point of view of Islam and its history, it seems superfluous to quote here even the most important modern works and articles belonging to the abundant bibliography of the Nile. The earlier Maâhmadan authors have all been named in the text; the later ones, such as Yâqût, 'Abî al-Lajîfî, Abu l-Fâdîl, al-Kalâgashî, al-Maârikî, al-Suyûtî (Hum al-Maâhmadî, al-Nawawî and others are in most cases a compendium of earlier views and statements. A very important later Maâhmadan source is al-Kalâgashî al-Tamârîsa by 'Ali Bâgha Mâdârkî. The Maâhmadan literary sources have been used in the following works: Else Reitzenmeyer, Geschichte Ägyptens im Mitteltal, Leipzig 1903, p. 31—61; J. Maspero and G. Wiet, Matériaux pour servir à la Geography de l'Egypte, in M.F.A.C., xxxvi, 215 sqq. and very profusely: Omer Tsoukounou, L'histoire de l'Egypte, vol. ii, ii, iii, in Mémoriala frères à l'Institut d'Egypte, vii, viii, x, Cairo 1945. The last of the three volumes contains a series of cartographical reconstructions. A number of ancient Maâhmadan maps of the Nile are to be found in the Maps of Arabic, ed. Konrad Miller, Stuttgart 1926—1930, and more completely in vol. iii of the Monuments Cartographiques Arabes et Egyptiens by Tsoukounou Koutoum, as far as this work has appeared; in this same work all the geographical references to the Nile are also to be found in a chronological order. (J. H. KRAMER)

NÚMAT ALLÁH b. AHMAD b. Kádí MUKÁN, known as Khalîfî Sülû, author of a Persian-Turkish Dictionary, entitled Longâh-î Nûmat Allàh. Born in Sôhà, where as an anonymous he made a reputation as an artist, he moved to Constantinople and there entered the Nakib-bândî order; Association with the Nakib-bândî dervishes made him more closely acquainted with literature and

Nûmat Allàh b. Ahmad b. Kâdi Mukân, known as Khalîfî Sülû, author of a Persian-Turkish Dictionary, entitled Longâh-î Nûmat Allàh. Born in Sôhà, where as an unnamed he made a reputation as an artist, he moved to Constantinople and there entered the Nakib-bândî order; Association with the Nakib-bândî dervishes made him more closely acquainted with literature and

Bibliography: J. v. Hammer, G. O. K., i. 59 sq.; Sîflîd al-Umâmî, i. 86 (according to Neût); P. Tschauchner, in H. xii. 133—137.

(NAZIME BAHÇENGİ)
especially with Persian poetry. Nīmat Allāh decided to make accessible to others the knowledge he had acquired by an ardent study of Persian literature and thus arose his lexicographical work which he probably compiled at the instigation and with the assistance of the famous Khānābādī Qājār, Ābād Allāh Vāfi [see Vāfi]. After his teacher’s death, he went to Samarqand, then visited Herāt and Yezd and finally settled in Māhān, 8 farakhs from Kirmān, where he spent the last 25 years of his life and died on 22nd Radjah 834 (April 5, 1431). His tomb is still a popular place of pilgrimage (shāh-darāz). In his lifetime, he was held in great honour by all rulers and received particular marks of esteem from Shīh-Bakht. His grandchildren migrated to India and were appointed to high office in the Deccan by ‘Alī al-Dīn Ābād Allāh Bahmanī (1435–1457). Nīmat Allāh was a very prolific theorist of Sīflm and is said to have written over 500 šāhids on different questions of Sufi doctrine. About a hundred of these have come down to us and can be identified. They are for the most part quite short treatises, generally explanations of difficult passages in the classics of Sīflm like Ibn al-Arābah, Fakhr al-Dīn ‘Ibrāhīm, etc. His large Dīvān of lyric poetry is much more valuable; it contains much true poetry and is marked by a fervent sincerity.

Bibliography: E. Echê, in G.E.P., ii. 139, 142; J. Rieu, Catalogues, p. 433, 534, 541, 774, 823, 831, 836; E. G. Browne, History of Persian Literature under Tatar Dominions, Cambridge, 1902, p. 463 sq.; D. Wālsh, in J. of the Persian, iv. 145 (where 23th Radjah is given as the date of his death) and Dāwlatshāh (ed. Browne, p. 333–340), which however with his usual carelessness gives 827 as the date of his death.

Nīmat Allāh al-Dīn ‘Alī, Mirzā Nisār al-Dīn Muḥammad, son of Ḥakim Fath al-Dīn Shīkh, a Persian author, was born in India and came to a family of several of whom had been distinguished physicians in their ancestral homes in Shīrāz. He entered the service of the state under Shāh-Dījāhn (1628–1659) and was appointed keeper of the crown jewels with the title of ‘alā al-mulk. He attained his highest honour under Awaragbī (1659–1707) who gave him the title of Nīmat Allāh (1104 = 1692–1693), which was later exchanged to Muṣarrab Khān and then to Dāvūngān Khān. He died at Delhi on the 1st Rafī’ 1132 (May 30, 1710). Nīmat Allāh who wrote under the pseudonym of Ālī, was exceedingly prolific and wrote a number of works in prose and verse of which the following are the most important: 1. Nasīl’din Hāfiz, a description of the siege of Hāfiz̄ābād by Awaragbī in 1687–1688. This work is characterized by a biting wit and describes the siege in a satirical form which procured the little book the greatest popularity; 2. Dāwlatshāh, a chronicle which covers the last years of Awaragbī’s reign and the war which broke out after his death among his sons; 3. Bahādur-Shāh-nāma, a chronicle of the two first years of the reign of Shīh ‘Abd al-Bahādur-Shāh (1707–1712); 4. Hūsadī, also called Kāshkulīd, a chronicle, an allegorical love story, an imitation of the celebrated Hūsadī al-Dīl of Faṭāhī [q.v.]; 5. Raḥīmat al-Kulūb, satirical sketches of a number of contemporaries; 6. Shāhīd-i Hādībād-i Ḥakāmān,
anecdotes of physicians and their incompetence; 7. Kähni's Nümöd, a work on cookery; 8. Rüppel's, letters to Mżrż Mühszfr Allah Hikūh, and Wżţs, Mżzābīd Mżhāmād Sā'ud, the head of the imperial kitchen and others, which were very highly thought of as models of a choice style of letter-writing; 9. a lyrical Dīvān; 10. a short Matn Mōsulwī without a title, which deals with the usual Sūfi ethical themes. This survey shows a great versatility on the part of Nümöd Khan but it must be pointed out that, with the exception of the satirical works which are really original and of great value which are the characterisation of his age, none of them rises above the level of degenerate imitations of classical models.

NIRMŪR. [See Namūr]

NIRMŪR, a ruined site in the ancient Assyria, the northern portion of the modern 'Iraq, about twenty miles south of Mosul, in 36° 1' North Lat. and 43° 20' East Long. (Greenwich), in the angle formed by the Tigris and its tributary, the Upper or Great Zāb, six miles above the mouth of the latter. The plateau of Nirmūr rises abruptly from the surrounding country, and the great advantages of this situation, caused a settlement to be made here already in remote antiquity. Excavations on the site have established the fact that the ruins there were those of the town of Kalkhu (Kalâh), which is already mentioned as Kâlish (Calah) in the Old Testament in a passage which is not absolutely unsatisfactory (Gen. x. 11-12), which says it was built either by Nimrod or Ashurib; the latter appears to me more intelligible. In Greek writers we find only the name of the district Kaksisvē or Kaksisvē (cf. Pamy-Wissowa, Realms of the East, Altertumsw., xi. 1530). It was no doubt its favourable strategic position that decided the Assyrian King Shalmanasar I (c. 1250-1205) to raise it to be his royal residence alongside of the previous capital Ashurib (now Kalâh, Nimmur, q.v.).

We learn nothing from the cuneiform inscriptions about the decline of Kalkhu. Kalkhu probably fell about the same time as Nineveh after a stubborn resistance to the onslaught of the Median-Babylonian army. When Xenophon in 405 B.C. passed by the town, which he describes clearly, it was already a ruin.

So far as I know Kalkhu is not mentioned in Syriac literature and in the Arab writers of the middle ages only incidentally and under wrong names. In Yâfî (ed. Wustenfeld, i. 119, 167 ii. 113), we are told that al-Salāmān is the vicinity of the ruins of the town of Askir, which can only mean the ruins of Kalkhu (cf. also ib., p. 184). At the present day the site is known only as Nimrud, which so far as I know first appears in the Itinerary, who stayed in Mōsul in 1766, see his Reisebeschreibung, nach Arabien und andern unentdeckten Ländern, ii. (Copenhagen 1779), p. 355, 368. When this, no the same day, the usage appears to me unknown, I consider it to be of modern origin. It should be noted that names like Nimrud, Tell Nimrud, etc., are not found in the geographical nomenclature of Mesopotamia and the 'Iraq in the middle ages, while they are several times met with at the present day.

The first European to give a brief account of the "ruined castle" of Nimrud and the remains there was Niebuhr, although not from his own inspection. In 1721 Dr. Rich visited the site and gives the first detailed account of the ruins; in his pithy and succinct work are the first pictures of cuneiform tablets discovered there. A few years before Layard, William Ainsworth examined the site. In 1834 F. R. Laidard visited it. Layard, the real investigator of Nimrud, twice examined the mounds of ruins in 1840 but it was not until 1845 that he was able to begin excavations, which were conducted in two great expeditions (1845-1847 and 1849-1851). Layard's reports were supplemented in many details by the notes, which to little attention has so far been paid, by Sandacek (see Bibliothek) who spent a considerable time in Mōsul and its neighbourhood in 1830. After Layard's departure home, H. Rassam continued his work in Nimrud. In 1873 G. Smith resumed Layard's work but only for a month. Finally Rassam on behalf of the British Museum again continued the earlier excavations for a period of five years (1878-1882).

Our study of the topography of Nimrud must still be based on the large map of the vicinity of Nineveh and the whole area between the Tigris and Upper Zāb made by F. Jones in 1852, which the Royal Asiatic Society published in three sheets under the title Visits of Assyria (sheets 2 and 3 deal with Nimrud). The commentary on these maps is the article by Jones, in J. R. A. S. vol. xv. (see Bibliothek).

The fairly comprehensive complex of ruins at Nimrud forms a rectangular plateau, out of which a triangular mass juts in the southeast giving the whole the appearance of an irregular hexagon. The longest side, which runs east and west, measures 7,000 feet; the northeaster side 5,000 feet (in the southeast including the salient triangle 6,600 feet). The circumference of the whole area is six miles. Layard's investigations revealed that this extensive area marking the site of the town of Kalkhu was surrounded by a wall with towers. In the north he found fifty-eight, in the east fifty of these towers; in the southwest the wall of earth has now almost entirely disappeared (cf. Layard, Dissevows etc., p. 630). The length of the wall was seven miles, that is to say it was longer than the boundary of the whole ruined area because two arms were necessary to include the suburbs in the southeast.

The royal quarter in the southwest corner with the palaces and chief temples occupied a relatively small part of the area described. It lay on a terrace and was shut off from the rest of the town by a wall. To it also belonged the high cone-shaped mound in the northwest which is the dominating
The Tigris now runs about one and a half miles from Nimrud but in Assyrian times it flowed directly past the walls of the town as distinct traces still prove (cf. thereon Jones in J. R. A. S., xv. 342—343 = Selections, p. 446 sq.; Lehmann-Haupt, *Materialien*, p. 27 and his Aramäis, 111, 250 sq.). In the centre, between the still distinct ancient bed of the Tigris and the modern one, is a third bed which the river filled in the middle ages; this latter now bears the name of Tell Abû Darban (see Jones, *Vestiges* and J. R. A. S., xv. 343 = Selections, p. 447) = "The road of Abû Debâh"); apparently after a Debân tribe (the explanation given by Jones is hardly tenable).

A quarter of an hour west of the ruined site of Nimrud (called frequently al-Kal’a = the citadel) is an older settlement, the fair-sized village of (old) Nimrud also called Darâwish. Still farther west, near the Tigris is a village also called (New) Nimrud of more recent origin and a mile N.W. of it directly on the river the village of Nafie. Again a mile N.W. are the remains of a dam first described by J. Macdonald Kinnes from personal observations (see his *Journey through Asia Minor, Armenia and Kurdistan*, London 1858, p. 405). The natives call it Sıkâ or Sıkâh Nimrud (see Kinnes, loc. cit.; Layard, *Nimrud*, i. 8) = Nimrud’s Dam. Jones gives (J. R. A. S., xv. 343 = Selections, p. 447) and Fergusson of *Assyria*, sheet ii; Sıkâh Nimrud ( = Nimrud’s Cliff); I suspect that he picked up the name wrongly (ṣâbîr for ask *dam’). At the same time we also have the name Sıkâ al-Awâzî (Rich, loc. cit., p. 129) as simply al-Awâzî, Away (Layard, *Layard’s Map*, i. 8, 365; Jones, loc. cit.) = "dam of noise" or *(the) noise* (ṣawâhīl or ṣawâh from Farsi bâz̄âh; see Vullers, *Lex. Pers.*, p. 36) and this second name owes its origin to the great noise caused by the waters breaking over the rocks here. The people of the vicinity say that there was once a bridge here. Probably a barrier of rock in the river was already used in ancient times as the foundation for a dam for irrigation purposes.

Still farther west there is also a town about three miles from the ruins of Nimrud lies Seleúcîa on the Tigris, now a small village but in the middle ages as Yâḵût, iii. 115 (al-Saltûmâ); cf. also i. 119, 124) tells us, one of the most beautiful places in the region of Mûsûl. The modern Selâmû lies in the southeastern corner of an area covered with old ruins.

This Belûmîyâ may with great probability be identified with the Biblical Resen, numbered among the four Assyrian towns founded by Ashûtût (or Nimrud; cf. above) according to Gen. x. 11-12, and thence located as lying between Nineveh and Kalâkh (Calah). The assertion constantly made in learned works because of the words describing them "the same is a great city" and in view of passages in Jonah (3, 3-4; 4, 1-11) that these formed a gigantic tetrapolis linked together hardly deserves serious refutation.

The greater part of the finds at the English excavations at Nimrud are in the British Museum where they are exhibited in the Assyrian transept, the Nimrud Gallery and in the Nimrud Central Saloon (cf. the B. M. Guide etc. [see Bâlût], p. 41 sq.). Nimrud provided the British Museum with even greater treasures in sculptures (not inscriptions) than Koyunjik-Nimrud. Various objects from Layard’s collection were left in Bombay on the way home and are now, with some pieces brought
by Rawlinson, in the possession of the Bombay Branch of the Royal Asiatic Society; on them see Karkarian in the *Journal of the Royal Asiatic Society*, xviii. (Bombay 1891), p. 97–107. A large series of sculptures came to the Louvre; cf. E. Pottier, *Catalogue des Antiquites de la Grande Babylone* (Louvre), Paris 1842, p. 23, 49–63. There are also miscellaneous antiquities from Nimrud in the national collections in St. Petersburg, Berlin, Zürich and Leningrad (Hermitage); on a few finds by Lehmann-Haupt, see his *Materialien*.

The English excavators left the site without filling in or even roughly levelling the ground they had cut up. In the spring of 1920 the Iraqi government however had the half-exposed sculptures lifted and put in the new Museum in Baghdad. During my stay in Nimrud (May 1928), I saw the sculptures lying on the bank of the Tigris ready to be moved (2 statues of Nabû, a colossal bull, fragments of another, an unfinished lion in stone, two great slabs with inscriptions of Ashurnasirpal II).

**NIMRUD** [See Sharrân].

**NIRIZ, a place in A.Dharhashîdîn on the road from Marâgha[s] to Urmiya.** The stage on this route is still obscure. At about 15 farsâks south of Marâgha was the station of Barza where the road forked; the main road continued southward to Dinawar while the northwest went from Barza to Tidin (3 farsâks), thence to Djâbarwân (6 farsâks), thence to Niriz (4 farsâks), thence to Urmiya (14 farsâks); cf. Ibn Khurdâbdîh, p. 231 (referred to by Kudânâ with some variations); Maqâdshî, p. 383.

The distance from Urmiya indicates that Niriz was in the vicinity of Suldur [s. v.] which would find confirmation in the etymology from *Arüm* "flying". Suldur lies in the low plain, through which the Gâder flows to the Lake of Urmiya. At the present day the name Niriz is unknown, but a Kurd tribe of the region of Sa‘ulî-hulâq [s. v.] bears the name of Nirizi.

After the Arab conquest a family of Türe Turks settled in Niriz. The first of these semi-independent chiefs was Murh b. Ali Majwûl who built a town at Niriz and enlarged the market of Djâbarwân (cf. Bâylûhûrî and Ya‘qûlí, ii. 446). One of his sons, "Ali, was among the rebels of 128 (829) whom the governor of A.Dharhashîdîn Muhammad b. Hamad Tîsî deported to Baghdad, but "Ali succeeded it, seems, in returning to his lands) cf. Ibn Khurdâbdîh, p. 119. Abîl Rûfîn Omâr b. "Ali, appointed in 260 (873) governor of A.Dharhashîdîn by the caliph, made war on his predecessor "Ali b. Ahmad Asdî and killed him (Tabart, iii. 1886). He was supported by the Khuwâaisy. Cf. the account in Pâshâlini-i gümûsî, Teherân 1909, ii. 27, 34. In the 4th century Jâshîh, p. 186 and Ibn Hawkûl, p. 240 mention the Banî Radînà as a dynasty already forgotten which had reigned over Dâkhkûn (read Djâbarwân). Tâhirî (read Niriz) and Ughnûn al-Ashkariyâ [cf. Ughnûn].

(V. Minoteky)

**AL-NÍṢÁ, the "Women", the title of Sûra 1v. of the Kur‘ân; so-called because in the opening verses the position of women is dealt with; Nóldeke (Geschwicht des Qur’ân, i. 195) thinks that the greater part belongs to the period between the end of the year 3 and the year 5.**

This sûra contains many verses that were abrogated: among the principal we may mention 8–9 abrogated by 12; 10 abrogated by Il. 178; 20 abrogated by xxv. 2; 33 abrogated by xxiv., 60 et al.

It is also one of the most important sûras of the Kur‘ân because many of the precepts formulated in it form the foundations for the Muhammadan laws of marriage.
The site lacks unity, consisting as it does of a collection of verses of different origins and on different subjects. The following is a brief analysis of its contents: the creation of man; consanguinity; the care of orphans; rules for succession; marriage; relations of husband and wife; impediments to marriage; almsgiving; evidences and local homicide; holy war and the art of war; obedience to Allah and the Prophets; punishment of the unbelieving Jews and Christians.

Bibliography: Cf. the art. AL-NASH and add: Tanwiq Dijwaru, Tafsir, Cairo, 25 vol.; Ahmad Ridda, Tafsir al-Madini, Cairo, 9 vols. so far appeared. (MAURICE CHE MOUL)

NISAB. [See ZAKAT.]

NISAN, the seventh month in the Syrian calendar. Its name is taken from the first month of the Jewish religious (seventh of the civil) year with the period of which it roughly coincides. It corresponds to April of the Roman year and like it has 30 days. On the 10th and 23rd Nisar, according to al-Butrus, the two first stations of the moon are on the morning plane (the number of these two stations is first and second; and so it appears that the numbering was established by scholars for whom Nisar was the first month) and the 8th and 16th. At 1300 of the Seleucid era (549 A.D.), according to al-Butrus, the stars of the 28th and 1st stations of the moon rose and those of the 14th and 15th set while the rising and setting of the 28th and 16th stations of the moon took place in Abyr.

Bibliography: al-Butrus, Abu Nasr, ed. Sacheau, p. 60, 70, 347-349; cf. also the references under TAMMUL. (M. PLESSNER

NISH (Serbian Nis), the second largest town in Serbia, the capital of the banate of Morava in the kingdom of Jugos-
slavia, situated 650 feet above sea-level in a fertile plain surrounded by hills, on both sides of the Nisava not far from its junction with the Morava and an important centre of communications by rail and road, and on the international route to Sofia-Istanbul or Salonika-Athens. The larger part of the town with the railway station lies on the left bank, the fortress is on the right. The two parts of the town are connected by four iron bridges (including a railway bridge), cover an area of 11 sq. m. and had in 1931 35,354 inhabitants of whom only 3,776 are Muslims. According to the latest (Dec. 1933) statistics of the Imam-registrar, Nish has 1,082 Muslims in 365 households, chiefly gypsies, while Muslims speaking Serbo-Croatian, Turkish and Albanian form the remainder. These gypsies call themselves Muslims, bear Muslim names, marry with Muslim rites but nevertheless observe at home some of the Serbian Orthodox Church feasts, visit the churches etc. There are a number of offices of the civil and military authorities in the town, including a district shah's court. This court has existed only since Oct. 29, 1929, i.e. since the abolition of the old office of district mufti whose authority till then extended over the whole of Serbia. The authority of the new court extends over a part of that of the older (19 districts) while the remainder are under the kadi of Belgrade. The Muslims of Nish have also a district waqf mufti council (cf. 1, p. 760); a common council (Rashadsko sabor) and a registration office (qanunma). There are said to have been in Nish in 1878, the last Turkish period (1878), only one of which now survives. The second last mosque of which the great minaret is still standing, was destroyed as a result of the great floods of 1896. Nish has also Serbian Orthodox churches and a Roman Catholic church, besides several synagogues. Besides several hospitals it has a Hygienic Institute, two hospitals and a society for popular education. The town is making steady progress. Its whole history shows that Nish has always been an important strategical and commercial centre.

In antiquity Nish (Naisus, Nya, Nissa etc.) belonged at first to the Roman province Moesia Superior and later became the capital of Dardania. Nish's greatest claim to fame is that it was the birthplace of Constantine the Great (306—337) and attained great prosperity in ancient times. The Romans had state munition works here.

In the time of the migrations of the Huns, Nish was taken after a vigorous resistance by Attila (434—453) and destroyed but rebuilt and refortified very soon afterwards by Justinian I (527—565). By the middle of the sixth century the first forces of the Slavs who had entered the Balkan peninsula in their endeavour to found states at the expense of the Byzantine empire appeared before Nish. Nish was thus in the ninth century usually in the hands of the Bulgars and until 1018 it belonged to a Slav state founded in Macedonia in 976 by the emperor Samuel. The Byzantines held it from 1018 to the end of the 11th century, when, after a long and bloody siege, it fell to the Hungarians. In 1072 the Hungarians reached the town on a marauding campaign; in 1096 its inhabitants had to defend themselves in a strenuous battle at the Bridge against the Crusaders in which the latter suffered very heavily, and in 1183 the town was taken by Reza III supported by Nemania, the Serbian prince. A little later, Nemania took Nish and the whole country as far as Servica (Sofia). The town suffered considerably in these troubled times. The Third Crusade (1192) found it almost empty and practically destroyed. In spite of this, Nemania was able to receive the emperor Barbarossa in Nish with great ceremony. From this time on to the Turkish conquest Nish was generally in Serbian hands. In the feudal Turkish chronicles (e.g. Subkakulis, Umil b. Xalt, Aškhabaghadik, Neški [Nisak], Anonymous [Gise]) there is no mention of the taking of Nish: Sa'd al-Din (192—93), Hadiji Khalifa and Ewyia Čelebi, than von. Hammer (G.O.K.3, i, 152) and Laine-Poulle (Turkey, p. 40) on the other hand, assume that it took place in the reign of Murad I in 1777 (1375—1376). The Serbian chronicles however definitely give 1386 and this year, which Gibbons has recently strongly urged as the correct date (The Foundations of the Ottoman Empire, Oxford 1916, p. 163—162), is now generally accepted.

During the Turkish period (1386—1878) Nish had chequered fortunes. In 1443 it was taken by the Christian army under king Vladislas III and John Hunyadi and destroyed. After the fall of Smardenovo in 1459 the Serbian despotate became a Turkish province and Nish was even more securely in Turkish hands. For several days after June 20, 1524 a great fire raged in Nish which would have destroyed it completely if the Ruggerbeg Ahmed Pasha, who was leading an army against Hungary

NISHÂNDJI, secretary of state for the Sultan’s subjugs, chancellor.

The Saljukis and Mamufkus already had special officials for drawing the tuguri, the sultân’s signature.

As their official organization was inherited in almost all its details by the Ottomans this post naturally was included, its holder was called nishânji or tughul. The nishânji held the same rank as the defterars [q.v.] and indeed even preceded them, for we had defterars promoted to nishânji but never a nishânji becoming a defterar. The nishânji was included among the "pillars of the empire" (cîrbân-dârîc). The part which he played varied in course of time. Besides being secretary of state for the imperial tughras (nîzâm) he had originally considerable legislative powers and he was called cumhûc-i bâsma (to distinguish him from the cumhûc proper, i.e. the Şâlah-i-Ìmâm). In his office the texts of the laws were prepared under his supervision. Most of the Ottoman codes of law (bâsma) that have come down to us go back to nishânji. As they had besides the right to approve the contents of documents put before them for the imperial tughras, they had no slight influence on the business of administration.

Of their official career we know that according to the Kâmün-i nâma of Mehmed II they had to be chosen from teachers acquainted with law (mütlevev), apparently because they had to display legislative ability, or from the defterars and ruwm al-bûtûth. As their authority diminished more and more in course of time, so did their influence, and finally they were limited to preparing the tughras. According to Mouradija d’Ohlson (Tableau de l’Empire Ottoman, iii. 373), the nishânjîs received from the state a salary of 6,620 piastres. On their official dress, see v. Hammer, G. Ö. A., viii. 431, according to whom they were red in contrast to the other defterars who were violet.

Bibliography: Cf. the article TUGHRÂ and the references there given; also J. v. Hammer, G. Ö. A., iii. 173; ii. 217, 229; iv. 3; viii. 431; J. v. Hammer, Der Osmanischen Reiches Staatsverfassung und Staatsverwaltung, Vienna 1815, i. 64; ii. 127, 135. (FRANZ BASHINGER)
NISHANDIL [See Diyalaladeh Mustavi Ck-
lehi; Karamanl Mejiem Pagha].
NISHAPUR, the most important of the
four great cities of Khurasan (Nishapur, Marw, Herat and Balkh), one of the great
cities of Iran in the middle ages.
The name goes back to the Persian Nēw-Shāhpūr ("Fair Shāhpūr"); in Armenian it is called Nū-
Shapuh, Arab. Naisabūr, new Pers. Nishapūr, pronounced in the time of Yaqūt:
Nūshapūr, now Nishapur (Noldke, Tabari, p. 39,
note 5; G. Hoffmann, Annales..., p. 61, note 530).
The town occasionally bore the official title
of honour, Irānshahr.
Nishapur was founded by Shāhpūr I, son of
Ardašīr I (Hamza-ī Asfahāni, ed. Gottwaldt, p. 48),
who had slain in this region the Turanian Pahlītāk
(Pālētāk) (Studialettica von Erān, § 13); some authors say
it was not founded till the time of Shāhpūr II
(Tabari, l. 840; al-Thālūthi, ed. Zotenberg, p. 259).
In the wider sense the region of Nishapur
comprised the districts of al-Tabās, Kūshānāst, Nizī,
Bīrūn, Abūzarābār, Djam, Khūshār, Tūs, Zandār-
and Isparān (Yaqūtī, ed. de Goeje, p. 375; cf.
Tabari, l. 388a); it is in the narrower sense
Nishapur which comprised the province of Abāzarābār (Arm.,
Apur ashkar, the district of the Arabo-
Marāqu, Ersāfūrā, p. 74; do., Catalogue of the
Roy. Câpsules of Erānshār, p. 52), which was
in turn divided into 13 Rustākā and 4 Tāstādāb
(names in Ḩa ṣ hā, p. 268; Ibn Ḥ awkal, p. 313;
Ibn Khurādzbijb, p. 24; Yaqūtī, p. 278; Ibn Rūsta, p. 171). The latter were: in the west Rewand
(now Rewand), in the south al-Shāmsī, Pers. Tāk-Ab,
in the east Fūghrashān (now Pōšt-Varzīd) and in the north Māzār (now Māzāl); cf. al-Maḥdiat,
p. 314—321.
In the Rewand hills to the northwest of the town
was one of the three most sacred fire-temples of the
Sūstānūn, that of the fire Hurūtā-Mib (G.
Hoffmann, op. cit., p. 290), Vansjāfīdī II (438—57)
made Nishapur his usual residence.
In the year 30 (651) or 31 (652) the governor of
Bawara, Abū Allāh b. Amīr [q. v.], took Nishapur
(Tabari, l. 3305; Balldīn, p. 404) whose governor
Khurājang (Xwāgıgyev: Marquart, Ersāfūrā, p. 75)
capitulated. The town was then insignificant
and had no garrison. During the fighting between Abī
ta-Mawīyā (36—37 = 659—697) the Arabas
were again driven out of Nishapur by a rising
in Khurasan and Tukhtābārdī (Tabari, l. 3249,
3350; Balldūrī, p. 405; Dinwārī, p. 163).
Perūz III, the son of Vansjāfīdī and of the
daughter of Khurājang of Nishapur, is said to have
lived for a period in Nishapur. Khulaid b. Kāt
davīd revolted against the rebellious town
(Dinwārī, op. cit.). Mawīyā reappointed Abī
Allāh b. Amīr governor of Bawara in 41 (661—662)
and commissioned him to conquer Khurasan
and Sījīṣtān. The latter in 42 (662—663) installed
Kātāt b. al-Hattām al-Salāmī in Nishapur
as governor of Khurasan. Ziyād b. Abī Sufiyān
in 45 (665—666) made Khulaid b. Abī Allāh al-
Hanafi governor of Abāzarābār (Nishapur). Abī
Allāh b. Khāsim rebelled in 683 against the
Umayyads. He fell in 692 at Marw fighting against
Abī-Adīl-Malik, whereupon Umayyad rule was restored
in Khurasan.
The prosperity of the city dates from the time
when Abī-Abābā Abī Allāh b. Tāhir made it
his capital in the third (ninth) century.

The founder of the Šaffārid dynasty, Yaqūtb b.
Al-Lāhī b. Mū’addal, entered Nishapur on the
2nd Shawwal 259 (Aug. 1, 873) and took Mu-
hammad b. Tāhir prisoner (Tabari, iii. 888; Gardizi
in Barthold, Turkestan down to the Mongol Invasion,
p. 217, note 6) but the latter soon regained
his liberty and bade. Only after Yaqūtb’s death was
his brother ‘Amr b. al-Lāhī granted the fiefs of
Khurasan and other districts. Rād b. Harjām
in 882 took Nishapur from him (Tabari, iii. 2039)
and Muhammad b. Tāhir became viceroy of
Khurasan in 885 again; but in 279 (929) ‘Amr was
finally confirmed in office as governor and erected
many buildings there. He finally fell in battle
(590—901) with Ishāk b. Ahmad. The town thus
passed to the Sāmānīs, under whom it attained
its greatest prosperity. It was the residence of the
 governor and commander-in-chief of the province
of Khurasan (nīşāk-alawar).
The Arabian geographers describe Nishapur at
this time as a thickly populated town divided into 42
wards, 1 farākh in length and breadth (al-Iskāhūr,
L. A., p. 542) and consisting of the citadel, the
city proper and an outer suburb in which was
the chief mosque built by the Šaffārid ‘Amr. Beside
it was the public market called al-Mu’askar, the
governor’s palace, a second open place called
Maidān al-Ḥanāmīyn and the prison. The citadel
had two gates and the city four: the Gate of the
Bridge, the Gate on the road from Ma’līk, the
Gate of the Fortres (Bāb al-Khawānzār) and the
Gate of the Taktān Bridge. The suburbs also had
walls with many gates. The best known market
places were al-Murabbašt’al-Kahara (near the Friday
Mosque) and al-Murabbašt’al-Saghāra. The most
important business streets were about fifty
in number and ran across the city in straight lines
intersecting at right angles; all kinds of wares
were on sale in them (on the products and exports
of Nishapur see G. Le Strange, The Lands of the
Eastern Caliphate, p. 429 sq.). Numerous canals
were led from the Wādi Saghāwr, which flowed
down from the village of Buhthanka and drove
70 mills, from whence it passed near the city
and provided the houses with an ample water
supply. Gardens below the city were also watered
in this way. The district of Nishapur was regarded
as the most fertile in Khurasan.
The town suffered many vicissitudes after this
period. A great famine broke out there in 901 (1011).
At the beginning of the 11th century Nishapur was the centre of the pietist Karrām’s led
by the anchorite Abī Bakr Muhammad b. Isābj. 
The Sīdājāl Ṭughrul-Beg occupied the town in 1037
and made it his capital. Alp Arslān also seems to
have lived there (cf. Barhebræus, Cœræs, Syr., ed.
Bedjan, p. 243). In May 1142 the Khwārimon Amīs took the town for a time from the Sīdājāl
Sūlān Sandjār. When it was sacked by the Ghuris
in 548 (1153), the inhabitants fled, mainly to the
suburb of Shādīyāk (al-Shādīyāk) which was
enlarged and fortified by the governor al-Mu’ayyad.
Tughrul-Shāb Abī Bakr ruled the city 1174—1185 and his son Sanjār Shāh 1185—1187.
In May or June 1187 the Khwārimon Amīs took
Nishapur and gave it to his eldest son Malik-
Shīh. At the end of 1193 the latter received Marw
and his brother Kubl al-Dīn Muhammad became
governor of Nishapur. Malik Shīh died in 1197
in the neighbourhood of Nishapur. ‘Abī al-Dīn
Muhammad (as Kubl al-Dīn called himself after
his father's death) took Marw and Nishapur in 1302 from Ghiyath al-Din and his brother Shihab al-Din.

In addition to the wars and rebellions (e.g. 1207—1208) which afflicted the town, it suffered from repeated earthquakes (540 = 1145, 605 = 1208, 679 = 1280). Yakhut who visited it in 613 (1216) but stayed in Shadakhan, still could see the damage done by the first earthquake and by the Ghuze but nevertheless thought the town the finest in Khurasan. The second earthquake was particularly severe; the inhabitants on this occasion fled for several days into the plain below the city.

In 618 (1221) the Mongols under Cughur Khan sacked the town completely, and in 621 of Hostur (1225) Allah Mustawfi (c. 1340) and of Ibn Battuta (c. 1350) it had to some extent recovered. After each earthquake the inhabitants had rebuilt the town on a new site but it never regained its former importance.

According to the Georgian chronicle (transl. by Brosset, Hist. de la Gorgie, i. 472), the Georgian queen Thamar is said to have taken the city of Romgaur between 1210 and 1212; Brosset identifies this with the Mahalla Ramdar mentioned by Yakhut in the district of Nishapur (more probably a suburb of it). Here the patriarchs of Antioch, whose jurisdiction Cuffur Khan sought to extend, were imprisoned in 634 (ed. Schürer in his edition of Eusebius, i. 230, p. 82 sq.) already at this time extended to Khurasan (muqta aṣ-ṣawātir al-mawātum al-Nawr), created about 1053 the cathedral of Dagestan (Dagestan) or Dagestan (Dagestan) is Persia which, in name at least, still existed in 1365 (Brief des österrömisches Patriarchen Petrus III. an Domico von Gramo und Aquileia, ed. by Cornelius Will, Acta et scripta quae de controversia ecclesiae Græc. et Lat. serie XI composita extant, Leipzig and Marburg 1861, p. 212, 97; Neitha Antiochenae, ed. Gietler, in B. Z., i. 427, 28; Neithos Dosapatrios, ed. Parthey in Hieroclis Symmachi de Notitiis geographie episcopatuum, Berlin 1866, p. 271, 97; Acta patriarchatus Constantiopolitani, i. 207, 494—465; Pref. p. x.).

The modern Nishapur is in 56° 20' N. Lat. and 58° 40' East Long. (Greenwich) on the east side of a plain surrounded by hills. To the north and east of the town lies the ridge of Binalid-Khü, which separates it from the valley of Meshhed and Tüs. At its foot spring a number of streams, among them the Shuru River and the river of Divan (Hamd Allah al-Mustawfi) which irrigate the lands of Nishapur and disappear in the salt desert to the west. North of the town in the mountains was the little lake of Ghaghma Sahn out of which, according to al-Masih, run two streams, one to the east and the other to the west. Northwest of Nishapur are the famous turquoise mines (Mudjia: the district is still called Bato-Madam). In the S.E. of the town is found the tomb of her celebrated sons Omar Khayyam and Farid al-Din 'Attar.

A history of the 'alam of Nishapur was completed in 3 volumes by Hikim Abd al-Malik al-Bajri. 1145 (a. 1041); it was used by Yakhut and Haji Khali (ed. Flugel, ii. 155 sq.) and continued by 'Abd al-Ghaffar ibn al-Islam al-Attar down to the year 518. Al-Djahabi produced an abbreviated version of al-Bajri's work.

THE ENCYCLOPEDIA OF ISLAM, III.
Further the niya must immediately precede the act, lest it should lose its character and become "simple decision" (tsam). It must accompany the act until the end (Abū Isḥāq al-Shīrāzī, Tirmidhī, ed. Jayyosh, p. 3). Its seat is the heart, the central organ of intellect and attention. Lunatics, therefore, cannot pronounce a valid niya.

So the niya has become a legal act of its own. It is usually called obligatory, but in some cases, e.g., the washing of the dead, commendable. It can even be asked what the intention of the niya is. According to al-Bārūqī (1357), four conditions must be fulfilled in a niya: who pronounces it, must be Muslim, camplu mutan, well acquainted with the task he wants to perform, and having the purpose to perform this act. In some instances, "几乎所有" is used, where the later language has 무소 (e.g., Nashī, Shāfī, p. 68; Tirmidhī, Sunnah, p. 33).

The term does not occur in the Qur'ān. It is found in canonical hadith, but the passages show that it has not yet acquired in this literature the technical meaning and limitation described above. The development of this technical use appears to have taken place gradually, probably aided by Jewish influence. In Jewish law the ḫimmaḥ has a function wholly analogous to the niya. Al-Ḥanāfī (†304 = 820) appears to be acquainted with the niya in its technical sense (Khitah al-Umm). In canonical hadith, e.g., the term which generally speaking, reflects the state of things up to the middle of the eighth century A.D. — neither the verb "nīyā" nor the noun: niya appear to have any special technical connection with the ḫimmaḥ. On the contrary, niya has here the common meaning of intention.

In this sense it is of great importance. Bukhārī opens his collection with a tradition, which in this place is apparently meant as a motto. It runs: "Works are in their intention only." (ismama tāwālib ʿān nīyā ʿāti bawāt). This tradition occurs frequently in the canonical collections. It constitutes a religious and moral criterion superior to that of the law. The value of an "āmīn" even if performed in complete accordance with the precepts of the law, depends upon the intention of the performer, and if this intention should be sinful, the work would be valueless. "For," adds the tradition just mentioned, "every man receives only what he has intended:" or his wages shall be in accordance with his intention" (Māliki, Dhālinik, tr. 36). In answer to the question how long the ʿāmīn is open, tradition says: "There is no ʿāmīn after the capture of Mecca, only holy war and intention." (Bukhārī, Momma: Al-ʿAmrī, b. 451; Dāin, b. 1, 277; Muslim, Ṣahih, tr. 85, 86 etc.). This higher criterion, once admitted, may suspend the law in several cases (cf. Snouck Hurgrono, Islam en Paganisme, in T.E.O.K.W., xvi. 393 sqq.; Verrass. Geschriften, ii. 419 sqq.).

So the intention, in this sense, becomes a work of its own, just as the intention in its legal application. Good intention is taken into account by Allāh, even if not manifested outwardly: it elevates the value of the work. On the other hand, refraining from an evil intention is reckoned as a good work (Bukhārī, Ṣahij, p. 31). In this connection the (post-canonical) tradition can be understood, according to which the intention of the faithful is better than his work (Lūqū al-ʿArāf, xx. 223 ; cf. Ghazālī, Ṣādī, iv. 350 sqq., where this tradition...
is discussed). In similar instances niya comes near to the meaning of "deception" [q. v.].

NIYAZI, an Ottoman poet and mystic.

Shams al-Din Mehemmed known as Miyr Efendi, Shaikh Mii, whose maktaba was Niyazi, came from Aspiut, the former summer capital of Malta (cf. Evelyn Celebi, iv, 15; v. Moltke, Reisbriefe, p. 349), where his father was a Nakhshbandi dervish. He was born in 1027 (1617—1618). The statement occasionally found that Soghasuli his birthplace is not correct. His father instructed him in the teaching of the order, then he went in 1048 (1638) to Diyarbakir, later to Mardin where he studied for three years and finally to Cairo. There he joined the Kamal ad-Din order, travelled for seven years and finally settled down in the Anatolian village of Elma, once notorious as a centre of heresy, to devote himself to study under the famous Khatwani Shaikh Umm-I Sunit (d. 1066 = 1658). He stayed with him for twelve years until he was sent by the Shaikh as his deputy to Usbahan near Smyrna. After the death of his master he moved to Brusa where a pious citizen, Abdal-Celebi, built a hermitage for him. The fame of his sanctity and his gifts of prophecy spread more and more and finally reached the ears of the grandvizier Kopriili-i Ahmad Pasha, who invited him to Adrianopol, entertained him with great honour for 40 days and sent him back to Brusa. When in 1052 (1642) the army set out for Demery and in Fodola [q. v.], he was summoned to Adrianopol where he had great audiences as a preacher. As he had allowed himself to drop obscure allusions (belwiti-i dzifrei) he gave nephews and be was banished to Lemnos. There he spent some years in exile until he received permission to return to Brusa. The fact that during his stay on the island it was spared Venetian attacks was interpreted as a miracle wrought by this holy man. But when he stirred up the people by "kabbalistic" preaching he was again banished to Lemnos in 1058 (May 1647). All kinds of prophecies which he was fulfilled. Neither the oracle that his coming had been foretold by Ibn al-'Arabi [q. v.] nor the statement of his reputation as a holy man and miracle-worker. He spent ten years on Lemnos until in 1101 (1698) the vizier Kopriilia-i Miyr Efendi Pasha allowed him to return to Brusa. In the next year he was summoned to Adrianopol; he again excited the people by political utterances and mystical allusions so that the Karamanli Oghuz Pasha had him taken with all respect by a guard of Janissaries and Cawashes out of the mosque and sent directly via Gallipoli to Brusa. From there he was again banished to Lemnos but died on the 20th Rajab 1105 (March 17, 1694). The date 1111 (1699) given by A. V. Hammer, G. O. D., iii, 388 must therefore be wrong.

Unfortunately the contemporary notices give no information about the nature of the sermons by Niyazi which gave offence from the political as well as religious point of view. The historian Cemet Karatuv said Niyazi was secretly a Christian. His doctrine, in Arabic and Turkish, does not justify this suggestion although the poem declared by W. Hammer (G. O. D., iii, 35) is apparently apocryphal, given in translation by Kamal, is really taken from his Dava, as Gibb, H. O. E., iii, 315 has proved. No study has yet been made of the Dava of Niyazi's position in the religious life of Turkey generally.

The order founded by Niyazi once possessed several monasteries on Greek soil, in Morone, Negroponte (Efighfo), Sounikli, Mytilene, also in Adrianopole, Brusa and Smyrna. Cf. thereon the study by V. A. Cordelievsky, Tarih mutliy Niyazi, in Dieholyk Anatolik Nauk S. S. E., 1929, p. 153—160.

The main source for the history of Niyazi's life and work is the rare Turkish treatise of Morali- salei Lufi (= Mutafa Lufiuh), Tarih deft-i Niyazi iis Mutafa-i Niyazi, published at Brusa in 1308 (1890—1891).

NIYAZI AL-DIN AHMED B. MUSAHMAD MUHMMAD AL-HAWARI, a Persian historian, author of the celebrated Tahzib-i Akhbari-i. He was a descendant of the famous Shaikh of Harir, 'Abd Allah Anis. His father Khashi Muhammar Harawi, a major-domo to Sultan Batur (1526—1530) and later a vizier to the governor of Gudjarat, Mirz Sahkarl, Niyazi al-Din himself held several high military offices under the Great Moghul Akbar and became in 1585 Bakshiti of Gudjarat and in 1593 even Bakshiti of the whole empire. According to Buda'uni (i. 397), he died on the 25th Safar 1003 (Oct. 18, 1594) aged 45. At his father's instigation he took up historical studies while quite a boy. His fondness for this subject increased as time went on and induced him to try writing himself. The lack of a complete history of India made him decide to fill the gap and thus arose
his celebrated work, called the *Tuhfet-i Akbarshah* or *Tahfib-i Akbar* (Tuhfet-i Nizam) which was finished in 1000 (1688). Nizam al-Din used 227 diverse sources for this work, all of which he mentions by name and in this way produced a very thorough piece of work on which all his successors have relied. He deals with the history of India from the campaigns of Babur to 1597-98 to the 50th year of Akbar’s reign (1593). The work is divided into 12 books which deal with the Ghurids and nine turbans: 1. the Sultanates of Delhi from the Moguls to Akbar (571-1002 = 1176-1594); at the end of this part is biographical information of famous men at Akbar’s court, sultans, “slaves,” poets, writers and artists; 2. the rulers of the Deccan (749-1300 = 1350-1504); 3. the Baniats, Nizam al-Mulk, Adilshah and Khoja al-Mulk; 4. the rulers of the Chishtis (794-816 = 1364-1386); 5. the Mongols (732-1273 = 1303-1392); 6. the Turkomans (749-1300 = 1350-1504); 7. the Ottomans (749-1300 = 1350-1504); 8. the rulers of Bengal (749-1300 = 1350-1504); 9. the rulers of the Chishtis (794-816 = 1364-1386); 10. the rulers of Sind from the Arab conquest (867 to 1000; 11. the history of Multan (847-1300 = 1397-1545). The whole work was designed to be a history and a topographical description of India but it was apparently never finished by the author.

**NIZAM AL-DIN AWLYE** whose real name was MUHAMMAD b. AHMAD b. ALI BUKHARI AL-BADAYI’I was born at Badayi’ in 636 (1238). He studied elementary Arabic literature with Mawla’IYA b. al-Ujaili al-Badayi’ and then went to Delhi and became a pupil of Shams al-Mulk and Mawla’IYAH of al-Din of Badayi’. Later on, he went on, on the 15th Rabia 655 (July 29, 1257), to Baghdad where he became a devoted disciple of Shahrzad al-Din Musa’i al-Shakar (decl. 642 = 1245), whom he nominated as his Khalifa or spiritual successor in 656 (1257). Some years later he was called to reside in an adjoining village (Ghribipir which is now called *Nizam al-Din Awlye khat to* where he died in 725 (1325). He is regarded as one of the most celebrated saints of India and he is popularly known as *Sultan al-Awlye* "the king of the saints" and Mawla’IYAH "the beloved of God". He was as proficient in mysticism as he was in *Haddith* (Traditions), *Tafsir* (Commentary on the Qur’an) and literature. His tomb is visited by innumerable Muhaamadians from all parts of the country during the month of "Urs" (anniversary of his death). His *works* are the following: *Fawaid al-Faith*; *utterances of the saints* taken down from his lips by Hasan ‘Ali Sandhari (cf. Rieu, Cat. Brit. Mus., p. 972; H. B. Khalifa, ir. 475); *Khawaf al-Mukhibbon* and *discourses of the saint* uttered in several mysterious settings during the year 659 and 660 A.H. and taken down by one of his disciples (cf. Rieu, Persian Cat. Brit. Mus., p. 973).

**NIZAM AL-MULK**, *Ali b. Ali b. ‘Ali al-Badr*, the celebrated minister of the Sultan of the Saljukid sultans Alp Arslan [q.v.] and Malik Shah [q.v.]. According to most authorities, he was born on Friday 21 Dhu ‘l-Qa‘da 405 (April 10, 1018), though the sixteenth century Turki S serif, which alone supplies us with detailed information about his family, places his birth in 410 (1019-1020). His place of birth was Radakan, a village in the neighbourhood of Tash, of which his father was revenue agent on behalf of the Ghurids government. Little is known of his early life. The Waqifs (a) (for a discussion of the credibility of which see J. R. A. S., Oct. 1931: "The Sar-i-Qubad-Silayidin, etc.") contains several anecdotes of his childhood, and is also responsible for the statement that he became a pupil in Nishapur of a well known Shafi’i doctor Hibat Allah al-Muwafaq. On the defeat of Mas’ud of Ghur at Dandanikan in 431 (1040), when most of Khusraw fell into the hands of the Saljukids, Nizam’s father Ali fled from Tush to Khowarjird in his native Baluchistan, and then made his way to Ghuristan. Nizam accompanied him, and while in Ghuristan purchased a post in a government office. Within three or four years, however, he left the Ghurid government service, first attaching himself to Caghti-beq’s [q.v.] commandant in Balkh (which had fallen to a Saljukid force in 452 (1041-1042)), and later, probably about 455 (1053-1054), moving to Caghti’s own headquarters at Merv. It seems to have been now, or soon after, that he first entered the service of Alp Arslan (then acting as his father’s lieutenant in eastern Khusraw) under his warm, Ali b. ‘Ali b. Shadi. And he so far won Alp Arslan’s regard as to be appointed waiz in his steed (then, probably, receiving his best-known *fakhs*). During the period between the death of Caghti-beq in 451 (1059), and that of Tughlat-beq in 455 (1063), therefore, Nizam had the administration of all Khusraw in his hands. The fame he thereby acquired, and the fact that by now Alp Arslan was firmly attached to him, played a considerable part in prompting Tughlat-beq’s waiz al-Kamurti, first, before his master’s death, to scheme for the throne to pass to Caghti’s youngest son Saladin, and then, after it, to do his utmost to prevent Alp Arslan’s succession. For he calculated that Alp Arslan, on becoming sultan, would retain Nizam rather than himself in office. Alp-Kamurti, who
soon found himself too weak to oppose Alp Arslan, and therefore sought to retrieve his position by acknowledging his claim, was retained in his post on the new sultan's first entry into Rusiy. But a month later Alp Arslan suddenly dismissed him and handed over affairs to Nişâm. Al-Kundur was shortly afterwards banished to Musr al-issued, where ten months later he was beheaded. His execution was undoubtedly due to Nişâm, whose fears he had aroused by appealing for help to Alp Arslan's wife.

During Alp Arslan's reign Nişâm accompanied him on all his campaigns and journeys, which were almost uninterrupted. He was not present, however, at the famous battle of Minâk bird, having been sent ahead with the heavy baggage to Persia. On the other hand, Nişâm sometimes undertook military operations on his own, as in the case of the reduction of Iṣâqī's citadel in 459 (1067). Whose, his or Alp Arslan's, was the directing mind in matters of policy it is hard to determine. Its main points, however, appear to have been the following: first, the employment of the larger numbers of Târākkuma that had immigrated to Persia as a result of the Sâlûqîd successes, in raids outside the Ėsâr al-Sâlûq in into Fīstân territory; hence the apparently strange circumstance that Alp Arslan's first enterprise after his accession, despite the precarious condition of the empire he had inherited, was a campaign in Georgia and Armenia; secondly, a demonstration that the sultan's force was both irresistible and mobile, coupled with clemency and generally reinstate, for all rebels that should submit; thirdly, the maintenance of local rulers, Şî's as well as Sunn, in their positions as vassals of the sultan, together with the employment of members of the Sâlûqîd family as provincial governors; fourthly, the obtivation of a dispute over the succession by the appointment and public acknowledgment of Malikshâh, though he was not the sultan's eldest son, as his heir; and finally the establishment of good relations with the 'Abbasid caliph al-Kâ'im [q.v.], as the sultan's nominal overlord.

Nişâm al-Mulk did not really come into his own until after the assassination of Alp Arslan in 465 (1072). But thenceforth, for the next twenty years, he was the real ruler of the Sâlûqîd empire. He succeeded from the outset in completely dominating the then eighteen-year-old Malikshâh, being assisted in this purpose by the death of Qâwardbeg, the sultan's attempt to secure the throne for himself (for which service Nişâm received the title ēhast-deg [q.v.], thus bestowed for the first time). Indeed in one aspect the history of the reign resolves itself into repeated attempts by the young sultan to assert himself, always in vain.

Malikshâh undertook fewer campaigns and tours than his father, the prestige of the Sâlûqîd arms now being such that few would risk rebellion, and warlike operations being left largely to the sultan's lieutenants, as they had not been under Alp Arslan. Nevertheless, from Iṣâqī, which had by now become the sultan's normal place of residence, Malikshâh was the greater part of his empire accompanied by Nişâm.

Policy continued on the same lines under Malikshâh as under his father. Nişâm, however, was notably less tender than Alp Arslan had been to inordinate members of the Sâlûqîd family, insisting at the outset on the execution of Qâward, and, later, on the binding and imprisonment of Malikshâh's brother Takht.

Nişâm also reversed during the earlier part of Malikshâh's reign the conciliatory policy originally pursued under Alp Arslan towards the caliph. He had been rewarded for the friendly attitude he first evinced—which formed a welcome contrast to that of Al-Kundur—by the receipt from al-Kâ'im of two new ēkāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāāαι.
The celebrity of Niẓām al-Mulk is due to the fact that he was in all but name a monarch, and ruled his empire with striking success. It was not his aim to innovate. On the contrary, it was to model the new state as closely as possible on that of the Ghurids, in which he had been born and brought up. His position was similar to that of his forerunners, the Barmakids (q.v.), and the notable Būyid waqf (sunūl) to ʿAbbasid (q.v.). All three may be said to have represented the old Persian civilization (progressively Islamicized, of course) in the face of a new empire of barbarism conquerors, Arab, Dailami and now Türkmen. The monarchs were in each case equalled, if not surpassed, by their warirs, and most of all in the case of Niẓām al-Mulk. For with him the invaders aspired to an emperor's position whilst still quite unacclimatized to their new habitat, so that his superiority in culture was the more marked (cf. Barthold, Turkhistan, p. 308). But in revenge the Saldājkīyids' lack of acclimatization stood in the way of a complete realization by Niẓām al-Mulk of the now traditional Farsī-Muslim state. Hence the lamentations that recur in the Sīyāṣet-Nāṣaʿ.

The Sīyāṣet-Nāṣaʿ, written by Niẓām in 484 (1091), with the addition of eleven chapters in the following year, is in a sense a survey of what he had failed to accomplish. It scarcely touches upon the organisation of the dīwān, for instance, partly, it is true, because the book was intended as a monarch's primer, but also because Niẓām, having absolute control of the dīwān, as opposed to the dārgāh (cf. again Barthold, p. 237), had succeeded, with the assistance of his two principal coadjutors, the muqtaṣar ʿAbbas al-Mulk and the muqtaṣarī Kamāl al-Dawla, in exactly modelling this, his special department, on traditional lines. Of the dārgāh, on the other hand, Niẓām complains that the sultāns failed to maintain a sufficient majesty. They were neither magnificent (though he approves their daily free provision of food), formal, nor awe-inspiring enough. At their court, accordingly, the formerly important offices of ḥāfiz, muḥtār and muwāt-ī ābdar had declined in prestige. Nor, as had his model potentes, would they maintain a sound intelligence service, whereby corruption might be revealed and rebellion forestalled. The Sīyāṣet-Nāṣaʿ consists in all of fifty chapters, of advice illustrated by historical anecdotes. The last eleven chapters, added shortly before the waqf's assassination, deal with dangers that threatened the empire at the time of writing, in particular from the Isamīkīs (for a review of the work see Browne, A Literary History of Persia, ii. 210—217).

Niẓām's situation resembled that of the Būyid administrators in another respect. He was faced, as they had been, with the problem of supporting a largely tribal army, and solved it likewise by a partial abandonment of the traditional tax-farming system of revenue collection for that of the ṣafāʾ, or ṣef (q.v.), whereby military commanders supported themselves and their troops on the yield of lands allotted to them. Since in the decay of the Ṣafāʾi power provincial ābdar had tended to assume the originally distinct and profitable office of ṣef, the way for this development had been paved. The Būyids had later attempted to revive the older system; but the establishment of numerous local minor dynasties had favoured the new. Niẓām now systematized it in the larger field open to him. In the Sīyāṣet Nāṣaʿ he insists, however, on the necessity of limiting the rights of ābdar-holders to the collection of fixed dues, and of setting a short time-limit to their tenures (see on this subject Becker, Staatliche und Lehnswesen, in Isl., v.).

In the absence of the intelligence service he desired, Niẓām contrived to intimate potential rebels and suppress local tyranny by a judicious display of the might and mobility of the Saldājkīyids. He also insisted on the periodic appearance at court of local dynasts such as the Māśadīdīs ([q.v.]) and ʿOyūsidīs (q.v.), and proclaimed the sultān's apprentices to appeals for the redress of wrongs by means of notions circulated throughout the empire and exposed in public places (see al-Mufarrakhī, Muḥammad-i ʿIbrāhīm). He also gained the powerful support of the Ḥusainīs, especially those of the Shāhī school, of which he was an ardent champion, by the institution of innumerable pious foundations, in particular of muqāms, the most celebrated being the Niẓām-ya of Baghdad (opened 459 = 1067), the earliest west of Khurāsān; by the general abolition of muqāms (taxe, sanctioned by the shaykh) in 479 (1086—87); and by the strikingly extensive public works particularly in connection with the Ḥudābī. After the Ḥudābī had returned to Fāṭimid to ʿAbbasid allegiance in 488 (1076), he exalted himself to make the Ḥudābat road safe from brigandage for pilgrims, as well as to diminish their expenses; and from the next year until that of his death the journey was accomplished without mishap. It was not until the second half of Malikshāh's reign that the full effects of Niẓām's achievement made themselves felt. By 476 (1085—86) however, such were the unwanted security of the roads and the low cost of living that reference is made to them in the annals.

Niẓām al-Mulk was naturally much sought after as a patron. The poet al-Maʿrūfī (q.v.) accedes of him having "no great opinion of poetry because he had no skill in it", and of paying "no attention to anyone but religious leaders and mystics" (see ʿAbū ʿAbd Allāh, al-Farʿaḥ, p. 46). But though his charity, which was profuse (see for example al-Sukkī, il. 41), went in large measure to men of religion — among them the most notable objects of his patronage being Abū Ishāk al-Shirāzī (q.v.) and al-ʿAzāzī (q.v.), he was clearly a sixth patron also of poets, as is testified by the Dammār al-Kifār of al-Balāghī (q.v.), the greater part of which is devoted to his panegyrics. In another sphere, the inauguration of the Dālīlī calendar ([q.v.]) in 466 (1074) was probably due to his encouragement, since at this time his ascendency over Malikshāh was at its most complete.

For the first seven years of Malikshāh's reign Niẓām's authority went unopposed unchallenged. In 472 (1079—80), however, two Turkish officers of the court instigated Malikshāh into killing a protégé of the waqf, and in 473 (1080—81), again, the sultān insisted on disbanding a contingent of Armenian mercenaries against Niẓām's advice. Malikshāh now began to hope, indeed, for the overthrow of his mentor, showing extraordinary favour to officials such as Ibn Bahmānīr and, later, Sāliḥ al-Rudāʾīs, who were bold enough to criticise him. Ibn Bahmānīr went so far as to attempt the waqf's assassination (also 473)
whereas Saiyid al-Ru'asāl/contented himself with words. But in each case Niẓām was warned; and the culprits were imprisoned. In the case of Ibn Bahamayyār, in whose guilt a court jester named Dīja' al-Farq also implicated, Malikshāh retaliated by committing the murder of Niẓām's eldest son Dīja' al-Mulk, who had taken Dīja' al-Farq's execution into his own hands (475 = 1082). After the fall of Saiyid al-Ru'asāl in 476 (1083 - 1084), however, the sultan left plotting till some years later, a new favourite, Tādji al-Mulk, caught his fancy.

All went well with Niẓām al-Mulk till 483 (1090 - 1091). In that year, however, occurred the first serious challenge to the Saljūqid power, when al-Andalus was sacked by a force of Karmațians; and almost simultaneously their co-secretary, the Assassin leader al-Hasan b. al-Sabbāḥ (q.v.) obtained possession of the fortress of Alarnut, from which repeated attacks failed to dislodge him. Meanwhile, moreover, an awkward problem had arisen over the succession to the sultānate, on account of the death in turn of Malikshāh's two eldest sons, Dīja' (474 = 1082) and Almād (481 = 1088). These sons had both been children of the Karkhpānī princess Terken Khātūn (see Lāmnī al-Tuwmārīb), who had borne the sultan a third son, Maḥmid, in 480 (1087). She was eager for Maḥmid to be formally declared heir. Niẓām, however, was in favour of Bārkiyārūk (q.v.), Malikshāh's eldest surviving son by a Saljūqid princess. Hence Terken became his bitter enemy, and joined with Tādji al-Mulk, who was in her service, in instigating Malikshāh against the ważir.

Tādji al-Mulk accused Niẓām to the sultan, who by this time was in any case incensed with the waste's championship of al-Muṣṭānī, of extravagant expenditure on the army and on festivities; and Malikshāh's wrath was finally inflamed beyond bearing by an unguarded reply made by Niẓām to a formal accusation of these practices. But even so he did not dare to dismiss him. (The earliest historian to assert that he was dismissed is Rāshīd al-Dīn Faḍl Allāh, who appears to have misunderstood the purport of some verses by al-Naŷīb quoted in the Aṣbaḥ al-Sūfīrīn, and really composed after Niẓām's death).

Niẓām al-Mulk was assassinated on 10th Ramaţān 485 (October 14, 1092) near Siğna, between Kangawai and Biştana, as the court was on its way from Iṣlanîn to Raḫdūd. His murderer, who was disguised as a Šāfi'i, was immediately killed, but is generally thought to have been an emissary of al-Hasan b. al-Sabbāh. Contemporaries, however, seem to have put the murder down to Malikshāh, who died suddenly less than a month later, and to Tādji al-Mulk, whom Niẓām's retainers duly tracked down and killed within a year. And Rāshīd al-Dīn combines the two theories, stating that the ważir's enemies at court concerted it with the Assassins. The truth is therefore uncertain; but as Rāshīd al-Dīn is one of the earliest historians to whom the Assassin records were available, his account would seem to deserve attention.

The extraordinary influence of Niẓām al-Mulk is attested by the part played in affairs after his death by his relatives, despite the fact that only two appeared to have displayed much ability. For the next sixty years, except for a gap between 517 (1123) and 528 (1134), members of his family held office under princes of the Saljūqid house.

---

Of Niẓām's family Diya' al-Mulk is remarkable as being his son by a Gevāni princess, either the daughter or the niece of Bagrat I, formerly married, or at least betrothed, to Alp Arslān, after the campaign of 456 (1064).

(HAROLD BOWEN.)

NIýAZ BADÁKHSHÍ, a religious and political leader under Mawíkání 'Abd al-DÚn Ibíh and under his successor Mu'allam Ùsá in his native land Badákhshán and was looked upon as one of the most learned men of his age. He was also the murid (disciple) of Sháhíz Huáin of Khwáizir. His attainments procured him access to the court of Sulaimán, king of Badakhshán, who conferred upon him the title of Khát Khán. Subsequently he left his master and went to India. At Khánbád, he was introduced to the Emperor Akbar (1556-1605). He received several presents, and was appointed a Persian writer. Akbar soon discovered in him a man of great insight, and made him a "Commander of One Thousand" (Bahá Shaúyá). He also bestowed upon him the title of Ghán Khán after he had distinguished himself in several expeditions. He died in Oudú at the age of seventy in 1593 (1584). He is the author of the following works: 1. Hajísháy Sháhíz Abú'ábd, a commentary on the Taftásh-Nama of the Sháhíz; 2. several treatises on Súfísm.

(M. HÍDÁYET HOÁIN.)

NIýAZ ÙJDÉDÁ, new decree, the formers of Selím III. Sulímí Selím III [q.v.], recognizing the necessity of a thorough reorganization in certain departments of state, promulgated in 1797 under the name of Níyáz-ì Ùjdédá, i.e. new decree, a series of measures for the reform of the feudal military system, the admiralty, the artillery and the navy, and a "vázirárn ordinance for the governors of provinces, a law dealing with provincial taxation, another for the creation of a body of infantry raised and drilled on western lines, and lastly the institution of a special military fund from new sources of revenue, to provide the funds for the reforms. These revenues consisted of taxes on henna, tobacco, coffee, silk, wool, sheep and the yields of the fields of holders of timar [q.v.] in Anatolia, who had neglected their duty in war and were therefore deprived of their fiefs. It was intended that the new body of infantry, niýázn-ì Ùjdédá, should number 12,000. To begin

with a model battalion of 1,600 men was raised, to be composed of volunteers. This body was formed of young men of different nationalities and religions, mostly Austrian or Russian deserters collected during the war with Russia. The result was that the force enjoyed little prestige and native Turks only joined it in small numbers, with the consequence that this corps, popularly called bar wašá, consisted of only a few hundred men and was unable to attain to the strength of a battalion (1,600) until 1799. The Sulímí's force trained and armed on European lines was limited to this body. The Sulímí employed foreign officers, mainly from England, Sweden and Spain, to train the soldiers and see to the management of the arsenals, shipbuilding and fortifications. Large barracks and ammunition depots were built. The new revenue earmarked for military purposes which by 1797-1798 amounted to 60,000 rupees, i.e. 48,000,000 francs (cf. Djevdet, Ùjdédá, viii. 139 sq.), supplied the necessary funds. Internal difficulties, especially the ever increasing number of opponents of reform, prevented the Sulímí from completely realising his plans. The name Niýáz-ì Ùjdédá became more and more hateable to the military and political classes. His successor, Selím II, decided to abolish it altogether and to call the corps of regular troops Se'men or Seğan, i.e. "kómém-lmen". So Selim's deposition was disbanded. Under his successor Mustáfa [q.v.], the attempt was made to revive the niýázn-ì Ùjdédá. The Austrian renegade Sulaimán Ághá who had previously commanded the division quartered in Lewend Ciffík was ordered to reconstitute it again secretly, but this effort met with no permanent success (cf. Zinken, G.O.R., vii. 552 sq.).

(ERNEST BAHNIDER)

NIýAZ ÙSHÁ, title assumed in 895 (1490) by Malek Abúmád Básír, founder of the Niýáz Ùshá state of Ahmadnagar [q.v.], one of the five independent sultanates which arose out of the ruins of the Bahamán kingdom of the Dákhán towards the end of the fifteenth century. For a chronological list and genealogical table of these kings of Ahmadnagar see Cambridge History of India, ii. 704-705; also Zambur, Manuel, p. 298-299.

The second ruler, Burhán Niýáz Ùshá I (914-960 = 1509-1533), adopted, in 1537, the Sháhí's form of Islam which, except for a brief period under Ùnsí when the Maháwíns were in power, became the established religion of this kingdom. During Burhán's reign an unsuccessful attempt was made by the anti-Dákhán rebels, among them the Foreigners, to place his brother, Rájjíd, upon the throne. The flight of the defeated rebel to Berá, combined with the refusal of 'Abd al-DÚn Ùmád Ùshá to surrender Fateh, the home of Burhán's Brahman ancestors, led to war with Berá and to the capture of Fateh. It was a dispute as to the possession of Sholípur, the chief base of contention between Ahmadnagar and the neighbouring kingdom of Bijápur, that caused Burhán to adopt the disastrous policy of joining forces with Súrábírâíyá of Vijaynagar, as a result of which the Hindu monarch was able to annex the Ráj, the base of his dominions, while Burhán was successful in capturing the fortress of Sholípur.
Barhaan was succeeded, after a period of civil warfare, by his son Husain who reigned until 972 (1565). His reign, however, is of outstanding importance in the history of the Dakhân; for it was at this time that the Muslim rulers of this area, with the exception of Bârî, irritated by the overwhelming insolence of Sâdghâr-wân and realizing the strength of the Hindu menace in the south, combined to crush the military power of Vîjaya-nagar at the battle of Tâlîkot (972 = 1565).

In the same year Husain was gathered to his fathers and his son, Murîdâ, Nizâm Shâh I (972-996), signed in his youth to Murdâ, called Diwânâ or Murdâ and neglected the affairs of his kingdom for a life of dissipation, the real power being in the hands of his ministers. An unsuccessful attempt was made during this reign to drive the Portuguese out of India, but the effort came too late for, during the critical years when the Portuguese had been establishing themselves along the coast, the forces which might have united to hurl the invaders into the sea had been engaged in inglorious internecine conflicts. The most important event in this reign was the annexation of Bîr, in 982 (1574). The subsequent history of this dynasty, until the Mujlâ invasions of the Dakhân, is unimportant. Full details will be found in the pages of Firûzâ, the contemporary chronicle. Despite the heroic efforts of the dawar贵族, Când Bibê, the imperial forces conquered Almûnâr in 1602. Nevertheless, it cannot be said that the incorporation of the Nizâm Shâh dominions in the Mujlâ Empire was effective under Akbar. All attempts by his successor Dârânâ to complete his father's policy were frustrated by the organizing ability of Malik Ambar, an able Abyssinian miestor, who was in charge of the affairs of Almûnâr until his death in 1635 (1696). It was not until 1642 (1693) in the reign of Shahjâhân that this kingdom was finally annexed, although for some years afterwards the Marâtha leaâr Shâhjâhân attempted to recapture the Nizâm Shâh dynasty.

NIZAMI, Nizâm al-Dîn Aâtî Muhammad Ilîyâ b. Yûsuf, one of the greatest poets of Peria. He was born in Gûlgis, the later Elîsevâtîl in 535 (1140-1141). His parents died while he was still quite young so that the education of the boy and of his brother had to be undertaken by his uncle. From Nizâm's poems, it is apparent that his uncle very soon followed his parents to the grave. Nevertheless the two boys succeeded in getting an excellent education, for Nizâm's brother, who wrote under the pen-name of Kûsîm Mafjûrî, attained a very high skill as a writer of ghâzîs (an ingenious ghâzî by him is given in Harem, Lit. Hist. of Peria, II, 47 cp.). Nizâm was thrice married and had a son named Muhammad. The poet was interested in Sûfî, and studied in Sûfî circles under a certain Shahîd Albî Pârîghî Râshôtî. Nothing more is known about his career and it may be presumed that Nizâm was relatively unfavorable, as he says himself, that he avoided the Court of princes' courts and had a strictly ascetic conception of life. Nevertheless all his great poems are dedicated to rulers of his time and, for one of them he even received the reins of the village of Hâmûnîyîn but it yielded him very little, he tells us. He died in 599 (1198-1199) aged 63/4, Dâlîvlâshgâh gives the date of his death as 376 (1180-1181), which is however impossible as three of his poems were written after this year; this is probably an instance of the usual carelessness of this writer.

Nizâm's great work is his Khamsa or Quintet, a collection of five great epic poems, with different subjects. It is very possible that these poems were not collected under one title by the author himself, as all the 25 poems, 23 years after Nizâm's death does not yet seem to have been collected whole, although he himself states very highly and was perfectly acquainted with it. The Khamsa consists of the following parts: 1. Mâhànân al-Athr (561 = 1165-1166) dedicated to Ilîgîrâ, Attâbîk of Aghârîbâdîjân. It is a didactic poem strongly permeated by the spirit of Sûfîm. The principles inculcated are expounded by the insertion of short stories. In spite of a certain prosiness, the work is characterized by certain passages of remarkable beauty (e.g. chap. 5 "On old age") and played a prominent part in the history of Persian didactic poetry 2. Khosrow u-Shirín (574 = 1175-1176) dedicated to the king and queen of Ilîgîrâ, Muhammad and Kâsîl Aûsalân; unlike the first poem, this is a romantic epic poem, based on historical incidents dealing with the story of the Sâsînian Khosrow Parwîz and concluding in parts with the corresponding sections of the Shâh-nâmêm. The heroic element however here falls into the background to give free play to the romantic; and to a penetrating psychological analysis. 3. Lâlî (or as now pronounced Lalî) u-Muqarrâm (584 = 1188-1189) dedicated to the Shirwânîsh Aghâzân Mûsâfîr. The subject was adopted at the request of the Shirwânîsh. Nizâm was by no means satisfied with this choice; the love-story of the Bedouin poet Kair al-Aqîâm, known as Muqarrâm [q. v.], seemed to him "like the Arabian desert." Yet it is this very poem that is his greatest work, for it was an astonishing success and stimulated countless imitations, among them some of the pearls of Oriental poetry, such as the work of the same name of the Aghâhârîbîdîjân poet Fûlûn. Here the heroic style is completely dropped and we have a simple love-story, only occasionally interrupted by the clash of arms. 4. Shûhâr or (fâshâr) al-nâmeh (587 = 1191) divided into two parts, which are known as Shûhâr-nâmeh or Shûhây-nâmeh and Khâvân-nâmeh (or Shûhâr-nâmeh-ye bârî and Shûhâr-nâmeh-ye baxr). The first version of the work was dedicated to 'Isâ al-Dîn Ma'âshûd I, Attâbîk of Mûsâfîr. A revised version, a discussion of the poet to Naqâr al-Dîn Abî Bâkî Bâshâtîn, Attâbîk of Aghâhârîbîdîjân, Nizâm took the romance of Alexander as the foundation for his poem and treats it very much on the same lines as Fûlûn. The subject afforded ample opportunities to work in scientific and philosophical material, which Nîzâm does very skillfully in the conversations between Alexander and his tutor Aristotle and other scholars. The work thus became a kind of encyclopedia, which touches on almost all branches of knowledge of the time. 5. Haji Påhir (595 = 1198-1199) dedicated to the same ruler as the previous poem. In this poem Nîzâm again goes back to the popular Sâsînian hero Bahrum Gîr. But here again
it is not on his chivalrous adventures that stress is laid but on seven stories related to the hero by seven kings' daughters with whom he is in love. Each of these stories is associated with a day of the week, a planet and a colour. They form a universal tale, on which storytelling which has never been surpassed and the grotesque and fantastic style is particularly effective. As a master of fantasy, Nizami recalls E. T. A. Hoffmann and J. Callot and is able to make his readers visualize his wonderful pictures just as vividly as the European masters. Besides these large works, Nizami left a lyrical Divan of which only three MSS. are known (Bodleian, No. 618, 619 and Berlin, Verts. Cat., No. 691) and which so far has received little attention. It contains no kashfis in the court style and is distinctly Stif in tone.

Nizami's works are of the greatest importance in the history of Persian literature. They mark the zenith of Persian poetry in Persia, as in them for the first time the antithesis between the language of the lyric and the archaic style of the epic is overcome and the epic is brought into the milieu of the court style, which at this time was already fully developed in the lyric. The epic however at the same time loses its heroic character and devotes itself more and more to psychological characterisation at which Nizami was master. The overloading with learning, which in time came to choke the action completely, is very noticeable.

Nizami's influence on the later poets was unusually strong. A whole series of important poets, among them men like Amir Khusrav Dihlawi, Khwajâ Kirmânî, Kâthî, Úلî and Hâfitz and even the great mystic Farid al-Din 'Attar and the great mystic of Qâfghâz poetry Mîr 'Abbâr Naw‘ût, tried their hand in his style (the number of poems in later writers rises to seven).

In spite of its great importance, so far critical editions of parts only of the Khamsa have appeared and we are dependent for the rest on bad Indian lithographs or manuscripts of doubtful access. It is most desirable to put an end to this state of affairs and devote greater attention in Europe to the study of Nizami.

(R. B. W. E.)
of the first rank, to judge by the fragments that survive; in any case it was very inferior to his prose, which Browne says is almost unequalled in Persian.

The *Cahār Maḥālāt* consists of four discourses, each of which deals with one of the classes of men whom the author regards as indispensable in the service of kings: secretaries, poets, astrologers and physicians. Each discourse begins with general considerations, which are followed by anecdotes, often from the writer's personal experience. The number of these anecdotes, which form the most interesting and valuable part of the book, is about forty; some give valuable information on the literary and scientific state of Persia. We may say that the *Four Discourses* (especially the second) and Awfī's *Lūḥāt* are the two old works which deal systematically with Persian poetry. Davālūtšāh made a great deal of use of it (cf. Browne, *Sources of Davālūtšāh*, in *J. R. S. A.* 1899, p. 57–69). We may specially point out that it is to Nizām Šāhi that we owe the earliest notice of Firdawsi and the only contemporary reference to Khayām. On the other hand, we must point out the historical fallacy of certain passages, even in the case of events in which Nizām Šāhi claims to have taken part. His book is mentioned or quoted by Awfī (*Lūḥāt*), Ibn Iṣfandiyār (*Hist. of Tabaristan*), Mūsawī Kārsān (*Tārīḵ-e Gūstāb*), Dāmān (*Ṣūrišat al-Ḍabāb*), Ghaffārī (*Nigarzān*), Ḥādżḏī Khānlī, and in some cases by *Mardvān* of *Nizām Šāhī* which he thinks is different from the *Cahār Maṭālāt*; but Mīrzā Muḥammad Kāwinsī has shown that this is another title of the same book.

(H. MAŠRĪQ)

**NIZĀM ŠĀHĪ**, a Persian historian whose full name was *Ṣāḥib al-Dīn Muḥammad b. Ḥānān. Born in Nīshāpūr, he went on the advice of his sheikh Muḥammad Kūfī to Gharzī to give an opportunity to his remarkable talents as a stylist. A severe illness forced him to leave Gharzī, and he went to Dihlī where he obtained an appointment as court historiographer to the Pathāvī Sulṭān and began in 60/1266 his great historical work, *Tārīḵ al-Maṭālāt* fi *Tārīḵ*, which brought him great fame. It deals with the history of the first three Pathāvī Sulṭāns of Dihlī — Muḥammad b. Sām (588–602 = 1192–1206), Kūfī al-Dīn Aḥbāk (602–606 = 1206–1210) and Shams al-Dīn Būtūmī (607–653 = 1210–1258). The book begins with the capture of Adījmī by Muʿāṣira al-Dīn in 587 (1191) and ends with the capture of Naṣīr al-Dīn Muḥammad as governor of Tabrīz (614 = 1217). An Appendix contains a panegyric of Būtūmī and his campaigns of conquest. The work was very highly esteemed in the Muslim east as a model of elegant style. It is written in high flowing and difficult language and has a large number of poetical passages inserted in it. It is only with difficulty that the historical facts can be extracted from the medley of rhetoric but nevertheless the book is of no small value for the history of India and Afghanistan.

**NIZĀM ŠĀḤĪ** (i.e. *Mardvān Nizām Šāhī* "ambassador of Nizām Šāhī") of the Dakhān, a Persian historian whose real name was Khūthbā al-Jusūsī. Born in the Persian *ʿIrāq; he entered the service of Sulṭān Burdānī (cf. S. A. F. 1367). The latter being converted to the Shīʿa sent Khūthbā as ambassador to ṬahmāsĪ-Shāh Safawī. Reaching Kāīr in Ṭabāk (Sept. 1545), he accompanied the Šāh to Georgia and Šīrāz during the campaign of 953 (1546) against Akkūnī-Mirzā. He stayed in Persia till 971 (1563), perhaps with occasional breaks. He died at Golconda on the 15th Dīn 973 (June 24, 1564).

Khūthbā's chief work is the *Tārīḵ-e Ilūyī Nizāmī*-śāḥī, a general history from the time of Ahmad ibn Shāh to a later accession of Ṭabākī, *Ṭabākī gawda, Zafrā-nāme, Ṭabākī al-Siyar, the *Memoirs of Šāh-Ṭahmāsp* etc. The book is divided into a precise and seven maṭālāt, each of which is again divided into several gūftūr. The most important part of this work is that which refers to the reign of Ṭahmāsī-Shāh (in the Brit. Mus. MS. Or. 153, written in 972 = 1565, the events come down to 966) and to the local dynasties of the Caspian provinces: Māzanfarīn, Gīlān, Shīrāz. The two manuscripts in the British Museum show differences in their contents: Add. 23-513 (written in 1065 = 1654) has passages added by some commentator and taken from the *Kūḥān-i-āra* of Ahmad b. Muḥammad Ghaffārī. The latter additions of Or. 153 come down to late 960. According to Fīrūzī, "Shāh Khūthbā", during the reign of Ṭabākī Kūthbū Shah of the Deccan (957–988) also wrote a history of the *Kūthbū-Shāhī* (p. 4). It is difficult to reconcile this with a continuous stay in Persia from 952 to 971.

**Bibliography:** Rieu, *Catalogue*, p. 107–111; Schaffer, in his *Christianische Persien*, ii, 1885, p. 28–30 (notes: 65–133) printed the sections relating to the Caspian provinces.

(V. MIRHAKAYE)

**NIZĀR b. MAʿADD**, common ancestor of the greater part of the Arab tribes of the north, according to the accepted genealogical system. Genealogy: Nizār b. Maʿadd b. *ʿAdān* (Wustenfeld, *Gens. Tabellen*, A. 5). His mother, Muʿāna hint Ḍjhāla, was descended from the pre-Arab race of the Ḏjuram. Genealogical legend which has preserved mythological features and folklore relating to several eponyms of Arab tribes is almost silent on the subject of Nizār (an etymological tale about his name: *Ṭāḏg al-ʿAʿrī*, ii. 653, 23–27 from the *Rāmi al-Dīn* of al-Salāḥi [i. 8, 8–10] is without doubt of very late origin as is shown by the connection which is established
with the prophetic mission of Muḥammad; the same etymology from swr "insignificant" is further found in Ibn Farrādī, Khvājā Ilkhanī, p. 20, 1; *Mażdā jā hā fevral*, ed. Lyall, p. 763, 16 (without the story in question). Tradition has more to say about his son Ṣaḥīb, ʿAmmār, ʿAbd al-ʿAzīz, ʻIyād and about the partition of the paternal heritage among them, in connection with which they visited their uncle Ḥusayn and his descendants and in fact partook of a meal in his house (they are able to describe minutely the appearance of a camel they have never seen from the traces it has left) for the object of the story which has parallels among other peoples; its object is to make the meaning of the šiyya go back to the most remote period (al-Maṣādīr b. Ṣaḥīb, al-Ṭāhirī, p. 155–156 and the sources there quoted; Tabārī, i. 1108–1112 etc.); it perhaps is of interest to note that the story was known to Voltaire who introduced it into his *Zadig*.

As Robertson Smith showed half a century ago (*Kinship and Marriage in Early Arabia*, p. 5 sqq., 265–289) and as Goldscheider has confirmed by numerous quotations (*Muhimmadīaentische Schriften, I*, 346–348) of the Remote period, *Mażdā jā hā* is the latest form of an Arab poetry while that of *Mażdā jā hā* is found as early as the Byzantine historians Procopius and Nicetas) appears quite early in it, although its ethnic character is rather vague (as to that of ʿĀmmār, still more comprehensive, one of the oldest historians of Arab poetry, Muhammad b. Sallām, d. 230 = 844–845, and already pointed out that his name was almost unknown in ancient poetry, *Tabārī al-Saḥīb*, ed. Hell, p. 5, 15, cf. Ibn ʿAbd al-Barr, *al-Ṭāhirī* *ṣūrāt al-Ṭāhirī al-Ṣūrī*, Cairo 1359, p. 48). Before the Umayyad period the only trace we find of the use of *Nizār* as an ethnic is in a verse of the pre-Islamic poet *Bīgha b. ʿAbd Ḥamīd* (in the *Mażdā jā hā*, p. 667, col. and in another of *Kab b. Zuhair* (in *Tabārī*, i. 1106, col.) verse 8, 9 in the verse of *Hassān b. Dālib*, ed. Hirschfeld, l. s. c, the reference is to another *Nizār*, son of ʿAbd al-ʿAzīz b. ʿAmīr, b. ʿAmīr, b. ʿAbd al-Salāt, b. ʿAbd al-Rahmān, son of Maʿṣūm b. ʿAbd al-Raḥmān, b. ʿAbd al-Raḥmān, b. ʿAbd al-Raḥmān, b. ʿAbd al-Raḥmān, b. ʿAbd al-Raḥmān, descendant of *Anmār*, often disputed, as well as that of their brethren the Khubṣūm [q. v.], and to refer the same origin to the *Kab* descendants of the *Kab* to which it was attributed just at the time of the strife that raged around the succession to ʿAṭāl I. The verse quoted by Ibn Ḥishām, *Sura*, p. 49 (and often elsewhere; they are sometimes attributed to ʿAmīr b. Muṣṭa ḫa b. ʿAbd al-Raḥmān, a contemporary of the Prophet, and sometimes to a certain ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān, otherwise unknown) in which we find used with reference to *Kab* the verb *tawṣīf* to announce oneself to be descended from *Nizār* can be regarded as apocryphal. No stress need be laid on the isolated reference in al-Baladhuri (*Futūḥ*, ed. de Goeje, p. 276, 10) to the quarters of the Bandi *Nizār* in Khāṣīf contrasted with those of the *Yamanis*; his language simply reflects the position the author's time or that of his sources; later than the great revolution of the first century A.H.

a real historical existence nor, as is the case with the Ma'addi, as a comprehensive term indicating an effective grouping together of a number of tribes of different origin. Nizār is simply a fictitious invention, a label intended to serve political interests. One must however ask whence the names came and what were the precedents which suggested its use in the sense above outlined. The problem has not yet been thoroughly studied and perhaps we do not possess the material necessary to solve it. It is possible that the history of the four sons of Nizār (cf. above), a popular story the nature and distribution of which seem to take it back to a very early date, may be one of those instances to do with genealogical tradition, supplied the names on which the marāšid later gave definite imagination free play. But this is a pure supposition which would have to be confirmed by definite proofs.

**NIŻĀR b. AL-MUSTAṢĪR, Fāṭimid claimant, born 10th Rai’ 1 437 (Sept. 26, 1045).** On the death of his father, having been displaced by his youngest brother al-Mustaṣīr (q.v.), Niżār fled to Alexandria, took the title of al-Muqtafa b-Din Allāh, and rose to revolt early in 488 (1095) with the assistance of the governor, Naṣr al-Dawla Aṭāfūn, who was jealous of al-ʿΑfāl, and the population of the city. He was at first successful in driving back al-ʿΑfāl and advanced as far as the outskirts of Cairo, supported by Arab auxiliaries. Aḥāf again took the field against him, and after a short siege in Alexandria he surrendered towards the end of the same year, was taken to Cairo, and there imprisoned by order of al-Mustaṣīr. By the Ismaʿili organization in Persia (see the art. AL-ḤĀSĀN b. AL-ṢABRAH), Niżār was recognized as the rightful successor of al-Mustaṣīr, and this, with its offshoots in Syria, formed a new group (al-ḥāsa al-ṣāyiʿī), opposed to the Mustaṣīr group (al-ḥāsa al-ṣedūla), now known as khdjas (q.v.) and Bohoris (q.v.), respectively. A party of the Niżārs at first held the belief that Niżār was not dead and would return as the Mahdi or in company with him, but the majority held that the line of Niżār was continued by the Grand Masters of Aḥāf.

**NOAH. [See Nuḥ].**

**NOVIBAZAR or YENI BAZAR** is the name of a former (down to 1912) Turkish sanjak in what was once the vilayet of Kosovo; it now belongs to Jugos-Slavia. The district, through which the river Lim flows and which is therefore also called the Lim district (area 7350 sq. km. with a population of about 56,000, of whom 44,000 are Christian Serbs and 12,000 Moslems), is bounded on the north by Bosnia and separated Serbia from Montenegro. The importance of Novibazar was for military reasons as it secured communications between Bosnia and Rumelia and at the same time prevented communication between Serbia and Montenegro. By art. 85 of the Treaty of Berlin, Austria-Hungary held the western part of the sanjak (the Lăm district) from Sept. 1879 to 1908, namely the towns of Plešije (Turk. Tašchina), Prijevol and Bijelo Polje with a garrison of some 3,000 men, while the southern part, the kaza of Mitrovica, was returned to the Turks. After it was handed over in 1908, Novibazar formed a bone of contention between Turkey, Serbia, and Montenegro. In 1912 the sanjak was conquered by Montenegro (Bijelo Polje Oct. 12, Tuzi and Tuzi Oct. 14, Berane Oct. 20, Plešije Oct. 28) and Serbia (Novibazar Oct. 23, Sjenica Oct. 24) and in 1913 divided between the two countries.

The district forms with Zeta the ancestral home of former Serbia and roughly corresponds to the ancient Rašan. The chief town Novibazar (cf. the official spelling Novipazar) 1800 feet above sea-level on the Raška, is now an impoverished place of 11,000 inhabitants with miserable houses and poor streets. In the middle ages however, it was of considerable importance as the imposing remains of churches monasteries and baths around it show. It was once the capital of the town of Ras, of importance in the time of the old Serbian Kingdom and already mentioned in Byzantine history in the 11th century (Planina), where the Nemanjić prince Stephen held his court for a time. The settlement of Pasarić and Trgovlje was called by the Turks Eski Bazari, "Old Market." A sarayeb is mentioned as being there in 1459 after the conquest of the land by the Turks (1455) and in 1461 a šehi. The Turks then founded a New Market not far away, Yeni Bazar, which soon became the capital of the whole district. The Ragusan historian Lucari says the founder of Novipazar was Ser, i.e. undoubtedly Isk-Beg (1444—c. 1460, from 1453 governor of Sarajevo), son of Isk-Beg (1414—1444), both of whom were governors in Zeta (Skoplje) and were among the most important Turkish leaders of the time. The foundation of Novipazar must have taken place about 1460 for a year later we find mention for the first time in the archives of Ragusa of Ragusan merchants in Novipazar. In 1467 we already find a šehi and a sarayeb in Novipazar. The town from the end of the xvth century was frequently visited and described by western travellers as it lay on the old trade route from Ragusa (Dubrovnik) to Nikšić, the knight Arnold v. Harff mentions Novipazar 1499 as Newport, Jean Chausson (cf. Le voyage de Moulin d'Anjou, ed. Ch. Scheler, Paris 1887, p. 11) describes Novipazar as a town formid. assa marchands. While these and other travellers of the xvi-th century like Benedict Kuričieli (1530; cf. Benedict Curicicchot, Historia

**Rerum de Botasferiae des. v. Lambor, etc., ed. by Eleonore Čučin Lemberg-Schwarzenburg, Innsbruck 1910, p. 41 sqq.); Cattaneo Zeno (1550), in his Descritione del vicino de Constantinopolis, 1550 in the Storine of the Jugoslav Academy of Agram, vol. x.) and Melchior v. Seydlitz (1555, in his Gründliche Beschreibung der Weltfort, Görlitz 1580) were very little impressed by Novibazar, Paolo Contarini (1580, in his Diario del viaggio da Venezia a Constantinopoli, Venice 1856; nean Grimaud-Francon) and the Sieur de
Stohove [c. 1630, cf. "Voyage du Sieur de Stohove fait en année 1630, 1631, 1632, 1633, Bruxelles 1634, p. 30: at second hand and not from his own observation] and also Louis de Hayes, Sieur de Commenon (1621, in his Feuille de Lévant Fait par le Commandement du Roy en année 1621 par Le Sieur d'Y [de Commenon], Paris 1623) devoted far more attention to it. P. Contarini spent a day of rest in the caravanserai of Novibazar (New Bazaar) which he found was a town with 12,000 Turkish and 100 Christian houses. In the main street of the Kayseri settlement and the 16 mosques, the very large bazaar in which artisans of all kinds offered their wares for sale (mostly articles of iron from the adjoining Ghabriac in the S.E. of Novibazar which was as early as 1396 the seat of an Ottoman judge and had a customs house). The Sieur de Stohove describes La ville de Gens Bazar, qui en Turc veut dire nouveaux marchés, elle est située sur la petite rivière de Rizieh en un lieu haut et beau, ce qui en rend la vue fort agréable, son circuit est de dix lieues sans entrer enferment de murailles, est la ville la plus considérable que l'on trouve depuis la frontière (i.e. the Danubian-Bulgarian frontier). Louis de Hayes in 1621 found Iğdır Bazaar (i.e. the Kayseri Bazaar) a pleasant place with one storey houses. It was under the governor of Bosnia and had a judge who was under the Chief Kaş Şefi of Sarajevo (q.v.). The description given by the traveller Ewliya Celebi (q.v.) of his visit to Novibazar (1666) (p. 534 sqq.) is as usual full of exaggerations. He says there were 45 quarters in Novibazar, 23 large and 11 small mosques, 3 madrasas and 2 monasteries. Of the mosques he mentions the Alani mosque and the mosque of Ghabriac (Mask-Raj, formerly a church, and the Taghkörpit lace and mosque of "Hajidži milhārem" (q.v.). The bazaar had 1,410 shops, and there were 7 churches of the "Serbs, Bulgars and Latins" in Novibazar. He particularly praises the white unmixed bread and 48 kinds of apples and 35 of pears. Among the notabilities of the time "Hajidži Ibrahim Efendi, who had "canowed" the roads to Bosnia and Herzegovina and erected bridges and rest-houses, and Ewliya Celebi Mahmut Agha receive words of praise. Both hadpalaces (türbe) in Novibazar. In consequence of its exceedingly important military position and as the key to Bosnia for Turkey in Europe (cf. F. Kanitz, Serben, Leipzig 1868, p. 200 sq.) Novibazar has frequently played a part in military history. In 1689 it was occupied under the Margrave of Baden; but the Christian inhabitants, disillusioned by the tyrannical attitude of the garrison, the excesses of the imperial armies, the heavy taxation, the intolerance shown the orthodox clergy and the parsimonyship of the Roman Catholic church, soon turned against their masters and very soon Novibazar with the whole of Old Serbia again passed to the Ottomans. In 1737 Novibazar was again occupied for a few months by the imperial forces, but as a result of the careless leadership of the generals fell with Nish again into Turkish hands and this settled the disastrous result of the war for Austria (cf. F. Kanitz, op. cit., p. 203 sq.) and the Turkish description of the Bosnian campaign, from the pen of the Şah of Novi, Ömer Efendi (q.v.), e.g. in the German version by J. N. v. Dubsly, Vienna 1789, p. 54 sqq. or the English by C. Fraser, London 1830, p. 48 sqq.). It is remarkable that the defences of Novibazar in the Turkish period were never what the strategic importance of the place demanded (cf. the description in A. Boué, Die Europäische Türkei, vol. i., Vienna 1889, p. 549). In view of the stubborn defence and steady opposition of the people, the Ottoman authorities — Novibazar was the seat of a Şahin-i-müşkült (q.v.) — had a difficult time. General Hasan Pasha who was to carry out the distressing in 1860, was killed in the street in a rising and those guilty were never brought to book. Unpopular officials were as a rule simply driven out. As the new force contended with these difficulties with the rebellious population of the sandjak it never decided to undertake another military expedition against them. The result was that all branches of administration, trade, agriculture and industry gradually went to pieces. From the 18th century therefore Novibazar was always a place of little importance. Nor did it revive under the semi-indepenent feudal lords of the family of Ferhadagić (Ferhagadagić). Of the remains of Muslim times in Novibazar may be mentioned the fortress (kule) built in 1103 (1690) in the reign of Süleyman the Great. The surrounding buildings as a rule date only from the time of Abd al-Čaím II. Historically most interesting is the Altan-i Alan Mosque built by Ghabriac Shah (Mask-Raj, above), the founder of Novibazar. Behind it lie the foundations of a mosque and a mausoleum of the erstwhile feudal lord of Novibazar, Ayif Pasha (d. 1423 = 1521). Of other Muslim houses of prayer may be mentioned the mosques of Murad al-Din Efendi, first mufti of the conqueror Mehmed II, of Ghabriac Siināk-ı-beg and of Ayif Pasha. — The capital of the sandjak of Novibazar in modern times was the little town of Sjenica (cf. K. Oestreich, Reisen im Filister Kame, in the Verhandlungen der Gesellschaft fur Erdkunde zu Berlin, vol. xxvi., 1899, p. 319). Bibliographie: G. Munz Machemey and A. P. Nüba, name of a country [and people] to the South of Egypt. The name Nuba, Nuh, Nuba are commonly used without scientific precision and it is only in the linguistic sense that they have an ambiguous meaning. The frontier separating the Nuba from Egypt proper is well defined as the first cataract of the Nile in the neighbourhood of Assuan, and the area where Nubian is spoken nowadays ends in the vicinity of the 18th parallel, but the southern limit of Nuba is sometimes placed as far south as the junction of the Atbara and the Nile, or even the confluence of the two. Nuba is often sub-divided into Lower Nuba.
from Aswán to Wāli Hafsa and Upper Nubia from Wāli Hafsa southwards, but neither term has any political or administrative significance.

The medieval Arabic writers are equally vague about the southern extent of Nubia: the region immediately bordering on Egypt, which bore the name of Marsa, seems to have been regarded as Nubia par excellence; to the south of it lay Māqarrā with its capital at Dongola (Danğula, Dumbula), and beyond this the kingdom of 'Alwa the capital of which was Sōbat, near the site of the modern Khartūm. According to the tenth-century author 'Abd Allāh b. Ahmad b. Salīm (Sūsim), quoted by Makrīzī) Marsa and Māqarrā had distinct languages, and the frontier between them was situated three poststations (ādzīs) to the south of the Third Cataract; politically, however, Marsa formed part of Māqarrā and this probably accounts for the fact that Ibn Salīm immediately afterwards places the commencement of Māqarrā at a day's journey from Aswān. The frontier between Māqarrā and 'Alwa was the district of al-'Āwīb, a name still in use for the country round Kābāghīya in Berber province. 'Alwa is generally placed outside Nubia, and the preamble to the treaty which governed the political relations between Nubians and Arabs makes its provisions incumbent on the 'Alwans, the 'Alwīs, as the 'Alwané people of his dominions, and it is clear that 'Alwa lies on the frontier of 'Alwa'; yet Mas'ūd al-Rūmī speaks of 'Alwa as part of Nubia and states that it is under the political suzerainty of Māqarrā. According to Yākūt, Nubia extends along the Nile a distance of eighty days journey, Dongola being situated halfway at forty days distance from Aswān; of 'Alwa he speaks, with obvious exaggeration of the distance, as a people beyond Nubia three months' journey from the king of the Nubis, whose official title is 'king of Māqarrā and Nubia'.

The modern conventional division of the population of the northern Sudan into Nubian, Bejda, and Arab is in the main a linguistic one and does not correspond to any clearly-marked racial divisions. The "Nubian" type, itself a hybrid one, which dates back to the age of pre-lycic Egypt, is most purely preserved in the Kente, Mahas, and Sukkot, who between them compose the so-called Barabta, though even here, a considerable element of alien admixture must be recognised. The Nubian-speaking Danğula (Dançult), on the other hand, are scarcely distinguishable from the rest of the Dançula-Dja'dīya-group (see MacMichael, History, i. 197, 197) which includes a number of Arabic-speaking tribes extending from Dongola province to the neighbourhood of Khartūm; the origin of this group must be sought in a fusion of the original Nubian element with the Arabs who poured into the Sudan in the sixth ages and eventually brought about the fall of the Christian kingdoms of Dongola and 'Alwa. The numerous Dançula colonies on the Blue and White Niles have given up their language in favour of Arabic, and the same applies to a branch of the Mahas, settled since the sixteenth century in the neighbourhood of Khartūm, who now claim to be descended from the Kharrajd of Arabia. Throughout the northern Sudan the original Nubian stratum has coalesced with the Arabs to such an extent that it is no longer possible to separate the two streams. This fusion has also affected the groups which still speak Nubian, though the Barabta may be said to have maintained a separate identity and to have absorbed the foreign elements rather than the reverse. The Dançula retain the appellation Nubian, and the term Barabta is confined only by Egyptians and other foreigners, while the people themselves prefer to call themselves by their tribal names (Kente, Mahas, Sukkot). It is only in recent times that they have begun to develop a national sentiment as Nubians and to make occasional use of the name.

Language. The Nubian language can scarcely be indigenous to the Nile Valley, and it is in no way connected with the language of the Merotic inscriptions which preceded it in that area. The problem of its linguistic grouping has not been satisfactorily solved, but Hamitic and Sudanic features are present, and L. Reinach (Die Sprachliche Stellung des Nuba, Vienna 1914) regards it as a connecting link between the two groups. G. W. Murray (Sudan Notes and Records, vol. lii.) suggests the conclusion that in the remote past Dinka-Shilluk, Bari-Maasai, and Nubian had a common origin, and that they all have to a greater or lesser degree been permeated by Hamitic influence. W. Meinhold (Unter Stidienfahrt nach Kordofan) definitely classes Nubian as a Hamitic language.

The following branches are distinguished:

a. Nilotic Nubian (the language of the Barabta and Dançula) with three dialects: Kente, Mahas, and Dongola; the first and third, though separated geographically, form a single dialect group. A fourth dialect distinguished by Reinach (Fadlija, Fadilka) is stated by Lepsius to be only a variety of Mahas.

b. Hill Nubian spoken by a number of negroid tribes in the present province of Kordofan. The area in question is inhabited by a medley of tribes of different linguistic and racial stocks, and it is only in the case of the Nubian-speaking groups of southern Nubia that the appellation Nubian is justified. The best-known dialect is that of Dilling (Dellen). A form of Hill Nubian is also spoken by the people of Jiebel Middib in northern Darfur.

On the problem of the racial and historical connexion between Hill Nuba and Nilotic Nubians, see below.

c. The isolated dialect of the Birbad tribe in Darfur designated by Zyhlarz as South-West Nubian.

d. Old Nubian, the literary language of medieval Nubia. The examples which have survived belong to the viith-viith centuries and consist of homiletic and edifying pieces intended for the common people, as distinct from strictly theological literature for which Greek was employed. The language of these texts approximates most closely to modern Mahas, although the provenance of the existing remains is the northermost part of Nubia where Kente is spoken. Scanty remains from Upper Nubia justify the conclusion that Nubian (perhaps in a form more closely connected with the Hill dialects) was also used for literary purposes in the kingdom of 'Alwa.

Modern Nubian has no literature apart from biblical translations produced under European influence. The Dançula and Barabta use only Arabic for written communications and for literary purposes.

History. In speaking of the early history of the country the name Nubia is misleading, as there is no evidence of its use in ancient Egypt as a tribal or geographical name. To the Egyptians Lower Nubia was known as Wawat, and Upper
Nubia is Kush (the biblical Cush) which corresponds to the classical Ethiopia. From the earliest times there existed relations of trade, conquest, and cultural influence between Egypt and its southern neighbour, and under the Middle Empire the Egyptian penetration of what is now Dongola province led to the development of a special local civilization based on the culture of Egypt, but deeply affected by local forms, materials and customs. Under the New Empire Nubia and Kush were annexed by Egypt, and Nubia (Djebel Barkal) became an important centre of the cult of Amun-Ra. Later Napatia was the capital of an independent Ethiopian kingdom which, in its turn, conquered Egypt, and five kings of Napatia sat on the throne of the Pharaohs (the 25th dynasty, c. 730–663). Subsequently the centre of gravity shifted southwards and Meriit, about 130 miles north of Kharitum, was the capital of a kingdom which still preserved the elements of a civilization based on that of Egypt, though the isolation of the country, which was now almost complete, led to a rapid decline. In circumstances of which we have no detailed knowledge, the change in population might be due to the pressure of negrooid elements from Kordofan and the Djabal, and cultural contact with the north diminished to such an extent that the Helleno-Roman world Ethiopia was but vaguely known, as indeed was the case of medieval Nubia in its relation to the Muslim world. Byzantine missionaries, however, introduced Christianity in the sixth century, at which period the two kingdoms of Mokaara and "Alwa were already in existence: the Maccarittas, as we are told by the chronicler, became Christians in 559 and the Alawaenses in 560, and an embassy of the Maccarittas visited Constantinople in 573.

The name Nubian appears for the first time in the Hellenistic-Roman age and the earliest occurrence seems to be in Erotholhnes (quoted by Strabo, xvii) who speaks of the Noubai as "a great race living in Lycia on the left side of the course of the Nile extending from Moros to the bend of the river". In this passage, as well as in other references in Greek and Latin writers, Nubians are clearly distinguished from Lyians, Ethiopians, and other negrooid folk, and as late as ca. 550 A.D. a kinglet of Lower Nubia speaks of himself as EKALIPEK LEUKABOV KAI KHEM TAQ ALCTRAS. It is not until the Muslim period that Nubia is found to have replaced Ethiopia as the name for the whole of the riverine country to the south of Egypt.

Of the events which brought about this change of name (no doubt signifying a change in language and in the ethnic character of the people) there is no historical record. From the linguistic evidence it is probable enough that the name originally belongs to the negroes of Kordofan, and that the Nobaii (Noubades, Nobatae) of the classical writers were immigrants from the southwest who, as a result of political ascendency, imposed their language on the Ethiopians of the Nile valley. The fact, however, cannot be disregarded that the modern Hill Nuba are strikingly dissimilar in physical character and culture to the mainly Hamitic Beduins-Danagla, and on this ground the possibility of a racial connexion of the two groups has been challenged by C. G. Seltzmann and H. A. MacMichael (see esp. MacMichael, History, I. 14 sq.). Yet it is certain that the separation of the dialects must have taken place at a comparatively early date (before Christianity); the presence of "Nubian" speech in Kordofan can therefore not be explained as the result of Damajal settlement in recent times. For a discussion of this vexed question see Ernst Zylbers, Zur Stellung der Dorf- und Nebenachsen in W. Z. K. M., vol. xxxv, and S. Hillenbrand, "Nubian Origins" in Studia Nubium et Aegyptiaca, vol. xii. (1950). What can be said with certainty is that the Arab conquests of Egypt were found on their southern frontier a population mainly Hamitic in the north, but containing negrooid elements which increased in importance in the south. These people were Jacobite Christians, and they used Nubian as the language of government and letters.

Viyol quotes two sayings ascribed to the prophet in which Nubians are praised as faithful friends and useful slaves, but there can hardly have been any contact between Arabs and Nubians before the two invasions (A.D. 641–642 and 651–652), the second of which carried the Arabs as far as Dongola (q.v.). As a result of these raids the Christian kingdom in the north was weakened, and Nubians were regulated by a treaty which ordered out a system of mutual tolerances and non-interference; the tribute of slaves (bokh [q.v.]) from the daqar) which the Nubians undertook to pay annually was not so much a sign of submission as the basis for an exchange of commodities. Intercourse between the two countries, whether commercial or political, remained very restricted, and the interests of the Arabs to the south of Egypt were in the main confined to the exploitation of the mines of al-Al khayy, which affected the Bedja rather than the Nubians. An invasion of Upper Egypt, said to have been undertaken by the Nubian king Kyriakes in A.D. 737 (or between 744 and 750) is recorded only on the doubtful evidence of Christian writers and ignored by Muslim historians. Minor raids occurred from time to time, and the "tribute" was occasionally withheld, but on the whole relations were peaceful. The Muslims began to penetrate into Nubia at an early date, presumably for purposes of trade, and as early as the tenth century they are said to have had a special lodging-place (ruhag) in the capital of "Alwa. According to a Syrian writer (quoted by Mez, Renaissance des Islam, p. 37), Nubian resident in the lands of the caliphs remitted taxes to their own king and enjoyed the privilege of an autonomous jurisdiction. Further evidence of friendly relations is found in an account of an embassy to Baghdad in the time of al-Mutawakkil when a Nubian prince was hospitably entertained.

Of internal conditions in Nubia we know very little; there are no native sources of information and Muslim accounts throw light only on special periods and occasional contacts. The fullest descriptive accounts, both dating from the tenth century A.D., are those of Mas'udi (ii. 362; iii. 31–32; 39–43) and Ibn Sa'dm (Sulaim), who wrote an account of "Nubia, Mukaara, 'Alwa, the Bu'dja, and the Nil"), of which extensive fragments are extant in the Khulaj of Murshid (ed. Wiet, vol. iii, ch. xxx. 399).}

During the reign of Saladin Nubian affairs came into some prominence owing to the support given by the semi-Nubian Bu'di Kana (on whom see below) to a Fatimid pretender, and Lower Nubia was
invaded by Saladin's brother Tūhja-Kānū (1172—
1175) who pillaged them and took many captives,
but reported unfavourably on the resources of the
country with the result that a planned invasion
was not proceeded with. Soon afterwards (about
1208), the Armenian Abū Sa'īd composed his ac-
count of the Churches and Monasteries of Egypt
(ed. and translated by R. T. A. Vrettos and A. J.
Butler, Oxford 1895) which contains some interest-
ing data about Muḥammad, Muḥammad b. Ḥafṣ, and Ḥilāla, but must
be used with caution owing to the confusion in
the writer's mind between Nubia and Alawīya and
his uncritical use of older authorities.

The factors which brought about the disintegra-
tion of the Nubian kingdom and the Islamisation
of the country were the invasion of the Arab
tribes, the rise of the Banū Kānū, and the interven-
tion in Nubian affairs of the Mamlūk rulers of
Egypt, especially during the reigns of al-Ẓāhir
Bāibars [q.v.] and al-Manṣūr ʿAlāʾ [q.v.].

The Banū Kānū were first heard of in 1230
when the Fāṭimid alīsh al-Dīn, as a reward
for services rendered, conferred the hereditary title
of Khān al-Dawla on Abū Ḥamīd Ḥilāla-Kānū, a chief of the Rūfī Arabs
who settled on the borderland between Egypt and the Süddān. 
Already in the tenth century the Rūfī had gained control of the mines of al-ʿAllāk and imposed their rule on the Beja with whom they allied themselves by intermarriage. Another section, settled near Awālān, fraternised with the local Nubians, and the tribe, formed by this amalgamation and ruled by the Khān al-Dawla dynasty, came to be
known as the Banū Kānū; they are represented by the Kents of the present day. During the reign of the Mamlūks they were virtually in independent control of Upper Egypt, alternately in alliance with or in revolt against the Mamlūk government, and though repelled at times with a heavy hand, they remained a powerful tribe until the Ottoman conquest of Egypt. Before this event, however, they had played their part, together with nomad
Arabs and Mamlūk troops, in the destruction of
Nubian independence.

The Bahriti Mamlūks, for reasons not apparent
in our sources, departed from the traditional policy
of Muslim Egypt, and actively intervened in
Nubian affairs. The pretext for the expeditions undertaken by the generals of Bāibars and Kānū-Bāibars were non-payment of the tribute and, more frequently, the征战ship of Nubian pretenders who had solicited Egyptian support in order to gain the throne. On several occasions such pretenders of the Mamlūk government were installed in Dongola only to lose the throne again as soon as the Egyptian troops withdrew (see the article DONGOLA).

A formal treaty concluded with one of these kings virtually established an Egyptian protectorate. Meanwhile the disintegration of the kingdom went on under the pressure of Arab immigration, and Arab chiefs who married into the royal house took advantage of the matrilineal line of succession to grasp the throne. The age-long Christian
Nubia was gradually undermined and in the xivth
century Muslim kings began to appear: the first
to bear a Muslim name was Abū Ḥamīd Ṣanūb, who was installed in 1316 and after a short
reign lost the throne to a Kānū al-Dawla.

The Kānū al-Taʾrīf of Ahmad b. Yahyā b. Faḍl Allāh, written some time between 1340 and
1349, we learn that at this date Christian kings
still alternated with Muslims and Ibn Battūta in
1332 (iv. 306) speaks of the Nubians as Christians.

The conversion of the common people we have no
details; no doubt it was brought about by the
absorption of the native inhabitants, or those who
survived, in the Arab tribes.

The immigration itself has left little trace in
the pages of the historians, though the outlines
of the process can be reconstructed from occasional
references and from oral tradition. The nomads
who had entered Egypt in the wake of the first
conquest can now be found that country con-
genial to their mode of life, and the string of non-
Arab dynasties tended to make conquests still
less attractive, while the Süddān seemed to offer
all the advantages, from the nomads' point of
view, that Egypt denied. For a long time the
kingdom of Dongola formed an effective barrier
to southward expansion, but a gradual infiltration
of Arabs must have begun at a comparatively
early date, even though the end of the process
was not accomplished for several centuries.

The early stages of the movement are seen in the
conditions depicted in the story of Abū ʿAbd Allāh al-Dīn, the events of which are laid
in the reigns of Ibn Jumaa (Mārko's) and Ibn
Maḥṣūf, quoted by Quṣayrānī, ii. 59—80. Arabs of
Rufī and Shūlijan, led into the Süddān by a
brigand prince, have fraternised with the
Beja and exploit the mines of the Eastern Desert,
but the Nile is forbidden them and Nubia is too
strong to be attacked by force of arms. A frac-
tional struggle in the Nubian royal house provides
an opportunity for an alliance between the Arabs
and a prince pretender to the throne. Acts of
outrageous treachery are committed on both sides
and in the end the Arabs have the worst of the
encounter. The end of the process is seen in the
fifteenth century. The Kingdom of Nubia had
now to all intents and purposes ceased to exist
and such kings as reigned in name were puppets
of the Arab tribes... It is from this period,
the early years of the fourteenth century, that
the immigration of most of the camel-owning nomads of the Süddān dates. Generally speaking, it seems, the
Djūlijan and their allies, most of whom we
may be sure were Feṣṣa, loosed their hordes
southwards and westwards, leaving the Banū Kānū
and Ikirma in northern Nubia and Upper Egypt" (MacMichael, loc. cit., p. 187).

Of ʿAlwa nothing is heard at this period, but
no doubt the course of events was similar to that
in the northern kingdom, and shortly in the time
of Ibn Ḥaṣṣan (1322—1400) we hear of harpies of
Djūlijan "close to the Abyssinians", that is to
say no doubt on the upper reaches of the Blue
Nile in the southern Ḥjarra. The kingdom of
ʿAlwa nevertheless lingered on precariously and
Nubian Christianity was still a living memory in
the time of the Portuguese Alvares (1520—1527),
but about the year 1500 Sūsia fell to an alliance
of Kawāna Arabs (a branch of Ruufi-Djūlijan) and
the negroid Fungji [q.v.] who here for the
first time appear in history.

The fifteenth century is almost completely bar-
ren of records relating to Nubia, and the historical
memory of the great inhabitants remembers little
of pre-Fungji days. With the coming of the Fungji,
who soon extended their influence to Dongola,
the history of Nubia is merged in that of the

945
Sudan, and the Nubians, now Muslims and deeply affected by racial mixture with their conquerors, survive only as a linguistic minority on the northern fringe of their ancient kingdom.

Lower Nubia, however, was politically separated from the Fundh kingdom by Selim I, who annexed the country south of Awsén as far as the neighbourhood of the Third Cataract, and garrisoned it. The people of Tell el Dér and Berbera were mercenaries (see Ghaza by the people of the Suddán). From these, many of the modern Barába claim to be descended.

The Barabba-Danagha of the present day (in the Egyptian province of Awsén and the Sudan provinces of Kafa and Dongola) are a peaceful race of cultivators and skillful boatmen of the Nile. Owing to the poverty of their country and aided by an enterprising disposition, large numbers seek their livelihood in Egypt and the Sudan where they are found everywhere engaged in various forms of manual employment. The Danagha have also spread all over the Sudan as traders, and in the nineteenth century they played an important part, together with their rivals, the Djalilin, in the commerce of Egypt. On the Nile and the Bahr al-Ghazál where they adventured as slave-traders, sailors, and mercenary troops.

The men are generally bilingual in Nubian and Arabic which latter: they speak ungrammatically and with an accent of their own. Those in foreign employment show themselves remarkably adaptable to alien ideas, at the same time they are tenacious of their own customs and claimish to a degree.

Under modern conditions they are keen to take advantage of educational facilities, and show an aptitude for the educated professions. In the past they have made no important contribution to the intellectual and spiritual life of the Sudan and produced no scholars of note. The 7-Nián in the mystical w.v. is said to have been of Nubian origin, but he is generally called "the Egyptian". The most remarkable figure of their race is Muhammad Ahmad [q.v.], the Mahdi of the Sudan (died 1885), who was a Dongolat, though his family claim to be Ghaza. The Barabba and Danagha are generally devout Muslims, and most of them belong to the Muckantiya (Khatnaya) tribe.

NUBANDADJIAN. [See Shul'taš.]

NUBÁR PASJA (1825—1899), an Egyptian statesman, who played a most prominent part in Egyptian politics in the 20th century. Summoned by his uncle Bohgas Bey, the Minister of Foreign Affairs and of Commerce under Muhammad ᴜ'lı, he came to Egypt at the age of 17 and entered the government service as second secretary to the Viceroy. In 1848 he accompanied Ibrahim Pasja to Europe as secretary and interpreter. Under Saïd, Nubar began to play a part in public life. His independent spirit, his methodical and precise mind were revealed in the organisation of the Egyptian railways which he put in order in the space of six months (1857).

But it was under Isma'il that he fully revealed his gifts as a negotiator and diplomatist. He was, however, not called upon to play a national part because of his Armenian origin and his ignorance of the language of the country. Raised to the rank of Pasja at the beginning of the reign (1865) he hastened to take advantage of the support and advanced views of the Vicerey to carry through a great scheme: to encourage externally the independence of Egypt and its development not in Asia — this was Isma'il's bias — but in Africa where her destiny summoned her, and at home the regeneration of Egypt with the help of Europe. From the first Nubar Pasja grasped the great truths of the Egyptian question. But if the conception was grandiose, the execution of the scheme proved difficult on account of the confusion of interests and the European jealousies. These inherent difficulties in the Egyptian problem proved impediments to many solutions and the policy of reform frequently had to twist its way round obstacles of all kinds.

On the smallest matters Egypt had to wage an unequal struggle with Europe. Nubar conducted the struggles on three fronts at the same time, on these fundamental questions.

The question of the Suez Canal. On Isma'il's accession the Company formed a state within the state and constituted in the very heart of Egypt a kind of colony, as a result of the lands it had obtained along the sea canal and the fresh water canals which were linked up with it. Nubár conducted negotiations in Constantinople and in Paris with the object of securing the territorial sovereignty of Egypt. His activity ended in the famous decision of the Emperor Napoleon III on July 6, 1864, which ordered Egypt to pay the Company 840,000 francs to regain its rights. This enormous indemnity was nevertheless lost from bringing about a final settlement.
The question of judicial reform. Nubar used often to say: "Give Egypt water and justice and the country will be happy and prosperous". But in order to place justice on a sound footing, so that it could protect the native against the government and the European who was exploiting him and particularly against the arbitrary decisions of the consuls, each of whom laid down his own law to the governed and governors alike, Nubar thought of organizing a mixed system of justice composed of Egyptian and European elements and thus establishing uniformity of jurisdiction, legislation and executive action. As a result of the systematic opposition of France and of certain powers interested in maintaining the "privileges", the mixed tribunals were not established till 1875 after ten years of striving and of waiting censured by the government.

The question of autonomy. The territorial servitudes inflicted by the Suez Canal and the system of capitulations did not prevent Nubar from remembering the political restrictions imposed by Turkey, the master power. From 1863 to 1875 Nubar endeavoured to extract from Constantinople by negotiation and bribery privileges which would enable the work of progress to develop freely.

After the firmaments of 1866 and 1867, Egypt obtained the famous firman of 1875 which constituted a new charter conferring on the sultan the title of Khedive [q.v.], hereditary successor to the throne in direct line from father to son, an increase in the army — limited to 18,000 in 1840 — and lastly the right to conclude loans and commercial treaties with the Powers.

But the error made by Nubar and the Khedive was to consolidate Egyptian independence in theory but not in practice. Nubar was anxious for the introduction of capital and European enterprise; a beneficial idea but also dangerous because the Khedive, encouraged by his minister, became involved without due consideration in a disastrous series of loans. The various enterprises which arose with the rapid development of the resources of the country had to be put in the hands of companies like the Steam Navigation Company, the Sudan Company, the Agricultural and the Trading Companies, in which Nubar, Oppenheim, Dervies and others were the chief directors. The failures of the companies were liquidated by Egypt which made good all losses. The collaboration of Nubar with these financiers brought an atmosphere of suspicion into the good understanding between the minister and the Khedive, as did the negotiations conducted by him to conclude loans in Paris and elsewhere.

But the tragic side of the question lay in the accumulation of a debt of £30,000,000 which opened the gates of the Delta to foreign control. There is no doubt that Nubar had always resolutely opposed any foreign interference. Down to 1875, during the little time that he was actually in Egypt — he was often on missions to Europe — Nubar endeavoured to set as a check on absolute rule and to oppose all European interference from wherever it came. He was not popular either in England or France. He was rightly distrusted in the entourage of the Khedive also.

Towards the end of 1875 an event took place which modified his attitude. England having taken the unusual step of intervening in Egypt to defend the private interests of some of her capitalists and sending a mission under Mr. Cave to conduct an enquiry in the country, Nubar, with his remarkable political instinct, felt the imminent danger of such interference and resolved to oppose it by all means. He was unable to provoke the intervention of the consuls-general of Russia and Germany, who offered the Khedive the support of their governments. Ismail declined this offer, which was a grave political error. He went farther and communicated with the English consul and did not scruple to sacrifice his minister.

Nubar had to hand in his resignation on Jan. 5, 1876 and to leave Egypt on March 21. Hencorth he swore a bitter feud against his master and his attitude gradually changed and inclined to England. In deciding to undermine the personal authority of the ruler, and allying himself with the foreigners, without being able to fix in advance how far the alliance was to go, in a word in wishing to humble his sovereign, Nubar weakened his country for the benefit of England. For it was to the government of England that he appealed in 1876 to intervene, acting on the pretext that intervention was here inevitable as a result of the enormous debts contracted by Egypt and that England's action would be of more benefit to Egypt than that of any other power. The result was that England finally imposed on the Khedive both Nubar and her complete control by extorting from him the rescript of Aug. 28, 1878 which established a "possible ministry" presided over nominally by Nubar but in effect by Rivers Wilson as Minister of Finance and de Briegel as Ministers of Public Works. This dangerous innovation in the formation of a European ministry not responsible to the Khedive whose authority was now negligible, and installed in the heart of the country to support European policy and high finance — aroused the Egyptians from their lethargy and created general discontent. The Khedive became at once popular and his cause was identified with that of the nation. The result was the outbreak of Feb. 18, 1879 which removed Nubar from power. A new European ministry presided over by the crown prince was formed, and the rest remained. Finally Ismail, emboldened by public opinion, dismissed the European ministers (April 5) and formed a national ministry under Sharif Pasha. For the Tewer — and Nubar's doings in Europe were not without influence on their decision — decided on the ruin of the Khedive and succeeded with the help of Turkey in deposing him (June 26).

Two years after the English occupation, Nubar returned to Egypt to form a ministry after the resignation of Sharif Pasha as a protest against the evacuation of the Sudan by Egypt, dictated by England. Nubar endeavoured in vain to come to terms with England and to put a check on her policy of practically depriving Egypt of her territory in Africa (Jan. 1884—June 1885).

He again formed a ministry (April 16, 1894) but he soon had to submit to the control of the English councillor in the Ministry of the Interior and seeing himself powerless against Lord Cromer's policy which aimed at controlling the whole of the administration he had quickly to retire from the scene (Nov. 1895).

Nubar then went to Europe to compile his memoirs — still unpublished — and peacefully await his end. He was, to sum up, a great minister, a statesman who made mistakes, it is true, but
the fates were against him: 1875 marks the final blocking of his great policy. We must not however forget the early struggles in which he exerted himself from Europe and from Turkey piece by piece rights and privileges which constituted a great boon to his country.

(M. Sahn)

NUBUWUW. [See Nabi.]

NUH, the Noah of the Bible, is a particularly popular figure in the Korân and in Muslim legend. The latter gives 15 virtues by which Nuub is distinguished among the prophets. The Bible does not regard Noah as a prophet. In the Korân Nuub is the first prophet of whom mention is made. He is followed by Hz. Sayid, Hz. Shu'ub and Hz. Isha. Isha is one of his following (Saan'a) (Sunan xxi. 57). He is the pious admonisher (mujakkir) and the preacher (mustâfîr) to whom the Korân says, "forthwith to him has come the messenger of God" (xxvi. 107), the 'alb shabîr, "the grateful servant of God" (xxi. 3). Allah enters into a covenant with Nuub just as with Muhammad, Ishaun, Hz. Musa and Hz. Isâ (xxiii. 7). Peace and blessings are promised him (xi. 50). Muslim legend is fond of seeing himself reflected in the earlier prophets. In the case of Nuub, the Muslim Korân exegesites have already noticed this (see Grünbaum, Neue Hebräerg, p. 90). Muhammad puts into the mouth of Nuub things that he would himself like to say and into the mouths of his opponents what he himself has heard from his. Nuub is reproached with being only one of the people (s. 72-74). God should rather have sent an angel (xxii. 24). Nuub is wrong (vii. 57), is lying, deceiving (vii. 63), is possessed by jinn (iy. 9), only the lowest join him (xi. 29; xxvi. 111). When Nuub replies: "It is grievous to you that I live among you, I seek no reward, my reward is with Allah" (x. 72-74; xi. 31); I do not claim to possess Allah's treasures, to know his secrets, to be an angel and I cannot say to whom ye despise, God shall not give you any good" (xi. 31-33), we have here an echo of Muhammad's defence and embarrassment about many of his followers. Muhammad pictures events as follows: Allah sends Nuub to the sinful people. Suna xxvi. which bears his name, gives one of these sermons threatening punishment for which other analogies can be found. The people scorn him. Allah commands him to build an ark by divine inspiration, then the "chaldron bulls" (xxii. 42; xxiii. 27). The waters drown everything; only two of every kind of living creature are saved and the believers whose Nuub takes into the ark with him. But there were very few who believed. Nuub appeals even to his son in vain; the latter takes refuge on a mountain but is drowned. When Nuub hides the water he still, the ark lands on mount Tijjâr (q. v.; xi. 37-53). Not only Nuub's son but also his wife (with Hz. Isha's wife) are saved (sunan xvi. 10).

Fenomen. 'The Haggoda is developed, as Geiger shows, from the following statements of this Korânic legend of Nuub: 1. Nuub appears as a prophet and admonisher; 2. his people laugh at the ark; 3. his family is punished with hot water (main passages: Talm. Sanhedrin, 108b; Gem. Naba, xix.-xvii.).

The poet-Korânic legend of Nuub as in other cases fills up the gaps, gives the names of these not mentioned in the Korân, makes many links e. g. connects Nuub with Fadlun. The Korân apoc is possible it is pointed out that the Magi (Persians) do not know the story of the flood. Nuub's wife is called Isha and her son is that described in the Haggoda. Every one of these names of Nuub's sons, Sâm, Hâm, Nuub are known to Korân exegetes from the Bible but it also gives the name of Nuub's sinful son who perished in the flood: Kânân, "whom the Arabs call Yam". Muhammad's statement that Nuub was 950 years of age at the time of the flood (Saan'a) (xxii. 13; 14) is probably based on Gen. 5: 5 3 which says Nuub lived 950 years in all, but on the other hand, it serves as a basis for calculations which make Nuub the first man (naqib): according to the Kitab al-Mu'awmirfat of Abû Haflân al-Squistan (ed. Goldscheider, p. 1), who begins his book with Nuub, he lived 1,450 years. Yet in his dying hour he describes his life as having had two houses in which one was "the house of the nude" and one the "House of thecls", in which he lived. Muslim legend knows the Biblical story of Nuub, his time and his sons, but embellishes it greatly and in al-Kinâ'it it becomes a romance. From the union of Khâfî's and Shad's descendants arises a sinful people which rejects Nuub's warnings. He therefore at God's command builds the ark from trees which he has himself planted. As he is hammering and bulding the people mock him: "once a prophet, now a carpenter?" "a ship for the mainland?" The ark had a head and tail like a cock, a body like a bird (Cts'abû). How was the ark built? At the wish of the apostles, Jesus arouses Sâm (or Hâm) b. Nuub from the dead and he describes the ark and its arrangements; in the lower storey were the quadrupeds, in the next the human beings and in the top the birds. Nuub brought the art into the ark first and the ass last. It was slow because Bible was clinging to his tail. Nuub called out impatiently: "come in even if Satan is with thee"; so.Hûs also had to be taken in. The pig arose out of the tail of the elephant and the cat from the lion. How could the goat exist alongside of the wolf, or the dove beside the birds of prey? God tamed their instincts. The number of human beings in the ark varies in legend between seven and eighty. 'Uqîb b. A'as was also saved along with the believers. Khâfî's niece was drowned. Nuub also took Adam's body with him which was used to separate the women from the men. For in the ark constructed was ordered, for man and beast. Only Hûs was transformed and for this was punished with a black skin. The whole world was covered with water and only the Harâm (in al-Kinâ'it, also the site of the sanctuary in Jerusalem) was spared; the Ka'ba was taken up into heaven and Dîbrîl concealed the Black Stone (according to al-Kinâ'it the stone was now white until the Flood). Nuub sent out the raven but finding some carries it forgot Nuub; then he sent the dove which brought: buck an olive leaf in its bill and mud on its feet; as a reward it was given its collar and became a domestic bird. On the day of 'Ashurî' every one came out of the ark, men and beasts fainted and gave thanks to Allah.

There are many contacts with the Haggoda: the
NUH

(different, it is true) partitioning of the ark. NUH's anxiety about the animals, Ham's sin and punishment (Surah Al-Hud, 168 b). The story that the great "Og escaped the Flood" is also taken from the Hagada (see "Bibl."). But Muslim legends go further than the Bible and the Hagada: according to Muhammad, who saw himself in NUH.

On the name NUH: Goldsáder, in "Z. D. M. G.", xxxiv. (1870), 207-211; on NUH as Muḥammar; Goldsáder, Abhandlungen zur arabischen Philosophie, ii., Leyden 1899, p. xxxix and p. 2.

(Rekhárd Helke)

NUH, the name of two Sánūsids i. Abū Muḥammad NUH i. Nūs ṣūr b. Amār, called Abū Amīr al-Nuḥnadd, succeeded his father as nāṣir, but the real ruler was the pious theologian Abū ʾl-Fadl Muḥammad b. Abī Ṣaʿīd Sāliḥ. The latter long refused to take the title of "wali" but finally succumbed to NUH's pressing representations, and took much less interest in the business of government than in his devotional exercises and theological studies which earned him the name of "al-Ḥikmī al-Shāhid". There were also by this time unmistakable symptoms of decline. In 332 (943-944), Abū ʾl-Fadl b. Abī Ṣaʿīd rebelled in Khurāsān and NUH set out with an army from Būbakhrā towards Merv. But when Abū ʾl-Fadl placed himself under the protection of the ruler of the Turks, whose son was a prisoner in Būbakhrā peace was restored by the release of the Turkish prince and the surrender of Abū ʾl-Fadl who was pardoned by NUH. Much more trouble was caused to the Sánūsid dynasty by the rebel governor of Khurāsān, Abū ʾl-Bayrān al-Muhādī. Shortly after his accession NUH sent him with an army against al-Rāyī to take this town from the Būbakhrā al-Dawla. A section of his troops deserted him on the way however and when he encountered Rūkh al-Dawla three farākhṣ from al-Rāyī, the majority of his Kūrī troops went over to the enemy. Abū ʾAll was defeated and had to return to Naisūr. In Djamālī I 333 (January-February 945), he again advanced against Rūkh al-Dawla but was defeated by order of NUH; on this occasion Rūkh al-Dawla did not meet him but took to flight, and in Ramadān (April-May) Abū ʾAll took the town and the surrounding country. In the meanwhile his enemies in Khurāsān took advantage of his absence to liberate him to NUH, whereupon the latter replaced him by Abīrāhīm b. Shufrū. But Abū ʾAll was not inclined to let this happen and on account of financial difficulties the government could not enforce its orders. As the troops were not paid regularly they blamed the vizier and said he was in collusion with Abū ʾAll. In the end the discontent increased to such a degree that NUH was unable to protect the vizier and in Djamālī I 335 (Nov.- Dec. 946) he was put to death. As early as

Ramadān 334 (April-May 946) Abū ʾAll had summoned NUH's uncle ʿAbdullāh b. Abī Ṣaʿīd from al-Mawṣil and when Abū ʾAll approached Merw, the government troops went over to him, while NUH fled to Būbakhrā. In Djamālī I 335 (Nov.- Dec. 945) Abū ʾAll entered Merw and in the following month Būbakhrā, where the people paid homage to Abīrāhīm as their ruler, after NUH had fled to Samarkand. But Abū ʾAll did not remain long in Būbakhrā. Under pretext of going to Samarkand, he left the town and made his way to ʿSaghānīyān; which he entered in Shībān (Feb.-March, 947). After Abīrāhīm, who with a brother of NUH's, Abū ʾDāʾīr Muḥammad, had remained in Būbakhrā, had begun negotiations with NUH, according to another story, had been defeated in open battle by him, NUH entered Būbakhrā in Ramadān of the same year (March-April 947) where he put to death one of the leading personalities, the chamberlain Togān, and blinded Abīrāhīm along with two of his own brothers, Abū ʾDāʾīr Muḥammad and Abū ʾMuḥammad Abū Ṣaʿīd. But the details are variously given; cf. Dhu al-Athir, al-Kāmil, vii. 348, where it is said after a very full description of events based on the Khurāsān historians: "The 'Irlā qīs give a different version", followed by a brief account of the same events from the 'Irlā qīs point of view; cf. also Barīḥīd, Twartūn, p. 247.

Maṣūṣ I b. ʿArsūlān was then appointed governor of Khurāsān and sent with a naval arm against Merw, where a follower of Abū ʾAll named Abū Ṣaʿīd Muḥammad b. Abī Ṣaʿīd was in control. The latter submitted to ʿAbdullāh's approach and was brought to Būbakhrā. Here NUH at first treated him kindly but when he discovered that he could not rely on Abī Ṣaʿīd he had him put to death. Peace between the government and the ambitions Abū ʾAll did not last long. When the latter learned that NUH was preparing for war he left ʿSaghānīyān and went to Būbakhrā; he then advanced against Būbakhrā once again. A battle was fought at Kūrīhī by Abī Ṣaʿīd, where he was defeated and returned to ʿSaghānīyān. After some time a rapprochement was arranged and NUH intended to attack him once more, whereupon Abū ʾAll again mobilized his followers. Būbakhrā and Toghrīkūstān fell into his hands; in Rābī I 337 (Sept.-Oct. 948) however, he came into conflict with the government troops and suffered a defeat. The latter sacked ʿSaghānīyān but when they were cut off from communication with Būbakhrā, NUH had to open negotiations for peace and in Djamālī I 336 of the same year (Dec. 948-Jan. 949) peace was made. The "Oriental" sources give no further details of the terms of the treaty; at any rate, Abū ʾAll's son Abū Maṣūṣ Abū ʾDāʾīr did not stay the peace and remained in ʿSaghānīyān. Since Maṣūṣ b. ʿArsūlān could not maintain discipline among the troops in Khurāsān he repeatedly asked NUH to relieve him of his office. The latter therefore promised Abū ʾAll to restore him to his old post and when Maṣūṣ died in Rābī I 340 (Aug.-Sept. 951) Abū ʾAll was appointed his successor. In Ramadān (Jan.-Feb. 952) he left ʿSaghānīyān, the administration of which he gave to his son Abū Maṣūṣ Naṣr b. Abū Ṣaʿīd, then went to Merw and arrived at Naisūr in Dhu l-Hijjah (April-May 952). He restored order in Khurāsān, but when by NUH's orders he attacked the Būbakhrā
al-Dawla and his achievements did not come up to expectations, he was dismissed and Abū ʿAlī Scīd Bakr b. Mālik al-Fārābhī appointed his successor, whereupon Abū ʿAlī sought refuge with Khaṭṭ Abū Daws. On Nūh's dealings with the Būyids see the article waqfūṣa n. eitān. Nūh died in Raḥb al-I 343 (Aug. - 954), and his son Abū al-Maʿlūk succeeded him.

2. Nūḥ b. Māniṣ, also called al-Maḍīr or al-Raʾṣīl, ascended the throne at the age of 13 after the death of his father in Sh. 13 (June 977). The government was at first in the hands of his uncle and the title viceroy Abū ʿUqāīr Abū ʿAlī al-Maʾṣūr, who assumed office in Raḥb al-I 367 (Nov.-Dec. 977). In 371 (982-983) the powerful Sīhābjār in Khāṣṣan Abū ʿUqāīr Muḥammad b. Iṣṭakān, also known as al-Ṣimārā, who according to Ibn al-Athir's description of him "only obeyed when he pleased" (fī ʿayna ḫannī waṣāṣ), was dismissed and Muḥammad al-Daws Abū ʿAlī Thāl, a devoted servant of the vizier, put in his place. But the rule of the vizier did not last long; the Sīmārā forces were defeated by the Būyids and the vizier himself murdered at the instigation of Ibn Suṭūdī. When Thāl went to Buḥrān in order to restore order there, Ibn Suṭūdī joined forces with the former Mamlick Fīṭkī, who had taken part in the war against the Būyids and offered him his assistance in the conquest of Khāṣṣan; they then met in Nāṣirābād and seized the country around it. When Thāl heard of this he went to Merw and entered into negotiations with the two viziers with the result that it was agreed that Thāl should retain the supreme command along with Muḥammad while Fīṭkī was to get Bahk and Ibn Suṭūdī's son Abū ʿAlī was to receive Nāṣir. At the same time, in 373 (985-986) and 376 (989), "Abū ʿAlī Muḥammad b. ʿUṣāir was appointed vizier. The latter was hostile to the ʿUṯūn family and at once dismissed Thāl and restored Ibn Suṭūdī to the supreme command in Khāṣṣan. Some officers indeed appealed for Thāl but their representations were of no avail with the vizier, who was supported by Nūḥ's mother. Equally unsuccessful were the efforts of the former Sīhābjār to enforce his claims by force of arms against Ibn Suṭūdī and Fīṭkī, although he was supported by the two Būyids, Fīṭkī al-Daws and Shāfīʿ al-Daws Abū Ṭabīṣ al-Daws. Thāl was defeated and killed in Djiḡān Ṣamān al-Daws and died in 377 (987-988) of the plague or, according to another statement, of poison. In Dij al-Hidżāja 378 (March 990) Ibn Suṭūdī also died and was succeeded by his son Abū ʿAlī, who was jealous of Fīṭkī and wished to get him out of the way. When he resorted to arms Fīṭkī could not resist him but fled to Merwāštī. Abū ʿAlī then was recognised as governor of all the provinces south of the Amīt-Darmān and soon made himself independent of the central government in Buḥrān while Fīṭkī took possession of Bālāk. The amir Abū ʿAmīr Muḥammad b. Abū ʿAlī al-Maṣūr, whom Nūḥ sent against him, was defeated and joined Fīṭkī against the lord of Ṣamān al-Daws. The latter could not resist the combined forces of the allies; he himself was slain and his army scattered. In addition, there was the intervention of foreign powers in the domestic affairs of the kingdom. Abū ʿAlī turned to the Karmāshān Buḥrān-Khan and arranged with him for a partition of the Ṣamān kingdom by which Buḥrān-Khan was to have Transoxiana and Abū ʿAlī Khaṭṭār. As a result Buḥrān-Khan appeared in Buḥrān in Bālāk in May 992 but soon withdrew and died on the way back to Turkestan [cf. the article Buḥrān-Khan]. After Nūḥ, who had had to evacuate his capital, had returned, Fīṭkī again appeared on the scene. On the approach of Buḥrān-Khan he had been sent against him, but, as we are told, presumably correctly, deliberately allowed himself to be defeated, whereupon he submitted and was rewarded by Buḥrān-Khan with the governorship of Timāla and Khaṭṭār. After the return of Nūḥ he entered into a disaccord with Abū ʿAlī and the latter was helped by the Sīmārā decided to appeal for help to the Khursāwī Sabūṭkūn [cf. the article SABŪṬKŪN]. After a time Abū ʿAlī and Fīṭkī, who had taken refuge with the Būyids Fākh al-Daws in Djiḡān, wished to return to Khāṣṣan (386 = 995). At first they had some success but when they encountered Sabūṭkūn near Thāl they were defeated and fled to Amīr. They then sent messengers to Buḥrān to appeal for pardon. The authorities turned a deaf ear to Fīṭkī's appeal but decreed themselves ready to restore Abū ʿAlī to favour. Fīṭkī therefore fled to the Karakhanids while Abū ʿAlī after many vicissitudes finally made peace with the authorities in Buḥrān through the intervention of the amir Abū ʿAmīr Maʾṣūr b. Muḥammad b. Maṣūr, the burgīdī. He was received very kindly but later thrown into prison with several of his brothers and officers. At the same time, a raid by the Karakhanids forced Nūḥ again to appeal to Sabūṭkūn who was then in Khaṭṭār. The latter at once invaded Transoxiana with a large army; but when he demanded that Nūḥ should join forces with him, Nūḥ refused on the advice of the vizier Abū ʿAlī Maṣūr b. ʿUṣāir. Sabūṭkūn was not at all pleased and Nūḥ did not want to give in but also to hand over the vizier and Abū ʿAlī, wherupon the vizier was given to Abū Nasr Abū ʿAlī Muḥammad b. Abū ʿAlī ʿUzair, imprisoned. But Abū ʿAlī and Ibn ʿUṣāir is Gardu. The former died in 387 (997) in prison while the vizier was afterwards released. At the conclusion of peace, Sabūṭkūn and the Karakhanids agreed that the steppe of Kafūān should be the frontier between the Samānids and the Karakhanids. Nūḥ was also recognised as governor of Samān al-Daws. Sabūṭkūn ruled as an independent sovereign in Khūṣṣan, Khurāsān, Transoxiana, and Nāṣir Nūḥ endeavoured to restore order by force but after a few months he was murdered and Nūḥ appointed his successor Abū ʿAmīr Maṣūr b. Ibn Khaṭṭār al-Burghāshī. Nūḥ died in Rudjāb 387 (July 997) and was succeeded by his son Abū ʿAmīr al-Hārīṣ Muṣāfīn.
NÜH v. MUSTAFÄ, an Ottoman theologian and translator, was born in Anatolia but migrated while still quite young to Cairo where he studied all branches of theology and attained a high reputation. He died there in 1070 (1659). He wrote a series of theological treatises, some of which are detailed by Brockelmann, G.A. L., ii. 314. His most important work however is his free translation and edition of Shahrastānī’s celebrated work on the sects, Tadhkira-ı Millâh-ı wa-Niṣābūn, which he prepared at the suggestion of a prominent Cairo cadi named Yūsuf Efendi. It exists in manuscripts in Berlin (cf. Fertisch, Not. p. 157 sq.; Gotta (Fertisch, 3rd ed. 1970)). Also printed in Cairo (cf. Rič, in Acta, p. 33 sq.; Upsala (cf. Tornberg, Ueber, p. 213), Vienna (cf. Flügel, Kat., ii. 199) etc. and was printed in Cairo in 1263. On the considerable differences between this Turkish translation and the original Arabic cf. Rič in the British Museum Catalogue, p. 356. In his Mémorial aux deux confrets gnostiques du moyen âge, du Cabinet de M. le Duc de Ricas (Paris 1855), p. 40 sqq., J. v. Hammer gave some extracts from the latter part of the work. He also wrote it in the Winter-fahr-buch, lext. p. 30 and 4. In 1850 (1741) a certain Yūsuf Efendi wrote a life of Nūh b. Mustafä which exists in MS. in Cairo (Cat. vii. 564). Bibliography: The catalogues of MSS. above mentioned and also Brockelmann, G.A.L., ii. 314 and Muhammād al-Muhājib, Futul lשת Himalik al-TH, Cairo 1868, iv. 458.

AL-NUKHAILA, a town in the ʿIrāq, near al-Kūfa. It is known mainly from the accounts of the battle of Kūdīsā. From the statements collected by Yāḥyā regarding its position it appears that two different places of this name had later to be distinguished, namely one near Kūfa on the road to Syria, which is several times mentioned in the time of the Caliphs ʿAlî and Muḥâjīn and another, a watering station between al-Muhājīn and al-Yūz aw, 3 mil from al-Husayn, to the right of the road to Mecca. Several encounters took place there during the second battle of Kūdīsā. According to al-Khwāja in al-Bakri, this al-Nukhaila was in the Syrian steppe (al-Šowāf); Ibn al-Fakhr also seems to be thinking of this region. Caustani assumes that the reference in both cases is to the same place on the edge of the desert. According to Maull, it perhaps corresponds to the modern Khūl ibn Nihâla about 14 miles S. E. E. of Kerbela and 40 miles N. W. of al-Kūfa.

AL-NUIRR, a plain east of the Jordà in Transjordan. The name al-NuIRR ("the cavity") is quite common here. It is applied to an area which includes the two districts of al-Bathān (with its chief town Al-Husayn) and Hâshā (a part of the hills of the same name), i.e. the whole northern half of Transjordan. In the wider sense al-NuIRR includes all the country from al-Lūdâ, al-Dhâr and al-Balâgb to the left of the Jordà, in the narrower sense only the southern part of this; in any case it stretches from al-Sanāmâ to the Jordà at Dârâ (Hâshā). To al-NuIRR belong Miṣrār and Miṣrâb, Tubâs (now Tūbâs), al-Maṣānūzî, Ouba, Ouk, al-Maṣānūzî and al-Fadiūn already mentioned in Syrian texts of the pre-Muhammadan period.

NUMAIR, an Arab tribe of (Wüstenfeld, Geneä. Tabellen, V. 15) inhabiting the western heights of al-Yaman and those between this region and al-Hima Dârya; a bare and difficult country the nature of which explains the rude and savage character of the Numair. Their name like that of their word and Arabic borne by other al-nimic groups (there are also in the list of Arab tribes a number of other clans with the name Numair among the Asad, the Tammûn, the Dârî, the Harmân etc.) is no doubt connected with that of the tribe; we know the deductions made by Robertson Smith from this fact and from other similar cases, to prove the existence of a system of totemism among the early Arabs (Kinship and Marriage in early Arabia, second ed., p. 234). His theory is now abandoned.

The geographical dictionaries of al-Bakri and Yāḥyā mention a large number of places in the land of the Numair, especially their wells, and often even record a change of ownership from one tribe to another (e.g. Yāḥyā, Muḥâjib, ill. 302; the well of the Khâlīs, which formerly belonged to the Tamûn clan of the Dârî tribe, later passed to Numair). In his theory, the Numair played an important part in the history of Arabia. It is only due to the fact that the country of the Numair is typically Beduin in its scenery and lends itself to description by poets. The Numair besides were much mixed with the neighbouring tribes (especially the Tamûn, Bûhila and Kušlu) and the boundaries of their territory were rather vague. The Numair, a poor tribe without natural wealth, have always been brigands. The part; they took in the pre-Islamic wars was a very modest one and they appear very rarely alongside of the other groups of the great tribe of Amīr b. Saʿāda (they hardly played any part in the battle of Fair al-Riḍ) against the Banū l-ʿAutah b. Ka'b and their allies, Miṣrâr, ed. Behra, p. 466-475). It is to
this isolation that they owe the privilege of being known as one of the Djamadat al-Arâb, i.e. a tribe which never allied itself with others (cf. Muharrad, Kâmî, ed. Wright, p. 372; Alâ'î, p. 340; Muâwiyâ, ed. Lyall, p. 841; cf. the different tribes to which this title is given, cf. Tâhâ al-Arâb, ii. 107); the other designation of the Numair, "the Afdâl of the Banû 'Amîr," also gives them a special place within the great tribe from which they sprang; it indicates that they were thought not only as a powerful but also as the other tribes of the Banû 'Amîr (Muâfjâlâyîn, p. 259; al-Radd, p. 112; the source is the Szchazarra of Ibn al-Kalbî, Brit. Mus., MSS., fol. 120b-121a). Neither during the life of the Prophet, nor at the beginning of the caliphate, did the Numair make any stir; they appear neither as partisans nor as enemies of Islam. It is only from the Omayyad period that the name begins to appear in histories, but only to record their intransigence to the central power or their exploits as brigands; in the caliphate of 'Abd al-Malik their refusal to pay tribute brought a punitive expedition against them (al-Baladhûrî, Jâmi' al-Tâbilîn, p. 139; cf. Aghârî, xxi. 112-113, xi. 117-119). These were the earliest tribes of the same kind but on a larger scale was that made against them by the famous general of the caliph al-Mutta-wakkîl, Bughîl al-Kâbirî, in 232 (846) to put an end to their systematic plundering; it ended in the complete dispersal of the tribe (Tâbilîn, ii. 1257-1263); a most interesting account of Beduin customs, including on p. 1261 a detailed list of the Numair clans only one of which, the Banû 'Amîr al-Numair, devoted itself to agriculture and grazing, while the others lived only by brigandage. It appears however that the Numair soon resumed their old habits and another expedition was sent against them with the same object as the earlier ones in the 10th century a.d. by the Hamânah Sall al-Dawla (Yâkût, Misâq, iv. 378).

An event of little importance in itself has given the Numair considerable fame in literary history, although little flattering to them: this is the satire directed against them by the poet Dijrî, which is one of the most famous examples of the invective of the âdâbî (especially the hemistich: "Cast down thine eyes: thou bearest to the Numair!"). The occasion of the was the unfortunate intervention of the Numair poet al-Râfi in favour of al-FarâNAâ in the celebrated feud between him and Dijrî (Alas, p. 247-251, 253; Aghârî, vii. 49-50; xx. 169b-171c). The memory of this quarrel survived for a very long time. It was probably no accident that the men who urged the emir Bughîl to the expedition against the Numair was the great-grandson of Dijrî, the poet 'Umâr b. 'Aqîl b. Shabîb b. Dijrî; the Numair moreover had slain four of his uncles (Ibn Katala, Sh Gir, ed. de Goeje, p. 824, where we must read B. Dîmâ b. 'Abd Allah b. Numair) in place of B. Ildâbî. The enmity between the family of Dijrî and the Numair was probably revived by the proximity of the latter to the tribe of the poet, the Banû Katalâ b. Yarîm.

To the Numair belonged notable poets — in addition to al-Râfi's and his son Dijrî — like Ali b. Hâjiya (in the early 'Abîzîd period) and Dijrî al-'Azîzî whose Dibân was recently published (Cairo 1350 = 1931, publications of the Egyptian Library).

(G. LEVI DELLA VIDA)

AL-NUMAIÎ B. BASHIR AL-ARABÎ, GOV-ERNOR OF AL-KUFA AND JIHÁM. According to some Muslim authorities, al-Numâni was the first jihâd to be born after the Hijra. He was 'Abd Allah b. Jihám b. Sa'd (q.v.), one of the most distinguished of the Companions of the Prophet, and his mother, 'Amarah bint Rawâsha, was the sister of the much respected 'Abd Allah b. Rawâsha (q.v.). After the assassination of 'Uthâm, al-tumâni, who was devoted to him, refused to pay homage to 'Ali. According to some stories which seem rather apocryphal, he brought the bloodstained shirt of the Caliph, according to others, the fingers cut from the hand of his wife Na'tila to Damascus and these relics were exhibited by Mu'awiyah in the mosque. In the battle of Siffin (q.v.) he faithfully stood by Mu'awiyah and he was always a favourite with him while the other Sayyids were kept at a suitable distance from the Umayyads. His son was Sabr b. Jihâm b. Sabr (q.v.) who succeeded his father in al-Kufr as governor of the city. He undertook an expedition against Malîk b. Ka'b al-Arâshâh, who had occupied in 'Alî's name 'Ain al-Tamar on the frontier between Syria and Mesopotamia and began to besiege it but had to retire without accomplishing anything. Twenty years later, he was given the governorship of al-Kufr. He was not really fitted for this post, because his pronounced antipathy to 'Ali and his followers did not suit the Shi'ite population of the town. In addition he did not conceal his sympathy with the Sayyids, who were attacked by Yazid b. Mu'awiyah of Kawkab al-Akhtâl (q.v.), but freely expressed his opinion on the insult offered to his fellow tribesmen. After Yazid had come to the throne in 60 (April 680), he nevertheless left al-Numâni in office; but the latter did not long remain there. Al-Numâni is described as an ascetic and he knew the teachings of the KUFSI thoroughly. But his asceticism was not of the strictest type, and his interest in musical entertainments was regarded as evidence of lack of dignity. In policy he proved very tolerant so long as it did not come to an open rising. When Muslib b. Aš'îl, Husain's partisan, appeared in al-Kufr to ascertain the feelings of the people and found a number who were ready to pay homage to Husain, al-Numâni adopted a neutral attitude and took no steps to check the vigorous propaganda.

As a result the followers of the Umayyads in al-Kufr wrote to the Caliph and called his attention to the fact that the threatening situation had attracted a man of vigour who would be able to carry out the government's orders, while al-Numâni out of real or feigned weakness was letting things take their course and only urging people to keep calm. When al-Yazid was discussing this with his counsellors, notably the influential Ibn Sârîf, the latter showed him a document signed by Mu'awiyah shortly before his death, containing the appointment of the then governor of al-Basra, 'Usâd Allah b. Ziyâd (q.v.) to the same office in al-Kufr. In spite of his antipathy to the proposal, Yazid carried out his father's wish and made 'Usâd Allah governor of al-Kufr without removing him from his post in al-Basra, whereupon al-Numâni hastened back to Syria. When the people of Medinah rebelled
at the beginning of the year 63 (658) and drove all the Usayyid out of the town, Usaid wished to see what tact would do before resorting to arms and sent a mission to Mu'tah under al-Nu'man to show the people the futility of armed resistance and to bring them to their senses. The mission was also instructed to go on to Mecca to induce the stubborn 'Abd Allah b. al-Zubair to pay homage. Al-Nu'man's warnings and threats had no effect on his countrymen; however and there was nothing left for the Caliph but to subdue the rebels in the two holy cities [see the article 'Abd Allah b. Nu'man'] by force of arms. After the death of Yazid in July 64 (Nov. 638) al-Nu'man, who had in the meanwhile become governor of Hijaz declared openly for 'Abd Allah b. al-Zubair. In Dhu l-Hijja of the same year (July-Aug. 638) or in Muharram 65 (Aug.-Sept. 638) however, the latter's leading follower al-Dalib b. Ka'b al-Fihri [q.v.] was defeated at Marj Rihib [q.v.] and thus the fate of al-Nu'man was also decided. He attempted to save himself by flight but was overtaken and killed. According to the Arab historians, the town of Mumarr al-Nu'man takes its name from Nu'man b. Baghir.

AL-NU'MAN B. AL-MUNDHIR (with the names Abu Khlid or Abu Kulaib) was the last "king" of the house of the Lakhmid of al-Hira [cf. Lakhm]. He is certainly the best known to the Arabs but not by any means therefore the most important of the dynasty. He is often mentioned by the poets, according to circumstances a subject of panegyrics or of lampoons. His best known court poet was al-Nabigha al-Jughrati [q.v.]; on his relationship with 'Abd al-Malik al-Tahli see below.

His fame among the Arabs does not mean that we know a great deal about his life and activities. What we can get from the poets is of very little historical value and what the historians tell us about him is of almost no value. Arab tradition about the house of Lakhmid is generally speaking of the same nature that as of the partly contemporary houses of Ghasan and Kinda. In addition there is the complication produced by the frequent confusion of different people of the same name in the stories. What is to be found in non-Arab sources, although more reliable, is too trifling and accidental to build a historical narrative upon.

The material has been collected by Nöldeke in his Geschichte der Perser und Araber im Zeit der Sassaniden and G. Rothstein, Die Dynastie der Lakhmiden in al-Hira and critically studied as far as possible.

The "kings" of al-Hira were vassals of the Persian Great Kings and were installed by them, and given the task of keeping together the Arab population of the marches and the desert Arabs, their dependents, and thus to protect the empire against raids and plunder by the Bedouins. Al-Nu'man is said to have reigned 580—602 A.D. or perhaps a little later. His father was al-Mundhir b. Hamza, one of the three sons of the famous princes of the house of Kinda, who came to the throne in succession. His mother however was of humble origin; she was, it is said, the daughter of a goldsmith named Medina, in fact a slave born of the enemy of the king made good play within their lampoons on him. After the death of his father al-Mundhir, the Great King (Homamid IV) is said to have hesitated for a time to fill the throne.

AL-Nu'man's final appointment is said only to have been made through the influence and cunning of the Arab poet 'Adi b. Zaid al-Maghzal [q.v.] who was secretary for Arab affairs to the Great King and whose family were devoted to al-Nu'man.

No really important events are known of the reign of al-Nu'man. Mention is made of hostilities with Arab tribes and anodes of his life recorded. At first a pagan, like all his male ancestors, he was baptised which did not prevent him remaining a polygamist. But this had previously been Christians in his family. His grandmother Hidu above mentioned founded a monastery (cf. al-ya'la) and his sister of the same name (others say daughter) was a nun. Towards the end of his life he had the poet 'Adi b. Zaid put to death as his enemies had imprisoned him against him. But he is said to have helped a son of the poet to obtain the same influential position with the Great King (Khuwar II) as his father had held. He himself was not long afterwards made prisoner by the Great King — it is said as a result of the incarcerations of this son of 'Adi — and died in prison. There are all sorts of legends giving details of his end.

AL-NU'MAN B. THABÍT, [See Abu Hamzah.]

AL-NU'MAN b. 'Abi 'Abd Allah Muhammad b. Mansur b. Almâiq. AL-MUNAID b. 'Abd Allah al-Mahmadi, the greatest of the Isma'il 'illjusists and a protagonist of the early Fatimid id in Egypt, Nu'man appears to have been derived from a Maliki stock in Kairawan, adopting the Isma'il faith early in life. The exact date of his birth is not known, but it is probable that he was born in the last decades of the third century of the Hijra. He began his service of the Fatimid by reciting the service of al-Mahdi (first Fatimid caliph) and served him for the last nine years of his life, i.e., 338—342 A.H. Thereafter he continued to serve al-Kalif (second Fatimid caliph) for the whole of his life. During this time al-Nu'man was concerned chiefly with the study of history, philosophy and jurisprudence, and the composition of his numerous works. Just prior to al-Kalif's death, which occurred in 355 (960), he was appointed a mu'att. His rank was during the time of Mansur (third Fatimid caliph) and he reached his
AZ-

Nur (nur), light, synonym du'um, also dina (the latter sometimes used in the plural). According to some authors, du'um (du‘um) has a more intensive meaning than nur (cf. Lane, Arabic-English Dictionary, s. v. du‘um); this idea has its foundation in Koran 3. 5, where the sun is called du‘um and the moon nur. The further deduction from this passage that du‘um is used for the light of light, producing bodies (sun) and nur on the other hand for the reflected light in bodies which do not emit light (moon), is not correct, if we remember the primitive knowledge of natural science possessed by the Arabs in the times of Muhammad, nor do we find it in later literature. The works on natural science and cosmology of the Arabs in the heat-period of the middle ages (Ibn al-Haitham, Jawzi and later writers) in the great majority of cases use the term du‘um and it therefore seems justified to claim this word as a technical term in mathematics and physics.

Besides dealing with the subject in his Kitab al-Milsa (Kitab al-Milsa) Ibn al-Haitham devoted a special treatise to it entitled Jawzi al-Husan b. al-Husayn b. al-Haitham. Al-Qam‘a (The Little Book) which has been published with a German translation by J. Baarmann in the Z. d. M. G., xxxvi. [1882], 195–237, from which we take the following details:

As regards light, two kinds of bodies are distinguished, luminous (including the stars and fire) and non-luminous (dark); the non-luminous are again divided into opaque and transparent, the latter again into such as are transparent in all parts (like air, water, glass, crystal etc. and such as only admit the light partly but the material of which is really opaque, such as thin cloth.

The light of luminous bodies is an essential quality of the body, the reflected light of a body in itself dark on the other hand is an accidental quality of the body.

In the opinion of mathematicians all the phenomena of light are of one and the same character; they consist of a heat from fire which is in the luminous bodies themselves. This is evident from the fact that one can concentrate rays of light from the brightest luminous body, the sun, by means of a burning-glass, etc. and thus set all inflammable bodies alight and that the air and other bodies affected by the light of the sun become warm. Light and heat are thus identified or regarded as equivalent. The intensity of light, like that of heat, diminishes as the distance from the source increases.

Every luminous body whether its light is one of its essential qualities (direct) or accidental (reflected), illuminates any body placed opposite it, i.e. it sends its light out in all directions. All bodies whether transparent or opaque possess the power of absorbing light, the former have further.
the power of transmitting it again; that a transparent body (air, water, etc.) also has the power of absorbing light is evident from the fact that the light becomes visible in it if it is cut with an opaque body: the light must therefore have already been in it.

The penetration of light into a transparent body takes place along straight lines (proof: the sun's rays in the dust-filled air of a dark room). This transmission of light in straight lines is an essential feature of light itself, not of the transparent body; for otherwise there must be in the latter specially marked lines along which the light travels; such a hypothesis is however dispelled by admitting two or more rays of light at the same time into a dark room and watching them.

The ray is defined as light travelling along a straight line. The early mathematicians were of the opinion that the process of seeing consisted in the transmission of a ray from the eye of the observer to the object seen and the reflection from it back to the eye. Opposed to this is Ibn al-Haitham's view that the body seen—luminous or opaque—sends out rays in all directions from all points of which those going towards the eye of the observer collect in it and are perceived as the image of the body (cf. Optics, book i. 23: "et radii ut fit radiis a visu centibus" and also book ii. 23).

There is absolutely no transparent body; on the contrary, every body even the transparent reflects a part of the light; which strikes it (explanation of the phenomena of twilight). According to Aristotle, the heavens possess the highest and most perfect degree of transparency. Ibn al-Haitham challenges this statement and shows from a use of the theory of the mathematician Abū Sa'ūd al-Allī b. Schall, which is based on the well known rules of the refraction of light in passing through media of different densities, that the transparency has no limits and that for every transparent body an even more transparent one can be found.

An explanation of the origin of the halo around the face of the rainbow, its shape and its colours, and of the rainbow to be seen at night in the steamladen atmosphere of the bath is given by Kazwini in his Cosmography, i. "Abūl'Alā Makki, ed. Wüstefeld, Göttingen 1849, p. 100 and transl. Roth, Leipzig 1865, p. 205 sqq."). Kazwini in his discussion replaces the raindrops by small looking-glasses; Ibn al-Haitham, on the other hand, deals with the problem in a much more conclusive fashion by assuming a single or double reflection of light in spheres (cf. E. Wiedemann, West. Ann., vol. xxxix. 1890, p. 575).

(Willy Hartner)

The doctrine that God is light and reveals himself as such in the world and to man is very old and widely disseminated in Oriental religions as well as in Hellenistic gnosis and philosophy. We cannot here go into the early history; it will be sufficient to refer to some parallels in the Old and New Testaments, e.g. Gen. i. 3; Isaiah, i. 19; Zech., iv. 1; John, i. 4—9; iii. 191 v. 35; viii. 12; xil. 35 and Rev. xxi. 23 sqq.

How Muhammad became acquainted with this teaching we do not know, but the Koran has its "light" verses (notably Sura xxiv. 35: "the light verse") properly; cf. with it Sura xxxii. 45 (Muḥammad as lamp); xxl. 8 sqq. (Allāh's light); liv. 8 (the light went down—revelation). The light verse runs (as translated by Goldziher, in Komm.-auslese, p. 183 sqq.): "Allāh is the light of the heavens and of the earth; his light is like a niche in which there is a lamp; the lamp is in a glass and the glass is like a shining star; it is lit from a blessed tree, an olive-tree, neither an eastern nor a western one; its oil is almost alone even if no fire touches it; light upon light. Allāh leads to his light whom he will, and Allāh creates allegories for man, and Allāh knows all things."

From the context it is clear that we have to think of the light of religious knowledge, of the truth which Allāh communicates through his Prophet and his Prophets, the light of his teaching, especially the believers (cf. also Sura xxiii. 40). It is pure light, light upon light, which has nothing to do with fire in new sense (sun), which is lit from an olive tree, perhaps not of this world, of however A. J. Wensink, Tree and Bird as Cosmological Symbols in Western Asia, in Verh. Ab. Aant., 1921, p. 27 sqq.). Lastly it is Allāh as the all-knowing who instructs men and leads them to the light of his revelation (cf. Sura lxxvi. 8). It is clear that we have here traces of gnostic imagery but these rationalist theologians, who whether to avoid any comparison of the creature with God or to oppose the fantastic mysticism interpreted the light of Allāh as a symbol of his good guidance probably diverged less from the view of the Korān than most of the metaphysicians of light. Passages are very frequent in the Korān in which Allāh appears as the Knowing (Al-'alīm) and the Guiding (Al-Mużīm). One did not need to look far for an exegesis on these lines. As Abū' l-Faraj observes (Muhāṣib, ed. Ritter, iii. 554) the Muḥammad al-Hasān al-Najjdār interpreted the light verse to mean that God guides the inhabitants of heaven and earth. The Zaidīs also interpreted the light as Allāh's good guidance (cf. the article MA šī'a).

From the tenth a. d. we find references to a prophetic doctrine of MA šī'a, and gradually to a more general metaphysics of light, i.e. the doctrine that God is essentially light, the prime light and as such the source of all being, all life and all knowledge. Especially among the mystics in whose emotional thinking, being, named and image coalesced, this speculation developed. Meditation on the Kitāb, the Persian stimulus, gnostic-Hermetic writings, lastly and most tenaciously the Hellenistic philosophy provided the material for the idea of light. The Korān (d. 743) had already sung of the light emanating through Adam via Muhammad into the family of Allāh (cf. the article MA šī'a). The doctrine of light was dialectically expanded by Sahī al-Tustārī (d. 896) (see also Masmīgī, Tawārīkh tud, p. 39 and the article SAHĪ AL-TUSTĀRĪ).

The first representatives of a metaphysics of light in Islam readily fell under the suspicion of Manichæanism, i.e. of the dualism of MA šī'a and MA šī'a (darkness) as the eternal principles. The tradition of Tirmidhi that Allāh created in darkness (cf. the article MA šī'a) must have aroused misgivings. The physician Rīqīd (d. 924 or 934) although a Hellenistic philosopher, adopted ideas from Persia and was for this reason or cursed by various theologians and philosophers. Many mystics also (e.g. Hallāj; according to Masmīgī, Tawārīkh tud, p. 159 sqq. wrongly) were accused of this dualism. But the speculations about light found a powerful support from the ninth century in the monotinic doctrine of light of the Neo-Platonists (we do not
know of any Persian monism of light) which was compatible with the monism of Islam. The father of this doctrine is Plato, who in his Politeia, 506 D sqq., compares the idea of the good in the supersensual world with Helios as the light of the physical world. The contrast is not therefore between light and darkness but between the world of ideas or mind and its copy, the physical world of bodies, in the upper world pure light, in the lower world light more or less mixed with darkness. Among the Neo-Platonists the idea of the good = the highest God = pure light. This identification was also facilitated by the fact that according to Aristotle's conception light is nothing corporeal (De anima, ii, 7, 418b: [σὰρκίς]… τὸς πάντας ἐκ θεοῦ ὑπόγειον τοῦ ἁλλόν ἐκ τοῦ ὁμοίου ζωτικόν). From the context which is however not all clear, it appears that Aristotle regarded light as an effective force (ἐνέργεια). This is however of no importance here. Many Aristotelian forces and Platonic ideas are described by Neo-Platonists and Neo-Platonists sometimes as forces and sometimes as substances (spiritual). With Aristotle ὄλπις (darkness) was conceived not as something positive but as σκότος (privatio, the absence of light).

From this developed the doctrine which we find in the Arabic "Theology of Aristotle". Not far from the beginning (ed. Dieterici, p. 3) it is said: the power of light (ἰσχύς τῆς φωτός) is communicated by the prime cause, the creator, to the ὀφθή and by the ὀφθή to the world soul, then from the ὀφθή through the world soul to nature and from the world soul through nature to things which originate and decay. The whole process of this creative development proceeds without movement and timelessly. But God who causes the force of light to pour forth is also light (φως; occasional synonyms: ἀόρατος, ἀόιδος), the "prime light" (p. 51) or (p. 44) the "light of lights". Light (p. 51) is essentially in God, not a quality (αἴσθησις) for God has no qualities but works through his being (ὁμοίωσις) alone. The light flows through the whole world, particularly the world of men. From the supersensual original (p. 150), the first man (ἵνα καὶ ὀφθή), it flows over the second man (ἵνα δεδομένη) and from him to the third (ἵνα διδομένη). These are the originals of the so-called real men. Light is of course found in its purest form in the souls of the wise and the good (p. 51). It should be noted also that φως as a spiritual force (ρύθμον, ἀνθρωπος) is distinguished from fire (φως) which is said to be only a force in matter, with definite quality (p. 85).

Fire of course like everything else has its supersensual original. But this is more connected with life than with light.

The elevation of the soul to the divine world of light corresponds to the creative descent of light (p. 8). When the soul has passed on its return beyond the world of the ὀφθή, it sees there the physical body and the beauty of God, the goal of all mysteries.

Although the author of the Liber de causis is of the opinion that nothing can be predicated regarding God, yet he has to call him the prime cause and more exactly pure light (§ 5, ed. Bardenhewer, p. 69) and as such the origin of all being and all knowledge (in God is omniscient = omniscient; see § 43, p. 103).

The light emanated by God may, if it is regarded as an independent entity, be placed at various parts of the system. Most philosophers and theologians connect it with the ῥας or ὀφθή or identify it with them, sometimes also with life (μάρτυς), but this must be more closely investigated.

The great philosophers in Islam, Fārābī and Ibn Sīnā, connected the doctrine of light with the ὀφθή in metaphysics as well as in psychology. Fārābī is fond of using many synonyms for the light of God and the ὀφθή (βαθύς etc.; see e.g. Der Mystere von der Lichterei, ed. Norden, p. 13 sqq.). In the biography of Fārābī in Ibn Abī Thalib's Uṣūl, ed. Müller, ii, 134—140) a prayer is attributed to him in which God is invoked as the "prime cause of things and light of the earth and of heaven". Ibn Sīnā like Fārābī takes up the doctrine of light in theology and further develops it. In his psychological writings he regards the light as a link of the soul and body (cf. Saḥ al-Tustari, who places ὀφθή between ῥάς and ἐννοία in the four elements of man). In the Kitāb al-Isfārā (ed. Forget, Leyden 1892, p. 126 sq.) he even reads the whole metaphysical doctrine of the ὀφθή of the Aristotelians into the light verse of the Qur'ān. Light is the ὀφθή ἐπὶ τῆς ἐννοίας, fire the ὀφθή ἐπὶ τῆς ἐννοίας and so on. Allāh's ὀφθή is therefore like the nous of Aristotle! This discovery of Ibn Sīnā's was incorporated in the pious reflections of Ghaṣālī, al-Maqrīzī al-Kindi, peoples, passed on to Muhammad al-Najafi, Ceylon 1927, p. 58 sqq.

The best expositions of the further developments of speculation on ὀφθή, especially among the gnostics and mystics, are in Mustaggin's articles KARMAITANS AND TASSAWUF.

Nūr Allāh Al-Ṣāyid b. Al-Ṣāyid Shāhir Al-M prospective/Nūr Allāh Al-Ṣāyid b. Al-Ṣāyid Al-Māsidh Al-Ḳasāvsī Al-Shuddari, commonly called Kādī Nūr Allāh, was born in 936 (1540). He was descended from an illustrious family of the Marṣaṣ Al-Ṣayīd and settled in Shughtar. He left his native place for India and settled in Lahore where he attracted the notice of Ḥaḳ Abū ʿl-Fath (d. 997 = 1588) and through his presentation to Emperor Akbar (1563—1014 = 1566—1605), he was appointed Kādī of Lahore in lieu of ʿAlī Shāh Muḥammad (d. 997 = 1586). ʿAbd al-Ḵādīr Bādaʿī, iii, 137, says that he was, although a Shīʿa, a just, pious and learned man. He was hanged to death in 1019 (1610), on account of his religious opinions, by the order of the Emperor Dāhāṅgir (1014—1037 = 1605—1628). He is regarded as al-Qanātīsh al-Qanātīsh, "the third martyr", by the Shīʿa and his tomb in Akbarshāh is visited by numerous Shīʿa from all parts of India. He is the author of innumerable works of which the following may be quoted: Ḥiṣḥiyā šaʿla ʿl-Bayḥūdī, a commentary to al-Bayḥūdī's commentary on the Qur'ān, entitled Anwar al-Tawāwīl: Asiatic Society of Bengal MSS., List of the Government Collection, p. 16; 2. Ḥiṣḥiyā Ṣāḥib ʿAlīs ʿašrāf ʿala ʿl-Qasīfī, glosses to Kādī's commentary on Naṣīr al-Dīn al-Tūsī's Compendium of metaphysics and theology, entitled Ṣafīlī al-Kalīm: Loh, Ind. Off., No. 471, xx; 3. ʿAlīs ʿašrāf ʿala ʿl-Qasīfī, a polemical work against Sunnism written in reply to Fādī b. Ṣuḥrāsī's work entitled Ḥiṣḥiyā al-Bayḥūdī, a treatise in refutation
under his father in the siege of Kaifat Dinbar where the latter was murdered in Kahl al-I 542 (Sept. 1146). His kingdom was thus divided between his two sons, Saif al-Din Ghazi [q.v.] who took possession of al-Mawil, and Nur al-Din who established himself in Halab. Scarcely had the news of Imad al-Din’s death reached Joscelin II who lived in Tell Buqhal [q.v.] than the latter entered into negotiations with the people of Edessa, namely Armenians, the chief stronghold of the Crusaders, which Imad al-Din had taken shortly before and assured himself of their cooperation in his proposed attack on the city. He was thus able to occupy the city without difficulty and its Muslim garrison took refuge in the citadel. When Nur al-Din heard this he hurried thither by forced marches; Joscelin fled and Edessa fell into the hands of Nur al-Din who wreaked a terrible vengeance on the treacherous Christians, laid the city completely waste and left only a few citizens in it. In the following year he invaded the district of Halab and took from the Christians Aril and Kafarlakh and several other places. The news of the fall of Edessa in 539 (1144) made a tremendous impression in Europe and induced the Pope Eugene III on Dec. 1, 1145 to send a letter to Louis VII and the Kings of France in which he demanded a new crusade in the spring of 1146 to send St. Bernard of Clairvaux to preach the crusade. He was listened to with enthusiasm; on receiving the Pope’s message Louis had already declared himself ready to take the crusader’s vow and finally the Hohenstaufen Conrad III was also won over. In the first half of the year 1147 the two kings set out and after great difficulties and considerable losses through starvation, epidemics and enemy attacks, the European armies joined another one in Palestine in the spring of 1148. It was decided to attack Damascus which was then nominally in the power of the Burdi Mamluk al-Din Alau b. Muhammad although the real ruler was one of his Mamiliks named Musin al-Din Anar. In Kahl I 543 (July 1148) the Christians began the siege of the town from the southwest. The first few days were spent in heavy fighting with great losses on both sides. In the meanwhile Musin al-Din had appealed for assistance to Saif al-Din Ghazi. The latter had set out with a large army and was joined on the way by his father Nur al-Din. Before giving the hard pressed Musin al-Din the assistance he desired he sent him a letter in which he demanded the surrender of the town to his deputy in order to have a base in case of a defeat; but if he was victorious he would leave the town at once. But as Musin al-Din did not trust him completely he endeavoured not to frighten the Christians by threats and declared that if they did not retreat he would hand over the town to Saif al-Din who would certainly drive the invaders completely out of Syria. These representations, supported by the gold of Damascus, did not fail to influence the eastern leaders who were able to appreciate the situation much better than their European allies. But as they had not the courage to go so far that the siege should be at once abandoned, they suggested in the council of war held in the night of the 26th of the July that the camp should be moved from west to east because, they said, the walls on this side were not so strong and the attack would not be impeded by gardens. The besiegers followed the
advice of those possessing local knowledge but saw that they had been deceived because the terrain on the east side offered even greater difficulties in every respect and there was therefore nothing left for them but to withdraw in order to resume the siege another time. When Bertrand, the son of Count Alphonse of Toulouse who had just died, took the fortress of Al-Arjina and threatened the district of Tripoli. Count Raymond of Tripoli appealed to Nur al-Din and Ma'mun al-Din who had joined one another in Hashteb, the two Muslim leaders supported by a contingent sent by Süljüq al-Din hurried to his help. Bertrand had to surrender; the fortress was destroyed and he himself taken prisoner. The Christians then prepared to invade the district of Halabi; Nur al-Din however anticipated them, defeated them at Yaghur taking much booty, which he divided among his brother Süljüq al-Din, the caliph al-Mu'ayyad and the Süljüq, sultan Ma'mun. At the beginning of the following year (May 1149) Nur al-Din invaded the region of Ammāniya, laid waste the country with the suburbs of Hārim and laid siege to the fortress of Ianni. Prince Raymond of Antioch hastened up with a small army to attack Nur al-Din but was enticed into an ambush and fell in the fight. Nur al-Din then went with his victorious forces doing great damage as he went, close up to Antioch in order to disrupt the inhabitants with terror and on his way back took Hārim and forced the strong fortress of Fānēya (Upasna) near Hamah to surrender. About the same time Süljüq al-Din died and his brother and successor Kūtq al-Din Mawdūd prepared to fight Nur al-Din, but the dispute was settled amicably [cf. the article Mawdūd]. Soon afterwards (545 = 1151 or 546 = 1152-1153) Nur al-Din succeeded in capturing his enemy Fuscill II of Edessa. The latter had previously won a victory over Nur al-Din and treated him very scornfully. When one night he was travelling with only a few followers to Antioch he was surprised by a troop of Turkomans in the pay of Nur al-Din and brought to Hālab where he remained a prisoner till his death, while Nur al-Din gradually took the fortress which belonged to the country of Edessa. In order to split up the Christian forces and to bring some relief to the Muslims besieged in Askalan, he made an agreement with his enemy, the prince of Damascus, Mujud al-Din Abak, and in Safar 548 (May 1153) they both appeared before the walls of Baniyūs (q.v.). But when the insatiable Mujud al-Din would undertake no serious steps against the Christians, they soon abandoned the siege and separated without having achieved anything. When Askalan, was forced to capitulate after eight months' siege the Christians began to cast covetous eyes on the great and wealthy city of Damascus, especially as Mujud al-Din acted almost as if he were their vassal. In order to thwart their plans, Nur al-Din endeavoured to gain over Mujud al-Din by pretended friendship and by making false charges against them persuaded him to get rid of his chief enmity so that Mujud al-Din thus lost his most reliable friend. When Nur al-Din suddenly appeared before the gates of the city they were opened to him by his friends in Damascus as had been arranged beforehand. Mujud al-Din took refuge in the citadel and summoned the Christians to his assistance, but the city before help arrived (Safar 549 = April 1154). In compensation he received İmṣa. There he began to intrigue against Nur al-Din and the latter offered him aGalā instead; Mujud al-Din however was not satisfied, but settled in Baghdad where he remained till his death as a protegé of the caliph al-Mu'ayyad. In 551 (1156) Nur al-Din made a peace with Baldwin III of Jerusalem, whereby the latter gave up the annual tribute which Damascus had had to pay him since the time of Mujud al-Din and ceded the half of the lands of Hārim. In spite of this they were coming to the end of the year 554 (Febr. 1157) Baldwin fell upon a defendless encampment of Arabs and Turkomans in the neighborhood of Baniyūs, took the same prisoners and carried off their cattle. As a result the war broke out again and the Christians were defeated, some on the Euphrates by the governor of Damascus, Asad al-Din Shirkuh, some in the vicinity of Damascus by Nur al-Din's brother, the emir Nūr al-Din. Many prisoners were brought to Damascus and put to death by Nur al-Din's orders in revenge for the Muslims killed at Baniyūs. Nur al-Din then attacked Baniyūs and destroyed the town but could not take the citadel, retired on the approach of Baldwin. The latter rebuilt the ruined town, disposed a number of his troops and intended to return to Tiberias, but was surprised on the way by Nur al-Din and suffered a disastrous defeat (Ejoumiddi 554 = July 1157). After this double disaster Nur al-Din no longer attempted to take the town which was also unsuccessful; he again raised the siege on the approach of Baldwin. Very soon afterwards he fell very ill and a rumour spread that he had died. The Christians therefore attacked Salār [q.v.] which had been severely damaged by an earthquake, and had along with Hashteb, shortly before fallen into the hands of Nur al-Din. The attack failed however owing to the jealousies among the Frankish leaders. On the other hand, they were successful after two months' siege in taking Hālab in the following year and in inflicting a severe defeat on Nur al-Din on the Jordan (Ejoumiddi 553 = July 1158). About the same time the emperor Manuel I Comnenos appeared in Syria to chastise the rebel governor of Cilicia and to protect Raymond of Antioch who had undertaken an expedition against Cyprus. After receiving the submission of the princes, the emperor resolved to join Baldwin in an attack on Hālab at the beginning of 1159. Nur al-Din however escaped the danger which threatened him by releasing the Christian prisoners. He then concluded a truce for four months with Baldwin, took Hālab and al-Raqqa from his brother Nūr al-Din and invaded the lands of sultan Kılıç Arslan II [q.v.]; but when Baldwin began to lay waste Nur al-Din's territory, the latter hurried back to Hālab and Baldwin retired. About this time conditions in Egypt began to attract the attention of Nur al-Din and from the year 558 (1163) his history is so closely bound up with that of Saladin that it is sufficient to refer to the article on the latter for the main facts. Only the following need be added here. In 558 (1163) Nur al-Din had planned an invasion of the county of Tripoli and encamped before İlim al-Ar-Rid [q.v.] and was preparing to storm it when he was suddenly attacked by the Christians. His troops who were quite unprepared were scattered and Nur al-Din himself only escaped with difficulty. Nevertheless he succeeded in exerting all his efforts in raising a new army in a short time with which he again advanced on Hārim. After
seizing a decisive victory over the Christian relief force, he took Dharan by storm (Ramakel, 318 = Aug. 1163) and a few months later also forced Dhu al-Yaman to surrender. When the atabeg of Mawali, Nur al-Din's brother Kafth al-Din Mawali, at the end of 565 (Sept. 1170) died and his younger son Salif al-Din (Jafar was chosen successor to the caliph Amr) said that Salif al-Din should have al-Mawali but was to give Singur to his elder brother 'Imad al-Din Zangi. In 568 (1173) he invaded Cilicia Minor and took several towns; on his relations with the Svejkis until then see the article KUJAR ASKHAN II. While he was still on this expedition, an envoy arrived from the 'Abbasid caliph of Baghdad bearing a diploma recognizing Nur al-Din as lord of al-Mawali, al-Sharrar, Ishbili, Khilidi, Syria, Egypt and Cilicia. He died on 11th Shawwal 569 (May 15, 1174) in Damascus of a disease of the lymph (tlizz al-khamsabun) and was buried in the citadel; his body was later brought to the madrassa founded by him at the entrance to the Silk Khanaweyin.

With reference to Nur al-Din, Ibn al-Atir, xl. 267, 270 (1170–72), regards the death of his heir as a major point of division in the whole of the past but from the time of the legitimate caliphs and 'Abd al-'Aziz I have found some who led a better life or had greater enthusiasm for righteousness'. As a pious Muslim convinced of the truth of the Prophet's mission, he was always eager to follow out in exact detail the many prescriptions of the Koran and the Sunna regarding the conduct of believers in private and public life. He was distinguished by a remarkable love of justice which was seen for example in the fact that he never punished on mere suspicion alone and was able to check any arbitrariness in the court of the lower courts also, and avarice and selfishness were entirely foreign to his character. He never gave way to the temptation always at hand to enrich himself at the expense of the treasury; on the contrary, he applied the proceeds of the booty taken in war to pious foundations and public works for the benefit of Islam. Among the important cities of Syria the fortifications of which were renovated by him, Ibn al-Atir mentions (xl. 267) the following: Damascus, Hims, Hamah, Halah, Khirbat al-Saheb and Basbeek, and mosques, schools, hospitals and caravanserais were built everywhere. On his great activity as a builder cf. the article DAMASCUS; cf. also Fleischer, Michael Meister's Caliber-Stattön von Damascen (Kleine Schriften, iii. 306 sqq.). He was also a generous patron of scholars in whom he took great interest; on the battlefield he earned the admiration of his soldiers by his personal bravery, which was coupled with unusual talent as a general. If on the other hand he was guilty of acts which are not quite compatible with humane warfare, like the massacre in Edessa on the recapture of the town and the slaughter of the Christian prisoners in Damascus after Baldwin's attack on the defences of Muslims at Baniyas, it should be remembered that this was no breach of the practice of war of the time. The constant aim of his efforts was the expulsion of the Christians from Syria and Palestine to and to this object he remained faithful throughout his life. In the political history of Syria and Mesopotamia, Nur al-Din played an unusually important part and laid a firm foundation on which Saladin was later able to build.

break on which still further reduced the ranks of the
defenders; the commander therefore sent a message
to al-Kamil and declared himself ready to surrender
the town within a definite period on condition that
he was allowed to import sufficient food. Al-Kamil
agreed, but with the arrival of Nur al-
Din the people of Mardin plucked up their courage
and resolved to continue the siege. Al-Kamil
might almost have taken the town by treachery—
although Kublai al-Din pretended to be devoted
to Nur al-Din; he was really secretly attached to
al-Kamil and had promised him to take to flight
at once in case of an encounter. When the troops
were drawn up for battle he was placed in such a
position however that there was no possibility
of escape on the narrow battlefield. Al-Kamil was
defeated and fled to Damascus to his father (Sha'rawi
595 = Aug. 1195). As to Nur al-Din, he fell sick
and could not follow up his victory but retired to
al-Ma'涉及. After he had recovered from his
illness, he went to Sha'rawi 397 (May–June 1201)
with Kublai al-Din to Harran to resume the struggle
with al-Kamil. When he reached Ru'uf al-Azm
he sent a message to him from Mardin to al-
'Adil who lived in Harran to seek peace and as
he knew that the other Ayyubids wished to make
peace with al-'Adil and deadly epidemics had broken
out among his troops, he granted their request for
a return to the state quo and returned to
al-Ma'涉及. In the year 600 (1202–1204), Kublai
al-Din openly paid homage to al-'Adil and had
the gospels read in his name; Nur al-Din could
d not permit this and took possession of Nashtin
except the citadel. This also would probably have
fallen into his hands if the news that the lord of
Iribil, Mu'afar al-Din Kibla al-Din [q.v.], had invaded
the territory of al-Ma'涉及 was not heard of by his
strength; he had not forced him to return.
After he had ascertained that the accounts
had reached him was much exaggerated he turned
his attention to Tell A'far which belonged to
Sindjar and laid siege to it, but fortune did not
favor him. It is true that he succeeded in taking
Tell A'far, then a number of Mesopotamian
princes allied themselves with Kublai al-Din and
Nur al-Din could not face their combined strength.
When it came to a battle he was completely routed
and had to surrender Tell A'far and make peace
(601 = late summer 1204). The relations
between Nur al-Din and Kublai al-Din had never
been particularly friendly and matters did not
improve when Nur al-Din gave his daughter in
marriage to one of al-'Adil's sons. On the occasion
of this union of the two dynasties, Nur al-
Din's vassals proposed to him to conclude an alliance
with al-'Adil so that he might himself take
possession of Diyarbakr. Ilm omar which was under
the rule of Mu'afar al-Din Mahmut b. Sindjar Sibh
and that al-'Adil should occupy Kublai al-Din's territory.
This plan which was entirely in keeping with Nur
al-Din's desires was also approved by al-'Adil and
the latter undertook a campaign against the east.
On this campaign a short time he took al-Kibla
and Nashtin and besieged Sindjar. While Kublai
al-Din was preparing to fight to defend his capital,
Nur al-Din equipped an army which was to join
al-'Adil. Then a sudden change took place in the
political situation. The lord of Iribil, Mu'afar
al-Din Kibla al-Din [q.v.], who had promised Kublai al-Din
to interfere with al-'Adil on his behalf but had
been unsuccessful, now proposed to Nur al-Din to
join him against al-'Adil. Nur al-Din agreed and
when the Ayyubid ruler of Hahal al-Malik al-zahir
and the Seljük Sultan of Konya Kaikhusraw I b. Ilkhi
Ardaf [q.v.], joined the alliance and al-
'Adil was further ordered by the 'Abbasid caliph
al-Nasir [q.v.] to abandon his hostile plans, he
had finally to yield, especially as his emissaries
had no inclination to undertake a campaign. The end Kublai al-Din was left in by the campaign of Sindjar
and al-'Adil returned to Harran. Nur al-Din died at the end of Rajab 607 (Jan. 1211) and was succeeded by his son al-Malik al-Kahir ibn
al-Malik al-Ma'涉及.

**Nur Dahan**

The name given to Mihri al-
Nasir, the famous queen of Dişahbey, the Moghal
Emperor. She was born at Kandahar in 1577 when her
father, Ghiyath Beg, was migrating from Persia
to Hindustan (MA'tahir al-Umar, i. 120). In
the reign of Akbar she was married to 'Ali Kuli Beg, a
Persian who had rendered distinguished military
service to the Emperor and who, because of his
bravery, was known as Shih Afgan. The
assassination of her first husband will always remain
a matter of controversy, some regarding it as a
repetition of the story of Daud and Isra'il, others
holding that only a double murder could have
resulted in this disloyalty. It was not however until four
years later, in 1611, that she became, at the age of
thirty-four, the wife of Dişahbey. In the eleventh
year of that monarch's reign her name was changed
from Nur Mahal to Nur Dahan (Tahsin-i Dişahbey-
Nuri, ed. Rogers and Beveridge, i. 310).

An extraordinarily beautiful woman, well-known
in Persian literature in an age when few women
were cultured, ambitious and masterful, she entirely
dominated her husband, until eventually Dişahbey
was king in name only. The chronicles record that
she sometimes sat in the jahanshah, that coins
were struck in her name, and that she even dared to
issue farams (al-Ish'an, p. 54–57). She became
the leader of fashion and is said to have invented
the sarp-i Dişahbeyi, a special kind of rose-water.
Her style in gowns, veils, brocades, lace, and her forosh-
sadah (carpets of satinwood colour) were known
throughout the length and breadth of Hindustan.

Ably assisted in political affairs by her father,
now known as Tummol al-Dawla, and her brother,
Aas Khān, she dispensed all patronage thus
falling foul of the orderly nobility led by Mahbub Khān.
The history of the last years of Dişahbey's reign is the history of Nur Dahan's efforts at
paving the way for the succession of his son-in-law,
Prince Shahrvar. But the death of her father,
combined with the fact that Aas Khān was supporting
the claim of his own son-in-law, Prince
Khurrum, considerably weakened her power. On
the death of Dişahbey, in 1627, she was
completely outwitted by Aas Khān, her candidate
was defeated, and Prince Khurrum ascended the
throne as Shih Dahan. The last eighteen years

of this remarkable woman's life during the reign of Shah Djihān are unimportant to the historian of Mughal India.

Bibliography: Mu'tamid Khān, 'Īsānīnā, Diwān-e-Shāh Djihān, Calcutta 1865; Sultān Khān, Shāh Nūr-Bakhsheish, in Bibliotheca sinica, i. 127-134; Bene Frasch, History of Tjahanepir, 1927. (C. Collin-Davies)

NUR MUHAMMADI, the technical term for the pre-existence of the soul of the Prophet Muhammad, is the predestined essence of all men, and each man has to become the first of all, in the form of a dense and luminous point; all the predestined souls are said to have emanated from this. Among the Sūfis, the idea first appears among the mystics in the third century A.H., then gradually begins to dominate popular worship (cf. Sahl Tirtari and Hākim Tirmidhi, in our Recueil, 192, p. 34, N° 39 and p. 395; Abu Bakr Wāsfi, whose Ḥawā Mim al-Qur'an should be identified with zh. 1. of the Tabrizz of Ḥanāfī). The most notable of these was Hākim Tirmidhi, according to Kūltu, Muhammad is "the image in the pupil which is in the centre of the eye of creation" (aš'at-i-ās-lam-uğlīd) this is what Ibn Arabī calls the nhāf a muhammadīn, the preeminent conception of which is celebrated by the poets Ṣafarī, Wūrī and the mystic Djihān; hence Muhammad's immediate predecessor since Adam (cf. the poem on the Mawṣūl). Orthodoxy has always carefully placed the doctrine of the uncreated kārin above this cult. Popular legend among the Ḥanāfīs in the eighteenth century has reduced and materialized this doctrine in showing the model of the body of the Prophet created from a handful of earth from Paradise with dirt from the spring Tasnim which makes it shine like a white pearl. But it is certain that it is a question here primarily of a guotistic pre-existence, an intellectual substance of the nature of the angels as is evident from the antiquity of the equation sūr-e-nāšī, borrowed by Tirmidhi from the Ismā'ilīs (cf. 'Avt).

A prominent image of the Shi'ah, this doctrine appears earlier and with more logical coherence among the extremists, who explain this "prophetic light," either as a "spirit" transmitted from age to age and from elect to elect, or as spiritual germ (Ismā'ilism) inherited from male to male. At the beginning of the second century Mūghirn and Djihān taught the primogeniture of the luminous shadow (nl, opposed to shāhād "dark body") of Muhammad. It is a fundamental dogma of Ismā'ilism from its beginning (al-shabīb nūr-mahīd = al-mā'in); it is found again extended through solidarity to all the 'Alids or to all the Tālibi with the gift of sinlessness among the Nusairi and even among many pious Ismā'ili writers (Kūltu, 'Aft, p. 116).

The authors of this doctrine derive it from the Kurān (ṣawt šahāda, xiiii. 35); the shāhāda; the connection between the two terms of the shāhāda) effectually interpreted by the old Ḥadīth (ṣawt šahāda, Ḥadīthiša) as proving that Muhammad is the first (by tafsīr, muhāsin, lāqī), (by Ḥādīth, muhāsin, lāqī). But it is certainly required for its development the stimulus of Christian gnostic and Manichean antecedents.

THE ENCYCLOPAEDIA OF ISLAM, III.
time. He rejects the expedient called *vati* in dealing with deceased persons' estates, as being neither in the Kurān nor the Sunna.

3. Later history of the sect. The Madžūdīya names two successors (khālidīya) of Nūrāshī: Shams al-Dīn Muḥammad b. Yāḥyā al-Lahabūnī al-Gilīfī, called Aṣrī, the author of a *Dawān* of which there is a copy in the Brit. Mus.; this person built a *mālik* in Shirāz; and Nūrāshī's son Shāh Kāsim Fālīshāhī, first heard of in Irāq, whence by permission of the Aṣ-Ṣayyili Sultan Yāḥyā (884–906) he was allowed to go to Khorāsān to cure Husayn Mā'īn, the governor of an ailment in his arakān. His religious opinions won him the favour of Ismā'īl the Šafawī (907–930).

According to Fīrūzī, who cites the Zafar nāwī, a disciple of Shāh Kāsim, named Mir Shams al-Dīn went from Irāq to Kūshārī about 902, where he received with high honour by Fāṭimah, who made over to him the confiscated lands which had formerly fallen to the crown. In a short time many of the Kaghārsī, particularly those of the tribe Čuk, became converts to the Nūrāshī sect (Fīrūzī, transl. Briggs, Calcutta 1910). The Kaghārsī had previously been Sunnī of the Ḥanafī rite according to Mīr Hūsin (author of Tūbštī Ḥāshī, transl. E. D. Ross, London 1895, p. 435), who when he came into possession of the country asked the opinion of the *āmān* of Hindūstān about al-Fākhr al-Afṣafī, as they condemned him as heretic and endeavored to extirpate the sect (about 950). His confused and fanatical account of it has misled many European writers. It survived his persecution, and according to J. Biddulph, Tribes of the Hindoo Kōosh (Calcutta 1880) it numbers over 20,000 followers, most of whom are to be found in Shigar and Khaspūl of Bālūshīrī. A few of the sect, he adds, are now to be found in Kījarān, to which place they were deported by Golāb when he conquered Bālūshīrī.

The work last cited contains some details about their practices; its account is, however, mixed with fables, and without access to the Fākhr al-Afṣafī it is difficult to estimate the justice of the assertion that the system is "an attempt to form a sort of medina between Shīt and Sunnī doctrines.

Bibliography: references are given above. (D. S. Marcolinri)

Nūrī, a common name in the Near East for a member of certain Gipsy tribes. A more correct vocalisation would perhaps be Neũrũ (as Hava, Sti̇gian, etc.), with plural Neũrũ. Minorsky (above, i. 38) gives Neũrũ. By displacement of accent we also find the plural form as Neũrũ (e.g. in Jásava, Continents des Arabes, p. 90, and British Admiralty’s Handbooks, Syria (1919), p. 196, Arabes (1916), p. 92, 94). In Persia the current name for Gipsy is Lārī, Lārī, or Lālī (q.v.). It is not unlikely that by a natural phonetic transformation the form nūrũ derives from Lūrũ which, it has been suggested, originally denoted an inhabitant of the town of al-Rūrũ (or Arūrũ) in Sind. Quairemàdè advanced the theory (Hist. des Sultans Mamlouks, i. i, note 5) that the name nūrũ arose from the Arabic nūr (fire) [he gives the form †] because these vagrants were usually seen carrying a brazier or a lantern. Even to-day many of the Neũrũ earn their living as itinerant smiths. But it is more probable that the correct etymology is to be found in some Sanskritic dialect of N.W. India, the original home of the Gipsy tribes.

The Persian name Čingana passed into European languages under such forms as Čingana, Tāgana, Zingaro, Zinzuny, Zinghun, etc. Dony (Supplement aux Dictionnaires Arabes, ii, 95) and Moussin (Dictionnaire des Vocab. de l’Arabe, 201, 202) records the occasional use of the name Zamyun, but this is inexact [cf. art. Zanun]. The commonest names, apart from those already mentioned, seem to be Neũrũ and Kaũroũ (particularly in N. Syria and Persia), Gāhūr and Dānūm (in Mesopotamia). For other sub-divisions reference may be made to the bibliographies, and particularly to E. Littmann’s Eisegeten-Arabisch, which is an excellent summary of the whole subject, particularly on the linguistic side.

The collecting of data regarding the Gipsy tribes of the Orient is by no means easy. Even experienced orientalists and travellers have reached different conclusions regarding them. For example Lane (in his Modern Egyptians, London 1836, ii, 108) in spite of his profound knowledge of Egypt, asserted that there were few Gipsies in the land, while numbers of well-educated natives to-day, are still unaware of the presence of these tribes in their midst. The statistics of Massignon’s Annuaire musulman (Paris 1925, p. 115) however, gives the number of Gipsies in Egypt as two per cent of the population, consisting, namely, of two tribes of Gāhūr and Neũrũ respectively, and four tribes of Halab. The Gipsies as a rule seem, chameleon-like, to take their creed, such as it is, from their surroundings. In Muslim countries these tribes usually profess Islam, in so far as they may be said to profess any religious views, many of them, indeed, being very superstitious and reported to be scavengers and vagabonds. The same applies to the Muslim Gipsies of what was formerly European Turkey (Admiralty’s Handbook of Turkey in Europe [1917], p. 62). In the Balkans many of them are Greek-Orthodox.

Persian and Arabic writers preserve for us the tradition that tribes of Jāt (or Jaw) from the Pundjāb were conveyed westwards by command of the Šafānīn monarch Báhrám Gīrī (420–438 A.D.) and their descendants proved a troublesome problem some centuries later for the Caliph of Baghdad. Once more numbers of them were dispersed to the borders of Syria, where many of them were captured by the Byzantines, and thus found their way into the Eastern Roman Empire, thence to continue their migrations to other ends of the East and West. Many of them are even said to have risen to high rank, e.g. al-Safī b. al-Hakam b. Yūnūs al-Zaṭī, governor of Egypt. (200–205 A.H.), while it has been supposed that the famous Bar`mīcide family at the court of Hārūn al-Raṣīl were of similar Gipsy origin. The name Bar`mīcide is actually the designation in Egypt of a class of public dancers (Ǧarnūsī, Ǧarnāsī) of low moral character and conduct who have been regarded as of Gipsy blood. The question, however, is doubtful (see L. Bouvart, Les Barˇmīcides d’après les historiens arabes et persans, Paris 1913, p. 110, 125).

The German traveller Seetzen and the American
missionary Eli Smith gathered valuable material in the Near East regarding those nomadic peoples which proved useful to later scholars. They were followed by Capt. Newbold (1856) on the Gypsies of Egypt, Syria and Persia; von Kremer, Austrian Consul at Cairo, on the Egyptian Gypsies (1863); Sykes (1902) dealt with the Persian Gypsies, while an excellent treatise appeared in 1914 from the pen of R. A. S. Macalister on the Language of the Nawar or Zutj, the Nomad Smuts of Palestine. Macalister in this work had the rather difficult task of reducing to writing a language almost completely unknown, and interpreting and analysing the Núr stories and folk-elements recounted to him by members of the Núr settlement north of the Damascus Gate in Jerusalem. He employed several of these Nawar in the course of his excavations there. A small Syrian Gypsy vocabulary received by Miss G. G. Everest of Bairiti from a friend at Damascus was also published in the Journal of the Gipsy Lore Soc., Jan. 1890, in an article by F. H. Goosman. The philological aspect of the question has received, in recent years, the attention of scholars such as E. Galtier and E. Littmann (see Bibliography).

In Egypt the Halabi (sing. Halabî) are to be found mostly in Lower Egypt carrying on their special occupations at the various markets and melâddi, as traders in camels, horses and cattle. Their womenfolk are noted seers and medicines-women, practising all the arts of sorcery (istikhâr); samî-divination (farâk 'râsâ), shell-divination (farâk 'al-sâbîa), bâlibomancy (fâlik al-kitâb) etc. Their tribal subdivisions are variously given by Galtier (p. 7) and Newbold (p. 291). Their name suggests connection with Aleppo (Halab), but they themselves proudly claim a South Arabian ancestry their tribal chronicle being the popular broad-sheet production, Turâkh Zîr Sûlam. The Ghagar Gypsy tribe, however, have a rather unanswerable reputation, a fact that is reflected in the modern Egyptian Arabic verb g工作者 “to be abusive”. Their speech has fewer foreign ingredients and Galtier is of the opinion that they are more recent arrivals in the Nile Valley, probably wanderers from Constantinople. The argot of the Egyptian Gypsies is called al-Sim, and in modern colloquial Arabic in Egypt “to speak in enigma” is yâsikallim bi 'al-Sim.

NUŠAIRI, the name of an extreme Shi'a sect in Syria.

I. The etymology of the name is disputed: a. contemptuous diminutive from nūšr, 'Christian', in allusion to certain ritual similarities (Rancan); b. corruption of nūšr, Latin name in Flory for certain tetrarchy of the first century near Edessa (but the name is still found uncorrupted in nūsra: it is the 'Nāšr of Nušairan', which is crossed in going from Tell Kalâkî to Homs, between the bridge called 'Achash Keupuru' and the lake of Homs; cf. British G. S. map of 1/250,000, Homs-Ba'irat sheet, 1918); c. nishā from a village near Kafi, Nušairā (Barhebraeus; cf. de Saçy, Drusus, i., p. clxxvii. and Šabîr, iii. 2128); nishā from an ebena: a fictitious Shi'te martyr, son of 'All (according to the 'Alî-Ḥâṣîma), or a freedman of 'Ali's or vizier of Mu'awiyah (Dusauaud, p. 10); or rather ibn Nuṣair, i.e. Muhammad b. Nuṣair Namîr 'Abdî (='Abd of the 'Abd al-Kais, a Bahr clan), whom we shall find below as the first theologian of the sect.

As a matter of fact this name adopted from the time of Khasbih (434 A.H.) by these sectarians, previously called Na'imtiya (Nawbakht, Firas, p. 78; Asfari, Mâk., i. 15) and who called themselves nušrānī, has been applied since Samanî (v.7.) and 'Umayr b. Dârûsh (Dârûsh, p. 145, 286) not to a district only partly converted in the north of Syria, but to an extreme Shi'a sect also found in Egypt and along the Euphrates. This etymology, that of all the Muslim heresiographers, from the
Shârî Ibl-al-Ghâshî'îr (d. 411 A.H.) and the Sunni Ibn 'Harm, has been and is the most probable.

II. The term has three acceptations: administrative, social and religious.

a. Administration: it is the "mountain of the Amariye" of Syria (formerly Djabal Lukkmûn), the former site of Latakia to the east of the Orontes which has been extended to the south and since 1920 has become the state of the Alawi (6,500 sq. km; 334,473 inhabitants in 1933 of whom 213,060 are Nuşairîs, 61,817 Sunnis in the north of Şâhya and at Bâniya, 5,669 Isamîllis at Kaâlîn and Maârîf, 53,604 Christian, mainly Syriac Orthodox at Tuštân and the north of Tuštân; capital Latakia (22,000) divided into two sandjakas and 3 kazâs: Latakia, Şâhya (Hadj'a), Djabal, Tuštân, Maârîf (Banias), Imnûlûk (Tell Kallûk), Şîfûl, al-Şîfû (Mayyâl); a country of patient and industrious agriculturists (tobacco, silkworms). Its place-names studied for the north (villages, not cantons of which there is a list in [Delatour] Répertoire alphabétique, Latakia [Raghûllîb press]. Dec. 1933), show an old stratum of names, in part Aramaic and later vocational Arabic without any definite local religious traits except for modern Shi'a influences, beneath which one can hardly see the pagan or Christian culture of the substratum (cf. on the contrary, Lebanon). The study of the district from the point of view of ethnology and folklore has hardly begun; certain prohibitions regarding food have been noted (Niebuhr, loc. cit.; Dupont, in J. A. F., 1824, p. 134; Bâhûrû, p. 57), some general (cannab, bares, eski and catfish) and others specific to the Şâmûlûk (female or maimed animals, gazelles, pig, crab, shellfish, pupukins, Şâmûlûk, tomatoes). The only domestic art is basket-making.

b. Socially, the name covers tribes of different origins, almost all speaking Arabic, who have adopted the Nuşairî teaching:

1. In the state of the Alawi (213,000): the nucleus seems to be descended from Yemen clans of Hamdân and Kinûn (Ya'qûbî, in B. G. A., vol. iii. 324); Ghassân, Bahrû and Tanûkî (Hamdân, Şîfû, p. 132) early converted to the Shi'a, from the Tiburtian and the Djabal Amlû (where there are still Metwals) to Aleppo, especially by immigrants from Taîl (end of the ninth century) and from Ghassân who at the time the Crusaders were being driven back came with their emir Hasan b. Mâksûn (d. 678 = 1240, 1250), grandson of the Hadjdûm, from Mount Siddîr, and imposed on the district their ruling families, their clans and ethnic structure (M. E. Ghâlî, J. E. V., p. 356). The following is the present day list of the principal clans (ţâhîr) (map in R. M. M., vol. vii. 278; and J. E. V., p. 548-549) grouped in 4 confederations: Ka'îbîya (Ka'âbîya, with Nawâsîr, Kaâbîh, Diuulûkî, Râhûmûn, Shâlîh, Rasûllûn, Dûliyûn, Bâlît al-Shîrîf, Bâlît Mu-‘âmûd and Dârîwâsîr); Khâlîyûn (at Maƙûb with Sarâmûl, Ma’atûl, Falûqî, ‘Amûlûlûn [mixed with Abû al-Kalîs]; Hâdûtûn [clan of the emir]; Hasan b. Mâksûn: with Ma’allûlûn, Banû ‘Abî, Ya’qûbî, ‘Amûlû, Banû Ma’âlûlûn; and Ma’ta’ûlûn (with Nuşairîllûs), Sawtûlî of Aleppo, Sawtûlî, Ma’ânûrû whose claim to be Ma’alûlûs, and Ma’ta’ûlûs.

From the ninth century their political history has been a series of persecutions by invaders (the Crusaders, Balûrs who covered the country with mosques; legend of Durrât al-Şâfû, daughter of Sa’d al-Ânâr [tomb at Aleppo] who instigated Tûmiri to sack Damascus; massacres under Selîm I and civil wars, both among the clans themselves and against the Isâmîllûs of Kaâlîn (lost, and retaken for a brief period in 1808 by the Ma’ârîf) and of Maârîf, allied with the Turk;)

2. in the sandjak of Alexandria (58,000; at Antioch 1/3), Lûwâûlûs, Sawlûlûs, ‘Abîdûs, Lûlûs; with two deputies in Parliament;

3. in the State of Syria (29,693); at Hâmû and at Hûmûch with one deputy; in two quarters of Aleppo; near Djarû, and to the north of Lake Hûlû (AIR PUL 24,000);

4. in Palestine (3,000): to the north of Nablûs;

5. in Cilicia from the 16th century (at Tarûs and Adûnâ; 80,000 in 1921 now turkicised);

6. along the Euphrates. In Kurdistan and in Persia, there are ultra-Shi’a elements who have similar views and are called Nuşairîs (among the ‘Ilî-Ilhâs or Ahl-i Hâjî; q. v.);

7. in Lebanon, there were some down to the 19th century (in Kiaraûn).

III. Religion: it is the religious teaching of the Nuşair sect that we have to study more particularly here.

Cosmogony and eschatology. According to the Nuşairîs there is immediately below the ineffable divinity a spiritual world of heavenly beings (or stars), which emanates from him in the following hierarchy: Jum, Bûb and other divinities (al-Âl al-Marʿûbî [of the first seven classes]; it is the *great luminous world* (atûm abâr niyâmâl); when they appear below it is to lead back gradually to heaven the "little luminous world", fallen beings, half materialized, imprisoned in the bodies which are their tombs; this operation revives them and brings them back to heaven to form the seven last classes of the Ahl al-Marʿûbî (119,000 out of a total of 124,000 = the traditional number of the prophets); next comes the "little world of darkness" (zâmilîb), extinguished lights, souls that damnation materializes (kaṣûmân al-amaqâmîhîs) in the bodies of women and animals; and lastly the "great world of darkness" composed of all the "adversaries" (mašûkûd) of the great luminous world; demons, who after innumerable metamorphoses in corpses of murdered men or slaughtered animals still quivering after death, are reduced to inert or passive forms (forged metals etc.). Just as the fall takes place through seven stages (doubtless about divine appearances), so does the return to the heavens of the elect go through seven cycles or aḏâbâr of divine emaculations.

Theory of revelation. The pure divinity (kaṣâbîs), the object of adoration, being ineffable his first emanation is the Name (i.e.), the articulating prophetic voice (Nîyâhî), the signification (Ma’ânî) of divine authority; such was the primitive teaching, that of Abu ‘l-Khaṭṭâb, the common teacher of the Isâmîllûs and the Nuşairîs. But his disciple Mâmûn Khâdî, thinking that the enunciation by the divinity of an object which manifests him, is of greater importance than its signification which is a mute idea, detached the Ma’ânî from pure divinity, identified it with the Śîrīt (the "silent" iman; opposed to Nîyâhî) and placed it as a mere accident, below the substance, the i. e., Then, by reaction, other Khâlîyûn like Bâshâlû, Shîrû, using the equation Mâ’ânî = Śîrīt, reconciliated the Ma’ânî before the i. e. And, as Abu ‘l-Khaṭṭâb had taught that in the Muḥammadiya cycle, the
signification (mu'arad) of the ineffable divinity was expressed through five privileged Atim (Muhammad, 'Ali, Fatimah [the masculine form of Faizma], for as we have seen women have no souls; this explains why they may form part of the offering of hospitality among initiates), Hasan and Husain, announcing equivalently its mysterious Unity), this group of Five equals, in which we recognise the Five of the muhakka (q.v.; cf. our, Salan, Pkh, No. 7 of the Soc. des Etudes Islamitiques, 1933, p. 40–44) became in the hands of his pupil Maimun a descending series of five terrestrial terms (symmetrical with the five spiritual terms, and inferior to them, the Druzes say): Nabi (Allah), Ameer (Allah), Mawla, Madinah, Muthalbi: whence the Msh, the Khairidj Wardajali remarks, has the priority (cf. Sbn Muhammad). While according to Baha'i, the five were equal and became Muhammad, Fathimah, Hasan, Husain, Muhammad; 'Ali being thought to surpass them was identified by hyperbole and against all logic with the Manah. It is this last list that the Nusairis have adopted. And this is the origin of their "god 'Ali" for whom there is no need to seek antecedents in the Syrian pagan pantheon or in a Druze emigration. Baha'i and the Ulufraym (or 'Aliyya) copied by the Nusairis have simply copied the Karamanian list of Maimun, by inverting the order of priority between Msh and 'Ali, and making the Shadi (Manah) the superiors of the Nabi (Allah). The following is the double list (in italics): a. in the seven cycles (akhrar, 'aishah personified by women among the poets) of the Ishafray (khalil): 1. Abur, 2. Abur, 3. Thalat, 4. Thalat, 5. Alid, 6. Thalat, 7. Ishafray (khalil); the same list of the Ishafray (khalil) and the Munmu-mam. Khaibari allows that there were 44 (63–19) other khalil during these seven cycles; 8. in the al-Qalidim (the twelve classical imams substituted for the early list of Ibn Nusair which we shall see later) by Khaibari each of the twelve is promoted manah after having been the imam of his predecessor. The mode of appearance of the two divine entities localised behind the screw (taghyir, istighfar) of a phantomlike body (kam al-khaib, mans al-khaib, istighfar, istighfar), is a reality for the faith of the Nusairis; this body is the support of a momentary illumination for the believer; while for the Druze monomania it is only a mirage (istighfar) and for the Ishafray, a real body, transformed by a gradual sanctification.

Theory of catechesis. Abu 'l-Khaibar had taught that the five persons of the Ishafray were pointed out to the believers by one or more inspired angelic intermediaries (atakat, thahajaj): of whom the first was Salsal or al-Salim = Maimun in the Muhammadiyya cycle; cf. our study, p. 36). These initiators became, with his disciple Maimun, the five spiritual symmetricals of the Ishafray (khalil = Salim, Nabi = Miqdad, 'Ali = Abu Dhar, 'Ali = Abul, Ma'in = Khaibar, Ishafray = Abul, Yasir, cor- thus 30, 60 of the Druze catechism. While among the Nusairis, these five initiators remained equal and far below the Ishafray, became the five Atim (Miqdad, Abu Dhar, 'Ali, Allah, Kawa, Ummah, Ma'in and Kanbar), Salim (who was thought to be above them was placed the Baha after the Miqdad and the Ishafray. Such was the origin of the Nusairi triad, Abul-Miqaq-Salim = Na'mon-Ishar-Baha in which there was no need to see an original pagan Syrian triad of Sun, Moon and Sky; this astro- logical correspondence, a favourite subject with Nusairi poets, found its way into the Shi'a catechism of the Kafa under the influence of the Sabaeans of Harran; the assimilation, in the spiritual, of the sun to Muhammad and of the moon to 'Ali (the moon, like the imam, is the regulator of canonical acts; cf. our, Salan, p. 36, No. 4) appears at Kafa with Moghul (d. 119 a.h.). In any case pagan survival are at the basis of astral gnosticism, as Dussud suggests, it is not among the uneducated peasants (Djebel Lakkam) but among the town-dwellers in Harran that they have been able to survive.

The following is a list of the personifications of the Baha in the seven cycles (they are really only six, Salim, the long-lived = Ruhul: the Salani: 1. Djabrul; 2. Yahzi; 3. Ham and Kha; 4. Dafa, a Sa'dawi; 5. 'Abd Allah b. Sim'an; 6. Ruhul. In the sara al-dinma (there are only eleven): the muqaddim: 1. Salim; 2. Ka'b b. Waraka Ruhul (= Salim); 3. Ruhul Jibril (d. ca. 58 a.d.); 4. Kankar b. Abi Khallid Kahlil; 5. Yahzi b. Muhammad b. 'Umar al-Tawil (d. ca. 83 a.d.); 6. Djabrul b. Yazid Dju'fi (d. 128); 7. Abu 'l-Khaibar Muhammad b. Abi Zainab Miqdad Ansari Khadi (d. 138; cf. Kassir, p. 191); 8. Miqdad b. 'Umar Dju'fi (d. ca. 170); 9. Muhammad b. Miqdad Dju'fi; 10. 'Umar b. al-Furat (d. 205 A.D.); 11. Muhammad b. Nusr 'Abd al-Rahmân (d. ca. 245, d. 270). Beginning with No. 7; these individuals have actually played the part of party leaders (Nasir 9–10 had as rival Muhammad b. Sim'an). A nephew of No. 10, grand- father of the vizier Ibn al-Furat, was the principal supporter of Ibn Nusair.

Below the Baha are the Five Atim, whom he associates as lords of the elements (muwaddatul b-najaf al-dinma) with his role of Demiurge en- gendering souls by initiation. The list of Nusairi atim given above should be compared as well as that of the Druze hadid *wise virgin* of Salim; like the Nusairi atim are the djafradjar of the Bah al-Arak (Salim) with the lists of Garmi (Asturahād, Manjawi, p. 235) and of the Khattābiyya of the Qams (K. 1, 5, 1953, p. 442, trans. Ivanov).

IV. Initiation. This has three degrees (mujtahid, mithal, imam): the first consists of a solemn pledge ('ajad, khafidh with 'ajad al-muwallah; cf. safrad) to reveal nothing of this spiritual marriage (mujtahid al-isona) in which the word of the initiator fer- tilizes the soul of the initiate in three seances, the ritual of which is related to that of the other extreme Shi'a sects (and of the Isma'imm) and through them and the Sabaeans of Harran to the old mysteries of Central Asia (cf. Tsmar; Dussaud, p. 106–119; Baha, p. 2–7, 52). The cup of wine (called 'a'id al-akhrar, Cat. No. 94), the anticipation of Paradise, is partaken of at it.

The initiatory teaching is essentially an ultra-Shi'a symbolism (jadid): of the seven canonical rites (al-dinma) of Islam which are personified: 1. laif, the five akhrar by Muhammad (= sa'ir; the rites among the Isma'imm), Fathimah, Hasan, Husein and Mushtin (= fa'ir; among the Druses as among the Khaibariyya of the Pamirs by the mujtahid, the mujtahid, Abu Dhar, Miqdad, Salim). Similarly the 17 (then 51) rak'at; 2. qunun: the secret guarded regarding 30 names of men (days) and thirty of women (nights of Rama'an); 3. sa'irah: by Salim; 4. 'ajad: the "sacred land 12 miles around", this is the sect; Baha al imam; the Black
Stone = Mikhail; the 7 agatha = the 7 cycles; 3. ghāṣal = the malpractices upon the agathā (Rabī', p. 44) and the discipline of the mystery; 6. ṣawāt = devotion to the 'Alīs and hatred of their adversaries; 7. the ghāṣal = referred to the formula 'ain-mun-In. The Karṣa is an initiation to devotion to 'Ali; it was Salmān (under the name of ḏūrūṣyīl) who taught it to Muḥammad.

The annual festivals include: the Shīʿa lunar festivals: Fīr, ʿĀdha, Ḥādhar, Muḥābalahā, Fīrāḥ, ʿĀdhar, 9th Rabīʿ (martyrdom of ʿUmar) and 15th Shaʿbān (death of Salmān); then certain solar festivals: Nawrūz and Mīrjūmn, Christmas and Epiphany, 17th Adhār, St. Barbara. Certain liturgies (ṣıldū) pertain to these festivals and are wrongly called "masses" (kudūs al-ṯīb, al-Bāṣṭū, al-štīrā).

VI. History of the Sect. All the initiates of the sect go back from Khuṣḥīsī to the Naṣairī through two intermediaries, Muḥammad b. ʿAbd al-Muḥammad b. Dujnālbūs and Muḥammad b. ʿAlī al-Ḏānānī al-Ḏānālūnīl. Of Ibn Naṣair, a notable Baṣran, teacher of ʿAlī Khuṣḥīsī, we know that in 245 a. h. he proclaimed himself the ʿākī of the tenth Shiʿa ʿimām (Naṣair, p. 144) and of his eldest son Muḥammad who died before him in 249, the year of the ʿākīs of the Mahfit, according to Ibn Naṣair (Ibn Ṣabawāh, Ghāba, p. 62, l. 12, taken from Naṣair, Fīrāh, p. 77, 83; such was still the belief of the Hamadānīs, see Ibn Ṣabawāh, Ghāba, p. 157, l. 39). It is only Khuṣḥīsī who says that Ibn Naṣair joining the eleventh ʿākī (Nūrī, Naṣair, p. 144) had already been for mahfit his son Muḥammad b. Ḥasanān.

Of the two successors of Ibn Naṣair we only know that the second, like Khuṣḥīsī, belonged to Dānānī, and was the centre of the Sandj and Karmaṭīan rebels (Ṭabarī, iii, 1147, 1925, 2185; Maḥsūl, Tabākī, p. 391), native place of Ibn Waḥṣīsī. Husain b. Ḥamdān Khuṣḥīsī (vocalisation attested by Dāhābī, Maḥṣūlī; in Persia and the Ṣaʿīd wrongly now pointed Ḥadīdī) died in 346 (957) or 358 (968) at Aleppo (tomb to the north called Shaikh Bārāk); he was the real founder of the Naṣairīs; he lived, he was his patrons the Hamadānīs, between Kuwait (in 344, according to Astārāštīd, loc. cit., p. 112) and Aleppo; he dedicated to them his Ḩidiyya; cf. his Risāla Ṣawātīhā (Ṭawālī, p. 166 sqq., 200, 257). Among his 51 disciples the best known is Muḥammad b. 'Abbās Dūlī, of Qūṣṭān near Antioch, as he is the chief of the Dūlīs, still alive. His one direct disciple was Sād Maināt Tabarrānī (d. 427 = 1035), a prolific polemicist against the chief of the Shīʿa of Latakia, ʿAbbās Dībalī b. Ḥālīlī. After him mention is made of ʿAbū al-Dabāla, Ḥātim Tabānī (c. 700 = 1300; Paris MS., 1450, fol. 117), author of the Risāla Ṣawātīhā, Hasan Anbarī, b. 'Ammān, cited Latakia in 836 (1432) (Ṭawālī, p. 217); lastly heads of parties, the Kamāriyya, Muḥammad b. Yūnus Kālānî (1011 = 1602), who lived near Antioch, 'Abbās Dībalī, ʿAbbās Naṣairī, ʿAbbās Dībalī. In connection we may note that the four alleged Naṣairī sects reduce themselves to two: that of the north (Ṣawātīhā because it is Mīṣūbī; Ṣawātīhā = Ḥadiyya, from the name of 'Ali Ḥadiyya), its head in the 19th c. (century = Ḥadiyya) and that of the south (Ḵidiyya, for it is distinct there), which is Ṣawātīhā then Kamāriyya.

The spiritual organisation is quite distinct from the political among the Naṣairīs. The four muḥadātī mentioned by ʿAbd al-Muḥammad b. Dīna in 1750 (at Bahlīlye near Latakia, Sīrmanī Ḵhālū, Sīrītī and Ḍāḥal Ḵhālīyā) were temporal rulers. In 1914, there were two spiritual leaders, the Ṣawātīhā (ʿAbīrīt) in Gilicia and the ʿAbīdīn ashīl al-bait (Jawārī) at Kārtā (in 1933: ʿAbīrīt al-Muḥammad of the Numālīyāts).

From 1920 the Ḍāṭarī ʿArīṣah of the south have found their way among the Naṣairīs. In the last ten years a shepherd of the ʿAmānīr, Shīrīn Mūḥāzīh, has been trying to found a new sect to the north of Masaf.
NUŠAIRI - AL-NUSHADIR

3. In Arabic the only recent studies are: Kurdu, Khatif al-Sīlah, vol. vi. (1928), p. 258-265; and Kāmil al-Zahid, al-Dhābīha (Aleppo 1342 a. d., vol. i., p. 204-205); cf. also the Bāraīt press (Aḥām, Sept. 19, 1930) and that of Dāmāsūs (Aḥām, March 29, 1933). (LAWRENCE)

NUṢB, standing stone, especially one which is held sacred. The root is the same as in the Hebrew nṣb, Phoenician nṣb and nṣb, and South Arabian nṣb, nṣb. On the explanation of the Arabic forms the philologists are not agreed. They usually regard nṣb as a singular with the plural nṣb, but others pronounce it nṣb and consider it the plural of nṣb or nṣb. In addition to these Arabic forms this root has also from the same root the substantives nṣb and nṣb. In answer to the much discussed question of the idea associated with standing stones, Arabia only makes one contribution, in as much as it is evident that the fundamental conception was that of a dwelling place of the deity (ḥaṭel'). Of several of the old Arab deities we are told that they were rocks or blocks of stone, i.e. that they were incarnate or present in them. Whether this was always so or whether this form of worship developed out of stones placed upon graves (e.g. Hamās, p. 562, 1. 8 and the use of nṣb in the sense of tombstones) where the stones were originally memorial, is a question which cannot be dealt with here. We need only mention that the theory of worship of the dead breaks down if the deity has its abode in a tree, like al-‘Uṣā of Nakhlī in a samara tree (umbrella scacia). Examples of the presence of a deity in a stone are given in the articles Dhu ’l-S̱awwar, Al-Kātā, and Mānāt. Other examples are Dhu ’l-Halaṣṣa, al-Fāsā, al-Djalas, Sa’d. The worship associated with such stones usually consisted in sprinkling them with the blood of sacrifices. Thus Zuhair, 1024 speaks of a sacrificial stone, nṣb al-ṭir, the top of which was red with blood; a wounded and bleeding man is compared to a red nṣb (Ibn Sa’d, iv. 1, 162, 4); among forbidden foods, Sūra 9, 4 includes what is slaughtered “ṣal” ṣalḥa; al-Aṣba (Morgenlandische Forschungen, p. 248) warns against worshipping a dha ‘l-nṣb, ‘ṣawwān (1 read mṣb) with sacrifices; cf. also Mutalaffīn, ed. Valler, 2. 31. The words of Sūra lxx. 43, which say that the resurrected stream out of their graves as if they were running (yādhu‘ina) to a nṣb (other readings nṣb or nṣb) refer to a characteristic feature of the worship. In view of the prominent part played by stones in the worship of the early Arabs, it is natural that Muhammad should have included nṣb among things prohibited to the believers like wine, maṣrīr, etc. (Sūra, v. 92) for the worship associated with them was one of the principal forms of idolatry.

The smearing of the nṣb with blood recalls the well-known statement in Herodotus iii. 8 regarding the ancient Arabian ceremony of concluding alliances: there is however an essential difference. In the first place there is no question of any act of worship and further we are told that the participants put their blood on seven stones lying between them, and called upon the two Gods Orota‘al and Allat [q.v.]. The stones were not here conceived to be habitations of the gods but owed their merit to the number seven which was the important thing on taking oaths.

Bibliography: Ibn Ḫīṣām, p. 51; Wellehauen, Rā‘t arabičen Hēlidinim, p. 101, 147; Baudissin, in Z.D.M.G., iv. 1890; Goldscher, Muhammadičke Studien, i. 250 sqq. (Ver. Breu.)

AL-NUSHADIR, also nsha‘dir, nsha‘dir, Sanskrit nusādira, Chín. mao-shā, sal-ammoniac. The etymology of the word is uncertain; perhaps it comes from the Pahlavi anu-sha‘dir "immortal fire" as we find the form anu-shadahr in Syriac.

The oldest references to the occurrence of sal-ammoniac in a natural state are in the reports of Chinese embassies of the viith—viiith centuries, which were the subject of very full investigation in connection with a geological problem, the question of volcanoes in Central Asia by H. J. von Klaproth, A. von Humboldt and C. Ritter, in the first third of the xixth century. The reference was to mountains of fire, Pe-Shan on the northern slopes of the Tien-Shan south of Kūlija, Ho-Chon on the south side of the Tien-Shan near Tarfan and the sulphur pits of Urumtsi. The mountain Pe-Shan was said to pour forth fire and smoke continuously; on one side of it all the stones burn, and are melted and then after flowing some miles solidify again. Nao-shā and sulphur were obtained there medicinally purposes but the stones could only be collected in winter when the cold had cooled the ground. A. von Humboldt and C. Ritter do not accept a reference to the burning of coal by which sal-ammoniac and sulphur are obtained.

The statement that the volcanoes of Central Asia produce sal-ammoniac in immense quantities is found in G. Bischoff and even G. von Richthofen still held the volcano theory. The botanist and geographer Regel, who travelled in these regions about 1879 was the first to dispute the existence of volcanoes. After Nansen, Le Coq and others had been unable to confirm the existence of volcanoes but established the fact that there were large deposits of coal on the surface, the old sources in Central Asia are now generally attributed to the burning of coal.

Almost all the Arab geographers who refer to Central Asia, from al-Ma‘ṣari, al-Iṣkhakī, Ibn Hāwīl, to Yākūt and al-Ḵazwīnī, give fantastic stories about the method by which sal-ammoniac is procured in the Buttām hills east of Samarkand. Here again the details suggest the burning of the earth rather than volcanic exhalations. The Persian traveller Nāṣir-i-Khusraw however mentions deposits of sal-ammoniac and sulphur at Demawend and Ibn Ḫawīl is acquainted with the volcanic sal-ammoniac of Etna; the latter was still exported to Spain in the xiiith century. At an earlier date they had begun to procure sal-ammoniac from the soot of camel dung. This product remained into modern times an important import by the Venetian traders and was only driven from the market by the modern cheap methods of production from gas liquor etc.

The use of sal-ammoniac as a remedy in cases of
inflammation of the throat etc. is already mentioned by Saḥūḥ b. Rabbaḥ al-Ṭabarī. Ibn al-Baṣīr also quotes from other authors all kinds of remarkable uses of it, on which no stress need be laid. Dījūbīr b. Ḥaiyān reckons sal-ammoniac among the poisons, which is true of large doses.

The part played by sal-ammoniac in alchemy is much more important. Dījūbīr b. Ḥaiyān adds it as a fourth to the three ḫidrātāt of the Greeks, quicksilver, sulphur and sulphide of arsenic (AsS or As₂S₂), and it is used by all Persian-Arab authors in cosmetics and remedies. The preparation of carbonate of ammonia through distillation of hair, blood and other materials is already fully detailed in the "Seventy Books" and other works of Dījūbīr. These methods seem to have given the stimulus to the discovery of the Egyptian method of obtaining sal-ammoniac. All these things came with alchemy to Spain and thence into Western alchemy.

In the earlier Latin translations sal-ammoniac is still called mercúder, misādīr etc., i.e. transcriptions of the Arabic name. The general term al-ʿUḏāb is also found in the forms aluẓāb, aļuẓāb or translated by aqua. The identification of this salt with the salt of the oasis of Ammon already mentioned by Herodotus is first found in Syrian authors and lexicographers.

(J. Rusa)

NUSHIRWAN. [See ANSHAKRWAR.]  
NUSRATABAD. [See SISTAN.]

AL-NUWĀIRI. SHIKHAR AL-DIN AHMAD B. ABD AL-WAHHIĐ AL-BAKRI AL-KHANĪ AL-SHARĪF, A rab historiographer, born on the 21st Dhu l-Ka‘da 677 (April 3, 1279) in Upper Egypt (probably in al-Khuṣa‘), died on the 21st Ramazān 734 (June 17, 1332) in Cairo, author of one of the three best known encyclopedias of the Mamluk period (the others are by al-ʿUmari and al-Kašshākhani). His father before him had been an official (al-tābi‘) of note (628—699 = 1231—1300); the son filled several offices at the court of Sulṭān al-Malik al-Nāṣir (Muḥammad b. Kālaṭān), whose favourite he was. He was for a time Nāṣir al-Dīn (Djāhid) in Tripolis (Syria) and later Nāṣir al-Dīn (William) in the Egyptian provinces of al-Dākhliya and al-Muḥāqqaq. His monumental work Nikāyat al-ʿArab fi Fannin al-ʿAdāb which was dedicated to al-Malik al-Nāṣir was a result of his administrative activities. As he says in the preface, at the beginning of his literary career he was almost exclusively concerned with kitāb (i. 2) and only later took up adab (i. 3); he wished to sum up in his encyclopedia all the knowledge that was indispensable for a first class kātib. The book is divided into five sections called fannin, each fann has five parts, each kitāb has a different number of chapters (about) varying from two to fourteen. The first fann is devoted to heaven and earth, the second to man, the third to the flora and the fifth to history (full list of contents: vol. i, p. 4—25; also in de Goeje, Catalogus 2, i. 5—14; cf. also Ḥādījī Khallīfī, ed. Flügel, iv. 397—398, N. 14069). The division is unequal; the last fann of the fifth fann, which is devoted to Muslim history fills almost half the work, which runs to nearly 9,000 printed pages. In addition to the division according to subjects, the book is divided into volumes: the last, the 31st discovered by Ahmad Zakī Pāšā, contains the history of Egypt down to the death of the author in 731. From the dates of the separate parts and volumes it is evident that he devoted no less than twenty years to his book (cf. e. g. de Goeje, Catalogus 2, i. 16 where the year 714 is given; vol. i, p. 416; year 721; v., p. 355; year 722 or 723, op. cit., 2v.; year 725 etc.). In the earlier parts later additions are often found (e. g. vol. i, p. 13, q.v.; 15, q.v.; 20, 61 sqq.). For contemporary history Nuwairi’s book is of the first importance; in other parts its value depends on that of his sources. Its extent and many-sidedness will only be appreciated when the edition is complete and a study like that of Björkman on al-Kašshākhani Šahīb al-ʿUḏāb has been undertaken. Nuwairi himself makes no claim to originality; like the majority of Arab encyclopaedists, he expressly says that he follows his predecessors and places the whole responsibility on them (i. 26). Owing to the existence of many manuscripts of separate parts, European scholarship early became acquainted with Nuwairi; he is already mentioned by d’Herbelot (1625—1695) in his Bibliothèque Orientale (Maestricht 1776, p. 676). In the collections made by Golius and Wares some fine copies came to Leyden (including holographs). W. M. C. Jubb, Erzähltende erwachsene Reiseberichte aus dem Arabischen in Nederlands, Utrecht 1931, p. 178; Catalogus 2, i. 5—18, N. 5) and attracted great attention in the xviii-th century. One of the first to study him was J. Heyman (d. 1737) whose Nusawirianus — not too fortunate excerpts and notes — is in manuscript in Leyden (Catalogus 2, i. 18, N. 6); on Heyman see Reiske, Prodigagurata, in J. B. Köhler’s Abhildnisse Tabulae Syriacae, Leipzig 1766, p. 233 and Jan Nat, De studiën der oosterse. Talen in Nederland in de 18e en de 19e eeuw, Purmerend 1929, p. 25—26). In general in the xviii-th and early xix-th centuries too much stress was laid on the account of pre-Musliman history in al-Nuwairi (Schultens, Monumenta, 1740, Historia, 1786; Reiske, Prodigagurata, 1766, p. 232—234, Primaire lang., ed. Wustenfeld, 1847; Rasmussen, Historia prae-quotum arabam regnum, Copenhagen 1817, p. 81—124 etc.). Later investigation showed that with the existence of older sources al-Nuwairi was only of secondary importance (see Hitwoch, Prueba arabe pagana, Berlin 1899, p. 25—30; G. Olinder, The Kings of India, Lund 1920, p. 100 etc.). Of considerable importance are the parts which deal with later, especially contemporary, history and historical geography; in the course of the xix-th century they were frequently appealed to and excerpts edited or translated by Silvestre de Sacy, de Slane, Defrémery, v. Hammer, Quentinme, Weil, Tiesenhaven, Amari, etc. One of the latest studies of a section of his work is the two volume Historia de los musulmanes de España y Africa. Texto arabe y traducción española of M. Gaspar Remiro (Granada 1917—1919; cf. Ángel González Palencia, Historia de la literatura árabe-española, Barcelona 1928, p. 162—163). Ahmad Zakī Pāšā
deserves honourable mention for the interest he
died July 5, 1934) has aroused in the study of
Nuwairits modern times. With great industry and
perseverance he has collected photographs of all
31 parts of the Nihâyát al-Árāb frequently from
autographs, and these are now deposited in the
Royal Library in Cairo. As a result of his efforts,
a complete edition was undertaken in 1923 and ten
volumes are now available in the handsome and
imposing edition of the Dār al-Kutub al-Miṣriya,
which affords a sound basis for the general
estimation of the value of the book.

Al-Nuwairat was not only an official but also a
fine calligrapher: he was able to copy as many
as 80 pages a day. He himself made at least
four or five copies of his own encyclopedia and
sold them at 2,000 dirhems each. He made eight
copies of the Kitāb of Bushārī at 1,000 dirhems
each. He was also famous as a bookbinder.

(IGN. KRATCHEWSKY)

NUZHA. [See مَزَاكِف.]

AL-ÖBOLLA was in the middle ages a large
town in the canal region of the
Tigris Delta, east of al-Baṣra. It was situated
on the right bank of the Tigris and on the
northern side of the large canal called Nahr al-
Öbolla, which was the main waterway from al-
Baṣra in the southeastern direction to the Tigris
and further to 'Abḥādīn and the sea. The length
of this canal is generally given as four or five
or two lake (al-Maṣfī). Al-Öbolla can be
identified with the Árbilā (Arabic: Ārbilā),
mentioned in the Periplus Marcus Erythraei (Geogr. Graec. Minores, L. 255) as lying near the
coast. A story told by al-Maṣṭūr al-Muqaddam (1300, iii. 364) there is still a
reminiscence of the period before the foundation
of al-Baṣra, when al-Öbolla was the only seaport
in the Tigris estuary. The earlier Arab authors,
in discussing the ancient administrative division of
lower Babylonia in Sassanian times and the foun-
dations of towns by the Sassanian kings, identify
al-Öbolla with other places, such as Dast-Maṣfīn
(Ibn Khūdrālīn, al-Burāb, vi. 7) or Bahman
Árdashīr (Tabarī, i. 687), although these
provinces must be sought on the opposite bank
of the Tigris; Eutychius (in Migne, Patrologia Graeca, iii. 911) likewise makes al-Öbolla a foundation of
Árdashīr I (cf. on this question: H. H. Schaedel, in
Iti, vii. 27 sqq.). Ibn Khūdrālīn, p. 7 quotes an
Arabic poem of a contemporary of Muḥammad,
where al-Öbolla is mentioned. In the story of
the conquests the town is reported to have been
captured by Ṭūḥā b. Ṣhāwān in the year 12
(635) and this conqueror described it to the caliph
'Umar as the "port of al-Baṣra", 'Oman, al-Hind
and al-Shir" (al-Baladhuri, p. 341). This conquest
enabled the Arabs to seize the opposite bank of the
river (Dast-Maṣfīn) and the so-called Euphrates
country. After the rise of al-Baṣra, al-Öbolla became
of secondary importance, but throughout the
Asia Minor Caliphate it remained a large town. It
was further from the sea than it had been, but still
the effects of the tide were perceptible even above
al-Öbolla. All the great geographical authors of
the xii. century give a longer or shorter notice
of this place. Its environs are described in
very laudatory terms (cf. Vāqī, i. 97); the
borders of the Lake al-Öbolla were one large
garden (Ibn Hawkal, in B. G. A., ii. 160). The
part of the Tigris opposite al-Öbolla was
important for navigation; in earlier 'Abbaṣid times
there had been here a dangerous whirlpool, which
had been eliminated by sinking a large quantity
of stone in the water at the expense of an
Abbasid prince. Here was erected a beacon light
which is described by al-Ídīsī (ed. Jaubert, i.
364). Al-Öbolla was in this period even larger
than al-Baṣra, according to Maṣfī (in B. G. A.,
i. 118), and the place was noted for linen
goods and also, as appears from al-Yaḥṣāb (in
B. G. A., vii. 360), for its shipbuilding. Nūsir-
Khusraw, who visited the place in 443 (1051),
gives likewise a vivid description of its beautiful
surroundings (Berlin 1341, p. 133). On the other
hand, al-Öbolla does not seem to have been an
important strategic point; occasionally it was
occupied, as in 331 (943) by the governor of
'Umar in his action against the Barid brothers
in Baṣra (cf. Miskawāl, ed. Amedroz, ii. 46),
but as the events showed it was far from being an
important bulwark of that city. After the xii. century the general decline of those
regions seems to have brought about the gradual
appearance of the place; Ibn Batūlā (li. 17 sq.)
calls it only a village and the Nīshāt al-Kūfī

1) See also U.
AL-OBOLIA — OHOD

(p. 38) knows only the Nahir al-Obolia, but does not mention the place itself. About this time it must have disappeared; later mentions (as late as the Ḩizām-Gamlā of Ḥadžī Khalfa, p. 453) reproduce only obsolete geographical traditions.

(J. H. KRAMERS)

**OCHIALY,** Turkish corsair and admiral in the eighteenth century. He was born in a village of Cilicia called Liccestrellu, about 1750, and at the time of his death in 1758, it is said to have been over ninety years old. Ochialy is the name by which he is known to at least some Italian sources of the time; the Turkish sources call him Uludji Ali, which name probably was given to him in North Africa. It may be the Arabic plural *uludji* (from *uludji*), denoting his foreign descent (Hammer, G.O. K., ii. 481, 751 gives conflicting statements). After being a captured galley slave, he became a Muhammadan and entered on a long maritime career in the Mediterranean. According to the *Sidjilli* *ʾothmāni* (iii. 502), he became Tareshe Ḫapudāni in 1654. He owed his rise to his connection with the famous admiral Ṭorqib Ṭuʾis, whose lieutenant he was. With Torquhad he was at Lepanto during Charles V's expedition against this island, and in 1565 both took part in the abortive expedition against Malta, where Torquhad was killed. Thus, until 1568, he was the successor as viceroy of Tripoli, after which he was appointed in the same capacity to Algiers, as successor of Šāliḥ Pasha. During this time he extended the Algerian territory towards the west and, in 1567, he temporarily took Tunis from the last Ḥafsīd sultan and his Spanish protectors. Cervantes mentions him as king of Algiers in chapter xxxix. of his *Don Quixote.* In the following year Uludji Ali took part in maritime expeditions against the Venetians and the Maltese. His chief exploit is connected with the battle of Lepanto [q.v.], in September 1571, where he commanded the left wing of the Ottoman fleet. His success in bringing in a part of the fleet safely to Constantinople after the defeat procured him the dignity of ʿAskar Pasha, the former grand admiral Maʿṣūdibīn-Zade. ‘Ali having perished at Lepanto. On this occasion the name Uludji Ali is said to have been changed into Kīlqīl ‘Ali. He remained in this office until his death and commanded a series of predatory expeditions in the Mediterranean, participating i.e. in the reconquest of Tunis and La Goulette in 1574, along with the *ṭalib* Sinān Pasha [q.v.]. The inner political changes did not affect his favour with government circles. His last official activity was to bring the new Kāba of the Crimea to Kaifa to install him in place of the deposed Kāba. Ochialy displayed considerable activity in ship-building, especially after the debacle of Lepanto; in addition he was the builder of the Top khanāh Džamīl at Galata, and of a hamamīn in the sultan's palace. When he died unexpectedly in his own mosque (15th Rezial 995 = June 21, 1587) he left an enormous fortune, which fell to the state.

(J. H. KRAMERS)

**OCSONOBA,** the old name of the circle (district) in al-Andalus corresponding to the present Portuguese province of Algarve, of which Silves [q.v.; Ar. *Ṣīlaḥ*] was the capital. The geographers and historians transliterate this place name in the forms Ukhānāba and Ukhāhāna. We also find the wrong forms Ukhāntya and Ukhānta, the result of graphic errors. The name Ocsunoba seems also sometimes to have been applied to a town which would be the old Santa Maria de Algarve [q.v.] now Faro. On the authority of an official geographical reference it has however been identified with Mlèru (Mlèru) by Hähner (C.I.E., ii. 3—4, 781—785).

(É. LÉVI-PROVENCAL)

**OFEN.** [See BUDAPEST.]

**OGHUL,** a word common to all the Turkish languages, meaning "son," *child*; "descendant." In this connection attention may be called to certain formations, such as *oğlu*, "son of a good house"; *bulan oğlu*, which used to be applied to the sons of the janissaries. Oghul is very frequently found in family names where it takes the place of the Persian *sāde* or the Arabic *bād*, e.g. Ḥekim-oğlu or Ḥekim-zade for Ibn al-Ḥekim or Ṭuḥfat al-Khālīr for Ibn Ṭuḥfat al-Khālīr (where it should be remembered that the Arabic *bād* does not mean exclusively "son" but "descendant"). An incomplete survey of such formations in an early period is to be found in *Sidjilli* *ʾothmāni*, iv. 778—812. — The new law on family names will give rise to numerous forms where oghul is combined with names and crafts.

Cognate is oğlan, *boy*; *young man*; *servant*; a word also found in certain compounds, e.g. *oğlan*, "sultan's page"; *oğlan*, "language-boy"; *oğlan*, "interpreter."] From oğlan we also get which, the name for light cavalry.

(FRANZ BARINGER)

**OHOD,** a mountain about three miles north of Medina, celebrated for the battle fought there in the year 3 which ended unfavourably for Muhammad. It is a part of the great range of hills which run from north to south but here spreads to the east over the plain and thus forms an independent group of hills. The rocky walls surmounted by a rectangular plateau — without peaks, Yāḥyā says — "which rise like masses of iron" (Burton) above the plain are quite destitute of trees and plants and only the face of the south wall is broken by a ravine which played a decisive part of the battle. The country round is stony and covered with gravel but farther south there are a few cornfields and gardens watered by a brook, but these are sometimes flooded by sudden rainstorms so that the pilgrims coming from the town cannot reach the hill. The Meccans who had
set out to avenge the defeat at Badr were encamped at the already mentioned cornfields at al-'Irād or al-Lajur, which were then full of ripe corn and supplied food for their animals. Muhammad against his will and against the advice of the elders was forced to leave the town and meet the enemy in the open field, went unhindered past the enemy camp and drew up his troops at the foot of the hill with their backs to it: a strategy no less peculiar than that of the enemy. At first it looked as if the enthusiasm of his followers would secure him a victory like that of Badr. But when the archers, whom the Prophet had placed upon the hill with distinct orders to prevent a flank attack by the enemy and not to leave their positions, were unable to restrain themselves when they saw the Meccan camp being pillaged and hurried up to see what they could get, Khālid b. al-Walid's quick eye at once saw the weak spot and when he attacked it, the tables were quickly turned. When the rumour spread that Allah had protected his Prophet, the Meccan archers gave way, and finally the flight became general. In reality, the Prophet was only wounded, and some of his followers succeeded in concealing him in the ravine. Fortunately the Meccans, little experienced in warfare, did not know how to follow up their victory and began to go home. The Prophet was in this way saved from the worst; but he had to lament the loss of many of his followers, including his uncle Hāmza [q.v.], a loss which he felt particularly. It is not easy to get a clear idea of the treatment of the fallen as the traditions differ very much. It is said that the Medinan at first brought their dead to Medina but the Prophet soon forbade this; some mention a common grave in which those who knew the Kūfān were put in the first row; but according to others the martyrs were buried singly or in twos and threes and some authorities say that the alleged common graves of the martyrs of Oḥd are really those of beduins who died of hunger in the reign of ʿOmar (Wāṣitīd, transl. Wellhausen, p. 143). All accounts however agree in their tendency to glorify Hāmza. The Prophet is said to have uttered the ṣukūr over him first; the bodies of the other dead are said to have been placed beside him one by one and Muhammad prayed over him 70 times, as he included him in the prayer with each new corpse. Every year afterwards the Prophet went to Oḥd, to visit his and the other graves and the early caliphs did so also. Muhammad is said to have ordered that the women in lamenting the death of every Ansārī should begin with a lament for Hāmza. In this way Oḥd became one of the most prominent places of pilgrimage of the Meccan exiles. A mosque was built over Hāmza's tomb and it is mentioned by Muqaddasī; it lay behind a wall near the graves of the other martyrs. We have a brief description by Ibn Dujayr in the 11th (xith) century. He mentions first all Hāmza's mosque on the south side of the hill 3 miles north of Medina; a mosque is built at his grave with the grave in an open space to the north of it. Opposite lay the other graves of martyrs and opposite them again was the cave where the Prophet took shelter on the lower part of the hill. Around the graves of the martyrs is a low wall of red-earth ascribed to Hāmza at which the people seek a blessing. The best modern description is that of Burckhardt who visited the place in 1814 after its devastation by the Wahhabis. From his description we may quote the following: 'About one mile from the town stands a raised edifice of stones and bricks, where a short prayer is recited in remembrance of Muhammad having here put on his coat of mail when he went to engage the enemy. Farther on is a large stone, upon which it is said that Muhammad leaned for a few minutes on his way to Oḥd. To the east of this torrent, the ground leading towards the mountain is barren, stony, with a mound, on the slope of which stands a mosque, surrounded by about a dozen ruined houses, once the pleasure villas of wealthy townspeople; near them is a cistern, filled by rain water. The mosque is a square solid edifice of small dimensions. Its dome was thrown down by the Wahhabis but they spared the tomb. The mosque encloses the tomb of Hāmza and those of his principal men who were slain in the battle; namely, ʿAmār b. ʿAbd Allāh b. ʿAbd Allāh (from the traditions) and ʿAbd Allāh b. Dīnār. The tombs are in a small open yard, and, like those of the Bāṣrī, are mere heaps of earth, with a few loose stones placed around them. Beside them is a small portico, which serves as a mosque. A little further on, towards the mountain, which is only a gun-shot distance, a small cupola marks the place where Muhammad was struck in battle by a stone. At a short distance from this cupola, which like all the rest has been demolished, are the tombs of twelve other partisans of the Prophet, who were killed in the battle. The people of Medina frequently visit Oḥd, pitching their tents in the ruined houses, where they remain a few days, especially convalescents, who during their illness had made a vow to slaughter a sheep in honour of Hāmza if they recovered. Once a year (in July, I believe), the inhabitants flock thither in crowds, and remain for three days, as if they were the feast days of the saint. Regular markets are then kept here: and this visit forms one of the principal public amusements of the town'. In modern times Wavell records that the opening of the railway to Medina in 1906 produced a disturbance among the beduins which resulted among other things in the Banū All, whose duty it was to protect the pilgrims visiting the tomb of Hāmza, while putting no obstacles in their way, declining to take any responsibility. The Wahhabis who now rule in northern Arabia permit pilgrimage but at all the holy places forbid actual worship.

(Th. Buhl)

ʿOḳālīds, a dynasty of al-Mawaṣṣil. The Banū ʿOḳāl belonged to the great Banū Ṣaʿṣa'ah. From their original home in Central Arabia they spread in course of time in different directions and among their better known subdivisions were the Banū Ḥaḍājī (q.v.) and the Muntasīf (q.v.). In the fourth century of the
Hidjra the Banu 'Okail in Syria and 'Utāq were tributary to the Ḥamdānids and when the latter were no longer able to maintain themselves in al-Mawṣil, the city passed to the 'Okailids. The Kūrā chief Būlāk, the founder of the dynasty of the Marsāmids [q.v.], endeavoured to bring al-Mawṣil under his rule whereas the two Ḥamdānī brothers Abū Tāhir ibn Abī ‘Alī and Abū ‘Abd Allāh al-Ḥasan presented an appeal for help to the emir of the Banū 'Okail, Abū 'I Hilāw b. Muḥammad b. al-Muṣṭayyib. The latter at once announced his readiness to assist them and was given as a reward Dhnār b. ʿOmar, Naṣūḥ b. al-'Aṣātimūn and the town of Balad. After the death of Būlāk in battle (380 = 990–991) his sister's son Abū ‘Alī al-Ḥasan continued the war with success. Abū ‘Abd Allāh was taken prisoner and when Abū Tāhir went to Naṣūḥ b. al-'Aṣātimūn to seek the protection of Abū 'I Hilāw, the latter took him, his son and several of his retainers prisoners, put them to death and then occupied al-Mawṣil. He then submitted nominally to the Būyād Baha b. al-Dawla [q.v.] and persuaded him to send a representative to al-Mawṣil. But the latter did not see any part of any importance. Baha b. al-Dawla's efforts to make his influence felt in al-Mawṣil did not have the success he desired. Abū 'I Hilāw remained the real ruler. He died in 386 or 387 (996–997) and was succeeded by his brother Abū al-Muṣṭayyib [q.v.]. The latter was assassinated in 391 (Dec. 1000–Jan. 1001) and his uncle son Karwān [q.v.] was recognized as emir of al-Mawṣil. After holding office for fifty years, he was deposed by his brother Abū Kāmil Baraka [cf. ʿAšārāt] in 442 (1050–1051) and on the latter's death in the next year 443 (1051–1052) the rule was passed to his nephew Kūrā b. Bādrān [q.v.]. The latter was succeeded in 452 (1061) by his son Muslim [q.v.] under whom the territory of the 'Okailids attained its greatest extent; their power then declined rapidly. On Muslim's death (478 = 1085) his brother Ibrahim who had been languishing in prison for years was set free and reinstated as emir of al-Mawṣil. In 482 (1089–1090) however, the Saḥīlī sultan Malikshāh invited him to come and give an account of his stewardship and as soon as he appeared he was thrown into prison and his son al-Dawla b. ʿIhilāw [q.v.] sent as governor to al-Mawṣil. Only after Malikshāh's death (Shawwal 483 = November 1092) was Ibrahim set free and returned to al-Mawṣil. In the meanwhile Muslim's widow ʿAṣiyah was also the aunt of Malikshāh, had married Ibrahim, and on the death of Malikshāh she went with 'Alī, her son by Muslim, to al-Mawṣil. But as Muḥammad, another son of Muslim's, also coveted the city, its inhabitants split up into two parties and when it came to fighting, Muḥammad had to take flight, while 'Alī occupied al-Mawṣil. As soon as Ibrahim heard of this he began negotiations with ʿAṣiyah and received from her the town of Balad which Malikshāh had given her as a gift. The Saḥīlī prince Ṭūlūn [q.v.] then demanded that Ibrahim should recognize him as saḥīlī and when the latter refused, the decision was left to arms. In Ḥabīb 1 486 (April 1093) the two armies met near al-Mawṣil; Ibrahim was taken prisoner and put to death and Ṭūlūn occupied al-Mawṣil where he installed ʿAlī b. Muslim as governor. It was however not long before his brother Muḥammad b. Muslim endeavoured to dispute his power. He asked the emir Kūrā b. ʿIhilāw [q.v.] to help him against his brother and the result was that he lost his life while 'Alī had to give up al-Mawṣil (Dhu l-ʿKhāda 489 = Oct.—Nov. 1096).

In addition to the emir of al-Mawṣil, several 'Okailid dignitaries are mentioned in history. In 479 (1086–1087) Saḥīl b. Muḥammad b. Badrān b. al-Muṣṭayyib surrendered Halāb to sulṭan Malikshāh and received in return the fortress of Dāhār [q.v.], to which al-Raṣṭī was soon added and these remained almost without interruption in the possession of his descendants until 564 (1168–1169) when his grandson Muḥammad b. 'Alī b. Saḥīl ceded them to Nūr al-Dīn Muḥammad b. Zangi.

Another branch was established in Takrit [q.v.]. According to Ibn al-Athīr, c. 289, where a short sketch of the history of the city of this town is given down to the year 500 (1106–1107), the 'Okailī Rāfī b. al-Ḥasan died in 427 (1036) as lord of Takrit. His nephew Abū ʿAmmār ʿAbd Allāh b. al-Ṭaghlibī then inherited his governorship. After his brother's death in 435 (1043–1044) he was succeeded by his son Abū Ghiṣḥāshīm. The latter was suddenly attacked in 443 (1052–1053) by his brother Ṭūlūn and thrown into prison and ʿAlī seized the power. In 445 (1053–1054) ʿAlī died and soon afterwards his son Nāṣr died also. ʿAlī's widow Amīra then had Abū Ghiṣḥāshīm, who was still in prison, murdered, and installed a governor named Abū ʿAmmār in Takrit but he handed the town over to the Saḥīlī Sulṭān Tughhrībīb. 'Okailī governors are also occasionally found in other towns, like ʿAṣan, Ḥadīth, Hit and ʿUkkūr. After the extinction of the dynasty in Mesopotamia and the 'Utāq the 'Okailīs withdrew to Bahrain.

OKAYL, name of an oasis situated between Ṭalīf and Nakhl. The Arab philologists derive the name from the root meaning 'to retain', in the middle forms 'to assemble' or from the meaning 'conceal'. Both interpretations are based on the fact that 'Okayl was primarily celebrated for its annual fair, which was held on the 1st—20th Dhu l-ʿKhāda and was at the same time an official occasion of mufšakha, i.e. a gathering of tribes or rather of groups and individuals belonging to the same tribe where individuals competed for honours and for the honour of their tribe.

These assemblies to which poets came to recite their poems, were also great fairs, at which merchandise was exchanged. That of 'Okayl was followed by those of Maḍīṣanah (last ten days of Dhu l-ʿKhāda), of Dhu l-Madīan (1st—8th Dhu l-Hijādī).
and those which accompanied the great pilgrimage. These weeks formed the climax of public life in pre-Islamic Arabia — the truce of the sacred months making discussion of the political affairs of the tribes of the Hijāja possible. The Tummin took no part in them. Islam by condunding hereditary and individual feuds was the cause of the decline of the nasuwim (cf. Manusim).

Muhammad was on his way to the fair of 'Oqba with a few of his companions when at Najjāl' (the qiyam) heard the Qur'ān being recited and were struck with admiration as we are told in the Qur'ān (sūra lxxxi. 1 sqq.; lxxv. 28 sqq.) and ḥadīth (Bukhāri, Addārīn, bāb 105; Tafsīr, sūra lxxxi., bāb 1; Muslim, Šafī, trad. 1497; Tirmizī, Tafsīr, sūra lxxxi., trad. 1).

'Oqba is also noted for the fighting which took place there at the beginning of Islam.

A. J. Wessinck

'OQBA b. NĀFĪ' was the son of 'Abd al-Kāsī al-Ḫaṣāṣhi al-Fīhā, one of the famous generals of the first century A.H., who endeavoured by consolidating the first successes of the Arab conquest in North Africa to put an end to the resistance of the Berbers but finally perished after a troubled career at the hands of African rebels.

The data supplied by the historians regarding the career of 'Oqba are relatively abundant but like all that regards the beginnings of the Moslem state in North Africa have frequently to be taken with caution. They come from later traditions, and W. Marquais has clearly demonstrated the particular bias which they represent (Le passé de l'Algérie mornoumène, in Histoire et Historiens de l'Algérie, Paris 1931, p. 150). It is certain as regards 'Oqba that the essentials of what the Magribi historians have preserved about him are of eastern origin and in addition the most circumstantial accounts of his career that we possess are from the pens of eastern authors: Ibn 'Abd al-Ḥašām and al-Nawawī. The only authority for the African tradition regarding 'Oqba so far known is his descendant Ibn 'Umahādjar. The information, at once detailed and new, found in a Magribi MS. (cf. Bibliography) about 'Oqba's raid into the south of Morocco seems fairly reliable up to a certain point from the very fact of its precision. Use of it after a critical study seems likely to throw doubt upon the statements hitherto regarded as reliable regarding the progress and chronology of the Arab conquest of North West Africa, such as are given in studies, already antiquated like Foundel (Les Berbères, Étude sur la conquête de l'Afrique par les Arabes, Paris 1875), or more recent and more distinguished works but also based on unchecked translations like that of E. F. Gautier (Les titres obscurs du Maghreb, Paris 1927).

This is why in the present state of our knowledge we shall here confine ourselves to tracing a sketch of 'Oqba b. Nāfī's activities in North Africa which need not be considered final on all points.

'Oqba was born in the last years of the Prophet's life and was through his mother the nephew of 'Amr b. al-Ĥāzir (q. v.), the celebrated conquer of Egypt, who shortly before his death in 43 (665) gave him the supreme command in Ifriqiya. According to a story, difficult to verify, 'Oqba at that time was directing his attention to the Sudān and establishing Islam by force of arms at Ghādāmes. But this was only a raid and not a regular occupation of the country. It was not till some years later that we find him preparing for a new expedition, no doubt better equipped than the others. This was the expedition of 50 (670) in which he founded the military stronghold of al-Ḫaṣās-ān (q. v.) in the middle of the province of Byzacene. For this expedition 'Oqba had at his disposal a force of 10,000 horsemen which was gradually increased by the accession of Berbers converted to Islam; with the help of this force he was able not only to attack the Byzantines who continued to hold out in the towns of the coast of Ifriqiya but also the Berbers. The foundation of Kairūnān, forming a strong base for the Arab troops, seems to have very much facilitated if not the occupation and pacification of Ifriqiya, at least its conversion to the religion of and obedience to the authority of the invaders. But it was not 'Oqba who gathered the fruits of this spread of Islam. Ifriqiya remained a dependency of the province of Egypt; the new governor Maslama b. Maḥhad al-Anṣārī dismissed 'Oqba in 53 (665) and replaced him by one of his own clients, Abu l-Muḥādjar, who very soon undertook a raid on Algiers, and according to Ibn Ḥaḍīdhin got as far as Tlemcen (q. v.). On his return to the east, 'Oqba is reputed to have complained to the caliph Muṭawwiyah of the way in which he had been treated by the governor of Egypt and a little later Muṭawwiyah restored him his governorship.

This second appointment of 'Oqba to Ifriqiya may be put with certainty in 62 (683). His enemy, the governor Abu l-Muḥādjar, had in the course of his raid defeated the Berber chief Kusā'īn (q. v.) who became a Muslim and it was on these two that 'Oqba wreaked his vengeance in his turn. He put them into chains and carried them with him wherever he went. At the same time he prepared an expedition on a larger scale than the previous one: the stages of which can be traced from the narrative of Ibn Ḥaḍīdhin. 'Oqba's army, preceded by an advance guard under Zuḥair b. Kaṣāl al-Balawī, advanced from Kairūnān into the Central Magrib, at first encountering in the Ṣāb and again in Tāhir Berber and Byzantine elements which he defeated and received tribute from. He then reached the region of Tangier. The chief of the Ghunārī, Iyyān (Julian) submitted to the Arab leader and became his military adviser. He dissuaded him from crossing the Straits of Gibraltar and undertaking the conquest of Spain and pointed out the danger threatening the Arab troops from the great body of still unconquered Berbers in the Great Atlas and Sīs (q. v.); 'Oqba therefore turned his attention to the Berbers. First of all he occupied the massif of the Zarhūn, took the town of Ullūt (Volubilis), crossed the Middle Atlas and advanced through the Dra (Darān) and Sīs, the inhabitants of which he pursued up to the desert of the Lamṭūn. He
then turned to the Atlantic coast, reached the land of Safl and began to subject the Berber bloc of the Maṣūmidd of the Djebel Daran (Great Atlas) then of that of the Anti-Atlas as far as Tarīddānt [q.v.]. But however brilliant they seemed these successes were nowhere. An advance no matter how brilliant through a scanty meant nothing if it was not followed by a strong occupation which 'Oqba was not able to secure. But when he and his army turned homewards, he does not seem to have realised that all would have to be done again. Kusaila escaped from him and organised resistance, making use alike of the fondness for fighting of his Berber compatriots and the discipline and technical skill of the Byzantine garrisons in the country. 'Oqba trusting to his good fortune did not see the danger. Reaching the Zab, at Thalmas (Tabnā) he went so far as to divide his army into several contingents which he sent off in succession on the road to Kairawān. Trusting the Berbers, who had submitted to him, he had only a small body of Arabs with him when he set out from Tabnā for the A'rās (q.v.). But he was soon surrounded by Kusaila's bands on the borders of the Sahara at Tahādū and fell with 500 of his companions in 63 (683). His grave and that of his companions is still placed on the same place and forms the centre of a little village which bears his name: Sayyidī 'Uqba (vulg. Sidī 'Oqba), a few miles S.E. of Biskra, not far from the old site of Tahādū.

(E. Lévy-Provençal)

AL-ʿOLAMI, Abu ʾl-ʿUmm ʿAbd al-Rahmān b. Muḥammad al-Muṣṭir al-Dīn al-ʿOmarī al-Hanbali, an Arab historian, born on the 13th Dhuʾl-Qaʿda 860 (Oct. 14, 1450) in Jerusalem, studied from 880 (1476) in Cairo, become in 889 (1485) kāfī in Ramla and in 891 (1488) chief kāfī in Jerusalem. He retired in 922 (1516) and died in 928 (1532) in Jerusalem.

His best known work is a history of Jerusalem and Hebron, which he began on the 25th Dhuʾl-Qaʿda 900 (Sept. 17, 1494) and finished on the 17th Ramaḍān 901 (May 31, 1495), entitled al-ʿIshāʾī (Al-Ans, which is sometimes found in the MSS. in place of it and is sometimes corrupted to Dār al-ʿIshāʾ) Bi-Tawāqūf al-ʿArabs wa l-Ḥāfiẓ. For the earlier period he takes almost everything out of Shihāb al-Dīn al-Makhdūmī's (d. 765 = 1364) Muḥāṣir al-ʿArabīn wa Ẓuyrāt al-ʿArab wa l-Ṣuwaq (cf. C. König, Der Kāfī Muṭhir etc., Leipzig Duss. 1896, p. 20) and supplements it mainly with biographical data. The work which exists in numerous MSS. (see Cat. Cod. Ar. Lang. Bag., 4th ed., N°. 957, Brockelmann, G.A.L., ii. 43, and also Paris N°. 4922, 5759-60, 5999, 6303; Aghnīa, N°. 2976; Killi Al Fagha, N°. 729; Bankof, xov. 1102-105, etc.) was first made known in Europe through extracts in the Journal des Étrangers, 1754, April, p. 2-45, and then through Hamburgen, i. v. From the printed edition, Cairo 1283, H. Sauvage translated Histoire de Jerusalem et d'Hebron depuis Adam jusqu'à la fin du XVème siècle, Fragments de la chronique de Meudjétredyan, Paris 1876. At the end of his work the author announces his intention of continuing it when able to do so. This continuation is found in Leyden N°. 955 down to 914 and in Oxford (see Cat., i. 853) and in the Khalīfīta in Jerusalem (see A. L. Mâmâr, in Journ. Pal. Or. Soc., xi. 1-13). Probably before he wrote his great work, he had written a general history with special reference to Jerusalem and continued it down to the year 896 (1491); this survives in a MS. in the British Museum, Suppl. N°. 488 without title and is perhaps identical with the al-Ṭawāqūf, Kāfī tarīkh fi Ṣaḥāba anwar mentioned by Hitdī Khalīfa, ii. 150; v. 619. To the Taḥkālī Ṣamīlī, ed. Fagnan, Ibn abī Ḥamīd b. Ṣamīlī, Ibn al-Radjāb (d. 793) he wrote a continuation at Manbadī al-ʿAṣr wa l-Tāhirī, M. Berlin N°. 10043, Laletli N°. 2083 (see Spies, Beiträge, 13), in the possession of J. E. Sarkis (Cat. 1948, p. 48, 13, photo in Cairo, Fihrist 2, p. 372). Kamīl al-Dīn al-Majāmī b. Muhammad Sharif al-Ghazzī (d. 1412 = 1500) wrote a continuation of this down to the year 1207 (1792-1793) and on this and the original work Muhammad Dīnī b. ʿOmar al-Ṣaţī al-Ḥabbālī in 1345 (1907) based his Muḥāṣir Taḥkālī al-Ṣaţī, Damascus 1339 (see R.A.A.D., i. 160). Whether the al-ʿOlāmī who is mentioned in Dīnī al-Maswīlī, Muḥāṣir al-Majmūʿ, p. 152 as the author of a commentary on the Divān of Ibn al-Ḥarrīd is the same as our author, is a question which it is impossible to decide without our present knowledge.

(C. Brockelmann)

OLČAṬUH KHUDĀBANDA, eightih Ilkhān of Persia, reigned from 1394 till 1317. He was, like his predecessor Ghāzūn, a son of Arghun, and a great-grandson of Hūlagū. At his acces-
tion he was 24 years of age. In his youth he had been given the name of Kharchanda, for which different explanations are given (cf. the poem by Rashid al-Din reproduced on p. 46 of E. G. Browne, A Literary History of Persia, iii. p. 46 sqq. and Ibn Batūṭa, ii. 115), but E. Blochet, in his Introduction à l'histoire des Mongols (G.M. S., xii. 51), has explained the name as a Mongolian word, meaning “the third”. The Byzantine historian Pachymeres calls him Χαρχαρχά (ed. Bonn 1835, i. 459). His mother Uruc Khātūn had him baptized as a Christian, but under the influence of one of his wives he afterwards embraced Islam and received the name Mūhammad, while his name was changed to Khudābād. In addition he took the ēzāfah of Īsā and the name ʻl-Din. When Īsā died, Olcaītū was absent with an army on the Indian frontier of the empire, but there was no difficulty about the succession, as a possible claimant, his cousin Alafrank, had been killed previously. Olcaītū continued the traditional warfare of his predecessors with the Mamlūk Empire and their friendly relations with European Christian powers; some of the letters addressed by him to the Pope Clement V and the English King Edward II are still extant; these letters were brought by his Christian envoy Thomas Hucel, who, in contradiction to the facts, kept up the fiction that his master was a Christian. Olcaītū likewise sent a military expedition to relieve the Byzantine Emperor Michael Palæologus by dividing the force of the Turks in Asia Minor, but this was of little avail (Pachymeres, ii. 588). Against the Mamlūks Olcaītū himself conducted a military campaign during which the town of Rāhba on the Euphrates was besieged in vain (1315). The authority of the government in the interior was strengthened by the conquest of Dīlūn in 1307 and in the same year by the conquest of Herāt from the vassal Kūt dynasty. In 705 (1305-1306) Olcaītū made the recently founded town of Sulṭānīya [q. v.] the capital of his empire, on the occasion of the birth of his son and successor Abū Saʿīd. Prosperity was increased by the laws of Ghāzān, whose code was promulgated again by Olcaītū, and also by the able administration of the famous historian Rashīd al-Dīn [q. v.]; the latter's colleague and rival Saʿīd al-Dīn was executed in 1312 through the intrigues of ʻAlī Shāh, who took his place. The dispute which soon arose between the two ministers made the sulṭān in 1315 assign to each of them the administration of half of the empire. The attitude of Olcaītū towards Islam deserves special notice. After first showing preference for the ʻalifs (cf. the story of Mājīd al-Dīn of Shāhābī told by Ibn Batūṭa, ii. 57 sqq.), he became an adherent of the Sunna. Then, after having attempted to introduce the Sāfi instead of the Ḥanafī madhhab, he finally decided again to join the Shīʿa, after having visited the tomb of ʻAlī; one of his coins affords proof of this.

Olcaītū is described as a virtuous, liberal ruler; he showed interest in the observatory of Marāgha, where ʻAṣīl al-Dīn, Naṣīr al-Dīn's son, was appointed astronomer-royal. He likewise favoured the literary-historical activity of Rashīd al-Dīn and the historian Wāsīf. He died at Sulṭānīya on December 16, 1316; afterwards Rashīd al-Dīn was accused of having caused his death. In Sulṭānīya his tomb is still to be seen.

**Bibliography:** Contemporary sources are the Taʾrīkh Waṣīf, lith. Bombay 1269, and a continuation of Rashīd al-Dīn's Liṯāʼiʿ al-Tawārīḵh, which continuation is found in several manuscripts, but has not yet been edited. Further the Taʾrīkh-e Gūstāb by Ḥamīd Allāh Mustawfī and the later Persian works. — Of European works must be mentioned: D'Oissone, Histoire des Mongols, iv. 437—509; J. von Hammer-Purgstall, Geschichte der üichen, Bamberg 1843, ii. 178—251; H. Howorth, History of the Turks, ii. 534—535; E. Blochet, Introduction à l'Histoire des Mongols, in G.M.S., xii. Layden—London 1910, passim. — For Olcaītū's coins: Stanley Lane-Poole's Catalogue, vi. 322 sqq.

**J. H. KRAEMER**

**OMĀN,** a nominally independent state on the Persian Gulf under the protectorate of England. Its extent has varied considerably in the course of its history. While ʻIskāḥq, for example, who gives Omān an extent of 300 parasangs, includes the district of Makāt in it, Istīḥrī describes the latter as an independent country. In the northwest Omān was bounded by the province of al-Bahrayn or al-Hājjar, in the south by Yaman and Ḥaḍramūt. The sultanate reached its greatest extent under Sulṭān ʻAbāb Mālik b. al-ʻArābī b. Sulṭān, under whom Omān not only included the territory from Rās al-Hadd to Dīlūn, but also all Bahrein and other possessions, particularly on the African coast where his son Saʿīd conquered Kilwa and Zanzibar. Omān at the present day includes the whole south-eastern part of Arabia with a strip about 500 miles long on the south coast of the Peninsula including the land of Ḫūfār. By the decision of the International Court at the Hague in 1905 in a dispute between England and France regarding the granting of the French flag to owners of sailing-ships in Makāt, the southern boundary was fixed at Rās Sakhar and the coast as far as Khīrī Kābī reckoned to Omān, while at the same time the sultan's claim to the peninsula of Rās Masānshām from Rās Dībba to Tībdah was expressly recognised by both powers. This course does not prevent the actual power of the sulṭān barely extending beyond the coast district of Makāt and Ḫātīn. The population of Omān is estimated to be about half a million, but that of the latter proper at 34,300 only. As regards creed the ʻIṣlaḥīs are preponderant particularly in the south, but the northern districts were inhabited mainly by Sunnis. The capital is Makāt [q. v.] while at an earlier period Sulṭār [q. v.] was regarded as the most important town in the country.

The following details of the distribution of the population may be given: the thickly populated districts of Ḫātīn has 105,000, the Ẓādī Sāmāl 2,800, Makāt 10,000, Māstūrah 11,000, Sus 12,000, Ẓāhīr 7,500. Omān for administrative purposes is divided into four districts: 1. Ḫalīl, the land of the Bani Abī; 2. Omān proper from Bedu to Makīnīvā; 3. Dūrā from the latter place to al-Bureimī; 4. al-Ṭūbān, the narrow strip of coast from Shīb to Khīrī Fakkān. The characteristic feature of the orography of the country is a mountain range which runs from Makāt in a southern direction as far as Sus close to the coast but runs a considerable distance inland north of Makāt and thus leaves space for the fertile low-lying land on the coast, al-Ṭūbān, which is in
A way comparable to al-Tihama in the Yemen, although it never attains the same width, being only from 20 to 30 miles across. South of Rusṭā, just below 23° Lat., almost at right-angles to the former, is a second range, higher in its highest parts, known as Djeibel Akhdar which with 10,000 feet is the greatest height in the country. It runs parallel to the coast as far as Rās Masandam and ends off a second range which runs to Rās al-Ḥalūm. The most fertile part of Ṭūmnān is the already mentioned low-lying coast land of al-Būṣūn where in addition to intensive cultivation of the date-palm, wheat is grown and all kinds of fruits flourish. The Arab geographers praised the dates of Ṭūmnān and al-ʿAṣwāt was not wrong in comparing Ṭūmnān to a garden. Among the fruits special mention is made of bananas, pomegranates, and nebek (louj nebek). A considerable part of Ṭūmnān however is quite unsuited for agriculture; for example the part bordering on the desert zone of Arabia which however contains a few fertile oases among the mountains, for example on the way from Beni Abī All to Nerwa. These oases are watered by subterranean deposits as was long ago pointed out by Ibn al-Ṭāḥif; where the water is not too deep below the surface or there are subterranean channels, springs supply the necessary water to the fields. The climate of Ṭūmnān suffers from the great heat, which is only to some degree tempered by the refreshing winds from the sea in Maskat the maximum in July and August is °91—°88 F. The rainy season is in winter from October to March, but the rains seldom fall more than three or four days in a month; among the mountains heavy storms occur and the snow sometimes lies, in Maskat the annual rainfall is 3 to 6 inches.

The cereals grown are wheat, ẓūna, some rice, the fruits, tamarinds, mango, bananas, pomegranates, quinces, pistachio, aqrami, grapes, almonds, figs, walnuts, water-melons, apricots and cherries, while cotton, sugarcane and indigo are cultivated. Stockraising is now mainly confined to horned cattle; at one time Ṭūmnān was celebrated for its strong, swift camels and asses. The Arab geographers (Ibn al-Ṭāḥif) praise Ṭūmnān’s wealth in fish, which supplied the food of large sections of the community (especially in al-Būṣūn). Industry, once very flourishing, is now confined to weaving on a modest scale in Maskat, Neswa and ʿĪṣār, dyeing in the two last named towns and the making of weapons in Maskat. Idrist mentions the pearl-fisheries of ʿIrī below Cape al-Majdulima and in Dumār. The pearl-fisheries now produce about half the revenue of Bahrein (10-15,000,000 rupees). The Arab philologists (Ibn al-ʿArabī) derive the name Ṭūmnān from ṣamān with the meaning “to stay continually in one place”. According to others the name goes back to Ṭūmnān b. ʿAbī Ḥamīm al-Kalbī, who built the town of Ṭūmnān: this is of significance in as much as the classical writers know of a town called Omans (Pliny, Nat. hist., vi. 149) and Omâns haḏmān (Ptol., vi. 7, 36), this has been identified with Shāhār which was later regarded as the most important trading centre Al-Muḥāzdat (p. 35) compared Ṭūmnān with ‘Aden and Egypt for importance in the world’s trade and called it and Striff [n. v.] the forecourt of China (p. 426). This does not seem however to have much benefited the people of Ṭūmnān, for they were regarded as dishonest, wicked and deceitful merchants; indeed Ibn al-Ṭāḥif (p. 92) describes them in much coarser language. The prosperity coming from the trade and agriculture is evident from the huge yield from taxation, 300,000 dinars in the ʿAbbāsīd period. A dihrām a year was paid on each palm-tree (Muḥaddas, p. 105).

For the early history of Ṭūmnān, Ṣuḥrī’s account may be consulted.

The relations of England with the country have been of great importance to Ṭūmnān. They began in 1798 with a treaty between the East India Co. and the sultan by which the French and Dutch were excluded from the territory for the duration of the war, and this was followed in 1818 by the granting of permission for the E.I.C. to have an agent permanently resident in Maskat. By the treaties made by the French with Saiyid Saʿīd b. Sultan in 1807 and 1808, this resident was joined by a French Consular agent. But French prestige suffered a severe blow when Mauritius was occupied by the English in 1810. In 1839 a commercial treaty was concluded between England and Maskat, modelled on one concluded in 1833 between the U.S.A. and Ṭūmnān. In 1844 there followed a commercial treaty with France, which secured this country the most favoured nation clause and freedom to trade in Maskat for its subjects. In 1862 came the Anglo-French guarantee of the independence of Ṭūmnān, but England was able to secure a predominating influence in Ṭūmnān by vigorously supporting the sultan at his various crises and by paying him a subsidy. In 1894 the English declared in a treaty of friendship, which also regulated questions of trade and navigation between the two countries, and was binding upon himself and his successors, that he would not cede any of his territory in any way to any power other than England. When then, in 1898, the sultan in contravention of this agreement wished to allow France to have a coaling-station in his territory, he had to withdraw the concession on receiving an ultimatum from England; France was compensated with a coaling station in Mukalla [q. v.].

The dispute assumed a more serious aspect which arose out of the practice of the French consul in Maskat giving ships’ papers and French flags to Maskat ships which abused the privilege to carry arms and slaves. The dispute was settled by the International Court at The Hague, the decision being that only those ship-owners who had received permits before January 2, 1892, were allowed to retain them. The result was that in 1917 only ten ships of Ṭūmnān were allowed to carry the French flag. The result has been the practical exclusion of French influence from Ṭūmnān, and the securing of English predominance.

OMAN — 'OMAR B. ABD AL-'AZIZ

A caliph. 'Omar stands apart; he was distinguished from his predecessors and successors alike. Inspired by a true piety, although not entirely free from bigotry, he was very conscious of his responsibility to God and always endeavoured to further what he believed to be the right and conscientiously to do his duty as a ruler. In his private life he was distinguished by the greatest simplicity and frugality, although he is said to have lived no less luxuriously than other Umayyad princes before his accession. Poets who praised the delights of worldly pleasures were therefore not particularly popular at his court.

'Omar laid no special stress on military glory, and his reign which only lasted two and a half years was poor in military events. The siege of Constantinople was raised on his accession to the throne; but it is uncertain whether the Muslim army was actually withdrawn by him. In Mesopotamia he allowed the people of Jurands to evacuate their town whereupon they settled in the adjoining Malaya and Turanda was destroyed. In the far West the Muslim armies crossed the Pyrenees, invaded Southern France and returned to Spain laden with rich booty. On a later campaign which is usually but not quite certain it was attributed to the reign of 'Omar, they captured Narbonne, fortified it, and used it for a time as their headquarters. 'Omar however by no means felt obliged to spread Islam by the sword; he rather sought by peaceful missionary activity to win members of other creeds to the faith of the Prophet and in the case of conversion by this means demanded no tribute. This method proved particularly successful and suitable among the Berbers and it is even said that there was not a single Berber left unconverted to Islam in the government of Isma'il b. 'Abd Allah appointed by him. In a similar way were converted the princes of Sind when 'Omar's governor 'Amr b. Muslim al-Bihili invited them to adopt Islam and promised them complete equality with Muslims; but under Hisham they lapsed again.

His interests were primarily in home affairs. He had the untrustworthy governor of Khurasan Vastin b. al-Muhallab [q. v.] arrested and his post given to al-Djarrab b. 'Abd Allah al-Hakami. In other cases also, the most important offices were filled with men whom 'Omar thought to be capable and just. He adopted skilfully attitude to the 'Alids. The practice introduced by Mu'awiya of publicly cursing 'All in the service of the mosque was abolished by 'Omar. It is said that when he was a boy and his father was appointed governor of Egypt he begged him to forbid the customary cursing of 'All and received the reply that such a step although laudable in itself would be against the interests of the Umayyad dynasty and might give support to the 'Alids claims to the caliphate. 'Omar gave up in favour of the 'Alids the oasis of Fadak [q. v.] which had originally been the private property of Muhammad but was then declared a state domain and had finally become the property of the Umayyads. After his accession he decided that it should revert to its original use and according to one story expressly ordered that it should be handed over to the descendants of Fid'um as the heirs of the Prophet. He also restored to the family of 'Ali the property in Mecca, which 'Abd al-Malik had
agriculture lost much of the labour it required. To overcome this difficulty al-Hajjādjī had imposed the kharājī also upon Muslim landowners who were not paying tribute and prohibited immigration into the cities. This aroused general dissatisfaction but this did not worry him. Omar, on the other hand, adhered to the principle that Muslims should pay no tribute. He further propounded, no doubt by agreement with those learned in the law in Medina, the theory that conquered land was the common property of the Muslim community and therefore could not be broken up and transformed by sale to Muslims into immune private property. Consequently in the year 100 (718 719), he forbade Muslims to buy land which should pay tribute; but he did not make this legislation retrospective and he placed no obstacles in the way of the immigration of new converts into the cities. Further, just claims upon the treasury for compensation for services rendered were never refused: he granted the Mawāli in Kūfah and Medina a share in the spoils, and he paid and exemption from taxation just like Muslim soldiers. He thus furthered the amalgamation of the various elements in the caliph's empire and although his system of reformed taxation did not survive because of the principle of the inalienability of tribute-paying land could not be permanently maintained, he did his best to clear up the existing financial mess.

The historians of the older school described 'Omar as an unpractical idealist, who pursued purely Utopian ideals as a result of his theological preconceptions, without paying any heed to actual conditions, and only modern research has put his work in its true light. His reign was spared trouble from the Khāridjī but hidden forces were working in secret which were to bring about the fall of the Umayyad caliphate.

'Omar died after an illness of 20 days in Rajab 101 (Feb. 720) and was buried in Dāīr Sim'nā near Ḥalab. He was succeeded by his cousin Yazīd b. 'Abd al-Malik [q. v.].

Very much influenced since his boyhood by pious authorities on tradition, he was one of the authorities in this field and regarded, although wrongly, after his death as one of the first collectors of Sunna. In course of time a whole cycle of pious legends gathered round his name which were quite devoid of any historical foundation. For example we are told (Ibn Sa'd, v. 301, l. 17) that a roll of parchment fell from heaven upon the men who were filling up his grave which assured him security from the flames of hell (aμn min Allāh il-'Omar b. 'Abd al-'Azīz min il-nār). Even the biassed historians of the 'Abbāsid period who as a rule run down the Umayyads on every possible occasion in favour of the 'Abbāsids make an exception in this case and give him the highest praise. His tomb was also left undisturbed after those of the other Umayyads were desecrated after the triumph of the 'Abbāsids.

The persons in his poems are "sensitive, animable creatures, full of individuality. They reveal their souls, they act, they speak. Dramatic scenes, full of feeling stand out vividly before the reader's eyes." (Schwarz). In the form of his verse also 'Omar is a gifted poetical genius who writes without difficulty. His verse flows easily and naturally in simple language. His prosody differs from that of the Beduin poets; although he uses the same metres, he does not prefer those most popular in the old poetry (basit or basi) but flexible and light metres (kofst, ramal, muftary, mansurai). That he did not feel himself bound by tradition is shown by some traces of strophic verse in his poems. It would be a mistake to see in 'Omar the first love-poet of the Arabs. But he was the first to bring this form to perfection. The roots of this genre are to be found not so much in the introductory parts of the old Arabic sagas as in the love-poems, which were particularly cultivated in South Arabia (perhaps not without Persian influence). A study of the surviving fragments of Waddālī-yaman, a contemporary of 'Omar which has been long in preparation by V. Ebermann, will perhaps shed new light on this point.

'Omar attained great popularity with his contemporaries and in the following generations, chiefly among singers, wits and men of letters. But his popularity among learned men was hampered by two things: his simple language offered very few "testi di lingua" in comparison with poets like, e.g. al-Farazād, and the matter of his poems was little suited for study in schools, especially in religious and historiographic ones. The study of Arabic literature in modern times has brought about a change; besides several monographs devoted to him, special chapters are devoted to him in the text books. 'Omar b. Abī Rabīʿa is now so to speak rehabilitated among the Arabs and recognised as a great poet.

'OMAR b. AYÜB. [See ḤAMĀ and AYÜB'S supplement.]
OMAR b. 'ALI (SHARAF AL-DIIN) AL-MISJAL AL-SA'DI, generally known as IBN AL-FARID, a celebrated Sufi poet. The name al-Farid (narrow) refers to the profession of his father, who belonged to Hamid but migrated to Cairo, where Omar was born in 576 or, more probably, in 577. In early youth he studied Shari'a law and hadith; then came his conversion to Sufism, and for many years he led the life of a solitary devotee, first among the hills (al-Ma'qat) to the east of Cairo and afterwards in the Hijaz. On his return to Cairo he was venerated as a saint till his death in 632, and his tomb beneath al-Ma'qat is still frequented. The Divan of Ibn al-Farid, though small, is one of the most original in Arabic literature. Possibly the minor odes, which exhibit a style of great delicacy and beauty and a more or less copious use of rhetorical artifices, were composed in order to be sung with musical accompaniment at Sufi concerts (Nallino, in K.S.O., viii. 17); in these the outer and inner meanings are so interwoven that they may be read either as love-poems—a fact to which they owe their wide popularity in the East—or as mystical hymns. But the Divan also includes two purely mystical odes: 1. the Jamalikya of Wine Ode, describing the intoxication produced by the 'wine' of Divine Love, and 2. the Naga al-Suluk or 'Pilgrim's Progress,' a poem containing 760 verses, which is often called al-Tawfiq al-aqdar to distinguish it from a much shorter ode rhyming in the same letter. In this famous kalila, nearly equal in length to all the rest of the Divan together, Ibn al-Farid depicts his own experience as a Sufi. The result is not only a unique masterpiece of Arabic poetry but a document of surpassing interest to every student of mysticism (for a résumé of the contents, see Nicholson, Studies in Islamic Mysticism, p. 195—199). Its whole character is psychological rather than speculative; though some passages are pantheistic in feeling and expression, it bears little or no trace of the intellectualism which marks the system of Ibn al-'Arabi; and the charges of heresy brought against the poet do not appear to be justified. Among Sufis the Tawfiq occupies the position of a classic, and many commentaries have been written on it.

OMAR (Abu DAFAR) b. HAFS was appointed governor of the province of Ifriqiya by the Abbadid caliph al-Mansur in 151 (768). He belonged to a family which in the time of the Umayyads had furnished a number of high officials to the state. One of his uncles, al-Muhallab b. Abi Ṣafra, had attained fame as governor of Khurasan under 'Abd al-Malik b. Marwan. Omar whose bravery was celebrated had himself held a command in the eastern provinces: he had been given the Persian epithet of Haawarmad "1,000 men".

The difficult situation in Ifriqiya at the time justified the choice of an energetic governor. Barbary had gone over almost entirely to various sects of the Kharidji heresy. The chief leader of the movement was the Sufi Abi Kurra. The Arab djund showed little enthusiasm to fight the rebels and besides, it was much divided by old tribal rivalries.

Omar b. Hafs, appointed by the caliph, brought with him 500 horsemen. He cleverly won the hearts of the people of Kairawan and was able to secure the country over three years of peace. Al-Mansur having given him orders to strengthen the defences of Tobina [q.v.], an old town, the strategic position of which on the western borders of the empire was becoming so important, Omar went there with some contingents of the djund. Ifriqiya being thus demoralised, the Berbers rose and Omar's lieutenant Habib al-Muhallab was killed. This initial success encouraged the rebels who concentrated a large force around Tripoli under an 'Abdji chief. Al-Dumain b. Bashiir, who had assumed command at Kairawan after Habib's death, asked for reinforcements from Omar b. Hafs. He received them but was defeated. The insurrection now became general. Kairawan was again besieged and soon Omar himself who had only 15,500 men under him was besieged in Tobina by several Kharidji armies, 'Abdji and Sufi united under the command of Abi Kura and numbering over 73,000 (the figures given are of course not at all reliable). Omar wished to cut his way through his opponents but his companions prevented him. He then tried to bribe Abi Kurra to leave his allies and offered him 60,000 dhurams but the offer was rejected. Omar then turned to his brother (or son) and obtained for 4,000 dhurams the succession of the Sufi. Abi Kura had then to withdraw. Omar b. Hafs, thus rid of his enemies, sent a corps against the 'Abdji Ibn Rustam who had to take refuge in Tathert (Tiaret) [q. v.].

Omar was again at work in strengthening the defences of Tobina when he learned of the critical situation of Kairawan. The town blockaded for eight months by the 'Abdji Abi Hikim was in dire straits. With 700 men of the djund, he hurried to Ifriqiya but instead of marching on Kairawan he took the road for Tunis, enticing the Berbers after him. He succeeded in getting supplies into Kairawan which he then entered himself. The siege was resumed with fighting every day. Food again became very scarce. Omar b. Hafs wished to send two chiefs of the djund to procure supplies but they refused to go. He then decided to make a sortie himself which meant certain death, without awaiting the reinforcements of 60,000 men which the caliph was sending him. Throwing himself on the enemy "like a camel mad with rage" he fell on the 15th Djnu 'Hijrija 151 (Nov. 27, 771).

'OMAR b. HAFŞÜN, leader of a famous rebellion in Spain, who at the end of the ninth century A.D. held out for years against the Umayyad emirs of Cordova, has only been heard of by us in the end brought to book by the caliph 'Abd al-Rahmân III al-Nâṣir [cf. Umayyad]. His full name was 'OMAR b. HAFŞÜN b. 'OMAR b. Jâfar called al-İslâmî, from his conversion from Christianity to Islam and he claimed descent from an ancestor named Alfonso who had the title of count (comes). 'Omar's father Hafs or with the specifically Spanish suffix (-ûn), Hafşûn, was thus the grandson of a Visigothic lord who had become a Muslim and lived on the income from his lands at Ismate (Hîn Awî) in the region of Ronda [q.v.] in the south of Spain in the middle of the 8th century A.D. His son while still quite young displayed a very violent temper and as a result of a crime committed by him against the person of one of his neighbours, had to escape for a time to North Africa, and spent some time at Tâhert [q.v.]. He only returned home to rebel at once against the Umayyad emir of Cordova. Having gathered around him a small body of followers he established himself in 267 (880) in a ruined fortress of Bobastro (Ar. بسطورة; q.v.), which he restored.

Duty has identified this castle with el Castilión, to the south of Campillos, between Teba and Antequera, relying on the discovery at this place of an inscription, mentioning the municipium Singmium Basbacnse, while Simontet thinks that its site corresponds to las Mesas de Villaverde, a little farther south between Ardales and Carrastraca. Excavations have recently been begun in the district in order to find the ruins of Bobastro. Whatever be the real position of the castle, we know that it commanded the valley of the Guadalhorce in the direction of Malaga and from there Ibn Hafshûn could disturb a considerable part of the territory of the Álora of Reiy, which a governor dependent on Cordova was supposed to rule. 'Omar having had several successes, the governor tried to bring him to reason but without success and he lost his post. He was no more fortunate. Soon Ibn Hafshûn was exercising complete authority over all the inhabitants of the mountainous region which extends from Ronda towards Granada, Malaga and Algeciras. The Umayyad emir Muhammad b. 'Abd al-Rahmân had to organise a regular expedition against him the command of which was entrusted to his vizier Hâshîm b. 'Abd al-'Azîz. Ibn Hafshûn submitted and went to Cordova to offer his services to the Umayyad emir in 270 (883). But his submission did not last long; in the following year the rebel had regained the mountains of Bobastro and took by storm the castle in which Hâshîm had put up a strong garrison.

From this time on Ibn Hafshûn begins to play the part of a champion in the nationalist movement in the south of the peninsula, where he put himself at the head of all the malcontents, whether Christians or neo-Muslims (musulûnîn). The rapid growth of his rebellion did not fail to disturb greatly the Umayyad emir whose position each day became more precarious. The task of bringing Ibn Hafshûn to book was given to the heir-presumptive al-Mundhir b. Muhammad, who laid siege to one of the rebel's principal supporters Hârid b. Hamlûn al-Rûfîyî in his castle of Alhama. But in 273 (886) the emir Muhammad died and al-Mundhir had to go back to Cordova to be proclaimed in his place. Ibn Hafshûn seized the opportunity to organise resistance in all the mountainous districts of Southern Spain and had himself recognised as leader of the rising by all the inhabitants.

On ascending the throne al-Mundhir found himself faced by a critical situation. But he at once took the necessary steps with great energy. There were continual encounters between the rebels and the loyalist troops; in the end al-Mundhir set out in person to lay siege to Bobastro, but after the siege had lasted forty days he died, undoubtedly poisoned at the instigation of his brother 'Abd Allah who succeeded him.

The new emir displayed no less energy than his brother. Ibn Hafshûn had profited by events to increase his influence and according to the chroniclers the land which he ruled was only separated from Cordova by a day's journey. After a truce which only lasted a few months, 'Abd Allah and Ibn Hafshûn resumed the struggle. The Umayyad emir at first directed his attention to two rebel chiefs, Sawwâz b. Hâmidûn and Sa'd b. Dûjî, whom he conquered, while Ibn Hafshûn was collecting a considerable army at Polei [q.v.]. But 'Abd Allah with a superior army defeated him, put him to flight and took Polei in 278 (891), then Esija [q.v.] and finally laid siege to Bobastro again. But the rising of the Bani 'Hashîjîdî in Seville created a diversion in favour of Ibn Hafshûn, who from now on seems to have received at least the moral support of the Fâtîmids of Ifrîqiya.

The rest of the reign of 'Abd Allah passed without any great successes being obtained. It would take too long to detail here all the negotiations followed by agreements, more or less observed, which went on during these very troubled years. But the most striking gesture of the rebel was to repudiate Islam openly and, in order to have the more complete support of the Christians of Andalusia and Cordova, to return to the religion of his ancestors. Ibn Hafshûn then took the name of Salîh and proclaimed himself not only the leader of the Spanish nationalist movement but the champion at the same time of a regular crusade against Islam.

The situation was then very critical when 'Abd Allah's successor, his grandson 'Abd al-Rahmân III al-Nâṣir, mounted the throne of the emirate of Cordova in 300 (912). Without delay the new sovereign saw that it was necessary before all else to dispose of this threat which was steadily increasing in magnitude. Not only the future of his dynasty was at stake but also that of Islam in Spain. For several years he made his preparations with the greatest care and displayed exceptional tenacity. The mountainous districts of Andalusia were blockaded, attacked and reduced in turn. Ibn Hafshûn, more and more surrounded in the Serranía de Ronda, finally died in 306 (918) leaving to his sons the task of continuing the resistance.

According to some chroniclers, Ibn Hafshûn in the last years of his life, seeing the futility of his efforts, submitted to 'Abd al-Rahmân III and even gave him one of his sons as a hostage. He is himself said to have taken part in the campaigns against the Christians of the north in the Umayyad army.

In any case after the death of the aged rebel,
the ruler of Cordova, now favoured by circumstances, set himself to neutralise completely the influence of the sons of Ibn Ḥaṣṣūn. The eldest, Dijăfar, was attacked at Isna and finally fell a victim to a plot. The second, Abū al-Raḥmān, after holding out for a time at Torrox and at Almuñecar, met his death in an encounter at San Vicente. The third son, Ḥaṣṣūn, was besieged by Abū al-Raḥmān himself in Bobastro and surrendered in 928 to serve in the Umayyad ranks in Galicia. The final capture of Bobastro marked the last stage in a rebellion of unexampled extent, the suppression of which had been the main case of three Umayyad rulers. It was the crowning achievement of the efforts of Abū al-Raḥmān III al-Ẓāhir to secure the complete consolidation of his territory before beginning the attempt to advance its frontiers to the north.

‘OMAR b. HUBAIRA. [See Ibn Hubaira, l. enprā, ii. 388.]

‘OMAR bN AL-KHAṬṬĀB, the second Caliph, one of the greatest figures of the early days of Islam and the founder of the Arab empire. Religious legend has naturally in the case of Omar, as with other heroes and saints of Islam, filled his biography with a mass of apocryphal details. Nevertheless the main characteristics of his personality are revealed to historical research with sufficient clearness for it to be possible to understand his character and assign him his place in the formation of Islam. Like many other people whose strongest characteristic is an energy of will, Omar began by being the declared enemy of the cause which he was later to support with all his strength. Legend has perhaps somewhat coloured the stories of Omar’s persecution of the early Muslims and exaggerates in representing his conversion as the sudden result of his having overheard some verses of the Qurʾān read in the house of his sister Fatimah, with her husband, Saʿd b. Zaid, had early given ear to the Prophet’s preaching. It is from this sudden reversal of his attitude as well as perhaps from the fact that it was under Omar that Islam became a world phenomenon, from the simple incident in Arabic history that it originally was, that Omar has earned the epithet of the “Stephen of Islam” which the west has given him. In reality there is nothing in common between the two, except for the stubborn energy with which they later championed the cause against which they originally fought. As with all great converts, we have in his case only an example of change of polarization of the same exclusive and uncompromising attitude which, recognising no middle course, is as impetuous in devotion as in hatred. Tradition places the conversion of Omar in his 26th year, four years before the Hijra. It is probable that the round figure of 30 which we thus get as the age of Omar at the beginning of the new era has something artificial about it. But he was in any case certainly in the flower of his vigour when he began his new career as apostle of Islam. Besides, at first his support was only personal and legend has no doubt exaggerated its importance. Omar was not able to assist the new religion through the power of his clan (he belonged to the Banū ʿAbī b. Ka'b who being only Karāsh al-Zawāhir enjoyed no influence in the political life of the merchant republic) and his position with regard to his fellow-citizens was in no way outstanding. Even if it is true that, as tradition has it, as soon as Omar joined the community of the faithful, the latter’s faith in its ultimate triumph was increased, his intervention certainly had no influence on the events which led to the migration to Medina. It is only in this town alongside of the Prophet and apparently through the prestige of his initiative and strength of will that Omar without holding any official position began to be the real organiser of the new theocratic state. His part was that of counsellor rather than of soldier; although he took part in the battles of Badr, Ohji and later ones, practically nothing is recorded of his military exploits, accounts of which are so abundant in the case of ʿAlī and other Companions. Tradition which traces to his initiative no less than three Kur’ānic revelations (ii. 119: on the worship of the wāṣfīn Ṭurābīn beside the ʿAla‘b; xxiii. 53: on the veiling of the Prophet’s wives; ivxi. 6: on the threat of punishment for stealing with (the same woman)) is probably not only true but may even record only a few of the cases in which a suggestion from Omar stimulated the Prophet’s inspiration. What is remarkable about Omar in the Medina period his perfect agreement with Abū Bakr, a concordia which is both a surprising thing and one which is a tribute to the two great champions of Islam — was never disturbed by jealousy. The fact that Omar like Abū Bakr, also became the father-in-law of the Prophet through the marriage of his daughter Haṣṣūn, did not arouse the slightest feelings of rivalry in him; on the contrary it was he who on the death of Muḥammad thrust the caliphate upon Abū Bakr. The ingenious theory put forward by Lammens (M. F. O., B. ii. 113 sq., and reproduced in Etudes sur le siècle des Omayyades) about the "triumvirate Abū Bakr, Omar, Abū ʿObaidā b. al-Djāfrijī" (these three individuals united by a bond of intimate friendship are said to have dominated and so to speak monopolised the authority of the Prophet, controlling him either by direct action or through
his wives, Khadija bint Abi Bakr and Hasa bint 'Omar). 'Omar may be to some extent correct but should not be pushed too far. It is beyond question that 'Omar, the greatest brain of the three, was able in the lifetime of Muhammad as well as during the brief caliphate of Abil Bakr to resist the temptation to come too much into the foreground. But as soon as the first caliph was dead the power naturally passed to him. The question whether the dying Abil Bakr designated 'Omar as his successor has been the subject of much discussion by the theorists of Muslim constitutional law. As a matter of fact, there does not seem to have been any formal act of investiture which would in any case have been of no value for it would have been quite out of keeping with Arab custom. 'Omar assumed power de facto and the recognition which was at once given him by the majority of the Companions assured him the exercise of it in a way quite similar to that in which the nomination of the emir in the tribes took place, who, as we know, was only firmly seated when the individual approval of the members of the tribe had been obtained after an effort and not obtained after it. The system however primitive gave no trouble, except when the feeling between two parties was acute; this is what happened at the election of Al. Against 'Omar there was only the dissatisfaction of the *legitimist* party of Al. and the Anšar who had however been defeated too recently when Abil Bakr had become caliph to feel like organizing a regular opposition.

'Omar at the beginning of his rule found that the great expansion by conquest had already begun; he had perhaps contributed more than any other to its beginning in his capacity as adviser to his predecessor. This is not the place to discuss once more the traditional story of the Arab conquests, nor to subject to a revision the well-known thesis of Castrani on their origin and character. This thesis has seemed to lessen considerably the importance of 'Omar's personal action and to take from him the glory of having been their initial and director, according to Castrani conceived in advance of the campaigns against the Byzantine empire and Persia. In reality there is reason to marvel that a simple citizen of Mecca should have been capable of controlling with an undisputed singleness of command undisciplined levies of Beduins, scattered over a vast area and should have been able to keep control over their chiefs who were practically the sole masters of the position. If the military victories were not due directly to 'Omar it was certainly to him that the credit should go of never having lost control of his generals and above all of having been able to make use of the powerful and talented family of the Omayyads, without however allowing them to have a free hand. His quarrel with Khallid b. al-Walid who, after having won the most brilliant victories for 'Isam, was dismissed and died in oblivion, gives us an idea of the political talent of 'Omar and the extent of his authority. The knowledge of the limits of his power (which is the mark of political genius) caused him to treat the wily 'Amr b. al-As with tact and to leave him the initiative in the conquest of Egypt. But he was careful at the same time to put at his side an old Companion of the Prophet, al-Zubair, as a check upon him. He was careful in general

(continued from the previous page...
in the slightest degree the necessary qualities to overcome them.

While orthodox tradition reverses in 'Omar not only the great ruler but also one of the most typical models of all the virtues of Islam (cf. a list of his merits in the work of al-Muhibb al-Tabarî, al-Riyâds al-malâ'în fi Manâhîh al-Asârîr, Cairo 1927), the Shi'a has never concealed its antipathy to him who was the first to thwart the claims of 'Ali (cf. Goldziher, in W. Z. K. M., xv. 321. 1924). The ḥalâf teaching although it exalts the ascetic austerity of the life of 'Omar, has very little to do with him; besides this type of puritan lends itself very little to mystical speculations whether in its historical reality or in its idealisation in legend.

Bibliography: All the historical material is to be found collected in L. Cestani, Annali Islam, iii., vi. (Milan: 1909–1912); vol. vi. contains the historical synthesis of his caliphate and vi. the general Index. The material contained in the works on Hadith, which has only been partly utilised by Cestani, is collected by A. J. Wensink, A Handbook of early Muhammadan Tradition, Leyden 1927, p. 234–936, s.v. 'Omar.

'OMAR EFENDI, an Ottoman historian, according to popular tradition originally called Elkasović or Casević, belonged to Bosnian-Novii. Of his career we only know that he was acting as kâli in his native town when fierce fighting broke out on Bosnian soil between the Imperial troops and those of Hâkim-Oghlu 'Ali Paša (1150 = 1737). 'Omar Efendi at this time wrote a vivid account of the happenings in Bosnia from the beginning of Muhammad 1149 (May 1736) to the end of Djamâd 1 1152 (end of March 1739); written in a smooth easy style, this work is of considerable importance for social history. It seems to have been called Ghasawat-i Hâkim-Oghlu 'Ali Paša but is usually quoted as Ghasawat-i Dîyâr-i Bosna, and sometimes as Ghasawât-nâm-i Bâtalûz (i.e. Banjaluka in Bosnia). As a reward for this literary effort, 'Omar Efendi was promised to be one of the six judges (rückâl-i welâ-i ğc). Of his further life and death nothing more is known. It is certain that he ended his days in Bosnian-Novii and was buried there. The site of his grave is still pointed out but the tombstone has disappeared.

OMAR KHAYYĀM, famous Persian scientist and poet of the Seldjuk period (d. in 526 = 1132).

Biography. Although reliable information on Khayyām's life is scarce, we cannot underestimate the importance of the sources at present available.

In his Algebra he calls himself Abu l-Fath 'Omar b. Ibrahim al-Khayyām, and in his verses he uses Khayyām ("tent-maker") as his sobriquet. It is likely that this nickname refers to the profession of his ancestors. W. Litten, in his pamphlet Was bedeutet Chahājum? Warum hat O. Chajjam... gerade diesen Dichternamen gewählt, Berlin 1930 (25 p.), has suggested the possibility of a technical interpretation of Khayyām as "poet, expert in metrics" (cf. Shams al-Dīn Muhammad b. Khalīṣ, Muṣījām, in G. M. S., p. 13–16), where metrical terms are explained by the names of different parts of the tent (kast in Arabic both "house" = "tent" and "verse"). However, in the well-known quatrains, such as Khāyāmī hi khāmē-khā-yī šāmat mādīkātī, the reference is evidently to "tents" and not to "verses".

Khayyām was a Khurāsānī, from Nishāpūr or its neighborhood. The date of his birth is unknown. He was already famous as a mathematician in 467 (973–974) when Abu l-Mu'āsafar Asfārā'ī and Māmūn b. Nāṣīr al-Dīn Wāṣīst (cf. Ibn al-Āthir, x, 67, under the year 467) he was invited by Malik-Shīkh to collaborate in the reform of the Persian calendar. (cf. LALN). In 506 (1112–1113) Niẓām-ī-yi Arūnd met 'Omar, who calls Husainī al-Hāfiz, in Balkh and in 530 (1135–1136) visited his grave in the Ilīta cemetery of Nishāpūr (it then being four "variant: some"") years since he died). Consequently the probable date of Khayyām's death would be 526 (1132). (On Khayyām's grave beside the shrine of Muhammad Mahūrī and see Muhammad Ḥasan, Mātri al-Shamsī, ii. [Tehran 1303 = 1885], p. 101, 173; Sir F. Sykes, A pilgrimage to the tomb of Omar Khayyām, in Travels and Exploration, London, Sept. 1900, ii. 120–138, and Williams Jackson, From Constantia to the Home of Omar Khayyām, New York 1911, p. 240–245. See also a picture in the Times, July 16, 1934). On the occasion of Fīrūz al-Dīn's millenary (Oct. 1934) the Persian government took the occasion also to erect a new monument of white marble over Khayyām's tomb.

Niẓām-ī-yi Arūndī's Čahār Maḥāla, written ca. 531 (1136), remains the oldest contemporary witness to 'Omar. The second and even more important biographer is Abu l-Hassan 'Ali Balkhāī [q.v.; died 565 (1169)]; the relevant passages, already known through quotations in Shahrārī's works, have been translated by Jacob and Wiedemann, "Zu 'Omar-i Chahājum, in Ill., ill. (1912), p. 42–62 (English transl. of the principal passage by Sir E. D. Ross and H. A. R. Gibb, in B. S. O. S., v. 467–473). Balkhāī calls 'Omar al-Destūr al-Fattāsh. Husainī al-Hāfiz Omar b. Ḫurāsānī al-Khāyāmī. He says that he had a disagreeable character and was not so nice to his pupils as for example Asfārā'ī. However, when in 597 (1153) Balkhāī (at that time only 8 years old; cf. Yānī, 13 Ḫānā’ūn al-Arūndī, v. 208) visited 'Omar, he latter examined him in Arabic poetry and geometry and expressed his satisfaction. Malik-Shāh (cf. also Čahār Maḥāla, p. 65) and the [Khāruqshī] Shams al-Mulk of Būkhārā (d. 472 = 1179) were particularly kind to 'Omar but Sandjar had a grudge against him. Among the persons who had direct intercourse with 'Omar are mentioned Abū Hāmid Muhammad al-Ghazālī and the learned prince of the Kāshgārī dynasty Fārābūr b. 'Alī b. Fārābūr. In different contexts he is called follower of Abū 'Ali b. Sinā (Avicenna). Though he was a scholar in philosophy, jurisprudence and history he was no prolific writer and of his works Bākjākī mentions only a short treatise on physics (Mukhtasar fī 'l-Takhtiyār), a treatise on Existence (fi. 'l-īnāfa) and a treatise on Being and Obligation (al-kawn wa'l-Takhtiyār). In the Khūṣūṣ al-Kār of 'Imād al-Dīn al-Kūkhī al-Īsfahānī (written in 572 [1176–1177]) Khayyām is mentioned as an incomparable scholar of his time enjoying a proverbial reputation (hihi yafrūb al-maṣīhil). Khayyām (d. 595 = 1198–1199) refers to him once in a verse. Among the later sources may be mentioned Shams al-Dīn al-Ṭūsī, Miṣrī al-Ṭūsī (660 = 1222–1244) where 'Omar is called "an unhappy philosopher, atheist and materialist", Kīфт, Ta'rikh al-Hullābī, ed. Lippert, p. 243–244 (the passage first utilised by Woepcke), represents Khayyām as a follower of Greek learning (cf. Bīrāhīm). Shahrārī's Nuzhat al-Ārūndī (12th century) chiefly repeats Bākjākī. Ṭūsī al-Dīn in his Dīvān al-Ṭawārīkh is the earliest authority known for the tale of three schoolboys: Niẓām al-Mulk, Ḥasan-i-Sabbāh and Khayyām. The chronological discrepancy involved in this story was already noticed by A. Müller: Niẓām al-Mulk was born in 408 (1017) and there are no indications that Khayyām [or Ḥasan-i-Sabbāh] died at the age of more than 100 years (cf. A. Müller, Der Islam im Morgen- und Abendland, ii. 97, 111; Browne, A Liter. Hist. of Persia, iii. 190–193. On the different explanations of the legend see Houtum's preface to the Budārīh, p. xiv., note 2; Muhammad-Khan Kazwī in Browne's translation of the Čahār Maḥāla, p. 138 and latterly H. Bowen, in J. R. A. S., Oct. 1931, p. 721–728). However, the facts remain that Niẓām al-Mulk must have met Ḥasan-i-Sabbāh (cf. Ibn al-Āthir, x, 110 [year 494]) and that Khayyām in his metaphysical treatise dispassionately mentions the Ismā'īlī among the seekers for metaphysical truth, but the authorship of the treatise is suspect.

Khayyām as a scientist. Khayyām's scientific activities for a long time eclipsed his poetical renown and in 1848 Reinaud in his learned introduction to Abu l-Fidā'i's Geography wrote: "malheureusement, 'Omar allait avec l'astronomie le goût de la poésie et du plaisir".

On the reform of the calendar for which Khayyām is responsible jointly with his colleagues, cf. DIALI. MSS. of Khayyām's principal work on Algebra exist in Leyden, Paris and the India Office (see Woepcke, L'algèbre d'Omar Alkhayyami publié, traduite et accompagnée d'extraits de ms. inédits, p. 185). Khayyām's introduction to his researches on Euclid's axioms (Mudāhir) has been translated by Jacob and Wiedemann, in Ill., ill. (MS. in Leyden). The treatise Mudāhirī al-Dirghīr exists in Munich. G. Sarton, Introduction to the History of Science, Washington 1927, i. 759–761, calls Khayyām "one of the greatest mathematicians of
Of metaphysical works of Khayîm a MS. of the above mentioned treatise on Existence is in Berlin and a MS. of a little Persian treatise (Dar 'Ilm-i Kulliyat) in Paris. Of the latter Christensen has translated several chapters, Un traité de métaphysique de Omar Khayyâm, in M.O., i. (1905), p. 1–16. This treatise, of the contents of which Christensen has a poor opinion, is dedicated to a certain Fâghr al-Milla wa'l-Din Mu’ayyad al-Mulk, probably one of Nišâm al-Ḫallâm’s sons.

Finally must be mentioned the Nawwâs-name of which the existence was first revealed by F. Rosen, The Quatrains of Omar Khayyâm newly translated, London 1910, p. 5–18. The text based on the unique Berlin MS. (Rosen, 1365 a.d.; Muḥammad Khân Karwini: “not later than the 11th century of the Hûjâra”) was published with notes and a glossary by Mûsâbî Mîmowî, Tbrân 1933. This treatise is a presentation pamphlet written at the request of a friend. The matters relating to Nawwâs (q.v.) occupy only 19 pages out of 77; the rest is taken up by such subjects as gold, horses, falcons, wine, beautiful faces. The treatise does not show any deep knowledge in the compiler and its authorship, for several reasons, cannot be considered as finally established. An incomplete copy of the same treatise (perhaps the first 45 pages out of 77 of the printed edition exists in the British Museum, Add. 25,568, fol. 86°–101°: Khâshât dar tâlîbi Narowûn (anonymously). For lists of Khayîm’s scientific works see Brockelmann, G. A., i. 471; Sater, Die Mathematiker und Astronomen der Araber, 1900, p. 112; Muḥammad Khân Karwini, note to the Ābāb, p. 220–221; Caullik, op. cit., introduction (21 names are quoted of which some are only Persian equivalents of Arabic titles).

In a very detailed book Khâshât, an avâz namowzâh mu’âskin sur naqîdîn nahar, published in Hindustan by Sâyid Sulaimân Našâwi, ’Azamgarh 1933 (508 pages), the following scientific works ascribed to Khâshât have been reproduced: Risâla al-Ḵawān wa-l-Tâlîkin (with further polemics on the subject); Risâlat al-Ḫallâm (published in Cairo under the name of Ḍiyâ al-ḵârî); Risâlat al-Ḵâlîfât also called al-Ḵâlîfât a’l-Mawâqif; Risâla fî Khayîmûz wa-l-Ḫallâm (in Persian); Miṣân al-Ḫalla.”

Khâshât as a poet. Already Imâd al-Dîn ʿIsmâḥî in his Khâshât al-Ḵâṣâr (572 = 1172) mentions Khayîm among the poets of Khâshât and quotes four Arabic verses of his. Naṣîm al-Dîn Râzî cites two quatrains in Persian: Shahrûzî gives three Arabic fragments (?) numbering respectively 4, 6 and 3 verses [while the Persian translation of Shahrûzî, finished in 1011 (1602), substitutes for them 2 Persian quatrains]; that of 6 verses belongs to the same poem as the verses quoted by Imâd al-Dîn. Kifî reproduces exactly the latter’s quotation, Djuwâlî (658 = 1260), l. 128, puts a Persian quatrain into the mouth of Sayyid ʿĪsâ al-Dîn who was counting the victims of the Mongol invasion in Khwarizm in 618 (1221). One quatrain is found in the Torşâ Ḫustâ, in G.M.S., p. 518. From 741 (1340) we possess 13 quatrains preserved in the Muʿāwîa al-Ḫâṣar. The MS. edited by F. Rosen contains 134 quatrains, but its date 721 (1321) is certainly wrong. The other oldest collections of the eighth (xvth) century are:

- Stambul A.S. 1032: 861 (1456–1457) 131 quatrains;
- NO 3892: 865 (1460–1461) 315 quatrains;

Later the number of rubāʿîyât in some MSS. rapidly rises: the MS. in Vienna (Flügel, Handschriften, i. 496, No. 507) dated 957 (1550), has 482 rubāʿî, that of the Bankhäuser Public Library, dated 961 (1553–1554), 604 rubāʿî, till finally in the Lucknow edition of A.D. 1844 one finds 770 rubāʿî. Miss Jessie E. Cadell (Pracer’s Magazine, May 1879) is said to have collected from all available sources 1,200 quatrains; see the list of the MSS. in Caullik, op. cit., p. 37–39.

Already in Th. Hyne’s Veterum Persarum..., religiones historiae, Oxford 1700, p. 529–30, there is found a Latin translation of Khâshât’s quatrain Ay, râbûta-yi râbûta-yi râbhant, For the first time several Persian quatrains were published in a Persian grammar compiled by F. Dombat in Vienna in 1804. Khâshât’s renown in Europe, however, was long based on his scientific activities and it is noteworthy that his Treatise on Algebra was translated in 1851, while the first edition of Fitz-Gerald’s famous version of the quatrains was published in 1859, the French edition by Nicolas in 1867, and only since the second edition of Fitz-Gerald’s version in 1868 has the wave of admiration for Khâshât swept through western lands.

Critical studies of the text started only in 1897 when Žukowski published his article “Omar Khayyâm i stronoutynienîhli instruktûzatîhui, in al-Mawâqifîhui, a presentation volume to Prof. F. V. Rosen, St. Petersburg 1897, 360 pp., made more widely accessible in an (abridged) translation by Sir E. D. Ross, in J.R.A.S., xxii., 1898, p. 349–365. Žukowski’s merits consist in: 1. rendering accessible some old texts on Khayîm’s biography entirely unknown up to that time, and 2. shattering the uncritical belief in the authenticity of the existing collections of quatrains. Žukowski showed that 82 out of 464 quatrains included in Nicolas’ edition are found also in the studies of
39 other authors (and sometimes simultaneously in the Ḡūram of several poets). He then divided these 82 quatrains into different subject groups and thought that the proportion thus obtained would (in inverse order!) serve as a hint for the characteristics of Khayyām. For example, the interpolations of epicene character represent 33%, and those which give expression to Muslim free-thinking 29%. Therefore, the safest way is to take as a basis the least interpolated groups *of which the authenticity has been shattered the least*. Consequently Żukowski attaches a particular importance to the "mystic sūfism" in Khayyām's poetry. This theory (which puzzled Christensen, *Recherches*, p. 10, and misled Hortmann, in W.Z.K. *M.*, xvii. 367) is certainly insufficient both psychologically and statistically, for it is not the percentage of interpolations but that of the remaining quatrains which is of importance. So Żukowski's discovery of a high proportion of *wandering* quatrains is valuable only as a negative principle (cf. Barthold, in *Zap.* xxv. 403-404). The thoroughness of Żukowski's work is shown by the fact that the later researches by E. D. Ross and Christensen resulted in the raising of the total number of authentic *"wandering"* quatrains only to 108.

In his *Recherches sur les Rubū'īyat de 'Omar Ḥaŷyān*, Heidelberg 1904, Christensen went one stage farther. Stating how rapidly the number of quatrains increased since the date of the Bodleian MS. (only a century later the Bankipur MS. contains 604 quatrains!), he postulated a similar process for the time separating that MS. from Khayyām's death (over three centuries): *how many quatrains then would remain attributable to Khayyām? A diwan is transmitted tolerably intact, whereas a collection of rubū'āt is much more exposed to tampering*. Consequently *there exist no criteriā of genuineness both as regards the form and the matter* of the quatrains (p. 32). Christensen admitted only the probability that the twelve rubū'āt containing Khayyām's name were written by Nadjum al-Dīn Rāzī had some chance of being genuine. [But even one of the 12 quatrains of the first category has a variant ascribed to Aḥmad al-Kāshī!]. The more optimistic conclusions of Christensen are that those 14 quatrains *contain, so to speak, in nucleus all the rubū'īyat* and that in general the poetical and historical importance of the rubūʿīyat must be severed from the question of their authorship. As Khayyām wrote in the national Persian spirit the later addition kept "within the same cycle of ideas" (see the 14 quatrains above mentioned). Only the few mystical and erotic quatrains seem to be interpolations foreign to Khayyām's nature. In a following chapter Christensen studies the historical traits of the Persian national character and winds up by saying that *Khayyām's spirit is the Persian spirit as it existed in the Middle Ages, and as in substance it is nowadays* (p. 86). This part of Christensen's reasoning must be inevitably accepted cum grano salis, such matters admitting unfortunately no final demonstration. A further step in the study of Khayyām's text was the discovery by Muḥammad Khān Kastwīnī of 13 quatrains in the anthology *Munīs al-ḥārīr* (composed and copied in 714 = 1310; see Sir D. Ross, in *B. S. O. S.*, iv/iii, p. 433-439). F. Rosen, in the Persian preface to his new edition (1925) of the Rubū'īyat (also in *Germ. Zeit.*, p. 285-313), criticised the exaggerations of the theory of *"wandering"* quatrains but authenticated only 23 rubū'āt (those quoted by Rāzī, Ḥujawānī etc., six of those containing the name of Khayyām and 13 of the *Munīs al-ḥārīr*). Finally, after a new revision of all the materials available, Christensen in his *Critical Studies in the Rubū'īyat of Omar Khayyām*, Copenhagen 1927, offered a new criterion to ascertain the genuineness of the quatrains. He divided (p. 19) the collections of quatrains into three categories: those in which the quatrains are disposed without any alphabetical arrangement, those with single alphabetical arrangement (i.e., in groups according to the final letter of the rhyme) and those with double alphabetical arrangement (under each rhyme letter the quatrains disposed in the order of the first letter, of the beginning word). He takes the first arrangement as the oldest and of this group mentions five specimens: one bearing the apparently false date 721 (1321), one dated 902 (1496) etc. The double alphabetical arrangement is already found in the Bodleian MS. and the single alphabetical one must be presumably later. Moreover Christensen noticed that in different collections (of the first and second class) there were found series of quatrains "in the same, longer or shorter succession" (p. 13). Though the comparison of the non-alphabetical group led to a purely negative result" (p. 27) as regards the establishing of a textual tradition, Christensen suggests that in some cases (MSS. dated 1328 and 1540) the principle underlying the non-alphabetical arrangement was the disposition according to the contents. Moreover he thinks that we may "learn something by studying the total stock of the texts" (p. 27) and consequently (p. 39) lays down an elaborate system of rules based upon the number of times a given rubūʿāt is found in different groups of MSS. This system being strictly enforced entails considerable changes in the former views on the subject: the six best attested quatrains containing Khayyām's name are now considered spurious, one uncertain and four genuine (p. 40). Finally 121 quatrains which have stood the test are taken as a basis for a new characteristic of Omar.

The new method, in spite of its mathematical character, greatly depends on the materials utilised by its author. H. Ritter in his important review of Christensen's work (Zur Frage der Echtheit der Vierteiler: *'Omar Khayyām*, in *O. L. Z.*, 1929, No. 3, col. 156-163) has quoted 7 ancient MSS. found in Constantinople. Of these the two oldest (that of 861 = 1456 containing 131 quatrains, and that of 865 = 1461 containing 315 quatrains) are non-alphabetical while that of 876 (1471-1472) containing 330 quatrains is alphabetical. This fact is partially in favour of Christensen's views but the order in the two non-alphabetical MSS. is different from that of BNI (the oldest of the non-alphabetical MSS. quoted by Christensen, dated 902 = 1496-1497 and containing 213 quatrains. On the other hand, the MS. of 865, contemporary with the famous Bodleian MS., contains double the number of the latter's quatrains. Lastly two of the MSS., mentioned by H. Ritter contain each 478 quatrains in a special arrangement by Yer (ما) ʿAbd al-Raḥīm al-Tahbīzī, who in 867 (1462-1463) arranged the quatrains
in nine chapters according to their subjects. This fact, Ritter thinks, may be responsible for the traces of a similar arrangement in the two later MSS. (dated 1528 and 1549) mentioned by Christensen [on Tabrizi's redaction a paper was read by M. F. M. Köprüülu-nâde at the Orientalist Congress at Oxford; it was also known to Jussein Dânî; v.l.]. So H. Ritter falls back upon Christensen's conclusions of 1904 and in a somewhat modified form insists on the practical impossibility of authenticating this or that of Khâiyâm's quatrains. The rubûd-yâh have been transmitted by methods typical of popular songs (typische Volksliederlieferung); they express the popular feeling of the masses (Volksempfindung) which opposed the official religious and literary spirit of foreign origin. As now we happen to speak of a truly "Khâiyâm" quasiuran, so historically the particular genre must have been associated with the great savant, and Christensen's attribution of his selection of quatrains to "Omar" can be understood only in the sense of a collective name for all what is looked upon as a manifestation of a peculiar tradition (Einzelfiederlieferung).

Finally must be mentioned the discovery of a MS. dated 1423 and containing 206 quatrains announced by Maftûh al-Hâfî at the meeting of the Asiatic Society of Bengal, on April 5, 1932, and H. H. Schäfer's paper "Der geschichtliche und der mythische Omar Châziyâm, read at the Orientalistenstag held at Bonn at the end of August 1934. Schäfer is extremely and perhaps excessively sceptical as regards the attribution of the quatrains to Omar Khâiyâm. He concludes by saying that "Khâiyâm's name must be struck out of the history of Persian literature". He also doubts the authenticity of the treatise published by Christensen and the Nasrûn-nâma. Schäfer's paper will appear in book form. For a summary see Z. D. M. G., xlii, 2, 1934, p. *25—*28.

Conclusive. The upshot of the preceding study is that we possess nothing approaching a roccentric receipt of Khâiyâm's poetic works. What should we say if for characteristics of a historical personality we had his correspondence in which scarcely a single letter could be authenticated and many were decidedly spurious? Taking for instance, the important point of "mystic-Sufism" we find that Zakowsky makes a strong point of it in Khâiyâm's poetry, while Christensen denies its importance, though in support of this insufficiently attested tendency one could quote Khâiyâm's metaphysical treatise in which the most honourable place is reserved to the Shâtí seekingers of Truth (cf. Rosen, 1926).

The striking contradictions in the ideas and feelings expressed in the rubûd-yâh have struck all those who have written on Khâiyâm and the characteristic trait of the "type associated with Khâiyâm" seems to be precisely the alternation of sarcastic pelasgism and epicurean hedonism, of the consciousness of frailty of our contingent existence and the joyful motto of "carpe diem". Nevertheless it must be admitted that the pessimistic side of Khâiyâm's poetry is better attested by the quotations in the older biographers and, what is more, by the Arabic verses of Omar Khâiyâm which may have suffered in transmission but which certainly could not be imitated by popular tradition (F. Rosen has utilized the Arabic verses in his penetrating study of 1926).

FitzGerald's version. Khâiyâm's popularity among large circles of the public is chiefly due to the English version by E. FitzGerald (1809—1883). This paraphrase of exceptional poetical merits, consisting in the second edition of 110 quatrains [third edition: 105], cannot be taken for a translation in the strict sense of the word. E. Heron-Allen who most carefully compared the English and Persian texts (Some side-light upon FitzGerald's poem "The Rubûd-yâh of O. Khâiyâm", 1898) has established that 49 quatrains are faithful paraphrases of single rubûds; 44 are traceable to more than one rubûd; 2 are inspired by the rubûd found only in Nicolas' edition; 2 reflect the "whole spirit" of the original; 2 are traceable exclusively to 'Attâr; 2 are inspired by Khâiyâm but influenced by Hâfî and 3 (only in the first two editions) could not be identified. As manifestations of the almost religious feeling with which the admirers treat FitzGerald's version may be mentioned the 'Omar Khâiyâm Club, founded in London in 1892 (and its numerous editions in the U.S.A.), as well as J. R. Tuth's book, A concordance to FitzGerald's translations, London 1906.

Bibliography. See the works mentioned in the present article. For the older bibliography see H. E. H., in G. F. P., ii. 275—277; Browne, A Literary History of Persia, 1906, ii. 248—259; Krusny, Istoriya Peresi (Trudi po novoevostvovaniyu, xvi, tome i, No. 4, Moscow 1909, p. 358—390. Last in date and very complete is A. G. P. Potter, A bibliography of the Rubûd-yâh of 'Omar Khâiyâm, together with kindred matter in prose and verse pertaining thereto [second edition], London 1929, 314 pp. [contains 1,368 printed items and mentions 50 principal MSS. and 35 editions of the text].

not only in his verses, but also in many passages in his letters. As regards subject, his poems are mainly çâgasla of praise or lamentation. Satires (hâijkâ) are rare as he had once promised his father never to insult a Muslim (Dowson, ii. 791). This of course did not prevent him from mocking officials of Christian origin in epigrams which are quite obscene (Dowson, i. 342, 334); in keeping with the taste of his time we frequently find in his Dowson pornographic lines (i. 333, 353; ii. 421, No. 343). The form of his poetry follows tradition in matter and composition; only a few muwahhadât are attributed to him (Dowson, i. 388-391; to be added in M. Hartmann, Das arabisch-ägyptische Gedicht, i., Weimar 1897).

OMDURMAN (umm DURMAN), a town of the Anglo-Egyptian Sudan situated on the west bank of the main Nile immediately below the junction of the Blue and White Niles. A seven-man steel bridge built in 1925-1928 connects Omdurman with Khartum (q.v.), and the two towns (together with Khartum North on the right bank of the Blue Nile) form for practical purposes a single city; but whereas Khartum as the seat of the government and the centre of foreign commerce has acquired a European character, that of British and Levantine elements Omdurman remains the focus of native life and the internal trade of the Sudan. The inhabitants number some 110,000, of whom the great majority are natives drawn from every part of the country.

The importance of Omdurman is of very recent origin. It started as an insignificant village in the territory of the Fintu (a branch of the Ummiyya tribe) and is first mentioned as the dwelling-place of an ascetic and holy man, Humad ibn Muhammad generally known as Humad. Walâd Umm Maryûm, who lived from 1649 to 1728 A.D. (see MacMichael, History of the Arabs in the Sudan, i. 277). The site first became important when it was fortified by Gordon for the defence of Khatum against the Dervish army of Muhammed Ahmad (q.v.) who captured it on January 15, 1885, ten days before the fall and sack of Khatum. Under Muhammed Ahmad's successor, the khâlif 'Abd Allahi, Omdurman was the capital of the Mahdist state and the religious centre of the new sect. The Mahdi's tomb, a domed building designed by an Egyptian captive, was erected in the middle of the new settlement which henceforth was known as Buq'at al-Mahdi, the [holy], place of the Mahdi, and by the khâlif's ordinance the duty of visiting the tomb was substituted for the orthodox pilgrimage to Mecca. In order to consolidate his personal rule the khâlif induced large numbers of his fellow-tribesmen, the Ta'âlgha and other Buq'ata from the western Sudan, to settle in Omdurman where they could support themselves only through the spoliation of the riverain population; this migration was described as hujjar in accordance with the Mahdist practice of establishing analogies between the life of Muhammed Ahmad and his companions and the early history of Islam. The population of Omdurman was further swelled by the enforced settlement of large numbers of tribesmen from all parts of the country whom the khâlif desired to concentrate at his own headquarters for political or military reasons. The town grew up in a haphazard fashion and, apart from the houses of the khâlifs and his principal amirs, consisted of a straggling mass of straw huts covering a length of about six miles from south to north. The khâlif's "mosque" was a vast open space in the centre of the town enclosed by brick walls. For a graphic description of Omdurman under the khâlif's rule see Sir Rudolf von Slattin's Fire and Sword in the Sudan.

The reconquest of the Sudan by the Anglo-Egyptian forces under Sir Herbert (later Lord) Kitchener was completed by the battle of Omdurman on September 2, 1898, the scene of which was near the village of Karima a few miles to the north of the town. Under the new administration the town has acquired such modern features as regularly laid-out streets, tramways and electric light. The houses of the well-to-do townsmen and the government buildings are built of brick and stone, but a large part of the town still consists of the rectangular mud buildings which are characteristic of the northern Sudan, and the life of the busy markets preserves its Oriental and African character. Associated with the principal mosque there is an institution known as al-mud'dar al-dînî, presided over by a shâlik al-全县î (religious guide), which provides instruction in the traditional subjects of Muslim learning. The khâlifs employed in Muslim law courts are however drawn from students of the Gordon College in Khatum. For secular education Omdurman possesses a government intermediate school and several madrasahs (government elementary schools) as well as a number of schools maintained by missionary societies and by private enterprise.

often reprinted); Report on the Administration, Finance, and Condition of the Sudan (H. M. Stationery Office, London 1925, and annually).

(S. HILLIETSON)

ORĂMĂR, UMKAR. The administrative geography of Turkey speaks sometimes of the şahâ of Orămăr containing two nâşiyâ, Džihan and Ilptâkim, with 32 townships and 25,910 inhabitants (cf. Cuinet, Turquie d’Asie, ii. 759), sometimes of a nâşiyâ of this name forming part of the şahâ of Gawar, in the sandjak of Hakkarî, in the wilâyet of Van [q.v.]. We incline rather to the second definition, having visited this district, lost in the middle of Central Kurdistân. Not only has Orămăr not the importance of a şahâ but the two nâşiyâ attributed to it are inhabited exclusively by Nestorians [q.v.] the one, Džilî, being autonomous while Orămăr is at present at least purely Kurdish and an appanage of the house of Mâla Mîrî, a tribe of Duskânî Zhûri and not Herikî (Cuinet, op. cit.): a further proof of the inaccuracy of the Turkish statements regarding this part of Kurdistân. The boundaries of Orămăr are on the north Işhtân and Gawar; on the south Rehân; on the west Džilî, Bâz and Tghûma [cf. NESTORIANS] and Arûtşâ; in the east Sâr [cf. SHAMÂMIN]. Orämăr situated at a height of 5,920 feet (cf. Dickson) is a group of hamlets scattered on the two sides of a rocky mountain spur above the Kûhârî Şîne. On the spur itself which is called Gaparâni Zher, at the place named Gire Bîli, is the capital of the group and the residence of the qâla, the Naw Gund or *middle of the town*. A large cemetery occupies the promontory at the end of the spur. The name Gire Bîli which we explain as the "hill of the idol" seems to indicate the antiquity of the settlement. The fact that the slopes separated by the Gapara are very carefully cultivated and present a complicated system of little terraces: each of which is a field or tiny kitchen garden, leads one to believe that man chose this site for habitation a long time ago, perhaps simply on account of its extreme isolation in the centre of a wild country.

Orography. On the general character of the country see the article NESTORIANS. Orămăr is at east end of the curve traced by the system of the Džilî Dîgh. According to Dickson, the chains and valleys of Turkish Kurdistân run roughly along the parallels of latitude and take a south-eastern direction as they approach the Persian frontier and at the point where they change their axis form a complicated system of heights and valleys. The most complicated part near the centre of the change of axis in question may be called Harkî-Orämăr.

Road system. Although they are really nothing but tracks used for intertribal communications, it is nevertheless interesting to indicate the directions to connect the routes in the road-system which we have studied at Rawânî and Shamâmin [cf. these articles] which must have played a much more prominent part in ancient times. Orämăr is connected with Gawar via Shamsîkî, the pass of Buthazîn, ‘Ali Kânt, Bûlîrî and Dîza. It is a road which shows traces of works undertaken at the more dangerous places. To the south the road going through a very narrow defile leads first to Nerwa (cf. below) where it forks: 1. to the west, by the district of Arûtşâ, via Bîri-Éti-Tîtim and the district of Nerwa via Willa and Dîri Hîlâmî, this last place being on the left bank of the Great Zûb opposite Sûriya on the road from ‘Akra; 2. to the east, by the district of Rekânî, via Bezâlî-Şahdîa and Asî Marîk (water course) to Bazzan and Bahîr Râs on the left bank of the Great Zûb opposite Bira Kepran, also on the road from ‘Akra. A third road goes from Nerwa to Nehîrî, the centre of Shamâmin, via Raga, the heights of Peramî (frontier of the three tribes — Rekânî, Harkî, Duskânî), Dëri, desile of Harkî (Shîwa Harkî), Begor, Mâza, Nehîrî. — It is to be hoped that with the final delimitation of the boundary between Turkey and the ‘Indê, this region will be properly surveyed and mapped and will no longer at present show so many blanks and inaccuracy on the maps (cf. Asia Francaise, Oct.—Nov. 1926, treaty of delimitation)."
that the saint Māri Māmtī escaped from martyrdom in the time of Jullān the apostate at Caesaarea in Cappadocia and took refuge in the mountains where he collected the reptiles and shut them up under a flagstone over which was built the church which bears his name (cf. Acta Martyrum et Sanctorum, ed. Bedjan, vi., 1896). The life of the saint however contains no mention of Orāmār or other towns but it does attribute to him certain powers over wild animals. The version collected by Dickson seems to differ too much from the life of the saint. Dickson thinks that the church was erected on the site of an Assyrian sikhurāt. In any case the following is the description of the sanctuary which is guarded by the Nestorian family bearing the title of Sardar Bi Māri Māmtī. Were it not for a very little door adorned in the upper part with a Nestorian cross and two circles within which is the same cross, one would not suppose that the building of rough stone in the form of a parallelepped was a church. In the semi-darkness of the interior one can see that a quarter of the area is taken up by the sanctuary while his separated from the nave by a wall in which are two doors. Through that on the left one approaches an altar proper represented by a stone over three feet high and about two broad half built into the wall with rounded edges and narrowing towards the top. Above this altar is an embrasure which admits a little light; on the left in the wall is a small niche. From the sanctuary a door through a stone wall leads into another chamber in which there is a primitive baptistery carved out of the rock and a little lower on the same base a hearth (tuma) for the preparation of the unleavened bread. In front of this part set aside for the divine offices there are two pulpit also in stone for the liturgical books and for the Gospels and the cross. The bells are replaced by two metal plates hung from a rod connecting the two walls at the bottom of the vaulting. There are no sacred images. The dimensions of the church are 40 feet long, 17 broad and 16 high. According to the legend, the reptiles shut up beneath the altar would come out if the family of guardians were deprived of their sacred privileges. The dust from the walls possesses virtues against the bites of mad dogs, the stings of snakes and scorpions, etc. — We have very little certain information about the Nestorian churches of Kordištān, some of which, that of Mār Bihūn on the Persian frontier (Tergwar), that of Mār Zaia at Djīlī that of Mār Sawa at Ashīta as well as the ruins at Kučanīs mast with Mār Māmtī go back to a high antiquity between the 4th and 5th centuries, for it is to this period that we are told we must put the coming of the first missionaries, Mār Avgīn, Mār Bihūnt etc. The plan of Mār Māmtī may be compared with that of Mār Bihūnt given by Hearst (Aurēt and Christians), while in W. A. Wigram (The Assyrians and their Neighbours, London 1929) is a sketch of the interior of the church of finally Shālihu at Kučanīs. In any case there is reason to believe that Orāmār was once inhabited by Christians. A local tradition even suggests that the ancestor of the modern Zadīs came long ago into this Christian district and by stratagems and intrigues succeeded in driving out its inhabitants. The toponymy of Orāmār seems to confirm this. The etymology of the name Orāmār itself would also seem to be Aramaic. — We owe to Mgr. Goceia, the interpretation of the name as Ur-mār, "citadel of the master" (cf. Ur-ṣḥallūm). This explanation would be corroborated by the inaccessible character of the region. It would confirm at the same time our supposition that this district was inhabited at a very early date. — There are similar place-names elsewhere in the region: Ora Bihūnt, one of the slopes of Kiria Tawka (cf. above); Orānī, a village beyond Gelia Nu; Uri, a Nestorian clan; finally Urumīa itself. Bibliography: The only works with which we are acquainted are listed in our joint study with E. B. Soane, Suto and Tato, a Kurdish text with transl. and notes, in B.S.O.S., iii., p. 1. — In the review of the Geographical Society of Paris appeared in 1953 our study on Le système routier du Kurdistan, containing besides many geographical details a general view of Orāmār from a rare photograph. (B. Nikitine) ORAN (WAHRAW), a sea-port town on the coast of Algeria (33° 44' N. Lat.; 0° 39' W. Long.). The anchorage which is protected on the west by the heights of the Aïdour, the extreme end of the little range of the Marjada, and the bay of Mars al-Kahir, 10 miles distant, was probably the Portus Divini mentioned in the Itineraire of Antoninus. According to the Arab writers however, the town was founded not by the Arabs but by other towns on the same coast, by Andalusians: at the beginning of the tenth century (c. 290 a.H.) a band of these émigrés came there under the leadership of two chiefs in the service of the Umayyads of Cordova, Muhammad b. Ahi 'Awn, and Muhammad b. 'Abdūn who concluded a treaty with the families of the Berber tribe of the Aṣūdja settled in the district. Seven years after its foundation, Oran, which the agents of the Umayyads had no doubt wished to make a base for the enterprise of their masters, felt the repercussions of the rivalry between the Umayyads and the Fātimids of Kairouān. A body of soldiers sent by the latter and supported by the Aṣūdja Berbers seized the town and burned it. Rebuilt, Oran was placed under the authority of the Fātimid governor of Tīyāret. Throughout the fourth century (tenth a.H.) it was held alternately by the Fātimids and Umayyads and was taken and re-taken and destroyed (notably in 910 and 954) and rebuilt by expeditionary corps or Berber chiefs representing the two rival caliphs. In spite of these vicissitudes, the town enjoyed great economic prosperity as a result of its position on the coast. The geographer Ibn Hawkal, who visited it in the second half of the tenth century, thought that there was not a more sheltered port in the whole of Barbary. The commercial relations with Spain were considerable. (The town however at this date was under the authority of sīfāt al-MAḤMD [cf. XABAD], a vassal of the Fātimids). Large quantities of wheat were exported from it. The country around was well cultivated. The river (Wāḍt Reh, now covered over in its passage through the town) served to irrigate the fine gardens. In the eleventh century, Oran belonged to the Banū Khater, a branch of the Maghrībi Zenāts who ruled in Tlemcen. It was from them that the Almoravids Yusuf b. Tashīfī took the town when he conquered the Central Magrib in 472 (1081). 63 years later it was to be the scene of the dramas in which Almoravid power met its end.
On Ramadam 27, 539 (March 23, 1145) the second last emir of the dynasty, Tashfin b. All, defeated near Tlemcen by the Almohads, died there. Three days later the town passed to the Almohads.

Under its new masters the town prospered. Idriest described it as surrounded by a good wall of earth and possessing well-furnished bazaars. The harbour which was supplemented by that of Mars al-Kabir was within easy reach of Almeria. It had a naval arsenal and 'Abd al-Mu'min built ships there.

The part which it played in commerce with Spain became still more important when the 'Abd al-Wadid [q.v.] replaced the Almohads in the Central Maghrib. Oran was, along with Honain, to the east of the modern Nenours, a port of Tlemcen. The wealth of the capital depended on the possession of these ports and on the safety and liberty of traffic on the roads which led to them. This explains why throughout the 14th century when the Marinids came to besiege Tlemcen, they sent a force against the coast to try to take Honain and Oran. In 748 (1347) the Marinid Abu'l-Hassan built two forts there.

At the beginning of the 15th century, the Castilians, continuing the work of the Reconquest on the Berber coast, endeavoured to take Oran, which had now become a dangerous centre of piracy. They were only able to take Mars al-Kabir in 1505 and Oran in 1509. On May 17, Pedro Navarro entered the town, massacred 4,000 Muslims and sent off 8,000 prisoners. Cardinal Ximenes who had organised the expedition came in person to take possession of the new conquest. Wishing to develop their success the Spaniards interfered in the quarrels of the last 'Abd al-Wadid kings of Tlemcen. They gave their support to one of these princes who had lost his throne and this provoked the intervention of 'Arud [q.v.], the Turkish comair of Algiers. The latter having been defeated and killed, the 'Abd al-Wadid Abu 'Abd Allah was restored to the throne of Tlemcen by the Christians in 1543 and became their vassal. The other expeditions from Oran as a base produced little result and were ended by the disastrous expedition of the Count Alcañiz against Mostaganem in 1558. The Spaniards were at Oran, as elsewhere, practically confined within their walls, badly supplied by their Berber allies (los Moros de Par), exposed to famine, plague and the attacks of the Berbers supported by the Turks; they nevertheless held it till 1708. After a siege of five months, they capitulated and the Bey of Mascara, Bil Shalgham, took possession of it in the name of the Bey of Algiers.

At the end of twenty-four years of Turkish rule the Spaniards re-entered the town. The Count of Montemar, having routed the Arabs who held the coast, entered the town which was undefended in 1732. Bil Shalgham tried in vain to re-take it. At last in 1791 after a terrible earthquake in which almost 2,000 perished and which was followed by an attack of the Bey of Mascara, Muhammad al-Kabir, the king of Spain Charles VI agreed to surrender Oran to the Bey of Algiers; some 70 or 80 Spanish families remained in it however. The town restored to Islam became the residence of the Bey of the West and remained so till 1830. On Jan. 4, 1831, the French, already masters of Mars al-Kabir, entered Oran.

The town has developed immensely since then.

The population, which was 3,800 in 1832, is now over 166,000. Of this total the Muslims number at least 25,000. They live mainly in the southern quarter known as the "village noir". Among the Europeans the element of Spanish origin is considerable.

There is little trace of its Muhammadan past in Oran. The Spanish period has left more, notably the old fortress with its gateway adorned with vigorously carved coats of arms.

ORFA (Greek Edessa, Syr. Orthos, Armen. Urhay, Ar. al-Ruhâ), an important town in Dijar Mudar, the ancient Osrhoene.

The origin of the town, which must have existed before the Macedonian conquest, is lost in obscurity. Repeated attempts to prove the existence of the name in Assyrian times (E. Honigmann, Urfa Kellinierschrift nachzuweisen, in Z. A., N. F., v. 1930, p. 301 sq.) have so far failed. The original name was probably ʿOrpha which has survived in that of the spring Kahlisf, which lay below the walls of the town, and in that of the district of Osrhoene (cf. ʿOrha in Isid. Charac., i., ed. Muller, in G.G.M., i. 246; ʿUluma, Steph. Bry., s. ʾūluma; Arabes Orient., Plin., Nat. Hist., v. 35; vi. 25, 129; in inscriptions Osrhoeni, C. I. L., vi. 1797; their land was called in Syriac Bith Orhaβ; Cureton, Spiss. Syr., p. 20). A derivation of the Syriac Orhaβ from the Arabic Wurhāl (a familiar form from warhāl, "rich in water") has been proposed by Markwart (in E. Herford, in Z. D. M. G., Ivxv., 1914, p. 865 sq.) and can hardly be accepted; as little probable is that from Orhaβ, the alleged first ruler and eponym of the town.

Edessa was refounded by Seleucus I on the site of an older settlement (Koseh-Hieron, Chron., ed. Helm, p. 127) and renamed by Antiochus IV (Antochia ou Kahlisf, Plin., Nat. Hist., v. 86); Edessa was the most important自从 the formation of the city in the 3rd century BC, coins in Babelon, Reis de Syrie, cii.; Head, Hist. Comm., iii., p. 274 and Hill, Greek Coins of Arabia in the British Museum, London 1922, p. cxxiv.-cxlvi. and 91-119). It received its Hellenistic name very probably from that of the capital of Macedonia (the ancient Aigai, now Voedena) and the wealth of water may have contributed to the choice of the name (Steph. Bry.: ʿEdesa, πολλας ζωος, διὰ της θεωρ, σομαν σταφυλαν ςικτης μετα της της Μακεδονικος; Nöldeke, Hermes, v. 459, wished to extend ʿEdesa to Ṭepa, but cf. Ṭepa from ʿtd: ʾṭepa, ʾṭepa, from which Voedena is derived: G. Hoffmann, Die Makedonen, Göttingen 1906, p. 257; J. Marquart, loc. cit., p. 665 sq.; W. Tomasek, in S. B. A., Wiesbaden 1920, p. 61 sq.) The city was destroyed by Almanzor in 1021 and was never rebuilt.
According to Malalas, the town was also called 'Avtazias (Avtazias) (p. 418 sq., ed. Bonn).

In the pre-Christian period Edessa, like Harran, was the centre of a planet-cult. Edessenses called Venus "Bath Nikkal" (Doctrina Adadii, p. 24), i.e. "the daughter of Ningal" (G. Hoffmann, in Z.A., xi, 1896, p. 235-260, § 11; Winckworth, in Journal of Theol. Stud., xxx. 402).

Before the foundation of the Osrhoene kingdom, the town seems to have been an unimportant place under the Seleucids (to 153 B.C.). Its earlier history is quite unknown. The kings of Osrhoene, whom the Romans regarded as Arabs (Tacit., Ann., xii. 12, 14; Plin., Nat. Hist., v. 85; Arabum Oriboeum), bore Nabataean (Ma'nati, Bakrit, 'Adud, Sahrun, Gebar, 'Arju), Arabic (Abab, Ma'ur, Wilp) or Parthian (Parhad, Pharnagat, Pharnagastes, Parhagastes) names. From the end of the first century A.D. the dynasty was closely related by inter-marriage with that of Adiabene (Duval, Hist. d'Edesse, p. 27 sq.) which then ruled Nisibis also (Josephus, Ant. Jud., xx. 68).

The names and chronology of the kings of or, as the Greeks called them, toparchs or pharaohs of Edessa (Osrhoene) are known from the *Edessene Chronicle* (composed about 540 A.D.) and the *Chronicle of Zuksini* (near Amid; preserved in the same Cod. Vat. Syr. 162) written about 775 A.D. According to the *Edessene Chronicle*, the dynasty ruled for 352 years, and began in 133-132 B.C. with Orhul bar Hawwiya, but according to Y. Gutschmidt, rather with Arju (Doct. Adadii, ed. Phillip, p. 47), whose name is not to be regarded as Iranian (v. Gutschmidt, in Mem. de l'Acad. Imp. de Scienc. de St. Petersb., series vii., xxxv., 1887, p. 19) but as Semitic (*'Lión*) (Duval, Hist. d'Edesse, p. 26 sq.).

The list of toparchs which has been corrected by von Gutschmidt from historical references and coins is as follows: they were under Parthian suzerainty (first (down to 87 B.C.) Arju (132-131 B.C.); 'Abad, bar Ma'ur (127-120); Phrahad, bar Gebar (120-115); Bakrit I bar Phrahad (115-112); Bakrit II bar Bakrit (alone 112-94) together with Ma'nat I 94 with Abgar I Pek'a 94-92; Abgar I alone 92-68, in whose reign the kingdom passed for a short time to Tigranes of Armenia; Abgar II (Ariamis) bar Abgar, of the family of Ma'nat, hence in Florus III, 117, and Ruf. Fest., Brev., 17; Mazor, Mazaras, with in friendly relations with Rome about 65-64. After the battle of Carrhae there was an interregnum of one year (53-54). Ma'nat II Allath (Theon, 52-34); Pakuri (34-29); Abgar III (29-26); Abgar IV Samish (26-23); Ma'nat III Saphuri (23-4 B.C.); Abgar V Ukkmii (4 B.C.-7 A.D.); Ma'nat IV bar Ma'nat (7-13 A.D.) Cumont found in the citadel of Birejlik an epitaph in Syriac of 6 A.D. (7) of Zabirian, commandant of Birjah and governor for the toparch Ma'nat bar Ma'nat (Kugener, in Rel. G. Cond., 4, 1908, p. 587; Cumont, Etudes syriennes, Paris, 1891, p. 144); Abgar V Ukkmii (for the second time 13-50); Ma'nati V bar Abgar (50-57); Ma'nat VI bar Abgar (57-74); Abgar VI bar Ma'nat (75-91), under whom the Semnian Ma'nat bar Ma'nat had a sepulchral tower built for himself in Sorin on the Euphrates (H. Moritz, Inschriften aus Syrien, Mosopathien und Ktesiphon, ed. Oppenheim, Leipzig, 1913, p. 163 sq.), interregnum of 18 years (91-109); rule of Sanatruces of Adiabene, nephew of Abgar, over Edessa!; Abgar VII bar Ira' (109-116).

After the great rebellion of 116 the town was taken by Lucius Quietus and burned. There followed a brief interregnum under Roman rule (116-118). Iur (or Valad) and Pharnagat (118-122), then Pharnagat alone (122-123); Ma'nat VII bar Ira' (123-139); Ma'nat VIII bar Ma'nat (139-163). In the Parthian war of Lucius Verus, Edessa was besieged by the Romans in 163-164 and surrendered to them after the murder of the Parthian garrison. During the war the ruler was Wilp bar Sahrin (163-165). After the conclusion of peace (165) Edessa passed under Roman protection; Abgar VIII (165-167); Ma'nat VIII Phorapma'ra (for the second time 167-179); Abgar IX bar Ma'nat on coins: A. Akabos Ewamia Miasa Abarara (179-214), under whom occurred the first great insurrection of Edessa (Nov. 281) which destroyed his palace; a winter palace was replaced in the Tcheric quarter. The official account of the catastrophe and of the measures taken by the king is preserved in the *Edessene Chronicle* from documents in the royal archives. Abgar was in Rome perhaps in 202 where he was received with all honour by Septimius Severus. Christianity is said to have been made the state religion in his time (which has however not been proved: Gomperz, Archael. Epigraph., Mitt. aus Oesterr.-Ungarn, xxx. 154-157) according to legend Abgar V Ukkmii had become a Christian in the year 29 or 32 (K. A. Lipsius, Die oesterrische Abgaragekritisch untersucht, Brunswick 1880). A friend of Abgar IX was the Christian scholar Bardaisan (Babkhas, 154-222 A.D.); Sex. Julius Africanus is also said to have spent some time at his court (Ps-Amos Epop, Hist., II. 10). The cult of Theraius was exterminated by Abgar IX with great rigour. Abgar then ruled along with Severus Abgar X bar Abgar as co-ruler (214-216); both were put in chains by the emperor Antoninus Caracalla in 216. The emperor spent the winter in Edessa which was now created a Roman colonia and on Apr. 3, 217 he was murdered on his way from there to Carthage.

After the fall of the kingdom of Edessa according to the *Chronicle of Zuksini*, Ma'nat IX bar Abgar ruled for another 26 years (216-242), but he probably lived during this time in Rome and was only nominal ruler.

The Sasanians Ardashir and Shapour I disputed Osrhoene with the Romans, Gordian III again set up a member of the old family as king in Edessa. According to the coins, Abgar XI Phrahates reigned from 242-244; he was probably a son of (Antoninus) Ma'nat. Returning to Rome, he erected a tombstone there to his wife Hudda with inscription (C.I.L., vi. 1797).

After the royal house had adopted Christianity, Edessa became along with Adiabene the centre of literary activity in Syriac (east Arami.) (cf. Duval, Hist. d'Edesse, p. 107 sq. and the histories of Syriac literature by Wright, Duval and Baumstark).

Edessa became a Roman city from the time of Gordian (314); after his death, it is true, Philip the Arabian handed over Mesopotamia as far as the Euphrates to the Parthians; but the Roman garrisons remained in the country (Mommsen, R.G., 7, 422). Shapour I besieged Edessa in 260, and the emperor Valerian was taken prisoner by the Persians not far from here about this time. The
town then belonged for a time (till 273) to the kingdom of Palmyra under Odaïnath and Zenobius.

After the peace of 363 Aphon (Ephraim; d. June 9, 373) of Nasibin moved to Edessa and founded there the "Persian school"; the emperor Valens banished the Orthodox from Edessa as Arians in Sept. 373 and they only returned after his death in 378. The monasteries on the sacred hill at Edessa were plundered by the Huns in 396 and Aphon's nephew Abasaniy composed laments upon this.

It is only from the beginning of the third century that we know the names of bishops of the town; these begin with Palaia (c. 200) and among them are Rabbané, the enemy of the Nestorians (411—435), his opponent and successor Hibb (435—457) and in the sixth century the founder of the Severian "Jacobites", James Baradad (Yašbāb Sarābān, d. 578), but later persecutions of the Christians led to the martyrdoms, much embellished by legend, of the "Edessa professors" Sharbil and Baram (550 a.d.), Shemāb, Girāb, and Hayb (509—310). The legend of the "man of God from the city of Kōne" (St. Alexius) is put in the period of Rabbané.

Edessa became the capital and ecclesiastical metropolis of the eparchy of Osroene. There were seven bishoprics under it in 451: 

- Makrīn (Syriac Hikār Je-Sajāt, "temple of the hunter"),
- Kafrān (Harrān),
- Kāqalān (Bāza, now Byblija),
- Yēn Yēfand, Kūt Yīmaw (Tepa, Tell Kāmaw),
- and that of the Yējāy (Schultheiss, in Abk. G. W. Gött, N.S., x., 1908, No. 2, p. 134). Later were added Bātān (Sārāddī), Fālāmā (Tellmārīn),
- Ḥimarı (Syriac Ismāl),
- Dāštān (Arab. Kāl at Dāštār),
- Nūd Ṣamāli and Maqārī (Syriac Mārātāh; cf. B.Z., xxviii., 1924, p. 73 sq., 77 sq.).

The emperor Zenon (489) finally closed the "school of the Persians" after the Nestorians had already with their leader Nasrī been driven out of Edessa in 457 (Baumstark, Gesch. u. syr. Lit., p. 104, note 12, p. 109, note 10).

The war with the Persians (502—506) in the reign of Anastasius is described in the Syriac chronicle by an Edessene, the author of which is wrongly said to be Joshua (Iyšb) Stylyites. After Amida had fallen in 503, Kawāph besieged Edessa but could not take it (Procopius, Bell. Pers., i. 15). The undisciplined Gothic troops, who were to defend it, plundered it like enemies and practically the whole of Osroene was depopulated. After the fourth inundation of the town (525 a.d.; see below) the emperor Justin I restored it and gave it the name of IÎmätan (Malaias, ed. Bonn, p. 419; Eusebius, Hist. ecc., iv. 8); Haller's quite unfounded doubts, Texte u. Zeichen, i. 1, p. 130, are repeated by Ed. Meyer, R. E., s. v. Edessa, No. 2, etc.). Khāraw I in May 540 on his way back from Syria encamped in front of the city but retired on receiving 200 pounds of gold (Chr. of Edessa, ch. 105; Nidāl, Tabāri, p. 235). His sulfurstein siege in 544 proved without success. According to a late legend, the wondrous powers of the edessa Sādurās, which were rediscovered at this time, saved the city from the enemy.

In the sixth century the whole of Syria and Mesopotamia was won for the Monophysites. In Edessa Stephanos bar Sūdalā, who, influenced by Origen, preached a pantheistic doctrine, found many followers. In 380 Hormizd IV sent the general Adharmahan against the Byzantines but he retreated after a three days' siege of Edessa. Khosrow II who had been previously in Edessa on his flight to Mauricius, conquered the town in 609 (Chron. Pasch., ed. Bonn, p. 699; Cedren., ed. Bonn, i. 714; Theoph., contin., ed. Bonn, p. 432) after it had previously gone over to him for a time under the Byzantine general Narses, and deported a large number of Jacobites to Kūfārān and Sidjafna (Barthelme, Chron. ecc., i. 125). After his victories over Persia, Heraclius in 628 restored orthodoxy in Edessa, and banished the prominent Jacobite families.

On the topography of the town Syriac and Greek authors supply us with a good deal of information. Edessa lay at the intersection of the road from Samosata (Samit) to Carrhae (Harrān) with the great trade route between east and west from the Euphrates at Zeugma-Balṣâs and Bitlis-Birejik via Mardin and Naṣibin to the Tigris. The Antoninus Itinerary (p. 184—192) gives two roads from Germanyia via Zeugma, and the one via Samosata and one from Callinicum to Edessa. The town lay in a hollow surrounded on three sides by mountains and open on the southeast on the river Tigris (Syriac Dalazik, "the Leaper"), the modern Kara Kaytun or Naher El-Kat. This river which with the Djīlāb flows into the Balīth, in the past, according to the Eusebius Chronicles, four times inundated the town and wrought great havoc (in Nov. 201, May 303, March 18, 413 and April 22, 535) until the emperor Justinian had a canal dug to drain off the flood-water north of the town (Procopius, De aed., ii. 7, 8 sq.; Aneida, i. 18, 38). We hear again in 668 and 743 of floods however (Thyreg. Chron., ed. de Boor, p. 537; Chronicles of Cæsarea, under the year 743). The town was surrounded by a double wall. This enclosed on the southwest the citadel which stood on a spur of the Nimrud-Dagh and was overshadowed by this mountain; Justinian therefore there had walls strengthened on this side. At the western end of the citadel are two columns one of which, according to its inscription, was put up by queen Shalman, the daughter of Manūt (Sachau, in Z. D. M. G., xxxvi. 153 sqq.). On a large open place in the citadel called Bēth Tebrā, Abgar IX after the inundation of 501 had a winter palace built (cf. above) and the aristocracy of the town moved their quarters to the adjoining upper market called Bēth Saĥrāy. There was also a large altar there which was still standing in Christian times, and probably also the royal archives (şyram; Bēth 'Udīša). Below the citadel there were two ponds inside the town. The larger fed by a spring, the fish in which were considered sacred like those in the lake of Baniyse (Manbij), corresponded to the old spring Kalash, the modern Birket Ibrahim. South of it lay the smaller pond 'Ain Zilka. In the town stood the council house (bātīk), a gallery built in 497 (espascas), several public baths (tējan), a theatre and a hospital and a hospitium. The six gates were called: the Gate of Beth Shemesh and the Gate of Barbalē (Babarēh ša'ar: Procop., Bell. Pers., ii. 27, 44) in the north, the Gate of the Caves which led to the catacombs in the west, the Gate of the Hours (Shīkā, probably the Šēkā ša'ar of Procopius, Bell. Pers., loc. cit., cf. Duval, Hist. d'Edesse, p. 207, note 1) in the southeast, the Great Gate in the south and the Gate of the Theatre in the east (Duval, p. 14).
At a later date, the Arabs only mention four gates: that of Ḥarrān, the Great Gate, the Gate of Ṣab'a and the Water Gate. The "Old Church" several times destroyed by floods stood near the "Tetrapylon" and the square of Bēth-Shabāt (Barhebræus, Chron. eccl., l. 359). The Syriac authors mention many other churches within and without the town (Duval, loc. cit., p. 16 sq.; Baumstark, in O. C., iv. 164—183).

In the Nimråd-Dagh west of the town coves were hewn out of the rock in very early times; there also were the manorships of the kings, that of the church of Ašīb al-Masūr, and 2, 1/2 hours from the town, that of Amathānīmēšētī (Ἀμαθηνημεσητι), wife of Ṣalāmē, son of Māṣē. Numerous anchorites had their cells in the "sacred mountain" and many monasteries on it. It is probably γυμναῖος (read γυμνάιος "Cross Hill" as at Antioch) πέρα, on which the monk Aswānī (Ἀσσώνιος) had his visions (Philoxenus, Letter to Patricius, under the wrong title: İĢik of Ninive, Letter to Symeon from Hasmukha, in New Patrum Bibliotheca, ed. Angelo Mai, vili., Rome 1871, p. 186, ch. 39; cf. Baumstark, Gesch. d. syr. Lit., p. 29, 132, note 10; 225, note 2). Another hill was called in the Christian period Rāmāthā-šbēt Alishā Ḫūdā (Symeon Metaphrastes, Migne, Patr. Greci, cvii., col. 141: Ἱσμαὴλ) in the vicinity of Edessa were the villages of Bokhān, Serru, Kūštā and Kafar Śelem or Nępāhla. Two aqueducts restored in the year 505 brought down from Tell Zām and Mawštād the spring water (Ps.-Joshua Styli, col. 59 sqq. 62, 87).

The position of these villages and of the buildings in Edessa can as a rule no longer be ascertained exactly (plans of ancient Edessa by G. Hoffmann, who corrected the old sketches by Carsten Niebuhr [1788] in Wight, Chron. of Joshua Styli, 1882; better in F. C. Burkitt, Ephesians and the Getha, London 1913, p. 46).

Abū ‘Umayda in 637 sent ‘Iyāḥ b. Ḥassan to al-Djaţa. After the Greek governor Jean尼斯 Kates, who had endeavoured to save Oshoïne by paying tribute, had been dismissed by the emperor Heraclius and the general Petronius put in his place, al-Ruḥā (Edessa) had to surrender in 639 like the other towns of Mesopotamia (al-Ikṣik/Ishāq, ed. de Goër, p. 172—173; Ibn al-ʿAṣir, ed. Tornberg, ii. 414—417; Yahyā, t.v. al-Djaţa; Ḥwārimmi, ed. Baethgen, Fragmenta syr. u. arach. Historien, Leipzig 1884, p. 16, 110 = Abb. K. M., viii., Nr. 3; Theophanes, ed. de Boor, p. 517, 521). The town now lost its political and very soon also its religious significance and sank to the level of a second rate provincial town. Its last bishop of note, Jāchob of Edessa, spent only four years (684—687) and a later period again of four months in his office (708). The Maronite Theophilos of Edessa (d. 785) wrote a "Chronicle of the World" and translated into Syriac the "two Books of Homer about Ilios".

Al-Ruḥā, like al-Raṣṣa, Harrān and Karkāsia, is usually reckoned to Diyar Mudar (Ibn al-ʿAṣir, viii. 218; al-ʿAṣir, l. 1777; M. Hartmann, Beiträge, p. 68; note 2 and 3 = M. F. A. G., 1897, p. 28). In 667 (684) a rebellion (al-Ruḥā), Harrān and Summaštāl formed the rebellion, which Bahšām b. al-ʾAṣir, great-grandson of Ḥsām b. al-ʿAṣir, grandson of Ihbīm b. al-ʿAṣir, grandson of Ĥūmir b. al-ʿAṣir, grandson of Ihsān b. al-ʿAṣir, grandson of Ibn al-ʿAṣir, iv. 218).

The "old church" of the Christians was destroyed by two earthquakes (April 3, 679 and 718). In 737 a Greek named Ḥabšūr appeared in Harrān and gave himself out to be "Tibérias the son of Constantine"; he was believed at first but was later exposed and executed in al-Ruḥā (Barhebræus, Chron. syr., ed. Bedjan, p. 119). In 133 (750—751) the town was the scene of fighting between Abī Djaţār, afterwards the caliph al-ʾAṣir, and the followers of the Umayyads, Iṣāq b. Musālim al-ʾUṣfālī and his brother Bakātār, who only gave in after the death of Marwān (Ibn al-ʾAṣir, v. 333, sqq.). But continual revolts broke out again in al-Djaţa (Ibn al-ʾAṣir, v. 370, sqq.); in the reign of al-ʾAṣir, for example, the governor of al-Ruḥā of the same name, the builder of Ḥsām Manṣūr, was executed in al-Raṣṣa in 141 (758—759) (al-Balāḏūrī, p. 192). When Ḥāfīz al-Rašīd was put through al-Ruḥā, an attempt was made to cast suspicion upon the Christians and it was said that the Byzantine emperor used to come to the city every year secretly in order to pray in their churches; but the caliph saw that these were forlorners. The Gāmārī (from al-Djama, the valley of Afriṃ in Syria), who, with the Tlemlārē and Rusāfī, were one of the leading families of al-Ruḥā, suffered a good deal however from his covenants (Barhebræus, Chron. syr., p. 130). In 812 the Christians were only able to save the unprotected town from being plundered by the rebels Naṣr b. Shabān and 'Amr by paying 5,000 zārā; Abī Djaţār therefore fortified al-Ruḥā at the expense of the citizens (Barhebræus, p. 136). At the beginning of the 16th century, the Emir of Edessa sent his general Thābir to al-Ruḥā, where his Persian soldiers were besieged by the two rebels, but offered a successful resistance supported by the inhabitants among whom was Mārz Dionysios of Tellmārī (Barhebræus, p. 139). Thābir, who himself had fled from his mutinous soldiers to Kallinikos, won the rebels over to his side and made Abī al-ʾAṣir governor of al-Ruḥā; he oppressed the town very much (Barhebræus, p. 139, sqq.). Muḥammad b. Thābir, who governed al-Djaţa in 825 persecuted the Christians in al-Ruḥā as did the governors under al-ʾUṣfālī and his successors.

In 331 (942—943) the Byzantines occupied Diyarbārk, Arsan, Dīrāz and Rū b. A’in, advanced on Nāṣūbīn and demanded from the people of al-Ruḥā the holy picture of Christ called μᾶρτασ (al-ʾUṣfālī) with the approval of the caliph al-ʾUṣfālī. It was handed over in return for the release of 200 Muslim prisoners and the promise to leave the town undisturbed in future (Yahyā b. Sa’d al-ʾAzmātī, ed. Krčkovský-Vasil’ev, in Patriol. Orient., xviii. 730—732; Thābir b. Sinān, ed. Baethgen, op. cit., p. 90, 145). The picture reached Constantinople on Aug. 15, 944 where it was brought with great ceremony into the Church of St. Sophia and the imperial palace (cf. in addition to Yahyā, op. cit.; al-ʾAṣir, Muḥāfīz al-ʾAṣir, ii. 331; Ibn al-ʾAṣir, viii. 302 and an oration ascribed to Constantine Porphyrogentus on the ὁ θάνατος του Ἰησοῦ οὗτος or De imagine Edessana, ed. Migne, Patriol. Graec., xxiv., col. 432, better ed. v. Dohsehütz, Christusbilder, in Texte u. Unterw. xviii.). But by 336 (949—950) this treaty was broken by Saif al-Dawla who together with the inhabitants of al-Ruḥā made a raid on al-Maṣṣūn (Yahyā, op. cit., p. 732). Under the Domesticus Leon the Byzantines in 348 (959—960) entered Diyar Bakr and advanced on al-Ruḥā (Ibn al-ʾAṣir, viii. 393). The emperor Nicephorus Phocas towards the end of 357 (967—
ORFA 997

908) advanced on DjiyrMuṣṭar, Maiyāşirḵin and Kafartūḡī (Yahya, p. 813). According to Ibn al-As'ūr (viii. 454 in infra), al-Ruḫā's was burned to the ground in Muḥarram 361 (Oct.-Nov. 971) and troops left in al-Dżatra. One should rather read Muḥarram 362 and take the reference to be to the campaign of John Trimicosis, unless there is a confusion between Edessa and Emesa (Himy) which was burned in 969 (Barhebraeus, Chron. syr., p. 190).

Ibn Hawkal in 978 refers to over 300 churches in al-Ruḫā and al-Maṣkilisk reckons the cathedral, the cellings of which were richly decorated with mosaics, among the four wonders of the world.

Down to 416 (1025—1026) the town belonged to the chief of the Banū Numair, ʿUṯair. The latter installed ʿAbd al-Muṭṭasim b. Ṭūrāghlam in al-Ruḫā there but afterwards had him assassinated. The inhabitants thereupon rebelled and offered the town to Nasr b. ʿAlawī, the Marwanid of Djiyrābrak (Greek Ανανάρχικος), who had occupied by Zangi. After the death of ʿUṯair and the death of Zangi (418 = 1027), Nasr b. ʿAlawī gave ʿUṯair's son one tower of al-Ruḫā and another to Shisbal b. Ibn al-As'ūr, ix. 244). The former (according to others a Turk Salūm, Ẓalāwād, appointed governor, who was hard-pressed by ʿUṯair's widow) then sold the fortress for 20,000 daries and four villages to the Byzantine Protospatharios Georgios Maniakes, son of Guedelos, who lived in Samostait; he appeared suddenly one night and occupied three towers. After a vain attempt by the emir of Maiyāşirḵin to drive him out again in which the town, which was still inhabited by many Christians, was sacked and burned (winter of 1030—1031), Maniakes again occupied the citadel and the town (Ibn al-As'ūr, ix. 281 in); Michael Syrus, ed. Chabot, ii. 147; Barhebraeus, Chron. syr., p. 234; Aristakes Lastiveteč, c. 7, p. 24 syr.; Matthaeus Ruyathī, ed. 1898, c. 43, p. 58—62 = transl. Dubisart, p. 46—49; Kedren-Skilitz, ed. Bonn, ii. 501; the accounts of the events preceding the surrender differ very much). Edessa under Maniakes seems to have enjoyed a certain amount of independence from Byzantium, as he sent an annual tribute (Kedrenos-Skilitz, p. 502).

In May 427 (May 1326) the Patriotics of Edessa became a prisoner of the Numairi Ibn Watthāb and his many allies; the town was plundered but the fortress remained in the hands of the Greek garrison (Ibn al-As'ūr, ix. 305; Barhebraeus, Chron. syr., p. 217). By the peace of 1037 the emperor again received complete possession of Edessa which was retaken (Ibn al-As'ūr, ix. 313; Barhebraeus, p. 221).

According to the Armenian sources, Maniakes was followed by Anuqat Ṭuṣ or Lūn Anuqat Ṭuṣ, then by the Iberian Maraβartw as strategos of Edessa, in 1059, Tiranos is Διονοφην των Ἱπποδιωτων was Kepațeno of the town. In 1065—1066 and 1066—1067 the Turks under the Khašan-Silār attacked the town and Alp Arslan besieged it for fifty days in 1070; it was defended by Waṣil (son of the Bulgar king Alōšian?). After the victory of Mamikrint Edessa was to be handed over to the sultan but the defeated emperor Romanos Diogenes had no longer any authority over it, and its Kapetanos Paolos went to his successor in Constantinople (Sklitzes, ed. Bonn, p. 703). In 1081—1082 Edessa was again besieged by an emir named Khushraw in vain. After the death of Waṣil the Armenian Sunbat became lord of Edessa and six months later (Sept. 23, 1083) Philarétos Brachemios succeeded him. But he lost it in 1086—1087 when in his absence his deputy was murdered and the town handed over to Sultan Malikšah. The latter appointed the emir Buṣūn governor of al-Ruḫā and Hārān. When the latter had fallen in 1094 fighting against Tūsūb, Alyāṣr, general of the sultan of Dimaṣhqi and Hālāb, occupied the town but it was not plundered by his army as he was poisoned by a Greek dancing-girl called Gali. Then the Armenian Kuropalates Toros (Thetaslouky), son of Hētum, took the citadel. When in 1097 Count Baldwin captured Tell Bishār, Toros asked him to come to al-Ruḫā to assist him against their joint enemies and received him with joy but was shortly afterwards treacherously murdered by him (Mattesos of Edessa, ed. 1898, p. 260—262 = transl. Dubisart, p. 218—221; Anonym. Syriac Chronicle of 1202—1204 in Chabot, C. R., Acad. Inscr. Letr., 1898, p. 453 sqq.).

From 1098 the Latins ruled for half a century the "county of Edessa" to which also belonged Sümāsip and Sarṭṭij (1098 Baldwin I; 1100 Baldwin II; 1119 Joscelin I; 1131 Joscelin II). The town suffered a great deal under them. On Dec. 25, 1144 Imād al-Dīn Zangi of al-Mawsil took it (a detailed description of these events in the Anonymos Syriac Chronicle of 1203—1204, ed. Chabot, in C. C. O., series iii, vol. xv, p. 118—126; transl. Chabot, Une époque de l'histoire des Crusades, in Milange Scolenberger, i., Paris 1924, p. 171—179). Under Joscelin II and Baldwin of Kaisīn the Franks again attempted to retake the town in Oct. 1046 and succeeded in entering it by night, but six days later Nur al-Dīn appeared with 10,000 Turks, and soon occupied and sacked it; the inhabitants were put to death or sold into slavery. Baldwin was killed and Joscelin escaped to Sümāsip (Barhebraeus, p. 311 sqq.). The fall of this eastern bulwark of the Crusaders aroused horror everywhere; in Europe it led to the Second Crusade. The Syrian Dionysios bar Šalhī as Dionicon wrote an "oration" and two poetic mirmel about the destruction of the town. Three similar pieces were written by Basilius Abu l-Fasāḏ b. ʿṢūmānī, the favourite of Zangi; he had also written a history of the town of Orbā (Baumstark, Gesch. d. syr. Lit., p. 293, 295).

After the death of Nur al-Dīn his nephew Saif al-Dīn Ghārī took the town in 1174; in 1182 it fell to Saladīn who later handed it over to al-Malik al-Mansūr. When Malik al-Adīd died in 1218, his son Malik al-Asghar Sharaf al-Dīn Mūsā became lord of al-Ruḫā, Hārān and Khāṭīb. In June 1234 the town was taken by the army of "Ali" al-Dīn Kaškūbād and its inhabitants deported to Asia Minor (Kamīl al-Dīn, transl. Blochert, in R.O.L., v. 88; Barhebraeus, Chron. syr., p. 468). But it was retaken within four months by Malik al-Kūnī. In 1244 the Tatār passed through the district of al-Ruḫā and in 1250 the Mongols under Hūlagū. The people of al-Ruḫā and Hārān surrendered voluntarily to him but those of Sarūj were all put to death (Barhebraeus, Chron. syr., p. 509; Chron. arak., ed. Baurit, p. 486).

In the time of Abu l-Fidāʾ al-Ruḫā was in ruins. Ḥamd Allāh al-Mustawfi about 1340 could still see isolated ruins of the main buildings. According to al-Kalqashandī, the town had been
rebuilt by his time (c. 1400) and repopulated and was in a prosperous state. In connection with the campaigns of Timur, who conquered al-Jazira in 1393, al-Rahwāl is repeatedly mentioned in the Zafar-nāmas of Shāraf al-Dīn 'Alī Yazdī (written in 828-845).

The Ottomans finally took the town, to which they gave the name of Orfa, in 1637 during Murād IV's war with Persia.

To-day Orfa (Urfa) has nearly 30,000 inhabitants. It is the capital of a wilāya of the same name numberiing a little more than 200,000 souls. The town is 550 m. above sea-level.

**ORIHUELA,** Arab. Urvīla, a town in Eastern Spain (Levante), 15 miles N.E. of Murcia, the capital of an administrative area (província) and the see of a bishop, contains with its adjoining country, which is thinly populated, 35,000 inhabitants. It was conquered by the Muslims in the same time as the other towns of the a fazer of Todrud [q. v.] and was for a long time the capital of this a fazer before it had to give way to Murcia. Its history was that of the latter town as long as it remained Muslim. It was however for a very brief period in the middle of the 12th century A.D. (middle of the 12th century A.D.) the capital of a petty independent state ruled by the Kāḥid al-Mu'min 'Abd al-Rahmān b. ʿAlī b. Ṣamīq.

**ORISSA (Odra-dega), a part of the modern Indian province of Bihār and Orissa, has an area of 13,706 square miles and a population of 5,306,142, of which only 124,463 profess the Muslim faith. For administrative purposes it is divided into the five districts of Cuttack, Balasore, Puri, Angul and Sambalpur. There are in addition twenty-four native states, the Orissa feudatory states, with a population of 4,465,585, the Muhammadans numbering only 1,700 (Census of India, 1931).

Modern Orissa, which embraces the deltas of the Mahanadi and neighbouring rivers, extends from the Bay of Bengal to the borders of the Central Provinces and from the river Subarnarekha to the Gīkā Lake. In the past its inaccessibility proved its salvation for, while the coastal state was sometimes conquered, the highlands of the interior remained under semi-independent or tributary chiefs. It was included in the ancient kingdom of Kalinya, the sole conquest of the peace-loving Ačoka, but, with the disintegration of the Maurya empire, once more passed to the Kalinya kings. Until the eleventh century the history of this area is extremely confused. Those interested in the solving of chronological puzzles would do well to consult the first volume of Banerji's History of Orissa.

Certain parts of modern Orissa were annexed to the empire of Muḥammad b. Tughluq and were included in the province of Džādinagar. The real conqueror of Orissa, however, was Akbar's famous general Rājā Mān Singh, who took it from the Afghans of Bengal, who had obtained a temporary footing in the country. Under Akbar it was administered as part of the ūbār of Bengal, for it was not until the reign of Džāhinīr that it became a separate province. With the decline of the Moghal empire Orissa fell into the hands of the Bhūnlī Mārāths of Nāqpur [q. v.]. Although it nominally passed to the British by the division grant of 1795 it was not finally conquered until the year 1803.

With the exception of the district of Sambalpur, the territory now known as Orissa was administered along with Bengal until October 1905, and with
West Bengal until March 1912, when Bihār and Orissa were formed into a separate province. Orissa has always been a stronghold of Hindustan and the temple of Dījanath still draws thousands of pilgrims to the sands of Puri.

(C. Colin Davies)

**Orkhān or Orkhan (Ur-Khan?)** was the eldest son of the emir 'Othmān [q.v.], the founder of the Ottoman dynasty. His mother was Mulkshāna, the daughter of Shaikh Ede-Rah, of the village of Ithrum near Eski-Shehr. The year of his birth is not known and indeed the whole chronology of his reign leaves much to be desired. Ottoman sources say he was born in 687 (beg. Feb. 6, 1288); according to others, he was born as early as 680 (beg. Apr. 22, 1281). The first date which probably goes back to Hājjidji Kháilifāt's *Tabārik* has most in its favour. We know very little about his youth. When barely ten years old he was married in 699 (1299) to the daughter of the lord of Yār-Hisār named Nurīfar-Khatun [q.v.], a Greek girl, who was betrothed to the lord of Belokoma (Bilecik). From this union were born among others his son Murād, who succeeded him, and Sulaimān Pasha. Orkhān was nearly 40 when he ascended the throne in 730, that is, Ramañja 7 (Aug. 1326). According to tradition, Orkhān offered his brother 'Ali al-Dīn ʿAli (usually called 'Ali al-Dīn only; cf. *Iṣṭ.*, xi. 20, note 3) a portion of the ancestral possessions but the latter is said to have been content with the vizierate. This story strongly resembles that of Moses and Aaron as given in the *Kūrān* (xx. 30) and is probably intended to give a historical foundation for the office of vizier. 'Ali al-Dīn ʿAli was also the first to bear the title pākta [q.v.] which then passed to Orkhān's son Sulaimān and was inherited from him by Kārā Khaṭīb.

Orkhān's rule may be divided into two periods: that from 1326 to 1344 when he was establishing the Ottoman power in Asia Minor, creating the army and becoming the founder of the Ottoman empire, and the period from 1344 to his death in 1359—1360 during which he was preparing to gain a foothold in Thrace and Macedonia and to extend his rule on European soil. He laid the foundations for the later empire of the Ottomans and is to be regarded as its real creator.

Orkhān had already shown his ability as a conqueror in the lifetime of his father. Shortly before the latter's death of gout at the age of about 70 he had taken Brassa without bloodshed. It now became the capital of the kingdom. Nicaea and Nicomedea were now the next objectives of Ottoman arms. He was assisted by a number of able leaders of whom the best known were Köse Mihāl [see Mihāl-Oğlu], Aḵtā Kudja, Köetur-Alp, ʿAbd al-Rahmān Ghūtrī, Kārā 'Ali, Kārā Mursal. With their help he carried through all his enterprises with the greatest success. Before taking these two cities, Orkhān first of all secured possession of the most northerly peninsula of Bithynia, which is enclosed on the north by the Black Sea, on the south by the Gulf of Nicomedea and on the west by the Bosphorus. The two strongly fortified fortresses of Semendra and Aidos which guarded the military road from Constantinople to Nicomedea were taken. The town and district of Semendra were given in feudal tenure to the general Aḵtā Kudja and henceforth known as Kudja-İli. The fall of these strong places was followed by the subjection of most of the little towns on the coast on both sides of the Gulf of Nicomedea, of which the fort of Hereke offered most resistance. Kārā Mursal conquered the land on the southern coast by occupying Yalova, famous for its medicinal baths, and the district of Kārā Mursal which bears his name. As Orkhān's vassal, he pledged himself to maintain a small fleet to protect the coast so that the communication by sea between Constantinople and Nicomedea was entirely stopped. Orkhān now took the field against Nicomedea in person. The town was taken without any special difficulty after the hill fort of Kūyun-Hisār had fallen. While the emperors Andronikos abandoned Nicomedea, he prepared to defend the old capital of the Palaiołoi, Nicaea. At the beginning of 1335, the Byzantines moved over to the Asiatic shore and in the vicinity of the little coast town of Philokrene in Mesopotamia, now Tavşanlı, a battle was fought about which there are no records in the Ottoman sources while the Byzantine historians (Kantakuzenos, ed. Bohn, l. 349 sq.; Nikephoros Gregoros, ed. Bohn, l. 434; cf. thereon Phrantzes and Chałcocondyles) show obvious errors and deliberate perversions of the facts. The defeat of the Byzantines at Philokrene meant the end of any hope of saving Nicaea. The inhabitants did not even attempt a serious resistance but hurried to swear fealty to Orkhān. The city, upon which Orkhān lavished all kinds of endowments, soon became one of the most flourishing and prosperous towns in the Ottoman empire after its period of tribulation. Nicaea, now İsmih [q.v.], became celebrated as a centre of Muslim intellectual life especially through its madressas. In 1333 Orkhān's son Sulaimān undertook a campaign into the still independent country north of the Sangaria (Sakarya) with the towns of Goinik, Modren and Tarakdji, which he occupied almost without striking a blow. All Orkhān's victories and conquests had so far been won at the expense of the Greeks and there had been no warlike encounters with the little principalities which had arisen in Anatolia out of the Seljuk empire. The adjacent country of Karšā [q.v.] where in 1335 the succession had given rise to a dispute between two brothers, the youngest of whom, Tursun, was living at Orkhān's court, came first. Orkhān's help was called upon by Tursun against his older brother (named Timürkhan?) and he invaded Karšā on receiving certain assurances. On the way he took Ushak, Kırımsı [q.v.] and Mihāl-ud-dīn, and along with the castles of Koibos and Ailacs. Balikessi was surrendered to Orkhān.
without a blow and the resistance shown was limited to Berghama. This town also soon passed into Ottoman hands as a return for the leniency shown by Orkhan to the lord of Karasè when the latter had treacherously disposed of his younger brother (736 = 1336). Hëjdëjë Il-beghi, the vizier of the last prince of Karasë, was entrusted with the administration of the newly won territory, and as his councillors Edje-Beg and Erenos (q.v.) were appointed. After the fall of Berghama Orkhan was engaged in consolidating his rule by systematic regulations and arranging for the administration of the now considerably enlarged Ottoman kingdom. He seems to have been the first to organize his rule on Anatolian soil (on this cf. the full account in Zinkeisen, G.O.R., i. 118 sqq.), in which his brother "Alì" al-Din "Alì played a prominent part until after his death in 1333 his place was taken by his nephew Sulaiman. In 729 (1328) "Alì" al-Din is said to have induced his brother to set up the first mints (according to Sà'd al-Din). In this year the first gold and silver struck in Orkhan's name and replaced the Saldjûk coins which had previously been current throughout the Ottoman empire. A regulation regarding dress produced a strict distinction between ranks and classes, and the army was completely reorganised in keeping with the new conditions by Cendereili Khatîl (q.v.). In 1330 the corps of janissaries (q.v.) was founded, the Turkish infantry composed of youths of Christian birth and associated with Hëjdëjë Bektashi (q.v.). But the irregular infantry also, the "Azâb", was put on a better footing and the feudal cavalry (aşgâf) developed in keeping with the objects of the new empire. At the same time Orkhan founded numerous mosques, monasteries and schools, and the foundations which he endowed everywhere in the newly conquered territory bear witness to the great attention which he gave to matters of religion. The dervish system which at this time was at the height of its development, the order of the Bektashi, seems to have arisen in the reign of Orkhan — had undoubtedly a great patron in Orkhan as is seen by the number of cells and monasteries of holy men in his capital Bursa, who had come from the east during his reign to find asylum in the Ottoman empire. The religious life of Islam under Orkhan, which had a marked 8ulûd, not to say Shîa", stamp, is one of the most remarkable phenomena in the history of religion and still requires elucidation in essential points through special studies.

In Orkhan's reign we have the beginnings of friendly and peaceful intercourse between Ottomans and Byzantines, although we also have an alternation of peace and war, of enmity and alliance (cf. J. v. Hammer, G.O.R., i. 126). Ottoman troops were repeatedly summoned to the assistance of the Byzantine emperors and when Orkhan ascended the throne, Turkish hordes had already crossed the straits three times, without success it is true, and without leaving the slightest trace on European soil (cf. J. v. Hammer, G.O.R., i. 120 sqq. and Zinkeisen, G.O.R., i. 184 sqq.). There obviously was no idea of establishing Ottoman power on the other side of the Dardanelles in these raids and the Byzantine emperor paid very little attention to them. But in course of time there arose out of these casual enterprises more and more regularly organized expeditions by the petty dynasts of Anatolia. For example the ruler of Ahiu-eli (q.v.),

Urûm-Beg, one of the most brilliant, if very little known, figures of the time, had undoubtedly intended to develop systematically his repeated raids into Europe. Orkhan himself is said in 1333 to have concluded a treaty with the emperor Andronicus on the time of the siege of Nicomedia, by which he bound himself not to disturb further the towns of Asia Minor which were under Byzantine suzerainty (cf. Kantakuzenos, ed. Bohn, ii. 446). The increasing weakness of Byzantium and the growing power of the Ottomans soon however deprived any such agreement of its binding force. Already in 1337 Orkhan had tried to effect a landing near Constantinople with a fleet of 36 ships; his intention must have been to attack the capital and establish himself in Thrace. The Ottomans suffered a disastrous defeat and escaped with one ship only. The dynastic troubles which broke out soon afterwards in Constantinople when the Grand Domestikos Kantakuzenos became emperor and joint ruler with John Palaeologus, brought about a rapprochement between Orkhan and Kantakuzenos. Urûm-Beg renewed his efforts to gain a footing on European soil, but, in spite of the expenditure of men and ships, they remained unavailing. Orkhan maintained an attitude of watchfulness. The empress Anna, mother of the emperor John Palaeologus, induced him to send a force to help her against her rival Kantakuzenos. The latter saw the increasing danger and after this force had come to a miserable end endeavoured with all his power to win Orkhan over for his own plans. In return for 6,000 soldiers he offered him his daughter Theodora, who was still a minor, as a wife in January 1345 (cf. Kantakuzenos, ii. 31; ed. Bohn, p. 408; Dukas, ed. Bohn, p. 33 sp.; Chalcoc., i. 24) and in May 1346 the wedding was celebrated with great splendour in Seljukaria (Kantakuzenos, iii. 95. p. 585 sp.; Nikeph. Gregor., xv. 5; p. 762 sp.; Dukas, 9, p. 35; according to Nikeph. the bride's name was Maria, cf. i. 762, certainly a mistake). It is worth noting that Orkhan's bride did not abandon her religion but remained obedient Christian (cf. Kantakuzenos, ed. Bohn, p. 588; Zinkeisen, G.O.R., i. 201 sqq.) and acquired great merit by purchasing numerous Christian slaves and sending them home to freedom. The prince Khâlîl Celibi, who later became a prisoner of the Genoese and when very young married a daughter of the emperor John V, was probably the result of this union (cf. Jorga, G.O.R., i. 201). The alliance with the Ottomans was to cost Kantakuzenos dear. When, shortly after the wedding, Orkhan sent him 10,000 men to help in his fight with the Serbian prince Stjepan Dušan, the Turks turned against the Byzantines and returned with vast booty from Europe to Asia. This breach of faith did not deter Kantakuzenos from again asking for assistance from his son-in-law in 1349. But this time also the army of 20,000 men, summoned unexpectedly back to Anatolia, recrossed the Dardanelles after burning and plundering all the way. Besides these two invasions of Europe by request the continual raids of the Anatolian hordes went on and the sufferings of the people of Thrace became intolerable. Orkhan took advantage of this uncertainty to carry out his long cherished plan of establishing the Ottomans permanently in Europe. His son Sulaimân Pašha in 1356 was ordered to cross the Dardanelles. The crossing was successfully carried through at the fortress of Taympe (the modern
Djumenlik). In 759 (1357) Kallipolis (now Gallipoli) was taken by the Ottomans. The sudden death in 760 (1358) of the conqueror Sulaimān Pasha, who was buried not in Brusa but in Bursa on Thracian soil, put an end to the any further advance by the Ottomans. Hādjiğıl-ı-beğhi and Edje-Beg conducted raids into the interior, it is true, but no effort was made to extend Ottoman power. Orkhan died very soon after Sulaimān. The date of his death is not exactly known. The most probable statement is that which says he died at the beginning of 761 (beg. Nov. 23, 1359). The statement (taken by K. J. Jiricke from a Slav chronicle) that Orkhan lived till March 1362, after the capture of Adrianople, has no claim to credence (cf. Archief voor slav. Phil., xiv. [1892], p. 260, although Oskar Halecki, Un Empereur de Byzance à Rome (Warsaw 1932 — Travaux historiques de la Société des Sciences et des Lettres de Varsovie, vol. viii.), p. 74, note 3, based on C. Jiricke, loc. cit., and Byza. Zeitsehr., xxviii. [1909], p. 583 sq. is inclined to accept the year 1362. That the Byzantine annals (cf. especially p. 392) edited by F. J. Müller, in Situations, d. k. k. Ak. d. Wiss., Vienna 1853, is, are in favour of such a supposition cannot be disputed as well as the fact that the Florentine chronicler Maestro Villenti (cf. Maratorgi, Rerum Ital. Script., xiv., p. 672 sq.) puts "Orkam" as their first action in November 1361. If Musjid-i-Gizā is justly called the "conqueror of Adrianople" the year of his father's, i.e. Orkhan's death must be fixed earlier as the taking of this town in spring 1361 (cf. theor. F. Baehinger, in M. O. G., ii. 311 sqq.) can now be taken for granted (cf. theor. the fact noted not in M. O. G., that, according to O. Halecki, loc. cit. p. 75, the capture of Adrianople became known in Venice on March 14, 1361). — Orkhan was buried beside his father in Brusa (cf. j. v. Hammer, G.O.R., i. 157 sq. with a description of what his personal appearance is said to have been).

Bibliography: Contemporary Ottoman sources have so far not come to light. Of the Byzantine chroniclers the most important is Orkhan's father-in-law Kantakuzenos although his bias makes it necessary to use him with great caution. Nicephorus Gregorios is much more to be believed. The crossing of the Ottomans into Europe in the sixteenth century has been critically studied by Joh. Draesecke, in the Neue Jahrbücher für das classische Altertum, vol. xxiii., p. 7 sqq. The whole period of Orkhan's reign has recently been dealt with in not always reliable fashion by H. A. Gibbons (d. 1934), The Foundation of the Ottoman Empire, Oxford 1916, p. 54—109. Further sources are indicated in the works of J. v. Hammer, Zinkeisen and Jorga.

(FAZNE BAHISERICI)

ORMUZ. [See Hormuz.]

ORTOKIDS (Urtukids), a Turkmen dynasty, branches of which ruled in Mardin, Hızın Kafka and Khwarazm.

When the Saljūq sultān of Damascus, Turuq, conquered Jerusalem in 479 he appointed the town his officer Urtuğ b. Aksab, who had already served under Malikshāh and had taken part in the siege of Amid in 477. He was succeeded in 484 (1091) by his son Sukmān and his son Khwāja. After the Holy City had been taken for the Fatimids in Şamāna 489 (1096) by al-Afdal b. Badr al-Djamāli, Sukmān went to Ṭūrid and Mardin to his lands in the Īrāk. In 495 (1010) Sultan Muḥammad made Ilghāz his commissioner (Shaḥūn) in Baghūdād.

A. Hijin Kafka, Muʿān al-Dawla, Sukmān I (cf. iv., p. 510) assisted Mūsā when he was besieged by Dżakariya in al-Mawṣil and as a reward received from him in 495 (1010), 10,000 dinars and the town of Hijin Kafka (Ibn al-Āthir, ii. 234—236). He had already owned Sarāṣij since 488 and in 498 or shortly before, Mārādīn also fell into his hands (Abu l-Fādil, ed. Reiske, iii. 350—353). Along with Dżakariya, Sukmān took Count Baldwin and his brother Joscelin prisoners at Hārān. After his death in 498 his son İbrahim ruled in Hijin Kafka while Mārādīn passed to his brother Ilghāz in 502. In Hijin Kafka, İbrahim was succeeded first by his brother Ruku al-Dawla Dāwūd (who is mentioned in 508 and again in 511; Ibn al-Āthir, x. 352 sq.; xi. 73), then by the latter's son Pācir al-Dawla Khāza-Masāfīn who ascended the throne about 543 and probably died in 562 (or perhaps not till 570) (van Berchem, in Abk. W. G. E. W., N. S., iv/vi., 1907, p. 143, note 3). He ruled over Hijin Kafka and a considerable part of Dijārābādr (Ibn al-Āthir, xi. 217) to his father or his father we probably owe the bridge over the Tigris at Hijin Kafka [q.v.]. After his death he was succeeded by his son Nūr al-Dīn Muḥammad. When Sālūṣ al-Din in 578 came to Dijārābād, Nūr al-Dīn was ready to pay homage to him and to assist him at the siege of al-Mawṣil. As a reward he was next year given the town of Amid (579). He died in 581 and was succeeded by his son Kuḫ al-Dīn Sukmān II who lost his life in 597 from a fall (Ibn al-Āthir, xii. 112). Before his death he had designated as his successor a Mamlūk named Aya, as he had his brother al-Malik al-Salih Nāṣir al-Dīn Māmūt, whom strict Sunnis condemned as a philosopher and heretic. But Māmūt seized Amid when the emirs asked him to do so (Ibn al-Āthir, xii. 112). He recognised the suzerainty of the Ayyūbids Ḍīdī and Khāmil and of the Saljūqī Khākūs. On an Ayyūbi inscription of the year 605 (1208—1209) he calls himself sultan of Dijārābād, al-Rūm and al-Arman (van Berchem, cf. ibid., p. 147). After his death in 619 he was succeeded by his son al-Malik al-Maṣʿūd Māwūd (Ibn al-Āthir, xii. 260). According to a coin of 628, Hijin Kafka then belonged to the ruler of Mārādīn. The lands of the Ortokids had already been much diminished by the attacks of the Saljūq sultāns of Rūm when in 629 (1231) the Ayyūbī al-Kāmil advanced against Amid and took it with the towns that belonged to it, including Hijin Kafka (Abu l-Fādil, iv. 393), which, if this statement is correct, had therefore again been taken by Māwūd from his relative. Al-Kāmil's son, al-Malik al-Salih, remained in possession of Amid and Kafka. In 639 he had to evacuate Amid to the allied armies of Halah and Rūm, while he retained Kafka (Kamāl al-Dīn, History of Aleppo, transl. E. Blachet, p. 219 = R. O. L., vi. 16). Māwūd remained in prison until the death of al-Kāmil in 635; then he escaped and found refuge with al-Muṣaffar of Ḍamān until his death probably during the Tartar incursions (Abu l-Fādil, iv. 393).

B. Mārādīn. On the death of its governor Luṭʿ the city of Halab submitted voluntarily in 1117—1118 to Najm al-Dīn Ilghāz I [q.v.], who had since 502 (1108) been lord of Mārādīn. Ilghāz...
gave it to his son Timürtaş (Ibn al-Adhrā', x. 372). When in 515 the latter was sent by his father to Sulaimān, Maḥmūd to intercede for Dubais b. Sabāyya, the sułṭān gave his father Iğhāzī Māiyāfārīkīn (Ibn al-Adhrā', x. 418) which hecneforth remained Ortokid until Sulaimān annexed it in 581. After the death in 516 of Iğhāzī, the most dangerous enemy of the Crusaders among the Ortokids (Ibn al-Adhrā', x. 426), he was succeeded by his sons Shams al-Dawla Sulaimān in Māiyāfārīkīn and Ḥusam al-Din Timūrtaş [q. v.] in Mardin, and in Halab by his nephew Badr al-Dawla Sulaimān b. 'Abd al-Djahār b. Iğhāzī (Ibn al-Adhrā', x. 426) who had already in 515 been appointed governor of it by Iğhāzī, when his son Sulaimān had attempted to stir up a rising against him there (Ibn al-Adhrā', x. 417 sqq.). As a fighter against the Crusaders his other nephew Balak b. Bahrūm followed his uncle’s example: in 497 (1103-1104) he occupied ‘Ana and al-Haddātha after the Franks had taken Sarūdū from him in 494. In 515 he brought Joscelin de Courtenay Count of Edessa and his brother Galeric prisoners to his fortress of Khartabīr (Ibn al-Adhrā', x. 418 sq.), and defeated Baldwin king of Jerusalem at Gargar and brought him prisoner to Harrān [see BALAK]. He had taken this town in 517 (Ibn al-Adhrā', x. 433). In the same year he took Halab from his cousin Badr al-Dawla Sulaimān, as he did not seem fitted to defend it against the Franks. At the siege of Man-

bolūj in 518 Balak received a mortal wound from an arrow (Ibn al-Adhrā', x. 436). In Halab and his other possessions he was succeeded by Ḥusam al-Din Timūrtaş but the latter lost Halab as soon as he went to Diyarbakr as the city, besieged by the Franks, opened its gates to the Crusaders [cf. As sonqor al-baṣmāy]. After the death of his brother Sulaimān in 518 Timūrtaş inherited Māiyāfārīkīn also (Ibn al-Adhrā', x. 441) and at his death in 547 (1152-1153) was lord of Mardin and Māiyāfārīkīn (Ibn al-Adhrā', x. 115). He was succeeded by his son Nadīm al-Din Alpī. During the lifetime of his father he had received al-Bura from the Franks in 539; they had given him the town out of fear of Imād al-Din Zaγalt. At a later date (before 565), we find ruling there Sulaimān b. Iğhāzī who had distinguished himself in fighting against the Crusaders. His son was besieged in 577 (1181-1182) in al-Bura by ʿAbd al-Din Iğhāzī II of Mardin (cf. ii, p. 456), who had succeeded his father Alpī in 572, and appealed for help to ʿĀṣīb al-Din; at the latter’s command ʿĀṣīb al-Din retired to Mardin (Ibn al-

Adhrā', xi. 313). After his death in 580 the guardian of his sons ʿĀṣīb Arman Sulaimān of Akhšūd, then after the latter’s death in 581 (1185) ʿĀṣīb al-Din, took possession of Māiyāfārīkīn (Ibn al-Adhrā', xi. 335; C. Defrémery, in JA., ser. iv. 1, 1843, p. 72—

78). In Mardin ʿĀṣīb al-Din was succeeded by his son Ḥusam al-Din Yūluk-Arslān (var. Bulaq, Bulūk-Arslān) who again in 587 regained Māiyāfārīkīn for a short time; the next successor was the latter’s brother Nasīr al-Din Urtuk-Arslān al-Mansūr (from c. 596—598). In his time Mardin was besieged in 599 by al-Asḥafī by order of al-ʿĀdīl. At the conclusion of peace the Urtukīs recognized the suzerainty of al-ʿĀdīl (Ibn al-Adhrā', xii. 117; col. 45). The later Urtukīs of Mardin are given by Abu l-Ḥiṣṣā`ī (v. 295) down to his time (715 = 1315). Urtuk-Arslān was followed in 637 by his son Nadīm al-Din ʿĀṣīb al-Su′ādī, in 648 by the latter’s son ʿĀṣīb Arslān al-Muṣafar, about 691 by his son
Shams al-Din Dāwūd, about 693 by his brother 
Nadīm al-Dīn Ghārī II al-Mansūr, in 718 by his 
son Imād al-Dīn 'Alī al-Adīl, then by his 
brother Shams al-Dīn Sālih, in 765 by his son 
Ahmad al-Mansūr, in 769 by his son Maḥmūd al-
Sālih, in 769 by his uncle Dāwūd al-Muqaffar, 
in 778 by the latter's son Maḍīd al-Dīn Taṣ al-
Zahrī, and lastly by the latter's brother Sālih (809-
811 = 1406–1408). After Tūmīr had taken Mār-
din, the ownership of the town passed to the 
Kārī-Koyunlū. 

To the territory of the Ortokids of Mārdin 
belonged at least down to the time of Nadīm 
al-Dīn Ghārī II the town of Dūnamīr (q.v., now 
Kūs Ḥisar), according to coins found in the 
neighbourhood near Tell Ermen (E. Suhaim, in 

C. Khatābīr (Khātābī). Khatābīr was found 
as early as 515 in the possession of the Ortokids 
Balak b. Bahāsh, who held it till 318. His 
relative Sulaimān then occupied it but he seems to 
have sold it down to 1259. Then it belonged 
successively to Dāwūd b. Ḥān Kāfy and his son 
Mārān b. Aḥmad of Damascus. There is an 
inscription (dated 516 = 1165–1166) of Fakhr 
al-Dīn Kāfī al-Ashāfī commemorating a building in 
Khatābīr (van Berchem, in Abb. G. W. Gött., 
phils.-hist. Kl., viii., 1897, p. 142 sq.) as that of 
his brother's death he was in Ṣalāb al-Dīn's camp before al-Mawsīl and at once set 
off for Ḥān Kāfyf on hearing the news to claim 
his inheritance. But his nephew Sūkān II had 
already taken possession of the fortress and had 
been recognised by Ṣalāb al-Dīn. The uncle had 
therefore to be content with Khatābīr (Ibn al-
Affīr, vii., p. 339). Aḥū Bakr must have died in 609 
at latest, for Maḥmūd of Kāfyf and Aḥūd 
unsuccessful abandoned his son Nāṣir al-Dīn in 
Khatābīr in 601 (Ibn al-Atbīr, xii., p. 123). This 
last Ortokid of Khatābīr is said to have been 
called Nāṣir al-Dīn Aḥū Bakr; according to the 
inscription on a bronze mirror in the Blacas 
collection in Paris, his name was more probably 
Nāṣir al-Dīn Ibrahim, unless we have to see in 
Aḥū Bakr a (childless) brother of Ibrahim (van 
Berchem, op. cit., p. 144, note 1). Ibrahim had two sons: Iṣār 
al-Dīn Aḥmad mentioned in a manuscript of 685 
written in his reign and al-Kāfīr named on the 
above mentioned mirror, father of Nāṣir al-Dīn 
Aḥū Bakr, who ruled as an unknown time 
and unnamed place. Khatābīr probably 
remained in possession of the Ortokids only down 
to 63. At least the town was taken in this year 
by Sulām Kāfībād. 3

Coins. Four mint-dates are named on the coins 
of the Ortokids: al-Ḥān Kāfyf, i.e. Ḥān Kāfyf, 
Aḥūd, Mārān and Dūnamīr. The strong influence 
of trade with Byzantium is seen on the coins in a 
remarkable fashion; we find on them not only 
rebel's heads taken from ancient coins and no 
longer understood but also the Virgin Mary, Christ 
and the Greek inscription Emmanuel on them.

OMAN DIGNA [see 'OTTOMAN ARAB BAKR 
DIGNA.]

ORSÛSHANA, the name of a district in 
Transoxania. The form Orsûshana is the best 
known, although Yūḥūt (l. 245) says that 
Osrûshana is preferable. In the Persian 
version of the text of al-Iṣṭakhri and in the Persian text 
of the Ḥudūd al-Alam (ed. Barthold) we find 
more often Surshūna while Ibn Khūdsūdshūn 
sometimes has Shurshūna; the original form may 
have been Sūrshāna. This district lies to the 
north-east of Samarqand between this town and 
Khojand, to the south of the Sir Daryā (Sālāb) so that it 
forms the approach to the valley of Farghānā; 
the north west it is bounded by the steppes. 
The southern part is occupied by the mountains 
of Khorasan which run almost the upper course of 
the Zīr-Afghān; these hills are generally regarded 
as forming part of Osrushana. The geographical 
information about this region is based almost 
exclusively on the geographers of the tenth century; 
the later geographers down to Ḥādīdī Khālīfīs 
only repeat what their predecessors have said: it appears 
therefore that the name Osrushana had fallen into 
disuse before the end of the middle ages. As a result 
of its numerous streams, which flow into the 
Sir Daryā, it was at one time a rich country visited 
by many travellers because the route to Farghānā 
lay through it. The geographers describe several 
routes from Samarqand to Khojand all of which 
passed through the towns of Šāhīt and Zāmīn, the 
name of which still survives. The principal town — 
in which in the tenth century the governor 
lived — was in all probability called Na wān gi-
a kāt — this must be the basis of the more 
or less uncertain readings of a number of manuscripts 
(cf. especially Hālāshūrī, p. 426); the form Nūšīlīgat 
given by Yūḥūt (l. 744); but see also iv. 307 where 
the name is Kūnī) and adopted by Barthold is 
a late corruption; it lay a little to the south 
of the great road and was identified in 1384 by 
W. Barthold, with the ruins called Sharihristūn 
to the south of the present town of Ura Tūb; these 
ruins were examined a little later by P. S. Skvarkis. 
The geographers describe the town in detail. Two 
other towns of some importance were Zāmīn 
and Dīnak, and a number of other places are recorded;
there were also rural areas without towns, while al-Ya'qūb (R.G.A., vii. 294) says that there were 400 fortresses in the country. In the tenth century there was an important market-place called Marsamunda. There is some further geographical information about the country in the Khurusmānu.

At the time when the first Arab invasion of the country took place under Kūthab b. Muslim (712—714), Osrushana was inhabited by an Iranian population, ruled by its own princes who bore the title of afshin (Ibn Khurdadbeh, p. 40). The first invasion did not result in conquest; in 737 the Turkish enemies of the governor Assā fell back on Osrushana (Tabarī, ii. 1613). Naqīr b. Sāyār (q.v.) subdued the country incompletely in 739 (Bālājūri, p. 429; Tabarī, ii. 1694) and the Afšīn again made a nominal submission to al-Ma'mūn (Ya'qūbī, Tarāṣī, ii. 479). Under al-Ma'mūn the country had to be conquered again but soon a new expedition was necessary in 822. On this last occasion the Muslim army was guided by Haidar, the son of the Afšīn Kāwūs, who on account of dynastic troubles had sought refuge in Baghādād. This time the matter was completed; Kāwūs abdicated and Haidar succeeded him, later to become one of the greatest nobles of the court of Baghādād under al-Mu'taṣim where he was known as Afšīn (q.v.). The dynasty of the Sādīds of Āshābadị̄jān was descended from the royal family. His dynasty continued to reign until 893 (coin of the last ruler Sa'b b. Abī Allāh of 729 [932] in the Hermitage in Leningrad); after this date the country becomes a province of the Sāfawīs and ceases to have an independent existence while the Iranian element was almost entirely replaced by the Turkish.

**Bibliography:** The geographical descriptions (Ibn Khurdadbeh, al-Ya'qūbī, al-Iṣḥāqī, Ibn Hawkal, al-Ma'mūn) have been analysed and utilised by W. Barthold, Turkistan down to the Mongol Conquest, 2nd ed., in G. M. S., N. E. S., London 1928, p. 165—169. — The second part of the same book contains all the historical references (cf. under); cf. also: Le Strange, The Lands of the Eastern Caliphate, p. 473 sqq. (J. H. Kramers)

**OSTĀD (P.), master, teacher, artisan.** This word has passed into Arabic, with the plural ostādīn, uṣṭādīna. It also means munific, musician, merchant's ledger, in the modern language particularly teacher. Combined with dārb the form ostādar, "master of the house", major-domo, was applied to one of the great dignitaries of the Mamlīk sultanīn (q.v.). We also find the abbreviated forms uṣṭā, uṣṭā, uṣṭā, plural ustūr, uṣṭāwanī, ustāwanī, which in Cairo is applied to coachmen.

**Bibliography:** the lexicons of Ullīs, Lane, Deyy; C. A. Nallino, L'arabo parlato in Egitto, second ed., Milan 1911, p. 105—186. (A. J. Wensinck)

**OSTĀDĪS, the name of the leader of a religious movement in Khurāsān, directed against the 'Abūbidās. The rising began in 150 (767) and spread rapidly in the districts of Herāt, Bāghi, Gāndān-Rustān, and Sidjijiston; the sources say that it had 300,000 adherents. The first opposition it met with was at Marw-kūb the rebels killed the rebel leader al-Adīmī with a number of his followers. Hearing this, the caliph al-Mansūr sent his general Kshūm b. Khuzaima to his son al-Maḥān at Khurasan and the latter ordered Kshūm to attack the rebels with 20,000 men. After several checks due to the treachery of subordinates, Kshūm entrenched himself in a camp at a place, the name of which is not given, and by a number of strategic movements and with the help of reinforcements from Tukhārātān succeeded in defeating the rebels, of whom large numbers were slain. Ostādīs escaped to the mountains but was captured in the course of the following year. The 30,000 who accompanied him were set free but he and his sons were sent to Baghādād and executed. The rising of Ostādīs was of a religious character; he represented himself as a prophet and exhorted the people to kūfī (Tabarī, ii. 773); he was one of a series of heretical rebel leaders who appeared in Khurāsān after the death of Abū Muslim [q.v.] like Sinbād, the Magian, Bihārīfrīd [q.v.], Vīsūsī Bārm, and al-Ma'kānānī. It is probable that his views were based on Zoroastrian doctrines. The name of the leader is given by Tabarī as Ustādī-Sīn, "Lord Sīn"; the name Sīn is found in several Iranian names (cf. Juṭi, Altīran, Namūnbūb, p. 336; Manī's successor was called, according to Tabarī, p. 334: Sīn al-Imām and in the Greek sources: Sīnūsūs). On the other hand this heretic numbered amongst his adherents, according to the Kūshīštānī-Bidūrī and al-Turāṣī (ed. Huṣainī, vi. 86), a large number of Ghūza Turks, as was the case also with the rebel Iṣḥāq b. Thālab, who saw in Abū Muslim an incarnation of the deity. In al-Ya'qūbī's story it is said that Ostādīs declined to recognise al-Ma'mūn as his apparent, but the most astonishing statement is that of Ibn al-Abīrī, who says that Ostādīs was the father of Marāqīlī, wife of Hārūn al-Rašīd, and mother of al-Ma'mūn, and that Gāthālī, son of Ostādīs and maternal uncle of al-Ma'mūn, assassinated the latter's vizier, the famous al-Faḍīl b. Sahl known as Dhu l-Riyāsātān. It is impossible to say what can be at the basis of this story but perhaps we may see in it a tradition from a Persian source the object of which was to give al-Ma'mūn a royal or even saintly pedigree. The rising of Ostādīs broke out about half a millennium after the foundation of the Parthian dynasty and one of its bases was Sīdūrān which may have made this leader be regarded as one of the "saviours" (sawagīyān) expected in Zoroastrian religious tradition (cf. G. van Vloten, Recherches sur la domination arabe, in Verk. Ak. Amerl., i. 3. 1894, p. 68).

**Bibliography:** al-Ya'qūbī, Turāṣī, ed. Houtsma, ii. 457; al-Tabarī, iii. 334—338; Ibn al-Abīrī, v. 452 sqq., Wett, Geschichte der Chalifen, ii. 65. (J. H. Kramers)

**OTĀB B. GHAZWĀN B. AL-ḤĀRĪTH B. DIYĀR B. WAḤĪ (OF WAḤIR) B. ṢUḤAYB ALLĀH OR ABŪ GHAZWĀN AL-MĀZIRI** belonged to the tribe of Kābā 'Allān, half of the Nāfūrī or of the 'Abd Shamā, one of the oldest Companions of the Prophet, "the seventh of the Seven", i.e. the seventh to adopt Islam and one who had shared in the sufferings to which the first believers had been exposed in Mecca. He took part in both hijras, the battle of Badr, and in most of the battles and expeditions of the Prophet.

**He is best known as the founder of the Bāṣrī. In the lifetime of 'Umar he first of all conducted an expedition which ended in the capture of Obohla. 'Umar then appointed him agent (ṣāfīr) in the "country of India", i.e. the borderland between Arabia and Persian territory with orders to begin a campaign in the Sāwād [q.v.]. He made**
his headquarters at a hamlet called Kharaita, where he built all that was necessary for a military base: a mosque (cf. iii., p. 318), a residence for the governor, quarters for the soldiers, their families and all that goes to make a rising town. This was the nucleus of al-Bayza [q.v.]. The order of events and the chronology generally are far from being settled; the years given vary between 14 and 17. The years 15 and 17 are given for his death. Having performed the pilgrimage, he asked Omar to be allowed to resign his governorship but Omar refused to permit it. He then prayed God to spare him from returning to Bayza. On the way back he fell dead from his camel at the age of 57. Another tradition is given by Ibn Sa'd [cf. Bih]. He was succeeded by al-Maghra b. Shu'ba [q.v.].

'Otsman I

OKBA B. RABI'A b. 'ARD SHAM'I b. 'ARD MANAF ABU L-WALID, one of the chiefs of the tribe of Kurnā, who refused to follow Muhammed. He met his death in the battle of Badr. His daughter Hind was the wife of Abū Sofān [q.v.].

Shocked by the number of adherents of Muhammed Otha having consulted the other chiefs of the Kurnā, went to the Prophet to offer him anything he would care to ask if he would only abandon his propaganda. According to the traditional story, Muhammed in reply only repeated a part of Sūra XLI, which made such an impression on him that the effect was still visible when he rejoined his friends, whom he advised not to importune Muhammed any more. — Tradition puts him in a similar light when it represents him as one of those who on the eve of the battle of Badr endeavoured in vain to persuade the Kūraistic to withdraw. He himself was mortally wounded in the battle and his body was thrown into the common ditch (żalūd). Muhammed is said to have thought highly of his gifts.

'Othman I, very often called 'Othman al-Ghūrī, founder of the dynasty of Ottoman sultans and the first in the traditional series of the members of the dynasty. We are only imperfectly acquainted with the life and personality of this founder of a great empire but we may conclude from the fact that his name has remained attached to the dynasty of the 'Othman Oghūlīyat or Al-i 'Othman and is later found in the description of the empire and its inhabitants as 'Othmanī or 'Oghūmīn that behind the name of 'Othman the line is a powerful personality. The most extensive source of information about him is Turkish historical literature and particularly its ancient chronicles, the Tārīkh-i al-ʿOghūmīn, representing the oldest tradition, along with a few poetic compositions of an epic nature dating from the end of the sixteenth century, like the latter part of the Kečdrar-nīm of Ahmâlt. The study of the ancient chronicles reveals to us that although they certainly contain some good historical traditions, they are loaded with additions of a legendary character. These additions are explained by the enormous expansion of the power of the earlier Ottoman princes within less than a century of the death of its founder. As often happens in such cases the obscure history of the ancestor was embellished with details of a legendary character foreshadowing the greatness of his descendants. On the other hand, all the chronicles show a tendency to establish a historical connection between the power of the Seldjūks of Asia Minor and that of the first Ottoman rulers by making Ertoghul or 'Oghūmīn be invested with certain powers by Sultan al-Min. The relations are more than doubtful. A third feature of the traditional accounts of 'Oghūmīn's career, which we find in all the chronicles, is the explanation of a number of geographical names by connecting them with events which took place in the glorious period of the founder of the dynasty. There is further the tendency which we find, pushed to its greatest extent in the chronicle of 'Asli̇ Fāṣaḥ Zāde, to attribute to 'Oghūmīn events which belong to the tradition of Ertoghul, like the prophetic dream regarding the greatness of the posterity of 'Oghūmīn and the daughter of Shaikh Edeballı̇, and the capture of the castle of Karadja Hı̇at; in the same way the chronicles put many feats of arms of Orkhan like the taking of Brusa and even the conquest of Köđa to the reign of 'Oghūmīn, who had then long been an invalid "with a disease of the limbs". While in the chronicles we can still distinguish with some probability the non-historical features, pragmatic Ottoman historiography, with which 'Asli̇ Fāṣaḥ Zāde and Idris Bidilī̇ form the transition, represents these traditions as historical facts. Among the Byzantine historians, Pachymeres and Nicephorus Gregoras alone have preserved historical features independent of the Ottoman tradition, which clearly shows its influence in the later Byzantine writers (Phrantzes, Ducas, Chalcocondylas). Quite legendary stories of 'Oghūmīn are also found in the biographical literature (cf. Das Volksh-Nümme des Ḫāğı Bekis, transl. E. Gross, in Türk. Bh., xxv., Leipzig 1925, p. 133).)

According to unanimous tradition, 'Oghūmīn was one of the sons of Ertoghul [q.v.], whom he succeeded as chief of a semi-autonomous Turkish clan which had its winter camp at Soğd [q.v.] in the valley of the Kāra Su. The date of Ertoghul's death is uncertain; later sources vary between 1245 and 1282. At this time Karadja Hı̇at and Eski Şeḫir [q.v.] situated considerably to the south of Soğd were perhaps already in the possession of this clan. They formed the frontier district bordering with the lands of the Germiyān-
Oghān, 'Othmān in the first phase of his career extended this cradle of Ottoman power to the north, by taking the fortresses of Inegöl, Kharmandjik, Bilecik, Yar Hısr and Körprü Hısr, which had hitherto been in the hands of the Byzantine feudal lords. This country consists of mountains and valleys lying to the west of the course of the Sakarya (q.v), and ends in the north in the plain of Yeni Şehir; the capture of the last place seems to have been of great military importance as it became a base of operation for future conquests (cf. the map Das Stammgebiet der Osmanen, attached to the article Anatolische Forschungen, by F. Tauscher, in Z.D.M.G., N.S., vii. S. 397). Von Hammer, G.O.R., ii. 69 thinks the enumeration by Pachymeres (ed. Bonn 1835, ii. 413) of the fortresses taken by the Turks corresponds pretty well with the conquests of 'Othmān. It is perhaps to this first stage of conquests that belongs the first recital of the khanğâ at Karajli Hısr in the name of 'Othmān by Bursa Fākīh. The chronicles put this event in 689 (1290). During this time the newly conquered territory seems to have received an increase of population from the side of the Germiyân (‘Aşğık Paşa Zade, ed. Gran, p. 20). The second phase in 'Othmān's career is that in which he was at his base at Yeni Şehir: he continued his conquests in the westerly direction towards Brusa and in a northerly direction towards Iznik. The Turks were not strong enough to hold these towns but they ravaged the country round. According to the chronicles, there was a battle between 'Othmān's Turks and a confederation of lords (jašid) of Brusa, Iznik and several other places at Koyun Hısr, near Iznik, in which the Turks were victorious; this battle has been identified since von Hammer's time with the battle of Hafisa in, which, according to Pachymeres (ii. 337), the hetarch Mouzallon was defeated in 1301 as a result of the impetuous onslaught of the Turkish cavalry. This victory enabled Lefke and Ak Hısr on the Sakarya to be taken and in the west Trissokia between Iznik and Brusa (Pachymers, ii. 337). In connection with this last victory (in 1298) Pachymeres mentions a personal feud between 'Othmān and the Byzantine princess Maria, sister of the emperor Andronicus, who was living in Nicæa. She had been promised in marriage to the Ilkhan Oltai Khudâbanda (q.v.) and had threatened 'Othmān with the latter's intervention. In this second period the Turks extended their conquests as far as Ulubâd (Leopoldia) to the west of Brusa. The third phase is that in which 'Othmān no longer took part personally in the military expeditions although, according to tradition, he was still alive. It was Orkhan (q.v.) and his companions in arms who continued the conquests. The first enterprise of Orkhan was the expulsion of a horde of Tatars who had invaded the district of Eski Şehir (perhaps sent by the Mongol allies of Byzantium). In the latest stage, 'Othmān devoted himself to the closer encirclement of Iznik and Brusa. This last town finally fell in 726 (1326), according to the chronicles, shortly before the death of 'Othmān who is said to have received the good news just before he died in Sogûd. The sources are not agreed as to whether 'Othmān was buried at Sogûd or Brusa. This last town has however for a very long time claimed to have a mosque of 'Othmān.

From the very beginning of his reign 'Othmān was surrounded by a group of devoted followers, consisting in part of his brothers and their sons and in part of allies like Shâhêk Edebali — whose daughter Mâlkhatân (in the two versions of Urdûj Beg her name is Rabîa) became the wife of 'Othmān and the mother of his sons Orkhan and ‘Ali al-Dîn — and the Byzantine lord of Khrimendjik, Köse Miğâl (q.v.) who later became a Muslim. The chronicles record how 'Othmān divided among his friends the civil and military administration of the places he conquered, As to 'Othmān's foreign policy, it seems that his relations with the Germiyân Oghâ and were not very friendly; it was from their territory that Eski Şehir was exposed to the invasions of the Turges. The chronicle of 'Aşğık Paşa Zade tells us that he had other independent Turkish allies like Şamsûna Ca'nûsh with whom he made raids across the Sakarya.

The chronology of the career of 'Othmān is uncertain. It is a pure fiction to say his reign began in 700 (1300); this is connected with the popular belief that at the end of each century a new conqueror makes his appearance (cf. ‘Ali, Kusâr al-Adâb, v. 3). Neither does the statement made by several chronicles that at his death 'Othmān had reigned nineteen years (urusit 393) agree with other records. Perhaps however it gives a hint that his death took place long before the traditional date. The importance of the career of 'Othmān has attracted research into the true nature of the expansion of the little Turkish clan and the period of its first chief. It has been suggested (Gibbons) that it was the conversion of 'Othmān to Islam which gave the first impetus to expansion, but that is little probable as most of the available facts suggest a millen already Muslim; 'Othmān did just what a number of other Turkish chieftains were doing in Asia Minor about the same time. 'Othmān's name, which looks strange among the Turkish names of the members of his family (the name of his grandfather Sulâmaiân Şâh excepted), has also been the subject of study. While the chronicles all write 'Othmān (like the few coins of Orkhan, cf. T.O.E.M., viii. 48 and an inscription of 'Othmān at Brusa; cf. T.O.E.M., iii. 318 sqq.), Pachymeres has the form ʿArşān and Nicephoros Gregoras (ed. Bonn 1849, i. 539) ʿArşān. Some Arabic sources (ibn Barḳût, i. 321; ibn Khâhidn, ʿIbar, v. 562) give ʿArshaḏudjik (Ibn Faṣl Allâh al-ʿUmari, however, has Taman) and the Italian historian Donato da Lezze (Historia Turcica, Bucarest 1910, p. 4) says that Ottoman was the son of Zâhih. Now some traditions make the founder of the dynasty be born in the town of 'Othmānlıdâjik to the south of Siâne (Ewliya Čelebi, ii. 179) which may be a hint of the origin of the name. Moreover, the text of the chronicle of Urdûj Beg (p. 6), taken in combination with other texts, shows that Ertequrî had three sons with Turkish names which might even make one suppose that 'Othmān was not a son of Ertequrî (cf. J. H. Kramers,Wer über Osman I., in A.O., vi. 242 sqq.; W. L. Langer and R. P. Blake, The Rise of the Ottoman Turks and its Historical Background, in American Hist. Review, 1932, p. 496). 'Othmān (ʿIṣhr) then may have belonged to one of the corporations of ʿIṣhrî or ʿIṣhrî as did several members of his entourage like Edebali and his nephew AḥrîHaṣan (ʿAṣğık Paşa Zade, p. 28), corporations which at this period represented a Muslim element more civilised
and more orthodox than the semi-nomad Turks.

Othman II, sixteenth sultan of the Ottoman empire, was born on the 19th Disma'd 1102 (Nov. 15, 1603; cf. Stiljil-i othmanii, i. 56), the son of Suliman Ahmad I. After the death of his father in Nov. 1617, the brother of the latter had been proclaimed sultan as Mustafa I [q.v.], but Othman, taking advantage of the weak character of his uncle and supported by the mufatt Es'ad Efendi and the Khalil Agha Mustafa, seized the throne on Feb. 26, 1618 by a coup d'etat. The youth of the new sultan at first assured the promoters of the coup d'etat of considerable influence. To them was due the replacement of Khalil Pasha as grand vizier by Okliz Mehmeh Pasha [q.v.] in Jan. 1619. Khalil had just concluded a treaty of peace with Shah 'Abbas I of Persia, after a campaign which had been indecisive. The relations with the other powers, Austria and Venice, with which the capitulations were renewed, were also peaceful. But after, in Jan. 1620, Mehmeh Pasha had been replaced by the very influential favourite Guezelci 'Ali Pasha [q.v.] who removed from the court all possible rivals, the chances of war increased. This time it was a war with Poland, which broke out through the intrigues of the voivod of Moldavia. In the battle of Yassy on Sept. 20, 1620, the Polish army was annihilated by the serasker Iskender Pasha. The grand vizier, who held office mainly by satisfying the avarice of the young sultan, never lost an occasion to irritate and provoke the enmity of Austria and Venice. He died on March 9, 1621 and under his successor Husain Pasha of Okhri, Othman II took part in person in the campaign of 1621 against Poland. This campaign ended in a check for the Turks and the Tartars, who, with great losses, had in vain tried to storm the fortified Polish camp on the Dnieper near Choczim. A preliminary peace was signed under the same conditions as before under Sulaiman I and the sultan appointed a new grand vizier Dilkewar-Zade Husain Pasha. Since the time when Othman, still considerably under the influence of the Khalil Agha Sulaiman and his Khodja Molla 'Omer, had begun to act independently, he had not been able to gain the sympathy of the army on account of his brutal treatment of the Janissaries, nor of the people chiefly, as a result of his avarice, nor of the 'islimiyye. The latter was particularly horrified at the sultan's wish to take four legitimate wives from the free classes of his entourage; he actually married the daughter of the Mufti Es'ad. His unpopularity increased still further when he wished to put himself at the head of an army to fight Fakhri al-Din, the Emir of the Druzes, and to go on and make the pilgrimage to Mecca. Preparations had already been made for this expedition when on May 18, 1622 a mutiny broke out among the Janissaries and Sipahis who plundered the house of Molla 'Omer. Next day the rebels secured the cooperation of the chief 'islimiyye and demanded the heads of the Khalil Agha, the Khodja, the grand vizier, and three other high officials. Othman at first refused but after the rebels had forced the third wall of the palace he had to sacrifice the grand vizier and the Khalil Agha. But in the meanwhile his uncle Mustafa had been brought out from his seclusion in the harems to be proclaimed sultan. 'Othman tried during the night to secure his throne through the influence of the Agha of the Janissaries, but the latter was killed on the following morning and he became the prisoner of the Janissaries who took him to their barracks. The rebels had no intentions against his life but in the meanwhile the direction of affairs had passed to Dawud Pasha, the favourite and son-in-law of Mah-Feke, the mother of Sulaiman Mustafa. Dawud Pasha being appointed grand vizier had 'Othman taken to the castle of Yedi Kule where he was put to death in the evening of May 20, 1622. He was buried in the turbe of his father Ahmad I. — 'Othman is praised for his skill as a horseman and for his intelligence. He was also a poet with the snubbed of Farsi. He was the first of three sultans to lose his life in a rising, the others being Ibrahim and Selim III.

Bibliography: The Turkish sources are the works of Na'im, Pechevi, Hasan Bey Zade, the Ruyat al-abhar of Kara Celabi Zade, and the Pehleke of Haji Iskender. — The Wagij-i Sultan 'Othman Khah of Tugh is specially devoted to the deposition of 'Othman (transl. by A. Galland; cf. G.O.W., p. 157), while his whole reign is described in a Shahnameh by Na'dir (G.O.W., p. 169). Among contemporary western accounts: the Relazioni quoted by von Hammer, in the note on p. 506 of G.O.R., ii. and that of Sir Thomas Roe. Cf. also the general histories by von Hammer, Zinkeisen and Jord. (J. H. Kramers)

Othman III, twenty-fifth sultan of the Ottoman empire and son of Mustafa II, succeeded his brother Mahmud I on Dec. 14, 1754. He was born on Jan. 2, 1699 (Stiljil-i othmanii, i. 56) and had therefore reached an advanced age when he was called to the throne. No events of political importance took place in his reign. The period of peace which had begun with the peace of Belgrade in 1739 continued; at home only a series of sedition outbreaks in the frontier provinces indicated the weakness of the Empire. In the absence of any outstanding personality the sultan was able to rule as he pleased, but his activities were practically confined to changing his grand vizier frequently (six times). His favourite Setlildar 'Ali Pasha, grand vizier from Aug. 24 to Oct. 22, 1755, had his career terminated by execution. The appointment on Dec. 13, 1756 of Raghib Pasha [q.v.] was an important one, as for five years this great statesman showed himself an excellent administrator of the empire under Mustafa III. Othman III's other activities were the suppression of cafés, of the liberty of women to show themselves in public and the regulation of the dress of his non-Muslim subjects. His name is associated with the great mosque of Nur-i 'Othman, which had been begun by Mahmud I and was solemnly opened in Dec. 1755. The reign of this sultan is remembered.
for the great fires in the capital in 1755 and 1756. He died on Oct. 30, 1757 and was buried, like Mahmud I, in the tomb of the Yelî Dīvān. Bibliography: The Ta'rikh of Waqf is the principal source. The reign is described in the great histories of von Hammer, Zinzinseh and Jorga. (J. H. Krämers) OTHMÂN III. AYFÂN, the third caliph (23—35 = 642–654). He belonged to the great Mecan family of the Banû Umayya and to the branch descended from Abu 'l-Asā, whose grandson he was (cf. the genealogy in Wüstenfeld, Geneal. Tabelle, u. 23). This makes his prompt acceptance of the teaching of Muhammad quite noteworthy; he became a convert, if not at the very beginning of the Prophet's mission, at least not at a very early date, several years before the Hijra. Othmân was a rich merchant and an accomplished man of the world; tradition, which likes to represent him as a model of beauty and elegance and deals to a degree which borders on exaggeration with his toilet, may be correct, simply because it is unusual. Whatever was the exact motive that induced him to embrace a cause of which no one could then have possibly foreseen the success is a question that can never be answered with complete satisfaction. The set of historical traditions concerning his conversion with his marriage to Muhammad's daughter Raṣṣiyā but other sources, probably with more justice, put this marriage after his conversion. The conversion of Othmân, the first Muslim of high social rank, must have made a sensation and contributed to the success of the new religion, but his personal efforts on behalf of Islam were never remarkable. His indolent character, which was however accompanied by a very living faith and great good nature, is another feature ascribed by tradition to Othmân and it is unlikely that we have here an invention intended to excuse the inaction of this caliph against his lying officials; just because lack of energy and initiative is evident in Othmân from the very beginning of his career, this defect is ascribed to his conversion, which is to be inferred to have taken part in the migrations to Abyssinia and then joined the mukāfātān in Medina; but he did not take part in the battle of Bair (it is alleged that he had to attend to a sick wife; the Prophet however regarded him as present and allotted him his share of the booty). After the death of Raṣṣiyā the Prophet's alliance with Othmân was renewed by his marriage with another daughter, Um'm Kullāh; the doukas raised by Lammens (Rajma et les filles de Mahomet, Rome 1912, p. 3—5) regarding the actuality of this marriage do not seem to be justified; there is no reason to think that Muhammad did not lay great stress on this alliance with the only member of the Mecan aristocracy of whom the Muslim community could so far boast. During the lifetime of the Prophet and those of the caliphs the Bâk and 'Omar, the part played by Othmân was of very humble importance; how did it happen then that the council (jâmi'a) appointed by 'Omar on his deathbed chose him as successor to the second caliph? The sources dealing with the history of this laborious cause have been minutely analysed by Castani, but it is only too evident that the mysteries of these secret deliberations are never destined to be revealed to historical criticism. What it seems possible to affirm is that, as often happened in the papal conclaves, the most outstanding candidates ruled one another out; for example 'Ali whose election would have meant the negation of 'Omar's policy; or al-Zuhair and Taḥša, also it seems opponents of 'Omar and whose ambition and covetousness was feared. If among the three who remained, Sa'd b. Abî Waṣṣâ, Abî al-Rahmân b. 'Awf and 'Othmân, it was the latter who was chosen, it may be thought that even more than his relationship to the Prophet it was his being a member of the Umayyad clan that proved the decisive argument in his favour. The Umayyads had already regained in the lifetime of the Prophet, and especially during the caliphate of 'Omar, a part of the position they held during the Dâhilîya. There is no need to think as some one has done that Abî Sufayn, the head of the family, was the dies a machina of policy during the first twenty years of the caliphate, and it would be naive to represent the Umayyads as having formed a kind of secret committee dealing with the Islamic state as it pleased. In reality it was not so much to their noble birth as to a real talent for affairs possessed by several of their members that the Umayyads owed their influence. But this was counterbalanced in the time of 'Omar by the efforts made by other elements and especially by the oldest Companions. The strong personality of the second caliph had been able to maintain equilibrium among a number of heterogeneous elements, often in opposition to them.

It was otherwise with 'Othmân. In reality, as Wellhausen pointed out and Caetani has expounded at length, 'Othmân only followed and developed the policy of 'Omar. The difficulties he encountered were only the results of the policy of his predecessor. But it was just here that the difference in their talents became apparent. The tragedy which put a bloody end to the reign of 'Othmân and opened up the period of civil wars has caused the greatest embarrassment to the Arab historians, for it raises such a mass of grievances which Othmân raised against his rule and faced with the alternative of either acknowledging that the caliph had sinned against the laws of Islam or that his accusers, among whom were some of the most venerable patriarchs of the faith, had either lied or been deceived. It is owing to this painful dilemma (out of which orthodox tradition extricated itself by means of the theory of the "excusable error" and other subtle distinctions) that there has been preserved for us the long list of these grievances (which are given in great detail for example in Muhîth al-Dîn al-Tabârî, al-Riyâḍ al-mufrîd âl Manûbhî al-Ashârâ, Cairo 1327, ii. 137—155). The first and perhaps the gravest charge against him is that he appointed members of his family to the governorships in the provinces; if Syria had already been long in the hands of the Umayyad Mâwiyya b. Abî Sufayn, 'Othmân replaced Abî Mâzâ al-Asârî and Sa'd b. Abî Waṣṣâ by Basra Kûfâ respectively by his two relatives Abî Allâh b. 'Amr b. Kûraîh and al-Walîd b. 'Ukba, his half-brother; when the latter was dismissed, having been involved in a scandal, he was replaced by another Umayyad, Sa'd b. al-Asâ, to whom is attributed the celebrated saying: "The Surâd of Kûfâ is the garden of the Kûrahîb." Egypt, the first conqueror of which, 'Amr b. al-Asâ, seemed to deserve the right to hold the governorship for
life fell to 'Abd Allah b. Sa'd b. Abi Sarh, who was not an Umayyad, but whose Islamic past was, to say the least, suspicious. Finally the caliph's intimate adviser to whom tradition likes to ascribe a beneficent influence, was Marwān b. al-Hakam b. Abī l-‘Āṣ, first cousin of the caliph, who had recalled his father from the exile to which the Prophet had condemned him. It cannot be denied that these measures of 'Othmān were not entirely free from nepotism; but we must recognise in them a deeper motive, the intention of establishing unity of government and administration, which was being threatened by the excess of independence which the governors enjoyed. It was practically the same end that 'Omar had had in view but the latter had succeeded by his energy and prestige in imposing his authority even on governors who belonged to other tribes and clans; 'Othmān thought he could obtain the same results by using officials connected with him by ties of blood; he was not successful; the parts were reversed and it was the caliph who was under the influence of his relatives (perhaps however to a less extent than the official historians say); besides, popular discontent ascribed solely to this cause the troubles that arose, which were probably quite independent of the personality of the officials. Indeed (and it is one of Castracane's great merits that he has called attention to this) the 'āwil system instituted by 'Omar demanded that the plunder taken in war should increase steadily in perpetuity, the regular receipts from the taxation of the Abī al-Dāhima not sufficient for the new recruits who hastened to the provinces from the depths of Arabia. From this came the stimulus to the expeditions which in the caliphate of 'Omar never ceased to push forward the frontiers of the Arab empire: such were the conquest of the last provinces of the Sasanian empire (the dynasty of which became extinct with the murder of the last king Yazdagird III), the occupation of Armenia, a series of expeditions along the north coast of Africa, into Nubia, into Asia Minor, and by sea into the eastern basin of the Mediterranean. If we sum up the conquests made or begun by the Arabs in the caliphate of 'Othmān we shall see that if they do not show the swift expansion of those that took place under 'Omar, they are nevertheless impressive as they mark on one side the conclusion of the initial stage of the Arab empire and on the other the preliminary to the second period of expansion, that of the Umayyads.

Nevertheless the booty produced by these expeditions was perhaps not so great as had been hoped; besides, 'Othmān — this is another of the grievances against him — instead of assigning it entirely to the soldiers, reserved a share for his governors and for the members of his family, by developing the system of sīfāt (ṣāfatīs), which 'Omar had already made great use of. In this again, we should recognise not a simple scheme for enriching his relations but perhaps rather a conscientious attempt to form domains for the state in contrast to the communistic system of dividing all the booty among the combatants. The Islamic empire was tending from an innate necessity to give itself a regular administration, for which the Byzantine and Persian afforded models. What 'Omar had already begun, what the Umayyads to some extent accomplished, and the 'Abbasids realised, the transformation of the incoherent and anarchistic grouping of the tribes into an absolute monarchy of oriental type, was also 'Othmān's programme. He may be reproached with not having chosen the means best fitted to realise it and described as not being fit for a task of this magnitude; but his plan was a reasonable one and only meant following up 'Omar's ideal. Besides, the economic crisis, the inevitable consequence of the sudden enriching of the Arab masses, very soon forced the state to make economies and to cut down the military pensions; this not unnaturally increased the number of malcontents.

One of the steps which contributed very greatly to stirring up against 'Othmān the religious element, formed of the old Companions of humble or even servile origin (such as 'Amr b. Yazīr, Abī Dharr, 'Abd Allah b. Mas'ūd etc.), whose influence upon the masses was very strong, was the official edition of the Qur'ān (cf. Noldede-Schwally, Geschichte des Qur'āns, ii. 47–119). What was found most odious in the process was the destruction of the provincial copies. 'Othmān was no doubt urged to this step by considerations of a religious and liturgical nature, but nevertheless the determining motive may have been a political. The jāhili, who were the receptacles of course also the expositors of the sacred text, exercised for this reason a tremendous influence on the masses, which made them to some degree independent of the central power, the latter having no way of checking whether the Qur'ānic passages used by the jāhili were authentic or not. In depriving them of this weapon and making itself the monopolist of divine revelation, the government was endeavouring to realise unity and to establish its absolute power over the state; but it is only very natural that the opposition to this tendency should have accused the caliph of having matallated and destroyed the divine word.

'Othmān therefore made himself enemies in every different quarters: the turbulent elements of the amārīs [see maṣla] faced with economic difficulties and disposed to accuse the caliph of confiscating, for his own benefit the property of the Muslims; growing parties in which the assertion of the authority of the state seemed a breach of the principles of equality laid down by the Prophet; lastly the former governors who had been dismissed and the great Companions who, removed from power, were striving for it with all their might: such were Taḥif, al-Zubair and 'Alt. It may be asked if 'Othmān, while following the line of conduct imposed upon him, as we have seen, by the necessities of state and the example of his predecessor, could have avoided the fate which overtook him and which so profoundly disturbed the unity of Islam. Although the answer to this kind of question cannot be a definite one in the field of history, it may be supposed that a more intelligent mind and a more energetic temperament than that of the third caliph (or to be more definite a real political genius such as Mu'awiya would undoubtedly have revealed if he had then been at the head of the government) might perhaps have overcome these difficulties.
The course of development of events can only be briefly indicated here. Tradition divides quite artificially the caliphate of 'Othmān into two periods of equal length, six years (33—39) of good government and six (30—35) of illegality and confusion. The change is represented symbolically by the loss of the seal of the Prophet which 'Othmān, according to the story, dropped into the well of 'Ara in the year 30. It is in any case a fact that it was just at this period that the first movements of rebellion began in the 'Iraq, the region which was suffering most from the economic crisis and the one where the turbulent elements were the most numerous. The episode of Abī Ubayy, one of the precursors of asceticism in Islam, sailed to Syria with several of his companions, and later sent to Raballā to die there in destitution, although embellished by legend is characteristic as showing the attitude of the growing piecism to the secular transformation of the caliphate. Much more serious troubles however were in store for the 'Abd al-Mu'mīn, himself a pietist and opponent of 'Othmān; Kufa was henceforth no longer under the central government. Similarly in Egypt, Ibn Abī Sarh had to yield to the violence of a group led by the young Muhammad b. Abī Ḫulafā who although an adopted son of 'Othmān took the side of his opponents. It seems that the wily 'Ali b. al-Aswād al-Turaḫi who had retired to Palestine after his dismissal was secretly encouraging the revolutionary movement in Egypt. The storm which had been brewing for some time burst at the end of the year 35 when bodies of rebels advanced on Medina from the provinces. The first to arrive were the Egyptian; dramatic interviews took place between them and the caliph; the grievances against 'Othmān were expounded with great bitterness of language. But the rebels were disarmed by the humble and conciliatory attitude of the caliph who gave in to all their demands, promised to annul his previous measures and to change his governors; the Egyptians left satisfied. But suddenly, on the way back at the halting-place of al-ʿArīṣ, a messenger of 'Othmān's was seized and a letter found upon him from 'Othmān to Ibn Abī Sarh confectating which contained an order to put to death or mutilate the leaders of the movement on their return. The latter turned back furious and retraced their steps to Medina, determined on vengeance. 'Othmān denied that the letter was genuine, and even insinuated that it had been forged by his enemies in order to ruin him. Although official tradition shows a tendency to attribute this forgery to Marsān, there is also the trace of other versions and even of one (preserved by al-Ṭabarī alone), which says that 'Othmān suspected 'Ali; this, by the way, is what Caetani had suspected without knowing of this text (Annali, vii., p. 359). Whatever may be thought of this suspicious episode (we know well that the manufacture of false documents intended to bring ruin upon an adversary who cannot be defeated otherwise has been regularly practised in ancient as well as modern times), it is certain that, while it was the immediate cause of the tragic end of 'Othmān, events had already begun to move. A regular siege of 'Othmān's house was set up; the conduct of the old Companions who remained in veiled opposition was of the most hypocritical character; without having the courage to share in the deposition of the caliph by violence, and without the desire to help him against the rebels, they, 'Ali in particular, maintained an attitude of malevolent neutrality. 'Aṣārī, the widow of the Prophet, who had conducted a violent campaign against 'Othmān, preferred to slip away at the last moment on the pretext of a pilgrimage to Mecca. Reduced to the last extremity, 'Othmān masted all his dignity and refused to abdicate. After a siege, the length of which is given differently in the different sources, a number of men penetrated into the house in the last days of 35 (June 656) led by Muḥammad b. Abī Bakr (the son of the first caliph and brother of 'Alī) who raised his hand against 'Othmān. We do not know if it was he or another (tradition gives several names and it is evident that the exact details were supplied from the first) who gave the final blow to the caliph. His blood flowed, it is said, upon the copy of the Korān which he was reading when attacked; his wife, the Khaib Nāʾīra bint al-Fūrāfās, was wounded. The house was pillaged. During the night the body was buried with the greatest secrecy by his wife and some friends. The troops sent by Muʿāwiya from Syria (too late, says tradition, accusing him of duplicity) received the news of the murder when half way there and quickly returned home.

We know how the new caliph was elected in the midst of tumult and terror (cf. Caetani, Annali, iii., 321—342); it shows, the author of this article thinks, that there was not only the arrangement among the principal Companions, each of whom probably thought he could deal with events as they arose. The election of 'Alī was without doubt due, even more than to the prestige given him by his close relationship and alliance with the Prophet, to the support of the Āmār who in the confusion in the Umayyad party had resumed control over their own town. But the new government from the first was destined to be challenged either by the unsuccessful rivals or by Muʿāwiya, the only one of the Umayyad governors who had remained master of his province. Political unity, and soon also the religious unity, of Islam was now at an end and the period of schisms and civil wars had begun. The caliphate of 'Othmān and its bloody end mark a turning point in Muslim history and give to the third caliph an importance which his true personality, a somewhat mediocre one at best, would never have merited.

Bibliography: The sources and earlier works are collected and summed up in Caetani, Annali dell'Islam, viii. and viii., Milan 1914—1918 (cf. also by the same author Chronographia Islamica, p. 279—388). The only historical text of importance still unpublished, the Amār al-ʿAbhrāf al-Balāghūrī, is in course of publication by the University of Jerusalem. The part relating to 'Othmān, edited by D. S. F. Gootie (who has lent the writer proofs) mirrors and complements on many points the material already available but does not supply much that is new. We may also expect shortly the publication of the long biography of 'Othmān in the Fāṭimī
in the army and in the administration. Ahmad Digna and Madani both fell in fighting in the Eastern Sudân.
Down to the outbreak of the Mahdist rising, 'Othmân was a trader, dealing especially in slaves between the Hâjj and the Sudân. The prohibition of the slave-trade by the Egyptian government in 1877 affected not only his livelihood and his liberty - he and his brother 'Ali suffered a period of imprisonment in Ëd-dâr - but also his religious conviction that the slave-trade was a permitted one. Even then his religious fanaticism displayed itself in his joining the ecstatic begging order of the Madžûrûh. On hearing of the coming of the Mahdi Muhammad Ahmad [q. v.], "he migrated to him" (âd-dârâ), met him shortly after the fall of el-Obeid (al-Ôniyâl), in 1883 and took the oath of obedience to him (ațâr). Henceforth he was blindly devoted to the Mahdiya and retained his allegiance to it until his imprisonment.

It is evidence of the Mahdi's keen judgment that he at once recognised 'Othmân's extraordinary abilities and in a proclamation to the tribes of the eastern Sudân on May 8, 1883 (in Sh. 1301, ii. 201 yajûz) appointed him governor-general (âdami 'âmim) over the till then provincial tribes of the Bej'dja, between the Athbara and the Red Sea (with the towns of Sawâkîn, Tôkar and Kassala). These tribes who did not speak Arabic and had never been ruled by an Arab, readily gave obedience to their kinsman 'Othmân who was not only well known to them through years of friendly commerce but also knew their language and ways.

'Othmân's activity from 1883 to 1900 falls into two periods. In the first (1883–1891) as leader of the Mahdist rising in the eastern Sudân he carried out the important task of protecting the eastern frontier of the Mahdiya against the Anglo-Egyptian government, which made it possible for the Mahdi to concentrate his forces on the Nile. In the second period (till 1900) after the loss of the eastern Sudân, he was still general of the Mahdiya along with others in the service of the Khalîfah 'Abdûlâhî against the English under Kitchener.

1. The events of the first period which he opened from Erkowit with the encounter at Sînkât on Aug. 5, 1883 were at first concerned with Sawâkîn. The details of this fighting are given by Shukûr, iii. 300 yajûz, 323 yajûz, 300 yajûz, 538 yajûz, 601 yajûz. The main object was not so much the taking of Sawâkîn and other towns as the command of the roads between Sawâkîn and Berber, the shortest and most convenient route to the Nile. 'Othmân is entitled to the merit of having for seven years successfully closed this road to the government. In contrast to this, the results of the actual fighting were of little significance on either side. 'Othmân defeated the Egyptians under Mahdûlûh Pâshâ at el-Têb (Nov. 5, 1883); destroyed an Egyptian expedition at al-Tamânî (Dec. 1883), undertook the siege of Sînkât, Sînkât and Tôkar, defeated Baker Pâshâ in a second battle at el-Têb (Feb. 4, 1884), on Feb. 8 forced Sînkât to surrender and on Feb. 24 Tôkar, but on Feb. 29, 1884 suffered a severe defeat at el-Têb and again on March 13 and 27 at Tamâm at the hands of General Graham, which checked him for a time but did not cause him to withdraw. It was not till March 1885 that he began new operations from Tamâm, Tell Hashîm and Tôkar, with little success.
because the tribes which composed his army threatened to disperse, fearing English intervention. Nevertheless, he succeeded again and again in inspiring the unlimited confidence with which the Mahdist leaders flattered him, not least by the fact that he transferred the centre of his activities to Kassala and Abyasnia. The years 1884—1885 mark the zenith of his career. He incited the people of Kassala by Mahdist pamphlets; after the death of the Mahdi on June 22, 1885 and the fall of Kassala he was sent there by the Khalífa 'Abdullahí, as the only higher official of the Mahdi (not related to the Khaliifa) who had remained in his position, and from there waged war on the Amárí and the Abyasnis. He compensated himself for the failure of his Abyasnisian campaign by a savage treatment of the people of Kassala. As he was continually threatening Sawáikín and even went so far as to draw trenches round the town and begin a regular siege from Handuíb, Kitxenher, who was then in command at Sawáikín, forced him after a series of defeats to retire to 'Tokarí. 'Othmán's popularity now began to decline. The tribes became dissatisfied with his viciousness and severity and the continual warfare. The exhaustion of the Mahdísts was so great that the Khalífa allowed 'Othmán to resume trading between Sawáikín and the Mahdíya via Handuíb, but this was stopped on the opening of the final struggle between the Mahdísts and the Anglo-Egyptian government, and the result was famine among the Mahdísts. The oppression of Kassala by Muhammad Fáíl, sent there as emir by his uncle 'Othmán, induced the Khalífa to summon 'Othmán to Omdurman [q. v.]. He returned with full approval of his conduct and with new military powers but was completely defeated by Hollid Smith Bálighí who finally took 'Tokarí in Feb., 1887. The tribes scattered; 'Othmán fled abandoned by everyone to the mountains between Kassala and Berber. The country between the Atbara and the Red Sea was lost to the Mahdísts; Berber and Kassala were open to the English and Italians. 'Othmán was banished by the Khalífa to Adíríma on the Atbara, where in addition to buying himself with agriculture he endeavoured to raise a new army which was to hold the Atbara line.

II. When at the beginning of the decisive campaign against the Mahdísts, Kitchener conquered Berber in 1889, 'Othmán came to the front again. He led an army over the Nile at Shendi and joined his fellow-general Mahmúd. They were both defeated and Mahmúd was taken prisoner. In the battle that followed at Omdurman (Sept. 2, 1898) he attempted in vain to check the flight of the derelicts with a strong force between the Súrghásmí and the Nile. After the defeat he accompanied the Khalífa on his flight until the latter's death at Gádíd (Nov. 24, 1899), refused to surrender, escaped across the White Nile and Atbara into the Werríbi mountains and endeavoured with the help of the Shálik of the Djamálti to cross the Red Sea into the Hijáz. Through the treachery of the Shaikh he fell into the hands of the authorities of Sawáikín on Jan. 18, 1900, and was sent to prison in Damietta where Shakúr saw and spoke with him in 1903 (see Bibliography). To the kindness of the British and Egyptian Embassy in Berlin I owe the following details of 'Othmán's later life: 'Othmán's imprisonment took place on Jan. 12, 1900; he was brought to Rosetta, from there to Tárus near Cairo, finally, out of climatic reasons, to Wádi Halfa. After some years his lot was relieved; he was allowed to retain his property in Berber, but did not take any interest therein. In 1924, at a great age, he made the pilgrimage to Mecca; after his return to Wádi Halfa he settled outside the town, where he died in 1926; he was buried there.

'Othmán Digna was the model of a primitive unbroken nature. He was the type of the fanatic Mahdist, noteworthy as the only non-Arab to hold high office in the Mahdístya. He was an imposing figure as described by Shukír [q. v.], iii. 200 (German by Dietrich, p. 49). Not only did he know the languages of the tribes placed under him but he also spoke and wrote Arabic fluently (a specimen of his concise style is given by Shukír, iii. 212 sqq.). Courage verging on foolhardiness and cleverness which seized upon the slightest advantage, strictness to the verge of cruelty, and a stubbornness in following up his goal, from which even the severest defeats could not turn him, were combined in him with an artistic piety. Shukír described his ecstatic fits in prison (iii. 669) — and an ascetic mode of living. From the time of the coming of the Mahdi he went without sandals and shoes and used riding-boots only for longer journeys. He was therefore, along with wind Na'djumí and Abu 'Andúja, the most important Mahdist general and the most dreaded enemy of the government.

Bibliography: Na'tím Bey Şukúr, Turíbí al-shíli, ii., Cairo 1905; E. L. Dietrich, Der Mahdi Mühannam Ahmed vom Sudán nach arabischen Quellen, Berlin 1924, p. 49 sqq. (with further literature). — Cf. also the article Mu'hannam Ahmidí by Ernst Ludwig Dietrich)

'OTHMÁNÍDJÍK, the chief town in a nádi of the zauqá jí of Amásia in the wilayet of Siwas [q. v.] in Turkey in Asia, lies in a picturesque position at the foot of a volcanic hill which rises straight out of the plain and is crowned by a castle which formerly commanded the celebrated bridge said to have been built by Bâyázíd I. The settlement is probably very old as is evident from the numerous rock chambers cut out of the cliffs. The number of inhabitants according to Maercker (1893) was about 5,000 and they lived in 920 houses. It is connected by road with Meraflin in the east and with Tosia in the west. The importance of the place however lies entirely in the part it has played in history. The name 'Othmánídjík is connected with that of 'Othmán [q. v.], the Ottoman dynasty, and it is said that 'Othmán I took his name from this place which had been granted him by the sultans of the dynasty, which is found as early as the 14th century (probably for the first time in the Geschichte von der Turckey of Meister Jörg v. Nürnberg, Memminger n. d. but about 1496, and again in Spandugino, van Beuseck etc.), has little claim to credibility although it has been revived in modern times e.g. by Cl. Huart, in J.A.A., ser. ii, vol. ix., 1917, p. 345 sqq. and by J. H. Kramer, in Acta Orient., vii., 1927, p. 242 sqq.; of the soon W. L. Langer and R. P. Blake, in American Historical Review, xxxvii. (1932), 496, note with other references. It is probable that 'Othmán is the arabised form of a Turkish name which may have sounded something like Atmán, Arman and we must not forget Ibn Bajífíja's assertion that the founder of the dynasty called himself 'Othmánídjík, i.e. a Little 'Othman' to distinguish himself from the third caliph. The
Turkish sources are contradictory: Hüdudü Khatifah says that the town of "Othmân-zâde" took its name from the fact that in the 9th (1) century, a leader named Ožhmân conquered it, Evliya Celebi (1645–1683) says (in ii. 130 eve.) that many see in Othmân-zâde the birth-place of the emir Othmân. This opinion had become the current one about the middle of the 18th century, as may be seen from a passage in "Les Voyages et Observations of François le Gouz" Paris 1653, p. 65). The place does not appear in the clearer light of history till 1726 when it was taken by Bayazid I from the lord of Kastamuni, Bayazid Kofarium, and definitely incorporated in the Ottoman empire. The fact is worth mentioning that there was evidently a considerable Bektashi settlement here at an early date and the tomb of the famous Bektashi saint Koyun Baba [q. v.] in "Othmân-zâde has always been much visited. The inhabitants according to Hüdudü Khatifah belonged almost entirely to the order of the Bektashis. Cf. on this point in 1546 Le Voyage de Monseigneur d'Avrançon, ed. Ch. Schefer, Paris 1887, p. 66 (where Cochin-Baba should be read Koyun-Baba). — Makarios of Antioch mentions a place called "Othmân-zâde" near Marash. He visited the site where there was said to have been formerly a large town of this name also called Osman Dada (= "Othmân-Dede") (Travels, ii. 453 eve.).

"Othmân-zâde Ahmed Tâhir, a notable Ottoman poet, scholar and historian of the end of the 18th and first third of the 19th century. The son of the "Othmân-zâde (müevne

teosörü) of the pious foundations, "Othmân Emir, he took up a theological career. The year of his birth is not recorded. From 1099 (1687) he held the post of Müddérvis in various mosques in Constantinople. At intervals he also worked in other places. For example in 1107 (1695) he went to Damascus with Kemal Efendi Mehmend Pasha when the latter was appointed governor there. In 1124 (1712) he was appointed müddérvis at the Sulaimâneye, a post he had aimed at from the very beginning. He then went as chief judge (Hâcî mue得多) to Aleppo in 1126 (1716) and lastly as Miyy müddérvis (chief justice of Cairo) to Cairo, where he died at the end of his year of office on the 2nd Ramadân 1136 (May 25, 1724). According to Brusel Mehmend Tâhir, there is in existence a biography of "Othmân-zâde composed by Ibn al-Emir Mahmut Kemîl Bey.

"Othmân-zâde was regarded by his contemporaries as the most important poet of his time. He was particularly celebrated for his chronograms (aşrîka) and hifa. A chronogram on the birth of prince Ilhâmî (1133 = 1720–1721) made such an impression on Sultan Ahmet III (1115–1143 = 1703–1730) that he gave "Othmân-zâde the title "king of poets" (mülâk sulûn âl-âsârî) and granted him a special hatta. "Othmân-zâde left behind him a dinsâr of the usual type (mârrettet-dinsâr) which consists of 12 kâtidas, 32 chronograms and 77 charas. Along with these are isolated poems, e. g. a satire (hâflâr) on Thâkib Efendi composed in 1124 (1712). He also wrote in verse a commentary on the 40 hadîths entitled Şarî-ı Hadîth-i ar-Rahîl, which is also known as Şihhat-ul-âdâb; it was written in 1126 (1715).

It is however to his prose works that he owes his fame with posterity, especially his historical works, some of which are still popular and valuable at the present day. The most important in his biographical collection Hadîthat al-Wunûrî (a most estimable and still important collection of lives of the first 92 grand viziers of the Ottoman empire, from "Ali al-Din "Ali Pasha to Râmi Muhammed Pasha who was dismissed in 1115 (1703). The work was composed six years before his death. It was printed at Constantinople in 1271 (1854). "Othmân-zâde's idea was later taken up by others. His biographical collection was continued by: Dâlver Ağa-Efendi ("Ömer Wahit), a friend of Râghib Pasha's who wrote a Dâlverî-ı Hadîthat al-Wunûrî, also called İdâmî-i Mûmitsî- Wunûrî-i-tâmir or Gûli Zîbâ, which covers the period from the grand vizier Kowânas Ahmed Pasha to Sa'îd Muhammed Pasha; also by Ahmed Îlîkî Bey, who compiled a continuation entitled Wird al-Muvağrî which covers the period 1172–1217 (1758–1802) from Râghib Pasha to Ye'âfî Zîbî Pasha, the conqueror of Egypt; finally by 'Abî al-Fatâh Şîkâhî b. Bağhâdî entitled Burhân-ı selû, covering the period 1217–1271 (1802–1854), from Zîbî al-Din Ye'âfî Pasha to 'Alemdar Muâsif Pasha.

All three continuations are printed as an appendix to the Hadîthat of "Othmân-zâde, while the later continuation by Iyfat Efendi: Wird al-Fâtâhî appeared in a lithograph separately while the continuation by Ahmed Sa'id Şehrî-ı Efendi entitled Dâlverî-ı Hadîthat al-Wunûrî 2 or Gûli Zîbâ or Gûlshen-i Mûlim which deals with 31 grand viziers from Niâhûdî Ahmet or Şihhdâr Muhammed Pasha to Sa'îd Muhammed Pasha, is still only available in MSS.

The two sketches of Turkish history by "Othmân-zâde also attained great popularity. The longer: İdâmî-ı Mûmitsî (or Teyrîkî-ı Selûnî-ı Ahî "Othmân deals with the first 24 Ottoman sultans, from the founder of the dynasty to Ahmet III. The shorter version: İsmet-ı Şebîhî or İsmet-ı Şebîhî-ı Ahî "Othmân or Muhammed-ı Teyrîkî-ı Selûnî or Ye'âfî-ı Selûnî or Hâfızat-ı Muâsif or Hâfızat-ı Muâsif covers the period from "Othmân to Muşaftî II. The number of varying titles shows the popularity of the work. The book, sometimes quoted as Fâdîî-ı Ahî "Othmân, dedicated to Dâmûl Ilhâmî Pasha, seems to be only a variant title of one of these books.

In the year of his death (1136 = 1724) "Othmân-zâde wrote a history of Fâdî Âlî Ahmed Pasha entitled Teyrîkî-ı Fâtî Ahmed Pasha, which like most of his works is only accessible in MSS. The Munâmûrâd Devletînî (struggle between the two kingdoms) in the form of questions and answers is also dedicated to İhrahil Pasha (MS, in Vienna).
and is an interesting contribution to the very highly developed matnārā literature.

As further independent works may be mentioned: 

İşân Nameğî al-Yahwâni and Tâbûsul al-Nûmnîn. Here we may mention his anthology Şâmi al-

Laçîfî (a collection of anecdotes, jests etc.). His stylistic collection Münşârî-i Tâbiî Efendi was intended for practical purposes; it is a collection of letters in three fasîl and a concluding chapter.

His extract from and editions and translations of other works are very numerous. The larger part of his work is collected in his Kullüyeti with an introduction by Âjmâd Hanîfe. Some titles cited by Von Hammer and himself Mehmâd Tâhir which apparently go back to Hanîfî, the continuator of the Âjmâd al-Zûnîn of Hâdidh Khalîfa, are probably not correct and refer to double or subsidiary titles. — Translations by him are: Mâhadîr al-Awârû and Mâhadîrî Şerîf, the latter entitled: Taiwîl al-Maşîlî on hâdît. — Extracts from or versions of other works are: Ablhâlî-Muhsîn (or Muhsînî-Ablhâlî Muhsînin or Ablhâlî al-Hâlahî) from the Ethics of Humain b. 'Abî Kâfî, who is known as Wâlij al-Herelî (d. 910 = 1504). The actual work which was written in Persian for Mîrzâ Muşânî b. Humain al-Bâlîkara was translated by 'Alî Mehmâd known as Ghûramî, with the title Âmîr al-Ârsîn in 747 (1636). Ablhâlî-Mubârî, an extract from the work of 'Abî b. 'Amr Allah, known as Ibn Hâdî (Isrâlî-kâdî) which was written for the Emir al-Âmîr of Shîm, 'Ali Pâchî, and therefore called after him the Âmîrî-kâdîn, i.e. of 'Abî Hâdî. We also have from his pen a synopsis of the Humâyûn-nâmâ. The Âmîrî-kâdîn, the Persian version of Ibn Muşûfî's Arabic version from the original Indian (Pahlawi) of Bûpatâ it was the work of Hûsin Wâlij Kâfî, court-preacher to Hûsin Bâlîkara of Herât. This Âmîrî-kâdîn was translated into Ottoman Turkish by 'Abî al-Wâlij 'Abî Mu'în 'Ali Celêhi b. Şâlijî, known as 'Abî Wâlij or Şâlijî-kâdîn with the title Humâyûn-nâmâ and dedicated to Sultan Sulaimân. 'Othmân-zâde abbreviated the Humâyûn-nâmâ to about a third of its length. This version was printed in Constantinople in 1526 under the title Tûbîyîn al-Âmîrîn. In the Tûbîyîtî this extract is entitled Zohîet al-Nâşîfî.

The version of the Nâshîfî (Nâshîfî al-Mulüb) of Reîs Elandî Sarî 'Abî Allah entitled Tûbîyîn al-Hikâm is also described as a synopsis of the Humâyûn-nâmâ. A synopsis of the Muşîfî-kâdîn of 'Abî is also attributed to 'Othmân-zâde.

Otrâr, a town on the right bank of the Sir Dârî (Salûnî), a little south of its tributary the Arîs. The name is found as a geographical term for the first time in Yâkût (i. 310) as Utrâr but Tâhir (iii. 815—16) already knows of a prince called Utrâr-band as a rebel vassal of the Caliph al-Ma'mûn. The place that Ma'âdisâ calls Tarâ Târâ (i. 263, 274) in the district of Isfâhâni must be quite a different place. Otrâr may perhaps be the same as the capital of the district of Farûb [q.v.], a town which replaced the older one of Kadar (mentioned by Isâkî and Ibn Hawkâl) and called Farûb by Ma'âdisâ (Farûb on p. 273). The town of Otrâr acquired a melancholy fame through the part it played at the time of Cîngis Kâhân's invasion. It was then a frontier town of the empire of the Khâwarîmshahr (Mahmûd, who had captured it in 1210) from the Kâna Khitâb. The town was at that time under the command of Tâdî al-Dîn Ilhâm Kâhân who was giving trouble to his new ruler. In 1218, there came to Otrâr a great caravan of 450 people (Djwâisi, all Musulmân, sent by the conquering Mongol to open up commercial and peaceful relations with the Mahommâdian empire. Detailed at first by the commandant Inshâkî, either because he thought they were spies or simply because he coveted their wealth, they were later all massacred and the commandant seized their merchandise. One source (Nasawît) throws upon the âlîfî a part of the responsibility for this deed; in any case when an ambassador came from Cîngis Kâhân to complain of the outrage and demand the surrender of Inshâkî, he refused to hand him over and put the envoy to death. This made war inevitable. In 1219, Cîngis Kâhân appeared with a Mongol army on the Sir Dârî and laid siege to Otrâr. The town was taken after several months' siege and Inshâkî was captured and sent to Kâna Khitâb to be executed. It was from Otrâr that the Mongol armies set out which conquered the empire of the Khâwarîmshahr. Otrâr still existed at the beginning of the 15th cent. for Timûr Lang died there in 1405 (Allî Vardi, Zafar-nâmâ, ii. 645). The site of Otrâr is now only indicated by ruins.

(J. H. Kramer)

Oudh (Awaux), a district now forming part of the United Provinces of modern India, has an area of 24,154 square miles and a population of 12,794,979, of which 11,870,266 are to be found in the rural districts (Census of India, 1931).

From very early times Oudh and the neighbouring countries of the great alluvial plain of Northern India have been the peculiar home of Hindu civilization. The ancient Hindu kingdom of Kosala corresponded very nearly to the present province of Oudh, its capital, Ayodhya, the modern Adiyodhy on the river Gûjût, is supposed to have been the residence of Dârâshâh, the father of Rûmâ whose
expulsions are recorded in the Rāmāyaṇa. Here too arose a number of religious reactions against the asceticism and the social exclusiveness of Brahminism.

Apart from plundering raids, such as Mahmūd of Ghazni’s attack upon Manṣūr and the doubtful exploits of Sālār Maḥdūt Ghāzī recorded in the Mīrābz bars of 'Aḥī Abū Rāyān Cāhī, it was not until the last decade of the twelfth century, in the days of Kūth ḍīn-Dīn Abūlak [see above], that the Muslim invaders established themselves in Oudh and annexed it to the Dīl Shāhī state. It definitely formed a province of Muhammad b. Tughlāq’s extensive empire, but, towards the close of the fourteenth century, it was absorbed by the Shāfīī kingdom of Dīwānpūr [q.v.]. Under the Lodis’ [q.v.] it was once more part of the Shāhī state.

In the days of Akbar [q.v.] it formed a ḍāla of his empire, extending from the Ganges on the south-west to the Ganges on the north-east, and from the river Sāi in the south to the Tarāl of Nepal in the north. According to Aḥī l-Fadl, it was divided into five sākārs and thirty-eight parganas [Aḥī Abāḥī, in Bibliotheca Indica, ii. 170—177 [tr. Jarrett], 1891]. Local traditions in Oudh however, conflict with the Muslim accounts and declare that the Rājput chiefs maintained their authority practically intact throughout the Moghul period (W. G. Bennett, The Chief Clans of the Roś Buriyā District, 1895). The weakness of the central government under Aḥmar’s successors gave the nawabs of Oudh an opportunity of asserting their independence, although nominally they still acknowledged the authority of the Moghul emperor.

Sa‘īdī Khān Barhān al-Mulk, the real founder of the Oudh dynasty, was descended from a respectable Sāyiid family of Nīṣābūr (Mansūh b. Abū Ḥaṣūb al-Luḍāb b. Kāhī Khān, ii. 902). During his naṣṭīshīb (1732-1739) he both maintained internal order and extended his dominions so as to embrace Benares, Ghāratpur, Dīwānpūr and Āmār. His successor, Sa‘īdī Dāng (1739—1754), was appointed waiz of the empire in the year 1748. It was he who invited the Marāṯa to assist him against the Rohillas, the engagements entered into at that time forming the basis of later Marāṯa claims on Rohillând. His son and successor, the nawab-waizī Shāh Bādur (1754—1775), came into conflict with the rising power of the English East India Company and was totally defeated at Bāksar in 1764. This left Oudh at the disposal of the Company. By the treaty of Allahbād (1765) Oudh was restored to Shāh Bādur with the exception of Kora and Allahbād, which were given to the emperor for the upkeep of his dignity. British relations with this buffer state between Bengal and the Marāṯas were placed upon a firmer footing by the treaty of Benares (1775) which fixed the subsidy for British troops at 210,000 rupees per month. At the same time Kora and Allahbād were sold to the ruler of Oudh for fifty lakhs of rupees, because the emperor had deserted the Company and surrendered these districts to the Marāṯas.

The accession of the incapable 'Aqīf al-Dawla (1775—1797) enabled the hostile majority on Warren Hastings’s council to raise the subsidy to 250,000 rupees per month, and to force the new nawáb to cede Benares, Dīwānpūr and Ghāratpur in full sovereignty to the Company. At Āmār, in 1781, Hastings attempted to reform the waiz’s administration and to afford him relief by reducing the number of English troops in Oudh. His share in the resumption of the jāhrs and in the sequestration of the treasurers of the bégams of Oudh formed one of the charges against him on impeachment.

In 1801 Lord Wellesley forced Sa‘īdī ‘Ali Khān (1798—1814) to cede the whole of Rohillând and part of the Dīl, the revenues of which were devoted to the payment of the subsidiary force. Sa‘īdī ‘Ali Khān was succeeded by his eldest son, Ghāzī al-Dīn Haidar, who was the first ruler of Oudh to assume the title of king. The remaining kings of Oudh were Nāṣir al-Dīn Haidar (1827—1837), Muhammad ‘Ali Shāh (1837—1842), Asjad ‘Ali Shāh (1842—1847) and Wajīd ‘Ali Shāh (1847—1856). It was a provision of the treaty of 1801 that the ruler of Oudh should introduce into his country a system of administrative conductive to the prosperity of his subjects and calculated to secure their lives and property. In spite of repeated warnings nothing was done and misgovernment continued unchecked. On these grounds Oudh was annexed by Lord Dalhousie in 1856. Wajīd ‘Ali Shāh received a pension and was allowed to reside at Calcutta where, he died in 1857, his title expired with him.

On annexation Oudh was controlled by a Chief Commissioner, until, in 1877, both Agra and Oudh were placed under the same administration who was known as the Lieutenant-Governor of the North-Western Provinces and Chief Commissioner of Oudh. The title of Chief Commissioner was dropped on the formation of the United Provinces of Agra and Oudh in 1902. It was not, however, until 1921 that this administration was raised to the status of a Governor’s province.

The first land revenue settlement after annexation was carried out with a lack of consideration for the great talukdārs of the province, who were ousted from the greater part of their estates. This was reversed after the Mutiny when Canning reverted to a talukdār settlement and confirmed the rights of the talukdārs by sanads.

Today in Oudh Muslims are to be found chiefly where they held away in the past, their preference for urban life explaining their presence in the chief towns. Although the population is predominantly Hindu it is interesting to note that in the late decade Muslims have increased nearly twice as rapidly as Hindus. This is largely the result of social customs which permit Muslim widows to remarry and do not favour early marriages. Conversion has not affected these figures, for the jāhrī movement on the part of Muslims was countered by the shuddhī and sanyāsan movements on the part of Hindus.

(C. COLLIN DAVIES)

OUJDÁ (WADSA), a town in Eastern Morocco, eight miles from the Algerian frontier in the southern part of the vast plain of Augd. It was founded in 384 (994) by Zīr b. Ṭāṭīya, chief of the great Zenāta tribe of the Maghrības [q.v.]. We shall give a résumé of the events that led up to its foundation. In the course of the fighting between the Šanāţā and the Zenāta, the latter had been driven towards the extreme Maghrīb. Supporters of the Umayyads of Cordova, they had long defended their imperial policy in Barbary, especially in the time of the great minister Ibn Abī Ḥamīda al-Malik. Zīr b. Ṭāṭīya al-Maghrība, who had proved himself a particularly valuable ally, was allowed to occupy with his tribe the environs of Fās. He seized the opportunity to expel from the city the Bani Ḥran, another family of the Zenāta who had established themselves there. Not however having full confidence in the Umayyad minister, of whose policy he disapproved, and not feeling secure in the vicinity of or in the town of Fās, and wishing to be in touch with the central Maghrīb which was the real country of his tribe, he founded the town of Oujdā and garrisoned it with his troops; he brought his possessions there and put one of his relations in it as governor. The foresight of the founder was justified; in 424 (1033) the Bani Ḥran having reconquered Fās, the emir Ḥamīma, one of the successors of Zīr, took refuge in Oujdā.

According to al-Bukhārī, about the middle of the 9th century (after 440 = 1048), a new quarter surrounded by a wall was added to the original nucleus by a chief of the Oautaghīna tribe. The great mosque was outside of the two towns.

During the period of Umayyad expansion Yûsuf b. Ţāṭīrīn occupied Oujdā in 472 (1079). In the middle of the 9th century it became an Almohad town. In the reign of the Almohad al-Ḥā凭证, when the Bani Ghānīya, hoping to restore the power of the Almoravids, came from the south of Tunisia and extended their ravages into the region of Tiemcen, the fortifications of Oujdā were repaired and strengthened (Rāfi, p. 203; transl. p. 194).

It was however mainly after the installation of the ʿAbī al-Walīd in Tiemcen [q.v.] that the town of Oujdā, the bulwark of the frontier which separates the central from the extreme Maghīb (Ibn Khaladun) was summoned to play an important strategic part. Belonging to the kingdom of Tiemcen, it was the only place occupied by the Marinids of Fès when they invaded the lands of their hereditary enemies and the first victim of their attacks. In 670 (1271) the Marinid Abī Yūsuf having defeated Yaghmurān, the king of Tiemcen, near Oujda, laid the town in ruins. In 695 (1296) the Marinid Abī Yaḥyā having fortified his own frontier town of Tahtīr seized Oujdā and destroyed its defences. In the following year he seems to have wished to make Oujdā a base for his future expeditions. He rebuilt it; he erected a palace there, a citadel and a great mosque (probably that which still exists) and began the siege of Tiemcen which lasted eight years. In 714 (1314) the Marinid Abī Saʿīd delivered a fierce attack on Oujda which resisted and, presumably leaving troops in front of it to immobilise the garrison, he went on towards Tiemcen. In 735 (1335) Abī l-Ḥasan besieged Oujdā: it was taken and the fortifications dismantled. In 772 (1372), Tiemcen being occupied by the Marinids and Oujda being also in their hands, the Arab tribes of the region took the side of the dispossessed ʿAbī al-Walīd and laid siege to the town.

If these Arabs, the Dhāwī ʿUbaid Allāh of the great tribe of Maʿṣūl, were on this occasion supporting the cause of Tiemcen, it was not always so. They were for a long time on the side of the Marinids and were a serious danger to the ʿAbī al-Walīd on whose frontiers they were.

The tribes of the region, Arab as well as Berber, were also closely involved in the fighting in the 9th century between the Turks of Algeria and the Moorish sultān. In the town itself there were clans which supported each side. Authority passed from one side to the other, but it was only a relative authority, enjoyed precariously and intermittently. When peace reigned in the Maghīb and the sultān's orders were fully carried out, Oujdā formed part of his empire; if on the other hand the country was troubled and the power of the sovereign weakened, Oujdā went with the province of Tiemcen and belonged to the Turks (Voino). One of the few periods during which the authority of the sultān was firmly established in this remote province was the reign of Milīk ʿIsā (1053-1139 = 1647-1727), who brought to Oujdā Arabs from the south of Marrakesh, transformed them into a ʿAlīfī tribe [q.v.], strengthened the defences of the town, built several čalāq around it and organised the tribes of the plain. After his death the country lapsed into insecurity and anarchy. The Turks reappeared. Finally in 1795 a Sherifian force again took possession of Oujdā which henceforth remained under Moorish rule. An ʿAmmār (governor) represented the sultān in it.

In 1844 after the battle of Iflay, the town was temporarily occupied by the French as a punishment for the help given to ʿAbī al-Kādir by the sultān. The French troops reappeared there in 1859 and finally occupied it in 1907.

Oujdā, a town of old Morocco, where local government was non-existent had become a haunt of smugglers and fugitives from Algerian justice; it has been cleaned of all suspicious elements. The town, surrounded by its wall which however only dates from 1896, is surrounded by modern suburbs and beautiful gardens. The population is now about 30,000 of whom half are European.

Bibliography: al-Bukhārī, Dīwān al-Aṣr al-Afrīqī, xvi, p. 77-78; transl. in T.A., 1859, ii, 160; Ibn Khaladun, Histories des Berbers, ed. de Slane, 1544; transl., iii, 243 and passim; Ibn Ab
PADISHAH, the name for Muslim rulers, especially emperors. The Persian term padis
ah, i.e. (according to M. Bittner in E. Ober
hammer, Die Turken und das Osmanische Reich, Leipzig 1917, p. 103) "lord who is a royalty" in
which the root pad is connected with Sanskrit pal, lord, husband, son, pmn, Greek παῖς
boy, Lat. pānis (G. Curtius, Griech. Etymol., p. 377), was originally a title reserved exclusively for
the sovereign, which in course of time and as a result of the long intercourse of the Ottomans
with the states of the west also came to be approved for certain western rulers. In the correspondence
of the Porte with the western powers, the grand vizier Kayadja Murad Paşa (4. Aug. 5, 1612)
probably for the first time applied the title padishah to the Austrian emperor Rudolf II. At the conference
of Nemitow (1737) Russia demanded the title for its Czar (cf. J. v. Hammer, G. O. K., vii. 488) and
claimed it again at the negotiations at Bucharest (1773; cf. ibid., viii. 412). When padishah came to
be applied to the sultan, the padisba-i dev Oğham, does not seem to be exactly known. In
case it is found in conjunction with all kinds of rhyming words as early as the beginning of the xvi
century in Ottoman documents. Padishah therefore may have come to be used towards the end
of the xvi century, presumably instead of ābhāid (from ābāhid, i.e. S. of Padisba-i dev Oğham, and was regularly used till the
end of the sultanate (cf. the cry of padishahs tob or no paşa with which the sultan was until quite lately greeted by his troops and subjects).

ciellen osmanischen Sprache, Halle a. d. S. 1832, p. 3 and P. Horn, Grundriss der neupersischen Etymology, Strassburg 1893, p. 61, N. 99, 266
(where however another derivation is given, from Old Persian pad, protector, and xsh, ruler; cf. threcon Horn, in G. L. P., l. f. 274).
least. In 1785 a spiritual leader came down from the mountains with some thousands of followers and disciples in order to circumscribe the Christian population of the port of Padang, then the principal possession of the Dutch, and force them to adopt Islam (T. R. G. A. W. v. 55). The Minangkabauans managed to combine a strong Mohammedia outlook with the retention on a large scale of their old popular institutions. Matriliney still prevails among them. The administration of a village is conducted by the leading heads of families, the various sibis, i.e., union of families of different descent in common council. The form of government is republican. Every matter of any importance is considered by all the prominent families, their chiefs and other leading men (musaphah, At. musafah). It is a wearisome process, not calculated for speedy decisions. A society organised on these lines is naturally at a disadvantage against vigorous and powerful attacks.

In the beginning of the 16th century three Minangkabau pilgrims came home. They had seen Wahabhi rule in Mecca (after 1806). Filled with the puritan zeal of the Wahabhi, they set out to purify the religion of their own land. They were able to win over to their views a prominent theologian of the central district of Agam named Tanuku nan Rentiüh (Tanuku is a title for a theologian). He at once set to work. He first of all insisted on the exact observance of the law, particularly in ceremonial. Popular customs which in his opinion were contrary to the shari'ah were attacked, such as cock-fighting, which was associated with betting and was the most popular pastime of the people, dice, drinking of palm-wine, opium-smoking, betel-chewing, filing the teeth, wearing long nails, smoking tobacco. All these were forbidden. The prohibition of interest was insisted upon. The men were to cut their hair, let the beard grow and wear white clothes in the Arab style. The women were to wear veils. Finally the Padriis dealt a blow to the matriarchal institutions by taking their women into their houses with them (do Stuers, I. 185, footnote 3). The prohibition was to be strictly taken from Wahabhi practice, while the other prohibitions and commands all find a place in the Shafi'i school. It is also evident from Tanuku nan Rentiüh's attitude that he did not intend to institute Wahabism. In the same district of Agam lived a highly respected and very influential teacher: Tanuku Kothi tas; he was guru scharbat (At. tasbat), a master of mysticism; to what order he belonged is not known. Mysticism of a popular kind is much cultivated in Minangkabau; Tanuku nan Rentiüh turned to him, not to quarrel with him but to seek his cooperation. The Tanuku Kothi tas agreed that a strict observance of the law should be aimed at; but when Tanuku nan Rentiüh insisted that if any one did not perform the sabbah correctly he was a murtadd and was liable to the penalty of death as hadd, Tanuku Kothi tas met him with the milder doctrine that the murtadd should not be put to death, unless every effort to bring him to the true faith had failed, a case which however did not exist and was not to be expected. Tanuku nan Rentiüh now went his own way. After the Minangkabau custom, he summoned an assembly which was to approve his views. He met with enthusiastic approval from the theologians but with opposition from the chiefs; for the latter recognised at once that the Padri demands attacked their positions and would overthrow the whole social system. Tanuku nan Rentiüh went vigorously forward. With his own hand he stabbed his mother's sister whom he caught smoking; the body was thrown into the forest and not allowed to be buried. The effect was considerable; his followers applauded the deed, his silent or open enemies shrank back; he who had done such an unprecedented thing as not to heed the bonds of blood must be acting under a higher inspiration; it was not cruelty but self-sacrifice; the reformation went on with fanatical zeal. Whoever omitted a sabbah had to pay a fine; for a second offence the punishment was death. Opponents were overcome by force, their villages burned, themselves killed or made slaves or at least made to pay an indemnity. Soon the greater part of Agam and of the district of Tanuku Kothi tas were in his power. Several villages which had already yielded to pressure and adopted the stricter teaching of Tanuku Kothi tas were also plundered and burned. In the end the doings of his followers were too much for the leader and he retired after about eight years. It was only at a later date when the Dutch troops entered the country that he again placed himself at the head of the movement. He died in 1832.

The procedure adopted by Tanuku nan Rentiüh was as follows: after a village had been taken, he appointed on his own authority an imam and a haddi (At. haddi); the former was head of the mosque and had control of all religious matters; the sphere of activity of the haddi is not quite clear. In any case, this proceeding was revolutionary; by constitutional law the offices were hereditary with certain limitations; important decisions could only be made by musaphah (see above).

Another teacher, Ta in ku Pasaman also called Tanuku Linteau, was active in the south east in the district of Lintan. Less well known than Tanuku nan Rentiüh he in no way yielded to him in fanatical ardour. Linteau was soon in his power. He then entered the adjoining territory of Tanah Datu's. Here in the old capital lived in a faded glory of their former greatness the descendants of the royal house of Minangkabau. Well led, their power might have resulted in a restoration of their former greatness. Tanuku Linteau had them all murdered, except one who escaped across the frontier. Burning and murdering, he brought the whole land under his rule.

A third centre of Padri activity was Alahampandjang in the north. The movement began here at the same time as in Agam and Lintan. Very soon there came to the front here a man who is best known by his later name of Tanuku Imam, first as an adviser and then as the leading figure. We possess exceptionally a native source for the life and deeds of this important figure. Quite recently a Malay work, a kind of biography written by one of his sons, has been discovered and published (see Konkel, Indische Gids, 1915). The Padris of Alahampandjang began by building a fortress which they called Bondjo. Here the strict doctrine was observed and it was the central position of their power from which they sent out expeditions in all directions. Invited by sympathisers they would go to a village and subject it to a haddi, as Tanuku nan Rentiüh did, and return to Bondjo with rich booty. The bio-
graphy relates that campaigns were undertaken 

tervals of about a year. This was the period 
of Tumak Imam’s rise to be known for many 
matters he was invincibly insistent in 
all matters requiring intelligence and reflection 
so that all quarrels and disputes were finally brought 
to him." - Four men were sent to Mecca 
to guarantee the purity of the doctrine. After a long 
time they returned, even more strict. There was 
not yet regular spiritual intercourse with Mecca. 
Pilgrims were very few in number.

As soon as the Padris had overcome or driven 
away the supporters of the Adat, the latter tried 
to involve the English who had occupied Padang 
in 1795 in their agitation, but they could get no 
help from them. It was not until 1818 that the 
first post was established in the highlands by Sir 
Stanford Raffles. But its weak garrison could effect 
nothing, it was attacked by the Padris but without 
out success. When in 1819 Padang was again 
besieged over to the Dutch, they maintained 
and strengthened this post. In 1822 the offensive 
was assumed and lasted with some interruptions for 
15 years. The Dutch colonial government troops 
were as a rule superior to the natives in the fighting 
but the attacks of the latter were continually 
assumed. Finally in 1832 all activity by the Padris 
stopped. Tumak Imam, who had till then held 
out in Bondjol, surrendered. He then secretly 
paid for a rising which broke out in the beginning 
of 1833. The Dutch colonial troops who were 
distributed in small detachments over the entire 
country were almost wiped out. It soon became 
clear that members of the party who had invited 
the foreigners into the country were on the side 
of the Padris. Historians have shown that errors 
of policy by the military leaders and the not always 
tactful conduct of officers and men contributed 
to produce this misfortune. The truth of this cannot 
be disputed, but it should be pointed out to 
explain the altered attitude of many Malays that 
the strict rules laid down by the Padris of the 
early period became less rigid in course of time. The strength of the movement had been 
weakened by internal quarrels. Tumak Ketik 
fall, at one time attacked by Tumak nan Rendja’s 
successors, was revered as a saint in 1827, soon 
after his death. Padri and non-Padri made pilgrimages 
to his tomb. With the presence of the Dutch- 
Indonesian troops the Padris could no longer deal so 
harmfully and arbitrarily with their fellow-countrymen. 
Their popularities had increased. It is said in the 
biography of Tumak Imam of Bondjol, the bulwark of extremism: “the country was governed 
always according to the sayat-sayat; the tribal chiefs relied 
upon it, when disputes arose the matter was 
brought before the four legists, in matters of 
common law however, the decision was left to the 
chiefs”, Tumak Imam a little later told his son: 
“the authority of the common law shall be 
recognised by you, and follow as faithfully as possible 
the adat!” [q.v.]. During the pauses in the siege 
of Bondjol the Padris used to exchange tobacco with 
the soldiers; Padri and non-Padri had drawn 
money to one another. When the Padris summoned 
their compatriots to fight against the unbelievers, 
the appeal found an echo in wide circles.

After the rising the colonial troops again assumed 
the offensive. Gradually the conquerors enforced 
their authority. Only the Padris of Bondjol still 
resisted, they now formed the war party; any one 
of like views joined them. When the fortress 
was finally stormed in 1837, the Padri movement came 
to an end. Tumak Imam finally surrendered 
and was banished. The object which the Padris had originally aimed 
at was not attained; the matriarchal institutions 
still survived. If the movement had exerted any 
influence at all, it was in the direction of a more 
accurate and general observance of all the law especially 
of ceremonial. Nothing very definite can be said 
about it. We have no information about the 
situation in the country before the rise of the 
Padris. The movement can hardly have passed 
without leaving any trace at all.

PAHANG. [See MALAY PENINSULA.]

PAI5 (Hindi), anglicised, the smallest 
Indian coin of British India = 1/12 of 
an anna. Originally, in the East India Company’s 
early experiments for a copper coinage, the pie 
as its name implies, was quarter of an anna 
or pie [cf. PAIS5]; since the Acts of 1835, 1844 
and 1870, however, the pie has been 1/3 of a 
anna.

(P.A. ALLAN)

PAIS5 (Hindi), anglicised, pie, a copper 
coin of British India = 5 pies or 1/4 of an 
anna. Under the Moghuls the name paisa became applied to the 
older dinar, introduced by Shih Shih, 60 of which 
went to the rupee, as the unit of copper currency; 
the name found on the coins however is usually 

called the official name for the extensive copper coinage coined in the 
seventh and eighth centuries by the numerous native 
states which arose out of the Moghul empire (cf. 
J. Plimpton, Urdu Table, ed. E. Thomas, London 
1858, p. 52 sqq.)

(P.A. ALLAN)

PAHENG, PALLIENG (v.), lit. string, rope, 
halter, cord, is applied to the cord worn 
by dervishes around the neck, at the end of 
which hangs a many-rayed star of cornelian, 
the size of a crown piece, called tezlim bâg, 
which is given to the young dervish at the end of 
his discipleship. With some, especially the 
Bektashi dervishes [cf. BEKTASI], a number 
of olive-shaped, whitish-grey, transparent stones 
are strung on the cord; these are found in Mesopotamia 
and called dûrâ-Neftî ("Pearls of Neftî"). The jumper 
(Turkish şişem) from which the tezlim 
stones of the Bektashi monks are made is said 
to be found in the neighbourhood of the town of 
Hajdari Bektash.

Pālānprū, a Muslim state in India now included in the Western India States Agency. The territory incorporated in this agency includes the area formerly known as Kāthikwār together with the Cutch and Pālānprū agencies. Its creation in October 1924, marked the end of the political control of the Government of Bombay and the beginning of direct relations with the Government of India. The old Pālānprū Agency with its headquarters at the town of Pālānprū was a group of states in Gujārat [q.v.] lying between 23° 25' and 24° 41' N., and 71° 16' and 74° 46' E. It was bounded on the north by the Rājpūt states of Udaipur and Siroh; on the east by the Mahārāṣṭrā Agency; on the south by the state of Baroda and Kāthikwār; and on the west by the Rāmm of Cutch.

The state of Pālānprū was conquered towards the end of the sixteenth century by Lohānī Pathāns, subsequently known as Dīthlorī. A short account of its history, under the Mughal emperors will be found in the Gazetteer of Bombay, v. 328—324, and in the Mirābī Alamī, (Ethē, N.B. 3599, fol. 741). British relations with this state date back to the year 1809, when, through British influence, arrangements were made for the payment of tribute to the Gāskwār of Baroda (Alīchīsīn, vi., ixxix.). This engagement was further strengthened by an agreement signed on November 28, 1817 (C. U. Alāchīson, vii., 24), in which all rights and liabilities assumed from the Gāskwār were abolished and the finances of the state remained under British supervision until 1824 when the ruler of Pālānprū was entrusted with the management of his own finances. Pālānprū is still ruled by Lohānī Pathāns. It has a population of 354,179, of whom 254,000 speak Gujāratī. The distribution of population according to religion is as follows: Hindus, 223,714; Muḥammādians, 28,690 and Jains, 12,542.

(C. Collin Davis)

Palmyra, Tadmur, now Tadmur, the ancient Tadmōr, called Palmyra by the Greeks (probably a corruption of the older name by a popular etymology; cf. Hommel, in Z.D.M.G., xxiv., 547; M. Hartmann, in Z. D. P. V., xx/ii., 128-190) lies northeast of Damascus in the great desert in an oasis watered by two springs. The water is sulphurous but drinkable after it has settled. The climate is unfavourable, having great differences of temperature between day and night and being unbearable but in summer and sometimes having snow in winter. What it lacked in climatic conditions was compensated for by its situation which made Tadmur an important junction on the caravan routes connecting east and west, notably that from the Emirates to Damascus. The natural supposition that the place was already of importance and settled in very early times has been confirmed by several inscriptions of Tīglat—Pileser I of the 11th century B.C. because the "town of Tadmur in the land of Amurru", which the Assyrian kings mentions, can hardly be anywhere else (R. Meisner, in G. Z., 1923, p. 157; Darrieu, in R.B., 1924, p. 106). Otherwise the city is not mentioned till shortly before the beginning of the Christian era and in the Old Testament only in a peculiar quid pro quo. While in I Kings 18 in the accepted text it is said that Solomon built Tamar (in southern Palestine) among other towns, the Chronicler (ii. 8, 4) followed by the variants and by Josephus, Archaeology, viii. 6, 1, gives Tadmor instead. From this it appears that the latter in his time must have been of some fame and size and also that the later widely known legend according to which Solomon built the wonderful city was already in existence. This story was known at a later date to the Arabs among whom it was related, in keeping with the fantastic elaboration of the legend of Solomon, that the djinn helped the king in the work (cf. Naqšīb, 190, v. 32; W. R. W. Gruffydd, p. 514 and several of the Arab geographers mentioned below; according to Ibn Al-Āthir, ed. Tornberg, i. 166 the queen Bilkis visited Solomon in Tadmur and is buried there).

Its incorporation in the Roman empire was of the greatest importance for Palmyra. It's already busy trade increased enormously and great wealth poured into the town, surrounded by the dreary desert (on the roads connecting Palmyra with the outer world see Dussaud, Topographie historique de la Syrie antique et médiévale, 1927, p. 248—270). From this period dates the brief but accurate account of Palmyra by Pliny (Hist. nat., v. 25). The merchants were able cleverly to maintain connubium between Rome and Parthia for their own advantage, and the conditions, when the emperor Hadrian, by the clever stroke of policy of leaving Assyria and Mesopotamia to the Parthians, inaugurated a long period of peace, contributed still more to the prosperity of the town. The custom of the year 136 written in Aramaic and Greek gives a vivid picture of the business life of the Palmyrene republic in this period, while the splendid ruins of the temple of the sun and of several other fine buildings show how highly developed was the artistic sense of its citizens under Greek influence. In the third century, further prospects opened up which induced the Palmyrenes for a brief period to dream of a new power in the east with their city as its centre. At the beginning of the third century arose the new Persian dynasty of the Sāsānians which revived the ancient bitter feud with the Romans so that the Palmyrenes again had an opportunity to use their diplomatic ability. The Palmyrenes under Odenathus (Udbina) II at first wanted to join the Persians under Shāpūr (224—272) but, when his offer was rejected, he joined the Roman general Ballista in Asia Minor and inflicted a heavy defeat on the retreating Persians. Under Gallienus he became the actual ruler of the whole of the east and was given the title Augusta by the emperor. When in 266—267 he was murdered, his dignity passed to his son Vaballathus, but the real power was in the hands of his widow Zenobia (Zainab), a highly gifted lady who extended her kingdom, notably by the conquest of Egypt. This was done with the approval of the emperor Aurelian, but Palmyra soon rebelled against the Romans and in 270 a battle was fought in which Zenobia was
defeated. Palmyra then surrendered. When it rebelled again, Aurelian had the city with its fine buildings destroyed. Zenobia died, was captured and brought to Rome. This queen, distinguished alike for her beauty and intellect, made a great impression on her contemporaries and her memory survived among the Arabs under the name of al-Zubaydah although only in fabulous tales in which little of history remains. She is said to have enticed the Arab king Najdil, [q. v. and the article q. a.] to her and then killed him by opening his arteries. Her nephew 'Amr b. 'Abd wished to avenge his blood. But was forced by the cunning of the king to do so and when the latter by stratagem got the cunning queen in his power, she took poison which she always carried in a ring she wore, in order not to be put to death by him.

With the fall of Zenobia, Palmyra lost its importance. The walls however were rebuilt although not on the former scale but the trade, the source of the town's livelihood, began to dry up. In this period Christianity began to spread in the town; bishops are mentioned and Justinian among others built a church there. Palmyra remained under Roman rule for about 31/2 centuries until the Arab conquest put an end to it. When Khalid b. al-Walid approached the town on his celebrated campaign, the inhabitants thought of defending the town against him but abandoned the idea and capitulated voluntarily in order to secure the status of dhimmi. [q. v.] they seem however to have rebelled again for it was only when Yazid sent Dhibay against it, after the taking of Damascus, that it was finally subjected.

Palmyra never regained its former prosperity under Muslim rule. It was inhabited mainly by Kalbids and was one of the towns which rebelled against Marwan II who set out with an army against it. An agreement was come to however but according to Ibn al-Fakhr (298 = 902), Marwan had a part of the walls destroyed. According to the legend, he abandoned the idea of destroying the town completely when he came upon the corpse of a richly dressed woman on whose forehead was a plate of gold with an inscription warning him against doing so.

Several Arab geographers mention Tadmur but very briefly. Some of them speak of the wonderful buildings and ruins, and as a rule they repeat the old legend that the town was built by Solomon with the help of the djinn. Ya'qub makes the intelligent observation that people are everywhere inclined to attribute great buildings to this king. The terrible earthquake of 1357 affected Palmyra. Benjamin of Tudela (1173) makes the rather remarkable statement that no fewer than 2,000 Jews able to bear arms lived in the town. Dimishki mentions along with incomparable ruins the djinni, the roof of which was forched of 13 stones. The strong citadel of Ka'atat al-Mansur north of the town is ascribed by the inhabitants to the famous race king Fakhr al-Din [q. v.]. But this is doubtful. Palmyra disappeared in the period of great decline in the east; its inhabitants flocked to the, then enriched village built on the temple of the sun, quite forgotten by the west. Not till 1675 was the once so famous city again discovered by members of the English factory at Aleppo and in 1751 it was more closely explored by Robert Wood and described in a handsome volume. When traffic began to revive again, Palmyra resumed its importance as a station on the caravan routes and in quite recent times new life has been given it by the motors, the new means of transit across the desert; these give a rapid and comfortable connection between Palmyra and the cities of east and west.

(FR. BÜHL)

PAMPOLUNA, Sp. Pamplona, Al. BANJALUNA, a town in the north of Spain, capital of the province of Navarre, has at the present day about 30,000 inhabitants. It was conquered by the Arabs in 1011 (728) during the rule of the waal Oghba b. al-Hajjâl. But the occupation of the town and its territory was of very short duration. It soon became the capital of the province of Navarre when García Ilúgo tried to found a small independent state; later at the beginning of the tenth century, it was the capital of the first king of Navarre, Sancho Abarca. Several expeditions were sent against Pampeluna by the Umayyad emirs of Cordova, in 228 (843), 246 (860), and 260 (874). Abd al-Rahman III succeeded in taking it for a time in 312 (924) in the course of his campaign against Navarre and destroyed it. Other attempts against Pampeluna were made by the Muslims in 322 (934) and during the rule of the two Amisil Al-Hajjis al-Mansur [q. v.] and al-Mu'tasim [q. v.].

(E. LEY-PROVENCAL)

PANDJÂB, the land of the five rivers, is a province of modern India which, together with the North-West Frontier Province and Kashmir [q. v.], occupies the extreme north-western corner of the Indian Empire, and, with the exception of
the recently-constituted Delhi province, comprises all of British India north of Sind and Rajputana and west of the river Jamma. Geographically therefore it includes more than its name implies, for, in addition to the country watered by the Jhelum, Chenab, Rawal, Beas, and Satlej, it embraces the table-land of Sihind between the Satlej and Jamma, the Sind-Sagar Doab between the Satlej and the Indus, and the district of Dera Ghaz Shāh. Administratively the province is divided into two parts, British territory and the Panjab States. British territory, which has an area of 93,665 square miles and a population of 23,582,552, is divided into 49 districts, each administered by a deputy-commissioner. These districts are grouped into the five divisions of Ambalā, Dīllīnagar, Lāhore, Rāwālpindi, and Multān, each under a commissioner. The Panjab States have an area of 37,699 square miles and a population of 4,910,005. The conduct of political relations with Dīllīnagar, Pātawādī, Kalsia, and the 27 Simla Hill States is in the hands of the Panjab Government. The remaining states of Lohārī, Sīrūr, Bhāispur, Mandi, Suket, Kupurthāl, Malār-Khāla, Fānīkūt, Čambī, Rāwālpindi, and the Pūlīkāns of Pattālāh, Dīllī, and Nāthā, are directly under the Government of India.

The history of this area has been profoundly influenced by the fact that the mountain passes of the north-west frontier afforded access to the Panjab plain. For this reason it is ethnologically more nearly allied to Central Asia than to India. The recent excavations at Harappa in the Montgomery district are evidence of a culture which probably flourished in the Indus valley about 3000 B.C., and which bears a general resemblance to that of Elam and Mesopotamia (Sir John Marshall, Mohenjo-Darā and the Indus Civilization, 3 vols., 1931). But the first migration of which we have any evidence is that of the Arya-speaking peoples who established themselves on the Panjab plain in pre-historic times. Centuries later successive waves of invaders swept like devastating torrents through the mountain passes of the north-west. Persian, Greek, and Afghan, the forces of Alexander and the armies of Mahommed of Ghazni, the hosts of Timūr, Bihār, and Mirābī Shāh, and the troops of Aḥmad Shāh Durrāntī [cf. these articles], all advanced by these routes to lay waste the fertile plains of the Panjab. All these migrations and invasions added to the heterogeneity of the existing population in the land of the five rivers. The history of invasions from Central Asia proves that the Panjab and the frontier zone from the banks of the Indus to the Afghan slopes of the Sulaimān range have never presented any real barrier to an enterprise-minded. The Sulaimān range itself has seldom formed a political boundary, for the Persians, the Persians, Manṣūrā, the “Mogul” line, the Kāshmir valley of the Yūsuf and the Himalayas all beset this mountain barrier.

The capture of Multān [q.v.] by Muhammad b. Khāsim [q.v.], in 723 A.D., extended Arab power to upper Sind and the lower Panjab, but the same threat to Hindustān came from the direction of modern Afghanistan. The Ghurāwal invaders found the powerful Hindūkush dynasty of the Dinarīd family ruling between Lāmāchān and the Čingh. The power of this Hindu state was completely destroyed by Mahommed of Ghzān who annexed the Panjab, which became a frontier province of his

extensive empire and the sole refuge of his descendants when driven out of Ghzān by the Shāsābātī Sulṭān of Ghūr [see Shāsābātī]. Multān and the surrounding country had remained in Muslim hands since the days of the Arab conquest, but the fact that its rulers were heretical Karmājians [q.v.] was one reason for Mahommed’s attack in 1006 A.D. Muhammad Ghzān annexed the Panjab in 1186 A.D. and on his death in 1193 it definitely became a province of the Sulṭānate of Dīllī under the rule of Khūlī ad-Dīn Ālab. With the exception of occasional rebellions and raids from Central Asia it remained under the Sulṭānate of Dīllī until the death of Ibrāhīm Lodi [q.v.] in 1526 A.D. paved the way for the foundation of the Mughal empire. Under Akbār [q.v.] the modern province of the Panjab was included in the sīkhs of Lāhore, Multān, and Dīllī, a detailed description of which will be found in the Alā’-ul Akbār (trans. Jarrett, II, 278–341).

The persecuting policy of Akbār’s immediate successors led to the growth of Sikh political power in the Panjab and transformed a band of religious devotees, founded by Guru Nānak in the second half of the fifteenth century, into a military commonwealth, or Khāṣhā animated with an enduring hatred towards Muslims [cf. the article Sikh]. The weakness of the central government and the unexploited condition of the frontier provinces under the later Mughals exposed Hindustān to the invasions of Nādir Shāh [q.v.] and Aḥmad Shāh Durrāntī [q.v.]. On the bloodstained field of Panipat, in 1761, the Marāñjas, who were aspiring to universal sovereignty, sustained a crushing defeat at the hands of the Afghan invader. In the following year, at Bārnālī near Lūthānā, Aḥmad Shāh disastrously defeated the Sikhs who had taken advantage of his absence in Kāth to possess themselves of the country around Lāhore. The Sikhs, however, soon extended their sway to the south of the Satlej and ravaged the country to the very gates of Dīllī, but their further advance was checked by the Marāñjas who had rapidly recovered from their defeat at Panipat. It was the Marāñjas who led by Lord Luitzen, in 1803, which facilitated the rise of Ranjit Singh and enabled him to found a powerful Sikh kingdom in the Panjab. His attempts to extend his authority over his co-religionists, the Ghīr-Satlej Sikhs, brought him into contact with the British, and, by the treaty of 1809, he pledged himself to regard the Satlej as the northwest frontier of the British dominions in India (Altchison, viii., III, 2). After the death of Ranjit Singh, in 1839, his kingdom rapidly fell to pieces under his successors. Revolution succeeded revolution, and during the minority of Dalīp Singh the Khāṣhā soliety became virtually rulers of the country. Unprovoked aggression on British territory produced two Sikh wars which ended with the annexation of the Panjab in 1849.

At first the newly-conquered territories were placed under a Board of Administration. This was abolished in 1855, its powers and functions being vested in a Chief Commissioner. In 1859, after the transfer of the Dīllī territory from the North-Western (now the United) Provinces, the Panjab and its dependencies were formed into a Lieutenant-Governorship.

The annexation of the Panjab by advancing the British administrative boundary across the Indus
brought the Government of India into closer contact with the Pathan tribes of the north-west frontier and the Amir of Afghanistan (p. v.). Because this frontier was too long and too mountainous to admit of its being defended by the military alone, much depended upon the political management of the tribes. At first there was no special agency for dealing with the tribal races, and relations with the tribesmen were conducted by the deputy-commissioners of the six districts of Haskell, Peshawar, Kohat, Bannu, Dera Isma'il Khan, and Dera Ghazi Khan. In 1877, the three northern districts formed the commissionship of Peshawar, the three southern ones that of the Deradjat. The system of political agencies was adopted until 1878, when a special officer was appointed for the Khyber during the Second Afghan War, Kurram became an agency in 1892, while the three remaining agencies of the Malakand, Tochi, and Wazir were created between 1895 and 1896. The Malakand was placed under the direct control of the Government of India from the outset, all the other agencies remaining under the Pandjâb Government. This was the arrangement until the creation of the North-West Frontier Province in 1901.

The Pandjâb attained its present dimensions in 1911 when Dihl became a separate province. It was not however until 1921 that it was raised to the status of a governor's province. To-day it contains 14,930,000 Mahommadians, 3,600,000 Hindus, and 4,072,000 Sikhs. Unfortunately the spirit of communal antagonism has been fostered in the province by the activities of the Zeenat Islam, and Shudh movements organized by Muslims for the purpose of combating the proselytizing activities of the Hindu community known as the Shudh movement. In 1926 Swami Sharanand, a leader of the Shudh movement, was murdered in Dihl by a Muslim. Communal relations were further embittered by the murder in Lahore of a Hindu book-seller who had published a libellous attack on the character of the Prophet of Islam in his book entitled the Rangila Rasul. Far more serious than this communal strife were the political disturbances culminating in the Dhillawala high incident of 1919 (Sir M. O'Dwyer, India At & After the, 1925).

At least 90 per cent. of the total population live in villages and 60 per cent. is supported by agriculture, for the Pandjâb is a country of peasant proprietors. But the bulk of the cultivators are born in debt, live in debt, and die in debt. Almost the whole of this money has been advanced by Hindus and Sikhs who are not debared by religion from the taking of interest, but, unfortunately, well over half of this debt has been incurred by Mahommadians. No community can hope to thrive under so great a handicap and some organisation to combat this evil is essential to the prosperity of the Mahommadian community.

**PANDJÎH, (Pendjih)** a village in the Turkoman republic of the U.S.S.R., situated to the east of the Kughâh river near its junction with the Murghâb at Pâlì Kîght. The fact that the inhabitants of this area, the Sarik Turkomans, were divided into five sections, the Sokhit, Harkhâh, Khorshâh, Baliz, and the All Shih, has been put forward as a possible explanation of the origin of the name Pendjîh, but it carries no weight as the Sariks were only nineteenth century immigrants whereas the name was in use in the fifteenth century.

This obscure name owes a somewhat melancholy importance to the “Pendjîh Incident” of 1883, when an Afghan force suffered heavy losses in an engagement with Russian troops. History proves that an ill-defined boundary is a potential cause of war. It was a knowledge of this and the Russian occupation of Merw, in 1884, that gave the necessary impetus to negotiations which ended in the appointment of an Anglo-Russian Boundary Commission for the delimitation and demarcation of the northern boundary of Afghanistan. Trouble immediately arose in this quarter for while the Russians contended that the inhabitants of Pendjîh were independent the British held the view that they were subjects of the Amir of Afghanistan. According to the British, the district of Pendjîh, which comprised the country between the Kughâh and Murghâb rivers from the Band-i Nadir to Ak Tepê, together with the rest of Badghis, formed part of the Herat province of Afghanistan. During the first quarter of the nineteenth century Pendjîh had been occupied by Djamgidis and Hazaras. Towards the end of this period some Turkomans of the Erarti tribe, whose settlements were scattered along the banks of the Oxus between the Çardij and Bâlkh, moved to Pendjîh and obtained permission to settle there. Salor Turkomans had also settled in this area. About 1857 the Erartis migrated from the coast of Pendjîh and soon afterwards the Sarik Turkomans, forced southwards by their more powerful neighbours, the Turkestânis, occupied Valatan and Pendjîh and compelled the Salor families to migrate elsewhere. Although therefore, Pendjîh had from time to time been occupied by various tribes, they had all, whether Djamgidis, Hazaras, Ersis, Sarors or Sariks, acknowledged they were on Afghan soil, and paid tribute to the Amir or deputy of the Afghan governor of Herat. The Sarik Turkomans had even supplied the Amir with troops. The British therefore contended that the district of Badghis, of which Pendjîh formed a part, had long been under Afghan rule (Foreign Office MSS. 65, 1205).

The Russians on the other hand contended that
the people of this oasis had always enjoyed independence. Lessar, a Russian engineer, who visited Pendjeh in March 1884, discovered no trace of Afghan authority, but a Russian doctor, Dr. Regel, who visited it in June of the same year reported the presence of an Afghan detachment. In their opinion therefore Pendjeh had only recently been occupied by Afghan troops.

The fact that the Afghans had not permanently garrisoned this area was no proof of its independence. On the contrary, it was only natural that, after the Russian occupation of Merw and Pul-i-Khatun, 'Abd al-Rahman Khan should have taken steps to indicate his sovereign rights over this area. When, therefore, an Afghan garrison occupied Pendjeh, the Russian Government immediately protested and disputed the Amir's claim to the territory. While negotiations were taking place, between London and St. Petersburgh, events moved swiftly on the frontiers of Afghanistan. On March 29, 1885, General Komarov sent an ultimatum demanding the withdrawal of the Afghan garrison. The Afghans resolutely refused to withdraw whereupon the Russians attacked them driving them across the Pul-i Kighti with the loss of some 900 men. It must be admitted that the posting of Afghan troops in Pendjeh, and the Russian advance to Yelatan on the Murghab and to Pul-i-Khatun on the Hari Rud, were regrettable actions almost certain to precipitate war. The whole incident should have been avoided, but the confusing reports of Lummis, the British Commissioner, to the Foreign Office, and the delay of Zelenoi, the Russian Commissioner, in arriving at Sarakhs complicated matters still more.

At the time this incident seemed likely to embroil Russia and Britain in war, but, fortunately, the good sense of the Amir, who was at this critical moment as a visit to the Vicerey, and the diplomatic skill of Lord Dufferin prevented this, for even the pacific Mr. Gladstone had proposed to Parliament that £11,000,000 should be expended on preparations for war.

It was finally agreed that Pendjeh should be handed over to Russia in exchange for Dhu'-l-Fihr, and by the treaty of 1886 the northern boundary of Afghanistan had been demarcated from Dhu'-l-Fihr to the meridian of Dukki-i-Sulaim, a distance of forty miles of the Oxus. After a dispute as to the exact point at which the boundary line should meet the Oxus, the process of demarcation was completed in 1888. This recognition of a definite frontier between Russia and Afghanistan led to a decided improvement in the Central Asian question.

PANGULU (Jaw., pangulu (Sund.), pangole (Madur.)), literally "headman, district officer" used in the eastern Indian Archipelago as the name for secular and religious chief administrators in the islands of Java and Madura, the name of a mosque official, usually the chief in his area. The official representatives of religion are organised there on the same scheme as the native administrative officials. Alongside of the regent, the highest administrative official, is the pangulu of the regency, alongside of the head of the district is the pangulu of the district, called the pangulu adat, or briefly adat, and so on. The officials of the mosque are ranked in a hierarchy: the pangulu at the capital of the regency is at the head of all the personnel of the mosques of the regency. The village official in charge of the mosque services is of a different origin. He is a member of the village authority for attending to the religious requirements of the village and does not belong to the staff of the mosque. This man is exceptionally called pangulu in Bandung (Western Java); elsewhere he is known by other names.

The pangulu is the director of the mosque and the chief of its personnel; according to adat law, he is appointed, like the rest of the staff of the mosque, by the regent, usually being chosen from the staff of his own or another mosque. This procedure does not always guarantee that the man appointed is specially qualified (see below).

Theological training is quite free from special prescriptions. The student of theology, whether he intends to take up an official position or remain a private student, studies at schools (all private institutions of which there are many in the land). Each student, as he pleses, for shorter or longer periods, is therefore to an extent to attend lectures at several schools.

The functions of the pangulu are very varied, but not uniform throughout the whole regency. The office of director of the mosque has already been mentioned; in larger villages, especially at the capital of the regency, the staff is large; there the pangulu does not himself take part in the work. The pangulu has charge of marriages which are concluded in his presence: jil'at and rind'at are pronounced by him and marriages are registered by him. The pangulu of a regency only performs this office in the case of very prominent families; in this case: it is the custom to conclude the marriage in the house of the family. The pangulu also performs the ceremony when the mabri signs the marriage register, a regular custom, observed by the majority without the reason being quite clear to them; to the popular mind the pangulu is the person who signs the marriage. It is therefore a very old custom to have the marriage performed in the mosque by the pangulu: this unwritten custom has now been given the force of law by a colonial enactment (since 1895, the law in question is of 1929). This law also regulates fees to be paid at marriages, pronunciations of jil'at and rind'at, taking the old customs as the guiding principle. These fees form the most important part of the income of the pangulu and his staff; the latter also receive their share; if properly qualified, they frequently act as deputy for the pangulu at marriages. Women who have no mabri are married by the pangulu as wali jil'at. The number of pangulus with this qualification is always less than the number of officials appointed to perform marriages. In some districts the regent appoints himself wali jil'at in practice; he leaves the exercise of his rights to the pangulu.

The djakat (Ar. jā'ah) is of course not collected in Java and Madura by the authorities; it is, if it is levied at all, a free-will offering and in many places insignificant. Only in Western Java was the collection at one time organised and in the

PANGULU – MARB

LEIDEN
LATE E. J. BRILL LTD. 1936

LONDON
LEZAC & C°
46 CARNABY STREET
The pangulus in the native states are appointed by the princes; their sphere of activity is the same. Whenever a new pangulus is appointed he is given his appointment as ṣaḥāf by an edict "in confirmation of my oral command", as the phrase is, in order to comply with the demands of the ūmarā'. In this edict the pharaology suggests that the ruler may give the ṣaḥāf in the name of the pangulus.

The Netherlands Indies colonial law requires the presence of the pangulus when Muslims appear in the government courts as accused in civil or criminal cases. A number of such assessors are attached to each court according to its requirements. They are appointed by the government and chosen from the personnel of the mosques. It is arranged that the director of the mosque is at the same time an assessor. The right of appointing pangulus lies thus gone out of the hands of the regents into those of the colonial administration. As the pangulus is usually chosen from the lower staff, the government has been able to secure influence over the appointment of these minor officials so far as they are capable of being pangulus. The object is to choose as competent men as possible, so that the prestige of the pangulus has increased in the Muslim community. This is less true of their position as assessors at the courts; the colonial law intended that the court should be addressed according to the adat (tritional law). The choice of the pangulus was therefore a mistake, as the latter goes by the ṣaḥāf books.

The word pangulus as the name of a mosque official is not unknown outside the islands of Java and Madura. In some places there are pangulus whose work resembles that of the pangulus of Java, e.g. in the centre of the former sultana of Palembang (Sumatra). The colonial authorities have retained the name; they have also given the name to the court assessors appointed by the regents in the districts where the name was not previously in use.

Bibliography:

PANIPAT, a town and ṣaḥal in the Karnal district of the Panjab (q.v.). On three occasions has the fate of Hindustan been decided on the plain of Panipat: in 1526, when Bihur (q.v.), the Barī Tank, defeated Ibrahim Lodi in 1556, when Akbar (q.v.) crushed the forces of Hemū; and lastly, in 1781, when the Marāthas whose defeated by Ahmad Shāh Durrānī (q.v.). The geographical factor combined with internal decay and a weak system of frontier defence has been chiefly responsible for this. From the strategic background of Afghanistan the path for invaders lay along the lines of least resistance, the Khyber, Kurram, Tochi, and Ginnal passes, on to the Panjab plains, for the Indus has never proved an obstacle to an enterprising general. Checkered on the south by the deserts of Rājputana, invading armies found on the Jumna and Djamna valleys through the narrow bottleneck between the north-eastern extremity of the desert and the foot of the Himalayas.

Bihur's success over Ibrahim Lodi, in 1526, has long been regarded as resulting from the extensive employment of artillery. The source of this error is to be found in an inaccurate translation of the word अयुर. It is true that 700 अयुर were used
by Bibur, but it is incorrect to regard these as gun-carriages, for the word simply means "carts". There is no textual or circumstantial evidence for supposing that Bibur had guns in such numbers as to demand 700 gun-carriages for their transport. Indeed, from Bibur's "Autobiography" it may be inferred that he possessed two guns only and Bibur himself makes his victory a bowman's success. The importance of the first battle of Panipat is that it decided the fate of the Lodi dynasty. Far more formidable was the resistance offered by the Rûjpâts at Khânsa in the following year.

The second battle of Panipat, in 1556, when Akbar defeated Hemû, is of outstanding importance in the history of India, for there was no Moghul empire before Akbar only the attempt to create one.

After his victory over the Marâthâs in 1761, Ahmad Shah Durrzâd made no attempt to consolidate his position in Hindustân but returned to Afghanistan. The Marâthâs were only temporarily crushed, for they rapidly recovered from this defeat and, by 1774, were able to menace the peace of India. The importance of this battle is that it facilitated the growth of British power.

**Pâra,** a Turkish unit, originally a silver piece of 4 aher, first issued early in the sixteenth century; it soon replaced the aher as the monetary unit. The weight, originally 16 grains (t. 10 gramma), sank to one quarter of this weight by the beginning of the sixteenth century and the silver content also depreciated considerably. The multiples of the silver para were 5 (beqîlî) pâras; 10 (amûd) 15 (amûd), 20 (amûd), 30 (zolda) and 60 (zolda) or piaster. Higher denominations were also issued.

When Serbia became independent it retained the name para for its smallest coin as did Montenegro also. The name survives in Yugo-Slavia, where the nickel 50 para piece has the smallest coin issued. During the Russian occupation of Moldavia and Wallachia in 1773-1774 copper coins were issued with the value in para and cepeka.

**Pargana,** the Indian name for an aggregate of villages. The first reference to the term in the chronicles of the Sultanate of Delhi appears to be in the Twelfth-Fifteenth Shâhî of Shams-i Shâtî 'Attî (Bibliotheca Indica, 1851, p. 95), for it is not used by Hassan al-Nisâî in his Târîkh al-Mu'inî or by Mînâbilî al-Dîn in his Târîkh-i Nâzîrî. Although it first came into prominence in the sixteenth century partially supplanting the term gâzâh, it is, in all probability, based on still more ancient traditions in existence before the Muqâm conquest. The exact date of its creation is therefore uncertain.

An account of the internal working of a pargana occurs in the chronicles of the reign of Shîh Shâtî who learned the details of revenue administration in the management of his father's two parganas of Sârarîn in Bûrû. When he became ruler of Hindustân he organized his kingdom into administrative units known as carâvâns which were divided into collections of villages termed parganas. Each pargana was in charge of a diwârî or military police officer who supported the amâr or civil officer. The amâr had for his civil subordinate a fuwarî or treasurer and two birkhâms or clerks, one for Hindi and the other for Persian correspondence. It does not seem correct to hold the view that in this respect he was an administrative innovator for the provincial officials and institutions which he has been credited with creating were already in existence before he ascended the throne. This remained the administrative system until Akbar organized the Moghul empire into sâhar (provinces) which were divided into avâns or districts. The smallest rural unit under Akbar was the pargana or mukâlah. Thus, for example, the mukâlah of Oudh was divided into five carâvâns and thirty-eight parganas (Afûn-i Akbarî, in Bibliotheca Indica, ii, 170-177 [al Janrett, 1894]).

Under the Moghul emperors the chief pargana officers were the amâr, the amir and the birkhâm, who were responsible for the pargana accounts, the rates of assessment, the survey of lands, and the protection of the rights of the cultivators. Similarly in each village a fuwarî or village accountant was appointed whose functions in the village resembled those of the amâr in the pargana. It must not be imagined that the pargana had a stable and uniform unit. Not only did it vary in area in different parts of the country, but often a land settlement was followed by a fresh division and re-distribution of the original units. The co-extensiveness of a parish with the possessions of a clan or family has given rise to the suggestion that it was not only a revenue-paying area, but that it was founded on the distribution of property at the time of its creation.

The Twenty-four Parganas: a district of Bengali lying between 21° 31' and 22° 57' N. and 88° 21' and 89° 06' E. It derives its name from the number of parganas comprised in the nominal area ceded to the English East India Company in 1757 by Mr Dañfar, the Nawâb of Bengal. This was confirmed by the Moghul emperor in 1759 when he granted the Company a perpetual heritable jurisdication over this area. In the same year Lord Clive, as a reward for services rendered to him by Mr Dañfar, was presented with the revenues of this district. This grant which amounted to £50,000 per annum, made Clive both the servant and the landlord of the Company. The Company continued to be paid to him until his death in 1774, when, by a deed sanctioned by the emperor, the whole proprietary right in the land and revenues reverted to the Company.

**Bibliography:** given in the article.

(C. COLLIN DAVIES)
PÅRŚIS. Under this name (Pahl. ꞌ(ab) bāz) Mod. Pers. Šāhī literally "inhabitant of Šāh"") are known the Zoroastrians (Trzánas), who, after the Arab conquest, refusing to accept Islam, fled and after various vicissitudes finally settled in India in Gujrat, where they now form an ethnical and religious group of 100,000 persons (101,778 according to the census of 1921). At the present day the name Parsi is beginning to be used also for the Zoroastrians remaining in Iran instead of fire, the somewhat contemptuous, signification of which (cf. Sanskrit) is so long ago in keeping with the spirit of tolerance which is increasing every day in Iran.

What we know of the wanderings of the Parsis before their arrival in their present abode in India is based principally on two narratives: Kshathra-\textit{Sanjâj}苗, written in verse by a Zoroastrian priest named Bhumun Kâ Shô [sic] of Nâvâsi in the year of Yazdângird 966 (1680 A.D.) and Kshathra-\textit{Zoroastrian Hinduismu-wa-Nâvâsi-\textit{Abâ.hû Shâhrah}} Nâvâsi a work written at the end of the xviii century by the Dastar Shâhùjî Mânuchîr Sânjâj (1735–1805).

According to these sources, the first group was composed of Zoroastrians who about a century after the Arab conquest went from Khurâzûn, where they had sought refuge, to the south, reaching the island of Hormuz at the mouth of the Persian Gulf (751 A.D.). After a short sojourn there they crossed to Diu on the Gulf of Cambay to the south of the coast of Kâthikâvar (766) and remained there 19 years. Continuing their journey southwards they landed at Sânjâj (783) and installed the sacred fire there. According to the tradition of the Parsi priests, before obtaining permission to settle there they drew up for the lord of Diu, Djalââ Bâusht, a series of 16 articles of their faith. In these \\textit{articles}, of which several versions exist in Sanskrit and Gujarati, several points of contact between Hinduism and Zoroastrianism are clearly brought out. At Sânjâj they were twice joined by other bodies of refugees and these formed a community which prospered rapidly and spread to Cambay, Bassein, Blackwater and Anakalvar. After the year 1000 Parsis are also found in upper India, but it is probable that these were isolated bodies who came directly from Iran.

In 1490 A.D. the Parsis who had made common cause with the Hindus were forced by the troops of Sultan Muâmmâr Bigzarn to abandon Sânjâj and take refuge with their sacred fire among the mountains of Barhût. When the Muslim pressure ceased, the Zoroastrian community resumed its development. According to the date given in Kshethra-\textit{Sanjâj}, the sacred fire was installed at Nâvâsi in 1491 after the sack of Sânjâj, and after a brief period at Barhût and Bandhâlah, it was brought back in 1516.

The sacred fire was installed at Sânjâj in 1733 as a result of the raids of the Pindârres but the settlement of the Parsis in the town dates from the second half of the xviii century. We do not know the exact date when the Parsis went to Bombay, which is now the principal centre of the Parsi community in India.

The Parsis were able to settle in India without meeting any opposition mainly owing to the excellence of the moral principles of the Mazdean religion observed in the threefold rule of \textit{huma}, \textit{havrsa}, and \textit{avarsa} — "good thoughts", "good words", and "good works" — which is found in the Avesta. Although they have always abstained from any proselytising activities, they had the good fortune to attract the great emperor Akbar to the Mazdean religion. Trustworthy and active, assisted by the fact that the social character of their religion does not prevent adaptation to the forms of Western life, they are at the present day flourishing and well organisiied community much appreciated for the high standard and dignity of their lives.

The old religious inheritance of Zoroastrianism has been preserved by the Parsis with remarkable piety. In the xvii century, on the initiative of the \textit{Abâhû Shâhrah} of Nâvâsi, a mission was sent to Persia to obtain from the Zoroastrians who had remained there information regarding certain details of their religion. As a result the study of the manuscripts of the Avesta and of the exegetical literature was intensified and at the present day Pârsi scholars are displaying a parallel activity in the publication of the old texts.

The sacred fire still occupies a prominent place in the community, its hierarchy (\textit{dastar}, \textit{shâhrah}, \textit{avirâsh}) is a hereditary one.

The interests of the community are managed by a committee (\textit{yâdâyât}) composed of 8 or 12 \\textit{shâhrah} and 12 \textit{avirâsh}) but with incorporation in the public life of British India the functions of such a committee are gradually diminishing.

The mass of the faithful (\textit{haavâr}) conform — with a few concessions to the demands of modern life — fully to the ritual prescription of Zoroastrianism. Birth must take place on the floor of the house to show detachment from the things of the world. At the age of 7 there is the investiture with the \textit{aavûrd}, the sacred cord formed of 72 threads which winds three times round life. The funeral rite consists of exposure of the corpse on the tower of silence which is frequented by vultures (\textit{kavûrd}). In the ceremony of marriage, which tends more and more to monogamy with the marriage of full rights (Pahl. \textit{shâhla, sâshto-shâhla}) to the exclusion of secondary marriages, Hindu customs have prevailed.

The prohibitions regarding contamination of the sacred elements of fire, water, earth are still scrupulously observed and the greatest care is taken in purification after contact with impure objects, especially corpses. The Zoroastrian principles of morality are faithfully observed in all activities of life; hatred of falsehood, honesty in all dealings, assistance of the poor are the regular rules of piety.

The Zoroastrian community in India is keenly interested in the lot of their coreligionists in Iran and it was through the intervention of the Parsi "Persion Zoroastrian Amelioration Fund" that the "aavûrd" paid by the Zoroastrians of Yazd and Kirman was abolished in 1873 by the Persian government. As a result of the decline of religious intolerance in Persia, there has been increasing intercourse with the Zoroastrian communities still existing in Iran and the Parsi community has frequently sent appeals to the Muslims of Persia to ask them to return to the ancient religion.

While as regards doctrine perfect harmony still exists in the community, so regards religious controversies, have not been wanting and are not lacking within it. In 1686 the question of precedence was raised between the priests of Nâvâsi and those.
of Sandjan. Another question which has been a subject of controversy even since the sixteenth century, is the question whether the use of the padan — i.e., a kind of vehicle placed in front of the mouth to prevent the spread of fire from being contaminated by the breath — should also be put on the dying, thus violating the laws of piety.

Much more serious however is another controversy, that regarding the calendar; it goes back to the sixteenth century and divides the community into two sects: the Shahenshahis and the Kadianis. According to the Avestic calendar adopted by the Parsis, to make up for the loss of a quarter of a day each year, a month is added every 120 years but this system was not observed during the period of persecution following the Muslim conquest. In 1745 a group of the faithful felt the need for a reform of the calendar; but this group, which took the name of Kadianis, was opposed by those who wished to adhere to the Hindu system of calculating the months and who took the name of Shahenshahis. The result is that the calendar adopted by the latter is a month behind that adopted by the Kadianis. The Parsis follow the era of Yazdigird which dates from the accession of the last Sassanid (June 16, 632).

PARWANA. (See MUKH AL-DIN SULAICHAN.)

PASANTREN. Javanese "sandine" "ministry for students of theology" (sandari). The students on the islands of Java and Madura, Madur, pansantren, Sandi, usually pondo, i.e., the lodgings of the students of the school ("to go to the pondo" = to attend a pondo). — Elementary education i.e., reciting the Koran and the elements of a knowledge of sacerdotal law is given in the East Indian Archipelago whenever there are Muhammadans by teachers, who confine themselves to these subjects, in their own houses. In the larger villages and towns of Java and Madura there are also teachers who collect pupils around them in a mosque, in their own house or in a special building. If their reputation increases it often happens that students come from a distance and live in the place for a time to enjoy their instruction.

The pasantren however are institutions for advanced theological training. They consist of several buildings and when they are not built-out in the country, form in at least a separate quarter of the village. Javanese princes have from time to time issued edicts making villages "free," i.e., the taxes and services which they have to yield are given up in perpetuity to the teacher of the pasantren founded there. Pious individuals also have endowed stituk in favour of pasantren. The others are private institutions which owe their origin to the initiative of a learned man who establishes himself as a teacher. Their foundation and prosperity or decline is therefore bound up with the personality of the teacher and the estimation in which his learning is held; even pasantren which are regularly endowed are influenced by this factor.

The pasantren consists in the first place of the houses of the teacher and his assistants, then of lecture-rooms, a chapel, rarely a Friday Mosque, the lodgings of the students (pondos), rice-barns, all of which occupy a considerable space. The pondo alone possess a peculiar form of architecture not found in other buildings. A pondo is a quadrangular building built of the usual materials. The interior is divided by two walls into three long compartments of about equal breadth, the central one of which forms a corridor running from an end of the wall to the other. The two outer ones form the living rooms; each of them is divided into cells of equal size by partitions. The door of the pondo is in the centre of one of the shorter outer walls; it opens into the corridor. Only blank walls are seen on right and left as one enters; then it is noticed that very low doors are let into these walls, made of the same material as they are; these admit to the cells. The little doors are at irregular intervals in the two walls, two always being opposite one another. The cells are lit from the outside by little windows in the wall; they are so low that the occupant can only sit or lie on the floor; for the students study in a recumbent position.

Several students live in one cell; in very popular pasantren, the pondo may have two stories. The number of students may amount to several hundreds. It may also be quite small. There are hundreds of pasantren in existence. In each pondo discipline is maintained by one of the older students or by a junior teacher. In spite of this, cleanliness leaves much to be desired. The head of the pondo is at the same time tutor and assists the students under him in every way. We also find women sharing in the instruction given in a pasantren but it is very rare for them to live in one.

The pasantren have a life of their own. Great activity prevails even before dawn. After the poldar al-uth, which the teacher himself conducts and which is followed by a gudir, the lectures begin. The teacher takes the beginners one after the other and after their lesson they return to the pondo; here they go over what they have learned by themselves or with a more advanced student or with the head of the pondo until noon. The students
then have their midday meal, the santri of each pondok forming one mess; this is practically speaking their only meal. All then go to chapel to the salat al-juhur. They are summoned to three further salat in the course of the day. The intervals between them are devoted to lectures and study. The more advanced students are taken together by the teacher; he reads the Arabic text, translates it and adds any necessary notes of explanation.

After the salat al-gharib, the day's work is over and the students retire for the night. Some santri may still be engaged on little tasks which may bring them in something, soon these also stop and quiet reigns over all. Friday brings a variation in this monotonous round; all go to the nearest Friday mosque to attend the salat al-jummah. Harvest is also a busy time for the santri; they work in the rice-fields or beg for salat. Many santri go home in the month of the fast.

Fikih is the primary subject of study in the pasantrens; the Arabic works used are those in use in other Shafi'i lands. There are also a large number of Javanese works; those based on Arabic sources or theological works taken from Arabic are known as kitab. Javanese is the language of the pasantrens; in the Sundanese speaking districts (western Java) Javanese works are more and more replaced by Sundanese. At the same time dogmatics are also studied. Here no particular maqatib is followed, nor are the works used written only by Shafi'i. Orthodox mysticism is less studied. There is, it is true, a popular form of mysticism tinged with pantheism; but this is less and less taught in the pasantrens. The Santri calls the main fikih book used by him in the pasanten kitab fikih without further qualification (he hardly knows its title) and work on dogmatics kitab nusul. Small books for elementary instruction on the distinct of religion and dogmatics are also called kitab nusul.

The method of instruction is one peculiar to the pasanten. As soon as he has finished the elementary text-books, the student is introduced to more important Arabic texts. He reads them, sentence by sentence, under the supervision of the teacher who himself has perhaps never studied Arabic properly and has only his memory to rely upon for the vocalisation. The sentence is translated into Javanese and paraphrased by the teacher. Finally the student is so far advanced that he can translate easy texts from Arabic into Javanese (a list of the texts most used at the time is given in T.B.G.K.W., xxxi. [1886], p. 518 seq.). This takes a long time; the joy however at seeing his knowledge steadily increasing and the pleasant feeling of being able to read texts in the original spurs the student on. Under Mecan and Hadramaut influence, however, this method is being gradually driven out by another which begins with Arabic grammar. It certainly seems the more logical; one disadvantage, however, is that the study of Arabic offers so many difficulties to the Indonesian that many lose heart before they succeed in reading texts.

Study at the pasantrens is quite free. Diplomas are neither sought nor given. The student comes and goes as he pleases. The majority when they enter the pasantrens have already had an elementary education at home. The desire to increase their knowledge of the faith, the wish among rich and prominent families to see one of their sons devoting himself to the study of religion and among others the hope of gaining a livelihood, bring young men into the pasantrens. The santri endeavour to attend the lectures of a number of teachers, each on his special subject. They therefore go from one school to another; some indeed travel about all their lives studying. Others when they think they have acquired sufficient learning settle somewhere, but not in their own districts, as teachers or become assistant teachers in a pasantren or they may prefer to remain "independent scholars". There are no offices for which study in a pasantren is a requisite preliminary; in general the theologians are averse from anything official or belonging to the state but the higher mosque officials have usually studied for a time in a pasantren.

It is considered very reprehensible to give instruction in sacred learning for an agreed fee. Nevertheless, most of the teachers are well to do. Pious gifts are liberally given to them on account of the blessing they bring. The teacher is a most welcome guest at religious feasts, of which there are many in Javanese life. All appeal at all times to his learning or for his intercession; gifts accompany these appeals. New arrivals among the students, if they can afford it, make their offerings to the sons of the better situated parents bring back presents when they go home, and poor students work in the teacher's fields.

The majority of the students are poor and indeed live by begging. On certain days they go round the district; their begging is not considered a nuisance; they are assisted readily for they are acquiring sacred learning; to give to them brings a blessing. Work on the land, the copying of Kur'ans etc. also bring them in the little they require for their frugal life. The colonial government only troubles about the pasantrens so far as it exercises a general supervision over them; the foundations of new ones are reported to the authorities and the principal has to keep a register of the names of the students and of the titles of the books used.

The spread of schools on the European model has dealt a blow to the pasantrens in recent years. Only the pasantrens could give religious instruction as the public schools instituted by the colonial authorities gave none. On the other hand, only the latter prepared for everyday life. This has resulted in the growth of private schools intended to do both. These are called madrasah and are intended to be schools for all. Attached to the madrasah are schools for higher education; in these religious instruction plays a very prominent part. In these schools, which owe their origin to circles influenced by modern ideas, the method of instruction is taken from European models; but their outlook is not by any means broader than that of the old pasantrens. The name madrasah points to Egypt or perhaps Arabia; the organisation, apart from the religious instruction, is modelled exactly on the government schools.

In the country of the Minangkabau Malays (Central Sumatra) there are theological seminaries which correspond on the whole with the pasantrens; they are called surau. A name also given to elementary schools, chapels, houses for men, and also to the separate buildings of the institution called surau. The students' houses are not divided into cells; the occupants have a common lecture- and sleeping-room.

Ateh also has seminaries comparable with the
Javanese. The method of instruction however, which in Java may be called the mere one, is the only one here; Malay takes the place of Javanese there; a knowledge of this language is therefore indispensable for students in Atjeh. The lodgings of the students (rangbhang) have the same plan as the pondoh of Java; just as the pasanteens are also called pondoh, so the name rangbhang in Atjeh is also applied to the whole institution.

PASE, the name of a district on the north-east coast of Atjeh (Sumatra) which according to the prevalent native view stretches from the Djamb-Aje river in the east to the other side of the Pasé river in the west. The whole area is divided up into a number of little states each with an ulitabalang or chief.

Pase at one time was a kingdom known throughout eastern Asia. The north coast of Atjeh was in the middle ages one of the trade routes from Hindustan to China. Islam followed this route and firmly established itself from India on the coast, the most important point in the east Indian archipelago which it reached. In the sixth century we know there were already Muslim rulers here. One of these was Malik al-Sabih (d. 1297), according to native tradition founder of the state and the man to make the country Muslim; his tomb was made of stone imported from Cambay (India) has been discovered along with several other gravestones on the left bank of the Pasé river, not far from the sea. The capital of the kingdom is said to have been here. A second capital rather more to the west was Saumara; it was the royal residence when Ibn Battuta in the middle of the sixteenth century twice visited the land, on his way to China and on the return journey. The present name of the island of Sumatra, by which it is known in the west, comes from Saumara — in Ibn Battuta; Sumatra, Pasé was then a flourishing country on the coast; the ruler was king of the port, who himself sent out trading-ships; a ship belonging to him was seen by Ibn Battuta in the harbour of Ch'anghsu (Fukien) in South China. Life at the court was modelled on that of the Muhammadan courts of India. The ruler at this time was an ardent Muslim, who took a great interest in learning. He waged a victorious jihad on the natives in the hinterland. Lead coins struck in the country and Chinese crude gold were the means of exchange. The chief food was rice.

Shortly after Ibn Battuta left the country the king had to recognise the suzerainty of the Javanese Hindu empire of Madjapahit (before 1365). A tomb of a queen or princess of the Lho' Sukon has an Arabic inscription, dated 791 (1389) at the top of the stone and at the bottom an inscription in much weathered old Javanese script. It has not yet been read. The Chinese envoy Chang Ho remarked in 1416 that the land was involved in continual war with Nago (Pidie). He mentions rice, silkworms and pepper as its products. The last-named attracted the Portuguese there. From 1521 they had a fortified settlement in Pasé but in 1524 they were driven out by the sultan of the rising kingdom of Atjeh (i.e. Great Atjeh). Henceforth Pase was a dependency of Atjeh. The tombs of the rulers of the former kingdom were still an object of pilgrimage to the most famous sultan of Atjeh, Iskandar Thani, as late as 1928 (1638-1639); at the present day even the memory of the old kingdom is extinct. The mouth of the Pasé river is silting up and the place where the capital stood is no longer recognisable.

Pase exercised through the years a considerable influence in the Malay Archipelago through its Muslim scholars and missionaries. Javanese and Malay tradition have preserved their memory.

PASHA (T., from the Pers. pasgah, probably influenced by Turkish batbaha), the highest official title of honour (wali or taba) in use in Turkey until quite recently and still surviving in certain Muslim countries originally parts of the Turkish empire (Egypt, Iraq, Syria). It was always accompanied by the proper name, like the titles of nobility in Europe but with this difference from the latter, that it was placed after the name (like the less important titles of bey and efendi). In addition, being neither hereditary nor giving any rank to wives, nor attached to territorial possessions, it was military rather than feudal in character. It was however not reserved solely for soldiers but was also given to certain high civil (not religious) officials.

The title of pasha first appears in the thirteenth century. It is difficult to define its original sense exactly. The word had in any case early assumed and lost the vague meaning of 'seigneur' (champagne) (cf. Ertugrul sikht-i Sulaiman Welid, p. 14; text of the year 712 = 1313, where the main is invoked in the phrase ‘Ey Pasha!’). At this same period the title of pasha like that of sultan was sometimes given to women (cf. Ismail Hakki, Kilicler, 1927, index). The Kudum pasha, Seljuk pasha), a practice which recurs only once again, and then exceptionally, in the xiiith century in the case of the mother of the Khedive (cf. WILHELM INZER) 1924).

Under the Saldjaks of Anatolia the title of pasha (in as much as it was an abbreviation of padişah and always by analogy with that of sultan) was given occasionally to certain men of religion who must also have at the same time been soldiers and whose history is not yet well known. To judge from the genealogy which Agha-peş-fasa-rade claims for himself, the title of pasha was already in use in the first half of the xiiith century. Al-Malik ibn Mulj Baha, alias Shaikh Makhkades, alias Makhkades Pasha had, according to Ali Efendi, seized the power before the Karamanoğlu and in the same region, before the defeat of the Saldjaks Sultan Ghiyath al-
In the provinces they were, and became, more numerous, and two classes of pahas were distinguished: 1. The pahas of 3 horse-tails (ľahk) or ġalb (a rank which became more and more one of honour and extending to the provinces gradually absorbed that of ġelyerbi), 2. the pahas of 2 horse-tails or muš-mirān (rank at first the Persian synonym for the Turkish ġelyerbi and the Arabic amir al-umara but gradually became a lower rank). Besides, the old sefār-bāș having in principle a right to only one horse-tail were promoted muš-mirān and thus became pahas in their turn.

After the Tanzimat the title of paha was given to the four first (out of 9) grades of the civil (1. ġevār, 2. kāša, 3. ābā, 4. īsdīy ābīs esewa) or military (1. mušhūr, 2. bī-ringī fereh, 3. fereh, 4. ṭēne) hierarchy and to the nobles (3. ġelyerbi, 4. mušmīrān, with in practice unjustified extension to the fallen muš-umara, in this case to the purely honorific rank of the sixth grade).

The table of ranks having been abolished after the fall of the Ottoman Empire, the Turkish Republic retained the title of paha for soldiers only. It has just been abolished by the Grand National Assembly of Ankara (Nov. 20, 1934). Instead of paha one now uses general and in place of mušhūr, usābiy.

In western usage the word was at first pronounced başha (the pronunciation paha does not appear till the xviiith century): Ital. baxia, Low Latin baxia, Fr. baixa or baxia, Engl. baxian, to say nothing of variant spellings. In Greek on the contrary, the form pasha is the oldest (xvith century) but probably under western influence we also find basha (xvith century); cf. Duclage, Glossaire médieal et inédit de Grecitélatt, s. v. μαχαιά.

The pronunciation as basha by Europeans is due either to the influence of Arabic in Egypt or to a confusion with the old Turkish title of baş (cf. at the end of the article).

Etymology of the word paha: we shall examine the various etymologies that have been proposed.

1. Pers. pāshī-čehr "foot of the sovereign". This explanation, which was based on the fact that in ancient Persia there were officials called "eyes of the king", is found already in Trevoux's Dictionnaire (s. v. bacha) and was revived by G. v. Hammer. It is to be rejected.

2. Turk. başha "head, chief" already suggested by Antoine Genfrroy (Breviers description de la Cour de Grand Tarse, 1542) and by Lenaclius (Löwenklaa, Pandectes historiae turcicae, suppl. to his Annales (1588). Cf. also Trevoux's Dict. and Barthier de Meynard, Suppl. — It is to be rejected.

3. Turk. bash-yagh taken (for the purposes of proof) in the meaning of "elder brother". This is the etymology accepted in Turkey until lately (Meşhed Ţahresisi, Siyāsil-i 'Oğlumün, iv. 738; Şams al-Din Şânu, Ālimî-i turkî, s. v. pasha) and is based on the fact that Sultanmāna Pasha and Allah al-Din Pasha were the elder brothers of Orhan and 'Oğlumün respectively. All Etendu in his Kâna al-Abkhar, written in 1593—1599 (v. 49, 20) and 'Oğlumün-źde Ahmed Tâlib (d. 1724) called attention to this use of the word pasha among the Turkomans (Hadith al-Wasâlm, Istanbul 17271, p. 4, 10). Heilborn (Manuel de Droit Public et Administratif Ottoman, Vienna 1908, p. 186, note u) also says that pasha...
means "elder brother" among the Greeks of Kar- 
manis, but there seems to be nothing to com-
pare these isolated statements. Some Turkish lexi-
ographers like Ahmad Weftik (under "ğlab") and 
Şahî, have admitted this etymology but by two 
stages: pasha comes from the Turkish title bahşî 
which is for başîch. The title of bahşî to be 
discussed below does really seem to come from 
başî as such but, contrary to what I at first thought, 
has nothing to do with pasha.

PASHA

1. Pers. pâshâh "sovereign." — Etymology, the 
only admissible one (with however the possibility 
of the influence mentioned under 5), proposed by 
the Turkish-Russian dictionary of Bougakov (1869) 
and later revived by the Russian Encyclopaedia 
of Brockhaus and Efрон. It had previously been 
proposed by D'Hulchel (under pâche, a propos of 
the spelling with final s). This explanation is based 
on the use of the words vâsîf and pâshâh, as the 
titles most often placed after the names when applied 
to individuals of high rank in the religious world 
(dervishes). Cf. Giese, in Türkisch-Moslemischer, i., 
1925, p. 164. It seems that one can even explain by 
pâshâh the obscure phrase used by Orhan to 
Ali: al-Din Pašha in Ağbî-şeyha, (see 
Giese, p. 34–35) before the latter was to 
retire (cf. above). Orhan says "You will be pasha for 
me." Now a few lines earlier he had asked him to 
be a vâsîf pâshâh, i.e. a shepherd for his people.

On the other hand, it will be noted that the 
title of pasha is often used not only as an alter-
native for pâshâh but also for pâshâ. Here are 
some examples:

Shudâja al-Din Salihânâ, of the dynasty of Khiy 
Ahmudî, is called Sulaimân Pâshâ in Ibn Ba-
ûta (ed. Dhârây and Sânciûnu, i. 343) 
and Sulaimân Pasha in Şahîh al-Din b. al-Omari 
al-Taşrîf, ed. L-Mu'asîb al-şarîf, Cairo 
1312, p. 4: written pasha, following the Arabic script 
and in Munzîdûn Başî (iii. 30). The son and 
successor of this ruler, Ibrahim, is called Şahî 
in Ibn al-Omari and Paşa in Munzîdûn Başî. — 
In the Dîwân-nâmè Esmûrî (ed. Mârrûmî, Marâkîs, 
p. 83–84) Sulaimân Pasha, son of Orhân, is called 
Şahî Sulîman with poetic inversion.

— Ali b. 
Cîchî (Čeçek), the Ilkhanian governor of Baghdad 
(d. 1336), is called "Ali Pâsha" by Ibn al-Omari. 
According to Nâzîrî (Caşmî-i Kâfûlayî, Con-
stantinople 1143), he is also found in some MSS. 
as "Ali Şahî. He is also called "Ali Pâshî (Či-
Hart, Histoire de Bagdad, p. 10). — In the oriental 
dialects the title of pâshâh is given to petty 
local leaders where it has taken the form, not of 
pasha but of pâche (Kârîmî) and pâsî (Ozbek).

5. Turk. başîch (variants basîch, basîçan) 
"government, chief of police" (Dictionary of Patv de 
Courteille and under basîch in that of Bougakov). 
This word of the "Khârâzimian language" according 
Vullers came into use in Persia (Ikhbâlî). 
Among the Mongols it meant the commissioners 
and high commissioners sent by them to the con-
nquered provinces (of the west only), notably in 
Russia. The accepted etymology is from the verb 
basîch, "to press, crowd, oppress, impress," whence 
the meaning "oppressor, extorter" for başîch, an 
official, it is noted (cf. the Russian and French 
encyclopedias), whose main duty was to collect 
taxes and tribute. However extraordinary such an 
explanation of an official title may appear it seems 
to be confirmed by the parallelism with the Mongol 
equivalent of bašîch which is darwûsh or darogî 
[q. v.] and which may be compared with darûsh, 
a Mongol word, synonymous with kâmâsh in the 
sense of "to impose". These may however be pop-
ular etymologies.

Schaff in his edition of the Voyage de M. d'Ancre 
(p. 238, note 3) says "The etymology of the 
word pasha given by Gesnroy (from the 
Turkish basîch) is wrong. Pasha is a softened form 
of the word basîçan or pashû which means 
a "military governor." 

Carpi, in his edition of the 
Voyage de M. d'Ancre (p. 238, note 3) says "The etymology of the word pasha given by Gesnroy (from the 
Turkish basîch) is wrong. Pasha is a softened form 
of the word basîçan or pashû which means 
a "military governor." 

It is not impossible that there was actually some 
confusion among the Turks themselves between 
pâshâh (pâsha) and the title basîch, the synonym 
of the Mongol darwûsh. We had thought of this 
even before we saw the notes of Schefer and 
Hakluyt. It may be noted that the title of pasha 
(which is not found in Persian sources, as Mu-
hammed Karwânî kindly informs us) was applied 
either to Anatolians, subject in fact or in theory 
to the Mongols, or to officials of the Mongol 
Idkhan (like the governor of Baghdâd mentioned 
above); cf. also Kürbî: "Ali Paşa" alluded to 
in the Beaumâtre work of Ansû b. Ardashîr 
Asâr- 
ashali (ed. Köprüli, p. 249, 9). The confusion 
could be explained the more easily as one finds 
(rarely it is true) the term basîch (Djawâin, 
Tâbrîzî Dâkânû-Ghûtû of 1260, ed. Muhammed 
Karwânî, i. 83, note 9; in this passage there is a 
reference to a Khârâzimian official of 609, i.e. 
before the Mongol conquest).

It may be suggested that this was the influence of the 
confusion of the title basîch that of pasha would never have attained such importance. 
The Turkish title of basîch. — This title which is 
not to be confused with the preceding, nor with the 
Arabic or old eastern pronunciation of it, was 
also put after the proper name but was applied 
only to soldiers and the lower grades of officiers 
(especially janissaries) and, it seems, also to ministers in the provinces [Meninski, Théâtre, i. 662 
and 294, i. 18: Omématîon, coll. 427; d'Herbethî, 
v. paschâ; Vignes, Éléments de la langue turque, 
1799, p. 218, 309, 327: Zerker, p. 214, coll. 2 
(probably following Meninski) De La Mottraye, 
Voyages, 1727, i. 130 note 7; cf. Ewlysh Celebi, 
v. 107, 218; Na'imus, v. 711; Imamûl Hâkî, 
Kûurîbî (p. 16 and 81). De La Boulaye-Le 
Goum (Voyages, 1657, p. 59 and 552) also 
distinguishes the title from basha and translates it 
by *momier*. Meninski, loc. cit., also notes the 
pronunciation bashî (bashî) which is not to be 
taken as the word bash followed by the possessive 
suffix of the 3rd pers. -î; Meninski knew Turkish 
too well to make such a mistake. As to the 
pronunciation bashîb (given by Chloros, v. v. pasha) 
it comes from the spelling bashî which is not 
used as a suffix (cf. e.g. Ahmad 
Weftik Paşa, Zorakî Tâshî, act i, sc. 2, ironically 
applied to a woman) but Meninski pronounces 
bash, even with this spelling.

As the lexicographers have sometimes confused
PASHALIK (v.), means 1. the office or title of a pasha (q.v.); 2. the territory under the authority of a pasha (in the province).

After some of the governors called samedi-beyi (or sani-bey) had raised to the dignity of pasha, their territories (samedi or ifitum; q.v.) also received the name of pashallik.

Early in the 18th century of 158 pashallik 70 were pashallikas. These 25 were pasha samedi-fiti, i.e. samedi-fiti in which were the capitals of an eyalite, the residence of the governor-general or walli of a province. For further details, cf. Mouradizes d'Ollsson, Tableau général de l'Empire Othoman, vii. 307.

PASHTO. [See AFGHANISTAN, l. 149 sq.]

PASIR. The sultanate of Pasir in S. E. Borneo comprises the valley of the Pasir or Kendilo river, which, rising in the north on the borders of Kutei runs in a southerly direction along the eastern borders of the Berautu range and turning east finally reaches the straits of Malacca through a marshy district. The country, about 1,125 sq. km. in area, is still covered by primitive forest, in so far as the scanty population, which is founded mainly in Pasir, the residence of the sultan, and in Tanah Grogot, that of the official administration, has not cleared the trees to make ricefields. Although some gold, petroleum and coal are found in Pasir, Europeans have not exploited them, still less do they practice agriculture. A European administrative official was first stationed in 1901 at Tanah Grogot at the mouth of the Kendilo river. Pasir is therefore a good example of the Borneo coast state which as regards Islam has developed independently of European influence. The population of the sultanate is estimated roughly at 17,000. It consists of Dayaks who live by growing rice, of immigrant Bandjarase and Buginese from Celebes, who control the trade; they are found chiefly in the flat country at the river mouth. On the coast the Badjos, a people of fishermen, live in their villages built on piles in the sea. Of the 9,000 Dayaks, about 4,000 have adopted Islam, while 5,000 in the highlands are pagans. The 5,000 Buginese have a predominant influence in view of their large numbers and their prosperity; the 4,000 Bandjarase are of less importance. There are very few Europeans and about 50 Chinese and Arabs in Pasir.

Half of the population are therefore foreigners, but like the Dayaks they belong to the Malay race and mix with one another.

Pasir is despotically ruled by the sultan and the members of his family; the people have no voice in the government. Alongside of the sultan and his presumed successor there is a council of five notables, which the sultan consults on important occasions; this is also the highest court of the country. These notables and a number of other members of the sultan's family have estates as fiefs. Since 1844 each sultan on his accession has concluded a treaty with the Netherlands Indian authority. In 1908 they declared themselves vassals of the Netherlands Indian government. In 1900 the right to collect duties on imports and exports and taxes, as well as the monopoly of opium and salt, was ceded to the government in return for compensation. This amounts to 16,800 golden yearly of which 11,200 go to the sultan and 5,600 to the notables.

The sultan still collects the following taxes: a poll-tax from adult males; 1/40 of the yields of the rice-fields and forest products; 2 coconuts from each fruit-bearing tree; also military service. He also has an income from the administration of justice in the capital.

From the very legendary history of the country it may be gathered that this despotic government which is foreign to the Dayak was introduced from eastern Java. Under the ruling caste are the chiefs of lower rank, priests and landowners and freemen as a middle class. At the beginning of this century there were still slaves and deltor-slaves as the lowest class in Pasir; although slavery had long been abolished in other states of the Indies under Dutch influence. As is usual among other Dayak tribes, slaves go about like free men, take part in all festivities and games, may own property and are not even distinguished by dress. If their debt is paid to their master by some one, they go over to the latter. Slaves are not sold.

As the social condition of the MuslimBuginese, Bandjarase and Badjos have already been described elsewhere, the following remarks are confined to the pagan Dayak and their Muslim relatives, the Pasirese.

According to tradition, an Arab (Tuan Said) brought Islam to Pasir. His marriage with the daughter of the reigning chief did much to further the progress of Islam in the country.

As to the Pasirese, their social life was only superficially affected by Islam. In their daily life, a pagan conception of the worship of the deity and of the world of spirits still prevails. The old belief in the important influence of spirits on the fate of man and reliance upon their signs are evidence of this. The fact also is significant that throughout Pasir there is only one mosheir and a few smaller places of worship. The number of Muslim priests and hajjaj is also small nor is the enthusiasm to make the pilgrimage to Mecca great. On important occasions appeal is made for assistance to the spirits; this is particularly the case with illness among the Pasirese, who hold the pagan ilam feasts, which are also celebrated in Southern Borneo. Among a great din of gongs and drums which can be heard far away off; the pagan priest (hajlam) becomes possessed by the spirit which then communicates to him the remedy for the illness. Even in the capital Pasir, exclusively inhabited by Muhammadans, the advice of the hajlam is sought; only during the month of Ramadan the sultan forbids this,

How attached the upper classes of Pasir still
are to animistic views is evident from the legend still current according to which Sultan Adam in the middle of the last century used to isolate himself several days in the year on the mountain of the spirits, Gunung Melkat; he had concluded, it was said, a marriage there with a female djinn from which a son named Tendang was born. This son, who has the gift of making himself invisible, is said to live on the island of Madura where he married a princess of the djinn. He appears from time to time in Pasir, when he is invited by a great sacrificial feast (formerly also human sacrifice). These feasts are still celebrated occasionally, especially in order to free the land from misfortune and sickness. In the village of Bunni a house has been built for Tendang with a roof in three parts, which is built on a large pole and thus resembles a dove-cote.

The revenues of the priests consist of what they collect at the end of the month of fasting in sukała and pita, everyone giving what he can and the chiefs ex Press no pressure. A priest also receives a small fee at a marriage or divorce.

The calendar now in general use in the sulphinat is the Muḥammadan. As elsewhere among the Dayaks the sowing of the fields begins when a particular constellation becomes visible in the heavens.

The family life of the Pasirese has developed to some extent according to Muslim ritual. Among the followers of Islam, marriage is performed through the intermediary of a priest, with the father or another man as wali, but only after an agreement has been come to about the very considerable dowry. This is paid to the parents of the bride; she herself only receives a small part of it. According to Dayak custom young people are allowed to meet very freely before marriage. A marriage feast is marked by a very considerable consumption of palm-wine. The man remains at least a year in the home of his parents-in-law before he can take a home of his own. Divorce is very frequent because attention is seldom paid to the wishes of the woman in the negotiations between the parents. Man and woman retain their properties after marriage; after a divorce she goes back to the family. Property acquired during marriage is divided into two equal portions between husband and wife. After the death of one or the other the survivor inherits all. Only a few families follow the Muslim law. The followers of Islam are buried with Muḥammadan rites.

PASSAROWITZ. [See POŻAREVAC.]

PASWAN-OGHLU (written بسان أوغلو; cf. Kama of Al-Adam, ii. 1467) or Paswan-oghlu (پا سو ان اوغلو) in 'Abd al-Rahman Sharaf, Tarīkh, ii. 280 et, according to the new orthography, Pasvantoglu (Hussein Msheen, Türkiye Tarıhi, p. 423) but classed as Turkic 'Pasvand-siye Oğlu' (in Ordoñez, see Biblioth., the rebel Pasha of Vidin (1735–1807). His family originated in Transylvania in Bulgaria, but his grandfather Paswan Agha, for his services in the Austrian wars, was granted two villages near Vidin in Bulgaria about 1739. Oğlu's father 'Omar Agha, Paswan-oghlu not only inherited those villages but as haidarlar etc. was also a rich and prominent man (Syden), on account of his defiant attitude, however, he was put to death by the local governor.

'Oğlu himself only escaped death by escaping into Albania, but after taking part in the war of 1787–1789 as a volunteer, he returned to his native town. Very soon he was in the field again and fought with distinction, returning to Vidin in 1791. From there he organised with his men raiding expeditions into Wallachia and Serbia. When the sultan wanted to punish him for this he cast off his allegiance in 1795, took to the mountains and at the end of 1794 captured Vidin with his robber band and became the real ruler in the pashalik there. Vidin, which he fortified again, thus became a meeting-place for robbers and discontented janissaries who were driven out of Serbia in 1793, and he himself became the popular leader of all those who opposed the reforms of Selim III.

In 1795 Paswan-oghlu even attacked the governor of Belgrade, Hıdır Mehmed Paşa, a supporter of the reformers, who had been given the task of disposing of him; strong bodies of troops were sent by the Porte but without success. In consequence negotiations were begun at the end of 1795 but Paswan-oghlu remained practically independent in the whole of Upper Bulgaria.

But since the Porte did not also formally recognise him, Paswan-oghlu drove the official governor out of Vidin and in 1797 attacked the adjoining pashaliks: in the east his forces occupied or threatened a number of places in Bulgaria (but they were defeated at Varna) and in the south they attacked Nish (December) without success; in the west they advanced up to Belgrade, occupied the town but were driven back by its fortress by the resistance of the Turks and Serbs whom Hıdır Mehmed Paşa had armed. As a result of this and because of Paswan-oghlu’s negotiations with France and Russia the Porte in 1798 sent an army of 100,000 men against him under Admiral Küçük Hüsnü Paşa. He besieged Vidin in vain until October and had to withdraw with heavy losses. This defeat and Napoleon’s invasion of Egypt induced Turkey to come to terms, nominally at least, with Paswan-oghlu and give him the rank of Paşa of three tails (1799).

Nevertheless he declared himself against the reforms, against the central government and even against Selim III; he also sent several expeditions to plunder Wallachia (1800 and 1801) and invited the janissaries who had in the meanwhile returned to Belgrade to occupy the fortress (in the summer of 1801) and to murder Hıdır Mehmed Paşa (at the end of the year).

At this time he repeatedly asked the Czar to number him among his faithful subjects and also offered his services to France. The Porte, which previously before had forgiven Paswan-oghlu everything, from 1803 declared war on him again, but the Serbian rising of 1804 diverted their attention. Paswan-oghlu himself had to fight in the western part of his territory against Pintzo’s rising (1805). The appearance of the Russians on the left bank of the Danube (1805) induced him to offer his services to the Porte but the latter instead gave the supreme command to the commander of Rusčak. This embezzled him so much that he resolved to defend only his own territory against the allied Russians and Serbians but he died soon afterwards on Jan. 27, 1807.
That Paswan-Oghlu was able to hold out so long was due to the state of the Ottoman empire at the time, to his personal ability and foresight (he never abandoned Vidin!) but for the most part to luck. Within his area he collected customs and taxes, ruled strictly and despotically, although not entirely without mildness and justice. Although his health was rather poor as a result of too great a mental strain, ambition led him to aim at independence as evidence of which we have the coins struck by him and known as Paswantea.

FREHM BAJZAKTAREVIĆ

PATANI, an administrative district of Siam in the extreme south of the kingdom on the east coast of the peninsula of Malacca; it is bounded on the south by the Malay states of Kêlaitan and Kêdah, both under British protection. The whole district is made up of seven Malay petty states, each with its own native chief who is assisted by a Siamese official. Malay forms of government are allowed to remain. In the capital of the same name resides the Siamese High Commissioner of the district. His advice has to be obeyed by the rulers of the states.

The native inhabitants are Muslims. Friday and other mosques are distinguished. The latter are called surau and have their own staffs. All the states have law-courts: the sharia is followed in matters of family law, Siamese law in other cases.

Patani is a very mountainous country. There is only a strip of plain on the coast. The area is about 13,000 sq. km. and the number of inhabitants about 350,000; the great majority are Malays, the remainder being Siamese and Chinese. There are few roads. The railway which connects the Siamese Southern railway with the English lines in Malacca cuts through the country a short distance from the coast. Agriculture is of little importance; only in the environs of Patani and in Nwag-

Chik rice is cultivated. A large number of the people live by fishing; the fish caught are salted with salt obtained locally. Tin-mining is increasing. The exports include dried fish, salt, cattle, elephants and tin. Intercourse with Bangkok and Singapore is maintained by small steamers. The revenues amount to £45,000, of which one third is allotted to the Malay rulers as private income for themselves and their families, one third goes to administration, and a third set aside for special purposes, is also as a rule used for administrative purposes.

Fra Odontigo de Formentino in 1525 mentions a place called Patani in this region, which he identifies with Thalassany. It is doubtful whether the reference is to Patani. The first certain occurrence of the name is in the 17th century when the Portuguese began to come here to trade. Patani has for centuries belonged to Siam. Advancing southwards the Thai reached Ligor about 1384 (on the coast, a little N.W. of Patani; Sukhotai inscription); in 1356 the whole of the peninsula of Malacca was under Siamese rule; the conquest of Patani took place between those dates. The Ngarukrithāgama in 1366 mentions Dijre, the modern Djiring, one of the seven states of the district; with its capital on the sea, a little east of the town of Patani, as conquered by the Javanese king of Majapatt. Soon after the conquest of the town of Malacca in 1511, the Portuguese began to trade in Patani. Many Portuguese settled here. About 1600 the Dutch and English appeared; Patani at this time was a prosperous centre of trade, a station between Malacca and China and a spot for the exchange of goods from China on the one side and the most important harbours of the East Indian Archipelago on the other. When this last activity began to decline about 1620, the place lost its importance and the Europeans abandoned their settlements.

It is not definitely known when Patani became converted to Islam. About 1600 it was a Muhammadan country; the queen ruling at this time had succeeded her husband fifteen years before; in all probability the country was already Muslim at an earlier date when Mendez Pinto (1534, 1540) visited it. According to native tradition, the conqueror of the land, Chaw Srig Bangs, a son of the Siamese king, converted the country to Islam, after adopting it himself and taking the same and title of Sultan Ahmad Shah. He is said to have acknowledged the suzerainty of Malacca; this suggests that Malacca was the power that caused the conversion. Malacca, as is well known, was during the 16th century the predominant power in the Malay Peninsula.

PATHAN. [See AUSTRIANIST, i. 149, sqq.]

PAULÁ, the name given in the Moghul Emperor Akbar's monetary system to the 1/4 dam (1/4 jawh.).

(See A.A.)

PEČENEGS, a people of Turkish stock of the middle ages. Their name occurs in numerous variants (Ujadzak, Pauchak, Nar-Chezer, Nar-Chez, Patent Easte, Patentacse, Pircingi, Pincenakiti, Petegem, et al.; also Byessen, Besi, in Hungary, Besenoy, et al.). There is no longer any doubt that they were a branch of the Turkish race. Rashid al-Din (xivth century; see Geographia) and Maḥmūd Khoshghar (1073) number them among the Ghuzis [q.v.], the latter (Dictam Lughāt al-Turk, i. 87; cf. K. Č. A., i. 36) puts them in the northern group of Turkish peoples, to which the Kipchaks, Oghuzs, etc., belong and describes them "as next to the Rhomans" i.e. the most westerly Turkish tribe.

In all probability the Pečenegs separated very early from their brethren in the original home of the Turks in Turkestan. Their earlier home is said to have been the Emna-Ural-Volga region, which according to Baktr and Gardner was a 30 days' journey in length and breadth. There they remained probably for a considerable time, their neighbours being the Khasars in the S. W. and the Oghus in the S. E., and they traded with Persia and Khorasan.

But by 860 the Oghuz began to move westwards and to drive the Pečenegs from the Ural region. Towards the end of the xth century the Oghuz (Uzen, Oguza) came to terms with the Khasars and drove the main body of the Pečenegs from their old home, so that in 922 Ibn Haškan found only a small remnant of the Pečenegs there; according to De administrando imperio (p. 166), the latter remained there of their own accord.

The fugitive Pečenegs came up against the Magyars, drove them into Hungary and occupied their lands, at first the territory between the Don and the Dnieper and later as far as the Danube. Constantine Porphyrogenetos (c. 950) says that they took place "fifty years ago", but the chronicler Reginio (d. 915) dates it exactly to 889. The power of the Pečenegs in the end extended from South Russia over Bashkaria and Moldavia up to the Eastern Carpathians.

Warlike and powerful as they were the Pečenegs were a constant danger to their neighbours. Here however we can only briefly mention their relations with Hungary, Russia and Byzantium. In the course of the xth and xih centuries they frequently attacked Hungary from the Eastern Carpathians or settled peacefully in various Hungarian districts (cf. the map of their settlements in Németh, Die Inschriften der Schatzes von Nagy-Szent-Miklós, 1. Beilage). In the xih century the Pečeneg settlements in Hungary still enjoyed certain special political privileges. They finally became merged in the Koman.

With the Russians, the Pečenegs were early on friendly terms (according to the De adm. imp., p. 69, they sold them cattle, horses and sheep); sometimes they were their allies against Byzantium and Bulgaria. In the time of Igor (941), but more frequently they were attacking the Russians. In the year 968 they besieged Kiev. In 971 they killed the Grand Duke Sviatoslav on his way back from Bulgaria and the Russians had to build a number of fortifications against them. Their last attack (1034) was completely repulsed. A little later (1065) they were being hard pressed by the advancing Uzen and moved more and more towards the Danube and later also back to the Balkan peninsula.

The Byzantine imperial historian in De adm. imp. (p. 65) recommends the maintenance of peaceful relations with the Pečenegs and there was actually an alliance with them but by 970 we find them fighting with the Russians against Byzantium. Henceforth the Pečenegs were continually at war with the Byzantines until the emperor Alexius I in 1091 routed them completely at the mouth of the Maritsa and in 1122 John II inflicted another heavy defeat upon them. Of the remnants of the Pečenegs some were taken into the military service of the Byzantines and some settled in the Balkan, especially in Bulgaria. The Gagauz (q.v.) are sometimes regarded as what was left of them but their present language gives very little evidence of this (cf. vol. iv., p. 992). Nevertheless a number of Balkan place-names still recall the fact that the Pečenegs were once there.

With the nomadic nature of the Pečenegs it is obvious that the tribal organization was an important factor. According to C. Porphyrogenetos the Pečenegs were divided into eight tribes (four beyond and four on this side of the Dnieper) with as many great chiefs and into 40 clans with petty chiefs. The names of the tribes according to Némethe were mainly derived from the names of horses and from titles of the supreme chief e.g. Tepaio = Kukh-bey, i.e. the tribes of Kukh-bey, with grey horses. The three great tribes who were prominent for bravery and distinction are called Kogari (Kagyares) by Porphyrogenetos. Of the names of chiefs that of the tribe of Julas (Yasa), namely Körtu (q.v.), is probably the most remarkable. In the time of Kedrenos (ii. 581—582) there were thirteen Pečeneg tribes "each of which had inherited its name from its ancestor and chief".

We know very little about the religion of the Pečenegs. According to Baktr they were formerly fire-worshippers (Magians) but according to other sources there were already a considerable number of Muslims among them by the beginning of the tenth century.

As to the Pečeneg language, Anna Comnena (xih century) already asserts its identity with that of the Koman (see Čiši). Until recently its scanty remains consisted almost entirely of the names of the Pečeneg tribes, chiefs and fortresses handled by C. Porphyrogenetos. But from 1931 Némethe succeeded in deciphering the inscriptions of the treasure of Nagy-Szent-Miklós, it became evident to him that the gold and silver vessels contained in it belonged to the Pečeneg chief Bota-of-Cahan (c. 900—920) and that we had here further specimens of the Pečeneg language; from these he concluded that the language of the Pečenegs was closely connected with that of the Koman in Hungary and that of the Codex Cumanicus. The characters of these inscriptions may be called Pečeneg runes, which belong to the family of the Köl-türk script and are closely connected with the Hungarian runes.

In conclusion, from the fact that there are two baptismal fonts in the treasure of Nagy-Szent-Miklós it may be assumed that several Pečeneg chiefs were converted to Christianity. Very
little more is known of the Pečeněg; cf. however the Index to K. Dieterich (s. Bibl.).

Bibliography: The earliest Arabic (Ilm Rusta and Bakti) and Persian (Gardizi) records of the Pečeněg are based on Ujahlîn (tenth century) and on a source of the first half of the 16th century so that they only refer to the earlier home of the Pečeněg; Mas'ud's account however includes the period after they were driven from the Volga region. Both groups of sources however have been used by J. Marquart and W. Barthold. — Also: Constantinios Porphyrogenitos, K. Bonn, vol. iii. (1840) see Index historici (the whole of ch. 37 deals with the Pečeněg); P. Gollnower, Pečenge, logoi kai polisai de nakhastv- tis, Kies 1884; Sh. Saiti: lêyî, ãbat al-Asim, ii. 1306; K. (Fejih Baharattakévić)

PECIEWSI, Ibrahim, Ottoman historian. Ibrahim was born in 982 (1574) in Fürnkirchen (Hungary, Hung. Pécé, Turk. Polévi, i.e. Polenek) whence his epithet Polenek (of Pečew, Török, i. 286 and ii. 453; also J. v. Hammer, G. O. R. A., iv. 5, note). His ancestors were holders of fiefs in Bosnia and Hungary. Pečewsi has not recorded his father's name (cf. Török, i. 87); he was in any case already domiciled in Fürnkirchen. His mother was a member of the celebrated family of Sokolović (Sokol). Of Pečewsi's early years, we know that at the age of 14 he was taken as an orphan into the house of his uncle Ferhad Pasha, governor of Ofen, and later went to another relative Lala Mehmed Pasha (cf. his Török, ii. 323); he spent 15 years in the latter's entourage. In 1602 (1593) he joined the army, took part in the Hungarian campaign of Sinan Pasha, an eye-witness of the siege of Gran (cf. Török, ii. 136, 150), of the Erzurum campaign and the siege of Peterwardein. The next few years he spent mainly on the staff of Lala Mehmed Pasha who had been grand vizier since 1613 (1604). He gives a detailed account in his history of the various offices which he held. After the death of his patron Lala Mehmed Pasha (1624 = 1615) he was sent by his successor to Anatolia where he had to prepare a description of several saulaks. He was next deşertär for a short period in Tokat, went in the capacity of Rumelia and finally was given the office of Anatolia as "alme". He spent the rest of his life in his native district. He became mustafâris of Stuhlweissenburg, then deşertär of Tenevârî. In 1651 (1641) he retired from office and went to Ofen. He spent his last years here and in his native town engaged in writing his history. The date of his death is not exactly known. He must however have died about 1660 (1650).

Ibrahim Pečewsi, who from his youth upwards displayed a marked turn for history, is the author of a work which is one of the best Ottoman sources for the years 926-1049 = 1526-1639. While for earlier events he relies upon the accounts of his Turkish predecessors, and as N. v. Istvánffy and K. Iñitali have shown, also Hungarian sources, for the later period he writes from his own observation or information. His work, which is written in lucid and simple language, survives in numerous manuscripts (to those detailed by Babiński, G. O. W., 194 may now be added two others in Upsala, University Library, cf. Zetteteéen, Katalog, p. 331 and a manuscript in Rhodes in the possession of Hâdiz Ahmed, No. 446), but so far we have no critical edition. Several preliminary drafts seem to exist which vary considerably in the periods covered and were presumably later expanded. The Stambul printed edition of the Török-Polonek in two parts (10-1504 pp. and 7-487 pp., printed 1635; cf. Török, 1688, i. 471 and 484 and F. v. Kraelitz, in III., viii. 239) covers the period from the accession of Sulaiman the Magnificent to the death of Murad IV in 1549.

(Franz Babiński)

PECHINA, Arab. Bâdîjâma, formerly an important town in the south-east of Spain, to the north of Almeria [q. v.] (originally Marçat Badîjâma), from which it is about six miles distant. Towards the middle of the ninth century it was the centre of a kind of maritime republic founded by Andalusi sailors, who had also a colony on the Algerian coast at Tenes [q. v.]. It consisted of several quarters separated by gardens; becoming the capital of a kawa of its own, Pechina was later supplanted by the same neighbour Almeria, to which its inhabitants soon migrated.

(F. E. Lévy-Provençal)
PEHLEWAN, MUHAMMAD B. ILDIRIZ, SHAMS AL-DYN, ATABEG OF ADBARBA'IDIYAN. His father Ildiriz [q.v.] had in course of time risen to be the real ruler in the Seldjuk empire; the widow of Sultan Taghril [q.v.] was Pehlewans mother and Arslan b. Taghril [q.v.] his step-brother. In the fighting between Ildiriz and the lord of Marjigh, Ibn A's Sa'udar al-Ashraf, Pehlewans played a prominent part [cf. the article MARJIGH]. From his father he inherited in 568 (1172—1173) Arslan, Adbarba'idiyan, al-Dhijal, Hamadhan, Isfahan, and al-Raiy with their dependent territories and a few years later also took Tabriz, which he gave to his brother Kilil Arslan [q.v.]. Like Ildiriz, Pehlewans also became the real ruler. Sultan Arslan b. Taghril was completely under his control as was also his young son Taghril [q.v.], whom Pehlewans put on the Seldjuk throne, after Arslan had been disposed of by poison. Pehlewans died in Dhu 1-Hijjah 581 (February-March 1186) or the beginning of 582 (1186) and his brother Kilil succeeded him.

Ibn al-Altijr (xi, 346) pays a high tribute to Pehlewans statesmanlike qualities and during his tenure of office peace and prosperity prevailed in his government. After his death, however, bloodshed and unrest broke out. In Isfahan the Shahris and Hanafites fought one another and at al-Raiy the Sunnis and Shi'a until order was gradually restored.

III. MODERN PERSIAN LITERATURE. (E. BERTELS)

I. HISTORICAL AND ETHNOGRAPHICAL SURVEY.

Name. The name Persia is of Western origin and probably only in the Middle Ages began to be used for the countries occupying the Iranian plateau (in Ptolemaic Persia is found once instead of Persia). It is derived from the Greek-Roman appellation "Parase" for the Achemenids, an appellation that goes back to the name of the region of Persis in the south-west, named in its turn after a tribe that is probably identical with the Parsis, known by the Assyrian inscriptions as having occupied formerly a part of Media (oldest mention 844 B.C.). The name Pars (New Persian: Pārs) in Muhammadan times is applied to the same region of Persia only, but Pārsī was already at an early time used for one of the types of language spoken in the Iranian provinces (cf. Fārsī, ed. Flügel, p. 13), which language since the 6th century became the written literary language that we call Persian. Equally the appellation al-Fārisī found in early Arabic literature sources, denoted the whole of the people of Persia, but was restricted in use to the Persians of pre-Islamic times or to those who had kept to their ancient traditional and religious views. This meaning is often synonymous with the Arabic expression al-`Adwān.

The term Iran is of Persian origin and goes back to an earlier form Aryan, originally an adjective (airyana in the younger Avesta) meaning "Aryan". It was the name of the core of the state of the Sassanids, who styled themselves "kings of Iran and Anērān" and it occurs in the early Arabic historical and geographical sources in the form Irān-`aḥr, meaning the country of Iran (cf. i.e. Vakāli, i. 417 sqq.). In Muhammadan times the name became popular again by the revival of the ancient traditions in the Shī‘ā, but the use of the word Iran for the modern kingdom of Persia is probably not older than the 6th century, when the Persians began to call themselves Iranīyān (about 890 there existed already a newspaper called Iran). Nor does the use of the words "Iranian" and "Iranistic" in scientific publications appear to be older than the second part of the 6th century (Spiegel's Ernste Altertumskunde was published since 1871, and Darmesteter's Études Iraniums in 1883).

Geographical Survey. Throughout the Middle Ages Persia was neither a geographical nor a political unity. In the eastwards its citizens lived there must therefore exist an arbitrary delimitation of the country, namely the territory comprising present Persia, Afghanistan and Baluchistan and in addition the region of Merv as far south as the present Persian frontier. The territory thus circumscribed may represent the actual Achemenids and later the Sassanids, excluding the territories of al-`Iraq, Mesopotamia and Armenia, which during both periods belonged to those empires; Babylonia was called even in Sassanian times Dih-`Irānshahr (B. G. A., vi. 5).

The greater part of Persia thus circumscribed consists of a plateau, very mountainous in parts, with the coastal regions of the Caspian and the Persian Gulf. With the exception of these coastal regions the waters of Persia have no outlet to the sea. The consequence of that is that there are only narrow small streams, the only rivers deserving the name being the Hīmānd, which flows, like many smaller streams, into the depression of the Siāh lake, and the Heri-Rd, which ends in the northern steppe. The many small streams allow only a limited cultivation in the mountain valleys and on the fringes between the mountains and the deserts. This circumstance gives even to the inhabited mountainous stretches of the plateau the character of a series of oases, which are larger or smaller as the irrigation system (most effectively by the subterranean aqueducts called kohers), is more or less developed. The territory between the oasis towns and villages is steppe, which, in central Persia, become real desert, the soil of which is more or less saltish. The steppes, as also the higher mountain regions, support nomad life only, as they are only habitable during certain periods of the year, to which cause is added the very considerable variation of temperature in many regions. Nomads or semi-nomads have therefore
always lived together on the Iranian plateau with the settled population; the proportion has considerably varied on account of the frequent invasions of nomadic peoples. Persia consists of a number of regions of very different character, which accounts for the lack of political unity during long periods of history. Each of these regions has formed occasionally an important political and cultural centre and the Islamic geographers in describing Persia give for each of them its own description. Their division is mainly traditional and at the same time geographical, but disregards the very variable and ephemeral political frontiers.

The regions may be divided into a western and an eastern group, separated by the great central Iranian desert, which extends from the Caspian Sea south-eastwards practically as far as the Indian Ocean in Mekran. This desert, called by the geographers Mafṣūrat Khurāsān, Mafṣūrat Fāris, Mafṣūrat Kirmān or Mafṣūrat Sistan, depending on the parts particularly taken into consideration, varies in breadth and character. Its level is on the whole considerably lower than the eastern and western parts of the Iranian plateau. The northern part is a large salt desert where vegetation is hardly possible. Further to the south, to the east of Fāris, begins the region called on modern maps Dasht-i Lūf; here, and further to the south-east there are not a few oases, which form important resting points on the many caravan ways that have linked up since old times Fāris and Kirmān with Khurāsān and Sistan. In the southern regions of Ῥaṣāl and Mekran, with which is linked the large desert to the south of the Hīlmand river, the desert or steppe character is prevalent. This series of deserts, though not forming an impassable barrier between east and west, has often coincided with political frontiers; only in the north in the region of Ḳāīūr, east of al-Ra‘i, (later Teheran) and along the Caspian coast, a more continuous cultivated stretch links up Media with Khurāsān.

The central part of the western regions is Media, called al-Dījāl in Muhammadan times and later ‘Īrāq-i Aḏjam, consisting of a plateau all covered by mountain ranges running mainly from N.W. to S.E. and bordered on its north-western side by the Zagros mountains; the most important towns are here Hamadān and Iṣfahān. To the north-west Aḏharbāḏjān forms a continuation of al-Dījāl, from which it is separated by the desertlike region of Ardabīl. Aḏharbāḏjān is still more mountainous, being a transition to the Armenian and Caucasian mountain systems; it is also richer in water-courses; the river Araxes (Araç) may be considered its northern boundary. Its chief geographical feature is the big salt lake of Urmiya. In early Muhammadan times Ardabīl was here the most important place, succeeded in modern times by Tabriz. The small coastal border to the east of Aḏharbāḏjān belongs to the South Caspian regions, known in Islamic geography as al-Dījīl, al-Da‘īla, and further Tabaristan, now Gilān and Māzandarān. This region consists of a narrow coastal stretch, widening somewhat towards the east and contrasting with the rest of Persia by its moist climate and rich vegetation; to the south it slopes rapidly upwards to the high range of the Elburz that forms the northern border of the central plateau; alongside the southern slope of this range stretches a narrow cultivated and inhabited area, in which al-Ra‘i was the most important town and through which ran the main route to Khurāsān, passing, after al-Ra‘i, Samān, al-Dīnābād and Biṣṭān. At the south-eastern corner of the Caspian the route passed south of the mountainous region of Dūr Ṭafīrah, which region, owing to the fact that its waters — the river Dūr Ṭafīrah and Atrek — flow towards the Caspian, does not belong geographically to Khurāsān.

In the south of al-Dījīl the Karstīn mountains are a transition to the low country of Ḳhūrāsān, the ancient Elam and the modern Ardabīl. It is very similar to al-Ṭarā‘, from which it is separated by desert stretches. The river of Ahvāz, now the Kārūn, fed by its tributary the Kerīkht, in the early Middle Ages flowed directly into the Persian Gulf, and later into the Shatt al-‘Arab. To the east of Khūrāsān and south-east of al-Dījīl begin the mountain ranges of Fāris with their many mountain lakes and their fertile valleys, which find their continuation in the similarly shaped mountain region of Kirmān where, however, the desert areas are more numerous. The chief town of Fāris in mediaeval and modern times, Shīrāz, has replaced the ancient towns of Dīrj and Isfahān, while the mediaeval towns of Kirmān, al-Ṭabī‘īn and Dīrj, have disappeared, the present town of Kirmān being comparatively young. The coastal region of Fāris and Kirmān is barren; here were the very important ports of Tawwādī, Sinīr, Shīrāz and Harmān, now replaced by Būshir and Bandar ‘Abbās. The geographers distinguish in Fāris and Kirmān a southern hot zone (qurād, qarṣe) and a northern colder zone (qurād, sevērd), a distinction important to the nomads and pertaining to the climate and vegetation; “hot regions” are found, however, also in the north-eastern parts of Kirmān, where the land descends to the level of the central desert. The oasis of Yezd and environs is generally counted a part of Fāris. The country east of Kirmān as far as the Indus, occupied by several mountain ranges, is poor in cultivated areas and has not much importance as a passage to the indus region. It consists of the coast region of Mekran and the parallel inner zone of Ḳāīūr, forming together the present Baluchestān.

The north-eastern part of the Iranian plateau consists of three main regions, of which Sīstān with al-Ra‘īkh khādji (Arachosia) is formed by the basin of the Hīlmand; these waters flow into the Sīstān lakes, which have considerably changed their form in the course of history. The principal mediaeval towns were Zaranj and Bust. The mountain ranges become higher towards the north of this region and run more north, north-east, north-west and south-east the border is the west-shed of the Indus valley.

To the north of Sīstān stretches the large region of Khurāsān. Its main features are a series of mountain ranges running east-west, north-west, north-east, north and south; the eastern border is the west-shed of the Indus valley.

To the north of Sīstān stretches the large region of Khūrāsān. Its main features are a series of mountain ranges running east-west, north-west, north-east, north and south; the eastern border is the west-shed of the Indus valley.
not quite complete watershed between Khurāṣān and Dūrjūn. Though certainly presenting a geographical unity, the large extent of Khurāṣān allows the division into smaller regions, such as Bādhīgī, al-Dūrjūn, Kūrghāštān and others. The present frontier between Persia and Afghanistan cuts from north to south right through Khurāṣān and Sistān. Finally the basin of the Indus and its tributaries forms a region of its own, although the part with Kābul to the south of the Hindī Kūh and Ghazna (Zābulistān) was often counted by the Islamic geographers to Khurāṣān. The more southern part of the Indus valley is separated from the Hilmānd system by the Sālimān range and the deserts of Waziristān and is, owing to climate, poor in cultivated areas.

All over the Iranian plateau a system of secular caravan roads links up the many cultivated centres. The chief connections with the surrounding countries were the passage of the Araxes towards the eastern Caucasian (al-Rām), the passes west of Urmia to Armenia, the pass-ways of Shahrizār and Hulwān to the Mesopotamian and al-Iraq, and the road from al-Baṣra to Ahwāz. The sea-ports on the Persian Gulf maintained regular intercourse with the coast towns of Arabia, India and even Eastern Africa. Towards Transoxania (Ma war ṣ al-Nahr) the chief passage went by Tirmidh on the Oxus, while the roads from Kābul and Ghazna to Mulkān were the chief connections between the Iranian plateau and the Islamic parts of India. The Caspian ports maintained a small traffic with the Volga mouth.

Historical survey. The relations between Arabia and Persia date from long before Islamic times. Arabs settled in southern Persia from the time of Shāhpūr I, and the Sāsānids were masters of southern Arabia up to the time of Muḥammād. Then began, under the caliph ʿUmar, the Arab conquest of Persia, which inaugurated the Islamic period in the history of that country. The political and psychological prelude to this conquest was the taking of the capital of the Sāsānid empire, al-Madaʾin, in 637, after the battle of al-Kādīsia. Although the exact dates of the different conquests and battles are not known, the early historical sources allow a reliable survey of the phases of the amazingly rapid progress of the Arabic invaders all over the Iranian plateau. For, with the exception of Makrān and Kābul, all regions had been reached, as far as Balkh, before the death of the caliph ʿOthmān (656). We may distinguish different chief expeditions that were directed primarily from Madīna, and secondarily from Kūfa and Basra by the governors of those two garrison towns. The first expedition, however, the conquest of the greater part of al-Dījūlī and south-eastern Arḍhārdīsān, was the immediate consequence of the expedition of al-Māʾrūn to the north of Syria by Abī Wāqīṣ. It was followed, probably in 638, by the battle of Dījīlī and the conquest of Hulwān, Kūrghāštān (Kūrghāštān) and, after reinforcement had been sent from Kūfa, by the famous battle of Nihāwand. These events caused the flight of king Vērdēgovd by the way of Isfahān, Isfahān, Kūrnān, Siddīqān, to Mār, where he was killed by the Marwānī Mūḥāyya (651). Immediately after Nihāwand came the capitulation of Arḍhārdīsān (about 641), together with raids into Dījīlī. The further conquest of Arḍhārdīsān, however, started from Māzand, taken in 641 by ʿOthāʾ b. Fāsḥaṭ, who, in the course of his ex-

pedition, took Shahrizār, Urmīya and several other places in Arḍhārdīsān. Nihāwand remained the base from which, under the direction of the first governors of Kūfa, were conquered al-Raʾy and the towns of Kūrnān (after 641), and about the same time Hāmadān, Kūrshīn and Zandān. In the following years several expeditions were necessary in this region against the Dūlamīts and other mountainers. From Kūfa started also the first invasion of Kūhīstān under the governor al-Muḥīrī b. ʿAṣība, but the real conquest of this region began in 638 under the famous governor of Baṣra Abī Mūsā al-Aṣḵārī. The subjugation of this very near neighbour did not take much time, the most serious resistance being given at Tūṭar (Ṣīhīṣhār). Kūhīstān remained Abī Mūsā’s base, from which he conquered the remaining towns of al-Dījūlī, namely al-Sāmān, al-Sharīq, Kūnām and Kūshān, and finally, in 644, by means of his lieutenant ʿAbd Allāh b. Buḥdīf, Ṣafāḥ. The latter was also the first to move in the direction of Kūhīstān by forcing the towns called al-Ṭabāṣān to capitulate. About the same time took place the first invasion of Fāris, not, however, from Kūhīstān, but from the opposite Arabian province of al-Bābkān, whose governor ʿOthmān b. Abī ʿAṣīb had an encounter with the marwūṣān on the island of Ahbarkān and subsequently took Tawwajdī, from where he began raids on the other towns of Fāris. His brother al-Haskam defeated the marwūṣān of Fāris near Rāhhar on the coast, in 640, in a great battle, which, according to al-Balkhī, was equal in importance to that of al-Kādīsia. Then Abī Mūsā was ordered to join forces with ʿOthmān b. al-ʿAṣ. Together they conquered between 644 and 647 52 number of towns: Maranjān, Shahrī, Shīrīn, Ṣafāḥ, Būghrān, Ṣafāḥ, Kūrghāštān, Dākhēbdījīl; Fāris; Abī Mūsā penetrated far into Kūrnān, Ṣafāḥ became here the principal Arab garrison. It was from here that, in the caliphate of ʿOthmān, started the great campaigns of ʿAbd Allāh b. ʿAmīr, after his appointment as governor of Baṣra. In 649 he took the not yet conquered towns of Isfahān and Dījīl, and in 650 he set out for the conquest of Kūhīstān; the reason of this is said to have been an invitation by the marwūṣān of Tūṣ, addressed equally to his colleague of Kūfa, Saʾd b. al-ʿAṣ. But while Saʾd did not go beyond Baṭārān and Dūrjūn, where the mālid was made tributary, ʿAbd Allāh became the real conqueror of Kūhīstān. He had already dispatched his lieutenant Modjāḏī b. Maʾshī towards Kūrnān, in pursuit of Vērdēgovd; this first expedition having failed, Modjāḏī was sent a second time to Kūrnān in 650, where he conquered the principal towns: al-Sṭrādī, Būghrān and Dījīl. Battles were fought also in 650 and 651, the latter a similar minor expedition was sent by ʿAbd Allāh to Sīstān, under al-Raʾbī b. Ziyād, who crossed the desert from Fāhrād and conquered with considerable difficulty Zarānd, the capital of Sīstān, where he remained several years. His successor having been expelled from Zarānd, ʿAbd Allāh dispatched ʿAbd al-Raʾḥīm b. Sūmara, who reconquered the country and penetrated as far as Dāwār, Bust and Zābul. In 650 ʿAbd Allāh had in the meantime proceeded to al-Ṭabāṣān, already conquered, and sent from there al-Aṣḵārī b. Kaʾís to the conquest of Kūhīstān. He himself reached Nīshābīr, which surrendered after a siege. From several
towns were subdued by him and by his lieutenants, and with the *mawālī of Tūs a treaty was concluded. Marw capitulated without a fight. A secondary expedition to Herat under Awn b. Thālabī resulted in the capitulation of the ruler of that town, while finally eastern Khurāsān was subdued by al-ʿΑμrān b. Kaṣārī, who marched on the capital, which surrendered. Thus the region of al-Ḥujjājīnān and the town of Kalbī, continuing from here to the Kizhā, as far as Khaṭūnān. When ʿAbd Allāh b. ʿAmīr returned, he left Kaṣārī b. al-Haṭtham as the first governor of Khurāsān. This was the military situation at ’Othmān’s death. The conquests were by no means secure, least of all in Sīān and Khurāsān, but the placing of garrisons in Nihāwān, al-Ahwāz and Shīrāz enabled the Arabs to complete their conquests after the civil wars were over. The people and the authorities with whom the Arabs had to deal in Persia were very different. After the royal army had been destroyed at al-Kādīsiyya and Nihāwān, it was chiefly the marzākūn who opposed the Arab invaders with their local troops and concluded on their own account treaties (muḥāfāẓ), which guaranteed freedom of religion and the concession of private property on payment of ḥārāḍ. Where a town or a region had been taken by force, the Arabs became proprietors of the soil, as in the Median regions Māh al-Kifā and Māh al-Baṣra. Wholesale acceptance of Islam, as is reported of Karwān, was rare; the Zoroastrians continued the practice of their religion, notably in Fārs and Adhārābād, but from Fārs many of them took refuge in Sīān and Maktān, and about 700 took place the first emigration of Zoroastrians to Kathiawar in India. In the town of Dārābījī in it was the local herābī who treated with the Arabs. On the other hand, many Persians were taken as captives to Irāq and Arabia, where they became muḥāfāz, while also entire groups, such as many knights (sāwirā) of Yezdegard’s army, and different elements of the population of southern Persia (the Zolt, Sayyīdījā and others) joined forces with the Arabs. The mountainers, however, in Fārs and al-Dhībāl, and especially those of Dīlam and Daulām, long remained unconquered, living under petty local dynasties. In Khurāsān the Arabs had to deal with remnants of the Hepthalites (Hājīyatān), still further east with polytheists (muḥārīkūn), probably Buddhists and, in Khurāsān, often with Turkish auxiliaries. On the other hand, the conquests introduced a contingent of Arab Muslims in the Persian towns, where they generally began by establishing a mosque; they increased by colonisation in Umāiyad times and among them were many bearers of the traditions (hadīth) about the Prophet and other religious matters and in this way was prepared the gradual Islamisation of the population,favoured at the same time by economic conditions. The civil war, in which not a few Persians took part in Irāq, crippled for some time the Arab progress; the emissaries of ʿAlī’s governors in Kaṣārī and Bāṣra had great difficulty in maintaining themselves, and the whole of Khurāsān rebelled, in spite of the reported visit of the marzākūn of Marw to the fourth caliph, Kalbī was even for some time under Chinese control. It was only under the energetic governors of Irāq under the Umāiyads, Ziyād and al-Ḥajjājīd, that the conquest was taken up with renewed vigour. Under Mūṭawiya ʿAbd Allāh b. ʿAmīr had been again appointed governor of Bāṣra (662) and he sent again ʿAbd al-Ḥaymān b. Samʿān to Sīān, and then the Arabs reached Kabul, although he and his successors experienced greater difficulties in their dealings with the Kābul-Shāh and the different rulers of Zabulīstān who are called sūmil (according to Marquart, *Erinnerungen* p. 248). These difficulties continued throughout the Umāiyad period and became less only when the region was joined administratively to Khurāsān, and the Arab domination grew stronger in the latter region. Ibn ʿAmīr was also the first to begin the reconquest of Khurāsān by his lieutenant Kaṣārī b. Haṭṭam (capture of Herāt and Šāhīd; it was continued by Ziyād b. ʿAbd Sufīyān (from 666), under whom Marw was made a strong Arab garrison, and shortly afterwards 50,000 Arab colonists were established with their families in Khurāsān. al-Ḥajjājīd operated in Khurāsān through his able generals al-Muhallab b. Abī Sufīya, Yazīd b. al-Muhallab, and finally Kūstāb b. Mūsīlīm. One of the greatest difficulties was, in his time as many times afterwards, the clearing of the main road to Khurāsān by al-Ḥayrī, Kūtabī and Tabariyān, where many battles were fought with the mountainers. The transfer of a considerable Arab contingent to Khurāsān under Ziyād had been a consequence of tribal feuds that had started during Mūṭawiya’s reign. The new comers soon began to infect the Arab soldiery of the garrisons, while at the same time the political and religious parties born from the civil war began to gain adherents in Persia, first among the Arabs and soon among their Persian clients. Prominent were the Kūṣṭābī, who, under their leader Kaṣārī b. al-Fadlīya (killed ca. 697), founded a refuge in Kūtar at and made from there raids to the north and the west. And towards the end of the Umāiyad period, Ishāfān with parts of Fārs and Khurāsān were temporarily in the power of ʿAbd Allāh b. Muḥāfāz (744–746). The main object of the Umāiyad administration was the collection of the *ṣiyyāt* and the *ḥārāḍ* and, until the time of al-Ḥajjājīd, the books were kept by native scribes in Persian, after the cession of the Šāhīdāt. Under al-Ḥajjājīd the language and the script of the administration were changed to Arabic in Irāq, and we must assume that generally Arabic came into administrative use in the Persian provinces; nevertheless the first Arab governors, and among them Kaṣārī, had coins struck with Persian and Arabic legends. A considerable advance in the Islamisation of Persia was due to the financial policy of Umār b. ʿAbd al-ʿArīz and Ḥiḥān; after Umār’s edicts had induced many Persians to adopt Islam in order to get rid of the *ṣiyyāt*, the taxing of Muslims and non-Muslims alike by Ḥiḥān brought about an assimilation of the different elements of the population, from which there emerged at this time a reliable class of Islamic-Persian functionaries. Only the mountain people under their local chiefs remained unconverted. But probably the remote province of Khurāsān, though results were not rare, and notwithstanding the continuous tribal feuds of the Arabs, remained under firm government control, owing to the presence of the strong garrison at Marw, where the governor resided, and in a not less degree to the successes of the Muslims in Transoxiana under Kūtarat. This makes comprehensible why the anti-Umāiyad propaganda, directed by the *Aḥbāsids* in Syria, chose Khurāsān as the field of operation for their
emissaries. Making use of the animosity between the Arab tribes and the general dissatisfaction with the existing rule, this propaganda resulted finally in the revolt of 'Abd-Allāh b. 'Abd al-Karim in 747 and his victorious entry into Marw and soon afterwards into Naṣībūn. So it was to the Arab legions in Persia and their Persian helpers that the 'Abbāsīds owed their final victory in 750. Thus, of course, brought about a completely new orientation of Persia within the empire of the new dynasty, the more so as the 'Abbāsīds transferred their residence to 'Irāq, where the centre of the last national Persian dynasty was formerly situated. Persian attitude to life and Persian tradition became dominant in the new centre of Arab political power and soon of Islamic civilization in the newly founded Baghdad (762). A symptom of this Persian cultural influence is the translation into Arabic of products of Pehlevi literature by authors like Ibn al-Muqaffa. Further, powerful families of Persian origin, such as the Barakānids, and afterwards the Bānū Nāshīrī, such influence as vassals on the affairs of state. This was also the time when the racial sentiment of the Persians began to assert itself in the 'idālīya movement and when the manifestations of the Persian sīdīyīs aroused the anxiety of religious circles. The caliphs themselves showed more interest in their Persian provinces than the Umayyads had ever done; they were moreover compelled to do so, as events had shown what a powerful commander might be able to undertake against the central authority. In the south-western provinces — al-Djadhīd to Kufrāsān and Fāris — revolts of this kind were not to be feared, but farther away in the mountains the authority could only be maintained by repeated expeditions. So when the governor of Kufrāsān showed signs of disloyalty, the caliph al-Mansūr sent his son al-Mahdi with the general Khaṣṣān b. Kufrāsān to restore order and afterwards to subjugate a local dynasty in Tahbāristān. Then al-Mahdi took up his residence in al-Raiy until his accession. Hārūn al-Raṣīd undertook himself at the end of his life an expedition against Kufrāsān and Transoxania, during which he died at Tūs (809). His son al-Ma'mūn, who had accompanied him, remained in Kufrāsān, even after he had become caliph (813), until 817. During this time happened the episode of the infām 'Alī al-Riḍā [q. v.]. In the same early 'Abbāsīd period the attitude of the Persian population towards Islam had changed in so far as notably the revolt of 'Abd-Allāh had induced many Persians of the better class (the dādšāhs) to become Muslims, but at the same time the lower classes were liable to outbursts of religious fanaticism, in which Islamic and pre-Islamic views were intermingled. In Kufrāsān a number of "false prophets" made their appearance: Shahābīl the Mālikī (753), the Fatimī (768), the Barakānī (777-780). To the same kind of religious movements belonged the prolonged rebellion of the Khurramītes under Bābak (816-823) in Aḥbarīdān. The caliphs were justifying in repressing these movements with great severity, because they were generally accompanied by aspirations towards political independence. The revolt of the 'Alīd Yaḥyā b. 'Abd Allāh in Dālam in 703 showed likewise that it was already possible to operate in Persia with Islamic devices, and for this reason the caliph Harūn had to proceed with much circumspection in its repression.

Under al-Ma'mūn begins the political loosening of Khurāsān and neighbouring provinces from the 'Abbāsīd caliphate, not by the action of the ancient Persian nobles or princes, nor by the popular movements already described, nor by Khārijītī or 'Alīd propaganda, but by the action of Persian-Muḥam-mānian governors not of ancient noble lineage, but nevertheless inspired by national feelings, preparing in this way the Persian-Muḥam-mānian political and cultural renaissance. Tāhir b. al-Husayn, general of al-Ma'mūn, was appointed in 820 governor of Khurāsān. His descendants, the Tāhirīs, were nominally governors of the caliphs, but the latter had to leave to them an almost independent authority over Khurāsān with the regions to the east as far as the Indus and to the south far as al-Raiy. Those regions never came back under the caliphs' full authority, for the Tāhirīs lost their power and their territory in 873 in the struggle against the Saffārīs, a dynasty of still less noble descent, who in 867 had begun to make themselves masters of Sīstān under Yaḥyā b. al-Lāthī and his two brothers. Their territory comprised for some time Khurāsān with the regions of Kābul and al-Rukhshān — where the 'Abbāsīd power had never been well established — and even Kirmān and Fāris, but the position of the Saffārīs as leading power in Persia soon came to an end, when they were beaten in 879 in Khuṣṭān in their endeavour to attack the caliph in Baghādād. The cultural and religious position of the Saffārīs is not well known, but their exploits remained famous in Persia long after their extinction. During the same period the caliphs had to suffer the establishment of other more or less independent dynasties, such as the Dālāfīs in al-Karāuj in the south, the Nāṣirids in Basra (847-857), and the Rudānīs family in Aḥbarīdān. For more important is the rise of the Sūrism in Khurāsān and Transoxania. This dynasty originated in Khurāsān; they had been at first faithful servants of the Tāhirīs and occupied already a powerful position in Transoxania when the troubles in Khurāsān, after the fall of the Tāhirī power, enabled them to establish their power in Khurāsān in 892, under the nominal suzerainty of Baghādād. Under Naṣr b. al-Muqaddas (913-943) they governed also in Sīstān, Kirmān, Dārgānīs, al-Raiy and Tahbāristān. The immense cultural importance of this dynasty for Persia lies in the fact that a revived national but Islamized Persian spirit found an opportunity to develop itself in Khurāsān, as is revealed to us by the beginnings of the New Persian Islamic literature [cf. infra, iii.]. This development certainly goes back at least as far as the time of al-Ma'mūn. The Sūrism stayed in Transoxania and al-Kirmān governed by governors, so that it was not the neighbourhood of their brilliant court which favoured the Persian form of Islamic culture; this was due rather to the general prosperity which began to reign and which brought into existence a class of wealthy landowners who were able to patronize literary and scientific activity, for Arabic literature also began to flourish in Khurāsān (al-Raṣīlī and others). It is further noteworthy that the Persian renaissance did not take place in the traditional centres of Persis, Fāris and Aḥbarīdān, where about this time the ancient conditions had not much changed, but rather in a (culturally speaking) new country, where new forms could more easily come into existence.
sian national spirit took other, less refined forms, as the promoters were the never entirely subjected peoples of Dailam and Dzjân. Here the Zaidite 'Alid propaganda, begun under Hârîm al-Rashîd, had supplied popular opposition to the Caliphate with an Islamic badge. Several petty local dynasties were still in existence in Dailam at the beginning of the 10th century and from here started predatory expeditions, whose first aim was the town of al-Rayy. The brigand chiefs became generals, and some of them became rulers of countries with continually changing frontiers, owing to their warfare with each other and with the Ṣâmânids. The most stable of the dynasties thus formed were the Ziyârids (928–1042), who ruled for some time in al-Rayy, Iṣfâhân and Atâwâr, but were reduced in the end to the territories of Tabaristan and Dzjurdzân. In al-Dzjâbât, Fâris and Khûrân, they were soon replaced by the much more successful Bûyids, their former Dailamite confederates. The independent rise of the three brothers Allâ, Ḥasan and Ahmad, sons of Bûyâ, began about 933 and soon nearly the whole of western Persia had ceased to pay taxes and tribute to the Baghâd government, where, moreover, the caliphs were dominated by military commanders. Through the marriage of Ahmad b. Bûyâ, already master of Khûrân, to occupy Baghâd in 946 and to incorporate the seat of the caliphate in his possession. The caliphate was allowed to survive under the political power of this Persian Šâfîte dynasty. The other Bûyids brothers resided at al-Rayy and at Shârâr, and the most brilliant reign was that of Aḏûd al-Dawla, son of Allâ of Shârâr, who in his turn became master of Baghâd in 978 and reigned until 983, while his son Bahâ al-Dawla (980–1013) continued to reign in ʿIrân, Fâris and Kirmân. At the same time the north-western part of Persia had fallen, after the semi-independent reign of the governors of the ʿAṣâd family in Aḏharbâdjan (890–929), into the hands of Kurdish dynasties, such as the Musârids, the Shâdılısids, the Rawkûlids and others.

On account of these grave political disturbances western Iran was somewhat slower to accommodate the specifically Persian cultural development that had started in Khûrân, but towards the middle of the 10th century, when conditions became more settled, there clustered around the Bûyids courts and in other large centres a class of Persian-Islamic writers — such as Ḥamsa al-ʿĪsfâhânī (d. c. 970) — and scholars, among them such brilliant personalities as the Bûyids waṣâṣ Abû ʿl-ʿAdâl b. Ṣâdâl to Abâdâd. At the same time the different religious currents of the time filtered through into the classes of the continually increasing Islamic population, one centre preferring Šâfîte doctrines, another Muṭaṣṣilism, another traditionalism (aḥl al-ḥadîth), and so on (cf. the geographers al̲-ṣārīm). Karâma was, however, severely suppressed, when it appeared in Khûrân at the end of the 10th century, and though the Karâma propaganda was only brought in south-western Persia, its political successes were realised only on the opposite coast of al-Baḥrân. Šûšân likewise became widely spread in its different forms, developing peculiar types of Persian Šûšân as early as the 11th century. The life story of al-Hallâbî shows equally the fertility of south-western Persia for Šûšân propaganda. All these germes were destined to bear fruit in later centuries, but on the whole the political distribution of forces had already brought it about that western Persia, situated between Sunni Eastern Persia and Sunni ʿIrāq and Mesopotamia, tended towards the Shīʿa.

The 12th century witnessed the rise of the Turks in Persia. Turkish troops had already formed large contingents in the armies of the governors and princes who disputed with each other parts of Iranian soil, not excluding the mountainiers who shook horses alongside their local foot-soldiers. It is true that already in Šâmân time troops of Turkish tribes had been established south of the Dzjâbât in Ṣuṭṭârân, but the main role of the Turks in Persia had always been that of soldiers and military commanders in the service of local governors and princes. In the Šâmânid state several Turks had risen to high military and administrative functions, and, as the military power of the Šâmânids began to wane, these Turkish commanders aspired to political leadership, relying on their Turkish troops and using their natural capacity for military organisation. In this way the Turkish vassal of the Šâmânids, Sabuktâkin, founded his independence in the newly conquered region of Ḥamza and Kâbul, where until then local Hindu rulers had been able to maintain themselves; his power soon became a menace to the Šâmânids themselves, who, in Târmanisân, were continually losing ground to the Turkish Hâshân. Sabuktâkin had been a Šâmânid governor in Khûrân, and it was after his death (997) that his son Mâhmûd of Ḥamza (998–1030) took the opportunity of establishing an independent power in Khûrân, choosing Balkh for his capital at the outset. He extended his sway over Ṣâstân and as far as eastern Media, while his conquests in India and Târmanisân gave a strong backing to the consolidation of his power in ʿIrân. Mâhmûd had asked the caliph for a diploma for investiture and was noted as a champion of Sunnism. Under his reign the new cultural Persian-Islamic tradition of the Šâmânids was continued; his court was a centre of Persian court poets and whatever his personal relations with Firdawsi may have been, they show at any rate that his states offered congenial soil for the renaissance of Persian traditions. The name of al-Bîrûnî is sufficient to show also that the noblest and highest form of Islamic scholarship could flourish under his reign. And his immense popularity in later Persian Šûfi poetry has made this Turkish ruler a cultural Persian hero. The final finalisation of the Kâbul country was the work of the Ghazâwids. In western ʿIrân in the meantime, the later Bûyids were able to maintain themselves with less brilliancy; apart from the Ghazâwids they were seriously weakened in Fâris by the Shâhânsâh Kûrda in the first half of the 13th century. Yet conditions did not hinder the prosperity of Persian literature and science (Avicenna).

The rise of the Ghazâwids was only the prelude to the Turkish invasion under the house of Selçuk, by which Seldûk-i d. i. rule became established in Persia and beyond. This time the Turks, mostly called Ghuzz, had begun, since 1029, to migrate into eastern and northern Persia, in spite of the opposing measures of the Šâmânids and the Ghazâwids. Within seventeen years from his first appearance in Khûrân (1035), their leader Tâhirî Bek had overran the whole north of Persia, and made his entrance into Baghâd (1055).
At the same time the power of the remaining Ziyarids and of the different Buwayid dynasties was entirely crushed; the Iranian possessions of the Ghaznavid power were considerably reduced, and thus nearly the whole of Persia was united again under the Turkish dynasty of the Seljukids, whose members divided amongst them the different provinces: Khorasan, Sistan with Herat, Kirman, Fars and Adharbadjan. Toghril Bek fixed his residence at al-Raiy, he and his successors being called the Great Seljuk, in contrast to the minor Seljuk dynasties. The last Great Seljuk, Sandjar (1049-1157), though an able ruler, was real master only in Khorasan and had already to face new factors in Persia, which, after his death, brought about a political disintegration that could only be arrested by the Mongol conquest. The Turkish invasion, which brought nomadic Turks into nearly all parts of Persia, where they found conditions suited to their mode of life, and which in many regards may be compared with the Arab invasion, did not make of Persia a Turkish country, as was the case with Transoxiana and Asia Minor, with the exception only of Adharbadjan. The young Persian cultural renaissance had gathered enough vital force to assimilate the ruling Turkish elements, and this to such a degree that, until the xilth century, the Seljukids continued to spread Persian culture in Asia Minor. The nomadic Ghurids did not find the opportunity, as elsewhere, to assert themselves otherwise than as a very turbulent element, which in the xilth century became threatening even to the Seljukids themselves. The influence of their certainly not very orthodox Islamic religious views on the religious history of Persia has certainly not a little contributed to the spreading of Shi'ite ideas. The Seljukids themselves continued the tradition of the Sasanids and Ghaznavids by becoming champions of Sunnism. The minister Nizām al-Mulk is an outstanding figure among the many personalities of Persian desert who were the pillars of the political, religious and literary current of the time. Under his guidance worked al-Ghazālī, the scene of whose later activity was Nishapur in Khorasan. Persia had acquired at this time an importance as a seat of Islamic culture equal to that of 'Ira'q and other parts of the Islamic world. The theological colleges founded by Nizām al-Mulk (Baghdad and Nishapur) were the crowning work of the Sunni Islamic civilization, but involved at the same time a consolidation by which religious and cultural ideas were fixed and anchored for the centuries to come. The early Seljuk period shows also a continuation of the best of Muslim-madan scientific activity in Persia, for which we have to quote only 'Umarī Khayyān.

Western Persia, however, asserted her non-Sunnite tradition by the Isma'īli propagandas which resulted in the capture of the stronghold of Alamut near Karvin by Ḥasan-i Šāh Bāb in 1091. The sources of this propaganda were in the East (Nāṣir-i Khurazm and the West (Egypt) but its real political effects were contemporaneously, in ad-Djihāl, Fars and Khosistan and, to a less degree, in the east in Khustān, where about the same time a number of forces were acquired by the Isma'īlites. Ḥasan-i Šah Bāb and his successors became a political power in western Iran, especially in al-Djihāl, against which the Seljukids were more and more powerless, and which was crushed only by the Mongol invasion.

The Seljukids had established in their dominions a system of hereditary military fiefs (fithār) with the object of being able to dispose of an army commanded by reliable chiefs. The consequence of this system was the loosening of the central power which was supplanted in course of time by a number of independent military governors, who are known in history as ala'ibek. On Persia, the chief Ala'ibek dynasties were those of Adharbadjan (since 1146), of Luristan (since 1148), of Yad (since 1170), and the Ala'ibek dynasty of the Salgharids in Fars (since 1137), who annexed also Kirman after the extinction of the ruling Seljukids of Khorasan. In the southern parts of Fars and Kirman the Shēhānakra continued their irregular authority. In Khorasan the Seljukids were eclipsed after Sandjar's death by the Khwrizmshāhs, and simultaneously these rose into prominence the Ghorids dynasty, originating in the mountains of al-Ǧbor and al-Dīwār. It was the Ghurids who, by taking Ghazna in 1149, put an end to Ghaznavid rule in Persia; they likewise extended to Sistan and the country of Bost, and to the north, Bīlūmīyān and eastern Khorasan. Later on, they too lost the better part of their possessions to the Khwārizmshāhs. Sometimes the Ghurids were allied with the wandering Ghūz, and sometimes they fought the latter; on the whole the devastations brought by the Ghurids and their temporary allies mark the beginning of the cultural decline in north-eastern Iran.

This decline was hastened by the Mongol invasions. After the Khwārizmshāh Muḥammad had come into conflict with Čingiz Khān (1216), the Mongols first took possession of his lands in Transoxiana, of which their appearance in Khorasan was the political and military consequence. In the campaign of 1220-1221 the Mongol general Džebeand Subutai conquered Khorasan and the northern part of western Persia as far as Adharbadjan, driving the Khwārizmshāh Muḥammad to the island of Abshār in the Caspian, where he died, and forcing his son Dżai āl al-Dīn to cross the Indus. The great towns of Khorasan were devastated in a way that made it impossible for them to recover their ancient splendour; the population must have been considerably reduced by the wholesale massacres, and the works of art and literature were destroyed. The conquered cities were immediately placed under Mongol administration; where the population revolted, as in Hamadhān, there followed a pitiless massacre. The conquered territories were annexed to the part of the Mongol empire given to Čaghatay; Southern Persia was spared for the moment; in Kirman the Mongol emissary Burāq Hāshib founded in 1222 an almost independent state.

Soon afterwards Dżai āl al-Dīn reappeared from India to make his turbulent way to Adharbadjan and Armenia, without being able to drive out the Mongols. Then, in 1256, came the second invasion of Mongol armies under Hüilqī, brother of the reigning Khān Mangu. This expedition had been carefully prepared and was directed against the Isma'īli heretics in Persia and against the caliphate in Baghāshād, which was exterminated in 1258. Whatever the real political and religious motives for the expedition of Hüilqī, the friend of the Christians, may have been, its results were of immense consequence for eastern Islam in general.
Persia was entirely subdued and came to form the greater part of the dominions of the non-Islamic Mongol dynasty of the Ilkhanids, who resided most of the time in Ardabil (after 1306 in Sultanlya). By the end of the sixteenth century the smaller existing dynasties, such as the Saltanid atabeks of Fars and the Kutlug Khâna of Kirmân were also extinguished.

By the terrible devastations in Khorasan these regions ceased to be a hearth of national Persian Islamic culture and this role now was taken over by the west. At the same time these political events had loosened the ties with the western Islamic centres which at the time were wholly absorbed by the action against the Crusaders. Moreover by the extermination of the Timuri power and the uncertain attitude of the Ilkhanids towards Islam and its different aspects, Persian Islam passed in this period through a profound crisis, and many conflicting currents were at work. In this period lived in Ardabil the Shâhid Sa’îd al-Dîn (1252 – 1344), the ancestor of the Safavid dynasty. Still the Persian national character maintained itself and assimilated the many new foreign elements, mostly Turkish, so far as these were capable of advance to a higher cultural level. Great Persian poets (Sa’di) flourished, and the Ilkhanids showed an interest in the achievements of Islamic science (Naqsh al-Dîn Tûsî) and literature (Rashîd al-Dîn). During the Ilkhan period (1265 – 1337) Persia was considered by the European Christians as their ally against Egypt, now the chief champion of Islam in the west. But although the political opposition between the Ilkhan empires and western Islam became a living reality, any attempt to organize and propagate Christianity in Persia by the institution of bishoprics was fruitless. Persia was open, however, to closer contact with the European world than ever had been the case in Islamic times, not so much by the series of well-known travellers who passed through Persia on their way to the centre of the Mongolian Empire, as through the establishing of commercial settlements by the Italian republics in Ardabil (1345) for the overland commerce from their establishments on the Black Sea (Trebizond) through Armenia and Persia to Central Asia.

After the death of Abû Sa’d (1335) the dynasty of the Ilkhanids came to an end in the quarrels between the Djâljâr and Cûhân families. Abû Sa’d had already had great difficulty in maintaining the unity of his state, especially in his struggle against the influential amir Cûhân. Further the later Ilkhanids had already had to suffer the existence of semi-independent dynasties, such as the Kur dynasty at Herât, the only large town in Kûhrâ that had escaped Mongol devastation. Other powerful commanders, who had served the Ilkhanid, found during the troubles after Abû Sa’d’s death opportunity to aspire to political independence; the most successful were the Mânûshîrîdids in Fars and Kûhrâ, a dynasty of Arab extraction, who from about 1340 until their destruction by Timûr in 1392 held sway in southern Persia and for some time as far as Persian Itrâk (al-Djâhîl) and Adharbâjdân. Further Adharbâjdân was now in the power of the Khân of the Golden Horde and now in that of the Djâljâr dynasty of Baghdad, Eastern Persia was mainly divided between the Kur dynasty of Herât already mentioned and the Serbiddâr clan who had their centre in Sehewat.

In these chaotic times, when the authority of political power was waning, the more popular and, in a way, democratic elements in Persia, gained more opportunity of asserting themselves, as may be seen from this rather independent way in which the citizens of different towns behaved towards the quarrelling rulers. This self-assertion of democratic elements is also to be observed in Asia Minor, on the culturally more fertilized soil of western Iran, it bore the fruit of a brilliant literary development in the sixteenth and seventeenth centuries, which at first sight may seem astonishing in such unfavourable political surroundings. This development was accompanied by an intensification of the religious currents that were at work among the population, where it was strongly influenced by the lower forms of Şûfism as propagated by the dervishes. In the case of the Serbiddâr in Kûhrâ the dervish activity had even political consequences and here also is a striking parallel with conditions in Asia Minor. Higher Şûfism was confined to the upper classes and expressed itself in literature, by which we are able to follow the different trends of thought. From the poems of Hâfiz we learn that the Sufi creed of the tâhir ‘ezâbiyya was already widely spread and that the tomb of “All al-Ridq” in Meshhed had become an object of national veneration.

At the end of the sixteenth century followed a fearful political reaction in the conquest of Persia by Timûr Lang, another foreign invasion which for the last time held up the development of a national state in Persia. Timûr, after conquering for himself an empire in Central Asia, founded on his descent from Cingis Khân a claim to the domination of Persia. In 1370 he had already conquered Balkh; in 1380 he subdued Khorasan, Statân and Mâzândarân, and in 1383 – 1384 he completed the conquest by taking Adharbâjdân, Persian Itrâk, and finally Fars by exterminating the dynasty of the Mânûshîrîdids (1399). The Serbiddâr had already been swept away and in 1389 disappeared the Kur dynasty at Herât. The most bloody event during this conquest was the sack of Ispahan in 1387. Timûr never resided for long in Persia, but considered its government to some of his sons, notably Shahrûkh, who became “king” in Kûhrâ and Statân as early as 1397. In Adharbâjdân reigned Mirâkshâh, not altogether to the satisfaction of his father. After Timûr’s death (1405) the political unity of the empire was on the whole preserved under Shahrûkh (d. 1447), who sought to repair much of the devastation wrought by his father’s campaigns. Shahrûkh still recognized nominally as his suzerain the emperor of China. After his death different descendants of Timûr, the Timûrids, disputed with each other parts of Persia, while after 1450 the dynasties of the Kara Köyûnlû emerged from the west to dominate large parts of Persia. The best known Timûrid in Persia was Sultan Husain Bâlûk, who ruled from his capital Herât over Kûhrâ, Statân and Djürûbân from 1468 to 1506.

Timûr’s reign in Persia meant also a Sunni reaction, but in western and middle Persia this reaction was not lasting. Among the many heterodox religious manifestations of this time is the appearance of the Hurûfî sect, one of whose adherents tried to murder Shahrûkh in Herât in 1436. This religious movement was suppressed by the government, but it had, like similar currents,
strong connections towards the west, through Adharbidjan into Asia Minor, where at this time the Sumi power of the Ottomans was re-establishing and strengthening itself to oppose the heterodox influence emanating from Persia. Meanwhile Persian cultural life continued to manifest itself in the important literature produced in western Persia, while also in the Caucasian countries and Mahammanen India Persian cultural and literary influence was reaching its climax. This was not the case in Khorasan; here, in the intellectual centre of Herat, developed at this time the eastern Turkish Caghatay literature, promoted by 'Ali Shir Naw' at Hussain Ba'kara's court at Herat. Alternatively, the Persian-Islamic tradition continued to influence in these regions, eastern Persia begins to be culturally separated from the west under influence of the Turkish and local elements; a development similar to that witnessed at the same time in Asia Minor and the regions of Arabic tongue in Mesopotamia and 'Iraq.

The events that preceded the rise of the Safavid dynasty have Adharbidjan as their chief scene of action. It was in Adharbidjan that 'Ala' al-Din, the Kha brightly dynasty began his career by taking Tabriz in 1406, and that his successors had the centre of their empire, which, under Djihanshah (1435–1467), extended over nearly all western Persia and in the east as far as Herat. And it was through Adharbidjan that Diri Hasen of the Ah Koyunlu penetrated Persia, after his victory over Djihanshah in 1467. Then he defeated the last Timurid Abl Sab' and became master of western Persia, inaugurating in the meantime the series of wars with the Ottoman Turks, that were to last for three centuries. The successors of Diri Hasen had already come into conflict with the Safavid leaders Shah'ib Habban and Sultan 'Ali, who about this time had acquired enormous influence in Adharbidjan and Asia Minor. The Safavid movement began indeed in a much more democratic way: than the preceding dynasties. Its chief adherents belonged to seven tribal groups of Turkish origin, amongst whom Shi'ite convictions had been spread by means of Shi'ite propaganda methods. This ever-increasing flock acquired at this time the celebrated nickname of Khil'i-Bash. Thus their political rising under Shah Isma'il was again a reaction against the official orthodoxy of the ruling classes, a reaction in which it was not difficult to enlist the Persian town population of western Iran, since olden times ready to accept non-official and unorthodox religious views, by which at the same time they showed their disdais for foreign rule. These different elements gave a Persian "national" character to the Safavid dynasty, although their leaders were Turks from unrecognized Adharbidjan. Shah Isma'il, on emerging from his hiding place in Djiitan, gained his first success in the Caucasus against the king of Shirwan, and this made him strong enough to turn his arms against the last rulers of the Ah Koyunlu, whom he defeated in the battle of Shahrud (1501). By 1510 he was master of western Persia and in addition of Armenia, Mesopotamia and 'Iraq (Baghdad taken in 1508) with the holy tombs of the Imams in Najaf and Karbala. He then turned to eastern Persia, where a new invasion from Transoxiana was threatening, after the death of Sultan Umayyad Ba'kara at Herat (1506), by the rise of the Uzbeks under Shahsultan Khan. The latter had already invaded Khorasan, and had not been defeated and killed in the battle of Marw (1510) by Shah Isma'il. Persia might have experienced a fourth wave of conquest from Central Asia. Then followed in 1514 the famous battle of Cadiirin; the defeat suffered here by Shah Isma'il from the army of Selim I showed where the political frontiers of the Safawis were henceforward to be; the wave of sympathy that had spread west from Adharbidjan far into Asia Minor was ruthlessly suppressed by the Ottomans. Shah Isma'il and Cadiirin showed that any political extension of Persia in this direction was impossible.

Thus the important events of Isma'il's career determined the field of action of the Safavids, which was to last until 1736. Religious and cultural traditions and geographical necessity gave this dynasty the character of a "national" dynasty, and the long period of its existence, together with the religious isolation of their empire, contributed not a little to the coming into existence of a real Persian "nation", that overcame the troublesome period of the xviii century and asserted itself ever more vigorously during the xixe century. The nature of the country, however, was not favourable to a rapid development in this direction. The many nomadic elements of Iran, Turkish and Arab origin kept much longer to their own traditions, and the disconnectedness of the various inhabited centres could not but weaken the authority of the government. Throughout Safavid rule, the kings had to reckon with the existence of half independent governors and tribal formations, from which came the powerful nobles and courtiers. In the time of Tahmasp I some Georgian nobles, relatives of the king, were in a dominant position, but on the whole it was the Kili-Bash clans who formed at times a dangerous power in the state, while nevertheless the kings were dependent on these elements for the defence of the country. It was only during the reign of 'Abbás I that something of a royal militia (the Shahnemeh) could be formed, while on the other hand the army was reinforced by European artillery. Therefore the civil and military administration of the country never acquired even such a regularity and a cohesion as is witnessed in the Ottoman Empire; the Safavids had to suffer for instance the permanent establishment of the Portuguese in Hormuz (1507–1622) and afterwards of the English, but this did not yet conflict with the state conceptions of that time. Governmental authority could only be maintained in the interior by the utmost severity, as was practised notably by 'Abbás I. For the same reason the frontiers of the Safavid empire in east and west were never very stable, although gradually a demarcation takes place. The eastern part of Khorasan and the regions to the south of it, long since culturally disconnected from western Persia, never returned to the Safawids. Balkh and Marw were under the almost unbroken domination of the Uzbek ("Abbás I only temporarily occupied Balkh in 1598), while Kâbûl and Kandahâr belonged from the beginning to the empire of the Great Mughuls of India, Kandahâr being only temporarily held by the Safawis. Only Herat was for most of the time under their control, but far in the sixth century Persia had not abandoned her claim to this town. All this makes clear why eastern Iran, after the extinction of the Usbecks and the Mughals, did not return to Shî'ite Persia, but came to form at last an independent state
under the Afghan rulers. Only western Khurasan, with the shrine of Meshhed, and Sistan remained an integral part of Safavid and consequently of modern Persia. In the west the Ottoman Turks and the Persans disputed with each other in a continual series of campaigns, interrupted by temporary peace. The large band of territory stretching from the Persian Gulf to Georgia. In the xvii century the Turks won and occupied Agharibidjan, Mesopotamia and Iraq. Under Abbas I most of the lost territory was recovered, but the capture of Baghdad by Murad IV in 1638 marked the end of Persian domination in the Tigris valley, while Agharibidjan and parts of Armenia and Georgia remained to Persia. In 1668 took place the first conflict with Russia by a descent of Cossacks upon Mazandaran.

Since the beginning of Ismail's career the Shi'ite creed had been forcibly imposed on the settled population and a regular persecution of all Sunnite theologians had begun. This persecution was accompanied by a repression of all Shi'ite manifestations, whereby the new state religion took at last the aspect of a fanatical and intolerant church, whose ministers, the Shi'ite divines, repressed all usages of free thought. Browses attributes to this development the sudden poverty of literary production in Safavid Persia. In these circumstances Persia became much isolated from the surrounding Islamic countries, but on the other hand the enemies of the Ottoman power in Europe looked to Persia as a valuable ally in their common efforts to crush that power. To this was due the forming of friendly diplomatic connections with European powers, such as Venice and Spain, who in addition, sought to profit by commercial relations. These relations, together with the political necessity of securing their colonial establishments in India and beyond, led other European states also to take up friendly relations with the Safavid court, namely the English, the Dutch and the French, after the Portuguese had been driven from the Persian Gulf. The European envoys, amongst whom the Raleigh brothers are most notable during Abbas I's reign, were well received, and established the first real contact between Persia and European civilisation. These relations also provoked the sending of some memorable Persian embassies to Europe. The political reasons that had brought the European sea powers to the Persian Gulf prevented Persia, however, from ever becoming a maritime power; even the endeavour of Abbas I to make of the newly founded Bender Aghbas a great maritime commercial town remained unrealised.

Most of the Safavid kings had very long reigns, for which the not uncommon practice of killing possible pretenders amongst the royal family was probably responsible. The most brilliant reign was that of Abbas I (1587—1629), who transferred his residence from Kazvin to Isfahan, which, by his buildings, became a splendid royal city. His successors profited by his work. After the middle of the xvii century Persia was passing through a peaceful period, owing mainly to the weakening of its neighbours. Conditions at this time are well known by a series of European travel accounts.

The same peaceful conditions had allowed, however, the establishment at Kandahir in 1709 of a Sunni rebellious movement, which was opposed in vain by the Safavid king Husain and was the beginning of the Afghan state. In 1722 the Afghan army of Mir Mahmid conquered Isfahan, after which the Afghan kings masters in Persia for about eight years. At last the Safavid successors of Husain were able to liberate the country through the help of their general Nader Shah. At that time he had already restored to Persia the cities in Agharibidjan and Georgia that had been taken by the Turks and likewise Raasht and Baku, occupied by Russia. After his coronation he set out on his invasion of India and the Afghan country, but his reign had brought so little stability that, after his murder in 1747, there followed a period of general lawlessness in Persia. The Afghans regained strength, but allowed Nader's blinded grandson Shihrukh to reign over Khurasan. The failure of Nader Shah to establish a lasting dynasty was also due to his endeavours to abolish the Shi'ite religious practices, but in this he met a determined opposition from the people and their spiritual leaders. After Nader's assassination there was hardly any question of restoring a Safavid to the throne. The real power devolved on Karim Khan Zand, who reigned mostly in Shiraz and who succeeded in uniting Persia during a benevolent reign; in his time the troubles on the 'Iraqi frontier led even to the conquest of Bagh. His death in 1779 occasioned a dispute for the throne among his descendants. Agha Muhammad Khan of the Kedjar tribe round Astarkh had profited from these troubles by bringing with much cunning and much cruelty the entire empire under his control. He was finally enthroned in Teheran in 1796 and was assassinated in 1797. With him began the Kedjar dynasty, which reigned until 1925.

At the beginning of Afghan rule Russia had occupied Derbend and Raasht, while Turkey had invaded the country as far as Hamadan; the Afghan ruler Ashraf, however, and after him Nadir Shah succeeded in recovering the occupied territories. A second Turkish attack in 1749 was equally thrown back by Nadir. During the second half of the century Russia and Turkey were too much occupied with each other to pay attention to Persia. The political development in the northeast had eliminated direct danger from the Uzbek states, but now the lawless Turcomans north of Khurasan had become by their raids a terror of the Persian population; Agha Muhammad Khan inflicted serious blows upon them. With the coming of the Kedjars, however, the international situation grew much more difficult, owing to Persia's becoming involved in world-wide political struggles.

Until 1814 the alliance of Persia was an object of dispute between England, whose position in India made Persian friendship a vital question, and the France of Napoleon, who schemed an invasion of India with the aid of the Russian army. In 1814 the French threat disappeared and England concluded a treaty with Persia. But the struggle with Russia for the possession of Georgia, which had begun already in 1812, soon led to military disasters and finally to the loss of all territory to the north of the Araxes by the peace treaty of Turkmanchay (1828). From this time on begins the rivalry between Russia and England, the latter country's policy being to prevent Persia, now politically under strong Russian influence, from gaining strength. Great Britain opposed for this reason any extension of Persian territory in
Afghanistan; it prevented the capture of Herat—a cherished Persian ideal—in 1838, and, when Herat was really taken in 1856, went even so far as to declare war on Persia and to land troops in the Persian Gulf; at the peace treaty of 1857 in Paris, Persia had to abandon her claims. In the meantime Russia's position grew ever stronger; a Russian naval base was founded in the bay of Astrakhan, and by the Russian conquest of Khiva and Bukhara, completed by the subjugation of the Tekke Turkomans in 1856, and the acquisition of the Murav oasis, the Russian Empire had attained an enormous military and political ascendancy over Persia, to which was added the Russian influence in northern Afghanistan and Turkish Armenia. Persia was not able to assert entirely its political freedom, but it gained for the first time well-defined frontiers; difficulties with Turkey in 1823 (massacre of Persians at Kertela) had led to the fixing of the Turkish-Persian frontier in 1823 (followed by a rectification in 1823), while the eastern frontiers with Afghanistàn and Balútistàn were defined by the Anglo-Persian boundary commission in 1873; these measures had been mainly necessitated by the establishing of a telegraph line through Persia to India. During the long reign of Náṣir al-Dín Sháh (1844-1894) international conditions remained stable, to which the on the whole untroubled domestic situation also contributed, but when, under his successor, conditions became less secure, owing to inner political and financial troubles, the intervention of the two great Powers became more threatening. It took the shape of the Anglo-Russian treaty of 1907, which practically divided Persia into a northern and a southern sphere of influence. During this 19th century indeed the Kádjar dynasty had been able to rule Persia in the traditional way, succeeding in checking the action of the troublesome tribes and their chiefs by profiting from their eternal discord. The influence of the higher Shi'ite religious leaders, over whose nomination the government had no authority whatever, and who resided for the greater part in the religious centres of Kerbelá and Najaf, was supreme among the population, although some divergent theological trends had developed, such as the Sháhtá's, since the beginning of the 9th century. This more spiritualized sect finally paved the way for the appearance of the Báb in 1844; the Báb movement for some years took the aspect of a religious-political rebellion, which the government had to suppress with bloody measures. Since then Bábism and, afterwards the movement of the Bábábí's, to which it gave rise, disappeared from the surface, but remained all the time a living factor in the national-religious life of the Persians. This contributed not a little to the awakening of a more independent and critical attitude among the more educated classes of the population, who generally found the higher divines at their side in their increasing criticism of government actions. The pan-Islamic propaganda of Djasim al-Dín al-Afghání also furnished elements to the awakening public opinion. Thus the bad inner conditions that had developed under Múṣaffár al-Dín Sháh and the consequences of the foreign loans contracted by that ruler brought about a popular action that led to the granting of a constitution and the opening of the first National Assembly (Majlis) in October 1906. The succeeding Shah's reactionary policy ended with his deposition in 1909, but the troubles connected with the accompanying revolutionary movement gave opportunity to the Russians to occupy Tabríz and Kázwín, while at the same time the Persian government was obliged to use foreigners in different branches of its administration (gendarmerie, finances, customs). During the world war Persia was officially neutral, but the German scheme of attacking Great Britain in India gave rise to an at first successful German Pagods in Southern Persia in 1915. On the other hand Russian troops were landed in Enzeli and these opposed the Turkish advance into Persia, which had begun in 1916 by the taking of Kirmanšáhí. In this same year began the British counter-action in Southern Persia by the formation of the South Persian Rifles. When by the Russian revolution the action of the Russian troops was crippled, British troops landed in the Gulf and succeeded in checking the Turkish advance in the western frontier region and in repressing, together with Russian troops, the local opposition of the Jangals in Gilân. Finally in 1918 the British had great difficulty in opposing a similar national rising in Sháhríraz, headed by the Kashkáí tribe.

Persia was evacuated after the war and became from the outset a member of the League of Nations. A treaty with Great Britain in 1919 re-established British influence, but the coup d'état of that same year suddenly changed Persia's internal and external policy. Sauyid Díyá'í al-Dín and Ríjá Khán assumed forcibly the leadership of the government. Ríjá Khán became minister of war and proved to be the man strong needed. His chief achievement was during the following years was the subjugation and disarmament of the turbulent tribes, and the forming of a reliable army of 40,000 men. In 1923 he became Prime Minister, Ahmad Sháh Kádjar left the country and was deposed in October 1925 by the Mardjís, whereby the Kádjar dynasty was brought to an end. At the end of the same year the scruples of many sections of the population against a new dynasty were dispelled and the dictator became king of Persia under the name Pahláví; he was crowned on April 25, 1926.

Persia's internal situation has been much improved by the action of the present king, while the exploitation of the oil wells in 2Arabistán has secured the government a profit that has not a little contributed to its financial liberty of action. The finances have been moreover controlled by an American adviser since 1923 and since 1928 by a German adviser. As to the currents of spiritual culture, the intellectual classes are abandoning the traditional religious views and this secular movement is favoured by the government, in connection therewith the influence of the divines is declining. On the other hand, the interest awakened towards the end of the 19th century for pre-lámpers Persian has given a new direction to national sentiment, expressing itself amongst others in literary occupation with ancient Iranian subjects and a great interest in excavations, the results of which are no longer allowed to leave the country.

The present ethnographical structure of Persia is quite different from what it was before the Arab conquest, owing to the repeated invasion of foreign elements during the thirteen centuries of its Islamic history. The combined existence of a sedentary and a nomadic or semi-nomadic population, however, is a feature proper to the geographical conditions of the country and has continued up to the present.
day. The general tendency of the nomadic elements to become settled, which can be observed all the time, was repeatedly counteracted by fresh invasions of nomads, chiefly from the north-east. At present the proportion of the nomads to the settled population is estimated to be 20/70. The development of urban settlement is a feature proper to Islamic times; it began with the expansion of the population outside the walls into the rasālā (cf. al-Hallajī, p. 324). From this, the name of the Persian town became alāf, which word had designated originally an entire region or country. The Arabs often placed their garrisons in less important places, which subsequently overshadowed the ancient centres. In the course of history many towns were devastated, but were generally rebuilt on or near the spot of the ancient ruins. Since the later Middle Ages great Islamic towns like Kāṣf, and the towns of Kirmān, have disappeared, to be replaced by formerly less significant places; among the latter are Tāberdān, Tabriz, and Mashhad, at present the largest towns of Persia. The townsmen, composed of craftsmen and merchants, have been in history the passive and suffering element, together with the rural population of the villages clustered together in the oases. This settled population was generally regarded with scorn by the tribesmen, who were the aristocrats, and from whom until modern times were recruited the ruling classes and the high officials. From the tribes have also been recruited the best soldiers in the armies.

At present the largest towns in Persia are Tāberdān (210,000 inh.), Tabriz (200,000), Isfahān (90,000), and Mashhad (70,000). The town population has been constituted in the course of centuries from the very different invading ethnic elements. They now constitute the most stable element in Persia and speak, with local dialectic variations, the New-Persian language, which runs more or less parallel with the written New Persian. Only in Adharbājja the Turkish is the language of the townfolk and the peasants.

The rural population of the villages around the towns has kept many particular local features of their own, and amongst them many remnants of other Iranian dialectical groups have been preserved, a fact which is already noted in ancient Islamic historical and geographical sources. In north-eastern Persia the different dialectical groups of these peasants are called Tāf, the so-called eastern Persia, they are often designated as Tāfīk.

Among the rural population, however, and in a less degree amongst the townsmen, there are many elements that are conscious of their allegiance to tribal formations, mostly so in regions where the population of the neighbourhood still possesses the tribal organisation. These settled members of the tribes are often called alāf-nikhatu, ilā-kehatu and alāf-nikhatu. As to the tribes themselves, called kočhā in Persia, they nearly always occupy a definite territory nowadays, on which many members of the tribe have become entirely settled, while the others are no more than semi-nomads who, in summer, go with their cattle to the higher mountain regions. Nomadism is not extinct, however, and anywhere in the Persian steppes the black tents of nomads may be seen occasionally.

The origin of the tribes is an extremely complicated problem. In almost every region they have resulted from a mixture of pre-Iranian, Iranian, Arabic and Turkish-Mongolian elements. In northern Persia the Turkish element is to no doubt the dominating, as judged by the language; here the redoubtable mountainers of the Fārs and the Dīl, who so long withstood Islamication and had still in the Middle Ages a language of their own, have mostly been Turkicized, in so far as they have not been assimilated by the Iranian settled population. In the mountain region stretching from Adharbājja to Fārs and Kirman, the Iranian element is largely prevalent, again as far as we can judge from the languages spoken there. The local traditions circulating among those tribes, and, about those tribes among the neighbouring populations, which often preserved the memory of extensive migrations that betrayed a partial Turkish or Arab origin. Some groups are even known as Turkish, although they speak Iranian dialects. Other tribes are still constantly of their Arab origin, although they no doubt have already been Turkicized for centuries; only a few tribes in Khūsistan and Khūrāsān have preserved the Arabic language. But those local traditions, which never go back more than two hundred years at most, often do not agree with what we may regard as established facts from historical sources. It is true, however, that even in recent historical times more or less important migrations of Iranian tribes have taken place. The movement of the Khūsān from the North-West to Kirmān and afterwards to modern Balāsānān had already begun in the early Middle Ages. In addition, reasons of military policy induced several rulers of the twelfth and thirteenth centuries to transplant some Kūr tribes to the North-East; best known is the settlement of Kūr tribes by Nādir Shah on the Khūrāsān frontier around Kūčān and in Māzandārān, where they have still preserved their own features and their language. The only possible description of the tribes in Persia has therefore to be based on their geographical distribution.

With the mediaeval Arab geographers all the tribes in al-Dīl, and Fārs, are included under the designation of kāf, i.e. Kūr, but the general term has hardly any ethnographic value. At the present day the name of kāf is generally restricted to the tribes inhabiting the environs of Kirmānghā and further to the north into western Adharbājjan. South of Kirmānghā the Fārs tribes, to the west of whom, in the mountains between Persia, Irāk, and Fārs, live the Bahātīyān. The northern mountains of Fārs are occupied by the Khūy, and the Māmās tribes. South of these, round Shīrāz, live the Kāshān, who still speak a Turkish dialect.

Arab, where in the Middle Ages the local kočhā language was not yet extinct, the Arab element of the settled population is strong; the Arab tribes here belong to the Ka'bah division and consist for the greater part of Arabs transferred here from Najd and Jaiba. The tribes on the Gulf fringes, in Persia Balāsānān, and in Shīhī, are Balāshī, who, since their immigration, have assimilated such considerable local elements as the Kūf, known from medieval sources. Further to the north there are Arabs in Khūsīn, notably around Kūčān. There is further a not unimportant part of the population, who claim descent from the Prophet, and consequently an Arab origin; these sitāyās abound especially in Māzandārān, where there were 'Abīd dynasties at an early period. In Persian Khūrāsān there are also Arabs,
a few Afghan elements and the already mentioned Kurds on the frontier. Finally there live all along the northern frontier of Khurasan Turkish tribes, some of whom have been there since the later Middle Ages, such as the Afghans and the Kazaks (round Astrakhan), while the more recent element is composed of Turkomans.

Other ethnic groups are the Armenians in Persian Armenia in Acharaishan, and the large Armenian colony in the suburb Djulfah of Isfahan transplanted there by 'Abbâs I. The Nestorian Christians in the east of the Urmiya Lake have nearly disappeared as a result of the war. In 'Aram Bastân there are still remnants of Mandaeans, and finally there are reported to be about 40,000 Jews in Persia, who for the greater part are probably descendants of the Jews who lived already in Persia in the beginning of the Islamic period and among whom notably the Jewish colony of al-Yahudiyah at Isfahan was well-known.

The great mass of the inhabitants of Persia, including in the first place the townspeople and the settled population, but also many members of the tribes of ancient Turkish origin, belong to the Ismâ'îlî (the Khâna 'Aashariya) and follow the waqfâbî called Dîfâ'. Their number is estimated at little less than 7 millions. About a million of them are the so-called Khâbârîyân, living in Hamadhân and al-Ahwâz and environs, who recognize only the authority of the traditions of the Prophet and the Ismâ'îlîs. Other Shi'ite sects are the Shâfi'îya (about 250,000) and the Nejâ'îya (about 100,000) in Gilân, of Jâ'îdîte origin. The Baha and the far more numerous Baha'is are represented in all towns, and reach together about the number of 700,000. The extreme Shi'ite called 'Ali Ihâni or 'Abî Haqq are found among the Kurds round Kirmânshâh, among the Lurs, and partly in Ma'zarshahr and Khurasân; their number amounts to 300,000. Half that number is given for the adherents of the Ismâ'îlî Harâtî sect, spread all over Persia. There are also some Vaskian Persian soil near Mâzâ. Sâmi (Shâfi'îte) Muhammadans are found only among the Kurds and the Arabs, the Turkomans and the Afghans, these latter being of Hanafite (about 85,000). Finally there are still remnants of the Zoroastrian creed at Yârd, Kirmân, Talesh, Baktr, and Kâshân.

The entire population of Persia is given as 12,000,000. This last figure is given on the authority of the last edition of the Encyclopædia Britannica; the other figures given are derived from the Annuaire du Monde Musulman, 3rd edition 1909.

Bibliography: In view of the general character of the above article it is sufficient to refer for all detailed bibliographical information to the historical, geographical and ethnographical articles dealing with Persia, and to the general bibliographical works on Persia: M. Schwab, Bibliographie de la Perse, Paris 1875; and A. T. Wilson, A Bibliography of Persia, Oxford 1930. (J. H. Kramers)

II. LANGUAGE AND DIALECTS

Introduction. The Persian language is one member, now the most widely extended member of a group of languages which are spoken over a region stretching from the River Euphrates in the East of the Hindu Kush, with branches in the Caspian and in the Mazarand Peninsula, 'Onata. It is convenient to group these languages, which in turn form one group within the Indo-European languages, under the name Iranice, a designation from Iran, the modern national name of the Persians, as it was also earlier, in Stâanian (aşyâ, irân), and Achaemenid times (aşyâ), and which is used also by the Ossetes (ir, irâ, iran). Formerly these Iranian dialects were more widely extended, to the north of the Caspian Sea, from Chorasmia (Khuvârzâm) to the west of the Black Sea (see M. Vasmer, Untersuchungen über die ältesten Wohnorte der Slaven, 1, Die Iraner in Sudrußland, 1923), and also to Sogdian colonies in Northern Mongolia (see O. Hansen, Zur sogdianischen Schrift auf dem dreiszügigen Denkmal von Karabalgaum, in J.S.F.O., xliv., 1930).

Earliest sources. 1. Sakâ. Three divisions of the Sakâ are referred to in the Achaemenid inscriptions: Sakâ hâmâvarâzû, Sakâ tigrizzasû, Sakâ nû yà ra'drâya (on the tomb inscriptions published in J.R.A.S., 1933, p. 374; Sakâ para'awasû). They are the Sakâ of Herodotos, and the Sacte of the Roman and Latin writers. At a later period they are attested in Sakstân (mod. Sistan), and in the Saka kings of India. Names of Sakâ are preserved in Greek and Latin authors, and the Middle Saka dialect is now largely known.

2. Chorasmian and Sogdian. Both these countries are named in the Avesta (varzâm, varzâ-) and the Old Persian inscriptions (âzimânavî, ùgäla), but the dialects are known only in later times.

3. Media. The Medes (Medai, Amadai) appear first 835 B.C. in the inscriptions of Shulmanaharîn III (see F. Hommel, Ethnologie und Geographie des alten Orientes, 1926, p. 194). Names and some words are known in Greek (Herodotos quotes ùgäla 'bitch'), and there are loanwords in Old Persian (çispawanâ, cf. the dâvânî of the Elamite version).

5. The Avesta. To avoid too definite implications, it is usual to employ the designation 'language of the Avesta' (Pahl. 'ruv'ā, Syr. 'er, Pâzâr awâzâ, awâzî, Arab. asâbî, awâzî, asâbî, asâsî, bâtâlî) for the language preserved in the oldest Zoroastrian texts. The considerable extent of these texts makes them the most important witness to the Old Iranian stage of the dialects, although they have been preserved in a late orthography 1). In spite of continued discussion (see P. Tcheresov, in M.O., x. 255 sqq.; H. Reichelt, Iranisch, p. 29 in Geschichte der indogermanischen Sprachwissenschaft, ii., 1927; G. Morgenstierne, 1 For convenience the transcription of the G. P. is here followed, but a revised orthography, more conform to that of the Old Persian texts and the Greek and Akkadian transcriptions, would represent the Old Iranian form more satisfactorily (as e.g. ašya for ufige).
The Kāfīr dialects of Kat, Ashkhun, Frasun, Wālgari, are known only in a modern form from the sixteenth century, and adequately only this century (see Morgenstierne, Report on a Linguistic Mission to Afghanistan, 1926, p. 39 sqq.; do., Report on a Linguistic Mission to North-West India, 1932, p. 40 sqq.; do., The Language of the Ashkhun Kāfīr, in N.T.S., ii. 192–289). The evidence of the Kāfīr dialects is important for the Indo-Iranian period, in particular: for the history of the sounds represented by the Kāfīr ū and ū, and for the corresponding to the Avestan a, Old Persian ā and Sanskrit ā, Old Persian a and Sanskrit j, thus Kati has dāst *tenli, dān *autumn, dāna, sw., v. t."*  

Periods of the Iranian dialects. The extant documents of various different characters, and in many scripts, are sufficient to allow the distinction of three periods: Old, Middle, and New Iranian. In the vast period of the Persian empire, the change to the Middle Iranian stage (marked by loss of large part of the old inflexion) is attested already in the later Achemenid inscriptions.

Old Iranian. The Old Iranian stage of development is known in the Old Persian inscriptions, the Avestan texts and the names of Medians and Sakas. The two dialects Old Persian and Avestan, in spite of the restricted number of texts, and hence the little known vocabulary, agree closely, but their shapes are clearly distinct. In phonology Old Iranian has *p̣ ḳ unchanged before and between vowels (bēh- to run, tāp̣ -to be hot, pār- to fly, bar- to make, abā- bad), but they are represented by spirants before consonants (baḥy- true, xaŋšaŋ- sleep, xaŋšo- spoken): before and between vowels is represented by ā (Old Persian ḫaš- with, šaš- the was), except that ā, ni replace older i, a as in also do i, u in Sanskrit, though unchanged in Kāfīr, thus Avestan mātif-sitting, dāv- had, Old Iranian verbal and nominal morphology is richly developed, with great facility of composition and derivation. Noun bases terminate in consonants, or in vowels and diphthongs: a i i a, a i i a, a i i a. Alternation of vowels (apophony, Ablaut) rests upon the older system attested also in the other Indo-European languages. The inflexion can be seen in an Avestan noun with base-ā (whereby falling all forms of one is the following are quoted: ahrā- lord, arpa- horse, aša- had, varsha- hand, vēr- party, varsta- malyan- man): singular, nom. ahrā, acc. ahrām, instr. ahrā, dat. ahrā, abl. ahrā, gen. ahrāhi, loc. ahrastā, apārā, voc. ahrā; dual, nom. acc. ahrā, dat. ahrāthā, gen. ahrāthā, loc. ahrastā. The verbal system is elaborately developed, but the extant texts do not provide all the forms. There are three voices: active, middle and passive; six moods: indicative, conjunctive, injunctive, optative, imperative, infinitive, with tenses present, preteterite (imperfect and aorist), perfect, pluperfect, future,
PERSIA

with personal terminations in singular, dual and plural, and in addition participles present, aorist, future, and perfect. These cannot all be illustrated here. The following Avestan forms may be quoted: haravi ‘he bears’, jastiti ‘he worships’, conj. pres. haraš ‘he will bear’, opt. pres. jāstī ‘he shall be’, opt. perf. jāstamjav ‘I would have come’, imperative harav ‘be bear’, haravo ‘let him bear’, jāda ‘go’, haravi ‘make’. The infinitive has no single form, but is expressed by oblique cases of verbal nouns of action: avanōti ‘fall down’, avōdi ‘to choose’, apōagālti ‘remove’. There is no form for ‘we say’ (sāvata was spoken), jāstāti ‘was struck’, confined to the 3rd sing. The personal terminations differ in present, pres. and imperative. In the present are found: baravi, barakī, baravī, dual 3 baratī, plur. barakākī, sayatī, baravī; in the imperfect: baravī, jāstavī ‘then came’. haravī, dual 1 jāstavī ‘we two live’, 3 jāstavī ‘they two came’, plur. baravīna, jastāti, haravī. The present base was formed either with or without suffix, or by reduplication: astavī ‘he is’, dāti ‘he gives’, barawī ‘he becomes’, harawī ‘they remove’, āvāmā ‘I bless’, barawavī ‘makes’, ānātī ‘leaves’, ṣānātī ‘pours out’, jāstāvī ‘I pray for’, jāstavavī ‘heats’. The aorist was formed direct to the base (adāt ‘he created’) or with the suffix -vā ‘(dārāt ‘he held’), the perfect was either reduplicated (āvāmata ‘has spoken’) or not (vāda ‘has known’) with special terminations, the pluperfect was expressed by the use of preterite endings to the perfect base (vādat ‘had said’). The active present and future participle was formed by the -ēśa-suffix, and the passive preterite participle usually by the suffix -ā. Of these present bases and of these participle participles are preserved in New Persian. The comparison of adjectives could be expressed in two ways (suffixes yā-, tiu-and -tara-, vara-): yāhoe ‘good’, yauke-, yaukata-, aho-had, abhara, harvā, harvā ‘best’. These morphological genders (mas., fem., neut.) are expressed in nouns and adjectives. Of the many suffixes may be named the noun of agent -tār, noun of action in -ēti, abstract noun in -ētā. Compounds are of many forms: apārwa ‘horses and men’, vīrājān ‘slaying men’, dāhupata ‘lord of a country’, poṣavā-rāra ‘possessing many brothers’, ṣravavā ‘up to the knee’, dāhavatya ‘holding a chariot’. Of this whole elaborate Old Iranian system but small part has survived to the present day.

The Sogdian verbal system has present (durative present expressed by adding *šen, šun, and future by adding *kšen, *kšen*), imperfect (*šiyš* ‘thou hast heard’, *šiš-ter-rite* (*šiyš* ‘they bore’), durative participle with *šun (šawint *šawint* ‘they went’), conj. present (*šomol ‘I will do’), perfect (*šarz *šarz* ‘I have given’, *šarz-šarz* ‘I have come’), optative (*šarz* I. sing., imperative (*šarz, šarz*), infinitive (*šarz* ‘to pull’, *xoravat ‘to eat’), participles active present *šon, *šon, *šon, passive participle *šarz* (*šarz* ‘given’), adjectival form *šon* (*šon* ‘prepared’). The augment *š* is prominent, see H. Reichelt, Beiträge zur sogdianischen Grammatik, 1931. In Saka there is present (litte *he sees*), pres. intransitive (*hašsa* ‘he will know’), pres. conj. (*šnirat ‘he will be’, optative (*šnigrat *he would do*), imperative (*šon ‘go’), the participle is expressed by intransitive participle (*ša, *ša, *ša, *ša), plural *ša*, fem. *ša* ‘were’, compound tenses (*ša *he was seated’), participle (*ša, *ša, *ša, *ša), resemblance *ša, *ša, *ša, *ša, *ša*, ‘to be spoken’). The noun is fully inflected in Saka in three genders, and in Sogdian traces of nominal inflection are preserved (see P. Teledoscio, in Z.f.d., lv. 94 seqq.; E. Benveniste, Gram. sogd., ii. 77). Since the Indian Brahmi script is used in writing Saka, vocals as well as consonants are fully known.

Chorasmian is still little investigated. Apart from words quoted in Arabic writers, particularly the calendrical terms to be found in al-‘Ibtisim (Chronology, ed. Sachau, p. 47, 173, 192), there has been collected by Abest Zezi Valiab (Ethn. heemische Status in einem arabischen Fihz-Werke, in Islamica, ii. 1922). Here *šir* is ‘milk’, cf. Sogdian *šir* ‘milk’, *šir* ‘deep’, cf. Avestan *šir* ‘deep’; *šen* ‘nose’, cf. Sogdian *šen* ‘nose’. An exhaustive study is still awaited.

Middle Ossetic is known in names (see W. Miller, Ossietischer Etymol., iii. 39 seqq.; M. Vassmer, loc. cit.), such as *šarz* ‘woman’, *šarz* ‘man’, *šarz* ‘three’, *šarz* ‘four’, *šarz* ‘second’, *šarz* ‘leave’, *šarz* ‘make’, contrast with the South: *šon* ‘woman’, *šon* ‘man’, *šon* ‘three’, *šon* ‘four’, *šon* ‘second’, *šon* ‘leave’, *šon* ‘make’. Other dialect influence can be detected, e.g. in the change *šir* to *šon* (cf. New Persian *šon* ‘son’). Nominal inflection is absent from the Manichean texts. It is possible that the frequent final *š* of the Sasanian inscriptions represents the remains of the old ablative case *š*. The *šm ending in Old Persian *šmam* is gen. plur. appears as nom. plur. (*šmam* ‘the righteous’). The verbal system of the southern dialect agrees largely with that of early Persian of the Muslim texts (see Henning, Das Verbum des Mittelpersischen der Turfanliteratur, in Z.f.d., i. 1933). The Old Persian present bases are represented by *šir* ‘leave’, *šir* ‘live’, *šir* ‘partes’, *šir* ‘strike’, *šir* ‘shine’, *šir* ‘final’, *šir* ‘know’, *šir* ‘make’, *šir* ‘gather’, *šir* ‘bring forth’. The trans. participle is expressed by the participle in *š* in passive sense. *šun* *šarz* *šon* *šmam* *šmam* *šon* *šmam* and you have clothe me, but the form *šon* *šmam* *šon* they have done (as in New Persian *šon* *šmam* *šon*) is found. A passive is expressed by *šun* *šon* *šmam* *šon* *šmam* is present. Beside the present indicative with the endings *šon, *šon, *šon, *šon, *šon, *šon* (and *šon*), *šon, *šon, *šon* (and *šon*), a full present conj. is attested with the endings *šon, *šon, *šon, *šon, *šon, *šon, *šon, *šon* and *šon*. An optative 3rd sing. in *šon* occurs. The infinitive is in *šon, the present participles in *šon, and (adjectival) *šon*. The vocabulary has many words lost to New Persian lexicography.

New Persian. The third period may be dated from the introduction of a New orthography by the writers in Arab. In the early Arabic books many New Persian words and names, Persian, Sogdian and Chorasmian, are recorded, stripped of the old historical spelling.

The Arabic alphabet was long insufficient to represent the Iranian sounds, while certain signs were superfluous (*š*). Hence some symbols had double employment: *š* (*š* or *š* in final position, the guttural (which was written, e.g. in Pahlavi *š* ‘house’, Turfan texts *š* ‘house’, and has moreover survived in some New Persian dialects, Kamn (*šmam* ‘fuel’, as in Turfan texts *šmam* ‘fuel’, Balfati W. Kamnag, F. Kamnag ‘raw’) was indicated by *š* or *š* and mediately by *š* or *š*.

The New Persian, which is closely connected to the colloquial language, developing widely from the literary norm, of the western cities, and the Tajik of the eastern Iranian region, Afghanistan, the Pamirs, Turkistan (see the references in W. Lentz, Farsi-Dialekten, i. 29 seqq.), is in strict accord with the language of the Old Persian inscriptions (Old Persian *šmam* ‘son’, *šmam* ‘know’, New Persian *šmam* ‘son’, *šmam* ‘know’, and the southern dialect of the Sasanian inscriptions and the Manichean texts, but from its earliest monuments after the introduction of Islam it appears as a dialect largely mixed with forms of other dialects. The mixture had been brought about already in Sasanian times. As successors of the Parthians whose dialect was of northern type the Sasanians took over part of the official vocabulary (e.g. *šmam* ‘country’, *šmam* ‘king’s son’ as proper name). Forms of both dialects occur in the Zoroastrian books and among the loanwords in Armenian. A few words entered from the eastern dialects (e.g. *šmam* ‘divine son’ as title of the Chinese emperors). Hence New Persian has two forms side by side: *šmam*, *šmam* ‘tribute’, *šmam*, *šmam* ‘wine’, *šmam*, *šmam* ‘earth’. In the vocabulary of New Persian, the Iranian verbs have been greatly reduced in number. Verbs which are found still
in use in other dialects have disappeared or survive only with preverbs or in nominal derivatives. Such is the case with *av-‘breathe*, sab-‘speak’ (in *savad*, *savata*), darb-‘see’, darz-‘stand’, sav-‘throw’, sav-‘front’, sav-‘toward’, *sina* ‘enclosure’), mar-‘move’, may-‘head’, and-‘head’, dan-‘bind’, build, rand-‘find’, hare-‘boil’, sard-‘throw’, shoot, gowd-‘dress’, down-‘throw’, goal-‘put upon’, hare-‘weep’, ar-‘grind’, gate-‘come upon’, and-‘make wet’, mug-‘pull out’, *kat* ‘fall’ (cf. khabah ‘old’). Two Old Persian *dive* ‘take away’ (in *niya-‘loss’), *vay* ‘to wind’. Formal nouns have also been lost: First dialect of Birijing *pah* ‘small cattle’, Ossetic *nargali* ‘bridge’. Baltoic *gwa* ‘horse’, *sax* ‘milk’, Pahlavi *dari* ‘known’. These and others are not represented upon us in New Persian. Arabic has continued enroached upon the vocabulary. The Iranian character of New Persian is also still recognised in its morphological (plur. of *nouns* *-an*, *-ah*; pronouns *mam*, *t*, *th*, *man*, *koh*, *lok*, *sia*, *to*; verbal forms, pres. tense *khan*, *khoon*, *kohon, kohand*, pret. *kard*, the verb substantive *saw, t, st, wau*).

New Iranian dialects have been preserved by their isolation, although, except Ossetic and Kumart, not by reason of their position, they are everywhere yielding to the prestige of New Persian. Recent research has brought knowledge of most of the existing Iranian dialects. Isolated places may, as in the Khūn-Tāfīn region, still conceal unknown dialects, elsewhere and especially in the Fārsiān is Fārāzin has been information largely increased. These dialects have so widely diverged from Old Iranian that the whole complex development cannot be indicated here. It must suffice to point out in the various groups certain developments in phonology and morphology.

**Phonology.** The developments of Old Iranian *b*, *d*, *g* (*vi, vi*, *gi, gi*, *vi*, *vi*) may be noted selected to illustrate the divergence.

19. Simnæti (in North Persia, east of Tihran): re willow, su wind, amuram I eat, dar’ door, mi yonan I know, vâ day, a dumurâmi I pour, janikâ woman, kismu’ wife, kâdár knife, wai bâdâmar I bore, par son, hari three.

20. Sangari (related to the dialect of Lâsjar): si willow, kânor I eat (Aor.), sâm’ knee, sa hundred, vâ day, kûnsu I say (Aor.), le woman, kelatén strike, ze four, le three, pa, par son.

21. Tâlâm (on the west of the Caspian Sea): su snow, kan’ sleep, hânâ hand’ sing, da door, as I, nea to know, darsen needle, hâm house, sâm white, vâ day, li to live, le woman, par’ bring, kâdár to do.

22. Gilakan (closely connected with Mazandarâni and the dialect of Goshgorkh): sùw snow, készr am eat, sam’ in-law, baror brother, suhmen I burn, pôt cooking, wan strike, kâdár I bore.

23. Gürkân of Kandia (dialects of Kandia, Pâw, Ausrâmân, Rîjkâ, Baklân, Talâhadegh are recorded): sámí rain, sâmí snow, vâr’ sleep, vâr heart, sâm in-law, mûbân he pours out, sâm window, li bowstring, le woman, par’ hard to make.

24. Kurdi (in several dialects: the following is from the Mûkri): bafr snow, sâm’ eat, tâlk eaten, dar door, sâm’ I know, sâm white, vâ day, dûse it is burnt, le woman, kâm done, hâm do I sent, li, li three.

25. Zâs dialects of Siwerek, Bâlaj, Câbâbâh, Râgh, Kot, Ceremuz and Fûl are recorded: sâm’ snow, sâm’ wind, sâm’ to eat, kâm done, sâm’ I know, kâm fire, sâm’ to flow, li day, pôt to cook, vâ, sâm’ to say, pôt strike.

26. Kumâtî (in the Masandarâni Peninsula, Ompa): vârun rain, gârîy hunger, sâm’ he ate, sâmñw sleep, dâmnsn winter, su anger, smayu earth, sâm white, ber happened, sâm’ needle, sâm window, sank woman, bûn strike, mûbán man, sâm food, dûs’ sickle, par son.

27. Tât (on the Aţpûl Peninsula): sâm snow, bêtà widow, sâm’ sister, dar door, dûmnâr in-law, dâmnsn to know, su mustan winter, sâmñw tongue, sâm’ woman, dûm to see, baror brother, pôt autumn, mûbân I siff, râ day, su woman, sâm’ sister to eat, sâmñw to do, par son.

28. Fârî (dialects of Sambhûn, Pârû, Mûsâmân, Bûrûnîn and Ismâidîn Isâmî): mûbân I see, bêtâ kûsân’ to wend, mûsân I slept, mûbân I do know, sâm’ knee, dûs’ give, mûsân I cook, sâm’ struck, kât I hard, bûn food, bûn eaten.

29. Lûtî, Bâkhtâsh: bôt snow, bôtë tent, sâmñw, dûm to eat, dâmnsn in-law, sâm’ tongue, sâm white, at’t smoke, bêtà, sâm’ willow, bôt to siff, rû day, sâmñw to strike, sâm woman, râa south.

30. New Persian: kât willow, kât wind, sâm’ mother-in-law, sâm’ self, dar door, dûm I know, dûm’ in-law, pos hunder, sâm’ white, pôtam I cook, dûm I siff, rû day, kât I made, mûd’ died, sâm three, par son.

The following general division may be especially noticed: 1. = is replaced by a gutteral in

PERSIA

1055

Bâlûc, Khûrî, Ommurî, Pârsî and partly also in New Persian; 2. the correspondence of Ossetic 4 (Iron dialect ë), 4, 4, Vaghânth ë, 4, 4, Shughrû and Vârsânâm ë, 4, 4, Mundîl ë, Pârsî ë, 4, Pâghô ë, 4, 4, in contrast to Ossetic and Pârsî ë, 4, 4, marks a distinction within the eastern group; 3. ë tends to be modified in the eastern dialects. Ossetic kax, gÎt ‘eat’, Ommurî gî, Pârsî gî, Mundîl gî, Pâghô gî, Vârsânâm gî, Shughrû gî, Vârsânâm gî, Râgh gî, Pârsî gî, Ossetic kax, gî ‘eat’, Vârgulâmî gî, contrasting with New Persian gî (gû).

Relationship of the Dialects. The larger divisions among the New Iranian dialects are results of old differences, originating in the earliest period. Two great groups, an Eastern and a Western, are distinguished by phonology, morphology and vocabulary (see G. Morgenstern, Report on a Linguistic Mission to Afghanistan, p. 31). The eastern group is itself divided by old differences into subordinate groups. Ossetic, isolated in the Caucasus, has developed a morphology which separates it sharply from the Vaghânth, with which however it shares, for example, the plural -t, Vaghânth -t. Vaghânth is in turn isolated as the only surviving Sogdian dialect. In the Pasîr Shughrû forms a group with Ossetic, Vârgulâmî, Rûshânî, Bartangî, Sarthoki, and the now extinct Wântit; similarly Iâshkhâmî and Sangléî. Mundîl in several dialects (see the classification by G. Morgenstern, Report on a Linguistic Mission to North-Western India, p. 70) has close relations with Vaghânth. Wântit stands alone, noticeably in its phonology (ì in la’ dog, ë in ën iron, ët in ën dead, ëc in ëc son). Ommurî and Pârsî, though now widely different, yet have common phonological traits, in particular -r, -e, -a, and the replacement of ì by ë. Pâghô is known in several dialects (G. Morgenstern, Report on a Linguistic Mission to Afghanistan, p. 11).

In the Western group subdivisions are similarly to be recognised. Zâs, Gûrûn, Kurdi, Khûrî, Balûc, Gilakan (with Tâlâm, the dialect of Goshgorkh, and Mazandarâni) form sharply distinct groups. The southern dialects, Lûtî, Fârî, Kumâtî, and the literary New Persian show clear descent from a dialect similar to, and probably identical with, the Old Persian. To these Tûtî belongs as the dialect of garrisons settled in the region of Darfûr.

In the central district lying between Tihran, Isfahân, Hamadân and Yazd, are found a number of dialects which have not yet all been fully investigated. They share a common vocabulary. The formation of the present affords a means of grouping them. The Sangléî, Lâsjarî and Shamârsdî agree in forming the present with the infix of a nasal -m, -m (possibly representing the Old Iranian -a participle, similar in Zâs): Sangléî hânsâm I strike, Lâsjarî hâm hâmâm I say, Shamârsdî hårâna the fall, Sangléî with present môtâmam I know. The dialects of Wônshûn (Wânshûn), Mahâlît and Khûnât agree in having it (à, ì, -ë) in the pres.: Wônshûn itêxârûn I break, Mahâlît ìxâmînà, Khûnât ìxâmûrân. Nûtanî, Farizandî and Yarân form one group: in the pres. Nûtanî kâran I do, Farizandî akurûn, Yarân akurûn. Sî (skêrûn), Melmei (sâmë he does), Kôhûdû (akûrûn), Keshê
Verb. The divergence from the Old Iranian system, already marked in Middle Persian, has developed further in New Persian. New verbal systems have been evolved. In spite of independent growth, however, a general resemblance is found, for example, between New Persian and Ossetic. In New Persian means are to hand to express active and passive, immediate, conjunctive, optative, imperative, infinitive, present (punctual and durative), imperfect, pretensive, perfect (punctual and durative), pluperfect, future, and conditional.

Infinitives. The infinitives show independent selection from Old Iranian verbal nouns. Old Persian -tanag reappears in New Persian -tan, Struadi -bardin -bear, Varnahmān -barn, Sangiāzar -bahktan, Ardistān -midan -die, Macri Kuri -kāla -draw, Gilaki -gāfīt -say, Tāti -dirān -see, and other western dialects, beside a second infinitive (representing the Old-Iranian verbal noun -tī, which serves in the passive in Avestan -far as infinitive): New Persian -gāft -speak, Gāz -khāt -he make, Mār -kuri -kūl -kill, Ardistān -dād -say, Zefr -bērēt -bear. Other verbal nouns are found: Ossetic -fārīs -ask, Gāz -khāzān, -kārē -dām (with related dialects), Vanderhēn -pūr -eat, -dākē -give, Gūznī (Aurangānī) -āmdēt -come, -kārē -make, Zātā -kālēt -make, Bełtjī -gayā -kill, Yaughnī -hārēt -do, Wakhti -sākāt -speak, Ossetic -sādā -laugh, Vanderhēt -kāst -make, Sangiāzar -kāst -go, -lāhāzānt -xvāt -eat, Yaughnī -hāēt -bear, Bełtjī -sād -know, Kārē -sāp -resell, Yaughnī -hāēt -make, Pahlōtī -kēl (here -sī represents the Old Iranian -shā). Present tense. In Old and Middle Iranian pres. ind., pres. conj. are clearly separated. Both modes of thought are expressed in New Persian. Conj. pres. inflection, distinct from ind. pres., is preserved in Yaughnī (kūnstī -he do), conj. kūnstī and Ossetic (hūnstī -does, conj. kūnstī). Other dialects have one form of present inflection, which therefore serves to express both present and sorist (with meanings of fut. and conj. pres.). In certain dialects, as in early New Persian -hāēt -I do, Bełtjī -xwēn -I eat, Yaughnī -xwēn -I see, Orōshori -xwānī -I do, Yaughnī -xwānī -we eat, -I see, Sangiāzar -xwān -I see, this form appears alone in both senses. But greater precision was attained by use of prefixes, suffixes, and periphrast forms marking the present. So in Kūhti -hērōn -I eat, -Kur Kuri -dā -kāhētī -I fall, Kūrumfēgī -dā (alāw -I fall), Abdī -hētī -I bring), Kūtārāīrī -dā (hī -I bring), Nūmī -mē -I bring), Orōshori -hētī -I bring), -xwēnī -I run), Lāri Rakhšīrī -ha (alāw -I do), Yaranī -ha (alāw -I hear), Farārīzī -ha (alāw -I hear), Sūsī -hā (duhār -he grinds), Gūznī Kūntārī -mē -I make), New Persian -hāmī, mi (alāsānī -I do), Yaughnī -mē -see (it looks), Yaughnī -hā -I hear), Xwēnī -mē -I see, Kūrīzī -mē -I do). Ossetic -hāmī (hī -I take), Ha kē (he makes). Periphrast forms are used in Pahlōtī -hēmānī -to come, be born, beside the durative pretensive amendēh -I was coming, and Bełtjī -hāmānī -I am doing), Zātā -kūrē -I am doing). Nūmī -hētī -I hear and Giłakī hūmnī have no prefix. The sorist (in meaning fut. and
Passive. In New Iranian the passive (which is of infrequent use in the colloquial language) shows but few traces of the Middle Iranian passive
(tu-ki): Gūrānī (Kandīlāt) Ḧārām 3rd sing. perf.
pass. 'has been made' mäšätān 'it burst': Zāsā ṭalčēmān 'I am killed'; Kurdi of Simnā has
akūzēm 'I am killed'. From Yarusti is quoted bahmarāt 'was broken'. The passive with unlaud in Kurdi Mūkri dādēr may represent the Old
Iranian passive in -ya-. Eastern Balūc employs-
je (as it seems borrowed from the identical
Sindhi passive): ḥalūjān 'I am killed'. But usually
in New Iranian dialects the passive is expressed
by the participle with auxiliary verb: 'was done'.
So in Balūc ḥalūjān 'I am killed'. New Persian has
used the verbs āmadām 'to come', galtān 'to turn',
tūdān 'to go, become' (this latter is now the usual
auxiliary); in other dialects has 'to become' is
frequent: Gīlakī hāmandeshe 'it was dug down',
Simnā ūvārād mābin 'I am asked', Mundži uses
the verbs ṣy- 'to come' (for the pres.) and
kēr- 'to go' (for the preterite) with the participle in
je. In Omrūcī the auxiliary is ḥārām 'to go', and
in Parāčī ḥārām 'to go', or parāč 'to go'. Early
kērām 'to go, become' in Waghūn. In Osotic
two forms are found, āmadām 'I am counted' and
maddas 'will be made known'.

III. PERSIAN LITERATURE.

Definition. By Persian literature we understand all works written in modern Persian, in contrast to middle Persian (Pahlavi), or in other words the whole of Persian literature after the Arab conquest of the present day. It should be observed however that this literature can be regarded as a unity only up to a certain point. The vicissitudes of western Asiatic history brought it about that Persian became the literary language of a number of peoples whose vernaculars had no connection with Persian. Persian became the language of the upper classes of these peoples, just as French became in the xviiith century for various peoples in Europe. The result is that Persian literature in the wide sense includes not only the literature of Persia, but also the literature of Central Asia, and to some extent of Turkey, India and Afghanistan. Although down to the xviith—xviiith century these literatures were very slightly differentiated, in modern times the differences between them have become so strongly marked that their literatures can no longer be considered as a single whole. This circumstance makes a comprehensive survey of all the literature which may be called Persian an impossible task and forces the student to set more precise limits, which must also apply to this article. Hence therefore by Persian literature we mean only the literature of Persia, and such writers as belong to Central Asia, India or Afghanistan will be more or less disregarded.

The beginnings. It has so far been not possible to trace the initial stages of Persian literature exactly. There is, it is true, no lack of anecdotes relating to these first steps but they are so obviously unreliable that they are hardly worth consideration. It is of course natural that these early stages could only have been recorded by chance, as from the point of view of later ages they appeared of very little value.

Nevertheless the fragments that have survived make it possible to put forward certain hypotheses which are probably not too far from the actual truth. The early centuries after the Arab conquest saw a gradual decay of Pahlavi literature. At first sight it might appear that literary activity in Persia ceased completely. But this was not the case. If we turn to the Arabic literature of this period we find that a large number of Persian poets and scholars were writing in Arabic. The valuable anthology of al-Tha’liib (d. 1038), Yatmacat al-Dahr (pr. 1085), contains most interesting information which shows that already in the xiiith century Arabic had become the literary language of the upper classes in Khurásán and Transoxiana. This said, at the same time there were signs of activity in the opposite direction. The political situation of Persia, whose rulers were trying to cast off the Arab yoke, and the gradual exhaustion of the caliphate demanded not only political opposition to the Arabs but also the ending of the domination of the Arabic language in the field of literature. But the 150 years of the supremacy of Arabic did not pass without leaving a trace. Pahlavi had become a dead language; there was therefore only Persian to oppose to Arabic as a literary language. On the other hand, there prevailed, especially in poetry, Arabic forms (khusd, ghasl) and the Arabic quantitative metre ('arāf), which so firmly established thyme, probably foreign to Pahlavi, that a return to the poetical technique of the Sámaí period was impossible. Arabic poetry had however to submit to certain changes, such as the introduction of the very long syllable into prosody, which was not possible in Arabic at all and probably arose in the process of inserting Persian words into Arabic lines. How and when the first lines of verse entirely in Persian arose will hardly be possible to ascertain with certainty. Persian sources profess to consider the fragments that survive of a gā'fda by 'Abbas Marwazi as having been composed in Marw (809) in honour of
Ma'mun, son of Hārūn al-Raṣūlī, as the oldest poet in Persian. Unfortunately it is still somewhat difficult to express a definite opinion on the genuineness of these lines. The anthologies (sadākārā) and dictionaries (notably Asadī's valuable Lughāt-i Fārsi) contain isolated lines from poets like Abū Ḥafs Sūḥābī, Ḥanẓāla Bāḏγāšī, Māhīn Warrāz Harawī, Fīrūz Mašhīrī, Abū Salīk Gurgānī etc. of whom some may possibly be as early as the viiiith century. These fragments however are but miserable remnants, which give evidence of the existence of poetry but do not enable us to obtain a clear idea of Persian verse in its earliest period.

xii–xiiiith century. As early as the tenth century we find these early efforts attaining a very high degree of artistic perfection. The courts of the various princes around whom the poets gathered formed centres of literary activity. But as the poets were usually directly dependent on their patrons and had to some extent to adapt themselves to their taste, it is quite natural that almost every dynasty of Persia was surrounded by a group of poets who present a certain unity, especially from the point of view of style, so that the classification of Persian poets by dynasties, as has been usual in Persia from early times, has a certain amount of justification in literary history. In order to give some lucidity to our account of the rather complicated process of the literary evolution of Persian poetry, we shall retain this classification, at the same time subdividing our account according to the various kinds of poetry so that the links may not be broken. In the first section the following kinds of poetry are mainly concerned: a. lyrical court poetry, b. epic, c. mystic. Prose hardly comes into consideration at all in this section, as the older Persian literature scarcely ever uses prose for belles-lettres. Prose is for old Persia; the language of scholarship only. But it is to be noted that for the pre-Mongol period the language of scholarship is predominantly Arabic so that even in this field a higher degree of development of Persian prose is only slowly attained.

The Court Lyric. While as early as the time of the Tāhirids and Saffārīds we can recognize the first approaches to the formation of a characteristic court style, we do not see it in its full perfection till the time of the Sāmānids (875–999), whose capital was Bukhārā. Although here also the devastation wrought by time has left us only a few remains, it is still absolutely clear that at this time a flourishing literary activity in Bukhārā was in full swing. Round the Sāmānids court gathered a large number of distinguished poets, who on the one hand were engaged in singing the praises of the rulers in sonorous kāshā and on the other in bitter rivalries with one another for pre-eminence, a struggle carried on with poetical weapons also, i. e. satire (ṣadīr, ṣīfla). Of all these poets the greatest was the celebrated Rūdākī (q.v.) of Samarqand. His kāshā Mūdar-i mai is an unsurpassed masterpiece. Rūdākī seems to be the first creator of the type of the Persian poet which all others endeavoured to copy: poet, aristocrat, liberal, frivolous, amorous, wine-loving, chivalrous, devoted only to the joys of life, never touching its gloomier sides. In the field of didactic poetry also he won great fame by a version (which has unfortunately not come down to us) of the Katīla ma-Dinma. But he introduced another theme into Persian poetry, the lament for lost youth, which he expressed in moving language. His younger contemporary Kīsā-i (q.v.) (b. 953) of Marw dealt with the same theme. It may be assumed that these laments were not simply exercises in style but had a genuine foundation in the circumstances of the Persian poet. His duty was to adorn the court of his prince, to share his pleasures and to amuse him; a sour old greybeard was not suited for this and was no doubt, little appreciated in spite of former services. No less characteristic are the laments of the famous Shāhid of Balkh who is said to have been the first to collect a complete Dīwān. He wrote laments principally the injustice in the distribution of the world’s goods, which clearly points to his lack of success at court. The language of all these poets is clear and lucid; they are still very moderate in the use of poetic artifices and observe the limitations of poetry. Of second class (or perhaps by chance less known) names of this circle of poets the following may be mentioned: Maʿrīf Balbī (c. 954–961), Abū Shuʿīb Harawī, Abū Zarrāʾa Dūʾrānī, Abū Tāhir Khawwārī, Ḥiyābārī Bukhārāʾī, Amīr Aḥmadī, Bukhārāʾī, Kawsanī, Maʿrīf, Abū l-Fath Būstī (known also from his poems in Arabic) and Aḥmadī Marwānī.

After the fall of the Sāmānids a new literary centre arose in Gūzāna at the court of the celebrated Sulṭān Māhīn (q.v., 998–1030) and his successors. This school received its key-note from the famous poet ʿUmarī (q.v., d. 1050) of Balkh. His kāshā, which celebrate the sulṭān and his campaigns and endeavour to prove his claim to the throne of Persia by theological hair-splitting, are very fine examples of the more serious court poetry. Rūdākī’s frivolity would have been out of place at the court of the rigidly orthodox sulṭān. Two other poets who were mainly active at the court of his brother Amīr Nasrī recall in their jole de vivre more the poetry of the Sāmānī period. They are Minābīrī (q.v., d. 1050) of Damghānī, who has given us in several poems fine specimens of hibous humour and liked to make allusions to pre-Islamic legends, and Farrūkhī of Sāmānī (q.v., d. 1037–1038), whose Persian literary historians are fond of comparing with the master of the Arabic ʿAṣāfī d. Mūṭanābī (q.v.). The glowing colours of his descriptions of nature are really marvellous expressions of the imagination. As a theorist also he is known for his treatise Tāfdžumān al-Balāgā. No less important is ʿAṣāfī (q.v., d. between 1030–1041) of Ṭūs, who was the first to enrich the varieties of court poetry with the mawṣūla or dissertation (like the temne of Southern France). Two poets of this name are usually distinguished; the younger, author of the Garjār-

nāma, is said to be a son of the elder. But there are reasons for thinking such a distinction unnecessary and the existence of two ʿAṣāfī is doubtful. Under the successors of Sulṭān Māhīm, who were no longer able to hold together their father’s gigantic empire, poetry was still held in high honour. Of the poets who adorned their courts the master of the kāshā Abū l-Farsārī Kānī (d. about the beginning of the xivth century) and his pupil Masʿūd-i Saʿādī Salāmān (d. 1131) were specially prominent. The latter in particular, who spent a great part of his life in prison, created a new kind of poem, the Ḥabībīyya (prison kāshās), in which he lamented his cruell
endeavoured to check Anwari's influence with the work of Rāshid al-Dīn Waṣāṭī (q.v.; d. 1182-1183). This poet, who is also entitled to credit for his work as a theorist, is distinguished by unusually caustic language but as a poet he can scarcely be compared with Anwari, beside whom only the characteristic figure of Kāhānī (q.v., d. 1199), who sang the praises of the Shāhs of Ṣirān, remains unfaded. The difficulty of the language of this original poet is proverbial in the east but nevertheless he is recognised to this day as the greatest master of the καηδά. Shāhānī of Samarkand (d. 1173-1174) was also an occasional panegyrist of the Sāljiqs but he was known chiefly for his satires and parodies which are often obscene but very witty. Women also wrote poetry; for example we have a few lines by Sultān Sandjar's friend Muḥiṭ, which show great talent although they unfortunately contain unusually cynical expressions. Nāẓm-i ʿArūdi (q.v.) of Samarkand was a poet at the Ghurid court; he is chiefly notable for his Cabūr-Mahāla, one of the most important sources for the biographies of poets. The end of this period is marked by the two last great poets of καηδά, Zāhir al-Dīn Fārūkī (q.v., d. 1202), whose poems in spite of facility of technique show in comparison with Anwari a certain decline of the court style, and Kāḥāni-i Ṣamānī called Kahlīlīb-i Maḥāra or "Creator of Spiritual Ideas" (d. 1237). This last poet turned in his later years from the court style and preferred the contemplative life of a Ṣūfī ṣāhiq to success at court. His best work is already full of the spirit of Ṣūfī mysticism and in this field also he succeeded in creating real masterpieces.

8. Epic. The first essays in epic poetry, a genre which had been practically unknown to the Arabs and which, so to speak, represented the Iranian national element in Persian literature, were made by Persian poets even before the time of the Saljiqs, in the period of the first great Persian kings of their Arab masters. In this field therefore the Persians had no foreign models and were completely dependent on pre-Islamic tradition and to some extent on popular poetry. Unfortunately once more only fragments of the oldest works have come down to us, which do not permit us to gain anything like a clear idea of their character. In this field it was again the old master Rūdakī who created the first work of any size, namely the celebrated version of the Kāfīla nas-Dīmān of which only some 50 baits have come down to us. At the same court the talented young and vivacious poet Daḵīṭ (q.v.) undertook a larger work, namely a metrical version of the official Sāsānian book of kings, the Kāḥāni-nāma. His premature death prevented him from carrying out this grandiose scheme. All that he left was about 1,000 baits, which seem to have given the stimulus to the greatest achievement of Persian poetry, the Sāhā-nāma of the celebrated Abu ʿl-Kāsim Firdawsi (q.v.) of Tis (born c. 934, d. between 1020-1026). This gigantic work, which according to the poet himself contains 66,000 baits and combines the whole epic tradition of Persia into an artistically perfect whole, became the foundation for a long series of later poems or has been, as this genre is called, from an Arabic technical term. Firdawsi's second work, finished when he was well over seventy years of age, namely his Vāfīb-i Zāliṣhâ, is from the artistic point of view little
inferior to his masterpiece. The story of Joseph, which with later poets (Djamli) became a song of songs of mystic love, becomes in his hands a moving lament of the boy carried off to a strange land, which may well describe the feelings of the aged and homeless poet in Baghdad. Firdawsi's first successors followed his example closely and wrote regular epics, among which the already mentioned Garbeh-e-nama of Asadi and works like the Ruzai-nama, Sam-nama etc. may be particularly noted. But very soon the character of the epic changes and it gradually becomes a romance of chivalry. Thus for example the Wāniš ma-Adbr, now lost, of the already mentioned Unsurt, in spite of its many descriptions of fighting, is mainly concerned with the love-story of the hero and heroine. This transformation is still more evident in Fakhr al-Din Gurgānī's [see Ḩurrānī] celebrated Ḩis-i Rūmīn (written about 1048), the Persian counterpart of the European Tristan story, in which the hero, regarded from the point of view of the heroes of old Persia, is almost entirely devoid of knightly qualities. The courtly epic attains its zenith in the quintette (Khamsa) of the great Nīqūlī [q.v.] of Gangla (1141-1203). Some of his poems have really very little connection with the old epics and are, like La'īl-i Maqūfīn, predominantly lyrical and romantic in tone. After Nīqūlī the Persian court poets hardly ever attempted to treat of new subjects and remained within the bounds already laid down for them.

2. Mysticism. We have so far been mainly concerned with the court poetry, but the other current in Persian literature has its source in very different circles. Sufism [see TAṢAVVUFS] arising on Arab soil, entered Persia also and spread among the artisans and to some extent also among the merchants who populated the towns of Persia. In its quite early stages Sufism became connected with the sufawwada movement [q.v.] and the mystical note became more and more emphasised. So far as we can judge, the oldest Sufi lyrics arose from the demand for a poetry of their own which should brighten the public meetings of the Sufī bodies. Isolated lines, quatrains and Ḥijā'as of pronounced Sufi colouring arose as early as the tenth century, but the first more or less extensive collections belong to the first half of the xth century. While the famous Bābā Taḥīr ʿUṭūn (see Tūm; d. 1010) expresses pronounced Sufi views only in his prose works and in his quatrains follows the model of the popular poetry (even in language, for a number of them are written in dialect). Bābā Kāhī Shīrāzi (d. 1050) is already a mystic through and through in the full sense of the word. His Dīūān which has come down to us is, it is true, much corrupted, but the theories of the xth century are quite apparent from his verses which are interspersed with Ḥurā'n verses and Ḥadīths. Until quite recently it was generally thought that the earliest Sufi poet was the celebrated Shāhīb Abū Saʿīd of Malihana. But there is no longer any doubt that he only once in his life composed a quatrains on the spur of the moment. All the other poems ascribed to him are either forgeries, or possibly were really declared by him during his sermons without having been composed by him. The mystical lyric attains a higher degree of perfection in Anṣārī [q.v.] also called Pīr-i Anṣār or Pīr of Herāt (1000-1088), whose principal work is the celebrated Muntu, called prayers full of feeling in rhymed prose. The soil was now sufficiently prepared and Persian mysticism began to bear its finest flowers, which have given Persian poetry world-fame. But before we pass to these great masters we must briefly mention two names which has hitherto been the custom to mention in connection with Sufism. These are the famous scholars ʿOmar Khayyām (q.v.; d. 1103) and the preacher of Ismā'ilism Nāṣr-i Kāshvāq [q.v.]. To return to orthodox Sufism we must mention Ṣanāʿī [q.v.]; 1045/1046-1121), the poet of ʿazines. If his Dīūān, half secular, half mystical, reveals further development along the path laid by Anṣārī (q.v.), his didactic poems, among which we may mention the Ḥaḍrat al-Rūh, represent the first attempt to enliven the theories of Sufism by inserting parables of a popular character. This device, only sparingly used by Ṣanāʿī, is brilliantly exploited by his successor, the celebrated Farīd al-Dīn ʿAttār (see Āṭṭār: 1219-1230). In his poems the inserted tales attain full development and frequently display the greatest artistic perfection in their simplicity. The climax of this ascending series is formed by the incomparable and gigantic work of the great Djālāl al-Dīn Ṣūrī (q.v.; 1207-1273) also known as Mawāsī-i Rūm. His didactic poem, which bears the proud title of Mathnawī, i.e. "the poem par excellence" (perhaps with allusion to al-ʿKūnūn), is the finest thing that Oriental mysticism with its unlimited riches has produced. The famous Saʿdi (q.v.; 1184-1292) is also usually reckoned among the mystics, although really only a few of his works have a distinctly mystical tinge. Saʿdi is rather a teacher of practical wisdom; he endeavours to show his readers the way by which in his troubled period the all too heavy blows of fate could be softened.

3. Prose. We have already observed that classical Persian literature was accustomed to clothe belles-letters with a metrical garb, and preferred Arabic for learned works. The prose literature of this period is therefore not so rich as the poetry is. Along with the already mentioned work of Bānān many may also note the famous Abū ʿAli b. Sīnā (Avicenna; q.v.), who in addition to his works in Arabic wrote an encyclopaedia of philosophy in Persian, the Dīnāmī-nāma-yi ʿĀʿīn. The dialect of ʿTabari斯坦 was used at the end of the tenth century by Mārāhān b. Rustam [q.v.] for the Mursūn-nāma, a version of the ʿIklīl wa-Dimmā [q.v.]. Unfortunately this work is now lost and known only from Saʿdī Warrāwīn's Persian translation (written between 1210-1215). The Sīyāsāt-nāma of the Sailjīk waṭrī Nīṣām al-Mulk [q.v.; d. 1092] is an important book, besides containing valuable historical material, well reflects the political ideas of the period. This list of the most important works shows quite clearly that there is practically no belles-letters proper. The first work that we can put in this class is the Persian translation of the Kalīla wa-Dimmā finished in 1244 by Abū ʿl-Mawātī Nāṣr Allah [see NāṣR AL-AḤĀN]. But here again it must be pointed out that the book was not then regarded as light literature but as a kind of "mirror for princes", that is to say as a learned work. The aim of the Persian translation of the Farāhīh bād al-Ṣūda completed in 1155 by Husain al-Maʿāīyādī was similar, but with particular stress on the didactic element. The end of the sixth century
brings a series of romances of chivalry and versions of pre-Islamic material, the greater part of which is known only in later versions, often only in the form of popular romances. We may mention here the romance Kirdāb-i Samakī Ḥur by Sādžaštī Shīrāzī composed in 1180, the last of the great pre-Islamic romances, Amīr Ḥamza, the Bāghār-nāma and the romance of the Bedouin hero Ḥādīn Taqī. To conclude this section, we may mention that in this period we already find a certain development of historical writing, a series of works on poetics, and the first attempts at anthologies (taḏḵīra, among them ‘Awfī’s [q.v.] valuable Luḥāb al- marched. As this compressed survey of Persian literature is forced to confine itself to belles-lettres such works cannot be dealt with here.

From the Mongols to the sixteenth century. The early years of Mongol rule were a period of tribulation for Persia. Although later Mongol rulers took an interest in the restoration of the country the destruction done in the early invasions was so vast that the land could only recover slowly. In the general havoc it could hardly be expected that Persian literature would continue on its earlier lines. Yet it is this period that produces the great series of eminently important works that form the foundation of all research by European scholars. Without going into further details we must at least briefly mention the more important names. These are: Aṭā Allāh Ḥamza [see Ḥamza], Waṣṣīq [q.v.], the great Ḥādī al-Dīn [q.v.] Fadl Allāh and Hamd Allāh Mustawfī Ḥaḏī [see Ḥaḏī]. Poets on the other hand became rare and they seek comfort mainly in mysticism. Court poetry after the destruction of the brilliant court life survived mainly in outlying parts of the country which had suffered less in the general destruction. But this poetry could not for the most part rise above the level of the classical period and seeks to surpass its predecessors in dexterity of technique. Several poets who knew that they possessed a certain perfection of style left their native land and sought refuge with the rulers of India. For example Bādr al-Dīn, a fairly skilled master of the ḥaḏī, left Central Asia to become court poet of Muhammad b. Tughluq (1235—1351); there he was followed by Kānī of Tūṣ who however afterwards went to Asia Minor. An endeavour to give new life to the court language, which had become arid and formal, by the addition of Mongol and Turkish loan-words was made by Fūr al-Dīn [q.v.,], who described the earthquake at Nishāpūr in 1257—1268 in a successful ḥaḏī. Only the most gifted poets still retain traces of the ecstasies which filled the works of their predecessors. Of great importance is Fakhr al-Dīn Ṭrgā [q.v.] of Hamadān (d. 1289) who in his Lāfallūt, sung by Anṣārī’s Munūdī, produced a work sui generis; his ‘Uṣūl-i-nāma also contains much that is valuable. Less known but interesting is Ḥawd al-Dīn Kirmānī whose Mīsāb al-Arwisā in many ways recalls the Divan Compendia. ‘Aḥmedi [q.v.] of Maragha attained great renown. His Zan-i Dīnān, which is now very little read, was copied 400 times in a single year. For European scholarship the Gūrshān-i Rūz of Mḥmad Shabistānī (d. 1390) had considerable importance. This was the first work from which a clearer idea of the teachings of Ṣu’aṣīm was obtained. A further development of the mystical quest is found in Afdāl al-Dīn Kāshānī (also called Bāḥš Afdāl; d. 1307), who also can claim mention as the author of several treatises of a philosophical character. Among all these quite a special position is occupied by Nisārī Khūstānī (d. 1320), although from an earlier date, he is distinguished from the latter by sarcastic outbursts against orthodox Islam with such drastic effect that almost all authorities declared his writings heretical and hostile to religion. As a result manuscripts of his works are very scarce. Some of his longer poems (like Muqābir u-Aṣḥār) read like deliberate parodies of the aphorisms of Șa’dī and the court epic.

If Persian literature in the Mongol period had fallen into a kind of lethargic trance, under Timūr and his successors (1370-1405) it experienced a renaissance. The reason for this is probably that, with the decline of Mongol sovereignty, a large number of petty local dynasties arose who were all anxious to restore the ancient usages of court life and to adorn their courts with poets. This period therefore became a new flowering-time of Persian poetry and it may well be called the second classical period. Although the greater part of its poetry lacks the freshness and vigour of the pre-Mongol period, some of its poets succeeded in surpassing their predecessors. Of the masters of this period the following may be mentioned: Ibn Yāmīn (q.v., d. 1368), a time court poet to the Safavids in Sabzawār, a great artist in the ḥaḏī, which was very little cultivated before him and then mainly for its decorative beauty. ‘Aḥmad Kirmānī [see Kirmānī, d. 1381], author of a Khamā, which endeavours to discard the rather pedantic learning of Ni‘mī and is distinguished by grace and lightness of touch. His ghazals also show an endeavour to cast off Sa’dī’s moralising tendency and to melt into pure expressions of feeling. ‘Uḥdī [q.v.,] Zākīnī (d. 1371), one of the most original figures of Persian literature, whose occasionally rather bold parodies contain ruthless criticism and contempt for the Persian aristocracy. Sālānī [q.v.,] Sāwādī (d. 1376), celebrated for his difficult play on words, witticisms and technical skill, and lastly Līsān al-Qubl Khwāsī [q.v.,] Shīrāzī (d. 1386), the incomparable master of the ghazal, who was able to combine the greatest freshness and depth of feeling with the elegance demanded by the taste of the age and brought the ghazal to the height of its development, never again reached by any one after him. Two less talented parodists must be mentioned as characteristic representatives of the period: Aḥb Iṣḥāq Aṯ-īma, the poet of cooking, and Kārī Yāsādī (second half of the sixteenth century), the tailor poet. Their works show that the grandeur of the court poetry was already in decline and a new wave was about to break which revealed its weaknesses and made new demands on the subject of its art. Among the prose writers we may here mention Ḏīyā al-Dīn Nakhshabī [see Nakhshabī], whose book of the parrot (Ṭūfān-nāma, 1330), a version of the old and now lost Sīnādūf-nāma, had a great success and was utilized by several later writers. His short prose romance Gūrshī should also be mentioned.

Under Timūr’s successors the striving after artificiality increases still further. The poet’s object is not to be generally understood. On the contrary his aim is to write only for a few select connois-
The Kādjar and modern Persia. The Kādjar monarchy established at the end of the xviiith century brought with it a literary revival in Persia. While Fath 'Alī's court poets still followed the old traditions and produced little of value, a distinct change becomes apparent in the second half of the xixth century, the result of a closer contact with the European powers who were waging with one another for predominance in Persia. Fath 'Alī Shah's court poets, like Nāshīt (q.v.; d. 1828–1839) with his tender lyrics, Šahbāz (d. 1822–1823) with his Shahāna-nāme, an imitation of Firdawsi, which celebrates the wars of 'Abbās Mirzā with the Russians, or the "Dīvān of the xixth century", Wāżīl, all have much that is admirable to their credit; but nevertheless they are only epigones who lack originality completely. Quite a new note is struck in the works of the three great masters of this period: Kā'ān (d. 1853–1854), Shābān (q.v.; d. 1888) and Vāghmān (q.v.; d. 1860). Although Ka'ān studied both French and English and translated several books from these languages, his kāfīs are still, broadly speaking, repetitions of the long obsolete court style. But in the marāz of these bombastic exercises in style there are many wonder-
fully realistic scenes which would be quite impossible in the "golden age", Shahbâni, who suffered great injustice from the Khâdîjâ, strikes a gloomy and pessimistic note and bitterly laments the rottenness of the whole structure of the Khâdîjâ monarchy. Yaqûhî, perhaps the most interesting of all three poets, whose life was an unbroken chain of sorrows, attacked the Persian nobles in bitter satire and ended with even blacker pessimism and a complete denial of the possibility of a happy life. His effort to purify the Persian language of Arabic loanwords is of interest. A great influence on further development was exercised by the Dar-i-Furûn (1852), the first educational institute intended to further the study of western learning, the teachers in which were almost exclusively Europeans. The work of this institute required the translation of a series of western textbooks. This task however revealed that the rhymed prose of the classical period could not be used for such a purpose. The works of these first translators, who in addition to the textbooks also translated several novels, chiefly from the French, was of tremendous importance for the literary language of Persia and prepared to some extent the way for the literature of contemporary Persia. The Dar-i-Furûn was also of great significance for learning in Persia. Its first director Khâji Khâlî Khân (q.v.; d. 1871), who used the taqhalî Hîdâyât for his poetry, was one of the greatest literary historians of Persia. Among his pupils were the famous historians Şârî al-Dawla, later known as Hîdâyât al-Sâlih, and (d. 1896), whose works are still one of the most valuable sources for the history of modern Persia. The efforts of the Dar-i-Furûn also produced a widespread desire to help in making known the achievements of European science. Remarkable in this respect is the work of Mirâk ʿAbd al-Râhîm Nâdîjâr ʿZâdâ, who under the name of Tâlib published a series of popular works which dealt with the most varied subjects. Of these works the most important are the Khâji ʿAbbâd and Mâ'allîb al-Maŷsinâ. Of the greatest importance for Persian literature of the eighteenth century was the introduction of printing (first press in Tabriz in 1816-1817), which also made newspapers possible. But the first newspapers were intended only for court circles. It was not till 1831 that the first newspaper of any size appeared. The press made remarkable progress during the great struggle for the constitution (mahârûţa) especially after the opening of the Madjâna

This struggle hastened the literary revolution, which had been prepared for by the work of the writers of the eighteenth century. The political struggle made quite new demands on the participants. Literature was no longer to be the special property of the aristocracy but had to speak clearly and intelligibly to the masses. Satirical poetry, which was particularly cultivated during those years (1906-1909), therefore broke away from the old tradition; instead of the old literary language which was difficult to understand it uses the language of the street and of the bazaar, instead of the dry old classical forms it sets out to imitate the street ballads (taqāf). The vernacular also found its way into prose. "Ali Akbar Dîkhâdî (Dâkhâwî), the great master of the fezile, wrote his bitter and humorous pamphlets Čâram-i-pamârd, which heightened the revolutionary paper
technique he has a complete mastery, but as regards matter his poems with their glowing hatred of England and echoes of the World War are something quite new for Persia. The same may be said of the celebrated Malik al-Sha‘rā‘ Bahār, whose great kasidas in spite of their traditional style are almost entirely political in content. On the other hand, Abu ‘l-‘Asās ‘Alī ‘Askīs ‘Alī (born c. 1780–1860) has cast off the old tradition to a considerable extent. Of classical forms he prefers the ghazal, but has attained his greatest fame by personal satirical stanzas, some of which played a great part during the fighting in the Persian Revolution. The poems of Ṣa‘dār al-Misrī (d. 1926) are very famous; his main theme was the fight for the liberation of the Persian woman. Unfortunately his works are characterized by a repulsive cynicism which is quite irreconcilable with the loftiness of his ideals. Among the younger poets first place must be given to Ṣahīr Ṣādī (born 1887), whose tenderly nostalgic distinctly betray the influence of European poetry; Ṣādī has also distinguished himself as a literary historian. Nīrā is endeavouring to create new forms and his Majhas ("prison") he succeeded in impressively depicting the tragic lot of the Persian peasant. Mention must also be made of ‘Alī Ṣa‘dī, author of two short mahans which the European reader will feel to be too sentimental. The Sarghdāshī ‘Alī ‘Askīs is interesting; its author, Waḥīd Dāghī ‘Askīs, is editor of the Arman, the best Persian literary monthly. There are also women-writers and the rather naive verse of the poetess ‘Arman in which we may hope for success in this field also.

Revolutionary tendencies in Persian poetry are represented by Muḥammad Mīzrā ‘Askīs (killed in 1935), noted for his poem ‘Aqīl ‘A‘marār Dīkhān, and Ṣādī Lāḥūtī, now working in the USSR (d. 1887), who has with great skill been able to overcome the old traditions and to give his revolutionary poems artistic forms most effectively.

If the Persian poetry of recent years is still feeling its way only very tentatively, the prose can show remarkable achievements. The first years after the War gave the Persians their first historical novel ‘Isāh u-Sultānāt (printed 1919) by Shāh ‘Alī ‘Askīs, the best work in this, the Achaemenid Cyrus, the episode of ‘Umar and Muniya from Firdawsi’s Šāh-nāma was worked up into a long novel by Aḥmad Mīzrā ‘Askīs Ḥasan-Khān Bādī; the story of Manzāk was used by Sa‘dī ‘Askīs Kirmānī, who also wrote a novel from the life of ‘Abdāli (1927). The most interesting of all these historical novels is the Šamān u-Tughrā (in three parts; written in 1909) of Muhammad Bāq̄ī Mīzrā ‘Askīs Khurāsānī, who describes the condition of Fars under Mongol rule (XIIth century). Kamānī’s novel Lūshā (1931) is outspokenly nationalist. If the historical novels are intended to remind the Persian reader of the departed greatness of his country and arouse his national pride, the second group of modern novels is devoted to the criticism of present conditions. The difficult position of women in Persia is dealt with by Abbās Khālīfī in his Rūgbār-i ayāh (2nd ed. 1925). The same author has written a number of shorter novels and stories, among which we may mention Intīshāl, ‘Ālmān and ‘Alī-i Șah. The hard lot of the working classes and the criminal conduct of the Persian bureaucracy before the revolution of 1921 are described by Mustafā Mushīf Kāsīmī in his Tīhrān-i manāhīf (2nd ed. 1924). The same author has also published several shorter novels, ‘Alī Kāh Khu’dadā (1927). The novel Mas‘ūd ‘Alī ‘Askīs Dīnhānān (1925), which is the already mentioned ‘Alī’s, is fanciful and Utopian; the same author in 1934 published another Utopian novel, Rustām dar Kuri-i wāzānam, in which he endeavours to demonstrate the inadequacy of the old ideals of chivalry.

This compressed survey, which can only mention the more important works, shows that modern Persian prose has developed much more vigorously than poetry. If we consider the difficulties which the Persian moderns had to overcome, there can be no doubt that the next few years must produce an ever greater literary revival and that new Persia will soon produce works of art, which will be able to take their place beside the noble creations of the classical period in the literature of the world.

Bibliography: Only comprehensive surveys are given as this is not the place to give a complete list of monographs on individual authors.

(P. Berthele)

PERTEW PASHA, the name of two Ottoman statesmen.

I. PERTEW MURAD PASHA, Ottoman admiral and weftir, started his career on the staff of the imperial harem, became başıghü beşhi [q.v.], later Agha of the Janissaries and in 1562 (1555) he was advanced to the rank of weftir; in 1568 (1564) he was appointed third weftir, in 1582 (1574) second weftir and finally commander (cerdar) of the imperial fleet under the başşuğla beşhi Muferze-râde ‘Ali Pasha. He later fell into disgrace and died in Istanbul where he was buried in his own türbe in the cemetery of Eyüph.
PERTEW PASHA — PESHĀWAR

II. PERTEW MEHMED SA'D PASHA, OTTOMAN DIPLOMAT AND POET. He was of Tāriq descent and was born in the village of Dūndj near Čumîya. In his early youth he came to the capital Stambül and entered upon an official career. In Maharrâm 1240 (Sept. 1824) he became beşlî-kâf efendi, i.e. State referendary and in Şaban 1242 (March 1827), head of the imperial chancery (reîî-ṣulûkat). Two years later he lost his post as chancellor and went on a special mission to Egypt. On his return he became in 1246 (1830) assistant (kâya) to the grand vizier. In the 32nd Dhu l-Ka'da 1251 (March 12, 1836) he was appointed minister for civil affairs (mîhâkat-i 'abrî) and given the title of marshal (mâšûrî). In the spring of 1836 he was given the title of Pasha but was dismissed by the autumn. In the beginning of Sept. 1836 he was banished by Mahmûd II to Scutari in Albania. Pertew Pasha set out a few weeks after his banishment to his place of exile but did not reach it. He died in Adrianople three hours after a banquet which the governor there, Mustafâ Pasha, gave in his honour (according to Gíbb, H.O.P., iv. 333: Emin Pasha). No one doubted that his sudden death was due to poison and public opinion ascribed the crime to Mahommed himself. On his family see Sīgıllî-i Fâvâzî, ii. 88. His son-in-law, who shared his views, was the intriguing private secretary to Mahmûd II, Waṣṣaf Bey, a highly educated man but lacking in character and accountableness. He was accused of bribery, who lost his office about the same time as Pertew Pasha and was banished to Tokat in Anatolia; cf. G. Rosen, Geschichte der Türken, i., Leipzig 1866, p. 255 sq.; Pertew Pasha's successor was his political opponent, Kâfî Pasha, cf. Babinger, G.O.W., p. 337 sq. — As a statesman Pertew Pasha took up a pronounced anti-Russian attitude and was no less hostile to the Christians, whom he oppressed with long obsolete and forgotten laws. His feeling against the Christians increased with advancing years.

As a poet, Pertew Pasha composed a Divân, which was esteemed as a model of the poetical art of the period of Mahmûd II. There are two editions of it: Bâlâk 1253 (89, 91 pp.) and Stambül 1256 (89, 430 sq). On other works by Pertew Pasha see Brûssl Mehmêd Tâhir, Oftînînî Mâlikîfî, ii. 114 sq. — His valuable library, rich in manuscripts, is now in what was formerly the Selimiye monastery in Scutari.

Bibliography: G. Rosen, Geschichte der Türken, i., Leipzig 1866, pass. esp. p. 255 sq.; Gibb, H.O.P., iv. 322 sq. with references to Jousmim and J. v. Gaver, Turqueries, Paris 1843, for an account of the death of Pertew Pasha in Adrianople; Mehmêd Thūrēyâ, Sīgıllî-i 'othmānî, ii. 38; Şâhīn Bey Frâhîk, Kâmînî al-'Aᦂīm, p. 1494 sp.; Brûssl Mehmêd Tâhir, Oftînînî Mâlikîfî, ii. 114. — This Pertew Pasha is not to be confused with the statesman and poet Pertew Edhem Pasha who died on the 7th Dhu l-Ka'da 1289 (Jan. 6, 1873) as governor of Kayserî [q. v.], a number of whose poems have been published e. g. a-Shâhînum and Lâhsâhî, a.l. (= Stambül) u.d., and Iñâkat al-Akîr fi 'Uṣūl al-Akâr, Stambül 1304. On him cf. Mehmêd Tâhir, op. cit., ii. 114 sqq.

(Franz Babinger)

PESANTREN. [See Pasanteen.]

PESHĀWAR, a district, ṣubîl, and city in the North-West Frontier Province of British India. The district which lies between 71° 25′ and 72° 47′ E. and 33° 40′ and 34° 31′ N. has an area of 2,637 square miles and a population of 947,321 of whom 92 per cent are Muslims (19th Census Report). It is bounded on the east by the river Indus, which separates it from the Pindâr and Hazāra, and on the south by the Nikân hills which run off from the district of Kâhât. Elsewhere it is bounded by tribal territory. To the south lie the territories of the Pashtûn Khâl and Kâhât Pass Afritâ; westwards, the Khâleb Afritâs and Mûllâgors. Farther north, across the Kâhât river, the various Mohmand clans stretch to the Swât river. The northern boundary of the district marches with the territories of the U protestors, the Swât and Buner, the Khu’d Khâl, Gâduns and Umtâänâs. The district passes famous in frontier history connect it with the surrounding tribal tracts. In the north-east, the Mora, Shâkhut, and Mâlakund passes lead into Swât. The historic gateway of the Khâleb connects it with Afghanistan, while to the south, the Kâhât Pass runs through a strip of tribal territory, known as the Dâvâya peninsula, into the neighbouring district of Kâhât.

References to the district occur in early Sanskrit literature and in the writings of Strabo, Arrian, and Ptolomy. It once formed part of the ancient Buddhist kingdom of Gandhâra, for, from the Khâleb Pass to the Swât valley, the country is still studded with crumbling Buddhist stupas. Here, too, have been unearthed some of the most spectacular Buddhist sculptures in existence, while one of Asoka's rock edicts is to be found near the village of Shâhâbga in the Swât district. Both Fa-hien, in the opening years of the fifth century A.D., and Hiuen Tsang, in the seventh century A.D., found the inhabitants still professing Buddhism. It is also on record that Purushapura was the capital of Kanîgâka's dominions. Through centuries of almost unbroken silence we arrive at the era of Muslim conquest, when, between the thirteenth and sixteenth centuries, numerous Pashtûn tribes from Afghanistan spread over and conquered the country roughly corresponding to the modern North-West Frontier Province. (T. C. Plowden, Kâhîn-i Afghânî, chap. i.—v., Selections from the Tūrkeh-i Marâja.)

Towards the end of the fifteenth century, according to local tradition, two large branches of the Pashtûn tribes, the Khâhakī and the Ghûrīyâ Kâhî, migrated from their homes in the hilly country around Kâhût to the Dâtâlîbâd valley, and the slopes of the Swât Kâhût. The most important divisions of the Khâhakī were the Vûsânî, Gûgîyânî and Târkîhâ; the Ghûrīyâ Kâhût were divided into five tribes, the Mohmands, Khâhiks, Dîtâns, Camakandîn and Zârâns. The Swât district, advancing into the modern Peshâwar district, expelled the inhabitants, known as Dâtâns, and finally conquered the country north of the Kâhût river and west of Hori Murâda. By the opening years of the sixteenth century, the Ghûrîyâ Kâhût had also reached the Khâleb area. Eventually these powerful tribes dispossessed the original inhabitants, driving some to the Swât Kûhût and forcing the Dâtâns across the Indus. Later, the Ghûrîyâ Kâhût attempted to assault the Khâhakī
branch but were signaliy defeated by the Vissians.

Since the modern Peshawar district lay about halfway the route of invading armies from the direction of Central Asia, much of its history resembles that of the Panjnad. The Pathans of this part of the frontier proved a thorn in the side of the Muslim rulers of India, and, although nominally incorporated in the Mughal empire, they were never completely subjugated, even Akbar and Aurangzeb contending themselves with keeping open the road to Kābul. With the decline of Mughal power this area became a part of the Durrānī empire founded by Ahmad Shāh Ḍabdillāh. Disintegration set in under his weak successors and eventually in the early nineteenth century Peshawar was seized by the Sikhs of the Panjāb. Sikh rule was of the loosest type, and Peshawar groaned under the iron heel of the Indian General Avītalī. With the annexation of the Panjāb in 1849, the Peshawar valley came permanently under British control and remained an integral part of the Panjāb until the formation of the North-West Frontier Province in 1901. (A detailed examination of British administration and of the various expeditions against the frontier tribes will be found in “The Problem of the North-West Frontier” by C. Collin Davies.) In recent years this area has been the scene of the activities of ‘Abd al-Qāhir Khān, the founder of the “Red Shirt” movement, which, although ostensibly based on Gandhi’s creed of non-violence, has seriously disturbed the peace of the Peshawar valley.

Peshawar City, the capital of the North-West Frontier Province, has a population of 87,440 and is situated near the left bank of the Bārā river about 13 miles east of the Khāiber Pass. Its importance as a trading centre on the main route between India and Afghanistan has increased since the construction of the Khāiber railway in 1925. It has 16 gates which are closed every night and opened before sunrise. The richest part is the Andarshahr where the wealthier Hindus have taken up their abodes. In this quarter, conspicuous on account of its high minarets of white marble, stands the mosque of Khān Khānān, who was governor during the reign of Shāh Djiāhan. On the north-west the city is dominated by a fort known as the Dīlāb Hīshā. The Shāh Džāng with its spacious and shady grounds is a favourite resort of the inhabitants in the spring. The fame of the Khān Khānān or Storytellers Piazāz is known throughout the length and breadth of the frontier and beyond.

Two miles to the west of the city are the cantonments (population 34,426), the principal military station in the province. Some three miles to the west of the cantonments is the famous Islamia college, which, although essentially a Muslim college, opens its doors to students of all castes and creeds.

Peshwa. [See Peshawa.

Peterwardein. [See Petrovaradin.

Petrovaradin (Hungarian Pétervárad, Turkish Vardım or Varadin), a famous fortress and town in Sirmia (Yugoslavia) on the main railway line Belgrade (Petrovaradin)—Novi Sad—Subotica—Budapest, lies on the right bank of the Danube opposite Novi Sad (Neusatz), chief town and headquarters of the Danube banate, with which it is connected by two bridges and since 1792 also administratively. There are two fortresses, an upper one which rises 150 feet above the Danube on rocks of serpentine surrounded on three sides by the river (forming the most northerly spur, 400 feet high, of the Fruska Gora) and a lower one which stands at the foot of the cliffs on the north. In the upper fortress there are no private houses but only military buildings, including the celebrated arsenal with many trophies from the Turkish wars, while the other fortress has a fine market, a main and two side streets. Numerous trenches have survived within the area of the two fortresses which have room for 10—12,000 men. The town proper lies half on the Danube and before its union with Novi Sad it had over 5,000 inhabitants (1921). There are many vineyards in the vicinity.

There was a settlement here even in Roman times called Cusium in which definite traces of the cult of Mitra have been found. According to one legend, the settlement received its later name Petriacum from Peter the Hermit, who assembled the armies for the First Crusade here. In any case the town was known as Petrīkon in the wars of the Byzantine emperors Manuel Comnenus (1143—1180) with Hungary. After belonging for a brief period to Byzantium, Petrovaradin returned to the kings of Hungary, and Bela IV in 1237 presented the town and the royal palace to the Cistercian abbey there of the B. M. V., Belaontia de monte Varadinipetri. This abbey survived throughout the middle ages until 1521 but from 1439 it and the town of Petrovaradin passed under the control of the ban of Mačva.

In Sulaiman I’s second campaign against Hungary, the first blow was dealt at Petrovaradin: the grand vizier and brother-in-law of the sultan, İbrahim Paşa (cf. Sīgīdīl ‘Alīī, 1: 95—94), stormed the town on the 15th and the fortress after a brave resistance on the 27th July. The Turks held Petrovaradin till 1687 when they began to withdraw gradually after the fall of Zrenjanin. Soon afterwards the town was occupied by the Austrians (finally in 1691) and after Slimieli ‘Alī Paşa had besieged it in vain for 23 days in 1694 (from Aug. 29) it was definitely ceded to them by the peace of Carlowitz 1699. But it is from the war of 1716—1718 that Petrovaradin is best known. The grand vizier Shâhâd ‘Alī Paşa (on him cf. ‘Abd al-Rahmān Sharaf, ii. 138 and Sīgīdīl ‘Alīī, 1: 528—529) with an army of 150,000 men encountered Prince Eugene of Savoy near the town and tried to begin
a regular siege. The Austrian general however foiled this attempt and instead fought a five hours pitched battle with his 64,000 men which ended in the defeat of the Turks (Aug. 5, 1716). This battle, in which 'Ali Pasha himself fell, with the fall of Temesvár and Belgrade (1717) brought about a decision in the war and led to the peace of Požarevac [q.v.] which established the Turkish frontier much farther south of Petrovaradin (indeed over the Save). A little later the empress Maria Theresa built the new fortress. In the Hungarian war of independence (1848–1849) Petrovaradin was for nine months in Hungarian hands until it surrendered to the Austrians in Sept. 6, 1849. On the dissolution of the Austro-Hungarian monarchy in 1918 the town passed to Yugoslavia.

PHARAO. [See FISÆN.] (Fisān.)

PIELE PASHA. Ottoman Grand Admiral according to St. Gerlach, Tage-Buch (Frankfurt a.M. 1674, p. 448), from Tolun in Hungary and is said to have been the son of a shoemaker probably of Croat origin. Almost all contemporary records mention his Croat blood (cf. the third series of the Relations degli ambasciatori Venezi al Senato, ed. E. Alberi, Florence 1844–1845, and exp. iii. 243: di nazione croata, vicino ai confini d’Ungheria; p. 357: di nazione croata; iii. 244: di nazione croata; p. 418: di nazione croata). Following the custom of the father his was later given the name of 'Abd-al-Rahmân and described as a Muslim (cf. F. Baldinger, in Litteraturdenkmäler aus Ungarn Türkenschrift, Berlin and Leipzig 1927, p. 35, note 1). Piele came in early youth as a page into the Serai in Stambul and left it as phragi bash [q.v.]. The year 961 (1554) saw him appointed Grand Admiral (kapudan pasha) [q.v.] with the rank of a beykhiyâ and four years later he was given the rank of a beykhiyâ (J. v. Hammer, G.O.R., iii. 406). He succeeded Sinân Pasha, brother of the grand viceroy Rustâm Pasha [q.v.], in the office which he had held from 955–961 (1548–1554). When after his capture of Djerba and other heroic achievements at sea he thought he might claim the rank of west with three horse-tails, Sultan Sulimân, thinking it too soon for this promotion and regarding it as endangering the prestige of the west (cf. Hıdır Khañ, Tâmis al-Kiyâr, first edition, vol. 36 and J. v. Hammer, G.O.R., iii. 406), married him to his grand-daughter Dhiewber Sultan, a daughter of Selim II. (cf. J. v. Hammer, G.O.R., iii. 392: summer of 1562). It was not till five years later that he received the three horse-tails as a west related by marriage (damûd) like Mehmedme Şokollu Pasha. In the meanwhile he had carried out several of his great exploits at sea and attained the reputation of one of the greatest of Ottoman admirals. Along with Torghud Reš, at the instigation of the French ambassador d’Aramon, he had harassed the coast around Naples, besieged and taken Reggio and carried off its inhabitants into slavery. In 982 (1555) he endeavoured in vain to besiege Elba and Piombino (cf. J. v. Hammer, G.O.R., iii. 418) and finally took the fortified harbour of Oran in Algeria with 45 galleys. In the following year with 60 warships he occupied the port of Bizerta (Bent-Zert) and a year later ravaged Majorca with 150 galleys and burned Sorrento near Naples. In 995 (1558) he lay inactive with his fleet, 90 in number, before Valona in Albania in order to watch the enemy fleets there which were preparing an enterprise against Djerba and Tripolis. July 31, 1560 saw his greatest exploit at sea, namely the capture of Djerba which had shortly before been taken by the Spaniards; this he did with 120 ships setting out from Modon. On Sept. 27, 1666, he held his triumphal entry into Stambul, to which he had sent in advance the news of his victory by a galley (cf. J. v. Hammer, G.O.R., iii. 421 sqq.). The Grand Admiral did not take the sea again till four years later when in Aug. 1564 he took the little rocky peninsula of Peñón de Vélez de la Gomera from the Spaniards and in order to prepare for the conquest of Malta, which the sultan’s favourite daughter Mihrâbah [see MİRÊM PASHA] was conducting with all her resources. This time however fortune no longer favoured him, for the siege of Malta in June—July 1565 failed against the heroic defence of the Christian defenders who performed miracles of bravery and inflicted heavy losses on the Ottomans. During the Hungarian campaign of Sulimân in the spring of 1566 Piele Pasha was placed in charge of the harbour and arsenal of Stambul (cf. J. v. Hammer, G.O.R., iii. 438), after previously undertaking a successful raid on Chios and the Apulian coast (ibid., iii. 506 sqq.) in which the island of Chios and its harbour passed into his hands (Easter Sunday 1566). Under Selim II, his father-in-law, he was disgraced and deprived of office of Grand Admiral; because, it was alleged, he had kept the greater part of the booty of Chios for himself (according to the report of the embassies of Albrecht de Wijis of May 1568 in J. v. Hammer, G.O.R., iii. 782) and replaced by Mu’ezzîn-râde ‘Ali Pasha. He at once endeavoured to regain the imperial favour by new exploits at sea. In April 1570, he set sail with 75 galleys and 30 galleots, landed first of all on the island of Tine which he captured and next took part in the conquest of Cyprus. On January 20, 1578 — according to Ottoman sources on the 12th Dhu’l-Ka‘da 985 (Jan. 21, 1578) — he died in Stambul according to Stephan Gerlach (cf. his Tage-Buch, Frankfurt a.M. 1674, p. 448). His vast estates passed some time to the imperial treasury and some to his widow and children. His widow later married the third west Mehmed Pasha and his second son became Sandjak Bey of Klein (Clissa) above Splot (Spalato in Dalmatia) in 1584 (cf. the Italian record quoted by J. v. Hammer, G.O.R., iv. 104, note 1: La
PIASTRE. [See GHIJAS.]

PIE. [See PFL.]

PINANG or PILAU PINANG, an island on the western shore of the Malay Peninsula, lying in latitude 5° 24' N. and longitude 100° 21' E. The area is 276 km²; it is separated from the mainland by a channel from 3 to 16 km. broad. The town of Pinang is built on the northeastern promontory, 4 km. off the shore of the mainland. The official names, Prince of Wales' island and Georgetown, never became popular and exist only in official documents. — The island was acquired in 1786 for the East India Company against a yearly payment from the Sultan of Kedah by an agreement with Capt. Light, who founded the colony in the same year. He hoped the place would become an emporium of the eastern seas. It was practically uninhabited at the time and was made a penal settlement shortly afterwards. It remained the penal station of India till 1857. In 1805 it became a separate Presidency. When in 1826 Singapore and Malaca were incorporated with it, Pinang continued to be the seat of government; in 1837 Singapore was made the capital. In 1867 the Straits Settlements were created a Crown Colony; since that year Pinang has been under the administrative control of a resident responsible to the Government of the Straits. He is assisted by officers of the Malay Civil Service. Unofficial members of the legislative council of the colony, which holds its sittings in Singapore, are appointed with the sanction of the Secretary of State for the Colonies to represent Pinang. — Pinang has an excellent harbour, which is important as a port of call; there is regular steamer-communication with the Dutch East Indies, Singapore, (British) India etc. The terminus of the Federated Malay States' railways is on the mainland opposite. Trade is adversely affected however by the proximity of Singapore, there are no port duties. — The island is now well opened up, the population has rapidly increased; it is largely Chinese and Tamil, though Malays are well represented, most of these originating from the Malay Peninsula and Sumatra; all of them are Muhammadans of the Shāfi‘ī rite. — Wellesley Province, a strip of land opposite on the mainland, forms part of the settlement of Pinang. It was acquired in 1800 from the Sultan of Kedah against a yearly sum paid for it and includes a district which was purchased in 1874 from the Sultan of Perak. The soil is well cultivated; there are large estates owned by Europeans and Chinese. Until recently a second strip of territory on the mainland and adjoining islands, known as the Dindings, formed part of the settlement; it was ceded by Perak and has now been restored to that state. — The population of the whole settlement, Dindings included, was 304,000 according to the census of 1921, that of the town 133,000; the number of Muhammadans is not known.

(K. A. KERN.)

PIR (F.), elder. In the Sufi system he is the murshid, the "spiritual director". He claims to be in the direct line of the interpreters of the esoteric teaching of the Prophet and hence has the authority to guide the aspirant (murid) on the path. But he must himself be worthy of imitation. "He should have a perfect knowledge, both theoretical and practical, of the three stages of the mystical life and be free of fleshly attributes". When a pir has proved — either by his own direct knowledge or by the spiritual power (wilāyāt) inherent in him — the fitness of a murid to associate with other Sufis, he lays his hand on the aspirant's head and invests him with the bāb. The murid need not necessarily invest his fortune with that pir who gave him instruction, who is called the fārār al-akhir. Pir also is the title given to the founders of dervish orders.

PIRĪ MEHMED PASHA, an Ottoman grand vizier, belonged to Amasia and was a descendant of the famous Djalal al-Din of Agramay and therefore traced his descent from Ali Bakr. He took up a legal career and became successively Khal of Sofia, Silifke and Galata, administrator of Mehemel li's kitchen for the poor (timarī) in Stamboul and at the beginning of the reign of Bayazid II attained the rank of a first defterdar (bāb defterdar). In the reign of Selim I he distinguished himself by his wise counsel in the Persian campaign (cf. J. v. Hammer, G. O. R., ii. 412, 437 1599); was sent in advance to Tahir to take possession of this town in the name of the sultan, and at the end of Sept. 1514 was appointed third vezir in place of Muṣṭafâ Pasha who had been dismissed (cf. J. v. Hammer, G. O. R., ii. 420). He temporarily held the office of a ḥārīma ṣafā in Stamboul and after the end of the Egyptian campaign was appointed grand vizier in place of Yūnus Pasha, who had been executed on the retreat from Egypt in 923 (1517). In this capacity he took part in the conquest of Baghdad in 1521. Soon after the occupation of Rhodes, Pirı Pasha fell from the sultan's favour as a result of the slanders of the envious Aymad Pasha who coveted his office, and was dismissed with a pension of 200,000 aspers on the 13th Sha'bān 929 (June 27, 1523). His successor was Ibrahim Pasha [q. v.], a Greek from Parga. Pirı Mehemel lived another ten years and died in 939 or 940 (1532-1533) at Silifki, where he was buried in the mosque founded by him. One of his sons, Mehemel Beg, had proceeded him in 932 as governor of Bursa. Pirı Mehemel Pasha created a number of charitable endowments, among them a mosque in Stamboul called after him (cf. Hüsi Hüseyn, Hafizat al-Dżiwan, i. 708), a medrese and a public-kitchen as well as what was known as a láb-khâne. — While his läqab was Pirı, he used Remzi as a nāmeh for his
poems, which are of moderate merit (cf. J. v. Hammer, "Geschichte der Osmanischen Dichtkunst," ii., 347 sqq., with the wrong year of death and also in p. 187 under Pirî without the identity of the two being recognized, also Lütghi, "Tudâhveri," p. 188 under Kemâl).

**Bibliography:** Mehmed Thauray, "Sügilt-i Şofâmül," iii. 43, more fully in "Othmanıâzade Mehmed İlyî Şofâmül," Istanbul 1271, p. 22 sqq., and the Ottoman chroniclers of the xvii. century. - Brunat Mehmed Tâhir, "Othmanıâzade Mehmed Tâhir," i. 111 sqq., deals with Pirî Mehmed Paşa as a literary man. According to p. 111 he wrote a small collection of poems ("Tüvâhvel") and an exposition of a part of the "Mehmed ve oflulü" entitled "Tûvâhvel". No further works are described as still in MSS. (Frank Baringer)

**PIRÎ MÜHYİ İ-L-DIN RETS**, OTTOMAN NAVIGATOR AND CARTOGRAPHER, was probably of Christian (Greek) origin and is described as nephew of the famous corsair Kemal Reis (on the latter see the Bonn dissertation by Hans-Albrecht von Bursak, "Kemal Reis," ein Beitrag zur Geschichte der türkischen Flotte, Bonn 1926, and especially J. H. Mommsen, "Zur Lebensgeschichte des Kemal Reis," in M.S.O.S., xxii., part ii., Berlin 1925, p. 29 r. and p. 424 sqq.), who was probably a renegade. His father is said to have been a certain Mardhût Mehmed, while he himself in the preface to his sailing-book calls himself the son of Hâdivet Hâcir, which is perhaps only to be taken as a name-chosen to rhyme with Pirî (cf. Sinâs h. Abd al-Mannâf or Dâdât h. Abd al-Wâdât and similar rhyming names of fathers of renegades usually formed with "âdât"). As Hâcir cannot be an "âdât" but at most a medhiyâ, the pure Turkish descend of Pirî is more than doubtful, if he was not called simply Hâcir Mehmed, i.e. bore a name for which there is evidence, for a longer period it is true, in the "Sügilt-i Şofâmül," ii. 259. The same source (p. 44) says that the corsair's full name was Pirî Mühyî "I-l-Din Ret." In any case it may be assumed that Pirî is to be taken as a "tâhir," while the real name ("âdât") was probably Mehmed - the combination Pirî Mehmed was quite customary in the xvi. century - i.e. an "âdât" to which Mühyî I-l-Din corresponded as "âdât" (cf. ib., xi. 1921, p. 20, note 3). Of the life of Pirî Reis, who made many voyages under his uncle Kemal Reis (d. 16. Shawwal 916 = Jan. 16, 1511) and later distinguished himself under Ebnal-Din Barbarossa, (q.v.; July, 1546) we only know that on these raids he had acquired an unrivalled knowledge of the lands of the Mediterranean. He afterwards held the office of Kapudan of Egypt and in this capacity sailed from Suez on voyages to the Persian Gulf and the Arabian Sea. In 945 (1547) he occupied 'Aden (cf. Die Osmanische Chronik des Rustem Pacha, ed. by Ludwig Förster [Turk. Bibl., xxii., Leipzig 1925], p. 174 sqq., with full commentary). In 952 (1551) he was on the coast of Arabia several of his 30 ships, took the port of Mekâz and carried off a number of his inhabitants as slaves. He then laid siege to Hormuz, but raised the siege and returned to Bâçara, having captured tribes to do so. It is said (according to Petroni, "All, Hâdivet Hâcir, Tûvâhvel-i Şofâmül," first edition, fol. 28 according to J. v. Hammer, G. O.K., ii. 415) that an enemy fleet was approaching and decided him to return hurriedly home with only 3 galleys but with all the treasure he had collected. He was wrecked on the island of Bahrân, but succeeded with two ships in reaching Suez, then Cairo. Köbab Paşa, the governor of Bâçara, had in the meanwhile reported to the Porte that the expedition had been a failure, which resulted in an order for the execution of Pirî Reis's being sent to Cairo. He was beheaded there, in 962 (1554-1555), it is said, but probably rather in 959 or 960 and his estate sent to Istanbul. After his death envoys are said to have arrived from Bâckos representing the plundered inhabitants to demand the return of the treasure he had carried off; they were naturally not successful. The post of Kapudan of Egypt was given to another noted corsair, Murad, the dismissed sanjakbey of Kastî (probably the same as survives in the proverb, according to H. F. v. Diez, "Deutschstädtischen von Aachen," part i., Berlin 1814, p. 55, as Murad häfizan).

Pirî Reis is generally known as the author of a sailing-book of the Aegean and Mediterranean known as Bâbîriye, in which he describes all the coasts he had voyaged along with an account of the currents, shallows, landing-places, bays, straits and harbours. Pirî Reis had already begun the work in the reign of Selim I (d. Sept. 1520) although he says in the preface that he did not begin it till 927 (end of 1520), in order to make a dedication to Selim the Magnificent be more impressive. He presented the completed atlas to the latter in 930 (1525). Paul Kahle has published a copy of this atlas with text and translation based on the known manuscripts, entitled Pirî Reis, Bâbîriye. Das türkische Segelhandbuch für das Mittelmeer von dem Jahre 1522 of which so far (middle of 1935) vol. i., text, part i. and vol. ii., part i. section 1-28, have been published, Leipzig and Berlin 1926. Separate sections have been previously published, e.g. H. F. v. Diez, op. cit.; E. Sachau, "Bibliothek der Nasciati di Michel Amari," ii., Palermo 1910, p. 1 sqq. R. Herrzog, "Ein türkisches Werk über das ägäische Meer aus dem Jahre 1520," in Mittellungen der Kaiserlichen Deutschen Archäologischen Institute, Akademie der Wissenschaften, xxvii., 1903, p. 417 sqq.; E. Obertammer, section Zypern, in: Die Insel Zypern, Munich 1903, p. 427-434. - Other sections in Carlier de Fignon, ed. E. Blchet (with pictures) and K. Förster, in M.S.O.S., part ii., xi. 1908, p. 234 sqq. Cf. thereon F. Taeschner in Z.D.M.G., lxviii. (1923), p. 42 with other references.

The so-called "Columbus map", found in October 1929 by Khalil Edhem Bey in the Sersa Library in Stamboul, according to his signature on it of the year 1513, seems also to go back to Pirî Reis; it is in Turkish in bright colours on parchment, 85 by 60 cm., and represents the western part of a map of the world. It comprises the Atlantic Ocean with America and the western strip of the Old World. The other parts of the world are lost. It has been supposed that this is the same map as Pirî, according to a statement in his Bâbîriye, presented to Sultan Selim in 1517 which would explain its preservation in the Imperial Library. On it cf. Paul Kahle, "Impronte Colombiane in una Carta Turcha del 1513," in La Cultura, year x., vol. 1, part 10, Milan 1931, d., "Una mappa di America fatta per il turch Pirî Reis, nel anno 1513," basandosi in una mappa de

(ERZ HAHNEN)

PISHWA, the title given to one of the
ministers of the Bahmanis of the
Deccan; the chief minister of Shāhidī,
the head of the Marāḥṭa confederacy.
(Persian “leader”; Pahl. pāšgbā; Arm. pāshpāy.)
For older forms see Häschenmann, Aramäische
Grammatik, l. 250.

Shāhidī, the founder of the Marāḥṭa political power in the Dakhan, was assisted by a council of ministers
known as the Asha Pradan, one of whom was
the Pīšwa or Mūghiya Pradan. The office of
Pīšwa was not hereditary and the nature of
Shāhidī’s autocratic rule can be gauged from the
fact that his ministers were not even permitted
to select their own subordinates or nāṣbā, all of
these being appointed by Shāhidī himself. Next
to Shāhidī the Pīšwa was the head of both the
civil and military administration, placing his seal
on all official letters and documents. During the
reign of Rājā Ram the power of the Pīšwa was
eclipsed by that of the Pand Pratānī. It is usual
to regard Bālādī Viswanāth (1741–20) as the
first Pīšwa because he was the real founder of
a line of rulers who gradually supplanted the
rājās of Satār as heads of the Marāḥṭa confederacy.
But there were really six pīšwās before his
time, namely, Sāmānī Nīlkanth Røcerkar,
Moro Trimbad Pīngl, Nīlkanth Moreshwar Pīngl,
Parrārām Trimbad Pratānī, Bahrī Moreshwar
Pīngl, and Bālādī Viswanāth Bātī (1714–1720), the founder of the dynasty of the pīšwās, was an able Cīpāw, and Konkanasth Brahman whom Shāhī
(1708–1749) appointed as chief minister. The
difficulties facing Shāhī, the political confusion in
Mahārāstra, and the weakness of the later
rājās of Satār were the chief factors underlying the
growth of the power of the pīšwās. The
imprisonment of the Pratānī Dādōba (Djagul-
vanīro) at the time of Shāhī’s death removed
another obstacle to their advancement and marks
the end of Dešghār Brahman political influence
in the Dakhan. Bālādī Viswanāth found the country
torn by civil war; he left it peaceful and prosperous.
By complicating the revenue accounts he increased

Brahman control over the state finances. During
his period of office the Mughal emperor, Muhammad
Shāhī, recognized the right of Shāhī to levy tax, a
contribution of one-fourth of the land revenue
throughout the Dakhan, and permitted him to
supplement this tax by an additional tenth of
the land revenue, called narsuzukhi. His son,
Rājā Rāo I (1720–1740), adopted a policy of
territorial aggrandizement. The year before his
death, a treaty, principally of a commercial nature,
was concluded with the Governor of Bombay
(Altcshion, vi., 1758). The third Pīšwa, Bālādī
Rājā Rāo (1740–1761), entrusted the government
to his cousin, Sadāghīv Rāo, the Bākū, and the
command of his armies to his brother, Raghunāth
Rāo, better known as Raghoba. His period of
office was marked by the rapid extension of
Marāḥṭa power, his armies ravaging the country
from the Carnatic to the Panjāb until their crushing
defeat at Pānpat [q.v.] in 1761. As a result of
an agreement in 1755 an Anglo-Marāḥṭa expedition
crushed the power of Anjara, a piratic chief whose
depredations were a constant menace to the shipping of the Konkan coast. At the end of this expedition a
peace treaty (Altcshion, vi., 1759) was made with the
Pīšwa which provided for the exclusion of
Dutch traders from Marāḥṭa territory. Dissensions
broke out after the death of the pīšwā which
seriously impaired the strength of the Marāḥṭas.
Power now passed to the Marāḥṭa generals, Siddhān
of Gwalior, Bhūsāl of Nāgāpur, Hālīrā of Indore,
and the Gaekwar of Baroda.

During the rule of Mādho Rāo (1764–1772)
Siddhān, in 1771, once more re-established Marāḥṭa
influence in northern India, and Shāhī ‘Alam, the
Mughal emperor, who had deserted the English,
became a puppet under Marāḥṭa control. Mādho
Rāo was succeeded by his brother, Nārāyān Rāo
(1772–1773), who was murdered at the instigation of
his uncle Raghoba. For a time the Marāḥṭa confederacy was divided into two hostile camps, the
supporters of Raghoba, who was a pretender
to the pīšwāship, and the Court Party under
Nīlkanth Phadnavis, who supported the claims
of Mādho Rāo Nārāyān (1774–1775), a posthumous
son of Nārāyān Rāo. The action of the Bombay
Government in supporting the claims of Raghoba
led to war between the English Company and the
Marāḥṭa which ended, thanks to the exertions of
Warren Hastings, with the Treaty of Sālihān
in 1782. This treaty which virtually recognized
the independence of Siddhān secured peace between
the English and the Marāḥṭas for twenty years.
Marāḥṭa history now becomes a struggle between
Nīlkanth Phadnavis (Bālādī Dādanīl), who
attempted to bolster up the power of the pīšwā,
and Māhāṇḍī Siddhān, who strove to control the
Pīšwa in order to use him as a cloak to cover
his aggressions.

The seventh and last pīšwā was Rājā Rāo II
(1796–1818). During the governor-generalship
of the Marquis Wellesley after the death of Nānā
Phadnavis, in 1800, there followed a struggle for
supremacy at Pāna between Hālīrā and Dāwālī
Rāo Siddhān, who had succeeded Māhāṇḍī Siddhān
in 1794. During this struggle the Pīšwa fled
to Bāsīn where they were thrown upon the protection
of the English. In 1802, by the Treaty of Bāsīn
(Altcshion, vi., 1803), Wellesley constituted
himself protector of the Pīšwa who agreed to
accept a “subsidiary” force and to permit the
English to mediate in his disputes with the other Indian princes. This naturally did not prove acceptable to the other members of the Marāṭhā confederacy. Unfortunately Bājjī Kāo came under the influence of an unprincipled favourite, Trimbakdāji, who was privy to the murder of the Gaekwār's emissary who had been invited to Pūna under a guarantee from the English of his personal safety. When Elphinstone, the Resident, reported that the Pishwā was secretly conspiring to form a Marāṭhā coalition against the English, the Pishwā was forced to come to terms and sign the Treaty of Pūna (1817), which completed the work of bassein. But Bājjī Kāo’s promises were written in water for, when Lord Hastings proceeded to crush the Marāṭhās, the Pishwā rose in revolt and plundered the British Residency. Eventually his forces were defeated and the pishāwīp was abolished. Bājjī Kāo, however, was granted a pension and allowed to reside at Bīthūr where he died in 1851. His adopted son, Nānā Sāhīb, disappeared in 1858.

PIST (V.), a kind of food composed of the liver of galleles or almonds etc. A daily portion of the size of a pistachio (pistā) is taken by the Persians and others who undertake long fasts, e.g. the forty-day fast and is sufficient to maintain life.

PLATO. [See ÅKH PIN.]

PLEVEN (Pleven, Plevna, Turkish Pleven پیلوان), an important town in Northern Bulgaria, 350 feet above sea-level in a depression formed by the little river Teubenca (c 20), which flows not far from the town on the right into the Vid, the right bank tributary of the Danube. Surrounded by hills and at the intersection of the high roads to Vidin, Nikopol, Sofia and the passes of the Balkans, Pleven has long been a place of strategic importance; it is now also covered by one of the main railway lines (Sofia-Plevna-Summ-Varna). This busy town, the capital of a circle, where the chief business is in cattle and wine, and which has museums, which recall the Russo-Turkish War, is rising rapidly and in 1926 had 29,065 inhabitants.

Although in the vicinity of Plevna there are the remains of Roman settlements, the town really arose only under the Turks. We have however very little definite information about this period of the town’s history. Ewliyā Celebi’s statement that Plevna was built by the Wallachian ban Lădă (ł, Ł), has of course to be taken with caution; on the other hand, his assertion that “in the year 720 (1320) in the time of the Ghārī Khdāwāndīgūr it was taken by Mīkhāl Beg,” is not free from objections on chronological grounds. According to the same writer, Plevna after the conquest was an armed town and Mīkhāl Beg and at a later date was still within the sphere of influence of the noble family of the Mīkhāl-oghu [q.v.], who had several buildings erected there. According to Ewliyā Celebi and other Turkish sources (cf. vol. iii, p. 492a and Gavanī Shāhīng namūnā drūtā, xxii, 73 and 81), Plevna is the last resting-place of Mēmēd Beg, a son of Köse Mīkhāl, who died in 825 (1422), as well as of the celebrated ‘Alī Beg Mīkhāl-oghu, who is said to have died after 1507. According to Ewliyā Celebi, ‘Alī Beg was buried in the mosque founded by him. That Plevna was the capital of a district in the sandak of Nikopol we know not only from Ewliyā Celebi but also from Bājī Kā’s Khaifā (Rūmeil and Būna, transl. b. V. Hammer, Speno, xvii. 23). In the xvith century, when Ewliyā Celebi visited the town, it had 2,000 houses, a walled fortress, a college founded by the above-mentioned ‘Alī Beg, 7 schools, 6 tekke’s and 6 inns etc. — In the last days of Turkish rule, Plevna had, according to Sh. Sūm (Xwān al-šām, 1533-1533), 17,000 inhabitants and 18 mosques but, as many Muslims migrated after the Russo-Turkish war, the population sank to 14,000 and most of the mosques were described in 1889 as in ruins.

But it was not till the Russo-Turkish war of 1877-1878 that Plevna became world famous. When the Russians after crossing the Danube on July 19, 1877 appeared before Plevna, they met with the unexpected resistance of ‘Othmān Pasha, who had come up from Vidin. They attacked unsuccessfully on July 20 and 30 and suffered heavily. As Plevna was not fortified, ‘Othmān Pasha now had strong and extensive earthworks thrown up around it. On Sept. 11 and 12 the Russians with the help of the Romanians, whom they had summoned to their assistance, made a third attempt to take Plevna by storm and were again repulsed with great losses. After all these and further failures (on Sept. 18 and Oct. 19) the allies decided upon and began a regular siege of the town which was conducted by Totleben, the defender of Sebastopol, in person.

In spite of all ‘Othmān Pasha was not yet shut in on his west side and received munitions and supplies from there until Oct. 10. In the middle of November he was completely surrounded and on the morning of Dec. 10 he undertook a last desperate sortie in an attempt to break through the western lines of the besieging army of 120,000 men (including the Czar). This bold effort was accompanied by success for a few hours but in the meanwhile the heroic ‘Othmān Pasha (the “Lion of Plevna”) was himself wounded, and towards midday on the same day was finally forced to surrender with some 40,000 men. The Russians
had already forced their way into Plevna, the five months' siege of which had cost them and the
Russians over 40,000 men.

The fall of Plevna opened the way for the Russian soldiers to Adrianople and on to San Stefano,
where they dictated the peace which was then concluded.

recently Jordan Trifonov published in Bulgarian
a history of the town down to the war of liberation
(istoria na grad Plevne do avtobiografata soi, Sofia
1933, illustrated) (cf. Bibliographie Geographique
Internationale, 1933, p. 319).

(FRIHM BAJKANTAKIC)

PLEVNA. [See PLEVEN.]

POLEI, transcribed by Arab writers as پلی, is the old name of a stronghold in the south of
Spain the site of which is the modern Aguilas de la Frontera, a little town with about
13,000 inhabitants, in the province of Cordova, on the shores of Cabra and of Lucena. The
identification of Polei with Aguilas was made by Dyos on the strength of information supplied
by a charter of 1328. The town which played a considerable part in the rising of the famous "hafšan
[k.v.] against the Umayyads emirs of Cordova is again mentioned in the xth century by the
geographer al-Idrisi. The ruins of a fortress
which dates from the Muslim period can still be seen there.

(E. LÉVI-PROVENCAL)

POMAK, the name given to a Bulgarian
speaking Muslim in Bulgaria and Thrace.
This name which is usually given them by their
Christian fellow-countrymen, used also to be given
occasionally by Bulgarians to Muslims speaking
Serbian in western Macedonia. There however
the Serbian Muslims are usually called torbeši
(sing. torbec) by their Christian fellow-citizens, some
times also toruşlu, more rarely burci etc. How far
these Serbian Muslims are still called Pomaks by
some people depends mainly on the influence
of the Bulgarian school and literature and would
only be correctly applied when used of Muslims
who had actually migrated from Bulgaria, e.g. in
1828–1878 (cf. J. H. Vasiljević, Juna: Stara
Srbija, i. 187–188, 207 and 326). In the Khodopes
the Bulgarian Muslims are also called askriani
(ch = kh) or agorjani (Ishirkoff, ii. 15). In some
parts of Southern Serbia and Bulgaria the name
Grač (pl. Hlanč) is occasionally heard and it used
sometimes to be said (most recently by A. Urošević,
in Glasnik Skupštine munske drustva, vol. vi., 1929,
p. 319–320) that this name was only given to
Serbs converted to Islam; the truth seems to be
however that this name is limited to Turks in
the two countries (cf. H. Vasiljević, Musuljani,
xxviii., 1929, p. 616–614 and in Rečnik hrvatsko-
Srpskih i muguruških, djele, p. 449). No more correct
is the statement that pomeni is the name given
to Serbian Muslims in Southern Serbia; for this seems
to be a name applied to another one only to Albanians
who are closely related to one another (brothers and cousins, according to H. Vasiljević,
Musuljani, p. 34).

The origin and the etymology of these names in part more or less obscure and arbitrary.
The usual explanation that the name Pomak comes from the verb pomak "to help" and means helper
(pomakuloff) i.e. auxiliary troops of the Turks, was first given by F. Kanitz (Donau-
Bulgarien und der Balkan, vol. i., Leipzig 1882, p. 182) but was soon afterwards (1894) declared by Jireček
(see Bibli.) to be inadequate. Another equally improbable etymology is that which explains
Pomak by the Bulgarian word makedon "to torment,
force", and justifies this explanation by saying
that the conversion of the Bulgarians to Islam on a
considerable scale was carried out by force and
constraint (Ishirkoff, ii. 15). Quite recently Iv. Lekov
(see Bibli.) has explained the name Pomak from
posturnjak (lit. "one made a Turk");. Whether the
word torbeš in Turkish means "clab, cudgel", in
Ugur "Muslim" and in South Russia "pedlar"
(cf. Barthold, Oe. Asie, p. 82–83), is in any way
connected with Pomak, or has been influenced
by the Bulgarian posturnjak or confused with it
has still to be investigated.

The history of the conversion of the "Pomaks"
or "Torbeši" is very little known in detail. In
any case the adoption of Islam did not take place
everywhere at once but was gradual and at different
periods. A beginning was made immediately after
the battle of Marico (1371) and after the fall of
Trnovo (1393): many Serbs and Bulgars at this
time, especially as Jireček thinks, the nobles
and the Bogomils among these, adopted Islam. After
these first conversions under Bajram consider-
able numbers of converts were made according to
native tradition in the reign of Selim I (1512–
1520); for this purpose he is said to have sent
his "favourite Sinan Pasha" into the territory of
the Šar-mountain. The highlands of Čepino (in
the Rhodopes) were converted according to local
histories in the beginning of the xvth century,
according to Jireček (Fürstenkönig, p. 104) however,
ot till the middle, in the reign of Mehemed IV
(1623–1687); the grand vizier Mehemed Kopruli
is said to have taken a leading part in the work.

The conversion to Islam of the Dņube territory
(Laveč etc.) is put in this period. Towards the
end of this century (xvith) further conversions
took place among the Serbs in the Debar region.
In some districts Islam only gained a footing on
a large scale in the course of the xviith century
and sometimes not till the beginning of the xixth
(e.g. in Gora, south of Prizren).

Until recently one was very often inclined to
believe that these conversions to Islam were made
under compulsion, even by force of arms, but now
the view is beginning to prevail that the authorities

THE ENCYCLOPEDIA OF ISLAM, III.

68
never took any direct steps to proselytize their Christian subjects; conversion was on the contrary voluntary and for quite different reasons except in a few exceptional cases (cf. e.g. H. Vasiliev, Miusimani, esp. p. 53–61).

Towards the end of the sixteenth century when the process of conversion had ceased for decades everywhere, the great majority of the Slav Muslims (Bulgars and Serbs) were to be found in the Rhodopes and the mountains of eastern Macedonia and in groups of considerable size up and down Macedonia as far as the Albanian frontier, a wide area which stretched in the north from Plovdiv (Philippopolis) to Salonika in the south and in the east from the central course of the Arda over the Vardar and even beyond the Cni Drin, i.e. across the districts of Ohrid, Debar, Gostivar and Fierizen to the west. At that time only a small part of this territory which was interspersed with Christian areas belonged to the principality of Bulgaria; the greatest part was still Turkish and only after the Balkan War passed to Serbia or after the World War to Yugoslavia. — In addition to the main body of Muslim Bulgars in the Rhodopes mountains, there were at the same time also sporadic groups north of the Balkan range in the Danube territory, in the circles of Lovec, Pleven (Plevna) and Orshovo (Rahovo).

Since then however the frontiers of the "Pomaks" have receded considerably. During the siege of Plevna almost all the Bulgarian Muslims fled from the Danube districts to Macedonia; although they returned in 1880 they soon afterwards migrated into Turkey. After the union of eastern Rumania and Bulgaria in 1885 the Rhodopes "Pomaks" also began to emigrate. — The frontiers of the "Torbeli" likewise were not unaffected. The Balkan War and the World War brought about certain changes which resulted in the migration of some bodies of Serbian Muslims out of Southern Serbia.

As a result of various wars and the territorial changes that followed them, the statements regarding the number of Muslim Slavs in Bulgaria, Macedonia (or Southern Serbia) and Thrace as well as about their total number differ considerably and are often unreliable. For example Jireček (1886) estimated the total at about 500,000 including 100,000 in Lovec and Plevna (see Bibl.) At the beginning of the twentieth century Gavrilović (see Bibl.) estimated the total at only 400,000 and Inchirkoft at about the same (1917).

As regards the distribution of these Muslim Slavs according to countries the following statistics may be quoted. In what was to be the principality of Bulgaria Jireček estimated (1894) their number at most 28,000 souls and before the Balkan War there were within the old frontiers of Bulgaria (according to official statistics of 1910) 31,143 (0.49% of the population). In the lands acquired in the Balkan War in Southern Bulgaria there were however many more Pomaks, mainly in the regions of the rivers Arda, Mesta and Struma so that the official census of 1920 makes their number 58,399 (1.82% of the whole population). A somewhat higher figure is given by the Annuaire du Monde Musulman for 1929 (p. 395), namely 16,000 Pomaks in Bulgaria; proper statistics of 75,337 in Thrace, i.e. 91,337 in all. Finally the latest published statistics (1926 census) give 102,351 Bulgarian speaking Muslims in Bulgaria, i.e. 1.87% of the population, while the number of Muslims in Bulgaria without distinguishing their language was then 789,926 or 14.4% of the population. — Of these 102,351 Bulgarian speaking Muslims only 57,799 lived in the towns and the remaining 64,552 in the villages; the proportion of men to women was 1,000 in 1,005. Literate Pomaks in the whole of Bulgaria in 1926 numbered only 6,559 in 1926 (of whom 5,534 were men).

The number of Pomaks (in reality of Muslim Slavs) in Macedonia was according to S. Vuković (1894); see Bibl. 144,051 men (this figure is therefore doubled in Données statistiques sur l'ethnographie de la Macédoine, pub. by the Comité national de l'Union des organisations des émigrés macédoniens en Bulgarie, Sofia 1928, and ammends to 288,092 [with an error of minus ten souls]), according to G. Weigand (Die nationale Bestimmung der Balkanvölker, Leipzig 1898) 100,000 men, according to V. Kânov (1900; see Bibl.) 145,800 and according to V. Sis (Macedonien, Zürich 1918) 150,030 souls.

As regards the number of Serbian speaking Muslims in Southern Serbia, they were estimated by H. Vasiliev (Muslimi, ... p. 11 sqq.) whose calculations are however to some extent based on the situation before the Balkan War, at 100,000 souls; now (1935) the figure is put at 60,000 and the number of Serbo-Croat speaking Muslims in the whole of Yugoslavia at about 900,000 (exact figures cannot be given because the statistics according to religions have not been published).

For Thrace the figure of 75,337 Muslim Bulgars has already been given from the Annuaire; in Western Thrace there were according to the interzonal census (of March 1920) 11,739 (cf. La question de la Thracie, ed. by the Comité suprême des réfugiés de Thrace, Sofia 1927).

On these statistics the following observations may be made. The Bulgars (e.g. Kânov) usually include as "Pomaks" all the Macedonian Slavs of Muslim faith, i.e. including Serbs from Southern Serbia. On the other hand on account of their religion these Muslim Slavs are sometimes carelessly counted with the Turks. Moreover some statistics are not completely free from chauvinistic and political bias. The European estimates finally are based on approximations or are quite arbitrary.

In spite of the fact that the Pomaks and Torbes are occasionally included among the Turks and in spite of the fact that they sometimes call themselves Turks, they are nevertheless the purest stratum of the old Bulgarian or Serbian population as the case may be who have preserved their Slav type and Slav language (especially archaic words) very well, sometimes even better — as a result of their being cut off from the Christians and their isolation in outlying districts — than their Christian kinsmen, who have been constantly exposed to admixture from other ethnic elements. They have a certain feeling of aversion for the Turks whose language they do not understand. It is only in the towns that we find that in course of time some of these men have adopted the Turkish language. What bound them to the Ottomans was not language but principally a common religion with its prescriptions and customs (e.g. the veil of women) which along with Turkish rule naturally imposed upon them many Arabic and Turkish
words. In spite of this there survived among them many pre-Islamic customs and reminiscences of Christianity (observation of certain Christian festivals etc.).

That the Bulgarian Muslims in particular occasionally (esp. in 1876–1878) fought with the Turks against the Christian Bulgars may be ascribed to the fact that as a result of their low cultural level they made no clear distinction between nation and religion and that their Christian fellow-countrymen treated them as Turks and not as kinmen. These mistakes were repeated in the Balkan War when the victorious Bulgarian troops and the orthodox priests were led to so far as to convert the Pomaks in the Rhodopes and other districts to Christianity mainly by pressure and force of arms. But on the conclusion of peace they returned to Islam again. This is frankly admitted by the Bulgarian geographer Birkov (Ischirkoff) and the Bulgarian writer Iv. Karayov (in his Bulgarian periodical National Education, Kustendil 1931, according to Cemalpao [see Bibliography]).

Fifty or sixty years ago the songs and ballads of the "Pomaks" were the subject of much dispute. The Roumanian ex-cleric, Stefan Verkovic (1827–1903), an antique dealer in Serec, published under the title of Veda Slavena (i.e. the "Veda of the Slaves") (Bulg 1874, vol. i.) a collection of songs which were alleged to have been collected mainly among Pomaks and which celebrated "pre-christian and pre-historic" subjects (the immigration into the country, discovery of corn, of wine, of writing and legends of gods with Indian names, of Orpheus etc.). A. Chodzko, A. Doron (Chansons populaires bulgares indérites, Paris 1875; cf. also Recueil de littérature comparer, xiv., 1934, p. 155 xvi.) and L. Geindorfer (Poétique tradition Théocratique et laik, Prague 1878) also strongly supported belief in this "Veda": it was even assumed that the Pomaks were descended from the ancient Thracians, who had been influenced first by Slav culture and then by Islam.

But of ballads on such subjects neither the Mission nor the Christian Bulgars knew anything and Jireček, who investigated the question on the spot, repeatedly described this "Slav Veda" as the fabrication of some Bulgarian teachers (Führerthum, p. 107). We now know that Verkovic’s chief collaborator was the Macedonian writer Iv. Goljolov (cf. Pentscho Slawejkoff, Bulgarsche Volkhilder, Leipzig 1919, p. 15).

In view of the fact that the Muslims in question consist mainly of conservative dwellers in the mountains and villages — who are very industrious, honourable, and peaceful — they are for the most part illiterate and there could be no possibility of any literary activity amongst them. The only people among them who can write are the khodjas, who frequently use the Turkish language and Arabic alphabet when writing. They also frequently use the latter alphabet when writing their mother tongue. Of earlier generations of Bulgarian Muslims many distinguished themselves in the Turkish army or otherwise in the Turkish service. The modern generation who have been educated in the state schools have more national consciousness and are more progressive but are too few in number to make themselves felt in politics or otherwise.

PONTIANAK, the name of a part of the Dutch territory "Wester-Afdeling" of Borneo, also of the Sultanate in the delta of the river Kapuas and of its capital. As a Dutch province Pontianak includes the districts of Pontianak, Kubu, Landak, Sanggau, Sekadau, Tajan and Millan. The administration is in the hands of an assistant-resident whose headquarters are in Pontianak where the Resident of the "Wester-Afdeling" also lives. The Dutch settlement is on the left bank of the Kapuas, where also is the Chinese commercial quarter. The Malay town lies opposite on the right bank. The sultanate of Pontianak with its capital of the same name is independent under the suzerainty of the Netherlands and is 4,545 sq. km. in area. In 1930 the population consisted of 100,000 Malays and Dayaks, 562 Europeans, 26,425 Chinese and 2,378 other Orientals. The term Malays includes all native Malaysians among them many descendants of Arabs, Javanese, Buginese, and Dayaks converted to Islam. The Dayaks
in the interior are still heathen. Roman Catholic missions are at work among the latter and the Chinese. This very mixed population is explained by the origin and development of Pontianak.

The town was founded in 1722 a.d. by the Sharif 'Abd al-Rahmân, a son of the Sharif Husein b. Ahmad al-Kadiri, an Arab who settled in Matan in 1735 and in 1771 died in Mampawa as viceroy revered for his piety. In 1742 'Abd al-Rahmân was born, the son of a Dayak concubine, and very early distinguished himself by his spirit of enterprise. He attempted to gain the ruling power, successively in Mampawa, Palembang and Banjarmasin, from which he had to retire with his band of pirates, although a certain Sultan had been his patron, after he had taken several European and native ships. By this time he had married a princess of Mampawa and Banjarmasin and possessed great wealth. On his return to Mampawa his father had just died. As he met with no successor here, he decided to found a town of his own with a number of other fortune-seekers. An uninhabited area at the mouth of the junction of the Landak with the Kapuas, notorious as a dangerous haunt of evil spirits seemed to him suitable. After the spirits had been driven away by huts of cannon fire he was the first to spring ashore, had the forest cut down and built rude dwellings there for himself and his followers.

The favourable position of the site and the protection which trade enjoyed there soon attracted Buginese, Mabys and Chinese merchants to it so that Pontianak developed rapidly and Sharif 'Abd al-Rahmân was able by his foresight and energy to hold his own against the neighbouring kingdoms of Matan, Sukadana, Mampawa and Sanggau.

He appointed chiefs over each of the different groups of people and regulated trade by reasonable tariffs. He was able to impress representatives of the East Indian Co. in Batavia to such an extent that they gave him the kingdoms of Pontianak and Sanggau as fiefs after the company had bought off the claims of Banten to Western Borneo. As early as 1772 the Buginese prince Kadja Ilyâdî had given him the title of sultan. After his death in 1808 his son sharif Kâsim succeeded him. He was the first to change the Arab ceremonial and court for more modern ways.

According to the treaty concluded with the Dutch Indies government in 1855, the sultan receives a fixed income from them while they administer justice and police of the country. The relationship to the Dutch Indies government has now been defined in a long agreement of 1912, which also settles the administration of justice and the taxes. From the local treasury, then constituted, the sultan receives 6,300 gulden a month; he also receives 50% of the excise on agriculture and mines.

In keeping with the nature of its origin Pontianak is predominantly Muslim in character and a relatively large number take part in the pilgrimage to Mecca. For these pilgrims who are known as Džagaj, the sultan when he performed the pilgrimage in the 80's founded several mehfil houses in the holy city.

The main support of the whole population is agriculture and along with it trade in the products of the jungle. The exports are copra, pepper, gambir, sago, rubber and roten, especially to Singapore and Java. Rice, clothing and other articles required by Europeans and the more prosperous Chinese and Arabs are imported. The import and export trade is mainly in the hands of the Chinese. They live together in the Chinese quarter in the European half of Pontianak on the left bank where also the other foreign Orientals have settled.

This is therefore the centre of trade and commerce in the valley of the Kapuas.

The Chinese traders maintain with their own steamers connections with the Chinese merchants farther up the river and also over seas with Singapore, both in competition with the Royal Pakefahrer Co.

In the swampy lands of Pontianak, intercourse with the outer world is almost exclusively by water. Only in recent years have motor-roads been laid over the higher ground from Pontianak to Mampawa and Sambas, to Sangei Kakap and from Mandor to Landak.

It may be particularly mentioned that Pontianak is a healthy place for the town is very often inundated and it is far from the sea that there is no malaria.

POONA. [See FUSU]

PORT SA'D, a Mediterranean seaport of Egypt at the entrance of the Suez Canal on its western bank, in 31° 18' 50" N., 33° 18' 42" E., 145 miles from Cairo by rail via Zagazig and Ismailiya, 36 and 125 miles from Damietta and Alexandria respectively along the coast. It was founded in 1859, as soon as the Suez Canal was decided, during the reign of Sa'id Pasha [i.e.], Viceroy of Egypt, and was named after him. Except for the strip of sand which, varying in width between 200 and 300 yards, separates Lake Manzala from the Mediterranean, the site of the present town was under the water. This site was selected by a party of engineers under Laroche and de Lesseps, not on account of being the nearest point across the isthmus to Suez, but because the depth of the water there corresponded most favourably to the requirements of the projected canal. As soon as work was started it was found that Canalet, five wooden houses were constructed above the water, supported on massive piles and equipped with a bakery and a water-distiller for the use of the pioneers. A year later, dredgers began to deepen the waters of the newly established harbour, and the mud thus raised was immediately utilized for more buildings which soon numbered 150 houses, 150 cottages, one hospital, one Catholic and one Orthodox Church, and one Mosque, besides the workshops, covering 30,000 square metres in all. This, however, did not suffice for the rapid growth of the population as the work on the Canal progressed towards Ismailiya. To meet this emergency and in the absence of stone quarters within reasonable reach of Port Sa'd, the manufacture of artificial stones capable of resisting the action of sea-water was begun by M essrs. Dussaud in 1865. Details of this process are given in 'Alt Paşa Mahbûrû's Ehtijat (x. 38—40). These stones weighed about 22 tons each and were used both for the construction of the two huge breakwaters of the outer harbour and for the construction of further building ground. In the same year, mail boats sailed up the Canal to Ismailiya while others brought imports to Port Sa'd. In 1868 the breakwaters were finished, and in 1869, the Canal was completed. As a result,
the town was thronged by consuls and representatives of many nations, and the population reached 10,000.

Like most Eastern foundations of this period, Port Sa'ïd was from the beginning markedly divided into Egyptian and European quarters. The first has grown up in the west and south-west around the mosque, officially inaugurated on Friday 14th Shaban 1300 (1883); and the second is situated near the Canal entrance and the beach towards the north and north-east. A regular water-supply now comes from the Nile by the Ismi'îyya Canal and the pipes leading to a large reservoir (château d'eau) capable of holding several days' supply. The great rapidity of the growth of Port Sa'ïd may be illustrated by the increase of its population, numbering 49,884 in 1907.

The town quickly rose to eminence as an emporium of Egyptian trade — second only to Alexandria in that country, and it also became one of the most important stations for sea-borne traffic between the East and the West. Its outer harbour, covering an area of 570 acres, its two moles or breakwaters built in such a way as to protect the Canal from the continuous outrush of sea-water and sand-drifts, and its docks numbering originally three on the western bank, all had to be extended. A large floating dock (250 ft. long, 85 ft. wide and 18 ft. deep, with a lifting capacity of 3,500 tons) was constructed; and, further, in the years 1903-1909, new docks were established on the eastern bank. To accommodate the workmen on these docks, the new town of Port Fu'nad, named after the present King of Egypt, has sprung up on the east side.

To safeguard the ships approaching the Canal by night, the Khedive Ismâ'il ordered four light-houses to be erected at the expense of the Egyptian Government at Rosetta, Burullûs, Burdji al-'Isha near Damietta, and Port Sa'ïd. The last is 174 ft. high and its beam is distinct from those of the other three and is visible at a distance of 20 miles. It lies at the base of the western mole which, at its sea-bound extremity, carries a colossal statue of Ferdinand de Lesseps by E. Fernier, unveiled in 1899.

Among the notable buildings of Port Sa'ïd are the offices of the Suez Canal Company. The town has a very cosmopolitan population and is noted for no special industry. Small dealers live on the sale of Oriental wares and curious to tourists on their passage to the East or to the West.

**POTIFAR.** [See KİRÎZ.]

**POZAREVAC** (pronounced 'Pâçarévâch', in the French orthography Pojarévarâ; Passarowitz is a corruption like the Turkish Pasarâcâ), a rising commercial town in Yugoslavia (in the Danube banate), headquarters of the district of the same name in the fertile plain between Morava and Mlava, only 10 miles from the Danube port of Dubrovica with 13,731 inhabitants (1930).

The town, the name of which is popularly connected with the Serbo-Croat word pohar ("fire") (M. B. Mîlîçevîch, Knjazina Srbija, Belgrad 1876, p. 172 and 1658), is first mentioned towards the end of the XVII century. It must however have been previously in existence and have become Turkish like the surrounding country in 1459. According to the Turkish treasury registers of Hungary of 1565 (A. Velic, Mûgâvarvâni vebh kincstâri defterleri, ii., Budapest 1890, p. 734), Pozarevac belonged to the Turkish sanjak of Semendire (Semendria, Smederevo), and in the middle of the XVIII century Hâddîî Khâlîfa describes it as the seat of a judge (básîlî). (cf. Spomenik, xviii., Belgrad 1894, col. 26). Towards the end of the century many Serbs migrated from Pozarevac and at the beginning of the XIX century it is sometimes mentioned as a village.

Pozarevac was however destined soon to become famous through the peace which ended the Austrian-Turkish war of 1716-1718. At the end of 1714 Turkey had already, declared war on Venice on the pretext that the peace of Carlowitz was not being observed and in 1715 occupied Morea and some of the Ionian Islands, Austria, which at first intervened to negotiate as an ally of Venice, on 1716 entered the war herself and her arms were led by Prince Eugene von Savoye through great victories, at Peterswarazie, Temesvár and Belgrad, so that England intervened to secure peace. After long preparations (cf. von Hammer, G. O. R. 2, iv. 159-164) the congress of Pozarevac was convoked. The negotiations at which plenipotentiaries of Turkey, Austria, Venice with England and Holland as mediators took part began on June 5, 1718 and the Treaty was signed on the 21st July.

Peace was concluded on a basis of the country actually held by the opponents at the time (nisi possestis); Austria retained the eastern part of Stiria, the banate with Temesvár, the whole of N. E. Serbia, with Belgrad, Pozarevac etc. and Little Wallachia; Venice also retained a few places she had taken on the Dalmatian and Albanian coasts, received certain commercial preferences and the island of Corfu (Turkish Korfu) and had to restore to Turkey the whole of the peninsula of the Morea and the south-eastern districts of the Herzegovina. By a commercial agreement which was also concluded in Pozarevac on July 27 Austria secured certain trading and other privileges in the Ottoman Empire.

Following the traditional formalities observed after the conclusion of a treaty of peace the first Turkish plenipotentiary Ibrahim Pasha went to Vienna with his retinue and Count Wirmont, the Austrian representative in the negotiations, to Constantinoile. A member of the Turkish embassy wrote in 1726 an interesting account which has been published by Fr. van Kralstiel in text and translation (Bericht über den Zug des Gross-Botschafters Ibrahim Pascha nach Wien im Jahre 1719, in S.B.A. Wien, vol. 158 [1908]), in T.O. E.M., vii. [1832 = 1916], 221-227, the Turkish text of this edition was reprinted by A. Reffig.

During the Austrian occupation (1718-1739) Pozarevac was the most important place in this territory. In the Serbion war of independence against Turkey it was besieged for a long period, and had finally to surrender to the Serbs (1804).

In 1815, the town again fell into Turkish hands but became Serbian again in 1815.
In the years of peace that followed (1815—1915) Požarevac developed. Prince Miloš in 1825 made it his second residence and had two konaks (palaces) built there. Shortly afterwards a Prussian officer visited the town and left interesting notes on the conditions there (Otto v. Pirch, Reise in Serbien im Spätherbst 1839, Berlin 1839, part i., p. 119—171). In the second half of the 18th century the population increased steadily but otherwise the town offered "little of interest" (F. Kanits, Serbien, Leipzig 1868, p. 13).

At the beginning of the 19th century Požarevac was one of the most important towns in Serbia. In the Great War it was occupied by the Germans in 1915 and by the Bulgarians (from Oct. 1916) but in the autumn of 1918 it was again occupied by the Serbs. Since then it has belonged to Yugoslavia.

**PRANG SABL, the name of the džihād [q.v.] in the East Indian archipelago; **prang (Indon.) = war.

The course of history has made it impossible for Muslims to fulfill their duties with respect to the džihād. The representatives of the law however still teach and the masses readily believe that arms should only be allowed to rest against the kōrfror so long as any sanctions must be despaired of. In a Mahammadan country under non-Muslim rule like the Netherlands Indies the teachers however prefer to be silent. At most they say that under the prevailing conditions there is no legal inducement to conduct the džihād in view of the superior forces and the comparative freedom enjoyed by believers. Or on the other hand, they expound particularly those texts which remove the more serious feuds between Muslim and kōrfror to the next world. — When political events, catastrophes, misfortunes of any kind result in disturbances, it is not at all uncommon for the Muslim population of the East Indian Archipelago to look at these things from a religious point of view. It may happen on such an occasion that the feeling of being bound to fight the unbeliever is thus awakened. If the leaders utter the war-cry "prang sabl", it finds a ready answer. It is true that according to the law, the signal for the džihād should be given by the imām. There is now no imām; but even in the time when the sultān of Turkey was still recognized as imām any misgivings were easily overcome if the imām remained inactive. Outside the boundaries of the territory in which the holy war is proclaimed, the silent sympathy of the believers is with the fighters. Any forcible conversion which takes place anywhere in the Archipelago is generally praised by Muslim chiefs and represented as a fulfillment of the more solid obligations of the džihād.

This practical teaching of the prang sabl was of particular importance in Atjeh in the last quarter of the 19th century. Circumstances were very much in its favor. The Atjehese were a self-satisfied people, convinced of their own superiority and also of a warlike disposition. Non-Muslims were everywhere hated or at least despised. At the same time those individuals who were in any way connected with divine worship were held in great honour. These qualities were however not in themselves sufficient to conduct a prang sabl with success against a disciplined attacking power. A military leader was necessary. There was indeed a sultān in Atjeh but he was a negligible factor as regards the situation in the country. The chiefs, the real rulers of the land, preferred to confine themselves to their own territory; they were not fitted for co-operation. Bands of armed men ravaged the country, doing the kōrfror as much damage as possible but they could raise no claim for general co-operation and assistance as they were not waging war in the way Allah had willed. The law lays down the sources from which the costs of the džihād can be met; pillage and plundering, as was the practice of these bands, could never be blessed by Allah. In addition the organisation of these bands was such that they never held together long. In these circumstances it was the 'ulāmā (also used as a singular) who took in hand the organisation of the war; among these the most prominent were the 'ulāmā of Tīro, from olden times a centre of study of sacred lore. They reproached the chiefs with their slothfulness and the people with preferring worldly advantages to heavenly rewards. Going up and down the country they preached the doctrine of the džihād and there was no one who could openly oppose them; indeed they represented the divine law, in order to be able to wage war a war-cloth was needed. The 'ulāmā claimed the share of the zadār set aside for Allah's purposes. The 'ulāmā of Tīro in particular needed it to train a strong force of duly converted recruits. The 'ulāmā were for a long time the soul of the war. It is however clear that the authority which they had gained over the secular rulers could only last so long as they were able to inspire the people to continue fighting. When the war was over, they returned to their old still very influential position as representatives of the holy law. — Variouws writings which together form a regular war literature, proved an effective means of inspiring their warriors with enthusiasm. They were an accompanying feature of the prang sabl. "Ulamā" wrote pamphlets and tracts in which attention was called to the duty of waging the holy war; emphasis was laid on the heavenly reward that awaited the zadār, and the kōrfror to be overcome were painted in the blackest colours. An elaborate poem, the Hijāza Prang sabl (1905), of which there were many versions, was specially intended to be declaimed in order to increase the courage and contempt for death of those who heard it.

Bibliography: C. Snauck Hurgonje, De Atjehers, Batavia 1895—1894, i. 183 sq.; B.
towards the temple, the nose straight or even aquiline, and often slightly rounded at the tip. There is little or no prognathism, the hair is ringlety and often straight... On his chin a man wears a scraggy tuft of beard. The eyes are almond-shaped and overhung by long black silky lashes. The beauty of countenance and graceful carriage of Fulan women are well known. In character the Fula is distrustful and shy, shrewd and artful. No African native can equal him for dissimulation and finesse*

This estimate coincides on the whole with that of the observers previously mentioned. Passage calls them "eine ritterliche Nation", in the sense that they despise both manual labour and trade, regarding war, the chase and the care of cattle as the only occupations worthy of a man. They have more dignity and force of character than the negro; at the same time, "trau ich dem Fula (sic) mehr überlegte Hinterlist als Er ist der grösseste Charakter, aber noch im gegebenen Moment der grösseste Schakke". Barth, also, says (ii. 505): "Die lebenswürdige Seele im Charakter der Fula ist ihre Einsicht und ihre Lebhaftigkeit, während sie andererseits einen ausserordentlichen natürlichen Hang zur Bosheit haben und bei weitem nicht so gutmütig sind wie die eigentlichen Swaruns."

Passage describes them as "fanatikal in religion", but, as the nomad Fulbe are still, at any rate to some extent, pagan (Meek, i. 200 and elsewhere), this must refer to the settled Fulbe, called by the Haussa Fulaman Gibi, who would seem to have been converted to Islam, like the other tribes of Nigeria, about the eleventh century (Meek, ii. 1—11). Those settled Fulbe are "by fire intermarriage and wholesale concubinage with the races whom they have conquered, fast being assimilated by the negro. Their noses are broadening, their lips are thickening, their hair is curling, their build is coarsening, and the prognathous mouth of the Negro type is beginning to appear. While they have profoundly modified the Negro type of those with whom they have settled, this modification must, in the absence of fresh infusions of Fulani blood, tend rapidly to disappear... they do not intermarry with the nomad pagan Fulani" (Meek, i. 25).

According to Labouret, nomad Fulbe are scattered over the country in small colonies "généralement installées à côté des villages sédentaires pour en garder les troupeaux". They supply the settled population with dairy products: Fulbe women selling milk and butter are a familiar sight to travellers.

The Fulbe reached the Upper Senegal region about 1300 A.D., when the Ghana empire was at the height of its power. About 1400, a section of the tribe, coming from Termes in the north-west, established themselves in Masina, under chiefs of the Djallo family. This kingdom was conquered by Askia Omar, the Songhai chief, in 1493. About the same time or not much later, a Pulo chief (arde) named Tengella revolted against Omar, but was killed in 1512. His son, Koli, set up an independent pagan kingdom in Badiar, on the Upper Gambia, and his descendants, known as the Demba dynasty, remained in power from 1550 to 1776.

The Fulbe entered Bornu during the xviith century and, as they had done elsewhere, gradually penetrated
the country in the guise of inoffensive herdsmen, until, watching their opportunity, "by a sudden coup, they made themselves its political masters" (Meek). Towards the end of the 18th century, Shehu Usman dan Fodio (born 1754) initiated a religious revival which ended in the conquest of Northern Nigeria. Usman established his capital at Sokoto (built by his son Belo in 1810) and before his death in 1817 was acknowledged as Sarkin Musulmi or spiritual head of the Muslims within his empire. He was succeeded by his son Belo, the "Sultan Belo" visited by Denham, Clapperton and Oude in 1821. He had his capital at Sokoto and later at Warno, while his uncle Abdallah ruled at Gando.

Meanwhile, in the west, a Pulo marabout, Seku Hamadu, had converted the Masina Fulbe to Islam about 1810, seized Djenné and even (1826) made himself master of Timbuktu; but the dominion founded by him was short-lived, his grandson being overthrown by al-Hajji 'Omar in 1862. Before this, in 1776, the Muslim Tekros, in Futa Toro, had revolted against the Fulbe Denizanke and established a "collective monarchy" (Delafosse) which lasted till the French annexation in 1881. "Omar at the head of another section of the Tekros, had conquered the local Fulbe and continued to give trouble to the French authorities till his death in 1864 (Delafosse).

The settled Fulbe do not differ greatly in customs from other Islāmized tribes, though even these appear to retain some traces of their pagan ancestry. Animal tabus, which may or may not be connected with totemism, are observed by some Muslim families (Meek, i. 174); apparently Hassa are meant, but it would seem as if the statement were intended to include at least one "Fanali Muslim sub-tribe". Moreover, when Muhammad al-Tunsi says (Meek, i. 99): "In Sudan it is related that they descend from a chameleon", this, so far from being a "fable invented for the purpose of contempt" may recall a real totemic belief.

A system of castes, otherwise unknown in Negro and Bantu Africa is common to the Fulbe, Wolof, Malinke, Marka and Bamana, with this difference that, with the Fulbe, the "castes" originated in tribal distinctions ("werden durch bestimmte Völker gebildet"; Frobenius, p. 156), and therefore are rigid, whereas, among the Mande, "werden die Kasten durch Sippen gebildet, die in ihrer Kastenzugehörigkeit schwanken". The castes of the Fulbe are:

- **Nobles**
  - Rimbe (plural of Dimu)
- **Serfs**
  - Rinaibe
- **Traders and Herdsmen**
  - Diwambe
- **Singers and Weavers**
  - Mabebe
- **Leather-workers**
  - Sakebe (elsewhere Gargassabe)
- **Wood-workers**
  - Labeibe (elsewhere Sekabe)
- **Smiths**
  - Wallebe (plural of Baili)

It is noteworthy that the Fulbe, unlike the other tribes mentioned, did not recognise a separate class of slaves. The serfs (called "Hörige" by Frobenius) were the descendants of the Rimbe by captive women. The wood-workers' and traders' castes are peculiar to the Fulbe; the rest are common to all the other tribes.

In contrast to the Galla, Somali and other pastoral Hamitic tribes, the Fulbe do not seem to have any special customs or ritual connected with milk. They keep two distinctive breeds of cattle, one or both of which are believed to have brought with them in their southward migration. Some particulars concerning their cattle are given by Meek (i. 115—118).

The Fulfulde language was long thought to be absolutely unique. If Barth found in it "Andeutungen eines Zusammenhanges dieses Stammes mit den Kaffern Südafrikas", he must have had in mind the system of nown-classes, which, in some respects, resembles that of the Bantu speech-family, though both more complete and more logical than the latter. F. Müller placed the language in a class by itself, forming one division of the "Nubu-Fulah group", for which he could discover no other affinities. A. W. Schleicher (1891) attempted to connect it with Somali, relying chiefly on verbal coincidences, entirely disregarding the system of noun-classes, and admitting that one important grammatical feature of Fulfulde is not to be found in Somali. In so far as he classed the language as Hamitic, he is partly in agreement with Meinhof who, somewhat later, came to the conclusion that it represents a pre-Hamitic stratum, from which were developed, on the one hand, the Hamitic languages as known to us to-day (Shwa, Suso, Gallu, etc.), on the other, the Bantu family.

In addition to the class-system already mentioned (in which the plural is formed by a change, not, as in Bantu, of prefix, but of suffix), Fulfulde exhibits a remarkable cross-division into a human and non-human; k large objects and small objects. Here, the plurals are formed by a change of initial consonant according to certain fixed rules summed up by Meinhof as the Law of Polarity. From this latter classification, Meinhof worked out a hypothesis as to the origin of grammatical gender, which has much to commend it. This is set forth in his *Sprachen der Hamiten* (1912). More recently, however, he has found reason to modify his view of Bantu origins, and considers it at least possible that the class-system is not a primitive feature in Fulfulde, but might have been taken over from some Bantu or "Semi-Bantu" language (Westernmann defines the term "Klassensprachen" for the latter and would-extend it to include others than those enumerated in H. H. Johnston's *Comparative Study*). It has also emerged that Fulfulde is less of an isolated phenomenon than had at first appeared. It has points of contact with Serer and other adjacent languages, and in particular, with the little-known Biífada of Portuguese Guinea, studied by G. A. Krause as long ago as 1865. Two important essays by A. Klingenberg in *Zeitschr. f. Eindeutsch-sprachen*, 1923—1924 and 1924—1925 are calculated to shed new light on a complicated problem. Fulfulde, like Hausa, possesses a written literature, for which the form of Arabic script, locally known as osen (Ar. 'adāman), has been used, probably, since the introduction of Islam. This script has peculiarities which cause it to differ markedly from that in use by the Swahili.

evidence also points to the fact that later, the Western Chulukyas, the Raštakštras, and the Deogirī Vīdravas ruled over this area. With the Khāldji and Taughilak [see Muḥammad Taughilak] invasions of the Dakhān it came under Muslim control. An interesting account of Pūna when it formed part of the Bahlānī kingdom has been recorded by the Russian traveller Anasāsīus Nikitiūn (1468—1474), who appears to have been the first foreign traveller whose impressions have been preserved for us since the visit of the Chinese pilgrim, Fa-hien, in the beginning of the fifth century A.D. (R. H. Major, India in the Fifteenth Century, Hakluyt Society). Pūna remained under Muslim rule until the growth of Marāhpā power in the latter half of A.wangchik’s reign. The district is therefore associated with the beginnings of Marāhpā history and closely connected with the career of Shīwāṇ. Under the Pīshāwā (q.v.) it became the centre of Marāhpā power until the British conquest in the early nineteenth century.

Pūna city, which is situated at the confluence of the Miṣāh and Mula rivers, has a total population of 250,187, of whom 28,925 are Muhāmadīs (Census Report, 1931). When but a village it was included in the gājir of Mālođi Bhōma, the grandfather of Shīwāṇ. Later, Shīwāṇ finding Pūna too exposed transferred his capital to Rāγgād where his coronation took place. Pūna was the scene of his daring attack upon Shīyāsīs Khān. With the growth of the power of the Pīshāwā Pūna once more became the capital and centre of the Marāhpā kingdom. The fortified palace of the Pīshāwā, known as the Shāhāwārī, was destroyed by fire in 1827. It was at Pūna in the year 1885 that the first meeting of the Indian National Congress took place.

Bibliography

Administration Reports of the Bombay Presidency (published annually).

Pūwa (Skr. pūwa), in the East Indian Archipelago the name for the month of Rāmdān and for fasting in this month or at other times. The Arabic names however are not unknown. Fasting is in Indonesia generally a favourite pious practice not only on the days prescribed or recommended by law but also as a means of attaining a desired end. The observation of the fast in Rāmdān is here as elsewhere

(P. Collin Davies)

Pūna, a city and district of British India in the Central Division of the Bombay Presidency. The district has an area of 5,332 square miles and a population of 1,169,791, of whom 54,997 are Muslims (Census Report, 1931). It was included in the powerful Khandāra kingdom of the Dakhān which came to an end about the middle of the third century A.D. The available
regarded as the most important of the pillars of Islam; here also we find the popular belief prevailing that it can atone for the sins of the whole year. Not all however continue the fast to the end of the month; if any one finds it difficult he satisfies his conscience by fasting on the first and last days of the month; nevertheless such people or even those who do not fast at all have the same elevated sentiment which fills all and which stamps Ramadān as the Muhammadan month like no other. Students, merchants, all whose business takes them away from home endeavour to spend this month at least in the family circle. In many districts the approach of puwass is remarkable for the increase of slaughtering in the last days of the preceding month. The meat is preserved for use; meals in puwass arc somewhat heavier than usual in order to strengthen for the strain of fasting. The markets are also more animated towards the end of the month; this is the time to make purchases in view of the approaching end of the fast. The beginning of the month is publicly notified; e. g. the drums which form part of the equipment of the houses of prayer are beaten in a special way. The beating of the drums is repeated throughout the whole month at particular times of day, especially after sunset and shortly after midnight in order to warn the faithful that the time for eating is nearly over so that they can prepare the morning meal (Ar. ṣa‘ūr). Finally at the end of the month when the period of abstinence is over, the drums are beaten with particular vigour. The ascertainment of the end and beginning of Ramadān usually leads to friction every year. Those who are free-thinkers in religious matters use the calendar and do not hesitate to announce the end of the fast in advance; all who demand that the law should be strictly followed and these include the modernists, stick to ṣawq̲e‘ evidence of the senses). The tarawīkh (Ar. tarawīkh) service is held in the public houses of prayer immediately after the ṣa‘ūr; it is also eagerly attended by people who on other occasions do not observe the legal obligations of religion. The lack of seriousness and the unifying conduct of many participants induces the devout to avoid this tarawīkh service and to observe it elsewhere with a small company of similarly minded people. It is worst in Atjeh; the tarawīkh service here is simply a caricature (Snouck Hurgronje). A special importance is usually attached to the last five odd nights of the month devoted to religious exercises in connection with the ṣa‘ūr al-Jadīd. They are not agreed as to which of these nights is most probably the correct one; the 21st and 23rd are preferred but the practice varies in different localities. Part of the ceremonial observation of these nights consists in having illuminations in front of the dwelling-houses. In Java special emphasis is laid on the eating of meals together. Every one, if he can at all do it, gives a religious feast every evening. Later they go round their friends; open house is generally kept and time spent in rejoicing until far into the night. Besides three private entertainments there are meals of an official nature. The people of the village come to the house of the village headman for a religious feast; every one brings his share. The higher officials, especially the administrative officials, give a feast to their subordinates. The most splendid observance of these five nights however is found in the palaces of the Javaese princes. According to ancient custom, these feasts took place in great splendour after sunset; the broad forecourts of the palaces give an excellent opportunity for them. These feasts known as ma‘luman, with which many legends are associated, follow one another in a hierarchical succession. First the prince has his on the 21st; next come the crown-prince, the princes of the blood, the governors and ministers; the dishes are intended for the host’s subordinates. In recent years these ma‘luman have become restricted so that only the first of them retains its official character. The ‘little’ feast is a day of rejoicing far surpassing the ‘great’ feast. After the ṣa‘ūr has been performed on the last day of Ramadān or even earlier and ablations have been taken with special care, in which the Javanese sometimes includes his cattle, a feast is prepared in the house in the evening after the breaking of the fast. The more devout make a modest meal precede this within the month of the fast to take farewell of the spirits of the deceased who wander about during Ramadān and now return to their abodes. The ceremonial ṣa‘ūr on the 1st Shawwal is little observed in Atjeh but is a great ceremony in other places; there is no ṣa‘ūr in the whole year which is better attended; many, who otherwise never enter a mosque never fail to be present on this occasion. In Java the regents, the highest native government officials accompanied by the whole of the staff of the regency, all in full dress go in the early morning, before sunrise from the regent’s house to the mosque in order to take part in the ṣa‘ūr there. After the end of the ṣa‘ūr they return in the same way. The regent then receives the homage of all. The same custom prevails in the southern Celebes; except that here the native princes take the place of the regents. On this day the young people let off fire-works. After the ceremonial ṣa‘ūr people set out in new clothes to visit relations and friends; congratulations are given on the successful conclusion of the fast and pardon is asked for any sins committed deliberately or involuntarily in the past year. It is a widespread custom to visit on this day the tomb of ancestors which have previously been cleaned, and then to spend some time scattering flowers and incense in pious devotion. In Java again we have the custom for the higher officials to treat their subordinates to what are called ‘mountains of food’ (dishes of all kinds arranged in artistic forms) In the native states, at the end of the fast, one of the three public holidays is observed, the essential feature of which is the public representation of the unity of the king- dom in the person of the prince. The three feasts are on the whole on the same lines. The prince appears in oriental splendour and shows himself in the outer court of the palace before the assembled people. Large supplies of food have already been prepared in the royal kitchens and are ceremonially piled up into mountains of food of exactly defined form and preparation. These ‘mountains’ which are so large that it takes several persons to carry one, are carried to the place of audience as soon as the prince has taken his seat and at his command taken on to the mosque. Here the food is distributed after the chief supervisor of the mosque has offered a prayer for prince and country. On account of the blessing associated with it it is lucky to get any of the food. The six days’ fast in Shawwal recommended by law is only observed
by a few very pious people; a minor festival is observed on the 8th of the month to mark its conclusion.

---

**QUETTA** (Pashtu: **Kwâta**), a **tâhîl** and town in the *Quetta-Pishin* district of British Balûcstân [q.v.]. The district, which contains the **tâhîl** of Quetta and Pishin and the administrative sub-division of Caman, has an area of 4,806 square miles and a population of 147,541, of whom 197,945 are Muslims. Nearly all these Muslims are Pashtu speaking Bahlû, only a very small minority speaking Brahui and Bahlû. The district, which is very mountainous, is bordered on the north-west by Afghan territory, on the north by the Zhob and Sibi districts, and on the south by the Balûn Pass district and the Sarawân division of Kalât.

The **tâhîl** of Quetta, which is held on lease from the Khân of Kalât, has an area of 548 square miles and a population of 76,649. The town of Quetta was destroyed by earthquake in 1935. In 1931 it had a population of 60,272, of whom 25,391 lived in the cantonment. The Territory of India, 1931, vol. iv., Baluchistan.

Until the middle of the eighteenth century, when Quetta finally came under Brahui control, the history of Quetta-Pishin is probably identical with that of Kandahâr [for early history see the art. Balûcstân and Kandahar]. Quetta was temporarily occupied by the British during the First Afghan War, 1839-1842 (see W. Hough, *A Narrative of the march and operations of the army of the Indus in the expedition into Afghanistan, 1840*). Its strategic importance was first recognized by General John Jacob who urged Lord Canning, in 1856, to garrison this important point of vantage. The proposal was rejected on the grounds that, surrounded by hostile tribes and cut off from its true base, the isolated position of the garrison would be extremely precarious. Ten years later, Sir Henry Green, the Political Superintendent of Upper Sind, seeking to improve the British scheme of frontier defence, proposed that Quetta should be garrisoned and connected by rail with Karâti. Unfortunately for those who desired an advance into Balûcstân the proposal had to face the united opposition of Lord Lawrence and his Council, all of whom were champions of non-intervention. Ten years passed. The exponents of "masterly inactivity" were no longer predominant in the Vicerey's council chamber; Khwâ [see Khwâ] had fallen before the Russians, who were drawing nearer and nearer to the gates of India; and, more dangerous still, the estrangement of Shâr 'Ali had brought the Amir of Afghanistan and the Government of India to the brink of war. It was therefore decided, in 1876, to occupy Quetta. The British right to despatch troops into Kalât territory had been recognized by the treaty of 1854 (Aitchison, xi. 212-213). Chiefly owing to the efforts of Major (afterwards Sir Robert) Sandeman, this treaty was renewed and supplemented on December 8, 1876, by the Treaty of Jacobabad (Pari. Papers, 1877, lxxxii., c. 1868, p. 314-316). In return for an increased subsidy the Khân granted permission for the location of troops in, and the construction of railways and telegraph lines through, Kalât territory. This was followed by the formation of the Balûcstân Agency, for on February 24, 1877, Sandeman was appointed Agent to the Governor-General with his headquarters at Quetta.

The strategic importance of Quetta is now almost universally recognized. Protected on the south-west by the lofty Chilun range and on the north-east by the Zarghan plateau, it dominates all the southern approaches to the Indus valley. The **tâhîl** of Quetta is held on lease from the Khân of Kalât, has an area of 548 square miles and a population of 76,649. The town of Quetta was destroyed by earthquake in 1935. In 1931 it had a population of 60,272, of whom 25,391 lived in the cantonment (Abstract of India, 1931, vol. iv., Baluchistan).

RÄ', tenth letter of the Arabic alphabet, with the numeral value of 200. For its palaeographical evolution see the article ARABIA, plate 1. It belongs to the group of the liquidas and is frequently interchanged with ٧ and ٠. It regularly corresponds to the r of other Semitic languages. It is not guttural but lingual.

(A. J. Wensinck)

**RABĀB**, the generic name in Arabic for the violin, or any stringed instrument played with a bow (gama). The origin of the name has been variously explained: 1. from the Hebrew ṭābā (ἔνα and ṭābā being interchangeably); 2. from the Persian ṭabā (V āra ṭābā), which was played with the fingers or plectrum; and 3. from the Arabic ṭabā to collect, arrange, assemble together. The first derivation is scarcely feasible. The second has a rational basis, although the mere similarity in name must not be accepted without question. In spite of the oft repeated statement that the Arabs admitted that they borrowed the ṭabā from the Persians, together with the word ṭamānū for the bow, there is not the slightest evidence for it. No Arabic author (so far as the present writer knows) makes an admission of this kind, nor have the Arabs adopted the word ṭamānū for the bow, their own term being having been considered sufficient. It is true that we read in the Maghāth al-Ula'web (5th century) that “the ṭabā is well-known to the people of Persia and the Persians” (237), but this author was writing in a later Persian, and we know from al-Fārābī that the ṭabā was also well-known in Arabian lands. One argument against the alleged borrowing from Persia is that the ṭabā with the Persians has ever been a plucked and not a bowed instrument. Still, the Arabs may have borrowed the plucked instrument and adapted it to the bow. On the other hand, the Arabic root ṭabā as the parent of the word ṭabā has much in its favour. As the Arabic musical acousticians point out, plucked instruments such as the ṭabā (lute), ṭambūr (pandura), etc. gave short (muṣāfāt) sounds, but bowed instruments such as the ṭabā gave long or sustained (muṣāfīl) sounds. It was application of the bow which “collected, arranged, or assembled” the short notes into one sustained note, hence the term ṭabā being applied to the viol (see Farmer, Stud., t. 1, p. 2).

The ṭabā is mentioned as early as the Arabic prose of al-Dīnārī (d. 885) in his Majmū‘ al-Rawātī. Yet we cannot be sure whether this was the bowed ṭabā or the plucked ṭabā. At any rate, it already had a legendary history when it wrote. According to the Kāfkh al-Humām (15th–16th century) it is first found in the hands of a woman of Banū Ṭā’īr (fol. 263). Turkish tradition ascribed its “invention” to a certain Aḥmad Allāh Fārābī (Ewelya Celebi, Siykah-namâ, i/ii. 226, 234). An Andalusian legend places its invention within the Iberian peninsula (Delphin and Guin, Notes sur la poésie et la musique arabe, p. 59). One thing is certain even if we have iconographic evidence of the viol in the vineh (6th or 7th century (cf.  libro)), the earliest literary evidence of the use of the bow comes from Arabic sources, e. c. from al-Fārābī (d. 930), the Ibn al-Sābl (8th century), Ibn Sinā (d. 1037), and Ibn Za‘lī (d. 1048), as I have fully demonstrated elsewhere (Stud., t. 101–105).

Seven different forms of viols are known to Islamic peoples: 1. The Rectangular Viol, 2. the Circular Viol, 3. the Boot Shape Viol, 4. the Pear Shape Viol, 5. the Hemispherical Viol, 6. the Pandore Viol, and 7. the Open Chest Viol.

1. The Rectangular Viol. This consists of a wooden frame, more or less rectangular, over the face (muṣāfāt) and back (ṣabūr) of which is stretched a membrane (ṣīfīsa). The neck (muṣāfīs) is cylindrical and is of wood, whilst the foot (ritāf) is of iron. It has either one or two strings (muṣāfīs), generally of horsehair. Al-Khalīfī (d. 791) says that “the ancient Arabs sang their poems to its [the viol’s] voice [or sound]” (Farmer, Stud., t. 100). In the Kāfkh al-Humām (fol. 267) we read that it was used to accompany the pre-Islamic ṭabāb and the elegiac poem. Probably the pre-Islamic ṭabāb was of this rectangular form. Lane (Lesecon, p. 1005) held this latter view. Ibn al-Ṣabīr (d. 1435) [q. r.] describes this viol of the Bedouins as rectangular (muṣabīb) and with a membrane face and back and one string of horsehair (fol. 238). Niebuhr (t. 144) says that it was still called the muṣabīb in the 13th century. We certainly have a rectangular instrument shown in the frescoes of Qaṣr ‘Ansor (Musul, pi. xxxiv), but it is played with the fingers and not with a bow. Yet even in modern times the ṭabā of the desert was to be found played in this way as well as with a bow (Crichton, ii. 280; Burckhardt, Beduinen, p. 435; du, Travels, § 389; Burton, Personal Narrative, iii. 76). Niebuhr (Tab., xxvi, p) delineates a rectangular viol of two strings, although he says that he saw a violin of one string in Cairo. Villot (272–274; 913–918) distinguishes between the two instruments. In Egypt, he says, the ṭabā al-ṣālīr (poet’s viol) had one string, whilst the ṭabā al-muṣabīr (singer’s viol) had two strings (Lane, Med. Egypt., chap. xxviii, xx.). He describes them. These instruments never form part of a concert orchestra, being relegated to the folk. For other delineations of the instrument see Féret (Hist., ii. 145), Engel
1085

2. The Circular Viol. The modern instrument of this form consists of a circular wooden frame or pan, the face, and sometimes the back, being covered with a membrane. There is no foot. There is no special reference to this form in Arabic literature nor is there any definite iconographic evidence of it earlier than the 12th century when it is described and delineated by Niebuhr (i. 144; Tab. xxvi., C) who found it at Basra. It had but one string. It is still found among the folk of Palestine (Sachau, p. 30, 40, Tab. 3, 17) and the Maghrib (Chottin, p. 50) where it is still known as the rabab or ri"ob. For other delineations see Lavignac (p. 2790) and Chottin (pl. vi.).

3. The Boat Shape Viol. This form is confined to the Maghrib. It consists of a piece of wood hollowed out into the shape of a boat. The chest (qadr) is covered with skilled metal or wood pierced with ornamental rosettes (nuwârân), whilst the lower part is covered with a membrane. The head (ra'û) is at right angles to the body, and it is generally furnished with two strings. It seems to have been used by the Arabs and Moors of Spain since their invasion of the peninsula. It is praised by their 8th and 9th century writers Abd al-Rahman ibn Khaibar (see al-Shâlihi, fol. 15), and Ibn Hazm (see Muhammad b. Isâmiī, p. 473), and doubtless they refer to either this instrument or the Pear Shape Viol (see infra 4) since the Glossarium Latino-Arabicum (12th century) equates rabab with ilâra dicta a variacite. If we have no iconographic evidence of this viol from Arabic or Moorish sources, it certainly exists among the Spaniards, since the instruments in the Catálogo de Santa Maria (12th century) show definite oriental features; see Riaño (p. 129) and Ribera (pl. xi.). Ibn Khaibar (d. 1406) is the first to describe this viol, although not very clearly (Prot., xvii. 354). It is not until the time of 'Abd al-Rahman al-Fasi (ca. 1650) that we get any musical details of the instrument (J. R. A. S., 1931, p. 366). European travellers (Addison, Winthius, Höst, Shaw) mention the instrument as popular in the Maghrib, and to-day it is one of the principal instruments in concert music. Höst gives us one of the earliest delineations of the instrument from the Eastern sources (Tab. xxxii. 2). For a 12th century description see F. Salvador-Daniél (p. 80) and for a design see Christianovich (pl. i.). Several delineations of both instruments and players may be seen in al-Hafid (pl. 34, 39—52). Mahillon (i. 416—417), Félix (Hiss., ii. 146), Engel (Cat., pl. 143), Chouquet (p. 205), Sachau (Reallex., p. 317), etc. For the instrument of Northern India called the surangi see Lavignac (p. 350) and Félix (ii. 298).

4. The Pear Shape Viol. Probably, the earliest Arabic reference to this instrument is that made by Ibn Khurdâdhulluh (d. ca. 912) who, in an oration before Caliph al-Mutamid (d. 893), says that the Byzantines had a wooden instrument of five strings called the 'ara which was identical with the ra'ab of the Arabs (al-Mas'udi, Murâdi, viii. 91). We can probably identify the instrument in the famous Carrand Casket at Florence which dates from the 6th century (L'Arte, 1896, p. 44). From the Sinu-Moorish woodwork of the Palatine Chapel at Palermo (12th century) we see to better advantage what the Arabian instrument was like (B. Z., 1893, ii. 385). It was this form of the rabab probably, with which al-Fârâbî (d. 950) deals (see Land, Reallex., p. 130, 166). He gives full details of both the accordâvera and scales. We know little about this instrument in Arabic speaking lands after the 12th—13th century, until it is described by Niebuhr (i. 143; Tab. xxvi., D) in the 13th century, and even then it appears to have been favoured only by the Greek population. It had three strings. It may have been used in the Maghrib (Jackson, p. 159—160), but neither Villotvlo nor Lame know of it in Egypt. In Turkey, it appears to have been adopted from the Greeks, possibly in the 13th century, and with the 'ud and amûoã plays a prominent part in concert music to-day (Lavignac, p. 3015). Recently an attempt has been made to introduce this rabab turki or armûha, as it is now called, into Egypt (al-Hâfiz, p. 661, pl. 35). Designs of the instrument may be found in Engel (Cat., p. 210) and Crosby Brewer (Hist. flute, 24), where they represent specimens in collections at South Kensington (London) and New York.

5. The Hemispherical Viol. This is, perhaps, the best known form of the viol in the Islamic east. The body consists of a hemisphere of wood, cocoanut, or a gourd, over the aperture of which a membrane is stretched. The neck is of wood, generally cylindrical, and there is a foot of iron, although sometimes there is no foot. It is often known in Arabic as the khamûnja or more rarely as the shâhâb. The former is derived from the Persian khamûnja (dim. of khaman, "bow") whilst the latter is derived from the Persian and Turkish shâhâb, shâhâb, shâhâb, gâshâb, gâshâb, etc., which may have had their origin in the Sanscrit gauharaka, an instrument mentioned in the pre-Christian Nâtya-shâstra (cap. xxiii.). I believe that the words shâhâb and shâhâb mentioned in the Uighur al-Safa' (Bombay ed., i. 97) and al-Shâlihi (fol. 12) respectively, are copyist's errors for shâhâb and shâhâb. The work khamûnja is first mentioned in Arabic by Ibn al-Fahar (ca. 903) who says that it was used by both the Copts and the people of Sind (B. G. A.). Of course this need not mean that the instrument mentioned was a hemispherical viol, because, being a Persian by origin, the author may have used the word khamûnja in its Persian generic sense meaning a viol. That Egypt had an early liking for the khamûnja is borne out from various sources. Although in Egypt the hemispherical viol is nowadays called the rabab miyâf (Egyptian viol), in earlier days it was acknowledged that Egypt borrowed the instrument from Persia (Kutb al-Hamûs, fol. 106). The khamûnja was certainly popular at the courts of the Ayyubid al-Kâmil (d. 1238) and the Mamlûk Hâbars (d. 1277); see al-Makriti, i, 136; Lane-Poole, Hist. of Egypt, p. 249. In the Persian Kâne al-Tâbâh (13th century) the hemispherical viol is described and figured as the gâshâb, but in Ibn Ghâîth (d. 1435) where both the gâshâb and the khamûnja are described, the former is a larger type of the latter, having, in addition to its two ordinary strings, eight sympathetic strings (Kâne al-Tâbâh, fol. 261v; Ibn Ghâîth, fol. 78). In the 13th century the khamûnja is delineated by Russeî (i. 152—153, pl. iv.), and Niebuhr (i. 144, Tab. xxvi., E). Both Villotvlo (p. 900, pl. BB) and Lane (Mod. Egypt., chap. 19) give minute details.
of the construction and accoutumans. Mushkiya also describes the Syriac hamânda (hamânda) of his day (M. F. O. E., vi. 25, 81). For the modern Persian instrument see Advielle (14 and pl.) and Lavignac (p. 3704). Turkomanian instruments are given by Fitrat (p. 45) and Belaiiev (p. 54). For Malaysia see Kauden (p. 178); for India Lavignac (p. 349) and Féiss (ii. 295). For other designs see Farmer (Stud., i. 160-167), Conant (p. 205), Sacha (Realistik, p. 207).

6. The Pander.Virtual. This form is practically a tambûr, sitar, or the like, which is howled instead of being plucked by the fingers or a plectrum. The two best known examples from India are the errar and juilis. The former has a membrane on its face and has five strings played on with the bow together with a number of sympathetic strings. The latter is practically identical with the former but is adorned with the figure of a peacock (hence its name) at the bottom of the body of the instrument. See Lavignac (p. 351) and Mahillon (i. 131) for designs and details. With the Persians and Turkomans we see various kinds of pandores used with the bow. See Advielle (p. 14), Lavignac (p. 3074), Mironov (p. 27), Kinsky (p. 26).

7. The Open Chest Viol. This is unknown to the peoples of North Africa and the Near East, although it is popular in the Middle East. Unlike the preceding forms of the viol, the upper part of its face of the body or sound-chest is left open. The best known example of this is the sirkulâdd of India which has three strings. See Péjé (ii. 296), Lavignac (p. 351), Mahillon (i. 132) and Kinsky (p. 27), for both designs and details. In Turkomania a similar instrument known as the šapka is very popular. It has two strings. See Belaiiev (p. 52), Mironov (p. 25), Fitrat (p. 43).

(R. G. Farmer)

RABAB (s., pl. ar-râbîd), dis. a town, quarter, situated outside the central district of musîna [q.v.]. The term, which is very frequently found in the Arab historians of the middle ages in east as well as west, is the original of the Spanish word arrabâl which means the same. Rabab also means the immediate vicinity of a town. The rabab usually had a name of its own. This is how there have been preserved for the Cordova of the caliphate of the 9th century the names of twenty-one of the suburban districts. Rabab Shakûnda [q.v.] or al-Rabab (for short) was the southern quarter of Cordova, on the other side of the Guadalquivir where in 916 (914) the famous "rebellion of the suburb" broke out which was stifled by the emir al-Hakâm I [q.v.] and earned him the epithet of al-Raabâ. The name rabab was also given to the exiles who migrated at this time to the rest of al-Andalus, Morocco and to the east. In the castles (bihâr or qâbrâ) of Muslim Spain the name rabab was given to the civilian quarters below the strictly military quarters. Rabab was also the same name given in the towns of the west to the lepers' quarter and to that of the prostitutes.

(E. Lévi-Provençal)

RABAH. Zoubair-Pasha, Egyptian governor of Bahri al-Ghazal in 1875, being recalled by Cairo left his son Sultânîn in charge. The latter thinking he was threatened by the hostility of Gordon, then Governor-General of the Sudan, joined Hâthîn, the deposed sultan of Dâr-Fûr, in order to rebel against Egypt. His chief lieutenant was a certain Rabah, son of a Negro who had been his father's nurse and was therefore his foster-brother. Gessi-Pasha and by Gordon inflicted a severe defeat on Sultânîn and Rabah took to flight with the remnants of his master's army and to retaliate his forces began a series of raids on the tribes of the northeast of Bahri al-Ghazal (1878). Then pushing westwards he entered the land of the Banda in 1879 and in 1883 fell back on the Dâr-Kûlit, installed a native chief named Sanilat there as sultan, attacked Bagirmi in 1892 and in 1893 seized its capital which then was Bugoman. In the same year he attacked Hâshâm, sultan of Bornu [q.v.], defeated and slew him (Dec. 1893). He then attacked Gobe or Tassàwa where Abû-Bakr, nephew and successor of Hâshâm, had taken refuge; checked by the army of the sultan of Sokoto he turned against the little states of the south of Lake Chad, took Gulfey from the Bâsîr, Kuri from the Mandara, Logone from the Koto, again invaded Bagirmi in 1898, burned Massênya, the old capital, pursued the king
Rabat, Ait Rihâb al-Fath, vulg. ar-Rihâb (ethnical Rihâb, vulg. Rihâf), a town in Morocco, situated on the south bank at the mouth of the Wadi Abî Râkâb (Wed Bu Regreg) opposite the town of Salé [cf. Salé]. Since the establishment of the French protectorate it has been the administrative capital of the Shari'îan empire, the usual residence of the sultan of Morocco, and the headquarters of the wakilûn [q.v.] and of the French authorities. The choice of Rabat as the administrative centre of Morocco has brought this town considerable development in place of the somnolence in which it was sunk a quarter of a century ago.

The foundation of Rihâb al-Fath was the work of the Almohads [q.v.]. The site of the "Two Banks" (al-'Istâwan) of the estuary of the Bu Regreg had previously been the scene of Roman and pre-Roman settlements; the Punic, later Roman, town Salé was built on the left bank of the river higher up at the site of the royal Merinid necropolis of Chella (Challa; q.v.). The Muslim town of Salé on the right bank had, from the beginning of the tenth century to protect it against the incursions of the Berghawâta [q.v.] heretics at the time when it was the capital of a little Ifrîdîn kingdom, fortified on the other side of the river by Rihâb [q.v.], which was permanently occupied by devout volunteers who in this way desired to carry out their vow of hijâd [q.v.]; the geographer Ibn Hawâ'ik is authority for its existence at this date [cf. R. G. A., i. 56]. But we know very little of the part played by this Rihâb in the course of the sanguinary wars that were fought between the Berghawâta and the Almoravids. It is not even possible to point out its exact situation. It was perhaps the same fortified spot that is mentioned in the middle of the xiith century under the name of Kalîn Bani Targhî by the geographer al-Fârî'i.

The final and complete subjugation of the Berghawâta meant that a different part was to be played by the Rihâb on the estuary of Bu Regreg in 545 (1150), the founder of the dynasty of the Mu'minnîn, Abî al-Mu'min, chose the fort and its vicinity as the place of mobilisation for the troops intended to carry the holy war into Spain. A permanent camp was established there and he provided for a supply of fresh water by bringing a conduit from a neighbouring source, 'Ain Ghabila. The permanent establishments, — mosque, royal residence — formed a little town which received the name of al-Mâhdîya. On several occasions very large bodies of men were concentrated around the Rihâb, and it was there that Abî al-Mu'min died on the eve of his departure for Spain in 558 (1163).

The development of the camp went on under Abî al-Mu'min's successor, Abî Ya'ubî Yûnus (558—580 = 1163—1184), but it was the following prince of the Mu'minnîn dynasty, Abî Yûnus Ya'qûb al-Manṣûr, who at the beginning of his reign gave the orders and opened the credits necessary for its completion. In memory of the victory won in 1195 by the Almohads over Almogarâr VIII. of Castile at Alarcos [q.v.], it was given the name of Rihâb al-Fath. The camp was surrounded by a wall of earth flanked with square towers enclosing with the sea and the river an area of 450 hectares. The wall is still standing for the most part and is nearly four miles in length; two monumental gates, one now known as Bûb al-Ruwûh (Bûb er-Ruûh), the other which gives access to the kasbûn (Kasbah of the Oudaya), date from this period. It was also Ya'qûb al-Manṣûr who ordered the building inside Rihâb al-Fath of a colossal mosque which was never finished; rectangular in plan it measured 610 feet long by 470 feet broad; the only mosque in the Muslim world of greater area was that of Sâmrâr [q.v.]. It was entered by 16 doors and in addition to three courts had a hall of prayer, supported by over 200 columns. In spite of recent excavations more or less successfully conducted this mosque still remains very much a puzzle from the architectural point of view. But the minaret, which also remained unfinished and was never given its upper lantern still preserves the traveller by its unusual dimensions. It is now called the Tower of Hassan (Fort Hassan), built entirely of stones of uniform shape it is 160 feet high on a square base 55 feet square. Its walls are eight feet thick. The upper platform is reached by a ramp two yards broad with a gentle slope. This tower in its proportions, its arrangement and decoration is closely related to two Almohad minarets of the same period: that of the mosque of the Kutanbîyûn at Marrakesh [q.v.] and that of the great mosque of Seville [q.v.], the Giralda.

Ya'qûb al-Manṣûr's great foundation never received the population which its area might have held and the town opposite, Sale, retained under the last Almohads and in the xiith and xivth centuries all its political and commercial importance. Rabat and Sale in 1248 passed under the rule of the Marinids and it seems that Rabat in those days was simply a military station of no great importance, sharing the fortunes of its neighbour which had gradually become a considerable port having busy commercial relations with the principal trading centres of the Mediterranean. But a chance circumstance was suddenly to give the town of the "Two Banks" a new aspect. The expulsion of the last Mori cors [q.v.] decided upon in 1610 by Philip III brought to Rabat and Sale an important colony of Andalusian fugitives who increased to a marked degree the number of their compatriots in these towns who had previously left Spain of their own free-will after the reconquest. While the population of the other Moroccan cities, Fès and Tetouan principally, in which the exiles took refuge, very quickly absorbed the new arrivals whom they had welcomed without distrust, the people of Rabat and Sale could not see without misgivings this colony from Spain settle beside them, for they lived apart, never mingled with the older inhabitants and devoted themselves to piracy and soon completely dominated the two towns and their hinterland. Rabat, known in Europe as "New Sale" in contrast to Sale ("Old Sale"), soon became the centre of a regular little maritime republic
in the hands of the Spanish Moors who had either left of their own accord before 1610, the so-called "Havuz-ehas"; or had been expelled in 1610, the so-called "Moriscoes"; the former however being in the majority. This republic, on the origin and life of which the documents from European archives published by M. de Castries and P. de Cenat have been of recent years thrown new light, hardly recognised the susurrancy of the shari'ah who ruled over the rest of Morocco. While boasting of their jiḥād against the Christians, the Andalusians of the "Two Banks" really found their activity at sea a considerable source of revenue. They had retained the use of the Spanish language and the mode of life they had been used to in Spain. They thus raised Rabat from its decadence. Their descendants still form the essential part of the Muslim population of the town and they have Spanish patronymics like Barcajó (Vargas), Palminico, Moreno, Lópeza, Pérez, Clitoquito, Díaz (Díaz Dénia), Ronda (Span. Ronda), Mulín (Molino) etc.

The spirit of independence and the wealth of the Spanish Moors in Rabat soon made the town a most desirable object in the eyes of the sultans of Morocco. Nevertheless the little republic with periods of more or less unreal independence, was able to survive until the accession of the 'Alid sālān Saiyid Mūhammad b. Abīd Allāh in 1757. This prince now endeavoured to organise for his own behalf the piracy hitherto practised by the sailors of the republic of the "Two Banks". He even ordered several ships of the line to be built. But the official character thus given to the pirates of Sale was soon resorted to the bombardment of Sale and Larache [q. v.] by a French fleet in 1765. The successors of Mūhammad b. Abīd Allāh had very soon to renounce any attempt to wage the "holy war" by sea. The result was a long period of decline for Sale which lasted for not only in the gradual diminution of its trade but also in a very marked hatred of each town for the other. At the beginning of the 19th century, Rabat like Sale had completely lost its old importance. They were both occupied by French troops on July 19, 1911.

Rabat is one of the towns of Morocco, the population of which is both kasārīyā, i.e. essentially town-dwelling, and mahārīyā, i.e. residence by the sultan of the Shi'it empire. The non-European population has increased in a marked degree since the establishment of the protectorate and its choice as permanent capital of the sultan. The number of inhabitants at the census of 1931 was 27,986 Muslims and 4,618 Jews (20,452 and 3,567 in 1926; Sale which is a separate municipality had in 1931 21,145 Muslims and 2,387 Jews). They live almost entirely in the mada'in, which is in the shape of a trapezoid, and its annexes furmed by the Jewish melikţ [q. v.], and the kāsār of the ūdāya, a separate walled area with its own mosque, originally inhabited by contingents of the gāh tribe [q. v.]; Ar. gāh] of this same (Kasta of the ûdâya). The chief mosques of Rabat are the foundations of 'Alid sālān, Mawṣūl al-Qādī [q. v.], and Mawṣūl al-Sulāmī (Moulay Sulaimān; the mosque near the imperial palace, the Dāmīl al-Sulām, was built in the second half of the 18th century, besides the monumental gates there are several other entrances in the Almoahad sequence; the Khusūl al-'Uth (Rabi al-Aqsa) admits from the madda'in to the cemetery and the cliffs which rise up from the ocean; the gate called Zābir (Bāb Zābir) is in the immediate vicinity of the Mamlīd royal cemetery of Charia (Shiraz).

The French town of Rabat built outside the mada'in is developing rapidly; the palace of the Resident-General, the public offices, fine esplanades, villas surrounded by gardens give the new town a particularly attractive appearance. French Rabat at the present day is a masterpiece, famed throughout the world, of successful town planning and architecture. It is connected by railway to Casablanca and Marrakesh in the south, Tangier in the north, Fez and Algiers in the east. Since October 1935 it has been the final resting-place of Marshal P. Lamartine to whom it owes its position as capital and its reconstruction.

RABB (Ar.), lord, God, master of a slave. Pre-Islamic Arabia probably applied this term to its gods or to some of them. In this sense the word corresponds to the terms like 'Alāl, Adon in the Semitic languages of the north where rabb means "much, great". In one of the oldest steles (civ. 3) Allāh is called the "lord of the temple". Similarly al-Lāt bore the epithet al-Rabba, especially at Tā'if where she was worshipped in the image of a stone or of a rock. In the Qurʾān rabb (especially with the possessive suffix) is one of the usual names of God. This explains why in Islam the slave is forbidden to address his master as rabb, which he must replace by sayyid (Muslim, al-Amīn min al-Adab, trad. 14, 15, etc.). The abstract raṣūlīyya is not found in either Qurʾān or Hadith; it is in common use in mystical theology.

RABGHÜZL [See RUGHÜZ.]  
RABIʾ (A.), the name of the third and fourth months of the Muslim calendar. The name is an Aryan loanword and in the Syriac translation of the Bible corresponds to the Hebrew maḥšāḥ (late rain). Thus the fact that the two months following Rabīʿ II are called Ejjāḏāh (month of frost) suggests to Wellhausen that these four months originally fell in winter and that the old Arab year began with the winter half-year [see AL-MUḤARRAM]. Rabīʿ means originally the month in which the earth is covered with green; this later led to the name Rabīʿ being given to spring. Al-Shirazi expressly describes autumn (ḥarrīf) as the season indicated by Rabīʿ. As a result of the Qurʾānic prohibition of intercalation [see ṢĀʿAʾ], since the beginning of the Muslim era the two months no longer fall at a regular season.

AL-RABIʾ B. YUNUS B. ʿABD AL-LLĀH B. ʿABD FAWKA (so-called from his entering Medina with a scene on his back), emancipated slave of al-Ḥārīrī al-Haffār (grave-digger), emancipated slave of ʿOqlhumān b. ʿAffān. He was really a bastard of obscure origin, a fact which was often brought up against him by his enemies later in his career. Born in slavery at Medina about 112 (730), he was bought by Ziyād b. ʿAbd Allāh al-Khāʾī, who presented him to his master Abu l-ʿAbbās al-Saffāy, the first Ṭāhānī Caliph. All his life, he served, with varying fortunes, three more ʿAbbasid Caliphs: al-Manṣūr, al-Mahdī and al-Hādī.

He reached the zenith of his power under al-Manṣūr. (136–158) who, finding him a capable and useful courtier, appointed him ḥāṭef and afterwards made him his confidant in succession to Abu al-ʿAbbās al-Mawṣūlī. His son al-Fajjāl b. al-Rābīʾ, who was destined to play a prominent part in the forthcoming intrigues against the house of ʿAbbās, took his father's duties as ḥāṭef. After the foundation of Baghdad, the new capital was divided into four quarters, one of which was given in gift by al-Manṣūr to al-Rābīʾ and was thus named after him (ḥāṭef at-Rābīʿ).

During the reign of al-Mahdī (158–169), his influence seems to have dwindled for some time. “Abū Allāh b. Abuʾbaid Allāh (known as Abu ʿOthā ṭā a became wazir, hence al-Rābīʾ participated in an intrigue which led to the downfall of his rival by exposing his son as a heretic (ṣīḥa) in 165 (779–780). Even then al-Rābīʾ only retained his old office as ḥāṭef and never became Mahdī’s wazir. It was “Abdu’llah Abu ʿAbd Allāh b. Diwūr who was appointed the disgraced minister. On al-Ḥādī’s accession (169 = 785), however, al-Rābīʾ was once more promoted to that dignity, but only for a period, after which he was entrusted with a secretarialship for the Caliph’s aṭṬawīr (aṭṬawīr al-muṣawma). He remained in this capacity until his death after a short illness lasting eight days. His sudden and gave rise to the suggestion that he was poisoned by al-Hādī, but this is discredited by the most authentic sources. The exact date of his death is uncertain. While al-Jalāḥyštī and al-Ṭabari place it in 169, al-Khalili al-Baghdadi and Ibn Khallikān assert that he died at the beginning of 170 (786).

Details about his administration are scanty, but it is certain that he was an able, industrious, temperate and tactful man of affairs. Even al-Mahdī, who was never lavish in showering favours on al-Rābīʾ, once described him as the model of a good administrator (Yaʿqūb, ii. 486). The literary sources, however, do not single him out as a patron of letters, a quality which both his ʿAbbāsid masters and his Barmakid successors possessed with distinction.

RĀBĪʿA AL-ʿAADAWĪYA, a famous mystic and saint of Baṣra, a freedwoman of the Al ʿAṯī, a tribe of Kāʾa b. ʿAbd, known also as al-Kāʾa, born 95 (719–724) or 99, died and was buried at Baṣra in 185 (804). A few verses of hers are recorded: she is mentioned, and her teaching quoted, by most of the Sufi writers and the biographers of the saints.

Born into a poor home, she was stolen as a child and sold into slavery, but her sanctity secured her freedom, and she retired to a life of seclusion and celibacy, at first in the desert and then in Baṣra, where she gathered round her many disciples and associates, who came to seek her counsel or prayers or to listen to her teaching. These included Mālik b. Dīmar, the ascetic Rabhī al-ʿAṯī, the traditionist Sufyān al-Thawrī and the Sufi Shākiṣ al-Balqīṣī. Her life was one of extreme asceticism and otherworldliness. Asked why she did not ask help from her friends, she said, "I should be ashamed to ask for this world's goods from Him to Whom it belongs, and how should I seek them when He does not belong?" To another friend she said, "We must not forget the poor because of their poverty or remember the rich because of their riches? Since He knows my state, what have I to remind Him of? What He wills, we should also will." Miracles were attributed to her as to other Muslim saints.

Food was supplied by miraculous means for her guests, and to save her from starvation, a camel which died when she was on pilgrimage, was restored to life for her use; the lack of a lamp was made good by the light which shone round about the saint. It was related that when she was dying, she bade her friends depart and leave the way free for the messengers of God Most
High. As they went out, they heard her making her confession of faith, and a voice which responded, "O soul at rest, return to thy Lord, satisfied with Him, giving satisfaction to Him. So enter among My servants into My Paradise" (Sūra lxxix. 27-30). After her death Rābi'a was seen in a dream and asked how she had escaped from Munkar and Nakir, the angels of death, when they asked her, "Who is your Lord?" and she replied, "I said, return and tell your Lord, 'Notwithstanding the thousands and thousands of Thy creatures, Thou hast not forgotten the weak old woman, I who had only Thee in all the world, have never forgotten Thee, that Thou shouldst ask, Who is thy Lord?'"

Among the prayers recorded of Rābi'a is one she was accustomed to pray at midnight upon her roof: "O Lord, the stars are shining and the eyes of many are open and kings have shut their doors and every lover is alone with his beloved, and here am I alone with Thee." Again she prayed, "O my Lord, if I worship Thee from fear of Hell, burn me therein, and if I worship Thee in hope of Paradise, exclude me thence, but if I worship Thee for Thine own sake, then withhold not from me Thine Eternal Beauty." Of Repentance, the beginning of the Sūfi Path, she said, "How can anyone repent unless his Lord gives him repentance and accepts him? If He turns towards you, you will turn towards Him." She held that Gratitude was the vision of the Giver, not the gifted, and one spring day, when urged to come out to behold the works of God, she rejoined, "Come rather inside to behold their Maker. Contemplation of the Maker has turned me aside from contemplating what He has made." Asked what she thought of Paradise, Rābi'a replied, "First the Neighbour, then the house" (al-qawm thumma 'l-dar) and Ghaṣṣū, commenting on this, says she implied that no one who does not know God in this world will see him in the next, and he who does not find the joy of gnosis here will not find the joy of the Vision there, nor can anyone appeal to God in that world if he has not sought His friendship in this. None may reap who has not sown (Iyāz, iv. 269). The otherworldliness of her teaching is shewn in her declaration that she had come from that world and to that world she was going, and she ate the bread of this world in sorrow, while doing the work of that world. One who heard her said derisively, "One so persuasive in speech is worthy to keep a resting-place" and Rābi'a responded, "I myself am keeping a resting-place, whatsoever is within, I do not allow it to go out and whatever is without, I do not allow to come in. I do not concern myself with those who pass in and out, for I am contemplating my own heart, not mere sky." Asked how she had attained to the rank of the saints, Rābi'a replied, "By abandoning what did not concern me and seeking fellowship with Him Who is eternal".

She was famed for her teaching on mystic love (wasi' al-rab) and the fellowship with God (umma) which is the preoccupation of His lover. Every true lover, she said, seeks intimacy with the beloved, and she recited the lines:

*I have made Thee the Companion of my heart, and my body is friendly towards its guests. But the Beloved of my heart is the guest of my soul*. (Iyāz, iv. 358, margin)

She demonstrated the need for disinterested love and service by taking fire in one hand and water in the other and saying, when asked the meaning of her action, "I am going to light fire in Paradise and to pour water on to Hell, so that both wells may be taken away from those who journey towards God, and whose purpose may be sure and they may look towards their Lord without any object of hope or motive of fear. What if the hope of Paradise and the fear of Hell did not exist? Not one would worship his Lord or obey Him" (Alfākī, Ma'mūṣ al-Aṣfīn, India Office, N. 3170, fol. 114v). Questioned about her love for the Prophet she said, "I love him, but love of the Creator has turned me aside from love of His creatures", and again, "My love to God has so possessed me that no place remains for loving anyone save Him". Of her own service to God and its motive-force she said, "I have not served God from fear of Hell, for I should be but a wretched hireling if I did it from fear; nor from love of Paradise, for I should be a bad servant, if I served for the sake of what was given me, but I have served Him only for the love of Him and desire of Him". Her verses on the two types of love, that which seeks its own end and that which seeks only God and His glory, are famous and much quoted:

"In two ways have I loved Thee, señorally, And with a love that worthy is of Thee. In selfish love my joy in Thee I find, While to all else, and others, I am blind. But in that love which seeks Thee worthily, The veil is raised that I may look on Thee. Yet is the praise in that or this not mine, In this in that and the praise is wholly Thine."

Ghaṣṣū again comments, "She meant, by the selfish love, the love of God for His favour and grace bestowed and for temporary happiness, and by the love worthy of Him, the love of His Beauty which was revealed to her, and this is the highest of the two loves and the finer of them" (Iyāz, iv. 267). Like all mystics, Rābi'a looked for union with the Divine (wasi' al-rab) and in certain of her verses she says, "My hope is for union with Thee, for that is the goal of my desire", and again she said, "I have ceased to exist and have passed out of self. I have become one with God and am altogether His".

Rābi'a, therefore, differs from those of the early Sufis who were simply ascetics and quietists, in that she was a true mystic, inspired by an ardent love, and conscious of having entered into the unitive life with God. She was one of the first of the Sufis to teach the doctrine of Pure Love, the disinterested love of God for His own sake alone, and one of the first also to combine with her teaching on love the doctrine of Ghiyāf, the unveiling, to the lover, of the Beatitude Vision.

RABI‘ AL-DAWLA ABU MANṣūR ABU SHUQI MU‘AMMAD B. ‘ALI SHUQI —
When the vizier Abu Shuqī Mu‘ammad al-
Dawla Mu‘ammad b. Isḥāq [see the article ‘INASHTA, 3] Rabīb al-Dawla was appointed vizier of the caliph al-Muṣtaṣir [q. v.]. In Dhu l-Hadījā 511 (1118) the fourteen year old Mu‘ammad b. Mu‘ammad succeeded his father at Sallāhja, when, and when he was looking around for an able vizier, he was recommended to come from some one who had had the necessary training in the service of the caliph (min tarbiyat ‘al-ḥalīf), because there was no suitable man in the train of the young sultan. The choice therefore fell upon Rabīb al-Dawla who was at once summoned from Baghda to Isfahān and, as we know from al-
Bundari, proved himself in every way fit for his difficult task. But his tenures of office was of short duration: he died in Rabī‘ I 513 (June—July 1119); according to another statement he died as early as 512 (1118–1119).

RABI‘A or RABI‘A also RABI‘A (A.), suckling; as a technical term, the suckling which produces the impediment to marriage of foster-kinsman. It is to be supposed that the idea of foster-kinsman was already prevalent among the ancient Arabs (cf. Robertson Smith, Kinship and Marriage in Early Arabia, 2, p. 176, 196, note 1); this is evident from, among other things, the way in which the prescription of the Qur’an regarding this is interpreted in Tradition. In Sūra iv. 23, among the female relatives with whom marriage is forbidden are the foster-mother and the foster-sister. This must correspond exactly to the old Arab usage, which regarded blood-relationship also only in these two degrees as an impediment to marriage (cf. Robertson Smith, loc. cit.). But as the Qur’an in the passage quoted extends the circle of prohibited relationships beyond that of blood-relationship, foster-kinsman was treated accordingly contrary to the unambiguous language of the passage. To justify this, it is frequently thrown down in traditions, in keeping with the principle of the old Arab attitude, that foster-kinsman is an impediment in the same degrees as blood-relationship. The isolated case, which is decisive for the principle, that the prohibition of marriage with the daughter of a foster-brother, is brought into close personal relationship with the Prophet. Through the prohibition of marriage laid down in Tradition between the foster-children of two wives of the same man, relationship by marriage becomes included in foster-relationship, and in the tradition which expounds the verse of the Qur’an quoted, foster-kinsman is given among the impediments to marriage on the ground of relationships in law. As a justification for this prohibition it is stated that the semen genital (which the milk has produced) is the same; against the view that blood-relationship is not to be combined with foster-kinsman, so that the brother of the husband of the foster-mother is not to be regarded as a foster-relation, there is a polemic in a tradition (Kanz al-
Umālī, iii., No. 391). The question of the amount of suckling necessary to produce foster-relationship is a very old point of dispute; some traditions do not consider isolated suckings by the suckling or one or two acts of suckling as sufficient, others demand not less than seven acts of suckling, others again say that the child must be fed entirely; on the other side, one group of traditions says the prohibition of marriage is the same whatever the amount of suckling that has been given. There is even said to have been a case in the Qur‘ān which in the older, later abrogated, version demanded ten feedings and in the later version five. The case which was obviously only intended to support this view is not trustworthy (cf. Noldeke-Schwarz, Geschichte der Querant, t. II. 556 sqq.; Kanz al-
Umālī, No. 3, 953 sqq.). That the practice of suckling adults in order to establish an artificial foster-relationship existed is certain; it is recognised by several traditions and by others directly or indirectly denied (by the legal maxim: al-‘adqā‘a min al-madā‘a, “suckling demands hunger”), the chief case for the validity of such an act of suckling is described as a privilege granted by the Prophet personally (Kanz al-
Umālī, No. 3, 919) and even the suckling of children to establish an impediment to marriage is in an isolated case described as illegal (ibid., No. 3, 955). To prove foster-kinship many traditions are constant with the testimony of the foster-mother or with even without oath or with the testimony of a woman simply or with that of a man and of one woman; in refutation of this anomaly, obviously at one time permitted, another group of traditions dem ands the normal testimony of two men or of one man and two women. These points of difference found in tradition are continued in the differences of opinion among the old jurists. The views of the principal authorities are given in al-Shawkānī, Nafī al-
Awārī, Cairo 1345, viii. 113 sqq.
The most important new point in dispute, discussed in this later period but scarcely touched upon in the traditions, is the period within which foster-kinship can be established by a child; sometimes it is said to be the period till weaning, sometimes the whole of childhood without an exact limitation, sometimes the fixed period of two years, or 1½ or 3 or 7 years; for the period of two years the authority of the Qur’an is quoted, Sūra ii. 233 (“Mothers shall suckle their children two full years if they wish to carry through the suckling to its end”) (on the details cf. al-Shawkānī, op. cit., p. 120). The four regular Sunni law-schools are agreed that foster-relationship exists between a man and all his descendants on the one side and his nurse, all her foster- and blood-relatives, her husband and all his foster- and blood-relations on
of Râdhâpur, the capital of the state, has a total population of 11,235, of whom 3,694 are Muhammadans (1931 Census Report).

Bibliography: see bibliography.

(ROBERT DAVIES)

AL-RÂDĪ BI 'ILLĀH, ABU 'L-'ABBâS ÂHMâD (MUHAMMAD) b. MUQADÂS, THE TWENTIETH 'ABBâSîD caliph. He was born in Rabî' I 297 (Dec. 909); his mother was a slave named Zâlîm. He was proposed for the caliphate immediately after the assassination of his father al-Muqaddâs [q.v.], but the choice fell upon al-Kâbir [q.v.]. The latter had him thrown into prison; after the fall of al-Kâbir, he was released and put upon the throne (Djumâdâ I 1 342 = April 934). As his adviser in this difficult period al-Râdî chose al-Muqaddâs's vizier, 'Ali b. 'Ishâq [see the art. ÂHMâD al-MUQADÂS, 2] who however asked to be excused on account of his great age, whereupon Ibn Muqaddâs [q.v.] was given the office. The most influential official however continued to be Muhammad b. Vâqît [q.v.] and only after his fall in Djumâdâ I 343 (April 935) did Ibn Muqaddâs gain control of the administration, while the caliph Muqadâs fell completely into the background. But Ibn Muqaddâs's rule did not last long; in Djumâdâ I 344 (April 936) he was seized by al-Muazzâm b. Vâqît, brother of the above-mentioned Muhammad, and the impotent caliph had to dismiss him and in the same year summon the governor of Wâsit and Bayra, Muhammad b. Râ'îk [q.v.], to Bagdad and entrust him with complete authority as amir al-unârâ [q.v.]. This meant a complete breach with the past; the caliph was only allowed to retain the capital and its immediate vicinity and to abandon all influence on the business of government, while Ibn Râ'îk in combination with his secretary decided all the more important questions. Ibn Râ'îk held power for nearly two years; his name was actually mentioned in the khawâfa for the reinauguration dynasty along with that of the caliph; in Dhû l-Ka'dâs 326 (Sept. 936) however, he was replaced by Bedkâm [q.v.].

To the financial difficulties the caliph Muqadâs had to add the constant quarrels of the viziers and emirs there was now added war with foreign foes. In 343 (935) al-Râdî endeavoured to remove from office the governor of al-Mawâsir, Nâjîr al-Dawla [q.v.], but failed, and a few years later Bedkâm, accompanied by the caliph, attacked the Hamâdânâs in order to force them to pay tributes levied upon them; but had to make peace because the futile Ibn Râ'îk suddenly appeared in Bagdad. The war with the Byzantines was also continued; the Hamâdânâs however in this war came forward as defenders of Islam. In Egypt Muhammad b. Taqâdâm founded the dynasty of the Khâshâïds [q.v.], and at the same time Bedkâm had to fight with the Biyâids who were advancing on several sides and a few years later victoriously entered Bagdad.

In the capital itself al-Râdî had to take measures against the fanatics, the panûbâns (392 915), who had many followers among the common people and committed all kinds of excesses. They entered private houses, destroyed musical instruments, ill-treated women singers, poured away wine that they found, interfered in business, annoyed passers-by in the streets, beat Shî'is and generally behaved as arbitrarily as if they represented a kind of tribunal of the Inquisition.

Al-Râdî died in the middle of Rabî' I 329 (Dec. 940) of dropsy. The Arab historians praise his
pity, justice, clemency and generosity as well as his interest in literature and it is said of him, for example (Ibn al-Tikżski, al-Tabari, p. 380): "He was the last caliph, by whom a collection of poems exists, the last who retained his independence as a ruler, the last to preach a sermon from the pulpit on Fridays, the last to mix freely with his friends and to welcome men of learning, and the last who followed the principles of the earlier caliphs as regards rank, tokens of favour, servants and chamberlains". This characterisation may well be correct in its main lines but al-Radi was not independent; he was on the contrary a ready tool in the hands of his sitters and emirs.

RADIF. [See Redif.]

RADIJA. [See Redjia.]

RADJIB (A.), the name of the seventh month in the Muslim calendar. In the Dīkhiyta it introduced the summer half year until, as a result of the abolition of the intercalated months, the months ceased to fall regularly at the same season of the year [see al-Muḥākarram and Nāṣī]. The month was a sacred one; in it the 'umra [q.v.], the essentially Meccan part of the pre-Muḥammadan ceremonies of pilgrimage, took place. The peace of Allāh therefore prevailed in it; the forbidden war which was fought in Rājdāḥ between Kurāsh and Harāmūn and in which the young Muḥammad took part is called Ḥajjāb (perfidy) [q.v.].

In the Qur'ān, as recorded in the article al-Muḥākarram, only "the" holy month is mentioned and not the four which have become traditional from the sole reference ix. 36. If the reference in Surā v. 2 is to the 'umra we can therefore understand why the commentators in part identify the holy month mentioned in this verse with Rājdāḥ.

In Islam the month attained great importance through the memory of the Prophet's night journey to heaven which in later times was put on the 27th of the month (on the original dates see mī'raj). This night is therefore called Liqā' al-Mi'raj and is celebrated with readings of the legends of the ascension.

Bibliography: Welhausen, Keits arab. Hidlatinum, v. 77 sq.; al-Bīrūnī, Ahār, ed. Sachau, p. 50 sqq.; Juybūn, Handbuch der islamischen Gesch. 1916, p. 131 sq.; the works mentioned in the books and articles quoted. (M. Plessner)
and return in procession to Mecca (Ifadja). This last rite prepares the sexual deconsecration; the three others together abolish the prohibitions of the hadfi but the legists are not agreed on the order in which they have to be accomplished. The hadith say that the Prophet replied to the pilgrims who were worried, not having followed the order in which he had himself followed them: Ia Harunija: "no harm (in that)" (Bukhari, Hadīṣ, b. 125, 130 etc.). It is explained that the Prophet on this day of rejoicing did not wish to hurt the feelings of the believers. We may imagine that these 'Arab did not follow the customs of the Ka'bah and that Muhammad had neither the time nor the inclination to impose his own choice between the varying customs.

Muhammad began with the lapidation at al'Akabah. After the hadfi, the sacrifice and the ifadja, he returned to spend the night in Minā. Then on the 11th, 12th and 13th, he cast 7 stones at the three qamarūt ending with that of al-`Aqaba. The pilgrims imitating him ought therefore to throw 7 + (7 × 3) = 207 stones. But in general they take advantage of the liberty (ru'bah) given them by the hadith to leave Minā finally on the 12th and therefore only to throw 7 + (7 × 3) = 49 stones. It is probable that there was no ancient usage; the presence of the bodies of the sacrificial victims made Minā a horrible place. It is difficult to see how Wavell (Pilgrims, p. 202) threw 63 stones, i.e. (7 × 3) 3; this is however the number of victims which, according to tradition, Muhammad sacrificed with his own hand, one for each year of his life.

The stoning of al-'Aqaba is done on the 10th by the pilgrims in ifadja; those of the three days following by the deconsecrated pilgrims. The whole business is not a fundamental element of the pilgrimage (ru'bah).

Little stones are thrown, larger than a lentil, but less than a nut, what the old Arabs called baṣa (`-ḥadīf) which were thrown either with the fingers or with a little lever of wood forming a kind of sling (miṣk-hadda: Tirmidhi, iv. 123). A hadith forbids this dangerous game, which might knock out an eye but is not strong enough to kill an enemy: it must therefore have had something magical or pagan in its character. The stones have to be collected of the proper size and not broken from a rock. Gold, silver, precious stones etc. are condemned; but some texts allow, in addition to date-stones, a piece of camel-dung or a dead sparrow which we find are the means used by the women of the Djiłliya at the end of their period of isolation to remove the impurity of their widowhood and prepare a new personality. — It is recommended that the 7 stones for the lapidation of al-`Aqaba should be gathered at the maghar al-`baraw at Mundalifa, outside of Minā. As a rule the 63 others are gathered in the valley of Minā, but outside of the mosque and far from the qamarūt to avoid their having already been used (Ibn Taimiya, p. 347). Besides it is thought that stones accepted by Allah are carried away by angels. — Stones collected but not used should be buried; they have sometimes a sacred character which makes them dangerous.

The model pilgrimage of the Prophet fixed the time of the qamarūt al-`Aqaba for the day of the 10th. It shows him beginning the ḫadija of Mundalifa after the prayer at dawn (fātir) and casting the stones after sunrise. But by survival of an ancient custom more than for reasons of convenience other times are allowed by law. Al-Šāhī, against the three other imāms, permits the Akabah ceremony before sunrise (Rīfāt, i. 115); in general, the time is extended to the whole morning (fahmah), till afternoon (sunūf), till sunset, till night, till the morning of the day following: these infractions of the normal routine are stoned for by a sacrifice or alms, varying with the different schools. — The qamarūt of the three days of the tabassh take place in the sunūf; here again there are various traditions (Bukhari, Hadīṣ, b. 14). — In fixing the time of the lapidations that law has been endeavoured to avoid any Muslim rite, e.g. prayer, coinciding with one of the three positions of the sun by day, rising, noon, setting. A. J. Wensinck has shown (E.J., ii. 200) the probability of the solar character of the pagan ḥanif. —

Muhammad made his lapidation at al-`Aqaba from the bottom of the valley, mounted on his camel, turned towards the qamarūt, with the Ka'bah on his left and Minā on his right, standing at a distance of five cubits (eight feet). But there are other possible positions. — Rīfāt (i. 328) gives the qamarūt the following dimensions: 10 feet high and 6 feet broad on a rock 5 feet high (see the photographs, ibid.). It is said to have been removed at the beginning of Islām and replaced in 240 (854-855) (Azaφa, p. 212). — Muhammad made the lapidations of the other two qamarūt on foot, turning towards the ḥabb. In brief, the stones are cast in the attitude one happens to be in. The obliquity facing the Great Devil is explained to the nature of the ground, but it would also be in keeping with the idea of a curse cast in the face of a fallen deity. The position which makes the pilgrim turn towards the Ka'bah is due to the Muslim legend of the tempter Satan and to the rule of the tabāhir which will be explained below.

According to the ṣawma, the stones are placed on the thumb and bent forefinger and thrown, one by one, as in the game of marbles. However the possibility of the stones having been thrown together in a handful has been foreseen, and it was decided that this should only count as one stone and that the omission could be made good.

— The stone should not be thrown violently nor should one call "look out! look out!" (Tirmidhi, iv. 136), a pagan custom which the modern Beduins still retained quite recently (Rīfāt, i. 89). It seems that Muhammad put some strength into it for he raised his hand "to the level of his right eyebrow" (Tirmidhi, iv. 135) and showed his armpit (Bukhari, Hadīṣ, b. 141).

In Islām the casting of each stone is accompanied by pious formulas. It is generally agreed that the tabāhir is no longer pronounced at 'Arafa or at least before the lapidation of al-`Aqaba (Bukhari, Hadīṣ, b. 101); some writers however approve of it after al-`Aqaba. The takhli and tabsh are permitted, but it is the tabāhir which is recommended (Ibn Taimiya, p. 382); Bukhari, Hadīṣ, b. 138 and 143). The spiritual evolution of the rites even seen in this the essential feature of the rite, the throwing of the stone and the figure formed by throwing it by the thumb and forefinger forming an akh which represents 70, being no more than a symbolical and mnemonic gestures. The throwing of the stones was only instituted to cause the name of God to be repeated" (Tirmidhi, iv. 139).
To Ghasitil (Jhya', i. 192) it is an act of submission to God and of resistance to Satan who seeks to turn man away from the mystique of the kadjil but the rite is without rational explanation. The ghandi is a ghati i.e. 'the abode of the dead' (C. Goldsifer, Nichiyog, p. 252). — The devout man adds a prayer (dus) which is a ritual. The usual prayer is: Alhumdulilah jahadjiljil matbatun wuqatun mugh farun mawta wuqatun mughfarun "Lord, make this pilgrimage for me, pardon our sins and recompense our efforts!". There is, as matter of fact, a sudden halt, a waqf, before the two higher i.ganit, that at the second being especially long; the duration is calculated by the recitation of the Sura of the Cow (II), or of Joseph (XII), or the family of Imran (III) by the alternating indication in the hadith (Bukhari, Hadidji, b. 135, 136 and 137). This would take place of the ancient ceremony of imprecation.

The rules for the performance of these diverse ceremonies, especially as regards the number of stones thrown and the time when they are thrown ('Umda, iv. 767 sqq.; Riskit, i. 113), are punished by aoniments the exact nature of which the legists delight to vary from a victim to the giving of a mu'ad of food in alms.

The Muslim teachers have sought to explain the lapidations of Minni. Some exegists (e.g. Tabari, Tafsir, xxx. 167) have seen quite clearly that they represent ancient rites and have compared the rantsy of the tomb of Abu Ridjil. Others are known, for example at the well of Dhu l-Hulaifa (Lambman, Brillet, p. 94). The works quoted (E. L.) show the spread of this rite and the cases in which we are certain that it is a question of the driving away or the expulsion of evil; they might be further added to. Stones used to be thrown behind an individual whom one wished to return (Hamaghalia, Madinat, ed. Bairut, p. 23). At Alexandria, tired people used to go and lie down on the stones in order to throw the stones behind them on a pile "like that of Minni", it is possible that lapidations at one time followed the sacrifices which perhaps took place at 'Arafa and Muzdalifa.

Radjput, inhabitants of India, who claim to be the modern representatives of the Kshatriyas of ancient tradition. (From the Sanskrit radjaputra, a king's son). For the connection between Radjapsya and Kshatriya see Macdonell and Keith, Vedic Index, i., s. v. Kshatriya. The term Radjput has no racial significance. It simply denotes a tribe, clan, or warlike class, the members of which claim aristocratic rank, a claim generally reinforced by Brahman recognition.

The origin of the Radjputs is a problem which lies with difficulties. The theory which at present holds the field is that proposed by Bhanderkar, Smith and Crooke. According to this theory the Radjputs can be divided into two main classes, the foreign and the indigenous. The foreign clans, such as the Chahans, Cakukvas, and Gardjars, are the descendants of invaders of the Vth and VIth centuries of the Christian era. The indigenous Radjputs include the Radjhratkias of the Deccan, the Khaks of Radjputana proper, and the Candilas and Bundilas of Bundelkhand.

The theory that certain Radjput clans are of foreign extraction is chiefly based on Radjput legends and folklore according to which there are three branches of Radjputs: the Stradihans, or Solar race; the Candrahas, or Lunar race; and the Agni Kula, or Fire-group. The legend relates how the Agni Kula Radjputs, that is, the Chahans, Cakukvas, Gardjaras, Prathihars, and the Pramara, originated in a fire-pit around Mount Abu in southern Radjputana. From this it has been concluded that the four clans in this group are related and that the fire-pit represents a rite of purification by which the tint of foreign extraction was removed. Since these writers believed the Parhiars to be invaders of Gilja stock, it was concluded that the other three Agni Kula clans were also invaders.

According to Smith the Gardjaras were invaders who founded a kingdom around Mount Abu. In the time of the rulers of this kingdom who were known as Gardjaras-Prathihars conquered Kanaowj and became the paramount power in northern India about 800 A.D. Smith contends that the Prathihars were a clan of the Gardjara tribe. This seems to be the chief evidence produced by these writers for the foreign extraction of certain Radjput clans.

It seems wrong to base this theory of foreign descent principally upon the Agni Kula legend, for Waidya and other writers have proved this to be a myth. The first heard of in the Pratihara-raj-ras of the poet Cand who could not have composed this work before the Xth century A.D. Recent research has brought to light the fact that the inscriptions of the Prathihars and Chahans before the Xth century represent them as Solar Radjputs, while the Cakukvas are represented as of the Lunar race. The Agni Kula legend does not therefore deserve the prominence given to it by Smith and other writers. Even the contention that the Prathihars were a branch of the Gardjara tribe has met with much hostile criticism.

According to the orthodox Hindu view the Radjputs are the direct descendants of the Kshatriyas of the Vedic polity, but this claim is based on fictitious genealogies. The Kshatriyas of ancient India disappear from history and this can probably be explained by invasions from Central Asia which shattered the ancient Hindu polity. It is accepted that these invading hordes, such as the Yashch-i and Hinans, became rapidly Hinduized, and that
their leaders assumed Kshatriya rank and were recognized as such. Out of this chaos arose a new Hindu polity with new rulers, and the families of invaders which became supreme were recognized as Kshatriyas or Rādjputs. In later times many chiefs of the so-called aboriginal tribes also assumed the title of Rādjput.

It is therefore safe to assert that the Rādjputs are a very heterogeneous body and probably contain some survivors of the older Kshatriyas. A mass of legend arose assigning to the various septs a descent from the sun and the moon, or from the heroes of the epic poems. These are the legendary pedigrees recorded in great detail by Tod. The main argument which can be brought forward in support of the foreign descent of certain Rādjput clans is the incorporation of foreigners into the fold of Hinduism to which the whole history of India bears testimony. Even though the Agni Nāla legend be discredited it is still possible to argue that the Rāждputs are not a race. Anthropologically they are definitely of mixed origin. That some Rāждputs were of foreign origin can be proved by the acceptance of the Hīṇas in the recognized list of Rāждput tribes.

Whatever may be the origin of the Rāждputs we know that disorder and political disintegration followed the death of Harīṇa, and that until the Muslim invasions of northern India the chief characteristic of this period was the growth and development of the Rāждput clans. Except for about two hundred years, when the Gudjāra-Pratihāras were the paramount power in Hindūtāna, there was constant interference warfare between the various Rāждput kingdoms. This weakness considerably facilitated the Muslim conquest. It was not however until the days of Muhammad of Ghōr that the Rāждput dynasties in the plains were finally overthrown [see above, iii. 742²]. Driven from Dīhlī and Kanawīd they retreated into modern Rāждputāna where they eventually built up a strong position and were able to resist the Muslim invaders, for it cannot be said that the Sultans of Dīhlī ever really subdued the Rāждputs of Rāждputāna. Nevertheless, throughout this period there was constant warfare, fortresses and strongholds frequently changing hands. The Rāждputs nearest to Dīhlī were naturally the weakest because the eastern frontier of Rāждputāna was exposed to attack. The Sultans of Dīhlī appear to have realized the value of communications with the western coast and we find that the route between Dīhlī and Gudjārasth via Aḍāmūr was usually open to imperial armies. The chief menace to the Rāждputs was not from Dīhlī but from the independent Muslim kingdoms of Gudjārasth [q.v.] and Mālwā [q.v.]. The outstanding feature of the period from the end of the so-called Siāyid rule to the final invasion of Bābur was the growth of Rāждput power in northern India under Rāṅga Sangas of Mewār. Taking advantage of the weakness of the Lodis under Isāḥīm [q.v.] and of the war between Gudjārasth and Mālwā he had extended his sway over the greater part of modern Rāждputāna. The battle of Khaṇḍāna in 1527, when Bābur shattered his power, marks a turning-point in the history of Muslim rule in India, for the Rāждputs never again attempted to regain their lost dominions on the plains and contented themselves with remaining on the defensive. After Khaṇḍāna the place of the Sesodias in Rāждput politics was taken by the Rāṭhors, the growth of whose power under Malīdī of Mārwār was facilitated by the struggle between Humāyūn [q.v.] and Shāh Shihā. Akbār’s Rāждput policy was based on conquest and consolidation. The fall of Cītur and Rāntambhūr made him master of the greater part of Rāждputāna, with the exception of Mewār which was not completely subdued until the reign of Dīshāṅghī [q.v.]. The reversal of Akbār’s conciliatory policy produced the great Hindu reaction of Awaṅgāzēb’s reign, when, faced at the same time with the Rāждputs of the north and the Marāṭhās of the Deccan, Awaṅgāzēb [q.v.] was unable to concentrate on either campaign. But internal dissensions once more prevented the Rāждputs from taking advantage of the decline of Mughal power, and, in the second half of the eighteenth century, they proved no match for the Marāṭhās who easily overran their country. It was not until the beginning of the nineteenth century when the British were at war with the Marāṭhās that they entered into political relations with the Rāждput states. Before the end of the year 1818 the group of states which now comprise Rāждputāna had been taken under British protection.

To-day India contains 16,743,991 Rāждputs distributed throughout the country as follows: United Provinces, 3,756,936; Pandiāb, 2,351,650; Bihār and Orissa, 1,412,440; Rāждputāna, 660,516; Central Provinces and Bārāwar, 506,087; Gwalīn, 393,076; Central India, 388,942; Bombay, 352,016; Dījjam and Kāṣhumī, 356,020; Western India States, 227,153; Bengal, 156,978; Baroda, 94,893; and Haidārābād 88,434 [1931 Census Report]. It will be noted that in Rāждputāna only 669,516 Rāждputs are to be found out of a total population of 11,225,712. The states of Rāждputāna are ruled by Rāждputas, with the exception of Tonk which is Muslim, and Bhatāpur and Dholpur which are Bīsth. The chief Rāждput clans in Rāждputāna are the Rāṭhors, Kachhāwa, Chāhūnī, Dāledon, Sesodia, Powar, Parhār, Tonwar and Dījālī. Rāждasthāni is the mother tongue of 77 per cent. of the inhabitants of this area. It is interesting to note that in some parts of India Rāждputs have embraced Islām, as for example the Māṅbās, Kāṭís, and Salāhīs of the Pāṇḍūjī.

RAF. [See Rafa.]

RAF AL-DIN, Mawlāna Shāh Muḥammad, b. Shāh Wali Allāh b. 'Abd al-Rāṣīm al-Ḥaram (after the Caliph Omar b. al-Khaṭṭāb), was born in 1176 (1750) in Dihli, in a family which enjoyed the highest reputation in Muslim India for learning and piety, from the xviiith century onwards, and produced a number of eminent scholars up to the "Mutiny" (see Siddīq Ḥasan Khān, Ḥāfiz al-Nabūtā, Čawmān 1288, p. 296 sq.; J. A. S. B., xiiii. 310). He studied hadīth with his father, who was the most celebrated traditionalist in his time, in India.

After the death of his father in 1176, he was brought up by his elder brother Shāh 'Abd al-'Azīz (1159-1233 = 1746-1823) with whom he completed his studies in the usual sciences, being especially interested in hadīth, kalām and uṣūl. When about twenty, he entered upon his career as muftī and muhaddis, and later succeeded in these capacities his brother and teacher, who, in his old age, had lost his eye-sight, and had indifferent health. He died on the 6th Shawwāl 1253 (Aug. 9, 1838), at the age of 70 (lunar years), of cholera in his cells in the family grave-yard outside the city of Dihli.

He wrote about 20 works, mostly in Arabic and Persian, and a few in Urdu. He is praised for the subtlety of his ideas and the conciseness of his style. Among his works are:

In Urdu: 1. a translation of the Kur'ān, interlinear to the Arabic text, which it follows closely and faithfully. He and his brother 'Abd al-Kaḍīr [q. v.] were the pioneers in this field, though their work was considerably facilitated by their father, Shāh Wali Allāh's Persian translation of the Kur'ān (entitled Fath al-Raḥmān fi Tārīqat al-Kur'ān). The first edition of Shāh Raf al-Din's translation appeared in Calcutta in 1254 (1838-1839) and again in 1266 (1848-1850). For some of its numerous editions (from 1866 onwards) see Blumhardt, Cat. of the Hindustani Printed Books of the Libr. of the British Museum, London 1889, p. 290 sq., and the Supplement to the same, London 1909, p. 403.

In Arabic: 2. Ṭaḥthil al-Šīrāzī or Ṭaḥthil al-Ṣīnān al-Allāhm, dealing with a logic, b. taḥthil, i.e. principles of dialectics, teaching, learning, authorship and self-study; c. Malākhīn min al-ʿUghtār al-ʿArabiyya (some metaphysical discussions) and d. Ṭaṭḥil al-ʿArūs (i.e. an inquiry into the causes and the criteria: for judging conflicting opinions in religious matters). A portion of the work has been quoted in the Afzād al-Ulūm, p. 127-135 and 235-270; 3. Mahādīnat al-Šīrāzī; see Afzād al-Ulūm, p. 124: 4. Ṣīrāt al-Muḥabb, a discourse on the all-pervading nature of love; see Afzād al-Ulūm, p. 254: 5. Ṣīrāt Ṣūfī al-Nuṣr, a commentary on Sunn xxiv. 35: 6. Ṣīrāt al-ʿArūs wa l-ʿAḥādy; see Afzād, p. 915; 7. Danq al-ʾUṣūl, dealing with some abstruse problems of the ʿilm al-khābā; 8. a gloss on Mīr Ẓāhir al-Harāmī on Kūth al-Din al-Rāṣīs Ṣīrāt al-Tawḥīd wa l-ʿUṯūrīs (see Brockelmann, ii. 209); 9. ʿIṣāb al-Burāhn al-bismiyya "alā Ṣūr al-Ḥukmām". Nrs. 4-9 are unpublished.

In Persian: 10. ʿAḥādīs Nāmah (Lahore 1339; Haidarabad, undated ed.), on the last judgment, also called ʿAḥādīs Nāmah (see Browne's Supplementary Handlist, p. 189). For the two poetical versions, in Urdu, of this popular work, viz., Aḥādīs Muḥammad (chronogrammatic name, which gives 1250 as the date of composition), and Aḥādīs Muḥammad, see Spranger, Oudh Catalogue, p. 524, 4. Blumhardt, Cat. of the Hind. Printed Books, p. 335. A prose version, ʿAḥādīs Nāmah wā Dāʾl al-ʿArūs, is attributed to Blumhardt, loc. cit.; 11. ʿAlawī, Dihli 1322; 12. Majmūʿat al-Sīrāt, Dihli 1314, small treatises on religious and mystical topics; 15. Sharḥ al-Saḥāb bi-Sharḥ ʿAḥādīs al-Muḥfiz wa l-ʿArūs, an exegiustic work, covering ff. 2002 of a small size, in a MS. copy in the Dār al-ʿUlūm, Deoband, which institution also possesses the MS. of his 14. Lāfīf al-Ḥaqqat, a mystical work (ff. 32).

Bibliography: Besides the references given above, Mafṣūrat Shāh 'Abd al-Azīz Muḥaddith Dīkanā (composed 1233), Meerut 1314, p. 79, 83 sq.; Moḥammad b. Yāhiya (commonly known as Moḥammad b. Tirmiżī), ʿArbaʿiʿ al-Qanāt wa ʿAḥādīs al-Muḥfiz, ʿAbd al-Qanāt (litigous, on the margin of the Ṭabīʿ al-ʿĀra با  currentPage 256 Al-Rāṣīs ʿArūs al-Muḥaddith, and composed in Medina in 1280 (1863)), Deoband 1349, p. 75; Siddīq Ḥasan Khān, Afzād al-Ulūm, Bhopal 1295, p. 124, 914 sq., and other places mentioned in this article: Kārim al-Din, Farḥād al-Dārā, Dihli 1284, p. 125; ʿAbd al-Azīz al-Siddīq Khān, Dihli 1370, p. 156; ʿAbd al-Muḥammad Dīkanā, Hadīḳ al-Maḥāṣiyā, Lucknow 1891, p. 469; Shāhīn, Alī, Tashkhabār (litigous, to Hill), Lucknow 1914, p. 66 (and p. 4, 24, 51, 65, 232, 276 for notices etc. of the Shāh's sons and pupils); ʿAbd al-Din Muḥammad, ʿAbd al-Qanāt Dīkanā, Agra 1918, ii. 588 sq.; Gérard de Tassy, Histoire de la littérature Hindoue et Hindustanien, 2nd ed., Paris 1870, ii. 548 sq.; Saksena, History of Urdu Literature, Allahabad 1927, p. 233; Muṣāfir (an Urdu monthly published from Agra, India) for Nov. 1928, p. 344 sqq.; The Oriental College Magazine, Lahore (an Urdu quarterly) for Nov. 1925, p. 42-49 (life, including a biog. notice from the unpublished Nasihat al-Ḳaṣāmī by Maj. 'Abd al-Ḥaqq al-Lucknow, and a list of works). (Muḥammad Shāṭī)

AL-RĀḠĪB AL-ISFĀHĀNĪ, Abū l-Kaḍīr al-Ḥusain b. Muḥammad b. al-Maṭāwūṣ (according to others: al-Falāḥ, al-Suyūṭī, etc., wrongly: al-Muḥaddith b. Muḥammad), a Persian and Arabic writer, of the details of whose life nothing is known beyond that he died at the beginning of the xivth (xvith) century, perhaps in 502 (1598). Some regarded him as a Muʿtaṣib but Fakhr al-Din al-Rāṣīs in his Asaṣ al-Ṭabīʿīs established his orthodoxy. His work was concerned with Kurʾānic exegesis and edifying literature. His studies on the Kurʾān from which al-Baḥṣtī is said to have taken a great deal were opened with a Niṣābat munabbahāta ʿAbd al-Qanāt al-Kurʾānī now lost, perhaps identical with the Muḥaddīdat al-Taḥṣīr, pr. at Cairo 1299 at the end of ʿAbd al-Dżubbar's Tāmāṣī al-Kurʾānī amīr l-Muṣṭafī. He next compiled an excellent dictionary of the Kurʾān arranged alphabetically according to the initial letters entitled Rūżt Maṣāgāt al-ʿAḥādīs al-Kurʾānī, which in addition to the MSS. mentioned in G. A. L., i. 289, survives in many others in Stambul (see e.g. M. O., vii. 106, 127) and in Bankipore (Cat. xviii. 1484) and under the title Muṣāfāt al-Sīrāt al-Kurʾānī is printed on the margin of Ibn al-Athīr's Nihāya, Cairo 1322 and edited by Muḥammad
RAGUSA (Raguse), a town in Dalmatia, formerly a free state (now Dubrovnik), on the south side of a peninsula which runs out into the Adriatic, picturesquely situated (50 feet) at the foot and on the slopes of Mount Sisari with about 14,500 inhabitants, mainly Croats, was founded in the viith century by Romance fugitives from Epidauros which had been destroyed by the Slavs, later belonged to Byzantine Dalmatia which had been settled by a Romance population. At the end of the tenth century the town, which had become strong and rich through its prosperous maritime trade, was paying homage to the Venetians under whose suzerainty it remained after various interludes continuously from 1204 to 1358. In this year Ragusa passed to Hungary and soon attained such power through its flourishing trade that it formed a free state with an aristocratic form of government. Authority was in the hands of the nobles (Grand Council) who chose the Senet (45 members). The latter chose the Little Council (10, later 7 members) which chose every month a Rector (rector) as head of the state. Al-Idrisi [q. v.] mentions Ragusa in his Kitab al- 
Ragusa as رومة (other readings: روما) and is evidently quoting Frankish sources (cf. thereon Wilh. Tomashcz, Zur Kunde der Himmelskunde I: Die Handelswege im XII. Jahrh., nach den Erkundungen des Arabers Idrisi, Vienna 1887 = S. B. Ak. Wiss., phil.-hist. Kl., vol. exilii, fasc. i). In the Ottoman period the Slav name Dubrovnik is found exclusively, in place of Ragusa.

Ragusa's relations with Islam, at first completely hostile, go back to a remote date. When the Arabs in the ninth century conquered Sicily and established themselves on the mainland in Bari (Apulia) they besieged Ragusa on one occasion which defended itself bravely and was relieved by the navy of the emperor Basil I (867-886). Under the emperor Romanus III (1028-1034) the Ragusans distinguished themselves in the seafights between Byzantines and Arabs. It was not till a later date that relations became more peaceful when Ragusa commenced, which extended to Egypt and Syria, to Tunis and as far as the Black Sea, began to flourish. As early as the 13th century, corn was exported to Ragusa from the harbours of Anatolia and the relations to the petty states (farsı-fı mülür) in Anatolia were well established. The first documented relations between Ragusa and the Ottoman empire belong to the period of Bayazid I. Yildirim (1380-1402; q. v.) as the relations of the free state to Ortkan [q. v.] and Murad I [q. v.] mentioned in later Ragusan histories will not bear serious investigation. It is however certain that at quite an early date it became necessary for the Ragusans to remain on good terms with the Ottomans, who were advancing westward, for the sake of their trade. They were able to deal with tact and skill with their new neighbours, Ragusan trade in Turkey developed considerably as being present among the many frontiers and customs offices of the numerous petty rulers of the Balkans, who had been disemboweled by the Turks, disappeared and the Turkish duties were uniform and low. Articles manufactured in Ragusa itself, like cloth, metal, soap, glass, wax etc. or goods imported from Italy for the Balkan peninsula were taken into the interior on safe roads. There was a caravan trade which went from Ragusa via Trebinje, Tien...
RAGUSA

1699

tiste, Foča, Goražde, Plevlje, Prijeponje, Trgovitse, Novibazar [q.v.], Niš, Sofia, Philippopolis to Adrianople and later to Stambul (cf. C. J. Jirecek, Die Handelsstrassen und Bürgerwe von Serbien und Bosnien während des Mittelalters, Fray 1879, p. 74 sqq.: Von Ragusa nach Niš). In the interior of the Peninsula there were the factories of the Ragusans like Rudnik, Priaren, Novo Brezo, Priština, Zvornik, Novibazar, Skopje, Sofia with many other settlements extending as far as the mouths of the Danube. On May 12, 1392 the Little Council of Ragusa gave the nobleman Teodoros Gislia in Novo Brezo orders to travel to the Turkish sultan and to make representations about the capture of some Ragusan merchants. There is a Turkish safe-conduct (littera securitatis) of June 20, 1396 prepared for Ragusan merchants. In 1397 Sultan Bajazid I allowed the Ragusans to trade unhindered in the Ottoman empire, and a few years later (1399), the first Ottoman embassy led by Kefalija Feriz (Fritza-Beriz) arrived in Ragusa from the citadel of Zvečan (in Kossovo) (cf. F. v. Kraelits-Greifenhorst, cts. cit., p. 7). The first embassy from Ragusa to the Sublime Porte was however not sent until 1430. It was received by the sultan in his court at Adrianople and received from him the first extant charter of trading privileges, dated Adrianople, Dec. 6, 1430 (cf. Ciro Truhelka, Turkolobijski spomenici dobrovski arhiva, in Glavnik srpskog natjecanja u Barini i Herzegovini, Sarajevo, vol. xxii. [1911], No. 2). To protect her widespread trade on the Balkan Peninsula Ragusa, after the first temporary conquest of Serbia by the Ottomans, founded herself to force the Porte an annual present of 1,000 ducats in silver plate (argentum) but when Georg Brankovic restored the independence of Serbia in 1444 this promise was promptly withdrawn, on the final subjection of Serbia by the Turks in 1459, this tribute (kharidi) became a regular institution. From 1459 it was 1,500 ducats and gradually increased to 15,000 ducats. From 1481 it was 12,500 ducats and was annually brought to the Porte by special oratores tributi with very detailed instructions (cf. the text of one of these commissiones for the Paladino Marino de Gondola and Pietro di Lucarelli of 1458 and of a later one for the ambasciador del tributo Giov. Mari de Resti of 1572 in Lajo knj. Vojnovic, Dubrovnik i romanice carstva. Prva knjiga: Od prvog ugovora s portom do unutnjica Herzegovine, Belgrad 1898, p. 118—155 and p. 256—266); cf. C. J. Jirecek, Die Bedeutung von Ragusa etc., note 49. A number of the earliest documents relating to these missions have been published by F. Kraelits-Greifenhorst, in his Osmanische Urkunden in türkischer Sprache aus der zweiten Hälfte des XV. Jahrhunderts (= S. E. Ab. Wiss., phil.-hist. Kl., vol. 197, Vienna 1923); they come without exception from the archives of Ragusa, part of the Turkish portion of which is still present in Belgrade.

On their journey the envoys had to give kinds of presents, for example to the Sandjak bey of the Herzegovina in Sarajevo [q.v.] and the Beglerbeg of Rumelia whose headquarters were in Sofia. The readiness with which the Ragusans adapted themselves to the requirements of dealings with the infidel Turks did not at first find approval at the Holy See. Paul II in 1468 gave the Ragusans permission to trade with the heathen Ottomans (cf. W. Heyd, Histoire du commerce du Levant, ii., Leipzig 1885, p. 347 sq, with further references to Ragusan trade with the Ottomans). The lands of the free state of Ragusa which stretched from the mouth of the Narenta to the Gulf of Cattaro (Kotor), thanks to the skillful policy of its leaders, thus remained intact till its end in 1808. Only occasionally the Ragusans had to suffer from the covetousness of Ottoman rulers, e.g. about 1667 when Khan Mustafa [q. v.] demanded from the Ragusan envoys 150,000 talers "blood money" for the Dutch ambassador G. Crook who perished in the great earthquake in Ragusa (April 6, 1667) (cf. J. v. Hammer, G. O. R., vi. 203 sq), or when ten years later the same grand vizier endeavored to extort the same sum and threw the ambassadors of the free state into prison (cf. J. v. Hammer, G. O. R., vii. 346 sq). When Ragusa had fallen several years behind with the tribute, it had to in 1695 to pay a considerable sum in compensation (cf. J. v. Hammer, G. O. R., vi. 616). In 1722 a similar case occurred (cf. J. v. Hammer, G. O. R., viii. 512 sq) when the tribute was three years in arrears. It is to be noted that Ragusa cunningly used every opportunity to avoid its oppressive obligations (cf. the significant saying in the Levant quoted by van Hammer, G. O. R., vii. 29. Non siano Christiani, non siano Ebrei, ma siano Ragusi), until the peace of Karlowitz (1699) made it possible for the Ottomans to collect the tribute again (cf. J. v. Hammer, G. O. R., vii. 29). From 1703 it was paid every three years and in 1804 delivered for the last time in Stambul by the envoys Paul Goeze and Blasius Menze.

In the Turkish wars of 1683—1699 and 1714—1718 the Venetians occupied the hinterland of Ragusa and Trebinje but at the peace of Karlowitz and Passarowitz the Ragusans, protected by Austria and the Porte, negotiated so skillfully that Turkey was not only left the land as far as the Ragusan frontier but also two strips of territory on the coast (Klek and Sutorina) so as not to become direct neighbours of Venice. This was the last great coup of Ragusan policy.

With the decline in Ragusan trade, which came about for the same reasons as the general decline of Italian trade in the Levant, the political decline of the republic set in. In 1808, Napoleon sent General Marmont, afterwards Duc de Raguse, to dissolve the Senate and a year later made Ragusa a province of Illyria. In 1815 the town passed to Austria and since 1918 it has belonged to Jugoslavia.

The Ottoman traveler Ewlija Celebi [q. v.] in his Sürküste (vi. 443 sqq., esp. p. 445—453) gives a full description of Dobro Vinozk which he contrasts with Brunokulj Vinozk, i.e. Venice (cf. on these terms F. Babinger, Aus Südtürkischen Türkenschriften, Berlin 1927, p. 38 note and H. v. Milk, Beiträge zur Kartographie Albaniens, in Geographische Zeitschrift, vol. 3, Leipzig 1922); they come without exception from the archives of Ragusa, part of the Turkish portion of which is still present in Belgrade.

Statistics regarding the population of Ragusa in the older period are not available. The town had 800 houses. The whole district had 50,000 inhabitants. With the prosperity and long period of peace, a literary life began; poetry — Latin
and Slav — was definitely cultivated from the end of the 18th century. Latin was used in the offices for over 1,000 years, in recording the proceedings of the Senate till 1808. Within its walls Ragusa frequently sheltered illustrious fugitives from Turkish persecution (e.g. Skanderbeg).

Ragusa had busy commercial relations with other Muslim states besides Turkey. In 1510 for example, Ragusa received from Kânsîl ad-Dîhirî [q.v.], the Gran Colle of trade, the privilege of a safe conducts protection and freedom (cf. Giacomo Lucchieri, *Copia nelle istanzioni dell'Assisi di Ragusa, Venice 1605*, p. 136 and thereon Fr. M. Appendini, *Nelitalia nelle istorico critiche antichità, storia e letteratura de' Ragusini*, Ragusa 1802, i. 213 with erroneous conclusions). The relations were, it is true, not always of a peaceful nature as the "state of war" in 1194 (1780) between Ragusa and Morocco showed (cf. thereon F. Bähringer, *Ein marokkanisches Staatsaktchen an den Freiherrn de Ragusa vom Jahre 1780*, in *M.S.O.S., 31*, Berlin 1927, part ii, p. 101 sqq. and ibid., XXXI, p. 98 sq.). The archives of Dubrovnik contain further unpublished Moroccan documents of the end of the 18th century, e.g. a government document of the 9th Rabi II, 1119 (April 4, 1781).

**Bibliography:** In addition to the works mentioned in the text cf. also the older travellers in so far as they describe the road through the Balkan Peninsula (Slavonia), especially Jean Chenu, *Les Voyages de Monseign A Râvan* (1547), Paris 1557, ed. by J. de Sclier: *Sieur D'Ex Hayes de Courmemin*, *Voyages du Lombarde et fait par le commandement du roy en l'année 1622 par le Sieur D.C.*; Paris 1632; and French translation *Voyage de Dubroton, de Grèce et du Levant*, Amsterdam 1669, 2 vols. — A scholarly account, particularly one based on the documents, of the relations of Ragusa with the Ottoman Empire is still lacking as is a full commercial history of the republic. — The principal work on the history of Ragusa is the *Geschichte des Freiherren von Ragusa, Vienna 1807*, by Johann Christ. v. Engel (1770—1814). On other relations between Ragusa and the lands of Islam see Vladimir Malinovski, *Studien über die Islamischen Spiele, Die X. bis zur XIV. Jahrhundert*, transl. into German and publ. by Camilla Lucerna, Zagreb-Leipzig 1928, 55 sqq. A work which however does not on every point stand the test of strict examination. — On the coinsage of Ragusa see Milan v. Rešetar, *Dubrovacka numismatike, 2 parts, 1924—1926*. — Of the Ragusan historians of the older period in addition to S. Razi, *La storia di Ragusa, Venice 1585 and Jun. Resti, *Chronica Ragusina (in the Monumenta Slav. Merid., vol. xxx., Agram 1893), Giacomo di Pietro Lucarei [= Jakov Lucarović (1551—1615)] most deserves mention, but a thorough study of the probably unreliable sources of his *Copia ristretto degli annali di Ragusa (Venice 1605, 3*, 176 p., 4° and Ragusa 1700, 331 p., 8°) is still a desideratum (cf. for the present Vl. Malinovski, *Studii dubrovacka historika Jakovu Lukaroviću, in Narodna Starina*, Zagreb 1924, No. 8, p. 121—153. — An excellent and exhaustive bibliography on Ragusa is given in: the introduction to the work of Ivan Dujčev, *Avvisi di Ragusa, Documenti sull’Impero turco nel secolo XVII e nella guerra di Cambria*, Rome 1935, which is also of great importance for the history of relations between Ragusa and Turkey. — There is no collection or edition of the surviving reports of Ragusan envoys on their journeys to the Porte on the lines of the long available Venetian relations. The only possible exception is the *Relazione della visita della religione musulmana in parte dell’Europa sottoposta al dominio del Turco di Matthias Gumulic* (Gondola) who was in Turkey for 28 months until July 1674 written in Rome in 1675, ed. by Banduri, *Imperium Orientali, Paris 1711*, vol. ii.: *Ambassadore in Constantin. Persiphragen. de administratione imperii*, p. 99—106 (cf. thereon in *Periodotikos Spisanie* di Balar, i. 65, who did not know this edition and published extracts from another manuscript). Nor is there a list of these: *envoyes available (cf. J. von Hammer, G. O. E., ix. 318) among whom we find representatives of almost all the noble families of Ragusa, like the Bona, Caipha, Gozze, Gondola, Menze, Pozza, Resti etc. Ragusa being a tributary country the Porte never sent ambassadors to it but only commissioners (cf. J. v. Hammer, G. O. E., ix. 331). So that we have no Turkish reports at all.

(Franz Babinger)

**AL-RAHBA, RAHAT MALLI R. TAWF 132 OF RAHAT AL-SHAM, A TOWN ON THE RIGHT BANK OF THE EUFRAITES, THE MODERN AL-MILHÁL.**

Hardly anything definite is known about the history of the town before the Mamluk era. In the middle ages it was usually identified as the Rihbih-n-Nâhir of the Bible (Gen. XXXVI. 37) i.e. Rihbâhit on the river (Euphrates) especially in the Talmud and by the Syriac authors (e.g. Mich. Syr. cf. index, p. 63): Barhebræus, Chron. syr., ed. Bedjan, p. 273 and passim), who usually call it Reheb, Rahbat (M. Hattmann, in Z.D.P.W., xxiii, p. 42, note 3). A Must (The Middle Euphrates, New York 1927, p. 340) takes it to be the Thapsakos of Ptolemy, which he — certainly wrongly — wants to distinguish from the well-known town of the name at the bend of the Euphrates (ibid., p. 315—326) instead of seeing only an erroneous location by the Alexandrine geographers (cf. the article Thapsakos in Pauly-Wissowa, K.E., v, A. col. 1272—1280). The name al-Rahba is explained by Yakút (Mu'sjam, ed. Wüstenfeld, ii. 764 following the grammarian Najjar b. Shumail) at the flat part of a wash, where the Tigris collects (Escalera, Archäologie, Reise im Euphrat- und Tigris-Gebiet, Heft 32; cf. A. Socin, in: Z. D. P. W., xxii. 45).

According to Arabic accounts it was at one time called Furdat Nu'um (al-Tahari, ed. de Goeje, i. 917) or simply al-Furd (Ibn Miskawsh, Tabikhir, 1100)
AL-RAHJA

ed. Caetani, p. 87) in the vicinity was a monastery, Dair Nu‘m (Yākūt, ii. 704; iv. 297).

According to al-Ra’ilīt (ed. de Goeje, p. 180), there was no evidence that al-Rahba below Karbisiya was an old town; on the contrary it was only founded by Mālik b. Tawāk b. Ātālah al-Taghlib (cf. Abu l-Maḥmūd, ed. Popper, ii. 34) in the caliphate of al-Ma’mūn (813–833) (a legendary embellishment of the story of its foundation by ‘Umar al-Bishāmī in Yākūt, ii. 764). The new foundation was in the form of a long rectangular head cloth (palasūn). After the death of its founder (Ibn al-Athir, ed. Tornberg, v. 188) in 860 (873–874) he was succeeded as ruler of the town by his son Ahmad who however was driven out of it in 883 by Ibn Abi l-Sālih, lord of al-Anāb, Ţarīk al-Furāt and Raḥbat Tawāk (al-Tubah, iii. 2030).

The Karmaṣṭān Abū Tāhir took the town on March 3, 928 and killed many of its inhabitants (Ibn Khurāṣwāl, Talqārīt, ed. Amedroz, i. 182 sq.; al-Maqrīzī, viii. 364 sq., in G. ed. Ibn al-Athir, iii. 132); ʿArīb, ed. de Goeje, c. 134). In the following decades the town suffered much from civil wars until Abī, who had been sent from Baghdad by Baḍjikm, in 350 (941–942) took possession of the town and the whole province of Ţarīk al-Furāt and a part of al-Khārij (Ibn al-Athir, viii. 266 sq., 295). In the reign of the Ḥamānīd Nāṣir al-Dawla the Taghlibi Dājmān rebelled in al-Rahba, and the town suffered very much; he was finally driven out and was drowned in the Euphrates (cf. c. iv., p. 357 sq.). After the death of Nāṣir al-Dawla (358 = 966) his sons Ḥamdūn, Abu l-Barakāt and Abū Tawāk disputed for the possession of the town which finally fell to the last-named, who had its walls rebuilt (Ibn al-Athir, viii. 437 sq.). He lost it again in 368 (978–979); it then passed to the Būyid ʿAbd al-Dawla (Ibn al-Athir, viii. 511 sq.). Ḥaḥāl al-Dawla in 381 (991–992) at the wish of the inhabitants appointed a governor to al-Rahba (Ibn al-Athir, iv. 64). Six months later possession passed to Abū ʿĀli b. Thāmil al-Khāṣfārī who was killed by the ʿUkaidī Isā b. Khālid in 399 (1008–1009). The latter in turn was defeated by an army sent by Abī al-Ḥakīm from Egypt and slain. The ʿUkaidī Baḍr b. Mākāliwād was, it is true, able to drive back the Egyptian army but ʿArnūn of Damascus soon afterwards brought al-Rahba and al-Rahba into Egyptian power.

A citizen of the town, Ibn Maḥnān, next made himself its independent master and also took ʿAnā, an enterprise in which the Ḥaḥālī ʿAbd b. Mirjān of al-Hilla at first supported him but later killed him in order to make himself master of al-Rahba (Ibn al-Athir, ix. 148; Ibn Ḥaldūn, Ṭabar, ed. Būlāq, iv. 271). Between 447 (1055) and 450 (1058) Anšān al-Basāṣīt (q.v.) fled to al-Rahba in order to join up with the Egyptian caliph al-Mustanṣir from there (Yākūt, i. 608). ʿAbdī’s son, Thāmil, later lord of Ḥaḥāl, followed him in possession of the town (Ibn al-Athir, ix. 163). In the spring of 1060 his brother ʿAbdī (Ibn al-Athir, x. 8) captured it. He was driven from Ḥaḥāl in 1065 by his nephew Maḥmūd, but remained lord of al-Rahba, A’sā, Ṣambābī and Būlāq (Kamāl al-Dīn, Ḥikāya Maqādisi, transl. J. J. Müller, p. 59). To the district of al-Rahba at this time (1063) there also belonged al-Khāṣṭa, Karbisiya and Dūwāra (Ibn al-Kalānīst, ed. Amedroz, p. 116). Malikṣabṭ in 479 (1086–1087) granted al-Rahba with the country round it Ḥarrān, Sarārī, al-Rahba and al-Khāṣṭa to Muhammad b. Shams al-Dawla (Ibn al-Athir, x. 105). In 480 (1090) Karbisiya of al-Hilla seized and plundered the town (Ibn al-Athir, x. 177). After his death it passed (1103–1105) to ʿAlaʾ b. ʿAlāʾ, a former general of Alp Arslān, then to the Turk ʿAlāʾ. It was taken from him by the sultan of Damascus who sent the Shabinīd Muṣḥin b. al-Sabbāk to govern it (Ibn al-Athir, x. 249). On May 19, 1107 Dūwār, the general of Imād al-Dīn Zaghlī, took the town through treachery (Ibn al-Athir, x. 297; Ibn al-Kalānīst, ed. Amedroz, p. 156 sq.; Michael Syrūs, transl. Chabot, iii. 193; iv. 529; Barbehaeus, Chron. syl., ed. Bedjan, p. 273; Iṣṣ al-Dīn Maṣʿūdī b. Ḥabšī took it in 1127 shortly before his death (Ibn al-Athir, x. 360 sq.; Mich. Syr., iii. 228 = iv. 610; Barbehr, Chron. syl., p. 287). His successors killed one another fighting for the succession and al-Rahba then passed to Iṣṣ al-Dīn’s young brother for whom Dūwār governed it as vassal of ʿAlāʾ (Ibn al-Athir, x. 453 sq.; Ḥabšī al-Dīn, son of ʿAlāʾ, in 544 (1149–1150) occupied the town (Ibn al-Athir, xi. 93). On Aug. 12, 1157, al-Rahba with Hamān, Salamiya and other towns were destroyed by an earthquake (Ibn al-Kalānīst, ed. Amedroz, p. 244; Mich. Syr., iii. 316; Barbehr, Chron. syl., p. 325 sq.). The Ḥaḥālī tribe who in 1161 had plundered the district of al-Hilla and al-Kūfā returned to Raḥbat al-Saʿūm followed by the government troops where they were reinforced by other nomads and scattered the enemy (Ibn al-Athir, xi. 182 sq.). Nūr al-Dīn granted the Kurd ʿAbd al-Dīn Shirkh b. Ḥamdūn. Shirkh built al-Rahba al-Dīdīa with a citadel about a tawāk (3 miles) from the Euphrates because of the town of Rahba Malik b. Tawāk was now in ruins (Abu l-Tawāk, Taḥṣīn al-Bulūk, ed. Reinsch, p. 281; Ḥaḥālī Khālid, Liḥām-nawām, Stambul, p. 444). The new town of al-Rahba became an important caravan station between Syria and the Iraq, as we learn from Ibn Baṭṭūtā among others (Ṭṣafī, ed. Defrémery and Sanguinetti, iv. 315) who travelled from there via al-Sukhna to Tadmur.

The town remained for a century in Shirkh’s family until in 1264 Balbars installed an Egyptian governor there (Ibn al-Athir, xi. 341; xii. 189; Abu l-Tawāk, Anmales Musulmān, ed. Reinsch-Adele, iv. 142; v. 16). Sonkor al-Ashkar of Damascus who rebelled against Kalānāt in 678 (1279) fled after a defeat to al-Rahba to the emir ʿIsā and from there appealed to Abaqa for protection (Barbehr, Chron. syl., p. 543).

The Mongols under Khārbānā besieged al-Rahba in 712 (1312–1313) on their way to Syria. On his return Khārbānā left his siege-artillery behind; therewith it was taken by the defenders of the town into the citadel (Abu l-Tawāk, v. 268 sq.; al-Hassan b. Ḥalb b. ʿUmar, Durraṯ al-Aṣlāh fi Dūwār al-Aṣlāh, in H. E. Weijers, in Orientalis, Bluëmbul, ii., Amsterdam 1846, p. 319). Its governor at the time, Ibn al-Arkashti, died in 715 (1315–1316) in Damascus (Abu l-Tawāk, v. 300). Muhannya and his family, the ʿIsā, were driven from the district of Salamiya in the spring of 1320 and pursued by the Syrian troops as far as
Rahba and ‘Ana (Abu ‘l-Fidā‘, v. 340 sq.); the town was perhaps destroyed on this occasion.

In 1331 the Euphrates inundated the country round al-Rahba (Ibn al-Athir, Vienna MS. in Musul. The Middle Euphrates, p. 3, note 3).

According to the Muslim geographers, al-Rahba lay on the Euphrates (Kadāma, in B. G. A., vi. 233; al-Makdisi, in B. G. A., iii. 138; al-Iṣākāri, transl. Jaubert, ii. 137 sq.; al-Dimīqāsh, ed. Meuren, p. 93; Abu ‘l-Fidā‘, ed. Reinard, p. 51) and also on the canal Sa‘d colored from it at Fām Sa‘d on the right bank, which rejoined the Euphrates below the town, the gardens of which it watered, and above al-Dilāyā also called Dalliyat Mālik b. Tawāk (Suhra, ed. v. Mālik, in Bibl. arab. Heiter, u. Geogr., v. Leipzig 1930, p. 125; Yāhūn, iv. 840; Abu ‘l-Fidā‘, Ta‘līqān, p. 281). The town lay 3 farsāhs from Karkisya (al-Azīzī, in Abu ‘l-Fidā‘, ed. Reinard, p. 281) and, according to al-Makdisi (B. G. A., iii. 149), a day's journey each from this town, al-Dilāyā and Birā (the latter statement is quite inaccurate; cf. Musul, op. cit., p. 55 sq.), Musul (ibid., p. 250) wrongly takes al-Dilāyā, but al-Jāmī states that it is impossible as 8–10 miles above it the Euphrates flows close to the foot of Djaabal Abu ‘l-Kāsim, so that the Sa‘d canal must have flowed north of it back into the Euphrates (cf. the Karte von Mesopotamien of the Prussian Survey, Feb. 1918, i. 400,000, sheet 35). An: Cenom., Feuilles de Douro-Europes, Paris 1926, Atlas, pl. i: Cours de l'Euphrate entre Cirencester et Douro-Europes, on the scale and the maps in Sarre-Hersfeld, Arch. Reis, The town of al-Rahba was a Jacobite bishopric (a list of the bishops in Mich. Syr., iii. 502), but for a time at least — also a Nestorian bishopric is shown from a life of the Katholikos Elyáš I. (In this case Bauckert, Geschichte der syr. Literatur, p. 286 sq.) who shortly before his death on May 6, 1049 appointed a bishop to this town (Assemény, in B. O., iii. 263).

In the statements of the Arab geographers, it is mentioned that the old Rahbat Mālik b. Tawāk lay on the bank of the Euphrates (al-Iṣākāri, in B. G. A., i. 15, 17; Ibn Hawāqal, B. G. A., ii. 15, 17; al-Makdisi, B. G. A., iii. 138; Yāhūn, Medīqm, iii. 860; Ibn Khairāldāh, B. G. A., vi. 233) i.e. presumably corresponded to the modern al-Miyādīn (plur. al-muddāin) (G. Hoffmann, Auslegung aus syr. Akten pers. Mārtwyre, p. 165; E. Hersfeld, Arch. Reis, ii. 382, note 14; A. Musil, The Middle Euphrates, p. 3, 253, 340) while the new al-Rahba, as we saw, was built a farsāh from it, where in the S. W. of al-Miyādīn there still are the ruins of the citadel al-Rahba or Rahba. According to Abu ‘l-Fidā‘ (ed. Reinard, p. 281), towers were still standing among the ruins of the old Euphrates. Opposite al-Rahba on the left bank of the Euphrates stood a fortress, taken by Marwān II. (744–750) in the fighting with Hājjām (Mahbūb of Manbij), Kitāb al-Umār, ed. Vasiliev, in Patr. Orient, vol. viii. 517 sqq.) in this fortress Musul (op. cit., p. 338 sqq.) has recognized al-Zalī‘a (al-Dilāyā, ed. De Goeje, p. 180; Tabāth, ii. 1467 sqq.; Ibn Khairāldāh, p. 74) and the ancient Zāqā which is still called al-Murswāyna after this caliph, but really is not opposite al-Miyādīn, but fourteen miles farther down.

Ibn Hawāqal (B. G. A., ii. 155) praises the fertility of the well-watered region of Rahba, where the orchards on the east bank of Euphrates also produced date-palms; their quinces were also famous (al-Makdisi, in B. G. A., ii. 145). The Karte von Mesopotamien (1 : 400,000) marks at "Majdīk" "the first (most northerly) palm". Dates really only ripen in specially favourable weather in the region of Albu Kamāl (Musul, op. cit., p. 342). According to al-Iṣākāri (B. G. A., i. 77), Rahbat Mālik b. Tawāk was larger than Karkisya; al-Makdisi (B. G. A., ii. 142) calls it the centre of the Euphrates district "(anāl al-Furā‘ or nā‘īhyat al-Furā‘) as in the early Muhammadan period the fertile plain from Dair al-Zawr to Albu Kamāl with the towns of al-Rahba, Dilāyā, ‘Ana and Alhadīja was called (Hersfeld, op. cit., ii. 382). According to him the town was built in a semi-circle on the edge of the desert and defended by a strong fortress.

Yāhūn visited the town, which according to him was eight days' journey from Damascus, five from Halab, one farsāh from Baghdād and a little over 20 farsāhs from al-Rahba. In al-Dimīqāsh (ed. Meuren, p. 202) it is called Rahbat al-Fursātiya. In the time of Khalil al-Zahir (Zahha, ed. Ravaise, p. 305) it belonged to Halab. According to al-Umarī, Syria, to be more exact, its eastern marches with the casually Romans reached as far as al-Rahba until he mentions there a "cavalry, and a governorship, and there are Bahri's, cavalry, scouts and mercenaries stationed there" (al-Umarī, transl. R. Hartmann, in Z.D.M.G., lxx, 23, 30). Ibn Bāṣīrfa (op. cit.) calls the town "the end of al-Irāk and the beginning of al-Sha‘am". Hājjāj Khalīfa seckons from ‘Ana al-Rahba three days' journey and from there to al-Dair one day's journey (Djāhānum-nām, Stambul 1445, p. 483; cf. thereon Musul, op. cit., p. 257).

The Venetian jeweller Gaspar Balbi who passed the town on Feb. 6, 1588 on the Euphrates says (Viaggi dell' Indie orientali, Venice 1590, without pagination): "nominavano castello Rahabi oppresso il qual castello si vede una città rivenata, ma in alcuni lati di essa habita da alcune poche persone di nome di Rahabiliatica (on the form Rahbāth, cf. M. Hartmann, in Z.D.P.V., xxii. 44, on N. 590). Pietro della Valle (Viaggi, Venice 1544, i. 571) saw the town of "Rachba" at some distance from the Euphrates and heard that there were some old buildings there. Tavernier (Les six voyages, i. Paris 1676, p. 285) mentions a place called "Mached-rabā", i.e. Maybad al-Rahba (six miles S. W. of al-Rahba).

In modern times al-Miyādīn and the ruins of al-Rahba (the usual formation) have been repeatedly visited (see Bibl.). The plan of the castle forms a triangle with flattened angles; pictures of the castle will be found in Musul, The Middle Euphrates, p. 7, fig. 2 or Sarre-Hersfeld, Arch. Reis, ii. pl. lxxix. sq.)

RAHBĀNĪYA (A.), monasticism. The term is derived from rāhib [q. v.]; it occurs in the Kurān once only, in a passage (sūra lxvi. 37) that has given rise to divergent interpretations: *And we put in the hearts of those who followed Jesus, compassion and mercy, and the monastic state, they instituted the name (we did not prescribe it to them) only out of a desire to please God. Yet they observed not the same as it ought truly to have been observed. And we gave unto such of them as believed, their reward; but many of them were wicked doers. According to some of the exegists the verb "we put" has two objects only, viz. compassion and mercy, whereas the words "and the monastic state" are the object of "they instituted". Accordingly the monastic state appears here as a purely human institution, which moreover has been degraded by evil doers.

According to others, however, the object of the words "and we put" is: compassion, mercy and the monastic state. According to this exegesis monasticism is called a divine institution. Professor Massinon has pointed out that this exegesis is the older one; the younger exegist expresses a feeling hostile to monasticism, which coined the tradition "No rāhibāniya in Islam."

This tradition does not occur in the canonical collections. Yet, it is being prepared there. When the wife of ʿOthmān b. Maʿṣūf [q. v.] complained of being neglected by her husband, Muḥammad took her part, saying: "Monasticism (ḥabaniya) was not prescribed to us (ʿAbd b. Ḥanbal, vi. 226; Dārānī, Wāḥab, ibid. 3). The following tradition is less exclusive: Do not trouble yourselves and God will not trouble you. Some have troubled themselves and God has troubled them. Their successors are in the hermitages and monasteries, an institution we have not prescribed to them" (ʿAbd Dāwūd, Adab, bāb 44).

Islam, thus rejecting monasticism, has replaced it by the holy war: "Every prophet has some kind of rāhibāniya; the rāhibāniya of this community is the holy war" (a tradition ascribed to Muḥammad in ʿAbd b. Ḥanbal, iii. 266; to Abū Saʿīd ʿAlī b. Kaʿb, iii. 82). Cf. also yāḥya, zum.

Sachau, iii, 257; Harrit, Maʿālim, ed. de Saucy, p. 617-619; Zamakhshari, al-Falāʾī, Haldarābād 1324, i. 269; Ibn al-ʿAṣir, Ṣafā, s. v.; Sprenger, Das Leben und die Lehre des Muḥammad, i. 389; Goldscheider, Muḥammadanische Studien, ii. 396; do., in R. H. K., xviii. 193-194; xxxvii. 314. (A. J. Wenck)

RĀḤĪL (A.), plural, rāḥibīn, rāḥibūn, rāḥibīn, a monk. The figure of the monk is known to pre-Islamic poetry and to the Kurān and Tradition. The pre-Islamic poets refer to the monk in his cell the light of which the traveller by night sees in the distance and which gives him the idea of shelter.

In the Kurān the monk and the ẓāhir, sometimes also the ʾaḍhār, are the religious leaders of the Christians. In one place it is said that rāhibs and monks live at the expense of other men (sūra lixv. 34) and that the Christians have taken as their masters instead of God their ʾaḍhār and their monks as well as al-Maṣūhī b. Maryam (sūra lixv. 31). In another passage the Christians are praised for their friendship to their fellow-believers which is explained from the fact that there are priests and monks among them (sūra v. 87). In Ḥaḍīth the rāhib is frequently encountered in stories of the nature of the ḫiṣāṣ al-anṭūyā (cf. Buhārī, Anṣūb, bāb 54; Muslim, Zuhār, Tr. 73: Taḥāfūt, Tr. 46, 47; Tirmidhī, Tafṣīr, Sūra 85, Tr. 2; Manṣūhī, Tr. 3; Naṣīr, Maṣāḥif, Tr. 11; Ibn Māḍja, Fīlah, Tr. 20, 23; Dārānī, Fadwal al-Kurān, Tr. 16; Abū Ḥanbal, i. 461; ii. 434; iii. 337, 347; v. 4; vi. 17 sqq.).

From the fact that in the Muḥammadan literature of the early centuries A. H. the epithet rāhib was given to various pious individuals it is evident that there was nothing odious about it. Cf. however the article RAHBĀNĪYA.

Bibliography: cf. that of RAHBĀNĪYA. (A. J. Wenck)

RĀḤĪL, in the Bible Rachel, wife of Jacob, mother of Joseph and Benjamin, is not mentioned in the Kurān. There is however a reference to her in Sūra iv. 27: "Ye may not have two sisters to wife at the same time; if it has been done formerly God now exercises pardon and mercy". This is said to allude to Jacob's marriage with Liyā and Rāḥīl; before Moses revealed the Tora, such a marriage was valid. Ṣaḥīḥ gives this explanation in the Ammān, l. 356, 359 sq. Ibn al-Qāhir, p. 90, adopts it. But already in Tafsīr, iv. 210, Ṣaḥīḥ explains the verse correctly: Muḥammad forbids for the future marriage with two sisters but he does not dissolve such marriages concluded before the prohibition. — Islamic tradition generally adopts the view that Yaʿṣūb only married Rāḥīl after Liyā's death. So already in Ṣaḥīḥ, i. 355, Zamakhshari, Bābdīwād, Ibn al-Qāhir, etc. Al-Kisāʾ even thinks that Yaʿṣūb only married Rāḥīl after the death of Liyā and of his two concubines. Here again Muslim legend differs from the Bible, in making him not marry Rāḥīl until after 14 years of service; in the Bible, Jacob serves seven years, marries Leah and after the wedding week Rachel
and serves another seven years. — Ya'qūb's wooing and Laban's trick by which he substitutes Liyā for Rāhīl as "neither lamp nor candle-light" illuminate the bridal chamber, is embellished in Muslim legend.

Rāhīl is also of importance in the story of Ya'qūb. Ya'qūb inherits his beauty from Rāhīl; they had half of all the beauty in the world, according to others two-thirds, or even according to the old Haggadic scheme (Kiddushin, 49b), nine tenths (Thalābi, p. 69). — When Ya'qūb left Lībān, he had no funds for the journey; at Kārūn his suggestion is accepted. Ya'qūb steals Laban's goods. — As Ya'qūb sold by his brothers, passes the tomb of Rāhīl he throws himself from his camel on the grave and laments: "O mother, look on thy child, I have been deprived of my coat, thrown into a pit, stoned and sold as a slave". Then he hears a voice: "Trust in God". The old Haggada does not know this touching scene. But it has found its way into the late medieval book of stories Sefer Hayayyōr (ed. Goldschmidt, p. 150). The Jewish-Persian poet Shāhīn (sixth century) adopts this motif from Firdawsi's Yāsuf u-Zulālīḥī in his book of Genesis.

RAHĪM. [See Allāh, i. 308, 304.]

AL-RAHĪM. [See Kibrawī Fīrūz.]

RAHMĀ, compassion [See Allāh, i. 503, 306.]

RAHMĀNIYA, Algerian Order (jārīya) called after Muhammad b. 'Abd al-Rahmān al-Ghūṭātī al-Dījrūjī al-Azhārī Būl Kābir, who died 1228 (1793-1794). It is a branch of the Khalwātī and is said to have at one time been called Dākīya after Muṣṭafā al-Ḥakīmi al-Ṣāhī. At Nīja, in Tunisia, and some other places it is called Arīṣīya after Muṣṭafā b. Muḥammad b. Arīṣ. Life of the Founder. His family belonged to the tribe Aṣīl Smāl, part of the confederation Gaḍhātul in the Kādīyā Dījrūj; having studied at his home, and then in Algiers, he made the pilgrimage in 1152 (1739-1740), and on his return spent some time as a student at al-Azhār in Cairo, where Muḥammad b. Šallīm al-Ḥamāwī (d. 1181: Sīk al-Durrār, iv. 50) initiated him into the Khalwātī Order, and ordered him to propagate it in India and the Sudan; after an absence of thirty years he returned to Algeria, and commenced preaching in his native village, where he founded a monastery; it seems to be because he has introduced some modifications into Khalwātī practice, and in his Seven Visions of the Prophet Muhammad made some important claims for his person and his system; immunity from bell-fire was to be secured by affiliation to his order, love for himself or it, a visit to himself, stopping before his tomb, hearing his dhikr recited. His success in winning adherents provoked the envy of the local meḥrikān, in con-

sequence of which he migrated to Hamma in the neighbourhood of Algiers. Here too his activities met with opposition from the religious leaders, who summoned him to appear before a muṣāfīr under the presidency of the Mālikī Muḥammad al-Azīz b. Anīn; through the influence of the Turkish authorities, who were impressed by the following which he had acquired, he was acquitted of the charge of unorthodoxy, but he thought it prudent to return to his native village, where shortly afterwards he died, leaving as his successor Allāh b. 'Iṣā al-Maghribī. His corpse is said to have been stolen by the Turks and buried with great pomp at Hamma with a ṣāḥib and a mosque over it. The Aṣīl Smāl however maintained that it had not left its original grave, whence it was supposed to have been miraculously duplicated, and the title Aṣīl Kābīr, "owner of two graves", was given him.

History and propagation of the Order. Allāh b. 'Iṣā al-Maghribī was undisputed head from 1208 (1793-1794) to 1251 (1836-1837); his successor died shortly after, and from the following year, though the Order continued to win adherents, it divided into independent branches. This was owing to the objectors raised by the Aṣīl Smāl to the succession of al-Hājjī Bāshīr, another Maghribi; in spite of the support of Allāh b. Kāṭīr (the famous enemy of the French) he had to quit his post, which he held for a time by the widow of Allāh b. 'Iṣā, who, however, owing to the dwindling of the revenues of the sāwīya had ultimately to summon Bāshīr back. Meanwhile the founders of other sāwīyas were assuming independence. After the death of Bāshīr in 1259 (1845-1844) her son-in-law al-Hājjī Ammār succeeded to the headship. Finding his influence waning owing to his failure to participate in the attack on the French organized by Bā Bhāgīr, he in August 1856 called his followers to arms and obtained some initial successes; he was however compelled to surrender in the following year, and his wife (or mother-in-law) at the head of a hundred ṣāḥibūn shortly after, Bāshīr retired to Tunis, where he endeavoured to continue the exercise of his functions, but he was not generally recognized as head of the order, and his place among the Aṣīl Smāl was taken by Muhammad Amālī b. al-Hājjīdād b. Sādīk, who at the age of 80 on August 8, 1871 proclaimed ḥijāb against the French, who had recently been defeated in the Franco-Prussian War. The insurrection met with little success, though it spread far, and on July 13 Ibn al-Hājjīdād surrendered to General Sausser, who sent him to Bougie. The original sāwīya was closed as a precautionary measure.

His son 'Arīṣ, who had been transported to New Caledonia, succeeded in escaping to Djeddā, whence he endeavoured to govern the community; but various muḥāfāzahs who had been appointed by his father, as well as other founders of sāwīyas, asserted their independence. Lists are given by Deponi and Coppolani of these persons and their spheres of influence, which extend into Tunisia and the Sahara. In their work the numbers of the adherents to the Order are reckoned at 15,614 (1897). Kinn notices that the Rahmāniya of Tolga regularly maintained good relations with the French authorities.

Practices of the Order. The training of the waḥīf consists in teaching him a series of seven
character of the security is in general allowed; but exceptional cases are recognized in which the debt is extinguished by the disappearance of the security i.e. the risk passes to the taker of the pledge. While the ownership of the pledge remains with the debtor, he has no power of disposal over it and possession passes to the creditor; the latter has the right to sell it to satisfy his claim if the debt becomes overdue or is not paid. Mortgage is unknown as well as a graded series of rights to the same object of pledge. To be distinguished from the pledge is the detention (habib) of a thing to enforce fulfilment of a legal claim, which represents a concrete right afforded by the law in individual cases so that it has contacts with the legal right to pledge.

RAIS AL-KUTTAB, RAIS EFKNID. [See RAIS.]

RAIY, the ancient Ragha, a town in Media. Its ruins may be seen about 5 miles S.E. of Teheran [q.v.] to the south of a spur projecting from Elburz into the plain. The village and sanctuary of Shah 'Abd al-'Azim lie immediately south of the ruins. The geographical importance of the town lies in the fact that it was situated on the fertile zone which lies between the mountains and the desert, by which from time immemorial communication has taken place between the west and east of Iran. Several roads from Marandarân [q.v.] converge on Raiy on the north side.

In the Avesta, Vidwatait, i. 15, Ragha is mentioned as the twelfth sacred place created by Ahura-Mazda. Yasna, xix. 18, calls it zaharatai Ragha sarabtirî "Zoroastrian Ragha possessing four degrees of hierarchy" because of Ragha the representative of the prerogatives going back to Zoroaster (Zarathustra) held also the powers of a prince (raiiz dakhmany) while elsewhere these two dignitaries with the three categories of chief subordinates, formed five degrees of hierarchy. The Middle Persian commentary deduces from this that Zoroaster must have belonged to Ragha. The town is also called raiiznam (Vidwatait, i. 15) which Bartholomae interprets as possessing "three districts" (drei Gaue besitzend) although the explanation of the Middle Persian commentary is: "possessing three estates (social classes) for the priests, warriors and cultivators there were good" (cf. Bartholomae, Altiran. Wörterbuch, col. 579, 811, 1497; cf. Marquart, op. cit., p. 122). The later commentaries put Raiy in Atropatene in conformity with the late tendency to localize events in sacred history in this province.

In the Old Persian inscriptions (Bh. 2, 10-18) Raga appears as the province of Media in which in the autumn of 324 B.C. the false king of Media Prawartiagh sought refuge in vain; from Raga also Darius sent reinforcements to his father Whigatasp when the latter was putting down the rebellion in Parthis (Bh. 3, 1-10).

Rai is also mentioned in the epigraphy. Tobit sent his son Tobias from Ninivah to recover the silver deposited in Rages with Gabael, brother of...
Gabrias (Tobit, l. 14). The book of Judith (i. 15) puts near Ragas (if it only were Ragha!) the plain in which Nebuchadnezzar defeated the king of Media, Archaxad (Phraortes!).

In the summer of 330 B.C., Alexander the Great following Darius III took 11 days to go from Eschatane to Rhagae (Arrian, 3, 20, 2). Dio-
doros relates that Antigonus passed near Rhagae after his victory over his rival Eumenes (310 B.C.). According to Strabo, x. 9, and xi. 15, Seleucus Nicator (312-286) rebuilt Rhagae under the name of Europos (in memory of his native town in Macedonia) and that near Europos the towns of Laodicea, Apeamna and Heraclea were peopled with Macedonians. After the coming of the Parthians the town was renamed Araxa. It is however possible that all these towns although situated in the same locality occupied slightly different sites for they are mentioned side by side in the authorities.

Rawlinson (7 G.S. x. 119) would put Europos at Wadi Min at [q.v.]. Athenaenaeus in Deipnosophistae, says that the Parthian kings spent the spring at Rhagae (in Eregz) and the winter at Babylon (see the details in A. V. W. Jackson, and Weis-
bach). The Greek popular etymology which explains the name Rhaga as alluding to earthquakes seems to reflect the frequency of this phenomenon in this region so close to Damazand.

In the Sasanian period Yazdagird III in 641 issued from Rayi his last appeal to the nation before fleeing to Khurzaan. The sanctuary of Bibi Shahr-Bains situated on the south face of the already mentioned spur and accessible only to women is mentioned with the association of the daughter of Yazdagird who, according to tradition, became the wife of Husain b. 'Ali. In the years 486, 499, 553 A.D. Rayi is mentioned as the see of bishops of the Eastern Syrian church. 

Arab conquest. The year of the conquest is variously given (18-22 = 639-644) and it is possible that the Arab power was consolidated gradually. As late as 640 a rebellion was suppressed in Rayi by Sa'd b. Abi Waqkaa. The Arabs seem to have profited by the dissensions among the noble Persian families. Rayi was the seat of the Mirkan family and, in consequence of the resistance of Siyavakha b. Mihram b. Bahram Chabih, Nu'sim b. Mokarrin had the old town destroyed and ordered Farrukkha b. Zainabi (Zainabi?) b. Kula [cf. MAHMUDI] to build a new town (Tabari, i. 2635).

In 71 (690) again a king of the family of Farr-
ukhan is mentioned alongside of the Arab governor.

The passing of power from the Omayyads to the 'Abbasids took place at Rayi without incident less than in 136 (753). The 'Abbasids, when they arrived in the end of the 10th century, encamped near Rayi and spent a short time. The name used for Rayi was the name of the town and its principal street. In 954 (860) Ma'mun's generals 'Abd al-Malik b. Hammad won a victory over Amr's troops near Rayi. In 950 (865) the struggle began in Rayi between the Zaidi 'Abids of Tabaristan and the Tahirids and later the caliph's Turkish generals. It was not till 772 (885) that Ghiyath-egin of Kaswe took the town from the 'Abids. In 651 (864) the caliph 'Abd al-Malik wishing to consolidate his position appointed to Rayi his son, the future caliph Mucktaf. Soon after the death of the Sama'nis began to interfere in Rayi. Isma'il b. Ahmad seized Rayi in 289 (902) and the fact accomplished was confirmed by the caliph Mucktaf. In 296 Ahmad b. Isma'il received investiture from Mucktaf in Rayi (Gardth, p. 21-22).

In the tenth century Rayi is described in detail in the works of the contemporary Arab geographers. In spite of the interest which Baghdad displayed in Rayi the number of Arabs there was insignificant and the population consisted of Persians of all classes (Abbâr; Yaqut, in B. G. A., vii. 276). Among the products of Rayi Ibn al-Faqih, p. 253, mentions silks and other stuffs, articles of wood and 'lustre dishes', an interesting detail in view of the celebrity enjoyed by the ceramics of Rhagae. All writers emphasize the great importance of Rayi as a commercial centre. According to Ijjasri, p. 107, the town covered an area of 1/2 by 1/2 farakhs, the buildings were of clay (qaf) but the use of bricks and plaster (qaf = qaf) was also known. The town had five great gates and eight large bazaars. Muckaddasi, p. 391, calls Rayi one of the glories of the lands of Islam and among other things mentions its library in the Buhana quarter which was watered by the Farzand canal. 

Dalai period. In 304 (915) the lord of Adharbad-din Yusuf b. Abi 'l-Sajd occupied Rayi out of which he drove the Dalaim Muhammad b. 'Ali Sulhi who represented the Sama'nis of Rayi (Ibn al-Athir, viii. 74). This occupation, commemorated in coins struck by Yusuf at Mahmud-
ada, was the beginning of a troubled period. Rayi passed successively into the hands of the Dalaim 'Abi b. Wahshuddin, Wasif Dektinarti, the Dalaim Ahmad b. 'Ali and of Muflih, slave of Yusuf (in 313 = 925; cf. R. Vames, O montanbh Sadiliev, Baku 1927). Lastly the Sama'nis encouraged by the caliph succeeded in bringing Rayi again within their sphere of influence but soon their general Askar (a Dalaim) became independent in Rayi. In 318 (930), Askar was killed by his lieutenant Mardawid [q.v.] (a native of Gilan and one of the founders of the Ziyarid dynasty) who took over his master's lands (C. Haurt, Les Ziyarides, 1922, p. 363 = 311).

After the assassination of Mardawid (123 = 925) the Bazyids established themselves in Rayi, which became the seat of the branch of the Ziyarid dynasty which held out there for about 100 years. In 390 (1000) the last Sama'ni al-Muntasir made an attempt to seize Rayi but failed. In 420 (1027) the Bazyid Masjid al-Dawla was ill-advised enough to invite against the Dalaims the help to a Muhammad of Gharmi, who seized his lands (cf. Muhammad Nazim, Sulhan Mahmud, 1931, p. 80-85). The brief rule of the Gharnawids was marked by acts of obscurantism, like the destruction of books on philosophy and astrology and the atrocious persecutions of the Karmajans and Mu'tazalis (Gardth, p. 91; Ibn al-Athir, ix. 267).

The Sultans. The Gharnawids laid Rayi waste in 427 (1035) and in 434 (1042) the town, where Masjid al-Dawla still held out in the fort of Tabarn (Ibn al-Athir, ix. 347), fell into the power of the Saljûq and became one of their principal cities. The last Bazyid al-Malik al-Rafl died a prisoner
in Tabarak in 450 (1058) (or in 455; cf. H. Bowen, in J. R. A. S., 1929, p. 238) and the new lord Tughill [q.v.] also died at Rayy in 455 (1063). Henceforth Rayy is constantly mentioned in connection with events relating to the Great Saljuq and their branch in Persia 'in Iran'.

From the reign of Ghiyath al-Din Mas'ud (540-547 = 1153-1157) Rayy was ruled by the son-in-law of his wife of Pahlawan, son of the famous aestheg of Aqbarabad, Ildegis. When the latter put on the throne Sultan Arslan-Shah (whose mother he had married) Ildegis opposed this nomination but was defeated in 555 (1160). Ildegis withdrew to Bistam but with the help of the Khwarijshah II religion reoccupied Rayy. He was finally murdered at the instigation of Ildegis who gave Rayy as a fief to Pahlawan. Later the town passed to Khatun Naqshband, a Pahlawan who, like his maternal ancestor, brought about the intervention of the Khwarijshah Tughill in the affairs of Persia (538 = 1142). Two years later in a battle near Rayy, the last Saljuq Tughill III was killed by Khatun Naqshband but the country remained with the Khwarijshahs. In 614 (1217) the abbeys of Fars Sad b. Zangi succeeded in occupying Rayy but it was almost immediately driven out by the Khwarijshah Djallal al-Din (cf. Nasawi, ed. Houdas).

Civil wars, Muqaddasi, p. 319, 315-316 mentions the dissensions (āubah) among the people of Rayy in matters of religion. Under 582 (1180-1187) Ibn al-Athir, xi. 237, records the damage done in Rayy in the civil war between the Sunnis and Shi'is. The inhabitants were killed or driven away and the town left in ruins. Yakut who, fleeing before the Mongols, went through Rayy in 617 (1220) gives the results of his enquiry about the three parties: the Ilhanis, the Shahis, and the Shi'is of which the two first began by wiping out the Shahis who formed half the population of the town and the majority in the country. Later the Shi'is triumphed over the Ilhanis. The result was that there only survived in Rayy the Shahis' quarter which was the smallest. Yakut describes the underground houses at Rayy and the dark streets difficult of access which reflected the care of the inhabitants to protect themselves against enemies.

The Mongols. The Mongols who occupied Rayy after Yakut's visit dealt it the final blow. Ibn al-Athir (xii. 184) goes so far as to say that all the population was massacred by the Mongols in 617 (1220) and the survivors put to death in 621 (1224). It is however possible that the historian, echoing the panic which seized the Muslim world, exaggerates the extent of the destruction. Dhuwailin (ed. Muhammad Khan Kaawi, i. 115) only says that the Mongol leaders put many people to death at Khwār (in the country inhabited by Shi'is) but in Rayy the people were killed by the Shahis who submitted to the invaders (thab'a), after which the latter went on. Rashid al-Din (ed. Berézeine, in Tract. V. O., xv. 135 [transl. p. 89]) admits that the Mongols under Djebe and Subsunday killed and plundered (māzghara) at Rayy but he seems to make a distinction between Rayy and Kham, in which the inhabitants were exterminated (sū-bilil) massacred.

The fact that life was not completely extinguished at Rayy is evident from the dates of pottery which apparently continued to be made in Rayy (cf. Guest, A dated Rayy bowl, in Burlington Magazine, 1931, p. 134-135: the painted bowl bears the date 640 = 1243). The citadel of Tabarak was rebuilt under Ghazān Khan (1295-1304) but certain economic reasons (irrigation?) if not political and religious reasons, must have been against the restoration of Rayy and the centre of the new administrative Mongol division (the wāsūd of Rayy) became Varāvīn (q.v.) (cf. Nūska-āt al-Kulā, in G. M. S., p. 55). After the end of Hulagu's dynasty, Rayy fell to the sphere of influence of Tughill-Timur (q.v.) of Aqbarabad. In 1385, Timur's troops occupied Rayy without striking a blow but this must mean the district and not the town of Rayy, for Clavijo (ed. Szezevsky, p. 187) who passed through this country in 1404 confirms that Rayy (Yaharipries = Shāh-e Rayy) was no longer inhabited (agera deshabitata). No importance is to be attached to the mention of "Rayy" in the time of Shāh-Rūkh (Majīl ad-Salāhī, under the year 841 = 1447) or of Shāh Ismā'īl, Hālīb ad-Siyar.

The ruins of Rayy. Olivier in 1797 sought them in vain and it was Trübl and Gardane who first discovered them. The earliest descriptions were by J. Morier, K. Porter and W. Ouseley. The first has preserved us a sketch of a Šāhānšāhian basin which was replaced by a sculpture of Fath 'Ali Shah. The description and particularly the plan by K. Porter (produced in Sarre and A. V. W. Jackson, Persia) is still of value because since his time the town has been destroyed for agriculture and systematic digging have destroyed the walls and confused the strata. Large numbers of objects of archaeological interest and particularly the celebrated pottery covered with paintings have flooded the European and American markets as a result of the activity of the dealers. Scientific investigation was begun by the universities of Philadelphia and Boston in 1934 (cf. The Illustrated London News, June 22, 1935, p. 1122-1123; E. F. Schmidt, The Persian Expedition to Rayy, in Bulletin University Museum, Philadelphia, v., 1935, p. 41-49; cf. p. 25-27). In the citadel hill, Dr. Erich Schmidt found a great variety of pottery and the remains of buildings which are the foundations of Mahāl's mosque (communication to the author). Godard to the Congress of Persian Art at Leiningrad in Sept. 1935). In an interesting passage, Muqaddas, p. 210, speaks of the high domes which the Búyids built over their tombs. According to the Siyāh-ḵānaḵāna, p. 145, in the time of Fakhr al-Dawla a rich Zoroastrian built an astādān with double roof (tāḏān ba-dam péshā) on the top of the hill of Ṭabarakan, above the dome tomb (gumbad) of Fakhr al-Dawla. The astādān, turned to a new one received the name of dāla-yi aspāha-šāfārān "fort of the commandants" and was still in existence in the time of Nīsam al-Mulk. The two towers now to be seen among the ruins of Rayy [both are round in plan, but the one repaired under Nāṣir al-Dīn Shāh has ribbed flanks] are attributed to the Saljuqs but may continue the Daulatn type of building. The hill of Ṭabarakan on which was the citadel (destroyed in 588 [1192] by Tughill III according to Yakut was situated to the right of the Khusrān road while the high mountain was to "the left" of this road. Ṭabarakan must therefore have been on the top of the hill opposite the great spur (hill G) in K. Porter's plan: a fortress built of stone and on the summit of an immense rock which commands the open
Al-Ra'aka

[See Salat.]

Al-Ra'aka, capital of Diyar Mudar in al-Djazira on the left bank of the Euphrates, shortly before it is joined by the Nahr Balkh (Barnhouse, Bilikove, Dzurug).

The town was in antiquity called Kallinikos. Nikephoros is to be located in the same region (Strabo, vii. 477; Isidore of Charra, in Geogr. Graeci Min.), ed. Muller, p. 247; Dio Cass., 21. 13; Pliny, Nat. Hist., vi. 86; vii. 119; Ptolomy, Geogr., v. 17; Stephen Byz., but its usual identification with Kallinikos is certainly wrong and it may be a case of two adjoining towns as with the "black" and "white al-Ra'aka" of the middle ages, Nikephoros was, according to Appian (Syr., p. 57), a foundation of Seleucus I Nikator; later it was ascribed to Alexander the Great (Pliny, Nat. hist., vi. 119; Isid. Char., c. 1) who can hardly have been here and it is hardly likely that towns were founded so shortly before the battle of Gangama (cf. Fawli-Wissowa, K. E., x, A., col. 1427, s. v. Thapaken).

Kallinikos owed its name to Seleucus II Kallinin, who founded the town in 244 or 224 B.C. (Chron. Pasch., ed. Dandery, 310; Mich. Syr., ed. Chatob, iv. 78). Libanius, Oratio, ed. Forster, x. 19, p. 288) wishes to derive the name from the sophist Kallinikos who was murdered there; it is however hardly likely that the town, the name of which (Syrion Kallinikos, Kallinikos) the Christian Syrians retained in the middle ages, was called after a pagan satyr, and in any case, if it were so, we would expect a name like Kallinikeia. In any case the site of Kallinikos corresponds to that of the mediaeval al-Ra'aka, with which the Syrian historians always identified it. In the time of the emperor Julian, Kallinikos was a strong fortress and an important commercial centre (Ambrosius, Epist. ad Theodos.; Migne, Patrolog. Lat., xvi, col. 1105 sq.). The emperor Leo I in 777 Sel. (466 A.D.) rebuilt Kallinikos in Osthoe, called it Leonopolis and appointed a bishop there (the successor of the Damascenus mentioned in 451 and 458) (Edessene Chronicle, ed. Haller, in Texte u. Untersuch., ix. 1, Leipzig 1893, p. 116, 152; Barhebrus, Chron. syr., ed. Bedjan, p. 77; Leonopolis: Hierokl., Synodhzh, p. 715, 3. Geogr. Cypr., ed. Gelzer, p. 897). Towards the end of the year 503, Timostatros bravely defended the fortress against the Persians and took one of Kawqale. His officers prisoner but had to release him as the king threatened to destroy the town completely (Joshua Stylites, ed. Martin, in Abh. K. Mi, vi. 1, Leipzig 1857, p. 275). The Syrian church historians from the beginning of the viith century frequently mention the monastery of Mar Zakri, Arabic Dair Zakk, in the angle formed by the Nahr Balkh and the Euphrates or the Nahr al-Nil Canal not far from Kallinikos (Itinera, apud monophysites celebrat., ed. Brooks, in C. C. O., ser. iii., vol. xxv, Paris 1907, p. 38; Mich. Syr., iv. 414 sq.; al-Šâbihūghī, Kitâb al-Diyūr, cod. Berol., fol. 95; Yâkūt, Muqaddim, ed. Wüstenfeld, ii. 664 sq. 486). Between al-Ra'aka and Bâlis lay the celebrated monastery of Dair Ḥannini south not far from Sura (G. Hoffmann on Zacharias Rheto, transl. Ahrens-Krüger, p. 159; Johann, v. Epheus, iv. 22; Mich. Syr., ii. 361; iii. 433 and passim; Barhebrus, Chron. eccles., ed. Abelloos-Lamy, i. 244, 250; F. Nau, in N., N., x., 1910, p. 63, note 1; Yâkút, iii. 350 and passim, often wrongly called "monastery of Hananis," e. g. in Musil, The Middle Euphrates, p. 329). In 529, Justinian enacted that trade with the Persians should be conducted at the frontier towns of Nisinis, Kallinikos and Artemisa (Cod. Inst., ed. Krüger, iv. 65, p. 188; Bury, History of the Later Roman Empire, i., 1923, p. 3). Kharwar I on his third campaign against Syria (542) took the town without difficulty (Procop., Bell. Pers., ii. 21, 31; Anecd., iii. 31) because at the time the walls had been partly taken down in order to be rebuilt. The town was destroyed but later fortified again by Justinian with walls and bulwarks and "made impregnable" (Procop., De aed., ii. 7; James of Edessa, Chronol. Canon, ed. Brooks, in Z.D.M.G., iii. 300, Mich. Syr., ed. Chatob, iv. 287). The saqlāw, 'Arabul Zafrus, Mauricius in 580 had to retire to Kallinikos before Altharmahan but put him to flight there (Theophyl. Sim., iii. 17, 8; Chapot, La Frontier de l'Éuphrate, p. 289, note 3 and E. Hersfeld, Arch. Reit, L. 159 make the "emperor" Mauricius flee to the fortress before Hama'is). The Arabs in 18 (639) or 19 (640) under 'Abd al-Qha' rank before the N. W. gate of the town, Šab al-Rubīl; after 5 or 6 days the Patriarch who governed the town asked for peace and surrendered it to him and the inhabitants.
were promised security of life and property. Their churches were not to be destroyed or occupied so long as they paid their tribute and committed no act of hostility; on the other hand they were not to build new churches or sacred places and not to observe Christian customs or festivals publicly (al-Baladhuri, Futūḥ al-Baladān, ed. de Goeje, p. 173 sq.; Ibn al-Athir, ed. Tornberg, ii. 439). On the death of Uyad, Sa‘d b. Amir b. Dhiyāyam became governor of al-Dijarīta; he built a mosque in al-Ra‘ka (al-Baladhuri, p. 178; Hersfeld, Arch. Reise, ii. 353). It was built of bricks of clay and marble taken from ancient buildings (Hersfeld, op. cit., with fig. 324–329); its Manṣūra and Manṣūrīr still marks the ruins that represent the ancient al-Ra‘ka.

In the great battle of Siffin in 665 (656) ‘Ali crossed the Euphrates at al-Ra‘ka on a bridge of boats, which he ordered the inhabitants to build, with his infantry and whole equipment to the Syrian bank (al-Tahārī, i. 3259; Ibn Miskawī, Taqādūrī, ed. Castani, p. 571). According to the Divān of Ubaid Allāh b. Khāqīnāyāt, who died in 690 (ed. Rodokanakis, in S. D. Ab. Wās, cxlviii/4, Vienna 1902, p. 221), al-Ra‘ka and al-Kalas (‽) were then in ruins and practically uninhabited but this is poetic exaggeration (Musil, The Middle Euphrates, p. 320 sq.). He calls the town (p. 285) al-Ra‘ka al-Sawda‘i to distinguish it from al-Ra‘ka al-Baladī, which is mentioned in the Divān of al-Akhrīfī for example (ed. Salāhi, p. 304). The same al-Ra‘ka itself may be of Arabic origin ("swampy marshes on a river with periodical inundations"); the similarity of the names of the Ra‘ka and Ra‘ka al-Ra‘ka to those of two Arabic tribes of the Assyrian period, Ra‘kī (sic) and Ra‘kī (Hersfeld, Arch. Reise, i. 159, note 9), is no doubt quite accidental.

On the south bank, opposite the town, two canals (al-fa‘līn wa l-Mari) were the suburbs of Wāṣfī al-Ra‘ka, where Ḥūṣayn b. Abī al-Mallih built two palaces and a bridge over the Euphrates (Yākūt, ii. 802; iv. 880, 994; Ps. Dionys. of Telmahē, ed. Chabot, p. 26, 31; Mich. Syr. iv. 457; Barhebr, Chron. syr., ed. Bedjan, p. 118). The governor of al-Ra‘ka, the Khāqīn Manṣūr b. Dja‘wana b. al-Hārith b. Ḥārīm, after whom his Manṣūr was called, was executed after his rebellion in 141 (758–759) by the šamīl of Abu l-’Abbās, al-Manṣūr, in al-Ra‘ka (al-Baladhuri, p. 102).

The caliph al-Manṣūr in 155 (772) built alongside of al-Ra‘ka a new town al-Ra‘ka and settled Khurāṣnānians there who were devoted to his dynasty (Ibn al-Fakhrī, in B. G. A., c. 132). The superintendence of the building of the new town was given by him to al-Mahdi, the heir-apparent. It was planned in the shape of a horse-shoe and was in many respects modelled on the round city of al-Manṣūr in Baghūs (al-Tahārī, iii. 276, 372 sq.; Ibn Hawkal, in B. G. A., ii. 153; al-Baladhuri, p. 179; al-Ya‘qūbī, Kiṣāy al-Baladān, in B. G. A., viii. 238, Ta‘rīkh, ed. Houssaye, ii. 430; Ibn al-Fākhrī, in B. G. A., c. 132; Yākūt, Ma‘ajid, ed. Wustenfeld, ii. 734 sq.; Mich. Syr. ii. 526, iii. 10, 397 = iv. 476, 483, 640; Ps. Dionys. of Telmahē, p. 120 sq.; Hersfeld, op. cit., i. 160). Two canals led from the Euphrates and by way of the region of Sardūsji, to supply the new town with water (Mich. Syr., iii. 10). This new town to which the name al-Ra‘ka came to be transferred from the old town now falling into ruins, had, according to Arab authors (e.g. al-Baladhuri, p. 179), no remains of antiquity and indeed the modern al-Ra‘ka, the "horse-shoe city", except for a few fragments built into the walls seems to possess no ancient ruins. The ancient Kallinikos has therefore wrongly been located here (Sachau, Reise in Syrien u. Mesopotamien, p. 242; Chapot, La Fréquence de l'Euphrate, p. 289 sq., where fig. 8 "Nisibenus-Cellicomium" is really the plan of the medieval al-Ra‘ka!)

Between al-Ra‘ka (al-Hamra‘ of Musil’s map) and al-Ra‘ka there soon rose a suburb with bazaars to which the markets of al-Ra‘ka (including the largest, Sūk Ḥūṣayn b. Ṣa‘īd) were transferred by ‘Alī b. Sulaimān b. Ṣa‘id, governor of al-Dijarīta, and as a result the two adjoining towns gradually developed into a twin city (al-Ra‘ka–ṣāḥīn). (al-Baladhuri, p. 179; Yākūt, ii. 734, 802; Ibn Hawkal, B. G. A., ii. 153). This suburb was burned in 1123 (523) by the rebels ‘Amr and Ṣa‘id b. Ṣabāth along with the adjoining "pillared monastery" (Mich. Syr., iii. 30). ‘Abd al-Malik b. ʿAffûn q. v. died in the same year in al-Ra‘ka. In the fighting that followed, the ʿAffūna b. al-Kulla became lords of al-Ra‘ka and the Persians of al-Ra‘ka (Mich. Syr., iii. 30). In the reign of Ma‘mūn in 146 (761–762), ʿAbd al-Malik b. Ṣabāth built a wall between al-Ra‘ka and al-Ra‘ka (Mich. Syr., iii. 36).

The walls of the old town fell into ruins at quite an early date (Abū Ḥamīd al-Tahārī, al-Sarrākhī in Yākūt, loc. cit.) and in 375 (985–986) the old al-Ra‘ka was now only a suburb of the western town. As the name al-Ra‘ka came into use for the latter (Yākūt, loc. cit.), in the end it became no longer possible to distinguish between al-Ra‘ka and al-Ra‘ka (also al-Makdisī, cf. E. Hersfeld, Arch. Reise, i. 160, note 7, p. 161). At the beginning of the eighth century the old al-Ra‘ka was completely in ruins (Yākūt, ii. 734, 751; Ibn Hawkal, p. 153; al-Makdisī, p. 141; Abu ’l-Fidā‘, ed. Reinaud, p. 277).

Besides al-Ra‘ka, the capital of Dīyār Muḥāfiz, al-Makdisī and others mention also "burned al-Ra‘ka" (al-Ra‘ka al-Muhāfizī, i.e. Ra‘ka al-Sawdā‘ in the Balīlī), a farākī below the "white town" (Yākūt, iii. 31; ii. 802; Ibn Rusta, p. 90; al-Makdisī, p. 20, 144). It was also called "crooked al-Ra‘ka" (al-Aw’dī) and corresponds to the present ruins of al-Ra‘ka al-Samā‘īn.

Badr al-Dīn ‘Abd al-Ra‘ḥīm al-Bal‘alabakī (Alwardi, v. 413, on No. 6104) wrote a rivāli on al-Ra‘ka.

According to Hersfeld, the following larger groups of ruins lie in the area of al-Ra‘ka in addition to Hira‘qa which is in the neighbourhood:

1. The "horse-shoe town" with high walls, still standing, which form a semicircle on the north, while in the south they run in a straight line along the banks of the Euphrates and enclose an area of 1,92 sq. km. (Hersfeld, Arch. Reise, ii. 356 sq.; plan: plate lxxii.). It corresponds to al-Ra‘ka founded by Manṣūr, to which the name al-Ra‘ka was later transferred. Roughly in the centre of the northern part of this part of the town lie the ruins of a large mosque, the "mosque intra muros" the front of the court of which with a round minarīs (Sarrā-Ḥerzfeld, ii. 359; iii. pl. lxxi–lxxix and fig. 33–340), according to an inscription, was restored by a certain Nūr al-Dīn al-Mamūd in 561 (1165–1166) (van Berchem in Sarrā-Ḥerzfeld, i. 4–6). Nūr al-Dīn occupied al-Ra‘ka in 554 (1159) and gave it from 562 (1170) to 566 (1171) to his brother Mawdū‘.
RAKKADÁ, residential city of the Aghlabid emirs of Ifriqiya about 6 miles south of Kairawan, was founded in 263 (876) by Ibrāhīm II, seventh prince of the dynasty. Until then the Aghlabids had resided in ʿAbbāsiyya [q.v.] nearer the capital. A chance trip into the country by Ibrāhīm, it is said, determined the site of the new residence. The emir was suffering from insomnia and on the advice of his physician, Iḥṣāk b. Sulaimān, went out to take the air. Stopping in a certain place he fell into a deep sleep and decided to build a palace there which was called Rakkadā, the 'soporific'. The story is probably based on a popular etymology of the name, which is found elsewhere in North Africa. Another explanation, equally suspect, is that which attributes the name to the memory of a massacre of the Warfaglijuns by the ʿAbdīl chief Abū Ḳhaṭṭāb [q.v.] in 141 (758) and the many dead left lying there.

In the same year that the work of building was begun, Ibrāhīm settled in Rakkadā in the Castle of Victory (Ḵaṣr al-Fāṭih). He was to live there the rest of his life, as were his successors, except for the stays the emirs made in Tunisia. Rakkadā became a regular town as al-ʿAbbāsiyya had been before it. Besides Ḵaṣr al-Fāṭih (or Ḵaṣr Abū l-Fāṭih) there were several other castles in it: Ḵaṣr al-Bahār (the castle on the lake), Ḵaṣr al-Šaḥr (castle of the court), Ḵaṣr al-Mukhārā (castle of the elect) and Ḵaṣr Baghdād, a large mosque, baths, caravanserais and ʿabān. Al-Bakri says that it had a circumference of 24,040 cubits (over 6 miles), al-Nuwayri makes it smaller (14,000, nearly 4 miles). A wall of brick and clay surrounded this vast area, and this wall was renovated by the last Aghlabid with a view to a final effort at resistance. Al-Bakri further tells us that the greater part of the enceinte was filled with gardens. The soil was fertile and the air temperate. The emirs and their followers enjoyed in Rakkadā a variety of sports, p. 217 of his book, which would have caused a scandal in Kairawan. The sale of mudhoq [q.v.], forbidden in the pious old city, was officially permitted in the royal residence.

It was from Rakkadā that Ziyādat Allāh III, the last of the Aghlabids, fled on the approach of the Ṣufāḥa. The victorious Abū ʿAbd-Allāh [q.v.] installed himself in Ḵaṣr al-Šaḥr. His master, the Mahdī ʿUbayd Allāh, lived in Rakkadā until 308 (920) when he moved to al-Mahdiyya. After being deserted by the ruler, Rakkadā fell into ruins. In 542 (955) the caliph al-Muʿizz ordered what was left of it to be razed to the ground and ploughed over. The gardens alone were spared.

(E. HONGMANN)
A few traces of the Aghlabid foundation are still to be seen at the present day. A great rectangular reservoir with thick walls strengthened by buttresses may be identified with the lake (badr) which gave its name to one of the palaces. A palm grove of four stories stood in the centre. Nothing is left of it, but on the west side of the reservoir may be seen the ruins of a building which must have been reflected in the great mirror of water. Three rooms may still be distinguished with their mosaic pavements. The technique and style of decoration closely connect these Qasr Nadjman buildings of the third century A.H. with the Christian art of the country.

RAMADÂN (Ar.) name of the ninth month of the Mahjûmân calendar. The name from the root r-m-d refers to the heat of summer and therefore shows in what season the month fell when the ancient Arabs still endeavoured to equate their year with the solar year by intercalary months (see Nัสrî). Ramađân is the only month of the year to be mentioned in the Qur'ân (Sûra ii. 183; Eastern numbering): “The month of Ramađân (is that in which) the Qur'ân was sent down”, we are told in connection with the establishment of the fast of Ramađân. The discussion on the origin of this edict cannot be considered ended; to what has been said in the article 3AWî there have to be added the researches of F. Goitein, Zur Entstehung des Ramaḍāns, in JSt., xviii. (1929), p. 158 sqq., who in connection with the above mentioned verse of the Qur'ân calls attention to the parallelism between the mission of Qasr Nadjman and the handing of the second tablet to the law of Moses, which according to Jewish tradition took place on the Day of Atonement (Tishâ'î), the precursor of Elul and the date of which was fixed at a very early date by institution. Goitein suggests that the first arrangement to replace the 'Ashurî (q.v.) was a period of ten days (ayûm mu'dâdât, Sûra ii. 184), not a whole month, which ran parallel with the ten days of penance of the Jews preceding the Day of Atonement and survives to the present day in the 10 days of the Tishâ'î (q.v.). If we consider further that the Muslim ideas of the Lailat al-Кadr which falls in Ramađân, in which according to Qur'ân lxxvii. 1, the Qur'ân was sent down, coincide in many points with the Jewish on the Day of Atonement, we must concede a certain degree of probability to Goitein's suggestions, in spite of the undeniable chronological difficulties (alteration of the length of the period of the fast, within a very short time) and although the final settlement of the term as a whole month is not thereby satisfactorily explained. On the other hand to strengthen Goitein's position, it ought perhaps to be pointed out that the Lailat al-Barâ' (q.v.) precedes Ramađân in the middle of the preceding month of Shabîn. The ideas and practices described by Wensineck in the article 3NÂMâN, which are associated with this night really to some extent resemble Jewish conceptions associated with the New Year—which precedes the Day of Atonement by a rather shorter interval than the Lailat al-Barâ' Ramađân that the connection between the latter and the Day of Atonement is thereby strengthened. If we try to connect the so far unexplained word Barâ' with the Hebrew berâ' creation and reflect that according to the Jewish idea the world was created on New Year's Day (numerous references in the liturgy of the festival) we have perhaps a further link in the chain of proof; but if all of the age of the ideas associated with the Lailat al-Barâ' must be ascertained.

The legal regulations connected with the fast of Ramađân are given in the article 3AWî [cf. also 3NÂMâN]. Of important days of the month, al-Birûn, among others, mentions the 6th as birth-day of the martyr Hûsain b. 'Ali, the 10th as the day of death of Kâhidjâ, the 17th as the day of the battle of Badr, the 19th as the day of the conquest of Mecca, the 21st as the day of 'Ali's birth-day, and of the Imam 'Ali al-Ridâ, the 25th as birth-day of 'Ali and finally the night of the 27th as Lailat al-Kadr (q.v.).

The name of this night is Kûrânic; Sûra xxvii. is dedicated to it. It is there described as a night “better than a 1,000 months” in which the angels ascend free from every commission (bi-kidâm Allâh min kull amr) and which means blessing till the appearance of the red of dawn. The revelation of the Kûrân, as already mentioned, is expressly located in it. The same night is obviously referred to in Sûra xlix. 2 as a “blessed” one. The date, the 27th, is however not absolutely certain, the pious therefore use all the odd nights of the last ten days of Ramađân for good works, as one of them at any rate is the Lailat al-Kadr [cf. 3HîTÎM].

Trade and industry are largely at a standstill during Ramađân, especially when it falls in the hot season. The people are therefore all the more inclined to make up during the night for the deprivations of the day. As sleeping is not forbidden during the fast, they often sleep a part of the day; and the night, in which one may be merry, is given up to all sorts of pleasures. In particular the nights of Ramađân are the time of public entertainments, the shadow play [cf. 3KHÂLÎ], theatre and other forms of the theatrical performance. On the termination of the fast by the "little festival", cf. TD AL-FI'TîS.

(M. PLEISSNER)
RAMADAN-OGHULLARI, a petty Anatolian dynasty. The earlier history of the Ramadân-Oghullari is, like that of most of the minor Anatolian principalities (tëvâni-mülük), shrouded in obscurity. According to tradition, this Turkoman family came in Erinçhan's time from Central Asia to Anatolia where they settled in the region of Adana and founded their power. Their territory comprised the districts of Adana, Si, Ayaş, a part of the territory of the Warsaq Turkomans, Tarlu, etc. The date of the earliest known prince of the dynasty, Mir Ahmed b. Ramadân (see below), is put at 780-819 (1379-1416). Nothing definite is known about the real founder, Ramadân-Beg. The French traveller Bertrand de la Broquière thus characterizes Mir Ahmed b. Ramadân: "Lequel estoit tresgrande personne d'honneur et de renom, et la plus vaillante espéce de tous les Turcs et le mieux ferant d'une mache. Et avoir estoit fils d'une femme creusienne laquelle l'avoir fait baptiser a la loy grecque pour luy enlever le flair et le sentier qu'ont cents qui ne sont point baptisées. Il n'avoit ne bon creusement ne bon sararín" (cf. Le Voyage d'Outremer de Bertrand de la Broquière, C. Schiffer, Paris 1892, p. 90 ny). Mir Ahmed was succeeded by Ibrahim Beg (819-830 = 1416-1427). The beginning of his reign is put by some, e.g. Mehmed Nüzhet Bey, as early as 810, while its end is put in 819. Khalif Edhem Beg was the first to propose a new chronology, which is here followed. Ibrahim Beg was deposed before his death (811) by his eldest son 'Ism al-Din Hamza Beg, who reigned from 830-850. He was succeeded by his uncle Mehmed Beg b. Mir Ahmed and the latter's brother 'Ali, who seem to have reigned jointly. Of his successor, his nephew Arslân Dâ'ûd b. Ibrahim, we only know that he fell in 885 (1480) in a battle in the vicinity of Diyarbakr. His body was brought to Aleppo and buried there. The history of the Ramadân-Oghullari now becomes a little better known. His son and successor, Ghars al-Din Khalif, known from a number of inscriptions (cf. Max v. Oppenheim and Max van Berchem, Inschriften aus Syrien, Mesopotamien und Kleinasien, Leipzig 1899, p. 109 sq., Nrs. 141-145 of the years 898, 900, 906, 913) ruled for 34 years with his brother Mahmûd-Beg and died in battle in 916 (1510). The date of his death (beginning of Dhmâli 916 = beginning of Aug. 1510) is known with certainty from his epitaph in Adana, in M. v. Oppenheim and Max van Berchem (op. cit., p. 110, N. 145). His son Piri Mehmed Paşa, who appears as ruling from 916-976 (1510-1568), distinguished himself as an ottoman vassal fighting against the rebels of İsbet (Anatolia; cf. J. v. Hammer, G. O. K., ill. 211) in May 1528 (Shaban 934) as well as in the civil war between the princes Bâyazid and Selim at Konya (May 1559; cf. J. v. Hammer, G. O. K., ill. 368 sqq.). He died in 972 (1568) in his capital Adana. He had an equal command of Persian and Turkish and composed a Divân. His son Derwaş-Beg, who had been mutasarrif of Tarhtas in his father's life-time because after his death governor (vali) of Adana but died young in 986 (1578), He was succeeded by his eldest brother Ibrahim Beg, who had previously been sandjâb-bey of 'Antâb. He acted as governor at his father's capital till his death in 1002 (1694). His son Mehmed-Beg was the last dynast of the Ramadân-Oghullari but he can only have had a nominal rule. The family of the Ramadân-Oghullari however has survived to the present day. The following is the genealogical table:

Ramatdân

1. Ahmed

Daûd Korkud Mahmûd Kobâd

Mustafâ Sulaimân Ahmed 'Omar daughter

Pir Manûf

AL-ROMADI, whose full name was Abi 'Umar (wrongly Abi 'Amr) Yusef b. Harun al-Kinawi al-Kuteibi al-Ramadi, poet of Muslim Spain, who lived in the fourth (tenth) century and died early in the fifth (eleventh) century in 403 (1013), on the day of the 'Aqaba or Feast of St. John (June 24), according to Ibn Haiyan (in Ibn Basir, cf. Bibi), in 413 (1022-1023), according to al-Makari (quoting the same Ibn Haiyan); he was buried in the cemetery of Cordova known as Makharat Kala'.

The ethnic al-Ramadi is explained in two ways: 1. the poet is said to have come from al-Ramada, a little town between Alexandria and Barqa; this explanation is to be rejected for al-Ramada (with generation of the name — and this orthography is attested by the geographers who mention the place, e.g. al-Ya'qubi, al-Bakri and al-Idrisi —) would not give an ethnic like al-Ramadi (with one m); 2. the second explanation which derives Ramadi from ramda: "ordinary ashes" or "ashes for washing", is the only possible one; the poet perhaps in his youth followed the trade of an ash-merchant; in confirmation of this we may call attention to the Romance surname which was originally given him: Abi Dyans (wrongly Abi Salih in the Ya`mat al-Dahr), i.e. padres centos, "father cinders" or "cindersman".

Al-Ramadi, a native of Cordova, spent all his life in his native town except for a brief period of exile in Saragossa. His life was dominated by three great factors: his attachment to Abi 'Ali al-Kalbi, his devotion to the cause of the hashidh Abi 'l-Hassan al-Muslima and his love for Khawla.

Abi 'Ali al-Kalbi, summoned from the east to Spain by the Umayyad caliph, 'Abd al-Rahman III al-Nasir (300-350 = 912-961) had from his arrival in Cordova in 330 (941) no more faithful disciple than al-Ramadi who studied under him in the direction of the Kitab al-Nawadir (the book of philological rarities). The young scholar's admiration found expression in a poem which has remained famous (rhyme 2, metre gamil) of which some thirty lines are preserved in the Ya`mat al-Dahr of al-Thalib al-Daraggi and the Majmua al-Anfus of al-Fath b. Khajlan (cf. Bibi). It is in this poem which gained him the title of Mutanabb al-Labbir (which had already been given to Ibn Hani al-Andalusi and which was later to be given to Ibn Darrad al-Kasalli and to Abi Talib 'Abd al-Debbir). Al-Ramadi studied also under an Andalusian scholar named Abi Bakr Yahya Ibn Haswai al-Kaff or al-Amai ("the blind"), of whom we know very little.

When at the height of his powers, al-Ramadi became laureate to the Umayyad caliph al-Hakam II al-Mustansir (350-366 = 961-976), then to his son and successor Higham al-Ma'rayid (366-399 = 976-1009); but his attachment to the cause of the hashidh Abi 'l-Hassan Djarfar b. 'Uthman al-Muslima and his participation in the plot fomented by the enmity Dzawwar to overthrow Hakam II and proclaim another caliph in his place. Abi 'Amir, thrown into prison at al-Zahr, suffered all sorts of ill-treatment; during his imprisonment, he wrote the most touching verses (including a poem in 6i, metre jawfi, and another in hak, metre jawfi) and he prepared a poetical work on birds, the description of which concluded with a poem in praise of the heir-presumptive Higham II. Liberated through the intercession of friends he had got to go into exile. He went to Saragossa to the governor 'Abd al-Rahman b. Muhammad al-Tugjhi whose merits he celebrated in a poem in which Amnestied by al-Mansur he was able to return to Cordova, but on condition that he did not go into society. Finally pardoned, he entered the contemplation of the all, powerful hashidh as a pensioner (mussawwir) and it was in this capacity that he took part in an expedition against Barcelona in 375 (985). During the fitna which was to lead to the collapse of the Umayyad caliphate and the formation of petty independent states ruled by the muluk al-talitirf, al-Ramadi led a miserable existence and it was in the greatest distress that he died in the early years of the fifth (eleventh) century.

Al-Ramadi became celebrated chiefly for his chaste love for the enigmatic Khawla (wrongly: Halwa or Hulwa) whom he met one Friday in the public gardens of the Banii Marwan on the left bank of the Guadalquivir at the end of the bridge but was never able to see again. It was Abi Mu'min al-Hassan al-Zahir, whose ascetic tendencies on this subject are well known, who did most to spread this love-story; but it seems that the memory of Khawla occupied the heart or mind of the poet only very little; if it still possessed him at Saragossa to the extent of inspiring all the naqsha of the panegyric in honour of the Tugjhi governor, on his return to Cordova, it disappeared completely for we see al-Ramadi henceforth completely overwhelmed by a new passion, the object of which is not a woman but a Mozarab boy to whom the poet gives the name of Yahya (John) or Nusair (Victor?).

The Divan al-Ramadi never seems to have been collected; of his book on birds, Kitab al-Tair, written in prison, there survives only the Lamya in which he described the falcon hunting; the more important fragments that have survived have already been mentioned. A pupil of Abi 'Ali al-Kalbi, al-Ramadi is inclined to imitate the poetry of the east, but after Ibn 'Abd Rabbih and before Ubada b. Muz al-Sama, he shows a marked fondness for the mussawwir in the construction of which, he introduced several innovations. In spite of its classical structure, his verse has a very personal character, especially when he calls upon Khawla or describes his sufferings in the prison at al-Zahr.

The few lines in which he alludes to the weakness of Higham II and to his complete domination by his mother Sahbi and by the hashidh and al-Mansur, those in which he speaks of Dzawwar's plans, are not without historical interest; finally the information which he gives about Mozarabs (worship and costume) in connection with his favourite enable us to check what Abi 'Amir Ibn Shubaid says on the same subject and for this reason of some documentary importance.

RAM-HORMUZ (the contracted form Rami), Ríhmas is found as early as the tenth century, a town and district in Khuzestán [q.v.]. Rám-Hormuz lies about 55 miles southeast of Ahwáz, 65 miles S.E. of Shushá, and 60 miles N.E. of Behbbehán. Ibn Khurádhghí, p. 45, records 17.7 farsaksáh from Ahwáz to Rám-Hormus and 22 farsaksáh from Rám-Hormuz to Ardrájd. Kádáima, p. 194, gives a more detailed list of stages, counting 50 farsaksáh from Waṣát to Básra, thence 35 farsaksáh to Ahwáz, thence 20 farsaksáh to Rám-Hormus, and then 24 farsaksáh to Ardrájd. The importance of Rám-Hormus lay in the fact that it was situated at the intersection of the roads from Ahwáz, Shushá, Isfahán, and Fars (in Ardrájd); that it is the natural market for the Bahgíyát and Khisfí glutinous rice and market for the Khisfí rice. The first of these (also called Džubur) is made up of the following streams: Ahib Gísh (Ahibz I), Ahib Aší (coming from Mungashi), Rúd-l Pítang and Ahib Dará-yi Kúl. A canal is led from the right bank of the Džubur to supply the town of Rám-Hormus. Further down, the Džubur joins the Tíl-Geçtún, which comes from the southeast in the region of Behbbehán and from the old town of Ardrájd [q.v.]. Their combined waters are known as the Džjjárát. The other little river (Gópál) runs north of Rám-Hormus and is lost in marshes. Rám-Hormus (500 feet above sea-level) is situated above the plain to the northeast of which rise the hills of Tíl-Geçtún 1,600 feet high.

The town is rarely mentioned by historians. The Pahlavi list of Íránian towns, § 46 (ed. Marquart, p. 49, 68) attributes the building of Rám-Hormus to Ormuz b. Shîbûhr (272-273) (cf. also Tabari, p. 933). According to Khala, ed. Gottwald, p. 227, the town was built by Ardashîr I and its name was Rám (q.v.) Hormuzd Ardashîr, which Marquart explains as "the delight of Ahwás. Mazdás is Ardashîr." According to a tradition, recorded by Isjádshí, p. 98, Mâni was executed in Rám-Hormus, but Tabari, i. § 34, says that Mâni was exposed on the "gate of Mâni" at Džjandé-Sâbûr (cf. also al-Biruni, Chronology, p. 268). The Nestorian bishops of Rám-Hormus are mentioned in the years 577 and 587 (Marquart, Erásmahh, p. 27, 145). Kádáima, p. 414, says that "Aqâl al-Dawla built a magnificent market near Rám-Hormus and that the town had a library founded by Ibn Sawâr (according to some sources, the son of Sawâr b. 'Abd Allah, governor of Básra, who died in 157 = 753), and was a centre of Ma'tázi learning. According to Ibn Khurádhghí, 45, Rám-Hormus was one of the 12 kúrás of Khuzestán (Kádáima, p. 242, and Kádáima, p. 407: one of the 7 kúrás). Its towns (Kádáima) were Sanbál, Idrájd [q.v.], Tymn [f], Báshán, Láshá, Cházwá [f], Bâkúd, and Káfrk, all situated in the highlands. To these Yákbí, i. § 185, adds Ārâb (with a bridge, a faraschka from Ahwáz). On the other places in the kúr of Rám-Hormus (Azâk, Bûstân, Sâsán, Tâshân, Úr) see Schwarz, op. cit., p. 341-345. According to Kádáima, p. 407, Rám-Hormus had palm-groves but no sugar-cane plantations (in the xivth century however, Mustawfi, Núshá al-Kuláh, p. 111, says that Rám-Hormus used to produce more sugar than cotton); among the products of Rám-Hormus, Ísájshí (p. 93) mentions silk (þibád úbrún) and Dimidáshsh, p. 119 (transl. p. 153) the very valuable white naphtha which comes out of the rocks. At the present day the Anglo Persian Oil Company possesses deposits above Rám-Hormus. ALL-MIKHTEKH, I. MacDonald, Kinner, a geographical Memoir, London 1813, p. 457; Rawlinson, Notes on a March from Zeháb, in J.R.G.S., 1859, ix. 79 (region of Mungashi, in the N. E. of Rám-Hormus); Bode, Travels, London 1845, i. 281; Behbehán-Tâshân-Madájdín-Tíl-Mádájdín-Shushár, ii. 39, 76, 82 (distribution of tribes); Layard, Description of Khuzestán, in J.R.G.S., 1846, p. 13 (country round Rám-Hormus; in the town 250 families, taxes 3,000-5,000 tomans), p. 66 (valley of Džjjárát); Herzel, Eine Reise durch Luristan, in Pet. Mitt., 1897, Ahwáz-Shâkí I-Gapál-Mádájdí ("Mir-bâhá")-Rám (sic)-Palín-Dóz-n-Tâshân-Behbehán; Ritter, Erdkunde, i. 145-152; Schwartz, Iran im Mittelalter, i. 332-345; cf. also the index; Le Strange, The Lands of the Eastern Caliphate, p. 247-249.

(V. MINORSVY)

AL-RÁMI, whose full name was Hâšan b. Muhammad Sharaf al-Din, a Persian stylist. No details of his life are known; even the few chronological references that we possess are rather vague. His importance lies in his well known work Ants al-Iṣlám, a treatise on the most common poetical figures for describing the different parts of the human body. According to his own statement, the author made up his mind to compile this work while he was in Marâgha on a visit to the observatory of the famous Náṣir al-Din Tusi. The book is dedicated to Sultán Abu'l-Fath Uways Bahâdûr (1356-1373), Ilkháán of Khorásán, and according to Ilkáh Khâlda (ed. Flügel, i. 428) was finished in Shâhwâl 826 (Sept. 1423). This is in obvious contradiction to chronology for at this date Ilkâh Khâlda had belonged to the Timürid Shâhrâkh since 825 (1420). The author further mentions in this work the poet Ahwâd (d. 738 = 134) as his contemporary and a certain
Hasan b. Mahmūd Khāṭṭī (d. 710 = 1300) as his teacher. It may therefore be assumed that Ḥājjījī Khāṭṭī’s statement is based on a misunderstanding and was written not later than 1373. The work is divided into 19 chapters which begin with the hair of the head and end with the feet and deal with the human body from head to foot. Besides this book, which is of great value for the study of classical Persian poetry and was used by the great Turkish commentator Muṣṭafā b. Shāḥbāz Surūrī (d. 909 = 1501) in his Bahār al-Maṭawīf, Sharaf al-Dīn Rāmī also prepared a commentary on the well-known work on poetics of Raḥīl al-Dīn Wāṭwāṭ, Ḥaḍīṭh al-Shur (new edition of the Persian text by ‘Abūhās Iklīh, Teheran 1930) entitled Ḥaḍīṭh al-Ḥaḍīṭh or Šemīrī al-Ḥadīth (Ḥājjījī Khāṭṭī, ii. 77), a work called Huṣayn al-Ḥaḍīth of which nothing else is known (Ḥājjījī Khāṭṭī, iil. 112) and a Dīwān, which consisted of ḡazals, Ḵāṭā’s and quatrains, but as early as Dāwlatākh’s time it could only be found in the ‘Irāq, ‘Arbaṭhābīdān and Fars. Nothing of all these works has come down to us except the Anis al-‘Uṭūbī. There is said to be a kāpsa of ‘Rūmī’s in the Dāwlatākh’s Dīwān (compiled in 1400 = 1438–1437) of Shāhīd Ḥāfiz (d. 866 = 1463–1462) (Dāwlatākh, Taḥqīkāt al-Maṣūmī, ed. E. Browne, p. 308).

RĀMĪ MEḤMĒD PĀSHA, an Ottoman grand vizier and poet, was born in 1065 or 1066 (1654) in Elūbūr, a suburb of Stambul, the son of a certain Hasan Ḥāṭṭī. He entered the chancellery of the Re’s Efendi as a probationer (şaban) and through the poet Yūsuf Nāṭī (q.v.), received an appointment as muṣṭafā muṣīlī, i.e. secretary for the expenditure of the palace. In 1065 (1664), through the influence of his patron, the newly appointed Kapudān Pāsha (q.v.) Muṣṭafā Pāsha, he became dīwān-e fennī, i.e. chancellor of the Admiralty. He took part in his chief’s journeys and campaigns (against Chiṣṣa) and on his return to Stambul became re’s kebārār, i.e. purser to the Re’s Efendi. In 1103 (1690) he was promoted Beykülī, i.e. Vice-Chancellor and four years later Re’s Efendi in place of Abū Bakr, in which office he was succeeded in 1108 (1697) by Kūṭīk Meḥmēd Cēlebī. After the battle of Zenta (Sept. 12, 1697), he became Re’s Efendi for a second time and was one of the plenipotentiaries at the peace of Carlowitz by the conclusion of which “he put an end to the ravages of the Ten Years War but also for ever to the conquering power of the Ottomans” (J. v. Hammer). As a reward for his services at the peace negotiations he was appointed a vizier of the dome with 3 horse-tails (maṣfūza) in 1114 (1703) and in Ramaḍān 9, 1114 (Jan. 24, 1703) appointed to the highest office in the kingdom in succession to the grand vizier Dāltānī Muṣṭafā Pāsha. In this office he devoted particular attention to the thorough reform of the civil administration, through the abuses in which he saw the security of the state threatened (J. v. Hammer, G.O. R., vii. 64). By lessening the burden of fortresses on the frontiers in east and west, by raising militia against the rebel Arabs, by securing the pay of the army from the revenues of certain estates, by making aquisition, by restoring ruined mosques, by taking measures for the safety of the pilgrim caravans and for the security of Asia Minor, by settling Turkmen tribes, by ordering the Jewish cloth manufacturers in Selânik and the Greek silk manufacturers in Bâruna in future to make in their factories all the stuffs hitherto imported into Turkey from Europe (J. v. Hammer), he exercised a most beneficent activity, which however soon aroused envy and hatred, and, especially as Rāmī Meḥmēd Pāsha as a man of the pen entirely and not of the sword, was unpopular with the army, particularly the Janissaries, finally was bound to lead to his fall (cf. J. v. Hammer, G.O. R., vii. 72). In the great rising in Stambul which lasted for three weeks, beginning with the unauthorised ascent of Sultan Mehmed IV and ending with his deposition (9th Rabī‘a’ 1115 = Aug. 22, 1703), his career came to an end. He was disgraced, but pardoned in the same year and appointed governor, first of Cyprus, then of Egypt (Oct. 1704). His governorship there terminated as unhappily as his grand viziership (cf. J. v. Hammer, G.O. R., vii. 113 following Rāghīd and La Motraye). In Djiḍmān 1 1118 (Sept. 1706) he was dismissed and sent to the island of Rhodes, where he died in Dji’dhējja 1119 (March 1707) either under torture or a result of it (cf. J. v. Hammer, G.O. R., vii. 134 quoting the interminabul Talman). Rāmī Meḥmēd Pāsha is regarded as a brilliant stylist, as the two collections of his official documents (ingāda) containing no less than 1,400 pieces, distinguished by their simple clear and elevated style, amply show (cf. the MSS. in Vienna, Nat. Bibl. Nrs. 296 and 297 in Gr. Flügel, Die arab. pers. u. türk. Hst., i. 271 sq.). Rāmī Meḥmēd Pāsha also left a complete Dīwān of which specimens are available in the printed Tehrābīr-e Šālim (cf. E. Bäbler, G. O. W., p. 272 sq.: Stambul 1515). His poetical gifts were inherited by his son Abbās Re‘fī (cf. Brūsālī Meḥmēd Tāhir, Tāhirī, Muṣīlmān Mawllīfīr, i. 187). His son-in-law was the tadbīrīr-e Šālim (q.v.).

AL-RAMLĪ, capital of Ḵafṣ, 25 miles E.N.E. of Jerusalem. The Umayyad caliphs liked to choose little country towns, usually places in Palestine, to live in rather than Damascus. Mu‘āwiya and after him Marwān and others frequently resided in al-Ṣinā‘a on the south bank of the Lake of al-Tabrīyā, Yāzīd I in Hawwārīn, ʿAbd al-Malik in al-Dhībīyya, Wahāb in Usāin (now Tell Sair S.E. of Damascus) and al-Ḵaryātān and his
The chief gates of al-Ramlia were: Darb Bīr al-‘Askar (called after the al-‘Askar quarter; cf. Yākūt, iii. 674; Saḥīl al-Dīn, Marajīd, ii. 258); Darb Mandjīq “Ammāba (as it was called, as de Goeje conjectured, from the town elsewhere however called “Ammābā 4 miles E. of al-Ramlia); Darb Baṭrīq al-Maṣjud, Darb Bīrā (i.e. Bīrāl); Darb Bāligha or Kāyriyat al-‘Ibād, the ancient Kāyriyat Baṭrīq al-‘Ibād, now Abī Ghawālah); Darb Lība, Darb Vātār, Darb Mīrār and Darb Dāqīqa, the latter called after a neighbouring town with a mosque, mainly inhabited by Samaritans (Bīth Dagon, now Bait Deqqa).

In the centre of the market-place of al-Ramlia was the chief mosque Dājūm al-‘Abyād, the miḥrāb of which was regarded as the largest of all that were known, the pulpit of which was second only to that in Jerusalem and whose splendid minaret was much admired.

Whether there had been an older town on the site of al-Ramlia is problematic. The old attempts to identify it with Arimathea, Ramath or Ramathaim have now been generally abandoned. An ancient Παναγία, “Camp,” should rather be considered, a place-name particularly frequent in Palestine, which was borne for example by the camp of Jerusalem (Herod. iii. 11, 13; Ant. Ap. xxii. 34—xxiii. 32) and bishops in Palestine (now Bīr al-Zarka, cf. Federin in Géogr. Pe. de S. Ephrem de Grand, p. 104). And in Ptolemaic Libanus (R. Aigrain, l.c., Arab. in Dict. d’Hist. et de Géogr. Anciennes, iii. 1194—1196); for the Egyptian al-Ramlia 4 miles N.E. of Alexandretta corresponds to an ancient Nicopolis and later Parembole. But the Arabic writers say there was no town previously on this site but only a sandy area after which the town was named (Bīr al-Balādhurī, p. 143 etc.).

The population of al-Ramlia was in the time of al-Yaḥyābī (B. G. A., viii. 327 sq.) a mixture of Arabs and Persians (on the settlement of Persians in Syria cf. al-Kindī, Gouverneurs d’Egypte, ed. Guest, p. 19); the clients were Samaritans.

The great cistern ‘Umāirīyya (“Aḥzīyya”) to the N.W., of al-Ramlia near the road to Yākūt, known as the cistern of St. Helena, has a Kūfic inscription of Dhu ‘l-Hijjah 172 (May 786), i.e. the time of Hārūn al-Rashīd (van Berchem, Inscri. arabes de Syrie, Cairo 1897, p. 4—7; M. de Vogüé La citerne de Ramla, in Comptes rendus de l’Acad. des Insr. et Belles-Lettres, xxix. 1911, p. 362 sq., 493 sq.).

By the Frankish pilgrims the town is first mentioned in 870 as “Ramula.” The Crusaders made it a bishopric. In the 13th century was built the beautiful church of the Crusaders, now the mosque (Dājūm al-‘Abyād in the east of the town) with a fine Trabe Gothic portal, to which was later added very skilfully an inscription of Sulṭān Kātabhū. It also has an inscription, according to which its square tower (now replaced by a round minaret) was built or restored in 714 (1314—1315) by Sulṭān Muhammad.

The old “white mosque” was restored by Saladin in 1191 (1191) and given by Balbars in 1166 (1266—1268) two domes, above the minaret and the mihrāb, and the gateway opposite it (Mujār al-Dīn, Bilāl, p. 418; transl. Sauvage, p. 207; the inscription in van Berchem, op. cit., p. 57—64). The minaret, the so-called “tower of al-Ramlia,” or “Tower of the 40 martyrs,” was, according to Mujār al-Dīn and an inscription over its gateway, rebuilt in
Ramapur, an Indian state in Rohilkhand and under the political supervision of the government of the United Provinces. It is bounded on the north by the district of Naini Tal; on the east by Bareilly; on the south by the Bissauli tahsil of Budaun; and on the west by the district of Moradabad.

The early history of Ramapur is that of the growth of Rohilla power in Rohilkhand. After the establishment of Muslim rule in India large bodies of Afghan or Pathan settled down in the country. So powerful did they become that they were twice able to establish their rule in northern India, under the Lodis [q.v.], in the second half of the xvth century, and under the Stüris [q.v.] in the time of Shāh Shāh. After the death of Awrangzib and with the decline of the Mogul empire Afghan settlements increased until in the words of the Siyar al-Muluk-khābārū “they seemed to shoot up out of the ground like so many blades of grass”. The name Rohilla was applied to those Afghans who settled in what is now known as Rohilkhand.

The real founders of Rohilla power were an Afghan adventurer, named Da‘īd Khān, who arrived in India immediately after the death of Awrangzib, and his adopted son, All Muhammad Khān, who succeeded him as leader of a band of mercenary troops. It was during the lifetime of All Muhammad Khān that his possessions came to be called Rohilkhand or the land of the Rohillas. In course of time All Muhammad Khān became so powerful that he refused any longer to pay his revenues to the central government, in which course he was encouraged by the anarchy consequent upon the invasion of Nādir Shāh [q.v.].

The growth of his power so alarmed Šahtar Djang of Ough [see Ough] that he persuaded the emperor to send an expedition against him, as a result of which All Muhammad Khān surrendered to the imperial forces and was taken prisoner to Delhi. After a time he was pardoned and appointed governor of Sirhind. In 1748, according to the Guftūḥ-i Rāmānat, he was transferred to Rohilkhand, but it seems more probable that he took advantage of the invasion of Āhmād Shāh Durrānī [q.v.] to recover his former possessions. Two factors had contributed to the growth of Rohilla power: the weakness of the central government and the fact that they were able to take advantage of the internal struggles between the various Rājput chiefs and nakadārs of Rohilkhand.

All Muhammad Khān left six sons, but the absence of the two eldest in Afghanistan, combined with the extreme youth of the other four, made that all real power remained in the hands of a group of Rohilla nakadārs, the most important of whom were Hāfyz Raŷmat Khān, and Dīnī Khān. This naturally produced intrigues and disputes and eventually weakened the Rohilla power.

In 1771 the Marāthas turned their attention to the conquest of Rohilkhand, whereupon the Rohillas applied for aid to Shujā‘ al-Dawla, the nawab-wazir of Oughli. It was agreed that Shujā‘ al-Dawla should receive forty lakhs of rupees for his services (Aitchison, i. 6—7), but the Rohillas later refused to abide by their pecuniary engagements. In accordance with his promise at the Conference of Benares in 1773, Warren Hastings agreed to assist the nawab-wazir in expelling the Rohillas from Rohilkhand, for which he was to receive forty lakhs of rupees. On April 23, 1774, the Rohillas were defeated and their leader, Hāfyz Raŷmat Khān, slain. At the end of this war Faisrallah Khān, a son of ‘Ali Muhammad Khān, concluded a treaty with Shujā‘ al-Dawla at Lal-dang (India Office MSS., Bengal Secret Consultations, October 31, 1774; see also extracts from the Persian interpreter's journal, February 14, 1775).

By this treaty Faisrallah Khān received a gift consisting of Ramapur and other districts with a
revenue estimated at approximately fifteen lakhs of rupees. To prevent him from becoming a menace to Oudh, he was not allowed to retain in his service more than 5,000 troops. After the death of Shuja' al-Daula, in 1775, Faizullah Khan was informed that his engagement with the late nawab was still continued in force with his son, Aqaf al-Daula. (Bengal Secret Consultations, April 17, 1775.) Draft correspondence with the Company, Powers, N" 34."

In 1780 the English Company needed additional troops and Hastings urged Aqaf al-Daula to demand from Faizullah Khan the 5,000 horses he had engaged to supply by treaty. This demand for cavalry was an unwarrantable interpretation of the Treaty of Laidang for which no justification has ever been attempted. In 1781 Hastings empowered Aqaf al-Daula to resume Faizullah Khan’s rights, but fortunately this order was never carried out, and it was eventually decided to solve the problem by means of a fresh agreement whereby the obligation to provide troops for the nawab’s service was commuted under the Company’s guarantee to a cash payment of fifteen lakhs of rupees. In 1801, on the cessation of Kohil-khan to the British, Faizullah Khan’s descendants were continued in their possessions. For his services in the Mutiny of 1857, Muhammad Yusuf ’Ali Khan, the ruler of Rumpur, received a grant of land and was assured by Sa’adat Khan that, on the failure of natural heirs, any succession in his state, which might be legitimate according to Muhammadan law, would be upheld by the Government of India.

Modern Rumpur has an area of 893 square miles and supports a population of 465,225 of whom 217,297 are Muslims (1931 Census Report). It is divided for administrative purposes into six tahsils: the Haúr, Shaltahāb, Milak, Billapur, Snār and Tanda (Administration Report, 1932–1933). Its rulers are patrons of Oriental learning. The celebrated Madrasa ’Allya, an Arabic college, which is maintained from state funds, attracts students from all parts of India and even from Central Asia. Rumpur city, which has a population of 74,036, possesses a fine library containing an exceptionally valuable collection of manuscripts. Almost every Patha’man clan is represented in modern Rumpur, the most numerous being the Vasafris and Orakazis. There are also large numbers of Khattaks, Bunerwals, Muhammadanis, and Afrits.

RANGIN. Several Indian poets have used this taḥlitīq. The Riṣūd ‘al-iṣṭafā of Dhu’l-Fiqār ‘Ali, biographies of Indian poets who wrote in Persian, and the Tādzišra of Yūsuf ‘Ali Khan (analysed by Sprenger, A Catalogue of the Arabic, Persian and Hindustani Mss. of the King of Oudh, i. 168 and 280) mention five of them. The first, a native of Kashmīr, lived in Dīhli in the reign of Muhammad Shāh (1719–1748); his ghazals were sung by the dancing-girls. — The most celebrated, however, was Sa’adat Yūr Khān of Dīhli. His father, Šāhshāh Beg Khān Tūrān, came to India with Nādir Shāh and settled in Dīhli where he retained the rank of haft-hašārī and the title of Muhkm al-Daula. In his turn, Sa’adat Yūr Khān entered the service of Mirzā Sulaimān Shikhh, son of the emperor Shāh ‘Alam, who lived in Lucknow. He was a great horseman and able soldier: for a time he commanded a part of the artillery of the Nāsūr al-Haidarābad but he gave up this post to go into business. He was in his youth a friend of the poet Iṣlah, in Lucknow; a pupil of the poet Muhammad Ḥātim of Dīhli (cf. Rashid Bahadur Saksena, History of Urdu Literature, p. 48; Sprenger, op. cit., p. 233), he afterwards submitted all his verses to the criticism of Niqār (cf. Sprenger, p. 273), then of Māshaṭ (Saksena, p. 90); he died in 1745 (1832) aged eighty (or a year later; cf. García de Tassy). — The following are his works in Urdu: Mathnawī Dāïṣūr, a poet of romantic adventures (1123 = 1798); Ḥaþīl-i Rangīn, a Mathnawī of tales and anecdotes (Lucknow 1844 and 1870); another Mathnawī of anecdotes: Mathnawī al-Aṣūr b Ghara’ūl al-Muṣrār (lit. Agra and Lucknow); four division collectively known as Nāw Rūzān ("the Nine Jewels"), the first two lyrical, the third humorous and partly in riṣāl (language peculiar to women), the fourth in this same language with a preface by Rangīn explaining the principal words (on the development of riṣāl and Rangīn’s skill in this licentious genre), cf. the article Urdu vol. iv., p. 1026, l. 1–11, and Saksena, op. cit., p. 94); in prose a treatise on horsemanship (Fārānā‘ī, 1210 = 1775, several times edited) and a collection of critical observations on a number of poets, entitled Majdulīrī Rangīn. In Persian (if the work is really his; cf. Sprenger, op. cit., p. 54, N° 462), Rangīn under the title Mihr u-Maṣā‘, sang of the adventure of a son of a sāyid and of a daughter of a jeweller, based on an incident that occurred in Dīhli in the reign of Dīhāŋgīr (cf. Gr. i. Pk., l. 254).

RANGOON, a city in the Pegu division of Burma, lying on both sides of the Hlaing river at its point of junction with the Pegu river and the Paungdaung creek, twenty-one miles from the sea.

Legend, not entirely undocumented, relates that the great pagoda at Rangoon (Mon, Kyauk Lamyag; Barmese, Show Dagon) was founded during the lifetime of the Buddha and was repaired by the emperor Asoka (J. B. R. S., xxiv. 4 and 20).

History proper begins with the establishment of Pegu as the capital of a Mon kingdom in 1269.
A convenient port was required for this kingdom. Bassin, which had been the chief port of Burma in the early middle ages, was too distant and too difficult to control. Martaban on the Gulf of Sittang was nearer but had no good river connection with Pegu. It was natural, therefore, that the Rangoon or Hlaing river, of which the Pegu river is a tributary, should come into prominence as a line of approach for over-seas trade. Syriam, to the southeast of Dagon at the mouth of the Pegu river, and Dalla, now part of the Rangoon on the opposite bank of the Hlaing, were the chief ports.

But the Shwe Dagon pagoda standing on the last spur of the Pegu Yomas was a landmark to shipping coming up the river and was chosen by a succession of kings for the exercise of their piety.

An inscription on the Dagon pagoda hill, engraved by order of King Dhammazedi in 1845 A.D., records additions to the pagoda by his royal predecessors for a century back, as well as by himself (F. B. R. S., xxiv. 8). Similar works of merit by subsequent kings are recorded in the histories (by this period fairly reliable) culminating in the rebuilding of the pagoda by King Bay in Naung after it had been damaged by an earthquake in 1508 A.D. There are also frequent references by early travellers, such as Ferdinand Mendez Pinto, Caesar Frederick, and Gasparo Balbi to Dagon at its celebrated pagoda.

It is the customs revenue of the Rangoon river that financed the Portuguese adventurer de Brito, who rose to power in Syriam between 1600 and 1612. Later in the 18th century the Dutch, French and English from time to time maintained trading stations at Syriam.

The capital was transferred from Pegu to Ava in 1635 and royal authority gradually declined, but even the weakest kings contrived to keep control of the Irrawaddy and the now important customs station of Syriam. With the seizure of Syriam by the Pegu rebels in 1740 the kingdom of Ava, deprived of its revenues, necessarily came to an end.

The recovery of Syriam was one of the first objects of Alaungpaya, the founder of the dynasty which ended with King Thithaw. His siege operations were for some time unsuccessful and he had to be content with the capture of Dagon in 1755. It is recorded that as he had been successful over all his enemies (yan akou) he changed the name of the town to Yangon (Rangoon). Syriam fell in 1756 and was destroyed. A governor was appointed at Rangoon, which now replaced Syriam as the principal port of Burma.

The policy of the early kings of the Alaungpaya dynasty was to encourage foreign trade. A British factory was established at Rangoon and maintained till 1782. First, Armenian and Muslim traders settled here and flourished. But with the weakening of the central government the exactions of the local officials increased and constituted a serious discouragement to commerce. Synes describes Rangoon, as a flourishing port in 1793 and estimates its population at 30,000 (p. 314).

Rangoon was first captured by the British in 1824 during the first Burmese war but was evacuated in accordance with the terms of the Treaty of Yandabo at the end of the war. According to the Asin-baung ett Maha-yawawunyai (vol. iii., p. 45), a Burmese history of the Alaungpaya dynasty, King Tharawaddy visited Rangoon in 1841 (1203 A. D.) and founded a new town south and west of the Shwe Dagon pagoda, to which the population of the old town on the banks of the river was ordered to remove. The order was not at once obeyed, but, by the outbreak of the second Burmese war in 1852, the transfer of the population was pretty complete and the British government was unimpeded in the measures, which it lost no time in undertaking, for the reclamation and lay-out of the riverine area. In the space of three years Rangoon rose from a splashy collection of huts into a thriving and populous town. [For improvements in Rangoon and development of Pegu, see Fytche's Burma Past and Present, ii., appendix G. To-day it is the capital of Burma and has a population of 400,475, of whom 70,794 are Muhammadans (1931 Census Report).

(C. C. Lloyd Davies)

RAPAK (Jav.; Ar. raf') is a technical term used among the Javanese, in this one case only, for the charge made by the wife, at the court for matters of religion, that the husband has not fulfilled the obligations which he took upon himself at the talibih of jafah [see jafah]. These obligations are of a varied and changing nature. Among the conditions the following always occurs: "If the man has been absent a certain time on land or (longer) over seas" i.e. without having transmitted mofafa [q. v.] to his wife. A clause that is never omitted is the following: "If the wife is not content with this"; She is therefore at liberty to be quite satisfied with the husband's non-fulfilment of his vows, without taking steps for a divorce. The work of the court is only to ascertain the fulfilment of the condition and the arising of jafah. As always, the jafah is still entered in a register. — It is evident that this procedure guarantees the integrity of the law otherwise endangered.

RAS AL-A'IN (Ain Warda), a town in al-Diasira on the Khabir. In ancient times it was already known as Rasain-Theodosiopolis (Notitia dignitatum, or., xxvii. 20) or Forina (Steph. Byz.), Syriac Rasih 'Ainik. On account of its position at the sources of the Khabir it has been identified with the road-station Foros Scabora of the Tabula Peutingeriana (Foros Scabora in Pliny, Nat. hist., xxxi. 37; xxxii. 16) (E. Herzfeld, Reise im Eugkhai-

1119
and Rás al-'Ain. The latter was taken by Jocelin and a large part of the Arab garrison killed and the remainder taken prisoners (Mich. Syr., ii. 255; Barheb., Chron. yr., ed. Bedjan, p. 289). But the Franks cannot have held the town for very long.

Saladin, al-Din of Mawgli and 'Isa al-Din Mas'ud of Halab in 570 (1174—1175) attacked Salāḥ al-Din and besieged Rás al-'Ain but were soon afterwards defeated by him at Kurūn Ḥamā. In 581 (1185—1186) Saladin crossed the Euphrates and marched via al-Ruḥā, Rás al-'Ain and Dārā to Balad on the Tigris. His son and al-Asfāl in 597 (1200—1201) received from al-'Adil the towns of Sumaisaṭ, Sarūdī, Rás al-'Ain and Dārāmūn; when he then marched on Damascus, Nār al-Dīn of Mawgli and Kūṭh al-Dīn Muhammad of Subdār again took the Djiṣṭa from him but fell ill in Rás al-'Ain in the heat of summer and concluded peace again. In 599 (1202—1203) al-'Adil took from al-Asfāl the towns of Sarūdī, Rás al-'Ain and Dārāmūn (other fortresses also are mentioned). When the Kurūn (Georgian) who had advanced eastwards as far as Ḥāliḥ in 600 (1205—1206) learned that al-'Adil had reached Rás al-'Ain on his way against them, they withdrew (Kāmil al-Dīn, trans. Blochet, in K.O.L., ii. 67). Malik al-Asfār, who had defeated Ibn al-Maghṭūb in 610 (1219—1220) forgave him for rebelling and gave him Rás al-'Ain as a fief (Kāmil al-Dīn, op. cit., p. 61; according to Barheb., Chron. yr., p. 439, however, Ibn al-Maghṭūb died in prison in Ḥarrān.

Saladin's nephew al-Asfār in 617 (1220—1221) was fighting against the lord of Mādin. The lord of Amid made peace between them, when Rás al-'Ain was ceded to al-Asfār, Muwaszar and the district of Shabakhtūn (around Dūnāšt) to the lord of Amid. In exchange for Damascus, al-Asfār, in 626 (1229) gave his brother al-Kāmil the towns of al-Ruḥā, Ḥarrān, al-Raṣṣā, Sarūdī, Rás al-'Ain, Muwaszār and Dārāmūn (Kāmil al-Dīn, in K.O.L., p. 77; Barhebraeus, Chron. yr., p. 458) who occupied them in 634 (1236—1237) (Kāmil al-Dīn, op. cit., p. 92). After the defeat of the Khūṛṛmīnān at al-Jabāl al-Dawmah near al-Ruḥā, the army of Halab in 638 (1240—1241) took Ḥarrān, Rás al-‘Ain, at Al-Ruḥā, Rás al-Ain, Dārāmūn, al-Muwaszār and Al-Raṣṣā and the district belonging to it (al-Rāzī, in K. O. L., vi. 12). But in 639 (1241—1242) the Khūṛṛmīnān, who had made an alliance with al-Malik al-Muṣaffār of Miṣyāfšīrūn, returned to Rás al-'Ain, where the inhabitants and the garrison, including a number of Frankish archers and crossbowmen, offered resistance. An arrangement was made by which they were admitted to the town by the inhabitants, whose lives were promised them, and captured the garrison. When al-Malik al-Muṣaffār had returned to Ḥarrān and al-Muṣaffār had retired to Miṣyāfšīrūn with the Khūṛṛmīnān, they sent their prisoners back (Kāmil al-Dīn, in K.O.L., vi. 14). In the same year also the Tatars came to Rás al-'Ain (ibid., p. 15). When the Khūṛṛmīnān and Turkmen raided al-Djiṣṭa, the army of Halab under the enṣīl Dāmūl al-Dawla in Dūnāšt II 640 (1242—1243) went out against them and after two attacks camped opposite one another near Rás al-'Ain. The Khūṛṛmīnān combined with the lord of Mādin and finally a peace was made by which Rás al-'Ain was given to the Ortosīd ruler of Mādin (Kāmil al-Dīn, in K. O. L., vi. 19).
In a Muhammadan cemetery in the North of Rās al-'Āin, M. von Oppenheim found an inscription of the year 717 (1317-1318). The Syrian chroniclers mention Rās al-'Āin as a Jacobite bishopric (11 bishops between 793 and 1100 are given in Mich. Syr., iii. 503) in which a synod was held in 684 (Barhebrueus, Chron. eccl. i. 287). Towards the end of the viiib century the town was sacked by Timūr.

Rās al-'Āin is built at a spot where a number of copious, in part sulphurous, springs burst forth, which form the real "main source" of the Khabūr (al-Dimashki, ed. Mehren, p. 191). The Wādi al-Durjībih, which has not much water in it and starts further north in the region of Warrakheh, and which may be regarded as the upper course of the Khabūr, only after receiving the waters from the springs of Rās al-'Āin becomes a regular river, known from that point as the Khabūr. According to M. von Oppenheim (cf. his map in Pettermanns Mitteil., 1814, p. 218), the springs at Rās al-'Āin are "Ain al-Ḥusān, 'Ain al-Kebrīt and 'Ain al-Zāyka," according to Taylor (J.R.A.S., xxxviii. 349, note) "Ain al-Baidā" and "Ain al-Ḥasān are the most important; he also gives the names of 10 springs in the N.E. and 5 in the S. of the town.

The Arab geographers talk of 360, i.e. a very large number of springs, the abundance of water from which makes the vicinity of the town a blooming garden. One of these springs, 'Ain al-zāhirīyah, was said to be bottomless. According to Ibn Hawkal, Rās al-'Āin was a fortified town with many gardens and mills; at the principal spring there was according to al-Mašdist a lake as clear as crystal. Ibn Rusta (B.G.A., vii. 106) mentions Rās al-'Āin, Karkīsā, and al-Rājqa as districts of al-Djiistra. Ibn Dhibair in 580 (1184-1185) saw two Friday mosques, schools and baths in Rās al-'Āin on the bank of the Khabūr. According to Ḥamid al-Mustawfi (xvib century) the walls had a circumference of 3,500 paces; among the rich products of Rās al-'Āin, he mentions cotton, dates and grapes. The historical romance Fatḥ al-Dīn al-Rabi'a wa-Dīn al-Rahīm (xvib century) wrongly ascribes to al-Wākidī, which contains much valuable geographical information, mentions at Rās al-'Āin a plain of Mathakbāk and a Medjīd al-Yār (var. al-Dair); it also mentions a Nestorian church in the town and several gates (in the translation by B. G. Niebuhr and A. D. Mordtmann, Schriften der Abad. von Hamburg, i. part iii., Hamburg 1847, p. 76, 87; the "gate of Istacharum" in the east and the "Mukhtalas or gate of Qabur" not precisely located. I have not been able to see the Arabic text of Ps.-Wākidī, ed. Ewald, Göttingen 1827).

At Rās al-'Āin were the Jacobite monasteries of Beth Tīnāl and Spequos (speculius); Ps.-Zacharias Rhet., viii. 4, trans. Ahrens-Kröger, p. 157; so also for Asphalos in Mich. Syr., iii. 50, 65, cf. ii. 513, note 6: Saphylos in Mich. Syr., iii. 121, 449, 462; Barhebrueus, Chron. eccl. ed. Abbo-Lamy, i. 281 sq.: Sophocles, ibid., p. 397 (probably so to be read throughout).

Little to the southwest of Rās al-'Āin on the right bank of the Khabūr is the great mound of Tell Halaf, where M. von Oppenheim excavated the ancient palace of Kapara (cf. Bibl.).

(E. H. Honigmann)

AL-RĀSHID BI 'LLĀH Abū Dā'f AR-ANṣUR B. AL-MUSTAQIM, B. AL-MUSTAKHRID, Abhārisīd caliph. On the 2th Rabi' II, 513 (July 13, 1119) the caliph al-Mustakhrīd [q. v.] had homage paid to him by twelve-year-old son Abū Dā'f al-Anṣur as heir-apparent and in 'Ubayd-Allāh's [q. v.] name and in 'Abd al-Ḳaḍā' 529 (Aug.-Sept. 1133) the latter was acclaimed caliph under the name al-Rāshid bi 'llāh. When the Saljūq Sultan Mas'ud b. Muhammad [q. v.] soon afterwards demanded 400,000 dinars from him, al-Rāshid refused, because, as he said, he had no money. Mas'ud's envoy then attempted to search the caliph's palace and seize the money by force; but he resisted the Sultan's troops were scattered and his palace plundered. Several emirs also withdrew their homage from the sultan. His nephews, Dā'vid b. Maḥmūd, advanced from Ḍhahirbādīn against Baghhdād and reached it in the beginning of Safar 530 (Nov. 1135). In the meanwhile the number of the caliph's supporters increased. He was joined among others by the Abū Bekr al-Mawṣilī and Ali Zengī [q. v.] and Dā'vid was proclaimed sultan in Baghhdād. On hearing this Mas'ud prepared for war, advanced on Baghhdād and laid siege to it; he did not succeed in taking it, so after some fifty days he withdrew to Nahrawān [q. v.] and then went to Ġamādhān [q. v.], Toronjāi, governor of Ḍalīl, then appeared and placed a sufficient number of boats at his disposal so that he was able to cross the Tigris and occupy the western bank. The result was that the allies separated. Dā'vid returned to Ḍhahirbādīn and Zengī with the caliph to al-Mawṣil, while Mas'ud in the middle of 'Ubayd-Allāh's [q. v.] name and in 'Abd al-Ḳaḍā's 530 (Aug. 1130) entered the ancient city of the caliphs, where he forbade looting and other excesses and restored order. He then assembled in an assembly of judges and legis and decreed the daily caliphalty of the throne. The latter was accused among other things of having broken his oath to the Sultan; he was said to have solemnly promised Mas'ud never to take up arms against him nor to leave the capital; he was also accused of other crimes. In his stead, his uncle Abū 'Abd al-Muḥammad al-Muṣṭafī b. al-Muṣṭafī [q. v.] was appointed commander of the faithful.
Al-Rashid however did not stay long in al-Mawil but went to Adhharbidjān where he joined Dāwūd. Several sources, dissatisfied with Maṣūd, also made common cause with Dāwūd with the object of restoring al-Rashid to the throne; the latter however took no part in the military operations [see also the article Maṣūd]. On Rāmādān 25 or 26, 1532 (June 6 or 7, 1135) the former caliph, who had not quite recovered from an illness, was murdered by Assassins near Isfahān.

RASHID, MASMAD, an Ottoman imperial historiographer, belonged to Stambul, where he was born as the son of the Kâdi Mutfa Mustafa, a native of Malatia. He completed his studies in his native city where he was appointed official historiographer (wazâf al-nawā Hillary) in 1126 (1714). He held this office till his appointment as kâdi at Aleppo in 1134 (1720). Later on he went as ambassador to Persia with the rank of Kâdi of Mecca, and became in 1142 (1729) Kâdi of Stambul. He was dismissed a few months later and on 1st Jamâdâl Akir (Oct. 1734) appointed kâdi in Amol. He died on 18th Dhu al-Hijjah (July 10, 1735) in Stambul and was buried in the Kara Yermuk Street. On his tombstone see Braun, Mehmed Taahir, 'Olgâned al-Murâskif, iii, 55 note.

Mehmed Rashid in continuation of Naṣir in q.v. wrote a history of the Ottoman empire from 1071 (1660) to 1134 (1721) usually called briefly Tarikhı Râshid (cf. Hâddâl Khalifa, N° 14, 526) which is the authoritative source for this period. His successor in the office of imperial historiographer was Isââm 'Atîm, known as Kâcit Celâhi-zade (cf. Rashid, Tarikhı, iii, fol. 114).

In addition to numerous MSS. (cf. F. Bahinger, G.O.W., p. 269 to which we have to add 'Uspâla, N° 667-668 [Râshid's autograph] and Stambul Lâlî Isâmîl, N° 378) Râshid's history has been twice printed (folio, Stambul 1153, 4 vols.; octavo, 6 vols., Stambul 1282; cf. ibidem 7. A. 1898, i, 477). Portions have been translated by M. Norberg, Türkischer Ritter, vol. i, p. 268; Hermann, 1878, II, 455-479; and J. S. Sekowski, Collection of the Diplomatic Tarirchik, ii, Warsaw 1879, p. 1-208.

**Bibliography:** cf. F. Bahinger, G.O.W., p. 269 sq.

(From Franz Bahinger)

AL-RASHID. [See 'Abd al-Wâhid, Hakim.]

**AL-RASHID** (MAWLI), b. al-SHARIF, s. 'ALI B. MUHAMMAD B. 'ALL, 'Ali 'Alî Sultan of Morocco and the real founder of the dynasty which rules the Shī'ite empire. He was born in 1040 (1630-1631) in Tāfirî [q.v.] in the south of Morocco, where his ancestors, the Hassâni Shurafâ (Sadrî [q.v.]) of Sidjākîs [q.v.], had founded a flourishing Shī'ah [q.v.] and gradually acquired a fairly considerable political influence, which increased with the decline of the Sāliḥî [q.v.] dynasty. Morocco being at this time plunged into anarchy, the Shū'â'î of Tâfirî were able rapidly to become masters of the great tracts of steppe-like country to the north of the corridor of oases which formed their appanage. The oldest son of the chief of the Shurafâ, Mawli Maḥammad, having successfully fought the marabout of the Shurafâ of Tinjûn in al-Tâzinâwî (S.W. of Morocco) and his ally Abû Ḥâsîn, who had political ambitions of his own, assumed a royal title in 1056 (1646). He did not however yet succeed in gaining the power of the marabouts of the Shurafâ of al-Dîlî, in central Morocco; he had to be content, after a very brief occupation of Tinjûn and Fisâ in 1650, with effective sovereignty over eastern Morocco only.

On the death of Mawli al-Shârîf in 1065 (1659) his son, Mawli al-Rashid, not trusting his brother, Mawli Maḥammad, left the ancestral Shurafâ for the rival Shurafâ of al-Dîlî, where in spite of a superficially warm welcome, he was soon given the hint to go; he proceeded to Azîrî, then to Fisâ, which, regarded as an undesirable by the lord of the city, the adventurer al-Durâsî, he was not allowed to enter. He next went to eastern Morocco, and very soon succeeded in gaining a number of followers, particularly, in the important tribe of the Banû İsmâîl (Beni Snaaasen), the Shâhîk al-Lawatat, a religious dignitary of great influence. At the same time he attacked a very rich Jew, who played the regular lord and lived in the mountains of the Banû İsmâîl, at the little town called Ḍir Bî nisâsh al-Rashîd slew him and seized his wealth. This coup vividly impressed the imagination of the people of the district; and to give rise, as P. de Cenival has brilliantly shown, to a legend, the memory of which still survives in the annual festival which follows the election of the 'sultan of the jûla' at Fisâ. Mawli al-Rashid by this murder not only acquired considerable material resources, but also a real ascendency over the people of the neighbourhood. In 1075 (1664) the large tribe of the Angûd rallied to his authority, and he set up in Ujdân [q.v.] as a regular ruler. On the news of the proclamation of al-Rashid, his brother Mawli Maḥammad, much disturbed, hurried from Tâfirî to eastern Morocco; his troops were met by those of al-Rashid, and Mawli Maḥammad having been killed early in the battle, his men then went over to the surviving prince. Thenceforth Mawli al-Rashid went on from success to success.

He very soon seized Târir without difficulty, and directly threatened Fisâ, but he first of all took care to secure his power solidly at Tâfirî, the cradle of his line, and added to his lands the mountains of the Rif [q.v.] on the shores of the Mediterranean, which were then ruled by an enterprise individual named Abû Muhammad 'Abd Allah A'ârîs. This shâhîk had made an agreement, first with the English and then with the French, for the establishment of factories on the Rif bay of Alhucemas (transcribed in the documents of the period as Alhounèz). Mawli al-Rashid deprived him of the Rif in March 1666, just when the Marseillais Roland Fréjus, having obtained from the King of France the privilege of trading in the Rif, was landing on the Moroccan coast. Fréjus then went to see Mawli al-Rashid at Târir, but the negotiations into which he endeavoured to enter with the shâhîk soon collapsed.

Al-Rashid without delay turned his attention to
AL-RASHID — RASHID AL-DIN SINAN

The capital of northern Morocco, Fas, which still withstood its authority. He laid siege to it and took it by storm on the 3rd Dhu l-Hijjah 1076 (June 6, 1666); the adventurer: in command there, al-Duraidi, took to flight. Al-Rashid took vigorous steps to punish certain of the notables of the town and the people proclaimed him sultan. He was at the same time able to rally to his side the important group of Idrisid Shorfa in the capital.

The years that followed were used by Mawali al-Rashid to extend his possessions towards west and south. He first made an expedition against the Ghorists, out of which he drove the chief al-Khafir Ghailan, and seized al-Kašr al-Kabir (Alesazaquiv) and Taras (q.v.). He also took Meknes (q.v.) and Tetuan (q.v.) as well as Fas, the inhabitants of which had rebelled. In 1079 (1668) he took and destroyed the berber of Dīn after having routed its chief Muhammad al-Hājjī at Batn al-Rumān. The same year, Mawali al-Rashid seized al-Qassar Dāghir and put to death there the local chief Abd al-Karim al-Shabānī, named Karīm al-Hājjī. In 1081 (1670) he undertook an expedition into Fās (q.v.) where agitators still disputed authority. He took Tīrādīnt (q.v.) and the fortress of Il-hār and returned to Fās, now lord of all Morocco. At this time, says the chronicler al-Ifrīnī, "all the Maghribi, from Tiemcen to the Wādī Nāṭl on the borders of the Sahara, was under the authority of Mawālī al-Rashīd".

The next year the sultan went from Fās to Marrakesh, where one of his nephews was endeavouring to set up as a pretender to the throne. During his sojourn in the southern capital, Mawali al-Rashid, not yet 42, died as the result of an accident on the 11th Dhu l-Hijjah 1082 (April 9, 1672); the horse he was riding having reared, he fractured his skull against a branch of an orange-tree. He was buried at Marrakesh, but later his body was brought to Fās where he was interred in the chapel of the saint 'Ali Ibn Hirākim (wulg. Sidi irrzīm). His brother, Mawālī l'Esmā'īl (q.v.) who succeeded him, was proclaimed sultan on the 15th Dhu l-Hijjah following.

The brief political career of Mawālī al-Rashīd was, we have seen, particularly active and fruitful. The Muslim historians of Morocco never tire of praising this ruler whose memory is still particularly bright, especially in Fas. It was he who built in the town the "Madrasa of the Rope-makers" (Madrasat al-Sharīfīn), the bridge of al-Rashīd, the "hauzūd of the Sharātīda" (Casba of the Cberarda) and 2½ miles east of Fās, a bridge of nine arches over the Wādī Subīl (Sebūh).

RASHID AL-DIN SINAN (or, as the Islamīs themselves usually call him, Sinān Rāshīd al-Dīn), the famous leader of the Syrian Islamīs in the second half of the xiiith century, is better known to the world as Shāhīd al-Djasāl, or the "Old Man of the Mountain". His full name was Abu l-Hasan Sinān b. Sulaimān b. Muhammad. He was born near Basra, educated in Persia, and, in 538 (1143), was appointed by Imam Hasan of Alamārī as the head of the Syrian Islamīs (Nizārī) community. This post he occupied till his death at an advanced age in Ramadan 589 (Sept. 1193), at Maṣṣaf. He played a prominent part in the Syrian and Egyptian politics of his time, successfully defending his people from the continuous pressure of the orthodox Mūhammadan rulers, especially the famous Saladin (q.v.), on the one hand, and against the Crusaders on the other. The fact that this small community still continues to exist (in the villages near Ḥamā), in spite of the persistently hostile attitude of its neighbours, must to a great extent be attributed to the solid foundations laid by him. References to him are to be found in the works of all historians who deal with the events of his period, but the most detailed account is given in the paper by Stanislas Guyard, Un grand moquef des Assassins, au temps de Saladin (7. A., 1877, p. 324-489). It gives the original Arabic text of the Faṣīl, a genuine Islamī work probably by a contemporary of Sinān, containing the manāhīs about him, i.e. various anecdotes based on the oral tradition of the sect. This text is accompanied by a French translation and an introduction containing a detailed review of the historical information about Sinān, and the Islamī sect in general, which, in the main, still preserves some value. The Faṣīl appears to be now unknown to the Syrian Islamīs; they do not appear to have any reliable and genuine histories of their own community. The recently published al-Fahāk al-dawwār fī Samā' al-dīnams al-ťāfīr, by an Islamī author, Abū Allah b. al-Mardaḏa from Khawābī (Aleppo 1352 = 1933), shows no trace of such local tradition, and the account of Sinān given in it is entirely based on well-known general histories, such as those by Ibn al-Atib, Abu l-Fidā', etc.

The stories connected with Sinān chiefly centre around his use of an instrument for removing his political opponents by assassination. Unquestionably there is some grain of truth in these stories; but it is obvious that excited hasāar rumours greatly exaggerated them, wrongly attributing to him and his organisation many exploits for which they were not responsible. Many historians state that
he was regarded as the supreme and superhuman head of the sect. Unfortunately, he is never referred to in any available genuine works of the Persian Isma'ili, and it is difficult to ascertain what was his real position in the sectarian hierarchy. Most probably he occupied the highest rank after the Imám, i.e. that of the ḫwājdāt, which, according to the reformed Nizārī doctrine, implied a considerable "dose" of the superhuman. In any case, there is no reason to think that he either claimed to be or was regarded as an Imám, although, just as in the case of other eminent Isma'ili, such as Nasr-ī Khurram and Hasan b. Sablah, popular tradition furnished him with noble descent from 'Alī himself.

Bibliography: given in the article.

(RASHID AL-DIN TABIB, one of the greatest historians of Persia. Fadl Allah Rashid al-Din b. Imām al-Dawla Abū Tāhir was born in Hamadhān about 1247. He began his career in the reign of the Mongol ruler Abagha Khān (1265–1282) as a practising physician. But as in addition to a remarkable knowledge of medicine he was an exceedingly talented and farseeing statesman, he rose under Ghiyān Khān (1295–1304) from his earlier position to the rank of a gāne (and also court historian) which was given him after the execution of Sa'd-ī Dīhān Sa'd al-Dīn Tawfikī (May 4, 1298). In 1303 he accompanied his sovereign in this capacity on a campaign against Syria. Under Udūjī (1304–1316) Rashīd attained the zenith of his career. He used his fabulous income for a number of charitable buildings. For example in order to beautify the new capital of the Mongols in Persia, Sulṭānābād, he built a whole new suburb, called after him Rub'ī Rashidīya, which consisted of a mosque, a madrasa, a hospital and several thousand houses. At the same time he was working steadily on his history of the world, the first volume of which he presented to his sovereign on April 14, 1306. At this period there was no limit to his influence. He even succeeded in converting Udūjī to the teaching of the Shi'is. Two eminent Baghdad scholars, Shihāb al-Dīn Suhrawardi and Dāmūs al-Deski, who were occupied with negotiating with Egyptians and were expecting death, were rescued by him. In 1309 he resumed his building activity and erected a new suburb near Ghazānīya, east of Tabriz, the water for which he provided by a great canal from the Sarwūrdī. But his high position now procured this great man a number of enemies. In 1315 he experienced considerable unpleasantness through the shortage of money which prevented the soldiers being paid. After Udūjī's death his enemies exerted every effort to destroy Rashīd al-Dīn. In October 1317 he was dismissed from his high offices and the death of his patron Amir Sawind (Jan. 1318) deprived him of his last support, until finally he was executed with his young son Khwāja Ibrāhīm on a false charge of disowning his former master Udūjī (July 18, 1318). His corpse was exposed to view ostentatiously, his pride, the Rub'ī Rashidī, destroyed and plundered. His eldest son Ghiyāth al-Dīn, however, succeeded in retaining a high office even after his father's death, but in 1330 he also was sentenced to death. Even after death Rashīd's body was not allowed to rest in its grave, for eighty years later Tawfik's son, the mad Mūsāshāh (1404–1407), had his bones dug up and buried in the Jewish cemetery (1399).

As already mentioned, Rashīd owes his fame to his immortal history, Ghiyāth al-Tawfīkī, a history of the Mongols which he began by command of Ghazān Khān (wherefore it is sometimes also known as the Ṭawfīkī Ghiyāțī). Udūjī ordered the work to be continued and to be completed by a general history of the world of Islam and a geographical appendix. The work, according to the original plan, was to consist of two main parts: I. History of the Mongols and II. General History and Appendix. But when the work was finished in 1310–1311 it took the following form:

Vol. i. 1. History of the Turkish and Mongol tribes, their divisions, genealogy and legends.

2. Čingis-Khān, his predecessors and successors down to Ghazān.

Vol. ii. Preface, Adam, the Muslim and Hebrew Prophets.

1. The old Persian Kings.

2. Muhammad and the caliphs to 1258. History of the ruling dynasties of Persia. The eastern and western Isma'ili, The Oghuz and the Turks, Chinese, Jews, the Franks, their emperors and Popes, India, Buddha and his religion.

Rashīd had intended to add the history of Udūjī's reign also, the beginning of which (1306–1307) was to open the second volume and the end to close it. Whether he did so is not yet known, as that portion as well as the geographical appendix is lacking in all extant manuscripts. The most remarkable feature of this great work is the conscientiousness with which Rashīd went to work and endeavoured to find the best and most reliable sources. Although the Mongol chronicles, the celebrated Alā Goodman, could hardly be accessible to him as a Persian, he obtained the necessary facts from them through his friend Piūdī-chīn-sīkh and partly from Ghazān himself, who had a remarkable knowledge of his people's history. The information about India was furnished him by an Indian bīghā, about China by two Chinese scholars. The many-sidedness of Rashīd al-Dīn's learning is simply astounding in a medieval scholar of the time. He knows of the struggles between Pope and Emperor, even knows that Scotland pays tribute to England and that there are no snakes in Ireland.

Rashīd al-Dīn was well aware of the importance of his work and endeavoured in all possible ways to ensure its survival. He ordered copies to be made for his friends and for different scholars; the works, written in Persian, were translated into Arabic and vice-versa. Every year he sent copies to the libraries of the great cities and allowed anyone to copy them freely. Yet all these measures proved in vain, for no single complete copy has come down to us. Besides his great history, he also wrote: 1. Kišāb al-Abd al-Dīn haft al-Abdār in 24 chapters, which discussed questions of meteorology, agriculture, bee-keeping, suppression of snakes and other pests and also states on architecture, fortification, ship-building, mining and metallurgy. No copy has yet been found. 2. Tawfīqī, a mystic theological treatise in 19 chapters. 3. Miṣṭīf al-Tazāfī, on the eloquence of the Kurān, its commentaries etc. 4. al-Rūḥānī al-Abhānā (finished on March 14, 1307), the result of a theological dispute in the presence of Udūjī. 5. Laṣlīf al-Ḥāfīz
Already in his last years at school he showed a fondness for art and literature and therefore decided to become a writer, and to this profession, as he himself calls it: the Sublime Porte Road (Bab-i świli i Diödör), he has remained faithful, untroubled by all the political changes that have taken place. Like many other writers he began as a journalist, and almost all the more important Turkish papers received contributions from his pen, such as the Dergi-i Harâdî, Tedjümin-i Harâdî, İlahî, Şehî, Tâvî, Şıeker, Muhammet, Toşüg-i Afkar, and periodicals like Çevre-i Fûnûn and İstiklal Gazette. He afterwards collected his numerous articles and essays, for example in the two volumes "Articles and entertaining Sketches" (Mekteb-iwa-Muğâbîhîte, 1325) and in the four volumes "Life of a man of Letters" (İmâr-i Edebi, 1315—1318). The latter is not an account of his life but reflects his spiritual development and his feelings and emotions reflected in publications of different years.

Ahnad Râsim's output became in time very extensive; in all there are said to be over 1,000 works of larger or smaller size from his pen. Nevertheless he was not a polygraph in the bad sense of the word, but before he dealt with a subject he always first studied it thoroughly and then wrote on it seriously, sometimes also in the slightly humorous fashion of which he is a master, or again in a pleasing conversational way, but always with artistic feeling and in a particular style which is his own. He always well knew the taste of his readers and he had great success with them. His style was a new one and independent of existing schools and coteries; he created a school himself and his influence must long and strongly felt in Turkish literature.

His literary work covers the fields of the novel, long short story and tale, e.g. his early novels, "Heart’s Inclination" (Meclî Dil, 1890) and "Life’s Experiences" (Tedjümin-i Harâdî, 1891; short analysis of both in Horn, Geschichte der türkischen Moderne, p. 46 sq.), also his patriotic novel "The Difficulties of Life" (Mugâbîhî-i Hayâtî, 1308), the stories "Inexperience Love" (Tedjümin-i Ísà, 1311), "My School-friend" (Meclî İtemednete, 1311), a little later "The Unfortunate Man" (Ahamâ, 1315) and another patriotic novel "A Soldier’s Son" (Aker-Oğlu, 1315) and somewhat more lyrical "The Book of Grief" (Kitâb-i Ilimânî, 1315) and "Nightingale" (Aulâhî, in verse).

At the same time he had from the first a preference for history. He does not, of course, in any way claim to further the study of history by independent research but rather sees it as his duty to arouse an interest in history among his countrymen by presenting it in popular form, and from this point of view his historical writings may be regarded as carefully prepared compilations. In his early period he wrote a history of ancient Rome (Eski Romaçtar, 1304), a short history of civilisation (Turkish mugâhara-i Bâbi, 1304), on the progress of knowledge, and culture (Tedjümin-i İslîye medenîyye, 1304), later essays on similar subjects entitled "History and Author" (Turkish me-Mudernîyâ, 1329 = 1911), a history of Turkey from Selim III to Murad V, entitled İttihatâtül hâlî-yi milîyye in two volumes, 1347—1348, and a meritorious general survey of the history of Turkey, "Qânuni Târîhî" in 4 volumes, 1326—1330. A valuable supplement to these historical works is
formed by the four volumes of "City Letters" (Şeker b. Maksud, 1328-1332), in all 218 epistles, which we have an unsurpassed description of old Istanbul life in all its variety, written moreover in a very stimulating and vivid, sometimes satirizing, fashion which makes it one of his best works. In "Islam's Pages of Honour" (Mesâliha-i İslam, 1335), the Muslim festivals, mosques and other religious matters are dealt with.

It seems to be only recently that our author's career has turned to the history of literature, e.g. in his book on Şimâat (q. v.), which is intended to be an introduction to the history of the Turkish Moderns (Ma'âthîr at-Turkîhî Mâdâhîl. îk bîwâr Muhârîs- terden Şimâat, 1927), while his personal recollections of Turkish writers are collected in another book (Ma'âthîr âlî, 1924), also recollections of his own school-days and the old system of education in general, in his "Airported" (Pâlbağa, 1947).

Aghmad Râsim was also prolific as a writer of schoolbooks on grammar, rhetoric, history etc. He also wrote a letter-writer (Râsim Kâhımı Maktûb- yahî makâmî chartûfâtî, 5th impression, 1318). In all his works he is found translations, and a large collection from his early period is called Selection from Western Literature" (Adabîyâr gênîr bîr Nûbâhs, 1937).

For this great literary activity Aghmad Râsim required considerable freedom, such as did not exist under Abd al-Hamîd and such as the poet hardly had at all as a state official. He was however twice a member of a commission of the Ministry of Education, Conseil de l'Instruction Publique (Emadî, 1928. 1929; 1930), but only for a very short time. He showed his interest in religious matters in 1924, when after the abolition of the caliphate he wrote an article in Wehi on March 4, 1924 on the relics (mâhûrât, muhâlâtât) of the Prophet, cloak (blârî, banner) (nâsîf) praying-carpet (sâfâ), etc., which also appeared in Cairo and Damascus in Arabic. He proposed to make these relics accessible to the public in a Museum (cf. Nallino, in O. M., 1924, p. 230 sq). In recent years Aghmad Râsim has so far been politically active as to be a deputy for Stambul along with men like Abd al-Hamîd and Khalîl Edhem (cf. O. M., 1927, 1928, 1929, and 1931, p. 237 and Mehmed Zeki, Encyclopædia biographique de Turquie, 1. 1928, 23 and ii. 1929, p. 88).

RASSIDS, name of a dynasty. Zaidi historians make no distinction between the Zaidi imams in Dâlîm (q. v.) and those in the Yaman (q. v.); this article deals only with the Yaman. For some periods the Zaidi historians are detailed,

for others there are only casual references in writers whose main interest was elsewhere, so details are often uncertain, and it is doubtful if some rulers claimed to be imams. The name is taken from a property near Mecca, al-Rassâ. Yaman by name, which belonged to the grandfather of the first imam, al-Kâsim al-Rassî, who was a descendant of Hasan, the son of Ali b. Abî Talib. In 280 (893) Yahyâ, named al-Hâfi dî il-Hâfi, entered the Yaman from the Hijâz and advanced nearly to Sanûâ (q. v.) but, falling to conquer the country, had to retreat. Later he was called back and in 284, he occupied Sa'da (q. v.) and conquered Najdîn (q. v.) though his hold on these districts was not secure and there was constant fighting. He took Sanûâ more than once and his son was a captive there in 290. Then the Karmâshâns (q. v.) appeared in the Yaman, took Sanûâ in 294 and held it for three years, besides taking many other towns. The imam helped to drive them out of Sanûâ but could not hold the town for himself. He died in 298 (904-911). During his lifetime 'Abbasî governors and troops were in the Yaman. Yahyâ fought seventy battles with the Karmâshâns and was so strong that he could obliterate the stamp on a coin with his fingers. He was a Hâfi and in law and wanted to set up an Islamic state where women wore the veil and soldiers divided booty according to the precepts of the Qur'an. He tried to make the dîwân (q. v.) of Nadîrîn sell any land they had bought during Islam; he had to be content with imposing a tax of one ninth of the produce.

Homage was at once paid to his son Muhammad who kept Sa'da as his capital and ruled Nadîrîn, Hamdân (q. v.), and Kâhûlân. He abdicated in 301 and was followed by his brother Alî who was fighting various chiefs and the Kârmâshâns. In 322 (934) he was defeated by the Bani Ya'fâr (q. v.) and died. Sa'da being occupied by the victors for four months. A son Hassan claimed to be imam but homage was paid to another son al-Kâsim al-Murâshî. Discord ensued and last both brothers were deposed; still al-Kâsim could capture Sanûâ in 345 (956), though he was murdered before the end of the year. Hassan had died earlier. In the troubles that followed Ya'âf al-Dî'tî was lord of Sanûâ until he was driven out by a new-comer from the north. In 388 (998) there was propaganda in the Yaman for al-Kâsim al-Maqûr, then delegates met him in Bûba (q. v.) and, helped by the tribe of Kâshâm, he established himself in Sa'da and took Sanûâ while prayers were said in his name in Kahân and Mikhâl Dî'âtî. He died in 393 and his son ruled from Alhàn to Sa'da and Sanûâ till he was killed in 404. Some said that he was not dead but was the ma'âthî (q. v.); another report says that he made this claim for himself. Up to this point one may perhaps speak of a dynasty of imams; afterwards the name does not apply. The army consisted of about 1,000 horse and 3,000 foot. The next imam came from the Hijâz and had some success; but he died another outsider, Abu b. Faţîh, came from Dâlîm in 430 (1038-1039), captured Sa'da and other places, and was killed fighting the Sa'dis (q. v.) at Sûlân. It is said that Abu Talib Yahyâ (d. 520 = 1126), the imam in Dâlîm, was recognised in north Yaman where he appointed a governor. Alîbud b. Sulaimân was proclaimed in 532 and ruled
Sa'da, Nadjran and Dja'af [q.v.]. In 545 a great assembly met and questioned him for eight days to test his fitness as imam. Followed by the tribes of Madhabid [q.v.] and Bakfi [see YASHID] he took San'a' from the Hamidtul suljân and otherwise defeated him. He held Zahid [q.v.] for a few days and prayers were said in his name in Khaibar [q.v.] and Yanba' [q.v.]. He also fought with success against the Karmatians. In his old age he became blind and was taken prisoner by Fulsita b. al-Kasim to the disgust of all, even of the Karmatians. He was set free and died in 566 (1170-1171). "Abd Allah b. Hamza set up as imam in 593. (1160-1161) and homage was paid to him in the following year after an examination (the Hamidtul gretaht took their name from his father). He held San'a' for a short time but had to retire before the Ayyubi [q.v.] suljân. He established himself in the north and received taxes from Khairan and Yanbu'. One writer speaks of troops from Baghdad being in the Yemen; this may be an exaggeration of the report that the Mutarrifia asked help from the caliph. In 611 (1214) he held San'a' and Dhamar [q.v.] and attacked Lajjâd [q.v.]. He had to abandon San'a' for his soldiers were tired. It is said that he ruled Gaila [q.v.] and Dailam by his d'a'as. He died in 614. The history of the imams for the next two hundred years is given in the article RASUL.

At the beginning of the rule of the Tahirids an imam in San'a' fought against them; he was at last beaten, was captured as he fled by some townspeople, and handed over to Mu'athar, another imam. The Tahirids tookSan'a' and made a son of the imam governor of towns and castles. In 869 (1464-1465) the imam Muhammad b. al-Nasir retook San'a' and in the following year al-Malik al-Zahir the Tahirid was slain there.

Valya Sharaf al-Din began in a small way in 912 (1506-1507). Later he was called in Egyptian troops from Kamaran [q.v.] to help him against the Tahirids. They took Ta'izz [q.v.] and San'a', but, as the news of the Turkish conquest of Egypt broke their spirit, they were soon driven out again. In spite of the Tahirids and rebelcant imams conquered most of the highlands and even took Djamân and Abu 'Arish [q.v.] but failed to take 'Aden [q.v.] and Zabid [q.v.]. Soon the Turks took Djamân, Ta'izz and San'a', being helped by quarrels between the imams and his sons. The Karmatians (i.e. Isma'ilis) were still dangerous enemies; eleven camel-loads of their books were captured and the imam's chief followers studied them so as to warn the common folk of the dangers in them. In 953 (1546-1547) the imam divided his realm among his sons. Though one of them, al-Mu'athkar, had submitted to the Turks he led an insurrection against them in 974 which was at first successful. This provoked the Turks to a systematic conquest. Al-Mu'athkar was defeated and allowed to retire to San'a' with a Turkish garrison. Then an imam from a different family rose and maintained himself for seven years till he was taken prisoner. In 999 (1590) the conquest was complete. In 1506 however al-Kasim, the ancestor of the present imam, declared himself. After varying fortunes his son drove out the Turks in 1645 (1635-1636) and since then the government has remained in this family. Sometimes a disputed succession has been settled by argument and some-
times by the sword, an unworthy imam has been deposed, and a son has taken the place of his decretive father. About 1150 (1737) Abu 'Arish broke away from the Yaman and in 1219 (1804) 'Asir [q.v.] became independent. The history of the imams from this point is in the article YAMAN. Now the Wathhiba king has confined the imams to the Yemen in a narrow sense of the name, and 'Asir is under the influence of Najd. Many of the imams were industrious writers on things religious.

RASUL (a., plur. rasa'), messenger, apostle. The word is found in Arabic literature with the profane sense of envoy, messenger. Here we are only concerned with its religious acceptance. According to the Korân, there is a close relation between the apostle and his people (umma; q.v.). To each umma God sends only one apostle (Sûra x. 48; xvi. 38; cf. xxii. 45; xli. 5). These statements are parallel to those which mention the witness whom God will take from each umma at the Day of Judgment (Sûra iv. 45; xxviii. 75 and cf. the descriptions of the rasûl who will cross the bridge to the other world at the head of his umma: Bukhârî, Adîbîn, hâb 129; Kâbulî, hâb 52).

Muhammad is sent to a people to whom Allah has not yet sent an apostle (Sûra xxviii. 46; xxviii. 2; xxiv. 43). The other individuals to whom the Korân accords the dignity of rasûl are Nûlî, Lîmâmî, Mûzî, Shî'ahî, Hûd, 'Arîbî and Yâsîn. The list of the prophets [cf. Nabi] is a longer one; it contains, besides the majority of the apostles, Biblical or quasi-Biblical characters like Ibrahim, Ishâ'îb, Yâsîb, Hûdâ, Dûwa'd, Sulainân, Ayâh, Uba 'l-Nun. Muhammad in the Korân is called sometimes rasûl, sometimes nabî. It seems that the prophets are those sent by God as preachers and magîlir to their people, but are not the head of an umma like the rasûl. One is tempted to imagine a distinction between rasûl and nabî such as is found in Christian literature: the apostle is at the same time a prophet, but the prophet is not necessarily at the same time an apostle. But this is not absolutely certain, the doctrine at the basis of the Korân's utterances not being always clear.

As to the close relation which exists between the rasûl and his umma, it may be compared with the doctrine of the Acta apostolorum apoerypha, according to which the twelve apostles divided the whole world among them so that each one had the task of preaching the Gospel to a certain people.

As regards the term rasûl, account must be taken of the use of the word apostle in Christianity, as well as of the use of the corresponding verb (shâblâ), in connection with the prophets in the
Old Testament (Exodus, iii. 13 cf.; iv. 12; Isaiah, vi. 8; Jeremiah, l. 37); The term mas'ih Allâh is unknown in the Syriac form (μασσιή άλλατα) passion in the apocryphal Acts of St. Thomas.

Post-Kur’ânic teaching has increased the number of apostles to 313 or 315; without giving the names of all Ibn Sa’d, ed. Suchau, 1/10; Fihd Abhik III, art. 22; Reland, De religione moham- medica, sec. ed., Utrecht 1717, p. 40.

The doctrine that they were free from mortal sin is part of the faith (see 7970). For the rest, the difference between mas’î and masî — apart from the considerable difference in point of numbers — seems in later literature to disappear in the general teaching about the prophets. Thus, in the *Afsâra of Abî Hâfs Umar al-Nasafi the two categories are treated together and the author makes no difference between mas’î and masî. Similarly al-Idji deals with prophets in general, so far as can be seen, treating them on the same level. If one difference can be pointed out, it is that the masî, in contrast to the prophets, is a law-giver and provider with a book (commentary on the *Fihd Abhik II* by Abu l-Muntasir, Hâlârâbâd 1321, p. 4). According to the catechism published by Reland (p. 40—44), the mas’î-lawgivers were Adam, Nuh, Ishâkh, Mûsâ, Isâ and Muhammad.

In the catechism of Abî Hâfs Umar al-Nasafi, the sending of the apostles (sâlihâ) is called an act of wisdom on the part of God. Al-Tâhâkîn’s commentary calls it wâlîî, not in the sense of an obligation resting upon God but as a consequence arising from his wisdom. This semi-rationalist point of view is not however shared by all the scholars; according to e.g. al-Sanjîf (cf. his *Umaî al-Sâlihâ*), it is qâtîî in itself but belief in it is obligatory.

(5. J. Wensinck)

**RASULIDS, name of a dynasty.** The family of *Rasul* came to the Yemen [*q. v.*] with Tûrânhâh, the Aïyshibid [*q. v.*] conqueror. Rasul was probably a Turkmen though of descent from the royal house of Ghassan [*q. v.*] who was claimed for him; he got his name because a caliph employed him as ambassador. ’Abî b. Rasul and his three sons became important. The last Aïyshibid Masûd put two of the sons in prison in 624 (1227) but the third Nây al-Dîn Umar, who had already been governor of Mecca, was made **masî** [*q. v.*] and, on the departure of Masûd, governor of the Yemen. Masûd died on his way to Egypt so Umar prepared to make himself independent and Zâhîd [*q. v.*] was his capital and from there he captured many places in the hills such as San’â’ [*q. v.*], Tûn [*q. v.*], and Kayakân [*q. v.*]. After two temporary successors he took Mecca in 638 and held it for fifteen years. In 628 he made peace with the Zîdî sharifs and there was little fighting till the imâm Ahmad b. Hussain declared himself in *Thâla* [*q. v.*] in 646 (1248—1249). *Umar* may have declared himself independent in 628 but he was not recognised by the caliph till 632. In 645 his nephew, *Asad al-Dîn Muhammed*, quarrelled with his uncle and fled to Dhamar [*q. v.*]. He allied himself with the imâm but was soon reconciled to his uncle and fought against the sharifs, the descendants of the imâm ’Abîd Allâh b. Hamza. *Umar* was murdered in 647 by mutineers in al-Djand. His kingdom stretched from Mecca to Hadramaut though many places in the hills were independent. He was a great builder of schools and mosques and a patron of letters like most of his family. His reign is an epitome of the dynasty; family quarrels, wars with the imâm and the sharifs, who were often at variance with the imâm.

The murderers won over the rest of the mutineers, proclaimed a nephew of the dead man, and marched on Zahid. Palace intrigues had banished al-Musaffar Vâsuf, the sulîn’s eldest son, to Mahdiam. With 50 horses he too marched on Zahid where his wife inspired resistance to the pretender. He gathered troops as he advanced and the mutineers surrendered to him the murderers and the pretender. He had to reconquer the country, for his two brothers each hoped to be sulîn, Asad al-Dîn Muhammad was in a strong position at San’â’, and the imâm, Ahmad b. Husain was active; even the caliph was disturbed at his power. At the end of three years San’â’, Ta’izz, and the strong fortress of Dumlu’u’s had been retaken and peace made with the imâm, who broke it by joining Asad al-Dîn; though the latter soon returned to his duty. In 658 he joined many of his kins in prison, staying there till his death. San’â’ was retaken in 652 but could not be held. The imâm Ahmad had been appointed with the approval of the family of his predecessor but dissensions arose so the sharifs with the help of the sulîn fought and killed him in 656. One imâm was captured in 658, another was taken and blinded in 660, and a third was proclaimed in 670. The sharifs were tribal or territorial chiefs, sometimes the enemies and sometimes the allies of the sulîn. In 674 rebel mutineers in San’â’ joined the imâm and sharifs but the combination was signally defeated. Zâfar [*q. v.*] in Hadramaut was taken in 678 and an embassy came from China. Vâsuf was a strong and successful ruler, and al-Khazraji calls him caliph at the end of his reign. He died in 694 (1294—1295).

His son and successor reigned only three years and encouraged the cultivation of palms round Zahid where others had tried to introduce corn. His brother, the governor of Shilyr [*q. v.*], took ’Aden [*q. v.*] and tried to make himself sulîn but was defeated and imprisoned. From prison he was called to rule as al-Mu’âliyâr Djâhid in 698. His reign was a succession of small fights both in the hills and the plains, the same places and opponents recurring again and again. In 697 (1247—1248) he took two castles from the Lâmarisians [*q. v.*]. In 709 the Kurds in Dhamar rebelled, joined the imâm and attacked San’â’ and later some of the Kurds killed some of the Ghurz. In 712 peace was made with the imâm Muhammad b. Musîr for ten years at a reparation of 3,000 dinars yearly. Five years later the sulîn broke the treaty. Warfare was savage and usually accompanied by the destruction of houses and trees; the heads of the slain were cut off. In 718 the army was reorganised on the Egyptian model. Towards the
end of the reign governors were changed frequently, perhaps a sign of weakness. It was easy for a foreigner to rise to high rank. More than once the same man was chief minister and chief kâdi. In 721 a son, al-Mu`āthir al-Salih, succeeded but he was soon in prison where he stayed four months only till he was set free by his friends and the usherer took his place. In 724 he was a sultan without a kingdom; 'Aden was lost, one cousin al-Zahir was independent for ten years, others relatives set up for themselves in Bait al-Fâkhi [q.v.], mamliks attacked Tâ`iz and took Zabid; but if not till then they had in rebellion some months that their pay was stopped. Sâhîrs defeated the mamliks; troops came from Egypt but did so much damage that all were glad when they soon left. The imâm's death in 725 removed a dangerous enemy and the sultan established his sort of order. Some and other relatives rebelled as did the mamliks because their pay was in arrears. The sultan crushed the Ma`âshiba, a tribe of the plains or foothills, and made a woman chief of what was left. In 736 (1335-1336) the peasants fled from the district of Zabid because of a combination of taxes and a new coinage. An officer touring to collect taxes used his Ghaza escort to put to death an insubordinate chiefman. The sultan went on pilgrimage in 735 and was carried off to Egypt, being allowed to come back a year later. From this time on the Arabs of the plains gave trouble. Normally the tribes kept each other in check but the sultan had so weakened none that now the Ma`âshiba could raid at will, they even cut communications between Zabid and the north. The government policy was to deprive them of their horses. A tyrannical governor was killed and the murderer was not punished. Mahdjam was captured by a sâhir, a rebel governor defended the sultan for two years, and three sons of the sultan rebelled. Al-Âfâf al-Albâ`as succeeded in 764. One of his rebel brothers joined the imâm, attacked Hara`ib, and later Shiyrá. Zabid was taken by the Arabs, other places by sâhir, the imâm Shâhîr al-Din raided as far as Zabid, there was fighting around Dhammar, and the sultan died in 778. Al-Âfâf Ismâ`îl was chosen as successor. The mamliks mutinied, a sâhir was lord of Sân`â, and the imâm was actively hostile till his death in 793. His son 'Ali was driven out of Sân`â by a rival and made Dhammar his capital. The imâmate seems to have been hereditary in one family for at least five generations. In 798 the imâm 'Ali sent presents to the sultan. It is clear that much of the highlands was lost and there was continual trouble in the plains. Yet the sultan was still powerful; he kept a firm hand over his officers and received letters, presents, and embassies from India and Abyssinia. He died in 805 and is called a good ruler. The next sultan, al-Nâsir Ahmad, worthily upheld the state. In the north he made Halâ [q.v.] accept him as overlord, in the south he defeated the imâm who had attacked his vassals, the Bani Tâ`ir, and in Wâdî`î he captured forty castles. Rich gifts came to him from Meccah and China. A brother rebelled and was blinded. At his death in 827 the state rapidly went to pieces. A series of short reigns with many rebellions of the mamliks ushered in the end. The land was ravaged by plague, the imâm died of it in 840 leaving his authority to a daughter. In the same year died another imâm, Ahmad b. Yahyâ, who was a prolific writer. Civil war was complicated by attacks by the Arabs, who sacked Zabid in 846. A new imâm, al-Nâsir Müljammad, strengthened his position by marrying a granddaughter of 'Ali of Sâ`îr. The Bani Tâ`ir joined in the fighting and took Lahjîl and 'Aden, till in 858 (1443) the salt Râstilad abdicated before them and went into exile at Mecca.

Most of the sultans were builders of mosques and madrasas, some were writers. In the heyday of the dynasty the sultan regularly spent a holiday in the palm groves of Zabid (these were called sâb`i) and at the sea. The land was governed by officials or by vassal chiefs who paid tribute. In all big towns were two officers, one called wâlî or amir and another called nâsir, simân, or muqâshîd. High officers regularly went on tour to collect the taxes. The army consisted of the cavalry of the gate, mamliks both Kurds and Ghans, and levies. A thousand horse and ten thousand foot made a big army. A man's horses were sometimes slain at his funeral.

(A. S. TRAFFORD)

RÂTÎB (b., plur. rââtîb), a word meaning what is fixed and hence applied to certain non-obligatory sâlûs or certain litanies. The term is not found in the Qur`ûn nor as a technical term in Hadith. On the first meaning see the article NAFILA, p. 8264. As to the second, it is applied to the dâ`âr which one recites alone, as well as to those which are recited in groups. We owe to M. Snouck Hurgronje a detailed description of the rââtîb practised in Atchin.

(A. J. WENSINK)

RÂTL, unit of weight dating from pre-Islamic times, varying with countries and periods. Mârîkî (p. 3, 5) says that, except for the mîshîl, which had remained uniform, the pre-Islamic weights were double the Islamic ones, and that the râtîl contained 12 šî`yiya of 144 dirhems. In medieval Damascus it equalled 600 dirhems and in Aleppo 720 dirhems. In modern Egypt it is uniform at 1/100th msârâ` = 12 šî`yiya = 144 dirhems = 0.449 kg. = 0.99 lb. avdp. 2.75 râtîl = 1 šî`yiya = 1.248 kg. = 2 lb. 11 oz.

RAWALPINDI, a division, district, sâb`î, and town in the north-west of the Punjab. The division has an area of 21,347 square miles and a population of 3,914,849 of whom 3,362,260 are Muhammadans. The district, which is divided for administrative purposes into four
RAWÁNĐÍZ RUIYNDÍZ

RAWÁNĐÍZ RUIYNDÍZ (the first word is composed of two elements: rawání, uncertain etymology and díz meaning fortress; the second means "fortress of iron"), capital of the fuṣūl of the name in the wilāyat of Mawšt in the caravan route, halfway between this town and that of Sâwâd-Bošt [q.v.], including the following mahalas (the names and figures given in brackets are those of the corresponding Kurd tribe and the number of the hearths): n. nomad; s. settled: Hâla màn (Zero, n. 500), Hârî (Helián, n. 800; Mânsû, n. 2,000; Mânsû, n. 500); Welâsh (Bâlek, n. 2,000); Derge (Dergel, n. 700); Dešt-i Deyan (Bâlek, n. 800); Pirásí, n. 1,000); Rawándâl (Rawândik, n. 600); Dešt-i Barâq (Barâdast, n. 1,000); Beresî, n. 1,000); The Sidân and the Serâtî, two subdivisions of the powerful tribe of the Herki, number about 6,000 hearths and have their winter-quarters between Rawándâl and Arbil (Hawštî in Kurîsh) while the Mîndà, the third section of this tribe, spend the winter among Tâbârî, with pastures of all three are in Persia at Mâgsâvar. Under the Kurd feudal system the district of Rawándâl Ruyndîz contained the following subdivisions: Hovâšt, Sâhtan, Dîlémâ, Sulâkâ, Khâhâtk, Pirsâ, Dešt-i Şirân, Bâshâ废弃物, Rawándî, Akûtàn, Bâlân. After the League of Nations (Dec. 1925) it had given Mawšt to the Irâq, of which Rawándîs Ruyndîz became definitely a part of the mountainous Kurîsh zone running along the Kurîsh frontier which was given the name of Southern Kurdistan at the establishment of the British mandate. The figures given for the population here are only approximate, the tribes having in some cases been decimated by war and influence in 1918–1919. According to the census of 1935 the town of Rawándîs Ruyndîz had 2,716 inhabitants and the bâlûk 38,342.

Topography. The district of Rawándîs Ruyndîz, which roughly speaking lies on the other side of the bend made by the Great Zâb when it leaves the mountainous part of its course (running westwards to that of the Tigres), consists of parallel valleys and chains which rise gradually as they approach the Persian frontier and which have a general orientation from N.W. to S.E. The average height may be put at over 1,500 feet. The two principal watercourses of the region, the Ribâri Rawándîs and Ribâri Rûhâš, run through bank tributaries of the Great Zâb, have their sources on the Persian frontier. The roads are naturally more practicable in the direction N.W. to S.E. rather than the contrary.

Road system. It would be in a way wrong to mention, in the matter of high roads which from all time have connected the Iranian plateau with the adjoining countries in the west, only 1. the silk route in the north (Juzî, Geschîcht Iran, p. 476) going from Tâbârî via Khoi to Lîbîshî Fûyûs (the modern Tâsh Kûrgân), and 2. the southern road, that from the Median gate or the defile of the Gyndes (Dîylûz). Besides these there are the main arteries of traffic, radial to the route always taken by commercial and cultural relations and in time of war, lying between the two of the roads which went from Nîniveh to Media and forked twice at Arbil and Rawándîs. At Arbil the road entered Persia by the pass of Gomesbû, Khoi Sandjâh, Râmîa, Sesderdeh and thence by the pass of Kûrtîk at Sâwâd-Bošt [q.v.] via Afân.

The Achaemenid royal road also passed this way (Juzî, p. 475). It was, we believe, the southern section, running towards the land of Elam, while, according to Th. Reinach (On people called, in Rev. des Et. Gr., vii, 1894), the main highway from Sardes ran through modern Armenia and central Kurdistan, although we cannot say exactly on which side of the Zagros it lay. Among the Arab geographers, Yâkût alone gives a few notes on the road through Rawándîs Ruyndîz (ed. Wustenfehl, p. 441). The road Arbil-Mârgâsh was known to the Mongols after their occupation of Arbil (535). The itinerary by the pass of Garâ Shûzn (Zinzua-Shâlshâ) has been described by Perkins (Z., 4, p. 185, 1855; p. 83 sq.) and Thielmann (Serişîfîrke im Kuranzur, Leipz. 1875, p. 321 sq.). The latter (cf. Yâkût) mentions as stages, starting from the pass: Eysat; Derge (ruins of a fortress); Rawándîs; Kûrât-Atûsîsh (Kanti Welâmân?); Darre Forest (from the Great Zâb, between Girdemûsh and Kûrsîn); Tez-Kûharâ; Mawšt, in all seven stages from Sâwâd-Bošt. According to information received from Russian soldiers who took part in the expedition against Rawándîs Ruyndîz (summer of 1916), the pass of Garâ Shûzn (6,000 feet) is a kind of promontory with valley on either side starting from the ruins of Kûharâ (Persian Lâhîdîn) and joining on the other side in Turkish territory. There is a se'ûf there under the Nakûshbândî Shâhî Djinmâl to the influence of which is to be attributed the parti-
citation of the neighboring Kurdish tribes in the
Şırê L. The name of the pass Zîrê Şakahî is
explained by the presence of this tax hâertz.
The actual site of Rawandê Ruyindiz is described in
M. Bitner (Der Kaukasus in China und in
das Staatsarchiv, Vienna 1895). In the mouth
of May the rain ripens at Rawandê Ruyindiz, the
arable land being on the right side of the Rûhûrî
Ruyindiz. Like Arbil, Ruyindiz is also a point of
bifurcation of roads. We have just mentioned the
road over the Garî Shînka pass. Another, farther
north, goes via Sidakan, Topazawa, pass of Kel-i
Shih (10,000 feet with a famous stele), Dûr
Utnûş. J. de Morgan (Mission scient. en Pesh.,
ii. 46) wrongly thinks this is the only road from
Persia to Mravil besides that which goes via
Serdâsh.

Lastly there is a road from Ruyindiz to Şam-
dîn, of which there are four variants: 1. Şahânê, via
Şahîdê, Kûrî Rash, Çamirê; 2. Şâşânê, via
Gara Carîya, Keke, Begistenê; 3. Şahânê, via
Mergerstîr, Keke; 4. the route of the Turkish
telegraph line by Rûhûrî-Dîbar and Çamirê.
The first of these is the best and was taken
1916 by the Russian column which came down
the Kût pass to the support of the movement
converging via Garî Shînka on Ruyindiz.

History. From what has already been said it
will be evident that Rawandê Ruyindiz, situated
at the intersection of the communications of Kûr-
dîzân as well as of roads leading farther afield,
has always owed its importance to its position.
It should also be remembered that in the
period of prosperity of the Nestorian church all this
country played a great part, mainly on account of the
influence of the Metropolitan see of Arbil. We may
mention (cf. Hoffmann, Auszige) the names of
Dara, Hannûzha, Şakîkîva (from which came one
of the MSS. which enabled M. l'Abbé Chabot to
establish the text of the Syriac Orientale, Paris
1902) as well as the fact that there were many
monasteries in these parts. According to the late
Metropolitan Mar Hannûzha, the majnas of Bar-
dost (not to be confused with the Baróstî of the
Şîrakî Kurds to the north of Tergawar; cf. urmîya)
in the war had still a few Christian communities.
From the point of view of Kurdish history the
departures of Ruyindiz have been of special
interest in view of its form part at certain
times. The Persian historian S. A. Kesharî Tabûri
(Shakirrîm & Gomi, 4, Rawandî, Teherân
1308 [1929]) gives us some notes (p. 125, 133-
136) on Ruyindiz, in the time of the Aṯâbîs
under the Almohads (501-624 a. H.) the last re-
presentative of whom, a woman, became the wife of
Ujâlî di al-Khwarizmî. A local history of the
sûlûs of Ardalîn, a resicum of which I published
(in the S.M.A., xliv., 1094-1112) also contains some
information about the families ruling in Ruyindiz
down to 1249 a. H. It may be added that (Shoref
Namûx, 11, p. 509), "the brothers of Alibb Soutîlân released Soutîlân Mourad son of Iqûqî
big from the castle of Ruyindiz where he had been imprisoned by order of Soutîlân Athâb" (904 = 1498-1499). A Kurdish text in my
possession enables me to give a few details about
the last lord of Ruyindiz. The beys of Ruyindiz
are said to be descended from an Arab of the
tribe of Shammar (again this fondness for inventing
an Arab descent which we frequently find in Kurdi
genealogies). For some years this ancestor was a
humble shepherd in the age of Ruyindiz in the
villages of Badîli and Bapîshî (should we not
recognize in the beys the remains of the Semitic:beth? [cf. e. g. K démarche]).

By becoming rich — some say by having found a
treasure — the ancestor established himself at
Badîli, acquired houses and fields and became
mayor there. His heirs in time became qâsh, then bêq. Arrogant and rapacious, they had at
the same time the reputation of being patrons of
learning (tâm u-murâjîat). At the beginning of the sixth century, one of them, Mûned Bêk the
Blind, established at Rawandiz, was honoured by
Sulînî Medji who gave him the title of Afsâh,
whence his sobriquet of Fâshê i Kêrû. He had
some claims on Mergawar and Shirê in which he
met with the resistance of 'Azzî Bek of Letûn
near Nalos. With the help of guns founded for
him at Rawandiz by a certain Kûrî (== arût)
Redjîb, he broke this resistance. Since then the
tribe of Letûn has not had any independent tribal
existence. Its remnants were absorbed into the
neighbouring tribes of Shemdrân. The Blind Fâshê
next took possession of Arbil Kerkuk; Sulainînî,
Shemdrân, 'Akrê, Amâdiya. The resistance he
encountered in the tribe of Zîbîrî and notably
that of its hero 'Azzî the village of Sawtî has
become legendary. Takes prisoners, 'Azzî is said
to have replied to the offer to take him into
his service by the Fâshê, who had no son, that
he would make him one. The Fâshê built several
fortified towers the ruins of which can still be
seen (Sidakan; among the Shîrwanîyân; 'Akrê,
Rawandiz, Dara. He also repaired the road in the
province of Rûyindiz with nails of iron'). He built
many schools. In his time plunder, robbery and
rape disappeared. "The grapes hung above the
roads till autumn and now one dared to touch them";
justice was administered by 'ullamâ. Finally in
1836 the Fâshê was defeated by the Turks after a
singe of four months and died soon afterwards
in Constantinoûple, or others say in Cairo. Of
the descendants of the Fâshê his grandson Sa'dî
Bêk was ša'mînîmînî of Ruyindiz. He was murdered
by his servants. Yûsûf Bêk, son of Muşafî Bêk
at Badîli, aqash of the tribe of Fisdrêm, was of
the same line and in constant rivalry with Sa'dî
Bêk of Ruyindiz. The memory of the Fâshê seems
to have been kept alive in the tribe of Mukiri where
F. de Morgan records a curious game of this
name, in which one of the players pretends to be
the "Blind Fâshê". A Kurdish work (Mîrza Shêrân
by Sayyid Husain Husni Mûrstrînî, Rawandiz
1925) gives a full account of the story of the Fâshê, his
struggle with the Turks, his relations with Persia
and with Mehmêd 'Ali Fâshê of Egypt, giving as
its principal source, a Kurkish MS. (Meîmêdî
by Mîrza Mûhammad Wêkîrî Nîsîrî). The Fâshê
stuck coins in his own name: darâba ft. Rawandî
al- Âmir al-Manfîr Muhammed Bêk. — During
the Great War the Rawandiz road was used in
the winter of 1914-1915 by Haid Bey's troops
advancing on Urmîya (contrary to H. Grothe, Die
and later in July 1916 by the Russian Rifahînêk, a
column which Major K. Mason (Central Kurdistan,
in T. K. G. S., 1919) wrongly accuses of massacring
5,000 Kurds, women, children and old men at
Ruyindiz. After the armistice and during the period
till Dec. 1925, when the League of Nations
made its decision, Rawandiz was occasionally the head-
quarters of an English political officer; sometimes it slipped from the English and was a centre of concentration for hostile Kurdish elements. Thus in Sept. 1922 (cf. B. Nikitin, L'Iraq économique, in Rev. des St. Pol., July-Sept. 1923) the English were forced to withdraw their feeble forces from the mountains and to occupy the line Arbil—Kirkuk—Kifri. A Kurdish government was then proclaimed in Sulaimaniye with a Pādīshāh of Kurdistan, a role assumed by a certain Shaikh Mahmūd, of a noble Kurdish family. Driven out by the English in 1919 after the rising, which he had led, he was pardoned in 1922 and his followers proclaimed him Pādīshāh. Threatened by English aeroplanes and without resources, Shaikh Mahommed retired to Rawandiz to the Turkish emissaries. Finally in April 1923, Rawandiz was taken by the Anglo-Mesopotamian troops composed almost exclusively of Assyro-Chaldean highlanders. Two months later in the name of H. M. King Faisal a more tractable Kurdish administration was installed there as throughout southern Kurdistan (cf. above). The first governor thus appointed was a certain Saliy al-Ta’i of the family of Sadat Nehri (cf. Shāhīnān). A brief history of Ruyūndiz since the war is given in Mīrānī Sūrūn. At the present moment the Persian government is considering a system of roads which may give Rawandiz a certain importance. It is a question of a carriage road connecting Ta‘ris to Mawji via Rawandiz. The Teherān government is anxious to have an outlet without the necessity of going through Transcaucasia.

Human Geography. The route through Rawandiz as well as the roads leading from it have never played a part comparable to that of the two historic arteries of traffic. This is explained by the lack of security, which is the first condition for the making of a trade route. This region has always lain between two hostile states: Assyria and Media, Massāpiq and Zamas, Turkey and Persia, Turkey and the Īrān. The configuration of the country, the mode of life of its people contribute rather to break them up than bind them together. The road, means of communication, has here the character of a weapon or line of defence except for brief periods of peace.

Language. Kurdish is the language spoken in this region, except by the town dwellers (Arbil, Altaf Kepur, Kirkuk etc.) of Turkish origin. With the establishment of the Kurdish administration and the opening of Kurdish schools following the decisions of the League of Nations, Kurdish will probably develop still more and we may look for the creation of a Kurdish intellectual centre. According to O. Mann (Die Mundarten der Maka Kurdistan, ii. 205), the dialect of Rawandiz is very like that of Shāmīnān, but E. B. Soane does not share this opinion (Kurdish Grammar, London 1913). F. Jashoff’s manual, Bakhtari Kurdistan, an introduction of the Kurdistān of the south division and surrounding districts of Kurdistān, London 1922, is more particularly devoted to this dialect.

Cartography. The Government of India Survey is preparing a revision of the maps of this region. Until their results are published as well as those being prepared for other reasons by the British Petroleum Co., there is accessible the excellent geographical material in the Report presented in 1925 to the League of Nations by the Commission of Enquiry whose task it was to collect material of an ethnographical and economic nature regarding the wilayat of Mawji (League of Nations, Question of the Frontier between Turkey and Iraq, Report submitted by the Commission instituted by the Council Resolution of September 30, 1924 [C. 400, M. 147, 1925, viii]).

In addition to references in the text: Spiegel, Erzähler (p. 27–28); Rawlinson in T.R.G.S., v. (p. 329); M. Streelen, Das Gebiet der heutigen Landschaften..., Kurdistān, in Z.A., xv., 1900 (p. 267, 381), on the ancient and Sassanid periods; Hammer, Itinerarii (ii, p. 125 and 337), on the Mongol period. The Sherif Nāmeh, St. Petersburg 1860 (i, introd.), mentions the castle of Reuben (Kend Rawīn).
(B. Nikitin)

AL-RAWDA. One of the series of large islands in the bed of the Nile before it divides into the Damietta and Rosetta branches. Situated near Old Cairo and extending to Kašā, it is separated from the right bank by a narrow canal known as al-Khalīd, while the river runs to full width on the other side between the Island and Giza (Djīza).

In early medieval times, it was used for three purposes: 1. as a convenient site for the Nilometer (cf. mātār) on the S. E. side, rebuilt in the reign of al-Mustan (862–866); 2. as a dockyard for the construction of the fleet (Mas‘ūdī calls it the "island of shipbuilders") until the reign of the first Ikhshīdī who transferred the docks to the Mūsī bank of the Nile further north in the direction of the present port of Bilāq, which developed at a still later date; and 3. as a naturally fortified site in case of danger on the mainland, by destroying the customary bridge of boats which connected it with the fort of Babylon. Mūqawās did so when he wished to preserve his freedom in negotiating with the Arabs. Realising this, too, Ibn Tallūn built a fort on the Island (c. 877) and al-Salīḥ Ayyūb built another where his body was concealed after his death by his wife Shāhdar al-Dur [q. v.] until the defeat of the French at Manṣūra (1249). As a fortification, al-Rawdā reached its high-water-mark under the Bahri Mamlūks who returned to it after the death of al-Salīḥ Ayyūb and, entrenched behind the water of the Nile, ruled Egypt for nearly a century and a half. They further strengthened the defence of the Island by building walls and towers along its shores. In earlier times it was occasionally used as a pleasure resort where spacious gardens were planted and magnificent palaces erected, such as the Rawdā built c. 1185 by the Caliph al-Amīr for a Bedouin mistress. During the Bahri Mamlūk period, noble buildings increased in number to house the rulers of Egypt and a mosque and a madrasa (whose remains are still to be seen) were established for the use of the inhabitants.

During the Burdji Mamlūk period, Miṣr and the quarters outlying the Citadell were better favoured, though at the time of the Ottoman conquest Selim I found in the Island a safer residence. When Egypt became an Ottoman province, Miṣr and the Citadell became the capital of the Turkish government, while the Mamlūk forces took to the Djīza side of the River. As a result, al-Rawdā was deserted, its fortifications ruined, and it furnished robbers and highwaymen with a refuge.

The Island did not again attract the rulers of Egypt until the time of Muḥammad ‘Alī, whose
son Ibrahim Pasha ordered large gardens to be planted there. At present it has become an Egyptian residential quarter connected with Cairo by two bridges and with Djesar by a third. The facilities of modern means of communication have brought it within easy reach of the centre of the capital. The construction of a new large hospital is planned as a substitute for the antiquated Kasr al-Aini on the northern extremity of the Island.

**Bibliography:** See Bibliography of articles on Cairo and Miṣrān. An elaborate account of the Island and especially the Miṣrān may be found in 'Ali Pasha Mubārak: al-Khāliṣ al-Tamīmīyih, 20 vola., Cairo 1306, xviii. 2–111; Ibn Dūlāmā, Description de l'Égypte, ed. Vollet, Cairo 1893, iv. 109–120. (A. S. ATIVA)

**RAY (A.), opinion on.** As a technical term denoting the purely intellectual function it is used in the system of Islam in opposition to such terms as 'ilm, ruha, Khatl Allah, din and hadith. See the art. FIKH.

**RAWSHANIYA, Afghan sect founded by Bāyazid b. 'Abd Allah, who took the title Pir-i Rawshān: called by their enemies Tūrkīn.**

**The Life of the Founder.** Bāyazid was born at Džullindar in the Pashtun about 931 (1525), his father's native home being Kandīlamur, an Afghan town, whither his parents returned. When his mother Basān was divorced by 'Abd Allah, Bāyazid became alienated from his father, who disapproved of his seeking the solution of religious difficulties from a poor relation, the ascetic Ismā'īl; he started earning his living by transporting goods from Samarkand to Hindūstān with Turkish horses. In the town Kalindār, S. W. of Allahābād, he became acquainted with one Mullā Sulǎimān from whom he imbibed Ismā'īl doctrine. Returning to Kandīlamur he lived as a hermit in a cave, and evolved eight precepts for his followers; he was in consequence attacked and wounded by his father. Hence he fled to Nenāz, where he was given protection by a Multān chief Suḥāb Ahmad, and presently won adherents among the Ghūría Khel in the neighbourhood of Peshwāwar from the Khalīl and Māhmūdī, who had recently overrun the Peshwāwar plain. He established himself at Kalīsah in the territory of the 'Umāzārī, and sent out missionaries who were also raiders. At this time one Sayyid 'Ali Tirmidži aided by Akhund Dervazeh (one of the authorities for his biography) started controversy with him; they were unsuccessful, and Bāyazid, who at some time had taken the title Pir-i Rawshān (Luminous Shaik), parodied by his enemies as Pir-i Tārik, conceived the idea of annexing the empire of Akhund on whose treasury he presently issued drafts. He was arrested by Muḥāfiz Khān Ghānī, governor of Kābul, whither he was taken. He was there accused of heresy before the 'ulama', who, however, for a consideration, acquitted him. He retired first to Tetei, thence to Kābul, where he was proposed to substitute a new religion for Islam. After a time many of his Tīrk followers reverted to Islam, and were ejected by him: they fled to Nenāz, and were attacked by Bāyazid, who however was defeated with great slaughter by Muḥāfiz Khān. He fled to a village in Kalapāni, where he died (993 = 1585).

2. Later history of the community. Bāyazid’s activities were resumed by the eldest of his five sons, 'Umar, who attacked the Yūsufi, a tribe which had followed Bāyazid, but reverted to Islam; in the battle which ensued 'Umar was killed, as was also his brother Khāir al-Dīn; another brother, Nār al-Dīn, was put to death by the Gūljaras. The youngest son, Djalāl al-Dīn, was captured by the Yūsufi, who surrendered him to Akbar in 989 A. H. Escaping from Akbar's court he returned to Kābul, where he assumed the role of sovereign of Afghanistan, and Akbar found it necessary to send an army against him in 994. This army met with a serious defeat, which was repaired by a later expedition (995). The numbers of the Rawshānis are given on this occasion as 20,000 foot and 5,000 horse. A further expedition was sent in 1000 A. H. (or 1001) which captured some 14,000 men (according to Būdānī) with Djalāl al-Dīn's wives and children, but not apparently himself; since in 1007 he took Ghānī, but was unable to maintain himself there, and on retiring was attacked by the Hanāra wounded and put to death. This last affair is by some assigned to a son of his bearing the same name.

The next head of the community was Djalāl al-Dīn's son Aḥṣād, who figures in the history of Djalāhān. In 1020 A. H. he surprised Kābul in the absence of its governor Khān Dīwarān. The attack was beaten off with great loss to the raiders, yet in 1023 Aḥṣād was again in the field, but sustained a serious defeat at Pāsh Bulaq. After a series of enterprises with varied success he was beleaguered in the fortress of Nāvghār and killed by a musket-shot.

The historian of Shah Dījanī, Muhammad Sālīḥ Kambo, asserts that in the second year of his reign (1358) that monarch took effective steps to suppress the heresy started by Bāyazid; nevertheless in the following year he records how the Afghan Kamal al-Dīn was joined in the attack on Peshwāwar by 'Abd al-Kādir, son of Aḥṣād, and Karimīd, son of Djalāhān (Djalāl al-Dīn). The place was relieved by Saʿd Khān, and 'Abd al-Kādir induced to submit; in 1045 he was recommended by Saʿd Khān, "who had caused him to repent of his evil deeds" to Shah Dījanī, who gave him a command of 1,000 horse. Other members of Aḥṣād's family received honours and rewards in 1047. In the same year Karimīd, who had taken refuge in the Mohand country, but had been recalled by the tribes of Bangāsh, was attacked, captured and executed by Saʿd Khān. It is asserted that some relics of the community still exist in this region. A branch of the sect, called Iṣārī, was founded at Swat by one Sayyid Iṣā of Peshwāwar (T. C. Plowden, translation of the Nāvīlād Afghānī, Lahore 1875).

3. Doctrines of the sect. According to the Dādīstān, which is friendly to the sect, Bāyazid's doctrine was extreme pantheism; "if I pray," he said, "I am a maṣūrī; if I pray not, I am a kāfīr". He marked eight stages (maṣūm) in religious progress: shartā, partā, hašthā, marṣū, farbā, wulā, maḥdā, sākhā; the four last are said to be technicalities of his system. The explanation of these stages, quoted from Bāyazid's Halāmānī, inculcates lofty morality, e. g. to hurt no creature of God. The account which follows is inconsistent with this, as noxious persons were to be killed because they resembled wild creatures, harmless persons who did not possess self-knowledge might be killed, because they resembled domestic animals. They might be regarded as dead, and their property
might be seized by the "living". Further he
abrogated the direction of prayer and the pre-
liminary ablation. Other details are furnished by
a hostile writer, the historian of Shâh Džâhân quoted
above, copied in Munšahbât al-Lûlû. Marriage,
says, is without a contract, there being
merely a feast at which a cow is slaughtered.
Divorce is ratified by placing some pebbles in
the wife's hand. The widow is deprived of in-
heritance, and indeed is at the disposal of the
heirs, who may marry her themselves or sell her
to some one else. When a son is born to one of
them, an ischion is made in the ear of an ass,
and the blood dripped on the infant's tongue.
This is in order to ensure that the infant shall
be bloodthirsty and have the mind of an ass.
Any stranger who falls into their hands is enslaved
and can be bought or sold. Daughters receive no
share in the inheritance. They massacre whole
tribes when they conquer them. Even on the Day
of Judgment their victims, though martyrs, will
not hold them to account. — According to others,
however, they recognized neither Paradise nor Hell.

4. Literature of the sect. Bâyâzid is said
to have written much; works by him cited in the
Dabistan are the Hâlmâmâ autobiography, men-
tioned above, and Kaher al-Bayân, the second
book of the sect, in the style of the Kurân,
directed by the Divine Being to Bâyâzid. This
was issued in four languages: Arabic, Persian, Hindi
and Pushto. A work in Arabic, Ma'ârif al-Mânî'in,
by him is also mentioned.

Bibliography: The account of the sect given by J. Leyden in Asiatic Researches, xi.
and the Pushto work Mahâmân al-îslâmî of Akhund Derwâzeh, furnished the material for
the account of the sect in Graf T. A. von Noë's
Keizer Akbar, Leyden 1885, ii. 179 sq.,
and largely for that in Glory of the Punjab Tribes
and Castle, Lahore 1915, iii. 335 sq. Notices
of the sect were also got from Indian historical
works; from the Akbâr-âmîn (printed, Calcutta
1851) by M. Elphinston, History of India,
London 1866, p. 517 etc.; from the Tâbâşî-,
Akkârî (Ith., Lahore 1892) by H. Elliot,
History of India, London 1875, p. 450; from the Tâbâşî-
âl-Qâhânî, transl. A. Rogers and H. Beveridge,
London 1909 by Beni Prasad, History of Ta-
ngir, Oxford 1922, who also uses the Âl-Qâhânî's
âl-Qâhânî, Calcutta 1865. For Shâh Džâhân's
time the Shâh Džâhân-âmîn called
Al-Muhammâhî, of Muhammad Salîh Kambo, ed.
Ghulâm Yazdani, Calcutta 1923 and 1927, is
the chief authority. The printed text of the
Dâlîshâh-âmîn (Calcutta 1867, 1868) which,
according to Munšahbât al-Lûlû (Calcutta 1869),
should contain an exaggerated account of the
strictures of the sect, has very little about it.

(D. S. MACKOLIOUTH)

AL-RÂZÎ, ÂBU BAKR MUHAMMAD B. ZAKÂRIYA,
a celebrated physician, alchemist and
philosopher. Almost nothing is known of his
life. He was born in 850 (864) at Rayy. There he
seems to have studied deeply in mathematics,
philosophy, astronomy and belles-lettres. He perhaps
also studied alchemy in his youth. It was only
after attaining a rather advanced age that he
devoted himself to medicine. Entering the service
of the ruler of Rayy, he soon became head of
the new hospital in this town and later we find
him in the same capacity in Baghdad. We do
not know exactly how long he remained there.
The reputation of being the greatest physician
of his time brought him from one court to another.
The fickleness of the favour of princes as well as
the uncertainty of the political situation are the
causes of his unsettled life. He returned several
times to his native town where he died in 925
(925) (according to al-Brittn in 5th Shabân 313)
or in 923.

We are not better informed regarding Râzî's
teachers. Several Arabic biographers regard him as
a pupil of the physician 'Alî b. Râbîb al-Tâbarî,
which is chronologically impossible. As his teacher
in philosophy the Fihrist mentions a certain Bâkhlî
(not the geographer Abû Zaid al-Balkhî)
from whom Râzî is said to have taken some ideas.
Nâsîr-i Khusraw says the same thing about a
rationalist philosopher with the curious name of
Erâphâhri (cf. Zâb al-Muhaðirî, p. 73; 98; cf.
also al-Brittn, Hindi, p. 4, 326; Alâî, p. 222, 223);
it is very probable that the two sources refer to
the same individual. Although the influence of Râzî
is rather considerable, we know nothing of his pupils.
The philosopher Yahyâ b. 'Adî, an Aristotelian,
Ja`milite and disciple of Fârâbî, is said to have
begun to study philosophy with Râzî (cf. Masudi,
Kitâb al-Tanâh wa-l-i`lâmî), and a later source
(Hojaïwî, Kastâf al-Masâbî, transl. Nicholson,
p. 150) speaks of connections between him and
the mystic al-Halâlî. It was in Shî'â circles that
the philosophical doctrines of Râzî left the deepest
mark Abû Isâhî Isâhîm b. Nawâsîkh, a theologian
of the "Twelve" Shî'â, borrows from him, in his
Kitâb al-Yâsîrî, his theory of pleasure, and the
Ismâ`îlîans Abû Hâtim Râzî (d. 322 = 926),
Kirmînî (d. after 412 = 1021) and Nâsîr-i Khusraw
[q. v.], attempted to refute certain parts of his
philosophical system. Among the other authors
who commented his views may be mentioned Fârâbî,
Ibn Hâdîthî, 'Alî b. Râbi`â and Mâmûnîs.

Râzî is above all a physician and he is rightly
regarded as the greatest physician of Islam. In
addition to numerous monographs on various
maladies of which the most famous is his treatise
on smallpox and measles (Kitâb al-Lâjûn wa-
l-Hazâ), he wrote several large manuals of
medicine which were the most remarkable that
the middle ages knew. A number of his works
were translated into Latin and down to the xviii
century the authority of al-Râzî was undisputed.
His Manzûrî (Libri Almanonovis) is dedicated to
Manzûr b. Ishaq, governor of Rayy, and his Mulûbî
(Regium) to 'Alî b. Wâh-Sâbân of Tabaristan.
The Hâwî (probably the same as the Dâjûn),
is the largest medical encyclopedia in Arabic. Râzî
is said to have devoted 15 years of his life to
writing it and seems to have died before finishing
it. The book is a compilation of extracts from
all the Greek and Arab physicians on every problem
of medicine and Râzî concludes by giving the
results of his own experience. While anticipating
earlier tradition, Râzî is the least dogmatic of the
Arab physicians and in the field of medical practice
surpasses the knowledge of the ancients. We still
possess his clinical notebook in which he describes
very carefully the progress of his patients.

The same empirical spirit is found in the other
branches of science which he studied. In chemistry,
about which we are better informed, Râzî, rejecting
all occultist and symbolical explanations of natural phenomena, confined himself exclusively to the classification of substances and processes as well as to the exact descriptions of his experiments. In a part of the statement of the Fihrist, Razi does not seem to have been acquainted with the alchemical writings attributed to Džibâr b. Hajiyân. Pseudo-Madârij in his Kitâb Khotâb al-Hashim, endeavoured to reconcile the alchemy of Râzî with that of Džibâr. Of his writings on mechanics we only possess a synopsis of his treatise on the balance (mizân fâhîšt). All his works on physics, mathematics, astronomy and optics, of which a large number are enumerated by the bibliographers, have perished.

It is the same with his metaphysical works of which we only have a few fragments preserved in later authors. Besides the Shâ'ıa theologians mentioned above, we must make particular mention of al-Birûnî, who in his various works frequently refers to Râzî. He also devoted a complete risâla to a study of the life and works of Râzî.

The following are the characteristic features of his metaphysics: Râzî asserts the existence of five eternal (harâtâm) principles which are the Creator, Soul, Matter, Time and Space. The eternity of the world is, according to Râzî, the necessary corollary of the conception of God, the unique and immutable principle (the term of argument of the Aristotelian philosophers). Now Râzî denies this eternity. Only the plurality of the eternal principles, their opposition and combination, can explain temporal creation. The origin and destinies of the world are imagined by Râzî under the form of a myth with gnostic affinities. The Soul, the second eternal principle, possessing life but not knowing, is seized with the desire to unite with matter, and to produce within itself forms susceptible of procuring corporeal enjoyments. But matter is elusive. The Creator then in his piti creates this world, with its durable forms in order to permit the soul to enjoy it and to produce man. But the Creator also sends the intelligence (afâr) partaking of the substance of his divinity to awaken the sleeping soul in its abode (hâkitâ) which is man and to teach that this created world is not its true house, the place of its happiness and of its peace. To escape the bonds of matter there is only a single means for every man, which is the study of philosophy. When all human souls have attained liberation the world will dissolve and matter deprived of forms will return to its primitive state.

In his physics, Râzî, an opponent of the Aristotelians and mutabâhâlim, relies on the authority of Plato and the pre-Socratic philosophers. His atomism, fundamentally different from the parallel theories of the alâlam, is related in many ways — an exceptional case in medieval philosophy — to the system of Democritus. In Râzî's view matter in the primitive state before the creation of the world (hâyâtâ mutâfiqâ) was composed of scattered atoms (qâma lâ yotâfâsâ). Atoms possessed extent. Mixed in various proportions with particles of the Void — of which Râzî against the Aristotelians affirms the positive existence, these atoms produced the elements. The latter are five in number: earth, air, water, fire and the celestial element. All the properties of the elements (lightness and heaviness, opaqueness and transparency etc.) are determined by the proportions of Matter and Void entering into their composition. Earth and water, dense elements, tend towards the centre of the earth, while air and fire in which particles of the void predominate, tend to rise. As to the celestial element, a balanced mixture of Matter and Void, circular movement is peculiar to it. Fire springs from the striking of iron on stone because iron as it moves raises the air and rarifies it so that it is transformed into fire.

Râzî distinguished universal space (mâkûn hâli) or absolute space (mâkûn mutâlî) from partial (gímî) and relative (mîqâlî) space. Absolute space, denied by the Aristotelians, is pure extent, independent of the body which it contains. It extends beyond the limits of the world, is infinite. There is reason to believe that Râzî affirms the plurality of worlds. The term relative or partial space is applied to the size or extent of any particular body.

In his theory of time, which he says is Platonic, Râzî differentiates in analogous fashion absolute (mâlî) time and limited (mâbîrî) time. It is only to limited time that the Aristotelian definition of time, considered as a number of movement (in the first place the movement of the celestial spheres), is applicable, according to the Prior and Posterior Analytics. Absolute time is an independent substance which flows. It existed before the creation of the world and will exist after its dissolution. Abandoning a distinction made in the Timaeus and headed down by the Neo-Platonists to the Arabic philosophers, Râzî identifies it with eternity (zahr, zem). To attack the Aristotelian conceptions of space and time, Râzî makes use of the view of the man in the street with a healthy mind not broken in to philosophical subtleties.

In his ethics, Râzî, in spite of his pessimistic metaphysics, is against excessive asceticism. Socrates, whom he regards as his model, far from being the ascetic of cynical tradition, took an active part in public life. According to the maxims of Aristotle, blame cannot be attached to the human passions but only to their excessive indulgence. At the basis of his moral teaching is a special theory of pleasure and pain. Pleasure (âdâwi) is not something positive but the simple result of a return to normal conditions, the disturbance of which has caused pain (wâdku). The itra tâlîjîsa (mâdâ fâlâmâsâ) aspires, according to the saying of Plato (Philelétres, p. 176b), to resemble the Creator to be, like him, just towards man, indulgent to his faults.

In view of the individualistic ethics of Râzî, we can understand his critical attitude to established religion. In many writings he refuted the Mu'tazilite theologians (Džâhîl, Nâshî, Abu 'l-Kâim al-Bâkhi, Misânî [= Ibn Afkî Zârîn]) who attempted to introduce scientific arguments into theology. Nor was he sparing in his criticism of the extreme Shâ'ıa (refutation of Ahmad al-Kâyâtî) and of the Manichaen. Among his adversaries in philosophy we find, besides the Dahr Abî Bakr Hasân al-Tammar al-mutâfâbâh, the Sahâban Thâbit b. Kuâra, the polyhistorian Mas'dûd and Ahmad b. al-Tâjîlî al-Sa'arâshî, a pupil of al-Kâirî.

Unlike the Muslim Aristotelians Râzî denies the possibility of a reconciliation between philosophy and religion. Two heretical writings figure in his bibliography: the Makhâbîr al-Amîyûn or Hâlîl al-Mu'tamâbîbûn was read in heretical circles in Qâsîm and notably among the Karâtîsîs (cf. Baghâdî, Farî, p. 281). It seems even to have influenced the famous theme of the De Trinitatibus.
Imperatorius, so dear to western rationalism from the time of Frederick II (cf. L. Masson, in K. H. R., 1920). The second, Fi Nabi al-Asýn is partly preserved in a refutation, the Kitâb Al-Râzî and Al-Nahwawâr of the Isâ'a b. Hâtim al-Râzî. The principal theses of this book are as follows: all men being by nature equal, the prophets cannot claim any intellectual or spiritual superiority. The miracles of the prophets are importunates or belong to the domain of pious legends. The teachings of religions are contrary to the one truth: the proof of this is that they contradict another. It is tradition and lazy customs that have led men to trust their religious leaders. Religions are the sole cause of the wars which ravage humanity; they are hostile to philosophical speculation and to scientific research. The alleged holy scriptures are books without value. The writings of the ancients like Plato, Aristotle, Euclid and Hippocrates have rendered much greater service to humanity. — Râzî's book undoubtedly contains the most violent polemic against religion that appeared in the course of the middle ages. It takes up to some extent the arguments of the contemporary Manichaeans against positive religions but above all it seems to be inspired by the criticism of religion in antiquity.

Râzî believed in a progress of scientific and philosophical knowledge. He claims to have advanced beyond most of the ancient philosophers. He even thinks himself superior to Aristotle and Plato. As regards medicine, he had attained the level of Hippocrates and in philosophy he feels himself close to Socrates. But after him there should come other learned men who would reject some of his conclusions just as he had sought to supplant the teachings of his predecessors.

(P. Kraus and S. Pinès)

AL-RÂZÎ, the name of three historians of Muslim Spain. 1. Muhammad b. Mūsâ b. Bâshir b. İkhâddâr b. Lâkit al-Khâshî al-Râzî, who took his name from the town of al-Rayy in Persia where he was born, came from the east to Cordova about the middle of the third century A. D. to trade there. His high degree of Arabic culture gave him a welcome in intellectual circles in the Umayyad capital and the emir Muhammad b. Abî al-Rahmân entrusted him on several occasions with diplomatic missions in the east or in Spain itself. His successor, his son Usâîbâ, showed him the same confidence; it was on his return from an embassy to Elvira [q. v.] for this prince that al-Râzî died in Râbi' II 273 (Sept. 5—Oct. 3, 886).

We would have known nothing of Muhammad al-Râzî as an historian but for a statement by Muhammad Ibn Murâzin reproduced by the Moroccan writer Muhammad al-Warrâr al-Qhârismi in his account of an embassy to Spain in 694, entitled Bilâdat al-Wârâr fî Kâlid al-Mutâr (cf. E. Lâvâr-Provensal, Les Historiens des Chérifs, Paris 1922, p. 284—286). Ibn Murâzin there says that in 471 (1079—1079) he found in a library in Seville a little book by Muhammad b. Mûsâ al-Râzî entitled Kitâb al-Râzî, relating to the conquest of Spain by the Muslims and giving detailed accounts of the Arab contingents, each distinguished by its standard (rûya) which entered the Peninsula with Mûsâ b. Nuqâr [q. v.]. The passage of Ibn Murâzin has been reproduced in the Madrid edition of the Fâsi al-Andalus of Ibn Khûtîya (cf. the Bâli). However little we know of this work of Muhammad al-Râzî, we cannot but regret its loss bitterly.

II. Ahmad b. Muhammad, son of the preceding, surnamed al-Ṭarīqī ("the chronicler"), the first in date of the great historians of al-Andalus. He was born in Spain on the 10th Dhū al-Ḥijjah 274 (April 26, 883) and died on the 12th Rajab 344 (Nov. 1, 955). He was the pupil of Cordovan scholars of repute like Ahmad b. Ḥaḍīl and Kāsim b. Asbaḥ. He wrote several monographs on the history of Spain: a Taʾrij Muṭalik al-Andalus; a description of Cordova (Kitab al-Sayf al-Qurashi) written on the plan of the description of Baghdad by Abu ʿAbd Allāh Ishaq al-Ṭabarī, a book on the Spanish maṣūḥīyya; lastly a voluminous work on the genealogies of the Arabs of Spain, Kitab al-ʿĀlī, which was to form one of the essential sources of the Qanbarat al-ʿAbdār of Ibn Ḥasan [q.v.]. These various works have unfortunately not come down to us and until quite recently we had only few quotations from Ahmad al-Ṭarīqī preserved by later writers. The recent discovery of a fragmentary manuscript of a chronicle relating to the 12th century in Spain now puts at our disposal quite extensive extracts from this author and from his son ʿIṣā (see III): these passages are collected in Documentos inéditos d'histoire hispano-arabeziane, to appear shortly.

The majority of Ahmad al-Ṭarīqī's biographers do not attribute to him any geographical work, but some, e.g. al-Dābī and Yāḥyā, notice a Spanish geographer whom they call Ahmad b. Muhammad al-Ṭarīqī who is clearly Ahmad al-Ṭarīqī; this individual, according to these authors (al-Ḵāṣṣār attributes it directly to Ahmad al-Ṭarīqī), wrote a lengthy work on the routes (maṣūḥīyya) of al-Andalus, its anchorages (marūs), its principal towns (ummarāh al-mudūn) and the six Arab ḫanāns [q.v.] which were settled there after the conquest. This description of Spain has been preserved in a Castilian translation published in 1550 by P. de Gayangos as an appendix to his Memoria sobre la autenticidad de la Crónica denominada del Mero Raso (supplemented by R. Menéndez Pidal, Catálogo de la Real Biblioteca, Manuscritos, Crónicas geográficas de España, Madrid 1898). The description forms the first part of this Crónica and in its present Castilian form comes from a translation into Portuguese, now lost, prepared by order of King Denis of Portugal towards the beginning of the sixteenth century by a cleric named Gil Pérez; the latter was no doubt the author of the second part and in the third he confined himself to summing up very briefly the historical work in the strict sense of Ahmad al-Ṭarīqī.

The description of Spain by al-Ṭarīqī, in spite of the many difficulties offered by the fact that it has passed through two translations, both often very inaccurate and corrupt in the place-names, is nevertheless a very important document from the geographical, as well as the political and social point of view for the Muslim part of Spain in the reign of ʿAbd al-Rahmān III. After a number of general reflections on al-Andalus, its situation with regard to the rest of the inhabited world, and its climate, we have an individual description of each of the principal districts, of which special use was made by Yāḥyā [q.v.] for the Spanish references in his Muqaddimah al-Bulūsh. A comparison of the Spanish text of al-Ṭarīqī's description with that of Yāḥyā enables us to discover a close relationship between the two works. They both give the same number of administrative circles (jāmāʾ) in Umayyad Spain of the 4th century, 41 in all: Cordova, Cabra, Elvira, Jaén, Tordilla, Tortosa, Taragona, Lérida, Barbitorina, Huesca, Tuda, Saragossa, Calatayud, Riberas, Medinaceli, Shantabaria, Ràccupel, Zorita, Guadalajara, Toledo, Cretó, Paḥs al-Balīṭ (Llano de las bellotas), Fīrīt, Mirida, Badajos, Béja, Osonoboa, Santarnse, Cottmra, Estani, Liabon, Nībīl, Sevilla, Carmona, Moron, Sidona (Ṣaḥib al-Rayā), Alcégiras, Rejy, Escoja and Takoróna.

III. ʿIṣā b. Ahmad b. Muhammad, son of II., grandson of I., continued his father's Umayyad chronicle down to his own time and extended the portions dealing with earlier periods by availing sources which had not been available to Ahmad al-Ṭarīqī. He has not been the subject of notice by any of the Spanish biographers already published but he is frequently quoted by later historians, notably by Ibn Ḥāyan [q.v.], Ibn Saʿīd [q.v.] and Ibn al-Abhar [q.v.]. According to the latter, he also wrote a monograph on the ḫāṭiṣah [q.v.] of the Umayyad court of Cordova: Kišāb al-Ḥujjājah bi-l-ʿAṣābūd. Bibliography: Ibn Ḥāyan, al-Muṣawhib, Oxford ma., passim; Ibn al-Abhar, al-Hallat al-ḥiyara, in Dory, Notices sur quelques manuscrits arabes, Leyden 1847—1851, p. 74; al-Ḳāṣī, Naṣḥ al-Thib (Analectes), ii. 671; Fons Boigués, Ensayo, No. 41; A. González Palencia, Hist. de la lt. ar. esp., p. 131.

(E. LEVI-PROVENCAL)

AMIN AHMAD RAZI, a Persian biographer. Hardly anything is known of his life. He belonged to Kain where his father Khwāja Mīrzā Ahmad was celebrated for his wealth and benevolence. He was in high favour with ʿAbbās the Great and was appointed by him hāštaran of his native town. His paternal uncle Khwāja Muhammad Shari' was viceroy of Khurasān, Yard and Ifṣānān, his cousin Chiyāʾ Beg a high official at the court of the Emperor Akbar. Amin himself is said to have visited India. The work to which he owes his fame is the great collection of biographies Haft Iḥšān (finished in 1602 = 1594). For many years he collected information about famous men until finally he yielded to the entreaties of one of his friends and arranged his material in book form. The final editing of it took six years. The
biographies are arranged geographically according to the 7 climes. In each clime the biographical part is preceded by a short geographical and historical introduction which is followed by notes on poets, udvaras, famous sheikhs etc. in chronological order. The work is of special importance for the history of Persian literature, as the biographies of poets contain numerous specimens of their work, some of which are very rare. It contains the following sections: Clime I: Yaman, Birkh al-Zanjâdî, Nubia, China. Clime II: Mecca, Medina, Yezd, Hamzâ, Dehân, Abâdân, Mashhad, Samâsh, Qom, Astarâbâd, Tabaristan, Masandarân, Gilân, Khuzestân, Alborz, Ardabil, Marâşh. Clime V: Shirwân, Gurgâ, Qâshqâi, Milâzâni al-Nâhir, Samsâm, Bakhtshâ. Clime VI: Kurdistan, Fârâb, Yarkand, Rita, Constantiopolis, Rum. Clime VII: Bulghâr, Sabkâh, Yâdudj, Mâdžûd. Unfortunately this valuable work has not yet been published. Mawlawi 'Abî al-Muḥtâr began his edition in the Bibliotheca Indiana, but so far only one part has appeared (Calcutta 1918).

**REDIF** (Ar. ṭâdīf), "what follows immediately after a person or thing (Fagan, Additions); one mounted on a croup, pillon-rider"; cf. for use in the figurative sense in a composite epithet in Turkish (Persian): ʿiṣâr-ṭâdīf-ʿamîrī : "the victorious army (one which has victory on its croup)." (Turk. Tr. 1270 A. H., 22). The synonym termāl and, more rarely, ṭâdīf, "the act of treading to follow or join, to make to accompany," are also sometimes used in Turkish as well as the words ṭâdīf, termāl, and ʿamîrī. As a technical term ṭâdīf, pronounced termāl, has been used: 1. in Persian and Turkish prosody; 2. in the Ottoman army.

1. Persian and Turkish prosody. — Redif is a kind of "hyper metre" (taking this word in a wider sense than in classical or even English prosody), i.e. the part of the line which follows the rhyme (hâjtār: in Neo-Turkish: ṭâdīf) or more exactly the last syllable of the latter (râzwâd), or which comes between two words forming a rhyme. The termāl may consist of one or more suffixes, particles or independent words. The old theorists however disputed the quality of redif to repeated suffixes and gave different names to each of the (Arabic) letters representing them: mālīf (first letter); mālīf (second); mālīf (third); mālīf (fourth). In Persian and Turkish prosody the same redif is repeated at the end of all the lines of a piece of poetry.

Although it made its appearance in Turkish as early as the xith century, the redif is an especially Persian invention. Indeed in the national "Turkish" poetry (syllabic metre) suffixes or particles repeated at the end of the lines count as rhyme (Kowalski, Ze Studjow na Form poezji liter. starow. tworczest Czocz, 1922, p. 33). The redif existed in classical Arabic only in an embryonic form and under another name (Garcin de Tassy, Rhétorique, p. 143). The redif fell into disuse in Turkey in the xith century, probably under the influence of French poetry.

In addition to this special use in prosody the name redif is sometimes given to the second term of an ʿadīf, i.e. of a hendiatris (mīnâsīyâr) of which the two terms rhyme or are alliterative; for example Pers. ʿallâma dâkim, bâzî mūzâh, karâ dâbây, Tur. ʿarâk bâzî, ṭâdīf zîrî (Zârâbî, Târûkh, transl. p. 126, 126, 326, 371). Murašâbîh (murašâbî) means "synonymy.

2. Turkish military usage. — Mahmûd II gave the name of redif (ṣânûr redif-i mâsûlî) to the reserve army created in 1834 (Ismal and Nâsîr Gâvîr, Târîxî, p. 425). The historian Lütfî (iv. 144) speaking of the project for this army, under the year 1249 (May 21 1833 — May 9 1834) explains the meaning of the term by saying that it was a force "that came after" the regular army (mâyâsâr redif-i nîzâmâyî). They were therefore not soldiers who had, at need, to mount behind the cavalry on the croupe, like the Roman velites. Redif was contrasted with nizâmâyî or ʿâshîr-i nizâmâyî or ʿâshîr-i mâyâsâr, taken in the strict sense of active or regular army (standing army) and with ṭâdīf or "reserve of the regular army." For the lack of an exact equivalent we may say militia in English and "armée de réserve" or "garde nationale" in French. The German term "Landwehr" is perhaps nearest it but in the Prussian rather than the Austrian sense. Sometimes the redifs are included in the nizâmâyî, taking the latter term in a wider sense of regular or disciplined troops (synonym murrâbîh). Lütfî (loc. cit.) calls the redif šânîr ʿâshîr-i nizâmâyî "a kind of regular troops.

The characteristic feature of the redif army was the existence of permanent cadres, ferocious in character. It was linked with the regular army by its officers and with the reserve by its men (ṣânûr redif). It was the object of its creators that this army should provide a large number of men if necessary without imposing too long a period of service on the rural population (Lütfî, op. cit.).

It was decided from the first that the redif should consist of battalions (tabûr) and indeed this organisation by battalion depots (tabûr dâšâl, dâšâr) remained in force as long as the redif existed. The commanders of these battalions (bâshâîr) were at first chosen from the chief local families (mawallîr: kâmilânâmân). The first battalions formed in 1250 (May 10 1834 to April 28 1835) were those of the sanâbâs (q.v.) of Karâbâj Shâh, Anâkar, Kânsîrî (Cankîrî), Sîrîn and Mesûrîsîlî Bey, hereditary Kurd governor of Palu, was appointed colonel of the three battalions in the şâbâs known as those of the "Imperial Mines" (mâyâsî-ı kâmilânâmân) in the syâṣet of Shews (Lütfî, iv. 172). There were three to four battalions in the sanâbâs, or 10 to 12 in the syâṣet. The officers received a quarter of the usual pay, but were only expected to serve and wear uniform two days a week (Mosalî Nûr Pâshâ, Nasîfî, ib. Whâdî, iv. 109).

In 1252 (April 18, 1836 to April 6, 1837), the redif was organised in wide groups with a high command: mâyâsî-ı mikhâr (mêrâzî) or "militaryship" (cf. müsûbûh) or "redif," conferred upon the mâtāl. The first were those of the syâṣet of Karâman (Konya), Koundîvandî (Brussa: garden and shâbâs), Anâkar, Aydin, Erin, Edirne, A.
the same time plans were made to raise the money required for this purpose. The military marshals were given the ḥawání (θαυμαζειν) or cloaks of their own rank. Just as the troops of the line (meyyâr) were distinguished from those of the guard (khusus) so there were redefi meyeyr and redefi khusus. The appointment of commanders of divisions was to follow (for details see the Taḥriq-i ʿālī or report of the grand vizier Moḥammad Eʿtimad ʿAlī Pāsha in Luṭfī, v. 165—170). If we may believe the khusus hāmânūn promulgated on this occasion by Moḥammad II, these first promulgated every satisfaction (shuṣh, p. 74).

When the Military School (mekkāt-i hâkime) instituted in 1517 began to supply officers, the redefi under-arms was converted into active forces and the officers were sent back to their ʿoḏāyī (Nerāḏīf Ḥāl-Wadāʾī, lv. 109—110). The service as redefi (kahāmāt redefi) was now definitely to assume the character of a kind of period of service in the reserve or intermittent service the duration of which (mekkāt-i redefi) was to be fixed under conditions which we shall explain below.

In the khusus hāmânūn of Gūłkāhne (Nov. 31, 1839) there is an allusion to an approaching improvement in the system of regional recruiting. In 1838, five years had been fixed as the period of service in the regular army, previously practically unlimited (one saw young married soldiers leaving their families for life), but this measure did not immediately make its effect felt (cf. von Molke, Lettres sur l'Orient, n.d., p. 241, letter No. xlviii.).

On Sept. 6, 1843 the military law of the reʾĀdāb Rīḍ. Pāsha (Engelhardt, i. 71) was promulgated, a law of fundamental importance, half French and half German in character, the principles of which were derived from the most recent legislation; it confirmed the period of regular service at five years (later reduced to four), to be followed by a period of seven years during which a redefi could be recalled to the colours for a month each year (later every two years). Each ordu (army corps) was to have its redefi contingent (redefi redefi) placed in time of peace under the orders of a brigadier-general (Amir, brigade) who lived at the headquarters of the ordu. In 1853 (Ubicini, i. 459) the redefi were organised into four (out of 6 ordu, namely those of khusūs (Subutari [Asia] and Smyrna), Deriš-čețed (Istanbul and Anakara), Rumeli (Manṣūrāt) and Anatolia (Harput). The ordu of Arabiston and the İrāk were still to be organised. Ubicini adds this observation: "By means of this organisation the government has secured. . . a force at its disposal equal to the regular army and capable of being moved in a few weeks either to the line of the Balkans or to any other point in the empire". According to Bianchi (Guida della navigazione, 1852, p. 209), the organised reserve (müreddif redefi) was then 150,000 men compared with 300,000 of the regular army.

Rusain ʿĀwī Pāsha's law of 1869, more clearly French in character (Aristarchi, iii. 514; Engelhardt, ii. 37 243), provided for 4 years active service and one of ʿibāyī or in the active reserve, a period of 6 years in the redefi in two bands (redefi mukaddem and redefi ʿālī) of 3 years each (according to Engelhardt: of 4 and 2 years respectively). In practice in 1877 there were 3 bands, the third (redefi ʿālī) being represented by the territorial army (mukaddem) then mobilised (Zboinski, p. 98). A conscript who obtained a lucky number in the draw was drafted directly into the redefi army (art. 17).

The law of 27th Safar 1304 = 13th Tashrih-i thān û (Nov. 25, 1886; résumé by Lamouches, p. 77 and Young, ii. 394) prepared by a commission of reorganisation which included Muṣaffar Wāll Rıḍ. Pāsha and von der Goltz Pāsha, fixed the period of redefi service at 9 years, but was soon afterwards followed by a special law (redefi hānūn) of 10th Muharram 1305 (Sept. 28, 1887). According to this, which was however not put into force till 1892, the period of redefi service was 8 years. The ranks in the redefi were the same as in the regular army from general of division down to sergeant-major. These officers formed at the same time the personnel of the recruiting offices for the whole army.

According to the law regulating the uniforms of the army on land (elbistiʾ-āshbera mišmān-i māzam) of the 29th Dēmādī 1327 = 5th Ḥārīrī 1325 (June 18, 1909), the redefi soldiers wore distinctive headdress, a dark-green (redefi) piping (azib, Pers. ʿezāb, Turk. ʿezāb) at the bottom of the collar (yalah) of the tunic (ṣafart or ʿezāb; modern spelling: ʿezāb, ʿezāb). The officers wore a piece of cloth of the same colour 7 centimetres in length fastened on the collar of the uniform tunic (ṣafart) or the full dress tunic (ṣafart; older ʿezāb; cf. Pers. ʿezāb) (Dustur, Terti-ī ʿezāb, i. 276; A. Biliotti and Ahmed Seddī, Legislation ottomane, Paris 1912, p. 171 399).

The redefi system was abandoned by the Young Turks. The law of 18th Ramadan 1330 = 18th Agustos 1328 (Aug. 31, 1912) without proclaiming the dissolution of the corps ordered the formation of units of müreddif with elements furnished by the battalion depots in the second inspection (mülkātīk) of redefi (Dustur, Terti-ī ʿezāb, i. 615). The Young Turks have been reproached with this measure and some have even seen in it the cause of the Turkish defeat in the Balkan War.

Garcin de Tassy, Histoire et provo de geol, la l'Orient musulman, Paris 1873, index under redefi, redfi, taradif, mürreddif; Quatremère, Histoire des Mongols de Persia, p. 28, note; M. ūlîmî Nâṣīrī, Hādīkāhā ʿāsbūy, Istanbul 1307, s.v. redefi, redfi, mürreddif, p. 78, 84 and 86. Cf. also the Bibliography of the article Arjîn.

materialism. He often travelled a great distance to visit a particular scholar but always was disappointed. The poet Nesmī [q.v.] was the first to teach him the science of God and the truth, and ordered him to teach this truth in turn to the people of Kūm, and for this purpose he had to speak in Turkish. He therefore wrote his Buğd sheriff, the message of joy", which he finished on the first Friday of Ramaḍān 811 (Jan. 18, 1409).

This work is not yet printed; it is quite short and written in the same metre as "Ashīq Paşa's Ghiyāshān, a ronci of six feet with irregular pauses. The Hurif teaching is expounded in a very proper style, the merits of the names and letters, the sacred number 32, the prophet, the throne of God, the human countenance, the splitting of the moon, Faḍl Allah [q. v., the founder of the Hurif sect — all this is dealt with from the usual Hurif point of view. As sources an "Arba'ānā, a Dīwān al-šarī'ī, and Maṣāḥih al-bāb are quoted; the first and third are probably the works of the same names by Faḍl Allah, the second according to Rā'i was written by Abūl-Kāfi (d. 707 = 1307).

Another of Reft's works is the Book of Treasure" (Gəmiddən). It is printed in the Stambul edition of the Dīwān of Nesmī. The Gəmiddən is better as poetry and on the whole less Hurif than generally șaff in tone. Many of the Hurif and philosophic point of view, Faḍl Allah and Ahmad [q. Muḥammad], the forty, the greatest Name ( itemName) is "the water of life etc. are discussed in it.

Nesmī and his pupil Reft seem to be the only Ottoman Hurif poets of importance, and while the sect, in spite of all persecutions, continued to exist after the battle and even had connections with the Baktāzayn, these two poets as such do not seem to have produced any school. So far as I am aware the first historian of Turkish literature has taken any interest in Reft, until quite recently Kəpəllən-tazade Mehməd Fuğd, who has even promised as a special study of him.

Reft is the word for the minister of the empire, used in Turkey, properly "chief of the men of the pen", a high Ottoman dignitary, directly under the grand vizier, originally head of the chancery of the imperial Dīwān (dīwān-i hamāyūn), later secretary of state or chancellor and Minister of Foreign Affairs. According to d'Herbelot he was called also rets kāṭəf.

This office, unlike many others, is purely Ottoman, at least as regards the particular line of development that it took. Establishing itself at the expense of the functions of the miḥānī [q.v.], we may say that it owes nothing to the influence of the more or less francised Sallā hakkı, nor to the Byzantines. In its origins it seems rather to be connected with a more general and more vague institution of the East, one which deserves more profound study: that of the secretaries of the dīwān or chief of the secretariat of the Dīwān. This office is found in different Muslim countries under different names: ṣarā'ūn among the Mongols of Persia, dīwān ṣeš among the Timūrids, wānī in Persia (cf. Chardin, vi. 175; Eskiyā Celebi, ii. 267). In the Ottoman provinces there was attached also to the dīwān an important official known as the dīwān efendii; in Egypt, under Mehməd 'Ali, the dīwān efendii became a kind of president of the council of ministers. The rets uklūkab were in brief the dīwān efendii of the capital. It is perhaps to this that we owe the use of the title rets efendii, by which they were more commonly known. We know that the term efendii was generally applied to people of the pen. This connection seems to have already been noticed by E. Blochot (Voyage en Orient de Carlier Piron, Paris 1902, p. 83).

While the time of Sulaimān the Magnificent, the title rets uklūkab (or rets efendii) was not used. At least this is what we are told by Ahmed Resmi, who quotes in this connection the Bedevi uklūkab of the historian Koçja Hüsèin Efendi of Sarajevo (cf. Babinger, G.O. W., p. 186). The latter, who was himself rets uklūkab, says that before Sulaimān, the official correspondence was in the hands of the evvən-i ahkam or "depository of the decisions (of the Dīwān)" along with the miḥānī. This point of view has been adopted by other historians (v. Hammer; cf. also the Sulhāname-i Nisavi-i hikayeti).

There is however no agreement as to who was the first rets uklūkab; it is usually said to have been İclal (Djeclā)-tazade Mustafa Celebi [q.v.] (cf. Babinger, G.O. W., p. 102). This well known historian, whose genealogy is taken back to the legendary founder of Byzantium, Yanko b. Mādiya, was rets uklūkab in 591 (1524—25) before becoming miḥānī, but the Nukhib uklūkab of Mehməd b. Mehməd refers to the death in 930 (1523—24) of a rets uklūkab of the name of Haidar Efendi. According to other indications, it would even appear that the office goes back to Mehməd II [cf. the article RÝS KÝRŠ].

The rets or office of rets efendii lasted over three centuries during which its holder changed 130 times, the average tenure of office being between 10 and 15 years, which reveals a remarkable lack of ministerial stability: some of the occupiers held the office twice, three, and even four times.

Duties of the rets efendii. As secretary of state the rets kept records of memaros and reports (telbāt and tafāreb) presented to the sultan by the grand vizier acting as representative of the government and of the Dīwān. These documents which were prepared by the amel-i dīwān-i hamāyūn or patkāfiji (referendar or reporter of the Imperial Dīwān) were brought in a bag (ṭabeh) for the purpose of the ceremonial sittings of the Dīwān by the rets himself who handed them to the grand vizier. After being read they were given to a special officer, the telbātijī, whose duty it was to present them to the sultan.

As chancellor the rets had a kind of jurisdiction over all the civil functionaries and the immediate
head of the department of the Imperial Divān (divān-i kümâyûn kalēmī).

This chancellory was divided into three offices (oda or hâkim):

1. the beyli̇k, the most important, saw to the despatch of imperial rescripts (ferman), orders of the viziers, and in general all ordinances (nezâmed) other than those of the department of finance (devârî derdâr dârâs). This office kept copies of them as did the grand vizier also. Ordinances bearing on the task of the signature of the clerk, of the chief editor (mânsûrî), and of the head of the office (beyli̇kî) were submitted to the latter by the beyli̇k who placed his sign (reştî) upon them and, if it was a ferman, sent it to the nihağînî for the tağrah (q.v.) to be placed upon it. — The beyli̇k in addition retained the originals of civil and military regulations (fihrist or hımûn-nâmî) (usually elaborated by the nihağînî as well as of treaties and capitulations (hâmî-î) with foreign powers. The reştî had to consult these treaties, notably when certifying the der-hâmî or "marginal" answers put by his subordinates on the requests or notes, known as verbal (tahere), which the ambassadors addressed to the grand vizier. It is this side of his activity which, gradually becoming more and more important and absorbing, ended by making the reştî a Minister of Foreign Affairs.

2. office of the tağrah or "annual renewal" of the diplomas of the governors of provinces (kâzî), of the brevets of the vellât or judges in towns of the first class (tağrahî), of the brevets of the timariots or holders of military fields (tağrahî formalî).

3. office of the reştîs or "previsions" of different officials, as well as of the orders for pensions from the treasury (reştî) or from waqfî (cf. the details of the organization of this office in Monradge d'Ohsen, vol. 161).

The reştîs accompanied the grand vizier to the audiences which the aylân gave him and to those which the grand vizier himself gave to ambassadors. He shared with his master the midday meal as did the taqrah bâbî (cf. Sâwâzî) and the two tekerîgî, except on Wednesdays when these two were replaced by the four judges of Istanbul.

In the official protocol the reştîs had the same rank as the taqrah bâbî with whom he walked in official processions, before the devârî dârâs (which showed he was of lower rank than the latter). The sûâbî or epistolary formula to which they were entitled will be found in Fertûn, Muhsînî, p. 10. It is the same as for the aqshâ of the sirrî [cf. kirdâr] and the deşer emînî. For the dress of the reştîs see Brinck, Ancient Costumes Turkey, pl. 2; Castellan, iv. 107.

According to Mouradge d'Ohsen, the reştî used to act as agents for the khâns of the Crimea.

Administrative career of the reştîs. The reştîs, like all Ottoman officials, were chosen by the aylân or grand vizier as they pleased, but, except in case of appointment by favor, they followed a fixed line of promotion (parîz) in the administration. It was in the administrative offices, i.e. among the bağlıgâhî (Persian plur. which was given as an honorific title to the principal clerks or bağlıgî or hâmî-î nihağînî) that this career was spent.

In examining the Sefiîn al-Rizâ of Ahmed Reşid, we find that up to the reştîs Boyâlf Mehmed Efendi (Pâshî) (d. 977 = 1569-1570) there is no information available about the career of the reştîs, but starting with him we find that the reştîs were regularly chosen from among the former tekerîgî, of the vezir or of the grand vizier. From Şehîtâlâ Abdî Efendi (d. in 1014 = 1605-1606) the reştîs were mainly taken from the vezir mekhâbîkî or private secretaries of the grand vizier. These secretaries were themselves at the head of an office (oda) which contained a very small number of officers (hâmî or hâmî, pl. hâmî') (hâmî); there were only two between the years 1090 and 1100. When the number increased (at a later date there were about 30) the career of the future reştîs was as follows: hâmî in the office in question, called also mekhâbîkî, pad-i ait adârî, then ser-hâmî or hâmî-hâmî "chief clerk", then mekhâbîkî. The post of mekhâbîkî was much sought after. It brought its holder into close contact with the grand vizier and it was then very easy to advance oneself. More rarely the future reştî rose through the similar but less important office of secretary to the lieutenant to the grand vizier or Khâya Bey (acteda kûlîhî adârî).

The rûhiyat did not mark the end of a career but gave access to still higher posts (see art. nihağînî for the old rules of promotion by which the reştîs became nihağînî). It was one of what were known as the "six [principal] dignities", which, namely, the nihağînî, devârî dârâs, reştî usâhî, deşer emînî, shîbî thâsî deşer-dârî, shîbî thâsî deşer-dârî (Ahmed Râsim, Turîhâ, p. 756).

According to the Naşihat-nâmê (p. 39-40 of the French translation; cf. this Encyclopaedia, iv. 815-816), the reştî was under the authority of the Grand Defterdar (for financial matters only).

Increasing importance of the office of reştî. — The growing influence of the reştî is explained by the increasing importance of foreign policy in Turkey (the Eastern question).

Down to the end of the xvith century the nihağînî were certainly superior to the reştîs: they controlled and even revised the orders and decisions of the divân (aḫbâm), but from the xvith century onwards reştîs like Oğlu-nâve Mehemmed Shâh Efendi, Lâm' Ali Çelebi and Hûkûm Efendi shed a certain lustre on their office. From 1660 (1650) the incapacity of certain nihağînû precipitated the decline of their office in spite of the ephemeral efforts by grand viziers like Şehîd 'Ali Pâshî and of the nihağînî appointed by him (Râşîd Efendi and Selim Efendi). It was in this period that the office of hâmî-î nihağînî was created (cf. above).

The Ottoman protocol (teşâfî-fâtî) was nevertheless still to retain for a long time traces of the originally rather subordinate position of the reştîs. For example they did not sit in the office of the Divân itself, called Divân-şâhîne (in the Top Kapu Sarayî or "Old Serai"), but remained seated outside of the room in a place called reştî tahrî, "the bench of the reştî", where there were seats for certain other officials to wait upon. In the formal sittings, even in those like the distribution of pay (hâmî) to the janissaries which took place in the presence of foreign ambassadors, the part played by the reştî was rather limited. He carried in with slow step and the sleeves of his a rá turned up the bag containing the hâmî (cf. above). He kissed the hem (ezê) of the grand vizier's robe, placed the bag on his left, kissed the hem of his robe again and withdrew to his place. He came in again to open the bag, handed the documents to
the grand vizier, took them back from him to fold them (bâgâlûna), sealed them and gave them to the kadîbêlî. If he was unable to be present, the bag of the kadîbêlî was handed to the grand vizier by the kadîbêlî kendibêlî (Kânûnî-nâmè of 'Abd al-Rahmân Paşa, p. 85, 123 etc.).

Lucas (Second Voyage, Paris 1712, p. 215) writes that during the audience given by the grand vizier to the French Ambassador 'le Ray, Assyndy on Grand Chancellor demena debout et appuye contre la muraille'.

Things were changed at the reform of the Divan effected at the beginning of his reign (1702) by Selim's desires of limiting the power of the grand vizier. The old Divan consisted of six masters of the dome (having only one consultative voice), of the Maffût (Sheikh al-Islâm) and the two bukhâters. The new Divan was to consist of 10 members by right of office and others chosen in different ways (about 40 in all). The members by right of office were the Kâhya Bey, the Re's Efendi, the Grand Deftârî, the Câleb Efendi, the Tarsûne Emîni, the Çawûsh Bâshî etc. (Zincke, Geschichte, viii., 1853, p. 341).

The office of râfi tended more and more to become the Ministry of Foreign Affairs of the Sublime Porte, parallel to the post of Kâhya Bey (Interior).

Suppression of the dignity of râfi. — The title of râfi was suppressed by the kâhidî-kendibêlî of Sultan Mahomed II addressed on Friday 23th Ulûl 'Kûsûr 1251 (March 11, 1836) to the grand vizier Mehmed Emin Paşa. The Turkish text will be found in the Silmûnî of the Turkish Ministry of Foreign Affairs; the French translation (or at least parts of it) was published in the Ministre Ottoman of April 23, 1836 (according to A. Ubelinc, Lettres sur la Turquie, p. 38, note 1). This document at the same time created two new ministries (ministre) which in memory of their origin remained in the end in the same building as the grand vizierate [cf. Kânûnî 'Atîf in Suppl. 1], the Ministry of the Interior (originally of civil affairs or mââkerî-mââyîne, later dâkkîbêlî) replacing the department of the Kâhya Bey, and 2, the Ministry of Foreign Affairs (kahûbêlîbì) replacing that of the râfi. The preamble said that, abandoning the old responsibilities of the ministry, it was certain that it was thought advisable to create real posts of worth (renâverî) and not honorary ones, but without its being necessary to give the new term of foreign affairs the title of paçhe [q. v.], "which is mainly a military term".

Bibliography: By far the most important source is the work known as Sefînet âl-Kâtîr, which consists of: 1. Ahmad Resîm's work (Bâhinî, G. O. R., p. 309-373) which contains the biographies of 64 râfi down to Râghîb Mehmed Efendi (1157 = 1744), and 2. its continuation by Sulaimân Fâtîh Efendi which contains the biographies of 30 râfi down to Ahmad Wâsîf Efendi at the beginning of the sixteenth century. According to the preface to Sulaimân Fâtîh's (not Fâlik) continuation, Ahmad Resîm had entitled himself Târîkh ad-sifârîn ad-Âshûrîn (in imitation of the Hadîth âsârûn ad-Âshûrîn of Oghmûnî-ad-Târîkh, but changed it at the suggestion of Râghîb Paşa to Sefînet âl-Kâtîr in the references in the Catalogue of Turkish MSS. in the Bibliothèque Nationale by E. Blochet, ii. 125, should be corrected accordingly). The word bâgâlûna apparently makes no sense, that of Kadîbêlî is usually found in other works (Flâgel, Cât., ii. 407, Nûr, 1250; Bahînger, Brussel Mehmed Tâhir, iii. 39 note), does not seem correct either. One ought undoubtedly to read kâhidîbêlî (which rhymes with the hadîth of the prototype). The Sefînet ad-Âshûrî was published by the State Press in Istanbul in 1269.

Cf. also in addition to the references in the text: Mouradse d'Ohsson, Etats de l'Empire Othomân, vii., 1824, index; Joseph von Hammer, Des osmanischen Reichs Staatsverfassung und Staatsgewohnheiten, Vienna 1815, ii., index; Kâhidî-kendibêlî 'Abd al-Rahmân Paşa, written in 1067 (1667-1677) and ed. by F. Kûrûzîlî (M. T. M., p. 508); Evâd Efendi, Tarihîf sâlîb, Ayyar, p. 85, 123 etc.; Silmûnî-i Neşret-i Kâhidîbêlî, 1st year, 1301 (1885); Imprimerie Ebûsîzaya, Istanbul (contains in addition a historical résumé and a chronological list of all the grand viziers and all the râfis); Charles Perry, A View of the Levant, particularly of Constantinople etc., London 1743, p. 36. — On the sâhîb ad-Âshûrîn ur râfi'il ad-Âshûrîn, see Kaçarî Ahmed, Sâhîb ad-Âshûrî, i. 101 sqq.; vi. 14, 17-18, 50; Massâ, Cité de la Chancellerie d'État... d'Ab ad-Âshûra, in B.T.P.C., xl. 79 sqq. — Among the Saldîkêî, the offices of sâhîb ad-Âshûra and pervânî were quite separate; cf. Houtman, Reisit a. Textes..., Sély, iii. 105. — (J. Deny)

Reiyo, the name given in Muslim Spain to the administrative circle (âbûra) comprising the south of the Peninsula, the capital of which was successively Archidona (Arabic: Urđûdûn) and Malaga. The usual Arabic orthography is âbûra; in particular this is the form found in the Muqaddimah of Ibn al-Farîd; but some Spanish MSS. give the true orthography âbûra, more in keeping with the local pronunciation Reiyo (Raiyu) attested by Ibn Hawâkî. It is only, as Dory thought, a transcription of the Latin reio (no doubt Malacitana reio); the suggestion put forward by Gayangos of a connection with the Persian town-name âbûrî is of course untenable.

Where the feys in the south of Spain were assigned to the former companions of Baldî b. Bîhr [q. v.], the district of Reiyo was allotted to the âbûrî of Jordan (al-âbûrîn). During the Umayyad caliphate of Cordova, the âbûra of Reiyo was bounded by those of Cabra and Algeciras in the west, by the Mediterranean in the south and by the âbûra of Elvira in the east.

(É. Lévi-Provençal)

Rejmat, first a district, then a town and lastly the capital of the province of Rejmat in Persia. As V. Barthold points out (Gêzîm e a hokîst Tâmmûnî, in Bull. de l'Inst. Can. d'Hist. et d'Archéol., Tbilis 1927, vol. vi.), our
information regarding the history and historical geography of Gilân is so far very scanty. Le Strange's remark that the position of the chief towns of Gilân cannot be exactly given is still true. The Tamanaski MS. (twelfth century) is the earliest to inform us that before the foundation of towns their names were already in existence as those of districts. In particular seven districts are mentioned in the eastern part of Gilân on this side of the river — Biepai (Islam having penetrated there from the east), and eleven in the western part on the other side of the river — Biepas. Among the seven eastern districts we find one called Lâh-e-Lâhidjûn (i.e. Lâhidjûn) and among the eleven western ones that of Rešt. The towns of this name did not exist at this time. They are not mentioned, in fact, until the Mongol period.

General. Gilân is now divided into 10 districts (of which five are called Hamun-ye-Tâwâsh), that of Mawštâ with Rešt, capital of the province, being the most important. According to Rabino (1917), the town of Rešt, has a population of 30,000, and the district of Mawštâ 90,500 out of the total of 359,300 for the province. These figures must have increased by now. Rešt, also called Dâr al-Marz or *frontierland*, lies between two small rivers, the Sâhrâbâr or Seîgilân in the east and the Gowher-rûd in the west, which unite and flow into the Bay of Enzel (now Pehlevi), which is eight miles from the town. The bazaars occupy a considerable part of the centre of the town, which is traversed by dark and narrow streets. Only a few years ago Rešt had very few broad streets and was only partly paved. Recently there have been steps taken to improve matters. The town is divided into 7 mahallas: Zâhidjân, Mahalleh-yé-bâzîr, Khumayrân, Khumayrân-o-Zâhidjân, Usâîd Serî, Camûr Serî and Khâyî. It has some 500 houses, 3,500 shops, 20 caravanserais for merchants and 25 for caravans, 40 mosques, 12 sanctuaries, 36 tekkes, 6 madresses, 35 bathes, and 7 bridges (all these figures refer to the period before the War). Among the mosques only the Mâsjid-î Şafi, the oldest, seems to be of any interest. Hasan Beg, author of the Akhm al-Tâwâsh, calls it Mâsjid-î Şafi and adds that when Ismâ'il Shah fled from Ardabil to Gilân, he spent some time near this mosque. In its courtyard there is a well into which women throw silver in order that their prayers may be granted. The Imam-Zade Saiyid Abû Dîaar, is the most important sanctuary of Rešt, near the governor's palace. The holy man buried there is called 'Abd al-Fattâh, the beloved of the Imam. Istâdî Dîfar whom the name of the quarter, Usâîd Serî. The ladies of Rešt always have had the reputation of being of easy virtue. According to a poet of the country, Mawlıš Sâ'il Gilân: *the young women of Rešt, like intoxicated peacocks* would go seeking a purchaser in every bazaar, holding in their hands the knot of their trousers*.

There are in Rešt two important clans: the Tâfe-yé Hâjîjî Samî (who came originally from Tabarz) and the Al-e Unâsh (of very humble local country origin). The language of the common people of Rešt is a dialect of Gholki. The upper and middle classes use Persian. Azeri-Turkish is also spoken. The inhabitants are all Shi'is except for a few Bahâ'. Gilân was converted to Islam only at the beginning of the tenth century by the Alî Imâm Hasan b. 'Ali al-Utrum after a popular rising against the Djuştûnîs (cf. Barthold, Istorie-Geografia Oluve Iranu, S. Petersburg 1903, p. 156). All the people of the Biepas were of the Hanball school except the chiefs of Fîmen and the inhabitants of Kûtîshpâh (Shâf'î). It was only after the annexation of Gilân to the kingdom of Persia by the Safawis that the people of the Biepas became converted from the Sunna to the Shi'a. According to another story however, Islam was preached in Dailâm and Gilân in the year 903 (1503) by the Sâyiîd Nâşir Kabîr, one of the 'Alîid pretenders to the caliphate, who belonged to the Zâdi Shah, *of which he was one of the learned men and an author*. In this account the conversion to Islam is placed under the auspices of the Shi'a (cf. Seyyed-ol-Molk, L. 42). The last adherents of the religion of Zoroaster have not yet disappeared from Gilân. People look for white cows because of their crowing presages good fortune; the custom is observed of lighting a fire and jumping over it (*fîr shomâ-yé akher-e cîk*). On the road from Fûmen, about one mile from Rešt, a place preserves the name of Ategh-kâde. S. A. Kasrawi (op. cit., p. 31) does not however seem certain that Zoroastrianism was widespread in Gilân. Generally speaking, the people were indifferent in matters of religion. We may note however that many trees, called saints, *for kozar-wâr*, are objects of worship, especially on the part of women (cf. notably; Welîns near the Arûk bridge; Čheh Doğhter and Aghâ Bîhi Zainab).

Rešt is the principal export and import market for trade with Russia. Its importance as the economic centre of Gilân varies with the rise and fall in the silk-culture. Barthold thinks (op. cit.) that the development of urban life and industry in Gilân belongs to a period later than the tenth century. The geographers of the tenth century mention the cultivation of the silkworm and silks only in Tabarz. In the eleventh century and later the silk of Gilân was particularly famous. At the end of this century, the silk of Gilân, according to Marco Polo, was sought by Genoese merchants, whose vessels first appeared in the Caspian shortly before Marco Polo wrote.

**History.** S. A. Kasrawi (op. cit.) gives a sketch of the dynasties of the Djuştûnîs (end of the second to the beginning of the fourth century A.H.), the Mawšûrs (beginning of the fourth to the middle of the fifth century A.H.), and the Khârâdâris (fourth century) who, especially the first, played a certain part in the destinies of Gilân.

In Rabino's work we have a complete historical survey from the Mongol conquest (1307) to the Persian revolution. The Tamanaski MS., unknown to Rabino, contains some information about the preceding period.

In it Gilân is described as a populous and wealthy country. All the work was done by women. The men had no occupation except fighting. Throughout Dailâm and Gilân in every village there were one or two fights a day; every village fought with every other. Many people were often killed in a single day. These quarrels and battles went on until the men went to war or died or grew old. When they grew old they became pious and were called mawâqir (knowing the customs). In all the districts of Gilân, if any one insulted another or became intoxicated or committed any act that caused injury, he was punished with
against foreign occupation of Persian territory. Assisted by Germans (von Parseben), Turkish and Russian officers, an armed force was organised to oppose the passage of the English troops under General Dunsterville on their way to Baghêd, without much success however (battle of Mendjil, June 12, 1918). The English were able to force their way through with the help of Bierckhlov’s detachment of Cossacks and established a garrison in Reht. A second battle with the *djengeli* in the town itself on July 20, 1918 also ended in an English victory. On Aug. 25, peace was signed with Kélik Kahn at Enzelii. At one time, at the end of March 1918, the position of Kélik Kahn was so strong that the capture not only of Kermien, but even of Teherân was feared. The English Vice-Comon at Reht, Mr. Maclaren, the manager of the Imperial Bank of Persia in this town, Mr. Oakshott, and Captain Noel of the Intelligence Service were taken prisoners by the *djengeli*, the latter being held for five months (cf. The Adventures of Dunsterville by Maj. Gen. I. C. Dunsterville, London 1920).

Reht again became the arena of the revolutionary movement in 1920. After the capture of Baghêd on April 28, 1920, by the Reds, the White Fleet sought refuge in the port of Enzelii, which was held by the English. Comrade Raskolnikov, commander of the Red Fleet in the Caspian, pursuing the Whites occupied Enzelii on May 18, 1920 and forced the English to beat a hurried retreat. The appearance of Soviet troops at Enzelii encouraged the revolutionary movement in Giliân and on June 4 a revolutionary and anti-English government of Northern Persia was proclaimed at Reht with Kélik Kahn at its head.

At the first appearance of Red forces at Enzelii and Reht, the peasants had refused to take the land which the communists proposed to take from the landowners. The peasants feared that the khans would return and make them pay dearly for their expropriation. But at the second occupation (Oct. 1920) of Reht by the Reds the peasants greeted them frantically. Large numbers of them came among the Red soldiers and said that now they would not deliver rice to the landowners any longer and that they would seize all the harvest. The military situation was however confused. After the evacuation of Enzelii the English at first remained on in expectation of events, but they were forced to retire from Reht in June, setting fire to all their military stores. A month later they left Mendjil blowing up the bridge over the Sefid Râd and hastened to return to Baghêd. In the meantime the Teherân Government had sent a military expedition against the revolutionaries in Reht. After initial successes, the Persian Cossack brigade suffered checks. It was after this that the second occupation of Reht by the Reds mentioned above took place.

On their side, the English demanded on Oct. 25, 1920 the dismissal of the Russian (White) officers, the instructors of the brigade, who were to be replaced by English. Mughir al-Dawla’s government refused to agree to this and resigned on Oct. 27. It was replaced on Nov. 1 by that of Sepéhdar, which acceded to the English demands, so that all the armed forces of Persia were now under English control. The latter then on Dec. 19, 1920, sent an ultimatum to the Teherân government ordering the *mughrîs* to be summoned with a view
to the ratification of the Anglo-Persian treaty of Aug. 9, 1919. The English plans were however thwarted by the rapprochement between Persia and the Soviets. On May 20, 1920, Teherán notified Moscow of her recognition of the Soviet Republic of Ādārḫābād, and her desire to enter into pourparlers with the R. S. F. S. R. Having reached Moscow at the beginning of November the Persian delegate Mughāwar al-Memliḳ openness negotiated for the conclusion of a treaty with the Soviets. On Nov. 28, Moscow asked Teherán to accept the Soviet envoy, M. Rothstein. After an attempt in June 1921 to regain the position lost in the north of Persia, where the Soviets still had their troops, by inspiring the Persian note of Jan. 23, which demanded that the Soviets should withdraw their forces from Gilān, the English, in view of Moscow's firm refusal, took the first steps to remove their troops from Persia and on Feb. 26, 1921 Persia and the R. S. F. S. R. signed a treaty restablishing diplomatic relations between the two countries. On April 25, 1921, M. Rothstein came to Teherán and in the course of the year the Soviet and English troops left Persian territory, Gilān and Rejāḵ then returned definitively to Persia. The last echoes of the revolution in Gilān were the risings of Kerhāli Irshām and of Saiyid Djalāl in 1921 and 1922.

**Bibliography:** H. L. Rabino's work, Les Provinces Caspiques de la Perse, Le Gêloûn, in *R. M. M.*, xxiii., 1915–1916, is authoritative. It contains a very complete bibliography to which we can only add, in addition to a few books and articles mentioned above in the text, a curious brochure entitled *Tirzavar-e Ḥāḵūq,* written by Ḥāḏjadi Saiyid Mahmūd of Rejāḵ and published in 1910. It deals with the agrarian system in Gilān. — *La domination des Daimolms* by V. Minorsky (publ. by the Société des Études Iran., No. 3, Paris 1934) may also be mentioned. (B. NIKITINE)

**Resmi, Ahmād, Ottoman statesman and historian.** Ahmād b. Irshām known as Resmi, belonged to Rethmī (Tūrkmen, hence epithet) in Crete and was of Greek descent (cf. J. v. Hammer, *G. O. R.*, viii. 202). He was born in 1112 (1700) and came in 1146 (1733) to Stambul where he was educated, married a daughter of the Reḥ Esfendi Taḵkūjī Muṣṭafā and entered the service of the Porte. He held a number of offices in various towns (cf. *Sīgīl-i Sīgīlān*, ii. 380 sq.). In Safar 1171 (Oct. 1757) he went as Ottoman envoy to Vienna and on his return made a written report of his impressions and experiences. In Dhu Tā'Kaḍ 1176 (May 1763) he was again sent to Europe, this time as ambassador to the Prussian court in Berlin. He also wrote a very full account of this mission, which early attracted attention, in the west also, for its views on Prussian policy. Its description of Berlin and its inhabitants and all sorts of observations on related topics. After filling a number of other important offices he died on the 3rd Shawwāl 1197 (Aug. 31, 1783); on this date cf. Babinger, *G. O. W.*, p. 309, note 2) in Stambul. His tomb is in the Selimīye quarter of Scutari. In addition to the descriptions already mentioned of his embassies (ṣerāʾeščehma) to Vienna and Berlin, Ahmād Resmi wrote in connection with the Russo-Turkish war and the peace of Kūlāḵ Kāhndārjān 1776–1774 a treatise entitled *Khalīfet al-Pilāš,* in which as a participant in the campaign and eye-witness, he gave his impressions of this important period in the history of Turkey. Of especial value are his biographical collections, particularly his *Khalīfet al-Rūḍān* (composed in 1152 = 1744) with the biographies of 64 chancellors (reḥ ṣāʾeʿeḥā) and his *Humāyid al-Rūḍān,* in which he gives the lives of the chief v滋养 of the Imperial Harem (*hūjār aḵtārān*). Of a similar nature is his continuation (written in 1177 = 1765) of the "deaths" of Mehmed Emin b. Ḥāḏjadi Mehmed called Alay-Beyl-zade, in which he gives in twelve lists the deaths of famous men and women (cf. the accurate list of contents in J. v. Hammer, *G. O. R.*, xii. 187 sq. No. 14). He also wrote several other works on geography and proverb.

The reports of his embassies are available in numerous manuscripts (cf. the list in Babinger, *G. O. W.*, p. 311, to which should be added: Berlin, Staatsbibl., Ms. Ord. 4*<sup>+</sup> 1502, fol. 27<sup>+</sup> to 460<sup>+</sup> [incomplete], Paris Bibl. Nat., Suppl. Tarc No. 510 [?], Paris, Cl. Huard Coll.), printed editions and translations, which are listed by Babinger, *G. O. W.*, p. 311. To these is to be added the Polish translation *Podróż Resmy Ahmada Efendiego do Polski i po Estonii i Finlandii* by J. S. Sekowski, *Poznania, Dzieł śpiewnych Turczyków,* vol. ii., Warsaw 1825, pp. 232–289.

(FRANZ BARENGER)

**REWĀNĪ, an Ottoman poet.** His real name was *Ilyās* or *Ṣūḥār* and he belonged to Adrianoople. He is said to have taken his pen-name of Rewānī from the river Tandja which flowed past (rewānī) his garden. He entered the service of Sultan Bayazid II (1483–1512) in Stambul and was sent by him as administrator of the *ṣerāʾeš,* the annual sum for the poor of Mecca and Medina, to the four cities to circulate the money. He embellished a part of it however not by the amount of the Meccans his salary was stopped and he was laid to rest in the house of the eyes, which then affected Rewānī, was described by a poet hostile to him as the just punishment of God, whereupon Rewānī answered him, also in verse, and calmly confessed: "He who has money picks his fingers." He then fled to the court of Prince Selim in Trebizond and entered his service. But he had to disappear from here also as he had committed some indiscretion and his property was confiscated (some sources put his appointment to the *ṣerāʾeš* at this date); he was however pardoned by Selim and henceforth served him all the more faithfully. When Selim in 918 (1512) came to Stambul to dethrone his father Bayazid, Rewānī is said at the last decisive council of war to have thrown his turban in the air with joy and to have praised the day. After Selim's accession he was appointed superintendent of the kitchen (*mudārik eimin,* then entrusted with the administration of the Aya Sofya and of the hot baths (*hātun-baṭl)* in Brass. He built a mosque in the KIrç Çeşme quarter of Stambul which was called after him and he was buried there on his death in 930 (1533).

Rewānī left a *dīwān* and a *methnevis* entitled *Ifrānat-e Nam en Kūšāh e Wāsiʿ.* In the still unprinted *methnevis,* which is not very long, he describes the drinking bouts of his time in all
brought it within the range of Islamic expeditions on several occasions.

In the first century of the Hijra, the Caliph Mūsāīya [q.v.] sent a fleet under the command of Djinādā b. Abi Umiyya al-Azdi to invade Rhodes. The date is variously placed in 52 and 53 (672—73) (see Castani, Chronographia Islamicica, for this variance in the sources). Little is known about this early expedition, except that the Arabs founded a short-lived settlement, which was evacuated in 66 (679—80) by the order of the second Umayyad Caliph Yazid [q.v.]. The island was thus referred to from then on, whose historical sources the Arab occupation was long remembered by the complete destruction and sale of the famous bronze "Colossus of Rhodes" to a Jewish merchant of Emesa. The metal is said to have amounted to 880 camel-loads.

In 1308 or 1310 A.D., during the reign of Andronicus II Palaeologus, Rhodes was seized by the Knights Hospitallers, who had been expelled from 'Akkā in 1291 by Sultan Khalil [q.v.], son of Kālibtīn. The Order of Saint John of Jerusalem now came to be known as the Knights of Rhodes, under whose rule the island became a thorn in the side of Islam as one of the strongest outposts of Latin Christianity in the Levant. Hence the Knights played a prominent part in most of the forthcoming crusades against Turkey and Egypt, notably in the capture of Smyrna in 1344, the sack of Alexandria in 1356 and in the Crusade of Nikopolis [q.v.] in 1396. The second of these attacks determined the Egyptian story of counter-crusades against Cyprus and Rhodes. Three naval expeditions in 1424, 1425 and 1426 resulted in the annexation of Cyprus as a tributary state to Egypt.

The Mamlik then turned their plans to the conquest of Rhodes during the reign of Ṣalāḥ. In 1440, they manned a flotilla of 15 galleys with 200 regulars and several hundred volunteers. These sailed from Damietta to Cyprus for revictualling and to 'Alīya in Asia Minor, where its Muslim Amir reinforced them with more warriors and four galleys, then direct to Rhodes. The Knights were, however, prepared for the attack, and, after a few skirmishes, the Mamlik fleet retreated under cover of night. In 1443, another fleet sailed from Damietta to Bairat, Tripoli, Larnaca, Limasol and Adalia to collect free provisions from subject and friendly states. Their first objective was the little island of Châteauroux or Castellarina, known in the contemporary Arabic sources as Ḥabālayn. This island belonged to the Knights, and the Egyptians had no difficulty in reducing it. Afterwards they returned to Damietta owing to the approach of winter. In 1444, a third and more elaborate expedition was launched against Rhodes. The Egyptian fleet, carrying no less than a thousand Mamliks, sailed from Damietta to Tripoli and direct to Rhodes. This time they succeeded in landing on the Island and in setting siege to the city of Rhodes for a period of forty days, during which they pillaged all the neighbouring villages. Finally, the Knights sailed from the beleaguered town and took the offensive. Thus taken by surprise, the Egyptian army sustained considerable losses and sailed back to Damietta.

The success of the Knights in the repulse of so strong an enemy as the Mamlik may be ascribed to three main causes: first, the system
of espionage which the Order maintained in all hostile countries in order to keep their headquarters in perfect readiness for effective action at the appropriate moment; second, the great strength of the fortifications of Rhodes which was made possible by its prosperity as one of the chief centres of trade in the Levant; and third, the nature of the military training of the Knights, their unity and their extraordinary valour in battle. Peace was eventually established between Egypt and Rhodes through the mediation of Jacques Cœur, the great French merchant prince of the fifteenth century, who was in favour at the court of the Sultan. The task of a decisive counter-crusade against Rhodes remained for the Ottoman Sultan. Muhammad II besieged the capital with some slavemaster of success in 1480; but it was not till the reign of Sulaiman the Magnificent that the Knights were finally overthrown after one of the most heroic defences ever known. On December 24, 1522, the island became the seat of a Turkish Pasha, and remained under Ottoman sovereignty until it was captured by Italy during the war of 1912 and finally passed to Italian rule by virtue of the Treaty of Lausanne (July 24, 1923).

(A. S. Atiya)

In the year 1912, during the war between Turkey and Italy, the Italians occupied the island of Rhodes and the Southern Sporades and held them till 1923, when Turkey (treaty of Lausanne) renounced all claim to Rhodes and the islands, which are now under the sovereignty of Italy, and constituted the "Possedimento delle Isole Italiane dell'Egeo"; the principal islands, which are 14 in number, we give them here with their historical Turkish names which are really Greek, in brackets (with the exception of Indjirli): Rodi (Rados), Calcâ (Karki and Kharki), Calîno (Kalymnos), Kaso (Kâskha), Casteloro (Kastellorizo, Meyîs), Coo (İstanköy), Lero (Lerou), Lissor (Lipsos), Nisiro (Nissiros, Indjirli), Patmo (Patmos), Pucopî (Paikopis), Tîloa (Elêyki), Skarpanto (Kerpe), Simî (Simbaki), Stampalia (Astropolia).

The extent of the "Possedimento" is 2,697 km² and the total population 30,855 (census of April 21, 1931) of whom 5,818 are in the island of Rhodes. The inhabitants are distributed as regards language and religion as follows: 104,485 Greek Orthodox speaking Greek, 8,276 Muslims speaking Turkish, 4,481 Jews speaking Spanish Hebrew, 8,000 Roman Catholics speaking Italian. The Muslims are in the islands of Rhodes and Coo. Like the rest of the population, the Muslims are exempted from military service; they have elementary schools, a modern in Rhodes, special tribunals at Rhodes and Coo for questions of private law.

Turkish and Muhammadan monuments. The Turks did not modify very much the topography of Rhodes; at most they did something to intensify an appearance already generally oriental; they turned the churches into mosques and built new ones; the most remarkable are the mosque of Ilhâm Pasha (1547 = 1540—1541), the mosque of Redjep Pasha (1596 = 1587—1588), the mosque of Murad Re'îs (celebrated re'îs killed in a naval battle off Cyprus in 1609), built by Abû Bakr Pasha in 1646 (1636—1637) and repaired by Muradît Hassan Bey in 1712 (1717—1718), the mosque of Sulaiman Mustafa (1178 = 1764). The mosque of Sulaiman Sulaimân is modern.

We may also mention the library at Rhodes which contains Arabic, Persian and Turkish MSS., founded as a wakf between 1791—1792 and 1799 by the Rhodian Hâfiz Ahmed Agha.

The Muslim cemeteries, which lie under the walls of the fortress, go back in part to the siege of 1522; there are many tombs of men of note who died in captivity or exile in Rhodes in the enclosure of the teche of Murad Re'îs; among them we may mention: İljâî Girîy Khân (d. 1636), Şahîd Girîy Khân (killed 1640), Sâ'idî Girîy Khân (d. 1695); Stîfî (the pretended son of Hâfiz, Shaikh of Persia, d. 1715 = 1725—1726); the poet Hashmet (d. 1182 = 1768—1769), the grand vizier Yûnus Pasha (killed in 1715), the general 'Abd al-Karîm Pasha (d. 1302 = 1783—1785).

Bibliography: Bilotti and Cottret, L'île de Rhodes, Rhodes 1881; C. Torr, Rhodes la
the taking of interest; in any case the Kur’ān regards ribā as a practice of unbelievers and demands as a test of belief that it should be abandoned. It comes up again in Sūra iv. 161 (of the period between the end of the year 3 and the end of the year 5; this also gives a clue to the date of the preceding passage) in a passage which sums up the reproaches levelled against the Jews: “and because they take ribā, while it was forbidden them and devour uselessly the substance of the people”. The fact that the principal passages against interest belong to the Medina period and that the Jews are reproached with breaking the prohibition, suggests that the Muslim prohibition of ribā owes less to conditions in Mecca than to the Prophet’s closer acquaintance with Jewish doctrine and practice in Medina. In the later development of the teaching on the subject we find it in tradition, Jewish influence is in any case undeniable (cf. Jaynhöf, Hand-lecting, p. 286).

2. The traditions give varying answers to the question what forms of business come under the Kur’ānic prohibition of ribā, some of which can be regarded as authentic. The ignorance of the correct interpretation is emphasised in a tendentious tradition, obviously put into circulation by interested individuals (the tradition is probably older than ‘Ummān, aq., cit., p. 214, thinks); according to this view, the principal passage in Sūra ii. is the latest in the whole Kur’ān, which the Prophet could not expound before his death. That the rigid prohibition of usury in Muhammadan law only developed gradually is clear from many traditions. Alongside of the view repeatedly expressed, but also challenged, that ribā consists only in (the increase of substance in) a business agreement with a fixed period (musta‘a, maysir, dālin); we have the still more distinct statement that there is no ribā if the transfer of ownership takes place immediately (yadaa bi-yada). But even in arrangements with a time limit, a number of traditions presuppose a general ignorance of the later restrictions; for example we are told that in Baṣra under ‘Umayr ibn al-‘Abd Allah was paid on credit for silver (this may have been an anti-Umayr bias – cf. below on Mu‘āwiyah, but it is illuminating); but at a later date such forms of the traditions against ribā were to some extent dropped. What was generally understood in the earliest period as the ribā forbidden in the Kur’ān, seems only to have been interest on loans (chiefly of money and foodstuffs); anything that goes beyond this is to be regarded as a later development. The reason for such prohibitions is at different times said to be the fear of ribā and sometimes we have underlying the recognition that there is no tradition of the Prophet relating to this. This is also expressed in the form that nine-tenths of the permitted is renounced or that ribā was conceived as going as far as ten times the capital. The view which later became authoritative is laid down in a group of traditions of which one characteristic example is as follows: “gold for gold, silver for silver, wheat for wheat, barley for barley, dates for dates, salt for salt; the same thing for the same thing, like for like, measure for measure; but if these things are different, sell them as you please if it is (only) done measure for measure”.

Another common tradition expressly forbids the exchange of different quantities of the same thing but of different quality (cf. below).
Other traditions demand equality of quantity even in the sale of manufactured precious metals. This last case seems to have been especially discussed, and on more than one occasion Mu'āwiyah appears as champion of the opposite view and practice (this again has a distinctly anti-Umayyad bias). Particularly conscientious people went even farther in their limitation of ribā than the generality and would only exchange wheat for barley in equal quantities. Still stronger was the view that the exchange of even the same qualities of the same thing, especially of precious metals, was ribā. This view must be older than a difference from the usual opinion (e.g. Muslim, Ribā hai 'alā 'umār wa-mu'ābīn bi-māhi'ī); which is based on the secondary interpretation of an already recognised tradition, which obviously only forbade the exchange of different qualities of the same thing but of different quality (cf. above). This same general prohibition of exchange is also given for dates. The question whether one party to an agreement can voluntarily give the other a bonus, is denied for an exchange, but affirmed for a loan. The deduction of the amount of the debt when the loan is voluntarily paid before it falls due, is sometimes approved as the opposite of ribā, sometimes disapproved as being equivalent to ribā; in any case it is clear that the practice existed. On the sale of an animal for an animal on credit, opinion is also not unanimous.

Numerous traditions forbid ribā without defining it more closely; the Prophet is said to have uttered this prohibition at his farewell pilgrimage (scarcely historical). Ribā is one of the gravest sins. Even the least of its many forms is as bad as incest and so on. All who take part in transactions involving ribā are cursed, the guilty are threatened with hell, various kinds of punishment are described; in this world also gains from ribā will bring no good. In spite of all this tradition foresees that ribā will prevail.

In connection with ribā tradition mentions various antiquated forms of sale of special kinds, like maakhir, mukhabara, musballana etc., which concern the exchange of different stages in the manufacture or development of the same thing, or of different qualities, and which are forbidden: an exception is made obviously because of its undeniable practical and social necessity, of what is known as 'arivya (plur. 'arīya), fresh dates on trees intended to be eaten, which it is permitted to exchange in small quantities for dried dates.

3. While the existence of the Karāmic prohibition of ribā has never been doubted, the difference of opinion that finds expression in tradition regarding the relevant facts is continued in the earliest stages of development of Muhammadan law. Unanimity prevails regarding the main lines of the limitations to be imposed upon the exchange of goods capable of ribā (māl ribānu); it is only permitted if transfer of ownership takes place at the same time, and, so far as goods of the same kind are concerned, only in equal quantities. In the case of a loan it is forbidden to make a condition that a larger quantity shall be returned without regard to the kind of article. Gold and silver are generally regarded as māl ribānu (only quite exceptionally are coins of small denomination included). All the greater are the differences of opinion as to what things outside of the precious metals are liable to the ribā ordinances. In isolated cases one still finds views that show themselves uninfluenced in principle by the authoritative group of traditions (cf. above), e.g. when everything realisable is subjected to the ribā ordinances (Ibn Kaisān) or all business dealings in things of the same kind (Ibn Shīrīn, Hāmād) or when everything liable to zakāt is considered capable of ribā (Rahb b. 'Abd al-Rahmān). Other opinions differ in the treatment of property capable of ribā from that group of traditions, although it is not known what they understand by this; possibly it is not an exchange of the same kind of thing not equality of quantity, but equality of value in two quantities demanded (Hasan al-Baṣri); or equality or quantity also in the exchange of different kinds apparently within a limited circle of goods capable of ribā (Sa'd b. Dūhain). The old interpretation that there is no ribā if the transfer of possession takes place at once is ascribed to 'Aṭa' and the jurists of Medina. The views of most authorities however and in particular those which survive later in the law schools assume the literal acceptance of the text of that group of traditions and differ only in its interpretation. Thus there are mentioned as precursors of the later Zāhirī doctrine: Tawās, Masrīk, al-Shāhī, Kātūda, 'Othmān al-Battī; as precursors of the Hanafī view: al-Zahhār, al-Ḥakam, Hāmād (cf. however above), Sufyān al-Thawrī; as precursors of the earlier view of al-Shāhī: Sa'd b. al-Musayyib and others; as precursors of his later view: al-Zahhār (cf. however above) and Yahyā b. Sa'd. On the question whether a loan can be repaid in another kind and what is to be done if defects are revealed in an exchange of māl ribānu after it has changed hands, there are old differences of opinion.

4. In the above mentioned group of traditions the following goods in addition to gold and silver are expressly mentioned as bearing the prohibition of ribā at their exchange: wheat, barley, dates and salt (sometimes also raisins, butter and oil). The Zāhirīs, as a result of their refusal on principle to accept analogy (ḥiýa), assume that the prohibition applies only to the six things especially named (the other kinds are rejected as not well attested). The other schools of law, on the other hand, consider the kinds mentioned in tradition only as examples of the variety of things that come under māl ribānu, but differ from one another in their lists of these things. According to the Ḥanafīs and Za'idis (also al-Awaṣī), gold and silver represent examples of the class of things defined by weight (wāṣībat) and the four other things those sold by measure (masbāh). The Imāmī teaching is practically the same. According to the Mālikīs and Shāhīs, gold and silver represent the class of precious metals and the four other things the class of foodstuffs: the latter, in the Mālikī view including actual estables so far as they can be preserved, according to the older view of al-Shāhī, provisions which are sold by weight and measure; according to his later view, which is also that of his school, foodstuffs without any qualification. The teaching of the Ḥanbalis corresponds to that of the Ḥanafīs; as regards the "four kinds", two further opinions of Ahmad b. Ḥanbal are handed down which correspond to the two views held by al-Shāhī. In these, wheat and barley are regarded as two different kinds by the Ḥanafīs, the Shāhīs and the better known tradition of the Ḥanbalis (as well as Zāhirīs, Za'idis and Imāmīs); as one kind
not only on their formal negative rejection of deduction by analogy but also upon their positive estimation of the intention underlying the evasions. One of the oldest transactions of the kind, against which several traditions are already directed, is the double contract of sale (from one of its elements it is called бa't‘ al-lma‘, credit sale par excellence); one sells to someone who wants to lend money at interest something against the total sum of capital and interest which are to be due at a fixed date, and at the same time buys the article back for the capital which is at once handed over. This transaction was taken over in mediæval Europe under the name of mekaṭra (from the Ar. mukhabāra; cf. Jyubnî, Handl. u. H., p. 289, note 1, and E. Bassi, in Rivista di storia del diritto italiano, v., part 2). Another method of evasion consists of handing over to the creditor the use of a thing as interest by a fictitious agreement to sell or to pledge. All these practices are still in use and in spite of the prohibition of ribā money-lending is a flourishing business in most Muslim countries (50% is often regarded as moderate interest).

(Josef Schacht)
be kept in readiness for an expedition. Ribāṭ also has the closely related meanings of relay of horses for a courier, caravanserai. The word however was early applied to an establishment at once religious and military which seems quite specifically Muhammadan.

The institution of the ribāṭ is connected with the duty of the holy war [see ajnāb], the defence of the lands of Islam and their extension by force of arms. The Byzantine empire was acquainted with the fortified monastery, like Mandrakion built at Carthage near the sea, mentioned by Procopius: but it seems doubtful if the monks living in it played any military part. The regular or occasional occupants of the ribāṭ are essentially fighters for the faith. The ribāṭ are primarily fortresses, places of concentration of troops at exposed points on the Muhammadan frontier. Like western castles, they offer a refuge to the inhabitants of the surrounding country in time of danger. They serve as watch-towers from which an alarm can be given to the threatened populace and to the garrisons of the frontier and interior of the country who could support the efforts of the defenders. The structure of the ribāṭ therefore consisted of a fortified surrounding wall with living rooms, magazines of arms and storehouses for provisions and a tower for signalling. This architectural scheme, the development of which will be indicated below, was of course often very summarily treated. The ribāṭ in many cases was reduced to a watch-tower and a little fort like those the Byzantines built on their frontiers. This explains the considerable number of ribāṭ mentioned by the geographers. We are told that in Transoxiana alone there were no less than 10,000 (Ibn Khalikān, transl. de Siano, i. 139, No. 3). The coasts were also amply provided for. There were ribāṭ all along the coast of Palestine and of Africa. The first-towers, attached to the ribāṭ or isolated, enabled messages, we are told, to be sent in one night from Alexandria to Centa. This is clearly an exaggeration. Nevertheless we may note a fairly rapid system of signalling and the mention of Alexandria, the pharaoh of which seems to have served as a ribāṭ. The Spanish coast also had its ribāṭ, as had the frontier against the Christian kingdoms, especially after the coming of the Almoravids, which saw an intensification of the jihād. For Sicily, Ibn Hawkal gives some curious information about the ribāṭ near Palermo and we know the little town of Rabato in the island of Goro in the Maltese archipelago.

Devotion to religion stimulated individuals to multiply their foundations, notably in Ifriqiya in the vicinity of towns like Tripolis and Sfax. It was a work of piety to build a ribāṭ at one's own expense or strengthen its defences. It was equally meritorious to urge men to go there to serve the cause of Islam, to revictual the garrison,Lastly and above all to go there oneself. For the coast of Palestine, al-Ma'kaddasi tells us of another use of the ribāṭ equally pleasing to Allah. Their fires were used to signal the approach of Christian vessels bringing Muslim prisoners whose exchange had been arranged. Everyone endeavoured to take part in this according to his means.

The building of the large ribāṭ and of many of the smaller ones was naturally the task of the sovereigns of the country. In Ifriqiya the first was that of Monastir [q.v.] built by the 'Abbasid governor Harthama b. Ayyūn (179–795). The third (ninth) century was the golden age: the Aghlabids all along the eastern coasts multiplied ribāṭ in the strict sense and sīhās: this word means a fortified area containing a small garrison or a watch-tower. Monastir retained the pre-eminence which the Prophet himself is said to have foretold for it. In the 11th century the dead were brought from al-Mahdīya to enjoy the blessing of being buried there. But the ribāṭ of Sūs founded by the Aghlabid Ziyādāt Allah in 821 had assumed considerable importance. We know that Sīhās was the port from which the troops embarked for the conquest of Sicily.

Compared with the east coast of Ifriqiya, which was directly threatened by attacks of the Rūm or which was the base for expeditions across the sea, the rest of the Barbary coast was less well supplied. There were however ribāṭ on the coast of the extreme Maghrīb, at Nakūr and Arasil to prevent raiding by the Norman pirates, and at Sādīt to facilitate the war against the Barghawītā [q.v.] heretics.

If the majority of the ribāṭ were official foundations, the service done by the combatants in them does not seem to have been in any way compulsory. The men of the ribāṭ, the murābiṭūn, were volunteers, pious individuals who had taken a vow to devote themselves to the defence of Islam. Some may have entered the ribāṭ like a monastery, to end their days in it, but the great majority only stayed in them for longer or shorter periods, and the garrisons were changed completely several times a year. In the ribāṭ of Arasil, this change in the garrison took place with the festival of 'Aqā' (Nov./Dec.) and the beginning of Rūmān and al-Ya'th al-Kabīr. An important fair was held on the occasion. In case of a siege the garrisons were reinforced by able-bodied men from the country round, summoned by the beating of drums (Palestine, according to al-Ma'kaddasi).

Life in the ribāṭ was spent in military exercises and on guard, but also in devotional exercises. The murābiṭūn prepared themselves for martyrdom by long prayers under the direction of a venerated šahīkh. The traveller Ibn Hawkal however reveals a dark side to this edifying picture. Speaking of the ribāṭ of Palermo in the fourth (tenth) century, he tells us that "they were the rendezvous of the bad characters of the country who thus found a means of livelihood outside of regular society and at the expense of the pious and charitable".

The double character — military and religious — of the life of the murābiṭūn found expression in the architecture of the old ribāṭ that have survived. Tunisia has preserved those of Monastir and Sūs. The first is still very imposing but the frequent restorations have complicated the original plan. The second which is simple may be taken as typical. With its high square wall flanked with semi-circular towers at the corners and the middle of the sides, it recalls the Byzantine forts of the country. The only entrance was by one of the salients in the middle of the wall. A staircase went down in the interior into the central court surrounded by covered galleries and very simple cells. The first storey, reached by two staircases, also consisted of cells on three sides of the court. Along the fourth side was a hall with a mihrāb. This was the oratory of the ribāṭ. The sīhās wall was pierced with embrasures. On the level of the
terrace which are above this first storey, in the door of the signal tower, cylindrical in form, which rises from the square base of a salient at one corner and dominates the fortress from a height of about 60 feet. A little dome which also rises above the terrace crowns, as in the mosque of the period, the square area in front of the mihrab in the forecourt.

The ribāṭ of Sās takes us back to the heroic times when the institution had distinctly a warlike character and these frontier posts played a strategic role on the borders of the lands of Iblīm. It retained this character in the 8th-9th century in the extreme Maghrib where the struggle with the Christians in Spain kept alive the tradition of the gīhād. We know that a ribāṭ built on an island in the Lower Senegal was the starting place of the career of the Lamūna Berbers and gave them the name of Almoravids (al-mawrābīyīn) under which they became famous in history [see Almoravids]. The Almohads who succeeded them had also their ribāṭs, two of which at least are worth mentioning. The ribāṭ of Tabān (q.v.) was fortified in 528 (1135) by Abū al-Mu'min at the time when he was conducting the Almoravids against the Almoravids a campaign which had as its aim the appearance of a gīhād. The ribāṭ al-Fath, the name of which survives in that of the town of Kūtar (q.v.) [Kutub al-Hādī], is an important military station on the borders of the Marinid princes, who in being both a religious and a military institution, supported the faithful in the sacred cause of Islam.

In the 12th century to give warning of landings by the Christians on the coast, mākbar and signal towers were still being built "to serve as ribāṭs". Ibn Mattūyī, the historian of the Marinid Abu l-Haṣan, who tells of them, says however that these were occupied by paid soldiers. They were not true ribāṭs, the garrison of which consisted of volunteers. If however we look to the 13th century, in the extreme Maghrib, we find the ribāṭ like that of Asūf playing a military part in the struggle with the Portuguese, in the east, in the lands where the infidel began to threaten Iblīm, the institution had changed its character or rather the ascetic discipline and the pious resolutions which were the regular practices in the old ribāṭs had entirely taken the place of military exercises. From the 8th (9th) century or perhaps even earlier, the development of mysticism and the grouping of the Sufis into communities gave these barracks a new raison d'être by making them monasteries. From Persia, where it originated, this evolution of the ribāṭ rapidly spread through the Muslim world. In the east the ribāṭ merged into the Persian ʿāšābīyya, Ibn al-Qalbī (ed. Wright and de Goeje, p. 243) refers to a ʿāšābīyya founded by Sāfī which was also called a ribāṭ al-aṭīyan to the north of the Syrian desert. When however a writer like Ibn al-Shāhānah describing Aleppo seems to distinguish the ʿāšābīyya from the ribāṭ, the difference between them escapes us. It may be supposed that the ʿāšābīyya were inhabited by permanent residents who spent their whole lives there and that the ribāṭs, as before, received devout men for limited periods, but one cannot assert definitely that this was the distinction. In any case the four ribāṭs within the city of Aleppo (one attached to a madrasa and the mausoleum of its founder with Kūrān readers and Sūfīs) had no longer anything of a military character. It was the same with the two ribāṭs of Mecca mentioned by Ibn Bāṭtūta. In Cairo the only inscription found by Van Berchem in which a ribāṭ is mentioned is that of the convent of Malik Asghār al-ʿIndi (860 = 1455).

In Barbary, where the wave of eastern mysticism had reached in the 8th-9th century, the term ribāṭ was likewise retained but applied to the exterior qaṣas [q.v.] in which ascetics gathered round the shaikhs in their tombs. As a matter of fact Ibn Mattūyī in this connection makes a distinction which nevertheless still remains obscure. Speaking of the ʿāšābīyya founded by Abu l-Haṣan, his master, he tells us that the first ʿāšābī, a Persian word, has the same meaning as ribāṭ and adds: "In the terminology of the ṣafārīn, one understands by ribāṭ the act of devoting oneself to the holy war and to guarding the frontiers. Among the ʿāšābīn it means on the contrary the place in which a man shuts himself up to worship the divinity". This last use of the word seems to be the usual one in his time. The ribāṭ al-Ubshāl is the group of piass foundations near Tlemcen that have grown up around the tomb of the famous mystic Sīdī Bīr Masyān. The ribāṭ of Ta瞬kekelt to the west south of Oran is dedicated to a saint of the Baal Imānīn; the ribāṭ of Tīfert in the borders of the Wāli Sbit contains the tomb of a Marinid prince and an apartment for ribāṭī (Kūrān reader).

With this erroneous use of the old Arabic word we might connect the parallel change undergone by the word ʿāšābī (marabout) which is applied to a saint, an individual who by his own merits or the mystic initiation which he had received or his relationship with a maʿṣūf [q.v.] enjoys the veneration of those around him.

In Muslim Spain, the last land of the gīhād, we may suppose that the ribāṭs continued to act as successive fortresses which the *reconquista* imposed on the lands of Iblīm; but to be certain we must wait until the study of the texts and the enquiry being conducted by F. Hernández and H. Terrasse into the military architecture of Muslim Spain give us precise details regarding the date of the castles and their object. The evolution in meaning of the word ribāṭ would lead one to think it had ceased to mean a fortress. Among the Arabic authors of Spain and al-Makkari as among the ṣafārīn mentioned by Ibn Mattūyī, ribāṭ is often used to mean a holy war, generally defensive, and it passed into Spanish in the form rebate as J. Oliver Añón has shown with the meaning of "sudden attack executed by a body of horsemen in keeping with Muslim tactics". If the Arabic term had lost its original meaning, however, another word derived from it was commonly used in a slightly different meaning. Spain saw the ribāṭīs multiplying and their memory is preserved in place-names in the form Riba, Ríz, Ribad. The word ribāṭ was also known in Barbary. It meant "a hermitage to which a holy man retired where he lived surrounded by his disciples and his religious servants" (cf. Makār, transl. Colin, p. 240 and the article ʿĀSHĪYYA).

Everything points to its having been the same in the Peninsula. The multiplication of ribāṭīs in Spain and their possible confusion with ribāṭs are
MATÉRIAUX POUR UN DICTIOINNAIRE ÉTYMOLOGIQUE DE LA LANGUE ARMÉNIENNE
ÉTYMOLOGIE, ORIGINE, COMPARAISON DE 10,000 MOTS
PAR
BEDROS KERÉSTEDJIAN
Directeur des traductions et de la correspondance étrangère du ministère des affaires de Turquie et auteur du Dictionnaire Étymologique de la langue Turque
ÉDITÉ PAR
SON NEVEU HAIG E. B. A. E.

The "Dictionnaire Étymologique de la langue Arménienne" by Bedros Kerestedjian, a recognised specialist on the subject, and the result of 30 years research, will be published by me in one volume of about 1000 pages and completed probably in 1937. The specimen pages represent the treatment of the linguistic technic and material in an abbreviated yet illustrative form.

The publication of such a scientific book of some 10,000 lemmata is naturally very costly, therefore, for the convenience of purchasers, the book will be published in about 10 parts of 80 pages at 2.50 guilders a part. Payment may be made upon receipt of a part.

It is respectfully requested that all interested students, kindly sign and return the enclosed card at the earliest convenience, so that I get an approximate idea as to the number of copies required, which will materially help to quicken the publication.

The publication will not be undertaken before at least one hundred subscriptions have been received. To ensure securing copies, therefore, subscriptions should be made now. Payment may be made upon receipt of a part. An order from is enclosed.

Once started the completion of the work will take about two years.

connected with the great movement of mystic piety which, starting in Fars, had spread to and about the monasteries — 

during the same troubles in Barbary — for the foundations, or even more than religious, of the heroic age of Islam.

The bibliographical section is extensive and covers a wide range of topics. It includes discussions on the life and works of Mehemmed Riza b. Mehemmed, also known as Zahr Marasi, who was a distinguished writer in the Ottoman period. His work is appreciated for its literary and historical value.

Rida Kuli Khan, a Persian scholar, was associated with the study of mystical poetry. His contributions are significant in preserving and analyzing the works of mystic poets during the Islamic era.

The Arabic section covers a variety of topics, including the mystical tradition and its influence on Islamic culture. It highlights the importance of these works in understanding the intellectual and spiritual development of the Islamic world.

The bibliography section provides a comprehensive list of works that are essential for further research in the field.

The thematic analysis of the documents reveals the cultural and intellectual significance of these works, particularly in the context of Persian and Ottoman cultural exchanges during the period in question.
RIDJA KULI KHAN — RIDWAN

The researches necessary for these last two works showed Hidayat the inadequacy of the dictionaries at his disposal; he intended to remedy this with his 
Munshi Farkhun-ud-Din and several other 
works. Hidayat in 1588, which, preceded by a remarkable 
text, provides the different meanings of each text, with quotations from the classical 
works. The work entitled 
Munshi Al-Balaghah 
(lith. 1531) is a glossary of rhetorical and poetical 
terms with many examples taken from different 
works. Lastly we owe to Hidayat the first editions of 
the 
Dirum of Mananthi (lith. Teheran 1927), of the 
As-Salat (ibid. 1275) and of the 
Najdat al-Majid (lith. the fall of the Khwarizm 
empire) of Muhammad Zaidari (publ. posthumously, 
Teheran 1308). Its autobiographical character gives the 
the attractive “Narrative of a Journey to Khwarizm” 
(Safar-nama-yi Khwārīm, ed. and trans. Schefrin, in 
P.É.L.O. V., Paris 1879) a special place among his 
works; he undertook this journey in 1851 as an 
ambassador sent to settle the differences between the courts 
of Teheran and Khiwa. This journal is a valuable 
document for the history of the Khßāsates and has 
been utilised by later Persian historians (notably 
Muhammad Ḥasan Khan; q.v.): besides valuable 
historical, archaeological and geographical material, 
the book, which is written in a simple and natural 
style, is a contribution to the study of the manners 
and customs of the period (notably conditions of 
travel); we find in it pretty pictures of native life 
and charming landscapes. Several of Hidayat’s 
descendants have taken a prominent part in 
literature, politics, and administration.

Bibliography: In addition to works already 
mentioned: Reis, Cat. of Persian MSS. in the 
British Museum, Suppl. (Index); Edwards, 
Persian prints and pictures in the British Museum; 
E.G. Browne, Persian Literature in Modern Times 
(index and portrait, p. 344); Gr. 1. Pk. (II. 
index); de Gobineau, Traité sur l’Asie (chap. 
*Les caractères*); S. Churchill, in F.R.A.S., 
aviii. 106-204; xix. 163; A. Kegli, Riti Khan 
Khan al-Dichter, in W.Z.K.M. 1897, al. 63- 
74; Niẓāmī, ‘Arba‘, Čahār Majāla, in G.M.S., 

(II. Masse)

RIDWA (1326-1340 A.D.), the only woman to 
succeed to the throne of Dhihl during the period of Muslim rule, and, with 
the exception of Sha‘lab Durr [q.v.] of 
Egypt, the only female sovereign in the history of Islam.

After the death of his eldest son, İhtimāl [q.v.], 
resigned the protests of his advisers, nominated 
his daughter Ridwa as his successor on the grounds of 
herself to rule. On the death of İhtimāl the 
courtiers, disregarding the late king’s wishes, 
raised one of his sons, Rukan al-Din Fūtūz, to the 
throne. The new king wasted his time in riotous 
living, all real power being in the hands of his 
mother, Sīhīr Turkān, whose cruelty disgusted the 
people and finally led to open revolt. Eventually 
in 634 (1236), despite the strong Muslim aversion 
to female rulers, Ridwa was proclaimed queen by 
the people of Dhihl and a certain section of 
the army. Although the war, Niẓām al-Mulk 
Muhammad Djamāl, refused to acknowledge her 
authority and was anxious enough to crush all opposition. She appointed 
Makhdhīs al-Din Ḥusain as her waiz and placed Malik Sefī al-Din 
in charge of the army with the title of fathāgh

İhtimāl. İhtimāl al-Din Aṭīmun was made amir-i 
ṣafiyyb. The Turkish amirs, however, took great 
exception to the favours shown to the queen by 
as an Abyssinian, Malik Djamāl al-Din Ākhtū who 
held the position of amir-i ḥārūr (Master of the 
Horse). Eventually the Turkish amirs rose in revolt, 
put the Abyssinian to death, imprisoned the queen, 
and placed her half-brother, Bahram Shīh, on the 
throne (Ramadan 636 = April 1240). Malik İhtimāl 
al-Din Aṭīmun, the governor of Bahram Shīh, 
in whose custody the deposed queen had been 
placed by his fellow conspirators, determined to 
champion her cause. With this object in view he married 
her and marched on Dhihl, but was defeated near 
Khalīl. On the day following this defeat both 
he and Ridwa were put to death.

The only original source for her reign is the 
Tahāba’, Nāṣirī of Minḥād al-Din [see Minḥād], 
the accounts of all later writers, such as Ibn Bāṭtūtā, 
Firuzā, Bādānī, and the author of the 
Tahāba’ Akhtū’s being untrustworthy. All that Minḥād al- 
Din relates is that she treated the 
Habāb with favour, but this was enough to enable the later 
historians to interpret it as undue fondness 
for the queen’s part. It was only towards the end 
of her reign that she laid aside her female 
attire and appeared in public clothed as a man 
and unveiled. The real cause of her downfall 
seems to have been the opposition of the Turkish amirs.

Bibliography: Minḥād al-Din, Tahāba’, 
Nāṣirī, translated by H. G. Cotton, London 
1881, i. 537-548.

RIDWAN (Syn.: RIDWAN), b. TUTUGH, FAKHR- 
AL-MULK (Mutlu), a Saliḫ ruler in Halab. 
Shortly before his death in Safar 438 (Feb. 1993) 
Tutugh b. Alp Arslān [q.v.] ordered his son Ridwan 
to go to the Irāq. The latter set out with a large 
army; on reaching the vicinity of Hīl [q.v.] he 
heard of his father’s death and returned to Halab, 
where he was recognised by the governor Abu 
'l-Kāsim al-Ḥasan b. 'Ali al-Khwārimi as the 
successor of Tutugh. He then attempted to seize Salīḥ 
[q.v.] but Šukrān b. Ortok [q.v.] anticipated 
him and defended himself so energetically that 
Ridwan had to withdraw; on the other hand, he 
succeeded in taking Edessa, the citadel of which 
he entrusted to the lord of Anṭīkīya, Yaghl Bāṣān 
b. Muhammad al-Turkāmī. Soon afterwards he 
returned to Halab because the emirs who were 
accompanying him, his step-father Djamāl al-Dawla 
al-Ḥasan b. Alītegī and Yaghl Bāṣān, quarrelled 
with one another; the former went to Halab and 
the latter to Anṭīkīya accompanied by Abu l-Kāsim 
al-Khwārimi. Ridwan was very soon involved in 
a war with his brother Dukāk, who had settled 
in Halab after the death of Tutugh and had been 
asked by Sawtugh, commandant of the citadel in 
Damasco, to take this town. He therefore left 
Halab, evaded the pursuit of the cavalry sent 
after him by his brother and reached Damascus 
where he was welcomed and recognised as lord 
of the city. He was joined by his step-father 
Tugtegī [q.v.] who soon afterwards appeared in 
Damasco with a number of officers who had served 
under Tutugh. After Dukāk and Tugtegī had 
established themselves securely, they had Sawtugh 
pursued to death. But Ridwan also coveted Damascus. 
The city however proved to be too strongly 
defended, so he went to Nāmis and then to 
Jerusalem which had fallen into the hands of the 
Fātimids. There also he met with a vigorous re-
Riďwan—Rīfā’ā Bey

1155

abstain, his troops scattered and there was nothing left for him but to return to Halab, Vaghtā Bašān then went over to Duḥṣāq and suggested he should besiege Riďwan in Halab. The latter however appealed to Saqānā b. Īrtqā in Sarāf, who at once hurried to his assistance, and when the two brothers met at Kinnārī [q.v.], Duḥṣāq was completely defeated and had to recognize Riďwan as his overlord (489 = 1096 or 490 = 1097). In order to receive financial and military support from the Fātimids, Riďwan for four weeks had prayed says for al-Mustaʿfā, the caliph in Egypt; but on the representations of Saqānā and Vaghtā Bašān, who had in the meanwhile made peace with him, he again paid homage to the ‘Abbaṣids and asked for forgiveness from the Caliph al-Mustaʿṣāfīr in Baghdad. About the same time Dānāf al-Dawla left Riďwan, settled in Himā and improved the defences of the town. He then took up a more independent attitude to his overlord Riďwan than before.

In June 1098 Aṃūḥīyā was stormed by the Crusaders and the Muslim army of relief, which included Riďwan, repulsed whereupon Bohemund was recognised as prince of Aṃūḥīyā. As his nearest neighbour, Riďwan was soon at war with him. In Shāhr bād 493 (July 1100), he set out to drive the Franks from the country round Halab but was defeated. He then joined forces with Dānāf al-Dawla; but when the Christians withdrew and Riďwan became jealous of his ally, Dānāf al-Dawla returned to Himā. Soon afterwards the Christians under Bohemund and Tańcred again threatened Aleppo; on the news of the siege of al-Malāya [q.v.] by a Muslim army [see Dānāf al-Dawla], they suddenly withdrew. Bohemund fell into an ambush and was taken prisoner; Riďwan and Dānāf al-Dawla won several successes, but in the end quarrelled with one another, and a year or two later (495 = 1102 or 496 = 1103), the latter was murdered at the instigation of the Assassins of Halab. In Shāhr bād 498 (April–May 1105) Tańcred, who had succeeded Bohemund as prince of Aṃūḥīyā and was also count of Edessa, won a brilliant victory over Riďwan. When Tańcred besieged the fortress of Arṭāth, the governor there appealed to Riďwan for help. The latter appeared at the head of a powerful army and the two forces met near Kinnārī. On seeing the superiority of the Muslim forces, Tańcred wanted to open peace negotiations; Riďwan for his part was not unwilling to meet him but allowed himself to be persuaded by a subordinate commander to refuse, and when the battle began, the Franks at once took to flight but returned and cut down the Muslims while they were plundering. Tańcred then occupied Arṭāth. In 499 (1105–1106) the latter also took the important fortress of Aṭṭimayā (Ayyamay). An Assassin named Abī Tāhir [cf. Aḥbab] who was on good terms with Riďwan, had disposed of the commandant there, Khalaf b. Malāḥ. One of his sons fled to Tańcred and asked him to exploit the supporters of Riďwan; Tańcred who had already received an appeal from the Christians of Aṭṭimayā, laid siege to the town. He withdrew after a time but soon returned and starred the town into surrender.

When Ĉawālī Saḵwān, governor of al-Mawārūn, lost the favour of the Sāljiḏ Sultān Muḥammad b. Malikāḏ [q.v.] and was replaced by Mawādī b. Alunţāqī, he gave count Baldwin and Joscélīn, who were prisoners there, their liberty on condition that they paid a ransom, liberated Muslim prisoners and assisted him against his enemies. But when Tańcred refused to restore the county of Edessa to Baldwin, hostilities broke out and the latter sought the help of Ĉawālī. After peace had been restored between the Frankish leaders and Edessa was restored to Baldwin, Riďwan were to Tańcred and warned him against Ĉawālī, who, he said, had already taken the town of Bālīs, and was now threatening Halab whereby he might become dangerous to Christian rule in this region. In Sāfr bād 492 (Sept.–Oct. 1108) Ĉawālī, who had joined Baldwin and Joscélīn, was defeated at Tell Bāhār [q.v.]. He lost Bālīs, and since he could not hold his own against Riďwan and Mawādī, he had to make his peace with the sułṭān. The Christian princes then combined to besiege Tripolī, Saqānā and Bālīs. Tańcred took the fortresses of al-Athārī and Bālīs and when the news reached them, the Muslims abandoned Mawādī and Bālīs also, and Riďwan had to purchase peace very dearly (504 = 1110–1111). When sulṭān Muḥammad summoned the princes, his vassals, for a vigorous attack on the Franks under the leadership of Mawādī, the latter was appealed to for help by Riďwan, whose lands the Christians were laying waste in revenge for the damage done by him in Syria. Mawādī came to his assistance but when he appeared before Halab, Riďwan, who no longer needed him, shut the gates and took no part in the war against the common enemy.

Riďwan died in the last days of Dijamāl I bād (Nov. 1113). As a part of the Ismāʿīlī Assāsins he had a bad reputation; he even had two of his brothers, Abī Tāhir and Bābārāshī, assassinated. Ibn al-ʿAthārī (x. 349) also says that his manner of life was by no means laudable (kānā mildur Riďwān ʿāqiṣ māḥīyā)...

Bibliography:

Rīfāʿā Bey al-Ṭartawī, a famous writer of the last century and one of the principal creators of the modern Arabic "Renaissance". He was born at Tahtā in upper Egypt in 1801. His parents, although of noble descent, were poor. When quite young, he devoted himself to the study of the Korān; when a young man, he went to al-Azhār, where he studied seriously under the direction of Shāhīţ Hāṣān al-ʿAthārī.

On leaving al-Azhār in 1824, he was appointed pay-master of the Egyptian army. At this period the celebrated Muḥammad (Meḥemet) Aḥī was ruling Egypt. The latter at the instigation of the French scholar Jomard sent to Paris in 1836 a group of students to learn French and study modern sciences. They were put under charge of Rīfāʿā. In Paris the latter made the acquaintance
of Oriental scholars like Janbert, Jomard, Sylvastre de Sacy and Canzani de Perceval. He made rapid progress and soon had a deep knowledge of the French language. From his stay in Paris dates a lively and interesting account entitled *Tahakkah al-dhahir* (Bilād 1325) in which every line reveals a charming wit, and the enthusiasm aroused in this oriental mind by the manifold aspects and lights and shades of French life and culture (cf. Carra de Vaux, *Pensées*, v. 237 sq.). On his return to Egypt (1832) he was attached as interpreter and professor of French to the school of Medicine directed by Dr. Clot Bey and also entrusted with the editorship of the *Informations égyptiennes* which later became the *Journal officiel*. In 1835 he was transferred to the School of Artillery and in 1838 appointed Director of the School of Foreign Languages (originally the "Translation Office").

He remained in this post until the accession of Abbas I. Unfortunately this ruler did not continue the brilliant work of his predecessor: the School of Languages was closed and its Director sent — a disgrace barely concealed — to the Sādān to organise the High School at Khartum.

On the death of Abbas, Rifā'a returned to Egypt. Sādīd Pasha appointed him Director of the Military School, but for a brief period, however, for the School in its turn was closed and Rifā'a found himself unemployed.

In the reign of Ismā'il in 1863, the School was reopened and our author again became Director of the "Translation Office". In 1870, he became editor-in-chief of the educational review *Ramādat al-Mu'allār* (fortnightly) and died in 1873.

Rifā'a Bey was one of the most important Arabic writers of the 19th century and his name is closely associated with the brilliant revival of literary and scientific activity in the modern world. An enquiring spirit of unusual intelligence, he left behind him a considerable amount of work in all fields: history, geography, grammar, law, literature, medicine, etc. Details will be found in Sarkis, *Dictionnaire bibliographique*, p. 943—947. We may note here only his translations of Télemán, of Malte-Brun's, *Geography* and the French *Code Civil*.

To appreciate the magnitude of the part he played, it must be remembered that at the dawn of the last century, the Arab world was in a state of semi-torpor and separated from European learning by a dense barrier; it was difficult that al-Asfar shed a dim light on the darkness that covered this period.

As a result of his works, his activity and the phalanx of experts and translators which he gave the country, Rifā'a accomplished the miracle of popularising European science, of opening the East to modern ideas, enlightening the minds of his contemporaries, awakening dormant energies and preparing the future.

We may measure the effort if we reflect that he and his pupils translated into Arabic and Turkish nearly 2,000 works.

On the other hand by expanding the framework of the old classical language and by vivifying it and widening it with a mass of new words, he enabled Arab thought to adapt itself to progress and to extend its light over modern Islam.

( *MAURICE CHEPROI*)

**AL-RIFA‘I, AHMAD B. 'ALI ABU L-‘ABBĀS**

Founder of the Rifā‘i order, died 22nd Dhu-l-Qa‘da 1221 (Sept. 23, 1123) at Umum Abidah, in the district of Wasi. The date of his birth is given by some authorities as Muharram 500 (Sept. 1100), but others say Rajab 512 (Oct.—Nov. 1118), at Kāryat Hamān, a village in the district of Basra. These places being in the region called al-Baṭā‘ī (i.e. what he has the further work in al-Baṭā‘ī); al-Rifa‘i is usually explained as referring to an ancestor Rifā‘a, but by some it is supposed to be a tribal name. This ancestor Rifā‘a is said to have migrated from Mecca to Seville in Spain in 317, whereas Ahmad’s grandfather came to Basra in 450. Hence he is also called al-Maghribi.

Ibn Khallīkān’s notice of him is meagre; more is given in Djalābī’s *Tarākhī al-Islām* (modern MS.), taken from a collection of his *Manāhī* by Mālik al-Dīn Abūl-Mulā ‘Abda al-Hamad bin Salāmān bin al-Hamad bin Qasim, cited by him to a disciple in 680. This work does not appear in the lists of treaties on the same subject furnished by Abu ‘l-Hadā ‘Efrāni, al-Ra‘ī al-Bahā‘idi al-Sayyādī in his work *Tawārīkh al-Abhār* (Cairo 1306) and *Ri‘ādat al-Dīran* (Bahri 1301), the latter of which is a copious biography, frequently citing *Tārikh al-Mu‘ūlār* by Taqī al-Dīn ‘Abd al-Rahmān al-Mahdūl, written al-Rifa‘i's work al-Baṭā‘ī and there are others. Al-Hamad bin al-Hamad bin Qasim, who was also called *manāhī al-Ma‘ālāt* for al-Rifa‘i’s. Great care is required in the use of the material.

Whereas according to some accounts he was a posthumous child, the majority date his father’s death as 519 in Baghchār, when Ahmad was seven years old. He was then brought up by his maternal uncle Manṣūr al-Ba‘thī, resident at Nahr Dākh in the neighbourhood of Basra. This Manṣūr (of whom there is a notice in Sha‘rī’s *Lauziq al-A‘māla* [p. 178]) is represented as the head of a religious community, called by Ahmad (if he is al-Rifa‘i’s great-grandson, *Kāfā‘ī, p. 33*) correctly reported by his grandson, *Kāfā‘ī, p. 38* al-Rifa‘i; he sent his nephew to Wāsi to study under a Shāfi‘i’s doctor Abu ‘l-Faqī al-Qādī wāsī and a maternal uncle Abū Bakr al-Wāsī. His studies lasted till his 27th year, when he received an *ijāza* from Abu ‘l-Faqī, and the *khāfa* from his uncle Manṣūr, who made him establish himself in Umum ‘Abidah, where (it would seem) his mother’s family had property, and where his father ‘Alī al-Nadīrīah al-Ansārī was buried. In the following year (520) Manṣūr died and bequeathed the headship of his community (*ma‘ālāt*) to Ahmad to the exclusion of his own son.

His activities appear to have been confined to
Umm 'Abdīda and neighbouring villages, whose names are unknown to the geographers; even Umm 'Abdīda is not mentioned by Yaʿqūb, though found in one copy of the Masūfī al-Jahiliyya. This fact renders incredible the huge figures cited by Abu l-Hudā for the number of his disciples (mashūs) and even deputies (khutba). The princely style and the colossal buildings in which he entertained them-Sibt ibn al-Jauzi in Miṣr al-Zarnān (Chicago, 1907, p. 336) says that one of their shahāks told him he had seen some 100,000 persons with Rīhā, on a night of Shabān. In Shāfiʿī al-Dhahabī the experience is said to have been Sibt ibn al-Jauzi's own, though this person was born 581, three years after al-Rīhā's death. In Tawārīkh al-Abār (p. 7, 8) his grandfather as well as himself is credited with the assertion.

His followers do not attribute to him any treaties, but Abu l-Hudā produces 1, two discourses (madājī) delivered by him in 577 (3rd Rajab) and 578 respectively; 2. a whole dāma of odās; 3. a collection of prayers (aʿyān), devotional exercises (aʿyān), and incantations (aʿṣā); 4. a great number of casual utterances, sometimes nearly of the length of sermons, swollen by frequent repetitions. Since in 1, 2, and 4 he claims descent from ʿAll and Fāṭima, and to be the substitute (mātī) for the Prophet on earth, whereas his biographers insist on his humility, and disclaiming such titles as bādh, ḍawār, or even shahāk, the genuineness of these documents is questionable.

In Shāfiʿī al-Dhahabī (iv. 260) it is asserted that the marvellous performances associated with the Rīhās, such as sitting in heated ovens, riding lions, etc. (described by Lady, Modern Egyptians, i. 305) were unknown to the founder, and introduced after the Mongol invasion; in any case they were no invention of his, since the like are recorded by Tanūkhī in the fourth century A.H. The anecdotes produced by Dhahabī (repeated by Subki, Taḥkīf, iv. 40) imply a doctrine similar to the Indian ṣūṭī, unwillingness to kill or give pain to any living creature, even lice and locusts. He is also said to have cultivated poverty, abstinence and non-resistance to injury. Thus Miṣr al-Zarnān records how he allowed his wife to be labour him with a poker, though his friends collected 500 dinars to enable him to divorce her by returning her marriage gift. (The sum mentioned is inconsistent with his supposed poverty).

Inconsistent accounts are given of his relations with his contemporary ʿAbd al-Kādir al-Ghāṣṣī. In Bahājī al-Abār it is recorded by apparently faultless imāmi on the authority of two nephews of al-Rīhā, and a man who visited him at Umm 'Abdīda in 576 that when ʿAbd al-Kādir in Baghābdī declared that his foot was on the neck of every saint, al-Rīhā was heard to say at Umm 'Abdīda “and on mine”. Hence some make him a disciple of ʿAbd al-Kādir. On the other hand, a work by Abu l-Hudā's authorities make ʿAbd al-Kādir one of those who witnessed in Medina in the year 555 the unique miracle of the Prophet holding out his hand from the tomb of al-Rīhā to kiss: further, in the list of his predecessors in the discourse of 578 al-Rīhā mentions Mānṣūr, but not ʿAbd al-Kādir. It is probable therefore that the two worked independently.

Details of his family are quoted from the work of al-Fārābī, grandson of a disciple named ʿUmar. According to him, al-Rīhā married first Mānṣūr's niece Khādījīya; after her death, her sister Rabīʿa; after her death Nafīs, daughter of Muḥammad b. al-Kāsimīya. There were many daughters; also three sons, who all died before their father. He was succeeded in the headship of his order by a sister's son, ʿAli b. Uthmān.

Bibliography: The sources of this account have been cited above.

(D. S. Markoe, Rīhā, the name of two towns.
1. The Arabs called the Jericho of the Bible Rīhā or Arīcr (Clermont-Ganneau, in J.A., 1877, i. 498). The town, which was 12 m/E. of Jerusalem, was reckoned sometimes to the Djam of Fīlān (Yaʿqūb, Muḥammmāj, iii. 913; e.g.) and sometimes to the district of al-Bāḥi (Yāqūt, in B.G.A., xii. 113); it was sometimes however the capital of the province of Jordan (al-Urdun) or of Ghawr, the broad low lying valley of the Jordan (Naḥr al-Urdun) from which it was to m/E distant (Yaʿqūt, l. 227). As a result of its warm moist climate and the rich irrigation of its fields the country round the town produced a subtropical vegetation; among its products are mentioned, some already known in ancient times, dates and bananas, fragrant flowers, indigo (prepared from the wāsma plant) sugar-cane, which yielded the best Ghawr sugar. Not far from the town were the only sulphur mines in Palestine (Abu l-Fida, ed. Reinhard, p. 236). There were however many snakes and scorpions there and large numbers of bees. From the flesh of the snakes called tiriyāpīya found there was made the antidote called "Jerusalem tiriyāpīya" (Yāqūt, x. 174). In the Kurān Arīcr is the town of the giants captured by ʿIṣra, there was shown the tomb of Moses and the place where, according to the Christians, their saviour was baptised. The eponymous founder of the town (Arīcr) was said to have been a grandaon of Arphakshad, grandson of Noah. The town was particularly prosperous during the Crusades but then began to decline and was in ruins in the xiii. century. The modern Erīk in the Wādī el-Kelt occupies the site of the town of the Crusaders; it is about 900 feet below the level of the Mediterranean.

RIHÄ — RIKÄ

p. 48, 236; Guy Le Strange, Palestine under the Moslems, London 1890, p. 15, 18, 28—32, 33, 288, 381, 396 sq.

2. A little town in the district of Halāb. According to Yāqūt it stood in a wooded, well-watered area on the slopes of the Djiabal al-Dirās. By this time, the Arabs meant not only the Lebanon but also its southern continuation as far as the Örontes (Lamassou, Nota sur le Liban, ii. 6; M.F.O.B., i., 1906, p. 271). But in the present case the heights in the east of the Ørontes are certainly wrongly included in the term. Ribā on the contrary is on the northern edge of the Djiabal Bani U'llām (Ibn al-Shihāb, Bārīrī, p. 120, 130), the modern Djielal Arba‘īn, a part of the Djebel Ribā or Djebel al-Zawiyeh (cf. the map Djebel Ribā or Djebel er-Zawiyeh by Rob. Garrett and F. A. North in Public. of the Princeton Univ. Arch. Exp. in Syria, div. ii., sect. B, part iii., 1909).

M. Hartmann suggested that the name Ribā was connected in the name of a town in Syria in an inscription of Concordia at Aquilia (C. I. G. v. 872 = C. I. G. xiv, 2334), and that this corresponds to the Maghrāb on 6 miles south of Ribā, while Dussaud (Topographie de la Syrie, 184, 212 sq.) wishes to identify it with Ribā itself; Hartmann wrote as follows in support of his view (Z. D. P. F., xxii. 145, note 3): “As in the case of Jericho, the form Arba‘ī may have been current alongside of Ribā in favour of this is the fact that Yāqūt, ii. 285, expressly protests against the spelling Arba‘ī for the little town in the district of Halāb: it should not be written with alif, while both forms were usual for the town in the Ghawri.” This supposition is certainly correct; for Ibn al-Shihāb twice writes Arba‘ī (p. 130 with the variant Ribā) and J. B. L. Roux (Liste alphabétique…, in Recueil de voyages et de mémoires, ii., Paris 1825, p. 215) also knows of Arba‘ī (Rībā) alongside of Ribā as the name of the place and of the sūbi‘a (cf. also the Sūbī‘a of Halāb for the year 1256, p. 118). But the identification of Maghrābica with Maghrāb or with Ribā cannot however be maintained for the former is already found near the years 870 (1079) in Kamm al-Din (Zabdat Halāb in Turāsh Halāb, Paris, Bibl. Nat., MS. Arab. No. 1666, fol. 101) as “Marsnikhī in the district of Kafartā” (E. Honigmann, in Syria, x., 1929, p. 282, xii., 1931, p. 99) and is still found as Marsnikhī about 20 miles south of Ribā (du Masneu du Buisson, in Syria, xii. 99 sq., with sketch map).

The Identification of Ribā with the Rūfūs or Rūfūs of the Franks is also untenable; as Dussaud (Topographe de la Syrie, p. 167, 174, 176, 213) rightly points out that this should rather be identified with al-Riyyah of the Arabs.

There is a place noted for its ruins of antiquity called Rowātah ("little Ribā") about 8 miles S. E. of Ribā.

Ribā is very frequently mentioned in modern travel literature as it was on the main road from Halāb to Hamā (ibid., xiiii., 1502; Dussaud, Topographe de la Syrie, p. 215), over which a great road (before 1047) and later a mountain road (1260) travelled in their day. The town is therefore mentioned by Belon in Mans (1548), Pierro della Valle (1616), Wanadali (1671), Pococke (1737); Drummond (1754); C. Nieufray (1778), Seetzen (1806—1807), Burckhardt (1810—1812) and many others.

(E. Honigmann)

RIKA. [See ARARIA, i. 387.]

RIKĀB (Ar., Turkish pronunciation: ribāb and ribābā, "stirrup") in Perian and Turkish usage at Muslimmadan courts: "the sovereign himself or his presence, the foot of the throne" (metonymy like those of hālidūn in(side) (side) of the throne; hāsūr or ħadīr, hābār (the) side; etc.).

In Turkish (Ottoman, Alti, Çaghatāi) the stirrup was called sängi (sangi), older form säng, sänggi (Kutadgu Bilig: Batiğ, ed. Kâzım, p. 49). This word passed into certain foreign languages without the initial vowel: Ar. Syr. sängīya and sängīnus "stirrup, ladder or other means of assistance in mounting a horse" (Freitag, Cuche, Kazimirski, Bochor, Bölt, Berggren; sangyuya is disputed by Dusti); Bulgarian sangevi (alongside of sangevi and yanegi, with a final -ya quite independent of that of the Arabic) "stirrup". In Turkish also there are traces of its use without the initial vowel: Çaghatāi sangi (sangi), Turkish sangi (sangī), Persian from the Ottoman usage sang-e ribāb, as in the Turkish-\(\text{W}^{\text{a}}\)lāh, Bülbül 1246, i. 179). (In spite of these, such coincidences and correspondences like Turk. sängin "rich" for Persian sāngīn, "heavy, precious", the resemblance of sāng and (i)ṣəng may be only accidental.)

The figurative expression ribāb-i hümâyūn (Turk. pronunciation: ribāb-i hümâyūn), or (more rarely) ribāb-i hâmâ(150,799),(837,834)
travelling. For example one said that so-and-so was "in the service of the imperial stirrup" (Houtman, Recueil..., p. 57; iii. 18) or "in the service of the parasol (tato) of the imperial stirrup" (ibid., iv. 7). In modern Persian one says "to be at the stirrup of a prince" for "to be attached to his court" (Kazimirska, Dialogi, p. 493 and 482-483).

In Turkish usage the same expressions were applied to:

1. The imperial cavalcade and the procession formed on this occasion. However, in order to avoid confusion with other uses of the word rikāb, there was also used, especially in the reigns of Mahmūd II and ʿAbd al-Mejid, the Turkish word bîniş which was applied to all public appearances of the sultan, whether on horseback or in a boat (Mouradgea d'Osslon, vii. 141, 144; Jouami and van Gaver, Travées, p. 377 note; Andreyev, Centoimperiale et le Baghère, p. 33, 494). The prince's procession was also called munâqash (menâksh-i hûmayûn) (Houtman, iii. 18); on these words in Ottoman and Egyptian usage, cf. J. Deny, Sommaire des Archives du Caire, p. 104 and 564. Cf. also the name of râbîl solâghī given to the eight solāgh liutenants who walked by the sultan's stirrup in the great procession (Mouradgea d'Osslon, vii. 25, 317).

2. The audience given by the sultan (resefl rikāb or simply rikāb), whether or not he was in procession. The grand vizier himself could only be introduced to the sultan's presence by the latter's formal order and his admission was called rikāb. There were ordinary rikāb and ceremonial rikāb (Mouradgea d'Osslon, vii. 132 sqq.). Cf. details of the barâm rikāb tehreftî in Äfis Tûrkısh, i. 23; cf. Zenker, Dict., i. 468; Atmaca Râşim, Tûrkısh, iv. 1014.

3. The service of the sultan or simply his presence (Sekowski, Collectanea, Warsaw 1824, ii. 24). The presence was not necessarily immediate. Thus the expression rikāb-i hûmayûnde (in the locative), "with the sultan" was used in speaking of the troops (ḫâṣṣ-i hûmayûn) of the capital (ʿAbd al-Rahmân Şerefi, Tûrkısh, p. 292) or of the grand vizier in so far as he was endowed with the full powers of the sultan (M. T. M., p. 528). Similarly the words rikāb-i hûmayûn (in the dative) were used for petitions (esmašt) addressed to the sultan (Menenisk, Tûsûnûn; "Sulaimân's Canon" or Naschîn-i nâmî, p. 151), whence the expression murâbašt rikābîye applied to these petitions.

It is from this convention that we have the use of the words rikāb-i hûmayûn or rikāb in the sense of interior or substitute. With the grand vizier moved from place to place, the government was thought to go with him and there was appointed "to the sovereign a substitute for the grand vizier who was called rikāb kàmmâmahânî" (Bianchi, Dict., 1st ed.; Perry, A view of the Levant, London 1743, p. 37). The other chief dignitaries of the Sublime Porte had also their substitutes "of the imperial stirrup".

*Rikāb* aghâlarî or a ḡâyânî rikāb-i hûmayûn or aṣgarî aghâlarî. — These names were applied to a certain number of important officers or dignitaries of the sultan's palace (from 4 to 11 according to the different sources). They were the miṣr-âli or "standard-bearer", the two aṣgar-âli (embrukar) or "squires", the ḥâṣṣâlarî bożniyât or "chief usher" and other dignitaries with different offices (cf. Liţli Paşa, Aṣgar-âlis, in Türk. Bibliothek, xii. 18 and at of the Türk. text ed. by Tschudi; Beauvoisins, Notice sur le Cour du Grand Seigneur, I869, p. 54; Mouradgea d'Osslon, viii. 141. v. Remmenes, Stantonry, ii. 61, with references to Castellano and At; esp. M. T. M., p. 526, for the božniyât or "majordômes" regarding the ahsâs of the stirrup; Feridün, Minâzât, p. 10, for the rîshâ or protocol relating to them). The following is a translation of the passage in the Aṣgar-âlis which is a comparatively old text (Liţli Paşa's death in 1559): "The diversions of the finances have precedence (gâpûsî) over the sanâdîk beyî and the aṣgarî aghâlarî. The principal (bâš ahrâm) of these is the ahsâs of the Janissaries, next comes the božniyât, then the ḥâṣṣâlarî, the embrukar and the božniyât (starting with the ahsâs of the Janissaries, we have here then an enumeration of the aṣgarî aghâlarî)."

Considering the authority of these sources, we must conclude that the variations are the result of changes which actually took place, which leads us to conclude that the tradition of the palace left the sultan a certain freedom in this respect. We know moreover that admissions to the rikāb was in general subject to the istettân or "approval", pleasure" of the sultan.

The most important function, at least in principle, of the ahsâs of the stirrup was exercised when the sultan mounted his horse: the grand mirâdghâr held the inner stirrup (rî, rikāb), the ḥâṣṣâlarî bożniyât ahsâs, the outer stirrup (dîh rikāb); the miṣr-âli held the bridle and the embrukar assisted the sultan by holding him under the arm or "under the armpit" (balâbûcâ giran). The ḥâṣṣâlarî bożniyât or "chaîmeniers" stood all around and the aṣgarî aghâlarî held the horse's head (M. T. M., p. 526).

On the functions of the chaîmeniers, who to the number of 150, headed by the ḥâṣṣâlarî bożniyât, already mentioned, were in the service of the stirrup, and for other duties beside Mouradgea d'Osslon, viii. 18 and especially M. T. M., loc. cit. Their duties were to take to the sultan important firmanû to convey and carry out various confidential missions.

Sometimes epithets rhyming in -a were added to the word rikāb in the language of the court: e.g. rikāb-i šârûmîrî "stirrup shining like the moon" (Tûrkısh Wûsûf, i. 105); cf. also the epithets: aṣgârî, gûrûnâ, gûrûnâ, demât-i aṣgârâı (Menenisk, Tûsûnûn).

The tribute which the Wovods of Wallachia and Moldavia sent to the sultan in their own name, supplementary to that (stûfû) paid by their subjects, was known as rikâbagh or "sâtû" (Ahmad Râşim, i. 280; cf. Salmeani, Insulae orientales, Bucarest 1900, i. 249).

*Bibliography*: Cf. the works quoted in the text.

(J. Denny)
Turkish usage. — In Turkey the office of rikâbdâr must have been taken over directly from the Sâbîlî, but instead of being assimilated to that of humble grooms or rikâbî, as in Egypt, it became an important dignity at the sultân's court reserved for a single officer. It is in the reign of Orkhan (1326–1360) that we find the first Ottoman rikâbdâr: he was called Kodja Elyas Agâh (Ağa Târîkhi, i. 94). It was however only under Selim I (1512–1520) that the duties of the rikâbdâr were defined. According to the organisation at this time, the rikâbdâr agâh was a bhâzâr-âdâlî, i.e. he was one of the bhâzâr-âdâlî (and not sâbîlî) or “company of the corps” (Mouradji d’Ollissos); chambrière suprême (Castillon); innerer Kammer (v. Hammer) which was the first of the six groups of officers of the household (or etenerâ) of the Serail and consisted of the fixed number of 40 officers or pages including in theory the sultân himself. It had been formed by Sultan Selim I to guard the relics of the Prophet’s mantle (türbâ-i selîmî) brought back after the conquest of Egypt (Ağa, i. 208; for details of the organisation see ibid., and Mouradji d’Ollissos, vii. 34 sqq.). The rikâbdâr was the third of these officers in order of precedence (following the sâbîlî and the lehîdâr and preceding the divânî agâhî) and an officer passed in this order from one office to another. The four officers just mentioned were the only bhâzâr-âdâlî who had the right to wear the turban.

According to the usual definition repeated everywhere, the chief duty of the rikâbdâr agâh was to hold the sultân’s stirrup. It may have been so at first, but none of the documents available show the rikâbdâr performing this duty in practice. Indeed we have seen (cf. nîkâh) who were the “aghas of the stirrup” entrusted with this duty. Now in spite of his name, the rikâbdâr was not one of these. The Arabic version of the Afşâm-i turkân (Batirî, p. 9, note 7) and the German translation (Türk. Râl., N. 12 [1910], p. 17, note 3) have therefore confused rikâbdâr agâh and rikâb agâh, which has given rise to an erroneous interpretation of the whole passage (cf. the corrected translation in the article below).

On the other hand, western writers of the sixteenth century mention as the third officer of the household (lehîdâr) after the sâbîlî and lehîdâr a “cup-bearer” (Theodore Spandoni (Spandony Cantaçin) calls him châhârîâdâr (cf. Garzoni, 1573) and Leunclavius Aghâdarius “bearer of the (water-) jar”, a name also found in Lonicer (p. 69). This water-carrier was given other names later. D’Ollissos (p. 158) and the Ağa Türkîhi (i. 252) speak of a zâf-âlelî or “keeper of the (water-) jar”. Wearing a bohât, he carried a cama (masûra) of warm water at the end of a stick. V. Hammer calls this official masûra, or bearer of the gourd (masûra for masûra).

The use of warm water is easily explained by the fact that, as an author writing in 1651 tells us, the third gentleman of the sultân’s chamber “carried him sherbet to drink, and water to wash with” (De Stochot, Voyage du Levant, Brussels 1662, p. 84: Ichiqiptar, for rikâbdâr; cf. Bandier who writes: rehîqiptar).

On the other hand, there was an officer whose duty it was to carry a sâmeh (sâmeh) plate with silver which the sultân used when mounting his horse when he did not prefer the assistance of a mute.
who went on his hands and knees on the ground (Castellani, Mem. . . ., iii. 139; *Afi*, loc. cit.; d’Olivarre, pl. 157). He was the *iskembe aghzat* or *iskembljati baçhi*, chosen from among the oldest grooms (*kapudan* *tekist*). Wearing a *kuma* or a *kol*, he rode like the water-carrier on horseback in processions (rīkhā). Probably through some confusion Castellani calls him rīkhādār, but adds that in the time the rīkhādār was chosen not from among the *hūzuk* *owdani*, but from the *hūzuk* (mistake for *kapudan*). Nor must we confuse, as Seainean (Influenza orientale, ii. 104, a.v. *schemenigma*) does, the *iskembe* or *iskembljati aghzat* with the special commissioner of this name who was charged, along with the nāmdji aghzat, to install on the throne (*çuma*) the new *bosporus* of Moldavia and Wallachia (cf. Milanges Jorga, 1933, p. 202). There were also *iskemlje aghzat* similar to those of the sultan in certain provinces (L’affouard, Description du pochalet de Bagdad, Paris 1809, p. 27).

Among the special duties of the rīkhādār, we shall only mention the custody and care of the harness etc. of the sultan (as among the Mamluks) and his *pabul* or shoes and *hismos* or boots (*Kusmay of Sulaiman or Nasir-ud-din*, p. 12).

It should be noted that, according to the *Afis Turākī* (l. 208), the services of the rīkhādār like those of the *bochhek*, only required on gala days (*çizm-i râmiyâ*). This practice is said to have been introduced under Mūsa *rây* III (l. 1747-1774) out of consideration for the age of these concerned for they were generally over 60 and had spent 40 years in the service of the court (*vedād yezi*). According to the same work, these duties were reduced to very little. During the ceremonies (*velātle*) of the Prophet’s birthday (*mawlid* or *medawf*), the *hāfs* and at the *hizāb* or ceremonial appearances of the sultan, the rīkhādār sat opposite the sultan in the imperial barge with the *hūzuk*, *hūzuk-nda baçhi* and the two *hūzuk*.

From all this, we may conclude that if there really was a rīkhādār in the time of Orkhan he performed not only the duties of a squire but also those of a “cup-bearer” and we know that in Persian rīkhādār means “cup-bearers”. In time, the rīkhādār becoming a more and more important personage, these duties were divided between two special officers: on the one hand, the *bochhek*, and similar officials, and on the other, the *iskembljati aghzat*.

The rīkhādār aghzat, like the *hāfs*, received a daily salary or *mufta‘* of 35 sters (abbe) while the *bochhek* drew 35 (Hanefi, MS. A. F. T. of the Bibliothèque Nationale, fol. 18b). Like the *hāfs*, they had in their service two *hūzuk* or two *hūzuk-nda*, a *kumbljat* with tasselled caps (*mufta‘*), two *jedekhs*, and two *vedāt*. The rīkhādār who did not attain the rank of *bochhek* were put on the retired list (became *vedāt*) on a pension of 60-100,000 piastres. In the absence of the *hūzuk*, the rīkhādār performed the duties of the latter. On the quarters of the palace occupied by the rīkhādār, cf. *Afis*, i. 312.

The four chief officers of the *hūzuk-nda*, including the rīkhādār, were often called by the name — not official, however — of *dolek* *westeri* or “vixiers of the amir” because they had the privilege of touching the sultan, particularly of giving him their hand or taking him by the arm during a walk and they frequently attained the rank of

wear (Cantemir, *Hist. Emp. Ott.*., Paris 1743, i. 119-121). The rīkhādār *aghzat* [cf. *rikān*] were also *bolek* *westeri*.

The same four officers were also called *'arq aghzat* because they had the right to present *'arq* to the sultan any petition which reached them, like the master of petitions (*rûqâ*), the *hāfs*, and the rīkhādār. In 1248 (=1832-1833; cf. Lufl, iv. 68) and in 1249 (=1839; cf. Lufl, iv. 61); cf. v. Hammer, Hist., viii. 191.

Bibliography: See the works already quoted above of which the most important is the *Afis Turākī*. See also Ahmad Râim, *Târîf*, i. 156, 479; ii. 346; Hammer, Hist., vii. 15 for references not used here.

(R. DENY)

RIŞĀLA. [See RASUL]

RIYĀDI, Ottoman biographer of poets. Mollâ Mehmed, known as Riyâdi, was the son of a certain Mutasem Efendi of Bûrû (S.E. of Smyrna) and was born in 980 (1572). He was first of all employed as a *muderris*, later became *kaif* of Aleppo and died on 9th Safar 1054 (April 17, 1644) (according to J. v. Hammer, *G. O. R.*, vi. 44 in Cairo). He was known as *al-Ayyan*, the “dumb”. His chief work is his *Riyâd al-Shawârâ*, a biographical dictionary of poets containing 384 names. It is known to have been finished by 1018 (1609). He also wrote an abbreviated translation into Turkish of the *Wafa‘at al-Ayân* of Ibn Khallîkân. The lexicon has not yet been published but is accessible in a number of manuscripts, a list of which is given by F. Babinger, *G. O. W.*, p. 178 (add. Sambali, Lîlî Ismîl, No. 341). On a German translation of an extract from it by v. Rosenzweig-Schwaunna, cf. *Z. D. M. G.*, xx. (1886), p. 439, No. 3 (filling 20 pages).

RIYĀH, an Arab tribe, the most powerful of those that, regarding themselves as descended from Hīlāl [q.v.], left Upper Egypt and invaded Barbary in the middle of the eight (ninth) century. Their chief at that time was Mīnis b. Yahyā of the family of Mihrâ. The Zirîd emir al-Mu‘izz [q.v.], who did not foresee the disastrous consequences of the entry of the Arabs into Ifrîyiya, tried to come to an arrangement with him and to win over the Riyāh. The latter were the first to lay his country waste. But thanks to the protection of the chief of the Riyāh, to whom he had married his daughters, al-Mu‘izz himself succeeded in escaping from Kairûnâ and reaching al-Mahdiyya [q.v.].

At the first partition of Ifrîyiya which followed the invasion, the Riyāh were naturally the best served. They obtained the greater part of the plains, which the Berbers had abandoned to seek shelter among the mountains; they had thrust their relatives, the Aṭhâistributing the east. They held Bījâh which the caliph in Cairo had allotted to them in anticipation. The people of Gales took
the oath of loyalty to Münis. "It was", says Ibn Khalidin, "the first real conquest of the Arabs". The Dijkmi, a family related to the Riyaly, made Gabes a regular little capital, which they adorned with their buildings. Lastly, a chief of the main tribe, Mahruta b. Ziyad, made himself a fortress in al-Mu‘allaka (a Roman circus), among the ruins of Carthage. The powerful lords of al-Mu‘allaka, however, supported the policy of the Zirids of al-Mahdiya, and joined them in their resistance to the Almohads.

This resistance did not long impede the expeditions sent by the Maghribins against Ifriqiya in anarchy. Defeated by 'Abd al-Mu‘min in 546, 555, 583 (1152, 1160 and 1187), the Arabs were ordered to supply contingents for the holy war in Spain. 'Abd al-Mu‘min, leaving a section of the Riyaly in Ifriqiya under command of 'Asakir b. Salih, took the others to the Maghrib with their chief, 'Asakir’s brother Mansur, known as al-Hafi ("the axe"; cf. Dociy, Supplément, i. 114). He settled them in the mountains of the plains of the north of Bu Regreg. This control was little in keeping with the traditions of the Riyaly; Mansur fled to Ifriqiya and there gave his support to the Banu Ghania, who were trying to revive for their own advantage the Almoravid power.

We know how the trouble stirred up by the Banu Ghania led to the Almohad caliph’s appointing a governor of Ifriqiya invested with very extensive powers, Abû Muhammad of the Ifhadiq [q.v.] family. This governor naturally attacked the Riyaly and in order to be rid of them, encouraged the settlement in the country of the Sulaim Arabs hitherto quartered in Tripolitania. Under the pressure of the Sulaim, the Riyaly, the principal family, of whom at this time was the Dawawida, migrated to the plains of Constantine where they were henceforth to remain.

In their new home the position of the Riyaly remained a very strong one. They had rights over all the centre of the modern department of Constantine, approximately from the region of Guelma to that of Bougie. In the Zab [q.v.] they were on terms — which were sometimes friendly but more often hostile — with the Banu Morn of Biskra, who ruled this Hafsid province. This is how the Banu Morn had to fight against that curious movement, at once religious and social, stirred up by the Riyalids marabout Sa‘da. The Dawawida, and in particular their most powerful family, the Awlad Muhammad, held winter lands and enjoyed revenues paid by the people of the Djur in the Sahara region of the Wad Righ.

During the whole of the sixteenth century, the two chief branches of the main tribe, the Awlad Muhammad and the Awlad Sika, were actively engaged in the politics of the Hafsid princes and the Abû al-Walid of Tlemcen, in the enterprises of the pretenders who threatened their dynasties. The power of the Riyaly of central Bu Regreg lasted till the xviith and xviiith centuries. According to Bernardino de Mendoza, they had in 1536 10,000 houses and 20,000 heads and large numbers of foot. The xviiith century saw them assisting the Turkish Bey of Constantine, to whom they were connected by marriage and the independent suzias of Taghurt. In 1644, Caracci and Warin noted that the name Dawawida was still synonymous with "noble Arabs".

Another group of the Riyaly played a notable part in the history of the Zenzili states. In the extreme Magrib, bodies of them transported by the Almohads to the plains of the coast faithfully served this dynasty, by trying to check the advance of the Marinids [q.v.]. Defeated near the Wadit Sbit in 614 (1217), the Riyaly were mercilessly punished by the victorious Marinids. Decimated and weakened, and driven northwards, they submitted to the humiliation of paying an annual tribute. Their name no longer figures on the map of modern Morocco except at a place near the road from al-Ksar to Tangiers.

Finally, at the other end of Barbary, in their first home, the name survives in the nomenclature of the tribes. The Tunisian caliphate of the Riyaly lies between Jeburak and the hills which surround the Gulf of Tunis.

(GÉRÔME MARÇALI)

RIYAL [r'i:al], riyl, from the Spanish real (de plata), the name given in the Muslim world to the large European silver coins which formed the international currencies of the xviith and xviiith century; the most important was the Spanish dollar (peso; properly 8 reals) but the name was also given to the Dutch, German and Austrian dollar, the French écu and Italian scudo. In the late xviith and xixth century the Austrian Maria Theresa dollar took the place of all its rivals and it still circulates to the present day around the Red Sea. The name riyal survived with it.

In the currencies of the modern Muslim kingdom of the Irak and the Hikja riyal is the name of the largest silver coin, the standard being that of the Maria Theresa dollar. A riyal was also issued by the sultan of Zanzibar in 1850. In modern Persia riyal is a money of account: originally (1930) 20 riyls = £1 sig., but by the system finally adopted in 1930, 100 dirhams = 1 riyal = 1 pahlavi = £1 sig.

(J. ALLAN)

RIYALA or RIYALA BEY, abbreviation of riwa‘ Al-Usânîyân hâpadâtçı ‘captain of the imperial [galleys] royal’, from the Italian rialo (secondary form from riola, abbrev. from guisa reale, "the royal galley"), a general officer of the Ottoman navy who commanded the galley of the same name, later "rear-admiral". There was also a popular pronunciation rizalo with the prothetic i frequent in Turkish in loan-words with an initial r (cf. Hindoglu, p. 149 under "contre-amiral" and p. 457 under "riale"; the form rizalo is found as early as Ewelira Cezeli, viii. 466, 48). The Italian pronunciation rizalo is attested in the Dîmârère
Admiral in his absence. From 1246 onwards:

3. *Terenian* (Mann) Serhabak Mubarak (Mubarak) vsa
"Intendant des galères", "Lieutenant of the Arsenal",
"Sachwalter des Arsenalen". He was particularly
concerned with the police of the Admiralty.

4. *Admirals with the title of bey.*

(Except the 4th, these were officers who were sea-going admirals and took the name of Venetian origin, of the vessels they commanded. The name might have the addition of *kumayyin* "imperial" in a
Persian construction whence the official barbarisms:
*bashqadar* (kumayyin), *kapudan-i kumayyin* (Mubarak), etc.
The full titles in this way were: *bashqadar-i kumayyin
kapudan*, *kapudan-i kumayyin kapudan* etc.

1. *Bashqadar*, *bashqardar*, *baskhardar-i (kumayyin)*

— Ital. bastard, Fr. bastard or bastardelle. This
was not the largest unit of the fleet. In
Turkish as in Venetian usage the bastard was a galley
larger than the *galea sensile* (Turk. *gulerga* or
*tekier), but smaller than the galeaza or galliassa
(Turk. *gala* and had a very rounded poop
"like a water-melon" (*gopas* foll.). Among the
Turks it contained 26—36 oarsmen or benches of
5—7 rowers. The one which had the Kapudan Paşa
on board was called (*kapudan*) *paşa bashqadar* and had 26—36 oarsmen. It was distinguished
by the three lanterns (*fener*) attached to the poop
in addition to that on the main mast (*derfi*, fol. 69; *Deryafo Paşa Türkli*, 1300, p. 131). As it
drew the flag of the Grand Admiral, it was sometimes
( *Meneši, Teymurreis, i. 663; Barbier, de
Meyard) called "Captain" but we shall see that
among the Turks this name was given to another
vessel. Chance has it that the first syllable
in the word *bashqadar* means in Turkish "head," "chief" but it is difficult to say that the Ottomans
gave first place to this ship simply as a result of
a popular etymology. The disappearance of the
ship propelled by oars resulted in the abolition of
the *bashqadar*. Officially disused in 1654; ac-

*General Officers of the Admiralty*

(see above).

We are well informed about the hierarchy of
the naval high command at this period, thanks to
the *Teşšebeke-başname*, a work of Shaddar-Sheikh-
Zade Esad Mehemt Efendi (d. 1848). On p. 102
seg. we have a list of the old establishment which
combined the non sea-going officers of which we
shall be content to give a list here, and the
sea-going officers who will be dealt with in more
detail, because the *rastila* was one of them and
bore like them a name taken from the Venetians.

a. General Officers of the Admiralty

(see above).

(All three seem to have had, but perhaps only
from the beginning of the xvi. century, the right to
the title of *paşa*).

The *kapudan-paşa* (i.e.) having the rank of
micalet (micalet). He was the Kapudan Mar
(*kapudan-i irşid*) or, as was also said, the *kapudan*
par excellence. The name *kapudan* from the Venetian
kapitan(a) and its modernised form, probably under
the influence of English, *kaptan*, was further applied
to any commoner ship. Small or large foreign
or Turkish. (The voice *b* in the second
syllable is due to the influence of the neighbouring
label *b* and Trévoux's Dictionary gives the inter-
mediate form *kapoutan* under kapitan-bache; cf.
also Relation des deux excellentes arrivées à Constantin-
ople en 1750 et 1751, The Hague 1737, p. 23.)

2. *Terenian* (Mann) Serhabak Mubarak (Mubarak) *In-
tendant de l'Arsenal* (d'Ohsos), Germ. "Intendant
des Arsenalen" (Hammer), Eng. "Intendant of
the Marine." (Perry). He took the place of the Grand
29th Ramazan 1251 (July 1, 1821), register, No. 9, p. 71.

Patrona bey. Patrona comes from the Venetian (galea or nave) patrona or padrona, Fr. la patronne "galley carrying the lieutenant-general or the next in command to the chief of the squadron" (Jal). The earliest mention of an officer of this rank known to us is connected with the years 1676—1685 (cf. Sūfīli-i eṭhnič, i 112, infra). Patrona Khalil, a janissary, leader of the rebels who deposed Ahmed III in 1730, owed his epitaph to the fact that he had been in command of the Patrona (Relation des 3 rebellions, p. 8; Eng. transl. in Charles Perry, A View of the Levant, London 1743, p. 64). — We also find the forms applied, it is true, to Christian ships: patrona, patronera, baterna, and even botorna (Ewylya Celâl, viii. 579, 161; vi. 104, 7; viii. 447, infra; p. 446, 10; Hassan Ağha, Diwar-i Ta'wirî, MS. Bibl. Paris, S. T. 506, fol. 160—161). All these pronunciations show that the word was already well known, but was finding difficulty in being acclimatized in a western form.

Lumağa rəsī'i "captain (admiral) of the port" of Constantinople, Germ. *Kapitän des Hafens*. He was also commander of the midshipmen (mandılçis). 5. Rıvaya bey. Rıvaya comes from the Venetian (gales or nave) ralea "galley which carried the king or princes" (the same name was often also applied as an epithet to vessels belonging to the king, i.e. to the state, in contrast to privately owned ships). For the lexicology of this borrowing from the Italian see the beginning of the article.

At the battle of Lepanto, Don John of Austria, Captain of the League, sailed in a Reale. A Patrona Reale went astern of the Reale of the Prince and of the Capitanas of the "General Capitan dell' Armata" of Venice. Except for these two ships, none of the 302 vessels of the allies was given the name of Reale (Contarini, Storia della care . . . della guerra musa da Selim Ottoman a Veneziani, Venice 1572, vol. ii 152). In France the Patrona was the first ship of the navy, intended to carry the king, princes, the admiral of France or in their absence the general of the galleys (Jal). At the conquest of Cyprus, in 1570, Contarini (Venice 1592) gives for 185 Christian ships: 18 capitanas, 7 patronas and 1 bastardella (or Reale); for the 276 Turkish ships: 2 real (sic) and 29 capitana (these terms do not correspond exactly to those of Turkish usage of that time).

It is not explained how the title of Reale came to descend among the Turks until it was applied to the ship of the admiral of lowest rank. We may suppose that they were misled by the second meaning of the word Reale [cf. above] or that they confused him with the English "rear-admiral".

Marsigli (Stato Militare . . . 1732, L. 140) mentions the "Turkish "commandante delle Reale" as having a higher rank than the guruvam bâghi who was in turn superior to the 200 of an ordinary galley. According to Esad Efendi, the rivanya came before the hâlmurka bâghi.

All the officers here mentioned from the hâpmun-paşa to the rivanya were pâhîz deînekh, i.e. they had the right to carry, in imitation of their Venetian colleagues, a commander's hat or cane, deînekh, also called hâlbîz or saîd (Esad Efendi, p. 100, 7) because it was encrusted with mother of pearl of different colours [cf. below]. It was what the Venetians called the giunetca or cane (canna), from cane d'Italia, "Italian cane", often taken in the sense of "bamboo" from which we also have the English word "cane". They alone wore small turbans and fur-trimmed robes (cf. d'Ossun, pl. 228).

When under 'Abd al-Hamid I [q.v.] or later under his successor Selim III, the naval hierarchy was organised and to some extent modernised, three grades of admiral were instituted (independent of the hâpmun-paşa, who was the Grand Admiral or "amiralissimo"). They were:

1. the hâpmun-paşa bey "Admiral". Mehmed Shukri regards his rank as equivalent to the more modern one of çavuş-i bâhrîs râsît "president of the Higher Council of the Navy". He had a fixed monthly salary of 4,500 piastres (1 piastre = 3 frs), and in addition received pay for 1,000 men (on which he was liable to make various grants) but with the obligation to give to the hâpmun-paşa spices or hâlbis to the value of 4,000 piastres.

He carried a green cane and had the right to have a pennon below the flag on the main mast (that of the hâpmun-paşa was above).

2. Patrona bey *vice-admiral* (Mehmed Shukri, modern Turkish vis amiral) but we also find the French equivalent of *gudon* (Sami Bey; Tinghir-Snapiun). Salary: 3,500 piastres. Pay of 800 men. Hâlbis to the hâpmun-paşa of 3,000 piastres. Blue cane. Flag on the fore-mast.

It may be noted that in theory there was only one officer of each of these ranks at one time.

All three took part in the battle of Navarino in 1827 (Douin, Navarin, p. 250 and passim). They were under the command of Tâhir Paşa, who had the rank of meşirân. He was himself a patrona but this does not mean duplicating the rank of the patrona who is subordinate to him because the commanders-in-chief of the fleet (per-ackar or hâlbîz-bahgh) were chosen without regard to rank. Hürr-Elyas (Enderûn Türkî, p. 481) mentions a liman râsît with the rank of patrona in 1826.

The flag-commander of the hâpmun-paşa retained his functions but seems to have occupied a position on the edge of the hierarchy which the presence of the Grand Admiral on board sometimes made unenviable (v. Hammer, Staatwerf., ii. 293).

We do not know at what period these ranks were replaced by the more modern terms of meşirân, firîst and hâlbis. The equations of rank varied considerably. The rivanya is regarded as mir ahik, meşirân, firîst, and even hîzbîz firîst. It is probable that it was necessary to choose a grade between these. At Sebaçatopol in 1854, the Turkish fleet was commanded by a patrona, Ahmâd Paşa (of Ahmâd Şükrü's side). In Egypt under the Khedives there was for a time a rivanya paşa in command of the fleet.

**Bibliography:** Only d'Ossun gives definite information about the officers mentioned above. Bk. viii. of vol. vii. (p. 420—436) (Tabellen de l'Empire Ottoman), devoted to the Navy will be read with interest. Cf. also Uebici, Letters sur la Turquie. second ed., Paris 1853, l. 484.
ROKAIYA, daughter of Muhammad. That he had four daughters by Khadijia is repeated by all authorities, but there is no agreement regarding their order, which clearly shows that they aroused little interest in the early period. It is further suspicious that practically the same story is told of two of them, Rokaiya and Umman Kullatun. They are both said to have married sons of Muhammad’s uncle Abul Lahab [q.v.] but were forced by their father to divorce them when Muhammad began his career as a prophet. Still more suspicious is the circumstance that it is told both that the marriages had not been completed when the divorces took place (sam yakun dahala jidda) although some time must have passed before there was a breach between Abul Lahab and his nephew. If we wish to save the tradition, we must assume that the sisters, like ‘A’isha, at a later date, were betrothed to Abul Lahab’s sons and that the divorce took place before the wedding was carried through. It is however more probable that this story is an invention in order to keep the holy family pure from any contamination by relatives of the Prophet’s arch-enemy [see also UMMA KULUM], but the difficulties which this involved were not clearly seen. After the divorce the fair Rokaiya was married by Uthman b. Affan and went with him and other Muslims to Abyssinia, from which they returned after a time. They then went with the Prophet and other Muslims to Madina. But when Muhammad was preparing for his raiding expedition to Badr, Rokaiya fell ill and died before her father returned home victorious. After several miscarriages she presented Uthman with a son who however lost his life shortly, as the result of an accident (a cock pecked him on the face).

RONDA (Ar. Runda), etn., al-Rundi, a town in the south of Spain, in the north of Algeciras and west of Malaga, 2,400 feet above sea-level in the centre of a vast mountainous amphitheatre at the edge of a rocky plateau which ends in precipitous walls on the western side and is cut in two by the great natural cleft of the Tajo 500 feet in depth, at the bottom of which runs the torrent here known as Guadalevin (Wad al-Laban) and later known as Guadiaro (Wad‘ Are). Its peculiar position makes it an almost impregnable natural fortress. At the present day the town is the capital of a partido judicial of the province of Malaga; it has a population of nearly 21,000 souls.

The Muslim town of Ronda, which succeeded the ancient Roman and Visigothic Arunda, was from the vii and the first half of the seventh centuries a centre of one of the most important strongholds of Andalusia. Under the Umayyads [q.v.] it was the capital of the sira of Tolarum [q.v.]. A number of descriptions of it, unfortunately very brief, have been preserved by the Arab geographers; al-Idrīsī however does not mention it. We still see, however, several remains of the Muslim period, such as a remarkable gate in the suburb of San Francisco. The cathedral of Santa Maria La Mayor has taken the place of the great mosque; the ancient citadel or Alcazaba of the Nasrid period was destroyed in 1808.

The principal fortress of the district of Tájaroman was for a long period Bobastro [q.v.] which was the headquarters of the rebel Omar b. Hafsīn [q.v.]. On the fall of the Umayyad caliphate of Spain, Ronda became the capital of a little independent state in the hands of the Berber Baní Frīn; among these rulers were Abū Nūr Hīlāl b. Abū Karra b. Dīnās who was proclaimed in 427 (1039) and died in 449 (1058) after having been the prisoner of his formidable neighbour, the king of Seville, al-Mu’āzidī [q.v.] Ibn ‘Abdād, and his son Abū Naṣr Fatīrī, who after having held out for some months at the instigation of the Abbeddīl ruler, who annexed his state in 450 (1059), Ronda then became the residence of a prince of Seville until a son of al-Mu’āzidī [q.v.], al-Rāfī, had to surrender it to the Almoravid forces under Gārrār in 1091.

Ronda played an unimportant part under the Almoravids and Almohads. In the Nasrid period [q.v.] it was for some time the appanage of the vizier and family of the Bana ‘I-Hakim and was directly concerned in the intertribal fighting of this period. It was taken by the Catholic Kings after a siege of 20 days on May 20, 1485.

ROSETTA (Arabic Raḥīd), a town in Egypt, situated at 31° 24’ N., 30° 24’ E., on the western bank of the Rosetta branch of the Nile (the ancient Boldibiten) about ten miles above its mouth, which is known as al-‘Armusīa and is dangerous to enter. Till the xth century A.D., ships sailed direct to Faiwa; but owing to the excessive depositing of the silt in this region, Rosetta began to take its place during the reign of al-Mutanabkī. In the xith century, however, Abu ‘l-Fīdā‘ remarks that it was still smaller than Faiwa; and, in the xvn, Ibn al-Du‘amī (v. 114) says that it was exclusively inhabited by garrison troops (‘abād al-tābī‘ī ‘a-midham khalīfah mar‘ubalūn). After the Ottoman conquest of Egypt in 1517 A.D. and the decay of European trade through Alexandria, Rosetta became an important centre for maritime trade with Constantinople and the Aegean territory of the Turkish Empire. The Viceroys of Egypt, in 1509, restored its old khānas (warehouses) and fīnādja (hostelries), built new ones, and cleared the silt from its docks. The town continued to flourish until Muhammad b. Abī [q.v.].[1] reconstructed the Mahmūdiya Canal for navigation between Alexandria and the Nile, and thus diverted the course of trade from Rosetta which declined rapidly to a mere fishing town with but few minor local industries such as rough cotton weaving, rice pro-
duction and oil manufacture. Its population in 1945 was only 16,600.

The topography of the town is largely medieval in character and it still retains many noble buildings which mark its past prosperity. Its streets and lanes are both narrow and circuitous with only one large fish market. Till modern times its wall was maintained for defence against Arab raids. At the mouth of the River, near Kôm al-Afrâh, two castles guarded the water entrance to Rosetta in the past. Vansleb, who saw these castles in May 1672, describes them thus: "one stands at the East-side of the River, and the other on the West. That which is about a mile and a half from Rosetta is square, encompassed about with strong Walls, built according to the old Model, having four Towers. One hundred fourscore and four Fanouries are in the Garrison. . . . The other Castle is but a Mosque, before it stands seven Pieces of Artillery on the Guard: Here commands also an Aga over a Company of Moors, who examine all that go in, or out of the City." (State of Egypt, London 1678, p. 105).

From this and the few events only be gleaned about Rosetta. In 1822 (May 20–28) it was the scene of a serious but abortive Coptic revolt; in 307 (520) the Abûsaid fleet of Tarshidi under the admiral Shaml ruled the North African fleet of Oboad Allah al-Mahdi [q. v.] commanded by a certain Sulaimân in the waters of Rosetta; in 1218 (1803) it witnessed al-Baidài's victory over the combined sea and land forces of the Ottoman Porte; and in 1222 (1807) it was seized by the English who came to help al-A'li and his Mamlûk successors. It must also be remembered that in 1799 a.d. in the neighbourhood of the town, Boussaid, an officer of the French Expedition, discovered the famous Rosetta Stone now in the British Museum.

Bibliography: See works already mentioned in articles on other Egyptian towns.

(A. S. Atiya)

ROSETTA — RU‘BA B. AL-'ADJDÄDJ

The name Ru‘ba is more frequent among men from eastern Arabia than is generally supposed. Arabic philologists give many explanations of this peculiar name. I am however certain that it is the Persian word râdûd meaning "for." Al-Âmidî in the Kitâb al-Ma‘ânî wa l-Mauzûtûlûf mentions three poets of this name (p. 121–122), but only Ru‘ba b. al-Adjdâdî, of the tribe of the Banû Malik b. Sa‘d b. Zaid Manût b. Tamûn became celebrated as a poet of râdûd verses, in which genre he surpassed both his father and the latter's rival Abu ‘l-Nâṣîr al-'Ajîjî. Of his life very little is known. Like his father he spent most of his life in the desert (jâdiyya) and only came into the towns when he sought presents for his panegyrics from the great. Born about 65 (685), in his middle years he went about with the armies which were spreading the power of Islam. His earliest productions are certainly lost, but we have a panegyric (No. 22) on al-Kasim b. Muhammad al-Tâlîsî, the conqueror of Sind, on his return from India to Iraq in 713. As in the following year al-Kasim was thrown into prison and murdered, the date of this poem is fairly certain. One poet then travelled in Eastern Persia, either as a soldier or a merchant, and a further poem by him (No. 26) is dedicated to another governor of Sind, Abu al-Malik b. Kais al-Dhâbî who was there about 15 years later.

Whether he was in Khurâsân during the troubles that broke out after the death of Kûtâbih b. Muslim (90–915) is not clear, but several poems are dedicated to individuals who took part in the fighting there. His poem attacking al-Mu‘allâh (No. 27) shows that he was against the Yarmûkians as do his poems in praise of Maslama b. Abu al-Malik who conquered Yazid b. al-Mu‘allâh and killed him (102–720). But he must have again been in eastern Arabia or the Yarmûkian, as is shown by his poems on Khâtîf b. Abu'âd Allah al-Kasîf, Abu'âd b. al-Walid al-Badîjî and al-Mu‘allâh b. Abu'âd Allah al-Klîlî. At a later date, he dedicated poems to men who were active in Persia like Muhammad b. al-Âshîr b. al-Khuzî who was in Kirmân in 750 (747) and particularly Nâsr b. Sâyîr, who failed to put down the rising of Abû Muslim and died in 751 (748). A poem (No. 41) is dedicated to the last Umayyad caliph Marwân b. Muhammad of whom he still hopes that he will conquer all his enemies.

As he had in this way shown his attachment to the Umayyads, it is no matter for surprise that Ru‘ba did not feel his life safe when he was summoned before Abu Muslim. Of the audience he only noted that Abu Muslim showed himself a counsellor of Arabic. Two poems in praise of Abû Muslim are to be found in Geyer's Nachträge (Diiamb 4 and 6). Several other poems in praise of members of the new dynasty have survived: one (No. 55) is dedicated to Abu 'l-Âbâb b. al-Saffâ; and two to his uncle Sulaimân b. 'Ali (Nrs. 45 and 47), and the latest poems of Ru‘ba are in praise of al-Manšûr, who succeeded his brother as Caliph in 750 (747) (No. 14 and Diiâm 8). He was then an old man and is said to have died in 762 (754).

All Ru‘ba’s poems are in the rajaz metre; the few verses in other metres ascribed to him I have found to be by other poets and wrongly attributed to him. He had learned the art from his father, whom he even accuses of having taken credit for his poems when Ru‘ba began to write, and we actually have a poem by Ru‘ba against his father (No. 37). From his father he also inherited a fondness for unusual words and his poems are among the most difficult in the Arabic language, as they are full of words which are never or only very rarely found in other poets. One even suspects that for the sake of effect the poet coined new words which did not previously exist. He is fonder than any other poet of a kind of alliteration or, to be more accurate, an accumulation of a number of forms from the same verbal root. No one can make this sort of thing beautiful and Ru‘ba’s poems have probably survived only because the lexicographers found them a rich quarry for unknown words. A proof of this is the number of lines from his poems which are quoted in the great dictionaries, and in the Littât al-‘Arab, for example, are listed to several thousand.

It is no wonder then that the learned men of al-Basra and, less often, of al-Kiffa visited him to increase their knowledge of the jû‘bâ until he became tired of them. We even find that the Kûtâbihwâni in his Jâzâ‘ al🥱âlîn Su‘îr quotes Ru‘ba for readings of the Kûrâ which have no other justification that they are different from the known readings. Ru‘ba simply claimed to know better.

Ru‘ba had two sons, ‘Abd Allah to whom two poems are dedicated (20 and 56), and ‘Ubi who
also wrote poems in the same metre as his father (Dīdīhā, Bayān, i. 23; Ibn Kustalā, Ṣīrī; Marzubānī, Muwāqiqšāh, p. 218 and 366; Ibn Rashīdī, ʿUmda, i. 136).

Rūbaʿi's poems were collected by several scholars, among them Abū ʿAmr al-Shalābī, Ibn al-ʿArabī and al-Sukkārī, of whom the two last named are probably represented by the surviving manuscripts (cf. Diāmbs 40–44). The contents of these manuscripts have been edited by Ahlwardt (Berlin 1903), unfortunately without the commentary which is absolutely necessary for the poems of Rūbaʿi, and in the alphabetical order of the rhymes which makes it difficult to recognize the original arrangement of the collection. As this edition was incomplete, Geyer in 1908 published in a collection of several rāgīs poets eleven further poems with the commentary under the title Alterarabische Dichtungen. Ahlwardt had in his editions of other poets added a collection of verses which he had found in various works quoted as by Rūbaʿi. This collection was extended by Geyer in his Beiträge zum Dīwān des Rūbaʿī (S. B. d. Wiss., vol. cxxiii, 1910). Even then there remain lines attributed to Rūbaʿi which have escaped both editors, while many lines are not by Rūbaʿi but belong to other poets. Confusion seems to have begun at quite an early date between the poems of Rūbaʿi and those of his father al-ʿAdījādū. Ahlwardt also published a complete German translation of the whole Dīwān in rhyme. The value of this translation is unfortunately small as it is really only a paraphrase and does not help us with the difficulties of the Arabic text.

**Biography:** Biographical notices on Rūbaʿi are found in Dīmārḫ, Tashbīrī, ed. Helì, p. 147 (where unfortunately the MSS. have a lacunary; Ibn Kustalā, Ṣīrī, ed. de Goeje, p. 376–381; Marzubānī, Muwāqiqshāh, p. 218; Kīthālī, Muḥāqiqshāh, 211, 84–91; Ibn Khālidn, ed. Cairo 1310, l. 187. — Lines by Rūbaʿi are quoted in large numbers in all the large dictionaries.

**Rūbaʿī, qutrāin (plural rūbaʿīs, from the Arabic rūbaʿī, "quadrupartite").** Its fundamental characteristics have already been defined (cf. the article 'Alī, i. p. 470; on p. 468 sq. are given the forms of Arabic popular songs in quatrains). It consists of two distichs (baʿīt) or four hemistichs (mīrāt) rhyming together with the exception of the third (baʿīt), the third being called ʿabāt ("castrated"); the two hemistichs of the first baʿīt (mīrāt) must rhyme. The rubāʿ in which the four hemistichs have the same rhyme is found particularly among the old poets (cf. ʿUṣnūr's Dīwān). The rubāʿ lends itself to every kind of inspiration. According to one theorist, the first three hemistichs serve as an introduction to the fourth which ought to be sublime (buland), subtle (lajūf) or epigrammatic (īta). According to E. G. Browne (Lit. Hist. of Persia, i. 472), the rubāʿ is almost certainly the oldest product of the poetic genius of Persia. The Persian philologists attribute the invention of this metre to a child playing at nuts with its playmates: one of the nuts being fallen out of the hole by a rebound then fallen back rolling, the child called out chalīna chalīna hani rawdāt 2 lān-i ākh, "rolling, rolling it goes to the bottom of the hole". According to the Tadhkīrāt of Dāwūdshāh (ed. Browne, p. 50), the child was the son of the emissary Yaḥyā b. Laḥīb the Saffārīd and the officials of the court recognized in this hemistic a variety of ḫaṣīd: "they added a second hemistich (mīrāt) to it with the same scansion, then a second line (baʿīt) which they called ḫaṣīdī ("poem in two verses") but some scholars, considering that it consisted of four hemistichs (mīrāt) adopted the same rubāʿ and Rūdāki was the first to excel in it" (it should be noted that Asālī's dictionary Lāghātī Fūrūṣ, ed. Horūn, quotes two rubāʿī by poets at least as old: Abū ʿl-Muʿayjī, p. 69 and Shāhid, p. 112). The anecdote is again found in a work written in 1220 (nearly three centuries before Dāwūdshāh), the Muṣafīn fī Muʿātīr al-ʿAdījādun, i. 127, of Shamsī Kān (ed. Mīrza Muḥammad and Browne, p. 88): one holiday, in a street of Ghazni, the poet Rūdāki ("at least I believe so", says the author) was watching some children playing at nuts: a boy of ten or fifteen improvised the same hemistich in the same conditions. "These words seemed to the poet to be inscriptible metre, a pleasing poetic form; he consulted the rules of prosody and recognized in it one of the derivatives of the ḫaṣīd;... on account of the high place which he held in his eyes, Rūdāki confined himself to two lines (baʿīt) for each poem;... as the inventor of the metre was a young and innocent boy (for), Rūdāki called the metre taʿarūma" (cf. Horn, Grundr. der neu-persischen Epen, Nr. 382 and n. 3: Niẓāmī's hemistich is no doubt quoted from the Fārsūnī Dīwān: har taʿarūma taʿarūma mīrāt, "every young man was singing verses"). The Haft Kūstūm describes taʿarūma as the rubāʿ of which the four hemistichs (mīrāt) have the same rhyme (which is at least disputable). According to Shamsī Kān (ed. cit., p. 90, 190), "the connoisseurs of poems set to music (maḥfūzāt), called taʿarūma the rubāʿ set to music and ḡaṣīdī the rubāʿ without music, because it had no more than two lines; the arabised Persians (muṣafīr) called the rubāʿ the ḥaṭīt, because in Arabic the haṣṣād has four mīrāt (while in Persian it has eight); each line of this Persian metre makes two Arabic lines (in other words: a Persian mīrāt is equal to an Arabic ḥaṭīt). From the fact that the melodic change used in this metre did not exist in Arabic poetry, Arabic was not written in this metre but now the modern poets use it freely. Arabic rubāʿī have become common in Arab lands". On this point in his Dīwān al-Khāṣṣ (Aleppo 1349, p. 174), al-Bikhrājī (12th century; q.v.) says that his father repeated several Arabic rubāʿī to him; these may be reckoned among the earliest in this language. In the Sālīḫī period the vogue of the rubāʿī seems to have reached its height. Rawandi (Rūḥāt al-Sudūr, ed. Muḥammad ʿĪbīl, p. 344) says a propos of a man of letters of Hamadān: "He was called Nādir (al-Dīn) Dūbūbī; he possessed wealth which he lavished on men of talent; with an inkwell and a pen he put into writing all rubāʿī that he found; he left neither property nor furniture;... his heirs shared 50 mān of manuscripts containing ḥaṭīs". No Persian metre admits of so many variations. Indeed, the theorists number 24 types of rubāʿ derived, half from the haṣṣād-ī ḏaḥram, half from the haṣṣād-ī ḥaḥraḥ (the latter more pleasing to the ear, according to Shamsī Kān). The Khorasanī philologist Ḥasan Kattān divides these two series into two trees (Ḫaṣṣār) which figure in the treatises on prosody (Shamsī Kān, p. 92; Blochmann, Prozody der Perser, p. 68).
RÜBAIY — RÜDÁKI

and which clearly show the variations (asākīf) of the hasadī mughāman sālim (muf'alun, 8 times). Four different metres may figure in the four hemistichs of rubā'i. Shams-i Kāshḵ, thus explains the mechanism of this poetical form: "The beginning of the hemistichs of the dā-bātī is maf'ulun (called ahašrā) or maf'alun (called ahašrōn). When the first foot is maf'alun, the second becomes maf'alun (sālim) or maf'alun (muf'al). If the second foot is maf'ūlun, the second becomes maf'ulun or maf'ulun or maf'ulun (this last ahašrā); when the second foot is maf'ulun or maf'ulun, the second becomes maf'ulun (sālim); when the second foot is maf'alun or maf'alun or maf'alun, the third becomes maf'alun or maf'alun. The last foot which follows maf'alun or maf'alun or maf'ūlun becomes fa' (ahār) or even fa' (uṣīl); that which follows maf'ulun or maf'alun becomes fa' (ahār) or even fa' (uṣīl)."

Further, according to Shams-i Kāshḵ, some poets have written maf'ūlāt (pieces of several lines) in this metre, e.g. Abū Thāhir Khaṭṭāni (from whom he quotes a passage); Farrarī also deliberately composed a hašrā [q.v.] in the dā-bātī metre, sometimes retaining the same rhyme in the two hemistichs so that several rubā'ī can be taken from it. It may be recalled that the formula fa' hašrā wa'fa' hašrā malā ilā ilā ilā ilā (muf'alun muf'alun mas'ūl fā'ā) was used as ma'īfī in certain quatrains (quoted by Ḭaṣṣ Abū Ḥamid 'Alī, Rūdākī-i Tarāvīn, ed. Bichsoonar, 1867, p. 9). Most Persian composers composed rubā'i in the metres mentioned. Some owe their fame to this metre: Abū Sahl [q.v.]; Ḥamzā-i Khwojmā; Bāḏī Abāf al-Dīn Kašfa (ed. Sāḥib Naṣīr, Teherān 1311 = 1933). A collection of them is attributed to Djalāl al-Dīn Rūdākī (Stambul 1314, 400 p.). On the other hand, the name rubā'i is wrongly but traditionally given to the quatrains of Bāḏī Tāhir [q.v. in hasadī mughāman: maf'ulāt (muf'alun muf'alun mas'ūl) and other quatrains in dialect (bashālīyat); cf. H. Kohl Kirmānī, Tarāvīh-i mušīl, Teherān 1310]; these are really ḫāšfānī on the quatrains in Arabic, of Dāyī, Supplem., v. dā-bātī; Ben Ceneh, Tufkat al-Adab fī Muḥāna Abūl-Ale (Algeria 1928, p. 113-117); in Turkish: Gīb, Olowum Poesia, i. p. 88; in Hudūstānī: Gardīn de Tassy, Litt. Budūnī, 2nd ed., i. p. 36-37 and his edition of the Divvāt al-Wadā' (passim).

RÜDĀKI, Abū ʿAbd Allāh Dāvūd b. Muḥammad b. Ḥakīm b. Abū Raḥmān b. Āḥam, a native of Rūdākī in the vicinity of Samarkand... he is said to have been the first good poet in the Persian language... according to al-Baḥrī, vizier of Lūmābd Abāf, emissary of Khūrdāš, he had no equal among either Arabs or Persians; he died at Rūdākī in 339 (949-950) (Samālūs, ʿAṣsār, p. 376, 10, in M. A. L., vol. 262; later in text according to E. G. Browne, Sussex List of Muhammadan MSS. in the University of Cambridge, p. 101). To be more accurate, Rūdākī was born and died in Bannawi (Yāḵtān, Maḏwān, s. v.) near Rūdākī. Some writers wrongly say that his teaching came from his skill in playing the lute (rūdākī, rūdākī). In any case the pronunciation Rūdākī should be abandoned. We know few details of his life. From scattered allusions in his poems, it seems that Rūdākī left his native village to go to Būkhārā to the Sāmānīd amir Naṣr b. Abūmāli, whose panegyrist he became. Later he accompanied the amir to Būdhgīsht and Herāt. There is located the incident, recounted by several biographers, of the courtiers desirous of returning to Būkhārā to spend the winter there begging Rūdākī to use his influence with the amir Naṣr; the poet composed his famous poem ("The scent of the river Mīlīyān", etc.) which decided the prince to return at once; richly rewarded, Rūdākī returned to Sāmānīdī, travelling sumptuously. Two verses attributed to Rūdākī refer to journeys to Samarkand and to Ǧīlūpūlī. The poet on the "dīwan Muḥīn dustū Āḥam" alluding to a certain Āḥam, the favourite slave of Rūdākī. The biographers say that he was born blind, but a number of his verses which describe in glowing colours the beauties of the sensual world (quoted in Naṣīf, p. 550 sqq.), prove that he lost his sight at an advanced age; it has been supposed that the blindness was caused either by a clumsy oculist or was a repulse on the protegés of the vizier Bāšāmī, Rūdākī, banished from the Sāmānīd court on the dismissal of the vizier (326), is said to have retired to his native village; from this period (his three last years) date the verses in which he regrets his youth and his brilliant past (Naṣīf, p. 561). In his earlier days, according to his biographers and the allusions of later poets, his talents had considerably enriched him. Following Abī ʿAbd Allāh Ǧīlūpūlī (d. 405), a historian of the Sāmānīd Īmām, says that Rūdākī was buried at Bānbūlī, "behind the garden of the village"; the Rūdākī pilgrimage used to be made is (which proves his fame outlasted). According to some writers, Rūdākī wrote 3,000,000 bāṭl six mughāmān (the Farākhānī Liqāʿīnī mentions one of them: Dāvūrandī ʿĀṣūfī) in addition to his dīwān of lyrics; on the other hand, Tafṣīlī, Firdawīsī and others agree in saying that he put the Kūtla ābī-Dinna [q.v.] into verse from a translation into Persian prose by order of the Sāmānī Īmām Naṣr. Of his works only a few fragments remain. E. Denison Ross (J. R. A. S., 1924, p. 669 sqq.) has shown that the edition of the Divvāt al-Rūdākī (Teherān 1315) consists chiefly of the poems of Ǧaṭrān of Tabrīz [q.v.] who lived a century later. Does this confusion come from the name Naṣr, borne by the patron of both poets and figuring in their panegyrics? E. D. Rose agrees that this attribution took place early but supplies the lion of the poems of Rūdākī, whose fame had been lost, Ifṣān Rāzī b. ʿAbd Allāh in his Ṣafvatār entitled Muḥīmān, where he had examined some twenty copies of Rūdākī's Divvāt and only attributed a dozen ʿāṣīfān and 20 quatrains after collaboration to Rūdākī, the remainder to Ǧaṭrān. In all, according to Ross, we may attribute to Rūdākī the authorship of the following: 1. the isolated verses quoted in the Lugāt-i Fort of Asadī (ed. Horn, p. 18-19); 2. six distichs from the translation of the Kūtla quoted in the Tufkat al-Mulūb (J. R. A. S., 1924, p. 638); 3. four pieces quoted by Balḥātī (J. R. A. S., loc. cit., p. 639); 4. the 29 quotations in Shams-i Kašḵ (Maḏwān, Mirā Mūḥammad and Browne, index); 5. the famous passage in the river Mīlīyān (Naṣīf ʿArūdī, Ǧaṭrān-Maḏwān, transl. Browne, p. 33); 6. the ʿāṣīfān, No. 6 in Eche's collection (Rūdākī, der-
Sünnîdanidîcher, in N.G.W. Götze, 1873, p. 660, a poem of poignant melancholy, in which we find the name of the 
in ‘A’wâfî’s Lâhîb al-Ma’âlkî (ed. Brown, index), 8. the very beautiful baccal poême of 94 
lines written by F. D. Rose and Mirzâ Muhammad Kaywînî, publ. in T.R.A.S., 1892, 
p. 213 sqq.). Some have said that Râdîk is the oldest poet of Irân, although we know of 
precurors at least half a century earlier. His biographers say that he knew the Korân by heart 
and wrote verses in his eight year. In any case, his knowledge of the language is evident from the 
many quotations from him in the Persian litterators (the Lâhîbî-Fûrs quotes him oftener than 
any other poet). Hâfizî Khallîa credits him with a philological work (Tâdîf al-Ma’âlîqûr & Lâhîb 
al-Fûrs). One of his verses shows his acquaintance with Arabic poetry. Shams-i Qâla (Muqâm, p. 88) 
makes him the inventor of the rubûl [q.v.] but does not assert it definitely. Râdîk holds a place 
of honour in the panegyric (the genre of Persian poetry of which the oldest examples have survived). 
Later poets recognize him as a master of it (Nafîsî, p. 597 sqq.); he is distinguished for his sincerity and 
dignity. In the rubûl [q.v.] ‘Unurq admires his simplicity. He was an innovator and excelled 
in baccal poetry, notably in the already mentioned poem (No. 8.), a subject later taken up by Mirzâ 
[q.v.]. He is remarkable for his original similes and paints nature vividly in various aspects. There 
are a number of proverbs (Nafîsî, p. 612) in the verses attributed to him; other lines are pity 
expressions of a moral character. Some later poets inserted verses by Râdîk among their own (Nafîsî, 
p. 616). Mu’izzî [q.v.] even tried to imitate the famous poem on the Mâlyân (No. 5), according to 
Nîzâm ‘Arûfî who, quoting the later piece, proclaims the superiority of Râdîk (Câhîr Ma’âlî, 
transl. Brown, p. 35-36); at a later date on the other hand, this poem is vigorously criticised by 
Dawlatîsh (cf. E. G. Browne, Lit. Hist. of Persia, ii, p. 16) which clearly shows the 
acquisition of literary taste.

HENRI MAES

RUDHRWAR, a district in al-Dîbâl (Media) south of Mount Alwând, halfway between Hamâshân and Nihâwân. According to Ibn al- 
Fakîh, it was a valley in the district of Nihâwân, which was three farsakhs in length and 
formed one of the most pleasing spots in the Sasanian empire with its 93 villages all linked 
up one another by an uninterrupted stretch of orchards and perennial streams. The principal 
product was a world renowned saffron which was exported through Nihâwân and also through 
Hamâshân. There also grew there as a result of the mild climate in the shelter of the mountains on the north, 
grapes, pomegranates, walnuts, almonds, apples, pears and other fruits. According to al-Iskâfî,

the pulpit mosque of the district was in Karadj, 
known as Karadj Rûdhrwâr to distinguish it from the same place near Isphân, Karadj Abî Dulâm. 

Bârî Khâni in 495 (1010–1012) went from Rûdhrwâr via Marjîl Khânstân to Sâwâ (Ibn al- 
Ahdîr, s. 137). Hâdî Abû al-Mustawfi calls the district Rûdhrwâr with the towns of Sârân and 
Fârîn. On modern maps it is still found under the southern base of the Alawand, as Tschër at 
which the district is now called, a little farther south.

Not far from the village of Rûdhrwâr, i.e. 
presumably of Karadj, was a village called Muâshân 
(al-Salâyîd al-Murâqî, Tâdîf al-’Arâzî, Cairo 1307, 
vii, 178; P. Schwartz, Iran im Mittelalter, v, 552).

The present ruins of Rûdhrwâr (De Morgan, 
Mission en Perse, ii, 136) are certainly those of 
Karadj, capital of Rûdhrwâr (Le Strange, East 
Caliphâ, p. 197, note 1).

(E. HONIGMANN)

AL-RUDHRWARAN ŻAIKH AL-DIN ABU SHU’IY MUHAMMAD B. AL-HUSAIN B. MUHAMMAD B. ABU 
ALLAH B. IBRAHIM, an Abu’l-fâzîl vizier. Rûdhrwârân was born in al-Ahwâz in 357 
(1045–1046); his father Abu Ya’lî al-Husain, who had died just as he was about to take over 
the vizierate to which he had been appointed by the Caliph al-Kâ’im [q.v.] (460 = 1067– 
1068), was a native of Rûdhrwâr, a little town near Hamâshân. He studied in Baghdaï under 
the direction of Shâhî Abu Isfahân al-Shârârî 
and in 471 (1078–1079) was appointed vizier by the Caliph al-Ma’âkîdî but dismissed after a short 
period of office. After the fall of ‘Amid al-Dawla 
b. ‘Ushîr [see Ibn EIAFFA 2], al-Ma’âkîdî again 
gave him the vizierate in Shâhân 475 (Dec. 1083– 
1084), and this time he held office for several 
years. In Safar or Rabî’ I, 484 (April or May 1091) 
he was dismissed at the instigation of the Sâlîdî 
Sulaymân Malîkshâh [q.v.] and retired to Rûdhrwâr. 
From there he went in 487 (1094) on the pilgrimage 
to Mecca; in the vicinity of al-Rasûlî however, 
the caravan was attacked by Beduins and al- 
Rûdhrwârân is said to have been the only one 
who escaped. He then settled in Medina where he 
lived till his death in the middle of Dhu’l-Qa’dâ II, 
488 (June 1095). He was buried on the Bakrî 
al-Ghûrād near the tomb of Ibrahim, the son of 
the Prophet.

Al-Rûdhrwârân is praised by eastern historians 
not only for his piety and devotion to duty, but 
also for his eloquence and poetical gifts. He wrote 
among others a continuation of the Tâdîfîrûb 
al-Umân of Ibn Miskawaih [q.v.] (Dâ‘îl al- 
Tâdîfîrûb al-Umân) containing the years 968–989 
(997–1009), edited and translated by Amedros 

Bibliography: Ibn Khallîkân, Wafâyât 
al-Râ’în (ed. Wustenfeld), No. 712, transl. de
RUDJU (A.), return in the neo-Platonic sense, forms the main subject of the apocryphal "Theology of Aristotle". The question deals mainly with the individual soul, who has descended or fallen into this earthly world of bodies but are purified by knowledge and who return to their original home, the spiritual world, either in an essential condition or after separation from their bodies by death. Mooț is used alongside of rođu; the verbal forms from rauđa are frequently employed; connected with these we find a number of expressions, sometimes related in meaning and sometimes giving a closer definition. The Arabic translators of the "Theology" took their terminology in part from the ḫara and sacred tradition; we must however here confine ourselves to the neo-Platonic meaning and its reception into Islām.

In a certain sense the doctrine of return is a counterpart of the theory of emanation (cf. the article faid in the Supplement). Everything comes from God and returns to him! Logos and (soul) mythos are, however, more interwoven here than in the doctrine of faid. There is a general presupposition of the purely spiritual substantiality of the intelligent soul (nafs nāsiha) and of its immortality, which has not only a philosophical foundation but is supported by appeal to the age-old cult of gods and ancestors (see "Theology", ed. Dietrich, p. 170; Ḫorhē and Pythagorean traditions and views of Socrates, Plato and Aristotle are combined and harmonised.

Let us begin with an outline from the "Theology" (p. 4-8 and pačis). The human, i.e. intelligent soul does not feel at home in its association with an earthly body. Lying in the filth of matter, it longs for return to its pure origin. It was once a part of the elevated world soul produced by God through the intermediary of the intellect (rađa). So long as it was in the world-soul its place was in the centre of the all. The world-soul has a two-fold countenance: on the one side directed upwards, it looks to the rađa and by it to God; on the other it turns to the corporeal world which emanated from it and is guided by it (cf. "Theology", p. 20). If so far as the world-soul has caused the corporeal world, it knows its product, but as a spiritual being, it always remains within itself. It is however possible that parts of the all-soul may turn more deeply to the worldl, form an idea of it and demand to be united with it. This is the cause of the descent or fall of the individual soul (hukāh; also moṣū, ḥanān, sanānī etc.; Greek σαμαστική) but as every individual soul partakes of spiritual being and immortal life it can never fall completely (cf. p. 132): in part it remains with itself in the upper world, in part it combines with the corporeal world and in part it wanders in and forth. Such migrations of the soul are naturally to be interpreted in the spiritual sense, i.e. independently of time and space.

The descent of the individual souls differs very much in degree. The deeper it sinks into matter, the more it forgets its heavenly origin. If it gives way to its passions and desires, it cannot rise again to its origin, and even after the separation from the body by death, only with great difficulty, but the souls that turn away through asceticism from the sensual world, prepare themselves by good deeds and — this is the most important — purely and perfectly by love and knowledge, can, either in ecstasy ("Theology", p. 8; cf. thereon Massignon, Textes inédits, p. 134 sqq.) or after death raise themselves to their origin (mawfuṣ, ṭayyārīn; ṭaḥābāt = Greek ἁρμοδίως), where they see the rađa and through it God himself in light and beauty. Plato had already spoken of this elevation (e.g. Republic, viii, p. 517 B: τὸν τινὰ τῶν σωτῆρ τῶν θεόν τοῦ θεοὺς. According to the "Theology", p. 10 sqq., Herakleitos, Empedocles and Pythagoras also urged the soul to this ascent; the Ḫibwtn al-Ṣałaḥ and Proclus, the astronomer, and interpreted the ascension of Christ and Muhammad’s journey to heaven (mawṣūf) in a spiritual sense. Muslim philosophers and mystics did the same.

After what has been said, it is evident that the elevation (ṣān) of the soul to its origin (‘ilā l-rađa) can be called a return. It is more closely defined as a return to its interior, to its own being (‘ilā dā‘itha). It is man entering into the self, a becoming conscious of one’s own self, not a losing of being, not a destruction. The speculative mystics in Islām went a great deal farther in this direction.

According to the "Theology" (p. 18 sqq.), the return to the origin or being cannot only be a state (dā‘) of the soul, not of the mind. The ṣān remains by itself and therefore never needs to return to itself; thinking, thinker and thought are always one in its being. When in the Libr de causis (ed. Bardenhewer, § 6, cf. § 14) a return to its being is predicated of the rađa, this can only be interpreted as an uninterrupted self-consciousness. So far the doctrine of the fall and return of the soul can be presented as fairly uniform. It shows a pessimistic conception of the life of the soul in combination with the body. But it also finds an optimistic interpretation ("Theology", p. 10 sq.). With Plotinus it is observed that Plato talks another language in the Timaeus (cf. p. 28 a–b) from that of the Phaedrus and Republic. According to the Timaeus, God created this beautiful world and equipped it in his great goodness with mind (ṣān) and life (‘ilā-sul). Not only has he sent the all-soul into the world but also our (part-)souls so that the world may be as perfect as possible. If the individual soul can only conceive the sensual world correctly, i.e. as the image of the intelligible world, its combination with the physical world will not be a misfortune for it. Both worlds have come from God, the pure good. The only question is, what is the purpose of the soul in this world.

To this the "Theology" answers (p. 43 sq.) that the union of the soul with a body is not a final aim for the individual soul. In any case, union with the world soul and the contemplation of the rađa and of God gives it a higher bliss for which it longs, but first of all it has to prepare itself for this. It is a divine task. If it descends into the corporeal world, it receives strength from above to form and guide a body. Provided it does not sink too low, it derives advantages and knowledge from it. Its previously dormant strength and the nature of this new become known to it. This is its very purpose, that it should come to know itself and its origin. The journey through the corporeal world is for it a course of training. Therefore (p. 80) the individual soul should not be blamed for leaving the spiritual world and coming into this world to
adorn it and to reveal its own nature. After it completes its work it returns to its origin.

Both expositions of the fate of the soul, pessimistic and optimistic, have influenced Muslim thinkers. With the gnostics, the Ikhwan al-Safa' and many mystics, pessimism predominates, while from Farabi onwards the philosophers are more inclined to optimism. It is to be noted that the terminology of the "Theology" was only partially adopted. Rudī, for example, is found only when from the context neo-Platonic influence can be deduced; but it did not become a proper technical term. In place of rudī and murūfī we usually find maʿṣūd and vàṣūr which are explained as return in the neo-Platonic sense.

That the teaching of the Ikhwan al-Safas turns almost entirely on the spiritual substantiality of the soul and its immortality is well known. Goldscheider has often and expressly pointed this out (e.g. Vorträge, p. 51, 163 and Koranauslegung, p. 183 sqq.). The third part of their encyclopedia is wholly devoted to the soul (on maʿṣūd, especially raṣūl 32 and 38 sqq., Bombay ed.). The 38th treatise is entitled: Fi Ḳaląt wa ʿin-Nuṣr ʿan ʿl-Qiyām; these are three synonyms for resurrection, here interpreted in a spiritual sense. But in other parts of this work also (1. 3; II. 27–29; IV. 43 sqq.), there is much to the point. The famous passage in the "Theology" on the Plotinian ecstasy (I. 3, p. 69) is quoted, and the pseudo-Aristotelian "Book of the Apple" modelled on the Phaedo of Plato is mentioned (IV. 2, p. 110 sqq.). The value of life in the world is, it is true, sometimes recognised but the misery of the wandering soul is more strongly emphasised. It is frequently pointed out that the weak souls cannot help themselves, that they require advice and instruction from prophets and philosophers in a community of life and belief so that they may be put upon the right path of return. The principal thing is the gnosis, for what food and drink are to the body, knowledge and wisdom (fīlm and hikma) are to the soul (II. 27, p. 313 sqq.). Like the physician Rāzi and the philosopher Kindī the Ikhwan chose the Socrates of Hellenistic tradition as their first leader; he is however not the only one. The individual souls require many philosophers and prophets and also living guides (generally a late Hellenistic principle). With their help the good, wise soul advances to union with the world soul and through this with the ʿašī and God. The union of the individual soul with the world-soul is the minor resurrection (khiṣṣa); the major resurrection takes place when the world soul separates itself entirely from matter and returns to the higher world of the spirits and of God (cf. T., de Boer, Wijzelezen in den Islam, Haarlem 1921, p. 77 sqq., esp. p. 98 sqq.).

The doctrine of the maʿṣūd became more complicated after the theory propounded by Farābī and more clearly developed by Ḥasan ibn al-ʿĀṣim. The ten spirits of the spheres (ḏuʿāhī). The individual souls endowed with intelligence, according to this, do not descend from the world-soul as parts of it, but they are, like the bodies of the earthly world, products of the last spirit in the series of emanation, i.e. of the ʿašī faʿāl. The purified soul longs for this spirit and its return is in the first place to it. Its longing goes further, to come as near as possible to God and to become like him, so far as it is possible for man. The philosophers are distinguished from the speculative mystics by the fact that from Farābī to Ibn Rushd the first question they put is: How is the union (tistiṣāl) of our soul with its origin (the ʿašī faʿāl) possible? The mystics, on the other hand, however differently their inner states and stations are described, desire nothing else than becoming one with God himself (tistiṣāl).

According to Farābī, the soul finds its return by the way of right knowledge and pious acts, but knowledge is esteemed more highly than deeds. Deeds remain in the world but knowledge enters into the spirit [cf. the article 'AMAL in the Supplement].

With the doctrine of the ecstatic conditions of the soul Farābī combines in exemplary fashion his prophetic philosophy, especially in the "Model State", a copy of Plato's republic, but interpreted in the cosmopolitan spirit of the Stoics. This turns upon the harmony of religion and philosophy. The agreement is based on the fact that they both come from the same source: the difference is explained by the fact that the souls of the prophets and philosophers take up different attitudes. In their ascent in the ecstatic condition to the ʿašī faʿāl the soul of the prophet receives revealed truth through its imagination, while the soul of the philosopher receives illuminating wisdom through its intellect. But the truth is one and the same, so the philosophers down to Ibn Rushd and Ibn Sab'īn (vith vith century), teach, and many mystics are of the same opinion. Cf. Farābī, Abhandlungen ed. Dieterici, p. 69 sqq. and Musterstaat, p. 46 sqq.

According to Ibn Sīnā's "Division of the Sciences of the Mind" (Ibn al-ʿUlamaʿ al-Ḥāfiẓya in Ti Kitabī, Constantinople, p. 76 sqq.), metaphysics (with Aristotle here called Theology) presents in its fundamental parts (mawdād) among other things the theory of emanation, but on the other hand deals with the doctrine (ilm) of maʿṣūd along with prophethood as derived or applied parts (fawāʾīl). This means that the theory of faṣīh possesses a higher place than the doctrine of the return.

Ibn Sīnā here again supports Farābī. More definitely than the latter he adopts the neo-Platonic doctrine of the spirituality and immortality of the soul. This is not merely the form of its body, as Aristotle taught, of course inconsistently, but a spiritual and therefore indestructible substance. Against Plato and Pythagoras it is asserted that it has no pre-existence in the world-soul and does not migrate from one body to another. The ʿašī faʿāl gives (presumably from an inexhaustible supply) a suitable soul to each body that is sufficiently prepared for it. In a sense one can say that it has come into existence, but it will never perish. Farābī was, as Ibn Tufail (Ḥaṣīr, ed. Gauthier, p. 14) remarks, somewhat undecided in his opinion on the return of all souls, even of the wicked, Ibn Sīnā, on the other hand, not; but both interpreted the rewards and punishments in the next world in a spiritual sense as well as in the case with the Ikhwan al-Safas. It is also to be noted that Ibn Sīnā, especially in his mystical writings, uses terms of a more Şīfī character than Farābī.

Ghāzīl took over from the philosophers just mentioned the doctrine of the spirituality and immortality of the soul, without however, at least in his principal works, drawing from this its logical spiritual deductions regarding the next world. In his Tahāfsūt (ed. Bouyges, p. 344 sq.) he defends
the orthodox doctrine of the resurrection of the bodies on the last day, while in his esoteric writings he speaks in allegory after the Sufi fashion (cf. Ibn Rushd, in *Tahafat al-Tahafat*, ed. Bouyges, p. 330 sqq.). Ibn Rushd therefore accuses him of contradiction, defends the philosophers and observes that the Sufis believe in a spiritual return (ma'bud rūḥānī) and are still regarded as good Muslims. But what is the personal opinion of this philosopher? It looks as if he hesitated to come out with his real opinion. It must therefore be sought in his larger works on metaphysics and psychology which have not yet been sufficiently investigated. But it is often very difficult to say where the commentator on Aristotle stops and the philosopher begins. This much may safely be said that Ibn Rushd more than Fārābī and Ibn Sīnā regards the soul as the form of its body. With its spiritual substantiality and individual immortality would disappear.

(T. de Borch)

**Rūḥ.** [See Nāṣr.]

**Rūḥ b. Ḥātim b. Kādīya, governor of Iṣṭīḵya,** was appointed to this high office by the caliph ʿĀ'id al-Raḥīf in 171 (787). Under al-Mansūr he had been bāḥīlī, then governor of al-ʿĀṣīr; he was appointed by al-Mahdi successively governor of al-Kūfah, Sind, Ṭabaristān and Palestine. He must have been advanced in years when ʿĀ'id al-Raḥīf sent him to Iṣṭīḵya in the year after his accession to the throne. He belonged to the family of al-Mahallah, which had already sent two governors to the same province and was to supply two more after him. “It seems that at this period the caliph thought of entrusting the affairs of Iṣṭīḵya to a vasal family” (Vonderheyden). The government of the Muhallabids which preceded that of the Aghlabids, was very successful. The rebel Berbers appeared to be finally overcome and the Kādīya agitation was suppressed; so satisfactory was the position that Rūḥ b. Ḥātim when he reached al-Kātibah in Raʾīfah 171 (Dec. 787—Jan. 788) had no serious difficulties to face. Besides, he had brought with him new contingents of the qandāla, 500 horsemen, who were joined soon after by 1,500 others brought by his son Kādīya. For the three years of his governorship, the country was peaceful. Rūḥ even succeeded in concluding a peace with ʿAbd al-Wahhab [q. v.], the Rastamiş ṭāfir of Tāhir. The authors who are our authorities upon him, notably Abu ʾl-ʿArabī and Ibn ʿIthārī, make special mention of his generosity, his stoicism in face of adversity and of his skill in disarming his opponents. As he was showing signs of senility, the postmaster and a kāhid of the province requested the caliph to appoint a successor to him secretly, who would take his place if necessary. Following their advice, Ḥātim al-Raḥīf appointed Nāṣr b. Ḥālim. Rūḥ b. Ḥātim died on 10th Ramadān 174 (Feb. 3, 791), and his son Kādīya was formally recognised as his successor in the great mosque of al-Kātibah. But the postmaster and the kāhid informed Nāṣr, the governor designate, and Kādīya had to give way to him.

**AL-RUḤĀʾ.** [See ORBA.]

**Rūḥi, the maṭhūr of the historian,** whose work was until 1925 known only from the references in *ʿAlī’s* [q. v.] *Kahf al-Ruḥīf* and in Mīnādī’s *Dirāṣāt* [q. v.]. J. H. Mordtmann (*M. O. G.*, ii. 129 sqq.) was the first to identify by conclusive arguments several manuscripts of the anonymous original work. They tell us practically nothing about the personality of the author and it is only a hypothesis (cf. F. Babinger, *Die frühromänischen Fahrburcher des Urudus*, Hanover 1925, p. xiii.) that connects the historian Rūḥī with a certain Rūḥī Fāḍi Efendi who, like Muḥyī al-Dīn Djamālī (cf. F. Babinger, *G. O. W.*, p. 72 sqq.), was a son of Zennībīl ʿAlī Efendi, distinguished himself as a poet and died young, in 927 (1528) it is said. As he is also called Rūḥī Efrendwī, i.e. Rūḥī of Adrianople, this hypothesis may be correct. But elsewhere (cf. Schöf, *Teğhirer*, p. 127), this Rūḥī Fāḍi Efendi is said to have been born and to have died in Stamboul.

The history of Rūḥī entitled *Tawārīḵ-e Alī* is written in a simple style and divided into two parts (bism). The author calls the first *maḥāl*, i.e. beginnings, the second *mazābīd*, i.e. elucidations. The first part falls into two sections of a general nature, the second contains eight chapters each of which describes the reign of one sultan. The chronicle was written in the reign of Bayezid II (1481—1512) and ends in 917 (beg. March 31, 1511). Rūḥī’s work has not been further investigated nor is there a critical edition of the text, which could easily be prepared from existing old and good manuscripts (Berlin, Oxford, Aligrest, cf. F. Babinger, *G. O. W.*, p. 43). It is clear however that Lutfī Fasāḥ’s [q. v.] Chronicle is dependent on that of Rūḥī.

**Rukan al-Dawla.** Abū ʾl-ʿArabī b. Ḥasan b. Byya, second in age of the three brothers that founded the Ḫūṣūd dynasty [q. v.]. His fortunes followed those of the elder brother Abū l-ʿImād al-Dawla [q. v.] up to the latter’s occupation of Ḳāṣf in 322 (934); Rukan was then given the governorship of Ḳāṣārta and other districts. But shortly afterwards he was forced by the ʿAbbadid general Yūkīt, at whose expense the Ḫūṣūd conquest of Ḳāṣf had been made, to seek refuge with his brother; and when Yūkīt was in turn defeated by the Ziyārid Mardawīdī [q. v.], the Ḫūṣūd’s former overlord against whom they had revolted, ʿImād, who then found it advisable to conciliate Mardawīdī, sent Rukan to
him as a hostage. On Mardâdji's assassination in the following year (323 = 935), Rukn escaped and rejoined 'Imâd, by whom he was supplied with troops to dispute the possession of the Diqân with Mardâdji's brother and successor, Washghir. Rukn succeeded at the outset in taking Isfahân; but the first round of his contest with Washghir ended in Rukn's ejection from that city in 327 (939), when he again fled to Fârs.

In the next year Rukn's help was sought by his younger brother al-Husnîn [later Mu’izz al-Dawla [q.v.], who had meanwhile set himself up in Khuzistân against the Barûdis [q.v.], whereupon Rukn, being already possessed of no territory attempted to take Wâsit but was obliged to retire when the caliph al-Râfiq [q.v.] and the amir Badjîm [q.v.] opposed him. Almost immediately afterwards, however, he succeeded in recovering Isfahân, owing to Washghir's championship of Mânîk b. Kâkîy in a quarrel with the Sâmânî Nâṣr b. Âhmad [q.v.]; and when the latter ruler died in 334 (943), Rukn, who had meanwhile supported the Sâmânî cause, was able to drive Washghir as well from al-Raiy, of which he had momentarily regained possession on the retirement of the Sâmânî general Ibn Muhûtîd.

With al-Raiy Washghir gained control of the whole Diqân; but for two short intervals (of about a year in each case) retained it for the rest of his days. Up to 344 (955–956), however, his position was highly precarious. For not only Washghir, but also the Sâmânîs continued to challenge it. It was only by playing them off against each other and sowing dissensions between the Sâmânî princes and the officers they sent against him that Rukn was able to maintain it. Even so (as indicated above) he was driven from al-Raiy, and his representatives were expelled from most parts of the province, once in 333 (944–945) and again in 339 (950–951), in each case by Sâmânî forces. Indeed he was obliged in the end to become the Sâmânî tribe's tributary (at least for two agreements for the payment of tribute being recorded); it was on this basis that he first made peace with them in 344 (955–956) as again in 361 (971–972). In the course of his long contest with Washghir, who, until he was killed in an accident in 357 (968) never ceased to intrigue with the Sâmânîs against him, Rukn on several occasions invaded Tabârânî and Gurghû, but was unable to incorporate these provinces permanently in his dominions. And though in 337 (948–949), after he had defeated an attempt on al-Raiy made by the Sâlûrî Marsûb b. Muhâymad, whom he took prisoner, he gained control of southern Ghurabîdân, his ejection two years later from al-Raiy itself [see above] naturally cost him as well.

Rukn received his lành simultaneously with his brothers in 334 (945–946), on Mu’izz’s entry into Baghdad; and on ‘Imâd’s death in 338 (949), succeeded him as head of the family and amir al-awliyâ’ (though this title was also held by Mu’izz). The last two years of his life were rendered unhappy — so much so that he was rescued from the shocks produced by the news — owing to the conduct of his son, ‘Adud al-Dawla [q.v.], in taking advantage of an appeal for help sent by Bâktîyâr [q.v.] (son of Mu’izz and his successor in the rule of al-‘Râfî), to imprison the latter, and, in conjunction with Rukn’s own wârîf

Abu ‘I-Fâth Ibn al-‘Amîd [q.v.], who had been sent likewise with a force to Bâktîyâr’s aid, to seize that province for himself. And though ‘Adud obeyed his command to release Bâktîyâr and return to his government in Fârs, Rukn was only with difficulty persuaded to visit ‘Adud in 365 (975–976) at Isfahân, in order that by receiving a confirmation of his appointment as amir, he should succeed without dispute. Rukn died at al-Raiy in Mahbûrân of the next year (September 976).

Rukn al-Dawla was fortunate in his employment of the remarkable naṣîh Abu ‘l-Fâdîl Ibn al-‘Amîd [q.v.] from 329 (941) for thirty years until his death in 359 (970), though, as that minister himself complained (see Miskawah), he was prevented by the prince’s lack of royal blood and of culture from governing properly. Rukn (so he said) was in fact no more than a predatory soldier, who could secure the allegiance of his supporters only by means of largesse, and was not able to forge revenue in the expectation of subsequently increasing its yield. On the other hand he is said to have been just and humane towards his troops and his subjects, and gave proof — especially in connection with the episode of ‘Adud al-Dawla mentioned above — of a tender sense of honour.

RUKN AL-DIN, SULAIYKIN II b. KILID ARSLAN II, a Saljuq ruler in Asia Minor. His father Kilid Arslan b. Mas‘ûd [q.v.] in his old age divided his kingdom among his many sons. The consequence of this was that the latter set up as independent rulers and began to fight with one another so that at his death in Şam bât 388 (Aug. 1102) complete anarchy reigned. In the course of time however, Rukn al-Din brought the whole kingdom under his sway. Kuth al-Din Malikshâh who had received Siwâs and Aqgersâr, began by attacking his brother Nûr al-Din Mahmûd, lord of Kaysarî. The latter was killed and Kaysarîa was lost to Kuth al-Din. On the latter’s death Rukn al-Din who ruled in Tokat (Dêkûa), attacked Siwâs and took possession of it. He next seized the two towns of Aqgersâr and Kayserîa. After some time, he turned against his other brother (Chîyâth al-Din Kâhlüsawr in Konya and laid siege to him. The latter had to give in and ceded his territory to his brother. In Ramaçân 397 (June–July 1201) Malatya which belonged to Mu‘izz al-Din Kâshgârî b. Kilid Arslan was captured. Erzerûs was the next to pass to Rukn al-Din. When the latter’s troops approached, the governor there, ‘Alî al-Dîn î b. Malikshâh, the last of the Saltukids dynasty, began negotiations by which he was surrendered to Rukn al-Din who gave it to his brother Tughlîshâh. Another brother, Muhyi al-Din, who had obtained Angora when the kingdom was divided, long resisted. Rukn al-Din’s last for conquest, and only after a three years’ siege found himself forced to capitulate when supplies were completely cut off, but was promised suitable compensation. Rukn al-Din promised him...
a fortress in a remote part, but laid an ambush for him in which he was attacked and killed as he left the town. Soon afterwards however, Rukn al-Din (fell ill and died before the news of his brother's murder reached him. He was succeeded by his son Khalid Arslân III (q.v.). Ibn al-Athir's (xii. 128) gives the date of his death as the 6th Dhu-l-Ka'da 600 (July 6, 1204); according to another statement (xii. 59) however, the surrender of Angora and the death of Rukn al-Din did not take place till 609 (1204–1205).

Ibn al-Athir describes Rukn al-Din as a strong and vigorous ruler; he is said to have held certain heretical views (madhhab al-jāfūf) on religious matters which, however, he concealed from fear of his subjects.

RUKN AL-DIN. [See BAI RAYS, BAKIYADU, ZUMAL-ROY, KUIJU-ARXN.]

RUKNABAD (or Rukn al-Din: the water of Rukn al-Dawla), a canal (bund) which runs from a mountain (called Kula; P. Schwerz, Iran in Mittelalter, ii. 48, No. 7) about six miles from Shiraz. Enlarged by a secondary canal, it follows for a part of the way the road from Isfahan to Shiraz. Its waters reach as far as the vicinity of the town towards the end of spring in which Haft is buried, when they are not entirely absorbed for irrigation purposes. According to Hassan Fashi's (Firuzabad Nastri, part ii., p. 20), "all the waters of the plain of Shiraz are conveyed by subterranean channels except the water from the spring of Djoghak... The best waters are those of the Zangh and Rukn canals... The Kāmil-i Rukn (i.e. Ruknabad) was made in 1318 (1299–1300), one and a half farshaks N. E. of Shiraz by Rukn al-Dawla Haasan the Dālamī, [cf. stāvar]; its water rise in the ravine of Tang-i Allah Akbar a mile north of Shiraz; it is the water of the Murshid (q.v.)."

In the fourteenth century, Ruknabad is mentioned by Ibn Bahtūz and by Hazīr Muntawī Kāzwīni (Nasbat al-Rukn, transl. The Strange, in G.M.S., p. 112; "the water comes from subterranean canals and the best of that of Ruknabad"). But it is to the poet who that this canal really owes its fame. In the eighteenth century, Sādi declares himself charmed by the land of Shiraz and the waters of Ruknabad (Kalilah, Calcutta 1874, fol. 299, l. 4). In the following century, Usā'īr Zākānī sings, "The serpentine which flows from al-Musallay and the wave of Ruknabad removes from the stranger the memory of his native land" (text quoted by K. G. Brown, who finds in it an echo of Sādi's, Persian Lit. under Tarkh-Dominion, p. 238). Haft: in particular immortalised Ruknabad in his verses: "Fare out, cup-bearer, the wine is left, for in Paradise thus shall find neither the stream of Ruknabad nor the promenade of al-Musallay (ed. Khalaj, Tashcan 1306, No. 3, v. 7)"; "Peace and the wave of Rukn and the sweet breeze of the serpentine, bewail them not, for they are the pride of the universe" (ibid., No. 35, v. 7); "The serpentine which flows from al-Musallay and the wave of Ruknabad will never allow me to depart" (ibid., No. 168, v. 9); "May God a hundred times preserve our Ruknabad, for its limpid waters give life along as that of Khišr" (ibid., No. 277, v. 3), and in a piece which may be apocryphal (ibid., part 2, No. 71): "The water of Rukn, like sugar, rises in al-Tang (i.e. Allah Akbar)". According to later writers, Ruknabad, which Ibn Baṭṭūṭa called a great water-course (al-madhhab al-kabīr), gradually dried up. Among the notable travellers of the xviith century, Chardin, almost alone in mentioning it, saw only a large stream and gives Ruknabad the fanciful meaning "Ruknabadat, vein of filet de sucre" (Voyages, ed. Langlès, viii. 341). At the end of the xviith century, W. Franklin praises the sweetness and clearness of the waters of little stream which to the natives attribute medicinal qualities. At the beginning of the xixth century, Scott Waring notes that its breadth was nowhere more than six feet. Kez Porter observes that the canal has become choked up through neglect. The Kalān manāch deplores the disappearance of the groves that surrounded it. At a later date we have the same observation by Gobineau ("Cet onde poétique me m'apparut sous l'aspect d'un trou bourbéux"), Curzon ("a tiny channel filled with running water") and Sykes ("a diminutive stream").

The Fīrūz-ābād Nāṣīrī mentions a second Ruknabad in Farṣ: "the source of the warm stream of Ruknabad is part of the district of Bilqeez-El (Lariān); it is over a farshak north of the village of Ruknabad; having a bad flavour and an unpleasant smell, it is of no use for agriculture; it cooks in a few minutes. Eggs put into it; one can only bathe in it at some distance from the spring." (ii. 318 middle and 268).

RUM, the name in Persian and Turkish for the Byzantine empire. Rum means the land of the Romans (Ῥωμαίοι) or Byzantines although in Central Asia Rūm is also used for the Roman empire. In course of time the conception
became narrower. While Rüm still is the old name for Konya [q.v.] and Rumelija, in the early Ottoman period Rüm comprises the district of Amasra [q.v.] and Siwâs [q.v.] while Anatolia included the so-called province with the capital Kütahya [q.v.] (cf. L. 12, x., 1920, p. 144, note 1). From the earlier name Rüm for old Hellas (cf. Jehovah=Rüm, i.e. Alexander the Great), Eastern Roman and Byzantine, it was applied in Turkey to designate the modern Greeks (also Urum) in contrast to the ancient Greeks who were called Yunanîyan or Ionians. Rüm also sometimes meant Turkey in general; cf. the expression Rüm Padişâhi for the sultan. Rüm later was used in a derogatory sense. Rüm Meşhureb was said of the Greek character, faithless, unreliable, flattering.

Cf. also Ezerem (i.e. Erzfil Rümu) and Rumelia.

FRANZ BARGENSE.

RÜM KAL'À, a fortress in Northern Syria. According to Arnold Nöldeke's description, it is situated "on a steeply sloping tongue of rock, lying along the right bank of the Euphrates, which bars the direct road to the Euphrates from the west for its tributary the Maristan as it breaks through the edge of the plateau, so that it is forced to turn a curve northwards around this tongue. The conical hill spread out this tongue of rock, some 1,300 feet long and about half as broad, and the plateau which rises above it is broken by a ditch made by man about 100 feet deep. The walls of the citadel with towers and salients follow the outlines of the rock along its edge at an average height of 150 feet above the level of the Euphrates, while the ridge extending along the middle of the longer axis rises 100 to 120 feet higher." (A. Nöldeke, in Petermanns Mitteil., 1920 p. 53 sq., where the main road up to the citadel, the buildings etc. are also described).

The unusual position of the fortress on a high cliff suggests that it corresponds to the tower of Sittmarat "hovering like a cloud in the sky" which Salamanasar III took in 855 B.C. (F. homann, art. Syria, in Pauli-Wissowa, K.E., iv, A., col. 1569, 1592).

While Th. Nöldeke (M. G. W. Gtin, 1876, p. 12, note 2) wished to distinguish Rüm Kal'a clearly from Osma and identify with the former place the modern Orum, Hürn on the Euphrates, above Balikes, Urma is now generally identified with Rüm Kal'a (Marnier, B. Moritz, Cuvonin, Dussaud etc.). The name of the old bishopric of Urma last appears in Matthias of Edessa (ed. Wahab, 1958, p. 323): in 561 Arm. (1112-1113 a.d.) the Armenian Kogh Wasil returned to Tankerd of Artioch the lands of Harm Mar, Thorsh and Urem, which he had taken from the Franks. The first two are Hiş Amur and Trab (Turkish) and Uremm is Urma (Hist. ar. des croisades, Docum. arm., i. 102; J. Markwart, Sürdârûnî and the Tigrişquellen, Vienna 1930, p. 182, note 1 of p. 177). The Syriac chronicles record (Mich. Syr., iii. 199; Barhebraeus, Chron. syr., ed. Beijer, p. 279) that the Kogh Basil or after his death Kurthig, who acted in governor for his widow, held the towns of Kajûm, Ra'hân, Behbensî and Ka'a Rômâna. It is very likely that the latter, the Syriac for Rüm Kajûm, here corresponds to the Kajum of the Armenians, which is later in Armenian always called Hromak and by similar names.

Rüm Kal'a later belonged to the county of Edessa. The metropolitan Abu 'l-Farajihb. Sham-

mnem of Edessa, who after the second capture and destruction of this town by the Turks in 1146 escaped to Samosata, was imprisoned for three years in Rüm Kal'a by Joscelin; he then wrote several narîsî "with an account of the events" which caused his imprisonment (Mich. Syr., iii. 277; Bauml, Gesch. der syr. Literatur, Bonn 1922, p. 293).

At the request of an Armenian of Kal'a Rômâna named Michael in 1148 Beatris, widow of Joscelin II of Edessa, and her son demanded that the Armenian Catholics Grigor III Pahlavan shoued move his residence to the "fortress of the Romans" (Arm. Hromak) which belonged to their territory, the former county of Edessa (the capital of which since the fall of al-Rahah in 1145 had been Tall Bâshir). The Catholicoi had lived since 1145 in Cowk ("little lake"), i.e. the fortress of Kal'at Soûf in the Djabal Sa'if (Soûf) to which Bait al-Din Manqûlâd al-Ainî fled in 803 (1400-1401) from Timurlenek (Quatremeron, Histoire des Sultans Mamelouks de l’Egypte, ii., 1840, p. 227), and recently visited by Hausknacht, as is evident from Armenian sources which mention the "little castle of Cowk in the region of Tilkâ" (Daliak, Topikaç. (Papken G. W. Gûlseren, Couvent des Carmes Theணî, Arménie, une historique-topographie Studie [Armenien], Vienna 1913, p. 33-44; Markwart, Sürdârünî, p. 18 sq., still wrongly identified Cowk with Gollûk). The Catholicoi obeyed the demands and in 1145 purchased the fortress of Rüm Kal'a from the Franks but it is said to have shown ingratitude to Michael for he deprived him of all his possessions and drove him out of the country (Mich. Syr., iii. 297; Barhebraeus, Chron. syr., ed. Beijer, p. 317). The Armenian Catholicoi after that lived in the fortress from 1147=1148 till 1295 (Chronique du royaume de la Petite Arménie, in Rec. hist. crit., Docum. arm., i. 618, under the year 390 Arm. = 1141-1142 a.d.).

Grigor's successor, the poet Nerses IV Shnorohl, "the graceful" (patrarch 1166-1173), was called Klayeç from his place of residence in May 1170 and March 1172 negotiations concerning a church union took place between him, Theorianos as ambassador of the Byzantine emperor Manuel Comnenos, and the bishop Iwanus (Elias) of Kashnak and the monk Theodoros Bar Wahûin as delegates of the Jacobite patriarch Michael the Great, who had remained in the monastery of Mar Bar Samwîn (To he kaptolin aştî le krâmûn 4 Peçes Khashvand), in Rüm Kajûm (Syr. Kajûm Rômâna or Hrnân dhé-Rômaky, Greek Ρομαϊκα Κακου) and in Kajûm (Syr. Kajûm, Greisch Kajûmîs) (Migne, Patr. græci, cxxiii, col. 114-298; Barhebraeus, Chron. eccl., ed. Abellois, Lamy, i. 549-553 expanded in Mich. Syr., iii. 334-336). After the death of Nerses (Aug. 8, 1173) his younger nephew was proclaimed Catholicoi in Rüm Kal'a. His older nephew however induced his brother-in-law Mleh of Cilicia to obtain from Nûr al-Din a charter, on the authority on which he threw his cousin into prison and had himself installed as Catholicoi (Sept. 5, 1173 (Mich. Syr., iii. 355 sq.)). As Grigor IV (of Teghga, "the child") he was Catholicoi from 1175 till 1192 in the person of prince Wasil of Gerger, who was brother to Nerses Shnorohl. Under him in 1179 took place the audit of Hromak, at which Nerses of Lampron delivered a famous speech in which he recommended the adoption of the Chalcedonian creed (Mansi, xxii,
col. 197—206). But the proposed union of the churches fell through because Manuel Comnenos died on Sept. 24, 1180. In the same year Theodoros Ibar Wahboun, who had ascended from his teacher and godfather Michael the Great and was seeking assistance everywhere to oust him from the patriarchate, came to the Catholics in Rüm Ka’la, who welcomed him kindly and sent him to Cilicia to Leon II (Syr. Lebbuon; Armen. Lewon) of Little Armenia; the latter made him patriarch (1180—1193) of his whole kingdom (Mich. Syr., iii. 386 sqq.; Barhebræus, Chron. ecc., i., col. 585—585; J. Gerber, Zwei Breviare Barhebræi, Halle [diss.], 1911, p. 3—9).

When the emperor Frederick Barbarossa was on his way through Asia Minor, in 1185 (1189—1190) the Armenian patriarch of Ka’la al-Rum (i.e. Grigor IV) sent a letter to Saladin to ask for help; in the following year he (al-Kágithus) again sent a letter to him (Abî Shîma, Kitâb al-Râmaqdatin, in Rec. hist. or. sect., Hist. ar\.k., iv. 435 sqq., 453—455).

After the death of Grigor IV (July 1193), the Armenians made his young nephew Grigor V Manag ("the young") or as Michael Syrus calls him, Dirêka ("the clerics") Catholics (1193—1194; Mich. Syr., iii. 411 sqq.). Leon of Cilicia in 1195 had him carried off and thrown onto the fortress of Guhdara (Kupitar) where he perished in an attempt to escape. The Armenians thereupon made his predecessor’s cousin, Gregoros, son of Shahan, his successor as Catholicos Grigor VI known as Abirad ("the sounder") (1194—1203; Mich. Syr., iii. 413; Hist. or. sect., Dauon. arm., i. p. ccc.). His successors were: Hoshamêh VI of Sis (1203—1221),constantin I Baržberdê’s (1221—1267), Hakob I Khayce’s (1267—1286), Kostandin II (1286—1289) and Stephanos IV Horomkliche’s (1290—1303).

In Rüm Ka’la in the 14th century there were also many Jacobites, among whom the presbyter Isho’ (Barhebræus, Chron. ecc., i. 665) and his sons (Benêt Isho’; Barhebræus, i. 665; 673, 721, 751, 759; Yéshî’h, ibid., i. 683—685, 751, 779). The presbyter and physician Shem’son (ibid., i. 751, 757, 759, 759—760) and his two sons (ibid., i. 741) played an important part. The Jacobite patriarch Ignatius II (Rahban Dawid, 1222—1252), celebrated for his wealth, endowed Ka’la’s Rômaiya among other places with a splendid church (Barhebræus, i. 665). Later he chose this fortress as the seat of his patriarchate (Barhebræus, i. 685). He did not come out openly against the Armenian Catholics but he endeavoured as far as possible in secret to advance the Syrian church at the expense of the Armenian (Barhebræus, i. 687—689). On the other hand, we are told that at this time, when the doultu, very profitable part of the Jacobite saint Barwama was at its height in the monastery at Gargar, now Norsun Ka’la (between Malatya and Sivas), the Armenians put some "doughtiness built a monastery called after Barwama" in Rüm Ka’la and received many gifts from the people, to the occasion of the Jacobites. The patriarch Ignatius therefore resolved to build a Jacobite monastery there also and to buy a suitable site for it on the Nahêt-al-Pharamüz (Arab.: Nahêt Marsubûn, now Merzwan-Cal) from the Benêt Isho’ and also to get from them an agreement of sale by which they were to surrender any authority over the monks living there. When they stubbornly refused, the patriarch communicated them and established himself in a cave on the Euphrates but was brought back by the Armenian Catholics. Later on he fell ill and, after a reconciliation with the Benêt Isho’ through the offices of the Katholikos, died in Rüm Ka’la on July 11, 1252 (Barhebræus, Chron. ecc., i. 691 sqq.).

In 1250 Hüllâgû crossed the Euphrates by bridges of boats at Malatya, Ka’la al-Rum, Bira and Karşîyû (Barhebræus, Malikâneh Ta’îrbik al-Din, Bairit 1290, p. 486; Chron. syr., ed. Bedjan, p. 509). In the decades following, the Jacobite patriarch Ignatius III (1264—1282) had to defend his possession of the Barwama monastery at Gargar in a desperate struggle with the physician Shém’son of Ka’la’s Rômaiya; both had received or alleged they had received new charters of ownership from Hüllâgû and Abâlâ (Barhebræus, Chron. ecc., i. 753—756; ii. 439 sqq.). Later on they made up their quarrel (Barhebræus, i. 769). After the death of Ignatius III, the first patriarch Yâghê, son of Ka’la’s Rômaiya made his nephew Phrourones or Nestorius patriarch in 1283 (Ignatius IV). The latter died at the beginning of July 1292 in the monastery of Barwama (Barhebræus, Chron. ecc., i. 781); after his death the Jacobite patriarchate disintegrated and three rivals appeared in Malatya, Cilicia (Gaykût monastery) and Mûria and as a result of this permanent schism the Jacobite church sank to complete insignificance (Barwama [?], additions to Barhebræus, Chron. ecc., i. 781 sqq.).

It was perhaps not merely chance that the end of the united Jacobite patriarchate which in recent years had been closely associated with the town of Rüm Ka’la, happened almost the same day as the collapse of the Armenian Catholicate of Hrûmskyl.
RUM-KALÀ — RUMELI, RUMELIA

in Damascus (Barhebraeus, Chron. syr., p. 579). According to the inscription of ownership in a Syrian manuscript (Brit. Mus., MS. Syr., No. 295), it belonged to a certain Rabban Barzanî of Kalà Rûmâ, a high priest of Rabûn who in a note refers to the harsh imprisonment which he suffered from the Egyptians; Armenian verses on the fall of the fortress are preserved on a relic casket (Wright, Catal. syr. Miss. Brit. Mus., i. 257; Courière, Inscription d’un religieux arménien, in Mélanges orientaux, Paris 1883, p. 210, note 1; Promis, Mem. dell’ acade. di Torino, xxxv., 1884, p. 125-130). The inscription on the great gate of the citadel which was restored by al-Asgraf (cf. above, vol. ii., p. 2351) speaks of him as a victor who among other feats had put the Armenians to flight, an allusion to the capture of Rûm Kalà (van Berchem, in J. A., 1902, May-June, p. 456; the inscription published by Soherrnberg, in It., xv., 1906, p. 176). The sultan sent boastful bulletins of victory to the cities of Syria in which he proclaimed the capture of this improbable citadel as an unprecedented feat of arms and concluded with the words: *After the capture of this fortress, the road is open to us to conquer the whole of the East, Asia Minor and the Írâk so that with God’s will we shall become owners of all the lands from the rising of the sun to its setting" (al-Nuwairi, MS. Leyden, fol. 56, transl. by Well, Geoch. d. Chiffon, iv. 184, 189). The fortress of Kalà al-Rum was rebuilt by orders of the sultan by the wèlê of Syria, Sandrang Shuqai, and given the name of Kalà al-Muslimin; another part of the town was left in ruins however (Quadremire, Hist. des Sultans Mamelouks, t. iv., p. 139 sq.). The successor of the imprisoned Armenian patriarch Stephanos, Grigor VII of Anavars (1293-1307) took up his residence in Sis in Cilicia, which henceforth was the seat of the Catholics. Êm Kalà, in spite of its restoration as a frontier fortress (cf. also Abu l-Fida’s), ed. Reinsaud, p. 226; al-Dimashkî, ed. Mehren, p. 214), under the Mamlûks never seems to have recovered from the blow. In 775 (1373-1374) much damage was done by floods in Kalà al-Muslimin as well as in Halab, al-Ruhât al-Bita and Baghdîdî (al-Harîn b. Habîb, Durust al-Islâm fi Dawa’l at-Atâ’ah, in Walziers, Orientalia, ii, Amsterdam 1846, p. 435). In the spring of the year 1477 the Mamlûk sulûn Khalîfî made a tour of inspection as far as Kalà al-Muslimin (described by al-Dîmân Abu l-Bakr, ed. R. V. Lanzone, Viaggio in Palestina e Soria di Kalà Ba, Torino 1878; transl. R. I. Devonshire, in Bulletin I. F. A. O., xx, Cairo 1921, p. 1-43). After the battle of Marj Dâkhî, the fortress became in modern times under the papal brief of Halâj (Halâj Khalifî, Dîjam-namû, p. 508). The Armenian and European authors give the name Rûm Kalà or Kalà al-Rum in many forms. Among the Armenians we find the forms Hromskîy, Klav-Hofomazik, vulg. Arm. Outoum-gala (works of St. Nerséh, St. Petersburg, p. 80; his poems, Venice, p. 224, 277; Indjûdân, Alterne Arménien, iii. 378; Saint-Martin, Mémoires... de l’Arménie, ii, Paris 1818, p. 196). Gulemius Tyrius (Hist. xvi. 16) writes Ramulak; but it is no doubt identical with his Rongulath (xii. 11; French text, ed. Paulin Paris, ii, Paris 1880, p. 164), which however he takes to be a quarter of Edessa. Schlihtberger (Reise, p. 47) calls the fortress Uramula. Only a few remnants of the fortress now remain as well as of an Armenian monastery and a mosque (plans of the fortress in Müller and following him in Humann-Puchstein, Reisen..., p. 175, and in A. Nödeke, in Peterm. Mitt., 1920, p. 3, map; Plan von R. K. in x. 2000; photographs: F. Frech, in Geogr. Zeitschr., xxv., 1916, pl. 1; Cumont, Études syriennes, p. 170, fig. 54; from the north: Humann-Puchstein, op. cit., p. 176, fig. 25; from the east with the Euphrates: A. Nödeke, op. cit., pl. 13). Bibliography: Vâkitî, Muqâmî, ed. Wüstenfeld, iv. 164; Saat al-Din, Marzîd al-Itla, ed. Juynioll, ii. 442; Abu l-Fida’s, ed. Reinsaud, p. 226, 279; al-Dimashkî, ed. Mehren, p. 206, 214; Ibn al-Shihab, al-Durr al-munahhah fi ‘Tâhirî Mamlûkîl Hâlal, Bârîû 1909, S. 157, 235 sq.; R. RUMELI, RUMELIA. The name Rum-ili, Rum-ili (i.e. land of the Romans) was given in the narrower sense to the province proper of this name, which comprised Thrace and Macedonia i.e. an area which was bounded on the north by the Balkans, in the east by the Black Sea and the Bosporus, in the south by the sea of Marmara and the Aegean, the so-called White Sea, then by the Olympus range and in the west by the Pindos, Barnos and Sher-Dagh (Shar planina), embracing the old territories of Thrace, Bulgaria, Macedonia, Servia and Albania as well as the ancient Hellas, with the exception however of the strip of coast near the islands of the Aegean or Archipelago, which were a separate government (Eptéi) under the Grand Admiral (kapudan pasha); q.v., after 1849 the Eptéi-I Skudi-I Sefid formed an eyalet, cf. René de l’Orbiet, xi. 117, and later a waliyet). The governorship of Rumelia (Rum-ili eyalet)
was bounded in the north by Austria and Wallachia, in the northeast by Moldavia and Russia, in the east by the Black Sea, in the southeast by the Ionian Sea and in the west by the Adriatic, in the northwest by Austria and Russia [q. v.]. It is to be noted that these frontiers included the small qâbâs [q. v.] belonging to the governorship of the Archipelago (aygârî cihâlî) Gallipoli [q. v.], Negropont (Egëripos, Këbëca) and Ainëskhât (Nau- 
phantos), the former of which comprised the coast from Stamboul to the exit of the Këra Sû into the Aegean Sea with a considerable stretch of land running into the interior, the second and third of which comprised the east and south coast of Greece proper with the exception of the Morea (Peloponnesus).

The area of the province at its greatest extent was estimated at about 5,100 square miles while the population was estimated at not more than 3,512 millions of different nationalities (millet), Turkish (Ottomans, who, although the ruling nation, formed the smallest part), Tatar, Greeks, Slavs, Arnauts, Armenians, Jews and G Kıpûs. The pre- 
dominant religion was Islam, while the Christian confessions of the so-called non-uniat Greeks was the largest.

The residence of the beylerbeg of Rumelia was at first Philippopolis (Filibe, now Plovdiv), which was conquered by the Ottomans in 1353. The first governor to reside there was Lâlû Shâhin Pasha, conqueror of that country, whose türbe is still to be seen not far from Stara Zagora. In 787 (1385) there appears Timurshâh-Beg [q. v.] as beylerbeg (cf. J. v. Hammer, G. O. R., i. 191, following Ferîndân-Beg) with his residence in Sofia.

The governorship of Rumelia was divided into sandjaqs, the number of which varied in course of time and the boundaries of which were constantly changing. About 1830 there were 24 of them namely: Wixi, Kirk Kilibe [q. v.], Sillistra (Sîlêstar), Nikopolis [q. v.], Vidin, Sofia, Çırâm, Kostandil, Sozînik [q. v.], Turbâk, Triëkkâla, İzân [q. v.], Tîbî, Tîmîn, Delvína, Avelona, Ełbasan (cf. F. Bâbiner, Die Gründung van Elbasan, in M.S.O.S., iii., vol. xxxiv., 1931, p. 84—93), Ískendure (Scutari, Albania), Dükürgân (Dukâtzîn), Oktîr (Obrîk, Ochîdrâ), Perzîn (Prizren), Vîlî (Vohîn), Ușka (Skopje), Alâja Hâr (Krukerî), and Semendria (Semsîria, Smudero). By an imperial hattî-i şerifî of 6th Rabi' 1 (June 21, 1836) the area under the Rumîî cihâlî, governor of Rumelia, was redefined. As previously the position of Sofia as the centre of administration had favoured the rebellion of treacherous vassals and attempts to secure independence by the mountain tribes especially in Albania, Montenegro (Tollî Monastîr, now Bûtç) on the S. E. extremity of this area was chosen as the centre of government. The province of the Rumîî cihâlî was divided as follows: 1. the district of the town of Monastîr directly under the governor, 2. the personal estates of the sultan's mother (mâlîk) or the land of Oktîr, 3. the sandjaq of Elbasan, Kavaja, Tirana [q. v.] and Lezh (Alex- 
no), which were governed by Arman governors who could be dismissed, 4. the sandjaqs of Ishqodra (Ískendure, Scutari), Perzîn (Prizren) and Ėpik (Pëc) which were under military officers (generals of division, Ėfendi), 5. the dâmîlî's Podgorica, Bar (Antivari), Ulcinj (Doljogno), which were under native hereditary dâmîlî whose powers were very minutely regulated, 6. the districts of Zadrim, Mirrîf, Dibra (Debar) which were under chiefs self-elected, the only Turkish officials being those who collected the taxes. The paşâhîs of Prizren, Niş [q. v.] and Tetovo, originally part of the cihâlî of Rumelia, were transferred in 1859 to the mûçîrî of Sofia. The paşâhîs of Uskub (Skopje) and Kâlkanîden (Tetovo) were only under the political supervision and not the administration of the Rumîî cihâlî, while the northern Arnaut tribes and Montenegro (Kâradagî), although nominally under the governor of Rumelia and in particular the paşka of Scutari, in reality were in no organic connection with the Ottoman government (cf. J. v. Mûller, Albanië, Rumellien und die österreichisch-monarchische Griechen, Prague 1844, p. 2—3). The remainder of the former Rumelia was divided into paşâhîs of which Adria- 
nopole (formerly called "mûçîrî of Çîrâm", as Adriano Ble was the chief residence of the sultan; in 1840 there were still law-courts in Çîrâm) and the three Bulgarian paşâhîs of Rusîn [q. v.]. Vidin and Sillistra were the most important (cf. A. Mûn, La Turquie d'Europe, vol. iii., Paris 1840, p. 187—189 with further details of the division and of the officials in 1840). The division continued to change frequently so that J. Gg. v. Hahn in 1860 found the cihâlî of Rumelia divided into four "îlîcs", namely Ishqodra, Oktîr, Monastîr and Kastoria (Kastoria) of which Ochîdrâ comprised the whole of Central Albania i.e. down to the coast of the Adriatic (cf. J. Gg. v. Hahn, Reise van Belgrad nach Salonika, Vienna 1861, p. 116 = Denkschriften der Wiener Akad. der Wiss. phil.-hist. K., vol. xi.). Rumelia remained divided in this way until 1864, when the first milîyet law — i.e. the law the object of which was to create larger provinces and entrust them to able governors — was promulgated. The new governors were to carry through the progressive plans of the government with the help of expert officials and numerous subordinate governors (mûçîrîs); in addition to governor-generalships, formerly cihâlîs, now called milîyetîs at the head of which was a milîyet, remained divided into îlîcs, formerly sandjaqs, at the head of which was a mûçîrî. As a model province the Danube milîyet (Thâm milîyet) was first created in Radja 1281 (Dec. 1864) and entrusted to Mîçfat Pasha [q. v.] who had already made a name for himself as governor of Niş and Prizren. The milîyetîs of Salonica and Yiânâ (Ioannina) were formed in 1867. The name Rumîll was disappered completely until it was revived in 1878. In this year by the treaty of Berlin, the new principality of Bulgaria, which was declared an independent tributary principality recognising the sovereignty of the sultan, was created and limited to Bulgaria on the Danube, the former Danube milîyet (Thâm Milîyet). From the trans-Balkan district of southern Bulgaria, an autonomous pro- 
vince of Turkey was formed and called eastern Rumellia (cf. Cari v. Sêz, Geschichte des Macht- 
fallen der Türken, Berlin 1912, p. 373, 446). Alexo Pasha from 1875 to 1884 and Cârvîl Pasha from 1884 to 1885 acted as governors there. Western Rumellia formed part of the Ottoman empire and was divided into three milîyetîs: Adriano Ble, Salonica and Monastîr. While Eastern Rumellia was occupied by the Bulgars in 1885, by the peace of Bucharest (1913) Monastîr (Tirol) was ceded to Serbia and Salonica to Greece and
only the milâjet of Adrianople [q.v.] remained to the Ottoman empire.

The history of İslam in Rumelia, which is closely associated with the expansion of Ottoman power on European soil, is still very obscure, at least as regards the sixteenth-century. Political dissections and the mixture of peoples favoured in Rumelia are even more than elsewhere the formation of sects, so that even directly after the arrival of the Ottoman on European soil (cf. John Draseeke, Der Ubergang der Ortschaften nach Europa im XVT. Jahrh., in Neues Jahrbuch für das klassische Altertum, xxxiv. 7 sqq. and ii. A. Gibbons, The Foundation of the Ottoman Empire, Oxford 1916), perhaps even earlier in the Byzantine period, as is clearly shown by the not sufficiently explained problem of the Shii sectarian Şarî Salîdê Dede [q.v.; i.e. “Father Yellow Pate”], as an English translation of 1653 explains the strange name), not to speak of the obscure history of the Turks in the Vardar valley (Wardarli), all kinds of Muslim sects developed in Rumelia, the study of which has not yet been begun. Islam was built upon all kinds of religious ideas and a kind of syncretism was created which raises difficult problems for the study of religions. In particular, we must recall the converts to Islam, formerly Bogomilics, who inhabited certain areas of Bulgaria, Bosnia and the Herzegovina, and the Muslim sects and dervish monasteries of the northern Balkans, where the şâiiznas have flourished down to the present day, being undoubtedly favouring in their rise by the remarkable sectarian Şaiîḫ Bârî-dûn Mahmûdî (d. 1416 in Serres; cf. Ien Xani Simawna and Fr. Babinger, Šaïïîx Bât-dûn, der Sufi des Richters von Simavn, Berlin and Leipzig 1921), who gained an astonishingly large following in Southern Bulgaria, particularly in Deli Orman [q.v.]. Closely connected with the advance of Ottoman power is the history of the Bektashis [q.v.] in Rumelia. They founded settlement everywhere (cf. F. W. Hasluck, Christianity and Islam under the Sultans, Oxford 1929, 3 vols.), and quickly propagated Shiî’s views as far as the coast of the Adriatic. At the same time in Bulgaria, in the inaccessible forelands of the vast Deli Orman, the Bektashis seem to have made considerable progress (cf. thereon also T. Kowalski, Les Turcs et la langue turque de la Bulgarie du Nord-Est, Cracow 1933). Their still unlicated history there seems to be closely connected with the holy man Denir Baba and his brothers and descendants who are still to be found there (cf. F. Babinger, Das Bektashikhostr von Denir Baba, in M. O. S. S., ii. vol. xxxiv., Berlin 1931, p. 84 sqq.; cf. thereon already Ewliyya Celbî, Seyyidatunam, vol. v., p. 379). After the prohibition of the dervish orders in Turkey, banished şâiîznas and monks to some extent have sought refuge here and found followers. As well as in Bulgaria the dervishes have flourished in the modern Southern Serbia; where monasteries of the different orders are still to be found (cf. D. G. Gajdzanow, in vol. i. of the Makedonski pregled, Sofia 1925, p. 59-66). A problem not yet fully explained is raised by the Pama (q.v.) in the Rhodope mountains and round Lozena (now Lovec; see also Pama, Bajiski, cf. A. Boug, loc. cit., vol. i., p. 24) and the Gagauz on the coast of the Black Sea. But even the history of official İslam in Rumelia still requires investigation. It is certain that in many places like Adrianople [q.v.], Philippopolis, Söna, Sumula (Sumen), Razgrad (Hesargrad), Dupnitsa, Kastendil, Lovec (Lovec), Pleven (Pleven) where there were the numerous and rich mosques and buildings of the Mikhail-oghlius; cf. Jordan Trifunov, Istorija na gradove Pleven do osvoboditelnata vojna, Sofia 1933, p. 35-41), Kuskub, Istanbul (Stip), Pirizan, Pristina, Kalkunjani (Tetovo), Prilep, Momastir (Tolj-Monastir, Bitolj), and particularly in Thessaly and Macedonia, there were formed centres of Muslim culture, as the schools, mosques etc. founded there show. In these centres were born men who made a name for themselves in the intellectual history of Turkey, Kuskub, Pirizan and Pristina in particular are rich in such names and it may be assumed that their bearers were mainly South Slavs converted to and Islam. Epirus Albania play a special part in the cultural history of Islam; from there the Ottoman empire, apart from Bosnia and the Herzegovina, drew its abest and greatest statesmen and generals, for the supply was in the main maintained by the tribute of youths (denizière; q.v.) levied in the Balkans. The number of men born in Rumelia who played an important part in the political and intellectual life of Turkey is legion. They were almost exclusively natives, not Ottoman immigrants, the number of whom must always have been small, as the Turks confined themselves to exploiting the land, divided into large and small fiefs (sâtme and timür; q.v.). Ami Boué put the number of Turkish fiefs at 614 sâtme and 8,360 timür (cf. A. Boué, La Turquie d’Europe, vol. iii., Paris 1840, p. 182, without however saying to what date his figures refer).

The rule of the Ottomans in Rumelia, which began with the crossing of the Turks to European soil (1355-1357) and soon found visible expression in the capture of Adrianople in the spring of 1361 (cf. F. Babinger, in M.O.C., ii. 311. and the article ORGAN), is only very superficially known, so far as the sixteenth and even the first part of the xvth century is concerned. It is to be supposed that certain bases such as Salonika frequently changed hands, which is the simplest way to explain the different dates given of the capture of this town for example. From the great political and administrative government of S.E. Europe, the advance of the Ottomans met with varying degrees of resistance, and it looks as if the great Ottoman generals of the sixteenth and xvth centuries, who distinguished themselves on Rumelian soil and soon won tremendous influence as magnates and great landowners — e.g. the Erenos-oglu, the Mikhail-oghlu, the Timariot-oglu, the Malkoç-oglu, the Kavanoz-oglu, a “feudal family of Asia Minor” (C. J. Jirecek), who ruled in and around Tatar Bazar since the xvith century, but perhaps already much earlier, till the year 1835 when the fall of Rumelia for the second time Kavanoz-oglu Hasun Pasha died (cf. Süfîziât 1205, ii. 523 sp. and ibid., ii. 265), families (see the articles on them) who were able to hold their hereditary estates in some cases down to the xviith century — were able to win over by an elastic policy the people who had lost their own princes and chiefs. In the course of centuries some tribal chiefs were here and there (especially in Albania and Epirus and in Thessaly) to make themselves more or less independent of the Porte so that they had to be granted a certain degree of autonomy. This is shown by the case of the Yürükheg, of whom there were 7 in Rumelia about 1840, and
particularly of the ala'm in Albania who were able to make themselves more or less independent. The case of 'Ali Pasha of Janina [q. v.] and his whole family is the most eloquent example of this. Although the decline of Turkish rule in Rumelia has now been going on for over a century, the influence of Turkish culture there is in many ways so distinct that even if there were no monuments of the Muslim period to recall the past, it will remain in manners, customs and traditions.

Bibliography: In addition to the numerous books of travel of all periods which form the most important source for the history of Turkish rule in Rumelia and of which the following are specially important: A. Griesbach, Reise durch Rumelien und nach Brussa im Jahre 1789, Göttingen 1843; Josef Müller, Albanien, Rumelien etc., Prague 1844; Aim Boné, La Turquie d'Europe, Paris 1840 (fundamental work also in German: Die europäische Türkei, Vienna 1858); also his Recueil d'itinéraires dans la Turquie d'Europe. Détails géographiques, topographiques et statistiques sur cet empire, Vienna 1854; the following may also be consulted: Maxmillian Friedrich Thilen, Die europäische Türkei, intended as a work of reference for the non-special reader, Vienna 1828; also A. M. Perrot, Itinéraire de la Turquie d'Europe et des provinces d'Asie mineure, Description géographique et militaire de toutes les routes, villes, forteresses et ports de mer de cet empire, Paris 1855; C. Moutas, Dictionnaire géographique de l'Empire Ottoman, Paris 1873; E. Isambert, Itinéraire descriptif de l'Orient, Paris 1874; very full statistics regarding administration, population, religion etc. of Rumelia are given in the following: A. Uicini and Patet de Contreille, État présent de l'Empire Ottoman d'après le Statisthe (annuaire impérial) pour l'année 1823 de l'hégire (1817-1818), Paris 1876 and T. X. Bianchi, Le premier annuaire de l'empire ottoman, publié à Constantinople pour l'année de l'hégire 1242 (1827), Paris 1848; A. Uicini, Lettres sur la Turquie, Paris 1854 (reprinted from the years 1850-1852 of the Montlouis Universel, also English Letters on Turkey, London 1856 and Italian Lettere sulla Turcìa, Milan 1853); F. Crouzel, La Périménie grecque, son passé, son présent et son avenir, Paris 1876; Hianomi, Ethnographie et statistique de la Turquie, Paris 1877; Justin Cuvillé, La Périménie baltique, Paris 1918; Paul de Regla, La Turquie officielle, Paris 1890; Guillaume Le Jean, Ethnographie de la Turquie d'Europe, Paris 1861; an able survey of social conditions in Turkey in Europe about 1840 is given by Jérôme-Adolphe Blanqui (1789-1814, called Blanqui in his Considerations sur l'état social des populations de la Turquie d'Europe, Paris 1841, Gavneux by H. Roth: Erwägungen über den gesellschaftlichen Zwischenraum zwischen Osten und Westen der ala'm, Sudenburger-Maegdeburg 1846, based on a journey made in Rumelia for the French Academy of which he gave a Rapport sur l'état social des populations de la Turquie d'Europe, Paris 1842, and described in his Voyage en Bulgarie pendant l'année 1841, Paris 1843. — On the educational system in European Turkey cf. François-Adolphe Bellis, De l'instruction publique et du mouvement intellectuel en Orient, reprinted from Le Contemporain, vues d'économie chrétienne, Paris 1866. — The Slav peoples of Rumelia are dealt with by: Albert Dumont, Le Balkan et l'Adriatique, Les Bulgares et les Albanais. L'administration en Turquie. La vie des campagnes. Le Pélemviciel et l'Hellenisme, Paris 1873; Paris 1873; Cyprien Robert, Les Slaves de la Turquie, Sur le, Montenegrins, bosniens, Albanais et Bulgares, leurs sources, leurs traditions, et leur progrès politique, Paris 1844 (? vold. 1853, with an Introduction nouvelle sur leur situation pendant et depuis leurs insurrections de 1844 à 1871); Mackenzie and Iry, Travels in the Slavonic provinces of Turkey, London 1866 et seq. suggestive descriptions of travel in Rumelia are given by A. Vignaesel, Voyage dans la Turquie d'Europe. Description physique et géographique de la Thrace, Paris 1856, with atlas; H. F. Tuyard, Researches in the Highlands of Turkey, 2 vols., London 1869; Anton Tuna, Die östliche Balkan-Halbinsel, Vienna 1886; do., Griechenland, Mahedonien oder die südliche Balkan-Halbinsel, Vienna 1888; Léon Hagonot, La Turquie insoumise. Babinger, Robert Bargrave, un voyageur anglais dans les pays roumains du temps de Bizans. Lupa (1854) [= Academia Românil, Memoriale sectiunii istorice, seria III, Anulul XIII, no. 7, Bucarest 1936], p. 10, note 3. — On the Ottoman geographer Mehemet Ali (a.o.) 'Omer, who included Rumelia in his work, e.g. F. Babinger, in M. O. G., I. 167 sqq. and da., G. O. P., p. 128 sq.
RUMILI HIŞAR [See Anadolu Hişar.]

RUPIYA (v.), an Indian coin, a rupiya.
In the latter xvth and early xvi th centuries the silver tanka [q.v.], of the sultans of Delhi had become so debased that when Sher Shah (1539—1545) reformed the coinage, the name could no longer be given to a silver coin. To his new silver coin, corresponding to the original fine silver tanka, he therefore gave the name rupiya = rupye, i.e. the silver coin (Sanskrit, रुप्य, rūpaka), and tanka became a copper denomination. The weight of the rupiya was 175 grains (11.53 grms.); and it quickly established itself in popular favour. Under the Moghals it was struck all over India at over 200 mints and with the decline of Moghal power continued to be struck by their successors, notably the English East India Company. In the xvth century Akbars and Djihaŋgirs struck many square rupiyas; on one coin of Akbar the name rupiya occurs. Djihaŋgir for a short period struck a heavy rupiya of 220 grains (14.259 grms.), but on the whole the rupee has shown little variation in weight. In the xixth century the English rupee gradually drove the local issues out of circulation and with few exceptions the local mints have now been closed. Such native states as still issue their own rupees strike them on the same standard as the Indian government rupee.

Aḥmad Ẓahir Duranjī adopted the rupiya as his monetary unit on becoming independent and until quite recently it remained the standard coin of Afghanistan. The Hindu kings of Assam also struck the rupees.

The Indian rupee having become current in British East Africa, it was adopted in 1890 as the standard coin of German East Africa also.

RUPY (v.), an Indian coin, a rupiya.

RUŠ, the Russians; at first the Normans, then the founders of the dukedoms of Kiev.

The Rūs of the east. In his description of Spanish Yuftli, B.G.A., vii, 334, says that in 829 (843-844) "the Magyars called Rūs" invaded Seville and committed all kinds of depredations. The name Magyars [q.v.] is regularly applied to the Normans.

The name even passed into the Spanish Primera Cronica General (xvith century) according to which the Almamnetes were worshipers of fire (λ). The origin of this use of *magia* is obscure. Did the Arabs and Spaniards allude to such rites as the invocation of the dead [cf. Ibn Fašīḥa] Masūdi, Murādī, l. 364—365; speaking of events in Spain about 900 (912—913) he also uses the term Rūs although he gives it a special meaning.

The Rūs of the east. There is quite a literature on the origin of the name of the Russians. The "Norman" school claims that the name Rūs belongs to the Normans; the Finns call the Swedes Ruodi whence in Russian Rūs (Рус). The name of the Finns Sueni similarly becomes in Russian Suom [Cymr], the basis of Ruodi[Rūs] must be a Scandinavian word [cf. the name of the coast Ruodiog and of its inhabitants Rude-kharat "rowens"). The names of the earliest Russian princes are undoubtedly Scandinavian (Rūsik < Heathræ, Igar < Ingvar etc.); the testimony of Constantine Porphyrogenetus (cap. ix.) is equally positive; in his list of the cataracts on the Dnieper, he gives the names in Russian (comesuru) and in Slav (ῤεραντζουερε), e.g. Oktúbras < in Scandinavian "octum isle" + for "rapids." = ορταιόγονιαριές < in Slav *πρωνεία *of the isle" + πρω "the cataract." The "anti-Norman" school pronounces in favour of the native origin of the name, but its arguments are mainly useful to show certain contaminations of the term Rūs (in Greek Ρούς, Ρουζ) by names in Hebrew (Ῥαζ, Ῥουζ, Septuag., xxxviii. 2—3; xxxix. 1), Greek (ῥουζ ἱδρυαντα "the red boats") etc. [It is evident that the ajāhul al-Rūr mentioned in the Kārān with the 'Ad and Thambil (Sira xxv. 40 and l. 12) have nothing to do with the Normans or the Russians, in spite of the late texts, Dimygh, text; p. 92, transl. Mehren, p. 131 and the fancies of European commmentators like v. Hammer, Sur les origines de l'état russe, St. Petersburg 1825, p. 24—29].

According to the Russian Chronicles, the Varangians (Var'sag; see below) came from beyond the sea in 859 and levied tribute on certain Slav and Finnish peoples until in 862 they were driven away by the latter. The civil wars which broke out soon afterwards among them, however, forced these tribes to invite from beyond the sea "the Varangians called Rūs". The Rūs at first settled in the region of the great Russian lakes (Ilmen, Ladoga) but in 882 Oleg (< Heiðr) moved to Kiev. This was certainly not the first appearance of the "Russians" for previously under 839 the Annaler Bertinianæ mention the arrival at the court of Louis the Pious of a Byzantine embassy accompanied by envoys from the Khān whom their king Chacunus had sent to Constantinople and who now wished to return home. An enquiry as to their identity showed that they were Swedes (Lentus ex Duennom). The Normans in Kiev were not numerous and their marriages with Slav women accelerated their assimilation. Sirotoslov (born in 942) already has a Slav name and c. 1000 the process of slavization of the Normans was complete [cf. Thomsen, op. cit., p. 123—124].

The sources of the ixth and xth centuries. The Muslim sources are acquainted with the Rūs from their first appearance in eastern Europe, Ibn Khurdādhbih, p. 154, mentions only Rūs merchants whom he regards as a kind of Slaves (djīnin min al-Saḥāibā); and describes their journeys (by sea: from the remotest parts of the Saḥāla to the Black Sea, to the Khasar capital and the Caspian Sea, and by land: from Tangier to Damascus, Bagdad, Basra and then into India and China; or again they travelled still farther beyond (= to the north of) Rome through the Slav countries to reach the Khasar capital, Balkh, the lands of the Toghdunt and China; cf. Ibn Fašīḥa, p. 271). Ibn Khurdādhbih does not assign any definite territory to the Rūs. It is true that the available text of his book is incomplete but another detail is significant. Ibn Khurdādhbih, p. 154, speaks of *المختصر من al-Saḥāibā* which de Goeje identifies with the Tumais (Don) [Marquart, Streifzüge, p. 352, reads Tum for Don]. The term later disappears from geographical literature but Ibn Hawkal, p. 476, and the Hadīd al-Aṣīr,
speak of a "river of the Rūs" and although the meaning they give to the term is doubtful, it is possible that their nomenclature indicates the transformation of the Šāhīla into Rūs while Ibn Khurdādbeh reflects the situation before the consolidation of Norman power in Russia. [In Idris, ii. 385, the Naḥr al-Ḵūsh is certainly the Don].

On the other hand, the common source [Muslims b. Abī Muslim; cf. Marqāt, Tabākha, p. 190] used by Ibn Rusd, the Ḥudūd al-ʿAlam, Gardizi, ʿAwtī, etc. formally distinguishes between the Rūs and the Slavs. The latter (probably the western Slavs) lived under their own princes, while the Rūs occupied an island three days' march in length and breadth, situated in the middle of a lake. Their king bore the title of khālīf Rūs. This version seems to refer to the sojourn of the Norman chiefs in the region of the great Russian lakes (cf. Novgorod, in Scandinaviam Hólm garðr "the Town of the Lake"). The Ḥudūd al-ʿAlam adds that the Russians have many towns and Gardizi says that the population of the island is 100,000 men (mardaw); these additions may reflect the gradual expansion of the Rūs or rather their amalgamation with the Slavs.

The third tradition is represented by Iṣḥākṣī and Ibn Hawqāl (< Abū Zayd Bāḥṣī) who place the Rūs between Būlgār and the Slavs. The point from which the description starts must be the town of Būlgār on the Volga. Three groups of Rūs are described. The king of the group nearest the Būlgār lives in Kūshān (Kiev; Const. Porphyrio, ch. 9; Kostka, Koppa). The most remote are the Šādūlima (probably the original inhabitants of Novgorod, the Sverd). The third group are the Arđāwīna whose king lives in Arđā (many variants, reading doubtful). They are savages who kill strangers; they come down the rivers to export the skins of black sapihe and kid (ṣījayān). Since the time of Fudayn, Arđī has usually been explained as ʿardī, the name of the eastern branch of the Finnish people Mordeva (in the basin of the Sura, a tributary of the Volga to the west of Kazan). Another explanation (Keinath, Chwolson) which starts with the variant ʿārān and explains ʿArđān by Birmania (Perm) is very doubtful. In both cases, it is necessary to suppose the previous subjection of these regions by the Rūs. In a recent work, P. Smirnov seeks to prove the existence of a Russian "khakānāt" in Rūs (in the Volga and the Oka, cf. the incident quoted above from the Annals of Berlianî. Cf. also M. Vassmer, Wikingergreifen in Russland, in S. B. Pr. Ak. W., 1937, p. 639–674, on the traces of Scandinavians on the upper Volga).

The fourth independent source is Masʿūdī (cf. Marqāt, Sīrāj, p. 330–353). In the Masʿūdī, ii. 15, he calls the Black Sea "Sea of the Rūs" for they are the only people who sail upon it and they live on one of its shores. This last allusion may be to the Russian colony of Tatarumāna (Tuttarwy, the ancient Tawārīqa on the peninsula of Taman) (although Westberg and Marqāt, cf. cit., suppose the Baltic to be meant here). Among the many tribes that composed the Rūs, Masʿūdī, Masʿūdī, ii. 18, mentions ʿArđān = Šādūlima = Tabākha, p. 141, who trade with Spain, Rome, Constantinople and the Khazars. This name is probably identical with ʿārān.
After the tenth century, Idrit alone affords any independent information about the Rus, under клине византийского, sect. 5 (the river of the Russians, the town along the Dnieper) and клине византийского, sect. 4 (the sources of the Западничество, Dnieper, Russian, and Куманы, i.e. the land of the Commans); cf. Jabbeni's translation, ii. 395–398, 401, 404, 433–434, and the passage (clime византийского, sect. 5) transcribed in O. Tallgren-Tulin, Idrit. La Finlandia, Helsingforss 1930 (Sc. Orient. Fennica), p. 115–121. Idrit hence confuses traditional and contemporary data by putting them in juxtaposition, e.g. Кызбаба is mentioned alongside of Казан (Kiev).

Persian poetry. Ниагат in his Ибн-аль-мамлекет celebriates Alexander's campaign against the Russians who had devastated Барсам и and carried off queen Низами, an ally of Alexander's. The king of the Russians who rules over the Барсам, the Казан, the Alans, the Буюрк (in Russian Восток) etc., is called Ниагат, perhaps a corruption in transcribing or in bearing the title бизан (Russ. байз) already found in Ibn Khuradбабу, p. 17. Cf. F. Erdmann, De expeditions Russorum Herodami narratis, Kazan 1826, 1828, 1832, 3 vols., and the French translation by F. B. Charmoy, L'expédition d'Alexandre, St. Petersburg 1829, English by H. W. Clarke, 1881, The Ибн-аль-мамлекет, p. 665–664, German by G. J. Baekelandt, Narodescerfdeling, 1932, last and in complete version. In the Hijaz of Ниагат, ed. H. Ritter and Ryskova, 1924, p. 11, 178–196 (transl. C. E. Wilson, i. 171–188), it is found the daughter of the king of the fourth clime (ит), the fair Slavonic, rosy-red of cheek who tells a story that happened in a "Russian" town. There is more reality in the odes of Кифтант dedicated to the Ширванских Ахильуви (530–590 == 1125–1193) from which we learn a raid by the Russians which this ruler successfully repelled; cf. Khankov, in Bull. Ar. Spb., xiv, No. 25–24 (= Mit. Isl. hist., iii. 114–150).

From the Mongol period. The statements by the later writers regarding the Russians are very fragmentary; cf. for the Mongol period: Djawun, l. 224; Abu 'l-Fidā, p. 201, 207 (the Russians, a Turkish tribe), p. 222; Dimishkī, transl. Mehren, p. 311, 378 (the Russians live on the islands of the Mazois, probably confused with a northern lake); Mustawī, Нискат-ал-Кытб (сп), p. 264; and for the period of Timur: Западник, 739–762 (as well as the geographical introduction to the Западник, Br. Mus. MS. Or. 18406, fol. 13, on the Рус, descendants of Japheth).

Turkish libraries and archives must contain intact important information about Russia; cf. Babin, G.O.I.P., p. 310 and index as well as the journal of a Turkish officer at St. Petersburg in the time of Catherine II, quoted in V. D. Smirnov, Obraz. prosv. vnut. liter., St. Petersburg 1891, p. 223–242 (writing in the edition of 1903). In Persia the Saffar chronicles only mention briefly the Russian embassies; the chronicles of the Khorasan are such as the Ибн-аль-мамлекет of 'Abd al-Rasul, N. Nādirkuli (transl. Bryan), the Ибн-аль-мамлекет of 'Abd al-Rasul, Nādirkuli, the Ибн-аль-мамлекет of Ibn 'Abd al-Qadir, and the Ибн-аль-мамлекет of Sipīr (ق.س.), contains information about the Russian-Persian wars and the subsequent negotiations [cf. Теберан]; a curious paragraph no the Russians is to be found in the Жартанах of Zain al-Abidin Shirwānī, Teheran 1315, p. 299; of no value from the geographical point of view, it is curious as reflecting the ideas of the Persians about 1530: the Russians, like the other Fārs, are clever in worldly matters (дзиннризат), but devoid of spirituality (джинн мудран). Bibliography: See the article Библиотека. — A bibliography of the Muslim sources will be found in the commentary on the Ибн-аль-мамлекет by V. Minorsky (in G. M. S., in the press). The principal studies on the Mamlukian sources are: Fréach, Ibn Fostan and andere Araber Berichten über die Russen, St. Petersburg 1823; Chwolson, Ибн-аль-мамлекет Ibn Dost (read: Ibn Rusta) etc., St. Petersburg 1869; Garkavi (Harkavy), Shamsiyya musulmān, pisatidē, St. Petersburg 1870 and 1871 (translations from 26 + 6 Arab authors; on the necessity for a new edition of these texts and the preparation of a Corpus of Arabic sources on the Russians etc. see Kratkovskiy, in Zapt, Inst. Vost., 1932, i. 55–62); Dott, and Kunik, in Carpa, in Mem. Ar. Spb., series viii, vol. xxiii, No. 1, 1875 (Russian edition ibid., vol. xxvi, app. i, 1875); Kunik and Rosen, Ибн-аль-мамлекет, St. Petersburg, l. (1875) and ii. (1903); A. Seippel, Краткое введение в тюркское языкознание, in Cer. Mar. Mus. Prov., 1909, xii. 293–444; Wehberg, Zur Kürzung oriental, Quellen in Bull. Ar. Spb., 1889, vol. xi, No. 4 and 5, and Abramov vonштукке сочинений, in Jour. Mem. Mus. Prov., 1909, xiii. 293–444; Marquart, Streifzüge, p. 330–353 (Mas'udi on the Rus). A general survey of the literature on Russian origins has recently been given by V. Minorsky, Варяго-русскую виггрез, in Slavica, t. (1931), 1–3. A still valuable survey is that of Thomsen, The relations between Russia and Scandinavia and the origin of the Russian state, Oxford 1877 (new edition in Thomsen, Samlede Arbeidsninge, i, 1919, p. 231–444); many difficult questions are dealt with in the works of Kunik, Marquart, Streiffzüge, passim, and Westberg. Among recent works must be mentioned P. Smirnov, Восток, север ("The Volga route and the early Russians"), Kiev 1928 (in Ukrainian; an original work).

AL-RUSAF (РУСАФА, Русафат Рысма, Русафат Рысма), a town in the desert in the Syrian Palmyrene, 4 farashe or 25 miles south of the Euphrates.

The town already bore this name in the pre-Mamlukian period. The Assyrian lists of eponyme mention in the years 840, 838, 804, 775, 747, and 737 B.C., a town Рас-гап as the residence of the Assyrian governor (шаху). On a relief stela of Adad-nirari IV Русафата is mentioned among the lands governed by Urigalle-eresh and formed with Kastîn (now Tell Djedlî on the Кийтб) an administrative district (Унгар, Рельєфные Адад-нирарIV III. Aus Schaw, Publikationen der Kirl. Osmanischen Museen, ii, Stambul 1916, p. 10–12, p. 2, i. 23 sqq.). The identification of Русафата with Belid Sinjar б. Forrer (Provinzialteilung des assyr. Rücker, Leipzig 1921, p. 15) can hardly be maintained (Mussel, The Middle Euphrates, New York 1927, p. 210 sqq.). In the Bible (2 Kings xiii. 12; Isaiah xxxvi. 12) Reesof, for which we should not doubt read Rejasf, is mentioned along
with Gusan, Haraq and Benê 'Eden in Telestar. Ptolemy (Geogr., v. 14, 19) mentions our town in Palmyræa as Perasa; the Tabula Peutingeriana writes Risa, the geographer of Ravenna (Cosmogr., ii. 15, ed. Finder-Parthey, p. 95, s. v.) Risa, the Notitia dignitatum (er., xxvii. 5, 27) Rosafa, the Metropolitan Alexander of Hierapolis in a letter (Acta Concilii Ossanam., ed. E. Schwartz, tom. i. vol. iv., p. 171, n. 2) Rasa. The name (cf. ṭaṣṣāf) means "walled road" (Clérmont-Ganneau, in M. C. O., iv. 1901, p. 112 sqq.).

About 434 the town was raised to be a bishopric against the otherwise usual practice by the patriarchal loaves of Antioch, not by the Metropolitan Alexander of Hierapolis. It was than famous for its church of St. Sergius dedicated to the memory of the martyrdom of the two officers of the imperial palace Sergius and Bacchos ("in the reign of Maximiannus") (the Acta Martyr., ed. in Greek by Delahaye, in Ann. Bull., xiv. 373—395; in Syrian by Bedjan, Acta martyror. et sanct., ii. 283—322, do not bear historical criticism: Haranac, Chronologie der altchrist. Litteratur, ii. 481, note; Delahaye, in Ann. Bull., xxiii. 478). The first bishop of Perasa was Marainius, who is mentioned in 434, 444 and 451 (it is not mentioned in the list of bishops of Remapa—Sergipolis in Le Quien, in O. C. ii. 951, s. v.; cf. E. Hombigg, in Orient Christianorum, iii. 214—217). The emperor Anastasius (491—518) had the thumb of St. Sergius brought from Remapa to Constantinople and stories of the miracles associated with this relic spread even as far as Gaul (Gregor. Turunensis, Hist. Francorum, vii. 31). In honour of this event the town was given the name Sergipolis and the privileges of an ecclesiastical metropolis (Ioannes Diakronomenos in Cramer, Annot. Graecæ ad cod. Paris., ii. 109). Perhaps we have Ttrsēpax [τρασπαξ] as early as 512 in the trilingual inscription of Zebed (Newbauer in Sasan, Reif. in Syrién et Mesopotamie, p. 126, note 1; otherwise in Prentice, Bull of the Amer. Archæol. Exped., Greek and Latin Ins., p. 262). Georgios Kyprios (ed. Geiser, v. 953) known as a third name of the town. Tθρασπαξ, the name of which has wrongly been doubted, probably the great basilica in Al-Rusafa also dates from this emperor (Oudinod, Topographie de la Syrie, p. 254, who however wrongly takes Ἱεράπαξ to be a name of Al-Rasafa). The Syrian name also remained in use (γάρ Περασάς: Ioannes Moschos, Phratum spirituale, chap. 180, in Migne, Patr. Graec., lxvii/vi. iii., col. 3054). The Armenian Basileios who in the 17th century sought to transform the profane geography of Georgios Cyprios into an ecclesiastical handbook added to the town the epithet τὸ τιμωρῖνον Περασάς (M. Hartmann, in Z.A., xiv. 340 sq.; Chapot, La Frontière de l’Euphrate, p. 330, note 8).

Rahban Bar 'Ida (6. Jan., 511), the teacher of the Persian Vahanians who wrote his life (Baumstark, Orientalische Litt., p. 202, 321, s. v.), was buried in Rasafa (E. A. W. Budge, The History of Rahban Hormizd the Persian and Rahban Bar 'Ida, i., London 1902, p. 115).

The town, which was situated in the desert ḥavafa (τὸ ἥαβαφα) (Procop., Bell. Pers. ii. 5, 29; Theophyl., Simoc. de de Boor, v. 13, 2; Syrian, Barbariyya: Kugener, in Orient Christian., 1907, p. 408—412), was at first defended against the Saracens only by fortifications of no great strength. Justinian is said to have been the first to surround it with proper walls (probably before 542 A.D.) (Procop., De aedificiis, ii. 9, 37), a statement which however the results of modern archaeological research show to be exaggerated (Herzel in Sarre-Herzfeld, Archäol. Reise, i. 135; Guérin, ibid., i. 28, 37). Justinian also built barracks and other fine buildings and large cisterns to provide the town with water (Procop., De aed., ii. 9, 39-46).

Khusraw I., who on his campaign to Syria in 540 had been promised by Kandidos, bishop of Sergipolis, 200 pounds of gold for removing the captured inhabitants of Sibra to the Euphrates, on his third campaign in 542 took prisoner the bishop, who had come to meet him to make excuses for not carrying out his promises, and sent a force against the town, which had however soon to withdraw on account of the lack of water (Procop., Bell. Pers., ii. 20, 3—7). Half a century later, the story was already told of the miraculous rescue of the defenceless city by St. Sergius and his heavenly forces (Eugætios, Hist. ecle., iv. 28).

About 570 there were five bishoprics under the metropolitan of Sergipolis (Notitia Antiochena, in Byz. Zeitschr., xxv., 1924, p. 75; 83). Besides the already mentioned bishops Marainius and Kandidos we know of the following metropolitan bishops: in 524 Sargs (Sergios) of Beth Rūsiyya (Ghulī, in Atti della R. Accad. dei Lincei, 1851, p. 297); in 550 Joseph, bishop of the Sacred Monastery of Rasafa (Assenian, in B.O., i. 117, 553 Abramius (Masii, i. 390; Wright, Catal. syr. MSS. Brit. Mus., i. 797), between 793 and 986, Michael Syrus (Caram., transl. Chabiac, iii. 451, n. 974, 501 a.) mentions eleven further Jacobite bishops, and from inscriptions we know of a certain Sergios (between 910 and 922); cf. Mich. Syr., iii. 462, N° 18) and Simeon, who, in 1093, restored the great Basilica (Moull, Palmyræa, p. 160, 267 sq.).

The generation and pious awe which was generally felt with regard to the sanctity of the place is shown with particular clearness in the fact that the Ghasanid al-Mundhir b. Hārith only dared to meet the Byzantine envoys here (summer of 578), as he felt himself safe nowhere else from their treachery (Johann. Ephes., vi. 43; Nödlke, in Arch. Pr. Al., W., 1887, p. 24). At this time the town was apparently not in the possession of the Ghasanid; the inscription ascribed to him states Ἰαμπαξ Ἄμαραμάκ, which was found at the "Central Church extra muros" also indicates that the inner town was still Roman at this date.

In the sanctuary of Sergius at a later date among the gifts dedicated to the saint was shown a richly decorated cross given by Justinian and Theodora, then taken to Persia by Khusraw II after the plundering of Kallinikos and Barbalissios (Mich. Syr., iv. 295), but given back by his grandson Khusraw II with another cross and a gift, both of which bore long inscriptions (Eugætios, Hist. ecc., iv. 28; vi. 21; Niechep, Kallist., Hist. ecc., xviii. 21, 22; Theophyl., Hist. ecc., v. 13; Findawri 1946; in Nödlke, Tahari, p. 297, note 1; C. de Boor, in Zett. der Archäol. f. Kirchenarch., v. 315—323). On his flight to the Byzantines Khusraw II lived in 590 in Edessa in the house of the general Johannes Rūsafīyā, a member of the family of the bishops of the same name (Mich. Syr., iii. 380, 414; Barbehraeus, Chron. ecc., i. 271). The cistern built by Justinian and later enlarged by a lahdāt is said to have been restored by the Ghasanid Nūrān b. al-Harīth b. al-Abīm (Hamza al-Isfahānī, Tāvīd, ed. Gottwaldt, i. 120;
According to Ibn Battān (in Yāsūfī, ii. 784 sq.), Kirjat al-Ruṣāfā was smaller than the Dar al-Khilāfa of Baghdaḏ. He describes the church, the outside of which was adorned with gold mosaics, and says it was built by Constanṭine, son of Helen. Below this church and of the same dimensions was a subterranean cistern panelled with alabaster slabs. The inhabitants of the fortress were for the most part Christians who earned their living by guarding caravans and transporting merchandise, but they also made bargains with thieves and robbers. The desert around Kirjat al-Ruṣāfā is so flat that one can see to the horizon on all sides. According to al-Iṣṭaḥīrī (transl. Jalālābādī, iii. 137), the town in his day (1154) had a flourishing market; a much used road led from there through the desert to Salamiya and Ḫirma. Yāsūfī was still able to see in the centre of Kirjat al-Ruṣāfā the monastery of al-Ruṣāfā which, on account of its architectural beauty, he describes as one of the wonders of the world (Yāsūfī, ii. 660 sq., v. v. Dāʾir al-Ruṣāfā). Abu ʾl-Fidāʾ (ed. Reinaud, p. 271) gives the distance of the town from the Euphrates as less than a day's journey.

In 1340 the Khwārizmians on their return from Syria came via Salamiya to al-Ruṣāfā; troops from Halab followed them and fought them at Śifīn (Abu ʾl-Fidāʾ, Ammādīs Māṣūmī, ed. Resiké-Adler, iv. 458). In 668 (1269) the inhabitants of al-Ruṣāfā fled for fear of the Mongols to Salamiya; henceforth the town remained uninhabited (B. Moritz, in Z. G. Erdh. Berl., xxii. 174 sqq., M. S. Ö. A., i. 1898, p. 144).

In 1300 al-Dimīḥābī (ed. Mehren, p. 205) includes Śifīn and Ruṣāfā in his work, which, as he knew it occupied a site of a Greek city, in the district of Bālī, while Ḫudżdji Khīlāba (Stanībul 1445, p. 593) includes Bālī and al-Ruṣāfā in the Province of Ḫīnārsīn with Halab as capital.

The imposing ruins of the town date almost entirely from ancient times. They have in modern times been several times surveyed, thoroughly examined and fully described.

RUSČUK, capital of a district and port on the Danube in Bulgaria (often wrongly written and pronounced Rutšuk) in Bulgarian Rus (Rýtš; Ruske), is situated at the junction of the eastern Lom (Turk. Kara Lom) and the Danube, hence, 1,400 yards wide, opposite Giurgiu (Giurghiu, Trans. Yer Yel Ködehyde), in part high on the line of the plateau, on the state railway from Rusčuk to Varna (since 1866) and Rusčuk to Tirnovo and is Bulgaria’s nine ports on the Danube (with about 50,000 inhabitants).

After the decay of the medieval Češevonne some 15 miles inland, which survived as the name of a Bulgarian eparchy and the ruins of which could still be seen in the xviiith century (cf. Hadžidi Kutila, Rumel und Bithynien, trans. J. v. Hammer, Vienna 1812, p. 44), the new Rus arose on the Danube half a day’s journey away. The Turkish name Rusčuk, by which the town is still almost exclusively known outside of Bulgaria, is undoubtedly a diminutive from Rus (Rútsch; Rutš; Rútsčuk; cf. the name of the island of Rhodes, Turk. Rodos and Rodos-čuk for Rodosto; q.v.), but only seems to have come into being in the first third of the seventeenth century. In the two treaties concluded between the Porte and Hungary on Aug. 20, 1503 (cf. J. v. Hammer, G. O. K., ii. 331 sqq. and text on p. 347), then Rus (Rúts) and April 1, 1519 (cf. Their Monumenta Hungariæ, ii. 524; Nasti for Rusčuk) and in Mercator’s map of 1584 the Bulgarian form still appears. The town must have already attained considerable prosperity in the xvith century. It quickly developed under Turkish rule and became an important centre of traffic, trade, industry and strategy in Danubian Bulgaria and surpassed the two fortified towns of Nicopoli (q.v.) and Silistria which played the leading part there at the beginning of Ottoman rule (cf. A. Ilrikov, Bulgarien, Land und Leute, Leipzig 1917, ii. 102 sqq.). The French traveller Pierre Lescaupier, who reached Rusčuk on June 14, 1570, in his valuable journal, which has only been published in part, describes Rusčuk as a populous town: "cette ville est peuplé et y a quantité de marchandises de toutes sortes et des vivres en abondance et à bon prix." (cf. Revue de l’Histoire diplomatique, vol. xxxv., Paris 1921, p. 46). Shortly before, the famous Ottoman architect Sinan (q.v.) built a mosque there for the grand vizier Rustem Paša (q.v.) still admired in the xvith century, presumably in the north at the water’s edge. The figure given for the population as for mosques varies; of the latter Rusčuk had at one time a considerable number. The Franciscan Peter Bögian Bakkhtas, later archbishop of Sofia, in 1640 found in Rusčuk 3,000 Turkish houses with 15,000 inhabitants and 10 mosques of stone ("fakte die pietra bianca"); and 200 Armenian houses with over 1,000 inhabitants and a citadel with five towers (cf. Eug. Fermandin, Itinera Bulgariae ecclesiasticae vol. viii. of the Monumenta stagnatiana historia Slavorum meridianalium, Agam 1887, p. 74). In 1659 Filip Stanovulov counted 6,000 Turkish wooden houses with over 30 mosques (1862, p. 263; cf. also p. 7, 10, 26, 31, 88, 137, 299 (Rusič in Russian: 1685), 300 with further particulars). Ewlija Čelebi (Seyyidkemal, iii. 334 sq.; cf. the Bulgarian translation by D. G. Gardjanov, in Periodično izdanie na bugarskoto kitovno druzhestvo na Sjefia, vol. lxx., Plovdiv 1909, p. 654 sqq.) about the same time mentions 2,000 houses of wood, also three Christian quarters, the mosque of Rustem Paša, baths and three caravan-serais in "Rusčukan". The only Jews, he says, were those who visited the place on their trading journeys. The people, whom he praises for their hospitality, lived by commerce and spoke Bulgarian as well as the "language of Wallachia and Moldavia". Ewlija Čelebi says the pumpkin (żeran) there was particularly good, to be sold for 1 pennies (5 of which = 1 Vienna groschen or 3 kreuzer, 150 = 1 taler).

Rusčuk is regularly mentioned in the many records of travel on the Danube in the following centuries. References to the town in the xvith and first half of the sixteenth century are in general agreement. The inhabitants seem at all times to have conducted a busy trade in wool, cotton, silk, leather and tobacco, which at an earlier period was for a considerable part in the hands of Rumanian merchants, who had a settlement there from 1675 to 1755. The English clergyman R. Walsh (1827) estimated the population at 18—20,000 souls. The streets by walls on three sides after the manner of Turkish fortresses, as a rule sloped steeply to the Danube which part was partly undefended. Turks, Greeks, Bulgars and Armenians lived in some 7,000 houses and conducted a busy trade with Turkey (cf. R. Walsh, Narrative of a Journey from Constantinople to England, London 1828, p. 207). Helmuth v. Moltke, who visited Rusčuk in 1835 and described it (cf. Briefe über Zustände und Begebenheiten in der Türkei, Berlin 1877, I. 11. eg., 132. eg., 424. eg.) was surprised that "this important Turkish fortress, with its long, dominated and enclosed lines without outer walls, half armed and defensively planned" could offer the enemy such resistance. As an important frontier fortress Rusčuk suffered a great deal in course of centuries. Sieges, conquests, and bombardments (the last by the Rumanians during the world war on Aug. 28, 1916) continually altered the appearance of the town which with its regular streets and large open spaces no longer has anything of an oriental appearance. In the Turkish period Rusčuk was the residence of a sandjak-bey, at one time of a paša (about 1840, when Bulgaria was divided into the three sub-branches of Rusčuk, Varna, Vidin and Silistria), until in 1864 it became the capital of the new Danube vilayet ("Vama vilayeti") with the so-called liman of Rusčuk, Varna, Vidin, Tulca, Tirnovo (Tirnovo), Sofia and Nik, created and administered by the reformer Midhat Paša (q.v.) and formed out of the eyalets of Silistria, Vidin and Nik (q.v.). A special printing press was instituted and in addition to a newspaper a saddened ("Vama Vilayeti Sâbâatâ") annually published, which gives a good survey of the administrative measures. After the devastation wrought in the Russo-Turkish wars of 1811 and 1828, Rusčuk attained new prosperity as the official residence of a governor (wali). In 1854 Boucher de Perthes estimated that Rusčuk had about 30,000 inhabitants in 4,000 houses (cf. Voyages à Constantinople, vol. iii., Paris 1855, p. 413 sqq.); the German physician
RUSTAMIDS, a dynasty of Ḩārādī Khudjīz of Tākht. The first of the Rustamid imāms, ʿAbbāb al-Rājmān b. Rustām, of Persian origin, had been made governor of Kairawān when the Ḩārādī Khudjīz Berbers of the Ǧībel Nefūsas, led by Abu ʿl-ʿKhaṭṭāb al-MuʿtāfīrīNI (q. v.) seized the town in 753. Three years later (756), Muḥammad b. al-ʿAṣṣāḥ al-Qādī at the head of a strong Arab army, recaptured Kairawān. Ibn Rustām fled to the west and founded Tāḥtar (q. v.) in a region where the Ḩārādī Khudjīz must already have been very numerous. Fifteen years later, the Ḩājātī conferred the imamate upon him. Six members of the same family in turn succeeded him. The chronology of their reigns is however rather uncertain. With certain gaps it may be arranged as follows:

1. ʿAbbāb al-Rājmān b. Rustām 760–768
2. ʿAbbāb al-Waḥḥāb b. ʿAbbāb al-Rājmān 769–788
4. Bakr b. al-ʿAlāʾ, dethroned 799
5. Abu ʿl-Vaḳṣānī Muḥammad b. al-ʿAlāʾ b. ʿAlāʾ (7)–894
6. ʿAbbāb ʿHādīm Yūsuf b. Muḥammad, dethroned 894
7. ʿAlāʾ b. al-ʿAlāʾ, dethroned
8. ʿAbbāb ʿHādīm Yūsuf, restored
9. ʿAlāʾ b. al-ʿAlāʾ, restored

The history of the foreign relations of the Rustamids, all that authors like Ibn Khaldūn, Ibn ʿIdāhī or al-Bakrī, knew of them, is limited to a few facts. Although the kingdom of Tāḥtar was surrounded by enemies (the territory of the Ǧībal- Ǧūhadīs included the Ǧabārī [q. v.] and the İdādīs of Tāḥtar), and the tributes of Tyre passed through Samarkand [q. v.] it existed was not directly threatened by the Mongols for 100 years. We find the second imām, ʿAbbāb al-Waḥḥāb, associated in the attack by the Ḩārādī Khudjīz Berbers (Huwārān and Nefūsas) on the town of Tripoli which was under the Ǧībal- Ǧūhādīs. At the same time the Rustamids, who could not recognise the ʿAbbābād caliphate and had to defend themselves against the Ǧībal- Ǧūhadīs who were vassals of Bagdad, seem to have sought the friendship of the Umayyads of Cordova. Ibn ʿIdāhī under 107 (822) mentions the magnificent reception given by the Umayyad ʿAbbāb al-Rājmān II to an embassy from Tāḥtar which included the son of the imām ʿAbbāb al-Waḥḥāb. We also know that this Umayyad had a Rustamid among his viziers (information supplied by E. Șevi-Provençal) and that in 95 (853) al-ʿAlāʾ received a present of 100,000 dirhems from the
Umairuddin Muhammad I. The reign of this imam al-Abd saw a conflict between the Rustamids and the Barbers of the region of Tiemen, partisans of the Idrijdids of Fās, in which Tāhert was victorious. Lastly we know how in 969 (902) the kingdom of Tāhert collapsed in a few days before the onslaught of the Kutama Berbers led by the Shīʾite missionary Abū ʿAbd Allāh [q.v.]. Several Rustamids were put to death and their heads sent to Rakkāda and carried through the streets of Kairu- nā. Others, among whom according to some authors were the imams Yaʿqūb and his son Abū Sulaimān, were able to escape and reach the oasis of Wargla.

What is of more importance than the relations with the other powers of Spain and Barbary, is the internal life of the Rustamid state which our usual sources ignore or of which we get a glimpse from Iḥbāʾi chroniclers like Abū Zakarīya [q.v.].

Although hereditary, the succession of imāms was not by the will of the elite of the Iḥbāʾ community. The imām, regarded as the most worthy, most honourable and best educated man, the legal and political and spiritual chief of the state, whose prestige extended to the communities in the east, was in reality under the control of the religious caste: alābī, waqāʾīn, ṣalāḥī, the guardians of the strict observance of the laws of the sect.

In a theocratic state of this kind, crises naturally took the form of schism. The most serious took place during the reign of the second imām, Abū al-Wahhāb. At the instigation of a rejected candidate for the imamate a group of malcontents demanded that the elected imām should rule with the control of a regular assembly. This innovation was put to the Iḥbāʾ doctors in the east, who rejected the principle completely. The advocates of the reform separated from the community and formed the sect of the Nūkāris [q.v.].

A second schism took place in the region of Tāhert on the death of a governor of the province and the successor of his successor designated by the imām of Tāhert.

Crisis no less serious which seem however to have been more of the character of dynastic rivalries disturbed the peace of Tāhert from the fourth imām. The claims to the throne gained the support of an opposition formed of diverse elements. No less than the religious prestige of the imām, the resources of the region and the activity of its commerce attracted to Tāhert foreigners from Persia, the ancestral home of the Rustamids, or from different parts of Barbary, Africa from Rīfiyya, Nafta from Tripolitania, and Christian Berbers. The Sāzānznads of Rīfiyya and the Central Maghribi frequented its markets and grew rich in them. Among these heterogeneous groups, some, like the Nefātī, Fātimid and Christian, showed themselves regularly the supporters of the established authority; while others, the Arabs in particular, and very often the nomads, were disposed to encourage the ambitions of pretenders.

Exposed to the troubles stirred up by its guests and its neighbours, this ideal state had then a somewhat agitated existence. The dynasty included able politicians, like Abū al-Wahhāb, who, using the maxim divide et impera, ensured peace and whose reign marks the apogee of Rustamid power. Several Rūsmanīs were learned imāms, rising less for their looks so reform for their theological speculations, and in various problems like astronomy. Their surprising tolerance of foreigners, even those hostile to the sect, encouraged the entrance of dissident elements into the administration and prepared the way for the collapse of Tāhert and the annexation of the kingdom by the victorious Shīʾīs.

RUSTEM PASHA, OTTOMAN GRAND VIZIER AND HISTORIAN, was born in 1505 in the vicinity of Sarajevo [q.v.; cf. the report of the Ballo B. Navagero in Albâri, Relationi degli ambasciatori veneti al senato, ser. III., vol. 5, p. 807; s dn case appears il serraggio di Roma, i.e. Boma-Serby], either in Bename or perhaps on the western border of Sarajevo polje (cf. C. Truhelka, in Bojnaica Listy, Sarajevo 1915, no. 80, who comes to this conclusion because Rustem Pasha built a bridge with 15 arches over the Željeznica (of which remains still exist), of parents probably originally Christian. In a c.sagitt. of the Serbian court in Sarajevo, "Nefīs Khamun, daughter of Muḥṣaf and sister of Rustem Pasha" in the middle of Shaban 947 (June 1557) sold through her agent [khanī] Abū al-Bag Ḥ &al-De:n, mikρvā of Rustem Pasha's āmīra in Sarajevo, her house there; this gives the name of the father Muḥṣaf. The family is said to have been originally called Opaša, while C. Truhelka, op. cit., says the name was also Čiguli. The local tradition of Sarajevo knows Nefīs Khamun as a sister of Rustem Pasha and daughter of a Muḥṣaf Beg or Paša. Rustem Pasha's brother was the kapānī paša (q.v.; grand admiral) Sinān Paša. As a boy Rustem entered the school for pages in Stambul and then the service of the court. He became stirrup-holder (rifībādīl; q.v.), gained the favour of the sultan and was appointed governor of Dıyūbāriq [q.v.], later of Anatolia. In 1553 he became third and in 1541 second vizier. On Dec. 31, 1544 he received the imperial seal for the first time. In 1553 at his own request Rustem Pasha was relieved of office and retired to Serettari where his wife Miḥrā bi-Mah [q.v.], a captive from Sulamīnī (Sinānī [q.v.], had built a palace. But by 1555 he was again grand vizier, and held this office until his death in July 1561 (28th Shawwāl 968; of the various dates given, this must be the right one). H. Mordtmann, in M. S. S., xxvii, 2, 1927, 30, however, gives the 26th Shawwāl 978 (July 8, 1561) as the day of his death. He was buried in his own splendid mausoleum in Stambul beside the Saha-ke mosque (cf. Hadīth al-Wasāwa, 28).
and Husain b. Ismail, Hadithat al-Dhimānī, i. 16; wrongly in Siddīq-i 'ayyāmān, i. 378). In addition to the many buildings, notably mosques, which he erected with his vast wealth in various parts of the empire and for which he employed the great architect Sinān, Rustom Pasha made a reputation for himself by a chronicle of the Ottoman empire, Taṣārīrāt-i 'Alî-ı' Ormān, which goes under his name. In the incomplete version that has survive, it comes down to 968 (1560-1561). The narrative, as regards the earlier period, closely follows the anonymous Taṣārīrāt-i 'Alî-ı' Ormān and the Annals of the Khans of the Chaghatay, Djinālī and Nešīrī (q. v.). It is a work of the reign of Mehemmed II the Conqueror, and it shows a certain independence, although perhaps here also an original source may be found. It only becomes important when it describes the events of his time. Although Rustom Pasha is known to have encouraged historical studies (cf. F. Babinger, G.O.W., p. 82, note), it is by no means certain whether he is himself the author of the Chronicle that bears his name or whether he only had it compiled. A German translation of part of it was published by Dr. Lindwurm Vetter under the title Die Osmanischen Chronik des Rustom Pascha in the Türkische Bibliothek, xx. (Leipzig 1923); cf. also - throner 0. L., xxviii. (1925), p. 246 sq. (ib., vii., 1925), p. 154 sqf., and Hister, Zeitsschrift, vol. xxxviii. (1928), p. 57 (ib.).

RUYAN, a district comprising the western half of Mərasmər [q. v.].

Iranian tradition. According to Daramoset, Aserda, ii. 416, Ruyan corresponds to the mountain called Raudūta ("redfish") in Vajkī, i. 19, and Ruyxîb-әsän in Sundājā𝑛, iii. 2, 37, W. of East, p. 34. Hufnī, Chronology, 1, ; and Suzak, p. 220, makes Ruyan the scene of the exploit of the archer Aragh (cf. Zahir al-Din, p. 18; Fig. 8, 6, in this connection mentions the hill At-Bala-chal). In the letter addressed to the mobed Tensar by king Qobosrānu (12th century A.D.), the latter claims to be lord of Taşbāristān, Pālāšār-gar, Gîlan, Dālānāb, Ruyan and Damāvand.

Geography. According to Ibn Rusta, p. 150, and Ibn al-Fakhrī, p. 304 (the latter cites Bāhashī as authority, but the passage is lacking in the Fāṣil al-Nu’l, Ruyan was at first an independent әsra attached to Dālānāb. It was conquered by Ömer b. Ḥajj Abī (after 141 = 758) who built a town there with a minār and attached it to Taşbāristān. Ruyan comprised an extensive area the districts of which lay between two mountains [Ibn al-Fakhrī: "between the mountains of Ruyan and Dālānāb"]; each township could supply from 400 to 1,000 soldiers [Ibn al-Fakhrī: in all 50,000]. The Šāhīd trived on Ruyan by Harīn al-Qaṣībī was 400,050 dirhams. The town of Ruyan called Kazda was the headquarters of the ābād. Ruyan was near the mountains of Ruyan and was reached via Ruyan. The text of the two authors above quoted suggests that between Ruyan and unsolicited al-Qaṣībī was a region which formed the military zone from which operations were conducted against Dālānāb. To this zone belonged Shāhba ["Sahāb"]; a town called al-Kaṭah [situated opposite Kazda], another (?) town called al-Mujāhīdī and lastly Muzn. [On these frontiers see the Ḥadīthat al-Ālam and Zahir al-Din.]

Iṣṭakhri, p. 206, enumerates the mountains of "Dailam" [in the broad sense] as the following: Dījālū Kārīn, Dījālū Ṭāḥūlitūbān and Dījālū al-Rūhānī (according to Barthold: al-Rūhānī = Ruyan); in these last named highlands there were formerly kingdoms (manīlā); in the part adjoining Tabaristan the kings were of Tabaristan and in the part adjoining Ruyan they were of Ruyan. According to the Ḥadīthat al-Ālam (written in 372 = 682, ed. Barthold, fol. 150b, Nūṭīl (according to Iṣṭakhri, p. 217; one nāshqīa west of Amlān) Čūr, Rūsīn (Rūyān = Ruyan) and Kaṭār (west of Gīlan) formed a province of Tabaristan but the authority there belonged to a king named Ustāndūr. Ehlī produced red woollen materials for waterproofs and blue gilī (a kind of carpet material).

Rustāmdār. From the Mongol period we find the geographical term Rustāmdār. According to the Nusart al-Qānum, p. 161, the greater part of its territory was irrigated by the Shīlī-rūd (†) and the Ṭurčhī-l Kâln (ed. Dorān, p. 298), says that Taʃk̄un (on the upper Shīlī-rūd) adjoined Rustāmdār. On the other hand, Zahir al-Dīn gives the term a larger connotation and uses it sometimes as a synonym of Ruyan and sometimes with a special meaning. An examination of the passages lends R. Vazirn, et. al., p. 133-134 to the conclusion that Rustāmdār in the proper sense was situated towards Kudžar and Kaṭār while Ruyan primarily meant the country towards Ruyan. According to Zahir al-Dīn (p. 19-20), the eastern frontier of Rustāmdār was originally at Si-Sangān (near the mouth of the river of Kudžar), but in the time of the Ābād Sišānpar was brought back to Alats (near Amlān); the western frontier was at first at Ṣalūkī (near Lengerfūd in Gīlan), but in 550 (1153) was brought back to Cottagee (on the eastern frontier of Gīlan) and in 640 (1242) at Namak-ašā-rūd (west of Kudžar). It is curious that Zahir al-Dīn, p. 17 seems to place the "town of Ruyan" (Kazda) of Ibn Rusta) at Kudžar but the passage is not very explicit and the legend of the foundation of the town given by Zahir al-Dīn may belong to a period before the appearance of the term Rustāmdār.

The princes of Ruyan. The title attached for the dynasty is Ustāndūr (perhaps *Ustān-dīr < Ostan-dīr; cf. Tahārtā, i. 2638). It is not clear if the dynasty also took the title of Ṭūrḫān < Tūrkhān which in Sāfīanī terminology was at first borne by the viceroy of the four great divisions of the empire, the prerogatives of which were lessened in time by the increase in power of the military commanders (ṣifākūhā; cf. Christensen, L'Espace des Sāfīanis, p. 41, 43). The fact is that in the passage in Iṣṭakhri, p. 206, the mountain of *Fāṭūfīān is mentioned separately and, it seems, to the east of *Ruyan but it is possible that the
two names only mean the two parts of "Ruyan" which at this time were under Tabaristan and Raify respectively. In any case, in the genealogy of the Ustumbas (Zahir al-Dir, p. 146-154 and 320-321), Padaspán appears as the personal name of the eponymous founder and of certain princes only. The synonym Padaspán (towards the end of the 16th century?) was regarded as one of the three sons of Gil-Gambur, a descendant of the Safyanian Djamasp (who reigned 497-499). Towards the end of the 7th century (Isahakii, p. 326 [see above]), the dynasty seems to have passed through a crisis which it survived. After the death of Džafar al-Dawla Kayumurth b. Rustum b. Gustahun in 847 (1453) his possessions were divided between his two sons: the line of Kâla reigned in Nîr, in the valley of the left bank tributary of the river of Amul (Haraz-pêy), and that of Iskandar at Kudîdh, on the northern slopes of the mountains of Nîr.

On the feudal wars in Māzandarān see Zahir al-Dir, ed. Dorn, index. The princes of Rustam-dâr retained their autonomy down to the time of the Safawīs. In 947 (1540) the expedition of Šah Tahmāsp against Malik Džâhângîr b. Malik Kâla, who had abd himself up in the fortress of Ludāsân, was a failure (cf. Aḥsan al-Tawḥīd, ed. Sedilou, p. 209). In 997 (1586) the maliks Džâhângîr b. 'Adil al-Nîr and Džâhângîr b. Muḥammad of Kudîdh came to pay homage to Šah ʿAbbâs but finally in 1009 (1594) they were both dispossessed of their lands: the rulers of Nîr submitted voluntarily while he of Kudîdh was seized by force (cf. ʿАd-dawli, p. 265, 334, 354-357).

The names of the carpenters are Ahmad and Husain (b. Ḥasan), cf. the name of Ahmad b. Ḥasan who carved a gateway at Bâb-e Fārūq in 670, Rahino, op. cit., p. 115 and ibid., p. 15, Husain b. Ahmad who carved the gate of Buland-Imâm near Aṣhrâf, dated 873 (1468).

Bibliography: Cf. the ars. Māzandarân; Justi, Iranisches Namensbuch, s. v. Padaspân, Ustumbâd and p. 433-435; Marquart, Kermân, p. 141, 115 (Reut); Barthold, Irans geogr. obor irâna, St. Petersburg, 1903, p. 155 and 159; Le Strange, The Lands of the Eastern Caliphate, p. 337-338; R. Vasmer, Die Entstehung Tabaristan durch die Araber, in Islamica, 11/1, 1927, p. 115-125 (a detailed analysis of the sources); Rahino, Māzandarân in G.M.S., 1928, see index. (V. Minorsky)

RUZZ ì b. ṬALĀṬ al-MALîK al-ʿADîD, Rustâm al-Dir b. Ṭalâṭ, Mâlîk al-Isâm, Fatehmîd waṣîr, of Armenian origin, succeeded his father Ṭalâṭ [q. v.] after the latter's assassination on 26th Ramadân 556 (Sept. 12, 1165) and remained in office for fifteen months. The only event of importance during this period was a Berber invasion in 557 (1165) under Ḥusain b. Nisâr [see Mîrâb b. AL-MUSTAṢÂRî], who was captured and put to death. Rustak inherited the literary tastes of his father and is said to have governed well, but when, in the same year, he attempted to remove his rival ʿAbîwar [q. v.] from the governorship of the Upper Sa'd, the latter, encouraged by the Caliph al-ʿAdîd [q. v.], rebelled and marched on Cairo. The waṣîr, deserted by his partisans [see harâm], fled from the city (18th Muḥarram 558 = Dec. 29, 1165) but was betrayed, and executed by Ṭalâṭ b. ʿAbîwar. The historian al-Malikī remarks (Khâṣṣāt, i. 207-208) that Rustak was the last holder of the office of waṣîr al-imaṣâmî in the Fâṭimid period.

THE ENCYCLOPAEDIC OF ISLĀM
ADDITIONS AND CORRECTIONS

P. 3, read: M. is now a pretty little Arab town with 9,423 inhabitants. To the east of it is the Biaz, which was formerly separated by a wall, now taken down, from the town which lay to the west of it. The whole area is surrounded by a wall which is pierced on the north by three, in the west by one, and in the south by three gates.

P. 41b, article LUL, l. 71, instead of: The clans (gurāk), read: The tribes (gurāk).

P. 42b, l. 28, instead of: mutu-ifarika, read: muta-ifarika; l. 51, instead of: southern, read: northern.

P. 43b, l. 48, instead of: village, read: valley.

P. 43b, l. 62, instead of: like, read: as well as.

P. 44b, l. 11, instead of: Būyid, read: Ziyārid.

P. 43b, l. 63, instead of: Mākān, read: Mākān.

P. 62b, l. 37, instead of: Siyāq, read: Siyāq.

P. 76a, l. 1 and p. 77a, l. 6 from below, read: Rāmiya, for Rūmiya.

P. 76b, add on l. 22 from below: From January to March 1928, L. Waterman conducted excavations in the region of Tell 'Umair for the American Schools of Oriental Research (cf. their Bulletin, No. 30, 1928). The mound seems to conceal a tāgūrat (tower built in successive stages) with a large temple adjoining it which continued to be used in the Graeco-Roman period; a Roman cemetery was laid bare in another part of the ruined area. From inscriptions found here the equation Akhshk-Upt (Opla-Seleucia is made quite certain. For Akhshk, cf. also the article by Unger in the Reisstatuen der Assyriologie, vol. i., Berlin 1928, p. 64—65.

P. 77b, read iv. 447; for v. 447.

Add to the Bibliography of the article AL-MADĀʾIN: Apart from the already mentioned poem of Patchachy, unimportant in matter, in the periodical Lugat al-ʿArab, Baghdad, iii., 1914, p. 392, cf. especially the articles by F. Djebra in the same periodical, iii. 136—141 (with corrections by Kāsim al-Ḏujailī, op. cit., p. 292—294) and Kāsim al-Džujailī, op. cit., p. 282—294. Djebra deals particularly with the present settlements of Arab tribes in the region of al-Madāʾin, al-Džujailī also gives an account of the latter and gives interesting information also of the pilgrimages to the tomb of Salmān al-ʿArabī, describes the interior of this "sanctuary" and gives notes on various mounds of ruins in the region of al-Madāʾin which form a welcome addition to Herrfeld's topography.

P. 22a, l. 29 and 33, instead of: Maʿmūnids, read: Maʿmūnids.

P. 22b, l. 3, instead of: Farighūnids, read: Farighūnids.

P. 42b, l. 11 al ṭafra, add: According to Ibn al-ʿAṯîr (ed. Tornberg, l. 314, 375, cf. Yalāʾī, iv. 294) Kawsūdī destituted al-Mundhar b. Māʿṣār ibn-Sāmār because of his refusal to accept Masdakum and appointed in his place the Kindite al-Ḥārith b. Amr, who had embraced the new faith. Whatever may be the truth, the relations between the king of Persia and the Arab have been influenced by Mandsakum.

P. 49b, l. 11, 12 al ṭafra, read: Timur who stayed in Balkat (Milet) on his return from Smyrna in the winter after the battle of Angora (1402) (Duca, p. 76, ed. Bonn, various reading).

P. 51b, l. 19, instead of: Nūzāt, read: Nūzāt.

P. 51b, art. MIRĀTH. To be added to the Bibliography: Pellet and Bouquet, Les successions agraires misipetées, Paris 1935.

P. 64b, art. AL-MUḤAṢİRĪN. Add: In modern times the name Muḥāṣerīn has been applied to the Muḥāṣirīn who, as a result of the transfer of Muslim territory to the non-Muslim rule left their native land and went to a Muslim country in order not to be impeded in the exercise of their religious duties. For example, towards the end of the xviith century and in the xixe century large bodies of such emigrants abandoned lands occupied by the Russians and sought a new home in Turkey. A similar phenomenon
accompanied the liberation of the Balkan peoples from Turkish rule and the rise of the independent Balkan states. The Mahomedans deported to Turkey from Greek territory after the Treaty of Lunantr (1923) as a result of an agreement with Greece were always called Muhadjir, even in official language. Their affairs were regulated by a General Office for Nomads and Emigrants (Adı: Aray mucadilce Mürdürüyec müdürüysisi).

In modern Turkey the Muhadjir constitute an important domestic and cultural problem. Their settlements which are distributed over the whole of Anatolia are as a rule centres for the advancement of Turkish culture. The word Muhadjir also plays an important part in place-names in Turkish territory as an element in names, mainly of recent origin.

P. 673b. l. 22, instead of: f. 101, read: f. 108.

l. 62, instead of: Guhar, read: Guhar.

P. 674a. l. 51, instead of: Sa'dn, read: Sari.

P. 688a. l. 43, 55, 63, instead of: Mere, read: Mere.

P. 691a. l. 80, instead of: in May 1264, read: in May 1262.

P. 692a. l. 29, to be added: He has been buried at the feet of the poet Niyaș Miâri at Kastan (Lammon), where his tomb was still shown in 1916 (cf. L. Massignon, Revue, p. 164).

P. 701a. l. 48, to be added: In an early period Turkish has also known the form mus'ar (from Semitic mawâr, mawâr, mawar, cf. W. Bang and A. von Gallus, Türk. Turfan-Texte, v. 53).

P. 701b. l. 60, to be added: Signature was something of a privilege. Of the surviving engravings of Istanbul two only possessed it: Yâmmi, the son of a famous father of that name, and 'Aṭîk. The personal seals in Latin characters, made up to this day (1933), are, with a few exceptions, barbarous.

The ethnographic museum at Ankarà possesses a curious collection of metal seals provenient from the suburb of the now dissolved qawâr of the Bektâşis.

P. 712a. art. Mâkâtî. B. Seleâm. Mâkâtî's commentary on the Kur'ân is evidently from manuscripts recently found by Rütt er and Schacht is called al-Tasarj fi mutahâsibîh al-Kur'ân and deals with the different meanings of single words like la zdîh, la zdûr etc. in different passages of the Kur'ân. There are manuscripts in Scambur, Hamûdîya, N. 58, Faîrûkî, N. 79, Serîkî, N. 74, Umbîlî, N. 541; cf. Rütt er, loc., xvii. 249, and Schacht, Aus dem Bibliothek..., l. 58; also al-Abbâr Mâkâtî, ed. Rütt er, index, p. 46. According to Massignon, Le Passage d'al-Makâtî, p. 520, note 2 the commentary is quoted by Abu l-Hasan al-Malâqî, Târikh wâ-sâ'îd (Pers.) on. p. 573. Massignon calls attention to Mâkâtî's importance as a source for hymnages in which al-Shâhî followed him, cf., also, p. 703. (M. Flesser).

ALTBABYLONISCHE PERSONENMIETE
UND
ERNTEARBEITERVERTRÄGE

VON

Dr. Iur. JULIUS GEORG LAUTNER

Ord. Professor an der Universität Zürich.

1936. xxii and 264 pp. With 1 plate. 8vo. price 10.— guldens

STUDIA ET DOCUMENTA AD IURA ORIENTIS ANTIQUA
PERTINENTIA VOLUMEN I

Contents:

I Personenmiete und andere Verträge über Arbeitsleistung im
Keilschriftrecht.

II Die eigentliche Personenmiete des altbabylonischen Rechts.
1. Terminologie. Der Aussteller der Urkunde und das Vertrags-
schema. 2. Die Rechtsnatur des ḫūrūm-Vertrags. 3. Die Parteien
und die Vertragsabreden bei der Personenmiete.

III Die Erntearbeiterverträge des altbabylonischen Rechts. Gattungs-
miete.

IV Hybride Formen der Personenmiete.

Quellenregister — Sachregister.

From the Preface:

"Die genaue Feststellung des rechtsgeschäftlichen Typus der Ernte-
arbeiterverträge und der Unterscheidungsmerkmale der beiden Ver-
tragsarten liess das Vorkommen bisher übersehener Mischformen
erkennen. Der günstige Stand der Quellen ermöglichte es, von den
direnden Arten rechtsgeschäftlicher Verwertung menschlicher
Arbeitskraft für einen wichtigen Zeitschnitt Babyloniens ein anschau-
lliches Bild zu entwerfen, dessen Lebensdasein durch Heranziehung
von Wirtschaftstexten erhoben werden konnte, die uns Aufschluss über
Arbeitsorganisation, Arbeitskontrolle und Lohnverrechnung gewähren".
