According to most traditions, the office of mu`ādhdhin was instituted in the year 1, according to others only after the irṣā, in the year 2, according to some weak traditions while Muhammad was still in Mecca. At first the people came to the saḥīl without being summoned. Trumpets (biḥā) were blown and rattles (maḥṣū) used or fires lit after the custom of Jews, Christians and Madjūs. `Abd Allāh b. Ṭa`lār learned the time of prayer by ear, and in a dream it was approved by the Prophet and when Būkār proclaimed it, it was found that ʿOmar had also learned the same procedure in a dream (Ibn Ḥāthīm, p. 357 sq.; Khawāṣṣ, i., 404 sq.; Buḫkārī, Aḥṣāṣṣ, bāb 1; Zarkhānī, i., 121 sqq.). There are also variants of the story, e.g., that the Prophet and ʿOmar had the vision, or ʿAbd Bakr or seven or fourteen Amīrs; according to some, the Prophet learned it at the ṣuṣrāq from Gabriel, wherefore the introduction of the ṣuṣrāq is dated after the irṣā; among the suggestions made, the hoisting of a flag is mentioned (Sīra al-Ḥalālbīya, i., 100 sqq.). Noteworthy is a tradition which goes back to Ibn Sa`d, according to which at ʿOmar's suggestion at first a mu`ānād, Būlīl, was sent out who called in the streets: al-Ṭalāṣṣ al-Dimārī, 173 sqq. Only later were other possibilities discussed, but the method already in use was confirmed by the dream, only with another formula, the one later used (Khawāṣṣ, i., 404; Sīra al-Ḥalālbīya, ii., 100 sqq.). According to this account, the consideration of other methods would be a secondary episode and probably the tradition in general represents a later attitude toward the practices of other religions. But in Islam other methods were certainly used. In Fāṣ, a flag was hung out in the minarets and a lamp at night (J. A., ser. 11, xii., 341). The flag is also found in the legend of the origin of the practice. The public crier was a well-known institution among the Arabs. Among the tribes and in the towns important proclamations and invitations to general assemblies were made by criers. This crier was called Mu`ānād or Mu`ādhdhin (Sīra al-Ḥalālbīya, ii., 170; Lammens, La Mosquée, p. 62 sqq., 145; do. Bercovici, i., 229 note; do. Muḥī`, p. 150; Aḥsanī, Hidayat, p. 54 sqq.). Therefore means Mu`ādhdhin, Mu`āhdhin, Mu`ādhdhib, Sūra viii., 50; "to proclaim" and "crier." Mu`āmī (Buḫkārī, Fasr al-Ḳibās, bāb 15) and Mu`ādhdhin (ibid., Sūra, bāb 69; Ṣaḥīḥ, bāb 10 = Ṣaḥīḥ, bāb 16; Sīra al-Ḥalālbīya, ii., 270) are names given to a crier used by the Prophet or ʿAbd Bakr for such purposes. Official proclamations were regularly made by criers (cf. Tabārī, iii., 2131, 3). Sadīq and Musallimīna used a mu`ādhdhin to summon the people to their prayers (Tabārī, i., 1919 sq.; cf. Annali dell' Islam, i., 410 sq.; 638 sq). It was therefore very a natural thing for Muhammad to assemble the believers to common prayer through a crier (mudūl bi`i or iba` al `salāt, Sūra v., 63; xix., 93) the summons is called Mudūl and Aḥsanī, the crier Mu`āmī (Buḫkārī, Waqīf, bāb 5; Aḥsanī, bāb 7) and Mu`ādhdhin; the latter names are used quite indiscerningly in ibid., Waqīf, bāb 5; Tabārī, ii., 297 sqq.). Mu`āmī (al-Ṣalāt, R. G. A., i., 182, 39, also Ṣaḥīḥ, "crier") is used (Tabārī, iii., 861; Chron. Mehaki, i., 340).

In these conditions, it was very natural for the crier in the earliest period to be regarded as the assistant and servant of the ruler; he is the mu`ādhdhin (Ibn Sa`d, i., 7; Muslim, Ṣalāt, iv., 43, Makrizī, iv., 43, etc.; cf. Tabārī, i., 1120). ʿUmar sent to Kūfa ʿAmr b. Waṣṣ as enmār and ʿAbd Allāh b. Kāītā as mu`ādhdhin and waṣṣir (B. G. A., v., 165); he is thus the right hand of the ruler. Al-Ḥusain had his musalli and later summoned to the salāt on al-Ḥusain's instructions (Tabārī, ii., 297, 298; cf. Ibn Zayyād, ibid., p. 260 and in the year 196 the ʿʿalām in Mecca, ibid., iii., 861, 73; also Chron. Mehaki, i., 340). During the same period the mu`ādhdhin probably visited his summons in the streets and the call was very short: al-Ṣalāh al-Dimārī (Ibn Sa`d, i., 7, 7; Chron. Mehaki, i., 340; Tabārī, iii., 861; also in the year 196, Sīra al-Ḥalālbīya, ii., 101; Khawāṣṣ, i., 404 sqq.). This brief summons was, according to Ibn Sa`d, also used later on irregular occasions (i., 7 sqq.; cf. the passage in Tabārī). Perhaps also the summons was issued from a particular place even at a quite early date (see D 2a). After the public summons the mu`ādhdhin went to the Prophet, greeted him and called him to prayer; the same procedure was later used with his successor; when he had come, the mu`ādhdhin announced the beginning of the salāt (ṣamī` al-ṣalāt, Waqīf, bāb 5; Aḥsanī, bāb 58; Sīra al-Ḥalālbīya, ii., 104 sq.; Makrizī, iv., 45). The activity of the mu`ādhdhin thus fell into three sections: the assembling of the community, the summoning of the imām and the announcement of the beginning of the ṣalāt. With time changes were made in all three stages. The assembling of the community by crying aloud was not yet at all regular in the older period. During the fighting, Ibn Zayyād in the year 60 called his mu`ānād with threats to the evening ṣalāt in the mosque and when after him the mosque was full he had the ṣīma announced (Tabārī, ii., 260). When a large number of musalsas had come into existence, the public call to prayer had to be organised lest confusion arose, and the custom
of calling from a raised position became general after the introduction of the minaret. While previously the call to prayer had only been preparatory and the ḥāma was the final summons, the public call (adḥān) and the ḥāma now formed two distinct phases of the call to prayer. Tradition has retained a memory of the summoning in the streets, now completely fallen into disuse, when it tells us that ʿOthmān introduced a third ʿaḍḥān, a call in al-Zawār, which was made before the call from the minaret: this call however was transferred by Ḥishām b. ʿAbd al-Malik to the minaret (Bukhārī, Qūnawā, bāb 22, 25; Sīra Ḥalabīya, li. 110; Ibn al-Ḥāḍīdī, Madkhal, i. 45). This may be evidence of the gradual cessation of the custom of summoning the community by going through the streets. Ibn ʿAbī Ṭālib, but this is exceptional, tells us that the muʿāḍhdīn in Kháṣrīr still fetched the people from those houses who did not come were whipped (ill. 4 sq.), which recalls Wahhābī measures. When exactly the Sunna and in distinction to it the Shiʿī formula, finally developed can hardly be ascertained [see Ṣaʿīdī]. The call ḥāyaʿa ʿala ʿl-fāṭīḥah is known from the time of ʿAbd al-Malik (65–85) (Akhṭār, ed. Ṣaḥḥān, p. 254; see Horovitz, in Jsl., xvi., 1927, p. 157; on ṣaḥāf see ibid.; on ṣaḥāf formulae see further Sīra Ḥalabīya, ii. 105 sq.). At first: the call was only made at the chief mosque, as was the case in Medina and Mīṣaʿ (Makritz, iv. 43 infra) but very quickly other mosques were also given muʿāḍhdīn; their calls were sufficiently audible in the whole town. The chief mosque retained this privilege, that its muʿāḍhdīn called first and the others followed together (Makritz, iv. 43 infra, 44).

The summoning by the imām in Medina was therefore quite a natural thing. The custom, at: first associated with the ruler’s mosque, was not observed in Medina only (see for ʿOthmān and ʿAlī: ʿAbī Ṭālib, i. 2050 sq.) but was also usual under the Omayyads. The formula was: al-Salām ʿalā ikhwān ʿl-Mukrīn wa-Rahmatum ʿl-Ikh was-Barākātuhum ḥāyaʿa ʿala ʿl-Fāṭīḥah, ḥāyaʿa ʿala ʿl-Fāṭīḥah al-Ṣūrāt, yarhamuka ʿl-Ikh (Makritz, iv. 45; Sīra Ḥalabīya, ii. 105). After the alteration in the adḥān and the greater distance of the ruler from the mosque, to summon him was no longer the natural conclusion to the assembling of the community. In the ʿAbbaseid period and under the Fāṭimids there was a survival of the old custom, in as much as the muʿāḍhdīn ended the adḥān call before the ṣalāt al-fajr on the minarets with a ʿaḍḥān upon the calliph. This part of the muʿāḍhdīn’s work was thus associated with the first adḥān call. When Saḥḥ al-Dīn came to power, he did not wish to be mentioned in the call to prayer, but instead he ordered a blessing upon the Prophet to be uttered before the adḥān to the ṣalāt al-fajr, which after 761 only took place before the Friday service. A multasib ordered that after 791 in Egypt and Syria at each adḥān a ʿaḍḥān was to be uttered over the Prophet (Makritz, iv. 46; Sīra Ḥalabīya, ii. 110). Ibn Dajbur relates that in Mecca after each ṣalāt al-maghrib, the foremost muʿāḍhdīn pronounced ḥāyaʿa ʿala ʿl-Mahṣūm ʿalā ikhwān al-ʿAbbasīm ʿalā ʿl-Iṣlaḥ wa-Shuʿayb, ḥāyaʿa ʿala ʿl-Iṣlaḥ wa-Shuʿayb (p. 103) and according to Makritz, after each ṣalāt prayers for the ʿAlī were uttered by the muʿāḍhdīn (iv. 53 sq.). Another relic of the old custom was that the trumpet was sounded at the door of the ruler at times of prayer; this honour was also shown to ʿAbd al-Lāwwah in 698 by order of the caliph (Ibn Maskawī, vi. 490; Cairo 1315, p. 356).

The ḥāma always remained the real prelude to the service and is therefore regarded as the original adḥān (Bukhārī, Qūnawā, bāb 24 sq.). In the earliest period it was fixed by the arrival of the ruler and it might happen that a considerable interval elapsed between the summoning of the people and the ḥāma (cf. ʿAbī Ṭālib, ii. 260, 297 sq.). The times were later more accurately defined; one should be able to perform 1–3 ʿaḍḥāts between the two calls (Bukhārī, Adḥān, bāb 14, 16). Some are said to have introduced the practice of the muʿāḍhdīn calling ḥāyaʿa ʿala ʿl-fāṭīḥah at the door of the mosque between the two calls (Sīra Ḥalabīya, ii. 105). From the nature of the case the ḥāma was always called in the mosque; at the Friday service, it was done when the imām mounted the minbar (Makritz, iv. 43) while the muʿāḍhdīn stood in front of him. This muʿāḍhdīn, as a rule, called some, ought to be the one who called the adḥān upon the minaret (Sīra Ḥalabīya, ii. 109), while Ibn al-Ḥāḍīdī ignoring the historical facts only permits the call from the minaret (Madkhal, i. 45). In Tunisia, the ḥāma was announced by ringing a bell as in the churches (Zarkaš, transal., Fīgūn, in Rev. Soc. Arch. Constantinii, 1894, p. 111 sq.). A similarity to the responses in the Christian service is found in the fact that the call of the muʿāḍhdīn, which contains a confession of faith, is to be repeated or at least answered by every one who hears it (Bukhārī, Qūnawā, bāb 23); this is an action which confers religious merit (Ibn ʿUsākhūḡa, ʿAbī Ṭālib al-Ḥanafīya, ed. Rūgīl, p. 30). It is possible that we should recognise in this as well as in the development of the formulae the influence of Christians converted to Islam (cf. Becker, Zur Geschichte der Islamzeit, in Jsl., iii, 1912, p. 374 sqq. and Islamstudien, i. 472 sqq., who sees an imitation of the Christian custom in the ḥāma in general; on the possibility of Jewish influence see Mittwoch, in Abb. Fr. A. W., 1913, Phil.-Hist. Cl. 2).

The muʿāḍhdīn thus obtained a new importance. His work was not only to summon the people to divine service, but was in itself a kind of religious service. His sphere of activity was further developed. In Egypt we are told that Maslama b. Muhkallad (47 sqq.) introduced the ṣaḥāf. This consisted in praises of God which were uttered by the muʿāḍhdīn all through the night until ṣaḥīr. This is explained as a polemical imitation of the Christians, for the government was troubled by the use of the muṣṭafī at night and forbade it during the adḥān (Makritz, iv. 48). In the time of Ahmad b. Tūsī and Khūmarwarāshī, the muʿāḍhdīn recited religious texts throughout the night in a special room. ʿAbd al-Dīn ordered them to recite an ʿaḍḥān in the night adḥān and after 700 ḥādr was performed on Friday morning on the minarets (ibid., p. 48 sqq.; Sīra Ḥalabīya, ii. 113). In Mecca also the muʿāḍhdīns performed ḥādr throughout the night of the first Shawwāl on the roof of the Ḥubba of the Zemmām well (Ibn Dajbur, p. 155, 156; cf. for Damascus: Makritz, iv. 49). Similar litanies are kept up in modern times as well as a special call about an hour before dawn (Ebel, Türkm. see Lane, Manners and Customs [Everyman’s Library],
The original call of the mu'adhdhin thus developed into a melodious chant like the recitation of the Qur'an. Al-Ma'adhini tells us that in the fourth century in Egypt during the last third of the night, the adhān was recited like a dirge (B.G.A., ii. 205). The solemn effect was increased by the large number of voices. In large mosques, like that of Mecca, the chief mu'adhdhin called first from a minaret, then the others came in turn (Chron. Mecca, iii. 24; Ibn Dzungar, p. 145 sqq.; cf. B.G.A., ii. 327; i. 327; cf. supra). But in the mosque itself the īklim was pronounced by the mu'adhdhins in chorus on the dakkah (see II. 26) erected for this purpose, which is also traced to the Muslims. In the third and fourth centuries we hear of these melodious recitations (tajārij) of the mu'adhdhins on a raised podium in widely separated parts of the Muslim world (Sanā'ī, Egypt, Khurāsān; B. G. A., iii. 327; vii. 111; the expression al-muḍāla 'iṭība, "the musicians," if correct, probably refers to the mu'adhdhins: B. G. A., iii. 205; cf. also: Kindi, Wafā', p. 469; for Fāris we are expressly told that the mu'adhdhins call without tajārij; B. G. A., ii. 439, 17). Sometimes in large mosques they were stationed in different parts of the mosque to make the īklim's words clear to the community (tabāgha). The singing, especially in chorus, like the salāh, was regarded by many as bid'a (Kindi, op. cit.; K. al-Ma'adhīl, ii. 45 sq., 61 sq.; Sīra Ḥalabiyya, i. 111). In other ways also the mu'adhdhins could be compared to deacons at the minbar.

The khāṭib on his progress to the minbar in Mecca was accompanied by mu'adhdhins and the chief mu'adhdhin girded him with a sword on the minbar (Ibn Dzungar, p. 96 sq.).

The new demands made on the mu'adhdhins necessitated an increase in their number, especially in the large mosques. The Prophet in Medina had two mu'adhdhins, Bīlāl b. Rikāth, Abū Bakr's muwāfa, and Ibn Umm Maktūm, who worked in rotation. 'Oqīmūn also is said occasionally to have called the adhān in front of the minbar (i.e. the īklima) (Ma'adhīl, iv. 43). It is therefore regarded as commendable to have two mu'adhdhins at a mosque (Muslih, Sāhī, tr. 4; cf. Subk, Mu'īd, p. 165). Abū Ma'hāshira was also the Prophet's successor as mu'adhdhin in Mecca. Under 'Omar, Bīlāl's successor as mu'adhdhin was Sa'd al-Kaṣār, who is said to have called to prayer for the Prophet in Ḫūba (Ma'adhīl, op. cit.; cf. Sīra Ḥalabiyya, i. 107 sqq.). In Egypt under 'Amr, the first mu'adhdhin in al-Fuṣaṭ was Abū Muslim: he was soon joined by nine others. The mu'adhdhins of the different mosques formed an organisation, the head (qażm) of which, after Abū Muslim, was his brother Shurahbīl b. Āmir (d. 65); during his time Maslama b. Mukhāḍīd built minarets (Ma'adhīl, iv. 44).

The office of mu'adhdhin was sometime hereditary. The descendants of Bīlāl were for example mu'adhdhins of the Medinan Mosque in al-Rawḍa (Ibn Dzungar, p. 194) and we also find in Medina the sons of 'Uthmān al-Kaṣār officiating (Ibn Kutasba, Hamzah d. Gesh, ed. Wäszenfeld, p. 132, 279). In Mecca the sons of Abū Ma'hāshira (ibid., p. 278; Sīra Ḥalabiyya, ii. 106), in Basra, the sons of al-Mundhir b. Ḥassān al-Ablī, mu'adhdhins of 'Uthmān al-Kaṣār (Ibn Kutasba, p. 279); it is also possible that this was really the result of a system of guilds of mu'adhdhins. In the Ḥajāmī of the Maghrib in the eighth century each had regularly four mu'adhdhins who were stationed in different parts of the mosque during the īklim (K. al-Ma'adhīl, ii. 47, supra); but there were often quite a large number. In the Asḥār mosque in the time of al-Jākīn there were fifteen, each of whom was paid two dinārs a month (Ma'adhīl, iv. 51). Ibn Baṭṭūlāf found seventy mu'adhdhins in the Mosque of the Omayyads (i. 204). About 1900, in Medina there were in the Mosque of the Prophet fifty mu'adhdhins and sixty assistants (Iṣāmāli, 'Ābīb, p. 242). Blind men were often chosen for this office; Ibn Umm Maktūm for example was blind (Bukhārī, Aṣbāb, bāb 11; Sīra Ḥalabiyya, ii. 104; cf. Lane, op. cit., p. 75). The Prophet is said to have forbidden the Thābitī to pay a mu'adhdhin (Wāqī'īṣī-Waḥīmmī, p. 383). Īqāmūn is said to have been the first to give payment to the mu'adhdhin (Ma'adhīl, iv. 44) and Ahmad b. Ḥajīm gave them large sums (Jābīl, p. 49). They regularly received their share in the endowments, often by special provisions in the documents establishing the foundations.

The mu'adhdhins were organised under chiefs (mu'awāfī; Ma'adhīl, iv. 14). In Mecca the wālī al-mu'adhdhin minbar was identical with the mu'adhdhin al-Zamānī who had charge of the singing in the upper story of the Zemzem building (Chron. Mecca, iii. 424 sq.; Ibn Dzungar, p. 145; cf. Snouck Hurgronje, Mecca, ii. 322). The mu'adhdhin was next to the Imām but subordinate to him; in certain districts, it was the custom for him to mount the pulpit during the Khutbah with the Imām (when the latter acted as khāṭib) (K. al-Ma'adhīl, li. 74; correct above p. 928, l. 31 sq. in keeping with this). The position which they originally occupied can still be seen from the part which they play in public processions of officials, e.g. of the Rāṣī l-Kufrī, when they walk in front and lead the ruler and his visir (Ma'adhīl, i. 246).

Closely associated with the mu'adhdhin is the mu'māshit, the astronomer, whose task it was to ascertain the īklim and the times of prayer (Subk, Mu'īd, p. 165 sqq.); sometimes the chief mu'adhdhin did this (Snouck Hurgronje, Mecca, ii. 322).

5. Servants.

According to Abū Hurairah, the Mosque of the Prophet was swept by a negro (Bukhārī, Sālāt, bāb 72, cf. 74). The larger mosques gradually acquired a large staff of servants (khālīdūm), notably buwādū, ḥarīfī, and water-carriers (cf. e.g. v. Berchem, C. I. A., i, N° 253). In Mecca there have always been special appointments, such as supervisor of the Zemzem and guardian of the Ka'ba (ṣālmī, pl. ṣālīmān, also used of the officials of the mosque: Ma'adhīl, iv. 76; cf. Ibn Dzungar, p. 278). In Ibn Baṭṭūlāf's time the servants (khālīdūm) of the Mosque of the Prophet were numerous, particularly Abyssinian; their chief (ṣālmī al-khālīdūm) was a great emir and paid by the Egyptian-Syrian governor (l. 278, 348); cf. the title of an emir of the year 798: abū Ḥādī al-ṣālmī al-khālīdūm in ʿālam al-arṣuṣ al-mawāni (v. Berchem, C. I. A., l, N° 201). In the Mosque of Jerusalem about 300 a. h., there were no less than 140 servants (ṣālmīt: B. G. A., v. 100); others gave the figure 250 (Le Strange, Paléologue, p. 163) and according to Muṣṭir al-Din, Abū al-Malik appointed a guard of three hundred black slaves here, while the actual menial work was done by
certain Jewish and Christian families (Sauvain, Hist. Jér. et Hbr., p. 56 sq.).

In other mosques superintendents (kamim, pl. haswawa) are mentioned, a vague title which covered a multitude of duties: thus the Madrasa al-Madidiya had a kajim who looked after the cleaning, the staff, the lighting and water-supply (Makrizi, iv. 251), the Azhar Mosque had one for the miṣṣa'ya, who was paid twelve dinars (ibid., p. 51) and also a haswawa, who were paid like muḥaddiths (two dinars a month) and are mentioned between them and the imams, probably supervisors of the staff (ibid., p. 51). In other cases a kajim al-dādhi, sometimes a kajmi, is mentioned, who is apparently the same as the îmãm, the khaṭṭb or some similar individual of standing (ibid., p. 75, 121, cf. 122; cf. Ibn Dhu-bair, p. 51). A musâkhâf, inspector, is also mentioned, e.g. in the Azhar (Makrizi, iv. 51).

(JoH. PEDESEN)
the Muslim community are more or less respected; the secular authorities however exert a great influence.

The revenues of mosque officials come from various sources: donations, freewill offerings, in cases where their services are required; *— at religious festivals, burials, etc. — need only be mentioned. The chief source of revenue is the so-called marriage fees, less from *djakat* and *pitra*; these are administered and distributed by the superintendent of the mosque. As already mentioned the mosque and its accessories have to be maintained out of the income. Neglect of this duty has induced the chiefs in Java and Madura to intervene and form a special fund, the so-called mosque fund for this purpose. This was arranged as follows: a certain percentage of marriage fees and of the *djakat* and *pitra* was set aside; the chiefs took charge of these funds. The revenues of the mosque officials earmarked in this way were however only a small fraction of the total; the greater part, perhaps 1/3 or more, remained at the disposal of the officials. This same procedure is found here and there on other islands but is not general.

The Dutch government maintains a neutral attitude to Islam, in all business matters of the mosque also. It takes no part in the building or restoration of mosques; only very exceptionally does it give a contribution in money for such purposes. This was done for example in Kuta Raja (Aceh), where the chief mosque, which had been destroyed during fighting, was rebuilt from government funds in 1881. But this act of the authorities was not appreciated by the Muslim population; in general, the government officials only see that no compulsion is used to procure materials or funds for the building or maintenance of mosques.

With the end of the sixteenth century the Colonial administration began to pay some attention to the regular organisation of the staffs of the mosques, primarily in Java and Madura. Their measures aimed at maintaining things as they were and at getting rid only of abuses and such customs as had proved to be a burden on the people.

*Djakat* and *pitra* are regarded as "freewill offerings" by the colonial authorities; the native chiefs and village authorities were therefore forbidden to interfere with them. It is left to the individual to give them or not; he is also free to give his gifts to whom he pleases. The giving of *djakat* varies very much with places and persons and is smallest in Central Java. It is concerned almost entirely with agricultural produce, especially with the staple product and even then it rarely happens that the legal quantity is given. In practice the *djakat*, where it is levied, is collected by the village mosque officials and handed over to the *pa**h**ulu*; he then distributes it in a certain proportion among his subordinates. The proceeds go almost entirely to the staff of the mosque and the village officials, firstly because they are *awan* and secondly because they consider themselves *pahulu* and *masahlu*; they have, as they say, no means of livelihood like other people.

*Pitru* is paid regularly; it happens very frequently with this "donation" that it is paid direct to those entitled to it and not through the officials. Nevertheless a considerable portion goes the same way as the *djakat*.

The government confined itself to seeing that the *djakat* and *pitra* collected by the *pa**h**ulu* was distributed as it ought to be according to custom but this was not always done.

Marriage, *walit* and *raji**h** have been regulated by a colonial law. The *pa**h**ulu* or his deputy was confirmed in his already mentioned functions as an official with legal standing. At the same time, others than the appointed *pa**h**ulu* were forbidden by the secular authority to perform marriages. The registration of marriages, *talab* and *raji**h** was improved. The fees and their distribution among the staff were fixed according to local custom.

Every effort is made to keep these as low as possible. Similar regulations were later promulgated for the other islands.

As to the funds of the mosques, it was ascertained that there was more money in them than was required for the maintenance of the building and that they were being used for other purposes than the traditional ones. This caused the government to place the funds of the mosques under the joint control of European and native authorities. This holds particularly of Java and Madura; but wherever else the mosque had funds, these were retained.

The regulations promulgated for Java and Madura have recently been attacked by Muslims; they wanted as far as possible to withdraw everything relating to marriage from government interference. The intervention of the government is now (since 1929) limited to the fact that parties who wish to enter into matrimony have to report themselves to a registrar. *Talab* and *raji**h** have also to be reported to him. The marriage ceremony may be performed by others, but they are under the control of the registrar; this last method is now the exception; the majority continue to go to the district officer.

In one other respect the mosque has come under the control of government regulations. In Muslim districts of the East Indian Archipelago hardly a mosque is built without the consent of the local secular authority. Although it does not have to give its approval expressly, no work will be begun until the plan is approved. In Java and Madura the chiefs have long held themselves entitled to decide on the question whether a new mosque should be erected, though they justified this claim by saying among other things that a new mosque, if not desired by the entire community, may easily lead to jealousy and disputes about the validity of the Friday service etc., which might result in general unrest.

The custom of making the site of a mosque *wahf* — or at least regarding it as such, results in it being impossible to use such pieces of ground for public purposes, even if it is long since the mosque buildings had been removed from them.

These and other difficulties induced the government to require the approval of the chiefs for the building of new mosques on Java and Madura and also that the sites should become *wahf*. It was however expressly laid down that there can be no possible question of interfering with the religious requirements of the Muslims; the chief can only refuse his consent in the public interest.

The law of the Dutch Indies demands the presence of the *pa**h**ulu* or some one with similar functions, at the courts for Muslim natives and also when a native appears as accused or plaintiff
in a court, to assist the court as adviser. An endeavour is made to get the most suitable people as advisers: they are officially appointed. It was found to be desirable to combine this office and that of the administrator of the mosque in the one individual; and this is now the normal practice. The influence of the government on the appointment of the personnel of the mosque, which otherwise is reserved for the chief, has thus been increased, especially as in the appointment of the assistant[s] of the paḫ[ḫ]alu, the ability of acting as adviser is also taken into account.

The bonds which connect the personnel of the mosque and the secular authority are thus fairly close; — in the opinion of some too close. In recent years the effort has been made in nationalist Muslim circles, to loosen or even break all secular connections in the fulfillment of religious duties. One way of doing this is to get private individuals to found mosques with the help of similar-minded people. This is quite possible in the conditions described and is still done.

III.

Architecture.

The mosque with an open quadrangle was the natural form for the hot southern lands of Islam, and is simply a continuation of the many types of pillared halls and chambers which were to be found all over the near east, beginning with the Egyptian temples and coming down to the apadana of the Persians and the stoa of the Greeks, of which course only the latter influenced the development of the early Muslim mosque. This consists of a courtyard or quadrangle (paḫn) usually very large which is surrounded by cloisters (rīsāf) which are either connected by flat beams, or more usually by arches and covered by a flat roof. At the khâba side the rīwâţs were deeper so that the rows of worshippers could find shade from the sun. The supports were at first very often columns taken from ancient buildings and where these were not obtainable, were of wood or brick. The pillared hall at the khâba side was called al-wâma al-bihî or râwâqa. A portion of the râwâqa was shut off by a railing and reserved for princes and priests. On the quadrangle side of the râwâqa is a podium (diqqa) supported by pillars and reached by a staircase or ladder; this is for the officials of the mosque, who repeat the words of the imâms during the service to make them audible on all sides. At the end of the râwâqa the muqâba is set into the middle of the wall and beside it is the minâb. In the centre of the court is a well, originally intended for ritual ablutions but these were as a rule performed in rooms specially set apart for the purpose.

These mosques with open quadrangle were built in the first century s.t. on a large scale, as they were primarily intended to be mosques for the troops, whence they were called 'askar mosques.
in Central Asia. They are as a rule oblong quadrangles with cells built round them and a stupa in the centre and several large rooms for living quarters. In Persia, under the influence of these buildings, the type of quadrangle and cells with 4 iwans in the form of a cross became established as the ideal scheme of a madrasa. That this plan which was architectonic in origin was also the practical ideal for the fourfold doctrine of the Sunnats, was a fortunate combination, which in some large state madrasas became of practical significance.

The Persian Mosque-Madrasa. The quadrangle surrounded by cells with four iwans of the Persian Madrasa was now combined with the old pierced mosque and the result was a very happy combination: the mosque-madrasa (as we Europeans call it). The important result of this combination was from the architectonic point of view the monumental courtyard with cells, which now replaced the old courtyard with pillars or piers which were no longer architectonically satisfactory and was also foreign to the spirit of Persian architecture. But with this transformation of the quadrangle a change was brought about in the spiritual aspect of the mosque. It symbolised the transformation which had meanwhile taken place internally and externally in Islam from a combative, conquering religion organised on military lines into a spiritual attitude to life, controlled by theologians and men of learning. The fighting, however, which was still conducted by military forces, and the conquests had now become more or less the private business of the secular rulers, above whom was the religious propaganda of the Muslim clergy. The most instructive example of this penetration of the older type of mosque by the Persian quadrangle surrounded with cells is the Masjid-i Djam's in Isfahan. This mosque, like all the Friday mosques in Persia was originally built as a pierced mosque and had been frequently enlarged. At the present time, as the plan shows, it consists of colonnades which have in course of centuries been added to one another from time to time. A great deal of wood must have been built into its framework, since Vīkūtī tells us that during the siege of Isfahan by the Seldjük Tughhrî Beg (443 = 1050/1051) the mosque was destroyed to obtain wood. From the contemporary accounts that have been handed down, we further learn that the Seldjük Sultan Malik Shâh when the mosque was completely burned down by his orders began with robbing the walls of the courtyard. He is credited with building the southern iwan. The other three iwans are over their present form of later origin. By covering over this large quadrangle, the courtyard, the only characteristic architectural feature of the mosque, received the necessary unity and importance. (Around it, this mosque, like most Friday mosques, was completely surrounded by bazaars which made any external development impossible: the quadrangle was therefore all the more important). The rows of cells had here no longer any practical significance as dwellings but became an architectural feature. Behind the southern iwan, directed towards Mecca, a large domed hall was built as a sanctuary, in the south wall of which were the mihrâb and pulpit. Here the solemn Friday service was held. Thus the Friday mosque was created of the type which became general in Iran and Turkestân. Mosques and madrasas were frequently combined with mausoleums (cf. the article Architecture).
The Mosque building in the early period. Muhammad left no instructions as to how future mosques were to be built so that the earliest mosques varied considerably and we can hardly talk of a fully developed type before the third (ninth) century. The Prophet’s house in Medina, where he performed the salât with his faithful followers and instructed them, was a dar of the usual local type quite unsuitable as a model for the future mosque. It consisted of a courtyard surrounded by a brick wall with living rooms and out-houses along the inner wall. As was usual and still is in every house of this kind in Arabia and other tropical lands, palm trunks were put up in the courtyard and a flat roof of palm leaves put over them and covered with a lattice of clay. This is how the earliest accounts would lead us to picture the Prophet’s house. In the courtyard was a reception tent furnished with fine carpets and materials, for Muhammad did not despise the nomadic luxuries and comforts of his people (cf. H. Lammens, Fatima et les filles de Mahomet et de, in J. A., 1915, p. 238 sqq.).

Around this establishment of the Prophet, his wife and daughters, lay the court in which his friends and followers used to assemble for the daily prayer and which thus became the first quadrangle of the first mosque. The use of a typical Arabian courtyard arranged in this way as a masjid however gives us no idea of the type of imposing building. For half a century, it is true, they were content with this primitive mosque, during the patriarchal period of the first four caliphs, out of respect for the Prophet’s mosque, but the first Omayyad caliph Walid I, who in transforming the church of St. John in Damascus into the Mosque of the Omayyads had acquired experience in matters of building and connections with builders, on the occasion of his pilgrimage to Medina in 90 (709) ordered the primitive mosque which had served the purpose so far, to be replaced so that an entirely new building could be erected on its site, which was extended. For this purpose, as Sambabi tells us, he asked the Byzantine emperor for skilled workmen and shells for the ornamentation, which were sent to him.

"The walls and columns of the new mosque were built of large hewn stones of equal size and bound with plaster; ornamentation in shell and marble was carried out in the roof built of palm wood and covered with gold paint." Instead of the early primitive mosque, Walid had thus given the Medinah a substantial pillared mosque, like the first mosque which he had built in Syria with the help of Byzantine artisans from pillars plundered from Hellenistic colonnades and Christian churches. It was only in this Hellenised form that the Mosque of Medina could have influenced the further development of the mosque in so far as we can speak of such influence at all. (It was given its present form by the Mamluk Sultan Kâfi Bey in 888 (1483). The ordinary Arab village mosque is different in appearance. It has retained the form of the Arab pre-Islamic masjid. This "place of salât" was and still is a long hall supported by pillars, open on one side without a courtyard and having no miyâkh and minbar.

The lack of any generally binding or recognised rule or tradition is shown by the varying form of the mosque in the early centuries A.D. The earliest mosque of the general "Ain in Fâra' of 21 (642) was an enclosed rectangular hall without a courtyard, with a rûba which was not yet marked by a miyâkh. The first mosque in Bagh was, like the whole city of Damascus, built of red clay that it could be taken down with the camp. In the year 15 or 17 A.H. Abd Mūsâ, the newly appointed governor of Bagh, built a mosque of unhewn clay and brick with a roof of thatch. It was only under the Omayyad governor Ziyâd that a mosque was built of brick and plaster with a roof of tile and pillars, which came from the quarries of Ahwâz on the Kârim river. The first mosque in Kûfâ on the other hand of 17 A.H. was *a covered hall*, which had no roof nor walls buildings behind it (Tabari); before it was an open square and so, continues Tabari, were all the mosques except the Masjid al-Haram (i.e. Mecca), out of respect for the sanctity of the latter, it was not copied in the other mosques. This mosque also was rebuilt by Ziyâd, governor for the first Omayyad Ma'dâwi (67–702). For it he had plans drawn up by Mazaraki architects: *Uno degli architetti gli fece un disegno nel modello degli edifici eretti dal re sassanide, ossia un vasto colonnato con tetto e chiuso ad ovest* (cf. Amm. di Costanzo, III, 347, p. 857). When, on the other hand, the conquerors found buildings in towns which were suitable for masjids from the point of view of space, they utilised them. In al-Madînâ, for example, the old twin-city of Seleucia-Ctesiphon, the ruins of the white palace was used as a place of assembly for the Friday service and the pictures of men and animals in it were not destroyed. In Syria, however, the churches were turned into mosques by changing the orientation from east to south and by placing a quadrangle in front of them. In this way the building of the mosque of any place in the early centuries A.D. was adapted to the traditions in existence and where there were no buildings, as in the newly founded camp-cities, it was on every occasion a problem for the governor requiring much consideration. In spite of this uncertainty, one can deduce from the descriptions, they were more inclined, even as early as the first century A.D., to the type of pierced mosque with a quadrangle, to which all the prototypes as well as the climatic point.

Development of the Masjid and the Madrasa in the different countries.

Syria. As the place of residence of the first dynasty of the young Muslim empire and a land of ancient culture, Syria was naturally destined to build the first substantial mosques and to influence early developments. This influence it exercised on the one hand indirectly through the Syrian mosque built by Walid in Medina, next to Mecca, the most sacred and most visited city of Islam; on the other hand, the Mosque of the Omayyads in Damascus, as we know from Arabic sources, was taken as a model as far away as Córdoba. The earliest centre of Muslim building was Jerash, the name of which the Omayyads endeavoured to play off against Mecca. Beside the ruins of the *Abâr al-Sawâr al-Hasân on the Harâm al-Sharif, the sacred rock of which was to supplant the Ka'ba, *Abd al-Malik used the part still standing of Justinian's Church of the Virgin to build the *zâïf al-Aïma* (finished in 83 (702)). According to de Vogüé's plan, this building, later often restored or rebuilt, was a pil-
lared hall with three naves, of necessity oriented to the south with the mihrab in the long axis. At a later date, the transept with the dome and four side aisles were added. The Mausoleum of the Omayyads in Damascus arose out of the rebuilding of the Church of St. John, which had been built on this site by Theodosius out of the pillars and other stones of the Antonine temple of Jupiter. We must assume that Wahil had the pillars of the basilica moved so that three equal naves were built. These were crossed in the centre by a transept, which led up to the mihrab and had a dome over its centre. The rich decoration with mosaics was a suggestion from Syria and was probably done by Syrian workmen (plan and history of these buildings in Diez, Die Kunst d. islam, Folker, p. 144 sqq. of the first and p. 32 sqq. of the second edition; with references to the literature). The mosque of Damascus was the first to have a transept, the prototype of which Thiess does not doubt rightly finds in the chalke of Byzantium (Pharos, p. 214), which frequently appears again in Syria and Northern Mesopotamia. The great mosque of Aleppo was also built after the plan of the Omayyads with a transept, as the latter can hardly have been added until the rebuilding of 365 (970) (pictures in Saladin, Monüll, p. 85). The mosque of 1st in Ephesus, limnated in 777 (1375), and the mosque of Dīyār Bahrī are northern prototypes of this type, the influence of which can also be often traced in Cairo and the Maghrib. 

Alongside of these principal mosques in Syria a series of smaller mosques arose, partly out of ancient temples (Abū Ḥija, Hamā, Homs, Bal'alebeh, Tabūs, al-Umayya), partly built out of material available from Christian buildings (Ramis, Kusair, al-Halabī, Baṣrā). Some of these mosques may have been Omayyad foundations, certainly the mosque of Omar in Baṣrā. All these mosques, except Kusair al-Halabī, have the same type of quadrangle with halls around it, two or more being on the kibla side, without transept. The development of these halls varies however, as a result of local tradition or material available (e.g. the naves of Christian churches). They are all vaulted with pointed arches; sometimes they have gable-roads and thus, along with their closed façades in front of which we exceptionally have a bowed corridor, bear a western or northern stamp in keeping with the colder climate. The later Syrian mosques under the Ajyūbiya and Mamluks differ very much in their plan. The Mosque of Frādis in Aleppo, for example, has a small pillared court and a broad nave, with a row of five small domes, as the burām besides various side-rooms; cf. M. v. Berchem and E. Faúo, Voyages en Syrie (M. J. F. A. O., Cairo 1914, 2 vols.).

Magrebb in Syria. A very complete state of the madrasas in Syria and Egypt by K. A. C. Creswell (The Origin of the Cruciform Plan of the Cairo Mosques, B. I. F. A. O., 1920) has brought some clearness into the question of its typical formal development. After an examination of eight madrasas built before 1370 a. d., the plans of which can still be traced in Aleppo, Damascus and Hamā, Creswell shows that the symmetrical plan was unknown in Syria and that there was no regular scheme in the arrangement of the rooms, but it depended on the site available. A typical specimen is the always correctly oriented mosque; a nave of three vaulted rooms with three pointed arched doors to the court; a iwan on the court, rows of cells in the rear of the court and usually two tomb-capsules usually flanking the mosque; the rest of the area is occupied by rooms. Madrasas used by two rites had two iwāns. Of the So madrasas counted by al-ʿIlmawī in Damascus in the 13th century (J. A. 10, vol. iii—iv), 33 were Ḥanāfi, 31 Shāfiʿī, 9 Ḥambali, 1 Maḍhabī, 6 used by Shāfiʿīs and Ḥanāfs. Creswell's investigation shows that in Syria there was not one madrasa of all four rites nor a cruciform one, a result which suggests some deduction for the Egyptian madrasas.

Arabia. The indigeneous form of the masjid in Arabia is a large hall formed of chambers with pillars and arches. The author found such instances, more correctly to be described as musallas, in Manāmān Bahārain (picture in Diez, K. d. isl., F., p. 46). These praying chambers, open to the street without a courtyard, have no furniture, not even a minbar or mihrab. The latter was foreign to Arabia and in the larger masjids its place was taken simply by a slab of stone with some adornment. But these pillared halls were only a more substantial form of the local native masjid of palm-trunks, which could probably often be found in the simple villages of the interior and whose sanctified precursor was the Masjid al-Nabawī in Medina, built in this fashion. Alongside of this type of mosque which was indigeneous to Arabia we find imported forms, like the masjids in Medina (see above), of slight importance from the archaeological point of view. Mention may be made of the ruins of a mosque near Manāmā 1240 (1339/1430) described in an inscription as masjīda al-harīf ḍuri dīn wa-maʿrūṣ, with old pillars of teak of the fourth (tenth) century; the Shāfiʿī form of the creed on this as well as the inscriptions on the kibla stones of the tīwīn century mark it as a Shāfiʿī edifice (cf. Diez, Eine wissenschaftliche Untersuchung auf der Insel Bahrain, in Der, d. ass. Kunt, 11, 1925).

Iraḳ and Mesopotamia. The earliest settlements of the conquering Arabs in the Iraḳ were primitive camps built of reeds; equally primitive were the earliest mosques. Slashed buildings were used for the purpose in conquered cities, like Ctesiphon. A pillared mosque was early built in Kīifa (17. a. m.) which Ṭahārī describes and which was rebuilt as early as the beginning of the Omayyad period by "Persian builders" in the form of a completely enclosed pillared hall (see above). In the capital of the caliphate also, as a result of its complete destruction by Timūr nothing worthy of note has survived. We know however that the Friday Mosque of al-Mansūr (149 = 766) was built of pillars of teak with capitals of wood and a flat roof. A wooden dome gives the masjīda is probably. It was rebuilt under Harūn in 192—193 (808). Al-Muṣṭaqī began to enlarge it after the return of the troops from Samarrā (280 = 925) (cf. Sattari- Ḩerdan, Arch., Reis., II, 134 sqq. with plan). Outside of Baghdaḏ the unlimited space available permitted great mosques for the soldiers to be systematically planned, as in Ṭarāṣ and Samarrā, these were the great-pillared mosques of the third (ninth) century, which were copied in the Mosques of Ibn Tulun in Cairo. Of the three large old mosques in Muṣṭa, that of the Omayyads has completely disappeared; according to Ṭahārī's description it was "completely vaulted, with suboctoster slabs." This seems to be the origin of that type of pierced mosque.
with vaulted arches which was later further developed by the Saljūqs and Ottomans (see below). The Mosque of Nur al-Din (541–569 = 1146–1172) or Qānim al-Kahf was also vaulted from the first (with cross-vaulting) on piers (543 = 1148) and on its rebuilding in 566–568 (1170–1172) was not given cupolas. The third Mosque of al-Mudżāhidī, Khiḍr Ilīya, has been completely modernized. Smaller mosques of the 11th century like the Qānim Nabī, Dījīra have single domed chambers as prayer-rooms.

In Baghdad the following madrasas were built under the Abābašī; the Shāhī Naqšīya in 459 (1066), the Tawījīya in 482 (1089), the Ḥanafī Tawījīya in 508 (1114), the Naqshīya, c. 600 A.H. and the Muṣṭaṣirūnīya about 630 A.H. Only the latter is still in existence and is used as a customs warehouse (sketch-plan in Serre and Hersfeld, Arch. Reise, ii. 161). Of remarkable ovoid shape (86 × 310 feet) it has six iwans, a large vaulted hall, rows of cells and side-rooms. Besides the four iwans this, the first state madrasa, also accommodated a dār al-fudūd and a dār al-ṭurūq. If the Mustaṣirūnīya was not planned in a strictly symmetrical way with four iwans at the intersection of the axes, it nevertheless incorporated the same idea and may therefore have stimulated the development of the next type. In Mīqāl there were several Ḥanafī madrasas.

Egypt. The type of pillared mosque imported from the 'Irāq under Ibn Tulnī prevailed in Cairo along with the pillared mosque down to the Mamlūk period. It is the regular rule that the large military and Friday mosques always have pillars, the smaller mosques intended for the people of the quarter have pillars. Some of the latter however were on occasion also used as Friday mosques. The rows of pillars were always parallel to the Kibda wall and connected by arches, a natural result of the rectangular form of the pillars, which had to run parallel to the rows of worshippers. In the pillared mosques the naves might also be perpendicular to the Kibda wall, without inconveniencing the worshippers. The Cairo mosques of this group are:

The Mosque of 'Amr Ibn al-Aṣīr in Fustāq, which received its present form as a result of repeated rebuilding and additions to the above-mentioned hall of the year 21 (642) (cf. E. K. Corbett, The History of the Mosques of Amr at Old Cairo, J. E. A. S., 1890).

The Mosque of al-Azhara of 339–341 (970–972) is a pillared mosque of Fatimid Cairo, remarkable for its central nave; broader than usual with two domes (tudajīs) probably borrowed from the Magribi and unusual here; also for its stilized pointed arches which henceforth became frequent in Cairo; finally for its rich decoration of the plaster in the arches, which were recently cleaned. (They will be published by S. Flury in Casswell's great work on the architecture of Cairo). The Azhara has long been used as a Dār al-Fudūd (state madrasa).

The Mosque of Ḥākim, a pillared mosque of the year 380–403 (990–1012), with valuable decorations on the plaster and inscriptions and two unvaulted, historically important maqāras [q.v.] (cf. M. v. Berchem, Notes d'Archéologie Arabe, Mém., et Isaac, Palermi, J. A., 1391, reprint, p. 23). The Mosque of al-'Askar, a small pillared mosque historically important for its façade built by Abū al-'Askar al-Maqrīzī (495–524), finished 519 (1125); restored by Burqī in 799 (1396–1397) and given a madrasa which was renewed in 815 (1412) (cf. M. v. Berchem, J. A., 1391, reprint, p. 81).

The Mosque of al-Fāṭimī, built by the Fāṭimid caliph al-Ẓahir in 543 (1148–1149) completely restored in the Ottoman period.

The Mosque of al-Zāhīr Buḍlīn of the year 665–667 (1266–1268) a mosque with pliers of brick, built for the troops with a very strong stone wall and three portails jutting out like the Mosque of al-Ḥākim. The six rows of columns in the ḥārdān are crossed by a transcept with a dome of three naves breadth in diameter before the miḥrāb. Porticoes with double naves surrounded the court.

The Mosque of Sulṭān Muḥammad al-Nasir on the citadel, of the year 718–735 (1318–1335) on pillars.

The Mosque of Aḥmad al-Maṣrī (Shāhī Ḥīrīya) of 730 (1332–1333).

The Mosque of Aḥmad Akūṣīn of 747–748 (1346–1348) on pillars.

The Mosque of Muḥammad of 819–823 (1416–1420).

Of pillared mosques in Egypt outside Cairo we may mention the Mosque of "St. Athanasius" and the Mosque of "The Thousand Pillars" in Alexandria the plans of which were recorded by the French expedition (Description de l'Égypte, Antiquités, v., reproduced in Thiersch, p. cit., p. 224). Shortly before the arrival of the French, Alexandria still had 88 mosques, 45 of which were large. Practically nothing of these is left at the present day. The mosques above mentioned were pillared mosques and particularly the second, also, called: the "Mosque of the Seventy" with its iwans of equal depth on all sides (only the northeastern one has 4 instead of 5 rows of pillars) the arches of which run parallel to the outer walls, i.e. palm-like, continue the type of the Hallenstück pillared agora or the gymnasium as Thiersch has pointed out. The same type predominated in the towns of the Delta.

The second, later type of mosque in Egypt was decisively influenced by the madrasa, to which we may now turn our attention. As Casswell has shown, the Egyptian madrasa was by no means always cruciform, as was usually supposed previously. It is also distinguished from the Syrian type and cannot be at once said to have been introduced from Syria. It is true that the first madrasa for all four rites in Cairo was built by Sīhī Naqīm al-Ṭūnī at-Tūnī, but this Sīhīna was a building divided into two halves and cannot be considered as the original of the later type (641–644). The first cruciform madrasa with 4 iwans in Cairo was the Zāhīrīya which was built on the site of a part of the old Fāṭimid palace which was cleared for this purpose and consecrated in
The typical mosque of the Muslim west is the mosque with courtyard, on pillars or columns. It was only under Turkish rule that the domed mosque became established in those parts of North Africa affected by it. The rows of pillars run, as a rule, perpendicular to the Kibla wall from which however they are separated by a transept. The axis of the latter is a continuation of the axis of the central nave which is always broader. Of the rows of pillars in the axis the two or three outermost ones are continued over the court and form the arcades of which the inner entrance side of the court has as a rule only one row. The beginning and end of the central nave are as a rule marked by a dome. The western mosques are given their characteristic features by the horseshoe and bulbous arch (a mixture of the horseshoe and the pointed arch). The mihrāb of the western mosques is as a rule a pentagonal niche considerably deeper than the semi-circular one.

The oldest surviving large mosques in the west are in Kairawa, Tunisia and Córdoba (since the expulsion of the Church).

The foundation of the Great Mosque of Kairawa like that of 'Amr in Cairo goes back to the first century A.D., but like that of 'Amr also retains nothing from its founder, 'Uqba b. Nābī, except the name. By 76 (695) the original mosques was rebuilt, and later enlarged but in 222 (836) it was completely taken down by the Aghlabid Ziyadūt Allah and rebuilt and in the third (ninth) century again enlarged on two occasions. In spite of many later restorations, the mosque has retained the form it was given in the third (ninth) century. Seventeen naves on pillars run perpendicular to the Kibla wall from which however they are separated by the transept. The central nave is broader and flanked by double columns and marked externally by two domes. It may be noted as a special feature that the first two travées of the hārūm seem to be one with the court arcades while the part behind was shut off by doors. The arcades of the court are on pillars with double columns in front of them, which with their bulbous arches give the court its special charm. The Džamī Zaïtūnā in Tunisia was built as early as 114 (734) by the Omayan governor Ibn al-Habbah but entirely rebuilt in 1850 (864). In spite of many internal restorations, it has in the main retained to the present day its old form of the end of the ninth century, In Spain we have from the Omayan period the former Mosque of Córdoba. It was built by 'Abd al-Rahím I (1228-172) = 750-785) and several times restored by his successors until the hārūm contained 19 naves each with 35 pillars. The special feature of this mosque is the double storied arrangement of its rows of arches, a bold innovation, which does not seem to have been imitated elsewhere. Recent investigations have revealed the original form of the mosque as a much lower level, which is decorated with mosaic. This would alter the proportions. The horseshoe arch taken over from the Visigoths was varied in the clover leaf and indented arch and these arches were imitated in the Magribi mosques of Algiers, Tlemcen, etc.). The domes swelling into various shapes were frequently imitated in Kairawa and Córdoba. The mosque of Sūk (236 = 850) and the Bâzaa (235 = 849) were founded in the Aghlabid period but the latter was completely restored in the tenth century.
the Fatimid empire in North Africa (907-909) brought about a new development of mosque building. The mosque of the new Shi'ite capital Mahdiya in Tunis however corresponds completely to the preceding Aqabite type. A novelty however is the use of cross vaulting which henceforth we find frequently, first of all in the two mosques of Monastir and in the new part of the Great Mosque at Sfax. Of the great pillared mosque of the Ka'a of the Rani Hammad, the minaret of which still stands and was mentioned in the article MANSIA, it is only possible to reconstruct the general plan, which had 15 naves with 48 arches (cf. MARCHETTI, Nouvelles architecques Musulmanes, Vol. XX, 1905, pp. 3, 4, and De Beytie, Le Qu'ara de Bani Hamouda, p. 77, 1956). A second mosque of the Rani Hammad has been destroyed in Beja, but it is extant from an old description that it belonged to the type of Kairouan (De Beytie, op. cit., p. 103—104).

Mosques of the Almoravids (448-541 = 1056-1157) and Almohads (524-667 = 1130-1227). The great mosques in Algiers and Tiemcen, the Koutoubia in Marrakesh and the mosque in Tamiouk, which are pillar mosques with jalousia arches. On the other hand the Mosque of Hassan in Rabat, now completely destroyed, the largest mosque of the Maghrib, stood on round area of 207 by 207 feet (63 m. by 63 m.) and was begun in 1196—1197. A noteworthy feature is the minaret behind the mihrab in the mosque of Tiemcen, which now becomes frequent in the Maghrib (but seems not to have been unknown in eastern Islam, as the plan of the madrasa of Khairqan shows; cf. Dest, Chorassan, Hauendahler, p. 73).

Maridins in Morocco (1426—1470), successors of the Almohads (1122—15th century): A large mosque in Zaouia, Morocco, piers, broad central nave and transversal nave, finished in 693 (1294). A large mosque in Aayda on the Algerian—Moroccan frontier (698 = 1296). Siddi ibn-Hassan in Tiemcen (696 = 1296), a square mosque with seven columns, and Awdal al-Ism in Tiemcen (710 = 1310), small, richly decorated. The greatest Ma'dara mosque in Tiemcen (736 = 1336), a very regular building, thirteen naves on seven columns, a broad central nave; a three naved transept, a madrasa in the centre, a polygonal mihrab with maqsura behind. Siddi ibn Madyen al-Awdal (739 = 1339) and Siddi ar-Hassan (754 = 1353), both in Tiemcen, small, the former on piers, the second on columns with slightly modified horseshoe arches with wide spand. Sidi (harbour of Rabat), Necropolis of the Marinids, a tomb—mosque (739 = 1339) (plan in Mazar, Manuel, p. 498). Around Tiemcen there are a number of small mosques of the sixteenth century.

Mosques of the Harmands in Tunis, sixteenth—seventeenth century: Mosque of the Ka'a in Tunis, built by the founder of the Hafsid—dynasty Abu Zakaryya Yalib (625—647 = 1228—1249) finished in 643 (1243). Pillars with chapiteles, supporting horseshoe arches in the quadrangular and cross vaulting, the usual form in roof in Ifrikiya from the tenth century (cf. Sfax etc.) is similar. The Mosque of al—Hajet of the sixteenth century is similar.

Mosques in Morocco under the Marinids 951—1311 (1544—1593).

In Morocco preference was given to the old Almohad type of mosque as exemplified in the

Koutoubia. The Bdh Darrakha 995 (1587) and Malikiya 976 (1567) mosques in Marrakesh have seven naves at right angles to the sihba, and a transom along the sides of the naves. Nave openings seem to be, in addition to the broader central nave, that the two outside naves left and right along the side-walls were broader and a dome was placed at each of the four corners of the mosque. A second transept on the court side of the Darrraka seems to be exceptional, as in the Bdh Darrakha. The Mosques of the Ka'a of Marrakesh dates from a foundation of the Almohad al—Mansur. After the explosion of 1574 it was rebuilt and in the sixteenth and seventeenth centuries repeatedly restored (cf. the monograph by H. Buset and Terrasse). The Mosques of al—Kurtawiyin and Malikiya Fdris in Fes have likewise been restored.

Mosques in Algeria under Turkish rule (1518). In addition to the two mosques which date from the Almoravide period, the Great Mosque 490 (1096) and the M. Sidi Kheider at Algiers, only two other mosques of the old type are believed to exist; all the others, over 100 in number, are Turkish. The oldest Turkish mosque is 'Ali Birtiv (1532); now Notre Dame des Victoires. This building had a large central dome, which is surrounded by small domes. It is noteworthy that the square minaret was not adopted by the Turkish type. All the later mosques of Algeria show variations of this type, except the "Mosque on the Fish Market" 1050 (1660) of which the plan which recalls those of the Islamic churches of the fifteenth century; it may however owe much to them, but derives from Byzantine—Turkish models.

Mosques in Tunisia under the last Hafid and Turks (from 1534). Under the last Hafids the venerable Djami Zaatun was again restored and enlarged and given its present portico and the outer gallery of arcades. The oldest Turkish mosque is Yusuf DDr (1610—1637). It is significant that it built after the old Tunisian type on pillars with cross—vaulting, as are the later M. of Hamuda's Bey finished in 1607 (1654) and several mosques of the sixteenth and seventeenth centuries. The Turkish style (Almohadi in Constantine) represented by the Sidi Muharem (second half of the sixteenth century) remains the exception in Tunis.

The madrasa in the Maghrib. Madrasas were first introduced into the western lands of Islam by the Almoravids, but nothing of these seems to have survived. The oldest madrasa data from the sixteenth—seventeenth centuries. The Marinids in Maghrib al—Aksa were particularly active in building and encouraging madrasas, which, as in Syria and Egypt, were also state institutions. This evolution of the madrasa was apparently a result of the Sunni, particularly Maliki, revival under the Marinids (1425—1470). Al—Nafarrin, the oldest madrasa in Fez, built by the great warrior and champion of the religion Yusuf Vizzi (685—700 = 1288—1306) of the Marinids who also built the Madrasa (see above), was the prototype of all the later madrasas in the extreme Maghrib. An angular gateway, such as is usually only found in private houses about a courtyard with a central basin and the cells. A domed chamber with a pentagonal mihrab adjoins it. On the analogy of the mosque, it is called ghasba. Adjoining it reached by a corridor is a iwta, with a basin in the centre for ablutions and fountains. These three main parts of the building, iwta, ghasba and iwta, are usually
3. Cairo, Mosque of Ibn Tulun. Detail.

8. Isfahān. Džāmi'.

a separate minaret, are found continually in a number of variations, usually dependent on the space available, which Margais, cf. cit., ii. 504, divides into three groups. In Fès in addition to those mentioned there are other seven medersas of the xviith century. With the medersas of Marrakesh, Taza and al-Awāzīd in Tlemcén we have in all eleven medersas of the Marinids extant (cf. the list in Margais, op. cit., ii. 504 sqq.). The most imposing and finest medersa in Fès is the Bû ‘Aīnānīa, founded by Abû ‘Aīnān, 749–759 (1348–1358). With its madjidi of two transits at the end of the square court and two domed chambers in the central axis of the court it recalls the mosque of Hasan in Cairo with its iwāns. The façades on the court display the wealth of wall adornment usual in the Maghrīb, tiles, stucco moulding and stalactites.

Medersas of the xvith–xvith centuries in Morocco: The Medersa of Ben Yāṣif in Marrakesh is regarded as the largest in the Maghrib and stands on the site of an originally Almoravid (?) mosque instead of the Marinid Medersa of Abû ‘l-Ḥasan. The plan seems to be old and in its regularity recalls the al-Hiri type of Arab palace and the palaces of the Ommeyyids and Abū’l-Ḥasan built in this style in the desert (plan in Marçais, op. cit., ii., p. 702). The Medersa al-Sharrûtīn in Fès, begun in 1670, shows a similar plan but is smaller and simpler.

Medersas of the xvith–xvith centuries in Tunisia. In the xvith century the Hájifí built a number of medersas here. Of the Turkish, the most interesting is the Medersa al-Badâya of ‘Ali Pasha (1740–1775), a court with cells, madjidi on pillars and stilts, but, like the Egyptian madrasa, it has also the tomb of the founder and a public fountain. In Tunisia, probably as the result of Egyptian or Oriental influence, it is common to find medersas and mosques associated with the tomb of the founder. The three varieties distinguished in Egypt by van Berchem, mosque-madrasa, madrasa-mosque, and monastery-mosque were also built in Tunisia.

Saljūq empire in Rûm, Armenia and Georgia. In Saljūq Anatolia (470–700 = 1077–1300) the three types of pierced mosque, the court-lawan madrasa and domed madrasa are to be distinguished. The pierced hall was used as the large public mosque. On account of the colder climate the open courtyard with pillars was not found here. The pillars were sometimes of wood (Eshref Rûm Djamí), usually however of stone. The flat wooden roof rested directly on the pillars or on the arches which connected them, which run sometimes parallel, sometimes perpendicular to the kibba wall. The Ulu Djamî in Wân has a vaulted roof resting on pillars, a system later often used in the Ottoman empire. Of more importance architecturally are the smaller (mosque–madrasas, which played a prominent part in the Saljūq empire; but they fell far behind the Persian madrasa in impressiveness and harmonious development. The model for the evolution of the iwan-madrasa was the Mesopotamian–Anatolian pîrmâ-house. From the latter came the bowers along the sides of the court which were placed in front of the iwan and the rows of cells. The combination of school and madrasa in which the builders, usually high officers of state, were interested, was the rule. The domed madrasa consists of a domed hall with a water basin in place of the open court with living rooms, a lecture-room and a mausoleum containing it. The external ornamentation of these Saljūq madrasas and mosques is confined to the gateways. The façades of the gates, irrespective of the material used elsewhere in building (brick or moulding), were always covered with slabs and the portals then ornamented with strips of decoration or inscriptions, fantastic looking candle-labra of palmettes (Divrigî), bundles of rods and convolutions in low and high relief and thus one of the highest points in Muslim decorative art was attained. The iwâns along the court, interiors of the comparatively low domes (which belong to the bridge over the corners on triangular consoles), the friezes on the wall and the mihrâbs are frequently adorned with glazed brick and mosaic friezes in a style which in pattern and colour is readily distinguished as an independent pattern from the Persian decoration. Here we find geometrical network patterns, which were not usual in Persia and a colour scheme which receives its special character from the much used black, alternating with bright and dark blue, although other colours are also found. The following is a list of the most important buildings, so far as they are known: 1. Pierced mosques: Mosque of ‘Ali al-Din in Konya, completed 616 (1219–1220), Djamî Kebir in Siwās, xith–xiiith century, and great mosque 679 (1280–1281) in Diyarbakr, Eshref Rûm (Eskî) Djamî, xiiith century, in Beýazî chillî, Ulu Djamî in Egerdir, xiiith century, Ulu Djamî in Çağdara (Cappadocia), mosque of Minâzeh 464–465 (1072–1100) in Anî (with octagonal Maâra), Ulu Djamî in Wân, xiiith–xiiith century. 2. Court iwân madrasas: Sirîddî Madrasa 642 (1242–1244), Gîik Madrasa, Baradîddîyâ and Tîîtîe Mînâzeh, all 670 (1271–1272) in Siwās, Khrîzî, 783 (1381–1382) in Kâmân, İbrâhîm Bey Madrasa, xith–xith century in Akgirâl, Tîîtîe Mînâzeh, xiiith century in Erzerum. 3. Domed madrasas: The Fârâb Mînâzeh 649 (1251–1252) in Konya, İndîe Mînâzeh 660–654 (1262–1285) in Konya, Gîik Djamî in Konya, xith century. 4. Madîs Madrasa 613 (1216) and 659 (1260) in Akgirâl, Sultân Wânîlîe xith and xiiith century in Salyîdî Gîârî.

The mosque of the Turcoman ruler İânî I (1348–1390) in Aşyanûk (Ephesus) is an exception in Asia Minor; it was finished in 777 (1375–1376) and its architect is said to have been ‘Ali b. al-Dîmbî. The interior is modelled on the mosque of the Ommeyyids in Damascus; the walls however are in the Turkish style of that period, as developed in the provinces of the Atabegs. The west façade is closely related to the façades of the mosque of Hasan in Cairo, which also drew inspiration from Northern Mesopotamia, the Ottoman empire. The Ottoman Turks further developed the types of mosque built by their predecessors, the Saljûqs. A second very important factor in the development was their expansion into Europe and the new model, the Byzantine domed churches, especially the Hagia Sophia in Constantinople. Here three main types of mosque may again be distinguished: the pierced hall, the cruciform domed mosque and the central or great domed mosque. The first and third were
commonly used for Friday mosques and mosques for the people, while the second type was reserved for the Sultan’s Friday service and religious instruction, and was more used for private mosques. The Ottoman pierced hall mosque is distinguished from the Sahilbâk, principally by its vaulting, rows of cupolas over the pillars. The court is limited to a hypaethral water-basin of the same size as the dome above it. The Ulûl Dîvânî in Brusa for example is an unadorned pillared hall, rectangular in shape with five aisles each with four domes in a row. The second group of four pillars in the central aisle was originally uncovered (now it has a glass dome) and contains the basin for ablutions, the rudiments of a court. The domes of the five aisles rise one above the other to the central row. The most important buildings of this group are: Ulûl Dîvânî 1370–1422 in Brusa, Uç Şerefeali Dîvânî 1889–93 (1484–1487) in Adríanople, Ulûl (Eski) Dîvânî ca. 1403–1422 in Adríanople, Ulûl Dîvânî 16th century (?) in Manisa (Magnesia on Sipylus), Djumaya in Filibe (Philippople), old mosque (now museum) 1477–1478 in Sofia, Sîndjîlî Küy Dîvânî ca. 1500, Ahmed Paşa Dîvânî by Sinan ca. 1555 and Pişle Paşa Dîvânî 1573, all in Constantinople, Eski Wâlide in Scutari. The pierced hall (and an unlined form became extinct in the 18th century. The 1374 in Constantinople is a mixture of the latter with the great dome. The origin of the cruciform domed mosque is rightly sought by Wulzinger in the Sahilbâk madrasa with courtyards which come in to be covered over with a dome. The centre which lies somewhat below the level of the rest, is occupied by a square roofed with a dome, again the rudiments of the former courtyard, and still often containing a fountain. The Kibla chamber is vaulted with a barrel or dome, the praying chambers to right and left are either flat or open towards the centre or have barrel-vaulting. The similarity of these mosques to Byzantine churches (in plan, not in structure) is involuntary and lies in the system. On the other hand, they are open pierced-out outer court (kibyâl) may go back to Byzantine stimulation. These outer courts however are very general in the east to give shade. The most important buildings of this type are according to Wulzinger’s list (op. cit. p. 186): Mosque of Murad I (1359–1389) in Brusa, fin, end of sixteenth century, two storied, Mosque of Bayzât I Yildirim (1389–1403), fin. after 1402, Yâhidî Dîvânî in Brusa, fin. 1423, Mosque in the Kolmessa church in Isnik, beg, of sixteenth century, Nilufer Kâltan “imaret, end of sixteenth century, Pirâz Paşa Dîvânî in Mila, fin. 797 (1394), Mosque of Murad II (1421–1451), fin. 1447 in Brusa, Mosque of Mustafa II in Adríanople, “imaret Dîvânî in Philippopolis 1535, Mosque of Hafetz Bey before 1452 in Brusa, Ghiyîh Michal Dîvânî ca. 1400 in Adríanople. The great domed mosque developed out of the more primitive single domed mosque which was very common throughout Asia Minor and Turkey as the simple village mosque, private mosque etc. and continued to survive. (In Aysoluk alone 14 small single domed mosques can be counted). This type of building was also used for the numerous temples. The following are more important single domed mosques outside Constantinople: Yâhidî Dîvânî 794 (1392) and Mahmut Celebi Dîvânî about 1400 in Isnik, Masjid of Khodja Vadygar beg. 1369 in Isnik, Masjid of Elia Baî 806 (1404) in Balat (Milet). The development of the great domed mosque from this type took place in part through combination with cruciform domed types, but its aim was however the elimination of all minor domes which at first it had for constructional reasons to put at the sides. A. Gabrjel’s table gives a good idea of the different variations. He gives the mosques of Constantinople, which number 42 (with Scutari), under six main types (Lei Mosqe de Constantinople, in Syria, vili., 1926, p. 352–419):

A. Square or oblong halls with one or more domes, sometimes flanked by secondary domed chambers: Mahmut Paşa Dîvânî 868 (1464), Murad Paşa Dîvânî 870 (1466), Dâwud Paşa Dîvânî 890 (1485), Atyk ‘Ali Paşa Dîvânî 902 (1497), Sulman Selim Dîvânî 926 (1520).

B. Quadrangular single domed halls (continuing the list given of the not yet very large single domed mosques from the city area of Constantinople): Firuz Ağa Dîvânî 896 (1491), Dicer Kâsim Paşa Masjid 921 (1515), Khâseki Khurem Dîvânî 946 (1539), Mehmed Ağa Dîvânî 993 (1585), Çelebi Dîvânî 1030 (1640), Nûru ‘Othamnîya Dîvânî 1169 (1755), Lalîlî Dîvânî 1177 (1763), Wâlide Dîvânî 1287 (1780).

C. Square hall with a central dome, usually supported by two half domes: Sulman Bayzât Dîvânî 906 (1500), Sulman Suleyman Dîvânî 937–964 (1550–1557), Kiliî ‘Ali Paşa Dîvânî 988 (1580).

D. Square hall with a central dome supported by four half axial domes: Şihhâde Dîvânî 955 (1548), Sulman Ahmed Dîvânî 1026 (1617), Yeşil Wâlide Dîvânî 1120 (1708), Sulman Mehmed Dîvânî 867 (1463), reconstructed 1180 (1767); variants: oblong hall with a central dome supported by three half domes: Iskele Dîvânî in Scutari 954 (1547).

F. Oblong hall with central dome and aisles.

Group a. Central dome with square plan and pendentives: Ball Paşa Dîvânî middle of sixteenth century, Muhammed Dîvânî middle of sixteenth century, Zal Mahmut Paşa Dîvânî 953 (1551).

A survey of this list shows that the type given under A is also the earliest. This was directly linked up with that in use in the older capital Brusa and already being built in Konya in the sixteenth century (Kara Ta’i Madrasa, Yeşilbûn and Yâhidî Dîvânî) which seem to be continued in the Mahmut and Murad Paşa Dîvânî. But already the original Sulman Mehmed Dîvânî (rebuilt in the sixteenth century)
which forms a striking anachronism in Gabriel's list under D, with its date 1463 (only the second modern Meḥmədšah of 1767 belongs properly there), had made the first important step towards a single great chamber (cf. Agha Ogli's reconstructed plan in Diez, Kunst d. isl. Volker, 2nd ed., p. 105) and this plan was repeated for the ʿAṭṭāʾ ʿAlla Pahaşı Džamı, while the Dâwūd Pahaşı Džamı of 1485 had already used another variation (cf. the plans in Gabriel, op. cit.). This in brief is the historical development of the Constantinople mosque from the Anatolian Sâlûq-Ortowan type. The next important step to the gigantic domed mosques of Constantinople given under D, was completed by the greatest of Ottoman architects Sinān (1486-1588) step by step in the Şehzade Džamı, the Sisahane and the Selimiye (1567-1574) in Adrianople. His guiding idea was, by thrusting the pillars of the domes as far back into the walls as possible, to get a single domed chamber of the largest possible dimensions, no longer interrupted by pillars; Sinān achieved this end in the Selimiye in Adrianople.

Persia, Turkestan and Afghanistan.

Old mosques or remains of them have not survived in Persia, as in Egypt, the Maghrīb and Syria, except perhaps for a few old parts still standing in the great complex of buildings that forms the Friday Mosque of Isfahān or in the old Friday Mosque of Shirāz. We know however from literary sources that at the beginning of the ʿAbbāsid period large mosques were built everywhere in the towns and some must have existed even earlier. ʿAbū Ḩasan the celebrated general and ʿAbbāsid propagandist, built mosques in Merv and Nishābūr. The latter was built on pillars of wood and similar structures are occasionally mentioned in Persia (e.g. at Rubāṭ in the province of Dzhurdžan, Strass on the Persian Gulf etc.). In the ninth century, however, greater use began to be made of columns of brick or stone or marble columns taken from older buildings where they could be obtained, as in Isfahān at Perspolis, Amt b. al-Layth (928-937 = 899-909), the second ruler of the ʿAbbāsid dynasty, renovated the Friday Mosque in Nishābūr and among other mosques built the Džamı ʿAṭṭāʾ in Shirāz, both mosques with columns of brick, of which parts are still standing in Shirāz. The Friday Mosque of Balkh destroyed by the Mongols in 1220, is said to have had splendid pillars, as Ibn Bāṭtuta records. An old mosque on piers of the fourth (tenth) century has survived in the remote desert town of Nainj in east of Isfahān, and enables us to make deductions about the architecture of mosques in the early period in Irān. The ḵarām consists of eleven barrel-vaulted aisles running perpendicular to the ʿibba wall, of which the central one is broader than the others. The court is flanked by four aisles of iwāsā which run parallel to the ʿibba wall, only the wall of the entrance has an arcade. The plan is therefore similar to that of the mosques of the Maghrīb. It is built on columns or piers of different forms. The part around the miḥrāb is richly ornamented in stucco and has bands of inscriptions around it (cf. H. Viiolet and S. Flury, Un monument etc., Syria, ii, 1921). How securely the pierced hall, as the type of Friday Mosque, maintained itself in the Sunni east, is seen from the rebuilding of Timur's great mosque in Samarkand after his return from his raid on India in 1410, a mosque with columns, which was directly connected with the madras of Bibi Khamim, but has now completely disappeared. The mosque had 460 columns of hewn stone, each seven ells in height. The vaulting was covered with large beautifully carved and polished slabs of marble. There was a minaret at each of the four corners of the mosque. The door was of bronze and the walls were covered inside and outside with inscriptions in relief (according to Sharif al-Din ʿAla Vazdi). How far there was any Persian influence here cannot now be ascertained. In any case, the twin and miḥrāb court became established in Persia in the fifth (eleventh) century and as the above described Friday Mosque in Isfahān shows, became blended with the pillared court. The great Mosque of Herat (cf. Niedermayer-Diez, Afghanaistan, p. 55 and fig. 149-153) shows a similar miḥrāb court adapted to the (probably older) pierced halls. In the completely new buildings of the Timurid and ʿAbbāsid period, the pierced hall completely disappeared and the ḵarām is extended by a central dome with vaulted halls at the side, when the ʿibba itself does not fulfill the purpose. The mosque of the great sultans of Timur, Tahmās, Jalal Ad-Din and especially of Masjīd-i-Shah, the mausoleum mosque of Khudâberd and many other urban mosques of Persia are built on this plan. Only in eastern Khurāsān, as in the Tabrız-i-Shah Mosque, does the old pierced mosque survive but with vaulted arches and a large dome in the centre of the ḵarām, all of which betray Indian influence (cf. the plan in Diez, Churussamische Beidücke, p. 79).

Of the already characterised type of domed mosques may be mentioned the "Blue Mosque" in Tabriz and the Masjīd-i-Shah in Masjīd-i-Shah, both similar in plan with a large central dome and two flanking minarets. The former was built during the reign of the ʿAbbāsid ruler Džihanšah (1437-1467), the latter by Amir Malik Šah, the architect being Ahmad b. Šamsa al-Din Muhammad Tabrīzī (cf. J. R. A. S., 1910, p. 131). The Tabrīz mosque had a chapel leading from the domed area with a second smaller dome. Both domes were decorated with tiles, the larger with white tendrils on a green ground, the smaller with white stars on a black ground (Tavernier). Only fragments survive of the Blue Mosque, which show how splendidly it was once decorated; on the other hand, the Masjīd-i-Shah in Masjīd-i-Shah is still standing, although the dome has lost its decoration. To this group belong also the mosque on the citadel mound of Erliwān, the mosque of ʿAlī b. ʿAlī the Māhī, the Kālīya mosque used as a royal private mosque and the public mosque of 1631 in Buhštā, both with high entrance iwāsā and without a court. At largely attended common prayer, the people assemble in front of such mosques. This is particularly the case in Turkestan; for the ʿibba and niches were simply very large miḥrābs and nothing further was necessary. In Balkh also there is a similar, formerly domed mosque probably intended for the ruler with a towering iwān (xvth century) (cf. Niedermayer-Diez, Afghanaistan, fig. 204-205). Besides these large main types, there were and are in these lands of eastern Irān hundreds of smaller mosques in the towns and villages, which sometimes show very interesting structures. Thus in Bāḏarīm in the ʿAlīshānsteppe (northern Persia) there is a mosque with a small
open court and domed chamber in front of the mihrāb, and two triple yoked aisles, probably a reminiscence of Nestorian churches (cf. Dier, Chrest. Būkūn, p. 85). We also find everywhere small masjidas, which are simply little oratories, where the people can promptly worship at the proper time: flat-roofed large halls on wooden pillars, which are frequently richly carved in Turkestān, Afghanistan (Kābul) and Central Asia (Kābūrīn etc.).

The Madrasa in Persis, Turkستان, and Afghanistan. Šahr-i madrasas were built in the 1̊Abūsūr period in Nīshābūr (where Haš阿 Abū counted 17), Merv, Bahgārā, Āmol, Tūs, and other towns. Nāṣir, brother of Mahmūd of Ghāna, is said to have built the first state madrasa. Under the Saljuqs, Sūsān al-Mulk, vizier of Al-Azm and of Malik Sīh, built three state madrasas in Nīshābūr, Tūs, and Bahgārā. None of these pre-Timurid madrasas in Persis has survived; unless the ruined iwān in Khārgīrjard, which is left of a madrasa, which is very probably (cf. Dier, op. cit., p. 71 sq.), the ruins of the Timurid period however give us a picture of the Persian madrasa of the golden period of Muslim Persian architecture. The madrasa in Khārgīrjard near Khāfar close to the Afghan frontier, completed in 848 (1444-1445), still shows a pure unmixed madrasa design: a quadrangular court with four barrel-vaulted large iwāns, equal in size, at the intersection of the axes, each flanked by two orphan, with the upper storey, four cells, four vaulted corner-chambers, a narthex-like outer building, comprising the three and two domed chambers; low combined mihrāb façades with low flanking towers at the corners. The walls, especially of the court, were adorned with rich tiles, the walls of the domed chambers with ornamental frescoes (cf. Dier, Chrest. Būkūn, p. 72-76, pl. 31-34). In contrast to the low façade of Khārgīrjard built by a West Persian (Shīrāz) architect are the Turkistan madrasas, with their high iwāns, characteristic of the east in general, and gateways, especially. In Sāmarqand we have the three Rūgistan madrasas: Shāt Dār (c. 1610), Tillya Kūt (c. 1610) and Ubūg Beg (c. 1434); also the Madrasa Bibi Khānum (about 1410) built by Timūr, all large courtyards with mihrāb courty and domed chambers, usually four minarets at the surrounding. In Bukhārā, the Madrasa Mir Arab of the end of the xvith century is related to the Madrasa Shāt Dār. Of the madrasa in Herāt, e.g. the celebrated Elkāssiyya, nothing has survived, nor do we have anything left of the madrasa of Turbat-Shaikh Džam in Eastern Khurāsān (cf. Dier, op. cit., p. 78). A ruin architecturally interesting is the state madrasa founded in the xvith century by Malik Ḥusain, the Gumbāz-Surkh at Kafl-i-Fath in Sīdījistan (cf. Tate, Sīdījistan, fig. p. 78). The cells are vaulted with the typical Persian house and bazaar domes. The last fine Persian madrasa is the Mader-i Shah Sultan Hūsain in Išfahan built by the Safawī Shah of this name (1694-1723). The tiled decoration of the court is among the finest of its kind that has survived in Persia (cf. Sarwe, Pers. Jūhān, and Dier, Aṣwar d. lit. Velber, p. 106-107). The dome still shows the original glazed tiles with foliage patterns: dark blue and white, changing to black stalks and and yellow leaves on a turquoise blue-ground.

Inda. In India the history of Muslim archit-

ecture so far known does not go beyond the xith century. The two earliest mosques of which the ruins still survive, the mosques of Mādnīr and of Dehlī, are large covered courts, built of pillars taken from Jainas temples. The domes on eight pillars found in all Jainas temples are here found ranged in rows. The richly sculptured pillars were simply cleared of any figures on them before being used. Vaulting on square piers continued in use after there were no more pillars to plunder (mosques in Kīlārga and Bīdāpur). For the rest, Indo-Muslim mosque architecture developed in different ways according to varied traditions and local conditions. In towns completely Islamised like Māndū on the Narbada, the capital of the sultanate of Māwās founded by Dillāvar Shāh at the beginning of the xvith century, or Dhānpūr near Bānambāh, which was founded by the sultan of Dehlī in 1359, Muslim places of worship show a marked synthesis of Hinduistic tradition with the rigid forms of Muslim symbolism. Similarly in the Muslim towns of Gādārī, in Bānambāh, Kamībā, Dīlākha, Māḥmūdnābd, Muslim sacred architecture developed out of the local Hindu art so that the demands made by Iṣlām on the shape of a mosque, such as an entrance-iwān and minaret, were carried through by purely Indian means and only the arch gave the building a Muslim stamp. In Bengal again, where the curved bamboo roof prevailed, mosques were built with curved roofs from the bricks in use there, as is shown, notably by the ruins in Gaur on the Ganges. Instead of glazed tiles, the walls were generally adorned with richly ornamented stucco and lajas, the Vidhīvāra range also, in the Deccan and in South India local schools of architecture grew up according to the same general principles. In Aṣmādānāg, Golkonda, Kīlārga, Bīdār, Awrangbād and other capitals of Mūhāammadan principalities, the building of mosques was much cultivated. Architectonically, the most important city was Bīdāpur, the capital of the state of the same name, which became independent in 1490 under Yūsuf 'Adī Shāh and survived down to the xvith century, when its great period of building culminated in the gigantic dome of the mausoleum of 'Adī Shāh. The mosque of Bīdāpur (second half of the xvith century) consists of a pierced half with small domes over each group of four piers and a large dome in the centre. In the Moghul period little change was made in this mixture of Hindu and Muslim methods, although the Persian elements are often more marked. The huge mosque with courtyard built by Akbar in Fathpur Sīkri has the usual plan with slight variations. The Great Mosque of Agra built by Akbar still shows little Indian pavilions on the tops of the cornices. It was only under his successors that a Puritan reaction set in, which finds its fullest expression in the mosques of Dehlī and Lahore. The process of assimilation thus attained its end.

China and Indo-China. From the Maghrib to the Pamirs and southeast of them the general character of the country, plains and deserts, linked the peoples of Islam together by certain common features, which also secured the mosque its unifying structure. In the early centuries in China where Iṣlām was only the religion of a few isolated groups of immigrants the mosque soon adapted itself to the well marked Chinese style of architecture and the mosques of the south and western
provinces, where Islam has established itself in places, are not distinguished externally from the Chinese temples or yamen and internally only by the absence of idols which are replaced by the muezzin and minbar. Exceptions are the mosques in the seaports, where the colonies of Muslims kept up steady intercourse with the home of Islam and the mosques were at the same time built by native architects. This holds for example of the mosques of Ts'ian-tchan, province of Fu-kien, the Zaitun of mediaeval writers, which was built in 400 (1009—1010) and restored in 710 (1310—1311) by an architect, a native of Jerusalem, who came from Shiraz, as the inscription testifies. This mosque which is built of hewn stone consists of a hypostyle hall, such as we find in Asia Minor (e.g. Sivas) and has bulb-shaped niches (cf. G. Arnaud and M. v. Berchem, Mönche und Klerikanten in Turkischen Islam, 2 vols., xii., 1911). The mediaeval chief mosque of Canton also followed the western tradition and even has a minaret, which is never seen on the mosques of the interior. The same holds of mosques in Burma and the Indian Archipelago. They are usually built of wood and adapted to the native architecture.

Bibliography: The works quoted under Manaka will also serve for Mosque and Madrasa. Special works are quoted in the text. For the Maghrib the new, excellent Manuel d'Art musulman of G. Marquis was mainly used, which deals only with the Maghrib (2 vols., Paris 1927).

AL-MASJID AL-AXSA, the mosque built on the site of the Temple in Jerusalem.

The name means "the remotest sanctuary" and is first found in the Qur'an, Sura xvii. 1: "Praise Him who made his servant journey in the night from the holy place to the remotest sanctuary, which we have surrounded with blessings to show him of our signs".

As was explained in the article IERA [q. v.], the older exegesis refers this verse to the journey to heaven (cf. mu'allaq) and sees in the name al-Masjid al-Aksa a reference to some heavenly place (cf. Sidrat al-Muntaka, Sura liii. 14).

This explanation had however in time to give way to another, according to which the expression is a name of Jerusalem. This explanation is connected with Muhammed's "journey in the night" (iraq). The combination of the iraq and mu'allaq thus gives the story of the Prophet's journey by night to the Masjid al-Aksa (Jerusalem) and his journey following it from Jerusalem to the heavens.

The question arises how Jerusalem came to have this name among the exegists of the Qur'an. According to Schrieke [cf. IERA] it is a result of the Omayyad tendency to glorify Jerusalem at the expense of the holy land of Islam. Horovitz has challenged this explanation (in Islam; cf. the Bibl.). In any case, Jerusalem was from very early times regarded in Islam as a sacred place, the original Kihla, which, although abandoned in favour of the al-Aksa, still retained its sanctity as may be seen, for example, from the fact that 'Omar had a Masjid built on the site of the Temple [see AL-KUBS, ii., p. 1097].

The name al-Masjid al-Aksa is now particularly attached to the mosque in the south of the Temple area, which according to some was originally a church built by Justinian [cf. AL-KUBS, ii., p. 1095].

According to late Arab writers the mosque was built by the caliph 'Abd al-Malik (705—750), a statement which might simply mean that Justinian's church was rebuilt. On this compare AL-KUBS, ii., p. 1098 sqq. where the further history of the mosque is given.

For a picture of the site and the mosque see Pl. v to the article AL-KUBS; plan and description of the interior in Travels of All Bey, London 1816, ii. 214 sqq.; Badecker, Palastina und Syrien, p. 54 sqq.

AL-MASJID AL-HARAM, the name of the Mosque of Mecca. The name is already found in the pre-Muhammadan period (Horovitz, Keronatische Studien, p. 140 sqq.) in Kaab b. al-Khattab, ed. W. von Kaulbach, v. 14: "By Allah, the Lord of the Holy Masjid and of that which is covered with Yemen stuff, which are embroidered with hempen thread" (?). It would be very improbable if Mecca was poet by these two references meant anything other than the Meccan sanctuary. The expression is also frequently in the Qur'an after the second Meccan period (Horovitz, op. cit.) and in various connections; it is a grave sin on the part of the polytheists that they prohibit access to the Masjid Haram to the "people" (Sura ii. 214; cf. v. 3; viii. 34; xii. 25; xli. 25); the Masjid Haram is the pole of the new Kihla (Sura ii. 159, 144); contracts are sealed at it (Sura ix. 7).

In these passages masjid harem does not as in later times mean a building but simply Mecca as a holy place, just as in Sura xvii. 1 Masjid Aksa [q. v.] the "remotest sanctuary" does not mean a particular building.

According to tradition, a wall was performed in the Masjid al-Haram is particularly meritorious (Bukhari, al-Sa'ud fi Masjid Masbaha, bkh. i). This masjid is the oldest, being forty years older than that of Jerusalem (Bukhari, Ambiya, bkh. 10, 40).

This Meccan sanctuary included the Ka'ba [q. v.], the Zamzum [q. v.], and the Makam Ibrahim [see aqana], all three on a small open space. In the year 8, Muhammad made this place a mosque for worship. Soon however it became too small and under 'Umar and 'Uthman, adjoining houses were taken down and a wall built. Under 'Abd Allah ibn al-Zubair, the Umayyads and 'Abbasid caliphs, successive enlargements and embellishments were made. Ibn al-Zubair put a simple roof above the wall. Al-Mahdi had colonnades built around, which were covered by a roof of tile. The number of minarets in time rose to seven. Little columns were put up around the Ka'ba for lighting purposes. The mosque was also given a feature which we only find paralleled in a few isolated instances: this was the putting up of small wooden buildings, or rather shelters for use during the salt by the ihram, one for each of the four orthodox rites. The fact that one of these makam might be more or less elaborate than another occasionally gave
rise to jealousies between the Ḥanafis and the Ṣaḥḥāfīs. Ultimately the ground under the colonnades, which was covered with gravel was paved with marble slabs, in the maṣṭāf around the Kaʿba as well as on the different paths approaching the maṣṭāf.

The mosque was given its final form in the years 1572—1577, in the reign of the Salāḥ al-Dīn Selim II, who, in addition to making a number of minor improvements in the building, had the flat roof replaced by a number of small white-washed cone-shaped domes. A person entering the mosque from the Masāf or the eastern quarters of the town, has to ascend a few steps. The site of the mosque, as far as possible, was always left unaltered, while the level of the ground round— as usual in oriental towns and especially in Mecca on account of the Sāl— gradually rose automatically in course of centuries (cf. Snouck Hurgronje, Mecca, i. 15—20).

The dimensions of the Ḥanāf (interior) are given as follows (al-Batānīnī, Rihla, p. 96): N. W. side 545, S. E. side 556, depth 860, S. W. side 364 feet; the corners are not right angles, so that the whole roughly represents a parallelogram.

Entering the maṣṭāf from the eastern side, one enters first the Bāb Bani Ṣāḥiva, which marks an old boundary of the masjid. Entering through the door, the Maṣṣūm ibn ʿAmr al-Iṣḥāqī is on the right, which is also the Maṣṣūm al-Ṣaḥḥāfī, and to the right of it is the miṣrāb. On the left is the Zemzem Well. As late as the beginning of the sixteenth century, there stood in front of the latter, in the direction of the northeast of the mosque, two domed buildings (al-Kababtain) which were used as store-houses (Chron. d. Stadt Mecca, ii. 337 sq.). These Kabbats were cleared away (cf. already Burchhardt, i. 265); they are not given in recent plans.

Around the Kaʿba are the maṣṭāfs for the imāms of the masjihābs, between the Kaʿba and the south-east of the mosque, the maṣṭāf of 'Arīyāt (or muṣalla) al-Ḥanbali, to the south-west the maṣṭāf al-Mālikī, to the north-west the maṣṭāf al-Ḥanafī. The latter has two stories; the upper one was used by the muḥādhdhin and the mubālligh, the lower by the imām and his assistants. Since Wahhābi rule has been established, the Ḥanbali imām has been given the place of honour. The maṣṭāf al-Ḥanafī stands on the site of the old Meccan council-chamber (dār al-nadwah) which in the course of centuries was several times rebuilt and used for different purposes. The maṣṭāf is marked by a row of thin brass columns connected by a wire. The lamps for lighting are fixed to this wire and in the colonnades.

The mosque has for centuries been the centre of the intellectual life of Islam. This fact has resulted in the building of madrasas and riwaṭs for students in or near the mosque, for example the madrasa of Kāṭib Bey on the left as one enters through the Bab al-Ṣaḥīm. Many of these waḥfs have however in course of time become devoted to other purposes (Burchhardt, i. 282; Snouck Hurgronje, Mecca, i. 17). For the staff of the mosque cf. Shamsa (Handbuch); Burchhardt, i. 287—291.

**MAṢḤAF. [See MAṢḤAṬ.]**

**MAṢḤAṬ, Muḥammad ibn Hammad al-Wali Muḥammad, a distinguished Urḍū poet, was born in Lucknow but went to Delhi in 1190 (1770), where he applied himself to the cultivation of Urdu poetry. His house was resorted to by the eminent poets of the capital. In 1201 (1786) he passed to Lahore and died in 1242 (1824). He was the author of several Divāns in Persian and Hindustānī, and of biographies of Urdu poets, called Taḍdhīb-or-i Hindi. He also wrote another Taḍdhīb of Persian poets who flourished in India from the time of Muḥammad Shāh (1131—1161 = 1719—1748) to the reign of Shāh ‘Alam (1173—1221 = 1759—1806) entitled Iḥād Taḥrīrīyāt, and a historical work in verse which he entitled Ṣaqā-Nama.

(M. HINDKET HOGAN)

**MAṢḤAṬ ALLĀH, the son of Abū’l’Fiṭr or Sāḥaṭ, a celebrated astrologer, who along with Nāsibkabī fixed the day and hour for the foundation of Baḡdād by order of al-Manṣūr. According to the Führer, he was a Jew whose original name was Māḥaṭ (a corruption of Manāṣṣah, i.e. Masanne?) whether he later adopted Islam and for this reason took the name Māḥaṭ-Allāh is not recorded. The date of his birth is unknown, but it can hardly be later than 112 (730). He is said to have died in 200 (815).

In numerous works Māḥaṭ-Allāh covered the whole field of astronomy, and also the making and uses of astronomical instruments. There has only survived in Arabic fragments of a treatise on the pros of various series which was translated into Latin under the title Metaelegia de Mercibus. Many of his astrological works were translated into Latin by Johannes Hispalensis and others and later printed. Hebrew versions are also known. It may be safely assumed that Arabic originals will still be found in eastern libraries. The critical study of the Latin translations existing in manuscript and printed form is most desirable in view of the early date of the author.

**Bibliography:** Ibn al-Nadim, Führer, ed. Flügel, i. 273; ii. 129; H. Suter, Das Mathematikerverzeichnis, 1892, p. 61—62; H. Suter, Die Mathematiker und Astronomen der Araber, 1900, p. 5—6; Nachtrag, 1902, p. 158; M. Steinach, Die urd. Litteratur der Juden,
stands the sultan’s palace, at the south end the offices of the British political agent. On either side the town is flanked by an old Portuguese fort, Marun and Djallati. The chapel in one of them bears the date 1588. The bazaar consists of low buildings and is of little importance. The mosques are remarkable for the absence of the usual tall minarets.

The climatic conditions are by no means favourable. With al-Jodeida and Djidda, Maskat is one of the hottest towns in the world. In 1912 the maximum temperature was 45° F. C., the minimum 17° F. C.; the rainfall varies between 75 and 150 mm. The high temperatures are caused mainly by the hot winds which at certain periods in the summer months usually blow from the Arabian desert and from the rocky hills for several hours in the night. From November to the middle of March the weather is however quite pleasant, but one must beware of malaria and fever.

Maskat plays a considerable part as centre of trade with the nearer east. There are regular communications with India, Persia, East Africa and Mauritius. The ships of quite a number of steamship companies call regularly at Maskat; e.g. the British India Steam Navigation Company on the route from London to India, the Backa Steamship Company and the Strick Line to Basra, the West Hotelpool Steam Navigation Company on the Aden-Basra route, the Hamburg-America Line monthly to the harbours of the Persian Gulf, the Arab Steamers Ltd. on the Bombay-Basra route, and the Compagnie Russe de Navigation et de Commerce. In 1912—1913 the total number of vessels entering the port was 98 steamers and 127,885 tons and 63 sailing vessels with 3,221 tons and leaving it 86 steamers of 90,863 tons and 39 sailing ships of 3,379 tons. The ships in question were mainly British (36.73%).

Maskat has a regular postal service with the rest of the world instituted by the British, as well as a cable connection which the Indian Government has laid to Djidda. The population, which changes a good deal, is about 10,000 souls, primarily Arabs but there are also Persians, Hindus, Indian Muslims, Beludji and a few Europeans settled here, mainly traders.

Maskat was at one time a flourishing centre of the silk and cotton trade but in recent years this has almost been destroyed by Indian and American competition. The gold and silver work done by Indians here is famous, notably richly ornamented swords and daggers. The imports of Maskat in 1912—1913 were valued at £ 63,000 and the exports at £ 301,477. The former were mainly arms and munitions, cereals, dyes, precious metals, pearls, foodstuffs, textiles, tobacco, building materials, enamel, glass and porcelain, ironmongery, perfumes and soaps, the latter camels, horses and asses, weapons, cereals, dried and salt fish, dates, lemons and pomegranates, wares and dragon’s blood, pearls, melted butter (ghar), muslul, mother-of-pearl and tortoise-shell, textiles, hides and leather. The chief importer was India, then Belgium, England and A’aden, the exports went mainly to Arabia, the Arabian coast, England, Persia, America and Zanzibar.

According to local tradition Maskat was founded at an early period by Hīmyar colonists. A. Sprenger has identified Maskat with the wavb or town of Ptolemy, vi. 7, 12. As the harbour has only a narrow entrance on the north and is enclosed on
the east by rocky heights, it is, as a matter of fact, easy for sailors to overlook it, and the name "the hidden" would be quite appropriate. Al-Muḥādhaṣi (B. G. A., ill. 93 sq.) who mentions the port of al-Maṣqūṭ, says that it is the first place which the ships from Yemen reach and is a fine town, rich in fruits. Iblī al-Fāṣih al-Hamzahī (B. G. A., v. 11) says of Maṣqūṭ that it is the very end of Ṭūmān, about 200 parasangs from Ṣṭrāf, the starting point for ships sailing to India and to Kuḥūmāl, a month's journey beyond it. Ships take in water here and Chinese ships pay 1,000 dirhams for it, the other 10--20 dirhams. Iblī briefly mentions Maṣqūṭ as a densely populated town; Ḏujūr-al-Maṣqūṭ is fuller (in A. Sprunger's Post- und Reise- reis, p. 145 sq.), and tells us that Maṣqūṭ was originally called Maṣqūṭ -- so also Niebuhr, p. 296 -- and that it is a considerable centre of trade with Africa and the east coast of the Persian Gulf, whence the wares are forwarded to Sidjāṣa, Ḍjārāṣa, Transoxania, Ḥawwah and Zābulistān. In the beginning of the xvth century A.D., Maṣqūṭ, whose history had hitherto been that of Ṭūmān, attracted the attention of European powers. In 1506, Albuquerquè appeared before the town and demanded that it should submit to the Portuguese. At the first the people seemed to be peacefully inclined, and willing to accept his terms, but this attitude changed and the Portuguese admiral decided to attack and destroy the town. Forty large and small ships and many fishing-vessels and the Imām's arsenal were destroyed, the mosque pulled down and the town burned. The Portuguese fortified the place and in 1527 built two forts, Marāfū and Dhjīlālī, and factories; the present buildings of these names were however only built after the union of Portugal with Spain in 1580 by direct instructions from Madrid. The Portuguese had not an easy position here. They were frequently attacked by the surrounding tribes and in addition by the Turks; in 1526 a rising in Maṣqūṭ was put down by Lopo Vas, the governor of India. In 1550 a Turkish fleet under Pir Bey appeared before Maṣqūṭ, attacked the town and took it by storm after eighteen days' bombardment. The Portuguese commander and 60 men were carried off to be Turkish galley-slaves, but in 1553 the Portuguese succeeded in destroying the Turkish fleet and re-establishing their sway in the Persian Gulf. Maṣqūṭ was now fortified as a naval base. But after 1631 Portuguese prestige began to decline rapidly. At the end of 1649, Maṣqūṭ was attacked by the Imām's army and had to surrender on January 23, 1650, as relief came too late. The town now lost much of its former importance, although under Dutch influence its commerce was still considerable. Towards the end of the xvith century it attained an unmistakable notoriety as a nest of pirates; in 1733 it was taken by the Persians, who were driven out by Aḥmad b. Sāliḥ, the founder of the dynasty still ruling in Maṣqūṭ, who was elected imām in 1741. Since 1793, Maṣqūṭ has been the capital of the sultānate of Ṭūmān. After 1797 the French began to be influential in Maṣqūṭ; the town played a prominent part as a base for attacking India in Napoleon's grandly conceived plan for destroying England's power; we need therefore not be surprised that England also spent an increased attention to the town. In January 1800, Capt. John Malcolm was sent to Maṣqūṭ by the Indian government and concluded a treaty with the sultān by which an earlier agreement between the East India Company and the sultān and also sent a consular agent to Maṣqūṭ. The town flourished under this sultān, Ṣa'id b. Sultān, and became a centre for commerce with the Persian Gulf. Maṣqūṭ repelled an attack of the Wāhahīb with the assistance of the English in 1809, but in 1833 it became tributary to them. The change from sailing to steamships brought about a decline in the importance of the town. In 1865 Palgrave describes Maṣqūṭ as an important harbour with 40,000 inhabitants, but in 1895, Bent found the population at only 20,000 and at present it can hardly be more than 10,000. In 1853 however, the sultān was able to negotiate a commercial treaty with the United States, followed by a similar one with England in 1859; in 1844 France and Maṣqūṭ drew up a commercial treaty by which France obtained the privilege of the most favoured nation and French subjects were given full freedom to trade in Maṣqūṭ. The independence of Maṣqūṭ, although expressly stated in the Anglo-French declaration of 1862, was however little more than nominal, for England, who had several times come forward to protect the sultānate, had through her political agent considerable control over the sultān. In connection with the slave-trade, which England was endeavouring to suppress, the sultān of Maṣqūṭ had bound himself in various ways to England and in 1854 even ceded to England the Khurūn-Mūrūn Islands of which France was endeavouring to obtain possession. When Sultan Sāliyād Ṣa'id died in 1856, his kingdom was divided between his two sons Thawāwi and Madjīdī of whom the former received Maṣqūṭ, while the latter was given Zanzibar which had belonged to Maṣqūṭ since the end of the xvith century. This division was negotiated by England through Lord Canning, the Viceroy of India. In 1861 Zanzibar was declared independent, but it had still to pay an annual tribute to Maṣqūṭ, which England in 1873 undertook to pay in compensation for various concessions of the sultān and Maṣqūṭ in connection with the suppression of the slave-trade as long as the sultān fulfilled his pledges and showed friendship for England. This readiness to meet the English was also seen in a telegraph agreement of 1864. In 1861 Sultan Fāṣih concluded a treaty of friendship, commerce and navigation with England in which the sultān bound himself and his successors not to cede, sell or let land except to England. The French opposed this and in 1854 succeeded in obtaining a coastal station five miles S. E. of Maṣqūṭ. England raised objections and quoted the treaty with the sultān although France in the treaty of November 17, 1844, had secured the right to acquire land. Diplomatic negotiations finally brought about a settlement, by which France gave up the coastal station in the Gulf of Ṭūmān, and in compensation was lent half the coal depot at Makallī. As France in 1916 again lent this coastal station to the English, the dispute was finally settled in favour of the English.
sultan of Maskat, and when the latter took steps to deal with them they were protected by France. The affair finally became so serious that in 1903 there appeared to be danger of a conflict between England and France, but in 1905 the question was submitted to the Hague Tribunal which decided that only those sailing-vessels which had received the French flag before January 2, 1892, had the privilege renewed and licences later issued were cancelled as invalid, in so far as they were not given to French protégés of 1863. As, in 1917, only 12 'Omān sailing-vessels still carried the French flag, this privilege of France must soon die out. It was only natural that the active smuggling of weapons from Maskat not only to Persia and Afghanistan but also into the interior of Arabia, should cause anxiety to England. The flourishing trade in arms was put down in 1912 by the establishment of a depot for the sale of arms under government control, which alone could sell arms. It is true that the smugglers have now migrated to Birk, Shabain and Ru'nis, but the great decline in the statistics of the year 1912–1913 when in the first half year 147,391 lbs. of arms were still imported while in the last five months the total was only 36,667. In 1913, the new ruler Sultan Taimur, who succeeded his father on October 4 and was recognised by England and France on November 15, 1913, met with serious opposition from the tribes in the south of 'Omān, who declared themselves independent, under an imām whom they chose themselves. It is only England's power that keeps these rebels from Maskat and thus secures the existence of the dynasty, whose rule has long been quite nominal.

| | | | 1856) ruler of Oman and Zanzibar, London 1929; cf. also 'OMAN and the Bibl. of this article.

On 2. Yākūt, Muṣfjam, ed. Wüstenfeld, lv. 529; Marāšid al-Iṣbaši, ed. T. G. J. Juynboll, iii. 98.

(A. Grohmann)
MASLAMA,  son of the second Maṣrawi Caliph. “His chivalrous figure seems to have made a vivid impression on the popular imagination; one might think he came out of a popular romance” (C. H. Becker). Few of the Maṣrawi princes were so active and gifted as he, and in many diverse directions. He lived long enough to give proof that he was not unworthy of the high hopes placed upon him. His gifts earned him the confidence of all the Maṣrawi rulers, to whom he was a Nestor whose counsels were always heeded, from ʿAbd al-Malik to Hārūn, not even excepting ʿUmar II, who was not always favourably inclined to the sons of ʿAbd al-Malik, nor the tyrant and fanatic Walīd II, who wept at his loss. He had been carefully educated by his father ʿAbd al-Malik. His long career as a military leader revealed his personal courage and his knowledge of the art of war. A man of good counsel and excellent judgment, versed in literature, a patron of poets and an accurate critic of their merits, adored by his men, Maslama made use of his exceptional position to be a protector of all the oppressed, to maintain the unity and cohesion at the heart of his dynasty, which was threatened by the absurd law of seniority which regulated the succession to the throne.

The chance of birth — his mother was a slave-girl — prevented him from rising higher. Walīd I gave his brother Maslama the task of conducting the military operations against the Greeks. Henceforth — with a few short intervals — he was to hold the office of commander-in-chief of the Arab armies, in which he frequently had under him his nephew, the able and valiant ʿAbdās [q. v.], son of the caliph Walīd. In the year 91 (709-710) he succeeded his uncle Muḥammad as governor of Armenia, a province not completely subdued, which required a military man to rule it. He also governed the ʿamār of Kūnārīn [q. v.], another frontier province continually exposed to the attacks of the enemy. He never spent much time in civilian appointments, for which his soldierly spirit seemed less adapted and in which the independent character of the Maṣrawi prince usually came into conflict with the central power.

His first campaign was marked by the capture of the important fortress of Tyana (Tawhna); the rigorous winter of the high Anatolian plateaus did not interrupt the operations of this long siege, in which the assailants suffered great hardships [for the chronology see ʿABD ʿABBĀS IBN AL-WALID]. The dismantled town remained deserted, a serious loss for the Byzantines. Their enemies now held both slopes of the Cilician Taurus, the gateway to Anatalia. Under Maslama’s directions, his nephew ʿAbdās in the next two or three years completed the conquest of mountainous Isauria. In 93 (712) the fortress of Amassia was taken and Maslama entered Galatia through Armenia. This opened up the road to Constantinople. In 95 he laid siege to the capital. The attack dragged on, and as a result, Maslama’s forces suffered severe hardship in the winter seasons. Contemporary writers blame for their failure the lack of foresight and insufficient diplomatic skill in the commander-in-chief, ʿUmar II recalled the besiegers to Syria and sent Maslama to the Ṭirāq against the ʿArḍrījīs. Yazīd II sent his brother to put down the rebellion of Yazīd b. Muhallab [q. v.] in the Ṭirāq. After the death of this rebel (102 = 720), Maslama became governor of the two Ṭirāq.

Before this, he had very opportunistically persuaded the caliph not to modify the order of succession to the disadvantage of Hārūn. Yazīd was not long in finding fault with his brother, especially as he neglected to send him the taxes of his immense eastern vice-royalty. He recalled him to Syria, where Maslama endeavoured to combat the influence of favourites on this weak sovereign. Returning to the army in 108 he conquered Cappadocia. The following years were marked by Maslama’s great campaign in Armenia and the land of the Ḳaṣara. After partial successes in which the country was laid waste, the stubborn resistance of the natives and the Turkish tribes forced him to retreat. The rest of his life was one with great difficulty Maslama succeeded in bringing back the remnants of his army to the Arab territory by sacrificing all his baggage and equipment (115 a. n.). His intervention to support the claims of Walīd b. Yazīd [q. v.], heir presumptive to Hārūn, compromised him at court. He died before this caliph and seems to have taken with him to the grave the fortune of the Maṣrawis, for they rapidly declined after his time.

(H. Lammens)

MAṢMŪDA (the broken plural Maṣmūdīya is also found), one of the principal Berber ethnic groups forming a branch of the Barānīya.

If we set aside the Maṣmūda elements mentioned by al-Bakrī in the neighbourhood of Bone, the post-Islamic Maṣmūda seem to have lived exclusively in the western extremity of the Maghrib; and as far back as one goes in the history of the interior of Morocco, we find them forming with the Ṣaḥāḥ [q. v.], another group of Barānī Berbers, the main stock of the Berber population of this country. Indeed from the first Arab conquest in the seventh century to the importation of the Hīsfīs by the Almohad Sultan Yākūb al-ʾAṣamur in 1190, it was the Maṣmūda who inhabited the great region of plains, plateaus and mountains, which stretches from the Mediterranean to the Anti-Atlas to the west of a line from N. E. to S. W. passing through Meknès (Meknās) and Dimūn; the only parts of this territory which were not occupied by them were three small Ṣaḥāḥ exclaves in the Ṣaḥāḥiyya of Tangier, of the valley of the Wargij and of Azemmūr. To the north and to the west, the land of the Maṣmūda was bounded by the Maṣran and the Atlantic. To the east and south it was bounded by the lands of the Ṣaḥāḥiyya. To the north were the Ṣaḥāḥiyya of the tribe of Tāzī and those of

(H. Lammens)
Wartha: in the centre, the Zanāşa or Şanţâida of the Central Atlas, to which should be added the Zanāşa of Fāzra; to the south, the Haskūra, the Lamta and the Gazīla.

It was from the presence of this Mašmuđa bloc, extending continuously from Sūs to the Mediterranean, that eastern Morocco generally must have received the name of Sūs, a name found for example in Yākūt (cf. Muṣṭafā, s.v. Sūs) who distinguishes a Hithr Sūs (capital Tangier) and a Farther Sūs (capital Tarqalāf) separated from the other by two months' journey. It is also to this racial unity that are due the legends according to which all the N.W. corner of Morocco was once inhabited by the people of Sūs (ak Sūs). Before the Mašmuđa peoples were divided into three groups:

1. In the north, from the Mediterranean to the Sahi and Wartha, the Ghamāra [q.v.].

2. In the centre from the Sahi to the Wādire Umm Rabī, the Baraghwāta [5. BARGOWA].

3. In the south, from the Wādire Umm Rabī to the Anti-Atlas, the Mašmuđa in the strict sense of the word.

Like the majority of the Barbâls, who in this respect are a contrast to the Buttr, who are inclined to be nomads, the Mašmuđa were all settled; for if, in one passage, Ibn Khaldūn mentions two nomad tribes, the Lâkhs and the Zaggan as forming part of the Mašmuđa confederation of the Hāba, he also points out that they were tribes of the Lamta, i.e. of the nomadic Şanţâida, who finally became incorporated in the Hāba. He also points out that they were tribes of the Lamta, i.e. of the nomadic Şanţâida, who finally became incorporated in the Hāba. The anti-Atlantic tribes of the southernmost Sūs. Ibn Khaldūn further makes special mention of the fortresses and fortified villages (maš bīl wa-bajūn) of the Mašmuđa who lived in the mountains of Dāran or the Great Atlas.

Other Arab historians and geographers mention the many little towns (jarāy) in the plains occupied by the Dukkâla or the Baraghwāta, a pastoral and agricultural people; but these were gradually ruined and destroyed in the course of the fighting which went on without interruption in their country from the establishment of the Zanâşa principalities of Shalla, Tâdil and Aghmâl; the Amoravidi and Almoravid conquests, repeated campaigns against the heretical Baraghwâta, the Hiflîl occupation, the struggle between the Almoravids and the Marinids, the rivalry between the Marinid kingdom of Fās and that of Marraquṭ and lastly the wars with the Berbers. Exterminated as heretics, dispossessed of their lands and driven from them by the Arab or Zanâşa nomads brought into their territory, transported to a distance (region of Fās) by the Wātāsid saltīns, for whose taste they showed too little hostility to the Portuguese, the central Mašmuđa, the original inhabitants of the Aqgār, of Tâmâsûâ and of the land of the Dukkâla finally disappeared; their place was taken by nomads, Hiflîl Arabs (in the north, in Hâlī and Aqgâr, the Rī'yâ; in the south, the Djelas, Satisf, Khât, Bayn Djetlar) and the Berbers (Zanâşa Hâfya; in the xvii century the coming to power of the Sâ'idâr dynasty brought about the immigration of Maš'îl Arab tribes to the same region: Abda, Aqmar, Rahâ'îmâna, Barâshî, Wâdîa, Awlad Duaîm, Za'air, etc.).

From the xvii century onwards, as a result of the occupation of their central plains by the Arabs, Hiflîl then Maš'îl, the Mašmuđa only survived in the mountainous regions which formed the northern and southern extremities of their old domains.

The Mašmuđa of the north (or Mašmuđat al-Sâhid; "M. of the shore" of al-Râyûn) were chiefly represented by the Ghamâra group [q.v.]. But, alongside of them, we find two small groups having the same racial origin:

a. The Mašmuđa of the Sûmâ, settled between the district of Cetâa, which belonged to the Ghamâra and that of Tangier, a Şanţâida country. It was they who gave their name to the fortified port of Kasr Mašmuđa, also called Kasr al-Maṣîla, the modern al-Kasr al-Sâghir. Their presence here is attested in the tenth century, for it was while fighting here against them that Hâk-Mtn, the prophet of the Ghamâra, was slain; al-Bakri (xii century) knows them in the same area corresponding to that of the modern Andajza.

b. Al-Bakri mentions another group of Mašmuđa (tribe of the Aghâra) settled in the land lying between al-Kasr al-Kabîr and Wâzzan; there is still a small Mašmuđa tribe between these two towns.

The Mašmuđa of the south, who inhabited the lands between the Wàdire Umm Rabî and the Anti-Atlas, were divided into two groups: those of the plain and those of the mountains.

a. The Southern Mašmuđa of the plain lived to the north of the Great Atlas. The chief towns were the Dukkâla; the Baṭūf Maqîr (around Suf); the Hâsha; the Ragâsha and the Hâsha (to the south of the lower course of the Tânsîf). The chief town in this region was Sâfî (Ar. Aṣfî), for the town of Asemîr [q.v.]; and the riṣâf of Tî [q.v.] were in the enclave of Şanţâida; beside the port of Sâfî, we must also mention that of Kât (the Acos of the Portuguese) at the mouth of the Tânsîf, which gave Aghmâr access to the sea and had a riṣaf, and that of Amagîlî (the Mogador of the Portuguese) which served the district of Sûs. Besides these three centres, there were, as in Tâmâsûâ, a large number of fortified little towns (jarây) many of which survived down to the xviii century. The Portuguese chroniclers, Leo Africanus and Marmion have preserved for us many names of these places which have now disappeared, their very memory being lost; the local hagiographic collections and notably the Kirsh al-Thugriyyîn of al-Tâbiîn (xii century) have preserved a good deal of valuable information on this subject. At the present day all the country to the north of the Atlas is arabicised and if the old Berber element has not completely disappeared, it is at least overwhelmed by Arabs of whom the majority seem to be of Maš'îl origin. The Hâsha alone, between Mogador and Aghâra, have remained almost intact and have retained the use of the Berber language.

b. The Southern Mašmuđa of the mountains occupied the Great Atlas (Qobâl Darân), the massif of Sirwāt (anc. Sirwāt) and the Anti-Atlas or mountains of the Nâgûta (Berh. In Gisînt).

In the Great Atlas, the Mašmuđa extended to the east as far as the upper course of the Tânsîf (a pass called Tisîn-Telwet). From east to west, the following were the chief groups: the Gallâwa; the Hâlîkîn (or Alâkîn); the Warîka and the Hârîdja, near Aghmâr; the Aṣâdān, including the Masîfma, the Mâshîl and the Daghâshâ or Bagh Daghîsh; the Hâkîika, including the Aṣâdâhika; the people of Tin-Mâlît, on the upper course of the river of Nafîs; the Sūda or Zâuda, in the lower valley of the Asîf al-Mâl; the Gudmâwa and...
Lastly in the west, the Gafsa, the chief tribe of which was the Sakawa or Sakawa.

The massif of Sirwa and the high valley of the Wadi Sūr were inhabited by the Banū Wawarazt and the Sakata. The N. E. part of the Anti-Atlas was occupied by the Hargha.

Further to the south, the Sūr, properly so-called, was inhabited by heterogeneous elements of Maṣmūda origin (al-Idrisi, al-iḥṣāʿ miʿt al-Bakri al-Maṣmūdī). Describing the road leading from Tārūdānt to Aghmat, al-Idrisi mentions between Tārūdānt and the land of the Hargha, four tribes the names of which, corrupted by the copyists, are unfortunately hardly identifiable.

Besides these highlanders, who were strictly Maṣmūda, we must mention the Haskara (or Hasaqına). These were highlanders of Ṣanḥāda origin, breach of the Lamsa and Gazella, who led a nomadic existence to the south of the Great Atlas and the Anti-Atlas. The Haskara were settled in the high valley of Tānsift and the Wāl al-ʿAblad, on the two slopes of the mountain range which links the Great Atlas, the home of the Maṣmūda, with the Central Atlas, the home of the Zānāga (Ṣanḥāda) of Tādil; their chief tribes were the Zāmariya, the Mughriša, the Garaša, the Ghajdira, the Fatwa, the Maqṣawa, the Hufanis, and the Hanfit, who, according as they lived on one slope or the other, belonged to the Haskara al-Khābi (H. of the south) or to the Haskara al-Dūl (H. of the north). Ibn Khaldūn, who calls attention to the Ṣanḥāda origin of the Haskara, adds that, as a result of their taking up the Almoravid cause, it became customary to associate them with the Maṣmūda tribes, but that they never enjoyed the same privileges as these latter.

History. In 682, ʿUqba b. ʿAbd marched against the Maṣmūda of the Atlas with whom he fought several battles. On one occasion he was surrounded in the mountains and owed his safety solely to the help given him by a body of Zanata. In the same year he attacked and took the town of Naffis which was occupied by ʿĀṣim and literate professed Christianity. Thence he went to Īgli, a town of Sāh which he also took.

Legend adds that he even thrust his way to the Atlantic where he rode his horse into the water, calling God to witness that there were no more lands for him to conquer. This first submission of the Maṣmūda does not however seem to have lasted after the departure of ʿUqba. In 707, ʿAbd b. Nusair aspired to reconquer Morocco; he in person took Dār and Tāfīlit and sent his son to the conquest of Sāh and the land of the Maṣmūda.

In 732 ʿAbdād al-Habbaš was appointed governor of the Magrib; he appointed his son Ṣamīr as assistant to the governor of Morocco and gave him particular charge of the district of Sāh. In 735, the same ʿAbdād al-Habbaš sent Ṣamīr, grandson of ʿUqba, to make an expedition into Sāh against the Maṣmūda and the Ṣanḥāda (Maṣmūda). Later the latter's son ʿAbd al-Rahman Filīn (d. 745) becoming semi-independent governor of the Magrib occupied Īgli and built a camp there, the remains of which could still be seen in al-Bakri's time. It is to the same governor that is attributed the making of the wells which supply the road from Tānsīf to Awdtāghast via Walūda, through the modern Mauritania.

The land of the Maṣmūda then disappears from history till the ninth century. The conquests of Idris I did not extend in the south beyond the Tāmānsa and the Tādil. But in 812 Idris II made an expedition against the town of Naffis; on his death in 820, his son ʿAbd al-ʿUmr al-Maṣmūda obtained as his share of the kingdom of Aghmat, Naffis, the lands of the Maṣmūda and of the Lakha as well as Sāh. Al-Bakri records that some of his descendants ruled as lords of Nafiss and among the Banū Lamasa, not far from Iglis. Other Idrisids, descendants of Yahya b. Idris, were at this time lords of Darūs.

With the decline of Idrisid power in the tenth century, the Maṣmūda again became independent and were ruled by elected sheiks or ṣābān (= Arabic ṣāḥib); Al-Bakri tells us that those of Aghmat were appointed by the people for a term of one year. When at the end of the tenth century, Zanata principalities became established in Morocco (at Faz, Shalla and Tādil), Maṣmūda established themselves at Aghmat; but all we know of them is that they were attacked by the Almoravids. In 1057, after receiving the submission of Sāh and of the Maṣmūda (Zarza, Sabilla, Gadda, Mina, Ragaqa and Ḥallia), the Almoravid chief of Sāh sent ʿAbd al-Bakri al-Muṣriḥ b. Yūsuf to Aghmat, the last Magribi ruler of which, Lāgūt b. ʿAli, fled to Tādil. His wife, the famous Zamāb, who was one of the Nafarzā, finally became the wife of Yūsuf b. Tādil whom she initiated into the fine art of diplomacy.

From 1057 Aghmat was the capital of the Almoravids till 1062, when Yūsuf b. Tādil founded Marrakush [q. v.]. In 1074 the same ruler, having divided his empire among several governors, gave his son Tamīn the governorship of Marrakush, Aghmat, of the Maṣmūda and of Sāh, thus of Tādil and Tāmānsa.

The Maṣmūda seem to have remained subject to the Almoravids till the rebellion in 1121 provoked by the ṣaḥāna Ibn ʿAbd al-Muttār [q. v.] of the tribe of Hargha, who, supported by ʿUmar Intīf, shāhin of the Ḥintlān, and by ʿAbd al-Muḥsin [q. v.], brought about the foundation of the Almohad dynasty [q. v.]. The history of the Maṣmūda is henceforth involved with that of the dynasty which they brought to power and which lasted till 1269. The Maṣmūda, together with the Almohad dynasty, thus contributed to the rise of the Ḥafṣids [q. v.], who ruled over Ifriqiya from 1228 to 1574, through the descendants of ʿAbd al-Haf ʿUmar Intīf, shāhin of the Ḥintlān.

During the first half of the fourteenth century, the power of the Almohads, routed by the Christians of Spain at the battle of Ḥiṣn al-Uqba (las Navas de Tolosa) in 1218 and vigorously attacked in Morocco by the Banū Maqrīz, soon began to decline. The Maṣmūda of the Atlas, indifferent to the fate of the dynasty, took advantage of its plight to regain their independence. It was the submission of the Ḥintlān and the Hargha, which in 1224 at the proclamation of al-ʿĀṣim assumed the leadership in the movement; frequently allied with the Ḥilāla Arabs of the plains, Sufyān and Kholī, we find them fighting in all the civil wars and supporting various pretenders to the throne.

Whereas in 1269 the Marinids had definitely crushed the Almohads, the Maṣmūda retained a certain amount of independence and lived more or less in submission to the central power, ruled by chiefs chosen from the great local families: ʿAbd al-Ḥamīn among the Ḥintlān; ʿAbd al-Salām al-Maṣmūda among the Gadda; among the Sakawa, ʿUmar b. Ḥaddū
was an independent chief who went so far as to claim the Berber title agiella (as king). In Sás, the Banú Yaddar founded an independent principality which lasted from 1254 till about 1340. As to the Haskhara, the power among them was exercised by the Banú Khatib.

Down to the xvth century, except during the first half of the reign of the Almohad dynasty of which they had been the principal supporters, the Maśmūda of the Atlas were hardly ever under the direct rule of the Moroccan government; only the tribes of the plains, Dukhala and Hája, in a position of inferiority as a result of their geographical situation, were able to offer less resistance and had to submit. The later dynasties, Sa'dian and Álawi, were no better able to subdue the Maśmūda of the highlands; but instead of gathering round local chiefs with temporal power, the latter now placed themselves under the leadership of holy men with religious prestige.

In the beginning of the xvth century, the land of the Maśmūda was in a state of anarchy. Some ashqādī of the tribe of the Hinaḫa held the lands of Marrakūsah; the most famous was Abū Shāntift; to the south of Tānsif, the xivth century saw the rise of the warlike group of the Rāgrāgīs; in the xvth century, the power of the emirate of Al-Djasūlī [q.v.] spread among the Hája in the adjoining country of Ibrāhīm's, the Sa'dian dynasty was rising, which after occupying Sás imposed its domination on the whole of Morocco.

But it did not however succeed in subjecting completely the highlanders of the Atlas. The powerful Ahmad al-Mansūr himself had to fight against a pretender who had proclaimed himself king of the Sakaṣāwā.

After the death of al-Mansūr, the Atlas and Sás were all under the authority of local religious leaders of whom the most important were to be found among the Hája and in Tānsif (family of Ahmad U-Murūs).

It was the 'Alawīd Sulṭān Māwlylh Rāshīd who restored Sás and the Atlas to the Moroccan empire. The only episode to note is the con-\textit{\textbf{ee}}ulation in Tānsif, by a marabout Saiyidī Hījān of a kind of independent kingdom, the capital of which was Ilīghīt and which lasted from the end of the xviiith century till 1886.

Henceforth the Maśmūda disappear from history. The Atlas remained more or less independent, according to the degree of power of the ruling sovereigns, but all the important events in the region took place among the Hája or in Sás [q.v.].

The French occupation found the old Maśmūda grouped, since the death of the 'Alawīd Sulṭān Māwlylh al-Ḥasan, into three bodies each under the authority of a local family: the Gūwās in the east, the Gunāfs in the centre, and the Muğgra in the west. The only use now in existence is the Gūwās; as a result of the disappearance of their leaders, the two others were recently broken up.

The name Maśmūda, still preserved in the north Morocco in the name of a little tribe of al-Kays al-Kahīr, seems to have completely disappeared in the south, where the former Maśmūda peoples, continuing to talk Berber, bear the name of Siyyīk (French Chleuha, q.v.). It may even be asked if the name Maśmūda, which is found so often in the Arab historians and geographers, was ever in regular use among the peoples to whom they apply it; it is, indeed, suggestive that it is not found in the long lists of tribes given in the Kāhīb al-Āṣrāfī, published in the Documenti indigenti d'Antica Almohade.

Sociology. The Maśmūda of the Atlas lead a settled life, living by a little agriculture and breeding a poor type of cattle, they live in villages or hamlets of stonehouses with clay roofs. Ibn Khālidīn notes the existence among them of numerous little strongholds and fortified villages (mādīr waṣṣā-lín), the ancestors of the modern fighranīt and agīṣīt. There were no towns among the mountains; Tīn Mallā, famous for the mosque where Ibn Tūnār was buried, was never a town. Before the Almoravīd ruler Yūsuf b. Tānsif founded Marrakūsah in 1063, built moreover in the plains out of reach of the highlanders, whom it was to control, the only urban centres in the district were situated at the foot of the Atlas on its lowest slopes. The principal towns were in the north, the double town of Aghmat [q.v.] and that of Nafīsī on the river Nafīsī; in the south, in Sás, Iglī and Tarāshant; as places of less importance we may mention in the north, Shīrīīs (mod. Shīlā+Famāna, Aṣfān and Tanūtīr, to the east, among the Hája and in the borders of Sás: Tānsif. The great trade-routes which traversed the region started from Aghmat for the port of Kāk (at the north of the Tānsif), Fās (via Taifāl), Sīdji-līūn (through the land of the Hāzrajda and the Haskhara), and Sás (via Nafīsī, the land of the Banū Maǧūf and Iglī; no doubt using the pass now called Tābīn-Tēst). Al-Bakrī particularly mentions the industry and application and the thirst for gain, characteristic of the Maśmūda of the Aṣlf and of Sás. The principal products of the country were fruits (nuts and almonds), honey and oil of argain (kargânīl, a tree peculiar to the country, of which there were regular forests among the Hája. The Maśmūda could eat and work iron and also copper, which they exported in the form of ingots or "loaves" (kangīd); they also worked and chasell silver jewellery. In Sás also the cultivation of the sugar-cane enabled sugar to be made.

From the intellectual point of view, the Maśmūda seem to occupy a place of first rank among the Berbers. Each of their three principal groups has produced a reforming prophet, the author of sacred works in the Berber language: Hā-Mu'in of the Qumārā; Sāliḥ b. Tarīf of the Baragāwīyā; Ibn Tūnār of the Maśmūda of the Atlas. It may also be noted that Sás is one of those few districts in which books were written in Berber down to a quite recent date (cf. H. Sanensi, 

\textit{\textbf{ee}} Essai sur la \textit{\textbf{ee}}tre de \textit{\textbf{ee}}'res des \textit{\textbf{ee}}res, P. 73—81).

As regards religion, the Maśmūda were converted to Islam in the viith century by Ḥūḥā b. Nāfī, who left his comrade Ǧhikār among them to teach the new religion. The latter died among them and was buried on the banks of the Tānsif where his tomb is still venerated. The place is now called Ǧhikār Saiyidī Shīkār near the confluence with the river of the Shīlā+Famāna. The Mosque of the town of Aghmat of the Hašinna was founded at the beginning of the eighth century in 704.

Ibn Khālidīn describes the Maśmūda of the Atlas as being attached to Islam from the first conquest, in which they differed from their brethren of the north, the Baragāwīyā and the Qumārā, who remained faithful to their heretical beliefs. At the beginning of the eighth century, several
of them accompanied Tārikh on his conquest of Spain; the best known of these was Khūshāyir b. Wāsilā b. Shamlā, of the tribe of the Aṣṣāād, who settled in Spain and was the grandfather of Vāyah b. Vāyah, one of the maṣā'ūl of the Mawṣūfāt; many others also settled in Spain and their descendants played important parts under the Ommayyads.

In the eleventh century however, al-Bakrī notes Rāfi'ī's heretics among the Masmūdā; these were the Banū Lamās settled to the north of the Hāmās and the town of Iglī. In this district he also mentions the existence of idolators who worshipped a rūm: perhaps we have here a relic of the cult of the god Ammon among the ancient Berbers. The towns however formed important centres of Muslim culture, the influence of which was felt not only by the Masmūdā of the district but also by the Sanhāja of the adjoining deserts: Lāṃja and Gāstū. We know that it was in the town of Naffā, with Wāqgāg b. Zālī, a learned jurist of Lāṃja origin and a pupil of Abū Imrān al-Fāsī of the Kairawān, that in 1059 Vāyah b. Ibrāhīm al-Gudālī recruited Abū Allāh b. Yūsuf al-Gudālī who was the promoter of the Almoravid movement. For the Almohad period, al-Tāffīlī's hagiographic collection, entitled Kitāb al-Tāffīlī, shows us the land of the Masmūdā of the south fall of wonder-working saints. Later the tribe of the Kārgā, settled on the lands now occupied by the Shaykūjīna, was the cradle of a movement at once religious and warlike, the details of which are little known but the memory still alive. In the first half of the xvth century, religious activity seems to have been concentrated in the south of Sūs, in Tāsārwālā where the descendants of the saint Saiyūhī Aḥmad U-Mānā considered themselves out an independent maraboutic principality.

Al-Masmūdā, a Zoroastrian dynasty whom the Arabs found in the region of Dunbāwand (Dāmūsī) to the north of Rayy.

The origins of the Masmūdā. The dynasty seems to have been an old though not particularly celebrated one as is shown by the legends recorded by Ibn al-Fakhrī, p. 275—277, and in al-Burānī, p. 227. The title of masmūdā is said to have been conferred by Fārsīn upon Arūmāl, Bārūmāl's former cook (Zobāhā), who had been able to save half the young men destined to perish as food for the tyrant's serpents. Arūmāl (according to Yābzī, ii. 606, a Nabatānī, a native of the Zab) showed to Fārsīn in the mountains of Dālīm and Shīrīsī, a whole nation of these refugees, which caused Fārsīn to exclaim was mānī kādir bihi, hadd hadrī, which is explained to mean: 'What a large number of people of the house (ahl bā'ině) thus hast saved!'

The first historical reference to a masmūdā is found in Tabārī's (i. 2656) account of the taking of Rayy by Nurāin b. Mūhammad in the time of the caliph 'Omar according to Ibn al-Asbīh in the years 15, 21 or 22; Marqārī however puts these events as late as 98 (716—717). The King of Rayy, Sūyāwsh b. Mūhammad b. Bahrām-Cōbit, had received reinforcements from the people of Dunbāwand, but when he was defeated, the masmūdā of Dunbāwand made peace at once with the Arabāwīs and received honorable terms (alā ghārī ṭarīqī wa lū maṣūrlīn) promising an annual payment of 300,000 dinārīs. The charter given by Nurāin was addressed "to the masmūdā of Dunbāwand, Mūhammad, to the people of Dunbāwand, of Fārūs, of Lārīs (Lārīrāt) and of Shīrīsī." This gives us an idea of the extent of the sway of the country round Mount Dunbāwand, [p. v] and stretched down the plains as far as the forests of Rayy. The district of Dunbāwand [Dubāwand, (the land occupied by) the Dubāwand ēsan] did not form part of Tabaristan. The Arabs mention it along with Rayy (Tabārī, i. 2653—2656; Muḥaddīd, p. 209; Ibn al-Fakhrī, p. 275—277); but as we have seen at the time of the conquest, Rayy and Dunbāwand were under different dynasties. The old capital of Dunbāwand may have been at Mūhammad where, according to Ibn al-Fakhrī, Arūmāl had built a wonderful house of teak and ebony, which in the reign of Hārūn al-Rashīd was taken to pieces and transported to Bagdad. In the Arab period there were two towns in Dunbāwand: Wūnīs and Shālahūn (the latter is marked on Stahl's map to the south of the modern town of Dāmūsī which lies on the slopes of Mount Dāmūsī). According to Yābzī, the masmūdā's principal stronghold was called Ummārī or Dādbhūd. This should be sought above the village of Shīrīsī, which must correspond to the old Kārīyat al-Haddān. Ibn al-Fakhrī's story of the shops (hāmilānī) in which worked the smiths, the noise of whose hammers exercised the enchanted Bitwārāsp must refer to the chambers carved out of the rock near Reiz; cf. Crawshay-Williams, Rock-Dwellings at Reizāb, J.R.A.S., 1904, p. 551; 1906, p. 217.

An attempt made by Abū Muslim in 134 to conquer the masmūdā was a disastrous failure: his general Mīhā b. Kā'ī was attacked by the masmūdā's men and on account of the difficult nature of the country (al-i'fā ẖilaẖ) was forced to return to Rayy (Ibn al-Asbīh, v. 304; cf. Hāfiz Abūl in Durr, Aṣāṣī, p. 441).

The principality was not conquered until 141. In this period there were few dissensions in the family of the masmūdā. Abarwāl b. al-Masmūdā, quarreled with his brother and went over to the caliph al-Masīr who gave him a pension (Tabārī, iii. 130). The Kitāb al-Ṣīnān wa l-Ḫaḍrāt, p. 228, testifies to his bravery in the rising of the Rūwandīya and calls him "al-Masmūdā Mīlāk b. Dinārī, malik of Dunbāwand." This Abarwāl (or Malik) had enjoyed considerable influence, for, according to Ibn al-Fakhrī, the appointment of 'Omar b. 'All as commander of the army sent against Tabaristan was made on the advice of Abarwāl who had known him since the trouble with Sunbāth (on the partisans of this "Khurramī") in Tabaristan cf. Māsā'il, Musāfīrī, v. 188) and with the Rūwandīya.

In the year 141, the brother of Abarwāl who occupied the throne of Dunbāwand was at war with his father-in-law, the ispahānī Khwālid of Tabaristan; but when he heard that the forces sent by al-Masīr were on their way to Tabaristan, he hastened to effect a reconciliation with his adversary (Tabārī, iii. 136; Ibn al-Asbīh, v. 356).
The stories of the campaign against Tabaristan directed by al-Mahdi by order of his father al-Manṣūr are very contradictory as is shown by their very detailed analysis in Vasmer, op. cit. After the defeat of the ispahbad, the Arab forces conquered the maṣmughān and captured him and his daughters Bakhtariya (?), and Śīyār (or Śāhki). Of these princesses one became the wife of Mahdi b. Manṣūr and the other the amun-wulad of 'All b. Raita. According to a story in Ibn al-Fakhrī, p. 514, Khālid b. Barmak (Vasmer, op. cit., p. 106, thinks that his expedition was sent especially against the lord of Drewbānd) sent the maṣmughān and his wife and his two daughters to Baghdad, but in another passage, p. 275, the same writer says that the maṣmughān obtained ṣawān from Mahdi b. Manṣūr and came down from the mountain of al-Airān (?). He was taken to Rayy and there Mahdi ordered him to be beheaded.

After the death of the maṣmughān, the people of these mountain regions lapsed into barbarism (kuwviya) and became like wild beasts (Tabari, ii., 136). According to Ibn al-Fakhrī (p. 276) however, the descendents of the maṣmughān (= Armālī) were still well known.

Spiegel's and Maqrqi's Hypotheses. Yāhīyā b. 344 interprets maṣmughān as kahir al-magāfī (= the great one of the magi') (see, "great", N.W. Iranian form). Spiegel thought of connecting this dynasty with the prince-princes of Rayy, whose existence is known from a well-known passage in the Avesta (Yasn. i., 18, transl. Darmesteter, i., 170; cf. Jackson, Vorstetter, p. 202-205). In spite of Marquart's criticisms, who says it is impossible to quote the authority of Avestan traditions which relate to much earlier state of affairs, Spiegel's suggestion is still of interest. We have certainly to deal with vague memories and not with actual facts. In the time of the Arab conquest the descendents of Bahram-Cobin were ruling in Rayy, but the Arabs (Tabari, i., 2653-2655) installed there a certain al-Zainabī, son of Kūfa and father of al-Farrukhān. It remains to be seen if this family of Zainabī, "whom the Arabs call al-Zainabī" (Bāhrāmī, p. 347) is connected with Drewbānd. Their stronghold in Rayy was called Armālī (against J. D. Pretzen, in the article above) and resembles the name of the mountain al-Airān from which the last maṣmughān came down (cf. the note by de Goeje in Ibn al-Fakhrī, p. 275). Marquart wanted to connect the maṣmughān of the Bawand dynasty, the eponymous ancestor of whom Baw, a descendant of Kāša, brother of Khusraw I., is said to have lived in the time of the later Sāsānians. This Baw was a man of piety and after the fall of Yavagird III had retired to his father's fire-temple. Marquart regards him as a "magus" and identifies him with the father of the Christian martyr Anastasius, who bore this name (Baw') and was a "master of magian lore". Lastly, he quotes the fact that the Bawandīs appeared in 167 only after the disappearance of the maṣmughān (after 141) as if to confirm their line. Unfortunately several details of the ingenious argument are not accurate: our sources (Ibn Isfandiyār, Zahir al-Din, p. 9; 204, 205) give not the slightest suggestion that Baw belonged to the priestly caste. According to Ibn Isfandiyār (transl. Browne, p. 98), his grandfather's temple was at Kūšān, which Rabino, p. 160, locates a little distance west of Ashraf i.e. quite remote from Drewbānd. The passage in Tabari, iii., 1294, which Marquart quotes to prove the occurrence of the name maṣmughān among the Bawandīs refers to the cousin of Māziyar of the Kairinī dynasty, which is quite different from the Bawandīs (cf. below).

The Kairinī maṣmughān. It is curious that neither Ibn Isfandiyār nor Zahir al-Din speak of the dynasty of the maṣmughān of Drewbānd, perhaps because they do not include this region in Tabaristan proper. On the other hand, they mention a maṣmughān (maṣmughān > miyān-rudd) by name al-Walsh, who was the marzūrin of Miyan-rudd (Zahir al-Din, p. 42), says that this canton was near the Sārī between the rivers Kāhilād and Mīhrānī and that on the east it adjoined Karasvand; Miyan-rudd is thus quite close to where Rabino puts Kūšān). This maṣmughān Walsh (Ibn Isfandiyār, p. 101; Zahir al-Din, p. 42) lived in the time of Djamaspid Farahkhan the Great (709-727) and belonged to the elder branch of the Kairinīs descended from Zarmrī b. Suhāk. (We do not know why Justi, p. 430, takes this Walsh to be the son of the last maṣmughān of Drewbānd). The Kairinī Walid Hurmund (of the younger line, descended from Kūra, brother of Zarmrī) in his rising against the caliph (cf. Mahdi, p. 158-169) had combined with the ispahbad Sharwin (772-797) and the maṣmughān Walsh of Miyan-rudd. This latter (Ibn Isfandiyār, p. 126; Zahir al-Din, p. 145) seems to have been one of the successors of the maṣmughān Walsh mentioned above.

Under 224 (838) Tabari (iii., 1294) mentions a cousin of the Kairinī Mażiyār, who was called Shāhīrūyār b. al-Maṣmughān. According to this, this al-Maṣmughān would be identical with Walid Ummid, uncle of Mażiyār (cf. Justi, p. 430). On the other hand under the year 250 (864), Tabari, iii., 1329, mentions a Maṣmughān (šah) among the allies of the Alī b. Ḥasan b. Zaid. Ibn Isfandiyār, p. 165 calls him Maṣmughān b. Walid-Ummid. One must either suppose there is an error in Tabari's genealogy or admit that the title of maṣmughān was borne both by Walid-Ummid and his son, but the form of the designation of the latter (al-maṣmughān) would rather show that the title had become a simple proper name (Browne is wrong in translating "the Maṣmughān").

To sum up then: Alongside of the maṣmughān of Drewbānd, we have the maṣmughān of Miyan-rudd. These maṣmughān, if we may rely on Zahir al-Din, belonged to the Zarmbīrī branch of the dynasty of Sāhīr (Sāsānian governor of Tabaristan descended from Kūra, son of the famous smith Kaω). Later we find the title (or proper name?) of maṣmughān recurring in the younger branch of the line of Sāhīr (the Kairinī branch), which occupied a position in Tabaristan subordinate to the Bawandī ispahbad (Zahir al-Din, p. 154, 14); Bibliography: Tabari, i., 2656; iii., 130, 136 (1294, 1529); Būrīni, al-Asghar al-Fārābī, p. 101 (transl. p. 209), p. 227 (transl. p. 213); Kīšāb al-Dīmān wa-l-Firdawši, ed. de Goeje and de Jong, p. 228; Ibn al-Arabi, v., 304, 386-387; Ibn Isfandiyār, index: Yāštī, p. 6, 243-244 (Ustednawān); ii., 606-610 (Drewbānd); Zahir al-Din, index; Spiegel, Erum. MASSA (Berber Mass). the name of a small Berber tribe of Morocco of Sūs, settled some 30 miles south of Agadir at the mouth of the Wūdī Māsā; the latter is probably the flumen masatūt mentioned by Pline the Elder (v. 9) to the north of the flumen Dārat, the modern Wūdī Dār'a, and the Māsātī of the geographer would correspond to the modern al-Māsā.

The name Māsā is associated with the first Arab conquest of Morocco: according to legend, it was on the shore there that, after conquering Sīs, 'Ugīb b. Nāfī' drove his steed into the waves of the Atlantic calling God to witness that there were no more lands to conquer on the west. In any case, Māsā appears very early as an important religious and commercial centre. Al-Ya'qūbī (emil of the third (= ninth century) notes that the harbour was a busy one and mentions a riḍāf already renowned, that of Bahūli. Al-Bakrī and al-Idrīsī mention the harbour of Māsāt; al-Bakrī emphasises the fame of the riḍāf and the importance of the fairs held there. Ibn Khaldūn devotes several passages in his Kitāb al-Ibar to the riḍāf of Māsā, where according to popular belief the expected Mahdi or Fāṭīmīd was to appear; this belief induced many devout people to go and settle in this riḍāf and also sent many adventurers there to raise rebellions.

Towards the end of the xvi century, the religious movement begun by a-Baddālī made Māsā one of the great centres of Sūs. In the middle of the xvi century Leo Africanus describes Māsā as a group of three little towns surrounded by a stone wall in the middle of a forest of palm-trees; the inhabitants were agriculturists and turned the rising of the waters of the Wūdī to their advantage. Outside the town on the seashore was a very venerable "temple", from which the Mahdi was to come; a peculiar feature of it was that the little bays in it were formed of ribs of whale-bone: the sea actually throws up many cetaceans on this coast and ambergris was collected here; local legend moreover says that it was on the shore of Māsā that Jumah was cast up by the whale.

After the fall of the Sa'dīans, the development of the Marabout principality of Tāṣārwālt again made Māsā a commercial centre. This port was frequented by Europeans but it was soon supplanted by that of Agadir. The rapid decline of the principality of Tāṣārwālt and the steadily increasing influence of the central Moroccan power finally destroyed almost completely any religious and economic importance of Māsā.

MASŪD Aḥmad Salīḥ, the eldest son of Sūlṭān Māhīmūd of Ghasna, was born in the year 388 (998). In 406 (1015—1016), Sūlṭān Māhīmūd nominated him his heir-apparent, and two years later made him governor of Herīt. In 411 (1020), at the command of his father, he led an expedition to Ḥūrūd and reduced the northwestern part to submission. Shortly after this, he was disgraced and sent as a prisoner to Mūltān, but he was soon taken back into favour and was reinstated in his government at Herīt. When the province of Ṣafī following was conquered in 420 (1030), Sūlṭān Māhīmūd placed it under Masūd who, after subjugating the outlying parts, conquered Ḥamḥātān and Iṣfahān from their Buwahid rulers, Aḥāl al-Dawla b. Kākawsh, in the beginning of 421 (1030), and was making preparations for further conquest when news arrived of the death of his father and the succession to the throne of his brother Aḥāmīd Mūḥammad. Masūd hurried to Ghasna to claim the throne. In the meantime, the army tired of Mūḥammad, deposed him, and had the khwāja said in the name of Masūd. Mūḥammad was blinded and sent to the fort of Mānīdī, and Masūd ascended the throne in Șawārūlī, 421 (October 1030), about 5 months after the death of his father. The Caliph al-Kādir b. līlīḥ conferred on him the titles of Nejr Dini līlīḥ, Ḥūf b. Ḥūf līlīḥ and Zabrī Khaṭīfī līlīḥ.

In 422 (1031), Sūlṭān Masūd sent an army to punish Isā, the ruler of Mūrīn, for his rebellion. Isā was defeated and put to death, and his brother named Aḥād Mu'āsakar was placed on the throne. In 424 (1032—1033), Masūd laid siege to a fort named Sarasti in the southern Kāšmīr hills, took it by assault and returned to Ghasna in the spring. After this he attacked Tābaristān, as the ruler of that country, named Aḥād Kānlīdār, had adopted a hostile attitude, and captured Aṣṭarābkāh. Aḥād Kānlīdār was forced to offer submission and to promise to pay an annual tribute. About the end of 426 (October 1035), Ahmad b. Nīyūtīlm, the governor of Lahore, rebelled. Masūd sent against him one of his Hindī generals who was defeated and slain in battle. He then sent another Hindī general named Tilāk, who defeated Ahmad and forced him to fly to Sīnī where he was drowned while attempting to cross the river Indus. About the end of 427 (October 1036), Masūd led an expedition to India, took the forts of Ḥāmīt and Soufāt and returned to Ghasna, leaving his son Masjūd as the governor of the Punjab. In 430 (1038—1039), Masūd crossed the Oxus to punish Pūrīmā, son of Aḥālīnī, ruler of Bakhhāra, for his hostility, but before he could accomplish anything he received news that the Sālṣūkīs were advancing to Bakhth to cut off his retreat, and he immediately returned to Khurāsān.

Early in his reign, Sūlṭān Masūd had been called upon to deal with the Sālṣūkīs whose power had considerably increased during the period of their disappearance following the death of Sūlṭān Māhīmūd. They raided Herīt as early as 422 (1031) but were repulsed with heavy loss at Fārāwīkh and forced to take refuge in the Bakhthān Mountains. This however did not stop their activities, and by 425 (1033—1034) they had started to make systematic incursions into Khurāsān. In Șawārūlī 426 (June, 1035) Masūd sent against them two of his generals, the Ḥājīb Baktīrī b. b. Mūhīlī, who inflicted a crushing defeat on them, but while the Ghaznavids were engaged in plundering the camp of their vanquished foes, a body of the Sālṣūkīs under Ǧawābī issued from the hills, fell upon their disorderly ranks, and made fearful slaughter among them. Ḥusain ʿAll was taken prisoner, and
Bakhtugdī managed to escape. Instead of marching against the Saljiqūs, Mas'ūd wasted his time in a fruitless expedition to India in 427, as stated above, and the result was that they became bolder and more powerful. In 428 (1036–1037), they captured Balkh, but retired to Marw at the approach of Sultan Mas'ūd, and sued for peace. Mas'ūd gladly consented to it, but it was only a sham peace and when Mas'ūd started on his return march to Ghazna, the Saljiqūs fell upon his rear and put many of his soldiers to death. Mas'ūd turned round and took terrible revenge for this treachery. The Saljiqūs redoubled their efforts against the Sultan, and won over the people of Saraqib, Naṣā and Kāšāw to their side. Mas'ūd now personally took the field against them. The Saljiqūs advanced to meet him under their leader Tughrīl. The two armies met at Dandākan on 8th Ramaḍān, 431 (May 25, 1040). Mas'ūd fought bravely but being deserted by his generals and finding himself surrounded on all sides by the enemy, he fought his way out of the field of battle and managed to reach Ghazna in safety.

The Saljiqūs had evidently become too strong for him, and he resolved to withdraw to India, possibly with a view to gaining a respite and preparing a large army there to retrieve his affairs. He left Ghazna with all his treasure and companions. His captive brother Abbās Ahmad Muḥammad, son of Ruhjī, Mārkakah, shortly after crossing the river Indus, was held by the slave leaving against him, plundered his treasure, and, being joined by the rest of the army, they seized Mas'ūd and proclaimed the blind Muḥammad as their sovereign. Mas'ūd was sent as a prisoner to a fort where he was put to death on 12th Dhu-al-Miḍād 432 (January 17, 1041). His reign had lasted 10 years and three months.

Mas'ūd was a man of strong build and great physical strength. He was brave and generous, but he lacked the wisdom of his father, and early in his reign, he lost the co-operation of his officers by foolishly attempting to bring about the ruin of the old servants of the House on the advice of his young and ambitious curators, and demanding the return of the money which Muḥammad had distributed at the time of his accession to the throne. Mas'ūd was a great lover of learning, and numerous scholars had assembled at his court, one of whom was the famous Abbās Rājaqī al-Birūnī who dedicated some of his greatest works to him. Several poets sang his praises and were given munificent rewards. He adorned his capital with beautiful buildings, and the New Palace with its magnificent throne was one of the wonders of the times.

Mas'ūd and Nūr al-Dīn, M. Yazdī, Tazkīrāt al-Dīn, a Saljūqī historian in the 15th cen (429–547 = 1134–1152). Like Muḥammad's other sons, Mas'ūd, when quite a child, was entrusted to an atābeg to be educated, namely the celebrated emir Mawḍūd and when the latter was murdered, Aḥ Solṭān and Aḥāa Dīwānī Beg acted successively as Mas'ūd's tutors. The latter, an ambitious emir, in the beginning of Muhaddīdīn's reign tried to secure the sultanate for his protege, then an eleven-year-old boy, but the attempt failed; in an encounter with Muhaddīdīn's troops he was put in flight and Mas'ūd as well as his warf, the famous Arab poet Tughrī (q. v.), were taken prisoners (414 = 1110). On the fate of the prince see the article on him. Mas'ūd was pardoned and later given Gandī by his brother (4150). After Muhaddīdīn's death (455 = 1151), his son Dāwūd was at first recognized as sultan but Sanjar decided that Mas'ūd's brother Tughrī should be sultan. Mas'ūd soon made peace with Dāwūd, after some fighting near Tahirī, and sought to obtain from the caliph al-Mustārṣūdī that the latter should mention him in the khutba in

THE ENCYCLOPAEDIA OF ISLAM, III.
Baghdad: The caliph, who had been approached with the same object by another brother of Mas'ud's name, made himself and his staff beg Kāṣṭānī, who found himself forced to accede to their request, by having Mas'ud's name mentioned first, followed by that of Sadiq. He also collected his forces to go in alliance with them against Sandjar; but when he arrived in Kharāja, he withdrew so that Mas'ud and Sadiq had to continue the struggle against their uncle alone and they were routed by him near a hill called Pāndj Anghaht in the neighbourhood of Dīnawar (1132). Sandjar however allowed Mas'ud to return unhindered to Gandja and at the end of the same year Mas'ud found an opportunity to go to Baghdad where Dāwūd also now was. Both princes were received by the caliph in public audience and given robes of honour and other tokens of esteem. Homage was paid to Mas'ud as sułtan and to Dāwūd as heir-apparent. Thereafter he fought with varying fortune against his brother Tughril and after the latter's death in 1134 (529 = 1134) was generally recognised as the legitimate successor. Meanwhile the caliph's vizier, now was given the office of vizier to the sułtan. Soon afterwards however, a number of Turkic emirs became dissatisfied with Mas'ud because they had felt themselves insulted by the advancement of Kāna Sandjar, the powerful emir of Aḫmarbadjūn, and were able to win the caliph over to their party. In the hope that Dāwūd would join him, he went with some 7,000 horsemen towards Hamadhan, where Mas'ud then was, but when the sułtan's troops met him at Dāmarg, his own men left him in the lurch or even went over to Mas'ud so that he and his vizier and other high officials were taken prisoners (529 = 1134). The sułtan, it is true, treated him with deference, and began to 'dispute terms of peace, but he did not release him. He took him with him to Marāq, where in the same year (cf. the various dates given: Weiss, Gesch. der Chalifen, iii. 234, note 4) he was murdered by a number of 'Adān. The murderers were apparently hired by the sułtan, on the advice of Sandjar, who had been stirred up against the Caliph by Dubān (q.v.). The latter, who was also with Mas'ud, was soon afterwards treacherously slain by him. These deeds of violence naturally made a very bad impression. Dāwūd and Sadiq began again to beset themselves; the new caliph al-Kāshīd Ḥīlāṭ, a son of al-Mustahsid, adopted a hostile attitude and other Turkic emirs, notablyZAṬG, the lord of al-Mawjūl, began to be insubordinate; in a word, anarchy soon prevailed everywhere. But when Mas'ud returned to Baghdad with his prisoners, as they all returned. Mas'ud thereupon had the caliph, who had escaped with Zangī to al-Mawjūl, deposed by a faṣūd of the kāšīd and jurists and approved the appointment of al-Muqtaṣir (530 = 1136). After peace had been to some extent restored, Mas'ud thought he might now devote himself to his pleasures and remained the whole year of 1137 in Baghdad in comparative inactivity, without allowing his leisure to be disturbed by a demonstration by the mob of the capital, which was intended to remind him that it was his duty to wage war upon the unbelievers. Once again several Turkic emirs rebelled and tried to bring Dāwūd to the front again; amongst them the most dangerous were 'Abd al-Raḥmān b. Tughanberek, lord of Khalkhāt, and particularly the prince Mungubār, whom Sandjar after Kāṣṭānī's death had sent to Fārs and who was vigorously supported by his deputy in Khuzistān, Buzāba. Mas'ud, it is true, sent troops against them under Kāna Sandjar but they had to retire, and a battle was only fought when Mas'ud himself came up, at Kurzhāna near Hamadhan (532 = 1138). The sułtan was at first victorious and put Mungubār, whom he had captured, to death; but when his troops were scattered plundering the enemy's camp, Buzāba fell suddenly upon them so that he and Kāna Sandjar had narrow escapes and some twelve of the emirs with him were captured and all put to death by Buzāba. Fortunately for Mas'ud, Buzāba did not pursue them, but was content with occupying Fārs; the sułtan was also able to make peace with Dāwūd, and the deposed caliph was murdered in Esfāhan on Ramaḍān 25, 532 (June 6, 1138). The sułtan's position however was not one whit better, for the different provinces of the empire were in the hands of powerful emirs, who not only paid no heed to the sułtan, but occasionally appeared in open rebellion against him in the name of various Sadiq princes whose abbeys they were. The most powerful of these was still Kāna Sandjar, who began a war on Buzāba to avenge his son, who had been murdered by the latter. When he approached, however, Buzāba withdrew into an inaccessible citadel and when Kāna Sandjar retired, he took prisoner the prince Sadiq, whom he had appointed to rule over Fārs and then continued to rule in Fārs as abbeq of two sons of Māḥmuḍ, Malikkāh and Muhammad. After the death of Kāna Sandjar, who died in 535 of a broken heart after the great losses he suffered in the terrible earthquake in Gandja in 535 (1138), Cawīt al-Dīnjādī took his place and like his predecessor was generally attached to Mas'ud. Buzāba's attempt along with another emir named 'Abbās (q.v.), who had gained an influential position in al-Raŷ, to put the sułtan's youngest brother Salāmān on the throne therefore failed. Mas'ud invited the prince to come to him and when he came he was imprisoned in spite of the sułtan's promise. Cawīt died in 541 (1146) in the same year as Zangī and in the following year 'Abd al-Raḥmān and 'Abbās were disposed of by assassination so that Buzāba alone remained of the enemies of Mas'ud. Buzāba now set out for Hamadhan to attack the sułtan, but not far from this city was taken prisoner in a fierce battle and executed (542 = 1147). The princes Muhammad and Malikkāh who were with him escaped. Mas'ud afterwards sent for the latter, gave him his daughter in marriage and designated him his successor. In these negotiations the sułtan followed the advice of his favourite beg Aṛān b. Balkarānī, best known by the title Khāṣēb, who in this way disposed of all his rivals, but at the same time aroused great discontent so that even the aged Sandjar came once more to al-Raŷ to remonstrate with his nephew (544 = 1149). But all this was in vain; and when in 547 (1152) Mas'ud died, Khāṣēb took Malikkāh upon the throne; when in a short time the latter showed himself quite incapable, he was sent for Muhammad, who had Khāṣēb treacherously murdered.

Bibliography: in the article sandjar, Ibn Khallikān's article on Mas'ud (Būkāl edition 1299, ii. 531) is of no importance.

(M. Th. Houtsema)

Mas'ud, R. Sa'd, Salīm, a poet in Arabic and Persian, was born in Lahore. His father
remained for a considerable time in the service of the kings of Kharb and had become the possessor of great wealth and lands in Lâhore and other parts of India. After his father’s death these lands were confiscated by the Governor of Lâhore and Masûd was compelled to proceed to Kharb to demand justice; but there also his enemies were able to put him to more troubles and bring against him a false accusation, which caused him to be imprisoned. He at last through the recommendation of Masûd b. Sulûn Ibrîshîm was permitted to return to India and take possession of his estate. When Saîf al-Dîn Maḥmûd b. Sulûn Ibrîshîm came in India as viceroy, Masûd attached himself to this prince as courtier and panegyrist and became one of the special favourites of his court. But again, a false charge being brought against him, he once more fell upon evil days and loss of fortune. It was maliciously reported in 492 (1098) to Sulûn Ibrîshîm b. Maḥmûd that his son Saîf al-Dîn Maḥmûd intended to go to ‘Irâq to Malikshâh. This report so much aroused the indignation of the Sulûn that he ordered his son with all his courtiers to be arrested and put to prison. Our poet for the next three years remained a prisoner. But on the intercession of Abu Tâ’âsîn Khâûs, the Sulûn pardoned him and released him from prison. He returned to India and was again placed in possession of his father’s lands and dignity.

He died in 515 (1121). He is the author of two diwâns, one in Arabic and the other in Persian.

**Bibliography:**

**Masûd**, Abu l-Ḥasan ‘Ali b. al-Ḥusâin, Arab historian and geographer and one of the most versatile authors of the fourth century A.H.

Information about his life can only be gleaned from occasional references in his works; as his activity lay outside the lines of the regular schools of learning, he gets little mention from their representatives. The author of the Fihrist regards him as a Mağribî. According to his own statement, however, he was born in Bâghdâd and descended from an Arab family which could trace its ancestry to a Companion of the Prophet. While still quite young he travelled through Persia where he spent part of 305 (915) in Iṣfâkh. Next year he went to India and visited Mâlân and al-Muṣûrûn. He went by Kâhâbâ and Şâmîr as far as Ceylon, joined some merchants on a voyage to the China Sea and back to Zanâhir from which he returned to Oûmân. We again find him travelling along the southern shore of the Caspian Sea and in 314 (926) at Tibrius in Palestine. In 332 (943) he visited Antioch and the Syrian frontier towns and after a brief visit to his native province of Başrâ, he was staying in Damascus in 334 (945). Afterwards he seems to have lived sometimes in Syria and sometimes in Egypt. He was in al-Fustâ Ghana, and 344 (955) and he died there in Djumâdâ II 345 (956) or 346.

His restless life is reflected in his literary activity. His travels were certainly stimulated not by thirst for adventure but by a strong desire for knowledge. But this was superficial and not deep. He never went into original sources, as did al-Birûnî later, but contented himself with superficial enquiries and accepted tales and legends without criticism. Nevertheless we owe him a good deal of valuable information about the lands on the periphery of Islam. His method of presenting his material has the same faults as his scholarship. He is never able to finish a subject he has begun but continually diverges from his theme. His literary activity, in addition to philology and theology in the narrower sense, touched on almost all the fields of interest of his time, particularly natural philosophy, ethics and politics as well as heresiography. His works, a list of which is given by de Goeje in the preface to the Kitiât al-Tamhîd, p. vi., are for the most part lost because they were not of general interest. Positivity was only interested in him as a historian. In the year 332 (943) he began his great history of the world, Kitiât Aḥhâr al-Zâmûn wa-mân al-akhâla ‘alâ l-Mûthamnîn min al-Osma wa-l-Abdhâra wa-l-Adârîr wa-l-‘Amadî, which is said to have filled 30 volumes. Bâchehkarî’s statement (Travels in Persia, 53) that twenty volumes of it are preserved in the Aya Sofâ in Constantinople has unfortunately not been confirmed. Only a single volume, the first of the work, which A. v. Kremer obtained in Aleppo, is preserved in Vienna (see A. v. Kremer, S. B. W. A., 1850, p. 207–211; Flügel, Die arabischen und türk. His. der K. K. Hofbibliothek, ii., p. 1262; another MS. of the same part is in Berlin, see A. d’Herwath, p. 9426). The work begins with the creation and after a brief geographical survey discusses the non-Muslim peoples and goes fully into the legendary history of Egypt. He reproduced extracts from this in the Kitiât al-amâsât of which one volume perhaps survives in Oxford (see Ural, Catalogus cod. MSS. or., l. 666). The substance of these two works he gave in a briefer form in the Mardin ‘al-Dîshâs wa-Maḏâhîl al-Qâdîs, which was finished in the Djumâdâ II, 336 (Nov.–Dec. 947) but revised in 956. In addition to the manuscripts used for the Paris edition, a number of others are in existence, e.g. in the Ambrosiana (R.S.O., iv. 97), in the Bibliothèque Nationale (269) and Mosul (Dâwûd, Maǧhâfîr al-Mawṣûlî, p. 123, 122, p. 123, 122, p. 123, 122). Printed as Maqouîl, Les prairies d’or (the more correct translation would be “Gold-washings”), see Gildemeister, W.Z.K.M., v. 202, Textes et Traductions par C. Barbier de Meynard and Pavot de Courtellie, 9 vols., Paris 1861–1877, Bâle, 1283, Cairo 1315, on the margin of Ibn al-Aṣîr, Bâle, 1305, of Maqouîl’s, Nosîb al-Tâbî, vol. 1–3, Cairo 1302. A synopsis of the Murûtîl ‘al-Dîshâs down to the fall of the Omâiyads was made by Ibrâhîm al-Ashûbî in 1118 (1706) (MS. Vienna, Flügel, p. 302). Another of which it has still to be ascertained whether the two works on which it was based were not also used in addition to the Murûtîl, with a continuation down to the year 638 (1238) was composed by Abu ‘Abd Allah Muhammad b. Abî l-Ṣâjîl of Târîn in Morocco under the title al-Qâmûs fi Maǧhâfar Aḥhâr al-Zâmûn (wrongly ascribed by de Sacy, N. E., ii., 1787 to Maqouîl; MS. Gyronas, 64, fol. 31–195; see Asin Palacios, Excavaciones, p. 374; other MSS. in Cairo and
Dammass: C. M. Kurl 'Atil, R. A. A. D., ill. 219, 224). An anonymous synopsis of his magnum opus with special reference to travelers' tales from the Indian Ocean with additions from the Kidath 'Adulth al-Hind of Ramhanmuti, as well as from the legends of Egypt, entitled Kidath Aghbar al-Zamami wa-'Adulth al-Buldan, or Muhammed al-'Adulth wa-l-Gharb is preserved in several MSS. in Paris (see Carra de Vaux, J.A., ser. 9, vol. vii., 133-144). Towards the end of his life, Mas'ud composed a survey of his whole literary activity and supplemented it wherever necessary from new sources in the Kidath al-Tamami wa-l-Jahrib (ed. de Goeje, in B.G.A., viii., Leyden 1894; additions to these in a Leipzig MS., Z.D.M.G., iv., 223-236; see Carra de Vaux, Mawdud, Le livre de l'aventure et de la revolution, French trans., Paris 1892),

(C. Brockelmann)

MAŠYÀD, a town in Northern Syria on the eastern side of the Djidhal al-Nusairiyeh. The pronunciation and orthography of the name varies between the forms Mas'ud, Mas'ad (in official documents and on the inscriptions mentioned below of the years 646 and 870 A.D.), Mas'ud, and Mas'ad (on the interchange of /a/ and /a/ see Kochchre, Z.D.M.G., lxxiv. 465; Praetorius, Z. D. M.G., lxxx. 201; Dussaud, Topographie de la Syrie, p. 142, note 4; 209; 395; note 3). The variants Mas'ud (Yakk, Al-Suhayl, ed. Wüstenfeld, iv. 556), Mas'ad (Khalil al-Zahir, Zuhd., Rassia., p. 49) and Mas'ud (al-Nahshadi, in v. Krasser, S.B. Ab. Wm., 1856, p. 331) are no doubt due to mistakes in copying (van Berchem, J.A., Ser. 9, ix. [1897], 437, note 2). At a later period, the pronunciation Mas'ad, Mas'ud became usual (al-Damaschki, ed. Mehren, p. 208; al-Khaljashch, 'Adulth al-'Abbas, Cairo, iv. 113; Ibn-al-Shihab, hadrill, p. 265; cf. Mas'ud on v. Oppenheim's map in Petermanns Mitteilungen, ivii. [1911], 71, Tab. 11). The name is perhaps a corruption of a Greek Mapesia (= Marwia) or Matwia, which presumably lay on the Marwian unitt, the boundary river of the Nasizi (ancestors of the Nasiria Plinis, Nat. Hist., v. 81) (E. Pauly-Wissowa-Kroll, Realenzyklopädie, xiv., Col. 1985 sqq., v. Marwia, No. 3).

A number of ancient pillars and capitals built into the gates of the fortress (some reproduced in G. L. Bell, Syria: The Desert and the Sown, p. 217-220) are its only remains of antiquity. An old Roman road (rastf) from Hamadi to the west passed the town (according to Miss Bell, loc. cit.).

Mas'ud is not mentioned in the early middle ages; the first mention of the fortress is probably in a Frankish account of the advance of the Crusaders in 1099: pentervimus gaudenter hospitali et quadam Arabam caritum (Aemontio gessa Frambavorum et allorum Hierosolymitarum, ed. Hagenmeyer, 1895, p. 418 with note 99; Dussaud, Histoire et religion des Nusairies, Paris 1900, p. 21, note 4). When in 903 (1109-1110), the Franks advanced on Raffia, 'Usamah set out to relieve it by the terms of the peace concluded between them, the Franks bound themselves to abandon all designs on Mas'ud and Hisn al-Akrad and in compensation these two places and Hisn Tafah were to pay them tribute (Siq, d. d.,Uusna, Marwia al-Zamami, in Rec. Hist. Orv. Crozz., iii., 537). Before 542 (1147) the fortress was in possession of a branch of the Mirdasis, who sold it to the Bani Munkadir. After the Nasiriid citadel of Radd and al-Kahf had fallen into the hands of the Ima'mils in 527 (1132-1133), the latter also seized the fortress of Mas'ud in 535 (1140-1141), by outwitting the commander Sani, a man in the service of the Bani Munkadir of Shizar, who was surprised and slain (Abu 'l-Fish', Muhacir al-'Adhhr al-Nasiri, in Rec. Hist. Orient. Crozz., i. 25; Ibn al-Allhr, Kam'il, ibid., i. 458; al-Nuwasir, Cod. Leyden 240, No. 220, in van Berchem, J.A., 1897, p. 464, note 1). Mas'ud now became the residence of the Syrian 'Master' of the sect (as we may call him, with van Berchem, to distinguish him from the Grand Master in Alami), known as Sahilah al-Djidhal after the Master (Muhammad) Abu Muhammad had dethroned him the members of the sect in the bills of Kudmats, about 537 (1102), K. a shid al-Djin Sinân [q. v.] appeared in Syria, as envoy from the Persian Grand Master, took over command of the aassasins [q. v.], and displayed his unusual organisability ability, by raising the sect to be a well equipped and dreadful force, the terror of the Crusaders. Saladin, who wanted to punish them for two attempts on his life, invaded the land of the Ima'mils in Maharra'm 572 (July-Aug. 1176), laid it waste and laid siege to Sinân in Kaft Mas'ud. Through the mediation of Saladin's uncle Shihâb al-Din al-Hâmini, lord of Hamad, Sinân however succeeded in obtaining Saladin's forgiveness; in the beginning of August, he went with his army to Hamad (Abu'l-Fish' and Ibn al-Allhr, in Rec. Hist. Orient. Crozz., i. 47, 626). Shortly before he raised the siege of Mas'ud (about the 1st Safar), he received from Ustâma b. Munkadir, who was in Damascus, a letter containing a posthumous prefix of his great patron (Dereonbourg, Vie d'Oppenhein, Paris 1893, p. 400 sqq.). Râjîd al-Din died in 588 (Sept. 1192). The Syrian Masters, as the official epithet al-Djidhal wa-l-Djin henceforth regularly borne by them shows, were raised by him to a position with power and privileges equal to those of sovereign rulers (van Berchem, op. cit., p. 470). While Sinân had completely emancipated himself from the autocracy of the headquarters of the sect in Alami, in 608 we find the old conditions completely restored (Abu Shâma, al-Dhahir al-Kamâl, in van Berchem, op. cit., p. 475 sqq., note 1). According to an inscription in the inner gate of the castle (Ball, J.A., 1897, p. 482 = van Berchem-v. Oppenhein, Brittexte z. Assyriol., vii/l, p. 17, No. 18.), this building was restored by the Syrian Master Kamâl al-Djn wa-l-Djin al-Hâsr b. Mas'ud under the auspices of the Grand Master of Alami "Ali" al-Ins Muhammad III (618-653). The reference is probably to the al-Kamâl, who according to al-Nasawi (Hist. du Sultan Djidal al-Djin: Mankhârî, ed. Houssas, p. 152) was for a period before 624, governor in Syria for the grand master of the Ima'mills. It is uncertain whether the commandant (muwa'lli)
Madjad al-Din, who received in 624 the ambassadors of Frederick II (Hamaši in Amari, Bibl. arabo-islamica, App. II, p. 30) was one of the Masters (van Berchem, A.A., 1897, p. 501, note 1). About 625/6 and still in 635, Sudjadj al-Din Muşafar b. al-Husain was Syrian Master (Nasawi, op. cit., p. 168, inscription of al-Kačh, ed. van Berchem, A.A., p. 488). A Persian from Alamaat, Tadj al-Din, was in 637 muqaddas of the Syrian Ismailis (Ibn Wāsīl, Geschichte der Ahl al-Baydah, Paris, MS, Ar. 1702, f. 333b in van Berchem, p. 466, note 2). As Tadj al-Din Abu'l-Futūḥ he appears in an inscription in Mayḥā of Dhu'l-Qāda 646 (Feb.-March 1249), according to which he had built the city wall of Mayşāf and its south gate. The commander of the fortress under him was 'Abd Allah b. Abī 'Ishaq b. Abu 'Ishaq (inscriptions A and B in van Berchem, A.A., 1897, p. 456 = van Berchem-v. Oppenheim, Beitr. s. Assyry., op. cit., No. 19). Probably it was Tadj al-Din to whom the Dominican monk Yvo the Breton, a member of an embassy sent by Louis IX to the "Old Man of the Mountain" in May 1250, sent a naive and fruitless appeal for his conversion to Tanniser, Hist. de St. Louis, ed. Wailly, p. 244 sqq.; van Berchem, A.A., 1897, p. 478-480). In the time of the Master Ridja al-Din Abu'l-Ma'shī in 1252 (1260) the Tatars seized and held the fortress for a time, but after the victory of the Egyptian Sultan Kūčuk at 'Ain Džālūt, they abandoned it. About two years later Baibars interfered to interfere in the affairs of the Ismailis and to demand tribute from them. He very soon deposed the Master Nadjam al-Din Ismail and appointed his son-in-law Sārim al-Din Muhārak in his place and took Mayşāf from him. When the latter returned there, Baibars had him seized and brought to Cairo, where he was thrown into prison. Nadjam al-Din was again recognized as Master for a brief period and then his son Shaass al-Din, before the Sultan definitely invested Mayşāf in his Kingdom in Rājdah 668 (1270) Abu 'I-Fidā, in Rev. hist. orient., siv. t. 153; Muṣafadād b. Abī 'I-Fadālī, Gesch. d. Mohammeds, ii. 188, ed.ablochet, in Patrul. Orient., siv. 445; van Berchem, A.A., 1897, p. 465, note 2). Mayşāf presumably at first belonged to the "royal province of fortunate conquests" the capital of which was Hijj al-Akrād, then to Tarābulus (after its capture in 688). It was later separated from this province and added to the nīṣāba of Dināshā to which it still belonged in the time of Khālaq al-Mustanṣērī (Sulţān 'Ibrāhīm, Cairo, iv. 113, 202, 235) about 814 (1412). Khaliṣ al-Zāhiri (Zahba't Kashi al-Mušālib, ed. Ravaisse, p. 49) includes Mayşāf with Hanī (about 850) Under Egyptian rule the position of the lands of the Ismailis with Mayşāf as capital was to some extent exceptional (Gaudrely-Demoutneys, La Syrie à l'Epoque des Mamelouks, Paris 1923, p. 182, No. 3). Abu 'I-Fidā (about 720 = 1320) described Mayşāf as an important town, with beautiful gardens through which streams flowed; it had a strong citadel and lay at the eastern base of the Djabal al-Lukkâm (more accurately Djabal al-Silkin) about a farasch north of Tarraín and a day's journey west of Hanī (not Hums, as Stravone, Palestine, p. 507 erroneously says; Abu 'I-Fidā, Geogr., ed. Reinaud, p. 229 sqq.). As a result of its high situation, it has a more temperate climate than the low ground on the Naḥr al-'Aṣī; the young ʿUṣnām in 516 (1122-1123) brought to Mayşāf the wife and children of the emir of Shīraza, his uncle Yaz din al-Din Abu l-'Aṣāhir Sulṭān, from the heat of Shīraza which was causing the emir anxiety about their health (Derenbourg, Vie d'Ousman, p. 43). The Banū Shīna'a passed through Mayşāf in 736 (1336) and al-Nāṣiri in 1105 (1692-1694). The latter mentions that the governor of the town then was a certain Sulaimān of the tribe of Tafākki. An inscription of Mayşāf of Ramadān 870 (April-May 1466) contains a decree about taxes of the Sulṭān al-Malik al-Zāhiri Khushṣāhād (van Berchem-v. Oppenheim, Beitr. s. Assyry., vii., p. 20, No. 23: No. 22 is perhaps of the same Malik al-Zāhiri). Of a later date are two inscriptions of an emir Mustafā b. ʿIbrahim, one of the year 1203 (1788-1789) relating to the building of a well (zūdī) (op. cit., p. 21, No. 24), the other (No. 25) of 1208 (1793-1794) to the building of the house of the Ismailis etc.

The Ismai'lis lived constantly in open or secret communion with the Nūsiris, although various tribes of the latter had offered their services to the Ismai'lis Masters, for example in early as 724 (1324) to Raqīd al-Din (Guyard, Un grand monument défendu de l'histoire arabe: Les Ascencignes au temps de Saladin, J.A., p. 1877, p. 165; Dussaud, Histoire et Religion des Nusiris, p. 80). A number of Nūsiris of the tribe of Rašān, whom the emir of Mayşāf had allowed to settle in the town under their Shāhīd Ṭaḥmān, in 1806 murdered the emir, his son and about 300 Ismai'lis and seized the town. The other inhabitants, who had sought refuge in flight, applied for protection to Yūsuf Pāshā, the governor of Damascus. He sent a punitive expedition of 4-5,000 men against the Nusiris; the Ismai'lis had to be surrendered by the Han Rašān after three months' stubborn resistance and the fugitive Ismai'lis returned to Mayşāf in 1810 (Dussaud, op. cit., p. 32; Burchhardt, Reisen in Syrien, p. 258). In 1812 Burchhardt estimated the population of Mayşāf at 250 Ismai'lis and 30 Christian families. The population since then seems to have diminished still further. Burchhardt and Lumans found many houses in the town and ruins and large gardens within its walls. According to Burchhardt, the land east of the town is a desert moor, while in the north at the foot of the hills the citadel stands on a high steep rock; on the west side is a valley, in which the inhabitants grow wheat and oats. The town, which lies on the slope of a hill is about half an hour's walk, in circumference. Three older gates have been incorporated in the present more modern walls. The mosque is in ruins. The citadel has an outer wall from which the inner defences are reached by a vaulted passage (G. L. Bell, Syria: The Desert and the Sea, p. 218). The old citadel is for the most part destroyed; only a few buildings have been roughly restored and in parts are still inhabited. BIBLIOGRAPHY: Yavana, Musas, ed. Defrémery-Sanguineti, i, 166; Khāliṣ al-Zāhiri, Zabtiṣ Kāṣf al-Maṣhīlib, ed. Ravaisse, p. 49; Ibn al-Shīnaʾ, al-Durr al-muntakhab fī Tutālīk Mamlukat Ḥalab, Baitur 1909, p. 265; Umar,
The Darāwīkh cut the head of Yoḥannes and sent it to the Mahdi as a sign of their victory.

The battle of Matamāh however had no greater value for the Mahdi's followers than a successful razzia: they retreated to the Sūdān after pillaging some neighbouring countries and did not occupy any territory of Ethiopia. On the contrary, Matamāh caused the end of the Northern Abyssinian dynasties; and the southern region— the Shāwa kingdom— became the political centre of the Empire, when in the same year, 1889 A.D., King Menfik proclaimed himself Emperor (Negusa Nagnit) as a descendant of the Salomonic dynasty.

The death of the Emperor Yoḥannes as a martyr during the battle against the Muslims, hereditary enemies of the Christian Abyssinians, has been celebrated in many songs and poems. The following is a very interesting example of the Abyssinian poetry in recent times:

"The Emperor Yoḥannes was a fool, and we all despise him!"

They said to him: "Reign in the middle of the country!"

He answered: "I will be the keeper of the frontier!"

The Emperor Yoḥannes was a liar!

He said: "I do not like drink!"

And we have seen him drinking a drink which causes the head to turn around!"

(The last verses allude to the head of the Emperor sent to the Mahdi by the Darāwīkh.

Enrico Cerulli.

Maṭğara, the name of a Berber tribe belonging to the great family of the Askari; they were related to the Zanjāt and the brethren of the Maṭğāta, Kūnum, Lamū, Sāditā, Māḍīfā, and Māḥīta etc., with whom they form the racial group of the Banū Fāṭim. Like the other tribes belonging to this group, the Maṭğara originally came from Tripolitania; the most eastern members of the Maṭğara, however, known to al-Bakri and Ibn Khaldūn were those who lived in the mountainous regions along the Mediterranean from Milīyāna and Tūn to the north of Ummāfa (port of Tāḥhit); those of the western part of this zone were allied with the Kūnūm; their mountain rose not far from Ḍadāmūn and the fortress of Tawnn was on their territory.

Three sections had reached the western Maghrib as early as the eighth century and they formed an important bloc. These were:

1. The Maṭğara of Fās and the connorl of TāṢa; al-Bakri observes that the source of the Wāḍī Fās was on their territory, in the region where Leo Africanus still mentions the Sab al-ḥamīt of the Maṭğara "fifteen miles west of Fās".

2. The Maṭğara of the Middle Atlas in the Jābl al-Maṭghāra which Ibn Khaldūn locates S.E. of Fās and which Leo Africanus says is five miles from TāṢa (to the south). The reference then is to the mountain region now occupied by the Al Wāṭrān; an important section of the latter, the Al Dīlīlīsān, represents the Banū Callīlīsān.
whom al-Bakri gives as a section of the Maghāra, settled near Tenes in Algeria. We still find among the Ait Wārīn several sections of the Imghān who represent the Maghīta, brethren of the old Maghāra.

In al-Bakri’s time (9th—10th century), these two sections of the Maghāra had as neighbours in the west, the Zawīla of Fāzā and of Tāfū. 3. The Maghāra, the bases of the Sahara, settled in the region of Siulīmba and in the town itself, in which they constitute the main element of the population, in the region of Fūtīg, in Tuwat, Tāmāṣūrt and as far away as Wāllān (Ghānem).

At the beginning of the Arab conquest, the Maghāra were represented by Ibn Khaldūn as settled and living in huts built of branches of trees (ṣaḥlīḥīḥ); those of the Sahara lived in fortified villages (fisāḥī) and devoted themselves to growing dates. In the time of Leo Africanus, the Maghāra of the Central Atlas occupied about fifty large villages.

Like other peoples belonging to the group of the Bantu, the Maghāra took an active part in the events at the beginning of the Arab conquest and weakened themselves considerably in the fighting. As soon as they had become conversant to Islam, a number of bodies of Maghāra went over to Spain and settled there. Later, like their brethren, the Matmāta, they adopted the principles of the Sufis — one of their chiefs, Maimur, provoked the famous schismatic risings of 740, which was the beginning of Morocco in the Baragwāta heresy. In a list of the tribes which adopted this heteretical teaching we find the Maṭmāta and Maghāra of the Central Atlas, as well as the Banū Abī Naṣr, the modern Ait Bil-Naṣr, the eastern section of the Ait Wārīn.

With the rise of Idris, the chief of the Maghāra, Bahālīl, declared himself at first a supporter of the caliph of Bagdad, Hārūn al-Rashīd, then rallied to the new dynasty. Later and down to the 11th century, the Maghāra of the Central Atlas do not seem to have played any part in politics; they retained their independence at least. From the 12th century, they seem to have been supplanted on their territory by invaders from the south. As to the Maghāra of the shore, settled in the region of Nalāg, their alliance with the Khānya gained them considerable political importance, when the latter became supporters of the Almoravids. It was at this period that they built the fortress of Tawwnt. They then rallied to the Almoravids but this brought upon them the wrath of the ruler of Tlemcen, the celebrated Vaqīmarūn, who finally crushed them.

Ibn Khaldūn uses the form Maṭḥāḥ instead of Maghāra; in Moroccan texts of late date we also find Madghara.

Bibliography: al-Bakri and al-Idrisī, indices; Ibn Khaldūn, Kitāb al-Ibar, transl. of Slane, i. 237—241; Leo Africanus, Description de l’Afrique, ed. Schefer, ii. 54 and 542; III. (O. S. Colle.) 71 and 225.

MATHAL (pl. atmathāl) is originally by etymology, like the Eth. mthāl, mshāl, Aram. malthā and Hebrew maṭṭhāl (see O. Eissfeldt, Der Maschāl im Alten Testament, Beilage zur Z.A.T. W., xxiv., Giessen 1913), similar to comparison; as popular sayings commonly appear in this form, the term was applied to them in general and thus obtained the general sense of proverb and popular saying. The fondness for similes and allusions, which is common to all primitive cultures, survived among the Semites and especially among the Arabs with great tenacity and therefore plays an important part, even in the higher forms of literature. The simplest form of metaphor is usually drawn parallel between man and beast. Of a sleepy man, one says nātāb bi-lahīr ankhā (or amkhā) “he spent the night like a hedgehog” (Abū Ḥülāl al-Askari, Masāma al-Anthāl, on the margin of Ma’dīn, Cairo 1310, l. 109, 15; Liām al-Arba‘, iv. 437) and with the downright beloved by the Arabs the good example and educative influence of a leader or father is described as bāla hāymān fa ṣāṭibā ṣawmātun or bāla fāṣīsh fa bāla sīwār (al-Ma’dīn, Maṣma al-Anthāl, Cairo 1310, l. 64, 65). The comparison to animals is also used to indicate veiled mockery of unpleasant social conditions as al-bālaḥa‘ fi‘ ardīn yasītārīn “here among us the sparrow plays the falcon” (al-Askari, l. 193, 80). Such proverbs are sometimes developed into regular tales (see Brockelmann, Fabri und Tiermärchen in der älteren arab. Literatur, Islamica, ii. 96—128). Among them they find much that is common to all nations, which it is hardly ever possible to trace back to a single source (cf. the discussion on the “goat and knife”); Z. D. M. G., xlvi. 237, 247; xlvi. 86 sqq.), unless the origin is as well known as that of the two bulls from the Kalīla wa-Dīnawar, which is given by al-Askari, l. 47, 22 sqq. and therefore ‘Ali cannot have applied it to his relationship to Othmān.

But the circumstances of everyday life also provide material for similes which usually take the form at ma‘n mīn, as in those which al-Askari and al-Ma’dīn quote at the end of each chapter of their collections of proverbs arranged in alphabetical order. Even quite banal happenings may pass into proverbs (fa‘ardār or abhāhab matba‘ or quvāfik bāl‘-i-emthāl, as so many Arabic stories end), like the story of Ka’il of whom we know no more than that his son once gave him a copper and never redeemed him (al-Mufaddal b. Salama, al-Fāghir, ed. Stoerzy, p. 24, No. 61), or the story of the poor woman selling butter of whom a rogue took advantage after inducing her to hold two skins of butter firmly together in her hands (al-Fāghir, p. 70, No. 147). But the memory of important historical events is also perpetuated in proverbial sayings, like that of the fratricidal war between the Bakr and Taghlib provoked by flauts (al-Fāghir, p. 76, No. 157); al-Mufaddal in his al-Fāghir, p. 217—231, and al-Ma’dīn, ii. 38—47, therefore give the most notable battles of the Arabs in their lists of proverbs and proverbial allusions. Many incidents of the Muslim period have attained equal renown, like Mu‘aṣṣīya’s explanation of why on hearing that al-Aṣhtar had been poisoned (see above, l. 504; al-Ma’dīn, i. 8, 8) or the memory of the fine voice of the two singers of the bon vivant Caliph Yazid b. ‘Abd al-Malik (al-Ma’dīn, l. 157, 8). It is however not always epoch-making events that are handed down to posterity in this way, like the stormy night in the time of the Caliph al-Muhdi, which provoked him and his retinue to do such pence (al-Ma’dīn, l. 176, 8); or in the story of the defeat and fall of the Khāliṣ, apparently that chief of the Khattāl, whom Asad b. ‘Abd Allāh conquered in the year 119 (737), which, according to Tahārī, ii. 1676, made a great sensation at the court of Hijāj, while Mufaddal in al-Fāghir, p. 80, 16 sqq., refers it to the fighting
against the Khāzān, but the historians record no event of the kind among them; or the story of Maʿāwiya's ambassador to the Emperor of Byzantium (Ibn Kūtabis, 'Iṣāma, p. 235, and the proverb; 'Askari, i. 76, 19 sqq.; Maidānī, ii. 75, 1). Such historical memories are frequently preserved in the form of allusions like the famous qaṣīfet al-Muhāmandi and the ǧaţf Sinimūr. Many problems of this kind are of local origin, like the allusion to the two equally poor asses of the man from Ḫrā (Maidānī, i. 72, 16) or to the Meccan dandy (Maidānī, i. 127, 11); such proverbsial allusions are particularly numerous from Medina (ibid., i. 168, 9; 173, 30; 261, 19; 264, a; 280, ag; 298, a); but we also have them from Basra (ibid., i. 145, 16 and 30; a parallel from Kufa in Dāḥiq, K. al-Hayyāvān, v. 133, 43; Kuفا (ibid., i. 192, 15, as a nest of ʿArabis), ʿAṣr (ibid., i. 97, 9) and Ḥimes (ibid., i. 190, 21). Men celebrated for particular qualities, as in other lands, are frequently commemorated among the Arabs in proverbial sayings, but the popular imagination very often inverts the representative of such virtues; when Ḥākim has to share the reputation for liberality with the Ḥamīd Kaʿb b. Māʿṣūr and Ḥātim b. Sinām (ibid., i. 223 sqq.; Maidānī, i. 193 sqq.), this is due to tribal rivalry. There are therefore various typical representatives of fertility ('Askari, ii 251 sqq.; Maidānī, ii. 231 sqq.), of perspicacity (Maidānī, i. 219 sqq.), and also of stupidity (Dughā: al-Fahlīt, p. 24, N. 58; Maidānī, i. 147; Shawkā: al-Fahlīt, p. 71, N. 148; Gothamis of Arabia, the people of al-Ḥaḍrat Māḏānī, i. 178, 4; Abū Ḥabīb Shāhīr, and others in Maidānī, i. 146 sqq., 150 sqq.; the best known is Dīghz, around whom have been crystallized the stories of a wandering rogue in the Adāb literature (cf. Schwally, Z.D.M.G., j.v. 237, 1), but also we have the Qayyūd governor of the Ḥizār. Vīsaqī, b. ʿOmar al-Thāqafī (Maidānī, i. 29, 31). In Memories of Penelope seem to have found their way to Arabia in completely perversion form ("stupider than the woman who continues undisturbed the weaving", which is found as early as Kaʿūn, xvii. 945; cf. 'Askari, i. 283, 7; Māḏānī, i. 172, 3) and of Sīhāyūn "greedier than he who turned the rock" (Māḏānī, i. 297, 79), among the typical representatives of stupidity and greed respectively.

But among Arabic proverbs there are not a few the meaning and origin of which had already been quite forgotten at the time they were put on record, so that Arab writers invented all kinds of explanation for them from pseudo-history, with a particular fondness for the Amalekites; not infrequently a choice is given of several stories, as for the "naked_warner" (Māḏānī, i. 31, 90), "the gatherer of acacia shoots of the tribe of "Anasā" (ibid., i. 49, 21; 288, 17), "the repentance of Kuṣāt" (al-Fahlīt, p. 74). We also find widely disseminated motives, as in the story of Khūṣān, which the Prophet is said to have told his wives (al-Fahlīt, p. 137, N. 280). In many cases the learned editors have gone so far as to invent stories because they passed over the simplest explanation as too easy. Thus the saying ʿaḏā, ṣī ṭa, muṣṭak ʿandāsah probably only means "Hawk, hawk, the ball (which was shot from the bow before the invention of fire-arms) is behind you"

which Aldī ʿUthūrī refers to a children's game; al-Kalbī and al-Shārīf however interpret Ḥāṣ and Banūdaḥa as names of South Arabian tribes who had fought with one another (al-Fahlīt, p. 38, N. 93). Similarly the same writers invent stories of the time of the Amalekites in which Ḥimār is a proverb name to explain tarākūn ḥūma hut maʿā, which al-Aṣʿāṣī rightly takes literally (al-Fahlīt, p. 12, N. 18).

The number of proverbs is naturally very large in which maxims of life, often very trivial, are laid down; they include some which have to do with their origin to social conditions in Arabia, like "a manthy brother whether he is right or wrong" (al-Fahlīt, p. 119, N. 259). They also include much that is the common property of all nations, the origin of which can rarely be demonstrated, as in the Arabic pendant to the definitely Roman Res vera et trivialis in al-ʿAskari, ii. 32, 16. The subject can only be touched on here. To the references given by the writer in Ostas, Zeitsschrift, viii. 65 sqq. we may add a few Arabic parallels to our proverbs: "Walls have ears" (Māḏānī, i. 57, 21); "Speak of an angel and you hear his wings" (ibid., p. 57); "Hammer and anvil" (ibid., p. 58, 19); "A liar must have a good memory" (ibid., i. 49, 21); "Festa lieslent" (ibid., i. 87, 21); "Out of frying-pan into the fire" (ibid., ii. 25, 9); "To fall between two stools" (ibid., ii. 64, 7); "To be on tender-hooks" (ibid., 74, 46); "Holst with his own petard" (ibid., 168, 21); "A bird in the hand is worth two in the bush" (al-Ṭirmīzī ʿAlī-baṣīr b. ʿAbd al-Raḥmān, K. al-Hamadānī, Rāzī, Bārātī 1890, p. 44, 3).

Among sayings which are international in character those disseminated by religious communities occupy a special position. It is of course not an accident, but is quite in keeping with the importance, which is becoming more and more evident, of Christianity for the intellectual life of ancient Arabia, that New Testament sayings are common among Arabic proverbs, notably from the Sermon on the Mount, like Mt. 7, 2 = Māḏānī, ii. 67, 27; Mt. 7, 15 = Māḏānī, i. 192, 21; Mt. 7, 16 = Māḏānī, ii. 34, 336, 34; Mt. 18, 4; 'Askari, i. 68; Mt. 9, 24 = Māḏānī, ii. 113, 21; Mt. 17, 3 = Māḏānī, ii. 67, 36; Mt. 23, 24 = Māḏānī, ii. 259, 16; Gal. 6, 7 = Māḏānī, ii. 73, 20. On the other hand, except for a few echoes of Proverbs and Ecclesi-ism in which the origin is uncertain, the only one from the Old Testament is Māḏānī, i. 228, 20, which looks like a quotation from Deut. 21, 15. From Christian legend we have also the proverbary tradition of Dūjarjūt (al-Fahlīt, p. 256, N. 517) and the story of the Seven Sleepers which appears in various forms (al-Fahlīt, p. 109, 239; Māḏānī, ii. 156, 4; Kāli, Amāli, i. 61; cf. M. S. O. S., v. 228). On the other hand, Old Testament figures are rare, and we find only Nosh once in a late proverb, probably native to Mīṣal (Māḏānī, ii. 250, 11). The Mandanae Creator-daity Fitāh must have gone into the proverb Māḏānī, ii. 67, 36, from the verse of Ṭurāʾis quoted there, to whom it was welcome, like other foreign matters, to give an appearance of learning (see Aḥward, Der Dīnaus al-Rabʿis, av.). Later tradition also associated with Lākūn (q. v.), the wise hero of Arab antiquity, sayings attributed to Alīṣar and common to many nations.

Although the proverb is from its nature anonymous, learned tradition often tries to find authors. Many proverbial sayings are therefore attributed
to the Prophet and his Companions. The *Amālib al-Našt, which circulated outside the canonical collections of Tradition were collected by Ibn Khālid al-Rāmhmurist (Fīhrīṣ, p. 155) and Ṣaḥīḥ al-Madīnī asserts the latter of being uncritical and quotes in his preface as an example of genuine Ḥadīth the parable of the good and bad companion in Būkārī, Ṣaḥīḥ (ed. Khehl, ii. 17). This does not prevent him however from putting in his collection a series of sayings of the Prophet, as his predecessors had done, and at the end of his book compiling a special chapter of them, which also includes sayings of the first Caliphs. Special popularity was always enjoyed— not only among Shi'is—by sayings attributed to Ṭālim al-Kutabi in his *Cayam al-Askārī, in the fifth book, *K. al-Tālim wa-l-Maṭrā'īn (ed. Khehl, fol. 155), already uses a collection of this kind, such as was current in various recessions (enonyms in al-Tahrīf al-ḥālīyā, Stambl 1302, p. 107—114), c. e.g. in alphabetical order by Abū al-Wāhid b. Muhammad al-Ḥāfīz, about 510 (1116), entitled *Sawar al-Hišam wa-Durr al-Kārim, lith. Bombay 1828 and also edited in Persian and Turkish (s. l. 299, and also W. Yule, Aepopechmes of Aes the son of Aes Tālim (*Maṭrā'īn) of a Persian translation and an English translation, Edinburgh 1813; Sad Allah Mawālī Muḥāfazat Ahmad al-Munīm, Thehrān 1304; Najāt al-Askārī, the second coll. in Fīhrīṣ, with Turk, paraphrase by Mu'allim Nādirī entitled *Amālib *Alī, Stambl 1311, with Turk, comm. by Naṣīr entitled *Kāfīta al-Askārī, Stambl 1257).

Numerous also are the proverbs which have a number of sayings inserted in them to say whether the poets in whose *Divān they are originated or only gave it its form. Al-Sawākt (Fīhrīṣ, p. 78) and *Cayam al-Mā'in (ibid., p. 48, 108) collected such *Cayam al-Mā'in. A fine collection has been made by al-Ḥāfīz in the *Kāfīta al-Askārī, Cairo 1320, i. 27 seqq. Among such metrical sayings are some by the greatest poets of the pagan period like *Ṭārīf al-Askārī, p. 254, 509; al-Mā'dīnī, i. 161, Ibrāhīm al-Askārī, i. 255 = Mā'dīnī, i. 133), Lahlūb (Askārī, i. 37) and by later poets like al-Farāzīf al-Askārī, p. 250, No. 450; al-'Askārī, i. 46 and Muḥt b. Iyās, whose two palms of *Hulwān (Askārī, i. 297, 452; Mā'dīnī, i. 297) are famous. From a misunderstanding of a verse of Farāzīf's which the way to *Uṣūlūn is mentioned (Mā'dīnī, i. 36; quoted by Ṭālim, ill. 736), this verse became typical of taking the wrong way. Al-Mutānabi's verses that have passed into the language have been collected by Isnādī al-Talākānt, d. 385 = 972 (Ṭālim, p. 511—518; Sāvātī, Ṣugag ʿal-Askārī, p. 35), in *Amālib al-Askārī min Shī' al-Mutānabi (Fīhrīṣ, Cairo 3, ill. 23).

Proverbs excited the interest of the learned from the very beginning of Arabic literature; historians and philologists emulated one another in collecting and explaining them. Thus we find among the sources of the works that have survived to us the old historians and genealogists like al-Shāfī b. al-Kaṣim (Wustenfeld, Geschichtskreiter, ii. 23) and *ʿAwāna b. ʿAbd al-Ḥakam (ibid., i. 27) and Abū 'Uyaynī b. Ṣaḥīḥ (ibid., p. 36; al-Fāhrīṣ, p. 253), the two former very often as authorities for Ḥāfīz b. al-Kalbī, to whom with the great monographists Muhammad b. Ḥāfīz (Wustenfeld, No. 59), Zubair b. Bakkār (ibid., p. 61) and al-Askārī (ibid., p. 47), we owe most of the legendary and historical material. Almost all the philologists of note have devoted special works to the subject. To their interest in language is to be ascribed the fact that the limits of the scope of the subject are extended to include phrases and idioms which have nothing to do with the proverb and, as for example *ʿAmālib *Thālus (al-Fāhrīṣ, p. 7), do not seem to require explanation; but we owe, for example, to al-Mufajjīl the interesting note that it had become a habit with some Syrian Arabs to use the Greek *φφαρ, "say he". The oldest work of the kind that has survived is the *Kāfīta al-Askārī, in which, and in the Escurial (Derenburg, Leiv-Pröpfel, 1757), also the commentary by Abū Ḥamīd al-Bakrī (d. 487 = 1094), ibid., No. 526 and Lālīlī, No. 1719; printed as No. 1 of the *Cayam al-Askārī, Stambl 1302, p. 2—16; on the other hand, the work dealt with by E. Bertheau in his Diss. Göttingen 1836 (s. Freytag, Arabum Proverbium, ill., vii.—xi) is much more recent. The *Kāfīta al-Askārī of al-Mufajjīl b. Salama, a pupil of Ibn al-ʿArabī (d. 513), has been edited by C. A. Storey for the "De Goeje Foundation", I 1915. The specially numerous proverbs of the form *afāfa min were collected by Ṣaḥīḥ (d. 520—620 = 960—970) in a work which only survives in a unique MS. in Munich (see Mittwoch, in M. S. O. S., 1900, p. 33 seqq.), which was much used by later writers, and copied word for word in M. S. O. S.'s corresponding section of his book. Abū Ḥamīd al-Askārī (d. 524 = 1028) compiled the *Jamiʿat al-Askārī, extant in several MSS. in Stambl (see R. D. M. G., iv. 513; M. F. B., v. 501; M. S. O. S., iv. 36) and printed at Bombay in 1306—1307 as well as on the margin of Mā'dīnī (Cairo 1310), in which an attempt was made for the first time to annotate each proverb from the philological and historical point of view, excluding all post-classical material, to which Ṣaḥīḥ had allotted considerable space. Al-Mā'dīnī [q.v.] collected the material compiled by his predecessors in his *Madīmī al-Askārī and expanded each section by an appendix on modern proverbs. This has since then been regarded as the standard work on the subject and not even Ṣamākhshārī's *Kāfīta al-Masāyaq b. al-Askārī, although also much read to the MSS. mentioned in C. A. Storey's, may now be added the following in Stambl, M. S. O. S., xiv. 155; R. S. O., iv. 708; M. O., vii. 97, 102, 123; also ʿAḥšā, No. 991; Dānūkī, No. 1557; Sciūt, Z. D. M. G., lvii. 58; Brunis, ibid., p. 50; Ṣasūn, *Dānūkī, al-Maṣqūfī in al-Maṣqūf, p. 329, 33, Cairo; Fīhrīṣ, ill. 355), could according to Ṣamākhshārī, No. 5141, permanently affect its popularity. Al-Mawardi's [q.v.] book, like the different collections of sentiments made by al-Zamakshārī, was from the first intended to deal rather with the literature than with the language of the people.

It was not till the sixteenth century that interest in the east was again aroused in proverbs under the influence of European scholarship. Almost all works on modern Arabic dialects contain collections of proverbs (cf. the lists which could of

(C. Brockelmann)

AL-MATHANI, a term of uncertain meaning which occurs twice in the Kur'an, namely in Surat xv. 87; "and we have brought thee seven of the mathani and the noble Kur'an", and Surat xxxix. 24: "Allah sent down the most beautiful recital, a book which is in harmony with itself, mathani, at the skin of those who fear our Lord creeps".

The interpretation of the word is made more difficult by the fact that in the latter passage it seems to mean the Kur'an itself, in the form on the other hand, something similar to the Kur'an.

In Tabart (Tafirs, xiv. 32 sqq.; cf. xxiii. 124 sq.) we find the following opinions:

a. Mu`adh was given six out of the seven mathani; two were lost when he broke the tablets. The seven mathani are like seven long straws, i.e. ii.-vii. and a seventh, on the identity of which there is a difference of opinion; it is either Surat s. or viii. and is combined.

b. The seven mathani mean the Fathis which contain six verses. These with the barami in the handwriting make seven. It is called the mathani, i.e. repetition, because it is repeated in the sa`at of each `ama`. This explanation is supported by quoting the term mathaniyyah ("in harmony with itself") which immediately precedes the word mathani in Surat xxxix. 24.

c. The mathani mean the Kur'an in general. Haddith hesitates among these interpretations a. (Tirmidhi, Tafirs, Surat ix, trad. i.; cf. Bukhari, Al-Bid'at, bab 166 and b. (Bukhari, Tafirs, Surat i., bab 1; Surat xv., bab 3; Fadil al-Kur'an, bab 91 Tirmidhi, Tafirs, Surat xv., trad. 3. 4; Nasr (Ismaili, bab 26).

Nor is there any unanimity in explaining the form mathani. Badawi on Surat xxxix. 24 gives as the singular mathanman, mathan or mathani. Zainalakhshir gives mathani. The latter form is found in the Kur'an (Surat iv. 3; xxxiv. 45; xxxv. 1) and in Hadith (Bukhari, Sahih, bab 84; Muslim, bab 1, Tashbid, bab 10; Muslim, Manafiin, trad. 145-148; Tirmidhi, Sahih, bab 206) as a distributive, meaning "occurring in pairs". This meaning however would not be at all suitable for mathani.

Geiger (Was hat Mohammed aus dem Judaentum aufgenommen?, p. 57 sq.) has already compared the Hebrew mishna (Arasn: mathanah). According to him then mathani would mean the Kur'an itself as a whole. His suggestion is approved by Noldeke-Schwalley (Geschichte der Geviere, p. 114 sq.). Attention might further be called to the fact that mishna means a single law as well as the whole codex and from this could be derived the double meaning of mathani (separate verses and the whole Kur'an), a derivation which could be supported by the parallel double meaning of the word Kur'an (single: revelation and all revelation as a whole).

Sprenger (Das Leben und die Lehre des Mohammed, Berlin 1861, i. 463 sq.) explains the word from the Hebrew nishnah "to repeat" and the conception from Surat xxxix. 24, from which it would appear that the mathani are part of the stories of punishment. This view has been adopted by D. H. Müller, Die Prophezeiungen in ihrer grammatisch-sprachlichen Form, i. 43, 46, note 2; H. Grimm, Mohammed, ii. 77; N. Rhodokannikis, in W. Z. K.M. xxv. 66 sq.; J. Horovitz, Koranische Untersuchungen, p. 26 sq. This would imply that, at least when Surat xv. 87 was revealed, there were seven of these legends of punishment.

Early evidence of the use of the word outside of the Kur'an is found in a poem of Abu l-Awsad al-Di`ali (text and transl. by Noldenke, in Z.D.M.G., xviii. 236 sq.; cf. thereon Bevan, in J. R. A. S. 1921, p. 554 sq.; Horovitz, op. cit.). Here the mathani are mentioned along with the Fath, "the seven verses" along with the "hundred verses" surus of the Kur'an. The exact content of these groups is unknown.

In conclusion it may be mentioned that Goldscheider (Z.D.M.G., i. 866 sqq.) has called attention to a term mathaf, which occurs in non-canonical tradition and is obviously a new formation modelled on the Hebrew mishna.

Bibliography: In addition to the references in the article: Th. Noldenke, Neue Beitrage zur german Sprachwissenschaft, p. 26; Fakhr al-Din al-Razi, Mathaf al-Ghaffar, iv. 110-112; al-Suyuti, Idrisi, p. 124; Idrisi al-Azhar, xviii. 177 sq.; Lane, Lexicon, s. v. mathanam.

MATHNAWI, a form of poetry in which each bait (verse) is normally a self-contained whole, grammatically complete and with the two mathaf (hemistichs) rhyming with one another and not except accidentally — with the verses that follow. In Persian, Turkish, Urdu and Urdu, poetic compositions of any length dealing with epic, romantic, ethical or didactic themes are of the mathnawi form, which probably originated in Persia. Dowlatshah (ed. E. G. Browne, p. 29) relates a tradition that in the time of the Dailamite `A`, al-Dawla (272-928) there was still to be found inscribed on the palace at Kar-i Shrin a baiat in "Old Persian" having the two hemistichs rhyming. There would appear to be no pre-Islamic Pahlavi verse of the kind extant, and the mathnawi form may be merely a development or expansion of the mathaf of the fahuza or ghazal. However that may be, in the oldest fragments of Muslim Persian literature that have come down to us, there are examples of the mathnawi as of the other forms of verse. Of these fragments the oldest belong to the work of Abu Bakr of Bahil, who is said, probably on that account, to have invented the genre. They appear to be parts of a series of narrative mathnawi (cf. Aamir's Lughat-Fars, ed. P. Horn, p. 29 of the Persian, and also p. 22 sq.). Alongside of them are to be found sufficient portions of the work of Rida (a later contemporary of his), to indicate that he also used the same form.
for a translation of the Kātibeh u-Dīnma (Asadi, ep. cit., p. 192 and Dawlatshāh, p. 31). There is also a complete in the ḥaṭafī meter indicating an erotic mathnawi (Asadi, p. 48; cf. Efsī, Kedaghi, in N. G. W. Levt., 1875, p. 735, 893).

The first complete poem that has survived of the genre is the Shāh-nāma, begun by Dātki and completed by Firdawsi. Actually, apart from the arrangement of the rhyme, it is not of the regular mathnawi type. More characteristic is Firdawsi's Vīrūf u-Zālīkhā, composed in the same metre (the mutaṣfīrī). It begins with a number of introductory sections of which the first is in praise of Allāh and the rest are headed respectively, "In praise of the Prophet", "In description of the king of Islam", "On the cause of the revelation of the Sūra of Joseph", "On the reason for setting down this narrative", etc. Then comes the story proper, commencing with the description of Jacob's working for Rachel and pursuing its way through the adventure of Joseph. Joseph becomes treasurer to the house of the Diṭī Potiphār, whose wife Zālīkhā falls in love with the youth. When he refuses her advances she denounces him for witchcraft and his wife is taken away. Then comes the story of the imprisonment of Joseph, the events that lead to his release and exaltation, the confusion of the wicked brothers, the repentance of Zālīkhā, her rejuvence and marriage to Joseph, and the death of Jacob.

A contemporary of Firdawsi's, 'Ursī, is credited with a mathnawi romance which has not survived: Wāmiq u-Adhrī. What purposes to be a version of the story is given in a Turkish mathnawī by Lāmī (d. 940 = 1533), according to which, Wāmil, a priest in a fire temple, is described as having fallen in love with Adhrī, a maiden devoted to the cult. They are forced to part; Adhrī going to the frozen regions of the North and Wāmil to the torrid lands of Ethiopia. They pine away in separation, and dying are turned into stars. The maiden becomes Vīrūf holding Spice in her hand, while Wāmil becomes Ārthārūt. The story bears marks of being of Pahlavi origin, the Arabic names being only translations.

Of mathnawī which have survived there follow chronologically two works of Nīṣārī, Khaṣraw, namely the Khaṣraw al-Maṣṣāḥ and the Shāh-nāmah, two ethico-didactic poems in the ḥaṭafī metre. After them in time is usually put the romance of Wīs u-Rūmīn, ascribed to Aftāf to Fakhr al-Dīn Gurgān (d. 440 = 1048), who is said to have derived it from the Pahlavi. In the version which has come down to us (ed. W. N. Lees, Calcutta 1865), we have a tale of passion unrestrained, which Pizzi (Persia Persiana, ii. 88) characterizes as a vulgar product of India in Akbar's time. In the tale, Wīs or Wīsa, the wife of Mūḥād, king of Mūḥād, has for her paramour her husband's brother Rūm or Rūmīn, who proves unfaithful to her but in the end marries her after Mūḥād has been killed. If the work is genuine, it marks a step in the differentiation of the romantic from the epic mathnawi, being composed in the ḥaṭafī and not the mutaṣfīrī metre which had hitherto been common to both.

The true creator of the romantic mathnawi is Nīṣārī of竿aist, who, after beginning with the composition in that form entitled the Khaṣraw al-Aʿārāt — a collection of ethical and religious maxims interspersed with anecdotes, — wrote in succession the four other works which form his Khaṣraw u-Fandi Gandji. This quintet provided the model for all subsequent mathnawi writers. Strictly speaking, only the second, third and fourth of them are romances; namely (a), the Khaṣraw u-Sīrīn, the story of the love of the Sūrāni prince Khaṣraw Parwiz for the Christian princess Shīrīn, who is also loved by the mighty builder and engineer Farbānī, and of the latter's betrayal and tragic end; (b), the Lālī u-Maḏghūnūn, the scene of which is laid in the desert and which shows the two lovers prevented from union by the hatred of their families for one another; and (c), the Ḥaft Pāhūrān, which has as its hero and consists of seven tales, each told to the king by one of his seven favourite wives. The Shāh-nāmah, which forms the fifth of the group, treats of the life of Alexander in epic style, but with a mystical touch in the later passages which makes him a prophet as well as a conqueror. Each of the five mathnawīs is prefaced by introductory sections similar to those in Firdawsi's Vīrūf u-Zālīkhā, with the necessary changes for the names of patrons etc. and with a further section headed "On the mufrad of the Prophet" added in the works which follow the Khaṣraw u-Sīrīn. Every imitator of Nīṣārī's mathnawī copies him in this respect as in others, so that even the xvii century Judaeo-Persian Dāndīl-nāmah (by Khaṭība Bakhšī, British Museum, MS. Or. 4743) has this introductory matter, though Moses is substituted for Muhammad in the section devoted to the Prophet.

The chief imitators of Nīṣārī are, in Persian, Dānti; in Turkish, Shāhī with his Khaṣraw u-Sīrīn and Fadālī with his Lālī u-Maḏghūnūn; in Turkish, Mir 'Ali Shīr Nawātī with his Khaṣraw; and in Urdu, Amin with a Vīs u-Zālīkhā, Fadālī with a Lālī u-Maḏghūnūn, etc. (cf. G. de Tasay, Antiquités Hindoustanis, Paris 1885, p. 30 sqq.).

The Mathnawi par excellence, i.e. the Mathnawī-i Shāh-nāmah of Djalāl al-Dīn Rūmī, is in a class by itself, being a long medley of the doctrines of Sūrān combined with parables, allegories, and pseudo-historical narratives. It is without the preliminary sections characteristic of the romantic mathnawi.

Arabic contains no poems of the mathnawī genre, but poems written in the two muraqīr of each half rhyming together independently of the rest are known. The arrangement of the rhyme is known as mawṣūdīyya. Short specimens translated from Persians are quoted in Thālibī's Vatīnas al-Dāhk (iv. 23), and there are longer compositions, metrical grammars, by Ḥafṣī (Mathān al-Fāsī), and by Muhammad b. Mālik (Khitīb al-Ifiyā) (for both of which see de Sacy, Anthologie Arabe, p. 184 sqq. and 145 sqq. of the Arabic text and p. 325, 356 of the notes).

The metre normally associated with the mathnawi form are those used by the masters in their compositions; viz., in addition to those mentioned above, the waqf and khašf used by Nīṣārī for Maḏghūn al-Aʿārāt and the Ḥaft Pāhūrān respectively;
and the rami, used by "Djalal" al-Din Rumi in his Mathnawi and by Farid al-Din 'Attar in the Manafi al-Tair.

J. W. Gibb, History of Ottoman Poetry, and Aga Ahmad 'Alli, Haft Asman (Bibliotheca Indica), Calcutta 1873.

MATHURĀ, name of a city, situated in 27° 31' N. latitude and 77° 41' E. longitude, and of a district of the same name in Northern India. The site of the city was of importance in the Buddhist period, as is proved by the numerous inscriptions and pieces of sculpture that have been found there. In later Hindu times it attained sanctity as the reputed birthplace of the god Krishna and the temples erected there acquired great wealth and reputation. In 1017 Muharram of Ghanza (q.v.) captured the city and levelled all the temples to the ground; there is no further record of the city until the reign of Sikandar Lodî, Sultan of Delhi (1488-1516), who destroyed all the temples that existed in Mathurā in his time. The city was practically refounded in the reign of Akbar, who visited the sacred site and gave permission for the erection of four temples, the ruins of which still exist. In 1665 Aurangzeb destroyed a vast temple that had been built in the reign of Djiñângir and changed the name of Mathurā to Lâlâbâd, but like many other Muhammadan designations of towns in India it failed to displace the original name of the city. With the break-up of the Mogul empire after the death of Aurangzeb, Mathurā suffered from the political confusion in which all the country between Delhi and Agra was involved, and at one time or another passed into the hands of the Moguls, the Marathas and finally the Britis.

In the centre of the modern city stands the mosque erected in 1665 by 'Abd al-Nabi Khân, who was appointed governor of Mathurā by Aurangzeb in 1659. The Muslims number 3,473 out of a total population of 56,666 (in 1921).

2. The ascensio obliqua (fig. 2) of a point $A$ in the ecliptic at any point is the curve $\gamma B$ of the equator the poles of which are $P$ and $P'$, between the beginning of Aries and the horismus meteoroscope (Johann Werneri de Meteoroscopis, publ. by J. Würschmidt, Abhandlungen zur Gesch. d. Mathematik, Heft xxiv/ii., 1913) and the orium quadrants. On the sine quadrants, the system of lines which enable the sine and cosine to be read off, the above formulae can be obtained with the help of the latter (on the quadrants see P. Schmidl, Zuw Geschichte des Quadrantin bei den Arabern, Munich 1929).

Along with the mašāli, the maghārid also were ascertained. If one is observing, not the rising but the setting points, the corresponding curves are called maghārid (a table for the latter is given by al-Birūnī in the Mašālidic Canon).

Addendum. Among the Greeks and Arabs and European astronomers of the xii-th-xvii century sqalpa means: 1. the globe or geometrical sphere; 2. the space between two surfaces of two concentric spheres, a shell of a sphere; 3. the circle which corresponds to the assumed path of a heavenly body, i.e. the ecliptic, the epicycles, the eccentric circles. – The Arabic ši'ra has only the first meaning, the word falak the second and third, the second in the theory of Ibn al-Hāthim (see al-Khwarizmi). The spherea recta, al-falak al-mušatāh is the sphere of the heavens, i.e. for the inhabitants of the equator; in the Latin translation of the tables of al-Khwārizmi (table 59) it is said of the ascension in the spherea recta "horoscopius secundum terram Arin" (Arin is a corruption of Azin-Ujgjin = Ujgjin in Sanskrit, which was erroneously taken to be the ḫubbat al-qayd, dome of the earth, the centre of the earth and of the inhabited world). At all places which do not lie on the equator, there is a spherea obliqua so that these are innumerable.

Suter, Die astronomischen Tafeln des Muhammads Ibn Mūsā al-Khwārizmi etc. [cf. also AL-KHWĀRIZMI] and numerous works on astronomy. — I am much indebted to Prof. Nallino for a number of suggestions. (E. Wiesemann).

MA'TMATA, the name of a Berber tribe, belonging to the large family of the Butr, and brethren of the Magiha, Kannia, Lasemia, Shaddūna, Madytuna, Maghila, etc. They formed with them the ethnic group of the Bantat Fātin who, like all the other Butr, seem to have had their original home in Tripolitania.

Our chief source of information about the Maťmata are al-Bakrī and Ibn Khaldūn. As with the majority of the Butr Berbers, three principal divisions can be distinguished:

1. Elements settled in the eastern Magribi not far from their original home: these are the modern Maťmata in Southern Tunisia, some 30 miles S.W. of Gábes.

2. Elements which have settled in the central Magribi: first in the steppes of the Sahara in the N.E. of Mināda; then having been driven out of this territory by the Zanla Beni Tadjā, they sought refuge in the mountainous massif of Wānngarts (the modern Ouaraïnès).

3. Elements which have migrated as far as Morocco. In the fourth (tenth) century we find them in the country of the modern Kabdiha (to the S.E. of Melilla) and in the upper valley of the Moluya at Amakūr. Ibn Khaldūn also mentions a little isolated group settled on the mountain.
which bears their name between Fās and Sufīdy; there must also have been some of them in the conoer of Tān for a place between Fās and Tān still bears their name. Finally we owe to al-Idrīsī the record of the most western body: the Mā'tmatā of Tāmaskān.

The Mā'tmatā played a fairly important part in the early centuries of Islam. Those of the central Mā'āridi had adopted Ābārī doctrine; being conquered by the Ṣanāḥiyya and Zānāta, many of them migrated to Spain. The most famous member of this people was Ṣāliḥ ibn Salamātīn, the famous Berber genealogist, so frequently quoted by Ibn Khaldūn.

**MATN** (n.), a term with different meanings (cf. the lexicon, a.v.), of which that especially that of the text of a tradition, deserves to be mentioned here, to be especially here, to be mentioned here.

Mā'TRAH, a town on the Gulf of Omān, two miles west of Maskat on the east coast of Arabia. The town, which has about 14,000 inhabitants, is the starting-point for caravan traffic into the interior of Arabia, and, next to Maskat, the most important commercial centre in Omān. The town is beautifully situated in fertile surroundings, has a good harbour, easily entered but little sheltered, from which Maskat can be reached in an hour by boat. The inhabitants of Omán used to have wharves for shipbuilding here and the textile industry was not insignificant (spinning and weaving). A fort built by the Portuguese still stands as a memorial of their rule in Omān. According to Wettstein, the town used to have 20,000 inhabitants.

MĀ'TURĪDI, ABDU'LLĀH MUHAMMAD B. MUHAMMAD K. MAḤMŪD AL-HĀNĀFĪ AL-MUṬṭARAṬI. Al-Mā'turīdī is the titular head of the Mā'turīdī School of theology, which, after the ʿĀshīrī School, formed orthodox Sunnite Islam. The two Schools are equally orthodox, but there has always been a tendency to suppress the Mā'turīdī's name and to put the Āshīrī forward as the champion of Islam against all heresies except in Transoxiana (Mā'mūr al-Nahr) where his School has been, and is, the dominant, representing the views of abī al-munma wa'l-dimānā. Next to nothing is known of al-Mā'turīdī's life, but he died at Samarkand in 333 (944), a contemporary of al-ʿĀshīrī who died a little earlier about 320 (931), while al-Tahāwī (q.v.), another contemporary, died in Egypt in 331. All three represented the movement, which must have been very widely spread, to defend orthodox Islam by the same weapons of logical argument with which the Muʿtazilites had attacked it. Mā'turīdī or Mā'turīdī is a locality (ματουρίδιον) in Samarkand. Its geographical reality and the identity of Abū Mansūr al-Mā'turīdī are assured by the article Mā'turīdī in the *Αναλ. of al-Samʿānī* (fol. 498b, 14), also by Barhīdī, *Turkbistan down to the Mongol Invasion*, G.M.S., p. 90, notes 9 and 10, p. 267, note 5, and the Russian references there). The books of Hanafīs give the names of his teachers, but to us they are names only (see Ibn Kuṭlūbhāghī, ed. Flügel, N. 173) and Flügel's *Hananici*, p. 274, 293, 295, 298, 313). The Sāyid Murtah in his little treatise on Mā'turīdī, inserted in his commentary on the *ṣūrah* (i. 5–14), complains that he has found only two biographies of Mā'turīdī, both are short (ςον 'Αδηνίας). Even Yākūt in his *Muṣāfās* has no mention either of him or of Mā'turīdī. Ibn Khaldūn in his sketch of the origin and history of Kaṭān (Makhdūma, transl. de Siane, ii. 55 sqq.; ed. Quatremère, ii. 38 sqq.) has no place for him and speaks only of ʿĀshīrī and the Ṣufis. For Ibn Ḥanīfa (d. 456 = 1064; Fīqī, ed. Cairo 1320, i. 111) the orthodox opponent of al-ʿĀshīrī is Abū Ḥanīfa and he has no mention of al-Mā'turīdī. Similarly Shahrastānī (d. 548 = 1153; Miṣrī, transl. Harhrücker, i., p. 135; text on margin of Ibn Ḥanīfa, i. 188) gives the views of Abū Ḥanīfa but does not mention Mā'turīdī. Abū Ḥanīfa, he says, inclined to the Muʿtazilites and his followers were even called the Muʿtazilites of the Sema, meaning, apparently, a form of Muʿtazilism consistent with orthodoxy. Similarly the Sāyid Murtah (loc. cit., p. 13 foot) says that the Muʿtazilites claimed Abū Ḥanīfa for themselves and rejected his authorship of one book because it was too contrary to their positions. The truth evidently was that Abū Ḥanīfa (d. 150 = 767) was the first to adopt the methods of the Muʿtazilites and apply argument to the foundation of the Faith. Also, from the beginning, his standing was so high that it was simply impossible to call him a heretic. This status continued in the Mā'turīdī School.

All this goes back to the time before Kalūm had become a technical term and when al-ʿĀshīrī meant both theology and canon law, with the difference that theology was called "the greater al-ʿĀshīrī" (al-ṣūrah al-āshīrīyī, see article Kalūm above, vol. ii., p. 6728). That was the title of one of Abū Ḥanīfa's books and we have a commentary on it ascribed to Mā'turīdī (Ḥalāfūlī Kārid 1321), the only writing ascribed by him apparently to print. This does not occur in the two exactly similar lists which we have of his books (Sāyid Murtah, p. 5; Ibn Kuṭlūbhāghī, p. 43): 1. Kiḥb al-Tawḥīd; 2. Kiḥb al-Ādārī; 3. Kiḥb Radd Aswād al-Adillī ʿl-ʿKhwā; 4. Kiḥb Bayān Waḥīm al-Maṭsurīlī; 5. Kiḥb Taʾwīl al-Kawārnā. Of these only the last is given by Brockelmann, i., p. 195, 4; the biographers praise it highly. The others suggest only anti-Muʿtazilite polemic (for al-ʿKhwā see Horten, *Philosophische Systeme*, by index). As a matter of fact it is only in one MS. of the com-
from the *Arabian Nights*, composed in everyday language an elegy on her old master and at the end of each strophe she added a new melih to "O my mother!" Whence the name of this kind of poetry.

From the point of view of metre, the *mawâsl* is a popular form from *mawwâl*) or *mawâl*, is a song in the *bash* metre (first *ˈərīf*) of which the last verse of each hemistich is fā'īm, fāʿīn or fīm.

In its primitive form, the *mawâsl* consisted of strophes, each of four hemistichs rhyming with one another. Later it was somewhat altered: the strophe contained five hemistichs in which the first, second, third and fifth, but not the fourth rhymed together or it contained seven hemistichs of which the first, second, third and seventh had the same rhyme and the fourth, fifth and sixth rhymed together.

The red *mawâsl* is used for war-songs while the green *mawâsl* is used for love-songs. In all cases the *mawâsl* must be in the popular dialect and make use of alliteration.

(MOH. BENCHENNE)

MA ḪĀRAʾ AL-NĀHR (Arab.) "that which (lies) beyond the river"; the name for the lands conquered by the Arabs and subjected to Islam north of the *Amū-Daryâ* (*q.v.*). The fourth *Māwarāʾ al-Nūh* on the north side of the east coast were where the power of Islam ceased and depended on political conditions; cf. the statements of the Arab geographers on *Māwarāʾ al-Nāhr* in G. Le Strange, *The Lands of the Eastern Caliphate*, Cambridge 1905, p. 433 sqq.; W. Barthold, *Turkestān* (*G. M. S.*. N., s. v., London 1928), p. 64 sqq. The phrase *Māwarāʾ al-Nāhr* passed from Arabic literature into Persian. As late as the ninth (xixth) century, Ḥāfiz ʿAbūt (*q.v.*) devotes a special chapter (the last) to *Māwarāʾ al-Nāhr* in his geographical work. Under the influence of literary tradition, the phrase *Māwarāʾ al-Nāhr* was used down to quite recent times in Central Asia itself (*Gābur, G. M. S.*. I., Index; the *Ozbek Muḥ. Stīḥī, Ṣawrār. Kitabāt, *Oblast, v. 240 et pass.*).
although to the people of Central Asia the lands in question were on their side of and not across the rivers.

(W. BARTHELD)

AL-MÅWÅRÅD, ABU 'L-ḤĀBÅN 'ALÌ KUMLAMÅD B. ḤĀΜÅD B. 'HÅ mêdåH, a S̱̱īḵ̱ī fāqīh, who on the conclusion of his studies taught in Bāṣrā and Baghdad and after holding the office of chief kāfīr at Uṣūwār near Nābulā, settled permanently in Baghdad. Here he often acted for the caliph al-Kādī (381–402–991–1031) in his negotiations with the Byzantians, whom he then ruled al-İrāq; when the Būyids Līmān al-Dawla in 429 (1037–1038) asked the caliph al-Muḳātād to grant him the title of shahādā (mākū al-muḳātād), he expressed his objections in a fāṣēd and thus earned the enmity of the Būyids. He died an 13th Rāhī 1 450 (May 27, 1058) at the age of 88.

His works are said to have been collected and edited only after his death by one of his pupils. The following have survived: 1. Tafsīr al-Karān or Kitāb al-Nuḥāt wa l-Uṣūl; MSS. in Rampur (s. Faww, Ar. Soc. Bengal, N. S., ii, xii), Fez (Fiskrīr Māwīdīh al-Karānīyā, N. 215) and Stam-bul (Khīṭār 'Ālî, N. 90); 2. K. al-Iṣlaḥ l-ḥanāb l-ḥaṣan f. 'l-Furqān'; MSS. in the Brit. Museum. Or. 5828; 3. Ellis and Edward, Dicr. List, p. 22; Cairo (Fiskrīr, ill. 215) and Stam-bul (Sulaimānīyā, N. 436); 3. his most celebrated work, dealing with constitutional law in purely theoretical fashion, disregarding the political conditions of the time (s. A. v. Kremer, Culturgeschichte, i. 396; M. Hartmann, Unpolitische Briefe aus der Türkei, p. 242), entitled K. al-Iṣlaḥl al-Sulāmānī, Constitutions politiques, ed. R. Enger, Bonn 1853; 4. Cairo 1337, 1344, 1377. Translations: Public and administrative regulations are found in different veils; an indication of the politiques; in Nederlandsch-Indie, door S. Keizer, s. Graevenhage 1862; Les constitutions politiques, trad. et commentées d'après les sources orientales par le comte L. Ostrog, Paris 1900–1905; These statutes government are given in detail and administrative, trad. et com. par F. Fagman, Algers 1915; cf. H. v. Amerdor, The Medaillums juridiction, J. R. A. MAWÅRÅD, ABU 'L-FA'TIH, SHIHÅD B. AD-DÅLÅWA-KÅTÅR B. AL-MÅLLÅWA, RULÅTÅ of Ghana, was born about 742 (1011–1022). In Muḥarrām 432 (September 1040) he was appointed to the government of Balkh with Khuwās Abī Naṣr Ahmad b. Muhammad as wāṣir. A few months later, his father Sultān Maṭyād was deposed and Muhammad, son of Sultān Mahmūd, was raised to the throne. On learning news of this, Mawārud left Balkh, took possession of Ghana, and spent the winter in making preparations for a struggle for the throne with Muḥarrām. At the end of the winter, Muḥarrām marched from India to take Ghana, but Mawārud advanced to meet him. A fierce battle took place on 3rd Shawwāl, 432 (April 6, 1042) near Danūr or Dinawar (modern Fatḥābād on the Pešāwar-Kabul route) in which Mawārud was victorious. Muhammad, all his sons except Abī al-Rahim, Sulämān b. Yūsuf, and Nāṣiguīn of Balkh were taken prisoners and executed. Mawārud returned to Ghana in triumph, but he was not yet the undisputed master of the kingdom. His brother Maṭyåd, governor of Māltān, was advancing on Ghana by way of Lahore, but three days after his arrival at Lahore, he died mysteriously on the morning of 10th Dīn 'l-Hijājī, 432 (August 11, 1041).

In 435 (1043–1044) Suhklāl, alias Nwāsā Shāh, son of Dīqāqīl of the Hindūkhāyī dynasty of Wānā, formed a confederacy with some Hindu Rājās and laid siege to Lahore. Suhklāl was killed in action, and after his death the Rājās quarrelled among themselves, raised the siege and retired to their respective kingdoms. The Muslims followed them in pursuit and laid siege to the fort of Sōnpur where one of the confederates named Dīqāl Haryānī had taken refuge. The fort was captured and given up to plunder but Dīqāl managed to escape. About 5,000 Muslims who had been imprisoned in the fort were released. The victors next attacked another Rājā called Ṭāḥā Bīrī by Ibn al-Athīr, took his fort and returned to Lahore with immense booty. These victories restored for some time the waning prestige of the Ghanāwīs in Upper India.

It was the ambition of Mawārud to restore the greatness of his empire by conquering the provinces which his father had lost to the Sālādkūs. In Muḥarrām 435 (August 1043) he attacked Khurāṣān but was defeated by Alp Arslān b. Dāwūd. In the following month the Ghanāwīs retrieved their reputation by inflicting a defeat on the Sālādkūs near Bust, but in spite of this reverse they became so powerful that Mawārud found it difficult to overcome them single-handed. After protracted negotiations, he secured the assistance of the ruler of Isfahān and the Kāhān of Turkistan, and marched towards Balkh to join forces with the Kāhān of Turkistan, but he had not gone far
when he was taken ill with colic and was forced to return to Ghazna where he died on 20th Rajab, 441 (December 18, 1049), at the age of 29 years.

Mawdūd was a good ruler and was famous for his generosity. Fāʾīl-i Mawdūd (the Arrow of Mawdūd) is called after him. It is stated that in his wars he used golden arrows so that if the victim was killed, the gold in the arrow would pay for his funeral, and if he was only wounded, it would defray the expenses of his treatment. He was a skilful general, and if his premature death put an end to all hopes of crushing the power of the Saljuqs.

(M. Nāṣīm)

**MAWDŪD** B. 'IMĀD AL-DIN ZANGI, KUTUB AL-DIN AL-ARABĪ, LORD OF AL-MAWLĀ. After the death at the end of Djamālī 1154 (Nov. 1149) of his elder brother Saif al-Din Ghazī I [q.v.], Mawdūd was recognised as lord of Al-Mawīl through the influence of the powerful vizier al-Djamāl [q.v.] and of the commander-in-chief of the army Zain al-Din ‘Ali. A number of emissaries negotiated with the third brother, Nūr al-Din Mahmūd, who lived in Halab, and it was agreed that Nūr and Mawdūd began preparations for war. The vizier however, who feared not only Saladin but also the Franks, succeeded in dissuading him, whereupon Nūr al-Din handed over Sindjīr to his brother and was given Hims and al-Jalīs instead. On other questions also Mawdūd followed his vizier’s advice; al-Djamāl however fell into disgrace and in 558 (1163) he was thrown into prison and replaced by Zain al-Din Kīlīk. In the next year Mawdūd joined forces with his brother Nūr al-Din in a war against the Franks, and in Ramaṭūn (Sept. 1164) the latter defeated the Christian forces and stormed Kafrāt Hārim. According to the most usual statement, Mawdūd died on 22nd Dhu’l-Hijja 565 (Sept. 6, 1170) aged about forty. He is described by the Oriental historians as a just and benevolent ruler. He was succeeded in Al-Mawīl by his son Saif al-Din Ghazī II.

(K. V. Zettlerstein)

**MAWKIF** (lah), *nomen laci* from *wābd* “to stand”. Of the technical meanings of the term two may be mentioned here:

1. a. the place where the *waṣaf* [q.v.] is held during the pilgrimage, e.g. *Arafat* [q.v.], and *Mawdūd* [q.v.] or *Damm*. In well known traditions Muhammad declares that all *Arafat* and that all Mawlāna is mawīl (Muslim, Hāfīz, trad. 149).

Abūl Dīwān, *Mawīl*, latb 56b, 63 fac.; cf. Handbuch of Early Mus. Tradition, s. v. *Arafat*. Snouck Hurgrono (Het mekkensche feest, p. 156) *Vergezichte Geschiedeniss*, i. 99) has conjectured that these traditions were intended to declare that the hills of *Arafat* and Mawlāna of their sacred character, which they doubtless possessed in pre-Islamic times.

b. the place where on the day of resurrection several scenes of the last judgment will take place; cf. al-Ḥāṣāṣ, al-Durrā al-Fāḥīha, ed. Gantier, p. 373, 653; m. 813; cf. *Kitāb Aṣwāt al-Riṣāla*, ed. M. Wolff, p. 65 sqq.

(A. J. Wiesinger)

**MAWLĀ** (la), a term with different meanings (cf. Linan al-ʿArāf, xx. 289 sqq.) of which the following may be mentioned:

a. Dārur, trustee, helper. In this sense the word is used in the Kūrān, Surā xlii. 12: “God is the mawā’il of the faithful, the unbelievers have no mawā’il” (cf. Surā iii. 143; xli. 62; viii. 41; ix. 52; xxii. 28; lxv. 2). In the same sense mawā’il is used in the Shīʿite tradition, in which Muḥammad calls *All the mawā’il of those whose mawā’il he is himself. According to the author of the *Lūnā*, mawā’il has the sense of *wābd* in this tradition, which is connected with Ghuṣir al-Khammās [q.v.]; cf. C. van Arondijk, De ophoornst van het Zuidtollitische innamaat, p. 18, 19). It may be observed that it occurs also in the *Mawā’il* of Ahmad b. Ḥanbal (i. 84, 118, 119, 153, 389 sq.; iv. 281 sqq. etc.).

b. Lord. In the Kūrān it is in this sense (which is synonymous with that of *najjār*) applied to Allah (Surā li. 286; cf. vi. 62; xii. 17), who is often called *Mawīl* “our Lord” in Arabic literature. Precisely for this reason in Tradition the slave is prohibited from calling his lord mawīl (Bukhārī, *Qīsidah*, latb 165; Muslim, *Aṣwāt*, trad. 15, 16).

It is not in contradiction to this prohibition that Tradition frequently uses mawā’il in the sense of “lord of a slave”, e.g. in the well known *ṣīlah*: “Three categories of people will receive twofold retribution... and the slave who fulfills his duty in regard to Allah as well as to his lords” (Bukhārī, *Qīsidah*, latb 31; Muslim, *Aṣwāt*, trad. 45).

Compositions of mawā’il and suffixes are frequently used as titles in several parts of the Muslim world, e.g. mawā’il (mawā’il), “my Lord”, especially in North Africa and in connection with saints; mawā’il (mawā’il), “Lordship” (especially in India and in connection with scholars or saints).

The term mawā’il is also applied to the former lord (patron) in his relation to his freeman, e.g. in the tradition: “Who clings to a (new) patron without the permission of his (legal) mawā’il, on him rests the curse of Allah” (Bukhārī, *Qīsidah*, latb 17; Muslim, *Qīsidah*, trad. 18, 19).

c. Freed slave, e.g. in the tradition “the mawā’il counts as the people to whom he belongs” (Bukhārī, *Qīsidah*, latb 24, etc.). In this sense mawā’il, or rather the plural *mawā’il*, is frequently used in Arabic literature. The evolution of the idea as well as the position and the aspirations of the *mawā’il* have been expounded by von Kreuner (*Kulturgeschichte der Orientalen unter den Chasīn*, xii. 154) and by Goldhoffer (Mehmedkünstliche Studien, i. 104 sqq.), by the latter especially in connection with the *mawā’il* [q.v.]. On the position of the
manālli in the law of inheritance law cf. the art. MISĀHIL.

MAWLAWI. [See MAWLAWI.]

MAWLAWIYA (Turkish pronunciation Mewlawiya), Order of Derishes called by Europeans Dancing or Whirling Derishes.

1. Origin of the Order. Its name is derived from mawlānā ("our master"), a title given per excellent to Djalāl al-Dīn al-Rūmī (e.g. by the Turkish writers Sa'd al-Dīn and Fečesi, cited below), of which the Persian equivalent was according to the Mānihī al-Arifīn (translated by Huntress in Les Saints des Derishes Turques, Paris 1913–1914) bestowed on Djalāl al-Dīn [q.v.] by his father, with whom this hagiography commences. According to the same authority, (i. 162), his adherents adopted the name Mawlawīs, and indeed copyists of the Maṭnunād of the years 687 and 706 a. H. thus designate themselves (Nicholson's ed., i. 7 and iii. 11); yet Ibn Baṭṭūṭa, who visited Konia after the latter date, asserts that they were styled Djalālīsya, and the word Mawlawī seems to have been used occasionally in the Mānihī in the sense of "scholar" which it ordinarily has in India. This work asserts that one Baḍr al-Dīn Guhārī (a historical personage, since he is mentioned in Ibn Bihī's chronicle of the Seljuqs of Asia Minor) built a college at Konia for the children of Djalāl al-Dīn's father, which was inherited by Djalāl al-Dīn. The Mānihīs (by Shams al-Dīn Ahmad al-Attār, 718–754 a. H.), however, so teems with anachronisms and extravagances that its statements must be used with great caution.

The European name is taken from the ritual of the ḍhikr, in which the derishes revolve, using the right foot as a pivot, to the tune of various instruments. Djalāl al-Dīn is said to have claimed that he had elevated the practice, but denied that it was an innovation (Mānihīs, ii. 79). Certainly "dancing" (raṣf) is mentioned as a Sufi practice in works earlier by some centuries than Djalāl al-Dīn's time, often with severe condemnation. The historian Sahāwi (al-Thīr al-Maṣūb, p. 220) in recording an edict issued in 852 against the practice at Egyptian cities mentions by one of the earliest Sahāwi in which the Sūfis who perform it are compared to asses and are bitterly reproached.

Dancing is indeed a natural accompaniment of music (aḍḥīq, x. 124) or poetry (rebūd al-Arīb, v. 131, 11), but the whirling of the derishes would seem to have for its purpose the production of vertigo rather than the presentation of an idea in rhythm. Of the various reasons which have been assigned for it the most interesting is that recorded in the Mānihīs (i. 190) as the excuse of Djalāl al-Dīn, viz. that it was a concession to the pleasure-loving inhabitants of Asia Minor, who might thereby be drawn to the true faith. The theory that the whirling was a reproduction of the motions of the celestial bodies is found in his Maṭnunād (ed. Nicholson, iv. 734), and the same view is offered in the much earlier Nīsāba of Ibn Ṭafṣīl (Cairo 1822, p. 75), where its hypnotic effect is emphasized. The anits in the Mānihīs are represented as able to maintain the exercise for many days and nights continuously, but the actual ḍhikr lasts only about an hour, with some intermission.

2. Relations with other Orders. Although the earlier mystics, such as Djinnaed, Bīāṭānī and Ḥallādī are mentioned in the Mānihīs with profound reverence, the treatment of founders of orders who came near Djalāl al-Dīn's time is very different. Abūl-Kādir of Ḩallād is ignored, Ibn 'Arabī mentioned with contempt, and Rifa'ī with severe condemnation. Ḥājjī Bektāsh is represented as having sent a messenger to inquire into the proceedings of Djalāl al-Dīn, and to have acknowledged the supremacy of the latter. At a later period the rivalry of the Mawlawi with the Bektāshi Order became acute.

It has been shown by F. W. Hasluck (Christianity and Islam under the Sultans, Oxford 1929, ii. 370 sqq.) that the environment wherein the Mawlawī Order originated was favourable to the Christians, and that throughout its history it has shown itself tolerant and inclined to regard all religions as reconcilable on a philosophic basis. He suggests that the veneration of the Muslims of Konia for the supposed burial-place of Plato (in a mosque which was once the church of St. Amphilochois) may have been intentionally favoured by the Mawlawi derishes, or possibly their founder, as providing a cult which Muslim and Christian might share on equal terms. In three other sanctuaries of Konia, one of them the mausoleum of Djalāl al-Dīn himself, he found evidence of a desire to provide an object of veneration to the adherents of both systems. It is not, however, easy to accept his inference that some sort of religious compromise on a philosophic basis was devised between the Mawlawi Sūfis and the local Christian clergy. It appears from the Mānihīs that the Order was frequently exposed to persecution from the ḍhikrīs in consequence of music and dancing; and they found an analogy in Christian services to the employment of the former. They are credited in recent times with having impeded the massacres of Armenians.

3. Spread of the Order. The Mānihīs attributes its propagation outside Konia to Djalāl al-Dīn's son and second successor, Sulaymān Bābā al-Dīn Walad who "filled Asia Minor with his lieutenants" (ii. 262). It would however appear from Ibn Baṭṭūṭa's narrative (ii. 282) that its following was not in his time extensive outside Konia, and was confined to Asia Minor. The story told after Sa'd al-Dīn by v. Hammer (G. O.R., i. 147) and others, that as early as 759 (1357) Sulaimān son of Orkhān received a cap from a Mawlawi derish at Belârī, has been shown by Hasluck (ii. 613) to be a fiction. The historians make no allusion to any attempt at attaching to the Mawlawi chief when Murād I took Konia in 1386 but when the city was taken by Murād II in 1435, peace was negotiated according to Sa'd al-Dīn (i. 358) by Mawlawi Hamza, but according to Nisāfī (quoted ibid.) by a descendant of Mawlawi Djalāl al-Dīn al-Kūmī, Arīf Celebi, "who united all the graces of worth and pedigree, and possessèd mystic attainments"; the rebellious vassal supposed that a holy man of the family of the Mawlawi would inspire more confidence. The same person performed a similar service in 1443 (Sa'd al-Dīn, i. 371). According to V. Cunet (La Turquie d'Asie, i. 329) Selim I when passing through Konia in 922 (1516) in pursuit of the Persians (†) ordered the destruction
of the Mawlāwīyah, at the instance of the Shāhīkh al-Islām; and though this command was repealed, the moral and religious authority of the head of the Order was gravely compromised. That the saints of Konia were highly revered was in the Ottoman Sphere later in the sixteenth century. The list of sacred objects, visited by Sāyid 'All Kapūs in 1554, which commences with those of the Usūl, brothers and his son (Pococke's History, 1283, p. 371). In 1564, Margul IV assigned the ḥabīn of Konia to the Cēlebi. Yet the first reference to ḍarwsha in Constantinople which Hašluk produces, is from the time of the Sultan Idrīsh (1540–1583). Cainet mentions three Mawlāwīs of the first rank and one ṭekye of the second in Constantinople and the neighbourhood; he gives the names of the saints whose tombs they contain, without dates. He mentions seven other Mawlāwīs of the first rank, at Konia, Manissa, Kaşarşīr, Bahriya, Egypt (Cairo), Galipoli and Brusa; and as the more celebrated of the second rank that of Şamsul Taβrīzī of Konia, and those in Medina, Damascus and Jerusalem. In these Hašluk adds ṭekyes at Canea (Crete), founded about 1880, Kanario, Rumelia, Tartar (in Thessaly) and possibly Tempe (for one in Salónica see W. M. W. 1922, pp. 877). Barnett, and for one in Cyprus that of Lukach cited below). It would seem that the Order was confined to the limits of the Ottoman Empire, and indeed to its European and Asiatic territories.

By a decree of Sept. 4, 1925 all the ṭekyes in Turkey were closed, and the library of the Mawlāwīyah of Konia was transferred to the Museum of the city (Oriente Moderno, 1925, p. 455; 1926, p. 584).

4. Political importance of the Order. Reference may be made to Hašluk's work (ll. 604 sq.) for refutation of the stories unscrupulously reproduced by Cainet and some less authoritative writers. In these the Shāhīkh of the Mawlāwī becomes first the legitimate successor by blood of the Seljūq dynasty, and secondly the real Caliph. Hašluk supposes these tales to be based on the supposed "traditional right" of the Mawlāwī Shāhīkh to gird the new Sultan with a sword. This right cannot be traced earlier than 1648, and appears to have obtained recognition in the nineteenth century. It would seem that reforming Şāfī used the Mawlāwī Order as a make-weight against the Bektāshī, who supported the Janissaries, and then against Qalāma, who supported the treatment of the Muslim community as a privileged community against the dhimmī. In recent times the Şāfī 'Abdu'l-Azīz and Meḥmēn Köşkūl were members of the Order.

5. The Ritual of the Order has been described by numerous travellers, e.g. J. P. Brown, The Derwašīyah, 1888, pp. 198–206; 1927, pp. 250–258; V. Cailet, loc. cit. W. M. W., 1922, pp. 877; and Lukach in the works cited; M. Hartmann, Der Seljūkische Orient, 1910, ill. 12; S. Anderson, M. W., 1923. The act consisted of a cap called šibbe, a long sleeveless skirt called tawšere, a jacket with sleeves called dast-far, a waistband called šēm, and a cloak with sleeves called chérk. thrown over the shoulders (in Lukach's description [Cyprus] "a violet gown worn over a dark green cassock"). The instruments employed according to the last writer (dealing with Konia) are six: reed-flute, sīrūn, rebbe, drum, tambourine, and one other. Cainet enumerates four, of which three agree with the above, the last being hāfl, vaqqa, a sort of small cymbal. Brown enumerates three, flute, violin, and kettle-drum. Those mentioned in the Mawlāwī are denominated by Hūrt, flûte, violon and tambour de bagourd. The service in Konia according to Lukach was held twice a month after the Friday prayer; in Constantinople, where there were several ṭekyes, they were held more frequently, to enable the members of different ṭekyes to join in.

6. Administration of the Order. The head of the Order, resident at Konia, had the title Mutlû Ḵambār, Ḥāfiz-i Pir, Cēlebi Mutlû, and Ḵazī Etendi. A list of persons who have held the office is given by Hartmann (loc. cit., p. 193) after the Ḥabīb-i Âḏẖār-i Mawlāwi, making 20 in all down to 1910; this list appears to be imperfect, and the Cēlebi whom Lukach found in Konia was uncertain whether he was the 39th or the 40th. The head of the establishment at Manissa counted as second in authority. Cainet enumerates seven officials subordinate to the Cēlebi at Konia, but the names of several seem seriously mutilated. Others mention a secretary (mekāli). An account of the discipline which those who would enter the Order had to endure is given by Hūrt (Konia, la Ville des Derwašiètes Timourides, Paris 1897). They had to perform mental service for 1001 days, divided into periods of 30; when this was over, they were clothed in the uniform of the ṭekye, assigned cells, and instructed in the exercises of the Order; and they had to remain thus occupied till they believed themselves able to enter into relation with the Deity by means of whirling, meditation, and music.

(On. S. MAŠALOŠTHO)
the Prophet as a holy day only begin at a late date; according to the generally accepted view, the day was Monday the 12th Rabi‘. The story which Wustenfeld originated, according to which the pious Shâfi‘i Karâhid (d. 343) observed this day by breaking his fast upon it, which he only did on one occasion however, the 7th of Dhu‘ al-Fitr (ahd. G.W.C., xxxvi., No. 126), does not seem to find any confirmation in the sources and is in contradiction to the general custom of fasting on Monday, as this day plays a special part in the life of Muhammad, as the day of his birth, of his Hijra and of his death (Ghazzali, Ḥiyâ‘ [Büyük], i. 363 and pass). On the Jewish origin of fasting on Monday, see Wessinck, Muhammad en de Joden, p. 126). But that on this day a special celebration was arranged, as distinct from private observation, one first learns for Mecca, where one would expect it earliest from the local traditions, from Ibn Dhu‘abir (d. 614; Travels, p. 113), who however is obviously referring to a custom which has already been a considerable time in existence. The essential feature of the celebration is however only a somewhat considerable increase in the number of visitors to the Ma‘awil or Nabî. An anticipation of the Ma‘awil celebration is found in Egypt as early as the middle and later Fatimid period. During the period of office of the vizier al-Mâḍal (487–513), we hear that the *four Ma‘awil* were abolished but a little later revived in all their old glory (Maqurid, al-Karâhid, i. 466; for the description of the festival: l. 432 sqq.). The celebration still took place in broad daylight and participation was practically limited to the official and religious circles of the city. There were not yet any preliminary celebrations; but we already have a solemn procession of all the dignitaries to the palace of the caliph, in whose presence — he sits, revered with a veil on one of the balconies of the palace — the khaṭam of Cairo (cf. above, l. p. 928) in succession deliver a religious address, during which a special ceremonial is observed. As to the matter of the discourses, we only know that they were like those delivered on the nights of the illumination so that they presumably dealt mainly with the occasion of the celebration. It is interesting to note that the Ma‘awil ceremonies here are not confined to that of the Prophet but the ma‘awil of ‘Ali, Fāṭima and even that of the reigning Caliph, the Imâm al-Mahdî, are similarly observed. As in the fundamental idea of these celebrations (Ma‘awil al-Imâm al-Mahdî), Siṭ’s influence can also be traced in separate elements of it. It had not yet come to be a festival of the common people in the time of the Fātimids. This no doubt explains why — except in Maqurid and Ka‘kâshandi — the great historians of Fātimid Cairo — there is hardly any reference to these celebrations in the literature emanating from Sunni circles, not even when writers like ‘Ali Pasha Mubarak are dealing with features peculiar to Cairo and deal very fully with the history of the Ma‘awil festival.

The memory of these Fātimid mawlid seems to have almost completely disappeared before the festivals in which Muslim authors unanimously find the origin of the Ma‘awil, the Ma‘awil which we first find celebrated in Arba‘a in 604 by al-Malik Musa‘far al-Din khôkhîr, a brother-in-law of Saladin. The fullest account is given by a somewhat later contemporary, the great historian Ibn Khalîlîkân (d. 681) on whom later writers continually base their statements (e. g. al-Suyûṭî, Hârîn al-Makâni [Broekelmann, G. A. L., ii. 157] and others). The personality of this ruler, his period so disturbed by the turmoil of the Crusades, and his milieu to which Ibn Khalîlîkân calls special attention, lead us to suggest marked Christian influence in the development of this celebration; his close relations with the Shî‘i movement on the other hand suggest the possibility of influence of quite a different nature. This is clear from the description of the celebrations. Preparations are begun long before and people come in from remote districts. The prince takes special care that the visitors are housed in splendid wooden huts especially built for the occasion for music, dancing and all kinds of amusements (shadows-plays, jugglers etc.). The streets of the town were for weeks as busy as on the occasion of an annual fair. On the eve of the Ma‘awil night a torchlight procession took place from the citadel of the town to the khânqâh, led by the prince after the maghrib salât. Next morning the whole populace assembled in front of the khânqâh, where a wooden tower had been erected for the ruler and a pulpit for the mawâlik. From this tower the prince surveyed not only the crowd assembled to hear the address but also the troops summoned to be reviewed on the adjoining mawādân. We are told nothing of the presence of the prince himself, but the address was to be reviewed on the adjoining mawādân. We are told nothing of the presence of the prince himself, but the address was to be reviewed on the adjoining mawādân. We are told nothing of the substance of the address. On its conclusion the prince summoned the distinguished guests up to the tower to give them robes of honour. The people were then feasted at the prince’s expense on the mawādân, while the nobles were entertained in the khânqâh. The following night entertainment was given to the prince by so many of the Sûfîs in sama‘ (Ibn Khalîlîkân, Büük 1299, ii. 550 sqq.).

In contrast to the Fātimid celebrations, what is specially striking here is the large share taken in the festival by the Sûfîs and the common people, a circumstance which is all the more notable, as it is probably in this association with Sûfism that we have the reasons for the later great popularity of the Ma‘awil. At the same time the torchlight procession, really foreign to Muslim sentiment, and borrowed from contemporary Christian customs at festivals deserves our attention; it is not found at the celebration in Cairo which was purely a day long ceremony, while the lavish entertainment of all present, especially with sweets, and the addresses are found in both cases and the hall is a large, available ceremonial, we seem really to have the foundation of all Ma‘awil celebrations. With the great political and religious movement, which we may call Sûfism very quickly took deep roots, thus preparing the way for an observance like the Ma‘awil, which is essentially kept up by popular religious sentiment.

The observance of the festival spread sooner
or later from here to Mecca where its old form was transformed. Its further progress was along the coast of North Africa to Ceuta, Tlemcen and Fés to Spain but it also went eastwards to India, so that ultimately the whole Muslim world is united on this day in a ceremonially, frequently of unprecedented splendour, but unlike everywhere in its main features. We have innumerable descriptions of the festival from all parts of the Muslim world, most fully for Mecca (Chroniken, ed. Wünschfeld, ii. 438 sq.; Ibn Hādjar al-Haitami, Mawlid (Brockelmann, G.A.L., ii. 386); for modern times: Snouck Hurgronje, Mecca, ii. 37 sqq.), where the celebrations have always been famous, for Egypt (Muḥammad Tawfik al-Bakrī, Bait al-Sidīdah, Cairo 1923, p. 404 sqq.; Lane, Manners and Customs, 8581, i. 156 sqq.) and the Indies (Snouck Hurgronje, Achehneen, i. 207; do., Verzekerde Geschiedenis, ii. 8 sqq.; Herklotz, Qaumun u Islam, 1825, p. 233 sq.; Golsheier, Conte des saints, 1886, p. 133; here it is not the birth but the death of the Prophet that is commemorated). The Turkish element in Islam also has not restricted the advance of the celebration of the Mawlid (Turk.: Mawlid). Since Sulṭān Muḥammad III introduced it in 996 into the Ottoman empire, it has enjoyed increasing popularity. Nowadays it is no longer confined to the Moslem world, but is a very popular festival. Accurate descriptions of the festival as celebrated in the older period of the court of Constantinople (Mouradian d’Ohsson, Tableau général, Paris 1787, i. 255 sqq.; G.O.R., viii. 441) clearly reveal its relationship with the festivals of a more popular nature in other lands of Islam.

One element in particular is very prominent, and that is the most characteristic one of the later celebrations, namely the recital of mawlid’s i.e. panegyrical poems of a very legendary character, which start with the birth of Muḥammad and praise his life and virtues in the most extravagant fashion. The origin of these addresses is already to be found in the religious addresses in Fātimid Cairo and in Arbeia and perhaps in part at least go back to the sermon usual at Christmas festivals. The K. al-Tawfik, Rauh, al-Sabū, 373, which Ibn Diyya composed during his stay in the palace at the suggestion of Khālifah was already famous as a mawlid at this period (Brockelmann, G.A.L., ii. 316). It was not till later times however that mawlid became a predominant element in the celebration, along with torchlight processions, feasting and the fairs in the street, ever increasing in size. In Mecca, for example, at the present day they form the main feature of the celebration in the mosque; among the pupils they are the most popular evening entertainment for days before the celebration and teachers interrupt their lectures in order to deliver mawlid to the students and the people on the streets and in the coffee-houses find edification and entertainment in listening to them. The number of such mawlids is quite considerable. Besides the famous but not very popular Ḥāfiẓ Shāh’s of Kāh b. Zuhair of the older period, the Burda and the Hamayya of al-Shafiri and their numerous imitations, there are a whole series of regular mawlid, some of which are intended to instruct like that of Ibn Hādjar al-Haitami, others purely edifying like a shorter version of it, and notably that of Ibn al-Jawzī (G.A.L., i. 503) and al-Barrandjī (G.A.L., ii. 354). In addition to those in Arabic, there are a great many mawlid in Turkish (Irmg. Engelke, Sültemin Tschekelbī’s Lekt.

gedicht, 1926). It is significant of the part played by these poems, that they have passed from the mawlid celebrations to other festivals, so that the word has actually become a name for “festival” and particularly “feast” (Caftima; cf. Snouck Hurgronje, Mecca, ii. 147, 154 and pass.; Becker, in M.R., ii. 1911, p. 19 sqq.). Quite apart from any festivals, the recitation of mawlid is popular, in Palestine for example in fulfilment of a religious vow (T. Canaan, in Journ. of the Pol. Or. Soc., vii. 1926, p. 55 sqq.; cf. also the introductory annunciation in the mawlid alleged to be by Ibn al-ʿArabi (G.A.L., i. 441)). Like the substance of these mawlid, the form is also very regular. Prose and poetry alternate, interrupted frequently by appeals to utter blessings on the Prophet. Dhikras are usually added at the end.

The Mawlid as the finest expression of reverence for Muḥammad has found almost general recognition in Islam, as fulfilling a religious need of the people and as a result of the strength of the Shiʿī movement. This must not however blind us to the fact that at that time there has also been vigorous opposition to it. This is found as early as the festival of Abūl ṭayy entertainments, i.e. Mawlid. The celebration is a bidʿa, a religious innovation, which is in sharp contrast to the Prophet’s teaching. Even some advocates of the festival confess this and the strictly orthodox, who adhere to the sunna, reject it most emphatically. But, as in so many other things, practice has here proved stronger than dogmatic theory. Once the festival had been thoroughly established in the religious life of the people, it was bound in time to find approval as an element of the ṣaʿīd. Its supporters found it easy to get this bidʿa legitimated, in theory at least, as a bidʿa ḥasanah. When the festival had been accepted by the consensus of the community, the essential thing had been done and legitimate ground for opposition had been removed. While the opposition thus finds itself reduced to combating the outer forms of the festival and its developments, its supporters are never tired of calling attention to the merit that lies in feeding the poor, in the more frequent reading of the Kurān and in the expression of joy over the birth of the Prophet and all that the day brings with it. It is significant of the character of the opposition that the opponents object to those very forms which show the influence of Shiʿism (dancing, ṣamman, ecstatic phenomena etc.) or Christianity (processions with lights etc.). The most interesting document of this kind is a ṣaʿīd by al-Sayyid (d. 911; Brockelmann, G.A.L., ii. 157; Husayn al-Maḥṣūlī fī Amāl al-Mawlid) which gives a brief survey of the history of the festival, then discusses the pros and cons very fully and concludes that the festival deserves approval as a bidʿa ḥasanah, provided that all abuses are avoided. Ibn Hādjar al-Haitami in his Mawlid and Ḥāfiẓ al-Dīn (Chroniken der Stadt Mecca, iii. 439 sq.) take the same view, while Ibn al-Ṣanʿānī (d. 737) in a more strict Millīkī condemns it most vehemently (K. al-Mudākhba, 1320, l. 153 sqq.).

Although the height of this struggle was apparently reached in the eighth—ninth century, it did not completely die down in later years; indeed it received new life with the coming of the Wahhābīs. The cult of the Prophet is in such contradiction in their fundamental principle, the restoration of the ideal purified primitive Islam, that we can understand that they should completely
disapprove of this, the most popular and most splendid expression of it. In doing this, they are only putting into action the protests of the extreme Ḥanbali Ibn Ṭamīyā (d. 748), the famous precursor of their movement, against innovations which are contrary to the sunna (Ibn Ṭamīyā against the holding of ḥajjām in the Mawlid night: Faṣlūd [Cairo 1326], i. 312). Similar ideas are still found to-day even where Wahhābīsm is rejected, notably in the school which Goldziher calls "Kulturwahhābīsmus", founded by the celebrated Muhammad ʿAbdal (d. 1905), who in connection with the worship of saints condemns the Mawlid also, in the periodical al-Mawlid (Goldziher, Rückentage der islam. Karamauneitung, p. 359 sqq.).

In the reverence shown to other Mālikī saints, the Mawlid also play a great part. Although the success of an appeal to a saint does not depend on particular days, yet certain days and birthdays in particular are regarded as particularly favourable. These celebrations are often connected with places, to which a certain saint is said to have been attached from pre-Islamic times (the Mawlid of Shaṭīḥ ʿAṣārān in Badāwī in Taḥṣīl: Goldziher, Mus. Stadl., ii. 338 sqq.). There are also Mawlid of nameless saints. In the derwīsh orders, next to that of the Prophet, the Mawlid of the founder is held in particular popularity. "Allāh ʿAbdul Mubārik (Abū Ḥafs Ḫudānī, i. 90; iii. 299 sqq.) mentions a large number of such festivities in modern Cairo, the characteristic features of which, he says, are the brilliant illumination of the town, the ceremonial procession (Makhlūfa; at the Mawlid al-Nabī: makhlūf; cf. F. Kahle, in Isl., vi., 1916, p. 155 sqq.) and the great feasts. One cannot now imagine the popular religion of Egypt without these feasts.

(H. FUCHS)

AL-MAWSIL. [See MUSUL.]

MAWSIM (Arab. "from the root m-w-s, 'to stagnate', 'to stagnate'; "market, festival"). In this sense the term is employed in Ḥadīth, especially in connection with the markets of early Arabia, such as those which were held in ʿUkāt, Madīnah, Ḥijr, Ḫudaydā, Taʿlīb, etc. (Bahārī, Ḥudaydī, b. 139; Taʿlīb, sūra 2, b. 34). At these markets the worst elements of Arabia gathered (al-mawsim yağus, ṭīlat al-mawsim). Advantage was also taken of these assemblies to make public proclamations and inquiries, e.g. in order to regulate the affairs of deceased persons (Bahārī, Ḫudaydī, b. 137; Manākib al-ʿAṣārān, b. 27). As the pilgrimage was at the same time one of the chief markets of early Arabia, the term mawsim is often combined with it (mawsīm al-ḥajj, Bahārī, Ḫudaydī, b. 150; Buṣīrī, b. 1; Abū Daʾwūd, Manākib, b. 6). Upon this basis the term mawsīm has developed chiefly in two directions; it has acquired the general meaning of (religious) festival (Daʾyī, Supplement, s.v.) and that of season. In the Lebanon mawsīm denotes the season of the preparation of silk (Bīrūzī, ʿUṣūl, s.v.).

In India and in European terminology referring to the regular returning winds and rain periods. Mawson, moseyon, mawson and other corruptions of the term are found in this literature.

MAWWAL. [See MAWLĪYA.]

MAWZŪNA, a small silver coin struck by the Sarifs of Morocco in the eighteenth and early nineteenth century. It was the smallest silver piece and equivalent to 24 copper fulāns or a quarter dirham. Another name for the mawzūna was šāfur. In 1911 (1330) copper coins of the value of 10, 5, 2 mawzūna were issued, the mawzūna being now the equivalent of a centime. On recent issues the name mawzūna has disappeared and its place is taken by šāfur.

C. Broekelmann

MAZAGAN (old Arabic name: al-Burâijida, "the little fortress"; modern Arabic name: al-Djaâlida "the new"), a town on the Atlantic coast of Morocco, 7 miles S.E. of the mouth of the Wadi 'Umm Rabih. Its population in 1926 was 19,159, of whom 14,141 were Muslims and 3,018 Jews.

Some writers think that Mazagan was built on the site of the "Dhâr al-Dhâr of Polcmery, or Forum Kusha of Pliney. The text however does not say that there was a town there, and there was only a roadstead frequented by ships. The situation seems to have remained unchanged throughout the middle ages. As to the name Mazagan, it seems to appear for the first time in al-Bakrî (eleventh century A.D.). This geographer, enumerating the ports of Morocco on the Atlantic coast, mentions a Marifin (de Salome's reading), which should not doubtlessly be amended to Marighan, a form attested by Idrisi (eighth century). The same place-name is found in a manuscript collection of edifying anecdotes relating to the great saint of Assamulâr: Sîdî Abû Shu'âib, who also lived in the twelfth century. Marighan appears here as a fishing village between Assamulâr and the Tibâṣî of Tâg [q.v.]. The vicinity of these two fairly important towns prevented it from developing. The roadstead is marked on a map of Morocco, which is valuable for historians and cartographers of the sixteenth century and the seventeenth (publ. by Ch. de La Roncière, Découverte de l’Afrique au Moyen Âge, 1925) which give the forms Messegan (1339 and 1737), Mashegan (1567), Masazung, intermediate between Marighan and the Mazagho of the Portuguese. The latter, from the end of the sixteenth century, used to come to the harbour of Mazagan for cargoes of the grain of Dâkkâla to supply the capital. In 1502, a squadron commanded by a Portuguese gentleman, Jorge de Mello, caught by a storm in the Straits of Gibraltar was driven to Mazagan and landed there. The Portuguese installed themselves in a deserted tower there to defend themselves against a possible attack by the inhabitants. Jorge de Mello soon returned to Portugal and obtained the king's permission to build a fortress at Mazagan. Although the story of these events is only recorded by writers of the sixteenth century, it must be in keeping with the facts, for letters patent of king Dom Manuel dated May 21, 1505, give Jorge de Mello the captnacy of the castle which he is authorised to build at his own expense at Mazagan. He did not however make use of his privilege for, when on Aug. 27, 1513 the Portuguese army sent to take Assamulâr under the command of the Duke of Braganza landed at Mazagan, there was neither town nor fortress there except the old ruined tower (al-Burâijida). The difficulty of entering the port of Assamulâr led the Portuguese to establish a more accessible base at Mazagan. During the summer of 1513 under the direction of the architects Diego and Francisco da Arruda, a square castle flanked by towers at each of the four corners was built. One of these bastions was formed by the old tower, al-Burâijida, the name of which survived among the natives as that of the Portuguese town. This early castle still exists almost in its entirety. Particularly striking is a magnificent subterranean hall, the vaulting of which is supported by 25 pillars. It was probably, rather than a salle d’armes, a huge granary built to hold the contributions in grain paid by the tribes subjected to the Portuguese protectorate. It was at a later date used as a cistern to hold supplies of drinking-water for the garrison, when the place blockaded by rebellious tribes had no longer any taxes in grain to collect, which happened in 1541. For ten years before, the situation of the Portuguese stations on the coast, in view of the religious and anti-foreign movement stirred up by the coming and successes of the Salûdian Sharifs, had been so bad that the king of Portugal thought of abandoning several of his fortresses. The taking of the town by the Bedouin chief of Agadir (Agadir) by the sharif (March 12, 1501) was a warning. John III decided to evacuate Safi and Assamulâr and to concentrate on Mazagan, a more favourable and more easily defended position, all the Portuguese forces he wanted to leave in the south of Morocco. The operation was carried through in the autumn (before Nov. 6). From the month of April onwards the work of putting the town in a state of defence had been going on. The work was actually pushed on during the last months of the year (1541) under the direction of the great architect João da Castilho, who used plans prepared by an Italian engineer, Benito of Ravenna. This was when the walls of Mazagan were built as they still stand to-day.

In retaining Mazagan the Portuguese wanted to keep a base on the coast to secure protection for the route to India. They also hoped that this fortress would serve them as a base for the conquest of Morocco, when a favourable juncture should arise, which however never happened. In fact for the more than two hundred years in which the Portuguese retained it, the possession of Mazagan only served them as a pretext to obtain from the Pope bulls of Crusades, which supplied the Papal Treasury with appreciable revenues. The tribes kept the town so closely blockaded that the inhabitants could not go outside its walls without military protection. The collection of wood and the cultivation of a few gardens, continually devastated by the natives, gave rise to continual skirmishes. The Muslims of the country round had built two little towns, a few miles from Mazagan, Fâya al-Zamân and Fâya Awâlî Dawaîlyh, where they entrenched themselves to keep up the blockade and where the devout, desirous of acquiring merit from participation in the holy war, used to come to discharge a few shots at Mazagan.

Badly supplied by sea, often a prey to famine and epidemics, the garrison and population however lived in sufficient security under their powerful walls, against which the tribes could do nothing. On several occasions however, they had to resist vigorous attacks. In April 1562 Muhammad, son
of the Sa'dian Sultan, 'Abd Allah el-Ghalib bi'llah, at the head of a vast horde of tribal warriors laid siege to Mazagan. Two assaults were repulsed and the besiegers lost heart. On Aug. 4, 1623, the place, attacked by 3,000 Muslims during the absence of the governor, who was led into an ambuscade, owed its safety to his wife who ordered the gates to be shut, organised the defence, distributed arms to the whole population, women as well as men, and sent them on to the walls. During the disorder which accompanied the decline of the Sa'dian dynasty, the governors of Mazagan seem to have succeeded in raising the blockade and resuming relations to some extent with the tribes. The mīnaštānd Sīdī Muhammad al-Alyāţahi, to put an end to this, attacked the Portuguese in 1639 and inflicted some losses on them. Mawlay Ismā'il, occupied with the siege of Cotta, never seriously tried to take Mazagan. The honour of retaking it belonged to his grandson Sīdī Muhammad b. 'Abd Allah b. Mūsā. The latter came to besiege it in person at the end of Jan., 1769. The place held out successfully for five weeks but, the order to abandon it having arrived from Lisbon, the governor surrendered on honourable terms. The garrison and civilian population returned to Portugal with their arms and possessions. On abandoning Mazagan on March 10, 1699 the Portuguese exploded mines there which did great damage; the sultan entered a ruined town which he repopulated in part but it remained in so miserable a state that it was called al-Muhādīna "the ruined", until, in the reign of Sīdī Muhammad b. Hājjīm, in 1840 (1824-25) it was restored by Sīdī Muhammad b. Tāyīr b. Dukkāl b. Tāmānāa, who gave it the name of al-Dāridā by which it is generally known to Muslims.

MAZANDARĀN, a province to the north of the Caspian Sea bounded on the west by Gilan, on the east by the province of Āstarābād (q.v., formerly Gurgān).

The name, if Gurgān to the Iranians was the "Land of the Wolves" (vānī-nā-khā) the region to its west was populated by "Mazārin dēwān" (Bartholmæus, Altar, Winterholtz, vol. 1169 under mās-nāngā dāmān). Darmesteter, Le Zend-Avesta, ii. 373, note 32, thought that Mazāndarān was a "comparative of direction" (Mazāna-tāva; cf. māsh and māshāt) but Nöldeke's hypothesis is the more probable (Grundriss d. iran. Phil., ii. 175) who thinks that Mazāndarān = "the gate of Mazān" was a particular place, distinct from the part of the country known as Tapurīstān. [A village of Mesdaran (?) is marked on the Siāh's map 12 km. south of Firūzkūh]. In any case the name Māzandarān seems to have connection with ro dardān, which according to Furtkows, viz., ch. iv., was situated between Parthia and Aria (Hārtāt-rād) and was connected with Olshausen (Māzandarān and Māzandarān, Monatsberichte Ab. Berlin, 1877, p. 777-785) with Māzadān, a station 12 farsakhs west of Sāragh; cf. ibn Khudrīdīhī, p. 34; Muqaddāsī, p. 351 [cf. however the late source of 881 (1476) quoted by Dorn, Mālāngān asisat, vii. 42].

The Avestan and Pahlavi quotations given by Darmesteter, loc. cit., show to what degree the people of Māzandarān were regarded by the Persians as a foreign group and little assimilated. According to the Bundahīsh, xv. 28, transl. West, p. 58, the "Māzandarān" were descended from a different pair of ancestors to those of the Iranians and Arabs. The Skāh-nāma reflects similar ideas (cf. the episode of Kāla-kūn' war in Māzandarān and esp. Vallers ed., i., p. 332, v. 290: the war waged against Ahriman; p. 364, v. 792-793). Māzandarān is contrasted with Īrān; p. 574, v. 925: the bestial appearance of the king of Māzandarān). Among historical peoples in Māzandarān we have the Tapryes (Tāpran), who must have occupied the mountains (north of Sīmān), and the Anardars (Aqāzard), who according to Andress and Marquart have given their name to the town of Āmol (although the change of nd to n is rather strange in the north of Persia). These two peoples were defeated by Alexander the Great. The Parthian king Phra-dates I. (in 176 B.C.) transplanted the Mardes (Amdarzes) to the region of Xezaq (Khvār to the east of Warāmīn) and their place was taken by the Tapryes, whose name came to be applied to the whole province.

The Arabs only know the region as Tabaristān (< Tapurīstān, on the Pahlavi coins). The name Māzandarān only reappears in the Saljūq period. Ibn al-Athir, s. 34, in speaking of the distribution of fields by Alī Arān in 456 (1065) says that Māzandarān was given to the emir Inandāl Bajiha. Ibn Isfandiyār, p. 14, and Vākīr, p. 502-3, think that Māzandarān as a name for Tabaristān is of fairly modern origin (in Arabic?) but according to Zakariya Kāzimi, p. 230, "the Persians call Tabaristān Māzandarān", Hamdālāh Mustawfi distinguishes between Māzandarān and Tabaristān. In his time (1340) the 7 tumān of the "willayat of Māzandarān" were: Djiurdji, Mūsrate (?), Āstarābād, Āmol and Rustāndar, Dibhisān, Rūghād and Siyāh-rustak (?); on the other hand the diwān-āt kūnāt wa-Tabaristān included Sīmān, Dārmān, Firūzkūh, a town of Damāvand, Pirrit etc. We find a similar distinction in Khvāndāmir, ed. Dorn, p. 53.

Geography: The actual extent of Māzandarān (Rahim) is 300 miles from east to west and 48 to 70 miles from north to south. Except for the strip along the coast—broader in the east than the west—Māzandarān is a very mountainous country. The main range of the Elburz forms barriers parallel to the south of the Caspian, while the ridges running down to the sea cut the country up into a multitude of valleys opened on the north only. The principal of the latter ridges is the Mazār-ečīl, which separates Tabaristān from Tān-kūm. The latter is bordered on the south by the chain of the Elburz in the strict sense, which
separates it from the valley of the Shahrud (formed by the waters of the Alamut and Talapkan and flowing westward into the Safid-rud).

To the east of Mazarrud, a number of ranges run out of the central massif of the Elburz: 1. to the east the chain of Nür which cuts through the Hafta-pey and 2. to the S.E. the southern hilly which forms the watershed between the Caspian and the central plateau. Between the two, rises in isolation the great volcanic cone of Damavand (9,900 feet).

To the east of Damavand the southern burreis rejoins the continuation of the Nür and the new line of the watershed of eastern Mazendaran is marked by the ranges of Bandi-pey, Sawad-khū, Shāh-mirzād (to the south of Simān), of Harzadār (to the south of Dāmghān), of Shāh-khū (to the south of Shahrud) etc.

The rivers of Mazandarān are of two kinds. A hundred short streams run straight down into the sea from the outer mountains of Mazandarān. Much more important are the rivers which rise in the interior and after draining many valleys form a single great river system which breaks through the Caspian. Such are (from west to east): the Saltarān; the Ćāllūs; the Harzadār, which drains the region of mount Damavand and then runs past Amol; the Bāhāl (the river of Bāftfrū), the Saltār (river of Allāhbad); the Tūjin (river of Sīr) and the Nīl (or Apsnyēs) which flows from east to west, its valley forms a corner between the southern chain (cf. above) and the mountains which surround the Gulf of Astara-Bād on the north.

The historical geography of Mazandaran is still full of difficulties although Vaemser's very full study has considerably reduced their number. The matter is complicated by the fact that certain well-known names are used in different periods for more or less identical districts.

The eastern frontier of Mazandaran (Tabaristan) in the strict sense, with Astarbād (Gurdjīn) seems to have always run near Kuhenābī (in the river Kīrin; cf. Polonyi Xpānī) where there used to be a well (dāmr dāmr) which barred the narrow strip of lowland between the Gulf of Astarbād and the mountains; cf. Ibn Rusta (p. 149) who speaks of the brick wall (dūrwar) and of the Gate of Fanshū. Thāmsī, through which, however, he had to pass (cf. Ibn al-Fākhrī, p. 203). To the west the town of Shāliṣ (Cullās) was situated on the frontier of Dīlām (Ibn Rusta, p. 150, fi. nāšīfī Rāsunā) but later the valley of the Sarī-dārūd (Kārādāsh) seems to have been annexed to Tabaristan. Further west the coast of Tūnīkānān was governed sometimes with Mazandaran and sometimes with Gīlān.

The Arab geographers distinguished between the plain (al-sāhāliyya) and the mountains (al-dāḥaliyya) of Tabaristan (Iṣṭāḵṭar, p. 211, 271). The important towns of Tabaristan were in the lowlands: Amūl, Nāīn, Shāliṣ (Cullās), Kalā (Kalār), Mīrā, Taḍī (Tādī, Barqīrī), Aīn al-Humma, Māmārī (or Barsārāghī), Sārī, Tāmān (cf. Iṣṭāḵṭar, p. 207; cf. Mūkaddasī, p. 353). The principal town (madīna) of Tabaristan in the time of AḥĪʿābī, p. 276, and Sārīya [or Sārīyā, but in the time of Māsūdī, Tāmān, p. 179, Iṣṭāḵṭar, p. 211, and Ibn Hawkal, p. 271, the principal town (kūf) and the most flourishing one in Tabaristan was Amūl (larger than Kārīm).

The mountain area was quite distinct and its connection with the plain is not very clear in the Arabic texts; cf. the confused summary in Iṣṭāḵṭar, p. 204. Tabarār, iii., 1295 under the year 224 (938) distinguishes three mountains in Tabaristan; 1. the mountain of Wânīd Humrus in the centre (wusṭāj) 2. that of his brother Wânāsāndjān (xīw) b. Ailandi dīrī Kārīm and 3. that of Sharwīn b. Sarkhāb b. Thā. Now according to Ibn Rusta, p. 151, (the Kārīmī) Wânīd-Humrus lived near Dunbarān. On the other hand, the same writer, p. 149, says that during the rule of Tabaristan by Dājir b. Yazīd, Wânīd Humrus had bought 1,000 djārī of domain lands (zwāfīf) outside the town of Sārī; see above (dāmr) seem to correspond to the region round the sources of the rivers Tādīn and Nīk which in Persian is called Hasār-djārī. Later, the lands of Wânīd Humrus included the greater part of eastern Mazandaran. Wânāsāndjān seems to have ruled over the greater part of Mazandaran for his capital Mūn was the rallying point from which expeditions set out again against Dīlām. Finally the mountain of Shārwin comprised the S.W. part of Mazandaran, for according to Ibn al-Fākhrī, p. 305, it was close to Kūmīs.

In the time of Iṣṭāḵṭar, the three divisions of the mountains specified are: the mountains of Rûbāndj (of Fāṭālībān and of Kārīn. "They are high mountains (dīlah) and each of them (dīlah) has a chief."

Rûbāndj, according to Ibn Hawkal, lay between Ray and Tabaristan, Bartholdi, Olerus, p. 155 embeds the name of Rûbāndj and identifies it with Ḳūyān. Ibn Rusta, p. 149 says that Ḳūyān, near the lands of Ray, did not form part of Tabaristan but formed a special bīrī with the capital Kūjādja which was the headquarters of the Wali (cf. Kārānūsī in the bīrī of Kūjādja). According to this, Rûbāndj = Kūjādja is to be located in the S.W. part of Mazandaran (south of Ṭbardīn). In the Mongol period, Ḳāḏālākh Kāzwīnī, p. 160, is the first to mention Rustamār (on the Shāh-rūd). As Vaemser, loc. cit., p. 122—123, has shown, Rustamār later included all western Mazandaran between Sakkhasar (Ḡīrān) and Amol.
Rustamdar therefore included Ruyan, without the two terms being completely synonymous.

Djibal Karin had only one town Shahmar, a day's journey from Sariya. The local chiefs of the dynasty of Karien lived in the stronghold of Firrit which must have stood on the western branch of the river Tidjin, which later flows past Sari. The modern Iril in Firrit is in the Hazar-Djarb (more accurately in its western half which is called Duldang). According to Ibn Isandynyr, p. 95, the possession of the Karins included the mountains of Wandal-umun and the mosque of Amol came from this mountain.

Amol, Lahur (on the eastern source of the river Bihul which runs to Bariaghur and Firrit, which is called Kuh-i Karin). According to Vayk, iii. 283, the lands of the Karins included Djibal Shirvin (cf. above) which Pimak al-Saljana, Khojat al-Tarah, p. 42, identifies with Sawad-keth i.e., the sources of the Tallur (river of 'Amlah between Amol and Bariaghur); the pass leading to Sawad-keth is still called Shalnether.

The Djibal-Faraspan (ذوجبإ-فراسپان long wrongly read فراضسپان) lay a day's journey from Sari.

The district had no cathedral mosque; the chief lived in the village of Urum (Ibn Hawqal, p. 268, 19; Urum-khat, Aram). As Vaimer has shown, p. 172-175, this must be sought on the middle course of the rivers of Baraghur and 'Amlah (to the north of Laihr and near Shiryag).

Bibliography. B.G.A., i. v. Dafla, Tabariistan, Amol, Sariya etc. Ibn al-Fakhr, p. 301-314, in particular gives very detailed information about Tabariistan. Mas'udi, Murughi al-Dakhah, index; Idriis, transal. Janbert, ii. 169, 170-180. 333, 337-338 (of little originality); Zabariy Karsanw, Abhur al-Budlana (elme iv): Amol, p. 190; Billah al-Dafla, p. 221; Ruyan, p. 250; Tabariistan; Vayk, c.f. Dorn, Arusig, 1858, p. 2-45; where are collected all the articles relating to Tabariistan [but the text of Wisentfeld's edition is preferable]; Fardallah Karsaw, Nawar al-Balwah, G.M.S., p. 159 and 161; Dorn, Arusig aus 24 Moret, Die Schriftsteller betreffend Khojastan, Der, Mill., ii. 68-72, 322, 222, 52-92; and also the historical bibliography.

Europeans works: Spiegel, Eran. Altersum, 1874, l. 64-74; Dorn, Livre, 1875 (a mass of rather undigested information); Geiger, Ostasiatische Kultur, 1882, index; Rammhofer, Von Pontus bis zum Indus, Leipzig 1890, p. 73-93; Alibor and Mazanderan (the author seeks to explain the Persian geography from Sanskrit texts); Barthold, Lister-geog. Ober Iran, p. 1903, p. 138-141; Pers, transal., Teheran 1930, p. 289-295; Le Strange, The Lands of the Eastern Caliphate, p. 368-376; Vayk, Die Erzurum etc.

History. The local dynasties of Mazanderan fall into three classes: 1. local families of pre-Islamic origin, 2. the 'Aliid sayids and 3. local families of secondary origin.

I. The local dynasties of the Sasanian dynasty, the king of Tabariistan and of Padaqhwyargar (Marquart, Erz-final, p. 120: "the district opposite the region of Khvar"); Pahalgwargar is a misreading of the name, which is also found in the Bandistich, xii, 17) was Gushan, whose ancestors had reigned since the time of Alexander. In 529-356 Tabariistan was ruled by the Sasanian prince Kayun, son of Kawat, Anshirwan put in his place Zarnmir, who traced his descent from the famous smith Kawa. His dynasty ruled till 645 when Gishan was (a descendant of the Sasanian Damis; son of Pheru) annexed Tabariistan to Gislan. These families, on whose coins might throw some light (cf. below), had descendants ruling in the Muslim period.

The Bawandila (who claimed descent from Kayun) provided three lines: the first 45-507 (665-907) was overthrown on the conquest of Tabariistan by the Ziyarid Karan b. Washington. At the same time, the second reigned from 456 (1073) to 606 (1210) when Mazanderan was conquered by Mahmand Khojistamah; the third ruled from 635 (1237) to 750 (1249) as vassals of the Mongols. The last representative of the Bawandila was slain by Arfisayy Caliaw.

The Karins (in the Kuh-i Karin) claimed descent from Karin, brother of Zarnmir (cf. above). Their last representative Mazur [p. v.] was put to death in 224 (839).

The Pudaspan (Puda Dasion) claimed descent from the Dasjon of Gislan (their eponym was the son of Gis Hanun; cf. above). They came to the front about 40 (660) and during the rule of the 'Aliids were their vassals. Later they were vassals of the Bawandila and Bawandila, who deposed them in 586 (1190). The dynasty, restored in 606, survived till the time of Timur, one of its branches (that of Kayun b. Kayumur) reigned till 975 (1565) and the other (that of Izanba b. Kayumur) till 984 (1574).

II. Alongside of these native dynasties the 'Aliids were able to establish themselves, principally in Tabariistan. In 250 the people of Ruyan, rebelling against the governor, sent to Ray for the Zaidi Sayid Hasan b. Zaid, a descendant of the Caliph 'Ali in the sixth generation. This (Hasanid) branch ruled in Tabariistan till 316 (928). The Husainid branch lasted from 364 to 537 (7). Another dynasty of Muraghay sayids ruled in Mazanderan between 760 (1358) and 860 (1458). The founder of this dynasty was Karam al-Din, a descendant of 'Ali in the twelfth generation. A third family of Muraghay sayids is known in Hazar-Djarb between 760 and 1005 A.H.

III. The noble families who enjoyed considerable influence, mainly in their fiefs, are very numerous. Rahim mentions the Khans of Chizuk (at Amol, Talasha and Rustamdar) between 795 A.H. and 909 A.H.; the Khans of Chizuk of Sari in 750-763; the house of Barzan in Sawadeh between 857 and 975; the Dino in the period of Shah Tahir in certain parts of Mazanderan; the Banu Ka'as between 857 and 957; the Banu Iskandar between 857 and 1066 and the different princes of Timurid, of Muyendurid, of Laidjum, of Muyendur, of Laihr etc.

Besides this confusion of fidal dynasties, a series of conquerors from outside has ruled in Mazanderan: the Arabs (their expeditions began in 22 = 644; the final conquest took place under al-Mansur in 141-144 = 757-761). The Banu Ka'as sent an expedition to Mazanderan in 923 (1521) but it was under Shah 'Abbais that the land was definitely incorporated in Persia in 1005 (1596). This monarch claimed hereditary
rights there from the connection of his family with the Sajiyid Kiwan al-Din Mar'sahi (Alamard, Tefehn, p. 354). Farahabad was founded in 1020 (1612) and in the next year Ashraf was built with its famous palaces.

European works: d'Ohsson, Hist. des Mongols, 1835; i, 2, 10, 44, 48, 106-109 (Cintimar governor in Mazandaran), 120-122, 193, 414-418 (Abaka); iv, 4, 44, 44-45 (Mazandaran sappen of Ghazan), 106, 124, 155, 159, 600 (Abi Sa'id in M.), 613, 623 (revolt of Yasawar), 685 (Hasan b. Coban in M.), 726, 730 (Taghua Timur, s. v.), 739 (the Sardabahs, s. v.); Meiganov, op. cit. (lists of the dynasties and 1200-1700 in Mazandaran); Rehatsek, The Tax and the Civilisation, J. Vnies, de rxxiii., 1839, p. 91; Butkow, Materiali dlia novogo dnia Kukush, St. Petersburg 1869, index (in the Persian sources the leader of the Russian expedition of 1787 Count Woinowicz is called *Karaf (= Graf-) Khan*).

Archaeology. Bode, On a recently opened annulus in the neighbourhoo of Astarabad, Archologia, London 1844, xxx. 248-255 (on the circumstances of the find made at Tarang-Tapa. cf. Bode,
Anonymous coins were also struck. The issue of these coins with Safavid types ended in the year 143 Tabaristan era (794, anonymous) but we have a coin of 161 (812) on the obverse of which is the name of the king's head, and that of a governor Safi b. Soltani (136 - 137) — there is a thumbprint with the puzzling Arabic letters ٥٥٥٥ and on the margin al-Faqil b. Sahel Djo'l-Riyāstānīn (in Arabic) is named; on the reverse, instead of the altar with its guardians are three parallel designs like fir branches, between them an inscription in four lines giving the Muhammānid creed in Kūfī and the date and mint of Pahlavi (Tümenhausen, Zap. varst. stud. arch. oběh., ii. 224).

We know dirhams of Tabaristan mint of the Caliphs of the years 102 (Lāvois), 147 (Brit. Mus. with the name of the governor Rāwī), 190 - 192, copper coins of the years 145 and 157 (Zamīnāvar, Namaz, Zivčer, xxvi, the latter with the name of 'Omār b. al-Ālā), at a later date, coins were struck there by the dātīs of the 'Alīs (Amūl, 253, 300 AV and 412), the Bidāy and Šiyārā (Amūl, Sāfī and Sārī), in 315, 316, 326, 37, 357, 404, and sometimes by the Sāfīs, (Amūl AV 341, 350, 353 - 357), still later by the Hūlāğūs, Serbārdā, Timurīs (Amūl, Sārī and Shāhās of Persia (Amūl, Sārī, Tabaristan, Māzandārān). In Amūl anonymous copper coins were struck from the xviith century onwards. On several pieces of this period the mint Tabaristan occurs. As these are all very rare, the issue must have been an occasional one. The dates are not preserved on any specimens. More common are copper pieces of the value of 4 šābek (16 - 22 grammes = 280 - 340 grains) with the lion and sun and mint Māzandārān, which belong to the xviith century. During the Russian occupation of Gilan in 1725 - 1732, to meet the shortage of currency provoked by the financial crisis in Russia at this time, Persian copper coins were overstruck with a Russian die (Cymbal-eagle) and circulated in the occupied provinces in place of Russian mithry. These coins are often called Māzandārān pieces but this is not correct, as only Gilān and not Māzandārān was occupied.

Bibliography: Olahusen, Die Pahlavi-Legenden auf den Münzen der letzten Sassaniden, Copenhagen 1843; Knütt, Wiman Jahrbiicher, xvi, Amtseitblatt, 1844; Mordtmann, Z.O.M.G., viii, x, xxiii, S.B. For the later period: The coin catalogues by S. Lane-Poole and R. Stuart Poole; Markov, Inscriptionii Catalogis, Zambors, Namaz, Zivčer, xvi, 135; K. Vasmer, Shemik Entemāuā, ii. 119 - 132 (Russ.).

MAZĀR-I SHARĪF, a town in Afghanistan, south of the Amū-Daryā [q.v.], in the middle ages it was the site of the village of Khair, later called Khodja Khairān, 14 miles east of Balkh. On two different occasions, in the xiiith century after 530 (1135 - 1136) in the time of Sultan Sanjaris [q.v.], and in 885 (1480 - 1481) in the reign of the Timurid Sultan Husain, the tomb of the caliph "Ali was "discovered" here and its genuineness declared to have been proved. A place of pilgrimage (mazār) at once arose around the tomb with a considerable market; the second
tomb which is still standing (the first is said to have been destroyed by Cingis-Khan), was built in 885 (1481-1482). The second does not seem to have been of any particular importance during the time of the Ozbegs and is hardly mentioned although several Ozbeg Sultanis were buried there. In the first half of the sixth century, the place is usually simply called nazd by travellers, the name Mas'udi Sharif seems only to have arisen within the last hundred years. Abd al-Karim Burni (ed. Schefer, p. 4) does not mention Mas'ud at all among the towns of Afghanistan: in 1832 when A. Burnes passed through it, it was a little town with about eight hundred houses. In 1860, the Afghan governor Bab'Allah Khan, a Dathi, chose Mas'udi Sharif as his residence; since then Mas'udi Sharif has been the capital of Afghan Turkestan. In 1878 it was described by the Russian general Matveev as one of the best towns in Northern Afghanistan with about 30,000 inhabitants (Kostenko, Turkestan. Kraj, ii. 157).

al-MAZĀT, a name borne by over twenty Abhid writers or men celebrated for their poetry, among whom may be mentioned Abu 'I-Ka'im Sulaíman b. Yāhshaf al-Mazāt, a pupil of Abi 'Abd Allâh Muhammad b. Bakr. Celebrated for his learning and his virtues, he spent all his life in study and teaching and died in 474 (June 11, 1081-May 31, 1082) in a little town of the Banî Wudlu (wudūl), a clan of the tribe of Mazāt, which in those days occupied the lands between Gabès and the south of Tripoli. He wrote a book on the principles of law (madhî) entitled al-Mutâhef.

MAZAK, the apostle of a religion, which was founded two centuries before him by Zardasht, son of Khurr-rakhan, but spread in Persia only after his propaganda; it had great political influence in the country in the time of Kawadh (488-531 A. D. with an interregnum). The latter adopted it and even made arrangements for putting its teaching into practice but after his restoration he put Mazak and a large number of his followers to death. The best known feature of his teaching was the endeavour to remove every cause of covetousness and discord among men, and thus to purify religion, by making women and possessions common property.

It is not possible to reconstruct from the sources the Mazaki doctrine in detail nor to settle its relations with the other religions or sects of Persia. The main features will be indicated here.

The sources. Detailed narratives of the reign of Kawadh and some important references to Mazak and his teaching will be found in the contemporary Syrian and Byzantine writers (Joshua Stylites, Agathias, Procopius, Malalas, Theophanes). In Pahlavi literature there are few references to Mazak. The bulk of our information about Mazak and his relations with Kawadh come to us from Arab and Persian writers and go back mainly to the Khosrownameh of the Royal Sasaniian Chronicle, of which the best known Arabic version was that of Ibn al-Mu'azzam. Baron Rosen has shown that the other Arabic versions were not all dependent on this one, some of them having been prepared directly from the original. Some compilers also inserted historical or legendary episodes taken from other Pahlavi works and others attempted to harmonise different narratives and did a certain amount of retouching in their reconstruction of the original. The Persian and Arab writers who had these different versions or compilations at their disposal only very rarely mention their sources and endeavours in turn to reconcile the statements made. Noldeke has already distinguished two "Haupptquellen" for the various Arabic and Persian narratives (the first followed by Ibn Kutüba and Eutychius and a part of Šabari, the second by al-Ya'qubi and another part of Šabari). Christensen in his fundamental study thinks he can distinguish four lines of the tradition of the texts, and made by the Arab and Persian authors in the different versions or editions of it. Noldeke's two "Haupptquellen" correspond to the first two; a third is represented by al-Dinwari (Noldeke thinks his story is a harmonising of the two "Haupptquellen") and the Nikâyat al-tâlîb 'I al-Khâ outlined by Šâbaris wa l-i-Arab (J. R. A. S., 1900, p. 195 sqq.) the fourth presents features of its own, some of which are legendary in character and are found again in the Siyyâṣat-Nâma of Nâqâ al-Mulk, which is independent of the Khosrownameh. The common source of all these legendary features would be, according to Christensen, the Book of Mazak, a Pahlavi work of fiction (like the Khâlh wa Dinwa) which enjoyed great popularity and was translated into Arabic by Ibn al-Mu’azzam and into Arabic verse by A. A. al-Hämîd al-Hâlîbî. The elements of this fourth line of tradition are, according to Christensen, found in the Khâlh al-Hâlmî, al-Thallîkit, Firânâsi, al-Burql, Ibn al-Ashur and Abu ‘I-Fâdî. Some references in al-Musâ’id and al-Khârîzmi can also be traced to the book of Mazak.

Independent traditions would also be preserved elsewhere, for example by the Arabs of al-Hira. Al-Shahrastâni notes (to which some critics deny any historical value) might go back to books of the sect now lost. These are not found elsewhere and their immediate source was Muhammad b. Hârin Ahsu ‘Ib al-Warrâq, a Zoroastrian converted to Islam. The source of the notices in the Fihris is not known (it calls the Mazakists Zoroastrians), the Persian work of the xviiith century called Dakhshûn-ı Mazakhi, is probably a mere compilation of no value, from sources already mentioned and the pretended Mazakii book Dastvâd, which it quotes, is not genuine.

Doctrine. The fact that the majority of these sources emphasise the social aspect of the Mazaki reforms and do not mention special doctrines or beliefs of the sect (some like the Fihris and Ibn al-Athir connect it with Mazdaism) has convinced the majority of Orientalists who have studied this subject (e.g. Noldeke, Nicholson, F. Wessendorf) that the reforms must be considered as a social movement which aimed at purifying the Mazdaean religion: a communist system of which the precepts regarding women and property and those of an ascetic nature (like the prohibition of slaughtering
animals and eating their flesh) had however a religious aim, and were clearly distinguished by this character from modern socialism.

Christensen, in his work already quoted, comes to the contrary conclusion that Mazdakism was above all a religious movement and that its social precepts were originally a very secondary feature; it was, he says, a reform of Manicheism, already preached by Zarathushtra, two centuries before Mazdak. Christensen supports his argument by two well-known passages in Malaha, of which the first deals with the doctrines propounded at Rome under Diocletian by the Manichean Bundus in opposition to official Manicheism.

The second passage speaks of Bundus as having afterwards gone to Persia and there spread his doctrine there, which was called ma'as or maas (from the Pahlavi form ma'as, meaning followers of the orthodox faith). The other passage calls king Kawardh or Kawardh (an inaccurate form for kawardh), an epithet which contains an allusion to the Mazdak faith. A popular form of Bundus or Bundus is said to be the origin of the very corrupt forms of this surname, which are found in the Arabic texts and are due to the similarity of certain Arabic letters (al-Thabiti translates it as ma'as or Bundus, which presupposes a form ma'da'.) Christensen thinks these links sufficient to identify Zarathushtra with Bundus (Bundus would be an honorific title of the reformer, "the venerable", from the Pahlavi buzidh, hundag and defines Mazdakism as a Manichean apocrypha.

This theory is supported by al-Shahrastani's resumé, which gives us, along with the general character of the religious history of Iran, the best argument for this thesis, and those who hold the other view are forced to deny any force to the evidence of this historian of sects. Christensen also concludes that it is with good reason that the Byzantine historians call the Mazdakis Manichaeans; but it must be added that their classification of a doctrine so little known in the west (where on the other hand Manicheism was well known and was, so to speak, the typical heresy of Persia) is not of much value.

According to al-Shahrastani's expose, Mazdak's system resembled that of Mani; except that he said that the dark spirits did not act of their own will and without restraint (hi t-khaf an t-aghlaye), but blindly and by chance (hi t-khaf an t-aghlaye); that mixture is produced also (hi t-aghlaye an t-aghlaye); and liberation will be produced (hi t-aghlaye an t-aghlaye). In this connection we must remember that the same author in his survey of the Manichaeans tells us that the views of the Manichaeans on the cause of mixture were divided and that some of them said that it was produced (hi t-aghlaye an t-aghlaye); the opposite of what was laid down in the original cosmogony. Other Muslim writers allude to this point in dispute among the dualist sects: al-Mujahhar b. Tahir al-Makdisi says, for example, that mixture (hi t-aghlaye an t-aghlaye) is taught by the Sabians, a name which is sometimes applied to the Manichaeans. All this gives the impression that the mention that the Mazdaki teaching in this connection is quite in keeping with the conditions of polemics and debate. Perhaps the practical teachings of Mazdakism should be connected with the doctrine of mixture (hi t-aghlaye an t-aghlaye).

Al-Shahrastani also gives from another source other details on Mazdaki cosmogony (the four forces, which surround the object of worship as court dignitaries surround the king of Persia; the seven vizards, the twelve spiritual beings, the three elements, the director of good and of evil), details which have their parallels in other gnostic and dualist cosmogonies, which should be studied with their names from the point of view of the latest studies on Iranian syncretism.

Al-Shahrastani finally alludes to certain cabalistic speculations on the letters of the supreme name and mentions Mazdaki sects (like the Abü Muslim) still in existence in his time in Persia and far away as Sogdiana.

We may conclude that it is at least premature to deny all connection between Manicheism and Mazdakism; it seems that rather than put the question in the form of a rigid alternative between Manichean or Manichean influence, it would be better to regard Mazdakism as a form of gnosia upon which two powerful religious forces have exerted an equal influence, the official religion and the Manichean heresy, and some other elements also (just as Manichean gnosticism owes much to the national religion).

In any case, the feature which appears most clearly from the sources and which struck contemporaries was the general body of Mazdaki precepts with communist and humanitarian tendency and especially those which relate to community of women and property and were actually put into practice for a short time. The arcane prescriptions are quite in keeping with a gnostic character of the sect (the prohibition of slaughtering animals and eating their flesh) which with communist teachings would be the elements forming the path to gnosia and liberation.

The presence of an arcane strain in Mazdakism, as in Manicheism, is probable. The people naturally seized on these principles and eagerly attempted to put them into practice on a large scale. Thus excesses resulted which, at least in origin, were very far from the intentions of the reformers and the elite of his adherents. This explains why the religious character of the sect was forgotten and memory of its social teachings retained. Whether the founder and his leaders also abandoned themselves to the excesses of which the sources accuse them, one cannot say; we know that very frequently the initial good faith of reformers is disturbed by contact with reality.

It was natural to give a more practical value to this body of teaching, if we regard Mazdakism as a Puritan reform remaining within the Mazdean religion and not becoming an independent religion.

Contemporary sources also tell us of a bishop elected by the Mazdaks, named, according to Malaha, Indaraz (which Nölske connects with the Pahlavi word amāzagī = to advise; cf. the latin episcopus of the Manichean) who was slain with the other Mazdaks on the day of the massacre; according to Christensen, it is possible to identify him with Mazdak.

During the persecution which followed the massacre, all the Mazdaki books were destroyed. The Persian work of the seventh century, Dastīr-i Maqālak quotes a book called Dinakshi which is usually regarded as a forgery; all the notices of the sect professing to come from this book are
taken from the text of al-Shahrastāni and other sources, like the rest of the book. The Book of Mazdak, which enjoyed a great popularity and was translated into Arabic by Ibn al-Maḍţa and into Arabic verse by Abūn, b. 'Abd al-Ḥamid al-Lājījī was a work of entertainment and not of religious teaching (cf. above).

History of the Mazdak Movement in the Reign of Kawād. — The Massacre. We know very little about the life of Mazdak (also written Mazdāk). His father was called Bāmdāh (a Persian name like Mazdak) and according to Ṭabariz, they came from a town which Christensen is inclined to identify with Mādrāhāy, Isfahān, and Tafriz are mentioned as the birthplace of the reformer. According to some sources, he had been a Zoroastrian priest (mōdābdāh); al-Bīrūnī who sometimes follows a romantic tradition (cf. above), calls him mūmābdān mādābdāh. The details of his doctrine are not known but it is certain that it developed and spread the teaching of his precursor Zartosht of Pasargād, who lived two centuries before him. It is evident that the disturbed condition of Persia after the victories of the Hephthalites facilitated the spread of revolutionary doctrines; but it is difficult to see why the king (whose reign began in 488) became a convert to the new faith (and this is a question which also puzzled the ancients) and how he became connected with Mazdak.

The necessity of crushing the power of the nobility and higher clergy which he found annoying may have caused the king to use for his own ends a sect which aimed at destroying the privileges of these classes. Nābdeke (who thinks Kawād was a man of strong will) credits him with this plan. Christensen (who had accepted this thesis) now sees in the allusions of some of the sources proof of the sincerity of Kawād (whom, as he says, the contemporary sources do not credit with a "Machiavellian character"). Kawād, he thinks, was moved primarily by religious motives and attracted by the religious element in the new teaching, while ready to take advantage of any political advantages that the sect might be likely to gain for him. In any case it is evident that in his wars he was not restrained by any humanitarian prejudices, although one Arabic source with a hostile bias says that the king as a sanūfī feared to spill blood. Christensen likes to compare his attitude with regard to Mazdak morality with that of Constantine with regard to Christian teaching. In any case it is difficult to give a verdict on Kawād, in view of the varying prejudices of the sources and the tradition of the time of Khusraw which in general tends to elevate the figure of Anahid who was, at the expense of the others. There were numerous conversions among the upper classes, proselytizing among the common people was facilitated by the wretched conditions in which they lived, and of course also by the nature of the teaching which in every age has seduced the masses. Manichaeism thus became a remarkable force and permeated all the machinery of government. The practical effect of the king's favor was seen in the measures allied to in contemporary sources; but we do not know to what degree they realized the Mazdakist ideal, either as regards community of women (perhaps this was only an extension of regulations already existing in the Shāhīnian code?) or community of property (only taxes on the rich?). But what is certain is that Khusraw at the beginning of his reign had to take important steps to remedy the disastrous results to property and the organization of the family; such abuses were however not the direct result of the legal measure adopted by Kawād, but rather of the violent application of communism which was a later development.

The philo-Mazdak policy of the king and the growing power of the sect provoked a revolution in the palace and Kawād was deposed and imprisoned. Dājūn, his brother, was put on the throne in his stead. Kawād succeeded in escaping and took refuge with the Hephthalites and regained his kingdom with their assistance (498 or 499). In the meanwhile, in spite of the dethronement of the king, the sect had grown more and more and its power became disquieting. The people, urged on by their leaders and more alive to the practical advantages than to the religious elements of the reform, naturally abandoned themselves to all sorts of excesses and disorder broke out everywhere. The estates of the nobles were plundered, the women carried off, which, with a horror of communism, explains the violent language used by contemporary and Arabic and Persian sources against the sect. All this must have frightened the king on his return. Having revenged himself on his principal enemies immediately on his restoration, he now found it necessary to come to an agreement with the majority of the nobility and clergy in order to face the war with Byzantium. Prince Khusraw seeing his rights to the succession threatened by the activities of the sect, which, taking advantage of its power, was endeavouring to secure the election of Kawād's eldest son Padshahkhwâr Shâh (Pithasansaran). It is also said (in the sources of the third line; cf. above) that Khusraw was eager to avenge himself on Mazdak, who had refused to take as his wife the mother of Khusraw (offered to him by Kawād in recognition of the principles of the sect) until the prince humbled himself before him. Khusraw, who had already begun to display his remarkable political abilities, must have had considerable influence with his father, who was persuaded to have Mazdak and his followers massacred, after inviting them en masse to the court on the pretext that a theological dispute was to be held (or according to another story, for the public proclamation of Padshahkhwâr Shâh as heir to the throne). The massacre took place in 528. In 529, Arab writers wrongly put it at the beginning of the reign of Khusraw; this exploit earned him the title of Anāsharwān. The number of slain is unknown. Kawād died in 531 and after him Khusraw took special steps to restore order in the ownership of property and in the social organization which had been upset by the application of communism. The surviving Mazdakists were persecuted in a blood-thirsty fashion and their books burned.

Mazdakism after the massacre. It is not probable that Mazdakism disappeared with the persecution; perhaps the survivors sought refuge in the mountains, in different parts of Persia where we later find sects (e.g. the Kūršâr) whom Muslim writers do not hesitate to connect with the Mazdakists. Nīṣān al-Mulk, who in his manual on the art of government attributes great political importance to a knowledge of the various sects, is very clear on this point. According to some
orientalists Mazak elements can be discovered in Bāhtinian and Isma‘īlian. But the whole question of the relations between these sects (of which very often insufficient is known) and the old Persian religious forms must be examined thoroughly with a knowledge of the progress made in the study of these areas and sects. It cannot be dealt with here; cf. the articles Isma‘īliyya, Shi‘a, Rāmīya, Murājīyya, Mu‘ammarī, Mu‘ākka‘ī, Xawandīya, Simḥa‘ī etc.

**Mauzur, Mīrza Dāngānī, a. U. poet and eminent Sufi, of Turkish descent, was born in 1119 (1699) or 1113 (1701) in Kāhībāgh, Māhāw. His father Mīrza Miṣrān was an office of Avaranāb [q.v.], who, when the news of his birth was conveyed to him, said his father was Mīrza Miṣrān and hence his son should be called Dāngānī; though his father afterwards named him Shams al-Dīn, yet he is known by the name which the emperor had selected for him. He was received into the Nakhchivan order by Sayyid Mi Muhammad Šāh b. Bālti and later on by Mūtabar Mi Muhammad b. Samā‘ī. He died in Dīhil in the 10th of Muharram 1195 (January 6, 1780) as a result of a fight at him by some Shi‘a fanatic. His memoirs with some anecdotes about Mūtabar Mi Muhammad Šāh ‘Alī b. Karamān are edited by Mūhammad Beg Bālākhānī, Dīhil a. D. 1309, A. D. 1892. His biography, together with notices of his disciples, has been written by Mūhammad Na‘īm Allāh Bahrāīdī in Bihārīyāt Mauzurīya.

**Mazān**, the name of several Arab tribes which are represented in all the great ethnic groupings of the Peninsula; this finds typical expression in the anecdote recorded in Aḥkāmī, vii, 121 (= Yākūt, ed. Arabs, ii, 352–353), according to which the Caliph ‘Abd al-Wahhāb asked the grammarians Abū ‘Othmān al-Mazānī, who had come to his court, to which Mazān belonged: — if to the Mazān of the Tamīm, to those of the Ka‘b, to those of the Rā‘īya or to those of the Yemn.

The first are the Mazān b. Mālik b. ‘Amr b. Tamīm (Wustenfeld, Gen. Tahābul, L. 12), the second, the Mazān b. Manṣūr (D. 10), or the Mazān b. Fāzūr (H. 13); the third, the Mazān b. ‘Arrīya b. Dīhilī (C. 19), the last, the Mazān b. ‘Al-Nadīmī, a clan of the Khuray Ḍārān Ansār (19, 24). But alongside of these, many other tribes and clans bore this name. The Dījamār al-Anzilī of Ibn al-Kalbī gives no less than seventy, of whom the best known are the: Mazān b. Sa‘d b. Dāhl b. Iṣnālī (Ibn Kathīr, K. al-Mas‘ārez, ed. Wustenfeld, p. 36; more accurately according to the Tawāmil, MS. Br. Mus., Add. 23, 297, fol. 114 r-115 r: Mazān b. ‘Abd Manṣūr b. Bāk r b. Sa‘d b. Dīhilī, not given in the Tabāl ‘im; Mazān b. Sa‘d b. ‘Arrīya b. Bāk r b. Dāhl b. Iṣnālī (Ibn Kathīr, p. 42; Tabāl ‘im, H. 12); Mazān b. Kalbī b. Ghaṣṭānī (H. 10); Mazān b. Raḥīmu b. Zubair b. Mazān b. Al-Asad (11, 11). The large number of tribes named Mazān and their distribution over the whole of Arabia makes the hypothesis that we have here a single tribe which had been broken up into small sections impossible and we are led to suppose that the name Mazān, is a descriptive rather than a proper name; since the verb sawma means to "go away", one might suppose that Mazān originally meant "the emigrants" and was used in a general way of any ethnic group which became separated from its main tribe and was incorporated in a strong tribe. This etymology, like almost all those of the names of Arab tribes, is of course impossible.

The sources give a certain number of geographical and historical references to different tribes called "Mazān"; but they are generally very scanty, none of these tribes having attained sufficient importance to make it independent of the larger body to which it was attached. We have a few details about the Mazān b. al-Nadīmī, a fairly important group of Madinīe Khārājī (on the part played by them at the beginning of Islam see Castani, Annali dell’Islam, Index to Vols. i.—ii.), as well as about the Mazān b. Fāzūr who took part as members of the tribe of the Dīhilī, in the war of Dāhilī and al-Qahra (cf. Al-Mas‘ārez, ed. Arabs, xxvii, 27). Ibn Majā‘īya, himself a Dīhilī, directed a violent satire against them at the end of the first century A.H. (Jāḥiṣ, p. 102). As to the Mazān b. ‘Arrīya b. Dīhilī, to whom the grammarians Abī ‘Uthmān, belonging, we know from the anecdote above quoted that in their dialect,  as (initia!) was pronounced like b (ba‘wma‘a for ba‘wma‘a, what is thy name?), a peculiarity which does not seem to be recorded of the dialect of other Rā‘īya. Lastly the Mazān b. al-Asad, whose tradition makes migrate to the north, changed their name to (Bīsān [q.v.]) under which they became celebrated. It is only the Mazān b. Mālik b. ‘Amr b. Tamīm that we have fairly full information. Legend, which has developed with unusual detail around the sons of Tamīm [q.v.], gives Mazān a part in the story of his uncle ‘Abd Shamsh b. Sa‘d b. ‘Zaid Manṣūr b. ‘Amr’s fight against al-Anhar b. ‘Amr b. Tamīm (cf. Al-Mufadha‘l b. Salama, al-Shā‘r al-‘Aṣir, ed. Storer), p. 233 and the references given in the note). This tribe of Mazān of the great group of the ‘Amr b. Tamīm to which it belonged and dwelt with them in the lands in the extreme N.W. of Najd; their headquarters were around the well of Safār near Dhi Kār (Najāf), ed. Bevan, p. 48, note to line 17; Yākūt, iii, 955; Bakrī, p. 774, l. 1: 287–788); their principal subdivisions were the Bani Hūrāsh, Khāzān, ‘Aqrīm, ‘Arqām, ‘Ala‘īna, ‘Ulākhā and ‘Aqrām. In the Dījamārī, Mazān followed their parent tribe and we find them sharing in the

The Encyclopaedia of Islam, III.
MAYZADIS, a Muslima dynasty in al-Hilla. The Banî Maysad belonged to the tribe of Asad and lived west of the Tigris, from Kirkuk to Kirkuk. In the southeast, on the Kurdish frontier, the Banî Maysad held settled. When Abu 'l-Ghanâm Muhammad b. Maysad, who was related to the Banî Dubais, slew one of their chiefs with whom he had quarrelled, a war broke out between the two tribes (401 = 1010-1011). Abu 'l-Ghanâm fled to his brother Abu 'l-Hassan 'Ali; the latter set out against the Banî Dubais with an army, but was defeated and Abu 'l-Ghanâm fell in the battle. In 403 (1012-1013), 'Ali was recognized as emir by the Buedh Sulaimân al-Dawla. In Muharram 405 (July 1014), he undertook a campaign against the Banî Dubais, to revenge himself for the defeat he had suffered and slew Hassân and Nahhân, the sons of Dubais, but in Dumat al-Umar of the same year (Oct.-Nov. 1014) he was routed by their brother Mu'far. After 'Ali's death in Dhu 'l-Ka'da 408 (March-April 1018), his son Dubais succeeded him. The latter's brother al-Mukallad, with the help of Turkish mercenaries in Baghdad, endeavoured to seize the power for himself; but order was soon restored and al-Mukallad went to al-Mawqil to the 'Ukkaids. In a few years Dubais became involved in war with Karbâm b. al-Mukallad (q.v.) and he had also troubles within his borders. In the war between the two sons 'Abd al-Kalîm and Djalâl al-Dawla, the former was supported by Dubais and the latter by al-Mukallad. After the defeat of 'Abd al-Kalîm in 421 (1030), al-Mukallad with the help of the Banî Khâdirja and the troops of Djalâl al-Dawla invaded his brother's territory. Dubais had to take to flight and the land was laid waste. Peace however was soon arranged. Dubais was allowed to retain his lands but had to pay Djalâl al-Dawla a considerable sum. The third brother Thâbit allied himself with al-Basâiri, the military governor of Baghdad, and in 424 (1032-1033) they advanced against Dubais. The latter sent an army to meet them; but his troops retired and he himself had to take to flight. After receiving reinforcements he advanced against Thâbit; they met at Dja'farîsâ and after a fierce battle, Dubais had to cede a part of his possessions while al-Basâiri, who arrived too late to take part in the battle, returned to Baghdad. In Radjab 446 (Oct.-Nov. 1054) the Banî Khâdirja invaded the country but were soon driven away with the help of al-Basâiri. Two or three years later war broke out between al-Basâiri who was joined by Dubais, and the Sulaimân Sulaimân 'Othmân b. Thâbit, the son of Qâsim b. Thâbit (q.v.). Dubais died in Shawwâl 474 (March-April 1082) at the age of 80. His son Masâyûd succeeded him but died in Rabi' 1, 479 (June-July 1086). In the reign of his son and successor Saydâja (q.v.) the power of the Mayzadis spread over almost the whole of the 'Iraq. At first he was a stout supporter of Barkâfîrî (q.v.); in 494 (1100-1101) however he turned to his brother. The towns of Wasîl, Bâsra, and Talîn fell successively into his hands, but, as the commander appointed by Saydâja in Bâsra did not prove fit for his task, Muhammad seized the sovereignty of the town and installed a new governor. In Saydâja's reign the capital al-Dumat al-Umar was extended and fortified and given the name of al-Hilla (495 = 1100-1102). His steady increasing power however aroused Muhammad's suspicions and in spite of long negotiations, a rupture finally occurred between them. At the end of Rabi' 1 (Feb.-March 1108) Mayzadis himself set out from Bâsra against Saydâja. A section of the Arabs allied with him fled and Saydâja fell in the battle. His son Dubais was taken prisoner but the latter's two brothers escaped and were only able to return home after Muhammad's death.
(511 = 1118). In 529 (1135) he was treacherously murdered [cf. the article DURAI] and succeeded by his son Sadaqa. In the war between Sulaym Maṣʿud and his nephew Dāwūd, Sadaqa declared for the former. After Maṣʿud's victory, the troops scattered to seek booty and several emirs including Sadaqa were surprised and captured by the enemy and at once put to death (532 = 1137–1138). Sadaqa's brother Muhammad was then upon recognised as lord of al-Hilla. In 540 (1145–1146) however, the third brother ʿAlī went to al-Hilla, because he was afraid of the Sulaym and drove out Muhammad. After he had taken the town, but drove back the Sulaym's troops and it was not till 542 (1147–1148) that Sulaymkerd, one of Maṣʿud's generals, was able to expel ʿAlī. But in the same year he was defeated by the latter and had to abandon the town. In 544 (1149–1150) ʿAlī endeavoured to induce the caliph al-Muṭṭafī to abandon Maṣʿud but, as the caliph refused and summoned the Sulaym to his help, ʿAlī had to submit and the rebels who had joined him dispersed. ʿAlī died in the following year and al-Hilla was given as a fief to Sulaymkerd by Maṣʿud. On Maṣʿud's death in 547 (1152), the town fell into the hands of Maṣʿud Bilāl, the commander of Baghdaḍ. The latter however was driven out by the caliph's troops who occupied al-Hilla. When in 551 (1157) Sulaym Muhammad took the field against al-Muṭṭafī (q.v.), they had to withdraw and Muhammad put a garrison in the town. The Masyad submitted to his deputy but in 558 (1162–1163) the caliph al-Mustaʿṣfar sent an army against them which put an end to their power. 4,000 men were slain and the remainder outlawed so that they were scattered in all directions.

According to Zahir al-Dīn, p. 321, Masyār b. Kārīn ruled for 30 years (194–224 = 809–839) but on p. 167 the same writer says that his (tyrannical) government lasted 7 years (217–224). Taṣafi, iii. 1015, under the year 201, speaks of the conquest of Tābaristān of Abū ʿAlī b. Khuradāsth (sic) as a result of which the Bwand Sidrwin b. Sidrwin had to leave the mountains and Masyār b. Kārīn was sent to al-Maʿmūn. According to later sources,
Māzvār

Shāhriyār b. Shāhriyār had deprived Māzvār of his possessions. Māzvār sought refuge with his cousin Windūnād b. Windūnād-sapān, who hand him over to Shāhriyār. Māzvār however managed to escape, sought refuge with al-Ma'mūn and became a Muslim, assuming the name Muḥammad. After the death of Shāhriyār (210 = 1135; Tabārī, iii. 1093), Māzvār, returning to Tabārīstān, slied Shāhir b. Shāhriyār and seized the mountain (Tabārī, ibid.). (Ibn al-Fakhrī's story, p. 305–306, about the "son of Shāhriyār b. Shāhriyār," whom Māzvār assassinated treacherously, seems to refer to Shāhir; to alyse the suspicions of his victim, Māzvār had built a mosque in Fīrūn.) Māzvār assisted the Arab governor Mūsā b. Ḥāfṣ b. ʿOmar b. al-ʿĀli, to subjugate the mountain of Shāhriyār and al-Ma'mūn appointed him governor of Tabārīsān, Rūyān and Dūshmand with the rank of ḥāshābi (Balāḏūrī, p. 229; Ibn al-Fakhrī, p. 309). At this time (Yaʿqūbī, Historia, ii. 582), Māzvār boasted the title of Ḥāshābi, ḥāshābi ṣaḥāḥīn Bihshār-Khurāsān (read Patīghār-i-ghānū, Muḥammad b. ʿArīn, ms. vandali (sic) amir al-mawāmin (i.e. "ally" instead of mawāʿil "clients")), which he did not have. Ḥāfṣ dād, Māzvār paid no heed to his son Muḥammad b. Mūsā. Complaints against Māzvār were taken to Baghdad by the Bawwādīs and by devout Muslims. But as al-Ma'mūn was setting out against the Byzantines (expedition of 216–218) Māzvār felt himself free from any control. In his turn he charged Muḥammad b. Mūsā with intriguing with the "Alids and on this imaginary pretext besieged Amūl. The town capitulated at the end of 8 months. Māzvār executed his enemies and imprisoned all the notables, including Muḥammad b. Mūsā, first at Rūd-bāst and then in his principal stronghold of Hurmuz-ābād. To judge from Tabārī, iii. 1289–1292, the piece must have been in the valley of the Tāhir, above Urm (Arum) at a distance of 8 farsakhs from Amūl and from Sāri (cf. the article Māzvārān). In the sixth year of the reign of al-Muṭṭasim (227) Māzvār openly rebelled (Balāḏūrī, p. 229: ḥāshābi mu-ḵadāra). The Ṭabārīsh ʿAbd Allāh, governor of Khurāsān, had denounced to the Caliph the "misdemeanors, tyranny and apostasy" of Māzvār. When al-Muṭṭasim's ambassador arrived, Māzvār would not listen to him. Ibn Isfandiyār, p. 157, even accuses him of having conferred honours on Bābak, Mazdak and other Magians who had ordered the destruction of the mosques and the obliteration of all traces of Islam. Māzvār's schemes. It is difficult to reconstruct Māzvār's programme from the sources, which are hostile to him, but the narratives of contemporary witnesses which Tabārī, iii. 1288–1303, gives under the year 224 contain a number of curious and important details. The extension of Māzvār's power (after the assassination of the Bawwādī Shāhir and the occupation of the mountain of Šahrūm) had brought him into conflict with the Tabārīshīs to whom he refused to give Khurāsān. It may be noted that Māzvār's very title ḥāshābi of Khurāsān (see variant given in Yaʿqūbī, E.G.A., vii. 376) must have been displeasing to the Tabārīshīs. On the other hand the celebrated Afshīn, who after his victory over Bābak was at the height of his glory, coveted Khurāsān. He therefore secretly encouraged Māzvār's resistance to his rivals and according to Tabārī, iii. 1269, played upon his sentiments as a man of noble Jewish blood (yanna-mlimūn dī ḫaldaḵnārīn). From the national point of view, Māzvār could recall the precedent of his grandfather Windūnād-Hurmux to whom late sources attribute the organisation of the massacre of the Arab garrisons. Māzvār, who came out of "the mountain" where he had only an almost unknown town (Iṣṭaḵīrī, 7100; Al-Ahwāzī), may have had ascendant at the urban elements of the great towns of the "plain" among whom Arabs and their clients (abādān) predominated. The landowning class was certainly hostile to him, as in order to weaken and even exterminate them, he had relied on the support of the peasants. Māzvār's actions were certainly very violent, for ten centuries later, Ẓahir al-Dīn, p. 167, quotes the proverb: "so and so has done an injustice such as not even Māzvār could have done". Coming out in open rebellion (probably before the year 224 under which Balāḏūrī and Tabārī relate the dénouement) Māzvār had homaged paid to himself, took hostages and levied khurāṣī at once. The doings of his governor Surkhāštān in Sāri are characteristic. He transferred all the inhabitants of Sāri to Amīl, where he shut them up in a fort; as to the people of Amīl, he took 20,000 of them away into the mountains of Hurmüz-ābād (cf. above). The walls of Sāri, Amīl and Tāhirān were rased to the ground "to the sound of fires and drums". Māzvār had given orders to the peasants to attack and plunder their masters (Tabārī, iii. 1269). The next passage (iii. 1270) seems to indicate that a cadastral survey was ordered (amara an yuvaḵša b-balad) and the lands were let out, the rental being 30/4 of the produce. As to Surkhāštān, he collected 260 nobles (ahna b-balwān), the bravest he could find, and on a pretext that the ahna were favourable to the Arabs and to the 'Abbaṣids, handed them over as dangerous individual to the peasants, who slew him at his suggestion. He even tried to provoke a massacre of all the imprisoned landowners, saying to the peasants "I have already handed over to you the houses of the landowners and their wives", but this time the peasants refrained from following his advice. The later sources retain the usual accusation of apostacy against Māzvār ("he once more assumed the girdle of Zoroastrianism", says Ibn Isfandiyār, p. 150 quoting the kāth of Amīl), Balāḏūrī, p. 229 and Ibn al-Fakhrī, p. 309 also say that Māzvār "renounced the faith and committed treason", but this point is more obscure in Tabārī, where it only occurs in the list of charges made against Afshīn, iii. 1311 (transl. in Browne, "lt. Hist. of Persia", i. 334). The tone of the letter which Māzvār had addressed to his representatives, ibid., iii. 1351, is respectful to the Caliph, in form at least. But there is no smoke without fire, if we may believe the authors who mention the existence in Tabaristan of a Māzvārīya sect connected with the Khurramiyā [v. q.] or Muḥammadiya [v. q.] (i.e. followers of Bābak). Cf. al-Rāghūḏī (d. in 429), Fūrāk bān al-ṣāḥīf, p. 251–252; Ẓahir al-Iṣfardīnī (d. in 451), Taḥrīr b-ṣirāṭ [quoted in Pluget, Bābak, Z.D.M.G., 1869, p. 533] and Samʿamī, G. M.S., fol. 501a.

Māzvār's end. 'Abd Allāh b. Tāhir sent against Māzvār his uncle Ḥasan b. Ḥusain to operate from the direction of Ḍūjūnd as well as
Hajjān b. Djbalā, who went with 4,000 horses via Kāmis towards Djibal al-Shawārīn (= Sawdākhīh; cf. the article مسجد الملک), at the same time the caliph al-Mu’āṣir sent considerable forces under the command of Muḥammad b. Ibrāhīm who entered Rīyād (western ʿAbdarrāzīk) by Sālāmaha and Rukbbīś (Tabari, iii. 1264). Maṣūf b. Ḥasan, "lord of Dūnhāwānd", attacked from Ka‘īy while Abū l-Sādīd advanced via Lāriz and Dūnhāwānd.

The Arabs very skillfully exploited the rivalries and enmities in the entourage of Māzār. First of all his nephew Ḵānūn b. ʿAbdilahrīrīb (his representative in the mountain of Shawārīn = Sawdākhīh) went over to Hajjān, who marched on Sātīr and began to negotiate with Māzār’s brother Kūlhrīb. In the meantime Surkhātān’s army which occupied the Ţaṭība front dispersed and allowed the Fāqīh to advance. Kūlhrīb, who had been promised Māzār’s place, submitted to Ḥasan. Māzār seems to have lost his courage when he found himself surrounded by the Arabs and betrayed by his follower. He trusted Kūlhrīb, who had promised him the swāʿ, and came with him to Ḥasan (Tabari, iii. 1288—1291; dramatic story by an eye-witness) but Ḥasan did not even acknowledge his greeting, Māzār was handed over to Muḥammad b. Ibrāhīm and sent to Sāmarrā. Here he was confronted with Aḥfīn and seems to have denounced the latter. The caliph ordered him to be given 400 lassas, under which he died and his body was exposed beside that of ʿAbd al-Baqī in 242 = 859.

Kūlhrīb’s treachery served him little. He was slain as a traitor by his cousin Surkhātān b. Māzūghān who commanded the Dūnnak in the service of Māzār.

Surkhātān was betrayed by the soldiers after the defeat at Ţaṭība and the other of Māzār’s generals, al-Durriš, who was fighting against Muḥammad b. Ibrāhīm on the Rīyād front, died while attempting to reach Dūnnak (Tabari, iii. 1300).

Bibliography: Ya‘qūbī, ed. Houtman, i. 514; ii. 582; Bālakīrī, p. 229; Tabārī, iii. 1268—1303. — Among his authorities were Muḥammad b. Ḥafṣ al-Ṭabhkāfī al-Ṭabarī (perhaps related to the Arab warl Mī′ūn b. ʿAbd al-Ṭabhkāfī) and ʿAlī b. Sahl Rāhān “the Christian” [author of the Firdaws al-ṣūma, ed. Siddīkī, Berlin 1928], whom Māzār employed as his scribe, cf. al-Fīrārī, ed. ʿAlī b. Sahl Rāhān, p. 299; Tabārī is the source of the later epitomist Khāṭīb al-Ḍiyūrī, ed. de Jong-de Goeje, p. 399—405; Ibn Ṭabāna and al-Muθqil, vi. 520—516, 522—525; Ibn al-Ḍiyūrī, vi. 351—359, 363—364, 366 etc. Cf. also Ibn Rusta, p. 276; Ibn al-Faṭkhī, p. 304, 305—306, 309—310; Maṣūfī, B.G.A., vii. 137; Ya‘qūbī, ii. 608; Tabārī, iii. 284, 490, 506; Ibn ʿAsbān, trans. Browne, p. 14—154; Zahr al-Dīn, index (these two last local sources do not know Tabārī and contain a number of quite legendary stories); Well, Gesch. d. Chaliften, ii. 321—325; Justi, Iran. Namensbuck, p. 201—302 (bibliography); Marquart, Erdalbenk, p. 334.

(V. Minorsky)

MECCA.

On the eve of the Hijra. It is with the birth of Muḥammad — between 570—580 A.D. — that Mecca suddenly emerges from the shadows of the past and thrusts itself upon the attention of the historian. The geographer Ptolemy seems to know it only under the name Macoraba; but it must have been in existence long before his time. Mecca was probably one of the stations on the “incense route”, the road by which the produce of the East especially valuable perfumes, came to the Mediterranean world. It owes its importance to its position at the

Intersection of great commercial routes. The town that had grown up around the well of Zamzam and the sanctuary of the Ka‘ba was advantageously placed at the extreme eudos of the Asia of the whites and the Africa of the blacks, near a breach in the chain of the Ṣarrat, close to a junction of roads leading from Babylonia and Syria to the plateaus of the Yemen, to the shores of the Indian Ocean and the Red Sea. By the latter it was in communication with the mysterious African continent. What advantages were offered by this situation at the boundary between civilisation and barbarism, at the point of contact between two societies, brought together by necessities more pressing than political ambitions or the quarrels of race and religion! This was the part played by the Palmyrans, situated between the Romans and the Parthians. It demanded an adaptability and diplomatic skill beyond the ordinary. The two societies were frequently at war; it required wits to deal tactfully with them. But if the position had its risks, it had the advantage of being able to fix the price for its services to the belligerents. In the delicate role of intermediary and broker between two world, the strength of will of the Ishmaelites and the tenacity that lay beneath his apparent complaisance assured his success from the first. Civilisation and barbarism might conclude peace for a time or be at war; he was able to trade on their agreement or exploit their dissensions with equal satisfaction to himself. Ambiguous and amphibious, the Meccan was able to have a foot in both camps without it being possible to discern where his sympathies really lay.

At an early date we see the Meccans opening negotiations with the states adjoining Arabia. They obtained from them safe conducts and capitulations, permitting the free passage of their caravans. This is what their chronicles call the “guarantee of Caesare and of Chosroes”. They also concluded agreements with the Negus of Abyssinia, with the principal shākhs of Naḍil, the šāls of the Yemen; with the patriarchs of Ghassān and of Ḫira. In the negotiations with the Greeks and Persians the principal of the “open door” was not admitted. Commercial transactions were carried through at posts on the frontier or in towns specially designated for the purpose. In Palestine these were the ports of Aila and Qarnah and perhaps also Jerusalem. In Syria, Bostra was their principal outlet, their great market.

Ṣūr civ. 2 mentions as a permanent institution “the double caravan of winter and summer”. The marṣūlīb, genealogists, record the names of the Kurash chiefs who had succeeded in obtaining by negotiation permits to trade. The countries open to commerce in this way were called waḥād, direction, marṣūlīb, region of trade. There were innumerable restrictions, limiting the extension of the privilege. Eastern governments did not permit free trade. Distrustful of merchants even when her own subjects, Byzantium showed herself still more
suspicious of foreigners, especially Bedouins, a slippery race which filled her with an unconquerable distrust. The latter had therefore to make heavy sacrifices, to pay onerous taxes, to pay continual customs-dues and tolls or to hand over hostages before negotiations could be begun. Mecca was not impressed by principles any more broad-minded; she took care to compensate herself from foreign traders and to levy various charges upon them, tithe, charges for permits to stay in the country, to travel about and to trade. Tithe had to be paid before entering Mecca. There was also, as at Palmyra, a "departare" tax or tax on exportation. In short, foreign merchants were entangled in a very intricate fiscal system, whether they settled in Mecca or only passed through it, especially those who did not obtain the ghirrār or guarantee of a local clan or notability.

The population. About the time of the Hijra, the people of Mecca claimed descent from a common ancestor. They called him Kūraish or Fīhr, sometimes also al-Nadr, surnamed Kūraish. The origins of the Kūraish were humble and little is known of them. They formed one of the less wealthy branches of those who went back to the main stock of the Kinda [q. v.]. At first they led a miserable existence in the wild mountains around the sacred territory of Mecca. A confraternity from the northern Hijāz, Kūsaif, is said to have installed them by force of arms in Mecca, which he took from the control of the tribe of Khuzay'a [q. v.]. Some ten main clans can be distinguished among them: Ḥāshim, Umaiyah, Nawfal, Zuhra, Asad, Talin, Makḥūt, 'Adi, Djugāb and Sahm. These occupied mainly the centre of the town, the bottom of the valley, the Bāṣṭa, where the water of the well of Zamzam accumulated, the hollow where the Ka'bah stood. Their living in this neighbourhood earned them the epithet of Abī Ḥāfiq, Abī Ḥāfiq or Kūraish al-Abī Ḥāfiq. This central quarter of the town was regarded as that of the aristocracy and of the oldest Kūraish families. Among these ten groups, some owe to Isāš a common inheritance. Such were the Tāmis and the 'Adi, rendered illustrious by the caliphs Abū Bakr and 'Umar. Other clans more vaguely connected with the eponymous ancestor were thrust towards the outskirts of Mecca, the lower slopes or in the gorges (dāhāf) of the hills which dominate the town. They were called the "Kūraish of the outskirts" (Kūraish al-Zawāhir). Held in less consideration than their fellow-tribesmen of the Bāṣṭa, these suburbanites had the advantage of being distinguished from them by their bravery. They supplied the Kūraish community with its best soldiers and never failed to cast this up to the Meccans "of the centre".

Government and Administration. It is not easy to discover definite indications of this. There must however been a rudimentary system of archives in which to preserve treaties of alliance and commerce, and later the equivalent of an office to take charge of the collection of taxes on foreign traders. Nowhere do we find any explicit allusion to the working of such administrative organisations. A tradition records the existence of purely honorary offices with no jurisdiction. But it does not agree either upon the number (ten or six) nor upon the functions of these offices. I imagine it was invented to satisfy the vanity of the great families. The only allusion to it is in the verses of a Mедине poet, Ḥassān b. Ṭahlī. The office of "pavilion and reins" has nothing to do — as has been supposed — with the art of war. This dignity, which was an ancient one and no longer understood, was a memory of the ritual processions held in pagan Arabia. The ghirrār was simply the pavilion or portable tabernacle, containing the fetish of the tribe and solemnly carried on the back of a camel. The chiefs and notables took turns at holding the reins of the animal bearing this precious burden. It is taking nothing from the glory of Kūhēl b. al-Walīd to say that he had not a monopoly of this privilege. Behind the legend of the Meccan dignities, we perceive the intention of glorifying the cradle of the Prophet. In giving it administrative institutions, an attempt was made to conceal the modest beginnings of the Ḥāshimīs and no less those of Abī Bakr and 'Umar. The onerous office of ḥāfiq, which had to pay compensation for murder and injury, was far beyond the financial resources of the modest citizen called Abī Bakr. The entrusting to 'Umar of the safra or diplomatic missions cannot be reconciled with his extreme youth and plebeian origin.

I have elsewhere, for lack of a better term, called Mecca "a merchant republic". If Abī Sufyān is called "Shāhīq and chief of the Kūraish", several of his contemporaries are given equally high sounding titles. There is not the slightest reason to think that he was a kind of Kūraish dux. The manner in which the events of the first eight years of the Hijra are recorded produces the fallacious impression that he held the power in Mecca in his hands. In reality, he was only the ablest and most intelligent of his peers, the chiefs of the Kūraish clans. As al-Fāṣî pertinently observes, all were equal: "no one exercised authority unless delegated or kindly permitted to do so by them". Did their chiefs constitute a regular official body? Yes, says tradition. Mecca is even said to have had a kind of Senate or Grand Council, the dīr al-ṣawāda. It met only in extraordinary circumstances. Usually, however, we find that it is in the ṣawāda, family groups or clans, the Nābi Ka'bah opening on the square of the Ka'bah — the forum and bourse of the town — that affairs of general interest were dealt with.

The Kā'bah cannot conceive of authority without a council of notables, without the muṣla. This institution is so frequently mentioned in the Kā'bah that the Prophet must have set it working before his eyes. We think then that Mecca was ruled by the oligarchy of the muṣla, the council resident in the town of the ṣawāda of the nomad tribe. This was an assembly of the chiefs of the wealthiest and most influential families. This is why Umaiyad and Makḥūtīs are most usually mentioned as composing the muṣla. Neither election nor birth could necessarily open the way to a seat on it, but rather the fame of services rendered, the prestige of ability and wealth. Thus it welcomed to its councils the very wealthy Ibn Djugāb, a member of the humble clan of Tāmis. An assembly of elders or if you like of senators, in conformity with the principle of seniority among the Arabs: its authority, purely moral, was limited to advising, studying, looking ahead and giving to the merchant community the benefit of the experience of its conscript fathers. In the absence of any coercive
powers, persuasion was the only force it had to make its wishes obeyed. Hence the importance of eloquence in a milieu like this, where every family and every clan claimed autonomy. The cause of peace was in continual conflict with their claims. Without infringing their prerogatives, the mullah was able to exert moral pressure when the general good required it. The system recalls, though remotely, the organisation of Palmyra and of Venice.

Site and climate. In the form of an elongated crescent with its points turned towards the flanks of the Kur'anic hill, the town was hemmed in by a double range of bare and steep hills. The centre of this ill-ventilated couloir coincided with a depression in the soil. The early town occupied the bottom of this; this was the old, the valley, the Kaaba Makka, the hollow of Mecca. The centre, the lowest part of this depression, was called al-Masjid (cf. above). Some buildings in this quarter were so close to the Ka'bah that in the morning and in the evening their shadows were merged in that of the sacred edifice. Between these houses and the Ka'bah (q.v.) a narrow esplanade (sharā) lay below the level of the surrounding soil. This open area formed the primitive masjid, a sanctuary open to the heavens. The pre-Islamic Batih knew no other. The ends of the little streets opening on this open space were called the "gates of the hearm or of the masjid". The so-called gates or openings took their names from the clan settled around the Ka'bah. Thus one regularly spoke of the "gate of the Banu Quraish". The walls of their houses served to mark the bounds of the masjid. It was on the ground floor of the buildings facing the sides of the Ka'bah that the masjid of the chief families met, those that formed the mullah (cf. above).

In the suburbs (pawθur), and at a later date in the ravines (al-tawq’ib) which had been dug by erosion out of the flanks of the hills, was a confusion of poor hovels, low and ramshackle hovels. The unpleasant features of a town of this kind are obvious. The geographer Makdisi has summed these up strikingly: "suffocating heat, deadly winds, clouds of flies". The continual difficulty was the dearth of water. The population was dependent on the variable output of the Zamzam. There were other wells, mainly outside the town. Those inside had a doubtful reputation. The scarcity of drinking-water is evident from the amount of precaution taken, when some thousands of pilgrims had to be supplied. In such deplorable conditions one can imagine what suffering the long days brought, randa. Makka "the burning of Mecca"; why the great families preferred to send their children to be brought up in the desert; why the Sira only incidentally mentions the plague of Makka (randa. Makka). Smallpox is mentioned only in connection with the enemies of the Prophet.

Rains are few and far between. Droughts sometimes last for four years. But when the winter season is wet, the rains may sometimes attain an unheard-of degree of violence. To the east of Mecca a rocky wall rises its steep barrier, a succession of strata and summits merging into the chain of the Sarit. These jagged hills collect on their flanks the surplus rains of the monsoon which brings fertility to the Yemen. All along these slopes, where no shrub interrupts the fall — at the bottom of each a soil is formed — the cataracts augmented by all these tributaries fall into the hollow of Mecca, a basin Makka, in which the Ka'bah occupies the bottom. The waters rush to this depression they force a passage through the *gates of the masjid" and flow over the area around the sanctuary. They fill it and rise to attack the Ka'bah. Before the Hajj, the Kur'ani cullayt seems to have paid no heed to the flooding or said they were powerless to prevent it. Efforts made by the caliphs yielded "only mediocre results".

This is why the misdeeds of the soil fill the annals of Mecca. On several occasions their violence has overflowed the Ka'bah and turned the court of the great mosque into a lake. As a result of the floods, epidemics broke out. The deposit of silt brought by the waters polluted the wells; graves left unburied formed centres of epidemic infection. The annalists avoid dwelling on this, troubled by the Tradition which says that the plague never reaches Mecca. The absolute sterility of the soil brought another scourge, that of famine. The slightest irregularity in the convey of grain from Syria or the Sarit was enough to cause it. It continues to figure along with the ravages of flood and plague in the monotonous annals of the town.

Economic life and finance. On examining closely the picturesque literature of the Sira and Hadith, one receives the impression of business, of intense activity busting out of the narrow and sterile valley of Mecca. The Kur'ani only strengthens this impression. All his life the Prophet retained the impress of his Kur'ani education and training. This fundamentally mercantile character is revealed at every turn.

Writing and arithmetic! One is amazed at their importance in the economic life of the town. Relying on the Kur'ani epithet maw‘ut, i.e., pagan, gentle, and on biased writers like al-Balatkhi, it has been held that, except for some fifteen individuals mentioned by name, all the pre-Hijrīan Kur'ani were illiterate. Alongside of the "book" of accounts, the scales always figure in the Meccan shops; not so much to weigh goods as to verify and check payments of all kinds including cash. Now, coins were not plentiful on the Meccan market; they were supplemented by the precious metals, ingots of gold and silver, by ibar, gold dust. Only the scales could determine the value. In the more delicate cases, recourse was had to the services of a muwair or professional weigher.

It would be difficult to imagine a society in which capital enjoyed a more active circulation. The sāfìr, business man, was not engaged in hoarding, in gathering wealth into his strong boxes. He had a blind faith in the unlimited productivity of capital, in the virtue of credit. Brokers and agents, the bulk of the population lived on credit. The sleeping partnership was much in favour (muqāraba), especially the "partnership for the half", which supposes 50% participation in the profits by the sleeping partners. Thanks to the development of these institutions the humbler sums could be invested, down to a gold dinar or even a mashik or half dinar. Such a flexible organisation stimulated even the humblist to take his share in commercial enterprises.

The coins brought to Mecca were of very different kinds: the demonius aureus of the Byzantines
and the silver drachm of the Sasanids and Himyars. These pieces often worn, rudely engraved, very unequal in weight and format, came from the most varied mints. Only the money-changer had the requisite flair, the eyes sufficiently trained to deal

with the confusion of currencies, to determine accurately the standards, values, and the kinds in circulation. In addition there were the complications caused by the difference of standard and the oscillations of exchange. The Byzantine provinces, Syria and Egypt, were among the khul al-jadhab or countries with a gold standard. Babylonia was khul al-wurr, a land with a silver, the Sasanian, standard. On the eve of the departure of the caravans for Syria, there were regular battues in search of dinars. The Meccan ṭağīr was not distinct from the financier. His first article of trade was money. When occasion arose, he invested his capital in business, in the organisation of large caravans. To the leaders of the caravans, to the traders and to the factors, he advanced the funds necessary for their operations.

Primarily a clearing house, a banking town, Mecca had customs and institutions peculiar to this kind of transaction and to finance. Sometimes it is ṭagīr, usury, in all its ugliness: dinar for dinar, dirham for dirham, i.e. 100\% interest. To the condemnation of ṭagīr in the Kurān, the Kuraich objected that they saw in it only "a kind of sale" (Kurān ii. 276), of letting out capital for a rent. Speculation too was rampant; on the rates of exchange, the load of a caravan which one tried to buy up, the yield of the harvests and of the flocks and lastly the provisioning of the town. Fictitious associations were formed and sales were made on which loans were borrowed. "Every Arab", says Strabo, "is either a trader or a broker". In Mecca, says the hadith, "he who was not a merchant, counted for nothing". In setting out on a military expedition the citizens always took merchandise along with them. This is what they did when going to relieve the Bād caravan. The first thing the Meccan muḥāfiz did on arriving in Medina was to ask the way to the market-place. The women shared these commercial instincts: Abū ʿUbayd’s mother ran a perfumery business. The activities of the ṭağīr Khudajī are celebrated. Hind [q.v.], the wife of Abū ʿUbayd, sold her merchandise among the Kalb of Syria. Like their husbands the Meccan women had financial interests in the caravans. On the return of the convoy they gathered round Abū Sufyān to know what their money and their contributions had earned and to get to share of the profits.

The Caravans. The organisation of a caravan was the subject of interminable palavers in the saḥāfī around the Ka’ba. Its departure and return were events of public interest. The whole population was associated with it. On route it remained in continual communication with the metropolis through Beduins met on the journey or special couriers. Abū Sufyān sent one of these messengers to describe the critical position of the Bād caravan. It cost him 20 dinārs, an enormous sum, but one proportionate to the value of the convoy in which Mecca had 50,000 dinārs invested. The Meccan caravans were of considerable size. Neither horses nor mules appeared in them. The number of camels on occasion rose to 2,500. The men (merchants, guides [daffil] and guards) varied from 100 to 300. The escort was strengthened on approaching areas infested by bandits (pō العب) or when traversing the territory of hostile tribes. The Bād caravan may be taken as typical. We do not know of another in which the capital invested attained such an amount. The greater part was supplied by the important Umayyad firm of Abū ʿUbayd b. ʿUmar. This firm had formed a company of the family, adding to their own considerable reserves the contributions of itssleeping partners. To their 30,000 dinārs the other Umayyad houses added 10,000. Four-fifths of the capital of the Bād caravan was therefore of Umayyad origin. We can understand why the direction and supreme control of the convoy was entrusted to Abū Sufyān, who was personally interested in the enterprise.

In the first place a caravan from Mecca carried skins and leather, sometimes also the ṣāḥī of ṯāffī, a kind of currant; then imports of gold and silver partly from the mines of the Bādū al-Sulaym and ṭāfu, gold dust from Africa. The texts frequently call it ṭafīma, i.e. a convoy laden with perfume and rare spices. Of the perfumes, the most esteemed came not from the Ḥijāb, but from southern Arabia, the "land of frankincense", or even from India and Africa. To these might be added aromatic gums and medicinal drugs, like the senna of Mecca, all objects of small bulk and purchased at higher prices by the luxury of the civilised countries.

From the Yemen the Meccan caravans brought back the products of India, the silks of China, the rich adānī cloths, so called from Ādam. Besides gold dust, the main exports of Africa were slaves and ivory. From Africa Mecca recruited her labourers and her mercenary soldiers, the ṣāḥībān or Abyssinians. In Egypt and in Syria, the Kuraich traders brought luxury articles, products of the industry of the Mediterranean, mainly cotton, linen or silk stuffs and cloths dyed in vivid purple. From Būṣān and the ʿUbar (Syria) came arms, cereals and oil, much appreciated by the Beduins.

The pace of the caravan was slow but the articles transported, leather, metals, scented woods, feared neither damage nor the delays of long journeys. The expenses were confined to the hire of the animals, the payment of the escort, the tolls and presents to the chiefs of the tribes. With such an economical organisation, the profits of 100\% were attained by our authors were quite usual. This was the case with the caravan of Bādī each dinār having brought back a dinār. Two years after this brilliant affair, the Companions of the Prophet who had sought refuge in Medina were able to carry out as profitable a transaction in the same field "since each of their dirhams gained a second dinār", that is to say a profit of 100\% again.

Fortunes in Mecca. We can now imagine how money had gradually accumulated in the chests of the Meccan financiers, who were naturally of a saving disposition. This explains Pliny the Elder’s ill-humour when he recalls "the millions of sesterces which the Arabs take annually from the Roman Empire giving nothing in return, nihil inveniorem redditum habuimus" (Hist. Nat., vi. 18). This last statement is an exaggeration, but it should be remembered that the Meccan caravan carried only articles of high value, and that with regard to the Empire the Arabs were mainly importers, so that the trade balance was always very much
in their favour. The 30,000 dinârs invested by the one house of Abû UbaïsCha in the Badr caravan suggests that H. Winckler is quite right when he tells us to think of the Palmira of Zenobia if we wish to get an idea of the financial capacity of Mecca. The fortunes of the Mâghâzim were no less than those of their Umayyad rivals. The Tânis. 'Abd Allah b. Djûzâ'ân must have been a millionaire if the poet thought of comparing him to Caesar. The principal organizers of the Badr caravan were also millionaires. The thousands of dinârs subscribed by them did not even represent all their fortune. Other portions of their capital were out at interest or put in other speculations. Among other millionaires we may mention the Mâghâzim Walîd b. al-Mughârîs and 'Abd Allah, father of the poet 'Umar b. Abî Râbah.

Next to these representatives of high finance come the well-to-do Meccans, like 'Abd Allah al-Râmnân b. 'Awf who had a capital of 8,000 dinârs and al-Hârij b. 'Amir and 'Umayya b. Khâlaf. In the case of the latter we have a second 2,000 dinârs in the Badr caravan. Lastly there were the small traders, brokers and shop-keepers who formed the petty bourgeoisie of the town. To their commerce a number added the supervision of some industry like ironwork or carpentry. The most typical representative of this class is given us by the future caliph Abû Bakr, a masseb, retailer of cloth. He belonged like Abû Djûzâ'ân to the plebeian clan of Tain, rich in men and women of initiative, like 'Aisha, daughter of Abû Bakr. He seems to have had a capital of 40,000 dirhams. 'Abbas, the uncle of the Prophet, is also mentioned among the rich bankers of Mecca, but we have no details about him. The other Mâghâzim lived in circumstances bordering on poverty. These Meccans most certainly must have been wealthy who paid without a murmur the enormous ransom demanded for their relatives after the defeat of Badr. After this disaster it cost them not less than 200,000 dirhams — the Meccan chiefs gave up their share of the profits in the Badr enterprise — some 25,000 dinârs — to prepare for the revenge. They did this 'nânân b'ânânus "with a good heart", with the easy grace of opulent financiers, used to running the risks of speculations on a large scale. One touching detail is recorded. They refused to touch the modest shares of the small contributors. This example shows how at Mecca, "the strong", al-ad-jumma (Wâjdîd), i.e., the patricians, were able in critical circumstances to realise a spirit of solidarity and of sound democracy.

Mecca before the Hijra had neither ships nor a port. It was only exceptionally that foreign ships anchored in the narrow bay in the shallow shore of the sea. It had a small shore. It was here that the Byzantine ships were wrecked, the wood of which went to build the terrace of the Ka'bah. It was to Shu'ailba that the first Muslim emigrants for Abyssinia went, no doubt on hearing that two merchant ships had touched there. More rarely sailings took place from the desolate shore of Djidda, which was nearer Mecca. From the time of 'Uthmân, Djidda took the place of Shu'alba and became the port of the Kuraish metropolis. When Muḥammad settled in Medina and cut their communications with Syria, the Meccan leaders never thought of taking to the sea but resigned themselves to the enormous detour through al-Nadîd. The creation of an Arab navy was the work of the caliph Mu'awiyâ.

2. After the Hijra. We need not rehearse the events of the first eight years of the Hijra. They are summed up in the biographies of the Prophet. This struggle and the ridda, the surrender of Mecca, were fatal to its economic prosperity. One after the other, the great families migrated to Medina, now the capital of Islam. This tendency increased under the first three caliphs, who made their headquarters among the Ansâr. 'Ali definitely left Arabia to settle in Kâfî. Richly endowed by the state, the leading Koraish, becoming generals and governors of provinces, lost interest in commerce. No more is heard about caravans or fairs in the Hijras. It was only at the period of the pilgrimage that Mecca became alive again and saw the caliphs reappear at the head of the pilgrims. The conquest of the 'Iraq dealt the last blow to the economic decline of western Arabia. The Indian trade resumed its old route by the Persian Gulf and the valley of the Euphrates. Direct communication was established by land with the markets of the middle east.

Umayyâd period. The situation improved with the coming of the Umayyad dynasty. Mu'awiyâ took an active interest in his native town. He erected buildings there and developed agriculture in the environs, dug wells and built dams to store up the water. Under his successors, especially the Marwânids, Mecca became a city of pleasure and ease, the rendezvous of poets and musicians, attracted by the brilliant society formed by the sons of the Companions of the Prophet. Many people returned to live in Mecca after making their fortunes in the government of conquered provinces. Contact with foreign civilisations had made them refined and fastidious. They had become accustomed to baths, a luxury which presupposes an abundant water-supply. Water had to be procured from the hills of the Sûr, Khâlid al-Khawâ's [q. v.] name is associated with this undertaking which changed the aspect of the town. To meet the scourge of flood, the caliphs 'Umar and 'Uthmân had called in the aid of Christian engineers, who built barrages in the high-lying quarters. They also secured the area round the Ka'bah by making dykes and embankments. The Umayyad caliphs continued and completed these works. They dug a new bed along the course of the sa'il and endeavoured to break its violence by barriers built at different levels. Their great anxiety was to protect the depression of the Bâthah where the Ka'bah stood. The skill of the engineers of the period did not succeed in overcoming the topographical difficulties nor in averting the ravages of the winter rains, regular flooding of the sur. They were not able to cover the whole area with the stone slabs of the ground, still further aggravated by the unnatural shape of the Bâthah, a basin with no outlet. The houses on the bank of the sa'il were taken down and the alleys adjoining the Ka'bah removed. Each modification of the old plan meant the sacrifice of more buildings. These clearances in time changed the traditional aspect of Mecca, where the sa'il continued to sow destruction.

Along with these precautions against flooding an endeavour was made to enlarge the religious court round the Ka'bah. Islam aspired to possess a temple in keeping with its worldwide claims. Successive expropriations begun by 'Umar and finished
by Wālid I prepared an exclamation. The plan of the great mosque [cf. AL-MASJID AL-HARĀM] with its galleries, a vast courtyard with the Ka'ba in the centre, is the work of the Umayyad caliph. He had the assistance of Christian architects from Syria and Egypt to carry it out. The important governorship of the Ḥijāz with its three cities, Medina, Mecca, and Ta'if, could in principle be given only to a member of the ruling family. Among the most celebrated of these Umayyads may be mentioned Sa'īd b. Aṣ, the two future caliphs, Marwān b. al-Hakam and 'Umar b. ʿAbd al-ʿAzīz. When no Umayyad was available the choice fell upon an official of tried capacity like ʿAbd al-Ḥakīm b. al-Kaṣīr. At first they were given Ta'if and then transferred to Mecca. It was only after this probation that the three towns were entrusted to them. But even then the centre of government remained in Medina, which under the Umayyads eclipsed Mecca by its political importance and by the fact that it was the home of the new Muslim aristocracy.

Under Yazīd I, the rising of ʿAbd Allāh b. al-Zubayr [q.v.] brought Syrian troops to Mecca. The rebel had made his headquarters in the court of the great mosque. A scaffold of wood, covered with straw, protected the Ka'ba. The carelessness of a Meccan soldier set it on fire. Ibn al-Zubayr rebuilt the edifice and included the Ḥijār within it [see KABA]. When Ḥajjāj had overthrown the Zubairid anti-caliph, he restored the Ka'ba to its former dimensions which have since remained unaltered. In 747 a Ḥajjājī rebel from the Yemen seized Mecca without meeting opposition. He was soon defeated and slain by the troops of the caliph Marwān II. In 750, Mecca passed with the rest of the caliphate under the rule of the ʿAbbasids.

I. Mecca under the ʿAbbasīds down to the foundation of the Sharifate (750–966).

Although the political centre of gravity in Islām now lay in Baghādā, this period at first presents the same picture as under Umayyad rule. The ʿAbbāsids are as a rule governed by ʿAbbāsīd princes or individuals closely connected with them (Die Chroniken der Stadt Mecca, ed. Wüstenfeld, ii. 181 sqq.). Sometimes Mecca and Ta'if were under one ruler, who was at the same time leader of the Ḥajjājī, while Medina had a separate governor of its own.

Arabia had however from the first century A.H. contained a number of ʿAlīd groups, who, as was their wont, fished in troubled waters, lay in wait as brigands to plunder the Ḥajjājī caravans and from time to time hoist their flags when they were not restrained either by the superior strength or by the bribes of the caliphs. We find al-Maʾmūr (156–157 = 754–755) already having trouble in Western Arabia. Towards the end of the reign of al-Mahdi (156–160 = 774–778) a ʿAbbasīd, ʿAbd al-Rahmān, set up his authority in Ḥijāz, and Ḥabīb b. ʿAbd al-Rahmān, grandson of ʿAbd al-Rahmān, took Mecca in 786. ʿAbd al-Rahmān then advanced to Ḥijāz with a huge army and plundered Mecca in 789. ʿAbd al-Rahmān was supported by Persia, and the ʿAbbāsīd government of the Ḥajjājī was restored. But ʿAbd al-Rahmān was finally defeated and killed. The ʿAbbāsīd government of the Ḥajjājī was consequently restored. This was the end of the ʿAbbāsīd period, which lasted until 966.
regular custom for a number of rulers to be represented at the Ḥajj and to have their flags unfurled; the holy city was rarely spared fighting on these occasions. The safety of the pilgrim caravans was considerably affected; it was very often ‘Alids who distinguished themselves in plundering the pilgrims.

The ‘Alid cause received an important reinforcement at this time by the foundation of a Hassânid dynasty in Tabaristân (Tabari, iii. 1523-1533, 1538-47, 1682-1685, 1695-1704, 1840, 1850, 1884-94, 1904-). In Mecca the repercussions of this event was felt in the appearance of two Hassânids (Chron. Mekkâ, i. 343; ii. 10, 195, 239, 329.), Isamî b. Yâsuf and his brother Muhammad, who also ravaged Medina and Dîdâda in the way that had now become usual (255 = 865-866).

The appearance of the Karmâniyas [q.v.] brought still further misery to the country in the last fifty years before the foundation of the aṣfarate (Tabari, iii. 2124-2130). Hard pressed themselves at the heart of the empire, the caliphs were hardly able even to think of giving active support to the holy land, and, besides, their representatives had not the necessary forces at their disposal. From 910 onwards the Karmâniyas barred the way to the pilgrim caravans. In 930, 1,500 Karmâniya warriors RAIDED Mecca, massacred the inhabitants by the thousand and carried off the Black Stone to Bahrein. It was only when they realised that such deeds were bringing them no nearer their goal — the destruction of official Iklân — that their zeal began to relax and in 950 they even brought the Stone back again. Mecca was relieved of serious danger from the Karmâniyas. The following years bear witness to the increasing influence of the ‘Alids in Western Arabia in connection with the advance of Fâtimid rule to the east and with Bûyid rule in Baghdad. From this time the Meccan ‘Alids are called by the title of Shari‘ which they have retained ever since.

2. From the foundation of the Shari‘ate to Kâthâda (c. 350-598 = 960-1200).

a. The Músâwits. The sources do not agree as to the year in which Dżfar took Mecca. 966, 967, 968, and the period between 951 and 961 are mentioned (Chron. Mekkâ, ii. 205 sqq.). ‘Alids had already ruled before him in the holy land. It is with him however that the reign of the Hassânids in Mecca begins, who are known collectively as shari‘s, while in Medina this title is given to the reigning Hassânids.

The rise and continuance of the Shari‘ate indicates the relative independence of Western Arabia in face of the rest of the Islamic world from a political and religious point of view. Since the foundation of the Shari‘ate, Mecca takes the precedence possessed by Medina hitherto.

How strongly the Meccan sharifate endeavoured to assert its independence is evident in this period from two facts. In 976 Mecca refused homage to the Fâtimid caliph. Soon afterwards the Caliph began to besiege the town and cut off all imports from Egypt. The Meccans were soon forced to give in, for the Hâjj was dependent on Egypt for its food supplies (Ibn al-‘Athîr, Kâmîl, viii. 407. Chron. Mekkâ, ii. 355). The second sign of the Shari‘a’s feeling of independence is Abu ‘l-Futûh’s (384-432 = 994-1039) setting himself up as caliph in 1011 (Chron. Mekkâ, ii. 207; Ibn al-‘Athîr, Kâmîl, ix. 233, 217). He was probably induced to do this by al-Ḥâkim’s heretical innovations in Egypt. The latter however was soon able to reduce the new caliph’s sphere of influence so much that he had hurriedly to return to Mecca where in the meanwhile one of his relatives had marred the power. He was forced to make terms with al-Ḥâkim in order to be able to expel his relative.

With his son Shukr (433-483 = 1039-1089) the dynasty of the Músâwits, i.e. the descendants of Mûsá b. ‘Abd Allah b. Mûsá b. ‘Abd Allah b. Hassan b. ‘Ali b. Abi Talib came to an end. He died without leaving male heirs, which caused a struggle within the family of the Hassânids with the usual evil results for Mecca. When the family of the Banî Shâhîb (q.v.; the Shibís) went so far as to confiscate for their private use all precious metals in the house of Allah, the ruler of Yemen, al-Sulâbi (Chron. Mekkâ, ii. 208, 210 sqq.; Ibn al-‘Athîr, Kâmîl, ix. 422; x. 19, 38), intervened and restored order and security in the town. This intervention by an outsider appeared more intolerable to the Hassânids than fighting among themselves. They therefore proposed to al-Sulâbi that he should install one of their number as ruler and leave the town.

He therefore appointed Abu Ḥâşim al-Muhammad (455-487 = 1063-1094) as Grand Sharif. With him begins the dynasty of the A. Ḥâşim (455-598 = 1063-1200), which takes its name from Abu Ḥâşim Muhammad, a brother of the first Sharif Dżfar; the two brothers were descendants in the fourth generation from Mûsá II, the ancestor of the Músâwits.

During the early years of his reign, Abu Ḥâşim had to wage a continual struggle with the Sulâmiyy branch, who thought themselves humiliated by his appointment. These Sulâmiyyas were descended from Sulâmiyya, a brother of the Mûsá II above mentioned.

The reign of Abu Ḥâşim is further noteworthy for the shameless way in which he offered the suzerainty, i.e. the mention in the khutba as well as the change of official rite which is indicated by the wording of the sajjân, to the highest bidder i.e. the Fâtimid caliph or the Salûk sulûk (Chron. Mekkâ, ii. 253; Ibn al-‘Athîr, x. 67). It was very unwelcome to the Meccans that imports from Egypt stopped as soon as the official mention of the Fâtimid in the khutba gave way to that of the caliph. The change was repeated several times with the result that the Salûk, tired of this comedy, sent several bodies of Turkomans to Mecca.

The ill-feeling between Sulâk and the Sharif also inflicted great misery on pilgrims coming from the ‘Iraq. As the leadership of the pilgrim caravans from this country had gradually been transferred from the ‘Alids to Turkish officials and soldiers, Abu Ḥâşim did not hesitate occasionally to fall upon the pilgrims and plunder them (Chron. Mekkâ, ii. 254; Ibn al-‘Athîr, x. 153).

The reign of his successor is also marked by covetousness and plundering. The Spanish pilgrim Ibn Dżhâir, who visited Mecca in 1183 and 1185, gives hair-rising examples of this. Even then however the Ḥâşim was no longer absolutely the own masters. As early years before, the Aysîhîyad dynasty had not only succeeded to the Fâtimids in Egypt but was trying to get the whole of nearer Asia into their power.
Saladin's brother, who passed through Mecca on his way to South Arabia, abandoned his intention of abolishing the sharifs that the place of honour on the Hadj belonged to the Ayyubids and their names were mentioned in the ghuṣra after those of the 'Abbasid caliph and the sharif (Ibn Djabir, p. 75, 95). The same Ayyubid in 1186 also did away with the Shī'ī (here Zaidi, for the Sharifs had hitherto been Zaidis) form of the adhīn (Chron. Mecca, ii. 314), had coins struck in Saladin's name and put the fear of the law into the hearts of the sharif's bodyguard, who had not shrunk from crimes of robbery and murder, by severely punishing their misdeeds. — A further result of Ayyubid anarchy was that the Shafi'ī rite became the predominant one.

But even the mighty Saladin could only make improvements in Mecca. He could abolish or check the worst abuses but the general state of affairs remained as before.

3. The rule of Kātādī and his descendants down to the Wahhabī period (c. 1200—1788).

In the meanwhile a revolution was being prepared which was destined to have far-reaching consequences than any of its predecessors. Kātādī, a descendant of the same Mihās (see above) from whom the Mūsamīs and the Ḥāwāqīm were descended, had gradually extended his estates as well as his influence from Ṭāubah to Mecca and had gathered a considerable following in the town. According to some sources, his son Hamza made all preparations for the decisive blow on the holy city, according to others, Kātādī seized the town on the 27th Radjab when the whole population was away performing a lesser ṣaḥa in memory of the completion of the building of the Ka'bah by 'Abd Allah b. al-Zubair, which was celebrated on this day along with the festival of Muhāmmad's ascension to heaven. However, it came about, Kātādī's seizure of the town meant the coming of an able and strong-willed ruler, the ancestor of all later sharifs. He steadfastly followed his one ambition to make his territory an independent principality. Everything was in his favour; that he did not achieve his aim was a result of the fact that the Hādīs was once again at the intersection of many rival lines of political interest.

Kātādī began by ruining his chances with the great powers; he ill-treated the son of the Ayyubī al-Malik al-'Adīl (540—615 = 1145—1218) in brutal fashion (Chron. Mecca, ii. 369). He roused the ire of the caliph by his attitude to pilgrims from the 'Irāq. He was able however to appease the latter and the embassy he sent to Baghdād returned with gifts from the caliph. The caliph also invited him to visit Baghdād. According to some historians, however, the sharif turned home again before he actually reached Baghdād. On this occasion, he is said to have expressed his policy of the "splendid isolation" of the Hādīs in verse, as he did in his will in prose (see Snouck Hurgronje, Qādīnābād's Policy of Splendid Isolation etc. in Rich.).

On the other hand, Kātādī is said to have vigorously supported an Imām of Ḥasanī descent in founding a kingdom in the Yemen. After the reconquest of this region by a grandson of al-'Adīl, the Ayyubīs of Egypt, Syria, and South Arabia were mentioned in the khutba in Mecca along with the Caliph and Sharif.

Kātādī's life ended in a massacre which his son Ḥasan carried out in his family to rid himself of possible rivals (Chron. Mecca, ii. 315, 325 sqq.; Ibn al-Athir, Kâmīl, xii. 362 sqq.). The Ayyubī prince Ma'dūd however soon put a limit to his ambition and had Mecca governed by his generals. On his death however power again passed into the hands of the sharifs, whose territory was allowed a certain degree of independence by the rulers of the Yemen as a bulwark against Egypt.

About the middle of the xiiiith century the world of Islam assumed a new aspect as the result of the advent of persons and happenings of great importance. In 1358 the taking of Baghdād by Hülagū put an end to the caliphate. The pilgrim caravan from the 'Irāq was no longer of any political significance. In Egypt power passed from the Ayyubīs to the Mamlūkīs; Sultan Barbars (658—676 = 1260—1277) was soon the most powerful ruler in the lands of Islam. He was able to leave the government of Mecca in the hands of the sharif, because the latter, Abū Nūr al-Ašūrī, was an energetic individual who ruled with firmness during the second half of the xiiiith century (1254—1311). His long reign firmly established the power of the descendants of Kātādī.

Nevertheless the first half century after his death was almost entirely filled with fighting between different claimants to the throne. 'Abd al-Ra'ūf's reign also (1346—1375) was filled with political mirest, so much so that the Mamlūk Sultan is said on one occasion to have sworn to exterminate all the sharifs. 'Abd al-Ra'ūf introduced a political innovation by appointing his son and future successor Ḥāfiz al-Ḥakam co-regent in 1361 by which step he hoped to avoid a fratricidal struggle before or after his death.

A second measure of Ḥāfiz al-Ḥakam also deserves mention, namely the harsh treatment of the Mūsamīs and Imām of the Zaidīs; this shows that the reigning sharifs had gone over to the predominant rite of al-Shafi'i and forsaken the Zaidī creed of their forebears.

Among the sons and successors of Ḥāfiz al-Ḥakam special mention may be made of Ḥasan (1396—1426) because he endeavoured to extend his sway over the whole of the Hijāz and to guard his own financial interests carefully, at the same time being able to avoid giving his Egyptian suzerain cause to interfere.

But from 1425 he and his successors had to submit to a regular system of control as regards the allotment of the customs.

From the time of Ḥasan, in addition to the bodyguard of personal servants and freedmen, we find a regular army of mercenaries mentioned which was passed from one ruler to another. But the mode of life of the sharifs, unlike that of other Oriental rulers, remained simple and in harmony with their Arabian surroundings. As a vassal of the Egyptian Sultan the sharif received from him every year his tawqîf [q.v.] and a robe of honour. On the ceremonies associated with the accession of the sharifs see Snouck Hurgronje, Mecca, i. 97 sqq.

Of the three sons of Ḥasan who disputed the position in their father's lifetime, Barākāt (I) was chosen by the sultan as co-regent; twenty years later, he succeeded his father and was able with slight interruptions to hold sway till his death in 1455. He had to submit to the sultan sending a permanent garrison of 50 Turkish horsemen under an emir.
to Mecca. This emir may be regarded as the pre-
cursor of the later governors, who sometimes at-
tained positions of considerable influence under
Turkish suzerainty.

Mecca enjoyed a period of prosperity under
Barakát's son Muḥammad (Chron. Mekha, ii.
341 sqq.; iii. 250 sqq.), whose reign (1455—1497)
coincided with that of Kāfībey [q.v.] in Egypt.
The latter has left a fine memorial in the many
buildings he erected in Mecca.

Under Muhammad's son Barakát II (1497—
1525) who displayed great ability and bravery in
the usual struggle with his relatives, without getting
the support he desired from Egypt (Chron. Mekha,
ii. 342 sqq.; iii. 244 sqq.), the political situation
in Islam was fundamentally altered by the Otto-
man Sultan Selim's conquest of Egypt in 1517.

Although henceforth Constantinople had the
importance for Mecca that Baghdad once had and
there was little real understanding between Turks
and Arabs, Mecca at first experienced a period of
peace under the sharifs Muḥammad Abū Nu-
amuy (1525—1566) and Ḥasan (1566—1601). Under
Ottoman protection the sharifs were extended as far as Kāfīr in the
north, Hālī in the north and east into Najd. Dependency of Egypt still existed at
the same time; when the government in Constantinople was a strong one, it was less perceptible, and
vice versa. This dependence was not only political
but also a material and religious side. The Hijāz
was dependent for its food supply on corn
from Egypt. The foundations of a religious and
educational nature now found powerful patrons in
the Sultan of Turkey.

A darker side of the Ottoman suzerainty was its
intervention in the administration of justice. Since
the sharifs had adopted the Shī'ite madhhab, the
Shī'ite kāfīr was the chief judge; this office had
also remained for centuries in one family. Now
the highest bidder for the office was sent every
year from Constantinople to Mecca; the Meccans of
course had to pay the price with large interests.

Hālī and Najd, which had a new period of confusion and
civil war began for Mecca. In the language
of the historians, this circumstance makes itself
apparent in the increasing use of the term Dhawī ...
for different groups of the descendants of Abū Nu-
namuy who dispute the supremacy, often having
their own territory, sometimes asserting a certain
degree of independence from the Grand Sharīf,
while preserving a system of reciprocal protection
which saved the whole family from disaster (Snouck
Huurgrunde, Mekha, i. 112 sqq.).

The struggle for supremacy, interspersed with
disputes with the officials of the suzerain, centred
in the xviiith century mainly around the 'Abādilla,
the Dhawī Zaid and the Dhawī Barakat.

Zaid (1631—1666) was an energetic individual
who would not tolerate everything the Turkish
officials did. But he was unable to oppose success-
fully a measure which deserves mention on account
of its general importance. The ill-feeling between
the Sunni Turks and the Shī'ī Persians had been
extended to Mecca as a result of an order by Sultan Murad to expel all Persians from the holy
city and not to permit them to make the pilgrim-
age in future. Neither the sharifs nor the upper
classes in Mecca had any reason to be pleased
with this measure; it only served the mob as a
pretext to plunder well-to-do Persians. As soon
as the Turkish governor had ordered them to go,
the Sharīfs however gave permission as before to
the Shī'īs to take part in the pilgrimage and to
remain in the town. The Sharīfs likewise favoured
the Zaidi, who had also been frequently forbidden
Mecca by the Turks.

The further history of Mecca down to the coming
of the Wahhābi is a rather monotonous struggle of
the Sharīfī families among themselves (Dhawī
Zaid, Dhawī Barakat, Dhawī Mūsam) and with the
Ottoman officials in the town itself or in
Djidda.

4. The Sharīfīs from the Wahhābī
period to its end. The Kingdom.

Although the Wahhābis [q.v.] had already
made their influence perceptible under his prede-
cessors, it was Ghālib (1788—1813) who was
the first to see the movement sweeping towards
his territory like a flood; but he left no stone
untouched to avert the danger. He sent his armies
north, east and south; his brothers and brothers-
in-law all took the field; the leaders of the Syrian
and Egyptian pilgrim caravans were appealed to
at every pilgrimage for help, but without success.

In 1801 Ghālib made a treaty with the emir of Darāya,
despite the boundaries of their territories were
pursued, with the stipulation that the Wahhābis
should be allowed access to the holy territory.
Misunderstandings proved inevitable however and in
1803 the army of the emir Sa'ud approached the
holy city. After Ghālib had withdrawn to Djidda, in April Sa'ud entered Mecca, the inhab-
habitants of which had announced their conversion.
All kubbahs were destroyed, all tobacco pipes and
musical instruments burned, and the agūlah purified of praises of the Prophet.

In July, Ghālib returned to Mecca but gradually
became shut in there by enemies as with a
wall. In August the actual siege began and with it
a period of famine and plague. In January
the following year, Ghālib had to submit to acknow-
ledging Wahhābi suzerainty while retaining his
own position.

The Sublime Porte had during all these hap-
penings displayed no sign of life. It was only after the Wahhābis had in 1807 sent back the
pilgrim caravans from Syria and Egypt with their
mamals, that Muḥammad ʿAlī was given
instructions to deal with the Hijāz as soon as he was
finished with Egypt. It was not till 1813 that
he took Mecca and there met Ghālib who made
cautious advances to him. Ghālib however soon
fell into the trap set for him by Muḥammad ʿAlī and
his son Tūsūn. He was sent to Sidon and,
where he lived till his death in 1816.

In the meanwhile Muhammad ʿAlī had installed
Ghālib's nephew, Yāhūd b. Saʿūd (1813—1819)
as sharīf. Thus ended the first period of Wahhābī
rule over Mecca, and the Hijāz once more became
dependent on Egypt. In Mecca, Muhammad ʿAlī
was honourably remembered because he restored
the pious foundations which had fallen into ruins,
revived the consignments of corn, and allotted
stipends to those who had distinguished themselves
in sacred lore or in other ways.

In 1827 Muḥammad ʿAlī had again to interfere
in the domestic affairs of the sharīfīs. When Yāhūd
had made his position untenable by the vengeance
he took on one of his relatives, the viceroy
deposed the Dhawī Zaid and installed one of the 'Abādilla,
Muhammed, usually called Muhammed b. Awn (1827–1851). He had first of all to go through the traditional struggle with his relatives. Trouble between him and Muhammed Ali's deputy resulted in both being removed to Cairo in 1836.

Here the sharif remained till 1840 when by the treaty between Ali and the Porte the Hijaz was again placed directly under the Porte. Muhammed b. Awn returned to his home and rank. Ottoman suzerainty was now incorporated in the person of the wali of Djidda. Friction was inevitable between him and Muhammed b. Awn; the latter's friendship with Muhammed Ali now proved of use to him. He earned the gratitude of the Turks for his expeditions against the Wahhabi chief Faizal in al-Riyadh and against the Ash tribes. His raids on the territory of Yemen also prepared the way for Ottoman rule over it.

In the meanwhile the head of the Dhawi Zaid, Abd al-Muttalib (1851–1856), had made good use of his friendship with the grand vizier and brought about the deposition of the Ashids in favour of the Dhawi Zaid. Abd al-Muttalib however did not succeed in keeping on good terms with one of the two pashas with whom he had successively dealt. In 1855 it was decided in Constantinople to cancel his appointment and to recall Muhammed b. Awn. Abd al-Muttalib at first refused to recognise the genuineness of the order; and he was supported by the Turkphobe feeling just provoked by the prohibition of slavery. Finally however, he had to give way to Muhammed b. Awn, who in 1856 entered upon the Sharifate for the second time; this reign lasted barely two years. Between his death in March 1858 and the arrival of his successor, Abul Allah in October of the same year took place the murder of the Christians in Djidda (June 15) and the atonement for it (cf. 1211H), and Saouck Harrounje, Ein rechter der wissenschaftlichen universiteit, in Brijvagen e. d. Tijd, Land- en Volkenkunde van Ned. Indie, 5° voelt., deel II, p. 381 sqq., 399 sqq.

The rule of Abul Allah (1858–1872) who was much liked by his subjects, was marked by peace at home and events of far-reaching importance abroad. The opening of the Suez Canal (1869) meant on the one hand the liberation of the Hijaz from Egypt, on the other however more direct connection with Constantinople. The installation of telegraphic connections between the Hijaz and the rest of the world had a similar importance. The reconquest of Yemen by the Turks was calculated to strengthen the impression that Arabia was now Turkish territory for ever.

The brief reign of his popular elder brother Husain (1872–1880) ended with the assassination of the sharif by an Afghan. The fact that the aged Abd al-Muttalib (see above) was sent by the Dhawi Zaid from Constantinople as his successor (1880–1882) gave rise to an obvious suspicion. Although the pasha saw something of a suit in this old man, his rule was soon felt to be so oppressive that the notables petitioned for his deposition (Saouck Harrounje, Mekba, i. 204 sqq.). As a result in 1881, the energetic Othman Nafi Pasha was sent with troops to the Hijaz as commander of the garrison with the task of preparing for the restoration of the Abbadids. Abd al-Muttalib was ostracised and taken prisoner; he was kept under guard in one of his own houses in Mecca till his death in 1886.

Othman Pasha, who was appointed wali in July 1882, hoped to see his friend Abdillah, one of the Abbadids, installed as Grand Sharif alongside of him. Awn al-Rafik (1882–1905) was however appointed (portrait in Saouck Harrounje, Bilder aus Mekba, p. ). As the wali was an individual of great energy, who had ever done much for the public good and Awn, although very retiring, was by no means insignificant, may even tyrannical, trouble between them was inevitable, especially as they had the same powers on many points, e.g. the administration of justice and supervision of the safety of the pilgrim routes. After a good deal of friction Othman was dismissed in 1886. His successor was Djamal Pasha, who only held office for a short period and was succeeded by Safwat Pasha. Only Ahmad Rithib could keep his place alongside of Awn and that by shutting his eyes to many things and being satisfied with certain material advantages. After Awn's death Abdillah was chosen as his successor. He died however before he could start on the journey from Constantinople to Mecca. Awn's actual successor was therefore a nephew 'Ali (1905–1908). In 1908 he and Ahmad Rithib both lost their positions with the Turkish Revolution.

With Husaia (1908–1916–1924), also a nephew of Awn's, the last sharif came to power. But for the Great War his sharifate would probably have run its usual course. The fact that Turkey was now completely involved in the war induced him to declare himself independent in 1916. He endeavoured to extend his power as far as possible, first as liberator (mumizli) of the Arabs, then (June 22, 1916) as king of the Hijaz or king of Arabia and finally as caliph. Very soon however, it became apparent that the Sultan of Naj'd, Abd al-Azn Al Sa'ad, like his Wahhabi forefathers, was destined to have a powerful say in the affairs of Arabia. In Sept. 1924 his troops took Taif and in October Mecca. King Hussain fled first to Aqaba and from there in May 1935 to Cyprus. His son 'Ali retired to Djidda. Ibn Sa'ad besieged this town and Medina for a year, avoiding bloodshed and complications with European powers. Both towns surrendered in December 1925.

Since January 1926, Ibn Sa'ad has been king of the Hijaz; the official title of his kingdom now is Hijaz, Naj'd and dependencies. A political unit has thus been formed which covers a larger area than the sharifs ever ruled and possesses greater internal strength than has been seen in Arabia since the end of Abbadid power.

By the organisation of the Naj'd warriors (ikhsán) as agriculturists also, by the maintenance of a strict discipline among the Beduins, by the creation of a military police, which is held in awe, a security has been created such as Arabia has perhaps never known and secure foundations laid for traffic, especially of the pilgrims.

With the representatives of foreign governments in Djidda the king maintains friendly relations. Recently several states have raised their consulates there to the rank of an embassy. Treaties have been concluded with a number of states.

By making use of modern technical skill, the king is endeavouring to counteract the natural poverty of the land. The automobile has become of importance for the pilgrim traffic, agricultural machinery is being imported and cisterns built to hold the rain water. A project for examining the
ground to prospect for minerals has been drawn up as well as a plan for a quay in the harbour of Ljidda.

Wahhābiyya — or as they prefer to call it in Arabia: Islam according to the Ḥanbalī rite — is the state religion. But it has advanced scantily in comparison with the profane culture attitude at the beginning of the sixteenth century. The external symbols of veneration for saints and the dead have been removed; Muhammad's tomb in Medina has however been spared. The maqām [q.v.] no longer comes to the ḫālij; the new covering for the Ka'bah is made every year in Mecca. The pilgrim traffic again shows high figures and even ḥajis are admitted again to the pilgrimage.

The religious and economic life of the city has from the earliest times centred round the pilgrimage (cf. the article Ḥajj and the Mosque cf. Al-Masjid al-Haram). The character of Mecca as the metropolis of Islam is reflected in the great variety of its population. Besides the original Meccan nucleus we have numerous Arab elements — among which the Ḥajrams are particularly prominent on account of their energy — and converts of foreigner's from all parts of the Muslim world who have out of worldly or religious motives taken up their abode permanently in the capital. Among these, special mention must be made of those from the Malay Archipelago who are known collectively as Ḥāwā; with them it is exclusively religious motives that have caused them to take up permanent residence in Mecca.

Even at the present day, slaves mainly African, form an important element in Meccan society. Abyssinian slave girls have always been highly esteemed as concubines. The slave-market however is no longer of the importance it once was. Freedmen rise from the slave caste and their dwellings, hats put together of every conceivable material, are on the outskirts of the city.

Artisans are, or at least down to the end of the sixteenth century were, organised in guilds. Among these guilds that of the pilgrim guides (muraqawaf, q.v.), who have agents in Ljidda and outside Arabia, is the most important; it lives entirely on the pilgrim traffic.

This is true in a way of the whole population, which has arranged to let houses to the pilgrims for a considerable portion of the year. By the eighth month, tens of thousands of these visitors are in the town. Their number increases till the twelfth. In Maharram, Mecca resumes its usual appearance.

During the last few hundred years — except for the first World period — the cult of saints in Mecca has steadily increased. Numerous places have sacred memories of Muhammad and his family, the most prominent muḥājirīn and later saints; numerous  khôlas were built over their graves and hawāls and muktabas were celebrated in their honour. The Wahhabī have done away with a great deal of this, how much is not exactly known.

Mecca is the seat of the government, although the king's residence is in Riyāḍ. The official gazette Um al-Kurā appears weekly. There are also printing presses, which mainly print Wahhabī or Ḥanbalī literature.

MEDEA, a town in Algeria (department of Algiers), 60 miles S. of Algiers, in 36° 15' 50" N. Lat. and 2° 45' E. Long. (Greenwich). Medea lies at an altitude of 3,870 feet on the northern border of the mountainous massif which divides the high plateaus from the Mitidja. Down to the French occupation, it could only be reached by a saddle-path over the Munia pass (3,870 feet). The building of a road through the gorge of the Ghiffa, alongside of which a railway now runs, has made access to it easier. The town itself is built at the foot of slopes covered with vineyards which yield wines of superior quality and orchards in which, as a result of the temperate climate, fruit trees grow very well. In the neighbourhood a number of European villages have grown up in which the cultivation of cereals is combined with that of the vine. There is also a fairly busy market but it is losing in importance since the railway has been extended to Djelfa at the southern end of the high plateaus. The population (census of 1946) is 13,810 of whom, 2,125 are Europeans, almost all French and 11,591 natives.

Medea occupies the site of the Roman settlement of Lemidia, on the ruins of which Belugine b. Zet in the tenth century built the modern town. The district in which it was built was a dependency of the Emirate of Ifrikiya and was granted to Ibn Khaldun (Berroza, trans. de Stane, ii. 6), inhabited by the Sanhadja tribe of Lemidia, whence no doubt the name Lemuida taken by natives of Medea. Of the history of the town itself we know hardly anything. Lassalonius (Bk. iv., ed. Schefer, iii. 66) and following him Marzouk (Affrika, ii. 594) only tell us that after having belonged to the sultans of Tlemcen who had a garrison there, it passed into the hands of the sultans of Tlemcen, and then of the Turks when the Barbarossa establishments themselves in Algiers. Under Hasan Khabir al-Din, Medea became the capital of one of the three provinces (beyliks) of the Regency, the beylik of the south of Titter, to which a later date was added the lower valley of the Sebou in Kabylia. Down to about 1770 we therefore find the bey of this province living alternately at Medea and Bordj-Sebou. It was not until this date that the region of Sebou having been incorporated in the Dii al-Saltun governed by the bey, the bey of Titter settled permanently at Medea where he was in a better position to control the nomadic tribes of the piazzas. He had however no authority over the inhabitants of the town itself, who were under the authority of a Muhassil appointed by the agas of Algiers. The population, which did not exceed 4,000—5,000 among whom were Malagasy and Turks, retired from the service, became wealthy through its trade with the south. Caravans brought thither the produce of the Sahara and negro slaves who were sold to the citizens of Algiers.

During the years which followed the capture of Algiers, the French on several occasions (Nov. 1830—May 1831—April 1836) occupied Medea, without taking permanent possession. Abd al-Kadir however placed a bey in it and had its ownership of it recognised by the treaty of Tafna (cf. Abd al-Kadir). The outbreak of hostilities in 1840 between the Emir and the French led to the final occupation of Medea by the latter on May 17, 1840.

MEDINA. The Arabic word medina "town" (cf. ALOMEDINA) has survived in Spain in a number of place-names. The principal are Medina de las Torres in the province of Badajos, Medina del Campo and Medina de Rioseco, in the province of Valladolid, Medina de Pomar, in the province of Burgos, Medina del Campo, in the province of Soria, and Medina-Sidonia, in the province of Cadiz. The Arabic place-names Medina al-Zahra and Medina al-Faraj correspond to Valladolid (q.v.) and to Guadajava respectively (from the second Arabic name of this town: Wad Al-Hijara) (cf. above II. 177), and it may be added that the town took its name from a known individual, Millik b. Abd al-Rahman Ibn al-Faraj, according to Ibn al-Khatib, Hâjjar, MS. in the Escorial, i. 189).

(M. LEVA-PROVENCAL)

MEDINACELI, a little town in the N.E. of Spain on the railway from Madrid to Saragossa, about halfway between these two towns, some 350 feet above sea-level on the left bank of the Jalón. In the Muslim period it was called Mudainat-Saliq, which is not to be confused with Medina del Campo, B. al-Saliq, or Ibn al-Saliq, in the Seville district (Ibrâ, Dicr. de l'Espagne, 174/205 and note 5, 177/115), the modern Grajasena in the province of Cádiz.

The Arab geographers give brief descriptions of Medinaceli. According to Idriß, it was a large town built in a hollow with many large buildings, gardens and orchards. Abn 'I-Fidâ' says that this town was the capital of the Middle March (al-Madâ'âr al-mawt). Târîkh adds that 'Uthmân (q.v.) founded the town in ruins at the conquest of Spain but it was repopulated under 'Uthman and became a prosperous town.

Through its geographical position, Mudainat-Saliq was of considerable strategic importance for the Umayyads from the fourth century onwards. It was on many occasions, as the last stronghold on Muslim territory, the point from which forces assembled at Cordova finally started for expeditions against the Christians of the N.E. of the Peninsula to which they retired. Though somewhat decayed down to the reign of 'Abd al-Rahman III al-Nâṣir, it was rebuilt, if we may believe the detailed evidence of a chronicler quoted by Ibn 'Idhir, in 353 (961): this ruler put the work in charge of his client, the general Ghalib, and all the garrisons of the country lent their aid in the work.

This Ghalib remained governor of Medinaceli and all the Middle March until the power was seized by Abn Munšir Ibn Abn 'Adim (q.v.). It was in Medinaceli that this famous Ghalib died on 27th Ramadan 392 (Aug. 19, 1002) on returning from his last expedition against Saragossa. In the following century Medinaceli was frequently taken by the Christians and retaken by the Muslims, before being finally incorporated in the Kingdom of Castile.

The Medjidieh of Maimon. — The Medjieh of the Medjidieh contains 100 articles, a number of which (275 articles) are already elaborated by Ibn Nadhum and his school; then follow sixteen books (Bokh), beginning with the Bokh of Ibn Nadr; the last four books deal with process matters. The whole has 1,307 articles. The first part of each book gives definitions of the technical legal terms used, and most of the articles are followed by examples taken from the collections of fatwas. The Introduction and the first book contained the imperial sanction on the 8th of Muharram 1266 (April 20, 1849) and the last two books on the 20th of Shaban 1383 (September 16, 1867).

The text of the Medjidieh is to be found in the big Code collection (Dawiyah al-Kunun) in the Introduction and book I, in vol. vii. of the book. In vol. iii., in vol. vii., and books vi. and xvi. in vol. vii., it has been published several times with a commentary, as the Medjidieh of Abdali's (tabl.) by H. M. Djam al-Din (Der-e Se'adat 1311) and a work under the same title by the in his time famous jurist 'Afif Bay (Der-e Se'adat, in different parts from 1328 to 1339; most parts had a second and the first part a third edition); the latter commentary, however, does not go beyond art. 1448. A full French translation is found in C. Young: Le Code des Dahirous Osmanis, vol. vi., Oxford, 1906, pp. 170-426.

Since the Great National Assembly has adopted, February 13, 1826, a new civil code (Kâlidâ-ı-secadi); al. Orientis Modernis, vi, 134 sqq.), which is substantially the Swiss civil code, the authority of the Medjidieh has disappeared.

MEHMET [See Miehmet.]

MEHMED PASHA. [See KAMALI Mehmed Pasha.]

MEHMET, MEHMET, MEHMET, MEHMET. [See MÜHÈMMEI.]

MEHMET PASHA. [See KANAMAI Mehmed Pasha.]

MEHRI, the language of the Mahr country in South Arabia, which with Shewari (spoken in the mountains northeast of Zafa) and the dialect of the island of Socotra forms a separate branch of South Semitic; the relation of the branch to the now extinct languages found in the inscriptions of the Sabians, Mezmets and (Bajmarwan) has not been accurately determined. Mehri itself as a spoken language in South Arabia is seriously threatened by the steady advance of northern Arabic. The Mahr people are already almost all bilingual and their native idiom is very much influenced, especially in vocabulary, by northern Arabic; for example, of its old numismatics it has preserved only the first ten; all higher numbers have been replaced by the northern Arabic forms. It is therefore not always easy to distinguish with certainty old words which are also found in southern Arabic from later borrowings.

As regards orthoepies, the Mehri consonants are in general agreement with Arabic and Ethiopic. Of the laryngal element of 'ain, which will surmount

1. In this article the author's system of trans-literation is retained for philological reasons.
vives in Shbawi, is characteristic of Mehri. The
vular passive / seems always to be voiced; of the
palatals that / which still survives in Shbawi,
is always liquidized, as in northern Arabic, to /q.
The case of the sibilants is particularly characteristic.
The original Semitic $ seems to have been preserved
as such; but in many words as in northern Arabic,
the original Semitic $ has coalesced with it. This
sound, which is preserved in Shbawi as well as
in Canaanite and Aramaic, has often been replaced
by $ in genuine Mehri words, initially for example
in battle (he) "hears" (compare המדה "ear-
muscle") and medially inמהו "forgotten"; in this
final position it may be dropped, as in $ as a "little
goat", $a "head". But when we find alongside of $ to "obstruct" same "to carry
over, to come to an agreement", which is connec-
ted with the Arabic sound "straight, correct", the
latter can only be regarded as borrowed from the
Arabic. This is however also found in words like $ak$ (he) "put on" and in the pronouns of the
third pers. fem. or $en, etc., in which such
borrowing is highly improbable; these must therefore belong to a dialect for which the phonetic law $-$ did not hold. The primitive Semitic $ has also survived: where a following $ was
asimilated to it, even when the consequent doubling
was dropped, as in the prefix to the causative reflexive $a$. A primitive Semitic sound seems
also to have survived in the $ in to which John
has given the same "lateral", and which is trans-
literated in the Vinman texts by /; it corresponds
eymologically to the Arabic $, and therefore to
the $ in Canaanite and Old Aramaic. Whether the
position of articulation was exactly the same cannot
of course be decided, but the description of the sound
as "lateral" probably means the same as the
pronunciation with flattened tongue which is assumed
for Canaanite and Aramaic. Among the dental
the we find alongside of $ and $ also the fricatives
$ and $ in native as well as loanwords; but in both:
the groups the fricative pronunciation has fre-
quently been dropped, e.g. in the case of $ regularly
in the demonstratives; alongside of $ $ we have $ in.
See "behind" $ appears instead of the $ in the Arabic $ (track), probably under the influence of $, like
$ in the Eth. $ instead of the $ which we should expect. So also in the case of $ the
fricative has in many cases become a positive $ under conditions still to be explained, as in $ "moon", $ "grand" = Arabic $, $.
The voiced $ has a lateral articulation differing from the
Arabic in the labial, as in Arabic, the voice-
less fricative / corresponds to the voiced explosive
$. Of the liquids, $, when in proximity to velars and palatals, is frequently more nasal than in
Arabic. $ and $ before consonants frequently lose
their own sound and merge in the preceding vowel,
as $ "all" from $ = $, $ "untranslated"
*he carries her from $ (by dissimilation in $ that
"night", bottle every night), $ $ "horn", $ $ "belly".

The vowels are frequently prefixed with the
laryngal fricative instead of the laryngal passive,
but we often have $ for $ as $ As in Ethiopic
and probably also in primitive Semitic, only two
short vowel sounds, $ and $, are distinguished,
while of long vowels we have $, $ and $.
The old distinguish between $ and $ are contracted to $ and $. These
basic vowels are however more strongly affected
than in Arabic by the predominant articulation of
consonants. The distinction between $ and $ is therefore
characteristically, in the vowel assimilation of long vowels to accented ones, whereby $, if it is not retained by laryngal
emphatic (i.e. pharyngalized) consonants preceding
$ (which often passes into $, open sounds ad-
joining it however become $, $, $), Assimilation
of vowels in adjacent syllables is frequent. Original
long vowels after laryngals and emphatic consonants
become $, $ and $.

Of the phenomena of sound-shifting and
sound-change in combination, a characteristic
feature is the tendency, paralleled in the vowel
assimilation just described, to bring voiced and
unvoiced sounds into agreement (Jahn, Grammatik,
p. 8). On this is based the transformation of Arabic
$ "other", the root of which poetic language retains in $ (to be delayed), into $ with metathesis of the initial sound $ being replaced by $ (cf. $ (thereupon), the "voice of the Arabic, which Bittner,
Studien, i. 15, compares with this, is to be regarded
as distinct). The tendency to the assimilation of
$ in $, as in Arabic, usually considered by the
necessary of maintaining the verbal system. Although
the disappearance of vowels produced by stress
sometimes produces double consonants initially, this
is frequently avoided at the end of words by the
insertion of an epenthetic vowel, e.g. $ $ alongside of $ "earth". Such additional syllables are found
medially also before consonants as in the subj. $ after laryngals as in $ and velars as
in $, $, $, etc. Dissimilation, especially before consonants $, $ from $, becomes
$ "time"; Hein, p. 117, 2), haplography as in
$ $ $ $ (fem.) and strong metatheses like $ $ $ $ (fem.) are.

The pronouns has preserved very archaic forms.
The first personal pronoun $, $ can probably not be equated
as Bittner, Studien, ii. 7 suggests), to $ in Accadian $, as the change $ $ is not found elsewhere in Mehri, but must be connected with the
primitive Semitic $ (with aspiration of the initial vowel — see above). It is also improbable that
the 2nd pers. pronoun $, $ should preserve in the singular, with assimilation of the $, the initial syllable $ was found
in the other Semitic languages, but reject it in the plural. It is perhaps more probable that the initial
sound of the 2nd pers. has been assimilated to
that of the 1st and 3rd. The 1st plur. $ reveals a
form of the primitive Semitic $ (in Hebrew,
the 3rd pers. alone among Semitic languages pre-
served the original difference in the initial sounds,
in $, $, $, $, $, $; on the other
hand, the double distinction through the vowels
has been dropped. Among the suffixes may be
noted the distinction of gender (genitive) found also in
some North Semitic dialects, in the 2nd pers.
$ $, $, $, with palatalization ik into as in Shbawi
$ (Muller, ii. 113, 4) and Sib, $ (Muller,
i. 227, N°. 2), "her", in place of the suffixes,
the independent pronouns may also be used with
the genitive particle as in $, my farm";
$ "my sheep".

The demonstrative pronouns end in the
sg. in $ (in place of $) and distinguish the
The feminine ending at takes the accent in nominatives with short stem vowels and therefore appears as at, at; or with assimilation to close front vowels as at, as in kahrmat. *rain*, pagh/ at, harshit/ *shamblng*; after long stem vowels however, it is unaccented, as in ahiit/ "flag", tawir/ "rise", quirit/ "palm-wood", especially in loanwords from the Arabic, while in true Mehti words the vowel in the unaccented syllable usually disappears and the vocal of the now closed root syllable is subordinated, as in ahiit/ (Yemen) ahiit/ "town, village", eit/ "worm", hariit/ "meat", at the same time showing assimilation of the final consonants: quirit/ (from quirit/) "good" (fem.), hariit/ (from hariit/) "usual" (fem.).

Another feminine ending i, which still occasionally appears unsuppressed in Arabic and Aramaic, is here found, as in most Semitic languages, only in combination with the usual ending i as a regularly accented ti, e.g. in the participles, and again in simple noun-stems, corresponding to the masculine ending s, e.g. tawir/ "rise", in the derivative stems like noun/ "mother", noun/ "father", noun/ "meater", noun/ "loved one", which is found also before some nouns which are trilingual in the other Semitic languages, like noun/ "fear"; noun/ "rope", noun/ "well", which Littmann explained by metathesis, noun/ "temple" = noun/ "great, elders," = noun/ "as". noun/ "old she-camel, head of a family", noun/ "water-skin" = noun/ "old, ancient, Axadad. noun/ as" noun/ "in a valley" (Müller, iii. 24, 25) this syllable (here assimilated only to the beginning of the next word) serves as an indefinite article, which has lost its significance in the above words and become a component of the stem, so that it also appears in the plural. noun/ etc., but originally however must have been identical with the numeral noun/ which is still used as an indefinite pronoun. noun/ "uncle," and noun/ among others: tawit/ "he weakened to be, A. Emheb, in Zetzcir, f. ag. Spr. u. All. li. 118, 136, compares these nouns with the assimilated stems with prefixed noun/ in Egyptian discussed by Sehe, ibid., xvi. 50, note 2.

Of other nominal forms we need only mention the diminutives, sometimes with internal formation similar to Ar. noun/ (see Rhodokanakos, Zur Formenlehre, p. 53), as, for example, noun/ "little child," sometimes also with the ending noun/, which here always appears as in under the influence of the diphthong of the basic form noun/ (Rhodokanakos, ibid., unw. khatit/ "short time").

The feminine ending at takes the accent in nominatives with short stem vowels and therefore appears as at, at, or with assimilation to close front vowels as at, as in kahrmat. *rain*, pagh/ at, harshit/ "shambles"; after long stem vowels however, it is unaccented, as in ahiit/ "flag", tawir/ "rise", quirit/ "palm-wood", especially in loanwords from the Arabic, while in true Mehti words the vowel in the unaccented syllable usually disappears and the vocal of the now closed root syllable is subordinated, as in ahiit/ (Yemen) ahiit/ "town, village", eit/ "worm", hariit/ "meat", at the same time showing assimilation of the final consonants: quirit/ (from quirit/) "good" (fem.), hariit/ (from hariit/) "usual" (fem.).

Another feminine ending i, which still occasionally appears unsuppressed in Arabic and Aramaic, is here found, as in most Semitic languages, only in combination with the usual ending i as a regularly accented ti, e.g. in the participles, and again in simple noun-stems, corresponding to the masculine ending s, e.g. tawir/ "rise", in the derivative stems like noun/ "mother", noun/ "father", noun/ "meater", noun/ "loved one", which is found also before some nouns which are trilingual in the other Semitic languages, like noun/ "fear"; noun/ "rope", noun/ "well", which Littmann explained by metathesis, noun/ "temple" = noun/ "great, elders," = noun/ "as". noun/ "old she-camel, head of a family", noun/ "water-skin" = noun/ "old, ancient, Axadad. noun/ as" noun/ "in a valley" (Müller, iii. 24, 25) this syllable (here assimilated only to the beginning of the next word) serves as an indefinite article, which has lost its significance in the above words and become a component of the stem, so that it also appears in the plural. noun/ etc., but originally however must have been identical with the numeral noun/ which is still used as an
ending in (see above) or it may be, as Rhodockanskaia (q6. cit, p. 8) suggests, the other plural ending ən, as in Accad. anūtum "all." In the formations and use of the broken plural, Mehri adopts a mean between Arabic and Ethiopic. Characteristic are a number of formations from plurals of the plural, with or without the ending ən, also in Arabic. e.g., ḍariq "a place of wood," plural ̄iyat, ḍariṣṣat and the phrase ḍariq ḍariq (Rhodokanskaia. p. 11 sqq.). Double plurals also arise through the addition of the masc. pl. ending ən in ḍariqat "wood," ḍariṣṣat "tails," wābīn "bows," to which the original plurals ḍariq, ḍariṣṣ, wābin are then taken as singulars (Rhodokanskaia. p. 9), and again with vowel reduction after the accented syllable in ḍariqām "bitches," ḍariṣṣīm "daughters," in which however Rhodokanskaia (p. 15) sees the ending ən.

The case inflections, except for a few remains of the accusative in some adverbs, have completely disappeared. The genitive is expressed by the simple juxtaposition of two nouns, more frequently by the relative, sometimes with a demonstrative suffix, as in ḍariṣṣa ḍariṣṣat "a pair of bows," ḍariq ṭełoṣ "the skin of the steer, the young of the cow." Here, p. 15 sqq., alongside of ḍariqat ənne "the young of the cow," ḍariq, p. 3 sqq.

Determination and indetermination are never indicated. Noun only survives in some adverbs, like ḍariqat ənne "in front," ḍariṣṣīm ənne "behind," ḍariṣṣat ənne "later.

The prepositions of Mehri are for the most part new formations, some of uncertain origin. Of the old, descriptive prepositions, only li (bi, bi), hēn, hēn ən, le ən hēn and li ən, and mei have survived; ən, ḍariq ən li ən only mean "with." The place of li has been taken by li ən, which Bittner traces to the first syllable of li ən, but this is not very probable. The other prepositions have been replaced by words indicating place, like ḍariqat ənne "in front," ḍariṣṣat ənne "behind," ḍariqat ənne "on" (properly a T-words connected with Arabic maštir "to be near," rather than with Syriac ənne, as Bittner considers), ḍariqat ənne "below," (properly "depresión"); but Sokčeti, mei (Mei, li, li ən, li ən, li ən, li ən), or parts of the body, like ḍariq ənne (lit. "in the bosom"; Christian) and ṭeṭr, ṭeṭr ənne (properly "back").

The verbs distinguish from the simple form, which is found in the active as ḍariqat ənne and passive as ḍariqat ənne "was clothed," an intensive which has never dropped the doubling and thus coincides with the passive ḍariq ənne, which is the imperfect also sometimes has the same form as the intensive (e.g. ḍariqat ənne to tend a sick person," impf. int. ḍariqat ənne, subj. ḍariqat ənne, and ḍariqat ənne "to remedy," impf. int. ḍariqat ənne, subj. ḍariqat ənne). The causative has very often a passive sense, like the simple intensive verb, with which it is often conjoined as an inner causative. To each of these stems there is a reflexive with inserted ṭeṭr to the simple verb in double form as ḍariqat ənne or ḍariṣṣat ənne, or with assimilation to the vowels of the simple verb ḍariqat or ḍariṣṣat, to the passive ḍariqat ənne "to go to law," ḍariqat ənne "to quarrel." In contrast to the perfect (quoted above as the normal form), which expresses a fact as such, there is an imperative in the active ḍariq ənne "break," in the passive ḍariqat ənne "put on," in the intensive ḍariqat ənne "wear," in the causative ḍariqat ənne "cause to write," in the reflexive ḍariqat ənne; ḍariṣṣat ənne, in the case, ḍariqat ənne and ḍariqat ənne. From these imperatives is formed the affective mood (Bittner's substantive), like ḍariqat ənne "that he caused to write," ḍariqat ənne "that he made," ḍariqat ənne "he writes," ḍariqat ənne "he travelled," ḍariqat ənne "he turns," ḍariqat ənne "he travels," ḍariqat ənne and ḍariqat ənne, etc. ḍariqat ənne. In the infinitive and sometimes in the reflexive shows an ending corresponding to the Arabic -yin, as in ḍariqat ənne "he travels," ḍariqat ənne and ḍariqat ənne, etc. ḍariqat ənne. In the infinitive, the affective mood serves also to indicate that an event is happening at the present time (as so called indicatives); on account of the relations of the intran. to the case and red. already referred to this formation, but now for the indicative only, is transferred to these forms in ḍariqat ənne (alongside of ḍariqat ənne), ḍariqat ənne (from ḍariqat ənne). To these is added the called perfect in active verbs, the stress remains in the second syllable of the stem with the exception of the 3rd fem. sg. the ending of which is, as in the nouns, attached to itself (ṭeṭr). The 3rd pl. has lost the ḍariqat ənne and replaces them only in the masc. by ḍariqat ənne, which comes from the pronoun. The consonantal terminations have lost their vowels, but the double consonant at the end of a word is separated by the insertion of an apenthetic vowel only before the numeral of the 1st pers. pl. (ṭerṭeṭrī); before other terminations the vowel of the stem remains short. As in Ethiopic the initial of the 2nd pers. is assimilated to that of the 1st (y); as in the suffix, the 2nd fem. sg. appears in the palatalized form ənne. The infinitive, the exception of the 3rd fem. sing., retains the stress on the first syllable of the stem, the vowel of which is assimilated to that of the second (ṭeṭrī). In the intensive the lengthening of the a to ə is found only in the forms which do not add a termination. In the imperative in the transitive simple verb as well as in the causative there is no distinction of gender in the singular. In the transitive form however, the vowel of the second accented syllable of the stem was assimilated to the feminine ending ən, so that even after it was dropped the distinction between m. ḍariqat ənne and ḍariqat ənne was retained, similarly in the reflexive ḍariqat ənne, ḍariqat ənne.

Accordingly, in the intensive and its reflexive and in the causative reflexive the distinction of gender is expressed also by changing the accented vowel: m. ḍariqat ənne, f. ḍariqat ənne, m. ḍariqat ənne, f. ḍariqat ənne, m. ḍariqat ənne, f. ḍariqat ənne. In the plural the genders are distinguished by the endings in -iən, -iən. In the imperative simple form however, the vowel of the second accented syllable of the stem was assimilated to the feminine ending ən, so that even after it was dropped the distinction between m. ḍariqat ənne and ḍariqat ənne was retained, similarly in the reflexive ḍariqat ənne, ḍariqat ənne.

Out of the imperative arises the so-called subj.
of the imperfect by means of the same personal prefixes as in all Semitic languages and with the endings -e for the 2nd and 3rd pers. In the corresponding imperative the distinction of gender is expressed in the second person by internal vowel change, m. tethé, f. teth in and on, and in the addition of the plural endings the short vowel (yitithe etc.) is restored. In the infinitive, the prefix 

The participle is in the singular (subj. khesiper, t. khesiper, subj. m. khesiper, t. khesiper); before the endings, the vowels are short and the mood endings give way to the plural endings so that the 3rd pers. f. sg. and pl. are the same: taheker.

The infinitives are in the same form as the active infinitive, t. khesiper (see above), and m. makhéter, i.e. the infinitive stems as in e.g. intensive mekhabter, t. makhéter, cam. mekhéter, t. miyum in the passive they follow the model of the simple verb, makhéter "enlarged" (in the intensive only when borrowed from the Arabic like meghabder "chief").

The infinitives are the same as the verb forms of the form makhéter "to be ill" in y惆kham to take (infrequently with med. lac.), with prefixes, like makhéter "work," or with the prefix like makhéter "to forgive" in the intensive and yitithe "to cool down," in the causal and the reflexive with the ending -e (2) in as m. hakheker, kakeker, kachker.

In the verbs with laryngal as second radical, the perfect is in e.g. gísham "he went"; it is therefore, as in Ethiopic, the intransitive scheme with the type of the transitive making itself felt; the imperfect is therefore infused as in the intransitives without distinction of mood. As a 1st radical, a laryngal frequently produces intransitive syllables, e.g. in subst. yisham to say; "to hear."

In the 3rd pers. as 2nd radical, acts in the same way, e.g. vsamad "let him become sick" (cf. Arabic wasma, not Hebrew ñáam as Bitter supposed), while an original khesiper disappears, as in yimer "let him say." As asecond radical no dis appears, but keeps a in the perfect of the simple verb unchanged, as the unrest (past tense) with the 

In the verbs with third aim, unlike Ethiopic, trans. and intrans. formation is distinguished in the simple verb, whereby the perf. of the trans. coincides with the niter verb (the causal); in the intransitives, the moods distinguish the moods of the imperfect exactly like the transitives.

In the verbs with first am, the primitive Semitic formation of the bilateral stem is dying out. It is true, we still find the imperative laryngal "give" with the subst. yisam and yisham come in with the subst. yewsh, but yesh is already limited to the feminine and the masc. yesh formed from it; we have besides the reduplicated imperatives: yismem, yisemem, as well as yisham and yisham to load; and with vowel lengthening yisham to call, and yisham to be called. In transitive formations the m. disappears from the root in some forms of the reflexive, like misham *to go in the afternoon*, imp. ind. yischam, subj. yischam, inf. yisham and yisham be awakened, imp. ind. yischam, subj. yischam, inf. yisemem. For the rest the first-passive verbs inflect regularly, and the few first-passive verbs follow them.

The third-singular verbs very often coincide with the third-singular passive. In the transitive in the simple form we have a throughout and in the intransitive e.g. yisham (and yisham) in the present active voice, which in the perfect in the forms with consonantal endings changes with the stem, e.g. yisham "he found," but x and x. c. nisham and nisham "he saw," but nisham. In the 3rd pl. m. besides the original khesiper, we have also khesiper with secondary vowel differentiation, and with a new formation on the model of forms like khesiper also khesiper. In the imperfect and subj. the form of the third-singular, like khesiper, khesiper has predominated; in the indic. the unaccented final vowels disappear except in the x. f. sg. (khesiper). The determinative khesiper to hang" from ker. *saun" follows completely the strong paradigm khesiper, only the t. of the x. sg. is also found in the 3rd. e.g. khesiper, along with khesiper and khesiper (Müller, lv. 11 i). In the genitive stems only the 3rd m. sg. of the perf. in the cases (hakham) and its refl. (gísham) is formed after the trans. simple verb, in all other forms the paradigm of the third-singular is followed (híti, híti, kíti etc.). But the final vowel is lost in the imperfect and in the subj. of the reflexive sometimes (kíti hide thyself) subj. yísham, but gísham, subj. kišam, and both forms lose it regularly in the causative and its reflexive kíti, yísham, sometimes with lengthening: kíti *get up*, kísham, sháth [Jahn, p. 113] at *give heed*, písham.

The model s and f verbs are, as in Ethiopic, to a great extent assimilated to the plan of the strong verbs, yish and makhéter being treated as consonants. Only in the simple form of the med. a is the old Semitic inflexion retained in principle. But the old form yismem (frequently yismem) has become indicative, and a new subj. has been formed with vowel change, yisemem, followed by the reflexive, yisham. As in the intransitives, the ending of the verb is the same as the perf. of the transitive, e.g. m. hakheker, kakeker, kachker; in the imperfect, m. hekheker, kakeker, kachker; and in the causative m. yisham, yisham, sometimes with lengthening: kíti *get up*, kísham, sháth [Jahn, p. 113] at *give heed*, písham.

MEKRA (Meknes and Meknés, North Africa), a town in Morocco, one of the residences of the Sultans. The old French name Meknès or Meknès has not prevailed against the form inspired by the Arabic.

Situated in 3° 50' W. Long., (Greenwich) and 33° 55' N. Lat., at an average height of 1,700 feet above sea-level, Meknes is 80 miles east of Rabat and 40 west of Fès. It occupies the centre of the transitional zone which lies between the Middle Atlas, 50 miles to the south, and the Sefrou, 110 miles to the north. Its climate is characterized by the dry, hot summer, and the cold, wet winter. At Meknes intersect the roads from Rabat to Fès, from Tafilalet through the land of the Rif Mutfid and Azrou, from Marrakesh through the Tafilalt. Meknes at the present day is commercially connected with Tafilalet.

The temperature rarely exceeds 30° C., or falls below 5°. The rainfall (351 mm. in 1929) is remarkably equid from one year to the other. The excellent water supply of the plain of Meknes and the quality of its light soil, resting on a subsoil of permeable limestone, make it one of the best agricultural districts of Morocco.

The population at the last census was 30,000, of whom 10,000 were Muslims and 5,000 Jews. Casual in 1902 put it at 20,000 of whom 9,000 were Moroccans and 3,000 Jews.

Meknes is built on the flank of a mountain spur. The ruins of the Aghna of Moulay Isma'il lie to the S. E. of the native town, and give to the old town, surrounded by walls of clay, a considerable extension, of which the Medina itself only covers about a fifth. Beyond the existing mud wall the Wadi Bhi Feikran the European town has been laid out and is being built. The appearance of the native town, dominating the ravine and placed upon a terrace plateau, is striking. The houses of the medina, often substantial, are always quite simple. There are only fifteen or so houses of any artistic interest. These elevations for the most part from the reigns of Sultan Muhammad I. and Alā al-Dīn and Moulay Isma'il. The suburbs of the town look like the streets of a country village. The only, which lie between the Mekness...
considerably. The colonists, most of whom have come from Algeria, cultivate mainly wheat, of which they are obtaining increasing yields. The cultivation of the vine is increasing each year. The region of Moulay Idris is one of the principal centres of olive-growing in Morocco (400,000 trees). The native farms are laid out in the district, covering 83,000 hectares. Official colonisation has not yet disposed of almost all the reserved lands, which have been distributed since 1927 by private colonisation. The native farms (130,000 hectares) are still working and are not yet disappearing as they have in the past.

The government of Meknes, which is a modern town, is in the hands of a sheikh. He is also sheikh of the Berbers, who have retained a part of their past greatness in a special capacity. The town (800 men according to L. Chatelard) is a place of refuge and the capital of a very considerable area. It was from here that the military operations in the Central Atlas were directed. Although this part of the country is now more peaceful, Meknes is still a military command, and its administrative region, although greatly reduced, still stretches to Meknes. Situated in the centre of Morocco at the junction of important roads, Meknes is a market town for one of the strong places of the country in the future: a military camp is being laid out at al-Idjeb.

The population of Meknes consists of many distinct elements: Shofa, Boughrara, Berbers and Jews. The shofa, who have played their part in the history of the town and retain privileges (the number of descendants of Moulay Idris, only the families residing in Fas and Meknes are allowed to show in the income of the shofa of Fas and the Idris shofa), have many privileges of their own, forming a kind of aristocracy, generally possessive. The Boughrara, descendants of the sheikh of Meknes, up to 1912, formed an unreliable element, which was always full of trouble. Since that date they have been taking up the trade of merchants and farmers. They live close to the town of old kasbas and gardens which belong to the sheikh and in the old kasba of Meknes (Meknes). In the 19th and 20th centuries. Their houses, studded with tchad, look like African enclaves. But it is the Barbare (Barber) element, which predominates at Meknes and gives it that desire for independence, a feature which has for centuries been a nationalism of Fas. It is the Barbare of the mountains who give it its tone: when they come down to the town, their women give colour to the streets of Meknes with the broom, their skirts, their baskets, their toilet and their wide trousers. The barber elements of the plains are much more mixed, having undergone many vicissitudes since the days when Moulay Muhammad is. Abi Allah inaugurated the policy, considerably extended by his successors, of transferring tribes.

A considerable part of the population of Meknes consists of floating elements who come, usually between harvest and the passing of arts, and when the harvest is over, usually between harvests, to work as artisans. These immigrants, almost all come from the south, from the Ifni in particular (pottery, tanneurs and porters),
from Sidi (procers), from Tind (oil-makers), from Figiy and Daqa (masons). The Rifians and Ifallas supply most of the agricultural labourers. A small number of Fasans, who have in recent years merged into the population of the town, are cloth-merchants, old-clothes-dealers and shoemakers.

Jews form a quarter of the native population. Foucault estimated the mūsāliā of Mekez to be half that of Fas. Chénier remarked on its prosperity. It has increased since his day as elsewhere and the position of the Jews is greatly improved since the establishment of the French Protectorate.

Religious Life. From the presence of the Idrāwi and Hassani niyabot, the proximity of the sanctuaries of Mawki Idris and the religious event of the celebration of his naẓar (class. marāsi), every year, Mekez is one of the most important centres of shriftism. At the same time for the Berber population it is a centre of marvellous rites of the most elementary kind. All the brotherhoods that have naẓariya in Morocco are represented in Mekez. The most important are those of the Kādiriya, Tulānīya, and especially Himākās who are the largest, the ṭāissen, in which half the population are attached. Mekez, whose patron saint is Sidi Muhammad b. Ġst and which contains his tomb under the šabbah erected by Mawki Muhammad b. 'Abd Allāh, is the capital of the order. This saint came here at the end of the 17th century. His teaching at first met with a vigorous resistance, which he overcame so completely that, when the governor of the town sought to take steps against him, the people protected him. Before his death he acquired an estate, constituted it šabbah and set it aside as a cemetery. It is still used and many men of religion are buried there. The celebration of his naẓar on the first day of the mawṣur (nerusāli) festival is the great event of the year. The preparations for it begin forty days before and become all-absorbing ten days before the festival. On the day before or the preceding day delegations flock in from all parts of Morocco, following the traditional routes. The most generous hospitality is given to the pilgrims by the descendants of Shaikh al-Kamīl, who are the mawki (Brunei). The excesses committed on the occasion of this pilgrimage have been frequently described. Many other special cults are observed in Mekez. He Šekri is the patron of the gravers, and Mawki Said of the Zāhdh is the patron of the tanners, weavers and butchers (Māgiɣ). There is even the cult of a living holy man, Mawki Ahmad Warzānī. As it was his custom to sit in the public way in a very simple costume, he was in 1927 granted clothes and a šubbah at the request of Mawki Yūnuf. The šubbah is at the entrance to a dispensary and the admittance of the saint come there daily to keep him company.

History. We know nothing certain about the history of the region in the Roman period nor in the centuries which followed. The most advanced Roman stations were on the slopes of the Zāhdh guarding the plain, out of which the warriors of the Central Atlas might debouch, and perhaps throwing out a serene as far as the plateau of el-Hadhja.

We do not know at what date the people here had their first contract with Yūzima, but even if it was not till the Hilāli invasion that Yūzima became securely established here, the Berber tribes of the Sa-ī and Sebī made the most of the fertility of their country. A tradition records that a fire destroyed the gardens there in 917. It was at this period that the country was covered, from Tānī to Mekez, by the migration of a Zenata tribe, the Minkas, a section of whom, who received the name of Minkas al-Zaṭṭa, to distinguish them from the Minkas Tānī, who lived farther to the east and established themselves securely in the plain. The Ṭurkis met with a vigorous resistance from the Minkas. They always found in their opponents whom they could not overcome in spite of several campaigns, and who were the medium of Umayyad intervention.

The Kāfir records that a governor of the district, al-Mahāl b. Yūsuf al-Kazārī, having joined Vahd. b. Taqfīn, was assassinated by the hitherto, and the terrified citizens hasted to disown the murder. At this date a few villages stood on the site of Mekez. One cannot say at what date, perhaps in the tenth century, they were grouped together to form the Tāmath mentioned by Idrīsī (Taqaṣrī, according to the Kāfir al-Isbīhānī). The population seems to have been more numerous in the Almoravid period than later, and prosperous. Enclosed by a wall, Mekez looked like a pleasure resort, with its gardens, cultivated fields, its mosques, its baths and water channels.

The Minkas vigorously opposed the Almohads onslaught. When passing through this region in 1132—34, Ibn Tūmāt preached here but he was not well received. Twenty years later, 'Abd al-Ma'min said siege to Mekez but it was not he who took it. He left it to enter Fas, leaving the conduct of the siege in the hands of Yahwī b. Yaghīm. The Kāfir says the siege lasted seven years. The town fell in 1150. It was plundered, the defences dismantled, a part of its wealth confiscated, and all its garrison put to death, except the governor Yadder b. Ullūū, who is said to have gone over to the Almohads before the surrender in order to save his head. On the site, or beside the ruins, Mekez rapidly rose again under the shelter of the fortifications built by the Almohads. At the end of the 12th century, it had regained some importance and the mosque of al-Nadžīrān was finished. This is the oldest mosque in Mekez: in 1755—57 Muhammad b. 'Abd Allāh had it restored and built the present minaret. The Almohads brought water hither from Tadjarra, five miles away. In 1152 the šubbah was said in five different places in Mekez and there were six gates in the wall which surrounded the town.

In the course of the following century, the intrigues of the Banū Matts (q.v.) disturbed the country, so that the fighting that accompanied the fall of the Almohads was particularly lively. In 1234—35, al-Ma'mīni had to intervene against the Banū Fārīs and Miskīna, who were ravaging Mekez. In 1250—57, as a result of the Martīdī success in the battle in which al-Sa'īd's son was slain, Abū Bakr entered the town. This occupation was only temporary but the Almohad emigration was not secure. In 1245—46, the governor left there by al-Sa'īd was slain in a rising in the market in favour of Abū Zakariya'ī, the Ḥafṣī. Al-Sa'īd again returned victorious, causing Yalūū b. Abū al-Hāṣim to fly to Tānī. The Martīdī had only two years to wait; after the death of the Almohad governor, he returned to Mekez to occupy it definitely.

The first period of greatness for Mekez dates from the Martīdī. They set out to make it beautiful
like Rahat and Fas. Abū Yūnus moved from Fas to Meekes, which owed to him a mosque (1276). Abū 'l-Ḥasan improved its water-supply, built bridges on the road to Fas and began the Madrasa Djiñada which Abū 'l-Ṭān was to finish. It bears the latter's name and is still the most notable building in Meekes, in spite of the Indirect Restorations carried out in 1872–1873. Other madrasas, 'Agārīn and Filktu, were built by the Marinids.

During this period the political organisation of the country had developed into a much different direction. The Istind shortlived, having assisted the Marinids to gain power, prepared to take advantage of the organisation which the latter had given them. Thus the foundations were laid for the movement which was to end in the partition of Morocco in the last years of the thirteenth century into practically independent divisions. The shortlived were numerous in Meekes. When the weakening of the Marinids and the decline of their prestige made it possible, they supplied leaders. History has preserved the name of Mawārī Zayān. The Wazīrus only once intervened, it appears, when the beginning of the fourteenth century. Mawārī b. al-Naṣir, having rebelled against Muhammad b. al-Ḥarīrī, found an asylum at Meekes. The Sultan besieged the town and took it, then installed his brother al-Naṣir al-Raḍīdī there, who however did not prove faithful to him. The few years of independence enjoyed by Meekes were not particularly glorious. They mark, however, an epoch in the history of the town destined at other periods to be only the prey of anarchy or the playing of a tyrant.

The rise of the brotherhoods of the fourteenth century found a favourable soil among the Marinids. The akwīs Tjarīla was established there, as in other places in Morocco. A few years later, Muhammad b. Isā was teaching there.

Meekes was thus well-prepared to welcome the Sufis. When Muhammad al-Shāfi'i approached in 1502, he entered the town without much trouble. The Marinid al-Naṣir al-Raḍīdī is said to have agreed to hand over the town in return for the liberty of his father Ahmad b. Zayān, and the marabout, to have demanded the conclusion of such an agreement. Muhammad al-Shāfi'i however took a sufficiently sure method to establish his authority when the Khātā Abū 'l-Ḥasan! Abū 'l-Harīrī, having once preached against him, he had him sentenced to death. When he returned two years later, he was welcomed with gifts. The estimates of travellers of this time put the population of the town at 8,000 to 10,000. It was only the town in the region. The Sufis took little interest in Meekes which never attracted their attention. The country was well in hand and the Berber tribes peaceful to such a degree that the road from Marrakesh by the Tiskār was regularly used. It was the practice to make Meekes the residence of one of the sons of the Sultan. There was however no important command attached to it. Leo Africanus credits it with a revenue equal to half that of the viceregality of Fas, which is astonishing. Under Ahmad b. Mārīq, Abū 'l-Ḥasan! Abū 'l-Ṭān lived there and then, after the second partition, Zayān and, lastly, Mawārī al-Shāfi'i, but as a prisoner in the last years of his father's life.

The civil war which broke out on the death of al-Maṣūr placed Meekes at the mercy of the Berber rising and marabout intrigues. Mawārī Abū 'l-Ṭān was at the head of a large band of marabouts and finally found refuge in al-Ḳasr al-Kabīr. In 1619, his brother Muhammad defeated him near Meekes. The chronicler mentions for the next year the rising of an individual who called himself the Sharīf Amghār. In the midst of this disorder an authority gradually made itself felt, that of the awliyā, and especially the Hanūn of Dīrī. In 1640–1641, Muhammad al-Ḥarīrī was even able to seize the sovereign power and get himself recognised by the Marinids after his victory over Mawārī Muhammad al-Shāfi'i b. Zayān. He gained the title of being of the Berber tribe, and Mawārī al-Raḍīdī in 1666. found a new ally in his alliance with the Dīrī's Abū 'l-Ṭān, Abū 'l-Ṭān, who had to fight them again in 1668. Mawārī al-Raḍīdī seems to have been interested in Meekes, the Kāshā of which he restored. In burying him in the mausoleum of al-Ḥarīrī, Mawārī Tamān said he was fulfilling the last wishes of the deceased. But the most important event was that al-Raḍīdī sent Mawārī Tamān to Meekes. The latter lived before his accession in the Almohad Kāshā, as a landed proprietor managing his estates. In his choice of a capital, we see the attraction of a rich district like this. He wished to be in his own image and realised this idea. For fifty years Meekes was simply the framework for his splendid, the scene of his extravagances.

He at once decided to build himself a palace and at once a grandiose scheme was projected. He began by clearing a space. The houses adjoining the Almohad wall east of the town were surveyed, and their owners forced to carry the debris off to a site which has retained the name of Hadim, then to rebuild on a site which the sharif enclosed by a wall to the N.W. of the medina. The site which he chose for himself was also separate from the town. His palace was built, and one even more splendid for his women. The first edifice, Dar Khuša, was finished in 1579. It was a series, without intelligible plan, of vihās embellished with fountains, paved with marble, surrounded by galleries which were supported by columns of marble; the apartments opened on to three galleries. The sovereign's palace was in two suites, that of his ladies in four and larger than his. His four wives and his favourites were equally splendidly housed. The other conclaves, of whom he had 500 of all nations, were housed in rooms along the passageway. At the end was a common hall, on a higher level, which gave a view over the gardens through iron grilles. The reception pavilions were planned on the same scale; one of them had forty rooms. The palace comprised in all 45 pavilions and twenty khābis. The whole was surrounded by a camelled wall pierced by two main gates. It was triple in the N.E. with a round road all round it and could be defended equally well against an interior of the gūsha. The battlements supported batteries of gunpowder and matchlocks. The women being subject to rigorous confinement and Mawārī Tamān living very merrily in the performance of the duties of religion, a mosque was set aside for them. Another had been begun in 1577, communicating with the town by the Khāṣa. Lastly the palace with its dependencies contained four mosques; two are still in use, the Dīrī al-Aḥṣār and in the quarter of the maws, very broken down, the Dīrī al-Rauš. To the south was a garden, the area of which is equal to that of the present suburb, an
orchard in which olive trees predominated. Further on were the stables to which the Sultan admitted only picked horses; to the number of 1,200; two parallel rows of arched about 100 feet apart. In the centre ran running water. Each animal had its stall and a shelter for its equipment. Opposite was a storehouse, the berti, which supported a supplementary palace with twenty pavilions. Between the palace and the stables was the garden, forty feet high and big enough it was said, to contain the whole harvest of Morocco. At the side was a pond for irrigation purposes and also subterranean reserves of water in case of a siege.

The buildings did not stop here. To the south west of the town lay a city of pleasure, Mâdânat al-Riqâ', where the officials had palaces, where Mawâli Isâm'î himself lived in his mosque, his madrasa, his hammâma, his fondâ'eh and the offices of the umara', the Treasury, with the shops of the Sharzâr tailers. In 1732-1733 Mawâli 'Abîd Allah on returning from an unsuccessful expedition into the Sûs, had the Mâdânat al-Riqâ' destroyed by Christian slaves. There is nothing left of it today except the Bani al-Khamis, dated 1667, one of the finest and best proportioned gates in the city.

Lastly a site was reserved for the troops. To the west of Meknes a large dâvar was settled with soldiers and their families. To the east of the Dirâ al-Melhâmâm, five jâ'âif for the 300,000 men of the army were gradually incorporated in the great kasbah.

After fifty years of unorganised but superhuman effort, the buildings were not yet completed. It was in 1731-1732 that Mawâli 'Abîd Allah finished the surrounding wall and the Bab Maussul, the most finished example of the Isâm'îs' pavilion, of proportions by no means perfect but imposing, of which the Bab al-Sandâ'in and the Bab al-Nâsir are the two other finest examples at Meknes at the present day. This name of a renegade, Mânûr al-Fârîlî, was no doubt that of a keeper of the gate. Mawâli Isâm'î directed all the operations himself. During the first twenty-four years of his reign he never spent twelve months on end at Meknes. But he returned there after each expedition; in preparation for his ambition and his power increased, his despotism and the needs of his government, his army and his family grew, his schemes became more and more grandiose; the work done was found unsatisfactory, modifications were made, buildings taken down and the work began all over again. The result certainly was sumptuous and imposing but also odd and sad.

All the country helped in the work. Mawâli Isâm'î collected materials wherever he could. Volubilis, Chalsa, Marràkès were plundered. If he destroyed al-Bâdi' it was perhaps out of jealousy of Ouedian work, or perhaps simply to get material. Like Ahmad al-Maâgîrî, he procured marble from Fès. One day when a corvée ship had stranded near Tangier he ordered the Glânsi to bring the stone from it by unaided manual labour. When he died the cargo of marble which were still on their way were left on the roadside.

Labour was recruited by similar means. The Sûs imposed days of labour on the tribes, levied forced labour as he pleased; sent his ministers to the workshops, but relied mainly on renegades and Christian slaves who were his permanent workmen. From 1680 the work was pushed on frantically. All the Christians in Morocco were collected there. The Târitâris of Fès joined them. The slaves were at first housed in slums near the building-yards, then they were moved to the Dirâ al-Melhâmâm, then to near the stables, under the arches of a bridge, where their lot was particularly miserable, finally to the interior of a forest, east of the town along the north wall of the Dirâ al-Melhâmâm. They were able to organise themselves a little there, to build themselves a church, to have chapels, a convent and infirmaries. A physician was made not a maximum, the "Christian decoction"; this was the name by which humane relations were established with the natives, even with the dwellers in the palace. Their last historian has reduced the number of Christian prisoners in the service of Mawâli Isâm'î to its real figure: they did not as a rule reach a thousand and the Sultan, in the course of over fifty years, himself killed only one hundred and nine (Koehler).

The emperor revealed in his palaces his extravagance and his opulence; he accumulated wealth as his old buildings, but only to hide it. The ambassadors and envoys who came to negotiate the ransom of captives he received with a mixture of bounteously and splendour. Frequent mention is made of the cruelty and the terror which this enter inspired; he loved to torture his women and cut off heads to show his skill. His summons to be in the same of a similar character; he liked to shoot with his falâs at the deer in his menageries then to finish them off with a spearthrow. Let us avert our eyes from all these horrors which make nature shudder, says Chéne.' Following his example his household of the terror in the town. He had six hundred children, a nursery of slaves, "who might have had a happier lot if he had loved them as much as his horses". On the approach of any of these, "every one hid all that he might take a fancy to", and the old in their turn, negroes robbed in bright colours, went about bullying in the name of their master at first and then in their own.

All his work was to collapse at his death, but he was able to keep it up in his lifetime. From the troubles that broke out when he disappeared from the scene, one can judge of the energy of this man of eighty who maintained order among his hordes of negroes and in this country, bestowed by God on anarchy. The âbâs of Zarhûn, the khâsa of Auzi in the middle of the Central Atlas, deserted Meknes on North and South. He was also able to preserve it from other sources; when an epidemic of plague broke out, the old were simply given orders to kill any people who came from Fès. Mawâli Isâm'î was buried like his brother in the mausoleum of Sîhî al-'Abîd al-Râmân al-Mâtû'î, a morastal altar of the sixteenth century. His sons, the rebel Mawâli Ma'mân, killed at Târûst in 1706, and Mawâli Zîdîn in 1707, had already joined Mawâli Ramîlî. In 1859 the palace of Mawâli 'Abîd al-Râhimî was also depopulated there.

On the death of Mawâli Isâm'î, the半个月 and the soldiers of the 172nd stirred up a palace war which lasted twenty years. Mawâli 'Abîd Allah last and regained his throne six times. But however great this struggle was, the other threat was still the greatest; having got rid of the garrisons of the Isâm'îs' khâsa, the Bedouins, armed, came down from the mountains. The problem for the sultan was to choose the lesser evil; they
declined to disband the *ahid and to the struggle which naturally arose between these and the Berbers raised more on the former. The civil war extended to the tribes of the plain and the garrisons of Fayy, especially the *Uqayyia; pretenders stirred up the flames, readily giving the signal to players and, in the rivalries of races and tribes, easily finding a party to support them. Gradually the Berbers took in mistreatment. It was in vain that Mawlā *Abd Allāh asked his sons to expend the treasure of Mawlā *Abd Allāh (Abu l-Faris Mawāfi) for them. The worst of it for Mawlā *Abd Allāh was that every one entered or began by hindering it.

Mawlā *Abd Allāh almost re-established order and restored to the town its past glory. He did a great deal for it: he palaced Dar al-Balīd, the severe architecture of which, not without charm, can still be seen in a part of the extra-grove of al-Hammūya; in the Kāshālān, he built the *Laylāt al-Amūzaq and in the souq, the unseen of the *Dhīlān al-Naṣrāt, the khāba of Sīdī Muḥammad b. *Isa, and several mosques (al-Achār, al-Badīlīn, Masīha, Sīdīya and Sīdīya al-Mubānī). It was also able to make the 13,000 books of the library of Mawlā *Abd Allāh's endowment for the benefit of all the mosques of Morocco. As regards the tax, his policy was to break them up. He transformed many of them and tried several repressive measures. The end of his reign was marked by the success of the Berbers whose attacks had been resumed about 1775.

Soon nothing was left of the work of Mawlā *Abd Allāh. The Christian community and its Franciscan mission in the reign of Mawlā *Abd Allāh had developed and did not survive the persecution of this shihr. The earthquakes of 1755 had destroyed their church, convent and hospice. The monks, who had gathered together at Kāshālān Carrājīl, were gradually absorbed.

The novel state was again acute from 1811. Communication with Fayy was continually being cut and it was nothing to boast of for the subjand to go out of Meekas. Mawlā *Abd Allāh (Sahlīn), who had undertaken to restore the Kāshālān and rebuild the bridges on the road to Fayy and who would have liked to get rid of the the Berbers, decided to settle in Fayy. His walls were his only defence at the time. Mawlā *Abd Allāh al-Khalīfī, who was Dāra's unfair and who built a mosque in Dar al-Amūzaq b. Halīm, left the Berbers in semi-independence and was lastly dismissed the head without even granting those who remained in Meekas the character of Meekas troops. His son carefully avoided all quarrels.

Mawlā *Abd Allāh revised the tradition of the great rivals and made his authority felt. He was able to enter Meekas after his ascension only by crushing the power of the Berbers. In 1829 he conducted a campaign against the Beni *Mūza. In 1837 he forced his way through the country of the Beni *Maghīd in his campaign against the Rīm. On his death the Berbers regarded their independence. If they retained their *khalīfa it was because the latter cast off all allegiance to the Kāshālān. After the fall of Mawlā *Abd Allāh al-Khalīfī, Meekas recognized the competences in succession. It was Mawlā *Abd Allāh who proclaimed *Abd al-Ḥafīz, who had come via the Berbers of Tādīl in 1908, in 1909 called the shihr al-Katrām and in 1912 rallied to Mawlā *Zain. It was in this

that General Monnier entered Meekas and two years later Colonel Henry under the direction of General Lamy pacified the Beni *Mūza country.

MELLĀH, the name given to the quarter in Moroccan towns which the Jews are compelled to inhabit. Being *ābī al-Ḥamīma, the Jews have a right to the special protection of the government which allows them a particular quarter in which to live in, situated very often quite close to the *khalīfa (al-Kutaba) where the governor of the town resides. Moreover, the pretenders and governors liked to have at hand "their" Jews who were frequently of use to them as clever diplomats.
agents and often gave them valuable financial support. All the towns of Morocco, even the large ones, did not necessarily have a mellāḥ. Thus at Tangier there are certain quarters particularly inhabited by Jews but they are not set aside for them and we also find Muslims there. As to Rabat, its present mellāḥ was established only in 1808 by Sulīmān Mawliy Sulīmān; formerly the Jews lived together in the al-Bahaira quarter (el-Bāḥāra) where there were also Muslims. When he founded Fās in 805, Idris 11 compiled the Jewish refugees who flocked into the capital to reside in the northern part of the ‘Adwat al-Kassawān (Aqqān quarter as far as the gate called Bāb Ḥasan Sa‘dūn); this was undoubtedly the first Moroccan ghetto; and the present Fondāt el-Tarādī (“the Jews’ warehouse”) apparently preserves its memory. But at the end of the 13th century the Marinids, wishing to create a new capital, founded alongside of Old Fās (“Fās al-Bāḥil,” “New Fās” (“Fās al-Djādīa”) or “White City” (“al-Madīnat al-Baladīa”). In the first half of the 14th century, the town of Ḥīnṣ was built close beside Fās and at first occupied by the Ghuran archers who formed a part of the regular Marinid army; after the suppression of this force in 1320, it became the quarters of the Christian mercenaries whom we find there in 1567. Later, probably at the beginning of the 16th century, and with no doubt as the result of massacres, the Jews of Old Fās were ordered to settle in Ḥīnṣ; this town was built on a site known as al-Mellāḥ, the “salt spring,” or “salt marsh,” and the new ghetto became known by this name. From a proper, this became a common noun, and passed from Fās to the other towns of Morocco as the name for the quarter assigned to the Jews. The etymology proposed by Dossy in his Supplement (al-mellāḥ < al-maḥall “quarter”) is therefore to be rejected, as are the explanations as “salted, accursed land,” or “quarter of the Jews who were forced to salt the heads of decapitated rebels”. In Morocco in the 13th century, el-Mellah, in speaking, the expression el-maḥall (class, “class,” “quarter”) is often used by anti-phrases, lit. the “not-salted”.

The mellāḥ of Fās is therefore the oldest in Morocco in every way. For a long time it was also the most important; in the middle of the 13th century, al-Bakrī says that Fās is the town with most Jews in the Maghrib, which has given rise to the proverbial saying: Fās baḥād bītā nās. “Fās, a town where there are no people (worth mentioning)”. But the constitution of Marrakṣ, in 1663, resulted in the foundation in southern Morocco of a new Jewish center which was to attract to it the Jewish and pseudo-Jewish peoples of the Atlas. The term el-mellāḥ however appears only in the second half of the 13th century (cf. E. Fagnan, Extrait de livres relatifs au Maghreb, p. 409). At the present day the mellāḥ of Marrakṣ and the Jewish town of Mogador form the most important Jewish centres of Morocco.

The name: el-mellāḥ is peculiar to Morocco; there, however, it is applied not only to the Jewish quarter in a town but also to little mountain villages exclusively inhabited by Jews. At Tlemcen the term derb el-bāḥil (class, “class, of the al-Bāḥīla”) is used; at Constantine rekhṣātari and in Algiers, Tunes and Tripoli el-ṭūrā.

(GEORGE S. COLIN)

MELILLA (in modern Arabic: Millīya, Berber Tamurilt, “the white”; in the Arab geographers: Millīla), a seaport on the east coast of Morocco on a promontory on the peninsula of Gezaya at the end of which is the Cape Tres Forcas or the Three Forks (Rūs Ḥark of the Arab geographers, now Rūs Wālī). Melilla probably corresponds to the Rūsaddir of the ancients (cf. Rūsaddir oppidiu at portus [Pliny, v. 13], Rūsaddir Colonia of the Antoninian itinerary). Leo Africanus says that it had belonged for a time to the Goths and that the Arabs took it from them, but in reality we know nothing of the ancient history of the town.

It is only at the beginning of the tenth century that Melilla appears in the Muslim history of Morocco. In 930, the Umayyad Caliph of Spain, 'Abd al-Rahmān al-Nāṣir il-Dīn Allāh succeeded in detaching from the Fātimids the famous Mūsā chief Muḥām b. Abī l-‘Ikāfīya, who had established his authority over the basin of the Moulaya and the district of Tāf, having seized Melilla, al-Nāṣir built ramparts around it and gave it to his new ally, who thus had at his command a base of defence (maṭṣī) against the Fātimids of Is’āfīya and a port which made communication with Spain easy. Later on, the descendants of his son, al-Būrī b. Mūsā, rebuilt the town, which remained one of the strongholds of the Mīknsa in Morocco down to the time of the decline of the power of the tribe, who were definitely defeated and scattered by the Almoravid Yūsuf b. Tāḥṣīn in 1070. But the Mīknsa must have abandoned it before their dynasty was crushed by the Almoravids; for al-Bakrī shows us that by 1067 a descendant of the Mīknsa chief Idrīsīd of Spain had been summoned to Melilla and recognized as ruler by the people of the district.

At the period when al-Bakrī wrote (1068), Melilla was a town surrounded by a wall of stone; inside was a very strong citadel, a great mosque, a hamam and markets. The inhabitants belonged to the tribe of the Banū Wartātī (or B. Wartātī); a branch of the Šanṭhājī group of the Banū Bāṭīya. Melilla had a harbour which was accessible only in summer. It was the terminus of a trade route which connected Sūditān with the Mediterranean through the valley of the Moulaya and Agariz (French: Garriṣs). The trade must have been considerable; the principal exports were no doubt those mentioned by Leo Africanus: iron from the mines of the mountains of the Banū Sa‘īd and honey from the Khaddāna country; we may also add pearls which were taken from oysters found in the harbour itself. Al-Bakrī notes that the inhabitants made money by granting protection to merchants. The environs of the town were occupied by the Banū Wartātī who also occupied the stronghold called Kûnīl Gārī, the Matafnas, the Abī Kābdān, the Mārtīna of the “White Hill” (al-Kuñīyat al-Hafīd) and the Ghassās of the massif which ends in Cape Tres Forcas (Rūs al-Ḥark). All this region was then independent and had no political
link with the kingdom of Fás or that of Náhir. But in 1080 the Almoravid sovereign Yúsuf b. Tashfin took Melilla and added its territory to the Almoravid empire. In 1141—1142, in the course of the Almoravid pursuit of the Almohads, a body of the latter set out from Támánsaín to lay siege to Melilla, which was taken and plundered. In 1272, the Marinid Sultan Ya'qūb took Melilla from the Almohads and Ibn Khaldūn simply mentions it as a fortified place. It seems in fact that these three captures of the town had destroyed its commercial importance to the advantage of another town on the west coast of the peninsula of the Geğgya: Ghassāna also called al-Kudrāt al-ḥaṣa, the Almohad of the Portola; in the thirteenth century it is this latter town that appears as the Mediterranean port of Fás and Tás, and it was through it that political and commercial relations with eastern Spain and Italy (Genoa and Venice) were carried on.

Leo Africanus says that in 1496, hearing that an attack on it was planned by the Spaniards, the inhabitants abandoned the town and fled to the mountains of the Bağhgya; to punish them for this the Wāṣṣād Sulīn had the town burned down; when, in Sept. 1497, the Spaniards arrived they were thus able to disembark without resistance and occupy the town, abandoned and half destroyed. The occupation of Melilla enabled the Spaniards to attack the port of Ghassāna by land and it was taken in April 1506. The Moroccans recaptured it in 1533 but the dangerous proximity of Melilla henceforth deprived it of importance. The commercial activity of this region was moved farther west to the port of al-Maziuma (Spanish: Aljucenas, Fr.: Alzouzème), and the centre of Muslim resistance in this part of Morocco was henceforth the strong hold of Támánsaín, which after having been the capital of the Marinid sultan of the Banū Wāṣṣād became that of a practically independent leader of a holy war. After passing into the hands of the Spaniards, Melilla was continuously besieged by the Muslims, mainly by the force of the leaders of holy war established at Támánsaín and at Māna’in (the Mayyaf of Leo Africanus). Occupied by the Christians, the town naturally became one of the places in Morocco in which Muslim pretenders and rebels found asylum and support against the central power, especially at the beginning of the Sa’dian dynasty. In 1549, it sheltered the dispossessed Wāṣṣād Aḥḥa Sāliḥ, the king of Rūdi; in 1550 it welcomed, with his family the Mawlay Ama‘r, the king of Dehdī. It was from Melilla that in 1595, the pretender al-NAṣīr b. al-Qallāl brilhīṭ set out against his uncle Sultan Ahmad al-Maṣūfī.

Later Melilla only appears in history in connection with sieges which it had to suffer: sieges by Mawlay ‘Abd al-‘Azzī in 1687 and 1693; siege in 1774 by Mawlay Muḥammad b. ‘Abd Allāh; Spanish-Moroccan war of 1893 (Sidi Wāṣṣāaf affair). From 1903 to 1908 the region of Melilla was the scene of struggles between the pretender al-Qalīfī al-Ruṣī, established in the ḫafīfa of Sərwā, and the troops of the Sultan ‘Abd al-‘Azzī; defeated and receiving no support, the latter had to take refuge in Spanish territory and be repatriated. Still more recently, in 1921, the same district witnessed the sanguinary battles between the Spaniards and the Rifians under ‘Abd al-Karīm (Anwāl dami). Melilla is for Spain “a place of sovereignty,” like Alhucemas, Peñón de Vélez and Ceuta. Before the establishment of the French protectorate, Melilla, constituted a free port, was the landing-place for all the European merchandise (cotton, sugar, tea) intended not only for eastern Morocco but also for the Saharan regions of Morocco and Orania. It has now lost much of its commercial importance.

**Bibliography:**

**GEORGES S. COLIN**

**MENDEREZ**, the name of two rivers in western Anatolia.

1. **Büyük Menderes** (called by al-‘Umari Menores, by Per Reis, Mendíra or Menderdz), the ancient Maeander, the Meander of the Crusaders. It rises in the district of Germiyân in a little lake, the Huwiran Gölü (Saklı) above Diner (according to Abū Bakr b. Bahram in a spring called ‘Aqīla, a day’s journey from Homa), flows past Homa at some distance off, then through the plain of Ashkül and the kajis of Bağlan and Cai. In the kaş of Çarşamba (capital Buldan) it is joined by the Banas Cai (called Murad Dagh by Abū Bakr, Bahram whose statement that it flows past ‘Aqīla is wrong). It rises in the Murad Dagh and flows past Banas. Further down its course, in the plain of Demirkali, it receives the Çitük Su, the ancient Lykos Fl. Further on a ruined bridge called ‘Emirtaş Köprüsî is marked the frontier between the two old livas of Germiyân and Afdin; according to Abū Bakr a warm spring rising in its foundations had contributed to the destruction of this bridge.

In the territory of Afdin the Büyük Menderes flows past at a distance the villages of Orakçı, Nazilli, Sülünkhisar, Köskh and Güzehşir Afdin, breaks up into several arms in the plain of Balas (Patlia, the ancient Miletus) and feeds a lake full of fish (al-‘Umari) there, which is now called Bafı Defisi (Lake of Patlia, the ancient Αρειστία). A little below Balas, it enters the sea.

Al-‘Umari who, generally speaking, is inaccurately informed about the course of the waters Defisi and Birgi on it, i.e. brings the Caystrus into its basin and makes it flow into the Black Sea) compares the Maeander for its site at low level with the Nile, in flood however with a sea. According to him, it is navigable and the people on its banks are protected from its mouth on military or commercial enterprises. Western writers also speak of the trade borne on the Maeander in the late middle ages. The main centre of trade on the Maeander and also on the land routes through the valley was Paläis (Balas, the ancient Miletus); in later times, however, the caravan route down the Maeander valley ended in Scalanova (Kuşh Adası).

2. **Kuçuk Menderes**, the ancient Caystrus. The central part of its course runs in a wide plain on the northern edge of which is Birgi, on the southern edge Tınır, the old capital of the Iml of Afdin. A little below Ayasalough, the ancient Ephesus, it enters the sea.

In the middle ages the centre of trade with the hinterland reached by the Cayster was Alshüno (from *Ayas* θύρας), the ancient Ephesus (Tark. Ayasalough, now called Selçuk); later Scalanova (Kuşh Adası). In the Ottoman period Smyrna attracted all the trade of the Aegean Sea with the Anatolian hinterland. The caravan routes which
came down the river valleys opening on the Angasan thus ended in Smyrna, just as at the present day the railways which utilize these valleys start from Smyrna.

MENF. [See MANIF.]

MENGÜÇEK (MENGÜÇEK), a Turkish emir, who after the capture of Romanos Diogenes in 1071 A.D. seized various places in the northwest of Asia Minor and transmitted his power to his descendants. We find them in Erzijân, Khorosha (Colonia, Carmen-Sagari), and Divrigi (cf. the genealogical table in von Zambur, Manuel de Genealogie, etc., p. 146). Little is known of their history. It is incidentally mentioned in Michael Syrus (ed. Chabot, Ill. 205) that Ibn Mengüçek, being threatened by the Ordokal Balâg, made an alliance with Theodore Gabara, the Byzantine commander of Trebizond, but was taken prisoner in battle along with the latter (1118). He was, how again released by the Danishmadin Emir Ghazi, whose daughter he had married, while the Greek had to pay a heavy ransom. His name is not mentioned but, from the genealogical statements in the inscriptions of his descendants, he was called 1Î88. The same story is given elsewhere but not so fully. Better known is his grandson Fakhr al-Dîn Bahramgih, who ruled for many years in Erzijân and died in 622 (1225). To him the celebrated poet Nîshân dedicated his poem Mâ'ûn an-Àrâf, which was composed in 1198 or 1199. He was on the best of terms with the Sâlihîya of Konia, with whom he was unconnected by marriage, but when these relations were altered under his son ìllü al-Dîn Dâwûd, the rule of the Mengüçeks was ended. At the end of 625 (1128) he was forced to cede Erzijân to Kalâbâbâd, and his brother Murâfâr al-Dîn Muhammad who ruled in Khorosna met a similar fate. A collateral line established in Divrigi and ruling there in the name of the Sâlihîya held out for a few more years, perhaps till the coming of the Mongols into these regions in 675; only a few scraps of information about this line have been gleaned from inscriptions and coins.

(M. TH. HOUTZEMA)

MENŞEŞE-ELI, a little principality in Anatolia. The boundaries of the territory of the Menşese-eli's [q.v.] are given by Münadżîdîm-bîsh (cf. Fr. Babinger, G.O.W., p. 457 sqq.) in his Sevâlî al-Abîn (Stambul 1285) as marked by Mûqâla, Bâlîq, Bâzû-yüklî, Mîlû, Bardîn, Mûnûn, Cine, Tawba, Bornâr, Maktûb, Gâdî, Pîdâ and Mermere. They thus correspond approximately to those of the ancient Caria. The origin of the name is uncertain, but it can confidently be ascertained that the opinion, presumably first put forward by P. Emininski (Lectiens, iv. 737) and quite recently upheld, that the district takes its name from the Mûnûn (Munuse in Strabo) of the ancients is not worthy of credence. Several of the places above mentioned play a not unimportant part as centres of scholarship and literature in the earlier period of Ottoman intellectual life. Thus in the time of the Menşese-eli Mehmed I (775—777) a certain Mahammad b. Mahammed b. Bardîn composed a Büyük Namus which was published by J. v. Hammer-Purgstall under the title "Feithârîzâ" (Pest 1840) from the Milan MS, and rightly described as one of the earlier documents of the Ottoman language. In many of these places there were academies where an active intellectual life flourished, so that the share of the district of Menşese in Ottoman literature is strikingly large.

(Fr. Babiner)

MENŞEŞE-OĞLU'LARI, a petty dynasty in Anatolia. The princes of Menşese first appear in history after the break up of the Seljuk empire. The founder of the family is said to have been a certain Menşese Beg b. Behâr al-Dîn Kardî. He had his court at Mîlû (Munuse) in the ancient Caria, and not far from it his stronghold Paštûk (Petsona). His descendants also lived in Mîlû until they moved their court to Milûs. The son of Menşese was Urtakîn Beg, who is known from an inscription on a building in Milû and from Ibn Battûta who visited him in 1334 in Milû (cf. Ibn Battûta, Voyages, ed. Dufrenoy, Paris 1854, II, 278 sqq.). Urtakîn's successor was his son Ibrahim, who built a mosque in Mûqâla in 745 (1344) and left two sons, Ahmed Ghazi and Memmed. The second succeeded him in 755 (1354), but succeeded in the struggle for the throne to his brother Ahmed, who took Eskî Hijar in 755 (1354), in 777 (1375) founded an academy at Kardîn and at the end of Ljummir II, 780 (Oct. 1378) consumed the Ula Ĩsmî in Milû. Ahmed Ghazi died in Shaban 793 (July 1391) and was succeeded by his nephew Ilyâs. The Ottomans had in his reign already taken possession of several principalities in the neighbourhood of Menşese-eli, such as that of the Germân-eli [q.v.] and of the Hamîd-eli [q.v.], and now seriously threatened the existence of the Menşeses. Immediately after the accession of Ilyâs Beg, Bâyazîd I, who had just become Sultan, deprived the lords of Menşese of the last vestiges of independence. They sought refuge with the ruler of Sinope, Bâyazîd Kötûrüm, and later with the conqueror of the Ottomans, Timur-Lenk. Ilyâs Beg, who built a mosque in Milûs, regained possession of Menşese-eli in 1402. On 24 July 1405, he concluded a treaty with the Sultanate of Crete, Marco Faileri (publ. by Max Lattre, at the end of his essay, Commece d'Epiphan et de Milet, moyen âge en la Bibl. de l'Ecole des Chartes, Sec. vi. Vol.vi. Paris 1864, p. 226 sqq.) and with
the admiral Ser Pietro Civran on 17th Oct. 1414 (cf. Diplomatarum Viciis-Levantinum, ii. 305–
and 203; for more, see W. Heyd, Historie du commerce du Levant, i. 353, etc.). The reign of Ilyas Beg,
which lasted for forty-three years and was ended in 824 (1421) when his lands passed to
the Ottomans, who continued until 831 (1428) in which he was killed. The title of Sultan,
which had previously been held by the Ottomans, was now bestowed on the ruler of Menteşe.
Ilyas Beg, who was the son of the last ruler of Menteşe, was one of the most powerful rulers of the	
Ottoman Empire, and his reign was marked by a period of peace and prosperity. He is remembered for his
buildings and the many monuments in Menteşe, including his beautiful mosque, the Mevlâna Mosque.

The relationship between the various princes is based on coins and inscriptions.

MERDAWIJ: [See Mirdawiyya.]

MERDAWIAH. AR. MERDAH, from the Latin Merida, a town in the south west of Spain, in the modern province of Badajoz, where it is the capital of a partido, on the right bank of the Guadiana. Now somewhat decayed, it has only 11,585 inhabitants. It is on the Madrid-Badajoz railway and is also connected by rail with Cáceres in the north and Seville in the south.

The ancient capital of Lusitania, Augusta Emerita, was founded, in 23 B.C., and under the Roman Empire attained remarkable importance and prosperity. Numerous remains of Roman buildings still testify to the position it held in the Iberian peninsula in those days: a bridge of 64 arches, a circus, a theatre, and the famous aqueduct of los Milagros, of which there are still standing ten arches of brick and granite. Merida under the Visigoths became the metropolis of Lusitania and according to Rodrigo of Toledo was fortified and strongly defended, which explains why the Muslim conquerors led by Nadir b. Nusair [q.v.] had some difficulty in taking it. The Arab army, under the command of Muhammad b. 'Abd Allah, captured it in June 713. From Merida, Nadir b. Nusair continued his advance to Toledo.

Under the Arab governors, Merida seems to have very soon become a rallying point for a large number of rebels of Berber and Spanish origin. It was there that Yusuf al-Afi'îh endeavoured to organise a movement against that organized for his own benefit by 'Abd al-Rahmân al-Mahdi in 141 (758). At a later date, Abul 'Abbas b. 'Abd Allah b. Wâsâd rebelled there against al-Hakam I in 190 (805) and the emir of Cordova had for the next seven years to undertake summer campaigns against him before bringing him to reason. Another rebellion broke out in Merida in 213 (828) and the town had to be besieged in 217 and again in 254 (868). In the reign of Emir 'Abd Allah it was the headquarters of 'Abd al-Rahmân b. Murwân al-Djifilî (the Gallican), an Arabic name which concealed that of a Christian nationalist leader. Merida definitely returned to its allegiance in the reign of 'Abd al-Rahmân III al-Nâsir when it submitted in 316 (928) to the 'abd Allah b. Aylas.

From the 9th century, Merida began to decline in favour of Badajoz, especially when the latter town became the capital of the independent little kingdom of the Alfajus [q.v.]. It remained in the hands of the Muslims till the beginning of the 11th century. In 1328 it was retaken by Alfonso X of Leon but never recovered its former importance.

The Arab geographers who mention Merida, describe its Roman ruins in detail; they also mention the Muslim citadel, the foundation inscription of which has been preserved. It was built in 220 (835) by the governor 'Abd Allah b. Kulaib b. Thâhâ, on the site of the Umayyad Emir 'Abd al-Rahmân II.

Bibliography: The Arabic historians of
UMAYYAD SPAIN (Ahlül-Bayyín, Ibn 'Idhārī, Buyūk, Ibn al-Atlīr, Nūrān, Muḥarrar, Anasīs, Ṣunnī [r. 762-775]), Hishām, a descendant of the Umayyads, became the first caliph of the Umayyad dynasty. His rule was marked by military campaigns and the expansion of the Islamic empire. He was succeeded by Al-Hakam I, who continued the expansion of the empire.

ALMOHAD SPAIN (Ahlul-Bayyin, Ibn al-Atlīr, Nūrān, Muḥarrar, Anasīs, Ṣunnī [r. 762-775]), Hishām, a descendant of the Umayyads, became the first caliph of the Umayyad dynasty. His rule was marked by military campaigns and the expansion of the Islamic empire. He was succeeded by Al-Hakam I, who continued the expansion of the empire.

In 1145, the Almohads began their conquest of al-Andalus, the Iberian Peninsula, which was then under the rule of the Almoravids. The Almoravids were a Berber dynasty that had previously conquered the Muslim territories in Spain. The Almohads were able to conquer a large portion of al-Andalus, including the city of Córdoba, which was the capital of the Almoravids.

The conquest of al-Andalus by the Almohads had a significant impact on the region. The Almoravids were known for their tolerance and patronization of the arts and sciences, which contributed to the cultural and intellectual life of the region. The Almohads, on the other hand, were more austere and focused on enforcing strict religious practices. This change led to a decline in the cultural and intellectual life of the region.

The Almohad rule was characterized by a strong central government and a strong military. The Almohads were able to maintain their rule over a large portion of al-Andalus for several decades, until the end of the 13th century. However, the Almohads were eventually overthrown by the Nasrid dynasty, which established the Kingdom of Granada in the late 13th century.

The conquest of al-Andalus by the Almohads had a significant impact on the region. The Almoravids were known for their tolerance and patronization of the arts and sciences, which contributed to the cultural and intellectual life of the region. The Almohads, on the other hand, were more austere and focused on enforcing strict religious practices. This change led to a decline in the cultural and intellectual life of the region.

The Almohad rule was characterized by a strong central government and a strong military. The Almohads were able to maintain their rule over a large portion of al-Andalus for several decades, until the end of the 13th century. However, the Almohads were eventually overthrown by the Nasrid dynasty, which established the Kingdom of Granada in the late 13th century.
The 'Abd al-Wâdhids very soon lost hope of unannexing territory in the west. If, as we have seen, they were a thorn in the side of the Merinids who desired to cross into Spain, this policy was of brief duration. Very soon they had to confine themselves strictly to the defensive. On many occasions, the kingdom of Tlemcen was invaded and the Tlemcensiens shut up within their walls. For example for eight years and three months, from 698 (1299), they were blockaded, during which period the Merinids established a permanent camp which became the town of al-Manşûra [q. v.]. In addition to numerous other works of circumvallation, Tlemcen however did not fall till later. In 732 (1337) Abû 'l-Hassan took it; he and his son Abû Inan were to hold it for 22 years. For these two princes, whose reigns mark the apogee of the dynasty, Tlemcen was only a first stage towards Ifrîqiya. The dream of recreating the empire of the Almohads was to be realised by annexing the Ifshid kingdom.

Constant relations, in which each hoped to gain some advantage, united the two states of east and west, Banû Hafs and Banû Marin. To a contemporary observer like the Egyptian al-'Umari, the Banû Marin alone counted as a military power, but the Banû Hafs, descendants of the Almohad caliphs, had a prestige which the Banû Marin could not claim in spite of the title of Amûr al-Mmelunis which Abû Inan arrogantly assumed. This explains why, from the very first, the Banû Marin in annexing the towns of the Magribi declared themselves mandatories of the sovereigns of Tunis and why they married Ifshid princesses. On their side, the Banû Hafs did not think it wise to refuse their daughters; they dealt tactfully with the Moroccan sulûts, who might be useful in protecting them against the sulûts of Tlemcen. In a word, they hoped to see the Merinids attack central Magribi but not to become complete masters of it, which would directly expose Ifrîqiya to the attacks of the conquerors.

This is what actually happened in 1347. Taking advantage of the usurpation of the throne of Tunis and of the troubles which followed it, Abû 'l-Hassan invaded Ifrîqiya and sought to impose his authority there as in his own kingdom. The situation here however was far different from what he was familiar with in the Magribi. In Ifrîqiya, the Arabs were still very strong. Abû 'l-Hassan came to grief against the Arab tribes united against a foreign master and near Kairâwân they inflicted a disastrous defeat on him in Maharram 749 (April 1348). This disaster even endangered the position of the Marinids in the Magribi itself. An attempt by Abû Inan, son of Abû 'l-Hassan, to reconquer Ifrîqiya proved fruitless.

In spite of the collapse of Marinid aims, the period of these last sulûts was nevertheless one of the greatest in the history of Muslim Barbary, one of those which has left us most memorials of its magnificence.

The Merinids were vigorous builders. In 1276, Abû Yusuf had founded New Fès, west of the old town, to make it his official capital; but it was during the first half of the xivth century that the greatest building activity was displayed. The majority of those that have come down to us date from this period. Works of considerable artistic value, they are at the same time evidence of the military activity and religious ardour of the Banû Marin, like the ramparts and the mosque of al-Manşûra, the walls and necropolises of Chella, the medersas of Fès and Sâli, the different buildings erected near Tlemcen around the tomb of the great ascetic Sûltân Bî Madyan. Piety in the form of mysticism was the dominating note in the intellectual life of the Magribi. We must however not forget that the court of Fès was frequently visited by men like 'Abd al-Rahîm b. Khâlidîn, Fès al-Khârijî and Ibn Batûtah, who have left a name in the field of literature and profane learning.

The failure of the attempts upon Ifrîqiya and the disaster at Kairâwân may be taken as the beginning of the decline of the Merinids. As a result of these military failures, the troops stationed in some parts of the Magribi had to be withdrawn. The passes of the Atlas being no longer guarded, the Arabs of Sîs and Tafîsîlî, excited by the rumours from Ifrîqiya, began to display their turbulent spirit. The tribes who paid taxes now paid only at longer and longer intervals under the threat of expeditionary forces sent against them. There was still a graver cause of decline: the power of the viziers vastly increased.

An aristocracy of high officials related to the royal family handed down offices from father to son, backed by powerful clans, and ended by usurping the power to dominate the new sovereigns. To keep them in tutelage, they used to choose for the throne a minor or a weakling. When the Sûltân displayed some desire to rule in person, they did not hesitate to dethrone or assassinate him. Thus in 762 (1361) Abû Sûlîm was decapitated by a soldier of the Christian militia; his successor Tâslîn, an idiot, was deposed and replaced by Abû Zâliân, who was found strangled and drowned in a reservoir.

In the midst of these palace revolutions the unity of the kingdom was destroyed. We find the prince who governs Siqîlûnells, fighting with the sultan reigning at Fès. The vizier who has control of the legitimate sovereignty pretends against him, who end by dividing up the country among them. Marrakesh fights against Fès. At one time, the traditional enemies of the dynasty, the 'Abd al-Wâdhids of Tlemcen, endeavour to profit by the occasion to resume the aggressive policy of Yahmûrûn. But Tlemcen was itself too weakened to attain success. Besides, it was attacked in the rear by the Arabs of the Central Magribi, instigated from Fès. One of the shaykhs of the Siwaûd Arabs is called the "friend and patron of the Marinid dynasty." The Banû Marin had another means of neutralizing Tlemcen; this was to support pretenders of the 'Abd al-Wâdhid family. To sum up, in spite of the weakness of the Banû Marin, the state of 'Abd al-Wâd, whose lands had for the most part passed into the hands of the Arabs, cut a still sadder figure and could not resist when attacks from the west were resumed. From 1389 all the sulûts of Tlemcen ruled under the suzerainty of Fès.

But grave events were to turn the attention of the Merinids from the affairs of the Central Magribi. In 1401, King Henry III of Castile landed in Barbary to take vengeance for outrages of the Muslim corsairs and destroy Tetwân. This attack, which produced considerable commotion in the Magribi, and the taking of Ceuta by the Portuguese in 818 (1415), provoked a vigorous reaction by the religious element. The threat from abroad, combined with its weakness in meeting this critical
sick of a fever (cf. Ewliya Celebi, i. 372; J. v. Hammer, Constantinopolis, i. 503; d. O. G. K., ix. 95, No. 495; following the Hadżat al-Djânûnî, loc. cit.). Beside it is the cell (niyya) of Merkès Efendi, of which wonderful stories still circulate among the people. He had many pupils, including his son Ahmed, famous as the translator of the Kamât, his son-in-law Muslih al-Din (cf. Ewliya, i. 372), the poor Ramadân Efendi, called Bîhişt and many others.

**MERSİNA, an Anatolian sea-port on the south coast of Asia Minor.** Mersina, the port and capital of the former sandjak of the same name (with an area of 1,780 sq. m.) in the vilayet of Adana [q.v.] on the south coast of Anatolia, is 40 miles from Adana, to which a railway runs. The name Mersina comes from the Greek mýrroîn (μύρροιν), myrtle, because this tree grows in large numbers in this region. The regularly built town, founded only in 1822, with about 24,471 inhabitants (1927), is only of importance as a port for the export of silk, corn and cotton. The climate is very unhealthy in summer. The old name of Mersina was Zephyrium; in the vicinity (8 miles S.W.) lie the ruins of Soloi or Pompeiopolis. The town which is quite modern is of no Muslim historical interest.

**MERTOLA, A. Murúdis and Mirúla, a little town in the south of Portugal on the Guadiana, 35 miles above and north of the mouth of this river, at its junction with the Ózira.** This place, the Myrrha of the Romans, was of some importance in the Muslim period. It was in the district of Beja and according to Yâhûbi was the best defended stronghold in the whole of the west of the Peninsula. At the end of the ninth century it was the headquarters of an independent chief, 'Abd al-Malik b. Abi 'l-Daghâwâ, who was in alliance with the lords of Badajoz and Osornoba and held his own against the Cordovan emir 'Abd Allah. Bibliography: M. Cistare, Description de l’Afrique et de l’Espagne, ed. Dory and du Goeuc, text, p. 175, 179, transl. p. 211, 217; Yeğen, Murâdî al-Bulûtân, ed. Wüstenfeld, iv. 714; Ibn 'Idârî, al-Bay‘ân al-mu‘tâlîî, ii., text, p. 1, 140, transl. p. 253. (E. LÉVI-PROVENCAL.)

**MERWA, a British district in Râjdânâ, lying between 25° 24’ and 26° 11’ N., and 73° 45’ and 74° 29’ E., has an area of 641 sq. miles and a population (1901) of 109,459.** The local name of the district is Magra, or “hill.” Beyond the fact that between 1138 and 1232 (1725 and 1816), several unsuccessful attempts were made by Râjdâs and Mârahhs to subdue the country, the history of Merwa is a blank up to 1234 (1818), when the British appeared on the scene. The District was at one time an impenetrable jungle, inhabited by outlaws and fugitives from surrounding states. The population known under the name of Mârs originally comprised a mixture of castes, Çandea, Gujarâ, Bhât, Râjdâs, Brahman and Mînas. It is said that Nasîdîw, the
Mehi, the capital of the Persian province of Khurasan (q.v., ii, p. 966), the greatest place of pilgrimage for the Shi‘ites in Persia. It lies 3,000 feet above sea level in 58° 35' E. Long., (Greenw.) and 16° 17' N. Lat. in the valley from 10 to 25 miles broad of the Khezef-Rud, which runs from N. W. to S. E. This river, also called Ab-i Meshhed (the "river of Meshhed"), rises about 12 miles N.W. of the ruins of Tus (q.v.), in the little lake of Chegans-i Gili (cf. Frager, op. cit., p. 550; Khanikoff, op. cit., p. 110; Yule, op. cit., p. 315) and joins the Heri (Hasti)-Rud (q.v., and cf. Le Strange, op. cit., p. 407 sq.) about 100 miles S.E. of Meashid on the Russian-Persian frontier. Meshhed lies about 4 miles south of the bank of the Khezef-Rud. The hills which run along the valley rise to 8,000 or 9,000 feet at Meshhed.

In consequence of its high situation and proximity to the mountains, the climate of Meshhed is in the winter rather severe, in the summer, however, often tropical hot; it is regarded as healthy.

Meshed may in a way be regarded as the successor of the older pre-Muhammadan Tusa (q.v.), and it has not infrequently been erroneously confounded with it.

The fact that Tus is the name of both a town and a district, together with the fact that two places are always mentioned as the principal towns of this district, has given rise among the later Arab geographers to the erroneous opinion that the capital Tus is a double town consisting of Taharan and Nukan; e.g. Yafa'i, iii. 560, 5 (correct at iv. 824, 83) and in the Lusab of Ibn al-Athir (q.v.) quoted by Abu l'Fida' (op. cit., p. 456): Khawatim (Ahmad ibn Bidar, ed. Wustenberg, p. 275, sq.) next made the two towns thought to be joined together into two quarters (ma'ajid). This quite erroneous idea of a double town Tus found its way into European literature generally. Sykes (J. R. A. S., 1916, i. 1135-1140) and others (cf. P. K. M.) have rightly challenged the untenable idea. The older Arab geographers quite correctly distinguish between Taharan and Nukan as two quite separate towns. Nukan, according to the expression testimony of the Arabic sources, was only 1/4 parasang (farshik) or one Arabic mile from the tomb of Harun al-Rashid, and 'Ali al-Rida (see below) and must therefore have been very close to the modern Meshhed. The ruins of Taharan-Tus and Meshed are about 15 miles apart.

As to Nukan (often wrongly vocalised Nawas) it is sometimes called more precisely (e.g. Yafa'i, ii. 153, sq.) Nukan Tus, and occasionally (e.g. Iskakhri = H. G. A., i. 257, 5; Hamd Allah al-Mustawfi, op. cit., p. 157, sq.) included with Sanabadh. The distance between these two towns is put at an Arabic mile (Yafa'i, iii. 153, sq.) or what is practically the same, 1/4 farshik (e.g. Iskakhri, op. cit.; Ibn Hawkal in Abu l-Fida', op. cit., p. 451). Nukan must have lain to the east and northeast of the modern Meshed and a small part of it is the northeastern quarter of the latter town.

In Nukan or in the village of Sanabadh belonging to it two distinguished figures in Muslim history
were buried within one decade: the caliph Hārūn al-Rāshīd and the 'Alid 'Alī al-Riḍā b. Mīrāb. When Hārūn al-Rashid was preparing to take the field in Khurāsān, he was stricken mortally ill in a country house at Sanābād, where he had stopped, and died in a few days (193 = 809). The caliph, we are told (Tabari, **op. cit.,** iii. 737; 15-16), realising he was about to die, had his grave dug in the garden of this country mansion and consecrated by Kūrān-readers. The three available accounts differ at first sight as to the house in which Hārūn spent his last hours. Two of them are given by Tabari: according to the first (iii. 736; 15-16; 737; 4) it was on the estate of Dānimā b. 'Abd al-Rahmān b. the caliph that stopped; the second story (iii. 735; 15-16; 736; 14-15) says that Hārūn lived in the mansion of Humnād b. Abī Ghānim. A third story in Yaḥṣub (iii. 566) says that the tombs of Hārūn and of 'Ali al-Riḍā were in one of the houses of the house of Humnād b. Kāṯībā. Now there is not the slightest doubt that the references to the house (dār) of Humnād b. Kāṯībā and to that of Humnād b. Abī Ghānim are to the same place, Humnād b. Kāṯībā must be the same person as Humnād b. Abī Ghānim; they are both described as of the tribe of Taly. As to Tabari's second story, which substitutes a dār b. 'Abd al-Rahmān for a dār Humnād, it may be observed that Dānimā b. 'Abd al-Rahmān held the office of governor of Khurāsān under the Umayyads (caliphate of Hārūn) from 111 to 116 (729-734) (on him cf. above i. 1100 sq.; ii. 357; Weil, **op. cit.,** l. 629-631; E. v. Zambur, **op. cit.,** p. 47). Dānimā probably resided as a rule not in Nāšīpur or Tūs but in the palace at Sanābād which he had probably built. One of his successors, Humnād, also chose to live here and seems to have enlarged the place. This would explain how our sources call the same house the house of Dānimā and of Humnād. Perhaps the extension became the property of the 'Abdādāls on the death of Humnād. About 10 years after the death of Hārūn, the caliph al-Ma'mūn on his way from Merv spent a few days in this palace. Along with him was his son-in-law 'Ali al-Riḍā b. Mīrāb, the caliph designate, the eighth imām of the Twelvers. The latter died suddenly here in 205 (818); the actual day is uncertain (cf. Strothman, **Die Zweifels-SchaERE,** Leipzig 1926, p. 171). On 'Ali al-Riḍā and his death cf. above i. 298, 298; iii. 2224; Weil, **op. cit.,** ii. 225; Fraser, **Narratives of a Journey into Khurasan,** London 1825, p. 449-451 (gives the story current in Meshhad of the imām's death); Yate, **op. cit.,** p. 340-344; Sykes, **The Glory of the Shahnameh,** London 1910, p. 255-258; W. Jackson, **op. cit.,** p. 265-266. It was not the tomb of the caliph but that of a highly venerated imām which made Sanābād (Nūkān) celebrated throughout the Shi'a world, and the great town which grew up in course of time out of the little village actually became called al-Mashhad (Meshhad) which means "sepulchral chapel" (primarily of a martyr belonging to the family of the Prophet). Cf. on the conception of Mashhad, ill. 323 and v. Berchem in Dietz, **Kurator schifische Baukunde,** l. (Berlin 1918), p. 89-90. Ibn Hawqal (p. 313) calls our sanctuary simply Mashhad, Yāmī (ill. 153) more accurately al-Mashhad al-Riḍawī = the tomb-chapel of al-Riḍā; we also find the Persian name Meshhad-i muqaddas = "the sanctified chapel" (e.g. in Ḥamd Allāh al-Maṣjāwī, p. 157). As a place-name Mashhad first appears in al-Maḳaddasī (p. 352), i.e. in the last third of the tenth century. About the middle of the xivth century the traveller Ibn Baṭṭūṭa (iii. 77) uses the expression "town of Mashhad al-Riḍawī". Towards the end of the middle ages the name Nūkān, which is still found on coins in the first half of the xivth century under the Ilkhanīs (cf. Cudrington, **A Manual of Muslim Numismatics,** London 1904, p. 189), seems to have been gradually ousted by al-Mashhad or Meshhad. At the present day Meshhad is often more precisely known as Meshhad-i Riḍā, Meshhad-i muqaddas, Meshhad-i Tūs (so already in Ibn Baṭṭūṭa, iii. 66). Not infrequently in literature, especially in poetry, we find only Tūs mentioned, i.e. New Tūs in contrast to Old Tūs or the proper town of this name; cf. e.g. Muhammad Mahdī al-ʿAlawi, *Ṭuzh Tahkīm al-ʿAlawi,* Baghdad 1926, p. 3. The history of Meshhad is very closely dealt with in the work of Muhammad Ḥasan Khaṭṭār al-Dawālī entitled *Maṭlaʿ al-Shams* (3 vols., Teherān 1301—1303). The second volume is exclusively devoted to the history and topography of Meshhad; for the period from 428 (1036) to 1302 (1885) he gives valuable historical material. On this work cf. Yate, **op. cit.,** p. 313—314 and E. G. Browne, *A History of Pers. Lit.,* Cambridge 1924, iv. p. 455-456. The *Maṭlaʿ al-Shams* forms the chief source for the sketch of the history of the town in Yate, p. 314—326. Cf. also the chronological notes in Muhammad Mahdī al-ʿAlawi, **op. cit.,** p. 13—16. The importance of Sanābād—Meshhad continually increased with the growing fame of its sanctuary and the decline of Tūs. Tūs received its death blow in 791 (1389) from Mīrāngāh, a son of Timitr. When the Mongol noble who governed the place rebelled and attempted to make himself independent, Mīrāngāh was sent against him by his father. Tūs was stormed after a siege of several months, sacked and left a heap of ruins; 10,000 inhabitants were massacred (see Yate, **op. cit.,** p. 316; Sykes, in *J. R. A. S.,* 1910, p. 1118 and Browne, **op. cit.,** iii., p. 190). Those who escaped the holocaust settled in the shelter of the "Alid sanctuary. Tūs was henceforth abandoned and Meshhad took its place as the capital of the district. As to the political history of Meshhad it coincides in its main lines with that of the province of Khurāsān [q. v.]. Here we shall only briefly mention a few of the most important events in the past of the town. Like all the larger towns of Persia, Meshhad frequently saw risings and the horrors of war within its walls. To protect the mausoleum of 'Ali al-Riḍā in the reign of the Ghānawīd Maʿṣūd [q. v.], the then governor of Khurāsān erected defences in 1037. In 1121 a wall was built round the whole town which afforded protection from attack for some time. In 1161 however, the Ghūz [q. v.] succeeded in taking the place, but they spared the sacred area in their pillaging. We hear of a further visitation by Mongol hordes in 1296 in the time of Sultan Ghāzān [q. v.]. Probably the greatest benefactors of the town and especially of its sanctuary were the first Timurid Shah Rukh (809—850 = 1406—1446; see vol. iv. 265 sq.) and his pious wife Daghbar-Šāhīd.
With the rise of the national Safavid dynasty \( [q.v.] \), a new era of prosperity began for Meshhed. The very first Safi of this family, Isma‘il I (1501—1524; \( [q.v.] \), established Shi‘ism as the state religion, and, in keeping with this, care for the sacred cities within the Persian frontier, especiallyMeshhed and Kāshān, became an important feature in his programme as in those of his successors. Pilgrimage to the holy tombs at these places experienced a considerable revival. In Meshhed the royal court displayed a great deal of building activity. In this respect Tahmāsp I, Isma‘il’s successor (1524—1576; \( [q.v.] \), and the great Shah Abbas I (1587—1627; \( [q.v.] \), were especially distinguished.

In the xvith century the town suffered considerably from the repeated raids of the Ōbegehs (Uzhehs). In 1507 it was taken by the troops of the Shaibānī Khān (cf. Shaibānīs); it was not till 1528 that Shah Tahmāsp I succeeded in repelling the enemy from the town again. Stronger walls and bastions were then built and another attack by the same Ōbegeh chief was foiled by them in 1530. But in 1544 the Ōbegehs again succeeded in capturing the town and plundering and murdering there. The year 1589 was a disastrous one for Meshhed. The Shahābīd ‘Abd al-Mu‘min after a four months’ siege forced the town to surrender. The streets of the town ran with blood and the thoroughness of the pillaging did not stop at the gates of the sacred area. Shah Abbas I, who lived in Meshhed from 1583 till his official ascent of the throne in Kāshān in 1587, was not able to retake Meshhed from the Ōbegehs till 1598.

At the beginning of the reign of Tahmāsp II \( [q.v.] \) in 1622 the Afghan tribe of Abdāl (\( [q.v.] \) invaded Khurāsān. Meshhed fell before them, but in 1626 the Persians succeeded in retaking it after a two months’ siege. Nādir Shah \( [q.v.] \) (1736—1747) had a mausoleum built for himself in Meshhed.

After the death of Nādir Shah \( [q.v.] \), the city was once again in the hands of the Afghans. In 1797 the Afghans attacked the town and burnt it. The town was later rebuilt by the Afghans and the Persians.

In 1825 Khurāsān suffered greatly from the raids of Turkoman horsemen and the continual feuds of the tribal leaders. (cf. Conolly, \textit{op. cit.}, i. 288 and Yate, \textit{op. cit.}, p. 53.) To restore order the crown prince ‘Abbās Mirzā entered Khurāsān with an army and made Meshhed his headquarters. He died there in 1833. The most important political event of the xixith century for Meshhed was the rebellion of Ḥasan Khān Kāshānī, the prince-governor of Khurāsān, a cousin of the reigning Shah Muḥammad ‘Abbās. For two years (1847—1849) he held out against the government troops sent against him. At the time of the accession of Nāṣir al-Dīn (1848) Khurāsān was actually independent. It was only when the people of Meshhed, under pressure of famine, rebelled against Khān Ḥusain al-Saljūqi’s army succeeded in taking the town.

In 1911 a certain Yūsuf Khān of Herāt declared himself independent in Meshhed under the name of Muḥammad Ḵān ‘Ali Shāh and for a period disturbed Khurāsān considerably with the help of a body of reactionaries who gathered round him. This gave the Russians a pretext for armed intervention, and on March 29, 1912, they bombarded Meshhed in gross violation of Persia’s suzerain rights and many innocent people, citizens and pilgrims, were slain. This bombardment of the national sanctuary of Persia made a most painful impression on the whole Muslim world. Yūsuf Khān was later captured by the Persians and put to death (cf. E. G. Browne, \textit{The Persian Poets of Modern Persia}, Cambridge, 1914, p. 124, 125, 136; Sykes, \textit{History of Persia}, London 1927, i. 436—447). Meshhed is now the centre of eastern Persia, the capital of the province of Khurāsān which, since its eastern part was taken by the Afghans in the xvith century, is barely half its former size (cf. Le Strange, \textit{op. cit.}, p. 383 sq.; \textit{ibid.}, xi. 108 sq. and above, i. 966). In the middle ages it was not Tūs, Meshhed’s predecessor, but Nāşībūr (modern Persian Naḵšūār) that was the capital of this extensive and important province. A royal prince has usually been governor since the fall of the Nādirids. Since 1845 the lucrative and influential post of Mutawalli-Ḵān, the controller or treasurer of the sanctuary of the Imām, has usually been combined with the governorship (cf. Yate, \textit{op. cit.}, p. 372).

The plan of the town is irregular and has a more or less rectangular form. It has a circumference of about 5 miles. The greatest breadth is about a mile, and the length not quite two miles measured along the main street which runs right through the town.

Like most Persian towns Meshed is enclosed by a great girdle of walls, which gives it a very picturesque appearance. The line of the wall. The line of the wall and the broad ditch around outside. are now in ruins and in places have completely disappeared.
The citadel (or) in the southwest part of the town is directly connected with the system of defences. It is in the form of a rectangle with four great towers at the corners and smaller bastions. The palace began by 'Abdū Mīrāt but finished only in 1876, with its extensive gardens, is connected with the fortress proper, now fallen into disrepair (cf. Yate, op. cit., p. 327). It is the governor's residence. The whole quarter of government buildings which, according to MacGregor, occupies an area of 1,200 yards, is separated from the town by an open space, the Mahān-i Tōp (Cannon Place) which is used for military parades.

There are six gates in the city walls.

The town is divided into six great and ten smaller quarters (nazābdān) (see Yate, op. cit., p. 328). The six larger bear the names of their gates; see al-Mahdī al-ʿAlāwī, op. cit.

The principal street which divides the whole town into two roughly equal halves, the Khīyānān, is a creation of Shāh 'Abdū I who did a great deal for Meshhed (1587-1627; see Yate, op. cit., p. 319; cf. the pictures in Sykes, The Glory of the Shīa World, p. 231). This street, a fine promenade, is, being the main thoroughfare, filled all day with a throng of all classes and nationalities, including numerous pilgrims, and caravans of camels and asses; the bustle is tremendous, especially in the middle of the day.

The canal, which flows through the Khīyānān in a bed about 9 feet broad and 5 feet deep is fed, not from the Keshgī Rūd (see above) which runs quite close to Meshhed, as it has too little water, but from the Čehmīn-e Gūsū which menaced it which needed to provide the Tūr with water. When this town had been completely abandoned, Shīr 'Abī, the sifter of Soltān Ḥusain b. Maqūt b. Bāhīrāt (1468-1506; on him see above, l. 343; l. 594), at the beginning of the xvith century had the water brought from this source by a canal 45 miles long, thus sealing the ruin of Tūr; cf. Yate, op. cit., p. 315; al-Mahdī al-ʿAlāwī, op. cit., p. 15.

The making of this canal (see Yate, op. cit., p. 315; Mahdī al-ʿAlāwī, p. 13) contributed essentially to the rise of Meshhed; for the greater part of its inhabitants rely on it for water, although after entering the town, the canal becomes muddy and marshy (which was often a subject of satire; cf. Ḥabīb al-Kaft, op. cit., p. 74), and not for drinking, washing and religious ablutions without hesitation. There are also large and deep reservoirs before the main gates. The water is saline and sulphurous and therefore has an unpleasant taste (cf. Conolly, l. 333-334; Khanjīkhī, p. 105; Curzon, l. 153).

The sacred area divides the principal street into two parts: the Bālī (Upper) Khīyānān in the N. W. and the Pirm (Lower) Khīyānān in the S. E., of which the former is about 3 times as long as the latter. The sacred area covered by the sanctuary of the Imām al-Riḍā is usually called Bālī (cf. above, l. 709). The name Haram-i Shāhī or Haram-i Māhānād or Haram-i al-Riḍāw (al-Riḍā's Haram) is often also applied to it; frequently it is called simply, "Imām" as in Persia as in the Iraq this title is applied also to a building of place of ground sacred to an Imām. The Bālī, a rectangle of 700 feet by 700 feet, is in the lower half of the Khīyānān. With its courts, mosques, sanctuaries, madrasas, caravanserais, bazaars, dwellinghouses etc. it forms a town by itself; a wall around it cuts it off completely from the rest of Meshhed. The main entrances from the Khīyānān are two great doors on north and south, but they are barred by chains so that no vehicle or riding-beast can enter; for the ground of the Bālī is holy and may only be trodden on foot. Animals which get in by accident become the property of the administration of the Imam. The Bālī also has the right of asylum (whence the name Bālī). Debtors who take refuge in it are safe from their creditors; criminals can only be handed over by order of the Māwatwalli-Bābī, which is now usually done after three days. In the whole of the sacred area strict discipline is maintained by its own police; there is a special prison for thieves (see the plan in Yate, p. 332, No. 75; cf. also Conolly, l. 203; Khanjīkhī, p. 98; Bassetti, op. cit., p. 224; Curzon, l. 153-154; Massy, op. cit., p. 1006; Yate, p. 334).

Entrance to the Bālī is strictly forbidden to all non-Muslims. In earlier times the rule does not seem to have been so strict, for Clavigero (see Bk)[1] in 1404 was able to visit the sepulchral chapel of the Imam al-Riḍā. In the sixteenth century (1822, 1833), Conolly (1830), Bunsen (1832), Ferrier (1845), Eastwick (1862), Vāmbērī (1863), Colonel Doulmage (in the sixties) and Massy (1893) visited the sacred area. Only Fraser, Conolly, Doulmage and Massy actually entered the sepulchral chapel itself. Vāmbērī and Massy were dressed as Muslims while the others retained their European dress. Except Doulmage, all these travellers have given more or less full descriptions of the sacred area. The full and accurate description given by Sykes in the J. R. A. S., 1910, p. 1120-1148 and in The Glory of the Shīa World is based on information supplied by the attachè to the British Consulate, Ėlim Bayāhdīr, Ahmad Din-Khān (cf. J. R. A. S., 1910, p. 1113 and The Shīa World, p. iii.; see also Curzon, l. 154 sq. and Mahdī al-ʿAlāwī, l. 17-22.

The most detailed plan of the Bālī is in the already mentioned Muṭṭla al-ʿĀlamī of Sām al-Dawla (1855); also given in Yate, op. cit., p. 332. A plan on a somewhat smaller scale was prepared by the Persian architect Muʿāwwīn Suwayyīya (cf. Sykes, Glory of the Shīa World, p. 240) and was published by Sykes in the J. R. A. S., 1910, p. 1128 and in Glory of the Shīa World, p. 100. The latter differs in details not inconsiderably from Sām al-Dawla's plan; which is right we have not the means of telling.

The history of the sanctuary of al-Riḍā is pretty well known from inscriptions and literary sources (cf. especially the references in Yate, op. cit., p. 317 sq.). Sykes, J. R. A. S., 1910, p. 1120 sq. and Mahdī al-ʿAlāwī, p. 14 sq.). According to local legend, Alexander the Great built a wall around the site as he lay there in a dream that it was destined to be the tomb of a saint (cf. Fraser, Narrative, p. 449; Sykes, op. cit., p. 1130). As early as the second half of the tenth century, as Ibn Hawḵal tells us (R. G. A., l. 313), the 'Alīd sanctuary had a strong wall built around it, within which devout men who wished to lead an ascetic life (fīlīfī, q.v.) took up their abode. The almost contemporary account of al-Muhallabī in Abu J. Fīlī, p. 452 is similar. A few decades later, Soltān Maḥmūd of Gharrā (998-1030) as a result of a dream enlarged the
buildings of the tomb and provided a new wall around them (see Sykes, p. 1130). The sanctum at a later date seems to have fallen somewhat into decay: for about a century later it was restored by the Sultān Sādīq Sultān Sa’dīq (q.v.), out of gratitude, local tradition says, for the miraculous cure effected on his sick son there (see Frazer, op. cit., p. 451; Napiers, J. R. G. S., xli. [1876], p. 50 sq.; Sykes, op. cit., p. 1141-1142 and in Glory of the Skin World, p. 238 sq.). It is to this event that an inscription of 512 (1186) inside the chamber of the tomb refers (see in Sykes, p. 1140-1141 and cf. Mahdī al-Alawi, p. 18). There is also a second inscription (in Sykes, p. 1142-1143) which records a restoration undertaken in 612 (1215). The existence of these two inscriptions, the oldest in Mehsbed, shows that the Mongols of Shoqiz-Khān, if they may have swept over Khurštān in 1220, did not strip the sanctuary, spared the buildings. We hear of another restoration of the buildings in the reign of Sultān Ulugh-Bīn Khudābān (1439-1465); cf. Sykes, J.R.G.S., 1910, p. 1111; cf. Mahdī al-Alawi, p. 18). From the middle of the sixteenth century we have the somewhat fuller description of the ‘Ali al-Ridżī by Ibn Batūta (B. 77-79). Timūr’s son Shīr Rūsh (1406-1446) and his wife Diwājar Shāhīn did a great deal for the Haram. The latter built the splendid mosque to the south of the tomb which still bears her name. The Dar al-Siyāda, the hall west of the tomb, and the adjoining chamber, the Dar al-Hurūf, are also due to this queen. Under Timūr’s grandson Sultān Husain Bilārī (1469-1506) (q.v.), the vizier Shīr ‘Ali erected the southern part of the Sāh-ī Kuhna, “the old court”, with the imposing porch; see the inscription reproduced in Sykes, p. 1133.

With the coming to power of the Šaftwīs a new and brilliant era dawned on Mehsbed. The rulers of this dynasty vied with one another in the development and adornment of the sanctuary of ‘Ali al-Ridżī, which they raised to the level of the religious centre of their kingdom. In this respect Tahmāsp I, ‘Abbās II, and Sulaīmān I deserve special mention. Tahmāsp I (1544-1576) erected a minaret, covered with gold in the northern part of the Sāh-ī Kuhna, adorned the whole dome of the tomb with sheets of gold and placed a golden pillar on the top of it. The Osłob came on this rich adornment on their visit in 1569. ‘Abbās I the Great did most of all the Šaftwīs (1537-1627) for Mehsbed. ‘Abbās II (1641-1666) devoted his attention mainly to the further decoration of the Sāh-ī Kuhna. The inscription in harām in Sykes, p. 1133 (cf. also Khānīkhānī, p. 172), was written by the master hand of Muhammad Ridżī ‘Abbās (on him cf. Sarre and Mittwoch, Zeichnungen aus Rīsāl Bābāz, Munich 1914, p. 15-16). Sulaīmān I (1666-1691) paid special attention to the restoration of the dome of the Imam’s tomb; see Mahdī al-Alawi, p. 19 (cf. also Yate, p. 343; Sykes, p. 1137).

Foreign potentates also gave great gifts to the Alīd sanctuary in the Safavid period, such as the Emperor Akbar of India who made the pilgrimage to Mehsbed in 1615 (cf. Yate, p. 319) and in 1612 the Khej Šab of the Dakhkan.

It was Nādir Šāh (1736-1747) who did most for the town of Mehsbed in the eighteenth century. Although a very strict Sunnī, he devoted a considerable part of the enormous wealth which he had brought back from his Indian campaign to the embellishment of the great Sāh-ī Kuhna, the place of pilgrimage. He restored thoroughly the southern half of the Sāh-ī Kuhna built in the reign of Sultān Husain Bilārī. He decorated the portico richly and covered it with sheets of gold so that it is still called “Nādir’s Golden Gate” after him. In 1730, before his accession to the throne, Nādir erected a minaret covered with gold in the upper part of the Sāh, as a counterpart to that erected by Tahmāsp I on the south side of the “old court”, cf. on Nādir Šāh’s activities at the sanctuary of al-Ridžī: Muhammad ‘Ali Hasīn Ta’ākh Mānūsh ‘Alī Khān (Memoirs, ed. Baldwin, London 1831, p. 272).

The rulers of the Kādīr dynasty of the sixteenth century, Fath ‘Ali (1707-1734), Muhammad Šāh (1734-1748) and Nādir al-Dīn (1848-1896), faithfully followed in the footsteps of their predecessors, as regards attention to the Lānī’s sanctuary.

In spite of the number of times which the ‘Alīid sanctuary has been plundered in course of time, it still has countless treasures within its buildings and put in, the shade, as regards wealth and the extent of its buildings and courts, all the other great Muḥammadan sanctuaries, except perhaps Mecca, but including the much admired Nadjaf and Kerbela.

A detailed and accurate description of the Haram and an account of its architectural history based on its present state cannot be given because the strict prohibition of admission to members of other faiths has prevented non-Muslim scholars from examining thoroughly and reproducing the buildings. Relying on description of the sacred area prepared by Europeans and Orientals and on the valuable data contained in inscriptions (the latter were first noted by Khānīkhānī, p. 103-104; more important: published by Sykes assisted by Khān Bahādur Aḥmad Ūn, in J.R.G.S., 1910, p. 1131 sq.), we can assume with considerable probability that, except the tomb, proper, which in its present form (excluding the later dome) according to the inscription (512 = 1186) dates from the beginning of the sixteenth century, only insignificant remains of the older mediaeval period have survived. The Haram in its present form is in the main a creation of the last 500 years, as is briefly outlined in the above, short historical sketch of the sanctuary.

The dome of the tomb with its various annexes rises in the centre of the sacred area and is bordered on the north and east by two great rectangular courts, the Sāh-ī Kuhna and the Sāh-ī Naw, while in the south it is adjacent by the extensive buildings of the Diwājar Shāhī mosque.

The most popular entrance to the Haram is the gateway in the Bālā-Khejūhār, barred by a chain. The road runs for 250 yards through this street filled with shops and ends at a great gateway through which the Harām, the “old court” is entered. Its northern part dates from the time of Šāh ‘Abbās I, while the southern is as old as the second half of the sixteenth century (reign of Sultān Husain Bilārī), but was completely restored by Nādir Šāh. Four great towers with niche-like halls (hence called “minārān”) admit to the court. The simplest of them are the west and east towers built by Šah 1; the former has the clock tower, while the platform of the latter is used as a ṣafār-ābān i.e. a music-
example of the so-called round hand (thuluth) in Arabic epigraphy (cf. v. Berchem in Diez, Chauravan, Handbucher, i, 97, note 8). These enable us to place the building of the present chamber in the beginning of the xivth century, while the dome 65 feet high covered with sheets of gilt copper was built only in 1607 by 'Abbas I and renovated in 1675 by Sulaiman I, according to inscriptions on its outside. As the thread of tradition regarding the site of the Imam's grave can hardly have been broken, it may be assumed practically with certainty that the present dome is built on the true site. There is no longer any trace of Harun's grave; it probably was in the centre of the mausoleum, whence the tomb of the 'Alid who died later was put in a corner of the same place.

Of the other chambers and isolated buildings belonging to the system of the Haram proper, we shall only mention here the Gumbad (dome-shaped) of Ali ibn Waddi Kham, which lies to the N.E. and takes its name from its builder, a famous general of 'Abbas I (cf. Conolly, i, 271; Sykes, The Glory of the Shis World, p. 266; see also the picture in Diez, Persien; Islam, Bankunt in Chauravan, p. 54).

Leaving the sacred chamber by the eastern door one reaches, after traversing two adjoining rooms, the "Golden Gate" of Nashir al-Din, which leads into the New Court (Saheb-i Nam; its northside is bounded by the Pash Khiyaban, Faith Ali Shah began this court in 1818. His two successors continued the building, which was completed in 1855.

If one turns southwards from the Dar al-Siyada already mentioned, one soon enters the area of the charming mosque endowed by Sultana Djawhar Shah and bearing her name. Like the Sultana Kuhna this older court, an oblong running N. to S. about 100 yards long and 90 broad, is broken in the middle of each of its four sides by a small hall (amun), while the unbroken part is divided by two walls, with rows of arcades fitted up as dwellings. The largest and finest of these four iwans of the mosque, the Loon-i Maksun in the south (for Maksur means stall, cf. iii, p. 336), is used for prayers; in it is a wooden pulpit in which the Mahdi will one day show himself to the faithful. The entrance hall is covered by a blue dome which surpasses that on the tomb of the Imam in height and width, and is flanked by two high arcades covered with blue glass tiles. The centre of the court is occupied by the Mangij-i Pir-i Zam = "Mosque of the Old Woman", a square unroofed area surrounded by a wooden balustrade around which runs water in a deep stone channel.

The Djawhar Shah mosque is the noblest and finest building in the sacred area: cf. the opinions of Fraser, Narration, p. 447; Vanden Audenaerde, Mein Wanderungen etc., p. 323 and Sykes, T.R.A.S., 1910, p. 1145. — Pictures of the mosque in Sykes, The Glory of the Shis World, p. 263; Vate, p. 344 (Ahwaz-i Maksun and Mangij-i Pir-i Zam); Diez, Persien; Islam, Bankunt, p. 45-48.

Of the various small sanctuaries which the pilgrim visits in the Haram, only two need be mentioned here, the Ziyarat Kadam-i Muhammed or Shari' = "the place of pilgrimage of the blessed or excellent soul" also called Dabi Sang-i Chakar-i = place of the foot-stone" (see the plan in Vate, p. 352, No. 16), a circular space covered by a dome (east of the north awan of the Djaw-
not a few of them make a living by supplying official documents sealed with the seal of the Imam (see the picture in Sykes, *Glory of the Shir World*, p. 378) which deal among other matters with the answering of petitions made by the pilgrims at the sacred tomb (cf. Khondkoff, p. 99).

On the administration of the sanctuary of Meshhed cf. Fraser, *op. cit.*, p. 455—456; Curzon, l. 162—164; Massy, p. 1006 and especially Yate, p. 344—346.

As we know from medieval Arabic sources, pilgrimage to the tomb of All the Al-Ridha began at an early date. We occasionally hear also of royal visits from the eleventh century onwards.

As to the number of pilgrims who visit Meshhed annually we have different estimates for the sixteenth century but as exact figures can hardly be kept and the numbers vary greatly, they can only claim reliability to a very limited extent.

While Yate (p. 334) gives the annual number for the last decade of the sixteenth century at 30,000, earlier travellers, except Marah (1872: 20—50,000), give much higher figures, e.g. Bellows (1875: 30,000—50,000; Ferrier (1845): 50,000; Khanizadeh (1858) and Eastwick (1862): over 50,000; Curzon 1859 even gives 100,000, but this is certainly too high.

The numbers go up considerably when special religious ceremonies are going on, e.g. at the anniversary of All the Al-Ridha’s death (cf. the pictures in Désa, Persian etc., p. 46) and during the first third of the month of Muharram at the Tusya (q.v.) in memory of the tragedy of Kerbela.

We have a full description of the Muharram festival of the year 1839 by Connolly (see his *Journey etc.*, l. 267—284, 335—336) and a shorter one of 1894 by Yate (op. cit., p. 144—148); cf. also the illustrations in Yate, p. 146 and the drawing by the painter All the Al-Ridha Abad of a Meshhed pilgrim at the time of the Muharram festival in Sarre and Mittwoch, *Zeichnungen des Risu Abbasi* (Munich 1914), Plate 1 (thereon p. 23, 40 and 1st, l. 216 sq.).

Every pilgrim who arrives has a right to free maintenance for three days (according to Vambery: six days). In the sacred quarter, south of the Bala Khiyabani (see the plan in Yate, p. 332), there is a special kitchen used exclusively for pilgrims, which gives out 5—600 free meals every day (cf. Vambery, op. cit. p. 333; Goldsmith, *Eastern Persia*, l. 364 and Curzon, l. 163).

On the ceremonies which the pilgrims have to perform at their visit to the tomb of All the Al-Ridha, we have accounts by Massy, *op. cit.*, and the notes supplied by Khan Bahadir Ahmed al-Din Khan in *Sykes, T.R.A.S.*, 1910, p. 144—45 and in the *Glory of the Shir World*, p. 240 sq. Special mention may be made of the three circumambulations (panuf [q.v.] of the tomb and the curving of all enemies of the Imam three times, especially the Caliphs Hārūn and Ma’mūn.

Every pilgrim who has performed the pilgrimage to All the Al-Ridha’s grave in the prescribed fashion is entitled to call himself Meshhed-i.

Meshhed occupies first place among all the places of pilgrimage in Persia. Among the great sanctuaries of the Muslim world, Meshhed stands second in the view of Shi’a theologians, coming after, not only Mecca and Medina, but also the four specifically Shi’a sanctuaries of the *īrāq, Nadjaf, Kerbela, Sāmarra* and Kāfāma, in this order (cf. *Sykes, The Glory of the Shir World*, p. xiii). According to a version current in Shi’a
circles which Curzon (p. 150) gives, Meshhed is entitled to the sixth place, coming between Kārīmābād as fifth and Sāmārār which is put seventh. The longing of every Shi'ī to find a last resting place in the shadow of one of the beloved Imams caused extensive cemeteries to be laid out at an early date at the great centres of pilgrimage. Thousands of corpses are brought every year to Meshhed, mainly of course from Persia, but also from all the Shi'a lands, particularly India, also Afghanīstān and Turkestan. Nowhere in the whole of Persia are there so many tombs as at Meshhed. As the ground of the cemeteries must be used over and over again, the graves change their occupants every few years. Fine solid tombstones are not used, but simply rough blocks of granite or soapstone from the quarries of the neighbourhood (cf. also Conolly, i. 345-4 and Khanikoff, p. 105). Graves within the sacred quarter itself are naturally most desired. Every available space there is used for the purpose; the pavingstones in the courtyards are often tombstones for the dead below. The fees for graves within the Bāst, which vary with the distance from the Mausoleum of ‛Alī al-Riḍā, bring a not inconsiderable revenue to the authorities.

Of the large cemeteries (māzarāns) outside the Bāst the most important is the Maškāra Khatl-i Gāh ("place of the killing") lying north of the sacred area. East of it is that of Sāliyād Aḥmad in which three children of the seventh Imām, Mūsā al-Kāẓim, are buried (cf. Mahdī al-Alawī, p. 8). In the Pān Khān Khānān quarter is the Maškāra Pir-i Pāshādār. S. E. of the citadel is the cemetery of Gumbād-i Sārī ("green dome") which takes its name from a half ruined mausoleum there, now inhabited by devishes (cf. Yate, p. 326; Mahdī al-Alawī, p. 9).

In the Nūkān quarter is the Maškāra Shīh-e Dāvood (see Mahdī al-Alawī, p. 8). We may also mention that outside the Nūkān gate on the site of the old town of Nūkān (see above), are visible the remains of a gigantic cemetery on which, according to Sykes (J. R. A. S., 1910, p. 1116), there may be found stone sarcophagi with inscriptions carved upon them dating from 760 to 1099 (1359-1688).

Outside of Meshed a good half hour's journey to the south, on rocky ground is the cemetery of Mīrzā Ibrahim al- ‘Imārzā (see Mahdī, op. cit., p. 8) and still further from the town, 3 miles north of it, that of Khvāndīn Rābī (cf. Sykes, op. cit., p. 1124, and Ibn Sād, v. 2, p. 127 sq.). According to the popular view, he was a Sunnī in spite of his relations with 'Alī and is therefore in a way regarded as the patron of the Sunnis in Khvāndīn, of whom those who live in Meshhed are usually buried near his tomb. Rābī’s mausoleum is one of the most interesting in the whole of Khvāndīn: it is a large octagonal building crowned by a dome but new it is in a half ruined condition.

Meshed is the centre of Muslim theological and legal studies in Persia. A number of colleges (madrasas) there are devoted to teaching these subjects. Lists of them with dates are given by Fraser (p. 456-460) who mentions 14 of the present 16 madrasas, also by Khanikoff (p. 107) who gives 13, and by Mahdī al-Alawī (p. 9-12). The latter observes that there were 20 older colleges, of which he gives 15, and a number of more modern ones. Fraser also gives brief notes on the possessions of the various madrasas and the clergy (muazzins) attached to them. Yate (p. 329-330) simply mentions six of the best known. From these lists, which supplement one another in welcome fashion, we get the names of 20 colleges. From the dates of foundation we find that the oldest of the madrasas still standing in Meshed is the Madrasa Dīdār, which was built in 823 (1420) by the Timūrid Sultan Shāh Rukh and restored by Sulaimān I. Under the same ruler was built the Pīršāla Madrasa which was completely remodelled by Sulaimān I. From the time of 'Abbās II date the two almost contemporary colleges Khārsāl Khān (1058 = 1649) and Mīrzā Dīfār (1059 = 1650). The majority of the older colleges, fewer than nine in number, date from the time of Sulaimān I, who also restored some buildings (1666-1694). As to the Kādeh, one was founded in the reign of Fath 'Ali Shāh and two in that of Naṣir al-Dīn, who also restored two that had fallen into ruins.

From the artistic point of view, the finest is the Madrasa of Mīrzā Dīfār which was built and richly endowed in 1059 (1650) by a Persian of this name who had made a fortune in India. It is generally regarded as the third finest building in Meshed, next to the Mausoleum of 'Alī al-Riḍā and the Dżwahr Shāh Mosque. In its plan, with vaulted halls and court yard with niches, and its rich decoration, it follows the style of the courts and mosques of the sacred area above described, typical of the ecclesiastical architecture of Persia (cf. above, iii. 439, 447 sq. and also Fraser, p. 460-467). Not only the Madrasa of Mīrzā Dīfār but also other richly endowed colleges, like that of Pām-Pā (both of the time of Sulaimān I) owe their origin to Persians who had made fortunes in India (cf. on the foundation of the two last named colleges: Fraser, p. 457-459; Sykes, The Glory etc., p. 267-269). The most esteemed colleges are in the Bāst, namely the three already mentioned as the oldest, Dīdār, Pārzān and Khvāndīn Khān, also Pāsāzār and 'Alī Naṣîr Mīrzā. Others, like the above mentioned Mīrzā Dīfār Madrasa and the Mustaṣṣāf Mādrāsah have doors communicating with the Şah-i Kūhān of the Haram quarter.

Students also live in the madrasas, their maintenance being provided for by pious endowments. While in Khanikoff's time (1838) there were no outstanding teachers there and the number of students was small, the reputation of the Meshed colleges went up again in the second half of the eight century so that Sykes (The Glory etc., p. 267 sq.) in 1910 puts the attendance at 1,200 students, who came from Persia, India and other Shi'a regions. The student who wishes to take a higher theological training after the nine years' course at Meshed must go to Meshed 'All (Nedjel, q.v.) and attend the lectures of the teachers there, who are the first authorities on Shi'a theology.

We have no details of the libraries of the Meshed colleges. Of the rich Fāṭimī-Khān Madrasa, Fraser only says (p. 457) that it has a valuable library. The administration of the Haram also has a large and valuable collection of books (on its location see the plan in Yate, p. 332, N°. 65 and cf. N°. 29), founded in the first half of the xvth century by Sultan Shāh Rukh. The treasures accumulated under him and his successors were for the most part lost when Meshed was sacked by
After his death their position became a miserable one, especially after the catastrophe which overwhelmed them in 1839. When in this year, during the celebration of the Muslim Kurban festival, a Jewess on medical advice placed her hand, which was suffering from an eruption, in the bowl of a freshly slain street dog, the Muhammadans took this for an insult to their religious observances. The excited mob, resenting the excuse, fell upon the Jewish quarter, plundering and murdering as they pleased and destroyed the synagoge. The outraged Jews had to adopt Islam. These Jewish converts are called Ljadjid, more fully Ljadjid al-Islam = “new-comers to Islam”, because their forced conversion is of recent date. The change of faith was only an external one; it is true that these Ljadjid to avert suspicion regularly attend the mosque, but not a few of them are said to observe their old rites in secret. The number of Judeo-Muslims in Meshhed at the present day who are small traders, physicians, etc., was put by Basset (1878) at 300 families, by Yate at 260. On the Jews of Meshhed and their persecution in 1839 cf. Trulliher, p. 373; Conolly, l. p. 350 sqq.; J. Wolf, Narrative, p. 177, 394–396; Ferrer, p. 122–123; J. J. Benjamin (see Rissi), p. 189–190; Vambéry, Wanderungen, p. 324–325; Basset, p. 230–233; Yate, p. 322.

The clerical element is strong in the Muslim population; everywhere one sees mullahs, jolnas (students) and dervishes. The town swarms with sayids (alleged descendants of Ali) among whom the Khwaja, who claim descent from Ali al-Ridha, enjoy special privileges. Meshhed is not only one of the most fanatical cities in the whole Muslim world, but also one of the most immoral in Asia. 

Prostitution, the so-called pilgrim marriage (Pers. ghaleh; cf. muta’ and iv., p. 353, 355), sanctioned by the Imami group of the Shiites, thrives here. Most pilgrims take advantage of this institute of temporary marriage (cf. Khaniukoff, p. 98; Conron, l. 164–165; Ibrahim Beg, p. 45; Yate, p. 419; Allemanii, iii. 86–87).

The people of Meshhed are described as very superstitious; see especially Basset, p. 228 sqq. and the Meshhed Stories in Conolly, l. 516–518. Many stories are told of miracles wrought in the Alid sanctuaries; see Fraser, p. 451–452; Basset, p. 426–427; Massey, p. 493–495. Yate, p. 345, 357.

The population of the town lives partly by catering for pilgrims and partly on local industries and commerce.

The industries, once very flourishing, have now declined. The famous manufacture of sword blades, introduced by a colony of workers transplanted by Timur from Damascus, has now almost entirely disappeared (cf. Trulliher, p. 375; Fraser, p. 124; Ferrer, p. 468; Conron, l. 166).

A specialty of Meshhed is the manufacture of decorated vessels (household utensils, like jugs, pots, dishes etc.) out of serpentine and dark grey soapstone (Meshhed stone), from the quarries 1½ hours south of Meshhed. This stone industry is old and the Arabic sources of the middle ages mention it as native to the district of Tis and especially to the town of Nīkān (the predecessor of Meshhed); cf. B.G.A., l. 258; ii. 313; iii. 324, 326; al-Muḥallabī in Abū l-Fālid, p. 452; Abū al-Rahmān al-Gharnāsī, in J.A., 1925, p. 203; Yāqūt, iv. 524 and cf. G. Le Strange, op. cit.
For the sixteenth century cf. Trulliher, p. 274-275; Fraser, p. 469; Ferrier, p. 124; Bellow, p. 366—367; Baker, p. 184; MacGregor, l. 291—302; Basset, p. 254; Curzon, l. 167.

The celebrated turquoise mines east of Nishāpūr (about 1 1/2 days’ journey distant; cf. Wādīzān and Le Strange, of. cit., p. 368; Fraser, p. 409-420; Ferrier, p. 106—107; Khankhoff, p. 90—92; Basset, p. 216—217; Yate, p. 399—408) at one time were of special significance in Meshhed’s trade and industry. Meshhed was the centre of the turquoise trade; for the whole output of these mines came to it and they were controlled by Meshhed merchants. The turquoise were sorted in Meshhed and put into commerce there. Now however, the finest specimens are usually sent directly abroad from the mines and only pieces of inferior quality come to Meshhed, to be worked there by the still very skilful stone cutters into ornaments and souvenirs for pilgrims. On the turquoise industry of Meshhed cf. Trulliher, p. 274; Bellow, p. 367; Goldsmid, l. 565; Baker, p. 184.

Weaving is another important industry in Meshhed. The carpets produced here were at one time of immensely greater value than those of the present day, which are produced in factory fashion. The modern shawls of Kasmir style are especially prized and known as Meshhed, as are the velvets, which in Fraser’s time were regarded as the best in Persia. On weaving in Meshhed cf. Fraser, p. 468; Ferrier, p. 124; Goldsmid, l. 365; Baker, p. 184—185; Curzon, l. 167; Ibrahim Beg, p. 47; Schweinitz, p. 27—28; Allemagne, l. 110.

Until the second half of the sixteenth century, Meshhed was one of the first emporia of Eastern Iran. At the intersection of important caravan routes, it was the entrepôt for the trade of Central Asia and especially of Afghanistan. Since however Russia has become established in Tarkistan and built the Transcaspian railway, Meshhed’s trade through has much declined. Nevertheless the town must still be described as an important centre of traffic and trade, not least on account of the numerous pilgrim routes that lead to it. Meshhed is 150 miles from the Russian railway station of Ashkhabad [q. v.], the capital of the Transcaspian area; there is a good road between the two towns.

For the housing of the numerous pilgrims and other strangers who come to Meshhed, a considerable number of caravanserais are available. In Fraser’s time (1822), there were at least 25—30 such places in use, apart from some that had been abandoned and allowed to fall into ruins (see Fraser, Narrative, p. 460). Khankhoff (p. 107—108) gives 16, four of which, intended for pilgrims only, were inside the bazaar; of these latter the oldest is the Salāt Caravansarai, built by Tāhmasp I; others date from Sulaimān I.

As to descriptions of Meshhed by Europeans we owe the first full description to Fraser (1822); Conolly (l. 260) and Burns (l. 78) both say it is thoroughly reliable. Valuable notes on the town are given by Conolly, Ferrier, Khankhoff, Eastwick, MacGregor, Basset, O’Connor, Curzon, Massy, E. Dier, and especially by C. E. Yate and Sykes, each of whom spent several years (1893—1897 and 1905—1912 resp.) in Meshhed as British Consul-General for Khurasan.

Le Strange, The Lands of the Eastern Caliphate, Cambridge 1905, p. 358-391, 431. Ibn and Meshehd are not satisfactorily distinguished; cf. above. (M. STREIC) MESHHEH 'ALI. [See NEJAF.] MESHHEH HUSAIN (Kerbela), a place of pilgrimage west of the Euphrates and about 60 miles S.S.W. of Baghdad, is on the edge of the desert (Vâkkâ, Ma'âlû, ed. Wüsstenfeld, iv. 249). It lies opposite Kassar Ibn Hitnara (al-Istakhri, B.G.A., l. 85; cf. al-Balkhi), Fawâf, ed. de Goeje, p. 287; al-Makhdûn, B.G.A., i. 121. The name Kerbelâ is probably connected with Aram-Kerbelâ (Daniel, 3, xi) and Assy. Karbalatû (a kind of headress) (G. Jacob, Türkische Bibliothek, xii. 35, note 2). It is not mentioned in the pre-Arab period. After the taking of al-Itra, Khânî B. al-Walid is said to have encamped in Kerbelâ (Vâkkâ, iv. 250). On the 10th day of the month of Muharram 61 (Oct. 10, 658) the Imam Husain b. Ali (cf. ii. P. 339) marched from Mecca to the Iraq, where he intended to enforce his claims to the caliphate, fell in the plain of Kerbelâ in the district of Nusawî (al-Tabari, iii. 2190; Vâkkâ, iv. 870; now according to Massîn: Khûmân, Khoirân, in a battle with the troops of the governor of al-Kufa and buried in Mâkâr (Vâkkâ, iv. 188-197; al-Tabari, iii. 752; E. Herzfeld, cf. above, li. p. 221). The place where the decapitated body of the Prophet's grandson was interred (on the site of the great place which was cut off and sent to Damascus to Varîd ibn, cf. van Berchem, Fäste der Moslem. Gesch., Berlin 1915, p. 298-310), called Kahr al-Mashhad, soon became a celebrated place of pilgrimage, for the Shi'is (cf. art. A'I'A). As early as 65 (684-685) we find Sulaimân b. Surâd going with his followers to Husain's grave where he spent a day and a night (al-Ta'ifîn, ed. de Goeje, ii. 545 sqq.). Ibn al-'Ather (Tarikh, ed. Tornberg, v. 184; is. 338) mentions further pilgrimages in the years 122 (739-740) and 436 (1044-1045). The priests of Mêshehd Husain at quite an early date were endowed by the pious benefactions of Umm Müsûm, mother of the Caliph al-Mahdi (al-Tabari, iii. 735). The Caliph al-Mutawakkil in 236 (851-855) destroyed the tomb and its annexes and had the ground levelled and sown; he prohibited under threat of heavy penalties visiting the holy places (al-Tabari, iii. 1407; Hamd Allah al-Mustawli', Nuzhat al-Kullûh, ed. Le Strange, p. 52). Ibn Hawâqi (ed. de Goeje, p. 166), however, mentions about 977 a.d. a large 'meshhad' with a domed chamber, entered by a door on each side, over the tomb of Husain, which in his time was already much visited by pilgrims. Dâbû b. Muhammad al-Asadi of 'Ain al-Tamm, supreme chief of a number of tribes, devastated Mêshehd al-Hârîn (Kerbela) along with other sanctuaries, for which a punitive expedition was sent against 'Ain al-Tamm in 569 (979-980) before which he fled into the desert (Ibn Miskawaih, Taghibt al-'Umam, ed. Amâdres in The Eclipse of the Abbasid Caliphate, p. 338, 414). In the same year, the Shîa Bâyâd 'Aqûd al-Dawla (cf. above, i. 143) took the two sanctuaries of Mêshehd 'Ali (al-Nadîjâf) and Mêshehd al-Husain (M. Hârî) under his special protection (Ibn al-Âthîr, viii. 518; Hamd Allah al-Mustawli', loc. cit.). Hassan b. al-Fadîl, who died in 414 (1023-1024), built a wall round the holy tomb at Mêshehd al-Husain (Ibn Taghibt al-Dawla, Nuzhat, ed. Popper, ii. 123, 141), as he also did at Mêshehd 'Ali (Ibn al-Âthîr, ix. 154). In Râbi' al-awwal 407 (Aug./Sept. 1016), a great conflagration broke out caused by the upsetting of two wax candles, which reduced the main building (al-Kubba) and the open halls (al-Arwiq) to ashes (Ibn al-Âthîr, ix. 209). When the Sâliht Sulîh Malik Shâh came to Baghâd in 479 (1086-1087) he did not neglect to visit the two Mêshehds of 'Ali and al-Hasain (Ibn al-Âthîr, x. 103). The two sanctuaries at this time were known as al-Maghâfûrân (al-Bundari al-Istakhri, Tanwîrkî, al-Sâlihtû, ed. Houtouza, in Revue des études islam., ii. 77) on the analogy of the large al-Iskâmû, al-Bužinû, al-Hirânî, al-Mirân etc. The Ikhân Ghûzân in 1303 visited Kerbelâ and gave lavish gifts to the sanctuary. He or his father Arghûtû is credited with bringing water to the district by leading a canal from the Tigris (the modern Nahâr al-Husainiyâ) (A. Noldeke, Das Heiligtum al-Husain u. Kerbelâ, Berlin 1909, p. 49). Ibn Sûriûta (ed. Defrénelle and Sanguineti, ii. 99) visited Kerbelâ in 727 (1326-1327) from al-Hilla and describes it as a small town which lies among palm groves and gets its water from the Frit. In the centre is the sacred tomb; beside it is a large madrasa and the famous hostel
(al-Sa‘idwa) in which the pilgrims are entertained. Admission to the tomb could only be obtained by permission of the gate-keeper. The pilgrims kiss the silver sarcophagus, above which hang gold and silver lamps. The doors are hung with silken curtains. The inhabitants are divided into the Awlād Rakhīk and Awlād Fāysa, whose continual feuds are detrimental to the town, although they are all Shi‘is.

About the same date, Ḥamid Allāh al-Mustawfi (cf. cit.) gives the circumference of the town as 2,400 paces; he mentions there also the tomb of Ḥurr Rīyā (b. Yazid), who was the first to fall fighting for Ḥusayn at Kerbela.

The Ša‘awīd Šah Ismā‘īl I (d. 950 = 1544) made a pilgrimage to al-Najaf and Meşhēd Ḥusayn. Sultān Sulaimān the Magnificent visited the two sanctuaries in 941 (1534-1535), repaired the canal at Meşhēd al-Ḥusayn (al-Ḥusaynīya) and transformed the fields which had been buried in sand into gardens again. The Manṣūrat al-ʿAbbād (see below), formerly called Enquça-Gī Vār, was built in 952 (1547-1548). Mansūr III in 991 (1583) ordered the Wālī of Baghdad, ʿAlī Wādsī b. Alwand, to build or more correctly restore a sanctuary over the grave of Ḥusayn. Soon after the capture of Baghdad in 1623, ʿAbbās the Great won the Meşhēds for the Persian empire. Nādir Şah visited Kerbela in 1743; while he is credited with gilding the dome in Meşhēd ʿAbbās, he is also said to have consecrated endowments intended for the priests of Kerbela.

The great prosperity of the place of pilgrimage and its large number of inhabitants is emphasised on the occasion of the pilgrimage of ʿAbbās al-Kurīm, a favourite of Nādir Şah. Rədiya Sultān Bəğum, a daughter of Şah Ḥusayn (1694-1722), presented 20,000 ṣaddās for improvements at the mosque of Ḥusayn.

The founder of the Šāzpār dynasty, Ağa Muḥammad Khatḥ, towards the end of the eighteenth century, presented the gold covering for the dome and the menāra of the sanctuary of Ḥusayn (Jacob in A. Nöldke, cf. cit. p. 65, note 4).

In April 1801, in the absence of the pilgrims who had gone to al-Najaf, 12,000 Wāhākkā under Şahīḥ Saʿūd entered Kerbela, slew over 3,000 inhabitants there and looted the houses and bazaars. In particular they carried off the gilt copper plates and other treasures of the sanctuary and destroyed the shrine. But after this catastrophe contributions poured in for the sanctuary from the whole Shi‘i world.

After a temporary occupation of Kerbela by the Persians, Nadjīd Pāša in 1843 succeeded by force of arms in enforcing the recognition of Turkish suzerainty over the town; the walls of the present old town were now for the most part destroyed. The governor Midług Pāša in 1871 began the building of government offices, which remained incomplete, and extended the adjoining market place (references for the history of Meşhēd Ḥusayn are given in A. Nöldke, cf. cit. p. 35-50).

At the present day, with over 50,000 inhabitants, Kerbela is the second largest and perhaps the richest town of the Irak. It owes its prosperity not only to the great number of pilgrims who visit the tomb of Ḥusayn, but also to the fact that it is the most important starting point for the Persian pilgrimage caravans to al-Najaf and Mecca, and through its situation on the edge of the alluvial plain it is an important “desert port” for trade with the interior of Arabia.

The old town with its tortuous streets is surrounded by modern suburbs. About half to three quarters of the citizens are Persians, the remainder Shi‘is Arab. The most important tribes among them are the Bani Sa‘ud, Salalime, al-Wustūn, al-Talāmīz and al-Nāṣirīya. The Dede family is the richest; for constructing the Nahr al-Ḥusaynīya it was rewarded with extensive estates by Sulṭān Selim.

The name Kerbela strictly speaking only applies to the eastern part of the palm gardens which surround the town in a semi-circle on its east side (Musil, The Middel East, p. 47). The town itself is called al-Meşhēd or Meşhēd al-Ḥusayn.

The sanctuary of the third Imām lies in a court yard (pāhā) 354 x 270 feet in area, which is surrounded by iwans and cells. Its walls are decorated with a continuous ornamental band which is said to contain the whole Qur‘ān written in white on a blue ground. The building itself is 156 x 138 feet in area. The rectangular main building entered by the “golden outer hall” (picture in Grothe, Geogr. Charakterbilder, pl. Lxxvii, fig. 156) is surrounded by a vaulted corridor (now called jamā‘ī; A. Nöldke, cf. cit. p. 20, 3), in which the pilgrims go round the sanctuary (jarmīd) (Wellhausen, Rel. arab. Holdentum, p. 109-112). In the middle of the central domed chamber is the shrine (pandīb) of Ḥusayn about 6 feet high and 12 long surrounded by silver mawṣūdīya work, at the foot of which stands a second smaller shrine, that of his son and companion-in-arms ʿAlī Akbar (Mas‘ūdī, Khatāb al-Tambīk, ed. de Goeje, B. G. A., viii. 303).

“The general impression made by the interior must be called fairy-like, when in the dusk — even in the daytime it is dim inside — the light of innumerable lamps and candles around the shrine, reflected a thousand and again a thousand times from the innumerable small crystal facets, produces a charming effect beyond the dreams of imagination. In the roof of the dome the light loses its strength; only here and there a few crystal surfaces gleam like the stars in the sky” (A. Nöldke, cf. cit. p. 25 sqq.).

The sanctuary is adorned on the Khiba face with magnificent and costly ornamentation. Two minarets flank the entrance. A third, the Manṣūrat al-ʿAbbād, rises before the buildings on the east side of the Ṣan‘ā; south of it the face of the buildings surrounding the court recedes about 50 feet; on this spot is a Sunnat mosque. Adjoining the Ṣan‘ā on the north side is a large medrese the courtyard of which measures about 85 feet square with a mosque of its own and several mihrābs (on the present condition of the sanctuary; cf. A. Nöldke, cf. cit. p. 5-26, on its history p. 35-50 and on its architectural history, p. 51-66).

About 600 yards N.E. of the sanctuary of Ḥusayn is the mausoleum of his half-brother ʿAbbās. On the road which runs westward out of the town is the site of the tent of Ḥusayn (Khāmisun). The building erected there (plan in Nöldke, pl. viii.; photograph in Grothe, pl. Lxxviii, fig. 145) has the plan of a tent and on both sides of the entrance there are stone copies of camel saddles.

On the desert plateau (hammānd) west of the town stretch the graves of the devout Shi‘is. North of the gardens of Kerbela lie the suburbs, gardens
and fields of al-Djârâ, N.W. those of Ktara, S. those of al-Qibâlitija (Yaḵût, iii. 768). Among
places in the vicinity, Yaḵût mentions al-ʿÂr (iii.
693) and al-Nawâší (iv. 816).
A branch line diverging north of al-Hilla con-
nects Kerbelâ with the Baghdad–Balârat railway.
Caravans roads lead to al-Hilla and Naṣāf. The
sanctuary of Ḥusain still has the reputation of
securing entrance to Paradise for those buried there,
wherefore many aged pilgrims and those in failing
health go there to die on the holy spot.

(E. HÖNIGSCHMIDT)

**MESSHED-I MİSİRİYÂN**, a ruined site in
Transcaucasia (Turkmenistan). N.W. of the
confine of the Atrak and its right bank tributary
the Sambar, or more exactly, on the road
which runs from Cat at right angles to the road
connecting Cikîqîr with the railway-station of
Ayrîl. The ruins are surrounded by a wall of brick
and a ditch and have an area of 300 acres. The
old town, situated in the steppes which are
now peopled by Turkomans, received its water
from a canal led from the Atrak about 40 miles
above Cat. Near the latter place the canal diverged
northwards from the river, crossed the Sambar by
a bridge and finally followed an embankment
6 feet high on which the bed of the canal was
1 foot broad.

The ruins of a fine mosque can still be seen,
the gateway of which, decorated with filigree,
have an inscription according to which this ǧârî
was built by ʿAllî, the Dârâly wa ʿl-Dîn Dîwâr al-Islâm
wa ʿl-Musulûmîn ǧârî Allâh; b. ʿl-A último Sülûm
Muhammad b. Sülûm Tâhirâk Bûrânî Amir al-Muʿminîn.
The Khârizmshâh Muhammad in question reigned
1200–1220. On one of the two towers (minaret?)
is written: hałîmülâk min ʿAllî
minma amara buh ʿAllî Dîwâr Ablay wa ʿl-
Aızâqbar ǧârî al-râbî, dəstakub ʿulâ, ʿulâ, ʿulâ,
All K R, . . . (I). The identity of this Ablay is
unknown but the title "lord of the ribât" which he
gives himself, confirms the fact that M.-Misriyan
was a frontier fortress (ribât). Near the east gate
stood another white mosque.

Tradition (Conolly) ascribes the destruction of
Misriyan to the "Kâmaq Tatars". The appearance
of the Kalmaks in these regions may be dated
1600.

The name Meşhed-i Misriyan (variants: Meş-
storan, Meş-Dovran, Meş-Dovran, Meştoran)
is obscure, unless Meşstoran is explained as
*Meštoran* "Nestorian Christians"; it may be
recalled that during his campaign in the Cîl
(*çül), to the east of the Caspian, Yezadagî II
persecuted the Christians (Hoffmann, p. 50;
Labouret, *Le christianisme dans l'Empire Persien*,
1904, p. 126).

The site of the ruins (to the north of Djarqân)
is given the name Dîhistan in Muslim sources,
which recalls the name of the old Scythian people
Daha who led a nomadic life on the Atrak (Grek
Aza and Azaş; cf. Tomasechek in Panly-Wissowa,
*Real-Encyl.*, 3, iv, col 1945). From the Dahan clan
of the Farmî was descended the Arabshid dynasty
which imposed its authority on the Parnithans (cf.
p. 50).

The basin of the Atrak (the ancient Zápou)
is at the extreme limit of the lands described in
the classical and Muhammadian geographers. The sources
mention several settlements in Dîhistan but in a
somewhat confusing fashion. As the analysis by
Hoffmann and by Barthold has shown, a distinction
must be made between: 1. the settlement on the
sea-shore, 2. the town of Dîhistan and 3. the ribât
Dîhistan.

1. The first of these was built on a promontory
(dokhîa) behind which ships could shelter. Mar-
quart, *Erzähler*, p. 136, reads the name concealed
in the variants in ʿIṣ̄ṭakhrī, p. 219, note b, as
*Dîhistân Bayâzîn* which he connects with the
district of Bayâzîn mentioned (in Djarqân) by
Tabarti, ii. 1330; Balâghari, p. 337 and Ibn Khur-
dâdbish, p. 35. The *notolet* al-ʿĀlam mentions a
peninsula of Dîhistân-Sur on the coast of Dîhistân.

This may be an echo of the name of the
Turkish (i) princes (also Hoffmann, p. 251)
who attacked Djarqân from the north (Ibn an-
Āthîr, iii. 33). Lastly Tabarti, ii. 1325, locates an
island of Bayâzîn 5 faraqî from Dîhistân. Barthold
identifies all these names with the cape of Ḥasan-
Kall which shelters the bay into which the Atrak
flows. [Cf. also the article *Tûkîr*, on the Din-
Alâqîn mentioned in the *Şâbîn-i-nâmâ*].
A difficulty is raised by Lezakhri (p. 219) who puts at 50 farshaks and p. 226 at 6 marbola (each of 87/4 farshaks) the distance between Ahsan Khan at the mouth of the river Dijnjakin, now Gümüşhâgay, and the cape of Dihistan in question. If we follow this double indication literally, we ought (with Hoffmann, p. 279, who reads the name “Dihistan” “Tâbâshir”) to move the cape of Dihistan considerably to the north, in the bay of Krasnowodsk, which is certainly a very important place. In this case the cape would be a different one from Buhaira = Hasan Kuli (Hoffmann, p. 278).

2. The town of Dihistan, according to the Middle Persian list of the towns of Erân, was founded by a certain Nasrâbâd, the Arzâkarid (Marquart, Erâszk, p. 75) and according to the Naqsh al-Kâmil, p. 166, by the Siyâyân Kâbâl b. Fîrât. According to Mâcadass, the town of Dihistan was called Aghân. Tabâshir locates the town of Dihistan 25 farshaks from the river of the Dijnjakin and, as we have seen, 5 farshaks from Buhaira. This latter distance is by the way less than the canal distance between Hasan Kuli and Meshhed-i Meshîyân.

3. The ruins of Meshhed-i Meshîyân (as the inscription on the mosque suggests) must correspond to the ribât of Dihistan which Mâcadass, p. 385 (cf. also p. 312, 367, 372) mentions distinct from Aghân. This ribât situated on the borders of the steppes had fine mosques and rich markets. Relying on Yahtî, l. 39, Barthold thinks that in the ninth century the ribât (not Aghân) to the east of the Dijnjakin-ribât road was the capital of the district of Dihistan.

(M. MINORSKY)

MESHÎ (originally ‘Ist), an important Ottoman poet of the time of Bayazid II. Born in Frigista in northern Albania, he came as a youth to Constantinople where he became a savāf (theological student) and distinguished himself as a calligrapher. In the end he won the favour of the grand vizier Shahâd al Paşa [q. v.] and became his devan-secretary. But his irregular life and carelessness in the performance of his duties frequently irked his patron (“Ali Paşa, called him Şehir aghchek”). He held his post, however, till the death of “Ali Paşa in 1511 in battle against the Shî rebels under Shah Kuli. Meshî wrote an elegy on his death, full of the deepest emotion.

His attempts to find a new patron failed. He had to be content with a miserable fief in Bosnia where he soon died in 1512 (1512), poor and forgotten but still quite young.

According to Ahmad Paşa [q. v.] and Negdî (d. 1514 = 1509), Meshî was regarded as the third great Ottoman poet and the greatest lyric poet before Bâkî. He is a most artistic and original figure. His output was not extensive, but of lasting influence. His Divân has not yet been printed, a fact common to nearly all important Turkish poets. In his lyric poems he is above the average of contemporary poets. In addition to the grace and delicacy of his diction, there is a certain novelty in his style. New images and pictures are introduced with great boldness, perhaps a result of his Albanian blood. The best-known of his poems, in Europe is his Ode to Spring (wehrîs) which Sir William Jones published with a Latin translation: Poesis Asiaticae commentariaiorum liber, Leipzig 1774 and has been repeatedly reprinted (by Toderni, by Wieland in the Deutsche Lieder, by J. von Hammer etc.). His Divân is also of importance linguistically, for it bears the stamp of the Rumelian dialect.

Meshî’s most original work is his Mecnevarî, Şehir-oğzis (the “Thrilling of the Town”), which is also the most original work in Turkish literature down to Meshî’s time. It is one of the subject also, as it did not have a Persian model. It introduced quite a new style of poems, which was frequently imitated. Şehir-oğzis represents the first attempt at humorous verse in Turkey, and its language is very close to the spoken speech. Here Meshî could write Turkish to his heart’s content, while in other forms he had to use the learned jargon. He laments in one passage that without Persian and Arabic there would be no room for him as a poet, even if he had come down from heaven.

Şehir-oğzis is a lurid catalogue of the beautiful “boys” of Adrianople—it is interesting to note that they are all Musalmans and became popular on account of its unadulterated speech. As a product of his activity as a secretary, we have also a collection of inşâ’î, experiments in epistolary style, not without historical interest, entitled Gâbî Sâd Berg (the hundreleaved rose). I have a manuscript of this work, which seems to be rather rare, of 901 (1583) entitled İmât-i Meshî.

(TH. MENZEL).
METAWILA. [See MUTAWALLI.]

MELWLANA HUNAKAR, a title of the head of the Mawlawi Order [see MawlAWo.]

The second word is the Turkish form of the Persian خیل‌النافور, the equivalent of mawlâ, which according to Aflâkî (Saints des Dervîches Tarihi, I. 59) was bestowed on Qâlid al-Din by his father. Şâmi in his Turkish Lexicon states that the word, besides being used for "Saltîn", "King", is applied to certain saintly personages, in such combinations as şîn hañkar or mawlî hünkâr. The underlying idea of such a title is probably that the saint has had committed to him the government of the world, if he choose to undertake it, an idea elaborated by Ibn 'Arabi (Fatihât, Mattakya, I. 262; II. 407), who regards such a saint as the true Saltîn. The title teherî is more generally recognized as that belonging to the head of the Mawlawi Order (Şâmî, loc. cit., p. 5190).

(Đ. S. MAKROJOULI)

MEZZOMORTO, an Ottoman Grand Admiral whose real name was HÜSEÎN HUSEIN PASHA.

Hâddîjî Hussein Pasha, known as Mezzomorto, i.e. "half-dead" because he was severely wounded in a naval battle, came from the Balsaric Islands, if A. de la Motraye's statement (Voyages, The Hague 1727, I. 206) that he was born in Mallorca is right. He probably spent his youth sailing with corsairs on the seas off the North African coast. He first appears as a desperate pirate in the summer of 1682 in the Barbary States. When France was preparing to deal a decisive blow at the pirates of Algiers, whose arrogance had passed all bounds, he was handed over as a hostage to the French after the bombardment of Algiers, but managed to return there, and to strike down with his own hand, in a mutiny of the mercenaries which he had stirred up, the Day of Algiers Sâla Hasan, who was ready to make peace and to fight his way to the head of the state (summer of 1683, cf. Zinkeisen, G.O.R., v. 51 sq.). Hussein Re'is in the following year concluded with Louis XIV of France a truce for a hundred years, which however was only of brief duration. His own rule over Algiers was not long. either (till 1688; cf. A. Bernard, L'Algérie, Paris 1929, p. 159). About ten years later, in Muharram 1107 (Aug. 1695), Hussein Re'is, who had already distinguished himself as commander of a galley (çasnak, kajmâd), was appointed Grand Admiral of the Ottoman fleet (kupadînî derya) in succession to 'Amâdîjasde Hussein Pasha, who was appointed governor of Adana after the taking of Chios. He owed his promotion to his skilful seamanship at the capture of Chios where he distinguished himself in the battle with the Venetian fleet (spring of 1695). In 1697 Hussein Pasha inflicted a disastrous defeat on the Venetian Captain General Alessandro Molino off the island of Lemnos, and in the following year in a naval fight on July 6 with Molino's successor, Giacomo Cornaro, near Mytilene it was doubtful whether the Crescent on the Lion of St. Mark gained the victory (cf. Zinkeisen, G.O.R., v. 183, from the account by the inquisitore Garzonì in his Istoria della Repubblica di Venezia, Venice 1705, p. 644 sqq.; 691 sqq.; 748 sqq. and 775 sqq.). Ottoman authorities and the historian Rashid (fol. 231; cf. J. v. Hammer, G.O.R., v. 635) credit the victory to the Ottomans. In 1113 Mezzomorto was dismissed from his rank and replaced by 'Abd al-Fattâh Pasha. He retired to Chios, where his adventurous life came to an end in the same year on the 13th Safar 1113 (July 20, 1704, according to Safvet, sp. cit.), on the 14th Safar 1114 (i.e. July 9, 1705) according to others. J. v. Hammer, G.O.R., vi. 766 and vii. 624, gives the date as 15th Rabî' 1113 (Aug. 20, 1701). One of these dates is probably that of his dismissal.

MI'DHANA. [See MANABA.]

MI'DHAT PASHA, Ottoman statesman, twice grand vizier.

Mi'dhat Pasha was born in Stambul in Safar 1238 (beg. Oct. 18, 1822), the son of Hüddîjî 'Ali Efendi-Zade Hüddîjî Hâfi Mehmed Emin Efendi, a native of Rusçuk. The family seems to have been professed Bektaşîyya and Mi'dhat Pasha also had a leaning towards them. His earliest youth was spent in his parents' home at Wildin, Lofoš (Bulgaria) and later in Stambul, where his father held judicial offices. In 1850 he was working in the secretariat of the grand vizier and later he filled confidential posts in various governorships (including two years in Damascos), in 1844 he came to Konya and in 1849 became second, in 1851 first secretary to the Council (месґlıис-мал). In 1854 the grand vizier Kihrîj Mehmed Pasha gave him the difficult task of pacifying the provinces of Adrianople and the Balkans and clearing them of robber bands. Here he displayed for the first time his special talents for administration, which were not unnoticed by the Porte and soon afterwards brought him the appointment of governor of the Danube districts (Wildin, Siliistra). In 1858 he spent six months travelling for study in western Europe, including Vienna, Paris, Brussels and London. In 1861 he was appointed governor (蒐集) of Niş of Phrygia with the rank of vizier, where he earned distinction by his pacification of the country, so that, when the new organization of willyets was carried out in 1864, he was given the model province, Danube-Bulgaria (Тuна Wildyêl). During his four years' governorship, he raised the province to a level rare in Turkey, although it was only under his successor that the people learned to thank him for it. He built schools and educational institutes everywhere, created funds to make advances to and support useful undertakings, built hospitals, granaries, roads (2,000 miles) and bridges (1,400) and improved communications in every way. As he required money for all these progressive undertakings, which the government could not give him and he would not raise by abuse of taxation, he raised the necessary funds by "voluntary contributions" from the people. The Bulgars, with whom for nationalist reasons he had no sympathy, suffered not a little from the enterprising spirit and unrestrained love of work of the young governor who, of unbending will and inexorable severity, was of a nature not attractive, but rather arrogant and conceited. At the same time he was quite modern in his views and had no scruples about
introducing absolute equality between Christians and Muslims in his province. He proceeded ruthlessly against aggressors and rebels, dismissed incompetent officials and brought extortionists to book. His most rigorous steps were directed against the Russian Pan-Slav intrigues, the leaders of which he ruthlessly hanged. Although in a few years he made the Danube province the richest in Turkey without it costing the state a pistare, in 1869 Midhat Paşa, who had incurred the hostility of the Russians, was deprived of his office and sent to remote Baghdad as governor and commander of the 9th Army Corps. Midhat Paşa was not dismayed, but went to work with renewed energy to develop his new governorship. He laid roads, started horse-tramways, built a technical school, founded a savings bank, instituted regular steamship traffic on the Tigris between Baghdad and several harbours on the Persian Gulf and urged the building of a "Euphrates railway". Under the pretext that he had taken part in a conspiracy against the Sultan, Midhat Paşa, who had already earned the gratitude of the Baghdad province and also won Nadjib for the Ottoman empire, was summoned to Stamboul where his enemy, the grand vizier Mahmud Nadjib Paşa, had chosen him for the office of wali of Adrianople. Instead of this, on the fall of his rival, Midhat Paşa was appointed grand vizier on Aug. 5, 1872, only to be dismissed on October 19. It is clearly shown that his real strength lay in provincial administration. All possible elements combined to bring about his fall: Sultan "Abd al-"Aziz could not endure him because he opposed his mad whims; the Old Turks regarded him as an infidel because he planned his measures regardless of dogmatic objections; he was most unpopular with the Russians because he had taken sharp measures to deal with the Slav Bulgar intrigues. Midhat Paşa retired into private life as pereus ingrata. In the grand vizierate of Fuad Pasha, he became minister of justice on March 15, 1873 and held this office still under his successor Shihwani-ziade Mehemmed Rüştü Pasha till Sept. 29, 1873. In the following October, the governorship of Salonika was given to him which he only accepted with reluctance and held for barely two months. On Feb. 17, 1874 he was again dismissed and retired once more to private life. He used the leisure thus forced upon him to work out the schemes which he later unfolded and which meant a decisive change in the orientation of the Ottoman empire. In August 1875 his old enemy Mahmud Nadjim Paşa, who had again received the imperial seals, appointed him minister of justice but by November he had handed in his resignation, which was accepted. The empire was then in a state of complete confusion, rising, famine, an empty treasury and a half mad sultan. Midhat Paşa then composed his famous memorandum of March 9, 1876, which was to have such momentous results. On May 20, 1876 he entered the cabinet of the grand vizier Mitterdim Mehemmed Rüştü Pasha as minister without portfolio. In the night of May 30, Sultan "Abd al-"Aziz was deposed and Murad V. raised to the throne of his fathers. On July 15, a proclamation issued in the name of the new sovereign used for the first time the word "constitution". Midhat Paşa was the soul of the new movement and he worked ardentely with a few kindred spirits to give Turkey a constitution. Sultan Murad V. became insane and was replaced by his brother "Abd al-Hamid; on December 18, 1876 Midhat Paşa became grand vizier for the second time, and five days later, the constitution was solemnly proclaimed. The reactionary party and a powerful camarilla never ceased its endeavours to bring about the fall of Midhat Paşa and to bring his progressive schemes to nought. Under the pretext of high treason he was dismissed on Feb. 5, 1877 and banished to Europe. He was put upon a steamer and went via Rome and Paris to England. He was only permitted to return in 1878 and then only to Crete. In November 1878 under pressure from England, he was appointed governor-general of Syria. In 1880 he was transferred to Smyrna as governor. Here "Abd al-Hamid's wrath overthrew him. In May 1881 he was arrested and brought to Stamboul. The ludicrous charge of having caused the assassination of Sultan "Abd al-"Aziz was brought against him. Midhat Paşa was condemned to death but the sentence was not carried out. He was banished for life to Taif in Arabia. After repeated attempts to poison him, he was strangled on April 10, 1883 (Radjap 29, 1301) in prison. In this tragic fashion ended the life of one of the most notable and best statesmen of Turkey, perhaps the most important administrator that the Ottoman empire has produced in modern times. Midhat Paşa had a son, 'Ali Haidar, Midhat Bey, who after his death conducted a campaign to clear his memory and wrote a very full life of his father.

Leipzig 1878, p. 52 sqq. [Gg. Dempwolff, Siwad
und Hohe Pforte, Vienna 1879, p. 237 sqq.;
Carl v. Sax, Geschichte des Macherpalastes
der Türk'en, Vienna 1908, p. 375 sqq.]. But the
western sources have mainly to be used with
cautions, as the very varying statements about
his origin, date and place of birth show.

MIDILLÜ, Turkish form for Mittleman, name
of the island of Lesbos, which in the middle
ages had already taken the name of its capital.
The island is about 650 sq. m. in area and has
two large gulfs, the Gulf of Kalloni (Kalânía)
and that of Jeros (Kelemia).

When the Muslims first became acquainted
with the island, it belonged to the Byzantine empire.
Its conquest in the reign of the emperor Alexios
Comnenos in 484 (1094) by the Emir of Smyrna,
Tsachas, fathes-in-law of the Seljûk Khârîş Arous I
in Sulamân, was only temporary. After the conquest
of Constantinople by the Latins (1204), the island
passed for a time to the Venetians. In 1335, the
emperor John Palaeologos, on the marriage of his
son with the Genoese Francesco Gattiliano, granted
the island to the latter as a fief. It belonged
to this family when Mehmed II the Conqueror
took Constantinople in 1454. The islands of the Aegean
had to pay tribute to the Turks, to which the
Gattiliano in the hope of retaining their position
readily agreed; and when the grand vizier Hânum
Paşa in 1456 anchored off Lesbos on the voyage
to Rhodes, the prince Dorino Gattiliano sent rich
gifts to the Turkish commander through the histo-
torian Ducas. After the death of Dorino, his son
and successor Domenico sent an embassy under
the same Ducas to try to gain the good graces of
the Sultan, but the Turks imposed rather harsh
conditions. In 1458 Domenico was slain by his
brother Nicolas who had escaped from Lemnos
and the latter seized the island. On the pretext
that he had given shelter to the pirates who
harassed the Asia Minor coast and had committed
other acts hostile to the Sultan, Mehmed in 1462
sent out against Lesbos. The grand vizier Mahmid
Paşa conducted the siege of Lesbos. It was then
after 27 days' bombardment and the Sultan
received the surrender of the island in person
(Aštîk Pasha Zâde, ed. Giese, Leipzig 1929,
p. 156 sqq.; Hudîdji Khalîfê, Täbişte al-Khatrî
et Esfar al-Rûhî, Constantinople 1141 [1728-1729],
fol. 62; Hammer, ii. 15, 67; Zinkeisen, ii. 226,
239 sqq.). A mosque in the citadel of Midilli
was built by Fatîh; cf. Newton, i. 117; Koldeway, p. 11.

Attempts of the Venetians under Orsato Giusti-
nani (1404) to take the island from the Turks
failed (v. Hammer, ii. 83 sqq.). An expedition against
the island in 1500 of the allied French and Venetian
flots was thwarted by the Turkish forces (v. Hammer,
ii. 327; Hudîdji Khalîfê, op. cit., fol. 104).
Since that date the island had been in undisturbed
possession of the Turks until during the Balkan
War it was handed over to the Greeks on Nov. 24,
1912 and finally conceded to them by the Peace
of London of May 30, 1913, although with certain
reservations by Turkey.

The island, the largest in the Archipelago,
belonged to the "wilayat of the Archipelago" (İzzet-i
Başr-i Eşref) and formed in it the sandjak of Midilli, with 5 kâzâs: Midilli (with the
capital, in the east of the island); Plomary (Plomary, in the south), Molowa (Molova, the an-
ocient Mothyuma, in the north); Sighri in the west of
the island; and lastly the Junda Islands (Mokosami)
east of Midilli; cf. Stamm, Dârul-Âlâm, col.
1694, 444; Caimet, La Turquie d'Aasie, i. 449-
472; cf. also: Sulaimân Pâkî, Rehîb-i Derya, i.
(Sinbül 1399), p. 55-59. — According to Bar-
deker 1914, the island has 140,000 inhabitants
of whom 7/10 were Greeks and 1/10 were Muhammadans.

Bibliography: On the island in ancient
times and most of the questions connected with
it, see the very full article by Burchner on
Lesbos in Pauly-Wissowa-Kroll, xii. (1925), col.
2107-2133.

A full description for the earlier Turkish
period is given by the Tur Piri Kems in his
Bahriye written in 1521; this section has been
translated by Maximilian Flitner in Paul Mor-
ner, Der heutige Lesbische Dialekt (Beih. zu den
Schriften der Basel-Kommission, iii.), Vienna 1905,
col. 579-584 and in my ed. of the Bahriye of Piri
Kems (Berlin and Leipzig 1926), chap. ix.: Midilli,
text p. 21-26, transl. p. 32-42.

The most important later descriptions are those
by Pococke, Description of the East, i, ii. London
1745; Newton, Travels and Discoveries in the
Levant, London 1805, i. 37 sqq.; A. Conze,
Reise auf der Insel Lesbos, Hanover 1865 and
R. Koldewey, Die antiken Bauwerke der Insel
Lesbos. In Anfängen der Kaiserlich-Deutschen
Archäologischen Institute untersucht und aufge-
nommen, Berlin 1890. This book gives details of
early explorations of the island and accurate
maps on a larger scale of sections of it.
(P. Kahle)

MIDJARA, the censer, from djanâra, "glowing coal"; the Arabic name for the con-
estellation of the Altar which lies south of
the Scorpion (fersân in Aratus, ara in Cicero,
Masullus etc.) or censer (bozatland in Polynesi,
turhulum in Gemini).

und Sternbilder, Strasbourg 1916, p. 193-
199.

MIDRÄM BANû. [See SÜHÂLMA.]

MIHNA (A.), noun derived from the root m-h-n, appearing in the Arabic verb mânâna, "to smooth", and in some Anthrope derivations, trial (e. g.
the trials to which the prophets and especially the
family of Muhammad, the 'Alîs, are exposed in
this world; cf. Goldziher, Verkömmungen, p. 212 sq.
261), inquisition. In the latter sense it is
usually applied to the Mu'tazilite inquisition and
persecution extending from 218-234 (833-848).
On the viâl form of the verb, mânâna, "to
torture", cf. especially Quatremère, Histoire des
cultes mohammedans, i, ii., p. 81, note 101.

The first Mu'tazilite inquisition was instituted
towards the end of his reign by the 'Abâsîd caliph al-Mu'tâm (q. v., 198-218 = 819-833),
who was a Mu'tazilite by conviction, especially
with regard to the creation of the Kurân (cf. the
articles AL-KURÂN and MU'TAZILITES). He sent a
letter to the governor of Baghdad, 'Isâb b. Dzhâmîn,
ordering him to cite before him the 39î's under
his jurisdiction in order to test them with regard to
their opinion on the Kurân (Talanî, iii. 1112
transl. by Patton, q. cit., p. 57-61; Kitâb
Baghdîd, p. 338 sqq.; cf. Abu l-Mahâsin, i. 636
Ee.; Fragmenta Hist. Arab., p. 465). Those who declared their opinion in conformity with that of the caliph, should cite the legal witnesses under their jurisdiction and institute a similar inquisition.

This letter was sent to the provinces. In Egypt, it was forwarded to the caliph. In Damascus, the latter, probably by his own hand, sent a copy to Asia Minor, personally determining the testing of the doctors of the town.

In a second letter he ordered Ḣāḍir b. Ibrāhim to send him seven of the leading theological authorities of Baghdād, that he might test them himself. The name of the chief champion of the orthodox view, 'Abd al-Mu'tamid b. Ḥanbal [q. v.], which was first in the list, was cancelled at the instance of the chief Ḥāḍir Ḥāmid b. Abī Duḍ'ad [q. v.], the most vigorous advocate of the miḥna under al-Ma'mūn and his successors. Among the seven who were summoned to the court was Ṣa'd ibn Ḥāmid [q. v.], the secretary of al-Wāqi'd [q. v.], and author of the Kitāb al-Tahfiz. All of them gave way to the pressure, assented to the view forced upon them and were sent back to Baghdād, where Ḥāḍir b. Ibrāhim had them repeat their confession before the theologians (Tabari, iii. 1116 sq.; Kitāb Baghdād, p. 343 ssqq.). The success of the caliph moved him to cling to the method inaugurated by him. In a third letter which is interwoven with theological arguments (Tabari, iii. 1117 sqq.; Patton, op. cit., p. 65 sqq.) he enjoined Ḥāḍir b. Ibrāhim to test all the Ḥāḍirs under his jurisdiction, who in their turn should test all witnesses and assistants in matters of law. Ḥāḍir b. Ibrāhim cited before him a number of the most notables of Baghdād (Tabari, iii. 1121 sqq.; Patton, op. cit., p. 69 ssqq.), among them Ḥāmid b. Ḥanbal. The result of the test was that some of them yielded and others remained steadfast; Ḥāmid b. Ḥanbal belonged to the group of the latter.

In a fourth letter to Ḥāḍir b. Ibrāhim (Tabari, iii. 1125 sqq.; Patton, op. cit., p. 74 sqq.), the caliph discussed the attitude of each of the doctors in connection with his character and way of life, and ordered those who had given unsatisfactory answers to be sent to his camp in Tarās. After a further examination by Ḥāḍir b. Ibrāhim two of them only remained steadfast, 'Abd al-Mu'tamid b. Ḥanbal and Muḥammad b. Nihāy. They were sent to Tarās as prisoners. On the way, the report of the caliph's death reached them. They were sent back to Baghdād; Muḥammad b. Nihāy died before he had reached the capital.

'Abd al-Mu'tamid b. Ḥanbal remained in prison. Although he was urged to make use of zajfān [q. v.] as others had done, he stuck to his attitude. Cited before al-Ma'mūn's brother and successor al-Muṭāzil (218-227 = 833-842), there originated lively debates on the nature of the Kurān and other theological subjects between him, the caliph, 'Abd al-Mu'tamid b. Abī Duḍ'ad and others, which lasted three days. No change, however, being brought about in 'Abd al-Mu'tamid's attitude, he was scourged at the order of the caliph, and afterwards, from fear of an insurrection (for 'Abd al-Mu'tamid was very popular), set free. Little more is heard of the miḥna under al-Muṭāzil (Abu Ẓ-Ẓahir, l. 649; Patton, p. 113), who had neither the interest nor the training of his predecessor in theological matters.

His son al-Wāṭik b. Ẓallāh (227-232 = 842-847) who succeeded him, returned to the methods of al-Ma'mūn (Abu ʿl-Maḥāsin, l. 683; Patton, p. 115 ssqq.), although it is said that he had restrained his father from prosecuting the miḥna any farther. He ordered the governors of the provinces to institute the notables under their jurisdiction. Little is known of the consequences of this order. 'Abd al-Mu'ṭāzil b. Ḥanbal in the meanwhile had become a favorite teacher; when, however, he heard of the renewed activity of 'Abd al-Mu'tamid b. Abī Duḍ'ad he refrained of his own will from teaching, and was beneficently left alone.

Al-Wāṭik personally intervened in the trial of one person of note, the theologian 'Abd al-Mu'tamid b. Ḥanbal. Mīlīk al-Khūṣā, who had more over taken part in a conspiracy (Well, ii. 341; Patton, p. 116 sqq.; cf. Tabari, iii. 1343 sqq.; de Goeje, Fragmenta hist. ar., p. 529 sqq.). Questioned about the Kurān, al-Khūṣā replied that he believed it to be the word of God. The trial had not proceeded much farther, when the caliph put an end to it and personally made an attempt to befriend his victim, in which he did not succeed without the assistance of some one more skilled than himself (ibid., 231 = 846).

Other persons of note who remained steadfast under al-Wāṭik were Nu'ai m b. Ḥammād and the well known Abū Yaḥyā b. Yaḥyā b. Yaḥyā b. 'Umdat, the pupil of al-Shāfi'i and editor of some of his works (Patton, p. 119). Both died in prison. As an instance of the fanaticism of 'Abd al-Mu'tamid b. Abī Duḍ'ad it is related that, when in 231 (846) it was proposed to ransom 4,600 Muslim prisoners from the Byzantines, he proposed to abandon those who would not admit the creation of the Kurān; this was actually done (Tabari, iii. 1351 sqq.; Fragmenta hist. ar., ii. 532; Abu ʿl-Maḥāsin, l. 684; Patton, p. 120). It is said that al-Wāṭik gave up his Mu'tazilite views before his death. The miḥna continued to exist during the first years of the reign of his successor al-Mutawakkil (233-247 = 847-861), but in 234 this caliph stopped its application and forbade the profession of the creation of the Kurān on pain of death.

MIHRAB, the seventh month of the Persian solar year which runs from Sept. 17 to Oct. 16 and therefore begins the autumn. Mihr is also the name of the 16th day of each month. To distinguish between the month Mihr and the day, the former is called Mihr Māh and the latter Mihr Rūz. On the 16th Mihr, the day when Mihr Māh and Mihr Rūz coincide, called Mihr-gān, one of the great feasts begins, which is also called Mihrgān and lasts till the 21st of the month. The first day of the feast is called Mihr-i ḍūmāna, the general Mihr, the last Mihr-i ḍūmilā, the special, proper Mihr. The associations of this feast relate to the beginning of autumn, partly to the sun, whose name the month indeed bears, and partly to hortoc legend: Mihrgān is the feast of Ferdūn's ascension after his victory over Dašt Ṭāh. On the rites observed at the feast see the sources mentioned below.

MIHR-I MĀH SULTĀN, daughter of Saleīm the Magnificent. Mihr-I Māh (sometimes also written Mihr-o-Māh): cf. Karakalčūlā, Nawūdt al-ʿIrār, p. 458) was the only daughter of Saleīm the Magnificent (q. v., as well as F. Bahinger, in Mittheil der Politiken, ii, Berlin 1925, p. 39—65). While still quite young she was married to the grand vizier Rustem Paşa (cf. F. Bahinger, G. O. R., 2, p. 81, n. 1) in the beginning of December 1539 (cf. J. H. Montmarte, in M. S. O., Year xxxii, Part 2, p. 37), but the marriage does not seem to have been a happy one. She used her enormous wealth — St. Gerlach in 1576 estimated her daily income at not less than 2,000 ducats (cf. Taugbuck, Frankfurt 1674, p. 266) — for many pious endowments. Among these the most important were the two mosques built by her, one in Stambol at the Adrianople gate (Edirne Kapu Qubīr; cf. Ewliya, Ṣeyhü-l-nâme, i, 165; Hāfiẓ Hüseyn, Hadīlāt al-Dawlah, i, 24 and, v. W. Brandt, G. O. R., i, 25, N. 84) near the landing-stage in Sancarli. The second was the work of the great architect Sinān (q. v.) who built it in 954 (1547) and also erected a palace for Mihr-I Māh in Sancarli near this mosque. After her husband's death (July 8, 1561) Mihr-I Māh Sultan intervened in political matters on several occasions; for example she continually urged upon her father that the conquest of Malta should be one of the main undertakings of the Holy War and offered to equip 400 galleries for this campaign at her own expense. She was still alive at the reconciliation with her brother Selim and his accession. The correct date of her death, Jan. 25, 1578 is given only by Gerlach, Tüzmeck, p. 449; the date in Karakalčūlā-āde, op. cit., p. 458, namely Elba 908 (Jan. 20—Feb. 18, 1577), is a whole year out. She was buried beside her father in his türbe (tomb-mosque) in Stambol. From her marriage with Rustem Paşa two sons and a daughter. Aḥsa Khanım was born; the latter married the grand vizier Ahmed Paşa.

Bibliography: In addition to the references cited in the text, cf. Mehmededdī Tharayī, Siyāṣī-āste ṭūbīmān, i, 33; J. v. Hammer, G. O. R., iii, 393, 425 and pass.; a description of the circumcisions festivals of her sons Ḏaḥangīr and Bāyazīd is given in the Turkish MS., N. 34, fol. 452 sqq. in the Pruss. State Library (cf. W. Persisch, Versammlung, 66). (E. Babinger)

MIHRĀB (see also MASHRQ, I, D. c.) Derivation of the niche. The mihrāb niche has been given a twofold origin by Orientalists and historians of art: from the Christian apses and the Buddhist niche. "Tout ce qui reste de la basilique dans le sanctuaire de la mosquée c'est la niche, sorte d'abside strophée" says M. v. Berchem in his Notte d'archéologie avant (J. A., vol. xxvii, 1891, p. 427). The introduction of the niche mihrāb into the mosque is no doubt rightly ascribed to the Omayyads, who were the first to build mosques of any size, under the influence of the Christian architecture of their lands. The simple Arabian and Persian village mosques have no niches even at the present day. According to tradition, Walīd i, when he visited the mosque built for him with the help of Byzantine masons in Medina, was reproached with having built the mosque in the style of Christian churches (Wüstefeld, Geschichte der Stadt Medina, Abb. G. W. Göt., i, 1861). When Omar b. ʿAbd al-ʿAzīz in his Syrian buildings had the kibla made in the form of a niche, he provoked the opposition and anger of the seals on account of the similarity which was thus produced between the mosques and churches. H. Lammons has collected a number of references, in which the mihrāb is roundly asserted to be copied from the Christians and to have become naturalised only with difficulty and not till the second century (Ziyya, p. 94, note 1 quoted by C. H. Becker, Zur Geschichte des islamischen Kultus, Islamstudien, p. 493). Perhaps the custom of placing several niches in the kibla wall of large mosques was also a gesture against the appearance of imitating the Christian custom. On the other hand it should not be forgotten that the semicircular niche was one of the most widely disseminated forms of ornament in Mediterranean architecture and its adoption was much more natural than an imitation of the much later Christian apses. The derivation of the mihrāb from the Buddhist or Hindu niche for idols has as much or as little to favour it as the other. For it was only exceptionally that the Indian idol stood in a niche, but regularly it was in a separate quadrangular cell. The separate phenomenon of the eastern polygonal mihrāb developed by the Turkish peoples, which was brought by the Seljūqs and other Turkish peoples to Asia Minor and is found in Mesopotamia from the end of the twelfth century can only be explained satisfactorily by a deliberate creation of its makers. As the heart of the house of worship, the mihrāb forms the culminating point in the equipment of the mosque, and as the carrier of the varied forms of decoration and continually changing systems of Muslim decorative art through the centuries is of considerable importance in the history of art. As a barometer of culture and art the mihrāb, if properly read, shows the prevailing tendency of art and its changes as a result of social changes. The writing of its history is a task for the future and it can only be outlined here.

History. The kibla was originally indicated not by a niche but by some mark such as a strip of paint or a flat stone marked in some way. Ac-
MIHRĀB

cording to Abū Hurairā, it was introduced into the first mosque of the Prophet in Medina. Instead of a mihrāb or prayer niche a block of stone directed the congregation; at first it was placed against the northern wall of the mosque and it was removed to the southern when Mecca became the Kiblah" (R. F. Burton, Personal Narrative of a Pilgrimage to Mecca and Medina, 1874, ii. 72). The oldest mosque of Amr in Fustāt of 21 (643) had no niche, but the kiblah, accurately calculated, was marked (Corbett, J.R.A.S., 1890, p. 757-500). The Arabian use of slabs to indicate the kiblah instead of a niche survived, alongside of the mihrāb and in spite of it, for several centuries within and without Arabia. The mosques in Arabia proper are still unknown and only a few buildings on the borders enable us to draw some conclusions. The ruins of the 8th—12th century on Bahrain (Dias, Eine orientalische Moschettten auf der Insel Bahrain, Jahrb. d. mus. Kunst, 1925, II. Halband) and the mosque of Kūsimā in Zaunābar (J.R.A.S., 1922, pl. iii.) show examples of a type later well known. Such slabs of stone or stucco were frequently built into the front pillars of the ḥaran down to the 13th century to indicate the kiblah. They are to be found in Mōṣul (Herzfeld, Arch. Reis., ii. 277, 280) and they would certainly have been found in Baghhdād for example had the old mosques survived there. They gave the caliph and his representatives the opportunity, so limited in Islam, of perpetuating their names and boasting themselves helpers of Islam by presenting such flat mihrābs. Examples are the richly ornamented stucco slab presented by the vizier al-ʿAfsān in the name of the Caliph al-Mustansir (F285 = 1092) in the mosque of Ibn Ṭalīn and its counterpart ordered by Sulṭān Lādūn (696—698 = 1296—1298) (illust. in F. Flügge, Die Ornamente der Hākim- und Āshar-Moschētten, 1914, pl. xvi.). When Muslim architecture is deliberately developed on a grand scale however we find the mihrāb in the 11th century as a semi-circular shell-shaped niche flanked by pillars, and this is the form that has survived essentially with local variations to the present day.

Mesopotamia. The oldest example here is the mihrāb of the Dāmī al-Khāṣṣā in Baghhdād. It consists of a single marble block: 5' 4 1/4 inches high and 3' 11 3/4 broad; with a semi-circular niche in it 12' deep. The columns have spiral grooves in them and Corinthian-like capitals upon which the horn-shaped shell is directly placed without an abacus. The niche under otherwise smooth base has in the central axis a perpendicular strip of ornament as its sole decoration, which is quite devoid of any structural function and is quite in the textile-like style of later Islamic decoration. Herzfeld supposes that this mihrāb was brought by water about 145 A.H. for the newly founded Baghhdād from North Syria or Diyar Bakr and suggests for this and similar mihrābs of Northern Mesopotamia, the similar niches in Christian churches as models (ibid., i. 35 sq.). The Khaṣṣātī type of mihrāb is found again in the walls of Amīd, which were built in 297 (1010) by al-Muktaḍur (M. v. Berchem, Inschriften aus Syrien etc., coll. by Fr. von Oppenhammer; De Beytie, Prome et Samarra, fig. 42; v. Oppenhammer, Ashīda, fig. 12, 293, pl. 111 sq.). The change in the pointed arch however took place here probably by the tenth century, certainly in the 12th A.H. Instead of the semicircular we find also flat niches cut in the form of a rectangle e.g. in the tomb of a holy man in Abū Hurairā (Sarrē-Ḫarrēf, Arch. Reis., i. 133 sqg.). The use of stucco, which is easily worked, hastened the development of the form of the niche in the 12th century. In the mausoleum of the Forty Faithful (al-Arbaʿīn) in Takrit there is a stucco mihrāb of 660 (1261—62) with a stepped arch in profile. The tomb of Zānāb in Sīndjār of about 657 (1258) contains a richly decorated stucco mihrāb completely covered with ornaments and scrolls (Arch. Reis., p. 308 sqg., pl. iv.). This wealth of decoration may in turn have reacted on the niches of stone, as the rich mihrāb of the great mosque of 543 (1148) and other niches in Mōṣul show (Arch. Reis., pl. xvi. xxii.). In contrast to Persia, stone remained the usual material here. We now find twisted little pillars with vase bases and vase capitals, zigzag arches and richly fluted bands with plumed fascinations (mihrāb of Badr al-Din in Mōṣul). The geometric mosaic shell, so far as it still survives, lost its naturalism by turning the sphinkeric structure into ornament. The rectangular frame of the arch of the niche completed the adaptation of an originally Hellenistic type to the oriental spirit of architecture. In the vacant field below the couch we here frequently have a mussel shell carved in relief. We find variations like the flat rectangular niches with the base of the couch protruding as in the Dāmī al-ʿAṣṣārī (Arch. Reis., pl. cxxxv.). When however we find in Pandjāb ʿAlī in Mōṣul in 686 (1287) i.e. under the Ilkhān Arḡūn, a polygonal mihrāb with stalactite canopy, we have apparently eastern, Sōmār influence, which produced the abstract geometric crystallisation of the details and general form. Their seeming structural function is taken from the flanking pillars by direct continuation around the arch. Finally we may mention the occurrence of corner mihrābs in Mesopotamia when the kiblah demanded it and it was not possible to orient the whole building properly. Such examples were confined to sepulchral domes (Masāḥhad Imām ʿAwū al-Din in Mōṣul; cf. Herzfeld, Arch. Reis., pl. cxxxv.).

Syria. The Mosque of the Omayyads in Damascus has twelve mihrābs in all (cf. the plan by A. Dickie, supplemented by C. Watzinger and K. Wulzinger, Damascus, Die islamische Stadt). If systematically studied, they would probably give a connective of the development of the mihrāb in Syria. Only the principal mihrāb appears, at least in its architectonic development, if not in its embellishment to go back to the time of the foundation of the mosque. The other niches were put up mainly in the 10th century and later (F. A., 1896, ser. vii., p. 185). The two favourite styles of decorating the walls in use among Byzantine workmen under Āl-Walīd were ṣajin black and glass mosaic. They must have been used almost exclusively for the early mosques along with carved moldings. The description by Ibn Ḫīṣām, who visited the mosque in 580 (1184) i.e. not till after the first great fire of 461 (1069), gives us an idea of the mihrāb as it then was, probably still predominantly Omayyad. The mihrāb wall was covered with marble slabs; the arch of the niche had inscriptions in gilt letters on a blue ground, probably in mosaic, and had a quadrangular frame. The wedges between arch and frame were decorated with the famous "vineyard of Walīd," as we may safely assume, in mosaic. The vaulting of the niche was probably adorned in the same way. The frame
of the mihrāb was crowned by a miniature arceding of marble, a motive which with others was taken to Spain (see below) and above this the wall was adorned with views of celebrated towns and trees in mosaic, the Kalâbî in the centre. Remains of these mosaics still survive and the mosaics discovered a few years ago in the mosque by the French give an idea of the splendour of their colouring. The mihrāb destroyed in the fire of 1293 had a miniature arceding (Illustr. in Saladin, Manuel, fig. 35); it had also an arch encircling it above, which also suggests an Omâyâd origin. (According to Mârquis, La mosquée d’el-Wal’d à Damas et son influence sur l’architecture musulmane d’Occident, R.A.A., L., where the dependence of the mosque of Cordova on that of Damascus is discussed, in Damascus an arch was originally horseshoe-shaped — and as in the rebuilding — arranged in two stories as we see from old descriptions.) Of the mihrāb of the Djiânî al-Abâzî we know that it was covered with marbles in 583 (1187) by order of Saladin. It has a wide niche formed of segments, with a pointed arch. The two sets of pillars with acanthus capitals are earlier than Saladin (Saladin, op. cit., fig. 28). Le Bon mentions two peculiar mihrāb niches in the suspension of the mosque (La civilisation arabe, p. 28, and fig. 68). Under the Ayyûbids the use of interlacing patterns in stone was popular in Northern Syrian architecture. They are sometimes rectilinear, sometimes rounded interlacings of textile origin which were used on the fronts of doors and prayer niches either in profile or as bands of stone in alternating colours. The decoration of the ribas thus received a remarkable stimulus. The prayer niches of the Madrasa al-Sulṭâniya and the Dîmârî and Madrasa al-Firdâwa of 633 (1235), both in Aleppo, and the mihrāb restored by Baibars of the Kubbât el-Sihâle in Jerusalem, show (picture in Creswell, The Works of Sultan Baibars, B.I.F.A.O., pl. xxviii., pl. 28, 29). Another peculiarity of the Syrian mihrâb is the occasionally found adornment of the vaulting of the niche with — it is true very modest — views of buildings and trees in opus sectile, as an example of which we may take the mihrâb of the great mosque of Tripoli founded in 693 (1294)(pict. in M.F.P.A.O., vol. xxv, 1909, pl. 5). The later Syrian mihrâb continued the traditional enunciating with different coloured marbles to which Turkish influence added the stalactite cochin.

**Egypt**. The principal mihrâb of the oldest mosque that has survived in Cairo, the mosque of Ahmad b. Tulfîn, is thought to be the original one in its general structure. The mosaic frieze with inscription at the level of the capitals and the marble covering below belong either to the restoration by Kâlîbîn or more probably to that of Lâmi, Thus a type was created in Cairo in the middle of the third century which is characterized by the double stepping of the niche between the two pillars on each side, in this case taken from old Christian buildings and by the stilted pointed arch and rectangular frame, this form became the Egyptian model. In place of the Mesopotamian cochin, the top of the niche is smooth and probably, as in Kairâân, pointed. The narrow top continued through the Fatimid period while the double recess of the niche beneath the pillars gives it later a more intricate character. A stucco mihrâb Cairene mihrâb is characterized by a stucco mihrâb.

**Maghrib**. The history of the mihrâb in the
western lands of Islam begin with the prayer niche in the great mosque of Kairuân. It was not the direct model for the later mihrāb — this was reserved for the portal of the library of this mosque — but with its wide semi-circular niche and the slightly rounded but still pointed arch it forms the transition to the western form of mihrāb. The pillars of mottled red and yellow stone rest on late antique bases and support pseudo-Byzantine porphyry capitals the abacuses of which are decorated with Kufic inscriptions. The wall of the niche is covered with marble slabs, some perforated, some carved in relief, the frames of which also bear inscriptions. Behind is a recess. The vaulting of the niche still shows traces of having been painted with vine tendrils arranged in circular patterns, which remind one of Mahāta (pls. in G. Marçais, Corpus et plagio de la Grande Mosquée de Kairouan, 1925, pl. viii.). The frieze separating the recess and the vaulting of the niche, and the surrounding walls are covered with the famous lustre tiles made, some in Baghādād and some by a Baghādād artist in Tunis, and presented in 281 (894) by İbrahim b. Aghlab. This remarkable mihrāb of the early period, when Islam was still in search of a style, thus combines all that the empire could produce in decoration, sculpture, painting, both richly brightened by gold and mosaic tiles. The fully developed western style is found a century later in the mihrāb of the Mosque in Cordoba. This mihrāb, built by Abd al-Malik (about 970), consists of an isolated hexagonal space 12 feet broad and 23 to 26 feet high. One side is formed by the wall containing the door. The floor and walls are covered with rectangular pieces of white marble, above are two friezes of inscriptions and the cornice, on which a richly carved niche wall with clover leaf arch is covered by a single piece of marble in the shape of a semicircle. In the inscription on the outer wall the artist is mentioned: "the work of Badr ibn Al-Kāhiyan [Kalijān]." The historically important part here is the entrance wall to this chamber, which consists of a horseshoe-arch gateway with rectangular frames and miniature arching at the top. This form of wall, which now becomes typical for mihrābs and portal walls in the western lands of the Maghārib and shows its own course of development, has been traced to the portal wall of the library of the great mosque in Kairuân as the earliest model, or both go back to a common Syrian original (cf. Marçais, Manuel, 1. 264 sqq.). In Cordoba we meet with a special shape of the mihrāb recess, the origin of which is doubtless different from that of the niche, and go back to an original with special functions connected with the cult of relics and the dead. According to tradition, a relic of the Prophet was actually preserved in this space, and the believers used to pay reverence to it in a sevenfold circumambulation. A quite singular, similar, isolated mihrāb is found in the medina in Kharṣūrī, Khaṣṣān (cf. Marçais and below Persia). Whether here we have the influence of the precedings of the Indian cult of relics cannot be settled. The circumambulation of altars, tombs of saints, or other sacred objects was of course a widespread custom in northern lands also). Horseshoe-arches, multiple rectangular border and miniature arcades are the typical elements of the horseshoe-canonical mihrāb wall. The wedge-shaped stones of the horseshoe arch are not serrated in complicated fashion, as in Egypt and Syria, but usually alternate in colour and are all smooth, as in Cordoba, or alternately smooth and carved in relief. In Cordoba the spandrels are still filled with palm-branches and arabesque-like tendrils in relief and the two borders decorated with Kufic inscriptions (cf. R. Amador de los Ríos, Inscripciones arabes de Córdoba, Madrid 1894). The niches of the miniature arcading with clover-leaf arches are covered with mosaic (pl. in Kühnel, Meinrichte Kunst, K. d. O., pl. 13, 14). The shape of the pentagonal mihrāb niche in the great mosque of Tunisia of about 1135 A.D. is similarly formed (pl. in Kühnel, op. cit., pl. 24). But we already find here in the spandrels the isolated rosettes which first appear on the mihrāb of the Aljīfera in Saragossa of the second half of the eleventh century (pl. in Marçais, Manuel, fig. 213). The mihrāb wall of the Almoravid mosque in Timmâ, the Atlas (1153 A.D. shows, instead of the tendrils, a worse pattern such as is often found on carpets (pl. in Marçais, op. cit., fig. 216); and in place of the miniature arcading we have round arched windows alternating with flat niches. A divergence from the canonical type is found in the mihrāb of the mosque in Tossur built in 1190 (1194) in the oasis of Ḏirīd (pl. in Marçais, op. cit., fig. 218). It has a double arch and profuse ornamentation, on the wall of the niche also. Marçais explains the divergence by saying that the mosque was built by a conqueror of Almoravid descent in the Almoravid period by workmen from Andalus. The niche bears the stamp of hurried improvisation. The mihrāb here reproduced, in the Sīdī Otha mosque in the Sībān oasis at Biskra which is considered the oldest mosque in Algeria, may be regarded as an example more in the popular tradition, therefore particularly interesting. The date is unknown. The decoration belongs to the field of Kleinarchitektur. Under the dynasties which succeeded the Almohads from the XIII.—XV. centuries the Cordoba type remains the model in principle. Only the proportions are more slender, the horseshoe arches more elegant and, instead of the miniature arcading, windows with coloured glass in a stucco framework have become naturalized. The isolated mihrāb chambers have given place to semicircular or polygonal niches. Examples are the mihrāb of the mosques in Taza, Sīdī b. Ḥasan and al-ʿUbayd ibn in and near Tlemcūn, in Fez and the Hamah of Granada, the latter covered with mosaic (pl. in Marçais, op. cit., fig. 336—338 and P. Ricard, pl. x, xi). In Tunis of the XV.—XVIII. century also the mihrāb with flat round niche and horseshoe arch of alternately coloured and ornamented stones and rectangular frames continued to predominate. The pilasters are regularly covered with marble or tile, while the niche vaultings are fluted like a mullion shaft. Persia, Turkestan, Afghanistan. The two earlier prayer niches (of Persia, so far as is known, are in the mosque at Nāīmān, east of Iṣfahān, of the 13.—14. century A.D. (Völtel and Flury in Syria, 1921, pl. xxx. and S. Flury in Syria, 1930) and in the Zāwī at Ḏirīd, Kharṣūrī, of the 15th century (Diez, Chdaughterische Bändermäler, pl. 39). In spite of these different ornamentations, these

Fig. 120. Persian frieze with Insira decoration.
two stucco mihrabs are very similar. Both are rectangular niches flanked by inset τ/4 pillars with leaf capitals, with pointed arches diagonally set and thickly decorated with tendrils in a rectangular frame. The back wall under the porch presents a repetition of the architecture of the niche so that we have a niche in a niche. In Persia, therefore, if Flury is right in his early dating, perhaps as early as the third (ninth) century, a rich double framed style of mihrab had been developed, which lasted down to the sixteenth century, as is shown by the next surviving monument of this group, the stucco mihrab in the Markaz-i Djam'an in Isfahan of 710 (1310) (Dietz, K. v. d. Volker, p. 4 and ed., p. 85). In the interval, however, the decoration, at first purely floral, had become mainly epi-

cratic, a transition that can be followed up by step from the sixteenth century. The stucco mihrab of the mosque of Djiyli-i-i Ast in Cairo of 458 (1065) is also of importance for this sequence of development (pict. in Flury, Ornamente etc., pl. xvii).

But in Persia a second type developed alongside of the stucco mihrab, the mihrab decorated with lustre faience, with which this part of the decoration of the mosque and with its Persian faience reached its zenith. The lustre mihrab of Kāshān of 624 (1226) in Berlin (pict. in Springer's Kunstgeschichte, vi. 438) and a similar niche from Yezdābād in the possession of the firm of Kelsak (Cat. of the Exhib. of Persian Art, London 1931) may be quoted as examples. These mihrabs show the same double niches as their stucco counterparts but are flatter, more framework-like niches. In place of the rectangular arch, the pediment is a rectilinear gable, a change in shape probably mainly due to the material. The colours are predominantly a light blue ground with letters in dark blue relief and decorations in brown lustre. By the combined effect of the colours and the profuse ornamentation, these mihrabs have a truly fairy-like suggestion and reach the highest ideal of Islamic decorative art. The mihrab assumed a new form in the Timurid period. Instead of the semi-circular or flat rectangular niche we now find under Turkish influence the polygonal — pentagon constructed out of an octagon — of larger dimensions than previously, broader and deeper. The ornamentation proceeds parallel with the usual Timurid wall decoration. In the same way the pilasters are covered with polygonal tiles and the walls above usually with flat miniature arcading, which pass into blind muqarnas painted or covered with tiles. Finally the frames and the scrolls of inscription filling them are frequently inlaid with that finely executed tile-mosaic which forms the glory of Timurid architectural ornament. As examples may be mentioned the mihrabs in the prayer chambers of the madrasa in Kshgīdar (Dietz, Chor. Kaukenmüller, pl. 32, 1), the mihrab of Xizāret Ahī Wāli near Herāt (Niedermayer-Dietz, Afghanis-

tan, fig. 174), the splendid prayer niche in the mosque of Zāvār-Zāde in Māhbad (Dietz, K. v. d. Volker, p. 146 and 161) all of the fourteenth century (1381-87). The mihrab in the splendid mosque in Herāt, now destroyed, must have been similar to that in Māhbad, here reproduced, having been founded by the same princes and probably built by the same architect (cf. above iii. p. 387v). In the Safawid period, we find alongside of mihrabs with mosaic and muqarnas also painted niches, which show intertwining tendrils standing out in white from a brick red ground. Mihrabs like this are to be seen in the ruins of the Masjīd outside tābār-e Iranān and in Rūdāb, Khamāsān (fig. Dietz, Chor. Kaukenmüller, pl. 22, 2). They seem to have been widely disseminated. It may be mentioned in conclusion that in place of a prayer niche in the Kshgīdar madrasa in Kshgīdar there is a rectangular windowless chamber, accessible by a doorway through the inner. The similarity with the mihrab chambers frequently found in the Maghrib is remarkable and is discussed under Spain in India. No mosques earlier than the eleventh century have survived in India. In the mosques of the ninth—twelfth centuries the prayer niches are built in Indian fashion, that is to say flanked by decorated Indian pillars and adorned with Indian ornamentation. The gable-shaped panels over the niches are particularly ornamental. The wall of the niche is usually adorned in relief with a lotus rosette and a pendant vase out of which grow tendrils. Numerous niches of this kind are to be found in mosques of Gudjarat and Ahmadābād of the eleventh—twelfth centuries. An Indian peculiarity is the placing of three to five, sometimes even seven mihrabs in the kibla wall in keeping with the architectural units of the main building, each marked by a dome (Djamāl Masjīd in Bānūs, and Champaneri, Gudjarat etc.). There are also masjīds with mihrab chambers, which we can assume with Haveli to be adaptations of the former cells for idols (Dībhā, Gudjarat, Khana Masjīd and Ahmadābād). It is therefore not impossible that isolated mihrab chambers outside of India, as in Kshgīdar, Persia, or even in the Maghrib, should be traced to Indian influence, although this feature is not found in the earliest mosques in Adjar and Delhi. In Gudjarat however these chambers might have been used as mihrabs in the oldest mosques and provinces with a sea coast and international trade may have had influence abroad (cf. Arc. Saracy of India, Western India, vol. vi, 1915, Gudjarat, Ahmadābād). When Persian influence began to be felt under the Mughul emperors, the Indian elements gradually disappeared from the mihrabs and their place was taken by the polygonal niche in the wall incised with coloured marble. Under the Gāzīkhān, Indian detail still survived. The arches of the mihrab of the great mosque in Fāṭīpūr Sīkri, for example, are edged with a lacework of carved palmleaf friezes; the material is stone but the inlay work imitates the Persian tiled mihrab (pict. in V. A. Smith, A History of Fine Art in India and Asia, K. v. d. Volker, p. 239 and p. 141). In the court mosques of Agra and Delhi we find a dazzling white marble mihrab with coloured intarsia of flowers. The most splendid mihrab in India and indeed in all the lands of Islam is the niche of the Friday mosque in Bābāpur, the former capital of the Adil-Shāhs in the Dekkan. The capital of the Adil-Shāhs in the Dekkan. The capital of the Adil-Shāhs in the Dekkan. Framed by a gigantic arch resting on double pillars, the pentagonal niche in the recess constructed out of an octagon goes deep into the wall on whose surfaces the motif of the niche is three times repeated. The central of the three niche areas is mysteriously marked by a gilt eight-pointed star as the real kibla. In gigantic letters of gold the two sacred names Allah and Muhammad in the quadrants of the arch impress themselves on the hearts of the worshipper, and chime in
afresh in the drumshaped flanking pillars, which in Byzantine decoration are frequently used as conventional ornament but are here of structural importance. Monuments such as domes crown the structure and their principal motive is again a niche in the centre. This imposing decoration is carried out in shallow relief and is painted with red, blue and black colours heightened with gold. In the rectangular niches on both sides and in the arches are inscriptions on bands and in medallions of which we give Consens translation of one because it sums up Muslim philosophy in a nutshell:

"Place no trust in life: it is but brief"

"There is no rest in this transitory world"

"The world is very pleasing to the senses"

"Life is the best of all gifts but it is not lasting"

"Malik Ya'qub, a servant of the mosque and the slave of Sultan Muhammad, completed the mosque".

This gilding and ornamental work was done according to the Sultan Muhammed 'XIII Shah, 1043' (1636 a.d.).

Asia Minor, Armenia and Turkey. The mihrab took a development quite of its own among the Seljuk Turks. Instead of the descendant of the high, Hellenistic round niche, we find here a prayer niche which rather resembles a heath and is probably to be explained as an adaptation of the prayer carpet to this form of building. The appearance of these niches, which are thus of no structural significance, is however made up for by their stereometrically crystallised cone-shaped vaulting formed of cells. The Turkish art of the Seljuk brought as its dowry to the art of the Muslim world the Mamluk, the suggestion of which, it turn owed to Buddhist art, for the Seljuks came from Central Asia where Buddhist art had long prevailed. During the short period of Seljuk architecture in Asia Minor, the 11th century, the form of the niche remained unaltered. They are low rectangular shallow niches with pillars built in without bases, which bear rhomboidal crystal bodies as capitals and come to a point with the conical cells of the vaulting. The spandrels and frames are inlaid with the usual Seljuk white, blue and black tile mosaic (pict. in Lütvrot, Sarre, Springer-Kühnel and Dids, p. 63, et al.).

The most important change undergone by this early Turkish mihrab in Ottoman architecture was the raising of the supporting niche to its full height. The niche assumed polygonal form, i.e., it has three or five faces constructed out of the octagon, such as we find in India and Persia from the 14th century; it was however raised higher and looks more slender and regularly ends in a mugharnat like a cone. The decoration consists mainly of marble and Turkish tile. A gold-plated tile or frieze formed the usual frame work for the whole. The combination of Byzantine and early Turkish elements in the hard, fast and a certain rationalism in execution give these mihrabs that cold appearance which is peculiar to Ottoman art.

Worthy of mention is the splendid mihrab of the Ulû Dârî in Wâdi in the Persian style with mosaics of green brick terracotta reliefs and inscriptions; a niche with a mugharnat (Seljuk—11th century, pict. in Bachmann, Kirchen und Moscheen in Armenien, pl. 63).

**Bibliography**: The references given under

**MINĀRÉ**, the name given by Muslim writers to the **INDUS** (Samkhit Sindhu), called by the Greeks Σελήν and *θέσπος* by the Romans *Sidus and Indus*, and by early Muslim writers *Abi Sind* (the Water of Sind). The name is more particularly applied to the lower reaches of the river, after it enters Sind. Flury, writes of "Indus, indus Indus appellatissimum".

The Indus rises in 34° N. and 81° E., receives the Kâbîl river almost opposite to Atak, and the Panjnad, the accumulated waters of the five rivers of the Pandjâb, just above Mathânak. Near Kâłmor, in 28° 26' N. and 69° 47' E., the river enters Sind, and below Bakkar is locally known as Dory, the "Sea". It falls into the Arabian Sea in 24° 58' N. and 64° 30' E. Its drainage basin is estimated at 372,700 square miles and its length at a little over 1,800 miles.

The courses of the Indus and its tributaries have undergone, even in historical times, extensive changes of which it is impossible to give details in this article, and which have misled historians who have disregarded them. They have been minutely and elaborately described in *J. a. S. B.*, vol. lxxii. (1892) by the late Major H. G. Ruxton, who has illustrated his scholarly monograph by a series of admirable maps.

**MIHRGÂN. [See MIHR.]**

**MIHRĪ KHAṬūN** (originally Mihr-i Mâh), an important Turkish poetess of the end of the 17th and beginning of the 18th centuries. She belonged to Amanâ, the producing a number of poets, and spent her whole life there. She was one of the family of Pir Ýlâg. Her father was a *šâh* and wrote poetry under the makhâkî of Belâbî. She inherited from him poetic gifts and also
received from him the poetical and theological training ascribed to her by Ewliya.

Not much is known of her life. This is in part to be explained by the reticence of the East regarding women. That in the East boys rather than girls are sung of in love songs is due not so much to a preponderancy of paederasty as to a disinclination to talk of women at all. She died in 912 (1506). Her tomb in Amasa is a place of pilgrimage. She belonged to the literary circle of prince Amad, the second son of Sultan Bayazid, who was governor of Amasa in 886-918 (1481-1512). Of a circumcission festival in the konak of the prince in 911 (1505), it is recorded that Mihrî was the chief of the ladies present.

In spite of the love affairs credited to her and sung of her (with Iskender, son of Sinân Paîsha, with Mu'âliyâzâde [born 860 = 1456] and others), the Turkish biographers emphasize besides her beauty her virgin life, in spite of the glowing fervour with which she described her nights of love. Her nature was evidently not quite clearly understood by the rest of the Orient. Contrary to the Oriental custom, Mihrî remained unmarried in spite of many wooers. It is not improbable that the experiences described by her are not quite inventions but evidence of her passionate nature which drove her to unhallowed love. Mihrî's great merit is that she did not suppress her femininity, so that in her poems she reveals a truly womanly soul. In this respect, she is the most personal among Turkish poetesses.

As a woman she found it doubly difficult, in view of the restrictions on her sex at the time, to win a place as a poet, as the study of the Persian poets was absolutely necessary for this. The energy with which she managed to achieve this is remarkable. Her chief model was Nefîzi (d. 914 = 1509), the most important poet of the period, with whom she tried to compete. Most of her pieces are written in Nefîzi's manner. She is not very original, but very few Turkish poets are. In language and in images she is conventional. But her freshness, directness and passionate feeling, in which no other poetess equals her, are remarkable. Her eloquence and brilliant style were proverbial.

She left a Divan (edition in preparation by Martinozzi) and several treatises in rhyme. A number of her poems have been made accessible to us by Smirnow. According to Ewliya's statement (in MSS. not in the printed text), she also composed rivâdas on Ñafî's and Ñâfî's.

MIKLÎ, the archangel Michael [cf. MAŁÁK], whose name occurs once in the Qur'ân, viz. in aţâra ii. 92: "Whoever is an enemy to Allah, or his angels, or his apostles, or to Gabriel, or to Michael, verily Allah is an enemy to the unbelievers." In explanation of this verse two stories are told. According to the first, the Jews, wishing to test the veracity of the mission of Muhammad, asked him several questions, on all of which he gave the true answer. Finally they asked him who transmitted the revelations to him. When he answered, Gabriel, the Jews declared that this angel was their enemy and the angel of destruction and penury, in opposition to Michael whom they said should be their protector and the angel of fertility and salvation (Tabari, Tafsir, i. 324-325).—According to the second story, 'Umar once entered the synagogue (mîdâsâ) of Madina and asked the Jews questions concerning Gabriel. They gave of that angel as well as of Michael an account similar to the one mentioned above, whereupon 'Umar asked: What is the position of those two angels with Allah? They replied: Gabriel is to His right and Michael to His left hand, and there is enmity between the two. Whereupon 'Umar answered: If there have that position with Allah, there can be no enmity between them. But you are unbelievers more than asses are, and whoever is an enemy to one of the two is an enemy to Allah. Thereupon 'Umar went to meet Muhammad, who received him with the words: Gabriel has anticipated you to the revelation of: 'Whoever is an enemy' etc. (aţâra ii. 92; Tabari, Tafsir, i. 327; Zamanî 'Alî, p. 92; Baizâvi ad aţâra ii. 97).

We do not know of any Jewish traditions which ascribe to Gabriel a hostile attitude towards the Jews.

For the statements regarding Michael as communicated above, there is sufficient literary evidence. In Daniel xii. 1 Michael is called the great prince, the protector of the people of Israel; cf. Targum Cantis, v. 11: "Michael, the lord of Israel;" Daniel x. 13, 21 where Michael is said to have protected the Jews against the kings of Persia and Greece; further in Ezek xx. 5 where he is called the protector of the best part of mankind; Testamentum Livii, xv. 6: Test. Dam., vi. 2.

In Vida Adae et Evas, chap. xii. 499, it is Michael who ordains Satan and the other angels to worship Adam. Although the story is mentioned several times in the Korân [cf. ma'lâ], there is no trace in Muslim literature of the role ascribed to Michael in Vida Adae et Evas; the only mention of Michael in the Muslim legend is that he and Gabriel were the first to worship Adam, in opposition to Iblîs who refused to do so (al-Kisâ', p. 27).

Neither does Muslim literature seem to have preserved other features ascribed to Michael in Jewish Apocrypha (mediator between God and mankind, 1. Enoch xi. 97; Test. Dam., vi. 2; 3. Baruch, xii. 2); or in the New Testament (Ep. Jude, vs. 9: Michael disputing with the devil about the body of Moses; Revelation xii. 7): Michael and his angels
fighting against the dragon and the final discomfiture of Michael as the protector of mankind (the Jews, the Christians) may be found in the tradition according to which Michael has never laughed since the creation of Hell (Abûmad al-Ḥanbal, iii. 224). Further, however, Michael is rarely mentioned in Kūškū (Bukhārī, Buhār al-Āthār, b. 7, where he, together with Mīlīk, the guardian of Hell, and Gabriel, appears to Muhammad in a dream; Naṣiḥ, Ṣafīnāt, b. 37 where Michael invites Gabriel to urge Muhammad to recite the Kūškū, according to seven ahrāf).

Al-Yaḥyā mentions a story of which we have no counterpart in Jewish or Christian literature either, which is not amazing, the story bearing an unspoken Shī'ite tendency. One day Allāh announced to Gabriel and Michael that one of them must die. Neither however was willing to sacrifice himself in behalf of his partner, whereupon Allāh said to them: Take 'Ali as an example, who was willing to give his life on behalf of Muḥammad (the night before the Khāja; Yaḥyā, ii. 39).

Michael is further mentioned by name as one of the angels who opened the breast of Muḥammad before his night journey (Ṭabarî, ed. de Goeje, i. 1157—59; Illa al-Āthār, ed. Törmö, ii. 17, 31), and as one of those who came to the aid of the Muslims in the battle of Badr (Ibn Sād, ii, 91, 92).

In the text of the Kūškū as well as in a verse cited by Ṭabarî (ed. de Goeje, i. 329), the form of the name is Mišāl as if it were a mif'āl form from wukhla (Horovitz). A direct reminiscence of the Greek, probably also of the Hebrew and Aramaic, forms of the name is to be found in the tradition preserved by al-Kisā'ī (p. 12), which calls Mišāl the attendant of the second heaven, in contradistinction to Mišāl, who is the guardian of the sea in the seventh heaven (p. 15). Other forms of the name are Mišāl, Mišāl, Mišāl, Mišāl and Mišāl. It is hardly necessary to say that in the magical use of the names of the archangels that of Mišāl is on the same level as that of his companions (e.g. Zwemer, The Influence of Animism on Islam, p. 193, 197).

MIŠĀL (mif'āl-form from wukhla), plural wukhal, appointed or exact time. In this sense the term occurs several times in the Kūškū (ṣūra ii. 189, 145, 139, 154; xxvi. 37; xxxv. 40; xlv.- 50; lxix.- 17). In Ṣafīnāt and Ǧāfi the term is applied to the times of prayer and to the place where those who enter the haram are bound to put on the ihram. For the latter meaning of the term cf. Ǧūram, l.

Although some general indications for the times at which some palats are to be performed occur in the Kūškū (cf. ṣūra ii. 239; xi. 116; xxvii. 30; xxxv. 29), it may be considered above doubt that during Muḥammad's lifetime neither the number of the daily palats nor their exact times had been fixed and that this happened in the first decades after his death.

A reminiscence of that period of uncertainty is preserved in those traditions which apply a deviating nomenclature to some of the palats. The palāt al-ḥadrī, e.g. is called al-adhrī al-nabī; the palāt al-maḡribī, 'ṣībih; the palāt al-maṭālah, 'ṣīmah; the palāt al-ḥṣīfī, 'ṣīmīth (Bukhārī, Muwāṣṣṭ, bābi, b. 13, 19). In other traditions the term al-ṣūma as applied to the palāt al-ḥṣīfī is ascribed to the Beduins and prohibited (Muslim, Muwāṣṣīt, trad. 228, 229; Abū Dāwūd, Muwāṣṣīt, bābi, b. 78; Abūmad al-Ḥanbal, Muwāṣṣīt, ii. 10 etc.); cf. on the other hand Bukhārī, Muwāṣṣīt, bābi, b. 20; Muslim, Muwāṣṣīt, trad. 129 etc., where the term 'ṣūma is used without censure.

From some traditions so much may be gathered, that the — or at least some of the — Ummiyyah showed a predilection for postponing the times of the palāt (Bukhārī, Muwāṣṣīt, b. 7; Muslim, Muwāṣṣīt, trad. 166, 167; al-Naṣr, ʿImām, b. 18; Zaid b. Abī Majādī, Al-ṣī⩽, N. 113).

In opposition to this a palāt in due time is declared the best of works (Bukhārī, Zāhīr, b. 1; Muwāṣṣīt, b. 5; Muslim, ʿImām, trad. 138, 139; Tirmidhi, ʿṢalāh, b. 133; Barm, b. 2). In other traditions this is said of a palāt at its earliest time (Tirmidhi, ʿṢalāh, b. 13).

This early state of things is reflected in several respects in a tradition according to which 'Umar b. Abī al-ʿĀṣim once postponed one of the palats and was rebuked for this by Urra b. al-Sūaybī, who related to him that al-Mughirah b. Shu'ba had once been rebuked for the same reason by Abī Māʾūn al-Anṣārī, on account of the fact that Gabriel himself had descended five times in order to perform the five palats at their exact times in the presence of Muḥammad. Thereupon ʿUmar admonished 'Urra to be careful in his statements (Bukhārī, Muwāṣṣīt, b. 1; Muslim, Muwāṣṣīt, trad. 166, 167; al-Naṣr, Muwāṣṣīt, b. 10).

Some early groups of traditions affect to reproduce reminiscences of the practice in Madina in Muhammad's time.

a. The palāt al-ḥadrī was performed at noon, when the sun was beginning to decline (Bukhārī, Muwāṣṣīt, b. 51).

b. the palāt al-maḡribī when the sun was setting, into ʿAbū's room, no shadows being yet cast there (Bukhārī, Muwāṣṣīt, b. 13; Muslim, Muwāṣṣīt, trad. 168). After this palāt people had still time to visit the remotest parts of the town, while the sun was still "alive" or "pure" (Bukhārī, Muwāṣṣīt, b. 1, 13, 14, 18, 21).

c. the palāt al-maḡribī was finished at a time when people could still perceive the places where their arrows fell down (Bukhārī, Muwāṣṣīt, b. 21).

d. the palāt al-ḥṣīfī was sometimes postponed till a late hour, sometimes till the first third of the night had passed (Bukhārī, Muwāṣṣīt, b. 40, 21, 24).

e. the palāt al-ḥṣīfī was performed by Muḥammad at a time when a man could discern his neighbour (Bukhārī, Muwāṣṣīt, b. 13); but the women on their way home could not yet be recognised (Bukhārī, Muwāṣṣīt, b. 27).

In a second layer of traditions these general indications are specified by the mention of the first and the last limits allowed for the different
prayers (cf. e.g. Muslim, Manāfidi, trad. 176, 177). On one day Muhammad performed:

a. the ṣalāt al-ṣuhr when the sun began to decline;

b. the ṣalāt al-‘asr when the sun was still high, white and pure;

c. the ṣalāt al-maghrib immediately after sunset;

d. the ṣalāt al-‘īsha when the twilight had disappeared.

b. the ṣuhr: at daybreak.

c. the day following the first day of the month.

d. the ʿasr: later than the day before.

e. the asr: later than the day before, the sun being still high up;

f. the maghrib: before the twilight had disappeared;

g. the ʿīsha: when the first third of the night had passed;

h. the ʿufār: when sunrise was near (asfara bih).

In a tradition communicated by al-Shāfiʿī (Kitāb al-Umm, l. 62) the fixing of the mawāzik just mentioned is ascribed to the example of Gabriel (cf. Zaid b. 'Ali, Maqāmāt al-Fihā, N. 109). These mawāzik have for the most part passed into the books of ḥāl. We cannot reproduce all details here. The following scheme may suffice:

a. ṣuhr: from the time when the sun begins to decline till the time when shadows and objects of equal length with the objects by which they are cast, apart from their shadows at noon. The Hanafites alone deviate in one or their branches in so far as they regard this as the ultimate term by the time when the shadows are twice as large as their objects. In times of great heat it is recommended to postpone the ṣuhr as late as possible;

b. ʿasr: from the last time allowed for ṣuhr till before sunset. According to Mālik the first term begins somewhat later;

c. maghrib: from the time after sunset till the time when the twilight has disappeared. Small deviations only, in connection with a prediction for the first term;

d. ʿīsha: from the last time mentioned for the ṣuhr till when a third, or half of the night has passed, or: till daybreak;

e. ʿufār: from daybreak till before sunrise.

b. This side by side with these mawāzik we find in the books of Tradition and of Law the times on which it is not allowed to perform prayers, viz. sunrise, noon, and sunset (Bukhārī, Muwaffiq, b. 30–32; Muslim, Sahīh al-Maṣāḥih, trad. 285–294; cf. al-Nawawī's commentary on this point, and further Wānīk, Al-Handebak al-Muṣāhib al-Muṣāhib, Paris 1921). According to 'Abū Īshā it is only forbidden to wait until sunrise and sunset for prayer (Muslim, Manāfidi, trad. 296). In Makkah prayer is allowed at all times (Bukhārī, Ḥadīth, b. 73; Tirūrī, Ḥadīth, b. 43).

(A. J. Wesseling.)

MIKHĀL ṢABBAGH, an Arabic author born of Catholic parents in Akko in 1784, was educated in Damascus and then came to Egypt. Here he joined the French army of Napoleon's expedition, had to leave the country with them and came to Paris. The State printing works employed him as a proof-reader and the Bibliothèque Nationale as a copyist of Oriental manuscripts; his irregular habits prevented him leading a comfortable or settled existence, although de Sacy and his pupils appreciated his thorough knowledge of his mother tongue. He himself only used it to compose ḥālās in the old style in praise of great men of the period and to make some money thereby. For example in 1805 he addressed a poem to the Grand Vizier when he visited the printing works, in 1805 Pope Pius VII, in 1810 to Napoleon on his marriage, in 1811 to the King of Rome, in 1814 to Louis XVIII. These poems were printed at the government press, that in Pius VII with a Latin translation by de Sacy, that to Louis XVIII with a French one by Granget de Lagrange. He also published a work on carrier pigeons entitled Kitāb Muḥābāt al-Barīr wa l-Œumām fi Ṣalāt al-Ḥamīl, La colonie messager, plus rapide que l'éclair, plus prompte que la vue, par M. S. traduit de l'Arabe en Français par Silv. de Sacy, Paris 1805; based on the preceding: Die Blitzgeschwindeste Brieffahrt, oder einweltliche Kunst des Umschutz, Tüchen und Briefen der Briefe abzuschweifen, nach dem Arab. von M. S. Herborn 1806; Brieftausch der Kunst der Barrikaden, welche seit der Zeit der Erfindung gebräuchlich wird, aus dem Arab. von Th. J. K. Arnold, Frankfurt 1817; La unione messaggera risa l'una delle due, trad. di M. S. Cataneo, Mailand 1822; Die Briefe eines Schmerz al der Brief, aus dem Arab. von C. Lüger, Straßburg 1879. — He left in manuscript a history of the Arab desert tribes of Syria, a history of Syria and Egypt and important for its lexicographical information: al-Rahīm al-Sibli Ṣallām al-Qāsim, il-Maḥīth al-Kūn l-Dīn, M. S.'s Grammatic der ab. Umgangs sprache in Syrien und Ägypten, nach der Münchner Ms. herausg. von H. Thorbecke, Straßburg 1886.

MIKHĀL-ŌGNU, an old Ottoman noble family. This family, traces its descent to the feudal lord Kose Mîkhâl ʿAbd Allâh, originally a Greek (cf. F. A. Geurin in Ch. Schefter, Petit traité de l'origine des Turcs par Th. Spaudowuy, Constantino, Paris 1856, p. 267: L'ang dialecte du nom semble Mâkhlûl ... Pahdit Mîkhâl sans descendre les Mîkhalogî). The name appears in the reign of 'Ohmân I. as lord of Chirimenka (Khirmeñjal) at the foot of Olympus near Edras, and later as an ally of the first Ottoman ruler earned great merit for his share in aiding the latter's expansion (cf. J. V. Hammer, in G.O.R., I. 43, 57; following IIridi Billias and Nefti). Converted to Islam, Köse Mîkhâl appears again in the reign of 'Odana's son Urkhan. The rank of commander of the army [v.] became hereditary in the family of Köse Mîkhâl.
which is even said to have been related to the royal house of Savoy and of France (cf. Paolo Giovio: "Mikhelel di zangus Turchetta e per via di donna al fa-parente del Duce di Savoia e del Re di Francia; in this case Mikhał [Mogola] alias Köse Mihăil must have been descended from the Palaeologus; cf. J. v. Hammer, "G.O.R., i. 382", and along with the Malko-oghlu (properly Malković e. Marković), the Ewrenos-oghlu, Cemal-oghlu, Timurtas-oghlu, Tatar-han-oghlu, and Turksche-oghlu, were among the most celebrated of the noble families of the early Ottoman empire. Köse Mihăil, called ʻAbd Allâh, died in Adrianople and was buried there.

The following genealogical table shows the order of succession of the Mihăil-oghuls:

"ʻAbd Allâh, called Köse Mihăil, son of ʻAsrâ, d. at Adrianople, buried in his own mosque there."

---

As Adrianople was certainly not conquered till 1361 (see F. Bachinger, in M.O.G., ii. 311) he must therefore have lived into the reign of Murad I. What J. H. Mordtmann has said in the article "Ewrenos" would therefore be true about his remarkably long life. Köse Mihăil had two sons, namely Mehmed Beg and Yahya Beg (Bakšhî); of whom only the former acquired some renown. He was vizier under Murad Celebi and a close friend of Sheikh Badi al-Din of Simâw (q.v.). Under Murad he was Beglerbeg of Rumel, and died in 825 (1422) at Iskander, the head of the judge Tât al-Din-oghlu, and is said to have been buried at Plevna in Bulgaria (cf. Ewliya Celebi, Siyâset-

---

According to the genealogy published by Isma'îl Hakki, "Köbologer" (Stambul 1345 = 1927), p. 35 which is based on a "Sevilismâne" in the Ewliya

office, "Yahyâ Defteri", No. 247, in Siwâs, the genealogy of the Mihăil-oghuls is as follows:

---

If we compare the article "Yâkıbek Paşa" in Mehmed. Surayîs, "Sevilismâne" (Istanbul, iv. 652), where the descendants of this general are given, we get a different picture of the genealogy.

1) According to Mehmed Thaârî, "Sevilismâne", iv. 101, Iskander-Beg had four sons, ʻAli, Mehemmed, Köbîr and Selîmûn. This must be wrong and the genealogy is as above.

MIKHÂL. [See Merkez.]

MIKHÂL, any simple instrument for measuring, e.g. the pointer on a sundial; in Egypt the name of the Nilometer, i.e. the gauge on which the regular rise and fall of the river can be read. To get an undisturbed surface, the water was led into a basin; in the centre of this stood the water gauge, a column on which cifs and fengers were carefully measured off. The level of the water was ascertained by an official daily and proclaimed by cries.

Originally the rising of the Nile was measured by the gauge (al-ṣūbârāh). According to Ibn 'Abd al-Ḥakîm, al-Kudî, and others, Joseph, the son of Jacob, built the first Nilometer at Memphis; at a later date, the "aged Dalîkâ" built Nilometers in Aḥmîn and Anjûnîn (Antinoë). These were the Nilometers in use throughout the Greek period till the conquest of Egypt by 'Amr b. al-Ĥâ, the latter erected a Nilometer at Assuan and a second at Dendera. Others were built in the reign of Ma'âwiyah and 'Abd al-Ĥâ. Finally the Caliph al-Mutawakkil had a large Nilometer built in the palace of Khalifâ and, instead of the Christian officials appointed Abu 'Ibâd to look after it, and the office remained hereditary in his family down to the time of al-Mârî (d. 1443).

The ancient Egyptians are said to have drowned a virgin in the Nile at the beginning of its rise as a sacrifice. 'Amr compelled the Nile to rise and fall at God's command by means of a writing which he threw into the water.

AMIL (A.). According to some Arabic lexicographers the meaning of this term is time of birth in contra-distinction to mansūb which may denote also "place of birth." The latter is the usual term for birthday, especially in connection with the birthday of Muhammad and Muslims with the birthday of the Prophet and the months (cf. the art. MAWIL). milûd denotes also Christmas. For other special meanings cf. Duvey, "Supplement aux dictionnaires arabes," i.e.

Bibliography: the Arabic lexicon, i.e.

AMILAS, the ancient Mylasa was the capital of Caria and famous in antiquity for its sanctuaries of the Carian Zeus (in mineral and modern western sources: Milasi, Milas, Melas, Meliso), a town on S.W. Anatolia, 45 miles from its seaport, Kuilkû (on the Gulf of Melitene). It is the capital of the kaza of the same name in the milîyet of Mugla (formerly the sandjak of Men-
MILAS

teshe) and has 7,346 inhabitants (census of 1928) compared with 7,101 (of whom 3,200 were Greeks) who were removed by the exchange of 1922, 739 Jews, who still flourish, and 74 foreigners in 1908 (Sallabanne Alda, of 1326 A.D.).

Milies lies on a low eastern spur of the Soda Dagh (Gr. St. Elias) in the centre of a very fertile plain surrounded on all sides by hills, and watered by the Sarı Cay which flows round the Soda Dagh on north and west. The road to the sea however does not follow this marshy water-course but crosses the hills south of the Soda Dagh, here commanded by the once powerful medieval fortress of Patlin (three miles S. of Milies). The bay itself was in the middle ages defended by the island citadel of Ano Kalesi (t. Iacoh, Atien, Mitten, xv. 139) and later by a castle at the harbour built by Mehmed I (Piri Ke're, Bâbîrîyê, ed. P. Kahle, chap. 21). At Milies met the old, and although difficult, only roads to the west to the important medieval port of Balît (Miletus), to the north into the fertile plain of Karposlu Osyav and Cino and into the Manassar valley, and eastward to Mugla, the other important town of this district. This and its protected situation near the sea within a broad fertile plain destined the town to be once more a capital when the region again attained political independence under the Turkish dynasty of the Menteşe [q. v.].

The region first passed temporarily under Turkish rule when, after the victory of the Seldjûqs at Manzikert in 1071 the western Anatolian coast with Nicæa, Smyrna and Ephesus and even islands like Samos and Rhodes were occupied by the Turks. Although we have no definite information about Milies itself we know that the monks of the neighbouring Latinos had to leave their monasteries on account of the Turks (in 1079; cf. Th. Wiegand, Milet, i. 185). But Byzantine rule was soon restored. It was only when the centre of the imperial government was withdrawn to Constantinople after the victory over the Latins in 1261 that this region finally passed into Turkish hands. When and how the final conquest took place we do not exactly know. Melanudion, which with Milies formed a theme from the period of the Comnenoi (W. Tomasehle, Z. hist. Topographie Kleinasiens im M.1. Vienna 1891, Abb. d. Ak. d. W., p. 38), and is therefore to be located in the neighbourhood of Milas and was by a Byzantine till 1373 at least, was again taken for a time from the Turks of Menteşe in 1376, so that it must have been occupied by them a few years before (Wiegand, op. cit.). That Menteşe is called Śwadzko (=Skił Łągi, Emir al-Sawadkhî) in Pachymerias (i. 472; ii. 211, Bonn ed.), in Sanolo (Hopf, Chron. greco-romanica, p. 145) Turquemodarum (read: Turquemodarum = "Turkoman of the sea") suggests a conquest from the sea. There is no longer any record at this period of the bishopric of Milas, which as a church of the eparchy of Caria (see G. Parthy, Hierocellis Symmecmenon et molestae graecae epicopatrum, p. 33, 112 etc.) was under the metropolis of Stavropolis which still existed in the 6th century (A. Wächter, Der Verfall der Griechen in Kleinasiens im XIV. Thek. A., p. 54 seq.) (Stavropolis, the ancient Aphrodia, at the village of Gere, twenty miles west of Denizli).

Milas appears as the capital of the principality of Menteşe about 1339 in al-Ūmar (ed. Taeschner, nev, p. 21); while Fokha = Phocasia which appears as a capital in the Genoese report, ibid., p. 47 is probably an error of the writer and is not to be corrected to Mugla and in Ibn Baṭṭuta (ed. Defrémery and Sanguinetti, ii. 278 seq.) also, who here enjoyed the hospitality of the Akgî gild (on a Parturjumâne written in Milas at the end of the 14th century see Tuschner, in Islamica, iv. 40) and admires the wealth of the town in gardens and orchards and gives the name of the lord of the country as Shaddâ al-Dîn Utâkan b. Menteşe, whom he visited in his capital Pećin, not far away. The Menteşe held very little in Milas as they were engaged in embellishing their residence. It is noteworthy that the two mosques of this period lie outside the old town, still largely enclosed in its old walls; one to the south, in the Hacı İlyas quarter, the little Şâlî al-Dîn Dîjânî's with outer court and stepped minaret, built under Utâkan Bey in 1422; the other just outside the walls to the east, the mosque of Aghamed Gîâzî built in 1378, which with its entrance in the narrow side (without an outer court) and the stepped minaret built above it (Ismâ'îl Hağı, Kitâbâler, Istanbul 1939, fig. 47) looks as if it had once been a church (cf. Wulsinger, Die Piran-Monche zu Milas, in Festschr. d. Tuch, Hochschule in Karlsruhe, 1925, p. 10 of the reprint). The minbar of this mosque also dated 1780 (1378) is now in the Çinili Kiosk in Constantinople. From the position of these mosques, it may be deduced that the old town remained in the occupation of the Christians, who still held most of it in quite recent times. The only mosque in the old town, just in its centre, and in the highest part of it, the Bilidân Dîjânî, seems also to have been a church and was probably used by the garrison, if it is old. The medrese of Kıpçâk Bedir al-Dîn, which dates from the period of the Menteşe, unfortunately cannot be exactly dated (Rev. Hist. v. 38).

Milas received its first important building from the first Ottoman governor Fîrûz, whom Bâyaştî appointed over Menteşe-ili (Dâvûdar-ı Emâri, ed. Mârûmîn Hîtal, Istanbul 1928, p. 88) after the conquest. (792 = 1390) (the date given by most Turkish sources is supported by Bâyaştî's confirmation of the Venetian privileges for Balât of May 21, 1390, Diplomatario Veneto-levanti, Venice 1899, ii., No. 134). The Menteşe who fled to Egypt (Dâvûdarî, c. c.) was probably the prince of the house ruling in Balât, while the senior Aghamed Gîâzî may have held out in Milas and Pećin till July 1391 (according to his tombstone he died in Pećin in Şahrûn 793 as Şâhî). In 1394 Fîrûz built to the north of the old town and outside of it a splendid mosque in the style of the brass private mosques (of Wulsinger's monograph); Ottoman rule was interrupted by Tûsmâ who passed through Milas on his return from Smyrna in the winter after the battle of Angora (1402) (Ducas, p. 76, Bonn ed.), for about twenty years by the restoration of the former dynasty. This last period of the Menteşe-oghlus has left no memorials in Milas or Pećin. The Ottoman commanders thus made their headquarters in Pećin, after which this last of the Menteşe sandık was long called (Aḫû Bahr-i Bahram in Hâdîlî Kaîtî, Zâwîyâ-un-nâî, p. 638, i.e. the second half of the xvii century) and only moved
to Milas at a later date, when a magnificent official residence was erected, with defensive towers, and is still partly inhabited.

From the second half of the xviii century we have Ewly’s description of the town (in the unprinted vol. ix. of his *Streit-nähe*, MS. Rehler Agha, No. 452, fol. 57) He says the town had 4, 5 madjels and two large khanas. At this time the garrison was still in Petin. He praises the gardens of the town but rightly describes the climate as unhealthy. Among the products he mentions tobacco, with which Milas supplied the whole of Anatolia. Among the nine places mentioned by him, we may notice that of Shakh Shushier because it probably refers to the Baba al-Shushier now here by Ibn Battuta. Ewly’s description of the old ruins is much exaggerated, although he saw a good deal more than now exists. Pococke (Travel., ii., ch. 6) at the end of the eighteenth century was still able to sketch a temple of Augustus and Roma here. All that now survives in addition to the town walls is the Baita Kapu (a Corwinian gateway with the Carian double-axe) and a mausoleum called Gümüşkhisen (tile-greaser-worker) (Chios-Goidler, *Voyage dans l’Empire Ottoman*, ii., 1791, p. 85—92). In the adjacent village of Sultan Köy is the tomb of Sultan Bedir al-Din, Shaikh Kasim, who died at Iznik in 854 (1451) and is buried here, a *khólica* of Sündu Muhammad al-Bukhari (see Rev. Hist., v. 31—44), on the site of a church of St. Xenia, who died here (Bull. de Cerr. Hell., iv. 61—67).

The capital of the Menteşe already mentioned several times by Petin (Gr. Petras) consists of an imposing gate built over ancient foundations and Byzantine masonry and an extensive town lying south of it. The citadel with its walls and towers crowns a steep rock that rises out of the southern end of the plain of Milas (Inma‘il Haşki, fig. 40) and is accessible only at the south side by a great door flanked by a tower adorned with lions carved upon it. Inside the fortresses, where now is a miserable little village, the only architectural remains are the foundations of a church. Opposite to the entrance to the citadel, on a platé surrounded by walls, some of which still stand, lie the palace and its annexes, now mostly in ruins. All that survives is a charming medrese, built of stone, of Ahmed Pasha of 777 = 1375 (Inma‘il Haşki, fig. 51—54). In the medrese, which is flanked in the yandaş by reliques of lions holding flags, the founder is buried (see above); opposite the medrese stands a mosque built by Ewly’s Bey in 733 (1333), in ruins except for the gateway of Byzantine doorbeams and fragments of minbar (the inscription is given in Ewly’s), probably the one that Ibn Battuta saw being built on his visit to Petin (Barghin). There is also a mosque and medrese, a bath and a palatial serai, all in ruins. Exceptionally finely carved tombstones give the names of important persons who lived here down to the xvth century. Ewly’s, who still found about one hundred houses here, thought there must once have been a great town here. Petin is mentioned by Kalkanbendi, *Nefi‘ al-Afdal*, v. 18, as the possession of a certain

(P. VATTER).

Milk (m.), possession, property. The word is not found in the Kur‘án, but is in regular use in legal terminology. The double meaning of the word shows that the usual distinction in its legal language between the conceptions of possession and property is not found in the Arabic. There is, it is true, a special term for the actual power over a thing, what we call possession, in the narrower sense, namely yad, “in hand”, but the distinction between a judicial ownership and the actual control is not found in Muslim jurisprudence and there is not a word for property which takes into account the actual ownership, from the positive or the negative point of view. As a result we find, for example, that the ownership of a thing passes directly by an agreement if this was intended, even if the thing in question is not at once handed over. On the other hand, not only things but also rights can be owned.

The following are excluded from the possibility of being property and subject to legal regulations:

1. useless things (e.g. wild animals); 2. things the use of which is prohibited by religion (e.g. wine-grapes); 3. things which are usually implanted or have become polluted to such an extent that they cannot be purified (e.g. swine, dung etc.)

If such things, however, are acquired, one talks not of milk but of ḥabq, a special claim upon them; legal transactions relating to such things have a special vocabulary of their own.

*Komāl al-milk* is a necessary preliminary for the property of an owner being liable to ḥabq [q.v.].

**Milla** (m.), religion, rite. However obvious it may be to connect this word with the Hebrew and Jewish and Christian-Armenian milla, *multa*, *attaration*, word, it has not been satisfactorily proved and where it received the meaning which is taken for granted in the Kur‘án, religion or rite. Nor is it known whether it is a purely Arabic word or a loanword adopted by Syriac or other languages. When Mohammed and others before him (Noldeke, Z. v. d. *K*., iv. 413) seems to hold that it is Arabic for the 4th form mulla or *ma‘n* to dictate") in the Kur‘án it always means (even in
the somewhat obscure passage, Sūra xxxviii. 6) "religion" and it is used of the heathen religions (vii. 86 sq.; xiv. 16; xvii. 19) as well as of those of the Jews and Christians (ii. 114), and of the true religion of the fathers (xii. 38). The word acquired a special significance in the Medina sections where the Prophet in his polemic against the Jews speaks of "Abraham's milla", by which he means the original revelation in its purity, which it was his duty to restore (ii. 124; iii. 89; xvi. 124; xxi. 77 sq.; cf. iv. 124; vi. 162; xii. 37). Muslim literature follows this Kirānic usage but the word is not in frequent use. With the article, al-milla means the true religion revealed by Muhammad and is occasionally used elliptically for al-hadi' al-milla, the followers of the Muhammadan religion (Tabari, ill. 813, 5658); just as its opposite al-dhimma is an abbreviation for asl al-dhimma, the non-Muhammadans who are under the protection of Islam; e.g., Ibn Sa`d, ill. 238; 51; cf. also the derivative milli` opposed to dhimma, client (Balbaki, ed. Schwally, p. 121 infra).

MIM, 24th letter of the Arabic alphabet, with the numerical value of foury. On different forms of the letter cf. ARABA, plate 1. In some dialects of Southern Arabia and of tribes coming from that region, mim was and is used as the article of determination, side by side with it. A well-known tradition is put into the mouth of a man from Southern Arabia in the following form: Zile `arabri an malla fī mu`arrab. Cf. Ibn Yā'ish, ed. Jahn, ii. 1337; Landberg, Études sur les dialectes de l'Araîche méridionale, i/ii. 281—290.

(A. J. WENSINSKY)

MINA, later often pronounced Mena, a place in the hills east of Mecca on the road from it to 'Arāfa [q. v.]. The distance between the two is given by Mu`addib as one parasang, while Wavell calls it five miles and says the continuation to 'Arāfa is nine miles. Mina lies in a narrow valley running from west to east, 1,500 paces long, according to Burchardt, surrounded by steep barren granite cliffs. On the north side rises a hill called Thalh. Travellers from Mecca come down into the valley by a hill path with steps in it; this is the Tāmān (q. v.), which became famous in connection with Muhammad's negotiations with the M walmart. The town consists of stone houses of fair size which form two long streets. Close beside the Tāmān is a rudely hewn short pillar leaning against a wall: this is the "great djamra" or the "Aṣāfa djamra", at which the pilgrims cast stones [cf. DJAMMA]. A little to the east in the middle of the street is the "middle djamra also marked by a pillar and lastly at a similar distance the third (the so-called "first djamra"). As one approaches the east end of the valley, there is on the right of the road a square mosque surrounded by a wall, the Masjid al-Kabīr, which was rebuilt by `Abd al-Rahman in 874 (1467) reconstructed by the Mamlūk Sultan Zāk`ar. Along the west side of the surrounding wall is a colonnade with three rows of pillars; but there is none on the east. So these three djamra [cf. D.JAMMA] Ibn Rusta (c. 500 A. H.) tells us that the mosque had 168 pillars of which only seventy-eight supported the west wing. The north side of the wall is pierced by several doors. In the centre of the court of the mosque is a little domed building with a minaret built over a fountain. There is another dome over the colonnade on the west side (see the illustrations, ii. 256).

The most striking feature of Mina is the very great difference, noted already, by Mu`addib, between the quiet and empty streets of the greater part of the year and the tremendous throng and bustle of the pilgrimage month when, as Wavell says, half a million people with heavily laden hearts of burden hope to cover nine miles in the period between sunrise and 10 a. m. Every body in the valley is then covered with them in which the pilgrims spend the night. Mu`addib tells of five houses built of teak and stone (among them was a frequently mentioned Dār al-humra) and large stone buildings are still to be found in Mina; but these are usually empty and are only let at the pilgrimage to the more wealthy pilgrims and even among those many prefer to live in tents. This depopulation of the city has been a subject for discussion among the geologists, for some held that this circumstance enables Mina and Mecca to be regarded as one city (mi`raj), a view which others reject. But another circumstance must have contributed to prevent a permanent settlement of the town, which is also true of other places on the pilgrim's route, namely the incredible filth and dreadful stench which is caused by such masses of humanity at the Ḥajjd. Complaints are made even of the uncleanness of the Masjid al-Kabīr and at Mina there are further the decomposing remains of the countless animals sacrificed.

The Ḥajjd ceremonies in Mina date back to the old pagan period [cf. ḤADJ], for Muhammad, as usual in taking over old customs, contented himself with cutting out the too obviously pagan elements, the result being that we can no longer reconstruct the old forms with certainty. The old posts make only passing references to them [cf. DJAMMA]: that they were similar to the Muslim practices is evident, for example, from an interesting passage in the Medina poet Kāzī b. Khattīm (ed. Kowalski, No. 4, p. 1798), where there is a reference to the "three days in Mina" and where we further learn that the festival held there offered an occasion for entering into and carrying on love-affairs. The stone throwing is certainly very ancient; its significance is quite un-Hiylī in Islam, although it is doubtless if there were already three heaps of stones in the pre-Islamic period [cf. DJAMMA]. It is also clear that the ceremonies in Mina formed the conclusion of the Ḥajjd even in ancient times. Muhammad however made some serious alterations here, for he inserted a visit to Mecca before the stay in Mina, whereby the ceremony first received its legitimate Muhammadan character; but the old elements remained the important factors, for the Ḥajjd ends not in Mecca but, as before, in Mina, to which the pilgrims return after the degeneration to Mecca. A survival of the pagan period probably exists in the slaughtering place preferred by the majority on the southern slopes of Tāhira "the place of sacrifice with the rain" [cf. Sūra xxvii. 192], as its association with the city of Abraham itself indicates. It was a sacred spot to be adopted into Islam. From Burton's description it is a square rocky platform, reached by a few steps. Muhammad himself did not directly forbid the use
of the pagan place of slaughter, but deprived it of its importance by saying that all Minā is a place of sacrifice; a clever procedure which he also followed at 'Arafat and Manzilah.

According to the law of Islam, the pilgrims who arrive in Mecca on the 8th Dhu 'l-Hijjah should leave this town in time to be able to perform the midday salát in Minā and remain there till sunrise on the 9th and only then go on to 'Arafat. The majority however do not do this but go on the 8th straight on to 'Arafat where they arrive in the evening. After performing the ceremonies of the pilgrimage in 'Arafat and Manzilah [q.v.], they go before sunrise on the 10th to Minā to celebrate the day of the great sacrifice (yuwm al-'aţâ or yuwm al-ţarî). (In contrast to the pre-Islamic practice, which was to start only after sunrise). Here the concluding titles are gone through, the slaughtering, the clipping of the hair and the lapping. There is not complete agreement on the order of these ceremonies, which one tradition (Wajkid, transl. Wellhausen, p. 429) makes Muhammad declare to be quite irrelevant. The relevance of the stone throwing is noteworthy, for on the day of sacrifice it is only done at the 'Aka'aba heap, while on the three following days each pilgrim daily throws seven little stones on all three heaps (cf. the illustrations above, ii. 256 and Burton, ii. 205). The conclusion of the whole pilgrimage is the three Minā of 'aţâ days, the 11th, 12th and 13th Dhu 'l-Hijjah (cf. above, ii. 195 and the article Tariq). They are days of rejoicing which are celebrated with great jubilation, illumination and the firing of shots. All the pilgrims however do not wait for these three days but set off on their return journey before then.

The typical form of the minar as a pulpit, which is placed to the right of the mihrab and of the spectator, is an erection on steps with a portal with or without a door at the entrance to the steps and a conico-pyramidal canopy to the platform. This form is peculiar to the minar of wood, which is the most usual. The variants in stone and brick are more simple and frequently are only a bare platform reached by three to five steps. The fine series of minars of wood begins with that most famous of all in the history of art, the minar in the great mosque in Kairwan. On the occasion of the extension of the mosque by Ibrahim II Ibn Aqblab (261 – 289 = 874 – 902) it is said to have been brought with the lustre tiles of the mihrab wall from Baghdad and set up. It is made of plane-tree wood and is in the canonical minar shape with a staircase here of 17 steps – to the present platform. The pulpit, however, has not yet the stylized structure of the later wooden minar. It has not the portal nor the canopy at the top. Its composition of about 200 carved panels and narrow strips of unequal size, is simply a primitive agglomeration of profuse ornamentation, still very ornate: in feeling, such as would hardly ever have been found in Baghdad, and even in Kairwan can scarcely be regarded as original. Saladin has pointed out that the pulpit must have been restored after Kairwan had been sacked by the troops of the Fâtimi Mustânî Ablb 'Abd al-Rahmân in 441 (1049). In any case it has several times suffered damage and undergone restoration so that its present general appearance cannot be dealt with critically until we have a thorough monograph based on exact investigation on the spot. The ornamentation must, as Kahle observes, be regarded as Omayyad (Springer's Kunstgeschichte, vi. 385).

The vine branches of the frame-strips and the panels filled with floral patterns and leaves resemble the decoration at Māhsūs [q.v.] and some of the geometrical patterns, which are of all imaginable combinations, are already found on the shafts of
pre-Islamic columns in Diyar Bakr (cf. von Berchem-Strzygowski, Amida). The archaic combination of designs on the minbar has no connection with the decoration which since Sasanid we call 'Abbasid. We have here a phenomenon comparable to Muhitt in since here also ornamentations from different sources are combined to form a general scheme whose common denominator is formed by the formal quality of the chiselluro comune to them all. We do not even know how long the nucleus of the carved strips and latticed panels may have previously existed in Bagdad and they may have there belonged to an Abbasid minbar before the pieces were brought to Kalawati and supplemented by copies and additions of local workmanship.

The few pulpits that have survived from the Fatimid period follow the Syro-Egyptian style of woodwork of the period, with their system of frames filled with foliage. The tendrils were prevented from over-running the whole surface by being placed within small polygonal areas which were grouped together in cassettes (Kühnel, Spriger's Kunstgeschichte, vi. 406). The wooden mihrab of the eighth century from Cairo illustrated in the article minbar illustrates this style, which is also represented by the minbar made in 1091 A.D. for the mosque of Aslan to now in Hebron, and by the pulpit of 1155 A.D. in the mosque of Ams in Kins on the upper Nile.

During the Fatimid period the pulpit developed its canonical form as represented in the minbar of the Masjid al-Aqsa in Jerusalem, which was gifted in 1168 A.D. by Nur al-Din to Aleppo and later taken by Saladin to Jerusalem (Saladin, Manuscript, fig. 28). It becomposes appears with the doorway and the domed canopy. The main decorative motives are 8-pointed stars and the polygonal and star-shaped subsidiary panels showing carving in relief inlaid with ivory and mother-of-pearl. Of the minbar of Sultan Lodji in the mosque of Imam San in the year 1269 A.D. little more is left than the framework, while the panels are preserved in the Arab Museum in Cairo and in the South Kensington Museum (cf. Descriptive Catalogue of the Arab Museum, Cairo). That wooden minbars were sometimes copied in stone is shown by the stone pulpit in the mosque-madrasa of Sultan Hasn in 757 and 765. The mihrabs on the door case and soon after found on the dome also, here as in the mihrab goes back to Turkish influence transmitted through Syria. Like the mihrab, the minbar also attained its finest workmanship in Cairo under the second Mamluk dynasty in the ninth century and later. No essential alteration was later made in its canonical form and its embellishment remained standardised and varied only in details. A fine example of this fully developed Cairo type is in the South Kensington Museum. According to the inscription, it was presented by Kâl Bey (1468-1495) and has finely carved ivory panels and traces of painting on the wooden parts. The central star pattern is replaced by a smooth surface. The gilt undulated dome with its filigree and crescent on the stalactite cornice are, as Briggs observes, characteristic of the period (Briggs, Mab\textit{aw, Architektur in Egypt und Palästina}, p. 217).

After the Turkish conquest, the general deterioration in craftsmanship in Cairo affected the minbar also, but exceptions, like the finely-worked pulpit of the mosque of al-Baândar, however show that the good old tradition still survived. Hakim II's minbar in Cordoba has not survived but from the descriptions of the Arab writers it must have been a peculiarly valuable piece of work, for according to al-Makki it cost 35,705 dinars. It could be moved on wheels and contained the caliph 'Osama's Qur\text{\textsuperscript{a}}n. In the mosque of 'Ali as-Din in Konya is a minbar of hazelwood; according to an inscription on the posts supporting the upper part, the work of an artist of Aklia's from the year 550 (1155). Two inscriptions on the door of the pulpit mention Sultan Mas\text{\textsuperscript{a}}id I (510-551 = 1116-1156) and Kilij Arslan II (551-584 = 1156-1188) (cf. J. H. Loytved, Konica and F. Surre, Schicksalskunde, Kleinkunst, p. 27, pl. vi.-viii.). Inscriptions from the Khur\text{\textsuperscript{a}}n decorate the frames of the balustrades of the steps. The pulpit is of the traditional Syro-Egyptian form, but is, however, distinguished from them by its vigorous structure. Polygons and star-shaped panels fill the side frames, together with the same tendril patterns symmetrically interwoven, as we find naturalised in all the eastern lands of Islam from the beginning of the eleventh century (detailed illustration in Surre, op. cit., fig. 24).

In Persia and Afghanistan all the old minbars seem to have been destroyed during the Mongol invasion. On the other hand, the minbar illustrated here in the mosque of Lâwhar Shah Agha in the sanctuary of the Imam Re\text{\textsuperscript{a}} in Meshed which was built about 840-850 (1436-1446) is original in ornamentation and an example of the Timurid minbar. The structural motive is thrust into the background by the profuse covering of small pentagonal and star-shaped wooden panels with tendrils carved in relief after the style of the contemporary silvers; the effect is that of a carpet. Nothing is known of old minbars in Turkish. In India, pulpits were built almost exclusively of stone. Many, some of them richly carved, still exist in the Muslim provinces and towns of India. The pavilion on four pillars, common and popular in India, which gives a charm to buildings for Muslim worship as a decorative finish to the roof, was also used here for the stone minbar. Indeed one might even wonder whether this originally Indian structure was carried by the Eastern Turks to Central Asian lands and adopted by them for the minbar. Minbars with such canopies are frequently found in the mosques of the province of Gu\text{\textsuperscript{a}}jar and in Ahmad\text{\textsuperscript{a}}bād (cf. these volumes in the Arch. Survey of India, Western India). The mosque of Hüs\text{\textsuperscript{a}}l Khan Kâ\text{\textsuperscript{a}} in Dühluh, for example, has a stone minbar with seven steps and a canopy on pillars on the roof, but no entrance gate. The triangular side walls are divided into square areas which are carved in relief (Arch. Survey of India, Western India, vol. vii., Gu\text{\textsuperscript{a}}jarat, pl. xxvii., xxx.). In Haidar\text{\textsuperscript{a}}bād, the Muslim state of the south, on the other hand, the minbars are more simple and heavier, and have no canopy (cf. illustration from Oman\text{\textsuperscript{a}}bād).

Fig. 1. Minbar in the Sultán Óthma Mosque in Kairuân.

Fig. 3. Minbar in the Sultán Hasan Mosque in Cairo.
MINATA or MINATAR ALL-BURJ is also the most commonly used term in scientific literature, the phrase "the twelve signs of the zodiac" in ancient Persian and Greek texts, then the same of the ecliptic formed of the twelve signs each covering 30 degrees. The SMART software contains references to MINATA in three different passages. In the SMART xxv, 61 they placed two heavens or "Jaburij" in the heavens and adorned them for the spectators. In SMART xxx, 61 they placed two heavens or "Jaburij" in the heavens and who placed a lamp in them and a light-giving moon.

MINATA is entitled "Jaburij" and verse 1: "By the heavens with their lights (Jaburij)". Babylonian may with great probability be assumed to be the original home of the zodiacal circle. The period of its origin cannot be fixed with certainty; the first attempt at a dating of the constellations is the path of the sun and the planets, however, date from before the period of Hammurabi and is in no case in the third millennium B.C. Almost all the names familiar to us are already found in Sumerian inscriptions. The Boghaz-Kil list of about 3500 B.C. gives all the signs of the zodiac, with the exception of Leo and Libra.

The only pictorial representation of the starry heavens of the early Muslim period, the fresco on the dome of Kasr Amra shows the ecliptic as a broad band which are arranged to the twelve Burj. It also shows the pole of the ecliptic and the 12 (elliptical) degrees of longitude, as well as the equator and a series of parallel circles. The peculiarity of the arrangement of the heavens in the church of Kasr Amra is, especially the mina, is broadly speaking the same as that on the Atlas Farrokh. Thus, it should be noted that the fresco of Kasr Amra represents the heavens reflected as in a mirror.

The twelve Burj: Preliminary Notes

The names of the Burj are given in Arabic literature with many variations; those quoted below are the most usual. With the fixed stars a distinction is made between those which form the outline of a constellation (Zuwilah min al-burj), i.e., the essential stars and such as "go beyond the constellation" (Jabbah al-burj) and are regarded as only being loosely connected with it, i.e., the unessential stars.

The account here given is based in its main features on the statements in the first part of Al-Kaswin's Cosmography.

1. al-Abra or al-Abbas, the Ram (Aries). It consists of 13 essential stars, 3 unessential stars in its immediate vicinity; its forepart is turned to the west and its hindpart to the east. It has a face on its back. The two bright stars of the head (β and γ) are called al-Sharik and al-Abard ("the latter"); they form the same time the first of the 23 stations (mansion) of the moon (manadi). According to another reading the name al-Abra is given to the unessential star β Aries which is situated above the figure of the Ram. The three stars, 2 and 3 Aries form the second station of the moon and are called al-Atab ("little panther").

2. al-Thaur, the Bull (Taurus). 32 essential and 14 unessential stars; its forepart faces the east. The bright star at the point of the northern horn (presumably β Tauri) is also included in the Wagoner (Boötes) as well as in the bull. α is called al-Daharun, "Alm al-Thaur, Taur, Al Nujum, Hadil, Al Nujum and Al-Daharun" (large cow); γ is called al-Ka'aba (the Hyades which surround it). The Pleiades are called al-Thaur, γ and α together as Al-Khulasa ("the two dogs") of al-Daharun. The Pleiades form the third, al-Daharun and the Hyades together the station of the moon.

3. al-Tauwamun or al-Dzawa, the Twins (Gemini). 14 essential and 7 unessential stars. The Twins are in the form of two men whose heads are turned in the northeast and feet to the southwest. Castor and Pollux (α and β) are called al-Dhahra al-mukhtariyy; they form the second station of the moon. 7 and 8 are called al-Ha'ar; together with three other stars of the Twins they form the third station of the moon. The name of 7 and 8 Geminiorum is al-Daharun. 4. al-Saraj, the Chef (Cancer). 9 essential and 4 unessential stars. α Cancer and al-Saraj form the eighth station of the moon and have the peculiarly Arabic name of al-Nabaka ("the cartilage of the nose") or in with keeping with the Almagest, al-Madhâb ("mountain"). The star δ on the south foot is called al-Yasir ("the extremity"); δ Cancri and A Leonis form the ninth station of the moon, al-Tarq ("the glance").

5. al-Asad, the Lion (Leo). 27 essential and 8 unessential stars; he is conceived of as looking to the west. α (Regulus), γ, 7, 8, and δ are called al-Mahu ("Forehead of the Lion") and form the tenth station of the moon; δ and ε are the seventeenth station of the moon. α Leo, 7 and 8 are called al-Ghurab ("blackhair") or "man of the land") or al-Mu'ad al-Asad, δ Leonis is called Ḥaab al-Asad or al-Ghurab station of the moon; al-Ghurab. According to another reading, the name Ḥaab al-Asad is given to small stars in the vicinity of al-Mahu.

6. al-Abra (only in the catalogue of fixed stars taken from the Almagest), the Virgin (Virgo) or al-Sabawi, the ear of corn. 26 essential and 6 unessential stars; the head of the Virgin lies south of 4 Leo, her feet west of α and β Librae. The five stars in the shoulders β, γ, δ and ε Virgo, form the thirteenth station of the moon, al-Amsa; a Virgin forms the fourteenth station of the moon, al-Smâhî al-Abud or al-Sabawieh (cf. Smâhâ) which name is applied to the whole constellation of the Virgin. (N.B. The name Smâhâ stands for Smakh or 4. When Virginia is not quoted in the name of the fourteenth station of the moon. The fifteenth station of the moon consists of the stars 4, 5, 6 and 7 on the left foot; it is called al-Ashâr.

7. al-Mahse, the Scales (Libra). 8 essential and 9 unessential stars. α and β Librae and the pan of the balance form the sixteenth station of the moon which is called al-Zakab or Za-kâbîy al-Sabah ("wine-cup of the Scorpion") (cf. Sumerian ZAB.A.N.A, Akkadian Zabantu, as the name of the constellation Libra).

8. al-Abra, the Scorpion. 21 essential and 3 unessential stars; it has its head to the west and its tail to the east. 3, 4, 5 and 6 Scorpi are marked by the fourteenth station of the moon al-
...the eighteenth station of the moon Ṛkut al-ʾAffāh, and the nineteenth station of the moon al-Sawadāʾ ("Sight of the Scorpion"). The stars γ and τ to the right and left of Ṛkut al-ʾAffāh, are called al-Nāyād, q. al-Kāmil, the Archer (Sagittarius) or al-Xaww, the Bow or al-Sākhn, the Arrow. 31 essential and no unessential stars; the face with bow and arrow is turned to the west, the hind-part of the horse's body to the east. (The fresco on the dome at Kuşçur 'Amra on the other hand shows the upper part of the body of the archer turned towards the hind-part of the horse's body, and aiming with the bow over this to the west. The stars γ (on the point of the arrow), δ (on the bow-grip) ε (at the south end of the bow), ω (on the right foot) are called Ṛkut al-ʾAffāh, ρ (on the left shoulder), ο (on the notch of the arrow), τ (on the shoulder blade) and ζ (under the shoulder) al-Nāyād al-Mā'ā. Both constellations together form the twenty-second station of the moon, al-Nāyād, γ and δ on the tail are called al-ʾAlīṣbinī. 11. Sāhī al-Ma'ā or al-Sāhī, the water-carrier (Aquarius) or al-Dalwī, the pail. 42 essential and 3 unessential stars; the head of Aquarius points to the N.W., the feet S.E. and γ on the right shoulder are called Sād al-Malik or Sād al-Makkī. The two (or three) stars on the left hand (α, β, γ, δ) form the twenty-second station of the moon, Sād al-Malik, β and δ on the left shoulder together with ε and ω Capricorni form the twenty-fourth station of the moon Sād al-Malik. The four stars γ, δ, ε and ω on the right fore-arm and the right hand are called Sād al-ʾAlīṣbinī and form the twenty-fifth station of the moon. 12. al-Samahātim, the two Fishes (Pisces) or al-ʾAbbāt, the Fish. 34 essential and 4 unessential stars; the figure is conceived as two fishes, the western in the south of the back of Pegasus, the eastern in the south of Andromeda. The two fishes are connected by a band of stars, al-Kawwātī does not mention any outstanding stars. It is evident, then, that by far the greater part of the 28 mansūl fall into the area of the 12 hurūf and 20 of them. Only the following four do not belong to them: No. 5 al-Hākem (α, β, γ, η Orionis), No. 26 al-Farq al-anwar (α, ω Pegasi), No. 27 al-Farq al-fātir (γ Pegasi, α Andromedae), No. 38 Bata al-ʾAbbāt or al-Riḍā (a large number of stars forming a fish in the neighbourhood of β Andromedae). The zodiacal figures No. 1, al-ʾAqul, No. 4, al-Sarafāt, No. 7, al-Māzda and No. 10, al-Dīgādī are known together as Būrūjī min lišākat, Greek Διῶνυσον σύμβολα: No. 2, al-Tawārīkh, No. 5, al-ʾAdīl, No. 8, al-ʾĀfāq and No. 11, al-Dalwī under Būrūjī min lišākat, Greek Διῶνυσον σύμβολα: No. 3, al-Qāsim, No. 6, al-ʾAdīl, No. 9, al-ʾAlīṣbinī and No. 12, al-Samahātim under Būrūjī min lišākat, Greek Διῶνυσον σύμβολα: i.e. "Double figures": Twix, Virgin and Ear of corn, Archer with Horse's body and the two Fishes. al-Kawwātī gives from Ptolemy the extent of the Minyatā as 486.259.721½ Mil, the length of each Būrūjī as 39.588.510½ Mil, and the breadth as 3.322.943½ Mil.

Mintāṭa in Astrology.

Muthallathūtī. By al-muthallathūtī (qg. al-muthallathātā) are meant in Arab astrology the Greek ἤλεων, Lat. hermes, or triqueira, which in the middle ages were usually translated by tripēstos. The twelve signs of the zodiac are here arranged in threes at the angles of four intersecting equilateral triangles of which one is allotted to each of the four elements. Each triangle is given two of the seven planets as its rulers (ῥηθ, pl. ῥηθ, Greek ἐνευρήματα or ἡγομονεῖσθαι, one for the day and another for the night; a third is associated with the two others as "companions". The arrangement is as follows:

The distribution of the Muthallathūtī has been settled since the time of Ptolemy (εἰσαγωγή). Wawīdī or Shumar. By dividing each hurūf into three we get 30 decans each of 10°, which in Arabic are called wawīdī (sing. wawīdī), wawīdī (sing. ʾawār) or darūfūn (from the Indian ḍarabhā, a loanword from the Greek) or ḍarabhī (Pers.), in Greek διάκλητον or ἐνευρήματα, in mediæval Latin facti, more rarely decani. The astrological significance is the same as with the Greeks, who in turn go back to Egyptian models. The decans are not mentioned in Ptolemy, al-Shumar means properly the paranautelomata of the Babylonian Tenkāra, the constellations which rise at the same time as the separate decans according to his list, Abū Maḥār and other Arab authors took over the list of the paranautelomata from Tenkāra.
MINTAQA

The Mintaka is, as in the Greek system, the fundamental basis for all calculations. It is divided into 360° degrees (γεζα, pl. γεζαδς or γεζαδα, coll. γεζαδι, pl. γεζαδις), each degree into 60 minutes (δεκατις, pl. δεκατα, δεκαταν), each minute into 60 seconds (δεκατις, pl. δεκατα, δεκαταν), each second into 60 thirds (δεκατης, pl. δεκατα, δεκατητα), and so on.

The points of intersection of the ecliptic with the equator (δαρα or fašok ma-waddal al-nabah) define the two equinoxes (al-balidin), the points of the greatest northerly and southerly declination of the two solstices (al-banat). The position of a fixed star or planet with respect to the Mintaka is defined by giving its longitude (nabul, pl. nabulat or in al-Battani al-ματαλλις al-himawan) and latitude (arg, pl. wawat). The longitudes are numbered from the vernal point (al-muḥāṣṣat al-waṣṣaṣ). The axis erected perpendicular to the plane of the ecliptic meets the sphere of the fixed stars in the two poles of the ecliptic (bāhš al-buṣṣaṣ al-hurūf).

On Arab star-maps and globes, we frequently find a mixed ecliptical and equatorial system of coordinates used (cf. the remarks above on the fresco on the dome at Kasr ‘Amra), which consists of ecliptical circles of longitude through the poles of the ecliptic and equatorial parallel circles.

Precession (in al-Battani al-biṣāṣ bi-waṣṣaṣ al-μātaṣṣ) in later authors more precisely bi-waṣṣaṣ muḥāṣṣat al-baṣṣaṣ). Among the Arab astronomers supporters were found for the theory of Ptolemy, who explained the precession as a continual revolution of the whole heavens around the pole of the ecliptic with a period of 36,000 years, as well as for that handed down by Theon of Alexandria (Thawr al-Ishārāt) from older sources, according to which the process of the precession consisted of an oscillation to and fro around the “nodes of the path of the sun”. The greatest amount of the precession according to this theory is 8° west or east of the nodes; the retrogression amounts to 1° in 80 years so that the whole phenomenon repeats itself after 2,160 years. The latter theory found particular approval in India and was further developed there. Thābit b. Khira gave an explanation for it which at the same time took into account the (more suspected than observed) diminution in the obliquity of the ecliptic and calculated the length of the period at 477 years. Thābit attacked and refuted the oscillation hypothesis of Thaum and of the Aṣbāk al-μaṣūdī (al-Baydāwī), on a basis of new and comparative observations he found that the precession amounted to 1° in 66 years, which corresponds to a period of 25,760 years, which is roughly 10%/too small. The very accurate estimate of 1° in 70 years is also occasionally, if rarely, given in Arabic literature, according to E. Zinner, Geschichte der Sterne und der Kugeln, p. 289.

Obliquity (Majl faṣah al-hurūf), very frequently al-muṣṭalad bi-waṣṣaṣ or al-buṣṣaṣ in contrast to al-muṣtaṣṣ al-μātaṣṣ, “declination of the separate points in the Mintaka”, cf. al-Aghawī, p. 21). The pro-

The word "Mintaka" also refers to a constellation in Arabic astronomy, which is part of the zodiacal circle. It is considered to be the most important and prominent star in the constellation of Taurus. The constellation Mintaka is the third brightest star in the sky after the Sun and Venus. It is also known as "Aldebaran" in the Western astronomical system.

The Mintaka constellation is divided into two main parts: the "Trapezium" and the "Eye". The "Trapezium" consists of four bright stars: Aldebaran, Beta, Rho, and Sigma. The "Eye" is a bright star, Beta. The constellation is located in the eastern part of the sky and is visible from most parts of the world.

In addition to its astronomical significance, the Mintaka constellation is also important in astrology and Astrology. It is considered to be a significant point in the zodiacal circle and is associated with various aspects of human life, including love, wealth, and success.

The Mintaka constellation is also significant in the study of mythology and astronomy. It is associated with various myths and stories from different cultures, including the ancient Greeks and Romans. In Greek mythology, Mintaka is associated with the goddess Aphrodite, who is considered to be the goddess of love, beauty, and fertility.

The Mintaka constellation is also significant in the study of astrology and Astrology. It is considered to be a significant point in the zodiacal circle and is associated with various aspects of human life, including love, wealth, and success.

problem of estimating the obliquity of the ecliptic was during the classical period a centre of interest for the Muslim astronomers. As a first attempt at an exact estimate in the Muslim period, Ibn Yunus (ch. i., p. 222 of the Leyden Codex of the Paris Codex, No. 4275) mentions an observation of the period between 778 and 786 which gave the value \( \varepsilon = 23^\circ 31' \). We have an unusually large number of observations of later dates. (For details see Nallino’s notes on al-Batâni’s *Opera Astronomicum*, i. 157 192.)

- **MINIOCOY**, a coral island in the Arabian Sea midway between the Laccadive and the Maldives; it belongs like the former to the Ah Râja of Cannanore but ethnographically and geographically has more claim to be attached to the Maldives group. It is six miles long but very narrow, being only 1/4 square miles in area. The population is about 3,000. The people, who are probably of Siaghalese origin, have been Muhammadans since the sixth century. The language is Malh but the Arabic character is used. They are strictly monogamous. A girl’s consent is required for her marriage and she brings no dowry, but receives presents from the bridegroom. The women go unveiled. There are three castes in the island. The inhabitants all live in one village which is divided into ten quarters in each of which the men and women are separately organised with their own headmen and headwomen. All work on land is done by women. The men are sailors and fishermen. Most of the island’s food supply has to be imported. The chief exports are cocoanut, coir, cowries and dried fish. The important position held by women in Minioyo has suggested its identification with Marco Polo’s “Femal Island” (ed. Vule, ii. 404).

MINUCHIRI, Abu'l-NADIR AHMAD b. VAQAR, Persian poet, nicknamed Shahbadda "six serpents", because of the wealth he accumulated in horses and cattle; but some say the name should be read Shabadda or Shah-badda i.e. "serpent-thunder". He was a native of Isfahan, calling himself "Dastmashar" in his verse; although Dawlatshah says he came from Balkh. He was a younger contemporary and imitator of Umar (n. v.), but he is considered to have excelled his model in poetic power. After completing his studies under Abu'l-Faraj of Susa (d. circa 392 = 1002) he enrolled himself in the service of the Amir Minuchir b. Khubsh b. Washqur, ruler of Djurjan and vassal of Mamduh b. Ghafran, and from the name of this first patron he took his taqibally. Presumably through the influence of Umar he later became attached to Mamduh's entourage of literary men at Ghafran, and wrote firdaws in praise of his new patron and of his sons Mamduh (who reigned for less than a year) and Mas'ud who succeeded to the Ghafranid throne. The latter was assassinated in 438 (1641), and Minuchir did not long survive him (Rashid ul Khân, Majmu' al-Farâbî, i. 545), says he died in the same year and quotes Abayi as having called him "short-lived". In his work Minuchir shows himself to be a gifted versifier, displaying a clever facility in rhyme and very often a reiteration of simplicity and straightforwardness of language. Also he did not hesitate to use new forms for his verse, and he is the earliest Persian writer we know of who used the stylized form of the mu'ammad, which, as used by him, consists of a series of mu'âra's or stichoi, in groups of six. All six may rhyme together, or only five; in the latter case the last line rhymes with the last lines of the other strophes. In spite of his qualities as a versifier, Minuchir cannot be regarded as a great poet; even for his day. His themes, - wise, love, springtime and the virtu of patrons - are those of the stock pattern, and his firdaws are deliberately moulded on the Arabic form, with all its artificialities. In flattery of his patrons he is as servile as any in the whole range of Persian panegyrists and his conceit of himself as it appears in his work is sometimes ludicrous in its effect. (Cf. No. 48 in Biberstein-Karavansky's edition, Paris 1886).

Bibliography: works quoted above and Ekhâr in G, Mrnawak d. Iran. Philologie. A Thiran ed. of the Dîwân was published in 1297 a.h. (R. LEVY)

MIR, a Persian title abbreviated from the Arabic amir and approximating in meaning both to it and to the title mirâd [q.v.]. (For the dropping of the initial m. cf. Br. Shah for Abi Shah.)

Like amir, the title is applied to princes (Minuchir, ed. Biberstein-Karavansky, 1886-96, speaks of Mas'ud, Sultan of Ghafran, as *Mir*), but it is also borne by poets and other men of letters (e.g. Mir 'Ali Shurî, Mir Khâyîî, Mir Mu'âsin; cf. the following art.). In India, Sâlinda sometimes call themselves by the title. As a common noun it is used as an equivalent of *sâ'î*, e.g. *mir* famiy, *mir* döyûr. In Turkish there was derived from it the colloquial adjective mirî (*belonging to the government*), which gave rise to *adamî* (*the government*) in the colloquial Arabic of Iraq.

MIR, the poetical designation of Mir Muhammad Taqî b. Mir 'Abî Allâh, was a native of Aramshah. After the death of his father he went to Dhihli during the reign of Shah 'Alam (1713-1722 = 1750-1806) and became a pupil of Sirâdî al-Dîn 'Ali Khân Arsl. In 1722 he went to Dhihli for Lucknow, where he spent the remaining portion of his life. He is recognized to be the most eminent poet of the Urdu language. He died at Lucknow in 1725 (1810) when he was nearly 100 years old. He is the author of six *dorâs* which have been repeatedly printed in India, and a biography of Urdu poets, entitled *Nukat al-Samarah*.

MIR AMMANN. [See AMMANN.]

MIR DJUMLA. [See MUHAMMAD SÂDI.]

MÎRÂDî (-î), originally ladder, later "ascend," especially Muhammad's ascension to heaven. In the Karân, Sîra xxi. 10-25 and ill. 1-12, a vision is described in which a heavenly messenger appears to Muhammad and Sîra liii. 12-18 deals with a second message of a similar kind. In both cases the Prophet sees a heavenly figure approach him from the distance but there is no suggestion that he himself was carried off. It is otherwise with the experience alluded to in Sîra xvii. 1: "Praise him, who travelled in one night with his servant from the Masîjîl al-Harâm to the Masîjîl al-Akâsh, whom surrounding we blessed, in order to show him our signs." That Muhammad is meant by the "servant" is generally assumed and there is no reason to doubt it (Schirke, Islam, vi. 13, no. 56, 25-40, Z. A. T. F., xviii. 53, 54), that the Masîjîl al-Harâm is the Meccan sanctuary is certain from Karâmî usage (Horovitz, Kuran, Ustâr, p. 149); but what is the Masîjîl al-Akâsh? According to the traditional explanation, but not the only one recognised in Hadith (see Schirke, op. cit., p. 12, 14 and above, s. v. MBb) it would mean Jerusalem, but how could Muhammad, who in Sîra xxx. 1 speaks of Palestine as *dîwân 'Arâd, call a sanctuary situated in Jerusalem al-masîjîl al-oqbî? The age of this explanation is not quite certain; perhaps it was already known to Umar b. Abî Rahîm (ed. Schwart, s. v.) and Abû Sâkh (Lilin of the Hudâbilin, ed. Wellenhaus, cef. 24), but even these belonged only to the Umayyad period (contrary to Lammens, Sacramouts, p. 72, this is true also of Abû Sâkh, who according to Aghânî, xxi. 94 was a partisan of the Bani Marwân and panegyrist of Abî al-Malik). Muhammad probably meant by al-Masîjîl al-Akâsh a place in heaven, such as the place in the highest of the seven heavens, in which the angels sing praises of Allâh and we would then have in Sîra xiv. 1, evidence from the Prophet himself about his nocturnal ascension into the heavenly sphere (Schirke, op. cit., p. 11, 13, 14, Horovitz, flâr. ii, i. 164, 165), testimony which is however content with the mention of the experience itself and says nothing about its course. The question
of the possibility of an ascent to heaven is several times touched on in the Qur'an. In Sura xi. 38 Fir'awn gives Hâshîa orders to build a palace so that he can reach the cords of heaven and clumb up to the god of Mudh (cf, also Sûra xxviii. 3). In Sûra li. 38, the calumniators are asked whether they had permission to build a ladder (jinnat) so that they could hear the heavenly voice and in Sûra vi. 35 the consequences are considered which the signs brought by the Prophet with the help of a ladder to heaven might have on his hearers. The old poets also talk of ascending to heaven by a ladder, as a means of escaping something one wants to avoid (Zuhair, Makallaha, p. 54; Aṣghâ, xv. 34).

Hadîth gives further details of the Prophet's ascension. Here the ascension is usually associated with the nocturnal journey to Jerusalem, so that the ascent to heaven takes place from this sanctuary. We also have accounts preserved which make the ascension start from Mecca and make no mention of this journey to Jerusalem. In one of these the ascension takes place immediately after the "purification of the heart" (see Bûkhât, Sahâb, bab 1; Hadîqâ, bab 76; Mawrid, bab 42; Abûmad b. Hanbal, Musnad, lv. 207; v. 143; Tahât, ed. De Goeje, i. 3157 sqq.). In the last mentioned passage we read: "When the Prophet had received his revelation and was sleeping at the Ka'ba, as the Qur'ân used to do, the angels Gabriel and Michael came to him and said: With regard to whom have we received the order? Whereupon they themselves answered: With regard to their lord. Thenceon they went away but came back the next night, three of them. When they found him sleeping they laid him on his back, opened his body, brought water from the Zamzam well and washed away all that they found within his body of doubt, idolatry, paganism and error. They then brought a golden vessel which was filled with wisdom and belief and then his body was filled with wisdom and belief. Thereupon he was taken up to the lowest heaven. The other versions of this story show many additions and variants; according to one, for example, Gabriel came to Muhammad through the roof of his house which opened to receive him; according to another, it was Gabriel alone who appeared to him and there are many similar variants. All these versions however put Muhammad's ascension at an early period and make it a kind of dedication of him as a Prophet, for which the purification of the heart had paved the way. Ethnographical parallels (Schieke, op. cit., p. 2-4) show other instances of a purification being preliminary to an ascension. Similar stories are found in pagan Arabia (Horovitz, op. cit., p. 171 sqq.) and also in Christian legends (op. cit., p. 170 sqq.). Another story (Ibn Sa'd, vi. 143) says that the ascension took place from Mecca although it does not associate it with "the purification of the heart" which it puts back to the childhood of the Prophet (cf. Hatâma).

How did it come about however that this, obviously the earlier, tradition of Mecca as the starting point of the ascension was ousted by the other which made it take place from Jerusalem? The localisation of the Qur'ânic Masâ'ûd al-Alâ'î in Jerusalem is by some connected with the efforts of 'Abd al-Malik to raise Jerusalem to a place of special esteem in the eyes of believers (Schieke, op. cit., p. 13; Horovitz, op. cit., p. 165 sqq.; do., in Islamic Culture, li. 33 sqq.) and in any case it cannot be proved that this identification is older than that of 'Abd al-Malik. It might all the easier obtain currency as Jerusalem to the Christians was the starting point of Christ's ascension and from the fourth century Jesus's footprint had been shown to pilgrims in the Basilica of the Ascension; as now, perhaps as early as the time of 'Abd al-Malik, that of their Prophet was shown to Muslim pilgrims (Horovitz, op. cit., p. 167 sqq.). The idea of the "heavenly Jerusalem" may have had some influence on the development of the "heaven" legends; when Muhammad meets Ibrahim, Musâ and Isha in Jerusalem, the presence of these prophets in the earthly Jerusalem is not at once intelligible, but it loses any remarkable features if Bait al-Mahd is (Ibn Hishâm, p. 267) from the first meant the "Heavenly Jerusalem" (Horovitz, op. cit., p. 168, another explanation cf. ii. 604). Perhaps also the phrase allaâhâ bârâhâ bârâhâ bârâhâ was taken to support the reference to Jerusalem; when these words occur elsewhere in the Qur'ân they refer to sites in the holy land (Lammeens, op. cit., p. 72, note). While the stories quoted above only say that Gabriel took the Prophet up to the heights of heaven, but are silent as to how, others add that a ladder (mawrid) was used for the ascent (see Ibn Hishâm, p. 268; Tahât, Taflur, xv. 10; Ibn Sûd, v. 143); this ladder was of splendid appearance; it is the one to which the dying turn their eyes and with the help of which the souls of men ascend to heaven. The ladder is probably identical with Jacob's ladder in Genesis, xxviii. 12; the Ethiopic Book of Jubilees, xxvii. 21 calls this mawrid and Sûra xxi. 3, 4 calls Allâh, Ibn Sa'd, Musnad, i. 355; to whom the ange and the spirit ascend (Horovitz). According to Sûra xxxii. 4, the soul rises to Allâh; according to Sûra liv. 4 and xcviii. 2, Allâh knows what descends from heaven and what ascends to it; and in Sûra xlii. 32 there is a reference to steps (mawrid) in the houses of men. Muhammad therefore already knew the word, which is presumably taken from Ethiopic (Horovitz, op. cit., p. 174 sqq.). Among the Mandaeans also the ladder (sumbôta) is the means of ascending to heaven (Gins, transl., Lidzbarski, p. 49, 208, 490) and there are parallels to the ladder of the dead in the mysteries of Mithras (see Andrac, De Person Mûnamêni, p. 45; Wetter, Pâsa, p. 114, note 2); the Manichaean amûlil al-sabha (Fûhi, p. 355, xx) by means of which the dead man is taken to the sphere of the moon is a more distant parallel (Bewun, op. cit., p. 59).

Just as the mawrid is associated with the ascension, so Bûrâk is originally connected with the night journey to Jerusalem; it found its way however at an early date into the legend of the ascension (see Bûkhât, Musnad, bab 1; Abûmad b. Hanbal, Musnad, lv. 207; v. 387; Tahât, Taflur, xv. 12). The prophets earlier than Muhammad had used Bûrâk as their steed (Ibn Hishâm, p. 267; Dîyârîkhti, Taflur al-Khamrât, i. 349), in particular Isha'âm ("Adîdja'd, ed. Ahlward, xvi. 48-82; Tahât, Taflur, xv. 5; Thâm'ât, "Athâ'î, xvi. 6, p. 63; Hâshîa, l. 369). This idea of one animal used by the different prophets is borrowed; according to the Misrafi statement, late it is true that Bûrâk on Zariah, ix. 19, 855; Fûhi de K. Ehrhart, xii.), the ass which Abraham rode (Genesis xvii. 3.) is the same as that used by Zipporah and her sons (Exodus, iv. 20) and is that on which
the Messiah will make his entrance (cf. also Ibn Sa'd, t. jîl. 176). The recollection that this deed was an act survives in Muslim tradition so that Burāq is described as "smaller than a mule and larger than an ass" (Bukhārī, Manāšir, bûl. 43; similarly Ibn Hīghām, p. 264; Ibn Sa'd, t. jîl. 143). Ibn Sa'd already describes Burāq as a female beast and, as early as a story attributed by Ibn Iṣâq to al-Ḥasan al-Baṣrī, Burāq is given wings (Ibn Hīghām, bûl. cit.). That "The Jāhāf seems to be the first who speaks of Burāq's human face (Ibn Hīghām, l. c., p. 370); in the miniatures dealt with fully by Arnold, "Painting in Islam," p. 178 sqq., al-Burāq usually has a woman's head. At the gate of each of the seven heavens through which he wanders with the Prophet, Gabriel is asked for his own name and that of his companion (Bukhārī, Sa'd, bûl. 1, Tabārī, Tafsîr, xv. 4; Anwarī, ed. de Goeje, l. i. 157). After he gives these he is next asked if Muhammad has already been sent as a prophet (awwâl ba'thul ilâha, correction for the original awwâl ba'shitha found in Tabārī, Anwarī, l. i. 158; see Snouck Hurgronje, "Ibl," vi. 5, note 4); this also indicates that the ascension originally belonged to the period immediately after his call (Schirke, q.v. cit., p. 6). In each heaven they meet one of the earlier messengers, usually Adam in the first, Yahyā and Īsā in the second, Yūsuf in the third, Idrīs in the fourth, Hārūn in the fifth, Muḥammad in the sixth and Isḥāq in the seventh heaven; there are also variations and Adam appears as judge over the spirits of the dead (Andrae, p. 44 sqq.; Schirke, p. 17; Ahmad b. Ḥanbal, Manṣūrī, v. 145; cf. Apoc. Mosis, p. 37). Of the other messengers of God we are only told—in addition to being given a description of their personal appearance—that they greeted Muḥammad; Muḥammad is an expression by which says that Muḥammad is higher in the esteem of Allâh than himself and that the number of his followers surpasses his own (Tabārī, Tafsîr, xv. 11). On another occasion, Muhammad engages in a conversation with Muḥammad after Allâh had imposed upon him 50 jâhâls a day as obligatory prayers for the faithful. On Muḥammad's advice, Muhammad asks several times for an alleviation and each time Allâh grants it; but when Muḥammad says 5 jâhâls are still too many, the Prophet refuses to ask for less (on Genesis, xviii. 23 sqq. as the prototype of this episode; cf. Goldschîher, Studien, l. c.; Schirke, p. 19; Andrae, p. 52). According to some versions, Muḥammad dwells in the seventh heaven and the conversation seems to be more natural there. To the ascension belong the visits to paradise and to hell. Paradise according to many Muslims is the seventh heaven, according to others in the first; in some it is not mentioned at all. The statements about its rivers are contradictory (Schirke, p. 19; cf. above KAWTHAR), the Sâdīr al-Mustâdhab is usually placed in the seventh heaven (Bevan, p. 59; Schirke, p. 18). In one description hell is put below the first heaven (Ibn Hīghām, p. 269; Tabārī, Tafsîr, l. c. 19). According to another, the place of punishment of the damned is on the way between heaven and earth; Muhammad sees it on his journey to the Bait al-Maṣūm (Tabārī, xv. 101, also Ahmad b. Ḥanbal, Manṣūrī, l. c. 257; l. c. 353; l. c. 125, 182, 224, 231, 239). On the punishment in hell cf. Schirke, p. 17; Andrae, p. 44; Horovitz, p. 172; Reumann, Das mamlûkische Buch der Geister, p. 81 sqq.; Lâbzârî, Johannitbuch, p. 98 sqq.; Gossen, p. 183.

That Muḥammad appeared before Allâh's throne in the seventh heaven and that the conversation about the obligatory prayers took place there, is already recorded in the oldest stories (see above) but only rarely do they extend the conversation between Allâh and the Prophet to other subjects (Tabārī, xxvii. 261; Manṣūrī, iv. 66 as a dream; Andrae, p. 70). But objection was raised to the assertion that Muḥammad on this occasion saw Allâh face to face (Andrae, p. 71 sqq.), and the question was also raised at an early date whether the ascension was a dream or a reality, whether only the soul of the Prophet was carried up or also his body (Castañi, Anuario, Introd. § 320; Andrae, p. 72; Bevan, p. 60; Schirke, p. 15, note 1).

The Hadîth contains, besides these, other details which Aṣīr (Ediœtologia, Madrid 1919, p. 7-54; Do., Danse y ci Islam, Madrid 1927, p. 55-71) has discussed. In developing the story of the Prophet's ascension Muhammadan writers have used models afforded them by the Jewish and Christian Apocalypses. A few features may also come from the Parvesh from the Aisa Virat; cf. the works already mentioned by Andrae, Bevan, Schirke, Horovitz and W. Boussens, in A.R.W., iv. 136-169.

Later accounts (Chauvin, Bibliographie, xi. 207 sqq.; Aṣīr, Ediœtologia, p. 53 sqq.; Do., Danse y ci Islam, p. 72 sqq.; Nallino, in A.R.O., viii. 803) collect and systematize the material scattered in the older sources; they only increase the matter without however increasing the depth of its thought. Among the Mu'tah-books which have become popular in modern times that of al-Qâhîrî may be mentioned (this is the correct form, see Nallino, q.v. cit., p. 813) on which Darîd (d. 1201) wrote a hâjiya; also that of Barzanî (d. 1179). In the non-Arab lands of Iblâs, Persia, Turkey, Hindustânî and Malay versions of the legend have contributed to its dispersion (see Chauvin, loc. cit.).

The ascension of the Prophet later served as a model for the description of the journey of the soul of the deceased to the throne of the divine judge (Aṣīr, Ediœtologia, p. 59 sqq.; for the Sûfis however, it is a symbol of the rise of the soul from the bonds of sensuality to the heights of mystic knowledge. Ibn al-ʿArâf thus expounds it in his work Kiftî al-ʿirâf ila Mašîm al-Burâq (Aṣīr, p. 61 sqq.; Andrae, p. 31 sqq.), and in his Fustâlî, ii. 356-375 he makes a believer and a philosopher make the journey together; but the philosopher only reaches the seventh heaven, while no secret remains hidden from the pious Muslim (Aṣīr, p. 62 sqq.). Abu l-ʿArâf al-Maṣūrî's Risâlât al-Qiftî is a parody on the traditional accounts of the Mu'tah (Aṣīr, p. 71 sqq.). Aṣīr in his Mu'tah-books quoted has dealt with the knowledge of Muslim legends of the ascension possessed by the Christian middle ages and their influence on Dante, in a separate work (La ediectologia musulmana en la divina comedia, Madrid 1924) he has collected and discussed the literature produced by these authors down to 1923.

According to Ibn Sa'd, t. jîl. 147 the ʿirâf took place on the 17th Râšt of the 17th Râmahân. For centuries however, the night before the 27th Râdîb—a date also significant in the history of Mecca (see Snouck Hurgronje, Mekka, ii. 71)—has been regarded by the pious as the Lailat al-Mu'âfî, and the eve is like the Mawlid al-Nâṣir devoted to reading the legend of the feast
MIRĀDĪ — MIRĀTH

(one al-Abdān, Madāḥī, i. 143 sqq.; Herklotz, Quom ↓ i Jumān, i. 165; Lane, Manners and Customs, London 1856, p. 474 sqq.; Snouck Hurgronje, The Achenese, i. 219; Aïn, Enoto-
logie, p. 97).

(M. Hidayet Hosain)

MIRĀN MUḤAMMAD SHĀH I, of the Fārābī dynasty. He belonged to the younger branch of that line, which had taken refuge in Gujrat, and his ancestors had lived in that kingdom and had married princesses of the Maqṣarī family until Maḥmūd I of Gujrat had, on the extinction of the elder branch of the Fārābīs, placed ‘Aḍī Khān III, Muhammad’s father, on the throne of Khandeh. Muhammad, who was, through his mother, the great-grandson of Maḥmūd, and the grandson of his son, Maqṣarī II, succeeded his father in Khandeh in 1252 and in 1257 tacitly intervened in the cause of ‘Aḍī al-Dīn Imād Shāh of Barār by aiding him against his enemies, Bābur Anṣār Shāh I of Ahmadnagar. He was defeated and driven back into Khandeh, but succeeded in persuading his uncle, Bahādur of Gujrat, to intervene, and with him invaded the kingdom of Ahmadnagar. The campaign was only partially successful, but Muḥ-
hammad was indemnified by Bābur I for his losses. He accompanied his uncle in the campaign which ended, in 1331, in the capture of Mānadd and the annexation of Malwa to Gujrat, and on Bahādur’s death in 1357, was summoned, in his mother’s right, to the throne of Gujrat, but died on his way to Ahmadsābād.

nasty of Khandeh (The Indian Antiquary, 1918).

(M. Hidayet Hosain)

MIRĀTH (A.), inheritance (pl. manārāth), vāriṣht leg, vāriṣht heir.

1. The law of inheritance (‘ilm al-farāšāh, “the science of ‘dispositions”, i.e. of the quotas laid down in accordance with Sūra iv. 18, which is called after its most important and most difficult part) is one of the branches of Muhammadan law in which Muhammad made more deeply modified earlier practice by legislation. Although the Kur’ānic reg-
ulations are fairly detailed, the task of deducing all necessary conclusions from them, to which lawyers turned with particular enthusiasm, gave rise to a great mass of traditions and considerable diver-

gences of opinion on questions not expressly decided in the Kur’ān. In the law of inheritance we can also still trace fundamental old Arabian pre-Islamic features.

In the period before the rise of Islam, in keeping with the patriarchal system prevailing among the Arabs, the estate of a deceased tribesman went, if he died intestate, to the nearest male relative(s); the order of succession in which these relatives, the so-called ʿaṣba (corresponding to agnates), were called upon to inherit survives me-

natised in its order in the Muslim law of inheritance (cf. below). Minors were, as incapable of bearing arms, excluded from the succession as were female relatives: widows also were not entitled to inherit, and originally no doubt themselves formed part of the estate, a view which survived in the levirate marriage usual among the Arabs, to which Sūra iv. 23 (cf. below) refers in forbidding it. There is no evidence of any preferential treatment of the first-born, which we find elsewhere in Semitic law. This, the original legal position, had by Mu-
hammad’s time most certainly altered somewhat in favour of women; in cases where the deceased had no male relatives his daughters seem frequently to have obtained the estate; but women had by no means equal treatment with men, as is clear from Muhammad’s regulations. In addition to these principal heirs the pre-Islamic Arabs had also secondary heirs who correspond to the later so-called quota-heirs (dhawi t-farāšah) and who, in a sort of part of the estate, the bulk of which went to the ʿaṣba. From Kūrān ii. 176 and iv. 37 which conform this arrangement, we can see that these included the parents, the “relatives” — apparently so far as they were not ʿaṣba — and the so-called confederates (jā’il, plur. ǧā’ilāt); the settlement of the 

portions falling to them was done in accordance with Sūra ii. 176 — at least in part — according to the law of the testament.

3. Muhammad modified this system considerably in details, the main point being the improvement in the treatment of women as in his innovations with regard to the laws of family life generally (cf. Ṭal‘ī). At the same time there is a clear endeavour to fix in legal form the practice which had varied considerably in heathen times. The main line of the system in the general conceptions as above briefly outlined were retained by the Prophets. One provision which had been made under special circumstances he was not able later to keep in force; immediately after the Ḥijrat he had ordered that those who migrated with him (the madīṣīn) and the believers in Mecca (the amīrāt) should regard themselves as brethren and therefore able to inherit from one another, while all bonds of relationship between the madīṣīn and their relatives left in Mecca, even if they were believers, were to be regarded as broken (Sūra viii. 73, with the limita-
tion imposed in vii. 16); but this was expressly revoked by Sūra xxix. 6. Tradition regards this fraternisation as a special case of confederacy (jā’il/dam, cf. above, section 2). For the rest, Muhammad in his first Mēlā period confirmed the system of secondary heirs and made the general practice in regard to inheritance (cf. ʿilm al-

farāšah) (Sūra iii. 176) is probably to be dated in the Rāmādān of the year 2, and iv. 37, of which the first view in
al-Bai'dawi is undoubtedly the right one, cannot be much later); that in ii. 176 he expressly makes the fair treatment of the secondary heirs a duty, already reveals the direction which later ordinances were to take. Connected with this is the probably contemporary ii. 241 sq., which secures the wife, if she survives her husband, a legacy of maintenance for a year. Not much later, about the year 3, is Sura iv. 23: "Ye, who are believers, are not permitted to inherit women against their will"; this is a prohibition against the 'apala forcing the widow of the deceased into a levirate marriage and generally assuming the position of ward over her, which belongs only to her male relatives; this is not meant as a regular legal ordinance, which is part of Muhammad's endeavour to improve the position of women [cf. Ta'liq]. Very soon after the battle of Uqud, when numerous Muslims had fallen, we have — as a result of it — the final 'Urfi\nordinance of Sura iv. 3:18: 'To the men belongs a share of what their parents and relatives leave, and to the women belongs a share of what their parents and relatives leave — whether it be much or little — as a definite share, 9. If the relatives (not entitled to inherit), the orphans and the poor are present at the division, give them some of it and speak kindly to them (verses 10 to 14) go on to deal with the treatment of orphans.' 12. Allah commands you, as regards your children, as follows: to the boy belongs as much as the share of two girls; if however there are (only) girls (and more than two, two-thirds of the estate belongs to them) and if there is one (girl) to her belongs the half. And the parents shall each have a sixth if the (legator) had children, and if he had no children and (only) his parents inherit from him, his mother shall have a third. If however he has brothers, his mother shall have a sixth. (All this) after deducting any bequests he may have made or a debt. Ye know not whether your parents or your children be of greater use to you. (This is) an ordinance of Allah and Allah is all-knowing and wise. 13. To you belongs the half of the estate of your wives, if they have no children; but if they have children you shall receive a fourth of their estate — after deducting any bequest that they may have made or any debt. 14. To them belongs a fourth of your estate, if you have no children; but if you have children an eighth of your estate belongs to them — after deducting any bequest that you may have made or any debt. 15. If distant relatives inherit from a legator, male or female, and he has a brother or a sister, each shall have a sixth; but if there are more, they shall have a third among them after deducting any bequest that he may have made or debt, 16. Without prejudice (this is) an ordinance of Allah. Allah is all-knowing and gracious." (Verse 17 sq. contain promises and threats.) As the settlement of the successor in indirect lines left undecided, Sura iv. 175 supplemented the above: 'They ask thee for a decision. Say: Allah gives you the following decision for remote kindred: if a man die childless and have a sister, half of what he has is here and she dies childless, he: is her heir; if there be two sisters, two-thirds of the estate belongs to them; but if there be both brothers and sisters, the brother shall have as much as two sisters.'... The object of these regulations is simply to supplement the law regarding the rights of the 'apala; they are not a reorganisation of the whole law. Each of the persons named is therefore only allotted a definite portion. The remainder, and this is as a rule the major portion, of the estate falls as before to the 'apala. There is a distinct tendency to give female relatives half the share of male relatives of the same degree; even in the case when there are daughters but no sons (and correspondingly sisters but no brothers), they do not receive all that would belong to the sons or brothers; but we regard a few smaller portions the two sexes rank equally. The quotas here given abolished the testamentary settlement of the portions usual in the hebron period, which was still approved by Sura ii. 176; this is the historical starting point for the tradition — early interpreted in another sense — that a legacy in favour of the heirs is not valid. Sura ii. 244 sq. (cf. above) is probably rightly regarded as alienated by the settling of the widow's portion in tradition. There is a slight difficulty in interpreting only in iv. 15; but there can be no doubt that this verse refers to half-sisters on the mother's side, as indeed it has always been interpreted; the text of Uba\n even inserts an addition to this effect (cf. Nikolaus-Bergstrasser, Geschichte des Koran, ii. 82, 83, note 5). The verse iv. 175 on the other hand refers to full sisters, how the 'Urfi wished half-sisters on the father's side to be dealt with, is difficult to say. In iv. 12 "more than two" (girls) is to be interpreted, as the verse requires, as "two and more"; similarly, in the case in which the mother is allotted a third of the estate, it is presumed that the father gets the other two-thirds.

4. The full details which tradition is able to give regarding the causes of the revelation of the regulation of the law of inheritance are not historical; on internal grounds all we can say is that it took place soon after the battle of Uqud (cf. above, section 3). The numerous hadiths which simply repeat the 'Urfi\n\nregulations may be neglected here. Tradition can only record very few actual divergences from the prescriptions of the 'Urfi; one of these is that a woman received back as her inheritance a share of what she had presented to her mother and who represented the latter's whole estate (in parallel case it is a man who has given his mother a garden; by this alteration the divergence is disposed of). According to another story, the Prophet is said to have laid it down that the wives of the mukhabbar should inherit the houses of their husbands; according to the wording, it cannot have been a temporary arrangement which was abolished by the final settlement. While nothing can be quoted in favour of the first hadith, the second, which does not seem to be intended as a foundation for any legal clause, may have a grain of historical truth in it.

5. The prescriptions of the 'Urfi\nare supplemented and developed in countless traditions among which a comparatively large number relate not decisions of the Prophet himself, but of his Companions (we may cite Ibn Hanbal, iv. 279 sq. as a typical mixed form); in reality they must not for a moment be regarded as fact, but only as anonymous evidence of the first developments of the 'Urfi\n\nlaw of inheritance. At this stage of development it is already firmly established that an unbeliever cannot inherit from a Muslim; the right of a Muslim to inherit from an unbeliever is finally also denied, although there is some opposition to this view; on the question
of inheritance of a mu'zazzad, unity was not attained. Excluded from the right of inheritance is also one who has killed the legatee; according to one view, always, according to another only if the slaying was deliberate (with 'anā'ā; cf. article 457). That a slave has no right of inheritance is taken for granted. Legal relationship is necessary for the right of inheritance; thus illegitimate children of those whose paternity has been disputed by al-nisā' [q.v.] have no legal claim on the estates of both father and his relations. The patron ( manslaughter, q.v.) is included among the 'aqqaba, who are placed in the order which had been handed down from the pre-Islamic period and continued to hold good: the patron and the masu'm slave inherit from one another and according to one view, the same right is granted to the masu'm, meaning the man before whom the persons concerned has adopted Islam. After the masu'm come — although some oppose this — the 'awāiṣ, i.e., persons related to the legatee in the female line, whose representative is usually the 'āqūl, and maternal uncle, In cases all these heirs should not exist, the fellowtribesmen are named. The law in Sūra iv. 14 is also extended to the widow whose husband dies before the consummation of the marriage; on the question what should be the share of two daughters, we have the answer two-thirds, doubleless in keeping with the sense of Sūra iv. 13, but also that based on the literal interpretation (the half); finally half brothers on the father's side, about whom the Kūr'ān lays down nothing definitely, are excluded from inheriting by full brothers. With certain modifications which occur again in the latter teaching, a son's daughters are treated like daughters and grandparents like parents, but this regulation only won recognition after opposition and varying practice in details. Here arises the problem of the different shares of the grandparent along with the brothers when he appears with them as 'aqqāb, which goes back to his varying position in the series (cf. below sect 58); along with other views we find quoted also the one that later prevailed but it does not seem to be the earliest. The Kūr'ān lays it down that before dividing the estate the amount of any legacies and debts should be deducted; and in early times — probably in literal interpretation of the Kūr'ānic passages — the legacies often were given preference to debts; after some opposition the opposite teaching prevailed. The 'āyās [q.v.] to be paid for a slave was in itself subject to the usual laws as part of his estate; but in early times the wife was not allowed a share in the 'āyās of her slave husband, which goes back to old Arab conceptions of the family; the other view ultimately prevailed. In addition there are numerous, often contradictory, views on separate points which show the greater interest taken in the matter. The interest taken in early Islam in the law of inheritance is reflected in Ḥādith; there are traditions in which the Prophet orders the law of inheritance to be taught and learned — calling it "the half of knowledge" — on account of its difficulty and expressing the fear that this subject, so difficult to remember, might in time disappear from the memory of his community.

6. The law of inheritance attained its full development in the system of ḥādith; the following are its principles according to the Shāfi'i teaching (for the most important divergences in the other schools cf. below sect. 7).

a. The law of intestacy in general.

According to Muslim law, there is no fusion between the property of the legatee and that of the heir. The creditors of the estate can therefore only assert their claims against the estate; on the other hand, the heirs have no claim on the estate until all debts are paid. The ḥādith has therefore no special teaching on the rejection of legacies, the different ways of succeeding to an inheritance, etc. In addition to pledges entered into by the deceased, the debts of the estate include the funeral expenses and the religious duties omitted by the deceased so far as they consist of concrete things (e.g. unpaid neṣīḥa) or can be annulled for by payment (e.g. neglected fasts [ṣawād]) or can be carried through at the expense of the estate by a deputy (e.g. the waqf omitted without good reason); in the opinion of a minority of the Shāfiʿi legists, omitted gifts may also be included in these. After the debts the legacies have to be paid (cf. waqīya); the remainder passes to the heirs. A necessary condition for inheriting is that the heir has survived the testator; in doubtful cases, when persons who would inherit from one another have died without its being certain which died first, as a rule no inheritance passes between them (this decision is already found in Tradition; there was a very old, difference of opinion on the point). The heir must also have existed when the testator died; only in the case where a man leaves a pregnant widow or 'aqqāb al-must, is a child's share reserved for the unborn child (Tradition is not agreed on this point). If a man is missing long enough to be considered dead, the qādī can declare him "presumably dead" at the request of the heirs after investigating the circumstances; the heirs thus receive the right to take possession of the estate for the time. Excluded from succession are the following: one who has caused the death of the deceased, the one who is an unbeliever from the succession to a Muslim and vice versa, the 'abr (the unbelieving member of a state with which the Muslim stands in no treaty relation) and the slave. As in old Arab law the succession of the 'aqqāb is the basis of the law of inheritance in the case of an intestate; the 'aqqāb are the usual heirs, inheritance by others is only an exception from the general rule; on the order of succession among the 'aqqāb cf. under 3. The 'aqqāb receive the whole estate after the deduction of the portions set aside for the quota-heirs by the Kūr'ān (cf. under 2). If there are no 'aqqāb, that portion of the estate which remains after the deduction of the portions of the quota-heirs goes to the state treasury (bāt al-māl), a notable change from the view found in traditions — cf. section 5 — even 'Omār II is said to have decided otherwise, cf. al-Dhahabī, Barā'ī, bāb 58); it being presumed that this is administered according to the law for the benefit of the Muslims; otherwise the Kūr'ānic quota-heirs receive the remainder of the estate in proportion to their quota by the so-called law of reversion, with the exception of the widower or widow if they are not also at the same time blood-relations of the deceased (here also as in the case of the exclusion of the widow from sharing in the 'āyās of her slain husband, the basis is the old Arab family law). Only if there are neither 'aqqāb nor quota-heirs and the state treasury is not being administered in accordance with the law are the qāhām 'awās — i.e. persons related to the deceased in the female line as well as those
female relatives who cannot be quota-heirs—called upon to inherit (there are two theories regarding their order of succession). If there are none of these relatives, any Muslim may take possession of the estate, if he be capable and ready to administer it for the general good of Muslims.

A. Rights of the 'apāha. The 'apāha are called upon to inherit in the following order which in essentials already existed in the pre-Mahomedan period: 1. The male descendants (the legatees) in the male line, a nearer excluding the more distant relatives from succession; 2. The nearest male relative in the ascending male line with the provision that the father, but not the grandfather (and remoter ancestor), of the deceased inherits before his brothers; the grandfather shares with the brothers (cf. below). 3. The nearest male relative in the male line in the descendants of the father: first the full brother, then the half-brother on the father’s side, then the descendants of the full brother, then those of the half-brother on the father’s side. 4. The nearest male relative in the male line among the descendants of the grandfather (as under 3) etc.; 5. Lastly the mawālid, i.e. the patron (or patrilineal), if the deceased was a freed man, and then his 'apāha. —The brothers of the deceased inherit only with the grandfather as 'apāha in equal shares with him, but if there are more than two of them, the grandfather receives one-third of what is to be divided between him and the brothers. If there are also quota-heirs, the grandfather is allowed in addition at least a sixth of the estate (when he would inherit as a quota-heir; cf. below). He can then choose the most favourable of the three arrangements. This rule seems to be a compromise between the two earlier contradictory views that the grandfather excluded the brothers or mawṣura was excluded by them (cf. above section 5). — Female 'apāha. If the deceased left sons as well as daughters, they inherit jointly, the share of a son being twice as large as that of a daughter (according to Šura iv. 12) while the quota allotted to the daughters (ibid.) is dropped, as is intended by the spirit of the Kurānic law. The daughter who inherits along with a son is therefore also called ‘apāha and in order to distinguish her from the male ‘apāha, the ‘apāha bi-nafa‘i (‘apāha by themselves’), she is called ‘apāha bi-l-ghairi (‘become ‘apāha through another’). The daughter of a son of the legator is similarly treated, inheriting along with a son of a son; and the full sister who inherits alone with a full brother (by Šura iv. 175); finally it applies also to the half-sister on the father’s side who inherits with a half-brother on the father’s side (the grandfather makes the full sister as well as the half-sister on the mother’s side ‘apāha bi-l-ghairi). — If the full sister and the half-sister on the father’s side inherit alone with a daughter of the deceased or of a son, they do not receive their Kurānic quota (Šura iv. 175) which in this case goes to the daughter or son’s daughter (according to Šura iv. 123), being the remainder of the estate after deduction of all quotas that have to be paid; they are in this case therefore called ‘apāha ma‘á l-ghairi (‘inheriting with one another as ‘apāha’).

b. Rights of the quota-heirs (Qanām fáṣiratāt; cf. the article Farád). The regulations in this connection are in general based on literal interpretation of the Kurānic regulations. It is true that here only the daughters, parents, husband and wife, and brothers and sisters are allotted a quota but (with some limitations) the rules holding for the daughters have been extended to the daughters of the son and those for the parents to the grandparents; in addition, a distinction has been made among the sisters between the full sister, the half-sister on the father’s side and the half-sister on the mother’s side. The total number of quota-heirs has thus been raised to twelve: 1. The daughter is entitled to half the estate, two or more daughters get two-thirds, but if daughters inherit along with sons, their claim to the quota drops and sons and daughters receive the whole after deduction of the quotas to be paid; in this case the daughter’s share is half a son’s. 2. The daughter of a son is subject to the same rules as a daughter; inheriting along with the son of a son she receives half as much as he as ‘apāha bi-l-ghairi. As the son’s daughter is related to the son through him, she is excluded from participation when a son of the legator inherits. A daughter on the other hand does not exclude a son’s daughter from the succession; as however daughters and son’s daughters together have only two-thirds of the estate as their quota, a son’s daughter has only a sixth if there is one daughter, and nothing if there are two or more, unless she inherits in these cases along with a son’s son as ‘apāha bi-l-ghairi. 3. The father’s quota is always a sixth of the estate; in addition he appears as ‘apāha and receives as his quota also any residuum of the estate after deducting all quotas, unless male descendants of the legator inherit jointly with him. 4. The paternal grandfather (in default of him, the remotest ancestor) also receives one sixth of the estate as his quota but is excluded by the father; he also appears as ‘apāha (like the father) if there are no male descendants nor father of the deceased. But if in addition to him there are also brothers of the legator, he appears with them as ‘apāha (on the share which falls to the grandfather in this case and in the case where there are also quota-heirs, cf. above 3). 5. The mother by Šura iv. 12, receives one-sixth of the estate if there are children, son’s children or two or more brothers or sisters of the legator; otherwise a third (on the meaning of the Kurānic rule cf. above; in practice the father in this case as a rule receives two-thirds, i.e. according to the scheme, one sixth as quota-heir and the rest as ‘apāha; on the exceptions cf. below under 2). 6. The quota of the grandmother is always a sixth; from this the mother’s share is excluded by the mother, and the father’s mother by the father and mother; all other female ascendants of the legator rank equally with the grandmothers on both sides if there is no father or mother, so far as they are not related to the deceased by a male descendant not entitled to inherit (therefore for example the mother of the maternal grandfather inherits nothing). 7. A full sister receives half, two or more such sisters receive together two-thirds of the estate (Šura iv. 175). Along with a full brother or grandfather she becomes ‘apāha bi-l-ghairi and receives the half of the brother’s share (Šura iv. 175). Along with the daughter or son’s daughter she becomes ‘apāha ma‘á l-ghairi (cf. above 2); sons, sons’ sons and the father exclude her from succession. She has a claim to the quota only when the legator has died without leaving de-
ascendants or male ascendants. § The treatment of the half-sister on the father's side in general corresponds to that of the full sister; along with a half-brother on the father's side or the grandson, she becomes ḥābla in ḥāblah, with the daughter or son's daughter ḥābla in ḥāblah (cf. above) and sons, sons' sons, father and full brothers exclude her from the succession. Full sisters exclude her only in so far as two or more full sisters receive together two-thirds of the estate, so that nothing is left for the half-sisters; if however the half-sister inherits along with one full sister they receive together two-thirds, the full sister getting a half and the half-sister a sixth; unless she in these cases inherits along with a half-brother on the father's side as ḥābla in ḥāblah (i.e. the same rule as with daughters and sons' daughters; cf. above), 9 and 10. The rights of the half-brother on the mother's side and of the half-sister on the mother's side are enunciated on Sūra iv. 15: each of them receives a sixth, two or more together share a third among them, they are excluded from the succession by descendants and male ascendants. 11. By Sūra iv. 13 the widow receives half of the estate, but only a quarter if there is a son or son's child; it is indifferent whether these are his wife's or his own descendants. 12. The widow, by Sūra iv. 14, receives the half of what a widow would receive under the same circumstances; if the deceased leaves more than one widow, they share equally the quota allotted to the widow. During the ʿiddat (period of waiting; q.v.) after a revocable ʿaḏhāb a man and woman are still regarded as man and wife for purposes of inheritance.

4. Exceptions from the general rules. Although the quota-heirs can never all inherit together and in particular the collateral relatives are excluded from their quotas by those in the direct line, the number of qualified quota-heirs may sometimes be so large that the sum of their shares is larger than the whole estate; in such cases their shares are proportionately reduced (cf. above). Otherwise, the occurrence of a number of heirs makes no change from the main rules necessary, except in a few particular cases which have special names; these cases are in which, if the main rules were strictly carried through, the inheritances would be in a proportion to one another which would be contrary to the law; e.g. in the case of the so-called ʿaḏḥāhāta: if some one dies leaving a husband or wife and both parents, the mother would receive in this case a third, the father's share however, which is usually two-thirds (cf. above c 53) would be here reduced by the quota either of the widow i.e. a quarter or of the widower, i.e. the half and thus reduced to five-tenths or to a sixth; according to tradition, it was ʿOmar who decided in this case that father and mother should share, in the proportion of two to one, what remains after deducting the portion of the widow or widower, an arrangement which is doubtless in the spirit of the Qur'anic rule. Another case, the so-called ṣawāqis, is that in which a wife leaves her husband, her mother, two or more half-brothers on the mother's side and also one or more full brothers; as the quotas in this case make up the whole estate, nothing would be left for the full brothers as ḥābla, and they are more closely related to the legator than the half-brothers; in this case, which is also said to have been decided by ʿOmar, the law lays down that the full brothers have the same rights as the half-brothers so that all inherit in equal shares the third originally set aside for the half-brothers. On a third case of this kind cf. Ḥanāyta.

The most important points of difference among the maḏhdhib, including the early legists, are the following. It is unanimously agreed that an unbeliever cannot inherit from a Muslim nor a Muslim from an unbeliever, but ʿAbd al-Muṣayyib and Ibn ʿAbī al-Naḵḫaṭi recognize the right to inherit in the latter case. Unbelievers who belong to different religions cannot inherit from one another according to Mālik and Ibn Ḥanbal, but they can according to Abū Ḥanifa and al-Shāfiʿi. There are three views regarding ability to inherit from the muṭawwīd according to Mālik, al-Shāfiʿi and Ibn Ḥanbal, his whole estate goes to the state treasury; according to Abū ʿAbd al-Muṣayyib and al-Shāfiʿi it goes to his Muslim heirs; according to Abū Ḥanifa what he has made while a Muslim goes to his Muslim heirs, but what he made after his apostasy goes to the treasury. If a legator has been deliberately (with ʿamal) and illegally slain, his slayer, it is unanimously agreed, is excluded from inheriting. Abū Ḥanifa, al-Shāfiʿi and Ibn Ḥanbal, but not Mālik, also exclude one who has killed him without design (with ḥaṣaṣ; q. v.). One who is a slave to some degree can, according to Abū Ḥanifa, Mālik and al-Shāfiʿi, neither inherit nor bequest; according to ʿAbd b. al-Muṣayyib the maternal uncle inherits along with the daughters. The relationship of ʿaḏḥāb, which is produced by some one attaching himself to the tribe (usually on the adoption of Islam by a non-Arab; cf. above, sect. 5), and which results in the patron becoming surety for the ḍīya (q.v.) of the client, does not, according to the usual view, give any right to inherit. Abū Ḥanifa al-Naḵkhah, and Abū Ḥanifa take the opposite view but hold but it may be dissolved at any time by either side so long as the patron has not paid a ḍīya for his client. The paternal grandmother is not excluded from the succession by the father, according to Ibn Ḥanbal only; in his view, in this case she inherits a sixth either alone or shared equally, with the mother. Among female ascendants, according to Mālik, only the mothers of the two grandmothers inherit, likewise their mothers and so on, but according to Abū Ḥanifa also the mothers of all male ascendants and their mothers again, and so on; both views are quoted by al-Shāfiʿi, but the latter is best known and has established itself in the maḏhdhib. According to Mālik and al-Shāfiʿi, the female ascendants on the father's and mother's side share in equal portions the sixth allotted to the grandmother, who is nearer of the two to the legator. According to Abū Ḥanifa, however, the nearer female ascendant on the father's side excludes the remoter on the

and the remainder as quasi-dower, according to the more usual view; according to the other, the remainder goes to the issue. There are no legal relationships between an illegitimate child and his ascendants (including his mother and her relatives), only between him and his descendants; if there are none, the estate goes to the issue. In the special case of the so-called  

chherhat (cf. above 6 d), there is no divergence from the general principles. — On the whole the 2nd law of inheritance represents an independent systematisation of the common principles found in the Koran and Tradition but diverging further from the old Arab pre-Islamic principles; whether and how far it the Sunni system already presupposes (as has been proved by the Zaidis; cf. Bergsträsser, O. J. Z., vol. xxxv, p. 124) has not yet been investigated.

6. On the law of the 2nd Zaidis of Streitmann, ibid., vol. xii, p. 52.

5. The most important peculiarity of the law of inheritance among the Kharijij Islaami is the following: the paternal grandfather inherits a quota-hair a sixth of the estate if there are descendants of the legatee; otherwise he inherits as apate, thus excluding the brothers, just as he himself is excluded by the father. The grandmother is exclusively excluded by the mother. Female descendants, like husband or wife, have no right to the residuum. Maumummin is content with rights of inheritance; freedmen, negroes, Abyssinians or Nubians cannot inherit from another if there are no other heirs (cf. above, sect. 5). If there are no heirs at all, the estate is given away in charity. The special case of the so-called  

chhekhra is settled as among the Shi'ites (cf. above 6 d). — The independence of this system on the Sunni is apparent.

9. The law of inheritance, as a branch of family law and possessing a peculiarly religious character, is a very full-rigour in the Koran, has always been one of the chapters of Muslim law, most carefully observed in practice (cf. ibid., and MABL.) At the long run it must lead inevitably to the splitting up of even the largest estates, various endeavours have been made to avoid this injustice, but which was considered unavoidable. A plan, frequently adopted, was to constitute a considerable portion of the estate religious endowments (cf. above, sect. 9). As the number of the tribe of Taimum which supplied all agents to the Kharijij movement. His father was called  

Abu Talib. His brothers  

Uwais b. Umayya had been one of the instigators of the Kharijij movement of secession at the battle of Siffin: he himself had taken part in the movement and had fought against the Caliph Á'li at the Nahawand (58 a.) after this defeat he gave up all political activity although, like his brother, he remained faithful to his old opinion; but he declared himself against armed insurrection, political assassination (karbala) and the participation of women in the Kharijij movement. These moderate views, which Mirdas retained till the end of the caliphate of Mawya and which caused the restorers to class him among the  

fashoda (quainters) of the Kharijij, made him the most remarkable when he came out openly and actively against the excesses of the governor  

Abu Yusuf, ibn Mubarak, ibn Ziyad, in his repression of the Kharijij. A woman named  

Abdulladh or  

Aluladh (the latter form, given by Ibn al-Madhir from al-Baladhuri, seems to be wrong) had been cruelly martyred by the governor. Mirdas's indignation was so aroused that he left Basra with 20 of his followers and went to al-Awja on the Fars frontier, where he held out for a long time without committing any of those acts of fanaticism usual among the Kharijij and confined himself to imposing a levy equal in value to the position.
"(laya) which was legally due to him and his companions (to A.-R.). 'Umarid-dah b. Zayd sent against Mirdas the Khilafah chief Abu-l 'Abbas b. Zura (this is the best authenticated form; al-Ya'fur in the first of the two versions which he quotes has Ibn 'Abbas al-Thumawi: Abu 'Abbas b. Zura in the head of the text of 3,000 men. They met near a village called Aikan (or Midya, according to a verse quoted by Yakhz, 4, 712-713) but the Khilafah, in spite of their great inferior number, defeated him. In the following year, a second expedition of 4,000 men under the Tanami 'Ababa b. Abda was organized by Ibn Zayd but he found the Khilafah encamped near the town of Dhabba. It was a Friday and the two parties agreed to finish their prayers before fighting. But the government troops, breaking the oath that they had sworn, fell upon the Khilafah while they were still praying and massacred them. Mirdas's head was cut off and taken to Ibn Zayd.

This episode, significant in itself, provoked a tremendous reaction throughout the realm in view of the same which the piety and moderation of Mirdas had brought him. His death was promptly avenged by 'Abda b. Ikhlaq, who was later to become one of the leaders of the 'Abdah rising, and it was in the same year of Mirdas that the Khilafah rebelled again on the death of the Caliph Yazid. The baniwa and death of Mirdas were sung by several poets, notably the famous imam b. Hisham (q.v.) whose memory is cherished to this day.

The bibliography given in the article, however, is not completely accurate. It wrongly attributes it to the Anakhs (Mic) and does not even mention Mirdas. — Cf. also Wellhausen, Die Koranredaktion (1880: G., G., Gh., philhist. KL, N. J. V. 2, 1901), p. 25-27. (G. Levi-Dezza VI).

MIRADSIDS, an Arab dynasty in Syria. The Miradsids took their name from the leader of the Banu al-Asad tribe of the Khilafah, Sulaym b. Mirdas. We know nothing of Mirdas himself. On Sulaym cf. the article and on his successor Sulaym al-Daws, the art; for the other members of the dynasty of YAM.

In the beginning of the fifth (eleventh) century the Khilafah migrated from the Irak to the region of Aleppo. In 414 (1023) their leader Sulaym took the town. The dynasty, at first so strong and ancient, became to feel that its last representative Sulaym exchanged the town in 476 (1083) in spite of his brothers' protest for a few smaller towns with the then powerful Banu Chinah in the Euphrates valley.

The importance of the Miradsids, the second last Arab ruling family of Syria, lies in the fact that they successfully defended the northern province of Aleppo, by arms and policy against the Byzantines and Turks. Lanz-Hofer gives the genealogy in his Muhammedan Dynasties (London, 1894: Sulaym al-Daws Nisal 3 (2) Shaib 4) also son of Sulaym and Resha Saddam al-Daws, Muhammad (4) also had some Shaib and Wathilib.

Bibliography: given in the article.

(M. Sobirin)
minutes each day. It is said to be one and half times the size of the earth.

Astrologers call Mars al-Naṣṣ al-ʿAlāʾi, the minor misfortune. It is the planet, which next to Saturn is credited with the most ominous omens and effects, war, revolutions, death, configuration etc. The character of those born under Mars is in keeping with this.

MIRZA or MIRZÉ, a Persian title, from Mard-nāma or Andar-nāda, and originally meaning "born of prince" (cf. Mard-nāma and Farsag-nāda, which occur in Sa'dī etc.). The title, in addition to bearing its original significance, was also given to noblemen and others of good birth, thus corresponding to the Turkish Ağā. Since the time of Nādir Shāh's conquest of India it has been further applied to educated men outside of the class of mulla or "alim." In modern times the title is placed after the name of a prince, and before the name of other persons bearing it: e.g. Hūsain Mirzā Princive Hūsain," whereas Mīrza Hūsain is practically equivalent to "Mr. Hūsain" (R. L Levy).

MIRZAPUR, a district (and town) in India in the Benares division of the Central Provinces: area 3,240 square miles. The population is nearly 1,160,000 of whom barely 7% are Muslims. The latter show a tendency to increase in proportion to the Hindus, owing to their greater vitality, containing as they do a smaller proportion of the very poor. The district is, however, a stronghold of Hindism, and Islam makes little progress by conversion. Nothing is known of the early history of the district. It was occupied by Rājdūt in the eleventh century A.D. and in the next century passed into the power of the Muslim rulers of Rājdūt. Down to the Moghul conquest, the district played an important part in the military history of India, as it contained the great stronghold of Čūnār which guarded the gateway of the east.

At Rājdūt near Allahābād is the tomb of a Muslim martyr, called Sayyid Ashāfī Ābd o, which is a place of pilgrimage. Near the gateway of the fort of Fīrāūgāh is shown the tomb of Sayyid Zein Ābd o, the saint who miraculously took the stronghold for Sher Shāh. The town of Čūnār contains two mosques at one of which are preserved garments said to have belonged to Hasān and Husain. The tomb of the Afghan saint Shāh Khāzīn, Sulaymān (1545-1606) with those of his family forms a group of buildings of architectural interest. His festival is celebrated on the 17th-21st Djamād I.

Mirzā Pūr city is the capital of the district of the same name. It has a population of 50,000 of whom six are Muslims. It is a Moghul foundation dating from late in the xviii cent.; in the xviii and early xix centuries it attained great prosperity as a trading centre, being at the junction of important roads and at the highest point on the Ganges reached by the larger ships. In 1854, the opening of the East India Railway left the town isolated; since then it has declined, as the railway now carries the trade with which it used to deal.

Among the mosques is one founded in the middle of the xixth century by a Muslim lady named Gāṅgā Bihā, who also left funds to build a sarai. The town contains the celebrated Hindū shrine of Vindhyavāsa, much visited by pilgrims and formerly held in special veneration by Thāgā.

(M. J. ALLAN)

MIRZĀ TAḴĪ KHĀN, Amir-i Nāḵīum or Amir-i Kuhīr, was born at Farāhān of humble parents, his father having been first the cook and then the steward of the Kāriḍ Khān, who ended his life as the first minister of Muhammad Shāh Kājūr (1834-1848). In 1829, as a young memial, Taḵī Khān accompanied the Persian Commander-in-Chief on the Mission which was sent to St. Petersburg after the murder at ʿĪrān of the Russian ambassador Grebiskof. On his return to Persia after this visit to Europe, he was promoted to be a māzīr or writer, and subsequently was advanced to the rank of Khān. By the time his master and patron died the young official had achieved distinction enough to be made wāris responsible for the army in ʿAḏharbājān. Still further honours came, when, during the negotiations at Erzerum for the settling of outstanding disputes between Persia and Turkey, he was sent to represent his own country in place of the Murād al-Dawla, who had fallen ill after his appointment as plenipotentiary. On the conclusion of the Treaty of Erzerum, Mirzā Taḵī returned to ʿĪrān and was then commissioned to accompany the young Wāḥid ʿAbī, Nādir-i-Fārābī, Minister to Tabrīz, to which the latter was sent as governor of ʿAḏharbājān. In 1848, Taḵī Khān's master became Shāh, and on the way back to ʿĪrān he appointed him his lieutenant to the post of Prime Minister. It is said that either modesty or prudence caused him to refuse the title of Āḏar Shāh which is bestowed on the holders of the office, but, in any event, he continued himself with the less imposing one of Amir-i Nāḵīum, which he had held in ʿAḏharbājān as Commander-in-Chief. As a mark of the royal favour he was given the sister of the Shāh in marriage, and found in her a wife who displayed the utmost devotion to him for the short remainder of his life.

In office he had the rare distinction in Persia of being amenable to bribery, and he had a regard for his country which led him to resent interference from foreign powers in its affairs. Moreover, recognizing the reactionary influence of the "māzīr," he attempted in such ways as were open to him to check their activities. He reorganised the army in spite of attempts by his enemies to rouse certain sections of the troops into revolt against him, he made efforts to improve the fiscal system of the country and he had some success in making the provincial treasuries self-supporting. Trade, both internal and external, was encouraged by him, and it was he that equipped ʿĪrān with the fine bazaars which it now has. As has been indicated, his period of office was not a peaceful one. In 1850 occurred the execution of the "Bābī" (q.v.) at Tabrīz, the revolt of the Hábitā at Yazd and Zīljān and the rebellion of the "Seven (Bābī) Martyrs" at ʿĪrān. The rising were put down with great cruelty, and in consequence an attempt was made by the Hábitā on the life of the Amir-i Nāḵīum, whom they regarded as responsible. Almost from the begin-
ning of his period of office he had aroused by his influence over the Shâh the jealousy of the latter’s mother and of possible rivals, and their secret attacks were helped by his overbearing character. In November 1851 his enemies succeeded in securing his discardment, after which the ill-judged attempt of the Russian ambassador to give the fallen minister his protection roused the anger of the Shâh who ordered him to retire in disgrace to Karshin. There, on January 9, 1852, he met his death at the hands of the sovereign’s farrakhlâgh.

MISÂHA (science of measurement, plane and solid geometry) is the name given by the Arabs to the science of comparing magnitudes and its methods. In the wider sense it covers the measurement of all things which can or need be measured, mainly lengths, areas, volumes, weights and numbers; in particular however, the ilm abînâ aims at geometry, with definitions of solids and geometrical figures as well as the laying down of rules for the calculation of lengths, areas and volumes of the different figures in elementary plane and solid geometry. The conception misâha therefore includes only a portion of what we call measurement in the wider sense, or practical or technical geometry (i.e. the measurement of things as their length, breadth and volume) in particular it excludes measurement in the narrow sense, geometry. The Arabs possessed special treatises dealing with the problems of geometry. They therefore make the same distinction between theoretical and applied measurement, which had developed among the Greeks from the time of Aristotle and is most clearly expressed by Hero in his Metrica and Dioptra.

The definitions given by the Arabs themselves of the conception misâha are very varied. Some authors give a very wide one (e.g. al-Umaw): *Measurement consists in ascertaining an unknown quantity by means of a known number, which gives the amount of the unknown quantity in units of the quantity used for measuring*; most of them mean by it the measurement of length, area and volume. Al-Shâhwan makes a clear distinction between direct measurement, *the test of coincidence* (qadsi), and indirect measurement by calculating from certain formulas.

We find treatises on geometry throughout the whole period in which the Arabs acted as the transmitters of the ancient culture with which they had become acquainted, from the earliest beginnings of their literary activity at the beginning of the ninth century A.D. to the decline of Arab mathematics about 1600. The purpose of such works was to give the future surveyor, architect or builder the necessary equipment, the theoretical foundation for his profession. Three groups of these treatises can be distinguished according to their method of treatment:

a. those which contain examples, completely worked out, illustrating the process of calculation (e.g. that of al-Baghdâdî);

b. those which only contain a series of fully worked out problems, and are a kind of exercise book (e.g. that of Abû Bakr).

On the method of exposition in these works it should be noted that we cannot of course speak of mathematical formulae in the sense of the word among the Arabs. They, especially the eastern Arabs, had no language of mathematical formulae; it was only later among the western Arabs and probably only in the field of algebra that a technical language was developed. The rules for measuring were always written out fully in words, sometimes even the figures occurring in the text.

The matter of the works on misâha, especially the larger ones, as a rule comprises introductory remarks, rules for calculating areas and volumes and the most important lengths found on them, and occasionally also practical exercises.

A. Introductory remarks. These are as a rule

1. Definition of the term misâha.

2. Explanation, description and systematic classification of the geometrical figures to be discussed.

3. Definition and list of the most common units of measurement.

B. Rules for calculation.

1. Plane surfaces (and the lengths occurring on them).

1. Quadrilaterals (square, rectangle, rhombus, trapezium, trapezoid, quadrilateral with salient angles).

2. Triangles (equilateral, isosceles, scalene, right angled, acute-angled and obtuse-angled).

3. Polygons (regular, irregular, *drumshaped figure* (nushtâib), *hollow figure* (madâ战绩ef) *stapleshaped figure* (nasudrâfaj).

*Drumshaped* and *hollow* figures are formed by the combination of two congruent trapeziums in such a way that in the former the shorter, in the latter the longer parallel sides coincide; a number of varieties are distinguished. The stapleshaped figure is formed by placing together a number of rectangles of the same length but different breadths, in which the proportions of the breadths form an arithmetical progression.

4. Circle, segments of a circle (semi-circle, segment, sector, circumference) and related areas (crescent or crescent *lîdâla*), egg-shape, bean-or lentil-shaped, or oval figures.

The crescent is formed by the subtraction of two segments of circles of different radius with a common chord, egg-shape and bean-shape by the addition of two congruous segments which in the egg-shape are less, in the bean-shape greater than the semi-circle. The area of the oval (ellipses) is given by Savasorda as $\frac{1}{4}(a + b)^{2} \pi$.

II. Solids (and the areas, especially superfi cies, and lengths that occur on them).

1. Prism (ordinary straight and oblique prism, square column, rectangular column, dice, triangular prism, obliquely cut prism, *corpus simile domini* in Abî Bakr as translated by Gerard of Cremona).

2. Cylinder.
3. Pyramids (straight and oblique pyramids, sections of pyramids).
4. Cones (straight and oblique cone, section of cone).
5. Sphere and section of a sphere, hemisphere, segment, sector and zone.
6. Regular and semi-regular bodies (the five Platonic and two Archimedean are treated at any length only in al-Kashi).
7. Other bodies (cylindrical vault, and pendants; the only difference between them is the length) hollow dome, roof-shape, round vessel (kufūr), wreaths and discs (hollow cylinder), terrace-shaped figures.

C. Practical exercises.

These are generally speaking rare in works on Misâha. We frequently find exercises in dividing fields modelled on Hero and Euclid. Savasorda has a number of exercises on fields on slopes, in hollows and on summits and on the calculation of the heights of hills; al-Hanbali has some on the measurement of inaccessible pieces of ground, the depth of wells and breadth of rivers. Of other problems some may be mentioned; for example, the calculation of the number of pieces of stone or bricks required to build a house or a roof, the ascertainment of the height of a wall.

It must not however be supposed that the subject matter as above described is fully contained in any work on Misâha. The individual works differ in subject matter according to the inclinations and abilities of their authors, just as our text-books of geometry do at the present day. We find works planned on a very comprehensive scale (by al-Hanbali and al-Kashi), alongside of very brief ones, often dealing only with portions of the subject (e.g. the anonymous Berlin MS. No. 5954 which contains only formulae for calculating plane surfaces), or even only a single problem (like the treatise by al-Shihabawi). We therefore often find exercises which are only put into works on geometry in order to show the author’s special knowledge or results of his research in a particular field.

Among remarkable examples of this kind are the insertion by Djamah al-Kashi in a work on Misâha of a treatise of regular and some semi-regular bodies (the calculation worked out by him in sexagesimal fractions to the fifth is so accurate that it only begins to differ from the correct figure in the tenth decimal place); the formulae for the area of a surface given by al-Imawī F = V \times \pi \times r^2 for trapezoids with a right angle and his improvement of Hero’s formulae for the segments of a circle; the formula for an arc given by al-Kashi; the formula \( s^2 = \frac{a}{2} \sqrt{b(a - b)} \tau \), where \( \tau \) is the diameter of the circle around a regular polygon of \( n \) sides of length \( a \) given by the same author and al-Baghâdî (the same formula is found in the works of the Hindus and attributed to the latter to the Hindus; it is however, so far as we know, not found in any Hindu mathematical work yet published); also the application of algebra in geometry by Abû Bakr and Ibn al-Rammâh. The former uses the algebraical solution for problems of areas in order to show the application of equations of the first and second degree to the six cases distinguished by al-Khwarizmi; the latter uses combinatorial analysis to investigate the different possibilities of stating the problem.

The methods of calculating the volume are the same as we find among the Greeks and Egyptians. When it is not a question of a matter that has been taken over from them, in which case the formulae are directly adopted, the obtaining of results is purely inductive and empirical. Al-Karkhî for example for the volume of a sphere gives, in addition to the formula \( \frac{4}{3} \pi r^3 \), the method of obtaining which he says nothing, also \( \frac{2}{3} \frac{\pi r^3}{3} \), which he gets by comparing the weight of a cube of wax with the weight of a sphere, which is made out of the cube of wax and whose diameter is equal to the edge of the cube. Al-Baghâdî deals with a method of ascertaining the volume from the weight and specific gravity. Al-Kashi knows the method of immersion of Archimedes mentioned by Hero. The direct method of measuring the length of areas by laying a thread along them is still recommended as the most reliable by al-Karkhî and Bahâ’ al-Dîn. It is evident that such methods must lead to approximative results and formulae be approximations, the typical feature of practical geometry, continue to be used by the Arabs in measuring long after they obviously knew of their inaccuracy. Ibn Mannûthi criticizes the usual formulae for the area of a triangle \( \frac{\sqrt{2}}{2} (a + b + c) \frac{c}{2} \) and \( \frac{\sqrt{2}}{2} (a + b + c) \frac{c}{2} \); al-Baghâdî the formula for a quadrilateral \( \frac{1}{2} (a + c + d) \frac{1}{2} (b + d) \), which comes from the Egyptians.

The reasons for the long survival of such rules are partly that the formulae gave in practice quite useful results and partly that the practical men who were concerned with measurement in the exercise of their trade wanted easier to calculate rather than great mathematical accuracy and took no note of slight errors, especially if they thereby avoided calculations with roots. For similar reasons and in keeping with the traditional practice, almost all works of Misâha give no scientific geometrical proofs of the accuracy of the formulae they quote. Only the book of the Jew Al-‘Azmah, who may be reckoned among the western Arabs, gives logically worked-out proofs in any number; we occasionally find references to early mathematicians (especially Euclid) in Ibn al-Bannâ and Ibn al-Hanbali. Probably inspection was quite sufficient (Abd al-‘Aziz for example draws plane figures in a network of squares each of one unit and counts the squares and their parts within the area) or a simple demonstration in some form or a calculation to prove the correctness of the procedure, which was frequently illustrated also by examples completely worked out.

A further peculiarity of Arabic authors was to give formulae which agree completely in substance in different algebraical forms. The Berlin MS. No. 5954 gives for example for the calculation of the sections of the hypotenuse in the right-angled triangle the following formulae: \( s = \sqrt{a^2 + (c^2 - b^2)} \), \( s = \sqrt{a^2 + (b^2 + c^2)} \), \( s = \sqrt{a^2 + (c^2 + b^2)} \), \( s = \sqrt{a^2 + (b^2 + c^2)} \), \( s = \sqrt{a^2 + (c^2 + b^2)} \). This differentiation was probably only intended to give as many forms as possible of the relations between the known and unknown magnitudes so as to afford the practical man a choice of different correct formulae of which one might suit the special case better than another.

The sources of Arab geometry are to be sought among the Greeks and Hindus. The form and
substance of the rules are almost entirely Greek, especially in the older authors. Hero’s “elaborations” in particular, which in turn go back to Egypt, seem to have been the model for Arab works on geometry. To Egypt may be traced the preceding of a metrological section (found in many books on **misāḥa**), the problems on dividing fields, the formula for the treasiphi, the special name for the upper side of a quadrilateral (rūda’t al-wari‘a). Hindus are the values for \( \sqrt{4 \cdot \text{cd}} \), for the quadrilateral inscribed in a circle, the terms are, perpendicular from the summit of an arc and chord, the marking of lengths in Hindu figures, the use of algebra to solve geometrical problems (equations, method of double error, combinatorial analysis). The chief teachers were however the Greeks, whose achievements the Arabs generally speaking never surpassed, the requirements of practical measurement gave them to new problems and practical geometry remained down to quite modern times in commentary, the majority of the problems of which had been finally settled long ago by the Greeks.

The services of the Arabs to geometry lie less in the extension of the field by ascertaining new, hitherto unknown facts, although in the **misāḥa** works we do find a series of new and novel rules, than in their enrichment of this science by new methods of calculation and teaching and especially in their preserving the inheritance of the ancients and handing it down to the western world. Although Hero’s geometry first became known in northwestern Europe through Roman surveys, it was mainly the Arab sources which gave new life to this subject which had become stagnant in its old form. Arabic original works were made accessible to the west in Latin translations. Leonardo of Pisa in his *Pratica geometrica*, which remained a standard work for three centuries, depended closely on Sasanid works, who most probably owed a great deal to ‘Abū Bakr as there are striking similarities between the **liber embūdarum** and the **liber mensuratoriun**; down to late in the xvth century we continually come across writings on practical geometry, which in form and content show to what originals they go back.

**Bibliography**: a. Manuscripts: Arabic authors translated into Latin:
2. **Libror. Sasanidi abūsahnī** (author presumably Zaid Abū ‘Uthmān; \( \dagger 1052 \)); Suter, **Arabica**, 3, 6, fol. 776–777.
3. **Libror. abūsahnī** (author presumably Qasim Abū ‘Uthmān; \( \dagger 1057 \)); Suter, **Arabica**, 34, fol. 777–777.

**Gods 1728**, 1 and 1729.

**MIS‘AR b. MUHĀRILH** ABū DULAF AL-KHĀBAJĪ AL-YARARE, in Arabic poet who lived at the court of the Shāhīd Nūr II b. h. in Baghdad (301–331 = 913–944) and in 331–344 was sent by him to conduct a Chinese embassy back to their land and on his return visited India. He later gained the favour of the Khwarazmian vizier al-Salḥī al-Talākī (so al-Samī‘ al-Ashrāf, fol. 1679) Isābīl b. ‘Abd al-Dīn (c. 385–995). To him he devoted a long poem on the thieves’ dialect of the Banū Sāhin, which his patron so much admired that he himself wrote a commentary upon it (extracts in Thābitī, *Natūna*, ill. 176–194). The dates of his birth and death are nowhere exactly given. To his long journeys he alludes in verse quoted by Thābitī, *op. cit.,* ill. 174. The only authentic information has been preserved by the author of the *Filōr*: on p. 346 sqq., where al-‘ānār al- javāhirī is of course not to be translated as Elbegi (note 151) *there was a ramant current* but (she was a great traveller). He is given the account of a temple in Mukān said to be of gold, and on p. 350, sqq., a description of the capital of China. A comparison of these with the corresponding account of his journey attributed to Abū Dulaf in *Yāqūt, Muḥqim*, ill. 457 sqq., shows that the latter is a late falsification (cf. Marquart in the *Forschungen* for Sasan, p. 252). This is confirmed by an internal criticism of his statements. The first country to be entered after leaving Muslim territory is, he
MISSBAH. [See SURBA.]

MISKIN, poor, a loanword which has shown remarkable vitality. It is a name for a class between those enjoying full citizenship and slaves; according to L. W. King; freemen who do not belong to the ruling race. In the meaning "poor" it has passed into Aramaic (messha{n}), Hebrew (mishken), North Arabic (miskin or, against analogy, mizkin), into Southern Arabic and Ethiopic (miskih). It has passed from Arabic into Italian as messchina and into French as messin. In Arabic, on the analogy of the form miska, it is usually of common gender but the feminine form miskzin is also found with plural miskinot. Muhammad often uses the word in the Koran, the list of persons whom it was a duty for believers to support. As in Sura ix. 60 it is found alongside of "fakara", commentators and jurists have felt that some distinction must be made between the two. They usually explain mishkin as needy, but not absolutely without possessions like the fakara, and refer to Sura xviii. 78, where there is a reference to poor people who possess a ship among them. How uncertain this is, is however evident from the fact that the Miskins in opposition to the Sindhis take the other view and regard the miskhin as the most needy; cf also the various definitions collected by Lane. Zohr Masaheb in Sura xc. 16 does not help us. From the meaning "poor" gradually developed that of "base, miserable", also in the moral sense, e.g. Ibn Sa'd, iii. 6 ult., where Abu Sufyan's Hind is called al-Miskin. On the other hand, the word can mean "humble" as in the words attributed to Muhammad: *Let me live as a mishtin and die as a mishtin and include me among the mishteena*.

(Fe. Buhl)

MISR, a proper name denoting the eponym of Egypt, the ancestor of the Berbers and the Copts. In accordance with the Biblical genealogy (Genesis x. 14 sq.), Misr is called the son of Ham, the son of Nuh. The Biblical origin of the pedigree appears clearly in the form Misra'm or Misram (cf. Hebrew Mista'am) which is found side by side with Misr. In some genealogies between Ham and Misr there is inserted Balsar, a name of which the origin is unknown to me. There exists, however, also quite a different genealogy, according to which Misyam is a son of Tabpid, one of the early heroes (djahhira), who ruled Egypt after the Deluge.

i, a proper name denoting Egypt as a country. It may be supposed that Misr was already the name of Egypt among the Arabs in pre-Islamic times as it is used in the Koran (e.g. sura x. 87; xii. 21, 100; xiii. 30), whereas the Biblical form Misiuin does not occur. It has remained the Arabic name of Egypt (q.v.) up to the present day.

ii, a proper name denoting the capital of Egypt, i.e. at present and since its foundation Cairo, which with its full name is called Misr al-Khires (cf. Cairo). Misr occurs, however, already as the name of the city or the cities situated south-west of later Cairo; when the name had been transferred to this city, the name Misr al-Khurram (Old Misr) clung to the old settlement, situated between the mosque of 'Amr and the right bank of the Nile (cf. Bâitar, Babylion, p. 16).

In the period between the Arab conquest and the foundation of Cairo the name Misr is regularly applied to the settlement just mentioned (Ibn Khurdadhbih, B.G.A., vi. 247, 251; Ibn Rostom, B.G.A., vi. 115 sq.; al-Hakim, Fawâ'id al-Khams, bab 13; Abu Daud, al-Mas'udi, bab 74). We are, however, not able to decide whether this is the part (Babylon, Fustat or the Tulin citadel) is especially denoted by it. It may be supposed that the combination of Fustat Misr "Fustat in Egypt" (cf. e.g. Mas'udi, Tabari, B.G.A., viii. 335; Makrizi, Kha'if, i. 285) opposes Fustat Misr to and Misr forms the link between the application of the name Misr to the country and to the capital. After the conquest of Egypt by the Musulins there were two settlements only on the right bank of the Nile where it divides, viz. Babylon and Fustat; the papyri never mention Misr as the name of either of these settlements. Yet in the latter part of the seventh century a.d. the application of the name Misr to one or to the other or to both
must have begun, as is attested by John of Nikiu who at least once uses Misis as the name of a city, where he speaks of "the gates of Misis" (p. 25). To one passage Misis appears as the name of the country (p. 201, 209).

The statement that the name Misis as the name of a town arose after the Muslim conquest only, is in opposition to Butler, who maintains that at least since the age of Diocletian three existed on the right bank of the Nile, to the South of the later Babylon, a city called Misis (cf. Butler, Babylon of Egypt, p. 151). I do not believe that the tradition concerning the Arab conquest of Egypt do not give the slightest credit to the existence of a city bearing the name of Misis, Butler’s reference to the Synaxarion proves nothing, as this work was composed many centuries after the conquest. — The Coptic name of Babylon was Kerma.

d. a common noun, denoting a town: it is used especially in connection with the capitals of the provinces in the times of the conquers, e.g. in the tradition: "The amurār will be accused at your hands" (Abû Dawîl, Dhatîl Íjâbah, b. 28). Baser and Kûs are among the "two misīs" (ibid, Bâbûlî, Dbâhî, b. 13; Yâ'ârî, Mušqâ‘ân, iv. 454). Further, any town may be called misīs (e.g. Bâhûlî, Dhadî, b. 2; Ašârâ‘, b. 15; Yâ‘azî, b. 25; Tîrmîdî, Nîshâb, b. 32 etc.). This misīs is a genuine Semitic word, cf. Līlîa di‘-Arab, s. v. and the Jewish-Aramitic misîr, mesâ‘anâ, which have the same meaning, viz. that of a house or a field as an exactly delineated and demarcated territory (cf. J. Levy, Chaldeisches Wörterbuch, b. n. Neubrandenburgsches Wörterbuch).

It may be supposed that the geographical name Misis (cf. above, a.–c.) comes from the same root and has originally a meaning akin to that of the common noun.

(A. J. Wernstedt)

MISRA‘, a term in Arabic, properly applied to a hemistich or half line (but) the first hemistich is called ma‘nâ and the second sa‘ir. Each has two, three, or four feet, sa‘ir or ma‘nâ.

The last foot of the first hemistich is called ‘asra‘ and that of the second sa‘ir. As a general rule, and in the first verse of a poem, the foot should have the same measure (ma‘nâ) and rhyme (sa‘ir) as the last foot.

(Mer. Men Chresten)

MISRIS, [See Mısır,] arab. Al-Maṣṣīṣ, a town in Cilicia on the Euphrates.

In antiquity it was called Misis a name, which (like that of Mešk in the Lycician passes) is derived from the cult of the legendary seer Mopsos (cf. Meyer, Griech. d. Altert., ii. 2, § 483). In ancient times, the town was chiefly famous for its bishop Theodorus (d. 423), the teacher of Nestorius and friend of the suffering bishop and inventor of the Armenian alphabet.

The emperor Heraclius is said to have removed the inhabitants and laid waste the district between Antioc and Mopsuestia on the advance of the Arabs, in order to create a desert zone between them (al-Tabarî, i. 2366; al-Baladhîrî, ed. de Goeje, p. 163), between the Arab-Balkh (ed. of Misis). Under the same name all the towns taken by the Arabs from the Maṣṣīṣ to the fourth Armenia (Malatya) are said to have been left unfortified and uninhabited as a result of the invades of the Mardaites (Theoph., ed. de Boor, i. 363, 37). According to Ibn al-Khaṭṭâb al-Azdî (in al-Baladhîrî, p. 164), the Arabs conquered al-Maṣṣīṣ and Tarzûs under Abu ‘Ubaydah, according to others under Mâsarî b. Mârîk, who was sent by Abu and who thereafter advanced as far as Samtî (in 16 = 637; Castani, Annali dell’ Islam, iii. 805, 311). Al-Maṣṣīṣ was no longer in the possession of the Byzantine forces up to Ajikulayî in 31 (651–652) on his return from Darawiyata (Daghistan in Farsîya) (al-Baladhîrî, p. 164 sq.). After the Syrian rebellion against ‘Abd al-Malik, the Vizier Constantine IV Pogonatis in 65 (684–685) advanced against the town and regained it (al-Ya‘rusî, ed. Hontama, ii. 321). Yâ‘ârî b. al-Khakâm in 77 marched against Mardî al-Shām between Malatya and Al-Maṣṣīṣ (al-Ya‘rusî, ii. 337). It was only in 81 (703) that ‘Abd al-Malik’s son ‘Abd al-Azîz retook the town and had the citadel rebuilt on its old foundations (Baladharî, p. 165; Ya‘rusî, ii. 466; Wâdî al-Tubzî, ii. 521).
1127: Ibn al-Abbás, ed. W. C. K. Dietrich, pp. 272, 273; On the site of a heathen temple he built a large mosque which far surpassed the mosque of Umar in size. When 'Abd Allah b. His was governor of Maghrib (i.e. 211 = 826), it was enlarged by al-Mamūn. Al-Mansūr increased the garrison to 1,000 men and settled in the town the inhabitants of al-Khuṣās, Persians, Slavs and Christians. Arabs (Nabataeans), whom Marsûn had transplanted thither (see above), and gave them allotments of land. It is probably that to the same event the story refers that allāh b. ʿAbd Allah b. ʿAbd al-Malik died in 1017 (612/613). His successor was 'Abd al-Malik b. Maslama, who died in 1021 (615). al-Mansūr died in 1036 (631).

On 22 February 975 E. A. D. attacked the town of al-Mansūr led by itself by al-Mansūr. The garrison was increased to 1,000 men and settled in the town the inhabitants of al-Khuṣās, Persians, Slavs and Christians. Arabs (Nabataeans), whom Marsûn had transplanted thither (see above), and gave them allotments of land. It is probably that to the same event the story refers that allāh b. ʿAbd Allah b. ʿAbd al-Malik died in 1017 (612/613). His successor was 'Abd al-Malik b. Maslama, who died in 1021 (615). al-Mansūr died in 1036 (631).

On 22 February 975 E. A. D. attacked the town of al-Mansūr led by itself by al-Mansūr. The garrison was increased to 1,000 men and settled in the town the inhabitants of al-Khuṣās, Persians, Slavs and Christians. Bonn., p. 503; Vasilev, Vostatyia, 10 Anfri, in Poleh izv. Bel. fac. imp. S.-Pth. Univ., east 1900, p. 88 sq., note 4), al-Mu'tasim bin 'Abd in the following year attacked Ammâria; his general Bâghr commanded a part of the army which included the Ma'ṣûqa contingents (Mich. Syr., iii. 96). In 1245 (859) the town was again visited by an earthquake which destroyed many places in Syria, Mesopotamia and Cilicia (al-Yâhûdi, iii. 1449). The Caliph al-Mu'tasim after restoring order in the Thughlîr al-Shamîya (251 = 900) returned from al-Maṣûqa via Fândûk al-Mansûr, the Eski-kanda and Baghna to Antâkiya, Hulab and al-Raâka (al-Tâbarî, iii. 3158-2200; al-Fândûk, a place near the Antâkiya near al-Mas'ûqa; Yahkîl, iii. 918; Saâf al-Dîn, Marâqîjî, ii. 365).

When in 1292 (904-905) the Byzantines and the people of Marînî and Tarusât held the town for the Ayyubids they were defeated and driven out by the突如其来 bin 'Abî Shâhîb al-Abî an-Nu'âwarî (al-Tâbarî, iii. 3231; ibn-al-Athâr, vii. 37); Saâf al-Dîn, Zaf. inn. 8, fac. imp. S.-Pth. Univ., east 1902, p. 154, note 2).

In 1344 (955-956) the Hamdânid Saif al-Dawla was visited by horsemen from the frontier towns of Tarusât, Adana and al-Maṣûqa and with them an envoy from the Greek king who concluded a truce with him (al-Nu'âwarî and al-Ma'mûn al-Dîn in Freytag, E.D.M.G., i., p. 192; ibn al-Mu'âsir, Alâî, Dodâl al-Dawla al-Maṣûqa, transl. Vasilev, op. cit., Pruschen, p. 56). Defeated by Leo Phocas in 349 (960) in the pass of Kûbûl, Saif al-Dawla spent the night in al-Hâfûz and returned to Halâb via al-Ma'lûka (al-Abî an-Nu'âwarî in Freytag, op. cit., p. 196; Yahkîl bin Sa'd, Tu'rîkî, ed. Kračkovskij-Vasilev, in Patrolog. Orient., iii. 1924, p. 275).

In 352 the emperor Nicephorus took Adana, the inhabitants of which fled to al-Maṣûqa, and annexed the Domestica John Trifimice (Vânis bi. al-Shiminâshî, al-Dumâtî) against this town. They fought for several days, but had to withdraw as his supplies were running short, and after laying waste the country round burned the adjoining al-Ma'lûka (Ma'ṣûqa) at the mouth of the Djâlân (Yahkîl bin Sa'd, op. cit., p. 703 sq.). The emperor himself came again in DJi T-1/2ka 333 (Nov. 964) to the marches (al-Thughlîr) and besieged al-Maṣûqa for over 50 days but had again to abandon the siege owing to shortage of supplies and returned to winter in Karmania. Finally the town was stormed by John Tâmasçâ (Arm. Knîf Žann) on Thursday the 11th Râjah 354 (July 13, 965). The inhabitants set it on fire and fled to Kafarsâ:b. After a desperate struggle on the bridge between the two towns the Greeks took this suburb also and carried off all the inhabitants and captives (Yahkîl bin Sa'd, op. cit., p. 793; ibn al-Mu'âsir, vi. 408-411; Abu 'l-Fâdil, Arm. Mard., ed. Reliable, ii. 482 sq.; Mich. Syr., iii. 128; Elias Nisâbîn, ed. Brooks, p. 218; transl. p. 106; Georg. Cedren., ed. Bonn, ii. 362; Leen Diakon, ed. Bonn, p. 39 sq.; Matti'êl Uluhayce, ed. Dâlâerîraz in Rev. hist. evr., Doum. Arm., i. 3; Stepân Aoûtik of Taron, Armen. Gëzic, transl. H. Gulbert and A. Burchardt, Leipzig 1917, p. 134, 3). They were, to the number of 200,000 or 300,000, it is said, led past the gates of Tarusât, which at that time was besieged by the emperor's brother Leo, to terrify the people of the town (ibn Shîhâ, Râmûl al-Maṣûqa, in Freytag, Z.D.M.G., Elias Nisâbîn, op. cit.). The gates of Tarusât and of al-Maṣûqa were gilded and taken as trophies to Constantiâpolis, where one set was put in the citadel and the others on the wall of the Golden Gate (Georg. Cedren., op. cit., 163).

The town remained for over a century in the hands of the Byzantines till 1292 when the Emperor Bâghr formed an alliance with the Sultan of the Andronicus, the people of Marînî and Tarusât held the town for the Ayyubids (Mich. Syr., iii. 96) at least Kupolopatidis (Mich. Attal., Bonn ed., p. 301) and whose ephemeral kingdom comprised the land from Tarusât to Malayyûn, Adana and Antâkiya, held al-Maṣûqa (Mich. Syr., loc. cit.); Laurent, Byzance et Antioche sous la couronne Phocaïque, Rev. des H. Arm., i., 1839, p. 1-72). Shortly before the arrival of the Crusaders, the Seljûk Turks took Tarusât, al-Maṣûqa, Ayîn Zarba and the other towns of Cilicia (Mich. Syr., iii. 179). About the end of Syr. 1097 the Franks under Tancred, who had been invited thither from Lombardy by Othon III, took the town which was stormed after a day's siege; the inhabitants were slain and rich booty fell into the hands of the victor (Albert. Avenius, in 15 sq., in Migne, Patrof. Lat., cxxv, col. 1456 sq.; Ralph. Cadom., Gesa Tanceredi, c. 39 sq.). William of Tyre describes al-Maṣûqa on this occasion (ii. 31, in Migne, Patrof. Lat., ccl. 2065; En passant Mammatur una de nobilitaturn sibiurum provinciarum civitatum, muro at multorum insulae igni, rei aequo et globa atque atque etiam prorsus commodis?; Count Baldwin, who had quarrelled with Tancred, followed him along with the admiral Winius of Boulogne and encamped in a wood near the Djâlân bridge; Winius left him there and went with his fleet to al-Ladikîya, while the two rivals had a desperate fight, after which Baldwin withdrew to the east (Albert. Avenius, iii. 15. 59, in Migne, op. cit., col. 1445, 472). Tancred followed him, after he had imposed on the city *plus patrosum quam principis legem* (Ralf. Cadom., c. 44). The Byzantine general Tâkitios, who had joined the Crusaders to take over their conquests in name of the emperor, left them in the lurch in the beginning of Feb. 1098 at the siege of Antâkiya and ceased to demand the town of Tarusât (Turan), Mammatur Adedàs (Adana) (Raymond of Aguilers, in Bargus, Gesa del per Francos, Hanover 1611, p. 146 sq.). Bohemond only took possession of the towns of Tarusât, Ain Zarba and al-Maṣûqa in August (Will. of Tyre, ii. 2). After the town had again fallen to the Greeks for a period, Tancred again took it in 1101 (Rud. Cad., c. 145), but had to hand it over to Tarusât, Adana and Ain Zarba to Bohemond on condition that they return to captivity in 1103 (Will. of Tyre, ii. 2, in Migne, op. cit., col. 379). In the following year however, Longinius, Tarusât, Adana and Mâzûrwa were regained for Byzantium by the campaign of the general Monastrus (Anna Comna, Avestâs, ed. Reifferscheid, ii. 149, 3; who apparently did not recognize the identity of Mâzûrwa with Mâsoo
in which she mentions several times). In the treaty between Bohemund and the emperor Alexios of Sept. 1108 the town was promised to the former (Anna Comnena, op. cit., p. 218). Tancred having taken it in the preceding year with 10,000 men from the Byzantine general, the Armenian Aspicles (Anna Comnena, ii. 147). At this time, of the citizens of the town, one (probably Kafarbayla) was in ruins (Anna Comnena, op. cit.). Baldwin of Burg and Joscelin of Courtenay, who allied themselves against Tancred with Kogh Vassil of Kasitum, were supported by the latter with a detachment of 800 men and a body of Febekeks, who were stationed in al-Maṣṣaṣ as Greek mercenaries (Mattheos Urbyacott, transl. Dulaunay, p. 266 sq. = Rec. Hist. Creut., Doc. Arm., i. 865). The great earthquake of 1114 destroyed the town like many others in Cicilia and Syria (Smbat, in Docum. Arm., i. 614).

Under the Frankish patriarchate of Antioch, Mopsuestia-Mamistra was separated from the ecclesiastical province of Antioch and made an autocephalic metropolis (Michael Syrus, ill. 191); reconstructions of the Nativitas Antiochana of the Crusading period, MS. of Chalki (now in Leningrad, Russ. Publ. Libr., MS. Gr. 716, cf. Benekevich, Byz. Neupgreich. Jahrb., v., 1927, p. 33), note, ed. Papadopoulos-Kerameus, in Εαυτοκρ. Φιλολ. Εκδ. Ιλισσου, Constantinople, 1884, p. 65; "Μοσούστιασ ανακαινισάς τον Σωτήρα Ανακαινισάς σαι ενα γανθανόντας; cf. cod. Paris. suppl. gr. 1226, ed. Nau, R. O. C., 1909, p. 215; Vatic. gr. 1455, ed. Gelzer, Byz. Zeitschr., i, p. 250, No. 165 and pass.). The Bula Merguersian stretched (according to a work on the boundaries of the Antiophene diocese, ed. Papadopoulos-Kerameus, op. cit., p. 67) from Seleucia in Syria and Adana to the Mount Ararat (now Özrev or Kafarba), and to the Mount Ararat of the latter, which is unnotably identical with "Adana, the Saliyan; for the name Djakhian (probably first found in the Umayyad court proc. of Abd al-Rahman II) 710 A.D.; Naldcke, Z.D.M.G., since 1890, p. 699 sq.) and Saliyan for Pyramus and Smyrna are no doubt derived from the Biblical rivers Gihon and Pishon (Gen. ii. 11) (wrongly explained from the Persians Djakhin in Com. d'Asie Min. Nancy 1904, p. 278). In 1133/34 the Cephalis town of Levon I, son of Constantin, took the town (Arm. Mais, Mises, Mamestia, or Mamasstia of the Greeks (Cinnamos, L. 77, ill. 145; Smutek Zarapet, Chronic, in Docum. Arm., i. 615). The brother of the emperor: John II Comnenus went to him and Levon gave his sons his daughters as slaves to the town of al-Maṣṣaṣ and Adana as dowries. But when they quarreled he took back from the Greeks all he had given them, and Isaac had to flee with his sons to Sultan Basil (Michel Syrus, ii. 250). Levon, falling through treachery into the hands of Raymond of Poitiers, had to settle (1136–1137) al-Maṣṣaṣ, Adana and Sarvankar (now Sawaran Ka‘fet), but regained his liberty in a couple of months; he very soon took back these towns (Docum. Arm., i. 152 sq. = Chron. d'Alexandre de Dulaunay, transl. Dulaunay, p. 157; Smbat, op. cit., p. 610). The emperor John in 1137 (1144 Sel.) had his revenge on Levon. He invades Cicilia, took Taras, Adana and al-Maṣṣaṣ, and Levon himself with his wife and children and took them to Constantinople, where Levon subsequently died (Der al-Allık, xi. 25; Michael Syrus, iii. 245; Gregor. presb. Fort. d. Chron. der Meth. Kopt., transl. Dulaunay, p. 225; cf. Docum. arm., i. p. xxii, 1 and 153; Will. of Tyr., xiv. 24; Rührich, Gesch. d. Kgr. Terumal, p. 241). John installed Coloman (Colomannus), son of Boris and grandson of king Coloman of Hungary, as governor of Cicilia (Will. of Tyr., xiv. 24, xvi. 9, in Migne, Patr. Lat., cxxi, col. 603, 756; "Das Cileaen" mentioned in Regim et principum christiatis, No. 24, in Bongars, Gesch. der Deut. Frur., i. 182, l. 46 and passim). When the emperors, John died as Murad al-Din on April 8, 1143 (Will. of Tyr., xvi. 24 sq.); Rührich, Gesch. d. Kgr. Terumal, p. 228, & his successor Manuel Comnenus had his body brought by boat from Mopsuestia down the Pyramus to the sea and taken to the capital (Niketas Choniats, Mau. Komn., i, Bonn ed., p. 67).

Thoros II, the son of Levon who had escaped home from his confinement in Constantinople, was again able to cast off the Byzantine yoke. When in 1151 he took Mais and Til (Tall Hamid) from the Byzantines (Smbat, in Docum. Arm., i. 619) and made their general Thomas prisoner, the emperor Manuel in the following year sent against him with 12,000 cavalry Andronicus Comnenus, whom he had appointed governor of Taras and al-Maṣṣaṣ (Gregor. presb., in Docum. Arm., i. 167 = Mani. Edess., transl. Dulaunay, p. 334; Smbat, Chron. in Docum. Arm., i. 619). Andronicus, who did not recognize Thoros as ruler of Asia Minor, advanced against al-Maṣṣaṣ but was surprised by the Armenians and put to an ignominious flight with his 12,000 men. Thus not only the town, which was very well supplied with provisions and military material of all kinds, fell into his hands, but also a great part of Cicilia (Gregor. presb., transl. Dulaunay, p. 334–336 = Doc. Arm., i. 167 sq.; Smbat, op. cit.). The emperor, himself too weak to avenge the insult, twice induced by gifts the Sultan Kılı-capital Anak (Gregor. wrongly: Mustih) of Kinnie to attack Thoros. The Sultan, who on the first occasion (1153 A.D.) was content with the defeat of the Armenian and the return of the lands taken from the Greeks, again attacked al-Maṣṣaṣ, Ain Zathu and Tall Hamid (Arm. Tilu Hamann) in 1156 but could do nothing against them and had finally to retire after heavy losses (Gregor., op. cit., p. 338 = Doc. Arm., i. 171).

The emperor Manuel himself passed through Cicilia in 1159 with a large army to the assistance of the Crusaders. Thoros had already retired to Vakka (in the desolate mountains (Arm. Rhymnia, Chron. in Doc. Arm., i. 505) when the emperor entered al-Maṣṣaṣ at the beginning of November, but he did no injury to any one there (Gregor., transl. Dulaunay, p. 335 sq. = Doc. Arm., i. 187).

The Frankish kings led by Baldwin came to pay homage to him in the town or on the adjoining pratrum palmarum (as Will. of Tyr., iii. 27 translates Murad al-Din) where his court was held in camp for 7 months (Gregor., transl. Dulaunay, p. 358; Rührich, Gesch. d. Kgr. Terumal, p. 298). Thoros was also able with great skill to become reconciled with him, and on acknowledging Byzantine sovereignty and ceding several towns in Cicilia, was recognised as "Sebastos" of Mais, Anazarbos and Vakka (Doc. Arm., i. 186; Smbat, ibid., p. 622). His brother Mihel, who attempted his life while out hunting between al-Maṣṣaṣ and
Adana, was banished by Thores and given by Nur al-Din the town of Kitzura (Kyrkhis; Sumbat, loc. cit.). After the death of Thores of Masi (1168-1169; Sumbat, p. 623), Mieh (Arab. Matthe b. Liwun al-Amsa) succeeded him and at first ruled only over the district of the passes (Bitrid al-Durub). In 1171 he surprised Count Stephen of Hiles at Mamluka and plundered him (Will, of Tyre, xx. 25-27). In 1168 (1172-1173), supported by troops of his ally Nur al-Din, he took from the Greeks Adana, al-Maṣṣaṣa and Tarus (Ibn al-Abbās, xi. 255. Kannal al-Din, transl. in Köhler, s. v. Besorge, in Gesch. d. Krummhafe, i, Berlin, 1874, p. 336).

When Mieh's successor Rupin III fell through treachery into the hands of Bohemund of Antioch, his brother Levon II obtained his release in 1184 by ceding the Maṣṣaṣa, Adana and Tall Handam (Tils) and paying 3,000 dinars; immediately afterwards, Rupin retook these strongholds from the Franks (Miche, S. i, 397. Dec. arm. i, 394).

Hērum, the nephew of the Catholicos Grigor IV and son of Kontvans of Tarun, who came to Cilicia in 1189 with his brother Shahinsah, received from Levon II (1185-1215) his niece Alice, daughter of Rupin III, in marriage and the town of Masi, but died in the same year (Sumbat, in Dec. arm., i, 629; Marquet, Šahānmand, 1295. Thirstraubn, Vienna, 1930, p. 481 sq.); the Emperor Frederick Barbarossa in 1186 (1190) was about to go to Syria via Tarun and al-Maṣṣaṣa when he met his tragic end in the Kalkastra (alleged) [7] letter of the Armenian Catholicos in Ibn Shaddad, in Rec. Hist. Orient. des Comtes, ii. 162; a portion of the story therupon went to Antioch via Tarun, al-Maṣṣaṣa and Thagia (Hhen al-Muḥākāh b. al-Shirshāb b. al-ʿAwīṣa Katb, Portolla, the Syrian passes, with which Köhler, Gesch. d. Krs. Jorns, p. 530, 41 identifies it).

Willbrand of Oldenburg who visited the East in the train of Duke Leopold VII of Austria and Steiermark and the Teutonic Grandmaster Hult von Sulis, came in the beginning of 1212 to Mamisere which he describes as follows: (Willi, w. 18, ed. Laurent, Forgeronati, Lez., sig. 1864, p. 175). "Hic est civitas prud. opus ortum, quæ communiter diu sim, nata amico, loci autem, loco ad orbem turritam, sed antiquitate servavit, pannos in gradu somnis omitit habitab, ubi capitnos, qui terrae suscitant, imperatori domino." In the vicinity lay "puellam etiam cum ejus ortum di patriamos horti Panthe. . . . ad muri temporis posterioritatem Graci." In hac civitate (Mamisiere) habitant sepulchra hos Fabrici. Ipse vero ducit a Gamaelii. (cf. Tomaseck, S. B. Ak. Wien, 1801, app. viii., p. 71) magnam dictam levon II granted the republics of Genoa and Venice the privilege of having their own trading centres in al-Maṣṣaṣa, which could be reached by ship from the sea before the mouth of the Dijana became silted up (Allajin, Slavono en l'Arménie-Cilicie, p. 287).

The attempt of Raymond Rupin of Antioch to seize the throne of Armenia after Levon's death in 1219 failed; he was, it is true, able to take Tarun and attack al-Maṣṣaṣa but he was taken prisoner by Constantine of Barerbod and died in prison in 1222 (Dec. arm., i, 514; Köhler, Gesch. d. Krs. Jorns, p. 741 sq.).

For twenty years the Rupins ruled almost undisturbed in the town. Their glory reached its height under the splendid-loving Hērum I (1219-1270). Here were held the annual festivals of the Church at which numerous princes and nobles used to gather down to the last and difficult years of the king. Here was held the brilliant ceremony at which his 30-year-old son Levon was dubbed knight. Fears that the king brought the seat of government further from the destruction of Sin (Allahan, Siennan, p. 287 sq.).

Three years later (1269), the district of al-Maṣṣaṣa was visited by an earthquake (al-Siyūṣī, in Dec. arm., ii, 1906, p. 772, note 1). Baibars (Arm. Patrāb gīn = Arab. Baibars al-Dīn) himself, in 673 (spring of 1279) took the field against Levon III, son of Hērum, bid waste the whole of Cilicia as far as Korhīn and stormed al-Maṣṣaṣa and Sin, the former on 26th March. The inhabitants were massacred, almost all the houses burned and the great bridge destroyed (Arnou, Kandarayn Maysay, s. v. Kantvah al-Maṣṣaṣa; cf. al-Maķriti, ii, 125 sq. with note 154; Muḥammad b. Ali Tūfādhi, Geč. d. Mamīkā, Kūtesjan, ed. Bičak, in Patr. Orient., cix. 389; Barhebzena, Chron. syr., ed. Bedja, p. 531; Sumbat, Chronik, in Dec. arm., i, 653; Köhler, Gesch. d. Krs. Jornsal, p. 697; van Berchem, C. T. A., i, 688, note 2), When in 697 (1297-1298) an army under the eniers Salf al-Din Kīpēš, the Nīṣma Ṭūṣ, the Mākaṣar al-Dīn Labkī, the Nīṣma al-Shāh, the Mākaṣar al-Dīn Bilnūr al-Maṣṣaṣ, and Salf al-Dīn al-Aṣāl invaded the lands of Sin, al-Maṣṣaṣa is not specially mentioned among the unimportant places taken like Tall Handam, Hamūn (Hamanj), Kāfurr Nadīm, al-Maṣṣaṣa, Sirfandik, Hadjar Shaghūū, al-Nakār and Zandīna (al-Maķriti, ii, 60-65; Muḥammad, op. cit., p. 603; al-Nuwarī, in Bičak, in Patr. Orient., cix. 382). In 1262, the Egyptians crossed the Dijana by a bridge of boats, got behind the Armenians who had retired to Masi and inflicted a severe defeat upon them; among those who fell are mentioned the barons Hērum of Dijana, his brother Constantine, Wahramlot, Oghin, the son of the marshal, along with 23 knights and many men (Sumbat's Continuator, in Dec. arm., i, 698). This authority also mentions a raid by an Egyptian force against al-Maṣṣaṣa (Mamestia), Adana, al-Małik (Mīn) and Tarus in 1334-1335 (Dec. arm., i, 671; Tomaseck, S. B. Ak. Wien, 1801, app. viii., p. 68). The last Egyptian invasion took place in 833 (1333-1374). Among the towns destroyed were Sin, Adana, al-Maṣṣaṣa and 'Ain Zarqa, and Levon IV had to surrender in 1375 after a siege of nine months in Qtabān (Dec. arm., i, 686, note 3). The town thus passed nominally into the Fāṭīḥī al-Djūkchāniya of the Mamlık empire; it had, it is true, by now sunk into insignificance and it is not mentioned, for example, among the towns taken by Shahsawar in 1467 (Allahan, Siennan, p. 287 sq.).

Armenian sources mention 8 archbishops of the town from 1175 to 1370 (1175-1306 David, 1215 Johnnun, 1266 Simon, 1306 Constantine 1310 John, 1332 Stephen, 1342 Basil, 1362-1370 unnamed; cf. Allahan, op. cit., p. 290). Michael Syunni knew only four of about 100 admitted (Cārēv, transl.
Chabot, iii. 23 sq., 451, No. 27) and the Frankish writers from 1124 onwards Bartholomaeus, before 1234 Ruparius and in the years from 1162–1238 three or four more unnamed bishops (Albert Aquensis, in. 16; Will. of Tyre, xiv. 107; Lu Quiro, Olivii Christianorum, iii. 1198–1200; Burckhardt, Gesch. d. Kgr. Jemuid., p. 42, 202). On account of the many Egyptian invasions the Latin archbishopric was removed to Aya by Pope John XXII in 1320 (Allianin, Sitizian., p. 290).

After the fall of the kingdom of Little Armenia, the power of the Rasađan-Oghlu and Džm "Kadik-Oghlu gradually spread in Cilicia. Selim I on his campaign against Egypt in 922 (1516) and on his return also preferred to keep to the east of the stream (Taschenier, Anatol. Wegenbuch, iii. 32). Mişeti has been Ottoman since that year, in which the decisive battle was fought on Mardij al-Dīsilī Ā. In Kasafriya a khān was built for caravans passing through in 1522 and restored in 1850 by Hasan Pasha. The Džalān bridge became useless in 1730 when the central arch collapsed; in 1766 this was repaired, but it was blown up in 1782 on the retreat of the Turkish troops from the fighting at Balīnī in order to hold up the advance of Irbīm Pascha’s pursuing army. As late as the middle of the sixteenth century it could only be crossed by an improvised wooden footbridge.

In modern times Mişeti is mentioned only by eastern pilgrims and travellers as a place only spent a short time there. Thus it was visited in 1452 by the Burgundian Bertrand de la Brocquière ("Missae-sur-Johan"), in the sixteenth century by P. Reen, 1682 the Meccan pilgrim Mehmud Edīb, 1695 the Armenian Patriarch of Antiochia Makarios, 1794 Paul Lucas, 1736 (Chevalier Oger, 1760 on the Dan Carsten Niebuhr, 1813 Macd. Kinnier, 1834 Ancher Eloy, 1836 Colonel Chesney, 1840 Almawrth, 1853 Victor Langlois, whose report was somewhat exaggerated by Cari Ritter (Irkendane, six. 66–115). The "Margen Gallo" visited by Ludwig von Rauter on July 8, 1568, is not (as in Röhrich-Meissner, Deutsche Pilgerreisen nach der L. Land., 1880, p. 434, note 43) al-Masqīt, but Merkez Kaleesi or Mandus Jekandar (Kan. Syn. pers.). Somewhat fuller descriptions of the modern Mişeti and its ancient and medieval ruins were given in the sixteenth century by Langlois, Allianin and at the beginning of the 18th by Cousin (see Bibliography).

The stretch of the Baghārd railway from Derāk south of the Taurus via Adjana and Mişeti to Manārīs at the foot of the Amanus was opened on April 27, 1912. As a station on the railway (the station is actually 1½ miles N.W. of the place) the town gained a certain strategic importance in the Cilician campaign of the French in 1919–1920 (1919) settlement of about 1,200–1,500 Armenians; May 27–28, 1920: full-scale Turkish blockade of the garrison there, about a company strong; end of July: withdrawal of the troops to Adana; cf. E. Bremond, La Cilicie en 1919–

According to the Arab geographers, al-Masqīt lay on the Džalān (Divānā, sometimes confused by the Byzantine authors with the Sāqā, Arab. Salān, with which it seems to have had at one time a common mouth: George Ceder, ii. 362; Anna Comn., ii. 147), 1–2 days’ journey from Bāyās and one from "Ain Zarba and Adham, 12 mils from the Mediterranean coast. The sea could be seen from the Friday mosque in the town; in front of the town lay a beautiful fertile plain (the ancient "Ašān al-Baḥr"). Al-Masqīt lying on the right bank of the Džalān was connected with Kafarbijya by an ancient stone bridge built by Constantine and restored by Justinian. The country round was rich in gardens and vineyards, watered by the Džalān. According to Yauppet, the town originally had a wall with 3 gates and Kafarbijya, same with 4 gates. A speciality of the town were the valuable fur-clacks exported all over the world. Ten miles from al-Masqīt, which is somewhat inaccurately placed by Ibn Khurdābdīhī, Yauppet and others on the Džalān al-Lukkām (Ammou), was the plain of Mardij al-Dīsilī Ā, which is often mentioned in the records of the fighting between the Maṇīlak and Little Armenia (probably the "agor Margueri" on which Cicero encamped: ad fam., iii. 8). In it, N.E. of the town on the road to Siu, was the fort of al-Amūdān (al-Maṣrīzī, ed. Quatremètre, ii. 61; cf. Kāf al Amūdān in Abu l-Fida’s, Ann. Musul., vii. 93; Reske, v. 18; located by Allianin, Sitizian., p. 275 sq., 100 far east in "Hēmēlīn, Kalkašī"). A field of Mardij al-Dīsilī Ā is also mentioned near al-Masqīt (Yauppet, iv. 487; Saif al-Dīn, Maṣrīzī, iii. 74). Tall Hūmā, a strong fortress of the Thughūr al-Masqīt, corresponds to the modern Hānīyeh, now called Biṭbiṣ (Z. D. M. G., xi. 191, 200; Yauppet, ii. 868; Saif al-Dīn, Maṣrīzī, iii. 211; Ibn al-Sinān, Bahrī, ed. p. 339). There also was Tall Hūmā (Yauppet, ii. 867; Maṣrīzī, i. 211; Ibn al-Shībūnī, ibid.; exact site unknown). Al-Ain at the foot of the Džalān al-Lukkām, over which went the Darb al-Ain pass, was also one of the forts of al-Masqīt (Yauppet, iv. 756; Maṣrīzī, ii. 293) on the frontier against Halab bay Biṭbiṣ (q. v.; cf. van Berchem, Voyage en Syrie, p. 237 sq.), Hīnī Siinān (al-Balādhūrī, p. 165; Yauppet, ii. 155) is probably also to be sought near al-Masqīt. A pass called Thūnīyat al-Ukhāb, "to be distinguished from that of the same name near Damascus, was in the region of al-Masqīt (Yauppet, ii. 938; Maṣrīzī, i. 230). Even the remote fortress of Sunalī (on its site cf. Tomasek, Zeitschrift f. J. Kirj., p. 144) was sometimes reckoned in the Syrian Thughūr and located near al-Masqīt and al-Tarsī (Balādhūrī, p. 170; Dijammīl, Yauppet, iii. 416; Maṣrīzī, ii. 167; Byzantion vu sàqās, Sév., 131; al-Saṣīfī on the present Sūqūgūd (Z. D. M. G., ii. 150; Reiske on Abu l-Fīdī, Annal., ii. 649, note 76 according to Ǧudīlī Khulīsa: "Ḫiṣār Saṣīfī, that is Sūgūd") is also reckoned by Yauppet (iii. 401) to the marches of al-Masqīt. Not far from the town was a Syrian monastery, Gawtakht (mentioned about 1200 a.D. by Barhebr. Chron. cel. ed. Abbebroe-Lamy, i. 624; in Allianin, Sitizian., p. 295), Qobūth, probably identical with Jōchakht. The neighbouring fortress of Adham (now Taunkal) and Camubetofen ("in interl. Millīzī, i.e. of Mīm, Arabic: al-Mallūn") were accorded to Wilfrard of Oldenburg (op. cit.) about 1212 in the possession of the Teutonic Order (Allianin).

The Venetians had a church in al-Masqīt (Geste des Chrétiens, in Doc. arm., ii. 831). Armenian authors mention there the churches of St. Sarkis, Thomas and Stephan (Allianin, p. 288 sq.).

The present Miṣeti (frequently also written Misītā,
as appears e.g. from the tradition in which it is related that Muhammad one day received a visitor and

Concerning Zaid b. Khalid it is related that he used to sit in the mosque keeping the tooth-pick behind his ear, "just as a writer keeps her pen" (Abu Daud, Ta kuła, báb 25; al-Tirmidhi, Ta kuła, báb 18). When Muhammad was in his last hours, there entered a man with a piece of wood fit for a si saw; 'Ali b. abu Talib and Chis it, so as to make it smooth (Bukhari, Muqaddimah, báb 83).

In general Hadith emphasises the value attached to oral tradition of Muhammad to the si saw. When he entered his house, his first movement was towards it. Muslim, Ta kuła, (báb 13; Abu Daud, Ta kuła, báb 27). His servant 'Abd Allâh b. Mas'ud received the so-called "as-si saw" [the tooth-pick] which he used to take care of Muhammad's si saw (Bukhari, Fadhl Al-As-si saw, báb 20). When Muhammad awoke at night, he cleaned his mouth by means of the si saw before he washed himself and performed night-prayer (Bukhari, Adhûn, báb 8; Muslim, báb 73; Tirmidhi, Adhûn, báb 35; Muslim, Ta kuła, báb 16). In one tradition it is said, as a matter of fact, that the miswak use of the si saw before every si saw was introduced by Muhammad as a compensation for the abolition of the si saw used before every si saw (Abu Daud, Ta kuła, báb 25). In another tradition (Nasâ'i, Rawa' i, báb 66) the use of the si saw is called obligatory before the Friday-service.

The appreciation of the miswak which appears from all these traditions culminates in the fact that it belongs to the customs of the "natural religion" (Jâfri: Abu Daud, Ta kuła, báb 29) or to the ordinances of the Apostle (Tirmidhi, Nisâb, báb 1).

Nevertheless Fîlûk does not declare the use of the miswak obligatory in any case. There is general agreement on this point. According to some traditions, however, the Khazârîs did declare the use of the miswak obligatory before the si saw, but these traditions are not generally accepted. According to Fîlûk the use of the miswak is recommended at all times, especially in 5 cases: in connection with the si saw, under all circumstances, in connection with the ka'bah; with the recitation of the Kurân; after sleep; and as often as the mouth has lost its freshness, e.g. after long silence.

According to the school of Shafi'i the use of the miswak is blamable (makhrûb) between noon and sunset at the time of fasting; for the smelly breath (khashîf) of the faster's breath is beloved by Allâh (cf. Nasâ'i, Ta kuła, báb 6).

It is recommended to use a miswak of orchard-wood of medium hardness, neither too dry nor too moist; to cleanse the palate as well as all sides of the teeth, beginning from the right side of the mouth, moving the miswak upwards and downwards in order not to hurt the alveoles.

MITHKAL (mûsaf), the weight of a thing, this is the meaning of the word in the Kurân; a particular weight for weighing precious metals, jewels, drugs, etc., probably the oldest unit in the Arab-Troy system. The mithkâl corresponds to the Roman solidus of the Constantinian system which the Arabs adopted. In Syria, 'Abd al-Malik took it over for his unit of gold when he reformed the currency in 195 (696). Its dinar weighed a mithkâl of 65.5 grains (425 grammes), hence mithkâl is used as a synonym for dinar. The silver dirham weighed 7/9 of a mithkâl and the mithkâl contains 24 dirhams. Slight variations in weight are found in the different parts of the Mud. world.

Bibliography: See the bibliographies to the articles Dinar and Dirham. (J. A.)

MIWADH. (See Hamid)

MI ZA F. MI ZAF. (K. m. el. Mezaf). Among the various classes of musical instruments dealt with by Arabic, Persian and Turkish writers on music is one which embraces those with "open strings" (mu'tar mushuk) such as the lyre or cithara, harp, psaltery and dulcimer. Among them are instruments grouped as mezaf. Nowadays, this term refers to all stringed and wind instruments (M. F. O. B., v. 28) but in the Middle Ages it had a more restricted meaning and stood for "instruments of open strings". Al-Jawhârî (d. ca. 1003) and al-Saghârî (d. 1241) define them as "musical instruments which you beat upon as in the 'ud (lute), tanbur (pandore) and the like", meaning by this that mezaf were played with the fingers or plectrum in the same way as the 'ud and tanbur were. The Târîkh al-Arâb includes the tambourine among the mezaf, but it is an erroneous deduction from the saying of 'Umar, marra 'l-mu'tar da'mah (he paid by the sounding of the stuff), which has misled many writers (cf. Sachs, Reallexikon der Musikinstrumente, s. v.). The author of Muqaddimah (17th cent.) states that the mezâf was "a stringed instrument belonging to the people of al-'Irâq" (p. 277), whilst al-Mutâarrî (13th cent.) says that the mezâf was "made by the people of al-Yaman", a provenance which ibn Khuradhdhî (d. 912) also gives the instrument (al-Ma'sûl, vii. 93). A more precise classification is allowed by al-Shalâbi, who includes the mezâf among barbitons (horâfîb) and lyres (târîqân), which agrees with our oldest authority, ibn-Lathîb b. al-Muqaffar (11th cent.), who says that mezâf and mezâf were terms given to "an instrument of many strings", whilst al-Fârîbî (d. 950) specifically denominates mezâf as instruments of "open strings" (Kosegarten, Lit. cata. p. 77, 110). In the Târîkh al-Asbâbî the mezâf is nowhere placed in the hands of the minstrels, probably because it was of insatiable merit. One performer on the instrument, Muhammad b. al-Harîrî b. Hâshîrî (14th cent.), was asked sarcastically if it were a rat-trap (Aqâ'ûb, 4, 153).

Tradition says that mezâf were "invented" by 'Abd b. Dhalîl, the daughter of Lammak, who was of the
seventh generation from Adam (al-Mas'ūdī, viii. 89). Since there was a hadith condemning miṣrūf as signs of the end of the world (al-Tirmidhī, ii. 33) it is quite likely that the fiṣṭūṭh thought it consistent with policy to make ṭilāl or ḍašāl ("error, destruction") the originator of these muṣālik or "forbidden pleasures". On the other hand, we read that "David the Prophet had a muṣāfa on which he used to play when he recited the psalms" ('Ilāh al-Fārikh, iii. 189), which was an echo of the Jewish tradition that he was an devotee of the king (I. Samuel, xvi. 16, 23). The name may be a survival from the days of belief in sympathetic magic. The voice of the dijinn was termed the 'ṣaf, and the spiritual world could be conjured by the sounds of the muṣāfa. In Islamic times musicians claimed that their music was inspired by the dijinn. The Greek σίθων was an instrument of the same class as the muṣāfa. It was of Lydian origin and the name is suspiciously like the Semitic one.

Lyre and cithara. Although we see these instruments in the hands of the ancient Semites on the monuments they do not appear to have had acceptance among the musicians of Islamic times except with the fallāšūn, unless the seven-stringed muṣāla (= maṣ北方) of Khurāsān was such an instrument (al-Mas'ūdī, viili. 99). Both words are of Greek origin and they appear in Arabic as fiṣṭūr and fiṣṭūra generally. In Palestine and Egypt to-day, a primitive type of lyre is known under the name of ṭabūra barbariya or ṭabūra (barsura or barsura). Villoteau (Descr. de l'Égypthe, tète mon. ii, 1910, and Saint-Saëns (Lavignac, Encyc. de la musique, iv. 1858) have shown that much of the ancient Greek method of lyre-playing still obtains in the modern Egyptian fiṣṭūra-playing. It is worthy of notice that the Arabic word for striking the fiṣṭūra strings is ṣarraba, and this is practically identical with the Greek σαρραβά.

Harp. Whilst we possess an actual example of a Sumerian harp with the sound-chest below the strings, this type does not seem to have had any vogue with the Arabs or Persians in artistic music, and is only found among the peasantry. In Palestine and Upper Egypt to-day it is called the muṣūr or ṣawā and ṣawā. The harp with the sound-chest above the strings has been a far more important instrument and is to be found in the Assyrian sculptures (cf. the Assy. word āmēk and the Ethiopian ṣaŋa). That extremely chatty Turkish writer Ewylyī' Celebi says that this instrument, which the Persians called the long, was "invented" by Pythagoras. Soore Solomon (Traveili, i. 227), and even al-Shālāsī says that it was of Byzantine (Kūn) origin (fol. 15). Yet Ibn Khurdāchib and al-Dżamā'ī, who were those most particular to the Persians and, indeed, the type may be found on the Šēstānian sculptures (Ker Porter, Travels, ii. 175). The Arabs call it the dāk and ṣawā and ṣawā (cf. al-Luqawī, ed. Sachau, p. 97). It may be that the dāk and ṣawā were different types of harp, the Persian and Arabic. There were certainly two types, the straight sound-chest and the crooked. In the Muṣūrāt al-Kumān ṭabūr (tabūr) and fiṣṭūr (fiṣṭūr) are likened to the dāk and ṣawā respectively. Among the Arabs the ṭabūr is mentioned as early as al-Asā'ī Mālūf (d. ca. 629). Al-Fārikh devotes a section in his Xīsād al-Mas'ūdi to muṣāfa, ḍiṣṭūra and fiṣṭūra, and other instruments "in which there is made to every note, according to its state, a solitary string", and he shows them strung with both fifteen (diatonic) and twenty-five (chromatic) strings (Rosengarten, e. c.). Both Ibn Sinā (d. 1037) and Ibn Badr (d. 1048) deal with the ṭabūr, whilst in the Xīnāt al-Tahāf (xiv. century) and the works of Ibn Ḥašibi (d. 1455) the ṭabūr is fully described. The oblique sound-chest was 150 cm. long, and the handle (ṭārīk) 81 cm. long. The strings are fixed to the horizontal bar below twenty-four or twenty-five strings of goat's hair were stretched, being fastened to metal pegs (ṣawā). Some players even used thirty-five strings so as to embrace the scale of the Systematics. The face of the sound-chest was of skin, but the remainder of the framework was of vine or paul tree wood. The handle was placed under the left arm (cf. the pictures in MSS.) and the fingers of both hands were used in performance, plucking (ṣawāt) being fastened to the finger tips. Nowadays the ṭabūr has fallen into complete desuetude among the Arabs and Turks. Even among the Persians it has become rare, and in its modern form it was little different from the occidental instrument (Advielle, La musique chez les Persans, p. 13), whilst the instrument shown by Kampeuer (xvi. century) under this name was a zither. In 1636 Ewylyī' Celebi found only twelve players of the ṭabūr in Constantinople because, he said, it was a difficult instrument to play (Travels, i. 234). At this time the Turkish ṭabūr had forty strings and a very large instrument of the xvi. (not xvii.) century is given by Engel (Mus. instr. in the South Kensington Museum, p. 59).

Although the "humped back" of the ṭabūr or ḍiṣṭūr became a favourite theme for poets, and it was certainly the best known type, yet an instrument with a "straight back" was also to be found. A more pronounced "hump" existed in a type mentioned by Ibn Ḥašibi and called, probably on account of this feature, the ṣawā. It was strong similarly to the ṭabūr, but had a wooden instead of a skin face on the sound-chest, and its tuning pegs were also of wood.

A Byzantine harp called the salāb (erroneously written salāb, salāyak [cf. the art. šalak], which clashes with the opinion of the present writer, Red.), or salāb in most dictionaries and MSS.) was also known to the Arabs. It was actually a survival of the old Greek σαλαβία, and is described in the Muṣūrāt al-Kumān as an instrument of the Čečs (Yunahābiyān) and Byzantines (Kum) resembling the ḍiṣṭūr (p. 136). According to Ibn Khurdāchib it had twenty-four strings (al-Mas'ūdī, viii. 91; cf. Farmer, Byzantine musical instruments in the ninth century, p. 4 n.). Ibn Sinā classes it with the ṭabūr among the instruments with "open strings" stretched across a space.

Psaltery. In describing those instruments with "open strings" stretched across a surface, both Ibn Sinā and Ibn Badr mention a particular type named the anāf. Whilst the name suggests a "long necked" instrument, the details given of strings of different lengths but identically situated bridges (ḥamālāt), compel one to recognize in it a trapezoidal psaltery, one species of which was known later as the Xīnāt. The word anāf also stood for "phoenix", and we know that the Greeks of old had an instrument called the φοίνιξ. This
but not by Kaeuper, whilst Advielle in the sixth century gives both a design and a description. In Turkey, whilst the word is registered in the sixteenth century by Meninski, it is not mentioned by Hafiz of Khaflan nor described by Elyi's Celebi, in their lists of Turkish musical instruments. In the next century however, it is recognised by Todesini, and to-day the sanfur is one of the most esteemed instruments in the country, where it may be seen in two forms: the sanfur turki and the sanfur francese. The former, exclusively used by the Jews, has 160 strings, grouped in fives, giving thirty-two notes, a two octave chromatic scale. The latter, which is confined to the Turks, was introduced from the West about the middle of the last century by a certain Hilmi Bey. It is mounted with 105 strings, also grouped in fives, which are placed on the sound-chest in the Occidental way.

al-MIZAN, the balance, is the common instrument from musama "to weigh", which means to weigh in the ordinary sense and also to test the level of, like the Latin library. Here we shall discuss:

1. The various instruments used for weighing in the ordinary sense; brief notes are added on the ascertainment of specific gravities. 2. Levelling instruments.

I. BALANCES.

The steelyard (al-harîfûn, q.v.) has already been dealt with; the general principles of the balance are also discussed in that article. — The usual balance with two arms of equal length had the same shape among the Muslims as in ancient times and at all periods in the west; this we know from extant specimens and illustrations in accurate works, notably in al-Khâzînî, in a manuscript of al-Karwâni with reference to the constellation Libra (fig. 1), in a manuscript of Hâfîzî, in the Ḳasîm, al-Abbâr of Abu 'l-Fâlî (fig. 2). In the beautiful manuscript from which Ch. Schefher published the Sîyâr Namaî of Naṣīr-î Khosraw,
on p. 88 in the illustration of the Mašdûl al-Akṣâr there is a balance labelled tareeq (Sifer Nameh, Relation du voyage de Nazari Khoran, ed. Ch.)

Fig. 1.

Schefer, Publications de l'ecole des langues orientales occidentes, ii. ser., i., Paris 1881. The common balance is called misân but in the Kur'an we also find ṣiṣār, which, according to al-Thâlibi, is a loanword. Other names are ṣiḥâm, which does not only mean the beam and tongue of the balance and is contrasted by the ḥanân al-ṣufâ to the ṣiḥâm (steelyard), also parts from the Persian harātân, thus mīrzâd for scales for gold and ṣâkhâ for beam and tongue. Minâjam means the tongs and also the beam. According to J. Ruska, ṣâkhâ: seems to be used for scales (for gold). On the expressions connected with harâzân, see that article. Al-Maṣfurî mentions Harrân as a place where balances were made, in his work Aṣâṣl al-Tâhîštî fi Mu'rad al-Alââm, p. 141; in this town many very skilful mechanics were engaged in making astronomical instruments. The accuracy of the balances made in Harrân was proverbial. The Arabs devoted special attention to the construction of balances used to identify metals and jewels from their specific gravity, to distinguish false from genuine and pure and to ascertain the composition of alloys of two metals by the use of the principle of Archimedes. They called these balances misân al-mâši, "water" (hydrostatic) balances. Of makers of these, al-Khârîjî (c. 1100, q. v.) mentions: Sanad (Sinâd): b. All (c. 350 = 864), Muṣlammad b. Zakariyâ al-Mazî († 320 = 932—933), Ibn al-Aṭâāl († 359 = 966—970), Vâlamî b. Yûsuf (perhaps al-Kasâ', d. c. 370 = 980—981), Ibn Sinâ († 423 = 1037); Aḥmad al-Fâdi al-Maṣâfî (the "measurer", also mentioned by al-Birûnî without the "Maṣâfî"), Aḥmad Haṣîm al-Khârîjî (as the celebrated mathematician is never called Aḥmad Haṣîm, it is doubtful whether he is the individual mentioned by al-Khârîjî). The scales were made by these men are still fairly simple as only two, or at most three, scales were used in them. A contemporary of al-Khârîjî, namely Aḥmad Ḥâkim al-Muṣâfar Ibn Isâl al-Aṣfârî (d. before 515 = 1121) added two more scales; these and other improvements made the scales much more convenient to use. Of him al-Balâhâzî says (E. Wiedemann, Beitr, xx., Einige Biographien nach al-Balâhâzî, in S.B.P.M.S. Erl., xliii., 1910, p. 17): "He constructed the balance of Archimedes with which one ascertains forgeries. The treasurer of the great sultân feared that his frauds would thus be discovered. He therefore broke the balance and destroyed its parts. Al-Muṣâfar then took up al-Muṣâfar's work and made the balance a
most accurate means of measuring; he called it the universal balance, *al-mizân al-jâmi*'. But, no doubt in memory of his predecessor, he called his book *Kitâb Mizân al-Dira.*

**Fig. 4:**

For special purposes such as the examination of gold and silver and their alloys, many contrivances were made with balances and the movable scales and running weights on the beams, for example in the physical (tâbî‘) balance of Muḥammad b. Zakariyya al-Rāzī (fig. 3); it goes back to Greek models, e. g. of Archimedes (fig. 4; cf. al-Khâsînī, *op. cit.*).

**Fig. 5:**

Here we shall describe somewhat more fully the "balance of wisdom"1) of al-Khâsînī.

Al-Khâsînî gives the beam ạ of the balance (fig. 5) a thickness of six cm. and a length of

---

1) H. Bauer (Zur Geschichte des spez. Gewichts im Altertum und Mittelalter, Dissertation, Erlangen 1913) has reconstructed the "balance of wisdom", as nearly as possible following the data of the original. Reproductions are in Erlangen and the German Museum in Munich. The illustration is taken from a photograph. In the original right and left are reversed.
two m. In the centre it is strengthened by an additional piece C, obviously intended to avoid any bending at this point. A cross-piece D (tirida) is let in here. Corresponding to it is a similar cross-piece F on the lower part of the tongue, in which moves the tongue D, itself about 50 cm. long. The upper cross-piece E is hung by rings to a rod which is fastened somewhere. Pegs or small holes are placed at exactly opposite places of the cross-pieces B and F to which threads are tied or drawn through. The friction at an axis is thus avoided, which, in view of the great weight of the beam, is quite considerable. The knob visible below the beam under its centre is used to secure the tongue to the beam, or to take it out in order to adjust it evenly. The tongue has for this purpose a peg at the foot which goes through a hole in the beam. Al-Khâzîn also observes that one could also take shorter beams but then all the other dimensions must be proportionately smaller.

The beam is divided not on one side only, as in the illustration, but on both. The scales are hung on very delicate rings of steel (qaṣāna ṭalâwi) on the points which fit into little niches on the upper surface of the beam. Five scales are used for ascertaining specific gravities, i.e. in investigating alloys and examining precious stones. Of these the scale H (fig. 53) is called the cone-shaped or al-kâsin, the judge, as it is used to distinguish false from true. It goes into the water and in order to meet with less resistance in sinking is cone-shaped and pointed below. The scale J is called the winged (muqânnaḥ, fig. 5b and 5c, side and top view). It has indented sides so that it can be brought very close to the adjoining scales. It is also called the movable (muqâshūb). There is also a movable running weight K (al-rumûmā al-mawṣūra) which serves, if necessary, to adjust the weight of the lighter beam; it is therefore also called the rumûmā of the adjustment (al-dîdî). The other scales are used to hold weights. Al-Khâzîn attained an extraordinary degree of accuracy with his balance. This was the result of the length of the beam, the peculiar method of suspension, the fact that the centre of gravity and axis of oscillation were very close to each other, and of the obviously very accurate construction of the whole.

Al-Khâzîn himself says that when the instrument was weighing 1,000 mithkâl, it could show a difference of 1 ḥabâr = 1/20 mithkâl, i.e. about 25 centigrammes in 4.5 kilograms. We thus have accuracy to 1/60 of a mithkâl. Al-Khâzîn used his scales for the most varied purposes. Firstly, for ordinary weighing, then for all purposes connected with the taking of specific gravities, distinguishing of genuine (passa) and false metals, examining the composition of alchemy, changing of dirhams to dinars and countless other business transactions. In all these processes the beams are moved about until equilibrium is obtained and the desired magnitudes in many cases can at once be read on the dividers on the beam.

**False Balances.** That as early as the time of Muhammad balances showing false weights were used for fraudulent purposes is shown by various passages in the Kitāb (Sūra xxvi. 182; vii. 13; xvii. 37). We read for example: "Weigh with the just (or upright, mustaṭfa) balance". Al-Djawart (middle of the 12th century; cf. E. Wiedemann, Beiträge, iv. Über Wagen bei den Arabern, in S.B.P.M.S. Erg., vol. xxxvii., 1905, p. 358) describes two such arrangements. In the one the beam of the balance consisted of a hollow reed closed at the ends in which there was some quicksilver; by a slight inclination of the beam this could be made to flow as desired to the side of the weights or of the articles and thus make the one or other appear heavier. A balance like this was used in Cairo in the time of E. W. Lane by a dishonest police inspector (mustaṭfa). In the second pair of scales the tongue was of iron and the merchant had a ring with a magnetic stone. By bringing the ring close to it the balance went down to right or left.

The balance or the principles applying to it were used for many purposes besides weighing. Contrivances turning on an axis in which sometimes one and sometimes the other side becomes lighter or heavier, especially by the admission or release of water, were used to produce automatic movements; they are often called mustaw (cf. e.g. the writings of the Banū Mūsa and of al-Djasar; e.g. in F. Hanauer, Über das Kitâb al-Hiyal, Das Werk über die innere Anordnung der Banû Mûṣa, Abh. 2. Göttinger, der Naturwissenschaften und Medizin, Heft II, 1922; E. Wiedemann and F. Hanauer, Über die Uhr im Bereich der islamischen Kultur, in Nova Acta der Kais. Leop.-Carol. Akademie, vol. c., 1915, N. 5 and other passages). In the hour balance used to measure time, a container filled with sand or water is hung at one end of a lever poised with arms equal and has a hole in the bottom. The equilibrium disturbed by the gradual loss of sand or water is compensated for by weights which move along the other arm. From their weight and position one can calculate the time that has passed (E. Wiedemann, Beiträge, xxxvii.: Über die Stundenwage, in S.B.P.M.S. Erg., 1914, p. 27; a full description is given by Prof. F. Hanauer in E. von Besser's manual, Die Geschichte der Zeitmessung und der Uhren, 1918).

Most artists who describe as *scales* al-misār, i.e. rulers, al-burēnes, the compasses, al-fāriyāt, set square and level, as they serve to show lapses from the straight etc. — Mihkâl, al-kâsin, ḥabâl are *scales* with which one measures whether things are correct or over measure in business transactions (Rasûl ibn Khâdîm al-Safâ', Bombay 1305, 1/2, 128).

For a few further meanings of al-misâr see Dory, Supplément, s. v. wanâna. — In mathematics the balance is used to elucidate certain mathematical processes. The steelyard is used to illustrate the inverse relation: the weights are in inverse proportion to the length of the arms (cf. e.g. Th. Ibel, Die Wogen im Altertum und Mittelalter, in Programm Forchheim, 1905—1906, p. 93; Rasûl'
with the water displaced weighed \( P' \), so that from \( P'' - P' \) we get the volume of water corresponding to the mass \( P'' \), which is then calculated by al-Biruni for a weight of 100 mithqāls. As almost always,

\[
\text{Fig. 6:}
\]

in ascertaining the specific gravity the Arabs rely on the ancients, particularly on the work of Menelaus on the artifices by which one ascertains the quantity of each of a number of mixed bodies" (Fi Hilāl allatt al-arafa al-hā Mīhrū bītal wāhid min Tāba'īn mithqālītātā (from the Escorial MSS) and Ma'rifat Īsānīyūn al-Afdālin al-mithqālītā (according to Ibn al-Kifā), p. 527: Professor Dr. Wurmschat is giving an edition of this work in *Philologus*). In al-Biruni's work, Archimedes himself is mentioned and a certain Manṣūrīya (according to Noldeke, probably Mansūrī). The Muslims however did not slavishly take over the statements of the ancients. Al-Biruni, for example, emphases that one can ascertain the composition of an alloy of two components but not of three, as Menelaus says. Among the Muslims it was certainly al-Biruni who did most in this field, in his work "on the relations which exist between metals and jewels in volume" (Moṣāfā 'I'Nāb allatt bān al-Fi'dītāt wa l-Jawshārī l-l-Hufayri, cf. also al-Biruni, Chronology, text, p. xxxiv), which still remains, and also in another work, which only survives in fragments quoted by al-Khazini. Al-Biruni was induced to compose the first named by the difficulties encountered in the quantities of metals necessary to copy a given article. As predecessors be mentioned Saʿūd b. 'All, Yalām b. Yūnus, Ahmad al-Faqīl al-Būghrī. So far as we know he was followed and his results were used by: Abū Ḥaṣan Omar al-Khawāżī (see above), al-Sīrāfī (see above), al-Khāzīn (see above), Fakhr al-Dīn Muḥammad Ibn Omar al-Rāzī († 1210, Suter, No. 328), and Abu ʿIṣāf Allāh, ʿAbū ʿAbd Allāh al-Maḥsūṣ, a work ascribed to Plato which was composed in the time of Bāyazīd by a slave of a son of Šāhān, a Turkish work by al-Qāṣfī, and a Persian by Muḥammad b. Marqān (on these works, as on mineralogical literature in general, see E. Wiedemann, Beitr., xxx.: Zur Mineralogie des Islam, in S.P.M.S. Est., xlii., 1912, p. 203). We must also mention the study by Abū Ḥaṣan al-Nāṣrī who is not to be confused with the commentator on Euclid, and the work on the measurement of bodies which are compounded of

1) It is to be noted that expressions like specific gravity and specific volume, which refer to the unit of weight and the unit of volume are not found among the Arabs. Al-Bīrūnī, for example, gives the amount of water displaced by 100 mithqāls of various substances corresponding to their volume and the weights of the metals which have the same volume as 100 mithqāls of gold and in the case of other substances the same volume as 100 mithqāls of blue yāḥūr.

The statements on specific gravities refer to: A. Metals: gold, mercury, bronze (ḫaller), copper, brass (ḫihāb), iron, lapis lazuli, pearl, coral, corseilin,onyx and rock crystal. B. Other substances: Pharaonic glass, clay from Siānīyān, pure salt, salt earth (ṣalāḥ), sandarach, enamel (mīnā), amber, pitch, wax, ivory, bakkan wood, willow wood.

The weights of equal volumes of liquids and the volumes of equal weights of liquid are sometimes found directly, sometimes ascertained with the aërometer of Pappus. The former magnitude plays an important part in the liquids used in every day life like oil and wine. The second was of more scientific interest. It is especially interesting that the Arabs found that hot water and hot urine had a larger volume than equal weights cold. They also knew that ice had a larger volume than the same weight of water.

The facts ascertained with the aërometer of Pappus for fluids refer to cold fresh water, hot water, ice (does not properly belong to this connection), sea water, vine-gar, wine, sesame oil, olive oil, cow's milk, hen's egg blood of a healthy man, warm and cold urine. Fig. 7 shows the aërometer reconstructed by H. Bauerreiss (from al-Khāzin). N is a massive cone used to make the instrument heavy. There are inscriptions corresponding to the Roman numerals. For details the reader may be referred to H. Bauerreiss’s article.

The principle that floating bodies of the same weight sink in water to the same depth finds application in a juristic trick cited in the Kitāb al-Hijāl fi ’l-Fikāh of Abū l-Ḥāsim al-Kaṣwī. The weight of a camel is ascertained by putting it in a boat and noting how deep the boat sinks. The camel is then replaced by iron weights until the boat sinks to the same level (cf. J. Schacht in G. Bergerotto, Beltr. zur sotetischen Philologie und Linguistik).

In medical works and treatises on weights and measures, figurines are given for the weights of equal volumes of oil and honey (cf. Bauerreiss, op. cit.).

So far as it is a question of particular bodies, the values as ascertained by the Arabs agree very well with those obtained by modern science and even surpass in accuracy those obtained by it up till the beginning of the last century.

Bibliography: This is given in the article Al-Šarāṭ."
An exactly straight ruler is laid on the plate and one looks over this.

Ibn Sinā (Cod. Ledenaei, No. 1061) in order to test whether the upper surface of the base of a theodolite is horizontal, makes a cavity in it with exactly perpendicular walls, pours water in and proceeds as in the case of the plate. To test whether a large ring is absolutely smooth, al-ʿUrdī used a process which he called al-ʿafādām. This is not a ready-made instrument but an apparatus to be put together from case to case. The ring to be tested is first of all placed exactly horizontal with the ground by means of the level (Fig. 9). Inside the ring on its concave side a circular gutter of potter's clay is built. Its outer edge comes up to the level of the surface of the ring while its inner edge is a little higher. The gutter is filled with water and some light ash are scattered on it. If the water flows over the ring the depressions in the ring are filled with it, while the ashes remain on the raised parts of it. The inequalities in the surface of the ring are thus brought out (Fig. 10). Al-ʿUrdī emphasises that the test must be made in absolute calm.

Al-ʿUrdī also used the same method in order to see that the outlets for water in a distribution system at Damascus were all of the same level. In the centre of the reservoir he put a gutter like this and deepened or raised the bottoms of the channels running out of it until the water from the gutter spread equally over the channels which revealed any inequalities (Fig. 11). Cf. H. J. Seemann, in S. B. P. M. S. Erg., ix., 1928, p. 49 and J. Frank, in Zeitschr. f. Instrumentenkunde, xviii., 1929.

4. A plumb-line (ṭīḥal, ʿabq, bāḥt [from ʿabq], ṣaḥāḥa) is dropped from the apex (Fig. 12) of an isosceles triangle, made for example of wood, with its perpendicular marked; a piece is sometimes left open in the centre of the under side for the weight of the plumb-line. If the plumb-line coincides with the perpendicular, the surface is horizontal (the figures go back to al-Ṣāḥibī and al-Khalīfī). Such drawings have led to the erroneous idea that Muslim students were already acquainted with the pendulum (cf. E. Wiedeman, in Verkl. d. d. phys. Ges., 1919, p. 663; the apparatus is called al-fāsādī [e.g. in al-Ṣāḥibī, al-ʿUrdī, see below]. Day, op. cit., also al-fāsādī).
In the architect's balance (fig. 13), according to Ibn Luyūn or al-Tūnirān (see below), a rectangular piece of wood is placed on the beam a a to be examined; in the middle of it, a perpendicular line b e is drawn before which a plumb-line is hung; according to the original figure, it seems to be two parallel lines between which the plumb-line hangs. 

Al-Marrākushī (see below) has described a more perfect form (fig. 14). In the figure a b, a c and d e are rods, and a b = a c and a d e is an isosceles triangle; d e is pierced in the centre. A plumb-line is hung from a through the hole. If the surface on which b and c are put is horizontal, the thread of the plumb-line goes through the centre of the hole.

Whether the levels and other similar instruments are themselves correct, whether for example the plumb-line from the apex to the base is perpendicular, is tested in this way: After the plumb-line comes to rest in one position of the level, the latter is put in various positions on some horizontal surface, particularly in one perpendicular to the first, and in one in which left and right have places exchanged. If the plumb-line always comes to rest the level is correct but if it only does so in the former case the error can be corrected by adjusting the position of the surface and that of the level.

The level here described is usually called ṣabūn (σωματίδιον); the word, however, is also used for the wooden set square, as used by carpenters (s. Masāfīkh al-Kūlān, ed. v. Vloten, p. 255) and land surveyors like Abu l-Wafā' (s. Abhandlungen zur Geschichte der Naturwissenschaften und Medizin, Heft iv., 1922, p. 98). A synonym is according to al-'Abīyān (Abū l-Farāhīt al-Abūsī, Med. b. chap. 13): ša'abūn. From the same root we have in Ibn Wāshīya (Cod. Leidensis, No. 1279, p. 537) ša'abūn, in Deyo (Supplement, ii., p. 246) ša'abūn and ša'abūn. Connected with this is ša'abūn, dust of ša'abūn.

Sometimes one finds it stated that levelling is done with the ša'abīn; e.g. in al-Battānī (ed. Nallino, text, 1903, p. 137); muwāzīn bi ʿlāyān, and an exactly similar statement is made by Ibn Sinā (Cod. Leidensis, No. 1061). A set square is either brought up to the plumb-line and a perpendicular dropped on the surface from it, or the ša'abīn is used for the level, the essential part of which is the plummet.

On larger surfaces, such as roofs, etc., a long rod (ša'abīn = cubitale) is first of all laid down and on it the apparatus for testing the level is placed; this is called suqūn al-šarīr (or al-sarrāfīn of the architects; cf. Ibn Luyūn, see below).

5. At the apex of a threensided pyramid built on a surface by 3 rods of equal length, a plumb-line with sharp point in the plummet is hung. This ought to hang over the centre of the surface (al-ṣūfīni, see below).

6. On the apexes A and B (fig. 15) of two sharp-pointed tetrahedrons of equal height A L H K, and E L M N, a rod of some length A B is laid on which is fixed a triangle with a plumb-line hanging from it or an arrangement such as is already described for the scale-beam. If the plumb-line or the tongue comes to rest, the rod and therefore the surface is horizontal (al-Marrākushī, see below).

The necessity of making surfaces exactly level continually crops up in building, and also in putting up astronomical instruments, and in constructing the Indian circle with which the meridian and then the direction of the ṣidrā is ascertained. In this case the level surface is usually not prepared on the ground but on a firm foundation, perhaps of stone. The construction for the Indian circle is already described in the Hydrometia of Proclus (loc. cit.) in the same way as by the Arabs.

We now deal with the tests used to see if a thing is perpendicular:

1. The simplest method is to hang a plumb-line beside it. In the case of level perpendicular surfaces, this must touch it all the way down if its point of suspension is on it. This method is always recommended in working with the quadrant (s. also below).

2. If the point of suspension is a little in front of the surface the thread must be equidistant from it all the way down.

3. In the side of the gnomon, a perpendicular rod, often with a cone-shaped top, Ibn Yūnus (see below) cut out a groove which ended in a hemispherical cavity. In the groove a thread is hung from the top of the gnomon with a ball shaped weight. If this comes to rest in the hollow, the gnomon is perpendicular.
4. The gnomon is moved backwards and forwards (turned about on its foot: *mawṣûf* or *mu-nilâr*); its shadow must only move so far on the level surface, on which it stands, as is in keeping with the movement of the sun during the turning (Ibn Yūnus, see below).

5. A circle is described at the foot of the rod and a pair of compasses used to test whether the distance of the top of the gnomon is the same from all points of the circle.

8. Ibn Sinâ drills a small hole through the gnomon parallel to its base, puts it in a vessel with a horizontal bottom which is filled with muddy water and examines whether the surface exactly coincides with the level of the hole.

7. In order to examine whether a level surface is standing exactly perpendicular, two exactly equal parallelepipedal blocks of wood (fig. 16) are placed on it, $L_1$ and $L_2$, one above the other. From the upper edge of $L_1$ a plumb-line is hung; one watches whether its thread exactly touches $L_2$; the best plan is to place a very thin ruler between $L_2$ and the plummet and test the position of the thread with respect to $L_2$ (al-Marrākush, see below).

11. In order to ascertain the difference in height between two points $x$ and $y$, which are at a distance $s$ from one another, as is necessary in making a canal for example, one looks horizontally from $x$ with an apparatus which is at a height $a$ from the ground; to a vertical rod at $y$, and ascertain the height $b$ at which the point observed is above the ground. A mark can be made in it (in modern mensuration, the rod at $y$ has divisions marked on it). The difference in height is $a-b$. According to fig. 19, the Arabs, like Hero, seem to have used something similar. Ibn al-Awâsim (see below) uses a square board on which are marked a number of circles touching one another, which are distinguished by different colours or have different centres. In order to place the rods absolutely perpendicular, plumb-lines are hung beside them (fig. 17).

The horizontal line of vision is obtained in various ways:  

1. A rod (e.g. an ell long) with square sides is put up in such a way that the upper surface appears horizontal to the eye and one looks along this surface.

2. The rod (struck) is put on the above mentioned dish or plate (fig. 8) and one looks along it.

3. At the end of the rod nails are fastened at the same height and their heads are pierced and one looks through the holes.

4. For a rough examination, one can put, at the two places, two tube-shaped bricks which for convenience may be made each out of two half-pipes (Ibn al-Awâsim, see below).

5. An astrolabe is put in a horizontal place such as the edge of a well or on its cover and one looks through the eyepiece.

Other methods of ascertaining differences of level are as follows:

1. An assistant is sent from the higher position to the lower holding a rod of a known length, vertically until one sees just the end of it; if $A$ is the length of the rod, $L$ the difference in height. If the distance is too great for the top of the rod to be distinguished, a light is put on it, for example a lighted candle and the observation is made by night.

2. If it is a question of ascertaining whether a place outside a well is lower than the level of water in the well, the distance of the latter from the surface of the ground or from the edge is ascertained by letting a rod and thread down with a shining heavy object at the end and used in calculation.

Two apparatuses, closely connected with each other, are the following:

3. To a rod (fig. 17) the triangle with the plumb-line is attached. To its two ends two threads with weights at the ends are attached, $a$ and $b$.

Fig. 17.

Two posts $a$ and $b$ are erected at the points, the difference in level of which is to be ascertained.

The one thread is fastened to the end of the lower post $a$, and the other hung along and over the post $b$ until its weight comes to rest. The amount of shifting of the thread measures the difference in height (al-Khûzîn, see below).

4. The *mawṣûf* (the bat, fig. 18) consists of an equilateral triangle with a plumb-line which hangs from the middle of one side. The triangle is suspended by this side. Two rods, an ell in length, are erected to eells apart; a rope is passed from the top of one to the top of the other and by two threads $a$ and $b$ the *mawṣûf* is suspended in its centre. If the plumb-line goes through the apex of the triangle, both places are on the same level, if not, one is raised by putting stones below it for example; but the end of the rope can, as in 3, be moved along (Ibn Lârûn, see below).

5. In the Paris manuscript N°. 2488, an unknown author describes 3 apparatuses for levelling (fig. 19—3). In the first (al-mârâkûs, the known) a rod of wood an ell in length is bored through its entire length and tongs with a tongue suspended from its centre (fig. 19a). Through the hole a rope some 15 eells long is drawn which is fastened to the two vertical rods already mentioned. The second apparatus (fig. 19b; al-takhshûs, the similar) corresponds to the *mawṣûf*; only the two threads $a$ and
are replaced by rings which are put over the long rope: a, a. The third arrangement (fig. 19c: abu-le, the pipe) is also mentioned by al-Khalili and Hāfiz al-Dīn but not described; it probably corresponds to our canal-level, a communicating pipe filled with water, such as is very fully described by Hero (Dioptias, p. 197 and loc. cit.); but he gives it no particular name, probably because it is associated with a dioptra. On the plain-line of the figure is written 

\[
\text{From the Paris MS. Nr. 1437, a. in the bow, b. in the similar c. the pipe, d. the weight.}
\]

Tighnārī mentions another instrument called mizān al-haf, Ibn Wāḥishī (see below) of one or brass called ṣafār or ṣāfr. Neither are described however. Arab authors who give full descriptions of Arab instruments are the following:

1. Ibn Wāḥishī (or Abū Thālib al-Zāliyāt, + 870) in Kitāb al-Fāṭhāh al-Nabawiyya, in "the Book of Nabatean Agriculture" (cf. H. Schmelzer, in Abhandlungen zur Geschichte der Naturwissenschaft und Medizin, Erlangen 1922, Heft VI, p. 36). His data are supplemented by those of numerous commentators.

3. Ibn Abū Ṭalāb (c. 1100) in Kitāb al-Fāṭhāh al-Dawḥa, deals with levelling ground etc., and gives notes on al-Tīgħnārī and others (cf. E. Wiedemann, Beiträge, x., see below).

4. Abū Īshāq b. Layūn (c. 1348) in Kitāb al-Fāṭhāh al-Dawḥa, deals with levelling ground etc., and gives notes on al-Tīgħnārī and others (cf. E. Wiedemann, Beiträge, x., see below).

Full details of levelling are given in the astronomical books in discussing the ascertainment of the meridian, e.g. in Khūṭ al-Dīn al-Shāhī (d. 1311; e.g. E. Wiedemann, in Zeitschr. für Physik, vol. x. 1922, p. 267); al-Khalīlī al-Nāṣīrī etc. Many books on the astrological give information on the subject in discussing surveying problems, e.g. al-Bīrūnī (cf. E. Wiedemann, Beiträge, xvii., 59 sqq.).

I give once again the names of the levelling instruments:

\[
\begin{align*}

In know of no comprehensive treatise on levelling in connection with canal building etc. in the early Muslim period. For the literature see my Beiträge, iii., 229; xviii., 26 and H. Schmelzer, loc. cit., p. 41. For knowledge of these matters in ancient times see C. Mörkel, Die Ingenieurs-technik im Altertum und H. Diels, Antike Technik, Leipzig 1920.

**Bibliography:**

- Larchondi and Simonet, Creations de l'océanie, v. 1, 271.

**MIZMĀR** means literally "an instrument of piping". In the generic sense it refers to any instrument of the "wood-wood" family, i.e. a reed-pipe or a flute. In the specific sense it refers to a reed-pipe (i.e. a pipe played with a reed) as distinct from a flute, as we know from Ibn Sinā (d. 1037) who describes the mizmār — a reed-pipe — as an instrument "which you blow into from its end which you swallow", as distinct from an instrument like the yārū' — a flute — "which you blow into from a hole". Ibn Zayla (d. 1048) writes similarly but substitutes the Persian word mizmār for the Arabic word mizmār. In Ibn Sinā's Arabic treatise al-Najūṭī we read of the mizmār as distinct from the other instruments in his Persian Dāngān-māna the word is mizmār. Further, the Maṭfī al-Ṭūlān says, "the mizmār is in the mizmār" (p. 236). For the present purpose, "wood-wood" instruments (mizmārāt) may be divided into:

1. Reed-blown types.
2. Reed-pipe-blown types.

Among the former we have single reed-pipes of the clarinet, oboe, and saxophone types, as well as double reed-pipes, the bagpipe, and the chiww. Among the latter we have the flute and recorder, as well as the pampipes.

**Reed-blown types.** Single reed-pipes occur in ancient Semitic art and literary remains (Livvango, i. 35 sqq.). Hoary gossip attributes the "invention" to the Persians (al-Masūdī, Maraghi, viii. 90), whilst Djamshīd himself claims to have been the actual "inventor" (Ewilīy al-Ṭebēbi, i. 641). With Islamic peoples, reed-pipes are found with a conical or cylindrical tube (mudālī) pierced with finger-holes (mudāsīn), and played with a single or double beating reed (ṣafla, ṣafrā). Among the Arabs of the 18th century, the mizmār finds a place at convivial
parties (Me'aṣeqa'tiyā, xvi.), and in the 18th century, it is one of the martial instruments of the Jewish tribes of Al-Hijār (Aẓḥār, ii. 172). When 'Isām came, an anathema was placed on reed-pipes mainly, it would seem, on account of the female reed-pipe player (sāmūmāt) who, as was common in the East, was looked upon as a courtesan, and, indeed, the term sāmūmāt and sāmūyāt became almost synonymous. It is improbable that the Prophet Muḥammad could have referred to a reed-pipe (mizmūr) in the well-known ḥadīth in praise of the chanting (bādī'a) of Al-Hārūn al-Ṣāḥī. The reference was rather to 'a mizmūr (Hebr. mīṣmerh 'psalm') from the masbūhāt of the House of David' (cf. my Hist. of Arabian music, p. 33). In early days, what the Arabs called the mizmūr, the Persians called the sāmūyāt, and the latter distinguished the flute by the name sāmūyāt (soft sāmūyāt). Later they called the reed-pipe the sāmūyāt (black sāmūyāt) and the flute the sāmūyāt (white sāmūyāt) because of the colour of the instrument. About the beginning of the 16th century, a musician at the 'Abbasid court named 'Azāzī invented a reed-pipe which was named after him the sāmūyāt or mizmūr (Ṭūfṣī al-'Arabī). What the invention was we can only conjecture. It may have been the cylinder used for altering the pitch of the instrument, or perhaps it was the introduction of a conical tube (see my Studies, p. 79, 82). At this period we have no information whether the various reed-pipes had cylindrical or conical tubes or whether they were played with single or double beating reeds. The word mizmūr was accorded little recognition in the East; whatever favour the invention itself found. In the West, where the name eventually became vulgarized into sāmūyāt, it became the most important reed-pipe not only in Spain as we know from al-Shakundī (d. 1321; al-Maḥkārī, Mbk. Dīnī, i. 59), but also in the Maghārib (Ibn Khaldaṭ, ii. 353). It became the sāmūyāt of the Spaniards (see also Schiaparelli, s. v.).

The mizmūr (= mīṣmerh al-wāz) is described and delineated by al-Fārābī (d. 950). It had eight holes for fingerling, giving a complete octave. He also describes a smaller reed-pipe called the surūnāt (Koengarten, p. 95; Lamm, p. 122; D.Erlanger, p. 264). One special feature of this instrument was called the sāmīr. In the Maṭfīṣ al-Ulām (p. 237) we read: 'The sāmīr of the mizmūr is its head, and it is by itself that it is made narrow and wide [in compass].' It was actually the cylinder inserted into the head of the instrument which lowered the pitch when required (see my Studies, p. 82), a device called later the rankh (Kanz al-Tawṣīf) or fajīl (Villoteaux). It was called the sāmīr because of the sound of the button at the top of the cylinder - which was turned round. The word surūnāt came to be modified into surūnāt and then sāmīr. Popular etymology opined that the word was derived from sāmīr 'reed' and sāmīr 'reed.' This form only appears in the lexicon (Hārūn-i Fāṣī). Some modern even write sūrūnāt. The sūrūnāt found its way into martial music as early as the beginning of the 16th century (Aẓḥār, xvi. 159: the text has sūrūnāt).

In the 16th century, Ibn Zāla shows how, by deviation in the fingerling and embouchure, other notes were obtained on the reed-pipe (Fwā'n, sāmīr). In the Persian Kanz al-Tawṣīf (xvith cent.) the mīṣmerh, also called the sāmīr sāmīr, is both described and delineated. More valuable is the explanation of the actual making of the beating reed with which the instrument was played, from which we learn that it was a double reed. In the next century a Turkish author Ahmad Uğlī Shukurullī copied extensively from this work (Lavignac, l. 3014). Ibn Ghāzī (d. 1435) says that all the notes could be obtained on the sāmīr sāmīr (= sāmīr sāmīr) by accommodating the fingerling and the embouchure. The smaller instrument, the mizmūr, was defective in the upper octave he says. A similar type of reed-pipe to the latter called the kalābīn is also mentioned by him. Ewliya Čelebi says that it came from Śīrāz. In the Muḥammād b. Muršid Tustarī (xvith cent.) we learn that the nūy sāmīr (se mīṣmerh al-wāz) was 27 cm. long.

With the Turks, the Persian word sūrūnāt had been altered to sūrūnāt and the term had become common to both the sāmīr (= mīṣmerh) and sūrūnāt in the East. Ewliya Čelebi (xvith cent.) mentions among the Turkish reed-pipes of his day the ḍabāj Üzmi sūrūnāt, the sūrūnāt sūrūnāt, the waṭfī sūrūnāt, and the ṣāmīr sūrūnāt (a Moroccan reed-pipe). He also speaks of a sūrūnāt sūrūnāt, which, he says, was an English invention (l. 642). This is the same as the sūrūnāt, which, he says, is the clarionet, an instrument which Denner is said to have 'invented' about 1690, which is after its mention by Ewliya Čelebi. The Persians still continued to call their reed-pipe the sūrūnāt, and a xvith-century design of the instrument is given by Kaempfer. Both Russell in Syria (l. 155) and Villoteaux in Egypt (l. 356 sq.) refer to several kinds of reed-pipes in use in the xvith century. The latter delineates these and describes them fully. They are: the ḍabāj Üzmi sūrūnāt, the sāmīr sūrūnāt, the sūrūnāt sāmīr, and the waṭfī sūrūnāt. The sūrūnāt sūrūnāt, the sūrūnāt sāmīr, and the waṭfī sūrūnāt are various kinds, the first being 58.5 cm. and the last 31.2 cm. in length. The modern instrument is also delineated by Lavignac, p. 2793; Sachse, p. 428. For specimens see Brussels, Nr. 122, 355, 357; New York, N.Y. 1331.

In the West as well we find a new name, or instrument, the ḍabāj or ḍabāj Üzmi [q.v.]. It is said to have been introduced by the Turks (Delphin and Guin, p. 48) but the name is mentioned by Ibn Battīţa (d. 1377) who likens the Mesopotamian sūrūnāt to the Maghribī ḍabāj (l. 120). There are, however, two kinds of ḍabāj, one - a cylindrical tube blown with a single reed, and another - a conical tube blown with a double reed. This may explain why ḍabāj does not always equate with sūrūnāt and sūrūnāt in the West (Ṭaḥhīṣī al-Niyārī, p. 93; Muḥammad al-Ṣaghīrī, p. 34). The cylindrical tube instrument is known in Egypt as the ḍabāj. For details see Bīl 'Allī, p. 105; Delphin and Guin, p. 47. For specimens and designs see Hist. p. 201, tab. xxxi.; Brussels, N. 354; New York, Nrs. 402, 2824; Lavignac, E. 3971. A reed-pipe that became quite famous in Western Europe was the ṣūrūnāt played with areed. The original ṣūrūnāt (= sūrūnāt) was a horn or clarion, and was made of horn or metal. Pierced with holes for fingerling, and played with a reed, a new type of instrument, somewhat similar to the modern saxophone, was evolved. In the xiiith century, this ṣūrūnāt was 'improved' by the Andalusian Caliph al-Hakam II (Bibl. de autores Españ., l. 440). Ibn Khaldaṭ, who describes it, says that it was the best instrument of the same family (l. 353). Ibn Ghāzī,
in his holograph MS. in the Bodleian Library, writes ḥiḥ, but adds, "also called ḥiḥ", but the latter remark has been deleted, it appears to be delineated in the Cancrins de Santa Maria (Riaño, fig. 41, b).

Another interesting instrument is the ʿifrāṣya or ʿifrāṣya, which may have been the forerunner of the European rusticus. It has a cylindrical pipe, and is played with a double reed. It is probably the descendent of the ʿāṭa al-ṭārīqī that al-Ghazzal (d. 1151 A.D.) speaks of. It is delineated and fully described by Villoteau (i, p. 8.7). Examples are given at Brussels, No. 124; New York, No. 2864. Both the reed-pipes and Reed-pipes belong to outdoor music. Just as we see them in the ʿAff Lālā of al-Lālā as being essential to folk, ceremonial, procession, and martial music, so they are today, and probably have always been.

Double reed-pipes. Ibn Khurdadhbih says that the Persians "invented" the double reed-pipe called the diyaṣṣa (al-Maṣrat, Murūḍ, vii, 90), in the viiith century. Frescoes at Qūṣir ʿAmrī (Mussul, pl. xxiv). It has been suggested that the word should be ḥiḥ, but diyaṣṣa is also given by al-Farāhi (see my Studier, p. 57), who describes and delineates the instrument which he says, was also called the minār al-maṭṣārā or maṭṣārā. The two pipes were of equal length and each was pierced by five finger-holes, which gave an octave between them. Probably the instrument known in the Middle Ages as the simānā (vulg. zamānā) was actually the old diyaṣṣa, although it merely played in ʿaṭāshī from the first sixteenth century to the eighteenth century. As early as the xith century we read of the zamānī in Egypt (al-Maṣrat, i, 136). The name itself means "joined" (see my Studier, p. 78), and it was doubtless a double reed-pipe. Since the xith century at least, zamānī has been the name for this instrument in the East (cf. Niebuhr, i, 145), and Lane (p. 367) describes and delineates it. It has cylindrical tubes and is played with single beating reeds. It is to be found with a varying number of finger-holes and is named accordingly (Sachs, p. 433). In the Maghrib it is called the mubānī and mubānī (Lavignac, p. 2793. R.A., 1866), whilst in Syria it is given a vulgarized or metathetical form of the old mānī (cf. Sachs, p. 257; Dallaman, Pal. Draw.). For specimens and descriptions see Brussels, Nos. 115-118; New York, Nos. 2167, 2632; and Z.D.P.V., 1927, p. 19. Specimens in my collection range from 10 to 43 cm. in length. The smallest type of double reed-pipe has only one pipe pierced with finger-holes, whilst the other serves as a drone. This also carries the name of zamānī when the two pipes are of the same length (cf. Niebuhr, i, 145). When the drone pipe is longer than the chanter pipe it is known as the ʿarqīḥ (ʿarqīḥ, Manṣūra, i, 291; ʿarqīḥ, Lavignac, p. 2812) in modern times (cf. Freyag, Christ, Arab., 1884, p. 34) in Egypt and Syria. Villoteau (i, 962) gives a detailed description with scales and designs of three sizes, 97, 82.6 and 88.6 cm. in length. In South Kensington Museum there is one 144 cm. long. Like the preceding instrument it is played with single beating reeds. The drone pipe is furnished with additional tubes (bīyāḥī) which are affixed to lower the pitch.

In Syria the smaller type of ʿarqīḥ is named the maṣṭānī, a most significant name, in spite of its being ignored in the lexicons. Lane (p. 267) figures six finger-holed instruments, which he says, were used at ʿūṣbī, and by Nile boatmen. For specimens see Brussels, Nos. 342-346; Z.D.P.V., 1927, p. 2.

Bagpipe. An ancient instrument in the Orient, just prior to Islam we have it figured on Sasanian sculptures (Ker Porter, Travels, ii, p. 64). We do not know its ancient Semitic name, but Ibn Sīnā and Ibn Sallūm mention it as the maṣāfīr al-ṣūltānī, describing it as being played by "an artificial contrivance." Although Niebuhr (i, 140) calls it the zamārāt al-ṣūktā, and Lane, p. 386 names it the zamārāt biṣṭānī, the more general term used in Arabic speaking countries is ʿabāra, although we found it mentioned in Tunisia (Von Humboldt, p. 4). The word ʿabāra is given variations by some European writers as in the ʿabāra of Villoteau (i, 970) and the ʿabāra of Roumanet (Lavignac, p. 2812). In Persia, the bagpipes have long been known as the nūṣ al-amīr, the maṣṭānī, or maṣṭānī (Lavignac, p. 2793) from whence the Hindustani name maṣṭānī or maṣṭānī (Trogore, p. 84; Day, p. 151). In Turkey, the older word was ʿabār, with a stem in ʿabār (Meninck, Sachs; cf. EwIyūs Čelebi, i, 642: ʿabārī ʿabārī, but Čelebi would appear to be equally popular, and this name is to be found throughout the Balkan countries (cf. Arab. ʿabārī; Span. paño; Engl. Bagpipe).

The bagpipe used by Islamic peoples is generally equipped with a chanter pipe (five or six finger-holes) and mouthpiece, but rarely with a drone pipe. The chanter, terminating in a horn (Schallsttick), is often double, a feature which was probably the original reason for the term maṣṭānī being used with the bagpipe. The woodwork is sometimes inlaid with metal, whilst another feature is the adornment of the instrument with tassels, beads, shells, and other trinkets. Designs may be found in Niebuhr (tab. xxi) and Sachs (p. 454), and actual specimens in Brussels, No. 372.

Instruments of reeds. The Chinese chēn is such an instrument. Probably it was not invented by Islamic peoples although known to them. The chēn is described in the Maṣāfīr al-ʿūlām as follows: "The maṣṭānī is a musical instrument of the Chinese. It is made of compounded tubes (nāḥīḥ), and its name in Persian is ʿabārī manṣūra." (p. 277). We get a little more information from Ibn Ghālibī who informs us that the ṣīlaḥ or maṣṭānī-khāṣā, was made of tubes of reed joined together. It was blown through a tube and the notes were written down in finger-chords. For names, types and designs see Van Andel, Chinese Music, p. 80.

A. Pipe-blown types.

1. The flutes of the Arabs, Persians and Turks, unlike those of the Western Europe, are played vertically, a current of air being blown across the orifice (manṣūra) at its head. EwIyūs Čelebi (i, 623, 638, 642 read ʿabārī not ʿabārī) is not sure whether it was Pythagoras or Menon who "invented" the first instrument of this type, the shepherd's flute, called the kanālī (cf. ʿabārī). Ibn Khurdadhbih says that it originated with the Kurds (al-Maṣrat, viii, 90), and Ibn Ghālibī (Shārī ʿal-ʿawālī) says that this instrument was the nūṣ ʿabārī (white nūṣ). We know from Ibn al-Aʿrāfī (d. 840) that the Arabs called
this flute or reed-pipe the ḫanūṭ. A characteristic
of the Arab flute was its length, hence the ancient
Greek proverb which likened the talkative person
to an Arabian flute (Menaḥerī Pargoth).
In the early days of Islam, the Arabs called
their flute the ḫaṭḥa (later modified into ḡaṭṭa),
and this is the name used by the poets al-Aṣbāḥ
(d. 629) and Ruḥā b. al-ʿAdlīkī (eighth century).
These terms fell into disuse in the East when
Persian musical influences were at their height.
The Persians called their flute the nay sūrūn
(sweet nay) so as to distinguish it from the nay
proper and the warān, which were reed-pipes,
and so the Arabs of the East called their flute
the nay, although in the West the old word ḫaṭḥa
or ḡaṭṭa was retained. Another term for the
flute in early days, perhaps a different kind, was
yaḥū (Mafṣūṭ al-ʿUlām, p. 336), and in the
fourteenth century Glossarium Latinum-Arabicum it
equates with caleumula. In the sixteenth century it
was still a common name with Šafiʿ al-Dimʿ Abī al-Muʿāmin
(p. 9) in the East, and with al-Shaḥṣudī in the
West (al-Maṣkūtī, i. 59, reada nādūr "not narrow").
In the contemporary Vocabulaire en Arabe it
(yaḥū) agrees with ṣītula. The words ḥarrī's and
ḥarrī's (al-Djwāshari, al-Fīrṣāshāhī) would appear
to be vulgar forms of yaḥū.

Whilst the diminutive ḥaṭḥa (ḵaṭṭa) sometimes
occurs in reference to a small flute, ḍabāḥa and
ṣakhk (Y ḥaṭṭa "to grow up") were the more
general terms used in ʿIrāq (Iṣḥāq al-Safārī, i. 97),
Egypt (al-Maṣkūtī, i. 136), Spain (al-Ṣafārī, Fī
Du Arab), and the Maghrib (Ibn Khaldūn, ii. 358).
It became the ṣīwālka of Western Europe. Another
name for a small flute was ḡawma, and this word
also found a place with the Latins as the joch
(Du Cange). In Persia, the small flute was called
the ṣiḥa (Kana al-Tuṣṭīf), hence the Balkan pi- nion and pisik.

We read of the nay in the Ābādī (i. 71) but
we cannot be sure whether it was a flute or a
reed-pipe. Rāzī (Kosgarten, p. 45) ignores
the flute (nay) and says that it was inferior (māghir)
to the mizmár (reed-pipe), but so late gained
wide recognition in chamber music that it can probably
be reason of jūsī appraisement and the style of the
darwāsh. Šafiʿ al-Dimʿ Abī al-Muʿāmin (d. 1394)
describes the nay with eight holes for fingers
and the thumb-hole at the back being called the ṣ ajud ("verhament"), its name revealing its function.
In the Persian Kana al-Tuṣṭīf (eighth cent.) we find two
very small flutes mentioned, but in the Ṣaḥīḥ at-
Adwār (sixth cent.) we find that the nay ahūd
was normally 63 cm. long. Five larger sizes are
given, the longest being 99 cm., with two smaller
sizes, the limit being 31.5 cm. Ibn Ḥašī perpetrator
also registers several varieties including the nay bānūn
of 67.5 cm. approximating in pitch to the harmen
string of the flute, and the nay dir of 33.75 cm.
approximating the air string. Ewīliya Čelebi (eighth cent.)
gives the names of a number of Turkish flutes (i. 633) including the ḥuṣūh muṣṭafrī, the ḱālmudī, and the ḱa-Ikām, unknown flutes (i. 954)
describes and delineates the Egyptian instruments
of the last sixteenth century. The largest, 77 cm.
long, was the nay ḥaṭṭ (= ḫar), and the smallest,
48.8 cm. long, was the nay ṣīruf, the harfeh of modern Syria (Mushārqa, p. 20). Other
flutes named by him are the nay ṣabūr, the nay
ṣuwarq (ṣuwarq), the ṣuwarq, and the nay
ṣuwarq. In Turkey the ṣuwarq is the smallest
flute used in chamber music (Lavignac, p. 3019).
Turkish and Egyptian flutes are usually well made,
with a head to support the lips. In Palestine and
the Maghrib they still retain, more or less, a
primitive appearance, and although the seven holed
flute is common (Christianowitz, pl. 2), the five
and six holed instrument has acceptance (Delphin
et Guin, p. 45: Z. D. P. F., 1947, pl. 1). In the
Maghrib, these flutes in the orchestra still retain
the name of ḩaṭḥa (vulg. ḡaṭṭa), and they are
usually about 40 cm. long, whilst the ḡaṭṭa or
ṣabūr is smaller. In the interior, longer flutes like the ġaṭṭa and ṣuwarq may be found. Delphin and Guin give an account of these.

The recorder, or flute à bec, also found
favour in the East. This is the Arabic nābūs (mouth nay), the Persian nāb, the Turkish ḏāūkh, and the Hindustāni ʿalāmā. As early as the ḫawās
al-Safārī and the Mafṣūṭ al-ʿUlām (sixth cent.) we
read of the ṣīwālka, which was doubtless a flute à bec (see my Städter, p. 83). Villeteau (i. 951)
says that it was an instrument of this type in his
day in Egypt. The ḏāūkh or ḏāūkh is mentioned
by Ewīliya Čelebi in nine different species (i. 642),
and is also mentioned by Ḥaḍḍī Kāhlīfa (i. 400).
The ṣīwālka would appear to have been a small
three-holed recorder such as was common with
pipe and tabor players in Medieval Western Europe.
It was played with the fingers of one hand, the
other hand being used for beating the ṣāṭī or drum,
and hence the phrase in al-Ghāsāni: the ṣīwālka of the drummers (ṣāṭī).

Pan pipes are also common to the folk. Both
Pythagoras and Mosques are credited by Ewīliya Čelebi
(i. 624, 636) with the "invention" of the
mūsīlar or panpipes. Although the word stands
for "a composer of melodies" in the Mafṣūṭ al-
ʿUlām (see also Meninski), it is referred to a musical
instrument in the sixteenth century (N. E., xiv. 312).
A contemporary writer, Ibn Ḥašī, says that the mūsīlar
is one of the [wind instruments] with free
pipes. Its notes are determined by size [of pipes].
The lowest have the least notes, and the shortest
the highest notes. We find the instrument called
mūsīlar (Pasang-i Sīwāl) whilst Ḥaḍḍī Kāhlīfa
(i. 400) has ṣawīlar, and Toderini (i. 237) musul,
which probably gave birth to the Romanian
musical. The term mūsīlar survived up to modern
times (Villeteau, i. 963), but the more general
word used today (Mushārqa, p. 20) is ṣīwālka.
(Pedro de Alcala [1505] mentions a harp by this
name, but perhaps he confused the name with ajmān).
Russell (The Natural History of Allige, i. 156)
writing in Syria in the sixteenth century says
that panpipes were to be found with from three
to twenty-three pipes. Kaemmerer, p. 743, delineates
a xvith century Persian instrument.

The names of instruments in the mūsīlar group
in Arabic are legion. Many of those not mentioned
in this article are regional and are of folk origin,
their source being often discernable, such as in
the namūsārā and namūsīlar, to name only two.
More interesting however, are the older words
like ḫawās, ṣūrūn, and ṣabūr. The first two occur
al-Fīrṣāshāhī (d. 1414), and ṣabūr, which equates
with mūsīlar, reminds us of the much debated
passage in Eschil, xxviii. 15. Zanbāk occurs in
in al-Azharī (d. 981) and even earlier (cf. Lane).
The Greek ἱππαλή and the Latin saxula were
strung instruments, and Iadore of Seville's sax-'
ologia as a "wood-wind" instrument has long been
suspect, but since mankāb is to be found in Arabic equating with ammūnā and māmūr there would appear to be good reason for accepting Iskole of Seville.

Specimens of instruments: Brussels, Catalogue des... du Musée Instrumental du Conservatoire royal de Musique; New York, Catalogue of the Croisière collection of oriental instruments (1st ed.).

(H. G. FARMER)

MIZWĀR, arbilised form of the Berber awmar, who precedes, he who is placed at the head, equivalent to the Arabic awmar ad-dam and like this frequently has in North Africa the meaning of chief of a religious brotherhood (q.v.), the superintendent of a mosque (q.v.), or the chief of a body of shorā (q.v.), dialect form from the class plur. sharaf. In those districts of the Maghrib, where the old Berber organisation has survived, mainly in the Great Atlas and Central Atlas, awmar is sometimes equivalent of amīr, the political adviser to a body; cf. R. Muntagné, Les Berbères et le Maghreb du sud-est (Paris 1930, p. 222).

The term māmūr (or māmūr) is early found in the histories of the Maghrib in connection with Almohad institutions. There it means the head of a faction and the corresponding office seems at this time to be often confused with those of ḥāfiz and makāb (q.v.). In the time of the Marinid Caliph Abū Yūnās Yaḥyā (q.v.) al-Maṣūr, chief of the twenty-one Almohad tribes had two māmūr: one for the first rank of the hierarchy, i.e. the earliest recruits of the Almohads, and another for those who had joined them later (q.v.). (Kisāb al-ʿAṣīr, in E. Levi-Provençal, Documents inédits d'histoire almohade, Paris 1928, p. 70; also p. 65 and p. 64 and M. Gandolfi-Demourey, Introduction au翻译 of the Maṣūr al-ʿAṣīr of Ibn Faḍil Allāh al-ʿUmar, Paris 1927, p. xxvi.).

At the present day, māmūr is in constant use in Fāṣ for the  ḥāfiz (q.v.) of the principal Shāfit groups who live in this capital.

(E. Levi-Provençal)

MOBEDH, a Persian word which passed into Arabic the form  محمد or  محمد, we also find in Arabic the Persian plural, moubēd, but usually combined with mābēd in the expression mābēd mābēd, which means "chief of the mābēd", "grand mīrābēd". It is also found alone (mābēd) standing for mābēd mābēd. The Arabic plural is mābēd. The word is derived from the Pehlevi mābēd, which means "chief of the magis" and therefore indicates a priestly office; according to al-Maṣāḥīrī, Kūstān-Tanbīh wa l-tahrīf, B. G. A., vi. 103, the word would mean खाḍā dā din and be derived from ma = "religion" and ḥāfiz = "protector", and according to al-Yaḥṣīrī (Tarīkh, i. 207) ḥabān al-ʿawād. In Armenian texts the word is rendered by magis, in the Greek acts of martyrs by muārōt; muārōt muārōt; muārōt muārōt; in Syriac and especially in the acts of the Persian martyrs not only by ܡ 가운, but also by ܡܓܕıyla; in one passage (Hofmann, Assyri, p. 88, cf. below), the word muārōt is used immediately before ܡܓܕiqueta. The Syriac has also ܡܓܕܝ因地制 or ܡܓܕܝ因地制 corresponding to the Greek ἔφορος, έφορος, יִשְׂרָאֵל, we have no satisfactory information regarding the functions of the mābēd; we know more about those of the chief of the mābēd or mābēd mābēd. The information given below relates to the Šāfit period, a period in which the clergy were reorganised and which is reflected in the Arabic and Persian Muslim sources.

In the later Anvātā, we find references to the sacredotal organisation but the names do not agree with those of the Šāfit period; for example the principal office, that given in the Šāfit period to the mābēd mābēd, is called Zarokhīsho, and had judicial functions like the chief of the mābēd. The term magis is only found in the Pehlevi commentaries on the Anvātā. The sources from which we can extract information about the mābēd, and the mābēd mābēd or chief of the mābēd, are of course Pehlevi or go back to Pehlevi texts. Among the former which have come down to us is the Bundahish which among other things contains a list of ašbāb mābēd: the Anvātā, Wāfīg Nūṣak; the Kūstān-Tanbīh al-dār USB, (transl. by Nöelke in the Börsen-Postchrift: Beiträge zur Kunde der indogermanischen Sprachen, iv., 1875, and by Pagliaro in L'Época e il Romanzo nel Medio Evo perurnico, Florence 1927, a part of the text 1-3 is reprinted in the Hijjafūkh für das Pehlevi by Nyberg); the Mobiles aus der...
stian, a legal work studied by Bartholomew in the
Samishian Scriptures, A. H., 1920, is valuable for our
knowledge of the judicial functions of the mohbedh and
mohbedh mohbedh; a few short moral treatises
preserving traces of laws (cf. Pagliai in R. S. O.,
x., 1925, p. 468—577 etc. The numerous references
to the mohbedh and the mohbedh mohbedh which we
find in Persian and Arabic sources come from lost
Pehlevi sources or Arabic and Persian versions of
them. Thus the Book of Kings especially in the latter
part contains some information about the mohbedh but
not anything full or precise about their functions;
the matter of the Shahrulm is taken, as we know,
from a Persian prose version of the Khwadhamagh.

The version which we have of the letter of Tammur
(published and traln. by Darmesteter in J.A., 1904, 1.)
gives very interesting information about the Shan-
nian hierarchy and also about the mohbedh; it
comes from a Pehlevi document which, according to
Christensen, goes back not to the time of Ardashtr
but rather to that of Khusraw the Great (cf. Empire
des Sassanides, 111—112, and more recently Aver-
com et Tammur, in Acta Orientalia, x. 43 1937).

The numerous writers in Arabic and Persian
whose works give as notes to the mohbedh derive
their matter, as regards Persia, from information
supplied directly by contemporary mohbedh or
grand mohbedh, from Pehlevi works translated into
Arabic (especially the translations of Ilan al-Muqaffa')
which no longer exist, such as the Khwadhamagh
and the A'Am-nama or "book of offices" (Kidsh.
al-Rusun; cf. below). Of great importance is the
Kidd al-Tadj or Achkad al-Mu'indi by al-Lijibhi
(cf. F. Gabrielli, in R.S. O., x. [1928], p. 252—308)
and others written by al-Lijibhi himself and the
Kidsh al-Mu'indi wa 'Ashish which is attributed
to him; very important also are the works of the
historians, chroniclers, geographers and polygraphers
or men of letters like al-Ya'qib, Ibn Kuttaha, al-
Dinawari, al-Talhuri, al-Mas'udi, Hamza al-Ishbunah,
al-Thaliibiti, al-Nawairi, al-Shahrastani, etc.

Of course all these sources bear different relations
to the Pehlevi originals or to one another and they
diffuse the same material, but from the fact that
they frequently combine legendary matter with accurate
statements, e. g. some concerning certain
of the functions of the mohbedh.

Information of value can also be extracted from
Syriac, Greek (especially Acts of Martyrs) and
Armenian (historians etc.) sources.

Even by combining all these sources it is not
possible to give a precise account of the office of
mohbedh in the Sassanian ecclesiastical hierarchy as
laid down in the organisation of the kingdom
attributed to Ardashtr (cf. Kitho al-Tadj, p. 23—30)
and to follow its developments (cf. the letter from
Tannur, al-Mas'udi, Tabbth, p. 105—104 and Maru'dhi,
II. 156; al-Ya'qib, Historia, i. 202: al-Shahr-
astani, ed. Cureton, p. 193; transl. Hausrucker,
I. 292). Nothing definite can be deduced from the
Parsi hierarchy of the present day as the ecclesiastical
organisation has profoundly changed. But we may
assume that high priests regularly called mohbedh
were given the task of supervising in the different
divisions of the empire (one might say dioceses)
the very varied work of the hereditary clergy, the
mohb, who had so great an influence over the lives of
the Persians that is to say not only the very
ceremonial occasions of worship, the sacrifices,
the care of the pyres, but also the care of souls
and the education of the people. These mohbedh
and their chief (cf. below) were like all priests the
ministers of learning, princes of learning (cf. Tabbth,
p. 97, where there is an allusion to the unbounded
knowledge of the mohbedh and
hordis) and the Arab writers must also have
obtained information from mohbedh (cf. Inostranee,
Etiopia sassanide, p. 10). The mohbedh had also
judicial functions (cf. below); in the Acts of the
martyrs they appear vested with executive power;
but since courts of inquiry were composed of lay
officers and priests, it is probable that this power
was exercised by the whole college or by delegation.
It is also certain that the title of mohbedh is not
applied exclusively to these heads of administrative
divisions or dioceses (of whom it is nevertheless
characteristic) because at the court of the king,
according to the sources, especially the Shahrastani,
there were many high priests called mohbedh or
hordis who formed a kind of council around
the grand mohbedh (cf. below) or who had other
special offices. Gradually the name mohbedh must
have come to mean, as at the present day, a
priest fully qualified to do everything in connection
with worship. The other terms for Persian priests
seem to refer rather, either to their dignity (e. g.
dastur) or to functions occasionally performed by
them (cf. zoroastrianism). Rent and mortgage are
sometimes put on the same level. The relation of
the mohbedh to the other degrees of the hierarchy
like the hordis, another office (perhaps teacher)
having supervision over the diocese of priests is not
clear. Al-Mas'udi says in the Tabbth, p. 103, that
hordis were lower in rank than mohbedh.

At the head of the hierarchy of priests were
no doubt the hordi hordis or chief of the
hordi and the mohbedh mohbedh or chief of the
mohbedh. Tannur, the writer of the famous letter,
is called by the Denkari: hordis hordis hordis, according
to Darmesteter "chief of the religion", while al-
Mas'udi (Tabbth, p. 99) calls him better the
mohbedh of Ardashtr. Indeed it is quite certain
from our sources that the supreme head of the
ecclesiastical hierarchy was the chief of the mohbedh
mohbedh or chief of the hordi (hordis) who was also the first dignitary
of the court; all the religious clergy which constituted a state within the state
was concentrated in this postifl. Al-Mas'udi in
the Tabbth, p. 103, says of his rank that it was
almost equal to that of a prophet.

In accounts of the ceremonial of the Shahrastani,
he is always given first place and he frequently
appears surrounded by a council of high priests,
hordi or mohbedh. Besides all the functions
which he exercised as chief of the clergy, i.e. the
supervision of the whole religious life of the
country, the settlement of theological questions,
of problems of ecclesiastical policy, the appointment
and dismissal of ecclesiastical officials, he had
others which we must outline. Christensen thinks
he can deduce from several sources (letter of
Tannur, al-Mas'udi, Tabbth, p. 103—104: Ya'qib,
Historia, i. 4—102) that out of five such officials
formed with the king a kind of ministry, the
composition and number of members of which
perhaps changed from time to time but which
always included the mohbedh mohbedh (cf. e. g.
the Shahrastani, ed. Mohl, vi. 223 where the mohbedh
is called the king's visitor). But he was also
supreme judge as head of the mohbedhs of the
administrative divisions, as the latter were the
judges of higher degree in their respective areas. It is derived from the studies of Bartholomae on
universally legal texts (and especially on the *kufr-i-
huduzi Dictation*, cf. Zum Saunadiischen Recht, p. 34, etc.) that in the different districts there
were judges of first instance and of two degrees (has lower, mas higher), above whom was the
muhadhih of the district. The supreme judge was ultimately the mubahih or mubtahih whose final sentence
could not be disputed. For the judicial functions of the mubtahih it is interesting to consult the acts
of the Persian martyrs in Syracc and Greek (cf. Hofmann, Auszüge aus syrischem Akten Jurisprudenz,
Leipzig 1880; the texts of Bedian, etc., in Patrologia Oriental., etc.). The Arab writers also
give us a pretty clear idea, especially as regards the mubtahih mubhah; for example in Tabari, i.
559; Noldeke, Gesch. al-Fursan unter der trater, p. 230, the mubhahih mubtahih in advising the king in
the matter of the son of Dhi Yasaan, lays particular stress on the young man's right to have his
prayer granted; al-Mas'udi, Muruq (ii. 156) and
Tamukht, p. 105, calls him Sadiq ul-luluf; in the
mubahih also (ii. 211) we are told in connection with the abuses of Hurnus son of Khurraw that,
having abolished the jurisdiction of the mubhahih, the good old tradition and the ancient laws fell
down to desuetude. In al-Tha'alibi, Hist. Pers., p. 506-7, we find two answers which are interesting in this
connection; they were given by the mubhahih mubtahih to the king, who had consulted him with
respect to the sentence of death to be pronounced against his chief wife and her son; in the Kirids
al-Tufy, p. 78 it is related that King Kawkadh full of admiration for a subtle answer given by the
mubtahih exclaimed: "It is with justice that kings have given you the first place and that
they have entrusted you with the control of jurisdiction!"

Some Arabic sources also allude to the court of justice which was held on the occasion of the
great festivities of the *Nuruz* and the *Mubhahih* (e.g. Kitab al-Tufy, p. 159-63; al-Majdab wa-
I-Ahlsad, p. 539-95; al-Kirdmi, al-Aqhdar al-Tabyha, ed. Schauz, p. 215-319, 222-223; Silust-nama, ed. Schueter, p. 38-40, etc.). According to these stories, the people on those days had the right
to bring any complaint against the king before a commission of which the grand mubtahih was the
most important member; the first complaint was judged by the grand mubtahih who thus had the
right to condemn the king, the latter having pronounced a formula of submission, kneeling
before him. The complaints that followed were judged by the king. According to al-Nuwairi, the
mubtahih also offered to judge on those ceremonial occasions a basket of fruits over which he had
uttered a prayer. Tansur's letter (J. A., 1904, p. 344-345) informs us that in the procedure laid
down by Ardashir for designating the heir to the throne the grand mubhahih played the most important
part, that is to say he proclaimed the new heir chosen by divine inspiration should it happen that
the other dignitaries summoned to deliberate with him were not in agreement. The position of the
grand mubhahih as intimate counsellor and minister
of the king who placed complete confidence in him
(is he often called *counsellor of the king*)
is very clear in the Sujudnama as well as in the
Arabic and Persian sources (cf. al-Tha'alibi
p. 504-505; al-Mas'udi, Muruq, ii. 171; where Bahramson of Bahram, son of Hurnus, addresses

the grand mubhahih: "Thou, supporter of religion,
counsellor of the king and the man who directs
his attention to affairs of state neglected by him").

According to al-Mas'udi, Tamukht, p. 104, only the
mubhahih and a few other high officials of state
possessed a copy of the *Sujudnma* or register of offices, a very large book, forming part of the
*Mubhahih* (in *Naufurlis* was translated by Ibn
al-Makaffi with the title *Kitab al-Kutub*).

Among the details which are preserved in the sources about the grand mubhahih, we are told that
he was one of the three who shared the king's table in time of war when the royal meals were
very frugal; and that when a victory was won, he
along with other dignitaries pronounced a discourse
(Kitab al-Tufy, p. 172) in which he was the main
feature in the sources is the wisdom of the grand
mubtahih and indeed of all the mubhahih (cf. below).
In the *Sujudnma* (we pick out only a few of the
more interesting episodes) the Byzantine ambassador
who was, the grand mubhahih tells Khurraw, of the
school of Plato, puts seven questions to the mubhahih
which he answers (Mohl, vi. 399 sqq.) and thus excites
the admiration of the king. In this story, as
usual, the grand mubhahih appears surrounded by
other priests called mubhahih on mubtahih as the
case may be, and he is also given the title *dawir*.

Cf. also the questions put by the grand mubhahih
to Khurraw Anbarka in (Mohl, vi. 394 sqq.) and
the assembly of the mubtahih under the presidency
of the grand mubhahih to put questions to Hurnusson of Anbarka (ibid., p. 424-430). Another
passage (Mohl, vi. 442 sqq.) describes the heroic
piety of the grand mubhahih who consoles a high
official, a victim of King Hurnus, and is poisoned
by the latter. The grand mubtahih is also represented
as interpreting the language of birds (cf. also
al-Mas'udi, Muruq, ii. 169-170; the dialogue of
the owls denouncing the cruelty of King
Bahram son of Bahram son of Hurnus (276-
293 A. D.), and in al-Tabari (i. 965; Noldeke, p. 250) he explains the invasion of jackals in the
reign of Khurraw as a punishment for the impunity
of the land.

The story is very well known among the Arabs
of the dream of the grand mubhahih in the night of the
birth of the Prophet and his interpretation of other
miraculous happenings of the same night (al-Tabatt,
982 sqq.; Noldeke, p. 253; Amiral dell' Islam, i. 150); Hamza al-Irshahid (ed. Gottwald, p. 37)
quotes a list of *Sujudnama* kings drawn up by the
mubhahih Bahram son of Mardanish (Noldeke, p. 401).

In religious discussions the steps to be taken
against heretics, in the persecutions and inquisitions
against the Christians, the mubbih and the grand
mubtahih are always most prominent (Hofmann,
Auszüge, texts of Bedian, Patrologia Oriental., etc.).

Cf. also the articles MAsk, Zinat.

A list of grand mubhahih of the Sassanian period
and of mubhahih contemporary with the last editions
of the book is found in the *Bundakhsha*, ch. 33
(Christensen, Empires des Sassanides, p. 35).
The first grand mubhahih appointed by Ardashir
was, according to Tabari (Noldeke, p. 9), a man named
Pehr (?). The mubhahih mubhahih Aturpitt-Zartuskh
lived, according to the Pahlavi sources, 150 years
and was grand mubtahih for 90. Ellsche (Langlois, ii. 230) mentions a grand mubtahih, who had the
honourable title of Hamakdun (*he who knows all
religion*) on account of his vast theological learning;
this title seems to have been often given to the

THE ENCYCLOPAEDIA OF ISLAM, III.

35
MÖBEDH — MODON

A number of names of grand mōbedh are given in various sources, among them the Acts of the Martyrs in Syria, Greek and Armenian; some are also preserved on the seals published by Herfeld in his work on the monuments of Faikuli. Māzak was according to some texts mōbedh or even grand mōbedh. In Ibn al-Fiṣṭiḥ, p. 216, we have a description in verse of pictures representing with other dignitaries "their mōbedh and their kārābāḥ" who judges ignorantly and iniquitously.

On the somassāk cf. the article Zoroastrianism and Goldzuber, Muhammedanische Studien, 1. 170 and Ṣaḥīḥ al-Bayān, ed. Sandbühl, Cairo 1927, III, 7, on the Ġānibīya. It is known that the Zoroastrian clergy played an important part in the Ġānibīya movement (Inschriften, Études somassianes, St. Petersburg 1909, p. 10–15).

After the Muslim conquest the importance of the grand mōbedh and of the mōbedh diminishes in proportion as Islam spreads; our sources of course continue to mention them and Arab writers give information obtained directly from mōbedh (al-Taftahi, t. 2874, year 31 a.H., mentions the mōbedh who advised the governor Mūhawalā to kill king Yaqūt; al-Musṭaḏhī, Khiṣāṭ al-Tūbākh, p. 104 gives the name of the mōbedh of all Persia in 342 a.H. etc.).

The organisation of the Fārsī at the present day is different, mōbedh means a priest qualified to perform all the duties of worship. This, however, is beyond the scope of this article.

(Michelangelo Guidi)

MODON, a town in the Morea on the south-west point of Messenia, about 20 miles N.W. of Cape Arkitas, opposite the island of Sapienza at the foot of Mount Tenea. Modern is frequently mentioned in ancient times under the names Mōsōnos and Mosoun; from the latter comes the Italian name of the town, modern, under which it has been known since the middle ages in Europe. In the middle ages it was of much greater importance than in antiquity. The good harbour of the town, sheltered by cliffs of varying height, has long been a haven of refuge and of supply for ships going from the west to the Levant. Hence pilgrims frequently mention the town and their accounts of their travels even contain maps.

The Arab Idris, in his geographical work finished in 1548 (1153) for Roger II of Sicily, enumerates many seaports and towns on the mainland of Greece. Among these is MODON of which he records that it is a fortified town and has a citadel which commands the sea (Geographie d’Edris, ed. A. Jaubert, Paris 1846, p. 305). By the treaty of 1109 with the Byzantine emperor Alexius III, Venice was allowed to trade freely in Modon. The town had suffered severely at the hands of the Venetians in 1125, and again of the Normans in 1146 but was recovering again slowly. After the taking of Constantiople by the Crusaders (1204) and the division of the lands which had previously formed the Byzantine empire, Modon fell to the Venetians, under whose rule it remained for nearly three centuries. It is this period that marks the golden age of the town, which, carefully administered by her merchant princes, developed a new prosperity and became an important and secure centre for trading with Egypt and Syria, while previously it had often been a nest of pirates. In the 13th century the population of Modon was a mixed one of Greeks, Jews, Albanians, Turks, Gipsies and Western Europeans. The Turks of the neighbourhood raised swine which they sold to the townspeople. According to some sources, at the end of the 13th century five thousand swine were exported annually from Modon to Venice. About the same time a settlement of gipsies in Modon is mentioned, who came from Egypt, a district about forty miles from Modon, from which they said they had fled — for the sake of the Christian faith — and were seeking refuge in all lands with a letter of recommendation from the Pope (cf. Die Pilgerfahrt des Ritter Arnold von Harf, ed. E. v. Groschwitz, Cologne 1860, p. xxvii, 67 f.; Z.D.P.V., xvii, 1894, p. 144). The fact is, however, that the gipsies of Modon after 1500 went over en masse to Islam, about the end of the 14th century were again mainly Christians, outwardly at least, after 1715 again became Muslims and finally after 1821 became Christians again.

During the second half of the 14th century the population of Modon increased considerably for many Christians and Jews of the Peloponnese, seeking to escape the Turkish yoke, took refuge here. While the town itself was immune, the country round, which was flat, suffered a great deal from the Turks. Thus for example about 1480, the Turks raided this plain and destroyed the fig trees there. In the last decades of the 14th century, the Venetian republic had much anxiety about Modon and her other possessions in the East, which the Turks had long coveted. In 1499 the Admiral Antonio Grimani was ordered by his government to see to the defence of Modon against the Turks. In July of this year, the Turkish fleet came to the vicinity of Modon and soon afterwards several naval encounters with the Venetian fleet took place. In a naval battle fought on Aug. 8, 1499, outside Modon, the heroic Venetian Andrea Lovestano, governor of Corfu, was taken by the Turks and put to death. Another Venetian admiral, Melchior Trevisano, was now entrusted by the Venetian republic with the defence of Modon and her other possessions in the East. At the same time the republic despaired of making peace with Turkey, but the negotiations broke down in face of the impossible conditions laid down by Bayezid II. Among other things he insisted on the surrender of Modon. In the meanwhile on March 23, 1500, the Turks had occupied Merona, a little town near Modon. Marcus Gabriel, the commander of Modon, had previously, on February 18, 1500, reported to the Venetian government the great straits of the town. According to his report, the garrison was not sufficient to defend the town against the Turks, and for a successful defence he would require four thousand trained men, in addition to artillery, arms, munitions and gunpowder, which the town lacked. In spite of his difficult financial
situation, Venice managed to provide the town with money, troops and artillery. But the Turkish fleet again appeared before Modon while Bayazid II advanced on the town by land at the head of an equipped army. An attempt by the Venetian fleet under Admiral Hieronymus Contarini to raise the blockade on July 24, 1500 failed with heavy losses. The Turkish fleet, according to the Venetian admiral, had very good artillery. In the meantime famine had broken out in the garrison so that they could hold out no longer. Four Venetian galleys were able to steal through the Turkish fleet into the harbour and bring the garrison food, munitions and men, but this could not avert the fate of the town. After a siege of twenty-eight days during which the town was bombarded by heavy artillery, the Turks stormed it. On Sunday, August 9, 1500, the Venetian garrison had to yield to this onslaught.

The lot of the surviving garrison and other inhabitants of the town was a hard one. They were either massacred in most inhuman fashion or sent into slavery. Very few of them succeeded in escaping. But the number of people captured did not come up to the expectation of the Turks, because the Venetian authorities had earlier sent thousands of old men, women and children from Modon to Crete and Zante. Among those who fell at the capture of the town was the Roman Catholic bishop of Modon, Andreas Falcius, a number of prominent Venetians and high officials of other origin. When the news of the capture of Modon by the Turks reached Venice, it was plunged into deep mourning. This is reflected in a letter which the Doge Augustino Barbarigo sent on September 7 to the Pope and several European rulers with reference to the catastrophe. The sole consolation of the Venetians was the devout hope that their fleet might succeed in retaking Modon. The Venetian Senate at once saw to the settlement of a number of the refugees from Modon in Cephalonia. Sultan Bayazid II regarded the conquest of Modon, at the fortifications of which he was rightly amazed, as a gift from God. When he entered the town as a victorious conqueror, it had already been partly consumed by fire which had been begun by the defenders themselves. The fugitives from Modon, who had taken refuge in Zante, watched the flames that were destroying their homes burn for several days. Sultan Bayazid II promoted the first janissaries to leap over the walls of Modon to the rank of Sarach-bey. He had two towers built of the skulls of the fallen and massacred Christians and turned the cathedral of the town, the venerable church of St. John, into a mosque. On August 14, 1500, he went to the new mosque to return his thanks to God in prayer. He then saw to the resettlement of Modon, the walls of which were rebuilt. By imperial decree, each Peloponnesian village had to send five families to become permanent settlers in Modon, the revenue of which were allotted to Mecca. After a brief stay, Sultan Bayazid left his new conquest. He took with him as a prisoner the last Venetian defender of the town, Marcus Gabriel, whose life he had spared with the intention of using him for his own purposes later. The historian Saffet, a native of Sinope, wrote some time before 1523 an account of the taking of Lepanto (Napactos) and Modon (Pethioudo'si Amfákhíi ve-Muion). The brief description of the capture of Modon written by Münzeli Sîyâsî Mehemet also gives details of the sultan's treatment of the town (cf. F. Babinger, G. O. W., Leipzig 1909, p. 49).

In 1531 the Knights of St. John endeavoured to take Modon from the Turks and to establish themselves there. To do this they equipped a small fleet under the command of the Abbate Fra Bernardo Salibia, a nephew of Pope Clement VII. Two Greeks employed in the harbour of Modon and Johnas Skandalis, a Greek from Zante, whose father was a customs officer in Modon, were to assist the enterprise. The fleet, led by Salibia, with two merchant ships, which also concealed soldiers, sailed for Synéfira. The warships were hidden in the vicinity of this island, while the two merchant ships under the guidance of Johnas Skandalis, made for the harbour of Modon. Permission to land was given without trouble to the crews of these two ships, who gave themselves out to be some merchants and some janissaries, and they were allowed to spend the night in the tower at the harbour. Johnas Skandalis and his little band of followers then succeeded in overpowering the Turkish guard at the tower and taking nearly the whole town. The rest of the Turkish garrison shut themselves in the palace which had once housed the Venetian governors of the town, and offered a stubborn resistance. In order to overcome the Turkish garrison the warships hidden at Synéfira were necessary. These now came up, although very late, and bombarded the town with their guns. Scarcely had they begun when a strong Turkish fleet appeared. The Knights and Johnas Skandalis therefore abandoned Modon, but not without carrying off some sixteen hundred prisoners.

The years 1532—1534, during which a Spanish force in the service of Charles V occupied the adjoining Coroni, were a critical period for the Turks in Modon. But after this, it was left in peace for a considerable period. The Travels of Evliya Celebi who visited the Morea in 1667 to 1668 contain valuable notes on Modon and its vicinity, while Hikâîî Khalifa (d. 1658) contains nothing essential.

During the war which broke out in 1684 between Turks and Venetians in which Germans, Poles and Russians also shared as allies, Modon with the whole of the Morea was restored to the Venetians. General Francesco Morosini in 1686 broke the resistance of the Turkish garrison with the help of Greek and German troops and secured it for the Adriatic republic. The chief mosque of the city, i.e. the old cathedral, was once more dedicated to Christian worship. Only in 1699 after the peace of Carlowitz did the Turks recognize the Venetian claim to Modon. Venice now did her utmost to restore the city which, with its commerce, had much declined during the Turkish occupation. Of the seven administrative divisions (cameru) into which the Venetians had divided the Morea, the third was that of Modon. This district was again divided into four areas (Fanari, Arcadia, Navarino and Modon). From a Venetian record of September 29, 1699, giving the results of a census by the Venetian officials, we see that the district of Modon had been depopulated to an incredible degree. The 218 villages detailed in this list were inhabited by only 11,702 souls. Modon itself, including the citadel, had only 236 inhabitants of whom some must have been Muslims. A large number of villages which at the turn of the xviiith—xxviiith centuries belonged to the district of Modon, have
Turkish names, some of which survive to this day. These villages were originally left to Turks whose names in time passed to the village (cf. S. P. Lambros, in Delton, publication of the Historical and Ethnological Society of Greece, vol. II, 1885. p. 686-710, pl. VII, thereon Τουρκική Μελετήματα, Athens 1884, p. 114 sqq.; Fieschi Antonio Paschico, Brève discussion corrigé du Peloponnesio e Morea, Venice 1704, p. 125 sqq.).

After the conquest by Morosini whose services to Modon are commemorated in inscriptions still in existence, the town remained for some nineteen years under Venetian rule. In 1715 the grand vizier 'Ali Kamurtri with the help of a number of Greeks took not only Modon but almost the whole of the Morea from the Venetians in a very short time. The Venetian garrisons of Navarino and Coroni as well as the inhabitants abandoned them when the Turkish army approached in the summer of 1715, in order to take refuge in Modon, which was much more strongly fortified. Soon afterwards the Turkish fleet and army began the siege of the town. After a brief resistance Modon surrendered voluntarily. After the capture of the town the grand vizier ordered a general slaughter of the Christians. Many in the district thereupon adopted Islam in order to save life and property in this way. The Turks who had formerly owned property in Modon or the neighbourhood were allowed by imperial edict to resume possession of it. The peace of Passawitz (1718) finally ceded Modon to Turkey. The town recovered from the catastrophe of 1715. From 1725 onwards a busy trade developed between Modon and the lands of North Africa, especially Algeria and Tunis; this trade had existed previously but not to the same extent. Modon played a certain part during the war between Turkey and Russia in 1768-1774. The Russian vice-general Georg Vladimir Dolgovski in 1769 with 500 Russians, 150 Montenegrians and 100 Greeks (mainly Maimotes) besieged Modon. The Turkish garrison of Modon consisted of 800 janissaries and a large number of Turks of the town and vicinity able to bear arms. The walls of the citadel were in good condition, and the supply of food and munitions ample. The siege lasted a long time; the fighting was conducted mainly by the artillery on both sides. The Russians had also two warships co-operating on the sea. At the end of May 1769, Turks and Albanians from the interior of the Morea came to the help of the besieged who undertook a valiant sortie, when they learned of the approach of help. In the battle that now developed the Russians suffered heavily. They were forced to abandon most of their artillery and to escape to Navarino, from which they sailed with the rest of the Russian army and a few Greek notables. A few years later, the Turks in Modon were still displaying the guns which they had taken from the Russians in 1769. According to reliable sources, the Turkish population of Modon about 1820 was four to five hundred fighting men. About the same time 'Ali Agha was prominent among the Turks of the town for his wealth and in other respects also. The vicinity of Modon was almost exclusively inhabited by Greeks who cultivated the land, which mainly belonged to the Turks, and were despised by them as contemptible menials. During the Greek War of Independence of 1821-1827, all the attempts of the Greeks to take the town failed. At the end of March 1821, a Peloponnesian force led by the orthodox patriarch of Methone, named Gregory, and other notables, besieged Modon and the adjoining towns of Koroni and Neaokastro. The besiegers were joined in the spring by Greeks from the Ionian islands and later by Philhellenes from Europe. On May 18, 1821, Greek ships, under the captains of the Speziators, Nikolaos Moutsas and Anastasios Koladuratsos blockaded Modon. But neither the Turkish garrison nor the armed Turkish civilians in the town were the least dismayed. On the contrary, they undertook raids in all directions and did their best to impede the progress of Greek emancipation. Many fierce encounters took place between the Turks of Modon and their besiegers. In July 1821, Turkish ships re-provisioned Modon but they were not successful in their attempt to re-provision Neaokastro, the garrison of which was in dire straits from want of food and even water. On August 8, 1821, the Turks of Modon decided to attempt the relief of their compatriots in Neaokastro, who had in the meanwhile been forced to capitulate to their Greek besiegers. On the road between Modon and Neaokastro a battle was fought on August 8, 1821, in which the valiant chief Constantine Pierrakos Mavroschialos, a member of the illustrious Mavroschialos family, fell. On the same day, the Greeks took Neaokastro; but they gradually abandoned the siege of Modon. The town was able to continue to hold out, only, however, with the frequent help of the Turkish fleet.

When Ibrahim Pasha, the adopted son of Mehmed 'Ali, undertook to suppress the Greek rising and to pacify the Morea, Modon and its neighbourhood formed his main base. There he landed troops on February 24, 1825, and dug entrenchments. Modon became an important base for Ibrahim Pasha's operations. On October 8, 1826 the town was taken from him by the French General Maison. Not before 1827 the French left and Modon has since then belonged to the Greeks. MODON — MOGADOR  

MOGADOR, a town in Morocco on the Atlantic coast. The Bay of Mogador, protected against the north winds by the rocky promontory on which the town is built, against those from the west by an island about 1,000 yards in length, forms a natural harbour which, although not large and inaccessible for ships of large tonnage, has however the merit of being accessible at all seasons, an advantage which secures it a favourable place among the anchorages of the Atlantic coast of Morocco which is, generally speaking, inhospitable. This favoured situation was taken advantage of at a very early period. In spite of the lack of precision in the sources, it is probable that we should seek at Mogador the site of one of the five Phoenician colonies founded by Hannibal (3rd century). The island seems to have been known as the island of Hera or of Juno. Filioy records that at the end of the first century B.C. the king Juba II fortified purple-dyeworks on the "Purpuraria insulae," islands in the ocean opposite the Autoleus", a Getulic people who lived in the north of the High Atlas. Getulic purple, which was celebrated at Rome, was supplied by the neutralus abundant on this coast. It is only at Mogador that we find an island and islets which can be identified as the "Purpuraria insulae," but no archaeological discovery has yet been made to confirm the deductions made from the ancient geographers.

In the 8th century of the Christian era, according to al-Bakri (who finished his book in 1068), Amogdal, a very safe anchorage, was the port for all the province of Sis. We see in the name of both local sultans, Sidi Mogdii, still venerated at the present day, whose tomb is on the bank near the mouth of the Wãdi 'El-Kob. It is however possible that the saint, of whom we know nothing, gets his name from an old Berber place-name. Mogdii, and Mogdar, is only a Spanish or Portuguese transcription of Mogdull, through the forms Mogodal, Mogdor, which we sometimes find in the texts. The harbour and the island bear the name Mogdor or Mongdor on a series of portolan of the 14th and 15th century (publ. by Ch. de la Roncière, La Découverte de l'Afrique au Moyen-âge, 1925) but there was not a town here, when in Sept. 1506, the king of Portugal Dom Manuel I commanded a gentleman of his court, Diogo d'Azambuja, to build a fortress here which was called Castel Real of Mogador. Built with great difficulty in face of the hostility of the natives, the Portuguese stronghold did not long resist them. While at Safi and Santa Cruz of Cape Goeur (Agadir), the state of anarchy in which the tribes lived favoured the rapid progress of the Portuguese, it seems that at Mogador they came up against resistance probably organised by the old Berber marabouts body of the Râgrâs. The garrison had to remain blockaded in Castel Real, revictualled with difficulty from the old Berber marabouts of the Râgrâs. In the autumn or November 1510, the tribes were strong enough to seize the fortress in circumstances which we do not know.

A sketch of the 16th century and plans of the xviiiith leave no doubt as to the site of Castel Real. It was situated, not at the mouth of the Wãdi 'El-Kob, where it is now shown an alleged Portuguese fort which however only dates from the end of the xviii century, but on the shore of the northern passage opposite the island, on the rocky point which supports the mole west of the present harbour. Sometimes abandoned, sometimes more or less restored by the rulers of Morocco, who from time to time kept a small garrison there, the old Portuguese castle survived till 1765 or 1765 and was only destroyed when the town was built.

In spite of the lack of success of the Portuguese attempt, this privileged situation continued to attract the envy of European nations. At the beginning of the xviiith century, Spain, fearing that Moroccan, Algerian or even European corsairs would establish themselves at Mogador, thought of seizing it herself to protect the route to the Indies. At the same time, English agents were thinking of making Mogador a base against Spain. The Saltñas Mawlij Zaâïn in 1611—1612 and his son 'Abd al-Majà in 1628 drew up a scheme to fortify the place to prevent foreigners from establishing themselves there. This was the time when in France Richelieu and Père Joseph were drawing up schemes for a colonial policy. The Chevalier de Ravilly in 1626 suggested to them the occupation of Mogador and the organisation of a factory and fisheries there. He had it reconnoitred in 1629 but found it impossible to take it by surprise.

In spite of so many projects and attempts against it, the island and the shores remained practically deserted. Ships however frequented the roadstead. It was through Mogador that in the first quarter of the xviith century, the greater part of the trade between Marrakesh and Holland took place. Later, in the time of Mawlij Isâm-id'l, the harbour was mainly used as a refuge for corsairs who came there to rest and repair their vessels.

In 1731, Sidi Muhammad b. 'Abd Allîth, then khâlifa of his father for the district of Marrakesh, desiring to develop commercial relations between his subjects and Europe, ceded the island of Mogador to a Dutch company, which however preferred to establish a centre at Agadir and was not successful there. A few years later on becoming sulîm and having made Marrakesh his capital, Sidi Muhammad decided himself to found a town at Mogador and to conduct all the commerce of
the south of his kingdom through it, to the greater benefit of the royal treasury, which would obtain not only the customs from this increased trade but also profit by the rents of the buildings, most of which had been built by the sovereign and were his private property. The harbour also served as a base for the corsairs who, through the menace they offered to the islets of Europe, forced the Christian nations to conclude treaties with the sultan by which he received valuable presents and even sums of money. In order to populate the town and start business in it, he demanded that European consuls and merchants should settle there and have homes built at their own expense.

By 1760 he had begun work but it is from the autumn of 1764 that the foundation of the town really dates; it was given the name al-Suwaïra (Souira), the little fortress, by which it is known to the natives; the name Mogador is only used by Europeans. We also find a Berberised form (Taouzir). The sultan went in person to choose and distribute the sites for the buildings. He had asked the English to send him an architect. They sent him a French "engineer", a native of Avignon, called Nicolas Courtu, who had made the plans for the fortifications of some places in Romillan. He was an adventurer who, after working in France and contracting, entered the English service during the Seven Years' War. He was living at Gibraltar where he entered Sidi Muhammad's service. The sultan did not gain much by his services and sent him back to France at the beginning of 1767. None of the present buildings in Mogador can be attributed with certainty to Courtu, for after him a number of European architects and masons worked for the sultan, notably a Genoese architect who built the battery called the źidla situated on the western rampart facing the sea. Mogador owed to its builders the narrow streets, massive gateways and bastions of European type, the like of which cannot be found in other Moroccon towns and which give it a quite a special character. Sidi Muhammad also built outside the town a country palace which still stands half buried in sand opposite the little village of Diyabat.

The dreams of the sultan were only imperfectly realised. The merchants, attracted to Mogador by the promise of a reduction in the export duties on goods, were soon undeceived when they saw that the sovereign did not keep his promises but constantly imposed new burdens on trade. The prosperity of Mogador remained insignificant under Sidi Muhammad and declined under his successors. The situation of the town, a long way from great cities and main roads, made it frequently used in the sixteenth century as a political prison and compulsory place of residence for high officials in disgrace. Mogador remained however the starting-place for the caravans to Sfax, Mauritania, and the Sidi in and has retained from this position a certain commercial importance, to which the opening of the port of Agadir to commerce will now do considerable harm.

On August 15, 1844, after the battle of Isly, a French squadron commanded by the Prince de Joinville, who had just bombarded Tangiers, came and bombarded Mogador. It was intended to make an impression on Sultan Mawlay 'Abd al-Rahmán by striking at a town which belonged to him personally and from which he drew considerable revenues. A three hours' bombardment silenced the batteries; the French army then disembarked on the island, the garrison of which, entrenched in the mosque, made a vigorous defence until the next morning. On August 16, a detachment of 600 men went to spike the guns, throw the gunpowder into the sea and destroy the last defences of Mogador. The town, which had suffered very little from the French shot, but had been evacuated by the inhabitants, was burned and plundered by the tribes of the country round (Shiyādān and Ḥaṣān).

Mogador is now the headquarters of a corrupt civil. It had 18,401 inhabitants at the census of 1867. The Jewish element is particularly large, numbering 7,770.

The extremely temperate climate is remarkably equable; but it is spoilt by the wind which blows almost incessantly, laden with sand from the neighbouring dunes.

MOGHUL. [See MUGHAL.]

MOHUR, an Indian gold coin. The name is the Persian mohur, which is a loanword from the Sanskrit mudrā, seal or die. The earliest occurrence of the word on coins is on the forced currency of Muhammad b. Tughlāq where it has the literal meaning of "sealed" or "stamped". By the sixteenth century it had come to be used as a popular rather than precise name for gold coins in general. Very little gold had been issued in India for two centuries before the reign of Akbar. One of his reforms was the issue of an extensive coinage in gold. In addition to many pieces which had only a brief circulation, he revived the old gold tanka (q.v.) of the Sullātus of Delhi on a standard of 170 grains (11.02 grammes) to which he gave the name mohur. That the name at first could be applied to any gold coin is shown by Dībānīgar's reference in his Mīmāṃsā: (_transl. A. Rogers, O.T.F., vol. ix., p. 10) to mohurs of 100, 50, 20, 10, and 5 tula. After the numismatic experiments of Akbar and Dībānīgar, only one gold piece was struck, occasionally with subdivisions so that the general name acquired a particular meaning, especially among the English merchants in India. Mohurs continued to be struck to the end of the Mughul Empire and by the states into which it broke up in the eighteenth and nineteenth centuries. Akbar and Dībānīgar issued
MOKHÀ, a small seaport on the Arabian coast of the Red Sea in 13°10' 50" N. Lat. and 43°12'10" East Long. (Greenwich).

The once imposing town lies on a small bay between two promontories with forts on each about one and a half miles apart. The wall which surrounds the town is a semicircle with four gates. In the north of the Bâb al-Hamidâtlya leads to the citadel of the town and to a tongue of land which runs out into the sea; in the east roughly in the centre of the wall is the Bâb el-Shâbûli through which the for of the al-Bâdî is reached and to the east the road to al-Tâiss from it, while the road to al-Holeida runs north via Bâb el-Bâr-lt. In the north the Bâb al-Salam admits to the fort of al-Bârûli and the road to 'Aden; in the west through the Bâb el-Bahr the harbour is reached; its stone breakwater is now much decayed. This also holds of the wall which connects the city-gates. Seen from the sea the town which covers an area of about half a square mile, still looks very fine; the white mass of houses stands brightly out from the dark blue waters of the Red Sea. But as one approaches, the damage which wars, dilapidation and turbulent times have done to the once sore tried town, is apparent; the houses are for the most part deserted, while the inhabitants, consisting of Arabs, Soudais, Danûkîli, Jews and a few Parsees, have settled in huts outside the town. East of the Bâb al-Shâbûli, for example, there is a large group of huts, inhabited by Arabs, while further south and on the other side of the Wâlî el-Kheer is the Jewish quarter (êl-Sâ'îl al-Yahûdî). In the north lies the ancient cemetery and a whitewashed mosque which contains the tombs of the patric sain of the town, Sheikh 'Ali b. 'Umar al-Shâbûli; in the east of the town is a second important mosque with a minaret 118 feet high, which forms a landmark visible from a considerable distance, along with several smaller ones. The country round is barren. Drinking water is brought by a conduit from the Mawrst twenty-four miles to the north. The population has varied considerably in the last hundred years. In 1824 it was 20,000; in 1878-1879 5,000, in 1882 it was put at 1,500 inside the town and in 1901 it had sunk to about 400.

al-Mokhà is briefly mentioned by al-Adamî in connection with al-Mandib as lying in the land of the Bânî Maqîdî; al-Ma'sûdî also refers to it briefly in his geographical work. The Portuguese gave the town the name by which it has become known in Europe: Moca. P. Manoel d'Almeida calls it Mocou in his Historia geral de Espanha a alma por B. Ihesua Telles (Columba 1666).

About 350 years ago Mokhà was an insignificant village, but rapidly grew in importance when Shaikh Shâhûli discovered the peculiar qualities of the coffee bean and introduced the habit of drinking coffee. In 1513 Alfonso Alberequerque found Mokhà still a modest place but by 1610 it had become the most important port for trade with Abyssinia, and England was endeavouring to trade with it while the Dutch had a factory here. Coffee was the chief article of export along with other specialities of the Yemen, and received its name from the town. As late as 1763 Nieuhof found the town very prosperous; but the capture of 'Aden by the English put an end to its prosperity. 'Aden and al-Holeida attracted all the trade of Southern Yemen. Under Turkish rule Mokhà was a kâdî in the sandjak of Ta'izz but its trade was insignificant. In 1916 for example, only about £10,000 worth of coffee was sent to 'Aden. There is a minimum of industrial activity and that only to supply local needs. Indigo dyeing and the manufacture of spirits may be mentioned: the latter is in the hand of Jews. Mokhà is connected by telegraph with Şanî (via Ta'izz), al-Holeida (via Zahût), Shaikh Sa'dî and Portu. Mokhà has acquired a new importance by the creation of the intendant of the Yemen and is now beginning to share the trade with al-Holeida.

MOLLÀ. [See MawÌlà.]

MOLLÀ KHUSRAW. [See Muhammad b. Farâmàk.]

MOMBASA (Munis, anciently Mvita), an island and town on the east coast of Africa, in Lat. 4° S., Long. 39° E. The island, about 3 miles in length from north to south and nearly the same distance from east to west, is remarkably compact in shape and is so placed in the deep inlet formed by the converging of several creeks as to be almost entirely surrounded by the mainland, only presenting its south-eastern angle
to the Indian Ocean. This peculiarity of its situation suggested to the late W. E. Taylor the derivation of the name Mvita (the "Curtailed Headland") from kita, "point". The more usual derivation from vita, "war" seems inadmissible on phonetic grounds; another explanation connects it with ska, "hidden", either from its hidden position, or from the inhabitants, as it is said, having hidden themselves in the bush during a raid from Pate.

The town of Mombasa is situated at the eastern end of the island and, being the terminus of the Uganda railway and the only port of the colony, is of considerable commercial importance. The population, according to the latest information available, is something over 44,000, of whom 26,906 are classed as "Africans" (i.e. the permanent residents, mostly Swahili, and a floating contingent of labourers belonging to other tribes). The remainder includes 7,525 Arabs, 7,556 Indians, 1,000 Europeans, and a proportion of "other races". The Arabs, Swahili and many of the Indians are Moslems; the two former chiefly Sunnis of the Shafi'i sect, though a few of the older men belong to the Itzhita. There are several mosques, very plain buildings, as a rule, and devoid of minarets; the muhaddithin stands on the flat roof to give the call to prayer. The largest and most imposing of these structures is that belonging to the Khodja.

The origin of Mombasa is involved in some obscurity. It is certain that Arab trading stations existed on the East African coast at the beginning of the Christian era, and we learn from the Periplus of the Erythraean Sea that the traders frequently married native women. This indicates a fairly early origin for the Swahili race. The first permanent settlements, however, seem to have been post-Islamic: 69 (659) is given as the date for the settlement of Pate; and, as Lamu is said by native tradition to have been founded by colonists sent out by 'Abd al-Malik b. Marwân (A.D. 678-705), these two towns were no doubt contemporary. There is no mention of Mombasa in the traditions of Lamu or Pate. At this period, except for a statement made to the late Captain Sigand (Land of Zanj, p. 29), that 'Abd al-Malik sent out Syrians, who "built the cities of Pate, Malindi, Lamu, Kilwa, Mombasa, Lamu and Kilwa". Other authorities place the founding of Kilwa much later, viz. 365 (767). The Chronicle of Kilwa states that "Ali b. Hasan of Shiraz, the founder and first Sultan," installed one of his sons as ruler of Mombasa, no doubt the first of the "Shirazi Sultans," the last of whom was deposed by the Portuguese. It would appear that Mombasa was for some time under the sovereignty of Kilwa; but how far the "King of the Zanj" described by Idrisi and, later, by Ibn Sa'd, as residing at Mombasa, was independent, is not clear. The names of the twelve tribes (called indifferently kabita or frâha) said by native authorities to make up the Swahili population indicate a composite origin and possibly a late one, as the bulk of the people came from settlements already founded. It is possible that the Wamvita (who either take their name from the city or gave their name to it) go back to the alleged foundation under 'Abd al-Malik; but against this is the assertion, repeatedly made, that the Wachangamwe, Wakkilindini and Watangana are the saifa safa, "the three" — i.e. the three aboriginal "tribes". Some native authorities give these three as "Kilindini", separate from Mombasa. Changamwe is a village on the mainland, a mile or two from the crossing at Makupa; Kilindini (now important as the principal harbour for steamers from Europe) is at the western end of the island. Tradition says that Kilindini was a city before Mombasa existed, and, in fact, the jungle near the present port contains numerous ruins of uncertain date, which, so far as I know, have not yet been completely examined. Tanga is on the island of Mombasa, now included in the town. The remaining tribes are those of Kilindini I (a town to the north of Mombasa; its inhabitants are said to have come from Shirazi), either Shirazi in Persia or a town of the same name in Tanganyika Territory, a colony from the original Shirazi), Pate, Panza (or Faza, in the island of Pate), Shaka (a Persian settlement near the mouth of the Tana), Mtwapa (between Mombasa and Takaungu), Jomvu (on the creek known as Port Tudor), the Wagnyua (the people on the mainland north of the Lamu archipelago) and the Waktuwa (the Somalis). Another account omits this last name and substitutes that of the Wamalindi. Krupf (Dictionary, p. 249) mentions a tradition that the town was built (not on the present site, but at the place known as Kwa Masheke, a little to the north) by the Mvita, whose tomb was pointed out to him; but it seems probable that this eponymus was invented to account for the name. When that of Mombasa was introduced we have no information, but it was used by the Arab geographers as far back as the 13th century. It is mentioned, as already stated, by Idrisi. Ibn Sa'id speaks of "a great estuary" to the west of the town, by which must be meant the creek now known as "Port Tudor", and says it is distant about one degree from Malindi. Ibn Battuta, who spent one night there, on his way to Kilwa, describes it as "a large island, two days' journey by sea, on the coast of the Sawahi country. It possesses no territory on the mainland. They have fruit-trees on the island, but no cereals, which have to be brought to them from the Sawahi. Their food consists chiefly of bananas and fish. The inhabitants are pious, honourable and upright, and they have well-built wooden mosques". This would imply that the coast opposite Mombasa was not reckoned as part of the Sawahi. Present-day Swahili restrict the term "Swahili" to the strip of coast between Malindi and Lamu, which they look upon as the cradle of their race and this might be taken as intended by Ibn Battuta, but for his reference to cereals being brought from "Sawahil", which would place it in the south, since the dhows laden with millet come up from that quarter with the S.W. monsoon (cf. Taylor, Africisms, § 128).

The first European to reach Mombasa was Vasco da Gama, who touched there, April 7, 1498, but did not land, owing to the real or suspected treachery of the Arab or Swahili pilot sent by the Shah of Persepome. He went on to the rival state of Malindi and established friendly relations with its ruler, who hoped to find in him an ally against Mombasa. Mombasa — after the city had been repeatedly destroyed, in whole or in part, by Almeida in 1505, by Nuno da Caixa in 1538 and by Continho in 1589 — was rendered tributary to the Portuguese in or about 1590, after the adventurer Mr. Ali Bey had induced the Shah to tender his allegiance to the Turkish Sultan and had been
driven off by Continho’s fleet. At the same time
occurred the invasion of the Zimbias, an unidentified
tribe who had spread desolation on their march
north-eastward, “probably from some locality on
or near the West coast” (cf. Thel, l. 352). From
Mombasa they passed on to Malindi, where the
Portuguese garrison, with the help of native allies,
effectually resisted them, and, if not exterminated,
they ceased to exist as a tribe. The fort, still in
existence, was erected between 1593 and 1595,
and Mombasa was held by the Portuguese for
some sixty years. The last Shtráz Shalikh, Shaho
Mahamab b. Hishaam, was deposed and the Shalikh
of Malindi, Almâr, installed in his stead with
the title of Sultân. Immigration from Portugal was
encouraged, but in 1615 the settlers, apart from the
garrison, only numbered 50 (cf. Stranb, p. 173).
In 1605, a convent of Augustinian monks was
founded, which, with other ecclesiastical establish-
ments, was under the jurisdiction of the Arch-
bishop of Goa till 1612. In that year a separate
diocese of Mozambique was created. Shalîk Almâr
died in 1609 and was succeeded by his son Hsân,
whose treatment by the Portuguese authorities ranks
among the scandals of Colonial history. He was
finally murdered, at the instigation of the governor
De Mello Pereira (1615). His son, Yüsuf, aged
seven, was sent to Goa to be educated and there
baptised by the name of Geronimo Chingulita.
After an inquiry held at Lisbon in 1618, the
highest ecclesiastical tribunal in Portugal pro-
nounced Hsân innocent and decreed that Yüsuf
should be restored to his inheritance. In 1630 he
was sent home and installed as Sultân, continued
for a time to profess Christianity, but, being accused
of apostasy because he had been seen praying at
his father’s tomb and apprehensive of being sent
to Goa (the seat of the Inquisition), revolted,
openly declared himself a Moslem and massacred
all the Portuguese in Mombasa (cf. Faria y Sousa,
vol. iii., iv., I., p. 391). His example was followed
by Tangâ, Miangitâ and some other towns (1631).
Mombasa was besieged for three months by F. de
Mowra, with a fleet from Goa, but without success.
Yüsuf, however, probably seeing that he would
be unable to hold out permanently, returned to
Arabia after dismantling the fort and destroying the
town. The new governor, Seixas de Cabreira,
subdued the revolted towns and repaired the fort,
as recorded in the inscription still legible above the
gateway. The Portuguese rule becoming more
and more oppressive, the Coast Arabs appealed
in or about 1660 to Sultân b. Seif al-Yaribl, Imam of
Oman, who had already expelled the Portuguese
from Maskat. He took Mombasa after
a long siege and various operations; and though
it was retaken shortly afterwards, the power of
Portugal was already on the wane, and Seif b. Sultân
again captured Mombasa in 1698 and installed
Nâgr b. Abîd Allah al-Masri as governor. Internal
squabbles and a revolt against this governor led
the town open to a last Portuguese attack, in
1748, when Luis de Mello Sampaio sailed to it
with the help of Bwana Tann Mkun (Abî Bakr
b. Mahammed), Sultân of Pate. This occupation
lasted but a short time and was terminated by
another massacre, probably that commemorated in
the tradition recorded by Taylor (Aphorismus, § 401).
A period of anarchy ensued, which became so
intolerable that not only the “Twelve Tribes” of
Mombasa but the chiefs of the pagan Wanyika on
the mainland, appealed to Seif b. Sultân for help.
He sent three ships and appointed a governor.
In 1739 this office was held by Mîhammed b.
Ishâm al-Masri, the first of a line who became
practically independent rulers of Mombasa. When
the Ya’arabi Imam were ousted by the Al Bit Siadi,
the Masri refused to recognise the new power.
They were left undisturbed for a considerable time,
but the more energetic policy pursued by Sa’îd
b. Sultân (1804—1856) induced them to seek
British protection in 1832. This was provisionally
granted by Captain Owen, but withdrawn three
years later, as the Home government refused to
sanction it. Sa’îd finally gained possession of
Mombasa in 1837, when the leading Masri were
captured by treachery and deported to Bandar
Abâs. From that time till the establishment of
the British protectorate in 1896, Mombasa remained
subject to the Salîyid (now called Sultân) of Zannibar,
who indeed retains a certain jurisdiction over the
ten-mile strip of coast leased from him by the
British East Africa Company in 1887. The principal
event in its history since that date is the invasion
of the Masri in 1895, coincident with, but not
caused by the proclamation of the British pro-
tectorate over the mainland territory, which
was taken over from the Company by the Imperial
Government. Since then the completion of the
Uganda Railway and the harbour works al-Killindini
have noticeably changed the character of Mombasa,
which is now a flourishing seaport, much frequented
by European shipping.

The dialect of Swahili spoken at Mombasa was
considered by the late W. E. Taylor “the truly
central” language, “the best fitted for accurate
statement and grave discussion”; though that of
Zanzibar has now attained a wider currency. The
art of poetry was, till recently, much cultivated
there; the best known of the native poets are
Muyaka b. Mwiinyi Hai, Mwaliima Sikuju (died
1891), and Hemedi b. Mîhammed b. Abîd
al-Masri, who was still living during the last
decade of the sixteenth century (since deceased),
Mîhammed b. Abîd, 4Abîd Allah Borashidi, Mwiinyi
Mugwama.

MONASTIR (pronounced Moustař, Moustra; ethnic Moustiri), a town in the Stél, the eastern coast of Tunisia, on the site of the ancient Ruspin at the end of a cape which runs out to the south-east of Sısa. The Arabic name raises a problem which is not yet solved. The name clearly conceals the Greek word παρθένιον which suggests that there was an important Christian monastery here at one time. This is however a pure hypothesis, supported by no text, although Tissot (Géographie historique de l'Afrique, ii. 165—166) seems to take it for granted. If on the other hand we remember that the Arab Monastir from the end of the eighth century was a great Muslim monastery and probably the first to be founded in the west, it is tempting to accept the explanation suggested by St Haan 'Abd al-Wahhāb that the name was given to the Muslim foundation by the Greeks of the country or Berbers speaking Greek, still Christians or recently converted to Islam.

It was in 180 (796) that Haršama b. 'Ālyan, who ruled the province of Idrīya, in the name of the 'Abbasid caliph al-Raḥim, founded the rihāz of Monastir. This fortified monastery retained considerable importance in Western Islam. A century after its foundation, it was quoted which proclaimed its great importance and promised the highest rewards to those who came there to fight the infidel or to prepare themselves for the holy war. The Prophet foreseeing the foundation of al-Monastir is said to have said: “On the coast of Idrīya, there is one of the gates of Paradise which is called al-Monastir; one enters it by the grace of God’s mercy and leaves it by the effect of his pardon”; or again: “He who keeps watch in the frontier town of Monastir for three days has the right to Paradise” (cf. Abu l-‘Arab, Classes des savants de l’Idrīya, transl. Ben Cherief, 5, 7, 9, 14, 15; Ibn ‘Idhārī, Bayţan, transl. Fagman, i. 1). In the 9th century al-Bakri gives a description of Monastir the substance of which is taken from al-Warrāt (d. 753) and which is not quite clear to us. It is a large town (bāṣṭa), he says, which contains a quarter (rayḥah) of considerable size. In the middle of this quarter stands a citadel (ʿāṣlim) which contains suites of rooms, oratories and castles (ṣayfāt) of several stories. To the south of this citadel is a great court (ṣubay) with ṣubhās, called ṣubhā ḍawrū, around which women who wish to devote themselves to religion come to live. It seems that the “fortress” was the town itself with its ramparts, still known by the name, common in Tunisia, of ṣubā. Outside the ṣubāt is the quarter also encircled by ramparts and turrets in which we have the rihāz. This occupies the north-east angle of this “fortress”; its walls and high tower (mizba) dominate the plain and the country round. To the south is a courtyard with tombs; here no doubt we have to locate the abodes of the pious women mentioned by al-Warrāt. The interior of the rihāz shows traces of frequent attention and repairs which makes its plan singularly complicated. We can however perhaps recognise the general arrangements of which the rihāz of Sīsa, founded twenty-five years later, gives us a clearer scheme on a smaller scale; a central rectangular court; surrounded by two storeys of cells. On the first floor on the south side, the cells are replaced by a hall for prayer of no great height, very simple with crude vaulting. It is probably the same as is mentioned by al-Bakri: “On the first storey is a mosque where there is always a ṣubhā of great splendour and merit, which has the direction of the community”. The signal tower, circular in plan, occupies almost the same position as that which dominates the rihāz of Sīsa. In addition to the dwellings of the marabouts there are reservoirs, baths and *Persian mills* in the monastery. Every year a great fair was held at Monastir on the ʿAshūrā day when the pious began their temporary withdrawals from the world. Some, however, shut themselves up for life and devoted themselves entirely to prayer and the defence of the lands of Islam. The people of al-Mizār supplied them with provisions, in itself a religious mark.

The ninth century was undoubtedly the golden age of the rihāz of Monastir. Its importance however must have diminished somewhat as a result of the foundation in 821 of the rihāz of Sīsa, which was the starting point for the expedition to Sicily. Al-Bakri would regard the rihāz of Monastir as a dependency on that of Sīsa. It was nevertheless, as well as the land around it, an auspicious place. We can date to about 1000 A.D. the building of the Great Mosque, close to the rihāz, and that of the little mosque of the Sayjada, both of which have preserved wikābas of a very curious transitional style. It is probable that the Lady whose tomb has given its name to the cemetery of the Sāfījida rulers. According to al-Idrīsī (13th century), the dead were brought there by boat (the roads were by no means safe at this time) from the town of Mahdia. The tombs of this period are numerous in the cemetery in which the patron saint of Monastir, Sīlā al-Mezari, is buried.

Although Monastir did not play a great part in history after this period, the town and the rihāz continued to be an object of care to various Tunisian dynasties. From the Hafṣid al-Mustanṣir (1260) date the two gates of the ṣubā of Bab al-Darb and Bab al-Shir. As to the rihāz, one of the gates as rebuilt by the Hafṣid Ali b. Fāris in 828 (1424); another dates from 1058 (1648) and is the work of the Turks.

Monastir is at the present day a town of some 7,000 inhabitants. Three little islands, one of which contains a number of puzzling artificial caves, shelter the roadstead outside, which is frequented by a considerable number of ships at the sunny and sardine fishing season.

of Montenegro and the latter in the Mediterranean area around Lake Skutari down to the coast. After the destruction in 168 N.C. of the Illyrian kingdom of the Ardiae whose last capital was Skutari, to which they, along with the Herzegovinas, Southern Dalmatia and Northern Albania, had belonged, they came under the rule of the Romans and later formed part of the province of Dalmatia. In the first century A.D. we find the two tribal areas replaced each by a town organised on Roman lines with the old tribal territories attached to them, but Ill-defined: Doclea, at the corner formed by the junction of the Moraca and Zeta, and Scodra, now Skutari, which later, in the division of Dalmatia under Diocletian, became the capital of the province of Preradovita or Praeradis and has maintained a dominating position almost down to the present time [cf. Skutari]. Doclea, on the other hand, is representative for Montenegro of the economic and cultural decline of south-west Europe since ancient times. In spite of the step-motherly nature of the country, we know from the ruins of public and private buildings gleaming in the miserable desert of the Karst and from epigraphic evidence that it was once a prosperous city with considerable trade with the interior across Lake Skutari and on the Boyana which flows out of it (Patsch, in Pauly-Wissowa, Reclamsynopädie der alt. Altertumswissenschaft, 1. 1251 sqq.). It suffered severely in 395 when the Balkans suffered so much at the hand of the Teutons at the time of the migration of the Visigoths, but in spite of the plundering of the Adriatic territory which followed at other hands also, it was still the scene of a bishop in 602, in the period when the towns of the peninsula were finally destroyed as a result of the raids of the Avars and Slavs and the permanent settlement of the later, who having no understanding of town life, retained in their new homes their traditional poor and primitive mode of life, for the most part in family groups settled on the land and mainly engaged in cattle-raising.

II. Its situation and tradition, from traces in place-names, remnants of the old population and the city walls, show much decayed, preserved for the most part in the ruined town of Doclea which hitherto had held the position later occupied by Montenegro, its old ecclesiastical position — there is a record of a bishop of Doclea subordinate to the Greek metropolitan of Durazzo — and seemed also to have given it a military and political preponderance, since the little Slav state which later grew up here bore after it the name of Doliaca, Slav Duklikiya down to the 16th century. This originally comprised only southern Montenegro and the stretch of territory called Kravina along its west bank of the Lake Skutari. The littoral itself (with Cattaro, Budua, Antivari and Dulcigno) and Northern Albania, with many Roman towns like Skutari and Drvasto, remained Byzantine on the contrary, as part of the theme (province) of Dyrrachion down to the 16th century, while eastern and northern Montenegro belonged to Serbia and the north-west to the principality of Travunia (capital Trebinje).

Of the early obscure pre-history of Doliaca all that we have is a Byzantine seal of a ruler of probably the tenth century: Πρωτομακάριος Δουλικιάς; the country was then not only ecclesiastically and culturally but also politically under Greek influence like the larger Slav Adriatic states. From 1000 A.D. our information is fuller, if not absolutely reliable.
Prince John Vladimir, a figure much obscured by legend, is inextricably associated with the last efforts of the Western Bulgar state. First a prisoner, then the son-in-law of the Czar Samuel (d. 1014), he was murdered (drowned in Lake Prespa) by the last Czar John Vladimir (1015–1018) in the Bulgar capital. Remembered in Montenegro as a saint by Christians and Muslims alike, he now rests in the monastery of Shen Jon near Elbasan in Central Albania.

In the years that followed, Byzantium, after the Bulgars, its opponents for centuries, had been finally disposed of by the Emperor Basil II (Berislav) in 1018, beginning the so-called Slavization of the greater part of the Balkan Peninsula, enforced its suzerainty to the northwest also. Dioclesia under three able rulers not only survived this danger but attained an importance never reached by Montenegro itself in its best days. Prince Stephan Voyislav — it is not known in what relationship he stood to John Vladimir — in spite of great opposition from the Byzantines (1036—1042) obtained Travunia (see above), Zachlumia adjoining it (on the central and lower Narenta), almost the whole Adriatic coast between the Narenta and Boyana along with Cattaro and Antivari as well as Northern Albania with Skutari and established the still existing Latin bishopric in Antivari, out of political hostility to Byzantium. His son Michael was the first to take the title of king; the choice of his son Constantine Bodin as Bulgar Czar by rebels in Macedonia (1075) ended however in a — temporary — humiliation of Dioclesia. Michael and Bodin, who preceded his father presumably in 1082, made an alliance with the Normans in Italy and supported Robert Guiscard in his fighting in the west of the Balkan peninsula (1081—1085) with Alexius I Comnenus. Bodin succeeded at the same time in extending his rule over Bosnia also (then practically only the territory on the lower course of the Buna, the Vrba and the Narenta) and Serbia or Rascia (in the modern north and eastern Montenegro, the sandjak of Novi Pazar, T. W. Serbia and S. E. Bosnia). The kingdom of Dioclesia attained its greatest extent with the conquests of Stephan Voyislav — but only for a brief period. Bodin's good fortune faded away. After the restoration of Byzantine rule on the Adriatic, reprisals were begun (1085—1094) under the personal direction of the emperor Alexius. The king was defeated; the links that bound the various parts of his kingdom together were loosened and quarrels broke out within the royal family itself. In 1096 Bodin could still receive Crusaders in his capital Skutari: Provencals under Raymond of Toulouse, who had marched through Dalmatia and probably through the Zeta valley (cf. above) and were making for Durazzo in order to reach Constantinople from there by the old Via Egnatia. After this we have no certain information about him and his successors. All that is certain is that Dioclesia was driven from the coast and out of Northern Albania by the Byzantines and became tributary to them, while Serbia, which had hitherto been politically insignificant in comparison, began to expand at the expense of Dioclesia under the Grand Zupan Vukan, Bodin's governor, and his successors, especially after the Byzantine empire fell steadily into decline from 1180 onwards. The Grand Zupan Stephan Nemanja, a native of Dioclesia, depri vied it of the former possessions of Dioclesia in Northern Albania and on the coast from the eastern shore of Lake Skutari to Cattaro, disposed of the last Dioclian prince Michael in 1189, and united his territory with Serbia. From the 12th century the old name of the country was replaced by that of the river Zeta (Latin: Zenta, Genta).

III. Under Nemanja's dynasty Zeta (with Northern Albania and the coast) remained for 470 years under Serbia and was frequently governed by princes, repeatedly by heirs to the throne. Widows of kings also had estates on this sunny strip of coast. A benefactor of the land as a builder was Helena (d. 1314), the French wife of Stephan Uroš I (1243–1276). She had the towns on Lake Skutari restored, which had suffered severely from the Mongol storm which in 1242 had swept southwards along the Adriatic, and built and repaired numerous churches and monasteries in the predominantly Roman Catholic territory around the Lake and on the coast which was under the bishops of Anti var and numerous suffragan bishops, including also the great Benedictine Abbey of St. Sergius and Bacchus on the Boyana (now the ruins of Kisha e Shirijit), at which there was an important trading centre with much visited animal markets. St. Sava (d. 1236) created an Eastern Greek bishopric for the Zeta on the island of Prievlaka on the Gulf of Cattaro; the land also had many well-endowed monasteries of this creed on the islands in the Lake Skutari (like Vranjina), and what fertile soil existed elsewhere belonged for the most part to monasteries in Serbia, on Athos and in Jerusalem, granted by the, in this respect, extravagant Serbian rulers. The population received a considerable admixture, now completely absorbed, by the immigration of Wallachians and Albanians.

A grave danger to Serbia was the power of the nobles, which had increased out of all proportion as a result of the constant feuds in the royal family. When after the death of the Czar Stephan Dušan (d. 1355) a general collapse of the great but only loosely knit state began, the centrifugal forces led in Zeta also (1360) to the formation once more of an independent principality by the brothers Stracimir, George and Balsa, sons of Balsa, a nobleman of Wallachian origin, to whom the government of the country was entrusted.

IV. The break-up of Serbia took place just at the time when the Ottomans were vigorously extending their power in the Balkan peninsula. Their victories at Cirmen on the Marica (1371) and at Kosovo ("field of the blackbird", 1389) destroyed the independence of the petty Serbian states in Macedonia and reduced Serbia itself to the district of the Morava, where it however not only maintained itself till 1459 but, as a result of the Turkish defeat at the hands of the Mongols at Angora (1402), was able for a time to rise to considerable power again. In spite of the danger which threatened Zeta also, George and Balsa exhausted their strength in continual foods with their neighbours over pieces of land, and in the reign of George II the turbulent nobles, among whom the most prominent were the Crnojević or Gjurojević from Budna, Cattaro and the lower Morafa, broke the kingdom up into little fiefdoms. The result was that when the Ottomans under Khaïr al-Din entered Albania from Macedonia, Balsa in 1385 lost a battle and his life north of Valona, and George II after fighting with varying
fortune, realising his own weakness, handed over his Albanian possessions in the south and east of Lake Skutari as far as Tuzi (S. E. of Podgorica) for an annual pension of 1,000 ducats (1396) to Venice, who thus became till 1479 the southern defender of Zeta against the Ottomans. George retained Duligno, Antivari and Butina for himself as well as the lands west and north of Lake Skutari.

Balša

Stracimir George I (d. 1378) Balša I (d. 1385)

George II (d. 1403)

Balša II (d. 1421)

But even this reduced territory found no peace. Under Balša II, the last of his warlike but unimportant house, two long and trying wars with Venice were fought; during the second, the prince died (1421) and left his lands to the despot (Duke) of Serbia, Stephan Lazarević, who lost Duligno to the republic. V. The second period of Serbian rule very soon alienated the sympathy with which it was at first received and had to fight increasing difficulties caused by the influence of Crnojević (see above). In addition there was an irrode by the Turks in 1430 and the demands of Venice. The latter took Antivari and Budan and appointed the unwieldy Stephan Crnojević its salaried governor in the little mountain country now quite cut off from the coast; he (1455) induced the people to take the oath of fealty to the republic in the island monastery of Vranjina (cf. above). The end of Serbia (1459) seemed to secure Venice complete possession of the lands round Lake Skutari, but soon afterwards the Ottomans surrounded this land on all sides, for the conquest of Bosnia (1463) was followed (1466) by the annexation of the Herregovina and of the present Northern Montenegro as far as Nikšić, which then belonged to it.

Like Stephan Crnojević (d. 1465) his son Ivan (1465–1490) who called himself Gospodar Zetki (lord of Zeta), was also a vassal of Venice, who gave him little support in the wars with Muhammad II over Upper Albania than after the evacuation of Skutari (1479), be had to fly to Italy, and Zeta was occupied by the Turks, which was the beginning of their long rule here. The contest for the throne after the Sultán's death (1481) induced Ivan to return and renew the struggle, which however ended in 1482 with the recognition of Turkish suzerainty. His youngest son Stanisla, a hostage in Constantinople, adopted Islam in 1485, and took the name Skender Beg. Ivan, also called Ivan Beg — his country was also known as Ivanbegovina — resided in Cetinje where he built a small monastery in 1484—1485, to which the Eastern Greek bishop of Zeta (see above) moved. The state suffered from the great independence of the tribes, who had strong separatist tendencies, like the Nyegiuti, Biyelici, Orixinti, and Čeklici; each formed a political entity with a well-defined territory, its own chief chosen for life, courts, tribal and family feuds, blood-vengeance, etc., — institutions which survived in Montenegro down to the sixteenth century and existed in the north Albanian highlands until quite recently.

Not even the greatest submissiveness earned for Ivan's elder sons, at constant enmity with one another, the goodwill of the Turks. George (1490–1496), who introduced the printing-press into Cetinje and in 1495–95 printed beautiful Cyrillic ecclesiastical works, died in Asia Minor in exile. Stephan (1496–1499) was interned in Skutari, where he is said to have ended his days as a monk. On the other hand in 1514, a separate sandžak with capital Zablak (to the north of Lake Skutari) was created for the Muslim Sultaš Skender Beg Crnojević out of Zeta, which had been incorporated in the sandžak of Skutari. The latter did not deny his descent; he was also tolerant in matters of religion, used his Slav mother-tongue in his correspondence and was in regular communication with Venice, although their relations were occasionally overloaded; in Venice Bòtida Vuković of Podgorica (d. 1540) and others from 1519 printed Cyrillic ecclesiastical works. Skender Beg's title Sandžak Crnogorski naturalised the name Crna Gora for the country, which we find as early as 1435 and as Montenegro in 1496 for the highlands above Cattaro. In 1528 all notices of this remarkable Montenegro-Turkish ruler cease. Crna Gora again becomes a šadžak under the sandžak of Skutari.

Montenegro under Turkey, under the unassuming ecclesiastical suzerainty of the bishop or Vladika of Cetinje chosen by the tribal chiefs, formed five mahlia or districts in the shape of a small triangle between Cattaro, Podgorica and the N.W. end of Lake Skutari, which in 1614 contained 90 villages with 3,534 houses and 8,027 men capable of bearing arms, of whom however only 1,000 had guns. The poll-tax was readily paid and they shared in the wars of the Porte against Venice and in suppressing rebellions in the adjoining lands, such as the closely related Brda, which had much more desire for independence. This long stereotyped monotonity did not change till 1688 when the Montenegrins with the Vladika Vizirion placed themselves under the protection of Venice, whose lands were under those of the Turks, and who since the failure of the siege of Venice had been fighting with the Turks from 1684 to the Peace of Carlowitz (1699). After the failure of his first attacks Sulaiman Paša, Sandžak of Skutari, as a punishment destroyed Cetinje in 1692 with the support of a number of Montenegro tribes.

VI. The process of liberation thus begun found vigorous support in the warlike Vladika Danilo Petrović Nyeguš (1697–1735) after whom the dignity of bishop became hereditary in the family, and its holder gradually increased his importance at the expense of the tribal chiefs. In 1711 an embassy from Peter the Great introduced relations with Russia, which however were only occasionally of benefit to the land. Even in the joint war on the Porte which immediately followed, Montenegro was left in the lurch at the peace of the Pruth (1711). The protection which fugitive Montenegro found in Dalmatia was used in 1714 as a pretext by Turkey for declaring war on Venice. In the same year Našim Paša Kopruli laid waste Montenegro entirely, Cetinje which had been rebuilt in 1704 being once more destroyed. As a result of the peace of Passarowitz (1718) more peaceful conditions

1) The story that all Muhammadans in Montenegro who would not be baptised or leave the country were put to death as partisans of Turkey on Christmas Eve 1707 is however a patriotic fable.
began to prevail except for the almost daily guerrilla fighting on the frontiers. Danilo took advantage of the peace to build up the country again after the overthrow of the Turkish administration, with the help of Venetian subsidies, so far as the poverty and the intractable nature of the people permitted. In 1724 Cetinje was rebuilt.

Under his impeccable successor Sava Petrović Njegoš (1735–1783), there was a complete relapse into the previous barbarism: no authority, civil and blood feuds, murders. No one dared to leave his house unarmed. The whole people lived by murder and robbery. In addition there were secret conspiracies with the Turks against their own countrymen, abject appeals to Venice and journeys of appeal to St. Petersburg, notably that of the able but powerless ecclesiastical condottiero Vasilije (d. 1766).

In the general distress the Vladika only thought of enriching himself. Some relief was afforded Montenegro in 1767 by the south Slav Štefan Mali (Little Stephen), the Lažn (false) Czar, who was accepted as the Czar Peter III murdered in 1762, and received such general recognition, out of respect for Russia, that in spite of his unmasking by the minister of foreign affairs Yuryi Volodymirıć Dolgoruki (1769), he was tolerated by Russia also until he was murdered by a servant in 1773. Able, unselfish, strict and just, he restored for a time unwanted order and security.

There was no considerable war with Turkey for a long period. All the more serious then were the relations with the suzerain in the reign of Peter I the Saint (1782–1830). The hereditary warir of Skutari, Kara Mehmed Paša Buhalili, taking advantage of tribal feuds, laid waste the whole country in 1785, forced it to pay the poll-tax again and burned down Cetinje. During the Austro-Russian-Turkish war of 1787–1792, there were only trifling encounters, for which in 1793 Kara Mehmed Paša again threatened serious reprisals. Kara Mehmed Paša being involved in 1796 at Slainia and later killed in the great battle of Kruše; his head was long preserved as a trophy in Cetinje, in keeping with the Montenegrin head-hunting custom which had become a regular practice in war. The consequence was that the tribes of Biyelopavlići and Piberi, in the Brda east of the Zeta valley, joined Montenegro.

A welcome and more profitable change were the wars of 1806–1808 and 1813–1814 in alliance first with the inhabitants of the Bocchi di Cattaro and the Russians, later with the English against the French, who had occupied Dalmatia under General Marmont after the peace of Pressburg (1805). Numerous ruins stretching as far as Ragusa still testify to the thrist of the Montenegrins for destruction and plunder even on Christian soil.

Peter I, a cultured ecclesiastic educated in Russia, full of good intentions, endeavoured throughout his life by legislative (1798 and 1803) and personal effort to unite his people, raise their moral tone and avert distress by introducing the potato, but in spite of great patience he met with bitter hostility, contributed to also by Russia which, only after being appealed to for a long time, in 1799 granted 1,000 ducats a year for public purposes but did not pay it regularly.

The first ruler over the Montenegrins, Gospodar Čemorgosdž i Biskvi, was Peter II (1830–51), a highly gifted man of the world, bishop only in name, one of the greatest of Serbian poets and also of unending vigour which did not hesitate at severe punishments and death sentences. The Radonic family which claimed secular (governorship) power for itself had to leave the country. Supported by Russia from 1837 by a grant of 9,000 ducats yearly and occasional gifts of grain, and on this account more highly esteemed by his covetous countrymen, he concentrated the government in his own hands. The powers of the tribal chiefs were restricted. A senate of 12 regularly paid members under the presidency of the Vladika henceforth formed the supreme governing body and court of justice: its authority was enforced by well-paid troops stationed throughout the country, the Gvaršija, in addition to whom the head of the state had a bodyguard, Prosjanici. The building of the first public school and a small state printing-press in the capital, the purchase of two cannons and the building of a powder mill, show the small scale of the state but mark the desire for progress. The innovations, and still more poverty and a great increase of population, as in earlier times led to the emigration of numerous families to Serbia and Russia.

Foreign politics were mainly characterised by troubles over the Montenegrin continual fighting celebrated in song, with the neighbouring Muşammadans, especially in the Herzegovina, which was then ruled by 'Alt Paša Rizanbegović (d. 1851) as a practically independent sovereign, under whom Smail Aga Čengić (d. 1840) distinguished himself in the fighting.

VII. Centralisation and reforms generally formed the programme of the next two reigns, which was firmly and successfully carried through in spite of much opposition. Under Danilo II (1852–60) the clan system was dealt a shattering blow, when the chiefs were replaced by captains of princely birth and legislation regulated by the code of 1855. His accession however marks the close of a period which was mustered as a hereditary secular power now replaced a theocracy. Danilo renounced his hereditary rank and with the approval of Russia and Austria had himself proclaimed Knyaz i Gospodar Crne Gore i Brda. The attempt of the Parte to obtain by force under Serdar Ekrem 'Omar Paša in 1852–1853 recognition of his suzerainty thus threatened was vigorously opposed by Austria after giving ample assistance in 1853 through Feldmarschallleutnant Count Leiningen's mission to Constantinople. During the Crimean War (1853–1856) Danilo remained neutral to the discontent of his people. On the other hand, he became involved in a war in 1858 because he supported the rebels in the Herzegovina; this ended in the defeat of the Turks in the valley of Grabovo (north of Risano) and in an enlargement of Montenegrin territory in 1859. In 1860 the ruler, who had previously had to put down conspiracies, some led by relatives, was murdered in Cattaro by a Montenegrin emigrant.

His able nephew Nikola I (1860–1918, d. March 1, 1921) who had been educated in Trieste and in France, son of the doughty Wojвод Mirko (d. 1867), completed the building of the state. By long steady work, first as an absolute and from 1905 as a constitutional ruler, and by very skilfully managing foreign relations, he created out of the ill-famed, unfertile, rocky little country a kingdom which was enlarged by the addition
of fertile valleys with its own sea coast, good communications and post routes, a busy economic life, modest prosperity increased by emigration to America, more law-abiding and secure since the institution of the civil code of 1888, with a good system of education and a well organised soldiery with modern equipment to be reckoned with in Balkan questions. Relationship by marriage, notably with the courts of Russia and Italy, reflected glory to the pretty little capital of Cetinje which had also become a centre of culture; 1910 crowned the work by raising Montenegro to be a kingdom. While interested great powers, notably Russia, gave grants of money, arms, munitions, etc., which were readily accepted and also requested, this development was conducted mainly at the expense of Turkey, with whom three wars were waged at longer intervals in addition to minor friction in 1869—1870, 1872, 1874—1875, 1895, 1898, 1911, 1912. The first (1862), a combined attack by Derwisch Fâshâ from the north and Serdar Ektrem 'Omar Pâsha from the south in the Zeta valley as a reprisal for the support given to the rising led by Luka Vučkalić in the eastern Herzegovina, forced Nicola by the threat to Cetinje to conclude an unsuccessful peace in Skutar. The second war was declared in 1876 by Montenegro in alliance with Serbia in order to prevent by the new intervention in the Herzegovina which had begun in the summer of 1875 in Nevesinje. His victory over Muktar Fâshâ at Vrbica and at Bileća and the defeat of Serbs were followed by a truce and the intervention of Russia in 1877. Sulaimân Pâsha succeeded at heavy cost in fighting his way out of the Herzegovina through the Zeta valley into Albania, but in 1877 Nikola took Niškić and Antivari and in 1878 Dulcigno. The Treaty of Berlin (July 13, 1878, Articles 26—33) recognised the independence of Montenegro and granted it, after cutting down very much the terms of the preliminary peace of San Stefano, a broad ring of land around the original land of Montenegro with Antivari, Nikšić, Banyani, Pira, Kolatina, Spuz, Podgorica, Žabljak and the district of Gusinje. The latter, as a result of the opposition of the Albanians, was exchanged for Dulcigno in 1880. The area was increased from 4,366 to 9,086 square kilometres, with over 300,000 inhabitants, including 12,500 Catholic Albanians; there was on the other hand a considerable emigration of Muslims from the new territories.

The third war with Turkey was the first Balkan War, which Montenegro began on Oct. 8, 1912, before its allies, Serbia, Bulgaria and Greece; but while the sandžak of Novi Pazar and Upper Albania were easily occupied, Skutar, the main objective, was only taken after a long siege and with the help of treachery on April 23, 1913. After the allies had quarrelled among themselves, Montenegro also took part in the second Balkan War against Bulgaria. By the peace of Bucarest (Aug. 10, 1913) it received the south-western half of the sandžak of Novi Pazar (with Plevye, Biyelo Polje and Brane), the greater part of the Metohia plain (with Peć and Gjakova), the valley of Gusinje and lands round Lake Skutar, increasing its area by 5,937 square kilometres to 15,017 square kilometres, with 437,000 inhabitants.

In the Great War, King Nikola reluctantly declared war on Austria-Hungary on Aug. 5, 1914. After the capture of the Lovćen (see above) the Montenegro

negrina laid down their arms unconditionally on Jan. 16, 1916 and the country, which had gone back a great deal since 1912, was administered by an Austrian military general-gouvernement. The king went first to Italy, then to France, never to return again, for after the War he was deposed along with his sons on Nov. 29, 1918 by an assembly in Podgorica on the charge of treachery.
MOORS, a rather vague name still applied in the sixteenth century to certain elements in the Muslim town population of various countries and especially to the inhabitants of the Mediterranean ports of North Africa. The word, presumably of Phoenician origin, corresponds to the ancient local name of the natives of Barbary reproduced by the Romans as Mасси, Massiri and by the Greeks as Massuprosoi (Strabo, xvi. 825). The term Massiri was used by the Romans in a general way for the Berbers who came into Spain in the form Mero, and it was by the name of Mero that the people of the Iberian peninsula throughout the whole period of Muslim rule knew the Arab conquerors and Arabized Berbers who had come to settle in Spain from the other side of the Strait of Gibraltar. The name Meroes passed into various European languages: French Moors, English Moors, German Moeren. At the time of the *Reconquest* the name Moriscos was applied in Spain to these Muslims (usually crypto-Muslims) who had remained in the country until their final expulsion in 1610. The Moriscos went voluntarily to North Africa, where they were known to the natives as Amuliers while Christian travellers gave them the general name of Moors.

In modern times the Moors to the European were therefore the urban population of the North African ports, irrespective of the proportion of immigrants from Spain. Since then the word has been generally used with the meaning Muslim of the towns of the western end of the Mediterranean (cf. such expressions as Moorish bath, Moorish coffee, etc.).

The name Moors has also been given to the Arab or Berber peoples, pure or mixed with negro blood, who live to the north in the Senegal in the province of St. Louis where it is given the ancient name of Mauritanis (see below), and to the offspring of the marriages of Arabs from South Arabia and Cingalesse who form an important Muslim colony in Ceylon (c. 300,000).

(E. LEVY-PROVENCAL)

The land of the Moors is MAURITANIA or MAURITANIA. This name which has been derived either from a Phoenician word Masparis or *the Western* or with more probability from the name of a tribe living before the Christian era in North Africa, was applied in ancient times to northern Morocco (Mauretania Tingitana) and to the north-west of Algeria (Cassarica Mauretania). At a later date, by extending the application, Europeans have given the general name of Moors to the Arabo-Berber peoples of Mediterranean and Saharan Africa. Then gradually they came to distinguish out of this mass the groups with which they came more frequently into contact (Tripoliains, Tunisians, Algerians, Moroccans), so that the name Moors came to be limited to the people of Spanish (Muslim), Jewish or Turkish origin of North Africa and particularly to the nomads of the western Sahara, who traverse what Ahmad al-Shikiti (in Al-Wasti, Cairo 1320 A.H.) called the "land of Shikiti," from the name of its chief negotiator; this country is bounded, says the author, by the Atlantic Ocean, the valley of the Sahil al-Hamu, the plain of the Halba (plain of the Brekka) on the right bank of the Senegal and by the two towns of Walata and Niam (Nenin); if, like him, we take into account all inhabited areas, we ought to extend it to the east as far as the meridian of Timbuktu.

Mauritanis, which now forms one of the eight colonies of French West Africa, is only a part of this vast area. It lies to the north of the Senegal between this river, the Atlantic Ocean and the marigot of Karkoro; to the north and east, a frontier settled by agreements separates it from the Spanish Sahara (June 27, 1900; Oct. 3, 1904; Nov. 27, 1912) and from the territories of the south of Algeria (agreement of June 7, 1905) and from the French Soudan (decree of April 17, 1913). It has an area of 835,000 square kilometres, 289,000 inhabitants, the density of population being 0.34.

Except for the banks of the Senegal, the country is steppe or desert, and only suitable for stock rearing. To be brief, it is a military frontier district defending on the north the more favoured lands of the Senegal rather than a country suitable for development by colonisation.

I. GEOGRAPHY

A semi-circular range of hills of no great height, worn by erosion but often difficult of access, starts as it were out of the ocean to the south of the Rio de Oro and reaches the middle course of the Senegal after running round the contours of an ancient gulf of the Quaternary period. The Aïr Tunar and the Tagant separated by the depression of the Khat form as it were the cornerstones of this system and are continued to the north-west in the "petrified sea" (a plain scattered over with rocky islets) of the Tiris and by the arêtes of the Aïr Suatif, to the south by the Kgalia and Asaba.

The interior of this gulf consists almost entirely of sands, brought from the desert by the predominating north-east winds. The dunes in the south are all fixed and are called "dead"; in the north they are shifting and constantly changing. Like the other dunes of the western Sahara they run in the direction of the wind, N.E.-S.W., and are separated from one another by contours of firm soil along which traffic can go.

The Shumamah is a plain, formed of lands of alluvial origin, along the lower Senegal and as such particularly suitable for cultivation; as we go up the river it is known as Litama and then as gidimaka. Other plains, those of the Brakna and the Gorgol, are more remote from the river; they contain permanent pools of water to which their girdles of high trees gave a characteristic appearance (toumert). To the north of the Shumamah and the land of the Birkan stretches a series of dunes among which may be mentioned those of Amaiilah. The contour of the Inghiri continued by that of the Amaiiala separates the latter from the similar ranges, the Aïdhar and the Azrael, which stretch to the Tiris; they are difficult to cross but between them the Tijjir supplies an easy route. Beyond to the north-west, the Tassafat and the Swatfal Abu-Abdy are great plains of demudation.

On their convex face, the Aïriler and Tifelt are prolonged to the north in the massif of the Koudiat Ijel and by that of the Zemmur, separated by the Tissel-kaf, towards the north-east by the cliffs of the Djar Aïriler and the Hânk and by the plateau of the Eglab, which stretches to the
great sand-duunes of the Igidi, to the east by the Uthe Tishit which runs to Walata. Between these lines of rock, great ridges of moving dunes make passage difficult but provide good pasturage for the hawks; these are from north to south, the Erg El-hammam, the Machtir, the Waran, the Aderaf and the Aukar. Lastly, to the north of all these masses of sand, the Gabbalah, Keret and Vettu are traverse without water, of hard and flat soil, which run as far as the Haumada of the Dra.

The coast consists of dunes and plateaux with numerous sabkhas or salt lakes. There is usually a large sand-bar; nevertheless the sea, which is very rich in fish, gives a livelihood to a population of fishermen.

The Sahar, in the proper sense of the word hardly extends by a line marked by Cape Ti-niria, Mejriya [Moundjeria], the northern bank of the Tisurant [depression of Kha], the southern margin of the Aderaf and Walata. It is especially dry on both sides of the Aderaf; to the west in the region of Port Etienne and in the dunes bordering on the Tiris, and especially to the east where to the south of Walata, the Maysa, Iqaf and the western part of the Erg Jebel, still almost unknown, form a waterless no man's land; this district is visited only by antelopes, gazelles and ostriches, and by the Nusai, hunters who can manage to go for days without water and live like their game on green stuffs.

To the south of the line above given, the steppes gradually changes to forest as we near the river. The climate is very hot; the influence of the sea is not felt beyond a score of miles inland. Subtropical rains fall as far as the north of the Aderaf.

II. POPULATION.

At the earliest period to which the chronicles and native traditions go back, Mauritania seems to have been peopled by negroes. Later, in the course of centuries, it received various immigrations of Berbers, especially Saâhaddja and Zanata, Arabs and probably also of Jews. The Saâhaddja came first, certainly before the Hadya; later the development of the coast-Saharan commence brought to the few towns that had been built, merchants of varied origin (Arabs, Berbers, Zanata, Nafdis, Lottana, Natawa, etc.); at different periods also, Jews came there to seek refuge from persecutions, the last of which drove them out of Tuti at the end of the xvi century; lastly the Arabs belonging to the Ma'lik group in their turn invaded the country from the xvi century onwards, bringing with them more Zanata or driving them in front of them.

The Jews have been completely absorbed into the Berbers (form it, they are believed, the foundation of the caste of smiths, masa'alle) or into the Fula, so that it is not possible to estimate their numbers at the present day. The negroes, who have been gradually driven towards the river by these waves, are represented by approximately 50,000 Tuaregs (Tahir), 21,000 Sarakole and 13,000 Wolof, Fula and Bambara. The Arabic-Berber Moor number about 570,000.

III. HISTORY.

a. Prehistory. Such researches as have been made in Mauritania, notably in the Aderaf and in the Aukar, have revealed there, as throughout the Sahara, the existence of important prehistoric sites; if it is not possible to date them, they are at least evidence of a very early population whose remains seem to connect them with the negroes. These conclusions are further confirmed by the native chronicles and traditions, and perhaps we ought to connect with these remote inhabitants of the country the Sibeyr, to whom the Moors attribute the creation of the palm-groves of the Aderaf and who are said to have built a town, the "city of the dogs", on the site of the present Aruggi, ten miles N.W. of Atar. What seems probable in any case is that these black Mauritanians were more or less subjects of the first kingdoms known to the southwest of the desert: that of Tukir, which ruled Senegalese Futa, that of Vihana, the capital of which was on the site of the modern Cumbi, 100 miles S.W. of Walata and that of Diara which succeeded them and ruled the whole of the western Sudan. To the north, the lands of the negroes no doubt matched with the lands in which the Saâhaddja and Zaliga Berbers led a nomadic life in the south of Mauritania.

b. The first Saâhaddja invasion. We do not know at what date the Saâhaddja invaded Mauritania, but it was certainly a very early one. It is possible that expeditions by the Arab emirs to al-Maghrib al-Akhir, beginning in the latter years of the seventh century, which marked the first contact of the Saâhaddja with Islam, may have driven them to the south but their first incursions into the Tiris, into the Aderaf and to the Tisurant were probably much earlier. Their conquest of the country, it is true, seems to have been fairly slow and it was not, it appears, till the xii century that they succeeded in reaching the banks of the Senegal for the first time.

c. The first Saâhaddja kingdom. At the beginning of the ninth century, a certain number of Saâhaddja tribes (among them the Lemutna, the Guellila and the Beni Waref) occupied the Aderaf, with their advanced posts in the Tisurant, and made raids into the Haul (Hodh) against the negro Soninke empire of Ghana. The Lemutna supplied them with chiefs at this time, and one of them, Tilutan (d. in 835 or 837), succeeded in imposing his authority on all the Berbers and making twenty negro kings pay tribute to him. The chief towns of his dominion were Aruggi and especially Andaghass, forty miles N. E. of the site of the modern Kiffa (Kiffa). Andaughass seems to have been founded in the seventh century by the Soninke and its fame as a centre of trans-Saharan trade brought it a large foreign population, already in part converted to Islam: Berbers of different branches and Arabs. In spite of this brilliant start, this Lemutna dynasty lasted only a short time and disappeared in 919. Each tribe then led an independent existence and the emperors of Ghana were able to extend their power towards the Tisurant and to take Andaughass at the end of the tenth century.

d. The second Saâhaddja kingdom. Towards 1020, the chiefs of the various Saâhaddja tribes agreed to combine again as in the time of Tilutan and thus to resist the encroachments of the Soninke. The power was placed in the hands of a Lemutna called Tarrina, who seems to have been the first really Muslim Zuñgi ruler. He went to Mocca and his enthusiasm as a new convert led him to a holy war on the negroes, in which he lost his life (1023). His son-in-law Yahya b.
brainless of the tribe of the Goudaïs succeeded according to the custom which made the supreme command go to the two tribes ultimately. Like Tarsins, he was a zealot and on returning from the pilgrimage, he brought from Morocco a holy man, 'Abd Allah b. Yasin, to whom he entrusted the task of educating his brothers, who were still very ignorant of the principles of Islam. The saint was at first well received by the Sanhadjas and he made them build the town of Arzncas near the site of the modern Tziftis. But soon his commands appeared too difficult for the nomads, who rebelled against him. He sought refuge with his disciples in a ribâd or fortified monastery on an island in the ocean (sometimes identified with Tifera) and they were henceforth known as the ri'ât-Murathâi (the men of the ribâd), a word which has been corrupted in Europe to Almoravids under which name they have become famous.

The Almoravids. Their reputation for sanctity spread very rapidly and attracted many disciples to them. When 'Abd Allah had gathered around him a sufficiently large body of men, he led them against their rebellious brethren and against the negroes. In a few years they subdued the whole of the western Sahara, from Taflah and the Dra to the Senegal. In 1050, Yahyâ b. Ibrahim died, and Yahyâ b. Umar, chief of the Lamtuna, became the political head of the confederation. 'Abd Allah b. Yasin remained the religious chief. While the first recaptured and plundered Autlaghast, the second attempted the conquest of the Maghribis. But soon they were both slain, Yahyâ in a rising in the Adrar in which the negroes of the Takrâr tried in vain to help him, and 'Abd Allah in lighting the Bardingal was heherits of the plains of Morocco, 'Abd Bakr, brother of Yahyâ, was then for some time supreme chief of the Almoravids, then to gratify his ambitious nephew Yahyâ b. Tisftin he handed over to him his conquests in North Africa, keeping only to himself the sovereignty of the south. He drove himself to a holy war against the negroes and to their conversion to Islam. He succeeded in driving them back towards the river and in taking Ghana in 1076 and the capital of the Takrâr in 1080, extending his teaching, the tradition says, as far as the lands of a Mandingo prince of the Upper Niger. He was slain in the Tagant in 1087 and his death marked the break up of the Sanhadjas in Mauritania; each tribe regained its independence.

The Tashumah and the negro reaction. Between this date and the end of the sixteenth century we know very little of the history of Mauritania. We only suspect that the influence of the negro kingdom of Mali must have extended up to the Adrar and Tagant and that a new Marrhubout Berber element formed by the Tashumahs of Sä'as came and settled in the country. The Tashumahs seem to have at first taken up the mantle of the Almoravids and to have made themselves the champions of the ajjâhid against the negroes. But after a few successes, they were driven back from the region of the river and fell back upon the Tirif and Adrar, where they gave up fighting and devoted themselves to study and religious devotion. The successes of the negroes then became serious. Wolof, Soumaks and Túcujors recaptured a whole part of Mauritania and might perhaps have succeeded in subduing the Berbers, who were exhausted by their campaigns of conquest in the Mediterranean region, if the coming of the Mašil Arabs had not checked them.

The Mašîl in Mauritania. It is not possible to date this new invasion exactly, it is, however, certain that it was not a single effort. It was almost down to the nineteenth century with little groups filtering into the Sanhadjas encampments and at length submerging them.

Setting out from Egypt, the Mašîl passed along the northern border of the desert and reached the Ocean to the south of Morocco in the first half of the sixteenth century. They then entered the service of the Marinid rulers of Fâs, who used them to keep in subjection the provinces beyond the Atlas and to collect taxes. These undisciplined nomads very soon took advantage of their privileged position. Measures had to be taken against their brigandage and their threats to overrun Morocco, and military expeditions were sent against them. Either as a result of these reprisals, or because they were called in by the Sanhadjas to help them against the negroes, or because a year of drought drove them in search of new pasturage, some of them, belonging to the confederation of the Dwi Hasan or Beni Hasan, went down towards Mauritania. But the chronicles do not say why. In any case, having helped to drive the negroes back towards the river, supported by the Znàtta Kanta who came from Taflah at the same time as the first of them, they reduced to vassalage the Sanhadjas of Upper Mauritania (Ijel and Zemmîr) in the sixteenth century, Western Mauritania, Wadans and Tagant in the sixteenth and the Adrar and Lower Mauritania in the sixteenth century. Throughout the long period from the sixteenth century to the present day we find the authority in the hands of a certain number of Udiya tribes: the Ulad Rîds, the Mghâgis, Ulad Mûrûk, the Brâhâs, the Tràza and the Ulad Yahyâ b. Usman. Other Beni Hasan also went south, but barely reached Mauritania. The Ulad Dim has always remained in the desert zone and the British seem to have passed some years a little to the north of the Senegal before migrating to the region of Timbuktu.

The Mašîl and the Sûltâns of Morrocco. From their first sojourn in the south of Morocco, these Mašîl long retained the character of Makhten tribes; under the Sa'diads and ShâHs, many of them vassal contingents of the Mašîl tribes. This status gave their migrations southwards the appearance of a conquest in name of the Sultana. This was no doubt the legal justification of the tribute which they exacted from the conquered Benînas; it also explains why the rulers of Fâs or Marrakesh sometimes claimed as theirs the territory of Mauritania, why they sent several expeditions there in the sixteenth and seventeenth centuries, why they granted investiture to certain chiefs and lastly why the author of al-Wârif, after consulting several learned men, thought that the "land of Shingâl" should be included with the Maghrib and not with the Sultana.

The Sanhadjas reaction. Whatever was the actual success of the Arab conquests in Mauritania, it was not effected without violent reaction on the part of the Sanhadjas. The poverty of the Tashumahs, the negro danger and the looseness of links between the various bodies of invaders facilitated the settlement of the early Arab invaders. But the tyranny of the Mašîl towards the Berbers
brought them in the xvith century to such desperation that a general rising broke out in the form of an attempted restoration of the Almoravids led by Naji'il al-Din, a taxraubert descendant of the Lamtuna. This individual, who camped in western Mauritania, first preached a holy war against the negroes, being sure of re-uniting the various contingents against the traditional enemy. Then, having given the troops sufficient training in a campaign which brought them across the rivers to plunder the left bank, he turned openly against the Almoravid. This was the celebrated "War of Bashibah", in the course of which the Arabs were held in check for thirty years; but in the end quarrels within the Sanhajda ranks destroyed their strength and in 1674 the defeat at Tin Yeftel doomed them to vassalage.

In much the same way in 1745 the Idi-Abdij Berra of the Adrar had to bow before the Maqal and at the end of the xiii century we find them again rising against the Arab amir and assassinating him. Finally in the Tagnit, the Sanhajda Ida'ish well led by their chief Muhammad Shenf regained independence at the end of the xvith century. They almost succeeded in seizing the Adrar in 1852, drove the Zanzara Kunta out of the Tagnit and extended their power to the Senegal, for the side of the amirs who are still reigning and claim to be true descendants of the Almoravids.

The rule of the amirs. All over, from the xvith century, the political situation of the tribes became stabilised, and regular little nomad states seem to have been formed, usually under Arab chiefs. Thus we now find the dynasty of the Ulad Ahmad b. Dannun reigning among the Tarara with distinguished sovereigns like 'Ali Sandara (1702-1727), who, supported by the petty Mavalah, delivered his tribe from Brikama domination, and especially Muhammad al-Hajib (1847-1850) whose long reign is marked by the first Moorish resistance to European penetration. Among the Brikama also, the Ulad 'Ali Allah amirs played a preponderating role after the war of Sahibah, and their possessions extended from the Tagnit to the Gulf of Guinea. Later, and particularly from the xviith century, their power declined. In spite of the brilliant reign of Ahmad ibn (1818-1841) and their desperate resistance to the advance of the French caused them to disappear from the political scene. In Adrar the Ulad Yahya b. Ilman also furnished great leaders: Ahmad ibn Muhammad (1871-1891) who was able to keep his turbulent subjects at peace with their neighbours and who tried to develop trans-Sahara commerce, and Ahmad ibn Sid Ahmad (1891-1899) who, by his military successes earned the title of "Amir of war". Lastly, in the person of Bakar ibn Soud Ahmad, a descendant of Muhammad Shenf, the Tagnit produced the greatest Moorish ruler of the xinith century.

The rule of these amirs was continually beset with great difficulties, produced by their rivalries, the lack of discipline, rebellion and intrigues among their subjects, by the warlike raids of the negroes, and particularly by the efforts of Europeans to establish their rule on the Atlantic coast and on the banks of the river.

A European empire on the coast of Mauritania. It was in the first half of the xvith century that the Portuguese visited the coast of Mauritania and the north of the Senegal for the first time. At the instigation of the Infante Henry the Navigator, expeditions followed which brought back slaves, gold and gums. After João Fernandes had gone to Wadan in the eastern Adrar, where he spent some months among the Sanhajda in 1449, a permanent settlement was founded in 1448 on the island of Arguin, which afforded excellent conditions of security. From there the Portuguese endeavoured to extend their power into the interior and to command the great caravan routes which led from the Sudan to Morocco; to them are attributed the fortresses, now in ruins, near Wadan and at Aruggi. But it is certain that for a short time they extended their relations as far as the capital of the negro empire of Mali on the Upper Niger, it seems that they did not own factories for any length of time except on the coast.

The trade of Arguin flourished for two centuries in the hands of the Portuguese, then of the Spaniards and it extended as far as Lower Mauritania through Portindelle (corruption of "Port d'Addi") from the name of an emir of Trâra, a not very good roadstead where banter was carried on. The French at a later date established themselves at the mouth of the Senegal (1625), then the Dutch at the same time with Spain took Arguin in 1638, which the English took from them in 1665 and a struggle for influence began among these three nations which lasted for a century. Arguin and Portindelle continued to change hands, while France developed her trade along the Senegal by building factories. Finally the Treaty of Versailles (Sept. 3, 1783) recognised her exclusive sovereignty over the Atlantic coast from Cape Blanc to the mouth of the Sénégal. The wars at the beginning of the xixith century brought the English back there for a time, and it was only in 1817, three years after the treaty of Paris, that France definitely took possession of the country. Arguin and Portindelle had in the meantime been almost completely ruined as a result of these vicissitudes. The French conquest. Down to 1852 England retained the right to trade at Portindelle, which allowed the Trâra chiefs and in particular Muhammad al-Hajib to play off against one another the two nations who seemed to threaten her independence, and thus to gain a footing on the left bank of the Senegal. The position of the Europeans with regard to the natives was however difficult and trade with them was permitted only on payment of heavy customs dues. It was only in 1854 with the appointment of Faidherbe as governor of Senegal that a more vigorous policy was introduced into Lower Mauritania. In four years he reduced Walo on the left bank to submission and drove the Moris out of it and forced the emirs of Trâra and Brikana to sign a treaty, which if it did not abolish the customs, at least recognised that France had a right of sovereignty over the peoples living near the river and guaranteed freedom of trade there.

For nearly fifty years these treaties were respected and the Moorish chiefs, too much occupied in maintaining peace among their subjects and in defending themselves from the intrigues of their contemporaries, no longer thought of coming into conflict with French troops; commercial agreements were made which extended as far as with the Ida'ish of the Tagnit and one treaty was even made with the emir of the Adrar. This period also saw a great deal of exploration of the interior; after
Mungo Park (1795-1796), Caillé (1825), Caillé (1843) and Pautz (1850), Vincent, Bu el-Mughad, Bonnel, Alian Sal, Mage, Falcond, Abbe, Soliellet, Quiroga and Cervera, Doual, Soller, Fabert, Doumet, Blanche, Gravel and Charanda contributed to our knowledge of this country and prepared the way for its occupation.

In the last years of the sixteenth century the troubles of which Lower Mauritania was the centre finally had repercussions on the trading centres on the river which became daily more serious. The insecurity hampered commerce and in proportion as the memory of the vigorous policy of Faidherbe became obliterated, marauders ravaged the country down to the left bank of the river, right into the administered country. The conquest of Mauritania had to be planned in order to protect effectively the colony of Senegal and with this object an expedition was made to use the influence of the marabouts, tired of a perpetual warfare, of which too often they bore the expense. The diplomatic action of M. Coppolani, Commissaire Général of the government since 1902, judiciously supported by police operations, brought about the occupation of the Tiris country in 1903, of the Brékna country in 1904 and of the Téragan in 1905.

This rapid advance, however, was checked before the anti-foreign propaganda of a manouit of the Haoua, Ma' al-Amin, son of Muhammad Fadil, who after spending a long period in Upper Mauritania, had been settled for some years at Smara near Sagiat el-Hammah. His prestige as a musician, supported by the veneration shown him by the Moroccan soukran, was not long in winning him the support of the greater number of the Moorish tribes and especially of those of the Adrar, the emir of which had been brought up in his entourage. At his invitation, Coppolani was assassinated and a cousin of the Sultan Massel Idris came to lead the Djihân in Mauritania. A success gained by him at Nyanilim led to nothing, but on the return of a delegation of Moorish chiefs who had gone to seek help from the sovereign of Morocco, a general offensive was begun against the French troops (1908). To put an end to an agitation which threatened to become dangerous, Colonel Gouraud conquered the Adrar in 1909 and his victory was completed in 1910 by the death of Ma' al-Amin and in 1913 by the capture of Tighr and joining up with the troops of the Haoua. The conquest of Mauritania by the French was thus practically completed. The march of el-Heiba, son of Ma' al-Amin, on Marrakech in 1914 revived some inclination to rebel among the Moors, but the destruction of Smara in 1913 checked this and France now only had to secure the protection of her colony from raiders from the Sahara.

IV. SOCIAL AND ECONOMIC LIFE.

The negroes are settled agriculturists who have their villages mainly in the Shamaah and the Gergol and in the uninhabited region of Senegal. The Moors have a few villages (the principal are: Ayar, Shingari, Wadon, Tijijin, Tighrit) with palm groves. The few farms in the Adrar, the Téragan and the Dher. They are great nomads who live under cone-shaped tents of camal skin and follow the rainfall with their flocks. Those who wander in the midst of the steppes oscillate between the river and the desert, except the Téragan of western Mauritania, who, on account of the dryness of their country, move over a much greater area and sometimes even reach Tiris and Adrar 'Ifras. The people of the Adrar go down as far as Téragan, and on the north at one time were in contact with the Tekes of the south of Morocco around the Sagiat el-Hammah. Their supply of water is very scanty and it is not an exaggeration when Feucher calls them "the most wretched of mankind".

Their groups have been much gradated by the constant influx of Moroccans. Before French rule, the Haoua, pure Arabs, formed the noble and warrior class who protected the encampments and lived by cattle-rearing and marauding. The Zouaves or marabouts, generally Sanhaja of Zanat Berbera, paid an annual sum called chafe to the Haoua for their security; they were likewise breeders of cattle, but also included among them merchants and men of letters who were regular travelling universitaires; the more or less open practice of sorcery served them as a means of defence against the continual raids of the zgaga of the Haoua. The Zouaves or tribunates (ahlumi), Sanhaja Berbers, were the exploited. The feudal dues which they paid to the Arabs (horma) did not always exempt them from periodic payments to the marabouts nor from arbitrary sums levied upon them by one or the other. They were in part agriculturists. The Haoua, freed slaves, formed tribes of serfs, usually better treated than the preceding. Finally the Haoua and the marabouts owned numerous slaves in which they did a busy trade. On the fringes of all these groups, the Malian, the griot (goum) and the Nmaa were respectively the workmen, poets and singers and the slaves who supplied the encampments of eastern Mauritania with meat.

The barter between these castes were in theory rigid. A certain number of marabouts, however, and even of zgaga succeeded in escaping in arabic trade, like the Ida'ash of the Téragan, and devoted themselves to the adventurous life of the Nmaa hunter (goumor) just as "penitent" Haoua sometimes adopted the pious life of the Zouaves (Tissah).

French administration has left this traditional organisation intact, only suppressing slavery; it has, however, checked the abuses of the Haoua by putting a stop almost everywhere to the payment of the hormas and ghafers.

Economic Life. Mauritania has only one port, Port-El-Houari, on the peninsula of Cape Blanc; it is, however, only a fishing centre. The coast of the Senegal is used as far as Podor in the dry season, as far as Bakel in the winter months. No road has yet been made, but the most important points are linked up by automobile or caravan services. The telephone is in use only in the south, but its place is taken by the wireless, which connects Mauritania with Dakar, Casablanca, Agadir, Flamans and Timbuktu.

The principal source of wealth of the country is stock-breeding: 51,000 camels, 3,800 horses, 339,000 cattle, 2,000,000 goats and sheep, 66,000 asses. The abundant game (antelope, gazelle, ostriches, guinea fowl and bustards) supplies further need for the inhabitants. Among agricultural products, wheat and barley are the most important.
the plateaus, millet, rice, oats, wheat and barley. In the south gum is a traditional article of export (1,250-2,500 tons a year).

The natural resources of the country have hardly been investigated as yet. We may mention, however, the salt of the Såhghat Ifyel, which has for long supplied the caravaners to the south: along the coast a few salt-pans are worked by the Moors. The annual export is 4,700 tons.

Industry is in a very rudimentary stage and confined almost entirely to the manufacture of leather goods which form the equipment of the camelers and the furniture of his tent. Fishing supplies the inhabitants near the coast.

A certain number of caravans transport merchandise from the north to the south along the coast and through the Adrar and Ténit to the trading centres on the river and the Sádín. They take with them animals, gums, salt, dates, ostrich feathers, skins and leather, and bring back cloth, arms, powder, candles, sugar, tea, spices and earthenware and supply the markets of Átar, Sånlif, Wadân and Tåigitch. As a result of the insecurity in the desert there is no longer any regular trans-Saharan trade.

V. POLITICAL LIFE.

The negroes are ruled by their village headmen and chiefs of districts. The Moors are grouped in tribes under the authority of a shatkhi assisted by a council of notables or djaaks. Sometimes several tribes are combined in a horatary union, the rules of which surround itself with a regular court generally recruited from among the Zála or Harêto. The shatkhi or mint is practically all-powerful; only the right to judge in civil matters is not completely his; the kâdž exercise it. The mint further reserves to himself a kind of right to supervise their judgments through the intermediary of his private kâdž who forms a sort of court of appeal.

The French administration has been superimposed on this traditional organization. A Lieutenant-Governor, residing at St. Louis, on the right bank of the Senegal, is the head of the colony and is assisted by a military commandant, an inspector of administrative affairs, a minister of finance and political affairs, a secretary for finance and a general of public works. The local administration carried out by administrators or officers is divided into eight districts (ëtrakta, Bëshka, Gogol, Gidimaka, Assaba, Ténit, Adrar and Baie du Lévrier) and seventeen sub-divisions or administrative posts. It controls the native administrative and judicial organization.

The Moors pay the Kûraic taxes (rakàt and andar) from which their riding-camels and gums alone are exempt. The negroes pay a poll-tax and a tax on cattle. Indirect contributions are paid by the markets, the salt-pans, the carrying of arms, the exploitation of the woods and ferries. The Budget for Mauritanie for 1930 was 14,613,000 francs.

VI. LANGUAGE.

The language spoken in Mauritanie is Arabic, the haurenia or language of the Sádín, the "whites". Some 7,000 Zângues in the south have retained a Berber dialect related to that of the dialects of southern Morocco. At Wadân and Tåigitch the language used (Áñet) which is a form of Souinke is now spoken only by a few individuals. Lastly the negroes of the river have retained their own language.

VII. RELIGIOUS AND INTELLECTUAL LIFE.

History does not tell us what was the religion of the Sånlifja before their conversion to Islam; we can only think that they had to some extent been influenced by a monotheistic faith like Judaism or even Christianity. Their first contact with Islam probably dates from Uthman b. Affâ's expedition to the south of Morocco (681), but it is certain that their real conversion was much later and can hardly have been earlier than the energetic proselytizing campaign of 'Abd Allâh b. Yâsîn. At the present day all the inhabitants of Mauritanie are Muslims of the Mâlikî rite, but many of them and more particularly the warriors and the Nâdîl have only a very superficial acquaintance with their religion and take little interest in it; superstitions and sorcery further corrupt their faith almost everywhere, revealing the primitive state of the people and negro influence. Islam is not really known and practised, except among the tribes of marabouts; among the latter, a mystical tradition and a fairly advanced culture have made themselves felt and for this reason they play an important role in the society of the Tijûniya; the part of a kind of sacred body such as is found nowhere else in the Muslim world of the west. This is no doubt a remote consequence of the Almoravid movement, revived for a time in the war of Babba, and of the peculiar situation of these Muslim nomads, who have here long been the advance-guard of the white race, face to face with the negro fetish-worshippers of the Senegal and Sâdín. Perhaps, like Reman and Polchari, we ought also to give credit to the influence of religiosité in the desert. In any case in thus assuming a kind of sacred character and surrounding it with a magic prestige, certain Berbers have had a regular revenge of their anoum-propre on the pride of race of the Arab invaders and have opposed to their tyranny and brigandage a defensive weapon which has not been without effect.

The principal brotherhoods of Mauritanie are those of the Tijûniya and of the Kâdiriya; their influence extends into the lands of the negroes. The first are represented by the Tijûniya of the Ténit and Adrar, who claim to be the first and say they came from Tabelbala at the beginning of the viith century. Since the early years of the viith century they have been connected with the branch of the Tijûniya in Fas. The second are much more numerous and influential; they have several branches; that of the Bekkîya dates from the viith—viiith centuries and is represented from the bend of the Niger to the Dâgân and Adrar by the tribe of the Kûnta. About a century ago it received fresh impulse in a new "path" and its autonomy. In Lower Mauritanie was secured by the great prestige of the Shâkhi Sidiya, of the Uld Biri (d. 1924). We may also mention the branch of the Kâdiriya, founded in the early years of the viith century, which enjoyed particular fame some 20 years ago under the direction of Mâ' al-'Ainin and his brother the Shâkhi Sa'd Bîd. These two branches have lost their importance since the deaths of these famous individuals. Lastly the Kâdiriya are still represented by the some 600 members of the
MOORS — MOREA

Ghadfa brotherhood, whose practices are regarded as heretical by the other Muslims.

Shingiti, benefiting by its situation on the routes of the caravans which came from western Morocco or Sebka for the oases of Egypt or the Senegal, was at one period an intellectual centre, the reputation of which extended to all the western Saharan and to the Sudan. We see this in the fact that it was able to give its name to all the Moorish tribes (Shingiti) and to the territory in which they led their nomadic life and that the tradition of the country makes it one of the "seven holy cities" of Islam. It has now lost its old prestige. In the 11th century the fame of the medrasas of Timbuktu must have offered serious competition to it. At the present day Shingiti is seriously threatened by the sands of the Warar and its trade is much reduced. Its position is an increasing importance; the insecurity and eccentric development of the North African and the Sudan have led to the almost complete disappearance of the trans-Saharan trade by which it lived and in particular of its natural in a land of nomads. It has been rather under tents and particularly in the marabout encampments of western Mauritania that intellectual culture has developed. Universities have been created there where the teaching of the Kur'ān, theology, law, grammar and logic still flourishes. Some of them have known outbursts of glory under famous teachers, who have sometimes created schools of mystic initation, like those directed by the Shāhīn al-Makhṣūṣī, Mīr al-ʿAʿīn al-ʿAdī, or the Sufi school. To the Abū Muhammad Sāliḥ, also a kind of university in the Timbuktu which produces almost all the jurists of Mauritania.

A whole original literature has been able to develop. Kur'ānic matter, Hadith, law according to Mālik Shāhīn al-Lūṭī, and his commentaries, are its essential elements, with the doctrines of the Sufis and their mysticism. But historical studies have also been made and still have their eager followers, especially among the Ulūd Dāma (Timbuktu). Lastly, poetry is held in honour among all the tribes, warriors and marabout alike, and supports a whole cast of troubadours, the griots, who enjoy the favour of the courts of the emirs.

**MOREA** is the usual name in mediaeval and modern times for the peninsula of Peloponnesus which was regarded in ancient times as the "capital" of Greece. The name Morea is first found in the 11th a.d. in the subscription to fol. 143 of the Greek manuscript Brit. Mus. Add.

**(F. DE LA CHAPELLE).**

**MORADABAD** (Marādābād), a district in the Rohilkhand division of the United Provinces of India and also the chief town of it. The district has an area of about 3,300 square miles and a population of 1,200,000 of whom over 420,000 are Muhammadans. Nothing is known of the early history of the district. In the Muhammadan period it was successively ruled by the Sultans of Delhi, from whom it was occasionally taken by the Sultan of the Moghul, the Moghuls, the Khiljis, and the Nawahi of Ouda until it was ceded to the British in 1801.

Moradabad is the principal town in the district; it is situated on the Delhi-Bareilly road and on the main line of the Ouda-Rohilkhand railway. It has a population of 75,000 of whom over half are Muslims. The town is a Moghul foundation of the second quarter of the 11th century. Its founder was Rustam Khān who also built the Dāmān Masjid, an inscription testifies, in 1672. The town takes its name from Murūd Bakhsh, the ill-fated son of Shah Dājān. It rapidly ousted Sambhal from its place as the chief town of the district. Its industries are florishing (chiefly textiles and brass-work). It was a mint of the Moghul Emperor and was the residence of Ahmad Shāh Durrānī during his invasion of India in 1760. Sambhal is a very ancient site but has lost much of the importance it possessed in mediaeval times. It has an old mosque, an interesting example of Pathan architecture which has even been claimed as a converted Hindu temple. It is said to have been built by Bābur but it is undoutedly earlier. Amroha is the great Muhammadan centre of the district, the majority of its population being Shāhīn and Saiyids. The chief saint of the Saiyids is Sharaf al-Dīn Shāh Wiliyāk, a descendant of the tenth Imam, who came here about 1350. His tomb is still shown here. The Dāmān Masjid is a Hindu temple converted into a mosque in the reign of Kālhābād. It is much visited by pilgrims, mainly Hindus who seek relief from mental distress through the power of Šadr al-Dīn, a former sufi, into the mosque, whose virtues are still believed to be efficacious. There are over a hundred other mosques in the town.

**(J. ALLAN).**

MOREA, the usual name in mediaeval and modern times for the peninsula of Peloponnesae which was regarded in ancient times as the "capital" of Greece. The name Morea is first found in the 11th a.d. in the subscription to fol. 143 of the Greek manuscript Brit. Mus. Add.
MOREA

567

28th (cf. M. Vogel — V. Gethaften, Die griechisch-
ischen Schriften des Mittelalters und des Renais-
sance, Leipzig 1909, p. 28, 466, and also Byzantin-
isch-Neugriechische Jahrbücher, iv. 73). Originally
the name Morea did not apply to the whole
Peloponnesus but only to the outer mountains of
Ichithya and the lands around them as well as
the whole district of Ellis. Reliable references show
that even in the xivth century the place-name
Morea was equivalent to Ellis; later the name
became gradually extended to the whole Pelopon-
nesus and with this meaning it is still used not
only by the Greeks but also by other peoples of
east and west.

Alongside of the original form Morea (Μόρεα, with
synonym Μορέα, Μορα), we find other divergent
forms in Greek literature: Μοραία, Μοράια, Μοραί
Μοραία, Μοράια, Μοράια, Μοράια, Μοράια. In
eastern sources of the medieval and modern period
along with the predominant form Μοραία (mainly
in Latin-Italian documents of the xiiiith—xivh
century), Μοραία (particularly in documents of
the xivth—xvith century), Μοραία (properly Italian),
Μοραία (French) we also find: Αμοραία, Λαμοραία
(see in Greek documents as early as the xiiiith century).
The origin of all these forms is to be traced to an
inaccurate separation of the article from the noun
Μοραία — Μοραία — Μοραία.

In Muhammadan texts we find seven main forms
of the name Morea = Peloponnesus: Λαμοραία, Λαμοραία,
Αμοραία, Αλμοραία, Μοραία, Μοραία, Μοραία.
The first five are properly Arabic, the last
Arabic-Turkish. There are however Arabic texts,
which have the old classical name of the peninsula
although with certain variants (cf. below).

As to the derivation of the name Morea, it has
puzzled scholars greatly for centuries. Some scholars
of the xivth century wanted to connect the name
with Morea (Ital. More). These were said to have
settled in the Peloponnesus at one time. This
derivation of the place-name, which has even been
adopted by modern scholars, agrees neither with
historical tradition nor with philological laws. At
one time the suggestion put forward by Emerson
(History of Modern Greece, 1. 60) and adopted by
Fallmerayer found many supporters; it connected
Morea with the xiiith century, see supra, note 3.
This view has been challenged by Kopitar (Wiener Jah-
bücher der Literatur, r. 1859), 111-120 and
again by Zinkeisen and Hopf as decidedly “mis-
taking and fanciful” and rejected by several later
Greek and Slavonic scholars. At the present day
it is generally thought that Morea is derived from
the Greek word μοράε = “mulberry-tree”, as Prof.
G. N. Haidzidakis (in the periodical ‘Aitex, vol. v.,
1894, p. 290, 401, 549, Παλαιολόγιοι Μελέτες,
Athens 1900, p. 29-99) has brilliantly shown on
the basis of philological arguments. In Ellis where —
as already mentioned — the name Morea, now
applied to the whole of the Peloponnesus for some
centuries, first appeared, the planting of the fields
with mulberry-trees is said to have been very common
in the middle ages. These trees were indispensable
for the silk industry which was at one time very
flourishing in the Peloponnesus and no less in
Patras. Authors of the Empire (Flivy, Hist. nat.,
iv. 4; Panatinaiki, v. 5, vi, vi. 36, 23, vii. 21, 5)
also tell us that Ellis in those days produced
ceres, i.e. a material related to silk. In any
case, as early as the xivth century, the Greeks
thought that the place-name Morea was connected
with the mulberry-tree. This is evident for example
from Joh. Lennclavius (Annales Sultanorum Ottom-
orum in Turcia sua lingua scripti, 1596, p. 63):
“Nonem ipsum (curt Morea) derivant Graeci: num-
que arbore moro quod tota regio scilicet arbor
hæce frequens est”.

In the medieval Muslim writers there is a
confusion between Amurria = Amorios in Phrygia
and Lamurria = Moreas, Peloponnesus. But Amur-
ria (or Amurilia, Amurilia, Amorilia etc.) in Abu-
I-Kásim Firdawsi can only be Amo-
ria, which used to be described as the capital
and “eye of the kingdom” of the Rūm. In the
geographical table of al-Tūsī (middle of the xiiith century) and of Ulugh Beg, Amurria
should rather be identified with Amorios than
with Morea = Peloponnesus (cf. P. Karolidis, in
Wissenschaftliche Jahrbücher [‘Ereniq] der Uni-
versität Athen, iii. 1909, p. 288—297; A. Hanritis,
in Byzantinisch-Neugriechische Jahrbücher, iv.,
1921, p. 63 sqq.). In the little map by the Arab
Idrisi, of the year 1119 a. D., Belbûnins = Pelo-
ponnesus is given (i.e. the old classical name of
the peninsula). On the other hand, we find Moria
= Moreas = Peloponnesus (i.e. its medieval and
modern name) in the Arabic geographical table of
the Paris MS. 2214, which is supposed to contain
the cosmography of Ibn Sa’ud of the year 1276 a. D.
based for the most part on Idrisi (1154 a. D.;

The Muhammadan peoples really only became
acquainted with the Morea in the xiiiith century
a. D. Hellenistic culture was long extinct there
and Christianity had become predominant. At
the end of the fourth century (395 a. D.), Alaric
had laid almost the whole of the Morea waste and
destroyed many towns and sanctuaries famed in
ancient times. About two centuries later, c. 580 a. D.,
the Avars (a Turkish nomadic people) allied with
Slav tribes are said to have invaded the Morea
and settled permanently. It should be expressly
noted that it is only late and tendentious sources
which tell us this. What scholars of the xivth
century put forward as a historical fact, namely
that an independent Avar or Avar-Slav Kingdom,
initiated to Byzantine or Greek Christian influ-
cence, existed in the western half of the Morea
for 288 years (589—876), must be relegated to
the realms of fable (cf. E. Curtius, Peloponnes, i.,
Gotha 1851, p. 86). It is certain, however, that
considerable ethnological changes took place in
the middle ages in the Morea. In the xivth
century in the reign of the Byzantine emperor
Constantine V (741—775), if not earlier, numerous
Slav tribes had pushed their way into the Morea,
which had been much depopulated from 746 by
a terrible pestilence. This epidemic had also made
great gaps in the population of Constantinople,
which Constantine V is said to have endeavoured
to fill with people from the Morea; this imperial
edict must have further contributed to reduce the
Greek element in the peninsula. It may be assumed
that the Slavs who at this time were settling
mainly in Arcadia and Messenia, Ellis and Laconia,
sought and found new homes in the Morea, which
had been favoured by nature with a milder climate,
not only as hostile robber hordes but also as
peaceful colonists from the north.

According to Schaufark (Sächsische Altertümer,
German transl. by Wittke, vol. ii, p. 192),
the spread of the Slavs over the Morea can be fixed
between 746 and 799. Nevertheless there can be no question of a complete abysishment of the country nor of a complete annihilation of the Greek element in it — as Fallmerayer and his followers hold. The immigrant Slavs in Greece proper cannot have been very numerous. They were really nomad herdsmen and peasants, who settled here and there in the open country. Their level of culture much have been very low. On the other hand, the Hellenic element in Greece proper and no less in the Morea had always had control of the coasts and of the towns and fortresses in the interior, and it was moreover strong enough as regards culture to assert itself through the centuries and even to leave its mark on the foreign Slavs. The Slav settlers often caused trouble to the Byzantine government, so that the latter found themselves forced to send expeditions against them. For example in 732 A.D. the Athenian empress Irene ordered the Patriarch Staurakios to punish the Slav tribes of the Morea and the rest of the mainland of Greece. He appears to have had numerous troops at his command and was able to carry out his task satisfactorily in a few months. He subdued the Slavs and forced them to pay an annual tribute to the imperial treasury. He returned to Constantinople with many prisoners and considerable booty and celebrated a triumph in the Hippodrome there.

After some time, the Slavs again rose in the Morea against Byzantine authority. They became a great danger and even threatened the towns on the coast. Supported by Saracens from Africa, the Slavs in 807 (805 by another reckoning) blockaded Patras, but from the land. The citizens of this important town defended themselves bravely in spite of a shortage of provisions, water and other supplies. When the help sought from the imperial strategists in Corinth did not come, the citizens of Patras made a vigorous sortie. They put the enemy to flight and drove them far from their town. Greek superstition seems to have sacrificed the victory won at Patras over the Slav hordes to St. Andrew, the patron saint of the town. Nothing is recorded of the fate of the Saracen allies of the Slav besiegers of Patras. It is supposed that it was they who ravaged not only Patras but also Rhodes and other islands by the caliph's order in 807 A.D. With the defeat at Patras the strength of the Slavs of the Morea was broken. It is true that they again and again attempted to win their independence of the Byzantines by force of arms but without success. In 850 A.D., the doughty Byzantine general Theoktistos Rousensus subdued all the Slav districts of the Morea as far as the mountains on the Taggetos and Parson, where two real Slav tribes, the Esterites and Melingia, had settled. These two tribes survived longest, sometimes as vassals of the Byzantines and sometimes as their open enemies. As early as the ninth century A.D., began the conversions of the Slavs to Christianity to which is due also their gradual hellenization. The mixture of the Greek Moreotes (Turk. Moralia), with the Slavs undoubtedly contributed considerably to the former process.

The Normans in Sicily in the following period disturbed not only the coasts of the mainland of Greece but also the interior of various Balkan provinces of the Byzantine empire. The Norman king Roger II in his campaign in 1146 against Greece sailed round the Morea and occupied with-

out a blow — after successfully storming the strongly fortified Malvasia — Corinth, celebrated for and prosperous from its trade and industries. It was for this same king, that the Arab Idrisi composed his Nusht al-Ma'dhik, finished about 1152 A.D. According to this work, Morea (Beliomik), a flourishing and prosperous island of the Mediterranean, had 13 large and important towns, many citadels or fortified places and villages. Of the towns of the Morea Idrisi mentions the following among others: Corinth, "a large and populous city"; Patra (= Patras), "situated on a promontory", has a "famous" church (of the apostle St. Andrew); Arcadia (= the ancient Kyparissia), "a large and thickly populated town", whose harbour is visited by many ships; Iroda (= Navarino) with "a very commodious harbour"; Molotina (= Modon; q.v.), "a fortified town"; it was protected by a fort which commanded the sea; Coronia (= Koron), "a little town" with a citadel commanding the sea; el-Kedemona (= Lacedaemonia, the mediaeval Sparta), "a flourishing and important town, six miles from the sea"; Malissa (= Monemvasia, Malvasia), "a town defended by a very high citadel commanding the sea, from which the island of Crete can be seen"; Argolica (= Argolis), "a famous place and beautiful country"; Anahopolis (= Nafplia, Napoli di Romaina). According to Idrisi, Morea (the extent of which he puts at 3,000 miles) is connected with the mainland "only by an isthmus, the length of which is six miles" (= Hexamilion, cf. below). Only small ships could be taken through the isthmus from the Gulf of Corinth into that of Saron; ships of larger size had to sail all round the peninsula of Morea. The confusion in Idrisi between the promontory of Malea and Tainaron is not peculiar in medieval works. Idrisi's statements are not based to any extent on his own observations (cf. Geographie d'Idrisi, transl. by A. Jaubert, ii, 1849, p. 132 and also Th. Luc. Fe. Tafel, Die provincia regni Byzantini liber accedit. Europa, Tübingen 1845, p. 27).

We get much and varied information supplementing the Arab geographer's account of the Morea from various 18th century sources e.g. the Travels of Benjamin of Tudela (d. 1191) who starting from Saragossa visited the Greek east and other lands in order to become acquainted with the Jewish diaspora.

The conquest of Constantinople by the Latins in 1204 and the resulting division of the Byzantine empire, which had now collapsed, had a great influence on the future of the Morea. Boniface of Montferrat in 1204 founded the kingdom of Thessalonica in Macedonia which he took in exchange for Asia Minor allotted to him by treaty. By a comparatively slight effort he and his followers were able from Thessalonica to conquer within a year a great part of the mainland of Greece as well as the Morea. Two knights, William of Champlitte, Count of Champagne, and Godfrey of Villehardouin the younger, may be regarded as the men who brought the Morea under Frankish rule. When William of Champlitte had to leave the Morea in 1209, Godfrey of Villehardouin continued the work of conquest alone and organised the Frankish administration of the country which was henceforth known as the Principality of Achaea to Europeans. Soon after the Frankish occupation of the country, it was reorganised on western lines. But the feudal system did not find
its way into the Morea only after 1204. It had already existed in the country in the time of the Comneni.

The Frankish rulers built new citadels and forts in the plains and on the mountains, most of which survived into the period of Turkish rule. A number of sieges which were formed by the Franks in 1205 became after the middle of the twelfth century hereditary possessions of the Ottomans.

It must also be pointed out that the Venetians after the Fourth Crusade had secured important trading centres and depots on the Morea. The Republic in this way acquired the province of Lacedaemonia, Kalabryta, Monod and Patras, and, in addition to the last two seaports, some of the surrounding country including the possessions of a number of distinguished families of the Byzantine aristocracy. During this period, Venice succeeded in extending her territory and commercial influence and privileges further in the Morea and even in taking possession of the whole of it (cf. below).

The fourth prince of Achaea (Morea), William of Villehardouin (1245–1278), the second son of the above-mentioned Godfrey, had vigorously completed the conquest of the country. In 1245 he forced Monemvasia, which had so far remained independent in alliance with the Greek kings of Nicea, to capitulate under certain conditions. The same ruler also conquered a number of Morean tribes who had shown themselves hostile to Frankish rule and who played a prominent part in later times when the Turks occupied the country. To keep in check the wild tribes of Zacoonia and Laconia, William II of Villehardouin in 1249 built near the ancient Sparta, on a hill jutting out in front of the Taygetos, Mysitra (Mysitra), the fortress of the same name. A Frankish-Byzantine town soon grew up around this fortress which became a centre of art and classical studies. The town of Mysitra was destined to be the capital of the later despots of the Morea, and even in the period of Turkish rule it did not completely lose its old importance. Frankish rule in the Morea, which reached its zenith under William II, was destined to suffer a severe reverse within his reign. In October 1259 a fierce battle was fought between Castoria and Monastiri (Pelagonia) at Longos Vorilla. In this battle fought the armies of the Despot of Epirus Michael Angelos and of the king of Nicea and later Byzantine emperor Michael VIII Palaeologos. As a result of this victory on the part of the illegitimate son of the despot Michael Angelos, the Sebastokrator Johannes, the troops and allies of the former suffered a reverse. Even William II of Villehardouin sought safety by flight only to be shortly afterwards enticed from his hiding-place and captured. He was not released till 1262, after taking the oath of vassalage to the Byzantine emperor and ceding him four important fortresses of the Morea: Mysitra, Malna, Geraki and Monemvasia, as well as a considerable part of Laconia. The Byzantines thus gained important bases in S. E. Morea from which they were able to reconquer the whole peninsula, which was all the more necessary as William II of Villehardouin only kept his pledge of fealty for a short time.

Relations between the Muslim peoples and the Morea now became closer. At the end of 1262 the Sebastokrator Constantine, a step-brother of the Emperor Michael VIII Palaeologus, landed in the Morea at the head of a large army which consisted mainly of Macedonians and Turks. This step-brother of the Emperor came to the Morea as administrator of the Byzantine lands there and occupied all the citadels which William of Villehardouin had been forced to cede in order to secure his release. The Byzantine governor took up his residence in Mystra. Soon afterwards open war broke out between the Franks and Byzantines. To strengthen the latter there landed at Monemvasia in the spring of 1263 a new Turkish army corps of 5,000 (according to others 10,000) mercenaries in the service of Michael VIII Palaeologus, led by two men named Malik and Shalik. We have no accurate record of the origin and descent of these Turkish chiefs who, so far as we know, were the first to appear in the Morea. They must have been either Saldjiks or Turks of other descent who had no shame about selling their services to Christian rulers. The Turkish mercenaries under Malik and Shalik contributed greatly to the successes which the Sebastokrator Constantine gained over the Franks at the beginning of 1263. Along with Greeks, mainly from Zacoonia and other provinces of the east, Slaves from the Morea, Dasmuls (of Greek-Frankish descent), the Turkish mercenaries attacked from Laconia, which was the capital of the Frankish principality. The bands of Malik and Shalik then pressed into the highlands of Skorta. Here they ravaged at will. With the approval of the Sebastokrator Constantine, they plundered the villages, killed and slayed cattle. In these circumstances the Skortians were forced to pay homage to the Byzantine emperor and to operate with his army against the Franks. Constantine’s army, composed of so many different racial stocks, occupied the market-town of Velogosti (near Megaloportes) and burned it, without however being able to take its citadel; they then conquered Kalabryta and burned the famous Latin monastery of Isos. But soon afterwards they suffered a terrible defeat not far from Olympia.

In the spring of the year following (1264), the Sebastokrator Constantine continued the war on the Franks. He had no success and also quarrelled with his Turkish allies, whose pay was six months in arrears. Malik and Shalik at once left him with their men for this reason and retreated undisturbed to the district of Karytaina. Constantine tried to win them over again but they went to William of Villehardouin who accepted their assistance. Thereupon Malik and Shalik with their followers went over to the camp of the, as they thought, generous Frankish leader in the conviction that the latter would keep his word. By the accession to the Franks of this Turkish force, the tide was turned in their favour. The Turkish chiefs who were inspired by an ardent desire to avenge themselves in battle on their false employers, now advised William II of Villehardouin’s knights to meet the imperial Byzantine army on the frontiers of Messenia and Arcadia. While the Frankish-Turkish army was going through the pass of Makryplogi (between Megalopolis and Kalamos, i.e. the line of the modern railway), they were attacked by an ambush of the Byzantine army, whose leader was no longer the Sebastokrator Constantine but the strategos Alexius Phylis, Makremos and Alexius Kabbellarias. Twice the vanguard of the Frankish-Turkish force led by Anselm de Toucy had to give way before the numerous Byzantines who occupied the heights of the pass of Makryplogi, but finally they won the
hostly contested summit of the pass, from which they ousted the enemy. The Turks under Malik and Shalik followed up and completed the victory. The leaders of the army so dismally defeated sought refuge in the neighbouring caves of Gardiki where they were besieged by the Turks. The latter took the caves and led their occupants prisoners to William II of Villehardouin. The latter thereupon ordered the Turks to raid and plunder the districts of Morea previously occupied by the Byzantines, notably the districts of Zacoia, Helos, Vatika and Monemvasia.

After the battle in the Makryplagi pass came the news that Skourtinians had again taken up arms against the Franks and stormed the fortress of Bachelet (Arakovon) and Karytaina. As the valiant Godfrey Brunieres, Baron of Karytaina, who had always been able to keep the turbulent Skourtinians in check, was no longer in the Morea, William II of Villehardouin ordered the Turkish leader Malik and his men to go to Skorta to put down the rising. Terrified by the ravages and cruelties of the Turkish mercenaries, the surviving Skourtinians submitted to the Prince of the Morea and begged for mercy which was granted them.

The Chronicle of the Morea, which has survived in four languages (Greek, French, Catalan and Italian), is the only source which tells us of the activities of the Turkish mercenaries in the Morea (1259–1265). The same Chronicle adds that the Turks in 1265 sought permission to leave the Morea and to be allowed to return to their Asiatic home. Malik took his leave in the friendliest fashion from the Prince of the Morea and began his journey home. The Chronicle however specially mentions that individual Turks preferred to settle in the Morea. They were baptised and married morean women. About the first half of the xivth century, there were still descendents of Malik's followers there, baptised Turks settled in Elia. It is natural to think that the modern villages in N.W. Morea of Maliki (Demos Vrapson) and Turkochori (= "village of the Turks", Demos Tritaias) owe their names to the Turkish settlers in the time of William II of Villehardouin. This prince gave two of Malik's followers who remained in the Morea the rank of knighthood and even granted them fees. According to the Catalan version of the Chronicle of the Morea, Malik himself married a noble Frankish lady, a widow, through the intermediary of William II of Villehardouin. It is a historical fact that Turkish-Moreot relations date from the second half of the xiii century. After the death of William II in 1278 we find a reference to estates which this prince had given to his Turkish allies and which were occupied about 1280 by the soldiers of Galerano d'Ivry, who acted for a time as governor of the Morea for Charles of Naples and Sicily, Charles I and his immediate successors in rule over the Morea had not infrequently Turkish warriors in their service. From the beginning of the xivth century it it infrequently happened that Mahommadan pirates from Asia Minor raided and plundered the coastslands of the Morea. Sometimes they had allies of the Christian faith, notably Catalans.

About the middle of the xivth century, an important change took place in the administration of the Byzantine possessions in the Morea. The Emperor Johannes Kantakuzenos in 1349 created an appanage for his second son out of these lands which he called the despotea of Mystra and which lasted till the Ottoman conquest (1349–1350). In this period fell the rule of the first despots of Mystra, Manuel Kantakuzenos, the second son of the Emperor. He assisted the Franks of the Morea to ward off the Turkish attacks, which had reduced the once flourishing Corinth and the country round to such misery that the Christian lords in 1358 were forced to send an urgent appeal for assistance to their sovereign, the titular Emperor of Constantinople and prince of Achaia, Robert II. The latter gave a ready ear to their appeal. On April 23, 1358, he gave the Florentine Grand Seneschal Niccolo Acciajoli and his descendants the extensive district of Corinth as a hereditary barony. The princely family of the Acciajoli survived in the Morea and on the mainland of Greece for two centuries, during which they had much to do with Muslim peoples. A series of circumstances, including the irritations of the Turks as early as the middle of the xivth century and the advance of the Ottomans, whose strength was steadily increasing, brought numerous Albanian refugees to Greece. The first despot of Mystra, Manuel Kantakuzenos, had them settled in various deserted regions whereby they became distinguished as warriors, agriculturists and as hunters. Thus we find them in Arcadia and Laconia where they seem to have come in large numbers. Later another 10,000 Albanian families were peacefully settled by another despot of Mystra, namely Theodoros I Palaeologos (1384–1407), son of the Byzantine Emperor John V. According to reliable sources, these 10,000 families left Thrace and Accarnania with their cattle and goods and chattels on account of the Turkish raids and for other reasons and reached the isthmus. There they pitched their camp and sent messengers to Theodore I with the request that they might be allowed to settle in his Morean territory. Theodore I acceded to their request and allowed them to spread over a considerable part of the Morea.

The story of G. Basio (Dell'istoria della Serre Religione et Illustrissima Militia di F. Gio. Gerosa voylentina, vol. ii., Rome 1594, p. 126–129) to the effect that the Turks had occupied Patras in 1378 and conquered the Moreo shortly before must be relegated to the realm of fable. About this time, there were again great changes in the Morea. The Company of Navarre, which in 1380 had entered the service of the titular Emperor Jacob de Beaux of Constantinople and prince of Achaia and were seeking their fortune on Greek soil, became after the death of the Emperor in Tarso in 1383 absolute masters of a great part of the Morea. In 1386 the Company made Captain Pierre de St. Exupery (Bordo de S. Supur) their leader. The latter was able to extend his power and influence in the Morea by inciting the Turks and also the Greek archons against Theodore I. During the period 1395–1402 he even bore the title of hereditary prince of Achaia (which was given him instead of money by king Ladijan of Naples). Sometimes before, a vigorous and enterprising Florentine, Nerio I Acciajoli (Sept. 29, 1394), had been playing an important part on the mainland of Greece. This man, a nephew of the Niccolo I Acciajoli, already mentioned, had acquired considerable territory in the Morea, partly by inheritance and partly by purchase. Shortly before his death he attained the height of his glory when he was appointed by king
Ladislaus of Naples as hereditary Duke of Athens and the lands belonging to it. In 1389 the Venetians occupied the important fortress of Nauplia and set about the conquest of Argos. The despot of Mystra, Theodoros I Palaeologus, the son-in-law of Negri I Acciajoli, at his father-in-law’s instigation anticipated the Venetians and occupied Argos. As a result, hostilities broke out among the Christian states, which could end only to the advantage of the Turks. The despot of Mystra replied to the demands of Venice to give up Argos by saying he could only do so with the Sultan’s approval. Later the Venetians joined up with the Navarese. Through treachery Bordo of S. Superan succeeded in taking Negri I Acciajoli prisoner on Sept. 10, 1389. The latter remained for nearly a year in the hands of the leader of the Navarese but in the end obtained his freedom.

An epoch-making event was the great battle on the field of the blackbird (June 15, 1389) at Pritsina, which decided Turkish rule for centuries in the Balkans. A Turkish army appeared in the Morea at the end of 1392 under Ewrenos Beg in order to aid, at their request, the Navarese against the despot of Mystra. The Turks thereupon occupied a number of strongholds in the peninsula. Negri I Acciajoli, who had been appointed governor of the Morea, now pledged himself to the Turks and to Sultan Bayazid and to be his vassal. After the death of Negri I Acciajoli, a fatal quarrel broke out between his sons-in-law Theodore I of Mystra and Charles Tocco, during which the Turks won important successes on the mainland of Greece. The fear of danger from the Turks probably induced Charles Tocco and Theodore I to make up their quarrel. After long negotiations with the Greek national party in Athens, who hated the Latin, Turkish forces under the Pasha Timurtash entered Attica from Thessaly. At the end of 1394 or in the first seven weeks of 1395, the Venetians occupied Athens including the Acropolis, after driving back the Turkish besiegers. Theodoros prepared to advance against the Turks on the isthmus. The latter, however, defeated on Sept. 28, 1396 at Nicopolis the flower of the chivalry of Hungary, Germany, and France and thus laid the foundations for their dominion over the lands below the Danube. Bayazid thereupon decided to attack the remnants of the Byzantine empire as well as the little principalities of the mainland of Greece. He therefore sent his generals Yağılı, Pasha of Rumelia, and the already mentioned Ewrenos Beg with an army of 50,000 men to cross the isthmus again. Yağılı occupied Argos; Ewrenos Beg at the same time fell upon the Venetian possessions in Messenia. The prince of Achais, Bordo of S. Superan, and Theodoros I of Mystra found themselves forced as a result of the Turkish successes to pay tribute to the Porte. Laden with inculcable booty the armies of Yağılı Pasha and Ewrenos Beg returned across the isthmus and in 1397 even occupied Athens for a brief period. In addition to Greek sources, Turkish writers record the "city of the wise", as Athens is frequently called in Muslim works, was taken by Sultan Bayazid’s men (cf. J. H. Mordtmann, in Byzaṭ-Neẓirciḥ, Jahrb., iv. (1923), 346–347). As a result of his troubles, especially the Turkish raids, Theodoros I of Mystra became utterly tired of his position. He therefore resolved to sell his towns and citadels to the knights of St. John of Rhodes, who after negotiations readily purchased Corinthe, Kalabryta and Mystra in the years 1400–1402. But they could not establish themselves permanently in the Morea, for the Greek national party in the country, especially in Mystra, rebelled against the sale, which the Sultan, the suzerain of Theodoros of Mystra, also declined to recognise. Theodoros therefore cancelled the sale and compensated the knights partly in money and partly by ceding the county of Salona and the barony of Zitara. Theodoros I had been able to take these lands from the Ottomans after their defeat at Angora in 1402.

Sultan Selim I (1403–1411) abandoned any claim to suzerainty over the Morea. At this time the influence and power of the Venetian colonies in the Morea were increasing. In 1407 the Venetians occupied Lepanto. In the following year, they seized Patras and the country round it and from these two strongholds which lay opposite one another, the so-called little Dardanelles, they were able to keep in check the Turkish pirates who made the Gulf of Corinthe unsafe. At an earlier date, the Albanian family of Spata had settled in Lepanto and had occasionally made common cause with the Turks. Patras at this time was ruled by the archbishop Stephan Zaccaria in name of the Pope. As he suffered a great deal from the Turks, he pledged the town and the country round it with the Venetians. The latter also occupied the seaport of Astros in Zaoncia. They restored the fortifications of Nauplia and other strongholds in their possession. The Republic of St. Mark in 1406 and 1411 concluded treaties with Sultan Selim I, by virtue of which they secured their colonies in the Morea and the East generally. But in the reign of Murât II (1421–1451) danger again threatened from the Turks. The Venetians were however able to take the necessary measures for the defence of their possessions in the Morea. In the districts of Nauplia and Argos as well as in their flourishing Messenian colonies they settled numerous Albanians who loved fighting. In Corinth and Attica also the Albanians were welcomed by the Acciajoli. The Albanian element was therefore very strongly represented in the Morea in the first half of the xvi century; later they spread to the islands around the Morea. In the wars of the Greeks and Venetians against the Ottomans, the Albanians frequently distinguished themselves; on the other hand, their morals left much to be desired. To this day we still can find descendants of these Albanian colonists in the Morea and in the adjoining territories.

After the battle of Angora, at the time when Frankish power in the Morea was declining, the Byzantines vigorously resumed their efforts to reconquer the whole peninsula. Theodoros I of Mystra had previously wanted, with Venetian support, to erect on the isthmus a great bulwark against the Turks which would make access to the Morea impossible for them. Manuel II Palaeologus again took up Theodoros’s plan and began to put it into execution with vigour. Not far from Corinth on the isthmus, which was usually called "Hexhamillon" in the middle ages, he built a wall 24 stadia long from sea to sea with castles at each end and in the middle and no less than 155 strong towers besides deep ditches. The building material was taken from older walls and defences. In the course of 25 days (April 8—May 3, 1415), i.e. at a most rapid rate, the great wall was completed which, like the
ismus itself, was called "Hexamillion"; the greatest hopes were built upon it, but they soon proved deceitful. The Turks usually called the wall "Ges-
eckliter. In 1416, Manuel II left the Morea after re-impersonating his usurpation upon the prince of Achaia Centaurea II Zaccaria and humbling several Greek and Albanian archons, some of whom he carried off with him to Constantinople.

The peaceful relations which had existed between the Byzantines and the Ottomans under Sulaiman I and Baysarz suddenly ceased when Murad II ascended the throne. In 1423 he ordered the celebrated Pasha Turakhan to clear up the small states. With an army of 25,000 men, which was joined by the Duke of Attica Antonio I as the Sultan's vassal, Turakhan sent out from Thessaly to obey his master's orders. The celebrated Hexamillion wall proved an insufficient bulwark against the onslaught of the Janissaries. Turakhan had the most of it destroyed and advanced into the Morea. The despot Theodore II of Mystra could scarcely have checked the Ottoman floods which swept into his land, plundering and murdering. Mystra, Lontari, Gardiki (on the Makaryplagi pass) and other Byzantine and Latin towns fell into Turakhan's hands. But he suffered one serious reverse. The Moreots captured a portion of his army in the pass of Lomares, where they were victorious and took much booty of, to be more accurate, recaptured their own property. In the Arcadian town of Tavita (the modern Davia, on the road from Tribolitha to Wytina), the Albanians assembled and chose one of themselves as their leader and decided to attack Turakhan on his way back from the south. In the battle that followed, the Albanians did not stand their ground but fled. Turakhan pursued them and slew many besides taking some 800 prisoners. These he put to death and, according to the Turkish practice, built towers of their skulls. Heavily laden with plunder, Tur-

khan returned soon afterwards across the isthmus to Thessaly. He had however in 1433 not yet completed Murad's order to subdue the Christian states of the Morea.

Soon after the withdrawal of the Ottomans, Manuel II Palaeologos besought Murad II for peace and concluded a treaty with him, by which the despot of Mystra was to pay an annual tribute of 100,000 hyperpyra to the Sultan and farther to declare his readiness to give up the Hexamillion wall. Venice, whose colonies in the Morea had suffered much from Turakhan's raids in 1423 and were continually troubled by Muslim pirates, recommended the Ottoman powers to interest them in this united front. This appeal for unity, however, fell on deaf ears. The various Christian rulers of the Morea quarrelled among themselves in spite of the critical times and even took up arms against one another. The Albanian inhabitants followed their own inclinations entirely and even began separatist movements of a political nature.

It is remarkable that the Greek political consciousness was strengthened in the Morea in this period of political confusion. Mystra became the centre of a kind of renaissance and a centre of learning and study of classical antiquity. In this period there appeared in the Morea a great scholar who was a philosopher of the Platonic school and also a fervent patriot of radical tendencies in social and political reforms. He was Georgios Gemistas or as he called himself "Plethion". His teaching was of a mystical nature. It was directed against Christi-
the Turks of the Thessalian plain. An Albanian clan settled in Phthiotis, whose autonomy had been recognised by the Sultān, joined the victorious Palaeologoi. The latter also occupied the little town of Vitrinitza (on the Gulf of Corinth) which the Turks had ceded to the Venetians. He installed a chief of the Pindus Wallachians who lived in Fannar (at the foot of the Ithome mountains).

The battle of Barna (Nov. 10, 1444) brought a change in the Balkans which was fateful also for the Morea. The Turks reinforced once again turned their attention to the south. Nero II Acquavola of Athens found favour with Murad II after most humbly promising to be his vassal and to pay the usual tribute. In order to save their colonies in the Morea, the Venetians also made a treaty of peace with the Turks soon after the battle of Barna. It thus came about that the Palaeologoi were left to face the Turkish onslaught quite isolated, a danger which they apparently did not clearly realise. After Nero II Acquavola had again recognised Turkish suzerainty, Constantine Palaeologus with a large force invaded Attica and besieged Athens. The consequence was the Nero II Acquavola turned for assistance to Murad II. The latter demanded that Constantine should evacuate not only Attica but also all the Turkish territory which Constantine had seized in the course of 1444 on the mainland of Greece and in southern Thessaly. Constantine replied to Murad II through his ambassadors that he would keep the lands he had won. Murad II was furious at this manly attitude of Constantine II. Incited by Nero II and Turakhan, the Sultān resolved on a campaign into the Morea. By his command powerful Turkish forces were assembled in 1446 at Serres in Macedonia from Europe and Asia. Constantine Palaeologus and his brother Thomas also raised a very large army for that time which was assembled on the isthmus. In the winter of 1446, Sultān Murad II led his army from Macedonia to the isthmus, without meeting opposition. He encamped at Mingei (the modern Muğla) and began to get his artillery and other arms ready. On his able picked staff was the experienced old Turakhan who, as already mentioned, had been twice in the Morea and therefore knew the country and the people. According to the historian Chalcocondyles (ed. von Dörck, ii. 114), Sulthan Murad's camp on the isthmus was the best organised that had ever been known. A bloody battle developed for the gateway to the Morea. The Turks with their artillery bombard the Hexamilion wall for days. A Serbian Janissary succeeded in leaping over the wall under the eyes of the Sultān and others followed him. The defenders so far as they were not killed by the Janissaries took to flight in a panic. The wall was thus in the hands of the Turks, who entered the Morea either through the gates or through the breaches their guns had made. In the Chronicle of Georgios Phrantzes the date of the capture of the Hexamilion wall, the "last bulwark of liberty in Greece", is given as Dec. 10, 1446. The Chronicon breve of Ioannis Chios in Casuarina gives Dec. 14, 1446, a date which has been accepted as correct by most modern historians.

The brothers Constantine and Thomas endeavoured to collect the scattered and flying troops, but in vain. The brothers therefore fled into the interior of the Morea. Sulthan Murad II ordered Turakhan to pursue the Palaeologoi with 1,000 men and he himself with his army marched along the south coast of the Gulf of Corinth towards Patras. He burned the lower town, laid waste the country as far as Clarentas and then turned eastwards to Corinth. In the meanwhile Turakhan had returned from his pursuit of the Palaeologoi with much booty and many prisoners. The Palaeologoi now began to negotiate for peace with the Sultān. They declared themselves ready to cede the lands in Greece proper and in Thessaly which they had acquired in 1444 and to pay an annual tribute. On these conditions the Sultān left them in possession of their lands in the Morea. The Emperor John VIII Palaeologus died on Oct. 3, 1448, and on Jan. 6, 1449 his brother Constantine, the despot of the Morea, was solemnly hailed as Byzantine Emperor in the Metropolitan church in Mystra. Of course he ascended the throne with the permission of Murad II, whose tributary he was. An event of importance in the history of the world soon afterwards took place on the Bosporus. On May 29, 1453, Constantinople was taken by the Turks; the valiant Constantinople died defending the city and thus the line of Byzantine emperors came to an end. When his brothers Thomas and Demetrios heard of the fall of Constantinople they sent envoys to Muhammad II asking to be allowed to retain their lands in the Morea, on payment of the usual tribute. After many humiliations, their request was granted them. The remainder of the period of Palaeologoi rule was a brief one and their authority only nominal. In 1455 30,000 Albanians in the Morea rebelled against the Palaeologoi. In July 1454 Venice sent Vettore Capello to the Morea, to settle certain business of the republic and at the same time to make peace between the Palaeologoi and the Albanians. But their effort failed. In the meantime Muhammad II had ordered Turakhan's second son "Omar to intervene in the Morea on behalf of the Palaeologoi (end of 1455). He succeeded in putting down the Albanians. The Palaeologoi were now able to enjoy their lands as vassals of the Sultān. For a few years they paid their tribute regularly, then they refused to pay with various excuses. At the same time they endeavoured to form alliances with western rulers against the Turks, a thing to which the Sultān could not remain indifferent.

The rule of the Palaeologoi was gradually approaching its end. The west scarcely troubled itself about the brothers of the last Byzantine emperor, who were not united and yet had to gather their last forces against the Turks. When a fleet belonging to the Pope Callistus III appeared in the Aegean, Thomas Palaeologus took courage and announced his refusal of tribute to Muhammad II. Already the latter had received no tribute from the Palaeologoi for the past three years in spite of repeated warnings. He therefore thought it was time to settle matters himself in the Morea and to teach his rebellious vassals a lesson. In the middle of May 1458, Muhammad II came to the Morea with a large army, laid siege to Tarsus, a village in two districts N.W. of Nemea and N.E. of the Lake of Pheneos, and forced it to capitulate. The citadel of Rapoli in Arcadia, to which many Greeks had fled with their women and children, surrendered after two days' stubborn defence. Muhammad II turned from Arcadia to N.W. Morea. Patras, the headquarters of Thomas Palaeologus, was abandoned.

MOREA 573
by its citizens. The garrison left in its citadel did not dare to offer resistance. The Sultan seized the town of Patras very generously. By July 1456, Muhammad II had reached Corinth after taking Hostissa (Argio) on the way. On Aug. 6, 1458, its commanders left the citadel to negotiate its surrender with the Sultan. The loss of Corinth to the Turks seriously alarmed the Palaeologoi. The negotiations for peace, which were now begun, were conducted by Mathaias Asanis. The Sultan then made peace with the deserts of Morea but the price was a high one. In the beginning of the autumn of 1458, Muhammad II left the Morea to return to the north via Athens, which shortly before had passed into his hands. The sources do not agree regarding his activity in the Morea in this year.

As a rule, Mahmmad's campaign in the Morea in 1458 is regarded, by modern historians also, as one of destruction. It is true, he was generous to the deserts of Patras and left the Corinthians unharmed after taking their city. He carried off however a large number of Christians to Constantinople and its neighbourhood. These settled there as artisans and peasants and formed the productive element in the capital of the Ottoman empire.

In the year 1458 Muhammad II for administrative purposes combined his possession in the Morea with Thessaly and placed the newly constituted province under the governorship of Turkhan's son 'Omar. The Sultan had hardly left the country when the Palaeologoi again began to stir up trouble. Muhammad therefore deprived 'Omar of his office in Thessaly and the Morea and decided to go in person to the Morea again in order to be done with the Palaeologoi once and for all and make the whole peninsula a Turkish province. Demetrius Palaeologus was not the man who could defend and save Mystra. He did shut himself up in the citadel with the intention of defending it, but very soon surrendered it to the Turks. Demetrius after many adventures died as the monk Dorotheos in Adrianople in 1470 (cf. Th. Spadugino, i Commentari di..., de l'Origine de principi Turchi, Florence 1557, p. 43 sqq.). After disposing of Demetrius, the Sultan turned his attention to his brother Thomas. When the Turks had occupied Mystra he had not dared to do anything to defend his lands. He was rather seeking to leave a way open to escape from the Morea, if necessary. One town after the other fell almost without resistance into the hands of the Ottomans. Thomas Palaeologus embarked with his family at Porto Longo (at Navarino) for Corfu, which he reached on July 28, 1460 but went on 3 months later to Rome where he died on May 12, 1465. After the disappearance of his chief opponents, Muhammad II continued his victorious march from Messenia to Northern Morea. He left the Morea towards the end of summer 1460. The plan which he had decided on when he entered the Morea, was practically carried through. Except for a few places, the peninsula was now Turkish territory. Zaganos Pasja was installed as governor of the Morea by the Sultan and entrusted with the reorganisation of the peninsula, which had become much depopulated and was a great deal poorer economically. In 1458 and again in 1460 Muhammad II combined the Morea with Thessaly for administrative purposes. This union was later dissolved. As early as the 15th century we already find the Morea a sandjak by itself with 109 sianets and 342 timar. Down to about 1570, the residence of the governor was by turns in Corinth, Loudari or Mystra, then in Nauplion and in 1586-1587 in Tropolon (cf. below). The division of the country under Turkish rule, usual from the middle of the 16th century, into 22 or 25 provinces or beylik is partly suggested by nature and partly a survival of the older Byzantine organisation.

There is no doubt that the Turks introduced their own feudal system after their occupation of the Morea. The Turkish-Muslim element in the country was thus able to expand. Even during the first period of Turkish rule (1458-1687), other factors contributed to this, like the immigration into the Morea of Muslims from other parts of the Ottoman empire, the conversion of Christian Morocytes to Islam, the carrying off of Christian women into Turkish harems, etc. While in the north of the Balkan Peninsula and in Asia Minor, countless Christians had adopted Islam either voluntarily or under compulsion, the Christian element in the Morea at the time of the Turkish conquest was morally strong enough to remain in the mass faithful to the Christian religion. Comparatively few Morocytes became Muslims, and these were principally Albanians, who always adopted Islam more readily (cf. thereon: C. Jirelesek, Studien zur Geschichts und Geographie Albanien im Mittelalter, Budapest 1916). As in Asia Minor, Bosnia, Crete etc., so in the Morea also members of the nobility and middle classes, especially those of Frankish origin, had adopted Islam in order to retain possession of their estates. There were also in the Morea crypto-Christians, as well as people whose Islam was very superficial. These were usually called nardhat (impure) in the Morea. These superficial Muslims, who continued to retain much that related to Christian worship, lived mainly in what is now the province of Olympia and were almost all exterminated during the Greek War of Liberation (cf. the articles by Photios Chrysaanthopoulos-Photakos in the Athens periodical Ephestia, vol. ii, 1886, p. 1). The Bardaniotes were also for the most part superficially Muslims. As to the survival of the Greek Morosaic element, there are theories current in modern literature which can hardly be right. It is said for example that Sultan Muhammad II's ordinance regulating the relations of the Christian subjects to the Ottoman empire benefitted also the Christian Morocytes. But it is wrong to credit Muhammad II with any such ordinance (cf. Fr. Giese, in Dk., xli., 1931, p. 264 sqq.). It is however a historical fact that the Greek Orthodox Church contributed a great deal to maintain the Christian element in the Morea as in the East generally. The Christian clergy of the Morea were frequently able to maintain a privileged attitude towards the Turkish officials and thus to further the interests of their co-religionists. The Christian Morocytes were also often cleverly able to avoid having their children taken by the Turks for the Janissaries. The Christians of the Morea held this, the "blood tax"; to be the greatest degradation they suffered under the Turkish yoke and a dreadful disgrace to their race. After the death of Sultan Salamis the Magnificent (1566), the lot of the Christian Morocytes gradually became worse. Ownerless lands were confiscated by the Sultan and given to his soldiers or allotted to the mosques as waqfs or given to private individuals as gifts. During the
long period of Turkish rule in the Morea, the largest and best part of the land was in Turkish hands. As a rule, Christians were not allowed to own large estates. The peasants had to pay over annually the fifth of the produce of the land and pay all kinds of annual taxes, were never sure of their property, nor even of their wives and children, and suffered unseparably in every way from arbitrary Turkish rule.

In view of the abuses of the Turkish authorities, the Christian Moreote preferred to abandon the fertile regions and retire to barren lands and into the mountains, where he could breathe more freely and more easily escape the despotism of his rulers and shape his course of life a little more pleasantly. We thus find that within the period 1460–1821 the mountains of the Morea were predominantly inhabited by Christians. Of the factors which contributed to the survival of Greek culture in the Morea during Turkish rule special stress must be laid on the political concessions which were made to them by the Ottomans. These lay mainly in the freedom to govern their own communities. Greek local government, as we find it during Turkish rule, is said to have been a continuation of old Greek institutions. In the period from 1715 to 1821, if not earlier, the freedom of the Greek community was not infrequently limited by the Turkish authorities. They interfered indirectly in the appointment of local officials and made propaganda for their favourites. It even happened that the Kedijabashi, through the influence of the Turks, were not only appointed for a number of years, but were also able to hand down their offices to children and grandchildren. Undoubtedly, those Moreotes were better off who lived in towns or villages which were allotted to the sacred places of albania or to members of the Ottoman imperial family. The town of Dimitsana in Gortyna for example was originally a waqf of Mecca under the protection of the Sultan’s mother.

The peace between their Turkish rulers and Christians could only be external. In the Morea also there were the so-called “Klefs” who would not submit to the existing government and took up arms against it. Against them the Turks used the Armotoli force, a gendarmerie of Christians organised on military lines. In the period from 1715–1821 the Turks for the security of the country built watchhouses (derbent) in which a garrison was stationed to watch those who passed, especially at the passes. The Derbenecia (बेल्केर दरबेन) between Corinth and Argos and the Derbenia of Lontari, the passes between Arcadia and Messenia (Makriplagi; of above) were all very important. The Mainotes in their wild mountains felt little of the Turkish yoke, which weighed heavily on the rest of the Morea. The Mainote tribes who were distinguished for their valour, were from 1460 to 1821 in constant rebellion against every foreign power. The Porte found itself forced to recognise officially the independence of Maina, in return for which the Mainotes were to pay tribute, but did not always do so. Although the Christians in the Morea were exempt from military service, the warlike spirit which they had so often displayed in the Frankish period continued to survive. An eloquent testimony to their love of freedom was the fact that they continually took up arms against their Turkish oppressors, sometimes alone, sometimes with allies. For a long period after the year 1460, when Sultan Muhammad II had made the greater part of the Morea a province of his empire, this land became the scene of desperate fighting between Turks and Venetians, in which the latter had the majority of the Christian population on their side. The great champion of the Christians, Skanderbeg [q.v.], the leader of the Venetian mercenaries, died in 1468. Two years later, Turkish rule over Euboia was firmly established and they could record further successes in the Morea.

In the spring of 1499 a new war between Venice and Turkey broke out. On Aug. 29–30, 1499, Lepanto had to surrender to the Turks. In 1500 Sultan Bayazid II ordered Yaşlı Pasha to blockade Modon with his fleet, while he himself set out by land from Constantinople with a well-equipped army for the Morea. On Aug. 9, 1500 (according to Hâddjî Khalifa: on 14th Muḥarram 916), Modon [q.v.] fell after a long siege in the presence of the Sultan. Bayazid II turned the cathedrals at Modon and Koron into mosques and offered up thanks in them and gave these towns to Mecca as waqf. He then paid attention to the defences of the newly acquired towns and to the repopulation of Modon. In 1502–1503 Venice concluded a treaty of peace with Turkey in which she surrendered her Messenian colonies and also Maina, which had in the meanwhile been taken by a son of Krokondilos Kliadas in name of the Republic. In 1532 the Morea became the scene of notable battles. The emperor Charles V had decided to intervene in the Morea. A considerable fleet assembled in Messina in June 1532. The Pope and the Knights of St. John, the Genoese and the Sicilians also showed a readiness to join the expedition, the leader of which was the Genoese Andrea Doria (Turkish: Andrevirius). After repeated and costly attacks, the allies succeeded in taking a considerable part of the lower town of Koron. The Turks who had retired into the citadel of Koron were forced to capitulate. From Koron Andrea Doria turned his attention to Patras, which also capitulated. He then returned with rich booty. Sulaiman I, who was now on the throne, gave the sandjak of the Morea to Muhammad Beg, a son of Yahyâ Pasha and commissioned him to reconquer the fortresses taken by Andrea Doria. Sulaiman I declared war on Venice in 1537. Kâstîm Pasha, the sandjak-beg of the Morea, was commissioned to conquer the Venetian colonies in the Morea. Nil al-Din Barbarossa had inflicted several defeats on Venice in her colonies, and she had besides every reason to complain of her allies, the Pope, Paul III and the Emperor Charles V. In the summer of 1540 Venice made peace with Sulaiman I in order to save what was left of her possessions. The majority of the Venetian colonies in the East, including Nauplion and Monemvasia, was the price paid. The Turks endeavoured to populate once more their new possessions in the Morea. About 1550, there were about 42,000 Christian families in the whole Morea. We know nothing definite of the Muslim population at this time. It may be assumed however that, then as later, Muslims were in a minority. Even when Ottoman power was at its height, the oppressed Moreotes, always desirous of liberty, rose against their oppressors. In the xviTh century the lot of the Christians in the Morea is said to have been unbearable. The Turkish sources of the xviTh century are of considerable importance for the history of the Morea. These are the "Survey of
the World" (Zaikin-nama) of Hadsch Khalif (d. Oct. 1657) and the Travels (Siyyihat-nama) of Ewliya Celebi, who visited the Morea in 1663 and 1670. There is no fuller work on the Morea than the latter among Muslim sources. Ewliya Celebi's narrative was based on personal observation and enquiry and is distinguished by a vividness of description and to some extent by a tendency to exaggerate. In the treatment of the Morea, given in his vol. viii., it is hardly possible to trace his literary sources. What he tells us about Muslim buildings and religious orders is of importance, and his account of the Christians is also of value. He naturally takes the Ottoman point of view (cf. Ewliya Celebi, Siyyihat nāma, vol. viii., Stambul 1925; Fr. Dabinger, G. O. H., p. 219 sqq.; Fr. Timocent, in E.G., vol. xvii., 1926, p. 299 sqq.). When Ewliya Celebi visited the Morea, various Muslim orders and corporations had settled there. They included fakirina brotherhoods, dervish orders, some of which were anti-Islamic, and Shi'ite Bektashiyye. The existence of such brotherhoods, which were widely disseminated in the Greek east from the 16th century, can be proved for the Morea as late as 1828 (cf. F. W. Hasluck, Christianity and Islam under the Saracens, vol. i.-ii., Oxford 1929).

At the end of 1683 another coalition against the Porte was formed by Venice, Poland, Germany, Russia and the Pupi. Francesco Morosini was appointed by his government to begin operations against the Turks as speedily as possible. He was given command of the allied naval forces. After 48 days of fighting by land and sea, Koron was stormed by Morosini. In the period from the late summer of 1685 to July 1686, Morosini, Count Otto Wilhelm von Königsmark and Hauzubal von Degenfeld took from the Turks Old and New Navarino, Kalamata, Modon, Zarnata, Passava, Celefa and Vitilo as well as other fortified places in southern Morea. The Seraskier Ima'm Pasha was defeated in several battles and had to retire to the interior of the Morea. Hasan Pasha, who was in Maina, negotiated with Morosini and surrendered voluntarily. The Turkish garrisons of many towns, on the other hand, offered a desperate resistance. It cost the Venetians and their allies much time and heavy sacrifices to take Nauplia. The capture of the latter contributed a great deal to increase their confidence. By the end of 1687 Morea up to Monemvasia was Venetian. Continual Turkish raids, however, continued to disturb the security of the peninsula. By the peace of Carlolitz (Jan. 26, 1699), the Porte had to cede the Morea to Venice. The seas of the Morea and of the mainland of Greece were now open to Turkey as well as to Venice. For the last period of Venetian rule in the Morea (1669-1715 or 1718), the reader may be referred to L. Ranke, Zur vieständischen Geschichte, Leipzig 1878, p. 377-361. The services of Venice to the peninsula in the period 1688-1714 must not be underestimated, especially as she had found it at a very low level.

The occupation of the Morea by the Venetians now attracted the attention of western scholars to the celebrated peninsula. The Turkish empire, which had been able to profit a good deal by the troubles in Europe at the beginning of the 18th century, resolved at the end of 1714 to reconquer the Morea. Many Greeks felt that the Venetians had not respected their rights in religious and family matters, were hostile to their own government and wanted the Turks back again (cf. De la Montesquieu, Fêtes, vol. I., p. 462). Except for a few larger towns which offered some resistance, the land was easily taken by the Turks and hence the Morea once again became Turkish. The history of this conquest was written by several contemporary writers.

The peace of Passarowitz (June 10, 1718) ceded Morea finally to the Turks. We are most fully informed about their rule from 1718 to 1821. The extant sources, especially in Greek, enable us to study the period to the smallest detail. After 1715 many Christians again adopted Islam. A census taken in 1720 gave 60,000 male Christians of 11 years of age and over. The Muḥammadan inhabitants are said to have been in the minority at this time. On the other hand, the Turkish element increased in the period 1769-1780 while the number of Christians diminished considerably, as did the total number of the population. From 1715 to ca. 1780 the Morea was governed by a Paša, the Morean, who had three funkcije and the title of muşir; his period of office was indefinite. He was usually assisted by two other Pashas and were under him and were granted two funkcije. A change was made in 1780. From this date to 1821 the government of the Morea was no longer given to a particular Paša but to a simple muşăgji of the Porte, who was however given the title of Paša. The higher offices were held by a snakhebilegd, a dejterekbeyaga and a Christian dragoman. Under the official system of administrative divisions, the Morea was divided into 22 districts. In this period Christian local autonomy gained more strength. After the many disappointments they had suffered from the western powers, the Moreotes now looked to Russia to liberate them from the Turkish yoke. From the time of Peter the Great the bonds between Greeks and Russians had been growing stronger. In the middle of the 18th century, Russian propaganda increased very much among the Orthodox of the Balkans. Under Catherine II. the Russians easily succeeded, with the help of Greek agents, in stirring up Greek notables and clergy in the Morea to rebel against the Turks. Among these the most distinguished was the influential and wealthy Panayotis Mpenakis of Kalamata. This secret propaganda did not escape the Turks. By 1767-1768 the Christians were preparing for rebellion. On Oct. 15, 1768, Turkey declared war on Russia. Russian fleets, whose equipment left much to be desired, appeared in the Mediterranean. On Feb. 17, 1770, Theodoros Orloff landed at Vitylo and received a warm welcome from the Moreotes; but as the ships had neither sufficient armament, guns or munitions, the first enthusiasm of the Greeks soon died down. On July 24, 1774, a treaty of peace was concluded at Kastik Kaimardhi between Russia and Turkey. Full religious liberty and other concessions were granted to the Christian subjects of the Turks. About three months later, the Porte granted a general amnesty to the Christians of the Morea and resolved to clear the land of Albanian bandits. After 1770 the Porte had confiscated a number of Christian estates in the Morea and granted them to mosques and imāres. By the treaties of Kastik Kaimardhi and Kalmali Kanan (10th March 1779), the Turks promised to return these or to compensate their owners, but the promises were not kept. Nevertheless, the Moreote

With twenty Plates and two Maps. 8vo, cloth, pp. vi, 300. Price 20s.

THE BUDDHA'S GOLDEN PATH
A manual of practical Buddhism; based on the teachings and practices of
the Zen Sect, but interpreted and adapted to meet modern conditions,
By DWIGHT GODDARD.
With three plates and a frontispiece. 12mo, cloth, pp. x, 214. Price 4s.

LATEST CATALOGUE ISSUED. BIBLIOTHECA ORIENTALIS XXXIII
Catalogue of New and Second-hand books on the Languages, Literature,
People, History, and Geography of the Far East. (Gratis on application).

LUZAC & Co. 46 GREAT RUSSELL STREET, LONDON, W.C.1.
(OPPOSITE THE BRITISH MUSEUM).
Additions and Corrections

Christians benefited considerably by the treaties between Russia and Turkey; this was not however the case with the treaties later concluded (June 10, 1878; and Dec. 29, 1912). The right given to the Christians of the Morea to trade under the Russian flag contributed to their economic expansion in the period 1775–1821. Intellectual relations between western Europe and the Greeks of the Morea became closer and closer after 1799. A new generation grew up among the Greeks of the Morea and other provinces. Since the peace of Paris of 1815, the Morocotes and other Greeks had become convinced that only their own efforts could relieve them of the Turkish yoke. Careful preparations were made in anticipation of the right moment. In the spring of 1821 open rebellion broke out among the Greeks of the Morea, when the Turkish governor Khamîrî Phâcî was besieging the rebel ‘Ali Phâcî at Yeniça. Soon after the beginning of the rising, in which a prominent part was played by Theodoros Kolokotronis, a famous Kretan family, the Moucamen were masters of the lowlands and even occupied several strongholds. At the end of 1822, however, the Porte commissioned Ibrahim Phâcî, the adopted son of Mehemâd ‘Ali of Egypt, to put down the Greek rising. Ibrahim Phâcî landed his forces in Messenia. He was not able to restore Turkish rule over most of the Morea, but he failed to put down the Greek rebellion. In the meanwhile, philhellenism had made progress in Europe and America, and it thus came about that the cabinets of Europe began to take an interest in the question of Greek freedom. On July 6, 1827, England, France, and Russia concluded a treaty in London, by which the Morea and other parts of the Greek mainland were to form an independent republic but to pay tribute to the Porte. The Turks insisted on their point of view and declined the intercession of the great powers as regards the rebel Greeks. On Oct. 20, 1827, the combined fleets of the above-mentioned powers destroyed the Turko-Egyptian fleet at Navarino. On Jan. 18, 1828, Johannas Kapodistrias came to Nauplion, having been elected President of the Greek Free State by the National Assembly of Troizen. On Aug. 6, 1828, England concluded a treaty with Mehemâd ‘Ali of Egypt for the evacuation of the Morea by the Egyptian troops. French troops, led by General N. Magis, soon afterwards landed in Messenia by order of Charles X to drive the Turko-Egyptian troops out of the Morea. In the autumn of 1828 Ibrahim Phâcî withdrew to Egypt after turning the Morea into a heap of ruins during his 5½ years in the Peninsula. After long diplomatic negotiations, much quarrelling among the great powers and disagreement between the Morocotes and the other Greeks, Prince Otto, the second son of the philhellenic Landgrave of Hesse-Cassel, landed at Nauplio on Feb. 6, 1832 as the first king of Greece. Henceforth the Morea formed a part of the kingdom of Greece. During the rising of 1821–1827 and later, many Morocote Muslims adopted Christianity. To this day, many buildings and inscriptions and especially place-names recall the days when the Morea was under the Crescent.

MORISCOS, (Moriscos), the name given in Spain to the Muslims who remained in the country after the capture of Granada by the Catholic Kings, Ferdinand and Isabella, on Jan. 2, 1492 and the destruction of the last ruler of the Nasrid dynasty.

It is mainly from Spanish sources that we learn the history of the Moriscos’ down to their final expulsion from Spain. Arabic texts relating to them are very rare; the only record at all detailed is that of the Maghribi al-Maqqari, a contemporary of the exodus of the Moriscos, in his Nafâ al-Dîn.

In proportion as the Spanish "reconquest" proceeded, groups of Muslims gradually increasing in

THE ENCYCLOPAEDIA OF ISLAM, III.
number found themselves under Christian rule. These Muslims for the most part remained attached to their religion and the largest bodies of them were in Aragon and the district of Valencia; they kept up relations with their co-religionists of the kingdom of Granada. But the latter were suddenly placed in the same position with the fall of the capital of the Nasrid kingdom. The treaty for the capitulation of Granada contained, it is true, a large number of clauses safeguarding the liberty and property of Muslims, granting freedom for their beliefs and for the practice of the Muslim religion. But these clauses were not long respected and very soon attempts were made to convert the people of Granada under the stimulus of the Cardinal de Cisneros and the Archbishop Hernando of Talavera. Camerino in particular began his work in 1494: he tried persuasion at first, then he tried to withdraw from the city by burning them as many Arabic books as possible dealing with different branches of Islamic learning. His efforts did produce a few successes among the conversos, but also caused a rising which began in Granada in 1496, in the Albayzin quarter (al-Tabayt) and soon spread throughout the hill country of Alpujarras (al-Buxtar, q.v.), between the southern slopes of the Sierra Nevada and the Mediterranean, and spread to the towns of Almería, Baza and Guadix and the Sierra Nevada of Ronda. The result was in 1501 the promulgation of a law which gave Muslims a choice between leaving Spain and adopting Christianity. It does not seem however to have been strictly applied and the Moors of the kingdom of Granada, retiring to the mountains, enjoyed practical independence for over half a century.

But this first edict brought about the conversion of the majority of the Muslims of Castile. As to the Moors of Aragon, in spite of a few restrictions on their statutes they were not much disturbed and orders were given to this effect to the Inquisition. Nevertheless in the early years of the 16th century we find the Muslims of Albarracín, Teruel and Manises being converted on masse. The reaction became stronger, encouraged by Joan the Foolish, then by Charles I. In 1526 the Moors of Valencia received their order of expulsion. The situation remained somewhat confused down to 1556, a date at which a series of vesantaneous measures were decided upon in Madrid and began to be applied against the Moors who still remained in Spain: the use of the Arabic language was forbidden them; it was in any case losing ground daily, even among the communities which remained Muslim; they were also ordered to abandon their worship, their costume and to modify their manner of life. This time the Moors of Granada and Alpujarras did not hesitate to rebel openly. The rising once again started in the Allanzac of Granada in 1568 and spread to the mountains; it was at first led by an individual named Ibn Umaya, the Abenhaimaya of the Spanish chroniclers and afterwards by 'Abd Alá b. 'Abdó (Abenhamao). It took costly expeditions to put down this movement, and the war lasted for several years, conducted successively by the Mares of Montjúic and Don John of Austria. The final decree of expulsion was not issued by Philip II although he had the intention of doing so in 1582. It was Philip III who signed it in 1609 and in this and the following years, a large number of Moors — estimated at half a million — had to cross the sea without hope of returning.

Islam was definitely uprooted from Iberian soil.

According to the Arab authors, the great edict at the beginning of the 16th century was a most cruel hardship for the Moors. A large number died on their enforced journey. Many went to France, from which they tried to reach Muslim lands. A few colonies of Muslims from Spain settled in Egypt and Constantinople. But the majority went direct from Spanish ports to North Africa, their nearest refuge. There they were known as Andalus and where they were not always welcomed, at least in Morocco, with open arms. The principal settlements were those at Salé and Rabat on the one hand and Tetouan on the other, where their descendants still form the most prosperous and most industrious section of the population. The Andalus of the seaports of the Atlantic coast of Morocco soon began to devote themselves to piracy: the celebrated Moroccan corsairs were almost all Moors, who had retained the use of the Spanish language. On the other hand, the Moroccan Sultan organised corps of picked troops from the Andalus and they played a prominent part under the Sa'idana, especially in the conquest of the coast. There was also a small colony of Moriscos in Fès. In Algiers, a new colony, settled in the towns of Tlemcen, Oran and Algiers. At Tunis they were well received by the Bey 'Uthman: they settled together in two quarters which took their name (cf. TUNIS, iv., p. 886). Those who had not been town-dwellers settled in little villages which soon became prosperous and still have a characteristic Spanish look. Such are the villages of Soliman, Grombalia, Djeddedj, Zaghwan, Sebou, Tébessa and Gafet el-Andalous (Kaf al-Andalus).

(E. Lévy-Prévraçal)
Climate. The climate of Morocco has been defined as "an Atlantic variety of the Mediterranean climate" (Gentil). This however must not be taken to apply to the whole of the country; the different regions differ as much in regard to temperature as in the distribution of rain. On the Atlantic coast the climate is relatively mild in winter and cool in summer; only small differences are recorded between the coldest month and the warmest (5° at Mogador and 10° at Rabat). On the other hand, the seasons and even the daily ones increase the farther one goes inland. They become excessive in character in eastern Morocco where the climate is distinctly continental. The rainfall is equally lacking in uniformity. Brought by the West and S.-W. winds, the rains are abundant in the autumn, the winter and the beginning of spring; but they are very rare during the summer. The Atlantic coast has everywhere a copious rainfall although the quantity which falls decreases as one goes from North to South (Tangier: 32 inches, Casablanca: 16 inches). It also enjoys the benefit of an atmosphere which is saturated with moisture even in summer. The interior is not so fortunate. The rains diminish in quantity from West to East. The mountain masses always form an exception. They condense the moisture in the form of rain and even snow which, although it is by no means perpetual, nevertheless covers the high summits of the Atlas mountains until the beginning of the summer. Eastern Morocco on the other hand, isolated by the barrier of the Middle Atlas, is not subject to oceanic influences and only receives, except in the immediate neighbourhood of the Mediterranean, rare and irregular downfalls of rain.

The flora reveals a striking fashion these variations of climate. Forests of evergreen oak, of oak and of cedar clothe the peaks of the High and the Middle Atlas and of the Rif. The cork tree is found in extensive forests in the massifs of the Zaizir and Zaytun and as far as the region of the Atlantic (forest of the Ma'mura). The thuya and the arganier (a tree peculiar to the S.-W. of Morocco) are already more disseminated. Poplars, willows, elms and tamarisks form a fringe of verdure along the wadis. The olive tree is met almost everywhere in its wild state. But, as the rain-fall decreases, the forest gives place to scrub where the jujube tree and the mastic abound, then to prairie and steppe. The prairie, which hardly goes beyond the limits of the maritime plain, is the home of plants which are used for fodder and of bulbous plants. The steppes, the home of shrubs and hedges (artemisia, dain, alfa) which are adapted to a dry soil and to extreme variations in temperature. The steppes cover a part of the interior plains of Western Morocco and practically the whole of Eastern Morocco, where they extend to the neighbourhood of the Mediterranean. As regards the desert, it is devoid of vegetation in the hawmida [see Sahara], although the cases form spots of verdure in the midst of the general desolation.

Hydrography. The structure of the country and the relative abundance or scarcity affect the hydrography. Morocco is thrice richer in running streams and in subterranean waters than any other country in Northern Africa. Wadis (wells) are here more numerous; their courses are longer and their volume larger. A number of them even deserve the name of rivers. The waters flow in three different
directions: towards the Atlantic, towards the Mediterra-
ness and towards the basalt of the Sahara. The
Atlantic rivers are in all respects the most important.
They can be divided into three groups: those of
the North (Likkos and Sebî), those of the centre
(Bô Râgag and Umm al-Rabû), and those of the
South (Tensift and Sus). The Likkos drains the
districts of the Gharb; the Sebî, those of the Middle
Atlas, of the Zarhûn, and the southern slope of
the Rif. On emerging from the mountains it takes
numerous turns and windings across the alluvial
plain and reaches the ocean after a course of 300
miles. Although subject to considerable variation in
volume, according to the season, it never dries up
completely. It is even navigable in its lower course.
The Bô Râgag and the Umm al-Rabû ran for a
part of their course through the Central Plateau,
the Moroccan "Meseta". The irregularity of their
courses makes them useless for navigation. The
Tensift, to the North of the High Atlas, the Wadî
Sûs to the South, which are much less in volume
approach more nearly to the classic type of wadi
of Northern Africa. The watercourses of the Sahara
(Wâl Ghi, Wâl Zas, Wâl Darâ) diminish in volume
and are farther away from the mountains and
end by disappearing in the sand. The Darâ alone
reaches the Atlantic, but it only flows intermittently
in its lower course [see the article Dârâ]. As for
the Mediterranean rivers, they are only torrents
with violent and rapid floods. The Muluya alone
forms an exception. It collects water from the slopes
of the Middle Atlas but only reaches the sea in
much diminished volume on account of the loss it
suffers in crossing the steppes.

Although the common characteristics of all the
countries of Barbary are found in Morocco, the
greater or less differences in relief, the differences
in climate, the peculiarities of vegetation bring in
their train a diversity more marked than in Algeria
or Tunisia. The combination of these different
elements determines the existence of regions which
differs from one another in their configuration,
their resources, the density and manner of existence
of their population. We may distinguish six such
regions: Northern Morocco, the basin of the
Sebû, Central Morocco, the country of the Atlas,
Eastern Morocco, and Moroccan Sahara.

Northern Morocco. Northern Morocco com-
prises a mountainous zone (the mountains of the Rif
properly, so-called which are to the North-West
continued in the "domes" of the Djebala as far as
the Strait of Gibraltar) and regions less rugged in
character which to the South-East and the West
form the transition into the adjoining countries.
The mountains, split into deep ravines by the
courses of the wadis, for the most part only leave
between their last escarpment and the sea-shore a
narrow strip, or a few basins enclosed by the
rocky promontories. A few cuttings which run
across the ranges afford communication between the
two watersheds. The Rif, therefore, must seem
to be a world very little accessible to influences
from without. Arab influence has scarcely grazed
it. The population has always vigorously opposed
the political measures of the sultans as well as the
attempts of Europeans to settle themselves there.
Crowded into a limited territory, since the highest
parts of the mountains are useless, the Rifians find
their chief means of subsistence in the cultivation
of vegetables and fruits. A number of them gain
from temporary emigration an addition to their
resources. They are not nomadic but inhabit villages
perched on the slopes. Towns are represented only
by Shfaâwan and Wazân, religious and commercial
centres, situated on the northern side and the other on
the southern side of the Djebala. Towards the South-East, plains interposed with
mountain masses extend as far as the Muluya. The
lack of rain gives to these plains (Selwân, Gîret)
the aspect of steppes more fitted to a pastoral
life than to agriculture and a settled life. Towards
the West the lowlying coastland, still a very
shallow border at the strait of Gibraltar, in-
creases gradually from the North to the South
between the Atlantic coast and the last slopes of
the Djebala. This district commonly called the
Gharb is a corridor. It still keeps in this respect
its historical significance, but its economic
value is diminished by the stagnation of its waters
in the hollows in the flat bottoms of the valleys,
and by the insecurity resulting from the proximity
of the warlike tribes of the high mountains. A
few townships have however succeeded in establishing
themselves, either at the crossing of roads such as
al-Keûr al-Kabûr [q.v.] or in proximity to the
coast like Centa, Taourirt, and Larseche (see the
articles Tîtîwân, Cru泰安, Taourılı, al-KeriQıll). The
valley of the Sebû. The valley of the Sebût lies between the Atlas and the Middle Atlas.
Moroccan Meseta and the Atlantic. The situation
of the region, the abundance and variety of its
natural resources makes it of exceptional value.
The Sebût links up the whole of it. Through its
tributary the Ingalou, the valley of which leads to
the pass of Télil, it makes communication with
the rest of Barbary easy. The mountain masses
there (Zerhûn, Zalâgh, mountains of Gerûn) offer
no insuperable obstacles to communication. The high
plains of Seût and Meknes are contrasted with
the lower plains of the Sharaûr and the alluvial
plains of the lower course of the Sebût. The in-
fluence of the Atlantic is felt far into the interior
and combines with the numerous streams that flow
into the Sebût and its tributaries and the Atlantic
waters to promote the development of all forms
of vegetation. Forests cover the higher slopes
of the mountains; fruit-trees flourish on the sunny
slopes and cereals on the high plains; the merga,
temporary marshes produced by the Sebût, in its
lower course, are used for grazing until they are
sufficiently dry to be of use to agriculture. This
combination of circumstances, so auspicious for
human habitation, has made the valley of the
Sebût a centre of intensive settlement. The most
diverse ethnic elements have settled together and
mixed there. All types of habitation are found as
well as all degrees of attachment to the soil from
immobile to settled town life. Human activities
are displayed in the most varied forms (grazing,
agriculture, arboriculture, commerce, industry). The
country villages, douses of "moulâia" in the plains,
villages of houses of clay in the mountains, are
numerous, the towns are flourishing. Mawli Idris
is the sacred city of Morocco, Seût on the borders
of the plain of Séût and the high limestone plateaus
lives by trading with the people of the mountains
and the industry of its weavers and makers of
slippers. Fis and Meknes are among the great
cities of Morocco.

The first of these towns has remained to this
day the political, religious, intellectual and economic
centre of Morocco. It has resisted all the usual
cause of decline. From all time the ownership of the high plains of the Sebta has been bitterly contested. Their possession has been the condition for the establishment and survival of the dynasties which have succeeded one another in Morocco. Their political significance and role in history correspond very exactly to their geographical position and economic value.

Central Morocco. Between the valley of the Sebta, the ranges of the Atlas and the Atlantic, covering about a quarter of habitable Morocco, lies the region called by the geologists the Moroccan Meseta. It includes districts of very different character, the only feature uniting them being the possession of a common substratum, the Hercynian peneplain covered almost everywhere by sedimentary horizontal formations. Differences of structure and of climate distinguish clearly the various parts: the Atlantic plain, the plateaux of the centre, and the interior plain of the Haur. The maritime plain lies along the coast from Rabat to Mogador. Very narrow at its northern and southern ends, it broadens near the centre (Dukkata, Skhirya) to a width of 50 miles. To the rains and the constant moisture from the vicinity of the Atlantic, the abundance of running streams and subterranean waters, the natural fertility of the soil further adds to the conditions for prosperity. The Djerba or black lands which run in an unbroken line behind the coast from the Béragrag to Tensift are admirably suited for the growth of cereals. The rural population, almost everywhere settled, is therefore considerable. The land of the Dukkata has 40 people to the square kilometre, a density very much greater than that of the other districts of Morocco. The towns of the coast, Salé, Rabat, Casablanca, Mazagan, Azemmour, Safi, Mogador [q.v.], benefit by the richness of the hinterland. The importation of agricultural produce has at all times been a branch of commerce, and has been much developed since the settlement of Europeans there. While facilities for communications and the continental relations with the valley of the Sebta opened the plain to Arab influences, the ports of the coast maintained contact with abroad and permitted the infiltration of European influences.

The interior is much more broken. The ground rises gradually up to a height of 2,000-2,500 feet. The predominant formation is plateaux terminated on the north in the very old massif of the Za’tar and Zayán, which are really mountains in character, in the south in the equally old but less elevated massif of the Kabyrta. These plateaux deeply cut into by the course of the Umra Rabî’ overlook on the west side the lowlying outcrops from the top of cliffs, and slope gently on the S.E. to the plain of Tâdil. This is a depression, over 120 miles in length, running to the north into the heart of the Middle Atlas where it terminates in a cal de sac, while it broadens greatly in its southern part. A low pass enables communication to be made between the Tâdil and the Haur of Marrakesh, a basin shut in by the High Atlas to the north, the Middle Atlas in the east, and the Oued Oued in the north and the hills of the Shiyâdja in the west. The economic value of this inner region is very unequal. On the mountains of the north the rains and streams support forests and the natives devote themselves to cattle-rearing. The plateaux of the centre, covered with a surface of limestone have great stretches of bare rock and cultivation is barely possible. The Tâdil is no better favoured except in the zone adjoining the Atlas, watered by torrents descending from the snow. The plain of the Haur would also suffer disastrously from drought, if human industry had not averted this danger. An ingenious system of irrigation has transformed the country round Marrakesh into a vast palm-grove and resulted in a particularly dense population (100 to the square kilometre). Comparatively large towns (Amânia, Demnait, Tâmaqarith) and especially Marrakesh [q.v.] have been enabled to rise and prosper. Between this region, already half Saharan, and the high lying plains of the Sebta, the plateaux of the centre and the mountains of the north which come down to within a short distance of the shore, a barrier which the attitude of its inhabitants makes still more difficult to cross. The Zayán, the Za’tar, the Zemmâr, over whom the authority of the Maghians has never been very securely exercised, have more than once cut direct communication between Fès and Marrakesh. These two cities have been at different periods the capitals of distinct and even hostile kingdoms.

The region of the Atlas. In spite of the marked differences between the different elements of the Atlas, the whole region nevertheless has general characteristics of its own. Between Atlantic Morocco on the one hand and Saharan Morocco on the other, the Atlas lies on an almost insurmountable barrier. Only the few transverse fractures in the Middle Atlas permit passage between the basin of the Sebta and the Saharan oases, while in the High Atlas valleys running right into the heart of the massif give access to passes opening on the valleys of Sîla and the Wâdi Darâ. Moister and colder, the Middle Atlas is covered with forests which are denser and more extensive than those of the High Atlas. Both however are great watersheds. From the Middle Atlas come the great rivers of the Atlantic slope (Sebta, Gilh, Unum Rabî’, Wâdi T’Ahil), from the High Atlas the Tâdil and the Tensift. The lands of the Atlas are nevertheless poor. The high mountains offer little to support mankind. Human activities are found mainly in the zones of contact between the mountains and the plains (dés) of the Middle Atlas and in some specially favoured valleys of the High Atlas. Except in the Middle Atlas, where the nomadic mode of life results in the exodus in the bad seasons of the inhabitants who lead a pastoral life, and on the plateaux of the High Atlas on the Atlantic side (Hâns, Shiyâdja) the inhabitants, of which are mainly engaged in cattle-rearing, the natives are settled. They live in villages perched on the slopes and terraces between wadis or scattered along the valleys. There is nothing approaching a town in size. These regions, defended by the nature of the country, have almost completely escaped outside influence; they are still almost exclusively in the domain of Berber tribes (Berber) in the Middle Atlas and Shilou in the High Atlas. The customs and institutions peculiar to this people (cf. Berbers) have survived to a greater extent here than in any other region of North Africa. In particular their political organisation is still most rudimentary: municipal republics administrated by a djama’a in the Middle Atlas, feudal lordships ruled in patriarchal and despotic fashion by a few powerful families in the High Atlas. The people of these regions have also always opposed vigorously the
central power; the authority of the Makhzen over the Berbers of the High Atlas has never been exerted except through the local chiefs. As to the tribes of the Middle Atlas they have retained to the present day almost complete independence. Even the most vigorous sulhun have never succeeded in forcing them into subjection for any length of time.

Eastern Morocco. Eastern Morocco may be described as the continuation of the Central Maghreb or which it has the distinctive characteristics. In it, as in Orania, we have a telt zone and a zone rising by successive stages up to 5,000 feet. The upper valley of the Muluya separates them from the Middle Atlas. The monotony of these vast spaces is only broken by the outcrops of gair, flat beds of rocks cut up by erosion and by the depressions of the ghot [q.v.]. Rested by the winds, exposed to the rigours of an extreme climate, these lands are only fit for the pastoral life led by the nomads who raise sheep. The valley of the Muluya is no better favoured, except in the vicinity of the Atlas, where villages surrounded by vineyards with a settled population are found along the tributaries of the river. As to the Tell, hills of no very great height (the most important being that of the Beni Sfounen which does not exceed 3,000 feet) divide it up into compartments occupied by plains (plains of the Awilsh Manar, on the coast, of the Trifta, of the Angud which in the south reaches the cliffs in which the high plateaux end). The dryness of the climate frequently gives these plains a steppe-like character; only the western part of the plain of the Angud with a fertile and well watered soil1 lends itself to cultivation. Then the climate makes it hard to procure grain. But this region owes its importance less to its natural resources than to its situation on the natural route between Atlantic Morocco and the rest of Barbary. Udjda [q.v.] which commands the passage, has thus been enabled to escape various causes of decay that have threatened it. A border district, eastern Morocco has always been a disputed region, a march for which the lords of Tinmen and Fès have contended. The authority of the latter was never solidly enough established here to impose itself on the settled inhabitants of the mountains and on the nomads of the plateaux and the plains. In the French occupation the country was left to anarchy and disorder.

The Moroccan Sahara. The Moroccan Sahara is the N.W. corner of the Sahara. There we find the general characteristics of this desert region [cf. Sahara]. Only the parts adjoining the Atlantic and the threshold of the mountains offer favourable conditions for man. In the plain of Sis [q.v.] shut in between the Atlas and the Anti-Atlas, the rivers and the irrigation canals enable shrubs to grow. The Dar'a, Zis and Gis are in their upper courses fringed by a thin border of cultivated land, pasturage, vineyards, and, in their middle course assure the growth of palm groves of modest size. It is best known, if not the most prosperous, is that of Taffilt [q.v.]. The richness of this region, only relative it is true — of these cases is in contrast with the desolation of the rocky plateaux (hammuda) which form the greater part of the Moroccan Sahara. These natural conditions determine the mode of life of the inhabitants. Some lead a nomadic life and drive their flocks up and down the plateaux; others are permanently settled on the Sis, in the high valleys and in the oases. Sis contains numerous villages and even towns (Àqadir, Tiznit, Tafiltuat) the cases have a settled population in the gair. Those of Tafiltat, Tamgret, Bu Inbi and Ifigig carry on a certain amount of commerce between Atlantic Morocco and the Sahara. But this very circumstance has prevented them escaping as completely as the lands of the Atlas from the political and intellectual influence of Western Morocco, especially Tafiltat where considerable groups of Arab chieftains have been long established in the midst of Berber populations. But, although the present dynasty actually came from Tafiltat, the people of this region have frequently escaped Shari'ah authority.

Begun in the last years of the sixteenth century, methodically pursued since the French occupation, the scientific exploration of Morocco is not yet completed. From the results so far attained one thing is clear: the lack of uniformity in the country. Thus its geography may explain to some extent the historical development of the country.

Atlantic coast, it barely extended beyond the mouth of the Rif Seagrat, and in the interior to the massif of the Zizhif. The plains and the mountains of the Rif, Middle and High Atlas escaped the authority of Rome. It was the same with the Sahara. The expedition of Sostius Paulinus, who in 41 A.D. advanced as far as the capital Afit, remained an isolated incident.

To defend herself against the rebellions of her own subjects and to protect the country from Berber invasions, Rome had to keep in Tingitana an army of ten thousand men, to build strategic roads and to establish fortified posts on the sides of the triangle: Sala, Zarhbit, Tingis. With the exception of Volubilis, the importance of which has been revealed by its ruins, methodically excavated in recent years, and which was undoubtedly a centre of influence of Roman culture on the people of the interior as well as a military base, the towns were all on the coast. They were Lixus and Tingis raised to the rank of "colonia", and Ceuta. They owed their prosperity mainly to trade with Spain to which were exported oil and wheat, the two main products of the country. On the whole, however, Rome's influence on Morocco was superficial and had left little trace.

Without any real firm hold on the country, weakened by native risings and by the quarrels between the dominions and the orthodox, Roman rule was to collapse suddenly at the beginning of the 6th century. Germanic invaders, the Vandals, came from Spain and in 429 A.D. conquered without opposition Tingitana which they gave back a few years later to the Romans. Soon afterwards the western empire disappeared and the natives seized the opportunity to become independent. The Byzantines, who in the 6th century destroyed the Vandal kingdom, were content to reoccupy the two strongholds of Ceuta and Tangier. The rest of Morocco was in the hands of the Berbers. The latter were divided into a large number of tribes, of whom the principal were the Ghomara on the Mediterranean coast, the Barlangana [q.v.] on the Atlantic coast between the Strait of Gibraltar and the mouth of the Sebta, the Meknès, in the central district, the Maqura, on the western slope of the High Atlas and on the coast from the Sebtab to the Sfr; the Haskita between the Sfr and the Dar'a; the Lamja and Lamtanes on the left bank of the Dar'a. These Berbers were all of Sanhadj stock; some possessed Christianity or Judaism but the majority still followed the old nature worship. The Arabs conquered brought them a new religion: Islam.

The introduction of Islam. The Arabs appeared in the extreme Maghreb at the end of the 8th century A.D. Tradition relates that Sidi Usba, the founder of Kairouan, in 684—685 undertook an expedition which carried him as far as the shores of the Atlantic Ocean. This raid, however, if it ever took place, was too transitory to have any permanent results. But at the beginning of the following century, Mesh b. Nusairi [q.v.] who had just completed the conquest of Ifriqiya, took Tangier, installed a governor there and set himself to conquer and convert the natives. He succeeded without much trouble. Attracted by the hopes of gain, the Berbers adopted Islam and enrolled themselves in the armies which were invading Spain. They were not long, however, in

Morocco before Islam. Morocco, like the other parts of North Africa, has probably been inhabited from a very remote period. We know, however, nothing definite about its earliest inhabitants. The traces which they have left, weapons and tools of chipped flint, pottery, rock-paintings, some of which represent animals of the quaternary period, now extinct, megalithic monuments identical with those found all round the Mediterranean basin, give us no information in this respect. At most, we may suppose that the primitive population consisted of emigrants from southern Europe, the Sahara and perhaps from Egypt. The fusion of these diverse elements gave birth to a race, the members of which, frequently different in type and physical features, were united by a community of language. The ancient writers called them Libyans and Moors. They were the ancestors of the present Berbers [q.v.].

The first historical fact known, and that only imperfectly, is the appearance in the 4th century B.C. of the Phoenicians on the Moroccan coast. The sailors of Tyre and Sidon built lacustrine there, where they exchanged goods of eastern origin for local products (cattle, wool, hides and slaves). But Phoenician influence was exercised mainly through the intermediary of Carthage when it in turn had become the metropolis of a great maritime empire. The Carthaginians rebuilt the ruined factories and added new ones. In the middle of the 5th century, Hannibal, in the course of his celebrated "periplos" established on the Atlantic coast seven colonies of which one was at the mouth of the Sebta. Rassadir (Melilla), Septem (Cíutat), Tingis (Tangier), Lixus (Larache), Sala (Salé) were the principal Carthaginian establishments. It does not seem, however, that Carthage sought to extend her power into the interior.

It was not until the 3rd century B.C. that contact with the native chieftains and the recruitment of mercenaries from the country. Morocco remained independent, but the tribes who inhabited it were not organised into states, except perhaps in the east, where ancient writers mention in the period of the Punic Wars the existence of a kingdom of Mauretania or Maursia, extending along both banks of the Muluya.

The destruction of the Carthaginian empire hardly altered this state of affairs. For two centuries Rome administered only the "Province of Africa" directly and left the other regions of Barbary in the hands of native chieftains under a more or less severe protectorate. Northern Morocco shared the fate of Mauretania down to the annexation of this kingdom to Rome in 40 B.C. The region to the east of the Muluya formed part of Caesarea Mauretania. The lands stretching from the Muluya to the ocean formed Mauretania Tingitana, an imperial province governed by a procurator. When the empire was reorganised by Diocletian, it was attached to Spain.

Roman Morocco never covered more than a small portion of the modern Morocco. On the
rising against the Arabs. Dissatisfied with the share allotted of lands taken from the Christians in the Peninsula, and exasperated by the exacting ways of the governors of Tangiers, they took up arms in 740 on the call of the porter Maïara [q.v.]. The rebellion was both religious and political in character. With the same readiness with which they had adopted Islam, the Berbers adopted Kharidjite doctrines from the east, teachings which also appealed to their egalitarian tendencies and to their spirit of independence. The army sent from Syria to establish order was destroyed on the banks of the Sebt (742) and the extreme Maghrib was lost at once to the caliph and to orthodoxy. Berber principalities were organised in the Rif (see Sifilmasa); in the west, the Bargawata [q.v.] recognised the authority of a certain Sidiûl, founder of a rival religion to Islam, who had composed a Qur‘ân, that is a sacred book, in Berber. None of these little states was strong enough to impose its authority on the others and to collect all the Berber tribes under one rule.

It looked for a time as if the Idrissid dynasty [q.v.] were to play this part. Idris I and his successor Idris II, actually enforced their authority over the greater part of the tribes of northern Morocco and successful expeditions extended their kingdom from the shores of the Mediterranean to the High Atlas and from the Atlantic to beyond Tlemcen. Ardent champions of Islam, they imposed their religion on those peoples who did not yet practise it or who had abandoned it after once adopting it. The conversion of the extreme Maghrib to Islam is their work much more than that of the Arab conquerors. Zealots defenders of orthodoxy, in spite of their 'Alid origin, they fought the Kharidjites with the same vigour but did not, however, succeed in completely extirpating the heresy. It is not without good reason that legend has transformed these rude warriors into saints, the one Idris I, patron saint of Morocco, the other Idris II, the patron saint of the city of Fès [q.v.] which he had founded. The building of this city had enduring results. It gave northern Morocco a religious, political and economic centre which it had lacked since the disappearance of Roman rule, and favoured by its position, Fès prospered rapidly. It survived all causes of decline, even the collapse of the Idrisid power.

The Idrissids indeed rapidly declined. The various groups which had recognised the authority of the founders of the dynasty were not long in establishing themselves on their own and fighting with one another. These controversies were taken advantage of by the Fatimids and the Idrisids and the Umayyads of Spain, who during the tenth century A.D. disputed the possession of the extreme Maghrib. With the assistance of the Miknasa, the Umayyads in the end remained masters of the country. They were in their turn ousted by the Maghrawa [q.v.], whose chief Ziri b.'Atiya, abandoning the cause of the Umayyads, seized Fès where his descendants ruled for three quarters of a century.

The Almoravids and the Almohads. The extreme Maghrib seemed to be condemned to anarchy and to be broken up among small factions when the Almoravid invasion came [cf.'_ALMOARAVIS_']. After having first of all subjected all the lands south of the High Atlas, they established themselves solidly on the northern slopes, at the foot of which Yüsuf b. Taq bí founed Marrakush [q.v.] in 1062, these Saharan hordes turned to the centre, east and north of Morocco, sweeping everything before them: Fès, Tangier, the Rif, Oran and Tlemcen fell before them. The Berber principalities of the Maghrawa, the Bargawatayya and Banû Fams disappeared. In less than twenty years, Yüsuf b. Taq bí founded became sole master of the extreme Maghrib as far as Algiers. To these territories, already so vast, was soon to be added half of Spain. Summed by the Muslim emirs who were threatened by the king of Castile, Yüsuf b. Taq bí checked the Christian advance at Zallák (1086), then dispossessed the petty Muslim rulers to his own advantage. Morocco was thus extended across the Straits of Gibraltar as far as the Ebro and to the Balearic Islands. The fortunes of the Almoravids were, it is true, as ephemeral as they were brilliant. In contact with Andalusi civilization, the Saharan rapidly became decadent. The rigid orthodoxy, which had been their strength, relaxed; theirs in their turn were regarded as infidels, "anthropomorphists" (mufassarimun), whom it was lawful and even meritorious to fight. It was in the name of orthodoxy that the Mas'udi, the founder and the Hûdâta of the High Atlas, who had the leadership of Ibn Tûmân, and 'Abd al-Mu'min entered into the struggle against the Almoravids.

This struggle ended in the displacement of the Almoravids by the Almohads [see ALMOHADS and 'ABD AL-MU'MIN]. In seven years (1119-1126 A.D.) 'Abd al-Mu'min conquered all Morocco; Sidjilmansa, Oran, Tlemcen, and Ceuta fell one after the other into his hands. Next came the turn of Salé, Fès, and finally of Marrakûsh, the gates of which were opened to him by the treachery of the Christian mercenaries. Muslim Spain was also conquered with the exception of the Balearic Islands. Even in Africa, the Hammadid kingdom of Bougie was conquered in 545-546 (1153-1152). A few years later (554-555 = 1160) a new expedition led 'Abd al-Mu'min into Idrísiya and secured him possession of the interior and of the coast, which he took from the Normans of Sicily who had occupied it some time before. Morocco in the strict sense of the word was now merely a province in the vast Berber empire. The unification of these territories under one ruler had important consequences for the Maghrib. It facilitated the diffusion in North Africa of the Hispanic-Moorish civilization, which was to be perpetuated in Morocco after it had disappeared from the Peninsula itself. Further it brought into the extreme Maghrib a new ethnic element: the Arab. 'Abd al-Mu'min, as well as his successors, on several occasions deported Hilîli tribes from the Central Maghrib and Idrísiya, where they continually created unrest, to the sub-Atlantic plains where other groups of Arabs joined them of their own free will.

The Almohad empire was too vast, it comprised regions of too different a nature, peoples too foreign to one another to last long united. The Almohad caliphs were powerless to restrain the separatist tendencies which revealed themselves on all sides. In the first half of the xiiith century A.D., the Almohad empire broke up. Idrísiya and the Central Maghrib recovered their independence; local dynasties set up in Tunisia (Hafsids) and Tlemcen ('Abd al-Wâliids). The extreme Maghrib ended by slipping away from the descendants of 'Abd al-Mu'min who were replaced by the Merinids [q.v.].
The Merinids. Berbers of Zanatta stock, driven by the Hilâlî Arabs on to the plateau of Oran and into the central valley of the Muluya, the Banû Merin had at first entered the service of the Almohads, then turned against them, when the power of the dynasty began to decline. By perpetual razzias they made themselves masters of almost all northern Morocco. After the death of the caliph al-Qādir, who had been able to arrest their progress for a time, their leader Abû Vaḥṣî (1043-1058) seized Fès, Mekeks, Rabat and Sijilmāsa. The capture of Marrākūš (1269) by Abû Yūsuf, successor of Vaḥṣî, marked the final triumph of the Merinids. Heirs of the Almohads, the first Merinids endeavoured to reconstitute the empire of their predecessors. In Spain, they enforced their authority on the Muslims of Andalusia. In Africa, they endeavoured to take the central Maghrib from the 'Abd al-Walīds. They were successful when Tiemsien, besieged seven times in sixty years, finally fell into the hands of Sultan Abû ʿl-Ḥasan (1337 a.d.). Ten years later, the same ruler took Bougie, Constantine and Tunis, but his hold on these was very insecure. At the end of barely a year, Abû ʿl-Ḥasan, defeated by the Arabs, found himself forced to abandon Ifriqiya, the Hafsids returned to Tunis and the ʿAbd al-Walīds to Tiemsien, while the sultan's own son Abû ʿImrân rose against him in Morocco. Attaining to power, Abû ʿImrân renewed his father's efforts. He re-occupied Tiemsien and Tunis, it is true, but could not retain them (1360 a.d.). The Hafsids and 'Abd al-Walīds recovered their kingdoms almost at once.

Separatist tendencies thus triumphed and on this occasion in a most definite fashion. The extreme Maghrib, the history of which had hitherto been so often that of Barbary, began to live its own life. The Merinid kingdom, while its boundaries in the east were still vague and changing, already corresponded roughly to modern Morocco and the Merinids may be regarded as the first strictly Moroccan rulers. Lacking the religious prestige of their predecessors, they endeavoured to secure the moral authority which they lacked by taking as their patron saints the sultans of ʿIṣlām in the Maghrib. The cult of Mawālī ʿĪdrīs in the xivth and particularly the xvth century assumed an importance which it has retained to the present day. No less characteristic is the development of intellectual life and the arts. The Hispano-Moorish civilization never flourished more brilliantly in Morocco than in the Merinid period. The rulers attracted to their court the poets, men of letters and lawyers of the Iberian Peninsula and the Jewish Maghrib. The university of al-Kanawiyat attracted students from all the lands of the western Muslim world. Fès, which the Merinids, abandoning Marrākūš and Rabat, the capitals of their predecessors, chose as their royal residence, was given splendid buildings by them, palaces, mosques and madrasas. It was at the same time a commercial city in which African and Spanish merchants mixed with Christian traders.

This brilliant exterior, however, was quite deceptive. Merinid Morocco was never able to organise itself on a solid basis. The central power was very weak and did not succeed in imposing its authority everywhere. The accession of each sultan was an occasion for outbreaks. The pretenders who arose always found supporters readily, either among the Arabs or the Berbers. Powerless in the interior, the sultans were no more fortunate in their enterprises against their neighbours, the Central Maghrib or against the kings of Granada. Their prestige and their authority could not survive these checks. The Merinids in the strict sense disappeared from the scene in 1455, after the assassination of the sultan by an Idrisid sharif. The Banû Wāṭās, descended from a collateral branch, the chief of whom seized the power in 1470, had themselves a wretched existence. Their kingdom broke up into a large number of independent little groups, principalities at Fès and Marrākūš, Berber republics in the Atlas, Marabout fiefs in the Rif, the ʿGharb and in Darʿa and Šūtā. The sultans were quite powerless to prevent this decomposition.

The Christian offensive and the revival of ʿIṣlām. Of all the causes which combined to enfeebles and discredit these rulers, the principal was undoubtedly their impotence against the offensive of the Christians against the Maghrib. In 1415 the Portuguese took Ceuta, in 1465 al-Ḳasr al-Ṣâghir, in 1471 Tangiers. They thus secured themselves a base of operations in the north while by the occupation of Asīlā and Anfās (Casablanca; q.v.) they secured a footing on the Atlantic coast. In the early years of the xvth century, they built fortified posts at Santa Cruz (Agâdir) and Mazagan (q.v.) and took by force of arms Saḥ and Azemmûr (q.v.). Holding all places of importance except Larache [see al-Sawtiyya] they brought under their protectorate all the lands near the coast (Saḥwiya, Ḥija, Dukkalā), forced the natives to pay them tribute and to hand over to them strategic points up to the environs of Marrākūš. Their expeditions had no other aim than plunder, no other result than to exasperate the inhabitants who saw their towns destroyed, their donars burned, their women and children massacred or sold as slaves.

Menaced in the west by the Portuguese, Morocco was threatened in the east by the Spaniards also. The latter completed the reconquest by the taking of Granada (1492). Thus free to go further afield, and still fired with the religious enthusiasm of Ximenès, they too went over to fight the Muslims on African soil. The occupation of al-Mārs al-Kabîr (1507) and of Oran (1509) and the establishment of a Spanish protectorate over the kingdom of Tiemsien constituted a serious danger to the Muslims of Morocco.

The threat from the Christians produced an awakening of religious sentiment. This renaissance of ʿIṣlām in the xivth and xvth centuries, the results of which are still to be felt at the present day, is beyond question the great event in the history of Morocco since the Idrisid period. The way for it had, moreover, been prepared by the Ṣifiri teachings imported from the east and by the development of the brotherhoods in which the adepts of these doctrines were organized. It also found a favourable soil owing to the persistence of maraboutism among the Berbers. The ṣāhlah or the charlātan, who had always been an object of public consideration, became readily identified with the šīʿah, sharif, the possessor of the tawārīkh. Co-operating with one another, these plural individuals became the religious leaders of the people of Morocco. They strengthened orthodoxy, excited the zeal of the faithful, preached the holy war, and led the defenders of the faith into battle. The ascendency
which they exercised, the wealth they accumulated in their zāwiya, made them independent of the sultan. They thus became temporal leaders also, all the more readily as the sovereigns could not fulfil their office of defenders of Islam owing to lack of energy and also of means. The activity of these religious leaders was always of a local nature; it was only effectively exercised within a limited area and did not extend over the country generally.

The religious solidarity thus established, the kind of common conscience thus created, did not put a check to the political dynamism until the time when the sāḍi’ī sharīf took direction of the movement and exploited it for its own benefit.

The Sharīfī dynasty. a. The sāḍi’īs. The sāḍi’ī sharīf benefited by the prestige which the religious awakening had restored to the descendents, real or presumed, of Fāṭima, the daughter of the Prophet. Coming from Arabia at the end of the sixteenth century and settling in the valley of the wādi Dar'a, while another branch of the family settled at Tāfīlāt (Hasan or 'Alīd sharīf), they were not long in acquiring a considerable influence over the tribes of the south. Thus they were naturally led to support the people of the south, who were exposed to the attacks of the Portuguese of Santa Crun. In 1521, the sharīf of Tāfīlāt, requested by the Muslims to put himself at their head against the Christians, agreed to do so. Supported by the marabouts who gave him valuable assistance, he began hostilities against the Portuguese. The holy war regularly waged secured to his son, 'Abd al-‘Alī and Muhammad al-Mahdi, the possession of the whole of southern Morocco up to the Umm al-Rabī'. The intervention of the Merbīlī sultan in the quarrels which broke out between the two brothers only resulted in his own downfall being hastened. Muhammad al-Mahdi took Fās in 1550: the freezing of an attempt to restore the Merbīlī in 1554, with the help of the Turks of Algiers, assured the definite triumph of the sāḍi’īs.

The coming of the sāḍi’īs meant a regular reconstitution of Morocco. Muhammad al-Mahdi and his successors imposed their authority on the whole country, protected it against foreign foes and increased the extent of their territory by distant conquests. They finally triumphed over the difficulties created by the Turks of Algiers, and at the battle of al-Kārīf al-Rabī in 1578 arrested a counter-offensive of the Portuguese. Ahmad al-Manzūr (1578–1610) occupied Tībīkūt [q.v.] and destroyed the Aṣkī empire of Gao. For half a century the Moroccans were masters of the Western Sahā, from the banks of the Senegal as far as Bornī. The plunder taken on this campaign of conquest enabled the sultan to keep a splendid court, the heri tradition of which was modelled on the Ottoman court, and to adorn his capital Marrākūsh with magnificent monuments.

To the same period also belongs the organisation of the mākhūn [q.v.]. The early sāḍi’īs had relied for support on the Arab tribes of the south. To these al-Manṣūr added the Arab tribes of the region of Thameen and ’Udīya driven into Morocco by the Turkish conquest. These zāhīs, as they were called, received lands around Fās in return for the military service they were forced to give. Reinforced by a regular army formed of renegades, Spanish Moors, and negroes, trained by Turkish deserters, the mākhūn provided the sultan with the means of preserving order and levying taxes; it was thus the essential instrument of sāḍi’ī government and tended to become the government itself.

This instrument proved sufficient in the hands of an energetic ruler but was insidious in weaker hands and in moments of crisis. The sāḍi’īs very soon found this out. The tendencies to disruption which had been held in check by the energy of al-Manṣūr broke out again on his death. The dispute for the throne set his sons against one another. One of them, Zaidān, ended by triumphing over his rivals but could not prevent the break-up of the empire. Larache was occupied by the Spaniards; Fās cast off sāḍi’ī authority. The Andalus of Rabat and Salé [q.v.], enriched by their piracy, formed an independent republic. Finally the sāḍi’īs, although they had owed their elevation to the religious movement, now found the marabouts raising against them. Delivered from the restraints which the distress of al-Manṣūr and his successors had placed upon them, the latter began to gain more and more hold over the people and contributed to the ruin of the sāḍi’ī authority. Soon was the control of one of them, Sidi ‘Ali; Tāfīlāt was under the Hasani sharīfī, the Ghārī under al-‘Alīyāḥī, leader of the "volunteers of the faith". In the centre, the power of the marabout of Dīlī (a zāwiya on the upper course of the Wādi 'L-Abdī) increased. Muhammad al-Hāddī, his leader, victorious over the sāḍi’īs and over al-‘Alīyāḥī, lord of Salé and Fās, seemed on the point of founding a new Berber empire from the Atlantic to the Mulaya. Inaccessible, in spite of the support given them by the English and Dutch, of disposing of their adversaries, the sāḍi’īs now held only Marrākūsh and its immediate environs. The last representative of the dynasty died in 1600, assassinated by the abīlī of the tribe of Shāhīsī.

b. The Hasāntī sharīfī. The disintegration of Morocco was arrested by the coming of the Hasāntī sharīfī. The latter had taken advantage of the disorder to assert their authority in Tāfīlāt, then by expeditions, which par took of the nature of brigandage, to conquer and to warfare in Morocco. One of them, Mawīlī Mūḥammād, had even tried, without success, to take Fās from the Dīlīs. His successor Mawīlī al-Raqīd (1660–1672) was more successful. He took Fās, disposed of Qhālān, an adventurer who had established himself securely in the Ghārī, destroyed the zāwiya of Dīlī, reconquered Marrākūsh, thus reestablishing it as a piece by piece the sāḍi’ī empire. Installed by force of arms, the sharīfī dynasty recognised the necessity of securing the moral prestige which their origin could not give them. They therefore sought to attract to their side the sharīfī family. They hesitated between the sharīfī of Wāzānī, whose patronage was a guarantee even for the rulers.

The work begun by Mawīlī al-Raqīd was continued and brought to a successful conclusion by his successor Ismā‘īl (1672–1729). During the first fifteen years of his reign, he did not cease to wage war on the rulers who disputed the districts of Marrākūsh and Sīdī with him. While fighting his enemies, he was engaged in building up an army which would work his will. To the mākhūn formed by the Shārīs and Uḍīya he added a body of black slaves, the 'Abīd al-Bukhārī (Bushker), the property
of the sultan; their children were specially trained for military service. The number of effective in this corps by the end of the reign numbered one hundred and fifty thousand men. The sultan was thus able to reduce to obedience the Berbers of the Atlas and the upper Muluya. Defeated and disarmed, the latter were kept in control by garrison placed in kasbas built at the exits to the valleys or commanding the lines of communication. The notables whom the sultan had taken into his service or united to himself by matrimony alliances forced their tribemen to live in peace. The bidul al-mulukina, i.e. the country where tribute was regularly paid, extended over almost the whole of the extreme Maghrib. The pacification of the interior did not cause Mawlii Ismaili to forget the obligations imposed upon every Muslim ruler to fight the infidels. He therefore continued the holy war against the Christians of the coast. He reoccupied al-Mahdiya, Larache, Asilah, and Tangier, evacuated by the English in 1684, but could not take Ceuta from the Spaniards in spite of a siege or rather uninterrupted blockade for seventeen years. He was no more successful in his enterprise against the Turks of Algiers, who disputed with the Moroccans the possession of the plains of eastern Morocco and the ifri of southern Oran. The expeditions which he directed against the Algerians ended in failure, and the lower course of the Muluya continued to be the boundary of the sharifian empire. In spite of his lack of success here, Mawlii Ismaili is nevertheless the great figure of the Hashemi dynasty, the model the Moroccan sultans have set themselves to the present day. Morocco, however, remained what it was before, i.e., an aggregation of different groups, the cohesion of which depended on the personal energy of the sovereign. The processes of administration were in no way altered; the shahif enforced obedience by drastic executions; he squandered his subjects to the utmost to get the money necessary for the building of his capital Meknes [q.v.], the palaces of which were built by the forced labour of the natives and of Christian slaves.

On the death of Mawlii Ismaili, a reaction set in. For thirty years his sons fought with one another. The real masters of the situation were the ‘Abd who made and unmade sultans as they pleased. One of them, Mawlii ‘Abd Allahi, was proclaimed and deposed six times. He succeeded, however, in triumphant over his competitors by playing the Berbers off against the ‘Abd, the importance of whom gradually diminished with the wars. The remedy, however, was not much better than the disease. This period was for Morocco one of misery and ruin. The authority of the sharifs emerged much weakened from it.

Mawlii Muhammad (1757—1792) succeeded, however, in restoring it. Inhabiting the energy and vigour of his grandfather Ismaili, he brought the rebel Berbers back to their allegiance, and by the taking of Maragna in 1769 destroyed the last trace of Portuguese power on the Atlantic coast. Convincing, on the other hand, that the weakness of the central power was mainly due to a lack of financial resources, he endeavoured to procure money by encouraging the development of foreign trade. He inaugurated a mercantile policy, concluded treaties of commerce with Denmark, Sweden, England, and France and endeavoured to attract foreign merchants to his kingdom by founding for them the town of Mogador [q.v.] in 1764. Heavy taxes, however, severely impeded the progress of this policy. Morocco remained a poor country and did not open itself as it had been hoped, to European penetration. It also remained in a perpetual turmoil. Under Mawlii Yezid (1792—1794) the country was once more handed over to anarchy. Mawlii Slimani (Sulaiman) (1794—1822), after at first being able to restore order, had to spend the last ten years of his reign in putting down the continual risings of the Berbers of the middle Atlas; in the course of one of these expeditions he actually fell into the hands of the rebels. This rebelliousness caused the sultan much misgivings; he also wanted to prevent the infiltration of foreign and anti-Muslim influences which he believed would aggravate it. He forbade his subjects to leave the country and restricted a minimum their intercourse with Christians. The diplomatic and consular agents were relegated to Tangier, and access to the interior was made almost impossible for Europeans. His successors followed his example. Down to the end of the sixteenth century, Morocco was more rigorously closed than it had been in the time of the Merinids and Sa’dians and even in the early days of the Hashemi sharifs. In spite of this systematic isolation, the sultans had nevertheless to face the same difficulties as Mawlii Slimani and had no more success than he in overcoming them.

For half a century the domestic history of Morocco was a series of rebellions which the sovereigns had great difficulty in suppressing. The regions remote from the centre, Rif, Tafilalett, Figuig, eastern Morocco, escaped the authority of the sharifian. In the very heart of the country, the Tuareg cut communications between Fes and Marrakesh, forcing the sultans when they wanted to move from one capital to the other to make a great detour by Rabat. The empire broke up more and more. Mawlii al-Hasan (1873—1894) postponed for a few years the inevitable collapse. His reign resembled that of Mawlii Ismaili. At the head of his army, the artillery of which had been reorganised by a French military mission, he was continually in the field raiding the rebels and tearing down kasbas. He re-established order. In the region of Udaif, forced the people of Sus to recognise his khalif, reduced to obedience the Za’aar and Zayaf, endeavoured to extend the magnificence country by expeditions against the independent Berbers, endeavoured to develop his influence in the Saharan regions and to restore his authority in Tiffou. But he died before completing his task and all had to be begun again.

Morocco and the Christian powers. The situation was the more critical that the fate of Morocco could no longer be a matter of indifference to the European powers. It increased the enmity of some and aroused the curiosity of others. In spite of their desire for isolation, the sultans had not been able to break every link with Europe. They had also to take account of the proximity of Spain, established for three centuries in the presidios of the Mediterranean coast, and of the French who had replaced the Portuguese in Algeria [q.v.]. The conquest of the old Rempont, destroying all the sharifian hopes of extension eastwards, had caused great irritation in Morocco. 'Abd al-Kadir [q.v.] found followers among the peoples of this country and support hardly disguised on the part of the makhzen. This hostile
attitude resulted in the Franco-Moroccan war of 1844. The sharifian army was crushed at the Battle of Isly, the ports of Tangier and Mogador bombarded. The moderation of France alone enabled the mahkzen to come fairly well out of this unfortunate escape. Henceforth, the relations between France and Morocco remained peaceful, although the impotence of the sharifian government to guarantee security on its borders forced France to military demonstrations like the K. Skaassen campaign (1859) and the wadi Gir expedition (1870). Spain in turn being unable to obtain satisfaction from the protectorates directed against her garrisons decided also to resort to arms. The campaign of 1855–1856, ended by the victory of O'Donnell, revealed the military weakness of Morocco. The treaty of Tetuán (1860) granted Spain, along with some trifling territorial aggrandisement, an indemnity of 100,000,000 reals. To pay this debt, the sharifian government had to raise a loan in London on the security of the Moroccan customs and to accept the control of European commissioners. For the first time foreigners intervened in the domestic administration of the empire. The French thus made was continually enlarged. The exercise of the right of protection, the erection of a lighthouse on Cape Spartel, served as a pretext for diplomatic negotiations and for the extension of international control. European ambitions were not dissimulated. In order to protect itself against them, the mahkzen tried to play one off against the other and confined itself to granting, as it did at the conference of Madrid (1880), concessions devoid of all practical significance. Mawlā al-Ḥanān excelled in this different game and the viceroy 'Abd al-Azīz, who directed affairs during the early years of the reign of 'Abd al-'Aziz, Mawlā al-Ḥanān's successor, displayed no less skill. Morocco was thus the object of a very keen struggle for influence. England wanted to maintain her economic preponderance along with the control of the Strait. France wanted to ensure the security of her Algerian possessions and of the roads leading to the Saharan mines occupied in 1901–1902. Spain appealed to her "historic rights"; Germany lastly was preparing to seize the opportunity to acquire openings for her commerce and emigrants.

The Moroccan crisis and the establishment of the French protectorate. Such a position could not last. The intentions of Sultan 'Abd al-'Aziz precipitated the crisis. The weakness of the sovereign and his immediate desire for European innovations displeased the stricter Muslims. The modifications in the fiscal policy made by the Bērīt disturbed the people already taxed to the utmost. Rebellion broked out everywhere. A pretender, the rāyf Illā Ḥamānī, rose in the region of Tarāz and routed an army sent against him. It was in vain that France by the agreements of 1901 and 1902 endeavoured to organise the activities of the mahkzen against the rebels and to postpone the inevitable catastrophe. On the failure of this effort, France decided to arrange with England and Spain to settle the Moroccan question and prevent the dismemberment of the empire. In return for recognition of the protectorate du fait exercised by England in Egypt and the granting to Spain of a sphere of influence in northern Morocco, these two powers recognised the right of France to act as her interests best demanded. France hastened to propose to the sultan a plan for reforming the sharifian administration. The intervention of Germany prevented its realisation. On March 31, 1905, William II landed at Tangier and in a sensational speech posed as the defender of the independence of the sultan. On the advice of the German representative, 'Abd al-'Aziz appealed for the constitution of an international conference to study the reforms to be introduced into the Maghribi. The conference met at Algiers (Jan. 15—April 7, 1906) and affirmed the three principles of the sovereignty of the sultan, the territorial integrity and economic freedom of Morocco. It did not, however, settle the Moroccan question. The two international bodies which it decided to set up, the police for the ports and the state bank, both capable of being of great service, could not take the place of the general reforms necessary for the salvation of the empire. Disorders continued, acts of hostility against Europeans in Morocco itself and acts of brigandage on the frontiers increased in number. Not being able to obtain satisfaction for outrages on its subjects, the French government ordered the occupation of Udiya and Casablanca in 1907. The country was then pacified around these two centres and order restored in eastern Morocco and in the Shawiya to the great benefit of the natives themselves. The Spaniards in their turn for similar reasons intervened in 1908 in the adjoining region of Mellila and after a severe campaign in 1909 occupied Salwān and a number of strategic points.

During this period war broke out between 'Abd al-'Aziz and his brother Mawlā 'Abd al-Haft, proclaimed sultan at Marrakesh and then at Fas. Supported by the anti-French party, the rebellion was victorious. All the powers, including France and Spain, recognised him, after he had promised to respect the agreement of Algiers, the international treaties and all the engagements entered into by his predecessors. France and Spain announced their intention of not prolonging their occupation of sharifian territory. The Franco-Moroccan agreements of March 4, 1910, and the Hispano-Moroccan of Nov. 19 of the same year, stipulated that the occupation should cease as soon as the mahkzen should have a force sufficient to guarantee the security of life and property and peace within its frontiers. This settlement seemed all the more desirable since there had been occasional friction between France and Germany which had only been smoothed over with great difficulty, the most serious being the affair of the deserters from Casablanca in Sept. 1908. A disquieting state of tension remained between these two powers, although France had endeavoured to give satisfaction to Germany in signifying, by the agreement of Feb. 8, 1909, her willingness not to impede the economic freedom of the territories of Germany. The aggravation of the situation in the interior hastened the dénouement. The sultan's rule was no more effective than that of his predecessors; the executions of the sharifian agents in the spring of 1911 provoked a rising of the Arab and Berber tribes in the region of Fas. Besieged in his capital and on the point of succumbing, the sultan appealed to the French. They decided to send an expeditionary force to the help of the sultan but, after hearing his commander to avoid any injury to the independence of the sultan and any occupation of new territory. Vigorously commanded by General
Moltke, the military operations had the desired effect. Fis was relieved on May 21, and after certain police operations necessary to secure the peace of the district, the expeditionary force turned to the coast. But, while the danger was thus banished from the interior, unexpected complications arose. Spain, taking advantage of the occasion to take possession of the sphere of influence reserved for her by the agreement of 1904, established herself in Larache and al-Kasar, Germany, feeling the moment was decisive, claimed compensation in her turn and sent a warship to Agadir. This demonstration provoked the greatest alarm in France and in Europe generally. In the end, however, a peaceful settlement was reached. After four months of difficult negotiations, the agreement of Nov. 4, 1911 put an end to the dispute. Germany abandoned all political claims to Morocco and admitted with certain reservations, chiefly of an economic nature, the principle of the French protectorate. There was no longer any obstacle to the establishment of this régime, which the Sultan accepted by the treaty of March 30, 1912. This diplomatic document stipulated: the maintenance of the sovereignty of the Sultan, the representation of and protection by French diplomatic and consular agents of Moroccan subjects and interests abroad, the carrying out, with the collaboration of and under the direction of France, of a number of administrative reforms, judicial, financial and military, intended to give the sultan an empire a new régime, while safeguarding the traditional prestige and honour of the Sultan, the practice of the Muslim faith and the institutions of religion.

The French protectorate now extends over the whole of Morocco, but the Spanish sphere of influence enjoys by the agreement of Nov. 27, 1912 complete autonomy from the administrative and military point of view, while Tangier and its environs form an international zone, the status of which is not yet definitely regulated.

The establishment of the protectorate was to have had as its first result the restoration of the authority of the shah, whose support was essential for the carrying out of the reforms. This could only be attained by a considerable effort. The central power was weaker than it had ever been at the time when the conclusion of the protectorate treaty put an end to the crisis. The kilid al-makhzen was almost non-existent. France had to conquer Morocco for the Sultan. The name of Marcellin Lyautey, appointed High Commissioner and Resident General, will remain inseparable from the history of the pacification of Morocco, like that of Baguen in the history of the conquest of Algeria. Very difficult in itself, for it brought the French into contact with warlike tribes, some of whom had never recognised the authority of the mahzen, the task was further complicated by events abroad.

Order had hardly been restored around the chief towns, Fas, Meknes, Marrakesh and communication restored between eastern and western Morocco, when the War of 1914 broke out. For a moment it was feared that the French were going to abandon the interior and fall back on the coast, but the progress of the pacification of the country was only slowed down, not interrupted. All the conquered positions were retained and the rebels held on all fronts. The counter-offensive of the rebels in the Taza corridor, along the Middle Atlas and in Sba were crushed. The War finished, the offensive was resumed to reduce the districts still unsubdued (Mghila Atlas, south of the High Atlas, upper valley of the Moulouya). Three years of difficult fighting (1921-1924) ended in the occupation of all Morocco of value*, i.e. those regions of economic, political or military importance. The Rifian offensive in 1925, however, threatened to compromise all the success achieved. A Rifian chief, 'Abd al-Kurtus, had gathered around him the greater part of the tribes of northern Morocco and inflicted serious reverses on the Spaniards and forced them to abandon a portion of the territory which they had occupied. Crossing the Spanish zone, he invaded the valley of the Wargha and threatened Fas. The resistance of the posts echeloned along the frontier gave reinforcements time to reach the scene of hostilities. Checked in the autumn, the Rifian advance was definitely crushed in the spring of 1926 thanks to the combined action of France and Spain. At the moment of writing, the conquest may be regarded as completed: only a few tribes of the Central Atlas and of the oases of the Sahara have not yet been reached by the French, but their reduction is only a matter of time.

The administrative reorganisation has kept pace with the pacification. The old machinery has been retained but submitted to a control which guarantees the native's against abuse of their power and excesses by the agents of the mahzen. Technical services have been created to give the country the works necessary for its economic life. The remarkable results obtained in all fields have been facilitated by the influx of European immigrants and capital. Morocco seemed condemned to vegetate. Now it is being completely transformed. A new epoch is beginning, very different from any that have preceded it.

be possible to estimate the total population of Morocco to within a few hundred thousands.

The total usually given is 5,000,000, of whom a tenth, 500,000, are in the zone of the Spanish protectorate. This population is very unevenly distributed and its density varies with geographical conditions. The most thickly populated part is that of the plains of western Morocco between the massif of the Jbilia in the north and the Great Atlas in the south: (Sahar, Shāwiyah, Tādil, Dukkala and 'Abda. The density of the population also varies with the fertility of the soil. The population of the region is estimated at two fifths of the total. The mountainous regions, Jbilar, Rif, Middle Atlas are not thickly populated, as we might have expected from the comparatively dense population of Kabylia in another mountainous region of North Africa. As to the Saharan zone, outside the belts of oases in the Wādi Gīr, the Wādī Zīs (Tātīlāt) and the Wādī Dar'ā (Drâ), it is very sparsely inhabited.

6. Elements of the population. The population of Morocco consists for the most part of Berbers and Arabs, the former being the older element and the latter invaders. As to the Berbers, who do not seem to be a homogeneous race and whose origin is obscure, see the separate article on them. As to the Arabs, they are in a minority, but it is often difficult to attribute an exact ethnic origin to certain tribes or confederations, so much have the Arabs and Berbers become mixed since the Muslim conquest, and intermingled either by peaceful or warlike methods. It will be more prudent and will give a more accurate result if we distinguish in Morocco between those who speak Arabic and those who speak Berber (see below VII. LANGUAGES). The former live entirely in the plains, while with the exception of the massif of the Jbilar, the inhabitants of the mountains speak Berber.

3. Berbers. Three main groups may be distinguished among the Berbers of Morocco: in the north the Rifans and the Beni Zāhas; in the centre the Zuğla (Shāhīdja) and the Brarb (Barbour), who form the population of the Middle Atlas; the third group is that of the Jbila (cf. the article Jbila) who occupy the western part of the High Atlas and of the Anti-Atlas, as well the plain of Sīla. In addition to these main groups, we may mention the Djilala, arabised Berbers, to the N.W. of Fās, and the Ħāṛīt (plur. of the Arabic Ḥārīf), who seem to be regarded as an intermixture of Berbers and Sudānese and form the basis of the settled population of the zone of the Saharan oases.

4. Arabs. The early invasions at the time of the Muslim conquest do not seem to have appreciably modified the ethnology of the country. Down to the xiii. century A.D., the country districts of Morocco were almost completely Berber; it was the great Almohad ruler 'Abd al-Mu'min [q.v.] who was the first to introduce into Morocco Hilāli Arab tribes hitherto settled in the Central Maghrib or in Ifriqiya; these importations, continued by the successors of this prince and by the Merinid dynasty, soon drove the Berber element into the mountains or absorbed and arabised it. Evidence of such assimilation is still found in the fact that tribes with clearly Arab names contain sections whose names show their Berber origin. These Arab tribes, who are all settled in the
plain, may be divided into two main ethnic groups: the Banû Hläil (q.v.) and the Ma‘ilî. The latter occupies almost exclusively the valley of the Upper Muluya as well as the lands south of the Atlas. The Banû Hläil occupy the sub-Atlantic plains and the steppes of Eastern Morocco.

3. Jews. There are about 150,000 Jews in Morocco, mainly living in the towns. There are also a considerable number among the tribes of the Great Atlas. They also form the principal element in the population of the two little towns of Dehdü and Demmät (q.v.). The origin of the earliest elements in this Jewish population is obscure: it is difficult to ascertain whether they were Jews who had migrated from Palestine or were Judaized Berbers. The modern element is made up of Jews who fled from Spain to Morocco in the xvith century. The former call themselves al-Miğ馄hîs (Palestinians) and are called forarîtîs (foreigners) by the Spanish immigrants, who are practically all settled in the towns of the coast and are rapidly becoming Europeanized.

4. Miscellaneous elements. The negroes, of whom there are considerable numbers in Morocco, do not however form a distinct group there. In the north we find many, who are almost all of slave origin. The predilection of the townspeople of Morocco for black concubines, noted for their domestic virtues, has brought into the population, especially in bourgeois circles, a very considerable amount of negro blood. To the south of the Atlas in the oases, the intermarriage of negroes and Berbers has produced the Ḥārîfîn. Finally: the negroes of the Siûdân, since the Middle Ages, have always been esteemed as mercenaries to form the imperial guards, especially since the taking of Timbuktu by the armies of the Sa‘dîan Sulṭân Ahmad al-Mansûr (q.v.).

Large numbers of Muslims from Spain, whether of Arab origin or descendants of Christian inhabitants of the Peninsula, have contributed to form the population of the towns at various times: Cordovans banished by al-Ḥâkam I at the beginning of the third century A.D. after the "revolt of the suburb" and Muslims expelled from Spain at the "Reconquesta".

We must not omit the influence that may have been exercised on the population of Morocco by Europeans (renegades, who had adopted Islam, mercenaries recruited outside Morocco and settled in the country), and finally we may note that frequently the sultans have purchased women for their harems in Constantinople.

IV. SOCIAL AND ECONOMIC LIFE.

1. Country. The population of Morocco, although for the most part rural, nevertheless has a larger proportion of town-dwellers than Central Barbary and, like the rest of North Africa, might be divided into nomadic and settled; this division does not at all coincide with that into Arabs and Berbers; there are still nomadic Berbers, while certain Arab tribes are becoming settled on the lands which they cultivate.

It has been shown that the nomadic or settled life of the country-people in North Africa does not depend, as was long thought, on ethnic factors, but is entirely conditioned by geographical considerations. It is the rule for dwellers in the mountains to be settled while the people of the desert steppes, forced to move about in search of pasture for their flocks, are nomads. There are however means between these two extremes and especially in Morocco, where we find semi-nomads, who move only short distances, principally to the borders of the various mountains of the centre and south. But generally nomadism is the outcome of pastoral migration and its geographical area is in direct relation to the rainfall and therefore to the nature of the vegetation.

It is in eastern Morocco, in the steppes which lie to the east of the Muluya, and to the south of the Great Atlas, towards the Sahara, that we find the principal groups of nomads in Morocco. In eastern Morocco, we may mention among the large tribes which lead a nomadic life the federation of the Bent Gil, between Bérgent and Fijig; on the other side of the Atlas, the Att Seddät, the Att Djäil, the Att Bäîlî, the Att-ül-Mrîbî; lastly to the south of the Dâr‘a (Dra) country, the Rgâls, the Şikárma and the Awwâl Dîmîn. As to the semi-nomads, we find them, outside the Middle Atlas, in the great plains of the Gharb, in the north, the Khânina and the Şiyâdma, in the south, where a pastoral life has not yet completely disappeared before a more settled state of society.

Nevertheless Morocco is, of the three countries of Barbary, that which has in its rural population the largest proportion of settled people, of fixed habitat and living not only in tents but also in houses. The latter are rarely found isolated in the country, but on the contrary are grouped into villages of more or less importance and more or less near one another, according to the density of the population.

The type of dwelling varies with the district. In the mountains the houses are built of unbaked bricks or stone with a gabled thatch or a flat roof. In the plains, the tent predominates, more or less fixed to the spot, and with it we find more and more the hut of branches with a conical roof called na’semla. In the Saharan oases, the population collects within a walled area or ṣâbur (ṣîbur, from the class. ṣîbr); these conglomerations sometimes possess the elements of town-life. The villages are called duar (dâwûr) in the plains, and ṣîbur in the mountains. In some hill regions we find survivals of cave-dwelling.

2. Town. Among the towns of his country, the Moroccans distinguish a certain number that he definitely regards as cities (ḥâjrâyîna). These are Fâs, Rabat-Salé and Tetwa (Tâvâ), which have been more than others subjected to the influence of Spanish culture. It must however be noted that in the majority of the other towns we can still find traces of the existence of colonies formed by Muslims from Spain, especially from the xviith century onwards. The population of the non-ḥâjrâyîna towns is found to be composed of rustic elements but little urbanised. This is the case with Udja and Massâg (country Beduins) and also with Tangier (countrymen from the hills). Marrâkush and Meknès owe their special urban character to the fact that as capitals they have contained the courts of two Şîhâth dynasties, both of Beduin origin; they are masbahîyîn towns in which the standard of civilization does not reach the refinement of the ḥâjrâyîn Spanish towns. The ports Tangier, Larache, Massâg, Sâfî and Mogador were for long the only points of contact between Morocco and European influences, politically as well as commercially. Lastly in the mountains,
little towns like Sefrou, Wadz, Sefra, Drat, Demnàt owe their existence to political reasons. The two first were founded as bulwarks against the Portuguese advance in northern Morocco in the sixteenth century. Demnàt and Drat are mainly Jewish towns. As to Sefra, it seems probable that it is a survival of an old Berber town. We may also mention as towns of secondary importance, on the Mediterranean coast, Ceuta, completely Europeanised for several centuries, on the Atlantic coast Ázila (Aqsal), Casablanca, which owes its origin to the port of Anfa, Azemmour, Agadir. In the interior, el-Karâ el-Kabîr (el-Kar, Spanish spelling: Alcazarquivir), Taza, Tzédîntî. Several ancient towns have now disappeared, e.g. Nakkar and Bîdîs on the Mediterranean, Têt to the south of Marrakesh, the two Agmât and Tinglalaî to the south of Marrakesh and several others, descriptions of which have been given by the geographers like al-Bakîr, al-Idrîsî and Leo Africanus.

As a rule, the Moroccan town is grouped round a citadel or château (pop. château) which is the seat of authority. Under the protection of the citadel lie the felted or Jewish quarter. All around spreads the town proper or medina with its great mosque, markets and châtrias [q.v.]. It is surrounded by a rampart (khir) beyond which there are usually the suburbs more or less rural in character. The town itself is divided into quarters (kaoum) with streets (sanne), alleys (aras) and squares (rabâa).

e. Economic Life. The country people, whether settled or nomadic, who form at least four-fifths of the population of Morocco, live on the land, either by agriculture or stock-raising, most often combining the two. Those in the highlands grow cereals (wheat, barley), certain leguminous (broad beans, chick-peas, vetches) and fruit trees. They also exploit their forests in a very primitive fashion (thuyas, cedars). The people of the plains devote themselves mainly to cereals and the rearing of cattle, sheep, camels, horses and asses. In the oases of the south, the population cultivates the date-palm and understands the art of irrigating the land.

The rural industries are very primitive. They are limited to supplying the necessary implements of agriculture, and weaving wool into the material for garments, tents and carpets. The Berbers of Sàs show a certain aptitude at metal-working (arms and jewels). Sàs no longer exports the cane-sugar and copper, which formed considerable articles of trade under the Sàdîans.

Each tribe has a certain number of markets (sâf) which are held in the open country and bear the name of the day on which they are held. It is in the sâf that the peasant sells his produce and buys the manufactured articles that are brought by the merchants from the towns. Cereals are preserved in silos (maânwa); in the Great Atlas and to the south of it we find fortified storehouses, which belong to the community and are called agûdir.

It is in the towns that we find industrial activity concentrated. Each trade, which originally formed a guild (bunot), is grouped in one street which bears its name. In it the articles are made and sold. The stocks are kept in the fondhûs (Ar. fondât) which correspond to the khân and wâlah of the east. Some products, like grain, oil, coal, wood, are sold in special places called rabâa.

The monopolies of exporting (sûs) corn and hides established by the sultans at the end of the sixteenth century have now been abolished. Several European products have become of the first necessity in Morocco and form the subjects of an important traffic: cotton goods, tea and sugar and candles. For the history of the weights and measures and coins in use in Morocco before the establishment of the protectorate see the works by Massignon and Michaux-Bellaire quoted in the Bibliography. The very vivid picture drawn by Leo Africanus of the commercial and industrial activity of Fas in the Middle Ages is still very valuable.

The Jews, who devote themselves specially to certain trades that flourish in larger centres (goldsmiths, embroiderers), also play an important part as brokers. The citizens of Fas, who have a large number of converted Jews among their number, had almost a monopoly of the import trade of Morocco, especially from England, and for this reason had little colonies in the sea-ports.

The Berbers of Sàs like to settle in the towns as grocers (aabîsil) and having made their fortunes return to the country. Since the war of 1914 many of them have migrated to France as labourers and they settle in groups, according to their original tribes, in the suburbs of certain large industrial towns.

V. Political Organisation.

It is only at rare intervals and for short periods that Morocco has been entirely under the authority of the sultan: whence the distinction between the territory subjected to the government (bîlûd al-makhzen) and the territory unsubjugated (bîlûd al-raîâ). As a rule, the makhzen territory included the towns, wâlahs and plains. The mountains, on the other hand, remained more or less independent, according to the degree of power possessed by the sovereign. For further details cf. the article MAHÆZEN.

Outside the towns the population is grouped into tribes (kaubâla). Several are sometimes grouped together under a common name, without however being a confederation in the strict sense of the word; this is the case with the Ghomara in the north, the Hâla, the Dukkâla, the Shâwiya in the south. The tribe is subdivided into sections (rubûl, khamsa, sâcherà), which are subdivided into sub-sections comprising a certain number of villages of tents or houses.

The tribes who own the sultan's sway are governed by a qâdî appointed by the makhzen. His duty is to allot and levy the taxes, to raise contingents of soldiers and keep good order. He has under his command a shâhiq for each section under whom are the makhâliyâ of the sub-sections.

For the distinction between makhzen, qâdî (vulg. qad), and makhzen tribes see the article MAHÆZEN.

In the tribes not subject to the makhzen, political activity is confined to the qâmûs, i.e. an assembly of men able to bear arms. The qâmûs deals with all the business of the tribe, civil, criminal, financial and political. It administers justice following local custom (Arabic türb, Berber türf). It elects a shâhiq (Berber wâshir) who is only an agent to carry out its decisions. Alongside of the qâmûs of the tribe, there are qâmûs of the sections and sub-sections but their powers are limited.

All the tribes of the bîlûd al-raîâ are divided into opposing factions or tâf. When a tribe of
a certain tax is assessed, those neighboring tribes who belong to the same faction take up arms and come to its assistance.

In the towns, the mahkzen is represented by a governor whose official title is shaif but in certain large towns he is often called khalif. The title of 'mali has been sometimes given to the governor of Oujda. The shaif of the town, generally speaking, has the same powers as the shaif of the tribe and acts as judge in case of any violation of the law. He has an assistant or khalif. Alongside of him, the mulhit supervise the corporations, fix their average prices and looks after public morals.

The shaif has under his orders the mahkzen of the quarter and his police (mahkzeniya) carrying out his instructions. Among the officials sent by the mahzen to each town may also be mentioned the 'abir or inspector of endowments (habúr), the trustee of vacant inheritances (wekil al-qurrala), popularly hím-muwa'iri (ahab 'muwa'iri), the collector of local taxes and market-dues (amin al-mudfi'd). Lastly in the harbours and frontier towns, the customs are collected by officials called umaní (eg. ammar).

Justice is administered by the shaif or by the húb, as the case may be. The latter deals with questions of personal law; official reports on the cases are drawn up by the 'abir. In technical cases he appeals to experts: master-masons, agriculturalists, veterinary surgeons (wekil en-nufar), arbák et-ta'al, fálta, hafir). The legal opinions (fatwa) given by eminent jurists on the same question being often contradictory, the Sharifian government has recently created a court of appeal (ma'fiis al-isti'maf) at Rabat.

Landed property takes a number of different forms. In the first place, there are the state domains; they are either managed directly by the mahzen (crown-lands) or are allotted to tribal tribes in return for the military service for which they are liable; others of these lands may be granted in temporary or definite ownership to private individuals by imperial edict (alziir or tanfi'd). The húb lands may be urban or rural. In the towns, they are not infrequently cover half the area. They are let out under special conditions which give the tenants special privileges, misfah and gazz (class. Ar. 'izzah). In the country, the húb lands consist mainly of fields and orchards. In all cases, the revenue from these lands is set aside for the maintenance of buildings of a religious character or of public utility (mosques, colleges, schools, fountains) and for the payment of the officials attached to these establishments.

In Morocco, there are vast tracts of land which are not the property of any one individual, either as a result of the insecurity prevailing or of the sparsity of the population. These lands belong undivided to the whole tribe; they are called common lands (húd al-djmn'ah).

Lastly, lands which have come to belong to private individuals (mulk) by inheritance or purchase have their character confirmed by a certificate of ownership (mulkkiya).

The old Muslim imposts (sukhut and 'arib) have recently been merged into a single tax, the tertib. In addition to this tax, from which the state draws the essential part of its revenues, we may mention the duties levied at the gates of towns and in the markets (mukhar), unpopular with the people and not countenanced by religion, and the urban tax on buildings (gadhra). In addition to these, the main taxes, there is the haddiya or present offered to the sulthan on the occasion of the three great Muslim festivals. The gadhra or poll-tax paid by non-Muslims and the násika or payment for exemption from military service by certain Arab tribes have been abolished.

VI. RELIGIOUS LIFE.

a. The Berbers before Islam. For lack of documents it is difficult to get any accurate idea of the religious beliefs and practices of the Berbers of Morocco, before their conversion to Islam and it is only from the survival of animistic cults which can still be observed in the country, that we can guess what the primitive religion was. The figures on two carved stones found in Morocco seem to be evidence of the existence of a solar worship. On animistic practices surviving in modern Islam in Morocco, see below d. Islam in Modern Morocco.

b. Conversion to Islam. At the time of their invasion, the Arabs found that in the districts around the towns the people were more or less under the influence of Jewish and Christian teachings; but there is little doubt that they did not practise these religions in their true form. It will be more correct to think of them as professing Judaism or Christianity rather than as real Jews or Christians. It seems evident that these influences had prepared the Berber population around the mountains to adopt the new monotheistic religion, which the invaders imposed upon them. The two earliest invasions, that of 'Uqba b. Nafi' in 640 and that of Musa b. Nuṣair in 661, could result only in a very partial and superficial Islamisation, for very few Arab elements remained in the country. Islam, a town religion, was for long confined to larger centres. The Berbers generally became converted in the hope of escaping the excations of the conquerors; but when the latter wanted to treat them simply as tributaries, they did not hesitate to apostatise, on seven different occasions, if we may believe the Arab historians. One thing is certain, that while remaining Muslims, they were not long in trying to cast off the authority of the caliphs of Baghdad by adopting the heterodox doctrines of the Khārjīs (q.v. and the article AL-SHIFI'I). The Berbers of Morocco went even further when part new local religions arose among them more or less based on Islam, with their own prophets and Karun. After the attempt at rebellion by the Berber of Tangier, Mäsaara (q.v.), which was quickly suppressed, the Barghawata recognised as their prophet one of their number, Salih b. Tarif, who gave them a religion and a Karun in the Berber language. This religion, whose progress of which was opposed by the early Moroccan dynasties, seems only to have been finally exterminated by the Almohad rulers of the sixteenth century. This Barghawata movement was the most lasting; we also note that which was created by Hāc-Mim (d. 315 A.H.) among the Ghumâr, near Tebwaït.

In spite of these reactions, Islam, having become the official religion of increasingly powerful dynasties, gradually gained ground and penetrated slowly into the Berber mountains, but it is only from the death of 'Abd al-Mu'min, who destroyed the religion of the Barghawata and put an end to the rule of the 'anthropomorphists' (musajzimin) Almo-
ravida, that we can date the complete unification of Islam in Morocco. Till then, Islam had had in Morocco champions who were soldiers rather than theologians, and who after forcing the people to adopt Islam at the point of the sword, were unable to instruct them in it. It required a Berber of the Great Atlas, Khm Tamtar (q.v.), a theologian who had been educated in the east to come back to his country and to secure the devoted support of a mass of followers in order to found the movement, which was political as well as religious, of the Almohades (q.v.) or "preachers of Jawhār" (q.v.).

If the Almohad reformation was only temporary in Morocco, it was nevertheless strong enough while it lasted to obliterate in the country all trace of schism or heresy and to establish thoroughly in it the school of Mālik b. Anas (q.v.) which it still follows.

c. Evolution of Moroccan Islam. From the time of the fall of the Almohad dynasty, Moroccan Islam rapidly acquired features of its own. Islam was defeated in Spain, was gradually driven out of it, then attacked in Morocco itself by the Christians of the Peninsula. The western frontier of the Dar al-Islām was brought back to its own territory and then thrust farther back. Islam in Morocco, attacked by Christianity and forced to gīhād, became an active principle. It required all the moral forces of the country, even those of which the orthodoxy seemed doubtful; in order to utilise them, it did not hesitate to absorb them by covering them with a more or less superficial veneer of orthodoxy. It was at this period that the cult of dead and living saints, and to a certain point Shari‘ism, which had hitherto only existed alongside of Islam in Morocco, were adopted into it and received a kind of official recognition from the maulūn.

Before the Marinids, Islam had required the constant assistance of the temporal power to maintain itself and advance. From the time of this dynasty, sprung from a Berber nomad tribe, the roles are inverted; it is now the sovereigns who utilise Islam to increase their own power, and try to monopolise it by creating official colleges for religious instruction (madrasa); the first of these (Madrasa al-Safārīn) was founded in 679 (1280) by the Sultan Abī Yūsuf al-Fās, the capital of the dynasty, which made it the great centre of Muslim culture in Western Barbary (cf. Fās). The immediate successors of the Marinids, the Bānti Wajša, established in the same town the cult of their founder Idrīs II. The mausoleum in which he is said to be buried was henceforth an object of great veneration. He is the earliest in date and the most important of the innumerable canonised Muslims who are the objects of a regular cult in Morocco, even on the part of the religious leaders and the aristocracy. When the cult of Idrīs was established, his descendants — more or less authentic — claimed the title of shari‘ and soon played a preponderating part in Moroccan society, as a political and moral influence. The power of the Idrisid shari‘a was soon reinforced by that of another shari‘a descended from "All through al-Jassān and this is the origin of the two great groups of shari‘as in Morocco, the Idrisid and the Afd. To the latter belong the two Shari‘a dynasties, the Sa‘di‘an and Filā‘ī, the latter still in power, from the moment of their accession to the throne, the influence of the shari‘a on the destinies of the country became more and more preponderant.

The phenomenon of shari‘ism is closely connected on the other hand with the development of religious brotherhoods (cf. the article Tārīkh). Although we find evidence of their existence at the end of the Almohad dynasty (Hudayyā, Māghīyīn, Aghūrīyīn), it is only as a result of al-Dijīshī’s (q.v., d. 1645 A.D.) campaign in favour of a gīhād against the Portuguese, that we find the principles of the brotherhoods, as we know them to-day, first coming into existence.

d. Islam in Modern Morocco. Here we will only give a survey of the principal points of detail in which the people of Morocco differ from the rest of the Muslim community as regards the practice of their religion. With the exception of a few isolated groups, still little studied, who are credited with heterodox or heretical practices (Zkāra, in the neighbourhood of the Rni Znās, in eastern Morocco, Bidsāw, in the Ghardaïa, not far from al-Kṣar al-Khelīr), all the Muslims of Morocco are Sunnīs and since the Almoravid period have followed the Mālikī rite, which prevailed in the west over that of al-Awāzī. It is in the towns that the population observes most strictly the duties of religion. The Berbers and the Berbers of the mountains are rather lukewarm Muslims. The Dijīsh, however, between Fās and Tangier, are very devoted to Islam, show great piety, and Qur‘ānic studies are very much in favour with them; it is from them that are recruited a great number of schoolmasters who practise their calling in the plains (cf. Sunrat). It is also practically only among the hillmen of the north and south that we find a mosque in every village.

In spite of the great distance they have to traverse, the Moroccans like to accomplish the canonical pilgrimage. A considerable number settle in the east (there are Moroccan colonies in Alexandria and Cairo); the importance of these colonies had even induced the Sultan Abī al-A ḫa to appoint a Moroccan consul, mānīn al-Maghrībī, for Egypt.

In addition to the two canonical festivals of Islam (Iṣlāh kār and Iṣlāh shabīr), the Moroccans celebrate the festival of the birth of the Prophet (mīlād, class. mawlid) and that of 'Aghīr (10th Muharram). The mīlād, established in Morocco by the Marinids, has become a kind of national festival, since the accession to power of sovereigns claiming descent from the Prophet; this festival in Morocco almost surpasses in importance the two canonical feasts.

The peculiarities just mentioned would not be sufficient to give Moroccan Islam a special character, nor would its religious brotherhoods, if the latter were confined to the practices of religion or exaltation of the faith and to satisfying the need for conscious mysticism among their adepts. These religious brotherhoods are fairly numerous: Tījānīya, Darjwāna, Tā‘lī‘īya, Tāl̲ī‘īya, Kāshānīya (q.v.) etc. But alongside of these brotherhoods, whose members are almost exclusively recruited from the literate or well-to-do classes of the towns and country, there are popular brotherhoods in considerable numbers, in which preoccupation with religion gives place to charlatanism practices and sanguinary displays. Such are the Dijīsh, the Tsa‘wa, the Mrīt, the Dīghīshiyta. Some of these brotherhoods recruit their members ex-
clusively, from a particular class of society; thus the ṭalā (class, rūūtal) is a brotherhood of marksmen, and the Guūsaa, a negro brotherhood. All these brotherhoods have this feature in common that their founder has become a famous saint (wūff). The cult of saints is highly developed in Morocco and undoubtedly was so before the introduction of Islam, which found itself obliged to tolerate it. There are however very different categories of saints, from the venerated patron saint of a capital or of a district to the local holy man whose name is forgotten, between whom comes the ṣa‘īy which tomb is marked by a bībah (chapel surrounded by a dome), more or less elaborate. The more humble saints are recognised by the circular wall (būyq) which surrounds their tombs. These venerating individuals, male and female, have attained sanctity by very different ways, some in their lifetime, by their learning, devotion, asceticism, miraculous powers (bāraka), sometimes even by more or less mystic mania (ma‘āwishī); the others, after their deaths, have been distinguished by miracles, apparitions etc. The warrior in the holy war (ṣīlah, ṣīlah), alian fighting against the infidel is frequently beatified — hence his name of mu‘āqib (pop. mūqib — French sanct). The English “marabout”!). But the early significance of this term was frequently lost sight of and the term mu‘āqib came to be generally applied to saints, who never took part in a ṣīlah in their lifetime. Mu‘āqib thus came into general use as a synonym of the other words used for saint in Morocco: wūff, ʿayyās, ṣa‘īy. But it is the only one applied to the descendents of a saint, who possess the bāraka of their ancestor. Among the Berbers, the saint is called atīrān. The names of great saints have ma‘āqib prefixed, the others the title ṣa‘īy, while women saints of Berber origin are called ṭalā.

The saint to whom sanctuaries are most frequently dedicated — modest though they are (ma‘ākīm, ḍāltwa) — was not a native of the country but the famous patron saint of Baghdad, 'Abd al-Rahmān ibn Kūdir al-Gīlānī, popularly called al-Dūlah, who undoubtedly never visited Morocco. The saint whose cult is surrounded with the greatest splendour is the famous Mawlü Idrīs, founder and patron saint of Fès. Among the other great Moroccan saints may be mentioned: Mawlā 'Abd al-Salām ibn Maḥīțah, patron of the Dūlah, buried on the Djebel al-ʿĀlam; Mawlā Abū 'Ijīūt ibn Maḥīțah, in the north of Fès; Sīdī Muḥammad ibn CPU, patron of Mecknūn and founder of the ʿĪsah; Mawlā Abū Sūllīq ibn Mūsīb, at Asemīr; Mawlā Abū Yā‘sār (Bu‘āzīz), in the Tābīrī; Sīdī Abū 'Ijīūt al-Sabti (Sīdī Bel-ʿAbbès), born at Cenaa and patron of Marrūkūn. All these and others less famous are the subjects of a hagiographical literature which will be dealt with later.

Devotion to individuals canonical in their lifetime, or after their death is in Morocco not confined to Muslims. The Jews have also their saints, relatively as numerous as the Muslim saints. Some of the Jewish saints have acquired a reputation so great that even Muslims revere their tombs: e.g. those of the Rabbi 'Amīn in Arjān, near Wazān and of Rabbi Ben Zimor at Safi. On the other hand, the Jews of Morocco show a special reverence for certain of the great Muslim saints of the country.

The area, surrounding the tomb of each of the principal saints is sacred (ḫūnār) and hence regarded as an inviolable ʿāsylam; among the best known are the ʿāsylam of Mawłā Idrīs in Fès and that of Mawłā 'Abd al-Salām b. Maḥīțah in the mountains of the northwest. These pieces of ground are the exclusive property of the families who are descended or claim to be descended from the saint, they are exempt from state taxes; more than that, the descendents of the saints have the right to levy for their own benefit certain special dues, by a privilege officially recognised by the sultan. The levying of these dues is not the only way by which the saint’s chapel benefits its descendents.

The principal source of income is the offerings of pilgrims when visiting the tomb; this is the ʿayyās. In general once a year, there is a kind of patronal festival at the tomb of the saint which is called mōṭūm (class. Ar. muḥāṭum); a vast crowd, some of them from a considerable distance, gather there to pay their devotions to the ʿayyās and to see the display of fireworks given in his honour. On this occasion the offerings flow in and are shared among themselves by the saint’s descendents.

In these circumstances, it is usual for every sanctuary of any importance to be regularly organised. The chapel which contains the tomb and the buildings attached to it, an oratory and guest-house, is called the sūrīya. It is superintended by a māḥfūdād who collects and distributes the revenues. These do not come entirely from the sūrīya. The sūrīya often owns lands, sometimes extensive, which are let out and the profits shared with the tenants. They are called ṣāḥib and the tenants are called ʿassāb. These farms, sometimes acquired by purchase, often come from bequests or donations (būlūk) from pius private individuals.

We can thus see how certain famous and wealthy sūrīyas may exert a moral and political influence in the country round them, independent of their religious influence. The latter is however also very important. The great Moroccan sūrīyas are centres of orthodoxy and give life and vigour to Islam in the country. Some are centres of mysticism and they are always centres of religious instruction. This explains the enviable position occupied in Moroccan society by any group of descendents of a famous saint, or of marabouts. If their ancestor had, in addition to the virtues for which he was canonised, the honour to be a descendant of the Prophet, they are at the same time shorff, which further increases their material privileges. The descendents of a saint who was not a shorff try to claim this origin for him by inventing more or less fictitious genealogies. The marabouts who have in this way “infiltrected” into the social category of the shorff are very numerous in Morocco. A Moroccan sūrīya is not only a centre of hagiolatry; it is also in the majority of cases a body of shorff and the centre of a religious brotherhood or of a branch of one, or of a secondary order affiliated to a brotherhood. The sūrīya itself may have offshoots. Many of the establishments of this name are daughters of a mother sūrīya and are sometimes at a considerable distance from it.

Hagiolatry, religious brotherhoods and shariātism thus form three special aspects of Islam in Morocco, which are profoundly intermingled, and it is diff-
cult; to study them separately. For a detailed account of the principal families of shorfā in Morocco of genuine sharif origin or simply marabouts see the article shorfā. Here we shall only mention the principal ones whose origin is considered authentic by the Moroccan genealogists. They are descended from al-Ḥasan and ʿAbd Allāh al-Ḵāmīlī through the latter's three sons, Idrīs, Muḥammad al-Nafṣ al-Zabīyā and Muṣḥ al-Dīwān. The descendants of Idrīs or Idrīsīdīs, are subdivided into Ḏīṭṣīyān (Ṣhāḥibīyān, ʿĪmrānīyān, Ṭalībīyān, Qaṭālīyān, Dabāṣḥīyān, Ḳattāṭīyān, Ṭalāmaṭīyān) (descendants of Muṣ̄īf), ʿAbd al-Salām Ibn Mūṣḥīn, buried on the Djaūl al-ʿĀlam, whence their name, and are themselves divided into Ṣhabṣāḥīyāntīn, Ṣaḥīnīyāntīn, Ṣabīnīyāntīn and ʿĀṣālīyāntīn). The descendants of Muḥammad al-Nafṣ al-Zabīyā are the shorfā of Ṣiddīqīmīs or ʿAlīs (Ṣīḥīyān; nībạ from Taftālīlī), i.e. those of the reigning Ṣhāhīz dynasty; lastly, the descendants of Muṣ̄īf al-Dīwān are the shorfā ʿAbdīyāntīn, who take their name from the great saint of Ṣaḥḥ al-ʿĀbd al-Ghālibī. We also find in Morocco, but in small numbers, Ḥusaynīdī shorfā, also descended from ʿAlī through al-Ḥassān, the brother of al-Ḥasan; these are the shorfā called Ṣīḥīyāntīn and ʿIrākiyāntīn, who came from Andalus. The great marabout families are that of the Nāṣirīya from Tāmhūrī in Darā, the ʿArṣāmīya (q.v.) in Taftālīlī, the Darālīyān and Wāṣālīyāntīn to the northwest of Fās. The shorfā ʿArṣāmīyāntīn (ʿArṣāmīyān of Ṣerīnān), whose chief is also head of the great brotherhood of the Ṣayyida-Tuḥānīs (cf. above), have for long played a considerable part in politics and have been the object of particular attention from the Ṣadīqīn. Even more than the other representatives of the great marabout families, they have in fact rendered great services to the central power by using for its benefit the great moral and political influence which they possess among that part of the population, which is lukewarm or hostile to the Ṣadīqīn. They have meditated in the most successful fashion between the ʿAlīs and the unmarried body of the people.

The shorfā are thus at the head of Moroccan society. Some have assumed the power, others are the equal in influence with the rulers who in return show them great deference. We shall see that they have occupied a very high place in the intellectual life of Morocco since the end of the middle ages. Lastly shorfānism, an important social factor, has been able still further to strengthen itself by the support which maraboutism has brought it, by incorporating itself in it, and the religious brotherhoods which very frequently spring directly from it.

e. Survivals of Berber cults. The cult of saints, accepted and even recognised, as we have seen above, by Ṣaḥḥīn, is in Morocco much earlier than the introduction of this religion. Indeed, alongside of saints of note, there are others who are essentially popular, in the country as well as in the towns. In the large cities like Fīs, the great saiydae venerated by all classes of society rub shoulders with humble marabouts whose names show clearly their popular origin; these are Sīḍī Ḥalīf (Rev. the Ĥidden One), Sīḍī ʿĀmm el-Khāṣir (Rev. Good Evening) or Sīḍī ʿAbd Allāh (the reverend gentleman who procures what is wanted) and notices are given of them by hagiographers like the author of the Salāt al-Anfāṣ (cf. E. Lecl-Prévenans, Les Historiens des Chorfa, p. 353 infra). The humble, often anonymous Ṣaḥḥiṇs, which abound in Morocco, undoubtedly are to be connected with earlier mythic individual practises, already worshipped in the same place before the coming of Islam. Besides this devotion to popular saints, there are the animistic cults, which we see everywhere in Morocco observed by the lower classes of the population; worship of high places, of caves, springs, trees and rocks. These cults are now being seriously studied and the results will perhaps enable us to reconstruct without too great risk of error, the type of religion practised by the Berbers before the introduction into their land of the three great monotheistic religions.

It is hardly possible to separate from these animistic cults that of Mawliwīya Yaḥyā in Morocco, who always has a saḥaba beside thermal springs whose curative virtues are recognised.

Survivals of paganism in every case completely foreign to orthodox Islam may be found everywhere in Morocco; they are hardly distinguishable from what one finds in other parts of Barbary. The rites which accompany birth and the ceremonies connected with it (giving of the name and circumcision), marriage and death are now beginning to be well known. They constitute practices quite foreign to the prescriptions of the Sunna but they are not regarded by those who follow them as in any way heterodox.

It is especially in the life of the country people that we see most clearly traces of pre-Islamic practices. Many of them are strangely like agricultural customs of the Romans. The Moroccan peasant has retained the use of the Julian calendar, no doubt introduced into the country by the Romans; it is of course much more suitable for the needs of agriculture than the Muslim lunar calendar. The names of the months are retained in their Latin form with little change: January is ʿaynār from the Latin Ianuariūs. The beginning of the solstices in Morocco is the occasion of a festival celebrated, especially in the country, under the name of ḍūḡūs; the festival of the summer solstice (ʿanṣra) is also celebrated and on that day it is usual to have fireworks. Similarly the ʿarbah, which are still observed by the peasants of Morocco, are completely foreign to the canonical prescriptions of Islam. They are mainly ceremonies of inauguration (of death and rebirth of the land, first day of labour, first day of harvest); rites to protect the crops from the evil eye, or to preserve the ʿarbah which they contain while standing, finally special rites to secure rain and good weather. These various ceremonies, to which ethnographers like Biarnay and Westermarck have already devoted detailed studies to which the reader may be referred, are sometimes closely linked up with ceremonies prescribed by Islam; thus the different pagan rites for producing rain (carnival processions, a large spoon dressed in women's clothes and solemnly carried round) do not exclude the worship of saints specially noted as rain-makers like Mawlibi Ṣaḥḥīn, so the celebration of the orthodox ceremony of ʿarbah. It is also in the worship of ṣpūṭīs (juṣṭaṣ, pūṣṭa, juṣṭaṣ, plus ṣpūṭa) that we find manifestations of a strongly Islamic stamp associated with quite profane rites. This cult is especially practised by the lower classes of society, and in the towns
particularly by women. The djinns are regarded as supernatural powers, who have to be conciliated to avert their evil influence or fought when they attack them. The rites which deal with them are either explanatory or intended to overcome these. In spite of the many sacred formulæ of Islam, which are found in the celebration of these two kinds of rites, one gets a strong impression of paganism from them; they undoubtedly remain, practically what they were before the introduction of Islam into Morocco.

**VII. Linguistic Survey.**

Two languages are spoken in Morocco: **Berber** and dialects of Arabic. Berber is the oldest language attested in Morocco and we have no evidence of an earlier language being used; as to Arabic, it was introduced by the Muslim conquest of the vii-th and viii-th centuries. But until the arrival in Morocco of the Banai Hilall and of the Sulaim (xii-th century), it seems that Arabic, the language of an essentially urban culture, was spoken mainly in the towns while the country people continued to talk Berber; it was only after the occupation of the plains by the Arab tribes that their language spread there. With the exception of the region of the Jbiles to be mentioned later, the highlands of Morocco alone have remained faithful to the Berber language, while the towns and lowlands are at the present day almost completely Arabic speaking.

In his *Annuaire du Monde Musulman* (p. 162) L. Massignon gives a proportion of 60% of Berber speakers (3,200,000 to 2,200,000). A. Bernard
thinks this exaggerated and reduces it to 40%. (cf. Arabophones et Berbérophones au Maroc, 1924, p. 278).  

A. Berber.  

1. Berber dialects. According to the works of E. Destaing, the Berber dialects of Morocco can be divided into two main groups.  

The first is the northern group which includes the dialects of the Rif, those of the Bui Znäsen and of the Berber-speaking tribes of the neighborhood and those of the Ait Segrhâshen, Masmâida, Ait Warain etc. to the north of the Middle Atlas. These dialects are characterised phonetically by their strong tendency to spirantisation of the dentals and palatals. In comparing these dialects with those which in Algeria the natives call Znâatya, E. Destaing has been led to describe the group as the group of Zanâa dialects.  

The second or southern group includes, according to the same author, the remainder of the Berber dialects of Morocco; he distinguishes two sub-groups:  

a. that of the Tamunsîq, the dialect spoken by the Brab of the Central Atlas, from the vicinity of Meknès to the edge of the Great Atlas; the dialects of the north are also distinguished from those of the south. It is with this sub-group that we should connect the dialect of the Sanhadjâ d-es-Srârî, an important highland confederation to the northeast of Fas, and perhaps also the language of the sections of the Ghrâmîa who still speak Berber.  

b. Sub-group of the Tamosq, the dialect once spoken by the Masmûda of the Great Atlas and by the Shiûb (usual French orthography: Chénab) of Sûs and the Anti-Atlas.  

The three groups of Moroccan Berber dialects seem to correspond very exactly to the three main ethnic divisions of the Berbers of the country: Zanâa in the N. E., Sanhadjâ-Zanaga in the centre and Masûmida in the south. Going back to the old division of the Berbers given by Ibn Khaladîn, E. Destaing proposes to make the first group correspond to the Butr tribes and the two others to the Barânis tribes.  

For the bibliography of Berber studies see the list of works given by E. Lanost at the beginning of his Met et Choses Berbères, Paris 1920, p. xvii.; since that date see the Moroccan bibliography annually published by Hespèris. A map showing the division of Morocco between Arabic and Berber is given in the articles by A. Bernard and P. Monnast, Arabophones et Berbérophones au Maroc (in Annales Soc. Géogr., vol. 35, Paris 1924). For the north, there is a more accurate map by R. Montagu and Pennès published at the end of the Manuel de berbère marocain (dialecte rifain) by Justimard (Paris 1926).  

There is no evidence of the existence of another language before Berber in Morocco. Very few of those "Libyan" inscriptions have been found which, although they are not yet read, are admitted to be in old Berber; one was found in the Roman ruins of Tamuda, a few miles S.W. of Tetuas, and is preserved in the museum of the latter town. Other Libyan inscriptions have been found in the region of Pelitiane.  

The earliest evidence of the use of Berber in Morocco is given by the Geography of al-Bakri (11th century) who says that the prophet Hâ-Mim, killed in 937 A. D., had given the Berbers a Kur'ân written "in their own language". This can only refer to their Berber speech; the same author tells us that the Baraghwata had also a Berber Kur'ân from their prophet Sâlih. (d. in 750). For the beginning of the Almohad period, a passage in Documents inédits d'histoire almohade, p. 67, says that at this time Berber was spoken on the Umm Rabi'. It is in the same work that we find the earliest recorded phrases in Moroccan Berber (Tamarsîq dialect) transcribed in Arabic characters (cf. p. 26, 30, 36, 38, 39, 67, 117).  

Ibn Khaladîn seems to have been the first to interest himself in the creation of a scientific system of transliteration of Berber into Arabic characters. Using certain graphem methods used by specialists in English, he invented compounds of letters to render sounds peculiar to Berber (ç, û [u emphatic] and 3). Unfortunately Ibn Khaladîn, who in his Muslimîmima gives interesting chapters on the urban and Beduin Arabic dialects, does not seem to have devoted any attention to the Berber language; one of the few passages to be noted in his book, as far as Morocco is concerned, is his reference to the existence of Berber speaking peoples among the Sanhadjâ tribes settled in the valley of the Wargha and around the fortress of Amarna (cf. Histoire des Berbères, ed. de Siane, text, i, p. 273, l. 11). For the beginning of the xvith century, Leo Africanus (p. 28) gives us more detailed information. The five Berber ethnic groups (Sanhadjâ, Masûmida, Zanâa, Hawwâra and Ghrâmîa) have a special language which they call uqal amârîq (uqal masûmâq), I.e. "noble language" (cf. the present name of the Tamamq dialect) (ed. Schefer, i.). Berber was still the language of a part of the Ghrâmîa, for, he says, Arabic is used by almost all the people (op. cit., i. 29). It even looks as if the Šâwiya ("Sonâva") of the Tamosq still spoke Berber ("African language") like all the other Šâwiya of North Africa with the exception of some who lived to the south of Tunis (op. cit., 1, p. 83).  

We have to come down to the Danish Consul G. Hôst, in the xvith century, to find the first Moroccan Berber vocabulary collected from a fârîq of "Tamenâr", a place probably in the region of Agadir (cf. Efterretninger om Marocco og Fas, Copenhagen 1779, p. 125—133).  

2. Berber literature of Morocco. Although Berber was the language of the Moroccan dynasties which followed between the Idrîsids and the Sa'dîs, it does not seem that, contrary to what was done in Egypt for the Turkish of the Mamlûks, Berber was made the subject of grammatical studies in Morocco, nor that it was used for the purpose of literary expression. A passage in the Khûfûs recalls the fact that Khûbâs were pronounced in Berber in the great mosque of Fas but the text of them has not been preserved. The celebrated Almohad reformer Ibn Tumâr is said to have composed in Berber theological and legal treatises which have now disappeared. The Berber Kur'ân of the Ghrâmîa and Baraghwata have also disappeared although al-Bakri has fortunately preserved some extracts in an Arabic translation. The only texts which we now have are translations of or commentaries on religious works of the type of the Khûfûs of al-Kairûzân or of the Mukhtâs of Ejdâ; all these Berber texts come without exception from Sûs, whether because this region
had a more advanced culture or its dialect with a more elastic consonant system and clearer vowed system was better suited than others for transcription in the Arabic alphabet. The Moroccan Berbers have a large stock of fables, legends, songs of love, war and work etc., many of which have already been collected by French and German students of Berber (see Berber literature, written and oral cf. Henri Basset, Essai sur la littérature des berberes, Algiers 1920).

Among Arab authors the Berber language is also used by the non-Arab languages: barbary, Berber: raifia, "jargon"; in the Documents inédits d'Arôis; almahade we several times come across the expression al-batun al-khawārini, "the Moroccan language". In Moroccan Arabic, Berber is usually called "khebûh".

B. Arabic.

The Arabic dialects. The Arabic language was introduced into Morocco in at least two stages: first in the eighth century at the time of the first Muslim conquest, then in the sixth at the coming of the Banû Hilal and the Salair. Down to the coming of the latter, who were brought to Morocco by the Almoravid ruler Vaqûb al-Mansûr, Arabic seems to have been spoken almost exclusively in the large towns of the north, where it was used by a considerable Arab population who enjoyed a double prestige, religious and political. It was the language of religion and law. From the towns Arabic spread among the people of the surrounding country, and al-Idrisi (Description de l'Afrique et de l'Espagne, text p. 99, transl. p. 90) already notes that in the sixth century the Berber tribes of the southern hinterland of Fès (Banû Yûsuf, Fandakla, Bahût, Zawâwâ, Maggâsa, Ghiyâya and Safâlgûn) spoke Arabic.

It is this linguistic influence exerted by the towns on the country around them that explains the arabisation of the mountainous country of the Jbala (plur. of Jbât, "highlander") while the rest of the Moroccan highlands remained Berber speaking. The land of the Jbûla, in the wide sense, stretches in the form of a crescent from Tangier to Taza. It was surrounded by a cordon of towns: Nakût, Bâdis, Tigliks, Tetwân, Ceuta, al-Ês-Ês, Tàngier, Arâla, al-Ês al-Kabîr, Imsouâ, Asâgin, Banût Tûrât, Wâllîf, Fès, and Taza, which were the only ports or marketplaces for the tribes of the region; besides, the massif itself was traversed by the most important commercial routes of Northern Morocco: the roads from Fès to Tangier, to Ceuta, to Bâdis, to Nakût and to Ghasmâsia; it was therefore natural that being subject to the direct and indirect influences of the towns, the highlands of Jbûla should be the first region of Morocco to be arabised. The process was further favoured by several other factors: 1. the existence in the mountains of numerous large villages, almost towns, which became secondary centres of Kûrânic culture; 2. the settlement almost everywhere in the xth century among the Jbûla of Idrisid sharifs who, driven from Fès by Mûsâ al-Êsi, founded independent principalities in the mountains, which became centres of Muslim urban culture; 3. in the tribes of the Jbûla furnished a considerable part of the contingent which went to wage the holy war in Spain, and returned home after being more or less arabised by contact with the great Muslim towns of Andalusia; 4. lastly, the rebellions and civil wars which so frequently disturbed Muslim Spain, the emigrations or expulsions caused by the progress of the Christian reconquest, brought to Africa, from the rising at Cordova (in 814) down to the xth century, an important element which settled in the region of the Jbûla either in the towns around the mountains or in the villages of the highlands (resettlement of Têtwân, foundation of Shakhûwân) bringing there along with the Arabic language, the prestige of their cultural, intellectual, and material superiority.

This rapid sketch of the spread of the Arabic language in Morocco explains why, after studying the question, three categories of Arabic dialects have been distinguished:

a. Urban dialects; b. highland dialects; c. Bedouin dialects; and we may add: d. the Jewish dialects.

a. Urban dialects. In Morocco not all the town dialects are "urban dialects". There are towns like Casablanca, Mazagan, Safi and Mogador (and to a certain degree Meknûs and Marrûkûsh) the population of which is entirely or for the most part of rural origin and where the absence of an old nucleus of town-dwellers has not enabled them to become urbanised. The Moroccans however distinguish quite clearly such places from towns with a really urban culture, more or less influenced by Andalusian culture. The principal towns with urban dialects are Fès, Rabat-Sahâ, Tetwân, Tanza, al-Ês al-Kabîr; Tangier, Wâzân and Shakhûwân also have urban dialects but these are much more or less contaminated by the surrounding highland dialects. Meknûs and Marrûkûsh have been influenced by the Bedouin elements introduced by the sahâiri groups into the dialects of these two old capitals. It is interesting to note the case of Azemmûr: where the old town of Azemmûr al-Êeddarî has an urban dialect, while the new town, which has in recent years grown up beside it, stands around the sanctuary of Mawlî Abû Shakhîr (onâgi Bu Shakhîr), uses a Berber dialect. The urban dialects of Morocco form one group with those of the western part of the Central Maghrib, notably with those of Tlemcen, Nedroma and Algiers. Their phonetic characteristics are the loss of the interdentals of the classical language, the affricative pronunciation of r, the frequent attenuation of g to gñ: in Fès, b, m, ë, t and dûn assimilate the dû of the article and are treated as "solars"; the simple dûn is pronounced like the French j (Persian j), but when it is geminated, it gives dû in Fès and Ë in Tangier. The x is often pronounced very close to the French ouvr r.

As peculiarities of the dialect of Fès, we may note the construction khebetu "she has written it" for khebet + ë, and the use of an invariable relative ë representing the old dialectal ë. Tangier and Tetwân have a preposition ë to which is used before nouns (m-ë-dîr ë "to the house") but not before suffixed pronouns. To translate ë, Marrûkûsh uses ë: the dialect of this town uses certain Berber adverbs: ëben "because", ëdîl "only".

All the urban dialects use the characteristic prefix of the present indicative: ë in the north, ë in the south. Fès uses one almost as much as the other.

A. Highland dialects. These are at least as well known as those of the towns. In 1926 I published notes on that of the Telûl and the
Rhônes in the north of Taza; in 1922, E. Lévi-Provençal published texts, prefaced by a grammatical sketch, of the dialects of the middle valley of the Warga; since then I have had an opportunity of studying those of the Bni Hûsîmar (near Tetwân), of the Mesûtâ (near Bîdes) and of the Ghîzwa (near Shîkhrâm). The highland dialects are of course more differentiated than the urban dialects. The tribes which use them belong to two political clans probably originally of different racial origin: the Ghûmâra, the old inhabitants, and the Sahhâdja, the invaders. In the present state of our knowledge it does not seem possible to make the dialects coincide with political or racial boundaries; but we can nevertheless recognise two main groups of highland dialects:

1. The northern dialects, extending from the Straits of Gibraltar to the south of Shafâhâmân and embracing in the east the confederation of the Ghûmâra.

2. The southern dialects, from Wazzân to Taza, used by two great classes of tribes: first, the Sahhâdja tribes of the valley of the Warga: Sahhâdja of the Central Warga, Sahhâdja of the Sun and of the Shade, of Mûshût and of Gheddo; secondly, the Butr tribes, more or less closely related to the Zanata and occupying the lands north of the region of Taza: Mersûn, Butr, Toul, Maghrîbûn and Mokhâm. It seems to be a historical fact that these Zanata and Sahhâdja peoples only settled in their present habitats long after the first Arab conquest; the Sahhâdja of the Central Warga certainly now occupy lands which before the Almoravid period were peopled by the Ghûmâra. We should therefore regard these southern highland dialects as younger than those of the northern group. The slight differences noted between the two groups may then be due to two main causes: 1. an evolution of the neighbouring urban dialects which would have taken place during the period between the amalgamation of the Ghûmâra and that of the Sahhâdja-Zanata; 2. the non-identity of the Berber substrata.

To the two main groups: Ghûmâra and Sahhâdja-Zanata, we may perhaps add two little islands in the south, the highlanders of the region of Şefrû to the south of Fâs (Biald, Bni Taghla etc.), and the Qibrîyâ to the south of Taza: these probably constitute the last vestiges of a continuous Arabic-speaking bloc which stretched to the south of the Fâs-Taza corridor, the existence of which in the xiii century we know from al-Idrîsî. Phenetically, the Moroccan highland dialects are characterised by the profound changes undergone by the Arabic consonantal system as a result of the spirantisation of the dental and post-palatal occlusives. We find the interdental /t/ and /d/, which do not represent the classical interdentals /t/ and /d/, having given in these dialects t and d respectively, which remain occlusive only at the beginning of the word or after a consonant or geminated; but after a vowel we have /t/ and /d/: /mâr "daughter" plur. bâtr; after a vowel also /t/ is pronounced as a resonant like χ of modern Greek. The representative of the group /d/ of the classical language is usually /d/, sometimes hardened to /d/ but among the Ghûmâra we have /d/ (emphatic /d/). The sound /d/ is fairly common. The short vowels are commoner than in the towns: many of the short vowels and /ɔ/ of the classical language are preserved: this is how we find a considerable number of imperfects /R / R / R and a few /R / R / R. As to morphology, the fem. personal suffixes *-âm ( < -âm) and pl. -âm ( < -âmâm) are characteristic; they are the complement of the series began by the masc. -âm, *-âm ( < -âm). Among the northern Jhîla we find the use of a suffix -âm marking the plural: it seems really to be a borrowing from Lalla. The dual, reserved for names of parts of the body which occur in pairs and for names of various measurements (of weight, length, volume and time) is in Jhîla: zaâdhâmân "two months", yištâh "his hands". The relative, pronominal and adjectival, is ے. The classical construct state (zdâj) is very rare and is only found in a few stereotyped phrases; it is in general replaced by analytical constructions in which the preposition 0 "of" is used, expressing possession as well as the material of a thing. Most everywhere the prefixes of the 3rd pers. com. and of the 3rd pers. fem. of the sorât are ے (and not ے: dëtkh "thou writest, the writes". The passive participle of hollow verbs is often of the type mâzâ: mâyâh "sold", mâyâh "filled up". Finally we may note a few traces of a passive of the form zdâj: zdâj "to be taken". As evidence of conservatism we may add the fact that in the dialects of Taza we have the word /z/ "mouth" which seems to have disappeared since old Arabic.

Just as the urban dialects of Morocco may be linked with a number of urban dialects of Algeria, so have the highland dialects of Morocco correspondents in the latter country. W. Marçais, who is the first to have isolated and described this group of Maghribî dialects and prefers to use the name of "parlers villageois" for them, classes along with the dialects of the Moroccan Jhîla two other similar groups, also characterised by the dispersion of the Arabic consonantal system (Liquidation, affrication, spirantisation), by the use of different forms of syntax and structural forms taken from Berber, and by the juxtaposition of Arabic elements sometimes strangely archaic and very abundant Berber elements. These are firstly the Ouar group of the Tørân in the country which extends from Lalla Mâghînta to the sea, a mountainous country traversed by the roads connecting Tiemenec, the capital of the Baut 4 Abî al-Wâd, with the ports of Humân and Arshût. It is with the dialects of the Tørân that the dialects of these Moroccan Jhîla show most agreement.

The second group, which differs more, is that of the highland dialects of Eastern Kabylia, a mountainous region of the department of Constantine, traversed by the roads connecting Constantine with the ports of Illijdêll and Colla; this was also the old habitat of the Kutâmâ, whom their support of the Fûtîmî movement must have caused to be rapidly arabised. Alongside of these three groups of highland dialects (Jhîla, Tørân, Eastern Kabylia), W. Marçais describes a fourth in the villages of the Tunisian Sîbel, which lies in the coast zone traversed by the roads which connect Kairûtân with the ports of Sûs, Mâdhîya and Monastir. These Tunisian dialects, of which that of Takrûn, studied by W. Marçais, is a specimen, are however much arabised and hardly seem to have been subjected in their phonetics, morphology, syntax and vocabulary to the profound
Berber influences which characterise the first three groups.

In spite of their divergencies, which are due mainly to pronunciation and to the local use of words and phrases corresponding to two very distinct forms of culture, the urban dialects and the highland dialects cannot be either historically or linguistically separated. The fundamental disparity is that which exists between the urban and highland groups and the Beduin group. It is the townsmen who have taught the highlanders to speak Arabic, but the urban dialects, used by individuals whose intellectual activity is greater, have evolved more rapidly. They are also more sensitive to external influence, literary and political. These facts added to the predominance of Berber blood in the highlands suffice to explain why the dialects of the Jbla still seem coarse and quaint to the townsmen. On the other hand, the towns have been frequently repopulated, wholly or in part by people from the neighbouring hills. All this explains the family resemblance which the linguist finds between the dialects of the towns and those of the hills; perhaps the latter, being more conservative, are also the more interesting for the history of the language. W. Marçais regards them as valuable representatives of the Arabic spoken in the country district of the Maghribi before the coming of the Banû Hilal and the Sinlains (cf. W. Marçais, Textes arabes de Takrissena, vol. i., preface, p. xxviii.).

The principal features which are common to the urban-highland group and which distinguish it from the Beduin group are the following:

- loss of the classic interdentals;
- pronunciation of ḥāf as ḥ or hamza (and not g as among the Beduins);
- tendency to the syllabic grouping of Ṱṭ h as Ṱṭ when ṯṭ is not a laryngal nor a sonant;
- rarity of the construct state;
- suffix of the 3rd pers. masc. sing. in -ā or on (and not -ā, as among the Beduins);
- relative rarity of the addition of personal suffixes, but regular use of the (analytical) phrase with ḥālit, ḥādit ḥālit, "my house;"
- diminutives of Ṱṭ Ṱṭ becomes Ṱṭ Ṱṭ type ḥālit ḥālit, "little dog;"
- diminutives of the types Ṱṭ Ṱṭ becomes Ṱṭ Ṱṭ type Ṱṭ Ṱṭ, (Class. a) and Ṱṭ Ṱṭ becomes Ṱṭ Ṱṭ, (Class. a) "a little red;" ḥālit, an adjective of the type Ṱṭ Ṱṭ, (Class. a) becomes Ṱṭ Ṱṭ, (Class. a) "black;" (plur.);
- reduction at the plurals of the C1 C2 C3 C4 to C1 C2 C3 C4, (Class. a), (Class. a) "keys;"
- use of a verbal prefix to mark the indicative present: ḥār or ḥā'; in the towns and ḥā' in the hills;
- in the singular of the perfect, the feminine person is generally used for the masculine: ḥā' (Class. a), "she has written (ms.), whereas we find in Rabat for the plural, an analogous form ḥā'wh and at ḥā'; in the towns and ḥā' in the hills;
- in the imperfect of the defective verbs, the plural is formed on analogy of the singular: yeṭā, "they remain;" yeṭā, "they weep;"
- Beduin dialects. These are in Morocco the dialects of the plains: the Atlantic plains from Azrila to Mogador with its continuations into the interior, the valley of the Moulida, the plateaus of eastern Morocco and the region of the Moroccan Sahara (Wādi Ghir, Wādi Ziz etc.), they are still little known; only that of the Hawr al Jīlah has been studied, but only in Europe and from authorities who had already travelled a good deal elsewhere. That of the Dukkala of the north (Ullāt Ǧaṣir, Ullāt Freq), have myself examined it corresponds in almost all its details to the dialect of the Ullāt Bhati of Sada (Oran) on which W. Marçais has written a monograph. There is no doubt that on examination one can divide the Beduin dialects into groups characterised by more or less conservatism; should those of the Maqqil perhaps be separated from those of the Banû Hilal? Perhaps a distinction should also be made between the dialects of the purely Arab tribes and those of the Atlantic regions where powerful Berber tribes (Gheba, Gharqā, Dukkala, Hamaghīlā) have been arabised and more or less submerged by the Beduins. It should be remembered that in the historical period the latter have been infinitely less stable than the tribes of Berber origin (speaking Arabic or Berber); whether because they were taken to form the ḥālit, which guards each large towns (environ of Fès, Meknes, Rabat-Salé and Marrākṣīs) or because they were transported far from their original homes as a measure of repression (case of the Shūrā), the Arab tribes of the Atlantic plains have become much broken up and mixed. The Beduin dialects which have most chance of having preserved their original character are those of the tribes of the Saharan steppes who have remained relatively stable and intact: Ban Ǧil, Ḥilāya, Ḥilwī Marū, Ḫūl Ǧūrī etc. In any case, the following are the main characteristics of these dialects: firstly the ḥāl, is pronounced as g (= ḥāl masʾūdat), and it is already this pronunciation which for Ibn Khaldūn characterises the Beduin dialects of his time. The ḥālit, ḥālit and gālīt ṭāli are retained with their interdental value. The short vowels are indistinct: the sound ū is almost completely absent and many short unaccented vowels sound practically like a labial ū. Characteristic is the appearance of an extremely short transitional vowel of a character, which is developed after ṯū, ḥū and ṭū placed before a consonant or an ṭū, ḥū, ṭū, "great" (plur.), ḥūḍā, "he sits down;" ḥāḏīṣa, "tablet;" ḥālūl, "green apple;" ḥālīl, "full;" thin (plur.), ḥālāl, a similar sound is found after ḥū ṭū and ḥū ṭū, ḥū ṭū, ḥū ṭū, ḥū ṭū, c. e. ḥāla, ḥāla, ḥāla, "crown;" ḥāla, ḥāla, "a blow;" ḥāla, ḥāla, "pomegranate;" ḥāla, ḥāla, "sugar;" ḥāla ḥāla, "piece (of cloth);" ḥāla ḥāla ḥāla, "sound;" by analogy the combinations ḥū ṭū and ṭū ṭū when the ṭū corresponds to a classical ṭū, a reduced sound is used for ṭū and ṭū; e. g. ḥāla, ḥāla, "the (little) place;" ḥāla, ḥāla, "the entrails;"

The retention of the accent on the first syllable causes "projected" syllabic forms: yekhā, the writer, plur. yekhā, yechā, Morocco; nīkha, "musket;" ḥālā, "my cow;"

The personal suffix of the 3rd pers. masc. is -ā. The dialectal preposition translating "of" is nīf or in. from the class of -ā, according as the word before it is feminine or plural, this preposition becomes nīf or nīf (i.e. or nīf (i.e.)).
It does not seem that the Beduin dialects know the use of the verbal prefix indicating the indicative present. In the plural personal forms of the defective verbs, there is a reduction of the diphthong:  ❮gila❯, from the verb  ❮gila❯ "to fly";  ❮nial-jidt❯ from the verb  ❮nial❯ "to forget".

We may also note the use of a preposition  ❮to❯;  ❮gila-mal❯, "he told us".

From the point of view of vocabulary, some words are characteristic of Beduin dialects:  ❮dawiri❯ "to make, do",  ❮bati, bati, bati, to wish",  ❮yemen, yemen, yesterday",  ❮jarara, jarara, jarah, now", from the classical  ❮dawiri-wawi❯. We may add the particle  ❮naf❯ used to indicate interrogation:  ❮wala naf❯, "have you seen so and so?" and the phrase  ❮naf, naf❯, "he no longer comes".

Jewish dialects: The Jews who emigrated from Spain have, as a rule, retained the use of an archaic Spanish; many have also learned Arabic for business reasons. Alongside of the Spanish Jews, we have in the Berber highlands and in the towns of the interior: Moroccan Jews of unknown origin whom the former called  ❮forareaa❯ (Span. "foreigner"); according to the district, they speak Berber or Arabic, but in the towns their dialects have not yet been studied. They have a literature in an Arabic dialect written in Hebrew characters (and called, certainly wrongly: Judaism-Arabic):  ❮pisyaan❯, songs at family festivals (cf. Tadjouri, in  ❮Hzrurin❯, iii, 1923, p. 408-420), and songs in songs dealing with real happenings; some of these texts have been printed at Fès and Constantine; a newspaper written in an Arabic dialect and printed in Hebrew characters called  ❮lis-barayya❯. The Library of the University has been published at Tangier for a number of years.

5. Relations of the linguistic groups of Morocco to one another. Morocco appears to the philologist a wonderful field for the study of the influence of the substiratum on an imported language, since the language of the substiratum, i.e. Berber, is still alive alongside of the Arabic and quite well known. The results of the examination are very meagre: the phenomena actually ascribable to the action of the substiratum alone are insignificant; this may, however, be due to the fact that Arabic, a Semitic language, and Berber, a proto-Semitic language, are not sufficiently differentiated.

From the phonetic point of view, there is hardly any sound change found in the highland dialects of the arabized Berbers, for which a corresponding change cannot be found in the dialectal phenomena of old Arabic; only, perhaps their tendency to spirantization should be connected with the identical tendency observed in the northern Berber dialects found in the confines of the Ifni country.

If we consider the morphology, we see that in the highland dialects the verb has lost feminine forms of the plural of the old Arabic, which still survive in some Beduin dialects and are still found in Berber. A Berber origin has been sought for the use of the initial prefix indicating the present of the indicative; but similar prefixes are found in Egypt and in Syria where there are very different substirata.

Certainly Berber is the scheme  ❮to, to❯ —  ❮t❯ which forms mean indicating truded  (to-mawasad, "trude of a mason") and names of abstract qualities (to-beeza, "vagularity"), it is however curious to note that in modern Berber, this scheme has not this significance and is only used to form the feminine and occasionally the diminutives.

In the syntax of the highland dialects, we find indissoluble traces of Berber influence: plural treatment of singulars applied to liquids (water, urine), phrases translated or stereotyped, e.g.  ❮bati❯,  ✗kuddari, ✗kuddari, "kuddari's brother," with retention of the Berber particle indicating belonging to, -in.

But it is in the vocabulary that the Berber substiratum makes its influence felt most. Whether surviving in the highland dialects or borrowed in the Beduin dialects, many of the terms relating to country life are Berber (names of plants, animals, rocks, agricultural implements and tools); they have often retained in Arabic the Berber pseudo-article  ❮a❯, which, still felt to have its original value, makes them unfit to take the Arabic article also; alongside of the singular in  ❮a❯, we usually have a Berber plural in -ba also retained. It is curious by the way but intelligible to find in the highland dialects words of Arabic origin with the Berber article. These must be Arabic words borrowed and berberized at a time when the Jellia still spoke Berber and which have been retained just as they were in their Arabic dialect after being arabicized, e.g.  ❮a-jaf❯, "ditch," pl.  ❮a-jafir❯; in Tangier, the name of the mosque is called  ❮a-hlir❯; at Rabat, two words imported from Europe have a Berber form:  ❮a-zaf❯, "the sultan's boat" and  ❮a-zaf❯, "tea."

Some Berber words have survived in the administrative language of the Mekhzen:  ❮a-feg❯, "a wall of earth surrounding the sultan's camp";  ❮a-akhir❯, "a pasture reserved for the sultan's animals";  ❮a-fer❯, "it is to punish the guilty";  ❮a-rira, a-sycint❯, "a sharp maker of arrows."

The Beduin dialects naturally contain much fewer Berber elements than the urban dialects and still less than the highland dialects; their rustic vocabulary nevertheless made numerous borrowings from the technical vocabulary of the previous Berber tillers of the plains.

Within the Arabic area, the highland and urban dialects have borrowed a certain number of terms relating to the rural activities of the Beduin; they are as a rule revealed by the pronunciation of  ❮al❯ as  ❮a❯. The Beduin dialects in their turn borrow from the towns their words relating to a more advanced culture; but, for economic, political and, to a certain extent, aesthetic reasons, they give more than they borrow.

Some words, which are used in the urban and highland dialects as well as by the Beduin dialects but are unknown in the Spanish and Maltese dialects, are perhaps of  "himiti" origin; the principal seem to be  ❮al❯, "horse",  ❮al-afir❯, "bear" and  ❮al-afir❯, "to see".

In addition to the Berber and Arabic elements, the Moroccan vocabulary contains a fairly important number of European loanwords. They come from the vocabulary of a higher culture and relate to the flora (in cultivation or its products), to agriculture, to food and dress, to furniture and housing, sometimes even to parts of the body. They are Greek or Latin borrowings of the old period, Romance or Spanish for later periods; but neither their meaning nor their phonetic treatment enables us always to be able to date accurately the time of their introduction and their origin.

These "European" loanwords are naturally found in larger numbers in Northern Morocco, which
has been more subject to Mediterranean influences which, through refugees from Spain, have been felt as far as the northern part of the Middle Atlas. The Beduin dialects have escaped these influences (cf 1. Simonet, Glosario de voces bereberes y latinas usadas entre los Morosques, Madrid 1883; 2. Schuchardt, Die romanischen Lautwörter im Berberischen, Vienna 1918; 3. G. S. Colin, Etymologie maghrébin, in Herzog's 1926 and 1927); 4. A. Fischer, Zur Lautlehre des Marokkanischen [chap. ii., III. und IV.], Leipzig 1917).

Between the two extremes marked by the most conservative Beduin dialects and the most characteristic highland dialects lies a whole gamut of intermediate varieties, which are in the transitional stages; they include the highland dialects which are characterized by the presence of the plain south of the Sahara, as well as certain dialects of Beduin type used in the Atlantic plains, notably in the nom-adyan towns. "But however extensive and deep may have been the interpenetration of the two types, it has not abolished their fundamental likeness" (W. Marqais).

In spite of the profound differences which separate them, the highland and Beduin dialects of Morocco (and of the Maghrib) agree in one essential and characteristic morphological feature: the forms sing. $a-s$, plur. $a-m$ in the first person of the sorist. Now this fact is attested in the 17th century for Almoravie Spain and Norman Sicily, i.e. in languages from which Hilali influence is clearly excluded; it is also found in Maltese; it must then be admitted that the two groups of dialects have independently brought about this innovation, which seems to have remained exceptional in the dialects of the east. The two groups agree also in the loss of short vowels in open syllables; this phonetic peculiarity is also found in many eastern dialects; but it is curious that it has become general in the Maghrib while the dialects of Spain and Egypt do not have it.

It is in the Documents inédits d'histoire almoravide [we find the first information about Moroccan Arabic (in 975), "in order that", "aita", "of", first persons of the sorist in $a-s$ (sing., $a-m$ (plur.)), but we have to wait till D. de Torres to find a few phrases transcribed (cf. French travel, Paris 1356, p. 341, 342, 349). Moussat, who was stationed at sea by the Moors in 1760 and was for a long time a prisoner, has left us a Dictionnaire arabe-français, in French and Moroccan, in transcriptions (cf. Histoire de la Capitale..., Paris 1683, pp. 328-359). The first grammatical notes were collected by Hest (cf. Histoire..., 1779, ch. 8, p. 202-210), who has also given us a Berber-Danish-Moroccan Arabic vocabulary (op. cit., p. 128-133). It is to Fr. de Domlayci that we owe the first monograph on Moroccan dialects, which is also the first serious attempt to study of Arabic dialects, the dialect which he deals with is that of Tanger (Grammatica linguae marroc-carii, Vindobonae 1800). Since then, there has been a number of studies; for works before 1911 see the bibliography given by W. Marqais in Teissier arabes de Tanger, p. 207-213; for later works in the bibliography in Teissier arabe de Rabat by L. Brion (now in the press).

2. Literature of the Arabic Dialects. Like all popular literatures, the literature of the Arabic dialects of Morocco is essentially poetical. The only texts in prose are those which have been collected recently by European students of dialects.

In the Arabic poetry of Morocco two periods must be distinguished: the first extending down to the beginning of the Sa'dian dynasty; the first known texts are those which Ibn Khaldun gives at the end of his Muqaddima among the specimens of the poetry of the towns. To these we may add a mass of poems composed in honour of the Prophet (Mu'addis) of which numerous collections exist in manuscript. Leo Africanus (ed. Scheffer, ii., p. 430) says that under the Marmides, poets used to compose verses in "valgar African" on the Mawlaid and also on erotic subjects. These were recited in the presence of the sultan, who gave prizes to the winners of the competition. From this group cannot be separated the poems which accompany classical Moroccan music, "Andalusion" music, many of which must have been composed in Morocco; these were collected and classified by al-Har,ik, a musician of Spanish origin who had settled in Tetouan. All these poems belonging to this first period are written in the Spanish Arabic dialect, which after the great success of the Cordovan Ibn Ku'man (xxrth century) became the classical language of the new poetic genre called sa'di, which had this in common with the mu'addis that, while employing like it new metres, its prosody was based on the classical metre on the complexity long or short of the syllables, but the sa'di differed from the mu'addis in that it was written in the Spanish dialect and not in the classical language.

The main characteristics of the poetry of the Moroccan dialects of the first period are attention to the quantity of each syllable as in Latin and the use of the Spanish dialect.

The second period, on the other hand, is distinguished by a system of prosody founded exclusively on the number of syllables in each verse (as in French) and by the use of a special language called melhun, a kind of waw adapted to literary purposes, based on the Moroccan dialect but influenced partially by the Beduin dialects. It is noteworthy that this poetry is of Berber origin and, it was under the benimining dynasty of the Sa'dians and the Alawids that it rose and flourished.

The first known author of a sa'di written in melhun appears in the xixth century: he was Abcr Firis 'Abd al-'Aziz al-Maghribi, who was one of the poets of the Sa'dian Sultan al-Mansur al-Dhahbi (1578-1602). His fame is still great and is preserved in the provest 'Uli min khi al makhrawi, which means "Nothing that is long is of interest except the palm-tree and the Al-Maghribi". Other poets followed him. It was at this time that the saint 'Abd al-Rahman al-Majnun al-Dakhili (b. in 1569) wrote his mystic sa'di, "bheblu maqru bi, heblu maqru bi, heblu maqru bi" which means "Nothing at all is of interest, except the palm-tree and the Al-Maghribi". The works passed from the poets to Tiemezam, an important centre of melhun poetry; first Sal'm b. 'Abd Allah al-Mindir al-Tilmanzi, author of the celebrated 'Afaj, who left his native town to live at the court of the first Alawid Sultan Muhammad, but the Shari (d. in 1664) and al-Raghi (d. in 1672): a pupil of al-Mindir, Abdmal b. al-Taribi, hounded from Tiemezam in 1672 by the Turks, also came to settle in Morocco among the Ben Znians. But we have to come down to the xixth and especially the xxth century for the coming of a whole school of poets writing in melhun. The three principal centres of literary activity were Fes, Meknes and
Marraksh. The subjects treated are most varied: love poems, mystic, erotic and satirical (discussion between a white woman and a negro, between a townswoman and a Bedoin woman etc.), political (on the occasion of the French conquest and the establishment of the protectorate), didactic (manufacture of powder, target-shooting, falconry) poems or burlesques (parodies of khtas declared by the students at their fêtes).

Among the numerous authors we may mention: Si Muhammad b. Sulaimân, Si Al-Thânim al-Madâghi, al-Qaïûdî, al-Hanbî; we owe humorous khtas to Si Al-Madâni al-Tarâkiî est Marraksh; Si Kâdûr al-Haïrî, who was buried at Melkens specialised in mystical and ethical poetry. The Arkâb b. Layalînî, whom Mihi b. Muhammad b. Saïd b. Muhammad b. Ahmad al-Harâbî of Tetwân (d. 1845) also wrote mystical khtas in melhâm which are collected at the end of the lithographed edition of his Dîwân (Tunis 1331; Fâs, n.d.). At the beginning of the xxth century, Al-Saïdâtî in Fâs was composing political khtas.

Melhâm poetry has completely replaced poetry in the Spanish dialect; it constitutes a very vigorous branch of literature, much in favour with all classes of society; we frequently find almost illiterate authors, and people say that their talent is a poetic gift given by God (mas'ûd); on the other hand, even the rulers have not disdained this popular poetry and one of the last Alâïdî Sulâmî, Mawâyî Abî al-Ifrîqî, wrote numerous khtas in melhâm which have been collected in a Dîwân lithographed at Fâs.

Alongside of this men's poetry, there are the songs of the women (songs of women working at the mill, songs of gleaners, songs of family fêtes, Ibabellâhs), the children's songs which are often strangely conservative, epigrams and proverbs (cf. A. Fischer, Das Liederbuch eines marokkanischen Singers, Leipzig 1918; C. Soneck, Chants arabes du Maghreb, Paris 1902 (Nes. 5, 6, 11, 12, 13, 14, 74, 84, 85, 88, 89, 94–97, 115 and 116 are Moroccan); E. Lévi-Provençal, Un chant populaire religieux du Djebel Marocain, in Revue Africaine, 1921; H. de Caunes, Les geants de Sidi Allal ben Ahmad ben-Mulâ, Maroc, Paris 1894; on the poetry melhâm in general, cf. Abî al-Muqâtab al-Ghâthî, Kâfîs al-Kâmî 'an Abî al-Sâîdî, Algiers 1904, p. 49–93; S. Baray, Notes d'ethnographie et de linguistique nord-africaine, Paris 1924 (songs of women and children); L. Brunot, Proverbes et dictons arabes de Rabat, in Hespèris, 1928, with Moroccan bibliography of the subject).

III. OTHER LANGUAGES. A sketch of the languages of Morocco which only took account of Berber and Arabic dialects would be incomplete, for other elements of secondary importance have to be considered:

1. Classical Arabic, the official language is used only in writing, for sermons, lectures and conferences; it is never the language of conversation. But as religious studies are considerably developed in the towns (especially Fâs) and also among the jbâla (Kur'ânic studies and especially ibtâî), many words of classical Arabic have been introduced into the popular dialect by the educated classes. The phonetic peculiarity to notice in borrowed classical words is the retention of the short vowels of the classical language, as a result of the process of elision; e.g. classical tâhir, plz. tâhirî, "decreed of the sultan", borrowed by the popular dialect in the form tâhir, whence a dialect plural gâshîh. Several Kur'ânic expressions or phrases of exegesis hence passed into everyday language as adverbs: tâhirî "guilty" (taken from Kur'ân vi. 153), bâ et-tâhibî "slowly", lit. "in commenting on", moâ šâhî "perhaps". Morocco, as a whole being little arabised, seems incapable of borrowing a part of the classical vocabulary and adapting it to its own dialect. Its borrowings from classical Arabic almost always look like borrowings from a foreign language.

2. Spanish was the only language spoken by many of the Muslims of Spain, who in the xvi th century and especially in the xviii th took refuge in Morocco, mainly at Tetwân and Rabat-Salî. Moutte, who was taken a hostage by the Mâarîf in 1670, says that Spanish was as common there as Arabic; his remark is probably true only of the towns already mentioned. The descendants of these emigrants from Spain, later learned Arabic and forgot Spanish, under the influence of Islamic culture. Not having been subject to the latter influence, the Jews of Spanish origin still speak an archaic Spanish, sprinkled with Arabic terms modified to the inflexions of Latin morphology.

3. At the present day, in the palace of the sultan, many servants of both sexes still speak Subsidien dialects, but these seem to have had no influence on the Arabic dialects of Morocco. No trace has so far been found of the existence in Morocco of secret languages; one could hardly put in this category the argots of certain guilds (butchers) or those of the students, the originality of which consist simply in transposing certain letters of each word of the ordinary language and in the addition of certain rearranged syllables.

(Georges S. Colin)

VIII. INTELLECTUAL LIFE.

More especially since the end of the middle ages, Morocco has occupied a place by itself, often important, in the history of Muslim civilisation. From this point of view of intellectual life, it was for long under the tutelage, more or less marked, of neighbouring countries, and it was only from the time it became an independent state with well-trained ministers drawn from the tribal leaders that it could show independence in this respect also. The great activity at the centre of learning in Arab Spain down to the end of the xiii th century had undoubtedly an influence in Morocco, but it was after the return of the Iberian Peninsula to Christianity, that, owing to the migration of refugees from Spain to Morocco, where there happened to be ruling princes anxious to further Islamic studies, it was able to preserve the last and only centres of study in the Muslim west. In any case, in spite of the relatively large number of scholars which it has produced in various branches of 'ilm, this country is far from having inherited in the eyes of the rest of Islam the reputation and intellectual prestige, which Spain enjoyed when it was a Muslim country. However, it may be said that the towns of Morocco have always held in recent centuries a large proportion of men of letters, much attached to their traditional cultus, to such an extent that this culture, to the end of the xvi th century at least, never allowed the slightest place for modern sciences, the study of which, if it has gradually become more or less established in the Muslim east, has never interested the west.

The characteristic feature of this culture, which
as essentially founded on religion, is that it has remained unchanging. In this country, where only a few years ago tradition strictly regulated all acts of public and private life, it is not surprising that the intellectual ideal has always remained the same. It has already been remarked that the Moroccan faqīḥ of to-day, whether he be magistrate, teacher, or official of the Sharīṭan government, possesses the same stock of knowledge as a faqīḥ of the periods of the Marinids or Sādīns. The same instruction has been given him and by the same methods. He has received first of all an elementary education in the Koranic school [see Mawṣūṣ], he has learned the Kur’an by heart, often completely, and some of the elements of grammar. Next he became a student (māEntre), and the faqīḥ al-Uṣūl, which he studied, is governed by no rules or programmes other than the traditional ones. He first of all studied the “mother-works” (mawḥūṣ), compendia made to be memorised readily, on theology and grammar (usually the Mawṣūṣ of Ibn ‘Ashīr and the Aṯurūmīya). It was only then that he entered upon a more thorough study of more advanced texts, usually commentaries (ṣahrā) or glosses (ṣāḥīḥa) on works (mata) of established reputation and exclusively Islamic in character. The whole trend of his studies is toward a better knowledge of the theology of the law.

The result is that in most cases in Morocco men of learning are almost entirely jurists and that they differentiate between purely Islamic sciences (mawḥūṣ) and profane learning (fusḥa) with some contempt for the latter. We understand also why the part played by Morocco in Arabo literature is primarily in the domain of subjects directly connected with the Kur’ān and the Sunna, theology, law, and usul.

The centres of learning have varied with periods and historical circumstances. The early ones seem to have been the points nearest to Spain, Ceuta and Tangier. The foundation of Fāṣ and the building in this city of the great Mosque of the Kairawānīs (Dżāner al-Kairawīyīn) initiated the establishment of a centre of culture in the interior. A little later, Marrākush, the capital of the Almōravids and of the Almorawide, became by desire of its rulers the centre of attraction for Maghribi scholars and even for a certain number from Spain. But it is from the Marinid dynasty, who saw in the development of educational centres in Morocco a means to make themselves popular in the country and to acquire prestige in the eyes of the Muslim world, that the rise of Fāṣ as an intellectual centre dates: it was the metropolis of learning in the country from the sixteenth century. Not only did the Marinid princes make it the political capital but by the foundation of a series of colleges or madrasas (in Moroccan modern) around the Dżāner al-Kairawīyīn and mosque of New Fāṣ, they were able to attract to this city a host of students from all parts of the country and to give it the renown for learning, which it still jealously claims to-day. In the Marinid period, madrasas were also multiplied outside Fāṣ. Meknes, Salé and Marrākush had their own which shows that regular education was given in these towns.

In addition to the part played by the madrasas, there was the activity of the šāwīya, directly connected with the development of maraboutism and šārīṭan in the country in the period when the Spaniards and Portuguese were trying to estab-

lish themselves in Morocco in the eighteenth century. The šāwīya, religious centres, headquarters of the Dżāber, naturally became centres of teaching. At the time when Fāṣ could only with difficulty keep its character as the principal centre of learning in the country, the šāwīya, in which teaching was carried on, became more and more numerous; e.g. the šāwīya of al-Kalīla in the Middle Atlas, the šāwīya of Tingrūṭ in the land of Da’ūr, the šāwīya of Wāṣītan in the north. The most famous scholars were frequently either heads of brotherhoods or šāyṣ, who taught in the motherhouse of their order.

We do not intend here to give a detailed sketch of the Arabic literature of Morocco, but will be content with a few general indications and names distinguishing where possible, between Islamic and profane sciences.

It was not till the Muslim west adopted the Maḥrivī rite that Morocco began to produce work in the domain of šorīṭ in close accord, as already mentioned, with the school of Spain. In this period of intellectual dependence, the relations between the two countries were confined and the Maghribi students down to the eighteenth century considered a journey in Cordova, Marcia or Valencia necessary to finish their course. The cast did not yet seem to exert the attraction that it did later. At this period, besides, the Islamisation and Arabisation of the Berber masses was still very recent. Only a few names may be mentioned for this early period:

Darrā al-Iṣāmī, of whom much that is recorded is legendary; the famous reformer Ibn Taḥṣīn [q.v.], creator of the Almohad movement and author of several risāla or ṣaḥāda on his teaching; the šāyṣ ‘Abū ‘Iyāṣ [q.v.], born at Tafṣīn in the first half (1053), d. at Marrākush in 554 (1159), author of numerous works on Muslim learning, of which the most famous are the Kāliš al-Sharīṭ and the Ḥajar al-Aṣwaṣ with a collection of biographies of learned Malīkis, entitled al-Maṣāḥīṣ.

During the modern period, on the other hand, the number of learned Moroccans becomes more and more considerable. The best known are for Fāṣ: Ibn Battīr (eighth century A. D.); Ibn Fājkī (nineth century); the scholar of Meknès Ibn Ghārī (1019); ‘Abd al-Raḥmān Ibn al-Kādī (1082); ‘Abd al-Raḥmān b. Idrīs Manṣūr († 1179); Muhammad b. ‘Abd al-Salām al-Fāṣ († 1214); and Ibn Radīw (Yahyā al-Sarrāq) († 997); Schākhī b. ‘Alī († 956); Ridwān al-Dżīlī († 991); Mahamad b. Kāsim al-Kasāf († 1024); Ibn al-‘Irāqī († 1228); for al-Ṣafā: Abu l-Ḥasan al-Salqīnī, commentator of the Nāṣrīzawan, (al-Dżarīzī [q.v.]) and Ahmad Zarrīk (nineth century) commentator of the Ṣaṣrīta of Ibn Abī Zaid al-Kairawān; al-Waḥsharī († 955); al-Manṣūrī († 995); Ibn ‘Ashīr († 1040); Māyānī († 1072); for philology: al-Malākhī († 807); Ibn Zakīr († 899). Their works have for the most part been recorded and will be found detailed either in Brockelmann, G. A. Z. or in Benreresheb’s work on the individuals mentioned in the Ṣafā’s of ‘Abd al-Kādīl al-Fāṣ. Only a small number have been printed in Western libraries; but on the other hand, they all form the foundations of the collections of manuscripts formed and preserved in the imperial palaces and mosques of Morocco.

Some Moroccans scholars have written works on šaṭā or collections of ṣaḥīḥs, in addition to books of a strictly Muslim character. None of
them can claim any great originality and purely literary slims are rare. Poetry, as a rule—when it is not didactic (argumin)—is religious or mystic. At the courts, there were always a few literary men maintained by the princes, who were the panegyrist, often very loyal, of their patrons.

It is at the courts also, especially from the sixteenth century, that we find the few historians who have given us original chronicles or compilations.

Their works, planned on a singularly curious conception of history, have nevertheless the merit of giving us the only detailed information about the political history of the country in the period of the author or immediately preceding it. Those which date from the Middle Ages are however much the best. The kind of work not only did not improve later, but because simply dry chronicles in which events are related in a brief and colorless fashion.

The early historians of Morocco—if we except the Berber genealogists about whom we do not know very much and the contemporaries of the Almoravid dynasty. A little later, the Almohads find a historian in the person of a companion of the Mahdi Ibn Tumart, Abul Bakr al-Baidhak al-Sanadik, the interest of whose me molos contrasts strikingly with many later chroniclers. Alongside of the work of al-Sanihak may be placed the chronicles of Ibn al-Kattan and of Abd al-Wahid al-Marrakush as of high value. But it was in the Marinid period that the historian found most favour in Morocco. Leaving out Ibn Khalidin, whom Morocco is not the only one to claim, we may mention Ibn Idhari, a scholar of Makkur, to whom we owe a history of North Africa, Spain, the Bayan al-Maghrabi, that of Ibn Abi Zar'a, author of a history of Fés and the Moroccon dynasties, Rawd al-Kureish, Ibn Mariq, author of the Musnad, a monograph on the sultans Abu al-Hassan Al'Ali, Ibn al-Ashur of the family of the kings of Granada, author of the Rawdat al-Nasrin. Under the Saadians, the principal historians were al-Fiqih, al-Franti, and the Nasab al-Hadii; finally under the Alawis, al-Zayanti and Akebina.

Geography is represented in modern Moroccon literature only in the form of itinera or accounts of the travels of pilgrims, in which the description of the country passed through only occupies an insignificant place. Nevertheless, the geographer al-Idrisi and the great traveller Ibn Battuta were of Moroccan origin.

The biographical literature of Morocco is considerable. The collections of masalikh, saints, monographs dealing with families of chayfa or religious brotherhoods are abundantly especially in the modern period. There are also collections by town or century, some of which are of a certain interest, even from the point of view of history. All these biographies have been surveyed in E. Levis-Provenchel, L'Historien des Chorfa. The most notable biographers down to the middle of the sixteenth century are Ibn 'Askar, author of the Darurat al-Nasir; Ibn al-Kadi, author of the Darurat al-Nasir and the Qa'idat al-Fadilat; the historian al-Franti, author of the Safwat man nabihr; and al-Franti, author of the Nihayat al-Matshat and the Idhrat al-Durar.

As to medicine and natural science, Morocco down to the sixteenth century was closely dependent on Spain. The physicians of the Almoravids and Almohad princes were from Spain, like Ibn Balja (Avenpace), Ibn Tufail, and the celebrated Ibn Rustad (Avenroos) and Ibn Zubir (Avencoar). In the modern period, we find at the courts of the sultans several physicians of Moroccan origin who have left works. The chief were, in the Saadian period: Abd Muhammad al-Kasim Waiz al-Quasssal, in the Alawid period: Ibn Shukr, 'Abd al-Wahhab Adarrak, Ahmad al-Dara', Abul Mir'ahib al-Asaf al-Marrakush, Ahmad Ibn al-Halalji and 'Abd al-Salih al-Akama.

Finally two famous Moroccans studied the exact sciences of the sixteenth century: 'Abd al-Hassan b. 'Umar al-Marrakush, author of a treatise on astronomical instruments, part of which has been translated by Sadilout, and Ahmad Ibn al-Bannus, to whom we owe several works on arithmetic, geometry, algebra, astronomy, astrology and alchemy.

At the end of the sixteenth century, the reign of Mawsil al-Hassan was marked by a kind of renaissance in Muslim studies in Morocco, particularly characterized by the need which writers felt of getting their works printed to make them more widely known. The lithographic press of Fas acquired a certain importance at this time and left to publish texts which had hitherto circulated only in manuscript. Among them, there appeared at Fas the three volumes of the Antiqat of Ahmad b. Dhakar al-Kattani [q.v.], an excellent biographical dictionary of the celebrities of the northern capital. At the same time, there was published in Cairo the great Moroccon history of Ahmad b. Khulil al-Nasiri al-Salawi [q.v.] entitled Kitaab al-Ittibar al-Makbar al-Magribi al-Aqb.

The establishment of the French protectorate in Morocco and the remarkable spread of French civilization in the large towns have already profoundly modified the intellectual ideals of the younger generation in Morocco. It is however still too early to forecast the orientation that Arabic literature will take in this country in the years to come.

MORÓN, Arab. Mawsil, a little town in the south of Spain, on the right bank of the Guadalquivir and at the foot of the Sierra de Morón for the S.W. of Cordova and S.E. of Seville. It was in the Muslim period the capital of a kibar...
of district and an agricultural centre with numerous olive-groves. At the beginning of the tenth century, it was one of the centres of resistance of the famous rebel 'Abd al-Rahman II. His citadel was captured by the troops of 'Abd al-Rahman III in 911 (923). In the next century, during the period of the petty kingdoms of the taifas, Morón was the capital of a little Berber dynasty, the Banu Dammar, Abadís from the region of Gubes in Tunisia. The first member of the dynasty to declare his independence in 433 (1041) was Muḥammad b. Nuh; his father Nuh b. Abi Tarid had lived at Morón from 1013 without actually recognising the government of Córdova. Muhammad b. Nuh soon excited the jealousy of the 'Abduládi of Seville al-Mu'tadid who made an attempt on his life. He died in 449 (1057). His son Manad Tarid al-Dawla, who succeeded him, was soon besieged at Morón by al-Mu'tadid and in return for life and liberty surrendered the town in 458 (1066). Morón and its territory were annexed to the kingdom of Seville and henceforth shared the fate of the capital.

**Moron.** [See Moore.]

**MOSTAGANEM (MUSTAGANEM).** A coast town on Algeria, eight miles E. of the mouth of the Shelf (q.v. Long, [Greenwich]) does not occupy the site of any known ancient town. There is no natural harbour here; two capes, not particularly well marked (Kharuba and Salamander), leave vessels without protection against winds from the north and west. It is therefore not as a port that al-Bakri (xiith century) mentions Mostaganem for the first time. He describes it as a town situated "not far from the sea" (it is less than a mile away) living on the produce of its rich territory, notably the cotton plantations. From this time onwards it was surrounded by a wall which strengthened its natural defences. The old town occupies a triangular plateau formed by the sharp bend of the Ain Sefra and the wall runs along the top of the ravine. On the point of this natural stronghold, the Almoravid Yūsuf b. Taqiyy is said to have built in 1082 a fortress which was later called Burdi al-Maḥṣal, from the name of one of the tribes of the neighbourhood, and is now a prison. Like the other towns of the coast, Nedroma or Algiers, Mostaganem was probably given a small Almoravid garrison. Thus strengthened, the town would serve as a place of refuge against an attack from the sea and one could keep at a distance the Berber tribes of the hinterland, who belonged for the most part to the Maghrībīa confederation. It must thus have developed to some extent. In the middle of the xiiith century, Idris tells us that it had bazaars and baths; he emphasizes the abundance of the water, which irrigated the gardens and orchards and provided mills.

The name of Mostaganem does not figure in history throughout all this period when the Almoravids in theory held the central Maghrib. The decline of the Almohads enabled the Maghrībīa to become completely masters of the country. In 1267 and 1277 the Zaïyāda sultān of Tlemcen Yaghmorbaṣa reduced these turbulent tribes and incorporated their lands in the empire which he had founded. In 680 (1281) he entrusted the government of Mostaganem to one of his cousins, al-Zarîm b. Vajrī, a descendant of one of the collateral branches of the family of the Banū Zaïyān, in spite of the lack of confidence he had in those relatives whom he had deprived of the throne. These fears proved well founded. Al-Zarîm, having raised the Maghrībīa to rebel, declared himself independent. Yaghmorbaṣa had to march on Mostaganem; he blockaded the town strictly and the rebel surrendered after obtaining permission to cross to Syrja.

Like all the coast region, Mostaganem in 735 or 736 (1335-1336) passed to the Merinid Abu l-'Hasan, who was engaged in the siege of Tlemcen. In 742 (1340) the victorious sultān built a mosque in Mostaganem. We have an inscription attesting this foundation of the interregnum of the Moroccan princes. Regained by the sultāns of Tlemcen, the town suffered disastrously from their weakness. The Sowaid Arab of the great Zoghba confederation became undisputed masters of the whole district. Mostaganem led a precarious existence. Léo Africanus at the beginning of the xvith century says that it occupied only a third of its former area. He credits it with 1,500 hearths, however, tells us of the weavers and of the roadstead to which ships from Europe came. He says the river runs "through the city", which shows that in addition to the old stronghold on the left bank there were now quarters on the right bank. In the Turkish period we know of two suburbs: Tidjit (the New) and Mattar (the Old). In 1536 Khair al-Din [q.v.] considerably strengthened its defences. Shaw at the beginning of the xvith century speaks of the citadel (the Fort of the East) which, built on a height, commanded the town and vicinity. In 1850 the garrison consisted of some hundreds of Turks and Kulliagh. The French took them into their service and put them under the command of the Kâib Ilīrām. Distrusting the loyalty of the latter and thinking he had an agreement with the Medjīber, an unsubdued tribe of the neighbourhood, General Desmiches occupied the town in 1833. The troops whom he stationed there were attacked by 'Abd al-Kādir. The vexatious results of the treaty signed by Desmiches with the Emir forced Clauzel to retake Mostaganem (1835). Under Bagesand, Mostaganem became the point of disembarkation and the centre of operations against 'Abd al-Kādir. It was there that in 1847 the first battalion of Algerian Tirailleurs (Turcos) was raised, and the town has since been an important centre for recruiting native troops.

Mostaganem has developed considerably since the early days of the French occupation; it has now over 27,000 inhabitants. Its harbour, which owes nothing to nature, has been improved by two jetties which still afford only a rather mediocre shelter to shipping.

MOSTAGANEM — MOSTAR

MOSTAR, the capital of the Herzegovina in the kingdom of Jugoslavia, one hundred miles S.W. of Sarajevo, on the Sarayevu—Mostar—Dhenvrovin railway. By the new (Oct. 3, 1929) division of Jugoslavia into nine banats, Mostar passed to the coast banat, the capital of which is Split (Spalato). The picturesque town lies two hundred feet above sea-level on both banks of the Neretva (Narenta) between the slopes of the Povdvet and the Hun. The old quarters of the town (Kounak, Carahya etc.) are in the east, the new in the west. In 1929, the number of inhabitants was 18,038 (in 1921 a little more: 18,176). Mostar covers an area of 16 square kilometres, has 2,916 houses, 33 mosques, a Serbian Orthodox and one Roman Catholic church. Mostar has a district mufti and a sharitul judge (zyhiri). Its trade is considerable as is its production of fruit, wine and tobacco. The climate is warm and rainy.

In the time of the Roman empire, there was a colony in this place of Mostar, which was destroyed during the period of migrations. In the centuries following, the immigrant Slavs conquered Zamunyade district with its capital Blagay (near the modern Mostar). According to the Dalmatian writers Orbini and Luccari (both at the beginning of the xviiith century), the new town of Mostar was founded in 1440 by Radivoy Gost, a vassal of Stefan Vukic Kosača, afterwards Duke of St. Sava. In historical documents the earliest mention is in 1452 of the two forts on the Neretva bridge (in castell al ponte de Neretva); the name of the town itself is not found till 1499.

It was only after the Turkish conquest of the Herzegovina (1485; cf. v. Hammer, G. O. A. 4, 1. 638), which resulted in the decline of Blagay that the new settlement began to develop rapidly, first as an important strategic point in the Neretva valley, then as a prosperous commercial town in addition. Since it grew up around a wooden bridge it was called simply Most (bridge), Mosti [of Mostar, properly Mostari (plur. "the bridges"). This "place of the bridge" was by 1522 the residence of the Turkish sandjakbeg of the Herzeogovina, who had previously lived in Foča. According to Hidjdži Khalfa, the crossing of the Neretva was exceedingly dangerous: the wooden bridge, being on chains, had no piers and swayed so that "one only crossed it in fear of death." The inhabitants therefore petitioned Sultan Sulaiman to have a stone one built in its place. The architect sent by the Sultan, the celebrated Sinan (q.v.), is said to have declared it impossible to build a bridge at this point, whereupon a local architect built the fine bridge which crosses the river in a single bold arch, thirty yards in length and sixty feet high. This is said to have been done in 1564 (1565—1567). The two Turkish chronograms given by Ewliyya Celebi and Çavtart to Čorbu and Keniz xahi actually give this date. This bridge not only gave Mostar its name but formed its chief sight, as it still is. The French traveller A. Pouillet in 1568 says that its "fabrication est plus hardie, sans comparaison, & dix fois plus digne que celles qu'on n'en trouve guère qu'ailleurs, y et estime une merveille" (cf. Giacinto zenafrica, musée de Bosnia i Herzegovina (hereafter quoted as: G. z. m.), xx [1908], 49). A modern traveller regards the old bridge at Mostar as the finest in the whole world (R. Michel, Fahrten in den Rheinlanden, Bilder und Skizzen aus B. und der H. [Vienna and Leipzig, 1913], p. 31). In his earlier book on Mostar he describes this bridge as a "ricrement in stone". The building of the bridge was often ascribed to the Romans and indeed its foundations perhaps date from them but the modern bridge undoubtedly dates from the Turkish period and is "the work of Dalmatian—Italian architects" (J. de Asboth, An official tour through Bosnia and Herzegovina [London 1900], p. 257).

Ewliyya Celebi visited Mostar in 1573 (1664—1665) and gives in his diary a number of details about the town, e.g. that it has fifty-three mescobales, three thousand and forty solidly built houses of stone, three hundred and fifty shops and forty-five mosques. Of the latter he mentions eight by name: 1. Old mosque in the Carahya, built in 1478 (1473); 2. Hidjdži Mehmedbeg mosque, built in 955 (1557); 3. Mndjil of Hidjdži Ali agha in the Carahya, built in 1016 (1607); 4. Deutfarlapaša mosque, built in 1017 (1608); 5. Kočki Mehmedpaša mosque, built in 1027 (1617); 6. Huričmian, built in 1044 (1634); 7. Rizanmedži Ibrahim-Efendi-mosque and 8. Hidjdži ‘Ali mosque. For the other two mosques neither the chronogram nor the year of building is given. The finest and largest of all is the mosque of Hidjdži Mehmed Bey, which is usually called "Karároyzhegova dizamiya", The monograph, quoted below, by Pec gives the names of twenty-seven mosques and twenty-six vakufs (vakuf) and in each case he mentions whether their foundation records are preserved or not.

It the course of the xviiith and xviiiith century Mostar was several times threatened by Venetian troops (1652, 1693, 1717). At a late date (1763), the Herzegovina was incorporated in the wilayet of Bosnia and Mostar was only the residence of the musalim. This lasted till 1832, when the land was again made a wilayet and Mostar became the headquarters of the newly appointed Herzeogovinan wawt ‘Ali Paša Rizvanbeg.

During the Turkish period Mostar produced a number of men of note in Turkish and Muslim literature and learning. Among these were:

1. Dya‘i (d. 972 = 1566); 2. Derwish Paša (Bayezidagić; 1599 and in 1601 governor of Bosnia); 3. his son Ahmedbeg Šabilić and 4. Ahmed Rüşhić (born 1047 = 1637). The following learned men were natives of Mostar: 1. ‘Ali Dede b. Mujaši (d. 1097 = 1588); 2. Mujaši Ajiyžažade, called Sheyyo (d. 1119 = 1707). Mufti of Mostar, commentator of various works; 3. Ahmed Efendi Mostar (Mostarski, d. 1190 = 1776), whose fetwa (Fetva-ı Ahmed) were very popular in Bosnia, and 4. Mujaši Šiđić (Karabeg), Mufti of Mostar (murdered).
in 1878), whose comprehensive Ḥādiyya ... 'alā Mir'āt al-Ūṣūl was printed in Sarajevo (1316).

A few days after the murder of the last-named, Mostar was taken without resistance by the Austrian troops (Aug. 5, 1878) and on Oct. 5, 1808, annexed to the Danube monarchy, in which it remained till 1918. During these forty years (1878–1918) Mostar was frequently the centre of Muslim (and of Serbian Orthodox) opposition to the government. In Mostar originated also the Muslim agitation for autonomy in religious affairs (cf. i., p. 760), which went on for ten years (1890–1899). The leader of the movement, 'Ali Fahmi Džačić, the then mufti of Mostar, had to escape to Constantinople at the end of January 1902, where he was appointed professor of Arabic literature in the University, in which capacity he published among other things his book Hīrān al-Ṣāḥīb fī Sharh Aṣ'ār al-Ṣāḥīb ( Constantinople 1324). In connection with the struggle for religious autonomy, there was published (from 1906) the Muslim political paper Maṣūmil (in spite of its Arabic title written in the Serbo-Croat language); shortly before the World War, a Muslim periodical, Byer (*Fenir* from 1912) was started in Mostar and a Muslimanska biblioteka (Muslim Library) which attained thirty volumes.

Since the dissolution of the Austro-Hungarian Monarchy in 1918, Mostar has belonged to Jugoslavia.

(MOŠUL (AL-MWAYSIL), the capital of Diyar-Rabi‘a [q.v.] on the west bank of the Tigris, opposite the ancient Niniveh. Whether the town already existed in antiquity is unknown. E. Hertfeld (Archäol. Reis., ii. 207, 259) has suggested that Xenophon’s Mērōna reproduces its old name and that we should read

*Mērōna (= Mawsil); but against this view we have the simple fact that this town lay on the east bank of the Tigris (F. H. Weissbach in Pauly-Wissowa, R. E., xv., col. 1164).

The Moslems placed the foundation of the town in mythical antiquity and ascribed it to Rēwand b. Bilawarī Ṣajdaḫja. According to another tradition, its earlier name was Khawālian. The Persian satrapy of Mošul bore the title Būdīl-Ardashīr-šāh, so that the official name of the town was Būdīl-Ardashīr (Le Strange, Eastern Caliphate, p. 87; Hertfeld, op. cit., p. 208). Lastly Bar Bahālī said that an old Persian king gave it the name Bih-horme-Kowdī (G. Hoffmann, Antige aus syr. Akten fers. Māryr., p. 178).

As the metropolis of the diocese of Akhūr, Mošul took the place of Niniveh whither Christianity had penetrated by the beginning of the second century A.D. Rahban Iqāb-yābī called Bar Kūra about 570 A.D. founded on the west bank of the Tigris opposite Niniveh a monastery (still called Mar Iqāb-yā‘) around which Khurāw II built many buildings. This settlement is probably the fortress mentioned in the Syriac chronicle edited by Guidi as Ḥēbūrīyā (mentioning de Hertfeld, “citadel on the opposite bank”) (Nöldeke, S. B. Ab. Wien., xxviii., fasc. ix., 1893, p. 29; Sachau, Chronik von Arbelo, chap. iv., p. 48; Hertfeld, op. cit., p. 208) which later was developed into a town by the Arabs (Chronicle of Sīrīt, at the end).

After the taking of Niniveh by Utbā b. Farkād (20 = 641) in the reign of ‘Omar b. al-Khaṭṭāb, the Arabs crossed the Tigris wherupon the garrison of the fortress on the west bank surrendered on promising to pay the poll-tax and obtained permission to go where they pleased. Under the same caliph, ‘Utbā was dismissed from his post as commander of Mošul and Harthama b. Arfaḏja al-Birīkī succeeded him. The latter settled Arabs in houses of their own, then allotted them lands and made Mošul his own town (muqāl); he also built a Friday Mosque (al-Balādghīrī, ed. de Goeje, p. 332). According to al-Wāṣidī, ‘Abd al-Malik (65–86) appointed his son Sa‘d as governor of al-Mawsīl while he put his brother Muhammad over Armiyā and al-Dijṣafe. According to al-Mu‘tāfī b. Tā‘ūs on the other hand, Muhammad was also governor of Adhurādājūn and al-Mawsīl, and his chief of police Ibn Tala‘id paved the town and built a wall round it (al-Balādghīrī, op. cit.). His son Marwān II is also described as a builder and extender of the town; he is said to have organized its administration and built roads, walls and a bridge of boats over the Tigris (Ibn Fakhrī, ed. de Goeje, p. 138; Yākūt, Mu‘jam, ed. Wüstenfeld, iv. 683–684). The foundation of a Friday Mosque was also ascribed to him. Mošul became under him the capital of the province of al-Dijṣafe.

After Mu‘awwakullī’s death the Khārijīyya Musāwir seized a part of the territory of Mošul and made al-Haddīja his headquarters. The then governor of Mošul, the Khawāyī ‘Abdakan b. Muhammad, was deposed by the Taghlibī Ayyāb b. Abūmd who put his own son ‘Abbās in his place. Soon afterwards the ‘Abbās ‘Abd al-Lāh b. Sulaymān became the governor of al-Mawsīl. The Khārijīyya took the town from him and Musāwir entered into possession of it. Mu‘tāfī appointed the Turkish general Asṭāqīn governor of the town, but in Iṣīmā‘īl 11259 the latter sent his son Asḵārīn there as his
deputy. The latter was soon driven out by the citizens of the town who chose Yahşû b. Sulaimân as their ruler.

Hâshim b. 'Abd Allah whom Aṣṣaghtâ then sent to Mûsûl had to return after achieving nothing. The Taghitli Ishaţ b. Aytâb whom Aṣṣaghtâ sent with 20,000 men against Mûsûl, among whom was Hâmid b. Haamdân, entered Mûsûl after winning a battle, but was soon driven out again.

In 261 the Taghitli Khîlîar b. Ahmad and in 267 Ishaţ b. Kundadîj was appointed governor of Mûsûl by Mu'tâmid. A year after Ishaţ's death, his son Muhammad sent Hârin b. Sulaimân to Mûsûl (279); when he was driven out by the inhabitants he asked the Banû Shâhân for assistance and they besieged the town with him. The inhabitants led by Hârin b. 'Abd Allah and Hâmid b. Haamdân after an initial victory were surprised and defeated and burned by the Shâhân; shortly afterwards Muhammad b. Ishaţ was deposed by the Kûr 'All b. Dâwûd.

When Mu'tâqid became caliph in 279, Hâmidân (the grandfather of Saif al-Dawla) managed to make himself very popular with him at first, but in 282 he rebelled in Mûsûl. When his army was sent by the caliph against him under Yûsuf and Naqût, he escaped while his son Hûsain surrendered. The caliph of Mûsûl was stormed and destroyed and Hâmidân soon afterwards was captured and thrown into prison. Naqût was then ordered to collect tribute in Mûsûl and thus came into conflict with the followers of the Khâridjî Hârin; Hârin was defeated and fled into the desert. In place of Tuk-tamîr, who was imprisoned, the Caliph appointed Hâsan b. 'Alî governor of Mûsûl and sent against Hârin, the main cause of the strife, the Hamdânî Hûsain who took him prisoner in 283. The family thus regained the caliph's favour.

When after the submission of the Khâridjîs, raiding Kurds began to disturb the country round Mûsûl, Muktaft again gave a Hamdânî, namely Hûsain's brother Abu l-'Ishaţâ 'Abd Allah, the task of bringing them to book, as the latter could rely on the assistance of the Taghitli settled around Mûsûl, to whom the Hamdânîs belonged. Abu l-'Ishaţâ came to Mûsûl in the beginning of 293 and in the following year subdued the Kurds whose leader Muhammad b. Bilis submitted and came to live in Mûsûl.

From this time the Hamdânîs [q. v.] ruled Mûsûl, first as governors for the caliph, then from 317 (Naqût al-Dawla Hâsan) as sovereign rulers.

The 'Uqalliida who followed them (386–459) belonged to the tribe of the Bann Ka'b. Their kingdom, founded by Hûsain al-Dawla al-Mu'azzîl, whose independence was recognized by the Byzids, extended as far as Ta'bîk (Ishaţâ), al-Mâlûdîn and Kifâ. In 489 (1005–1006) Mûsûl passed to the Saljûqs.

The town developed considerably under the Atâbeg 'Imâd al-Din Zangî who put an end to the Saljûq rule in 521 (1127–1128). Mûsûl, which was for the most part in ruins was given splendid buildings by him; the fortifications were restored and flourishing gardens surrounded the town. Under one of his successors, 'îzîz al-Din Mas'ûd I, Mûsûl was twice unsuccessfully besieged by Saladin (1182 and 1185). A.D.; after the conclusion of peace 'îzîz al-Din, however found himself forced to recognize Saladin as his suzerain.

The town was at this time defended by a strong citadel and a double wall, the towers of which were washed to the east side by the Tigris. To the south lay a great suburb, laid out by the vizier Muqaddim al-Din Kâ'imâz (d. 595): From 607 his son Ba'dr al-Din Lâlit [q. v.] ruled over Mûsûl first as vizier of the last Zangids and from 631 as an independent ruler. In 642 he submitted to Hûlût and accompanied him on his campaigns, so that Mûsûl was spared the usual sackings. When however his son Malik Shâhîb b. Lâlit joined the Ballârs against the Mongols the town was plundered in 660 (1261–1262); the ruler himself fell in battle (van Berchem, Forschungen f. Töd. Nûlûdâ, 1906, p. 197 sqq.).

The Mongol dynasty of the Kâshârîs succeeded the Ikhânâs in Baghâdah and Sulâh Shâhî Shâhî, Usâin in 766 (1354–1355) incorporated Mûsûl in his kingdom. The world conqueror Timûr not only spared Mûsûl but gave rich endowments to the tombs of Nabi âûs and Nabi Dîjîrî, to which he made a pilgrimage, and restored the bridge of boats between Mûsûl and these holy places.

The Turkman dynasty of the Aq Koyunlû's (founder Baha) al-Din Kâzâ Osząmîn had been appointed governor of Dîyâr Bârîr by Timûr, was followed about 920 (1514–1515) by the Persian Shâshâ. After long fighting the Ottomans in 1647 (1637–1638) finally took the town from them. In 1677 (1667) it was visited by a serious earthquake, in 1756 (1743) besieged by Nâdir Shâh âşfâ'î and heroically defended by Christians and Muslims. It was then under a Pâgha of the local family of the 'Abd al-Dîjîlî who had ruled the town for a long period, fairly independent of the Porte. In the sixteenth century Mûsûl was an unimportant provincial town of the Turkish empire. After the World War the willâyet of Mûsûl after long negotiations was placed in the mandated territory of Irauç. The town has now about 70,000 inhabitants.

The Arab geographers compare its plan to a hexagon (faisûlân), i.e. to an elongated rectangle. Ibn Hawâşî who visited Mûsûl in 358 (968–969) described it as a beautiful town with fertile surroundings. The population in his time consisted mainly of Kurds. According to al-Mađûsi (c. 375–486), the town was very beautifully built. Its plan was in the form of a semi-circle. The citadel was called al-Murâshîbâ's and stood where the Nahr Zâbâû canal joined the Tigris near Ica'lâ or Bâsh Tâbiyya; cf. Hefersd, op. cit., p. 209. Within its walls were a Wednesday market (shâh-al-ez-râz) after which it was sometimes called.

The Friday Mosque built by Marûn stood on an eminence not far from the Tigris to which steps led up. The streets in the market were for the most part roofed over. Al-Mađûsi (op. cit., p. 136) gives the eight main streets of the town (discussed in Herfeldt, op. cit., p. 209). The castle of the caliph (Kâzâ al-Khalîfa) stood on the east bank, half a mile from the town and commanded Nîzâr; in the time of al-Mađûsi it was already in ruins, through which the Nahr al-Khawar flowed.

Ibn Dhu'lláh visited Mûsûl on 22nd–26th Safar 580 (June 4–8, 1184). Shortly before, Nur al-Din had built a new Friday Mosque on the marketplace. At the highest point in the town was the citadel (now Bâsh Tâbiyya); it was known as al-Hadâr, "the hunch-backed", and perhaps as the synonymous al-Dâfûdî (G. Hofmann, Auszüge aus
MOGUL — MOZARABS

mozarabs, the name given in the middle ages to those christians who lived in districts under Muslim rule and bore the stamp of Spanish Moorish culture. The term comes from the Arabic musa'abīh, the meaning of which is exactly that of the Spanish mozarabes; the Arabic form itself is found in documents in the archives of medieval Spain.

We know that in principle at the time of conquest the new subjects of the Muslim conquerors could either adopt Islam or continue to profess their own faith, in the latter case falling into the category of tributaries (aljuma; q. v.). The early Arab rulers of Spain showed considerable tolerance in this connection and the treaties of capitulation were definite on this point, at least if we may judge by one of them of which the text has been preserved and which was concluded between the Visigoth Theodemir, lord of the district of Murcia [q. v.], and 'Abd al-'Aziz b. Musa b. Nuṣair. This attitude of Spanish Islam to the Christians hardly altered in the centuries following until the coming of the Almoravids and Almohads. It is true there were occasional anti-Christian reactions under the first Umayyads which found vent in persecution. But these persecutions seem to have been dictated by political considerations rather than by the fanaticalism of individual rulers. The Christian communities of the large towns were the most active nurseries of the nationalist movements which broke out in Spain mainly in the ninth century. Among the most important we may mention that led by the Mozarab 'Omar b. Hāṣīm [q. v.], which passed far beyond the limits of a purely religious movement.

At Cordova in particular a few illuminati had to be sent to the scaffold because they insulted the religion of the Prophet. The Muslim judges seem to have sentenced them to the supreme penalty with considerable reluctance and the central authorities took the initiative in summoning a council, so that the church itself put a stop to the demonstrations of certain mystics like Eulogio and Alvaro.

In any case in the tenth century the Mozarabs of the caliphate were living in harmony with all classes of Muslim society and were themselves considerably influenced by Arab culture. They spoke Arabic, just as the Muslims spoke the Romance language, and were acquainted with Islamic literature. The reciprocal influences were therefore considerable and were to continue so till the end of the middle ages.

As regards administration, the Christian communities of Muslim Spain under the Umayyads were under the direct authority of officials chosen by themselves from their own number and appointed with the approval of the Muslim authorities. Their head, who is sometimes given the Latin title of defender or protector, was most frequently called Count (Comes, Sp. Comte, Ar. qānīn). The taxes which the Christians had to pay were collected by an agent called excepitor. To settle their differences they had a special judge (Ar. ḥāqī 'l-maqāra or ḥāqī 'l-ḥanūm, Lat. canon) who administered the Visigothic code (Elder Justinus, later the Fuero Jusgo).

The Christian communities of Cordova and Seville were among the most important but were less important than that of Toledo, which was during the caliphate the residence of the metropolitan (maqāra) of Spain. The clergy were under bishops (muhaf). Public worship was celebrated.
in the churches; there were monasteries (dair) with monks (râhil) in the neighbourhood of the larger towns: for example that of Armilâ (Guadalmellato) near Cordova.

The history of the Mozarabs of Spain is of course closely connected with the political history of Islam in Spain and with the "reconquista". But its development is mainly interesting as throwing light on the peculiar culture of Moorish Spain which remained alive even after the fall of Muslim power. The recent publication of a considerable number of documents from the archives of the cathedral of Toledo mainly of the 12th and 13th centuries enables us to estimate how great was the arabisation of all classes in reconquered Spain, which we find influencing civil, military and economic institutions and even ecclesiastical ritual (Mozarab rite). It is similarly to the Mozarab communities and their representatives who went to the north of the Peninsula that we must attribute the origin of a special art, Mozarab art, directly derived from Cordovan art and characterized by almost regular use of the horse-shoe arch and the vault.

(M. LÉVI-PROVENCE)

MSHATTÂ, a ruined palace in Transjordania.

Description of the building. The ruins of al-Mshattâ (the winter camp) lie east of the Jordan about 130 miles south of Damascus and 25 east of the northern shore of the Dead Sea, near the Darb al-Hadid, the pilgrims' road from Damascus to Medina and Mecca. It consists of a rectangular outer wall, defended by towers at the corners, each side being 157 yards long. The entrance gateway is in the centre of the south side and is flanked by two pentagonal half-towers rising out of an octagonal base, across which runs as far as the next round towers the long frieze 16 feet high and over 45 yards long, which has for the most part been taken to Berlin and which made Mshattâ a world-famous monument of early Muslim architecture and decorative art and a much discussed centre of interest in Oriental archaeology. The building of the whole area with the part where the battle was fought was planned in three sections of which however only the central one was carried through, at least in part. This again is divided into three parts: the entrance area, the central rectangular outer court and the royal residence. The plan by B. Schults (ed., Jahrbuch d. preuss. Kunstsammlungen, vol. xxv., 1904) shows a gateway and an entrance hall, both of which were intended to be vaulted, and a series of surrounding rooms, of which the oblong room to the right of the entrance has been said by Herzfeld and others to be a mosque because it has a niche in it which is taken to be a mihrab. Only the foundations of the parts stand still and the damage to the walls of this part however are still standing. In the large quadrangular court on the western side is a water-basin built of brick and traces of a second one mentioned by Tristram on the opposite side, so that Schults thought there were originally intended to be four for the sake of symmetry. The palace consists of a great hall with three aisles, a domed chamber and the living rooms at the sides. The long walls are about five feet high, of blocks of limestone and above that of brick (21 x 21 and 27 x 27, 65 cm. thick). The rooms at the sides to the left and right of the great hall with its three aisles, are all barrel-vaulted; the smaller vaultings still exist and, like the relieving arches of the doors, are remarkable for their pointed arches. Schults was able to reconstruct the façade which had fallen and was still lying on the ground. It consisted of three round arches on pillars corresponding to the three aisles. The hall was divided into three sections by pillars of which a few shafts and a Corinthian capital with painting and remains of gilding have been found. Holes and gutters at the bases and on the shafts suggested to Schults that the columns had originally been taken from another building and used again here. The horizontal termination of the façade also shows that this hall was intended to have a flat, and not a sloping roof, or actually had one. To give it its height the two supporting rows of pillars had a second story of pillars placed upon them, an arrangement usual in Syrian architecture also. The quadrangular hall of audience and ceremonial, entered from the oblong hall by a second door, was covered by a dome and three half domes of brick, all of which have collapsed. Dovetailing on the inside of the palace walls shows that it was intended to build on to the sides of the palace dwellings for soldiers and other retainers. On the evidence of these projections from the wall, Schults has prepared his reconstruction of the plan of these wings. The quadrangular surrounding walls with the round towers had barely been half built when the half-finished work was abandoned. The principal motive of the great frieze at the part of the wall containing the main gateway is a zigzag pattern in high relief which forms 44 half triangles. These triangular areas are, wherever the frieze was finished, thickly covered with tendrils in low relief. In the central part of the pairs of interlocking perpendicular and suspended triangles, bosses are set in high relief decorated with acanthus rosettes. The socket of the frieze is in the form of a modified Attic base consisting of a plinth and two toruses. The border which frames the frieze at the sides and above consists of a leaf kyma at the foot and a second larger crowning it. According to Schults photography, before the frieze was removed, the half left to the door up to the main border was finished but the right half only up to half-height of the frieze.

The patterns of foliage in the fields of the triangles show great variety. Here we follow the scheme of the official publication in the Jahrb.
d. præn. Kunstzümmungen, xxv. (1904), pl. viii.

The triangles A and B have within circles vines with birds picking grapes; in the apex of triangle A there is also a Chinese fabulous animal with a human head such as was very popular in Chinese sepulchral plastic art. In C the circles are interlaced and lotus flowers appear in addition to the vine tendrils. In D - I the vines which are here more realistic grow out of vases which are flanked by lions and winged griffins; buffaloes, panthers, lynxes and gazelles also relieve the foliage. In triangle J the tendrils grow straight out of the ground; this area also has the remarkable addition of men picking the grapes. Triangle L is the first right of the door and is the last to contain animals. The areas of the triangles of the right half show a quite different style. M - T have, it is true, still vines but of the greatest, lace-like delicacy and closeness of pattern which varies from triangle to triangle. U and V lastly are filled with palm-leaves and cone-shaped figures instead of vines and crowned with spirals.

Form and purpose of the building.

The plan is that of a ʿāqīya, i.e. the Arab type of camp, reproduced in building materials, and so called after the Lakhmids capital, with the prince’s tent or house on the central axis just as is described by Masʿūdī in his account of Sāmarrāʾ (cf. E. Hersfeld, Erster vorläufiger Bericht über die Ausgrabungen van Samarra, Berlin 1912, p. 39 sq.). Māḥattā, Ukhkhirij and Sāmarrāʾ are descendants of this eastern type of palace. Just as the form could only be recognised as typical after the examination of Ukhkhirij in the Iraq and by the excavation of Sāmarrāʾ, so it was the investigation of H. Lammens that first elucidated the purpose of these buildings (La Bâtole et La Hirâ tous les Oméyâdes, in M.F.O., iv). Following Lammens, Hersfeld explained Māḥattā as a ʿāqīya [q. v.], i.e. a country palace which was built in the form of a ʿāqīya for an Umayyad as an occasional residence.

History of exploration, bibliography and date. After its first discovery by H. B. Tristram in 1872, Māḥattā was explained by his archaeological adviser J. Ferguson as a ʿAṣāfīn palace, built by Khurrwā II after his conquest of Syria in 614 A.D. It found a place in literature with this description in Tristram's The Land of Moab (London 1873). It was not till about the end of the century that Māḥattā became a subject of archaeological study and discussion when it was visited in 1898 by A. Musil and soon afterwards examined by R. E. Britmow and A. v. Domaszewski and published in their Provincia Arabia (1904-1909). In the meanwhile the Prussian expedition sent to take it down under B. Schula had already been there and the Berlin publication by Schula and Strzygowski appeared in the Jahrb. d. præn. Kunsts., 1904. To Professor Strzygowski is due the credit of having urged W. Bode to bring the façade to Berlin. Thanks to the interest displayed by the Emperor. William II in the plan and his friendly relations with Sulṭān 'Abd al-Ḥamīd, the latter, with the traditional generosity of an Oriental despot, gave the German Emperor a present of this ornament of the desert. As a result of his study of the architecture and decoration, Strzygowski dated Māḥattā between 720 and 660 A.D. M. v. Berchem with Clermont-Ganneau and Dunant decided on historical grounds for the Lakhmīd dating, i.e. that it was built as early as the

fourth century A. D. (Aux pays de Moab et d'Edom, iv., J. S., 1909, p. 401-408) while Britmow and Musil assumed a Ghassānīd origin. On the other hand in his review of Strzygowski (Z. Ä., xix., 1905-1906, p. 419 sqq. and Islamstudien, p. 276 sqq.), C. H. Becker championed the Umayyad dating, which E. Hersfeld in his Geœnis der islam. Kunst und des Māḥattāproblems (I. I., 1910, p. 27-63 and 105-144) supported with evidence from the history of art, and was strengthened by the appearance at the same time in M. F. O. B., iv., 1910, p. 91-112 of H. Lammens' study Bâtole et Hirâ. This Umayyad dating was defended by Māḥattā, Hirâ und Māḥattâ (J. d. præn. Kunsts., 1921) and finally crowned his work with the discovery of an inscription drawn up by Walid II himself recording repairs done by him; Walid II was murdered after a year's reign (126 = 743-744) and work on the building was not completed. This attribution found further support in a story quoted by H. Lammens (in J. Â., 1915) from Ibn al-Muṣaffâʾ, according to which Walid II was murdered by a man named ʿIbr̄ūrī while building a "town" in the desert, which was to bear his name. Lammens identifies this town with Māḥattā. Recently the Syrian desert palaces were again thoroughly investigated by the two fathers and teachers of the École Biblique St. Étienne in Jerusalem, Javausen and Savignac (Mission Arch. en Arabia III. Les châteaux Arabes de Querim Amra, Haran,ACH et Tabi, 2 vols., Paris 1922). As regards ʿAbd and Mahattā the two students came to the same conclusion, namely that they belong to the same period. As it seemed to them impossible to attribute them to the Umayyad period, they attributed them to the pre-Islamic period; as both buildings were left unfinished, they must have been built towards the end of a dynasty or kingdom. The discovery of idols at Mahattā also, they said, prevented its being attributed to the Umayyad period (cf. Diez, Die Kunst d. islamischen Volker, 11th. ed., 1926, p. 153).

Establishment of the Umayyad date of Māḥattā. The archaeological material at Strzygowski's disposal when he wrote on Māḥattā in 1904 was still insufficient for the proper appreciation of the historical position. It is not yet possible to have a complete conception of Umayyad art. Hersfeld who knew the lands in question by long residence and frequent travels was able six years later to approach the problem from much more solid premises. The most important monument from which deductions could be drawn was the Mihrāb of the Djamāʾ al-Khâṣṣakī, discovered by Sarre and Hersfeld in the meanwhile in Baghdad, which must be either pre- or early 'Abbāsid, and the decoration of which formed a parallel to that of Māḥattā (J. Â., i. 33 sq. and plate 1). The explanation of the niche in the chamber right of the gateway as a mihrāb had to be decisively rejected and indeed less emphasis had been laid on it by Hersfeld than by superlicial writers on the question for whom the "mihrāb" meant an easy proof of their point. Schula had previously ascertained on the spot that this niche is not a mihrāb, and a study of the plan and Schula's measurements shows a piece of masonry jutting 65 cm. out of the wall, containing a niche 1.62 m. broad and 1.48 deep. The fact that the mihrāb is never in a projection from the wall an exception
would prove nothing) as well as the breadth of the niche which would be exceptional, even in very large mosques of late date (such a depth is hardly ever found anywhere), prove that this can only be a tribunal niche or something of the kind.  

Kaş al-Tuba has in its south wall four similar semi-circular apse-like niches about 10 feet broad, which surely no Muslim archaeologist would claim as mihrabs.  

Mshattá, however, does not require such illusive evidence to prove its Umayyad date.  

The conclusive proofs are found in the variety of material used and architectural styles, in the application of the principles of the minor arts to the decoration of buildings, already noticed but not correctly interpreted by Strzygowski, and the variety of styles in the areas of the triangles which fall into four groups.

The combination of Ḥarrāk brickwork with Syrian stonework in the royal residence proves the cooperation of different groups of workmen working on the system of conscription which was revived by the Umayyads. The construction of the brick arches is also Ḥarrāk in form and, besides, they are pointed arches which were unknown before the beginning of the seventh century, so that it is impossible to put the date before 650 A.D. It was only in the early Muslim period that their use spread. We find Syrian tors profiles on the basilical building and North Mesopotamian profiles on the frieze. The pillars in the basilical hall are taken from older buildings as was the custom wherever possible in the early Muslim period. In the pre-Mahmudan period neither wooden frames in the arches nor material from older buildings were used (Hersfeld).

On the significance of the decorative façade we may add a little to Strzygowski's and Hersfeld's observations. Two points were hardly touched on in the previous discussion: that the frieze is to be considered and understood not only as the basis of a great façade which was planned but was never finished, and the origin of this system of decoration from Persian textile art, which alone could supply the foundation for it and explain the sudden appearance of this completely new world hitherto unknown in architectural ornamentation. The façade proper, planned above this architectural border, would have contained a pattern on a much larger scale just as we see on carpets. The thousand-fold opposed groups of animals still to be found on Russian carpets and textiles influenced from Persia and the Caspian of the seventh-sixth centuries and the zigzag friezes filled with tendrils each with a cypress (in place of a roseate) in the centre show the popularity and wide distribution and permanence of this motive. When it was taken over for architectural decoration, the popular textile forms, however, were translated into the traditional forms of the art of the land and time. This explains the different stylistic execution of the same plan by the stone-masons.

This historic breach with tradition, this surprising control over a differently oriented artistic tendency presupposes a radical change and reorganization of society and outlook. An artistic creed so perfect and complete in itself cannot possibly be explained by the ambition of some upstart of a desert sheikh but it presupposes in addition to enormous wealth and far-reaching power a highly trained artistic sense, which was only possible at the time of the Umayyad Court and actually existed there, as we know from many sources. Only a passionate builder and lover of architecture could visualize such a work and only at a court filled with scholars, poets and artists from all countries could the plans for it be drawn up. This illuminating empaniment from the Hellenistic façade with its pillar ed niches only be explained as the expression of a new outlook rooted in religion and proudly conscious of its quite different ideals, as was the case with young Islam. For the first time, the new teaching was given artistic expression, in a design on a figured ground, which was to develop into the frieze of inscriptions on the façades in Khārijid in the 14th century (cf. Diez, Churunichi Badanmā'ter, Pl. 182/2).

**MU’ADHDHIN.** [See MA’RJDJ, I, H, 4 and ADHAN.]

**AL-MU‘A‘IYAD.** [See HISHM II.]

**AL-MALIK AL-MU‘A‘IYAD SA‘IR AL-DIN, Shaikh al-Mahmūd (so-called after his first owner) al-Khāṣṣāk (member of the bodyguard), a Cariassian by birth, was brought as a slave to Cairo and purchased by the Abu Bakr. When the latter became Sultan in 588 (1192) he gave him freedom, put him in the corps of pages (qāmūdar, q.v.), moved him to the corps of cup-bearers (ṣūrā, q.v.) and later appointed him to the bodyguard (khāṣṣāk, whence his nickname). Bakr's son, Nasr Faraj (q.v.), on his accession in 801 (1409) appointed him emir of a thousand and in the following year governor of Tripoli. He served as a troop commander in the battle of Damascus against Timūr, was taken prisoner, soon after his release again became governor of Tripoli and later of Damascus. The reign of Sultan Faraj was a period of uninterrupted fighting between the Sultan and his governors and Shaikh was always in the midst of intrigues; often he was on the Sultan's side, more often in rebellion against him. His relations with his rival, the powerful governor Nevwir, were similar. Finally the Sultan succumbed to the emirs, was deposed and put to death; the caliph ʿAbbas b. Muhammad al-Mustaʿin succeeded him in 815 (1412). This governor Shaikh who was in Cairo at the time, was appointed first minister (miṣlān al-emlāl) and retained power by filling all available offices with his followers. A rebellion of the Egyptian Beduins gave a pretext for deposing the Sultan al-Mustaʿin. The emirs demanded that a man of vigour should occupy the throne and in Shāhān of the same year chose Shaikh as Sultan. While he encountered no difficulties in Egypt, the governors of the Syrian provinces refused to recognise him. He had himself to go to Syria to bring them to reason. He gradually succeeded in taking one after the other prisoner, and after he had executed his chief enemy Nevwir his throne was secure. The last rebellion in 818 (1415) he put down with comparative ease.

The defeat of the Ottoman Sultan Bayazid in 804 (1402) by Timūr and the civil strife in the Manṣūr land had been utilised by the neighbouring rulers in the buffer-states between Egypt and the Ottoman empire to capture a number of towns and fortresses in southern Asia Minor up to a line Laren-luna-Ablun-lain, which had previously been under Manṣūr rule. Sultan Shaikh considered it as his duty to recapture these fortresses and again force these former vassals to recognise
his suzerainty in order to give his kingdom the necessary strength to resist its enemy, the Ottoman Sultan, and to protect the northern frontiers against the plundering raids of the Turkomans. The first campaign took place in 820 (1418). In spite of repeated demands, the prince Mahammad b. 'Ali of the house of Karamans would not surrender the town of Tarsus, which he had taken, although he was ready to recognize the Sultan's suzerainty on the coins and in the khatba. The Sultan set out from Cairo, receiving in Syria envoys from the families of Dhu l-Qādīrī, Kāramān and Rāmādān, who brought the submission of their chiefs. Malatya, Abulustain, Darenda and Tarsa were successively occupied, then Beheesah, Kahta and Karaks west of the Euphrates; the citadels of the two last-named were besieged, but the siege was raised when the commanders recognised the suzerainty of the Sultan. In the following year, a dangerous enemy of the Sultan, Karaz Yusaif, chief of the Black Sheppard, invaded Northern Syria in his pursuit of Karaz Yelek, chief of the White Sheppard (both called after their banners), plundered the towns in the N.W. of the Mamlik empire but then returned to Baghdad. The Sultan's successes were rendered useless by his return to Egypt, as the Syrian governors did not succeed in retaking the citadels. The Sultan therefore sent his son Ibrahim with a strong army to Asia Minor. The latter reached Kaisariya, appointed friendly chiefs as governors, while several hostile chiefs were taken prisoners and put to death and others slain in their flight. Ibrahim himself returned to Cairo in triumph but died there in 823 (1421) to the great grief of his father (the story that the latter poisoned him out of jealousy of his fame is absurd). Karaz Yusaif was threatening the eastern frontier, but he had to turn his attention to his enemies, a rebellious son and Timur's grandson Shah Rukh, and at the end of the year he was poisoned. The Sultan himself had suffered for years from an affection of the foot; his illness (probably inflammation) became so serious that he could scarcely leave his bed. He had installed his eighteen months' old son as his successor and his entourage formed a kind of regency. His death took place on the 8th Muḥarram 828 (Jan. 14, 1427). His kingdom was secure, the frontiers consolidated, but at home there was a lack of order. Beduins were plundering the country and Alexander was not infrequently exposed to attacks from the sea by Frankish pirates. Offices were freely sold and the people suffered much from the extortions of the officials. From time to time the Sultan deprived high officials of the profits of their extortions or imposed severe punishments on them. Taxes oppressed the country. The Sultan himself was brave and to the end of his life fulfilled his duties as a ruler in spite of his painful affliction — he had frequently to be carried. Although he led a life of pomp and gave popular entertainments, fireworks and feasts with great splendour, he was nevertheless a pious and humble Muslim, who in times of famine and pestilence took part in prayers in the penitential garb of the Sultan on the bare ground and like a pious Muslim observed a three days' fast in times of drought. He was harsh on Jews and Christians, dismissed them from government offices where they had clerical and administrative posts, and punished them in addition. The old strict regulations about dress were again enforced and all kinds of humiliations heaped on the "unbelievers".

AL-MU'AIYAD FI 'L-DĪN, ABU NAṢR HIRAT ALiKh B. ABU 'IMRĀN MUB'S B. DAWŪD AL-Sūfī, a Fiṭḥīm dā'ī of high rank, d. 470 (1087). At the beginning of his mission al-Mu'ayyad propagated the Ismā'īlī doctrine in the East, especially in Shiraz. He succeeded in converting the Buwayhid amir Abū Kālāhḏar [q.v.], but on account of opposition at home he went to Baghdaḏ and Mawlawi, and thence to Cairo, where he was received after some time at the court of al-Mustansir bi l-Dīn [q.v.]. He now became chief dā'ī and kāb of the Ismā'īlīs, and was probably in relations with the other great dā'ī Nāṣir-i Khusraw [q.v.]. Al-Mu'ayyad was sent in command of an army to help al-Baṣṣārī [q.v.] against the Turkomans. With his assistance al-Baṣṣārī inflicted a severe defeat on the Turkomans at Sīdjaḏ, took Baghdaḏ, and read the ḥutta in the name of the Fiṭḥīm Caliph. Al-Mu'ayyad was also in direct communication with the leaders of the Fiṭḥīm da'wa in Yaman. In addition to his capacities as a general he was possessed of great literary ability and a poet of no mean talent. His dīnān, which consists of panegyrics on the Fiṭḥīm Imāms al-Mustansir and al-Zahir, deals partly with philosophical subjects. Another important work, al-Mafā'Ili, contains 800 "assemblees," dealing with different theological and philosophical questions, including his correspondence with the poet-philosopher Abu 'l-'Ibl al-Mu'ārī [q.v.] on the subject of vegetationism (see D. S. Margoliouth, in J. F. A. S. [1902], 289 sqq.). His autobiographical work, al-Sirā, gives a detailed account of his mission in Shiraz and his admission to the court of al-Mustansir, and is carried down to 451 (1059). Besides being one of the few autobiographies in Arabic literature, it is of considerable interest for the history of the Buwayhids and their relations with the Fiṭḥīmīs. The MSS. of these works are preserved in some collections of Ismā'īlī works in Yaman and India.

separable comrade of Bayarid. When Sultan Mehmed heard from various sources, especially from a complaint in verse by Hājim Lutf Allah, Kādi of Siwās, who had been gravely insulted by the envoys of the prince, of alleged abuses at the prince’s court, especially the enforcement of the Quṣṭuğīchtī (zubārī, az-zubārī, az-zubārī), he sent a commission of enquiry which arrived in Amasiā when the prince was with Mu’ayyad on a pleasure trip to Ladiq. The result of the enquiry was the issue of an order for the execution of the two chief culprits, one of whom was Mu’ayyad (this hümûn-i hürfi is given in Feridūn, Mejam‘ūs-i Mīnâshāh, Constantinopole 1274, i. 270-271). From a note by Mu’ayyad in a book bought by him during his stay in Ladiq in Rabī‘ I 882 (June 1477) (the Zīd of Shems al-Din) the date is exactly fixed, as it was then in Feridūn should therefore be altered from 884 to 885; cf. Husam al-Din, Amaṣsī Tâṭhatī, Istanbul 1927, iii. 230 note 1). Mu’ayyad, receiving timely warning of the fate threatening him, escaped from Amasiā, provided with everything necessary by Bayarid, and after a short stay in Halab went to Dābūzār, where he completed his theological studies under the celebrated Dilāšt al-Din al-Dawwānī. When Mu’ayyad returned home, on hearing of Bayarid’s accession, he received an iǧālu (teacher’s diploma) from Dābūzānī. In 887 (1483) he reached Amasiā where his father had died three months earlier. After staying six weeks he went to Constantinople where his extensive learning soon gained him a reputation among the theologians. Bayarid appointed him miṣnur (rasselm) of the Kalenderkhāne-mechet in Constantinople. In 891 (1486) Mu’ayyad married the daughter of the famous legist Muṣlih al-Din Kandilīl (Mawâlim Kandilīl) who was the last Kādi-asker of the general of the Turkish empire and after the reforms by which this office was divided became Kādi-asker of Rumelia. Mu’ayyad had a brilliant career: in 899 (1494) he became Kādi of Adrianopole; in 907 (1501) Kādi-asker of Anatolia; in 910 (1504–1505) Kādi-asker of Rumelia and head of all the “alamāt”. In 917 (1511) the Janissaries who had taken the part of prince Seïlim plundered his house because his sympathies were with Ahmad, the favourite son of Bayarid. He himself was dismissed by the new sultan Sulṭân under pressure from the Janissaries. Seïlim I soon after his accession recalled however him to his old office as he saw in him the right man to carry through the important duties of a Kādi-asker. Seïlim took him with him on his campaign to Persia against Shīh Ismā‘īl. But on the way back Mu’ayyad was deprived of his office in Čoban Sūprī, as symptoms of a mental breakdown had begun to show themselves (920 = 1514). He died in 922 (1517) in Constantinople and was buried in Eiyrb. Mu’ayyad wrote a number of treatises on law and theology especially on Kū’rān exegesis. Brockelmann, G. A. L., i. 227 and Russel Mehmed Tāhir, Oğuzmâni Mu‘allafleri, Istanbul 1933, i. 355, gives a list of his works that survive in MS. Under the nom-de-plume of Khātemi, Mu’ayyad also wrote poetry in Arabic, Persian and Turkish. His great service to Turkish literature lies however less in his own original work than in the magnificent liberality with which he encouraged rising young talent, like the poets Nījrāt and Zāhu, the historians Kemâl-Paşa Zāde and Muḥyī al-Din Mehmûd, the jurist Abū ‘l-Ṣā‘īd and others. Mu’ayyad was also famed as a calligraphist. He was the first Ottoman to form a private library of over 7,000 volumes, a huge figure for the time.

**MU‘AYYID AL-DAWLA, ABU MANŞER RUYA B. KUKN AL-DAWLA, Bâyid governor born in Qumâda II 330 (= February-March 942), died in Djjurjûn in Shâbâb 373 (January-February 984). See the article Fâzîl AL-DAWLA, AL-MU‘AKHKHİR. [See ALLÂH, ill.]**

**MU‘AMMĀ, q. v. AGRAM, sometimes charade, a kind of enigma propounded in verse and rarely in prose; its meaning is made "blind" or obscure with the object of misleading the wits and the eye. It is formed by designating one or more words by various allusions to the letters forming it or them or by allusions relating to the pronunciation: the alphabetic value, the numeral value of the letters, misinterpretation or inversion (jawš). Very frequently no notice is taken of the vowels or of letters only connected with the spelling. Good taste is the rule.

There are several varieties of mu‘ammâ which will be found enumerated in the works given in the Bibliography.

The invention of the mu‘ammâ is attributed to Khalīl b. Ahmad, the inventor of proosy, while the Persians of course attribute it to ‘Alî b. Abî Tâlib. The following is an example of a mu‘ammâ on the name Fâzîl: Awwalân bârîllich inđâf, bâkîrî ‘l-tâbîî tâbîî, qaṣîrî ‘l-bâkîî, ‘l-bâkîî ‘l-bâkîî, wa-‘amînî ‘l-tâbîî ‘l-tâbîî wa-‘amînî ‘l-tâbîî ‘l-tâbîî. Its first is the third of [the word] mu‘ammâ (apple) = A; and the fourth of [the word] tuďhâ (apples) is its second = B; and the first of [the word] mu‘ammâ (apple) is its third = C; and the last of [the word] word (rose) is the remainder of it = D. Here is a Persian example on the word tutkî: Nâm-i Butam an mîk ìrtişt, haff att ìhàrîst ìrtişt, a word which is the name of my lady, this (woman) fair as the moon, is seen in Persian and Arabic. The word tutkî divided into two gives two written in Arabic means “six” and “five” which in Persian means “one”, whence we have 6 + 5 = 7.

MU'AWIYA, the first Umayyad caliph, son of Abi Sufyân [q. v.] and Hind [q. v.], was born in Mecca in the first decade of the seventh century A. D. Under the training of his father, the most influential personage in, if not the actual leader of the merchant republic of Mecca, he had an opportunity to be initiated into the principles of government as the Meccans understood it. Converted to Islam in the year of the fiṭrah or surrender of Mecca, he made himself useful to the Prophet in the capacity of secretary. Here he gained an insight into the workings of the new regime and learned to know the men with whom he was later to work or struggle: the autocratic 'Omar, the presumptuous 'Ali, a whole crowd of ambitious people, like Talhâ, Zubair and 'Aâishâ, sometimes redoubtable for their talents and capacity for intrigue, like 'Amr b. al-As [q. v.], and Maghâra b. Shu'â' [q. v.]. This dual training early matured the young Mu'awiyah who was remarkably gifted, and prepared him from the first for his high destiny.

In the caliphate of Abû Bakr he was sent to the conquest of Syria as second in command to his brother Yazîd; in this new field he displayed an astonishing activity and distinguished himself by military successes, like the taking of Damascus and other cities of the Phœnician coast. On the premature death of Yazîd, he took his place as governor of Damascus. In 'Omar's reign, with the addition of Arab armies, he added to this office the governorships of the other provinces of Syria. 'Othmân, who was related to him, confirmed him in these offices and still further increased his authority. Mu'awiyah gained the attachment of those under him and established in Syria during the twenty years of his governorship a model province, the best organized, and with the best disciplined troops of the young empire. Not having been able to prevent the assassination of 'Othmân, he was able cleverly to take upon himself the task of avenging him. This was to lead him to the caliphate and bring him into open conflict with 'Ali. Delaying his attack, he let his rival use up his forces and lose his prestige in civil strife and conflicts with the dissenters ('Othmânīya, q. v.) and others, who accused him of complicity in the murder of his predecessor. The Indecisive battle of Siffin [q. v.] resulted in the arbitration of Adhâb [q. v.]. In pronouncing that 'Ali should lose the caliphate, the verdict restored to Mu'awiyah liberty of movement. He had won over 'Amr b. al-'As to his side and at once used this valuable supporter for the conquest of Egypt. Encouraged by his military and diplomatic successes, he allowed his troops to proclaim him caliph and continuously harassed the provinces that still recognised 'Ali. Ibn Munam's crimes removed the last obstacle separating him from the throne. Mu'awiyah profited by it to inaugurate his reign in Jerusalem. To him the title of caliph merely meant official recognition of a fait accompli, the result of twenty years of labour and devotion to those under his governorship in Syria. To law-abiding men, he alone seemed capable of putting an end to the anarchy in which the empire had been struggling for more than ten years. In the course of a rapid campaign in the 'Irak in 41 (661), he acquired from Ħasan b. 'Alī a definite renunciation of his family's claims. The submission of the provinces to the east of the Tigris restored the unity of the caliphate. This
year is known as the year of reunion (al-`amādiyya).

One man continued to sustain in Persia the flag of the Abāsids, Ziyād b. Abī Isām [q.v.]. Mu’āwiyah won him over by a bribery procedure by which he recognised him as his half-brother, son of Abī Sufyān. This bold stroke secured him the support of the abest of the governors of the caliphate, a worthy rival of ‘Amr b. al-‘Āṣ and Mughīrā b. Shābūs, already supporters of the caliph. Against the combination of these four brains all the plots hatched by the anti-Umayyad opposition were to come to nothing. On the death of Mughīrā, Ziyād added the governorship of Kūfa to his own of Basra and for eight years ruled the whole of the eastern provinces. By his ability and loyalty, Ziyād showed himself most worthy of the confidence placed in him. Freed from anxiety about this half of the empire, Mu’āwiyah devoted his energies to the pacification and development of the prosperity of other parts of his vast empire and to removing the traces of the long struggle from which it had emerged. He organized the Arab navy while his lieutenants actively pursued the work of foreign conquest. He took Cyprus and Rhodes and on two occasions his son Yazīd closely blockaded Constantinople. His great work was the creation of the Syrian army of troops blindly devoted to their sovereign. It formed the great military reserve of the empire for its successors, an inestimable nursery of soldiers and leaders. He was able to keep it in training by annual invasions of Byzantine territory: raids on a large scale rather than campaigns with a definite plan of conquest. By thus keeping the enemy engaged at home, he managed to defend his own frontiers very efficaciously. Taken at a disadvantage during his tense struggle with ‘Abīs by an invasion of the Mandäites [q.v.], he did not hesitate to purchase the withdrawal of those adventurers from the emperor. If after his elevation to the caliphate he rarely left Damascus — henceforth the official capital — to lead his armies in person, he nevertheless was still the "real organiser of victory". He saw to the comfort and equipment of the troops, doubled their pay and saw that they were paid with a regularity hitherto unknown. His rival ‘Ali said that on the call of Mu’āwiyah the Syrian army "would take the field without demanding pay, not two or three times a year only, wherever it pleased its leaders to take them". His intuition everywhere chose the ablest administrators, the best leaders among the Karājā and other tribes. To the names already mentioned we may add those of Daḥḥāk b. Kās, Abī l-‘Awār al-Sulami, Muslim b. ‘Uqba, Bāz b. Abī ‘Arjūr, Ḥabīb b. Maslama [q.v.]. By the help of enormous subsidies and by his magnanimity he was able to keep the members of the Prophet’s family, the ‘Alids and the Hashimites, quiet: Ibn ‘Abbās and Ibn Dī‘ār, ‘Āqīl, the brother, and *the two Ḥasan*, al-‘Hassanī, the sons of ‘Ali. He used the business experience of the Sarǧūnids to organise the financial administration. This fiscal reform gave him the resources required to maintain his armies, carry out desirable public works and pay the subsidies necessary to secure the success of his plans. He continuously interested himself in agriculture. He paid special attention to the development of the province least favoured by nature, the Ḥijāz. His example, which was copied by his relations and most influential contemporaries, brought this region a century of prosperity under the Umayyads such as it was never to see again. In the lands of Medina and Mecca and ‘Jāfī, Mu’āwiyah carried out great irrigation schemes, sank wells and built dams.

In Syria he strengthened his authority by a close alliance with the fellow-tribemen of his Khalīt wife Maisīn [q.v.] and through them with the other tribes of Ḥijāz and those from the Yemen; these groups formed the bulk of the Arab population of Syria. It was on these foundations that the hegemony exercised by Syria throughout the Umayyad period was built and consolidated. His policy towards Christians was a tolerant one. Lastly, he endeavoured to train his son Yazīd to be an heir capable of continuing his traditions of government, by checking certain tendencies of his well endowed but impetuous nature with its fondness for pleasure. Seeing his end approaching, he skillfully succeeded in getting Yazīd recognised as his successor, first of all in Syria and then in other provinces. These difficult negotiations were the last of his political successes. Mu’āwiyah was now entering on the twentieth year of his caliphate, in 60 (Oct. 679) and probably was in the 80th year of a life which had been marked by constant success. By the year 3 or 4 — contrary to the assertion of Ibn Durādī (Kitāb al-‘ibād, p. 256) — he must have reached manhood, for four years later he was secretary to the Prophet. In the course of the forty years of his public career, no serious check ever interrupted his progress. After the abdication of Ḥasan b. ‘Ali, he had *reigned without a rival, without losing any of the conquests of Islam*. Neither ‘Abd al-Mallāh, nor Ma‘ṣūr, nor Ḥārūn al-Ra‘shīd earned this praise, unique in the annals of Islam" (Dhahabī). He died at Damascus in the month of Ṣajdah of the year 60 (April 680) and was buried in the cemetery of Bāb al-Ṣaghīr where his tomb still survives. Before his death he entrusted the regency to Daḥḥāk b. Kās and to Muslim b. ‘Uqba until Yazīd should return from Anatolia. Companion and secretary of the Prophet, brother of Abū l-Ḥāfīz b. Ḥabīb [q.v.], "the mother of the believers", these claims have not preserved him from the hatred of the Shi‘is and the official maldefinitions pronounced by certain ‘Abdūl-Mu‘tadī caliphs. More tolerant to his memory than to that of his son Yazīd, orthodoxy generally agrees to recognize his right to the respect which is due to the Sarḡūnids. The Syrians long cherished the memory of his glorious reign and even beyond the bounds of Syria he had partisans among the Ḥanbalīs, called gā‘dī, the enthusiasts for Mu’āwiyah.

II. Mu’āwiyah’s policy. In the historical and anecdotal literature of the Arabs there are few collections which do not devote a paragraph to Mu’āwiyah’s "wise mildness and complete self-control" (Wellhausen), qualities which the Arabs include under the term ḫilm. By this supreme virtue they claim to recognize the true statesman. The Sufyānīd sovereign is said to have owed the greatest success of his career to it. "Mu’āwiyah’s ḫilm" thus became proverbial. A somewhat mixed virtue, essentially opportunist in character, it may be combined with astuteness, or the less scrupulous forms of diplomacy. In our hero this quality has been found even in the most difficult trials inflicted on his amour-propre. His smiling imperiousness was able to disarm the proudest of his adversaries, who were then completely won over by his generosity. With the golden chains of pensions
and rich gifts the ruler was able to hold in leash his most intractable enemies. When his friends expressed surprise at the vastness of certain donations, he would reply: "A war costs infinitely more." This was his favourite method of dealing with the 'Alids and Hashimids. He has been unjustly accused of having introduced the custom of publicly cursing the name of 'Ali from the pulpit of the mosque. There is no certain evidence of this practice before the time of the Marwānids.

The collateral branches of the Umayyad family supplied him with distinguished assistants. He was careful not to bring the more ambitious of them too much to the front or to leave them too long in office. He was studious to inculcate into all his relations the feeling that they must stand by one another and that this consisted in the blind execution of his orders. The Umayyads formed his natural supporters. He could not do without them. But the unsettled problem, of the dynastic succession made him distrustful of relatives called upon to share the responsibilities of power. He did not fail to keep a close watch over them. With men like Ibn 'Amir, Sa'id b. al-'As, Marwān b. al-Hakam [q. v.], of remarkable gifts and considerable influence, who did not conceal their aspirations, he came to terms in a way that effectually discouraged them from following the dictates of their ambitions. As to the sons of the Caliph 'Othām, they seemed to him too insignificant to cause him any diatribe. On the other hand, Marwān and Sa'id were appointed to succeed one another at about regular intervals in the government of the 'Abbasid, the cradle of 'Abbasid rule and of the ruling family. Mu'awiyah was unwilling to give them time to create in such an important centre a position for themselves and connections which might have compromised the future of the dynasty. Ultimately he decided to replace these two relatives by a nephew of his own, now almost grown up, the Sufyānid Walîd b. Uthā [q. v.]. In the important governorship of the Ṣufyān, which controlled the eastern provinces, Mu'awiyah showed his preference for Thaqafī officials, Mughira, Ziyād and the latter's son Ubad Allah. He appreciated the devotion of these men, who came from the shrewd society of the 'Abbasid, suspected by the other Umayyad families, compelled to rely on their sovereign, the author of their fortunes. For a moment, the extraordinary promotion of Ziyād and the confidence the Caliph showed in him suggested that he had him in view as his successor. In this attitude to his relatives, the interests of the dynasty surmounted all other considerations. The heir presumptive was young. Mu'awiyah wanted to save his Umayyad cousins from the temptation to set up as rivals of his successor. The first step was to do Yuzid rather a bad turn. If, instead of the inexperienced Walîd, Mu'awiyah had retained or restored for another period of office in the governorship of the Ṣufyān the energetic Marwān, there is no reason to think that this would not have turned the incipient Husain from the hopeless exploit of Karbala'

In the traditional view Mu'awiyah appears as the perfect type of Arab ruler. When writers, jurists, encyclopaedists and compilers of anthologies have to quote a trait or a saying illustrating kingship, or the conduct of states, they rarely hesitate to credit it to our hero. This unanimity which reflects so much to his credit has been transformed into censure by orthodoxy. Mu'awiyah is reproached with having transformed the ẓuhār, the vicariate of the Prophet, into walī, into a temporal sovereignty, with having, if we may use the term, secularized the supreme power, really a purely lay one, in the heart of Islam. This criticism is an attempt to throw odium on Mu'awiyah while in reality it calls attention to his great merit. In him the ruler, "the king", i.e. the organizer and administrator, appear very distinctly while they are difficult to find in his predecessors, painfully fighting against the outbursts of Bohān anarchy. This transformation of the patriarchal power had begun with 'Umar who was the first to realize the necessity for it and attempted to realize it. Mu'awiyah endeavoured to hasten its evolution towards more effective centralization, an extension of the powers and personal authority of the sovereign. To secure for the latter the advantages of external pomp, the prestige given by formalities, he gave more ceremony to the hitherto democratic appearance of the caliph at the Friday services. He appeared in the mawṣūr or pulpit, surrounded by a ṣūrā or guard — 'Ali had already had one — and remained seated while delivering his address, the ṣaḥīf. Some have thought to see in this attitude a sign of pride. This is to forget the primitive nature of the minbar as the seat of the ruler, the sovereign's throne, before it became of liturgical significance as the pulpit of the mosque, after the latter had become a building for religious worship. This charge of walī was also intended to render suspect the sincerity of the faith of the Sufyānids monarch. But austerity characterised his morals and private life. He was a good father and a devoted husband. We find him conscientiously performing his religious duties and dying at length a good Muslim.

The chroniclers unanimously find in the complex character of Mu'awiyah another trait besides ḥisn: political finesse, what the Arabs call sūhiyya. To be credited with this it was necessary to have in addition to diplomatic skill, a remarkable gift of eloquence, a sense of decision, a resourceful nature and a conscience broad enough not to shrink from the use of trickery. Mu'awiyah was reckoned among the five best Kurājih orators of his time. He was fond of saying "I have won more success with the tongue than Ziyād (b. Abīth) with the sword", Arab writers prefer to attribute these successes to the Machiavellian nature of the sovereign. He is said never to have shrunk from recourse to violence or to the use of poison when he wished to get rid of troublesome adversaries. To support this charge the cases of 'Abd al-Rahmān b. Khalīl, Hasan b. 'Alī and Aṣhtar b. Mālik [q. v.] are quoted. But each of the examples is capable of a more natural explanation. We would readily put Mu'awiyah in the category of those statesmen to whom useless crime is naturally repugnant, too wise to allow themselves to be tempted by violent solutions but not scrupulous enough to hesitate in such an extremity, if reasons of state seemed to advise it. One of his successors, 'Abd al-Malik, called him "the cunning (mulāḥim) caliph". The pleasure-loving son of 'Alī, ruined by his easy life, forgotten and retired to Medina, did not deserve to be feared. The two other individuals above mentioned died by accident or were victims of private vengeance.

The poets, the "journalists" of the period, had an undeniable influence on their contemporaries. This influence the sovereign succeeded in controlling
and subjecting to dynastic interests. Himself very susceptible to the charms of verse, he would have liked to see poetry confine itself to developing patriotism, and renouncing satire which was a source of dissension among the tribes. The restorer of ḍāima, national unity, felt more than anyone the necessity for this concord to heal the wounds caused by anarchy. Powerless to prevent the incursions of poetchers into the field of politics, he endeavoured to win them over to his side by gifts and the use of tact. To win them over he had to have "a good press", and at the same time gain their tribes to the cause of order, for the tribes usually agreed with the ideas spread by their bards. He exploited his son Yazíd's relations and friendships with the poets to compromise them in favour of the Umayyads and make them less amenable to the advances of the reactionary parties. He paid for their panegyrics; he took them under his protection whenever their lack of discipline brought them into trouble with the local authorities. He did not hesitate to shut his eyes to some of their poetical outbursts, which seem to compromise the reputation of his own hearth; under the 'Abbasids such anarchy would have meant death. He further left it to these indiscreet auxiliaries to deal with abuses by officials and found in them a useful check on arbitrary exercise of authority by his lieutenant. It was at the same time a satisfaction of their amour-propre, allowed to the vanity of these rhapsodists, who were courted by all parties and intoxicated by the terror which their wit inspired. In return for this toleration, he was able to get less disinterested services from them. He imposed on them the duty of preparing public opinion in favour of the karā, the recognition, of Yazíd as heir-apparent.

To accustom the Arabs to this step so repulsive to their democratic instincts, to give the caliph leisure to calculate its chances of success, there was nothing so useful as the intervention of these heralds with their echoing phrases. It enabled him to remain discreetly in the background, ready to come out at the opportune moment.

The biased Mas'ūd himself cannot help admiring the pliant ease of Mu'āwiya's policy, *his* great generosity to his subjects and the benefits which he heaped upon them; winning their sympathy and seducing their hearts with such skill that they put him before their kinship and natural affections*.

Firmness in administration, skill in managing men according to their rank, cordiality, these are some of the qualities credited by this historian, the friend of 'Ali, to the successful rival of Fātimā's husband.

Let us now deal with the charges brought against him by orthodoxy. With the object of making them more readily accepted, the indictment is carefully put in the mouth of the austere Hasan al-Baṣri. *Mu'āwiya committed four crimes — one of them alone was sufficient to cover him with dishonour: he abandoned the nation to men of no repute, deprived it without consulting it (by the ḍāima of Yazíd) of the control of its destinies and that in the life-time (i.e., to the detriment) of numerous Companions and virtuous individuals. He chose as his successor an incorrigible drunkard, robed in silk and playing the harp. He tolerated Ziyád. Lastly, he condemned Ḥadīr b. 'Ādī [q.v.] to death*. The impartial historian will have little difficulty in clearing the sovereign from these charges, which reveal his political flair, his instinct for rule, which raised him high above the prejudices of his contemporaries. The measures for which he is blamed secured the caliphate twenty years of peace and prosperity, the longest period it ever knew.

To sum up, Mu'āwiya appears in the series of Muslim rulers as one of the most attractive individuals and one of all round ability. In him the Arabs see the very incarnation of sovereignty. In the opinion of Mas'ūd his successors at best could only try to copy him without being able to equal him. In spite of their little liking for the able Sufyán, the Marwānids frequently appealed to his traditions and the methods of government inaugurated by him. He was, beyond doubt, the least oriental and the most modern of the rulers of Islam. He did not disdain public opinion. One must be grateful to him for not having believed in the power of force alone in the management of men, for not having sought to reestablish, as the 'Abbasids were to do, the old Asiatic monarchies, for having preferred that his subjects should become voluntarily attached to him by winning their sympathies, for proclaiming that "the world is more surely led by the tongue than by the sword". This conviction led him to adopt several institutions of Beduin democracy — such as the waf'id, deputations from the provinces and the principal tribes — to consult the views of such assemblies on as many occasions as possible, to associate them openly with public business by recognizing their right of remonstrance. The astuteness of the sovereign knew how to direct these manifestations of the old individualism of the nomads and to bring them to cooperate with his designs. To quote the comparison of the Byzantine historians, he appeared as a ṣawā'ib in the midst of his ṣubā'ib; in the deliberations of his Syrian parliament, he posed as *prīmus inter pares*. He was gradually able to advance the political education of his subjects and to control the signs of lack of discipline. He was never perturbed by their criticisms nor by the satires of the poets. "I do not trouble" he said "about words so long as they do not lead to deeds". These liberal principles became restricted under the Marwānids and disappeared with the coming of power of the absolute monarchy of the 'Abbasids.

As is frequently the case with men who have grown old in politics, a long period of power — he exercised it without interruption for 40 years — had made him a sceptic. This benevolent scepticism was revealed in a knowing smile when, with eyes half closed, he used to listen without missing a word to the petitions and rejections of his visitors and pretended to be taken in by their customary excesses. From his youth, passed in the cosmopolitan city of Mecca, then in Medina in the very mixed society of the Companions, he had been in too close contact with his contemporaries to be under any illusions about their disinterestedness. He had not to invent, but no one managed better than he, that institution of government, the ṭalīf al-ḥalib, the rallying of hearts, an ingenious euphemism of the Karān, meaning the art of purchasing hesitating adherents. Other caliphs surpassed him in courage, in outward austerity, *sukhī*, in love of knowledge and other qualities that dazzle the eyes of the multitude. No one possessed to such a degree as Mu'āwiya the gifts of the founder of an empire: vision,
energy and promptitude in action, breadth of view, logical thinking, absence of antiquated prejudices, skill in adapting the prestige and ceremonial of his position to Arab taste, ability to use men and to deal tactfully with their prejudices so as not to offend them directly. This rare combination of qualities enabled him to extract order out of the chaos of Beduin anarchy. If we endeavour to appreciate fairly Mu'awiya's work with its inevitable deficiencies, one must take into account the intractable material on which he had to work and the resistance opposed by the inveterate individualism of the nomads. He succeeded not only in disciplining them but also in transforming them into conquerors, able to rule over peoples of superior culture, heirs to the oldest civilisations.

For achieving this result, the son of Mu'awiedd's old opponent has deserved well of Islam. In the list of those responsible for this great revolution his name should come after that of the Prophet beside the caliph 'Omar. Orthodox tradition likes to exalt the latter and present him as the second successor of Islam. Of European writers, Sprenger and von Kremer have popularised this view. In it we may recognise the reply of the schools of the Hujjat to the 'Irak legend woven round the memory of 'Ali. To their work we owe the fantastic proportions assumed by the personality of 'Omar; it absolves not only Abū Bakr, but even throws its shadow upon the Prophet. 'Omar is brought into the origin of all religious and administrative institutions, especially of all those that cannot decently be credited to the author of the Qur'ān. This exaggerated admiration of the Hujjat was to provoke the protestations of the 'Abbāsid. The counterblast of Shī'ah tradition was to place 'Ali alongside of 'Omar to direct him and if necessary to correct him. The indisputable merits of the second caliph lie elsewhere. In the midst of the terrible confusion that resulted from the conquests he was able to maintain the unity and cohesion of the empire, immeasurably enlarged, to bring the Arab culture into connection with the non-Arab peoples, to foster the dynamic successions and to bring about an economical and administrative reorganisation. Closely watched, harasscd by the selfish claims of his Medinese senate and its disturbing element formed by the redoubtable group of the "ten 'Abbāsidīn" or the "chosen" and the oldest friends of the Master, he succeeded in neutralising their restless activities, their desire for intrigue and in exploiting their greed and mutual jealousies. In the provinces the generals and governors showed an obedience scarcely less intermittent. 'Omar had frequently to resign himself to approving by sancti in radices in order not to lose touch with such undisciplined auxiliaries and to remind all of the existence of the vicariate of the Prophet. The day on which he thought of a more effective centralisation, of a less ideal set systematisation, assassination brutally delivered him from his error. The same fate was to overtake 'Utbān, when under pressure from the Umayyads, he took up the predecessor's programme where it had been interrupted. With 'Ali the caliphate collapsed into chaos and lost a quarter of a century of progress on the way to reorganisation. One province alone formed an exception: Syria, which had been governed since its creation by the Umayyads.

But for the intervention of Mu'awiya and his able lieutenants, the 'Amr, Ziyād and Marwān, the Muslim empire would have been transformed — like the 'Irak and Kjurān — into an arena to which the Arabs came to settle their petty tribal quarrels. Once on the throne, the Sufyānid worked to extend gradually to the rest of the caliphate the methods of government which had secured the prosperity of Syria. Encouraged by the results obtained in this country, he set himself to discipline the other Beduin tribe, according to the ideas ascribed to 'Omar, formed the "substance of Isām". From this rudis indigestus noes, this rebellious mass, gradually broken in by the influence of Syria, fashioned by teachers trained in his school, the first Syrian caliph recruited soldiers, then formed from them the cadres of a regular army: wonderful troops always ready to play their double part, the qālidh abroad, and at home the maintenance, against any threat from within, of the qāmil, the unity of the empire. Mu'awiya succeeded in impressing on these descendants of caravan-leaders of Arabia, nomads, all obstinate landmen, the importance of the mastery of the sea. Arab thalassocracy dates from this period. Forced to use primitive institutions, the jirān, tradition, sanctioned by the Prophet and the Medina caliphs, he endeavoured to turn them to the needs of a great empire. He managed at least to suppress the anarchical working of the jirān by regulating the dynastic succession. He organised the finances; he began by revising and reducing the enormous pensions granted by preceding governments without regard to services rendered to the state. Down to his time the central treasury of the caliphate had been supplied by intermittent and always unwilling contributions extorted from the provinces. Mu'awiya endeavoured to settle the amount to be paid by each province and to regularise its collection. Under him the treasury ceased to be a relief fund which the conquerors claimed to use as they pleased. His predecessors had had to empty it periodically to secure assistance, or neutrality important for the success of their policy. Hitherto semīl al-musulūn, the collective property of the Muslims; the treasury now became māl Alīshā, the treasury of the state, intended to cover general expenses, to secure the representation and the defence of the empire. These reforms made Mu'awiya the first sovereign, musallā of Islam, the first ruler to enjoy a definite authority, independent, unlike his predecessors, of the anarchical good-will of his subjects, and no longer at the mercy of an oligarchy interested in the maintenance of old abuses. The Medinese vicariate which developed from the triumvirate, could not long survive this coup d'état, this drastic solution of the problem of the succession to the Prophet. Before Mu'awiya, the caliphate had only had a nominal existence. For this figure, the son of Abū Sufyān substituted a reality; he created the Arab state: a creation seen darkly by 'Omar without having been brought to realisation.

Levi della Vida, Il Califato di 'Ali secondo il Kitāb an-nāšir al-arabī di al-Balighari, in R.S.O., vi., 427—507; our Zīdān ibn Abīthi, vice-rei de l'Irāq, lieutenant de Mahāva I (extract from the same periodical, iv.).

MU'AWIYA II. 'UBAID ALLĀH. [See Abd 'Ubaida Allāh.]

(H. LAMMENS)
MUBALLIGH. [See Masjidin, I, D. e and H. 4.] MUBARAK GHAZI, an Indian saint. In all parts of the Sundarbans, the Mahommadan woodcutters invoke certain mythical beings to protect them from tigers and crocodiles. In the 24 Parganas it is Mubarak Ghazi who, in the Eastern parts of the Delta goes by the name of Zindah Ghazi, the living warrior. Mubarak Ghazi is said to have been a faiq (mendicant) who reclaimed the jungle tracts along the left bank of the river Hooghly. Every village has an altar dedicated to him and no one enters the forest nor does any of the boat's crew, who might sail through the districts, pass without first making offerings at one of these shrines. The faiqs in these dangerous forests, who claim to be lineally descended from the Ghazi, indicate with pieces of wood called jang the precise limits within which the forest has to be felled. Mubarak Ghazi, so the legend goes, came to Bengal when Radja Malak ruled over the Sundarbans. The saint happened to have a dispute with the chief who thought himself to be in the right, and on which the latter agreed to give his only daughter Shughla in marriage to the former, should his own opinion be proved wrong. This the Ghazi succeeded in doing and won his bride in consequence. Since no man saw him die, he is believed to reside in the depths of the forest, to ride about on tigers, and to keep them so obedient to his will that they dare not touch a human being without his express desire. Before entering a jungle or sailing through the narrow channels whose shady banks are infested by tigers, boatmen and woodcutters, both Hindus and Mahommadians, raise little mounds of earth and on them make offerings of rice, plantains, and sweetmeats to Mubarak Ghazi, after which they fearlessly cut the bracken and linger in the most dangerous spots.

This strange myth, there cannot be any doubt, is borrowed from Hindus to suit the taste of the superstitious boatmen and woodcutters.

MUBARAK SHAH, Muzzaf al-Din, the second king of the Saiyid dynasty of Dihli, was the son of Khizr Khan, the first king, and succeeded his father on May 22, 1421. The limits of his kingdom were then restricted to a few districts of Hindustan proper and Multan, and he was obliged to resist from an attempt to establish his authority in the Pandjab by the necessity for his being Gwalior, menaced by Huyang of Malwa, who raised the siege and met him, but after an indecisive action came to terms and retired to Malwa. From 1425 to 1427 he was engaged in attempting to restore one in Mewat, and received the formal submission of the rajas of Gwalior and Canwar (Fatehabad), but Muhammad Khan Awhadi of Bajana, whom he had taken prisoner, escaped and took refuge in Mewat, and the work there was to do again. Muhammad Awhadi, on being hard pressed in Bajana, fled to Ibratam Shihb of Dwainpur, and as the latter marched against Kali, Mubarak marched to meet him. Ibratam, who had been plundering Mubarak's dominions, avoided a conflict for some time, but on April 2, 1428, the armies met near Canwar and Ibratam, though not decisively defeated, retired.
the next day to Djaswâp. Mubârak then collected revenue in the neighbourhood of Gwâhor and retired by way of Bâysâna, which was evacuated by Muhammad Awhâdi, who had returned thither. For the rest of the year his officers were engaged in restoring order in the Pandjâb, ravaged by Djsârath the Khokar, and he in a similar task in Mewât, and in collecting revenue by force. In 1430 Fûlâd Turkmâna successfully defied the royal authority in Bhâtinda, and in 1431 a rebellion broke out in Mûlân and had no sooner been suppressed than Djsârath renewed his activity in the Pandjâb. The chronicle of the rest of the reign is a record of rebellions in the Pandjâb, Mûlân, Sâmân, Mewât, Bayûna, Gwâhor, Tûjdhâra and Iâwâ, and a rebel captured Lâtâh and attacked Dipâlîrâ. Lâtâh was eventually recovered, but the whole country remained in a disturbed condition.

War broke out between Isâhâm of Djaswâp and Hûshâng of Mûlân in connection with Kâlpî, the suzerainty officer, who belonged to neither and was supported by both, and Mubârak, marching thither, turned aside to inspect Mûhârakhdâ, which he was building, and then, on October 19, 1434, he was assassinated at the instance of Sarwar Alâ, whom he had dismissed from the post of minister in the preceding year.

MUBÂRIR AL-DIN. [MUHAMMAD B. AL-MUBÂRÂKHÎ, AL-MUBÂRÂKH.] AL-MUBÂRÂKH, Abu 'l-'Abbas Muhammad b. Yazîd al-Thumâlî al-'Azîdî, an Arab, philosopher, born on the 10th Dju'h al-Hijja (March 25, 826) in Bâseh, was there taught by Abu Qâsim al-Djânnî, Abu Qâsim al-Mâjâni and Abu Jahîm al-Sâjdî, the pupil of Ajmâ'û, in his early works, the Kitiâb al-Maw'aqûth al-Âshâr, he criticised the Kitiâb of Sibwâwî, but only a small number of his criticisms were well founded and of these only a minority were original (al-Suyûtî, al-Musâhir, ii. 188; ii. 323). Later he went to Baghdad where he became a very busy teacher, among his pupils were Nûfiswâlah, Ibn Durrastawâlah and Ibn Kâshân. His rival for favour at court was the Kûfân Thallâb, to whom he was far superior in ability and style; the rivalry between these two scholars seems to have been the origin of the later tradition of the opposition between the schools of Kûf and Baghdad. His episthel al-Mubârâk seems to refer to his skill in disputation, but there are a number of anecdotes explaining it in very different ways (Musâhir ii. 207, 312; Bahā'î, p. 116, 117; Jâhâd, v. 137, 339;). He died in Baghdad in Shawwâl or Dju'h Kâ'ba (October 898).

His chief work al-Fikrîyâr al-'Adâb is a typical example of the work of the old philologists as developed from their teaching. Without being tied down to any fixed arrangement or even aiming at cohesion in the separate chapters, it combines traditions of the Prophet, sayings of pious men, proverbs, many poems mostly of the older period, and also historical matter like the important chapter on the Khâridjâ (characteristic is the passage on p. 409 in Wright's edition;* in this chapter we shall mention something of everything in order by change to prevent the reader from being wearied and mix a little jest with the earnest so that heart and soul may be recuperated; similarly p. 428; exceptions like the chapters on simile p. 447 or on lametta for the dead and consolation p. 713 are rare). The important feature is the full grammatical and lexicographical commentary which he gives to every quotation. The work was given its final form with numerous additions and glosses by Abu 'l-Hasan al-Akhfash (d. 315 = 927). Al-Bâtalâyât wrote a commentary on it which has not survived (Musâhir i. 182, 11; 223, 4; there is an anonymous commentary in the possession of Iâmîl Efendi in Siâmbül. It was first printed in Siâmbül in 1886; editions: The Kitiâb of El-Mubârâk edited for the German Oriental Society by W. Wright, part 1, Leipzig 1864; 1892; reprinted Cairo 1808, 1823, with extracts from Dju'hâr on the margin, 1339; with two modern commentaries: Tahâhîr al-Kâmîl by al-Sîhâbîl al-Bâlâyî, Cairo 1841 (1925), 2 vols. and Bagha' al-Amîl min Kitâb al-Kâmîl by Saiyîd Ibn 'Ali al-Marâsaft (professor at al-Asfar), Cairo 1845 (1923), 8 vols., Cairo 345-346 (1927-1928); Das Khârizmischenkapiel aus dem K., transl. into German by O. Rescher, Stuttgart 1922. His second collection of material, the Kitiâb al-Maw'aqûth, met with less success, because, it is said, it had been transmitted by the heretic Ibn al-Râswânt; it is preserved with a commentary by Sa'id b. Sa'id al-Fârîqî (d. 391 = 1000; see Yâkût, l. 740, l. 740) in the Escurial manuscript 2, p. 111 and in Siâmbül, Köprüle, No. 1507-1508 (cf. Rescher, in Z.D.M.G., iv. 197; photograph in Cairo; Fibristis, i. 123). Of his numerous other works given by his biographers we only have the Kitiâb al-Tâzîr, Escurial 2, p. 534, r; the Kitiâb Namâ'â al-Mu'âashar, Kitiâb al-Mu'âshar, 2003 (M.F.O.B., v. 491) = 1324, 3178 (M.F.O.B., vi. 108), Escurial, 1700, fol. 59 v-58 v (r. Levi Della Vida, Les livres des chevaux, Leyden 1928, p. xxiii), his answer to a letter from Ahamad b. Wâbîqî on the question whether poetry is superior to eloquence, in Munich 791 and in a fragment in Berlin, Ablw. 7177 as well as the Kitiâb al-Mu'âshar we't-Mu'âshar as transmitted by Abu 'l-Asfîrî, in Damascus, Zâyîâ, p. 36, No. 113, 3. 2. His other works are only known from quotations, e.g. his Kitiâb al-Kitâbiyâr, which Ibn him, himself quotes, Kûmil, p. 760, r; the Kitiâb Sharh al-Nadhîfî, which Ibn al-Asfîrî mentions among his sources in the preface to the Nâshûa; the Kitiâb mu'âshar Fâsîhû wa al-Bâbâs al-Maw'aqûth (Suyî'î, Sharh al-Maghîbî, Cairo 1923, p. 195, 83); the Kitiâb al-Râwî, a collection of poems by contemporary poets beginning with Abu Nasr, Âdâbî, al-Djârî, Kitiâb al-Maw'ahîr, p. 29, 9; Abu al-Asfîrî, al-Maw'ahîr, p. 189, 46; the Kitiâb al-Adâbī in the causes of the poetical strife between Djârî and Farandak; 'Abd al-Kâdir al-Baghâdâ, Kâmînât al-Adâb, l. 305, 41; Kitiâb al-Shârî (i.e. Sharh Kâmînât al-Adâb), l. r., l. 195 infra.

AL-MUBARRAZ, a fort on the Persian Gulf, about a mile north of al-Hafif, surrounded by open villages and date-palm groves. The population of the fortress and of the hamlets that belong to it is given, sometimes at 10,000, at other times at 30,000.

AL-MUBDI', see ALLAH II.

AL-MUDAJJI', name of sūra lxxxi, which is also called al-madjda or al-adjinās.

MUDAR. [See KAR'A.]

MUDARI', the twelfth metre in Arabic prosody, which is very rarely used. Theoretically each of its hemistichs consists of three feet (masī'ilun fā'īlamun masī'ilun); in practice the third foot is lacking.

It has one ʿarāf and one ʿādāf only; masī'ilun fā'īlamun: masī'ilun fā'īlamun. Masī'ilun however must become masī'ilum. The first masī'ilum may lose its ma; in that case the form is fā'īlamun (= masī'ilum) and fā'īlamun. (M. BENCHER)

MUMADAWANA. [See SAINUN.]

AL-MUDDATHTHIR, title of sūra lxxiv.

AL-MUDHILL. [See ALLAH II.]

MUDIR, title of the governors of the Egyptian provinces, called mudiriyah. The use of the word mudir in this meaning is no doubt of Turkish origin. The office was created by Muhammad 'Ali, when, after 1813, he reorganised the administrative division of Egypt, instituting seven mudiriyah; this number has been changed several times. [K. KHERSTJAE]. At the present day there are 14 mudiriyah. The chief task of the mudir is the controlling of the agricultural administration and of the irrigation, as executed by his subordinates, viz. the mū'āthir, who administers a mahrās and the mū'āthir who controls the dā'im which is again a subdivision of the mahrās. Under Sa'd Pasha the office of mudir was temporarily abolished with a view to preventing oppression. Until that time they had been without exception Turks, but under Ismail Pasha, when the function was reinstated again, this high administrative position was opened also to native Egyptians.

AL-MUḌIḌILA', title of sūra lxxvi.

AL-MUḌIḌAH. [See KAR'AH.

MUDIṢAṢIMA. [See TASHIRI.

MUDIṢAWWAZA. [See TUBURIAN, iv. 890 sqq.]

AL-MUḌIЯ. [See ALLAH II.]

MUDIIR AL-DIN. [See AL-ALAIM.]

MUḌIŻA (A.), part. act. iv. of ʿarāf, lit. "the overwhelming", has become the technical term for miracle. It does not occur in the Kur'ān, which denies miracles in connection with Muhammad, whereas it emphasizes his "signs", ʿaṣīr, i.e. verses of the Kur'ān; cf. the art. KORAN. Even in later literature Muhammad's chief miracle is the Kur'ān; (cf. Abū Nu'aim, Dal'il al-Nubuwwa, p. 743). Muḍiża and ʿaṣīr have become synonyms; they denote the miracles performed by Allah in order to prove the sincerity of His apostles. The term kărāmā [q.v.] is used in connection with the saints; it differs from muḍiża in so far as it denotes nothing but a personal distinction granted by Allah to a saint.

Miracles of Apostles and Prophets, especially those of Muhammad, occur in the ʿaṣīr and in hādiżh. Yet in this literature the term muḍiża is still lacking, as it is in the oldest forms of the creed. The Fiṣḥ Akbar, ii., art. 16, mentions the ʿaṣīr of the prophets and the kărāmā of the saints. Muḍiża occurs in the creed of Abū Ḥafṣ, 'Umar al-Nasafi (ed. Cureton, p. 4); ed. Taftāzānī, p. 165: "And He has fortified them (the apostles) by miracles contradicting the usual course of things". Taftāzānī explains it in this way: A thing deviating from the usual course of things, appearing at the hands of him who pretends to be a prophet, as a challenge to those who deny this, of such a nature that it makes it impossible for them to produce the like of it. It is Allah's testimony to the sincerity of His apostles.

A very complete and systematic description occurs in al-Idji's Muṣūšt. He gives the following definition of muḍiża: It is meant to prove the sincerity of him who pretends to be an apostle of Allah. Further he enumerates the following conditions: 1. It must be an act of Allah; 2. it must be contrary to the usual course of things; 3. contradiction to it must be impossible; 4. it must happen at the hands of him who pretends to be an apostle, so that it appears as a confirmation of his sincerity; 5. It must be in conformity with his announcement of it; the miracle itself must not be a disavowal of his claim (da'wā); 7. it must follow on his da'wā.

Further, according to al-Idji, the miracle happens in this way that Allah produces it at the hands of him whose sincerity He wishes to show, in order to realise His will, viz. the salvation of men through the preaching of His apostle. Finally, as to its effect, it produces, in accordance with Allah's custom, in those who witness it, the conviction of the apostle's being sincere.

MUḌITHH, the fourteenth metre in Arabic prosody, has theoretically three feet, consisting of two successive fā'īlum in every hemistich; in practice there are two feet only.

It has one ʿarāf, and one ʿādāf only; masī'ilun fā'īlamun: masī'ilun fā'īlamun. The foot fā'īlamun of the ʿādāf also, though seldom, that of the ʿarāf, may become fā'īlamun, on condition that masī'ilun retains its ma; it loses its ma when masī'ilun loses its ʿa.

Masī'ilum loses its ʿa, when the preceding fā'īlam retains its ma; it also loses its ma, when fā'īlam following it, does not become fā'īlam.

(MOH. BENCHER)
AL-MUFADDAL b. MUHAMMAD b. YA'LA b. AMIR b. SALIM b. AL-KAMAL AL-DABSHI, an Arabic philologist of the Kufan school. By birth he was a freeborn Arab; the date of his birth is not known. His father was a recognized authority on the events in the wars of the Arabs on the frontiers of Khurāsān in 30–90 A.H. (quoted in Thabit’s Annals). It is possible that his son was born in this region. As a partisan of the house of ‘Alī he took part in the rising against the ‘Abbasid caliph al-Mansūr led by Ibāth b. ‘Abd Allāh (q.v.), brother of al-Nafīs al-‘Abbash. The rising was put down by Ibāth and Mufaddal was taken prisoner, but pardoned by the caliph and appointed tutor to his son, the future caliph al-Mahdi, and in his train he visited Khurāsān. He then worked in Kufa as a philologist and teacher; among his pupils was his stepson al-A‘rāfī. The date of his death is variously given; the Fihrist does not give it at all while others give 164, 165 or 170.

Mufaddal, like his contemporary ‘Allamād (q.v.), bore the epithet and title of honour al-Samāwī, and was regarded as an authority on the poetry of the Dāshīlī. In contrast to ‘Allamād, he is celebrated for the reliability of his transmission. In his work, Kitāb al-Aghāni (v. 1), there are several stories illustrating this fact. While ‘Allamād was reproached with having inserted verses which he had himself composed into the work of the prominent poets of the Dāshīlī, Mufaddal is praised for handing down the old poetry pure and unaltered.

There was, of course, a great rivalry between the two Sāfārī which also finds expression in the stories of the Aghāni. Mufaddal is reported to have said that the influence of ‘Allamād on Arabic poetry had been most disastrous, to a degree which could never be made good again. To the question how this was and whether ‘Allamād had made mistakes in the attribution of the poems or linguistic errors, he replied: if that were all, it could be made good, but he had done worse than this. Since he was such an authority on the old poets, he was able himself to write verses in that style and he added inserted such verses of his own composition in genuine old Sāfārī so that now only very good critics of the old poetry could recognize them (cf. Aghāni, v. 172 and Yāqūt, Irshād, vii. 171). It is also recorded that al-Mufaddal once in the presence of the caliph ‘Abd al-Malik passed off verses of his own as the work of ‘Allamād b. Abī Sulaym. The Sāfārī which ‘Abd al-Malik was reciting began with da‘ī da‘ī and on the caliph asking for the missing nasīh he added several nasīh verses. Mufaddal however said quite rightly that there had probably been a nasīh before the surviving verses, but no one any longer knew it. ‘Abd al-Malik was thereupon forced to confess his forgery. It is interesting to learn that, as is recorded in this passage of the Aghāni, ‘Abd al-Malik was rewarded for his recitation but the sum given to al-Mufaddal was considerably greater. al-Mufaddal was given his reward, not only for his knowledge, but also for his fidelity and honesty in transmission (cf. Aghāni, loc. cit. and Yāqūt, loc. cit.).

Mufaddal worked in different fields of Arabic philology. He was considered an authority on rare Arabic expressions, celebrated as a grammarians and was also an authority on genealogy and on the Arab battles (‘Ayyām al-Arāfī). He wrote a number of books: a Kitāb al-‘Amthāl (on proverbs), a Kitāb al-Aref (on metres), a Kitāb Mu‘aṣṣ al-‘Āthār (on the meanings of poems) and a dictionary: Kitāb al-Alfiṣ. His principal work, however, is a collection of old Arabic šajā‘āt called the Mufaddalīyat, which he compiled for his pupil, the future caliph al-Mahdi. Mufaddal himself is said to have given another story of the origin of this anthology, which is one of the most valuable Arabic collections. When on one occasion Ibāth b. ‘Abd Allāh was in hiding in his house, he brought him some books to read at his request. Ibāth marked a number of poems and these he collected in one volume because Ibāth valued them as a good critic of the old poetry. This collection was later called the ‘Ibāthiyya al-Mufaddalī (ed. Flügel, Gramm. Scholien, p. 144, note 1). The Mufaddalīyat contains 126 poems, some complete šajā‘āt of many verses, some fragments of small size, while in Abū Tamam’s collection, the Hamūra, only little fragments of poems or separate verses are contained. The latter was compiled some fifty years later; at first it was much more popular than the Mufaddalīyat and more frequently annotated. But al-Mufaddal’s anthology is of quite outstanding merit. The great bulk of it is the work of pagan poets and muḥāfazzūn, while only 6 of the 67 poets represented were born Muslim. Two of the poets whose šajā‘āt are contained in the Mufaddalīyat were Christians. The poems, the date of composition of which can frequently be deduced from events mentioned in them, are in some cases very old. The earliest are those attributed to Murāǧīj al-‘Āthār, which probably belong to the first decade of the sixth century A.D. al-Mufaddal’s anthology offers a rich selection of the old Arabic poetry, the value of which is increased by the great age of the poems preserved in it. The name of its collector, who enjoyed a good reputation among his contemporaries for his reliability, also gives us a certain guarantee that we have in the poems of the Mufaddalīyat really genuine specimens of old Arab poetry.

LIKE LITERATURSTÖRER

AL-MUFID ABU ‘ABD ALLAH MUHAMMAD B. MUHAMMAD B. AL-NU‘AMI AL-‘ABASSII, also called IBN AL-MU‘ALLIM, a distinguished Twelve scholar of Baghdad under the Buyids, was born at the end of 333 or 338 (945 or 950), and came of an old Kuraish family which, as his second epithet shows, had a reputation for scholarship; he himself became, as his epithet shows, the teacher from whom all later students have derived advantage. While he took little active part in politics, he was a very prolific author. His correspondence, usually replies to queries, came from Mawṣil, Djurdjfan, Dinawar, Raqqa, Khwarām, Egypt and ‘Arabistan. His literary connections with other leaders of the Twelvers are seen in the fact that the Dogmatic mentioned third below is a critical commentary on Ibn Bihbīya’s Risālat al-Ifrījāt (published in a collected volume, Teheran
II. THE DECLINE OF THE MUGHAL EMPIRE.

III. MUGHAL ARCHITECTURE IN INDIA.

I. THE MUGHAL EMPIRE TO THE DEATH OF AKBAR.

A. Military Organization of the Mughal Empire.

The army which Bābur led into India, and with which he defeated at Panipat the army of Ibrahim Lodi, 100,000 strong, consisted of about 10,000 combatants, mainly cavalry, but comprising a corps of artillery and a small proportion of infantry, chiefly matchlockmen. Bābur’s son and successor, Humayūn, though hampered by the virtual independence of his brother Khān, governor of Kābul, who annexed the Panjab, and thus cut him off from the best recruiting grounds of the Muslim army in Northern India, Afghanistan, and Trasoxonia, was nevertheless able to lead into the field at the battle of the Ganges, near Kanauj, where he was defeated by Shāh Shāh, an army of 100,000 men. On his return to India in 1555 he left Kābul with an army of no more than 15,000 men, and it was his son and successor, Akbar, who was the creator of the army of the empire of which he was, in fact, the founder.

The empire was a military despotism. The governor of a province was entitled zājī al-dīn, or “commander-in-chief,” the governor of a purgāwa, or sub-district, khānī-khānān, or “commandant,” and practically all courtiers and officials, even those holding civil and judicial posts, were graded as commanders of horse. Thus we find Shāhīs Abu ‘l-Fadl, Akbar’s secretary, graded as a commander of 2,500; Rādījī Bil Dar, court wit and Hindi poet laureate, as a commander of 1,000; Sāyīd Mūhammad, Mur ‘Ad, a judge, as a commander of 900; and Shāhīs Fāiqī, the poet, as a commander of 400 horse. A command of horse was known as manṣūb (“rank”) or “dignity”) and its holder as manṣūdī (“officer”). Each of these nominally commanding 500 to 2,500 horses was classed as an amīr (“noble”), and each of those nominally commanding more as amīr-i hākī (“great noble”). These commands were nominal, conferred merely for the purpose of regulating the rank of the official holding them, and were styled manṣūb-i hādi (”personal rank”). Each of those actually exercising military authority had, in addition to his personal rank, sāzār (horseman) rank. Thus, a commander of 5,000 might be described as “commander of 5,000, with 4,000 horsemen”, that is to say, one ranking as a commander of 5,000, but supposed to maintain only 4,000 horsemen. In Akbar’s reign, apart from the rank held by the royal princes, commands ranged from 10 up to 5,000 horsemen, but at the end of the reign two or three nobles were promoted to commands of 6,000 and 7,000. In these two high commands there was no distinction of grade, but each of the other commands was divided into three classes, viz.: 1. those whose sāzār rank was equal to their personal rank, 2. those whose sāzār rank was half, or more, of their personal rank, and 3. those whose sāzār rank was less than half of their personal rank. Thus, a commander of 5,000 with 5,000 horsemen would be in the first class of his...
the troops being provided for by orders on the treasury for payments in cash. This edict caused much discontent, for the ḡāṭr system was, for many reasons, far more popular than the nákhr, or cash-payment, system. Under the nákhr system a muster-parade might at any time be made a condition precedent to the issue of a payment order; and a ḡāṭr might reap much profit by economizing in the administration of his fief, by rack-renting the landholders, and by encroachments, but the nákhr system furnished him with no such means of enriching himself. The edict was immediately modified, and though the nákhr system was introduced in the settled provinces of the empire, the ḡāṭr system was retained in the more recently conquered provinces of Bengal, Gudjārāt, and Sind, and, after Akbar's death, was restored, in many cases, in other provinces.

Another reform introduced at the same time, the ḡāṭr u-maḥbāllāt, or branding regulation, was resented even more than the substitution of the nákhr for the ḡāṭr system. It was seldom that ṭabqābāt maintained their full quota of troopers; "false musters were an evil from which the Mughal army suffered, even in its most palmy days. Nobles would lend each other the men to make up their quota, or needy idlers from the bazaars would be mounted on the first baggage pony that came to hand, and counted in with the others as efficient soldiers". It was to check such fraudulent practices that Akbar introduced the ḡāṭr u-maḥbāllāt regulation, which required the preparation of descriptive rolls of men and horses, the latter being branded on being passed as fit for service; and at muster-parades only these who produced branded horses were paid. This system originated, apparently, with the Sākūrīs in Transoxiana and Persia, and was introduced into India by 'Ali al-Dīn Khāldī in 1342, but was not enforced after his death until it was revived by Shāh Shāh in 1541. After his death it was again abandoned, and Akbar had great difficulty in reviving it, owing to the determined opposition to any measure designed to prevent public officials from enriching themselves by defrauding the state. Even he was obliged to exempt commanders of 5,000, or a greater number, of horse from its operation, though these were required to parade their contingents for inspection when ordered. In the later days of the empire, the regulation was not enforced, and when Bābur al-Mulk joined Muḥammad Shāh at Karnāl, to meet Nādir Shāh, a historian considers it worth while to describe his contingent as ṭabqābāt ma ḡāṭrī, that is, "actually present, not merely on paper"; and later, in 1750, an officer in Bengal receiving pay for 1,700 men was said not to have been able to muster more than seventy or eighty.

Besides the contingents of the princes and the ṭabqābāt there were the sovereign's personal troops. His body-guard was a corps known as the Wallāḥābād, composed chiefly of men who had been attached to him from his youth, and had served under him as a prince. Manucci refers to these as the emperor's slaves, and says that they numbered 4,000 under Awrangāzīb. Details of their pay are not given, but they probably received more than the troopers serving in the contingents of the ṭabqābāt. There was also a corps of élite first formed by Akbar, and styled the Ḍhādāl corps. Abu 'l-Faḍl, in a characteristically foolish passage says that they were so called because they were
fit for a "harmonious unity", whatever that may mean; but they seem to have been called akhāli because they enlisted singly in the personal service of the emperor, and were not brought into the service in bodies by a manṣubār. They stood, in rank, between the lower manṣubārs and the tābūnān, and received nearly double the pay of the latter. They may be compared to "gentlemen of the life-guard", and many were seconded from the corps in order that they might hold civil appointments. The proportion of three-horsed, two-horsed, and one-horsed troopers was the same in the akhāli corps as in the contingents of the manṣubārān.

A commander of horse, whether he held a ḍīfā or whether he drew the pay of his contingent from the treasury, made his own arrangements for its disbursement. He was entitled to retain five percent of the pay of his men for himself, and pay was not always allowed for a whole year; often only for six, five, or four months. Manitucci, writing of the army in the reign of Aurangzeb, says, "in respect of one year's service they receive six or eight months' pay. Even that is not all in coin; they are always foisted off as respects two months' pay with clothes and old raiment from the household. Over and above this, there is almost always due to them the pay for two or three years' service. The soldiers are obliged to borrow money at interest from the pārāfs, or money-changers. These men lend to them, it is true, but it is hardly ever without a command from the general or officer; and these latter have an understanding with them about the profit from interest, which they share between them. Sometimes the soldiers sell their papers to these money-changers, who for a note of hand for one hundred rupees will give them twenty or twenty-five. It is by these and such-like extortions that these generals ruin the wretched soldier, who, unable to find other means of gaining his bread, is forced to remain on in his service. Speaking generally, it is impossible for them to escape such extortions, for these disorders reign throughout all the princes' establishments. If any one resigns service at his own request, they deduct two months' pay. Nevertheless service in the cavalry was socially an honourable profession; a common trooper was looked upon as being, to some extent, a gentleman, and such were, even when illiterate, often used to the highest positions."

The infantry was, in every respect, an inferior arm. With it were classed doorkeepers, watchmen, runners and spies, gladiators, wrestlers and palanquin bearers, but the combatant branch consisted of musketeers or matchlockmen (farqāmānīs), archers, and spearmen. Akbar maintained a corps of 12,000 matchlockmen, the officer in command of which was styled dārgā. A secretary and a treasurer kept the accounts and disbursed the pay of these troops. The non-commissioned officers of the corps were graded in four classes, the first of which received 7½, the second 7, the third 6½, and the fourth 6½ rupees a month. The privates were divided into five classes, the pay of which ranged from 2½ down to 2½ rupees a month.

Besides this corps was a number of troops styled akhāli, of which one-fourth were matchlockmen and three-fourth archers. These were the troops allowed to the jāmākārī in the jargāns or subdistricts, to assist them in maintaining order and collecting the revenue. The non-commissioned officers of the matchlockmen received Rs. 4 a month, and the privates Rs. 3½ each. The archers were considered more efficient than the matchlockmen, for the matchlock was not an arm of rapid fire or precision, and an archer could shoot many arrows while a matchlockman was loading his matchlock. Neither matchlockmen nor archers could, as a rule, face cavalry in the field, and it was not until the emperors and their vassals were brought face to face with troops armed and drilled after the European fashion that they discovered that infantry was the queen of battles; but belief in the superior efficiency of cavalry died hard.

The artillery was divided into two classes, the heavy and the light. Bābur had an efficient corps of artillery, and used it with great effect, but the Muslims of India were not skilled artillerists, and the heavy artillery was usually officered and partly manned by Uthmānī Turks, Portuguese renegades of pure or mixed blood, and occasionally by other Europeans. The light artillery consisted of field-pieces carried on bullock-carts, wall-pieces on animals' backs, and sambūraks, or still lighter service-guns, carried on and fired from the backs of camels. The heavy artillery was drawn by strings of oxen, or, occasionally, by elephants, and, as the army gradually declined in efficiency the heavy guns increased in length and calibre until they became so heavy as hardly to be mobile, so that often they could not be dragged to their destination but were left stranded by their road. A defeated army could seldom save its heavy field artillery. All that it could do was to spike the guns and leave them. The ammunition was solid shot, sometimes of stone, sometimes of iron, and field guns and heavy guns in the field were sometimes loaded to the muzzle with the tough copper coin of the time, which took the place of case-shot, and did great execution at close quarters. The artillery also comprised a corps of rocketeers. The whole of the artillery was commanded by an officer entitled mir-i āṣīr, or "lord of fire". The officers were entitled jartābāz ("commander of 100") corresponding to a battery commander, and mirādāh (commander of 10), who had charge of a subdivision, or one gun. The wall-pieces and sambūraks, which were numerous, account for the enormous numbers of "guns" mentioned in accounts of armies in the field.

Akbar used elephants freely in battle, and brought them into the field in great numbers. They usually carried archers or musketeers on their backs. Their use as a fighting force was, however, soon abandoned, and would have been abandoned sooner than it was, had it not been for their imposing appearance, for it had long been established that they were more dangerous to their own side than to the enemy. To the last some elephants protected by armour were brought into the battle-field, but their use was confined almost entirely to carrying the generals or great nobles, and displaying their standards. The baggage elephants were assembled in rear, with those bearing the harem, the women remaining mounted on the latter during the battle, and protected by a strong force posted round them."

Under Akbar the elephants ridden by the emperor were called ḍhāṭā ("special"), and all others were arranged in groups of ten, twenty, or thirty, called ḍhālpī ("ring", or "circle"). In later reigns the same classification was employed, but with
a more extended meaning, khāṣa then including all riding, and faţās all baggage elephants. Manṣābās from 7,000 down to 500 were required to maintain each one riding elephant, and, in addition, five baggage elephants for each 25,000 of pay. It appears that these elephants belonged to the emperor, and were not even made over to the manṣābās for use, except in the field. In the Akbār Akhāri Abu’l-Faḍl says that Akbar "put several faţās under the charge of every grandee, and required him to look after them".

The commander-in-chief of the army was the emperor himself, but at the head of the military administration was an officer entitled Bakhshi-ul-Manṣūlahi, whose position may be described as that of adjutant-general and mustar-master-general. He was assisted by three bakhshis and a number of bīrūlaks, or clerks, and the duties of this department included enlistment, mustering, and passing the pay of both manṣābās and taḫīna, for which purpose they were obliged to see that the branding regulations, so long as they were enforced, were observed by those to whom they applied. Manucci says, "twice a year the bakshās holds a review of all the cavalry present at court, examines all the horses, and sees whether any of them are old and unfit for service. In the latter case he makes the owners get rid of them and buy others". These officers remained at headquarters, and from some authorities it appears that one of them had charge of the Wird-ul-Manṣūlah, or body-guard, but the Akbāri corps, which was commanded by one of the great nobles, had its own divān, or paymaster and quartermaster, and its own bakhshis, both officers being assisted by bīrūlaks. Certificates granted by the bakhshi were recorded by the waqf-a-nigar, or writer of the official diary, and were by him submitted to the suwar, or minister, who, after passing them, sent them to the office of revision and record, but pay was issued on the minister's order. In addition to the bakhshi at headquarters there were officers with similar functions attached to the governor of every province, their office being generally combined with that of waqf-a-nigar, or provincial diary-writer; and in imitation of the imperial establishments each great noble had his own bakhshi, who performed for him the same duties as those performed for the emperor by the imperial bakhshi.

It is impossible to estimate accurately the strength of the army in Akbar's reign, for the swar rank of the manṣābās is not given, either in the Akbar Akbari or in the Tuhaf-i Akbāri. He maintained 12,000 matchlockmen, and Blochmann estimates the whole strength of his army at 25,000, of which 12,000 were cavalry and the rest matchlockmen and artillery, but this seems to be much too low an estimate. Humayun could pass 6,000 cavalry into the field, and it is not likely that Akbar, with far wider dominions, would have been content, or could have ruled and extended his empire with a smaller army. It seems probable that Blochmann's estimate included only the emperor's personal, or household, troops. In the latter half of Shah-Djahān's reign the contingents of the princes and nobles would have numbered 435,000 if each manṣābār had maintained the full quota of his swar rank, but this they were not even expected to do. Fortunately a fairly exact return of the strength of the army is given in the Taḥdīkh-i-Imām. There were 8,000 manṣābārs of all ranks, 7,000 mounted Akhāris and barhānās, 200,000 cavalry, exclusive of the troops allowed to sāfīedāris for the maintenance of order and the collection of the revenue, and 40,000 foot matchlockmen, artillery, and rocketeers, of whom 10,000 were at headquarters and 10,000 in the provinces and the forts. It is not quite clear what is meant by the mounted barhānās classed with the Akhāris, for barhānās is the word used for the matchlockman, and horsemen certainly did not carry the cumbersome matchlock, and carbines and pistols had not been introduced, but it may be that a few men carrying a lighter musket than the ordinary matchlock were attached to the Akhāri corps. Of the army in the reign of Avarangbāb Manucci writes, "ordinarily the king keeps fifty thousand horse in garrison besides those in movement every day, an almost equal number. He has twenty thousand infantry, all Rāṭāpuris; out of them twelve thousand are in charge of the artillery; the rest are for guarding the royal palace, mounting sentry, etc. cetera".

The army of the Mughal emperors was not drilled. Muster parades consisted merely in the troopers passing in single file before the bakhshi, and the nearest approach to any manoeuvres was the participation of the army, or part of it, in a royal hunt, when the troops, aided by the people of the country side, acted as beaters, surrounded a large tract of country, and, day by day, closed inwards until in a small area was enclosed an enormous quantity of game, which was then daunted wholesale by the emperor and those who were permitted a share in the sport. Apart from this species of hunting styled ahkār-i-hūngar, the army was never exercised in any combined movements, or drill; but the individual trooper paid great attention to the training of his body, exercising himself with all his weapons, saber, spear, mace, battle-axe, buckler, dagger, and bow and arrows. The bow was considered a most effective weapon, as a horseman could shoot six times before a musketeer could fire twice. The trooper also went through various exercises for strengthening his limbs and his body, both with and without apparatus, the latter consisting of dumb-bells, waxdār, or Indian clubs, and the tham, a strong bow with a steel chain instead of a string, most effective in training these muscles employed by an archer. The horses were also trained in a sort of musketry.

B. Economics and Administration.

The Mughal Empire lived mainly by agriculture. The only metals available in quantity were iron and copper; both were relatively expensive, and local supplies of the latter were falling in the xvith century. The existence of coal was unknown, and of other minerals only lime, salt, saltpetre, and, locally, building stone were largely produced. The agricultural land was divided into areas known as
villages (dāl), usually, but not always, inhabited. The villages were grouped traditionally in larger areas (pargana), which were usually treated as administrative units (mughal). Most villages, but not all, were occupied by a community of peasants, held together by the tie of common ancestry; each member of these bodies had separate possession of the land which he cultivated, but the community acted as a whole, through the headmen (mukaddam), in the management of the village, letting surplus land to tenants, paying the revenue and other expenses, and transacting such other business as emerged.

The population was predominantly vegetarian. Most of the officials and the army was provided where required, but its supply lay outside the ordinary course of agriculture. The products of the land were mainly food, cereals, millets and pulses, with, on a smaller scale, sugar, vegetables, and condiments. Oilseeds were grown for local needs; opium was produced largely, and tobacco, a recent introduction, had spread rapidly through the empire; cotton and some other fibres, together with indigo and other dyes, were the chief industrial crops. Holdings were usually small, and were worked largely by the peasant himself with the aid of his family and the landless labourers of the village. Omen were used for village implements were few and primitive, and there was in general a scarcity of agricultural capital, necessitating prompt sales of produce at each harvest, to the peasant's loss and the middleman's gain.

Handicrafts were numerous and varied, but weaving was by far the most important. Cotton cloth was woven all over the empire, most of it for local consumption, but near the coasts production was directed largely to supplying overseas markets, while finer goods—muslins and prints—were carried long distances by land. Most of the consuming markets were conservative, adhering closely to established styles and patterns. There was thus little scope for invention; copying was safer than designing; and such developments as are recorded were the result of either patronage by wealthy amateurs, or the extension of the European demand. Silk-weaving was locally important in Bengal and Gujrat, in the latter case from imported material; jute and hemp were only of local importance, but in the xvith century an export trade in sacks and sacking was beginning to develop.

In peaceful regions commerce was active, and, for the period, highly organised. Funds were ordinarily transmitted by bills of exchange, which could be negotiated in all the principal towns, and in some centres outside the empire. Merchants were, however, disinclined to carry large stocks of commodities, and preferred to utilise their funds in money-lending; the rate of interest in commercial transactions was commonly about 10 or 12 per cent, but the charge was much higher when the element of risk was great.

External land-trade was almost limited to the two caravan routes westward by way of Kābul and Kandahār, though there was some small traffic with Tibet. By sea, Gujurat had old-established connections with the Red Sea and the Persian Gulf, with East Africa, and with Sumatra, Malacca and further East; on a much smaller scale Sind had relations with Persia; while Bengal dealt chiefly with the south of India and with Burman and Siam.

During the xviith century all the sea routes were dominated by the Portuguese, who were concerned rather to exploit than develop; the chief extension of trade due to their efforts was the supply of cloth to Brazil and West Africa, but most of this was drawn from the Coromandel Coast, which was outside the empire until almost the end of the xviith century. After "factories" (i.e., agencies) had been established at Surat by the English (1611) and the Dutch (1617), an important trade with western Europe grew up in indigo and calico. In the middle of the century the indigo-trade yielded to competition from the West Indies, while the depopulation of Gujrat by the famine of 1630 transferred the bulk of the calico trade to the East Coast; Surat remained, however, an important centre until its supersession by Bombay. In the second quarter of the xviiith century the Dutch, followed by the English, established factories on the Hūgli in Bengal, and trade developed in silk, saltpetre, fine calico, and muslin. Towards the middle of the century a change of fashions in Europe produced a great demand for muslin and prints, which was met partly by Bengal, and partly by Madras, by this time technically within the limits of the empire.

The outstanding feature of all trade with India was the need for importing gold and silver. India bought little beyond the industrial metals and luxury goods, but was eager to sell produce for cash; and, since Western Europe could not supply what was most in demand, the operations of the trading Companies were necessarily so organised as to direct streams of gold and silver to India from those countries which would part with them, notably, at this period, gold from China, and silver, and later gold, from Japan. The seaports serving the empire were thus brought into a complex but efficient organisation, which took whatever they had to sell, supplied whatever they wanted to buy, and, so far as was possible, satisfied the demand for gold and silver.

Inland transport was necessarily less efficient. The Indus, the Ganges, the Djuama, and the waterways of Bengal were largely used, but the bulk of the empire depended on what were then called roads, unmetalled tracks, sometimes defined by lines of trees, with halting-places which were generally walled or otherwise defended against robbers, and usually furnished with supplies. Transport was effected by carts and pack-animals, generally oxen but in some places camels. Passengers travelled on horseback; in palanguins, or in carts drawn by fast oxen. There were excellent arrangements for the rapid transit of letters, but these were for official use, and were not ordinarily available for private persons, who hired messengers when required, or in a few cases, clubbed together to send messengers periodically.

Standards of life presented sharp contrasts. The mass of the population, peasants, artisans and labourers, lived in such extreme poverty as to elicit the commiseration of European visitors. An almost equally standard prevailed among the numerically important class of servants in the towns, whether freemen or slaves, who, however, enjoyed a more secure life than that of the rural population. The middle classes, comparatively smaller in numbers than now, were thrifty and frugal; and, even when wealthy, were careful to avoid any display which might lead to exactions by officials. The superior
grades of officers employed by the State were exceedingly well paid when allowance is made for the high purchasing power of money, and spent their incomes freely in extravagance and display, increased by the fact that on their death their property reverted to the treasury.

The prosperity of the empire depended mainly on three factors: the character of the rainfall, the degree of internal tranquillity, and the working of the revenue administration. The seasonal rainfall was, as it still is, uncertain, and any serious defect resulted in insufficiency of food. The difficulty of transport made it impossible to afford adequate relief on the spot, the people abandoned their homes to wander in search of food, and in contemporary narratives we read again and again of the then familiar features of deaths from starvation, cannibalism, and the sale of children into slavery. Recovery from such a calamity was a slow process, and the famine which desolated Gujarat and the Deccan in 1630–1631 left its mark for at least a generation. Exceptionally favourable seasons might also prove calamitous, though not to the same extent. There was no local market for the surplus produce, and prices fell to a ruinous level, and in official regulations low prices were treated as a calamity requiring relief on the same footing as drought or hail.

The dominance of the weather was inevitable; the other influences on prosperity were matters of administration. Here a clear distinction must be drawn between the general and the revenue administration, a distinction denoted by the current phrase wa'li wa-mal. The emperor was of course supreme in both branches, and was assisted at his headquarters by four principal officers, the Wazir or Prime Minister, the Wazir or Revenue Minister, the Bahshah (see col. 629*), and the Sadr, who was in charge of Islamic law and also administered the department dealing with charitable grants and endowments. The post of Wazir was not always filled, and when it was it always the duty attaching to it devolved on the Wazir. In practice the powers of these Ministers depended on the personality of the Emperor; under Akbar or Shah-Jahán they were definitely subordinates, while under Jahangir’s Prime Minister was at times practically the ruler of the country.

The system of general administration to which the Mughals succeeded in Northern India was not highly developed. The great bulk of the country was held by officers in assignment (a term explained below); the assignee was responsible for keeping the peace, and in practice had a free hand in the methods employed. Under Akbar a more effective system was established, which was maintained throughout the period. The empire was divided into provinces (sāhāk), each of which was in charge of a Viceroy (Sipahsāhār, Sāhahār), who at first was responsible to the Emperor for all branches of administration, but after 1595 was relieved of revenue work. Apart from the Viceroy, officers who may be described as Governors were stationed at selected places, with the duty of keeping the peace and putting down rebellion, a term which covered failure to pay the revenue due. The ordinary designation of these Governors was Fauqifār, but in outlying regions which were controlled by fortresses the Governor was the fortress-commander (śarifār), while in a few large assignments the assignee exercised the powers of a Governor. Cities were governed by officers designated Ketāwāl, who combined the functions of magistrate, police-commandant, municipality, and censor of morals. There was no regular police force at the disposal of these officers, who were expected to employ the troops they maintained as a condition of their rank, obtaining help when their own forces were insufficient. The efficiency of this organisation varied with that of the central administration, which depended mainly on the personality of the Emperor; by the close of the eighteenth century it was definitely breaking down, and conditions of anarchy were spreading over the empire.

It is difficult to state in precise terms the relation of this organisation to the extensive portions of the empire where internal jurisdiction remained in the hands of Hindu Chiefs; but apparently the Chief was regarded officially as assignee of his territories, and was expected to maintain order within them. If he failed to do so, the Viceroy or Governor concerned might intervene, but his action would ordinarily be directed against the Chief rather than against the people.

The revenue administration was controlled by the Wazir, sitting in the Revenue Ministry, which was known as Diwan, as opposed to Husār, or the Court, whence orders were issued by, or in the name of, the Emperor. Revenue at this period meant practically Land Revenue; the Imperial Treasury had receipts from other sources—Customs, Salt, Mint, Presents, Inheritance, and, under Awrangzéb, the Captivation Tax (ārūd), but, taken collectively, they were of little importance compared with the income obtained from the peasants. Under the system traditional in India, and embodied in Hindu law, every person cultivating land was required to pay a share of the produce to the King, who determined, within somewhat elastic limits, the amount of the share, and who also prescribed the methods of assessment and collection.

The first Muslim conquerors accepted this ‘King’s share’ as the ārūd to which they were entitled under Islamic law; the question of property in land was not raised, but occupants were ordinarily allowed to retain possession subject to due payment of the revenue.

In the Mughal period agricultural land fell into three classes: Chiefs’, Reserved and Assigned. The areas governed by the more important Chiefs were not assessed to revenue (ārūd) by the Wazir; that was the privilege of the Chief, and any payments which he made to the treasury were in the nature of a tribute, determined by negotiation. The treatment of the numerous smaller Chiefs is not on record; but the few facts which have survived are consistent with the view that assessment was made through them, and that they were allowed to retain a portion of the revenue in return for their services. In the regions which were directly administered, certain areas of land, described as ḍāhān, were reserved to furnish the treasury with revenue, and were managed by the staff employed by the Revenue Ministry; at first the local staff was under the provincial Viceroy, but in 1596 a Diwan was posted to each province, to manage all revenue business directly under the Minister, and in this way emerged the dichotomy into ṭāmān (revenue business) and fawqifār (general business) which henceforward characterised the local administration.

The land not reserved for the treasury was
available for assignment. Every officer appointed to the Emperor’s service was entitled to an income defined in cash, which represented both his personal salary and the cost of the troops he was required to maintain. For a short period in Akbar’s reign, this income was paid, as well as defined, in cash, but the ordinary practice in the empire was to assign to each officer an area (गढ़ी, तळ, या घर) estimated to yield as revenue the amount of his stated income; and the officer thereupon took charge of the area assigned to him, and assessed and collected the revenue in accordance, at least theoretically, with the general orders in force. If the yield proved insufficient, he could claim the balance from the treasury, while he could be required to account for any excess receipts; but in practice these matters seem usually to have been adjusted by bribery, for which there was also extensive scope in securing profitable assignments, and in getting rid of those which had been squeezed dry. Changes of assignment were ordinarily so frequent that an officer would have been unwise to spend money on fostering agricultural development, or to do anything beyond extracting the largest income which his assignment could be made to yield. The great bulk of the land was ordinarily assigned, the reserved area being one-sixth or one-seventh of the whole.

The share of the peasants’ produce claimed by Akbar was one-third; later, at some uncertain time in the first half of the xvith century, this figure became the minimum, with a maximum of one-half, which inevitably tended to become the standard. Three principal methods of assessment were in vogue: Sharing (चालिया अधार), Measurement (प्रभाबिकिया), and Group-Assessment (सम्मेल). In Sharing, the produce of each peasant was ordinarily estimated (or occasionally ascertained at harvest), and the prescribed share valued to determine the cash-revenue due for that season. In Measurement, a fixed charge, varying with the crop, was made on each unit of area sown; it might be fixed in either cash or produce and in the latter case it was valued at current prices. Under both these systems payment in cash was the general rule, but payments in kind were permitted in some backward regions where currency was scarce. In Group-Assessment, the official concerned came to terms with the headmen of the village to pay a sum fixed in cash for the year, thus avoiding the necessity of detailed assessments on individuals; this system tended to pass into Farming, when terms were made, not with the headmen, but with an outsider.

Each ruler determined at his pleasure which of these methods should be employed, and in what regions. Group-Assessment was the prevailing system at the time of Bībī’s conquest, and apparently was accepted by him. After the expiration of Humāyūn from India, Shāh Shāh introduced Measurement throughout his kingdom, and his methods were at first adopted by Akbar; the revenue claimed from each unit of area was at this time a stated quantity of produce, calculated to be one-third of the average yield, and, except in the tracts where payment in kind was practised, this amount of produce was commuted to cash at prices fixed officially for each season. Practical difficulties, however, in regard to commutation; and in 1579–1580 the revenue was put definitely on a cash basis, the charge on each unit of area being a fixed number of दाम (reckoned at 40 to the rupee) instead of a fixed weight of produce. Schedules of cash-rates adapted to the varying productivity of different regions were now drawn up, which remained in operation during the rest of Akbar’s reign. At some uncertain period, probably under जाहांगीर, these schedules were discarded, and a return was made to Group-Assessment, which was the standard system in the middle of the xvith century, and survived into the British period; Sharing was now practised only in backward tracts, or in some cases where the headmen refused to pay what the assessor thought a reasonable revenue, in which case he proceeded to detailed assessment on individuals, by Sharing or by Measurement according to circumstances.

Such was the history of assessment in the heart of the empire, but the outlying provinces were not brought into rigid uniformity, local conditions determining the system applied in each; while in the Dakhan provinces a distinct and elaborate system was introduced in the middle of the xvith century in order to promote recovery from the effects of war and famine.

It would be futile to criticise these varying institutions, for the value of all alike depended on the spirit in which they were worked. In administrative circles there was throughout the Muslim period a definite ideal of agricultural prosperity as the foundation of the State, its elements being extension of cultivation, improvement in the class of crops, and development of irrigation. Against this ideal operated the urgent need for the largest immediate revenue that could be wrung from the peasants. The course of the struggle cannot be traced in detail but the central fact is that by the middle of the xvith century agriculture had ceased to be an attractive career, and the peasants were deserting the land for other occupations; the resulting decline in agricultural production was the chief economic factor in the eventual collapse of the empire.

The remaining branches of the administration require little description. Customs duties were formally low, but their incidence was increased by arbitrary over-valuation and unauthorised payments required to secure prompt clearance of goods. In the towns, civil justice was administered only by the जाहीर; in the country, disputes were apparently decided summarily by the executive officials. Punishments for crime were summary and drastic, and were not always in accordance with Islamic law. By Indian tradition, local officials raised a large revenue for local purposes by a multitude of taxes and excissions of a most oppressive nature; these were prohibited by the Akbar, and again by Awrangzeb, but the system survived. Its worst feature was the levy of transit dues on internal trade, which were a cause of constant complaint by Indians as well as foreigners.

Special attention was given to the coinage, as being a recognised appanage of sovereignty. Gold, silver and copper were coined, all the coins circulating at their metallic value, so that the exchange rate between different denominations fluctuated; but gold was not in general circulation. The chief coin of the empire was the silver rupee, containing nearly 180 grains of almost pure silver; the principal copper coin was the दाम, of nearly 324 grains; and there were various smaller coins of both metals.

The unit of weight used in wholesale commerce-
was the maund or mow, which varied in different parts of the country. In the south of India it ranged about 25 lb; in Gujrat it was 33 lb, but in 1635 this was reduced to 37 lb; in North India, it was 52 lb. At Akbar's accession, was raised by him to 55 lb, by Djiângir to 66 lb, and by Shahji to 74 lb. In Bengal, it was 64 lb in the West, and 46 lb in the East. All these figures are given to the nearest lb. The unit for retail trade varied from place to place, but was ordinarily smaller than those which have been named. Measures of capacity were not used in wholesale commerce. The measure of length in the North was the gun or yard, which was standardised by Akbar at about 33 inches, and by his successor at about 40 inches, but the smaller unit survived; in the South the šānta, or cubit, of about 18 inches was used; in Gujrat the unit was about 26 inches; and in Bengal about 27 inches.

II. THE DECLINE OF THE MUGHAL EMPIRE.

The decline of Mughal authority, already manifest during the reign of Awrangzeb, rapidly developed under his immediate successors. Bahâdur Shâh [q. v.] (1707—1712) was too amiable, Djiângir Shâh [q. v.] (1712—1713) was too vicious, Farrukh-shâyâr [q. v.] (1713—1719) was too feeble, to revive the empire. In seven bloody battles of succession, fought within six years of Awrangzeb's death, the imperial family attested its inherent lawlessness and declining power. Then it became the sport of rival factions. For a while the two famous Sâyid brothers, 'Abd Allâh and Husain 'Ali, of Bâhâ, became the joint mayors of the palace. But they were unable to consolidate the support of the Mughal nobles. In 1720 Äsaf Djiângir Nîâmân al-Mulk rose in arms. Husain 'Ali mediated against him, but was murdered with the connivance of Muhammad Shâh, the emperor whom he and his brother had set up in 1710. Shortly afterwards, his brother 'Abd Allâh was defeated, and, after lying in prison at Agra for two years, was poisoned. When they fell, Nîâmân al-Mulk strove hard to restore something like the old order of administration. But he was unwilling to force himself upon Muhammad Shâh as the Sâyids had forced themselves upon Farrukhshâyâr. When the emperor whom he had delivered refused his advice, and the followers of the courtiers made fun of his antiquated dress and the ceremonious manners, he preferred to retire and rule the Dakhan in virtual independence. Ironically enough, Mu-
Nicholas: Sh. believed that Nisam al-Mulk had been plotting his overthrow. With Nisam al-Mulk's departure from Delhi, the last chances of a revival of the empire vanished. Never did a falling state betray greater incapacity for reform. No phoenix could arise from those shameless ashes. Even while Nisam al-Mulk still retained the nominal control of affairs, extraordinary incidents could occur. At Delhi itself, for example, a Hindu clerk in one of the imperial offices turned Muslim, and, when his wife and daughter refused to follow his change of faith, he laid a complaint against them, alleging that, as his daughter had not attained puberty, she was therefore of her father's religion. The case offered certain technical difficulties, but was at last referred to the sadar al-quditah. His treatment of the case displeased the Delhi mob. Riots broke out, the recall of the daftah at the Dhalan-numa Masjid was interrupted, two or three Hindus were seized and circumcised. To pacify the rioters, the girl was imprisoned, and, a few days later, buried with Muslim ceremonial. "To cut a long story," says Kamwar Khan who relates the incident, "she was killed; otherwise it would have been many headaches and much vexation."

Nasam al-Mulk's successors were worthy of the frivolous emperor whom they professed to serve. For twelve years the imperial councils were directed by a man called Shih 4 Abd al-Qasim. Byorigin a cotton-weaver of Tatth, he had lived both as jogi and faqir. Claiming magical powers and popularly believed to consort with djinn and devils, he was summoned to interpret the dreams of the emperor's mother. This led him into the imperial service, and he contrived to accumulate in his own hand a great number of offices, producing a revenue of 5,000 rupees a day, apart from the bribes which he received, said to amount to as much more. This man was pitily described as never having spent money on a good work, never having conferred a favour, and never having done a kindness. He was a miser, and at his downfall (for even at Delhi another Muhammed Shah such qualities at last produced their natural reaction) more than a crore of rupees was found in his private houses. But the unpopularity which his character and habits naturally evoked were as nothing compared with the detestation with which his son and daughter were regarded. No one in Delhi was safe who displeased them or denied them anything that they desired.

Amid such confusion and under such rulers the empire rapidly lost its cohesion. The Mughals [q. v.], whom even Awrangzib sought in vain to subdue, soon became the most formidable power in India. On Awrangzib's death, his successor, Bahdur Sh. had released the Maratha prince, Shih Raja, in the desperate hope of reestablishing through him the form, if not the substance of imperial control. Shih Raja met with influential and talented support. In 1708 he took possession of Satara and by the next year was generally recognized as ruler. A Chipayan Brahman, Bhalaji Waghwhath, became his priesthood or first minister, and began to develop the characteristic Maratha policy, which was to play a part in the enfeeblement of the empire. This was to put forward claims to a share (under the title of Sayad or a quarter part) in the imperial revenues in as many provinces as possible. In 1709 the Mughal governor in the Dakhan admitted this claim, and, although later governors contested it, it was again recognized by the Bahr Sh. Sayyid in 1719. In the next year Halaji Waghwhath was succeeded by his son, Bajji Rao I, and the process was extended further afield. Particular provinces were assigned to particular officers, who were to realize the tax either by collecting the amount from the provincial governor, or by plundering the country. Bajji Rao employed Pailaji Gakekar as his chief leader in raids in Gujrat; Raghuji Bhosale established himself at Nagpur; these and other leaders spread the terror of Maratha devastation in all directions, and it was no longer possible for the provincial governors to make their annual remittances to the capital. At the same time, seeing that their tenure of office was coming to depend more and more upon their own power and resources, the governors tended to become virtually independent rulers.

Ajas Djiq Nisam al-Mulk in the Dakhan continued to profess himself a humble servant of the emperor, but he repelled by force of arms the persons who came with imperial farrunia ordering his supersession, and when he died in 1748 he was succeeded by his son. In Bengal too the succession had become a matter of heredity or war. But the respect which the name of the empire still enjoyed and the degradation into which the empire itself had fallen were exemplified by the large gifts sent by a new viceroy farrunia of investiture and the unhesitating compliance with which they were issued. The troubles breed by this internal dissolusion were enhanced by those of foreign invasion. In 1722 the safawids were overthrown in Persia, and, after a short period of great confusion, the Turkman Nadir Kuli established himself as ruler under the title of Nadir Sh. [q. v.]. With him difficulties arose over the Kandahar frontier. He was engaged in reducing the Ghilzais there to submission. Thrice he sent envoys to the court of Delhi requesting that his enemies should not receive shelter in the Mughal territory. But by this time the Kahl province was falling into a like disorder with the rest. The governor spent his time in prayer and hunting. The money which had been regularly sent from Delhi to bribe the hill-tribes into quietude and pay the troops ceased to be sent, partly because of the growing imperial penury, partly because it was believed that it never reached the governor but was embezzled by his patron at court. Large bodies of Ghilzais therefore were able without the least difficulty to take shelter from Nadir Sh.'s troops in the Mughal province, while the Mughal court foolishly supposed it was evading its difficulties by neglecting to answer Nadir Sh.'s repeated demands. The ineptitude of the court, therefore, rather than (as used to be supposed) any elaborate intrigue of party against party, made Nadir Sh. resolve to invade India. No effective opposition could be offered in either the Kahl province or the Pandjdb. In 1738 Kahl was occupied. In the next year Nadir Sh.'s army appeared before Delhi. The emperor went out, not to strike a blow in his own defence, but to make his humble submission. Conqueror and captive then entered the city. The Delhi mob, grievously mistaking its strength, attempted to massacre the foreigners. As a punishment Nadir Sh. deliberately let loose his troops for five long hours—from 9 o'clock in the morning till 2 in the afternoon—during which some 20,000 of the inhabitants are believed to
to have perished; and beyond this toll of life a
great ransom was exacted, including 50 crores' 
worth of those wonderful jewels which earlier 
Mughal sovereigns had hoarded up for their delight. 
From this time onwards the annals of the Mughal 
empire contain nothing but dishonour. Nadir Shah 
fell; but Ahmed Shâh Durrânî established on the 
frontiers of India another empire and repeatedly 
invaded India between 1748, the year of the 
ignominious Muhammed Shâh's death, and 1764, 
the year in which he inflicted the severest defeat 
in all their history upon the Marâthâs at Panipat. 
Until the decay of the Durrânî empire in the early 
years of the nineteenth century, the provinces of 
Sind, the Pândjab, and Kashmir, were dependen-
cies of the Afghan kingdom.

Europeans in India — Dutch, French, and 
English — had observed these events with great 
care. Early in the eighteenth century the Dutch 
had sent a great embassy to Bahádur Shâh, and 
a little later the English had sent one to Farrukh-
siyar. Both had secured far-reaching firmâns by 
profuse expenditure; both had found that their 
firmâns were waste paper wherever they ran 
counter to the interests of local governors. But it 
was the Frenchman Dupleix who first sought to 
push into practice the conclusions to be drawn from 
this situation. Others were convinced that European 
force could easily establish itself in India; but he 
began experiments, and, in the hope of keeping 
the English motionless while he acted, he pro-
fessed to be acting on behalf and in the name 
of the Mughal emperor. This fiction became the 
traditional basis of French policy in India, and 
down to the end of the century Frenchmen were 
elaborating plans (which their failure to control 
the sea brought to nothing) for establishing them-
seves in India and expelling their rivals under 
cover of imperial grants. With equal consistency 
the English adopted a political realism which 
squared far better with the circumstances of the 
time. They fought and overcame Dupleix in the 
name of their national interests. When they acquired 
Bengal, they carefully avoided all obligation to 
reestablish the imperial authority; and it appears 
that their acceptance of the diwanî of Bengal was 
dictated, not by any desire to mask the reality of 
their power (which no-one in India doubted), 
but by the desire to take on behalf of the East 
India Company something which could not be 
taken over by the English crown as a territorial 
sovereignty certainly would have been. Thus it 
was that Prince 'Ali Gauhar, who proclaimed himself 
as Shah 'Alam II [q.v.] in 1760, on learning of 
of his father 'Alamgîr's murder by his wazir, Châs 
al-Din, first came under the protection of the 
English. He had for some years been attacking 
the province of Bihâr with the aid of the Nawâb 
Wazir of Oudh. But after the battle of Bâkasr 
in 1764 he had given up the struggle, joined the 
English camp, and in the following year on Clive's 
demand bestowed on the East India Company the 
diwanî of the provinces it held in return for an 
annual allowance of 26 lakhs of rupees. At the 
same time the districts of Kora and Allâhâbâd 
were assigned to him and he proceeded to reside 
in the latter city. Soon however, he wearied of 
his position of dependence, and departed to join 
the Marâthâs, who, having recovered from their 
defeat at Panipat, were once more invading northern 
India. On this Warren Hastings decided to hand
Kora and Allâhâbâd over to the Nawâb Wazir 
and refused to continue the payment of the 26 
lakhs. From this time until the close of the century 
he remained under the control of the Marathas, 
except at such times as their internal dissensions 
led to the recall of their forces from the north. 
One of their chief leaders at this time, Mahâmadji 
Sindha, gradually built up a strong principality 
for himself, conquering the provinces of Agra and 
Oudh, and becoming the emperor's real custodian. 
So matters remained till Sindha's defeat by the 
English in 1803 transferred the guardianship of Shâh 
'Alam into the hands of the latter. They carefully 
refrained from entering into engagements with him, 
but they assigned revenues for the maintenance of 
the imperial family, they permitted all orders issued 
in the city of Oudh to run in the emperor's name, 
though the actual administration was conducted 
by an English agent, and they attempted no interfer-
ence with the precincts of the palace. Gradually 
the traditional observances broke down. The Mughal 
emperor and the British governor-general met with 
the ceremonial of equals. The emperor's name 
was removed from the coinage. And it had been 
resolved no longer to recognize the imperial title 
after the death of its holder, Bahadur Shâh II, 
when the Indian Mutiny, in which several of the 
empire princes took an active part although they 
seem to have had little share in bringing it about, 
led to the formal trial and deposition of the 
emperor and the disappearance of the shadowy 
court which for a century had lingered on under 
the toleration of the real powers of India.

III. MUGHAL ARCHITECTURE IN INDIA.

The Mughal dynasts brought to India strong 
Central Asian predilections and a keen feeling for 
natural beauty. But each in succession obeyed his 
own instincts, education and caprices. Hence they 
patronized no "schools" of art, but came to employ 
an almost cosmopolitan body of artists, Persian, 
Indian, Turk and even European, who one and 
all had to adapt their own canons to the aesthetic 
moods of their employers. In general the Mughals 
forbade any sculpture of the human form, but like 
the Orthodox Greek Church, were usually less 
rigid towards paintings of it and even fostered 
portraiture till it reached a high level. Yet, with 
relatively few exceptions, the Mughal buildings 
were all religious, comprising mosques and tombs 
or shrines. Hence their scope was limited, though 
within their limits they express the religious feelings 
and policies of the dynasty. Even the conqueror 
Bâbur found leisure in his brief reign of five years, 
1526—1532, to build at Panipat the Kâbal Shâh 
mosque, whose name commemorates at once his 
love of Kâbul and his victory at Panipat in 1526. 
His mosque at Sambhal in Rohilkhand is marked 
by an ovoid dome. When he required constructive 
work Bâbur summoned workmen, whether Muslim 
from Constantinople, and avoided Indians; Hindu 
or indigenous standards, though he must have 
employed Indian workmen in spite of his dis-
paragement of Indian skill and knowledge in design or architecture.

Humayun’s longer but still more chequered reign produced many buildings, of which few remain. His mosque at Fatehpur-Sikri near Delhi is massive and well-proportioned, recalling the Tughlaq or Turkish period, with domes rather more than hemispherical. It is decorated with enamelled tiles in the Persian manner, apparently the earliest example of that style now extant. His tomb at Delhi, doubtless begun, as is customary among pious Easterns, during his lifetime, is of red sandstone and also Persian in style, but in it coloured tiles are replaced by white marble, of which the dome is wholly composed, the rest of the masonry being also inlaid with that material. The main dome has a narrow neck, the first of its type to appear in India, the four corner cupolas, also a new feature, support domes of an earlier style.

Akbar (1556–1605) was versatile in his architecture as he was in his religion. In the Fort at Agra he built the palace — one of the few secular buildings of the Mughal period which survive — called the Djahangir Mahal. His other buildings at Agra were demolished by Shah-Djahān. This palace, built of red sandstone which has weathered badly, bears the impress of Akbar’s vigour and originality. Throughout the arches are used sparingly, the horizontal style of construction being the rule. Its forms also are as Hindu as its construction, but the ornamentation, carved on all flat surfaces, is of a type used by Akbar but not found in other buildings. During the early part of his reign an erected at Gwalior the tomb of Muhammad Goharwah, who died in 1562. Closely resembling that of Sher Shāh at Sahasāram, it marks a considerable advance in tomb-building during the brief period that had elapsed between the erection of the two, an advance ascribed by Fergusson to the invigorating touch of Akbar’s genius, but doubtless due in great measure to the skill of the Gwalior school of architects and masons who were probably Hindus. The tomb is a square, 100 ft, each way, exclusive of the hexagonal towers, and its chamber forms a half, 45 ft, square, with the angles cut off by pointed arches so as to form an octagon on which the dome rests. Around this square building is a wide gallery, enclosed on all sides by a screen of pierced tracery in pierced stonework with a projecting porch on each face.

At Fatehpur-Sikri, the new capital founded by Akbar where the court resided from 1569 to 1584, the emperor’s eclectic phase found its fullest expression. Its architecture is admirably illustrated in W. E. Smith’s works 1), but all its significance has not yet been explained. The site was chosen because Akbar’s patron saint, the Kāhlī Salmī Ḍīn, lived in a cave on its summit 2). Akbar’s own residence was the “House of Dreams”, the Kāhlī-gāh, an unpretentious structure standing on the roof of the Mahall-i Khān, which contains paintings attributed by Smith to Chinese artists and apparently depicting Buddha as Yamunatoka 3). However this may be, the design of his throne in the Dīwān-i Khāšā massive pillar symbolizes that he sat there as a Cakravartin or ruler of the four quarters, as Haveli suggests, though it is conceivable that it signified his claim to the supreme headship of his new religion, the Din-i-Ilahi. But it is rash to dogmatize on the symbolism of a builder who seems to have had no settled design for the plan of his new city. The Mahall-i Khān regarded by Fergusson as the original block of building at Fatehpur-Sikri, has two spacious courtyards and is larger than the Red Palace at Agra, but its surrounding structures are inferior in richness of design and ornamentation. From time to time Akbar added courts and pavilions as if to compensate for this inferiority. While the Dīwān-i Khāsh is square, as befits a Hall of Audience, the Daftar-Khāna or Record Office is peristylar like the one erected by Akbar at Allahābād. The Panīr Mahall, a five-storied open pavilion with richly carved pillars, and long colonnades and walls connecting these buildings one with another, complete this group of structures. The most characteristic and beautiful of his designs here are the three small buildings, the Mahall or apartment of Bir Bal’s daughter, the house of Marīam Zamāni, mother of Djahangir, and the palace of the Rūmī Sultan. Kukhāri Begam, a cousin of Akbar and his first consort, Akbar’s greatness however demanded more grandiose monuments. The Dīmān Masjid or cathedral mosque, erected in 1577 (the year in which he proclaimed himself the ma ‘ṣūla (of his age and openly claimed the spiritual headship of Islām) commemorated his victories in the Dakhan (Southern India). It ranks amongst the finest ecclesiastical buildings of India. According to its inscription, it was designed by Sālīm Salmī Ḍīn himself and modelled on the Ka’ba. Though highly ornate it betrays few or no traces of Indian influence 4). The tomb of the Sālīm, in its courtyard, is built wholly of white marble, with windows of pierced tracery of the most exquisite geometrical patterns, and a deep cornice of marble supported by brackets of a design so elaborate as to be almost fantastic. The other tomb in the courtyard, that of Sālīm’s grandson, Shāh Iskār Khān, is of sober and excellent design but eclipsed by its surroundings. The Baland Darwāzah or “lofty gateway”, built in 1602, commemorates Akbar’s conquest of Khāndesh and dwarfs even the Dīmān Masjid. It is the grandest gateway in India and one of the loftiest in the world, its height being enhanced by its position on the brow of the hill on which Fatehpur-Sikri stands. Its architect placed its portals at the back of a semi-dome, which thus became its porch or portico, and its dimensions impress themselves as those of the actual portal. It must be added that Akbar intended his new capital to be a school of all the arts and that he allied architecture to painting. From the fragments of interior mural paintings which survive, it is clear that he employed Persian and Indian artists, who worked independently, and some idea of their technique is doubtless to be gathered from the miniatures of this period, as mural artists were also required to illustrate manuscripts.

1) J. Indian Art, No. 47 (vol. viii., p. 66), 1894.
2) For its wall-paintings see J. Indian Art, No. 66 (vol. viii., p. 55), 1899.
4) 2) The tomb of Salmū Salmī Ḍīn is described and illustrated in Smith’s work cited above and in J. Indian Art, No. 64 (vol. viii., p. 41 and 497), 1898.
At Allāhābād, the city where Akbar was compelled by administrative duties to reside more than at his new but isolated capital, he built the pavilion of the Čalis Mīnār or "Forty Pillars," of which only the hall survives. Its plan is square, supported by eight rows of columns, eight in each row, making sixty-four in all; and it is surrounded by a deep verandah of double columns, with groups of four at the angles, all surmounted by bracket capitals of the richest design.

But perhaps the most characteristic of Akbar's buildings, observes Ferguson, is his tomb at Sīkandera, begun in his lifetime but completed by his successor. Unfortunately Dājhāngīr, in his Tāt̤āb (travels, A. Rogers, i. 1553), asserts that he demolished Akbar's work and reconstructed the tomb. But, seeing that the plan of the building is unique in India and has no Persian or Saracenic parallel, it is more likely that only its exterior is the work of the fastidious orthodox Dājhāngīr. Its original plan was modelled on the Panč Māhall, being composed of five square terraces diminishing in size as they ascend. Thus the outline of the structure is pyramidal, not domical. Standing in an extensive garden it is approached by a single gateway and stands on a raised platform. Exceeding the angle towers the lowest storey measures 340 ft. each way, and on this terrace stand three more, similar in design but more ornate, each about half the height of the lowest storey or terrace. Within and above the highest storey is a white marble enclosure of 157 ft. square, contrasting with the red sandstone of which the rest of the structure is built. The outer wall of this enclosure is entirely composed of beautiful trellis-work; and inside it is a colonnade or cloister, also of white marble, in the centre of which is placed the tomb of Akbar, resting on a platform of exquisite arabesque tracery. This doubtless typifies Akbar's celestial resting-place, for below it lie his remains under a far plainer tombstone in the basement. That Dājhāngīr here departed from the original plan is certain. According to W. Finch, the tomb was to have been covered with a canopy of "curious white and speckled gold richly inwrought". What Akbar planned and what he meant to express by his design must remain a matter of conjecture. Ferguson postulates a Buddhist model, and even sees in the pavilions which adorn the upper storeys reminiscences of the cells which stand on the edge of the great rock-cut bath at Māmmalaparum; but these may have been intended for use as a theological college like the rooms and pavilions in the upper storey of Humāyūn's tomb. He also thought that a domical chamber over the tombstone formed part of the original design, since no such royal tomb remains exposed to the air in any Indian mausoleum — a dangerous generalization. Havell sees in the building an Indian five-storied Assembly-Hall, apparently a meeting-house for the royal order, the Dāhāī, the four lower pavilions (or terraces) corresponding to the four grades of the order. Even Cambodian

1) This view is contested in Archaeological Survey of India, Annual Report, 1903—1904, p. 19, but it was certainly the usual custom for a Mughal emperor, like any other good Muslim of means, to build his tomb during his lifetime. The problem is fully discussed in The Tomb of Akbar, by E. W. Smith and W. H. Nicholls, published by the Arch. Survey of India, Allāhābād 1908.

influences have been conjectured). Yet it is not impossible that a Zoroastrian model was kept in view, as Akbar borrowed from that faith among others.

As compared with Akbar Dājhāngīr contributed little to the architectural magnificence of Mughal India. At Lahore, which he made his capital, he added the Barā Klewūm-gāh or greater sleeping apartment to the Fort; and the tomb of Amūskālī was also erected in that city. Near Srinagar in Kashmir he made the Shāhīn Mārs gardens with their summer-houses; and the fine gateway to the Sarāī at Nūrāhān near Dāljandhar is also ascribed to his reign. The quadrangle at Lahore was doubtless executed by Hindu artisans, as the colonnade, which surrounds three sides of its area, is supported by pillars of red sandstone with bracket capitals and carved figures of elephants, peacocks and conventional animals like those found in the Red Palace at Agra. Dājhāngīr's greatest buildings were however erected at Dākkā, in Eastern Bengal, where he made a new provincial capital in supersession of Gāw; but his structures there were principally built of brick, covered with brickwork, only the pillars and brackets being of stone, and they have been almost destroyed by the jungle. In one respect only did Dājhāngīr innovate. In 1600 he built the Motī Masājd or "Pearl Mosque" at Lahore, the first of its kind in India. Between Akbar's style and that of Dājhāngīr little difference exists. The former had used colour ornamentation at Fathpur-Sikri; its later buildings were richly decorated with wall-paintings, and marble mosaic was used in the Dājmī Masājd. Dājhāngīr relied still more on mosaic decoration, e.g. in Akbar's tomb at Sīkandera, but soon after its completion we find variegated marble mosaic supplemented by pīstra dura, as in Fīmūd al-Dawla's tomb, and in the Tādž we still find inlay almost exclusively used. Akbar had continued the use of chamfroned tiles at Fathpur-Sikri for roofing and more sparingly for ornamentation; and they were employed by Dājhāngīr at Sīkandera and by Wāsīr Kāshānī, his wāsīr, on his mosque at Lahore. Indeed the mosaic is only noteworthy on account of this decoration. Akbar had also introduced painting on interior walls.

Dājhāngīr's wife Nūr Māhāl or Nūr Dājhānī erected at Agra the tomb of her father, Fīmūd al-Dawla, completed in 1628. Built almost entirely of white marble, enriched with semi-precious pīstra dura patterns, it foreshadowed the finest work of Shāh-Dājhān's reign. Dājhāngīr's tomb, at Shāhdārā near Lahore, has little architectural merit, consisting of a vast platform 209 ft. square, with a minaret at each corner. The façades are decorated with white marble let into the red sandstone and the flat roof with geometrical mosaics. The emperor's remains are probably buried beneath an opening in the roof so that the rain and dew of heaven might fall on his tomb, as his earliest chronicler says?). In brief the actual grave was hypostyle?;

3) A contrary view, that the tomb had a closed
b) held finds expression in Sura ix. 20, where we read "those who believed and migrated and expended blood and treasure in fighting for the cause of Allah, occupy a higher position (than other believers); they are the fortunate ones". Malhādīr in this way became a title of honour (cf. Sura xxi. 25 where Lot is so called). Individuals who had migrated not to Medina but to Abyssinia also proudly called themselves malhādīr (see Fr. Buhl, Sp. cit., p. 172). But the real "migration" was that to Medina in which the Prophet himself took part. The number of the Malhādīr gradually grew as the increasing power of Muhammad from time to time induced Meccans to leave their heathen city and go to Medina. It is to them that Sura viii. 76 refers, where those who adopted Islam later than the first emigrants who migrated and afterwards fought alongside of the older Malhādīr are acknowledged as belonging to the community ("they are of you"). After the treaty of Hudaybiya (q.v.) in particular, we hear of Meccan women who left their pagan husbands and went to Medina. Where, in accordance with Muhammad's interpretation of the treaty they were not surrendered if they offered the so-called women's pledge (see Sura ix. 11 (22)). Thus the Malhādīr, later and earlier, formed an increasing element in the population of Medina, whom Muhammad often mentions along with other sections of the community as possessing equal rights with them (e.g. Sura xxiii. 6, 49) in which connection it should be noted that Malhādīr is never, as was the case among the Ānār, used in genealogies.

That these emigrants were especially dear to Muhammad is easily intelligible, for they had shared his sufferings in Mecca and made the greatest sacrifices for him and included in their number men who had adopted his teaching out of pure conviction. With the occupation of Mecca, the migration ceased while the Malhādīr remained as a separate highly honoured body. It is natural to suppose that a certain amount of rivalry might easily arise between them and the other elements of the community, and that there was actually a certain amount of friction between the emigrants and the Medinæn is evident from the fact that in the troubles after the Prophet's death the Medinæn endeavoured to set up one of their number, Sa'd b. Ubāda, as successor to the Prophet. The attempt failed through the energetic action of 'Umar, Abū Bakr and Abū 'Ubaida, and the leadership of the community remained in the hands of the Malhādīr until the descendants of Muhammad's old opponents in Mecca seized power for themselves.

Muhāl [see MANTÝS]

al-Muhāllab b. Abī Ṣufra, Abī Sa'īd al-Azōzī, an Arab general. Al-Muhāllab is said to have been born two years before the death of Muhammad. In the reign of Mu'āwiya he undertook a campaign against India and raised the country between Kābal and Muhāllab (445-664-665). He next distinguished himself in the expedition of the governors of Khurāsān against Samarkand. Then however, he left the Umayyads and joined the anti-Caliph 'Abī Allāh b. al-Zubair who gave him the governorship of Khurāsān. When he was just about to start for there, he was appointed commander-in-chief in the war against the Asrāñ
following the precedent set by Bābur. The sarco-
phagus is of white marble, inlaid with pietra dura,
and it stands in an octagonal chamber 21 ft. high
and 20£ ft. thick on all sides, and access to it is afforded by two oblong
apartments, one on each side, but it does not
open into any of the forty other rooms behind
the arches which surround the structure, each façade
having a central arch with five smaller arches on
each side.

Under Shāh-Djāhān (1627—1658) Mughal archi-
tecture attained its zenith. One of his earliest
buildings was the incomparable Tādi Mahall [q. v.],
beginning the year after the death of the empress,
Arjuna-
mān Bānī Begam, entitled Mumtāz Mahall, or
the "Chosen One of the Palace". For himself Shāh
Djāhān planned a corresponding tomb of equal
magnificence on the opposite bank of the river
Djāmān, but Awrangzēb did not carry out the
scheme, probably because it savoured of paganism 1). Considerable controversy has raged over the question
of its architect. Shāh-Djāhān's style was essentially
Persian, with an indefinable difference of expression,
and it was sharply distinguished from those of Isfahān
and Constantinople by a lavish use of white marble,
sumpuously decorated with pietra dura. Coloured tiles had by now become rare. Spacious grandeur was combined with feminine
elegance, to which inimitable open-work tracery
contribution. In the mosque colour was eschewed,
and the finest art is found in the Pearl Mosques at Agra and Dihli. The former was built in 1646—
1653. Meanwhile Shāh-Djāhān had founded Shāh-
Djāhānābād, the great palace near modern Dihli,
recently restored to something like its pristine

beauty. A Persian engineer, 'Ali Marzūn Khān,
had tapped the Djamān 6 miles above Dihli,
and his canal fed the new capital with many streams.
The most favoured of them was the Nahr-i Bihāsh of
"Stream of Paradise", by which was so named by
Shāh-Djāhān himself. It fell in a cascade down
a marble chute in a pavilion — the Shāh Burj —
and flowing along the terrace which bordered the
Hayāt-Bahāsh ("life-giving") gardens, it traversed the
chain of stately edifices that lined the eastern wall
of the Palace — the Hāmānān, Dīwān-i Khāns and
Khāb-bāsh — silently gliding beneath the Mīrān-
īsūf ("Balance of Justice") across a sun-bathed
court into the cool of the Imitāy Khān or
"Palace of Distinction", styled later the Rang
Mahall Sultan or "Greater Colour Palace", from
its elaborate painted decoration and gilding. Set
on a marble terrace which formerly swept from
end to end of the Fort, it overhung the Djamān
whose course then flowed along the base of the
red sandstone walls. On the West an orchard
separated it from the Dīwān-i Am. Thence, still
on the same level, it passed through the Lesser Rang
Mahall, the Mumtāz Mahall and other buildings of
the imperial sanctuary. Thus Dihli combined the
Mughal love of enclosed gardens, watercourses by
running channels, with their passion for archi-
tectural beauty. It preserved Bābur's love
of nature, and perhaps added to it a sense of land-
scape which also found expression in the Mughal
gardens of Kashmir.

With Awrangzēb (1659—1707) set in the period of
decline, due no doubt largely to that emperor's
orthodox prejudice against art, but partly also to
his conscientious parsimony. He declined to com-
plete Shāh-Djāhān's tomb, ostensibly on the ground
of expense, but also perhaps because he regarded
the scheme as savouring of paganism. Yet he
constructed at Benares the great mosque with its
lofty graceful minarets, built a copy of the Dihli
mosque at Lahore, and at Awrangzēbād imitated,
though on a small scale and with success, the
Tādi in the tomb of his favourite wife. Awrang-
zēb's own tomb, at Khudībād, a hamlet just above
the caves at Eldā, is mean and insignificant. But
some of his buildings, in spite of their ironical
decadence, are the last great examples of the
Mughal style. His Djamān or Bāsh-bāsh mosque at
Lahore is pleasing in form, though the marble
ornamentation of its great central and front façade
is very inferior in detail to its prototype at Dihli.
Its three domes of white marble and the imposing
gateway of red sandstone and marble leading to
it from the Hazūr Bāgh are its finest features.

Near Dihli the tomb (1756) of Nawwāb Sa'dār
Djag, Wazir of Oudh, is a passable copy of a
Humāyūn's mausoleum, but its interior is marred
by indifferent plaster decoration.

At Lucknow, the capital of the Nawwāb Wazirs
of Oudh, the buildings erected by that dynasty
and its nobles hardly deserve to be classed as
Mughal. The one exception is the vast Imāmbara,
built by the fourth Nawwāb, Aziz al-Diwānī, in
1784. Conceived on a grand scale for the cele-
bration of the Muharram according to the Shi'a
rite, its details will not bear close examination,
though its solidity is impressive. The buildings
of the Muhammedi dynasty of Mysore (1760—1777)
have still less claim to be regarded as Mughal.
To conclude, the architecture of the Mughals
was, like all their arts, a resultant of many
forces.
But its essential distinction over Hindu art lay in its balanced use of purely Indian and imported technique; while it recognised the value of symbolism in its structures, it never made its arts merely a vehicle for symbols, as Hindu sculpture tended to do.

MUGHAMMAS according to others MUGHAMMAS, a valley near Mecca on the borders of the sacred area. According to tradition, Abrahah (q.v.) ordered his army to encamp here when he was going to attack Mecca, but was prevented from doing so as birds slew his soldiers by dropping stones on them. In Mughammas is shown the tomb of the Taif Abi Righah who died here after acting as guide to Abrahah. He was so hated by the Meccans for this that the custom grew up of casting stones on his grave [cf. AL-DJAMRA]. Whether this explanation is true or not is unknown, but in any case a verse of Hassan b. Thabit (ed. Hirschfeld, xxii.), shows that in the time of the Prophet the mention of his name was sufficient to insult the Taifis. The antiquity of the custom of stoning his tomb is shown by a verse of Dzarr: "When al-Farazadak dies, stone him as you stone the grave of Abi Righah".

AL-MUGHIRAH b. SHU'BA, of the sept of the Ablaf, a subdivision of the Thaqif, further a member of the clan of the Banu Mu'attib — guardians of the sanctuary of al-Lat — and nephew of 'Urwah b. Mas'ud (q.v.), companion and martyr. For having attacked and plundered some travelling companions during their sleep, he was forced to leave Taif, his native town, and came to Medina to offer his services to Mubahmad. The latter used him to attract the Thaqif to Islam and after the submission of Taif, sent him to this town to superintend the destruction of the national sanctuary and the liquidation of the treasure of al-Lat. In the caliphate of Abak Bakr, although he never succeeded in attaining to one of the great posts which were reserved for the Kuraish, Mughirah was able to keep a position in governing 'Omar, while under no illusions about his morals, appointed him governor of Bagra. A scandalous incident temporarily interrupted his administrative career. He was accused of adultery. The evidence was overwhelming: instead of having him stoned, 'Omar only dismissed him. Mughirah holds in tradition the record for marriages and divorces: the figures of 300, 700 and 1,000 are given. In the year 21 (642), recalled to public life, he was appointed to the important governorship of Kufa. His slave Abi Lutha, who lived in Medina, assassinated the Caliph Omar. Under 'Othman, Mughirah retired to private life. In the reign of 'Ali, he withdrew to Taif to watch the course of events. He went without having been invited to the conference of Ađhira [q.v.]. In 40 (666), taking advantage of the general confusion that followed the assassination of 'Ali, he produced an alleged certificate of appointment from Mu'awiya and took over the control of the annual pilgrimage.

The great Sufyan was able to appreciate at their true value the authorities of the stamp of Mughirah, one of the chief khalifis of his time, the man who could get himself out of the most hopeless difficulty": "if (it was said) he were shut behind seven doors, his cunning would have found a way to burst all the locks". Of shocking morals, free from any attachment to the 'Alid party, equally free from any claims to the caliphate, free from the jealousies of the Kurayish families, as well as from the narrow-mindedness of the Ansar clans, a member of the intelligent and enterprising tribe of Thaqif, everything attracted Mu'awiya's attention to him. In the year 41 (667), this Caliph appointed him governor of Kufa, a region disturbed by the intrigues of the Sh'ite and the continual risings of the Kharidjah. Mughirah succeeded in not compromising himself with the former: he was content to advise them to avoid any too striking outburst. Now nearly sixty, the able Thaqif felt the unusual ambition of remaining where he was and of finishing his troubled career in peace and honour. This opportunist, who had come over to the Side after cool calculation, felt little desire to sacrifice his own peace and leisure for the consolidation of the Omayyad dynasty; he was solely concerned with keeping on the right side of the auspicious Mu'awiya. The sudden rising of the Kharidjah leader Mustawrid failed to disturb his equanimity. With remarkable cleverness he was able to let loose against these rebels their born enemies, "the fine flower of the Sh'ite". Whichever was victorious, it could not fail to lighten his responsibilities. By setting them against one another he rendered harmless the most dangerous elements of disorder in his province. The crushing of the Kharidjah enabled him to breathe freely.

Thanks to this combination of mildness and astuteness, and by knowing when to shut his eyes, Mughirah succeeded in avoiding desperate measures against the people of the 'Irak, who were a continual source of trouble, and succeeded in retaining his position. He was even regretted by his subjects after he was gone. Not quite satisfied, Mu'awiya thought of breaking this lieutenant of his who was always playing at the opportune moment to provoke troubles which required the continuation of his services. In this way he prepared the return to favour of Ziyad b. Abiil [q.v.], destined to be his successor. He is also said to have disarmed the Caliph's suspicions by suggesting the plan of proclaiming Yazid heir-apparent. As the general situation had considerably improved in the 'Irak and order prevailed, on the surface at least, the Caliph left him in office till his death, the date of which is uncertain but which must be placed between 48 and 51 (668-671). Mughirah died on the plague at the age of about 70.

Weisenthall, Die religiopolitischen Oppositionspolitik, v. 34 sqq.; da, Das arabisch Reich, 141 ff.

AL-MUHALLAB, ABD ALMAMUD AL-HASAN B. MUHAMMAD, A vizier of Mu'izz al-Dawla. He belonged to Bajars and was born in Miharram 291 (= Dec. 903). In 334 (945) when Mu’izz al-Dawla was marching on Baghdād, he sent him in advance to negotiate with the Caliph and, on Dju-mmād I, 27, 339 (= Nov. 950) al-Muhallab was appointed vizier. He was given the supreme command in the war with ‘Irān b. Shihāb (cf. 801/2 AL-DAWLA) and had brought him into a very precarious position when he himself fell into an ambush and could only save himself with difficulty, whereupon Mu’izz al-Dawla had to conclude a peace with ‘Irān. In 344 (953–954) the ruler of ‘Oman, Yūsuf b. Wajīh, undertook a campaign against Bajar; al-Muḥallab, however, anticipated him, occupied the town and defeated Yūsuf. In the same year, he fell into disgrace but was able to retain his office and the good relations between Mu’izz al-Dawla and his vizier were restored. A few years later, Mu’izz al-Dawla equipped an expedition against ‘Oman and put al-Muḥallab in command. The latter set out in Dju-mmād II, 352 (= June/July 963), but soon fell ill and decided to return to Baghdād. He died on the way on 26th Shābān of the same year (= 19th Sept. 963) and was buried in Baghdād. On his death Mu’izz al-Dawla confiscated all his property, a measure which aroused general indignation.

K. V. ZETTEBÉRN

MUḤAMMAD, the founder of Islām, was a native of the city of Mecca, out of which the energetic Kurāmah had in the sixth century created a flourishing centre of commerce by exploiting the much visited places of pilgrimage there. In consequence of the unreliability of the sources at our disposal the very first question a biographer has to ask, namely when was his birth after, cannot be answered with certainty. That Muḥammad’s activity in Medina covered ten years (622–632) is certain; but we have no certain data sometimes to Abū Kais b. Abī Anas and sometimes to Hanān b. Taḥāfīt (ed. Hirschfeld, No. 101a) to the effect that his prophetic activity in Mecca lasted ten and some years. The parallelism between the two periods, which might be brought forward as a ground of suspicion, is not complete, and on the other hand, the annual recurrence of the great pilgrimage to Mecca has made it easy for the inhabitants to reckon by them, so that a chronological statement originating there deserves more confidence than others. The Meccan period in any case must not be put too short, for according to ‘Urwa’s story mentioned below (Tahārī, i. 1181), “several years” passed after the migration of his followers to Abyssinia before they returned, after which new difficulties arose which produced the migration to Medina. — For the period before he came forth as a religious reformer we have only the indefinite expression ‘awr (Sīra x. 17). The
Muslim historians make him usually 40, sometimes 43 years old at the time of his call, which, taken with the already mentioned data, would put the date of his birth at about 570 A.D. When however tradition puts the date of his birth in the "year of the Elephant" (see Asmaa and Sura xvii.), this is a result of an unhistorical combination, for Abraham's grandson Ishmael was never in Arabia, the Beduin tribe of Sal b. Bakr, see the article KALMA. The story of the cleansing of his breast (a similar story is related of Umayya b. Abi l-Salt; cf. Goldziher, Arab. x. Arab. Phil. I. 213) is a materialisation of Sura xxv. 1.

In Sura xxiii. 40, we are told that Allah made the poor orphan prosperous. Corresponding to this in tradition is the marriage of Muhammed with a rich merchant's widow, in whose service he had been (cf. AL-MAQADDAs). She bore him four daughters, who play a part in later history, and several sons all of whom died in infancy; one of them at least must be historical as his pagan name 'Abd al-Mal'af (Sprenger, i. 199 sq.; Carlin, i. 173) could not be invented by later writers; such a fiction in any case, as posthumous comfort to alleviate the disgrace of the lack of male heirs (Lammes) would be very inadvisable. If it had to make the baby son of the Beduin tribe of Sal b. Bakr, see the article KALMA. The story of the cleansing of his breast (a similar story is related of Umayya b. Abi l-Salt; cf. Goldziher, Arab. x. Arab. Phil. I. 213) is a materialisation of Sura xxv. 1.

MMUHAMMAD

943

7; cv. 0 8; ev.; 1 8); he admitted the
acclivities offered there into the true worship (xxvii. 2) and allowed his followers to take part in the
pilgrimage (xvii. 29 sq.) so that it was all the easier
for him later to accept it as one of the main
features of his religion (see below). We shall later
discuss this relapse into paganism, which however
we specifically overcome, as well as the fact that
he was only gradually led to attack on principle
the gods of Mecca. He was also influenced by
the manner of the old Arab inspired soothsayers
(cf. on the modern Kwala: Musul, Die Kultur,
1910, p. 10) to the extent that he adopted their
peculiar form of speech with mysterious oaths and
rhythmic prose (tashâ'ī'; cf. Goldscher, Abhandlungen
s. arab. Philol., l. 9 sq.; Maxmull, Marnef, iii.
358 sq.) when he began to announce his revelations.
All his earlier conceptions were however driven out
except for such trifling residues as these, when a new
world of ideas began to fill him to an ever increasing
extent, until he was finally compelled with irresistible
force to come forth and proclaim them. These new
ideas point mainly to the religion of the "possessors
of a scripture" — Judaism and Christianity — and he
was conscious of this, as much as he repeatedly
emphasised the agreement between his teaching
and these older religions of revelation as irreconcilable
of its truth (cf. the significant passage: "If thou art in doubt about what We have revealed,
ask them who read the scripture before thee",
Sûrâ x. 94). The only question is, in what way
did he become possessed of these new ideas.
Mark only is that he did not get them
from his own reading of the holy scriptures of the
Jews and Christians. The word ummati. (i. 161, 166)
applied to him (Sûrâ xvii. 166) signifies, without
committing us to anything about his ability in reading
or writing — as a merchant he must have had
a certain knowledge of these arts — that he was an
illiterate layman, who was not able to read the
Hebrew or Greek Bible, and that this fact also
the case, the Kûrâr which occurs on every page. For
the formation of the term Wensine, Acta orient.
li. 491 and (citing the Hebrew ummat bâ'âzîm)
Horovitz, Koyernische Untersuchungen, p. 53 would
put "pagan", Nivâîi; but, although this might fit
some passages, it could hardly suit Sûrâ ii. 73
where there is a reference to a difference between
the "possessors of a scripture" and the mowâ'âmim
among the Jews. The usual explanation suits well
enough, as it is certain and it is confirmed by
the Kûrâr everywhere that, while Muhammad had
some notion of the books of the Bible, the Hebrew
and Greek Bibles were closed books to him.
Uterances like the saying that Jesus "received"
the Gospels (iii. 44: v. 50; vii. 27) and that it
should be "observed" like the law (v. 70, 72)
clearly show that he did not know its real content.
Sûrâ xxi. 105 contains a quotation from the Psalms,
but this is quite an isolated instance and he knew
nothing of the Psalms as a part of the Old Testament
(xviiii. 81); the parable of the camel and the eye
of a needle (vii. 28) proves of course no literary
dependence and the alleged description of Mu-
hammad and his followers in the Gospels (xviii.
29) shows what he could build up on a vague re-
version of something he had heard. On the other
hand: the stories reproduced, e.g. the long account
of Joseph (Sûrâ xii.), show that he was indirectly
dependent on the Bible and not only on the
Old but also on the New Testament (cf. what
he relates of Mary, Joseph, Zacharia and John);
the story of the Seven Sleepers (cf. Abuâb Al-
Kahsa and M. Hûber, Die Wunderlegende von den
Siebenknäufen, 1910) also presupposes Christian
authorities. One therefore cannot blame his enemies
when they said that he had foreign teachers (xvii.
153; xxv. 5 sq.; xlvii. 13), which is certainly not
refuted by the reply in xvii. 105. Further it is clear
from the Kûrâr that he did not come into contact
in this indirect way with the books of the Bible in
their simple form, but that his authorities had
drawn on Midrashic and Apocryphical works, which
is easily explained by the varied and most
character of the religious tendencies in Arabia in
particular what he tells of the birth and childhood
of Jesus (xix. 23 sqq.; liii. 411; v. 109 sq.)
comes from Apocryphal sources, and his account
of the death of Jesus (lv. 156) has parallels among
the Manichæans and Basilidians.

To state exactly what religion exercised particular
influence on Muhammad's ideas is hardly possible
in view of the scanty information available about
conditions in these days; especially as many things
indicate that he was influenced from various sides,
primarily by Christian sects, but later also by the
Jews. There was ample opportunity to become
acquainted with both these religions from caravans
passing through to Syria or the lands of the
Euphrates, from communication by sea to Abyssinia,
and from foreign merchants visiting the
great markets; and not only in the more advanced
districts of South Arabia, but also among several
Beduin tribes (e.g. Bakr, Taghibî, Ḥanîfâ, Ḥâjî),
Christianity had established itself, while Jewish
colonies had settled in Medinâ and the oases
north of it. But a citizen of Mecca in particular
had repeated opportunities of coming into contact
with Christians and Jews. The great festivals attracted
people from all districts and it is expressly recorded
that Christians also took part in the pilgrimage
(Snouck Hurgronje, Het Meknaansche Heel, p. 26,
128, 159); in addition there were Christians captured
in war and immigrant Ghasânids living in Mecca
(Ara'î, ed. Wustenfeld, p. 97, 458; 465; cf. the
Christian slave in Tbl'; Ibn Hibân, p. 280 sq.);
and in the Kûrâr alongside of expressions coming
from the Aramaic, several Ethiopic borrowings are
evidence of religious influence from Abyssinia (cf.
Nöldeke, Neue Beitraege zur semitischen Sprach-
mittelstilisierung, p. 47). Recently scholars have
been found of seeking a main source of Muhammad's ideas
and their formulation in the religious development
which is alleged to have taken place in South Arabia.
This is certainly a possibility to be reckoned with,
but so long as we know so little of South Arabian
religious history and in particular so long as no inter-
mediate South Arabian forms are found for the Aby-
sinian loanwords in the Kûrâr we are better to
set it aside. It should also be noted that Muhammad
in his stories of the prophets frequently mentions
the Arab tribes of 'Ad and Thamîn (q.v.) but
only rarely touches on the older history of South
Arabia (Sûrâ xxvii. 20 sqq.; xxviv. 19 sqq.; xlvii.
26; li. 13; on the other hand: harâz, li. xxy. i. 89 sq.;
6; M. Hartmann, Die aramäische Frage, p. 474).
In the utterance ascribed to the Prophet (Bockh, ed.
Kreil, iii. 50) "Belief and wisdom are
Yemeni", Yemeni as the context shows, only
means "of Yemeni fashion" i.e. cultured, human,
in contrast to Beduin coarseness. The main objection
however, is that the hypothesis would only mean
an unnecessarily circuitous route, for Muhammad always appealed directly to his agreement with Christianity, without suggesting any remodelling of these religious views through a South Arabian Mandaeism. And the stronger one endeavour to make Semitic influence on religious matters in Mecca, the more unintelligible becomes the stubborn opposition of the Meccean to Muhammad. Much greater weight should be given to Tor Andræ's treatment of the question of Muhammad's dependence on Christianity. After calling attention to the wide dissemination and dominating position of Nestorianism in the Persian empire, which is of importance as it must have been much more accessible to Muhammad than Monophysitism, he points out the close relationship between Muhammad's ideas and the ecclesiastical writings of the Syrians: the contempt for worldly possessions, the strong condemnation of the arrogance and frivolity of the unbelievers, the warnings against laughing, joking and careless speech, the emphasis on the significance of almsgiving as an atonement for sin, the descriptions of Paradise (we even find the houri in Ephram the Syrian) etc. Alongside of these very instructive similarities, there is however one point to be remembered in which the relationship is somewhat modified, namely Muhammad's Christology. It is, in any case, remarkable in several respects for it is distinguished from his other accounts of prophets and approximates to the teaching of the Church in strict fashion, e.g. in the account of the birth of Jesus and his miraculous gifts and in the undeniable echoes of the doctrine of the Logos (Sura viii. 434; ix. 166). But already in the Meccan period (e.g. xliii. 57 sqq.) Muhammad vigorously rejects the idea of Christ being the Son of God and absolutely denies that he had ever asserted anything of the kind of himself. Here it is not sufficient to point to the Nestorians since they did not deny that Christ was the Son of God. When Muhammad from the first insists on the complete agreement of his teaching with the old revealed religions, i.e. with Christianity also, he seems to have been influenced by a form of Christianity where this dogma occupied a very unimportant position.

What one can deduce in this way from the Koran about Muhammad's development is supplemented in an important way by tradition, according to which he was not alone in his search for a purer religion. Various individuals are named who, disaffected with the old Arab religion, were seeking for a more intellectual faith. As a particular cousin of Khulilija, Waraqa b. Nawfal, even if these traditions cannot be utilized in the form in which we have them, as they have been influenced by later Muslim ideas, yet they certainly have a historical basis, because they are not taken from the Koran and are not intended to show Muhammad in a more favourable light. In addition there are the Hamits [q.v.] of whom the traditions of the Arabs have preserved only a very hazy picture, and Umayya b. Abi 1-Salt [q.v.] whose poems often have points of contact with the Koran, which would be of great importance if they could even in part be regarded as genuine [cf. also the article WEILAM].

While Muhammad was in a state of great spiritual excitement as a result of contact with the religious ideas that had penetrated into Arabia, something happened which suddenly transformed his whole consciousness and filled him with a spiritual strength which decided the whole course of his life: he felt himself called to proclaim to his countrymen as a prophet the revelations which were communicated to him in a mysterious way. When Constantine wishes to see in this the result of a lying devilish plot and continued reflection, this is certainly not correct. We have much rather every reason to trust the tradition which tells of a sudden outburst of conviction that he was called to proclaim the word of God. For this view we have the analogy of prophets in general, from the Old Testament prophets down to Joseph Smith; and no long drawn reflections but only an overwhelming spiritual happening could give him the unshakable conviction of his call. This is also confirmed by several passages in the Koran, which point to a deciding moment, definite in time (Sura ii. 88 sqq.; ii. 118), in which connection it is of minor importance whether it is possible to identify the revelation of the call itself among the Suras of the Koran (according to a common opinion, xci. 1 sqq.) according to some, on the other hand, ( laxlv. 1 sqq.), especially as one must reckon with the possibility that the very earliest revelations were not written down. If this really was the case, however, the reason certainly was not that they were deliberately suppressed, since a revolutionary change of his world of ideas into its diametrical opposite while retaining the earlier apparatus of inspiration would be quite an untenable hypothesis.

The Koran gives only a few hints about the manner of these inspirations; a veil lay over them which the Prophet either could not or would not raise completely. Perhaps the wrapping up (laxlix. 1; Ixiv. 17) refers to a preparation for the reception of the revelations in the manner of the old Arab divination, but we are taken further in an indirect way by the oft recurring accusation of his enemies that Muhammad was possessed (maqurūt), a soothsayer (jāḥin), a magician (jāhij), for they show that in his moments of inspiration he made an impression similar to those figures well known in ancient Arabia. In addition there are several traditions which describe his condition in such moments: more fully and may undoubtedly be regarded as genuine, since they are the last thing later Muhammadanism might be expected to invent, while these mysterious seclusions afforded to those around him the most valid evidence for the superhuman origin of his inspirations. In Byzantine authors we find it stated that the Prophet was an epileptic (e.g. Theophanes, Chronographia, ed. de Boor, i. 334) and modern psychiatrists recognize the correctness of these descriptions of his attacks and we must of course leave it to them to define the exact nature of his condition. From the scientific point of view the fact is the whole described by him only altered what he had from time immemorial from others and which now cropped up out of his subconscious. The scientific student therefore does not see in Muhammad a debtor but fully agrees with the impression of sincerity and truthfulness which his utterances in the older revelations make (e.g. Sura a. 16, 20, 113; xxviii. 85 sqq.; lix. 44; lixv. 16 sqq.; cf. vii. 202; xxi. 15); the cogent imperatives (lixv. 2; xxxvi. 15) the self-denunciation (xxx. 1 sqq.; etc.) along with the fact that he unhappily endured years of hostility and humiliation in Mecca in the unshakable conviction of his lofty task. It is more difficult with the later Medine revelations, in which it is often too easy to
detect the human associations, to avoid the sup-
position that his parasyms (e.g. at the battle of
Bakr: Ibn Hishâm, p. 444; in the slandering of
Abd-Allâh, p. 735 et al.) could sometimes be artificially
rought on, and there is even a tradition which
makes Abâl'aś'î say to the Prophet: "Thy Lord
seems to have been very quick in fulfilling thy
prayers". It must not be forgotten however that
natures like this, without actually being conscious of
it, are able to provoke the same states of excita-
tion, which arise without their assistance; and
so probably not only were his followers in Medîna (cf. Ka'b b. Mâlik in Ibn Hishâm, p. 614 et al.)
but even he himself convinced, that the spirit was continually hovering about him
to communicate the revelations to him. By this
we do not of course mean that in his ecstatic
condition he received the divine communications in externa, as we now have them in the Kur'ân;
only the foundations were given him, which he
afterwards developed into discourses of greater
length. Since in doing this he used the external
forms of the old Arabs soothsayers it is natural
that the Meccans took him for one, but it does
not follow that he was spiritually akin from
the first to these soothsayers who were inspired
by jinn. The indignation with which he objects
to being associated with them is not a proof of
such a relationship of which he wished to rid
himself, simply because he was conscious of the
similarity, but a natural result of the fact that
the enlightened Meccans saw in persons of this
kind luridous familiars of the lowest kind, while
he was firmly convinced that he was filled with
quite a different spirit, one quite unfamiliar to
his enemies.

While it is in no way possible with the help
of the Kur'ân and Tradition, to get an accurate
picture of Muhammad's development and
his condition when prophesying, he himself
gives in the Kur'ân quite a different interpretation of the revelations that came to him, which is based on a peculiar theory which he apparently did not invent himself but adopted from others. The
fundamental idea in it is the conception of
a divine book existing in heaven, al-Kutb , a well
guarded book, which only the pure may touch (lxxv. 76 sqq.), a well guarded tablet (lxxxv. 21 sqq.), the mother of the book (xiii. 2 sqq.), on honourable
leaves, exalted and pure, by the hands of noble
and pious scribes (lxxxv. 13 sqq.). He himself did
not read this book, as E. Meyers erroneously thinks, but it was communicated to him orally piece
by piece, not in its original form but in an Arabic
version intelligible to him and his countrymen
(xiii. 1 sqq.; xiiii. 37 sqq.; xlin. 6 sqq.; xxxii. 12 sqq.; xlix. 192 sqq.; xlii. 8 sqq. ; xliv. 6 sqq. ; and especially xlii. 44 sqq.). If we had
made it a Kur'ân (in a foreign tongue, they would
say: Why is it â€œsignatureâ€‌, from the small
sections of the text (not expounded intelligibly),
a foreign text and an Arab reader!?). In addi-
tion there is the fact that Muhammad was aware
that the complete contents of the book were not
communicated to him, as he expressly states, e.g. of the stories of the prophets, not all of
which were related to him (xl. 78; iv. 162). He
received the communications orally, Allah rehearsing
to him the substance of the separate sections
(lxxxvi. 16 sqq. etc.), while in several passages
it is stated more precisely that the revelations were
communicated through the Spirit (xxxv. 192 sqq.);
is significant for the commercial life of Mecca — from all forms of cheating (xxvi. 183 sqq.; lv. 8 sqq.), banning contact with newborn girls, as the barbarous custom of the time was (unaccordant to Sūra vi. 152; xvii. 33 from poverty, cf. al-Maharrad, Kāmil, ed. Wright, p. 277; originally perhaps a kind of magic to procure sons, when only girls had been born, cf. Musil, Kāgraf Aθrya, p. 58; even before Muhammad's time there had been people who fought against this barbarous custom, cf. al-Maharrad, Kāmil, loc. cit.). This is the ideal of the truly pious man who is called by the name of muslim (lviii. 35; xxi. 108 etc.) or hāsh (x. 405; xxx. 291; xviii. 4; cf. vi. 79 and the article). Cf. In this connection the list of Muhammad's precepts in Aθir-a's poem (Ibn Hishām, p. 255; Morgenlandische Forschungen, p. 25 sq.).

From all this, it is quite evident that Muhammad had at this time no thought of founding a new religion. His task was only to be a "warner" (li. 50; lxxiv. 2; lxxix. 45; lxxx. 11; lxxviii. 21 sqq.), in view of the approach of the day of judgment, to his countrymen, to whom no prophet had yet been sent (vi. 157; xviii. 46; xxvii. 2; xxxiv. 43; xxxi. 51; no notice is taken here of HHū and Sāïlīh and as a result of the revelations granted him to give them, in the form of a liquid Arabic būrūn (see above), what the " possessors of a scripture" had in their scriptures, which were not accessible to the Arabs and thereby to save them from the divine wrath. The Jews and Christians also must therefore testify to the truth of his preaching (x. 94; xvi. 45; xxi. 7; xvii. 197; xviii. 53 etc.).

On account of the insufficiency of the sources, it is very difficult to ascertain in detail how Muhammad's relations with the Meccans developed. The būrūn contains only vague references, which permit no chronological arrangement, while the traditions are very full but little reliable. Only one report, which Uthw composed for the caliph Abū Al-Malik (Tabāt, l. 1180 sqq.; 1224 sqq.), the value of which has already been indicated by Spranger, gives a brief but apparently trustworthy glimpse of the main events (cf. also al-Zuhri in Ibn Sa'd, 1/1, 133). At first Muhammad met with no serious opposition and in not a few cases his preaching fell on fruitful soil; indeed the words addressed to Sāïlīh (xii. 64) we may find a hint that he had at first aroused considerable expectations among the Meccans. All traditions agree that Khādira was the first believer, while they differ as to who was his first male adherent. In any case Abū Bakr, the master-slave Zenād b. Hāsa, Zābal b. Aqwa'm, Aṣa' b. Umaid Abū, Abū Rāhman b. 'Awf, Sa'd b. Ali Wāsçāy, and Muhammad's cousin Alī (4 s.) were among his earliest followers. The majority of those who were won over by his preaching were however young and of very little social standing, while the well-to-do and influential held back (xix. 74; xxxiv. 30 sqq.; xxxviii. 62 sqq.; lxii. 11; lxxx. 1 sqq.; cf. the veiled references in vii. 73; xi. 293; xvii. 17; xxi. 111). This became still more the case when the full consequences of his ideas became clear to him and he openly attacked the religion of his native town; for the Meccans, to the majority of whom such devotional matters had been a matter of complete indifference, was discovered that a religious revolution might be dangerous to their faith and their trade. That was this the silent feature of their resistance to Muhammad is evident from the fact that he frequently endeavours to calm the fears of the Kūsa'ish on this point: the Meccan sanctuary, he said, belonged to his god Allāh, from whom the Meccan also recognized the highest god (xxxiv. 23; xxxix. 39; cf. Kās' al-Khālid, ed. Kowalski, v. 14; xii. 12 where Allāh is the lord of the Kūsa'ish and he will protect and bless his sanctuary, if they submit to him (xxviii. 93; xxxvii. 57; xxi. 67; xxi. 1 sqq.),). In addition there was the conservative attitude of these merchants in the field of religion and their animosity to new and fantastic ideas, particularly in that of the resurrection of the dead.

Traditions record at great length the persecution and ill treatment which Muhammad and his followers suffered at the hands of the Meccans. These descriptions are undoubtedly much exaggerated, for the object was to glorify the self-sacrifice of the believers and no doubt also to put the old patrician families of Mecca in an unfavourable light. But it is equally certain that there is some foundation for these stories. It was a case of two persecutions (Āθm) which twice forced the believers to migrate, and in the Kūsa'ish there is mention of "trials" which their opponents inflicted upon the believers, men and women (lxxx. 10), and it is expressly mentioned that the influential wished to prevent Muhammad from praying (xxvii. 9 sqq.; cf. the veiled account vii. 54), while on the other hand, the complaints about what they would have liked to do should not be taken at their face value without more ado (xviii. 17; xxi. 78; cf. xi. 93). The peculiar feature, repeatedly found in stories of the prophets, that their opponents threatened them and their followers with stoning (Sūra xi. 93 and frequently) might suggest the hypothesis that Muhammad was actually threatened in this way by the Meccans, but this would probably only have been in a momentary outburst of passion and in any case the quarrel was mainly conducted in endless wordy disputes in which the spiritual advantage lay with Muhammad. His strength lay in the consciousness that he lived in a higher intellectual world which was closed to the Meccans and that he proclaimed ideas, "the equal of which neither men nor dijuns with combined efforts could produce" (xvii. 90). Very pertinently he often points to the lack of logic in his enemies, when they recognize Allāh as the real true God, but will not draw the logical deductions from this. But even his most crushing arguments rebounded from the impregnable wall of their prejudices which were based on their material interests. This circumstance now began to influence the matter of his preaching in a very remarkable way. When his opponents mocked him because the divine judgment threatened them, he could not come (xxviii. 15; lxx. 5) he began to describe in an increasing degree in his stories how the contemporaries of earlier prophets had met them with incredulity and had therefore brought on their heads dreadful punishments. That he did not use such means at the very beginning of his mission is evident from the fact that his preaching, according to the already mentioned credible tradition, at first gave no offence, and indeed this feature is lacking in the sūras which are certainly the oldest. It was the hardness of heart of his countrymen which made him take to this weapon in order to stir them. At first it proved by no means ineffective, as the Arabs knew of old trading peoples like the
MUHAMMAD

Thamud [q.v.], whose destruction might well give
cause for reflection. But gradually this line
of attack lost its effect. To Muhammad how-
ever the resistance of the obvious truth was something
so unassailable that he could only find solace in
an idea, which was to be of far-reaching import-
ance in the further development of Muhammadan de-
gmatism. Allah, the innervously excited and al-
mighty, could of course not be impeded by the
resistance of mortals; the unbelief of the Prophets'
opponents was therefore an effect of the divine
will: "Allah makes to err whom he will and gui-
nes whom he will" (xv. 95; xxvii. 127 etc.; xxvii. 34 etc.), a view which his enemies were unsuccessful to turn against himself (xvi. 57; 
xxvii. 47).

Several episodes stand out in the Meccan period
which are unfortunately more or less obscure and
may be interpreted in various equally untenable
ways. It is certain, in spite of the silence main-
tained about it in the Koran (even xvi. 43 is
not to refer to it), that Muhammad's community
was at one time in such great distress that a con-
siderable section of them migrated to Abyssinia.

The later view was that participation in this flight
became a patent of nobility similar to that conferred
by the great Hijja to Medina, which was actually
granted as a titular distinction (Wenhausen, Stu-
zen, iv. 113); but the Prophet gave the advice to
seek protection among the Abyssinian Christians
only to those of his followers, of whom he was afraid
that they had not sufficient strength to maintain
their faith under the difficult conditions in Mecca
(cf. the significant story of the cool reception
which some of the allies later received on their

M. Hartmann's view that the emigrants were to
consider political propaganda in Abyssinia is not
capable of proof. According to 'Urwa, these emi-
grates (i.e. probably the greater number of them)
returned to their native town, when Islam had
become strengthened by the accession to its ranks
of a number of individuals of position. At the
same time there is a different story of their return,
which it would not be difficult to combine with
'Urwa's story if we assume that they gradually
drilled back. We are told that Muhammad pro-
claimed in one of his sermons that the favo-
dities of the Mecca, al-Lâl, al-'Urâz and Manâth
[see these articles], might be regarded as divine
beings whose intercession was effective with Allah.
This led to a general reconciliation, news of which
reached Abyssinia and induced a number of the
Muslims there to return home. Here however they
learned to their horror that the agreement had
been of short duration, as the Prophet had very
soon recognised: these words as interpolations of
Satan and had substituted for them the words which
we now have in Sûrâ iii. 19-23. The credibility
of this story has been doubted, certainly wrongly;
for in view of the absolute impossibility of such
a thing being a later invention, any possible ob-
jections to the reliability of the authorities cited
(Tâhirî, i. 1192, 1195; Ibn Sa'd, t. i. 137 etc.) hardly
deserve consideration and passages like v. 57;
xxvii. 134 (cf. iv. 113) amply show that the
incident was quite possible from the psycholo-

gical point of view.

It is much more difficult to elucidate another
episode of the Meccan period, the story of the
boycott of the Hâshimids. That Muhammad's whole

position during his struggle with the Mecceans was
only made possible by the support given him by
his own family has already been indicated. All
members of the family of Hâshim, with the excep-
tion of 'Abî Lâhab [q.v.], who on this account is
perpetually damned in the Koran and the Prophet
with his wife, chivalrously fulfilled their duty in
this respect, although not a few of them believed in
his call. It would therefore be not unnatural in
itself for the Mecceans in the end to attempt to
make the whole family innocuous without bringing
on themselves the guilt of bloodshed by an open
attack. The story, however, which tells how they
forced the Hâshimids to withdraw into their own
part of the town and pledged themselves to refrain
from intermarriage or commerce with them, is
confirmed neither by the Qur'an nor by 'Urwa,
but sounds in itself somewhat suspicious and is
probably much exaggerated. That the effort finally
failed is conceded by the story itself. On the
other hand, it is quite possible that Khadija's
fortune may have suffered considerably from Mu-
hammad's obligations to his nestorians followers
and from the smiting of the influential merchant
princes.

To the last portion of the Meccan period most
probably belongs Muhammad's nocturnal journey,
later so celebrated, to the "remotest place of prayer,"
which viii. 1 (perhaps also verse 62) briefly refers,
no doubt a vision, which however made upon him
an impression of reality. According to the pre-
valing opinion, the terminus of this journey was
the temple in Jerusalem, and conclusions are
drawn from this about the great significance which
this city then had for him. Schricker (Jrb., vi. 199)
and Herovitz (ibid., ix. 159 sqq.) have however
ever sought to show that maragh al-agâb refers
to the place of prayer of the angels in heaven
(cf. vii. 205; xxvii. 35), for which view several
cogent arguments can be produced, notably that
the nocturnal journey is associated with the journey
to heaven as early as in the tradition given by Ibn
Ishâq and that in the Qur'an there is several
times a reference to an ascent into heaven (vi.
35; xvii. 92 sqq.; xxvii. 14 sqq.).

Of other details we may further recall that
Muhammad, who, as already remarked, was firmly
convincing that his teaching agreed with the
religion of the "possessors of a scripture," nevertheless
had already begun in Mecce to reject the
christological dogmas of the church. This is certain
from the conversation with his pagan opponents
(xxiii. 57 sqq.) which can only have taken place
in Mecce. This however does not affect his idea
of the fundamental identity of his with the older
revelations but only the false doctrine later adopted
in the church, for he makes Jesus vigorously reject
the doctrine of his divinity; but this limitation
of his theory was not without importance and
was able to serve him as a model in his later
criticism of Judaism.

The sources are somewhat fuller for the close
of the Meccan period, although late tendencies
historiography has coloured everything in the
traditions. According to 'Urwa's account, Muhammad
did, it is true, succeed in winning a few
notables in Mecc (inclining probably 'Umrau
his teaching, after the emigration of a number of
his followers to Abyssinia. But on the whole his
attempt at a religious reformation could be regarded
as having failed; and when Khadija and Abî
The migration of the Prophet, the Hijira [q. v.], has been with justice taken by the Muslims as the starting-point of their chronology, for it forms the first stage in a movement which in a short time became of significance in the history of the world. According to the usual calculation, he arrived in Khaybat, a suburb of Medina, on the 12th Rabii' 1 of the first year, i. e. Sept. 24, 622 and shortly after went into his new home. The tasks which awaited him placed the greatest strain on his diplomatic and organizing abilities. He could only rely with absolute certainty on the part which migrated with him (the Muhajirun [q. v.] for their whole future existence depended entirely on him and of course only those had migrated who were firmly convinced of the truth of his mission. In addition, there were those Medina inhabitants who had already adopted Islam or did so soon after his arrival, the so-called Ansar [q. v.], who formed only a portion of the inhabitants of Medina. He only found direct opposition in a few families, like the 'Aws Allab; but at the same time there were a number who while they did not exactly oppose him only reluctantly accepted the new relations, the so called Mundhirun [q. v.], who were to cause
him much anxiety. Fortunately for him, they were led by a man, the Khazzardj b. Abü Unayr, who possessed the nuqādī quality of irresolution to such an extent that he regularly let slip every occasion on which he might have offered successful opposition. A further danger lay in the fact that the old and bitter feud between the two chief parties, the Jews and the Khazzardj, had by no means died down, but which might easily break out again on any occasion. Finally there were the Jews (in the first place aūzal-Akhdarī, i.e. the Nājis and Kumia; cf. Kūs b. aūzal-Kāshānī, ed. Kowalski, xz.; Hassan b. Thālūth, No. 216, 17; Ibn Hīshām, p. 660 and Ibn Sa'd, viii. 86, 91) and the Judaized tribes in Medina, who played an important part because of their wealth and the support they had in the Jewish colonies in Khilār etc. For Muḥammad they were on the whole a plus factor in his calculations for, according to his theory already mentioned, he ought to expect that they would champion the truth of his preaching. His relations with the Christians in Medina (cf. Hassan b. Thālūth, No. 135, 17) were no longer absolutely estranged, since he had begun in Mecca to reject the orthodox ecclesiastical Christology; they were, however, insignificant and could be ignored. He had also a much greater sympathy with them than with the Jews (x. 55; lxi. 27).

Muḥammad had to form a united community out of these heterogeneous elements. The first problem to be tackled was how to procure the necessary means of subsistence for the emigrants, who were for the most part without means or work, which could for the time being only be done through the self-sacrifice of the Anṣār and certainly only very inadequately. To strengthen their claims for protection, he ordered the relationship of brotherhood to be created between each emigrant and a man of Medina. This arrangement, to which was added brotherhood between every two emigrants, was abolished after the battle of Badr by Sūra xxxiii. 6 and left only a few traces (see Ibn Sa'd, iii. xxxiv.). On the other hand, we possess for a somewhat later period, when relations between Muḥammad and the Jews had begun to become more tenuous, a very valuable document in Muḥammad's constitution of the community which has been preserved by Ibn Ishaq. It reveals his great diplomatic gifts, for it allows the ideal which he cherished of an ammañūn definitely religious in outlook to sink temporarily into the background and is shaped essentially by practical considerations. It is true that the highest authority is with Allāh and Muḥammad, before whom all matters of importance are to be laid; but the ammañūn included also Jews and pagans, so that the legal forms of the old Arab tribes are substantially preserved. This scheme had however no considerable practical importance; it is nowhere mentioned in the Kūrān (hardly even in vii. 58), because it was too rapidly obsolete by the rapidly changing conditions.

It is a proof of the Prophet's political wisdom that he endeavoured to attach the Jews to himself by taking over several features of their worship. Thus he made the 10th Muḥarram a fast-day, obviously in imitation of the Jewish fast on the 10th Tisrī, the day of atonement, which is particularly obvious in its name, taken from the Aramaic (šālāt). On Jewish practice are probably also based the introduction of the midday salah, which was now (ii. 239) added to the morning and evening salahs and the easier rule about purification before the salah (iv. 46; v. 97). On the other hand, Friday as the day of the common salah, which probably goes back to the Jewish day of preparation (cf. Becker's correction to Ibn Sa'd, iii. 53, 19, in Thālīth, iii. 579), is said to have been already introduced before the Hijra by Muqā'ab b. Umar (according to others, Amr b. Zūqrā). Whether the choice of Jerusalem as the āqṣā (q. v.) was one of the concessions made to the Medinese Jews is uncertain as the statement about his attitude in Mecca on this point differ. But it is improbable that he should have turned towards the Kūrān there, otherwise it is difficult to understand how the different stories could have arisen. But whether he then used Jerusalem as the āqṣā, which need not necessarily mean a borrowing from the Jews, as this direction of prayer was elsewhere found in the east, e.g. among the Edomites and Elymasites, whether he turned to the east like many Christians, or whether he had a āqṣā at all (the Kūrān is silent on the point), is uncertain, but in any case the balance of probability is in favour of the Jerusalem āqṣā having been one of the alterations made to gratify the Medinese Jews. If some writers have seen in the immediate erection of a place of prayer (Ibn Hīshām, p. 336) a copying of the Jewish synagogues, Čaṣūn b. Husain has with weighty reasons argued that this was not a building definitely assigned to the worship of God, since the alleged masjid was also used for all kinds of secular purposes, because in reality it was simply the court-yard (āür) occupied by Muḥammad and his family, while the assemblies for regular worship were held on the muṣala' (cf. Maqari). But nevertheless the "mosque of opposition" so called by the Prophet with horror (Sūra ix. 108; see below) seems to have been an actual building recalling the Jewish synagogues. In spite of these concessions to the Jews, it soon became obvious that he had seriously miscalculated with regard to them. Although they undoubtedly cherished lively expectations of the coming of the Messiah (Ibn Hīshām, p. 286, 373 sq.) they could not possibly recognise an Arab in the expected Messiah and he had soon reason to lament that only a few among them believed in him (iii. 106). In particular, the misunderstandings in his reproduction of the Old Testament stories or laws aroused the notorious Jewish love of ridicule and thus brought him into an unfortunate position. His conviction of the divine origin of his mission and his position among the believers would not allow him to confess that he had made a mistake and on the other hand he had too often himself appealed to the testimony of the older religions of revelation to be able to ignore this criticism. His reaction to this dilemma by asserting that the Jews had only received a portion of the revelation (iv. 47; cf. iii. 115) and even this included a number of special laws and even adapted to a particular age (iv. 158; vi. 147; xvi. 119) but they had also concealed all sorts of things in their holy scriptures (ii. 39, 141, 154, 169; iii. 64 etc.) and indeed had even falsified their scriptures (ii. 50; iv. 48; v. 16, 45; vii. 162; cf. Hassan b. Thālūth, No. 96, 97; and the article TAQūRūT, in short they obtained hardly more benefit from their scriptures than an ass from the books which he is carrying on his back (Ixxi. 3). The Jews were not able to refute these assertions for, although he challenged them to produce these scriptures
neither he nor his followers could read a word of them. He therefore now poured forth the visions of his wrath upon the Jews in many speeches and awaited the time when he would be able to refute their criticism and malicious writings and contradictions in convincing fashion. (E.g. iii. 177, 9ff.; iv. 48). As he had now already begun to regard the church doctrine of the Christians as a corruption of the true teaching of Jesus, he felt himself called upon to reform the degenerate religion of revelation, which, of which asserted it was the only true one (ii. 107). As a result he now claimed a special place among the prophets: he is seal of the prophets (xxxiii. 40; a metaphorical expression which Maimonides, among others applied to himself and which indicates the conclusion of the series), he is the last prophet, to whom Jesus himself had pointed under the name Ahmad (ix. 67; cf. ii. 75). Still he is not thinking any more than before of introducing a new religion but only of restoring the religion proclaimed by the prophets from the beginning. Nevertheless the early days after the migration were the period when Muhammadanism was born as an independent religion, for parallel with his criticism of the religions of revelation and in particular opposition to Judaism ran a positive shaping of Islam, through which he was emancipating himself in important points from his previous models. He gave his religion a pronounced national character by taking over various elements from the worship of the old Arabs and associating them with his religious ideas. In the second year of the Hijra (July 623—June 624) after some hesitation, he ordered that Jerusalem should no longer be the old temple at prayer: but the new sanctuary of the Black Stone at Mecca (ii. 137—145) for it is "a gathering-place and a safe retreat for men" (ii. 119). His native town was thus made the centre of the true religion. As a substitute for the pilgrimage which he now adopted into his religion as one of the main rites, but from which he and his followers were temporarily cut off, he had an animal sacrificed in this year on the 10th Dhu'il-Hijjah on the mount Arafat in Medina (Tabari, i. 1362; according to Ibn Sa'd, iv/1, 9 he continued this after the occupation of Mecca) and in the following year he calls the Hajj one of the obligations of believers towards Allah (iii. 90, 91). Friday retained its significance but was not to be a day of rest like the Jewish Sabbath (ix. 94, 95), which is connected with his rejection of the Old Testament idea of God resting after the creation (i. 27). In place of the fasting on Ashura, he substituted quite a new particular rite, according to which his followers were to fast throughout Ramazan, the month, in which he himself received the fundamental revelation (ii. 28), as long as the sun was visible in the heavens. The Mussulmans had a similar custom: but whether he took the new revelation from them or from another sect cannot be ascertained (cf. RASDAN). This nationalisation of Islam, which was to have so many results, gave Muhammad a final legitimisation, which brought it into harmony with his earlier appeal to the religions of revelation, as he came forward as the restorer of the religion of Abraham (sūlla of the Hebrews) which had been corrupted by the Jews and Christians. Abraham, whom Jews and Christians alike regarded as the great type of faith and whom he had himself emphatically indi

the great hajj, not only in contrast to the hajj but also to the possessor of a scripture (neither polytheist, nor Jew, nor Christian). [ii. 129; iii. 90, 91], and that, as Shuckburgh has shown, v. 162 and xxxi. 124, must also be much a. In his and his son Ishaq, the ancestor of the Aghzah, founded the Meccan sanatorium and the rites celebrated here, now corrupted by the hajj, which Mu

While his religion was being transformed in this way, Muhammad's personal position was being gradually changed by the altered conditions. According to the already mentioned constitution of the community, all important matters were to be laid before Allah and himself. It now became a fundamental duty of the believers to be obedient to Allah and to himself (iii. 3, 129, 166; iv. 175, 62), where it is added: "and to those among you who have to exercise authority."

While Mecca was the centre of his religion, the Prophet (188, 13, 94, 32, 6, 12, the "women's homage," which is inserted in the account of the second conference at Akaba, Ibn Ishaq, p. 280) and those who are disobedient are threatened with the "torments of hell:" (ix. 64). Alongside of the belief in Allah now appears belief in the Prophet (xviii. 44, 13, 5, 8 etc.), Allah is his protector, as is Gabriel, and the angels are at his disposal (xxi. 4). He claims certain privileges, which suggest a worldly, mortal rather than a spiritual leader (xxx. 62; xlix. 2, 94, 32, 63; xiii. 13, 94, 32, 63) but which however must be described as quite moderate demands.

The elevation of Mecca to the centre of his religion imposed on Muhammad new tasks, which were soon to lead to unexpected results. If visiting the holy places in and around Mecca was a duty of the Muslims, who were excluded from the town (xxii. 25, 27), the result was the inevitable necessity of forcing admission to them. In addition the Prophet had an account to settle with the Meccans, for by his expulsion they had humiliated him in the eyes of the world and the punishment repeatedly threatened them had not materialised, unlike the stereotyped punishments of the godless in the stories of the prophets. This led to a new command, that of the holy war (xviii. 2, 94, 32, 63; xiii. 13, 94, 32, 63) but which however must be described as quite moderate demands.
followers in this connection (ll. 212; xxi. 39 sqq. etc.). He succeeded however in finding a way out of the difficulty, which might be able to pave the way for military enterprises without injuring these feelings too much. After he had sent different men with small armed forces who did not succeed in conquering the enemy, in Kusayr, one of the sacred months in which all fighting was forbidden, he sent some of his followers to Nakha, where a caravan was expected and gave their leader sealed orders in which he left it to their judgment what they should do. They did not disappoint him for they fell upon the caravan which felt secure until the end of the month and one of the Meccans was killed. The rich plunder was sent to Medina, where in the meanwhile a storm of indignation had broken out. Muhammad however gave the people time to recover and finally calmed them, by the revelation ii. 244. The success of the coup had had such an effect in Medina that not only emigrants but also a number of Angar offered their services, when he appealed for followers in Kusayr a. h. in a new raid, which he himself would lead. On this occasion things came to a real aid in unexpected ways. He had learned that the rich caravan was on its way from Syria and he decided to ambush it at Badr [q. v.]. The very cautious Abū Safiyyah [q. v.] who was leading the caravan got wind of his plan however and sent messengers to Mecca for help. But when by a diversion to the coast he had reached safety, he soon afterwards sent other messengers to Mecca to cancel the first message. The angered Meccans had however already collected an army which was three times the size of Muhammad's little handful of men and were unwilling to let the opportunity escape of properly chastising their troublesome enemy. They went to Badr where soon afterwards Muhammad arrived with his men, expecting to meet Abū Safiyyah's helpless caravan. When they discovered their mistake they were filled with terror (viii. 5 sqq.; cf. the continuation of 'Urwa's story: TaBart, l. 1384 sqq.) but the Prophet saw in the encounter the wonderful opportunity of the propagation of Allah who wished to force upon man a battle and his remarkable power of suggestion was able to inspire his men that they completely routed the far superior enemy. A number of the Meccans, including the leader of the aristocrats Abū Lakhš, were slain and several, including Muḥammad's uncle Abū Bakr, were brought prisoners to Medina, where Muhammad had two of them, al-Nadjir and 'Ukba b. Abī Muṣsit, put to death, while the others were held to ransom. This in our eyes very insignificant fracas, which however must be judged in light of the observation of Doughty, who knew the country (Travelers, ii. 378), became of the utmost significance for the history of Islam, for Muhammad saw in the victory a powerful confirmation of his belief in the superiority of Allah (viii. 37, 66; ili. 119; cf. Ka'b b. Mālik, in Ibn Hisām, p. 520 sqq.) and in his own wani and besides the commercial city of Mecca enjoyed such great prestige amongst the Arabs that its conqueror was looked upon to attract all eyes to himself. He therefore displayed even greater energy and was able to utilise the advantages he had won. After he had drawn up the programme given in Sūra vii. 57 sqq. he began to besiege the Jewish tribe of Kūmākḍa in their fort, The Munāfiqūn did not dare to oppose him seriously and the other Jews left their co-religionistes in the arch in shame-ful fashion (cf. ili. 24) so that the latter were forced to migrate to Transjordania.

In order to protect himself while fighting from attacks from another foe, Muhammad at this time adopted a plan which was a further proof of his outstanding political ability. He concluded, as a number of letters that have been preserved show (cf. J. Sprecher, Mitteilungen des Seminars für orient. Sprachen, 1916), as lord of Medina, alliances with a number of Beduin tribes in which the two parties pledged themselves to assist one another.

In the year 3 a. h. (June 624—June 625) Muḥammad continued his attacks on the Meccan caravans so that the Kūsān finally saw the necessity of taking more vigorous measures and revenging themselves for Badr. An army of 5,000 men was equipped and set out with much display for Medina under the leadership of Abū Safiyyah, who was little suited for the task. Although several of his followers advised Muhammad to make his defence within the town, he decided to go out with his forces, which had been much reduced by the departure of the Munāfiqūn, and took up a position at the foot of the hill of Uḥud [q. v.]. In spite of the numerical superiority of the Meccans, the fighting at first went in favour of the Muslims, until a number of archers who had been placed to defend his flank joined against Muhammad's express orders in the battle, which promised to yield rich booty and this at once enabled Khalid b. al-Walīd to fall upon Muhammad's flank. The tables were now turned and many of the Muslims began to flee, especially when the rumour spread that the Prophet had fallen (cf. ili. 138). In reality he was only wounded and escaped with a few faithful followers through a revine on to the west side of the hill. Fortunately for him, the Meccans were quite incompetent to follow up their victory and as they thought that Muhammad had been punished and as they thought that Muhammad had been punished and their honour saved, they turned quietly back to Medina. The Prophet was thus saved from the worst, but he had to lament many fallen friends including Ḥammā [q. v.] and his newly acquired prestige naturally also suffered. With all the eloquence in his power he endeavoured to raise the morale of his followers by exhortation and censure alike (ili. 114 sqq., 133—154, 150—200) but the consequences of his reverse did not fail to materialise. The Jews who had taken no part in the fighting (according to Ibn Hisām, they were observing the Sabbath), made no secret of their delight at his misfortune, and several Beduin tribes next year (4 a. h. = June 625—beginning of June 626; the eclipse of the moon which took place in Eṣṭambūl II of this year was that which in Medina in the night of Nov. 19—20, 625; cf. Rhodeskanis, in W. Z. K. A. M., xxiv. 105; Cantani, l. 958 sqq.) showed how much his prestige with them had sunk [cf. ere MA'UDRA]. It was therefore all the more necessary to make an example and another Jewish tribe in Medina, the Nadjir, seemed a suitable object after Ka'b b. Asfar's [q. v. and cf. Ḥasan b. Thabit, No. 97] murder had served as a prelude. It is made a charge against them in Sūra vii. 4 that they defy Allah and his messenger, on which account Tradition imputes all sorts of crimes to them. After a siege of several weeks (TaBart, l. 1389; cf. Euting, Tagebuch, p. 111) they were forced to emigrate to Khasār or Syria. They left behind them their weapons and their gold and silver as a rich booty, the distribution
of which on this occasion Muhammad reserved for himself (lxix. 6 sqq.).

To this period most probably belongs the prohibition of the drinking of wine which is characteristic of Islam (v. 92 sqq. of the Instructive Gradation in ii. 216; where the word "great" is to be deleted as Schwally proposed).

It has been connected with a number of features of life in the old Semitic east but the main reason should rather be sought in the connection with the "masir" games [q.v.]. Drinking-bouts with feasting on a specially slain camel and games of chance, which were in the eyes of the old Arabs the bright spots in their hard struggle for existence, and in which they endeavoured to display their nobility and hospitality, brought the Muslims into suspicious relations with pagans and with Christian and Jewish wine-sellers, which might easily lead to their faltering in their new religion (cf. Wâkidî, transl. Welhamsen, p. 100; Bukhârî, ed. Krehl, ii. 270 sqq.); and this might explain why he forbade it at the same time, which of course does not exclude the possibility that forms of abstention for other reasons may have been known to (Musallâma's prohibition of wine was obviously intended as asceticism; cf. the article). While Muhammad was endeavouring to restore his weakened authority, a new and threatening storm came upon him and Medina from Mecca. The Quraysh, whose caravans were being continually harassed by him (cf. Hassân b. Thâbit, No. 16, 6 sqq.) and who were urged on by the Jews of Khilânâ, recognised that the victory at Uhâd had only been a blow in the air and realised the necessity of occupying Medina, which they had then neglected to do. Conscious of their slight military skill, they negotiated vigorously with various Beduin tribes and thus raised a large army — said to have been 10,000 men — with which they set out against Medina in the year 5 (June 626—May 627). The various accounts of the season of the year (sometimes a month after the barley harvest, sometimes cold, winter storms, the latter in agreement with Sûra xxxii. 9; cf. Hassân b. Thâbit, No. 14, 3) may be reconciled by the possibility that the siege lasted a considerable time (cf. Doughty's description, Travels, ii. 429 sqq. of the siege of 'Ansa, which in general illustrates this work excellently). The advance of this imposing army produced great consternation in Medina, which was still further increased by the vacillating attitude of the Munîqîn and by the discovery or perhaps only the suspicion that the Jews were conspiring with the enemy (xxxiii. 10 sqq., 26). Muhammad in order to strengthen the defences had a ditch (hâdîluk, a Persian word?) dug in front of the unprotected parts of the town. According to several stories, he did this on the advice of a Persian named Salmân b. J. Horowit (cf. Isr. xii. 178—183) would reject this as a later accretion. Modest as the defences were — about 150 years later 'Abî b. Mûsâ bridged the ditch which had been restored by Muhammad b. 'Abd Allâh, by throwing a few doors across it — they seem to have imposed upon the enemy who had little experience in the art of war and the siege gradually dragged on.

The able lord of Medina used the time for secret negotiations with the Ghâfitân and cleverly stirred up enmity among his opponents and when at the same time the weather conditions became unfavourable the besiegers lost heart and gradually began to retire so that the last effort of the Quraysh to destroy their sinister foe came to nothing: For one section of the participants however, the comedy of the "War of the Ditch" was to become a bloody tragedy. Hardly had the besiegers retired than the Prophet declared war on the last Jewish tribe of any size, the Kûraîss, and began to besiege their quarter of the town. The Jews no doubt hoped to escape in the same easy fashion as the Nadrî had, especially as their allies, the 'Awîs, were very actively trying to induce Muhammad to clemency; but this time he was inexorable and carried out seriously a threat that he had previously made (lxix. 3). Tradition has however endeavoured to put the responsibility for the massacre of the Kûraîss on Sa'd b. Mû'âdî (cf. Hassân b. Thâbit, No. 9, clxxii, who asserts Sa'd's innocence). But there are various indications that it was the Prophet himself who made the decision and perhaps induced the Jews to surrender. On this occasion the Jews showed a strength of character and nobility of spirit which throws a redeeming light on their otherwise so ignoble history. By these amputations, which however did not spare all the Jews from Medina (cf. Ibn Hâshîm, p. 855; Wâkidî—Wâlidian, pp. 303, 393; Hassân b. Thâbit, No. 133, 176, the Prophet had come nearer his goal, the organisation of an emira on a purely religious basis, which hitherto he had to keep somewhat in the background for political reasons. For the present he continued his attacks on the Meccan caravans far into the year 6 (May 627—May 628) and his raids, usually punitive expeditions, on Beduin tribes; of these expeditions, which have no particular interest, mention may be made of that against the Bâshî Mu'tâ leggings and the 'Ansa and involved 'Abîs [q.v.] in the celebrated adventure which nearly cost her her position as the wife of the Prophet, until finally a revelation saved her (xiv. 4: 18, 19—20).

Towards the end of the year 6 Muhammad thought that his position in Medina was so firmly established that he could risk a step, which would bring him nearer the desired goal. He and the enigmatisms were still excluded from Mecca and its holy places, but through secret confidential agents, among whom we may certainly include his carefully calculating uncle 'Abûâs, he knew that feeling in the town had been gradually coming round (cf. xvii. 15; ix. 7). An increasing number had become tired of the hopeless war and thought it would be much more advantageous for the commerce of Mecca to make peace with their indefatigable enemy, especially after he had adopted into his programme the pilgrimages to their fairs, the source of the city's wealth. Trusting to this revulsion of feeling he gave his followers in Ibtî-l-`u'd of the year 6, i.e. March 628 (the news of the death of the Persian king Khwarâw Pâwân on the 29th of this year reached him on the way) orders to provide themselves with sacrificial victims and undertake an 'umra [q.v.] with him to Mecca, as Allâh in a vision had promised him a successful fulfilment of the visit (xlviii. 27). He probably chose an 'umra deliberately (Ibn Hâshîm, p. 740; Wâkidî—Wâlidian, p. 249 sqq., 253; cf. Sûra, xx. 30, 34) instead of the great pilgrimage which was soon due, as the consequences of an encounter with all manner of tribes, with whom he might
possibly have been waging war, were too incalculable for him; but perhaps he cherished also the hope that, if all went well, he might remain there in the following month also (cf. ii. 192 which perhaps belongs to this connection). The step was nevertheless a risky one, so that he asked several Beduin tribes to accompany him in case they met with resistance. To his disappointment however, they refused (xlviii. 11 sq.) so that he decided to abandon the military character of the march and make his followers go as harmless pilgrims. In Mecca many were inclined to meet his wishes but the belligerent party was still strong enough to get a body of armed men sent to meet him to prevent him entering the town. He therefore encamped at al-Hudabiya [q. v.] where he began to negotiate with the Meccans, and when this led to no result he sent 'Uthman, who was protected by his family connections, into the town as his representative. But when the latter showed no signs of returning and finally a rumour got about that he had been murdered, the situation became critical and Muhammed dropped all negotiations, collected his followers under a tree, probably one long held sacred, and made them swear to fight for him to the last, which they did with enthusiasm (xlviii. 10 sq.). But soon afterwards a number of Meccans arrived, many of whom no doubt were characteristic of the aimless Meccan policy, by which he was to retire this time but to be allowed to perform an 'umra next year. He agreed to the proposal, concluded a ten years' truce with the Kuraiš and further promised to surrender all Meccans of dependent status who came to him. His followers, whom he had worked up into a state of great excitement by his promises and the taking of the oath, heard these conditions with scarcely concealed anger; but Muhammed calmly ordered the sacrificial animals brought with them to be slain, which was to have been done at an 'umra in the town (see Lane, Lexicon, s. v. asabil), and had his hair cut and by his authority forced his crumbling followers to do the same. Only later did they discover that he had made a brilliant stroke of policy for he had induced the Meccans to recognize the despised fugitive as an opponent of equal rancour and concluded a peace with them which promised well for the future.

He and the participants received ample compensation for the apparently frustrated 'umma at the beginning of the year 7 (May 628—April 629) by the capture of the fertile oasis of Khairar [q. v.], which was inhabited by Jews. It was the first actual conquest by the Prophet and he instituted on this occasion a practice which became regular afterwards, when Jews or Christians capitulated; he did not put the people to death or banish them but let them remain as tenants, as it were, who had to pay dues every year. This expedition which also brought the Jewish colonies of Wadi 'r-Kuraih into his power, made the Muslim rich (xlviii. 18—21).

In this period, although the exact date is variously given, tradition puts the despatch of letters from the Prophet to Muqawki, governor of Alexandria, the ruler of Abyssinia, the Byzantine emperor, the Persian king etc., in which he demanded that they should adopt Islam. The alleged original manuscript of the first of these has however proved not to be genuine (see J. L., 1854, p. 482 sqq.; Zaidi, in Hilal, 1904, p. 103 sqq.; Becker, Fajyari Scholl-Rheinhardt, p. 3). But even what is related about these epistles hardly deserves the faith most people have put in it. Even if we disregard the many apocryphal details, we must surely consider it very unlikely that so sober a politician as Muhammed, who had at this time a very definite object, the conquest of Mecca, before his eyes, should have thought of indulging so fantastic an idea as the conversion of Heraclius or the Persian king, to whom the 'Incid Kuraihi, as no less unintelligible than the Bible to the Prophet and his countrymen, and whom he could neither compel by force nor entice with professed advantages. It is very doubtful if Muhammed ever thought at all of his religion as a universal religion of the world, as for example Nolidke, in W. Z. K. M., xxi. 307, Goldscheider, Vorlesungen über den Islam, p. 25, and T. W. Arnold, The Perishing of Islam, p. 43 sqq. hold (against them, see Snouck Hurgronje, Mohammedanism, p. 48 sqq.; H. Lammens, Étude sur le livre du calif Médina, i. 422). The passages in the Meccan sûras which can be quoted in favour of this theory (vi. 90; xil. 104; xil. 157; xxv. 1; xxiv. 27; xxxiv. 70; xxxiii. 78; lxviii. 32; lxvi. 27; cf. from the latter long passages in lix. 25) are limited by their context or by unambiguous parallels (like vi. 92; xil. 5 [the mother of the city, i. e. Mecca]; cf. xxvi. 214). Besides, in the Medinan period, the place of persuasion and proof ("no compulsion in religion": ii. 257; cf. xvi. 126), was taken by the spread of Islam by force of arms; which, although based on the supremacy of Islam over other religions (iii. 79; ix. 33; lix. 4), was confined to the lands inhabited by Arabs. If after the conquest of Mecca he also declared war on the possessors of a scripture (see below) the campaign undertaken by him prove that he was only thinking of Arabs under Byzantine or Persian rule, and it cannot be proved that he ever went beyond this in his schemes (the gift of Helvon, Baladjari, ed. de Goeje, p. 129 may be confidently asserted to be a forgery; cf. the article UEMMA). The decisive consideration however is that Muhammed at the height of his power never demanded from Jews or Christians that they should adopt Islam but was content with a political subjection and the payment of tribute. The correct conclusion is therefore to reject those stories and to look for the real historical basis in negotiations of a purely political nature, e. g. with the friendly Muqawki (q. v. and cf. Butler, The Arab Conquest of Egypt, 1902) and to assume that the idea of a great missionary enterprise arose later under the influence of Christian traditions, notably of the miracle of Pentecost.

On the other hand, the character of the genuine letters of the Prophet to the Arab tribes changes at this time, for he was no longer content with a purely political agreement but, relying on his now consolidated power, also demanded that they should adhere to his religion, which involved performing the salat and paying "alm"; he even gave the Djahim on the Syrian coast a respite (m叹d) of two months after which they were to decide (see Speyer, op. cit., p. 14 sqq.).

In March 629, Muhammed performed the 'umra stipulated for him by the peace of Hudaidiya (the 'umra of the "contract" or "recovery"). For him who had been driven out of his native city it was undoubtedly a great satisfaction to be able to visit Mecca as the acknowledged lord of Medina;
but otherwise the significance of the occasion was more symbolical and the efforts of the practised diplomat to prolong his stay by his marriage with a sister-in-law of his secret ally 'Abbas (see MADINNA) were politely but firmly resisted by the Meccans. On the other hand, it was of great significance that some of the most important Meccans, like 'Amr b. al-‘Ash and the military genius Khaṭṭīl b. al-Walid, who saw he was the coming man, openly joined him, while his uncle 'Ābās and the very patriotic Ibn Ḥaḍīm, p. 275) but cautious Abī Safyān endeavoured in secret negotiations to prepare in the most favourable way for the inevitable result. In the meanwhile he continued his military expeditions. His forces suffered a serious reverse but the first considerable effort to extend his authority over the Arabs on Byzantine soil, at Muta (q. v.) in Transjordania; this is also recorded by Theophanes (Chronographia, ed. de Boor, p. 335). But several Beduin tribes now began to see what advantages they would procure not only for the next but also for this world: by joining him, and large groups like the Sulaim voluntarily adopted Islam and placed themselves under his flag.

That it was Muhammad's intention to break the truce with the Kuraish at the first opportunity may be taken as certain; for it must have been intolerable for him that the heathen should still have Allāh's sanctuary in their control (ix. 17 sq. cf. iii. 3). The inaccessibility of the Meccans now gave him his opportunity. Very much against the advice of Abī Safyān, the belligerent party in Mecca had supported the Bakk against the Kuraish, who were divided amongst each other, and thus gave him a plausible causa belli (cf. perhaps ix. 12 sq.). In Kausāfa of the year 8 (May 629—April 630) he set out at the head of an army of Muhājirīnūn, Anṣār, and Beduin. The news produced considerable anxiety in Mecca where the number of those who wished to fight shrank daily so that the more prudent now could take control. Abī Safyān, who was sent out with several others (including the Khūṭrib b. Warqa who was a friend of the Prophet) met Muhammad not far from the town, paid homage to him and obtained an amnesty for all the Kuraish who abandoned armed resistance (cf. 'Urwā 'Abdārī, p. 1654 sq.). Except for a few irremediable (cf. Dīwan al-Hudūlūtan, No. 183; Mābarrad, al-Kāmil, ed. Wright, p. 395), they acquiesced and thus the Prophet was able to enter his native city practically without a struggle and almost all its inhabitants adopted Islam. He acted with great generosity and endeavoured to win all hearts by rich gifts (lūlīf al-khulīsh, a new use of the slms; cf. ix. 60). Only he demanded ruthlessly the destruction of all idols in and around Mecca. Only Sūrā cx. seems to preserve an echo of the exultation with which this victory filled him; here as in the unusually touching passage alviii. 1 sq., he sees in the success of his plans a sign that Allāh has forgiven him all his sins.

Muhammad did not rest long upon his laurels for not only was Taʾif, which was closely associated with Mecca, still unsubdued but the Hawāzin tribes in Central Arabia were preparing for a decisive fight. A battle was fought with these Beduin at Ḥumayd on the road to Taʾif (q. v.) which at first threatened to be a fatal disaster to the Prophet, mainly because of the unrelatability of a number of the new converts, until some of his followers succeeded in recalling the fugitives and routing the enemy (ix. 25 sq.). On the other hand, his inexperienced troops were unable to take Taʾif with its defences (cf. the description of impregnable fortresses in Dīwan al-Hudūlūtan, No. 66, 80 sq.). The people of Taʾif however afterwards fell in with the spirit of the time and adopted Islam. When Muhammad, after raising the siege, was distributing the booty of Ḥumayd, the Anṣār who as soon as he entered Mecca had expressed the fear that he would take up his residence again in his native town, became very insatiable about the rich gifts that he made to his former opponents in order "to win their hearts", while they themselves went empty-handed (cf. Ḥasan b. Ḥabīb, No. xxix.) but he spoke kindly to them that they burst into tears and declared themselves satisfied. His conduct on this occasion reminds us to some extent of that of David towards the Jews and Ephraimites after Absalom's rebellion.

The characteristic feature of the year 9 (April 630—April 631) in the memory of the Muslims was the many embassies which came from different parts of Arabia to Medina, to submit on behalf of their tribes to the conqueror of Mecca (cf. cx. 3) and the letters which he sent to the tribes, to lay down the conditions of their adoption of Islam. In the autumn of this year, he made up his mind to conduct a campaign against Northern Arabia on a considerable scale, probably because the defeat in Transjordania required to be avenged and because the Ghassānīs king was adopting a hostile attitude (cf. Ibn Ḥaḍīm, p. 94; Maqrīzī, Maghātā, h. 8, 79). But his appeal for followers met with little support. Mūsābnīrūn as well as Beduin held back and even among his devoted followers, there were some who put forward all sorts of objections, out of fear of a campaign so far away in the glowing heat (cf. ix. 43; lxi. 84—91, 98 sqq.). In particular he seems to have had to face at this time a considerable opposition in Medina (ix. 58—73, 125) so that he had to have recourse to his old instrument of intimidation and his words recall in a remarkable way the period of passion in Mecca (ix. 71, 129 sqq.). Matters came to such a pitch that some of the opposition, behind whom is said by one tradition to have been his old inexcusable opponent, the ascetic Abī 'Amir 'Abd "Amīr, furnished a house of prayer of their own "for division among the faithful and support for those who had formerly fought against God and his Prophet" (ix. 108 sqq.). Unfortunately the expressions in the Kūfā and in the traditions are quite insufficient to enable us to get a clear picture of this very remarkable affair. In spite of all opposition however, he carried through his plan, but when after great hardships he had reached Tabuk on the frontier (in the land of the Byzantines; cf. Ibn Ḥaḍīm, p. 956), he stayed there some time and then returned to Medina. The campaign was however not without success. His prestige had now become so great that the petty Christian and Jewish states in the north of Arabia submitted to him during his stay in Tabuk, for example the Christian king Wābānna in Ams (q. v.), the people of Alahār (q. v.) and the Jews in the port of Makkah. Khaṭṭīl also occupied the important centre of Dīwan al-Djandal (cf. for a criticism of the account: Csetani, ii. 261—268; Sperber, cf. cxxx. 44 sqq.; on the alleged letter from Muhammad to the Jews in Makkah, see also Wensineck, in fel. II. 290).
Unfortunately we do not know how the matters which were rapidly coming to a head in Medina actually developed; but we may safely assume that the death of 'Abd Allah b. Ubayy, which took place not long after the expedition to Tabuk, must have contributed to slacken the tension. These years showed a marked increase in the prestige of the lord of Medina abroad. Mecca was in his hands and among the Beduins an inclination was noticeable in several places to submit to the will of the conqueror of this town, to be safe against his attacks and to have a share in his rich booty. This was for example the case with the group of tribes of 'Amir b. Sa'âda, with portions of the great tribe of Tanm and the neighbouring Asad and further north with the Bakr and Taghib. Even in regions so remote as Bajraun and 'Oman within the Persian sphere of influence and among the chiefs of South Arabia, the new teaching and order of things penetrated and found ancient followers in some places. But we must not allow ourselves to be deceived by the representations of the historians, from which it appears as if all the people in these lands adopted Islam. Caetani and Sperber in particular have shown that these accounts are not in keeping with reality and that it was only little groups that submitted, while there was a not inconsiderable number who rejected the Prophet's denunciation. As regards open opposition the question was quite simple; when they were heathen, adhered to their paganism and would not abandon their polytheism, they were to be threatened by Muhammad with the "holy war". He had not only to deal with such as those in Arabia, but there were also in addition to the Jews who had already felt his strength, a considerable number of Christians, and some Persians in the eastern and southern districts. Muhammad was thus faced with a problem which he had to solve. From his words in Suna ix. 29 y.9, where he includes the Christians and even the Jews, the people of such strict monotheism, among the polytheists, who give Allah a son and honour men as lords beside him, one would expect that he would have fought them like the heathen, if they did not adopt Islam (cf. also the attack on the Christians, verse 76 y.).

But in contrast to such utterances we have another (Suna v. 87) where he mentions the Christians very sympathetically because they, unlike the Jews, show themselves kindly towards true believers and are not arrogant, which he ascribes to the fact that they have priests and monks (cf. his judgment on monasticism: Suna vii. 21). These remarkable contradictions may be explained, as pointed out by Tor Andrae, by the difference between the Monophysites and the Nestorians. The former aroused his unqualified displeasure by their Christology, while the latter, who were then predominant in the Persian empire, attracted him much more, and this attitude was shared by his followers after his death, as the letter of the Catholicon Ilyâ'ah, quoted by Tor Andrae, shows. On the other hand, his remarks about the Jews are always very severe. It is therefore all the more remarkable that the distinction between Jews and Christians completely disappears when their position is finally settled. They were included together as "peoples of a scripture" and they were allowed to retain their religion if they recognised the political suzerainty of the Prophet by paying a tax (jizyâ, q.v.); if they did not they were to be fought without mercy.

The memory of the agreement between Muhammad's teaching and that of the "peoples of a scripture", earlier so much emphasised, must have contributed to this rather illogical settlement and in addition there was the fact that treating the Jews as tax-paying tenants, and allowing them to practise their religion, as had been already done at Khaybar, was much more practical for the Muslims than fighting them till they gave in. A further compromise with the "peoples of a scripture" was that believers were allowed to marry the daughters of the "peoples of a scripture" and to eat food prepared by them (v. 7). It is noteworthy that the Persians (Masêhîr: xxii. 17) were included among the "peoples of a scripture" which made a difficulty for later better informed generations (Tabari, i. 1005, 19; Balâdhuri, p. 79); probably Muhammad did not dare for political reasons to demand that they should give up their religion. This extended application of the term "peoples of a scripture" is found not in the Kur'ân but in a letter of Muhammad's to the Persians in Hadjjar (Ibn Sa'd, i/ii. 49) but with the limitation that the Muslims are forbidden to marry their women and eat meat killed by them.

With these exceptions, the Prophet had approached nearer the object which was always before him, although it hitherto eluded him, the formation of an amân on a definitely religious basis, for the inhabitants of a number of parts of Arabia were now actually bound together by religion. The old differences between the tribes with their endless feuds, their blood-vengeance and their lampions which continually stirred up new quarrels, were to disappear at the will of Muhammad and all believers were to feel themselves brethren (lx. 11; xlix. 10 y.). There was to be no distinction among believers except in their degree of piety (xlxi. 13). The Prophet certainly had an ideal before him but it was realised only in a very incomplete way. The very rapid extension of Islam had been accompanied by a considerable diminution in its religious content. Alongside of the older adherents, who were really carried away by his preaching and whose faith had been tried by privations and dangers, there were now the many new converts who had gained mainly by fear (cf. the well-known poem of Ka'b b. Zairah; the poem of the Hudjnulli Uasl b. Abî Iyâs in Kösgarten, Carmine Huitfeld, Nr. 127) or by the prospect of material advantages. In spite of the teachers sent out to them there could be no question of any deep-seated conversion among these Arabs and how the old Arab spirit continued to flourish among them unweakened is shown for example by the boasting and abuse in the poems in Ibn Khîlan, p. 934 y., which is in no way inferior to the old poems. The Prophet himself in Suna xlix. 14 has recorded very definitely how far the Beduins were from the true faith: they cannot say that they believe but only that they have adopted Islam. Commandments relating to religion and worship, which had considerably occupied Muhammad in the early Meccan period, gave way in striking fashion to social and political regulations, a natural result of the fact that the new members were not ripe for the former. Uncertainty on these matters was still great and even at headquarters much seems still to have been in an embryonic state. This is true even of so fundamental a law as the rule for the times of daily prayer, as the five prayers later obligatory are
nowhere laid down in the Qur'an (see above; cf. also the expression “morning and evening” in A'isha’s poem: Morgenland, Forsch., p. 259). That they were introduced by Muhammad himself at the end of his life is possible, but not very probable in view of the silence on the point in the Qur'an, and in any case it is not certainly proved by the mention of the formulas of prayer in a letter of the Prophet’s (Ibn Hisham, p. 1382) as we are not justified in expecting absolutely literal accuracy in the transmission of such documents. Only one or two religious institutions are dealt with at all fully in the Qur’an, the great pilgrimage to the sanctuaries at Mecca and the ‘umra in the town itself, but the hadith was indeed the crown of his endeavours begun in Mecca and carried through with tenacity. The Prophet, although he was now lord of Mecca, did not yet take part in the pilgrimage in the year 8, which was so inexplicable to later generations that they invented an ‘umra unknown to many of his followers (Ibn Hisham, p. 886; Tabari, i. 1670 [Urwa], 1685; Wâkidî, p. 350; Ibn Sa’d, ii/i. i, 123 sq.; Nîlî, 193 sq.; cf. ii/1. 125 sq.; Snouck Hurgronje, Het Mubazzare Insul, p. 58 sq.). Nor did he come in 9, from Mecca to the ‘umra, until in 10, to Mecca he showed his interest in it however by sending Abû Bakr as his representative and making him read a proclamation which had momentous results (Bukhâri, iii. 165, 249; according to the usual tradition, it was ‘Ali who acted as his deputy; but this is probably a tendentious alteration; cf. Tabari, i. 1760 sq., where Abû Bakr complains about being passed over and is comforted by Muhammad; there is also another tradition, according to which Abû Bakr commissioned Abû Hurairâ to proclaim the exclusion of the heathen from the pilgrimage (Ibn Sa’d, ii/i. 121 sq.). This was what is known as the bârid at (q.v.), in which Muhammad, who had been for so many years excluded from the pilgrimage, forbad all heathen any participation in it and gave them a period of four months, after the excited reception of the letter, to change their religion. The adoption of Islam and merciless warfare (Sûra ix.).

This explains his absence from the celebration in the two preceding years; he wished to wait until he could celebrate it as sole ruler and completely in agreement with his intentions or, as he said, with the ceremonies introduced by Abraham (ii. 119 sq.). Finally all was prepared and at the end of the year 10 (April 631–March 632) he was able to carry through the first reformed pilgrimage (the “Farewell Pilgrimage” or the pilgrimage of ‘Isâm), which became the standard for all time. It is remarkable that the regulations for the ceremonies of the hadith, the object of which was to remove all that was too obviously pagan in the old ceremony (cf. e.g. the anthems in Mina in Faradak, in Z. D. M. G., lix. 604; Arâfah, ed. Wüstenfeld, p. 402) and to give it an Islamic colouring, are found mostly in traditions, where later details can of course easily have been inserted, and not in the fragments and more or less incidentally in the Qur’an; but broadly speaking, the later form is undoubtedly based on what the Prophet laid down on this memorable occasion (cf. the article hadith).

The Farewell Pilgrimage, at which an effective address, of which somewhat variant versions have been handed down, is put in the Prophet’s mouth, marks the culminating point in his career. His feelings at this time are probably expressed in Allah’s words in Sûra v. 5: “To-day I have perfected your religion, and completed my favours for you and chosen Islam as a religion for you”. There is therefore a touch of the dramatic in the fact that his career closed a few months later. He himself hardly expected this, for only a month before his death he was preparing an expedition, which was to set out under the leadership of the young ‘Uthma (q.v.) against Trans-ocean (not in some traditions to West of the Jordan, cf. the article umma) in order to avenge the death of his father. The situation was such in other directions also that it required a man in full vigour to deal with it; in several places the appearance of different “prophets” had provoked disturbances [cf. Al Aswad, Tâlimah, and Muzâlimah]. Then Muhammad suddenly fell ill, presumably of the ordinary Medina fever (Faradak, ix. 13); but this was dangerous to a man physically and mentally over-worked. He rallied a little but then died on the 13th Rabi‘ i of the year 9 (i.e. June 632; only this date suits the statement in Hassan b. Thâbil, Nâ, cxxvii, and all traditions that it was a Monday) on the bosom of his favourite wife ‘A’isha, according to the story with the words: “The highest friend” (Tabari, i. 1817; IbnSa’d, ii/i. 57 sq.; 58 sq.; 59 sq.; 71 sq.).

The great difficulty which the biographer of Muhammad feels on every page is this, that the prophet is both complete, the wonderland of his personality and the power of influencing those around him by suggestion, is not recorded in the early sources and indeed could not be recorded. From the Qur’an, it is true, one becomes acquainted with his earliest remarkable inspirations, which even now are not without effect, and with his eminent political gifts later in Medina. We do of course find instances in the battle of Badr or the agreement of Hudâliyya where his intellectual superiority is overwhelmingly evident; but these are only isolated flashes and for the most part we have to read the essentials between the lines and be content with instructive analogies, among which the influence of Joseph Smith on the intellectually far superior Brigham Young is a particularly striking example. The really powerful factor was his unshakable belief from beginning to end that he had been called by Allah, for a conviction such as this, which was not without a slight doubt, expresses an in calculable influence on others; and the certainty with which he came forward as the executor of Allah’s will gave his words and ordinances an authority which proved finally compelling. His real personality was revealed quite openly with its limitations; his strength and his knowledge were limited, the ability to perform miracles was denied him and he speaks quite frankly of his faults (vi, 69; xxxiv,
Apart from the revelation with which he was favoured, he is a man like any other and several times refers to the fact that he will die. (xxxix. 31); xl. 33 [q. iii. 138]; the episode in Ibn Hisham, p. 1072 sq. is not historical but a ten- dentious story directed against the tendency becoming apparent to apostatise the Prophet. This is exactly the field in which later ages have felt dissatisfied, so that they quite early, driven mainly by their disputations with the Christians (see M. Schreiner, in Z. D. M. G., xlii. 594), wove around the person and life of the Prophet a network of superhuman features (see Tor Andræs work quoted below). Apart from the traditions which are clearly confirmed by the Qur'ān we can only have certainty in the strictest sense of the word in cases where the stories place the Prophet in an unfavourable light, not only from our point of view but also from that of the Muslims, e.g. in the story of his temporary recognition of the three goddesses of Mecca before he became a Muslim, one of these goddesses being a form of the 'Urūma and Ḥadhījī on the Farewell Pilgrimage, for it is quite incredible that such features should be later inventions and as a rule in such cases the compromising stories are confirmed by the existence of variant traditions which endeavour to dispose of the offensive features by glossing over or altering them.

If the biographers of Muhammad must for these reasons impose a very considerable restraint upon themselves, there is nevertheless one essential aspect of his activity, which ought to be very strongly emphasised, particularly as justice is not always done to it in modern treatments of his life. There is a tendency in some recent writers not only to emphasise all that is unfavourable but also to neglect his real religious importance. If he had only been an oversexed man, anxious for worldly profit and quite unscrupulous in the choice of his means, Islam, which had been created in him and had died after his death, would have been an effect without a cause. It is impossible for the unbiassed historian to deny that he aroused the religious instinct of his countrymen, and gave expression to a body of religious and moral conceptions which not only satisfied his fellow countrymen but supplied the needs of the people of lands which had old civilizations conquered by the Muslims and served them as foundations for a vigorous and far-reaching intellectual activity. Although as a result of his singular theory of inspiration, his direct dependence on the older religions of revelation remained concealed, he was able in his own way to communicate to his countrymen a part of the spiritual wealth of the "peoples of a scripture" and how he touched the soul of the Arabs is best seen by the efforts of the Wahhābitis at a reformation. In lands of ancient culture, Islam, it is true, was only able to carry out its task by a somewhat radical re- moulding and the intellectual activity already mentioned developed also under the influence of Christianity and mysticism, but yet it was Muḥammad who set the whole process in motion and he could not have gained this influence if he had only been what the writers mentioned profusely to have found in him.

MUHAMMAD I-I. [See MAIYAD ISLAM.] MUHAMMAD I., according to the current view, the fifth Sultan of the Ottoman Empire, reigned, after the Empire’s restoration in 1413, as sole acknowledged ruler until his death in 1421. Like many details of the first century of Ottoman history, the year of the birth of this Sultan is unknown; Sigillati Oghlan, i. 66 gives 759 or 791 (1379 or 1389). It is commonly agreed that he was the youngest of the sons of Bayazid I, which probably has made von Hammer accept the later date. At the time of Timur’s invasion, Muḥammad resided at Ärin ou Amusia, but he was present at the battle of Angora (end of July 1402). From here he escaped with the help of the vizier Bayazid.
Muhammad had the surname Aḥḥaṭ, or, more popularly, Ṣāḥib, seventh ruler of the Ottoman Empire, reigned from 1451 until his death in 1461. He succeeded his father Murād II’s lifetime as governor in Mağnissia; after the death of his brother Ali al-Din in 1444 he became heir to the throne. Before his final enthronement Muhammad had twice resided in Adrianople as sulṭan, on account of the abdication of Murād II; the first time in June 1444, after a ten years’ peace had been concluded with Hungary. When, notwithstanding this treaty, Hungary and her Christian allies again took the offensive in July, Murād came back from Mağnissia, to which he had retired, and won the battle of Varna (Nov. 10, 1444). Then Murād abdicated a second time, but a menacing revolt of the Janissaries in Adrianople made the grand vizier Khālid Paša call him back again, a matter which Muhammad was relegated once more to his Anatolian governorship until his father’s death.

On Febr. 9, 1451 this new sultan of Adrianople and seemed at first peacefully inclined. In reality his reign was to become a period of untiring and continual conquest under the personal leadership of Muhammad himself, who, especially in the beginning of his reign, took part in nearly all the important campaigns. His conquests did not very much enlarge the boundaries already reached at Murād II’s death, but consisted more in a bringing under immediate Turkish rule of a large number of countries, regions and towns that were still held by local rulers under the Ottoman suzerainty. In this way Muhammad’s conquests made possible the enormous expansion of the Ottoman empire in the xvith century.

The first, and at the same time most conspicuous military achievement of his reign was the conquest of Constantinople, where, by the grace of Murād II, the Palæologue Constantine was still reigning. The preparations for this memorable siege had begun in 1452 with the construction of the castle of Rüstem Hisar (in which an inscription by Zaghazan Paša, one of the builders, of 856 [1452], is found; cf. Khalīf Edhem, in T. O. E. M., ii. 484-497) and other military preparations, e. g. the casting of an enormous siege gun. Constantinople was taken on May 29, 1453, and Galata surrendered soon afterwards (cf. Constantinople). In the next
again from the grand vizirate and executed in
August 1474; Gedik Ahmed Pasha took his place.
In the following years, until 1480, the sultan's
chief attention was given to conquests in Europe.
He built in 1471 the fortress of Sabacz (Bögürdeden)
in Syria, near Belgrad, while his troops in these
and the following years made incursions into Hungary
and far into Austrian territory. The war with Venice
continued and in 1474 the Albanian Skutari
(Skodra) was in vain besieged. The year 1475
brought the great success of the conquest of Kaffa
from the Genoese and, as a result of the establishing
of the Ottoman power in the Crimea, the
submission of the Tatar Khanate of the Crimea to
Ottoman suzerainty. In 1476 the sultan himself
was successful in Moldavia, but in the next years
the Turkish armies had less success against the
Venetians in Albania and southern Morea; finally
in 1478 Muhammad himself went to Albania and
took Croia; Skutari was besieged a long time,
but surrendered only after an account of the peace
negotiations with Venice, which led to a peace
(treaty (confirmed January 26, 1479) leaving a
considerable number of towns in Albania and Morea
to Venice. The Ionian Islands, however, were con-
quered in 1479 by a fleet under Gedik Ahmed,
also, at the same time, went so far as to take
Otranto in southern Italy. An endeavour to con-
quered the island of Rhodes in the same year was
not successful.

Muhammad's last campaign took place in 1480,
when he intervened in the dynastic disputes of the
dynasty of Üçüncü 'Kadir [q. v.], which intervention
gave rise to the first difficulties with Egypt. In
the next year, 1481, he had already set out for a
new military enterprise in Asia, the aim of which
was yet unknown, but may have been connected
with the same difficulties, when he died; rather suddenly,
in the place called Tekfar Çayrî or Khamîl Çayrî
between Skutari and Gela (May 3, 1481).
His body was transported to Constantinople and
buried in the sărko of the Fatih Mosque.

Besides being a great conqueror, Mahammed II
was the builder of many important edifices, in
the first place of the Fatih Mosque in Constantin-
ople and the mosque of Eiyi (u'dudzat el-bâ-
namâën), i. 8 443; 443 443) and further of the
castles on the Dardanelles and other works of naval
and military importance. In the army administration he
succeeded in restoring discipline among the Janis-
aries by incorporating in them the corps of the
Segban; further his name is connected with the
first Ottoman Rûmân-âlem (printed as an appendix
T.O.E.M., III.). He encouraged scientific studies
and showed an interest in literature and poetry (he
sponsored thirteen Turkish poets); even for the
Renaissance arts in Italy he summoned Gentile Belli-
ti to Constantinople, who made his portrait; cf.
also Tschudi, Vom alten Osmanischen Reich, Tü-
hingen 1930, p. 48.}

Bibliography: Among the early sources, the
Byzantine historians (Phranzes, Ducas, Con-
cydis) are by far the more important. The
Greek description of Muhammad's life by Crito-
boulos was translated into Turkish (appendix to
T.O.E.M., 1. and II). The old Ottoman chronicles
(Nehri and others) often treat the beginning of
Muhammad's reign in their last part; the later
historical sources (Sa'd al-Dûn', Ali, Feridûn)
are far from being reliable for this time. Further:
von Hammer, G. O. K., I, II; Zinckenstein (I) and

MUHAMMAD III, thirteenth ruler of the Ottoman Empire, was born on May 16, 1567, the son of Murad III and the Venetian lady Baffa, and reigned from January 27, 1593 until his death, December 22, 1603. He was the last sultan who, as crown prince, had resided as governor in Magnesia. During his short reign he does not seem to have exercised any great influence on the policy of the Empire, being mostly under the influence of his mother who, as vâlide sultan, intervened in affairs of state through her protégés within and without the palace. Much against her will but on the insistence of a large part of the troops and of the high dignitaries, Muhammad took part in one campaign, namely that of 1596, in which the Hungarian town of Eger (Egi) was taken by the Turks (September 1596). This campaign was a part of the war against Austria that lasted during all his reign and occasioned every year a military expedition to Hungary or to Wallachia. The grand vizier was changed not less than twelve times under this sultan; the most conspicuous grand vizier was Damiad Ibrahim Paşa [q.v.], his brother-in-law and the protégé of the vâlide. Ibrahim three times held the sultan's seal; three other titularies ended their office by being executed. In the same year as the conquest of Eger, the Turks won the battle of Keresetea between the Austrians and Hungarians; the severity of the then grand vizier Cighala Sinan caused a great number of the troops to desert and to appear some years afterwards as jarrists or gævêîâs, provoking dangerous revolts in Asia Minor which lasted thirty years and began with the taking of Urfa by Kara Yafzâli [q.v.] in 1599. A third memorable fact of the Hungarian war was the conquest of Kâneç in 1600 by Ibrahim Paşa. In other parts of the Empire the situation was relatively quiet; only in the Crimea was there a war between two rivals to the khanate, in which the Ottoman government had to intervene. Relations with the European powers were peaceful. France began already to exercise considerable influence through her ambassador; with Persia there was peace until September 1603, when a war began with the taking of Tabriz and Nakhchewan by 'Abbâs I.

The Empire was still supported by the traditions of Sultan's time, but the lack of strong government had introduced a lot of abuses, notably in the administration of the timars and of the finances. One of the consequences was the dangerous revolt in January 1603 of the sipahis in Constantinople, who demanded the abolition of the harem régime in the capital and the restoration of the authority of the government in Anatolia. Two high harem functionaries fell as victims of this revolt; the grand vizier Venâşîîî Mâs'ûn was able to oppose the sipahîs with the aid of the Janissaries, thus creating an everlasting feud between the two corps, but in October of the same year this nefarious policy caused his own fall and execution. Muhammad III was buried in a türbe of the Aya Sofja, a short time before his death, he had ordered the execution of his eldest son Mahmud. He is said to have made a great show of piety, and had some excellent councillors in his environment, such as the khâlidja Sâ'd al-Dîn (died 1599), who had determined him to accompany

the army in 1596; but on the whole his mother's influence prevailed by keeping him mainly confined to the harem in the palace.

Bibliography: Among the Turkish historians the works of 'Ali (until 1595); Selimâni (until 1600), Pecêwî and Hasan Beg Zâde are valuable as contemporary sources, further Na'ma (I.) and Hûdâji Khâfîa, Von Hammer, G.O.E., iv. and the works of Zinkoens (iii.) and Jorga (iii.)

A contemporary European source is Lass, Sarrasse, Ottomans: sive de rebus turcis liber continuus descriptionem potentiae Mahometi III, 1600.

(J. H. KRAMER)

MUHAMMAD IV, nineteenth Sultan of the Ottoman Empire, was born on December 30, 1641 and was placed on the throne on August 8, 1648, after the deposition, soon followed by the execution, of his father Sultan Ishâhîm. The power in the state was at that time divided between the court, where the old vâlide Kosem (q.v.) and Sultan Muhammad's mother, the vâlide Kâsîm, held the reins, and the reçbe, the representatives of the Janissaries and the Sîpahi. The lack of stability in the government at this time is shown by the fact, that, until the nomination of the grand vizier Köprüllâ Müahmed in 1656, there were no less than thirteen grand viziers. In 1651 the old vâlide Kosem was assassinated and at the same time the resistance of the Janissaries was broken; the regime of the court party that followed under the sultan's mother did not improve the situation. The grand vizierate of Ishâhîm Paşa (1654—1655), who at first seemed to be the strong man needed, was brought to an early end by his rival Murad Paşa, and in the meantime the Cretan war against Venice was exhausting the resources of the Empire. In March 1656 a military rebellion forced the sultan to allow the execution of several of his favourite courtiers.

The real strong man proved to be Köprüllâ Muhammed Paşa [q.v.] (Sept. 15, 1634, Oct. 31, 1661) who eliminated immediately the influence of the harem régime and became until his death the real ruler of the Empire. His régime began with a Turkish maritime defeat by the Venetians at the Dardanelles, but already in the following year he obtained as success in Transylvania and succeeded at the same time in establishing firmly the Turkish authority in the Danube principalities; the collaboration with the Crimean Khân was here of great value. In 1658 and 1659 he was able to suppress rebellions in Asia Minor, and in the Venetian war a great fleet of Venetian ships and other Christian allies did not succeed against the Turkish forces on Crete. After his death (Oct. 31, 1661) he was succeeded in his office by his son Köprüllâ Ahmed Paşa, who completed the work of his father by carrying through the final conquest of Crete (surrender of Candia on Sept. 4, 1669) followed by peace with Venice. In 1661 the war with Austria had begun again, where Sultan Muhammed took part in several campaigns, notably that of 1665 in which Üjvár (Neshâhî) was taken. In 1664 took place the famous battle of St. Gotthard, where the Turks were beaten by an allied army, a part of which was formed by French troops; still the peace concluded with Austria in 1665 was favourable for Turkey. In 1672 the sultan took part in the campaign against Poland, after the Ukrainian cossacks had invoked Ottoman aid
against the Polish king; the Polish war, ending in a peace treaty of 1678, brought him still further the Empire's position in the north. Kupriil Ahmet Paşa died Oct. 26, 1676. Though the sultan, who had developed in the meantime a morose and suspicious character, never showed him the same confidence as to his father, Ahmet Paşa had been easily able to maintain himself against enemies in the interior, not least by forming new troops (the beylik and the gumbaz), who were far more reliable than the Janissaries and Sipahis. He had not been able, however, to put an end to the extravagant luxury of the court, which wasted enormous sums. The sultan had an abnormal liking for big hunts, that were organized at enormous cost in the environs of Adrianople, which town he preferred as a residence to Constantinople.

After Ahmet's death the sultan did not himself take the affairs of state in hand; he appointed Kâzım Muşafı Paşa [q. v.] as his grand vizier. The latter continued in an unnecessary way the interior work begun in 1677 and 1678 and obtained successes against the Cossacks, behind whom the Muscovite power now began to gain in importance in Turkish affairs. In 1682 war broke out again with the Austrian monarchy and led to the second Turkish siege of Vienna (July 13—Sept. 12, 1683), ending in a Turkish débâcle, thanks to the intervention of the Polish king Sobieski. This disaster cost Kâzım Muşafı his office and his life and at the same time the influence of the Seraf became again predominant. The grand viziers now following proved unequal to their task and in the years 1683—1687 nearly the whole of Hungary was lost to the Austrian armies (Turkish defeat at Mohács on June 22, 1687). At the same time the hostilities with Venice had been reopened in the Morea and in the Archipelago.

All these disasters caused a revolt of the troops in the field; they marched on the capital in September 1687 under Siyawaş Paşa, commander of the gumbaz. His action fell a victim to them; he was deposed on November 8, 1687 by the sultan's brother Kupriil Muşafı Paşa and lived in seclusion in Adrianople until his death on December 17, 1692. He was buried next to his mother in the Veli Djaımi.

Bibliography: Na'mın (ii.) and Hâddi Khalîfâ, and until 1660 the Tarihi of Râshid are the most important Turkish historical sources. The Sivaştı-nâmüs of Kâlîva Çelebi describes many of the military expeditions of this period and is also otherwise a valuable source of information. Among the European sources of this period is covered by P. Racinet, Histoire des trois derniers empereurs des Turcs depuis 1624 jusqu'à 1677, Paris 1863. Further, von Hammer, G. O. R., v., and the works of Zinkeisen (iv. and v.) and Jorga (iv.). See also the monographs of Ahmet Refik, Kupriil Paşa, Constantinople 1913 (1913), Kâzım Muşafı, Constantinople 1914—1924, and Pelikh Senslerli (1904—1110), Constantinople 1932 (1914).

MUHAMMAD V RÜŞHAD, thirty-fifth Ottoman Sultan, was born on November 2, 1584 as a son of Sultan ʿAbd al-Majîd. During the reign of his brother ʿAbd al-Hamîd II he lived in seclusion; his very existence inspired ʿAbd al-Hamîd with such terror that even the mentioning of persons with the name Râshid had to be avoided in his presence (cf. Snouck Hurgronje, Verrassende Gedenkstenen, iii. 234). He was a man of mild character, who owed his accession to the throne (April 27, 1699) only to the victory of the Young Turks; moreover: he was the first constitutional ruler of Turkey, but he was unable to give direction to the very disparate political tendencies that manifested themselves within and without the Parliament during the years after the Revolution, and after the final victory of the Unionist party in January 1913, Muhammad V had to submit, much against his will, to their government.

At the very beginning of his reign, Turkey lost her last vestige of authority over Bosnia and Hercegovina by Austria-Hungary's annexation, and over Bulgaria by the declaration of its independence (Oct. 5, 1909). The cabinets under Husein Memiç Paşa (until January 18, 1910) and İsmail III Hağiç Paşa (q. v.; until Sept. 29, 1911) were not able to bring about a peaceful situation in the interior (revolts in Albania). Hağiç Paşa had to resign on account of the declaration of war by Italy. Under the grand vizierate of Sa'id Paşa [q. v.] the Italian war led to the loss of Tripoli, confirmed by the peace treaty of Uşçay (Oct. 15, 1912). The peace was signed under the anti-unionist cabinet of Ahmet Muhîttî Paşa, but in the same month began the so-called Balkan War against the unfederated Balkan States. The reactionary cabinet of Kâmil Paşa soon showed an inclination to conclude a disastrous peace through the intermediacy of the European powers (Conference of London); then on January 23, 1913 the Unionist coup d'état brought again a Unionist government under Mahmûd Shewket Paşa. The result was a reopening of the hostilities and, after the failure of Bulgaria, the recapture of Adrianople (July 22, 1913). In the meantime Mahmûd Shewket had been murdered (June 28) by adherents of the liberal opposition, but this did not bring about a change in the political course; his place was taken by Sa'id Halil Paşa, whose government signed the peace-treaty with Bulgaria (Sept. 29, 1913), Greece (Nov. 14) and Serbia (March 14, 1914). From this time on, the Committee of Union and Progress, which from the beginning of Muhammad Râshid's reign had not ceased to work behind the scenes, became all powerful and its leaders ʿAṭât Bey and Ener Bey came more and more to the front. Afterwards, when at the beginning of the First World War, the Ottoman Government had decided to remain neutral, it was the Unionist sympathies with Germany that brought about a gradual estrangement between Turkey and the Allies (the "Goeben" and "Breslau" incident), culminating in the entrance of Turkey into the war on the side of the Central Powers (the Turkish fleet in the Black Sea on October 29 and 30, 1914). ʿAṭât Bey himself became grand vizier in February 1917. The Allied endeavour to force a way through the Dardanelles was definitely abandoned in January 1916 and in the meantime Turkish troops fought on the Egyptian front, in Irã and on the Russian and Persian frontiers. Before the end of the war Muhammad V died unexpectedly on July 2, 1918.

(J. H. Kramer)
MUHAMMAD VI WÂSID AL-DIN, last Sultan of the Ottoman Empire, was born on January 14, 1581, as son of Sultan 'Abd al-Majid. He was called to the throne on July 3, 1581, after the death of his brother Muhammad V Reşâd, the former heir to the throne Yüsuf 'Esra al-Din, son of 'Abd al-'Azîz, having died in 1576. When on October 30, 1581, nearly four months after his accession, the armistice of Mudros was signed, he was the ruler of an empire that seemed to be at the mercy of its former enemies, whose military forces occupied the capital and other hitherto unconquered parts of Turkey. On the other hand, the power of the Committee of Union and Progress was broken, but, since in the beginning of 1919 there began in Anatolia an increasing opposition against the foreign occupation, joined with an aversion to obey the Constantinople government, Muhammad VI seemed to have no other choice than to throw in his lot with the Allies and, together with his grand vizier Dânimâ Ferîd Pasha, he collaborated with the Allies in the endeavours to suppress the nationalist forces (beginning of 1920); this anti-nationalist action was even sanctioned by a fatwa of the Shî'îh al-İslâm. As the nationalist movement grew ever stronger, the Sultan's authority could only be upheld in Constantinople by the support of the Allies. His government had to sign the Treaty of Sévres (August 10, 1920) and the Tewfîk Pasha cabinet (since October 21, 1920) tried to summon the Parliament for its ratification. But in 1921 things had already gone so far that Tewfîk Pasha recognized the powerlessness of his government to represent Turkey. The final success of the nationalists against the Turks was expected by the Cossacks of Smyrna, September 9 (1922). But it was brought about the armistice of Mudania (October 11, 1922), to which the Sultan's government was not a party. It was still invited to represent Turkey in lausanne, together with the Angora government. This was not accepted by the Great National Assembly, which, on November 1, 1922, declared the Ottoman sułtanate abolished from March 16, 1920 (occupation of Constantinople); Tewfîk Pasha's cabinet resigned accordingly (November 4) and Muhammad VI remained as Khâlifa in Constantinople, where, on November 10, he appeared at his first ıntâmî. When, however, the National Assembly decided some days afterwards to try Wahid al-Din on a charge of high treason, this last Ottoman Sultan left Constantinople as a fugitive on a British ship (November 17, 1922) and the very next day the Angora government declared him deposed, the ex-sułtan proceeded to Mecca as the guest of King Hasaan. From here he launched a proclamation to the Islamic world, in which he maintained that the separation of the caliphate from the sułtanate was contrary to the shî'a (text in Orientis Modernis, ii. 702–705). This appeal found hardly any response in the Islamic world. The last Ottoman Sultan left Mecca again and went to live in San Remo, where he died on May 16, 1926. In 1924 he had even recognized King Hasaan's claim to the caliphate.

(T. W. Hato)

MUḤAMMAD, Tughlūk, the second king of the Tughlūk dynasty of Dīhī, was the eldest son of Ghiyāth al-Dīn Tughlūk, its founder. During the short reign of the usurper, Naṣīr al-Dīn Khaṭṭār, he was in some peril, but escaped and joined his father, who was marching on Dīhī. He was known at first as Dāwūrān Khān, but received the title of Ulagh Khān and was sent in 1321 to Warangal, to reduce to obedience the rajā of Pratap Rādḍārā II. In this distant region he attempted to rebel, but his army refused to believe his story of his father's death at Dīhī and to accept him as their king, and he was obliged to return in haste to the capital, where he either persuaded his father of his innocence or gained a pardon, for, though he accomplished no further than to be again sent, in 1322, to Nīnār, and on this occasion compelled the rajah to surrender and sent him to Dīhī. In the following year he acted as regent during his father's absence on an expedition into Bengal, but his conduct aroused suspicion, and his father rebuked him in letters sent from Bengal. He received the king, on his return, in a temporary kiosk of wood, so constructed that the dislocation of a beam would bring the whole structure down; and by this device crushed the old men to death, and ascended the throne in February 1325. The delineation of a character so complex and capricious as that of Muḥammad Tughlūk is no easy task. He was one of the most extraordinary monarchs who ever sat upon a throne. To the most lavish generosity he united revolting and indiscriminate cruelty; to scrupulous observance of the ritual and ceremonial prescribed by the Islamic law an utter disregard of that law in all public affairs; to a debasing and superstitious veneration for all whose descent or whose pious command were set a claim to a hereditary dignity, when roused respected neither the blood of the Prophet nor personal sanctity. Some of his administrative and military measures give evidence of abilities of the highest order; others are the acts of a madman.

The chronicle of his reign is largely a record of rebellions punished with gross barbarity. In the second year his cousin Gūrḫāpī rebelled in the Dakan and was slayed alive. In 1326, a second revolt of Wasfūr, named it Dāwātābād, made it his capital, and two years later drove the whole population of Dīhī thither. In 1328 Khāṣa Khān rebelled in Mullān and was defeated and slain, and in 1329 India was invaded by the Muḥṣilīs of Aḥḥ al-Dīn Tarmāštīnī, who, however, was driven from the country. In the same year the enhancement of the land-tax in the Gangetic Dothb drove the inhabitants into rebellion, and the measures taken to suppress the rising depopulated the country. At about the same time Muḥammad issued his famous fictitious currency, decreeing that his brass tokens should be accepted as equivalent to silver.

In 1331 a rebellion in Bengal was crushed by Bahānār Khān, but in 1338 he died, and a second rebellion separated the province from the kingdom of Dīhī, and in 1334 Sayyid Djalāl al-Dīn Aḥsan established his independence in Madura. Muḥammad marched to punish him, but a pestilence in his army compelled him to retreat, and on his return he established in the Dakan the pernicious system of farming out the revenue for cash. Under this system, the result of which was to drive both the impoverished cultivator and the defaulting farmer into rebellion. Ḫūsni of Dāwātābād, believing a report of the king's death, rebelled, but was captured and pardoned, a rare instance of clemency, but a rebellion in the Pāndābāt was crushed with great severity.

An enormous army raised for the conquest of Persia melted away for want of funds to maintain it, and in 1337 a heavy calamity fell on northern India, a famine of unusual severity which lasted for seven years. The king's measures to combat the famine were, on the whole, well conceived and well executed. Grain was plentiful in Awadh, which proved that the famine was largely due to artificial causes, and he built a temporary city, Sargā-dvār (Sargā dvār, Sanskrit: "the Gate of Paradise"), on the western bank of the Ganges, transferred thither the citizens of Dīhī, and with the assistance of Aʿīn al-Mulk, governor of Awadh, fed them from the granaries of that province. In the following year he committed one of the greatest of his many follies in assembling an army of 100,000 horse for the invasion of Tibet and sending it into the Himālaya, where it perished.

In 1339 a rebellion in the Dakan was crushed and even the faithful Aʿīn al-Mulk was goaded into rebellion, but, in consideration of his services, was imprisoned instead of being put to death. Almost immediately afterwards Shāhī the Afghan rebelled in Mullān, but died before the king's army arrived into Afghanistan. The famine was now at its height, and the people were eating human flesh. Muḥammad set himself to the framing of regulations which should improve and extend agriculture and obviate future famines. By their means, says the contemporaneous historian, with conscious or unconscious irony, agriculture would have been so promoted that plenty would have reigned throughout the earth, had they been practicable. They included the extension of the system of farming the revenues, and bred confusion and rebellion, which reacted on the king until he regarded his subjects as his natural enemies and waged war against them with all the weapons of despotic power. The tale of executions is recorded, with sickening details, by Ibn Buṭṭābī. Rebellions in Sūrīn, Samānā, Kāthī, Gāhān, Kārā, and the Dakan were all traceable to the king's revenue system, but he attributed the discontent in the Dakan to the dissatisfaction of his officers and sent to that province a wretch who slew ninety of his officers in cold blood, and was himself slain in the rising which his barbarity provoked. Muḥammad marched into Gūrḫāpī and personally undertook the collection of arrears due to the treasury, so alarming the officials in the Dakan that they seized the fort of Dāwātābād.
and proclaimed an Afghan, Tamīl Mukh, as their king. The king marched to Dawlatabād, captured the city, and besieged the rebels in the citadel, but was recalled to Gędarāt by a serious rebellion headed by a man named 'Uqīt. He pursued the rebel in Gędarāt and Kāthākwar for three years, drove him into Sind, and followed him thither, and on March 20, 1351, died within a few miles of Thātha, where the rebel had taken refuge. "The king," as a historian says, "was freed from his people, and they from their king".

His empire, at its greatest extent, included the whole of India except the small kingdoms of the Colas and the Pandyas, in the neighbourhood of Cape Comorin, and the principality of Girnar in Kāthākwar. Before his death he lost Bengal, the Dakkan, the Peninsula, and Sind, and left the remnant of his dominions seething with discontent.

(T. W. Haag)

MUHAMMAD III, the sixth king of the Tuglak dynasty of Dihlī, was the son of Firdawsī, at whose death the son of Fath Khān, his eldest son, was raised to the throne on Sept. 20, 1388, as Ghiyāth al-Dīn Tuglak II, but was slain on Feb. 19, 1389, and was succeeded by his cousin Abū Bakr, son of Zafar Khān, the second son of Firdawsī. Muhammad, the third son, contested the succession and, after suffering more than one defeat, occupied Dihlī and ascended the throne on Aug. 31, 1390. Abū Bakr took refuge with Bahādur Khān in Mewāt but was pursued and defeated, and was imprisoned in Mirāb, where he shortly afterwards died. The old servants of Firdawsī, men of Eastern Hindūdūstān, who had been the principal factors in all the troubles of the kingdom, were put to the sword, after being tested by a shibboleth which distinguished them from the natives of Dihlī.

A rebellion in Gędarāt was suppressed in the same year by Zafar Khān, who in 1396 became independent in that province, and in 1392 Muhammad crushed a serious rebellion in the Dothāb, captured Ḳāhva, ravaged the districts of Ḳāhva and Dalman, and built near Dжалas a fort, which he named Muhammadābād. In the same year, he put to death his minister, Ḳān Khān, who was meditating rebellion, and appointed in his place Ḳhādījā Djalās. Another rebellion was crushed in the southern Dothāb, and in August 1393, Muhammad invaded and plundered Mewāt and returned to Djalās, where he fell sick. Bahādur Khān took advantage of his illness to plunder some villages in the neighbourhood of Dihlī and Muhammad marched into Mewāt, defeated him, and put him to flight, but on his return to Muhammadābād his disorder increased, and on Jan. 20, 1394, just as he had ordered his son Ḳhādījā Djalās to march against the Khojars, who had captured Lāhore and were ravaging the Pindārī, he died.

(T. W. Haag)

MUHAMMAD I, the second king of the Bahmanī dynasty of the Dakkan, was the eldest son of Ḥasan, 'Abī al-Dīn Bahman Shah, usually, but incorrectly, styled Ḥasan Ganga. On succeeding his father, on Feb. 11, 1335, he carefully organized the government of the four provinces of the kingdom and the administration of the army. The pertinacity of the Hindū bankers and money-changers in melting down the gold coinage which he introduced led to a general massacre of the community and the measure involved him in hostilities with the Hindū states of Warangal and Vīḍyaṇagara. He invaded the dominions of Kānchāya of Warangal three times, put his son Venyek Deva to death, and compelled him to pay heavy indemnities and to surrender the town and district of Golkonda. After this success he grossly insulted Bubba I of Vīḍyaṇagara by paying some dancing girls with a draft drawn by him on Bubba's treasury. Bubba invaded the Rājārī Dothāb, captured Mūḍāga, and massacred its garrison. Muhammad marched against him, attacked him with great impetuosity, defeated him, and recovered Mūḍāga, where he rested during the rainy season. In 1365 he met Bubba at Katical, again defeated him, and carried out an indiscriminate massacre of his subjects. The Hindūs were cowed by the slaughter of 400,000 of their race, and Bubba was compelled to sue for peace. He honoured the draft and paid an indemnity, and received in return a guarantee that non-combatants should be spared in future wars, and the agreement, though sometimes violated, mitigated to some extent the horrors of the long period of intermittent warfare between the two states. On returning from Vīḍyaṇagara he completed, in 1367, the great mosque at Gulparga, and then turned against his cousin Bahānān Khān Mānaḍarīnlī, who had for some years been in rebellion at Divalatābād, defeated his army, and drove its leaders into Gędarāt. He died in 1377 and was succeeded by his elder son, Muhammad II, the fifth king of the Bahmanī dynasty of the Dakkan, was the son of Mahmad Khān, the youngest son of 'Abī al-Dīn Bahman Shah, the founder of the dynasty, and was raised to the throne on May 20, 1378, after the assassination of his uncle, Ḥusain Shah. Fiṭḥāyat's statement that this king's name was Mahmad has misled all European historians, but is refuted by inscriptions, legends on coins, and other historians.

Muhammad II was a man of peace, devoted to literature and poetry, and his reign was undisturbed by foreign wars. He invited Ḥafiz to visit his court, and the great poet set out from Shīrāz in response to the invitation, but was so terrified by a storm in the Persian Gulf that he disembarked and returned to Shīrāz, whence he sent to Muhammad his excuses in a well-known ode.

Between 1387 and 1395 the Dakkan was visited by a severe famine, and the king's measures of relief included the free importation of grain, the establishment of schools at which children were taught, fed, and lodged at the public expense,
special allowances to readers of the Qur’an and the blind, but only those of his own faith profited by his benefactions. He died of a fever on April 29, 1328, and was succeeded by his eldest son, Ghulam al-Din.

(T. W. HAMO)

MUHAMMAD III, LASHKARI, the thirteenth king of the Bahman dynasty of the Dakan, was the younger son of Humayun Shih, and succeeded his elder brother, Nizam Shih, on July 30, 1463, at the age of nine. His minister was the famous Mahmud Gawan, Malik al-Tujjimag, Khwaja Djanah. A campaign against Malwa in 1467 was unsuccessful, but between 1469 and 1471 Mahmud Gawan conquered the southern Kankan. In 1477 Malik Hasan Bahri, Nizam al-Mulk, a Bahman who had been captured in Vidjeyamag and educated as a Muslim, led a successful expedition into southern Urtia and was rewarded with the governorship of Telingana. Fath Allah ‘Imad al-Mulk, another Bahman with a similar history, was made governor of Barar, and ‘Umar ‘Adil Khatt, a Turk, was appointed to Daulatboud. In 1474 the Dakan suffered severely from a famine which lasted for two years, and in 1476 a rebellion in Koundawir led the king into Telingana. He relieved Malik Hasan, who had been besieged in Raddjamahendri, invaded Urtia and punished the raudja, who had supported the rebels, and on his return in 1478, captured Koundawir and assumed the title of ‘Alahsid.

He then set out to invade the eastern Karsat, but first divided the great province of Telingana into two governments, mortally offending Malik Hasan, the governor. The partition was part of his scheme, devised by Mahmud Gawan, to be applied to the provinces of the kingdom. Muhammad made Koundawir, in the Karsat, his headquarters, and returned thither after carrying out a daring raid to Kondjaweram. From Koundawir he issued an edict dividing the other three provinces of his kingdom, Barar, Daulatboud, and Gullisgur into two governments. The measure was intensely unpopular, but it was only the vindictive Malik Hasan that actively resisted it. He regarded Mahmud Gawan as the author of all the unpopular reforms, and by means of a forged letter persuaded the young king that his minister was in league with the foreign enemies of the state. Muhammad, when under the influence of drink, summoned his faithful minister, and on April 5, 1451, without any inquiry into the circumstances of the case, caused his head to be struck off. Mahmud’s innocence was established immediately after his death, and from the day of his unjust execution may be dated the collapse of the authority of the Bahman kings. Of the two parties in the state, all the foreigners, led by ‘Abd al-Khaliq, who established himself in Buljapur, and the respectful portion of the Dakanis, led by Fath Allah ‘Imad al-Mulk of Barat, avoided intercourse with the king, who was thrown into the arms of the assassins, led by Malik Hasan. The latter accompanied Muhammad to Bidar and subsequently on an expedition to Buljapur, but encamped apart from the royal troops, and always saluted the king from a distance, refusing to enter his presence. Muhammad attempted to drown his grief and humiliation in drink, from the effects of which he died at Bidar on March 22, 1452, crying out in his last moments that Mahmud Gawan was slaying him. He was succeeded by his son Mahmund, who was never a king but in name.

Bibliography: See art. MUHAMMAD I.

(T. W. HAMO)

MUHAMMAD II, ABBAS [See KAABAR.]

MUHAMMAD II, ‘ABBAS ALALL, great-grandson of Hasan, the eldest son of Ali and Fatima, was one of the ‘Alids who did not spend their time passively awaiting the fulfillment of their aspirations, but endeavored to realise them by personal effort. He and his brother Ibrahim had, according to Wajih, been brought up as future rulers and Muhammad was called al-Madbi by his father. As early as the reign of the Umayyad caliph Hisham, the two sectarians al-Maghira [q.v.] and Bayan [q.v.] who did not recognise Muhammad as ‘Ali al-Baqir [q.v.] endeavoured to make propaganda for him. When signs of the imminent collapse of Umayyad rule became apparent after Walid’s death, ‘Abbads Allah’s family by his command paid homage to Muhammad with the exception of al-Baqir’s son Dju’far. Wider circles also recognised him as the legitimate heir, including the Mu‘tazili, who in those days had a distinctly ascetic character. Abul Dju’far, later the ‘Abbadsid caliph, was at this time attached to this school and it is several times recorded that he was among those who paid homage to Muhammad. This is in itself by no means improbable and well explains his hostile attitude to him, although it remains remarkable that Muhammad later nowhere, even in his polemical letters to him, refers to this important fact: The Umayyad governor Ibn Hulaila also thought of joining him when he was besieged in Wasi in 132 (759) but dropped the matter when he received no answer to his letter.

When finally the ‘Abbadsid Abu l’Abbasi in the same year won the caliphate and ousted the ‘Alids, the two brothers disappeared and showed thereby that they would not recognise him. There now began for them a period full of adventure and danger, especially after Abu Dju’far became caliph in 136 (754). They went secretly from place to place to gain adherents; nowhere could they feel safe from the caliph but the people were on the whole favourably disposed to them and at least would not betray them. In this way they reached, not only Basra and Kufa but even went as far as al-Sind via ‘Aden; as a rule however, they stayed in Arabia most securely among the DJu’hamin, in whose territory lay the hill of Ralja, which so often appears in the history of the ‘Alids. The caliph was very uneasy at the continued lack of success of his search for them; more and more angrily he demanded of his governors in Medina that they should be produced and he dismissed several in rapid succession, when they appeared, perhaps without reason, ineffective and lukewarm in their efforts. He himself took very active steps but with little result. On his pilgrimage in 140 (758) he had Muhammad and Ibrahim’s father thrown into prison because they would not betray their place of concealment, and on a later pilgrimage (144 = 762) the same fate met the sons and grandsons of Hasan, ‘Abbads Allah’s brother. They and ‘Abbads Allah were taken to Kufa, treated most
brutally and 'thrown into prison, where most of them died.' The same thing happened to Thāhir’s father-in-law Muḥammad b. ʿAbd Allāh, a descendant of ʿUṯmān, whose head the caliph sent to Ǧafrun with a certificate on oath that it was the head of the ʿAbd Muḥammad in order to intimidate his followers there. Shortly before (Dec. 761), he finally found a governor after his own heart, Riqāḥ b. ʿUṯmān, who conducted the search with the necessary vigour. But he was soon able to save himself the trouble for in Ǧadīd 745 (Nov. 762) Muḥammad appeared in Medina and began the revolution while his brother Ǧahfl went to Bāṣra to do the same. It is not clear whether they did this because in Muḥammad’s opinion the time was ripe or whether they were forced by circumstances to hasten their plans. In any case, the enterprise was not sufficiently prepared, for although they had a large number of followers in Ǧafrun, Bāṣra, Egypt, where however Muḥammad’s son ʿAli was arrested by the ʿAbbasids, governor in Khurāsān and even in Sind, to which another son ʿAbd Allāh al-ʿAlṭar was sent, there was no question of any organisation, and, as so frequently, the enthusiasm for the ʿAlids was like a fire of straw which blazes up quickly but dies down as soon. In Medina where Riqāḥ was completely taken by surprise, Muḥammad in keeping with his character acted with great mildness; he opened the prison, forbade all bloodshed and was content with arresting Riqāḥ. The best element in the town came over to him after the jurist Ǧalīl b. Anas declared invalid his oath taken to the ʿAbbasids; Mecca also surrendered to the new ruler. The outbreak of the revolt was really a relief to Abu ʿUṯmān for he had now, as he said, enticed the fox out of his hole. He hurriedly left Bagdad, with the building of which he was busy, and went to Ǧafrun, the point of danger. With keen instinct he saw that the weak point of the rebellion lay in Medina which must be attacked first, for in this remote spot there was a lack of materials of war and the roads thither could easily be barred. But he first of all offered a complete amnesty to Muḥammad, which however only led to a characteristic exchange of letters, in which one reproached the other with the weaknesses of his family. He then sent his relative ʿĀṣa b. ʿAṣaḥ against him with 4,000 men, with instructions however to settle the matter peacefully if possible. His arrival had a sobering effect upon the Medinae, of whom a number seized the opportunity to get out of their difficult position. Muḥammad however remained undismayed. He rejected the well meant advice of several men to abandon Medina as an insult to the town but left his people free to stay with him or not. He trusted in Allāh "from whom victory comes and in whose hand the matter lies", and imitated all that the Prophet had done in his time in romantic fashion. For example he revetted the ditch which the Prophet had dug round Medina when it was besieged by the Kūraish; he used Muḥammad’s sword and his battle-cry was the same as that at the battle of Ḥunain; even the old single combat before the battle proper was revived. The result in these circumstances was easily foreseen. ʿĀṣa, after offering a free pardon in vain for a few days, laid a few days over the ditch, entered the town and began a battle in which Muḥammad’s supporters became less and less in numbers until their leader finally fell

(Monday, 14th RAMADĀN 145 = Dec. 6, 762). Muḥammad’s head was cut off and sent to the caliph. For the further course of the rebellion see the article ḤIRĀTH 1. 'ABD ALLĀH.

Muḥammad is described as tall and strong with a very dark skin, on which account the caliph surmisedly called him al-Muḥammad, the “Blackened.” He was rightly called “the pure soul” (Ṭabar, iii. 100) for he was an ideal character, gentle in spite of his personal bravery, but he lacked those qualities which are required of a pretender in times like his.

(FA. BRILL)

MUḤAMMAD b. ‘ABD ALLĀH, a Tāhirīd, governor of Bagdad. Born in 209 (824—825). Muḥammad in 237 (851) was summoned by the Caliph to Bagdad and appointed military governor in order to restore order in the chaos then prevailing, in spite of the great power of the Tāhirīds, who ruled Khurāsān as independent sovereigns in practice, although they nominally recognised the suzerainty of the Caliph, its task was by no means a light one. After al-Mustak‘ī ma had ascended the throne (242 = 856), he confirmed Muḥammad in his office and also gave him the governorship of the ʿIrāq along with the two holy cities of Mecca and Medina. In the following year troubles broke out in Bagdad and Sāmarrā. The Arabs were defeated by the Byzantines and the rage of the people was turned against the Caliph. The vizier Uṯmānī also succeeded in restoring order with the help of the two Turkish generals Ṭawfīq and Bughrā the Younger. The ʿAlids also gave the government trouble on several occasions. A descendant of ʿAli named ʿAbd Allāh b. ʿUṯmān rebelled in Ǧafrun and drove out the governor of the town. After he had routed an army sent against him by Muḥammad, he was attacked by the ʿAbūṣāfī governor al-Ḥasan b. Isma‘īl while another division took him in the rear and he finally fell in the battle (Ǧadīd 250 = Aug. 864). Another ʿAlī, al-Ḥasan b. Zaid, had more success. Two prominent men in Ǧabarstān, who were discontented with the rule of the Tāhirīd, appealed to him in 250 and very soon he was acknowledged as lord of the whole of Ǧabarstān. The Tāhirīd governors of al-Ra‘ay and Ǧazwī were driven out and replaced by ʿAlids; Muḥammad b. ʿAbd Allāh, governor of Khurāsān, a nephew of the governor of Bagdad, was sent an army against al-Ra‘ay. The ʿAlīd governor was defeated and captured and the town had to surrender but again fell into the hands of the ʿAlids. When the former governor of Ǧabarstān, Sulaimān b. ʿAbd Allāh, invaded this province and conquered it completely, al-Ḥasan b. Zaid had to flee to Ǧalīmān where he was defeated by Muḥammad b. Ǧāhir (351 = 865—866); after some years (257 = 870—871) however, he inflicted a defeat on the latter’s troops in Ǧarādūn and in 259 (872—873) he again became lord of Khurāsān, where he founded an ʿAlid dynasty which lasted about sixty years. Arabia
also did not escape the ‘Aliid plots. A descendant of ‘Ali named Jum‘a b. Yūsuf raised trouble there in 853, plundered Mecca and Medina and killed so many pilgrims that he received the epithet of al-Safābi, ‘the Bloodshedder’. There was also continual trouble in the capital. In Muharram of the same year (ye Feb. 866), al-Mu‘ta‘īn left Sūmra and went to Baghdad. Al-Mu‘ata‘īn [q.v.] was then taken by force from his prison in Sūmra and proclaimed Caliph; he then appointed his brother Abū Ahmad, later co-regent with the Caliph al-Mu‘amid, commander-in-chief in the war against al-Mu‘ta‘īn and his governor. When all negotiations failed, the latter had to take arms but was several times defeated. Fighting took place in and around Baghdad with varying success during almost the whole year, while anarchy in the provinces increased and when Muhammad finally began negotiations with Abū Ahmad, he was accused of treason, so that the Caliph had to protect him against the troops who were furious with him. But when Muhammad’s friends had the Mu‘ata‘īn intended to sacrifice himself, he made peace with Abū Ahmad. The Caliph had reluctantly to confirm the treesty and alidicate in favour of his rival al-Mu‘ta‘īn (Dhu l-Hijja 251 = Jan. 866) and the latter thereupon ascended the throne. Muhammad died in Dhu l-Ka‘dah 253 (Nov. 867).

(K. V. Zettersten)

MUHAMMAD b. ‘ABD ALLAH HASSAN AL-MAHDI, the well known Somali Mahdi called by the British ‘the Mad Mahdi’. He was a Somali belonging to the Ogaden Bah Geri tribe, section Rāh Ham. He was born about 1860 and had been from his youth devoted to religions and mystic stahis; in 1885 a.d. he performed the pilgrimage and during his stay in Mecca became acquainted with Sa‘īd Muhammad Sa‘īd [cf. SOMALIAND] of whom he became an eager follower. After his return to Somaliand he first settled in the Dālibahata tribe’s territory and began a vigorous propaganda on behalf of the Sa‘īliya parīṣa and to call Somali Muslims to a more strict rule of life. As he was a learned, eloquent man and a skillful impromptu composer of poems (the ancient and best way to propagate one’s ideas among the Somali Beduins), he was easily able to attain a great popularity among the Dālibahata in British Somaliand and his Ogaden countrymen in Abyssinia. His influence brought him to the knowledge of the government of Berbera, and British officials had sometimes recourse to him to settle through his mediation disputes arising between Beduin groups. In March 1899 however, the Mahdi suddenly changed his former attitude to an openly hostile one toward the British Government. In August 1899 he assembled his followers in Berbera and declared himself to be the Mahdi and proclaimed the holy war against the infidels. A first expedition was sent against him by the Abyssinians to prevent a further exten-
Government, and further they organised the Sultan's forces to employ them against the Mullah, thus assuring the defence of the northern frontier of their colony. There then began a series of raids led by Somali auxiliary bands, especially against the Mullah's followers in the northern valley of the Shabelle and towards Nugal, where Djirirkan and Garad were occupied by the Sultan of Hoby. These energetic actions which took place even during the Great European war, besides wear down the Mullah's army, caused him to lose political control of a very large zone where the population concluded peaceful agreements with Italy and forced him to be continually ready to defend his position from the north also. However, after the end of the Great War, the British Government decided to attack the Mullah from Berbera and to finally overthrow him. In January-March 1920 after violent bombardments of the Mullah's defences by the British airmen, a British force advanced to Taleh, the Mullah's last camp; he, rapidly pursued by the Camel Corps and Somali auxiliaries, fled to Ogaden and then into the Karanli tribe's territory, where he died on November 23, 1920.

The Mullah's career is a very typical one for the study of the Somali mind. He had begun his movement as an agent of the Siddiya 'parisa, then his increasing popularity tempted him to a more ambitious sphere and, accordingly, after placing his propaganda on a severely religious basis, he tried to become the leader of all the Somalis by making the ties of the common faith prevail over the tribal bonds. This is really the only way to lead such a movement in Somaliland where Islām may be regarded as a tie of brotherhood among tribes otherwise deeply divided by their secular history of wars and revenge. Therefore Muhammad b. 'Abd Allāh Ḥassān said in a famous poem: "I have not put my prayers on this sea to join together the Muslims who were not brothers?" alluding also to his relations with the Siddiya in Arabia. He desired for the same reason that his followers should call themselves 'Darawish', forgetting even the name of their original tribe. Therefore he attempted to become angry when he was referred to in official correspondence as "Muhammad 'Abd Allāh, the Ogaden Bah Geri" while he used to add to his signature only the name: al-Hišami (alluding to the origin of the Somali from 'Aqil b. Abī Tīlib) [see the art., SOMALILAND].

Further, instead of the tribal forces he raised special armed corps, often with a new name, like the Haggattu ("the scratchers") recruited among the Habar Gidir, the Dugad recruited among the Makkāli ("Dugad" means "shooter"), the Karrayl recruited among the Dhulabsana. But he did not pursue this policy to the end; the hostility of the greater part of the Isāk tribes, which was a strong appeal to the old rivalry between Isāk and Dirrā; Muhammad Siddā's letter, which was undoubtedly a severe blow to him, since he had had already provoked the hostility of the Kādiriya and so had to rely entirely on Siddiya support; the necessity of getting booty for his soldiers who otherwise would have hardly remained with him; all these things and his very nature caused the religious prestige of the Mullah as the Mahdi of Somaliland to decline and he generally became merely the chief of a tribe; a powerful chief indeed of a large tribe like the Darawish were, formed from various elements and therefore very similar to the federations well known in the Somali customary law. It was obvious that, when he began to regard himself in this light (that is regarding himself as a chief of a Somali tribe rather than "the brother born from the same father and the same mother of all the Muslims"), it was very difficult for him to restrain himself and his followers from exaggerating those tendencies so familiar to their own national character; and therefore they came back gradually to the ancient Somali custom of guerrilla warfare conducted in the traditional way, even to defying the tribes of the enemy in insulting or scornful poems or designating them with typical ironical nicknames or giving to every razzia a special name ("the razzia smashing the bones") was the name given to the fight at Duhmadhob; of the Ayyūb al-'Arab).

It may therefore be concluded that the Mullah's attempt to avail himself of Islam to conquer the old rivalries between the tribes and combine the Somalis to drive the Europeans out of the country, failed both on account of the strength of the European armies and the fierce Somalis, often unconscious, opposed by the Somali on the basis of their ancient tribal organisation and customary law.

(ENRICO CERULLI)

MUHAMMAD b. 'ABD ALLAH [See Ibn ALAAR, IBN AL-KHATIR, IBN MALIK.]

MUHAMMAD b. 'ABD AL-MALIK, ABU DAA'AF, called Ibn al-Zayyāt, vizier to several 'Abbasid d. Ibn al-Zayyāt began his career as secretary in the chancellery in Bagdad and when the caliph al-Mu'tāsir noticed his abilities and having appointed him his vizier (819-820) (KH 25). He also filled this office in the reign of al-Walid; but as he treated the latter's brother Dī'afar, the future caliph al-Muttawakkil, with a lack of respect he earned his hatred. After the death of al-Walid in Dhu l-Hijjah 252 (Aug. 847), Ibn al-Zayyāt wished homage to be paid to his son Muhammad; the latter, however, was thought to be too young by the Turkish general Waṣf and in his stead Dī'afar was proclaimed caliph under the name al-Muttawakkil. The vizier was at first allowed to remain in office but in 'Athār of the following year (Sept. 847), he was arrested, deprived of his possessions and subjected to a cruel form of torture which himself had invented. After enduring the most horrible cruelty he died in Rabī' 1 253 (Nov. 847).

MUHAMMAD b. 'ABD AL-MALIK [See Ibn TUFAIL, IBN ZUHR.]
MUHAMMAD b. 'ABD AL-RAHİM [See Ibn AL-FURAY].
MUHAMMAD b. 'ABD AL-WAHHĀB [See WU'TANWA].
MUHAMMAD b. ABD 'AMIR [See AL-MANṣūR R. ABD 'AMIR].
MUHAMMAD, a són of ABD Bakr and one of the wives, Aṣmah of the tribe of Khaṭṭām. He was born in the last year of Muhammad's life so that his father could not have exercised any influence on him, while the memories of ABD Bakr's great friend which were kept alive in his family must have had all the more influence on the passionate nature of the boy, which receives important confirmation from the fact that Ibn Kūtayb describes him as one of the "pious" (mursal) among the Kuraish. When in the reign of Uthman the bitterness at the preference of the Umayyads in combination with a reaction against the strong secularisation of 'Abd al-Malik provoked a movement which grew in strength, he took part in it with great vigour and began along with ABD Bakr's ungrateful foster-son, Muhammad, b. ABD Hārith, the people of Egypt against the Caliph. He later went with other revolutionaries to Medina where his equally ardent but much wiser half-sister 'A'isha in vain advised him to go with her to Mecca and leave others to carry through the crime; but he was one of those who broke into the Caliph's room where he ill-treated the helpless old man although it was Kūtayb b. Bahr who dealt the death-blow. He was one of the few Kuraish who joined 'Ali and the latter apparently cherished a real affection for the young man, whose enemies of course interpreted as further evidence of his friendship with the murderers of Uthman. Muhammad took part in the battle of the Camel, at the conclusion of which the chivalrous 'Ali commissioned him to escort his half-sister to Basra. The sources give somewhat different accounts of the last phase of his life in Egypt. According to Waṣālīdi in Balādhūrī, ABD Al-mu'min (Tabari, i. 3392 sq.) and Yaḥyā b. ABD al-Mu'min (ibid., p. 475) recall 'Abd al-Malik's appointment of his governor of Egypt and we unwisely interpreting these accounts as meaning that 'Abd al-Malik appointed him governor of Egypt. On the contrary, 'Abd al-Malik was at this time still in power, and it was to appoint a youth inexperienced in war to this difficult post, that he sent for his eldest follower al-Ashārī (q.v.) and gave him command in Egypt while he appeased Muhammad's rightly injured feelings by a kind letter. The attempt to make good the mistake failed, however, for al-Ashārī was poisoned on the way in al-Kalbān at the instigation of Muḥammad. Al-Zahīlī's account (Tabari, i. 3242) shows 'Ali in a somewhat more favourable light. After the recall of Kais he sent al-Ashārī as governor to Egypt and only after he was poisoned did he send Muhammad. Finally there is a third story (Ibn al-Kalbī and Mas'ūdī) according to which al-Ashārī was sent to Egypt only after the death of Muhammad, but this must be due to some misunderstanding of the first version. In any case, the choice of Muhammad was an unfortunate one, for the inexperienced youth, who had no authority and was besides insufficiently supported by 'Ali, was not fit to meet experienced opponents like Muḥammad and 'Aun b. al-Asy, and al-Qays came with an army and a battle was fought at al-Musannāt (the dam). When the actual murderer of 'Uthman, Kānān b. Bahr, had fallen after a brave resistance, the Egyptians lost heart and Muhammad, abandoned by all, was captured and killed while trying to escape (258 = 659).

(Franz Buhl.)

MUHAMMAD b. ABD BAKR [See Ibn Khayyim AL-DIANTUDYA, IBN SATISH AL-NASR].
MUHAMMAD b. ABD 'UL-ẒAMIN [See Ibn AL-ZAFAR].
MUHAMMAD b. ABD MUḤammad [See Ibn AL-ZAFAR].
MUHAMMAD b. 'UL-ẒĀDI Abū 'Umaid ALLAH, son of Abu 'Umaid Dīwadhād, an Eastern Iranian (not Turkish) noble from Ushān al-Mas'ūd's al-Nahr (see Barthold, Türkistan, G. M.S., p. 169). For his early career see the article SūHMA. After his rupture with al-Ma'ālikī he returned to Baghādād (276 = 889) and appears to have remained there (cf. Tabari, iii. 2112) until his appointment as governor of Aḍḥār al-Dījān in 279 (892). Though on his arrival he had entertained friendly relations with the Bagrātids of Armenia, Sembât (acc. 891), after seizing Maker in 280 (893) he made a first incursion into Armenia, but without success. At the same time he had strengthened his position at Baghādād by giving his daughter in marriage to al-Ma'ālikī's confidant, the general Bakr al-Ma'ālikī. Having been rejoined by his shāhīd, the general Wast, who had defeated the al-Darūjī 'Umar b. 'Abd al-Azīz in al-Dījān in 281 (989-985) but did not succeed in annexing his territory, he made a second expedition into Armenia in 282-285 (985-986) and captured Kars, Erzurum and Vanpurak. Subsequently he came to terms with Sembât, but his son Dīvadhād remained as governor of Dīvān until Muhammad's death. In 284 (987-988) Muhammad declared his independence, but finding himself unable to withstand al-Ma'ālikī made prompt submission, was pardoned, and in the following year officially recognized as governor of Armenia in addition to Aḍḥār al-Dījān. About the same time he appears to have adopted the title of al-Aṣhhī, which appears on his coinage, and which was evidently intended as a claim to descent from the old princely family of Ushān, (see the article AFGHAN and casti, Iran. Namensbuch, s. v. Piša). In 287 (992) he made a further indirect attempt to extend his rule over the territories which were slipping from the grasp of the Umayyads by encouraging Wast to seize Malāya and to apply to the caliph for investiture with the government of Cilicia. Al-Ma'ālikī, however, learning that this was only a preliminary step towards the seizure of Diyar Muhār, gave Wast and al-Aṣhhī, put an end to their design by a swift and unexpected campaign against Wast, who was himself captured. Al-Aṣhhī died a few months later (Rabi' 1, 288 = March 901) at Barūdān.

MUHAMMAD b. ABDZINAB [See Abu 'l-KHAFFAH]

MUHAMMAD b. ACHLAB [See AGHLABIS]

MUHAMMAD b. AHMAD [See IBN AL-ALAMI, IBN IYAN, IBN KIRGI]

MUHAMMAD b. 'ALI, a grandson of Husain the son of 'Ali; his kunya was Abi Dжа'far. On account of his learning he was given the honorific name of al-Bakir (the inventor), who goes deeply into things). He was a recognized authority on Tradition and a number of pious utterances are also recorded of him; he had at the same time the characteristic fondness of his family for embroidered silk garments and colours. That did not escape the usual fate of his family of being celebrated by a section of the Shi'ah as an imam is shown by a poem of the 'Ijli Ati' Haiara; but he lived contentedly in Medina and apparently played no part in politics although he was treated, for example by Umar II, with respect. He was expressly disowned by extreme Shi'i like al-Mughira and Bayan. When the party which had hitherto paid homage to his brother Zaid, abandoned the latter, they transferred their privileges to him, or rather, since he was dead, to his son Dжа'far [cf. IYAN b. MUHAMMAD]. The reason of the breach is said to have been that Zaid would not insult the memory of the two first Caliphs as his followers demanded but this does not agree very well with the fact that Muhammad b. Iyan's obviously much rhetoured account emphatically declares his fondness for Abi Bakr and Umar. The date of his death is variously given as 114, 115 or 118 AH.

MUHAMMAD b. 'ALI [See AL-DJAWAD AL-ISHAAB, IBN AL-ARABI, IBN ASKAR, IBN KIRGI, IBN AL-TASSEK, IBN WAJHIBYA]

MUHAMMAD b. 'ALI AL-RIDA', first Imam of the Twelve Shi'a, was born in Ramdan 115 (June 821) in Medina. As, according to Abi 'l-Faraq al-Ishahibi, Maqshid al-Talibisin (Teheran 1307), p. 195 sq., he was of negroid appearance, it may be true that his mother, a slave-woman, variously called Salma, Dura and Khaiziur, was a Nubian; to give her an honourable pedigree it was added "of the family of Maria the Copt". When al-Mamun attacked 'Ali al-Rida' to his court, he married the boy to one of his daughters, Umm al-Fadl, who was taken to him in 215 (830). Al-Mu'tasim on his accession summoned him to Baghdad. He arrived there at the beginning of 220, but was dead already by Dhu'l-Ka'da (Nov. 835). According to the Shi'a and in keeping with their scheme of martyrdom, he was poisoned on the instigation of al-Mu'tasim by Umm al-Fadl who remained childless; but even the already mentioned Maqshid, which record every murder of an 'Ali, know nothing of this. This Muhammad is generally speaking, only occasionally mentioned inside the Shi'a, along with his father, e.g. in Ibn Walji al-Ya'ish, Tawdih, ed. Houtsma (Leyden 1883), ii. 552 and in Tabari, Annals, iii. 1092, 1093; according to al-Ma'mun, Munshi al-Zahabs (Paris 1861 sqq.), iii. 117, Muhammad died in 219, according to vii. 171 not till the reign of al-Walid, i.e. after 227. Even within the Shi'a, his role is quite a passive one. After his father's tragic end, those with Za'id views who had hoped some day with him as Caliph to put into force their activist 'Ali political programme, went their own ways again, while those who held Imam views, one group, as usual in such a case, became "スタミファ" Waqiyifaya and another chose Abruad, a brother of al-Ka'da, as Imam; for Muhammad was only seven at the time. For those who remained faithful to him, there arose in the Sihurut al-Imama the question of the child Imam's knowledge. The case was repeated with the following three Imams. But the authority to teach and to act, in the hands of men whose activity extended through several Imamates; with Ma'mun (p. Bibi), xi. 125 infra cf. Mires Muhammad al-Astabirab, Manhaji al-Ma'mul (Teheran 1306), p. 217; Abi 'Amir al-Kasbah, Manajat Aghlab, Khilafat al-Ka'da (Isfahan, 1317), p. 352 sq., 374 sqq.; Tafrih al-Zahab (Bibl. Bibl. III., No. 60), No. 124, 150, p. 289, note 1. The gradual development of the dogma in this question, is associated with the child Jesus; teaching in Sura xix. 30 sqq., is not quite clear, as regards its apportionment to the various Imamis. Hereologers including al-Nawahi, Firaq al-Sa'id (Bibl. Bibl. III., No. 4), p. 74 sqq., quote the doctrines anonymously. Besides, there is the confusion of names (which has also entered European indices); for Muhammad b. 'Ali was also the name of one of his grandchildren, who died before his father, the 10th Imam Al-Najat, but left issue; his adherents continued the imamate further than the Twelve through these children, while they deny the existence of the twelfth Imam Muhammad al-Mahdi as successor of his brother, the eleventh Imam Hasan al-Ashur. They work avoid confusion by giving the ninth Imam, the Abu Dжа'far al-Thani; his official title is al-Taqi, "the God-fearing"; a common epithet is al-Dжа'if, "the liberal"; he is said to have paid his father's debts. As mac'ar al-bad, he had, like al-Ka'da before him, Utma'n b. Sa'id al-Amri, called Salamun or Zaibat. Among the usual miracles of the Imamis, Abu Dжа'far al-Saffar (d. 290) in Bayqur al-Daraghtin (in Ma'mun, xii. 108) relates that the ninth Imam carried a warshipper at night from Syria to the holy sites of Kerbelah, Kufa and Medina as well as to Mecca. The fact that his memory has been kept so green to the present day is due to the fact that he was buried beside the tomb of his grandfather, the seventh Imam, Minah al-Ka'im [q.v.]; thus arose the double Maqshid al-Ka'imman.

Biography: A full account with exact references to the sources is given in Muhammad Bakir b. Muhammad Taqi al-MadjJlis, Ridair al-Armar, xii. (Teheran 1302), p. 99-126; of earlier works we may specially mention al-Ma'mid (q.v.), al-Frzyadi (Teheran n.d.), with the addition of a solution, arranged in the order of the Imamis.

MUHAMMAD b. FARĀMARZ [See KHOSROW
MOLLE].

MUHAMMAD b. ḤABBĪ [See Ibn ḤABBĪ].

MUHAMMAD b. AL-HANAFIYA, a son of
'Ali and Khawla, a woman of the tribe of
Bani Ḥanifa, who had been brought a prisoner to
Medina after the battle of 'Arafat [q. v.] and came
into 'Ali's possession (cf. Suyūtī's poem Kīthā al-
'Agāmūt, vii. 4: "she was a servant in the house"); he was born in 61 A.H. Although he did not, like Ḥasan and Husain, have the blood of the
Prophet in his veins, he became involved not only in
the political turmoil but also in the schemes
which the bloodless families of the extreme Shi'īs
built up around the family of 'Ali. He was not
blame for this, for he was of a retiring
position and acted very cautiously. But when Ḥasan
had sold his rights and Husain had fallen at Kerbelā
in 680, many turned their eyes to him as the
natural head of the family. This aroused the
suspicion of 'Abd Allah b. Zubair who, after the death of
Ḥusain, appeared more and more openly as a
preacher; the fact that Muhammad had no
sympathy with the efforts of the opposition in the
Ḥijaz is evident from the interesting statement of
Balādī that he definitely declared the
assurances brought against the Caliph Yazīd I by the
Medinese to be false. The matter only became
serious when the adventurer Mughārīr [q. v.] after
seven vain efforts to get others to join him stirred
up a movement on a large scale in the Ṭūlāk in
66 (685), as champion of Muhammad's rights.
Even now Muhammad acted with great restraint
and declared the significant title "al-Mahdi" with
which they wished to greet him (cf. Tabari, ii.
510 and Ibn Sa'd, v. 68, which has certainly been
misinterpreted by Lammens). He obviously did
care for Mughārīr at all, and he had every
reason to doubt the genuineness of his enthusiasm
for him; but in view of the many dangers which
surrounded him and probably also from a want of
decision he did not wish to break with him openly.
Therefore when some people came to him from
Ṭūlā to clear up his attitude to Mughārīr, he only
gave them a diplomatic answer which was
noncommittal (cf. the somewhat different versions:
Ibn Sa'd, v. 72; Ya'qūbī, ii. 308; Tabari, ii. 607
and thereon Kīmi, p. 595) but which they inter-
cepted as a kind of approval, as it did not definitely
disown him. As a result the revolution-movement
spread in extent and much blood was shed to
avert the Ḥusain and with it the 'Alīs. Muhammad
was against this also (cf. Ibn Sa'd, v. 72 sq.; 77);
but when Ibn Zubair's attitude became more
and more hostile he finally imprisoned Muhammad
and several relatives, including 'Abd Allah b.
'Abbās, at Mecca near the Zemzem well, he saw
nothing else for it but to appeal for help to Mughārīr.
This was what the latter wanted and he sent a
body of cavalry at once to Mecca and released
Muhammad and the other prisoners in the nick of
time but by the latter's express orders avoided
conflict with Ibn Zubair's troops, as the town was
not to be desecrated by bloodshed. Muhammad
then sought shelter with his family at Minā (cf.
Kūmāt, p. 554, 597; Kīthā al-'Agāmūt, viii. 33:
Kumāt, ed. Horovitz, i. 78) and later went to
Ṭūlā. He made no further use of Mughārīr and
was therefore not compromised when the revolution
failed and his champion fell in 67 (686-687).
In spite of the threats of Ibn Zubair and the
demands couched in more friendly language of
'Abd al-Malik and although a safe place of
residence was granted him neither in Ḥijaz nor in
Syria, he defined his attitude by paying homage to
neither of the two pretenders and adhered to
the principle that he would only recognize a ruler
around whom the Muslim community were united.
He therefore appeared in the noteworthy pilgrimage
of the year 688 along with the Zubairids, Umayyads
and Khālidūs, as an independent head of a party,
although only under an armed neutrality. Only
when, after the fall of Ibn Zubair (73 = 692), the
anonymity of the vox populi which he had demanded,
became a reality, did he finally recognize the
Marwanī as the legitimate ruler and visited him
in 78 (697-698) at Damascus. He returned how-
er to Medina, where he died in 81 (700-701).
His strict passivity in the political field is always
attributed to purely religious motives as in the
traditions; not human force but Allah's help alone
should assist 'Ali's family to their rights; but there
is no doubt that a further reason was his lack of
enterprise and self-confidence, a trait common
to a number of 'Alīids. That, like his whole family,
he at the same time liked the good things of this
world is evident from the heavy demands which
he sent to 'Abd al-Malik for the payment of his
debts and annual pensions for his children,
and relatives; there is also evidence that he
had the family fondness for fine clothes and
manners. It is all the more remarkable then that
the more fanciful and extravagant school of Shi'īs
was seized upon him at once after his death and spread
the belief that he was not dealt but lived in a
kind of fairy kingdom on the hill of Radwān west
of Medina, whence he would return as the victorious
leader of an army (cf. Kīthā al-'Agāmūt, viii.
476 sq.; Kīmi, p. 347; ibid. 9 sq.; viii. 32). This was the idea of raqī's which
'Abd Allah b. Sā'b [q. v.] had associated with
'Ali (cf. Firdausī, in Z. 241, xxiii. 309 sqq.) and
which was now transferred to him; and in fact it
was now easier to bring him into the forefront than
it had been while he maintained his attitude of
stoutly passive resistance in his lifetime.

**MUHAMMAD b. AL-HUDHAIl** [See Abu l-Hudhail]

**MUHAMMAD b. HUSAIN**, an Ottoman dignitary and historian, who at the request of the first Wali of Baghdad, Derważ Mehemed Pasha (Durriayi, *Safli li-‘l-‘almâni*, ii. 33), translated into Turkish the history of ‘Abî. Shîhâb Hamâghûhâ, written in 1036 in Persian; he added two letters to it and gave it the title *Tuhfat al-Mu’mûn*. The work only exists in manuscript.

**Bibliography**: Bursaft Mehemed Tahir, *‘Otmâni Mülûkîlîr*, ill. xiii.; cf. also Ṣafî al-Khalîfa, *Kashf al-Zawâ‘in*, Hulâq 1274, i. 404, where Mustafa Shâhânlî is named as the Turkish translator.

The **MUHAMMAD KHALIFA** (‘Abbâd ‘Abd al-‘Azîz, 1587-1637), who was a dignitary of the court and flourished under three sultans (Mūsâ IV, 1033-1049 = 1623-1640; İbrahim, 1049-1058 = 1640-1648, and Mehemed IV, 1058-1069 = 1648-1687), was not identical with him. He wrote a chronicle of his time entitled *Twoelâd al-Qilâmat*, which covered the years 1060-1075 = 1650-1665. The work which consists of 3 volumes and a Khalima (of which the second letter contains two and the third 12 lines) was published by Alîdâ Fârid as supplement 11 to *T.C.A.M.* parts 78-83, Istanbul 1340 (1924).

A certain Muhammad Khalifa b. Husain is perhaps the same person: he also was a dignitary of the court of the same three sultans and wrote a history of his time which covered the years 1043-1070 (1636-1659). The only known manuscript is in Vienna.

**MUHAMMAD b. IBRAHÎM** [See Abu l-Hašan]

**MUHAMMAD b. İBRAHÎM ‘ADîl SHAH** (1035-1070 = 1626-1660) succeeded to the throne of Bijdipur after the death of his father. In the year 1064 (1654), the armies of the emperor Shah Djihâân invaded the Deccan and laid waste the country of Bijdipur. After the subjugation of Davlattâbâd and other forts, Muhammad b. İbrahîm ‘Adîl Shah agreed to pay a considerable tribute to the emperor of Delhi. He was the last king of Bijdipur who struck coins in his own name. In the latter part of his reign, his vassal Swâdîj, son of Sâhî Bhambî, by stratagem and treachery obtained great power, and the foundation of the Bijâdipur monarchy became weakened. He died in 1660 and was buried in Bijdipur where his tomb is called *Gill Gumbâs* (circular dome).

**MUHAMMAD b. İLYAS** [See Abu ‘Ali]

**MUHAMMAD b. İSÄ** [See Ilkâniya]

**MUHAMMAD b. İSâHâK** [See Ibn İsâ, Al-Nâzîr]

**MUHAMMAD b. AL-KASIM** [See Abu l-Alî’, Abu al-‘Abbas]

**MUHAMMAD b. KASIM**, a cousin of Walî II (86–96 = 705–715) and son-in-law of al-Hâijdîlî b. Yûsuf, was the governor of Bâsra; in 91 (711), he was sent to conquer Sind. Having defeated and killed the Râdî of the place called Dîhîr, he took possession of that country in 93 (712) and finally penetrated as far as Multân about 500 miles from the sea and even reached the foot of the Himalayas. Various accounts are given of the death of this general. The common story is that Muhammad b. Kasim was falsely accused by the two daughters of the Râdî of Dîhîr, whom he had sent to the harem of Sulaiman (96–99 = 715–717), the brother and successor of Walî, of having violated their chastity, and that he was therefore sewn up alive in a raw cowhide, by order of the enraged caliph. Others say that Muhammad b. Kasim, with other members of his family, was tortured and put to death by Śâlih b. ‘Abîd al-Alâm, governor of Istak, in revenge for the murder of his brother by Hâijdîlî.

**MUHAMMAD b. MAHMÚD** [See Abu ‘Umar]}
he against Muhammad. He was also able to win Malikshah over and to collect an army, which was however scattered in the following year by Muhammad with the help of Mawdūd, lord of al-Mawṣil, and Salmān was again made prisoner. Muhammad now thought himself strong enough to attack the Caliph himself and to besiege him in Baghdad. Imād al-Din, who was in the town, gives a full account of the siege (Rc. Hist. Crois., ii. 246 sqq.). Muhammad hurriedly raised the siege when news reached him that ʿAbd al-Malik had encamped Hamadān with Malikshāh and Arānān (552 = 1157). By the time the sultan arrived there they had retired, but he was at war with them till his death in 554 (1159).

(M. TH. HOUTSMA)

MUHAMMAD b. MALIKSHĀH ABU SHUQAIʿA GHAYTHI b. DUNYĀ ḫAṢIM AMIR AL-MUʾMÆNA, a SALTJIB b. SALTJINA (498-511 = 1005-1118), was born on the 18th Shabān 474 (Jan. 20, 1082) of a slave, who was also the mother of Sanadjar, and was given the Turkish name of Tapar. After his father’s death, he stayed at first with Turkan Khatun but then joined his brother Barkiyārūk who granted him the town of Gansā, Arrived there, he also seized Arrān and allowed himself to be seduced by Muʿayyad al-Muluk b. Nūṣrat al-Mulk into dropping his brother’s name out of ʿ.market. The two brothers fought one another with varying success in the following years until finally in 497 (1104) Barkiyārūk withdrew from the western provinces of the empire to Isfahān and left Muhammad to enforce recognition as sultān from the governors in these lands. When Barkiyārūk died soon after, at the end of 1104, Muhammad turned first to Baghdaḍ because he was sure of the homage of the Caliph, who had already received him and his brother a few years before in ceremonial audience (cf. the account in Ibn Khallikān, Bītākk 1299, ii. 444, had the emir Ayār, who had at first had the ʿattāṣa read for Malikshāh b. Barkiyārūk, treacherously put to death and sent the king of the Arabs Šadāqa back to his capital al-Hilla with orders to restore peace in Baṣra and among the Arab tribes of the neighbourhood. He then hurried to Isfahān, where the Būṭaynīya had achieved great successes in the troubled reign of Barkiyārūk and had established themselves in several hill-fortresses in the neighbourhood. One of their leaders, Ibn ʿAtāq, had by a ruse secured possession of the fortress of Dir-Kaḥ of ʿAlī-Dir built by Malikshāh. The sultān regarded it as his first duty to subdue and root out if possible these unbelievers; he sent his troops to besiege the fortress and, when it was taken, rased it to the ground and had the captured Būṭaynīya executed in cruel fashion (500 = 1107; cf. the text of the report sent by him to the Caliph’s vizier in Ibn al-Kalānī, ed. Amedroz, p. 152 ff.). Nor did he hesitate to have his own vizier, Saʿd al-Mulk Abu Tāḥamīn Abū al-Muluk Abu Ṭāhir al-ʿAttājī, executed at the gate of Isfahān; he was suspected, according to Anshahwān wrongly, (cf. Rsc. Hist. Crois., ii. 91) of having dealings with the Būṭaynīya.

While Muhammad was still in Isfahān, the emir Ğawāl Saḵawu, who ruled between Fāra and Khurāsān, made his submission to him; the sultān had previously tried in vain to bring him to obedience through the emir Mawdūd. The sultān was so pleased that he granted him the town of al-Mawṣil where Ḏjeκermanī, who had only paid homage to him under compulsion, was in command. The latter was not inclined to submit to the arrangement, but was taken prisoner in an encounter with Cawālī. The latter however was not yet lord of al-Mawṣil, for the followers of ʿAzṣunkor al-ʿAbūsulku, the governor of Baghdaḍ, to Šadāqa and to ʿAbd al-ʿAtā, the Salmānī of al-Raʾīm. The last-named sloshed answered the appeal and came with his troops to al-Mawṣil where he had homage paid to himself as sultān, but soon afterwards, after an unsuccessful encounter, he was drowned in the Ḳhāṭibūr on his retreat. Cawālī now had little difficulty in taking the town and going on to his further task, the war against the Crusaders. It would take us too far here to sketch the course of this war, and the reader may therefore be referred to Weil, Gesch. der Chl., iii. 191 sqq. During his absence he again fell into disgrace with the Caliph, who had in the meanwhile returned to Baghdaḍ and sent his troops to attack Šadāqa, by whom he was also dissatisfied. Šadāqa fell in battle in 501 (beg. of 1101). The sultān sent Mawdūd to al-Mawṣil and granted him the same dignity as he had previously given Cawālī. The latter on the same day made his peace with the sultān and was appointed as Emir of Fāra, where he fought the unruly elements in the population with great energy (cf. Ibn al-ʿAdīr, ed. Tārīkh, x. 561 sqq.). The Būṭaynīya however gave Muhammad no peace, so long as they were able to hold their strong mountain citadel of Alamāt; Abū Nashr ʿAḥmad, a son of Nūṣrat al-Mulk, who after Saʿd al-Mulk acted as the sultān’s vizier, was therefore given orders to take this fortress and when he did not succeed, he was dismissed in 504 (1109-10). In the meanwhile the sultān was being urged more and more from different sides to prosecute the war with the Crusaders seriously, and to succeed in persuading the various governors the of western provinces to combine and attack the Christians under the leadership of Mawdūd accompanied by the young prince Masʿūd. After Mawdūd’s assassination (507 = 1113) ʿAzṣunkor al-ʿAbūsulku took command and after him ʿAbūsulku assumed the supreme command but on account of the strife among the Turkish emirs, the value of the Crusaders and the complicated situation in Syria, decisive successes could not be attained. For the course of the campaign we again refer the reader to Weil, op. cit., p. 194 sqq., and the historians of the Crusaders. In the last years of his life, the sultān sent the emir Anṣahwān Shīrī against the Būṭaynīya In Alamāt, but he died on the 24th Dhuʾ al-Hijārā 511 (Apr. 18, 1118) before the fortress was taken. He was only 36 years old and this is why Weil suggests that the Būṭaynīya had a hand in his death, but does not go so far as to support this hypothesis in the oriental chronicles. On the contrary, individuals in his immediate entourage, notably the Great Ḥājjī ʿAlī Bār, seem to have been not quite innocent, because they, apparently to avert suspicion from themselves, accused the sultān Guhar Khatun and the famous poet al-Ṭehrābī of having caused the sultān’s illness by magic arts. The former was blinded and strangled on the day Muhammad died. The reason given by Matthias of Edessa for this (Docum. Arm., i. 120) is wrong. The sultān deserves credit for having, with the assistance of his brother Sanadjar who ruled in Khorāsān and the adjoining lands, restored the fortunes of the Salmānī kingdom, which had declined since the death of Malikshāh.
and for having vigorously fought insulds and sectarians in his seal for Sunni Islam and the 'Abbasid caliphate. He was, as Rec. Hist. Cr. ii. 118 has it, the perfect man of the Sultãns and their strong heart-camel.

Bibliography: given in the article Seljouks.

(M. Th. Houtsma)

MUHAMMAD, ABU AHMAD, İLĐAD-DAWLA WA-DJAMÅ, AL-MALLA, ABU AHMAD MUHAMMAD, second son of Sultan Muhammed of Ghazna, was born about 387 (997). He was married to a daughter of Abû Nasr Muhammed b. Abu'l-Habib Ahmad b. Muhammad, the Faríghan ruler of Džâlân. After the death of Abû Nasr Muhammed in 401 (1010-1011), Sultan Muhammad assigned to his son Muhammed the government of the province of Džâlân. In 411 (1020), at the instance of Sultan Muhammed, the 'Abbasí Caliph al-Kázîr b. Tâhî the Confessor conferred on him the titles of Jálân al-Dawla wa-Djámâl al-Milla. Towards the close of his life, Sultan Muhammed divided his empire between his sons, giving Ghazna, Khurásân and India to Muhammad and Rayî, Džâlân and Ifsânân to Mas’ûd, and took solemn vows from both to respect this division. When Muhammed died in Rabî‘ II, 421 (April 1030), Muhammad ascended the throne at Ghazna, but Mas’ûd, disregarding his vow, marched on Ifsânân to take possession of Ghazna. In the meantime, the holders at Ghazna deposed Muhammad on 3rd Shawwal, 421 (October 2, 1030) and read the Mu’âta in the name of Mas’ûd. Muhammed was then deprived of his sight by orders of Mas’ûd and imprisoned in a fort. His reign had lasted only 6 months.

In 431 Sultan Mas’ûd suffered a crushing defeat at the hands of the Sultâns, and resolved to settle in India. In the beginning of 432 (September 1040), leaving Ghazna in the hands of his son Mawdûd and his wazîr, he marched into India with all his treasures, but on 13th Rabî‘ II, 432 (December 24, 1040) his slaves deposed him and raised Muhammed to the throne. Shortly after this, Mas’ûd was put to death. Hearing this, Mawdûd advanced with a large army to avenge the death of his father, defeated Muhammad near Dünpûr on 3rd Sha‘bân, 432 (April 1041), and put him to death. The second reign of Muhammad lasted only 4 months. Muhammad was obedient to his father and was a man of amiable temperance. He resembled his father in appearance.

MUHAMMAD b. MARWAN, an Umayyad governor. In 65 (684-685) he was sent by his father, the caliph Marwan I, to Mesopotamia, and in the battle of Dâir al-Dâjihân in 72 (689) in which his brother, the caliph ‘Abd al-Malik, defeated Mu‘izz al-Dîn al-Zubair, he commanded the advanced guard of the Syrian army. In the following year ‘Abd al-Malik gave him the governorship of Mesopotamia and Armenia, which carried with it the command in the war with the Byzantines. On account of climatic conditions the Arab expeditions always took place in summer. In 73 (692), the emperor Justinian II was defeated at Sebaste or Sebastopolis in Cilicia. In 75 (694) Muhammad again took the field against the Byzantines and was successful against them at Marûtsh, and in the following year he invaded Armenia. Along with his nephew ‘Abd Allâh b. ‘Abd al-Malik he was sent to al-Halîkhânî the year 82 (701), to support him against the rebel ‘Abd al-Rahman b. Muhammad b. al-Asfâfî, and in the negotiations with the ‘Irâqîs before the battle at Dâir al-Dâjihân the caliph was represented by Muhammad and ‘Abd Allâh. In the same year, Muhammad led an expedition against Armenia, and again in 84 (703) and 85 (704). After the accession of al-Walid (Shawwal 86 = Oct. 705) Muhammad fell gradually into the background while Maslama, the caliph’s brother, was the actual commander; but the former retained his governorship for some time until in 91 (709-710) he was replaced by Maslama here also. Muhammad died in 101 (719-720).

Muhammad b. Sa‘ūd — Muhammad b. Tūghdīj

The full source is the Khalīl al-Ghazzawi (vol. ii. of Rawdat al-A‘shār) of Husain b. Qādān (d. 1225 H.), MS. British Museum Add. 23, 345, fol. 39–50; the Boulain lithograph (1332 H.) is very inaccurate; summarized by H. St. J. Philby, Arabia, London 1930, p. 12–22.— See also A. Masul, Northern Night, New York 1928, p. 258–259, and Amin al-Ra‘i‘ī, Tādi‘īq Qādān al-Halāl, Beirut 1928, p. 50–53, and for general works the Bibliography to the article Ibn Sa‘ūd. (H. A. R. Gru.)

Muhammad b. Sirīn (See Ibn al-Salām).

Muhammad b. Tāhir, governor of Khurāsān. After the death of his father, Muhammad received the governorship of Khurāsān (Radjab 248 = Sept. 862). In 250 (864–5) the ‘Alid al-‘Imām b. Zaid rebelled, which led to a long and serious struggle (see Muhammad b. Nā‘īr). When ‘Abd al-Malik al-Sidqi rebelled against Ya‘qūb b. al-Layth al-Shāfi‘ī and appealed for help to Muhammad, who appointed him governor of al-Tabarzan and Kuhistān, Ya‘qūb found a welcome pretext to invade Khurāsān. Muhammad sent an embassy to him; but as Ya‘qūb had already found a following among discontented Khurāsānians, all negotiations were in vain. In Shawwāl 259 (Aug. 873), or according to another statement in 258, he entered Nisanbūr without striking a blow, put an end to the ‘Abd al-Malikid dynasty and took Muhammad prisoner. But when he rebelled against the Caliph al-Mu’tamid, he was defeated in Radjab 262 (April 876) by the latter’s brother al-Mu‘awwad and Muhammad, whom he had with him in chains, escaped. The Caliph restored the latter to his former office in Khurāsān; the exiled Tāhirī however never found an opportunity to exercise his functions. He was further appointed — probably not till 270 (884–5) — vizier of Nāsibid and Khaibād as his deputy as military governor of Baghdaḍ. He held this office until the accession of al-Mu‘taḍidīd (279 = 892). He died in 296 (908–9).

Muhammad b. Tāhir (See Ibn al-Khaṣṣāb).

Muhammad b. Takah (See Khawārijmīn).

Muhammad b. Tughdīj (or Dioph) b. Vaktan b. Fūrūk b. Khāṣā b. Bakr, known as al-Ikhshīdī, from the title granted to him by the Caliph al-Ra‘ī‘ī in 327 (939), was the founder of the Egyptian dynasty of the Ikhtsīdīdīs (q.v.).

He was born in 268 (882) at Baghdaḍ and must have spent his youth in Syria, as his father, who joined the service of the ‘Abbasid at about the same date, was appointed governor of Damascus and Tabaryya c. 276, a post which he held for some fifteen years, and he himself acted for a time as his father’s deputy for Tabaryya. In consequence of the overthrow of the ‘Abbasid dynasty in 292 (904), he was imprisoned at Baghdaḍ. He was released in 294 (907), according to the inscription of ‘Abbās b. al-Husayn, and being implicated in his murder, had to fly when the conspiracy of Ibn al-Mu‘ta‘is (q.v.) failed. He escaped to Syria and found himself reduced to a humble station. Next year he passed on to Egypt, where his government, took him into favour, so that he kept him with himself, both in Egypt and in Syria when he was transferred thither to act as governor at intervals (302–307 and 309–311), and promoted him to appointments of importance.

At this period Muhammad came into contact with the powerful Mādarā‘i family, and also attended Murūsīh (q.v.) when he was brought to Egypt by the Fāṭimid invasions. He had already attracted some attention at Baghdaḍ by an exploit in 306. In 316 (928), through influence at the capital, he became governor of Ramla, quitting Takīn abruptly. In 319 he obtained a transfer to Damascus, where he became powerful, and in consequence of his defeat of Baghār in 321 extended his rule over the whole of Syria. In the same year (March 933) Takīn died, and Muhammad b. Tughdīj succeeded in obtaining the appointment as governor of Egypt in his place, but only nominally and for one month (Sept. 933). Two years later, by means of a large army and fleet, he entered Fustā‘ī and took possession of the country, overcoming the resistance of al-Mardā‘ārī (Muhammad b. ‘Ali), who by appointment from Baghdaḍ was then in control of Egypt, the governor being under his direction (taşık tūdīrīhī), Superior to al-Mardā‘ārī, however, was al-Fadl b. Dā‘ūr b. al-Fadlī (for whom see the article Ibn al-Fadlī; the inspektor minister (wā‘ir khudhīf) of Egypt and Syria, who had been specially granted full executive powers. Muhammad b. Tughdīj had acted with the authorization of al-Fadl and later (324) obtained the confimation of al-Ra‘ī‘ī to the addition of Egypt to the province of Syria already held by him. Probably at the same time he was granted the suzerainty over al-Yaman and the Holy Cities of Mecca and Medina, in honour of the following year to the Emperor Romanus he boasted of those places as part of his kingdom. Until the death of al-Fadl in 337 (March 939), he seems to have been subject, at least in theory, to some control by him. In 342 a decisive victory by the troops of Muhammad b. Tughdīj near Alexandria (battle of Albuq; March 31, 936) crushed the third Fāṭimid invasion and led to overtures from the Fāṭimid Caliph al-Kā‘īn, which in the end came to nothing. Muhammad did indeed decide three years later to recognize the Fāṭimid, and had given the order that al-Kā‘īn should be proclaimed in Egypt, out of indignation at the ‘Abbāsid government at Baghdaḍ, but was induced to reconsider his decision.

Only a month after he had received his title al-Ikhshīdī from al-Ra‘ī‘ī (Ramadan 327 = June–July 939), he found himself threatened from Ra‘ī‘ī by Ibn Rā‘ī‘ī (q.v.) and learnt that his provinces had been granted to this rival. Bad‘kam (q.v.), as amir al-amara‘ at Baghār, gave no answer to his appeal but that the question must be decided by the sword; the powerless Caliph could say nothing. Ibn Rā‘ī‘ī rapidly possessed himself of Syria, driving back the forces sent to oppose him,
and had soon captured Ramla (Oct. 939). Muhammad b. Ṭūḥāḏyj himself confronted him with an army at Yarramū, and with no fighting beyond some skirmishing entered into negotiations, ending in an agreement to cede Syria from Tabariya to north on condition that Ramla and the rest were restored to him. Ibn Raʾšāf soon broke this treaty and again advanced. This time Muhammad b. Ṭūḥāḏyj encountered him at al-ʿArish and routed him (15th Ramaḍān 324 = June 24, 940), but as he followed him into Syria, met with a reverse in his turn, one of his detachments being surprised and badly defeated at Laddāḏūn (18th August). Peace was then renewed on the same terms as before, and Muhammad b. Ṭūḥāḏyj undertook to pay an annual subsidy of 140,000 dinārs. He was back in Egypt in October.

The death of Bāḏjkam in 339 (April 941) drew Ibn Raʾšāf back to Baghdāḍ, and Muhammad b. Ṭūḥāḏyj was soon relieved of him completely, for he was murdered a year later by the Ḥamdānīs. Muhammad lost no time in recovering Syria, marching thither himself (June 942) and remaining in the country about six months before coming back to Egypt. It must have been at about this period that he succeeded in dispersing some minor encroachments on Syria from the direction of Raʾṣā, that are alluded to without details, those of Adl (al-Bāḏjkam) and Badr al-Khārjāhānī. He had to meet more serious attacks from the Ḥamdānīs. One of them, al-Ḥusayn b. Saʿīd, took Ḥalāḥ from him in 332 (March 944), and in May he set out to recover it. The Caliph al-Muttaḏi, moreover, insecure under the protection of the Ḥamdānīs from Tūṣān, the amir al-ʿaṣ̱rār, had appealed to him for help. His enemy retired at his approach and having regained the town he proceeded to Raʾṣā, where he met the Caliph (Sept. 7, 944). At this time he had thoughts of becoming amir al-ʿaṣ̱rār himself. He urged al-Muttaḏi to come with him to Syria and Egypt, and even offered to go with him to Baghdāḍ. He begged him not to trust himself to Tūṣān, but could not dissuade him. After receiving flattering marks of honour he departed. Before he reached Fustāṭ on his return the Ḥamdānī Saif al-Dawla [q.v.] had taken Ḥalāḥ (Oct. 944). The Egyptian army sent to meet this new aggression was severely defeated at Rastān near Himṣ, and Saif al-Dawla advanced to Damascus and entered it (April–May 945). Muhammad b. Ṭūḥāḏyj, coming from Egypt with his army, obliged him to retreat, pursued him, brought him to battle at Kinnārūn (May–June 945), and defeated him. Again Muhammad made easy terms when victor; Saif al-Dawla retained Syria north of Damascus and was also given a subsidy. The treaty was concluded in Raḥib 1 334 (Oct.–Nov. 945), and Muhammad then went back to Damascus, remaining there until he died a few months later (21st Dhu Ṭaʿrīh 334 = June 24, 946), just after the arrival of a Byzantine envoy concerning an exchange of prisoners for which he had opened negotiations.

Next to nothing is recorded of the internal events of Egypt during his reign; the country was doubtful quiet. Its revenue, said to have amounted to two million dinārs annually, was no longer accounted for to Baghdāḍ, and no regular payments were made from it to the central treasury. But he sent large occasional gifts to the Caliphs, so that al-Rāfiʿī considered him an exemplary vassal.

He left seven million dinārs at his death besides considerable other property. No constructional works of much importance are credited to him. At Fustāṭ he rebuilt the shipyard on the mainland, and on its site he built a garden called al-Makätārū; he enlarged the government house in which he resided, a Tūṭūnīd building that was situated near the still existing tomb of al-Kaṣīr Bakkār, and added a masāʾūd̤ān; he also made another garden known later as Rāfiʿī, afterwards the site of the western Fīṣṭānī in the face of Cairo. His armies at times seem to have been large. At the battle of Ablīf the Egyptians are said to have had 15,000 horsemen, at that of Kinnārūn 50,000 men. Such numbers would have been reached by means of levies for particular emergencies, which he is known to have raised more than once. On one occasion his personal retainers (qāʿārām), on whom he more especially depended, numbered 500. The constantly repeated and universally accepted figures of 400,000 for his army and 8,000 for his bodyguard can be dismissed as ridiculous, notwithstanding that they rest on the early authority of al-Fakhūri (d. 354), and with them the accompanying myth as to his habit of concealing his sleeping places when on campaign.

The most renowned of his followers was Kāfūr [q.v.]. Another of his qāʿārām, Fāṭik, rose to some eminence. Ali b. Muhammad b. Kāfūr was his secretary both at Damascus and in Egypt. Muhammad b. Ali al-Madaraṭī was his wazīr for a few months (328–329), Muhammad b. Ali b. Mukāṭī, previously secretary to Ibn Raʾšāf, was his wazīr at his death. His four brothers were all younger than himself; al-Ḥasan was in command at the battle of Ablīf, and represented him in Egypt during all his absences, al-Ḥusayn was in command at Laddāḏūn and killed there, [Ubayd Allāh acted for him in Syria, Ali disappears early.

Notable Egyptian authors who flourished during his reign were the historian Ibn al-Dāyā (d. 334), al-Kindī (d. 350), and Abd Allāh al-Farghānī (d. 362), who came to Egypt in 329 and was in his residence at Raʾṣā in 333. Al-ʿAlī, moreover visited Egypt in 330. Al-Mutanabbi, just rising to fame, recited once in his presence in Syria and addressed a verse or two to him and to his brother [Ubayd Allāh (d. 333 at Ramla)].

Muhammad b. Ṭūḥāḏyj was strong physically, but subject to occasional fits of melancholia. His character is illustrated by a number of incidents that have every appearance of being authentic. He was strict, but in no way vindictive or cruel. He often brought his officers to account, and then after punishing them by arrest or fine would restore them to favour. Hardly any executions are heard of in his reign. He would not allow torture and the "maltraitement of accused persons, so common in his time. His tact and sagacity were conspicuous. He was decent in his life and liked by his men and the people. On the other hand, he was certainly oppressive and unfair in some of his money exactions, and though at times not ungenerous was inclined to be mean and miserly in minor matters. The two great faults attributed to him, even to his face in his lifetime, parsimony and timidity, are not altogether without foundation. As to the latter, his own defence in a particular instance looks valid.

His career was closely parallel to that of Ahmad b. Ṭūṭūn [q.v.], even as regards several fortuitous
occurrences. It leaves no doubt of his capacity, and if admitting of occasional overcaution, will not allow of anything like cowardice. He did not make the same mark as his predecessor, but was a milder and perhaps a better ruler.

Bibliography: Ibn Sādāl, al-Muqarrī (ed. Ta'liqārī, Teheran, 1890) contains the text of the principal authorities, a list including subsidiary authorities, and a full bibliography in German carefully worked out from both sources. By far the most important authority is the long and detailed biography of Muhammad b. Tughdī which forms part of Ibn Sādāl's work, and appears to consist of the life composed by Ibn Zālīq between 350 and 355, reproduced almost but not quite verbatim. The other principal authority is the Kīṭāb al-Walīfah of al-Kindī, ed. Guest. Little, if anything, can be added from books published after al-Muqarrī.

MUHAMMAD II. YĀKIT [Abū Bakr, a chief of police in Baghād. In 318 (930) Muhammad, whose father was chief chamberlain to the Caliph al-Mukṭadr, was appointed chief of police. The maintenance of order in the capital at this time was much neglected and the praetorians conducted a regular reign of terror. In a fracas between infantry and cavalry Muhammad intervened on behalf of the latter; their opponents were cut down, some driven from the city and only a small contingent of negroes, who at once surrendered, remained unscathed (Muḥarr mak 318 = Feb. 930). Some months later these mutinied and demanded more pay; but they were driven out of the town by Muhammad and then routed by the chief emir Mu'nīs (q.v.) with ease. The confusion was increased by the breach between Mu'nīs and Muhammad. At the instigation of Mu'nīs, Muhammad was dismissed in Dīnār Hādī 239 (June–July 931). Mu'nīs was nevertheless not satisfied but demanded that his hated rival should be banished. The Caliph at first refused to grant his request; but when Mu'nīs threatened him with force, he had to yield, whereupon Muhammad went to Sidjīnāt (Radjāb 319 = July 931). Soon afterwards the Caliph quarrelled with Mu'nīs and recalled Muhammad. In Muḥarrak 320 (Jan. 932) the latter returned to Baghād; the Caliph then sent him with an army to al-Muḥājīl in the region of Takrit. But when Mu'nīs advanced from Mūṣil, the Caliph's troops under Muhammad and Sa'd b. ʿAḥmad retired to Baghād without striking a blow. After the victory of Mu'nīs and the murder of al-Mukṭadr in Šawwāl of the same year (Oct. 932) the latter's son ʿAbd al-Wāḥīd fled with Muhammad and his other supporters to al-Muḥājīl and then to Ṣawī, where a number of his generals abandoned him. When the forces of the new Caliph al-Kāhir approached under the command of Yalābī, ʿAbd al-Wāḥīd and Muhammad fled to Tuṣāt. Muhammad was not popular on account of his arrogance and selfishness, so that one after the other laid down his arms and finally ʿAbd al-Wāḥīd surrendered. Muhammad entered into negotiations with Yalābī and the Caliph pardoned him. He then returned to Baghād where he gained a great influence over al-Kāhir. On the accession of al-Rāšīd in Dīnār Hādī 1, 332 (April 934), Muhammad became the real ruler in a short time; the Caliph appointed him chief chamberlain and also made him his commander-in-chief while the vizier Ibn Muḳṭar played a more subordinate part. When al-Muḥājīl's cousin Hārūn b. Ṣibrāt, whom al-Kāhir had appointed governor of Māl al-Kūfah, al-Dīnār and Māṣāḥah, rebelled, Muhammad was sent with an army against him. In the resulting battle, Muhammad suffered a defeat (Dīnār Hādī II 332 = May 934); soon afterwards however, Hārūn fell from his horse and was killed by one of Muhammad's slaves. With the death of their commander the resistance of Hārūn's followers collapsed; Muhammad was nevertheless unable long to retain his position of power. On the advice of Ibn Muḳṭar who feared his ever increasing power, al-Rāšīd had him arrested along with his brother al-Muṣṭafīr and the secretary Abū ʿIṣāḥ b. Ṣarūrī on the 37th Dīnār Hādī 1, 333 (April 12, 935). Muhammad died in prison in the same year.

MUHAMMAD 'ABD AL-KARĪM [Alawi, better known as ʿAbd al-Karim Mansūr, a Persian historian of the middle of the 13th century. His best known work is the Taʾrīkh-ī Ahmad or Ahmadīkhā bānī composed for ʿAbd al-Raṣūm b. Hādījī Muhammad Rawḥān-Khān, a history of the founder of the Durrāt dynasty in Afghanistan, Ahmad Shāh. After ʿAbd al-Karim had finished a history of Shūdjaʾ al-Mulk Durrāt and the conquest of Khurasān in 1225 (1820), he decided to write a complete history of the Durrātins and began his Taʾrīkh-ī Ahmad. The work is based on the Taʾrīkh-ī Husainī Khānī of ʿAbd al-Dīn Hūsain (Rīvī, Cat. Pers. MSS. Brit. Mus., iii. 904?) and is really only a paraphrase of it. It begins with the story of Ahmad Shāh which he continued to the year 1212. Then he follows a description of the Pandjāb and the roads between Ḍābul, Harāt, Panjāb and Kandahār and a chapter on Turkestān under Nariśka Bay. The work concludes with the accession of Shahbūz al-Mulk. In addition to this book, ʿAbd al-Karim in 1620 (1847) wrote the Muḥādjīnāt, a history of the Persian emperors with the English down to General Pollock's expedition (Sept.–Oct. 1842). It again is not original but based on the poem Abbār-nāma of Kāšīn Dīnār. According to Beale, Oriental Biographical Dictionary (London 1859, p. 5) he also wrote a history of the Sikh war entitled Taʾrīkh-ī Pandjīb Tukhsam H-i ʿAbdābī, but there is no mention of a manuscript or lithograph of any such work in any of the European catalogues. It is possible that there is some confusion with the Pandjāb section of the Taʾrīkh-ī Ahmad in the Catalogue of the Persian printed Books in the British Museum (London 1922, p. 19). E. Edwards ascribes to the author a dictionary of English and Persian synonyms.
entitled *A Dictionary of Anglo-Persian homogenous words in a... Collection of... Words having nearly the same Sound and the same Meaning*, Bombay 1859; it is however unfortunately not possible to be certain that the author of the book is the same 'Abd al-Karim Munzah.

(E. Brehier)

**MUHAMMAD 'ABDUH, a Muslim theologian, founder of the Egyptian modernist school.**

Muhammad 'Abduh belonged to an Egyptian peasant family and was born in 1849 in Lower Egypt. He spent his childhood in the little v illage of Maḥallat Nasr in the maktûbiya of Buḥairân. When Muhammad 'Abduh had learned the Kur'ânh by heart, he was sent in 1862 to the theological school of Taḥâ la but he left this after a year and a half discouraged and was only induced to resume his studies through the influence of a grand n eccle who assured him an interest in mysticism. In 1865 he returned to Taḥâ but the next year proceeded to Cairo to the Azhar mosque. There at this moment the first movements of a new spirit were becoming apparent in the beginning of a return to the classics and an awakening interest in natural science and history, which agreed with mysticism in a lower estimation of the old traditional studies. In this milieu Muhammad 'Abduh at once devoted himself entirely to mysticism, practised asceticism and retired from the world. It was again his grand uncle who persuaded him to give this up. About the same time, 1872, Muhammad 'Abduh came into contact with Sayyid Dâjjal al-Din al-Afghânî [q. v.] who had just arrived in Egypt and was destined to exercise a profound influence upon him. It was he who revealed traditional learning to Muhammad 'Abduh in a new light, called his attention to European works accessible in translations and attracted his interest finally to Egyptian and Muslim problems of the day. Muhammad 'Abduh soon became his most ardent disciple and in his very first work of a mystic nature (Risâlat al-Wâdirât, 290 = 1874) enthusiastically described Sayyid Dâjjal al-Din as his spiritual guide. The influence of Sayyid Dâjjal al-Din is still more marked on the matters of Muhammad 'Abduh's second work, notes on dogmatics entitled *Hâjîyya 'alâ Sharh al-Dawâlî" al-Adâlî al-Afghânî* [1292 = 1876]. The influence of Sayyid Dâjjal al-Din and the development of affairs in Egypt towards the end of the reign of the Khâlid Isâ'î caused Muhammad 'Abduh in 1876 to take to journalism, which he practised henceforth. After concluding his studies at the Azhar mosque and acquiring the certificate of an 'Allm (scholar), he first of all gave private tuition; in 1883 he was appointed as teacher in the Dar al-Ülím, which had been founded a few years before to modernise instruction in religious learning. In the same year, shortly after the accession of the Khâlid Tawfiq, Muhammad 'Abduh was dismissed for reasons that have not been clearly explained and sent to his native village, while Sayyid Dâjjal al-Din was banished from Egypt; but a liberal ministry very soon recalled Muhammad 'Abduh (1880) and appointed him chief editor of the official gazette *al-Wâqîya al-Mihrîya*, which not only contained official announcements but also endeavoured to influence public opinion; under Muhammad 'Abduh's control it became the mouth-piece of the liberal party. In spite of a common ultimate goal: the liberation of the Muslim peoples and a renaissance of Islam by its own strength, there was an essential difference between Muhammad 'Abduh's programme and that of Sayyid Dâjjal al-Din; the latter was a revolutionary who aimed at a complete upheaval; Muhammad 'Abduh, on the other hand, held that only gradual reform could be successful, thought that no political revolution could take the place of a gradual transformation of mentality and regarded a reform of education, especially moral and religious, as the first preliminary to progress. His interest was more to become concentrated on Islam and its position in the modern world. *'Arâbî Pâ'îb* his rebellion put an end to Muhammad 'Abduh's activity on these lines. His part in this movement has not yet been sufficiently elucidated; although it is certain that he neither shared the optimism of military circles nor approved their use of force, he put himself on the side of the nationalist opponents of absolutism and endeavoured to exert a moderating influence on its leaders. After the suppression of the rebellion he was condemned to banishment from Egypt at the end of 1882. He first went to Bairût and then to Paris where in the beginning of 1884 he met Sayyid Dâjjal al-Din. The two founded a society called *al-Urwâ al-muntâji* and published a work of the same name, which had to cease publication after eight months but exercised a very profound influence on the development of nationalism in the Muslim east. In Tunis Muhammad 'Abduh continued propaganda for the society, but he cut himself off from it and settled in Bairût at the beginning of 1885. The *Urwâ* expressed the views of Sayyid Dâjjal al-Din entirely. In Bairût he taught at a theological school and engaged in Muslim and Arabic studies. In this period he produced his translation from the Persian of the *Risâlat al-Rashîd al-ahâd-dâhîya*, the only considerable work of Sayyid Dâjjal al-Din (1302 = 1886), and two valuable philological treatises (*Sharh Nâ'âsî al-Balâqî* [1302 = 1885] and *Sharh Maḥâmil al-Fâîf* al-šâdâmi *al-Hamâbâdî* [1306 = 1889]). When in 1889 he was allowed to return, he at once went to Cairo. His wish to resume teaching again was not at once granted; instead he entered the judiciary and was immediately appointed a judge on the Tribunals Indigènes, two years later Conseiller at the Cour d'Appel; in 1899 he attained the highest clerical post in Egypt, that of state mufti, an office he held till his death. One result of his work at the courts was the publication of his verdicts in *Tasâfi' i'tibâr al-Mu'âlâhâ Barhîya* (1318 = 1900) which gave the stimulus to important reforms in the admini-
station of the *shari'a*, and the foundation of the College for *Kulla* goes back primarily to his efforts. In the same year, 1899, he became a member of the Consell Légalatif, which marked the first stage in the representation of the Egyptian people. Finally he was allowed to resume his interest in education; in 1894 he became a member of the governing body of the Ashtar, which had been constituted at his suggestion, and in this capacity not only acquired great renown by his reforms in the university but himself took an active part in the teaching. In addition to this many-sided activity in the fifteen years after his return he found time to publish a number of works, including his most important: the *Risalat al-Tawhid* (1315 = 1897), his principal theological work based on his lectures in Bairut; the publication of a work on logic (*Sharh Kitab al-Baq'ir al-Naqiriyah, Tafsil al-Kaifi Zain al-Din* (1316 = 1898)); a defence of Islam against Christianity in the field of knowledge and civilization entitled *al-Islam wa *'An-Na'ir, mu' a 'l-Iltim wa 'l-Madaniya* (1320 = 1903; first published in *al-Ma'mur*). Muhammad ʿAbduh was not able to finish his commentary on the Kurʾān, on which he laid such importance and of which he had published portions in *al-Ma'mur*; it was revised by his disciple and friend Shaikh Muhammad Rashid Ridā and published first of all in *al-Ma'mur*. Of Muhammad ʿAbduh's numerous articles by which, along with his lectures, he most influenced public opinion, two (of 1900) were published in a French translation entitled *L'Europe et l'Islam* by Muhammad Ta'lat Harb Bey (1905). The advanced ideas put forward by Muhammad ʿAbduh provoked the most vigorous hostility in orthodox and conservative circles which manifested itself not only in serious refutations but also in attacks on and intrigues against him, as we see from a whole literature of lampoons. But his teaching met with remarkable support among all seriously minded Muslims. The principal organ of his views was the monthly *al-Ma'mur*, which had appeared since 1897 under the editorship of Sheikh Muhammad Rashid Ridā, who has also produced an extensive literary and political commitment to his master (but his views and the tendencies of his periodical must not be identified offhand with those of Muhammad ʿAbduh). Muhammad ʿAbduh died in 1905; but his teaching has retained its influence steadily to the present day.

Muhammad ʿAbduh's programme according to his own statement was: 1. the reform of the Muslim religion by bringing it back to its original condition, 2. the renovation of the Arabic language, 3. the recognition of the rights of the people in relation to the government. His political activity was dominated by the idea of patriotism, which was the first to champion enthusiasm in a religiously in Egypt. As an opponent equally of the political control by Europe and of Oriental despotism in Muslim lands he favoured an inner assimilation of western civilization, without abandoning the fundamental Muslim ideas and a synthesis of the two factors. From this programme, which assures Muhammad ʿAbduh an important place among the founders of modern Egypt, must be distinguished his effort to carry it through in the field of theology. Muhammad ʿAbduh is in the first place a theologian; his life was devoted to the attempt to establish and maintain Islam, at least as a religion, against the onslaught of the west, while he abandoned without a struggle those aspects of Muslim-Oriental life in which religion was of less moment. However great a stimulus he may have received from progressive western thought, the actual foundations of his teaching came primarily from the school of Ibn Taimiya and Ibn ʿAbd al-Ghanī al-Danjawiya, who favoured reform on conservative lines, and from al-Ghazālī's ethical conception of religion. Deeply convinced of the superiority of true Islam, unaffected by the vicissitudes of time, Muhammad ʿAbduh wished to get rid of the abuses which falsified the Muslim religion and made it out of keeping with the times, and to adapt Islam to every real advance by going back to its true principles. Muhammad ʿAbduh was thus brought to attack the *maṣbūḥah* and *istiʿṣāl* [q. v.], to demand freedom for *idīlīn* [q. v.] and a new *idīlīn* [q. v.]. In keeping with modern conditions, based on the Kurʾān and the true sunna, for the establishment of which he laid down strict criteria; he was also brought to reject the hairsplitting of the *fuḥūd* and the worship of saints and all *bidʿa*, and to the endeavour to create a more ethical and deeper religion instead of a mechanical formalism. The antiquated system of Fiqh, against which Muhammad ʿAbduh claimed full freedom, was to be replaced by new laws capable of development, in which consideration for the common good (*maslahah*) and the times should, in keeping with the true spirit of Islam, have if necessary preference to the literal text (*masāʾil*) of revelation, just as in any conflict between reason and tradition in settling what is laid down by religion, the verdict of reason should be followed. Alongside of the belief in the sublimity of revelation there was in Muhammad ʿAbduh the conviction that knowledge and religion, properly understood, could not come into conflict at all, so that reason need not recognise a logical impossibility as a religious truth; religion was given to man as a thread to guide him against the aberrations of reason; reason must therefore, after it has tested the proofs of the truth of religion, which it is qualified to do, accept its dogmas; Muhammad ʿAbduh's object was a cooperation between religion and science. In dogmatics he adopts essentially the most rational conception that could still be reconciled with orthodoxy. At the same time he interiorises the conception of revelation (to him it is intuitive knowledge caused by God and provided with the consciousness of this origin), but his kind of religious experience is limited to the prophets and deficts that of religion (to him it is an intuitive feeling for the paths to happiness in this and the next world, which cannot be clearly grasped by the reason). The task of prophecy for him is the moral education of the masses. Religious teaching and commandments are therefore intended for the masses and not for the elite. Muhammad ʿAbduh regards the Kurʾān as created and endeavours to weaken the rigidly opposed point of view of orthodoxy. The saints he does take into his system but is sceptical regarding belief in miracles. In spite of the denial of causality and laws of nature by orthodoxy, he finds a basis for explaining nature by causal laws but by quite scholastically formal reasoning. As regards the duties of religion, Muhammad ʿAbduh adheres to the four main duties of ritual prayer, the almsgiving, fasting and pilgrimage; only he shifts them, as usual in mysticism, from the sphere of worship to that of religion and morals. On the old question of free will Muhammad ʿAbduh
decides for indeterminism; he thereby opens the way to build up a moral system for society, which, excluding all fatalism, preaches vigorous activity by every one and, following the ethics of the mystics, mutual support. His view of the substance of Muslim teaching Muhammad 'Abduh defends not only against traditional orthodoxy but against Christianity also by a kind of philosophy of history of religion; the sending of prophets was a gradual process of education of step by step, the last and highest stage, that of absolute religion, is the sending of Muhammad; if the Muslim peoples of the present do not correspond to the Muslim ideal, this is only the result of the fact that they have lost the old purity of the teaching; an improvement is possible by return to it. This primitive Islam of Muhammad 'Abduh is however not the historical Islam but a very much idealized one. The superiority of Islam over Christianity in substance lies, according to Muhammad 'Abduh, in its rationalism and its closeness to reality and its avoidance of unattainable ideals of life.

In this theology, the religious content consists of humility before God, reverence for the Prophet, enthusiasm for the Qur'an. The basis of this Islam is the recognition of a not too regressive system of dogmatics; its object is the observance of an ethical system which is favourable to progress, and both are influenced by a strongly marked rationalism, which is genuine old Muslim but for Muhammad 'Abduh is no indifferent inheritance but the main weapon of defence of Islam and actually takes the place of a deepening of religion so that his theology has the character of a polemical compromise.

MUHAMMAD AHMAD b. `ABD ALLAH, the Mahdi of the Sūdān, was born about 1258 (1835) on the island of Darār in Dongola among the Argil islands north of el-Orfe. A member of the Kunii family of the Nubian Arab Berbers, in later life when Mahdi to prove his kinship and mystical relationship with 'Ali and the Prophet, he traced his genealogy on his father's side to Hasan and on the mother's side to Hassan and 'Abbas. He was the second son of a shop's carpenter and had an older sister and three brothers. His tendencies early revealed themselves in him; after the usual early education he therefore in 1277 (1861) entered the order of the Sammātāya with Shaikh Muhammad Sharif; after a seven years' noviciate Muhammad Sharif appointed him a shalih of the order. After a short stay in Kharṭūm where he married, he went to the island of 'Abba (in the White Nile, north of Kosti), built a šāhāt there and a šābūna and collected pupils around him.

His master Muhammad Sharif, with whom he maintained a constant connection, settled near him in 1288 (1872), which seems to have been unwelcome to Muhammad. Shortly after this event there arose in Khorfato al-munṣafar, under the influence of the traditional ideas of the Mahdi, which brought about a breach between him and his master. He now joined the enemy of his former leader, the Shaikh al-Kurāshī, and in 1297 (1880) became his successor. In his wanderings (ṣiyāḥa) from Dongola to Sennar, from the Blue Nile to Kordofān, he convinced himself of the discontent of the people, who were oppressed by the Egyptian government; the turbulent, mixed population of the Sudan, the religious fanaticism, the dissension between Turks and Arabs, the old opposition of the Shi'a to the Turkish ruling official classes, all formed a fruitful soil for his claims to be the Mahdi; the movement begun by Muhammad Ahmad which, as its letters and proclamations show, was based on a religious experience in which he earnestly believed, came from the first mixed up with political and social ideas, in which the east cannot be separated from religion, and in which finally deception and cunning played an evil part. According to the traditional formula, Muhammad Ahmad felt himself called "to purify the world from wantonness and corruption." For this purpose he summoned the people to fight in the first place against "the infidel Turks". He had previously bound a number of chiefs in Kordofān and Darfur to him by his oath of fealty, after the model of the Prophet; for the text see Dietrich, in Islam 1925, p. 39. He had been cleverly able to attach men of action like the unscrupulous `Abd Allāh al-Tayyib, later his Khalīfa, to him; at the same time he practised a shameless nepotism. He further incited the people by numerous pamphlets and edicts, which contained his visions of the Prophet, who had appointed him Mahdi, of al-Khidjr, Gabriel, the angel, summons to "purify religion", to "emigrate", to "show fealty, to imitate the Mahdi, to the ḍālīn," etc. The hill of Gadd in Dar Nūba became the centre of this secret propaganda; in Shabān 1298 (July 1881) he made his first public appearance as Mahdi. Negotiations begun by the government in Kharṭūm with Muhammad Ahmad proved fruitless. Two companies sent against him under `Abu ʿIlā-Ṣaʿādī were destroyed; this secured further victories for him. The Egyptian government was moreover prevented by the rebellion of `Arabī Pāshā from taking vigorous action. The expeditions of the governors of Fashoda, Rashīd Pāshā, Yūsuf Pāshā al-Makhlīfī (at Gadh, May 1882) and of Hicks Pāshā (at Shākām or Khargollī), all ended unsuccessfully. The Mahdīya thus spread unhindered from Kordofān via Bahīr al-Gawshī to the eastern Sūdān; there in Sawākin, `Othmān Dījna, a former slave dealer, soon to be the ablest Mahdīist general, entered Muhammad Ahmad's service. Attempts by the Mahdi to extend his power to the west with this object to conclude alliances with Muhammad al-Sanṣūfī in Djaghībat and with Morocco came to nothing. At the height of his power the campaign of 1301 (1884) took him to Kharṭūm, which after a heroic defence by Gordon fell into the Mahdi's hands on Jan. 30, 1885. Gordon was killed. Muhammad Ahmad did not however long survive his victory; he died, probably of typhus, on 9th Ramadān 1302 (June 22, 1885) at Omdurman near Kharṭūm.
where a kahfa was erected by him to his successor, the Khalifa 'Abd Allâh; it was henceforth the Mahdi's capital until Kitchener put an end to 'Abd Allâh's rule and to the Mahdiya in 1898. The organization of the Mahdiya under Muhammad Ahmad, which was primarily to follow the laws of the Prophet, was early developed; it was quite military in character, for the 'ishâh was considered more important than the khalifâ. He had four khilafas beside himself, of whom al-Tâ'îyish was the most intimate and undoubtedly had the most pernicious influence on him. Particular attention was devoted to the distribution of booty and to the administration of the treasury (hai al-mâl).

Muhammad Ahmad's teaching shows some of the features of the extreme popular Sufism and some of those of an idealized primitive Islam. His asceticism was hostile to progress; the contempt for learning in the Mahdiya and the order to burn all books on uma and tafsîr alienated the educated classes from him. The only things that had validity in addition to the Kur'an were the proclamations of the Mahdi, the Rûhî (a collection of ghûlî expressions), a work attributed to Maintained Muhammad Ahmad's own uma as a substitute for the previous one but remained incomplete. In the abolition of the four mahdhabs we see the 'ishâh tendencies frequent among the Sufis. Washâbî influences are very probable in a number of regulations, for example in the prohibition of adornment, music, extravagance at weddings, tabacco and wine; particularly however in the zeal against the worship of saints and sorcery; as a matter of fact Muhammad Ahmad himself became an object of worship among his followers even before his death.

The only really new thing in Muhammad Ahmad is the addition to the shâhidah: "...wa-uma Muhammâdun Ahmad'un 'abd 'l-'llah khaib Mahdiya-li takhassus wa-khishâfa râ'î, wrkâ. Where the traditions of the Mahdi did not suit him, he did not hesitate to alter them. He laid down the following 6 asbûn instead of the 6 of the su: 1. qadîr, on the courage; 2. sifâ, performance of the work; 3. kâtâb, stress was laid on the sîrat, in express opposition to the sîrât practice and in place of the kâfî; 4. obedience to God's commandments; 5. the extended shâhidah; 6. recitation of the Kur'an and of the Rûhî.

A few extremist ideas, like that of equality between rich and poor, come partly from the revolutionary character of the old Sîfâ, partly from the political and social conditions of the time; the social ideas were however not his central ones but only incidentally used cunningly to attract the masses. In practice the Mahdiya had an exceedingly unitifying and equalizing effect: slaves and slave-dealers fought under one banner, the humblest often rose in a short time to the highest offices.

Muhammad Ahmad's eschatology centres round the world domination of the Mahdi. The conquest of the Sudân was to be followed by that of Egypt, Macedonia, Syria and Constantinople. The formation of a Pan-Islamic movement. Muhammad Ahmad's personality began very early, sometimes deliberately encouraged by him and his immediate followers and sometimes actually believed by them. Under pressure from his court chronicler Isâmî 'Abd al-Kâdir, composed a highly coloured sîra entitled Kitâb al-Mustahkâm ila Sîrat al-Imâm al-Mahdi. It covered the years 1298 to 1302 A.H. but was burned in the time of the Khalifa 'Abd Allâh. The Egyptian writer Shukriy (see below) claims to have had in his hands a copy that was said to have survived.

Bibliography: Na'im Shukriy Bey, Turji't al-Sûdân, Cairo 1903 (in the third part Shukriy, utilising the edicts of Muhammad Ahmad and the Khalifa 'Abd Allâh, which were collected and printed under the Khalifs, as also the above-mentioned Sira and his own experiences in the Anglo-Egyptian army, gives a very full account of the Mahdiya under Muhammad Ahmad and 'Abd Allâh); Djurdji Zaidân, Rûhîyat xristî al-Mahdi, Cairo 1892.—On two fatâwâ of the Egyptian government against the Mahdiya s. Dietrich, Der Mahdi Mohammed Ahmad nach arabischem Quellen, in Ibl., 1925, p. 1—90 (with further literature); J. Darmesteter, Thā Mahdi, London 1885.

MUHAMMAD 'ALI PASHA (in European sources often Mehemet Ali or Mehemet Ali) was the well-known powerful viceroy of Egypt during the years 1805—1849 (which period comprises the entire reign of Sulân Mahmed II q.v.); and the founder of the khedivial, later royal dynasty of Egypt. Seen in the light of history his life-work fully entitles him to the epithet of "the Founder of Modern Egypt".

Muhammad 'Ali was born in 1769, possibly of Albanian extraction, in the town of Kàwâla [q.v.] in Macedonia; he was engaged in the tobacco trade until he joined, as his hâshi in a corps of Albanian troops, the Turkish army that landed in Egypt in 1799 and was beaten by Bonaparte at Abî Kir (July 25). In 1800 he was one of the two chiefs of the Albanian troops in Turkish service who were left behind in Egypt; this secured him an influential military position when, after the final departure of the French in 1801, Turkey began to try to recover her authority over Egypt. At the end of 1801 he fought as a general against the Mamlûks, but in the troubled years that followed he was alternatively on the side of the Mamlûk Beys (headed by al-Bardisol) and of the Turkish governors sent from Constantinople. He intrigued against Khassaw Pasha [q.v.] whom he had to leave Egypt in May 1803, and who was already in the same year appointed titular governor of Dîdûs. Under the following governorship of Káshîf Pasha, Muhammad 'Ali succeeded in winning the favour of the inhabitants of Cairo and their spiritual leaders, and used them with success in his intrigues against Kâshîf, whose Turkish troops — composed of delis — were a scourge to the population, while his own Albanians were ordered to behave well. The result was that Kâshîf had to withdraw in August 1803, leaving the citadel of Cairo to Muhammad 'Ali. The Turkish government, though sending several emis- saries and trying to remove the Albanian troops, failed to keep Egyptian affairs under control and ended by recognizing Muhammad 'Ali's self-assumed
position (November 2, 1805); he was solemnly
installed in April 1806.

The internal and external difficulties of the
Sultamic Porte did not allow her to interfere any
further for the moment and the new governor had
soon occasion to show himself a loyal vassal
when the English — then at war with Turkey
[cf. SELIM III] — landed in Alexandria in March
1807. At that time Muhammad 'Ali had already
undertaken the struggle against the Mamluk Beys
al-Bardusi and al-Alfi, the latter of whom was
strongly supported by the English. He came back
hastily from Upper Egypt, fortified Cairo, and
claimed a victory over the English army at Rashid
(Razezat) in April. Soon after the departure of the
British fleet in September the viceroy began the
execution of his far-reaching administrative and
economic measures, which were to restore Egypt's
economic strength and consequently to assure for
himself a more powerful position than any Turkish
governor had had for the last two centuries [cf.
MAMLUKS]. In the meantime the Beys (whose two
leaders had died in 1807) continued their
position (no doubt increased by the viceroy's land
policy), which was finally broken by the massacre
of about 300 Mamluks in the citadel of Cairo on
March 1, 1811, on the occasion of a festival. "The
persecution of the Mamluks was at the same time
to extended to the other parts of the country. Mu-
hammad 'Ali now could send, without danger to
his own position, his Albanian troops in the cam-
paign against the Wahhâbi in Arabia, to comply
with a request of the Porte. The Wahhâbi war
began in September 1811 and was conducted,
until 1816, by Muhammad 'Ali's son Œsoum; after
the latter's death the command was taken over by
his elder brother Ibrahim Pasha [q.v.]. Muhammad
'Ali himself took part in an expedition to Yemen,
but had to return before the end of the war, be-
cause his position as governor seemed to be in
danger.

The military successes of the Egyptian troops
against the Wahhâbi power immensely increased
Muhammad 'Ali's authority all over Arabia and in
a larger sense in the entire Near East; European
policy began to look for the first time on Egypt
as a factor of political importance. This import-
ance was further increased by the expeditions to
the south that followed immediately on the Arabian
campaign; Egyptian power was established for
the first time in the Sudan [q.v.], where Muhammad
'Ali's third son Isma'il found his death in 1822,
the year in which the town of Kharjim [q.v.]
was founded. At this time Egyptian power was
also extended in the direction of the Red Sea,
which made an end to the hitherto continuous
plague of the incursions of nomadic Arabs into the
Nile valley; the ports of Sawâkin and Massawa
(Maşwâ) came under the Egyptian sphere of
influence, although the direct authority of the Porte
was maintained.

A new phase in the development of Muhammad
'Ali's power began by his participation in the
military repression of the Greek revolt by the Turks.
Only through Egyptian aid was the submission of
the whole of Greece with the exception of Nafplio
obtained; first by the conquest of Crete by Ibrahim
Pasha (1823) and then by the Egyptian army that
landed in 1825 in Mossa. When in 1827 England,
Russia and France intervened in the Greek question,
the combined Turkish-Egyptian fleet was destroyed
in the bay of Navarino (October 20, 1827); in the
following year the Egyptian troops evacuated the
peninsula, after a convention had been concluded
between Muhammad 'Ali and the British admiral
Codrington (August 6, 1828). Crete remained under
Egyptian administration until 1844.

Muhammad 'Ali's power was now such that he
could conclude international agreements without
the sultân's cognizance; at the same time the two
Mediterranean naval powers, France and England,
were endeavouring to win him over as an independent
political factor. In 1829 France had almost induced
Muhammad 'Ali to undertake the conquest of the
Barbaresque states of Algiers and Tunis; the viceroy,
however, was more inclined to seek territorial ex-
pansion in the east, the more so as the four
governorships of Syria had been promised him
by the Porte as reward for his participation in the
Greek war, a promise that had never been
fulfilled. At the end of 1831 there arose difficulties
between Muhammad 'Ali and the Porte on account
of the governorship of Akkâ, which he claimed
for himself. The conflict soon brought about the
abandoning of an Egyptian army under Ibrahim Pasha
in Syria. On May 27, 1832 Akkâ was taken.
In the following month the army that was sent
by the sultân was repeatedly defeated and finally
beaten near Könya (December 21, 1832). The
Egyptian army, continuing in the direction of
Constantinople, reached Kutsahla. Here at last an
armistice was concluded between the Porte and
Ibrahim as representative of his father, thanks
to the intervention of the European powers,
who Russia had already sent military aid to
Constantinople. Muhammad 'Ali was granted the
appointment of governorship of Syria and Adana by the definite
peace of April 6, 1833.

During the following six years the viceroy's power
was at its height. While Ibrahim administered
Syria, severely but on the whole to the prosperity
of the country, Muhammad 'Ali continued his
administrative programme in Egypt and inaugurated
a pan-Arabian policy, the aim of which was to be
the union of all Arab-speaking peoples under
his leadership. In Arabia his influence was still
considerable since the Wahhâbi war; he now
tried to extend Egyptian influence as far as the
'îrak. This policy, while at the same time constituting
a threat to the ambitions of the European powers
in the Near East, was to bring him again into
conflict with the sultân, who, having succeeded
at last in subduing too independent vassals in other
parts of his empire, was waiting for an opportunity
to crush his most powerful vassal in Egypt. The
latter, in 1838, had even made known his intention
of declaring himself independent of the Turkish
government.

Not long after the outbreak of hostilities the
Turkish army under Hafiz Pasha was completely
defeated at Naşib in North Syria (June 24, 1839),
while the Turkish fleet under the Kapudan Pasha
Ahmad sailed to Alexandria and went over to
Muhammad 'Ali's side. In this desperate situation
the authority of the Porte was saved by the inter-
vention of the five European powers, in defence
of the integrity of the Ottoman Empire. The
Egyptian question had thus produced an interna-
tional political crisis, which was aggravated by
the opposition of France, which had long been
best intentioned towards Muhammad 'Ali among
the European governments. By the convention of
London (July 5, 1840) England, Russia, Austria and Prussia agreed with the Porte upon the terms to be imposed upon Muhammad 'Ali. When the latter did not accept, there followed military demonstrations against the coastal towns in Syria (Akkâ taken on November 4, 1840). Soon afterwards a British fleet appeared in Alexandria, where Admiral Napier on November 27 concluded an agreement with Muhammad 'Ali. The viceroy consented to the return of the Turkish fleet and renounced his governorship of Syria, Adana and Cetie, while on the other hand he was to keep the hereditary governorship of Egypt as a part of the Turkish Empire. These terms were confirmed by an imperial firman of February 13, 1841, completed by another of May 25, in which the mutual relations of sultan and viceroy were definitely regulated. The chief points were the right of succession according to seniority in Muhammad 'Ali's family, the payment of a tribute and the permission to maintain an Egyptian army of 18,000 men, the higher officers of which were to be appointed by the sultan.

Muhammad 'Ali's last years were passed in peace. In 1846 he visited Constantinople and Konstânia; in 1848 he lost his son 'Abdâl 'Ali to whom his military successes were due. On August 2, 1849 he himself died in Alexandria, to be succeeded by 'Ammâr's son 'Abdâl Pasha [q.v.]. He was buried in the new mosque which he had had erected in the citadel of Cairo.

Still more amusing than the career of this once obscure Turkish officer are the enormous changes brought about by his work in the condition and the international position of Egypt; they have made him a hero in the history of the Near East. His reign is an era by itself in Egyptian history. Muhammad 'Ali's latest biographer says: "He began by seeking only to raise money. He ended by seeking, however mistakenly, to develop and civilise the country" (Dodwell, p. 220). His work indeed did not at all mean a break with the government traditions prevailing in the Turkish Empire, but the political aim that Muhammad 'Ali had set himself, seconded by his personality and the continuous supervision of his Kerrâle individually, led him last to result where, had similar conditions, would otherwise have been difficult to attain, as is shown by the state of things prevailing at the same time in other provinces of the Ottoman Empire.

As the measures taken by Muhammad 'Ali in the field of administration, land policy and the industrial and commercial mobilisation of the country have been briefly sketched in the art. KHELÎW, it is unnecessary to enter here into the same details. It is sufficient to point to the fact that all these measures had as their first object to make the paisha himself the sole proprietor and administrator of the riches of Egypt. He certainly listened to the advice of European and other councillors and valued European institutions as examples to follow to a certain extent. But he followed oriental methods and made as good a use of Europeans as officials in the home administration.

This was not the case in Muhammad 'Ali's newly-created army. The paisha himself had not been entirely able to keep his mercenary troops under control (mutiny in Cairo in 1816). So he decided to form a new army, moved by the same motives that had led Sultan Selim III to create new regular troops (müfti-i ğredî). From 1819 this enterprise was confirmed and brought to a successful end by the French captain Sève, who, after having embraced Islam, served Muhammad 'Ali as Sulaimân Paşa. A first attempt to use negro slaves from the Sûlûmân-as soldiers having failed, the failliîs of Egypt itself were recruited; the officers were mainly taken from among the young Mamluks, besides whom there were not a few Europeans. With this army were won the military successes in Morea and Syria. The recruitment met with exceedingly strong opposition among the people of Egypt and later in Syria, and the methods used to get the required number were sometimes cruel, but the paisha's energy prevailed. At length this military organisation proved to be a means of education for the people and prepared the growth of national feeling among the generations to come. As has been said already, the final Imperial firman of 1841 limited the Egyptian army to 18,000 men in time of peace.

Muhammad 'Ali's attempts to create an Egyptian fleet go back as far as 1815. At first he had ships built in France and Italy and in Bombay, but soon Alexandria itself got its yards. After the destruction of the Egyptian fleet at Navarino ship-building began again and quite a number of French and Italian officers were employed in the Egyptian navy after 1831. The Egyptian fleet, however, did not long survive its founder.

On the whole, Muhammad 'Ali's rule wore a Turkish character. Most of the responsible posts in the administration and in the army were held by Turks and by descendants of the Mamluks. Thus the Ottoman ruling system, with some modifications applied after the European model, was imposed on Egypt most completely at the time when the country itself was politically loosened from the empire. It may be called an exception that the Armenian Boghos Bey, who was for a long time Muhammad 'Ali's minister of finance and of foreign affairs, came to this exalted position, although the use of Christians (Armenians and Copts) in more subordinate offices had always been government practice in Turkey as well as in Egypt. The viceroy himself is said never to have spoken well any language other than Turkish.

Muhammad 'Ali was not a great builder of magnificent architectural monuments. He erected a mosque after the Turkish fashion in the citadel of Cairo, but he never built costly palaces for himself. Most of his works were of public utility, such as the improvement and the enlargement of the irrigation system in the Delta, including the Nile Barrage below Cairo. This last work was undertaken in 1847, but failed.

The judgments on Muhammad 'Ali's personality were very divergent even during his life-time. Most of his admirers were found amongst the French; in view of the on the whole friendly attitude of the French government this is of course not strange. British opinion was less favourable, but all those who came into contact with the viceroy were impressed by his personal charm. Now that his era belongs to the past, the impression remains of a great man in many respects, possessed of considerable personal courage and trustworthy and loyal in a high degree. His methods were sometimes cruel and in the begin-
ning of his career he often had recourse to
ingenious, but in the circumstances it is hard to
understand how it could have been otherwise. As
years passed by and the prosperity of the country
increased, his methods of government grew more
lenient, so that, at the end of his reign, he had
become decidedly popular with his subjects. An
equestrian statue of Muhammad 'Ali now com-
mands the chief square of Alexandria; and one
of the largest thoroughfares in Cairo is called
after him.

Bibliography: Documentary sources from
the Egyptian, French, English and Italian
archives have only recently begun to be published
in the beautiful collection Publications spéciales
de la Société Royale de Géographie d'Egypte;
published in Cairo. So far have appeared: G.

[J. H. KRAMER]

MUHAMMAD 'ALI B. MUZAFFAR AL-DIN.

[See KALURJ.]

MUHAMMAD BAIRAM (MUHAMMAD B. MU-
STAFâ B. MUHAMMAD B. MUHAMMAD B. MU-
HASSÎN B. ABDÂD B. MUHAMMAD B. MU-
HASSÎN B. BAIKAM), a Tunisian patriot and
man of letters, born in Tunis in Muharram 1256
(March 5—April 3, 1840) and died on Wednesday,
25th Rabi' II, 1307 (Dec. 18, 1849) in Egypt, at
Hulwân, and was buried in Cairo near the tomb of
the Imam al-Shafi'i.

Belonging to the family of the Bairams whose
Muhammad Baimam, at the head of a body of soldiers, took part in the capture of Tunis by Sinan Pâshâ on 25th Djamâdi 981 (Sept. 24, 1753) and of which several members had held the office of grand mufti of Tunis, Muhammad Baimam studied at the Djami' al-Zâliûna and had as teachers al-Tahir b. Sâîdî, al-Şâhâbî b. Sâîdî, Aymân Baimam, Mustafâ Baimam, the Shâhî b. İsmâîl Muhammad Baimam, Mu'âwîya and others. At the age of 17, he compiled a manuscript in which he recorded the ordinances, decrees and administrative regulations which the emir Muhammad Pâshâ ordered the authorities to enforce.

On the death of his paternal uncle Baimam IV, he was given charge of the Madrasat al-Imanîyya on 1st Djamâdi 1, 1378 (Nov. 10, 1861) and on the 9th of the following month (Dec. 13) of that of the Djami' al-Zâliûna. Soon after this, troubles provoked by the despotic régime began to disturb Tunisia and resulted in the closing of the representative assemblies in which Baimam was interested. He published in the Ni'âdî, the official gazette, the two first political articles that ever appeared in Tunisia and in them he condemned the tyranny of the authorities, preached the love of liberty and begged the government to be liberal and to grant its subjects representative assemblies.

On Safar 17, 1291 (April 6, 1874) he was appointed to administer the empty which he hastened to reorganise. The hard work ruined his health and forced him to take a journey in Europe to recuperate; this caused him to begin his Safwat al-Fikih. He left on Shawwâl 1292 (Oct. 31–Nov. 28, 1875) and visited Paris. In the same year the Sâidi College was founded; Baimam shared in the preparation of the regulations and programme of studies, modelled on those of European institutions, and was one of the first to enrol his son so as to encourage his compatriots to take advantage of such innovations.

On 1st Djamâdi II, 1292 (May 7, 1875) he was put in charge of the government printing works which he at once reorganised, and securing eminent assistants: Muhammad al-Sâhih Tailor, Hüsnû Fath Allîh of Cairo, a prodigy of the Ni'âdî regularly. It was at this time also that he reorganised the Maktubat al-Sâhihîya alongside of the Djami' al-Zâliûna.

In 1293 (1895) he assisted Turkey in the war with Bulgaria and Montenegro by sending money, horses and camels, political considerations preventing the dispatch of help in men.

In the summer of 1295 (1898) he went a second time to Paris, visited the Exhibition and was received with great consideration by President MacMahon. He took the opportunity to visit London and England and, on his way back, Algiers. He took a very prominent part in the reorganisation of the Savîcî Hospital which was opened on Safar 18, 1296 (Feb. 1879). At the same time he was one of the two arbitrators appointed by the Tunisian government in the case of Hâshîr Safiyyîth Tâshîth and the French government. In the middle of the same year, he was appointed by the vicier to go to Paris, to receive medical attention, but was paid, but in reality to ask Gambetta to remove the French consul, who was interfering in the domestic affairs of the country and even managing them. The consul thwarted the plans of Baimam and the vizier. On his return he told the vizier that France intended to annex Tunisia. Tired of the vexations preexisting of the vicier Mustafâ b. İsmâîl he obtained, after many attempts, permission to make the pilgrimage to Mecca and left Tunis, never to return. On Shawwâl 16, 1297 (Oct. 4, 1879) he went via Malta, Alexandria and Cairo, where he was received by the Khedive Tewfîk Pâshâ, and thence to the Hijaz, visiting Mecca and Medina. Then he went to the Vambû and the Suez Canal to Bairût, where he was much honoured by the people and by Midhat Pâshâ, the governor of Syria, and on to Constantinople. He wrote a Bâdîa in honour of Sultan 'Abd al-Ḥamîd. The Tunisian government at the instigation of the French consul, who feared the establishment of closer relations between Turkey and Tunisia, demanded his return but the Sublime Porte diplomatically did not receive the request.

It was in Constantinople that he began to prepare the Safwat for publication and finished the first two volumes. The penetration of France into Tunisia was a rude shock to Baimam, who in collaboration with the former vizier of Tunisia, Khârî al-Dîmî, was appointed by the Sublime Porte to prepare a report on the situation created by the Franciscan. Disparing of returning to his native town he went to Leghorn and was joined by his family; he then went to Geneva, where he left his son to finish his education, and to Vienna and Bucharest and then settled in Constantinople. The Sultan, wishing to send some horses as a present to the Emperor Frederick III of Germany, Baimam was appointed to write the letter conveying the gift. During the eighteen months which he spent in the Turkish capital, Baimam drew a pension of £ 25 per month. It was during this stay that he prepared the third volume of the Safwat.

His health being undermined by an illness which grew worse daily and being unable to meet his expenses and fearing the machinations of his detractors, who saw in him a man to be removed, he left Constantinople on 1st Muharram 1302 (Oct. 21, 1884) to go to Egypt, where his letters of recommendation secured him the esteem of the Khedive Tewfîk Pâshâ, who gave him a pension.

On the 25th Rabî' of the same year (Jan. 13, 1885) he produced al-'Um, a political and scientific journal.

Two years later, he went to London to attend the Jubilee celebrations of Queen Victoria, had medical attention in Paris and returned to Egypt via Berlin and Vienna. He then completed a work which he had begun in Constantinople entitled Tadżdîr al-Sâniyya, which was published on March 29, 1885, on Islamisme et la Science (Paris 1853), in which he alleged that religion was an obstacle to the diffusion of science among Muslims. He also published a Qaidâ in which he declared that it was permitted to purchase bonds or shares in a Muslim government loan so that Muslim money should not leave the country, and that this had no character of usury. He wrote a report on the compulsory use of the Arabic language in the teaching even of modern sciences. He finished the fourth volume of the Safwat and had begun the fifth which death prevented him from finishing.

On 12th Djamâdi 1, 1306 (Jan. 14, 1889) Baimam was appointed a judge in the Tribunal de 1re Instance in Cairo. Going to Huwilân for a change of air, he took pleurisy and died after 25 days' illness.
He had a vast knowledge of Hadith, law, history, ancient and modern, and historical and political geography. In addition to the works already mentioned and numerous risālas which it would take too long to enumerate, we may mention the following: 1. Ṭabḥat al-Khamīsī fi Hillād Ḫalīfah al-Rāshīd, printed at Cairo in 1303 in which he claims that the law regards as permitted the flesh of game killed with fire-arms; 2. a treatise on prosody; 3. a risāla in which he says that it is permissible for men to let their hair hang down and float in the air, contrary to the opinion of several ḥanafis; 4. al-Taḏkhir fi Maḥṣul al-Raḥīaq, a study in which he shows what slavery among Muslims is according to the law, points out the motives of slavery and the rules regulating it, and concludes by saying that slaves who are sold on the present day are free men and that Muslim governments which forbid the sale of slaves are acting in accordance with the law; 5. Ṣafwat al-Fihār al-Mustawadā’ al-ʿAmīrī, published in 6 vols. in Cairo in 1302—1303, 1303, 1304, 1311, the sixth volume being devoted to the biography of Muḥammad Bārīm and edited by his son of the same name; it is perhaps the best treatise yet written in Arabic on political geography.

**Bibliography:** The biography written by his son and published at the end of the Ṣafwat; E. Van Dyck, ʿIstīqa’ al-Kawāthīr, Cairo 1906, p. 414; G. Zaidān, Turāth Abū al-Luḥqāt al-ʿArābiyya, Cairo 1911—1914, iv. 289.

(MOH. BENICHÉE)

**MUḤAMMAD BĀRĪM,** son of Shaikh Ghułam Muḥammad, born in 1347 (1647), was first taught by his father and then by Shaikh ʿAbd Allāh, called Mīyān Ḥanṣar, and Shaikh ʿAbd al-Ḥaqq b. ʿAbd al-Ḥaqq Dihlawī. After a few years he himself began teaching in his native country. He first became a muhaddith or disciple of his father, and after the latter's death attached himself to the famous saint, Muḥammad Muḥāsin Sarhīmī. He was pursued by ʿAbū ʿAṣhim Khāṣf, Muḥāsin Sarhīmī, to come to the court of Āwānghaš and accepted the duties of Bakhshaṭ (pay master) and Wāliʿahānine (writer of the official diary), but by special favour he enjoyed much leisure, which he devoted to literary work. He died in 1694 (1683) at Sahāraūpī. He is the author of 1. Miḥāl al-Ḥādīth al-Muṣālim (a general history compiled under Āwānghaš); 2. Rīwāyah al-Awārīḥ (life of saints), 3. Tadhkira al-Ṣawār (biographies of the poets).

**Bibliography:** Bakhtīār Khān, Miḥāl al-Ḥālām, fol. 4782; Elliott-Dowson, History of India, viii. 145—165; Rieu, Cat. Pers., MSS. Br. Mus., iii. 900; Ethé, Cat. of Persian MSS., India Office, p. 49. (H. H. HADDAD)

**MUḤAMMAD BĀKHTĪYĀR KHALDĪ,** an inhabitant of Ghur, was of a very mean appearance and amongst other deformities of his person it is said that when he stood upright the mean of his fingers extended considerably below his knees. When he reached the age of manhood he went to Ghazna, and offered himself as a volunteer to the officers of Muḥammad Ghurī, but they refused to enrol him. He, therefore, repaired to Dihlawī, and was appointed by Ḳāṭṭ al-Dīn Allāb (q.v.) to command an army destined for the conquest of Bihār about 596 (1199). Here he was very successful. He was next ordered to invade Bengal. In 600—601 (1203—1204) he proceeded to Nāyān, the capital of Bengal, and captured it without any bloodshed. His last attempt was directed towards the invasion of Bihār and Tibet, but he met with reverses which compelled him to retreat. He succeeded in reaching Dīrkhūt in Bihār where he died, but his body was carried to Bihār and buried there in 602 (1206).

**MUḤAMMAD BEY ABU DHAAHAB** [See 'Abd Bey.]

**MUḤAMMAD BEY 'OTHMĀN AL-DJALĀL,** was born in Egypt in 1829, the son of a judge in the Court of Appeal, named Yūnīs al-Ḥasanī. When a boy he learned English, French and Turkish at the school of languages (Madrassat al-Ālamūn) and when only 16 was given an appointment in the government translation bureau. His patron, the engineer Clot Bey, had him appointed to the Conseil de Médecine. In 1863 he entered the War Ministry and five years later (the Ministry of the Interior. In 1879 the Khedive Tewfīq Pāshā appointed him to his civil cabinet and several times took him to accompany him on journeys. After the death of the Khedive he was appointed a judge in Cairo. In 1895 he was pensioned and he devoted himself to literary work till his death at the end of 1898.

In collaboration with Clot Bey, he published a sketch of the history of Muḥammad 'Ali and an elementary grammar of the Arabic and French languages and also a description in rhyme of his journey with the Khedive Tewfīq. He then devoted himself to the translation of poetry: first of the fables of La Fontaine, the novel Paulet Virginie, and of Racine's tragedies Alexandre et Grand. Esther and Iphigenie. All these he translated into classical Arabic. But his real importance lies in his endeavour to translate Molière's comedies into the modern Arabic vernacular of Egypt, freely adapting them to Arabic conditions.

The Egyptians were not much attracted by these comedies translated into the vernacular. The language did not appear cultured enough to the Egyptian public. They were hardly ever produced and the rich vocabulary which the comedies contain has not been noticed or utilised by students of modern Arabic.

Sarkis, Dictionnaire encyclopédique de bibliographie arabe, ii., col. 1306. (M. SOBERMANN)
MUHAMMAD CEBELI. [See GHAZIHL.] MUHAMMAD DAMAD PASHA, grand-vizier, also called Oktuz Muhammad Paša, was the son of afarrier of Constantinople and was educated (rather unusual at that time for a boy from Constantinople) in the imperial palace for a military career. He left the palace as silahdar, but we do not know his career until he was appointed, in 1516 (1607–1608), governor of Egypt. Here he was successful in the energetic suppression of a Mamluk revolt and when he returned in 1610 to the capital with two years’ tribute, he was appointed Kapudan Paša, being at the same time married to Sulhahn Ahmed’s seven-year-old daughter Gawhar Khan (married afterwards to Radijeh Paša and Syuywush Paša; cf. Sigilli’s ‘Anişmi, l. 147), which assured him the qualification damad. As Kapudan Paša he was made responsible for a defeat inflicted in 1613 on a part of his fleet, off the island of Chios, by a small Spanish-Sicilian fleet; this blow prevented the landing of Turkish ships in Syria on an expedition against the Deuces. Damad Muhammad was dismissed from the post of Kapudan, became, however, second vizier and, after Naşib Paša’s execution (October 17, 1614) he was appointed grand-vizier. In this office he commanded in 1615 as vez‘ed-i nevâr in a new campaign against Persia, the peace negotiations having ended unsuccessfully a short time before. Nothing was undertaken, however, that year, partly owing to astrological calculations. The grand vizier remained that winter in Aleppo. The next year the Persians were attacked in Armenia, where they had made some progress; Eriwan was beleaguered and capitulated beginning of July 1616 after a 25 days’ siege. The Turkish army was obliged, however, to withdraw with heavy losses occasioned by the rude climate and the insufficient food supplies. Damad Muhammad was dismissed in January 1617 to be succeeded by Khalil Paša [q.v.], in the Venetian Rellandini Khalil Paša and Muhammad Paša are described as the only members of the Imperial Dîwan that really count. The next year, after the ascension of Óﬀûnî II, he became Khalil’s vezir-malâm during that year’s Persian campaign and, after Khalil’s disgrace (January 18, 1619), this dignity he held only a year, in which peace was concluded with Persia; the reason of his dismissal was a dispute with the Kapudan Gâzîeddin Ali Paša [q.v.], a favourite of the sultan (January 1620). Damad Muhammad went as governor to Aleppo, after having been deprived of all his wealth by the extortion of his successor. He died soon after his arrival in Aleppo and was buried in the tekke of Şahîh Abî Baki, where he had a mausoleum made for himself.

R., iv. 447, 468, 475 sqq.; 597 sqq. of where some contemporaneous western sources are indicated; Óthmûn Zâile, ‘Hadîf al-Wusûrî, p. 61; Sigilli’s ‘Anişmi, l. 147.

(J. H. KRAMER)

MUHAMMAD DJÀFAR KARADJA-DIGHI, Mânhî of the kâdîr prince Djâal al-Din, Mirâs and translator into Persian of the famous comedies of the Alharbîdînî, playwright Mirâs Feth ‘Ali Aklundâzâ. After they had been published (1859). Mirâs Feth ‘Ali sent a copy of his plays to the above-mentioned Kâdîr prince in the hope that he would take notice of it. But the book lay unheeded for years in the prince’s library until Muhammad Djaftar opened it by chance. The unhealed, delighted with the plays, at once decided to translate them into Persian. As no one would help him, he was forced to print the translation at his own expense, which brought him into considerable financial difficulties. The translation appeared in lithography in Teherân in 1874 under the title Tozmîlû. When the work was finished, Muhammad Djaftar corresponded with the author and found out that they were related. The Persian translation is of the greatest importance for the history of Persian theatre as it gave the stimulus to the composition of original works. The influence of Aklundâzâ on the work of Malikû Khan and even on more recent dramatists, such as Aşkûmî, is quite apparent. From the artistic point of view, however, Muhammad Djaftar’s translations cannot be called successful as their language is very clumsy and filled with countless Alharbîdînîisms. It is remarkable that European orientalists, first became acquainted with Aklundâzâ’s works in their Persian dress and published a considerable number of these translations (see Bibliography) as textbooks for the study of spoken Persian, although, in view of their linguistic defects, the translations cannot by any means be regarded as models of the living Persian language.

(E. BRYKHEVS)

MUHAMMAD ESSAD. [See GHÂDIB DREJ.] MUHAMMAD ESSAD. [See Essad Efeeni.] MUHAMMAD GAWTH GAWALÎYĂR, an Indian saint. He was a descendant of the famous saïnt Shaikh Farid al-Din ‘Attar [q.v.], his full name being Abu ’l-Mu’azzam Muhammad b. Kâfûr al-Din b. Lâjj b. Mu’in al-Din Kâtîl come to India and died at Djanpur. One of his brothers, Shaikh Bahîlî, who was attached to the service of Humâyûn, fell in battle and lies buried at the gate of the fort in Bâyána. According to his own statement, Muhammad Gawthi was born in 906 (1500). He was a pupil of Shaikh Šâhîd al-Din Hâdîdd Hâdîr, and belonged to the Shafī’îya sect of şâfîî. He and his eight brothers were disciples of Shaikh Šâhîd Hamîd, khalîfa of Shah Ḫâdan, the disciple and khalîfa of Shaikh ‘Abd Allîtâ Shâṣṭa. After leading a solitary life
for more than thirteen years in the mountains of Čuńār, he came to Gujārāt, where he became acquainted with the popular saint and scholar Shāh Wadhī al-Dīn Gujārātī. He went to Āgra in 1563 where he was received with high regard by Akbar. Subsequently he returned to Gujārāt where he died in 820 (1562). Humāyūn is also said to have been a faithful follower of Muḥammad Ghaẕwī.

He was the author of several Sūfī works, the most popular of which is Iswā'h-i Akhbar, in Arabic, which he completed in 956 (1549), and which he subsequently rendered into Persian with additional improvements. His other works are Kullāt al-Maḥāsin, Bahā al-Hayātī, and Mīrāḏī Nāma. It is related that his ecstatic sayings in the Mīrāḏī Nāma were condemned by the ulamā' of Gujārāt, who passed orders for his execution, but that he was saved by the timely intervention of the above-mentioned Shāh Wadhī al-Dīn.

(Abdul Muṣṭafā)

MUHAMMAD GURDĪ PASHA. Two Turkish Grand Viziers are known under this name.

1. The one who is also called Ḥādīm Muḥammad Pasha began his political career after having been a eunuch in the imperial palace; in 1604 he became aṣhīr in Egypt, where he was able to establish some order; after that he was twice kalim-muḥāli of the grand vizierate in the capital, in 1611 and in 1615; in the meantime he had held governorships in Erzerūn, Bosnia and Belgrad. He was called to the grand vizierate in the days of Sultan Mustafā I's second reign, when the Janissaries and the Sipahis were dictating their will at Constantinople (September 1622). Kādīm Muḥammad owed his nomination to the Sipahis — who had obtained the dismissal of Mir Ḥusain Pascha, the leader of the Janissaries — also to the confidence of the wāli, and to his well-earned reputation of a wise and experienced politician. He succeeded indeed in the abolition of abūjana — the army administration — by convoking a large council of dignitaries, where the reinforcement of the šālik was decided. When, however, in several parts of the empire, there arose opposition against the Janissary regime, especially the action of Akbar Pascha [q.v.] in Erzerūn, the grand vizier was unable to oppose the Janissaries in Constantinople. Their leader Mir Ḥusain was luring them again, while at the same time the sultān was crying for revenge for Sultan 'Othāmān II, who had prevented the former grand vizier Dāwūd Pascha was killed in January 1623. On February 9 of the same year the rebellious Janissaries, declaring that a eunuch could not be their grand vizier, obtained his dismissal in favour of Mir Ḥusain. Gurdī Muḥammad went into exile, but after the enthronement of Murād IV he came back to the capital as vizier, and acted for the third time as kalim-muḥāli in May 1624 when the then grand vizier went on an expedition against Alba. He died on March 26 and was buried in a mausoleum in Eṣṭahbāt. His age is not given in the sources. In the opinion of the English resident Roe, Gurdī Muḥammad was one of the few persons that were able to load the affairs of the empire.

(T. H. C. MM.)

MUHAMMAD HASAN PASHA, a Persian man of letters, who died on 19th Shawwāl 1313 (April 3, 1596). His honorific titles were Šāh al-Dawla and later Šāhān-i Suļā′mānī.

Through his mother he was related to the Khatārs [q.v.] and through his father he claimed descent from the Mongol rulers. His father, Ḥādījī 'Alī Ḥān of Marāgha, was a faithful servant of Naṣīr al-Dīn Šāh (1558–1652) — discovered the conspiracy of Sulaimān Ḥān and the son from his youth upwards was in the service of the court.

Muḥammad Ḥasan Pasha was one of the first students at the Dār al-Funūn founded in 1268 (1851) and spent 12 years there. Later he went with his father when he was appointed governor of Ṭarābah. In 1286 (1869) he was appointed secretary to the Paris Legation and spent two and a half years there. On his return to Fesrūn he was appointed interpreter to the Shah and in this capacity accompanied him on his travels. In 1288 (1871) he was appointed head of the dragōnāvān (dar al-taḏḏama) and of the press bureau (dar al-ṣawt) as well as director of the official Rāḥem-tiyawān. In 1290 (1873) he was appointed superintendent of the palaces and assistant to the minister of justice and henceforth continued in rank.

E. G. Browne criticises severely the work of
MUHAMMAD HASAN KHAN — MUHAMMAD ISMAIL

Muhammad Hasan Khan and his books have been written for him by his own scholarly works. On the other hand, Javakhovsky speaks with much respect of his works and shows that he is a great many literary undertakings (e.g. the printing of the Kur'an with an inter-linear Persian translation, concordance and index, the foundation of a press for printing in Persian characters, the establishment of the Maghribiy school, encouragement of the daily press etc.) although after the appearance at Bombay of satirical broadsides against the British Himalayan Shariat the censorship was established on the suggestion of Muhammad Hasan Khan.

The fact is that the number of works — often very useful — bearing the name of Muhammad Hasan Khan, is very large. Without the help of "secretaries" some of these books could not have been undertaken. To Muhammad Hasan Khan is in any case due the honour of having suggested them. His principal works deal with the history and geography of Persia and are often in the form of annals. They are: Mir'at al-Buldun, 1, 2 editions (1293, 1294), a dictionary of geography: letters 1—2, 2, 1295 (history of the years 1—xxi. of the reign of Nasir al-Din and calendar); iii, (years xvi—xxvii. of the reign of Nasir al-Din and calendar); iv, 1296 (geography: letters 1—2 and history of 1296). In the geographical parts we find quotations from Vakht and European travellers along with notes specially prepared by the local authorities (an extract from the Mir'at al-Buldun: Two books usb-nasimi was published at Bombay in 1311); Tur'ish-ka-manap-im Niyat, 3 parts, 1298—1300 (history of the time of the Haji) vol. iii, history of the Kajjar 1194—1300; Ma'al-ka-shah, 3 vols., 1301—1305 (description of the journey to Kerman with important archaeological data); 1, 105—213 contains the autobiography of Shah Tahmasp, and ii, 469—500 a list of books in the library of the sanctuary of Mazar-i, Khudchi, Hujjat al-Saltana fi Hudud al-Shahada, Tehran 1304, Tabriz 1310 (history of the martyrs of Karbala); Azadaran hikmat [cf. Sura l. 76], 3 vols., 1304—1307 (biographies of famous women of the Islam); Khudchi, Hujjat al-Tawajjub, a handbook of the arts, 1310; Khudch-i, Marji'a, 1309 (historical annals for the reign of the Nasir al-Din Shah); Khudchi, Hujjat al-Tawajjub, fi azhali Djaradi Shahwah, 1311 (history and geography of Sawad-khan in Masandaran).

In the field of literature Muhammad Hasan Khan was only a translator (Swazi Family Robinson, romances of Jules Verne, discovery of America, Tur'ish-ka-khahiji, Yangi Dusun, Tehran 1288, Memoirs on the Indian Mutiny of 1857). He also wrote a number of text-books on geography and on the French language.

MUHAMMAD HUSAIN TABRIZI, a famous Persian calligrapher, pupil of the celebrated Mir Saiyid Ahmad Moghadda and teacher of the no less famous Mir'at al-Shahid. His remarkable command of the art of calligraphy, so popular in Persia, brought him the title of honour Mihin Urud (greatest master). His father Mirzâ Shkurrallâh was Mihin at-Mashahâr to the Shahwâd Tahmâsp I (1291—1297), the master himself, according to the Oriental sources, was vizier to Shah Ismail II (1278—1288) but lost the favour of the sovereign and was forced to fly to India where he remained to his death. Rieu says he died about 1350 (1345), but this does not agree with other biographical details and is indeed improbable. That he spent the remainder of his life in India is evident from the fact that most of the manuscripts known to have been written by him were handed in India. The inscriptions on the mausoleums of Tabriz are said to have been his masterpieces but unfortunately they have been almost entirely destroyed by earthquakes. After completing these inscriptions he made the obligatory pilgrimage to Mecca and on his return devoted himself exclusively to copying the masterpieces of Persian poetry. A Dwâdah of the Persian poet Amir Shirî from his pen is in the Cambridge University Library, Bibliography: C. R. Huart, Les calligraphes des manuscrits de la bibliothèque du Mir'at al-Mawalân, Paris 1905, p. 327; E. Browne, A Catalogue of the Persian MSS. in the Library of the University of Cambridge, 1899, NV, p. 255, p. 353; Mirzâ Halîh, Khâsh o Khattâfân, Constantinople 1296, Tur'ish-ka-khahiji, Abâb, Tehran 1314, p. 102; Ch. Rieu, Catalogue of the Persian MSS. in the British Museum. . ., p. 785, 786, 788.

MUHAMMAD ISMAIL II, or Abd al-Qâhin al-Mahdî was born on the 22nd Shawwâl 1196 (1781), of a Dhilli family that traces its origin to the Caliph 'Umar. He was a nephew of the famous Mawâlân Shah 'Abd al-Qâhir (1332—1383). Having lost his father early, he was brought up by his uncle Mawâlân 'Abd al-Qâhir (1342—1383). In childhood he was insensible to his studies and fond of swimming in the Djamun, but thanks to a retentive memory and keen intellect he later on became a learned man.

Being shocked at the harsh or intolerable tendencies, then prevailing among Indian Muslims, he zealously preached the doctrines of Islam, impressed by the religious sanctity of Saiyid Ahmad al-Majduddin, he became his disciple and his constant companion. In 1256 (1828) they went to Mecca and then to Constantinople, where they were received with marked consideration. Six years later, on their return to Dhilli, they gained many followers. In 1255 (1827) they with many disciples went to Peghâwar and declared a jihad against the Sikhs. But owing to some innovations upon the mazes of the Afghans, their power declined and during a retreat they perished in a skirmish with the Sikhs in 1257 (1830). He is the author of the following works:

1. Khudchi, Lutfi al-Fikr, a treatise on the principles of Muhammadan law according to the Hanafî school;
2. Muhadda, a Persian treatise on the Imamats;

Bibliography: Şiddik Hasan, İlahi al-Nabul, p. 416; Saffiy Ahmed Khan, Akbar al-Sanadid, ii. 97; and J. A. S. X., xii. 310. (M. Hidayet Hosain)

MUHAMMAD KAZIM B. MUHAMMAD AMIN was a mufti or secretary to Awrangzeb. He was entrusted with the compilation, from official records, of the history of the emperor's reign and was ordered to submit it to him for correction. He accompanied the emperor on his journey to Adjumur where he fell ill and was consequently sent back to Dilli and died there shortly after his return in 1692 (1681).

The history which he composed is known as 'Alamgir Numa'; it begins with the departure of Awrangzeb from Awrangabad in 1668 (1657) and is brought down to 1678 (1667). It has been printed in the Bibliotheca Indica, Calcutta 1865-1868.

MUHAMMAD KHALIFA. [See Muhammad B. Husain.]

MUHAMMAD KHAN BANGASH. Nawab styled Qasimdar Djang, was a Ruliwa chief of the tribe of Bangash. The city of Farrukhhabad was founded by him in the name of his patron the emperor Farrukhshah. When Muhammad Shafi became emperor of Dilli, he appointed him governor of Malwa in 1143 (1730), and as he could not stop the repeated attacks of the Mahrattas he was removed in 1145 (1732) and appointed governor of Allahabad. Muhammad Khan intended to reduce the Hindustani of whom Radja Chaturzala was chief. He captured several places but as he did not know the roads, Chaturzala with the help of Pahwa Radji Rao, surrounded him suddenly with an army. The Nawab took refuge in the fortress of Djanggar; whereupon his son, Kasim Djang, having collected an army of Afghans marched to Djanggar and escorted his father in safety to Allahabad. The imperial ministers then removed him from the governorship. He died in 1156 (1743).

MUHAMMAD LALI PASHA. [See Muhammad Pascha Lah.]

MUHAMMAD LALEZARI SHAIRI, author of a work on tulips, Mawin al-Ashlar, "Balance of Flowers". This treatise on the cultivation of tulips was composed in the reign of Sultan Ahmad III (1115-1143 = 1703-1730), who had given the author the title Shahrisperverd, on the suggestion of the grand vizier Ibrahim Pascha between 1718 and 1730.

Bibliography: H. Fr. von Ditz, Denkwürdigkeiten aus Asien, Halle and Berlin 1815, ii. 199, reprinted as: Vom Tulpen- und Narcissen-Bau in der Türkei aus dem Turkevisen der Schich Muhammad Lala-Ishvar, Halle and Berlin 1835; Pertzsch, Katalog der türk. Hsc. Berlin, P. 305, № 252. (Th. Meznel)

MUHAMMAD LALEZARI, Tahir, the name of a Kady who died in 1204 (1789) in Constantinople, who wrote a series of theological treatises and commentaries, which are still accessible in ms.: Musul al-Musulim fi Musul al-Kifl fi al-Musulmi, Daf' Sirha Raghbi fi Nahr al-Fismat; commentary on the Kiflis-Nameri, and the commentaries in a collected volume in the 'Agir Efendi-Library in Constantinople (Difters Kutub-i-Kutub-i-Aghir Efendi, Constantinople 1500, p. 188, № 243 [3rd Waki-foundation]; commentary: Laymanur al-qubra (on Qasrwa); Ya'zamat al-amrun (on Biruni); Amurat al-Ajam (on Abd al-Kadir al-Ghan); al-Durrat al-sabka (on Al-Ashkar) and Kawkub al-dawra (on Ibn Majshug). The name Lalezari comes from Lalezir, a quarter of Constantinople near the Fatih Mosque.

MUHAMMAD MUHSIN AL-HADDJI, son of Haddji Fadl Allah, son of Ahmed Fadl Allah, a rich merchant of Iran who came to India in the early part of the xviii century, was born at Hagi in 1143 (1730). For a time the Agha resided at Murshidabad and carried on there an extensive mercantile business, but finding the rising port of Hagi a more convenient centre, he finally settled there with his son Haddji Fadl Allah.

Already settled at Hagi was one Agha Muftahwar, who, coming originally from Persia like Ahmed Fadl Allah, had won his way at the court of Awrangzeb [q. v.]. That monarch had conferred upon him extensive jagirs in Djsur and other places in Bengal, and Agha Muftahwar, eager to take possession, finally himself set out from Dilli for the Eastern province. So well did he manage his newly acquired lands that he soon became one of the wealthiest men in the province. He selected Hagi as his headquarters. Agha Muftahwar for many years remained childless and it was only in very old age that a daughter was born to him. Round this only child, named Must Djan Khaan, all his affections centred, and dying when she was only seven years old he left her all his property. The widow of Agha Muftahwar was displeased with the conduct of her husband and subsequently married Haddji Fadl Allah, the son of Agha Fadl Allah, her late husband's friend. The fruit of this marriage was Haddji Muhammad Muhsein. He was eight years younger than his half-sister, Must Djan Khaan. Muhammad Muhsein was first brought up at Hagi, afterwards he completed his education at Murshidabad. After finishing his studies at Murshidabad, he returned to his sister's home at Hagi. Later, he started on a long journey and for twenty-seven years he continued his travels in India, Arabia, Persia and Central Asia. It was not until he had reached his sixtieth year that he finally decided to terminate his travels and return home. Making his way slowly across Northern India he came at last to Lucknow. Thence he came to Murshidabad in 1216 (1801), with the intention of settling there. But during his long absence his sister, Must Djan Khaan, had married her cousin, Saiyid al-Din Muhammad Khan, nephew of Agha Muftahwar; her husband died in the prime of life and she was anxiously waiting for the
arrival of her step-brother. At last at the solicitation of his sister, Muhammad Muḥsin came to Ḥājdī, and when she died at the age of eighty-one in 1218 (1803), she left a will bequeathing to Muhammad Muḥsin the whole of her property.

It was thus not until Ḥājdī Muhammad Muḥsin had reached the age of seventy-three that he became possessed of the great wealth which greatly helped his co-religionists in Bengal in the pursuit of education. He had never married and the death of his half-sister left him without near relatives. He was anxious that his great wealth should be put to good use, and, consequentially, on the April 26, 1806 (1221 212), he signed a Deed of Trust, setting apart the whole of his income for charitable purposes in perpetuity.

Michael Muhammad Muḥsin lived for six years after making this noble disposition of his property. For his own personal use he had reserved only so much property as would bring him in about one hundred rupees a month. In 1227 (1812) he died at the age of about eighty-two and was buried in the garden adorning the ImamātRa which he had so splendidly endowed.

MUHAMMAD MURTADA B. MUHAMMAD B. 'ABD AL-RAZZAK ABU 'L-FAID AL-HUSAINI AL-ZARQULI AL-HANAFI, an Arabi scholar, born in 1145 (1732) in Bilgārān in Kamārāt in N.W. India, settled, after travelling for many years in pursuit of knowledge, in Cairo on 9th Safar 1167 (Dec. 7, 1753). There he succeeded in realizing an interest in the study of Tradition by giving lectures to specially invited companions. In Upper Egypt also he was always a welcome guest with the Arab Shi'ahumān and in the Egyptian country towns, and his fame spread to the Sudan and even to India. From the year 1191 (1777) he drew a pension from the government. He died in Ṣahābān 1205 (April 1791) in Cairo of the plague.

His principal works are two great commentaries. He wrote the *Ṭabi' al-Arūs* on Fīrāzābādī's Kāmiū, finishing it in 1183 (1767) after 14 years' work; although in the preface he quotes over a hundred sources used by him, he takes most of the additions to the Kāmiū bodily from the Liṣān al-'Arab of Ibn Manṣūr. It was printed incompletely in 5 vols. in Cairo 1286–1287, and in 10 vols. in Cairo 1307. He wrote a commentary, also very extensive, on Ghazālī's Ḥīyā 'Ulūm al-Dīn, entitled Ḥīyā al-Silāh al-muttaṣafin, in which, in addition to explaining words he devotes special attention to establishing traditions quoted by Ghazālī; it was printed at Fās in 1301–1304 in 15 vols., in Cairo in 1311 in 10 vols. He also composed a number of smaller works on lexicography and Tafsīr, as well as in the commentary on 'Adī's: 1. No'ūṣ al-ṣiṣṣa fī Bayān Raḥīf al-Maṣlah wa-1-ʿIṣāṣ, ed. by Landberg, *Principes arabes*, 1, 40–55; 2. al-Fawa'īl al-mukarrar fī Taḥlíf Lašīf-al-Tābah, Cairo, Fīrīḥ, l. 96; 3. Taḥlíf al-Wadā'ī al-Maqrīzī al-Muḥātār bi-'l-Kaṣīfī, Muṣāf, Dāwūd, Muḥṣīṣ al-Dīn, p. 140; 4. al-Amāli al-Shaikjūnyan, lectures on traditions, which he gave in the Dāmājī Shāikjī, Berlin, Alwardt, No. 10253; 5. Kitāb al-Fadhilah Yamūn al-Āakhirūn, Cairo, Fīrīḥ, vi. 209; 6. Taḥlíf al-Kaṣīfī al-Maṣlah fī Madā'ī Shāikjī al-ʿArāfī Ṣamīlī in the form of a maqāma, Cairo, Fīrīḥ, iii. 47; 7. ʿĪdāf al-Maṣlah fī ʿl-Īdāf wa-ʿl-Awalidī, finished on 4th Rabbī 1194 (April 10, 1780), ibid., v. 51; 8. Dāshghūra: al-Bīkār fī Nuzūl Bani 'l-ʿAlī, finished on 26th Dhu 'l-Hijja 1182 (May 2, 1769), ibid., v. 150; 9. Fīrīḥ al-Fawā'īl. The history of the Arabic script and of famous calligraphers, finished on 12th Dhu 'l-Hijja 1184 (March 30, 1777), ibid., p. 163; 10. al-Ḥawāf al-miṣīrī fī Nuzūl al-Sāda Al Qurṭub al-Tamīrī, ibid., p. 205; 11. Muṣāf al-Ṣaḥīfī fī Nuzūl Bani 'l-ʿAlā, finished on 16th Ramaḍān 1187 (Nov. 21, 1774), ibid., p. 343; 12. Niṣābat al-Ṣaṭrīl Muhammad Efendi Ibn Ḥawām al-Bānī, ibid., p. 346, b. 8.

MUHAMMAD PASA. [See MUHAMMAD DAMAD PASA, MUHAMMAD GURĐI PASA, KARADA MUKHED PASA, SOKOLL]

MUHAMMAD PASA, BALTADI, grand vizier, was born about 1660 in the town of 'Othmānji, and, after an education in the imperial palace, entered the corps of the halqāf. On account of his beautiful voice he acted for a time as muʿāqelān; later on he became a scribe and rose rapidly in this career. In 1703, at Ahmad III's accession, he became muʿāqel and was made Kapudan Paşa in November 1704. In December of the same year he obtained the grand vizierate as successor of Kalayi Alı̄m Paşa, against whom, although he had been at one time his fellow halqāfī, he had used with such power of intrigue, for which he was especially notorious, according to the historian Rāḍīh. On May 3, 1706 he was dismissed — on account of his lack of capacity, as Rāžīd says — and sailed to Lemnos, but his friends obtained for him the nomination to the government of Erzurūm. In January 1709 he became governor of Aleppo and from here he was called, in August 1710, a second time to the grand vizierate, after Köprülü Nūmān Paşa had proved unable to restore stability in the way that had been expected from him. At that time the first great conflict with Russia was drawing near; Charles XII of Sweden, after the battle of Poltawa, remained in Turkey. The beginning of Baltādī Muhammad's second grand vizierate was therefore filled with preparations for the war with Russia, which had been decided upon at a great state council in November 1710, and approved of by a fatwā of the Shāikjī al-Isāmī. The grand vizier was made commander of this memorable campaign, which quickly was ended by the battle near Fahlī (Falksen, Turk. Fahlī) on the Pruth (July 21–22, 1711). Peter the Great's army was left in a desperate position, but his generals succeeded in concluding a truce with the
grand vizier, by the terms of which the Russian army was allowed to withdraw, while Azoł was restored to the Turks. The general feeling in the Ottoman historical tradition is that Balthadji Muhammad had been bribed; his enemies at any case intrigued against him in Constantinople so that, even before his return to the capital, he was informed of his dismissal at Adrianople (Nov. 1717). The conclusion of the armistice of the 12th was also much against the wishes of Charles XII who, on his remonstrances to the grand vizier, is said to have got the insulting reply that, in case Peter had been taken prisoner, there would have been no moderates left in his country and that, in general, it was not good that sovereigns should leave their country (Voltaire, Histoire de Charles XII et de Pierre V). Balthadji was exiled to Losbos and then to Lemnos, where he died in 1712, aged over fifty.

The reputation which this grand vizier has in Turkish history, and which is also given him by von Hammer, does not seem to be confirmed by western sources (Jorga, iv. 308).

Bibliography: The chief Turkish authority is Râghi's Tarikh, the campaign against Russia has been described in a Tarikh-i Muhâfiz, contained in the work of Hasan of Crete and in a Munich manuscript (Babinger, G. O. W., p. 307, 310); Dâhver-Zade, Dâni to the Hadîkat ul-Wussûrâ, p. 369; Siâliî-î Sherî for, iv. 208 307; von Hammer, G. O. R., vii. 111 307, 148 307; Jorga, Geschichte des Osman. (J. H. KRAMERS)

MUHAMMAD PASHA, ELMAS, grand vizier, was born about 1660 in a village near Sinûh as son of a ship's captain. After having been attached to the service of the pasha of Tripolit, he was educated in the hâch of the palace and became in 1687 slâyh: 12th; soon afterwards he became nişâhî and obtained the rank of vizier. In Ahmûd II's reign he was pasha in Bosnia but did not yet play a prominent part, though he is said to have been one of that sultan's favourites. After Mustafa II's accession he was appointed efîmânmî of the imperial chancellery and, when a revolt of the Janissaries had cost the grand vizier Sûrtmî Ali Pasha's life, he was appointed in his stead (April 1695). He accompanied the new sultan during the campaign against Austria of the years 1695, 1696 and 1697. On September 11, 1697 the Turkish army was attacked by the Austrians under prince Eugène, while it was passing the Theiss near Zenta in order to march on Szegedin. The sultan had already reached the left bank, but the grand vizier, together with a number of high military chiefs, was killed that day in the battle, which meant a heavy loss for the Turkish troops. Elmas Mûhammad had been against this military enterprise, but the other members of the council had persuaded the sultan to the contrary. He is said to have disliked the surname Elmas "diamond" to his accomplishments and handsome physique.

(J. H. KRAMERS)

MUHAMMAD PASHA KARAMANI. [See KARAMAN MEHMET PASHA.]

MUHAMMAD PASHA, LALA, grand vizier under Ahmad I. He was a Bosnian by origin and a relation of Muhammad Sokollî Pasha. The year of his birth is not given. After having had his education in the palace, he was mer-i-zâker and became in 1595 agha of the Janissaries. Two years later he took part in the Austrian wars as beylerbey of Rum-ili and was commander of Eastergem (Grão; Turkish: Östergem) when this town capitulated to the Austrian army in September 1595. During the following years Lala Muhammad was several times mer-i-zâker in Hungary and when, in July 1604, the grand vizier Yavuz 'Ali had died in Belgrade, on his way to the Hungarian theatre of war, the sultan sent the imperial seal to Lala Muhammad. Although peace negotiations were continually being resumed, the new grand vizier took in that year Waitzen (Turk. Wât) but besieged in vain Eastergem. During next year's campaign Eastergem was taken by Lala Muhammad (Sept. 29, 1605) and in November he crowned the Hungarian Bocskay as king of Hungary (without the regions occupied directly by the Turks) and Transylvania. In that same year the Turkish eastern army under Çigalâ Pasha was beaten by the Persians, while the troops sent to subdue the revolt in Anatolia were routed at Balawadin. After his return it was decided that the grand vizier should remain next year in the capital and lead the war on the two fronts and, if possible, bring to a successful and the long-drawn peace negotiations with Austria. The young sultan, however, changed his mind in keeping with the wishes of the Kapudan Pasha Derwisch, who was intriguing against Lala Muhammad. Accordingly the latter was ordered to take command of the army against Persia. He had already put up his tent in Uskudâr, when overcome by sorrow because of the frustration of his plans, he was seized with an apoplexy and died three days afterwards (May 23, 1606). He was buried near the niche of Sokollî Pasha.

Bibliography: The Tarikh of Peclevi, who, as scribe, had served Lala Muhammad on several occasions (cf. Babinger, G. O. W., p. 192), Na'mân and Hasan Beyzade; 'Olmân Zade Ta'bî, Hadîkat ul-Wussûrâ, p. 52 sqq.; Siâliî-î Sherî, i. 395; von Hammer, G. O. R., iv. 140.

(J. H. KRAMERS)

MUHAMMAD PASHA, RUM, vizier and, according to some sources, grand vizier under Sultan Muhammad II. As his surname indicates, he was a Greek renegade. After having had an education in the palace he was destined for a military career and became at one time beylerbey. The dates of his birth and of his military advancements are not recorded. He had taken part in the final campaign of Muhammad II against Karâmân in 1466 and was charged by the sultan with the transfer of parts of the population of the conquered regions to Constantinople, instead of the grand vizier Mahmut Pasha (q.v.) who executed these measures in too lenient a way, as the sources say. On the way back to Constantinople Mahmut was dispossessed of his dignity in favour of Rûm Muhammad. The latter remained grand-vizier until
commander of the expedition against Azof [q. v.], which town he seized after it had been burned by the Cossacks before he arrived. On his previous march he had been with the sultan’s favourite Djindji Kâğıtja a triumphant supporter of the sultan, Kosem [q. v.]; they intrigued against the grand vizier Kara Mustafa Pasha, who sought to remove the danger by sending Sultan Zâde Muhammad in 1643 to Damascus as Vâdi. After Kara Mustafa had been executed on January 1, 1644, Sultan Zâde Muhammad was made grand vizier. One of his most conspicuous characteristics in this office seems to have been his ability to flatter the sultan and to satisfy his very extravagant wishes by obtaining money from all possible sources and by giving sandjakas to many of Isâtâm’s favourites. At this time the Empire was at peace with Austria (which sent in August 1644 an extraordinary embassy to confirm the peace) and with Persia, although Rahoccy, the prince of Transylvania, did his best to involve Turkey in a war with Austria. There was, however, a strong desire to go to war with Venice and to conquer Crete. The vâdi undertook this undertaking, but his former confederates drew the sultan to their side. Accordingly Yûsuf Pasha sailed as sâdir to Crete in the spring of 1645 and took Canera (August 17). The good feelings that arose after Yûsuf Pasha’s return led to Sultan Zâde’s dismissal from the post of grand vizier (December 1645). After Yûsuf Pasha in January 1646 had fallen a victim to Sultan Isâtâm’s cruel capriciousness, Sultan Zâde himself was made sâdir against Crete. He departed in April 1646, drove the Venetians from Tenos, which they had taken by surprise, and died shortly after his arrival in Canera (July 1646). He was buried in the teke of Hadîtî in Üskûdar.

Bibliography: Na’im’s Türâk is the chief Turkish authority; valuable contemporary information is given in the Siyâhat-nâme of Ewliya Celubi, who himself went with the expedition against Azof. Further the Doiîl Tawârid-i Âltı ‘Othîmân of ‘Îsâ Pasha Zade (cf. Babinger, G.O.W., p. 211) and an anonymous Necât-nâme (G.O.W., p. 152, 161) by ‘Othîman Zade Tâlût, Hadîtî el-‘âlî, 8, p. 84, p. 161: Siyâhat-nâme, iv. 161; von Hammer, G. O. W. (J. H. KRAMERS)

MUHAMMAD PASHA, SOKOLLÎ (See Sokollî)

MUHAMMAD PASHA, SULTÂN ZÂDE, grand vizier under Mahmut I, was born about 1660 at Constantinople. His father was a Janissary. He began his career as a scapegoat and rose to important posts; in 1739 he played a role in the peace negotiations at Belgrad with Austria. He had been beyaz of the grand vizierate, viz. minister of the interior, when the sultan, under influence of his new beyaz agha, the so-called Behsithe Younger, dismissed his predecessor Has'an Pasha and called him to the grand vizierate (August 1740). The twelve months of his period of office were not filled with war, but with important diplomatic negotiations, in which he was supported by the new beyaz Muhammed Safî, later grand vizier, and the red efendi Mustafa, both of whom equally well versed in European diplomacy. During Tiryâkî Muhammed’s grand vizierate peace was concluded with Na’dîr Shah of Persia (September 1746) and the peace treaties with Austria and Russia were renewed. As the reason for his dismissal (August 24, 1747) is given his addiction to the use of drugs.
(hence the surname "Tiryaki") and his quarelsome, vindictive character, by which he had made enemies, especially in the ranks of the "elmek." After his fall he was governor in different eyalets, as İli, Məşəf, Bəğəddə, Dəžəda, and he died in July 1751 at Rətməno in Cretə, where he lived, probably in involuntary retirement. According to the Sədədəbə, he was a capable official before coming to the grand vizierate; afterwards he was a failure in every office.

**Bibliography:** The Turkish of "Izzə; Dələwər Zəde "Omar, Dələwə "Hadətə al-Wərəmə," p. 73 sqq.; Sədədəbə "Bərəxə," v. 237 (where the dates are wrong); von Hammer, G.O., vi.

**MUHİMMAD PASHA, YEŞENCE, grand vizier under Muhammed II.** He was called Yegen "the Nephew" because he stood in that relationship to Kəl Yənda Efeşini, a high official in the financial administration (Sədədəbə "Bərəxə," v. 650); he also began his career by holding different financial offices, and was also əbəsəbəqə of the grand vizier Təpə "Təxəbə Pasha (1732). In 1737 he became bəshən-vəsəzən in Constantinople during the absence of the grand vizier Əbdəl Ələxə Pasha. He was successful that year against the Muslims on the Dənəcə frontier (taking of Fətəş əIəssəm), but was nevertheless dismissed, after his return, through the influence of the əzəxbər aghətə Bəxər. Yegen Muhammed was appointed in his place (December 1737) and had to continue the peace negotiations with Austria and Russia, which were made especially complicated by the rivalry between France (represented by de Villeneuve) and the Sea Powers in offering their good services as mediators. The grand vizier himself was rather in favour of continuing the war, and, being of a proud and arrogant character, made the negotiations still more difficult. In June 1737 he went zədədə to the Austrian front and was successful in recapturing Səmənədərə and Ozwə (August). He was back in the capital in November. At the end of the year the Russians retired from Əokətə and Kələrmə, which placed Turkey in a favourable position in the never ceasing peace negotiations, in which Poland also had become involved. But not even this grand vizier was able to bring the war to an end; the same influence that had disposed of his predecessor obtained his dismissal in March 1739. After that Yegen Muhammed was governor of Crete, Bosnə, Əldən, and Anadolu. When in this last office he was called to the post of zədədə on the front of Kərə (March 1745) against the Persians. He received large reinforcements from different quarters and thought himself strong enough to attack Nə dib Şəkər in his encampment near Ərivan. This battle resulted in a disaster for the Turks, owing mainly to a mutiny among the irregular təxəbəsən. Yegen Muhammed was killed, probably by the mutineers, in August 1745.

**MUHİMMAD (Mesrəp) RAUF, an important Ottoman author and poet who plays a very prominent part in the development of the Turkish modern and of the written language. Born on Aug. 12, 1291 (1875) in Constantinople, the son of an Anatolian, who came from Kurşaya, and a Circassian mother, he received a good education. He studied the Naval School and became a naval officer, but he only spent eighteen months in the navy, mainly in Crete. When quite a boy, he displayed an irrepressible love for the theatre, literature, and began to write at the age of 16, taking as his models the novels of Ahmed Midhat and the translations of French romances of adventure. This first production was a drama, Dəvət yəkəbə Gəsəbə Kəsəlmə ("Baseness or the Corroser of Gascoigne"). As his knowledge of English, and later of French, increased, he extended the scope of his reading and of his interests, so that at school he received the nick-name Roman əxəyən Efeşini (the novel-reader) and later Romandəh (the novel-writer). His literary activity proper only began in the Naval School where he became acquainted with Georges Ohnet, Əokətə Feşə electrodes, Alphonse Daudet, Əmələ əIəsə, Ələxə, the French realists and naturalists and endeavored to imitate them. His story Dələwə is the most notable of his efforts at this period.

When he became acquainted with the works of the modernist Əokətə-Zəde Ələxə, əIəsə, (q.v.), he came completely under his influence, especially after entering into correspondence with him and having his story Dələwə published by him in the periodical Kənəs. Through əIəsə who remained his model and Əxəyə, with whom he made a friendship he made soon afterwards, he adopted the career of letters completely and became an author. When Dənəbə Şəkər al-Din had to go to the ƏIəsə as medical officer, he left the editorship of his periodical Məkəbə in the hands of əIəsə. In 1312 (1896) RAUF at the suggestion of əIəsə published his novel Gərməxə-Shêkəi ("Youthful Passion") in İdələm, but it did not meet with any special success. He only began to be famous as an author with his cooperation in the periodical Sərəzətə Fətənə in 1312 (1896), which was of great influence in the development of modern Turkish literature. Here he worked with əIəsə and the poet ƏIəsə Əfətə (q.v.), to whom he had become related by his marriage. In 1501 the Sərəzətə Fətənə came to an end and with it his literary activity till the Revolution of 1908.

His first contributions to the Sərəzət were Nətxəs ("In Convalescence") and Ünbəxəs. In the 10th volume was published in serial form his most celebrated novel: Eyfəl ("September") which then appeared in book form like most of his works in the collection, so important for the development of Turkish literature: Edəbəyətə dəxətə Kəaəxəbə, vol. vi., 1517 (1901). This novel, which was reprinted several times and which remained unique of its kind and represents a height of achievement never again reached by RAUF, had great influence and won general approval. In vivid, moving, although unequal language he describes in impressively realistic fashion the development and tragic end of a noble, innocent love. The astounding verbosity in which RAUF revels here was aptly compared by əIəsə to a gemlet which always turns at the same spot.

Of his novels we may also mention Fordəbə ("The Morning of Passion"), Edəbəyətə dəxətə, N. 28; Gəndəf xə Kəalə ("A Young Girl's Heart"); Mənəxə ("Violet") and Kəalə ("Nightmare").

More important are his collections in the pre-
MUHAMMAD RAUF - MUHAMMAD SHAH

writing fashion of short sketches, tales and long stories. Among these is his second most famous work: Siyah Indjiler ("Black Pearls"), a collection of poems in prose, modeled on Ziya's Manzar Sihirler and Beaudelaire's Fleurs du mal (Andeyby, No. 11, 1317); also the collection of long stories "Ahbibi" ("Enamoured") (Andeyby, No. 16, 1325 = 1910); Titir ("Death Agony") (Andeyby, No. 12, 1325); Son Emel ("The last Hope") (Andeyby, No. 29, 1329 = 1913); and Bir "Asghar Tale" ("H-quality of a Love Affair") (1330 = 1914); further Ul Usbiiye ("Three Tales"); Echar ("Flowers"); Perinbentzibeli ("As butterflys").

Rauf was no less successful as a dramatist. He wrote the following pieces: Pek ("The Talon"), a drama (oyun) in four acts (Andeyby, No. 14, 1325 = 1909); Ferdi ve Siyasi Ders ("Ferdi and Co") in 3 acts, a dramatisation of the novel of the same name by Ziya (Andeyby, No. 17); and Lijiyat ("Battle") in 5 acts (Andeyby, No. 30, 1327 = 1911); also Bk Kusme ("Two Powers"); Yaghmuran doluya.

Rauf died on Dec. 23, 1931 at Constantinople.

Numerous contributions by him are in the Sorvet-i Fuyuân; the finely produced woman's periodical Mebâra of which he edited the only volume that appeared. Contributions by him, some his own work, especially poems (Rauf possessed not inconsiderable poetic talent and was regarded as the Turkish Baudelaire), also essays and criticisms, of which his analyses of the contemporary novel are valuable, were published in different collections, periodicals and newspapers in vast numbers. His Zemsah ("Lily") brought him trouble. It was confiscated on account of its sensuality and the author was imprisoned. He wrote other things in the same style which were not printed.

In his works he appears as a very artistic, rather sentimental nature; even what he writes in prose is pure poetry. His prose is as good as that of Ziya, the leader of the Sorvet-i Fuyuân movement. He is one of the most important personalities in this group of men of letters, although his marked merits in form and style are counter-balanced by equal defects, which became worse as he paid no attention to the cultivation of his style; in him we find a reversed process, from the more particular to the less. He would have been held in higher repute generally, if he had ceased to write after his first works. — Owing to the identity of the name and the parallel literary activity Muhammad Rauf was often taken for M. Rauf, the son of Faruk 'Atif Pasha, who died on Feb. 23, 1918 and was buried at Hai Dar Pasha. M. Rauf was editor of the Rasîmi Kütâb. He was a dramatist and wrote: Fermine, Niğûha Keremeti ("Wonder in sight"); a comedy Istek le Bûrû arânishia ("Between Fire and Powder") and a piece entitled Tûr ki written jointly with Rauf Nedjet, one of his most intimate friends. The following dramas were never printed: Zâfik Al-Dîn-i Elyâb, Nermiyan and a number of adaptations. From the English he translated Saiyed All's The Life and Teachings of Muhammad the Spirit of Islam in 2 vols. entitled Mevpowerg Tel'dcile, 1918.

Besides being an author, M. Rauf was also a teacher, a task for which his extensive knowledge of languages qualified him (in addition to French and English, he knew Arabic, Persian, German, Italian, Greek and others). He lectured at the University on mythology and Greek and Italian literature, on which he wrote two text-books: Yûnâni Fuyuân, Tûrki Fuyuân and Italya Fuyuân. He was also for a time teacher of western literatures, Turkish literature and French at various schools.

MUHAMMAD SADÎ [Mir Dżuma], minister of 'Abd Allah Karb Shah of Haiderabad during the xviith century, was originally a diamond merchant, and was famous in the Deccan for his wealth before he became minister. After the defeat of his master 'Abd Allah by Awnarâzî, Mir Dżuma took service under the latter, and was made Governor of Bengal from 1071—1075 (1660—1664). He defeated Shah Shâjadî when the latter fought against his brother Awnarâzî. Mir Dżuma was afterwards employed in the conquest of Cochîlîhûr and Assâm in 1072—1073 (1661—1662). He overran both these countries but owing to the rainy season and the spread of disease among his troops, he was compelled to return, only to die of dysentery contracted during his campaign, shortly after his arrival at Dacco in 1073 (1663).

MUHAMMAD SADÎ. [See KHALIL EFKENI ZÕĐUK.

MUHAMMAD SHAH (1131—1161 = 1729—1748), emporor of Dîhî, surnamed Muhammad Rawshun Akbar (or, the Brilliant Star), was the son of prince Dhiabîn Shâh, one of the three brothers who perished in disputing the crown with their eldest brother, Dhiabînâlar Shâh, son of Bahadir Shâh. He was born on Friday the 24th Râbî' I 1114 (August 7, 1702), and was crowned by the two Saiyid brothers, Saiyid 'Abd Allah and Saiyid Husain, after the death of Râfî al-Dawlah on the 25th Dhu 'l-Ka'âd 1131 (September 29, 1719). Muhammad Shah reigned for about 30 years and died one month after the battle of Sârîlund, which his son fought against Ahmad Shâh Abdâli [q. v.]. His death took place on Thursday the 27th Râbî' II 1161 (April 16, 1748). He was buried in the court before the Mausoleum of
Muhammad Shah — Muhammad Zaim

Ni'üm al-Din Awliya at Dhihli. This emperor may be called the last of the Timurid line, who reigned in Dhihli and enjoyed any power. The few princes of that sovereign's family who were raised to the throne after Muhammad Shāh were mere puppets in the hands of the nobles of the court.

(M. Hidayet Hosain)

MUHAMMAD SHAH I, ALI AL-DIN KHALID (695—715 = 1395—1415) was the nephew and son-in-law of Sultan Qalau al-Din Firuz Shah II Khajdu, whom he murdered by treachery at Karī Mānpūr, in the province of Ilahābād, in 695 (1295), and ascended the throne of Dhihli in the same year. He re-conquered Gujrat (697 = 1297), took Citor and temporarily subdued the Rādpūtīs (703 = 1303). His eunuch general, Malik Kāfūr, seized Duqgūr and Warangal, and founded a Deccan province of the Dhihli kingdom. The empire is said to have flourished during his reign. Among contemporary poets Amir Khurram and Khawāja Ḥasan āl Bārī, the first ranks, Shāhīs Niṣām al-Dīn Awliya, one of the greatest saints of India, flourished at the same time. He died in 715 (1315) and was buried in the tomb which he had constructed in his life-time in Old Dhihli.

(M. Hidayet Hosain)

MUHAMMAD SHAH BAHMANI. [See Muhammad I—III, above, p. 664 sqq.]

MUHAMMAD SHARIF AL-NADAVI was born in the Deccan where he spent the first twenty-five years of his life. He afterwards visited in an official capacity Gujrat, Malwa, Adjmir, Dhihli, Agra, the Punjab, Sind and Kashmir. He went to the last country in the train of Dīgīrīgīrī and under the command of Kāsīm Khān (1617 = 1621). He is the author of Magdīlī al-Saltānī, a short history of the kings of Dhihli and of the Deccan dynasties from the Muhammadan conquest to the accession of Shah Dijān, completed in 1038 (1628).

(M. Hidayet Hosain)

MUHAMMAD Tahir al-Fatani al-Gujraṭī, was born at Fatan in Gujraṭ in 914 (1508), after completing his education in his native land, he proceeded to Mecca, where he studied traditions with eminent scholars such as Ibn Ḥadjar al-Haitami al-Maκtūm and others. He acquired much learning from ‘Ali b. Ḥāṣīn al-Dīn al-Muttaqi (d. 975 = 1567) and also became his disciple in the Kādirī and Shāhītī orders. After his return to his native country he tried his utmost to spread learning and to uproot the doctrines of Muhammad al-Djamalpurī who had claimed to be the Maktī of his time and had a considerable following among the Bohora [q. v.], a community to which Muhammad Tahir himself belonged.

In 980 (1572) Akbar went to conquer Gujraṭ, and after his conquest he conferred honour on Muhammad Tahir by tying with his own hand a turban on his head, saying that it was incumbent on him (Akbar) to spread the true principles of Islam. Khān ‘Azīz Muhammad Kākhānī was appointed governor of Gujraṭ and he helped Muhammad Tahir in uprooting the new doctrines of Mahdīism. But when ‘Abd al-Rahmān Khān Kākhānī succeeded him as governor, Muhammad Tahir suffered much at the hands of the followers of the Mahdī and proceeded to the court of Akbar in Akbarshāh for redress. On his way at Ujai in he was murdered by some followers of the pretended Mahdī in 986 (1578).

Among his various compositions the following may be mentioned:

1. Manāhī al-Qādirī al-‘Aṣir al-Amārī fi Qawālīt Ṭarīq al-Qādirī, a copious dictionary of the Kurān and the Traditions, lithographed, Lucknow 1248, 1284 and 1314;

2. al-Mughūl, a dictionary of proper names of Muhammadan traditionists, lithographed on the margin of Tāḥrit al-Tahābīd by Ibn Ḥadjar al-Aṣqālānī (Dhihli 1290);

3. Tujjīhīr al-Majūdīhī, a treatise on traditions that have been incorrectly attributed to the Prophet.

MUHAMMAD ZAIM, a Turkish historian. All that we know of his life is gleaned from his works. He was born in 950 (1552) for he tells us that at the accession of Sultan Murūd III, i.e. in 982 (1574), he was 43. At the early age of eleven he took part in the campaign of 950 (1543) along with his elder brother Perwa′n Agha, who at that time was Kapudān Bāshā to the Sandjak Beg of Lepanto, Yahyā Pascha Oghlu Ahmad Beg. When the latter, after the capture of Stuhlweissenburg, was appointed Sandjak Beg there, the brothers seemed to have remained in his service, probably till 952 (1545) when Ahmad Beg was summoned to Stambul, in connection with the plundering of the Stuhlweissenburg churches. In 967 (1554) when Sultan Sulaimān took the field against Shah Tahmāp of Persia, Muhammad Zaim was a secret agent in the service of the governor of Syria, Teki Oghlu Mohammmed, and a year later he was secretary to the powerful grand vizier Mohammed Sokollī and in this capacity compiled the official report of the death of Selim II and the accession of Murūd III which was sent to the governors of Diyarbakir, Aleppo and Baghdad. This office, to which he perhaps succeeded on the promotion (1578—1580) of the famous Fertćālu Ahmad Beg [q. v.], he must have filled till the death of Mohammed Sokollī in 987 (1579); we hear nothing further about it. He held a great fakīr (wakzan) and his epithet Zaim; him he himself says: wakzan-i atbedat asliyyat-i insānīyeyen Mohammed i munāfeg u-mādehsīr. Friends requested him to write a history and he finished it within a year. He began the work in Muharram 985 (beg. March 21, 1577) and had completed it in Jumāt-i-Hijriyya of the same year (beg. Feb. 9, 1578). The date of his death and
disposition of Aḥū Mānsūr and compared the following order of succession to that of the Husainid Muhammad Bākır for Aḥū Mānsūr and of the latter for the Husainid Muhammad b. ʿAbd Allāh, with the Jewish line: first Moses, then Joshua, son of Nun, then the sons of Aaron (the later priesthood is meant). This arrangement was chosen in both cases so that conflict might not arise between the two lines of brothers (bāyātīn). — We cannot be certain that the Muḥammadīya formed a definite sect. The name rather records the fact that the rising of al-Naf ʿal-Ẓakīya, which was of great extent, attracted all circles of the Shīʿa to its ranks, even those who belonged to the Husainid camp; and members of the Muḥammadīya, the followers of Muḥṣīl b. Saʿdī, killed in the year 119 (737) by Yūsuf b. ʿOmar's predecessor ʿAṭīlī b. ʿAbd Allāh al-ʿAṣūrī, probably, under the leadership of Dāhir b. Yānī al-Dīūrī, supported al-Naf ʿal-Ẓakīya with their good wishes at least.

Quite a different group is the ultra-Islāmīc Mūḥammadīya or ʿAlīmīya. It took its name from the belief in the divinity of the third ʿAlī Mahdī in reply to an ʿAlīyīa or ʿAʿlīyīa, which regarded ʿAllā as God. Its principal representative Al-Fāyūkī b. ʿAlī was executed between 279 (892) and 280 (893).

The Khāridjī Mūḥammadīya was a separate party within the strictly Khāridjī sub-group of the Adārīdī; it is called after a certain Muḥammad b. Zūrak.

(2. STRÖTHMANN.)

Mūḥammad a town and port on the head of the Persian Gulf and in the Persian province of ʿArabštī. It lies on the right bank of the Ḥaffār channel (formerly called Nahār Bayān) which connects the Ḥafṣūn river with the Shah ʿal-ʿArab. The original village from which the town grew appears to have lain on the left bank of the channel, on the island of ʿAbshādān [q. v.], and Muḥammad a is probably therefore not to be identified with the town of Bayān, though it now lies on the same site. Further, Bayān was included in ʿIrāq. Arabī by the geographers, whereas Muḥammad a, lying on ʿAbshādān island, was a part of Persia until the shifting of a channel threw the possession of the town into dispute between that country and Turkey. By the treaty of Erzerum (1847) it was assigned to Persia, but though the government was nominally directed from Shahrāb, it remained in reality in the hands of the Arab shaikhs of the Ḥabb (or Ḫab) tribe, who were Shīʿa. From the fact that the Arab geographers ignore the town, at any rate under its present name (for references to Bayān see ꦭ. Le Strange, below), it may be inferred that the change (Muḥfrīt) was either of minor importance or of comparatively recent origin. At the present time the port is of some importance for the trade of Persia, its principal article of commerce being dates.
though it is also connected with the oil trade.

(R. LEVY)

MUḤARIB, the name of several Arab tribes (Wustenfeld, *Register zu dem general Tabellen*, p. 320 gives five of this name) of which the most important is that of the Muḥārib b. Khaṣṣafa b. Kāis Ālān (Wustenfeld, *Register zu den general Tabellen*, D, 8). They do not however seem to have been of very great importance either in the Ḫulayfah or in Islama; Ibn al-Kalubi only gives these two pages of his *Dhawqarat al-Anībah* (Brit. Mus. MS., Add. 23,297, fol. 163b—165b) but these add considerably to the very meagre information in the Tabellen especially as regards the lines of 'All b. Ǧasr b. Muḥārib and of Badḥa'wā (sic) b. Ḍhūhī b. Ǧarīf b. Khālaṣ b. Muḥārib. A typical Bedouin tribe, the Muḥārib lived in the mountainous region of southern Najd between Medina and al-Yamāmāt (Wustenfeld, *Register*, p. 320 following Ibn Kātabi, *Kithāl al-Maṣā'īf*, ed. Wustenfeld, p. 41); several places in their territory are recorded in Yāḥūt's geographical dictionary (cf. the index of tribes, s. v.). We know very little about their history before Islama; they were closely connected with other tribes of the general group of the Kāis 'Allān, like the Hawāshīn, with whom they are said to have shared the worship of the idol Ḥulūl b. Ǧarīf (Yāḥūt, *Mağ'ūl*, ed. Wustenfeld, ii. 167; 1, 1 = Wellhausen, *Recht*, p. 65; cf. *Ṭağī al-Anībah*, iii. 415, l. 7; from below), and especially the Ghaṭafānīn (inheritors of their clan Thālab b. Sa'd b. Ḍhūhībān) alongside of whom the clan of the al-Khūḍr b. Ǧarīf b. Khālaṣ b. Muḥārib (the genealogy of the Tabellen is to be rectified in as much as al-Millik is the name of al-Khūḍr and not that of his father) fought the war known as the *yawm al-ḥurāfa* or yawm Dūrat Mağ🇪II alluded to by the poet of the Ḫulayfah Usbān b. al-Ḥumān in some of his poems (cf. al-Muṣaffaṭdīyāt, ed. Lyall, Ns. ii. and xii. and the commentary of Ibn al-Anbar), with the passages quoted in the notes).

The Muḥārib at the beginning of Islama were hostile to Muhammad; this hostility was perhaps only the continuation of that which prevailed between the nomad tribes of the 'Āliya of al-Najd and the citizens of Medina. Thus we find, in the early years of the Ḫulayfah, that Muhammad sent against them (and against the Ghafarān) a series of expeditions, of the nature of raids and counter-raids rather than regular military enterprises (our sources give 30 or 40 men as the total of Muslim forces); the details of their fighting are given in Caetani, *Annali dell' Islama*, i. p. 527—538. (3 A. H. § 6), 596—597 (5 A. H. § 3), 689—

*AL-MUḤARRAM* (A.), the first month of the Muḥammādian year. The name is originally not a proper name but an adjective, as the article shows, qualifying Ṣafar. In the pre-Muḥammādian period the first two months of the old Meccan year were Ṣafar [q. v.] and Ǧīd, which is reflected in the dual *a-potiori* al-Ṣafārīnī for al-Muḥarram and Ṣafar; in the old Arab year the first half year consisted of *three months of two months each* (Wellhausen), as the two Ṣafār were followed by two Ḥaṭās and two Ḥumādās. The first of the two Ṣafār, as the one that belonged to the sacred months, was given the adjectival epithet al-muḥarram which gradually became the name of the month itself. As Ǧa ḫu ʾḥ-i-Hiḍja also belonged to the sacred months, three of the four sacred months came together except in leap year. The month intercalated to equate the year to the solar year was inserted after Ǧa ḫuʾ ḫ-i-Hiḍja and was not sacred. It thus came about that learned Muslims described the intercalation as remounting the Muḥarram concerned; Ṣafar, i.e. as making Muḥarram not sacred; they mean that the month after the pilgrimage, which they consider as al-Muḥarram, following the custom, is not sacred i.e. is Ṣafar and the second month i.e. in their view Ṣafar, is "al-Muḥarram". In doing this they of course overlook the fact that Ṣafar proper now only comes third; but when the intercalary month was abolished in Islama, the proper conception of the state of affairs was lost [cf. NAF].

In the early period when an attempt was made
to equate with the solar year by inserting intercalary months, — which was not successful on account of the ignorance of the old Arabs in astronomical matters — al-Muharram introduced the winter half year as the name of the first of the intercalary months. The Arab year began, like the Jewish, in autumn. After Muhammad had forbidden the insertion of the intercalary months in Sūra iv. 2. Muharram, the beginning of the year, went through all the seasons as the year, which now consisted of 12 lunar months, had always only 355 or 356 days, as it still has. Whether the first month of the year was originally marked by a festival we do not know. Wellhausen has endeavoured to show that the ḍahīf originally fell in the first month of the year, so that Muhammad was ḍarīm in its quality as “Dhu-l-Ḥijjah.” This also suggests that there was originally only one sacred month, but it was observed at different times in different parts of Arabia. Muhammad in the Kūrān always speaks only of the sacred month (ii. 942, 217; v. 2, 97); only in Sūra ix. 36: in laying down the method of reckoning time does he speak of four sacred months, in which it was thought to be of greater value if the year was divided into four parts, and, according to Sūra vii. 217, the defence of the faith takes preference over the sacred month. What the sacred month referred to in the Kūrān is, we do not know; in Sūra v. 2, at any rate, the month of the pilgrimage must be meant, which fits Wellhausen’s theory excellently. The commentators think Ṛadīj or Ḍhū ’l-Ḥa’līn is meant, at any rate not al-Muharram.

Al-Muharram has 30 days of which, in addition to the 1st as the beginning of the year, the following are specially noted: the 9th as the fast-day of the Shi’ite ascetics; the 10th as the anniversary of Kerbela (60 = 680), on which al-Husain b. A’īb b. Abī Tālib [q. v.] fell fighting against the Caliph Yazid b. Mu’awiyah and therefore the great day of mourning of the Shi’a (on the significance of the 10th Muharram for the Sunnis see “Āqīdah’), celebrated by pilgrimages to the sacred places of the Shi’a, especially to Kerbela [see MUGHEER HUSAIN], in which the passion play, representing the death of A’īb’s son [see TA’ZIYAH], plays the most important part; also the 16th as the day of the selection of Jerusalem as the Kibla [q. v.], and the 17th as the day of the arrival of the “people of the elephant” (Sūra cxiv).

MUḤĀSĪBĪ ABU ‘ABD ALLĀH ḤARIBĪ B. ḤARIB AL-ANṢĀRĪ, called Muḥāsibī, i.e. “he who examined his conscience,” was born in Baṣra; he died in Baghdad in 243 (857). A legist of the Ḥanbali school, a theologian who advocated the theory of the principle of reason (sarf), using the dialectic vocabulary of the Muṭarrīfīn, which he was the first to turn against them, he finally adopted a life of ascetic renunciation after a moral conversion prolonged which is described at the beginning of his Masāḥa. Involved with the Muṭarrīfīn in a general persecution as a result of Ibn Ḥanbal’s attack on the dialecticians, he had to give up all teaching in 232 (846) and died in retirement.

His principal works are: Rūya al-Ḥanbaḍ Allāh, Masāḥa (more accurately: Naṣṣ), Kitāb al-Taṣwīkh, Mā’yaṭ al-ʿAṣīr wa-Muṭāna, Risāla: al-ʿAṣāma, Fāḥim al-Sulāfī; none of them is yet printed. The Dāwā’ al-ʾArṣaṣ, which Sprenger attributes to him, is of an earlier date; it was arranged by his chief teacher ʿAṣāma b. Aṣim ʿAshqi.

Muḥāsibī is the first Sunnite mystic, whose works reveal a complete theological education; they combine in a very original way a keen concern for exact philosophical definitions, and a fervent reverence for the most naive traditions with the rigorous search for an increasing moral purification.

In his Rūya he discards the foundations of the concept of introspection which ʿAshqi had envisaged; he shows that a correlation is possible between two series of human happenings, the external actions of the members and the intentions of the hearts (against this: Allāh and the majority of contemporary muḥāṣibīn); he proves in detail that the enactment of the states of conscience (nashīd) can be guided progressively towards a perfect purity, provided an ascetic and moral rule of life is observed, the true ṭabāṣṣīma mentioned in Sūra iv. 27.

His adversaries (muḥāṣibīn), especially Ḥanbalis, attacked him for having differentiated the concepts of "līfān" and "ṣafī" (parallel of the "sower", "sīma" and waṣwafīa (like Ibn Karrām); admitted the created character of the ʿalāfū (our pronunciation of Kurʿānic verses); held that the elect, in Paradise, would be summoned to enjoy directly familiarity with the divine being; chosen his references from authors not by following the formal text and literal translations of their sūrahs, but on account of their intrinsic significance, from their moral weight (līfā), for the reader.

The Rūya is his main work; it forms in 61 chapters, in the shape of advices given to a pupil, a complete manual of the inner life. Ghazālī used it before writing his Ṭūḥā; and in spite of periodical attacks, its reputation among Arabic-speaking Muslim mystics lasted for a long time, and may be compared with that of the Sūrāt Ḥamin Christi among Christian mystics using Latin; the Shinābīya brotherhood, with Mursi, Ibn Ḥabīb Rundi, and Zarath Burski, have always recommended its use; and one of them, ʿArṣ al-ʿArṣ al-Muḥāsib, has made a summary of it.

The Ashʿari theologians also esteem Muḥāṣibī as a precursor.

signon, Essai sur les origines... de la mystique mulsiman, Paris 1922, p. 210—225 and 126—137; do., Passion d’al-Hallâ, index, s. v.; do., Textes indiscrets... la mystique mulsiman, Paris 1929, p. 16—23, and add. (L. Massinon)

MUHIBB AL-DIN. [See al-Tâbarî]  
AL-MUHIBB, a family of scholars in Damascus of the 11th—11th (xvth—xviiith) centuries of which three members distinguished themselves in literature:

1. Muḥibb al-Din Abu ʿAmr Muḥammad b. Ṭāhir Ḥasan b. Muḥammad b. ʿAbd al-Rahmān b. Tāhir al-Dīn al-Ḥasan al-Dimashqī al-Muḥiyyī b. al-Ḥasan, born in the middle of Kamādi? 949 (Dec. 23, 1542) in Hama, studied there, in Halab and Hims and after a journey to Constantinople obtained a post as teacher in the Madrasa al-Κuḍayrīya in Damascus. In 978 (1571) he accompanied the Shâsh al-Islâm and Chief Kālid Četvâže to Cairo, was for a period a kādi and there after a second journey to Constantinople was appointed kādi in Hims, Maʿarrat al-넘ān and several other towns of northern Syria. In 993 (1585) the post of a chief naṣib (al-miṣrāq al-kuṣūr) was given to him; at the same time he was military judge, judge of the Syrian caravans, taught in several madrasas and gave fatwas at the Sultan’s request. He died on the 23rd Shawwal 1016 (Feb. 18, 1608). Of his numerous writings only three have survived: his commentary written in 969 (1561) (according to al-Muhibb, iii. 322, on the other hand, prepared at the age of 16) on Muḥammad b. al-Shâsh’s (d. 815 H.) Uṣūl al-Bayānîya (Muṣ̄lima ṭaḥiyya (Uṣūl al-Bayānîya) in the Berlin, Ahwaiz, Ver., No. 7457—7557, and Gotha, Perach., No. 2780 MSS.; his Travel, al-Riḥûla or Ḫāliṭ al-Riḥûlah al-Ngâdiyya wa l-Diṣār al-Miṣriyya, in the Paris, Cat. de Sâne, No. 2293; Cairo, Fihrist, vii. 646; Stambl, ʿAiṭh Efendi, No. 2030 (s. Rescher, in M.K.O.B., v. 496) MSS., which he wrote when kādi in Maʿarrat al-نعمān, and his commentary written in 1011 (1603) on the authoritative verses in Zamakhshari’s Kaḥfahî entitled Tamīs al-Aṣya, See. Bukhārī 1281, Cairo 1307—1308, and on the margin of Kaḥfahî, ibid., 1318.

2. His grandson Ṣuḥayl Allâh b. Muḥibb Allâh b. Muḥibb al-Din was born on the 17th Muharram 1031 (Dec. 2, 1621) in Damascus, at an early age showed great linguistic ability, received in 1048 (1638) from Naǧm al-ṣul al-Ghazâlî (d. 1051 = 1641), (see Brockelmann, G. A. L., ii. 292) the iṣâqûs for Ḥadîth, and after failing to secure something in Hims through the Shâsh al-Islâm Muḥammad b. Zakârîya, was given by his father the latter’s post at the Derwâshîya. In 1051 (1641) he accompanied Muḥammad Ḥasan to Constantiopole, was appointed to the Madrasa Arba in there, but dismissed a year later, when he returned home. In 1059 (1649) he accompanied the kâdi Muḥammad b. Abâl al-Halûn al-Buṣrâwi to Egypt and became his deputy. After a quarrel with him, he resumed his studies in al-Asâr and came home next year. In 1073 (1662) he again went to Constantinople and four years later was appointed kādi of Barišt and returned to Damascus in 1079 where he died on 23rd Džumâddul-Ilī, 1082 (Oct. 27, 1671). While his own Džumâdû and his description of his journeys to Constantinople have not been preserved, his edition of the poems of his friend Manṣur al-Ḥasan (d. 1080—1069 in Damascus) are still in existence. He first of all arranged them chronologically, beginning with a poem on Sultan Ibrahim I of the year 1055 (1646) (in addition to the MSS. mentioned in Brockelmann, G. A. L., ii. 277 there are now Kuprili, ii. 1245 and Mösûl, Daʿûd, Manṣûr, No. 153, 20), then alphabetically, including poems of a later period down to 1071 (1660); this edition was printed at Damascus in 1301. In 1078 (1667) he edited the biographical work of Abû al-Ḥasan al-Bûrûnî (d. 1024 = 1615) Taʾrif al-ṣawād min Abû al-ʿAzîm and published it with a supplement; we may add to the MSS. mentioned by Brockelmann, G. A. L., ii. 290: Muḥammad Kurd al-All, in R.A.A.P., iii., 1923, p. 193—202.

3. His son Muḥammad al-Amin b. Ṣuḥayl Allâh b. Muḥibb Allâh b. Muḥibb al-Din Muḥibb al-Din, born in 1059 (1649) in Damascus, went with his father in 1065 (1655) to Egypt but returned home several times from there. A friend of his father’s, Muḥammad b. Luṭf Allâh b. Bârûn al-Iṣârî, who had been kâdi in Damascus in 1065 (1655) and was military judge in Anatolia in 1078 (1668), provided him with funds to study in Brusa. He returned home after a brief stay there on 8th Safar 1086 (May 4, 1675) in company with the mufti Muḥammad b. Abî al-Ḥalîm al-Iṣârî had in the meanwhile been appointed military judge in Adrianople and was able to procure him a post there. But his patron fell ill soon after wards and had to resign. Muḥammad accompanied him to Siambal and looked after him till his death on 10th Shawwal 1092 (Oct. 24, 1681). He then returned to Damascus and began to write. When in 1101 (1690) he had made the pilgrimage to Mecca, he was appointed a deputy kâdi and then a teacher in the Amnīya in Damascus. He died there on the 18th Džumâdd al-Ilāh, 1111 (Nov. 11, 1699).

His principal work is a collection of about 120 biographies of scholars, poets etc. of his time and the period immediately preceding it arranged in alphabetical order, entitled Khustain al-Alfar fi Ḥāna al-Karn al-kâdî al-suhûr, the first fair copy of which he finished in 1096 (1685) (printed Cairo 1684, 4 vols.). The draft of a number of biographies from the Hijâz and Yemen, which is preserved in the Brill-Houtmans MS., No. 112 appears to be part of the preliminary work on this collection; the draft of a synopsis is, No. 112 appears to be part of the preliminary work on this collection; the draft of a synopsis is, No. 112 appears to be part of the preliminary work on this collection; the draft of a synopsis is, No. 112 appears to be part of the preliminary work on this collection; the draft of a synopsis is, No. 112 appears to be part of the preliminary work on this collection; the draft of a synopsis is, No. 112 appears to be part of the preliminary work on this collection; the draft of a synopsis is, No. 112 appears to be part of the preliminary work on this collection; the draft of a synopsis is, No. 112 appears to be part of the preliminary work on this collection; the draft of a synopsis is, No. 112 appears to be part of the preliminary work on this collection; the draft of a synopsis is, No. 112 appears to be part of the preliminary work on this collection;
like the crown and throne. It is the same when sovereignty is delegated to governors (vi., p. 5; v. 1; cf. i., p. 499; v. 163; iii., p. 421; v. 111; vi., p. 459; v. 3745; v. 463; v. 418). There is a reference in the same poem to seals of amber (i., p. 545, v. 692) such as actually existed (cf. Reinaud, Mon., i. 129). They were sometimes steeled in Chinese musk (vi., p. 351, v. 2288).

In Turkey the seal was again the emblem of power. The imperial seal (mukhär-šāhīnīšāhī) was handed to the grand vizier, hence also called mukhär-šāhī (cf. 8āzām-Šāhī), with great solemnity. Cf. M. d'Ohsson, vii. 120, and Na'īm (iv. 430). In speaking of ambition to become grand vizier the phrase mukhär-šāhīnīshāhīnī ("desire for the seal")

We may mention here that according to d'Ohsson (8āzām), the sultan had four seals with a tughrā set in rings; one was square and remained in his possession; he entrusted the others which were round, to the Grand Mistress or Lady Treasurers of the Harem (khāmān-tā?) and to the khāmān-tā, a white eunuch who at one time held the office of first chamberlain.

The seal was changed at each accession of a new monarch (cf. Na'īm, i. 117) as was the tughrā itself. Ewīlī Čelebi's statement, which implies the contrary, is therefore rather strange (vii. 300, v. 4 from below). In Persia the seal was retained but the name was changed (cf. Čaitam).

The grand vizier produced the imperial seal on the ašarbān days for the bolt or seal and for the registers of the rūsānāh and the archives of the Finance Department and melāyī defter-khānā, the Treasury (khānāt) and the general Archives (defter-khānā) (M. T. M., 499). The grand vizier also had, like all the viziers or governors of provinces, two other seals, one, a large one, impressed at the top of bayurūtān or "ordnances," and the other, a small and modest one, placed at the foot of the letters from the vizier, including official ones (cf. Ahmad Rūsūm, 8īmīn. Tarīkhā, iii. 1514).

The use of seals in Turkey (we know very little of those of the Sālājūls; cf. Reinaud, Mon., i. 121 note) was exceedingly widespread. They were used for impressions in wax (mukhār-mawān) and for stamping in a particular kind of ink to which saliva was added, as in Persia (cf. l.e Père Raphaël du Mans, p. 129). In more modern times the seal was carried in the purse (cf. a verse by Mejmīd 8ākīf in his poem Sīrīl Rāhī). It is only recently that under the influence of the West the mukhār has been dispensed with by the signature. It must have received its coup de grace with the recent adoption of the Roman alphabet and of rubber seals.

The industry of seal-engraving has thus been gradually disappearing. It had at one time reached a high degree of perfection and the artists used to sign their work. These signatures were usually very brief, Mīḥlī, Sīh, Ahmad etc. They were written in characters so minute that they could only be distinguished with a lens and only when very clearly engraved. Quite a study could be written on these artists.

Ewīlī Čelebi gives the following information about the seal engravers of Istanbul (i. 575). He distinguishes:

1. Engravers on stone, Ḥabbākūṭ, 105 workmen in 30 shops. They engraved on stones such as
THE MUHRADAK (MOHURDAR), Turk. MÜHÜRDAH [cf. the article ŞEHAT], keeper of the seals or better, "private secretary" (cf. below), was therefore a very important personality. Mir 'Ali Shīr Nava'i was the muhradak of Ḥusain Baiktara before becoming Ḥusain b. Reza and first minister (cf. Belin, Notice sur Mir..., 1863, p. 13; cf. de Saëcy, N.E., iv. 284, 261). He was succeeded in these offices by another poet, Mo'vestān (ibid.). On the muhradak in Persia, cf. Le Père Raphael du Mans, p. 21. In Central Asia the title of muhradak seems to have replaced that of tāmbūk which is now early as the Orkhoz inscriptions. In Turkey, each vizier had his muhradak (Ahmad Râsim, "Othman. Türk. li. 455). Cf. the account of the career of a muhradak in the Süklü'evâni, ii. 33 below (Behroj Eshuha [the same as is mentioned in the Manuel de Saint Pâsha, i. 4].)

The vāhnāmāgī had also their own muhradaks (J. Deny, Sémaine des archeves turques du Caire, p. 136). At Kâfi Koy there existed a quarter called Mühradak. For the work bearing the title Mürhuradak Türkî, cf. Babinger, G.O. W., p. 216 sq.

With the viceroys of Egypt the muhradak was a "private secretary" of the Khedive. The title of muhrdar was abolished in 1884 but the office has remained. His salary was the same as that of the chief of the cabinet (cf. ibid., p. 92 and 476).

Bibliography: Cf. the article ŞEHAT. We may now add: Babinger, Das Archiv der Byzantischen Osman Pacha, Berlin, 1931, p. 23 and note 5, where reference is made to a little known article by Rina Efiomi Madesroef. Cf. also von Hammer, Hist. de l'Empire Ottoman, xi. 445, 450, 464 (J. Deny).

MUḤSIN ALI, son of Shah Ḥusain Ḥājīkhan, was an inhabitant of Lucknow. In poetry he was the pupil of Ḥājan Wasi'. He flourished in the latter part of the sixteenth century. He is the author of a Dīwān, a collection of lyrical poems, and a biography of Urdu poets called Nasabî Sama'īn. Bibliography: Nasabî, Tīmcīd-

al-Muhtadī, Abu Abū Allām, Muḥammad, an Aḥbāb al-maṣbūl. After al-Wâlîk's death, a number of officials wished to pay homage to the young Muhammad, son of the deceased caliph and a Greek slave; instead however, al-Wâlîk's brother was proclaimed his successor and only after the deposition and murder of the unfortunate al-Mu'tazz (end of Ṛaddāb 255 = July 693) Muḥammad ascended the throne with the name al-Muhtadī. His ideal was the Umayyad Caliphate. People al-Aris. Like the latter, he also distinguished for the strictness with which he conducted his life; with piety and simplicity however, he combined strength and ability and during his brief reign he did his best to raise the caliphate from its degradation and to restore the power of the Commander of the Faithful. In several provinces there were risings by 'Alids, real or alleged; but the most dangerous enemy of the caliph was the Turkish general Miṣr b. Baghā. When the latter, who was fighting against the 'Alids in Persia, heard of the accession of al-Muhtadī, he returned home. Reaching Sāmarrā in Muharram 256 (Dec. 869), he forced the caliph to take an oath to bring to justice the Turkish chief Sālih b. Wāṣfī, who had robbed the mother of the caliph al-Mu'tazz of all her priceless treasures. When Sālih concealed himself, the Turkish mercenaries mutinied and were intending to depose al-Muhtadī but were suppressed by the minister of the latter. Al-Muhtadī then promised Sālih's followers that he would pardon him; but as the latter did not appear, they went to Sāmarrā and began to pillage it until they were scattered by Miṣr. Sālih was soon afterwards discovered and killed by one of Miṣr's men. When Miṣr had taken the field against the Kārāgārī, al-Muhtadī began to incite the people against him and his brother Muḥammad b. Baghā and accused them of embroilment. Muḥammad was brought to trial and put to death although al-Muhtadī had expressly guaranteed his pardon. The only course left for the caliph was to dispose of Miṣr if he was to keep his throne. But his plan was betrayed; Miṣr advanced with superior forces and the caliph suffered a disastrous defeat. As he declined to abdicate, he was murdered in Radjab 256 (June 870) in horrible fashion.

MUḤTASIB (Ar.), "censor," an officer appointed by the caliph or his warī to see that the religious precepts of Islam are obeyed, to detect offences and punish offenders. His office was the jihâd, and to it only men of good standing could, in theory, be appointed. Like al
Group of 29 seals accompanying the address to Muhammad 'Ali Pasha by the principal religious authorities in Mecca: the governor at the time, the imāms, khāffas, mujtahids of the four schools etc. The text dated at the end of the month of Muḥarram 1226 (Feb. 27/1813) contains congratulations on the occasion of the victory over the Wahhabs and expressions of gratitude for the restoration of freedom of pilgrimage.

Art. MUHR
Seals of various individuals, Ottoman, Algerian and Hijjari (beginning of the sixteenth century).

2. Esma Sultan, sister of Mahmud II. 11 Ram. 1222 (November 12, 1807).

3. Musa Pasha, șehînêçi or grand vizier interim. 8 Shaw. 1222 (December 9, 1807).

5. Kasim Agha, chief eunuch. 19 Rab. II 1225 (May 24, 1810).

8. Mehmud 'Arif Efendi, former șehîğ-êli-islâm. 9 Saf. 1227 (Feb. 21, 1812).

9. Mehmud Sadl Khatîb, Minister of the Interior. 23 Ijam. II 1227 (July 4, 1812).

10. Shâkir Ahmed, șehînêçi. 28 Ijam. II 1227 (July 8, 1812).

11. Mehmud Khurshad Pasha, șâbu-d-şâba (at this date). 15 Saf. 1228 (Feb. 17, 1813).

17. Sarl Ahmad, wa'dl al-haramain al-harfâm at Mecca. 3 Shaw. 1241 (May 11, 1826).

18. Selim Thabit, wa'dl of Algiers at Constantinople. 7 Shaw. 1242 (May 4, 1827). Cf. No. 4: same seal, but on this impression the signature of the zugraver 'Omer appears clearly under the fleuron on the left.

19. al-Saiyid Khalil, wa'dl of Algiers at Smyrna. End of Ram. 1243 (April 15, 1828).

22. Sulaimân Ismail, șâmîç and wa'dl of Algiers at Durazzo. 7 Ram. 1244 (March 15, 1829). To left under the fleuron: signature
holders of public office, he had to be a Muslim and free. Generally he was a fakih, and in addition to his police functions he performed those of a magistrate. In some respects his duties were parallel with those of the šafi‘i, but the mufti’s jurisdiction was limited to matters connected with commercial transactions, defective weights and measures, fraudulent sales and non-payment of debts. Even in these matters he could hear only those cases in which the truth was not in doubt. As soon as evidence had to be sifted and oaths administered the mufti’s jurisdiction ceased. As a consequence he had power to enforce the law without first requiring complaint from an injured party, and had to see that in a place where Muslims lived they did not neglect to hold a Friday service in the mosque and that if they numbered forty or more they formed themselves into an organised community. But if the number was large and there were differences of opinion on the question of worshipping the individual Muslim at the mosque unless he was a persistent defaulter. Even then the officer could do no more than admonish the delinquent. So far as the mosque was concerned the mufti could insist on the qibla and he could examine the mu‘allafat in the subject of the times lawful for the ablution. If a public mosque fell into disrepair, the mufti was charged with the duty of calling the attention of the authorities to the matter.

An important part of the mufti’s duties was to see that the laws of the šafi‘i were maintained. Persons breaking the fast of Ramadan, widows and divorced women who did not observe the ḥudūd [q.v.] before remarriage, and other transgressors, were liable to have to make explanations before him. Public morals further, came under his jurisdiction. He had to prevent men from consorting with women in public and from indulging openly in wine; also the playing of forbidden musical instruments came under his ban and he had to see that games and toys did not lead to offences against the šafi‘i. However, he could not act on suspicion alone nor had he the right to go behind closed doors to pursue his investigations. His powers would appear to have been wider where the spiritual welfare of Muslims was concerned. Thus if a fakih propounded views contrary to idjma‘ [q.v.] it was the mufti’s duty to admonish him and to report him to the sovereign if he persisted in preaching heterodox doctrines. Also, if a person not a fakih suddenly turned to the study of the šafi‘i, the mufti had to make investigation in order to discover his motive and to prevent his misleading persons who might apply to him. Schools also had to be visited by the mufti, though not so much for the purpose of inspecting the character of the teaching as to ensure that teachers did not beat their pupils too severely (Ma‘ṣūṣ, Ḳaṣaf, i. 464). Other matters which came within his jurisdiction were connected with public amenities rather than with morals or religious institutions. Thus, in towns where the source of drinking water was coiled or the provision made for poor wayfarers he could order the townsmen to rectify matters. He had to see to it that no house overlooked the women’s quarters of another belonging to a Muslim and that no house had projecting rainspouts or drains leading on to the street to the inconvenience of wayfarers, and finally that the šafi‘i was kept clean and clear of obstacles to traffic.

AL-MUḤÝL. [See ʿAlîn, b. 2.]

MUḤÝL b. ʿALI (al-Arâbî). MUḤÝL b. ʿALI MUḤÂMÂD (Mehmed) b. ʿALI b. AL-DIN ‘ALI al-DÎJÂLÎ, a Turkish theologian and historian of the time of Selim I (1512–1520) and Sulaimân I (1520–1566). His father was the famous mufti Zanibî ‘Alî al-Dîjâlî, a grandson of Dijâlî al-Dîn Mehemd of Ak Serai (hence the epithet Dijâlî). He received his theological training first from his maternal grandfather, Hüsân Zâde Feândî, then from his father ‘Alî al-Dîn and later from Mu‘ayyad Zâde Feândî. He worked as mûdates in several medreses, in Constantinople at the Murad medresse and at the eight schools of the Fatih mosque and in Adrianople where he was also a mufti for a period. He died in retirement and was buried at Adrianople in 957 (1550); according to some, however, in 956 (1549).

His main importance lies in the fact that he edited the anonymous Ottoman chronicles, the Târîkh-i ‘Alî ʻOthmânî, and under the title Târîkh-i ‘Alî ʻOthmânî, These chronicles which run from the beginning of the Ottoman empire were continued by him down to 936 (1539) i.e. till shortly before his death.

Two versions of his Chronicle exist, both of which go back to him: 1. a shorter one to which corresponds the translation of the Beck manuscript by Gaudier-Spiegel: Chronica ac Acta (in der Türkischen Sprache vorn geführte Krüge, aus Türkischer Sprache verdeutsch. Vorhm niss in Druck ausgesehen, Frankfurt a/O. 1567; it was also published in Latin and German by Leunclavius: Analea Sultaniearum Ottomanarum a Turcicisenna scripta, Frankfurt 1588; 2nd edition with index and German transl. Neues Chronika Türckischer Nation von Türken selbs beschrieben, Frankfurt a/Main 1590; 2. a longer version: the so-called Veronan Chronicle (Codex Veraniatanus), edited in Latin and German by Leunclavius: Historia Musulmanum Turcorum de monumentis inscriptis in libro XVIII, Frankfurt 1591. These were 18 books instead of the 30 planned. As early as 1590 the first three books were published in German at Frankfurt: Neuerer Musulmanischer Histori, Türkische Nation, von ihrem Herkomen, Geschichte und Taten; beyß Bücher, die ersten unter derregischen, followed by the complete German translation of the Analee: Neuerer Musulmanischer Histori Türkischer Nation, Frankfurt a/M. 1595.

In addition to his chronicle, which exists only in manuscript (MSS. in Vienna, Munich, Berlin, Gotha, London, Constantinople etc.), Muhyî al-Dîn is also credited with poems in Turkish, Arabic and Persian (also extant in a manuscript) and a theological work.
MUHYI 'L-DIN MUHAMMAD — MU'IN AL-DIN SULAIMAN PARWANA

MUIHYI LĀRĪ (d. 933 = 1526—1527), a Persian writer, author of the famous Fatḥi al-Haramain, a poetical description of the two holy cities, Mecca and Medina, which also contains a full account of all the rites of the obligatory pilgrimage (hajj).

This book, written in 911 (1500) and dedicated to Mu'āṣar b. Mahmūd Shāh of Gūḍḫāst (197—932 = 1511—1526), was a long time wrongly attributed to the celebrated poet 'Abd al-Rahmān Kāšānī. Muḥyī Lārī was a pupil of the great philosopher Muhammad al-Sha'rānī (d. 907 = 1501) and made use of his extensive philosophical knowledge in a commentary on the great Kāfāh of Ibn al-Fārūḍ, which is known as al-Tārīkh al-kubrā. In this work he endeavoured, following in the footsteps of his teacher, to reconcile the principles of orthodox Muhammadian mysticism with the teachings of Aristotle in the form in which they were disseminated in the east.

(E. BERTHELS)

AL-MU'TID. [See 'Allah, b. 1, 113.]

MU'IN AL-DIN SULAIMAN PARWANA, vice-regent of the Sālidūq empire in Asia Minor after the Mongol invasion of that territory. His father Mahdihībād al-Dīn 'Alī al-Dāhlī, some sources, such as the Taqīrī-bi Gū啸e, Mu'īn al-Dīn is called "al-Kāshī," which implies origin from Kāshān) had been a minister during the reign of Kākhkūshār II and had been able, after the battle of Kūse Dagh (1243), to secure for a time the continuation of the Sālidūq dynasty in Asia Minor, by his intercession with the Mongol general Bāqūlī (Bin Bībi, p. 243). His son Mu'īn al-Dīn Sulaimān soon rose to hold important offices and had been commander of Tōkjāt and Erzinjān, when, in 1256, he was promoted, by the favor of Bāqūlī, to the rank of pārwarān. The title pārwarān denoted a high administrative office (high chancellor) in the Sālidūq empire and is erroneously explained by the Persian dictionaries as a synonym of fāwārān (the word is fully discussed in the foot-note in p. 46 of Khalīl Edhem's article in T.O.E.M., vol. viii; cf. also Huettl, Z. Isl. Staats, i, 86). At the time indicated the three sons of Kākhkūshār were nominally reigning, but Mu'īn al-Dīn was already the real director of affairs. After Bāqūlī had appeared on the scene in 1250, the empire was divided into two parts, of which Kukan al-Dīn Kājīlī Arslān got the eastern part with Parwana as visier at his side. The latter had also a family connection with the dynasty, for he was married to a daughter of Kākhkūshār II, while one of his own daughters became the wife of the Sālidūq Ghiyāth al-Dīn Mas'ūd II. As visier of Kukan al-Dīn he conquered Sinope (Stabul) from the Greek emperor of Trebizond; the town was given to himself, and after his death some of his descendants continued to reign there (cf. 1250 and 1287, Schödel, Parwanier-Zaithlen, in T.O.E.M., 1st year, p. 703). In February 1265 Parwana, warned that his sulṭān wanted to get rid of him, had him imprisoned and afterwards strangled at Aş-Serīt. The two and a half years' old son of Kukan al-Dīn, Ghiyāth al-Dīn Kākhkūshār, was set up as puppet-king. During the following years, when Parwana was, under the supervision of the Mongols, the real master in Eastern Anatolia, the wretched situation of the country induced many notable Turks to emigrate to Egypt, where they incited Sulṭān Baibars to a military expedition against the Mongol dominion in their country. It is highly probable that Mu'īn al-Dīn Parwana himself was secretly at the head of these negotiations. Baibars invaded Asia Minor, defeated a Mongol army at Alibārba and occupied the town of Kaşārīye in April 1277. Here he waited for Parwana to join him, but the latter had lost his confidence in the enterprise and fled to Tōkjāt with the young sulṭān. Baibars returned again to Syria and soon a Mongol army appeared under the Ilkhan Abaqa to inflict drastic punishment on the Muslim population; he is said to have killed over 200,000 people. At the same time suspicion fell on Parwana. He was accused of having fled with his army at the battle of Alibārba, of having not appeared before the Ilkhan after the defeat, and of having neglected to inform the Mongols of Baibars' approach. At first Abaqa was willing to spare him, but on the insistence of the relatives of those killed in the battle of Alibārba, he ordered him to be executed at Ala Dagh, together with his retainers, probably on the 1st of Rabī‘ I 676 (August 2, 1277). Ala Dagh is, according to Khalīl Edhem, probably the same as Köse Dagh, to the east of Siwā. His burial place is not known. A foundation inscription on a mosque built by Mu'īn al-Dīn Parwana in 663 (1264—1265) is still extant at Marzūf. His death inspired several poets to make elegies on him (Manādījīm Bīshī). From the tradition of the Mawlawī order it appears that Parwana was on intimate terms with Khalīl al-Dīn Rūsūm; the latter's work Fatḥi al-Mu'īn was dedicated to him (cf. Kūripūlālī, Zāhil M. Fāsil, I, Mu'tawālīm, p. 258).

mid writers claim, he privately declared his adhesion to al-Mu'izz. His death on 21st Djamād al-Aswād (24th May 968) gave the signal for the advance of the Fātimid army, said to have been over 100,000 strong, which set off under the command of Dījawar on 14th Rabi‘ I, 358 (6th Feb. 969), with the support of a naval squadron. The disorganization which prevailed in Egypt and the terror inspired by the Greek armies (who in 968 had swept over the whole of northern Syria without meeting opposition and had taken immense numbers of prisoners), contributed greatly to the prospects of its success; moreover, many of the Egyptian notables and even of the troops had sent letters to al-Mu'izz inviting his intervention. On Dījawar's approach the population made their submission by an embassy of notables, but the Ikhwānid and Tūlūnī regiments rejected the conditions laid down in the agreement, and had to be forcibly dislodged from their positions at Dījrāz and on the islands. The retreating Manuli people split up into bands, some of which continued to give Dījawar much trouble as local centres of disaffection, ending only with the arrest and deportation to Africa of their commanders, and the disarmament or imprisonment of the remainder.

Dījawar, having entered Fustān on 17th Shawwāl 358 (7th July 969) and laid the foundations of the new city of al-Khīrā, immediately took in hand the reform of the administration. Complete religious toleration was promised, and confirmed by the reinstatement of the existing officials, weekly sessions for the hearing of mājālim were instituted, several vast taxes were abolished and property which had been illegally appropriated to the Treasury was restored to its owners and regular salaries were assigned to the officers of the mosques. Another of his reforms, however, caused great resentment, as the levying of a new coinage to replace the existing debased coinage, and the order to levy all taxes in the new currency. His difficulties were increased by a prolonged famine and by the turbulence of the Berber soldiers, and it was not until the arrival in Egypt of al-Mu'izz himself in Ramadān 362 (June 973) that the task of reorganization was completed by centralizing the financial administration under Ya'qūb b. Kifrī (q.v.) and 'Amīr b. al-Ḥasan, and by the removal of the Berber troops to a new camp near Heliopolis.

The course of events in Syria after the occupation of Egypt is differently related and obscure in detail. Dījawar's lieutenant Laj'far b. Fadhāl defeated the joint forces of the Ikhwānīs and Karmānijas under al-Ḥasan (in some versions al-Ḫāshām) b. 'Ubayd Allāh b. Taghādī at Ramla in the early months of 359 (970), but the general disorganization and the licence of the Arab tribesmen preventing him from entering Damascus until Dhu 'l-Ḥijjah of the same year. Shortly afterwards he detached some contingents against the Greeks, but the troops sent to recover Antioch were defeated near Iskandarīn, or, according to Yahyā b. Sa‘īd (ed. Chekhlo, p. 139), were recalled before besieging the city for five months. Meanwhile the Karmānij general al-Ḥasan b. Ahmad al-ʿAṣām (in some versions al-Aghabāh), in revenge, it is said (but see de Goeje, Les Cérémonies du Bahrām, p. 181-190), for the stoppage of the subsidy he had received from the Ikhwānid al-Ḥasan, opened negotiations with the Buwālīd 'Īzā al-Dīn and
the Hamdānī idrīs of al-Mu‘izz, and with the aid of subsidies from the sultans and some Ikhshihīd contingents, defeated and killed Dayfīr and recaptured Damascus in 1721 (A.H. 365). Having set up the remaining Egyptian forces in Yūsf, he marched on Cairo, but was defeated by Dzhawar in Rābi‘ I 361 (Dec. 971), and his fleet was destroyed at Tinall. The Karmātians retained their hold on Damascus, however, repulsed a strong Mamluk force despatched to Palestine by Dzhawar in Ramaḍān 361, and with an army of Arab auxiliaries and Ikhshihīd (some sources also add Daylami) made a second descent upon Egypt after the arrival of al-Mu‘izz. By bribing the Arabs, the Caliph succeeded in dividing and defeating the Karmātian army outside Cairo in Ramaḍān 365 (May–June 646), but not before the Karmātian forces had overrun both the Delta and Egypt itself. On al-Hasan’s return to al-Ahṭīr the ‘Uṯlīlī Zā‘īm b. Mawshīb occupied Damascus on behalf of al-Mu‘izz, but came into conflict with the Mamluk troops, whose indiscipline and excesses at length led the citizens to appeal to the Turkish general al-Aṣfāḥīn, who remained in possession of the city until he was captured by al-‘Azīz [q.v.]. Meanwhile in northern Syria the Fāṭimid forces gained a series of striking successes against the Greeks. Tripoli and Bahrīt were captured in 394 (975), and John Zimiskes suffered a crushing defeat both on land and sea at the hands of Rāyšān, governor of Tripoli, on his attempt to recover the city.

The empire which al-Mu‘izz bequeathed to his successor, though it fell short of his ambitions, was still of imposing extent. The viceroy to whom he had committed the western provinces, Balasik b. Zīrī [q.v.], proved both loyal and capable; when, on the departure of the Caliph, the Zenātīs again rose in revolt, he scattered their forces and captured Tāḥāt and Tilīmān. The holy cities of Mecca and Madīna acknowledged the suzerainty of the Fāṭimidās, and they had a powerful following in Sīnā. Only in Syria had the Karmātians, on whose cooperation al-Mu‘izz had confidently relied (though the letter reproduced by al-Makhrīzī, Ḥakīmah, ed. Bn LX, p. 333 sqq. is of doubtful genuineness), brought him to a halt, but by this action they had placed a fatal obstacle in his way. This appointment preyed on his mind and, worn out by ill-health and by grief at the loss of his eldest son ‘Abd Allāh (died 364), he died at Cairo on 12th Rābi‘ II, 365 (Dec. 19, 975), having nominated as his successor his second son Nūẓẓar al-‘Azīz.

The personal character of al-Mu‘izz was singularly noble; frank, accessible, simple in his habits, endowed with brilliant gifts, and endowed with all the traditional qualities of šī‘a, he was at the same time a capable administrator and just towards his subjects, though the financial exigencies of his last years left a bitter memory. No instance of cruelty is recorded of him, except the execution of his Karmātian captives, and he was completely devoid of religious fanaticism.

(H. A. R. Gibb)
difference in longitude between the two heavenly bodies is 180°, while the modern use is to take account of the deviations of latitude from the ecliptic, al-Battâni’s expression, emphasis (Opus astronomicum, ed. Nallino, ii. 196) that we can only have the true Mukabala when both bodies are either in the ecliptic itself or are in equal ecliptical latitudes when opposed; in other words when they are diametrically opposite one another in the heavens (cf. *kibur al-musulmān*). Opposition with the sun can only occur for the moon and the outer planets (in ancient astronomy only for Mars, Jupiter and Saturn), not for the two inner ones, Mercury and Venus. When an outer planet is in opposition to the sun, its conditions of visibility are at their best; at midnight it passes through the meridian and is above the horizon the whole night. When the moon is in opposition to the sun, when the sun has set, the usual technical expression for this in Arabic astronomy is *al-taṣālíkh*, which is derived from the same root as *mukabala* (Greek *μεταβολή* or *μεταξομεταβολή*) and is rendered by Plato Thebanaeus and other mediæval translators by *transmutation*, but we do not commonly apply the general term *mukabala* applied to the opposition of sun and moon, while on the other hand we never find *al-taṣālíkh* used in the general sense of opposition of the planets (cf. al-Battâni, iii. 349, s. v. *kibur al-musulmān*).

Al-mukabala, opposition, forms along with *tābat*ī, quadrature (Gr. τετράγωνον, Lat. quadratum, quadratum), *tābâṭāk*ī, trigon (Gr. τριγώνον, Lat. trigonum, triangulum, trigonum, *astra* tricornia), and *tākta*sī, hexagon (Gr. ἕξ γωνία, Lat. hexagonum, sexangulum, *astra* sexticia), the four astrological aspects (ābdāl, ṣāhīl, ḥaṣāl, ḥaṭlat), which are applied to the ecliptical difference in longitude of two planets to the amount of 180°, 90°, 120° or 60° respectively. The *aḥkāl* also play a part in the astrological arrangement of the signs of the zodiac (tawāgi) (cf. the article *miqāra* and al-Battâni, iii. 194). It should be noted that the conjunction of planets (mukabara, Greek *συνάφεια*; for moon with sun [new moon] always *idgīn*) is not included among the *aḥkāl*, nor the position when the difference of latitude is 30° or 150° (cf. al-Battâni, s. v. *aḥkāl*).

In horoscopes mukabala and *taṣālīkh* are ruled as unfavourable in principle, *taḥkīk* and *tāصلا* on the other hand as favourable.

(Wilf Hartner)

MUKADAM (m. a. *placed in front*). Applied to persons the word means the chief, the one in command, e.g. of a body of troops or of a ship (captain). Dozy, *Spieg.* s. v., gives number of police appointments which have this name. In the devshir orders the word is used for the head of the order or the head of a monastery.

As a neuter noun the word is a technical term in logic and arithmetic. In logic it means the protasis in a premise in the form of a conditional sentence, e.g. *"If the sun rises (it becomes day)\*", where this whole sentence is to be regarded as a syllogism. But as every sentence can be a premise, *mukaddam* is really identical with the condition in the conditional sentence. In arithmetic *mukaddam* means the first of two numbers in a proportion, i.e. 3 (1-5) or in other words the divided in a simple division.

In logic and in arithmetic the portion following the *mukaddam* (in brackets above) is called *taṣālīkh*.

(M. Flogner)

AL-MUKADDASĪ, SHAMS AL-DIN AḤĀB AL-‘ABBĀS MUḤAMMAD B. AḤMAD B. AḤĀB AL-BANNA’A AL-SHĀMĪ AL-MUKADDASĪ AL-MAṬ‘Ī B. ‘ĪSĪ AL-BASHSĪRĪ as he is called on the first page of the Berlin manuscript (Cat. Ahlwardt, No. 6034), is the author of the most original and at the same time one of the most valuable geographical treatises in Arabic literature. The name-form al-Mukaddasi, denoting his origin from Jerusalem, goes back to Sprenger, who brought the Berlin manuscript from India and made this author first known in Europe (A. Sprenger, *Die Post- und Reisezüge des Ortes*, Leipzig 1844, p. xviii), but the form *Maṭ‘ī* is probably more correct, as Jerusalem is commonly spelt in Arabic al-Madīa (Yāḥyā, *Al-Madīa*, iv. 550). Yāḥyā always quotes him as al-Bashshārī.

Biographical dates on the life of this author are only to be found in the text of his treatise. In 356 (966), when he was at Mecca, he was about twenty years of age; it is probable that he lived at least as late as 1000, as the last datable information in the treatise belongs to the end of the 10th (xth) century. His grandfather Abu Bakr al-Banna’ā was an architect in Palestine and had made for Ibn Ṭulun the gates of the town of ‘Akkih. His mother’s family was originally from Bīyar in Kūmis, from where his grandfather Abu I-Tayib b. al-Shāwī (in B.G.A., iv., p. viii, l. 12, *paterna* is to be corrected into materonas) emigrated to Jerusalem. Muḥammad b. Ahmad himself shows also a good knowledge of architecture, besides a good literary and general erudition.

The geographical treatise is known from two old manuscripts, which form the basis of de Goeje’s edition in the B.G.A., iv. 1877 and of his revised edition of 1906. The Berlin manuscript has the title Aḥsan al-Tawāqi’ fī Murūṣat al-Aḥfūl, while the Constantinople manuscript (Aya Sofia, No. 2977 kēr; cf. Ritter, in *Lit. xix.* 43), written in 658 (1260), is only indicated as Kitāb al-Aḥfūl. The Leyden manuscript (Cat. v. 191) is a modern copy of the Constantinople one, while another Berlin manuscript (Cat. Ahlwardt, No. 6033) is a bad copy of the other Berlin manuscript. The date of composition is not certain. The text itself states that it was completed in 375 (985) (B. G. A., iv. 9), but as has been said, information of a later date has been added, while Yāḥyā (i. 653) gives the year 378 (988). The manuscript (Constantinople) is somewhat less extensive than Berlin) and de Goeje, hesitatingly, considers the composition of C as the older one. It is dedicated to a certain Abu I-Ḥasan ‘Aḥī b. ʿIṣā and mentions the Samaras as the most important dynasty; B, on the contrary, does not contain the dedication and is more orientated towards the Fatimids.

The general scope of the work proves beyond doubt that it is based on the same geographical tradition as the treatises connected with the names of the latter, but affords a wealth of information on a vast number of regions hitherto unknown to Europeans. The author’s undoubted aim is to describe the land of God with his own eyes, in contrast with the material from which the earlier geographers drew as fully as possible. The work has a very unequal value. The first part dealing with Syria, Egypt and Africa is the best and most trustworthy. The descriptions of the different regions in Arabia are for the most part compiled from older sources. The author’s real merit lies in the fact that he assembled so much material and collated it with so much care and knowledge. He describes all kinds of wild beasts, birds, flowers, fruit and corn, and gives also a number of meteorological and astronomical data. He has drawn up a list of castles and fortresses, the names of which are found in other sources nowhere else, as well as a list of inscriptions which are not found in any other manuscript. He does not give any indication of the sources from which he took his information, and is therefore of little value as a bibliographical authority. (D. de Goeje, *Die Post- und Reisezüge des Ortes*, Leipzig 1844, p. xix).
where the native sailing-boats are built. The country around is not fertile; a mile to the west however is an oasis belonging to the ruler, which is watered by a stream which also provides the town's water supply. The climate of Mukallā is very dry, the coast hot; only from October to April and in June and July do fresh breezes and showers temper the heat. The population varies between 6,000 and 12,000.

Mukallā is the only place between 'Aden and Maskat that deserves the name of harbour. It cannot however be used as an anchorage during the southwest monsoon; in this period its place is taken by Burām, 16 miles southwest. The trade with India, Somalia, the Red Sea and Maskat is considerable. The exports are mainly gum arabic, skins, henna from the Veshbou valley, senna and some coffee; the imports are cotton goods, metals, pottery from Bombay, dates and dried fruits from Maskat, coffee from 'Aden, sheep, aloes and frankincense from the African coast. The fisheries also give a considerable yield while amber is obtained in considerable quantities. Parais and bananas from Bombay play a leading part in the trade and Hindustān is spoken almost as much as Arabic. Since 1884 Mukallā has been under the rule of the 'Alā'ī dynasty with which England concluded a treaty granting a protectorate on May 1, 1888. According to Ibn al-Majdūsir, the old name of the town was 'Al-Mukannā, and the natives also called al-Mukallā, like al-Shīrī, Bender al-Abkāf or Sīk al-Abkāf. The port has steamship communication with 'Aden; most of the traffic is borne by native sailing-boats of 100—300 tons, which are busiest at the time of the date harvest.

(Adolf Gehrmann)

AL-MUKALLĀ. The capital of the province of Mukallā, and situated on the southern coast of Arabia, 142 miles N.W. of the cape of the same name. The town lies between two bays at the foot of a reddish limestone cliff, which rises to a height of 300 feet behind the town; four towers for the defence of the town are built upon it. On the west side a wall runs from the cliff to the shore with only one gate in it. The only buildings of any size are the great mosque on the coast with a minaret which can be seen from a great distance, and the sultan's palace; the other buildings are mainly huts with a few houses of stone. The palace is a great six-storey building with decorated windows which stands on a kind of peninsula. In the centre of the town is a large cemetery with the tomb of Wall Yaʿqūb; in the modern western part of the town is the bazaar which is provided with all kinds of goods and has some modest industries which provide the native population with baskets, pipes of a kind of limestone, silver powder-horns and muskets without stocks. There is a yard in the harbour I. G. W. de Goede, in the introduction to vol. iv. of the B.G.A., p. vi.—viii.; further cf. Brockelmann, G.A.A., i.

[J. H. Kramer]

MUKALLĀ (Makalla), a seaport on the south coast of Arabia, 142 miles N.W. of the cape of the same name. The town lies between two bays at the foot of a reddish limestone cliff, which rises to a height of 300 feet behind the town; four towers for the defence of the town are built upon it. On the west side a wall runs from the cliff to the shore with only one gate in it. (Adolf Gehrmann)
MUKAN (Mughan), a steppe lying to the south of the lower course of the Araxes, one part of which (about 10,000 square kilometres) belongs to Russia (U.S.S.R.) and the other (50–70 x 60 kilometres) to Persia. The steppe which covers what was once the bottom of the sea has been formed by the alluvial deposits from the Kur (in Russian Kura) and its tributary the Araxes. The latter has several times changed its course and one of its arms flows directly into the gulf of Kaff-Aghaj. In the interior the only water in Mughan is from a number of springs, and it is covered with tells and shows traces of the old system of irrigation. Mughan has a very mild climate in winter (Kazvinis calls it kshirun Aghar-khahan) and in the spring it is covered with a rich carpet of verdure but in summer the heat makes it a regular hell and it is infested with snakes (Monteith says: in June the snakes literally covered the ground?); cf. Abi Hamid al-Gharna on Kazvin, p. 372.

The name. The old Arabic transcription (Balaghurt, Tashirt) is Mukhan (without article) but quite early in certain manuscripts of the Arab geographers we find Mughan (probably a popular etymology mughan “magi”) which became general in the Mongol period. Markwart, Z.D.M.G., 1895, p. 633 connects the name of Mughan with that of the people mentioned by classical writers as inhabiting this region: Hecataeus, fragment 170: le Mavan al’Aptaw; Pomponius Mela, book III, ch. v.c. *Mochi (“al Hyrcanian front Albani et Mussi et Hyrcani”). This tribe is to be connected with the Caspians who lived in this region; cf. Hübchmann, Die alten Orientvölker, 1904, p. 269, cf. in Yakhut, iv, 676 the genealogy in

rented by Ibn al-Kahl, according to which Mughan and Djilam — both inhabitants of Tabistan — were the sons of Kamsahih (I) b. Yakh b. Nūh; cf. Genesis x.). The Chronicle of Theophanes, p. 363, has Bessarab (var. Bessara), the Armenian geography Mukan, the Georgian chronicle Mowakan (another Mowakan lay near the confines of the Alazan with the Iora).

History. The Byzantine general Léoninus in 678 subdued Iberia, Albania, Bukhara (cf. above) and Media. The district of Mukan was conquered in 21 (642) by an officer of Sargon Bukair who addressed a letter guaranteeing peace to the people of Mukan of the mountains of al-Kahh” (Caucasus; Tashirt, l. 6666). According to Balaghurt, p. 337–339, in 25 (654) Wall b. Uqba undertook a campaign against the people of Mukan (abd Mukan), of al-Bahr (cf. Tashirt) and al-Taisham (= Tajish). Another campaign of Salih b. ‘Aj in the people of Mukan and Djilam, although successful, entailed severe losses. According to Yakhut, ed. Houtsma, ii. 395, 12 in 123 the future Caliph Marwan II b. ‘Abd Allah undertook a campaign in Mukan and Mukan figures several times as a stronghold of Biskak (Tah, iii. 1174, 1178). In the third (ninth) century Ibn Khuradadhbih, p. 119, mentions one Sikha (I as chef of Mukan. According to Ibn al-Mas’udi, Muradi, ii. 5, in his time the Shurwan (cf. Shurwān) had conquered the states (manakia) of Yeyrin (several variants) and al-Mukanānyas. It appears from Ibn Miskawaw (ed. Margoliouth, l. 399) who mentions the isphahab of Mukan b. Dālī as ally of the Ghil chief Qašqar b. Mardi, who rebelled against the Dālam in 336 (937), that Mukan enjoyed a certain degree of autonomy. In 359 (950) the Kurd Daiman sent his vizier “into the mountains (sic) of Mukan to entrench himself.” In 349 Mukan appears as a centre of rebellion (Ibn Miskawaw, ii. 136, 178–179. The poet Khāżī mentions the rising of the isphahab of Mukan against the Rawwādī Wehānād (1278, cf. Kiwan, Futūhān-i gumān, Tashirt 1299, ii. 94). Later we hear of Mukan mainly as an excellent area for the winter pasturage of the conquering nomads. In Yakhut’s (iv. 676) time the majority of the people of Mukan were still Turkomans. In the history of the Khurasmāh Djalal al-Din, Mukan is constantly mentioned. The sultān sends his booty there, keeps his baggage and mobilises his troops there (Naşvāt, Sūr, p. 210, 280, 366 etc.). But in 617 (1220–1221) the Mongol general Līje and Subutay sent the winter in Mukan (Djewvān, l. 116), and Kazvin, p. 379 says that Mongols took Mughān for their winter pastures and drove out the Turkomans. In the time of Timur, Mukan must have been included in the region of Kadsābāgh where this conqueror liked so much to pass the winter. During the winter of 804 (1401) Timur repaired an old canal which was given the name of his tribe of Timurids. The canal lies from the Kshā-kuš Kurgān and at a distance of 10 farsangs ended at Sarjā-pil (i.e.?). Since, in order to give the necessary instructions, Timur (who was to the north of the Araxes) had to cross the river (Zafaranām, ii. 395), we may suppose that the canal lay to the south of the Araxes, i.e. in the steppe of Mughān. It must correspond to the Vīn G’aus arskh of which traces can still be seen for a length of about 23 miles. Sarjā-pil may correspond to Castell on the Russian map (according
to the involved description by Monteith, the Barlas canal issued in the neighbourhood of Karasu?). The canal is in any case quite distinct from another canal which Timur traced in 806 to the north of the Araxes towards the town of Balaqan (Zafar-nama, ii. 543).

In the Safavid period (and perhaps already under the Karavanserai) Mughân became the possession of the Safi Turkmans tribe who forms the principal support of the dynasty and became known as the Mughans (q.v.). By article ii. of the treaty of Gulistana of 1723 the steppe of Mughân was divided between Russia and Persia. The boundary line was more precisely defined in article ii. of the treaty of Turkmenâbâd (q.v.). In 1884 Russia forbade Persian nomads to cross into Russian territory. Towards the end of the sixteenth century the project of irrigating the land of Mughân was conceived and realised between 1902 and 1907. The four systems of canals were to make 200,000 hectares cultivable, particularly for cotton. From 1884 the steppe was occupied solely by nomads who were Russian subjects. But in 1917 there were already 46 Russian villages with 17,000 inhabitants while the Turkish nomads who had become settled on the banks of the Kuras and of the Araxes numbered 30,000 souls. As a result of the tragic events of 1918, the whole Russian population had to leave Mughân and the canals became silted up. Between 1920 and 1924 the work of restoration was carried out and the ingettis were renewed to return. The total area of irrigated land in Mughân is estimated at 355,000 hectares, while immediately to the north of Mughân the steppe of Mil (from Mil-Balaqan, "oasis of Balaqan", cf. Khandkow, Mem. sur inscriptions musulm. au Caucase, 137. Aug. 1852, p. 72) has another 165,000 irrigated hectares.

Historical geography. The Arab geographers are fairly well acquainted with Mughân (cf. the Bibliography). In the Mongol period, Mughân must have comprised all the lands to the north of the Saltaw ridge (which is a western outlier of Russian Tâlik and forms the watershed between the middle course of the Kuras and the Bolgarn), to the east of the lower course of the Kuras (where it follows the northern direction) and to the south of the Araxes. Towards the east the Mughân stretched to the Caspian Sea and included the coastal region of Russian Tâlik. The mountainous part of the latter, held as a vassal, must also have belonged to Mughân. The same condition must have existed in the Arab period for the curious expression of Ibn Miskawayh (136 referring to the Djiilik Mughân can only refer to the mountainous part of Russian Tâlik).

We may note Mughadzâ's remark (p. 380) who among other wonders mentions, one marhâ (7-8 faraks = 20-25 miles) distant from Mughân, an imposing fortress called al-Harâ (?] below which are houses and palaces in which there are large quantities of gold (guldâ 'asim) in the form of birds and wild beasts and "many kings made plans to seize it but never succeeded in reaching it". Mughadzâ does not definitely say that the fortress belongs to Mughân and evidently speaks of it by hearsay. Is this a reference to Shishil-kala (which is about 50 miles = 2 marhâ to the south of the presumed site of the Sâmchirân of Mughân)? On this imposing mountain (6,000 feet high) can still be seen ruins of important fortifications (Raddû, p. 355; "ruins of a strong castle...many ruins of brick buildings"). Finally, in a Persian translation of Ispâhân, 186, 187, we read: "The Gils and the Mughân are tribes on foot who rarely go on horseback" which can only refer to a few remnants of the old population settled in upper Tâlik (where the highlanders are very distinct from the lowlanders).

Bibliography: cf. the article Shârsân; Djiilik-nama, p. 152 (of little originality); Olearsius (1853), Voyages, book iv., ch. 21 (ed. 1656, p. 447-451); Shamshâda-Djwâd Balharu river Bedjirwân-Dizî-Ağhâ Sâmîyân Ardashir; J. Struys, Lee voyages, Amsterdam 1720, ch. 27 (il., p. 235); it is exactly identical with that of Olearsius J. J. Lorch, Nachrichten von d. wissenschaftlichen Reisen nach Persien (1747), in Büschings Magazin, part s., p. 367-476; Shamshâda-Djwâd-Bolgarn-Lankurî-Astârî-Rashî; Monteith, Journal of a tour through Aserbajjen (etc), in T.R.G.S. 1834, iii., p. 28-31; Ardashir-Barasî-Kirî-kâlîs (at the confluence of the four rivers which form Balakoo = Balaqan) Kuyrar-taps Agha-masa Vedi-bulûk-Altan Altan-takht-Aslanbur-Bayat (wrongly taken for the old Balaqan) -Barahâ; Toropov, Mughanska steppe, Krasn. kalendar, 1864, p. 243-298; Toropov, in Krasn., 1864, No. 28; Ogranovîc, Oifestyles Belusaroa, in Kahan, 1871, No. 32; Durm, Carpath. St. Petersburg 1875, index; Ogranovîc, Proeniitst Prii-d Ardehlabikha i Scrabalhaya, in Zap. Kowt. Oddl. Imp. Russ. Geogr. Obshch., x/1, 1876, p. 244; Udjarûd; Raddî, Reisen un d. persien-mas rec. Lebens, Tafelz u. einige Beobacht., Leipzig 1886; passim Belusaroa etc. On the flora and fauna of Mughân and the plans for irrigating it there is a whole literature in Russian. The most recent references are in W. S. Kliip, Zakonoskaya, Moscow 1929, p. 50.

AL-MUKANTÂRÂT. [See ASFURLÂK.]

MUKÂTIL B. SULAIMÂN B. BÂSHîR AL-ARAB AL-KHRÂQÂQI AL-BÂSHI (ABU 'L-HASân), traditionist and commentator on the Kur'an, was born in Balkh and lived in Marw, Baghâd and Bâsha, where he died in 150 (767); there is also a reference to a stay in Hairût. Of his life we know almost nothing apart from a few details for his judgment as a traditionist. The name of his wife Umm Abî 'Uma Nûb b. Abî Mâryam has been preserved. According to Ibn Durajd, he was one of the mawalî of the Benî Asad. He is sometimes quoted as Mukâtîl b. Dâwi-âl-dîs or Dâwi-âl-dîs. Ibn Hadjaj, Lâbîn al-Mûsâr, expressly states in contradiction of wrong ideas that this is our Mukâtîl and that Dâwi-âl-dîs is not a lašûd of Mukâtîl himself but of his father.

Mukâtîl's prestige as a traditionist is not very great; he is reproached with not being accurate with the isâm. His lexicon enjoys even less confidence. The biographers write with one another in telling stories which illustrate his mendacity and particularly his professing to know everything. Contempt is poured on his memory by stories of ludicrous questions which were put to him about the most impossible things and to which he either gave fantastic answers or could make no reply. It is in keeping with this profession of universal knowledge that the sources are unanimous in talking of his extreme anthropomorphism (tâjallî).
It did little to help his fame also that he is said to have told pious stories [cf. H. A. R. Gibb] in the mosque, at a time when this was strictly forbidden. In politics he is said to have belonged to the Zaidiya, in theology to the Murjidiyya [q.v.].

Mu'attil's literary activity was somewhat comprehensive, yet until quite recently nothing was known of his works. Only since 1912 has a Qur'ani commentary by him been known in the MS. Or. 5533 of the British Museum. The genuineness of which however Goldschmidt did not think beyond doubt. The Fikrist gives a list of his works; Hujjatul Khalifa also gives some of them. They deal mainly with the language and exegesis of the Qur'an; but a pamphlet against the Kadartiya is also mentioned. This is however hardly in keeping with another story, according to which he wrote a pamphlet against Dajmah [q.v.] and the latter wrote against him.

(M. Pleissner)

MU'AKHAMAT, the part of the range of hills west of the Nile, which lies immediately to the east of Cairo and from which the mountains take a northerly direction, borders to the Nile delta to the south-east. It reaches a height of about 600 feet and consists, as does the greatest part of the north African mountains, of limestone (cf. Description de l'Egypte, Etat moderne, Paris 1822, t.1/ii. 751).

The name Mu'akhamat (the Tauji al-Arur records also the popular form al-Mu'akhamah) does not go back to a pre-Muhammadan nomenclature, nor is it considered, in spite of its correct Arabic formation, as a true Arabic word, for the geographers (cf. Yaqut, iv. 607 sqq.) give, hesitatingly, different explanations of its meaning. The name occurs for the first time in the historical tradition of the Egyptian Arabs, as found in the Fatih Miṣr of Ibn 'Abd al-Hakam (cf. Torrey's edition, New Haven 1899, p. 156 sqq.), in half legendary tales in which also al-Mu'akhamah [q.v.] plays a part. Some of these traditions give it an eponymous hero, Mu'akham b. Miṣr b. Baisar b. Hām, or lay stress on the special sanctity of the mountain, declaring that, in some way, it is connected with the mountain of Jerusalem. As in the last mentioned traditions Ka'b al-Azhār [q.v.] is named as final authority, it seems probable that the origin of the name must be sought in Jewish legendary traditions (for Jewish traditions about mountains, cf. the Midrash Thallim on Psalm lxi. 17) and that the name has been fixed only in course of time on the ill-defined mountainous region to which it is attached, since the flourishing times of al-Faṣṭ and al-Kairawān. The vagueness of the geographical definition has survived in the Arabic geographical sources, which either call Mu'akhamat the entire eastern mountain range as far as Wuswān (Wuswan) or even represent under the name Mu'akhamat the whole of the mountain system that runs over the inhabited world from China to the Atlantic Ocean (Ibn Hawqal and others). Moreover several geographers give the legendary statement that in the Mu'akhamah are mines of emerald and other precious stones, while in reality it contains only stone quarries, but these were used already in very ancient times. Mu'akhamat, Kāfir, ed. Bilsāni, i. 123 gives a fairly complete survey of the different traditions and opinions.

It may be thus assumed that the Mu'akhamah acquired a real geographical identity only after the foundation of al-Faṣṭā. Its geographical situation, viz. its proximity to the bank of the Nile, has deeply influenced the territorial expansion of this town and later of Cairo [q.v.]. Parts of the town and famous sites are situated on the western spur of al-Mu'akhamah, such as the mosque of Ibn Tulun and the citadel of Saladin. The elevation of Ibn Tulun's mosque bears, however, the special name of Dajmah Yaḥkūr. The cemetery of al-Kairawān belongs likewise to the Mu'akhamah and it is with this cemetery that are connected the ancient traditions already mentioned. This Mu'akhamah plays a part; al-Mu'akhamah informs 'Amr b. al-'As that the mountain, instead of earthly vegetation, is destined to bear the plants of Paradise and the caliph 'Umar, informed by 'Amr, decides that by these plants of Paradise can only be meant Muslims who have died. Accordingly, tradition records a number of Sāhibān who are buried in al-Kairawān. On the summit of al-Mu'akhamah was built in the Fatimid period the mosque of al-Diyānah, by Badr al-Diyanālī in 1748 (1085); for this reason the mountain is also called Dajmah al-Diyānah. On the southern slopes, towards Hulwān, lay the Christian monastery Deir al-Kāfsar (description by al-Shabābī towards 1000; cf. Saban in Abb. Pr. Ab. Wiss., 1905). A historic or perhaps legendary feature, connected with al-Mu'akhamah is that the Fatimid caliph al-Hakim is said to have disappeared mysteriously, in the night of 27th Shawwal 411 (Feb. 23, 1021), when he had gone for a ride in the Mu'akhamah. Finally it may be mentioned that the Mu'akhamah has given its name to one of the large modern Arabic newspapers published at Cairo.

(J. H. Klamms)

MU'AKHWĀS, MU'AKHWĪS, the individual who in Arab tradition plays the leading part on the side of the Copts and Greeks at the conquest of Egypt. The Prophet is said to have sent a letter to him in the year 6 a.h. In the address on this letter, the text of which is given in Ibn 'Abd al-Hakam (cf. Torrey, p. 46), al-Maqrīzī (Almajir, i. 29), al-Suyūṭī (Ham al-Maṣāra, i. 58) and al-Manṣūrī (p. 29), as well as in an entirely different version in Pseudo-Wākidī (p. 10), and also in the accounts of the incidents in the Arab historians, the position of Mu'akhwās is described in the following phrases: 1. Sāhib al-Ishārāt (Naawat, p. 577); Ibn 'Abd al-Hakam, p. 45; 32; Abū Sa'īd, iii, p. 38 [100]; Ibn Khāṭir, iii, fol. 159 b; Ibn Sa'd in Wellhausen, Skizzen und Vorarbeiten, iii, p. [99]; 2. Maṭlib al-Ishārāt (Ibn 'Abd al-Hakam, p. 49; al-Suyūṭī, i. 60; Pseudo-Wākidī, p. 75; Ibn Ḥakam, p. 971); 3. Sāhib Miṣr (Abu 'l-Fida, i. 149); 4. Mālik Miṣr (al-Manṣūrī, p. 7: cf. al-Maqrīzī, Almajir, i. 163, v. 78); 5. Mālik Miṣr wa 'l-Ishārāt (Pseudo-Wākidī, p. 10); 6. Sāhib Miṣr wa 'l-Ishārāt (Pseudo-Wākidī).
All these epithets, though devoid of much meaning, simply the actual ruling authority in Egypt, whose true title was not known to the Arabs. If we remember that in the year 6 (628) the Persians were masters of Egypt, we can hardly give much credence to the story of the Arab historians. This is evident from the statement recorded by Manufi (p. 50) that Egypt was under the rule of Maukawis continuously from the lifetime of the Prophet, through the caliphate of Abu Bakr to the beginning of the caliphate of Omar. Muhammad’s letter to Maukawis was long ago declared not to be genuine by E. Amelinus (Registrum cap. 392) and Wellhausen (Studien und Vorarbeiten, iv. 90) although they did not doubt the fact of the embassy to him; later Butler (Conquest, p. 522) and Th. Noldeke (Zeit.M.G., 118.160) still believed in the embassy although the latter granted the possibility that tradition might have transferred the name from the time of the conquest to the man to whom Mahommed sent gifts, while for example Samuel (Egyp. in the Middle Ages, p. 6, note 2) supposes that the Maukawis of 628 and the Maukawis of the conquest are two different people. This suggestion however is disposed of by the fact that the name of the letter is called in Ibn Kathir (in Abi l-Fida) in genuine; Nawaw only gives Djuwaidj, i.e. the same as the Maukawis of the conquest; for we need not heed the patronymic of Maukawis given by Pseudo-Wakidi (p. 10) (in genuine), while the epithet al-Farshab al-Nafs, which al-Ma’si, Tanaki, p. 261, has taken in an obviously corrupt form from an old source, is the Ibn Karkab al-Vinani of the Maukawis of the conquest. In view of the many serious contradictions, which the transmission of Maukawis into the period of Persian rule in Egypt offers, there is no alternative but to regard with Cantini, Anni dell’Italia, iv. 90 the story of Mahommed’s embassy to Maukawis as legendary and devoid of any historical value (cf. also G. Rouillard, p. 187 and note 2). The genuineness of the parchment found in a monastery at Akhtma by the French ethnologist E. Barthélemy in 1852, which was thought to be the original of Mahommed’s letter to Maukawis and was actually put among the relics of the Prophet in the old Scroll, thus disappears (cf. the publication by Helin, in J.A., 1854, p. 483–482 and Djuwaidj Zaidan, in Hülüt, xii.2, 1904, p. 103 sqq.). Its falsity had already been recognised by J. Karabacek (Beiträge zur Geschichte des Maukawis. Leipzig 1874, p. 33, note 35 and Mitteilungen der K. Königl. österreichischen Classe, 1874, p. 182) (cf. also Noldecke-Schwell, Geschichte der Qurins, i., Leipzig, 1909, p. 106). As a matter of fact palaeographical grounds are clearly against any assumption of a date in the first century for this document.

The same discrepancies, which we find in the transmission of the name and title of the Maukawis of Mahommed’s letter are found in the Maukawis of the conquest. In the historians we find the following names:

1. Djurjaji b. Münz (Abi Sallâh, p. 30 [84]), 101 [230]; 2. Djuwaidj b. Münz b. Kurjak (Ibn Abi l-Hakam, p. 64, note 9; Ibn Hadjar, Itâba, ill. 1090); 3. Ibn Kurjak or Ibn Kurjak (Abi l-Khâlidi, i. 259, sq); Ibn Taghribird; l. 9; Yâkût, Maríajum, ill. 894, 14).

Taking first of all the name of his grandfather, J. v. Karabacek’s endeavour (p. 3) to dispose of apparent contradictions in the statements about the patronymic by assuming a double name Münz Farshab proves unnecessary, when we see the name unequivocally given in No. 3. When Karabacek (p. 3) preferred the reading Farshab for Kurjak, he was at least able to quote the form in the Codex Parisinus of Ibn Taghribirdi, but I cannot agree with Amelineau in supporting Karabacek’s proposal (Registrum cap. 394 sq) to equate this name with Maukawis, especially if we remember the variant of the Farshab, and Noldeke must be right when he (Zeit.M.G., 118.160) restores this to the Tadhwar rejected by Karabacek. The form unpointed however has however so far been found in only one papyrus, the more usual form being Maukawis (Zeit.M.G., l. 138). Butler’s conjecture (p. 523) on the name seems to me as improbable as Karabacek’s identification. He calls attention to Abi Sallâh’s observation (p. 67 [156]) that Maukawis is a corruption of Gregorios and supposes that Kurjak is a corruption of Kurjar so that Ibn Kurjar would be an error for Ibn Karkab and mean “son of Gregory”. Camaan’s proposal (in Butler, p. 523) must be dismissed as still more improbable, viz. that Ibn Kurjak is a corruption of Abi Kurka. The office filled by Maukawis is described by the sources in the following terms:

1. Shâhi Misr (al-Baladkhani, p. 226); 2. Malik ‘alî Misr (al-Ma’uri, Khâbat, l. 163, sq); Ibn Duqamä, v. 118); 3. Amir al-Khâlidi bi-Misr (Ibn Hadjar, ill. 1090); 4. ‘Amir ‘alî Misr (Ibn ‘Abd al-Hakam, p. 64, note 9; Al-Makkin, i. 39); 5. ‘Amir ‘alî ‘l-Khârâjî bi-Misr (Eutychius, ii. 302). If the three first terms only mean the ruler of Egypt in general, the two last names limit the sphere of activity of Maukawis to the administration of taxation and the expression given in 4 may be taken as synonymous with ‘amir “governor”. In this connection we have the very clear evidence of Ibn ‘Abd al-Hakam, p. 37 and Ibn Duqamä, v. 119 who preserve the statement that Maukawis was appointed by the emperor Heraclius as governor of Egypt and entrusted with the wrapping of war and the levying of taxation. Abi Sallâh’s statement (p. 30 [84 sq]) that Maukawis Djurjaji b. Münz had rented the taxes of Egypt from Heraclius for 18,000,000 dinars fits in with this. This makes intelligible the statement of Eutychius (ii. 302) who calls Maukawis controller of the land taxes (‘amir al-khârâjî) and traces his attitude to the Arabs to his extorting the taxes raised, and further explains the description of Maukawis (Maukawis) as Tadrâjî in the Vita of Apa Samuil published by Amelineau (p. 367), to which we may add the statement of the Ethiopic Synaxar that Maukawis had been Patriarch and financial controller of Egypt.
M. J. de Goeje and J. v. Karabacek have laid special stress on this side of the activity of Mu\cker\wak\xattr\' in identifying the prefect George mentioned in John of Nikia (p. 359), whom de Goeje regards as prefect of Lower Egypt and Karabacek (p. 8) as pagarch of Babylon, with Mukawak\xattr\' who is called in the sources George son of Menas. A. J. Butler (note 4 to Abi\xatr\' Salib, p. 81), Milne, and Lane-Poole have followed de Goeje while Amelina\xatr\'(Fragmenta coptica, p. 404; Samuel de Qalamoun, p. 24 and Résumé de l'histoire de l'Egypte, p. 243) wished to identify Mukawak\xattr\' with the Patriarch George who was appointed by the emperor Heraclius as successor or deputy to Cyrus during the period of the latter's stay in Constantinople (cf. John of Nikia, p. 574).

In contrast to these attempts at identification, which are in more one respect in contradiction to the sources, the most probable solution of the Mukawak\xattr\' problem is the identification of Mukawak\xattr\' with the Patriarch and governor Cyrus of Phaia, who was sent in the year 631 a.d. by Heraclius to Alexandria where he died on March 21, 642. While Zonenberg (in his edition of John of Nikia, p. 576, note 3) has already pointed out that the main features of the activity of Cyrus are found in the Arabic stories of Mukawak\xattr\', although no doubt the legend mixes up the activities of several individuals under this name, F. M. Esteves Pereira, (Vita de Abba Samuel, P. 41-53) completely proved the identity of the two. Independently J. Kral in an unpublished article for the Mitteilungen aus der Sammlung des Papyrus Erhard Rainer, on the authority of three new fragments of the Vita of Apa Samuel, had come to the same conclusion. The full story of the entire problem by A. J. Butter, the main result of which, the identity of Mukawak\xattr\' with the Patriarch Cyrus, has been adopted by B. Evette (Patrologia Orientalis, ii. 491, note 1), by M. Guidi in his doctoral thesis, C. H. Becker and O. Braun in his article Cyrus in the Kirchliche Handlexicon, ii. col. 530 and others, has been critically examined by L. Caetani (Annali dell'Istituto, ii. 86 sqq.). The decisive evidence for the identity of the two individuals is found in the History of the Patriarchs of Severus of Assamniae (ed. Evette, p. 490 sqq.; ed. Seybold, p. 166 sqq.) in which there are references to the Patriarch and governor of Heraclius in connection with the flight of the Patriarch Benjamin once as Cyrus (بكرس), then a few lines later as al-Mukawak\xattr\' or al-Mukawak\xatr\'; the synecdoche in this connection also give the name al-Mukawak\xattr\' (cf. F. Amelina, Fragmenta coptica, S. 397, note 1; p. 308, note 1; p. 406, note 1 and the edition by R. Basset, Patrologia Orientalis, xi. 562) and the Arabic Vita of Benjamin (Amelina, p. 400, note 1); of peculiar importance is the text edited in K. O. E., xx. 393, where the combined names Cyril and Mukawak\xattr\' appear. There is the additional fact that the period of ten years which, according to the history of the Patriarchs, lay between the flight and return of the Patriarch Benjamin coincides within a year with the period of office of Cyrus (631-642) in Egypt, whom the Christian sources describe as an "unbeliever" (παισιν, Amelina, Fragmenta coptica, p. 364, 366; Μαθητης in Severus of Assamniae, p. 495 [108]; godless and sinful Kuchios (ναχωκος παισιν καταραθινε),

Vienna Coptic fragments of the Vita of Apa Samuel in Kral, Kanzhia frequently in Amelina's, deceitful Antichrist (πατημιονος αναλος in Amelina, p. 366 sqq.), and Pseudoarchiepiscopal (ἐπισκόπος, p. 365). The double position of Cyrus or Mukawak\xattr\' as supreme head of the administration and archbishop, of which we have ample evidence (cf. G. Rouillard, p. 230, note 2), and which is quite certain from the testimony of Severus (p. 495, 495 [106-108]) and the Arabic and Ethiopic synaxa (Amelina, p. 406, note 1: درر أوخود ألك), (p. 399) and also by the Vita of Samuel (Amelina, p. 367), was quite unknown to the Muslim Arabic sources. Nöldeke has already called attention to this remarkable fact (p. 160) and it remains a crux for the identification of the two figures. There was however no necessity for the Arabs to refer to his name in the church. He was only of importance to them as head of the administration. If one wants to, one can see an indication of his ecclesiastical dignity in the wish expressed by Mukawak\xattr\' during the negotiations with 'Amr regarding the capitulation of Alexandria (in Ibn 'Abd al-Hakam, ed. Torrey, p. 72) that he might be buried in the Church of St. John (thereon Amelina, p. 400 sqq.). How much the Christian sources differ in their ideas of the personality and position of Mukawak\xattr\' may be gathered from the description of the death of Mukawak\xattr\'. According to Severus of Assamnia (ed. Evette, p. 495; Seybold p. 168), the governor and Patriarch of Alexandria poisoned himself after the occupation of Alexandria lest he should be put to death by 'Amr, while John of Nikia (p. 335, 378) says that Cyrus was weakened by vexation at the faithlessness of 'Amr and sought disintegration and died. According to Caetani, the contratilities and obscenities on the part of the Arab historians show that they did not consider who Mukawak\xattr\' exactly was, but simply used the name as the family name of the chief personage in Egypt at the time of the Muslim conquest. Evidently all who negotiated with 'Amr in the name of the Copts are included in one individual. The same manner, with which Mukawak\xattr\' is described as a Copt and the different names given him suggests that Mukawak\xattr\' conceals not only Cyrus but also other Egyptian negotiators — e.g. perhaps the commander of Babylon, George, and the bishop of the same town, Menas. The Arabs must have made one out of these two negotiators and given him like Cyrus the name Mukawak\xattr\'. Of the attempts to explain this name, Karabacek's (p. 8) πνευματος is as little probable as Amelina's explanation (p. 407-408) which makes Kuchios "the man from Kaukhiin". We would rather think with Butler and Guidi of a connection with κοχιναιως, which indicates the home of Cyrus. But even this explanation is by no means certain and the connection of Mukawak\xattr\' with Cyrus has again (in Canterelli) given rise to serious doubts. Nau, p. 110 has compared Mukawak\xattr\' with μακαυκος. His name survived in the Kom el-Mukawak\xattr\' in the area of old Cairo (Ibn Du\xatr\', iv. 53).

MUKHDAM (A.), the term applied to an individual whose life fell within the periods of both paganism and Islam. Various explanations are given of the origin of the name. Some derive it from waah wubwadnaha "cropped ear" and say the meaning is that these people were cut off from the Djihiylia by Islam (cf. nuna wubwadnaha "a she-camel with cropped ears"). It is said that the tribes that adopted Islam cropped the ears of their camels differently from what they had done in the pagan period. A man who had therefore seen both the pagan and Muslim styles was called wubwadnaha. Others derive the word from wáh bhibrim "(a well) which contains much water" and explain that a man who has lived in both Djihiylia and Islam was called wubwadnaha, since he was fully acquainted with both periods.

The term wubwadnaha is occasionally found with the same application and the explanation given is that the individuals had mixed paganism and Islam. Some commentators describe wubwadnaha as "a person who adopted Islam after the death of Muhammad.

The word wubwadnaha is particularly used to describe one of the four classes into which the Arab philologists divide the poets. It means those whose work was begun in the period of Djihiylia but who lived to see Muhammad and his mission and some even adopted Islam. Among these for example were Labab, al-Asha'î and Ka'b b. Zuhair. These poets are still completely immersed in the poetic tradition of the Djihiylia. The new outlook was late in finding its way into poetry so that the change is not yet reflected in the poets who were Muhammad's contemporaries. The scheme of the qasida of the pagan period, with its fixed themes and stereotyped images also holds for the wubwadnaha and in their poems one can hardly find the slightest hint that they were contemporary with the great religious change in Arabia. The only exception is the qasidas composed in honour of Muhammad, like the qasid of Ka'b b. Zuhair called, after its opening words Bintam Sa'îd and the panegyric on the Prophet by al-Asha'î. While these still follow the scheme of the qasida, as regards form they reflect Muhammadan points of view and legal ordinances and also use Qur'anic phrases.

(See LITENSTADTER)

MUKHLIS AL-DAWLA. [See AL-MUKALLAD.]
Mihdjan, was his second cousin (al-Mukhtar's great-grandfather Musadd being the son of 'Amir b. 'Umair b. 'Awf; cf. Wustenfeld, *Gen. Tab.* G. 19). He is said to have been born in 622 (Tabari, i. 1264) a statement which has perhaps no real foundation (cf. Tabari, ii. 2). In 40, he was a "young man," ašāḥīsāʾ, and the thought that his adversary "Abdl Allah b. al-Zubair was born in the same year. His father having died the death of a hero at the battle of the Bridge in 13 against the Persians, the orphan was brought up by his uncle Sa'd b. Musadd who became governor of al-Madā'in under the caliph 'Ali. Al-Mukhtar was his deputy when Sa'd left al-Madā'in to go after the Kāhirīs who had left 'Ali's camp in 37 (Tabari i. 3366; al-Dinawari, p. 218). His early life and his family traditions therefore made him a partisan of 'Ali: al-Tabarī (ii. 2) however says that when 'Ali's son al-Hassan took refuge with al-Mukhtar's uncle when fleeing from Mu'āwiya in 40, the nephew proposed to surrender him to his rival and he was reproached with this disloyal act 25 years afterwards by the Shi'ites. This is all we know of the early days of one who was destined to become the champion of the extreme Shi'a: his refusal to bear witness before Ziyād b. Abīth against Ḥadhīr b. 'Adī, who was accused of having attempted an anti-Umayyad rising at Kūfa in 51 (Tabari, ii. 134), shows however that his feelings were already pro-'Ali. It is only when, after the death of Mu'āwiya, the hopes of the partisans of 'Ali's family began to rise again, that al-Mukhtar emerges from obscurity: he took part in the risings of Muslim b. 'Abīl in 61 and, imprisoned by the governor Umarb Allāh b. Ziyād, he was only released after the failure of al-Husain's attempt and returned to Mecca, where 'Abdl Allāh b. al-Zubair was secretly engaged in preparing the movement which was to take him to the head of the anti-Umayyad rising. It is alleged that al-Mukhtar, after vainly trying to compromise Ibn al-Zubair prematurely, disappeared from Mecca for a whole year which he spent in his native town of al-Tā'if. It was no doubt in this period that the ideas ripened in him which made him the initiator and leader of a new political and religious phase of the Shi'a movement; but of the way in which his ideas came to him, their immediate origin and the influences which went to form them, history unfortunately knows nothing. In any case, al-Mukhtar returned to al-Zubair, who had in the meanwhile been publicly recognised as caliph, and sought bravely at the first siege of Mecca in 64. But his adhesion to the cause of Ibn al-Zubair had no other object than to enable him to return to Kūfa which was then under the anti-Umayyad caliph. According to one source which is in contradiction to Tabari, al-Mukhtar was sent by al-Zubair himself to the capital of the 'Irāq to take charge of its administration, having promised him the support of the 'Alī派 ('Abd al-Mu'malin, al-Murādī, v. 70). It seems more probable that as Tabari says, he went there of his own accord to carry out his plans for a Shi'a revival. The Shi'a of Kūfa were at this time (Ramadan 64) under the influence of Sulaimān b. Ṣurād [q.v.]. Al-Mukhtar did not wish to join his party and began propaganda of his own: he was the emissary of Muhammad, son of 'Ali, called Ibn al-Hanāfīya from the name of his mother's tribe [cf. Muhammad b. al-Hanāfiyya]. The motives which gave al-Mukhtar the idea that he could pass off as the legitimate successor to the rights of 'Ali, this son, who was not born of Fāṭima, the daughter of the Prophet, have not been fully explained; but as the other children of 'Ali who had escaped the massacre of Kerbela were quite incapable, al-Mukhtar's choice was limited. In any case, his fiery and peculiar eloquence (he pronounced his discourses in saqīf with obscure phrases and expressions which recalled the Kurān, without being a slavey imitation of it; he also said or allowed it to be said of him that he was inspired by the angel Gabriel) was able to gain partisans for the idea of the Mahdi whose imminent coming would restore the rule of the true religion. Without being yet openly hostile to the rule of Ibn al-Zubair, al-Mukhtar's attitude was suspected. He was therefore imprisoned by the Zubairid governor 'Abd Allāh b. Yaṣir al-Asṣāfī but his captivity was not rigorous and enabled him to remain in contact with the people of Kūfa. After the death and death of Sulaimān b. Ṣurād, which he had predicted, he was set at liberty on guaranteeing he would not fight against the Zubairid government. Al-Mukhtar took advantage of the liberty restored to him to secure the cooperation of Ḥabīm b. al-Aṣqārī, son of 'Ali's famous general, who kept up his father's traditions. The latter hesitated long before accepting al-Mukhtar's proposals and only agreed on receiving a letter, undoubtedly a forgery, in which Ibn al-Hanāfīya introduced al-Mukhtar to him as his plenipotentiary (ṣamīl) and minister (ṣimāl). The rising then began (14 Rabi' I 69): the response of the chiefs of the tribes (the Ashīfrī), who while opposed to the Umayyads and former fighters by the side of 'Ali, had long lost their enthusiasm for the cause of his family, was overcome by the unslought of the troops composed for the most part of adventurers and sammāt led by Ibn al-Aṣqārī, a most capable warrior. The Zubairid government (he was at this time 'Abd Allāh b. Muṣṭar al-Karrābī) the Ashīfrī capitulated and al-Mukhtar, undisputed lord of Kūfa, rapidly extended his power over Mesopotamia and the eastern provinces, where he at once appointed governors: the south alone, with Baṣra, remained to Ibn al-Zubair. Al-Mukhtar had naturally to give the Ashīfrī positions of authority in his organisation but he could not completely gain their confidence. Although old partisans of 'Ali, or sons of partisans, they were moderates who distrusted al-Mukhtar as an extremist and demagogue: indeed, the favour which the latter showed to the mawāli, who formed his essential support, threatened to overthrow the system on which the political and economic supremacy of the Arabs over the native population was based, for not even the conversion of the latter to Islam had made them equal to their conquerors. Al-Mukhtar therefore was forced with the necessity of deciding for one or other. He preferred the mawāli party, probably more from genuine conviction than for political reasons: he must have believed that the triumph of the Mahdi whom he foretold would make all believers equal without distinction of race. During the absence of the army which had gone under Ibn al-Aṣqārī to fight 'Abd al-Malik's troops, the Ashīfrī made an attempt to overthrow al-Mukhtar who was forced to temporise with them; but succeeding in informing Ibn al-
Ashur of his difficulty, the latter returned to Kufa and completely routed the enemies of al-Mukhtar. This was the signal for putting into execution the latter’s full Shi’i programme; all those who had taken part in the murder of al-Husain, or had neglected to defend him, were put to death. This bloody deed seemed to have divine approval, for two days later the Syrian army which had marched out for the ‘Irak was completely routed on the banks of the Khabur by Ibn al-Aswar and its leader ‘Ubayd Allah b. Ziyād, who had defeated and killed al-Husain, was killed in the battle (Muharram 67). In the fanatical enthusiasm of these days in which the Shi’i cause seemed to have won a definite success there took place episodes of great religious interest although unfortunately not yet clearly explained, notably the worship of the empty chair (Tasbi, ii. 702—706; cf. al-Mubarrad, al-Ḵamil, ed. Wright, p. 597—600).

But in spite of his successes at home and abroad, al-Mukhtar was threatened by the presence in Basya of the brother of ‘Abd Allah b. al-Talhaib, Mu‘awiya, whose army, organised by al-Muhallab b. Abū Suffa, hardened in the war with the Kharijites and strengthened by the accession of the Kifan Asghar who had left the town, was one to be feared. Indeed, the Shi‘i troops were defeated by it at al-Madīnah on the ‘Irīs; a little later at Ḥarrūr, they suffered a complete rout, mainly because of the absence of Ibn al-Aswar who was in the north at al-Mawṣil and whom al-Mukhtar either through distrust of him or through excess of confidence in himself had neglected to recall. Al-Mukhtar who had taken refuge in the citadel of Kufa held out there valiantly for four months. Finally abandoned by most of his men, he was slain in a desperate sortie (Kamaṭan 14, 67). His body was mutilated, his hand suspended at the gate of the great mosque (and it was only taken down many years later by al-Halīlī); one of his wives, who would not disown him, was executed in brutal fashion, although she was the daughter of al-Nu‘mān b. Bāshīr al-Anṣārī, who had been governor of Kufa under Mu‘awiya. A great many of al-Mukhtar’s followers were also massacred.

The nature of the movement led by al-Mukhtar has been variously judged by modern historians. The historical tradition which grew up in Kufa, especially in the mille of the Asghāf, is naturally hostile and regards him as an adventurer and false prophet. His conduct was undoubtedly somewhat crooked occasionally; the way in which he exploited the name of Ibn al-Ḥanafiyah (who never wished to be completely compromized in the business of the Mahdi) was not quite fair. But neither these doings nor his double dealing with regard to the Asghāf (they paid him back however only too well) are sufficient to convict him of bad faith. They were tactical expedients which every one who wants to stir the masses is justified in employing for the triumph of his cause. It seems certain that al-Mukhtar sincerely believed in his mission, and his equilibrarian ideas about the ummah, although premature, were, as the future was to show, the only ones which could secure to Islam its later expansion and transform it from the exclusively Arab movement it was at first into a worldwide civilization. What is still and will remain mysterious is the personality of al-Mukhtar (Wellhausen rightly observes that “demoniac” natures like his are always problematic), the manner in which he arrived (no doubt through a crisis within himself) at the religious and eschatological conception of the Shi‘a of which he was the creator and which is infinitely greater than the expiatory sacrifice of the Isma‘īli of Sulaymān b. Ḥarūb. It is owing to this conception that the importance of the movement started by al-Mukhtar is far greater than the ephemeral political success which he enjoyed; in the popular enthusiasm which welcomed his prophecies we see the germs of the ideas which transformed the Shi‘a’s political movement to a religious doctrine. In what measure these ideas were in existence before al-Mukhtar, in what relation they stood to that eschatological personage ‘Abd Allah b. Sahl and his disciples are points that are still obscure. But if he was not the inventor of the doctrine of the Mahdi, it was undoubtedly he who in locating in a real person, Muhammad b. al-Ḥanafiyah, the mystical figure of the Messiah, the restorer of the true religion, gave it the stamp which was henceforth typical of Imām doctrines.

The name Murkhtār is borne by one of the many Shi‘a subdivisions given in the lists of the writers on heresies; but it is doubtful if it ever had any real existence as an organised sect, especially as the sources which mention it do not clearly distinguish it from the Kala‘iyya [q.v.] and the Khāshābiyya [q.v.], which seem very likely to be the legitimate successors of the teachings of al-Mukhtar.

Bibliography: The principal and almost the only source for the history of al-Mukhtar is al-Tabari (ed. de Goeje), ii. 530—572 and yassim, which is based for the most part on the statements of eye-witnesses of the events. The secondary sources add practically nothing new; they are quoted in Caetani, Chronographia islamica, a. 64 § 15, 65 § 6, 66 §§ 5—7, 9—12, 67 §§ 2, 4, 42 (a few details also in the biography of Muhammad b. al-Ḥanafiyah in Ibn Sa‘d, v. 71—77); H. D. van Gelder, Adjothr de witseke Prophet, Leyden 1898, J. Wellhausen, Die islam. Oppositionsparteien im alten Islam (Abh. G. Götts., N. S., v. 2, 1901), p. 74—89. Cf. also the bibliography given in the articles kala‘iya and khaṣṣābiyya (add al-Nawabkali, Pirār al-Saff, ed. Ritter [Bibl. Islamica, iv., 1931], p. 29—30). (G. LEVY DELLA VITA)

MUKHTAR PASHA, GHÀZI AHMAD, a Turkish general and statesman, was born in Sept. 1832, the son of a high official in Brussa, and received a military training there and in Constantinople (officer in 1854). He took part in the Crimean War, from 1860 taught in the Mekteb-ı Harbbye as professor of the art of war and in 1865 was tutor to the prince Yısauf ‘ıze al-Din. After holding a command in Albania (1867—1870), he distinguished himself under Redif Pasha in the Yaman campaign, the conduct of which he took over in 1871 as General of Division and Pasha. On his return he was given the title of mukhtar, the Herzegovina he was defeated in 1876 at the Duga Pass. After the declaration of war by Russia (April 24, 1877) he was given the supreme command on the Caucasus front, where after at first having to retire to Koprüköy, he counterattacked at Darab (June 21) and Ziwin (June 25) and forced the Russians under the Armenian generals Loris-Mellikoff and Ter-Huggestoff, to evacuate Ottoman territory and occupied Sukhum.
Successes in August on the Yagshuf Dagh and at Khil-Tepe (near Shaj Gardiler), earned him the title of Mir-i Qezari [q. v.] but did not prevent the collapse of the army in November—Nov. [cf. INER
BOVÁN, KARS AND ERZURUM]. Appointed Commander-in-Chief of the Artillery, he restored peace in Crete in 1878; in 1879–1885 he served as commissioner on the Greek frontier. As a result of the Anglo-Turkish agreement of Oct. 24, 1885, he became the first High Commissioner of the Porte in Egypt, holding the post till 1906 and playing a part in the Taif affair. In this period he busied himself with the question of reforming the calendar; he advocated a uniform Hijra solar year for all Muslims (see BIL). From Dec. 1908 Vice-President of the Ottoman Senate, he proposed in the National Assembly of April 27, 1909 to give prince Reshid the name Meşhed V in memory of the first conqueror (Fatih) of Constantinople [see MOHAMMAD II] (communication of Abd al-Rahman Shereef to Martin Hartmann); he himself led the deputation which announced his accession as Sultan-Caliph and brought him to the War Ministry to receive the oath of allegiance [cf. BÁFA]. On Oct. 14, 1911 he succeeded Said Pasha [q. v.] as President of the Senate and on July 22, 1912 as grand-vizier in the cabinet of the "Great Oman" (Bugübler). Under pressure from the association of old-Turkish officers (Kadir-kârîm) he persuaded the Senate on Aug. 4 by a bold interpretation of the constitution to declare the session of Parliament closed. He endeavoured to free the army and civil service from politics, obtained an amnesty for Albania, recalled Ahmed 'Izzet Pasha from the Yaman, instituted the Naval Medal and Medal of the Red Crescent, obtained favourable terms in the treaty of peace with Italy (Oct. 18, 1912) but could not avert the catastrophe in the Balkan War. On Oct. 29, 1912 he retired in favour of Kâmil Pasha, but remained a member of the Senate till 1918, in which on Feb. 12, 1917 he advocated the adoption of the Gregorian calendar and rejection of the Christian reckoning for the financial year. He died on Jan. 21, 1919. Mahmud Mukhtar Pashâ is his son.

MUKHTARI, ŞEHİD AL-DİN 'ÜDDEH M. MOHAMMAD AL-MUKHTARI AL-MAZBAH, was the poet of the later Ghaznavids Ibrahim b. Mas'ud II (1059–1099) and Mas'ud III b. Ibrahim (1099–1114). He lived for a considerable period in Kirmân, where he wrote panegyrics on the Sahîlîk Arslân-Shâh b. Kîrmânîshâh (1101–1114). The great poet Majd al-Dîn San'aî showed him the greatest reverence and celebrated him in a long ûşâde as the best poet of his time. He could not have been San'aî's teacher, as the Banklîpe Catalogue (l. c.) says, since he must have been only a year or two older than San’aî. His influence however is quite marked in many of San'aî's works. One of Mukhtârî's philosophical ûşâdîs may be regarded as the one of the finest examples of the old Persian school of poetry since Ma'bar on it were written by the best poets such as Khâshâ, Amir Khosrâw, Alîh-rî Alîkhanî, "Abd al-Rahman Lââmî and Nâwî. His chief work is a large ûşâde of lyrics, the majority of which are panegyrics in the style of the old Ghaznavî poets like 'Unurî and San'aî, and dedicated to Arslân-Shâh, Bahram-Shâh, Alâdî al-Dawla Dâlâmî, Tâmgush-Khân and a number of vîlîs. Besides these ûşâdîs there were in the ûşâde a few short maqâmânî, one of which of an astronomical nature seems to have had a great influence on later poetry. We should probably also ascribe to our poet the authorship of the Alâshârî-nâma, an imitation of the Şâhârî-nâma, the hero of which is Shâhriyar's son of Baranz son of Shahri, i.e. a great-grandson of Kustân, and the action of which is laid in India. The poem is dedicated to Mas'ud III, in the preface the poet says that he has worked at it for three years and hoped for a present worthy of this labour. If he does not receive this gift however, he will not write a satire this year, which must be a direct reference to Firdawsi. The year of Mukhtârî's death is not exactly known, 530 (1135), 533 (1138), 544 (1149) and 554 (1159) are mentioned. The last date seems to be the right one.

Bibliography: H. Elbe, Neuere Literatur (Gr. I. Ph. ii. 334, 356–357); Daulatabâhî, p. 93; Majdîm al-Funâsî, l. c. 508–507. A manuscript of the Şâhârî-nâma in Rien, l. c. 542. (E. BERTHEL) AL-MUKIT, [see ALLAH, II.]

MUKNÂ, a district and village in the Yaman, a day's journey south of Sana'a. The Arab geographers mention a cornelian mine here. The name is also given to a mountain in the Yaman Sarat. According to Sprenger, we cannot connect the Himyar tribe of this name with the Musqar of Piolemy.

MUQTAZAB, name of the thirteenth metre in Arabic prosody, very little used; in theory it consists of three feet, with two successive mustafîlîn, in each hemistich; but in practice it has only two.

There is one ûf and one dark: muqatsu mustafîlîn: muqatsu mustafîlîn. However, muqatsu should lose its û in mustafîlîn: (mudwallâ = mudwallâ) or change its û to a, which is very frequent (muqatsu = mudwallâ).

Mustafîlîn can never retain its û (mustafîlîn = muqatsu). (MOH. BENCHENNE)

AL-MUKTADI MI-AMRI 'L-LâH, ABD 'R-RAHMÂN 'ABD ALLAH M. MUKHTARI, 'Abbasîd caliph. His father was the son of the caliph al-Mukhtârî and his mother an Armenian slave girl named Urduwâna. After the death of his grandfather al-Kâlîm in Sha'bân 407 (April 757), al-Mukhtârî succeeded him as caliph. The real ruler was the Sahîlîk Sultan Malikshâh [q. v.] to whose daughter al-Mukhtârî was married in 480 (1087). By 482 (1089) however, she had returned to her father became
she was neglected by the caliph. Malikshāh, who wished to prevent the caliph interfering in affairs of state, endeavoured to induce him to leave Baghdad and take up his residence in another town; this plan however came to nothing through the death of the sultān in Shawwal 485 (Nov. 1092) and al-Muqtadī was left in peace in the capital. About this time the power of the Saljuq was at its greatest height and in all the lands conquered by them the spiritual supremacy of the caliph was recognised. Al-Muqtadī died suddenly on 15th or 19th Muḥarram 487 (4th or 8th Feb. 1094) at the age of 38. He was perhaps poisoned by Malikshāh's son and successor, Burkīyārūk [q.v.] whom he had offended by confirming the selection of his minor brother Muhammād as sultān.

AL-MUQTADIR [See ALLĀH, II.]

AL-MUQTADIR B. 'Abbās al-Abbāsīd caliph, son of al-Mu'tadī and a slave named Shaghāb. After the death of his brother al-Muqtadī in Dhu l-'Khādād 295 (Aug. 908), al-Muqtadī who was only 13 at the time was proclaimed caliph. Many however preferred 'Abbās Allāh, son of the caliph al-Mu'tazz, and after the murder of the vizier 'Abd al-Ḥasan b. ʿAbbās in Dhu l-'Khādād 295, according to the vizier's personal and sometimes by the viziers among whom special mention may be made of the intriguing Ibn al-Furāt [q.v.] and the brave Ibn al-Darrāsh [q.v.]. Al-Muqtadī's caliphate was therefore marked by a gradual decline. In his reign the dynasties of the Fāṭimids [q.v.] and Hamdānids [q.v.] became independent. The Karmājāns also rebelled once more. In the years 307 (919—920) and 310 (923) Baṣra was plundered by the Karmājān chief Abū ʿĪsā Sahābra (cf. AL-DJANSARI) and at the end of the year 311 (924) he fell upon the pilgrim caravan returning from Mecca. In Dhu l-'Khādād of the following year (925) he attacked the caravan which was going on the pilgrimage to Mecca from Baghdad and put it to flight. He next plundered al-Kufa and then returned to Baṣra. An army sent against the Karmājāns under the command of Muḥammad arrived only after they had retired. In 314 (926—927) Yūsuf b. Abī l-Slālā was summoned from Aḥurābadīdān to help, but Sulaimān defeated him in Shawwal of the following year (Dec. 927) and took him prisoner. The caliph's troops did not dare to give battle and in Muḥarram 316 (March 928) Sulaimān seized the town of al-Raḥba. After an unsuccessful attack on al-Raḥba he retired; in 317 (929—930), or, according to others, in 316, he plundered Mecca and carried off the Black Stone. On the Byzantine frontier both sides continued their raids with varying fortunes. In 305 (917) the Byzantines made an offer of peace and after two years the peace was definitely concluded, but hostilities very soon broke out again. In 314 (926—927) the Byzantines ravaged the district of Malkāyat and in the following year they crossed a considerable part of Armenia. After taking several Armenian cities which belonged to the Arabs (316 = 928—929) and occupying northern Mesopotamia (317 = 929—930) they lost all their gains in 319—320 (= 931—932). In Muḥarram 317 (Feb. 929) a rebellion broke out in the capital. Al-Muqtadī was forced to abdicate but was brought to a place of safety by Mu'āwīya, while the soldiery plundered the palace. His brother Muḥammad was summoned to be Commander of the Faithful in his stead with the style al-Kahtīr; but since the chief leader of the rebels, the head of police Niẓārī, could not satisfy the demands of the troops for higher pay, al-Kahtīr was deposed after a few days and al-Muqtadī placed on the throne once more. In Baghdad he continued in power until in 320 (932) the catastrophe came. The enemies of Mu'āwīya took advantage of his absence to persuade the caliph that Mu'āwīya intended to dethrone him and when Mu'āwīya approached at the head of his army, al-Muqtadī was persuaded with great reluctance to take the field against him; but he fell at the beginning of the encounter (27th Shawwal 320 = Oct. 932). See also the article MUHAMMAD B. YUSUF.

AL-MUQTAPFI B. 'Abd al-Abbāsid caliph, born on 12th Rabī' II 439 (April 9, 1096), son of al-Muqtadī and a slave girl. After the deposition of his nephew al-Rašīd, al-Muqtapī was acknowledged as caliph on the 8th Dhu l-Ḥijjah 530 (Sept. 17, 1136). While the Sādūqīs were fighting among themselves, he did his best not only to maintain his independence but also to extend his rule and one district after the other in the Irbīk fell into his hands. In 545 (1148) a number of enmities announced their allegiance to Sultan Mas'ūd and marched on Baghdād but dispersed after several encounters with the caliph's troops. According to some sources, the same thing took place again next year. In Rabī' II 547 (Oct. 1152) Mas'ūd died, and was succeeded by his nephew Malikshāh who was deposed in a few months and succeeded by his brother Muḥammad. In the meanwhile the caliph seized the two towns of al-Hilla and Wāṣit. In the following year Sultan Sanjar who lived in Kūršān was attacked and taken prisoner by the rebel Ghuzz [q.v.] whereupon his enmities proclaimed Mas'ūd's
brother Sulaiman-Shâh saltân in Muḥarram 552 (Feb.–March 1156) the latter was recognised by the caliph on condition that he did not interfere in the affairs of the Ṭarîq. Although al-Muktafi supported him he was defeated in Djinânâd I (June–July) of the same year by his nephew Muḥammad and the latter's auxiliary. In Dhu l-Hijjah (Jan.–Feb. 1157) Sulṭân Muḥammad advanced on Baghdad to take vengeance on the caliph. The latter had to retire to the eastern part of the town and was besieged there for several months. In Rabî' I 552 (May 1151) however, the sulṭân suddenly raised the siege because Maškîkhâb was advancing on Hamadân. As the latter therefore retired, hostilities automatically ceased and Mulâmmad b. Ṣâd was said in 1157 to have made peace with al-Muktafi. The latter twice besieged Ṭakrit in vain; on the other hand, he succeeded in taking Lihi. The Crusaders continued their hostilities in al-Muktafi's caliphate. The most powerful pillar of Islam was the Atâbeq of al-Mawṣûl, Imâd al-Din Zangî, and his son Nûr al-Din Muḥâmid in Syria. Al-Muktafi died on 2nd Rabî' I 553 (March 12, 1160).

(K. V. Zettersten)

AL-MUKTAFI b. 'IZZâD, ABD MUḤÂMÂD AL-'ÂLî b. 'ÂḤÂMîD, A'BBÂSîD CAliph, son of al-Muṭaadîd and a Turkish slave girl named Čiček (Arabic Džđjak). In 281 (894–895) he was appointed by his father governor of al-Kâyî and several towns in the neighbourhood, and five years later he was made governor of Mesopotamia and took up his quarters in al-Râkîa. After the death of al-Muṭaadîd on 22nd Rabî' II, 282 (April 5, 902), he ascended the throne and at once won the good-will of the people by his liberality and by destroying the subterranean dungeons in the capital. He proved a brave and fearless leader who fought with success against the many enemies of the caliphate. The Kârmaṭians were ravaging Syria; one town after another fell into their hands and Damascus itself was plundered. On the 6th Muḥarram 291 (Nov. 29, 903) the general Muḥâmad b. Saḥîmân finally succeeded in inflicting a crushing defeat on them and they scattered in all directions. Muḥâmad then turned his attention to Egypt where he put an end to the rule of the Tūlûnids. Many of their followers joined him and after the Tūlûnîd Ḥârîm b. Khumârâwaš had been slain, the capital had to surrender (Ṣâfâr 292 = Jan. 905) and Ḥâfiz al-Naḥârî was appointed governor of Egypt. An attempt to restore the Tūlûnîd was easily crushed (293 = 905–906). About this time the Kârmaṭians again began to be troublesome and at the beginning of the year 294 (Oct.–Nov. 906) they attacked the great pilgrim caravan returning from Mecca, massacred the men and carried off the women and children. In Rabî' I of the same year (Dec. 906–Jan. 907) they were defeated near al-Kâdiša by the caliph's troops under Wâfîl b. Śâwâstegân. The war with the Byzantines was also vigorously pursued. In 291 (903–904) a Greek named Leo who had adopted Islam undertook a number of raids on the Greek coasts with his fleet of 35 ships. The Byzantines however had the advantage by land. In 292 (904–905) Marâsh, al-Maṣjaḍa and Ťarûs were taken by the Greek general Andronicus and the following year the Byzantines advanced as far as Hâlab. Then the Muslims gained the upper hand and Andronicus went over to them. Al-Muktafi died in Dhu l-Ka'da 295 (Aug. 908) at the age of 31; cf. also the article AL-ÂḤÂMîD b. AL-ḤÂSÎN b. ÂḤÂMîD.

(K. V. Zettersten)

AL-MUKTÂNÂ, BAḤR AL-DIN, A Druze missionary and author, with his teacher Ḥamzû b. 'Âlî q.v. founder of the theological system of the Druzes [q. v.], the fifth minister of the Druse theogony, with several titles of honour, in addition to the above two: al-Djâbût, al-Âṣîr, al-Tâlî, kjhâyâl, al-Muktafrî etc. His "secular" name was Abû l-Ḥâsan b. Abû Ahmad al-Samâkî. Of his life practically nothing is known. As Arab historians are silent about him (Silvestre de Sacy, Exposé de la religion des Druses, ii. 320), his two writings are almost the only sources according to Druse tradition, he was a Druze of Alexandria in al-Ḥâkîm's time [q. v.]. (M. v. Oppenheim, Vom Mittelmeeer zum Perrischen Golf, i., Berlin 1899, p. 135). As his works reveal quite a good knowledge (not without misunderstandings) of Christian religion and literature, he may have been born a Christian, probably in Syria. Only for the period of his teaching do we have chronological exactness. His table of investiture is dated on the 13th Shawbân of the third year of Ťumâna mission i.e. 411 (1020) (S. de Sacy, op. cit., i. 474–475: ii. 309, 313; transl., ibid., ii. 297–309). The earliest of his known writings is of the tenth year of Ťumâna, 418 a.H. (ibid., ii. 326). In consequence one must assume that he came to the front after the disappearance of al-Ĥâkîm and Ťumâna. His activity was not a continuous one and he had even to live for a time in concealment (about the year 17–18 of Ťumâna; see S. de Sacy, op. cit., ii. 364), whether in Egypt or Syria is not certain (H. Guys, La nation druze, p. 114). The latest date known in his writings is the 29th year of Ťumâna, i.e. 433–434 (1042) (S. de Sacy, op. cit., i. 496; ii. 379). His farewell epistles dates from this year; according to it he had retired into concealment (ibid., i. 514–515; ii. 358); nothing more is known of him. The "Druze theogony" does not agree with these dates; it gives 17 years as the period of his activity (H. Guys, op. cit., p. 107). Ph. Hitti's assertion (The Origin of the Druze People, p. 11) that he died in 1031 is due to a misunderstanding.

Druze tradition not unjustly ranks him with Ťumâna and regards him as the greatest theological writer, to whom four of the sacred books are ascribed (M. v. Oppenheim, op. cit., i. 135–137). These are not books
in the proper sense but collections of separate tracts, usually in the form of epistles, directed to followers of the Druse teaching or of other creeds in various lands (Byzantium, Syria, Egypt, Arabia, India). They are to this day frequently read by the Druses in their hālāwāt; commentaries were written on some of them by the last independent Druse theologian 'Abd Allāh al-Tanākī (d. 1480; on him see Ph. Hitti, op. cit., p. 53; 71; M. v. Oppenheim, op. cit., l. 137). Of the some 110 Druse treatises so far known in Europe, 70 are ascribed by S. de Sacy to al-Muktānā (op. cit., i. 484 and 496). Except for a few that were published by S. de Sacy also, few other writings of Ḥanāfī, Ṣūfī, Ḥadīth, and Rabbānite authors have been printed, namely the Kīthā al-Bad' by Ch. Seybold (s. Bibl. and al-Kisāyāt al-Kaṭanṭanīyya, sent in 1208 to the Byzantine Emperor Constantine VIII., by J. Khalil and L. Romzeville (s. Bibl. and extracts in Hitti, op. cit., p. 64—67). Others are accessible only in translations and extracts (spec. in Silvaestri de Sacy; al-Kisāiyyat al-Manṣūhyya, a synopsis in Hitti, op. cit., p. 68—70). As with other Druse writers, the style is very obscure and artificial, frequently embellished with rhymed prose.

Silvaestri de Sacy, whose book still is the most important collection of material, regards al-Muktānā as "un enthousiaste de bonne foi" (op. cit., l. 508). It is highly desirable that some one should devote a special study to his life and work, paying particular attention to the authenticity of his works and to a critical edition of them.

MULAK [See MAWLĀ].

MULK (A.), royal power, is used in the Kūrān with reference to God and to certain pre-Islamic personages, who all appear in the Old Testament, and in the former case is synonymous with mutākib; the latter word however occurs only four times in the Kūrān and always with a dependent genitive ( kull išār or al-ramūsūt wa-l-tāriq) while mulk is often used absolutely. To God alone belongs mulk, He has no associate therein; to Him belongs mulk over heaven and earth as well as over the judgment. He gives mulk to whom He will; the unbelievers have no share in it. Shāfi‘ī promised Adam imperishable mulk and tempted him with this promise to eat of the shajarat al-khisīl (Sūra xx. 118). Nimrīd endeavours to claim for himself God's mulk against Ibrāhīm (ii. 260) but God gives mulk to the family of Ibrāhīm (iv. 57). Yusuf thanks God in prayer for the mulk which He has given him (xii. 102). Fir‘awn boasts of his right to the mulk Miyr (xiii. 50); God wills to give Talūt mulk over the recalcitrant Israelites and to send the fātūr as a sign (li. 248 sqq.). Dāwūd's mulk is mentioned ii. 522 and xxxviii. 19 and Sulaimān's li. 96; the latter prays for it (xxxviii. 34).

That the conception of mulk was not carried over into Muslim law generally has been explained in the article MAJL; an exception is Egypt during the Ayyūbī period and in quite modern times. See also the article TAKM and G. Richter, Studien zur Geschichte der altemen arabischen Rechtslehre (Leipz., Sem. Studien, N. F., iii, 1932), esp. p. 6. (M. Plessner)

MULĀN is an ancient town of the Pandjak situated in 30° 12' N. and 71° 31' E., and has been known at various times as Kasthpūr, Hanspur, Bāpūr, Sanb or Sanapūr, and finally Mulakshān, of which Mulān is a corruption. This name is derived from that of the idol and temple of the sun, a shrine of vast wealth, which the Arabs, who plundered it, named dār al-asbāh, or the house of gold. It remained the Arab capital, and the outpost of Islam in India, for three centuries but by A.D. 900 its ruler had become independent of Baghdaḍ. At this time it was seized by 'Abd Allāh the Karmāṭī, and became a stronghold of the Karmāṭī heretics, who were crushed and expelled by the orthodox Mahṣūmī of Ghazān. The town and province remained nominally subject to the descendants until Khūrānā Mūlik, the last of them, was carried into captivity by Mu‘īz al-Dīn Muḥammad b. Sūm, when it became a province of his Indian empire. On his death the governor, Nīsīr al-Dīn Kābakī, attempted to establish his independence of Dīlī, but Khūṭh al-Dīn Ablāk reduced him to obedience, and the province remained nominally subject to Dīlī from 1260 to 1438 when Shaikh Yūsuf Khurānī became independent ruler of Mulān and was followed by the kings of the Langāb tribe, who reigned until 1537. The town was occupied both by Timūr in 1397 and by Bābir in 1528.

The province was one of the ṣurūs of Akbar's empire, and remained nominally subject to his successors until 1752, when its allegiance was transferred to Kābul. It was occupied by the Sikhs as early as 1771, but was not annexed by them until 1818, when Ranjit Singh took the city by storm. It was not affected by the first Sikh war, but the murder of two British officers by Mūṛādī led to the second Sikh war, and the city was captured on January 3, 1849. Its fortifications were dismantled in 1854 and its garrison was disarmed in the mutiny of 1857.

MU-MUTAHNA, title of sūrā 19.

MÚMTÁZ, BAKKHWĪDRĀ b. MAḤMŪD TŪR-KĀNĪ, a Persian writer, a contemporary of the Saʿwīd Suṭṭan Ḥasan (1694—1724). At an early age he left his native town of Farah

THE ENCYCLOPÆDIA OF ISLAM, III.
and went to Meaw where he entered the service of the governor Ayılan-Khan. After two years however, he left this post and became munsif with Hassan Kül Khân Şahînî Kürî-i-başî in Ḫalîfān. At a banquet there at his master's house he heard a story which attracted him exceedingly. He wrote it down and it became the foundation of a great collection, Maḥfīl, which contains about 400 stories and consisted of a masnadana, eight ṣâhî and a ḥātimâ. Soon afterwards he returned to Farāh, spent some time in Herât and Meshâh and then entered the service of the emir Mûnîkh Khan b. Kâğıtghây whose duty it was to defend Darûn and Kâğıtghây against raids by the wild nomad tribes. His stay there was disastrous for Mûmtâz, since he lost all his goods and chattels and the valuable manuscript of his Maḥfīl during a nomad raid; he did not have another copy of it. He resolved however to restore the book and wrote all the stories that he could remember a second time. Thus arose the second version of the Maḥfīl, which consists of a masnadana, five ṣâhî and a ḥātimâ and has come down to us under the title Maḥfī al-Ḳūtîb. The book is written in an extravagantly artificial style. The ḥātimâ is the best part; it contains the celebrated story of Zâhî and Ra'ânî, which is very common in Persia in a simplified form in many editions from the popular presses.

MUMTÂZ MAHALL, wife of Ṣâhî Dâjîn, and the lady for whom the Tâjî Mahâll (q.v.) was built. She was the daughter of Aṣâfī-Ḥân, who was Nûr Dâjîn's brother. Her name was Aḏrûmân Bîqî, the title Mûmâtâz Mahâll being conferred on her after Ṣâhî Dâjîn's accession. She was his favourite wife and bore him fourteen children, seven of whom grew up. She was born in 1593, married in 1612, and died at Bûrûnâbâd in the Deccan, very shortly after the birth of a daughter in 1631. She was beautiful and amiable, and Ṣâhî Dâjîn loved her tenderly.

MUNADJĐJIM. [See Astrology.]

MUNADJÎM BÂŞH. The name by which the author of the most important general historical work written in Turkey is known. His real name was Aktâf Efsenî, son of Lâfi Aṭîh, a native of Ereğli near Konya. He was born in Selânik, in the first half of the xvith century, received a scholarly education and served in his youth for fifteen years in the Mewlewî-kâne of Kâsim Paşa under Shaikh Khalîl Dedî (Sigîlî- ṭâhânmâ, ii. 257). Afterwards he studied astronomy and astrology and became court astrologer (munadjiâm basî) in 1078 (1667—1668). In 1086 (1675—1676) he was admitted to the intimate circle of Sultan Muhammad IV as münâfiq-i pâdishâhî. He was dismissed in Muḥarram 1099 (November 1687) and banished to Egypt. From here he went some years later to Mecca, where he became Ḥâshî of the Mewlewî-kâne. In 1105 (1693—1694) he was obliged to move to Medina, where he lived for seven years. Soon after his return to Mecca he died there on the 29th of Ramazân 1113 (February 27th 1702) and was buried near the tomb of Ḫâdîjâ.

Besides writing his historical work, Munadjdim Basî displayed a considerable literary activity. Of his works are mentioned a ḥâtimâ on the Kur'an commentary of Bâḍîjâ, a commentary on the 'Ashâb al-ḥadîth of al-Qâdî, a Ḥâfiz-i 'Arâfî, a translation of the anecdotes of Uba'id-i Zâkâni, and a number of treatises on geometry, mysticism and music. His Turkish dâvî also gives him a place in the ranks of Turkish mystical poets; his tâhâfnâ was 'Ashâbi.

The general history was written in Arabic under the title Lâyân al-Dawâd, but although manuscripts of the Arabic original exist (the Somâ-Kânei Edeh of 'Ali Ewâr mentions two MSS. not mentioned by Bâbiner, viz. one in the library of the mosque of Selim II in Adrianople and the other in the imperial palace, in the library of Almâîdd Ilî), it is much better known in the Turkish translation made by the poet Nêdêm (q.v.) in the xvith century under the title Sayâtâf al-Ḳâhîrî (printed in three volumes in Constantinople in 1385). It is a well known, arranged, after the fashion of similar Arabic works, according to dynasties, with a main division into three parts: the first treating of the history of Muhammad, the second of the non-Muhammadan dynasties, and the third the Muhammadan dynasties. In the introductory chapters the author cites his numerous sources, not a few of which are lost in the original. Therefore the work has a special value for the knowledge of many smaller dynasties and for this reason it has been especially used by F. Sachau for Ein Verzeichniu wakhânien-dânischen Dynastyen (in SB, Pr. Ab., W., Berlin 1923 [cf. the introduction). The last dynasty treated is that of the Ottoman Sulûqu; it is proportionately longer and more detailed than the history of the other Muhammadan dynasties and is based on several imperfectly known sources; the last part, which ends in 1689 (1678), gives contemporary history. The Turkish translation of Nêdêm is very readable and not composed in the high-flown literary style that prevailed in his period. For this reason it is especially praised and represented in Ebuzziya Tewfîk's Nûmân-i Edbeleyi-i 'Eshâniyê, Constantinople 1330.

Bibliography: F. Bâbiner, O. G. W., and the sources mentioned there.

AL-MUNAFIKUN (t.), the term applied in the Kur'an to those Medîneî upon whose fidelity and zeal Muhammad could not absolutely rely. The Arabs (e.g. Muḥabbâr, Kûmil, ed. Wright, p. 153) derive the word from münâfîk (one of the entrances to the hole of a field mouse), but it is certainly the borrowed Arabic münâfîk, *heretic* from münâfîka to *aspire*, münâfîka to be divided, irresolute*. The meaning *wavering*, doubter* quite fits the usual use of the word in the Kur'an, while the usual translation *hypocrite* can only apply to a few passages. Another description of the same people in the Kur'an is: *those in whose hearts there is sickness (weakness, doubt)*, again in contrast to the unashakably firm believers. Sometimes (ix. 68
Muhammad also on one occasion speaks of Ma'nafi'Kun among the Beduins. The first group found their leader in 'Abd Allah ibn Umayya (q. v.) who would have been the chosen head of the Kaila tribe, if a new and superior force, which he could not meet, had not opposed him in Muhammad. Nevertheless these claimants, joined by other unreliable elements, were strong enough to cause the greatest embarrassment to the Prophet in critical moments e. g. before the battle of Uhud (III. 160 sq.), in the War of the Ditch (xxxili. 1, 12-24, 60, 73) and before the march on Tabuk (I. 63-69, 74, 78), as he had always to be careful not to drive them over into the enemy's camp. It is no wonder then that his utterances about them are always made in a tone of great irritation. He describes them as hypocrites, who say something different from what they mean in their hearts (III. 161; xiii. 7); in this irresolution, the enemy, according to their view of the future, sometimes the Muslims and sometimes the enemy (IV. 137-143; v. 57); if it goes badly with the believers, they think that their religion has deceived them (vili. 51). When they are together among themselves they revenge themselves for the restraint which they must put upon themselves by malicious remarks about the Prophet and his revelations, but are in great anxiety, lest Allah may communicate their secret conversations (I. 65 sqq.; x. 79, 123 sqq.). They are indolent at prayer (I. 141), refuse to take part in the fighting or to contribute from their means (xlii. 22, 31; xlii. 1 sq.; Ixii. 71; cf. iv. 40 sqq.); they hope for a weakening of his power so that the more worthy may expel the measurer (Ixii. 8). As representatives of the true Meccan aristocracy, their attitude and eloquence made a certain impression on the Prophet but on closer examination they are nothing but "propped timbers" (Ixii. 4). In a word, they are no better than the unbelievers. God makes them err (iv. 59 sqq.) and their abode shall be hellfire (I. 74; Ixii. 13 sqq.). We cannot help feeling in some ways a certain sympathy for these men who were deprived of their rights; but in the end they deserved their fate for their complete lack of ideas and courage at decisive moments and their conduct with regard to the Jews in Medina, whom they incited to resist Muhammad and then left in the lurch (cf. I. 11), makes a very unfavourable impression. With the death of 'Abd Allah they lost their leader and their opposition was forced to be silent before the great successes of Muhammad's last years.

The word munafik remained however and like other Kur'anic terms was used in the fighting between the various parties as a term of abuse; cf. e.g. its application to Ibn Zubair (Tabari, ii. 467, 3 and his party (Abhawari, An-Nasir wa al-aqabi, Chronik, p. 73, 4). In the Qur'an Sura Iviii. is called after the Munafikun; it is connected by most commentators

with the campaign against the Banu Mu'attal.

Muhammad ibn al-Munafikun. [See Umayyads II.]

Mu'nis ibn al-Munafikun, title of Sirr lxvii., which is also called al-mustabil and al-munafiya.

Munafikun (Munafiqun), the head-quarters of the Munafik District in Bihar and Orissa in India, situated in 25° 25' N. and 86° 28' E. on the south bank of the Ganges. The population of the district in 1911 was 2,132,593, of whom 200,339 were Muhammadans. Muhammadan historians state that Bakhittar Khaled was the first Muhammadan who conquered Munafik during his subjugation of Bihar about 593 (1198). Henceforth it became a place of military importance. In 1177 (1705) Nawwâb Mir Khâshim, the Nawwâb Sildar of Bengal, when he proposed to fight against the British made Munafik his military head-quarters. He founded here an arsenal under Gurgin (Gregory) Khân, his Armenian general. The gun-making industry for which the town is famous is said to date from the establishment of this arsenal.

Bibliography: Imperial Gazetteer of India, xvii. 401-403; O'Malley, Bengal District Gazetteers, Monghyr, Calcutta 1909, xvii.

(M. Hidayet Hosain)

Munafikun (Munafiqun) deereh Munis, ottoman poet of Adrianople. He belonged to the Mewliwî order. He received his education from the famous Enis Dede (d. 1147 = 1734). He died in 1145 (1732) in Adrianople, where he is buried. (cf. Bibilography: Fath, Teskeh, Constanti- nople 1277, p. 387; Tahtip, Sigüit-i-işmaîli, iv. 527; Ali' Ewver, Sema'âbi-i-işteh, Istanbul 1509, p. 226.

Mu'min al-Munafikun, principal 'Abîbîsî general from 926 to 931 (926-933), and latterly virtual dictator (usual attribution to him of mitha al-Kafrîh seems to rest on passage — p. 347 — in Hîlal al-Sâhib's Kiwa al-Wusâra [ed. Amedroz], where Naṣir should be read for Mu'nis), a staunch (passage of Ibn Miskawayh [ed. Amedroz and Margoliouth, i. 100] shows that ðhdûm in this case does not mean merely freedman, as suggested by Massignon, al-Hallaj, p. 205, N°. 2), said by al-Dhababi, Ta'bîlî al-Bizâm (followed by Ibn Taghrîbî, ed. Juybîlî, ii. 255) to have been 90 years old at death (though this age would seem incredibly great for a recently active commander), i.e., to have been born in 931 (845-846), and to have held the rank of amir for 60 years.

Mu'nis first appears (if passage of al-Taθârî, iii. 1953, refers to him) as a Khâdîm of al-Mu'tâjid (not yet caliph) in Zandâ [q. v.]. He was appointed of 267 (980-983) and is mentioned as Chief of Police in caliph's camp in 287 (990). Al-Dhababi (also Ibn Taghrîbî, loc. cit.) states, again, that he was banished to Mecca by al-Mu'tâjid, to be recalled on accession of al-Muktâdîr [q. v.]; and as Mu'nis is nowhere referred to during intervening reign of al-Muktâfî, the statement may be true. (If so, in al-Mu'âthî’s description, Munûdî
at-Lūhahā, ed. B. de Meynard, viii. 212, of al-Mu'tadid's death, Ibn al-'Aṯīm read al-'Aṯīm, as in 'Arib, ed. de Goeje, p. 295.)

Mu'nis owed his later eminence mainly to his leading the defence, in 296 (908), of the Ḥasanī palace at Baghdād for al-Mu'ātkīr against the partisans of the latter's cousin, the pretender Ibn al-Mu'tazz [q. v.]. During the caliph's youth his gratitude and that of his powerful mother for this service assured Mu'nis's position; and though later al-Mu'ātkīr's favour turned to enmity, by that time Mu'nis's authority was hardly in need of support, owing chiefly to his almost invariably successful generalship. For though he undertook no very important campaigns, except perhaps the repulse of the Fāṣīmīd al-Mahdi [q. v.] in 307 (915-920) (for which he received the Ḥākāb al-Mu'āznārī, and the defence of Baghdād from the Karmāratīs [q. v.] in 315 (927-928), he was only once defeated—in 306 (918).

Mu'nis early fell out with the wazīr Ibn al-Fūrāt [q. v.], repeatedly opposing him, till in 314 (925), on Ibn al-Fūrāt's third term of office, Mu'nis played a prominent part in securing his dismissal and execution. He now became all-powerful, being invariably consulted on the appointment of viziers and so controlling the government. Hence the change of al-Mu'ātkīr's affection to dislike, first signalled (315 = 927) in an abortive plot of the caliph's to murder him. In 316 Mu'nis lent himself to al-Mu'ātkīr's deposition in favour of his half-brother al-Kāhir [q. v.]. He almost immediately restored him, however, thereby becoming more absolutely his master than ever. Al-Mu'ātkīr eventually deigned Mu'nis (319 = 931), who thereupon left Baghdād. Next year, however, having meanwhile collected a strong force, he marched on the capital intending to reinforce his authority. He duly defeated the caliph's army outside the walls, but al-Mu'ātkīr himself was killed on the field.

Mu'nis now restored al-Kāhir. But by resuming his dictatorial ways he soon so alienated him that he was obliged in self-defence to keep the new caliph a prisoner in the palace. He even contemplated deposing him. Al-Kāhir, however, succeeded in luring Mu'nis, together with his chief supporters, into the palace, where he shortly had them executed in Sha'bān 321 (August 933).

Mu'nis's influence was on the whole exerted for good; but he was neither strong nor intelligent enough to prevent the decline of the caliphate. His example of depriving the caliph of real power was pernicious. It was to be followed all too soon by the series of adventurers who, with the style of amir al-samāri [q. v.], were to dominate al-Kāhir's successors.

MUNKAR WA-NAKIR (the forms with the article are also found), the names of the two angels who examine and if necessary punish the dead in their tombs. To the examination in the tomb the infidels and the faithful—the righteous as well as the sinners—are liable. They are set upright in their tombs and make out their opinion regarding Muḥammad. The righteous and the faithful will answer, that he is the Apostle of Allāh; thereupon they will be left alone till the Day of Resurrection. The sinners and the infidels, on the other hand, will have no satisfactory answer at hand. In consequence of this the angels will beat them severely, as long as it will please Allāh, according to some authorities till the Day of Resurrection, except on Fridays.

In some sources a distinction is made between the punishment and the pressure (saqūfa) in the tomb, the righteous being exempt from the former, not from the latter, whereas the infidels and the sinners suffer punishment as well as pressure. (Abū l-Mu'īn Māmah b. Muḥammad al-Naṣfī, as cited in the commentary on the Waṣayṭ Abu Ḥanīfa, Haidarābād 1321, p. 22.)

The punishment in the tomb is not plainly mentioned in the Kūrān. Allusions to the idea may be found in several passages, e.g. sūra xxvi. 29: "But how when the angels, causing them to die, shall smite them on their faces and backs"; sūra vi. 93: "But couldst thou see, when the ungodly are in the floods of death, and the angels reach forth their hands, saying, Yield up your souls: this day shall ye be recompensed with a humiliating punishment"; sūra viii. 52: "And if thou went to see when the angels take the life of the unbelievers; they smite their faces and their backs, and taste ye the torture of burning" (cf. further sūra is. 102; xxiii. 21; lii. 47).

The punishment of the tomb is very frequently mentioned in Tradition (see Bibliography), often, however, without the mention of angels. In the latter group of traditions it is simply said, that the dead are punished in their tombs, or why, e.g. on account of special sins they have committed, or on account of the weighing of the living.

The names of Munkar and Nakir do not appear in the Kūrān, and, so far as I can see, once only in canonical Tradition (Tirmidhī, Q. 80). Apparently these names do not belong to the old stock of traditions. Moreover, in some traditions one anonymous angel only is mentioned as the angel who interrogates and punishes the dead (Muslim, Tāhir, trad. 163; Alī Dāwūd, Sunnā, bāb 30h; Ahmad b. Ḥanbal, lii. 233, 346; iv. 150; Taṣā'ilīs, No. 753). So there seem to be four stages in the traditions regarding this subject: the first without any angel being mentioned, the second mentioning the angel, the third two angels, the fourth being acquainted with the names Munkar and Nakir.

This state of things as reflected in hadith finds a similar reflex in the early forms of the creed. In the Fāḥiṣh Akbar i., which may date from the middle of the viiiith century A.D., the punishment of the tomb appears as the only eschatological representation (art. 10). In the Waṣayṭ Abu Ḥanīfa, which may represent the orthodox views of the middle of the viiiith century, we find, apart from an elaborate eschatology, the two following articles (arts. 18, 19): "We confess, that the punishment in the tomb shall not without fail take place. We confess, that in view of the traditions on the subject, the interrogation by Munkar and Nakir is a reality". The term "reality" is apparently intended to oppose the
allegorical interpretation of eschatological representations as taught by the Mu'attashim.

The Pišk Akhbarī, which may represent the new orthodoxy of the middle of the 10th century A.D., is still more elaborate on this point (art. 23): "The interrogation of the dead in the tomb by Munkar and Nakir is a reality and the reunion of the body with the spirit in the tomb is a reality. The pressure and the punishment in the tomb are a reality that will take place in the case of all the infidels, and a reality that may take place in the case of some sinners belonging to the faithful."

In the later creeds and works on dogmaties the punishment and the interrogation in the tomb by Munkar and Nakir are expressed in similar ways.

The Karramīya [q.v.] taught the identity of Munkar and Nakir with the two guardian angels who accompany man ('Abd al-Khāliq al-Baghlākī, Uṣr al-Dīn, Stambul 1932, p. 246). Qazwīnī admits the idea that eschatological representations are a reality that takes place in the malakūt.

The origin of the names is uncertain; the meaning "disliked" seems doubtful. The idea of the examination and the punishment of the dead in their habits is found among others peoples also. The details to be found in Jewish sources (bībīt ha-ab-hab) are strikingly parallel to the Muslim ones.

MUNSARĪ, the name of the tenth metre in Arabic prosody; it has three feet to the hemistich. It has three ʿarūf and four ṣūrū: 1st ʿarūf: mustafīlān maṣfūlātum mustafīlān mustafīlān 2nd ʿarūf: mustafīlān maṣfūlātum mustafīlān mustafīlān 3rd ʿarūf: mustafīlān maṣfūlātum maṣfūlātum

We rarely find mustafīlān in the ṣūrū of the first ʿarūf. The second ṣūrū of the first ʿarūf is not indicated by al-Khalīl b. Ahmad but Ibn Bari notes it was much used by the muwaddāl poets, among them Ibn al-Rūmī. It may be noted that the second and third ʿarūf are regarded as belonging to the ṣūrūf metre.

Mustafīlān may lose: 1. its ʿa except when used as the first ʿa in the first ʿarūf; 2. its f and the foot becomes (mustafīlān = maṣfūlātum); 3. its s and f at the same time (which is very bad) and the foot becomes (mustafīlān = faṣūlātum). This last change cannot be undergone by the first ʿarūf.

Maṣfūlātum may lose: 1. its f, which is very bad and the foot becomes (maṣfūlātum = maṣfūlātum); 2. its w and the foot becomes (maṣfūlātum = faṣūlātum).

3.

MUNSĪF, [See ISNĪL].

MUNSĪF (A.), part active iv. of m-w-f, "to be just, to act with justice", the title of a native judge of the lowest grade in India.

AL-MUNTAFAQ, a section of the Arab tribe of the Bani 'Ukayl, which in turn is a subdivision of the great group of the 'Amir b. Sa'āya [q.v.]. Genealogy: al-Munktakī b. 'Amir b. 'Ukayl (Wustenfeld, Gen. Tab., p. 19). The very scanty information in Wustenfeld can be supplemented by the notice which Ibn al-Kalbī gives of the Bani 'l-Muntafāq (Jami'at al-Ainan, MS. Brit. Mus., fol. 130v.-131v); but this little clan nowhere appears to play a great part in early history. The territory inhabited by the Bani 'l-Muntafāq is the same as that of the other divisions of the Bani 'Ukayl, in the southwest of Yamūma; some places belonging to them are quoted by al-Bakri (Muqaddam, ed. Wustenfeld, p. 567), Yāḥyā (Muqaddam, ed. Wustenfeld, i. 793-794; iv. 712, l. 78: we may note that in these two passages al-Muntafāq is said to be the surname of Mu'awiyah b. 'Ukayl while the usual genealogy makes this Mu'awiyah a son of al-Munktakī), al-Hamāshī (Jāhānra, ed. D. H. Müller, p. 177, l. 12-15: note the mention of gold mines in their territory). The Bani 'l-Muntafāq numbered among their clients the Banū Tahār (Wustenfeld, Gen. Tab., C 14) whose eponym was said to have been made a prisoner by them (Kitāb al-Ākāhd, vii. 110); one of the few episodes of the pre-Islamic period in which this clan is mentioned is the battle of Shīb Djabala where Kays b. al-Muntafāq distinguished himself (Ākāhd, x. 44; Naḥāf, ed. Bevan, p. 671 l. 12-672, l. 14, where Ibn Ṭafāl should be deleted). In the history of the origins of Islam, several of them appear as ambassadors of the Bani 'Uqayl to the Prophet: such were Abūs b. Kays b. al-Munktakī and Lāyīq b. 'Amīr b. al-Muntafāk (Ibn Sa'd, l. 144, 45 etc.; on the latter the bibliographic collections have long discussions as to whether he is to be identified with this or that muḥaddith: cf. among others Ibn Ḥaḍjar, Taḥādhūl al-Ṭabarī, viii. 456). In the period of the conquests, the Bani 'l-Muntafāk settled in the marshy region between Kufa and Basra (al-Kalbāghandi, Nikāyat al-ʿArab, p. 65-66). All that we know of them after this period is the names of a few individuals who held public offices: a certain 'Amīr b. Mu'awiyah b. al-Muntafāk, mentioned by Ṭabarī, i. 3284 at end, as fighting at Siffin, is said by Ibn al-Kalbī to have been governor of Armenia and Ādharbājān under Mu'awiyah according to Ibn al-Kalbī, 'Abd Allāh b. Mu'awiyah b. Rabba b. 'Amīr b. al-Muntafāk was governor of Marw and Ahvāz, also under Mu'awiyah, and 'Abūda b. Kays b. al-Muntafāk of Armenia, under Yazīd I. These men are not mentioned elsewhere: the same is true of the poet Djam b. Awar b. al-Husain b. al-Muntafāk (Ibn Ḥaḍjar, ibid. [ed. Sharafīya, Cairo 1325], v. 124 follows Ibn al-Kalbī).

(Leo Vetti Della Vida)

AL-MUNTAKIM. [See ALLAH II.]}
AL-MUNTAŞIR (also called Mustansir) b. 'LLAH, ABU 'DhabiyyIR MUHAMMAD b. 'DhabiyyIR, *Abū ʿAbdAllāh caliph, son of al-Mu'awakkil by a Greek slave. After his father had been murdered in Shwawdīl 247 (Dec. 861) by conspirators, among whom was al-Muntasir, the latter ascended the throne, aged 25 according to the usual statement. As a ruler he was only a tool in the hands of the violent Aḥmad b. al-Khaṭīb and the Turkish generals. His brothers al-Mu'taq and al-Mu'ayyad were forced to surrender their claims to the throne and Wāṣif, the commander of the bodyguard, was sent to the Byzantine frontier. Unlike his father, he treated the *Ālids with great consideration; nothing else remarkable is recorded of him. Al-Muntasir died in Rabī' II 248 (June 862) or, according to a less trustworthy report end of Rabī' I, in Sāmarrā' after a reign of six months.

MURĀDĪ. [See Aḥmadīyār, 11. 9. 9.]

MURĀD, the name of an *Aram* tribe, belonging to the great southern group of the Madābiḥ [q. v.]; genealogical tradition (al-Kalbi, Djamārat al-Murād, Esqelār MS., fol. 113b—117b, which is followed by Ibn Durānī, Kitāb al-L-kitābah, ed. Wüsstenfeld, p. 328; cf. also Lūnān al-ʿArab, iv. 409) regards Murād as a nickname, for this tribe was said to have been the first to rebel (tamarrāda) in the *Yaman*; an etymology which is not convincing. Murād's own name is said to have been Yaḥyā b. *Muḥammad b. Yaḥyā* and he was therefore a brother of the *Ām* and the *Ṣaḥil al-ʿArbaʿa* (Wüsstenfeld, General Tabellen, p. 17, n. 9). Although they were neighbours of the Southerners, the Murādīs, the Murādīs have always retained a typical Beduīn character; their country (usually called al-Dār and placed to the east of Naḍjan and Maʿrib) is bare and sterile (cf. the picturesque description given of it by the Kitâb al-Aghânî, viii. 135 and the mountains of the Murādī* mentioned by Yâkūt, Murâjīn, ii. 78) and its inhabitants are notorious as brigands (Farāvâr Murād; cf. Kitāb al-Aghânî, x. 147). The land inhabited by the Murādīs and by their neighbours, the Hamdānīs [q. v.], had once belonged to the Taʾīyī (Yâkūt, Murâjīn, i. 129), who had left it to settle in the north of the Arabian peninsula; it is probable that it was from the old masters of the country that the Murādīs and the Hamdānīs inherited the cult of the god Yaghūth (cf. below).

The Murādīs appear for the first time in history in connection with an episode, not however at all clear, of the last days of the dynasty of the ʿAbbāsids of *Albârāʿ; as the king *Amr b. al-Muẓaffar (III) b. Muʿāwīya b. *Saʿd* had excluded his half-brother *Amr*, a son of Usāma, sister of Hind mother of the first of their chief, *Amr*, from a share in the kingdom, the latter sought refuge with the Murādīs, who recognised him as their chief but when he began to rule tyrannically, they killed him, which gave *Amr b. Hind a pretext for invading the land of the Murādīs and putting to death the murderer of *Amr* b. Usāma (al-Muṣaffar al-Dārī, Amīr, al-ʿArab, Constantine, 1300, p. 68—69, who gives a more satisfactory account than that contained in the passages quoted by G. Rothstein, Die Dyn. der Lahmīdān, p. 99, in which Yaḥyā, iv. 130 should be read for i. 130). *Amr* is said to have been killed by a certain Ibn al-Dīnāʾī (the same story is given by Ibn al-Kalbī, Dīnār al-muḥājirīn) according to Yaḥyā on the other hand by Hubrâzī b. 'Abd Yaghūthi surnamed al-Makhlībī, the latter's son Kāsī seems to have been one of the most powerful chiefs of the Murādīs at the time of the rise of *Albârāʿ.*

The Murādīs had just then suffered a disastrous defeat, which had considerably weakened them, at the hands of the ʿAbbāsīs, as the result of a quarrel which had arisen in connection with the control of the worship of the god Yaghūth (cf. Wellhausen, Reste arab. Heidentums, p. 19—22 and the sources mentioned by him). It is probably this defeat (Yaḥyā al-Raʾmānī), which traduced places in the same year as the battle of al-Qadār, which made a section of the Murādīs think it advisable to seek an alliance with Muḥammadīs but Kāsī b. al-Makhlībī refused to join in this. It was therefore another Murādī chief, Farwa b. Musulīkī, who went to al-Madinā in the year 106 A.H. and concluded a treaty there with the Prophet (cf. Caetani, Annali dell Ištām, iii. 332). To what extent tradition is right in saying that Farwa was given authority to levé *naẓīl* on all the tribes of the *Yaman* is very difficult to ascertain. In any case, the policy of the Murādīs was not oriented towards Muḥammad under the leadership of Kāsī b. al-Makhlībī. In the great rising led by al-Awsād al-ʿAnṣārī against Persian hegemony in the *Yaman*, the Murādīs were against him. But if, as tradition has it, Muḥammadīb used his connections with some chiefs of the *Yaman* to prevent al-Awsād's success, after the death of the Prophet these same chiefs refused obedience to Abī Bakr and resolutely threw themselves into the struggle against *Albârāʿ.* It is again the Kašī b. al-Makhlībi who, as chief part in these events. Taken prisoner, Abī Bakr granted him his life and consequently the chief of the Murādīs and his tribe played their part bravely in the conquests. We find them sometimes in Syria, sometimes in the *Itāl* and Kašī everywhere distinguishing himself by his exploits. He lost an eye at the battle of Yārnūk (cf. Caetani, Annali dell Ištām, i.—v., index e. v. Qays b. Hubayrah). But the account of his death in the civil war between *Alī* and Muḥṣīya at the battle of Sīṭin is based on confusion with another man of the same name of the tribe of Badīla (the fact, which is clearly indicated by Ibn al-Kalbī, Dīnār al-muḥājirīn and Tabāri, i. 3301—3302, has already been noted by Ibn Hādīj, Ṭabkīrī, ed. Sharafīya, v. 288; Annali dell Ištām, iv. 638 should be corrected). We also find the Murādīs in the conquest of Egypt (Annali, iv. 573, 21 A.H., § 101 b—209). But it was of chief that they settled in the largest numbers. It was their chief, Abī al-Raḥmān b. Mulīṣām, who, assassinated the caliph *Alī; it was there also that in 60 (679) Hānū ḏ. *Urwā al-Murādī was executed by orders of the governor *Ubaḍ b. ʿAbd Allah b. Ziyād after being found guilty of conspiring with Muḥammadī b. *Abī Bakr in favour of al-Ḥusain (Tabāri, ii. 227 sqq.). He was a descendant of the poet *Amr b. Kīšī (R. S. O., xiii. 58, 327), one of the very few poets.
of this tribe, which does not seem to have produced many individuals of note either during the Dākhiliyya or under Turkish rule. We may however mention Uwāiṣ al-Kārānī (of the Banū Karān b. Ādām b. Nādjiyya b. Murād, Wāstenfeld, Genial. Tab., p. 72), one of the prototypes of Muslim asceticism.

Bibliography: Given in the article.

MURĀD I, according to the common tradition the third ruler of the Ottoman state, was a son of Orkhan and the Byzantine lady Niliše. Although some Ottoman sources profess to know the year of his birth (Sīğil-i ‘collision, I. 74 gives the year 726 = 1326), this date, like all dates given by Turkish sources relating to this period, is far from certain. The name Murād (Greek sources such as Phrantzes have Αναφημ, from which later Latin sources make Amurath, while contemporary Latin sources from Italy have Muratthi) must have originated in mystical circles and hardly occurs in earlier times. An ‘Abdāl Murād lived in Orkhan’s time (Sīğil-i ‘collision, iv. 354, ‘Aṣḥāb Paghī, ed. Gis, p. 200; photographs of his tomb in R. Hartmann, Im neuen Anatolien, Leipzig 1928, plates 9 and 10). The ancient Turkish chronicles often call Murād Gazi Khünkār, later Turkish historians Kudāwāndikār (q.v.).

During his father’s lifetime Murād had already been entrusted with the governorship of ‘In ‘Uthūl and later of ‘Ushūr. His brother Sulaimān Pasha had held the more important sanjaks and was destined to become Orkhan’s successor. Sulaimān’s untimely death, shortly before that of Orkhan himself, placed Murād unexpectedly at the head of the Ottoman principality. This happened about 1350; the date of Orkhan’s death is uncertain.

Murād I became the first great Ottoman conqueror on European soil. In this he followed the footsteps of his brother Sulaimān Pasha and of other Turkish emirs before him.

It is not yet possible to gain a clear idea of the succession of military achievements by which the Ottomans succeeded in establishing themselves firmly on the Balkan Peninsula. Even the outstanding victories are confounded with each other in the Ottoman and Western sources, and the exact dating of even important events is subject to great difficulties. The Byzantine sources, the most reliable of all, are mainly concerned with the tortuous policy of the Byzantine rulers. On the other hand, many tales of a legendary character have entered the historical accounts of later times. The impression on the whole is that the Ottoman successes were mainly due to the mutual rivalry between the then existing Balkan states, Byzantines and Bulgarians, and the Austrian and Serbian kingdoms, complicated by the struggle of Venice and Genoa for an advantageous position in the Levant, and the zeal of the popes for bringing the Greek church back to Rome. This secured the Ottomans at all times although in the Christian camp itself. Nor is it possible to ascertain in which Ottoman expeditions were really planned by Murād and his councillors and which were merely successful raids by Turkish bands. All this makes it extremely difficult to form an adequate judgment of Murād’s personality as a warrior and as a statesman.

 Provisionally three periods can be distinguished.

The first begins shortly after Murād’s accession with the conquest of Western Thrace, in which were taken Çorlā, Demotikā (if this town had not already been taken by Orkhan), Gümüldjina, Adrianople (about 1352; cf. KÜREN) and Philippopolis, mainly through the activity of the beglerbeg Lala Şahin and Ewremos Bego. These conquests provoked a coalition of Servians, Bosnians and Hungarians, who were beaten on the river Maritsa by ‘Hājjāt Ibēki. The western part of Bulgaria was raised up to the Balkan Mountains and the Byzantine Emperor John Palaeologus made his first submission as vassal to Murād. Murād himself had been on a campaign in Anatolia, which brought him as far as Votçat (q.v.), during which he consolidated the Ottoman hold on Angora (already taken by Sulaimān Pasha in 1354; cf. Wittek, Festschrift Jacob, 1932, p. 347, 351 n.). He then came to Rūm-līlī and took up residence in Demotikā, to change this town in 1366 for Adrianople, from this time on the European capital of the Ottomans. The story about a treaty between Ragusa and Murād concluded in 1365 has a legendary character (cf. Gis, Festschrift Jacob, 1932, p. 42, after Jireček). In the meantime the hostility between Byzantines and Bulgarians gave Murād the opportunity of taking Izbetbul (Sofopulis) near Burgas, and the same hostility led to the fall of, about 1356, of a crusade undertaken at the instigation of Pope Urban V by count Amadeo of Savoy to come to the rescue of the Byzantine Emperor; the expedition only drove the Turks from Gallipoli for a short time.

A second period of Murād’s reign may be said to begin with the crushing of a Serbian advance on the Maritsa, near Čirmen, probably in 1357. This Serbian defeat is known to the Turkish sources as ‘erf tămâh vi and gave the Turks during the following years the important Macedonian towns of Sesre, Drama and Kavalla, and at the same time the possibility of advancing west of the Vardar. These conquests were made by Ewremos and Djan- darī Khalīl Pasha, while Lala Şahin obtained about the same time successes in eastern Bulgaria (battle of Samakow). Then followed again some years of comparative tranquillity, in which the newly won regions were partly colonized with Ottomans; the still unsubdued northern parts of Serbia and Bulgaria were governed by the local rulers as vassals of Murād. The latter had more than once to interfere with the dynastic affairs of the Palaeologoi. After John Palaeologus had been sold in 1375 the island of Tenedos to Venice, this led to an action of Genoa in combination with the Turks, in course of which John lost his throne and was imprisoned, until, by the favour of Murād, he became Emperor again in 1379; his dependency went so far as to help the Turks, together with his son Manuel, in the conquest of Philadelphia (Ala ‘Shehir), the only remaining Greek fortress in Asia Minor. The end of this second period is marked by a new activity in Anatolia. A part of the territory of the Germiyān-Oghlu (q.v.) was acquired as a wedding gift to Prince Bayazid when he married the daughter of that ruler (probably in 1381); this territorial accession was followed by the sale of the greater part of the lands of the Hamid-Oghlu to Murād and by the conquest of a part of the principality of Teke.

About 1385 there followed new conquests in Europe. Turkish troops intervened in Epirus and Albania (under Khalīl Pasha), but decisive for the establishment of Ottoman power in the Balkans
was the taking of Sofia (1385?) and Nish (1386?). About the same time, the Italian republics, Genoa and Venice, obtained by treaties with Murad, concluded respectively in 1385 and 1388, commercial privileges in Turkish territory. Immediately after the successes in Serbia, probably also in 1386, Murad went to war with the Karatan-Oghlu ‘Ali’ al-Din, his son-in-law; this conflict had long been threatening [cf. Karatan-Oghlu]; now the Ottoman power had grown so as to destroy the political equilibrium in Anatolia. Murad was victorious in the battle of Konya, but left ‘Ali’ al-Din in his possessions and set the example, henceforward traditional, of lenency in dealing with the Anatolian population. This caused a lively discontent amongst the Serbian troops which had taken part in the battle of Konya. These Serbians are said to have contributed to the anti-Turkish feeling among the Serbians in general, who, under the leadership of Lazar Gresljanowitch, and with the Bosnian king Tvrtko as a powerful ally, were preparing a last effort to free themselves from Turkish vassalage. They succeeded in defeating an Ottoman army at Plouchnik (1388). The results were meagre, however, for at the same time the Turks made new conquests in Bulgaria (Shumla and Timuro) and even raided Morea. In 1389 Murad himself marched against the Serbians and their allies and fought the famous battle of Kosowo Polje (Turkish Kosova), where he himself lost his life, although the Serbians, partly owing to treachery in their own ranks, were defeated. The most probable date is June 20, 1389 (Gibbons, cf. also Giese, in Ephemerides Orientales, No. 34, April 1928, p. 2 sq.). The way in which Murad was killed, during or after the battle, is not clear from the early sources; the later Serbian epic tradition has the well-known tale that Murad was murdered by Milosh Obranowitch, Lazar’s son-in-law, who, claiming to be a deserter, had obtained an audience with Murad after the battle, was admitted to his presence and killed him with a dagger. Murad’s body was transported to Brusa and buried in a tübe near the mosque which he had built at Cekirge in Brusa (cf. Ahmed Tewhid, in T.O.E.M., vol. iii.).

Murad I was the first ruler under whom the state founded by ‘Oghlan rose to be more than one of the then existing Turkoman principalities in Asia Minor. This development is symbolised in the successive change of titles given to him in different building inscriptions dated in his reign (cf. Taeschner, in J. E. S., xx, 151 sqq.). While the oldest inscription calls him simply Bey, when his son Orkhan, and gives him a ‘Abd (Shahab al-Dunya wa-l-Din) after the Salladik fashion, he is already called Sultan (q.v.) in 785 (1385), while in the inscription from 790 (1388) on the *Imaret* built by him in Iznik, we find the style which afterwards became a tradition with the Ottoman sultans (al-malik al-mu’azzam al-‘Alî al-Dîn al-madîk-râm al-sultanî ibn al-sultanî). It was a time when the old Salladik traditional institutions no longer held and new forms of government and administration came into being, to which the example of Byzantine institutions, and also those of Manûlî Egypt may have contributed. Even if it is not true that Djandarli Khur al-Din Khallil Pasha — who was appointed Murad’s vizier at the beginning of his reign and died about 789 (1387) — was the first Ottoman grand vizier, it cannot be denied that the activity of this man — who by his origin belonged to a higher culture than the Ottoman — as Murad’s councillor as well as his military deputy and administrator in Macedonia, makes him a true prototype of the grand viziers of a later age (cf. Taeschner and Willett, in J. E. S., xviii. 66 sqq.). His son ‘Ali Pasha began also to play an important military part during the later years of Murad’s reign. It is also with Khalil Pasha that the old Turkish sources connect the institution of the janissaries as troops formed from converted Christian prisoners of war. In the administration of the times (q.v.) a Kâmilus of Murad I is said to have brought improvements. Some of these measures were closely connected with the problem of acquiring a quiet and loyal population in the newly conquered Christian territories; this was not possible by Turkish colonisation only but succeeded mainly through a humane treatment of the original inhabitants, after the region had once been conquered.

The more important buildings of Murad I are all in Asia Minor. The best known are the Kuddawenlik or Djâmi-i in Cekirge, near Brusa, where Murad himself is buried, and the Djâmi-i in Brusa; further a mosque in Bilecik, the Nûrîn Imâret in Iznik (recently described by Taeschner, in J. E. S., xx, 127 sqq.). There is also a mosque of Murad in Serres. The old Ottoman chronicles enumerate his foundations. — On Murad I’s coins cf. ‘Ali, in T. E. M., xiv. 224.

Bibliography: The information given by the old Turkish chronicles (‘Ashik Pasha Zade, Anonymous, ed. Giese, Urfûj, the translations of Leunelavius, also Djuûd-nâmê, Eyears), ed. Mûkrimin Khatîl, Istanbul 1928 and this editor’s *Medjâl*, Istanbul 1930) is sometimes supplemented by the later historiographers (Sa’d al-Din, ‘Ali, ‘Ataschqâm, † Yearli, † Yezddejâm-Resghi,*). The Byzantine historians (Phrantzes, Ducas, Chalcondylas), however, give a far clearer survey of this period so far as it came under their attention, while documents from Venice, Genoa and Rome throw light on the diplomatic activities evoked by the advance of the Turks in Europe. Ibn Hadjar al-Asqâlâmî, *İnşeâl al-Ghâber fi ‘Abd al-Umm*, contains also a biography of Murad I. Further the historical works of von Hammer, Zinzens and Jorga, and H. A. Gibbons, *The Foundation of the Ottoman Empire*, Oxford 1916, p. 110 sqq.; C. Jireček, *Geschicke der Seheren*, Gotha 1918.

(J. H. Kramers)

MURAD II, sixth ruler of the Ottoman Empire, was born in 806 (1403–1404) and ascended the throne in May 1421; when he arrived in Adrianople some days after his father Muhammad I’s death; his decease had been kept secret on the advice of the vizier 1wa? Pasha until the young Sultan’s arrival. As crown prince he had resided at Magnesia, and he had taken part in the suppression of the revolt of Simawna Oglu Badr al-Din. Immediately after his accession he had to face the pretender known in Turkish history as Düzme Muștafa (q.v.) and his ally Djiudâl (q.v.). Both were supported by the Byzantine emperor Manuel and at first were successful in the European part of the empire. Bayazid Pasha, sent from Brusa, was defeated and killed in the battle of Staff Ders (between Seres and Adrianople) and the allied Greek forces took Gallipoli. Then Murad himself had to face them in Asia; he suc-
ceeded in sowing discord between Mustafa and Djumaïd and defeated the first in the battle of the bridge of Ulubâd. Then Murâd went over, with the help of ships from the Genoese colony of New Phocas (Veniè Folla) and discovered Gallipoli, after which he entered Adrianople and killed the pretender. In 1422 he began a siege of Constantinople; this siege was raised, either by the effect of Byzantine gold (through the intermediary of the graecophil vizier İbrâhîm Paşa) or as a result of the rise of a new pretender in İznik in the person of Murâd’s younger brother Mustafa. The latter was at last betrayed by his former supporter İyâs Paşa and killed. Then followed a struggle with Djanâld, who had established himself again at Aidin, but surrendered at last in 1425, after which he was killed. Murâd was now at peace with all his European neighbours and vassals; the Emperor Manuel had died in 1424 and was followed by John Paleologos, with whom peace was concluded. Several towns had been taken in the meantime in Morea, and Wallachia paid tribute. In eastern Anatolia there had been a conflict in 1423 with Isfendiyar of Sindi, ending with the acquisition of a part of his territory by Murâd; after 1425 the Ottoman power was confirmed in Teke and Menteshe and the Karamân Oghlu İbrahim, who tried to take the already Ottoman Adalia, had to retire and made peace. In eastern Anatolia Yûrkedji Paşa subdued the Turkomans round Toğat and Amasia and of the region of Djamîk. In 1428 there began difficulties on the Hungarian frontier. The most noteworthy exploit of this period was however the capture of Salonic (Selinik; q.v.) in March 1430; after the Greeks had sold this town to Venice in 1427; Murâd had never given up the plan of avenging that transaction. Peace with Venice soon followed.

Occasionally the Turks had taken several fortresses in Epirus and Albania, but their interest began more and more to concentrate on the northwestern regions, where George Brankitich ruled as vassal over Serbia. With the latter peace was renewed in 1432 and a daughter Mara was given to Murâd, but the Turkish raids continued in Serbia as well as far into Hungarian territory. In 1438 the Turks made, together with Serbians and Wallachians, incursions in Hungary (capture of Semendra); in 1440 they beleaguered Belgrad in vain and in 1442 Turkish troops under Murâd Bey laid siege to Hermannstadt. Here they suffered a heavy defeat by John Hunyadi, who in the coming years was to act as champion of Hungary and Christian Europe. He was the leader, in 1443, of a big crusading army including Serbians, Poles and Germans; the Turks were thrown back at Nish, after which Sofia was taken. The campaign ended with a heavy defeat of the Turks at Jalce which was between Sofia and Philippopolis. In the same year Murâd had to oppose again the Kârânâm Oghlu, who supported the Christian allies. But the peace with Hungary, concluded in July 1444 at Sejred, though advantageous to Hungary, maintained the former frontiers of the Ottoman political influence; only Wallachia became tributary to Hungary.

After this peace, which was to last ten years and seemed to Murâd a guarantee for the future, he abdicated in favour of his son Muhammad, leaving with him Khalîl Paşa, son of İbrahim Paşa (who had died of the plague in 1429) and Khusraw Molla [q.v.] as counsellors. He retired himself to Magnesia, but had to come back when, in September of the same year, the Hungarians, meeting the peace treaty, were preparing a new crusade. They marched south of the Danube to Varna; here the army of Murâd inflicted on them a crushing defeat, in which King Ladislav of Hungary was killed. Again Murâd II went back to Magnesia, but in the following year a Janissary revolt broke out in Adrianople and it was the vizier Khalîl who invited Murâd to return a second time, as the young Muhammad did not seem to be able to face the situation.

During the last six years of his reign Murâd led again several campaigns in the Balkan peninsula. In 1446 an action was undertaken against the Paleologoi in the Morea (destruction of the Hexamillion, capture of Corinith and Patras); in 1447 against Albania, where the activity of Skander Beg [q.v.] had begun in 1443; in 1448 he faced again a Hungarian invading army, which was beaten on the plain of Kossowa; and in 1450 he was again in Albania (siege of Croja). In that year Constantine Paleologos became, by the grace of Murâd II, the last Byzantine Emperor, after the death of John. Shortly afterwards, in the first days of February 1451, Murâd died at Adrianople. He was buried in Brusa at the side of his mosque (cf. Ahmad Tewfîk, in T.O.E.M., iii. 1856).

His reign was of extraordinary importance for the future political and cultural development of the Ottoman Empire. After the first critical years he continued his father’s work of consolidation. His aim was mainly to live on peaceful terms with the vassal princes, of whom the ruler of Sindi and the despots of Serbia gave to their daughters to Murâd. This peaceful policy was in accordance with his character; the Byzantine historians and other Christian sources describe him as a truthful, mild and humane ruler. His most influential visiters were not yet the renegades of later times; they belonged to the old families that had supported the cause of Murâd’s forefathers and were becoming a kind of hereditary nobility: İbrahim Paşa and Khalîl Paşa of the Djamart Oghullari (F. Taeschner and P. Wittek, in H., xviii. 92 sqq.); Hâddiji, İwaç Paşa (Taeschner, in H., xx. 154 sqq.); the sons of Timurtash, of Erewnos and others. The mystical tradition was strong in his surroundings, as is proved by the great influence of a man like the Şaihit Amir İbnikkî; other shâhîs came to his court from Persia and Mesopotamia. This determined also the direction which the classical Ottoman literature was to take in following centuries.

Murâd II was the first Ottoman prince whose court became a brilliant centre of poets, literary men and Muslim scholars [see TÜRK, B., iii.]. But his court was also open to non-Islamic envoy and visitors and Murâd’s court seemed a centre of culture (cf. Jorga, l. 464 sqq., which description applies principally to Murâd II). Amongst the sultans’ buildings a mosque in Brusa (cf. H. Wilde, Brusa, p. 57) and one in Adrianople (the U Kerveli Dâme), are notable and some large bridges. His army organisation is well known from a full description by Chalcondylas.

Bibliography: The older Turkish sources: Neçir (Haniwaldanus), Aşık Paşa Zade, Uraç, Küçü, Anonymous Giesa, are completed by the Byzantine historians Phrantzes (who himself played a part in the diplomatic history of the time), Ducas and Chalcondylas, and also by
the later Ottoman authors Sa’d al-Din, ‘Ali and Mineşştîm Begh. A curious contemporary description is that of an unknown captive from Mühlenbach in Transylvania (captured 1438) in his *Tractatus de moribus conditionibus et negotiis Turcorum* (cf. K. Poy, in *M.S.O.S.*, iv., v).

General later descriptions of Murad II’s reign in the works of von Hammer, *G. O. R.*, i.; Zinkeisen, i. and *Jorga*, i.

(J. H. KRAMER)

**MURAD III**

**MURAD III**, twelfth ruler of the **Ottoman Empire**, was born on the 5th *Dümâdâr* 953 (4th July 1546; *Sâhibîl-i ʾethnâmî*, i. 76) as son of the later Sultan Selim II and the êkârî Nûr Bânî. He arrived at Constantinople on Dec. 21st, 1574, after Selim II’s death and reigned until his death on January 16, 1595 or a few days later. His reign is not characterized by great conquests in Europe. The peaceful relations with Austria were officially maintained; peace was several times confirmed (in 1575 and 1584) by a new treaty and by extraordinary Austrian embassies. Nevertheless there were continual Turkish raids into Austrian territory, especially in Croatia in 1578 — where even a new sandjak was formed — followed by triumphal processions in the capital, which the Austrian envoys were forced to witness. It was only in 1593 that a formal war broke out, in which the then grand vizier Sinân Paşa took the town of Raš (1594). The relations with Venice were of the same kind as with Austria; notwithstanding several serious naval collisions peace was maintained, mainly through the influence of Murad’s kâsî Efendi Safiye (of the family of Baffa) and the Kapudan Paşa, who were Italian regenades. In the Danube principalities the never ending dynastic disputes went on; this was also the case in Transylvania. Even Poland was considered more or less an Ottoman tributary vassal state; the Polish king, Stephen Bathory, owed his crown to the sultan’s protection and after his death (1586) the new king Sigismund began to reign by the grace of Murad. The Forte had to intervene several times in the disturbances caused by Polish cosacks in Moldavia and the Tatar Khânate and by Tatar incursions in Poland. In the Crimea the Ottoman intervention was even stronger, because the Persian war necessitated in 1581 and 1583 expeditions by the way of Kaffa and the Crimea against Díghistán and Transcaucasia.

The most outstanding military exploit of the Ottoman Empire during Murad III’s reign was the war with Persia, which lasted from 1577 to 1590. Persia passed, after Shâh Tahmâsp’s death in 1576, through serious inner troubles. This gave the Turks a favourable opportunity of enlarging their territory. Between 1577 and 1584 the chief theatre of the war was Georgia. Lala Mustafâ Paşa won the battle of Lake Céldir (August 9, 1578), after which the princes of the small Georgian kingdoms became nominally Ottoman vassals, while several towns, like Tiflis and Shaki, came under direct military occupation. In 1579 the town of Kâra was fortified. That same year Sinân Paşa became ser-Sâker on the Georgian front. The completion of the conquests confronted the Ottoman armies with serious difficulties, especially after Simou, the former king of Kârtli, had come back to life in Persia. This made necessary the already mentioned expedition by the way of the Crimea in 1581, under Ösdemir ʾOthmân Paşa who was joined in 1583, by the same way, by Dâyer Paşa; they came back to Constantinople again via the Crimea and ʾOthmân Paşa was received with great honour by the sultan after his return, although it would seem that the real aim of the expedition — a junction with the Turkish forces of the south — was not reached, owing to the combined efforts of the peoples of Georgia and Shîrwân (cf. W. E. D. Allen, in *History of the Georgian People*, London 1932, p. 157). The second phase of the Persian war began with the taking of Tabriz in 1585 by ʾOthmân Paşa, followed by other successes on Persian territory (Gandja in Transcaucasia and Nîhtwend). In 1587 Shâh ʾAbbâs I ascended the throne: soon afterwards there began peace negotiations, ending in a peace treaty (March 21, 1590) which left Georgia, Shîrwân, Karabâgh, Tabriz and Luristan to the Ottoman Empire. One of the peace conditions was that the Persians should give up most of their anti-Sunni religious practices.

During Murad III’s first years Muhammed Paşa Şoqollî [q. v.] had continued to administer the huge Empire as grand vizier, but his once unquestioned authority began to wane and the influence of the sultan’s courtiers like Şemît Paşa and the defterdâr Uwez; an influential personality also was the Khâdía Sa’d al-Din — the historian — and the eunuch Qhazaner Agha. Home and foreign politics were influenced also by Murad’s mother Nûr Bânî and the already mentioned kâsî Efendi Safiye (Baffa), who used as a powerful agent outside the palace the Jewess Kira (Chierazza in the Italian sources). Şoqollî’s confidants were relegated from the capital (as the *nizâmî*) Fertûnî or executed (like Michael Cantacuzeno). But he was still grand vizier, when he was murdered on October 11, 1579. After him the grand vizierate was changed no less than ten times under Murad III. Sinân Paşa, already mentioned, held the office three times; ʾOthmân Paşa, appointed in 1585, after his return from Díghistán, died eight months, was as weak himself to direct a consistent policy, — as he acknowledged himself according to Allî (cf. Hammer, *G. O. R.*, ii. 567) — all kinds of abuses gradually began in this epoch, especially in the stipulation of the fiefs [cf. *tâmâl*] and the enrolling of the Janissaries; they are summed up in Köbi Bey’s *Rûstâ*. This sultan’s reign witnessed for the first time revolts of the Janissaries directed against the imperial dwân itself. The first mutiny, in April 1589, was caused by depreciation of the coinage and could be appeased only — as so often afterwards — by the sacrifice of the lives of high officials. In 1592 there was a similar Sipahî revolt. More than one provincial rebellion had to be subdued by force; the most celebrated expedition was that of İbrâhîm Paşa, the later démâd and favourite of Muhammed III, to Egypt and Syria in 1585; in Syria he persecuted severely the Bântû, the leaders of the Druses, but very soon afterwards the successful career of Fakhr al-Dîn [q. v.] began.

Murad’s reign can be characterized as the beginning of the internal weakening of the Ottoman power. The sultan did not possess the strong personality of his grand father; his amorous tendencies were much encouraged by his mother and his wife Safiye, and he had far more than a hundred
forces him to surrender, after which Abasza played a part as governor of Bosnia and of Silistria. In the meantime several vain efforts were made to recover Baghdad, by Hafiz Ahmad Pasha in 1626, and by Khosrew Pasha [q.v.] in 1630.

From 1632 Murad IV prepared with incredible energy the mobilisation of all the country’s resources for the war against Persia, where Shah Abbas I had died in 1629. He suppressed with great cruelty the rebellious movements among the Janissaries and reduced their number by not applying the deuchirmes for twelve years. New and more reliable troops were formed from the desherdja, bastandjas and especially the sighdjas (squads). The necessary funds were procured by drastic financial measures, amongst them the confiscation of large fortunes. Every attempt at opposition was cruelly suppressed; in 1633 even the Shikh al-Islam Aghj-Zade Husain was executed. In October 1633 an army under the new grand vizier Tabant Vaqf Muhammad Pasha left Constantinople, but that year and the following no important military operations took place. The Kapudan Pasha Djeyr, however, was successful in suppressing the power of the Druse Amir Fakhr al-Din [q.v.] and bringing him alive to Constantinople. In 1635 Murad himself left the capital, joined the grand vizier’s army in Erzerum and conquered Erivan (August 1635). Then the undefended Tabriz was taken and destroyed, after which the sultan returned. In the following year the Persians recaptured Erivan. Finally, in 1638, Murad took the field for the second time with the grand vizier Tahtja Muhammad Pasha; Bagdad was taken by them in December 1638, and thousands of Shafs were massacred. This was the end of the Persian war; in 1639 a peace was concluded, which left Bagdad to Turkey and Erivan to Persia.

In comparison with the events in Asia, European affairs were of secondary importance. The peace with Austria was several times renewed (1623 at Gyarmath and 1627 at Seoa) although predatory raids from both sides never ceased. Serious trouble was caused in 1624 by the appearance of Cossack ships in the Bosporus; they were defeated only in 1626. Another hotbed of unrest was the Crimea, where from 1624 till 1628 the Porte had to suffer against its will the Khans Muhammad Giray and his brother Shahin Giray, who even took Kaffa for a time. After 1628 the Tatar Mirej Kantemir (or Kankins), chief of the Noghays, became the most powerful man in the khanate; his continual incursions caused serious conflicts with Poland (peace restored in 1634) and in Moldavia. At last Kantemir was executed at Constantinople in 1637.
