LABBAI (LUBEY) (Tamil, Ilappai, said to be a corruption of 'arabbi'), in class of Indian Muslims, also known as Djamakas (Skt. rvauna, "Greek, western"), supposed to be descended from Arab immigrants who intermarried with native women, but now having nothing to distinguish them from the aboriginal people, except their mode of dress and manner of shaving the head and trimming the beard. In 1111 they numbered 401,700 and chiefly on the E. coast of Southern India. Most of them are Sunni, of the Shâhîs waqfshah, and their head-quarters are at Naqâvâ, the burial place of their patron saint, Shih al-Hamîd Abû al-Kadr (ob. 1600), commonly known as Kâdir Wall or Mihrân Sâhî (see Gazetteer of the Tanjore District, p. 245). They read the Qur'ân in Tamil translation, written in Arabic characters. They are industrious and enterprising, especially as fishermen and traders.

LABBAIKA (See Taliya).

LABID b. RIMÂ, ASC' ASI, an Arab poet of the pagan period, who lived into the days of Islam (mawhur), belonged to the family of Banu Dja'lâr, a branch of the Khilâb, who belonged to the Banu 'Amir and therefore to the Khawazim. According to Ibn Sa’d, vi. 21, he died in 40 (666/667) in the night on which Mu'awiyah arrived in al-Nukhâba to conclude peace with Hasan b. 'Ali. Others, like Ibn Hajar, iii. 657, write Nâsir (Fûn Fûsul-l'Asâs), ii. 51 thinks ought to be followed, give 41 A.H., others again 42. He is said to have reached an unusually great age (al-Sidjastânî, K. al-Mu'mmârin, ed. Goldziher, ch. 61). In fact he makes several allusions to this in his poems. The date of his birth can only be approximately fixed. Even before 600 A.D. he seems to have obtained a prominent position in his tribe by his command of language. As quite a young man he is said to have accompanying a delegation from his tribe to the court of king Abd al-Malik Nu'mân of al-Ihâs (c. 580-602), and when the latter was invited against the Banu 'Amir by his friend Abd al-Rahîm b. Ziyad al-Abî (of the tribe to which Labid's mother belonged),Labid succeeded with a satirical râjâ (Divân, NO. 33) in so ridiculing him to the king that he restored his favour to the Banu 'Amir. A verse from Nu'mân's answer to his courtier who sought to defend himself from the lampoon on him became proverbial (cf. al-Mufâsâlât, al-Fâhûr, L. 47; al-'Askari, Amâlî, on the margin of Maidûn, ii. 117, 7-18).

al-Maidûn, ii. 33; K. al-Ashqâr, xv. 94 sqq.; 91 sqq., xvi. 22 sqq., 21 sqq.; Abd al-Kâdir, Kâmânat al-Adwâb, i. 79 sqq., iv. 171 sqq.). In his later poems Labid also often prides himself on having helped his tribe by his eloquence. He remained loyal to his tribe even when a famous poet and scorned the profession of a wandering singer, practised by his contemporary al-'Askâr. But the coming of the Prophet Muhammad threw him out of the usual groove. We do not know the exact date of his conversion to Islam. As early as Djamâkâts II of the year 8 the chiefs of the tribe of 'Amir b. 'Abdullâh, 'Amir b. Tufail and Arbab b. Kâzî, a stepbrother of Labid, seem to have negotiated in Medina about the admission of their tribe to the new constitution without reaching any result (see Caetani, Amâlî, ii. 90 sqq.). Both men are said to have soon after come to an untimely end. 'Amir from plague and Arbab from a lightning stroke; the latter story seems to find confirmation in Labid's lament for him (Divân, NO. 5). The accusation on the other hand that Arbab attempted to kill the Prophet is quite incredible; for in that case Labid could hardly have composed several elegies on him and they would certainly not have been included in his Divân. In the year 9 the tribe again sent a delegation to Medina which included the poet and an agreement was reached. Labid is said on this occasion to have become a Muslim. He later migrated to Kufa where he died. Of his family only a daughter is mentioned who is said to have inherited his talent (see al-Maidûn, ii. 49, 13 sqq.; al-Ghâzâlî, Maqâlî, al-Badr, v. 57, 7 sqq.).

Labid's poems were very highly esteemed by the Arabs. Al-Nâbi'sha is said to have declared him the greatest poet among the Arabs and at least of his tribe, the Khawazim, on account of his Mu'âlââ. He himself is said to have claimed third place after Ibrân b. 'Abdullâh and Ta'hâf. Al-Djamâkâts (Tâl'mâd b. Shâ'îrâd, ed. Hall, p. 29 sqq.) places him in the third class of pagan poets along with al-Nâbi'sha and Abu Dhu'ayb and al-Shâmâkâb. Labid showed himself equally master of the kafilaf, the masâfiya and the bâshâlân. One of his bâshâlân was adopted into the collection of mu'âlââs and is thought by Nâsirî (Fûn Fûsul-l'Asâs, ii. 51) to be one of the best specimens of Beduin poetry. Labid uses the traditional pictures of the animal world — wild asses and antelopes fleeing before the hunter and fighting with his dogs — as charmingly as the usual complacencies about drinking bouts. He seems on the one hand to have only cultivated the marâb, because it had been traditional. He deals far less with the subject of woman's love than with the description of the Aslāf which he likes with
artistic calligraphy. He is also fond of recalling memories of places of his native district, the palm-groves and irrigation works of which continually move him to charming descriptions; indeed, one such connection he gives the whole literary (Hist. E. As., 19, 4, 490) of a journey from central Arabia to the coast of the Persian Gulf (see von Kremer, et al., p. 12). As his almost contemporary Abū Ẓahīr is fond of doing, in the Maʾālūkūt, 9, 154, he turns however more often to his beloved and thus combines the maḥāl with the main part of the hājīda to an organic whole; but for him this is simply a mode of transition to a new descriptive passage. His poetry is however distinguished from that of other poets of the pagan period by a certain religious feeling which seems to have been not exactly rare among his contemporaries, even before Muhammad's mission. While Zuhair, for example, still expresses his practical wisdom derived from the experience of a long life, in plain though impressive language, Lahib with such excessive always strikes a religious note. He certainly did not profess Christianity nor can we see in him a representative of the so-called Ḥanīfa of the ʿIra, as von Kremer wished to do. In him rather we find the belief in Allah as the guardian of morality finding particular expression, a belief widely disseminated in Arabia by the preaching of the Christian church. Such passages naturally invited the Muslim traditionists to increase them. Indeed a later author went so far as to ascribe to him a verse by Abū T-ʿAṣḥāyā (fig. 15). But many passages of his Divān seem to owe their inspiration to the Koran. The statement that he writes in more poetry after his conversion to Islam is obviously an invention (see the Sād, vi, 31, a repeated later; e.g. by ʿAlī Ḥusaynī, Majāli, ii. 52 infra); it is contradicted by the simple fact that poems 21 and 53 of the ʿArbāʿ were only composed shortly before his death (F. al-ʿArbāʿ, xvi. 101). The description of Paradise (Hist. E. As., 2, 14) is certainly inspired by the Koran like the idea that precedes it, that a record is kept of the doings of men. Under the influence of Islam in N. 39 and 41, verses 11 of which, as Ibn ʿAbī-l-Faqīr (i. 151), states that giving a verse, certainly must be written after his conversion, if it is not to be considered an interpolation, he replaces the maḥāl by pure adulation. Thus he creates a new artistic form that of poetical passages on the sanctity of human life; besides the Korān he may of course have been influenced by Christian preaching. He only follows older models in the composition when he combines adulation with the allusions of Islam from a woman in N. 14, so in Tahārīs multibāb, verses 56 spp. 63-65 (cf. Caster, Das Schickel, p. 93); where this is however only an episode in the whole.

Lahib's Divān was edited, according to the Fihrist, p. 158, by several of the greatest Arabic philologists, Abū ʿAbī al-Ṣabbāh, AbūʿAbī al-Shahbāz, al-Aṣmaʿ, al-Ṭāhir and Ibn al-Sāhih. Of these editions only half of that of al-Ṭāhir with a commentary has survived in the manuscript edited by al-Khālidī (see below) of the year 529. All other MSS. are much later, e.g. those in Leiden, Strasbourg, and that in Cairo not yet edited which also contains the Divān of Abū Ẓahīr, ed. by J. Holl.

LACCIADIVES (Lakīya divī, "the hundred thousand islands"), a group of coral atolls lying off the Malabar Coast between 8° and 14° N. and 71° 40′ and 74° W. There are thirteen islands in all, but only eight are inhabited, and these are divided into two groups—the northern, including the inhabited islands of Annini, Kudamart, Kitiya and Cetat, and the southern, including the inhabited islands of Agatti, Kara-rat, Androth and Kulendi. The northern group, for administrative purposes, forms part of the south Kanara District and the southern, of the Malabar District. To the south of the Laccadives stands the isolated island of Minikini, belonging physically, neither to this group nor to the Maldives, but approaching rather to the latter. The Laccadives were originally colonized by Hindus from Malabar but the inhabitants were converted to Islam in the thirteenth century, according to tradition. They number about 10,000, and in habits and customs resemble the Māppilas of North Malabar, but their women hold a higher position, and are neither veiled nor secluded. Inheritance follows the female line. The people formerly owned all that they cultivated, and the Kollam and Rajīs were virtually independent until, in the sixteenth century the Rajīs bestowed on them his admiral, the Alī Rāwjī of Kamanur, whose descendants governed them until 1791, when Kamanur was conquered by the British, into whose hands they fell.

LĀDHĪK (Lātīhī, Gk. Aistōs), the name of several towns in Asia Minor.

1. The ancient Aistōs, or Aistēvounē, or (Lātīhī Saray). It probably derived this name from the smelling furnaces which were here and around, as the centre of the quicksilver mining area. It was in Karaman south of Konya, on the great military road which ran through Asia Minor. Lātāhī Saray already knows it by its modern name of Yorgā Saray or Lātīhī Saray in Karaman.

LADIK — AL-LADHIKIYA.

Ladik (Hudjda Khalifa; Ladijkiya), the ancient Laodicea ad Lyceum was in the S. E. part of Djermiyan. Al-Battjia calls it, in following Greek sources, Ladijkiya Fratijia (= Φρατίγια while Ptolomy places it in Caria). According to Ibn Battjia it was a large town with 7 Friday mosques, beautiful gardens, flowing rivers and springs and fine markets. The Greek women there made remarkably beautiful and durable woollen goods, embroidered with gold. Ibn Battjia also praises the hospitality of the inhabitants but censures the freedom of their morals. Slave girls were sold and prostitution practised even in the public baths. On the history of the town (now Eski Hora) see above.

BIBLIOGRAPHY:

Ladik, the ancient Laodicaea Riveirae, south of Amasya.

AL-LADHIKIYA, a sea-port in Northern Syria, this ancient Laodicea Riveirae. It was founded by Seleucus I, who called it after his mother Laodike, and towards the end of the Seleucid empire it was the residence of the alliance of the four most important Syrian cities, the stegan, Antiochus, Amaena, Seleucia and Laodicea. In the reign of Justinian I it was made the capital of the newly founded province of Theodoria.

When the Arabs under the governor of Hims, Ubada b. al-Samit al-Aqmar, advanced on the town, the inhabitants made a determined resistance. Ubada encamped near Ladik and had deep trenches dug in which even horsemen could advance, unobserved. After a pretended retreat he returned in the night and was then able to surprise the inhabitants who had unobservantly opened the great gate of the city, and to enter the town. The citadel was then stormed and Ubada proclaimed upon the walls Allah akbar. A section of the Christian inhabitants fled to al-Basai (Birj-ir', al-Baladir, ed. de Goeje, p. 133), should thus be corrected for sanad: Ed. Schwar in Wallhausen, Z. D. M. G., i, 145. Their request to be allowed to return to the town was granted them on payment of a fixed sum as tribute. They retained possession of their churches, while Ubada had a new mosque built which was later enlarged (al-Baladir, ed. c. 134 ss.). About 97 (according to al-Baladir: 100 A.H.), the Greeks attacked the coast of al-Ladik and with a fleet, burned the town and carried off its inhabitants as prisoners (al-Baladir, ed. cl. c. Brook, J. H. S. 1878, xviii, p. 195). Umar had al-Ladik rebuilt, fortified and renamed the inhabitants from their captors. Yazid completed the restoration of the city after 'Umar's death and he also put a garrison in it. According to another story however, Yazid's services to the town were only the renovation of the defences and the strengthening of the garrison (al-Baladir, ed. cit. Mar'ud, Muruj al-Dhahab, Paris, viii, p. 281).

Nichephore Phokas in 968 won the town and the whole of Northern Syria from the Byzantines (Vahyi b. Sa'id al-Anjaki, ed. Kratkovskiy, and Vassiliev in Patrologia Orientalis, 1924, xlvii, p. 219). In 980, according to Vahyi b. Sa'id, when the Romans think, took his statement from a local chronicler of al-Ladik, the emperor Basil II appointed a certain Karmath, who had distinguished himself in an expedition against Tartalus which belonged to the Fatimid, to be governor of the town. When it was besieged by the Arab Muzay and ibn Shakir, he was captured during a sortie, and beheaded in Cairo (Reuss, Zepiski, Nauk, Acad. Nauk, xlv, p. 16 sqq. 153 sqq.). Michael Burzos (al-Faraj, ed. 1992) put down a rising of the Muslims in the town and had them deported to Bilad al-Rum (Vahyi, ed. Rosetti, p. 257). In 1086 al-Ladikkiya belonged to the Barqun Khan of Shaisan (Dasenberg, Osman. Chron., p. 27 sqq.) who had, however, to cede it to the Seljuk Malik Shah. In August 1098, the Count of Normandy took the town; it then passed in rapid succession to the Byzantines, to Bohemond of Tarentum, to the Byznatines again and finally after 18 months' siege, to Tancred of Antakiya (Rübbel), Gesch. des Kreises Jerusalema, p. 45, note 8). In 1104 we again find the Greeks besieging it by land and sea, and Bohemund promised the Emperor Alexius Comnenus in the treaty of Didim (1108) the possession of this territory among other places (Anna Comnena, Alexias, Boma, ii, p. 94, 271). Tancred however soon afterwards with the help of a Frank fleet took the town which in the meantime had again passed to the Muslims. The governor of Halab took and sacked it in 1130 in 1137 and 1170 it was visited by two severe earthquakes, in which only the principal Greek church remained intact. On July 23, 1188, Salih al-Din took the town ("Imad al-Din, Fath, p. 141; Abu Shama, Aziz al-Ramuiyatun, ed. Cairo 1287/1288, ii, p. 128 = Hisid, Orient, des Crois., iv, p. 561). In autumn 1197 Bohemund III succeeded once more in conquering al-Ladikkiya or a part of the town at least. In 1225 the Halabs destroyed the town or its citizens out of fear of the Christians approaching on the Fifth Crusade. But even after this (since 1197), half the city remained in possession of the Franks. Balbar in 1275 demanded that they should hand over this part of it. In 1281 al-Ladikkiya belonged to the emir Sonkor of Dimashq, whom the Seljuk had been forced to surrender it in a treaty (June 24), but after the fall of Sonkor, another emir won it back from Aflumer (April 20, 1287); soon afterwards a new earthquake almost completely destroyed several of its strong towers, the pigeon-tower, the light-house and the towers in the sea; great siege engines completed the destruction of the fortifications.

The district of al-Ladikkiya, which had hitherto gone with Halab under the Ayyubids (Vahyi, Minhaj, ed. Wüstenfeld, iv, p. 338; al-Shu'ayb, ed. Furtt, p. 237), was ceded to the king of the eleventh century, who declared it the new province of Tartalus ("Umar, Twr, ed. R. Hartmann, Z. D. M. G., 1910, p. 282, in R. Hartmann, Z. D. M. G., 1910, p. 282, in C. Zaaydi, Msy, ed. R. Hartmann, Z. D. M. G., 1910, p. 282, in F. Zaaydi, "Imad al-Din, Fath, p. 141; Abu Shama, Aziz al-Ramuiyatun, ed. Cairo 1287/1288, ii, p. 128 = Hisid, Orient, des Crois., iv, p. 561). In autumn 1197 Bohemund III succeeded once more in conquering al-Ladikkiya or a part of the town at least. In 1225 the Halabs destroyed the town or its citizens out of fear of the Christians approaching on the Fifth Crusade. But even after this (since 1197), half the city remained in possession of the Franks. Balbar in 1275 demanded that they should hand over this part of it. Paris MSS. Arab. 4435, fol. 94r, 122v, 123r, in van Berchem, Voyage en Syria, p. 290, note 3; al-Kalbajahandi, *Tabb al-Dun*, v. 145; transl. Gaudenfrey-Demoubyens, *La Syrie*, p. 113 (ed.). The Arab geographers and historians mention many ancient buildings that had survived in the town; they also tell of two castles connected with one another on a hill which commanded al-Lādhiqīya (Bahāʾ al-Dun, in Hist. Or. des Crois., ii. 110), a great city-gate, which it took a number of men to open (al-Ghālibī, ed. v. 132), and the splendid monastery of Dār al-Furūs (Masʿūdī, *Masāʾik al-Dhakhīlah*, viii. 251; Dānāwihi, ed. Mehren, v. 209, Abu ʿl-Fadl, Geogr., transl. Renand-Guyard, i. 183, in Ibn Batūta, i. 1831: al-Furūs) called after Zul Fursi and the name of the eminence to the north of the town (M. Hartmann, *Z.D.P.V.*, iv. 466 and map). A short description of al-Lādhiqīya is given by Ranulf of Caen (Grund Tavereh, ch. 144; Rohlricht: *Z.D.P.V.*, 2: 316 has put together a list of the buildings of the town known from Frankish sources). It is quite probable that the earthquakes and frequent pillaging suffered by the town in the course of centuries, it never seems to have been quite desolate but not uninhabited. The fine, high houses and the straight streets paved with marble blocks, noted by Ibn al-ʿAli, and Abu ʿl-Ḥasan (Hist. Or. des Crois., i. 720; iv. 361) and which they say had suffered much when the town was sacked (cf. also Yaḥyā, ed. de Goeje, *B.C.A.*, vi. 208), recall the description of Laodicea in Ptolemy's *Geography* as a *κατάκτα ιερόν πόλις* (Strabo, xvi. p. 753), and of the modern town van Berchem says (J.A., 1902, p. 425; cf. Voyage, i. p. 289 sq.): *la ville de Zedadhi a gardé ses ruines. Il est curieux que, en plein, d'aspect tout moderne, existât un moyen âge; il semble qu'il ait été à l'antiquité, comme certaines autres villes de Damas et d'Éphèse*. The origin of the straight streets and the square plan of the town (cf. Th. Schnieter in the Flortschrift für H. Kiepert, 1908, p. 224, 249) has been ascribed to architects of the Roman empire (A. v. Gerkan, Griech. Stadtbaukunst, 1904, passim), but more recently Culler has shown that they were already existing in the early Hellenistic period and had been borrowed as early as by Hippodamos of Miletus (fifth century) from the architecture of the ancient east (Architektur Hippodamos, in *Memoriai dell Accad. dei Lincei*, ser. v., vol. xvii, p. 409, 433 sqq.; Camont, *Guide de l'Égypte*, Paris, 1916, xiv. note 3, 4, 24 sqq., 483).

Laghuat — Lahidj

The town which was visited in 1503 by Ludovico di Bartholomeo and in 1810 by V. G. von Sestoc and which Niebuhr still calls Al-Mashat is but a name in the face of the desert, a word, if you will, in the air. In the old days, when the towns were full of inhabitants, this place was a town of several thousand houses and 500 straw orreed huts with almost 5,000 inhabitants, owes its prosperity to the Russian-Turkish war in the course of which in 1828 England temporarily proclaimed a state of siege in Aden and evicted the Arabs and Somaills from Aden. The latter went to Lahidj, where they built themselves thousands of huts close to the town, which now form extensive suburbs and considerably increased the number of inhabitants. The sea of houses is dominated by the palace of the Sultan, built by Indian architects and four to five storeys high with extensive subsidiary buildings; it is entirely built of clay and painted white. The palace is surrounded by a clay wall in the east of which lies a town with its numerous rectangular flat-roofed houses, all built of sun-dried bricks made of a mixture of dung, clay, straw and dried grass and one or two stories high. The reality of the picture is broken only by the very simple, insignificant mosques which are outlined in white round the roof. To the east of the palace in the shade of beautiful leafy trees and palms is a pleasant looking one-storied bungalow built by the Sultan for foreign guests. Round the town are scattered little groups of low straw-huts, made of Shibra stems and surrounded by a hedge which is inhabited by Somaills and their families. In addition to these there are also small Sahrawi settlements in Lahidj. The great majority of the inhabitants however are Yemeni Arabs, who live in the numerous houses and mud-huts, which form the town with its narrow, winding, dusty streets. A part of the town is reserved for the Jews, who look wretched and are merchants and artisans. There are also a few Muslim Jews who are traders. All types of the population are met with in the bazaar street which is barely six feet wide. Not far from this is the armaments' market where smiths, Arabs and Jews have erected their simple workshops in open booths. The principal weapons made here are the fine jirba's while the long cavalry lances, which are used by the Yemeni Kabils, are made in Dahla, Anqalib or Ha'w and brought for sale to the Lahidj market. In

Bibliography: E. Basset, Les dictionnari attirage attribués à Sidi Ahmed ben Youssef; in 'Y. A., 1890; E. Doumas, Le Sahara al-
Wellsted's time there were also 30 silk-weavers here, who got their yarn from India. The oasis is very well watered and the numerous little canals are fed by the perennial streams which pass not far from the town. Lahijd which plays an important part in the caravan traffic is connected by a road with 'Aden and in 1907 was to have been linked up by a railway with 'Aden and 'Adil', part of which was actually surveyed but the plan was abandoned. England took up the scheme again in 1915 during the war and laid a strategic railway of 1 metre gauge for 25 miles to Lahijd; in 1921 it was extended a few miles beyond the oasis of Lahijd and now reaches Ḥabab al-Ḥamra', 8 miles N.W. of al-Ḥaṣa. The continuation of the railway to 'Aden would open up Southern Yemen and increase the importance of Lahijd.

History. The name Lahijd (Lahijd) which means a damp low lying area intersected by water channels, a place-name that admirably suits Lahijd, is connected by the genealogists with the Himyar Lahijd b. Wāli b. al-Ghawth b. Ḥāsan b. al-Ẓahir. Lahijd is a name that is still current and is accepted by the geographers to a district in Yemen which forms part of the territory of Ḥabab al-Ḥamra, a town in the Yemeni province of Ḥabab al-Ḥamra. Lahijd is a fertile area with good water supplies and a mild climate. It is located on the Red Sea coast and is connected by a road with 'Aden. Lahijd was an important center for the slave trade, with many slave caravans passing through. The area is famous for its date palm groves and its fertile land.

The coast of Lahijd is known for its strategic location, as it is close to the Red Sea and the Arabian Sea. The area has been inhabited for thousands of years, with evidence of early human settlement. Lahijd has been a center of trade and commerce, with caravans passing through to 'Aden and other parts of Yemen. The area is still known for its agricultural resources and its role in the regional economy.
the Sultan, or his sons were to enter or leave 'Aden free of duty. In spite of this treaty the Sultan, who was still sore over the loss of 'Aden, continued to intrigue against the English and supported the attack of the Arabs on 'Aden in 1840 and even had the English representative in 'Aden, Hassan Khatib, murdered and regularly adopted a hostile attitude towards the English. His constant failures however forced him to change his policy and on February 11, 1843 he concluded a new agreement with England which was renewed in a more stringent form on February 20, 1844. Before his monthly allowance was again paid to him, Mubaisin Faqil, who had again allowed himself to be involved in a war with England in 1846 in which he was defeated, died on November 30, 1847. His son and successor Ahmad maintained friendly relations with England as it was in his best interest to do so. He died in 1849 and was succeeded by his brother 'Ali who resumed a policy of hostility to England and roused the hostility of the tribes against 'Aden. On March 7, 1849 a treaty was however concluded with the East India Company which was ratified on October 30, by Lord Udalhouse, but an attitude of constant friendship to England was not thereby secured. The Sultan even cut off supplies and it finally came to open fighting in which the Sultan was defeated on March 18, 1858 at Sheikh 'Othman so that he had again to reconcile himself to a peaceful policy. When in 1873 the Turks in their reconquest of the Yemen advanced on the hinterland of 'Aden, the English occupied Lahij and this had to retire as a result of English diplomatic negotiations with the Sublime Porte. Whether these negotiations were instigated or approved by the Sultan and the effects of its independence — only nominal it is true — by the Turkish occupation of his territory, is not known. In any case in 1887, as E. Glaser records, Sultan Faqil b. 'Ali was receiving a monthly allowance of 1,250 dollars from 'Aden.

**Genealogical Survey of the Sultans of Lahij.**

Faqil b. 'Ali b. Salih b. Salim (1728–1742)

- 'Abd al-Karim (1742–1753)

- Mubaisin (1827–Nov. 30, 1847)

- Ahmad (1847–1849)

- Faqil (1849–1866)

- Fatimah (after 1866?)

- July 1915

- 'Abd al-Karim (since July 1915)

In the World War Turkey assumed the offensive from the Yemen in June 1915 against the English sphere of interest and Turkish troops in conjunction with those of the Imam Yahyá b. Hamid al-Din, their ally, under the command of Muhammad Naṣr reached Lahij in their advance on 'Aden where there was a battle with the English and their allies. In the course of the fighting the English troops evacuated Lahij and the Sultan 'Ali b. Ahmad was shot. A counter-attack on July 21, 1915 restored Lahij to the English but by August 21 they were driven out of all which was occupied by the Turks who held it till the beginning of 1918. It was not till the collapse of Turkey on the Palestine front and the cutting of communications with the Yemen that the position became untenable for the Turkish troops and forced them to retire. Since July 1915, 'Abd al-Karim b. Faqil b. 'Ali has been ruler of the Sultanate of Lahij.

LAHIDJAN. I. A town in Gilan in the east of the Safid-Rud and north of the mountain Dulaf (cf. the ancient name of a people *Abíšonas*) on the river Kói-khala (Pardesar) which 8 miles higher up flows through Langarud, the present capital of the district of Rám-i Khán.

Lahidjan although unknown to the early Arab geographers is certainly one of the oldest towns in Gilan. Its foundation is attributed to the legendary Lahid b. Sâm b. Náb, the river Safid-Rud divides Gilan into two parts. In ancient times the river formed the frontier between the Arramids on the coast and the Kullusors or Gilai on the west; cf. Andreas, Armeniae, in Pauly-Wissowa, Real-Encyclopädie. In the Muslim period the part of the Gilan to the east of the river was called Biya-pash and that to the west Biya-pas (the word *pash* [cf. Aḥmād Rāzī in Dorn, Auszüge, p. 100, corresponds to the Avestic *wistāh*, *water-course*]. According to Kāhīnī the people of Biya-pash were *Allīda (Zaidis) and those of Biya-pas *Habalis or sectarians of mátād Abū Džafar (= Tābari).

The old dynasty of Biya-pash was that of the Kowām or Hawūm in the modern Rám-i Khán. Its founder was Nāšir b. Kāhīnī Ḥasan *Utrīshā, a descendant of the Caliph *Alī, who preached Nāshirī doctrines in Gilan and died in 364 (974) (Ibn-i-Abirā, viii. 61; Tābari, iii. 2392). His descendants are known as Nāshirwānd. Later the family divided into two branches, in the reign of Ujjājīn the lord of Kowām was Sāltāb b. Sāltāb b. Kālīkwāz b. Sāltāb (the descent of this branch is not quite certain); the lord of Lahidjān, the most powerful of the princes of Gilan (or of Biya-pash), was Naw-Pāddishā (or Shāh-i nāw).

When in 1307 Ujjājīn arrived before Lahidijān (via Tāror-Lūwādšān-Dāšṭān-Rustā) Naw Pāddishā submitted to him and thus kept his position.

Lahidjian became more generally known as the capital of the dynasty of Biya-pash called Kār-Kīyā. These sāiyids came originally from the village of Malāt (in the district of Rám-i Khán). About 769 during the civil war between the two lines of Nāshirwānd, the descendants of Sharāf al-Dīn and those of Amur Muhammad of Rám-i Khán, Sāiyid *Alī b. Sāiyid Kīyā sowed Biya-pash, Dashtām and some districts of Māzandaran. The power of the Nāshirwānd was re-established in 791–794; in 908 (1502) the troops of Amir Ḥusain al-Dīn of Fārān (Biya-pash) sacked the town and similar invasions were repeated in 910 (1504) and in 914 (1508) but, except for such interruptions, the dynasty of the Kār-Kīyā lasted till 1000 (1592). The Safawids had close connections with Lahidjian in the village of Shāhīshābār, with the road from Lahidjian to Langarud is the tomb of Shāhī Shīkh Zāhīd (d. in 714 = 1314), who was the spiritual father (ftr) of Shīkh Šāh al-Dīn, the famous ancestor of the Safawī dynasty. Shāh Ismā'īl I, a fugitive from the Al-Koyanu, found refuge with the Kār-Kīyā Mirzā Alī and studied under Mūsawī Shams al-Dīn Lahidjian (E. Dacosta, Ross, The early years of Shāh Ismā'īl, Tekas, 1895, p. 286). These friendly relations were broken in the reign of the Kār Kīyā Khān Ahmad Khān (943–975 and 985–1000) who was at first imprisoned by Shāh Tahmāsp and later driven from the throne by Shāh Aḥbāb, who was desirous of adding his intrigues with the Ottomans. Ahmad Khān ended his days in Constantinople (Hammer, G.O.R., ii. 562, 576). In 1000 (1592) Shāh Aḥbāb came to Lahidjian and destroyed the gardens in front of the castle. During their occupation of Gilan (1724–1734) the Russians built two forts in Lahidjian. Lahidjian has now lost all political importance, but has retained its local importance as the centre of one of the largest and richest districts in Gilan. The town has 2,360 houses with 10,000 inhabitants. There are many tombs there of members of the old ruling family. The district is divided into seven cantons:

2. Several districts in Persia have however derived from the stems Lāh and Lār [v.]: Lahijān, an important little town in Transcaucasia west of Shamshāna [cf. šam-aš]; Lahidjian, a village in the county of Kurkāt in the province of Pārs; Lahidjian, a canton of Mulk Kudristān [cf. sawūd-nāsā], which the Sharāf-šāhīn, 286 calls Lahidjian. There is a village of Lahidiān near Ilhāk, south of Tabriz and a village of Lāhijān south of the Araxes about 12 miles above the south of the river of Ardabil (Kara-Šīr). The forms Lāh and Lār may both come from *Lād[* (cf. the old Persian *Māz[a, which gave Māz in Persian and Māz-i in Armenian). According to the dictionaries (Vallier), the old name of the town of Lār [v.] was Lāh/Lād; the silk called *lad is also known as *lāh (Lāh however may equally well be explained by *lāz). The change of *d(ā) to r is
attested in the Caspian dialects (it is regular in Tātī; in Mānzadārī we have the parallel forms láhād/láhād; Melganov, p. 221). The fact that we have districts of Lāhīdān and Lārīdān in the adjoining provinces of Gilān and Mānzadārān is remarkable, but still more significant is the fact that Lāhīd of Shīrvān represents an islet of Iranīan Tātī surrounded by Turkīs (the Tātī are now found scattered throughout Daghīšān, the country round Teherān, Aghāshāhī, Kāzar, etc.). Their present name has a rather general and vague character, of which Teherān. The colony of Lāhīd may have retained the original dialect formerly spoken in the metropolis. The name of the silk láhīd/láhīd suggests the former existence of a place called Lād, which produced silk (cf. Vakš, v. v. Lāhīd). [Yaḵīr says that Lāhīd produces the silk called “Lāhīdī” which is not of high quality.] With the suffix ‘-i, the word láhī would mean the people of Lād. It remains to be seen if the region of Lāhīdān is not the ancestral home of numerous Lāhīdī colonies. At the present day there is spoken in Lāhīdān — although with certain local peculiarities — the Gilākī dialect but this parent dialect has here exercised a levelling influence, of which the foreign Turkīs was incapable in the case of the people of Lāhīd of Shīrvān. As to Lāhīdān of Khūzestān we may recall the hypothesis of Andraes that the name “Dišā” which the Zākī call themselves (north of Diyarbakr) is a metathesis of Dišālam (Danīlam). The emigrations from Gilān, still very obscure, certainly penetrated far to the west. — [To the names mentioned one might add perhaps that of Kal-i Lāhīdī in Khūstān (i.e. on the coast) and that of the Tārākī in Khūstān (v. s., xiv/1, p. 240).] (V. Minorsky)

LĀHĪR, capital of the province of the Pāndjāb, British India, situated on the river Kāś, at 31° 35' north latitude, 74° 20' east longitude. Population in 1911, 228,687 of whom 139,301 were Muhammadans. The foundation of Lāhīr is traditionally attributed to a mythical Lava or Lōh, son of Kāna, after whom the city was named. Lōhāwar. It is not mentioned in the chronicles of the invasion of Alexander the Great, nor is the town described either by Strabo or Pliny, but it may be the Lōhākā of Ptolemy, which Sir Alexander Cunningham (in his Ancient Geography of India) explains as Lāvāika, "the abode of Lava". In the Mahābhārata, the Pāndjāb is called Tākādaca, or the country of the Tākas. According to Huien Tsang, Tākī was the capital of the Pāndjāb in 663 A.D. He makes no mention of Lāhīr by any name capable of identification as such, though he traversed the entire province and stayed in it for quite two years. Possibly the Lokeot of the Purāṇas is Lāhīr. The Dehshā Bahāq (a compilation from the Purāṇas) gives an account of a battle between Bānumal, Rādja of Lāvāpūr, and one Bhīm Sen Kanēkson, the mythical ancestor of the solar Rādja princes of Carnātik, India, is said to have migrated south from Lōkot, and was assigned by Connel Ted to c. 145 A.D. One of the earliest gateways is known as the Bhāti Gate; the Solānkhā and Bhātā of Rādjarāpān point to Lāhīr as the seat of an earlier settlement. The first distinct mention of Lāhīr occurs in the history of the campaign of Subhātarīn, and of Mahmūd of Ghāznī, when the Brahman kings of the Kāshī valley, being driven from Pāshawr and Ohind, established their new capital first at Bhēra on the Dīhelm, and then at Lāhīr. Both Dīsī Pāl, and his son Anang Pāl, the successive antagonists of the Ghāznī invaders, are called Rādjas of Lāhīr by Farāhī, according to whom the Hindu dynasty was subverted in A.D. 1037, when Lāhīr became the residence of a Muslim governor under the king of Ghāznī. A final insurrection of the Hindūs was quelled by Māwduī in 1045, and the city was left in charge of Malik Ayān, whom Muhammadan tradition regards as the founder. During the reign of Mas‘ūd III (1009—1114), Lāhīr became the capital of the Ghāznī dynasty, but was captured in A.D. 1186 by Shāhāb al-Dīn, known as Muhammad Ghōrī, the Muhammadan conqueror of India. The town was sacked by the Mongols of Cīngī Khan, and of Tūmhār, and in the reign of Mubārāk Shāh it was "a desolate waste in which no living thing except the owl of ill-omen had its abode" (Elliot-Dowson, iv. 56, 37). Lāhīr remained insignificant throughout the period of the Pāshās and Durrāns. In 1456, Bahālī Lōdī seized Lāhīr as a first step to power. It was plundered by Akbar’s troops in 1524. Even at this time the Pāndjāb was an almost uninhabited waste, except for a few walled cities in which the Hindūs could exist in some security from the frontier raiders. The Mongols of Bahk and Kāshū every year used to make raids on the Pāndjāb, and for this reason the province remained depopulated for a long time, and very little agriculture was carried on. Rāj Rām De Baht, of Patālā, rented the whole Pāndjāb from the governor of Lāhīr for 900,000 takās (£ 2,000) (Lāhīr’s Memoirs).

Under the Great Mughals, Agra, Dīlī, and Lāhīr were the three chief cities and mints of the Mughal Empire. Akbar held his court here from 1584 to 1598, and repaired and enlarged the fort. In the time of Dājīghūr, who made it a secondary capital, Lāhīr reached its zenith of wealth and splendour; the tombs of this emperor and of his famous consort Nūr Jāhān, are on the opposite side of the Kāś. The place fully shared in the misfortunes which attended the decline of the Mughal Empire. Situated on the high-road from Afgānīstān, it was exposed to the visitation of every Western invader, and suffered from the successive conquests of Nadīr Shāh, Ahmad Shāh Durrānī, and other less famous oppressors. Lāhīr was a bone of contention between the Sikhs and the Moslems, and the great city of the Mughal princes and their viceroy was reduced to little more than a heap of ruins. But the rising of Sikh power under Rājītī Singh (1708 A.D.) made Lāhīr once more the centre of a flourishing realm. It relapsed into anarchy after Rājītī Singh’s death. Then followed the First and Second Sikh Wars, and annexation to British India in 1849. Since that time the capital of the Pāndjāb has grown steadily, and a new town covers a large tract which was recently a wilderness.

The native city is a walled town with thirteen gates. It has been a municipality since 1867. The old crafts are moribund, but have been replaced by trades of a modern character. There are power mills — cotton, flour, iron — and a large agricultural market. The European quarter, or Civil Station, lies to the south and east of the city, and is a large administrative, educational, and business centre. The older part is known as Anarkali, and here are the buildings of the Government Secretariat,
University of the Punjab, Government College, Medical and Law Colleges, and Museum. A number of smaller institutions are associated with it, including the Punjab University Library, the Punjab Museum, and the Punjab Agricultural University.

**Biography:**

(B. R. Whitehead)

**) LAILA (A.), night, Lailat al-barâ'a, Lailat al-Kadî, see RAMADân.**

**LAILA L-ARKHÂLÂ, an Arab poet, daughter of Abdallah b. al-Rahbâl(a) b. Ka'b b. Mu'awiya of the tribe of Uqail b. Ka'b. She got her name from the fact that her father — according to other traditions one of her ancestors Ka'b or Mu'awiya — was known as al-Akhyl (= the falcon). Perhaps it was a common name in her family and the phrase wa-nâma l-arkhâlî-N in her verses glorifying her family may refer to this (Aghâni, x. 80; Hanabî, p. 711). Laila is usually mentioned in connection with her fellow-tribesman Tawba b. Hushayr b. Khalefâ-dji, fragments of her lamentations for him are preserved in the Kitâb al-Aghâni. She also wrote an elegy on the death of the Caliph Uthman. It is also recorded of her that she exchanged lampoons with Nâhîga al-Djawâdi. Her conversations with Mu'awiya, Abd al-Malik and Ǧâhdî-jâjîd b. Vâsun are several times recorded. She lived in her old age to take her to her uncle Kutabâ b. Muslim in Khdiri, but she is said to have died on the way. She must therefore have flourished in the second half of the first century A.H.

**Biography:**

(H. H. Brau)

**LAILÂ KHAHÎM, with Fitnêth Khaftâm, the greatest Turkish poets of the older school, at the end of the romantic and beginning of the modern period. Born in Constantinople, the daughter of Kaft-Askor Moreli-zade Hâmid Efendi, she received an excellent education. Her Molla [14 v.] contributed most to her poetic development; she was related to him and always retained a grateful memory of him as is shown by her elegy, full of deep feeling on his death. In her case the lack of information about her is characteristic of the old Turkish conception of women about whom very little is spoken in public. She was early married but divorced very soon afterwards. She had the reputation of a Lesbian. She cared very little about the opinion of the world. She lived for her pleasures and her writing. A few anecdotes relate to her infringements of the social code of Turkish ladies. She joined the Mewlewî and was buried in the Mewlewî convent in Galata. She died in 1264 (1848).**

Lailâ Khañîm left a regular Diwân entirely lyrical which was several times printed (Buñâk 1260, Constantinople 1267, 1299 etc.). Although she is still completely in the purely Oriental conventional period of Turkish poetry, her place at the end of the old school is not to be denied. Her verses are simple and clear and free from the affected bombast of the time and with their classically correct language much easier to understand than the majority of contemporary poets, whereby admirers of the old school like M. Nâdî can find very few "scold". Her hymns (mundâfî-n) and elegies were particularly admired. She was celebrated for her ready wit.

**) LAILÂ U-MÂDJINÎN. (See MAHÎNÎN.)**

**LAÎTH. (See KINÂNÎ.)**

**LAK, i. The most southern group of Kurd tribes in Persia. According to Zain al-Âbidîn their name (Lak, often Lakk) is explained by the Persian word lak (100,000) which is said to have been the original number of families of Lak. The group of importance as the Zand dynasty arose from it. The Lak now living in Northern Luristan are sometimes connected with the Lur (Zain al-Âbidîn), whom they resemble from the sanguine and ethical point of view. The facts of history however show that the Lak have immigrated to their present settlements from lands further north. They are a well-to-do tribe. The language, according to O. Mann, has the characteristics of Kurdish and not of the Luri dialects [cf. Lûr]. (Cirirîk, Futûwî Journal, St. Petersburg 1875, p. 227, says: "the Lur and the Lak speak different dialects and hate one another".)**

The Lak appear in the Shâraf-nâmâ, i. 393 alongside of the Zand, among the secondary Kurds tribes, subjects of Persia. According to Kabino, the Lak were settled in Luristan by order of Shîh 'Abbâs who wished: in this way to create some support for the new walis of Luristan, Hûsain Khañîn, whom he had chosen from among the relatives of the old Shâhshâh al 'Attâb (Tâhir-i Alâm-i, p. 369). Of these tribes, the Lûsîlîs had formerly lived at Mâhidâsh (S.W. of Kavoûn- shâb); the Dîlâfûn take their name from Ablî Dâlah [cf. the article AL-ḴÂMî, s. v.] whose sels of the third (ninth) century lying in the north of Luristan [cf. Sultân-ḵânî] and the Bûlghân of Zohûr [q.v.] as well as of Luristan say they come from Mawijîl and are evidently one tribe. The Luristan branch seems to have exchanged its Kurnâmi dialect for
Lakki during its sojourn among the Lak in the time of Shāh 'Abdul. Even after Shāh 'Abdul there were several Lak tribes outside of Luristan. Zain al-'Abidin (bog. of the sixteenth century) mentions among the Lak: the Zand, the Māfi, the Bādijān, and the Zand-yi kīla (†). To the last tribe (according to Hostum-Schindler: Begege) belonged Karm Khān Zand (born in Pārtiy, the modern Pāré about 20 miles from Dowlahābād on the Sulţānābād road). When at Shār-e Karm Khān sent for the Lak tribe of Bārāinwand. In 1212 (1797) the Bārāinwand and the Bādijān actively supported Muhammad Khān Zand in his attempt to take the power from the Kāshfī (H. J. Brydges, A History of Persia, London 1833, p. 46, 58; R. G. Watson, A History of Persia, London 1866, p. 115). Under the Kāshfī several Lak tribes were broken up; in 1830 remnants of them were to be found among the Bādijān of Khāntik (Khvārābād, Khvārābād, Khvārābād, Khvārābād, Khvārābād, Khvārābād, Khvārābād, Khvārābād), Russ. trans., p. 110-121); there are still a few Zand families in the Dork-Farāsān district to the S.E. of Kermān-shāh (H. M. M., xxviiii., p. 39); a section of the 'Amala of Puth-i Kuh claims to be descended from the Karm Khān tribe. At the present day there are Māfi at Waramin, Tīhrān, and Karān. According to a good list compiled by RousSea at Kermānshāh in 1807 (cf. Pardvand, Shāh, Vinyla 1813, ill. 85, 98) there were considered as Lak the following tribes: Kalīn, Māfī, Nānakī, Dālīwān, Pāyrawān, Kūli, Šīrīwān, Bahrāmīn, Karīkī, Tawalli, Zīrywān, Kālīwān, Nāmīwān, Aqmānāwān, Bōbī, Zīlī, Hārsī, and Shahīwān. According to O. Mann and Rabino, the Lak tribes of Luristan are as follows: Sisyla (9,000 families), Dīfān (7,470), Tīhrān-Amrāyī (1,582 families), the Bārāin wand (6,000 families) and Dālīwān (1,000 families) forming part of the Bāla-gīrāwī group, a total of about 15,000 tents. The Bārāinwand and Dālīwand live to the east of Khvārābād around the sources of the river which flows through this town; the Sisyla and the Dīfān occupy the beautiful plains of Al-kitāb and Khāwā respectively while the Tīhrān (perhaps = Tarkhān, i.e., exempt from taxes) live between the left bank of the Saimara and the lower course of its left bank tributary from Khvārābād. The territory occupied by the Lak and including N. and N.W. Luristan is sometimes called Lakhtistān. The cohesion of the Lak tribes is evident from the fact that even before 1914 the Sisyla, Dīfān and Tīhrān were united under the authority of Nāzār Khān of the Amrāyī clan. In addition to the bōnī tribes and language, there is that of religion for all the Dīfān and many of the 'Amala of Tīhrān belong to the extremist Shī's sect of the Ahl-i Haq (cf. Sulaymān Sulaymān).
practically reduced to little more than a title of honour. Its archaic flavour, the glorious memories which it recalled of the phylarchs of India, was very impressive in the "Burke" or "Almanac de Gothâ" of the Arabs. But as to the Lakhmids, they no longer have a separate existence from the Djarâmân. When in the lands to the west of the Euphrates, we find them mentioned alone, the name must be taken to mean the Djarâmân. It is the latter that the chroniclers usually have in mind.

(H. Lammens)

**LAKHNAU,** former capital of the province of Oudh (Awadh), now secondary capital of the United Provinces of Agra and Oudh in British India; situated on the river Gomti, at 26° 55' N. lat., 80° 56' E. long. Population at the 1911 census, 197,852, of whom 4,401 were Muslims. The town has a long history, dating from the time of the Sih Marcus, who reigned in the 16th century. It became a Muslim dominion in the 17th century, and was for a time the capital of the Mughal Empire. The town was captured by the British in 1857, and has since been administered by the British Government.

**Lakhmât.** See LAKHTU.

**Lâzâzâni.** See Mîmâd Lâzâzâni.

**Lâm (Bani Lâm),** an Arab tribe leading a nomadic life on the lower course of the Tigris (Ali Gharbi, Ali Sharei, Amâra). According to the statistics of Khurshid Efendi (middle of the 18th century) there were over 4,400 families of Bani Lâm west of the Tigris, and the Tigris, 17,450 families of the Bani Lâm went over to the Persian territory between 1788 and 1846 (the southern parts of the Fashûl-Khâ, the domains of the wâls of Huwâza); some columns were even established east of the Karkhâr and at Falâshîyya.

The Bani Lâm claim to come originally from...
under the same emperor and the caliph al-Mutawakkil; the sixth in 283 (896) under the caliph al-Mutawakkil and the emperor Leo VI; the seventh called "redemption from treachery" under the same emperor and the caliph al-Muktafi in 292 (905); the eighth three years later in 295 (907); the ninth took place in 305 (917) under the caliph al-Muktafi and the emperor Constantine Philophyrogenetos; the tenth took place in 313 (925) under the same rulers; the eleventh in 326 (938) under the same emperor and the caliph al-Kālid; the twelfth took place in 335 (946) in the caliphate of al-Mu'tūs through the intermediary of Salf al-Dawla the Hamdanī, lord of Aleppo. This river had at this place either a ford or a bridge which the ransomed prisoners crossed. There was also a town of the same name (Adana, Lamuri) on this river not far from the sea.

(L. Hoare)

LAMGHANAT, a district in eastern Afghanistan. It is often referred to by Bâbur, see W. E. Burne's translation of his *Memoirs*, p. 141 and P. de Courteille, i. 287. The name is fancifully connected with Lamoch, the father of Noah.

(H. Beveridge)

LAMIT, nom de plume (takhallûs) of SHAIKH MAJMUDD, b. 'OTÌMAN b. 'ALI AL-Nâşrî, a celebrated Sûfî writer and poet of the early part of the reign of Sulaimân I, the era, not only of the greatest political development of the Turkish empire, but also that in which literature was most cultivated. He was born in Brussa, the son of the defterdar of Sulâtan Bâyâr's treasury. His grandfather had been taken by Timurlenk after his invasion to Transoxania (Samarkand) where he learned the art of nakkâshih (embroidery and painting) there highly cultivated and on his return to Asia Minor introduced the first embroidered saddle. On the completion of his theological studies with Mollâs Akhawayn and Mollâ Mâjahmâd b. al-Hâjiyât Hasan-sâde, Lâmi', who had an inclination to Sufism, became murid with the Nakhabandî Sheikh 'Arif bî-llâh Saiyid Aḥmad al-Bâghîri. He spent his whole life in the calm retirement of a Sûfî, free from external cares and favoured by the patronage of Sulâtan Selim and Sulaymân who frequently showed signs of their favour to him and his numerous family; he lived in Brussa, writing industriously till his death in 938 or 940 (1532 or 1533). He was buried in the mosque built by his grandfather on the citadel in Brussa.

The versatility and quality of his literary output in prose and poetry is really astonishing. But his work was not so much original as translations and
adaptations, as was characteristic of the period which regarded Slavish attachment to Persian models as the highest ideal. He usually took as his model Džami, then the most celebrated poet of Persia with whom he had a further link in their both being Našgbandis and therefore was called Džami-i Rūm. His prolificity is greater than that of any Turkish writer. We have a cycle of nine romantic poems from his pen. His importance to Turkish literature is considerable but is greatly exaggerated by von Hammer who devotes the longest monograph in his Gesch. d. eim. Dichtkunst (ii. 20—195) to him. Lāmī’s style is still comparatively lucid and simple. There is not yet any trace in him of the overwhelming turgidity of the later artificial classicism, yet it must be confessed that most that is beautiful in him is due to his Persian originals. Zīyā Paşa in his Khwarāzī has for this reason paid no attention to him.

The list of his works as given in the Sharaf al-Inānī numbers 24 but in reality there were more. His prose writings are: the translations of Džami’s Shīr: works: Nūfūs al-Ustād (biographies of Shīrs with the title Farrākh al-Maṣūḥāt id-Dawrān Kūlūs al-Maṣūḥāt) and Sharḥ-i al-Nuḥawān (‘The witnesses of prophecy’) printed at Constantinople in 1293; the Sharaf al-Inānī, “The worth of man”, considered by Lāmī to be his masterpiece which is a Turkish version of Part 22 of the 51 Arabic tractsates (Rust’ī) of the Ikhwan al-Safā, the struggle between man and animal (ed. and transl. by Diererici, Berlin 1858, Leipzig 1879 and 1881: Thier und Mensch vor dem König der Geister). His works of a religious character are Muwāwīn ‘Alla’ al-ḥusnā, translation and commentary on the 100 verses of Muḥammad Nīhābīrī on the 99 names of God and Misfār al-Miṣrī fi Khwās-i ṣamīḥ wa-ṣādī, he also wrote a collection of letters, Manqahāt, a commentary on the Dībāqī’s Gūbātūn of Sādī, and Dībāqīyāt (‘Book of examples’), a collection of tales and allegories, lith. Constantinople, n. d.); a Majnūn al-Fāṭi’ī, or Fāṭi’ī-nūnā (a collection of very often daring anecdotes, quite in the style of Roccacchio’s Decameron, which received its final form from his son, ‘Abd Allāh Lemi, also known as a poet). Finally as a kind of transition to pure poetry he wrote two Majnūnās (disputations in the mixture of prose and verse later so popular), namely: Majnūnās-i Behār u-Shāh (‘Disputation between summer and winter’), Constantinople 1290, with the title Majnūnās-i Sultanī Behār u-Shāh (Shahrā’ī Shāh) and Majnūnās-i Naqī u-Shāh (‘Disputation between Soul and Spirit’).

His very much more important poetical works include a large Divān of about 10,000 verses which contain much that is beautiful and original; besides paša’s Ghaṣl’s etc. it also contains the Ghaṣl in 1288; transl. by Pfamier, Verherrlichung der Erzgebirge (separately printed at Constantinople Stadt Bursa, Vienna 1839).

His great Majnūnās poems were of permanent influence; some deal in a popular fashion with stories from Persian legends, namely: Salātnā ba-Shāh (dedicated to Sultan Selim), from Džami’s original; ‘Ahsa’ al-Naḥwīn (dedicated to Sultan Sulaimān) the original of Fakhr-i Dārjānī (d. 440 = 1048) and a version of Nisāfī al-Arūzī al-Samārānī; ‘Ahsa’ al-Makhlīkī from the Persian original of ‘Umūr (d. 441 = 1050) translated at the express desire of Sultan Sulaimān (transl. by von Hammer, Vienna 1833); Farbāzī-nūnā (transl. by von Hammer, Stuttgart 1842); Hejīf Pēkhr, “The seven beauties” (based on Hāflī’s Hejīf Muḥār, which again goes back to Nīshān’s Hejīf Pēkhr). Besides the two allegorical dramas Gīr u-Cikat (‘Bird and Bat’) and Sīrān u-Parvānā (‘Camel and Butterfly’, the latter probably from the Persian of Ahī Shīrāzī, he also wrote two Malekānu’s of a religious nature, the Malekānu-i Imām Hūsain recalling the Shīr Tāziyā (illustrated MS. in the ‘Ahsī-i Dehānī, No. 249) and Mankhāb (or Mανήb) Uśain u-dhānūn.

Finally there are his political allegories Husn u-Dīr from the Persian original of Fakhr Pāshā Shīhānī and the Turkish version of Ahī, ed. and annotated and compared with Lāmī’s Turkish version by R. Drōfskā, Husn u-dīr, persische Allegorie von Fatṭāh (aus Niẓām), the Khwāz-nūnā (‘Book of the Intelligence’) and the Dībāqī-nūnā.

(Th. Menzel)

LAMTA, a large Berber tribe of the Barān family. Its exact origin does not seem to have been known to the Arab and Berber genealogists, who simply make them brethren of the Sanhadja, Hashtra and Gazzila; others give them a Himyarite origin like the Harrāwā and the Lawata.

The Lamta were one of the nomad tribes who wore a veil (madāhīสน). One section lived on the south of the Mira, between the Massīf and the Taghī (Tuareg) on the east; they even seem to have extended as far as the Niger. In the south of Morocco, in the Sāhara, where there were Lamta who led a nomadic life, in company with the Gazzila, the Lamta occupied the territory nearest to the Atlas. On the coming of the nomad Arab of the Maḍīlī family, the two sections of the Lamta were absorbed by this race. Jellāl the Dāwī Ḥassān; the remaining sections then joined the Shabānī, another Maḍīlī tribe, to oppose the Gazzila who joined the Dāwī Ḥassān.

In the territory of the Lamta, of the Sāhara at the mouth of the Wād Nīl (now Wād Nīl) lay the commercial town of Nūl or Nīl of the Lamta, the first inhabited place one reaches on coming from the Sahara. Several Moroccan dynasties have struck coins there.
fortified it. On the 9th Muharram (Šādahrā) 1228 (Jan. 1, 1813), Lankoran was taken by storm by General Kotliarskii after a brave resistance of the Persians. This event hastened the conclusion of the treaty of Gulistan (1813) by which Persia ceded to Russia part of Tālib to the north of the river Astanā. From 1826 Lankoran was the capital of the district. The fortress was dismantled in 1855. Since 1920 Lankoran has formed part of the republic of Adbar-dādžān, a member of the Soviet Union.

The population of the town, which was 3,970 in 1857, had reached 11,700 in 1897. The district of Lankoran has an area of 5,000 sq. miles and in 1840 had 30,200 inhabitants and in 1861 99,082. Later the district was reduced to 2,000 sq. miles: in spite of this, its population in 1897 was 125,895 of whom 46.5% were Azeris, Turks, Iranian Tālib 46.3%, Russians 6.9% (in the north) and Armenians (2.9%). The district is composed of 3 zones: to the north, an eastern continuation of the steppes of Mughān; to the east, a marshy littoral intersected by lagoons and covered with a rich sub-tropical vegetation; to the west are wooded mountain ranges running from 5,000 to 7,500 feet above sea-level which rise from the Russian frontier forming the boundary of the provinces of Ardebil. The district is rich in forests and has good fishing.

LĀR. 1. Capital of the district of Lārīstān, to the southeast of Fārs. Very little is known of Lārīstān and its early history. The country appears to correspond to the land of the dragon Haftān-būkht which was killed by Ardāšīr Pāpakān. According to Persian legend, Ardāšīr's adversary lived in the village of Altār in the rastāk of Kūjdārān which was one of the maritime rustāks (rastāk al-rūf) of the province Ardāshīr-Khurra (Tahuri, i. 820); Nīldeker in his translation of the Kūurvānuk (p. 50) gives the variants Gūltūr and Kūjūrān; the Šāh-nāme, ed. Mohi, v. 568: Kūjdārān. Lastly the Armenian geography of the seventh century mentions a Khojāyāstran in Persia (Khūsthratan) (cf. Margari, Erânšahr, p. 44). The prefixing of an a to the name Lār is also found in the name of the island of Lār (cf. below). Margari identifies Kishahrān with the case of Dāgūn near Strf; on the other hand the Fārābān-nāma-yi-Nāgīst mentions a village of Kūjdār-Khūkar in the canton of Galle-lār (the ancient Fīl/Pal Bil of Ibn Baṭūtā: Khūndāl = Kūjdāl + bil) immediately adjoining Lārīstān. According to a verse attributed to Firdawsi (cf. Vullers, Lexicon, s.v. Lār) but not found in the known editions of the Šāh-nāme, the town was
originally called Ład (and fell to Gurgin Milād, one of the heroes of the cycle of the Kayānīd Kāi Khwarazmī). This would be a very curious case of the changing of a to r found especially in Armenian and in the Caspian Tati dialect (Darmesteter, Eironicles, i. 73). The Fārs-nama-yi Nādiṣī mentions another legend according to which the people of Lār in Fars had come from Lār in Damāwand (cf. below) the cold of which they could not endure.

The Arab geographers do not mention Lār, for apparently the old routes linking up the chief towns of Fars, with Strāf and Kās, or Humrāz (by Fastāk and Forq) avoided the town of Lār (cf. Nushat al-Kustūrī, p. 185, 187). According to Ḥamdallāh Mustawfī, Lār is a willow tree near the sea and Ibn Baṭṭūṭa alone talks of Lār as "a large town, with springs, considerable rivers and gardens". Lār had a local dynasty. Its princes, relying on the verse already mentioned regarding the presentation by Kāi Khwarazmī of the town of Lār to Gurgin, son of Milād, traced their descent from a hero. They were even crowned with the crown of their ancestor and this treasure was among the booty taken by the Safawīs in 1517.

The first prince of Lār to be converted to Islam (about 100) was Djalāl al-Dīn Iṣṭāvī. The dates become more reliable from the time of the Amir Kūṭ al-Dīn Māyīd Fājū (7) (1504-648). Fourteen of his successors are known but their order is not so certain; when in 748 (1347), Ibn Baṭṭūtā passed through Lār, the Sultan of Lār, of Turkoman origin, was called Djalāl al-Dīn, while according to the genealogy of the Mūsāfīrīs, Bakhtānjī, was ruling there between 731 and 753. The dependence of Lār on the Mūsāfīrīs is shown by a gold coin of Shah Shīhāb (760-786) struck in Lār (S. Lane-Poole, The Coins of the Mongols in the British Museum, 1881, p. 240). In 799 the troops of Muhammad Šāhūn, grandson of Timūr, ravaged the eastern part of Fars on the lines Kārin-Fal, Djaḥrom-Lār, etc. (Zafarnama, i. 309). There are Timūrid and Cāhglī coins struck at Lār (O. Codrington, A Manual of Moslem Numismatics, London 1904, p. 183). In the reign of the Mūsāfīrī Djaḥangīr (859-883), the Russian merchant Afanasī Nīkīt, passed through Lār in 1469 on his way to Humrāz and India and in 1472 on his way from Humrāz to Shīhūr. The Mūsāfīrī Nīsrānī says "the just" (930-948) was a poet, musician and author; he died by the hand of a slave. His successor Ibrahim Khīzī submitted to the Safawīs and received the title of Amir Djaḥrom. His son Nār [Nawr] al-Dāh lived in the time of Šāh Lār Muhammad Šafawī. Under Šāh Iskandar Aḥsāf al-Mulūk, son of Nār al-Dāh, was authorized to take the name of Ibrahim Khīzī II. The young Khīzī showed signs of independence and oppressed merchants and travellers. This could not be tolerated at a time when Lār lay on the great road between the capital and the sea. As a preparation for the occupation of Gombrūn (Bandar-ı Aḥbātī) in 1614 (7) and of the island of Humrāz in 1622, the Begīrjegār of Fars, Allāh Šīhī Khīzī, in 1609 and 1610 (1601) marched against Ibrahim Khīzī and seized his possessions. Ibrahim II had to surrender to the mercy of Allāhwardī who treated him honourably and took him to Shīh Aḥbāt at Bālī, where he died during an epidemic. The government of Fars was then entrusted to Šāh ʿAlāʾ Khāsim of Lār, a sincere Shīʿī (ṣariʿī ʿAlāʾ Šīrāzī) as (p. v) fontsī) and the people of Lār (Ṭārīḵ-i Alī Amirdārī, Tihān 1314, p. 423-426. Buildings of the Mūsāfīrīs are still to be seen at Lār — a mosque and a bazaar ofewn stone covered with stucco. The bazaar was restored in 1015, by ʿAlī Beg Djaḥromī, a slave of Lār.

The memoirs of ʿAlī ʿAlī Ḥāżīn contain interesting notes on the domestic life of Lār at the beginning of the xvi cent (xvi cent) rule of the Afghān Khāndān-Khān, passage through Lār of the routed army of Shah Aḥṣāf, etc.) According to ʿAlī Ḥāżīn (p. 210) the people of a part of the Lār lands (garmūr) of LārīStan were Shamīs. They had prospered under the Afghān but Nādir, wishing to reduce them, sent against them the sardār of Fars, Muhammad Khān Balūcī. The latter met with difficulties at Lār and having come to terms with its inhabitants returned to Fars. In 1146, Muhammad Khān rebelled against Nādir and tried to raise the Shamīs of Lār. The latter maintained a waiting attitude but by order of Nādir they were massacred and scattered. Lār was later annexed by a certain Nāṣir Khān, formerly a brigand in the bālūk-i šaʿbā (a region between LārīStan and Kirmān) who received from the Shamīs title of Khan. His family (the begīrjegārs) remained more or less autonomous till 1202 (1845) when the governor-general of Fars sent troops to Lār and appointed a simple bālūkī there (Fars-nama-yi Nādiṣī).

At the beginning of the xvi century the Balūcī Ḥāżī Khān invaded LārīStan (Pottinger, Travels in Beloochistan, London 1816, p. 163). In 1256 (1840) Lār was occupied by the chief of the Ismailīs, ʿAlī Khān who had rebelled against the Šīʿī (Schindler, The Eastern Persian Iraq, p. 94).

The town of Lār lying 57 farsarks to the S. E. of Šīrāz was very frequently visited by European travellers in the xvi century when it lay on the direct route Šīrāz-Djaḥrom-Djāynūn-Lār-Bandar-ı Aḥbātī. Figueroa (1617), Sir T. Herbert (1627), J. A. Manderlo (1636), J. B. Tavernier and Thevenot (1665), Sinuau (1672), Chardin (1673), Dr. J. Fryer (1676), Le Brun (1703). At this time there was a factory of the Dutch East India Co. at Lār (Thevenot, Voyages, Amsterdam 1737, ii. 460-476). After the fall of the Šafawīs Bandar-ı Aḥbātī became the port for the province of Kirmān only, while Bābīzī became the principal port of the Persian Gulf. Lār conducted a local trade with the ports of Bandar-ı Aḥbātī, Linga (q. v.) and Šīrāz (the older Strāf; q. v.); cf especially Siffle, Ancient Trading Centres of the Persian Gulf, G. F. 1805, p. 166-173. In the xvi century, Lār has been described by Dupré and Stack. Of the 76 bulks of Lār, that of Lār called Tīzin is the most extensive (57×47 farsarks, i.e. about 45,000 square miles). It is bounded on the N.W. by Barānī, on the S.E. the bridge of Tīzin separates it from the nālīya of Bandar-ı Aḥbātī. This latter had a separate dynasty (the Kalūtī princes of Humrāz). To the south Lārīstan is washed by the Persian Gulf (the ports of Kung, Linga, Mughī, Čārak, Nakho, etc.). In 1898 A. T. Wilson found Lār quite prosperous (New on a Journey from Bandar-ı Aḥbātī to Šīrāz, Geogr. Journ., Series 1908, p. 152-170). On the west it is bordered by the cantons of Mūlītī, ʿAlī-marvād-dagh, and Kond; on the north-west by the buluk of Djīyūn; on the north by the buluk of Dārāb; on the northeast by the buluk of Šīrāz.
The country is full of mountain ranges running parallel to the shore of the Persian Gulf and has a torrid climate. Water is scarce and brackish. The river of Lārīstān, variously known as Rūdkhānā-ī shīr-i Gallādār, Shīr-i Hing, Rūdkhānā-ī Lamūz etc., runs from west to east and flows into the sea a farashk east of Kung.

The subdivisions (nābiya) of the šāhāk of Lārīstān are as follows (their orientation from Lār is given and the distance from it is in farashkā):

The term šāhāk in the local dialect means a valley shut in by two ranges of mountains. Filuštān is derived from the word fūmnī, corn.

The population of Lārīstān is thinly scattered. The most important towns are Lār (Dupré: 15,000 inhabitants; Stack: 1,200 houses, 6,000 inhabitants) and Līnga (q. v.). The majority of the population is Persian. In canton No. 6 there are some Bahārī Turks and in Nos. 2 and 3 are inhabited by Arabs.

Lārīstān has Persian dialects of its own (O. Mann, Die Tijk-Mandarins der Provinz Fars, Berlin 1909, p. xxxiv, 126—131) and there is even a local literature in them. The Fārsī-nāma mentions Āk bfdū Mūsāmmad Bāχiīr ("Subḥat") who was well acquainted with Arabic, Persian and "Dari". Romākavlī has collected some of the poems in the local dialect of the poet Mahdīfār as well as Persian quarants by several popular poets, natives of Lārīstān (Romākavlī, Pers. nov., etemārīzāyīn, i, in Zepkeli, 1918, xxxii, 313, 340).

2. An island in the Persian Gulf called Abū Shīrīn. Near this island touched at it on his perilous but does not give the name, which according to Ptolemy was ʿAssāk (in Semitic ʿasāk = island of seaweed). The Greeks praised the pearl fisheries of Lār. Ibn Khurdadbhūtī calls the island Mārd. Other variants in the Arab geographers according to Le Strange are Allahān and Lān. The Fārīn-nāma, ed. Le Strange, p. 241 makes it a dependency of the island of Araslāh-Khurra. Yākūt (iv, 341) places it between the island of Kās and the port of Sīrāf. The Portuguese called it Ilha de Lázaro from the village of Lār (should this be Lāgh? — at the end of it). It is 13×24 miles in area. To the east of it lies the little isle of Shīwār (Ciwar). Some ten miles north of Lār on the coast of Fars lies the little harbour of Nākhlī. We do not know if there is any connection between the names of the town and of the island Lār. An island "Lārāk" ("little Lār") lies south of the island of Hurmūs.

3. A high valley lying in Māzandarān, on the sources of the Huszār-pet. The altitude of Lār is from 8,500 to 6,500 feet. It lies west of Damduct. The valley is deserted in winter, in summer the nomads pitch their tents there. The people of Ĥīrān also go there for summer quarters. Stahl however (Petrii. Mittelt., Ergänzungshft. ii, 1869, p. 619) found traces of ancient dwellings on the right bank of the river Lār. The locality is sometimes called Lārdījān, which must be a plural of Lār-īn, a "inhabitant of Lār" (on the suffix -īn, cf. Marquart, Belträge, Z.D.M.G., 1895, p. 666). The same derivation explains the Arabic transcription al-Lāris (Baladjuri, p. 5), one of the cantons of Tabaristan (not however found in the list in Ibn Rusta, p. 149). Al-Lāris formed part of the possessions of al-Masqūm in 131 (748) by Abī Muhammad (Marquart, Erbauh., p. 127, 137). The term Lārdījān seems to have been applied especially to the place below the high valley of Lār near the modern bridge of Pallīr; cf. Dib-palī in Ibn Isfahānī, trasm. Browne, G.M.S., p. 67. Lārdījān is said to have been the last inhabited part of Tabaristan. Its village of Warakān was said to have been the birthplace of Farīdūn. In the villages lying on the slopes of Damduct, Stahl saw a festival celebrated in memory of the death of Zohak (Aug. 11; cf. Morier, Second Journeys, p. 157). At Lārdījān there was a special reward for the inhabitants of Tabaristan under the sāhadā of Tabaristan (Ibn Isfahānī, ibid., p. 15, 153, 280). On the district of Liṭhānūd (Lārdījān) cf. Lārdījān. — Spiegel (Varona, Z.D.M.G., 1876, xxxii, p. 716—726) was inclined to suppose a connection between Warak (Ibn Isfahānī, p. 15: Waraka, native place of Farīdūn = Thaštāna) and the Avestic vears. The name of Warakān is unknown but in lārdījān there exists a village Wānāh on the disappearance of r in Persian dialects, cf. Grundriss d. iran. Phil., iii, p. 559, 551.

(V. Minorsky)
LARANDA (also called Karaman from the name of the dynasty which reigned there in the xivth century), a town in Asia Minor, capital of the kaza of the same name and of the sanjak of Konia, to the S.E. and 35 miles from this town. It is 4,000 feet above sea-level, has 2,000 houses, 7,500 inhabitants, 105 mosques, 21 Friday mosques, 4 dervish monasteries, 515 shops, 30 warehouses, 6 cafes, 4 caravanserais, 14 baking ovens, 7 baths, 5 mills, 1 military depot, 110 fountains, 1 barracks, 1 Greek school, 10 Muslim schools, 21 madrasas. There are a ruined fortress, mosques and other monuments in ruins from the time of the Kar-ban-oglu (mosque of Amir Miša with pillars from ancient buildings). The town was annexed to the Ottoman Empire in 1464. To the north is the Kara-Dagh covered with medievial monasteries now in ruins (bîl bîr bîllet = 1001 churches).

LARI MEHMEDE. (See MEHMET LAKI)

Larin (r, larî), a silver coin current in the Persian Gulf and Indian Ocean in the xivth and xvith centuries. It takes its name from Lâr [q.v.], the capital of Lâristân [q.v.], at which it was first struck; cf. Pedro Texeira (Travels, Hakl. Soc., 1902, p. 341). There is a second edition of Lar (q.v.), in which are called Laris, a money of the finest silver, very well drawn and current throughout the East" and Sir Thomas Herbert speaking of Lar in 1627 (Some Years' Travels, London 1665, p. 150) "neither bylar nor larmes are cossed, a famous sort of money". The larin weighed about 74 grains (49.4 grammes) and had a high reputation for the purity of its silver. It was worth ten pence in English money (Herbert) or one-fifth of a French crown (Tavernier) or 60 Portuguese reis.

The larin is in shape quite unlike any other coin. It is a thin silver rod about 4 inches long, doubled back and then stamped on either side with various devices from different coin. It is admirably described by Willius Barret in his account of the moneys of al-Basra (in. Hakluyt, Principal Voyages, Glasgow 1904, vi. 136). The silver larin is a strange piece of money, not being round like all other current money of Christianity, but is a small rod of silver of the greatness of the point of a goose feather with which we use to write and in length about one eighth part thereof, which is so wrought that the two ends meet at the just half part and in the head thereof there is a stamp Turkcoce and these be the best current money in all the Indies and also of the lamas make a ducat."

The kingdom of Lâr is celebrated to issue these coins after its conquest by 'Abdül Aziz the Great of Persia (Chardin, Voyages, Amsterdam 1735, iii. 125), but its popularity led to this type of coin being adopted by other states of the Indian Ocean. The kings of Hormuz of the latter half of the xivth century issued larins as did the Shahs of Persia at Shiraz and the Ottoman Sultan at Basra. In India, they were struck in the xivth century by the 'Adil Shahi dynasty of Bijapur and other rulers and the frequent finds of larins in Western India show how extensive was their circulation there. In the Maldivie Islands in the early xivth century the king struck his own larins as we know from the Voyage of F. Pyrard de Laval (Hakl. Soc., 1857, vol. I, p. 322 sq.). In Ceylon they were also struck, not only by the natives but also by the Portuguese merchants at Colombo; in this island they were twisted roughly into the shape of a fish-hook, whence the term "fish-hook" money. These pieces are either uninscription or bear rude imitations of the Arabic script. In Ceylon the "fish-hook" money survived into the xvith century. A degenerate descendant of the larin still exists (Philly, Heart of Arabia, ii. 319) on the Arabian side of the Persian Gulf, in Hassa where it is known as a farvâla, i.e., the "long" (coin). It is only an inch long and of very base silver, if not copper, without any trace of inscription. It is described by Pulgrave (Journey, etc., London 1865, i. 479) who adds that there is a proverb "like a Hassa farvâla", applied to any one who like the local currency is of no use away from home.

AL-LAT, an old Arabian goddess. The name (from al-lâh, cf. AL-LAT) means "the goddess" but was the proper name of a definite deity, according to the Arabs themselves. (See G.) Ibn Ya'qub, ed. Jahn, p. 44, 87) the sun. She is found as early as the Nabataean and Palmyrene inscriptions and was later worshipped by various Beduin tribes (e.g. the Hawari; Ibn Hisâhî, p. 549, 13). An oath by al-Lat is frequently found in the poets, e.g. Al-Šââbî, ed. Ibn Hisâhî, p. 567, 7, Al-malâmî, ed. Voller, p. 2, 8, 'Abd al-Hasan, ed. Geyer, p. 51, 8, and even in al-Akhtâl, Kâb al-Akhtâl, vii. 173. She had her principal sanctuary in the valley of Wadâdî near Ta'îf, where the Mu'attî (Attab) b. Mâlik b. Ka'bah were her priests and a white stone hanged with all kinds of decorations was her symbol. She is frequently mentioned along with al-Ukzu (Ibn Hisâhî, p. 145, 7, 206, 8, 87, 8, where Wadd also is mentioned; 'Abd al-Hasan, p. 11, 8, and among the Kurash, she, along with this goddess and Manah, was held in such high esteem, that Muhammad once went so far as to recognise these three goddesses as intercessors with Allah but soon afterwards withdrew this (Sûra, ii. 157 sq.). According to Tabari, i. 1305, 8, 'Abd al-Sufîkî carried al-Lat and al-Ukzu with him into the battle of Uhud. After the capture of Mecca, al-Lat was destroyed with her sanctuary in Ta'îf by al-Mughîlî, who were related to her priests. She was not forgotten, for, according to Doughty, there is still in Ta'îf blocks of stone which the people call al-Ukzu, Hitah and al-Lat, at which they secretly seek help in cases of illness.

LAWATA, a Berber ethnic group, belonging to the family of Butr, whose eponymous ancestor was Lawat the younger, son of Lawat the elder, son of Zahik. Ibn Khaldún dismisses the view of certain Berber genealogists recorded by Ibn Hawqal who consider the Lawata as Saddaritsa and the Manas as of Coptic origin. Others say the Lawata with the Hassar and the Lamba were of Himyarite origin. In any case the oldest homes of the Lawata seems most likely to have been the eastern part of North Africa. They were found in Egypt to the north between Alexandria and Cairo; to the south in the oases and in al-Sha'd. Some Lawata led a nomadic life in the region of Barqa. In the Maghrib they lived in the Djebril Lawata (south of Gabes and Sfax) and it is probably this section that is mentioned by Corippus under the name Logmaten = Berber: Hauasiten; others lived in the country round Boughie and the region south of Tizaret (Tabert) where they had adopted the Isma'ili heresy. In Morocco there were Lawata in the Tadla (the Zanzura section), in the south of Fès and in the land between Tangiers and Arsat.

(G. S. Colin)

LAWH (A.), board, tablet; the first meaning is found in the Kur'an, Sura, iv, 13, where Noah's ark is called ala-ha al-lawh. The second meaning is that of law as writing material, e. g. the tablets of the lawh (Sura, vii. 142, 149, 153, where the plural noun is used; see Li'am, iii. 421). Al-lawh wa l-lawh (Bukhari, Taifir al-Kur'an, Sura, iv, bâb 18) corresponds to our "paper and ink". The expression mä haina l-lawhain = what lies between the two boards is found in Hadith, to describe the whole Qur'an. (Bukhari, Taifir, Sura, vii, bâb 4; Li'am, bâb 84); cf. mä haina l-dafa'atun (Bukhari, Fatir al-Kur'an, bâb 16). In modern linguistic usage "al-lawh" also means a school-child's slate.

Al-lawh thus means the tablet kept in heaven which in Sura, xxxii. 22 is called lawh mähfüz (cf. ii. 1066, 1076). According to this passage, it is usually described as the "safely preserved" tablet. But it is not certain whether the words in this passage are really syntactically connected. If we read mähfüz, the word does not go with lawh but with the preceding sur' (7), and the translation is: "Verily it is a Kur'an, famous, preserved on a tablet" (see the commentaries); "preserved" i.e. against alteration.

In the commentaries on Sura, xxvii. 1, the tablet is again mentioned: "We wrote it down (the Kur'an) in the night of the decree"; this refers either to the first revelation made to Muhammad or to the descent of the Kur'an from that tablet which is said to have been seven heaven, to the lowest.

The tablet as the original copy of the Kur'an is thus identical with unnu al-kurîh.

The decisions of the divine will are also written on the lawh with the pen balam (q.v.) We have therefore to distinguish two quite different concepts:

1. The tablet as the original copy of the Kur'an. This idea is found in the pseudographical literature. In the Book of Jobbels, ii. 10, it is said that the laws relating to the purification of women after childbirth (Lev. xxii. 11—16) are written on tablets in heaven. In Jobb., xii. 28 sq. says the same of the laws regarding the "feast of booths" (Lev., xxii. 29—40) and Jobb., xxi. 15 of the law of tithes (Lev. xxvii).

2. The tablet as the record of the decisions of the divine will is also found in the Book of Jobbels. In Jobb., v. 15 it is said that the divine judgement on all that exists on earth is written on the tablets in heaven. Enoch prophecies the future from the contents of these tablets (Book of Enoch, xxii. 2, cf. lxxxii. 6, 2, 15; xlv. 19). The "scripture of truth" is mentioned as early as Daniel, x, 21, the contents of which
Daniel announces in prophetic form. These ideas are connected with the Babylonian conception of "tablets of fate".

From these passages it is evident that in the pseudo-epigraphic literature also the tablets in heaven are also regarded as the originals of revelation, sometimes as tablets of fate. This is sufficient to explain the double meaning of lāwāh in Muslim literature.

For other passages, cf. the Index to Charles, *The Apocrypha and Pseudepigrapha of the Old Testament*, v. "tablets"; it cannot always be said definitively to which of these two conceptions a statement belongs.

In mystical and philosophical literature lāwāh is given a place in the cosmic system and sometimes explained as nāfi'ū būll or mūm al-nāṣrī.

(A. J. WENHICK)

LAZ, a people of South Caucasian stock (Iberic, "Georgian") now dwelling in the southeastern corner of the shores of the Black Sea.

The ancient history of the Laz is complicated by the uncertainty which reigns in the ethnical nomenclature of the Caucasus generally; the same names in the course of centuries are applied to different persons (or groups). The fact that the name Phasis was applied to the River, to the Corohk (the ancient Akupsis) and even to the sources of the Araxes also creates difficulties.

The earliest Greek writers do not mention the Laz. The name Lāzē, Lāzēn is only found after the Christian era. (Pliny, *Nat. Hist.*, iv. 4; Periplus, of Arrian, xi. 2; Ptolemy, v. 9 s. 5). The oldest known settlement of the Lazoi is the town of Lazoi or "old Lazik" which Arrian puts 680 stadia (about 80 miles) south of the Sacred Port (Nazoromias) and 1020 stadia (100 miles) north of Tityrus, i.e. somewhere in the neighbourhood of Zoroaster. Kerseling sees in the Lazoi and in a section of the Kerketai, who in the first centuries of the Christian era had to migrate southwards under pressure from the Zygai (i.e. the Cercies [q. v.]) who call themselves Adighe (Adzighe); the same author regards the Kerketai as a "Georgian" tribe. The fact that at the time of Arrian (second cent. a. d.), the Lazoi were already living to the south of Sukhum. The order of the peoples living along the coast to the east of Trebizond was as follows: Colchi (and Sani); Machelnosei; Henichozi; Zydrinei; Lazai (Lāzēn), subjects of king Malausus, who owned the celerity of Rome; Apilans; Abasai (cf. Aghiai); Sanniga near Sebatapoli (near Sukhum).

During the centuries following, the Laz gained so much in importance that the whole of the ancient Colchis had been renamed Lazica (Anonymous *Periplus*, *Fragm. Hist. Græc.*, v. 186). According to Constantino Porphyrogenetos, *De Admin. Imperii*, Ch. 53, in the time of Dioscretian (884-303), the king of the Bosphurus, Sauromatus, invaded the land of the Lazoi and reached Halys (N. Marr explains this last name by the Laz word meaning river). Among the peoples subject to the Laz, Procopius (*Hist. Got.*, iv. 2 and 3) mentions the Alasgit and the people of Suania and Skymnia (= Le-Uskan). It is prob-
names (as also was Vivien de St. Martin) proposed a theory of the identity of the name Legzi and Laz. Ewliyi’s calls Trebizond “former Legzi vilayet.” Häjdjü Kahlifa after enumerating the peoples of the district (Legzi): Mangrelians (Megtril), Georgians, Abkhan (Abaza), Cerkes and Laz, adds that the latter are those who live nearest to Trebizond. To the S.E. of Trebizond in the Čepeli mountains he mentions the Turks who “worship as their God (mənə) the Shih of Persia (i.e. are extreme Shi’is) and are associated (məstrətarik) with the Laz.” Häjdjü Kahlifa and Ewliyi do not agree on the number of the sires of Trebizond; Ewliyi only says that the value of the eyalat has depreciated through the unruliness of many of its 41 nahiye (Lıthban-numa, p. 429; Ewliyi, ii, 81, 83–85).

The first serious blow to the feudal independence of the dreh-khbar of Lazistan was only struck at the beginning of the sixteenth century by the Ottoman Paşa of Trebizond, but Koch who visited the country after his expedition still found most of the hereditary dreh-kheyl’s in power, although some of their liberties. He counted fifteen of them: Atin (two), Bulep, Ariaghis, Wisse, Kapelpe, Arkhaw, Kisse, Khopa, Markia (Makriali), Gafata, Batum, Maradit (Maradidi), Pergwan and Cat. The lands of the three latter lie however on the Coruh. They divided the mountains separating this valley from the river of Lazistan in the strict sense. On the other hand among the dreh-kheyl of Lazistan was the lord of Hamash, i.e., of the upper valleys of Kalopotamos and of Furtuna inhabited by Muslim Armenians. According to the Armenian historian Lewond, transal. Chahmaanian, Paris 1826, p. 162, the latter with their chief Hausam of the Amatani family had settled in the district in the time of Constantine VI (780–797) (the old Tumam was given the name Hamash < Hamashqum, “built by H.”). It is evidently this region that Clavijo (1403–1406), ed. Sreemski, St. Petersburg 1851, p. 383, calls “tierra de Arnauqiel”. He adds that the people, dissatisfied with their king Arnaquiel (Arakel), submitted to the Muslim ruler of Ispir. The Hamash are now Muslims and only those of Khopa have not forgotten Armenian. A Hamash lexicon was published by Kipilidwan. With the institution of the vilayets the sandjak Lazistan became part of the vilayet of Trebizond. Its capital was at first Batum but, after the Russian occupation of Batum in 1828, the administration of the sandjak was transferred to Rize (Ribizna), detached for this purpose from the old central sandjak of Trebizond. Lazistan lying to the west of the Ottoman-Russian frontier occupied a strip of 100 miles long and 15 to 20 miles broad. The kadija of the sandjak were: Khopa, Atina and Rize, subdivided again into 6 nahiye (Samey-Bey, Kamutu st’Atăm, v. 3966). Cuinet, La Turquie d’Asie, i. 118–121, mentions Of as a fourth kadija and gives 8 (2) nahiya (Hamashin, Karzurde, Mapawri, Wæg, Kær’ya-sah, Wisse, Arkhaw). In 1860 there were in the sandjak 564 inhabited places with 138,467 inhabitants, of whom 689 were orthodox Greeks and the rest Muslims (Laz, Turkicized Laz, Turks and “Hamashin”). The number of true Laz cannot be more than half the total population.

The term Laz is used in the West of Turkey to designate generally the people of the south-east country round: the south-east of the Black Sea, but in reality the people calling themselves by this name and speaking the Laz language now live in the two kadija of Khopa (between Koprung and Gurup) and Atina (between Gurup and Kemeri). Laz is spoken in 64 of the 69 villages of the kadija of Atina. To these should be added the very few Laz who used to live in Russian territory to the south of Batum. These Laz were incorporated in Turkey by virtue of the Tercisoviet treaty of March 16, 1921, which moved the Turkish frontier to Sarp (to the south of the mouth of the Coruh). Rize and Batum are now outside the Laz country proper.

The Laz are good sailors and also practice agriculture (rice, maize, tobacco and fruit-trees). Before 1914 many of them earned a living in Russia as bakers and often came home with Russian wives, who became converts to Islam. The Laz are known for their conversation in religious matters, Turkish proverb and the marionette theater (şaray-fesi) are often very notable about the Laz (Lazallı terziyan muazzam man yemes ozn, “the Muslim does not eat Laz jelly” ; terziyan from the Greek tezizai). The Laz language is closely connected with Mingrelian (which is a sister language of Georgian) and Armenian. N. V. Marr finds in it sufficient peculiarities to consider it a Mingrelian language rather than a dialect. In the Laz-Mingrelian group he believes he can find resemblances to the more Indo-European elements in old Armenian (Grab). There are two Laz languages, eastern, and western with smaller subdivisions (the language of the Çhält). Laz is very full of Turkish words. It has no written literature but there are local poets (Kashid Hulmi, Pehlîvan-oghlu, etc.). The Laz are forgetting their own language, which is being replaced by the Turkish patois of Trebizond (cf. Firerew in Zapt, 1901, xiii., p. 147–201) in which the harmony of the vowels is much neglected (cf. a specimen in N. Marr, Tezizî ve rozbatlî, St. Petersburg, vtt, p. 55).

The Georgians call the Laz Çan but the Laz do not know this name. Çan is evidently the original of the Greek name Sanua/Tzanooi and Çan survives in the official name of the sandjak of Samos (Djanik). From the historical point of view the separation of the Laz and Çan seems to have taken place in spite of the close relationship between the two of them. In the time of Arian, the Sanuoi were the immediate neighbours of Trebizond. In an obscure passage in this author (cf. the perplexed commentary of G. Müller in Geogr. Grundzüge Minorens, ad Arrian, Peripl., 8) he places on the river Of the frontier between the Coruk (Laz) and the Samos (?). Koch mentions the interesting fact that the people of Of speak a “language of their own” and according to Marr the people of Khashnish (near Atina) speak an incomprehensible language. Procopius places the “Sanuoi, who are now called the Tsanooi” on the area adjoining the mountains separating Coruk from the sea (the Parashades range, the name of which survives in the modern Parkher/Balkhat). The researches of N. V. Marr have shown that the Çan (Tzanooi) had at first occupied a larger area including the basin of the Coruk and its tributaries on the right bank from which they were temporarily displaced by the Armenians and finally by the Georgians (Kharthi). The chronicles of Trebizond continue to distinguish the Laz from the Tsanooi (Çanî). The latter in alliance with
the Muslims attacked the possessions of Trebizond in 1348. and in 1377 were punished by the Emperor. At this period the Tranzids must have been in the southwest of Trebizond (besides, the sandjak of Djankt is to the west of this port). Thus the Georgian application of the name Caan to the Laz may be explained by the confusion of the two tribes, one of whom (the true Caan living to the south and west of the Laz) was ultimately thrust to the west of Trebizond.

**Bibliography:** The principal Byzantine sources are found in: Dietrich, Byzantinische Quellen zur Länder- und Volkerkunde, Leipzig 1912, I, 52—58; Dulois de Montpéroux, Voyage autour du Caucase, Paris 1839, ii. 73 and the Atlas, series i, pl. xiv.: map of the theatre of wars of Lazizia; Vivien de St. Martin, Études de géographie ancienne, Paris 1852, ii, p. 196—

**Lazarus** is the name in the Gospels of 1) the poor man who finds compensation in Abraham's bosom for the misery of this world (Luke, xvi. 19—31); 2) the dead man whom Jesus raises to life (John xi). The Kur'an mentions neither the one nor the other, but among the miracles with which it credits Jesus is included the raising from the dead (Sure, ii. 55). Muslim legend with its fondness for the miracles of resurrection is fond of telling of the dead whom Jesus revives, but rarely mentions Lazarus. Tabart (Amalci) talks of these miracles in general. According to him, Ham b. Nuh is revived by Jesus (I. 187). Al-Khayy only mentions Sám son of Nuh of those restored to life by Jesus. Thalāt relates, closely following St. John's Gospel: "al-Ázir died; his sister sent to inform Jesus, Jesus came 3 (in the Gospel 4) days after his death, went with his sister to the tomb in the rock and caused al-Ázir to arise; children were born to him". In Ibn al-Athir the resurrected man is called "Ázir", the st of Ela'ar was taken for the article, as in al-Ya's (Elisa) and Alexander (al-Iskander) or in Azar in the Kur'an, whose name Fraenkel derives from Ellizer. In Ibn al-Ajur we find Muslim legend endeavouring to increase the miracle, Jesus raises not only "Ázir" (Lazarus) but also his wife (children are born to him), and Sám (son of Nuh), the prophet Usair and Yahyá b. Zakariya (John the Baptist).

**LEBARAN.** [See 'id al-Fitr.]

**LEO AFRICANUS, AL-HARAN K. MUHAMMAD AL-WAZZAN AL-ZAIYATI,** called Yahyán al-Asad al-Gharnâtî, in Latin Johannes Leo Africanus, born at Granada in 1401 (1465) was brought up in Fés. Enraptured with three diplomatic missions to the South of Morocco by the Banû Wâqif, he went to Mecca in 921 (1516) and then to Stambul. Captured on his way home by Sicilian corsairs he was taken to Naples in 926 (1520), then to Rome where the Pope baptised him "Johannes Leo". At Rome he compiled the following works, only the first of which has come down to us in the original Arabic text: 1. Arabic-Hebrew-Latin Vocabulary composed in 930 (1524) for the physician Jacob ben Simon (MS. Escorial 598); cf. H. Dernberg, Cat. vst. arabes de l'Escorial, Paris 1884, i. 410; 2. Description of the Africa, which he translated into Italian on March 10, 1526 (divulgated since 1531; published by Ramusio, Navigationi, viaggi, Venice 1550, i. 109—115; French transl. by Temporal, ed. Schafer, 1866; Latin by Florians; English by Pory, ed. Browne, 1866; Dutch by Leers; German by Lombach); 3. Libri de viris illustribus apud Arabos, finished in 1527, Latin transl., ed. Hottinger, 1785, then by Fabrius. These works gave the west the earliest materials for a history of Islam; cf. in the economic and social monograph on the city of Fés, Description, Bk. iv., Ch. 23—54, a remarkable résumé from the Mâlikî point of view of the historical development of theology. Before 957 (1550) Leo returned to Tunis where he died, a good Muslim.

According to H. de Castries (in his Sources), Signora Angelo Codazzi, of Milan, is preparing a critical work upon the Arabic materials of the "Descriptions".

(LE MASON)
LEPANTO — LEWEND

"Spiegelglocke": in view of the Greek form however it is very probable that the Turks originally pronounced it Iνε Βάκχιτ. The town is situated in the ancient Locri, north of the strait which leads from the Ionian Sea towards the Gulf of Corinth, known since the middle ages as the Gulf of Lepanto.

After forming from the xiii century part of the despoty of Epirus, Lepanto fell into the hands of the Venetians who made it one of the strongest places in Greece. Muhammad II during his war with Venice therefore undertook an expedition to take the town by land. In 1487 Khâdim Suleiman Pasha was given the task but did not succeed (Tâmârîkî, Aâlî 'Oqââmîn, ed. Giese, p. 115). It was Bâyazîd II who ultimately took the town in 1499 with the help of the Turkish fleet after the latter had defeated the Venetians near the island of Sapienza (Bursûk Râ's Aasâf) in July. The town was already being besieged by Mustafà Pasha, beglerbeg of Rûm Ili; Bâyazîd joined the army later. The commander of the garrison had declared he would never surrender until Turkish vessels should enter the strait. This happened after the battle of Sapienza, for the Venetians made a feint resistance. The Venetian commander capitulated on Aug. 26, 1499, (cf. Tâmârîkî, Aâlî 'Oqââmîn, p. 127 and 'Aâbî Pasha Zâde, p. 237-238, which gives the date as 3 of Muharram (905 = Aug. 10, 1499). Immediately afterwards Bâyazîd built two forts to defend the entrance to the Gulf.

Lepanto is particularly celebrated for the famous naval battle fought on Oct. 7, 1571, between the Turkish fleet and the Christian fleet consisting of 108 Venetian galleys, 77 Spanish, 6 Maltese, 3 Savoy and 12 Papal in addition to 8 enormous Venetian galleasses (the figures given by the Turkish historians vary considerably) united under the command of Don John of Austria. This great combined expedition of the Christian fleets had been provoked by the capture of Cyprus by the Turks under Lala Mustafà Pasha in 1570 and 1571. The Turkish fleet came for the most part from Cyprus with the ser Aferd Pervet Pasha and the Kapudan Pasha 'Alî and was joined by Ulud 'Ali Pasha (Ochali) beglerbeg of Algiers with 40 ships. After raids on the coast of Crete and the Ionian Islands it had cast anchor off Lepanto; it was here the Turks learned of the approach of the Christian fleet. The Turkish fleet consisted of 300 ships (40 von Hammer; Hâdimi Khalifa speaks of 180; it was not at the top of its strength on account of the numerous desertions. Against the advice of Pervet Pasha and Ulud 'Alî who commanded the left wing proceeded to leave the bay of Lepanto and to attack. The Christian ships entered the Gulf on Oct. 7; the battle which followed only lasted a few hours and ended in the complete destruction of the Turkish fleet; the Kapudan Pasha perished in the battle; Pervet Pasha escaped with difficulty and Ulud 'Alî who commanded the left wing succeeded in saving 40 vessels. This, their first great defeat at sea, is called by the Turks 'aeglâs damama referi, the "expedition of the destroyed fleet". The immediate results of this event were not considerable, for the Allies could not take advantage of their success and the Turks were soon succeeded in making good their losses in material; Muhammad Selîdî (q.v.) was credited with saying that the empire was rich and powerful enough to make the anchors of the fleet of silver, and the ropes of silk and the sails of atlas (Pecewi, i. 499).

The moral results however were very great and justified the great importance attached in history to the battle of Lepanto.

In June 1587 the Venetian and Austrian forces seized Lepanto, but they had to surrender the town to the Turks by the treaty of Carlowitz (1699); as Venice then held the whole of the Morea, Lepanto remained the only Turkish stronghold in this region. The Turkish history of the town ended with the insurrection of the Greeks, as a result of which Naupactos was incorporated in the kingdom of Greece.

The defence of Lepanto consisted of 3 successive lines of fortifications on a cone-shaped hill; it was the residence of a zumârâbeg of the eyâlet of the Kapudan Pasha (Hâdimi Khalifa, Tuchâs al-Kîlîr, p. 679). Its great strategic and maritime importance is explained by Hâdimi Khalifa in Rumîlîl and Bouma, transl. by von Hammer, p. 125.

J. H. Kramer)

LERIDA, the ancient Ilirida, the Arabic Lerida, a town in northern Spain, half-way between Saragossa and Barcelona, now the capital of the province of the same name, with a population of about 29,000. It lies at a height of about 600 feet on the right bank of the Segre (the Wadit Sâbir of the Arabs; Yâkü, Muğjam al-Buldân, s.v., wrongly makes this another name of Lerida), and forms an important strategical point at the entrance to the plains of Aragon.

Lerida, which is undoubtedly of Iberian origin, was taken by Julius Caesar in 49 B.C. in the first Civil War between him and Pompey. In 546 a council met there and it was occupied by the Muslims in the first half of the eighth century. It seems to have henceforth shared the fate of Saragossa and to have been an important point for the defence of the Upper Frongera (al-Mughr al-Dirâ). It was later part of the independent kingdom of the Banî Hûd of Saragossa. At the division which took place on the death of Sulaimân b. Hûd al-Mustâ'în bi 'Ilîh (1046), it fell to his son Yûsuf but was again taken by the ruler of Saragossa Ahmad al-Mu'akhtâr. (E. Levi-Provençal)

LEWEND, the name of the members of an irregular militia, which formed part of armed forces of the Ottoman empire during the early centuries of its existence; they were chiefly
employed as soldiers on the fleet in the period when the Turkish navy consisted mainly of the corsair vessels, which the Sultans employed for their naval expeditions. The word *lewend* seems to have been borrowed like many other naval terms from the Italian. The Italian word would have been *livonino* (Sami, *Kamik-i Türk*) or *livrand* (Djwadat Pagha) and was originally used by the Venetians for the soldiers whom they recruited from the inhabitants of their possessions in the Levant to defend the coasts or serve on the fleet. It was the same category of men, i.e., Christian Greeks, Albanians or Dalmatians, living on the Mediterranean coasts that the Turks used at first. After a time Turkish elements from Asia Minor joined them.

The lewends were a soldiery almost without discipline whom it was impossible to make use of when the navy came to be regularly organised. Even in the time of Mahmut II the use of *savâb*’s had been begun for the naval service and under Bayazid II, the first regular body of marines was formed, consisting of 400 *savâb*’s. About the same time the *savâb*’s were employed on the galleys as *ürkçüs* in place of the less loyal Christians (*Yaşâlî Myślafa, Thâtâfat al-Îlâm*, p. 109). Thus the true lewends were gradually removed from the navy. We find however that the word lewend is still used at a later period to indicate the soldiers of the navy, especially the ruffians (rûf-ıkhâr), cf. Djwadat Pagha; in Constantinople there were two barracks of lewends, belonging to the organisation of the arsenal. In a figurative sense, the great naval captains of the sixteenth century are also called lewend (e.g. by *Safvat Bey* in his article in *T. O. E. M.*, No. 24).

The lewends after having been removed from the fleet, still continued to exist as marauders, especially in Asia Minor where they were a scourge to the country. The word lewend thus acquired the meaning of vagabond and rascal; this last meaning has even passed into Persian. On the other hand, the Pagha in the province for long continued to recruit their bodyguard among the lewends (cf. the picture of a lewend in the plate on p. 136 of the third volume of *Dhâsimoan*).

From the end of the sixteenth century the government found itself forced to take steps to abolish the bodies of lewends still in existence. Ordinances of 1695, 1718 and 1720 gave them permission to join the new corps of the *alef* and *gülâle* (*Yaşâlî Myślafa, Târîkh, Constantinopol 1828, v. 13, 123). Finally a series of military expeditions in 1737, 1747, 1752, 1759 and 1763 extirpated the last bands of this turbulent soldiery, who still existed in different parts of Asia Minor (Ist, Târîkh, p. 25, 30, 78, 209; Yaşâlî, Târîkh, p. 137, 234).

**LÎTÁN**

(a) an oath, which gives a husband the possibility of accusing his wife of adultery without legal proof without becoming liable to the punishment prescribed for this, and of denying the paternity of a child borne by the wife. In the language of the Shari’â, evidence given by the husband, strengthened by oaths, by which the husband invokes the curse (bâna: from this the whole process is a *şâver*) named and the wife the wrath of Allah upon themselves, if they should lie; it frees the husband from *hâdd* (the legal punishment) for *sadâf* (accusation without proof of infidelity by persons of irreproachable character) and the wife of *hâdd* for incontinence (A. Spranger, *Dictionary of the Technical Terms used in the Science of the Moslem*, *Bibl. Indica*, Old Series, ii., 1300). On the technical use of the related verbal forms, cf. the Arabic lexicons and Dozy, *Suppl. aux Dict. Arabes*, s.v.; *al-Kasâllân*, commentary on *al-Bukhârî*, *Thâtâfat al-Îlâm*, 25, at the beginning; *al-Zurkâni*, commentary on the *Muwafaqat*, *Bâb mî zfî* = *‘LÎTÁN*, at the beginning.

1. The following *Kurâni* passage is the basis for the regulations regarding the *hâdd*: xxiv. 6 sqq.: *‘A* to those who accuse their wives (of adultery) without having other witnesses than themselves, the man concerned shall swear four times by Allah that he is speaking the truth and the fifth time, that the curse of Allah may fall upon him if he is lying, but the woman may aver the punishment from herself if she swears four times by Allah that he is lying and the fifth time that the wrath of Allah may fall upon her if he is speaking the truth. If Allah were not gracious and merciful towards you and wise and turning lovingly towards you*.

These verses belong to a part of the *Kurâni*, apparently composed at one time, containing various regulations about adultery and consisting of xxiv. 1-10, 21-26; verses 11-20, which certainly belong to the year 5 were inserted later; our verses must therefore be older (cf. Nöbdliche-Schawly, *Geschichte des Quaran*, i. 210 sqq.; H. Grimmie, *Mammoon*, ii. 27; puts the *Sûra* between the battles of *Badr* [2 A. H.] and *Uhud* [3 A. H.]). They form a regulation in favour of the husband, an exception to the punishment strictly laid down in 114 Kuran, xxiv. 4 (cf. also verses 23-25) for *sadâf* and are therefore, like this penalty, primarily Muslim and have no analogies in Arab paganism in which an institution like the *hâdd* had no place at all (contrary to D. Santillana, *Istituzioni di diritto musulman*, ii. 221 below). The word *hâdd*, which comes from the *Kurâni*, is unknown to the pre-Mohammedan poetry.

The *hâdd* concerning *hâdd* are almost entirely (the oldest probably exclusively) exagetical and profess to give the occasion of the revelation of the *Kurâni* verses in question; they are to some extent contradictory (attempts to harmonise these are found in *al-Zurkâni*, commentary on the *Muwafaqat*, *Bâb mî zfî* = *‘LÎTÁN*), systematised and univocal (cf. Nöbdliche-Schawly, etc., where further references are given, to which may now be added those in A. J. Wensinec, *Handbook of Early Muslim Tradition*, p. 56 sqq. [in p. 56 ut may be added, T. 44, *Sûra* 24]). Four types may be distinguished among them: 1. the husband (unnamed) laments his sad case to Prophet in low language whereupon the verses are revealed (oldest form); 2. *‘Uwamir* b. *‘Aqil asks in the same way, first through the intermediary of a friend and then directly of the Prophet (a development of the first type); 3. *Hândi* b. *‘Umayya* accuses his wife of adultery and is to be punished with *hâdd*
for this, when Allah saves him sometimes by the revelation of the verses (this type probably a development of the first, in which Sa'd b. Ubada also is often involved, who had previously with scornful criticism called attention to the possibility of the dilemma which has now actually happened, has of the three the most schematic and not original appearance); 4) some one marries a young woman and finds her not a virgin while he disputes his assertion; the Prophet therefore orders ُّنام (not exegetic). There are of course other transitional and mixed forms. In so far as the hadiths yield nothing new about ُّنام, this brief outline is sufficient; they are only of importance when they afford evidence for the oldest juristic adaptation of this Kur'anic institution.

2. The first subject of the earliest legal speculation was the question, not touched upon in the Kur'an, whether ُّنام makes separation between the husband and wife necessary. In many hadiths this question is so expressly (sometimes polemically) affirmed that there must have been a school which approved the continuance of the marriage after the ُّنام. The statement that al-May’ab b. al-Zubair is said to have held this view (Muslim; Nasai) is however based on an imadmissible interpretation of another hadith, in which he appears as a contemporary; on the other hand that Uyman b. Burti held it may be considered sufficiently proved (al-Zurqani on the Musawat). Among the oldest representatives of the other view which later became predominant, that a continuance of the marriage was impossible after ُّنام, may be included with some probability Abd Allah b. Umar and with certainty al-Zuhri in whose time it was already sunna, and Ibrahim al-Nakhji (Kishk al-Asghr); the tracing of this opinion back to Abd Allah b. Abibl, which we find in the hadith, must however be regarded as unhistorical.

Next arises the question how this annulment of the marriage as a result of ُّنام is to be carried through, whether by a triple ta‘lak, which the husband has to pronounce against his wife or by the decision of the judge before whom the ُّنام is taken or by the ُّنام itself. The first view is undoubtedly based on a large number of traditions, while on trace of its use in law has survived; these traditions are rather interpreted in favour of the second view (cf. the ُّنام of al-Zuhri in al-Tahabi, Ta’ifir and al-Bukhari, Ta’al, b. 30 and ُّنام, b. 43; the tradition in Ahmad b. Hanbal, v. 330 sq. forms in its abbreviated form only an apparent exception; a polemic against the first view in al-Tayalisi, No. 2065). The second opinion survives in the later legal ُّنام; apart from the ample testimony to it in hadith, its oldest representatives known with probability or certainty are Abd Allah b. Umar, al-Zuhri, in whose time it was already sunna, and Ibrahim al- Nakhji’s (Kishk al-Asghr) description to ‘Abd Allah b. Abibl is again not historical. For the third there is no evidence in tradition; it is only found after the rise of the maqdisah. We seem therefore to have a tendency to development in a particular direction.

Other prescriptions about ُّنام in tradition, going beyond what is laid down in the Kur'an, are of less importance. Thus, when the question is raised at all, it is unanimously laid down that the husband cannot marry the wife again at a later date, that a ُّنام may take place during pregnancy (legal ُّنام is later attached to their interpretation of this hadith), that the child has only relationship with its mother as regards kinship or inheritance i.e. is considered illegitimate. Other hadiths say that the ُّنام must be taken in a mosque and attribute the formula to be spoken there by the ُّنام to the Prophet. We are also brought into contact with questions of detail, which play a part in the later ُّنام by a tradition according to which the Prophet did not allow ُّنام unless the husband and wife were on equal terms as regards Ibad and freedom; a series of older authorities who held the contrary view is quoted in the Musawat.

Details of the further teaching of Ibrahim al- Nakhji on ُّنام are given in the Kitab al-Asghr. Two more general pronouncements in Malik and al-Shafi‘i bring us to the period of the rise of the maqdisah. Malik states definitely that it was the sunna of al-Madina, about which there is no doubt and an ُّنام, that the husband and wife after the ُّنام has taken place could never marry one another again and al-Shafi‘i says that with ُّنام divorce of the pair and denial of the paternity of the child was sunna of the Prophet.

3. The teachings of the separate maqdisah, develop the views of their earliest representatives, not entirely on the same lines (cf. the Musawat); it is to be assumed with probability that Malik followed the second view regarding the element in ُّنام which annulled the marriage (cf. above), while his school later held the third opinion entirely. The most important regulations of the Fiqh regarding ُّنام that goes beyond what has been so far discussed are as follows: if the husband accuses the wife of adultery or denies the paternity of his child without being able to prove it in the legally prescribed fashion and she denies his charge, recourse is had to the process of ُّنام. If the husband refuses to pronounce the formulae prescribed for him, he is punished with the ُّنام for ُّنام, according to Abul Hanifa, however, imprisoned until he pronounces the formulae, whereby he is set free or is declared to have lied, whereupon he is liable to ُّنام. If the wife refuses to pronounce the corresponding formulae, she is punished with the ُّنام for adultery, according to Abul Hanifa and the better tradition of Ahmad b. Hanbal, however, imprisoned until he pronounces the formulae, whereby he is set free or is declared to have lied, whereupon he is liable to ُّنام. On the question whether ُّنام is possible if one partner is or both are not Muslims or free not or not valid, there is a mixture of ُّنام, which cannot be detailed here; the same applies to the possibility of ُّنام during the pregnancy of the woman with the object of denying the paternity of the child. On this point the strength of the principle that the marriage decides the descent of the child, is remarkable, as is the distinction between two objects of ُّنام (accusation of the wife of adultery and denial of paternity) which is only a result of later developments. In the whole of the earlier period these two objects coincide from the juristic point of view. The divorcing element in ُّنام is, according to the Malikis (on their presumed divergence from Malik himself on this question; cf. above) and a tradition of Ahmad b. Hanbal, the ُّنام of the wife, according to al-Shafi‘i that of the husband, according to Abul Hanifa and the
better tradition of Abūmad b. Ḥanbal however the widow or the judges pronounced after the ḫāSa of both. Opinions also differ regarding the legal consequences of a later withdrawal of the dīn by the husband; according to Abū Ḥanifa and one tradition of Abūmad b. Ḥanbal, a new marriage of the two persons is possible in this case, according to Malik al-Shāfi‘ī and the better tradition of Abūmad b. Ḥanbal it is not; among older authorities only Sa‘īd b. Dujair is in favour of the first view, while ‘Umar, ‘Ali, ‘Abdallāh b. Mu‘āt, ‘Abdallāh b. ‘Umar, ‘Aṭī‘ and al-Zahiri are quoted as if in favour of the second (not all have historical confirmation) which was also held by al-Awzā‘ī and Sufyān al-Thawrī. Finally it is a disputed question whether the ḫāSa can only be performed orally or (in the case of a dumb person) by gestures; al-Buhārī devotes chapter 35 of his Kitāb al-Talākh to the discussion of this question and the reasons for his attitude to it.

It is easy to understand that resort was only had to the ḫāSa in extreme cases. Thus we find a scholar of Cordova in the fourth century A.D. pronouncing the ḫāSa against his wife simply in order to revive this maṣūma of the Prophet, which had fallen into oblivion (I. Goldthorpe, Muhammedanische Studien, ii, 21). But it has not yet fallen completely into desuetude, as Muslim law has no other means of disputing the paternity of a child (cf. Juynboll, Handl. pp. 217, note 2; Sanullāna, Istituzioni, p. 222).

(Joseph Schacht)

LIḤYĀN, an Arab tribe, a branch of the Ḥudhail [q.v.]. Genealogy: Liḥyān b. Ḥudhail b. Mudrīka b. al-Yās b. Muṣār. Settled like the other branches of the Ḥudhail in the country N.E. of Mecca, the Liḥyān do not seem to have had in the ḫāSa just before and after Islam a history independent of their brethren; it is only rarely that they are mentioned apart from them, e.g. in Ḥasan, p. 34, a propos of their battles with the warrior-poet Tūḥamā b. Ṣa‘d b. Ḥudhail. Meanwhile the tribe of this kind is regarded among those of the Ḥudhail — e.g. ‘Abdīb b. Khaḑlī b. Ḥudhail, al-Muṭi‘al Ḥudhail, al-Ka‘bah, etc. At the time of the prophethood of Islam we find them like the rest of the Ḥudhail under the political influence of the Quraysh. This explains their hostile attitude to Muhammad, who resided in Mecca, in the murder of their chief Sufyān b. Khaḑlī b. Nāṣrīr b. ‘Abdallāh b. ‘Umar at the instigation of Muhammad. This murder was cruelly avenged by the Liḥyān who slew several Muslims in their turn (wasī‘ al-Ragī, 4, 18, cf. Ḥudhail). As there is no further mention of hostile relations between the Muslims and the Liḥyān, it is probable that the latter were included in the sub-division which the Ḥudhail made to Islam.

After the triumph of Muhammad and in the periods following, there is an almost complete lack of information about the Liḥyān and there are very few persons of note belonging to this tribe; the only Sammaritan al-Liḥyān, whose full name was al-‘Abī b. Ḥudhail, was at some time a partisan of the Prophet (cf. al-Mas’ūdī, Mu‘arrab al-Mas‘ūdī, ed., Krenkow, R. S. O., xxxii, 145, No. 125, with bibliography; Flügel, Die gramm. Schriften, p. 51) especially a favorite of the two sons of ‘Abdīb, i.e. 222 or 232 (cf. al-Zubaydī, Šarḥ al-Nu‘aym, ed., Krenkow, R. S. O., vii, 145, No. 125, with bibliography; Flügel, Die gramm. Schriften, p. 51) perhaps belonged to it, but other sources (Vāqī‘, Ḥarib, ed. Margoliouth, v. 229; Tāhā al-‘Arūf, x, 324, 10) trace his nīsā‘ al-Liḥyān to the unusual length of his beard (bana‘).

There was some reason to suspect that the Liḥyān at a remote period of Arab history had played a more important part than that almost unnoticed, which they did later; this seems evident from a passage in Ibn al-Kalbī (K. al-A‘ẓā‘ī, p. 37 = Vāqī‘, Mu‘arrab, iii, 181, 10) who assigns to the Liḥyān certain priestly functions (ṣa‘īna) in the cult of the Hudhail idol Su‘ā‘ (cf. Wellhausen, Keil-Arab. Heidentum, 5, p. 18—19); the discovery of several hundred pieces of inscriptions and graffiti in the north of the Hijāz has not only confirmed this suspicion but also revealed the existence of a Liḥyān state several centuries before the coming of Islam. These inscriptions, first known from the imperfect copies of Doughty and Huber, were later collected in large numbers (over 900) by Eutin and deciphered by D. H. Müller after preliminary work by J. Halévy. They are now available in still larger numbers and better known as a result of the discoveries and publications of F. A. H. Jumaa and S. S. A. They are almost all in the vicinity of the village of ‘El-‘Ola (especially in the area fall of archaeological remains, called el-Dārreke in the rocky cliffs to the east of this) not far to the south of the great Nabataean centre of al-Hijāz [q.v.], Mā‘ṣir al-Ṣūlīb; some have even been found here although in much smaller numbers. Their epigraphy closely resembles that of the Nabataean and Sa‘ūdatic Inscriptions, in Northern Arabic and only differs from classical Arabic by several peculiarities (especially the use of ḫ as in place of J for the article, and of a participle of the form muṣī‘al in contrast to the classical muṣī‘al of the classical Arabic).

From these inscriptions we learn that el-‘Ola — the old name of which is given in the form D O of the Bible — was the capital of the kingdom of the Liḥyān, of which some of the kings were Talmaj I and II (cf. the name of Talmaj, king of Geḥār, father-in-law of Alnasir, Il Sani, iii, 3 and xiii, 17), Tādhī, Lawdhi, Hannā‘ al-MASH-M, Karb’il.

This kingdom seems to have been for a long period of remarkable size and importance; before it was formed or became quite independent el-‘Ola-Dedan was a colony of the Nabataeans which was brought the merchandise of the Yemen and India to the ports of the Mediterranean. After the fall of the Nabataean kingdom (according to M. Hartmann between 230 and 260 B.C.) the Nabataeans
replaced the Minaeans in the control of trade and settled in al-Hijr; but at the same time the Libyans, who had absorbed Minaean civilization formed an independent kingdom and arrested the southward advance of the Nabataeans; the frontier of the two states must have been between al-Hijr and al-dba. It is probable that these Libyans were simply a section of the Thamud (q.v.) whom we find mentioned in the annals of Sargon of Assyria, while there is no ancient reference to the Libyans until Ptolemy who mentions them (Hist. Nat., vi. 33, 1) under the name of Lechieni. Their power must have increased after the fall of the kingdom of Petra (106 A.D.) and it seems that from this time onwards, they also held al-Hijr, abandoned by the Nabataeans.

When and how the Libyans fell in their turn to the position in which we find them in the sixth century forming part of the tribe of Hudhail, and settled in a territory considerably to the south of their original home, we cannot tell, on account of the complete absence of documents. Muslim tradition has lost all memory of them and confounds them apparently under the general designation of Thamud with the Thamudic period and the Nabataeans of al-Hijr; a memory but a very vague one of the Song of al-Hijr of the Libyan kingdom may perhaps have survived in the isolated mention in a tradition that the Libyans were "remnants of the Djeriurum," who later became part of the Hudhail (Tabarī, Annals, ed. de Goeje, i. 749, 11-12; [cf. Djeriurum] following Ibn al-Kalbi; Tağf al-Arūr, x. 324, 2-9, following al-Hamdānī, probably in al-Idriṣī and the passage is not found in the text of the Qāfīrat al-Arūr). The Thamudian graffiti (which used to be called proto-Arab) are a development (later or parallel) of the Libyan script, the last stage of which is seen in the Safaitic graffiti; but we are completely ignorant of the historical relations of the people who used these similar scripts.

The ruins of Dibān-el-d-dba, although they have so far only been superficially explored give us some idea of the unoccupied stage of civilization to which the Libyans had attained; besides tombs, some of which are decorated with sculptures in high relief, Fathers Jaussen and Savignac have discovered a sanctuary with a central basin circular in form (for ablutions?) and ornamented with large statues several important fragments of which have been discovered. An inscription in this sanctuary mentions an afhal of the god Wadd: this term, which certainly is the name of a sacrificial office is not unknown to Muslim Arab tradition (Agānī, xxxix. 686; IbnDurait, K. al-Iṣṭiqbāb, p. 197, 7). Among the deities worshipped by the Libyans we find alongside of typically Arabic ones like Allāh, al-Iṣṭi, Wadd, Yağhūth and a god named Ḥabāt of whom we know nothing definite, gods of Aramaean origin, like Bel; a name, in the epigraphic name, Šâm; in these names as well as in the use of other Arabic terms (among them nafs in the sense of "tomb") there is apparent the influence of the Nabataeans, who undoubtedly contributed with the Minaeans to form the character of Libyant civilization. The presence of Judean elements, which Müller and Glaser thought they could recognize is on the other hand more than doubtful.

Lidzbarski, Ephemeris für semit. Epigraphik, ii. 23—48, 345—361; iii. 214—237; (G. Levi Della Vida, LIMNI, Turkish form of the name of the island of Lemnos in the Aegean Sea between Mount Athos and the mainland of Asia Minor about 50 miles S.E. of the entrance to the Dardanelles. In ancient times a possession of Athens, in the middle ages it belonged to the Byzantine empire; in this period, in 901, the island was sacked by the Muslim inhabitants of Crete. Towards the end of the middle ages Lemnos had passed into the hands of the Italians who called the island Stallaime (formed with the addition of the Greek preposition είς; and the article). When the Turks took Constantinople the island belonged to the Genoese lords of Lesbos (Midillí), the Gattelusio. Under Bāyazid I, who had fortified the Dardanelles, Lemnos passed with the other islands under Turkish rule. But when Constantinople became the Turkish capital it was inevitable that Lemnos, the largest of the three islands commanding the entrance to the Dardanelles (the others are Imbros and Tenedos, or Bodja Ada) entered the direct domination of the Turks. In 1456 took place Muhammad II's expedition against Ainos as a result of which the conqueror became lord of the islands of Tuzsa, Samothrace and Imbros. Negotiations had been going on between the lord of Lesbos and the Sultan regarding the payment of tribute. But in the course of these negotiations the people of Lemnos, dissatisfied with the rule of Nicholas Gattelusio, brother of the lord of Midillí, voluntarily submitted to the Sultan who appointed Hamma Beg governor of the island and entrusted Isma'il, beg of Gallipoli, with the task of installing him there. Gattelusio succeeded in leaving the island before the arrival of the Turks. The date of these happenings which are recorded only by the Byzantine historian, Duca (xiv. 190) and Chalcondylas (viii. 248) is not certain; but Ducas who was representative of the princes of Lesbos at the Sultan's court, may be considered a reliable authority. In 1457, a Papal fleet drove out the Turks — the Pope had intended to establish an order of Knights on Lemnos — but some time afterwards the same Isma'il Beg recovered Lemnos with the adjoining islands (Zinkeisen, ii. 253—257). In 1462 Muhammad became master of Lesbos also. The following year the Turkish possession of Lemnos was disputed by the Venetians, whose Admiral Canale in 1467 (A. H. 872 in Neckor and Sa'd al-Din, according to von Hammer) took Ainos and the islands in this part of the Aegean Sea (cf. also Münebd-ič Dəş, iii. 354); these conquests resulted in Muhammad's great expedition against the island of Euboea or Negropont (in Turkish:
Egbribo) in 1468. Soon afterwards the Turks retook Lemnos and by the peace concluded with Venice in 1479 this island remained definitely a possession of the Turks. In this year the island of Tenedos was fortified by the Sultan so that the system of defences of the Dardanelles was completed.

In July 1656 the Venetians won a victory over the Turkish fleet before the Dardanelles and as an immediate result took Tenedos, Samothrace and Lemnos. These conquests were such a threat to the capital that the grand vizier Muzaffar Pasha took energetic measures and sent an army of 4,500 men under the Kapudan Pasha Topal Muhammad; the latter besieged the citadel of Castro for 63 days, after which the Italians capitulated on November 15, 1557. Tenedos was regained from the Turks by the same expedition (Na'imi, i. 518, 585, 633). Finally in 1770 in the Russo-Turkish war Count Orloff laid siege to Castro and after 60 days had obtained its surrender, when the Kapudan Pasha Husein attacked the Russian fleet in the harbour of Mudros (Turkis: Münduro), forced the enemy to withdraw on October 24, 1770 (Wajih, ii. 118).

Linga, a little seaport on the Persian Gulf which lies between Lihristan [q.v.] and the desert. The old port was at Kung, 8 miles east of Linga; the Portuguese had a factory there where they ruled long after the loss of Hormuz (to 1711). In the reign of the Zand dynasty, 1,000 Dawsim Arabs (Bani Dāshīm, Dawsīm, Kowkis) with their chief Shāh Saḥīl came from the district al-Qalba (Qumān) and took Linga from the banīnahrīn of the district Dāhamgūrī. In 1787 the Persian government took possession of Linga and deputed to Teherān the last hereditary ushārī (Kādī). The present population is very mixed (Arabs, Persians, Hindus, Africans). On the shore at Linga are wharves for building boats for local traffic and the port is fairly busy, but the mountains which rise from 3,500-4,000 feet behind Linga make communication with the hinterland difficult (Llr is 63 farsaks from Linga).

Lisān al-Dīn. [See Jān al-Khāṭīf].

Lisbon, Portuguese Lisbon, a city at the mouth of the Tagus, now the capital of Portugal, with 455,000 inhabitants; tradition attributes its foundation to Ulysses and it originally bore the Phoenician name of Olissippo. Under the Romans it received the name of Felicitas Julia and formed a municipium. It was under the rule of the Alans from 407, of the Visigoths from 585 to 715, when it passed into the power of the Muslims.

For the Arabic transcription of the name of Lisbon we find the two forms Lisbâna and Istanbul with or without the article (cf. especially, David Lopes, Cn Arabes was abrah de Alexandre Herculano, Lisbon, 1911, p. 58—59 and the references there given). The most usual ethnic is al-Usbūdi. Lisbon was not a large town in the Muslim period but it was nevertheless frequently described by the Arab geographers. Al-Idrisi speaks of its ramparts and its castle and of the springs of warm water which rose in the centre of the town. It is built, he says, opposite the fort called al-Madān (Almada), so called from the gold dust washed up on the bank by the Tagus. It is also from Lisbon that this geographer followed by several authors makes the legendary expedition of the 8 Adventurers set out (no doubt to the Canary Islands; cf. above, p. 888, s. v. at-Kāf-/Abū8).

Lisbon very early (by 711) fell into the hands of the Muslims and under the Omaiyad caliphate of Cordova formed a part of the district of Balâq, along with Santamia and Cintra. The Arab chronicles record several risings there which were quickly suppressed. It was however from the Normans (844—847) that Lisbon suffered most in this period. During their first invasion of al-Andalus in 849 (844) it was there they disembarked for the first time. According to Ibn Idârî, their fleet consisted of 54 galleys and 54 vessels of less
LISBON — LITHAM

importance; the alarm was given to the caliph of Cordova by the governor of Lisbon, Wahh Allah b. Ham. Again, during the invasions of 966—971, in the reign of al-Hakam II, the Normans began by ravaging the plain of Lisbon after landing at Alcacer do Sal (Kaju Ali Dhlili). For further details, cf. the article MAHOMET and the literature there quoted.

After the fall of the Omeyyad caliphate of Spain, Lisbon formed part of the independent kingdom founded by the Almohads [q.v.], with Badajos (Badajuz), as capital. Under the Almoravids, it seems to have been taken for a brief period by the Christians and retaken at the end of 504 (1110) by the Emir Sir. b. Ali Bakr, at the same time as Santarem, Badajoz, Porto and Evora. It was only some 40 years afterwards, in 547 (1147) that it was finally conquered by Alfonso I Henriques of Portugal with the help of a body of Crusaders who were on their way to Palestine under Arnold van Arachot.

LITHAM (L.), sometimes also pronounced lisham, the mouth-piece, is a piece of material with which the Beduins concealed the lower part of the face, the mouth and sometimes also part of the nose (see the commentary on Harih, ed. de Sacy, Paris 1821, p. 374 a). It served the practical purpose of protecting the organs of respiration from heat and cold as well as against the penetration of dust (cf. Dhu 'l-Rumah, No. 5, 43). It is also made of the face more or less unrecognisable and thus formed a protection against the avenger of blood (Goldziher, Z. D. M. G., xli. 101). The līθam was therefore also sometimes worn as a deliberate disguise by people who did not usually wear it; thus in the rooρ Night (ed. Macnaghten, i. 785) it is worn by a princess, who disguises herself as a man, and (ibid., ii. 59) by a woman for similar reasons. A demonstrative verb has been formed from līθam, the fifth form of which in particular means "to put on the lip harness" (e.g. Aḥlī, vii. 102, 16; al-ṣul, p. 32, sī. Aḥlī, ed. Koubâ, p. 122, s.; Wright, Arabic archaics, p. 111; s.; Harih, Masāmīr, p. 433, 3), while the eighth form in the meaning "to put on something as līθam" is generally used only metaphorically (see below) Tihāshma usually means a woman's veil (Cherbonne in J. A., 1849, i. 64), but rūmash ukhādīy is also found as the distinctive dress of a particular office under the Fatimids: their chief ūsmān wore it along with the taulmān and 𝕏𝕏WW (de Sacy, Chrest., ii. 92). In general however, the līθam does not seem to have been worn by town-dwellers.

The līθam has no considerable importance for Lisbon from the purely religious point of view; it is forbidden along with certain other garments for the women (Bukhārī, i. 390, below).

The custom of wearing a līθam was generally disseminated among the Sanhājī tribes [q.v.] in N. W. Africa, who are therefore described as līθam-wearers, muhālithāzn al-umūr as well as avūd al-muhālithāzn; as the Almoravids originated in one of their clans, the Lamūni, the līθam thus came to have a certain political significance. The custom of wearing a līθam below the nīθād, see Bakr, p. 170, was found in other parts of Africa also, e.g. in Kūnām (Maṭrīkī, l. 193, 20—27), and still prevails among the Tuaregs. These Africans retained their veils even on journeys into the eastern lands of Islaam, where it was not the fashion, while their women went unveiled. A tradition of late invention explains these remarkable customs by a story that on one occasion during an attack on a village where there were many women but only a few men, the men put on veils and the women took up arms to deceive the enemy as to their real numbers (Goldziher in Z. D. M. G., xlii. 101); another story has that after the fall of the Omeyyads, 200 Omeyyads escaped to Africa disguised as women and that the wearers of the līθam are descended from them (Wüstenfeld, Der Tod des Husayn, p. viii.). According to Hārīrī (text, p. 170 = transl., p. 324), they never took off the līθam if one of them fell in a battle and lost the līθam, not even his friends could recognise him till the līθam was put on him again; they also called other men who did not wear the līθam "fly-mouthed". The Almohads, particularly Ibn Tītīsīrī, opposed the veiling practised by the Almoravids. They continuously insisted that it was forbidden for men to imitate the dress of women, but they did not succeed in abolishing the custom of wearing the līθam (Goldziher in Z. D. M. G., xlii. 103). Among further passages, where the term muhālithāzn occurs in this sense may be mentioned. "Abdallāh, ed. de Sacy, p. 483, note 48 (with other references); Fleischer, Kleine Schriften, ii. 243 (discusses several passages); Marquart, Die Benamqanning, Index, s. v. Līθamträger.

The word līθam and its derivatives was very much used in figurative language especially by poets. From expressions like "to kiss the lips of the beloved one, which are under their līθam" (Dossy, Elements, p. 409; cf. mā tuḥba līθamān = the face in the mullūkīb, p. 464, 47) develops the meaning of līθam "to kiss" (Onas b. Abi Rahīm, ed. Schwar, p. 6, ṣ. Ibn al-Fārid, Fīwālīn, Marseille 1853, p. 125, l. 5 from below) and especially, ṣaḥāshama = "to kiss one another"; mualithām, the place which is kissed (Farasād in Dossy, Supplemente). A girl is given a līθam worn out of her own hair (100 Night), Brestian edition, li. 53, 9); the camel has a līθam on its fore-hoof (the mouth of Dhu 'l-Rumah, p. 76, 7), the wolf is abūmān Iwāshma = black in the region of the muzzle (Tirmanāî, p. 4, 35); in the wolf, we find it said in Hārīrī, p. 170, and şam, şamtašālāma; the wind-jar has a līθam, i.e. a piece of cloth over its mouth (mualithām; Muṣafājilīzī, ed. Lyall, N. 358, 9); cf. also Abkīlī, ed. Sebalīl, p. 85, and in Alkama, ed. Socin, ii. 43, on (art); the sun is darkened by clouds of dust and is thus given, as it were, a mouth veil (Iwāshama, Mutanabbī, p. 604, 16): "as the day (mawāf) doffed its līθam" [description of dawn in Ibn 'Arabīshīhī, ed. Sebalīl, p. 64, 4] from below; cf. also the commentary on Hārīrī, Masāmīr, p. 240, 44; tārāfīsh (tuḥba līθamān; many titles of books also begin with Kusāf al-līθam, cf. Brockelmann, G. A. L., ii. 659);
the līfāna is to be taken from the walls of buildings, i.e. they are to be exposed (Ismāʾīl al-Din, ed. Lanzberg, p. 65, 13); to duff the līfāna of one's origin = to confess; freely (Hartr, Mahānī, ii. 426, 3); the archangel Idrīs has one of his four wings veiled like a vast month's veil (llāhānā) from heaven down to the seventh earth (Kaswini, ed. Wustenfeld, i. 56, below); a voice may be hidden, makhūm (Tarā, ed. Alwallāt, No. 5, 56 = Bairūt ed., 1858, p. 10); a further metaphor is found in Ibn al-Farāh in de Sacy, Christ., ii. 55, verse 24.

(W. Björkman)

LIWAʾ (a. *wall*; from ʿara to *enroll*; means in Turkish official terminology, an administrative area, several of which form a willyet, *province* and one is in turn divided into ʿadām *districts*). It corresponds pretty much to the département in France. It is synonymous with məndil (r. *flag*) and is used alongside of it. The āmmāl is governed by a məndilvî, whereas a third synonym, məndilvî-lık, the institution of the āmmāl goes back to the early days of the Ottoman empire but it was under Mahmut I in 1834 that the present administrative organisation came into being.

(J. Huart)

LIWĀN, (a., for al-āwān; Dozy, Supplement, ill. 563) in eastern houses is a hall, enclosed by walls on three sides and open through an arch on the fourth; it is raised two or three steps and forms the front of the house; all the rooms of which open on to this atrium, which is ornamented with plants and trees. This is a type borrowed from the Sassanian palaces, of which a specimen has survived to the S.E. of Baghdad, in the ruin called Tūgh-birāt, vault of Chooseroy, or ḏurūṭ, *hall of audience*. It corresponds to the kūf of the modern Persians. It is open on the north side to get the cool air.

(C. Huart)

LODI, the name of a clan of the Ghilji tribe of Afghanistan. A family of this tribe was established in Multān before India was invaded by Mahommed of Ghazni, for that district was ruled, in 1005, by Aiū 'l-Fath Dusdūd, grandson of Shāhīzul Nāšr, Loṭād who had established himself there, but the importance of the tribe dates from the reign of Firdūs Tughlak when some of its members entered India for purposes of trade, but soon occupied themselves with politics. Dusdūd Khan Lodi competed with Khānr Khan [q. v.] for the throne on the extinction of the Tughlak dynasty. Malik Bahram Lodi took service under Malik Marād Dusdūd, governor of Multān, and his eldest son, Shāhīzul Nāšr, served Khānr Khan at Multān. After the battle on Nov. 12, 1455, in which Khānr Khan defeated and slew Malik (Ishq Khan), Shāhīzul Nāšr received the title of Islam Khān and the fee of Sīrhind, where he settled with his four brothers and assembled a body of 12,000 horse, mostly of his own tribe. His next brother, Khānr, had a son named Bahūli (usually called Bahūli in India), whom Islam Khān adopted, to the exclusion of his own son, Khānr Khān, and married to his daughter. Khānr Khan fled to Dīli and entered the service of Muhammad Shāh the Saīyid, to whom he described his relations as a danger to the state. Muhammad sent a force against them and they were defeated and fled to the hills, but almost immediately returned, recovered their possessions, and defeated the men of Multān near Südhawā. In 1442 Dīli was threatened by Maḥmūd Khalīd II, of Multān, and Muhammad Shāh appealed to Bahūli, who demanded, as the price of his assistance, the execution of his enemy, Husam Khān and the appointment of Ḥamīd Khān as minister. The fierce king complied, and Bahūli marched to Dīli with his contingent and took command of the army. The battle with the army of Multān was indecisive, but Maḥmūd was recalled by the news of a riot in his capital and Bahūli was hailed as the saviour of the kingdom, and received the title of Khān Khānān and the government of the Pandja. He shortly afterwards picked a quarrel with Maḥmūd and besieged him in Dīli, but returned to Südhawā without capturing the city. In 1443-1444, Maḥmūd died, and was succeeded by his son 'Alam Shāh, a feeble monarch who, after a brief and troubled reign in Dīli, retired to Bagdād, which he made his place of residence. Bahūli then marched to Dīli and 'Alam Shāh abdicated in his favour; Bahūli ascended the throne on April 19, 1451, and reigned for thirty-eight years. He was succeeded, on July 17, 1499, by his son Sīkandar, who reigned until November 21, 1547, when he died and was succeeded by his son Ṣīrāj, who was defeated and slain by Bihār on the field of Pānpāt on April 22, 1558.

(T. W. Hato)

LOJA (a., Læouga), a little town in Andalusia, 36 miles S.W. of Granada, on the left bank of the Genil at the foot of an imposing limestone mountain, Periqeta. It has now rather less than 20,000 inhabitants but seems to have been more important in the Arab period. It was the birthplace of the famous Ibn al-Khaythī Līsūn al-Dīn [q. v.] who wrote an enthusiastic description of it. One can still see there the ruins of the ḳūf which commanded the town in the Arab period. It was repopulated in 280 (993) in the reign of the caliph 'Abd Allāh b. Muhammad. This "key of Granada" was besieged in 1488 by the Catholic Kings who took it after a month's siege with the help of a body of English archers.

(E. Lévy-Provençal)

LOMBOK (usually called by the natives Taṇāb Sarak), the second in order of the Little Sunda Islands lying east of Java; the Strait of Lombok separates it from Bali, the Strait of Alas.
from Sumbawa. A not very broad, rather flat, strip runs from east to west approximately through the centre of the island, which is in part extremely fertile and is shut in by hills on the north and south. In the north is the volcano of Rinjani revered as holy by a large section of the population. The island is one of the richest parts of the Archipelago; the main industries are agriculture and cattle-rearing, the first being on a particularly high level. A quantity of the rice which is in part grown on fields excellently irrigated in expected.

Even if we exclude the foreign traders settled on the coast towns (especially Buginese, Arabs and Chinese) the population is not homogeneous but consists of two groups which are sharply distinguished territorially also; the smaller western part is inhabited by Balinese, the centre and the east by the much more numerous Sasak. The inhabitants of the western part are descendants of the Balinese, who came as conquerors to Lombok in the xviiith and xvith centuries and gradually extended their power over the whole island; they intermarried very little with the native population, so that they do not differ very much from the people of their own homeland, and their language is Balinese, and they profess the peculiar form of Hinduism and Buddhism which is found in their mother island, with a few exceptions (they have for example adopted a dress that is typical of the Balinese). The Sasak are the true aborigines of the island; they are quiet and industrious, in their physical features they most closely resemble the Sumbanese and their language (not yet fully studied) shows a similarity in certain points with the Sumbanese. They have all adopted Islam except for the little group of the Bodha, who have remained pagan; they live quite apart from the rest of the island, especially in the northern districts of Tanjung and Bajang and on the south coast and engage in agriculture of a primitive type. They claim to be the descendants of Balinese who emigrated hither in ancient times before the great invasion; there is however no ground for this assertion; physically and linguistically they are in no respect different from the Sasak around them and the name Bodha is also found in other parts of the East Indian Archipelago as an expression used by the Malayans to indicate groups of people who have remained pagan.

Of the earlier history of the island we only know that in the viith century, it was a possession of the Javanese empire of Madjapahit; we have no really reliable information as to how and when it became converted to Islam. Islam probably came to Lombok from East Java at the time of the decline of the Empire of Madjapahit. Evidence of a considerable Javanese influence can still be traced, and according to a chronic in the Javanese language found in Lombok, it was Pangeran Prapin, the son of Raden Paku (Suman Giri) who converted Lombok by force to Islam.

The Sasak are of course no more orthodox Muslims than any other people in the East Indian Archipelago, but Islam has so far influenced them that we may see in it the reason why, in spite of the long Balinese dominion, there has been no assimilation between Balinese and Sasak. They are divided into two groups or sects: Waktu Limu and Waktu Tiga (1810:). The former, who live mainly in the plain of Central Lombok are the Orthodox among the Lombok Muslims; their name shows that (in theory at least) they observe the obligations prescribed by Islam of performing 5 (i.e. limu) prayers a day. In keeping with this, the name of the Waktu tiga (who live mainly in the mountains) would mean that they are of the opinion that three (tiga, tiga = 3) times a day are sufficient. This is however an improbable explanation. Many are of the opinion that the name is to be explained by the fact that the Waktu tiga only know of three times of prayer, namely the Salat on Friday (or at birth), at death, and at the end of the month of fasting; others say that the full name is waktu-tiga-tiga, which is said to be an expression indicating the old paganism (the religion of the time of the three kings, namely the kings of Selaparang, Saka and Pedanggi). There is no certainty on the point however. In any case the Waktu tiga are regarded, and not without reason, by their countrymen the Waktu Limu as half heathens. There are few mosques in their country; they have no regular performances in practised and religious observances to their religious leaders (fakih) and they do not observe the ordinances regarding the eating of pork, fasting or pilgrimage to Mecca. They only observe Muslim principal festivals and their marriage ceremony also shows that they wish to be regarded as Muslims.

At the same time pagan sacrifices and pilgrimages (which however can also be found among the Waktu Limu) play a prominent part in their life. In their villages, there is always in addition to the Muhammadan kiai a pengangku, i.e. one who acts as an intermediary at the shrine of all kinds of spiritual powers from the world of animism. It is particularly among the Waktu tiga that we find the custom that the village headman keeps two coarse pieces of cloth woven out of different coloured threads (the one "male" and the other "female") to which offerings are made in cases of illness etc.; every household makes a copy on the pattern of these pieces of cloth, which are also treated with reverence.

Practically nothing is known of the early period after the conversion of Lombok to Islam; the island was divided into little principalities often at war with one another; the eastern part was under the influence of Mataram and Sumbawa, the western under the influence of Bali. In 1674 the Dutch East India Company concluded its first treaty with the princes of Lombok. Soon afterwards in 1675 took place the first serious Balinese invasion and about 1740 the king of Karangasem succeeded in bringing the whole island under his sway. Four small Balinese kingdoms thus arose on Lombok which were frequently at war with one another until in 1838 the king of Mataram overthrew his opponents and ruled over the whole of Lombok. Down to 1849 he regarded himself as a vassal of the King of Karangasem on Bali; he then placed himself under the suzerainty of the government of the Dutch East India Company. The Sasak repeatedly rebelled against their Balinese rulers until finally in 1894 the Dutch intervened with the result that they conquered Mataram; since 1895 Lombok has been directly under Dutch rule and administered jointly with Bali.

Bibliography: A complete bibliography for Lombok to the end of 1919 is given in C. Lekkerkerker, Bali en Lombok, Rijswijk 1920.
LOMBOK — LUBNAN

(W. H. RAMBERG)

LORCA (A., Lureka), a town in Eastern Spain between Granada and Murcia, with 16,700 inhabitants. It is the ancient Ilvica or Helvorea of the Romans. In the Muslim period it formed part of the diocese of Tudmir [q. v.] and was famous for the richness of its soil and subsoil and for its strategic position. Its site was one of the most substantial in Andalusia. It is 1,200 feet above sea-level on the southern slope of the Sierra del Cabece, and dominates the course of the river Guadaletein. Under Arab rule it usually shared the fortunes of Murcia and became Christian again in 1266.

LUBNAN (Lebanon). The Arabs have a somewhat confused, almost mysterious idea of Lebanon. Here they place the sown to of the Ahsuli [q. v.]. They do not distinguish it from the Anti-Lebanon for which they have no special name. *Iblam Sants* means to the Arabs the section of Anti-Lebanon to the north of the valley of the Barada [q. v.]. The massif of Hermon has been known since the time of Hasaka b. Bakth as Iblam al-Thalidi; it is the Iblam al-Shariyah of modern writers. Nor are the Arab geographers agreed on the northern boundary of Lebanon. Some include al-Lukkam (Ammon) in it. This confusion has been facilitated by the vague popular application *Iblam*, which has been applied from the Middle Ages to the present day to the range parallel to the Mediterranean running through Syria from the mouth of the Orontes to Galilee; from this comes the name Ahsul al-Iblam, Iblam al-Yahud, *mountainers*, applied by the Muslim chroniclers to the Nusairit, Mutasalleh, Druze etc. A hadith tells us that stone from Lebanon was used in building the Ka'ba. This tradition perhaps explains why the Arab geographers see in Lebanon the continuation of the long arête which separates the Hujã from Najd and Syria and Anatolia to the Black Sea. The southern frontier of Lebanon is usually made to coincide with the lower valley of the Lajüni, the modern Kasimya. Current usage, conforming to local tradition, makes the Lebanon lie between this river and the Nafr al-Kahîr (the ancient Eleutheran) on the north. This is the region which a modern historical survey will cover. The backward and the scattered population of the Anti-Lebanon has always gravitated in the orbit of the towns of Eastern Syria, while Lebanon with its towns opening to the sea and its flanks watered by the abundant rains yielded by the moisture from the sea, which it gives to the rest of Syria by its rivers, is in economic and political dependence on the centres of the ancient Phoenician country.

Lebanon is rarely mentioned by the pre-Muslim poets; for example by Nahiâbah Dhahâshin, whose patron was phylarch of Khassân. The name becomes more familiar to their Muslim successors, e.g. Abu Dâbaâl al-Qâmân, Nahiâbah al-Shabahin and Abu al-Râmaân b. Hassân, from their attendance at the Omajji court. Its territory, covered with moss and orchards, is marked with the open route cut by deep valleys and torrentious rivers, from the Arab conquest has offered a place of refuge to several small nationalities, increased from time to time by the influx of all the oppressed and persecuted.

The semi-independence which it has never ceased to enjoy has favoured its evolution on individualist lines and the local development of its communities, formed at the expense of orthodox Islam, e.g. the Mutawwals, the Druzes and the Nusairis [q. v.], not to speak of the Christian sects, Malikites, Jacobites and Maronites; these last are nowhere mentioned by name by the Arab writers, when dealing with Lebanon. The struggle for autonomy won by these groups, religious in their origin but finally strictly national, enables us to follow the fluctuations of Arab penetration and Muslim power in Syria.

Each sect, often each district, lived under the rule of petty native dynasties, supposed to be founded by successors in Damascus, Baghdad or Cairo. They received grants of investiture and were in return liable to certain obligations and military services, when the actual authority, was able to force them to it. With a remarkable agility, the fezull chiefs of Lebanon practised the art of maneuvering through all the turnzils that now successively installed in the east the rule of the caliphates, Saljûk Saljûq, Ayyûbids, Franks, Mamlûks and Turkish pashas.

Not realising its strategic importance, the Omajjids and the Ahsulis did not think of occupying Lebanon, still thinly populated except in the districts on the coast; they were less far-seeing than the Crusaders, who built massive fortresses on the frontier of the "Mountain": Hujan al-Akrîd [q. v.] and Shaqif Arrûn. This negligence enabled the Druzzjâns [q. v.] to enter Lebanon. The establishment of the Maronites in the upper regions of northern Lebanon must have coincided with the coming of these Anatolian invaders and have facilitated the organisation of this Christian group, which was destined to play a preponderating part in the Mount. At the end of the ninth century,
Arabs of Tanitah, coming from the region of Aleppo carved out for themselves in southern Lebanon a principality, that of the "cnnts of al-Gharib" in the middle of peoples, partly Arabised and influenced by Shi'a teaching. The development of this emirate was arrested in the eleventh century, by the creation of the Frankish dukedoms of Sayyde (Saida) and Barut (Byblos). The lordships of Gibelot (Jbeil), Batroun (Byblos) and the county of Tripoli depended for support on the Christians of northern Lebanon.

After the invasion of the Franks, the Maronites of Egypt, entrust the defence of Bâb el-Mandeb to the Tanitahs. The situation of the sixteenth and seventeenth centuries, the rising against the Mamluks followed by the extermination of the Maronites and their expulsion from the country south of the Nahr el-Kabir (Adonis). In the coming of the sixteenth century the Tanitahs joined the Ottomans who were conquering Syria. Weakened by internal dissensions they had to seek refuge in the Baalbek of whose Fakhr al-Din [q.v.] was the most noteworthy representative. In 1696 on the death of the last of the Mamluks, the political situation of the region was passed to the Franks, the Banu Shihab, who were originally from the Waal 'Taims, on the western slopes of Hermon.

The fall of Fakhr al-Din had opened Lebanon to Turkish intrigues. They were not long in undermining the authority of the Shihabids, constantly struggling with the Sanadis, who were the successors of the Fakhr al-Din, the last of the Maronite line. The most famous of these emirates was Bashir [q.v.], a Christian by birth (b. 1670). Resuming the scheme of the Ma'adi Fakhr al-Din, he worked for four years in forming a great state of Lebanon. Deposed in 1840 he died in exile.

Direct Turkish rule in Lebanon (1840-1861) perpetuated anarchy and insecurity there and fighting between the Maronites and Druses. This ended in the massacre of Christians by the Druses and the shedding of French forces to restore order. An international commission was appointed to elaborate a Règlement Organiqne, the charter of a new autonomy for Lebanon, under the control of Europe. At the head of it was a Catholic governor-general, appointed for five years with the approval of the Powers in whom wascentralised all the executive power. As a consequence of this, an administrative council was elected in 1850 to represent the various communities. From this Règlement Organiqne arose modern Lebanon which owes to it fifty years of prosperity and peace such as it had never before known.

The Great War upset everything. Turkish forces occupied the Mountau and a Turkish governor was appointed, famine and disease soon decimated the population. On April 23, 1920, the conference at San Remo entrusted to France the mandate for Syria and Lebanon. On Sept. 1, of the same year, at Bâb el-Mandeb, General Gouraud, High Commissioner of the French Republic, solemnly proclaimed the existence of the Etat du Grand Liban with Bâb el-Mandeb as its capital. In addition to the Autonomous Lebanon created in 1860, this new state included the districts of Tripoli, Safed and Tyre. It stretches from the Nahr el-Kabir in the north to the borders of Palestine and is bounded on the east by the chain of the Anti-Lebanon. Grand Liban is governed separately from the Confédération Syrienne, with which it reserves the right to conclude agreements. It is represented by a French official until a native governor is appointed. A representative council of 30 members is elected by vote discuss matters of general interest and the budget.

According to the last census (1921-1922) the population is 629,000. The Christians number 350,000 of different sects of whom 200,000 are Maronites; 275,000 Muslims (125,000 Sunnis, 105,000 Mutawwats or Shi'a, 45,000 Druses etc.); 3,500 Jews; 20,000 foreigners.

sleys, according to which Christ will one day return. Antichrist at the door of this church. After the church had been destroyed by the Fatimid Caliph Hikim (986-1030) and rebuilt once more, it was destroyed in 1906 by the Muslims on the approach of the Crusaders, so that the victors only found the splendid tomb when they arrived. Under Christian rule Lydda again became the see of a bishop and a new church was built immediately adjoining the ruins of the old one but was destroyed by Saladin. The town never recovered from its complete destruction by the Mongols in 1271. A mosque was erected on the site of the earlier church while the ruins of the church of the Crusaders were handed over to the Greeks who restored them in modern times.

(L. R. BOH.)

LUĐHĪNA, is the name of a district and town in the Panjab Division of the British Indian Empire. The tract is an alluvial plain bounded on the north by the river Sutlej and traversed by the old bed of that stream; the area is 1,455 square miles. There is some irrigation from the Sindh Canal. The early history is obscure; Susest is a site where ancient coins are found peculiar to the place. The tract is prominent in the annals of the Sikhs. In the year 1809 Ludhiana town became the British frontier cantonment, and the district assumed almost its present limits at the conclusion of the first Sikh War in 1849. The population of the state in 1931 was 752,624. The principal towns were List, Sikhs, fine men and excellent farmers. Gudjran, Aransi and Mafiania Radjepa come next in numbers.

The town of Ludhiana stands on the Grand Trunk Road close to the Baranhullah; it is an important junction on the North Western Railway. The founders were Lati Pathans from whom it took its name. After the 1st Afghan War the exiled family of Shah Shagha domiciled here. The population in 1931 was 51,850. Ludhiana is a busy market town famous for the manufacture of shoes and boots, of furniture and woodwork and for wool and silk dying. Military contracts supply uniforms and accessories to the Indian Army. The principal women's hospital of the Province is here, founded by the American Presbyterian Mission, which has its chief station in Ludhiana.

(R. H. WHITEHEAD)

LUḤAYYA, a harbour at the southern end of the Gulf of Dāma on the Arabian coast of the Red Sea. The little, now uninhabited, town of Hāmīn or Hamam that was once an island but has become joined to the mainland in comparatively recent geological times and is separated from it at high tide, while the harbour is dry at low tide. The town in Nebi's time had no wall around it, but there were ten or twelve towers on the land side at intervals of 250 paces with entrances at a height above the ground reached by a ladder. The towers were armed with a few cannon. When El-Temeni visited Luḥayya in 1825 the town was enclosed by walls. At the present day there rises behind the town a fort built by the Turks with one or two modern guns. The houses of the town are for the most part stuccoed, little straw huts, such as are usual in Tihamah; only a few are built of stone. The harbour of Luḥayya is hardly worth the name, as the anchorage is bad and the entrance is made difficult by sunken reefs. Even quite small ships have therefore to anchor far from the town and at low water even small boats cannot reach the shore if loaded. The drinking-water is brackish and dear. The coast around Luḥayya is dry and sterile. The main industry of the population, who are mainly Arabs, but include a few Baniyas and still is fishing and trading. Luḥayya owes its importance mainly to the trade in coffee, which is brought down from the highlands, stored, shelled and sold. Near the town there are also a few coffee plantations, the produce of which is highly esteemed and used to be reserved for the Sultan of Turkey. There was and still is a busy trade with Dīdā, Hadēs and ʿAden, mainly conducted by Arab sailing-ships. The principal item exported is coffee and corn is imported. Luḥayya is connected with Dīdā and Hadēsia by a caravans road 621 miles long. There is also a telegraph line to Hadēsia. The Eastern Asia Service of the Lloyd Triestina has a three monthly service to Luḥayya.

Nothing definite is known about the origin of Luḥayya. A. Spranger identified the town with the Maḥāja waṣṣ of Procopius but this equation seems at best only possible. The identification of Luḥayya with the old town of Sembracchu or the harbour of Luḥayya or Naḥyya adgūd, which E. G. Broussemartius, is a very improb. Niebuhr supposed that the harbour of Luḥayya was probably the object when the demands of the export trade in coffee from the interior required it. Here also, as at Mokha, the hermitage of a Muslim saint is said to have been the nucleus around which the admirers of the saint gradually collected and built the town. A chapel was built over his tomb, the vicinity of which was considered auspicious for living and dead. At the beginning of the 18th century the Portuguese who call the town Laya for the first time became acquainted with Luḥayya. In 1513 Afonso d'Albuquerque entered the harbour on an expedition into the Red Sea. Luḥayya then formed the southernmost point of the territory of the Imams of Scnū' and to whom it paid tribute. In the second half of the 18th century Luḥayya suffered from the raids of the Hīdāla and Bakri tribes, who on one occasion burned it down. In spite of this the trade of the town was constant. In 1858 it paid paying 3,000 dollars from the harbour revenues to the Imam of Scnū'. At the beginning of the 19th century the governor of the Imams of Scnū' made himself independent in Luḥayya; but when the Wahhabi invaded the Yemen and defeated the gūla of Luḥayya, the latter went over to the victors and took from the Imams of Scnū' the whole of Tihamah from Luḥayya to Bīb al-Manṣab along with Bīb al-Fakḥ and a considerable part of the coffee-growing country. Luḥayya now seems to
have a brilliant future before it; for it was to be the main harbour of export not only for the whole of this vast area, but of the Wahhabi country also and negotiations were opened with the East India Company, who were invited to establish a factory in Luhaiya. Luhaiya’s prosperity was again interrupted by the invasion of Muhammad Ali, who occupied Luhaiya in 1833, and in 1869 we find it in possession of the Turkmen whom the port and its approaches formed a bagā in the usual sense of the word. Luhaiya was also used by them as a base of operations against the never completely pacified highlands of Asir, which obtained independence with the collapse of Turkestan in the world war. Saidy Alī b. Muhammad al-

LUKĀṬA (m.), an article found (more precisely: "picked up"). The leading principle in the Muslim law regarding articles lost and found may be said to be the protection of the owner from the finder, sometimes mingled with social considerations. The picking up of articles found is generally permitted, although it is sometimes also said to be more meritorious to leave them. The finder is bound to advertise who he has found (or taken) for a whole year unless it is of such insignificant value or perishable. The particulars of this advertising are minutely regulated by special rules. After the termination of the period, the finder, according to Mūša b. al-Šāhī, has the right to take possession of the article and to keep it peacefully with it, but according to Abū Ḥanīfa, only if he is "poor"; but otherwise of the articles as religious alms (ṣaqā) even before the expiry of a year is permitted in a preferential clause in Abū Ḥanīfa and Mūša. If the owner appears before the expiry of the period he receives the object back, as he does after the expiry of the period if it is still with the finder; but if the finder has disposed of it in keeping with the law, he is liable to the owner for its value; Dāwūd al-Zahrāwī recognized no further claim by the loser in this case. The establishment of ownership is facilitated, compared with the ordinary process in Mālik and Aḥmad b. Ḥamūl. Luhaiya (as was al-Bukhārī also; cf. his superscription to Luhaiya, hist. r.): As regards the finding of domestic animals in the desert, there are special regulations which are less onerous for the finder in the case of injured animals and more onerous when they are not injured. Al-Shāfi`ī and Aḥmad b. Ḥamūl have similarly some special regulations for articles found in the Haraqm, the sacred territory in Mecca, which at bottom go back to the old idea of a special right of ownership by Allah in the Haraqm and articles found in it.

These prescriptions of the Fīḥ are based on certain hadiths which have been handed down with several variants (cf. al-Bukhārī, Luhaiya; Muslim, Bundantinopole 1329 AH, v. 133), which need not be quoted in detail here as they agree with the principles in all essentials. But it may be mentioned that in a very old stratum, later worked over, there is mention of a two or three year period. In the conception of the primitive jurist the article found is sometimes described as deposited (maṣla); further, out of special religious affinity, one is careful not to pick up dungs dates and eat them, as they might belong to the saḥārār; finally there is a hadith which forbids the Meccan pilgrims (ḥajj) to pick up articles found at all. From the superscription by Bukhārī to Luhaiya, hā. 11 it is evident that found articles might be handed over or used to be handed over to a government office, their retention in the finder’s case is justified by quoting a special tradition.

None of these traditions can be considered historical; at most the prohibition by the Prophet in his address after the occupation of Mecca from keeping articles found in the Haraqm without advertising the index (cf. above) may be genuine on account of its antiquated terminology; Luhaiya is not mentioned in the Korān.

(AUGUST GROHMANN)

LUKMAN, a legendary figure of the period of Arab paganism, who was adopted into the Korān and later legend and poetry. The story of Lukman shows three main stages of development: I. The pre-Korān; II. Lukman al-Muhammān; III. The post-Korān. Lukman, the wise maker of the proverb (Ps. ciii. 4), is a hero of some age. He is offered a long life. He keeps a second one and so on, for six centuries. He is the seventh and last, at the time the seventh, Luhaiya. Thus the story was by far the most popular and long-lived among the Arabs (Ps. ciii. 4). Lukman, Abb. zur arabisch. Phil., iii., p. ii. 476; J. Basset (Lukman Hecbert, p.
that he had read 10,000 chapters of Lukan's wisdom. The Arabic collections of proverbs (notably Maimon) attribute much to Lukan (see R. Bassot, *op. cit.,* xiv.-liv.). Thalât devotes a chapter of his *Maktûbe* to the wisdom of Lukan. Many sayings seem to link up with the Sîra of Lukan. Sura xxxxi. 14 advises reverence for parents but warns against being led astray by parents to worship false gods. Thalât's authority makes Lukan say: "Be amenable to your friends but
be power so to you as to act against God's laws." There is much that recalls Akhîkar: Lukan teaches that the rod benefits the child like water the seed. In Akhîkar we have: "Spare not thy son for strokes of the rod are to a boy like doing to the garden*" Lukan says: "When thou seest people who remember God, join them; hast thou knowledge it will be useful to you with them and they will increase it; if thou hast none, they will teach thee; when thou seest people who do not remember God, do not join them; for if thou hast knowledge, it will not avail thee, and if thou art ignorant, they will increase thy ignorance." Akhîkar says: "Join the wise man, then thou wilt become wise as he, and join not the fools and babblers, lest thou become associated with him." Lukan gives excellent advice for one going on a journey and also adds that he should be armed, similarly Akhîkar. In Mâdînî's Arabic proverb, Lukan is credited with the following admonition: "My son, consult the physician before thou fallest ill!" This corresponds to the first saying in Ben Sira's alphabet: "Honour the physician before thou requirest him." On the other hand Lukan's warning against hypocrisy is found in a similar form in the *Disciplina clericorum.*

Muslim legend is fond of making the sages and wise men of the past into prophets. But since Muhammad quotes Lukan as a sages, the story was told that God offered Lukan the choice between becoming a prophet or a sage. Lukan chose wisdom and became visier to King David, who called him fortunate: "Hail to thee, thinke the wisdom, ours the pain!" Lukan lived down to the time of the prophet 'Imran (Joran). He is also called judge of the Jews. Muslim legend sometimes also, although very rarely, makes Lukan a prophet and even gives him the *무집* (*magîlîa*), the veil of wisdom. (Ṭabarî, *Amûla*, i. 1205).

III. Lukan, the writer of fables.

Lukan was honoured by Muhammad and after him as a maker of proverbs. A few centuries later he became a writer of fables also, perhaps because *mollhâ* meant both proverbs and fables. Lukan thus became the *Aṣâqî* of the Arabs. Much was transferred to Lukan that was told in Europe of Aesop. The tendencies to this can be traced quite early. While the very earliest legend was in Lukan the hero and Muslim legend makes him a sage, judge, visier, or even a prophet, the later Oriental legend delights in describing him as a carpenter, a sheph Kurdistan, a deformed slave, an Egyptian, Nabataean or Ethiopian slave, a feature which is obviously modelled on the story of Aesop. Lukan's master orders him to set the best before his guests. Lukan gives them the tongue and heart of a sheep. On another occasion his master tells him to set his worst before them. Once again Lukan sets a heart and tongue before them, for there is nothing better than a good tongue and a good
heart and nothing worse than an evil tongue and
an evil heart (in Plutarch) and in the Vita Apostoli
of Maximos Planudes the tongue only is mentioned
and not the heart. Lukman's fellow-slaves on one
occasion sat at his master's feet and accused Lukman.
At Lukman's suggestion the master makes them the
only slaves drink water. Lukman vomits water
only, the other slaves drink water. — Lukman's
master in his cups had wagered he would drink
up the sea. Sobered he asks Lukman's advice.
The latter demands of those who had taken up
the wager: that they should first dam back all the
rivers flowing into the sea, as his master had pro-
mised to drink up the sea only but not its tributaries.
The latter is a widely disseminated motive in fairy
tales of the type of the Empress and the Bishop
(Walter Anderson, Kultur und Alter, F. K.
Communications, No. 42, p. 134—140, especially p.
139 where reference is made to Lukman; Chavvin,
Bibliothek, viii. 50—64). These anecdotes are
also found in the Vita Apostoli of Planudes (xvth
century), but they are known as early as in Plutarch,
Chrestomathia seu Sophismum.

The older Arabic literature does not know
fables of Lukman. They first appear in the late
middle ages. The Paris manuscript published by
J.-D. Derenbourg belongs to the year 1299 and
contains 41 fables. These fables have often been
published and thoroughly discussed in scholarly
publications especially by Derenbourg, R. Basset
and Chavvin. Out of the 41 fables, No. 22 alms has
no parallels; the animals beg the gardener to
tend it so that the kings may delight in its flowers
and fruits; the gardener waters it twice a day
and the thornbush overruns the whole garden.
R. Basset recalls the fable of Iotham of the thorn-
bush which destroys everything (Judges, iv.).
All the others with the exception of the thirteenth
(midge and the bull) are found in the Syriac
fables of Sophus (=Aesopus) published by Lands-
berg. All are found in Aesop except No. 9 (the
gazelle in the well), No. 22 (thornbush), No. 34
(wasp and bee), No. 40 (the man and the snakes).
It has been further noticed that in these fables
the very animals indigeneous among the Arabs,
the ostrich, the hyena, the jalam and the camel
play no part. As these fables first appear in the
late middle ages there can now be no doubt that
we have to deal with a selection of Aesop's fables
translated into Arabic.

IV. Related legendary figures.
Lukman is a many-sided figure: he is Man'mumar, the
hero, sage, maker of proverbs, and writer of fables.
It is no wonder then that he has often been
compared and identified with other legendary
heroes, Pythamathos, Atikman, Lucian and Solomon.
Abu'l-Faradj makes Lukman the teacher of Es-
pedocles. Three of these equations deserve close
examination: 1) with Balaam, 2) with Alhijar and
3) with Aesop. The identification with Balaam is
old. Arabic legend gives the following etymology:
Lukman b. Bahr b. Nakib b. Harir. It is evident
that the Koran exegetes sought for something
very similar according to Balaam in the Bible. They
found this in Balaam as the vowels hata and legama
both mean the same; *hata douro". This then became
a Muslim tradition, which entered the Hebrew
Megile Simkhes where Lukman is one of the seven
wise teachers of the king's son (ed. Cassel, p.
220 sq.), and also the Dhikrul clerici of Petrus
Alphonsus, where the correct text is *Balaam
qui linguas arabicam vocatus Lucaman" (ed. Hilke-
Soderhjelm, p. 3). The Qur'an exegetes had no
doubt about this identity. The question arises
whether: did Muhammad himself see Balaam in
Lukman? — and next: is Lukman really Balaam?
Derenbourg, Basset and Eduard Meyer (Die Is-
raeliten und ihre Nachbarstämme, p. 379) are
opposed to this view. In the affirmative. But it is quite
impossible. The pre-Koranic tradition about Lukman, the Kur'an
Sura, which shows deep reverence for Lukman,
have no single connection of the latter Balaam of the
Bible and the Haggada. This identification was
made only later by Kur'anic exegetes, who wished
to connect Lukman with the Bible at any cost, and
made him the son of Deor, i.e. Balaam, just as they
sometimes made him the nephew or cousin of Job.
Lukman's similarity to Akhikar was also noticed
long ago, but it is only quite recently that the
identification has found a vigorous champion in
René harris, who devotes the chap. vii. of his
Story of Akhikar to it. He bases his identification
on the agreement of Sura xxii. 18, with Akhikar's
warning about the voice of the sea, and an Arab
hypotheses which compares Lukman with other
figures in legend and history, notably to the
relationship of Lukman, Akhikar and Aesop. The
story of Aesop shows originally a close relation-
ship to that of Akhikar. The later legend of
Lukman has borrowed much of the story of Aesop
and thus becomes like the Akhikar story but in
reality Lukman is not directly connected with
Akhikar but with Aesop.

The development of the Lukman legend seems
varied but clear. Lukman properly belongs to the
legends or possibly the history of the monasteries.
For even this period already we know the sage
Lukman. With Mahammar he becomes the teacher
of pious doctrines. Influenced by the Kur'an
the interpreters of the Kur'an found Lukman's sayings
in many places and found Lukman himself in the
Balaam of the Bible. He was credited with fables
in addition to the proverbs and was thus made
the Aesop of the Arabs.

(RENAUD HELFER)
LULLI, one of the names for gipsies in Persia; parallel forms are in Persian, Nirit, Nit (Farhang-i Djahangiri); in Baluchi, Mil (Denys Bracy, Census of Baluchistan, 1911, iv, 143, gives the popular etymology from lor = 'lot, share').

The name lirit is first found in a legend relating to the reign of Bahram Gur (395–438 a.d.). At the request of this Sasanian King, who wished to amuse his subjects, the Indian king Shangal (I) sent to Persia 4,000 (12,000) Indian musicians. Hanza (350–961), Berlin-Kaviani, p. 38, calls them al-Zap (q.v.). Firdawsi (Mohi, i, p. 36–77), Lutiyana, Thalibis (c. 1327), ed. Zehlenberg, p. 567, says they came from the desert and descended from the black lirit (lirit, liriti-i al-zap), skilful players of the flute; the Maghribi al-Tawirshq (c. 1160), transl. Mohi, J. d., 1841, xii, p. 515, 534, confirms this origin of the lirit. The lirit (plur. liritiyen) are often mentioned by Persian poets. Mundhihi (Dughmeh–Djanjan–Ghezo, 18th/19th century), Djamal al-Din 'Abd al-Razik (d. in 388 [1192], Isfahani), Kamal bin'il (d. in 635 [1237], Isfahani), Hafs (d. in 701 [1300]), Shiraz, say that the lirit's are 'black' (like night), petulant (mubalqan) and elegant (zangaleh) that they play the flute, that their way of living (kandaghih baggaga) is irregular. The Persian dictionaries explain Tori; shahzada, gey, the dweller among gypsies, woman of light morals', etc. of Vallers (the quotations from Amr Khustawi (d. in 725 [1325] in India), ibid., v. Lur refers rather to the inhabitants of Luristan.

The origin of the name lirit has not yet been investigated. The term seems to apply to the inhabitants of the town of Sind which the Arab authors call Arūt or -al-Rū (cf. Arūt or -al-Rū; Arūt or -al-Lū). This town had been conquered by Muhammad b. Khazim before 95 (714) (al-Hallajuri, ed. de Goeje, p. 439, 440, 445). According to al-Balini, ed. Sechan, p. 100, 130, the town of Arūt (Arūt) was 700 years old. W. Muhsin and 20 farash above al-Manṣūrīa. In Elliot, History of India, London 1867, i, 641, 653, the town is called Abr. This town, the old capital of the Hindu rājas of Sind, is now in ruins (on the Indus, in the valley of Rohri). In the district of Sukkur: im. Imperial Geographer of India, Oxford 1908, iv, 4 and xal. 508: Asor and Rohri). The change of *Arūt/Kārt into Lūlit/Lūli is readily explained by the phonetic law of dissimilation of the two r's especially after the change from Arū (Indian) to al-Rūr (Arabic). The descendants of the Indian musicians of Bahram Gur (L. e., the gipsies) seem to have been called and considered by the Arab al-Rūr. The Arab wanderers had known, and perhaps before them, the Sasanians. This explanation would locate quite precisely the original home of the Lūlit/Lūli, without in any way prejudicing the ethnical relationship of this tribe.

The Luri/Lūlit gipsies (cf. the reference above to their dark skin) must be clearly distinguished from the Luri or -al-Lū (q.v.) highlanders who live in the southwest of Persia; they have a fair skin and speak a "tribal" dialect with no trace of Indian elements. The situation is however slightly complicated by certain minor points. In the first place the use of the terms Lūlit, Luri, Lur, etc. is not always quite clear. In the confederation of "Arab tribes of Fars there is a Luri clan; Sykes, Ten thousand Miles, p. 330; Rittich, Postulka u Sultānīn, fev. Geogr.-Oblčk. 1902, xxxiii/1, p. 69 speaks of a Luri section (Persian pronunciation of Lūlit) among the Luri of Kermān. Edmonds notes the existence of a Luri (clan) in Luristan in the Dehsham division of the Baluchew group. In Khorasan there is a clan Luri-i Kuhār (cf. SENNA).

Still more confusing is the fact that some Lurus follow the same profession as the gipsy-bead-sellers (cf. Cirikow, p. 277). As early as the 16th century, Shihībi al-Dīn al-Umari mentions the talent of the Lurs in these directions and in our own day we find wandering troops of Lurs as far north as Tabriz where there is a permanent colony of Kuresta gipsies, professional actors and singers. It is possible that the special qualifications of the Luri and gipsy players differ somewhat; the Sarmānī of Khorasan (cf. Sarm told and SENNA) who excel in singing and dancing are not acrobats. But we must first of all wait till a special investigation settles to what precise section the wandering Luri artists belong.

There is nothing improbable in a gipsy infiltration into Luristan. Whatever was the ethnical entity covered by the name Zajt (on the confusion of the Zajt with the Luri see above: Hanza, Thalibis) the existence of Zajt colonies in Khūrāstān is known as early as the time of al-Haschidī (q.v.) (cf. Nawar al-Zajt between Arāddān and Rūm-Homrūt; the modern town of Hindiyāni ("the Indians") may have a similar origin). According to Balbūri, p. 382, when in the second quarter of the first century A.D. the Zajt had apostatised from Islam, they were joined by the local Kurds, which provoked the punitive expedition of 'Abd Allah b. 'Abbār (cf. Mālam, the future archbishop of the Kurds, Bursarg). The alliance of the Zajt and Kuris (cf. Kuris, i.e. kuris) at so early a date is curious. Under al-Luri, Yarali, n. 835 mentions two places in Sind and a small district under Alūwāz in Khūrāstān, Schwarz, Persien im Mittelalter, v, 665, identifies this Rūr with the district of al-Luri (cf. ZAJEIEN). In the light of what has been said above one might suppose the existence in al-Luri of a very ancient Indian colony.

The language of the gipsies of Persia (Sykes, de Morgan, Ivanow) has taken its morphology from modern Persian; its vocabulary also is full of Persian words (cf. the lists in de Morgan); Indian elements seem to be rarer than in the Romant of Europe; the language of Kurrâxân and Khoraxân (Sykes, Ivanow) contains a large number of unrecognisable elements. Longworth Dumas out of 96 words in Sykes's vocabulary found 12 in Arabic, 4 Arabic, 28 Persian and 52 of unknown origin.

He would regard this dialect rather as an artificial secret jargon. Denyse Bray (quoted by Ivanow) in any case confirms the fact that the Lâ'î of Basília is learned by the children as a separate language ("is any language acquired naturally by Lâ'î children, as a language for the home circle").

The Śmârains use Kurdish mainly. According to Cirikow they are called Durnü, which must correspond to Trumän (= Dûmân, the name of a low state in India from which comes the well-known name for gipsey; *Rusu*). The vocabulary of the Dûmân (Baghdâd, Aleppo) as collected by Newbould, *J.R.A.S.*, 1856, p. 303 from an informant from Timur-kêrân, is full of Kurdish words: *shı̄var* "stone", *hûf* "wall", *dam* "house", *dûs* "dog"). A Kurd tribe in the east of Baghîdâr bears the suggestive name of Sûndî/Sûndîn (= the *Sûndîans*). According to the Şmârains the chief of the Kurrâkân clan (the Zâkât) had married a gipsy woman. In discussing the relationships of gipsies and Kurds, it should be remembered that in 220 (835) a section of the Zanj settled in Khardîn, i.e. at the gate of Kurdish territory; cf. de Goeje, *Mémoires*, p. 304; Talât, ii, 1868.

According to Sampson, two categories of gipsy speech may be distinguished according to the fate of the primitive Indian aspirated *s praemia*: the one changes them into aspirated *s*s, e.g. *Evâk*, *blikâh* > *bîkâ* (Armenia, Europe), the other preserves them as aspirated *blikâ* > *bîkâ* (Persia, Syria, Egypt). The interest of the Persian dialects lies in the fact that Persian was the first language in which the gipsies sojourned after leaving India (probably in the Sasanian period). In the gipsy dialects of Persia, as yet very insufficiently studied, we may expect to find traces of a rather archaic phonetic system. Ouseley for example found among the Kurrâxân of Tabriz the word *dûm* "sister" which must be older than *phûm* or *hûm* (cf. also *shârâb* in Gobineau).

**LULU', BAIID AL-DIN AND LULU', MALIK AL-RAJAH, A Baiseg of al-Mawşil. Lulu', who had once been his slave, had great influence with the Zahid Naur al-Din Aslan Shah I and when Naur al-Din on his deathbed (607 = 1210-1211) confirmed the nomination of his son al-Malik al-Kahir 'Iz al-Din Man'ud as his successor, he appointed Lulu' as regent of the kingdom, while the younger son İmid al-Din Zangi was given the two fortresses of al-'Ajr and Shah near al-Mawṣil. At the end of İradi, 615 (end of June 1218) al-Malik al-Kahir died after appointing his minor son Nur al-Din Arslan Shah his successor and Lulu' his regent. When İmid al-Din seized the fortress of al-Imdiya in Ramadān of the same year (Dec. 1218), Lulu' sent an army against him. Lulu' s troops besieged al-Imdiya but had to return with nothing effected, whereupon the other fortresses in al-Hakkariya and al-Zawān surrendered to İmid al-Din when the latter made an alliance with the lord of Irābīl, Muẓaffar al-Din Kökbürī. Lulu' sought the assistance of the Ayyūbid al-Malik al-Asgar, who ruled the greater part of Mesopotamia, and recognised his suzerainty, whereupon al-Asgar sent an army to Naṣirīn to help Lulu' if necessary. In Muharram 616 (April 1219) İmid al-Din was defeated by Lulu' s forces near al-'Ajr and had to flee to Irābīl. Peace was however soon afterwards concluded through the intervention of al-Asgar and the Caliph al-Nāṣir, but when the sickly Nūr al-Din died in the same or the following year and his brother Nāṣir al-Din Māhmed, who was some three years old, succeeded him, İmid al-Din and Muẓaffar al-Din began to raid and plunder the district of al-Mawṣil whereupon Lulu', who had first sent his eldest son with an army to al-Asgar to help him against the Franks, appealed for help to al-Asgar, the Ayyūbid s general in Naṣirīn. Al-Asgar set out at once and joined Lulu'. On Rajab 20, 616 (Oct. 1, 1219) Lulu' was defeated near al-Mawṣil, but while he was again collecting his followers around him Muẓaffar al-Din retired. After the conclusion of peace, İmid al-Din occupied the fortress of Kawkab, and Lulu' had again to appeal to Asgar. Muẓaffar al-Din however induced a number of emirs, among them Ibn al-Maṣḥūb, to secede from al-Asgar and take up a position at Dūnāsir to prevent the latter s passing. The emirs however soon changed their views with the sole exception of Ibn al-Maṣḥūb who went to Irābīl. He was twice defeated, first by the garrison of Naṣirīn and then by the troops of Fārāb Shah, lord of Sīrāj, who took him prisoner. While he had been released, he collected a plundering horde around him and ravaged the country far and wide. He was defeated by an army of Lulu' s and took refuge in the fortress of Tell Aṣfar. The latter was besieged and Lulu' himself came up from al-Mawṣil. On Rabi' 17, 617 (June 21, 1220) he had to capitulate and Ibn al-Maṣḥūb was taken prisoner and brought to al-Mawṣil. After Asgar had made peace with Muẓaffar al-Din he handed over to Lulu' the fortresses of Dūnāsir, Naṣirīn and the governorship of Mesopotamia, to which other fortresses were later added. After the death of Nāṣir al-Din (619 = 1223 or according to others not till 621 = 1224-1225) Lulu' was recognised as al-Asgar of al-Mawṣil and assumed the name of al-Malik al-Asgar. In 1235-1236 he became involved in war with the Ayyūbid al-Sādīr Naṣir al-Din. The latter took the Khurasanians into his service and granted them Harrān and Edessa whereupon they seized also the town of Naṣirīn. About three years later they were defeated by the rulers of Harrān and Lulu' regained Naṣirīn with Dārā. Lulu' had also to fight the lord of Harrān, the Ayyūbid al-Nāṣir Yūnīn. In 645 (1250-1251) he was defeated and Naṣirīn, Harrān and Karkhāniyā fell into the hands of the Aleppo forces. Lulu' died in 652 (1259) aged over 80, after recognising the suzerainty of Hülagū. [q.v.]

LU LU' A (A., "pearl"); a fortress near Tab Sū in Cilicia, which was besieged by the Caliph al-Ma'mūn in 817 (831). It was the strongest of the Greek citadels and the one that # roused most havoc among the Muslims; it had a large garrison and was well supplied with arms.

The caliph, not having succeeded in taking it, blockaded it for a hundred days with two forts, the troops of which routed the Emperor Theo-

plius; as a result of this defeat, the people of Lu'lu'a appealed to 'Udaif b. 'Abdās who was their prisoner to negotiate for them and capitulated on obtaining safeguards (amīra) granted by al-Ma'mūn.

(L. CHAUR.)

LU R (in Persian Lur with a short), an Indian people living in the mountains in S.W. Persia. As in the case of the Kurds, the principal link among the three branches of the Lurs (Māmākīn, Kāhlīlī, Bakhšīyār, and Lurs proper) is that of language. The special character of the Lur dialects suggests that the country was inhabited from Persia and not from Media. On the ancient peoples, who have disappeared, become assimilated or absorbed in different parts of Luri-

The name. Local tradition (Turk-e-Gustā) connects the name of the Lurs with the place Lur in the defile of Mān-rūd. This tradition is perhaps based on a memory of the town of Lur mentioned by the early Arab geographers (Jayshkhīr, p. 195 etc.), the name of which survives in Şahr-št Lur (to the north of D Şīr). There are several other place-names resembling Lur, namely Lur, a district of Dāmāleš, Bakhshīyār (Schwarz, Persien, p. 666; cf. the Kāhlīlī tribe: Bakhshīyār), which may be to Lur what Nār in Lur is to the "money" in Persian; Langjīn (Yāḥīya), Lardajarī, norzāngā, according to Jayshkhīr, capital of the canton of Sarāvān (between Kāhlīlī and the Bakhshīyār) and lastly there is a place called Lur (Lūr) near Salmār.

Masūdī, alone, in his list of "Kurd" tribes, speaks of the Lursīya tribe (which may mean the Lurs connected with the district of al-Lur). In the 6th century Yāḥīya uses the name Lur, Lūr to mean the "Kurd tribe living in the mountains between Kāhlīlī and Jayshkhīr"; he calls the country inhabited by it "Hād al-Lur, or Lurštān.

These facts show the stages of evolution of the geographical term (perhaps pre-Iranian) into an ethnomonic one. If however we seek an Iranian etymology for the name Lur, its connection with the first element in Lurh-aspd (already proposed by von Bode) at once suggests itself. According to Justi, Franziscus Nematpusch, Lur is explained by *rubās "red". The place-name Rūr in Yāḥīya may supply an intermediary form. The Turkh-i-Gustā gives a popular etymology Lur < br > "woode(d) hill" in Lur.

Etnology: If the linguistic data connect the Lur with Fār, local tradition only regards as true Lurs the tribes who came from the defile of Mān-rūd. According to the Turk-i-Gustā, p. 539, 547, there is in the māyāt of Mān-rūd a village called Kurd near which there is a defile. The place-name Lur is situated in this kūl (the word means in Lur a "little ravine", cf. O. Maan).

The name Mān-rūd much resembles that of Mādīya-rūd (the word mādīya is found as mān/mīn in Lur; Šukowski, i. 158) but certain historical considerations make us look for it near Māngarda-Mangarma (cf. Turk-i-Gustā, p. 548 on the place lying between Mān-rūd, Sāmīk and Mangarma). The clans (parshā) of the natives of Kūfšt Mān-rūd...
were later called after the places where they had settled, like the Jangalūt (Jangalūt, Jangadar) and the Urt (Awtar). The governing family of the Atibegs of Little Lur belonged to the Djalwar (the name of their clan, the Sabāb, Saghār should be corrected from Salwāni, *Alamār*stān, p. 399) Salwāni, *Ali Hazār (full beloved, p. 38) Salwāni, and the general state of the Djalwar in Horum-Schindler). The *Jurīdich-Gestalt* concludes by enumerating the 8 clans (ādawād) of the two principal gūrāh and the 18 other tribes (ādawān) of the Lurs.

A few names (Mangarā, Amānāk, Līndāk) correspond to modern names. Finally 4 clans are mentioned: Shāh (Samī), Arān (Asān, Asānī), Arāh and Baha, who, although speaking Lurt, are not Lurs; the people of the other villages of Mānūn were peasants (rīwāt). About 500 (11006), a hundred (or 400) Fūlāwī Kurd families arrived from Syria. They came by the north (Shutūrūn-Kūh) and settled at first on the lands of the Kūlār, Mūkākhā (cf. the article *Kūlār*) and the Sāqāt (cf. the article *Smāqāt*) (Mūkākhā, Smāqāt, Na. 70 under the word gīrīrāt). At the beginning of the ninth (xiith) century new tribes flocked to the standards of Husayn ibn the Great Lur. Among them were two Arab tribes: *Qalili* (Qalīlī, cf. the place of this name below Shīkhzād), and Ḥāshimi and 28 different tribes (mūtafāfī) among whom we find the Bahktārī (Makhtārī), the Djalwarī (Mānūnī), the Gōtandī (cf. the village near Shīkhzād), the Dīkār, the Lurānī, the Mānūnī (Mānūnī), etc. According to the *Sharaf-nāma* (I, 26) all these tribes also came from Syria. These waves of immigration must have had a considerable effect on the composition of the Great Lur. It is remarkable that the immigrants were Kurds and that traces of them still survived among the Kūrs whom Ibn Bagūṣ (II, 28-36) found at the beginning of the sixth century near Bahbāhān and Bām Hormez when on his way to the capital of the Great Lur. There has long been a village of Kūrīškūn on the Djalwar and it had even given its name to this river. Shīkh-ibn-Dūn-ibn-Umart (V, 9, xii., p. 320-332) mentions the existence of Lurs in Syria and Egypt and tells how Saladin (564-589), alarmed by their dangerous ability to climb the steepest mountains, kept them mounts on 1000 strong men; he then sent five lights a. m. the river on which Mānūnī, 600 a.m. of numerous Iranian tribes.

The southern part of Little Lur was exposed to intimidation by Kurds, especially through the valley of Kārīz (cf. Lur); just to the north of Sūsā is a tree *dūr-e Bāhā* bearing the name of a clan of the Kūrī tribe of Djalwar, in the history of the Hasānwāhidās; cf. Hm al-Athīr, IX, 146, 219) and exposed to Turkish and Mongol invasions (cf. the desperate fighting of the Atibegs of the Lurs-Kūris against the Bāzārs, and Alwā (= Bahkātī) Turkic. In the Sāfawid period, Turkish tribes were introduced into Luristan from the direction of the Kūris (where traces of them still exist) and Georgi and Armenian colonists to the north of the Bahkātī country. On the movements of the population under Nādīr, the Zambis and Kārgār see below. The ethnical situation gradually subsided at the beginning of the sixth century.

The names of the Lur tribes and groups are now quite well known and as we have given from 1856 to 1922 a compass enables us to note the changes that have taken place meanwhile. Regroupings seem to be taking place more rapidly among the Lurs than among the Kurds, but the general framework of the tribal grouping remains essentially the same. In 1851 (Caron, ii. 274) there were 420,000 Lurs of whom 170,000 were Bahktārīs, 41,000 Kūris of the Kūris, and 210,000 Feisil. According to Maharani this last section numbered in 1904: 31,650 tents (or 150,000 individuals) in Pāsh-Kūh, and 10,000 tents (or 50,000 individuals) in Pushkar-Kūh (this last figure seems too low).

The Māmānī (Mamassani) group includes 4 main tribes; the Bāshā, Djalwarī (Dīkār), Dushmanulārī and Kustānt (cf. the article *Kustānt*). The Kūris group (Kūris) includes 3 large tribes (Aftārī, Band, and Dīkār). The first of these tribes (cf. the name of the old Turkish tribe of Aftārī) is of a composite character, for of its 9 clans four (Aftārī, Begārī, Çagāhātī and Kurā-Bāghī) are Turkish (eventually the remains of the Shīb-Bowānī to whom the government of Kūri had been given under the Shīkārī and a fifth clan (Tīlābātī) bears the name of a district in Kurdistan of Senna [q.v.]. On the second tribe, Bowi, O. Mann: notes that it bears the name of an Arab tribe of the neighborhood of Ahwāz; but there is also a mountain called Bawī to the south of Khurram-fālī. The third tribe, Dīkār, is purely Lur and is composed of 2 main sections: Čebrānīs and Līwātīs with many subdivisions. This threefold composition of the Kūris group is typical of many of the Lur tribes. As to the Bāshā, Sewytry as long ago as 1846 said that the Lurs are thoroughly surveyed on a scale of 8 miles to the inch, nearly every tribe visited in their own encampment, everything appertaining to the Bahktāris may now be said to be known. But Caron's title (1890) are still the last word available to the student. Of the two Bahktārī tribes: Bahktārīz and Fahntār, the latter is the more important at the present day. The Fahntār, who used to be in the south are now mainly on the outskirts in the district north of the northern border (between Dīrīshān and Gālāpāghān).

The main groups of Lurs are: Turān, Elfīānī, Sīlāfī (cf. Lur, Bāzārs, and Bahktāris). The tribes of the last group are the Lurs par excellence and have important subdivisions: Dīrīshān, Sāqqādī, et al. It is possible that the Dīrīshān are the real nucleus of the Lur race. Their chiefs are called na. In contrast to what we find among the Kurds, where the individual members of the tribe are usually much attached to their hereditary chiefs, the Lurs proper (Bahktāris) are distinguished by a more democratic feeling. The power of the hereditary families of kāns is based on their "guard" (fājdā) but this power is considerably reduced by the authority of the chiefs of the tribe (jūmā). The kāns are forced to court the favours of these wild tribal chiefs (Edmond: *uneautre bending*) the latter are amenable to the solicitations of their neighbours and in this way the tribes are broken up and new groupings take place.

Little is known of the ethnology of the Lurs. The dates of Duzechotto (who commanded a Lur regiment in 1855), *Études sur la pêpèl, la Perr*., p. 38, of Kulaniçoff, *Mém. sur l'ethnogra-
manifestation who is called Hibat Khosra and
numbers among his "angels" Bahá Táhir [q.v.].
An important sanctuary of the sect, the tomb of
Sháh-áli Ahmád (the alleged son of the šáh...

The religion of the Lurs was so little orthodox
that the Shi'í point of view that at the
beginning of the 12th century, prince Muhammad
Ali Murád had to send for a mujáhid to convert
the tribes to Dálim (Rabinow, p. 24). All the
Lur and Lak tribes are officially Shi'ís (contrast
the attenuation of the true Kurds to Shi'í orthodoxy).

LANGUAGE. Down to the beginning of the 20th
century, several words were collected by Rich, to
4 Baghíyín versified in Layard and in some thirty
words collected by Houtou-Schindler. As late as
the Grymbal de la Rone, Phil., 1/4, 1898-1901,
p. 249, we find the thesis that the Lurs are
slowly related to Kurdish and may even be
described as one of its dialects. The materials
of Zabrowski (collected in 1883-1886) were finally
published in the 20th century after the death of the author
(d. 14/1198). The merit of having first
established the important fact that Kurdish and
Luri are quite separate ("these kinds of evidence"
from the Kurînische vom Lurî") is due to O. Mann.
This scholar has shown that although there are
Kurd tribes in Luristan (cf. the article TAK),
the true Lurs speak dialects which belong undeniably
to the S. W. Iranian group (like Persia and the
Lakans of Iran) and not to the N. W. group
(like Turkish and the "central" dialects).

The Luri dialects which have none
of the aspersion of Kurdish (cf. KURIA) fall into two
categories: to the first belong the dialects of
Great Lur: Mamásán, Kálguh and Baghíyín
(the latter has a few insignificant peculiarities of its own); to the second belong the dialects of the
Little Lurs, i.e. of the Padi Lurs.

Even the first group possesses very few special
features compared with modern Persian. From the
point of view of phonetics: -dm- becomes -am-, -um-
(sóhak/sohak; hamásan/hamán; xáman/xáman;
šáman/šáman); -t changes into -dt; intervocalic
a gives ut (ut); -m, -sh; -sh becomes a; -sh, -sh, etc.

Peckar to Baghíyín are the change of inter-
seastic to -y; -dáh/šáh; -ds; and the occasional
change of -d into -a: šágud = šágud. It is remarkable
that some of these phonetical peculiarities were long ago noted by Hamáallah Mustawa (Zeidán de la
Garde, p. 332-350). He says that Luri (though
full of Arabic words) does not have the peculiar
Arabic sounds, like -d, -g, -d, k, -g, -l, etc.,
Inclusion: plural in -d, -d, -d, -s, -s, -s, -s, -s,
accusative in -d; instead of -d; šáman, šáman,
šáman, šáman, etc.; this lack in Baghíyín is the
characteristic of Arabic dialects of the Luri
mainly forms the popular of active verbs as in Persian
with the help of personal endings (active
construction) and not like Kurdish and the majority
of Persian dialects (including those of Fars) which

The domestic life and manners of the Bakh-
ñáyín have been described by many travellers,
and the BAKHÑÁYÍN have been described by many travellers,
and the BAKHÑÁYÍN have been described by many travellers,
give the preterite a passive construction. Vocabulary. In the present and preterite stems Luri follows Persian: راهیتا, راهیتند, راهیت "to throw"; تریتا, تریتند, تری "to be able"; دیا, "eye," etc. From the Mongol period, Luri has kept several expressions like: کوریت, "chief of a clan," in Mongol, تیزک, "official"; ضریت, "guard of the khan," in Eastern Turkic: جمنب, جمنب "encampment," in Mongol, "camp, tent." As in the Felli group, their dialect differs very little from ordinary Persian (Mann: "weiter nützlich als ein stark abgeschlossenes Persisch"). There are in Luriistan a large number of Kuri dialects of some importance. Such are in the north the Lak tribes: کوریت. Among the Felli, the Makhsu group (on the frontier of Kirmanshah, at Hulaftan, and farther south) speaks a southern Kurid dialect like that of the Khabur. The Fashqi group (to the south of Fashqi Dagh) speaks a "kurmanji" Kurid. Linguistic conditions in the Fashqi further study is required.

Bibliography:

The principal source for the domestic history of the country is the Tołkhār: Gāndhāra (730 = 1330) based in turn on the Šāhāb al-Tūvatīrkhā, which of the Persian and Sanskrit (which belongs to the old Mongol period) only has the first volume, No. 368 from the Persian Catalogue). The Mašhmuqat al-Anbār (C 1475) based on independent oral tradition but is less accurate. The Dīnārānās al-thalāthah although late (its author Ķadź Ahmad died 1875) was unpublished date. The Mūsawmān (1380) is based on the Šahāb al-Tūvatīrkhā or perhaps a good copy of the Tołkhār: Gāndhāra. According to these sources which supplement the statements of the Arab geographers, the situation in Luriistan about 900 (912) was as follows:

The Shīt [q.v.] — who are not mentioned by the Arabs before the Mongol epoch — occupied a part ("half") of Luriistan. The lands of Shītistan, proper (Tołkhār: Gāndhāra, p. 537 and 539) had a governor named Naqīm al-Dīn Abār (according to the Mašhmuqat al-Anbār the title Naqīm al-Dīn was hereditary among the Shīt) while the Luri territory under the Shīt (probably Kūr-Gill) had a pāshā Sāfī al-Dīn Māhām whose family had been prominent in the country since the Sassanian period; he was of the Rūzbānī tribe which the Tołkhār: Gāndhāra mentions among the Luri tribes. The rest of Luriistan was ruled by a family of Lur princes (independent of the Shīt) of whom Bād ruled in the Great Lur and his brother Mānṣūr in the Little Lur. Their dates are uncertain. Bād's successor was his grandson Najīr al-Dīn Muḥammad
We do not know under what circumstances at the end of the Saqawid dynasty (Fara-nawari Nā'ūrī) the group of Maimakbi tribes, who had migrated into the Great Lur (after 600) occupied the ancient Shaliistan (cf. above).

After the Saqawids: During the troubles provoked by the appearance of the Afghans before Fahān, the wāli of Luristan, 'Alī Mardān Khān Fālid (a descendant of the Husain Khān appointed by Shāh 'Abhās), played a considerable part. With 5,000 of his men he took part in 1135 (1722) in the defence of the capital. He was even appointed commander-in-chief of the Persian troops but the other Khāns refused to take orders from him. When the Turks invaded Persia in 1725 'Alī Mardān Khān abandoned Khurramkabād (which was occupied by Ahmad Pāgāl) and retired to Khūstān from which he undertook a diversion against Fahān. The Turks who had gone through the Bakhṭiār country and reached Fardūn had to return. Cf. 'Alī Hazin, Tavkhir al-Afnwāl, ed. Balfour, London 1853, p. 115, 134, 137, 148, who was an eye-witness of the events; Hanway, The Revolutions of Persia, ii. 135, 159, 168, 238; Malcolm, History of Persia, London 1829, ii. 60–61; von Bode, Travels, ii. 281–285; Hammet, G.O., iv. 227.

About the same time several Bakhṭiārī Khāns (Kásim-Khān, Sāfī-Khān) are mentioned as resisting the Afghan and Ottoman invaders but they did not agree well with 'Alī Mardān Khān Fālid. In 1137 (1724) 'Alī Muhammad Husain Khān Bakhṭiārī recognized as his successor a certain pretender who claimed to be prince Sāfī Mīrān. The latter's headquarters were in Kūb-Gill; he was not taken.

1140 (1727) (Hanway, ii. 168, 238; Malīk-Khān, Tavkhir al-Qānūnī-Nādirī, Tabriz 1828, transl. into French by Jones, London 1770, p. xxvii). The Afghans do not seem to have penetrated into the Bakhṭiārī country and their expedition in 1724 against Kūb-Gill was a farce.

(v. Hammer, ii. 310; Malcolm, op. cit., ii. p. 449). By the treaty of 1140 (1727) the Afghan Afshars ceded Luristan to Turkey with other western provinces. The Turks kept it (nominally) until 1149 (1736), when Nādir re-established the status quo (Hanway, ii. 334, 347; von Hammet, G.O., iv. 355, 317).

Under Nādir a certain Turkman chief named Sāhī Khān Cəpənüşh (Cəpənüşh) was appointed beglerbeg of Luristan-i Fālid. On the other hand 'Alī Mardān II Fālid was entrusted by Nādir with diplomatic negotiations in Constantinople. Nādir in 1732 passed through Kūb-Gill with his troops where Muhammad Khān Bālī (the claimant to shirās) was defeated. The local Afghans had to support Nādir, who was one of their tribe. Several expeditions were sent against the Bakhṭiārī country, among whom a new chief 'Alī Mūsāl Manūsī and Kāhérī-lang) had collected together the two contents. In 1732-33 Khān Cəpənüşh was sent against him for the first time. In 1149 (1735) Nādir took the field against him in person going via Gūpşālak and Khurramkabād. The Bakhṭiārī country was several times invaded but the main blow was directed against the little explored country south of Shūm-in-khān. 'Alī Mūsāl was captured and executed. The Bakhṭiārī were decimated and deported to the regions of Fālid and Bālūchistan (cf. above).

As to the Kūb-Gill territory, it was governed by Khāns of the Turkomant tribe (Shāhīzeh), who were settled among the Lurs. In 988 (1580) a derbār in Kūb-Gill claimed to be Shāh Ismā'īl. He had a considerable success among the Kūbīs, Bāsh-Kh влиих, and Bandāstī tribes who killed several Ak-šūr governors. In 1005 as a result of the conquering committed by the Ak-šūr as well as by the Lurs, the governor of Kūb, 'Alī-shāh Kāla, established the direct centre of his government in Kūb-Gill (Tavkhir, 'Ala'ī-nāma, p. 198, 338).
The defeated Bakhtiyārīs returned from Khurasan immediately after the death of Nādir ʿAlī Khan (Tabīkhār-i ʿAbd al-Nādirī, ed. Mann, p. 26) and when the dynasty of the Lakhis was re-established, the Bakhtiyārī chief ‘Alī Mardān Khan (who is not to be confused with the two Sāhs of Luristan-i Fuhl) attempted to play a big part. In 1563 (1750) along with Karim Khan Zand he set up a Lakhīn a scion of the lateral line of the Safawīs (ʿAlī Davūd under the name ofīlamī III). The career of “guardian of the sovereign” exerted by Nādir seemed to be certain for him also but Karim Khan gained the upper hand; the troops of ‘Alī Mardān who included Lakh of the tribes of Kīhār and Zangana were defeated in 1752; he escaped to Bakhtiyār but died there by the hand of an assassin: cf. Mīrāb. ʿAbdī, Tabīkhār-i gīthīgāhā, quoted by Malcolm, in the same note, p. 2. However, G. G. A. B., iv., p. 475, 477; R. S. Poole, The Crisis of the Ṣafawī of Persia, London 1887, p. 269; Curzon, ii. 389.

Karim Khan [q. v.] who had disposed of his Bakhtiyārī rival was himself a Lakh of the tribe of Zand, settled in the immediate neighbourhood of Luristan-i Fuhl. On the movements of population in his time, cf. the articles Lakhīs and Lakh. In 1785 when Zīvar Khan Zand had to fall back on Zāvān a number of Laks and of Turks assembled at Lakhīs under former politicians of ‘Alī Mardān Khan but the town was soon occupied by Ḥādī Muhammad Ṣādārī who had nothing better to do than attack the Bakhtiyārīs (ʿAbd al-Karim Khānī, Tabīkhār-i Zandīyā, ed. Beer, p. 20; Malcolm, op. cit., ii. 179 ff) which injured his popularity among the tribes.

The Lakhī Bakhtiyārī country was never completely assimilated during the century and a half which the Ṣādārīs reigned. A resume of the history of the Bakhtiyārīs in the sixteenth century has been given by Curzon in Ch. xxiv. of his Percia. At first the Ṣādārī family, descended from the brother of ‘Alī Mardān Khan (cf. above), came to the front but the expedition of the governor of Lajakah Mānṣūr Khān Mūsāmīr al-Dawla (whose real name was Yānjābokhī, he was an Armenian from Tiān in 1841 put an end to the career of the Bakhtiyārīs, which later group and in spite of the intervention of the british in 1847 at its chief Ḥusayn Kāli Khan (Hādīīlī Lakhī) former lord of the Mūsāmīr al-Dawla which had been reduced by the autonomy under the rule of his Muzārīd and Ṣādārī.

The centralizing efforts of the Ṣādārīs had more effect in Luristan-i Fuhl (formerly Lakhīs) in as much as, as a result of the government in Kīhār through the energetic prince Muzārīd of the beginning of the sixteenth century, the old family of the Muṣṭafās and Zandīs found its rights reduced simply to the possession of Pānwāsh Kāk (q. v. and Cirkiew, p. 277). The Ṣādārīs of Luristan the Persian province of Luristan. Muhammad ‘Alī Ṣādārī with troops and artillery marched through this province. In 1836 Rūdoluf followed him at the head of his Ṣādārī regiment. After the famous expedition of Manṣūr Khān Khan (1841), his nephew ultrasound Khan Sāmān al-Dawla, governor of Ḥusayar, maintained order in Luristan but for the second part of the sixteenth century Luristan was plunged more or less into a state of anarchy. It was not till 1900 that prince ‘Alī al-Dawla was able to restore order in Luristan and at this time several explorers travelled freely in the disturbed province. But in November 1904 two British officers (Col. Douglas and Capt. Loomer) on their way to Khurshabad were attacked and wounded by Luris. A considerable agitation was stirred up among the Lurs (and in western Persia generally) by the appearance among them of the rebel prince Sāmān al-Dawla (several times since 1903). In spite of the efforts of the Persian government Luristan remained closed till 1917, when with the help of a foreign representatives several caravans from Diba were allowed to travel. About the same time the Persian government confirmed the rank of Ṣāh of Pahlavī on Ṣāhid ‘Alī Khan Amrī (cf. the article Lakh); cf. Edmonds in the Geogr. Journ., 1922.

It is only since the accession of Rīdā Khan (later Ṣāh Rīdā Pahlavī) that the situation in the region inhabited by tribes of Lur origin changed radically and the authority of the Central Government enforced respect for itself through the whole of the south-western provinces.

LUR-I BUZURG, a dynasty of Aṭībegs which flourished in Eastern and Southern Persia, Luristan between 550 (1155) and 827 (1425). The capital of which was ‘Ismāʿīl (Mālamī). The eponymous founder of the dynasty, also known as Faḏlāwī, was a Kurd chief of ‘Ismāʿīl name Faḏlīyā. His descendants (the Dījam-ādīa mentions 9 predecessors of Aṭīāt Hādī) migrated from Syria and passing through Mālamītār and LāhBritān to where they made an alliance with the Amir Dādā (7) of Khān (they arrived about 550 (1006) in the plains north of ‘Ismāʿīl-ān Kūh (Luristan).

Their (q. v.) chief Abū Tāhir (Abi Ṣāh) Muhammad distinguished himself in the service of the Sultan of ‘Ismāʿīl (543-556) in an expedition against the Khāhān (q. v.). As a reward Sūkī gave him Khān-‘Ismāʿīl and agreed to send him to conquer Luristan. He succeeded in this. Abū Tāhir assumed the title of Aṭīātāwī and later quarrelled with ‘Ismāʿīl and made himself independent (c. 550). (The Muḥammad al-‘Aṣrī seem to confuse several individuals under the name Kāt ‘Alī, to whom it attributes the following successes: the defeat of the Shīb (q. v.), the deposition of Nājis al-Dīn, the de facto ruler of Luristan, and the defeat of the Khāhān troops commanded by the Turk ‘Ezāb). (Under the son of Abū Tāhir, (A) Mālīk (sic) Hāzārāt (600-626 or 550), Luristan prospered and new Arab and Iranian tribes flock ed into it. Hāzārāt drove out of Luristan the last remnants of the Shīb and invaded Luristan proper. The Shīb migrated to Fārs. Hāzārāt disputed with the Khāhān the possession of the fortress of Manṣūrāb (Mālamītār, S. W. of Mālamī). The possessions of Hāzārāt were extended up to a distance of 4 faršāh from Lāhān. The Caliph
Nasir (575–622) confirmed to Hazarasp the title of Atabeg. On the other side Hazarasp maintained friendly relations with the Khirvánísháth Mohammed and gave his daughter in marriage to his grandson Ghiyath al-Din (220–260). The Zanjirísháth mentioned his two sons of Hazarasp: Khushal al-Din (d. 669) and Nisarat al-Din (d. 659); the former bought Zarda-Khâh, where several members of the family were afterwards interred.

(3) Tikla (c. 655–656), son of Hazarasp and his Salghâtish wife, successfully warded off four attacks on him by the Salghâtish Atabeg of Fars, who was indignant among other things at the expulsion of the Shâh from Luristan. Tikla took from Husáin al-Din Khâshí (d. 654) certain districts of Luristan. He defeated the general sent against him from Khâshí (see the caliph). During the Baghsháthí campaign of Husáng Khan (653), Tikla accompanied him in Khâshí’s campaign (1609). He did not however conceal his feelings about the treatment inflicted on the caliph and Muslims. Husáng took hostage at this and Tikla fled to Luristan and shut himself up in Mândákhâh. Husáng pardoned him but later changed his mind and had him executed in Tabâst. Tikla was buried at Zarda-Khâh.

(4) Shams al-Din Alp Arghân succeeded to his executed brother and ruled for 15 years. He led a nomadic life. His winter residence was at Jâhid and at Sus (probably Susán on the Kârân above Shâhshâh) and his summer one at Kâshkâ and in the upper waters of the Zarda-Râh and the Pârsuft (source of the Kârân).

His son (5) Vasaf Shâh had spent his youth with Alâsh Khân (663–680) and even before appointed in his father’s stead remained at the Mongol court with 200 horsemen. He took part in the war against Turâkân (q.v.) and distinguished himself in a skirmish with the Tartars. To the preservation of Vasaf Shâh Ahiâda added Khâshí, the region of Kâh-Gilâna and the towns of Fârâdân (7 farâks above Jâhid) and Kâshkâhâh (Gurpâyagkân). Vasaf Shâh went to Kâh-Gilâna and attacked the Shâh with the modern Mânsuïshâni cavalry from Kâh-Gilâna. After the defeat of Alâsh, Vasaf Shâh was forced against his will to go with 20,000 cavalry and 4,000 foot to the help of Akmâd Târân. The latter was defeated (683) and the Lur retreated to Tâmân across the desert where the majority died of thirst. After the accession of Arghân, Vasaf Shâh went to pay him homage and interceded on behalf of the former victor Kâhâ Shams al-Din who had taken refuge in Luristan (cf. L’Othman, iv. 5).

His son (6) Afiyâlshâh sent his brother Ahamd to the court of Arghân while the himself remained in Luristan where he put to death the members of the former victor family. Their relatives having taken refuge in Jâhid, Afiyâlshâh sent his kinsmen in pursuit of them. At this moment arrived the news of the death of Arghân (690). The Lur killed the Mongol governor of Jâhid. Afiyâlshâh appointed members of his family to govern in Homâdân, Fâr and in the territories reaching to the Persian Gulf and even began to march on the capital. The Mongol general Akmâd Târân was defeated at Kâshkâ (Kâshkâ, near Kâshkâhâh). Kâshkâ Khân sent Mongol troops against Afiyâlshâh and troops from Lur-Khâh. Afiyâlshâh shut himself in Mândákhâh but after some time went to Kâhâ Khân who pardoned him. Returning to Kâshí, Afiyâlshâh massacred his own relatives and a number of the notables. Ghâdâr Khân (694–703) at first showed himself favourable to Afiyâlshâh but in 696 on the complaint of the Amir Hûrûdbâsh of Fâr, Afiyâlshâh was tried and executed at Malâwâd (7) in Fârûshân.

The rank of Atabeg was next conferred on his brother (7) Nisarat al-Din Akmâm (from 695 to 730 or 733) who had spent most of his life at the court of the Khâshí. According to the Masâni’s annals he introduced Mongol institutions (bâthi meghâli) into Luristan. Hamâlshâh Mustafâi praises his able and prudent administration which required the damage done by Afiyâlshâh. He was a friend of men of religion and several books were dedicated to him, like the Tâvâlih Mashadî of Akmâm al-Mâh, etc. Aghâb of Fâdî Allah Kâzîmî. The Masâni’s annals gives him the title of Fâr. According to Ibn Bâyûtá he built 160 mausoleums (hamehtāb) of which 44 were at Iâshâh and he had roads cut through the mountains.

His son and successor (8) Kûshâ al-Din Ya’ Dâsh Shâh II (723–740) was also a ruler. His lands (Masâni’s annals) extended from Busra and Khâshí-Abad to Lîlâmrâvân and Frâshân. He was buried in the mausoleum of Rukshulâzâd.

His successor was his son (according to Ibn Bâyûtá) his brother (9) Shâfî al-Din Afiyâlshâh II (Akmâm), Ibn Bâyûtá travelling via Mânsu-, Râmân-Târân, visited the capital Iâshâh or Malâwâd. He found the princes given to wine. The Arab traveller describes the peculiar customs of the Lur who witnessed at the burial of the son of the caliph. The latter’s possessions included Tabar Shâhshâh and extended to Garweh al-Râkh (the modern Khâvardâr in Zarâmshâh west of Fârâh). During the ten days the Arab traveller took to cover this distance he found shelter every night in a madrasa. At the same time (740) Hamâlshâh Mustafâi mentions among the possessions of the Great Lur Djhâhalâk (apparently the district N.K. of Luristan and west of Gulpâyagkân).

Next follows an obscure period. According to the anonymous historian of Mirza Isâkzâd, the successor of Afiyâlshâh was his son (10) Nâwâ al-Wâd (“roses-bud”), who ruled from 736 (7) to 756 and disposed of the treasures of his ancestors. According to the Zâhî˘lā-îrâd, Muhammad Muhsân of Fâr (715–760) learning of his dealings with Abî Isâk Khâjâ had him blinded at Sus in 756. His cousin (the Zâhî˘l-ârâb hâsr nephews) (11) Shams al-Din Pâshâ–b, Ya’ Dâsh Shâh II (7) succeeded him and ruled from 756 to 768. At this time Frâshân became involved in the civil wars of the Usâri. When Shah Mansûr, making Shâhshâh his headquarters began a series of raids on the lands of Pâshâb, Shah Sha’dâ (oldest brother and rival of Mansûr, d. 786 = 1354) came to the help of Pâshâb. We have copies of 764 and 764 struck at Iâshâh in the name of Shahâb (S. Lane-Poole, Cat. of Oriental Coins in the Brit. Mus., vol. vi., London 1881, p. 235, 237). After the death of Pâshâb a struggle began between his two sons (12) Malik Pîr Akmâm and his youngest brother (13) Malik Hûrûdbâsh in which the latter was killed. (According to the anonymous historian of Isâkzâd, if he has been rightly understood by Howorth, Akmâm and Hâ-
sheng were sons of Nasr al-Wardi and the former was the immediate successor of his father). Shah Muzaffar ad-Din Pir Ahmad and appointed in his stead a notable scholar and Malik Dinar. When Turmut passed through Luristan in 795 Pir Ahmad came to meet him at Ruma-Hormuz. Turmut later received him graciously at Shiraz, confirmed him by a decree (al-rumgha) in his hereditary possessions and allowed him to repatriate 2,000 families of Luris deported by Shah Mansur. In spite of this in 798, Turmut took as hostages Samarkand the brothers of Pir Ahmad Ahrasiyah and Mansur Shah. Turmut afterwards divided Li-rumgha (2) between Pir Ahmad and Ahrasiyah. After the death of Turmut, Mirza Pir Muhammad imprisoned Pir Ahmad in Kuhbandi. He was restored in 812 but met his end in a popular rising. The son of Pir Ahmad (137) Abu Sâ'îd, kept for two years a hostage at the court of Mirza Iskandar at Shiraz, succeeded his father and died in 820. His son (14) Shâh Hussain in 827 by the hand of his relative (15) Shâh Râh al-Dîn b. Khânt b. Hüfâng (1262). The latter seized the power but the Turmuti Khalif Isfahân b. Shahrâb got troops to expel him and thus ended the rule of the Fadlilzad. Later the power passed into the hands of local notables of the Bakhtiyari tribes (Sharaf-nama, l. 48).

Minorovsky).

LUR-I KÜÇIK, a dynasty of Atabegs which ruled in Northern and Western Luristan between 580 (1184) and 1006 (1597) with Khurramshâh as their capital. The Atabegs were descended from the Lur-I Buzurg of Djamâl (Djamâl-i). The dynasty is also known by the name of Khânt Shâh from the name of the first Atabeg. (It remains to be seen if this name is connected with that of Muhammad Khurash, vizier of the former rulers of Luristan before the rise of the Atabegs of Lur-I Buzurg). After 730 the power passed to another line which later claimed to be of 'Alid descent; at this time also the title mulk succeeded that of khânt.

The ancestors of the Khurashšâh had entered the service of Himûn al-Dîn (of the Turk tribe of Shâhât or Shâhát) who ruled Luristan and Khântshâh about the end of the Sa'dîsh period (c. 550-580).

(1) Shâdâj b. al-Dîn Khurashshâh b. Abî Bakr b. Muhammad b. Khurashshâh was at first Shâhâna of a part of Luristan on behalf of Himûn al-Dîn but after the death of the latter (in 570 or 580) became independent lord of the whole of Lur-I Küçik. He waged war on the Djamârnâw (the tribe in which he had originated, but which was then being ruled by his rival Shâhât b. 'Ayâr) and besieged their stronghold Dibâ-Siâyâh (in the district of Mânâvîd and in the "wilâyat" of Samâh). The inhabitants bade all Mânâvîd over to him but the caliph ordered Shâdâj al-Dîn to deliver up to himself the stronghold of Mângûr (Mângûr-north of Khânh). In compensation Shâdâj received the district of Tarsâk in Khântshâh. Shâdâj al-Dîn drove back the Bayân Turks who were ravaging Luristan. He led a nomadic life and spent the summer at Kift (in Šâhâr-Girâwa) and the winter at Darav Dibâ-Luristan in Naqsh-i Kâhistân) and at Mânah (7). He died a centenarian in 624 and his tomb was venerated by the Lurs. His son Bakr was killed by his nephew (3) Sâf al-Dîn Kutam b. Shâhâshâh b. 'Ali who became Atabeg and was a good ruler. Kutam was succeeded by his brothers first (3) Shâhâshâh al-Dîn Abî Bakr and next (4) Ibrâhîm al-Dîn Gharâshb. The latter married the widow of Abî Bakr, Mâlhà Khântshâ, who was the sister of Sulaimân Shâh Awa, later commander-in-chief of the caliph of the Musta'âlin (Abâk should be altered to Aïma, name of a tribe or a district in the time of the last Sa'dîsh; cf. Râhât al-Dîn, G.M.S., p. 346; Djamâl-nâma, G.M.S., xlvii, p. 153; Nasbat al-Kullâh, G.M.S., p. 107; Debsenmey, Recherches sur quatre princes d'Hâmânet, 3, 1847, p. 177). When (5) Hâjian al-Dîn Kutam b. Shâhâshâh b. Kutam, Shâhâshâh killed Gharâshb, a struggle ensued between him and Sulaimân-Shâh (Shâhâshâh al-Dîn). The Lurs took Bakr (near Hamadan) but finally Khântshâ was defeated and killed near Khântshâ-âst in 640 (1242).

His brother (6) Tâdâ al-Dîn Mansûrd went to the court of Mângûr and returned in the train of Hâljûl. This descent is an authority on Shâhâ's law, ruled till 616. He showed great kindness to the family of Sulaimân-Shâh, when the latter was executed at the taking of Hâljûl. The sons of Shâhâ were executed by Abâk who appointed (5) Kutam al-Dîn Kutam 'Abâk al-Dîn Khântshâl (also executed by Abâk in 677).

He had two immediate successors, the two sons of Shâhâ of whom (8) Fâlak al-Dîn Hâjian al-Dîn ruled a part of Luristan (disk, mowâ'îl) and (8a) Ibrâhîm al-Dîn Hâjian ruled the crown domains (li-rumgha). The number of their troops was 17,000. They chastised the Bayân and reunited under their control all the lands between Hamadan and Shâhâtshâh and between Ibrâhîm and the Arab lands. Both died in 692.
other son of 'Izz al-Din, took advantage of the decline of the Timurids to extend his territory. He plundered Hamadán, Gulpâygan, Ifahán and Isfahan, even undertook an expedition to Shahr-i Sabz. Therefore, where the Bābūrī Turks slew him in 871 (or 873). His son (19) Shāh Rāz was supported by Isfahān 1; at this period the birds of the Little Lur had already adopted the theory that they were of 'Aldī descent. The son of Rustam (20) Oghur (or Oghur) accompanied Shāh Tāmūs on his campaign of 940 against 'Ubayd Allah Khān and during his absence his brother (21) Ḍajāngīr seized the power. He was executed in 949. The governor (jila) of his son (22) Rustam Shāh handed over the latter to Tāmūs Shāh who imprisoned him in Alamut, while Muḥammadī, another son of Ḍajāngīr, was hidden by the Lur at Canga. An impostor in Luristan gave himself out to be Shāh Rustam Tāmūs, then released the true Rustam who recovered his seat but had to hand over a third of it (do dang) to his brother (22b) Muḥammadī. At the instigation of the wife of Shāh Rustam, the governor of Hamadán seized Muḥammadī who was shut up in Alamut. The sons of Muḥammadī plundered Luristan and the adjoining provinces into great disorder. Ten years later Muḥammadī escaped, and conquered Luristan while Shāh Rustam took refuge at the coast of the Shāh. Muḥammadī established good relations with Tāmūs and Isfahān 1 but there was no peace between them; with the Ottomans they fell into strife. Relations with the Ottomans were strained and Muḥammadī became reconciled with the Šafawīs.

(24) Shāhwardī, Shāhwardī, who had escaped from Baghāhī where he was living as a hostage, received investiture from Shāh Khusrau after his father's death. At the time of the occupation of Nihawānd by the Turks Shāhwardī showed some signs of independence. In 1000 good relations with Shāh 'Abbās were re-established between them. Shāhwardī made the most of his alleged descent from 'Abbās b. 'Ali and his Šafawī (ṣafawī) šāhī ('Abbāsī). Shāh 'Abbās married his sister and gave him a Šafawī princess in marriage. In 1002 Shāhwardī, in a pitched battle killed the governor of Hamadán Oghurī sulfurī Bayātī who was trying to levy taxes in Burūdjīrī. Shāh 'Abbās, filled with wrath, left the Khurāsāni front and hastened to Hamadán. Shāhwardī crossed the Šāmir (Kattāgh) and escaped to Baghāhī. Luristan was given to Šafawī Husain b. Shāh Rustam. In 1003 Shāhwardī was pardoned and restored but he was not long in relapsing. In 1005 Shāh 'Abbās took the field against him a second time. Shāhwardī was besieged and slain in the fortress of Canga (in Pughi-Kū). Husain Khān b. Manṣūr beg Sulaymān b. Šafawī 1 was given Luristan, except Šafawī, Hindmānī (1) and Pughi-Kū which were given to Tāmūs Kūl Isanātī. This may be regarded as the end of the dynasty of the Atlābeys of the Little Lur, although the dynasty of "wills" of Luristan (later of Pughi-Kū (q.v.) only) claims descent from Husain Khān who was a cousin of Shāhwardī.

of Turke (utilised by Howorth); Qâhrân-nâmeh; Abû al-Kâdir Ahmad Ghaffâri; Sharâf-nâme, l. 52-55; Abbas-i-Abâ Timâr; Thârân 1341, p. 320, 342, 358-370; Qâhrân-nâmeh; Mundâmî (by Shah). Hist. of the Monguls, ii. 598-600; d'Ohlson, Histoire des Mongols, iii. 250-261; iv. 171; Hammer, Gis. d. Mitt. des. 161-163; Howorth, History of the Monguls, iii. 140, 206, 754. (V. Monoszy).

A great land of the Lurs, a region in the S.W. of Persia. In the Mongol period the terms “Great Lur” and “Little Lur” roughly covered all the lands inhabited by the Lur tribes. Since the Safawî period, the lands of the Great Lur have been distinguished by the names of Kûh-Gilit and Bakhtiyârî. At the beginning of the xvith century the Mainau confederation occupied the old Shûlûstan [q. v.], and thus created a third Lur territory between Kûh-Gilit and Shiraz. It is however only since the xvith century that Lurî-Kûh [q. v.] has been known as Luristan (for greater precision it was called Luristan-Fellî). In the xviith century Luristan was divided into two parts: 1. Pûsh-Kûh (country on this side of the main line of ascent of Kûh-Kâtî and 2. Pûsh-i-Kâtî (country beyond the mountains east of Kâtî). At the present day the term Luristan usually means Pûsh-Kâtî while Pûsh-i-Kâtî means the Fellî country.

The Mamâsanî territory and the Kûh-Gilit forms part of the province of Fâr. The capital of the Mamâsanî is at Fahâlyn (cf. Shîlah). Kûh-Gilit (Kûh-Djîlîya, Kûh-Gilit) stretches from right (west of Fahâlyn) to Bûshâdah; this last town is the main centre for the tribes of Kûh-Gilit. To the south the Kûh-Gilit’s tribes descend as far as the Fârîan Gîûl. The mountains of Kûh-Gilit and the frontier between its tribes and the Bakhitiyars are not yet well known. The chief rivers of Kûh-Gilit are the Kûh-Sîthin which is formed by the junction of the Khurshâd and the Zobrah, and in its lower course runs via Zûdân and Hûshûn, and the Kûh Kûdirânî or Uzzârîh, one branch of which runs via the Kûrân [q. v.] and the other towards Dâwânîr. On Kûh-Gilit see the valuable Fârâmâna-yi Nasîr of Esmâ’îl Falî (Thîrân 1313), the itineraries of Sûsîân, the Abû al-Kâdir, and the general account in de Bode, l. 344-391; Ritter, Erdkunde, ii. 132-144 is now very much out of date.

The Bakhâtîyân land stretches from Calhâmîkîl (west of Ibfânîn) to Shûlahât, and to the south the Bakhâtîyân match with the Kûh-Gilit and to the north they go beyond the northern barrier of Luristan (Shûtûnî-kît etc.). They are found at Farsâlân, Bûshûrût, Jâzîlkhâ, and in the cataracts around Burûshîr (even before 1840 many villages had been purchased here by Muhammad Taqî Kûh Câhr-Lang). Roughly speaking the Bakhâtîyân occupy the lower basin of the Zandûrân and of the Kûtân [q. v.] above Shûlahât. The works of Lâzzîr, Shânîr, Behzad, Cèrû etc. give a very accurate picture of this mountainous country, in the centre of which rises the Khâb Rang (13,800 feet high) which forms the watershed between the Persian Gulf and the central Persian plateau. (It may be asked if the name Kûh-i-Rang is not the Mongol chûm, “mountain, larger”, found in Luristan). The frontier between the Bakhâtîyân and the Lurs proper follows the western branch of the

Abî Dîr, an important tributary of the Kûrân. Luristan (Pûsh-kît) is bounded on the east and west by the convergent streams of the Abî Dîr and the Kûrhân, while in the north the range of the Chûlân-bâlâghân, Garîn etc. separates Luristan from Nîzhân and Shûlahât (district of Burûshîr). To the west of Kûrân Pûsh-i-Kût begins. In the northwest the frontier of Luristan runs to the southwest of the districts of Hûshûn and Hûshân which belongs to the province of Hûshûn.

The chief left bank tributary of the Kûrân is the Kâshân (Kâwhîn; Kâwhâghân), which is formed by two arms. The northern arm with its tributaries drains the beautiful plains of Hûr-rûd, Abûl-ghur and Khûvân. The southern arm, separated from the northern one by the Yûsuf-kût range, takes the name of the town of Khûrûmânâbâd [q. v.] near which it passes. After the confluence of the two arms, the Kâshân, running S.W., receives on the left bank the combined waters of the Kûrân and Gîîn, which flow from Khûh-i-Habûd Pûshî (south of Khûrûmânâbâd) and the northern slopes of the Kûh-i-Gîrîh. These two ranges are covered with pine, and right angiosperms which follow the right bank of the Abî Dîr, which the Kûrân cuts through from the valley of the Kûrân. On the right bank the Kâshân receives the Madîjîân-kût, “river of the mare”. Above Kâshân the Kâshân receives on its left bank several tributaries of less importance still little known (Rûhûr etc.) Below Kâshân and also on the left bank, the Kâshân receives the Pûsàh, Leîlân (Lchîmî) and Abî Zîr. This last river with its tributaries Aûrâk etc. rises in the southern slopes of the Kûh-i-Gîrîh. The topography of the right bank of the Abî Dîr is not well known. The sources of the Baladûr and its right bank tributary the Khîrî-ûb lie a considerable distance to the north. The Baladûr flows into the Abî Dîr between Dûsfîl and Susa. The Khîrî-ûb receives on its right bank the waters of the Kûl-i-ûb which come down from the high valley of Mûngârâz, which with the peaks that surround it form a kind of natural basin and separate the basin of the Baladûr from that of the Abî Dîr. The Shûrâ-yi-Lûr plain formerly well irrigated lies north of Dûsfîl and south of Khîrî-ûb (“pitch-water”) whose naphthaly spring has been known since ancient times. It was probably here that Darius settled a colony of Greeks (Ritter, l. 201).

The interior of Luristan presents a series of mountain ranges, which stretch N.W. to S.E. in the direction usual in Persia, and one behind the other between the plains of Susiana and the northern barrier (height about 9,000 feet).

Ancient history. The land now occupied by the Lur tribes have been inhabited since the period before the arrival of Iranians in them. This region, being at a considerable distance from Assyria, was mainly under the influence of Elam; Susa where there have been found traces of occupation going back to the third millennium B.C., lies just at the entrance to the mountains of the Little Lur. The purest traces of the local culture and of this alone are found more to the southeast. Just as the Akkâbûs of the Great Lur had for their capital Ibfânîn (= Mîlâmî), so in very early times, the lords of this district, the kings of Akhir (Hapirtû), whose relations with the rulers of Susa had control at least of
the Kürün valley. The site of Malküz (cf. de Bode, Layard, Jéquier, in de Morgan, Dizges, if Persia, 1902, ii. 135-143 and Hising, Der Zugoc zu seine Velber, Leipzig 1908, p. 40-50) with its purely indigenous (Elamite, non-Semitic) inscriptions and bas-reliefs is a most important point. The recent discovery by Herzfeld (Reiseberichte, Z.D.M.G., 1916, p. 259) in the Manashtan region of a base-relief and bricks bearing Elamite characters (1500-1000 B.C.) is valuable in indicating the extent of Elamite penetration into the Lur mountains. Küh-Gillî lying between Susiana and Persis may correspond to the still unknown region of Amur (Anaúra) of which the successors of Cyrus the Great. On the survival of this name near Shaskar, cf. Grundr. d. iran. Phil., ii. 418 (according to Rawlinson: Assur).

The antiquities of the valley of the Upper Kürün (the two Susas, Luraidin, the mount of Salūr, Tār and Idrād) are insufficiently known (Layard, Sawyder). According to Sawyder, the higher Bakhthiary lands are "seriously devoid of any ancient landmarks".

For the west part of Luristan in the strict sense of the word see the articles Masarqān and 878 Infer. No monuments of great antiquity have as yet been discovered in this district except the mounds at the river (Mesopotamia) of Seroš or Mūngūr and Khoorasmāb, Kītīkow, p. 139. The early inhabitants of Luristan were the Kāshkās who imposed their rule on Babylon between 1760 and 1650 B.C. The Achaeemidian paid the Kossiioi for the right of passage by the Babylon-Ecbatana road. These highwaymen were temporarily subdued by Alexander the Great. Antiquity, pursued by Esmeres, traversed the heart of the Kossiian country, according to Rawlinson on the route Pshā-tang-Kalleil pass-Khoorasmāb (Ritter, Erdkunde, i. p. 335). The Kossiian (who should perhaps be distinguished from the Khāra) - "the language differences of that from their neighborhood, but if we already find proper names borrowed from Indo-European. Cf. E. Meyer, Gesch. d. Altert., 1/2, Berlin 1913, § 455; Humal, Der Zugoc, p. 24 and Attrum in La langue du monde, Paris 1925, p. 283. [The name Kāshkāy has perhaps survived in that of the river Kāshkāy].

It is also probable that northern Luristan was more or less dependent on the land of Ellīpī, often mentioned by the Assyrians. This region, which was considerably influenced by Media is now located in the province of Kerman, cf. Andreas, Alana, in Pauly-Wissowa, über Streck, Z. d. A., x, 379; Cambridge, Ancient History, ii. 1924, i. cf. supra.

We know very little about the Karwan people who (Herodotus, v. 49) were bounded on one side by the Armenians and on the other by the Susians (Reismich, Un peuple oublé: Les Massiqa, Revue des études gréco-romaines, 1894, viii, p. 313-318).

Here we can only call attention to various ethnical elements buried in the later strata of Iranian invasions. In the name of Paralada, a canton in the northeast of Bahgūthiārī, we have a reminiscence of the Median tribe of Parashiiennēu (Herodotus, i. 110) and of the province (Tarākās) (Streck, loc. cit. p. 380) which lay between Media and Persia (in Assyria; Parashik, Parashka; cf. Streck, Z. d. A., xx, p. 365). The translocation must have been accelerated by the formation of the great empires, Achaemenid, Māschehan, Parthian and lastly Sasanian. There are many Sasanian towns in the valley of the Karštārī. Many Sasanian buildings are attributed by the natives to the Anbheg of Luristan, who were certainly nothing more than the restorers. The complicated system of bridges is very remarkable (cf. the photographs in de Morgan, Études gene., ii. and Études Archéol., Paris 1896-1897, p. 360-374) and the roads which may still be traced on the upper courses of the rivers of Susiana. The remains of roads, paved or hewn out of the rock, may be seen at Tangi Sonak (between Bakhthiār and Mānakdrī) near the Sasanian bas-reliefs (de Bode, i. 355, 356), to the east and west of Mālamāt (de Bode, i. 350, ii. 320, qanād-yi šahābān), between Dīnhal and Kīrab (Rawlinson, A march from Zohak, p. 93), to the north of Kīwār (qanād-yi Eshfān, Cittowk, p. 210-221). All these works are evidence of a systematic and continuous penetration. But since at the end of the fourth (fourth) century the inhabitants of the plain of Khāštān had not yet forgotten the Hūrī language (Jomkstad, p. 418) colonies of the ancient stocks may have survived in the mountains. The Lur highlands only assumed their present ethnical character under the Anbhegs.

The knowledge of the Arab geographers about the Lur country is very summary although they describe the routes between Khāštān and Far (cf. Schwabe, Persia, p. 175-186; Arraīrūn-Surūn, p. 190; Arraīrūn-Surūn, between Khāštān and Iṣfāhan (the road started from Iṣfāhan; Ibn Khurdadhībhī, p. 57; Jomkstad, p. 401) and lastly between Khāštān and Dīnhal. As to these last routes Iṣtīkhur, p. 106, contends from al-Lur to Shāhīr-Ḵᵛāšt 30 farakhs, from there to Līghtar (= Alātīn) 12 farakhs, from there to Nihavand 10 farakhs (the road must lie that which follows the upper waters of the Bafāštārī). A few details of this route are established by Muḥammad, p. 401, who gives the following eight stages: Karṣād (cf. the article Nīl-Khāšt) = Wafarwāmand-Dārgān-Khurāšt (certainly = Hūrū, Hillūrī, north of Khurāštāb) = Sābur-khwās (=

Among the inhabited places in modern Luristan may be noted the following: the town of al-Lur, 2 farakhs north of Dīnhal (Baṣrāt Anīf), the site of which should be sought in the plain of Shāhīsīr-Lur near Shīlūhās; the town of Līghtar, now disappeared, was certainly in the plain of Alīhār and the town of Shāhīr-Ḵᵛāšt. The exact location of the latter is important for the comprehension of certain events in the sixth (eleventh) century (Ibn al-Asfāḥ, in. 80, 814: 211; a. 466; Zarrāk-ī Gunāz, p. 557). Rawlinson had identified Khurāštāb with Shāhīr-Ḵᵛāšt (cf. Le Strange, The Lāhūr, etc., p. 668). The combined evidence of Iṣkhpūr, p. 668, of the Nuzūl al-Kabār, p. 70, 476 and particularly of the itinerary of Muḥammad, p. 404 fully justify Rawlinson's identification (against Le Strange). The change of name, or moving of the site (cf. Schwabe) must have taken
place in the 8th century. The Naukat al-Kullah (740 = 1340) which does not include Shāhpur-Khāyat in its enumeration, the towns of the Little Land is the first source to mention Khurrāmahād (a town in ruins). It is on the other hand not at all probable that the wāliyya of Mān-rūd, the alleged ancestral home of the Lurs, is near Khurrāmahād. It should be sought to the north of the town of al-Lur near Mān-gara (= Māngara), Samahī, mentioned in the Tarikh-i Gāinda, p. 548, was in Mān-rūd; its fortress Dīz-e Sīyāh must correspond to the fort of Dīz which defends the entrance to Māngara and was destroyed by the mālī of Pūghti-Kūth in 1895 (Mann, Die Mundarten der Luristaner, p. 117). Finally the stronghold of Gīrg (Tarikh-i Gāinda, p. 549, 552) is mentioned by Chirīkow, p. 153, among the encampments of the tribe of Pāpī (to the south of Khurrāmahād).

Economic conditions. Apart from the Bakhūjiyya districts near Ifsāhān where there are flourishing villages, the Lur territories inhabited by nomads or semi-nomads only export the products of their cattle-rearing. But the future of the montaneous country which lies like an amphitheatre around the plain of Khūstāzīa is very promising. The Lur lands are rich in minerals and especially in petrol. The famous wells of Maqīd-ī Sulaimān (Māqīn-Nafīn), belonging to the Anglo-Persian Oil Company are in the middle of Bakhūjiyya's territory (between Sāhīsār and Mālāmat). The same company has concessions including petrol-bearing lands in the whole of southern Persia. It is putting into operation its claims in the Kūh-Gīr hot region (to the north of the port of Gāndāra) etc. (cf. Schwarz, Die lirdische Forschung, 1919).

On the other hand the territories now occupied by the Lurs played a considerable part in ancient times, as they lay on the route between the great centres of the Persian empire. Their southern part (Kūh-Gīr) may become of great importance for air and railway communication between Mesopotamia and India. The Bakhūjiyya caravan is now thrown on the new route connecting Khūstāzīa with Ifsāhān and controlled by Lynch Brothers. Finally Larīstan proper seems destined to be annexed by the main line connecting the Persian Gulf (Mohammāda or Khāmiyānī) with Teherān, and perhaps with the Caspian Sea. Before the war of 1914 surveys had already been begun for making the Mohammāda-Dīsīf-Khurrāmahād railway by the Persia Railways Syndicate (cf. Litten, Persien, Berlin 1920, p. 65, 88). Since the change of dynasty in Persia, the Persian government proposes to carry through this task itself; cf. Millepauch, Ifsāhān, Laristan, 1926, p. 277.

Lūt, the Biblical Lūt has in Muslim legend, even as early as in the Kurʾān, an importance which he does not have in the Bible or Hagada. As his story is associated with the downfall of the sinful Sādīm (not however mentioned in the Kurʾān) he appears to Muhammad as a prophet of punishment along with Hūd, Sālīḥ, Nūḥ and Sūlāḥ as predecessors of Muḥammad. When Muḥammad is accused of being a liar he can console himself with the reflection that before him the people of Nūḥ, Ḥūd, Ṣanūdī, the people of Ibrāhīm and the people of Lūt also called their prophets Hūd (Sūra, xix. 43). Lūt’s people (called humsin Lūt, l. 135: Ḳawāh Lūt) are usually located between Thamād and Mārān. Lūt in the Kurʾān becomes a naqīd, messenger of Allah (xxvi. 160; xxvii. 133), a raḥīm, āʾīn, a reliable prophet (xxvi. 162), a participator in wisdom and knowledge (xxi. 74). When Allah warns his people, Lūt invites them to repent (xxv. 25). He sent to sinners who forbad hospitality (xxv. 70), waylay strangers and practise sodomy and cruelty such as no other people had before them. They threaten him that they will finish those who lead such a moral life saying: “if thee preachest right, bring God’s punishment upon us” (xxviii. 28). God thenceupon sends his angels of punishment; Ibrāhīm’s intercession is in vain (xli. 77, 78). The angels come to Lūt. His people demand the visitors for sinful purposes. In vain Lūt offers his daughters instead. He feels himself helpless. The angels: “calm him, saying: ‘We shall have thee, only no one must turn round: thy wife will do it’.” The city was turned completely upside down (Lxvi. 84; xv. 74); Ḫālīf stones, marked by God, rained upon it.

The Kurʾān mentions no other name in the history of Lūt. The destroyed city is called al-māʾṣība (hil. 54) of which the plural is al-māʾṣībak (xx. 74; lix. 9) corresponding to the Hebrew māṣība, which is used in the Bible of Sodom.

The Kurʾān commentators also know the Biblical story quite accurately (Tabari, ed. de Goeje, I. 349, 347). They are able to fill all the gaps and give all names. The sins of Sādīm are fully described. Sādīm has a king of the line of Nimrod. The inhabitants worship idols. Lūt admonishes them for 40 years (al-Kaʾīrī). Then God sends three angels. Gabriel, Michael and Iṣḥāq (in al-Kaʾīrī also the soul-taker Axriel). Ibrāhīm intercedes: “will ye destroy a people among whom there are 300 believers?” No. — 300, 200, 100... — No. — 44 believers? No. — This number is assumed, Ibrāhīm comforts himself in the belief that Lūt’s wife is one of the believers. The angels must not destroy Sādīm until Lūt testifies four times to its sinfulness. They all see once more Lūt, who testifies. After meeting others they encounter Lūt’s daughter. She invites them to her father’s house. Lūt orders his people to be silent, especially his wife who has disobeyed him for 40 years (al-Kaʾīrī). But Lūt’s wife deliberately makes a light to show they have visitors or at ostentatiously procures salt (this is why she becomes a pillar of salt) or she actually says: “Young men have come to stay with us, with more beautiful cheeks and sweeter fragrance than I have ever seen.”

The people demand the young men; Lūt offers his daughters. “If we wanted thy daughters, we would know where to find them,” they reply, Lūt bars the doors. At the bidding of the angels he opens them. Gabriel bends the intruders with a blow of his wing. They tramp on another. “Save yourself!” they cry, “Lūt’s house is being destroyed!” As the hour of destruction is at hand, Gabriel (according to others the Angel of Punishment-Michael) turns the town upside down, and lifts it up so high that the angels in heaven hear the crowing of the cocks and the howling of the dogs of Sādīm. Ṣīdīl stones fall; each is marked whom it is to strike. As Lūt’s wife looks sympathetically on her people, she is struck by a Ṣīdīl-stone. The number of killed varies between 4,000 (Thāʾlīf) and four millions (Tabari, ed. de Goeje, I. 348). All perish except one who fled to Mecca, brought his Ṣīdīl-stone to the lamb where it hung for 40 days between heaven and earth, until it finally slew the man who brought it there (Thāʾlīf). The Muslim legend gives names to everything and explains them all. Lūt takes his name from Ḳūdā, “to attach oneself”, because Ibrāhīm’s heart was affectionately attached to Lūt (Thāʾlīf). Lūt’s wife is called Ḳawāhka or Ṣāḥīha, his older daughter Ḳūt (?), the younger Ṣāḥīha (Thāʾlīf), Saghīf (Thāʾlīf), or Ṣāḥīha (7) (al-Kaʾīrī). Not only is Sādīm mentioned, but also other four towns, in whom names may be recognised the Biblical
LUT - LUTFI PASHA

As a child, Adina, Sehaim, and Sohar, the sons of Sohar, Thelah says it was saved (Gen. xxia. 20-23) "because it believed in Lut".

The Muslim legend has a little in common with the old Haggada (Gen. Rabba, xxix, i.; Sanhedrin, 109b), e.g. the fact that Abraham thinks he is sure of a certain number of devout people. When Peshk X. Edser (xxvi.) describes the characteristics of Lut favorably, when "Michaiah Hagualot" (ed. Schachter, p. 287) calls the angels sent to Sodom, Gabriel and Raphael, Muslim legend may have had some influence on the later literature.

Bibliography: The principal passages are:

LUT, YAHYA. (See AME MUNEJAH.)

LUFTI ALI BEG Adjut, a Persian poet and biographer of the xvith century. He was born in Isfahan on the 20th Rabi' 1, 1293 (June 7, 1711) and spent his youth at Kuh and later at Shiraz, where his father lived while governor of Luristan and the coast of Fars under Nadir Shah. After the death of his father, he made the pilgrimage to Mecca and travelled in Persia, finally settling in Isfahan in the service of Nadir's successors. He latterly adopted a life of seclusion and put himself under the spiritual direction of Mir Sayyid Ali Manafi. He died in 1784.

Lufti Ali Beg is best known for the collection of biographies of Persian poets which he compiled between 1760 and 1779 under the title of Asbat-Khoda; in it he gives biographies of poets in Persian alphabetical order arranged according to towns and districts. The last part deals with 690 contemporaries of the author and is followed by an autobiography, The Asbat-Khoda was first published at Calcutta in 1249 a.h. and at Bombay in 1277 A.H. There is a Turkic translation printed at Constantinople in 1759 a.h. Among his poems was a maqamat, Vam-e Nakhitana, from which the author quotes many verses at the end of the Asbat-Khoda. Lufti Ali Beg was held in considerable esteem by his literary contemporaries; he was particularly intimate with the poet Hafiz of Isfahan.

LUFTI 'ALI KHAN was the last ruler of the Zand dynasty in Persia. He was born in 1769, the son of Jafar Khan of Karim Khan Zand. He was crowned in 1779 and continued the throne in 1784, and concluded the struggle against the Safar, Aqshu Muhammad, who had forced him to retire to Shiraz, where he died on Jan. 28, 1789 from poisoning. During the short period of the reign of his father, Lufti 'Ali Khan had beenentrained with the conqest of Luristan and Kirman, which he had successfully carried through. But after the death of Jafar he was forced to flee from his own army to Kirman to seek refuge with the Arab lord Bishri. With the latter's help, he was able to make himself master of his capital Shiraz where a certain Saiyid Murad had proclaimed himself king. It was chiefly through the efforts of his father's minister Haji Jibril who occupied the position of khulafa (mayor) of the town that Lufti 'Ali succeeded in getting himself again recognized as sovereign. After his accession the character of his government was one society and generosity had hitherto been so much praised as his personal bravery seems to have changed. His acts of tyranny and cruelty, decided Haji Jibril to abandon the cause of the Zands and betray it to the enemy. This he did in 1791 when Lufti 'Ali Khan had set out against Aqshu Muhammad Khan. Haji Jibril seized Shiraz and stirred up Lufti 'Ali's own troops to mutiny against him. The latter fled to the coast and succeeded in collecting a small armed force with which he tried in vain to retake Shiraz.

Then followed several years of guerrilla warfare waged with incredible vigour by Lufti 'Ali against the Khans. He went up and down the provinces of southern Persia for some time supported by the lord of Tabas and even temporarily taking Yazd. In 1794 being assisted by the chief of the district of Garmestan he even took Kirman. Here Aqshu Muhammad besieged him with a large force. After four months the town capitulated, Lufti 'Ali Khan succeeded in once more escaping and reaching Tabas but here he was treacherously delivered over to his enemy who had him taken to Tehran where he was blinded and mutilated and finally put to death. Then came the terrible vengeance wreaked by the Khans on the people of the town of Kirman (q.v.). Lufti 'Ali Khan, the last chivalrous figure amongst the kings of Persia (Brown), probably had the sympathy of most of his contemporaries and it is recalled that even Aqshu Muhammad Khan openly recognised his bravery. But as his history was written under the new dynasty of the Khans in Persia, the Persian sources could not show much sympathy for him. European sources give a more faithful account of the course of events. The more modern Persian historians like Muzaffar Muhammad, 'Ali Khan, Dastur-ud-Mulk and Tavakkil, from the history of the Zands, reproduced in Bech, Neufiratische Konvolut und Grammatik, 1784, p. 239-250 do not hesitate to describe the actions of Haji Jibril as treason. Haji Jibril who soon afterwards became minister tried to justify his conduct to Sir Jules Malcolm.

LUFTI PASHA, nephew (kuzucu) of Lufti Pasha b. 'Abd al-Muell, an important Turkish statesman, scholar and historian, grand vizier in the time of Sultan Selim I al-Kadisi. He was of Albanian descent. The date and place of his birth are unknown. He was brought up in the imperial court, which he had
Lutfi Pasha was in the author of 21 works, a list of which he himself gives in his "History", p. 1-4, ed. also the 1st in Hammam-Purgall, Geschichten der Osmanischen, Kirchen, i, 703; Filig, Katalog der Wiener Handbücher, ii, p. 232; Tschudi, Türkische Bibliothek, vol. xii, p. xv—xvi. It includes 15 Arabic and 8 Turkish works, to which perhaps may be added the Kâmil-nâme dedicated to him which he perhaps does not mention as his own because it was the result of his official activities.

His theological work has not come down to us, so far as we know. According to sources — not however specially blamed in his favour — he had only a moderate knowledge of the different branches of theological study and medicine, which he loved to display with a dilettante's exaggerated and insipid style of his powers. This is not quite convincing however as not only his perhaps quite mediocre theological works but also his really important historical writings, except for the Aşaf-nâme have been almost unnoticed.

As a poet he is praised by Sehi, who completed his Hecht Elikle in 1943 in the time of his grand vizirate. But the numerous verses scattered through his history are not by him. Veres certainly by him are very mediocre. Besides, he does not show much sympathy with poets as the contemptuous attitude to 'Ali Celebi, author of the Hecht Elikle, shows, to whom he makes the reproach that he had spent 30 years on this work instead of dealing with questions of state.

His importance as a historian cannot however be too highly estimated. His Aşaf-nâme, a kind of mirror for historians, a textbook of ethics for viziers in which he sought to make available for his successors his wide experience of administration, obtained a certain success, as the not inconsiderable number of existing manuscripts suggests (ed. and trans. by R. Tschudi, Berlin 1910; ed. by 'Ali Amiri, Constantinople 1526). But his history Ta'mül-al-Asl-i Osmanbe is still more important. It is now accessible in n, however, in other mediocritie, edition (Constantinople, 1548-50). Lutfi Pasha, Tököly, Türken Zeitung, 28, 1848; Weidemann, Verzeichniss, No. 25, from an incomplete copy found by M. Tököly in Berlin, supplemented by the formerly unique copy in Vienna by 'Ali used by von Hämmerl (Filig, ii, 234, No. 1804).

Lutfi Pasha not only models his title on those of the old Ottoman chronicles but he copies this primitive style of historiography in his manner and style, which forms a striking contrast to the elaborate Persianistic court style. Down to Sultan Edipurl he is only a copyist. Then however fol-
MA' AL-'A'INAIN AL-SHingtTY, the name by which the famous agitator in Mauritania [q.v.] at the end of the 16th century and beginning of the 17th century is best known (several explanations of his sobriquet are given; the literal meaning is "the water of the eye"; but the most satisfactory seems to be that which sees in it simply a symbolism, like that in the expression of his namesake) in which the majority of religious leaders of the Saharan countries of North Africa, like his more immediate followers, who became well known throughout Morocco by their nickname of "blue men" on account of their costume, consisting of a djellaba of Almuni (a cotton stuff from Guinea), a turban and a burnous, all blue in colour. They were also called 'Ainiyya, from the name of their master, and al-Shingtayi (Shingtayt), "the men of Shingtayi".

Ma' al-'A'ınain very soon entered into regular relations with the Sulaym of Morocco. He had already made a sojourn in the country on his journey to the holy places of Islam, in the reign of Mawlyy 'Abdl al-Rahmao n b. Hisham [q.v.] (1218-1276 = 1752-1810). Later and especially in the reign of Mawlyy al-Hamn [q.v.] (1290-1345 = 1873-1894) he travelled regularly to Marrakesh and to Fas and was welcomed by the Sulaym, whom he supplied with slaves (in which he also dealt). When the young Mawlyy 'Abd al-Aziz [q.v.] ascended the throne in 1311 (1894), he sent him his hussars and went to visit him in 1896 in Marrakesh. The Sulaym gave him a gift in his southern capital of a site for a dhargha of his order and he hired him a steamer to take him with his suite from the Moroccan port of Mogador to that of Tariku (the natural harbour of the Rio de Oro) for his capital Smara. This little port henceforth became of some importance: German ships, Greek and Spanish sailing-vessels disembarked there merchandise from Morocco and considerable cargoes of arms and ammunition, all consigned to the agitator to enable him to supply...
his followers and arm the Moorish tribes to enable them to fight French expansion beyond the frontiers of Senegal. For several years Māʿal-ʿAlāʾīn was able to maintain in all the vast area under his influence an atmosphere hostile to French penetration into Mauritania. He was largely the instigator of the anti-foreign outbreaks, which after the assassination on May 2, 1905, near Tijjālīya of the explorer Xavir Copppolani decided France to occupy Tājānī in 1906.

All the paramounties, Māʿal-ʿAlāʾīn, having assembled the chiefs of the great Moorish tribes who were in alliance with him, took them to Fās to demand the alliance and assistance of Morocco against France in Mauritania. He was favourably received by Māwlyāʿ Abū ʿAbd Allāh Abū Kātib and succeeded in getting a cousin of the Sultan, Māwlyāʿ ʿAbdul, sent to al-ʿAḍrār as representative of the māḥkūm. At the same time Māʿal-ʿAlāʾīn was authorised to install himself in the Moorish ḥaṣb of Tissnī, to summon to the holy war and to rally around him all the warriors of the Sahara from al-Ṣūtī to the region of Sāḥyāt al-Ḥamīnī. The hopes that Māwlyāʿ Abū ʿAbd Allāh Abū Kātib had based on the promised assistance of Māʿal-ʿAlāʾīn were disappointed. After the occupation of Ujda and the destruction of Sāḥyāt by the French he had to disown Māʿal-ʿAlāʾīn. The latter had no longer a chance even in his own country, where a fatal blow was struck at his power as a result of the al-ʿAḍrār expedition in the course of which French troops led by Colonel Gouraud completely scattered his forces. Māʿal-ʿAlāʾīn had however not lost all hope of regaining his former influence in his old territory. He aimed even higher, when in May 1908 he did not hesitate to proclaim himself Sūfīn and to attempt the conquest of Morocco, which he thought had been sold to the infidels by the Alawai sovereigns. Having united around him all the tribes of the Anti-Atlas and of al-Ṣūtī as well as his own followers, he reached Marrakāk and from this town tried to take Fās by surprise, taking the road through the Central Atlas. But he was checked in his advance near Tarīfī [q.v.] by a column under General Moinier which routed him completely on June 23, 1908. He just managed to escape and reach al-Ṣūtī where he was abandoned by all his followers and had to sell his slaves and flocks in order to live. He retired to the ḥamāma of Tissnī, where he died on 17th Shawwal 1232 (Oct. 28, 1910).

Two years later, the son of Māʿal-ʿAlāʾīn, Abdur al-Hība, in his turn attempted to proclaim himself Sūfīn. Proclaiming himself the Malik, he set out from Tissnī and entered Marrakāk on Aug. 18, 1914, where he had himself proclaimed, while his troops put the city to fire and sword. But on Aug. 29, al-Hība was defeated at Bengetīrī by Colonel Mangin, who after a second encounter at Sūlī Bu Uthnā entered Marrakāk on Sept. 7 following.

Māʿal-ʿAlāʾīn, who had very many open or secret followers in Morocco has left in the country the reputation of a true ascetic and a great doctor in Sīlah. The hair shaved, the face veiled, always clad in white, he only appeared in public during festival occasions. Māʿal-ʿAlāʾīn led an austere life, lived exclusively on milk, dates and mutton. A well-read man, he composed many pious works, books on theology, mystic Ṣūfīan, astronomy, astrology, books full of contemplative reveries, on theological and dogmatic controversies, on metaphysical theories, and of magical formulae to acquire riches and power by occult means. Like his father and his brother, he loved to spread among his disciples a reputation as a worker of wonders and a thaumaturgist. These magical practices much increased his prestige in Seguïat (al-Sīkṣīyā al-Ḥamīnī) and in Morocco (K. Richet, La Mauritanie, Paris, 1920, p. 126—127).

MA'ADD, a collection of laws for certain Arab tribes, in the traditional usage for those of North Arabian origin (Mujar and Sabrā), in contrast to the Yemen tribes. This contrast said to be inherent in the name Ma'add seems already to be found frequently in the early posts, always presuming the genuineness of the passages in question. Thus in a verse of Imru 'l-Kays (Ahmad, No. 41, I. 5) the term Ma'add is used apparently in the sense of excluding the Thäib, Tays, and Kinda, and in Nīqūm (Ahmad, No. 13, I. 1, 2), the Qassān. Tradition also records fighting between Ma'add and Yemen in the pre-Muhammadan period (cf. Yākūt, ii. 434; Ibn Batūtā, p. 164). At a later period the genealogical list links the two tribes in a way that contradicts their real relations in South Arabia, where the rivalry between North and SouthArabians had become the dividing political element in the fighting of the Omayyad and 'Abbasid periods (passages quoted in Goldsmid, see below. "Bibl.").

The fact that the name Bani is not found combined with Ma'add as well as the form of the word itself suggests that Ma'add may originally have been of similar foundation and meaning to Ma'adjar, a general name for "people", body of people. Ibn Duraid: (faytīya, p. 20) long ago suggested the derivation from the root "sad." To count, numbers, not however without adding other very different attempts to interpret it. The usual genealogical scheme of Arab tradition has inserted in it the name Ma'add as the name of an ancestor of an eponymous series, namely a son of the traditional founder 'Adūn: Ma'add is brought into connection with the history of Mecca by the legend that he married Ma'nāma, a daughter of the Dhūn-nāmas. From this marriage were born Nizar, father of the tribal eponym Mūsā, Rahmān and 'Yūsīd. According to Abu 'l-Fadl, "Hist. Anti-

AMARRAT MAṣRIN or MIBRIN, capital of a nāhiya of Ḥalab. The name is also written Ma'arrat Maṣrin which has been wrongly taken as an abbreviation of Ma'arrat Kāsmīn (Le Strange, Palestine under the Muslims, p. 497). In Syrian manuscripts of the eighth century, the town is called Ma'arrat Maṣrin. (Wright, Catalogue of the Syrian MSS. in the Brit. Mus., 1454, dated 745 A.H., and Lewis, "Manuscripts in Libraries in Greece or Evangelica domnocephalos," London 1910, q.v.) a palimpsest under a collection of biographies of holy women, written by a monk Yohannan Styliotes of Beth Mary Kāsim, a monastery of the town of Ma'arrat-Maṣrin in the Khilah of Antioch.)

In the year 16, Abū 'Ubaydah defeated a large Greek army which had assembled between Ḥalab and Ma'arrat Maṣrin and then took the town, which capitulated under conditions similar to Ḥalab (al-Baladhurī, Futūḥ, ed. de Goeje, p. 149). In the reign of the Caliph Mutawakkil, 'Amr b. Hawwar, the native of Ma'arrat al-Burādhiyya (cf. Yākūt, Muḥa-

It is not clear who is responsible for this translation. The text appears to be a study of the Ma'add tribe, their genealogy, and their relationships with other tribes, particularly in South Arabia. The text also discusses the name Bani and its usage, and the genealogical scheme of Arab tradition. The text mentions the location of Ma'arrat Maṣrin, a town in Syria, and its historical significance. The text concludes by mentioning the defeat of a Greek army by Abū 'Ubaydah in the year 16. This translation is presented as accurately as possible, but may require further clarification or research. Please provide feedback if you find any errors or omissions. This section is part of the larger text, which may include biographies, historical events, and genealogical data.
of Shaghur and Bakra, al-Râjil and Ma'ar'at Ma'srin, which he exchanged about five years later for 'Ain Shih, Râwândah and Zîth (Kumait al-Dim, truml. Blocketz, R. O. Z., v. 64, 72; Abu 'l-Fîrîd', Annali Musulmoni, ed. Reiske, iv., Copenhagen 1792, p. 317).

The town has not been much visited by modern travellers. Jullien describes Ma'ar'at Ma'srin as a large village, lying among sacred fields and olive trees. It is said that the fertility of the country: the soil there is unusually fertile, fig. trees are numerous and roses are growing by roadside". In modern times the name of the town is often written Mašarin (with the article) e.g. by J. B. I. J. Kowalski (Descrip. du Pachaluk de Haleh, in Kungfrunden des Orient, Vienna 1814, iv. p. 11), Kütter (Beschaut., xvii., p. 1576), Garrell (Publication of an American Archæologist, Expedition to Syria, New York 1914, part I., p. 119) etc.

Not to be confused with our town is Ma'ar'at al-Ibbân (also called Ma'ar'at al-Akhdâm) e.g. of it, sometimes called simply Ma'ar'at, e.g. by Sarail (Geographia, 1787, viii., p. 241; Mašarin, p. 56), according to whom in Arabic it is strongly given this name, 'white houses bare and exposed with its white sugar-cone like roofs on a wide plain'. According to al-Djârîr of Hâlab (d. 843) and Ibn al-Shîhûm (edited by Abu S. Yûnis al-Baybarsînî in the eleventh century), Ma'ar'at was earlier called Dâbil al-Kâfîrî (Z. D. M. G., xx. 182; Ibn al-Shîhûm, ed. Cheikh, Hâlî, 1909, p. 164, 183, Lammone, M. F. O. B., 1905, iv. p. 240). But this statement is due to confusion with Ma'ar'at al-Nâmûn (cf. Dussaud, Topographie historique de la Syrie antique et médiévale, Paris 1927, p. 213, note 4).

Berggren, Europa och Europa medeltider, Stockholm 1826, part ii., p. 153 (Ma'ar'arat Ma'srin); Kaspii Nihârî, Reisereisung nach Arabien und iiber den vo. unliegenden Ländern, Hamburg 1837, vol. iii., p. 100 (Masrûr Ma'srin); Thomson, Bibliotheca sacra et theologicala, vol. 18, v. 665 (Masrûr [or Ma'ar'arat], 675 (Masrûr Ma'srin) [?]; Jullien, Sinai et Syrie, Lille 1883, p. 284 (Ma'ar'arat Ma'srin); Mechi'el de Voghio, La Syrie centrale, Paris 1861-1864, passim (Ma'ar'arat Ma'srin); R. Garret, in American Archæologist, Expedition to Syria, New York 1914, part I., p. 119 (Ma'ar'arat al-Masrin).

MA'ARRAT AL-NÂMUN, a town in northern Syria, often called simply MA'ARRAT. It is celebrated as the birthplace of the poet Abu 'l-'Alî' Ahmad al-Ma'ar'at (q.v.). According to al-Sam'ânî (Alîkh al-'Awhâd, reproduced by D. S. Maqbool, 'G. M. S., xx., 1912, ed. 536, 1, 4) the name (from the place-name was Ma'ar'arat to distinguish it from that of Ma'ar'at Ma'srin. The town probably lay on the site of the ancient Ara which is called Kaños-Abîn̄ in an inscription. Yaqût says that Ma'ar'at al-Nâmûn is an old town in ruins. Nâšîr Khur-rawî in 438 (1437) found on the town wall a stone column with an inscription in some language not Arabic and Ibn al-Shîhûm also talks of old pillars. According to Hâlebî, the site of the town is called Būrûm. But the remains of a Greek inscription in the Madrasa (Foyoth, p. 203, note 4).

The town received its new name, to distinguish it from the numerous other Syrian towns of the same name, from the Companion of the Prophet, al-Nâmûn b. Bâqîr, who was governor of this district under Ma'ar'at and whom we find there. According to another tradition it is called after al-Nâmûn b. 'Adi al-Shîrî of the tribe of Tanûqî. An earlier name of the town according to Ibn Bâqîrûn and Khâlid al-fârî (ed. Ravaise, p. 43) was Dâbil al-Kâfîrî, according to al-Djârîr (Q.), al-'Ibbânî (R. G. A., xiv.), ibn Khîrshshîhî (R. G. A., vi. 75). This is strongly given this name, 'white houses bare and exposed with its white sugar-cone like roofs on a wide plain'. According to al-Djârîr of Hâlab (d. 843) and Ibn al-Shîhûm (edited by Abu S. Yûnis al-Baybarsînî in the eleventh century), Ma'ar'at was earlier called Dâbil al-Kâfîrî (Z. D. M. G., xx. 182; Ibn al-Shîhûm, ed. Cheikh, Hâlî, 1909, p. 164, 183, Lammone, M. F. O. B., 1905, iv. p. 240). But this statement is due to confusion with Ma'ar'at al-Nâmûn (cf. Dussaud, Topographie historique de la Syrie antique et médiévale, Paris 1927, p. 213, note 4).

As early as 278 (891-892) we find Yaqût giving the title Tanûqî to the inhabitants of the town. The district around it was one of the parts of Syria most strongly settled by Maronites (al-Ma'surî, Alîkh al-Tanûqî, ed. de Goeje, 1533). As there was no running water near the town, its inhabitants had to collect rain-water in cisterns. But the country round was rich in olive, fig, pistachio and almond trees; wine was also made here as in the ancient Ama. According to Ibn Tîbîsî the orchards stretched far nearly two days journey from the town and formed one of the richest and most fertile areas in the world. South of Ma'ar'at al-Nâmûn, just beside the town wall, according to local tradition, the tomb of Joshua son of Nun; but Yaqût says his grave was really at Nâsîrûn (cf. Goldscheider, Muhamschidische Traditionen über den Grabort des Jonas, in Z. D. P. F., iv., 15-17. The Tâ'înîs Nâsîr Allah Yûsîî in Ma'ar'at al-Nâmûn still bears the name of Joshua and has an inscription (dated 604 (1207-1201) (van der Heijden, Velge in Syrie, p. 202, note 4).

When Abî 'l-'Alî came to Ma'ar'at al-Nâmûn in the year 1067 (457), the people showed him such welcome and hospitality to pay 'Umar and 'Abd al-Shîrî (al-Kalâbî, Alîkh, ed. de Goeje, 1364, 132; Câstani, Annali dell'Ottoman, iii., p. 794, 284); Th. Câlîpih, 'Umar II was buried in 1061 in the monastery of Simeon (Dal Sottà, s. al-Nâmûn (Nasîrûn) not far from Ma'ar'at al-Nâmûn (Hoffmann, Z. S., iv., 1922, p. 17). Dussaud, Topographie historique de
in Syria, Paris 1927, p. 184). 'Abdallah b. Tahir appointed by the Caliph al-Mu'āwīya in 207 as successor of his father in the governorship of Syria, destroyed the fortifications of Ma'arrat al-Nu'mān, while fighting against Nāṣr b. Shabib and many small towns like Ḥijra al-Kafir and Ḥijja Ḥanāfū (Kamāl al-Dīn in Freytag, Selten or historia Halab, Paris 1819, p. 20). In 390 the Byzantines under 'Alī ibn Abī al-ʿAbdīr captured the town (Batiq al-Ma'arrat al-Nu'mān, Hīna, Ḥanīfah, and Samalūn, six miles from the town, and captured the women and children into captivity. The Baal Kīlāb in 325 (930-935) entered Syria from al-Nejd and advanced on Ma'arrat al-Nu'mān. The commander there, Ma'ādīl b. Sa'īd, went out to al-Bārāghīlī (site unknown) to meet them, but was captured there with the greater part of his army, and only later released by the Kīlāb Abū Tābīlib Abūl-Mu'min b. Sa'īd, governor of Halab. The latter and the Kīlāb Šams al-Dawla in 332 were driven from Halab by al-Hamūn b. Ša'īd b. Ḥamūn, Sulīf al-Dawla's uncle and possessor of the majority of the country. The victors, Ma'ādīl b. Sa'īd and his. Kīlāb the governor of Egypt in 333, advanced against Sulīf al-Dawla as far as Ma'arrat al-Nu'mān, which he took. Ma'ādīl b. Sa'īd, whom Ikhshīd had again installed there as governor was slain in battle at Khumair by Sulīf al-Dawla. In 357 (968) the emperor Nāṣir-i 'Alī Phocco took the town and destroyed its chief mosque and most of the walls. When Kārgātiyya seized Aleppo, Zuhai'ir the governor of Ma'arrat al-Nu'mān joined the Hamānīs Sulīf al-Dawla (358) and set out with him from Manbij against Aleppo; it was only when the Greeks Turbaši brought help to Kārgātiyya that the pair retired to al-Isnāfūn and Ma'arrat al-Nu'mān. In the year 376/1084, Nāṣir-i 'Alī Phocco and Kārgātiyya (Sulāf 359) Ma'arrat al-Nu'mān was promised to the latter. Sulīf al-Dawla held out in it for three years. Bākūdūr had deposed and imprisoned Kārgātiyya in Halab and made himself sole ruler (364 = 975). Sulīf al-Dawla set out from Hīna against him and with the Baal Kīlāb whom he had won over to his side by promising them lands at Hīna besieged Zuhai'ir, who was an ally of Bākūdūr, in Ma'arrat al-Nu'mān. He forced his way with his followers into the town through the Hūnaqā gate; when they were repulsed, they burned the Hīnaqā gate. Zuhai'ir thereupon surrendered and was executed in the citadel of Fāsīyā; the citadel of Ma'arrat al-Nu'mān was plundered by the conqueror. When Kummāt, a Mamlūk of Sulīf al-Dawla ("Sulīf") rebelled in 396 in Ma'arrat al-Nu'mān against Sulīf al-Dawla, the latter with Luṭū' went to besiege the town but retired to Halab on the approach of Bandjatakīn (Freytag, Loci summales, p. 45, l. 6); Luṭū' who had seized the power in Halab in 392, next year had Kafr Rūma in the district of Ma'arrat al-Nu'mān and the fortress in the Awūdū (the two districts of al-Rāq, cf. Rosen, Zep. imp. Arkad. Nomencl., xlv, p. 337, note 200) destroyed to prevent them falling into the hands of his enemies. Luṭū' in 414 joined the forces of the Mamlūk Mu'lī al-Dawla Tūsī, he occupied Ma'arrat al-Nu'mān. In 452 on his campaign against his nephew Maḥmūd, Thamūl spent eight days in the town; the inhabitants suffered severely as the Arabs on an account of the severe winter were billeted in the houses and did much damage there. Maḥmūd after occupying Halab in 457 allotted Ma'arrat al-Nu'mān to the Turk chief Hārūn; on Shawa'il 17, 458, the latter entered the town with Turks, Daulandis, Kurds, and men of the tribe of al-Awād, about 1000 fighting men besides camp-followers. They pitched their camp before the gate at which public prayers were said. Although excellent discipline prevailed among them and no one injured the trees or plants in the courtyard of the town, the inhabitants ravaged more freely when they left the town again to assist Maḥmūd on his campaign against the Kīlāb. In 462 Turks in large numbers came out of Byzantine territory against Halab, went via Ṭumūk al-Ḥājāt, Ma'arrat al-Nu'mān, Kafarjīth, Hīna, Ḥanīfah and Rahilān, and laid Syria waste in dreadful fashion. The Turk Tūnūsh in 472 undertook a campaign from Damascus against the north of Syria; he burned the region of Ḥijāl al-Sa'īdīn and Ḥijāl b. 'Uqlām, exterminated enormous swarms from the people of Sārin and Ma'arrat al-Nu'mān and plundered the country. The last of Ma'arrat al-Nu'mān was laid siege by 'Alī Sharī'ī of Tall Manas (Σαλναράς) in vain and burned Ma'arrat al-Rayyātīa (the ancient Μαραταρίας) in the district of Kafarjīth. His son Rīwān in 488 gave the town of Ma'arrat al-Nu'mān with its land to Ṣāḥibān b. 'Urayj. Soon after the taking of Antkiya (1491) the Franks advanced on our town, supported by the people of Tall Manas, and all the Christians in Ma'arrat al-Nu'mān itself but they were defeated between these two towns. In the beginning of 492 they again besieged the town with a large army (then aρῆς μαζηστηρία, Will. of Tyre, vii. 6) and took it, killing almost the whole population, 20,000 men, women and children (C. de Wych, iii. 492 sqq.). Ma'arrat al-Nu'mān was, like Jerusalem in the same year, completely sacked and the walls and mosque destroyed. During the siege the Franks had destroyed all the gardens round the town and the Kīlāb, who had come to the help of Rīwān, consumed all the supplies of the district so that the country was completely starved. In 496 Rīwān reconquered the lost fortress. At the end of 514, he concluded a treaty with the Franks by which the latter were allotted Ma'arrat al-Nu'mān, Kafarjīth, al-ʾIrāk and a part of Ḥijāl al-Sa'īdīn etc. In 521 (1137) the Alšag Zangi regained Ma'arrat al-Nu'mān. When the inhabitants asked to have restored to them the estates of which the Franks had deprived them, he demanded the original charters of ownership from them but they had been destroyed. He therefore had search made in the books of the office of the financial department of Halab (Dast🙌ir Dīn al-Ḫalab) and found from the old payments of ḥāriyah what families had owned property and restored them (Ibn al-ʿAlī, in Tornberg, xi. 24 = Hist. or. de Croes, i. 453; Abu ʿl-ʿAlī, Annalist Islam., ed. Reiske, iii. 470; v. 374); Zangi razed the walls. While King Fulco of Jerusalem was putting down a rising in Antkiya, Turkoman tribes entered the district of Ma'arrat al-Nu'mān and Kafarjīth but were driven out again by the Franks who thereupon conquered Kafr Ṭalab b. Maḥāb (Kemāl al-Dīn, Hist. or. de Croes, iii. 667, where our town is meant by al-Ma'arrāt, not Ma'arrat Maqrin as Rūshīkh, Gesch. d. Königre. Jerusalem, p. 107 assumes). The Byzantine emperor John II Comnenos in 532 (1138) invaded the district of Ma'arrat al-
Nu'mân and then turned suddenly against Shairar (q.v.) which he besieged in vain. The earthquake of 552. (1157—1158) wrought great havoc in Ma'arrat al-Nu'mân (Kamal al-Din, transl. Lochet, in R.O.L., v. 590).

Ma'arrat al-Nu'mân in 718 (1388) went from Halab to Ma'arrat al-Nu'mân from which he made a pilgrimage to the Shaihkh Abd Zakkariya al-Maghribi who lived at the tomb of the Caliph Umar. Towards the end of the reign of Sahib al-Din (c. 1191) the town formed part of the Syrian possessions of Taqi al-Din. (Hist. Or. d. Crois., iv. 14.) Ma'arrat al-Nu'mân is several times mentioned in the wars between Sahib al-Din's sons. Abu'l-Fath is said to have invaded Ma'arrat al-Muqafarat a fourth time but was driven out (ibid.).

Ma'arrat al-Nu'mân is a separate province (q.v.). Henceforth Ma'arrat al-Nu'mân formed a wilayet of this province (al-Ka'kashandi in Guadet's Demouyynes, La Syrie a l'epoque des Mamelouks, p. 233). In the Mamluke period the town had seven gates (according to al-Rauw al-Musir fi Akhbar al-Musir, quoted in al-Kal'kashandi, Cairo, iv. 342). the Halab gate, the great gate, that of Shihb, called after the adjoining tomb of Seth, the garden gate, the Hems Gate and the like gate (insha' probably a double gate of Hems). Ma'arrat al-Nu'mân was a station of the Egyptian pigeons-post (al-Umar, Tala'if, transl. R. Hartmann, in D.M.G., i, 591, 1; al-Kal'kashandi, iv. 393). After the battle of Marj Dhibih in 522 (1516) the town passed to the Ottoman. Delia Valle a military later found here (1616) a native chief under Turkish suzerainty and the Agus who lived there in Pucosco's time while paying tribute to the Porte retained complete independence. Troilo found in the town 'twelve houses Wirths-Hauses, das eine war sienlich baulandig, das andere aber noch wohl wunderlich, umb und umb alt und in einem langen beytern Tuffeln bedecket.' Sestrens describes Ma'arrat al-Nu'mân as the most northerly place in the Pashalik of Damascus (Sturtys). Walpole was a guest of the mutasarrif of the town. The district of the town later became a khilif (ibid. iv. 35). The fort of Halab. When Sivas passed the Euphrates it was in 1879, a king's horse was living there, the frontier with Syria was at Khân Shakhzûd. After the world-war the town was included in the district under French mandate. According to Sachi it has about 40 well built houses and with its well-cared-for gardens and fields looks a peaceful and prosperous country town, while von Berchem calls it "a large village of rather dismal appearance"; it lies in a monotonous but well tilled plain at the foot of the eastern edge of the plateau of the Djebel Rifâ'. In the north-west it is commanded by the high hill on which stand the remains of the mediæval citadel (on the map of G. Garret and F. A. Norris, in America, Arch. et Histoire, s. 50 and Peinet's Exp. in Div. ii, Sect. 2. part 3). Ka'dar in Nu'mân is wrongly placed north-east of the town, cf. however also van Berchem, Voyage, p. 202 and Ellis Smith in Ritter, Erzih, xvii. 1007 and Sachau, Reten, p. 945. Among the architectural features of Ma'arrat al-Nu'mân the most notable, next to the great mosque, is the already mentioned Shihb Madrasa (built in 1557). A notable building of the Ottoman period is a large square caravanserai on the south side of which is a fine gateway with an inscription of 974 (1566—1567). Sykes was shown by the K'iznumah, a group of the sights of the place the (alleged?) tomb of the poet Abu'l-Fath.
progress in the last few years, is still often called by its original name of Udjong-pandang (Lum-pandang). The Dutch gave it the name Macassar from the kingdom of the same name. The heart of the Macassar country is the former principality of Gowa, which was not under the direct rule of the Dutch East India government in 1641 and is a remnant of the once very powerful kingdom of Macassar. The area inhabited by the Macassars is the wider area stretching over the southern part of the southwestern peninsula of Celebes, as well as over the island of Sabler and several groups of islands in the neighbourhood.

The remainder of southern Celebes is inhabited by Bugis who are closely related to the Macassars and whose language, manners and customs are very similar. The Macassars do not differ much in physical appearance from the javanese; they are of above medium height and in general well built. Their mode of life, dress and dwellings are simple. The main industry is agriculture which is very successful as the generally fertile soil in the plains is rich, and often on wet fields in the mountains maize particularly, but also vegetables and leguminous plants, and cacao-nuts. The cattle-raising also is not unimportant. The native industries which are carried on in the houses of natives are not on a very high level; the work of the gold and silver-smiths is relatively good. An unfavourable verdict has often been passed on the character of the Macassars but this seems to be exaggerated; it is found difficult to submit to a regular life but for the most part they are not difficult to govern. Among their vices are their fondness for dice and cock-fighting. Originally three classes were distinguished in Macassar society, the princes and nobles, the people, and the slaves. Slavery has now been abolished even in the districts under independent rule.

The population generally professes Islam and its laws are on the whole conscientiously observed and the Muslim principalities faithfully celebrated. But one cannot of course say that Islam regulates the whole of their social and religious life. The customs which survive from an earlier period are very numerous and form a striking contrast to the ideas of Islam. In a very village there is still found a little building which is used for the worship of the spirits of the animistic period (the chief of whom is Karang Loe, i.e. the "great prince") and where heathen priests offer sacrifices. There can therefore be no question of fanaticism and the very simple mosques are in general in disrepair. The highest Mahomedan office is filled by the kulit, usually a man of princely descent, who used formerly to be appointed and dismissed by the king. He had control of all matters relating to worship and he also gave legal decisions in questions of inheritance and played an official part in marriages and divorces. These duties are also in the hands of Muslim notables as preachers and preachers, performed the offices of a sexton and gave elementary religious instruction. Their knowledge of Islam is usually very slight. The revenues of their clergy consists of the sabbas (zakat), the jibura (jizya) and of presents on all sorts of occasions at which they take part, and of a certain percentage (jizbel) on the division of inheritances. The sabbas is irregularly and insufficiently paid, the jibura much better.

No particulars are known of the early history of Macassar, and of the regions inhabited by the Macassars in general. In the middle of the 13th century they were under the rule of the Hindu-Indian kingdom of Madjapahit. According to the native chronicles of the royal houses of Gowa and Telo, which, at least so far as the earliest period is concerned, are largely mythical, the Gowa originally consisted of an alliance of nine small districts each under a noble, after the government had passed into the hands of one man and the kingdom had expanded, to include for example the lands of what was later Telo. Gowa is said, after the death of the sixth king (at the same time the first whom the chronicles regard as an ordinary mortal), to have been divided between his two sons: the one became the king of Gowa and the other of Telo. It is certain that, so far as our knowledge goes, there were always close relations between these two kingdoms and that there was a certain degree of unity about them; they were known together to Europeans as the "kingdom of the Macassars". About the year 1512 Malays from Sumatra were given permission to settle in Macassar and it was perhaps they who first brought Muslim ideas to South Celebes. When the Portuguese appeared there in the middle of the century, they found only a few foreigners there, who were Muslim; it was not till the beginning of the 17th century, that the arrival of Macassars in general adopted the new religion. During the reign of Tumidjallu (1555-90), Usbithul, king of Terano, came to Macassar, concluded a treaty and at the same time attempted to introduce the Muslim religion into South Celebes. In 1603 Sultan Ali-Muluk and one of his brothers became converts to Islam, which then spread rapidly over Gowa and Telo, chiefly through the influence of Karmang Motawary, administrator of Gowa and prince of Telo. We find traditions about the first preaching of Islam in South Celebes, similar to those of other parts of the archipelago. They are particularly associated with a certain Dato-ri-Sulung, a Minangkabau peasant from Tidunggal, who is said to have landed about 1606 in Telo and to have preached the Muslim faiths, at the same time performing all kinds of miracles.

Next to him, the two main apostles of Islam are said to have been his contemporaries Dato-Si-Tiro and Isto-Patimang. Their tombs are still much visited. In the first half of the 18th century, the kingdom of Macassar extended very much, so that it brought under its sovereignty almost the whole of the Celebes, but the Portuguese, French, Spanish and the eastern coast of Formosa. The Dutch East India Company, which had a good deal of trouble with the Macassars, did not succeed till 1629, in concluding a treaty with them, which permitted freedom of trade but allowed them no permanent settlement. But in Macassar caused the Company further difficulties in the Moluccas, a war was concluded in which the town was burned. By the peace concluded in 1650, the king lost a portion of his territory; the Portuguese were forbidden to remain in the kingdom while the Company were allowed to settle and trade freely in Macassar. Peace was again broken in 1665 (the Act of the Dutch East India Company, Speelman, sailed with a large fleet to Celebes, destroyed the Macassar fleet and forced the king to sign a treaty of peace ("Koninklijk Verdrag", 1667; confirmed in 1669), whereby
MACASSAR — MADAGASCAR.

With its area of 225,340 sq. m., Madagascar is the third largest island in the world after New Guinea (234,770 sq. m.) and Borneo (283,670 sq. m.). Its area is a little greater than that of France (520,000 sq. m.), Belgium (317,750), and Holland (41,774) combined. It is oriented from N.E. to S.S.W. and measures 1,000 miles in its greatest length and 350 miles in its greatest breadth with a coast line of 3,000 miles. The latest estimates put the native population at three millions.

The island was called al-Kornu by the Arabs, Buxini (lit. where there are (al) Bade), by the Bantu of the neighbouring East African coast and by certain Malagasy tribes. The Bantu called it "Island of St. Lawrence" because they discovered it on that saint's day, August 10, 1506, and finally it became known as Madagascar from Marco Polo's name for it. The orthography ماداگاسکار vulgarised gave rise to the false etymology Diancubal al-Kornu "island of the moon," with which the Portuguese historians became acquainted in the sixteenth and seventeenth centuries and which survived down to the end of the eighteenth century among the sailors of Southern Arabia.

The name Kornu appears for the first time in the Küch Schir Afar of Muhammad b. Miss al-Khudadim (d. 220 = 833 or 320 = 845), in which mention is made of the famous "mountain of Kornu," جبل الموemet في الروضات, in which the Nile was reputed to rise. But the interpretation by جبل الموemet أب صغير "mountain of the moon" was already old in the ninth century for it is found as early as the 6th century of Ptolemy, who put the whole of Arab geographers and notably al-Khwarizmi took as a model. The mountain called "of Kornu," or "of the moon," is mentioned by all the Muslim geographers who dealt with eastern Africa. We shall see below how and to what degree the name of this mountain is connected with that of Kornu = Madagascar.

In my memoir entitled Le Kornu dans les sources géographiques antiques (1901), I have endeavoured to trace the origin of the name Kornu; the documents there utilised enable it to be connected with the name of the Kornos and of the Kornos

Kuan-lun of the Chinese. The Chinese sources speak also to East Africa in which the Lu fan is a Kao Ju-ku (1225) reproducing word by word two passages of the Liang shu of Cow Ka-lo (479); it is a land of Kornu-lun 昆侖 "mountain of the Zang of the qu-hin," which is close to a large island (Madoq) which is the regular home of the fēn or redha of the Arab, whose feathers are large that they can be used for holding a little bucket of water. The old name of Madagascar has survived in modern geography in the name of the Comoro Islands, the little archipelago lying to the N.W. of the island.

In his Explorations portugaises et Madagascar (Toulon, 1843), F. T. Chevalier, a member of the French Consular Service, speaks of the connexion between Madagascar and the sub-appliance Moros in Asie, as Toulon explicas, 1914, p. 393; F. H. v. d. Kemp, P. F. T. Chevalier's work was a result of the commission for the survey of Madagascar and sub-appliance furnished by the Government of the Dutch East Indies in 1885-1887 (Exped. Archipel. Naut., 3, 1897, p. 317). It is to be connected with the Malagasy word mahuha "king-
dom, subjects” (phonetically: malagash), which is a plural Bantu form (w-a-Rah) malagasson => Bantu plural form, -a-. It is phonetically not the same as Malag. -a-Rah, which reflects nothing, whether we take the form with soft letters malagasi or that with hard noted by the Portuguese: matava-hi. Not do we know whether we have to deal with a western Indonesian root or a Bantu stem. In any case it is probable that we have to deal here with a foreign tribal name, the eastern or western origin of which can no longer be explained from an ancient or modern language.

In the Arab geographers the first detailed account of the island of Komor-Madagascar is found in the Kitâb Nuzhat al-Maghâth fi lâqâdat al-Ifrîqî (1154) of al-Idrisi who included the large African island in the country of the Zang. The people of the island of Zbang = Sumatra” he says in the seventh section of the first cime come to the country of the Zangi in large and small ships and use it as a centre for trading in their merchandise as they understand one another’s language” (MS. 221 of the Bibl. Nat. Paris, f. 296, l. 15). This passage is very important as it shows that in the sixteenth century, Madagascar, wrongly located in the country of the Zangi, had been long before colonised by immigrants from Sumatra who had introduced their language into the island and Malagasy was derived from it. In the eighth section of the same cime the island of Komor (Sumatra) is situated seven days’ sail from the town of Malasy. Its king lives in the town of Malasy. This is an island of months’ journey in length. It begins nearly the Maldives and ends in the north opposite the islands of China. The geographer of Roger of Sicily, as his map shows, has combined into one huge island Madagascar, Ceylon and a part of Sumatra. In the ninth section, we are told that the people of Komor and the merchants of the land of the Malährâsi (= Sumatra) come to the inhabitants of the east coast of Africa and are welcomed by them and trade with them (cf. my Relations de Voyage, Index, s.v. Komor and Komor).

Yâhil in his Madjum (completed in 1824) says simply (vol. v., p. 174) “al-Komor is an island in the centre of the sea of the Zangi, which contains no larger island than this. It contains a large number of towns and kingdons. Each king makes war on the others. Amber and the leaf al-komor (ibid.) are found on its shores. This is a perfume; it is also called bsef flower. Wax is also obtained from it”. The Kitâb al-Maghâdir of the same author contains identical information taken from the Madjum (ed. Wutenfeld, p. 338) but the latter text has more correctly “the leaf al-komor”.

Abu l-Hassan Ali b. Said al-Maghribi, best known as Ibn Said, was born in 32 08 or 1314 near Granada and died at Damascus in 1374 or in Tunis in 1386. The Bibliothèque Nationale in Paris has a copy catalogued as Ms. n° 2234, a treatise on general geography, which runs from f. 1 to 117 and is entitled: “The book collected and annotated by Abu l-H. Said al-Maghribi the Spaniard of the Book of the Geography (of Ptolomy) in seven climes; and he has added to it thelongitude and latitudes from the book of Ibn Pûtnus”. This copy of the original manuscript is dated 714 (1314–1315) and belonged to the celebrated geographer Abu l-Fidâ’i. The text contains in a few lines information of the highest importance to the following effect: “The Komor who have given their name to the mountain of this name, situated in eastern Africa are brethren of the Chinese. They originally lived with the Chinese in the eastern regions of the earth, i.e.
in the interior of the Asiatic continent. Discouraged by their experience, the latter crossed the Komor to these islands. After a certain period of time, dissensions broke out among them, and the Komor who had migrated into these islands, the king and his family migrated once more and went to the large island of Komor - Madagascar and the Komor lived in a town of this large island, called Komory. These Komor immigrants to the large island increased in numbers and spread through the different centres of the island; but new dissensions broke out and provoked a new exodus and many of them went to settle in the south at the beginning of inhabited land along the mountain which bears their name.(cf. Relations de voyage, ii. 315 sq). If we translate these successive migrations into terms of modern geography, we get the following: The Komor, related to the Chinese, originally inhabited Central Asia, migrated from the interior of the continent where they were neighbours of the Chinese to the adjoining maritime islands of the Indian Ocean, Malaya Peninsula and Java; in Decaëns ii. Book i., Chap. iv. of China, p. 352 of the little edition of 1777, the Portuguese historian Juan de Barro says that the Javanese claim to have originally come from China). They later migrated from Indonesia, more accurately from Sumatra (cf. my Empire suarnatrani de Ceylonaya in J.A., 1822, vol. xx.), to the large island which bears their name, the island of Komor - Madagascar and from there to the land of the mountain of Komor, the famous mountain which in the Nile was called Mount Sinai, West Africa. The first migration, that from Central Asia to the coasts of Bassa-Gueule etc. certainly took place long before our era. Several centuries must have passed between the departure of the immigrants from the plains of Eastern Tibet, their expansion in the region of the coast, from Burma to Indo-China and their crossing to Indonesia. Ibn Sa'd lived in the 8th century. How then would he have known of events that took place several millennia before his time and are not recorded elsewhere? Neither the history nor legends of the Far East contain anything of such happenings. The Indonesians, Simogresians, and Indo-Europeanists whom I have consulted cannot think of any text that would bear this account directly or indirectly referring to them. I am surprised at such an assertion being raised by a comparatively late Arabic text and I know no satisfactory answer. I was prepared by my studies on Madagascar to accept Ibn Sa'd's statement that the large African island was colonised by Somatians whose ancestors had come from the Asiatic Continent; this is exactly what Ibn Sa'd tells us. The agreement between the Arabic text and historical events is striking; but this undeniable agreement is unjustified for we do not know as well as we ought how and where such information could have been obtained in the 8th century. I put forward the hypothesis (Relations de voyage, ii. 330) that Ibn Sa'd might have got the information at the court of Hilal or where he spent some time in the 8th century. But we know from his biographers that the Spanish traveller lived in Baghdad, studying medicine at the 8th Institute of that city, and making extracts from manuscripts. He may have found in these works the statements he has so fortunately preserved for us.

The following geographers: Shams al-Din Abu 'Abdallah Sulayf al-Dinaghiri (d. 1335), Abu 'l-A'abbas Ahmad al-Nawawi (d. 1332), Abu 'l-Fida' (1273-1313), Ibn Khaldun (d. 1375), Makrizi (1365-1442) tell us nothing particular about the island of Komor. The town, which some of them locate in the great African island, are really in Ceylon or further east or cannot be identified (cf. Relations des Voyageurs, index, a. e. Komor and Komor).

In the 6th century Ibn Majid (cf. shams al-Din Ahmad b. 'Abd al-Majid) in his Kitab al-Fawaid (cf. Instructions générales et cérémonies arabes et portugaises, vol. i., p. 68, sq) in his Kitab al-Komor among the ten large islands of the world and mentions it after the Arabian peninsula: "The island which is the second in size", he says, "is the island of Komor. It is now an island (sic). The information I have collected orally does not agree with its size, but it is quite apart from the world and the inhabited climes of the earth. This is why there is doubt on the subject. In the large books on geography it is said to be the largest of the inhabited islands. Between it and the land of Sofia and the islands dependent on it (the Mozambique Channel) there are islands and reefs. In spite of this sailors are able to pass among the islands and reefs. The island of Komor takes its name from that of Komor, son of 'Amur son of Shem son of Noah. To the south it has the sea which the Greeks called Ogygias; this is the ocean surrounding the world (al-Mahs in Arabic). It is the beginning of the southern darkness, which is to the south of this island of Komor". Ibn Majid frequently mentions the island of Komor in his other Nautical Instructions also and it undoubtedly is Madagascar. With Susinmø al-Ma'īr (cf. below) our information becomes more definite. In his al-Ma'ārif (Chap. iv., dealing with the islands and sailing routes along their coasts (cf. Instructions générales et cérémonies arabes et portugaises, vol. ii., P. 221), he says: "Let us begin with the island of Komor: because it is a large island which stretches along the coast of Zanz and Sofia. Its northern extremity is called Rās al-Milh (= Amber Cape); it lies in 11° 32' of N'aah (4° 47' of the Great Bear = 8° 37' South; the true latitude is 11° 37'). Its southern extremity which is called Miftah (= Cape Sainte Marie) is in 3° 18' of Naga (4° 57' South; the true latitude is nearly 25° 38') according to some, in 3° 30' of Naga (4° 51' South) according to others. This latter latitude is the most accurate. There is a discussion of opinions about the direction of the sea-routes along its coasts, because this island is remote from the inhabited earth. There are two opinions regarding the direction of the route along its eastern coast: according to one some should sail S.W., W. according to others S.W. There is a third opinion that one should go W.S.W., from one end to the other of the island. This last view is that of the older sailing
MADAGASCAR

western. In my opinion, adds Sulaiman al-Mahri, it is possible that the route should be W.S.W., then S.W., then S.W., and in another direction still for two reasons: the first that it is a large island, that its coast is long and the route is also long. The second reason is that the directions given have not been verified on account of the fewness of the voyages made to this island and the insufficient nautical knowledge of those who have been there. Sailing-masters (nawā'īlim) of Zanz have told me that the route on the east coast from Rūs al-Mīlīm to the place where Naḥš is in 6 ḫarīb (13° 50') south is to the south and from this place to the south end of the island is S.-1-S.W. I have recorded that the route on its west coast from Rūs al-Mīlīm to the place where Naḥš is 6 ḫarīb (13° 50') is to the south and from this place to the south end of the island S.-1-S.W. On the west coast from Rūs al-Mīlīm to the place where Naḥš is 6 ḫarīb (16° 44') the coast is perfectly safe; from 6 ḫarīb to its south end there is a āshūr (bank or shallow) about 2 sahūr (6 hours) sail or more in length to the neighbourhood of the coast. Between the island of Komr and the coast (east coast of Africa) there are four large inhabited islands, near one another, to which the people of Zanz go. The first of these islands is Ḥabishayda (Great Comoro). It is in 11 ḫarīb of Naḥš (9° S. approx.; Murl, the capital of Ḥabishayda, is in exactly 11° 40' South). Between it and the African coast it is 16 sahūr (48 hours) sailing. The second, Mūlaḏ (our Mohandis), is in 11 ḫarīb of Naḥš (8° 37' S., true Lat. about 12° 20'); the third, Dūmān, (capital of Anjouan) which is in 11 ḫarīb of Naḥš (8° 37' S., true Lat. 12° 15') is to the east of Mūlaḏ; the fourth, Mawwūt (our Mayotte) is in 10 ḫarīb of Naḥš (9° 25' S., true Lat. 12° 46' 55''). From the east of these islands lies a great reef of rocks, with sand 4 sahūr (12 hours) sail, usually called ʿAin al-Fakhr (eye or source of the sea). The harbours of the west coast of Komr are Lāngānī (15° 17' S.), Sūdā (true Lat. approx. 15° 34' and Mansābūlī (the bay of Mahādsamba, whose west point is in approx. 15° 42' Lat.). Those of the west coast are Bender Bani Isma'īl, in the same latitude as Lāngānī, on the south side, and Tūmānī, Vohemar in 15° 21' 15''. All these ports are dangerous (for ships) except Lāngānī. Know that between Rūs al-Mīlīm and the coast of Zanz, there are 50 sahūr (150 hours) sail; and 20 sahūr (60 hours) to the east of Rūs al-Mīlīm there is an inhabited island called Munawwarī (one of the southern Maldives?). To the southeast of the island of Komr lie numerous islands called Triqānī (the Mascarene Islands); they are 12 sahūr (36 hours) sail from the island of Komr.

In his Ḧabīb al-Mundhīrī al-Fāhrī (f. 73b of the same MS), Sulaiman al-Mahri gives another description of the island of Komr which does not differ from that given above. Four pages earlier on f. 72b he mentions several other harbours on the island of Komr with their latitude calculated from the altitude of the Great Bear.

Island of Munawwarī by 11 ḫarīb; Bender Isma'īl or Bani Isma'il on the east coast and Lāngānī or Lāngānī on the west by 10 ḫarīb; Bimarūt on the east coast, Amsānīl on the west by 9 ḫarīb; the island of Ambūr (Qūṣārat al-ʿAmar) on the east coast and Bender al-Nūbī on the west by 3 ḫarīb; Noshaqī (f. 73b) on the east coast and Malāwūn (f. 73b) on the west by 7 ḫarīb; Malāwūn on the east coast (true Lat. 24° 38' 50'') and Bender al-Shūḥān (port of the banks), by 6 ḫarīb; Bender Ḥaddū on the east coast and Bender Kūrī on the west by 4 ḫarīb; Wābūya (according to the Turkish text of Sūdī, the name is illegible in MS. 2559) on the east coast and Bender Hit (or Hāt) on the west coast by 5 ḫarīb; Bender Ḥaddū (sic) on the east coast; no name known on the west coast in this latitude by 2 ḫarīb; Bender Kūrī (or Kus) on the east coast and the bay of Kūrī on the west coast by 1 ḫarīb; the majority of the names of harbours, which are sometimes found on both coasts recall nothing known elsewhere.

Malagasy undoubtedly belongs to the western Malagasy-Polynesian group of the Malayoe-Polynesian family. Down to the adoption of the Arabic alphabet, the language was only oral and, so far as we know, never written down in any alphabet. The lack of epigraphic material on the one hand and of ancient monuments on the other deprives us of any chance of regaining the past history of this vast island. Before the 18th century, a few Arabic and Chinese texts would constitute our only documents, if the linguistic substrata did not yield us some valuable information. These substrata are of two kinds, Bantu and Sanskrit.

These former are divided into three categories: 1. The borrowings of relatively recent date from Swahili, which is in turn got them from Arabic, of the type: Malag. kibutu, "sea" &c. ; < Arabic kibbat ; Malag. kombu, "coconut fibre" &c. ; < Swahili kombu &c. ; Malag. masita, "udder" &c. ; < Swahili masita &c. These loanwords are practically only found in the maritime dialects of the N.W. and W. coasts.

2. The borrowings from Swahili of the type: Malag. buli, "sea" &c. ; < Swahili buli &c. ; Malag. sūna, "master," &c. ; < Swahili sūna &c. ; Malag. bibita, "measure of rice" &c. ; < Swahili bibita, "measure of about a quart," &c. Like the preceding, these loanwords are found almost solely in the maritime dialects of the western coast; it may therefore be assumed that they also are of recent introduction.

3. The following words are, on the other hand, used mainly in the old and modern coast dialects or in the dialects of the centre and east, that is outside of the zones frequented by the sailors of the east coast of Africa, Zamibor and the Comoro. They are found in manuscripts of the Bibliothèque Nationale and in old records of travel; they are not borrowings, but belong to an old substratum of the language: Malag. anonda "dog" &c. ; Bantu mwebu ; Malag. akungi "guinea-fowl" &c. ; Bantu kunga ; Malag. amplanandr "eas" &c. ; Bantu dama ; Malag. akinutu, akinutu, akiri "fox" &c. ; Bantu ngwembo ; Malag. anglabem "tail, fable" &c. ; Bantu angwembo ; Malag. akonvintre, akonvintre "sheep" &c. ; Bantu imbili ; Malag. veveka, veveka "green pigeon" &c. ; Bantu imweka ; Malag. larea "kind of lemon" &c. ; Bantu ngedere "little black monkey" &c. ; Malag. kโป" "in the tribal name Kasi-mumti "madame" &c. ; Bantu mosei, mosei, mosei, mosei, mosei;
Skr. śāle "glass" > Malag. ə̀sä > old Malag. ə̀säta; Skr. śāla: "melon, pumkin" > Malag. ə́sàtn; Batak ə́säta > Malag. ə́sätna.
Skr. mṛgha "cloud" > Malag. mga > old Malag. măga; Skr. mąhā "hotel" > Javanese mıhá > old Malag. māhā; Skr. māla "kind of palm-tree" > Batak mala; Malag. Javanese, Sundanese lanta > Malag. dava "kind of palm-tree"; Skr. aṃguśa "fast" > Malag. punvina > old Malag. ofa "act of fasting"; Skr. catun "four" > Atilhene catu "a square game played by women" > Malag. ə̄ṭra; Skr. māndapa "building erected on the occasion of a festival, a pavilion" > Mal. mānḍapā, pavilion, building in which guests are received > Malag. mān̄a, in composition mān̄a, "royal residence, court, palace, tribunal, a roof in the centre of the village under which business is discussed"; Skr. catura "manual, book, magic treatise" > Balinese catur "story, fable, in which animals are the principal characters" > Malag. catūhā "story, legend, tale"; Skr. tawrī "copper" > Malag. tawrī > Balinese tawrī "red copper" > Malag. tawrī, tawrī, tawrī; Skr. varunama "ginger" > Malag. bavařānu and the form with metathesis bavānu, etc.

INTRODUCTION by Muslims speaking Arabic, Islam has left numerous traces in Madagascar; the first and most important is the Arabic alphabet. The task of adapting the Arabic alphabet to the transcription of Malagasy was delicate and difficult. It was however satisfactorily accomplished. The Malagasy sounds a, i, y, e, a, e, ø, ø, ø, ø were transcribed by the corresponding Arabic letter.

The other sounds were rendered as follows: Malag. g by ֕, page; gutural ֕ by ֕ and sometimes by ֕; the group ֕ also by ֕; the sounds ֕ and ֕ which in Merina represent practically the d or t or the English d or t (they are pronounced a little farther back in the non-Merina dialects) generally by ֕, sometimes by ֕ with a tanwin (e.g. antandré, "date-palm" is rendered by ֕ and the context alone indicates whether ֕ is to be read or or or) Malag. by ֕ with a point below; ֕ by Arabic ֕; Malag. by ֕ but the Arabic ֕ is also pronounced ֕: Arabic ramaññā : Malag. ramaññá; Malag. by ֕ pronounced ֕: "little child"; the sound ֕ by ֕ and in modern Arabic-Malagasy sometimes by ֕.

The Islamised non-Semitic peoples, who have adapted the Arabic alphabet and who have to transcribe the occlusive ! have employed various notations: The Malagasy have rendered it by ֕; the Persians and following them the Muslims of the Comoro archipelago by ֕; the Swahilis of East Africa by ֕; the Malagasy adopted an unexpected solution of the problem: down to the 18th century they rendered ֕ by ֕; i.e. ֕,
contrary to Malay, each letter is vocalised, which renders the reading of Malagasy-Arabic texts easy in spite of the variations in orthography, which are too numerous to be given here.

The Arabic-Malagasy alphabet was once used over a very considerable area; at the present day, it is only used on the S.E. coast where very many natives were still using it at the end of the sixteenth century. The Malag. Muslims of the N.W. and W. prefer to use the Arabic-Comorian and Arabico-Swahili alphabet. The latter renders by the Arabic letters _redirect to Malag. 19 but this form is only used in the island of Anjoan. The dialect of this island which has a transcribes it by 19, the 1 of Persian and Turkish. The Arabic letters 19, 19, 19, 19, 19, 19, 19, 19, 19, 19, 19, and 19 are only found in Malagasy, when Arabic words are quoted and they are pronounced respectively 19, 19, 19, 19, 19, 19, 19, 19, 19, and 19.

Malagasy manuscripts in the Arabic character bear the generic name of 19"68 prototype; i.e., "special writing". They used to be difficult to obtain; the owners gave them an esoteric character, which did not allow their contents to be communicated to a stranger. I was able to get some copied and to acquire a few others between 1890 and 1894. The Bibliothèque Nationale in Paris has ten, of which eight are undoubtedly old. MSS. 2, 3, 4, and 5 came from the old Abbey of St. Germain des Prés; No. 6 is also old, although it was only acquired in 1820. Thanks to an inter-linear transcription and Latin translation by a European, which can be dated on palaeographical grounds between 1595 and 1620, it may be presumed that No. 7 reached Europe in the second half of the XVII century and must therefore have been written before that date. According to MS. No. 1, by the famous Mansa, who has been brought to France in 1743; the MS. 3, 5, 5, 5, 5 exactly classed with the Arabic manuscripts is also an old Malagasy manuscript. MS. 6, given by the Due de Donze to the Abbey of St. Germain des Prés has coloured drawings, coarsely executed of man, animals, trees, and zambalistic figures but not a single line of text. MS. No. 13, is a copy of four short modern manuscripts. With the exception of 1 and 13, all the manuscripts are on native paper, written with the 19, with native ink. Flacourt gives a detailed description of them in his Histoire de la grande ile Madagascar (p. 154 sqq. of the edition 1661). The subject matter of the manuscript is very varied. There does not seem to have been a 19"68 prototype out of which all the others proceeded. In an apparent disorder, the result of the fancy of the author or the抄手, we find collected slurs of the Kariim, interlinear lists of the names of Allah, and of names of angels, Arabic religious texts with interlinear Malagasy translations (e.g. the facsimile publ. in N.E. vol. xxxviii., 1904, p. 1577); Arabic-Malagasy glossaries, magic texts, and invocations in large numbers, magic squares and formulae, texts showing the magic influence, good or bad of the planets, signs of the zodiac, lunar mansions, months, and days of the year, of the male and female character of the twelve Muhammadan months (Malagasy is male, 19, and female, and so on, in MS. No. 2 sqq., 267), of patterns for amulets (biroz < Arabic 667), etc.

The slurs of the Kariim are not reproduced in the order which was settled at the revision ordained by the Caliph 'Uthman. MS. 6 gives them in the following order: 667, 667, 667, 667, 667, 667. Then come verses 1-4 of Sura xxiv., verse 256 of ii., verse 16 and beginning of verse 17 of iii. The same MS. also contains Sura xxxi., (f. 136v.) and f. 136v.-138v., verses 158-159, 137, 256-259, 284-286 of Sura ii. and verses 25-26 of Sura iii.

Here we may mention several texts of particular importance, one of which is certainly unexpected. MS. 3 contains a bilingual glossary of 36 common words, Malagasy and Dutch, the two languages being transcribed into Arabic characters. It was published in B. T. E. F., vol. ixxi., 1908. I have suggested that it must have been compiled by the interpreter of Frederic de Houghton, who was sent four years with the missionaries and spoke their language well. He had supplied Houghton with "his collection of Malagasy words".

MS. 5 contains from f. 32v. to 38v. an Arabic poem with Malagasy translation in honour of a certain Lallia (I have not yet been able to ascertain if this is the lover of Madinin, or of some Lallia in Arabic literature). The piece begins "The poet said..." and ends ..., the girl who possesses beauty and kindness." The Arabic verses are of an unusual accuracy and show that whoever reproduced them had a very superficial knowledge of the language and poetry.

MS. 8 (f. 52v. to 56v.) preserves a 667 in Arabic entitled 667, son of Sultan 'Uthman. The mention of the last of the 667 caliphs seems to indicate that the Malagasy converts to Islam, among whom this 667 was in use, had been converted by Annu who had left Baghdad or a country under the Muslims in this caliph's reign, i.e. between 640-656 (144-150). We cannot explain otherwise how the title "Commander of the Faithful" in a 667 used in Madagascar. As to the Sultan 667 (perhaps we should read 667 and translate "Sultan 667 who is here", the 667 then indicating the Sultan in question), I have not been able to identify him. As it is written, the name is neither Arabic nor Malagasy. MSS. 7 and 8 contain two identical versions of a religious text which I published in N. E. (xxviii. 440 sqq.). In a passage devoted to the glorification of the month of Ramadan, the anonymous author succes-
sively invokes the prophets of the Old Testament, Jesus and Mary, the Prophet Muhammad, the first four caliphs, Hasan and Husain and finally Abū Ḥanīfa al-Nuʿman, the great Sunni Imām, and Muhammad b. Idrīs al-Shīfiʿi, the founder of the Sunnite school which bears his name. The mention of these two learned men and the ḍāha ḍ already mentioned are evidence of the orthodoxy of certain Muslims of Madagascar and perhaps one may say of the generality of Muslims on the southeast coast. But the same manuscript No. 5 contains a Persian text which prevents us putting forward this conjecture. The latter text which is still written is found on f. 225—278. The last line invokes the ʿajār al-muḥāṭa, then, the first night Imām's of the Shiʿa sect of the ʿTwelveers" (cf. ʿIRRISH ʿAHDARIYA) to whom the author has added "All Akbar ("All al-ʿezar") son of Hussain and half-brother of ʿAlī Zain al-ʿĀbidin. The mention of these Imām's of whom the last named, "All al-Řidā, reigned from 183 (500) to 202 (518) is valuable, for it implies that the writer of this text belonged neither to the schismatic sect of the Žaidīya founded in 695 ʿA. 1 by the schismatic Shiʿa sect of the Jamīʿ, which dates from 765 ʿA. 1, but to the orthodox Shiʿa sect of the ʿTwelveers". The Persians who followed the Persians who were drawn from the Persian historical tradition make come from ʿIrāq and colonise Kīwa on the east coast of Africa and the island of Anjouan in the Comoro Archipelago were Žaidīya (cf. G. Ferry, Les Collection de Kīwa, in Journal de l'École Française du Maghreb, in press) who cannot come into consideration in the present case. The Imām's, whose presence in Madagascar is evident from MS. No. 5 also form a separate group different from that of the Persians who had immigrated to the adjoining coast of ʿIrāq.

The Arabic-Malagasy manuscripts which I possess, those of the University Library of the Faculty of Letters in Algiers and others which I have been able to examine, are of the same type, similar in contents to those of the Bibliothèque Nationale, with the exception of the Žuhāṭa and the Persian text, which so far as I know are found nowhere else. Quite a considerable number of manuscripts like MS. 13 contain genealogies of kings of the South- east, from which all these documents come, and local histories. One of these gives details of La Cosa's campaign in the Island of 1639—1663 (cf. N. E. 1907, xxxix).

The majority of the religious texts which are found in the Arabic Malagasy MSS. of the ʿIrāq. Nat. are translated into Malagasy. The Arabic past is very incorrect and the Malay translation seems that the exegetes of Madagascar understood very little of it. The illustrious and lamented Gombe, to whom nothing Islamic was foreign, was interested in the texts which I published. Comparing three translations of the Malagasy text with the Arabic text he concluded that "the meaning of the fundamental ideas was most gravely misunderstood" (L'École française des Lettres et des Méthodes d'Algérie au XIXe Congrès des Orientalistes, in K. H. K., 1905).

The borrowings of the Malagasy from the Arabic are overwhelming, there is no limit. Many are many and are found throughout all the tribes of the island without exception. The most notable are the names of the days of the week: al-ʿāshātun, šibilla, al-ṣihāba, al-šabtabi, al-šaʿbūtun, waḥa, al-śabta, al-ṣibbi. We may note that the Arabic article has been retained for Monday, Wednesday, Thursday, Saturday and Sunday but dropped for Tuesday and Friday. The names of the days are here given in the Merina dialect; the forms of the other dialects show the regular phonetic variations.

2. The names of the twelve months in Merina and in the dialect of some other tribes reproduce the Arabic names of the twelve signs of the Zodiac: ʿal-ḥārim, ʿal-ḥātātan, ʿal-ḥāmar, ʿal-ḥābbīth, ʿal-ḥārābīth, ʿal-ḥāmarī, ʿal-ḥāmarī, ʿal-ḥāmarī, ʿal-ḥāmarī and ʿal-ḥārātun in which we readily recognise: ʿal-ḥāram, ʿal-ḥātan, ʿal-ḥātan, ʿal-ṣuqā, ʿal-ṣuqā, ʿal-ṣuqā, ʿal-ṣuqā, ʿal-ṣuqā, ʿal-ṣuqā and ʿal-ṣuqā. Quite a number of tribes do not know the Merina series, but still use the names of Sanskrit origin given above (p. 68, col. a).

3. The names of the 28 days of the month (the S. E. Malagasy however once had a year of 366 days) which are recorded by Flacourt (Histoire, 1661, p. 174) recall those of the 28 lunar mansions of the Arab. According to the empirical method adopted by al-Sūfī and other writers, i.e. dividing the 28 mansions by 12 the latter are evenly distributed among the signs of the zodiac. *Know* says al-Sūfī, "that each of the signs of the zodiac has two mansions and a third" (A. C. de Molyneux, Les Mansions Considérées des Arabes, texte de Muhammad al-Maqrī, transl. and annot., Algiers, 1899, p. 68). In Madagascar as well the 28 days of the month have been divided into 4 weeks of 7 days each, a division which is not completely accurate, but is used as a general rule.

Signs of the Zodiac         Lunar Mansions
1. ʿAl-ḥāram            1. ʿAl-ḥāram = al-ḥāratun
2. ʿAl-ḥātan            2. ʿAl-ḥātan = al-ḥurātan
3. ʿAl-ḥāmar            3. ʿAl-ḥāmar = al-ḥurātan
4. ʿAl-ṣuqā            4. ʿAl-ṣuqā = al-ṣuqā, al-ṣuqā, al-ṣuqā
5. ʿAl-ḥāmar            5. ʿAl-ḥāmar = al-ḥakā
6. ʿAl-ḥāmar            6. ʿAl-ḥāmar = al-ḥanā
7. ʿAl-ṣuqā            7. ʿAl-ṣuqā = al-ṣuqā
8. ʿAl-ḥāmar            8. ʿAl-ṣuqā = al-ṣuqā
9. ʿAl-ṣuqā            9. ʿAl-ṣuqā = al-ṣuqā
10. ʿAl-ṣuqā           10. ʿAl-ṣuqā = al-ṣuqā
11. ʿAl-ṣuqā           11. ʿAl-ṣuqā = al-ṣuqā
12. ʿAl-ṣuqā           12. ʿAl-ṣuqā = al-ṣuqā

The Arabic names of the lunar mansions thus become the names of the 28 days of the Malagasy months. Mentioned along with the day of the week, they take the place of the ordinal which the Arab-Malagasy texts rarely indicate by a figure. This method seems to have been used in Madagascar and in the succeeding centuries, so that it is hardly used except in memory.

4. The ʿshīṭī (dialecical variants: ʿshīṭī, ʿshīṭī; ʿshīṭī, "figure") is the art of divination; its object is to find out what is not known and the means of discovering a remedy against it. Used throughout the island with slight variants from tribe to tribe, it is a direct derivative from the ʿshīṭī al-ṣawal, lit. the science of sand or Arab-germancy (cf. the Kitāb al-ṣawal fi ṣawal 'al-ʿanf of Shāhīd Muḥammad al-Zamātī, lit. Cairo, n. d.). Shāhīd al-Zamātī's treatise from which is derived all those in use in Madagascar comprises the following 16 figures:
Each figure of the table bears a name of its own and is composed of a certain number of dots, maximum eight (IV) and minimum four (XIII). Four figures have five dots (V, XII, XV and XVI); six have six dots (II, III, VI, X, XI, XIV) and four have seven dots (I, VII, VIII, IV). Each figure governs a certain number of things or beings; according to the question put to the diviner, the latter considers very carefully the figure relating to the question asked. The influence of each of the figures comes from the sign of the zodiac, planet, day, Arakh month and from one of the four elements to which it corresponds. It is also lucky or unlucky, male or female, fālāh (applying to the person consulting the fates) or maṭṭāb (applying to the question asked); it is more or less strong and powerful in such and such conditions, and it also shows in what state the thing asked shall be realized. The 16 figures of the table are divided into different groups each bearing a particular name:

- the ṣubūkkī, "those who enter," which number three (XI, II, XV). If they are present in a large number in the ṣubīk directed by the diviner, it is a very auspicious sign and the questioner will certainly obtain what he seeks. If one of the ṣubūkkī proves to be the first figure, the object sought enters, i.e., is obtained;

- the shawārī, "those who go out" are three in number (III, X, XII). If they are several times represented in the ṣubīk directed by the diviner, it is an unlucky omen and the object sought will be unobtainable. If one of the ṣubārī proves to be the first figure, the object "goes out," i.e., is lost to the seeker;

- the mubārikī, "those who return" (I, V, VI, IX, XIV, XVI) are sometimes lucky, sometimes unlucky, according to circumstances. If one of the mubārikī is the first figure, the operation will remain without a definite result;

- the ṣundhāī, "those who are fixed, who do not vary" are the figures I, II, XI, XII, XIII, XV. They are lucky and assure that the seeker will gain his end;

- the maṭṭābī, "the dismal" are figures III, VII, VIII, XI. If the first figure is one of the maṭṭābī the questioner will not obtain what he asks or will not escape the misfortune he fears.

The figures I, IV, VII, X are called mubārikī, "the pious," if the four figures found in it are similar, success is assured.

Figures II, V, VIII, XI are called ṣawādī, al-ṣawādī, "what concerns the pious." If the four figures found in it are similar, the desire expressed, will be realised.

Figures III, VI, IX, XII are called ẓāhiq al-ḥulūlī, "the cure of the pious." If the four figures found in it are similar, the object desired is coming and will arrive or the desire is completely realised at the moment of consulting the diviner.

The sixteen figures are also divided into two groups of eight: one is called ṣawādī, al-ṣawādī, "figure of him who asks"; these are the eight who represent him who is consulting the fates; the other ẓāhiq al-ḥulūlī, "figure of the thing sought", i.e., those who have to answer the question. If the first figure of the ṣawādī is among the eight fālāh, and the seventh among the eight maṭṭābī, it is a very good omen. If on the other hand, the first figure is maṭṭābī and the seventh fālāh, it will be impossible to avert the evil fate. It must also be enquired if the fifteenth figure of the operation of the diviner is ẓāhiq or ẓāhiq, if fālāh, it is lucky and if maṭṭābī, unlucky.

If the ṣawādī is consulted on behalf of a sick man the presence of figures VIII, VI, V, XIV, IX, XII indicates his approaching end.

The four first figures of the table are also called ṣawādī, al-ṣawādī, "houses of the days," repeated several times they indicate that the thing sought will be realised in the course of a day. The four following (V-VIII) are called ẓāhiq al-ḥulūlī, "houses of the weeks" and indicate an interval of a week; the four others (IX-XII) ẓāhiq al-ḥulūlī, "houses of the months" indicate an interval of a month and the last four (XII-XVI) ẓāhiq al-ḥulūlī, "houses of the years" indicate an interval of one or several years. If one of the houses of the days occupies a position other than the first four, the interval increases in proportion and is remote from the first four places. On the other hand, if one of the houses of the weeks, months or years is found before its place, the interval diminishes in proportion to its nearness to the first figure.

The figures I, III, V, and X mark the direction of the east; VIII, XII, XIV and XV, the direction of the west; II, IV, VI and VII, the direction of the north; IX, XI, XII, and XVI, the direction of the south.

Figure I of the preceding table is called al-ḥulūlī or ẓāhiq. The first of these names has passed into Malagasy as the word alakhbarī. It represents the person who comes to consult the diviner; its zodiacal sign is Libra; its planet Jupiter; its day Thursday and its element, the fire.

The corresponding figure is the fifteenth. It is lucky, male and fālāh; i.e., it is one of the eight figures representing him who consults the fates. Its month is Dam 'Ukhālī. If in the preparation of the ṣawādī it occupies the first place, the thing demanded will be realized after an interval of three days. The amount of happiness and success which it brings will be greater if it occupies the first place.

Figure II (ḥulūlī, al-ḥulūlī, Malag. alakhbarī) is that of wealth, riches, possessions, and businesses and merchandise of all kinds. Its sign of the zodiac is Sagittarius; its planet, the Sun; its day, Sunday; its element, fire. The corresponding figure
is the tenth. It is lucky, feminine and maghrib, i.e., it is one of the eight figures which represent the thing sought. Its month is Djamâd al-Awwal. If it occupies the fourth place, the desire of the seeker will be accomplished after an interval of 55 days; if it is in the fifth place, it is still propitious; if in the fourth it indicates greatness.

Figure III (bâbût al-khârijîâ, Malag; alânû) is that of the family, especially brothers and sisters. Its sign of the Zodiac is Râs Djawâghtî (<Pers. râs Džwâghtî; "the head of the Dragon"); its planet Saturn; its day, Saturday. The corresponding figure is the tenth. It is unlucky, male and fâlîh. If it is in the fourteenth place, the interval necessary for the accomplishment of the desire formulated is 150 days. It reaches the maximum size in the ninth place and strength in the third. Its metal is gold.

Figure IV (al-djumâa) > Malag; âwma, ruma) is that of the country, gardens and borders of the dead. Its sign of the Zodiac is Virgo; its planet Mercury; its day, Wednesday. The corresponding figure is the fourteenth, its element blank earth. It is good or bad according to circumstances and maghrib. Its month is Djamâd al-Khîrî. If it is in the fourteenth place, the interval before the realization of the desire expressed is 26, 53 or 150 days. It is large in the sixth place and strong in the fifth and tenth. Its metal is silver.

Figure V (al-kumma) <Pers. kumât or al-fîramî; Malag; akhânah) is that of children and babies. Its sign of the Zodiac is Libra, its planet Venus, and its day, Friday. The corresponding figure is the twelfth. The south wind is its element. It is neither good nor bad; it is fâlîh and female. Its month is Djamâd. If it occupies the fourteenth place the desire expressed is satisfied the day following. It is large in the twelfth place and strong in the fourth, eighth and eleventh. Its metal is gold.

Figure VI (al-akhir) > Malag; akûkû, akânû) is that of the sick, of aunts, of war, of slaves, of the property, of remedies and of ships (sailing ships of the West, i.e., Indian Ocean). Its sign of the Zodiac is Aquarius; its planet, Mercury; its day, Saturday. The corresponding figure is the seventeenth. Its element is the west wind. It is good or bad according to circumstances, fâlîh or maghrib. Its month is Djuhâl al-Ka'da; it is female. If it is in the fourteenth place, the interval before accomplishment of the desire expressed will be fifteen days. It is large in the ninth place and strong in the eighth, eleventh and twelfth. Its metal is silver.

Figure VII (anîrî > Malag; alikirî) is that of husband and wife, of women and of sexual relations. Its sign of the Zodiac is Capricorn; its planet, Saturn; its day, Saturday and its element earth. The corresponding figure is the sixth. It is unlucky, fâlîh or maghrib, male or female according to circumstances. Its month is Shawwâl. If it is in the fourteenth place, it indicates an interval of 56 days before an answer to the question asked the diwan is obtained. It is large and strong in the second, ninth and twelfth. Its metal is silver.

Figure VIII (amûsû > Malag; akhâmû, akâmû) is that of death and removal. Its sign of the Zodiac is the Ram; its planet Mars; its day, Tuesday. Its corresponding figure is the sixteenth, its element, sun. It is unlucky, fâlîh and male. Its month is Muharram. If it is in the fourteenth place, it indicates an interval of 21 days. It is large in the first and strong in the seventh. Its metal is iron.

Figure IX (bâbût al-khârijîa > Malag, akîhîa, akîbihîa) is that of departure and of those who clothe the dead in white linen. Its sign of the Zodiac is Cancer; its planet, the moon, its day, Monday. Its corresponding figure is the thirteenth and its element is water. It is neither lucky nor unlucky but may be one or other according to circumstances. It is fâlîh and female; its month is Djamâd al-Khîrî. In the fourteenth place it indicates an interval of ten days for the accomplishment of the desire expressed. It is large in the ninth and strong in the eleventh. Its metal is copper.

Figure X (bâbût al-khârijîa) > Malag; alânû) is that of strength and of rulers. Its zodiacal sign is Leo, its planet: the sun; its day, Sunday; its element fire. It is male, fâlîh and very lucky. Its month is Djuhâl al-Ka'da. In the fourteenth place the interval before the accomplishment of the desire is 52 days. It is large in the tenth and strong in the thirteenth. Its metal is gold.

Figure XI (bâbût al-djumâa > Malag, amaronâz) is that of life in towns, of return to the domestic hearth, of ambition, friendship and of children. Its sign of the Zodiac is Taurus, its planet Venus, its day, Friday, its element, black earth. The corresponding figure is the fifth. It is male, lucky and fâlîh. Its month is Ramadân. If it is in the fourteenth place, ten months will have to pass before the realization of the desire. It is strong in the fourteenth place and large in the eleventh. Its metal is copper.

Figure XII (bâbût al-khârijîa > Malag, karîdan) is that of enemies, cunning and ambushes. Its sign of the Zodiac is Djuhâl al-Djawâghtî, the Dragon's tail', its planet Saturn, its day Saturday. The corresponding figure is the third, its elements are: water and earth firms. It is unlucky, maghrib and feminine. If it is in the fourteenth place, the interval before the accomplishment of the desire is 66 days. It is large in the twelfth and strong in the thirteenth. Its metal is iron.

Figure XIII (bâbût al-khârijîa > Malag, karîban) is that of the road which leads to the house of death, to the cemetery. Its sign of the Zodiac is Cancer; its planet, the Moon; its day, Monday. The corresponding figure is the ninth, its element is water. It is lucky, maghrib and female. Its month is Djuhâl al-Ka'da. If it is in the fourteenth place, the interval before the accomplishment of the desire will be 50 days. It is large in the fourteenth and strong in the fifteenth. Its metal is copper.

Figure XIV (bâbût al-djumâa, akîhîz) is that of learned men, of remedies, of knowledge, arms and medicine. Its sign of the Zodiac is Gemini; its planet, Mercury; its day, Wednesday. Its corresponding figure is the fourteenth. Its element is the wind. It is lucky or unlucky, male or female, fâlîh. Its month is Djamâd al-Khîrî. In the fourteenth place which is its own, it indicates an interval of 6 months before the accomplishment of the desire. It is large in the fourteenth and strong in the fifteenth. Its metal is iron.

Figure XV (bâbût al-djumâa, Malag, akâmû) is that of the judge. Its zodiacal sign is Pisces; its planet is Jupiter; its day, Thursday and its element, water. The corresponding figure is the
first. It is lucky, male or female and pilik its mouth is 'Shawwal. In the fourteenth place the interval before accomplishment of the desire will be 55 days. It is large in the fourth and strong in the eleventh. Its metal is iron.

Figure XVI (nafi al-adhamid > Malag. kimis') is that of the end of all things and the last of the sikili. Its sign of the Zodiac is Scoepio; its planet Mars, its day Monday and its element water. The corresponding figure is the eighth; it is lucky or unlucky, male or female and molfi; its mouth is Djinmad also 'Awali. In the fourteenth place it indicates an interval of seven days before the realisation of the desire. It is large in the fourth and strong in the eleventh which is its own and its opposite is copper.

There are the sixteen figures of the sikili and the significance given them in Madagascar.

As its Arabic name shows, this 'science of the sand' was first practised by tracing lines or dots on the sand; in Arabic one says jarias al-rum. 'to strike the sand', to describe the preparation of the ibn al-rum. On the east coast of Africa Swahili the same operation is called kipucu haa, lit. 'to strike the planchet' (which implies that the dots forming the sixteen figures are inscribed on a planchet) or rami, a Bantuised form of the Arabic rami 'sand'. At the first the lines or dots were traced on the sand, then on a planchet of wood and lastly as in Madagascar on paper. According to another Malagasy method, the diviner also uses grains of sand, or seeds, especially those of the fano tree (Fistacia ventricosa, Bhi).

When requested to consult the fates by the sikili, the diviner first of all pronounces the invocation: 'Awake, O God, to awaken the Sun! Awake, O Sun, to awake the Cock! Awake, O Cock, to awaken Man (albhumulum). Awake, O Man, to awaken the sikili; not that it may lie, not that it may lead us to error, not that it may make us laugh, not that it may say foolish things, not that it may deal with any matter of no importance, but that it may search out secrets, that it may see what is beyond the mountains and the other side of the forest that it may see what no human eye can see. Arise! for thy skill which comes from the Muslims with long hair (al-bhumhum) or from the high mountains, from Niaparabika from Tapelakatsaketsia, from Zafihimani (eponym of a tribe of the south-east converted to Islam), from Andriamivohitrahi, from Rakeliharanana, from lanaharo (eponym of another south-eastern tribe, converted to Islam), from Andriamihisahamba, from Yasima (a dwarf tribe, of African origin as the name shows; the old owners of the soil), from Anakandriamanahatra, from Rakeliharaha (lit. the little man with long hair) Arise! for we do not have thee for nothing; for thou art dear and cause expense! We have taken thee in exchange for a fat, well-fed cow with a large hump. And for money on which there was no dust (i.e. coins) which are still circulating. Awake! for thou hast the confidence of the ruler and also the respect of the people. If thou art a sikili that can speak, a sikili that can see and that does not repeat (only) the gossip of the people, the man killed by its owner, the ox killed in the market, the dust which clings to the feet (i.e. a sikili who does not repeat what everyone knows); awake, on the mat which is on this very spot.

(cf. Antananarivo Annual and Madagascar Magazine, 1886, p. 221) If the diviner operates with seeds, he takes a few at random and counts them two by two until at the end he has one or two which are placed at the top of the figure. The operation is repeated four times which gives the four rows of dots of the first figure.

When the diviner works on paper, he traces the julum a line in the form of the arc of a circle, the centre of which is indicated by a dot. The sum of the dots and initial and final curves (each of which counts as a dot) must not exceed 4, although the uprisikili is understood to make the dots without counting them. He then draws three other concentric curves in the same way. This done, the dots are counted two by two and line by line from left to right. A vertical line separates the groups of two dots from one another. After the last vertical line there remains either the final curved line which counts as a dot, either a point or a line, i.e. two dots. This or these are written opposite each line and given figures I, II, III, IV:

The four first figures are called in Arabic non-merah 'the mothers':

Figure V is obtained by transcribing vertically from right to left the line a, b, b, b and a give in the same way figures VI, VII and VIII. These four new figures derived from the four first are called malum 'the daughters':

Figure IX is formed by adding horizontally the dots of I and II (in the addition • + • = ••, •• + •• = ••••, •••• + •••• = ••••••). All the other figures are similarly formed: III and IV give X; V and VI give XI; VII and VIII give XII; IX and X give XIII; XI and XII give XIV;
XIII and XIV give XV; and XV and I give XVI.
The eight last figures are called kāfū al-daʿūrīa "the daughters of the daughters".

These sixteen figures contain the fate of the inquirer and the diviner has to give him the meaning of each of them by interpreting them from the table of Shāhīk al-Zanjī, which was given above (p. 714). We may therefore imagine what a high place the āshādī occupies in Malagasy life, and the very numerous circumstances in which recourse is had to it. The diviner was and undoubtedly still is the true manager of it. In practice it is consulted for every sort of private and public life whatever of the individual, family, clan or tribe. I have not been able to learn how one becomes a māqīlīhī. It is the speciality of certain individuals: without distinction of sex or birth.

A diviner or a seer may be man or woman (I have never known a woman seer but have heard that there are such). The seer may be of royal birth, noble or freeman (I have never heard of a seer or diviner who was a slave, although slaves have been executed on charges of divination). The diviner or the seer is very often the son or daughter of a diviner or a divineress, which assures him an extensive clientele, for he or she is supposed to inherit the paternal (or maternal) secrets. The seer or diviner may be either native or foreigner. I was taken for a diviner during a stay of forty months at Mananjary (S.E. coast) by the Muslim māqīlīhīs of the district, who treated me as a collegue after I had shown them my knowledge of Islam. It was in this way that I was enabled to be initiated gradually into the practices of diviners and appeal was sometimes made to it. The art of divination of the 'Ina al-rūmī in Africa is considerable. It is found in Dāirī and the Travels of Harries in Dahoméy reveal the existence of practices closely allied to āshādī among a West African people who are however not Muslim (cf. G. Fernand, Missionnaire à Madagascar, iii., p. 187 sqq.).

The great annual festival of the fahārmāra or the bath is only a survival under another form of the old ṭiū ṭihṛ. (q.v.) On this identification cf. G. Fernand, Notes sur un Calamètre malgache de ṭiū ṭihṛ.

According to the evidence of the Portuguese discoverers and especially of Vincenzo, the Muslim Malagasy of the S.E. of the 17th century founded during Rania's, recited the obligatory prayers, read the Kurān, but drank fermented liquors and washed and ate pork. They were dhīmmī in the S.E. not that assemblies of the faithful took place; but there is no mention of the existence of mosques in the early travellers and Pluquet says definitely in his preface that "the nation of which he is going to speak, has no idols or temples". As in Sūr (q.v.) the success of Islam was only mediocore in Madagascar. Malagasy does not readily assimilate foreign beliefs and customs and the latter do not profoundly modify native beliefs and customs. His whole philosophy is contained in the proverb mānū ni amin, "Life is sweet"; he thinks it good to be alive; the strict observation of the Kurānic prescriptions would have upset too much his usual life and customs. Allāh prescribes fermented liquors, standing stones, games of chance and consulting the fates as abominations invented by Sāmī. But these abominations are particularly dear to the Malagasy; they are particularly devoted to alcoholic liquors and to gambling, believe firmly in soothsaying and standing stones (trangānbantara) are held in honour throughout the whole island. No doubt they venerate Allāh, the Kurān, the Prophet and saints of Islām but it is a purely vatai reverence and they are not really Islamized to the degree that, for example are the negroes of the adjoining east coast of Africa.

The conversion of the Malagasy to Christianity was also a failure. At the time of the conquest of the island in 1605 they were quite disposed to be converted en masse to Roman Catholicism, thinking it would please us; they had to be warned that the French government only attached importance to respect for the laws and respected the religious convictions of every one whatever they were. This fact, of which I was a witness is more eloquent than any other and throws an illuminating light on the past.

The evidence quoted above and especially that of comparative philology enable us to draw up the following scheme of the settlement of Madagascar so far as our knowledge at present goes:

I. Many legends give the old yasāmba, now disappeared, as the first or second or third masters of the soil i.e. the autocrats. The name which is found in East Africa is clearly Banī and represents an older wāsāmba Malag. vasmāna. They are said to have been of small stature. They were perhaps negroid.

II. There was an important immigration of African Bantu prior to our era of which we have an evidence in a certain substratum of African words which has survived in the modern language.

III. There was next an important immigration of Hindūised Indonesians from Sumātā (cf. G. Fernand, L'Empire sumatran de Chindia) in the second-fourth centuries A.D. A word like the Malag. ʿālif < old Malay, ʿālif = 100,000 < Malay ʿālif = 100,000 < Sanskrit, bhūpi = 1,000,000 is over many others testifying to this fact. These Indonesians modified the somatological, cultural and linguistic type of the negroid Bantu who peopled Madagascar.

IV. Arrival of Arabs in the six-ninth centuries and conversion of the Malagasy to Islam. These Arabs probably came from the Persian Gulf and belonged to the Sumātā.

V. Another immigration of Sumatrans at the end of the tenth century I consider the Wātāwātā to be western Indonesians, as I shall explain in the article Wātāwātā. The Book of the Wonders of Islam (ʿAṣāfīḥ al-Hind, ed. by van der Lbb. and tr. by M. Devic) mentions a piratical campaign by these Wātāwātā in 334 (945) in the Western Indian Ocean. It is probable that we have here a reference to the migration led by Ramuni the
**Bibliographie:**

- G. Granddidier, *Bibliographie de Madagascar,* Paris 1906 (it contains all the works published at this date).

**AL-MADIHN, a medieaval Arab town or rather a group of towns in al-Trak (Babylonia) about 20 miles S.E. of Baghdad lying on either side of the Tigris in two almost equal portions. The name al-Madīn (plur. of al-Madīn) "the town" is explained from the fact that the two capitals situated opposite one another, Sennaces on the west, the city founded by Seleucus I between 312 and 301 B.C., and Ctesiphon on the east (the first reference to which is in 221 B.C.), the winter residence of the Parthian and Sasanian kings, with several other places close at hand were regarded as forming a whole. The Sasanian Aramaeans who formed the bulk of the population under the Arsakids and Sasanians comprised the whole group under the name Malis or Madīn al-Madīn "the towns" which latter term the Arabs adopted in the plural form al-Madīn in particular to their language. Following the Sasanians, the Arabs reckoned seven towns in al-Madīn, the official names of which they partly arabised.

On the west bank lay Web-Ardaghih, corrupted by the Arabs to Behar (often wrongly read Beharast and Nahr Shih or Shyr; cf. Streek, *Babylonia*, p. 263, note 3). The name does not mean "good (is) Ardaghih" as it is often explained but "house (i.e. foundation) of Ardaghih" (cf. thereon, *Nödeke, W.Z.K.M.,* 591, 1902, p. 7; *Web = Arab. Be*). In Syriac and Talmudic literature Behar is usually called *Noghih* (= Koheh of the late classical writers) and Madīs (= "the town"); it occupied the lower southern half of the former Syrian city. A parasang (c. 3 miles) north of it was the village of Darrastan and Daražan (also Darašata), an abbreviation of Darāšān. On the east bank stood Ctesiphon. The Arab historians and geographers reproduce this name, which is not Greek but very probably indigenous (Jastān) by *Tašīmān*; but we also find *Tašīn* and *Tašin* corresponding exactly to the presumed Pahlavi form (Tašīn, Tašīn). On these place-names cf. the very full discussion by Streek in *Syrije-Wiss.,* Suppl. iv, 1102 ff. Not uncommonly the town on the east bank, much more important for the Muslims, is called al-Madīn (e.g. in al-Iṣṭahib, *B.G.K.,* i, 57 f.). About an hour's journey away, south of Ctesiphon stood Web Anīshqī Khosrow (= Antiocha, house of Khosrow). The Arabs usually called this city founded by Khosraw I Anāsrabbā, which was settled with the deported inhabitants of Antioch ad Cragum, destroyed in 540 and is said to have been planned on the model of the Syrian capital.
Kmuysa = Rome in. (New) Rome or Byzantium. The Syriac sources distinguish this new foundation from the older towns by the name Makkia, which in Arabic became "New town".

We know nothing further about the three other towns of al-Mad'in, which made up the number seven so popular in the east and was hence doubtless deliberately chosen. The exact forms of their names are not even known.

As early as the Parthian period there was a stone bridge across the river between the two thickly populated banks of the Tigris, which the historian Hâmûr al-Kalâshân (cf. his Ta'âlî, ed. Gottwald, p. 31, sq.) describes as a marvel; but already in his day (beginning of the fourth century) there was no longer any trace of it. Under the Sasanian a second bridge (of boats) was erected. In the Muslim period however there was still only a bridge of boats.

In Mu'min-Ctesiphon two main quarters are distinguished, the northern "old town", Arab. al-Mad'in al-su'a, and the southern Asfahân (Asbahân, Asfâr, and other variants of the name).

The "old town" probably represents the oldest settlement on the east bank, the foundation of the Parthian period. In it was a royal palace which the Arabs called astâr al-mu'ayyad = "the white palace" (there were other palaces of the same name elsewhere; cf. the article KÂLÂSHÂN, probably the residence originally of the Šâsiân kings built by one of the last Annakids or first Šâsiân. The southern quarter Asfâr also included a royal residence, the tun ( = pillared hall, palace), usually described more definitely by the Arab authors of the middle ages as Mâsâs ( = Pers. Mâsâs, Ctesiphon, the general title of the Šâsiân kings among the Arabs; cf. Streck. Seleuc. u. Ktesiph. p. 37, note 1). Its builder is known with certainty to have been Sapor (301–379 a.d.). It may be noted that later Arab historians often confuse the "white palace" and the town.

It can hardly be supposed that the site of al-Mad'in, so favoured by nature, at the point where the Euphrates and Tigris must nearly approach each other, was without any considerable settlement until the time of Seleucus I. There is on the contrary every indication that the town of Ma'din (written geographically in the usual buq'â, dating back to remote antiquity like its successor Mâsâs) of the ancient city, cannot well be located anywhere else than on the site of the inner towns of Seleucia and Ctesiphon or in the immediate neighbourhood. What the Arab writers say about the founder of al-Mad'in is worthless. They ascribe the foundation to mythical kings of the old Median epic like Tiwwânsh and Talabûrshan or other celebrated rulers of the east (like Nimrûd in Iskander-Almahârak; see Nimrûd's see Abr. 1-Paradisiachus, Te'âlî, Mâsadân, Behût ed. p. 20).

For the pre-Mahâammad history of al-Mad'in which does not fall within the scope of this work cf. Streck. Seleuc. u. Ktesiphon, and the article above under Annakids, Asfâr, and others. The Arabic sources contain much valuable information for the Šâsiân period; the most notable in Târist's history (cf. Nöldeke, Briefe der Perser und Araber zur Zeit der Sassaniden, Leyden 1879). We may here mention that under the later Šâsiân, Ctesiphon, to some extent lost its popularity as the winter capital, for they, especially Khorâshân and the Prophet, preferred to travel to it, three days journey to the north on the very old "royal road" [cf. DASTÂRÎ]...

We have fairly full information about the conquest of al-Mad'in by the Arabs, especially the great chronicles of Tabari (i, 245–246) and Ibn al-Athir (ed. Tämmig, iii. 396–403) and also al-Cârati, Annals dell' Irâq, iii. 734 sq.; Wulffen, Ereignisse und Forschungen, vi. 65 sq., and Streck. Seleuc. u. Ktesiphon p. 30–34). After the glorious battle of al-Ka'dâiya, which made the Arab masters of the east, the conquered the Tigris (cf. above, ii, p. 612 sq.), the Caliph 'Omar ordered Sa'd b. Abi Waqqâs, who was then in command of the Muslim troops operating in the east, to march on the Persian capital. Sa'd advanced, fighting several battles on the Tigris and appeared before Behistun in the first half of January 637 (= end of 10 a.a.). The strongly fortified town, which was heavily defended was besieged and stormed in vain for two months. In the end the Persians whose supplies were exhausted fled by night unnoticed over the river so that when the Arabs advanced the town soon afterwards they found it quite deserted. A few days later the invaders were able to raise the siege and return to the Tigris, much swollen by the spring floods. This almost miraculous rescue effected without any loss is a much celebrated event in Muslim history; it is one of the famous "days" of the period of the conquest. The Persians had not expected that the Arabs would win their way across the king had taken refuge with his family and court in Hûšâk (q.v.); the army had retired to Djar Nahrâm (about 24 miles north of Ctesiphon). Only a few regiments remained at the palace in the capital. At the end of March 637 Sa'd made his triumphant entrance through the deserted streets. The progress of the Arab operations had not given the Persians sufficient time to carry off the vast treasures accumulated in Ctesiphon. Those all fell into the hands of the victors. The Arab sources give many interesting details of the various valuable objects which were captured not only in Ctesiphon but in the pursuit of the Persian army. The total value of the booty taken in Ctesiphon was estimated at 900 million dinars (of a nominal value of nine pence but it varied a great deal).

The occupation of the Šâsiân capital, the greatest royal city in western Asia, may be said to be the most important event of the period of Islam's splendour, the period of the great campaigns of conquest. In the "old town" the victorious Sa'd built the chief maqsûn = the first Muslim place of worship to be built in the east.

Al-Mad'in was not destined to be the residence of the Arab governor of the east, on the contrary it sank under Muslim rule to be a mere provincial town. It was soon overshadowed by the newly founded Arab military colonies of Kâfâ, to which the goods of Ctesiphon were transported. A symbolic custom found elsewhere in the Arab east. — Baṣra and Wasit, Baṣra and Kâfâ now became the political and intellectual centres of the Arab east. — Baṣra and Wasit, Baṣra and Kâfâ now became the political and intellectual centres of Mesopotamia, until the Caliph al-Mansûr built Baghîdad and the political and cultural centre of gravity of the land gravitated thither. The foundation of Baghîdad dealt al-Mad'in its death blow. It was now called upon to yield the building material necessary for the new capital of the caliphs
just as Babylon had done for Semitic centuries before.

In the history of the 'Umayyad and 'Abbasid period, al-Madain was as a rule no longer of any prominence. It only played a part of some importance in the civil wars of the first two centuries of Islam, those provoked by the Khaṭrids as well as those provoked by the 'Abdids. The Muslim inhabitants of al-Madain were, it seems, always strong supporters of the Shi'a. They were also hostile to the Khaṭridi movement. As early as 658 there was fighting around al-Madain between 'Ali and the Khaṭrids. An attempt by the latter (in 664) to seize Ctesiphon from Behrašt was thwarted by the commander there who had Shī'ī sympathies, by destroying the bridge of boats. The Khaṭrids however later succeeded in twice gaining temporary possession of al-Madain, e.g. in 688 when the Khaṭrid group of the Arākīya (q.v.) wrought great slaughter among the Muslims who did not belong to their party. The second occupation of al-Madain in 696 was achieved by the Khaṭrid leader Shalḥī b. Yazid. On these events cf. J. Wellhausen, *Die religiöse Politik. Oppositionsparteien im alten Islam* (= Abh. G. W. G., N. F., vol. v., Nos. 1 (1901), p. 21, 36, 43, 45, 57; R. Bürnow, *Die Chrestomathie unter dem ersten Osmanschen Weltyrnen* (Eydyan 1884, p. 22, 97). With the death of Shalḥī b. Yazid, the power of the Khaṭrids was broken, but as late as 752 'Abbāsid troops had to be sent to suppress a leader of these rebels; cf. A. Müller, *Der Islam im Morgen- und Abendlande*, l. 440.

As regards the 'Alid war in the 1st-3rd, the most important campaign was that of Hasan to al-Madain in the year 661. Hasan lived there in the "white palace". Cf. on this expedition, the Arab chronicles which differ not inconsiderably: Well, *Geschichte der Chalifen*, l. 244; Flügel, *Gesch. der Araber*, Leipzig 1867, p. 158-159; A. Müller, *cf. cit.*, l. 336 and especially J. Wellhausen, *Das arabisch-riech und sein Staat*, Berlin 1902, p. 67-68. In the later Shī'ī troubles al-Madain appears in 684-686 and 744 as supporting the 'Abid, cf. Wellhausen, *Die religiöse Politik*, Opp. p. 72, 73, 80, 98. The importance of al-Madain as an objective in these civil wars is evident from the fact that in these days the military road from Basra to Kufa did not go through the desert along the Arabian bank of the Tigris but went across the canals to the Tigris at al-Madain and from thence over further canals to the Euphrates; cf. Wellhausen, *Die religiöse Politik*, Opp. p. 85, note 3.

The Caliph al-Mansūr was repeatedly forced to lead an army against al-Madain: in 811, when the rioters who arose over the succession on the death of Hārūn al-Rašīd the Barhebečī 'Ibrāhīm b. Must defended the town against Ma'mūn (cf. l. p. 685), and in 815 when an 'Alid rebel Abū 'Abbud al-Sarīr b. Mansūr, cf. l. p. 170, who had seized the town was besieged in it. For the rest we do not hear much more of al-Madain in the 'Abbasid period; its two main components, Tarsaftin and Behrašt, continued for several centuries more to enjoy the modest existence of small country towns. As regards Rūmiya which was included in the system of towns forming al-Madain, the Caliph al-Mansūr had temporarily held his court there in 754 and had caused 'Abī Muslim (q.v.) to be treacherously murdered there (Yākūt, l. 807, s.v. Streck, *Byblosien*, II. 288). But about the middle of the 10th century this place according to al-Maqrīzī (*Maqrīzī al-Jāhidī*, ed. Paris, 1920) was already completely deserted: the wall round it built of thick bricks was the sole relic of it left. When Yaḥyā wrote in the early decades of the 11th century (cf. his *Maqālim*, l. 768, t. 447, p. 755) the whole of the east side of al-Madain, i.e. Tarsaftin in particular was already completely deserted; on the west bank still stood Behrašt, a small town, practically a village, inhabited by peasants who practised only agriculture. It was now known as al-Madain.

When Hulagu with his Mongol hordes was advancing to conquer the Caliph's capital in 1257, he pitched his camp in the ruins of the Iwán and in the following year, after he had been joined by the troops of the Mongol princes, he marched on Baghdad; cf. Ranjād al-Dīn, *Histoire des Mongols de la Perse*, ed. Quatremer, Paris 1836, p. 266.

The author of the *Mawādirī al-Hīlī* (ed. Jeynali, ii. 64) who wrote an epitome of Yākūt and died in 1358, is also acquainted with Behrašt as a little town inhabited exclusively by Shī'īs, as is also Bākūr, who about 1403 prepared a synopsis of the geography of al-Kashfī (q.v.), cf. the French translation of the latter *Voyage de l'Àgha de Galipas* in *M. E.*, ii. 1789, p. 424. When Behrašt became deserted is unknown. Presumably the disastrous invasion of the Mongols under Tūnūr at the beginning of the 13th century which was so fatal to so many once flourishing towns of the lands of the Euphrates and the Tigris also caused the collapse of this last settlement in the territory of al-Madain.

It was not till the 18th century that a modest village arose on the site of Ctesiphon, a little north of the ruins of the *Jām Shīrāz*, in sight of the highly venerated sanctuary of Sabūna Fakr and called after him. This occurred on my visit in 1917 of a single street of mud-houses and Khāns where the numerous Shī'ī pilgrims who pass through here are put up. The building material is mainly supplied by the ruins of the *Jām*, especially of the north wing of its great hall which collapsed in 1888; cf. Hertzfeld, op. cit., ii. 65.

In the Great War the site of al-Madain was the scene of desperate fighting, momentous in its results. This is usually called the Battle of Ctesiphon. When the Anglo-Indian army under General Townsend in the late autumn of 1915 began an advance from the fortress of Kūt al-ʻAmāra along the Tigris to the north to try to take Baghdad, it was defeated on the 22nd and 23rd November 1915 in the district of the ruins of al-Madain by the Turks. The fighting took place mainly by the east bank; the British lines of battle ran on the east of the ruins of the Iwán and the little village near it. This reverse forced Townsend to retire to Kūt al-ʻAmāra, which was soon afterwards surrounded by the Turks and capitulated after five months' siege on April 29th 1916. For further particulars of this battle, the greatest on the Mesopotamian front in the world war, see the works on this subject; cf. especially General Townsend's *My Campaign in Mesopotamia* (London 1919), p. 193 sqq., 171-184, with plans of the battle (map 7).

In connection with this brief sketch of the history of al-Madain it may be mentioned that one of the most distinguished scholars in the
field of Arab history was born here, namely, Al i b M. al-Madai'in [cf. the next article], born 753, died, between 830 and 845. His work itself has survived, but may be partly reconstructed from the numerous extracts in Hakluyt, Talh, Viktil, the Kitāb al-ghāyba etc. as that we have had an idea of its contents; G. Röschelmann, G. d. A., i, 140—44, ii, 169, i. f. Herr, Die hist. und geogr. Quellen Täpke's Geogr. Wörterbuch (Strassburg 1898), p. 5—6, 67—68 (on the chapter al-Madai'in in Hakluyt). Darzamah (Darzāmān), already mentioned above and included in the haptaplos of al-Madai'in, was the birthplace of the famous traditionist and historian al-Khālid ibn al-Baghdadī (d. 463 = 1071); on him cf. vol. ii, p. 929 ff., and Bergsträsser, in Z. A., h. 207—308. In the introduction to his biographical lesson, he gives a brief sketch of the history of al-Madai'in, making a special point of noting the companions of the Prophet who came to this city and took part in its conquest; cf. G. Saltmarsh, al-Wāḥis ibn al-Baghdadī, Inscriptiones Graeco e Hieroglyphica à Phil. de Bagaud (Paris 1904), p. 13—25, 175—181, or p. 85—93 of the Arabic text.

As to the mint history of al-Madai'in, neither the name al-Madai'in, nor as we might perhaps expect, Ištānīn or Behriais is found on the coins of the Muslim period; on the other hand, we have a considerable number of pieces with the inscription al-Bāḥi 'the gate' which undoubtedly belong to our city. The Arabs adopted the custom of the Sabians who gave their coins strack in Ctesiphon the mint name Bābi 'the gate', which is to be interpreted like 'Sublime Porte' as an official epithet of their royal capital (cf. the official designation of Constantinople as Πόρος τῆς Αἰγίς "Gate of Ilissus"). We have not only a series of Arabic coins with the mint name al-Bāḥi down to the end of the Umayyad period but also a few pieces of Sabian type with the legend Bābi, on the latter (specimens of the year 67—68) cf. Naum, Katalog der orientalischen Münzen in den kgl. Museum zu Berlin, i. (1898), p. 102. Coins are also found occasionally with the mint al-Madai'n al-Ablah, the name of the northern quarter of Ctesiphon (with the Sabian royal palace, etc. above). For the Arab coins of the mint of al-Bāḥi, cf. articles of various writers in J.D.M.G., xxii. 1891, 148 sq.; xxiii. 601; xxiv. 23, 38; xxv. 907; cf. also Streek, Sot. und Ktes., p. 37—88 and the references there given.

Here we can only refer briefly to the important part which al-Madai'in played in the church history of the east independent of Rome, especially Nestorian Christianity. The see of Sebastea, said to have been first established in the time of the apostles, was the premier diocese in the east. As supreme head of all the Nestorian bishops, in the Sabian period as well as in that of the Caliphate as patriarch of the east the occupant of the see of Sebastea bore the title of Patriarch. A number of offices were held at his official residence in the course of centuries. The episcopal cathedrals were in Behriais (New Sebastea) which the Syrian sources usually called Kirkel (cf. above) hence the official title of the patriarchate, "Church of Kirkel". Besides the official church of the bishop there were in al-Madai'in in the quarters on either bank a whole series of other Christian churches, the names of which are occasionally found in Syriac and Arabic texts. From Sebastea the Nestorian church developed considerable missionary activity, extending even to the Far East and reaching its zenith in the period from the sixth to the ninth century. Under the 'Abbāsids 25 metropolises — the first in rank after the Katholikon was the bishop of Kaskar [q.v.], each of whom in turn had 6—12 suffragans under him, acknowledged the authority of the see of Sebastea. All the metropolises received their investiture in the cathedral of Kirkel. Soon after the foundation of Bagdad (762) the Katholikon also moved from Behriais (Kirkel), new declining politically and commercially, to the new capital of the empire in order, as religious and political head of the Christian communities, the more effectually to champion their interests there at the court of the Caliph, where he usually enjoyed considerable prestige. But each new patriarch continued to be ceremonially installed in the mother church at Kirkel (probably down to the end of 'Abbāsid rule). For further information on the significance of al-Madai'in in oriental church history cf. Streek, Babylonien, ii. 274—275, ds., Sot. und Ktes., p. 42—7; 84 (sources in Syriac literature); J. Lafont, Le Christianisme dans l'Empire perse, Paris 1904.

That al-Madai'in was also for some time an important centre of the gnostic sect of the Manichaens may be mentioned here; but it is doubtful whether their founder, Mani (Mānas), as is often supposed came from Ctesiphon itself; cf. thereon most recently Schaefer, in Z.D.M.G., 25.

Finally it may be briefly recalled that al-Madai'in possesses considerable interest for the history of Judaism, especially for the Talmudic period of it. As in the Hellenistic period, the Jews under Sabian and Arab rule had also their main settlement on the west bank in Behriais which in Jewish sources is usually called Mahfud, "the town". There, as in the Greek Sebastea (cf. Streek, Sot. and Ktes., p. 10, 21), they formed an exceedingly high percentage of the inhabitants, indeed at times they seem to have been in the majority. That they are described as very rich is not surprising in view of the great importance of al-Madai'in as a trading centre down to the time of the rise of Bagdad. At the same time their character is unfavourably depicted by the same sources; it differed from that of the other Jews of Babylonia which is perhaps mainly to be explained by the fact that there were many proselytes among them. They also had a famous college, which was however only the intellectual centre of Babylonian Judaism under Rabī' bbar Joseph (b. 220 A.D.), a native of Mahfud, and at other times was inferior to the other Jewish centres of learning in Babylonia, Nakhuda, Sura and Fombellah. For further Jewish accounts of al-Madai'in, cf. A. Berliner, Beitr. zur Geogr. und Ethnogr. Babylonium im Talmud und Midrash, Berlin 1853, p. 19, 23—24, 39—43; 61—62; see also Streek, Sot. und Ktes., p. 87; 83 and 84 (bibliography).

Apart from the wretchedness of the modern village of Saimāt Pāl the whole of the area of the town of al-Madai'in measuring about 60 square miles is quite uninhabited. It is only from the middle of the 20th century that we have more or less full accounts of it by European travellers; cf. Streek, Sot. and Ktes., p. 47—8. The first systematic topographical and archaeological examination of the extensive ruined site was made by E. Harefeld, who visited it five times between 1903 and
1911. He dealt fully with the results of his examination in 1914, in the second volume (not published till 1920) of his and Sarre's Archäologische Relte im Fakāsh- und Tigrisgebiet; cf. lii, p. 46-76 and the pictures in Plate xxxix-xliv (Vol. iii.) and xxxix-lxviii (Vol. iv.), Herzfeld gives (ii. 51) the first plan of the whole area prepared by him in 1911; cf. this reduced to 1:1 of the original also in Streck, Sel. u. Babylon, p. 50 and in Palmyra-isswa, op. cit., Vol. iv., 1105.

Of the towns on the west bank, notably Seleucia, there has survived from the Hellenistic period only remnants of the old city wall (el-sir), a double wall of gigantic dimensions, on the sea shore and (less considerable) south side. The whole west side of the old city is now sunk in a permanent swamp (dhū'ba) formed since 1900 of the annual inundations. Within the south half of the ancient city walls, there now rise from the otherwise flat plain two mounds of rubble about 15 feet high (dhawrā'a), which in the 'Iraqi is practically synonymous with 'abwā', namely the Lujārat el-Bardān and the Lujārat el-Kasāf. The former which takes its name (powder-millhill) from a powder-mill which used to stand there to supply the Turkish troops, may, from the finds of pottery, conceal an important part of the Sasanian foundation of Behistūn. The second hill with the legendary name Lujārat (or Kāriy) bint el-Kasāf = "hill or castle of the Kasāf's daughter" may very well mark the site of the several times mentioned central of Seleucia-Kūkān. Beyond the above mentioned permanent swamp, further hills may be seen:—

Tell el-Umar (or Lujārat el-Union, Khisdāf or Abu Halafiyat, al-Šaffāt, al-Khiyāniyat and Tell al-Ishāfa. They perhaps all fell within the area of Seleucia, and probably come from suburbs of it.

The ruins on the east bank, those of Ctesiphon, begin about a mile above the village of Salīm Pāk. After isolated wall-like ruins of walls and canals, the first considerable ruin we reach is a large quarter of the town running for a mile along the Tigre opposite the Hellenistic Seleucia averaging 400 yards in breadth enclosed by a primitive much destroyed wall of clay:— hence the name el-fumāt, "the little clay-wall". Within this area lie a few farmplaces with palmyre trees and mulberry trees and fields. Al-Fumāt with its inadequate vicinity now marks the site of Mādīn al-Abrāg on the northern quarter of Ctesiphon. A second area filled with ruins is found around the village of Salīm Pāk and around the 'Ablān.

The village street of Salīm Pāk leads in a straight line to the much excavated tomb of Salīm al-Fārisī (Salīm the Persian) as, it is usually called locally, of Salīm Pāk, "the Pure". He is said to have been the first Persian to have adopted Islam and as "Apostle to the Persians" is one of the most popular Shi'i saints. According to Muslim tradition he died at an advanced age in 636 or 657 in al-Mada'in, where the Caliph 'Umar appointed him governor; it should be noted however that the Arab accounts of Salīm's share in the conquest of the Iraq and in the government of al-Mada'in are little credible. Cf. on Salīm vol. iv., p. 116 and Streck, Sel. und Khu., p. 53-54. The mausoleum with the alleged grave of Salīm which is crowned by a dome (it used to be shown in the vicinity of Ḥisbān!) stands on the south side of a court enclosed by a high white terraced wall and in its present form may date from the first half of the xvith century, when it was renovated by Sulṭān Murād IV (1623-1640). In 1903-1905 the building was restored. A description of the interior by Kāşīn al-Da'īfī is given in Herzfeld, op. cit., ii., p. 262, note 1.

South-west of Salīm Pāk about 1,000 yards from it close to the back of the Tigris is a large Muslim tomb with a dome, that of Ḥusayn b. al-Yāsamīn, one of the "councilors" of Muḥammad. The latter, an ardent champion of the 'Ahl cause, obtained, we are told, great merit by building the first mosque in al-Mada'in and died in 657 in Kufa; an he was also buried in Kufa, p. 289;Tabari, i, 2452; Streck, Babylonien, ii, 262; Herzfeld, op. cit., ii, 59.

The tradition that these two companions of the Prophet are buried here is old and goes back to the third (ninth) century — the earliest reference is in Yāqūt, R. G. A., vii. 320. Of the thousands of Persian pilgrims who annually visit the great Shi'a shrines of the 'Iraq (Kerbelah, Najaf, Kāşīn, and Samarrā) many choose to visit Salīm Pāk as one of the stages on the way out or home. K. Niebuhr (cf. his Reisebeschreibung nach Arubien, Copenhagen, 1778, ii, 79-80) heard of a tomb of a third companion of the Prophet in al-Mada'in, namely that of 'Abd Allah b. Salām, [p. 71] a Jew of al-Madīnah. The latter — a strenuous opponent of 'All — never came to the 'Iraq so far as we know. The Salāma-Baghdād of 1347 (1906), p. 256 (according to Herzfeld, op. cit., mentions in addition to Ḥūdūsī a certain 'Abd Allāh al-Anṣārī, buried in al-Mada'in, but I think his statement like that of Niebuhr (or rather his informants) is not to be relied upon. There is possibly some confusion with 'Abd Allāh b. Sādā, who is said to have been of Jewish origin and accompanied the Caliph 'All to the 'Iraq, but was later honori by him, as his extravagant enthusiasm for him made him a nuisance to al-Mada'in, where he may have died. Details of his end are not known. Herfeld suggested 'Abd Allāh b. Ḥalabī, who, according to Mas'ūdī (iv. 410), was murdered by the Khirriyya in 38 (658) while acting as 'Ahl's representative in al-Mada'in. As the interior of Salīm's sanctuary is said to contain two graves, the second may be claimed as that of this uncertain 'Abd Allāh and not as that of the last Caliph Muṣ'ta-jeim executed by Hāfolī, as Migno, Travels in Chaldæa, London 1829, p. 73 says: he is followed by W. Ainsworth, Narrative of the Exploits Expedition, London 1888, i, 276. For the existence of a tomb of a Caliph at al-Mada'in there is no literary authority.

As to the second area of ruins, which begins south of Salīm Pāk, its centre is formed by the great half of Taḵ-i Kīš ("Arch of Kīsha"), the glory of the celebrated Ḥraw, which will be dealt with briefly below. In the immediate vicinity of the Taḵ, four groups of ruins may be distinguished which the most notable is an oblong mound 20 feet high in the south, called locally Herbī al-Ḥāra al-Ṭāfībī, the "green hill". It certainly conceals a single building. All these groups of ruins which fringe the Taḵ on the four sides undoubtedly belong to the palace of the Ḥraw, which must have covered an area about 400 yards long and 300 broad. Some 500 yards S.E. of the ruins of al-Taḵ, behind an irrigation canal the surface shows fewer but continuous remains
of buildings, which stretch to a corner of the wall, called *Bustān-i Kārā, the garden of ʿAlī*; which perhaps enclosed a park for animals. A thousand yards S.W. of Bustān-i Kārā rises another mound, 20-25 feet high, almost square at the base, Tell al-Zubāb = *Gold-hill* in Khuwāṣt Kārā = *Treasury of Kārā*. It is apparently one large building, perhaps the treasure-house built by Khosrow II (cf. Taʿzir, i. 1942).

In conclusion it must be emphasised that, for the proper appreciation of the ancient mediaeval and modern topography of al-Madīn, the important fact must not be overlooked that the configuration of these three mounds was radically altered when the Tigris, since the end of the middle ages, completely changed its course here and now leaves its old bed immediately south of Ctesiphon for a stretch of 3 miles and describes a curve five times this length. We must further consider the possibility that not only has a considerable part of Seleucia disappeared in the Tigris, but smaller pieces of Ctesiphon have been gradually swallowed up by the floods of the river.

The most impressive memorial to its great past is now the Tāh-e Kārā, which stands in the centre of the ruins of al-Madīn. The surviving portion consists of a gigantic façade 103 yards long divided into two unequal portions by an arc 80 feet in width thrown boldly across. This, the front wall, originally over 100 feet high, divided into three stories is effectively relieved by open and isolated doors, arcades, pilasters and half-columns. Through the gigantic archway one reaches a spacious hall 150 feet deep, on either side of which are four parallel side-chambers. A wide door in the back wall of the hall leads into a wide court apparently square in plan.

For the place of ʿIwān in the history of art and the date of its origin, the reader may be referred to Hersfeld, e.g. cit., p. 74 f., and according to him the building shows a mixture of Oriental and Hellenistic styles. Saper (Sahra) i. (244-272) is the only possible builder; Khosrow I (531-579) seems also a possible candidate for a considerable restoration of the whole. The most characteristic part of Iwān, which clearly shows it was mainly intended for a palace of audience, is the great hall, in the Sassanian period the scene of ceremonial public audiences and receptions by the sovereign. Nothing has survived of the architectural details of the Iwān, and the stucco or mortar coating in which these found expression has fallen off. The Kaiser-Friedrich-Museum in Berlin possesses stucco reliefs, which Hersfeld (Z. D. A., i. 1927, p. 268) identified as ornaments from the Iwān. In the interior, the palace, as we know from the records of the Arab, was adorned with pictures and images in gilt relief. When the Muslims, pending the building of a mosque of their own, used the great hall of the Iwān provisionally after the capture of Ctesiphon, the paintings remained intact and were still to be seen two centuries later. For example in the ninth century we find the poet Abū Ḥujjāj al-Madīnī (cf. L., p. 773), who was very fond of describing palaces, describing the Iwān in a famous poem from his own observations; see this poem in the appendix of his Diwān printed at Stambul in 1300 (1882) (Vol. I., pp. 478 f.). Almost the whole text is also given in Vāqī, i., 478-483; pieces of it in al-Khurṭib al-Baghdādī (ed. Salma, p. 90-91) and in Ṣawānī, ed. Wüstenfeld, ii. 304.

The majestic remains of Ctesiphon, which from early times have always made a deep impression on the Oriental mind, very soon inspired the imagination of the poets. The Persian poet Ṣafāl al-Dīn b. ʿAlī Ḥājī (d. 595 = 1200 [q.v.]) wrote an elegy on al-Madīn, one of his best works; cf. Ethe, in Grundriss d. iran. Phil., ii. 264. This was printed in Stambul in 1330 (1912) and in Berlin 1843 (1924). This latter edition entitled al-Madīn, un poème de Khusroh, adapté et augmenté par quelques poètes contemporains (n.d. No. 5 of the framschall press) has a critical historical introduction by Dr. Rü(n) Tschirch and a commentary by the modern Persian writer Ḥusayn Diniš; on it, cf. E. G. Browns, The Press and Poetry of Modern Persia (Cambridge 1914), p. 307.

Muslims regard the abandoned and ruined remains of the Persian royal city as monuments of the victory of their religion, (on the alleged causes of the collapse of 14 pinnacles of the Iwān in the night of Muharram's birth, see Strech, Sel. und Babyl., p. 6, and as impressive symbols of fallen greatness. Like the pyramids, we find them in Arabic poetry as the regular symbol of the transitoriness of worldly power: cf. for example the verses of al-Tīfānī in Maqrīzī, al-Maqrīzī, the chapter on the pyramids, ed. by E. Graafe (Leipzig, 1911), p. 47 and 88 (and 94). The Haydūr Sulṭān Ḥujjāj al-Dawla (1025-1042) recorded his visit there by inscribing on the wall of the Iwān two verses proclaiming the transitoriness of worldly things (see Vāqī, ii. 429, 57); cf. also Strech, op. cit., p. 61. The Arab geographer reckoned the Iwān, like the pyramids, among the wonders of the world (cf. e.g. Ibn al-Fakhrī, B. G. A., v. 255): indeed it was held to be not the work of man but of the demons, the Djinn [q.v.]. Quite early many legends became associated with the Iwān, most of which centre round the figure of Khosrow I Anūbāwān, still proverbial in the east for his generosity: e.g. the story of the old woman's horse which the king took whilst wandering within the precincts of the palace (see Suruki, Babylûnoûn, ii. 256-258; Strech, Sel. und Krit., p. 56 and 7, A., 1834, Vol. 15, p. 489) which Hersfeld (op. cit., ii. 68) traces to the lack of symmetry in the façade; also the story of the chain of justice, to which petitions were attached (imitated by Ikhān in Taḥfrīz, ed. v. Hammur, Geschichet der Ikhān, Dorndorf 1845, ii. 339) which according to Bentzon still seem to be known among the people; see al-Madīnī: of the legend published by him in Le Liban, Le Royaume de Damas, May 1926, p. 10-11: Le Légende du Melon d'or taken down from the lips of a Bedouin thence.

Down to the accession of the Abbadid in Iraq, seems to have been practically intact; then they began to use it as a quarry but this was abandoned as too costly, the yield being far below the cost of obtaining it. As to the Caliph who ordered it to be taken down, authorities differ. Al-Manṣūr is usually given (754-775) but very often Ḥārūn al-Rašīd also (786-809). In any case the partial destruction of the Iwān, under the early Al-ʾAbbasid is an assured fact; cf. Suruki, Babylûnoûn, ii. 255-256, 259; do. Sel. und Krit., p. 61-62; Herznfel, ii. 63. The Iwān with the exception of the great hall and two wings of the façade had been destroyed by this time, for the part that was spared, the name Tāh-e Kārā—now popularly pronounced Tāh-e Kesā—was
came into use, first, I believe, in Baghdad al-Jan (Ebn. ad-Ma'mun, ed. Quatremère, p. 266). Volkt (443), as well as Iskandar (c. 1400) after him, used only the arched half built by two wings as remains of the twin. The building remained in this state practically unaltered till 1888, when on April 31st on the occasion of a high flood the northern front wing collapsed, probably undermined by the ruthless robbery of bricks. An attempt was made a few years ago to save the threatened south wing by securing its foundations. Pictures of the Taq-i Kisra before and after 1888 may be found in Fr. Langenegger, Die Baumeister des Iran (Osnabrück 1911), p. 16.

The Kazr al-Abajir, the "White Palace," has completely disappeared. At the capture of Ctesiphon it was spared by the Arabs like the Iran. The Muslim general Said took up his quarters in it. It met its fate in the reign of the Caliph al-Mu'tasim (962-908) who had it destroyed to provide building material to complete the Taq-i Kisra palace on the east side of Bagdad. See Streck, Babylonien, l. 122, II. 259; Herzfeld, op. cit., ii. 63.

Systematic excavations have never been conducted on the site of al-Madīn. The antiquities found here come from isolated chance finds; for a list of these see Pauly-Wissowa, Suppl., iv., p. 1166-1197. The Deutsche Orientgesellschaft has just (the autumn of 1927) begun excavations here and it is to be hoped that this enterprise, which is on a considerable scale, will yield valuable results for the archaeology, history, and topography of Seleucia and Ctesiphon, especially on disputed points which can only be decided by the spade.

THE ENCYCLOPAEDIA OF ISLAM, III.
The fourfold division of matter is very common, e.g. in the abjad of al-Safi: 1. prime matter, either directly or indirectly an emanation from the divine being, i.e. an intelligible matter conceived, according to Pseudo- Empedocles, as the first emanation but usually explained, as in neo-Platonism as the first in the series (spirit, soul, nature), often defined as the effuse of light from the light of God; 2. the matter of the universe as a whole, especially and permanently, all the heavenly spheres, which first of all adopts the indefinite form of corporeality (extent) or at least the three definite dimensions; 3. the matter of the four earthly elements, fire, air, water and earth, 4. energy, which is already formed in some way, but can be used for definite purposes, e.g. wood, stone etc.

In agreement with Aristotle the philosophers regard God as pure immaterial form. Only an extreme mystic like Abul Karm al-Jill, can call Him the abjad of the world. As regards the lower spirits (spirits of the spheres, angels etc.) opinions differ, but most thinkers find it easy to assume an intelligible matter, and even to recognize in the first-created, the highest world spirit, a material principle: next however they are fond of distinguishing this intelligible matter as receptive and the earthly sensual matter as passive. Different opinions are expressed regarding the ʻemunah iman ʻishrāq of the Muḥaddithun: in the comparatively speaking purer Aristotelianism we find the tendency to seek it in matter and in those who are more inclined to Platonism in form. All insist, although with varying emphasis, upon the desire of matter for form more than the love of form for union with matter.

As to logical matter, it may be noted in conclusion that the three modalities of judgment (necessity, possibility and impossibility) are described as "matters" (Ihm Sin). - Cf. also the article 'abjad'.

MADINA. [See Madina.]

MADIHAB. [See Figh.]

MADHJAB, an Arab tribe of Yemen origin, traced by the genealogists to Malik b. Uhair, who is said to have been descended for four generations from Kašīf and to have received his name Madhijā from a hill of this name on which he and his brother Tāy were born. His sons are said to have been: Sa'd b. Ather, Uqayl, Yūḥūb called Murad, and Zaid called Ann. The Madhjāb whose tribal lands are said to have lain near Tāzīd "on the road to Yemen" (Yūḥūl, e.a.) and whose brother tribes were Kāṭher and Murād, were according to tradition, at war with the Anas b. Ša'īq about the time of the appearance of Muḥammad. In the course of this war was fought the battle of Šaff al-ʿArab. In the Muslim period, families of the tribe of Madhjāb were prominent in Kašīf also along with those of Kinda and Ādhamān.

MADAR. [See Marīj Mīrāk.]

MADRĪD, a philosophical term meaning 'a place', or 'the place', or 'a seat', or 'the seat', a word of varied significance. In general it is used in a phrase that one can possibly exist (Posse: esse) but which really is not (non esse) but may become something through the adoption of opposed determinatives (forms). As the realization of the possible is conceived as advancing by stages, a lower stage of the form may again be conceived as material for a higher form of development. The question is further complicated even in Aristotle by the distinction between a physical and a logical material (this stems in the conception of species, which is formed by the specific differentia) and by the division of the physical into a heavenly and an earthly material. In addition there were further different, especially non-Aristotelian, influences among the Arab philosophers.

AL-MADINA, a town in Arabia, the residence of Mahommed after the Hijra, and capital of the Arab empire under the first caliphs. The real Arabic name of the town was Yathrib, iathrippa (this is the correct reading) in Procop. and Stephan Byzantinus, Yathrib in Masegon inscriptions (M. Harms, Die aramäische Epigraph, p. 232 sq.). Al-Madina on the other hand is a descriptive word, the town and is taken from the Avamie, in which Medina means strictly, "area of jurisdiction" and hencetown (of same size). In the Meccean section of the Koran it is found as an appellative with the plural al-Madina, while in the Medina Sira al-Madina is used as a proper name for the new residence of the Prophet (ib. 107, 127, 233, 60, 31. 5). The old name Yathrib on the other hand is found only once (xvii. 13). It is evident from these references that the real explanation of the name as the "town" (of the Prophet) is a later one. It is rather to be supposed that it was a result of the existence of a strong Jewish element in Yathrib that the Arabic loan-word became the regular name of the town. It is analogous to the originally South Arabian Hadyat (q. v.) "town," which is applied to the capital in Babylonia. Of the Madinan seats, Ray h. al-Khalib was the name Yathrib exclusively, while Hassan b. Thalith and Khb. al-Mahlak was both names, which is also the case with Muhammed's "ordination of the community. (Ibn Haldun, p. 344 sqq.)

Medina is situated in the Hijaz, on a plain sloping very gently towards the north, the boundaries of which are marked in the north and west by the hills of Simud (q. v.), and "Air about eight miles from the town, two outer spurs of the range, which forms the boundary between the Arabian Highlands and the low lying lands (Tabuk). West and east the plain is bounded by the Hassa or Luhayz, barren areas covered with black basalt but the eastern Hassa lies at a greater distance and there is no water between them and the town rain. For roots of the black basalt, to the south, the plain stretches away further than the eye can reach. Its noteworthy feature is its watercourses. The south of the Hassa is marked by a few low black hills. In the south the plain stretches away from the watercourses that separate the Hassa from the central part of the town. One such flood was particularly threatening in the reign of the Caliph Uthman. He built a dam in a factory with the water and made it into a swamp. After heavy rain the open square of the Madina (see below) forms a lake and considerable inundations are not rare and may even be dangerous to the buildings in the southern part of the town. The watercourses have different names; in the west, al al-Aqib with W. Duhair and Rihan, in the east, W. Duhair with Dahar and Mudhajir, or-nah. The soil is of rocky sand, lime and loamy clay and everywhere very fertile, particularly in the south. Dates are grown excessively, also oranges, lemons, pomegranates, bananas, peaches, apricots, figs and grapes. The winters are cool and wet, the summers hot but rarely saltry. Modern travellers say the air is pleasant but not very healthy and fevers are always present. The weather is usually pleasant, especially for newcomers as Muhammad's followers had frequently to flee (Baladhuri, p. 11; Faraadaj, ed. Goeccker, p. 23 sqq. Burchardi, Liber in Arabum, p. 525 sqq.; al-Wahidi, p. 176 sqq.; Wesemann, Mahommed in de Funden, p. 56; H. Leumme, Fatihon, p. 44; Mahomedische Studien, ii. 243). The best place to stay is the town "the Elthy" in contrast to the hammita al-mahfalah in which the Prophet is said to have given: (Goldsche, p. 402, H. 237).

The way in which Medina is favored by nature forms a striking contrast to Mecca which lies in a rocky valley whose corn does not grow (Sura xiv. 40). From the very beginning it was not a regular town but a collection of houses and enclosures which were surrounded by gardens and cultivated fields, the inhabitants of which were engaged in agriculture and therefore contemptuously called "Naharaian" by the Medina. The scattered settlements gradually became consolidated to a townlike agglomeration, which however lay further north than the later town, as the name Yathrib according
to Samhūtit (Wüstenfeld, Geschichte der Stadt Medina, p. 37) was especially associated with a place west of the tomb of Ḥumayd where the Banū Ḥāṭih settled. The town which arose in this way was not surrounded by a wall so that its defences were the thick groves of palm and the orchards which surrounded the houses. As they wereless thick on the north and west sides, these were most exposed to hostile attacks. The little forts (ʿaṣāf, plur. ʿaṣāf, or ʿaṣāf, plur. ʿaṣāf) which were built in considerable numbers formed a substitute for a wall and the inhabitants could retire into them in times of trouble.

There were in later times no reliable traditions regarding the origin and earliest history of Medina and the historians endeavored to fill the gap themselves and as elsewhere made the Djuhrum (q.v. and also Krauss, in Z. D. M. G., lxx. 152) and the quite unhistorical Ḥamzahites play a part in it (cf. also Hasān b. Thābit, ed. Hirschfeld, No. 9, verse 6). It is only with the coming of Jews to Medina that we are on surer ground, but the historians know so little of the exact period of these settlements that they connect them sometimes with Mosen, sometimes with the deportations of the Jews under Nebuchadnezzar, and sometimes with the conquest of Palestine by the Greeks or by Ayyubids or Romans. According to various references in the Talmud there were Jews in Arabia in the early centuries of the Christian era and this certainly means North Arabia in the main (see Hirschfeld, Beiträge zur Erklärung des Koran, p. 49 sq.) and that they were numerous is evident from the existence of Jewish communities in Taʾmīn, ʿIṣāṣ, Jausan and Sāvaq, Mission, p. 190, 244), Khāṣbah, Wāṭiʿ al-Kura, Fadāk and Maknūn, to which might be added that in Medina. Everywhere in these cases they took over and developed the cultivation of the soil, and it was probably due to them, that these scattered settlements each developed into a kind of town; evidence of this is found in the Arabic name Madīna for Yathrib. According to the definite statement of Hasān b. Thābit (No. 9, verse 8 in Hirschfeld) they built a number of small forts in this town. But that they were not the first to do this may probably be concluded from the fact that the earliest inhabitants were not pure Bedouins (according to Lammens, T.A.F., p. 72, these forts were built after the model of those of the Yemena). The Jewish tribe of Kainajah played a prominent part in the immigration, as at a later period one of the principal markets in the western part of the town was called after it. But gradually the tribes of Ḳarrsah and Ṣadār came to be the leading ones in Madīna Jewry. The former dwelled with the Bāḥil on the W. Mahāsah, the Ṣadār on the W. Buṭṣān (Ḳ itch b. Ḳ itch, šaṭa, 95, where Jewish tribes and the judaized Arab tribes are detailed). While in this passage, as usual, the Ḳarrsah and the Ṣadār are numbered among the pure Jews, according to a notable statement in the historian Yaḥyāh (ed. Houtmann, ii. 1, 52) they were not pure Jews but judaized clans of the Arabian tribe of Ḥijāj, which Nieleke has repeatedly emphasized as a genuine tradition. Now it is historically certain that at that time there were many Jewish proselytes (cf. Ibn Rithaʿī, Ḳ itch b. Ḳ itch, p. 299) but in spite of this there are decisive reasons for believing that the Jewish element in Madīna did not arise in this way. It is of special significance that the Kurras and Ṣadār are frequently called the Aḥāmēd, the "two (tribes of) priests", which shows that the Jews knew their genealogy and laid stress upon their descent (cf. e.g. Ibn Ḥishām, p. 660, 18: "thou revilest the pure of the two tribes of priests"). The same thing is seen from the fact that Ḳarīf Ṣaffa was married by Muḥammad as belonging to the family of Arūn (Ibn Saʿd, viii. 86, 2). But the decisive fact is the way in which the Prophet speaks in the Madīna sūras to the Jews there. He apostrophizes them as sons of Israel and reminds them that God has raised them above all men (ii. 44, 116); he embraces them with the ancient Israelites as if they had taken part in the Exodus from Egypt (ii. 26, 42); Allāh gave Moses the scriptures so that they might be rightly guided (iii. 50); they break the laws which he bound them to observe at the treaty of alliance (iii. 42, sqq.) etc. Such statements suggest hardly as possible that he regarded them as true descendants of the ancient Israelites. There must therefore have been in addition to the judaized Arabs a stock of true Jews, and indeed it is obvious that without such there could have been no proselytes. Wellhahn moreover has aptly pointed out that the Arabian Jews by their language, their knowledge of the scriptures, their manner of life, their fondness for malicious mockery, secret arts, poisoning, magic, and cursing, and their fear of death, make an unusual impression which cannot be explained simply by the judaizing of pure Arabs. But on the other hand it must not be forgotten that the Jews in Arabia were very much influenced by their surroundings and had assumed a character of their own. For example we find among them the division into tribes and families, characteristic of the Arabs, with the obligations associated with this. The names of these tribes cannot be traced to old Jewish names but are thoroughly Arabic in appearance, which is also true of their personal names among which true Jewish names like Samawāl and Sāra are rare. The arabisation of the Jews is particularly notable in the poems which are ascribed to Jews, most of which might have been equally well written by Beduins (see Nöldeke, Beiträge zur Kenntnis der Poetik der alten Araber, p. 32 sqq.). While the Jews were supreme in other places like Khāṣbah, al-Fadāk etc., the position was changed in Madīna as a result of a new immigration which the Arabs associate with the burning of the dam at Marīb [q.v.] and the migrations of South Arabian tribes produced by it. In this way the two so-called Kaila tribes, Sāw and Ḳarrassad [q.v.], came to Madīna. No particulars of their coming are recorded, but there is an interesting verse in Ibn Khūdād்ஶ (B. G. A., vi. 128) and Yaḥyā, iv. 460, it is evident that they were for a long time subject and tributary to the Jews and that this part of Northern Arabia was at this time under Persian rule, in keeping with the usual Jewish policy of maintaining friendly relations with Persia. Later the Kaila Arabs however succeeded in casting off the Jewish yoke and bringing the Jews under their rule. According to tradition the occasion of this was that a powerful Jewish king named Ḳifūm, who exercised the jus primae noctis, was murdered by a Ḳarrassad Malik b. al-ʿAdīf to save his threatened sister—a widely disseminated motif (cf. K.
Schmidt, "Dea primae noctis," 1882, and also E. E. T., 1883, p. 156 (n. 44), on which too much stress should not be laid. As to later events, there are two different traditions; some make Malik after his death seek the help of a Ghassânid ruler, Abu Daibula (cf. the name Daibula among the Ghassânids), others of a South Arabian Tuba'is, Tha'āl Abulkhirī (c. 430; M. Hartmann, Die arabischen Prüge, p. 488, 497). In this second story, Wellhausen finds some support in some old verses and assumes that Tha'āl the nephew was the most popular name for a later Abyssinian victory. There is however nothing in these verses about an attack of the South Arabsians on the Jews of Madīna alone but on the inhabitants of the town together, so that Wellhausen further supports this attack may have occurred weakened the Jews hitherto predominant that the Arab inhabitants succeeded in breaking their supremacy; but this is of course no more than an attractive hypothesis. In any case the name Abraha in Kais b. al-Khaṭīm, No. 14, verse 13, cannot be used as a basis for further hypotheses for it is certainly not the celebrated Abraha (q.v.) who is meant. Besides, these stories contain legendary allusions to Muhammad's future appearance on Madīna, which betray at least a later recasting by Muslim historians.

The new lords of Yathrib took over the farms occupied by the Jews and built several more (Samhūdī, p. 37). They also learned "Nabatean" arts from them and began to cultivate palms and pomegranate agriculture. The Kharradjī, whose principal family was Nadījm (or Taim al-Latī), as the most powerful tribe assumed the leadership and occupied the centre of the town where the modern Madīna lies. West and south of them lived other Kharradjī tribes while the territory of the Ĥārid ran to the east. The Awwālī, who also comprised several families, settled south and east of their brethren, the Nabīt in the northeast separated by the Ĥārid from their kinmen. The two principal Jewish tribes Nadījm and Kūrāṣ preserved a certain amount of independence and retained their lands under the Awwālī while the Kāmānī retained their lands in the southwest although their main industry was practising the goldsmith's art. Further details of the parts occupied by the tribes and families are given in Samhūdī (Wüstenfeld, p. 29 sq., 37 sq.), but these can only now be partly identified. Besides, there were in Madīna, in addition to the Jews and the immigrant Kaṣā tribes several Arab tribes, some of which were already there when the former came. They were closely connected with the Jews and were partly judaized. The settlement of affairs reached in this way gave the town a period of peace, which was however gradually broken as an increasing enmity arose between the two Kaṣā tribes, as was not infrequently the case with Arab brother-tribes. At first it was individual families that fought one another but the confrontation gradually spread until the existence of the whole town was threatened. The quarrel began with the feud of Sumair, so-called after an Awwālī named Sumair. This was settled by an arbitrator but it was not long till renewed friction led to renewed hostilities, of which the so-called feud of Ĥāṣib was the most serious. We are introduced to this second period by the poems of Kais b. al-Khaṭīm of the Awwāl family of al-Nabīt. The fighting throughout, ended unfavourably for the Awwāl and the Nabīt were finally driven from their possessions. In their need the Awwāl appealed for help to the two principal Jewish tribes. They at first refused it; but when the Kharradjī had foolishly slain some Jewish hostages, they concluded an alliance with the Awwāl and declared themselves ready to assist them. It was no longer a fight between a few families but a struggle between the two great rival tribes in their full strength and other inhabitants of Yathrib, even the Beduins of the country round also took sides. At Barā' (q.v.) after long preparations a decisive battle was finally fought. It was at first looked as if the Awwāl were again to be defeated. The tables were turned and the Kharradjī suffered a severe reverse. It is interesting to note that Abdallah b. Uways of the Kharradjī on this occasion displayed the same irresolution that he did later in his opposition to Muhammad; he took the field with the others but did not enter the battle. On the day of al-Sarā'ī he actually ran away. The battle of Barā' restored the equilibrium between the principal tribes, but the continual fighting had sapped the strength of the town and the bitter feeling which continually revealed itself made the living more and more unbearable. Then a momentous change took place when the people of Madīna, who required a leader with a strong hand, and Muhammād, who had only to a slight extent succeeded in winning over the Meccans to his religious views, came into contact with one another.

The Kaṣā tribes at the time of their immigration to Yathrib had been heathens like the great majority of the Arabs. The principal deity they worshipped was Manāt (q.v.), after whom the Awwālī were originally named but they also reverenced among others al-Lat (cf. the name Taim al-Latī already mentioned). Through living alongside of Jews they became influenced by their religious and moral ideas, but unfortunately we know very little of their spiritual outlook before the coming of the Prophet. The poet Kais deals in the Beduīn style mainly with the quarrels between the tribes and families and rarely refers to religious matters. He nowhere mentions the local deities but refers to Allah (No. 6, verse 22) whom he calls the creator (5, 6; cf. Goldscheider, Z. D. M. G., viii. 398), which is in itself sufficient to prove Jewish or Christian influence. Of him he says in No. 11, verse 8: *Allah will only what he will*; verse 13, 12: *Praise be to Allah, the lord, the lord of the building* refers to the Kab'a in Mecca, the masjida covered with carpets (5, 14). The three days in Mina are mentioned in 4, 4 which shows that they then as later in the Muslim ports gave the young men an opportunity for love-affairs with women of other tribes. In rejecting a life after death, 6, 22, he is quite on a level with the poet Meccan. Alongside of such representatives of a mixed religion there were others whose conceptions had developed further through contact with Jews or Christians, so that they were reckoned staunch [nūn] as they definitely rejected the popular deities and had assumed a tendency to asceticism. Abu '1-Halīhām and Abīnād b. Zūrā for example professed monotheism before they became acquainted with Muhammād (Ibn Sa'd, iii/ii. 22, 139). A Kharradjī, Abī Kais Simra b. Abī Anas, wore sackcloth and laid stress on devotional purity; he actually thought of becoming a Christian but gave up the idea and adopted Islam when an old man (Ibn Sa'd, p. 347 sq.). A man of the Awwāl tribe,
Abd Al-Karim 'Abd 'Aziz b. Saif was known as the "man of the hour" from his ascetic mode of life; he later became an enemy of the Prophet, left Medina and fought against him on the side of the Muta'im. He is also said to have supported those who built a rival mosque at the time of the Tabuk campaign (Ibn Hisham, p. 411; Ibn Sa'd, iii/s. 90; Al-Walid b. Damen, p. 310). In evidence of such influence, the Christians in Medina might quote a verse of Harun b. Thabit (ed. Hirschfeld, p. 153, n.), but this probably refers to a later period and opportunities of mixing with them were to be found in many places in Arabia. One result of living alongside of Jews in Medina was that the art of writing was quite well known then (Ibn Kathir, Kitab al-Mu'jam, p. 134 sqq., ed. Thabit). 

The spiritual influence of the Jews on the Arab inhabitants of Medina became an important factor in the relations between them and Muhammad, for it made them receptive to his religious ideas with which they became acquainted by visits to Mecca and in other ways. Now finally a treaty was concluded between him and several representatives of the Muta'im, by which the latter pledged themselves to take him into their community and to defend him as if he were one of themselves, and now he and those of his followers who were still faithful to him were allowed to return to Medina. This treaty is dated in the year 9 H. After a brief stay in the southern suburb of Kubab he entered the town and took up his abode with a Khaṣṣā Ḥanāfī b. Zaid, with whom he lived till a dwelling was arranged for him. He is said to have left the choice of the site to the movements of his camel — if the story is true, a very clever man was not only not from the religious but also from the political point of view. In any case it is certain that hardly anything ever showed so clearly his gift, based on his unshakeable belief in his prophetic call, of leading men to follow his will, as this treaty was a very short period in bringing about a kind of order into Medina, hopelessly split up by feuds, and making a kind of unity out of the heterogeneous elements in the town, the earlier Arab inhabitants of Yathrib, the later immigrants, composed of the tribes of Ka'b, the Muta'im from Mecca and the Jews of Jabalum. We get a glimpse of the first steps towards the order from the ordinance of the community presented in Ibn Hisham, p. 342 ("Book of the Laws"); cf. Tawil, Usul umma, al-ṣalāh, p. 67 sqq., and following him, Ahmad al-Iṣbāni, Siyāsah, i, 385 sqq.; and Wesselsch, Muhammed de Prophet en de Moslim, p. 78 sqq., have discussed it. It is most interesting for its Muslim and lacks the market degree, clear and logical fundamental ideas, because Muhammad was content temporarily with what could be attained and avoided everything that might cause strife. In it he calls himself the messenger of Allah, but there is no reference to his divine inspiration. The object is to form a united group out of the inhabitants of Medina and this is defined from the religious point of view as the community of believers from Mecca and Yathrib. But the non-believers are not excluded, for the same ordinance, rather with the town of Medina which included the Jews and heretics, of whom it is not demanded that they should adopt Islam. The tribes retain their autonomy as regards blood-vengeance and ransom of prisoners, but against the rest of the world generally the offering of protection was obligatory on every member of the community without exception, and no one could conclude a peace separately with the enemies of the community (particularly the Quraish). All important matters, out of which mischief might befall the community, were to be brought before Allah and Muhammad. The valley of Yathrib was to be Jannah (or Jannat) for all who were bound by this ordinance. The whole document thus alternated continually between religious and purely political phrases in a very opportunistic fashion. It was written in great importance and it soon fell into oblivion as it was rendered obsolete by the rapid progress of events, certainly not against the wish of Muhammad whose plans went far beyond what was laid down in it. The main cause of its loss of importance was the breach which soon occurred between Muhammad and the Jews, which the latter proceeded by their scornful criticism of Muhammad's revelations, especially of the weak points revealed in his reproduction of stories from the Old Testament. This meant a serious threat to his authority and in addition the Jews endeavoured to destroy the agreement reached in Medina by endeavouring to revive the old hostility between the two Kudayt tribes (Ibn Hisham, p. 385 sqq.; cf. Sīrī, i, 143 sqq.). To meet these difficulties, which of course were very welcome to his enemies in the town, Muhammad worked hard to split his followers for a common object, the war with the Muta'im, by which he could at the same time avenge the resistance offered him there. It was at first difficult for him to arouse enthusiasm, for this war among the Muta'im and even more the Quraysh but finally, when a fortunate incident occurred to help him, he succeeded in bringing about a war with the Muta'im which led to the triumphous victory at Badr. On the further fightings of this campaign, the battle of Uhud, and the war of the ditches of the article Muḥammad. The latter campaign gets its name from the ditch (Qal'ab, p. 113), which Muhammad, in order to protect his town and the inhabitants of the fortified parts of the town and which, in spite of its modest dimensions, it is said to have been a, (ath, large, formed a serious obstacle to the enemy. Ibn 'Abd al-Mu'min in the 8th century still saw traces of it, an arrow-shot west of the town. On his further course cf. Wesselsch, Muhammed en de Dichters, p. 28, 31. The Meccans in this fighting gave him very material assistance by their lack of warfare ability and energy, and the war contributed to consolidate his position in Medina, sided not a little to the lack of resistance among the Muta'im who never managed to seize opportunities favourable to them. He was thus not only in a position to continue the war against his native city but also to repay the Jews in ruthless fashion for all the annoyance they had caused him. After the battle of Badr the Quraish were driven out of the town and after the battle of Uhud, which was against the Prophet, the same fate was meted out to the Quraish, who were, however, still out of the town, the Najjarin, that the word waqt was used at the time of the surrender of the town, he had measured, at the same time the events however do not show the Jewish tribe in a favourable light as they made no attempt to help one another but left each other
in the breach is most cowardly fashion. The Kurans then, at the massacre showed a courage which to some extent atones for their previous atrocity. In this way Muhammad succeeded in dissuading the danger that threatened him from the Jews for the Jews, who were left in Medina, were of no importance and caused him no serious difficulties.

The news of Hudhayfah in the year 8 A.H. [cf. sūrah al-Ma'ād] the war with the Quraysh was practically finished, for in it his genius for diplomacy succeeded in bringing them to recognize Medina as a power equal in importance to Mecca. The official conclusion of the struggle was the bloodless occupation of his native city in 8 A.H. However great a triumph this was for the Prophet, it produced a new feud which was to prove fatal for Islam after the death of Muhammad. Even before the decisive turn in the struggle with Mecca, in the campaign against the Basrīs Musallah, the ill feeling between the migrants and a section of the people of Medina came to a head in a breach of fashion and the death of Abd Allah b. Ubdul Aziz. The latter delivered several boisterous speeches and threatened to expel the migrants and other intruders (cf. Sura, 10, 8), which he unanimously denied when the Prophet later took him to task. But when Muhammad had entered Mecca, his faithful followers in Medina became anxious, as they feared he would now abandon their town and return to his native place. He calmed them however, and declared that he would live and die with them (Tim Hughens, p. 383). But when he began to treat the Meccans with great clemency and after the battle at Hunain was striving to win them over to his religion by rich gifts, the Ansar with justice felt themselves slighted and once again feared that he would abandon them. But he delivered them a speech in which he reminded them how he had united them when they were in hostilities to one another and declared his gratitude for all that they had done for him, and when he concluded by asking them to be satisfied if others went home with captives and not with the messenger of Allah, they burst into tears and withdrew satisfied (Tim Hughens, p. 383). While in such stories there may be an echo of the later antagonism between the Ansar and the Quraysh, they undoubtedly give a not inaccurate idea of the feelings which found expression at this time. It is all the more remarkable that according to various indications there must have been an opposition to Muhammad at the time of the Tabuk campaign in Medina. His actions against the Munāfiqūn in the ninth Sura round unusually caused him to flee to Medina and take refuge in the Meccan period with their threats of punishment. There is also also the notable, but unfortunately not quite clear story of the Māqṣid al-Dhahr (cf. also Lammer) which some men had built south of the city in the land of the Amīr b. Awf and which he sanctioned until he saw that the object was to provoke discussion among the believers for the benefit of his former enemies (Sura, lit. 103. 777 sqq.), whereby he had it destroyed. According to one story, the already mentioned Hamīd Abī Amīr was the moving spirit in it, (Tim Hughens, p. 392 sqq.; W. J. Wellhausen, p. 410 sqq.; Tabari, ii. 770 sqq.; Ibn Sa'd, iii. 348 sqq.) in any case Muhammad succeeded in again restoring peace, probably assisted by the fact that the leader of the Munāfiqūn died soon afterwards.

As his promise, the Prophet remained in Medina till his death on June 9, 632. According to a reliable tradition (Tabari, ii. 1837; Ibn Sa'd, ii. 37, 58, 59, 71, 99), his corpse lay unburied for a whole day, so that its putrefaction was far advanced when it was finally buried under 'Aisha's house, apparently a result of the great confusion into which his death had thrown the town. The unity created by his strong hand at once fell to pieces; the Ansar assembled and chose the Khārāmī Shā'īh b. Ubād b. As-San'āni as their chief, while others proposed that the government should be shared between the Ansar and the Muhājirūn. 'Umar's rapid and vigorous intervention however succeeded in thwarting these plans so threatening to fallin and carrying through the election of Abū Bakr as Caliph. He and his two successors were at Medina, which thus became the capital of the rapidly growing empire. Abu Bakr and 'Umar, like the Prophet, were buried under the house of 'Aisha, while 'Uthman's body was brought in the darkness on a door to the Jewish cemetery amidst Notions of stone-throwing. In this period on one thought of strengthening the defences of the capital, not even during the ribāts after the Prophet's death, and still less later when the holy wars were waged exclusively in foreign lands. 'Uthman had the forts taken down, but remains of them could be seen as late as the tenth century (Mas'ūdī, Kāmil al-Tāhīth, vii. 246).

'All's reign brought a complete change. While the great civil war was broken out between him and his rivals and the decisive battles were fought in the provinces, the Caliph recognized the vast empire could not possibly be governed from the remote corner of the world in which Medina lay. While the earlier caliphs had remained in the capital and sent out armies of conquest from it, 'All placed himself at the head of his troops and set out from Medina in Oct. 650, never again to see it. He made Kufa his capital and after Mu'tawiyah's victory Damascus took its place. Medina now sank, like its old rival Mecca, to the rank of a provincial town, unaffected by the current of the world's events. What pious old folks thought of this change is reflected in a characteristic tradition (Dinawarī, p. 152 sq.), according to which several prominent Ansar tried to induce 'All to abandon his plan of leaving Medina: 'What thou dost love in the form of prayers in the mosque of the Prophet and the course between his tomb and his pulpit is of more value than what thou expectest to find in the Hezib; reflect how 'Umar used to send his generals to war; there are still just as capable men amongst us as thou'! But the Caliph replied: 'The wealth of the state and the armies are in the Hezib and attacks threaten from the Syrians, and I must be near them'.

Medina with its venerable associations and the tombs of the Prophet could not out of course become quite insignificant; on the contrary, its ascendancy increased in the eyes of Muslims, the more the figure of Muhammad became important in their conceptions; but the life of the town became more and more remote from the real world in which actual history was being unfolded. His termites all who wished to keep themselves from the turmoil of political happenings, like 'All's son Hasān, after he had abandoned all his claims (Tabari, ii. 9; Dinawarī, p. 232). Hussein also went there from Kāth, and left it again to make desperate attempts to gain his rights, and it is significant that none of the Madīna Amīr
went with him (Wellhausen, Die Oppositionspartei, p. 86). When he was slain, his wives and sons were brought to Madina, where they lived in peace under an unimportant functionary, M. b. Abi-Hunya, residing in Madina (Dewaart, p. 508). It was not among only relatives and ardent followers of the Prophet, who preferred to live here in his city, but several of his former enemies, the Umayyads, also felt attracted either by the quiet and easy life and would not go to Damascene (Lammens, Histoire sur le califat des Omeyyades, p. 35). In this way Madina gradually became the home of a new population, consisting of people who wished to enjoy undisturbed the great wealth which the wars of conquest had brought them. Life there became more and more luxurious until finally the holy city became so notorious (Ktib al-Aghani, xxi. 367 note), that during a visit in the year 745 (137) the last Umayyad Caliph Marwan II could see one of the participants in it, how it was that the wine-songs of Madina had brought him back from taking part in it (Tabari, ii. 1910). Such stories remind us of Doughty's description of the present inhabitants of Madina (Travels in Arabia, 3rd ed., p. 351: *carving, playing, tippling in arak, bristly hemp smoking, ribald living*). This was the golden period of Madina about the glory of which the poets sang. Flourishing, well-watered gardens and meadows surrounded the town, and there was a number of splendid palaces built by wealthy Kuranids, especially in the Wadi al-Mughir, of which traces can still be found (cf. Biaurozd, Rdp., p. 261 sq.; Lammens, Madina, p. 228).

Another section of the people of Madina was attracted thither by the quiet life, although for other reasons. Their object was not worldly enjoyment, but they devoted themselves to the memories of the town of its past greatness, by collecting and analyzing the legal and ritual enactments dating from the Prophet, so far as they were based on the model of Madina and the style there. The most distinguished representative of this group was Mutamir b. Sharar (646-705), the author of the Muqaddim, who was founder of the Muqaddim school gathered many pupils around him (Goldschmidt, Al-Andalusiana, Madina, p. 237 sq.). On the death of this great man, the first caliph of the town of Madina (690 = 844) but it has not survived. Madina was now ruled by governor appointed by the Calif, list of whom are given by Tukari and Ibn al-Allah. The town was however not entirely unafflicted by the wars of the first century after Muhammad. In the reign of Yazid, feeling it Madina, even among the Umayyads, was not less on less hostilities to the Calif and many took the part of their rival, and took the part of the Caliph at Zahiria in Mecca. The expedition under the governor Amr b. Aswad, which Yazid ordered, was a failure. In 63 (942) the Madinans rebelled openly, opposing 'Abd Allah b. Hamuda as their leader and building a wall with a ditch to defend the town on the north. The Calif sent an army under the leadership of Uqba b. Ummayah which took up its quarters on the Huray N.E. of the town and fought the battle of the Actara which ended in the defeat of the Madinans, according to the usual story, a result of the treachery of the Banu Hashim. These inhabitants were abandoned to the ill-omen of the Syrian troops, probably a malicious
sight: earthquake which increased to seven each succeeding day. This, a glowing stream of lava burst forth which, as the chroniclers tell us, devoured rocks and stones but fortunately flowed to the east of the town and thus continued its way northwards. The inhabitants sought protection in the Mosque of the Prophet, praying and confessing that the town was lost. The belief in the latter's inviolability, which was thus strengthened, was soon to be shattered by the conquest described below.

Under the rule of the Turks Madina continued to lead a quiet life, little heed being taken by the outside world, and it is rarely mentioned, circumstance much facilitated by the fact that the holy city could not be entered by non-Muslims. Radical changes only came about in the sixth century. In 858, the Wahhabis took the town, plundered its treasures, and prevented pilgrimages to the Tomb of Muhammad. An attempt to destroy the dome over the tomb failed, but the great treasures in pearls, jewels etc., presented by pilgrims to the mosque were carried off. It was not till 1823 that Muhammad 'Ali's son Taimur succeeded in reaching the town. But there are the treaty of peace in 1825.

'Abd Allah b. Sa'Id recognized Turkish suzerainty over the holy places in the Hijaz. Muhammad 'Ali however paid no attention to this, but sent another son Ibrahim to continue the war against the Sa'id and in 1838 he took Dar'ya and raised it to the ground, whence he returned to Madina. The sacred cities once more belonged to the Turks and the Grand Sharif of Mecca even forbade pilgrims from Ibn Sa'id's territory to enter Mecca. This restoration of Turkish rule brought at least one important innovation: the building of the Hijaz railway from Damascus to Madina in 1908. It was primarily intended for pilgrims but was also of military importance and therefore suffered severely in the world war. Through the intervention of the Grand Sharif Husain b. 'Abd al-Malik, the fighting and the intrigues in North Arabia became more and more involved. He first posed as a faithful servant of the Turkish Sultan but later he rebelled and on Nov. 6, 1914 had himself proclaimed king of the Hijaz and joined the English. After the peace which ended the world war the Turkish troops evacuated Madina in 1918. In the meanwhile a stronger opponent to Husain had arisen in 'Abd al-Aziz b. Sa'id, who had once more raised the Wahhabis to a position of supremacy. Husain's bold move in assuming the title of caliph found no support among the Arab chiefs, and the people of the Hijaz forced him to abdicate. Ibn Sa'id seized this opportunity and at once captured Mecca. Thus was induced Husain's son 'Ali to leave the town. The two holy cities are therefore now both in the hands of the Wahhabis, who are however more tolerant and permit visits to the Mosque of the Tomb and other holy places and only forbid actual worship there.

In spite of the success of Madina, all non-Muslims and the reports of various modern travellers enable us to form a fairly clear picture of it, which can only be briefly outlined here. In keeping with the configuration of the ground, the plain on which Madina lies is divided into an upper southern part and a low northern part, al-Shiyah and al-Shijkh, issues found even in the earliest writers. Al-Shiya is reckoned to run to the above mentioned village of Kula, 3 miles away, al-Shijikh to the hill of Umm. The older wall encloses the town proper; the already mentioned later wall which is now partly in ruins encloses the eastern rather large sahn of al-A Rashid and "camp of the summer," luce al-muharrad, 400 yards from the old town and the town. Here is pointed out the traditional site of the muqalla, the Prophet's place of prayer, a tradition probably worthy of credence, as otherwise it would have been natural to locate it in the great mosque mentioned below. Along the south side of the wall runs the road of the funeral processions, Darah al-Djamah, which leads to the old general burial-place, Bab al-Qasr (so called after the plant aitrus retusus) in the east of the town. Among the thousands who are buried here are the little son of the Prophet, Thalib, his wife (whether also his daughter Fatima is disputed: see below), many of his companions, al-Shahba, Muhammad al-Bekir, Dja'ls al-Salih, the already mentioned jurist, Malik b. Anas, and many others. At the north-west corner of the town and partly on the wall there are several gates in the walls, including the Bab al-Sham in the north, the Bab al-Djam in the east, and the Bab al-Arshayya in the west. From a spring of fresh water in the village of Kula an aqueduct runs into the town, first laid by Marwan when governor of Madina. It frequently fell into disrepair and was restored for example by several Ottoman sultans, on the last occasion by 'Abd al-Hamid after the Wahhabis had destroyed it. The damage not infrequently done by floods has already been mentioned. In 1734 the Madinans were prevented for six months by an inundation from visiting the grave of Hanan. The streets of Madina are, clean but narrow and only the main streets are paved. The houses are well built of stone and a number have two stories. Several of them are surrounded by gardens, but the houses with gardens are mainly found outside the north and south wall, especially towards the south where vegetable gardens and orchards alternate with palm groves and cornfields. The dates of which there are 70 varieties are, as in ancient times, one of the principal products. The pilgrim traffic is however the most important source of revenue for the inhabitants, who let their dwellings to the strangers and guide them to the sacred places and instruct them about ritual duties. The astronauts here play the same role as the sufi sheikhs in Mecca. Burton (ib. 182) gives the number of inhabitants at 16,000—18,000, in addition to 400 men in the garrison. Wavell (p. 63) in 1908 put it at 20,000, including soldiers and pilgrims, while Balfour gave 60,000 including many foreign visitors. The results of the world war have of course altered these conditions in many ways. The population used to increase gradually by visitors settling after permanently in the sacred city, Of the inhabitants of the old Ansar there are very few left in Madina; according to Burckhardt there were only ten families in his time. There are a number of Sh[J]'is in the suburbs. Madina possesses no sanctuary, some remote times like the Ka'bah, on the other hand it possesses compensation for this in innumerable rail in. Muslim eyes is the most beautiful mosque in reality and is the goal of countless pilgrims. Several teachers even put this sanctity higher than the Mecca one, but this view is not general, and the visiting of the mosque is not obligatory like the pilgrimage to Mecca.
and also may be undertaken at any time. According to
numerous traditions the Prophet was buried under
'Abd Allah's house, where also the two first caliphs
rested on their last resting-place. Further, all the
earlier sources agree that Muhammad soon after
his arrival in Medina had a mosque built, which he
erected after the taking of Khaybar, and they
were also agreed that the dwellings of his wives
were close by so that 'Abd Allah's house with the
garden could easily have been taken into the mosque.
That there is nothing improbable in itself in a
mosque having been built in the time of the
Prophet is shown by the mention of a real mosque,
Sūrā ix. 108 (97), cf. xi. 26, 36. But Castani, Amozzi, p. 432 (163), has disputed
important arguments the correctness of the tradition
and various statements drawn the conclusion
that originally on the site of the later mosque
there was more probably only the ärre of Mu
hammad with a courtyard and various dwellings.
If this is right, it is not known who built the
mosque; but probably it was erected not long
after Muhammad's death, for the rapidly increasing
reverence for the Prophet must very soon have
aroused the desire to build a resting-place in
touch with his religion. To this mosque, early
built, can then be referred that tradition tells us of Muhammad's mosque; — a simple building
of brick with pillars of palm-stone and a roof of
branches. According to the same tradition, 'Umar had it extended and after him 'Uthman who replaced
it by a building of stone and a roof of
leak. When Marwan was governor of Medina,
he had a maqṣar of colored stones erected; but no
important advance was made till the reign
of Walid, who commissioned the then governor,
afterwards caliph, 'Abd Allah-al-A'īs in 87
(766) to adow the building in greater splendour.
For this 'Umar used Greek and Coptic builders,
and the Byzantine emperor is said to have contributed
1,000 caelit of gold and a large quantity
of mosaic stones towards it. On this occasion four
minarets were placed at the corners of the sanctuary
covered with plates of lead. The mosque remained unaltered till the reign
of Al-Mahdi. After this Caliph al-Hajib had visited Medina, it was rebuilt and extended in 182 (778-779)
and its length was now 300 and its breadth 200 coll.
In the following century another restoration was
necessary and was carried through by al-Mu'ta-
awahh in the year 247 (861-862).
Of the mosque which thus came into existence there are very full descriptions by Ibn 'Abd Rab-
bih (d. 326 = 939), Makhdadd (375 = 985), Ibn 'Uqayr who travelled in the end of the years 576-
578 (1182-1185, and 1187) and lastly of al-Ma'mun, a very minute work, given by these authors only a few
can be quoted here. As is quite evident from several of these descriptions, the mosque had the form,
always retained later, of an open court-yard
covered with and or gravel, which was surrounded on all four sides by rows of pillars.
In the eastern part of the southern pillared hall
was the holy of holies, the tomb of the Prophet,
with the tombs of Abū Bakr and of 'Umar. It
is described by Yāḥīyā (iv. 458) as a high building,
surmounted at the top only by a space from the
roof of the pillared hall. Regarding the relative
positions of the three graves there are in his
description different views. North of them, according to some traditions, was the tomb of Fāṭima, while
according to others this was in the general burying
ground. The part of the pillared hall lying west
of the graves bore the name al-naṣūra, the gardens,
from an alluded utterance of the Prophet. The
total number of pillars is said to have been 956; those in the southern part were stuccoed, with
 gilt capitals, the others were of marble. The walls
were adorned with marble, gold, and mosaic.
Along the southern border of the naṣūra ran a barrier,
with which several highly venerated relics
were associated; — the remains of the trunk of a
tree, on which Muhammad used to sit, and especially his miter of pulpits. According to
the tradition Muhammad wished to remove these; but
immediately a tremendous earthquake began, and he
abandoned the idea and instead raised it by an
upper structure five steps higher. Al-Mahdi later
wished to remove this addition, but he was dis-
suaded from doing this as the masts had been
driven into the old minbar (Yaḥīyā, ed. Horimau,
ii. 283; Ṭabari, iii. 483; Makhdadd, ed. de Goeje,
p. 81). According to the descriptions it had 8 steps
and there was a slab of ebony over the seat which
visitors might touch. The remains of the tree
trunk were kisn and smoked with the hands, an
interesting imitation of ancient Arabian religious
customs. Among the various treasures of the
mosque was the Mazar of the Madīna, i.e., the
canonical text of the Korān prepared by
'Uthman. The mosque had 19 doors of which only
four, two in the east and two in the west, were
opened. There were three misarrays, two at
the corners of the north side and one at the
southern corner.
While the Mosque of the Tomb escaped the
volcanic eruption already mentioned (654 = 1256), it suffered in the same year from a fire due to
the carelessness of a caretaker, which destroyed a part
of it. An appeal to the caliph of Baghdad for assistance to rebuild it remained unanswered
as the Abbasid dynasty was then tottering before
the Seljuk Turks, which was to last for another 70
years. Only the roof was repaired. The fire in sackcloth fashion, the rubble was not even
clared away from the tombs but remained there
for over two centuries. Several of the Manṣūrī
Sulṭāns showed some interest in the sanctuary,
among them Kāhin I, who, according to Muhyī
al-Dīn (Cairo 1283; p. 454), placed a railing round the tomb of the Prophet and had its roof gill,
while others sent workmen and materials, and
notably al-Mansūr Kāhin in 676 (= 1279) to mark
the site of the tomb built a dome over it covered
with plates of lead. Al-Farāḥ Shīrīn Kāhin (735-800 = 1485-1545) was however the first
rebuild and to deal with the mosque in an entirely
new and original fashion and he had the mosque at the southern corner, al-Mustaṣaṣṣa, taken down and rebuilt. A great
number of buildings were built upon the mosque for, in a terrible
thunderstorm in 886 (1483), it was struck by lightning
and partly destroyed, and the library with its valuable manuscripts of the Korān perished.
Sulṭān, who lost his own library on this occasion,
gave an account of the catastrophe. The most
famous Sulṭān Sulṭān however sent a large number of
workmen with tools and materials, and in 889 (1484)
the building was restored and among other alterations the dome over the tomb was enlarged; he
also presented the brass railing which surrounds
the naṣūra. On this occasion, the Sulṭān also
presented to the town baths and a hypocaust for
them, an aqueduct and a water mill, as well as a large number of valuable books to replace those destroyed. Its misfortunes however were not at an end for in 898 (1492) it was again struck by lightning; the Qāʿa, the northeast corner was destroyed and had to be rebuilt. The mosque received its present form by an addition to the north, made by 'Abd al-Majīd in 1270 (1853-1854) which Burton saw before its completion. The many inscriptions which cover the walls, include various Sūras and Korans and the mystic prayers and verses of 'Abd al-Majīd.

In modern times we have descriptions by Burckhardt (unfortunately incomplete), as he was ill during his stay, by Burton (1853), a brief one by Wavell in 1808—1809 and a good one by al-Batūnī in 1910. In their main outlines they give much the same picture as the older ones. The mosque stands in the centre of the town proper, a little to the east. Al-Batūnī gives the length from north to south as 385 feet, the breadth on the north side as 285 feet and on the south side as 230 feet. The court (jaʿfar or al-baṣāl) is covered with sand or gravel and enclosed by four sides by pillared halls, of which the longest on the south is 360 feet. The actual mosque itself, the pillars in this part are covered with marble with gild ornamentation. All the pillars in the mosque, 347 in number, support arches on which rest little domes like divided oranges. Of the pillars 32 are in the eastern part of the southern hall (the qubba), the sanctuary proper with the tomb of the Prophet. "The Garden," i.e. the area between the tomb and the minbar, is 70 feet long and 50 breadth. The qubba is enclosed on the south, where the mosque is extended by a row of pillars, by a brass grille with the relics already mentioned, and the beautiful mecbīra of the Prophet with an indication of the direction of prayer. The present marble is of marble with gilding, a gift of Murād III in 998 (1590). The mecbīra, the holy of holies, in the south, is 50 feet long from north to south and 47 feet broad, is surrounded by a green polished brass railing through which a door, 88 by 125 by 135, leads to the Rawżah. It encloses an area which is called al-ṣaqa, in allusion to Aṣūr's house. It cannot be accurately described as it is covered with green silk and is not seen by visitors. The covering, which recalls the covering of the Ka'bah, is said to have been first presented by the mother of Hūrin al-Raḥilī, Nim al-Din Zangī is said to have cleaned a new area round the other salaysa to protect the tomb. In the jaʿafars are the tombs of the Prophet and of the first two caliphs, according to the usual belief in the following order: the most southern is the tomb of Muhammad; next to it is ʿAbd al-Majūd, next Bes al-Bakr with his head beside Muhammad's feet and on the north ʿUmar with his head beside ʿAbd al-Bakr's shoulders. A fourth, empty grave is said to be intended for Jesus after his passion. On the north side of the large mecbīra, another smaller one adjoins it, which, according to an assumption still disputed by many, contains the tomb of Fātimah. Two doors on the east and west side connect it with the large mecbīra. Two hanging lamps are placed in this the most sacred part of the mosque, and in addition in the Rawżah there are candelabra of crystal. In the court of the mosque, approximately east, is a quadrangular area shut off by an iron grille, which is called Fātimah's garden. Of the 15 palms which grew there in the time of Ibn Dabbūs, Burton saw only 12; al-Batūnī mentions several small palms planted round a high one. Behind the boundary wall is called "Prophet's wall". The mosque has four minarets at the four corners and according to Burton a fifth in the centre of the west side, but this is not mentioned by al-Batūnī. Five domes give admittance to the sanctuary: on the west the Bāb al-Salām and Bāb al-Raḥim, on the north the Bāb al-Majūd, on the east the Bāb Dīlān (or al-Dīlān) and Bāb al-Naṣr. They are all closed at night. From the descriptions already quoted, the mosque was not impressive when seen from the outside, as the houses were built so thickly round it that an open view of it could not be obtained. Even the richly ornamented Bāb al-Salām only looked like the termination of a street running from the west. But this seems now to have been altered, as according to Maull, "Zur Zelt- und Ruhigkeiten von Arabien," p. 344, all the houses in the immediate vicinity of the mosque were removed in 1916.

The immediate vicinity of the city of the Prophet is of course very rich in places with which are associated anecdotes and traditions of him. The most important of these is the hill of Uma or Umm, with the graves of those who fell for the faith there. It is riddled by the village of Kuba′, where Muḥammad on his arrival in his new home stayed from Monday till Thursday (Ibn Humayd, p. 335). The village, which was at that time occupied by the "Aṣūr or ʿAsīf, according to the Arab geographers, 2 miles, according to Ibn Hāmid, 3 miles, 1½ hours from Madīnā; to be accurate, it is about 3 miles. The surrounding gardens which are exceedingly rich in all kinds of fruit and vegetables extend for 4 or 5 miles (Burckhardt). Burton describes how the village appeared to him as he approached it: "a confused lump of huts and dwellings, houses, chapels and towers, with trees, between oil lamps, heaps of rubbish and yelping dogs". Tradition marks the spot where the Prophet's camel knelt (al-mقщ)& and here also was the mosque mentioned in Sīra, i.e. 139 built out of stone, as well as its counterpart, the Masjīd al-ʾAʿzīz, destroyed by Muḥammad's orders (cf. Wāḥidī—Wellhausen, p. 411; Ibn Ṣa'd, III, 32, 33 and above). The mosque of Kuba′, with its simple minaret was in ruins in Burckhardt's time, but has since been replaced by a stone structure.

Al-Madinat al-Zahirah, the ancient capital of the Umayyad Caliphate in Cordova, the ruins of which are still in existence about 3 miles to the west of this latter town, as the place called Cordoba in Spain, on the last spurs of the Sierra Morena overlooking the valley of Guadalquivir (q.v.).

The western Arab historians give us a great deal of information on the foundation of this royal town, upon the period which marked its prosperity and upon the causes which led to its fall. It was the great Caliph 'Abd al-Rahman III al-Nasir (q.v.), who decided upon building it, and its construction was begun during the reign of the sovereign at the end of the year 325 (936). The chroniclers say that one of his companions having left him a large sum of money, al-Nasir wished to utilize this sum for the payment of the ransom of the Spanish Muslim prisoners of war in the kingdoms of Leon and of Navarre. As the envoys who had been sent for this purpose failed to find any prisoners whom they could ransom, the Caliph's favourite al-Zahirah is said to have advised him to employ the legacy to build a town to which she would give her name. This amicable act was without doubt legendary, at least in several points. The work of building the town was carried on for many years (from 325 to 430 years according to historians); it lay around the palace of the Caliph. Six thousand town stones were used every day, not to mention other materials; the necessary marble was chiefly imported from Afriquia, and no less than 4,373 columns were required, if we may believe Ibn 'Idhārī. According to the same author it was the crown prince al-Hakim himself who directed operations. The name of the chief architect, Mathamah b. 'Abd Allāh, has also been preserved.

The building of Madinat al-Zahirah engaged not less than 10,000 workmen. Account was taken in the planning of the town of the very steep slopes of the site. The town was given a plan in which the central mosque occupied the centre. The town was built on three terraces; the lower one contained private dwelling-houses and the Great Mosque.

'Abd al-Rahman removed with all his court to Madinat al-Zahirah, as he felt the Caliph's palace of Cordova which faced the cathedral mosque and overlooked Guadalquivir too small, and this became his favourite residence. His successors al-Hakim II and al-Hakim III lived there for the most part during their reigns, and further embellished the town of al-Nasir. It appears, however, that they were not so well received in it as the previous sovereigns. In the year 395 (1005) marked its final fall, A century and a half afterwards in the time of Idriss, the walls alone remained and vestiges only of the palace. A few inhabitants still lingered in it.

A beginning was made in exploring and systematically excavating the ruins of Madinat al-Zahirah.
about the year 1910, under the direction of the Spanish archaeologist, E. Velázquez Bosco. The first work done was the excavation of the double rampart dividing the upper terrace of the town from the middle terrace and from certain parts of the palace. A large number of carved stones have been brought to light.

**Bibliography**

**AL-MĀjejRA**

**AL-MĀjejRA**, the Milky Way (the place, path, road of moving).

The Name. It is probably taken in the first place from the Greek γαλακτός: *al-ḥabba‘ū al-bakīhah* or *al-dhahr al-dakhir*; the circle or path which looks like milk. Other names are *fisr al-ghalib*; the road of milk, as it has the colour of milk, *farīr al-ghalib*, the road of the place where there is milk, and hence metaphorically name of heaven, mother of heavens, who feeds the heavens as milk; *farīr al-ghalib*, path of straw and milk or *al-dhahr al-dakhir*, path of the place where there is milk. Similarly the Milky Way is called in Persian گلکسِی, straw-puller, or گلکسِی, path of the straw-puller in Turkish گلکسِی, گلکسِی, straw or fodder-thief. Whether names connected with straw go back to Greek or Oriental ideas is uncertain. Guindel (op. cit.) holds the latter view. In the East the Milky Way is the sky, straw and meal, which Peter or Saint Vincent (Venna) lost and blessed by God gave to heaven. Another Turkish name is گلکسِی, path of the pilgrim.

Other Arabic names are *al-tam‘*; gate of heaven, and *al-saw‘* or *al-saw‘*, gap probably from the idea that the Milky Way corresponds to a gap which one can see the sky beyond. Another name is *awr al-majjar*; mother of the stars, because no part of the heavens is so rich in stars. The stars are also to have legs (دَارَة al-majjar). Among the Kazan Tatars the Milky Way is called *Fat‘ al-Wil-Goose* and among the Altai Tatars (*Fat‘ al-Grose-Feast*; front way).

The name of *al-majjar*; River of the Majjar, is noteworthy. The Milky Way is regarded as a river; this is evident from the passages in *Abū al-Rahmān al-Safī* in his work on the constellations, in *al-Bīḍāl* in his *Kitāb al-Tafsīr* towards the end and in the *Chronology* (text, p. 345; transl., p. 348), in *al-Kawāf* in the *Camograph* (text, i, p. 37; transl., p. 18) and in many others. In these passages the constellation of Segittarius or the eight stars forming the lower station of the moon which are called *Segittarius al-majjar* are described. *Four* of the stars which lie on the Milky Way are called *al-majjar al-safī*; the eastern going to drink, the four others lie at the side of the river of the Milky Way and are called *al-majjar al-dā‘ir*, the cattle returning from drinking (cf. e.g. L. de Verte, op. cit., p. 184 and Hyde, *Ulysses’s Table*, Oxford, p. 28).

**Description of the Milky Way.** A description of the Milky Way, the stars and constellations in it, is given by Podenay in the *Almugāri* (Dh. viii, Ch. 2) and the Muslim translators have borrowed from this. The editors have treated it in different ways. Al-Ṭūsī for example in his commentary of the *Almugāri* gives the description of Podenay fully as in *Polemies*; but he does not give the translation by al-Majjarī, as I was able to show. Ibn Sīnā, the other hand, who gives a brief synopsis of the contents of the *Almugāri* in the *Šaybān* (Hersing) gives no such description; he deals here in the same way as he does with the Tables which he includes.

The very full treatment of the Milky Way is followed in *Polemies* by a description of the method of making a globe of the heavens on which the Milky Way is represented. Ibn Sīnā, for example, took over this section word for word in a form which we also find elsewhere. It is therefore exceedingly probable that the Milky Way was represented on one or other celestial globe, of which a whole series is recorded. It does not seem to be on the extant globes (cf. H. Schmoll, *Die Kugel mit den Schatten*).

An independent description of the whole Milky Way as full as that in *Polemies*, I have not been able to find in Arabic works. A brief description is given by Abū Ḥanīfa al-Dimawri in *al-Maṣūfik*, *Kitāb al-Amrīn wa l-Ahwiq* (Cairo 1325, ii, 9–12). The description of al-Dimawri leaves much to be desired and the text is not quite correct. The former is in keeping with Abū al-Rahmān al-Safī’s verdict, according to which al-Dimawri was very well acquainted with the verses on the Milky Way but his astronomical knowledge was insufficient (it may be noted that Abū al-Rahmān mentions Ibn Khuzayma, while there is a Muhammad b. Khuzayma in al-Masūfik).

The anonymous writer mentioned in the *Bibliography* gives a brief description of it. Abū al-Rahmān al-Safī unfortunately only gives a description of one part of it; he mentions the part of the Milky Way between the bright, the bright Milky Way (al-Majjarī al-qāmiyum) and the falling eagle (Lyra) (bīz al-majjarī; here at y Gygoi the Milky Way divides). Abū al-Rahmān follows this stretch up to *Scorpio*. In many cases the position of stars e.g. in the Ship is given from their position with respect to the Milky Way. Schjellerup has given details in the tables appended to the synoptic accord. (p. 544). In the *Kawāf* of al-Ṭūsī the Almugāri and al-Majjarī of the Arabs, Kāthir of the Persians and Kah Bihich of the Hindus is an aggregation of a very large number of small stars.
They form an almost perfect large circle, which runs between Gemini and Sagittarius, sometimes narrow, sometimes wide, in some places it is dense, in others not. Aristotle thinks that the Milky Way consists of stars surrounded by vapors like the halo round the moon and the mist (in the sky) and the sameness.

The Theory of the Milky Way. On the nature of the Milky Way and the cause of its shape, there are a number of views, which follow the same lines as those of the ancients (cf. O. Gilbert, Die astrophysischen Theorien der griechischen Alterthumer, Leipzig 1907, index v, p. 275). I may give al-Karīmi's account of it.

Al-Karīmi (1125-1286) who wrote a work on Optics (Noteworthy consideration of what the eyes grasp in 50 questions or problems), says in the 45th question: "Why do we see a black haze on the moon? Is this an illusion or reality?" and concludes:

"Commented on this question is that of the Milky Way which looks red in the sky. We are told that it is due to the vapor. 2. It consists of small stars which are crowded so closely together that the eye cannot distinguish one from the other. 3. It is said to be a vapor, which has risen from the earth and solidified under the sun of the fixed stars. One forms a black, cloudy body. This is the case in the central Milky Way. A part lies in places which are far away from those in which there is burning; these are the two sides of the Milky Way. These phases appear white. 4. Finally we are told that the Milky Way consists of something whose shape is inverted in the heavens and which is in some part of the earth, to which the eye cannot be found and which cannot be reached."

Of these four views, the second is nearest the truth.

The anonymous author of the Berlin manuscript also tells us very fully about the different views and the nature of the Milky Way, here is the passage in question: "Learned men have many and varied views on the nature and substance of this belt. Some say that it is a part of the upper sphere and thicker and closer than the rest of it. It is therefore visible, while the rest is not, as the latter is exceedingly fine. This corresponds to the opinion of the philosopher Diodorus (Silikotitas)."

"According to Aristotle, this belt consists of vapors which have collected together and ascended into the sky through the intermediary of the stars. As vapors are continually rising, they retain their shape. There is a contradiction in this. If we assume that the belt is formed by rising vapors, they cannot possibly be always seen at one and the same place in the sky; nor can they be seen from all places on earth and they cannot maintain one and the same distance from the stars and the atmosphere."

"If the belt is always seen in the same way and has permanently the same form, if it is seen in all climates, if the distance from the stars and the ascendants is always the same, then, this is a sure indication that the belt does not originate in vapors as these completely lack such qualities."

Some learned men agree that the Milky Way, al-Madjara, has its origin in the fact that small stars have become combined in this figure (1168) and offer themselves jointly to the view.

On account of their smallness, they do not look like shining stars as they are united together and give their light together (the light of the single stars forming one whole). This is the origin of the shining and the figure which we see. This view is one which is intelligible and men adopt it."

"We say that the Milky Way is a limit of the sphere of the fixed stars. As it is a thick limb, which is thicker than the other limbs, it completely absorbs the light of the sun, corresponding to what the other limbs take up, i.e. as the stars do. This corresponds to the view of him who says that the matter is thick limbs of their nature. Each limb takes up light in proportion to its density, but the density is the same, light being reflected at an angle.""

"Many learned men attack the Aristotelian view, as has been done even in ancient times, and regard the latter view (5) as the most probable."

The anonymous writer therefore says it down quite generally that the Milky Way cannot be in the earth; it has always one and the same form quite independently of the position from which it is seen and does not alter its position.

Abu 'Isar (Has Hbrebsa) in his work (Invention of the splitters) on the shape of heaven and earth, (translated by F. Nau, Paris 1899, p. 92 sq.) has a section on it (he ḥafaš nājīdā) and the Milky Way. He says: "In the heavens there are some white patches, vapor-stars. Some think these are a part of the Milky Way as like it they resemble clouds. They also think that they consist of a very large number of very small stars lying very close to one another, like the mane below the lion which is in the shape of an ivy leaf. Those who believe this also say that the whole Milky Way consists of very small stars joined together. The Milky Way is obviously neither made nor kept in the air, nor is it outside the sphere of Saturn, but on the contrary it affects the Milky Way."

The following note may be added on patches of nebula:

Among the nebulae known to the Muslims are the Magellanic clouds which were observed by merchants in Makka. They saw there a white patch of cloud which never came down and never changed its position (al-Karimī, Aṣāī al-Majāshīr, vol. II, p. 40).

At quite an early date Ibn al-Haitham thoroughly and fully proved that the Milky Way is not in the air, but in the heavens and at a distance which is very great in proportion to the diameter of the earth, from the absence of a parallax, etc. from the fact that it has the same position with respect to the fixed stars at different points on the earth. The anonymous writer also points this out (F. Wiedemann, Über die Lage der Milchstrasse nach Ibn al-Haitham, in Series, xxxvi-xxvi.

1) According to this, the anonymous writer would believe that the fixed stars, the Milky Way, etc. are seen light from the sun, a view that is contradicted by the al-Haitham and others of below.

2) In the tables and astronomical works only the separate patches mentioned by Poliklet are given.

3) There is an error here: The Milky Way should have to be below tne sphere of Saturn but above the atmosphere like the planets. — The deviations in the brightness of the Milky Way are phenomenon caused by dusting.

The Milki Way is mentioned in a whole series of verses, particularly in the hands of modern poets. I have published 22 of these in the S. P. F. M. S. Erlangen with the help of A. Flower (Leipzig), Kowalinski (Cracovia), Heil (Erlangen) and Krenken (Bonnheim).

(M. F. WIEDEMANN)

MAJID AL-DAWLA, Abi ‘Ali, Rusun al-Din. Abi ‘Ali, Fathur al-Dawla, Abi Rabi. After the death of his father Fathur al-Dawla (q.v.), Majid al-Dawla, who, according to the usual statement, was then four years of age, according to another source (while Ibn al-Aziz, Abi ‘Abd, N. 43 says he was born in 379-909-900) which does not agree with either of these statements, was proclaimed as successor to the regency of his mother Suyyid. In 388 (998) Kasha b. Wadhambugh (q.v.) esteemed the two provinces of Dajjajun and Tabaristan, to which was added by the treaty of peace Maimana the also, and later he brought Gillin al-Dawla under his rule. In 397, 1006-1007, Majid al-Dawla with the help of the vizier al-Khatir Abi ‘Ali b. Abi Rabi and al-Ruzzu, in the east of al-Dawla whose attempt to overthrow his mother he was taken prisoner by his brother Shams al-Dawla and the kadi that his brother, Abi Rabi, was deposed, whereupon Shams al-Dawla took control of the government. But al-Dawla did not last long; however, when Majid al-Dawla was released and again recognized as ruler, while his brother retired to his government of Maimana. In 405 (1015) the latter succeeded in seizing the town of al-Kayy. Suyyid and Majid al-Dawla had to take to flight, but were soon able to return because Shams al-Dawla was prevented from following them by a routiny in the army and had to leave the field. Suyyid held the reins of government until her death (410 = 1019/1020), while Majid al-Dawla, who although extremely interested in learning, otherwise cared only for his numerous harem, paid no heed to affairs of state. After Suyyid’s death, the complete chaos reigned. (see the previous paragraph). In 419 (1028/1029) Sultan Mahmud b. Sulaiman b. Sulaiman b. Al-Shakirah (q.v.) undertook a campaign into the tribe. When Majid al-Dawla wrote to him and complained of the rebellion spirit of his army, the Sultan sent a considerable body of troops against al-Dawla and ordered the commander to take Majid al-Dawla. When the troops opposed the latter went to them and was at once seized along with his son Al-‘Ali. The Sultan himself then set out against al-Dawla, seized the town and had Majid al-Dawla sent to chains to Kasr el-Din.

(K. V. ZETTERSTEDT)

MAJID AL-DIN. [see HUBAT ALLAH MUSAMMAM]

MAJID AL-MULK, Abi ‘Abd al-Rahman Muhammad al-Harawi. Governor of the Sultanate of Sur and Harāt. As early as 485 (1093-1099) we find Majid al-Mulk mentioned among the high officials, and in time he became more and more powerful, while Barqiyuyk’s weakness and incapacity became more and more obvious. But as a Shī’ī, Majid al-Mulk became suspected of being the real instigator of the murder committed by the ‘āliids and after the murder Barqiyuyk [q.v.] had fallen a victim to ‘āliid fanaticism, the troops mutinied (Shawwal 490 = Aug.-Sept. 1099) and demanded that Majid al-Mulk should be handed over to them. He offered to sacrifice his life and proposed that the sultan should have himself exonerated to satisfy the troops. But Barqiyuyk wished to save him. After the soldiers had sworn not to slay Majid al-Mulk, but only to imprison him, he was handed over. In spite of their oath, the soldiers fell upon him and set fire to him to places. His death is derived from Barakshah, a village near Kurna; cf. Yakut, q.v.

(K. V. ZETTERSTEDT)

MAJIDHUB (as, "attracted") denotes in the terminology of the Sufis a person who is drawn by the Divine attraction (Qadghin), so that without effort on his part he attains to union with God. In other words, the Sufis experience the ecstatic rapture of losing himself in God, and is thereby distinguished from the akhri ("travellers"), who makes the journey to God, stage by stage, with conscious endeavors and purposes. The opinion favored by the rationalists, it is, that the Sufi is superior to the akhri finds expression in the saying: "One Qadghin (act of drawing) from God is equivalent to all the inward (rational) work of manhood and isms (‘ilm al-Qadghin);", but it is generally recognized that, whether akhri or Qadghin (q.v.) properly describe both are needed in order to reach perfection. Those in whom Sufism prevails possess such and constitutes the predominant element in their spiritual life are called ‘ālim as-Dawla, while conversely those whose sufism comes first are known as ‘ālim as-Sīlah. Although the terms ‘ālim as-Dawla and ‘ālim are employed by Husain (Masighon, Persien, ii. 905) and occur
frequently afterwards, their application in a narrower sense to those who speculate or acknowledge the moral and religious law is characteristic of the derisive franknesses, which, as is well-known, differing widely from others in their theory and practice concerning this matter.

(M. A. NICHOLSON)

MADID (A.) [See AL-MINH.]

MADINUN. In Arabic, Persian and Turkish literature the epithet al-madinun, i.e. "the man possessed by a djinn," the "madman," is prominently associated with Kāsī ibn al-Mu'āz wa'far (according to others, the name of his father is Muḥammad), the author of the Bara' ʿAbd ar-Rahmān ibn al-Sa'd, the story of whose passages for Lālā, daughter of Saʿd, a woman of the same tribe, is celebrated throughout the Mughal world. Kāsī is said to have died about 1300 A.H. (Farsū, Ḥādīj 328, li. 172), but it seems doubtful whether he can be regarded as a historical person, and this view is supported by the statements of early Muslim authorities (Aḥmad, I, 167-169; cf. Ibn Ḥallāl, ed. Wetschenski, N. 103, p. 542, and Ibn Ḥallāl, Muḥaddisima, ed. Quatrench, t, 106, f. 20 r. = Aḥmad, I, 169, d. 604, where he describes one of three persons who were visited, while Ibn al-Kalīt declared that the story of Madinun and the scenes attributed to him were fabricated by a man of the Banū Umayyah (fābd, li. 167, b. 20 v.). Stripped of the picturesque details with which later poets have embellished it, the story is a simple one. Kāsī meets Lālā amidst a party of women, falls in love at first sight and slaughters his horse to make a feast for her. His horse is returned, but his father refuses to give her in marriage, and soon afterwards he perishes in manner similar to traditions in sanitary matters. The story is a fine one of the past of his days in solitude, wandering half-baked in the hills and valleys of Najaf, making verses on the subject of his unhappy love, and only seeing Lālā at rare intervals until his death. The development of this love-tale of the Arab desert into one of the popular themes of Persian romantic and mystical poetry was begun by Nuqūmi of Gondā, in whose Khānam the Lālā al-Madinun occupies the third place. Of other poems bearing the same title, the best-known in Persian literature are those by Abū Khurshūn of Dīlū, Dubās, Nūḥ, by Ḥusain (see the abridgment in Gilot, History of Ottoman Poetry, li. 175-190) and Jābīlī (ibid., vii. 83-88; 100-1054). Sīh writers find in Madinun a type of the sort which through tribulation, self-abnegation and self-abasement aspires to be united with God.

(M. A. NICHOLSON)
MADJUS. [See VADJUS WA-MADJUS.

MADJUS (n. the Zoroastrians. The Greek word Ἱδωράθη (which itself renders an Iranian word, cf. old-Persian magas, new-Persian mag) passed into Arabic through an Aramaic medium. According to the Arabic lexicographers, Madjus is a collective like Yatūr; in the singular Madjūs is to be used; the religion of the Madjūs is identified with Al-Madjūsīyya. The lexicographers cite from the root  y m  a form (maghzūla) and a verb (magdīya). In a poem, cited in the Liwa and the Thaqaf-al-arm, the phrase fat magāju is found. If we also add, one could be sure, that this word is really (as is asserted in the Liwa) a composition of  gallery is and Al-Tawān Al-Yashābūrī conjointly, the word would already occur in the oldest Arabic literature extant.

In the lexica, the word Madjūs is derived from the proper name, Mīndī Kīs, which name, according to them, is the Persian equivalent for Arabic مَنْدِي الكس (*a. little ear*). This man, named Mīndī Kīs, they say, is not the same as Zoroaster, but lived before him, and was the first among those who proclaimed the religion of the Magi. This is one instance of the many etymological and etiological enormities of Arabic antiquarians (cf. Liwa, viii. 98 sq.; Thaqaf-al-arm, iv. 245; Lane, Lexicon, s. v.). Incidentally, it may be noted that in Arabic literature the word Madjūs is also used to denote the peoples of Northern Europe, viz. the Scandinavians (cf. Deay, Nicholson, ii. 250 et al.; Appendix No. xxxiv. p. lxxiv.; Reiske normannicorum fontes arabici . . . collegii et al. Selpell, i., Christiania 18396).

In the Kurān the word Madjūs occurs once (xxii. 17); with this verse, ii. 59 and v. 73 are to be compared. In these three places the Ah al-Kišt [q. v.] are mentioned, but it is only in xxii. 17 that the same Madjūs is also found. In this same verse, however, the Madjūs's also are mentioned, who, of course, can by no means be included in the term Ah al-Kišt. Now, in Muslim law, the Zoroastrians are, it will be seen, treated as if they belonged to the Ah al-Kišt. But this conception cannot be based on the Kurānic verse xxii. 17. Also, the commentators (al-Bahāwī, 57; Flügel, p. 629; al-Zamakhšārī, Kastrij, p. 917; al-Raṣī, Majbūt al-Gīrāb, ii. 554; al-Nāṣīrī, in marg. tafrīz, ed. Cairo, xvii. 74 et al.) give nothing that can point to the fact of the Madjūs being, theoretically, Ah al-Kišt. The words of al-Raṣī, who states that the Madjūs are those who do not follow a real prophet, but only a soothsayer, might suggest, that he takes Madjūs to be a sect intermediate between the Ah al-Kišt and the sunnābi, the heathen. Al-Naṣīrī also says that the prophet of the
MADJIS — who, moreover, are dualists — is no real prophet but a muwādī; the muwādīs, on the other hand, have no prophet at all, nor a sacred scripture. In Arabic historical literature the Zoroastrian Persians are themselves occasionally called waḥdānī, e.g. al-Baladhuri, ed. de Goeje, p. 302, 303, 350, 387 (muwādī); p. 407 (muwādī). Finally it must be added that the Kūrā-verse xxii. 17 seems to be a late addition to this Sūra (cf. Nöldeke-Schwalbe, Gesch. des Qorān, i. 214: the verse must be Māliinitic).

In the Ḥadīth, which represents the theory of Muslim law, there is not very much to be found on the Madjīs in particular (cf. A. J. Wensinck, Handboek van oude Muhameedanen Tradition, p. 7, Madjīs). The substance of the Ḥadīth concerning the Magians is, that they are to be treated like the Aḥḥāt al-Kīthāb, and, in consequence, are bound to pay the qiyya. Practically, the rising Muslim state power could not follow any other way. The subjection of Iran would have become impossible, had the Arabs considered the Zoroastrians as mere heathens, who were to be given the choice either of Islam or the sword. And, even before that time, dealing with the Zoroastrians of Bahrain in this rigorous way would have been a grave constitutional fault. Thus tradition, though it also hands down an account of how the prophet gave the Zoroastrians of Bahrain the choice of either Islam or death, reports that 'Abd al-Raḥmān b. 'Uwāfi stated that the prophet had accepted the qiyya from these Madjīs. This tradition was regarded as authoritative afterwards, and the other, stating that the prophet refused to consider Magians otherwise than as muwādīs, was abandoned (cf. Aḥḥāt al-Dāwād, ed. K. 29 = vol. ii. 30). 'Abd al-Raḥmān b. 'Uwāfi is said to have delivered his statement on an occasion when the Khalīfa 'Umar felt doubtful whether he should accept the qiyya from the Iranians, or not (cf. al-Baladhuri, ed. de Goeje, p. 267: the prophet, according to 'Abd al-Raḥmān, had said: *waḥdān khān manan aḥḥāat al-kīthāb*). There is a tradition relating that 'Umar, a year or two before his death, wrote to Dīzār b. Maḥdīya, regarding the Madjīs, instructing him, to put to death every sorcerer (sāḥīr), to separate each Madjī from his wife and children, and to forbid the practice of usnamma (the muttering of Zoroastrian prayers, now-Persian ʿāst or ast). Dīzār began to execute these rigid orders, and 'Umar refused to accept the qiyya from the Madjīs, until 'Abd al-Raḥmān b. 'Uwāfi assured that the prophet had accepted it from the Madjīs. (Aḥḥāt al-Dāwād, loc. cit.; Ibn Hānbal, Musnad, i. 182, 1942; al-Baladhuri, Sābīḥ, Cairo 1904, ii. 144 sqq.) Al-Baladhuri, moreover (ii. 145) cites the following answer given to a Persian ambassador: *Our prophet has commanded us to fight you, until you serve God, and Him alone, or until you pay the qiyya*. So here likewise the Madjīs are put on the same level as the Aḥḥāt al-Kīthāb. The determination of the position of the Zoroastrians in respect to the Muslim state, is the main point of the Ḥadīth concerning them. Moreover, there is a tradition in al-Dāwād, Fawā'id, bab 45, regulating the hereditary portion of the Zoroastrians (capital: altogether clear, however). Other, not so important traditional matters respecting the Madjīs is cited: Lāzīm, vii. 47. Lāzīm, Lūzūm, n. v. jībār; the article Kātibāxiya.

The traditions of the Muslims about Zoroaster are in accordance with their idea of the Zoroastrians being a kind of inferior Aḥḥāt al-Kīthāb. Al-Ṭabari relates, that Zurādīḏ b. Isfīmān (Isfīmān is an adaptation of the Avestic Esphāma, the name of the ancestor of the family to which Zoroaster belonged) laid claim to the title of a prophet, after three years of the reign of King Bīshāpa (the Avestic Bīshāapa) had elapsed (l. 675 sq.); the same historical reports, on the authority of Ḥīqāḥ b. Mahāmed al-Kallāb, that Zurādīḏ, who by the Madjīs is said to be their prophet, was, according to the learned men of the Aḥḥāt al-Kīthāb an inhabitant of Palestine, and a servant of one of the disciples of the prophet Jeremiah. He committed a fraud against his master, who caused him, so that he became leprosa. Zurādīḏ then went to Adharbājījān and began to promulgate the religion called Madjīsīya; afterwards he proceeded to Bahārā, where Bīshāpa resided. This king became a convert to the religion of Zurādīḏ, and compelled his subjects to embrace that religion also (l. 649; cf. al-Thaʿlabī, Histoire des rois des Perses, ed. Ziegenbalg, p. 256).

Another tradition, likewise preserved in al-Ṭabari's work, brings Zurādīḏ together with a Jewish prophet ʿaṣm (vocalisation uncertain), who was sent to Bahārā, and, at his court, met with Zurādīḏ, and the sage Dīzārīs (Avestic Diṣtaṣta, the minister of Bīshāapa and son-in-law of Zoroaster). Zurādīḏ is said to have noted down in Persian the teachings which the Jew delivered in Hebrew, Bīshāpa, and his father Lūzūm (Avestic Lavūstāspa) had been Sīlānīs before ʿaṣm and Zurādīḏ proclaimed their religion (Ṭabari, i. 681, 683). These traditions aim at throwing the Zoroastrian faith into a certain connection with the Jewish religion in the one, Zoroaster is an apostate Jew, in the other, he acts in agreement with a Hebrew prophet. In the Ḥadīth there is a saying of Ibn ʿAbbas: *when the prophet of the Persians had died, Ibn wrote for them the form of the Madjīs* (īnna aḥḥāt Fārisum ʿammum ibnum lūzūm umm al-Madjīsūm; Ibn ʿAbbas, Kāfird, bāth 29 = ii. 30). This isolated tradition might perhaps in some way be connected with the reports about ʿaṣm.

Some Arabic authors, of course, had a better knowledge of Zoroaster and his religion, cf. for instance al-Baladhuri, ed. de Goeje, p. 331, where it is stated, that according to the Madjīs, Zurādīḏ came from Urmīya, and, especially, al-Shahrūsīān, Kīthāt al-Mīlād (ed. Curton, p. 143 etc.), whose scientific treatise, however, contributes nothing to the knowledge of the ideas about Zoroastrianism prevalent among the Muslims. It is enough to say, that al-Shahrūsīān whose information goes back to Isfīmān sources, gives a succinct, but, in general, correct account of Zoroaster and the Madjīs, whom he subdivides into three principal sects: the Kātibāxiya, the Zorāwīsīya and the Zorādāxiya, the latter, according to him, properly the followers of Zoroaster. The Madjīs are, he rightly remarks, not Aḥḥāt al-Kīthāb, but, like the dualists, only possessing something like an inspired scripture (shmāhita kīthāb, p. 179): before the rise of the Madjīsīya, the Persians professed the religion of ʿĪrāhīm (p. 180).

Respecting the treatment of the Zoroastrians during the Iskand conquest, the following data may be given:
1) al-Yaman. Muhammad had sent envoys to that country, who, among other things, had to collect the *ṣirāfa* from those who preferred to remain Christians, Jews, or Medjūs (al-Baladhūrī, p. 69). The Zoroastrians of al-Yaman (the so-called *Medjūs*) were said to be descendants from the pers of the army of Wahriz, who, by order of Kharrawāl, carried back Saif b. Dhi Yasam to that country. Muhammad, when sending an army to al-Yaman against the pseudo-prophet al-Awād, recommended its general, to try and win over to his side these Zoroastrians, who were treated tyrannically by al-Awād. One of these Medjūs, Fāris b. Dalalami, had already embraced Islam; the most distinguished man among the *Medjūs* was Dādghawal (Dādghīya), also became Muslim, and, at his advice, the remaining *Medjūs* followed. They helped energetically to put down al-Awād. So we see, that in al-Yaman the Medjūs were treated like *Abī al-Kīthār*, after which followed their spontaneous conversion to Islam.

2) *Umar*. There was a tradition that the prophet commanded Abū Zaid to take the *ṣirāfa* from the Muslims of *Ushk*, and the *ṣirāfa* from the Medjūs of that country (al-Baladhūrī, p. 77).

3) Bahrayn. In the year 3 (629/630) Muḥammad sent out al-*Abī* b. Abdallāh al-Ḫadramī to Bahrayn; most of the Arabs of that country embraced Islam, and so did Ṣawāh, the Persian *mirād* of Ḫālij (the capital), and some other Zoroastrians. The greatest part of the Medjūs of the country, however, remained faithful to their religion, and had to pay the *ṣirāfa*, like the Jews and the Christians, who, in Bahrayn, did not embrace Islam. Some Arabs criticized Muḥammad, because he pretended to accept the *ṣirāfa* only from the *Abī al-Kīthār*, and now accepted it from the Medjūs of Ḫadram. On that occasion Ṣawāh v. 204 was revealed (al-Baladhūrī, p. 78 etc.).

Here it can be seen, that in the oldest Islam it was by no means regarded as a matter of fact that the Medjūs were to be reckoned under the *Abī al-Kīthār*. During the Khilāfat of Abū Bakr an insurrection took place in Bahrayn, the Medjūs refusing to pay the *ṣirāfa*. This rebellion was not put down before the khilīfat of *Umar* (ibid., p. 83).

4) Iran. Before entering upon the particulars of the state of the Medjūs in Iran, it may be remarked that in Armenia the Medjūs were treated like the Jews and the Christians. They were obliged to pay the *ṣirāfa*, but enjoyed security for their persons and their possessions. In the capitulation of the town of Dāhil (Dīrin) to Ḥabīb b. Maslama, the Christians, Jews and Medjūs are comprised alike under these conditions. The *ṣirāfa* and *ṣīra* are also mentioned as remaining in the possession of their old masters; it may be assumed, that here under these words, which properly design Jewish and Christian sanctuaries, the fire-temples of the Zoroastrians are understood also (al-Baladhūrī, p. 200).

In Iran, the regular treatment of the places which surrender themselves is the imposition of the *ṣirāfa* and the *ṣirāfa* (which, as at this time, in most cases were identical terms for "tribute" in general, cf. *ṣirāfa* and *ṣirāfa*), but cf. al-Baladhūrī, p. 314, where *ṣirāfa* = capitulation and *ṣirāfa* = ground-tax. Thus, the inhabitants are reduced to the state of *ṣirāfa*; if they really were *Abī al-Kīthār*. This is the case e.g. on the

subjection of Mahrūd; Bandanāḏīn (al-Baladhūrī, p. 265). Ḫulawān, Karmān (ibid., p. 301), Nihāwān (ibid., p. 306), Dūnawar, Sirwān, Sarmāmar (ibid., p. 307), Ḥamadān (ibid., p. 309), Isfahān (ibid., p. 312 sq.), Ahvāz (ibid., p. 377; here the prisoners of war were released by order of *Umar*, to cultivate the land, under the obligation to pay *ṣirāfa*; there being not enough Arabs for the purpose), Ḫusayn b. Saḥīr (ibid., p. 382), Ḫurma, Arādūn, Ḫursūz, Darabāḏīd (ibid., p. 385; at Darabāḏīd, the chief authority in the town was a Zoroastrian priest, a *bērka*, Tahtāz and Kurān (ibid., p. 403); they concluded a treaty with *Umar*, which later was confirmed by *Uthman b. Affān*, Naṣīr, (ibid., p. 404). The (ibid., p. 405), Harūt, Baghātūz and Būṣhānd (ibid., p. 405), Mars (ibid., p. 405 sq.). The term *ṣirāfa* is often occurring in our source, must be understood as meaning a tribute; this appears from the last mentioned passage, p. 405 sq.

Not always, however, did the subjugation of the Iranian places come to pass without bloodshed. In Rāy a massacre ensued, but there seem to have been no religious motives for it (al-Baladhūrī, p. 317). If a town had offered a strong resistance, it might happen, that only a limited number of persons were included in the massacre. This was the case at *Sarāhla*, where, according to the treaty, only 100 men were spared; the *marshān* had not included himself in the number, and was, accordingly, killed, while the women were made captives by the conquerors (ibid., p. 405). At *Sīra* a similar event occurred; here the number of men, comprised in the *marshān*, was 80, or, as others said, 100 (ibid., p. 378 sq.). At the conquest of Mānāfīr all the men were killed, and the rest of the population was taken captive (ibid., p. 378). But another stronghold, though resisting the Muslims vigorously, obtained a capitulation, by which its inhabitants became *ṣirāfa* (ibid., p. 317 sq.). A great slaughter was made at the conquest of *Īsākh*, where 40,000 Iranians lost their lives; most of the nobles belonging to the *Abī al-Kīthār* and the *marshān* perished there, so it seems, not in the defence of the town, but after its capture (ibid., p. 389 sq.).

When the Zoroastrians were received as *ṣirāfa*, their religious practices must, of course, be respected. Thus al-Farābī made the Muslims, on behalf of the inhabitants of Rāy and *Kūsim*, 500,000 *dirhams*, while the Muslims promised, among other things, not to destroy any fire-temple (ibid., p. 318). When Adharbījān was subdued and made tributary, the treaty, which its *marshān* concluded with the Arab commander, contained also the stipulation, that no fire-temple should be destroyed, and that the people of *Sīra* were not to be hindered in their dancing-festivals and other practices (ibid., p. 385). It goes without saying, that in the countries, inhabited by Zoroastrians, soon after the appearance of the Arabs, mosques also were built, destined in the first place for the religious worship of the conquerors; the *marshān* *ṣirāfa* which Saʿd b. Abī Waqqas constructed at al-Madīnā, was the earliest building of that kind in al-Sawād (ibid., p. 280). Under the khilīfat of *Uthman*, a *marshān* was built at Rāy, in which town later on, under the khilīfat of *Al-Mansūr*, a *marshān* was erected by order of the future khilīfat al-Mahdī, in 158 (775) (ibid., p. 309). At *Tawwādūž*, its conqueror *Uthman* b. Abī
As caused mosques to be erected for the Arab population, which he transported to that country. In Aradjan a marqued was built by the governor al-Hakam al-Hugamleh. (ibid., p. 392)

Already at the period of the conquest, there occur numerous conversions from Zoroastrianism to Islam. As T. W. Arnold (The Preaching of Islam, p. 177 et seq.) observes, there were several reasons, why it was not very difficult for the Persians to exchange their religion for Muhammadanism. The grysa, moreover, which the Zoroastrians were bound to pay, could no longer be required from those who had become Mussulman. Soon after the battle of Pulwar, some akhshans embraced Islam, and, consequently, became freed from paying the grysa (al-Baladhuri, p. 265).

The inhabitants of Isfahan, on the other side, being invited by Al-Ash'ath, to accept Islam, preferred to give the grysa, but some noblemen from the same town became Muslims, and had, therefore, only to pay the gharab (for their lands: wo-um-fit min al-qarab f-umal-sit; ibid., p. 312 sq). The inhabitants of Kwarin likewise became Muslims out of aversion to the grysa (ibid., p. 321), and so did those of al-Khizr. (ibid., p. 373).

A Zoroastrian, who had become Muslim and then apostatized, foretold, of course, his life: this happened e. g. with the akhshans of Mazara, who was killed by Al-Mughira b. Shabaz (ibid., p. 345). Other instances of the progress of Islam, we find in the case of Adharbadjlu, whom Al-Ash'ath for the first time governed this country, he ordered the Arab settlers whom he himself had brought into the land, to invite the population to Islam. These efforts were successful; as Al-Ash'ath, under the Khalifate of Ali, a second time became governor of Adharbadjlu, he found, that most of the population had become Muslims (ibid., p. 328 sq).

A conversion to Islam of some individuals seems to have been brought about chiefly by the administration of the rapid successes of the Muslims (immanee be found in al-Baladhuri, p. 374. 381); a case of forced conversion is that of al-Harmazdz (q. v.). Converts to Islam, whose original name had a too pronounced Zoroastrian meaning, had to exchange that name for an Arab one: the Khilaf al-Ma'mun, e. g. appointed a certain Maysazd (comp. Fahlawi, legends, the Zoroastrian offering of food; the jung i of the Arabic transplantation cause, however, a difficulty for this explanation) governor of Bavastan, Krypt and Isfahawand; this Maysazd, in order to change his name into Muhammad (ibid., p. 359). Also the father of Hasan al-Bozk (q. v.), who was one of the prisoners, taken after the conquest of Maestal, altered his name, Fakhr to Yastr (ibid., p. 344), although this Persian name could scarcely offend a Mussulman; but, after he became a mezbah, a change of name became necessary.

After the conquest, Zoroastrianism, for the time being, continued to exist in many parts of Iran, not only in countries which came relatively late under Muslim sway (e. g. Tabaristan, cf. Al-Bagdawi), but also in those regions which early had become provinces of the Muslim empire. In almost all the Iranian provinces, according to al-Mas'udi, first-temples were to be found. The Musulman, he says (ed. Barthier de Meynard, iv. 86), venerate many fire-temples in Irak, Fars, Kirman, Siufistan, Khuristan, Tabaristan, al-Dibbi, Adharbadjlu, Aran (he adds also "in Hindu, Sind and Shad"). This general statement of al-Mas'udi is fully supported by the medieval geographers, who make mention of fire-temples in most of the Iranian towns. The toleration, then, from the part of the Muslims, must have been greater in mediaeval times than in modern ones. That, however, not all Zoroastrians felt happy under a non-Zoroastrian government, appears from the fact, that a number of Mids, the ancestors of the Parsis of to-day, emigrated to India. Their landing on the coast of Gajarat is said to have taken place in the year 716 of the Christian era.

Conversion to Islam may have been, in many cases, "peaceful and to some extent at least, gradual" (Arnold, loc. cit., p. 181). On the other hand, it is evident, that for a Zoroastrian, desirous to attain to some prominent position, conversion to Islam was indispensable. Among the well-known converts from Zoroastrianism may be cited Ibn al-Ma'qafa (q. v.), Samit Khudait, the founder of the dynasty of the Saimans (q. v.), the poet Daghli (q. v.), etc., etc.

Occasionally, the Muslim magistrates, it seems, imitated the Zoroastrian clergy against heretics: al-Shahsrastani (K. al-Mi'd wa'l-Nihal, ed. Curot, p. 187) relates, how Abu Muslim of Neishkour, on an accusation from the part of the malhak of the Zoroastrians, caused a sectarian to be killed. It seems, however, that this man, who had been a Zoroastrian, and now proclaimed a new creed, held tenets calculated to cause disturbance.

A history of the relations between the Muslim state and the Persian Zoroastrians (for neither the Indian Zoroastrians, the Parsis, nor the internal history of the Zoroastrian community concern us here) can only be written, when the mass of Persian historical literature of the Middle Ages and modern times will be completely accessible. The position of the Zoroastrians has become worse in course of time. Their number seems to have greatly diminished by the disturbances which ended after the death of Nsir Shah (1159 = 1747), when the Afghans destroyed the Zoroastrian quarter at Kirman, and by the war between Agha Mmmad Khan Khatu Kadjar and Lutf Ali Khan (see also Kirmen). In modern times the number of Zoroastrians in Persia is estimated by v. Houtum-Schindler (1879) at 5,449 at all; by Browne (1887/1888) at 7,000-8,000 for Kirman, and Yazd and environs alone [but elsewhere (A year among the Persians, p. 370) he gives for Yazd and its environs alone 7,000-10,000 and for Esfahantest 25-25. The Emerg, Britannica (1911) has the number 9,000 for the whole of Persia. In 1854, there were in Yazd and its environs 6,658 Zoroastrians, of whom ± 25 were merchants, and the rest small husbandmen and labourers (Karak, History of the Persians, i. 55). The same author gives for Kirman (in 1888, the date of the book) no more than 450, for Shiraz ± 30 merchants, and a small number of humble position, who were employed as gardeners in the palace of the Shah. At Shiraz, some Zoroastrian families were found, who exercised the trade of shop-keepers. Further more, there are Zoroastrians at Kesh and Esfahan (v. Houtum-Schindler). The Ghebers of Bisk are Indian Parsis (cf. Kuki).

According to Browne, there are in Persia...
MADJUS — AL-MADJUS 101

dāghmā's (tower-shaped buildings, where the Zoroastrians dispose the bodies of the deceased to be devoured by birds of prey); one South of Thirūn, at Kirmān, and one in Yazd. The number of fire-
temples is given by v. Houtum-Schindler as 4 for Yazd, 18 for its environs, and 1 for Kirmān. Karaka.
(I. 60) knew (1854) in Yazd and its environs as many as 34 greater or lesser fire-temples. V. Houtum-
Schindler says, that the social position of the Zoro-
astrians in those places, where there are only few
of them (Thirūn, Kāşān, Shīrāz, Bāshahr), was a toler-
ably good one, because they were respected as being
honest traders. But at Kirmān their condition was
less favorable, and at Yazd still worse. In the first
half of the sixteenth century, the levying of
the dāghmā was still a source of misery for all Persian
Gebers, because they were helplessly exposed to
the extortions of the government functionaries.
However, even at the time of v. Houtum-Schindler
(1879), the Indian Pānī, in virtue of a
convention with the Persian government, paid the
dāghmā (valued at 1,920 tāmūl) for the con-
collecting that tax came to an end. In 1882 the
dāghmā of the Zoroastrians was abolished (Karaka,
l. 74). For this, and other improvements, as also the
foundation of schools, the Persian Zoroastrians are
indebted to the "Persian Zoroastrian Ame-
lization Fund," a Parsi institution.

But, especially at Yazd, the situation of the Gebers,
during the second half of the sixteenth century,
was far from good. Brownes relates, that at
Yazd they were treated with more contempt, by the Jews
than the Zoroastrians. They were not per-
mitted to ride on horse-back; fire-temples which
had decayed, were not to be restored, etc. The
then government, jawīl-al-dawla, had, it is true,
paid out a sum to some of the more serious iniquities,
e.g. the putting into practice of the quint maximi,
that a Zoroastrian, who had become Muslim, ac-
quired by that conversion a right to the property
of his non-converted kinsmen. Although at Kirmān
the treatment of the Gebers was better than at
Yazd, Brownes had heard of wrongs done to them,
e.g. forced conversions to Islam of children and
young girls.

The Bibliography regarding the Persian Zoro-
astrians (and also the so-called Gurbis, cf. especially
K. Hadičk'a Introduction to O. Mann, Die Mund,
darten von Kirmān, p. 17, 1874) has been given
in the article Kirmān.

V. F. BECCHER

AL-MADJUS. The historians of the Maghrib and of
Muslim Spain give the generic name of Madjus
pajama, fire-wishippers" to the Scandinavian
pirates known in England as Northmen (Norse-
men) and also to the Normans of France
who on several occasions in the middle ages
attempted landings on the coasts and expeditions
against the frontiers of the Muslim west.
The first invasion of Spain by Northmen was in
230 (844). In the month of Dich'el-Hijdjas 230
(Aug./Sept. 844), a fleet of 54 large vessels and
as many small harks anchored before Lisbon (q. v.)
and the forces they carried landed at the mouth
of the Tagus. The Caliph Abū al-Manṣūr il-
warned by the governor of Lisbon, Wahh Allah
b. Hāzim, gave instructions to the governors of
his semi-provinces to prevent any surprise attacks.
The Norman forces seized Cadiz from Lisbon,
then the province of Sídama (Shādīfliat) and
finally Seville (q. v.) which they took by storm
on Oct. 4, 844. It was not till November that they
were forced to seek the shelter of their vessels by
the Muslim armies sent against them. Other bands
at the same time ravaged, with fire and sword
the whole coast from Lisbon to Trafalgār and one of
these reached a point in Africa where the little
town Astil (Arrīlā [q. v.]) was founded soon
afterwards, but took to flight on the approach of the
Berbers of the region.

After this invasion, the leader of the Norse
hordes seems to have sent an ambassador to the
Caliph Abū al-Manṣūr II. to propose a peace.
The Umayyad sovereign agreed to his request and
sent to discuss the terms of the treaty a diplomat
of his entourage, Yabīya b. al-Hakam al-
Hājijāmi, known as al-Ghurānī. The latter reached
Silves, where he entered a ship, which after various
adventures took him to the Norse leader. Al-Ghurānī
returned to his master after an absence of 20
months. The account of his embassy has been
preserved for us by Ibn Dībāya, who got it from
the visitor Tāmmān b. Alkama, a friend of al-Ghurānī.

Fifteen years later, in 244 (858), Spain and the
Maghrib again suffered a Norse invasion. We
have accounts of it by Ibn al-Kāyīya, al-Hakīm
and Ibn Istahīr. It lasted several years, at least
till 247 (861). The Northmen began by seizing
the town of Naktū in Morocco. They then appeared
at the mouth of the Guadalquivir but without
success; they then seized Algiers where they
burned the great mosque. They appear to have then
had an encounter at sea with the fleet of the Caliph
Muhammad b. Abū al-Manṣūr.

We have fuller details of the invasions which
followed. In 235 (946), the Danes, who had come
to the assistance of the first Duke of Normandy,
made an expedition against Muslim Spain, on the
interested advice of Richard I. This lasted three
years. The invaders, always called Madjūs by the
Arab historians, appeared first at Kṣar Abī Dānūs
(Algaz a-Dam) and landed in the country round
Lisbon which they laid waste. The Caliph al-Hakam
sent against them a fleet from Seville which met
their in the estuary of the Tagus. At the same
time a battle was fought on land near Lisbon in
which the Muslims were defeated. The Danes then
extended their efforts to Galicia and in 236 seized
St. Iago de Campestuel. In the next year, they
again attacked Muslim Spain but they were much
weakened by the losses; they had suffered in the
north of the Peninsula and they do not seem to
have dared to land anywhere.

It is also to the Madjūs (the name being accom-
panied by the more precise one of al-Akkūdāmān
= Al-Akkūdāmān) that the Arabs attribute the
celebrated taking in the following century of the
town of Barbastōr (Barbujat) to the N.W. of
Saragossa, on the borders of Aragou. The historian
Ibn Hājīr wrote a detailed account of it, which
is preserved by Ibn 'Ilīhār. A Norman expedition,
in which French knights shared, which was evi-
dently led by Guillaume de Montreuil, succeeded
in capturing Barbastōr in 456 (1064). This suc-
cess and the barbaric treatment inflicted on the
population made a deep impression on Muslim
Spain. In the next year the king of Saragossa,
Almād b. Sulaimān Ibn Hūd al-Muḥātādīn,
with an army reinforced by a contingent of cavalry
sent by the Seville ruler, al-Mu'taṣib Ibn Abīlākh,
repulsed Barbastōr, where a weak garrison left
by the Normans on their return to France could offer only a brief resistance and was almost entirely wiped out.

1. *Madinah* in Arabic is the legal institution of the *jumān* [q.v.], a term which occurs in the following connections: *jumān* or *wadā' dohār* madīnah, *lāhū* or *àlāhī* *edarīt*, *mağniṣ* (الْمَغْنِيْشَ) "pawn." For the parties to the agreement and the article in question in a bond, the rules hold which apply to all other contracts.

2. In the chapters of the Fīh books which deal with the law of obligations, *mağniṣa* is used for the thing for which one is liable or responsible, i.e., is bound to replace. In this way *dānūs* comes to mean, in the wider sense, "liability, obligation to restore" in contracts. This liability consists either in the producing of something identical (mišīl); i.e., a of the thing of quality and quantity (tīfāsah, *mawṣūla*), or, e.g., in edible things (mišīlīyā), which are measured by quality, weight, or number (mawṣūla ma-makhlaysa-makhrūf) or in the value of the thing (kimā) e.g., in inedible things (ma'dānīsah), which have a special individuality, and are therefore *ṣā'īl* = species.

**Bibliography:** The chapters on the conditions of legal agreements in the Fīh books.

---

**MADRAS.** Presidency, the southernmost province in British India, occupies the whole of the southern portion of the Peninsula with an area of 1,42,160 sq. m.; total population (1921): 22,10,855, of whom 2,81,488 (nearly 7%) are Muhammadans. The majority of these are Sūnīs, 2,68,043 (93-06 per cent.): Shā'īs: 54,114. The only Native State with a Muhammadan ruler is Banaganpalli (255 sq. m.); population 36,633, of whom only 1,076 are Muhammadans. The language spoken by the majority of the Muhammadans of the province is Malayalam (1,16,8,656 c. 387 per 1,000, including almost all the Māḍīpas [q.v.]); Hindī, 335 per 1,000; Tamil, 209 per 1,000.

*History.* Southern India began to suffer early in the sixth century from plundering raids carried out by the Muhammadans established in the north, until the rise of the Hindu kingdom of Vijaynagar in 1336 erected an effective barrier against the southward expansion of Muhammadan power for more than two centuries. When in 1564 the four Sultans of the Muslim kingdoms of the Deccan, — Bijāpūr, Bijār, Ahmadnagar and Golkonda, — joined forces against this powerful Hindu state, in a decisive battle (Tālīkota, January 1565) they effected the ruin of Vijaynagar and utterly destroyed the capital, and its territories were for the most part incorporated in the kingdoms of Bijāpūr and Golkonda. In 1686 and 1687, Aurangzeb [q.v.] conquered these two kingdoms and made them part of the Mughal empire. After Agra 1630, the first Nizam of Hyderābad, had made himself independent in 1748, the other of the Carnatic [q.v.], also styled the Nawab of Arcot (Arkāt) from the name of his capital, became his chief subordinate in the South of India. When in the middle of the xvii th century the English and the French were in conflict with one another in Southern India, each espoused the cause of a different claimant for the office of Nawab of the Carnatic. The support of British troops under the command of Robert Clive assured the success of Muhammad Ali (ob. 1795), but papers seized at Seringapatam after its capture in 1799 having proved that both he and his son and successor, though nominally allies of the British, had been in secret correspondence with Tippu Sultan [q.v.], Lord Wellesley, then Governor-General of India, declared them to be public enemies of the British Government, and in 1801 concluded a treaty with a grandson of Muhammad Ali, named A'qīm al-Dawla, according to which he resigned the government of the Carnatic into the hands of the East India Company, but retained the titular dignity and received a considerable pension. The present representative of the family bears the title of Prince of Arcot and has the position of the premier native noblemen of Madras. The greater part of the existing Presidency of Madras consists of the territories annexed by Lord Wellesley.

**Madras.** City, on the shore of the Bay of Bengal, in 3° 4' N. and 80° 15' E., is the capital of the presidency of the same name; population (1921): 529,011, of whom 145, in every 1,000 are Muhammadans.

**MADRASA.** [See Massūf.] **MADRAS.** The present capital of Spain has kept the name it had in the Muslim period: *Madrīs* (الْمَدْرِيسِ). Arab geographers describe it as a little town grouped round a strong fortress, with a khartuţ mosque, at the foot of the Djabal al-Šādrāt, the Sierra de Guadalarrama, and a dependency of the province of Toledo. It was especially known for its patricies. It had only an unimportant history, but gave birth to several famous Muslim scholars, among whom the most important was Abu l-Kārim Maṣīma i, Ahmad al-Madījī, who lived in the second half of the fourth century and of whom cf. Brockelmann, G. A. L. 1. 245. Madrid was taken in 1476 (1083) by King Alphonso VI. According to a Christian tradition, Ramiro II had previously held possession of it for a short time during his campaigns against the Muslims in 1037 (939). It was on the site of the old cathedral (el Guzmán) of Madrid that the king
of Castile had the church dedicated to the Virgin of the Almudena built.

**MADURA, an island north of Eastern Java, with the sea of Java on the north and the strait of Madura on the south, a narrow strait separates it from the residence of Surabaya.** For administrative purposes it forms a separate residency along with several small adjoining islands. From the geological point of view Madura is a continuation of the limestone hills of the residences of Edamango and Surabaya in Java; it is doubtful whether the statement in the *Nagarendagar* (Ballad XV, verse 2; also the earliest mention of the island) that Madura only became separated from Java at the beginning of the third century A.D. is of any historical value. The ground is hilly; large parts of the country are not agriculturally fertile. Although agriculture is becoming more and more important with the completion of irrigation works, the quantity of rice grown is quite insufficient for the wants of the dense and still rapidly increasing population; they have frequently to live partly or completely on maize. Every year many Madurese leave their land for a certain period to seek work in various ways in Eastern Java; the comparatively unfertile nature of the soil has always forced the inhabitants to emigrate permanently to the Eastern residences of Java and these are therefore with the exception of a few districts inhabited by a population which speaks Madurese. Of more importance for the Madurese than agriculture is the rearing of domestic animals (cattle, horses, goats and sheep). The Madurese castle are probably the best in the whole archipelago; many draught animals and fat stock are annually exported. A very popular sport is bull racing; the beasts used for this are bred and looked after with the greatest care. The Madurese have a certain preference for the trade of a wandering pedlar; on the coast and on the islands the main source of livelihood is fishing and fish-breeding.

The population is closely related to that of Java; the customs at birth, marriage and death agree in general with those that prevail there. There are however striking differences. The Madurese are more heavily built, more energetic and enterprising than the Javanese; he is also less sophisti-
cated. He is said to be faithful, reliable, economical and wise, avunculonious. Poor, houses and
farms of the Madurese look less cared for than those of the Javanese; the houses are not as in Java close together in settlements but are scattered. The Madurese are specially fitted for hard heavy work and less for occupations which require skill and application. Alcoholic beverages are much drunk, but little opium is taken. The language is also related to Javanese and much influenced by it; the literature consists mainly of translations and versions of Javanese works.

Java is the generally prevailing religion. The Madurese have no tendency to fanaticism but as a rule they faithfully perform the principal duties of their religion; the great Muslim feasts are
duly observed. All receive the usual elementary religious instruction and many are not content with this only. We have no exact or reliable information as to the period of their conversion and the manner in which it came about; the stories given in the native annals do not agree. But as Madura has politically always been closely connected with Java (in the Hindu period it was subject to the kingdoms of Tampili and Madjapahit; at a later date it was under the adhapi of Surabaya and then under the Sultan of Madura) and as it is quite close to the district through which the new religion entered Java, it may well be assumed that between the first dissemination of Muslim ideas on Java and on Madura not a great deal of time passed. The complete conversion of the island to Islam seems to have taken place quickly and without difficulty. Hindu rule had never made a deep impression. According to native tradition Madura belonged to the Mahamanadal coalition which overthrew the Hindu Javanese kingdom of Madjapahit. Until 1623 Madura (which was divided into five small states) formed part of the territory of the adhapi of Surabaya. In this year it was acquired by Mataram and a Madurese prince appointed governor. When in 1678 a grandson of his, Truna Djaya, rebelled against Mataram, endeavoured to make Madura independent and even aimed at rule over Java, the ruler of Mataram sought the intervention of the Dutch East India Company. In 1679 Truna Djaya was taken prisoner; in 1705 Mataram recognised the sovereignty of the Dutch East India Company (which had existed in reality since 1653) over the eastern part of Madura and in 1743 over the whole island. The Company and after them the Dutch government for a considerable time always avoided intervention in the internal affairs of the island; as the rulers of Madura had repeatedly performed important services, they were treated — often to the injury of their subjects — less as servants of the Company than as independent allies. From the middle of the sixteenth century the power of the rulers was gradually limited; since 1885 the whole island has been directly under Dutch rule.

MADYAN SHU'AI'I

MADYAN SHU'AI'I, a town on the east side of the Gulf of Akabah. The name is connected with that of the tribe of Medians known from the Old Testament (lxv.: Madian; Madias; in Josephus Madavssan, & Madamn xwak) but it can hardly be used without further consideration to identify the original home of this tribe, as the town might be a late Medianite settlement and besides it is difficult to fix the real home of such wandering tribes. In the Old Testament a town of Midian is not mentioned (not even in 1 Kings xi. 18 where “Mesoron” should possibly be read). On the other hand Josephus (Ant. xiv. 228) knew Mediasa (or Mediasa) known as a town on the Erythraean Sea as Erythras (Onocytus, ed. Lagarde, p. 276) in Ptolemy (vi. 7, 1) is mentioned as a town on the coast, and called Medisa or Medima while in another passage he gives it as an inland town under the name Madiasm, a difference which is explained by the actual position of the town. In Mahanian's time there is only one reference (in Ibn Ishaq) to the town of Madian, when the Prophet sent an expedition under Zaid b. Haritha thither. There are occasional references in the poet Kalbiyir (yetik, d. 723) who speaks of the monks there and in the record of Muhammad b. al-Munafiyah's journey to Aila. In the geographical we find Madian only as a town near the coast, six days' journey from Tabuk; it was the second station on the pilgrim's road from Aila to Madina and was a dependency of Tabuk. In the sixth century A.D. Ishaq speaks of its position in the desert, rich in springs and watercourses, gardens and date groves and of its mixed population. Isajkhty says it is larger than Tabuk and describes from his own observations the spring there, from which Moses watered the flocks of Shu'ail (see below), it was now covered by a house which had been built over it. The town then began to decline gradually. In the eighth century Ibrahim says it is an unimportant little trading centre with scanty resources; in the tenth century Abu al-Fida says it was in ruins. Only in recent times has it been visited e.g. by Rüppell, Burton and Musil. The extensive ruins, which the Arabo call Maghrit Shu'ail after the caves-tomb, lie about 15 miles east of the port of Novak in 28° 28’ N.Lat. in the southern part of the valley of al-Bat which is rich in streams and palms and other trees. According to Burton the whole district between 29° 28’ and 27° 40’ is called Arad Madayan.

In the Kurban following the Old Testament there are repeated references to Madian as a people: for example in the stories of Moses' stay with them (xxv. 47; xxvii. 21 sqq.; 45), where his father-in-law (Jethro in the O.T.) is still anonymous, or in one of the stereotyped legends of prophets in which the Madian are punished because they would not believe their prophet Shu'ail (viii. 92–91 xi. 85–98; xxix. 35 sqq.). This Shu'ail was later identified with the father-in-law of Moses, for which there is no authority in the Old Testament. But perhaps the real truth is that Shu'ail had originally nothing to do with Madian. In the Surae (xxv. 78; xxvi. 176 sqq.: xxviii. 18; l. 23) it is not the Medianites but the Ashab al-Absa (the people of the thickets) who are his enemies and it is therefore very possible that Muhammad only later combined an indigenous story of the people of the thickets and their Shu'ail with the Midianites of the Old Testament.

MAGNATIS, MAGNATIS, MAGMHTIS, Lodestone and Compass.

I. The Lodestone and Magnetism

The lodestone is a widely disseminated mineral, and is therefore frequently mentioned by geomancers and cosmograpbers, for example in the pseudographical "Petrology of Aristotle," by al-Diminiti, al-Kazwin, al-Farabi, Ibn al-Farisi, al-Kalkhashandi, etc. Of Amir and Hashadili, it is said that the lodestone is found there as a hard rock. According to Ibn Sumi, the Indian is the best and al-Jibini makes it come from India. Like the Greeks and Romans, the Arabs also discussed the properties of the lodestone and its effects on iron. They found that the lodestone can hold an iron needle (a ring), this a second, a third and so on, so that a chain is formed.

The power of attraction of the lodestone was defined. Most writers say that a lodestone can lift double its weight in iron, and one from Baghdad three times. Djibiri b. Huyayn al-Safi possessed a particularly strong one. Djibiri b. Huyayn ascertained that it could work through bronze. Other information is given by Shams al-Din al-Diminiti, p. 73, and 85 of the work mentioned below (cf. also E. Wiedemann, "Briefe, ii. 5: Uber Magnetit, S. B. P. M. S. Erlang., xxxvi, 1904, p. 322").

Knives and swords rubbed on lodestone, according to Ibn al-Farisi and al-Kalkhashandi become themselves magnetic. They consist alike, like needles, of iron which contains carbon, i.e. steel. They are stronger than the lodestone and do not lose their power of attraction as the former does.

It was noticed that in needles which floated on water the end rubbed pointed sometimes to the north and sometimes to the south, apparently ascending as it was rubbed with one or the other pole of the magnet; this appears to be no sudden. The end not rubbed had also changed. Utard al-Hanawi's statement that there are three kinds of lodestone is probably connected with the effects on the magnetised needle: one he says attracts, the second repels, and in the third one side attracts and the other repels.

The Arabs devoted much attention to the theory of these phenomena — with how little satisfactory results is evident from the remark of Ibn Butbun: "It is very annoying for us to feel that we do not know this with certainty (the cause of the attraction of iron), although we perceive it with the senses." Djibiri b. Huyayn explains the lodestone as a spiritual one, confusing it with sacred. Al-Tughtani includes the lodestone among the "malikatul mahd" by which certain spirits (see E. Wiedemann, "Briefe, ii. 4: Zur Alchimie bei den Arabern, S. 8. P. M. S. Erlang., allii, 1911, p. 82). Al-Kazi seems to have dealt with the lodestone through the "al-amir" which is attached to making objects with scents. Al-Tughtani includes the lodestone among the "malikatul mahd" which contain spirits (see E. Wiedemann, "Briefe, ii. 4: Zur Alchimie bei den Arabern, S. 8. P. M. S. Erlang., allii, 1911, p. 82). Al-Kazi seems to have dealt with the lodestone through the "malikatul mahd" which is attached to making objects with scents. Al-Tughtani includes the lodestone among the "malikatul mahd" which contain spirits.

II. The Compass

The Arabs of the East became acquainted with the compass through Chinese sailors, without however at first giving it a special name; there was considerable traffic between the Persian etc., ports and Southern China. Thence it came to Syria and then to the Mediterranean ports of Europe. The compass had very probably however already reached the north of Europe by the trade-route of the Russian rivers. As early as the eighth or ninth centuries. This explains why the compass was known earlier in the north than in the south of Europe and perhaps explains also why the Chinese were able to undertake long voyages by sea (cf. R. Hettig, "Der Mikhail, der Geograph, Deutsche Naturforscher etc., 8. Versammlung 1942, Allii, p. 95").

In designing the direction by means of a magnetic needle, the Muslims used the end which pointed to the south; as Mecca lay to the south of most places in Syria etc. the Kibla [q.r.] corresponded almost exactly to the south.

The oldest passage in which the word "haram" is used to correspond to "magnet" (calamut) occurs in Dizzy for the year 339 (554) inSuplement, ii, 337 who found it in al-Tabrit al-Maghrib (Histoire de l'Afrique et de l'Espagne) edited by him. Serious objections have however been raised by historians as to the correctness of this passage (Al. S. O. S., Berlin, t. 1—2, 1900, p. 263). From the fact that al-Masudi (933) in his "Histoire" on compasses, G. Ferrand concludes that the compass was already in use then. The next oldest absolutely certain reference is in the "Dizain al-Alshin" of 'Awfii: it is in his "Dizain al-Alshin" (ed. Brown and Mirah Muhammad Kazwin). A
A very full description of the compass and its use in the Mediterranean was given in 1430 (142/43) by a certain Balkāk al-Kahdāfī in his Kitāb l.Khitāf (Balkāk 1270, l. 240; Cairo 1324, f. 357; Z. f. Phys., xiv., 1924, p. 165).

A needle which was enclosed in a "sudden lodestone is placed diagonally through a rush or piece of straw etc. Sometimes a cross made of two straws is used. The arrangement is floated on water so as to rotate by a lodestone held in the hand and moved in a circular direction; the latter is then quickly withdrawn. The needle places itself pointing to the south, which is the same as the ūyala. The turning is probably regarded as magical, but it has a physical significance. By the turning often very tenacious skin of the water is broken and the apparatus bearing the magnet is enabled to move freely. The turning is however not always done, but the needle with its support is simply placed on the water.

Al-Zarrūḥī describes several forms of compasses in a work on mechanical toys, for example a small beautifully painted fish, in which a magnetic needle is placed. In place of the fish, which might hurt the feelings of pious worshippers, a wooden disk with aśībūd drawn upon it is also used. Finally an apparatus just like our compass is described. Two magnetic needles are placed symmetrically in the centre under a circular piece of paper. Under the centre of the paper a funnel is placed which turns on a point; the whole is enclosed in a cylindrical receptacle with a glass top and is called kāfūl al-wašīl, "container for the kūla", or hūṣ al-alwū ṭ, "gourd of the needle"; according to Nicolaus the same name is still given to the compass. At the present day similar compasses are used along with a simple sundial. Another very full description is given by a certain Muḥammad b. Abī l-Khayr al-Ḫaṣṣāni in his al-Najāmi al-gādiatātī (cf. E. Wiedemann in the Z. für Physik, xiv., 1923, p. 113). There is a manuscript in Berlin in addition to those mentioned here. Whether the Cambridge one was written in 1063 or 1588 cannot be ascertained with certainty. The needle is fastened to a copper plate hollowed out or raised in the centre and placed on a copper stand. One end of the needle, no doubt the south end, has something put on it to mark it.

An important passage in an anonymous work "preparation of the bowl (kūla) to ascertain the kūla and points of the compass" is in a Berlin manuscript (Ahwārī, No. 3811). Here the point of the needle points south, the eye to the south. (The rubbing [ṭāẖā] of the needle explains the peculiar modern name ṭāẖā for the compass).

It would take us too far to deal here with the box compass proper which is called in Turkish e. g. şarbasi from the Italian. We will only note that on the rhomb-card the south is called ḍīẖū and the north ḍīẖūn (cf. thirteen for example K. Foy, Die Pflanzen bei den Osmanen und Griechen mit Besonderer Rücksicht auf die Geschichte des Admiralitäts Firl-Reis vom Jahr 1527, M. S. O. S., Berlin 1908, 234 sqq.).

In the Beiträge ii., the earlier literature is collected. This is also done in other works e. g. by Clément Mullet on the Compass. Of special importance are the works of A. Schuck (Der Kompass etc., Hamburg 1811, 1815 sqq.), which also deal with the Boustole in China.

(E. Wiedemann)

MAGHRĀWA, a large confederation of Berber tribes, belonging to the Zanata group and located to the confederations of the Banū Ḩam [q. v.] and Banū Irmān. These tribes, who live in a nomadic life, in the middle ages roved over the country between the valley of the Chelif as far as Tlemcen and the mountains inhabited by the Moulīya. They were easily converted to Islam and their chief Sīlah b. Wāsālīn is to have gone to Madīna to the Caliph "Uthman and been confirmed by him in his rule over the Maghrīb. This is why this confederation came to control themselves clients of the Umayyads of Spain and supported, sometimes by force of arms, the cause of this dynasty in the Maghrīb. This chief Sīlah was succeeded by his son Ḥaṭ and his by his son Khātār, with whom the Arab amirs of al-Kairawān had to deal at the time of the rebellion of Ma'āzūn in 1227 (759). On his death his son Ma-
HAMMAD after the early successes of Idris I in the Maghrib, brought his submission of the Maghrawa and returned Tlemcen to him, which he had just taken from the Banu Ifran; the Maghrawa thus became one of the principal supports of the Idrisid dynasty at its beginning.

The grandson of this Hammud b. Kharas, a contemporary of Idris I, also called Mahamad, resisted the Fatimids (q.v.). When the general of the Mahdi 'Ubayd Allah, Musa b. Habbas, had seized the Idrisid possessions in the Central Maghrib and placed over them the chief of the Mirdas, the Musa b. Abi 'l-Asyfa, the chief of the Maghrawa rebelled and brought under his flag a large number of Berber tribes in 309 (921-922) he routed the army sent against him under Musa, whom he slew with his own hand.

But the next year, the Maghrawa, faced with a new Fatimid offensive, had to take refuge in the region of Sidjlmas, but some time afterwards, the Umayyad Caliph of Cordova 'Abd al-Rahman III al-Nasir, wishing to annex the Maghrib to his dominions, summoned the Maghrawa to his assistance and with the help of Muhammad b. Kharas was able to bring under his sway all the central Maghrib except the region of Tafurt. The son of the Maghrawi amir al-Hajjar b. Muhammad was installed as governor in Orant. The Banu Ifran and Musa b. Abi 'l-Asyfa also joined the Umayyads (first half of the tenth century). But all these submissions to the wishes of the Umayyads were only dictated by self-interest and when Muhammad b. Kharas died at al-Kairan in 350 (961) he had become the vassal of the Fatimid sovereign al-Mu'tiz.

The successor of 'Abd al-Rahman III in the caliphate of Cordova, al-Hakam al-Mustasim, having no father, summoned the Maghrawa in their old allegiance; their chief Mahamad b. al-Hajjar b. Kharas therewith threw off the Fatimid suzerainty. Knowing the motives of this defection, it was going to cause him, al-Mu'tiz invited Ziri b. Mamdouh, chief of the Sanhadja to attack the chief of the Maghrawa. A battle was fought in 360 (970-971) between the Maghrawa and the Sanhadja commanded by Bologgin. Ziri: the Maghrawa were completely routed, but a little later they were able to take their revenge, owing to the assistance of Da'far b. 'AlI b. Hamdan, lord of al-Ma'da and al-Zab. Next year Bologgin b. Ziri in the name of the Fatimids led a great expedition against the Sanhadja and subjugated them completely in the Central Maghrib. The Maghrawa had once again to take refuge in Sidjilmas and, after the return of Bologgin to Irrikiya, they definitely abandoned central Maghrib and settled in Morocco. It is from this time that two of their families were able to found two short-lived kingdoms, that of the Banu Ziri b. 'Atiya at Fas and that of the Banu Khassan at Sidjilmas and at Tripoli.

The Maghrawa of Fas. After the defeat suffered by the Maghrawa in the central Maghrib, the descendant of Kharas, Mahamad b. al-Khalif, crossed the sea to seek the help of the famous 'Amirid 'Abd al-Majid b. 'Abd al-Amir (q.v.). The latter sympathised with him in his troubles and sent an expedition to the Maghrib under Da'far b. 'AlI b. Hamdan. The Spanish army with contingents from the Banu Ifran and the Maghrawa took up a position near Centa and in view of its strength Bologgin b. Ziri refrained from attacking it and set out to subdue all Morocco.

In 373 (984-985) the Maghrawa, after the departure of the Spanish governor Ibn al-'Asqaladja, were chosen by al-Mansur to rule Morocco in his stead. In 377 (987-988) the haddjib appointed as his vassal to rule the western Maghrib, the amir of the Maghrawa, Ziri b. 'Atiya b. 'Abd al-Malik b. Kharas. The latter made Fas his residence and settled his tribe around the town. By orders of al-Mansur he waged war on the Sanhadja and notably increased his dominions towards the east. In 382 (992) he made a journey to Cordova on the invitation of the haddjib. In spite of the admonitions of his father, it seems that the reign of Ziri 'Atiya was rather troubled and that changes of fortune placed on the throne of Fas sometimes the Maghrawi prince and sometimes his Iraniid rival Yafsa b. 'AlI. On his return to Fas, Ziri found his place occupied by 'Imran Ya'qub and it was only after a powerful struggle that he succeeded in regaining his throne. But, finding Fas not sufficiently central in position, he decided, like his Spanish suzerain, to build a capital for himself and the principal chiefs of his confederation. In 384 (994) he laid the foundations of the town of Wadja (Ujda) and came with his court to live there. At the same time he tried to throw off the suzerainty of Cordova and relations were finally broken off between him and al-Mansur. Ibn 'AlI 'Amir sent against him an army under the freedom Wajiji a battle was fought on the banks of the Wad Radd and the Spanish army defeated. The haddjib then sent another force under the command of his son 'Abd al-Malik al-Mu'assaf. On this campaign Ziri was twice routed in 387 (997). He sought to take refuge in Fas, but the inhabitants prevented him entering it and 'Abd al-Malik soon afterwards entered the capital. Ziri had to go to the Sahara; later he tried to create a principality for himself in the land of the Sanhadja. He laid siege to their capital Azhir (q.v.) but before he could take the town, he died of the consequences of an old wound in 391 (1000-1001).

On the death of Ziri b. 'Atiya, the Maghrawa proclaimed his son al-Mu'assaf; he began his reign by endeavouring to regain the favour of al-Mansur, 'Abd al-'Amir. The latter recognised him, and his successor 'Abd al-Rahman al-Mu'assaf appointed him governor of Fas and western Maghrib in 393 (1002-1003). He received from Cordova letters of investiture for all Morocco, except the land of Sidjilmas, which was kept for the Banu Kharas. Morocco seems to have had peace and a certain degree of prosperity in the reign of al-Mu'assaf, who died in 417 (1026) or 422 (1031).

His successor was his cousin on the father's side Hammama b. al-Malik b. 'Atiya. Hammama took advantage of the anarchy then prevailing in Spain to strengthen his position. He surrounded himself with literary men and legal authorities. But in 424 (1032-1033) the pretendre of a rival dynasty Abu l-Kamal Tamhum b. Ziri al-Harrani marched from Salé on Fas. Hammama took the field against him with the Maghrawa but they were defeated. Hammama entered Fas the same year and persecute the Jewish population. As to Hammama, he reached Wadja (Ujda) and Tenes and gathered there considerable forces, with which he marched on Fas in 429 (1037-1038). Hammama had to withdraw from Fas and returned to his own capital, Shella (q.v.).
Hamana then continued to reign till his death, which took place in 425 (1039-1040).

After him the power passed to his son Dinka. Quickly suppressing a rebellion by one of his cousins, he devoted his reign to the embellishment of Fez, which was then beginning to become a great city, with a large population and a busy trade. This prince died in 452 (1060).

The successor of Dinka was his son al-Fathib, but on his accession his right to the throne was disputed by his brother Adja'a. He also claimed the title of master of part of the capital, the Kasbah (kesara) of al-Kasrawiyya, while al-Fattih established himself on the opposite bank, that of al-Anhalas. The two brothers fought in the town itself and the inhabitants were divided into two camps. Morocco was agitated in anarchy, and it was only after three years of fighting that al-Fattih was able to reign undisputed in al-Fas, after Adja'a had been killed. A great city of this kind perched in the south-west wall still bears his name; another in the north wall bears the name of his brother in a slightly corrupted form (Adja' Azf).

Al-Fattih was driven from his capital in 454 (1062) by the Hamidid sovereign Bologgai b. Mahammad. This was the time when the Almoravides were beginning to invade Morocco. After the departure of al-Fattih, the Maghrawes appointed one of his relatives to succeed him, Muanazir (or Muanazir) b. Hammsid b. al-Mu'izz b. Adja'a, who was proclaimed in 455 (1063) and took up the struggle against the Saharan invaders. He succeeded in defeating the Almoravides lying siege to the city, the amir of the Maghrawes attempted a sortie in the course of which he met his death (460 = 1067-1068). The people of Fas then proclaimed his son Tamir. But the capital was taken by Yufai b. Talhifa two years later and the young ruler put to death along with a large number of Maghrawes and Banu Ifran. This was the end of the dynasty of the Maghrawes of Fas. This city, which had enjoyed a certain amount of prosperity under the early members of the dynasty and had been extended by them, later suffered a great deal, according to western historians, from their tyranny and exactions.

According to the Khalidin, in the period of the decline of the Maghrawes power in Fas, there was at Agissan, at one of the entrances to the Great Atlas on the plain of Marrakesh, a little dynasty of amirs belonging to the same confederation. The last of these chiefs who flourished about 450-460 (1058-1067) was called Laggul b. Yusuf b. 'Ali. He was defeated and slain by the Almoravides when they made their successful thrust to the north of Morocco.

The Maghrawes of Sidjilmassa (Banu Khazru).—At the instigation of the hadjib of Cordova, al-Mansur ibn Abi 'Amir, a Maghraw chief in 366 (976/7), had taken Sidjilmassa from the Mhiznas, which for over two centuries had been governed by amirs of the Mhiznas branch of the Banu Mithal. This chief, who was called Khazru b. Fakhir b. Khazru, proclaimed the supremacy of the Umayyads of Spain in Sidjilmassa and sent to Cordova the head of the last Almoravid ruler Al-Mu'izz li-l-Mahran. Khazru received from al-Mansur the governship of the town and kept it till his death. He was succeeded by his son Wannan. The latter had to defend himself against the invasion of the Sahidjan in western Maghrib and in the end was confirmed in his governship by the Umayyads in 390 (999) after a period of dispute. On the fall of the Spanish caliphate he proclaimed himself independent, seized the region of Dza (Dara) and in 407 (1016-1017) took Sufry (Sefrou [q.v.]).

**MAGHRIB**, the name given by Arab writers to that part of Africa which modern writers on geography call Barbary or Africa Minor, and which includes Tripolitania, Tunisia, Algeria, and Morocco. The word "Maghr" means the West, the setting sun, in opposition to "Maghrib", the East, the rising sun (Levant), but as Ibn Khalidin remarks, the general denomination was applied to a particular region. The extent of this area, moreover, varies according to different authors. Some Oriental writers include in the Maghrib not only Northern Africa but also Spain; the majority, however, reserve the name Maghrib for the first of these countries. But they are not in agreement upon the boundaries to be assigned to it on the East. On the other hand they are in agreement about the Northern, Western and Southern boundaries. To the North, Maghrib is bordered by the "Roman Sea" (Mediterranean). To the West it extends as...
far as the *Surrounding Sea*, also called the *Green Sea*, the *Sea of Darkness*, and by foreigners called, according to Ibn Khalidun, Oceanos or Atlantic (Atlantic Ocean), which stretches from Tangier to the desert of Lumtûn (Abu 'l-Fidâ'î) or only, according to Ibn Khalidun, as far as Asafî (Saffî) and Derun (Great Atlas). To the South it stretches as far as the barrier of moving sands, separating the country of the Berbers from the land of the Negroes, that is to say the Arab [cf. *axen*] and as far as the rocky region called *Kammade* (Ibn Khalidun). Some districts situated outside this limit, such as Bûma, Tamenrit, Gûrra, Ghâdames, Fazzān, Waddân, are sometimes considered as belonging to Maghrib although they are in reality countries of the Sahara. As regards the Eastern boundary, certain authors made it extend as far as the sea of Kûrûm (the Red Sea) and thus include in the Maghrib, Egypt, and the country of Barka [see the article *Barka*]. Others, whose opinion is adopted by Abu 'l-Fidâ', make it coincide with the actual frontier of Egypt, from the oases as far as the *Akabat* which is on the sea island of Barka and Alexandria (Abakâbât, Abakûbûn). Ibn Khalidun does not accept this collocation, because he says, the inhabitants of the Maghrib do not consider Egypt and Barka as forming part of their country. The latter commences only at the province of Tripoli and encloses the districts of which the country of the Berbers was composed in former times. Ibn Sa'd and the later Maghribi writers such as al-Zaydi and Abu Sa'id limit themselves to reproducing with few variations in detail, the boundaries of Ibn Khalidun. As to Ya'qûb he confines the Maghrib to the country stretching from Miliana to Sit (see *Watentbeld*, iv. 573).

Confined within the sixth *cima* the Maghrib is divided into several regions. Ibn Hawqal (*Description...*; transl. de Sane, J. A., 1841) distinguishes two of them: the Eastern Maghrib from the frontier of Egypt, as far as Zawiya in Tripolitania and the Western Maghrib from this point to Sit al-Aksâ; but the division commonly accepted is into three regions, Irîkiya, Central Maghrib and Farther Maghrib (Abu 'l-Fidâ', Ibn Khalidun et al.). Ibn Sa'd adopts a slightly different division, Irîkiya, outer Maghrib, and further Sûs, Irîkiya stretches from Kays al-Hamad near Mersa (Ibn Sa'd) to Bougie, Central Maghrib from Bougie to Melilla (Ibn Khalidun), Farther Maghrib from Melilla to Asafî and Derun, to which must be added al-Sûs which forms as might be said, according to Ibn Khalidun, an island or country detached from all others and surrounded by seas and mountains.

**MAGHRIBI, the name of several writers.**

1. *Ali b. al-Husayn, Abu 'l-Hassan. Like his father, Ali was one of the intimate friends of the Hamudîdî Sa'id al-Dawla of Halâb. He had also great influence with his son Sa'id al-Dawla, but when a cloud came over their friendship, Ali left Halâb and went to al-Rajja to Bak'dûr, who had been one of Sa'id al-Dawla's Mamlûks and persuaded him to enter into negotiations with the Fâtimid caliph al-'Azîz bi 'l-'Abbâs [q. v.] with whom 'Ali had had relations for a long time. When Bak'dûr had been given the governorship of Damascus by al-'Azîz, at the suggestion of 'Ali whom he had made his vizier, he set out against Halâb but was defeated by Sa'id 281 (April 991) whereupon 'Ali fled to al-Rajja. When Sa'id al-Dawla took this town, 'Ali fled to Khûfû, whence he wrote to al-'Azîz and asked permission to come to Egypt. In Dîjamât I of the same year (July–Aug. 991) he reached Egypt and by his advice the caliph sent an army in 383 (993–994) under Mangûtûq, then governor of Damascus, against Halâb where Abu 'l-Fadîlî, son of Sa'id al-Dawla, had now succeeded his father. 'Ali, who took part in the campaign as Mangûtûq's secretary, was bribed by Farîq, the leader of the Hamudîdîs and persuaded Mangûtûq to take the reverse, pretending that he lacked supplies. When the Caliph heard of this, he ordered Mangûtûq to resume the siege without delay and dismissed 'Ali at once, who therefore returned to Egypt. 'Ali made himself very popular with the caliph al-Hâkim, who succeeded his father 'Abd al-Hâkim in 266 (966) as did his son al-Hassan also. After a few years, however, he was sacrificed to the suspicions of al-Hâkim and on the 3rd Dhu al-Kinda 400 (June 18, 1010) 'Ali was executed along with his brother Mahammed and two sons.*

2. *Al-Husayn b. 'Ali, Abu 'l-Kâ'im, called *al-wâhir al-Maghribî*, son of the preceding, was born in Egypt on the 13th Dhu al-Hijja 370 (June 19th, 981). In 400 (1010) when his father was executioned, al-Husayn fled from Egypt to al-Ramlîs to Hâssân b. al-Mafrûrî, amir of the Banna Tâiyî, and induced him to foresee his abdication and to assign to the Caliph al-Hâkim and pay homage to the 'Abd al-Mannîr of Mecca, Abu 'l-Farîthî al-Hâsim b. Dîjfar. The latter came to al-Ramlîs and was proclaimed caliph. But when Hâssân was bribed by al-Hâkim Abu 'l-Farîthî had to return to Mecca while al-Husayn sought refuge with FâhÎr al-Mulk, vizier of the Buïyd Buïyd, of al-Dawla. Although as an Egyptian he was an enemy of the *Abbadîd* caliph al-Andalusi, he was permitted to accompany FâhÎr al-Dawla to Wâmiq and remained there till his death. He then went to al-Mawâli where the *Ugâidî Kârîwâzî took him into his service as secretary. In 448 (1053) the Buïyd governor of *Irtak* Muhammad al-Dawla appointed him vizier. But the very next year he quarrelled with the **Ugâidî** Caliph on some trivial matter, he had to leave al-Mawâli in the same year. He then went to the court of the ruler of Dihî Bâkî, near al-Dawla [cf. al-Mawâli] who gave him a sanctuary. Al-Hâsim died at Mâmiyâhirîn on 15th Ramazân 418 (Oct. 17, 1027) and was buried in Kûsa.*

**Bibliography:** Ibn Khallîkân, *Wasfujî,*
MAHALLA AL-KUBRA

MAHALLA AL-KUBRA is the modern name of an important town in the Delta of the Nile at some distance to the west of the Damietta arm, north-east of Tanta. It lies on the Tur'at al-Milhî canal, a branch of the Bahî Shahîn.

In view of the large number of Egyptian geographical names compounded with Mahalla, the identification of the town with the names mentioned by earlier Arabic writers is a matter of some difficulty. Maspero and Wiet indentify it with the Coptic Tighaîr (Amélineau, La géographie de l'Égypte à l'époque copte, Paris 1893, p. 263), but this identification is rendered doubtful by the fact that al-Mahalla is a purely Arabic name (and it also remains to be proved that it is a rendering of the Coptic name just mentioned), and because the work of Abu Ṣâlih on the Christian buildings of Egypt makes no mention of this town. The earliest author who knew a town called al-Mahalla or al-Mahalla al-Kubra is al-Ma'mûnî (p. 55, 194, 196, 200); he tells us that it was a town of al-Rif built in two parts, one called Sandafâ (or Sanafa), but the statement that the town was situated on the river by Alexandria (p. 200) seems to be an error. Al-Bakrî seems to know the same town under the name Mahâlât Mahûmî (Kifâ al-Malîk wa'l-Mahâlât, Brit. Mus. MS., XI, 183), Description de l'Afrique, p. 158, calls the town simply al-Mahalla and knows a canal called al-ajîr. Yâkût’s statements are confused, for he speaks of a town called Mahâlât Dâkahlî and of another Mahâlât Sharîkîyûn (iv. 443), both of which seem to refer to the same place. Mahâlât Sharîkîyûn in Yâkût— which should be Mahâlât al-Kubrâ—forms one town with Sandafâ in Al-Idrîsî and others and he says that Mahâlât Dâkahlî between al-Kahtâr and Dumîyat, is the largest of the Mahâlât that he knows (cf. also Abu'l-Fidâ‘ī, ii. 160), while the geographer Al-Dimashkî (p. 231) knows Mahâlât Dâkahlî as the capital of the Kûm of Dâkahlâ; Ibn Dâkâlî (v. 82) says that the governorship of this town was regarded as “the little viceroyate” (al-mâlîk wa'l-mâlîk).

The name Mahâlât Sharîkîyûn is again found in al-Ma‘mûnî (ed. Wel, ii. 2577). It is clear from these writers that the town was an important commercial centre from the tenth century onwards. It does not seem however to have played any considerable part in history, although Al-Idrîsî Ma‘mûrî quotes some events that took place there, from al-Ma‘mûnî and al-Di‘antar. In Egypt in the ninth century the town had to give way to Tanta, which became the capital of the ma‘malât of al-Gharrîba, while al-Mahalla became the capital of a smaller administrative area; Al-Ma‘mûrî estimates its inhabitants at 50,000, while the 1928 Baedeker only gives it 55,000. It is at present a centre of the cotton trade; raw cotton is there cleaned in the factories. Of the many individuals who bear the name al-Mahâlî, the most celebrated is Djâlîl al-Din al-Mahâlî (q.v.) who was born here.

MAHALLA AL-KUBRA — AL-MADHI

A negrito tribe also called Kotoko, living on both banks of the Lower Logone below Musgum and on both banks of the Lower Chari from Lake Chad to Fort Lamy and Kusseri.

They are usually divided into three groups: the Lagwe on the Logone, where they are mixed with the Musgum, the Semir at Kusseri and the Sungat Kwe at Gulfei. These natives do not seem to be autochthonous; the first occupants of the country according to tradition were the Kerabina, who are perhaps related to the ancient people of the Sao or So. As a rule, tall and slim, lank and bony, they have a narrow head and dark skin; they make three parallel drainies on the forehead, the middle one of which runs from the top of the nose to the roots of the hair. Their language is akin to the Sao, Kuri and Buduma. They are usually connected with the Musgum, with whom they form the Massa group. The Kanuri have passed on to them the Muslim religion and a certain degree of civilization.

The Makari or Kotoko are agriculturists and fishermens; they grow different kinds of millet, maize, peanuts and ground their corn with a quern. Fishing provides them with an abundant supply of food; they follow it in large pirogues, about 40 feet long and two to four feet wide. These crafts which are propelled by poles or paddles, have a flat bottom and a raised bow and stern; they are built of strong planks bound together with fibre passed through holes which after being tied, are called with various bars. This is how they come to be described as canoe. They carry 25 to 30 persons. The Kotoko fish with a large net mounted on two forks placed in different directions at the front and manoeuvred by a lever. This net is lowered to touch the bottom, then a little pirogue rowed by children drives the fish towards the fishing boat by striking the water with poles. The apparatus is lifted as soon as the fish have entered it.

The houses of the Makari are built of clay, are fairly large and comparatively comfortable. The walls are about 6 feet high; they have an elliptical door about 5 feet high; the roof is of straw and hemispherical in shape. Inside is a bed of clay, shelves of clay to hold household utensils and the fireplace. Sometimes there is also a bed made of twigs of hide or grass round a framework.

There are few isolated homes in the Makari country; they are generally grouped in villages of which the most important are Logone, Gana (Little Logone), Kanari Logone and Logone Berri (Great Logone) and Kusseri. They used all to be surrounded by circular ditches and clay walls pierced by several narrow gates. Their defense were intended to protect the inhabitants from the frequent attacks of their neighbors.

The population includes smiths, potters, weavers and a few traders. There are a few Arabs among them. Politically the Makari belonged to the ancient empires of Bornu [q. v.]. They were divided into several small royal houses; that of Kanuri Logone showed more independence.

MAHBUB, the name given in North Africa and Egypt (cf. Dossy, Stephenu, q. v.) to the Turkish gold sequin, contruction for Ternagte [q. v.].

MAHDAWIS, the followers of Saffih Muhannad Mahdi, of Dasmir, near Baniara, 847-910 (1442-1504), who declared that he was the promised Mahdi [q. v.] and by his preaching gained a number of adherents in Ahmadabed [q. v.] and other parts of Godjirat. His followers credited him with the power of working miracles, raising the dead, healing the blind and the dumb, etc. For a time they were allowed to profess their faith unmolested and add to their number by proselytizing, but in the reign of Murshid I, Sultan of Godjarat (1513-1526) they were persecuted and many of them put to death. Avrangaz [q. v.] also persecuted them when in 1645 he was governor of Ahmadabed. In consequence of these persecutions, the Mahdaws fled to the present day practice islyia [q. v.] and wish to pass as orthodox Muslims; their exact number is therefore uncertain, but they are found in small groups in most parts of Godjarat, in Bombay, Sind, the Dakhan [q. v.], and Upper Hindustan. They believe that Saffih Mahabba was the last Jesus, the promised Mahdi, and in consequence of his having come, they are said by their religious opponents neither to repent for their sins nor to pray for the souls of their dead. They observe certain ceremonies peculiar to themselves at marriages and funerals. By their enemies they are styled (Mahdawa, i.e., those who do not believe in a Mahdi) who is still to come; but the Mahdaws themselves apply this designation to other Muhammadans as having failed to recognize the Mahdi who has already appeared.

AL-MADHI (A.), means literally "the guided one", and, as all guidance (huda) is from Allah, it has come to mean the divinely guided one, guided, that is, in a peculiar and individual way. For Allah, in the intense and immediate way, for Ishaq, in the intense and individual way, for Ishaq, in the intense and immediate way, for the weakness of the lower nature, to his knowledge of Himself and to what is needed for their existence and continuance (Lisa, xx. 238, foot). One of his names is al-Allahi, the Guide (Kur.), xxii. 33: xxv. 33), and the idea of His guidance is reiterated in the Kur. For statement of its different kinds see Bandi on Kur., i. 5 (Fleischer's ed., i. 8, ii. 21 n.).
of al-Rāghib al-Iṣfahānī, p. 560 of ed. Cairo 1324; al-Maḥṣūl al-wṣāri' of al-Ghazālī, p. 80 of ed. Cairo 1324. But it is singular that the word mahdī (the passive participle of the 1 Stem) never occurs in the Kur‘ān and that the passive of that stem occurs only four times. In the usage of the Kur‘ān, the VIII stem, iḥdida, strictly “he accepted guidance for himself”, is used as a quasi or reflexive passive. Thus the man whom Allah guides is not simply “guided” but reacts himself to the divine guidance.

There seems to be no original authority for the vocalisation al-Mahdi which Edward Pococke gave as No. xvi. of the Signs in his Porta Mosis, ii. 263 of ed. 1655, with the meaning "director"; cf. Lane's note in the Supplement to his lexicon, p. 373a. Margoliouth (article cited below, p. 337a) suggests that it may mean “the giver” and refers to traditions (see below) of the Mahdi bestowing uncounted wealth; but there does not seem to be any oriental authority for this epithet. Also, the verb used in these traditions is ofia.

But one who is mahdī, or al-mahdī, is in a different position; he is absolutely guided. It is used of certain individuals in the past and of an eschatological individual in the future. Thus the Isḥāq (xx. 229, 9 from below) quotes from a tradition “the usage of the Khalīfa who followed the right way and were guided” (sunmān la yakhlaṣ al-‘alā ‘alā maḥdī al-umma), meaning the first four Khalifs, and gives on state that it is applied especially, as a name, to the Mahdi of whom the Prophet gave good tidings that he would come in the End of Time. There are many other instances of the non-eschatological application of the term mahdī to historical personages. Goldziher (Vorlesungen, p. 267, v, note 12, 3) has gathered a number of such cases; Thus Ḥajar (Nāṣīqīd, ed. Bevan, No. 104, v. 39) applies it to Abūsaid and Ḥassān b. Thābit (Dīwān, ed. Tunis, 24.) to Mahammad; and, too, Ibn Sa‘d (xii. 94. 4). It is often applied by Sunnites to Allāt, in distinction even to the other three Khalifs; thus in ‘Um al-‘Abd (v. 31, 4) he is kāfirīn mādīsīn, and Sulaimān b. ‘Umar calls Ḥussain, after his death, allāhīsīn al-sālihīn of the Mahdi” (Tabari, Tārīkh, ed. Lcliden, Ser. ii. 540, 19). Farābī and Dārīrī applied it as an honorific even to the ‘Umāyid Khalifs. As applied by the poets to ‘Umar II, the ‘Umāyid (Ibn Sa‘d, v. 243, 2), it seems to have been more than an honorific; he was regarded as a real muṣaffādī (q.v.) and under peculiar divine guidance. In the view of later Isra‘il he was the first of these “renouncers” of the Faith and the eighth and last of these would be either the Mahdi, a descendant of the Prophet, or Iṣā‘ (al-maṣīh al-muḥtadī), according to the two positions; cf. article Iṣā‘. See on the whole question of the Muṣaffādī and his relation to the Mahdi; Goldziher, Zur Charakteristik... in-Sayyī’s, in S. B. d. Wien, lxxix, p. 100. It is characteristic of ‘Umāyid to take a very pessimistic view of human nature; men always fail away from the faith and have to be brought back. This will be so especially towards the end of the world. Men will become thoroughly secular and Allāh will leave them to themselves. The Kāfā will vanish, and the copies of the Kur‘ān will become blank paper, and its words will vanish, also, from the memories of men. They will think only of poems and songs. Then the end will come.

In a similar heightened sense the term Mahdi was applied by Ibn al-Ta‘awwsh (Dimashq, ed. Margoliouth, p. 103, 3, 6) to the ‘Abbasid Khalīfa al-Nasir (A.H. 575–638). But is the Mahdi and no other eschatological Mahdi need be looked for. In a narrower but more true etymological sense it came to be applied to converts to Isla‘m; Allāh had guided these to the right Way. For such, Turks use the more Kur‘ānic term mahdāti; see above for the distinction. Goldziher (p. 268) gives cases. In a heightened sense, also, the term was applied very early (A.H. 66) to Muhammad b. al-Hanafīya, a son of Ali by another wife than Fatimah. After the death of ‘Abd al-Malik b. Marzūq, a son of ‘Abd b. Marzūq, a son of the legatee (al-mayyīf); a term applied to ‘Ali by those who asserted that the Prophet had bequeathed the headship of the people to him (Tabari, Tārīkh, ii. 534). This was after the deaths of ‘Abd al-Malik b. ‘Abd al-Malik, and the two sons of ‘Ali by Fathimah, the daughter of the Prophet, and shows a different drift as to the inheritance of the Imamate from that of the Shi‘ite legitimists. This Muhammad was heir as the son of ‘Ali and not as possessing the blood of the Prophet. He seems himself to have declined the dignity thus thrust upon him, but, maiyīf, he became the founder of the Kāfīniya sect which looked for his return from his grave in Mount Ra‘d, where he remains undying. This was maintained by the poet Kauthārīy (d. 105 = 723) and by the ‘Abd al-Haymār (d. 173 = 789; al-‘axāl, viii. 32; cf. Mas‘ūdī, Paris ed. v. 180 seq.). Muhammad thus became an “expected Mahdi”, makābī muṣaffār, like the Hidden Imam of the Twelve Shi‘ites. For the position of the Kāfīniya see Shahristānī’s Mishk wa-Nīshāl, ed. on margin of Ibn Hibat, i. 196; Makhtārī, disgusted with Muhammad, eventually founded the Makhtāriya sect which was strict Shi‘ite and upheld ‘Abd al-Malik b. Marzūq, a son of the Imamate (p. 197). The whole episode is interesting as showing the extreme fluidity of the religious-political parties at the time. It also shows very clearly how the term mahdī gradually hardened from being a general honorific into a special designation, and even a proper name, for a restorer of the Faith in the last days. The Hidden Imam of the Twelve Shi‘ites, whose return (ra‘īya) is awaited, is also called, by the Shi‘a, al-Mahdi. But his status is entirely different from that of the future restorer looked for by the Sunnites. The very essence of Sunnite Isla‘m is that the Muslim people shall rule itself and can attain truth and certainty by its own exertions. When, at any time, its qualified scholars (mawdūfātī) have applied the three wujūd — Kur‘ān, Sunna, Śiyār — to any point of Isla‘m and have come to an agreement (ta‘līf) on it, that point is assured and the acceptance of it as of faith is binding on all Muslims. The idea of an absolute Mahdi, therefore, as an infallible guide, suggests too much that ṭabī‘ (q.v.), which the later Sunnite theologians rejected. Sunnite Isla‘m, as Goldziher has taught us, is a recoil against the idea of blind submission to any human teacher. Even Iṣā‘, as restorer, is called muṣaffādī, which is much less emphatic in its suggestion of infallibility. Yet the masses demanded an absolute restorer and it was among the masses that the belief in a Mahdi was, and is, strong. To return — the
Mahdi, or Ḥāli when he comes as a restorer and ruler, will restore and apply that Consensus of Islam which has been reached by the successive generations of mujaddidān. Thus the Muslim people not only rules itself but is also the ultimate and infallible interpreter of the revelation through the Prophet. The Shi‘ites, on the other hand, admit no such authority either in the Muslim people or in their own mujaddidān; by Kur‘ān, Sunna, Kaysā, and Ḥajjū there can be no certainty. They can only be gained from the instruction (ta‘lim); cf. Goldscheider’s Streitkreise der Glaubigen gegen die Bahā‘isya- Secte, passim) of the hidden Imām who is divinely protected (muntakib) against all error and sin, and whose function it is to interpret Islam to men. The mujaddidān of the Ḥujjātas are his intermediaries with men; but they in their intermediation may err. When the Hidden Imām returns he will rule personally by divine right. He is called a Mahdi, but it is in a different sense from any Sunnite use of that term. The idea of protection against sin and error in a Mahdi (al-muntakib) seems to have been introduced into Sunnite Islam from the Mu‘a‘talah system by Fakhr al-Dīn al-Razi (d. 689/1290), see, further, Goldscheider in Itinera, vi. 238—245), but there it has been limited strictly to prophets. No “successor” (khilāfat) can enjoy it and the Mahdi, for those Sunnites who expect him, is strictly an ultimate khalifa of the Prophet. For those Sunnites who look to ʿIsa to play the part of the Mahdi he will not return as a prophet in his own right. It will not be a return (ra‘b) in his case but simply a “descent” (mush‘il) and he will rule according to the law (ʿur企业发展) of Muhammad; see article ʿIsa above, ii., p. 525. As all Shi‘ite sects agree on this status of their Imām it is unnecessary to go into further details on them; see in general, article ʿIsa.

Another important point of difference between Shi‘ites and Sunnites as to the Mahdi is that he is an essential part of the Shi‘ite creed but not of the Sunnite. That there will be a final restorer of the faith all Sunnite Islam believes as a part of its eschatology, but not that he will be called Mahdi. There is no mention of the Mahdi in either of the ʿAskar, of Musli of or of Bahāri. Similarly Sunnite systematic theologians do not deal with him. The Musābīj of al-Qādi has nothing on him; nor, indeed, on any of the Signs of the Hour (ʿāyat al-sunna; cf. article ʿAYAMA). Nāṣrī in his ʿAṣba has, of these, only al-Dājdjal (see article above, vol. i, p. 886) and the Descent of ʿIsa; Tafsīrī in his commentary, gives ten Signs but not the Mahdi. Even al-Ghazālī, a popularizing theologian, has nothing on the Signs in the last Book of his ʿIsyā, that on eschatology, and he makes only a slight allusion in the Book dealing with the ʿIsyā (ed. 1334, l. 218; ʿIsyā, the commentary of the Seyyid Murattāl, iv. 379) to the coming of al-Dājdjal, the descent of ʿIsa and his slaying of al-Dājdjal; there is no mention of the Mahdi either in the text or in the commentary. Al-Ghazālī’s whole point in this passage is to stress the final falling away from the faith of all men to which reference has been made above.

It was, then, in the hearts of the Muslim multitude that the faith in the Mahdi found its resting-place and support. In the midst of growing darkness and uncertainty — political, social, moral, theological — they clung to the idea of a future deliverer and restorer and of a short millennium before the
Karujbi died in 617 (1272) in the first years of the Nasrids of Granada when Granada was the only part of Spain left to the Muslims. He and those around him felt glowly the need of such a restorer and Mahdi, and detailed traditions sprang up as to his coming. The situation called for a man and the more specific champion of Islam than Ḥāfiz whose business it was to kill al-Dājjal. Devotion, also, to the blood of the Prophet, of whom the Mahdi was to come, and which was so strong even in the Sunnite Maghrib, may have helped this. Al-Kurtubi’s Mahdi was to come from the Maghrib as opposed to the earlier ones who were to come from Syria or Kūthurins. He will come from a place in the Djabal of the Maghrib, on the shore of the sea, called Masān; they will swear allegiance to him there and again, a second time, at Mecca. Here the tradition joins and attempts to explain an earlier one, given by Abū Da‘ūd and quoted by Ibn Khaldūn (p. 148; see, also, below), telling of an expedition against Kullab and of the booty of Kullab, thus linking up with the earliest inter-tribal conflicts. This western Mahdi will also kill al-Sufyānī who is supported by Kullab. This is not the place to enter upon the story how the Mawāniḍh branch of the Umayyads supplanted their cousins, the Sufyānīs. But from the mystery connected with the voluntary abdication and speedy death of Mu‘awīya II, the succession of Marwān b. al-Ḥakam and the sudden death or assassination of Walīd b. Uthmān b. Abī Sufyān (p[wa֑saspberry]atlaswāqiwāsqijawāisk; Maxmi, Paris, ed., v. 170) at the burial of Mu‘awīya II, it seems there have to sprung an Imāmī party among the Umayyads (qawūl al-Umayyāt min al-Mi‘āwīya, al-Qāsimī in Goldschmidt’s Streitschriften, p. 14 of the Arabic text); yet this Walīd appears later alive in Tabarī’s narrative. In the account of Kūthurī, b. Yūsuf in the Aṣḥāb (xvi, 88) there is a story that he was the first to start this (wa‘dāt al-Mallah al-Sufyānī wa-khabārah wa-shirād al-yakūnā 6m‘ālī fihī rā‘āwsw), although that is also denied and a more general and earlier origin is asserted. In the civil war at the rise of the Aḥbāsids one of the “white”, i.e., Umayyad, revolts was in support of the claims of “the Sufyānī of whom there were to be mentioned” (wawalqil hādha l-Sufyānī ni‘lghat hānū fi‘lhabaw, Tabarī, Turāh, Cairo ed., x. 138, anno 132; Ibn al-Αḥbāt, Kāmil ed. [of Ed. Cairo 1301]. Apparently the Sufyānīs continued to assert their claims in the under-ground Imāmī fashion against the Marwānīs and, later, the Aḥbāsids, supporting themselves with traditions, as all the parties did. The details are exceedingly obscure for this was one of the lost causes of Islam and has left only a name and that name under the general opposition which fell upon the Umayyads in all later Islam, Sunnite and Shi‘ite. An earlier stage in this appears in a tradition quoted by Tabarī (d. 724 = 838) in his commentary on Kurān, xxxiv. 50 (Part xxii, p. 63 foot). The Prophet mentioned a dissension (saxma) which would arise between the East and the West. Then there would come forth al-Sufyānī from the Dry Wādī (al-wādī il‘-līsah); otherwise unknown; in Yākūt, iv. 1000, *the Wādī of Yāḥūs: from a man; it is said that al-Sufyānī will come from it in the End of Time*) in that outbreak of his*, or when his time comes” (fi fa‘urbi l-Qālib). Much is said of the armies he will send out and the destruction he will spread, slaying 3500 chief of the Banu ‘Abas until Dājjal is sent against him and destroys him. His appearance, thus, for Tabari, is not eschatological and there is nothing about the Mahdi and the End of Time. But in an apocalypse incorporated by Muhāyil al-Dīn Ibn ‘Arabī in his Muḥāfaraat al-akhir; and studied in detail, historically and astrologically, by Richard Hartmann in his Islamische Apokalypse aus dem Kreuznägebiet and dated by him about 1576 (1580), this tradition is used, expanded and brought into the eschatological picture, and al-Sufyānī is finally killed by the Mahdi. A hundred years later al-Kurtubi expands it still further and calls al-Sufyānī Muḥammad b. Uraya. For other references on al-Sufyānī see Goldschmidt, Streitschriften, p. 52, note 1, Srah Ehringer, Der Mahdi, in Verspreide Geschichten, i. 155; De Goede, Frag. hist. ar., ii. 526; Van Vloten, Recherches sur la domin. ar., p. 61; Lamens, Le califat de Yūsuf, i. 177; Mu‘awīya II ou le dernier des Sufiyānīs, p. 42.

It is obviously impossible to give in detail the traditions bearing on this restorer, but their types can be indicated and some recurrent characteristics. The great majority are put directly in the mouth of the Prophet, a very few go back to ‘All. If there remain of the world a single day, Allah will lengthen it until he sends this restorer; the world shall not pass away; the Hour shall not come until then. He will be of the People of my House (min asl bih); of my kindred (min ‘arab); of my Nation (min ummat); of the offspring of Fātimah (min wa‘dāt Fātimah); his name will be my name and his father’s name; my father’s name. He will resemble the Prophet in disposition (khalīf) but not in appearance (ḥāl). This is put in the mouth of ‘Ali. He will be bald of the forehead, hook-nosed, high-nosed. He will find the world full of evil and oppression and inglorious; if a man says: ʿAli! ʿAli! he will be killed. He will fill the world with equity and justice; he will beat men until they return to Allah (al-khāliq). The Muslims will enjoy under him a prosperity like of which has never been heard of; the earth will bring forth its fruits and the heavens will pour down its rain; money in that day will be like which is trodden under foot and is not reckoned; a man will stand up and say: ‘O Mahdi, give me’ and he will say: ‘Take!’ and he will pour into his robe as much as he can carry. It is suggested that this is a sacrilegious, legitimate or illegitimate, of a tradition in the Sahih of Muslim: ‘There will come in the end of my nation a khalīf who will scatter wealth, not counting it’. See many references for this munificent khalīf and the abundance of money in the last days in Wensinck, Handbuch der Tradition, p. 1002, foot. But in this tradition, as in all Muslim and Bukhārī, there is no mention of the Mahdi. Again: the Mahdi is of us, the People of the House. Allah will bring him suddenly and unexpectedly (qawōl qalīliyya tālān fī l-ikfā). He will rule five, seven, nine years. There are frequent allusions to his coming in a time of dimension (fi‘lham). These will be such that it will take a voice from heaven to still them; saying: ‘Your Amir is saved and so’ (Ibn Khaldūn, p. 152). This is very like an ironical comment, but it is cited as a simple foretelling. In these earlier traditions he will come from the East (al-Mashrik; Khurāsān), from beyond the River (Dijbīr); in later times (e.g., Karujbi
and Ibn Khaldun, p. 171—176) he was to come from the wide, unknown, lands of the Maghrīb. The original Black Banners (frāhat šī'ah) tradition about the 'Abbasids, apparently forged to lead them to support the 'Alids, does not mention the Mahdi (Ibn Khaldūn, p. 533), but in an evidently later form there is added, "for he is the khalifa of Allāh, the Mahdi" (Ibn Khaldūn, p. 159). One long tradition (Ibn Khaldūn, p. 145) may be given entire as an illustration of a type and because of the later expansion and use of it by Kurjūtā: "There will arise a difference at the death of the khalifa and a man of the people of al-Madīna will go forth, fleeing to Mecca. Then some of the people of al-Madīna will come to him and make him go out (apparently rise in insurrection) against his will and they will swear allegiance to him between the Kūhān and the Maḏāmūn. And an army will be sent against (or, "to," lāh) him from Syria but will be swallowed up in the desert (al-ba‘āda) between Mecca and al-Madīna. Whenever the people see that, the 'Abādūn ("Substitutes" or "Nobles") of Syria and the 'Abādūn ("Companions" or "Territories"); see Lane, p. 205g) of al-Irāk will come to him and they will swear allegiance to him. Thereafter, there will arise a man of Qurash with maternal grandparents of Kāth. So he will send against them an army and it will overthrow them and that will be the expedition (jihād) of Kāth. And oh! the disappointment of those who will not have part in the booty of Kāth! He will divide the wealth and rule over the people according to the sunna of their Prophet and he will subject himself to the support of Īlam. He will remain seven or nine years and then die and the Muslims will pray over him. This is evidently an echo of the early 'Alids conflicts and is not eschatological nor does it mention the Mahdi. But its motifs of the 'Abūdūn and of the earth swallowing up in the desert (al- ba‘āda) re-appear in other traditions which are concerned with the End of Time (p. 156, 161) and it is worked into al-Kurjūtā’s tradition of the Mahdi from the Maghrib. Again, in a traditional context evidence is seen between the 'Abbasids and the 'Alids, the Muslims are exulted to turn to the youth of the tribe of Tammān (al-tammān) for he will come from the East and will be the standard-bearer of the Mahdi! (Ibn Khaldūn, p. 162). But it is plain, too, that the doctrine of the Mahdi arose late and was not generally received. Thus the doctrine of al-Dājdžāl is fixed in all Muslim eschatology, official and popular, but a tradition tries to assert that belief in the Mahdi is more of Faith than belief in him: "Whoever denies the Mahdi is an unbeliever but whoever denies al-Dājdžāl is only a denier" (Ibn Khaldūn, p. 144). On the other hand a tradition asserts that there is no Mahdi but Īṣā. The upholders of the Mahdi tried to turn this by saying that it means that no one ever spoke in the cradle (maḥdā; Qūrān, iii. 41) except Īṣā (Ibn Khaldūn, p. 163; Kurjūtā, p. 118). For al-Kurjūtā, another restored who is not mentioned in any of the collections of traditions used above, see article GAYTAN, above, vol. ii., p. 630f and Snouck Hurgronje’s article Der Mahdi, p. 12 (Verehr. Geogr., 1. 156).

The later, therefore, we go and the more popular are our sources the more fixed do we find the belief in the eschatological Mahdi. The more, too, the Muslim masses have felt themselves oppressed and humiliated, either by their own rulers or by non-Muslims, the more fervent has been their longing for this ultimate restorer of the true Islam and conqueror of the whole world in Islam. And as the need for a Mahdi has been felt, the Mahdis have always appeared and Islam has risen, sword in hand, under their banner. It is impossible here to give the history of these risings. See for details upon them the article Mahdi by Margoliouth in Hasting’s Encyclopedia of Religion and Ethics, viii. 336—340 and Goldziher, Vorlesungen, p. 231, 268, 291. For the Sudanese Mahdi, see especially Snouck Hurgronje’s article Der Mahdi, reprinted in Verehr. Geogr., 1, p. 147—151. This contains, also, a fundamental discussion of the origin and history of the idea of a restorer in Islam; see also beneath, s.v. Muhannad Aḥmad.

Bibliography: has been given in the course of the article. The three important treatises of the subject are undoubtedly those by Snouck Hurgronje, Goldziher and Margoliouth.

AL-MAHDI, ABU 'ABD ALLĀH MUḤAMMAD, an 'Abbāsid Caliph. His father was the Caliph al-Manṣūr, his mother was called Umūr bint al-Manṣūr b. 'Abd Allāh and belonged to the family of the old Himyarite kings. When the governor of Khurāsān 'Abd al-Dājjāb b. 'Abd al-Raḥmān [q.v.] rebelled, the Caliph sent his son Muḥammad al-Mahdi with an army against him; the real commander was Khāṭīb b. Khurāsīma. After taking 'Abd al-Dājjāb prisoner, al-Mahdi by his orders undertook an expedition against Tabaristan which had to submit to him [cf. Dā%xīva]. In 761—762 he returned to the Irāk where he married Raita, the daughter of the Caliph Abu l-Abhāb al-Sa‘fākīh. For the next few years he lived in al-Ra‘ī, lāh b. Mūsā had long been designated as successor to the throne but he was persuaded by al-Manṣūr to waive his rights in favour of al-Mahdi, and after the death of al-Manṣūr in Dhu ‘l-Hijja 158 (Oct. 775) al-Mahdi was recognised as Caliph. He made himself very popular by his liberality and gentleness, although several cruel deeds are credited to him. For example he had the son of the vizier Abu ‘Abd Allāh Mu‘awwiyā b. 'Ubayd Allāh [q.v.] executed on a mere suspicion and another vizier Ya‘qūb b. Dāwtūdī, who had fallen into disfavour with him, was thrown into a prison so dark that he lost the use of his eyes. In 767—775 a rebellion broke out in the always unruly Khurāsān; the leader of the rebels, Yūnāf b. Dākhilīna, was however defeated and taken prisoner whereas the Caliph had him executed in the crudest fashion. The war against Byzantium was continued under al-Mahdi. In continual raids to plunder and devastate the marches, the two opponents sought to do each other as much harm as possible; there was however never any thought of permanently occupying any territory temporarily conquered. On the whole the advantage lay with the Muslims and in the early stages they advanced as far as Arsacra. Michael Lachanodrakon however with a Byzantine army advanced against them, destroyed the fortress of al-Hadīth [q.v.], which however was soon rebuilt, and laid the land waste as far as the Syrian frontier (162 = 775/779). In the following year al-Mahdi equipped a great expedition in which his son Harīm took part against
the Byzantines and in 165 (782) Hārūn took the field again, accompanied by the Caliph's favourite al-Rabi' b. Yūnus, later vizier. This time the Muslims penetrated to the Boaphorous and the Empress Irene was forced to make a three years' truce and to promise to pay an annual tribute. In Rāmādān 168 (March/April 785), however, the truce was broken by the Byzantines and hostilities lasted till the death of al-Mahdī, without however any decision being reached. In his reign appeared the sectarian fanatic al-Ma'ṣūma', who gave the Caliph's troops much trouble and sustained a long siege in a fortress in the region of Kusāya, till finally he poisoned himself in 165 (770/785) in order not to fall alive into the hands of his enemies. In other parts of the empire also, heresies, especially real or alleged Manichaean (Zindo), were treated with the utmost severity. Al-Mahdī acquired great merit by his work for the peaceful development of his empire; new roads were laid down and the postal system improved; trade and industry reached a prosperity hitherto unknown and scholars were richly rewarded. At the same time there appeared an undesirable tendency to extravagance, which in the end was to prove really fatal, and with al-Mahdī began that expenditure of the revenues on useless luxury, which contributed not a little under his successors to the ruin of the 'Abbāsid empire. In time the Caliph fell under the control of his courtiers and in particular allowed himself to be guided by his chamberlain al-Rabi' b. Yūnus and especially by his wife al-Khairūnā, formerly a slave who was the mother of two sons, Mūsā and Hārūn. As early as 160 (770) homage had been paid to the former as successor designate under the name of al-Hādi in place of 'Isa b. Mūsā [q.v.]; and six years later al-Mahdī had his younger son Hārūn proclaimed as successor to al-Hādi. But as Khaīrūnā preferred Hārūn and he was also supported by the Baracdees, the Caliph decided to alter the succession in favour of him; al-Hādi, who was thus in Dārā al-Nūr refused to agree. Al-Mahdī thereupon set out to discuss the matter with him in person, but died suddenly on the 23d Muharram 169 (Aug. 4, 785) in Māshhadān at the age of 43. As a ruler he was undoubtedly one of the best among the 'Abbāsids.

(K. V. Zetlërstejn)

AL-MAHDI. [See Ibn Tūmārt.]
and his Christians. In spite of all the efforts of al-Mahdi, the blockade of Cordova became more and more strict. He then tried to put on the throne the caliph Hishâm II b. al-Mu'ayyad whom he had himself deposed and then given out that he was dead, but this was in vain. On 16th Rabi' I, 400 (Nov. 7, 1010) the palace of the caliph was in the hands of the besiegers. Al-Mahdi’s only hope was to hide himself. The pretender of the Berbers, Sulaimân, received the oath of allegiance at al-Cordova and assumed the honorific title of ‘al-Musta’s in b’Illah.

The following month al-Mahdi was able to leave Cordova secretly and seek refuge in Toledo where he was well received by the inhabitants. He then sought and obtained an alliance with the Catalans (frandjû) who marched with him on Cordova in Shawwâl 400 (May-June 1010). The town was taken and the second reign of al-Mahdi began with a bloody persecution of all the Berbers in Cordova. To avenge the wrongs of their fellow-countrymen in the capital, the Berbers in the army of Sulaimân al-Musta’s in returned to besiege the city. Al-Mahdi, betrayed by his servants, was slain during the siege in the palace in Cordova by some ‘Amidir slaves on the 8th Dhu’l-Hijja 400 (July 29, 1010). His first reign lasted nine months, the second less than two.

É. Lévi-Provençal.

MAHDI KHĀN, MIZZJU-MUHAMMAD MAHDI ASTA’NAZAD ET MUHAMMAD, HISTORIAN OF NAĐIR SHAKH OF PERSIA, whose deeds he recorded in the Tarikh-i Qâhân Gughâî-n Nâdirî; this work written in Persian is an excellent complement to those by James Fraser and Jonas Hanway on the conqueror. In it Mahdi Khan details the life of Naadir from his birth to his death while other Persian writers only deal with periods of life (e.g. Muhshin b. Hanif records only the expedition to India in his Qamwani-s Samâin; Abd al-Karim Kaghfurî in his Ba’yan-î Wazî) confines himself to the period from this expedition to 1784). W. Jones in his introduction to the Tarikh of Mahdi Khan says that “the narrative of these perpetual rebellions...is somewhat dry and fatiguing”; as to the boundless praise which he bestows on the author’s style, especially the descriptions of spring at the beginning of each year, it is exaggerated; in these descriptions all the images used had been employed to satisfy for years before. It is true that some works of the period are still more hackneyed. Mahdi Khan himself gives free train to this vaxatious tendency in another version of the history of Naadir which comes down to the year 1748 only: Durvîi Nâdirî, in a style uniformly artificial and elaborate. Malcolm (History of Persia) reproaches Mahdi Khan with having been too flattering to Naadir; he recognises however that the historian has spoken frankly of the cruelties which were a blot upon the latter part of the reign. Mahdi Khan was ‘Abd Nâdir’s secretary. This is revealed not only in the accuracy of his details but in certain statements also. Mahdi, for example, says that he was with the prince when the latter received news of the birth of a grandson (transl. Jones i. 191); at the end of his reign ‘Abd Nâdir sent him on a diplomatic mission to the Sultan of Turkey (ii. 179). H. Brydges (Abd-er-Razzaq, History of the Kajars, London 1833, p. clxxi, note) also credits him with secretarial duties. Besides his historical works, Mahdi Khan compiled his celebrated Eastern Turkish-Persian dictionary entitled Sangâlîkh (1173 = 1760) a valuable thesaurus enriched with examples taken from the Turkish classics (Mir ‘Ali-Shir, Bahar-Nâmâ etc.); the publication of this work of which there are two abbreviations is highly desirable.

MAHDI AL-MAHDI ALLAH AHMAD, a title and name of several Zaidi Imams of the Yemen: About 250 years after al-Hâdi Yâhya, the founder of the Zaidiyas [q.v.] dynasty of the Yemen, his direct descendant, the Imam al-Mutsawakkî ‘ala ‘lîhah Ahmad b. Sulaimân had, between 532 and 566 (1134–1170), restored the kingdom to its extent in al-Hâdi’s period, with Sa’da, Nadirân and for a time also Zabad and ‘Anân. A generation later (593–614 = 1197–1217) the hill country from Sa’da to Qammar was again ruled by one man, the ‘Abbasî b’Ilâh ‘Abd Allah b. ‘Abd, not a descendant of al-Hâdi but of a Rashid, i.e. one of the family of al-Hâdi’s grandfather, al-Kâsim b. Ta’zâbâhi, the spiritual founder of the Zaidiyas of the Yemen. The ‘Abbasî was twice able to enter ‘Anân; he was also recognised as Imam by the Rashid ‘Abd’Allah, the Nakatwî; but even before his death his power had become restricted by the last Ayyubid Sultan of the Yemen, al-Malik al-Mas’ûd, once more to the land of Kaysabâhân. After his death his sons, first Mâlamîmad ‘Isa-al-Din, then the Imam Ahmad al-Mutsawakkî tried their fortunes in the south, while one of al-Hâdi’s descendants and his namesake al-Hâdi Yâhya b. al-Mahdi created a petty imâmât around Sa’da. An attempt to unite the divided forces of the dynasty was made by

a. AL-MAHDI AL-DIN ALLAH; his full official title, one previously met with among the Zaidis, was al-Mahdi al-Din Allâh, Ahmad b. al-Husain b. Ahmad b. al-Kâsim b. Ahmad b. Isa’âl Abî ‘I-Barakat. The uncertainty about his genealogy, that occurs may be explained from the fact that, as is also found in the superscription and signature of his Khilafah al-Qâ’rân (see Bâl.) there is a jump from Isa’il Abî ‘I-Barakat to Isa’il al-Dâhîdî (of de Zambur, Table B.); he himself expressly says that his genealogy meets that of al-Manṣîr in al-Kâsim b.
Ibrahim, i.e., that he was a Rasid. His reign of ten years during which the Yamam was harassed by plague and famine does not reveal a great ruler nor even any real and consistent authority, but gives a remarkable picture of conditions in South Arabia, when for want of a definite line of succession, success alone decided how far an 'Ali' pretender was able to hold his own among his kinsmen. In the event he could gather to make a stand against foreign foes. In 646 (1250) Al-Mahdi had himself proclaimed Imam in the fortress of Thula in the highlands of Hadhramut, northwest of San'a', by arrangement with the Banu Hamza, i.e., the family of the late Imam al-Mansur, and with the benevolent tolerance of Assad al-Din Muhammad b. al-Hassan, the brother's son of the first Rasidid Sultan, al-Malik al-Mansur Nuri al-Din 'Omar b. 'Ali b. Rasul. But he was defeated by Nuri al-Din and besieged in Thula, and in 647 (1250) we find him having to fight with the Banu Hamza who had again deserted him. He was saved by the death of Nuri al-Din when he was killed by his own Mamluks in Zabid, an event which is probably connected with contemporary Mamluk attempts on the Egyptian Ayyubids; Assad al-Din who wished to make his governorship in San'a' independent, is also accused of intriguing it. The latter continued active under Nuri al-Din's son and successor al-Muqaffar Yathub, rebelling and suing for peace alternately, sometimes on the side of the Imam and sometimes intriguing against him. Al-Mahdi, who in the meanwhile had bound Shams al-Din Al-Mahdi, son of the late Imam and chief of the Banu Hamza, to joint action with him, took San'a' in the beginning of Dhumadas (July 1250); although harassed by Assad al-Din who held the fortress of Birash, he was able to extend his rule to the south as far as Dimashq. But before a year had expired al-Mahdi had to abandon San'a'. Assad al-Din indeed sold him the fortress of Birash, but it was just on account of this that the final breach occurred between them. Assad al-Din again went over to al-Muqaffar who had the governorship of the Yamam, granted him by the Caliph al-Mustahfin, who is even said to have sent assassins (Siva, see Beit., fol. 2378) against the Imam. In a thoroughly Rashid fashion, however, his fate was decided not by foreign foes but by the Zaidis themselves. He quarrelled with his eldest and most ardent supporter, Shibli Al-Mahdi al-Rasid. With the help of the Rasidids, Shams al-Din made himself Imam of the Zaidis in 652 (1254) in the old capital of Sana'a. Al-Mahdi was again confined to his original territory. The very next year a Zaidi army, probably comprising his deposition, as unworthy. Of the 10,000 men and 500 camel-borne soldiers of the earlier fighting, he had still 2,000 infantry and 300 cavalry, but these also left him in the decisive battle of Wadi Shawaha, which runs from San'a' parallel to the Wadi Khatri. He was slain at the age of 42, his head sent round as a trophy and treasured shamefully but finally turned with his body in the little Wadi of Light Bus (Dhushcha). His inglorious end did not prevent his tomb from becoming a wonder-working abode of grace; his biographer tells us that the *martyrs on the path of Allah and the commander of the faithful* are remembered of him even from his lifetime. His assassination at the beginning of 656 (1258) falls in the same year as the execution of his old enemy, the last 'Abbasid Caliph, al-Mustahfin. Legend says that the messenger who was to carry the news to Bagdād learned on the way that the caliph had met his fate on the same day.

While in his Dā'ā'ir (see Bibi) al-Mahdi collected the usual Zaidi arguments with the regular saying from the Kanz al-Usul practically in the traditional form as a general appeal to support the Zaidi cause and himself, his Khalfu is a passionate personal protest against his deposition and an attempt to bring back his enemies especially Shams al-Din Ahmād, to the loyalty they had sworn to him. This, he reproaches them, was as unrighteous as the recognition of Muhammadd's authority as a Prophet by the Usūlīs.

The Shams al-Din Ahmād above mentioned, who adopted the official title of al-Mutawakkil and recognised the Rasidids as his overlords, was at once challenged by a rival Imam in the person of Alī Muhammadd al-Hassan b. al-Wahhāb. The position remained the same for the next 50 years. The Ta'ilimaa gives nine men, the last being al-Nāṣir Sa'il b. al-Din Muhammadd b. Alī, who succeeded in obtaining some recognition as imams in the period between al-Mahdi Ahmād b. al-Husayn and A. AL-MAHDI AL-DIN ALLĀH AHMAD B. VAYYĀ. B. AL-MURTADĀ' B. AHMAD B. AL-MURRĀDH B. AL-MUNAFIDJAL B. MAŠUR B. B. AL-HUSAYNI B. B. AL-HUSAYN B. B. VAYYĀ B. AL-MANṣUR B. AHMAD B. AL-NĀṢIR. The last named ancestor was the son and successor of Vayyā al-Harīrī. After the death of al-Nāṣir Sa'il b. al-Din, a khalīf 'Abd Allah b. al-Hassan al-Dawārīī made himself Imam, with a few partisans on behalf of his sons who were still minors. But the 'Usūlīs, anxious to consolidate the power which was gradually breaking up, placed in the mosque of Dhumadas al-Din in San'a's three claimants: Alī b. Alī 'I-Fadżā'īl, al-Nāṣir b. Ahmād b. Muhammadd and Alī b. Vayyā b. al-Murra'dh, and these three were to decide on one of their number. The choice fell on Alī b. Alī 'I-Fadżā'īl, the youngest of them.

In spite of his objections, he had to give in to their argument that "one who has gone deeply into learned problems with their subtle points cannot be incapable of conducting worldly affairs". They at the same time promised him their advice and support (Zatīmu,s, fol. 724). But on the very night on which he was proclaimed, the hāji al-Dawārīī succeeded in getting hostage paid to his candidate (end of 793 = 1391). Ahmād b. Vayyā and his adherents at once left the town; a body and withdrew to the hills to the Banī Shihāb, a clan of the Hamdānīs. His abode was betrayed by one of the Shihāb, Fighting went on for 13 days in which the enemy lost about 50 men and the Imam 10. The latter then went farther into the mountains and his claims were recognised in Anis also. Among his special supporters were Alī al-Hady b. al-Mu'ā'īyāh, son of the former Imam, and Ibn Alī 'I-Fadżā'īl. He was also asked by people in Ṣa'da to receive his homage. But he was surprised by his enemies and as he would not interrupt his ritual ablutions and prayers in fight, he surrendered under a promise that no harm would befall him. In spite of this, as the Tatīmu,s tells us, which is however much biased in his favour, 80 of his men were massacred, he himself was taken to San'a', where he was kept a prisoner for 7 years.
and 3 weeks (794—801). Liberated with the help of his warders, he lived a further 40 years, 'basking up and down the country', devoting himself entirely to learning until he died in Zafar (either 1430 or 1437) of the plague in the Yaman, which had already carried off with many notables including the rival Imam Ali b. Salih b. al-Mas', on the island. According to the Tawwāna (fol. 754) Ibn al-Murtazā was born in 775 (1373) in Timbuktu, according to other sources (see Rien B. Rett. Mus. Cat. Suppl., No. 305) in 764 (1362) at Timbuktu.

The choice of Ibn al-Murtazā as Imam was a mistake, as much as he lacked the necessary wisdom and administrative ability. On the other hand he had another qualification in perfection. As a result of his careful education and a thirst for learning from his youth upwards, he wrote a great deal, dogmatic, legal and panegyric; he was also a poet and worked at grammar and logic. The kindness of his warders, who supplied him with ink and paper, enabled him to compose the new work Al-Asrar fi Fī Bahā al-Anāma al-Mušā'īd (Berlin MS. 4919) on which he wrote a commentary. His most valuable work is still his theological and legal encyclopedia, Al-Bahr al-taḥkhir (Berlin MS. 2894—9699) on which he likewise wrote a commentary. Although not the work of an original scholar, it is a rich and well arranged compilation, which deserves attention, if only for the part of the introduction which compares the various religious, as the distinctions between them are seen from a quite a different point of view to that of Ash'arī or Shahristāni.

About 80 years after al-Mahdi Ahmad b. Yahyā, from 922 (1516), the Turks had begun to occupy Yaman and to hold it with varying fortunes (see Kufah al-Din al-Makki, al-Barā' al-Yamanī fī al-Fath al-Ōzamīni, in S. de Saady, in N.E., iv. 412—44 and A. Roiger, Historia Summatet sub Hassānā Fatshā, Leyden 1838), in his struggle with them al-Mas'ūdī b. al-Kāsim b. Muhammad, a descendant of al-Hāshī, in the 17th generation, was able about 1000 A.D. to restore the present imāmate in San'a (see A. S. Tritlett, The Rise of the Imāmate of San'a, Oxford 1943). Of his sons, Muhammad al-Mas'ūdī succeeded him. Even in his reign but still more after his death in 1054 (1644), when his successor Ismā'īl, another son of al-Kāsim, was making his way with difficulty against his many brothers and nephews, one of al-Kāsim's grandsons began to come to the front, afterwards the Imam.

c. AL-MAHDI II-DIN ALLĀH AHMAD b. AL-HĀSN b. AL-KĀSIM. His father was not Imam but distinguished himself in the wars against the Turks and was also a scholar. In 1049 Ahmad appeared in the hills of Wushāb; in 1051 he besieged Khāber without success; in 1053 he was in Mecca with many members of his family on the pilgrimage. Just at the accession of Ismā'īl, he set out with another cousin against San'a. At first he came to terms with the Imam but then fought in different places for his own hand, e.g. at Thula'a and again in the Djibhat Wushāb. In 1070 he won the Jafr (Sana) for Ismā'īl, to which the Zaidīs had been summoned by the disputes for the throne. When in 1087 (1676) on the death of Ismā'īl he himself assumed the imamate a nephew, al-Kāsim b. Muhammad al-Mušā'īd, proclaimed himself Ismā'īl and was recognised particularly in the remoter territory in the south towards al-Thā'ma in Zabīl. A Zaidī assembly of leading Shā'īs and 'Ulama' met, at which Ahmad was with some difficulty recognised as the legitimate Imam. Although this did not mean that he enjoyed the authority of a sovereign, since his rivals and the other amirs remained as independent as before, yet peace and security reigned in the country. But Ahmad b. al-Hāsn died soon afterwards in 1092 (1681) in al-Ghīrān near Shābān which had been built by the first Turkish conqueror Hāsan Pasha. After the short and weak reign of his son al-Mu'tawakkil Muhāmmad b. Hāsan (to 1097 = 1688), family feuds broke out again. Among the later Imāms of this Šā'ī course another Ahmad b. al-Hāsan b. al-Kāsim (from 1221 = 1806) again bore the official title of al-Mahdi II-Din Allāh.
gaining genius, in the end his own astuteness and love of power brought about his undoing. Nevertheless it was to him that 'Ubaid Allah owed his throne and title. While the former was sowing the seeds of sedition amongst the Berber tribes of North Africa, 'Ubaid Allah was making his way with his family from Salamia in N. Syria to Kairawan (522 A.D.). In passing through Egypt disguised as a merchant he narrowly escaped imprisonment at the hands of a suspicious governor. Perhaps judicious bribery helped him on his way until he found himself with his son thrown by the Beni M'dkr, supporters of the 'Abbdus-Salam, into a dungeon in Sidjillaoua. Meanwhile his generalissimo was operating elsewhere in his favour with the help of the wild Beni K'tama whose services he had enlisted. A victorious entry into Sidjillaoua marked the release of 'Ubaid Allah — though there are suspicions that the real prisoner was slain before the surrender — and his proclamation as the true spiritual head of Islam, al-Mahdi, Commander of the Faithful. The Aghlabid monarch Ziya al-Din ('Ubaid Allah II) was overthrown and driven into exile in Egypt; while on Jan. 15, 910 A.D. (25th Rabii' II, 297) the new Mahdi and his son made their triumphal entry into Kalkada.

Following his elevation to supreme control 'Ubaid Allah entered on a policy of extending the bounds of his dominions. Not only had he enemies on all sides; even within his own camp lurked traitorous allies and fickle adherents. Those who had raised him from the dungeon found very soon that he was now their master. The estrangement between him and his chief supporters is said to have originated in the disappointment felt by the latter that he was incapable of working the miracles expected of such a divine personage. About 'Abd Allah was forced to play a subordinate part, and becoming embittered thereby, began spreading sedition amongst the unsettled Berber tribesmen. But the Mahdi was quite capable of dealing with the situation. A Shafi'i of the K'tama Berbers, heading a deputation asking for clear proofs of his spiritual claims, was summarily beheaded. Shortly after this he waylaid 'Abd Allah and his brother 'Abd al-'Abbas and had them assassinated (298 = 911). The other brother 'Abd al-Zakki was sent to Kairawan with a letter ordering his execution. As the Mahdi himself said in justifying such acts against quondam supporters: "Satan caused them to slip and I have purified them by the sword". Riots ensued, but the bold handling of the populace by the Mahdi and his personal courage averted disaster and firmly established the secular power, if it did not demonstrate the spiritual virtues, of the Fatimid dynasty.

'Ubaidallah's foreign policy led him to despatch Jassan b. Kalebi of the Beni K'tama as governor to Sicily in order to further the Fatimid cause. The Huwara and Lusa tribe of Tripolitains were vanquished, while the Mahdi's forces were also victorious against Muhammad b. Khasar at Tiharet. But following 'Abd Allah's death, the Beni K'tama, who were murmuring against the Mahdi, were attacked in April 912, chiefly by their old enemies, the people of Kairawan who never liked their savage manners. The Beni K'tama rose to a general revolt and appointed a new Mahdi, named Kahlil; but after considerable fighting they were defeated. The Tripolitains were also involved in a struggle with the Berbers (300 A.H.). But the most important events of this reign were the attacks on Egypt. The Mahdi's son, Abu 'l-Kaisim, was sent in command of the forces; while a fleet operated under Khabubas. Tripoli, Barca, and then Alexandria (302 = 914) were taken, until the victorious army was chased outside Fustat by the eunuch Muns, the Egyptian commander. A second expeditionary force (916-917) repeated the feats of the previous one and devastated the Delta and ravaged the Faiyum, only to be checked once more at Old Cairo, while the fleet of 80 vessels was destroyed at Rosetta (307 = 920) by the Khalifa's smaller but more efficient fleet of Greek mariners. Once more the Fatimid ranks had to withdraw. Nevertheless the domination of the Mahdi extended from the borders of Egypt to the confines of the Idrissid stronghold in Morocco. His fleets spread terror throughout the Mediterranean, Malta, Sicily, Sardinia, and the Balearic Islands felt his influence; while his secret-service agents were to be found throughout Andalusia. A revolt in Sicily in favour of an Aghlabid prince Ahmad b. Ziyadat Allah affected his sway in that island, but his administration generally was strong and secure, albeit rigorous and unmerciful. The year 926 found him taking up his residence in the new city he had founded on the Tunisian coast, named after himself al-Mahdiya (q.v.) (the "Africa" of Groissart). This became his capital instead of Kairawan (16 n.m. distant). The new town was founded in 303 (916) and was situated on a projecting peninsula called Djenzrat al-Far. It was strongly fortified with high and massive walls, and colossal heavy gates, enclosing the palace and the royal barracks. A natural harbour was improved to shelter 100 vessels of war. On the mainland lay the faubourg of Zawila intended as a place of residence for traders and the general public. After a reign of 25 years 'Ubaid Allah died on the 4th March 934 (14th Rabii' II, 328) at the age of 65, and was succeeded by his son Abu 'l-Kaisim under the title of al-Ka'im bi-Amraillah.

R. STEOTTMANN

AL-MAḤDIYAH, a town on the east coast of Tunisia, is the “town of Africa” of the European historians of the Middle Ages. It is built between Sousse and Sfax on a small peninsula more than a mile in length and less than 500 yards in breadth, which separates the cape of Africa and is connected to the mainland by a narrow isthmus “much as the hand is joined to the wrist.” The site was without doubt occupied by a Phoenician factory and by a Roman settlement, which it has not been possible to identify. Its name comes from the Shīʿa Mahdi ‘Ubaid Allāh, who in 300 (912) founded and fortified it, after having consulted the oracles and foreseeing the dangers which would threaten the Fāṭimid dynasty. A rampart of rubble of which a few towers are in existence ran along the coast towards the south; the wall protected the port, an ancient Phoenician harbour excavated out of the rock, which the ships entered under a large gate flanked by two strong defensive works. A little farther on, towards the point, was the naval arsenal. From the side of the isthmus, the rampart, which is very strong and strengthened by round and square towers, had a wall in front of it and was pierced by a gate which still exists. Flanked by two small towers with inclined sides entrance is gained under an arch 45 yards in length (al-bāṣilu, al-bāṣil). The highest point of the peninsula is occupied by an old Turkish hāja, built on the probable site of the palace of Mahdi. In front towards the west, probably lay the palace of his son al-Kāʾim. The town owes to the Fāṭimid also a great mosque built near the sea, of which considerable remains still exist, notably an ornamental porch. A custom-house was at hand (waṣl al-nujūḥ al-hājiyya); beyond the peninsula the suburb of Zawila (ancient Zella) of which the site is still known and where remains have been found, amongst other things glass-ware.

The Mahdi ‘Ubaid Allāh after leaving Raṣīq al-Daraj near al-Kairawān, came to live at al-Mahdiyya in the year 308 (912). Having become the capital of the empire, the town prospered. It was, according to Iḥṣāṭ, the richest city in Barbary. The son of ‘Ubaid Allāh, al-Kāʾim, was besieged there for over five months (January-September 945) by Abū Yazid, “the man with the saw,” a Khuḍāji agitator, who starting from Taẕwīr made himself master of the whole of Iṭrīyya. The failure of the blockade of al-Mahdiyya was the first stage in the downfall of the heretic. More than a century after, al-Mahdiyya, which had been the refuge of the Fāṭimid when in danger, served also as an asylum to their unconquered vassals, the Zirid Amirs, the victims of the Ḥillal invasion. In the year 449 (1057) the Zirid al-Muʿūz abandoned al-Kairawān for al-Mahdiyya. From that place he and his successors set themselves to recover the lands they had formerly ruled. From there they also turned their activities to the sea. Al-Mahdiyya, where the corsairs were now equipped, became and was to remain
AL-MAHDIYA,
formerly called AL-MA'SURA, a town of Morocco, on the Atlantic coast at the mouth of the Wādī Sabū (Sahū), built on a rocky promontory which dominates the valley of the river. Situated on the southern extremity of the plain of Gharb and 30 miles to the North East of Salé (Sāli) it enjoys a geographical position of the first importance. A port is shortly to be created here for ships of heavy tonnage, which cannot sail up the Wādī Sabū as far as the river port of Kenitra (Ar. al-Kumaitra, "the little bridge") situated 6 miles as the crow flies from the mouth of the river.

It is generally agreed that the site of Al-Mahdiya corresponds to that of one of the earliest Phoenician settlements founded by Hanno in the fifth century B.C. on the Atlantic coast of Morocco: — the factory of Thynisteria. Nothing is known of the later history of this foundation and we have to wait till the fourth century A.D. to get the first mention in Arabic writers of the town, at the mouth of the Wādī Sabū under the names al-Ma'īr or Hālīk ("the mouth") or Hālīk Sabū. According to the chronicler Abu l-Kāsim al-Zayami [q. v.] the modern town was founded by the short-lived dynasty of the Banū Ifren [q. v.] which settled on the Atlantic side of Morocco at the end of the tenth century of our era. In the second half of the XIIth, the Almohad Sultan 'Abd al-Mu'min built there one of his dockyards for his navy (dār al-mu'āṣir). Later, down to the XVIth century, al-Ma'īr's history is obscure — it was a small trading centre to which European ships came for the products of the country.

Al-Ma'īr, when the Christians of the Iberian peninsula made their offensive against Morocco, was one of their first objectives; on June 24, 1515 a large Portuguese fleet anchored at the mouth of the Wādī Sabū and a landing force of 8,000 men occupied the town without a blow being struck. The Portuguese made themselves a strong base in al-Ma'īr, built fortifications there, remains of which still exist, but they were only able to hold it for a short time. The Muslims drove the Christians out of al-Ma'īr at the end of the same year, inflicting very heavy losses upon them.

Al-Ma'īr re-enters history when at the end of the XVIth century it became a formidable nest of European pirates, who under the leadership of an English captain, Mainwaring, practised piracy along the whole Atlantic coast and became a terror to the seafaring centres of Europe. This state of things was put an end to when Spain, which in 1610 had occupied the port of Larache (al-Attālib, q. v.), a little farther north, made a landing at al-Ma'īr in August 1614, after negotiations with the Moroccan ruler, the Sa'dian Mawlay Zaidan. The town was taken and the Spanish fleet withdrew leaving a strong garrison of 1,500 men. The captured town was given the name of San Miguel de Ultramar.

The Spanish occupation of al-Ma'īr was to last 67 years during which it was several times forcibly attacked by the Muslims, particularly the "volunteers of the faith" (Mujāhidūn), who mobilised to drive the Christians from the various points on the coast where they had established themselves under the active leadership of the chief al-'Ayyash of Salé. The principal attacks on San Miguel de Ultramar were delivered in 1628, 1630.
and 1647. In 1681 (1092 A.H.) the 'Alawid Sultan Mawly Isma'il [q.v.] laid siege to the town and finally took it by storm. He then gave it the name of al-Mahdif: the name of al-Mammar was added, as that of the great forest of cork-oaks which lies between Sahl and the lower valley of the Wadi Sahib. It may be noted that for a few years at an earlier date the name of al-Mahdifa, which was borne in the Moghul empire, was used. The Almohad Caliph 'Abd al-Mammar was on the site of the future Rabat al-Fath (Rabat), on the southern bank, at the mouth of the Wadi Sahib (the modern Wadi Bil-regreg) [cf. the article Rabat]. During the French occupation, the town was occupied by French troops in 1911.

Considerable remains survive at al-Mahdifa, dating from the brief Portuguese occupation, the Spanish occupation or from the date when it was definitively retaken by the Muslims. Around the citadel (khalib) runs a continuous rampart with a ditch. These defences are entered by two gates; one very massive, with two Arabic inscriptions, dates from the XVIIIth century. The other, a simple postern, dating from the Spanish occupation, opens on the steep slope which runs down to the river. Inside beside a few hovels and a little mosque are the ruins of the Muslim governor's palace of the XVIIIth century. Between the foot of the citadel and the bank of the Wadi Sahib for a length of 200 yards and a breadth of about 40 may still be seen buildings consisting of a series of square chambers completely isolated from one another and each protected by a double wall. These were probably granaries, which need not be earlier than the end of the XVIIIth century, and are not, as has been suggested, of the Phoenician period.

(E. LÉVI-PROVENÇAL)

MAHDIYA (A.), technical term in metaphysics, quid di, frequently used as equivalent of gzm-bar, substance. Abd Hanif, Dirar (and al-Nadjar) used it to designate the pure divine essence; cf. 'Abd al-Kahir al-Baghdadi, Al-Farāb khatn al-Farā'ab, p. 201-202; al-Shahrazuri, Kitāb al-Mīlāw wa 'l-Nihāl, Cairo, i. 114; Kitāb al-Su'a' wa 'l-Turāqq, ed. and transl. Huart, i. 85. On the question whether the quiddity is identical or not to existence (wujūd) cf. Djumā'ī, Sharh al-Mawrid, Cairo, p. 92.

(L. MASSIGNON)

MAHKAMA. See MGLKMB.

MAHMAL (or more correctly: MAHMUL, A.), the name of the splendidly decorated empty litters, which since the IXth century have been sent by Mahomedan princes on the Hajj to Mecca, to display their independence and claims to a place of honour at the ceremony. The camel which bears the mahmal is not ridden but led by the bridle. It goes at the head of the caravan and is regarded as its sanctifying element. What extravagance the rivalry of princes led to is shown by the mention of a mahmal adorned with much gold, pearls and jewels, which was sent in 721 (1321) from the 'Irāq to Mecca (Die Chroniken der Stadt Mecca, ed. F. Wüstenfeld, II, 1859, p. 278). The mahmal, which is most esteemed, which then accompanied the pilgrim caravan from Cairo, is described by Lane as a square wooden framework, with a pyramid at top covered with black brocade richly worked with inscriptions and ornamental embroidery in gold, in some parts upon a ground of green or red silks; it is bordered with fringe of silk and silver balls are fixed to the corners and to the top of the pyramid. On the front of the pyramidal roof is a view of the Ka'ba embroidered in gold. In the brief description given by Burckhardt of the Egyptian mahmal it is added that it is decorated with ostrich feathers. According to him there was only a prayer-book in the empty interior, which on its return was exhibited in Cairo and admired by the people; according to Lane on the other hand there are two silver receptacles in the mahmal which contain two Karafs, one in a scroll, the other in book form. The mahmal is carried by a fine tall camel, which after the pilgrimage is spared for further work. On their arrival in Mecca the mahmuls are haled with joy and led through the crowded streets in a solemn procession after which they go with the pilgrims to 'Arafat where they occupy a position reserved for them. It used to be generally supposed that the covering of the Egyptian mahmal was used to cover the tomb of Muhammad or the Ka'ba, but this is wrong; the kiswa is of course taken to Mecca with the great pilgrim caravan but it has nothing to do with the mahmal.

According to Maqrizi the custom of sending a mahmal to Mecca was first introduced in 670 A.H. by the Mamluk Sultan Baibars but others attribute it to the 'Abbāsids and 'Abū Nūaymī. It is also said that it was a princess going on the pilgrimage in a splendid litter that gave Baibars the idea of sending one with the pilgrimage. This is however only a story; and it is a much more important question whether the custom did not arise at an earlier date and whether it did not originally have a direct religious significance. It is natural to recall the portable sanctuaries of the Arabs and the mahmal particularly reminds one of the description which Musli (Die Kalifat, 1910, p. 849) gives of the 'Abbāsids and the Mahmal (or the Reba tribe): a framework of thin pieces of wood adorned with ostrich feathers which is fastened on to the saddle of a pack-camel and is the visible centre of the tribe. This would at any rate lead us to the practical significance of the later mahmal, a visible sign of independence and claim to sovereignty of the various Muslim states. It is just this significance which gives the mahmuls a certain historical interest as political changes and rivalries are reflected in them in course of time. There have occasionally been rulers who by sending mahmuls gave expression to their endeavour to obtain recognition as sovereigns and protectors of the sharifs, only to be soon driven from power again by others. That the Egyptian mahmal came to obtain a place of honour, that from Syria being the only other at all comparable to it, was a result of the political influence of the Mamluk Sultan. It is noteworthy that Ottoman rule made no alteration in this respect and an attempt to send a mahmal from Constantinople met with no success. In 1867 an interruption was
caused by the conquest of Mecca by the Wahhabihs who forbade this empty pomp, so hateful to them; but this ceased when they were driven out and Muhammad A'li's rule again gave the Egyptian mahmal pride of place. After the World War the sending of a mahmal from Syria stopped. Difficulties arose between the Egyptian government and King Hussein (1915—1924) regarding the powers of the heads of a field-hospital which was to accompany the mahmal as well as regarding the ceremony of its reception, which twice resulted in the mahmal not being sent.

When Ibn Sa'ud had become king of the Hijaz, long negotiations took place over the mahmal. The Wahhabist ruler insisted on the music which usually accompanied the mahmal being omitted and all sort of superstitions customs being dropped; he also protested against the armed escort as a denial of his sovereignty. The attempt made in 1926 to harmonize the demands of the two sides came to nothing: a fight broke out between the Wahhabists of Ibn Sa'ud and the Egyptian soldiers which was only stopped by the personal intervention of Ibn Sa'ud. Since then the Egyptian government has not sent a mahmal, but neither does it any longer send a new kurna for the Ka'bah to the Hajj.

MAHMUD I., twenty fourth Ottoman Sultan, reigned 1143—1166 (1730—1754). He was born on the 3rd Maharam 1108 (Aug. 16, 1696), the son of Mustafa II. The Sultans of the 18th century give the date 7th Ramadan 1107 (April 10, 1696) — and had spent his life in seclusion up to his accession. He came to the throne through the mutiny of the Janissaries under Patronas Khalil, a mutiny which cost the grand vizier Ibrahim Pasha, the Kapudan Pasha and the Kayas their lives, and forced Sultan Ahmad III to abdicate in favour of Mahmad; these events took place on the 17th Rabii' I, 1143 (Oct. 1, 1730). The mutiny, which really had the sympathy of most of the subjects and seems to have been in the nature of a social revolution (Josef), was only suppressed after some time through the efforts of the Kfilar Agas Beghri; before its suppression a certain number of appointments to important offices dictated by the rebels had to be conceded and the many palaces built in the luxurious reign of Ahmad III were allowed to be pillaged. After the Janissaries had been pacified by considerable largesse on the accession of the Sultan, Beghri Agha succeeded in plotting the death of Patronas Khalil, who was assassinated on Nov. 15, 1730. The Kfilar-aghas continued to exercise a preponderating influence on affairs of state; the Sultan, who was by nature more interested in literature and in the erection of more or less useful buildings, did nothing to throw off this influence, which on the whole was for the good of the state. One of the consequences of this system was the very frequent changes of grand viziers — there were no fewer than 16 in Mahmad's reign — but the state possessed a number of able men who worked for the good of the empire in the offices of grand vizier, reis efeendi and k'aya beg. The state finances were kept in good order, as much by the confiscation of any great fortunes amassed by high officials as by a financial system which made no distinction between state and private revenue and the personal revenues of the Sultan. The situation abroad was also favourable, especially after the peace of Belgrade in 1739, which secured to Turkey a fairly long period of peace in Europe.

At the beginning of the reign, Turkey was at war with Persia. The campaign of 1733 was favourable to the Turks, who reconquered Kirmangah and took Hamadan (battle of Koridjan, Sept. 15). Urmia and Tabriz; however, by a peace signed on Jan. 10, 1732 by the ser-asker and grand vizier Topal 'Othman Pasha, Turkey gave up Tabriz and Hamadan. This peace neither pleased the powers in Constantinople, who replaced the grand vizier by Hekim Zade 'Ali Pasha (q.v.), nor 'Othman Kuli Khan, who on his return from Herat had deethroned Shah 'Othman and was making new preparations for war. On Oct. 6, 1732, the Porte issued a formal declaration of war and in December a Persian army invaded Mesopotamia, took Kirkuk and laid siege to Bagdad; the great battles of this campaign were those of Duldjidik on the Tigris, where the Persians were defeated (July 19, 1733), and that of Kirkuk, where a week later the Turks suffered a defeat which involved the death of the ser-asker Topal 'Othman Pasha. In the same year, the Persian war produced a conflict with Russia, provoked by the Khan of the Crimean march through the Caucasus to reinforce the Turkish troops fighting against Persia. Russia declared she could not allow the passage of the Tartars through the country of the Kumak and the Kaitak, which she regarded as under her authority; the Khan's force was therefore held up and several battles were fought in Daghestan between Turks and Russians. The negotiations opened at Constantinople showed more and more that a war with Russia would be unavoidable and they were finally broken off by the siege and capture of Azof by the Russians in March 1736. Meanwhile the war with Persia, which had ceased in 1734 on an armistice being concluded by the Pasha of Bagdad, had been resumed in 1735 when Ahmd Kopefla was appointed ser-asker. The campaign was unfortunate for the Turks. They lost a number of towns in the Caucasus; however the development of affairs in Persia where Shah 'Othman Kuli, afterwards Ndir Shakh, proclaimed himself king on Dec. 1, 1735. In his camp on the Caucasian front, was favourable to the peace negotiations which were begun at this time. These negotiations ended in a peace signed at Constantinople on Oct. 17, 1736; the frontiers of the two countries remained as they had been fixed in the time of Murad IV. In the same year a Russian army invaded and laid waste the Crimes, although negotiations still went on, first at Constantinople and then in the country. Austria, posing as mediator, took an active part in these negotiations, which were finally broken off at the Congress of Nienmriow in Aug. 16, 1737, when it became evident that Austria was really Russia's ally, so that Turkey had to
deal with two adversaries. The war began badly for the Turks who lost Nish to the Austrians and Ossakow to the Russians. Nish however was won back in Oct. 1737. During the next two years fortune was rather on the side of the Turkish armies under the grand vizier Yegen Muhammad Pasha. The conclusion of the war was marked by the capture of Belgrade and the appearance of the forces of the grand vizier Hâdişî Muhammad before Belgrade in July 1739. It was during this time that the famous peace of Belgrade (Sept. 18) was negotiated with the assistance and mediation of the French Ambassador, the Marquis de Villeseuvre, by which Turkey again obtained possession of the town. Russia was included in the same treaty and had to promise to demolish the fortifications of Azof.

This ending of the war in a way very advantageous to the Porte was followed by a long period of peace with the states of Europe, which, as a result of the Seven Years' War, had no time to devote to plans for the partition of Turkey. From 1743 to 1746 there was a new Persian war. It began through the demands of Nâdir Shah to have the Persian Shah re-recognised as a fifth Mahâlik, but of all this the Porte at first gave an evasive answer and only after they had become convinced that Nâdir Shah intended to make himself lord of Mesopotamia, the Shâhi-i-Isâm gave a formal against the recognition of the Djiyârâyân. In 1743 Nâdir Shah took Kärkik and laid siege to Ïâşuj, only to be forced to raise it after a while. In the following year the scene of hostilities shifted to the Caucasus. The Porte then attempted to support a Persian pretender of the Safawid family, whom it sent off with great pomp to Kars; in 1746 the Turkish ser-asker, the former grand vizier Yegen Mahâmmad, fell in the battle of Murâd Tepe in Kurdistan. During all this time, peace negotiations were going on in Constantinople and conducted through the Turkish commender-in-chief. During these negotiations Nâdir Shah had dropped his demand for the recognition of the Djiyârâyân and finally agreement was reached on the basis of the frontiers of Murâd IV (Sept. 4, 1746). In July of the same year the full power of Bebhir Agha died at the age of 96; in spite of the efforts of the grand vizier al-Sajîyid Hasan Pasha, his successor Bebhir Agha the younger succeeded in procuring the same influence in affairs. This new regime only lasted till 1752 when there was reason to fear a new outbreak of discontent among the Janissaries and the "ulama" also; the Sultan seems therefore to have decided to sacrifice the Kîlar Agha by having him treacherously assassinated along with some other favourites (July 10, 1752). Two years later, on Friday, Dec. 13, 1754, Mahâmmad himself died suddenly on his way from the mosque; he was buried in the Yeni Dîjâmî.

The Sultan left a pleasing memory behind him; it is even said of him that he took a personal part in the affairs of state (Sîgîlî, 'Oţhmanî, etc.) although in such sources give little evidence of this. He did not continue the splendid court of his predecessor, respecting public feeling which had led to the latter's fall. Mahâmmud is especially celebrated for the large number of buildings he had erected; in Constantinople he built no less than four regiments and he began the building of the Nûr-i 'Oţhmanî mosque. This activity was equally displayed in the provinces. This Sultan also acquired considerable merit by founding four libraries in the capital, those of Aya Sofia, the Willide Dîjâmî-i mosque, the Fâti'h mosque and the Gbalâş'a Serîşî. The reign of Mahâmmud is further marked by the display of a very skilful diplomatic activity by the Porte, conducted by several very able reis esfendis, like Râghib Pasha, etc. They were profited by the lessons of European diplomats and also by the advice of the famous French renegade Bonneval, who lived in Constantinople from 1729 till his death in 1747 and introduced several useful reforms into the army. But in spite of appearances, the Ottoman empire was far from being a strong power, as the historian Djeddet Pasha (Twârîkî, Djendet, 1502 ed., i. 63) has very justly remarked; therefore, in the period of anarchy that followed in Persia the death of Nâdir Shah, the Porte consistently declined to interfere in Persian affairs. From time to time minor revolts contributed to weaken the strength of the empire; besides the always dangerous Janissaries, there were several risings in Arabia (e.g. Şâfî Beg Oghlu in Aidin in 1739). It was also in the reign of Mahâmmud I that the Wallâhîs first gave to give trouble to the government. In Egypt the Mamlûk beg succeeded in ruling the country in practical independence, in spite of the energetic steps taken by Râghib Pasha, when the latter was governor of this province. As to foreign relations, it is interesting to note that it was in this reign that France, which became very influential after the peace of Belgrade, succeeded in 1740 in obtaining the celebrated capitulation which became in time the most important document on the extra-territorial rights of foreigners in Turkey.

Bibliography: The principal Turkish sources are the imperial historiographers Twârîkî Sânî ve Şahîrî ve-Sabîlî, Constantinopole 1198 (years 1143—1156), Twârîkî ve-ısâl, Constantinopole 1199 (years 1157—1165) and the beginning of the Twârîkî ve-ısâl, Constantinopole 1219 (beginning in 1166; then there are the reports of certain embassies like the Twârîkî ve-Tenîfî of Râghib Pasha on the peace negotiations with Nâdir Shah in 1736, a manuscript which was used by von Hammer. There are also several works still in manuscript on the history of the reign of Mahâmmud I, noted by Bahinger, G.O.W., Leipzig 1927, p. 332. The same author (op. cit., p. 289) also quotes a series of monuments in Turkish which deal with the wars of Nâdir Shah. For these wars, a complementary source is the biography of Nâdir Shah by Mahdî Şânî and Hanaway, A Journal of Travels from London through Russia into Persia, 1755—1758. General sketches of the reign of Mahâmmud I are given in von Hammer, G.O.W., Pesth 1836, iv. 266—482; Zinkleisen, Geschichte des Osmanischen Reiches im Europa, v. Gorha 1857, p. 629—847; Jorge, Geschichte des Osmanischen Reiches, v. 1911, iv. 409—462.

J. H. Kramers

MAHMUD II, THE TWENTY- NINTH SULTAN OF THE OTTOMAN EMPIRE, REIGNED FROM 1808 UNTIL 1839. He was the son of Abd al-Hamid I and was born on the 20th July 1784 (13th Ramadân 1199, cf. Sîgîlî, 'Oţhmanî, i. 73). He succeeded to Mustafa IV on July 28, 1808, directly after the tragic events, which had led to the assassination of Salâm III (q. v.). Mahâmmud himself had a narrow escape from the fate of Salâm. Until his coming to the throne he had lived in seclusion and during the preceding year his intercourse with the
dethroned sultan had undoubtedly exercised a great influence on Mahmud's ideas, making him appear afterwards as Salim's avenger.

The grand-vizierate of Mustafa Bairakdar Pasha, the consequence of the latter's victory, lasted only until November 1808; a revolt put an end to his reformation, tyranny and to his life. The next steps were taken up by the war against the Russians, who had occupied the Danubian principalities in December 1806. Endeavouring to continue their conquests on the southern side of the Danube the Russians met with more resistance from the Turks than had been expected; it was, however, due principally to the increasing danger of a Franco-Russian war, that the Turks obtained the peace of Bucharest, signed on May 28, 1812, and negotiated, on the part of the Turks, by Ghasib Efendi. By this peace, Turkey had only to cede Bessarabia to Russia. In the meantime the new sultan had inaugurated a policy of internal consolidation of the empire, a policy which lasted until the Greek revolt in 1820 began to absorb all the strength of the state. He put an end to the almost intolerable extent of the duties in Rumelia and to that of the numerous dervishes in Anatolia, especially to the families of the Karas Oghlan, Oghlan in Şarkhan and Alikn and of the Cankaya Oghlan in the region of Kaşarlye (cf. DEBREY). The sultan's authority was equally reestablished in southern Mesopotamia after the death of Salaheddin Pasha of Baghdad in 1810. The aid of Muhammad 'Ali Pasha of Egypt had to be invoked to repress the Wahhabi power in Arabia; Mecca and Medina were reconquered in 1813 by 'Usun Pasha (cf. 1813). In Serbia it was only after years of trouble that an arrangement could be attained, which left Milosch as supreme khan of this principality. The submission of Bosnia only took place after 1821. On the contrary 'Ali Pasha of Yanina succeeded in keeping his strong position during this period; not till 1820 were the Turkish troops able to lay siege to Yanina. In Constantinople the sultan took severe measures to maintain order, especially against the dangerous element of the Janissaries.

During this time the diplomatic difficulties with Russia, relating to the interpretation and the execution of the peace treaty, continued, especially with regard to the regime in Moldavia and Wallachia. These difficulties were to become a real danger after the Greek insurrection had broken out.

This insurrection, being in a way a consequence of the autocratic regime of 'Ali of Yanina, and secretly favoured by Russia, began in 1820 with the appearance of Alexander Ippiani in Rama and a fierce revolt in Morea, instigated by Demetrios Ippiani. The first resistance on the Turkish side were numerous executions at Constantinople, including that of the Greek patriarch. Then Turkish troops entered Rama, where Ippiani was easily beaten. As this military action provoked sharp protests from Russia, whose ambassador Stroganov left Constantinople, the Turkish troops were soon withdrawn for the greater part. But in 1822 the insurrection in Morea spread quickly; Tripolitis and Corinth fell into the hands of the insurgents. In the same year 'Ali of Yanina was murdered. In May 1823 the Acropolis of Athens was surrendered by the Turks; the latter, however, remained on the whole stronger than the Greeks. In order to avoid all difficulties with Russia, the Porte had evacuated in 1823 the whole of Rumania, while declaring that, henceforward, she would suffer no more foreign intervention in her internal affairs. But Russia continually came forward with new claims (e.g. the division of Greece into three principalities, after the model of the principalities on the Danube); at the same time the other European powers no longer remained indifferent towards the Greek affairs, partly because public opinion began to be influenced by the philanthropic movements, and partly because they feared that Russia might gain too much profit from the weakness of the Ottoman Empire. In these years Turkey had even to sustain a war with Persia occasioned by Persian incursions into Kurdistan; this war was ended by 1823. During the years 1824 and 1825, while Turks and Greeks were waging a guerrilla war by land and sea, and while amongst the Greeks there reigned complete anarchy, nothing decisive happened. The situation was only changed by the death of Alexander I of Russia (December 1, 1825) — which brought to the throne Nicholas I, much more inclined to make short work of the Turks — and by the combined action in Morea of Egyptian and Turkish troops under the command of Ibrahim Pasha, son of Muradhammad 'Ali. This action was crowned by complete success, for Morea was entirely subdued, and on April 23, 1826, the fortress of Missolonghi capitulated after a siege of more than six months.

The Turkish successes encouraged the sultan to realise his long considered project to form a new army, trained and equipped after the European fashion. These new troops were recruited from the Janissaries. Their inauguration took place on June 4, 1826 and occasioned, ten days afterwards, the revolt of the Janissaries which ended in the complete and bloody extermination of these once famous troops (June 16). The extermination of the Janissaries is an act that will always be connected with the name of Mahmud II; it made a formidable impression in the whole country and the reform party — who spoke of it as the 1826 — considered it as the beginning of a new era of prosperity. The first consequences, however, were disastrous; the strength of the empire was weakened to a degree, which made itself felt more and more in the development of the relations with Russia. Hoping to get rid of the everlasting demands of Russia, the Porte had given still more concessions by the convention of Akkerman (September 25, 1826), but soon afterwards followed an agreement between Russia, Great Britain, France and Prussia with regard to the Greek question (July 7, 1827), which prevented the Turks from the suppression of the insurrection. Though directed, since the beginning of 1827, by the fanatical Pervet Efendi as Reis Efendi, Turkish diplomacy was powerless against this new intervention. One of the consequences of the agreement of the powers was the destruction of the Tureo-Egyptian fleet in the Gulf of Navarino, on October 23, 1827, without previous declaration of war, by the English, French and Russian naval forces. Subsequently the diplomatic relations with these countries were broken off, but, when war actually broke out, it was only with Russia.

The Russian war, inaugurated by a declaration of war by Russia (May 7, 1828), was particularly disastrous for Turkey. The Russians immediately
occupied Rumania and crossed the Danube, while on the Oriental front they took Karş and Akhalteke in the Caucasus. In 1829 the debacle was completed by the occupation of Adrianople by General Diebich, on August 16. Thus, by the peace treaty of Adrianople of September 14, 1829, the Porte was obliged to make all the concessions required of her. Russia gave back nearly all her conquests, but obtained the payment of a heavy war indemnity. As to Greece, Turkey had to accept the decision of the great powers, which meant absolute independence. In the following years the new frontier and the future relations between Turkey and the new state were regulated by special conventions.

The principal political facts of the nine last years of Mahmud's reign were the conflict with Muhammad 'Ali of Egypt and the Russian intervention, which was its consequence and put Turkey in a state of dependence on Russia. The activity of Muhammad 'Ali [q. v.] began in 1831 with the invasion by Ibrahim Pasha of the territory of the pasha of Akka; this town was besieged and fell in May 1832. Within a short time Damascius and Aleppo also submitted to Ibrahim. The military measures of the sultan were insufficient to stop the advance of the Egyptian troops, who marched from Syria into Asia Minor; the Turkish General Rashid Pasha was beaten by them in the battle of Konya (December 21, 1832) and was himself made a prisoner. The Porte then was obliged to accept the aid offered by Russia, and the mediation of France, the result of which was an agreement, concluded on April 8, 1833 at Kutahiya, with Ibrahim Pasha; Muhammad 'Ali had to be recognised as pasha of Syria while the province of Adana was given to Ibrahim. In the meantime Russian troops had been landed in the Bosphorus. These were only withdrawn after the conclusion of the notorious treaty of Hünkâr İskâllesi, signed on July 4, 1833 between Turkey and Russia. The treaty was a defensive alliance and contained a secret clause by which Turkey undertook to prevent any eventual commencement of Russia from entering into the Black Sea. Thus Turkey became still more politically linked to Russia without the other powers being able to hinder this.

On the other hand Mahmud continued with tenacity the consolidation of his authority in the interior. The principal agent of this policy was the former grand vizier Rashid Pasha, appointed governor of Smyrna after his return from Egyptian captivity. He succeeded in establishing order in eastern Anatolia and in Armenia, especially by subduing the Kurdish tribes. After his death, in 1836, he was replaced as serasker by Hafiz Pasha. The latter, unlike Rashid, was in favour of the introduction of modern tactics into the Turkish army; in his successful expeditions in the north of Mesopotamia he was accompanied by the Russian lieutenant von Molike, one of the army instructors who had been sent by the King of Prussia. These military measures of Mahmud had also in view the strengthening of the frontier on the Syrian side, in order to be prepared for a new conflict with Muhammad 'Ali. This event happened only after 1838, when Khurraw Pasha [q. v.], the zealous reformer and ancient enemy of the Egypt, came again into power as president of the new Turkish cabinet. The next

year Hafiz Pasha, appointed again as serasker in Kurdistan, crossed the Euphrates and occupied 'Ainšlīb, but he was completely beaten by the Egyptians under Ibrahim Pasha, in the battle of Nîzîh, on June 24, 1839. This battle left Turkey again in a desperate condition, just a week before the death of Mahmud himself.

During the same period the sultan had to suppress dangerous and repeated revolts in Albania and Bosnia; the situation in Serbia had remained quiet after a kháftî sharîf of 1830. In August 1837, the situation in the interior had become sufficiently stabilised for Mahmud to undertake a journey in his European provinces, which journey was an unheard of breach with the traditional customs of the Ottoman rulers. It was to be one of his last public acts. Mahmud died on July 3, 1839 at Constantinople in his palace of Çâlîçû below Scutari.

It is quite clear, from the many descriptions we possess of this sultan, that he was a strong personality, who made his own ideas prevail in the government of his empire. In his immediate entourage only few first rate men were to be found. But the task which Mahmud had set himself, of reforming the empire after the European model was nearly super-human in the extremely unfavourable political circumstances that prevailed during his reign. To which must be added the enormous difficulties presented by the traditional institutions and views existing in all ranks of the Turkish people, of those days (cf. e.g. the severe judgement by von Molke, p. 434, sqq.). Mahmud has often been compared, as a reformer, with Peter the Great, though the conditions were quite different. On the other hand he has been blamed for having commenced his reforms where he should have finished ("par la queue"), for demolishing things existing without being capable of constructive activity; especially in Turkey of to-day Mahmud is judged severely (cf. Halide Edib, Memoirs, London 1926, p. 237, sqq.). It is very probable, however, that without the drastic measures of this sultan, the following period of the Tanzimât [q. v.] would have been an impossibility (cf. Rosen, i. 300, sqq.). The most important reform was that of the army; it brought about the extermination of the Janissaries, but the formation of an army after the European fashion did not succeed till much later; the most zealous reformers, such as Khurraw Pasha, had only very vague ideas about what it really meant. The most useful work was done by the Prussian military instructors. By sending young officers to military schools in Western Europe, Mahmud prepared, however, a more efficient reorganization. In the government system there gradually developed a cabinet of ministers of state after the Western fashion; at a certain period in 1837, the ancient title of sadr-i ʾṣâṣān was even temporarily abolished, and the ministers received the new title of şekil. Moreover, by a firman of October 1826, Mahmud had opened the way to the development of a better and more dignified position of the state functionaries; this firman abolished the sultan's right of confiscating the possessions of the functionaries after their death. It was, however, a long time before a new corps of real and loyal functionaries came into existence. The men whose services Mahmud was obliged to use were too often highly corruptible, a circumstance of which the other powers,
especially Russia, took advantage in a large degree.

Mahmud II lies buried in the turbe that bears his name; it was constructed in Stambool on the Divan Yolu by his son and successor 'Abd al-Majid.

Bibliography: The Turkish historical works deserve more attention than has been paid so far to them. The more accessible ones are: Djawdat Passa's Tarijeh, Constantinople 1303, vol. ix—xxi, comprising the period from 1223 to 1241, and its continuation, the Tarijeh of Aflaj. Latif, Constantinople 1309—1360, vol. i—vii, comprising the period from 1241 to 1255.

Other printed sources are: Ali, Blu, Vagif Pasha, Constantinople 1332; Tarijeh Aflaj, Constantinople n. d.; Mahmud Aflaj, Dir iz CifTER, Constantinople 1424, a monograph on the extermination of the Janissaries; Mahmud Tutreja, Nizahat al-Wahfah, Constantinople (cf. also Babinger, G. O. W., p. 387). European general treatments of this period: Zinkies, Geschichte des Osmanischen Reiches in Europa, vii., Gotha 1863, p. 561 sqq. (until 1812); Rosen, Geschichte der Türken, Leipzig 1866, vol. 3 (after 1826); Jorga, Geschichte des Osmanischen Reiches, v., Gotha 1913, p. 482—487.

A valuable contemporary source is H. von Moltke, Briefe über Zustände und Begebenheiten in der Türkei, Berlin 1883.

MAHMUD I, NĀṢIR AL-DĪN, was Sultan of Bengal from 1446 to 1460. When the ferocious tyranny of Shams al-Dīn Ahmad Shāh, grandson of the warrier, Rādīj Kān, or Ganej, could no longer be borne, he was put to death, and Nāṣir Kān, one of his amirs, seized the throne; but after a reign of one week was slain by his amirs, who would not submit to one of their own number. Their choice fell on Mahmūd, who was a descendant of Ilyās, the founder of the old royal house, and he was raised to the throne. He reigned with justice and clemency for twenty-six years, and restored and beautified the city of Gaur. On his death in 1460 he was succeeded by his son Bābāk Shāh.

(T. H. Hay)

MAHMUD II, NĀṢIR AL-DĪN was the third of the Hābšūr, or African Sultans of Bengal. He succeeded his father in 1494, but was a mere puppet in the hands of one minister after another. His first minister, an African entitled Habšūr Kān, was slain by a rival, another African known as Malik Bādīr the Mālīm, who afterwards slew Mahmūd, having occupied the throne for no more than six months, and usurped the throne.

Bibliography: See Mahmūd I of Bengal.

(T. H. Hay)

MAHMUD III, GHAYYĀH AL-DĪN, was one of the eighteen sons of 'Alī al-Dīn Husain Shāh of Bengal. He remained loyal to his eldest brother, Nāṣir al-Dīn Nisārat Shāh, throughout his reign, but after his death slew his son, 'Alī al-Dīn Firdaw Shāh, in 1533, and ascended the throne. During a troubled reign of five years he never ruled the whole of Bengal. Shīr Kān Shir, who ultimately ascended the throne of Dīlī, was already powerful in Bāhā, and allied himself to Mahmūd's rebellious brother-in-law, Makhduimi-

Alim, who was governor of Ḥādjiyūpūr. Shir Kān defeated an army sent against him by Mahmūd, but Makhduimi was less fortunate, and was slain in another battle. Shir Kān then forced the Teliyāgarāhī defiles, invaded Bengal, and besieged Mahmūd in Gaur in 1537. Mahmūd appealed to Humayūn Shāh of Dīlī for aid, and Shir Kān was recalled to Bāhā by a rebellion in that province, but left his son Dīlī Kān to continue the siege of Gaur. In April, 1538, Mahmūd was forced to evacuate Gaur, and fled, leaving his capital and his son in the hands of Dīlī Kān. Shir Kān, returning from Bāhā, then pursued Mahmūd, overtook him, forced him to a battle, and defeated him. Mahmūd was wounded and fled, and nothing more is known of him.

Bibliography: See Mahmūd I of Bengal.

(T. H. Hay)

MAHMUD, SHIRR AL-DIN, the fourteenth king of the Bahman dynasty of the Daka, was raised to the throne at the age of twelve on the death of his father, Mahdī al-Dīn, on March 22, 1482, and remained under tutelage throughout his reign of thirty-six years. The ascendency of his first minister, Malik Ḥasan Bahārī, Niẓām al-Mulk, who had been responsible for the death of Mahdī Gāwān (q.v.), was distasteful to the Foreign ambār of the kingdom, at the head of whom was Vissāf 'Adil Kān of Bidjpur, and the assassination of this minister, ordered by the young king, embittered the relations between him and the Daka party, which attempted to dethrone him in 1487. The plot was discovered and frustrated, and was followed by a massacre of the Dakans, ordered by the king. But the youth could not stand alone, and was completely dominated by his next minister, Ḥāsīm Bārīd al-Māslīkī, a Turk. In 1490 Mahdī Niẓām al-Mulk, governor of Lūmā and son of Malik Ḥasan Bahārī, proposed to Vissāf 'Adil Kān and Fatḥ Allāh, 'Adil al-Mulk of Bārīz that they should proclaim their independence of the king of the Daka, and both accepted the proposal. In the numerous wars of the reign Mahmūd was no more than a figurehead, being carried into the field by his minister, who issued orders without any pretense of consulting his nominal master's wishes. Mahmūd made more than one attempt to free himself from the control of Ḥāsīm Bārīd al-Māslīkī, and of his son Amīr 'Alī, who succeeded him in 1504, but each attempt resulted only in the tightening of his bonds. In 1512 Sulṭān Kūlt Kūl al-Mulk, who had been appointed governor of Telingūna in 1494, followed the example of the other provincial governors and declared himself independent, and in 1518 Mahmūd died, worn out with debauchery. Four puppets followed him on the throne of Bāhā, and his line was finally extinguished in 1527, when Amīr 'Alī Bārīd al-Māslīkī assumed the royal title in Bāhā.

(T. H. Hay)
MAHMUD, Nisir al-Din, Sultan of Dihli, was the son of Shams al-Din Ruhman by the daughter of Kuth al-Din Aibak [q. v.]. In 1249, when the nobles of Dihli were growing weary of the sloth, incompetence, and tyranny of their uncle, Mahmud, they about 18 years of age, was governor of Bahralie, and hastened secretly to the capital when he learned that the throne was likely to become vacant. On June 10, 1249, Mahmud was deposed and thrown into prison, where he died shortly afterwards, and Mahmud, his uncle, was enthroned in the Green Palace. He was an amiable and peace-loving prince, with a taste for calligraphy, which he displayed in making copies of the Kur'an, but as a ruler he was a mere cipher. He was well served by Ghayth al-Din Balban, whose daughter he married, and who ultimately succeeded him on the throne. Balban restored the royal authority in the Pandja, the Dehli, Mewat, Multan, Nigawa, and northern Malwa, but his enemies had been busy during his absence from court, and on his return attempted to assassinate him. He frustrated this design, but was banished from court. The nobles soon grew weary of the treatment of the emir Ra'if Khan, who had supplanted him, and Balban and other nobles assembled their troops and marched on Dihli. Raif Khan and the king marched against them, but as most of the nobles in the royal camp were in sympathy with Balban, he hesitated to attack the king, serious hostilities were avoided, and the royal army retreated. The nobles at court now prevailed upon the king to dismiss Raif Khan, who was banished, first to Budan, and afterwards to Bahralie, a reconciliation between the king and Balban was effected, and they returned together to Dihli in January, 1255. Raif Khan was soon discovered to be in communication with Kutlug Khan of Bayana, who had secretly married the king's mother, and the emir was captured and put to death. In 1256 Mahmud and Balban marched against Kutlug Khan, who fled, and when he was pursued, in 1257, into Sirmur, again fled and took refuge with Khai Khai Khan, the rebellious governor of Multan and Uch. Balban marched against the rebels, but they evaded him and marched on Dihli. Finding, however, that preparations had been made to receive them, and that Balban was menacing their retreat, they fled, and in 1259 joined an army of Mughuls which was invading the Pandja. It was feared that the Mughuls would attack Dihli, but they retired without crossing the Satlaj. Order was then again restored in the Dehli, and in the following year the Meos of Mewat expiated by a terrible punishment a long series of crimes. Their country was ravaged, and 250 of their principal men were brought to Dihli and put to death with torture. In a second expedition 1,000 of them, men, women, and children were put to the sword. Meanwhile negotiations had been in progress with Hulgit Khan at Taloris, and in 1260 a Mughul envoy reached Dihli and promised, in his master's name, that raids into India should cease. At this point a hiatus of nearly six years occurs in the history of the Mamluks in India, and the next fact which is recorded is that Mahmud died on Feb. 18, 1266, and was succeeded by Balban.

MAHMUD II, Nisir al-Din, was the grandson of Fizur Shah, of the Tughluq dynasty, and was placed on the throne of Dihli on March 8, 1393, on the death of his elder brother Humayun (Sikandar Shah) and was never more than a puppet in the hands of intriguing ministers. The emir Saragar, depatured by him to quell a Hindu rebellion in Awahe, received the title of Sultan al-Shakr, and never returned to Dihli, but established his independence in Jajawan. Another amir, Sarang Khan, became virtually independent in the Pandja, and the minister Sa'dat Khan, resenting his supersession by Mukarram Khan, set up. Mahmud's cousin Nusrat as a rival king within the narrow limits of the kingdom of Dihli. In 1398 Malla, the brother of Sarang Khan, murdered Mukarram Khan and assumed complete control of Mahmud, who confounded on him the title of Ikhbal Khan. Nusrat Shah was then driven into the Dihli, but the kingdom of Dihli was in a state of utter confusion when, in October, 1398, news was received that the Amir Timur [q. v.] had crossed the Indus and taken Multan. He reached Panipat on Dec. 2, and meanwhile the capital had been filled with fugitives, fleeing before him. The resources of the kingdom were so restricted that no adequate preparations could be made to resist him, and Mahmud and Malla were filled with terror; but such troops as could be collected were assembled within the walls, and on Dec. 15, the king and his minister marched forth to meet the invader, who had crossed the Jajawan from his camp at Lum. They were utterly defeated, and fled by night, Mallu to Baran in the Dehli, and Mahmud to Gujjar, and afterwards to Malwa. Timur left Dihli on Jan. 1, 1399, when his work of plunder, devastation, and bloodshed was finished, and Mahmud's rival, Nusrat Shah, occupied the ruins of the capital, but was expelled by Mallu, and driven into Mewat, where he shortly afterwards died. Mallu returned to Dihli in 1400, and in 1401 was rejoin by Mahmud. In 1402 Mallu, carrying Mahmud with him, marched to Kansawal to attack Ithrum Shah of Jajawan, but Mahmud, weary of the domination of Mallu, fled and joined Ithrum, who, however, received him so ill that he again fled, and established himself in Kansawal. Mallu then made a fruitless attempt to recover Gujjar, and returned to Kansawal in order to capture Mahmud, but was baffled by the strength of its defences and returned to Dihli. He attempted to subdue Khair Khan of Multan, but was defeated and slain by him in November, 1405. After his death Daulat Khan Lodt became the virtual ruler of Dihli, and at his invitation Mahmud returned to his capital. The rest of his reign was spent in attempts to re-establish his authority in Samba, Sambhal, and Baran, and to punish Ithrum of Jajawan for his reception of him when he had fled from Mallu; but he was obliged to conclude an ignominious peace with Ithrum, and his success in other directions was neutralized by the insubordination of Khair Khan, who persuaded that Timur had appointed him his vicerey in India, and in 1406 stripped Mahmud of all his possessions beyond the walls of Dihli except the Dehli, Kohat, and

THE ENCYCLOPEDIA OF ISLAM, III.
Sambhal. In 1409 and 1410 Khiār Khān captured Rohtak, Narnaul, three towns to the south of Dīhlā, and Fīrūzābād, and besieged Ṭabārī in his capital, which was only saved by a famine which compelled the invader to retire. In 1413 Mahmūd died, the last of his line, at Kītaḥbāl, after a nominal reign of twenty years.

MAHMŪD II, SHARF-AL-DIN, succeeded his father, Ismail Shah, on the throne of Dīghaṇpur in 1430. In 1443 he obtained permission from Mahommed I of Mūlla to punish Nāṣir Khān, governor of Kālpī, which was a satrapy of Mūlla for breaches of the law and customs of falsan committed by him, but Ṭabārī of Mūlla repented of his compliance, and was broke out between Mūlla and Dīghaṇpur. Hostilities, which were indecisive were terminated by a compromise. In 1452 Mahommed Sharf-al-Dīn, on the invitation of some disaffected nobles, attacked Dīhlā in the absence of Ballāḥī Lodi, but was defeated and compelled to retreat to Dīghaṇpur. The foolish act of aggression served only to enrage Ballāḥī a sense of the danger to Dīhlā of the existence of an independent kingdom in Awadh and in 1457 he marched to attack Mahommed, who, however, died before he could meet him in the field.

MAHMŪD I, SAFI AL-DIN, BAGHARIA, the greatest of the Sultāns of Gujrat, was a younger son of Muḥammad I, Khurram, and was born in 1444. In 1458 the nobles dethroned his nephew, Dāwūd, a vicious and depraved youth, and placed Mahommed on the throne. The boy immediately displayed great courage and resources in the suppression of a serious conspiracy and rebellion at the beginning of his reign, and in 1461/1462 he marched to the assistance of the youthful Nizām Shāh of the Deccan, whose dominions had been invaded by Mahommed I of Mūlla. He compelled the invaders to retire and forestalled a second attempt to invade the Deccan. In 1466/1467 he attacked and destroyed the Ādil Khān of Gīrānī, which had been independent since the capture of the fortress by Mahommed B. Tuglak, Dīhlā in 1348, and reduced him to the position of a vassal. In 1470 he again invaded Gīrānī, and on Dec. 4, captured the Rājā's strongholds and compelled him to accept Isfahān, thus putting an end to the Ādil Khān dynasty, which had reigned in Gīrānī for about 1,000 years. The Rājā became an amir of Gīrānī, and received the title of Khān-i-Dīhlā, and Mahommed founded, near Gīrānī, a new fortress, which he named Muṣafār-Shād. He then invaded Kītaḥbāl, and suppressed a rebellion in that province, carrying its leaders, who were compelled to accept Isfahān, to Muṣafār-Shād as hostages. In 1472 he crossed the Rūmān and marched into Sīmāl, to assist Līmān Nāsir (Nizām al-Dīn) who was beset by rebels. He crushed the rebellion, and after his return marched to Dīghaṇpur, to punish the Rājā. Bhīn, who had plundered a ship belonging to a Muslim merchant, Dāwārī and Bālī Shāhshahīhār, the robber-chief's stronghold, were taken, and a Muslim governor was appointed to manage the small state. Bhīn himself was captured and executed. Mahommed's next expedition was against some Malīhārī pirates who had harassed the coast near Khambhāt (Cambay), and whose depredations were checked by the capture and execution of some of their number. Rājā Pati of Čampānār had long encouraged brigandage in the kingdom of Gujrat, and Mahommed now retaliated by raiding some districts of his state. On his return to Ālmudān al-Muhānādībī discovered a plot to depose him, formed by some of his nobles, who were weary of his ceaseless activity, but the malcontents, who were well aware of the dangers which threatened the kingdom, were brought to their senses by his threat to perform the pilgrimage to Makka, leaving his young son as regent. After restoring order in various districts of his kingdom he marched, in December, 1482, to settle accounts with Čampānār. The fortress fell, after a siege of two years, at the end of 1484 and the Rājā and his Minister, having refused, after five months' imprisonment, to accept Isfahān, were put to death. In 1491 Mahommed was disturbed by acts of piracy and aggression committed against his subjects by Ballāḥī Gilān, a rebel in the Kōlān, and his protests compelled the nobles of the distracted kingdom of the Dīkhān to unite for the purpose of crushing the rebel. In 1505 Mahommed's fleet, under Malik Aḥṣāf al-Dīn, participated with that of Malik Aḥṣāf Nūsārī of Egypt, in the victory over the Portuguese fleet, in which the gallant young Lūreyrūn d'Almeida, son of the victor, was slain, and later in the same year he invaded Khānādāsh and placed on the throne of that kingdom his daughter's son, Aḥsan Khān, whose father descended from the vicing family of Khānādāsh, and who ascended the throne under the title of Adil Khān. In this campaign he was supported by Nizām Shāh of Aḥmadnagar. In 1511 a mission from Sulṭān Isābīl-Safawī of Persia arrived in Gīrānī for the purpose of inviting Mahommed to accept the Shīa faith, but he refused to see the heralds. He had now been ailing for some time, and on Nov. 23, 1511, he died, at the age of sixty-nine (Ramūr) years, after a reign of rather more than fifty-three years. He was a tall, burly man, of commanding appearance, and was, besides being an able administrator, both warlike and chivalrous. His nickname of Bagharia has been variously explained, but it undoubtedly had reference to his capture of the two great fortresses (gārāb) of Gīrānī and Čampānār. His elder brother had died of poison, and strange stories are told of his precautions against a like fate. He is said to have gradually absorbed poisons into his system until he was so impregnated with them that a fly settling on his hand instantly died. Butler refers to this strange prophylactic treatment in the lines:

"The King of Cambay's daily food
Is sap, and balsam, and toad;"

He was also distinguished by his voracious ap-
petite. His daily allowance of food was between twenty and thirty pounds' weight, and before going to sleep, he placed two pouds, or more, of boiled rice on either side of his couch, so that he might find something to eat on whichever side he awoke. When he rose in the morning he swallowed a cup of honey, a cup of butter, and from 100 to 150 baumns.

MAHMUD II. Of GUJRAT, was the sixth son of Muqaffar II, on whose death his eldest son, Sikandar, was raised to the throne, but was assassinated on July 12, 1526. The minister then placed on the throne Mahmud, who was an infant, in order that he might rule in his name, but Bahadur, the second son of Muqaffar, who had been absent at Dibbi and Jaspur, hastened back to secure his birthright, and on July 11, ascended the throne at Ahamadâbâd and marched on Chânpâner, where his infant brother was. He entered the fortress without opposition, and Mahmud was deposed and secretly murdered within the year.

(T. W. HAO)

MAHMUD III. Sâ'Ud-al-Dîn, of GUJRAT, was the son of Latif Khân, third son of Muqaffar III. On the death of Bahadur Shah Muhammad Shah Fârâk of Khânchâkh was offered the crown of Gujrat, but died on his way thither. The choice of the nobles then fell on Mahmud, the heir male, but his cousin, Mahbûr Khân, who had himself expected an offer of the crown of Gujrat, refused to surrender him, until an army from Gujrat compelled him to do so. The prince was escorted back to his country, and on Aug. 8, 1537, was enthroned as Mahmud III, being then only eleven years of age. For the first three or four years of his reign he was a puppet in the hands of powerful ministers, and when he escaped from tutelage proved himself to be weak and inefficient. His attempt, in 1546, to recover Dibbi from the Portuguese, was a miserable failure, brutally avenged by him on the few Portuguese prisoners in his hands. In 1549 he retired to Mehmudâbâd, where he lived in luxurious luxury, ruining his constitution with drugs. On Feb. 15, 1554, he was stabbed, as he lay in a drunken stupor, at the instigation of an attendant named Burhân al-Dîn, who attempted to usurp the throne, but was slain by the nobles. The discovery of an heir was no easy matter, for Mahmud, dreading an heir as a possible competitor, had taken the barbarous precaution of procuring an abortion whenever a woman of his harem became pregnant. The choice of the nobles ultimately fell on a young prince entitled Râjâl al-Malik, the great-grandson of Shâhâr Khân, a younger son of Ahmed I, and he was raised to the throne under the title of Ahmed II.

(T. W. HAO)
Kumbha in the field he failed to take his capital by surprise, and returned to Mândū. In 1468 he marched to Chandī, and his officers captured and destroyed the fortress of Kasahra. On his way back to Mândū he suffered severely from the heat, and on June 1, 1469, he died, at the age of sixty-eight. He was the greatest of the Muslim kings of Málwa, and under him the kingdom reached its greatest extent. The “column of victory” at Citor is said to commemorate Rān Kumbha’s victories over Māhmūd I of Gadjiṣṭ, and Māhmūd I of Málwa, but if so this is more mendacious than most laudatory inscriptions, for the successes of Mewār against Málwa were gained by Sangrama against Māhmūd II, not by Kumbha against Māhmūd I. Māhmūd’s fame had reached distant Egypt, for he received an envoy from the phantom ‘Abbāsid Khālid, who formally recognized him as Sulṭān of Málwa. He was a real Muslim, and restored the use in all public offices of the inconvenient lunar calendar of Islām, and, while he gloried in his successes against the “infidels,” was careful to excuse himself for his attacks — often unjustifiable — on sovereigns of his own faith.

**MAHMŪD II.** *Allā* al-Dīn, Khabādji, of Mālwa, was raised to the throne on May 2, 1511, on the death of his father, Niẓām al-Dīn Khabādji. The early days of his reign were disturbed by rebellions on behalf of his brothers, and of other pretenders, and he was once driven from his capital, and was enabled to return and expel the rebels by the assistance of Mūsā Rāy, with a force of Rādjāpts. The king soon had reason to repent of having accepted their aid, for Mūsā Rāy assumed the place of minister, and the dominion of the Hindus alienated and disgusted all the Muslim nobles of the kingdom. Bihājī Khaṇ, governor of Chandī, openly expressed the cause of a pretender, and Māhmūd, while engaged in correspondence with him, was disturbed by news of a revolt in his capital and of the invasion of his kingdom by Mūṣaffār II of Gadjiṣṭ, but the revolt was suppressed, and the invader was recalled to Gadjiṣṭ by domestic disturbances. After protracted negotiations the pretender fled, and Bihājī Khaṇ received Māhmūd at Chandī and endeavoured, but in vain, to free him from the influence of the Hindus. Māhmūd returned to Mālwa early in 1524 and fell entirely under the control of the Rādjāpts, at whose instance he put to death many of the Muslim nobles of the kingdom. The arrogance of the Hindus at length became intolerable, and in 1527 Māhmūd fled to Gadjiṣṭ and with the aid of Mūṣaffār II, who led an army into Mālwa to restoring his authority, captured Mālwa, and massacred the Rādjāpts who had held it. The rest of the Rādjāpts in the state established themselves on its northern border and transferred their allegiance to Rān Sangrama of Citor. Mūṣaffār retired to Gadjiṣṭ leaving 10,000 horse to assist Māhmūd, and Māhmūd besieged Gāgrawān, held by Hemkaran for Mūsā Rāy. The Rānā marched to its relief, and Māhmūd, turning aside to meet him, suffered a severe defeat, and was wounded and captured. Sangrama received him courteously, but compelled him to surrender his crown jewels. He might now have annexed Mālwa, but, fearing to arouse the hostility of every Muslim ruler in India, made a virtue of necessity, and replaced Māhmūd on his throne. A few years later Māhmūd harboured and encouraged Cānd Khān, brother of Bahādur Shāh of Gadjiṣṭ, and a pretender to his throne. Bahādur invaded Mālwa and besieged Mālwa. Māhmūd’s sloth and negligence infected his army, and on March 17, 1531, Bahādur captured the city, and Māhmūd appeared before him. Mālwa was annexed to Gadjiṣṭ, and Māhmūd and his family were sent towards Cambānepur, to be imprisoned there. On April 12 the camp was attacked by a force of Bihāls and Kollā, and Māhmūd’s guards, fearing a rescue, put him to death. His seven sons were conveyed to Cambānepur, and nothing more is known of their fate.

**MAHMŪD III. ISMĀ‘IL.** [See Ibn Khaṭīb, *Šamāl wa-Šamāl*].

**MAHMŪD III.** Muḥammad b. Maḥkāshā, a Sa’dīn ruler in the Ḥirs (517 = 1121-1131), ascended the throne as a boy of 13, being the eldest of his father’s five sons. To his misfortune, his trusted advisers only troubled about their own interests and made the young Sulṭān take various steps which were fatal to the prosperity of his reign. Anushārān in al-Birūnī mentions no fewer than ten such fatal mistakes; the result was that even in the early years of his reign several ambitious Turkish emirs were in open rebellion while his father’s Great Ḥājjī Alt Bār, who, during the latter’s illness, had had and still retained control of the vast treasures which the latter had hoarded up, dissipated them in a very short time and let the young Sulṭān lead a gay life. Especially dangerous to him were the aṭābegs of his brothers Maḥmūd and Toghārī, who found the opportunity a favourable one to dispose the sulṭānate on behalf of their infant protégés. The result was that in 513 (1119) Sandjār, the Sulṭān’s powerful uncle, was forced to interfere and marched on al-Rāyi (after an attempt to appease him had failed. Māhmūd was then forced to allow matters to come to an open fight but his troops were defeated at Sēwa [q.v.] and nothing was left for him but to go to the victor and accede to the demands made by him. Fortunately Sandjār, whose mother was Māhmūd’s grandmother, was favourably disposed to his nephew and announced himself content to add to his territory a few districts, e.g. al-Rāyi, but otherwise received Māhmūd in a friendly fashion and even gave him one of his daughters in marriage. Thereupon he retired and left Māhmūd without his help to make the best of the difficulties that faced him in the Ḥirs. There were few enough, for the Aṭtabeg of Maḥmūd, whom Ibn al-Ṭāhir calls Aḥyā al-Dīn-i Ḥabīb, in conjunction with the unruly Malik al-Ṭārīb Dhahīs [q.v.] was plotting to proclaim his protégé Sulṭān. The plan failed, however; Aḥyā’s troops were routed at Asadābād (514) and Maḥmūd’s unlucky vizier, the celebrated Arabic poet al-Taghrit [q.v.], was captured and soon afterwards put to death on the pretext
that he was an infidel. The two brothers readily made friends again as Mas'ud was still a mere child; Ayyab was escaped by Mahmud, but lost to Ahsan Khan of Multan which he had previously held. Duhais was preparing the Sultan still further trouble and soon found this opportunity, because Toghir, who, with his Atteghs being meanwhile given the province of Arran as ida could not withstand the Georgians there, who had taken Tiflis in 515 (cf. Brosset, Histoire de la Græce, i. 365; Matthais of Edessa, ch. 320–
323; Ibn al-Farràk in Ibn al-Kalâna, ed. Amer-
droz, p. 205), and came to the 'Irak to seek help from Mahmud. The latter himself took the field against the Georgians without doing much and Toghir, who had now returned to his pro-
vince, soon received a visit there from Duhais, who pretended he had set out to the 'Irak against the caliph al-Mustarshid. As they had no success in this enterprise, they turned their complaints against the Caliph and Mahmud. Sandjar thereupon went to al-Rayy and sent an invitation to Mahmud to come to answer the charges (522 = 1128). Mahmud was received with honours and instructed to restore Duhais to his territory in Hilla while Toghir and Mas'ud who was also with him, went off with Sandjar. Mahmud however did not find the caliph inclined to tolerate Duhais in his neighbourhood, and the Sultan withdrew his claims for a sum of 100,000 dinars and went to Hamadian. There had been trouble between Mahmud and the Caliph before and in 520 (1126) for example there had been open fighting in the streets of Bagdad between the Arabs and the Sultan's Turkish troops. In all these circumstances Mahmoud proved unequal to his task; while he left the business of government to his viziers, among whom al-Sumayram and al-Dargaznt (or al-Aminshadi as Ibn al-Athir always has it) were the most prominent, he spent his time with his hawks and hounds, which, according to Mirkhmir, were 400 in number and wore jewelled collars and coverings embroidered with gold. It became worse when he devoted himself to sensual pleasures and as a result of his sexual excesses fell ill and died at Hamadian at the early age of 27 (Shawwal 15, 525 = Sept. 10, 1131). Nevertheless he was: by no means an insignificant figure; he had a good acquaintance with Arabic and was celebrated in a long panegyric by Asiai-Bajis (q.v.). Ibn al-Athir lauds his gentleness and eulogizes his memory. His viziers held the government of his property. To a question by: what occurred in the article sur, 1585; cf. also Ibn Khallikan, Wafa'jir, Cairo 1899, ii. 510 et seq.

MAHMUD of Ghazna, one of the most famous of Muslim conquerors, was the elder son of Subuktigin and was born in 969 A.H. In 994 Nuh II of Bukhara appointed Sahabuddin of Khurasan, as a reward for assistance received from him, and Sahabuddin appointed as his deputy his son Mahmud, who took Nishapur from the Isma'ilis heretics and made it his capital. On his death in 997 Subuktigin left his throne to his younger son, Isma'il, but Mahmud marched to Ghazna, defeated his brother, and ascended the throne in 999. Begtuzan, an aniet of Mansur II of Bukhara, attempted to depose Mahmud of the government of Khurasan, but failed; and the S-
with much booty and large numbers of captives, to Ghazna.

In 1024 Mâhmdûd's officers subdued Gharadjistân, and he compelled the Khalifâ al-Kâtîr to cede to him those districts of Khurâsân which he had not yet occupied, but the Khalifâ returned a stern refusal to Mâhmdûd's demand for Samarkand, and Mâhmdûd was obliged to apologize for his presumption.

Amendpâl had now died and had been succeeded by his son, Trilokpâpâl, a weak monarch who committed the management of his affairs to his son, Nidar Bîm, or "Bîm the Fearless." Bîm reversed the submissive policy of his grandfather, and in 1015 Mâhmdûd was obliged to invade the Pandjâb in order to keep the road to Hindûstân open. In the spring of 1014 he defeated the Hindû prince in the Margula Pass, captured the fortress of Nandana, and pursued him into Kâshmîr, but was unable to come up with him, and was obliged to return. A second invasion of Kâshmîr was equally unsuccessful; he failed to take Lohkot, and in the spring of 1016 he retired, with heavy loss, from his only unsuccessful campaign in India, losing, on his way, many of his men in the flooded Dîskâm. In the same year he marched to Kâshmîr to avenge the death of his sister's husband, Abu 'l-'Abbâs Ma'mûn, who had been slain by rebels. He crushed the rebellion and appointed one of his own officers, Alînûr, to the government of his new conquest. In the autumn of 1015 he set out on his long meditated expedition into Hindûstân, whither Trilokpâpâl and Nidar Bîm had retired. He crossed the Jumna on December 2 and received the submission of the Râjdâ of Baran, 10,000 of whose subjects accepted Islam. He next defeated Râjdâ Kâltânâ of Mahístân, who to avoid disgrace stabbed his daughter and son, and then himself. He sacked and destroyed the splendid cities of Mathurâ and Bîndûstân and, leaving the greater part of his army there, marched with a picked force, to Kânnawât, defended by seven forts on the Ganges. Its ruler, Râjdâpûla, fled, leaving his capital undefended, the seven forts were plundered in one day, and the city was sacked. Alînûr, further down the Ganges, shared its fate, and Mîddîltân, "the Fort of the Brahmins", was plundered after its defenders had been slain to a man. Râjdâ Când of Shavâra fled, but this city was sacked, and he was overtaken and defeated on January 6, 1019. Mâhmdûd then set out on his return march to Ghazna with a large number of elephants, 3,000,000 dirhâms', much other plunder, and captives so numerous that slaves were to be had for two or three dirhâms' each. On his return he founded at Ghazna his great mosque, the "Pride of Heaven". Râjdâ Nanda of Kâllâmârâ and the Râjdâ of Gwâlâyâr had marched to Kânnawât after Mâhmdûd's retreat, and had punished Râjdâpûla for his cowardly desertion of his capital by putting him to death. They were attempting to form a new confederacy of Hindû princes when Mâhmdûd, in 1019, invaded Hindûstân to frustrate their design. He defeated Trilokpâpâl on the Rângânga and the latter fled, leaving Râjdâ Nanda who was marching to meet him with a great army, the sight of which even Mâhmdûd quailed. Nanda, however, was smitten with a sudden panic and fled in the night, leaving his camp to be plundered by Mâhmdûd, who obtained, with much other booty, 580 elephants, in addition to 270 already taken from Trilokpâpâl. Then, fearing lest his retreat through the Pandjâb should be cut off, he returned to Ghazna. In 1021 he resolved to provide himself with a base for future raids, and having invaded Swîr and Bâdjâw and compelled the inhabitants to accept Islam he attacked, but again failed to capture, the fortress of Lohkot, and, raising the siege, marched into the Pandjâb. Trilokpâpâl was dead, and Nidar Bîm fled and took refuge with the Râjdâ of Adîmar, where he died in 1026. Mâhmdûd was thus able to annex the Pandjâb, and brought it under his own sway. In 1022 he again invaded Hindûstân and attacked the forresses of Gwâlâyâr and Kâllâmârâ, but left their rulers in possession of them on their promising to pay tribute. On his return to Ghazna he mustered his army, and in 1023 invaded Transoxiana to establish his authority there. The smaller chiefs hastened to pay him homage, the ruler of Samarkand was brought before him in chains and was sent as a prisoner to Kâllâmârâ, as were also the chiefs of the Saldjâk tribe, 4,000 families of which Mâhmdûd, though he was apprehensive of their power, transported into Khurâsân. In 1025 Mâhmdûd set out on the most famous of his raids into India, the expedition to Somnâth. The insolent boats of the Brâhmans had annoyed him, but it was the reputed wealth of the temple that prompted the enterprise. He crossed the Indian desert after elaborate preparations, plundered both Adîmar and Anhîlâvâra, and reached Somnâth in the middle of January, 1026. Within two days his troops had stormed the ramparts and entered the city, but the temple was most strongly defended, and while he was attacking it he learned that the Hindû princes of Gudjarât, who had fled before his arrival, had rallied to the defence of the idol, and were before the city. Leaving a force to continue the siege of the temple, he marched against them, and, after a battle in which he narrowly escaped defeat, put them to flight. Their defeat sealed the fate of the temple, which was almost immediately captured. Mâhmdûd plundered it of its vast treasures and broke up its idol, a huge lingâm. From Somnâth he marched to punish Fârâm Dô, Râjdâ of Anhîlâvâra, for the attempt to relieve the temple, but the Râjdâ fled, leaving his stronghold and its treasures to the conqueror. It is said that Mâhmdûd was so captivated by the beauty and climate of Gu- djârât that he was with difficulty persuaded by his officers from making Anhîlâvâra his capital, and leaving Ghazna to his son, Ma'sûd. On his return march through the Sind desert his army suffered severely, and after crossing the desert was harassed by the Dâtâs, but succeeded in reaching Ghazna with its spoils. In 1027 Mâhmdûd undertook his last expedition into India, in order to punish these Dâtâs. He collected a flotilla of boats at Multân, and, owing partly to their superior construction, defeated the Dâtâs in a naval battle on the Indus, and carried off their families, which they had removed for safety to islands in the river.

The remainder of Mâhmdûd's life was devoted to the western provinces of his empire. He wrested Tus, Irrâl and Ishlân from the Buwâhîs, invested his son Ma'sûd with the government of the newly conquered territory, and employed himself in establishing order and security on the caravan routes throughout his wide dominions, and in excoriating the heretics whom the Shî'ah Buwâhîs had tolerated. In 1029 he returned from Rây to
Balkh, and marched in the spring to Ghazna, where, on April 30, 1050, he died, at the age of sixty-three, worn out with the labours of forty years. 

Mahmud was far from being the zealous champion of the faith depicted by Muslim historians. Occasionally he encouraged, and even compelled Hindus and others to accept Islam, but the propagation of the faith was never the primary object of any of his campaigns. Temples were attacked rather because they contained treasure than because they contained idols, and he did not hesitate to employ bodies of unconquered Hindus, even against his brethren in the faith. He has been described as misrule but he loved money chiefly as the source of power. He adorned Ghazna with noble buildings and his court was in that age the chief resort of poets and men of learning, and was adorned by al-Usbat, al-Bririni, Unnari, Asadi, Asjadji, Minchiri, Firdaws, and many other poets and men of letters. His scrougy treatment of Firdawsi is to be attributed rather to the malice of a personal enemy than to the meanness of the king, and the poet’s mode of resenting it placed him beyond the pale of forgiveness. Mahmud was one of the great figures in Islamic history, and though his warlike career left him no leisure for the acquisition of learning he knew how to appreciate and reward literary merit in others.

MAHMUD GAWĀN, TIMĀG AL-DIN, Khwādja, was born in A.D. 1405, of a family which had long held high offices in the small principality of Gillán, and is said to have taken the name of Gāwān, by which he was afterwards known in India, from Kawān, his birthplace. He received a good education and as a young man made a pilgrimage to Mecca. While he was there his family fell into disgrace, so that he could not safely return home. Refusing offers of employment in other parts of Persia he became a merchant, and in 1455 sailed from the Persian Gulf for India, and landed at the port of Dāhk. Thence he proceeded to Būtar, the capital of the Bahmanī kings, and was well received by ‘Alī al-Din Ahmād II, who was then reigning. He received the command of 1,000 horse and was sent to quell the rebellion of Dājal Khān in Telingān. His conspicuous success secured his position as one of the leading nobles of the kingdom, and after the death of Ahmād II in 1457 he received from his son and successor, Humayun, the title of Malāk al-Fadījīr ("Chief of the Merchants"), and was highly esteemed. During Humayun’s short reign he was employed in suppressing rebellion and restoring order in Telingān, and on the king’s death, in 1461, was associated by his widow with himself and Khwādja Dājal the Turk in a council of regency. The foreign enemies of the kingdom took advantage of the childhood of the new king, Nīṣān Shāh, and Mahmud Gāwān bore an honourable part in repelling the invasion of the Rādīj of Ura, who was forced to pay a large indemnity. Mahmud Khādji I of Mīlwa next invaded the Dākan, defeated the army of Nīṣān Shāh, and annexed the existence of the state. Mahmud Gāwān succeeded in enlisting the aid of Mahmud I, Begurānī, of Gujūrānd, and with his help defeated and expelled the invader. Nīṣān Shāh died in 1465, and the kingdom was governed for his younger brother, who succeeded him as Mūhammad III, by the same council of regency, but the arrogance and ambition of Khwādja Dājal the Turk so aroused the suspicions of the queen-mother that she ordered her young son to put him to death. She shortly afterwards retired from public life, leaving Mahmud Gāwān, now entitled Khwādja Dājal, sole regent. In 1469 he was sent to subdue the Konkan, and to suppress the pirates of that region, and, in a series of campaigns extending over three years, conquered the country and captured Goa, then one of the principal ports of Vīdayanagara. On his return to Būtar he was received with great honour and his position as first noble of the kingdom was assured. In 1472 he brought the seige of Begurānī to a successful conclusion, but the chief service which he rendered to the Bahmanī kingdom was the reform of its administration. It had originally been divided into four great provinces, Gultarga, Daulatabd, Būtar, and Telingān, to which the name of farāf was given, and the power of the farāfar, or provincial governors, was almost absolute. He collected the revenue; raised, paid and commanded the army; and appointed all officials, his responsibility to the king being limited to maintaining order, keeping the people contented, remitting to the capital the quota of revenue due, and joining the king, when summoned, with the contingent of troops which he was bound to supply. Even in the early days of the kingdom rebellions raised by provincial governors had not been unknown, but the system had worked well on the whole so long as the limits of the kingdom were comparatively narrow, and the kings were energetic. But the kingdom now stretched from sea to sea, the provinces were unwieldy and the defects and dangers of the old system were apparent to all. Mahmud Gāwān divided each of the original farāfs into two, so that their number became eight. Būtar was divided into the two farāfs of Gārī and Māhr; Daulatabd into Daulatabd and Dīnnur; Gultarga into Gultarga and Būjīpur; and Telingān into Warangal and Rādījīmahendri. The powers of the farāfūr were at the same time curtailed. These reforms were resented by all the old farāfūr, and by none more than by Malik Ḥasan Bahri, Nīṣān al-Mulk, farāfar of the great province of Telingān, who was posted to the new faraj of Rādījīmahendri, and found his power, his influence, and his emoluments reduced by more than half. He was the leader of the Dakanī party and Mahmud, though he had done all in his power to end the strife between the Dakanis and the Foreigners, was a foreigner, and was regarded by all as the leader of the Foreign party. In 1487, the royal camp being then in Telingān, Ḥasan Bahri took advantage of the absence of Mahmud’s chief supporter, Yūsuf ‘Abīl Khān the Turk, who had been sent on an expedition into the eastern provinces of the kingdom of Vīdayanagara, to compass the downfall and death of Mahmud. The minister's
confidential secretary was induced, by misrepresentation, to affix his master’s seal to a folded paper. The paper was blank, and the conspirators wrote, above the seal, a treasonable letter to the Râjid of Urta, inviting him to invade the kingdom. The letter was shown to the king when he was drunk, and he at once summoned Mahmûd, who, though warned by his friends that mischief was afoot, insisted on obeying the order. He was asked by the king what was the punishment of treason and unhesitatingly replied, “Death by the sword.” He was then confronted with the letter, and though he declared it to be a forgery the king paid no heed to him, but bade the executioner do his office, and withdrew. Mahmûd knelt down and repeated the symbol of his faith, and the executioner, Bâzawâr by name, struck off his head. An order for the plundering of his camp was then issued, and his followers were dispersed. The king was much disappointed by the examination of his late minister’s affairs. He had, throughout his official life continued his mercantile transactions, and lived frugally on his profits. His great official emoluments were expended on the troops and establishments which he maintained and on public works, and the balance was disbursed in alms, in the king’s name as well as in his own. Mahmûd III understood, too late, the value of the servant whom he had so summarily put to death, and his remorse was bitter. Mahmûd was a great statesman and public benefactor. Learned himself, he was a munificent patron of learning, and built at Bûr the magnificent college, the ruins of which are still to be seen. The only private property which he left at his death was a splendid library. He is one of the foremost figures in the political history of India, and his death was the cause of the fall of the dynasty which he had served so well, for it destroyed the confidence of the nobles in the town, and hastened the advent of the day when the provincial governors proclaimed their independence.

(T. W. Ham) MAHMûD PASHA, grand vizier in the reign of the Ottoman Sultan Muhammed II, often called Welt Muhammed Pasha. He was born in Alâqja Hijar (Kruhlevatî) in Serbia; of Christian parents; according to Chalcedonians, his father was Greek and his mother Serbian. Taken in his youth to Adrianople, he was brought up at the court of Murad II, and began his public career on the occasion of the accession of Muhammed II in 1451. Soon afterwards he became Bîlegheb of Rûm; according to the historian Râjamûz Zâde Melimûn (Kûrük Nîyânî) he had been also Sa’âdeh and qâ’î (q.v.). As Bîlegheb, he took part in the capture of Constantinople. After this event he was appointed grand vizier in 1453; the office had been empty since the execution of Cendereh Klâîs Pasha. As grand vizier, Mahmûd Pasha frequently accompanied the Sultan on his campaigns but in 1456–1458 he was appointed to conduct the operations against the Serbs, while the Sultan conquered the Moreas; in 1459 Muhammed himself advanced against Serbia which was completely subdued; during this war Mahmûd Pasha’s brother was the leader of the Tanzîphi party in Serbia. In 1460 and 1461 the grand vizier took part in the expedition against Sînope and Trebizond as commander of the fleet while Muhammed led the army by land. The capture of Trebizond was mainly due to Mahmûd Pasha; he was related to a high dignitary of the court there so that some Greek authors talk of treachery (Fellmerayer, Geschichte des Kaiserthums Trapezunt, p. 279). In 1462, Mahmûd accompanied the Sultan against the Wlovod of Wallachia, Wlad Dracul and in the following year as commander of the fleet he was sent to conquer Lesbos and forced the Duke of Lesbos to capitulate. In the same year he drove the Venetians out of the isthmus of Corinth. In the Bosnian campaign of 1464, Mahmûd prepared the way for the Sultan’s advance by taking the principal towns of the country. In the war that followed with Mathias, king of Hungary, Mahmûd Pasha stood the latter to raise the siege of Zrenjanik. In 1466 he aided the Sultan in the campaign which was to put an end to the power of the Karamanli and defeated the Karamanli Iâbâg Beg near Lâranda. The latter himself escaped and the fact combined with the too humane treatment which the governor wished to apply to the people of Konya and Lâranda and the intrigues of the second vizier Rûm Muhammed Pasha, brought the Sultan to dismiss him on the return march to Constantinople. Mahmûd Pasha then governed the sandjak of Gallipoli for some time. In 1472 he again became grand vizier. The Sultan wished in that year to send him against Uzun Hasan but was persuaded by Mahmûd to send Iâbâg Pasha to his place. In the following year he accompanied the Sultan against the Ak-Koyunlu, who were finally routed after the Ottomans themselves had suffered the defeat of Beg Bahaz. In the same year Mahmûd was again dismissed; the reason alleged was a lack of zeal in the pursuit of the fugitives. He then retired to the village of Khâs Koy near Adrianople. Next year he came to the capital on the occasion of the funeral of Prince Mustafà; this opportunity was taken to calumniate him to the Sultan on account of the intimacy which had existed between Mustafà and Mahmûd Pasha. This was sufficient to get him imprisoned in the castle of Yedi Kule and executed a few days later in Rabî’I, 879 (July–Aug. 1474).

Mahmûd Pasha was one of the most popular grand viziers. His name is still preserved in the mosque which he built at Stambul in 868 (1463–64) on a site originally occupied by a church; in the mosque is the türbe of the founder. He also erected a madrasa, a mevlevî, a mekteb, a wall and a hanimám. There is a legendary story entitled Mennâbi-ı Muhammed Pasha, in which his unjust execution is specially emphasised (printed in Fr. Dietterici, Chronomathes Ottomanae, Berlin 1854); the historian Şadr al-Din in his Tâfri al-Tarhâbî (I. 557) also devotes a chapter to the Baba-i Muhammed Pasha. Mahmûd Pasha was the patron of a number of men of letters and scholars, who dedicated their works to him. He was himself a poet but it is uncertain whether he wrote under the 'Farâhî of 'Adali or 'Adil. There is a Divan of 'Adil (printed Constantinople 1508) which is generally attributed to Sultan Bayazid II but Gibb
MAHMUD PASHA — MAHR

(Hist. Ott. Poetry, ii. 25 ff.) thinks it should be attributed to Mahmud Pasha.

**MAHAIKER. [See Khân.]**

**MAHR (a.).** Hebrew Maleh, Syriac Maleh, "bridal gift," originally "purchase-money," synonymous with *qadja* which properly means "friendship," then "present," a gift given voluntarily and not as a result of a contract, is in Muslim law the gift which the bridegroom has to give the bride when the contract of marriage is made and which becomes the property of the wife.

1. Among the pagan Arabs the mahr was an essential condition for a legal marriage and only when a mahr had been given did a proper legal relationship arise. A marriage without a mahr was regarded as sham and looked upon in the same light as concubine. In the romance of Antur the Arab women, who are being forced to marry without a mahr, indignantly reject such a marriage as a disgrace. Victors alone married the daughters of the conquered without giving them a mahr.

In the pre-Islamic period, the mahr was handed over to the war, i.e., the father, or brother or relative in whose guardianship (wa'il) the girl was. Here the original character of the marriage by purchase is more apparent. In earlier times the bride received none of the mahr. What was usually given was the dowry at the betrothal. The *qadja,* the mahr, being the purchase price of the bride, is given to the war.

But in the period shortly before Muhammad, the mahr, or at least a part of it, seems already to have been given to the woman. According to the Qur'an, this is already the prevailing custom. By this amalgamation of mahr and *qadja* the original significance of the mahr as the purchase price was weakened and became quite lost in the natural course of events. There can be no doubt that the mahr was originally the purchase price. But the transaction of purchasing in course of long development had become a mere form. The remains, however, as they survived in the law of marriage in Islam, still bear clear traces of a former marriage by purchase.

2. Muhammad took over the old Arab patriarchal ceremony of marriage as it stood and developed it in several points. The Qur'an no longer contains the conception of the purchase of the wife and the mahr as the price, but the mahr is in a way a reward, a legitimate compensation which the woman has to claim in all cases. The Qur'an thus demands a bridal gift for a legal marriage: "And give those whom you have enjoyed their reward and a bridalgift" (lit. *farhâl* "allotment of property*"; Sûra, iv. 28) and again: "And give the women their dowries voluntarily" (Sûra, iv. 3). Cf. also Sûra, iv. 29, 38; v. 7; ix. 10.

The bridal gift is the property of the wife; it therefore remains her own if the marriage is dissolved. "And if ye wish to exchange one wife for another and have given one a talent, take nothing of it back." Even if the man divorces the wife before he has cohabited with her he must leave half the mahr with her (Sûra, ii. 239—238).

Down into the Muslim period the wife was considered after the death of the husband as part of his estate; the heir simply continued the marriage of the deceased. Such levirate marriages are found in the Old Testament also. Muhammad abolished this custom, which still remained in his time, by Sûra, iv. 23: "O ye, who are believers, it is not permitted to you to inherit women against their will.

3. There was an ample store of traditions about the mahr and these paved the way for the theories laid down by the jurists in the fiqh-books. From all the traditions, it is clear that the mahr was an essential part of the contract of marriage. According to a tradition in Bukhârî the mahr is an essential condition for the legality of the marriage: "every marriage without mahr is null and void!"

Even if this tradition, so brief and pointed to the point, is not genuine, a number of traditions point to the fact that the mahr was necessary for the marriage, even if it only consisted of some trifling thing. Thus in Ibn Mâdhja and Bukhârî traditions are given, according to which the Prophet permitted marriage with only a pair of shoes as mahr and approved of a poor man, who did not even possess an iron ring, giving his wife instruction in the Qur'an as mahr.

A few hadiths endeavour to show that the mahr must be neither too high nor too low. From the traditions we also learn what mahr was given in particular cases in the Prophet's time: for example, the bridal gift of 'Abd al-Rahmân b. 'Abd Allâh was an ounce of gold, that of Abû Hurairâ an iron ring and a dish, that of Shahab b. Sa'd an iron ring.

In the hadiths we again frequently find the Qur'anic regulation that in a divorce after cohabitation the woman has the right to the whole mahr.

4. According to Muslim fiqh-books, marriage is a contract ( *'a'dhâ* ) made between the bridegroom and the *wa'il* of the bride. An essential element in it is the mahr or *qadja,* which the bridegroom binds himself to give to the bride. The marriage is null without a mahr. The jurists themselves are not quite agreed as to the nature of the mahr. Some regard it practically as purchase-money (e.g. Khalil: "the mahr is like the purchase-money") or as an equivalent ( *'inâwâr* ) for the possession of the woman and the right over her, so that it is like the price paid in a contract of sale, while other jurists see in the mahr a symbol, a mark of honour or a proper legal security of property for the woman.

All the things can be given as mahr that are things ( *mâl* ) in the legal sense and therefore possible to deal in, that is can be the object of an agreement. The mahr may also - but opinions differ on the point - consist in a pledge to do something or in doing something, e.g. instructing the woman in the Qur'an or allowing her to make the pilgrimage. The whole of the mahr can either be given at or shortly after the marriage or it may be paid in instalments. When the latter is the case it is recommended to give the woman a half or two-thirds before cohabitation and the rest afterwards. The woman may refuse to allow consumption of the marriage before a part is given.

Two kinds of mahr are distinguished;
a. Mahr muqaddas, "definite mahr", the amount of which is exactly laid down in the wedding contract.

b. Mahr 'al-mishk in which the amount is not exactly laid down, but the bridegroom gives a bridal gift befitting the wealth, family and qualities of the bride. This mahr 'al-mishk is also applied in all cases in which nothing definite about the mahr was agreed upon in the contract.

The ownership of the property of the wife and she has full right to dispose of it as she likes. In case of any dispute afterwards as to whether certain things belong to the mahr or not, the man is put upon oath.

The Shâr'a lays down no maximum or minimum for the amount of the mahr; but limitations were introduced by the various law-schools; the Hanafis and Shâ'is insist upon 10 dirhems as a minimum and the Malikis three dirhems. The difference in the amount fixed depends on the economic conditions in the different countries where the mahâlûs in question prevail.

If the man pronounces a divorce, the mahr must be paid in every case, if cohabitation has taken place, the bridegroom may withdraw from the marriage before it is consummated; in this case he is bound to give the woman half the mahr.

MAHRA, a land on the southeast coast of Arabia: on the Indian Ocean between Ha'dramût, the coast of which is inhabited by the Kâiti' (Ge'bi't), and Zafir; the Arabs however and modern geographers include Zafir itself, formerly the town only and now the country, the old frankiscene region [see %Afër], in Mahra, so that Mahra may be said to be the country between Ha'dramût and Zafir (cf. al-hâqîq. E. G. A., l. 130, 146; Hârîrî, Hârîrî, ii. 177; al-Mahâsinî, ed., iii. 57; Vâlq, Ma'dhûm, iv. 7001; al-Idrisî, ed. Jaubert, Paris 1836, i. 48; Ibn Khaddîn [in Kay, Yemen, London 1892, p. 152]). This connotation of Mahra seems to have been already known to the Greeks of the fourth century B.C.: Theophrastus, Hist. Plant. iv. 4, 2, numbers among the lands of Arabia which yield spices, along with Saba', Ha'dramût and Katabân, a fourth, Ma'dhûm (var. Mâhûm). A satisfactory identification of this land, which would also explain the name has not been made. Of the various attempts to explain it, given in the article SARA' in Pauli-Wissowa, R e a l e n c y c l. der heut. Altertumswiss., coll. 1331 sqq. (cf. the article SARA', iv. p. 64) that which suggests Ma'dhûm is a corruption of Ma'dhûm (Maranah) which Strabo, vi. 768 gives with the three South Arabian kingdoms above mentioned, following Eratothenes — these two authors represent one original source; Eratothenes and Strabo are two different sources — is certainly wrong. The identification of MÂA with Mahra p. 99, 98, 263, 266, without however any attempt at proving it and also adopted by Fr. Hommel, Ethnologie und Geographie des alt. Orientis, Munich 1926 (L. v. Müller, Handbuch der Altertumswissenschaft, Sect. iii., Pt. i., vol. 1) p. 137, is worthy of attention. It was naturally to be expected that the botanist Theophrastus, whose duty it was to give as full a list as possible of lands in Arabia producing aromatic plants, should mention the real land of frankincense, Zafir or in a wider sense Mahra, including Zafir, On the other hand, it is not to be denied that the mention in Theophrastus of a Mamali or Mall, which is quite unknown, after three well-known names, is remarkable, as it must of course be an important country, fit to be compared with Mecca or Medina; Simple for this reason E. Glaser's various attempts to identify it (Schriften der Geschichte und Geogr. Arabiens, ii., Berlin 1890, p. 3, 35 sqq., 40, 137, 153 sqq., 217), not one of which is tenable (cf. Researches, s. v. Saba', col. 1335 and here SARA', iv. p. 54), may be discarded. The passage in Theophrastus has been wrongly interpreted as mentioning Mamali only as the home of the cinnamon plant (see SARA', iv. p. 54 and the literature there given to which may be now added: Hommel, Ethnologie [= Grundzüge], p. 517, note 2). Although Mahra is not suggested without certain inherent probability, the question still arises how has it come to be called Mamali or Mall, which must remain more or less a puzzle. As the first two letters in Mahra and Mall are the same, it may be supposed that there is a corruption in the third letter of Mall. The name seems to conceal the Greek transcription of Mahra, which in the form MAPÎ (from MAPA), was corrupted to MAÂL, because it was of course unintelligible to the Greek copyists, or it might have been altered by a learned editor with geminatio of the first syllable to MÂMAÂL, especially as this form might seem to him to be superficially supported by the Sama'ân naqas in Poitiers, iv. 7, 5. A further corroborating factor is that Theophrastus' description of the hilly country, where the Athetares grows, with the is Âi'nâl and kai 'ârîw and neînâs, from which rivers pour down in the plain and which was visible to sailors from the coast, agrees very well with the description of the xa'd neigâfâwi càd iwaî and neîfâse of the land of Zafir (p. 96) in the Persicus. Merv, Babylon, § 29 (cf. the 9âr 1înâl and peîkâwâna and ') as well as § 32, very probably the Kark mountains), and also recalls Carter's statement that nowhere else in South Arabia is there so much running water as in the frankincense country. This undeniable agreement is not affected by the fact that, according to Theophrastus, the frankincense country mentioned by him was in possession of the Sabaens. The fact that he mentions this land as a fourth with Saba', Ha'dramût and Katabân and at the same time says that the Sabaens were lords (zâbî) of this frankincense country, suggests that the country which was quite a considerable distance from their original home, had passed to Saba' by direct conquest or automatically with the occupation of the
whole territory of some former independent power. This may have been either its ancient rival Ka'tabān, which, although still an independent kingdom, no longer exercised sovereign rights over the frankincense country and about two centuries later lost its independence to Saba', or the ancient kingdom of Ḥadramūt, which with the frankincense country was in the time of Jahm a part of the Sabaean kingdom, already ruled by the Himyars (according to Piby, Nat. Hist., xii. 52 sq.; see Saba') and to which, certainly in the time of Periplus, i.e. in the Himyar period of the early centuries A.D., long after the beginning of the dissolution of Sabaean rule, the frankincense country belonged, but it may however have done so before Saba' became a great power. Hommel (op. cit., p. 140 and notably p. 653) quite a close ethnic connection between the Ḥadramīt and the Minasaeans and he definitely says that the Ḥadramīt Minasaeans were those who took possession of the frankincense land, which geographically also appears most natural. No convincing argument can be brought against the evidence of Theophrastus that in his time or in that of his authority, perhaps Androsthenes (cf. Ralemenes, s.v. Saba', col. 1306), the frankincense country was not independent, but belonged to Saba', so that the latter was already a great power, which possessed the hegemony of South Arabia and numbered its weaker neighbours among its feudatories. The frankincense land only became independent early in the Christian era. That the campaigns of the Sabaean extended considerably to the east may be deduced from the Sīrab inscription (Glaser, N°. 1000) (cf. Hommel, op. cit., p. 658 sq.). On the unjustified alteration in the text (Ṣama) in Theophrastus, see Saba', 4, 6 (to the literature there quoted may now be added Hommel, op. cit., p. 516 sq. and 653 sq., in addn. to 138)). To support the assumption that the Ka'talānians occupied the frankincense land, it is not necessary to presume Gebban as a later name of Ka'talan (in allusion to the Gebbanūt in Piby, vi. 153; cf. MA'IN; on Gebbanūt, see Gebbanūt, No. 4). The eponym Yamaomūn is the longer title of the south Arabian kings of the last epoch mentioned, according to Hommel in Handbuch der arabischen Altertumskunde, ed. by D. Nielsen. Copenhagen–Paris–Leipzig 1927, p. 96, note 5, "perhaps the frankincense coast as the "south land" of Ḥadramāt?"; it might well be interpreted as a general name of the southern coastsland, at a later date still included in Yemān, in contrast to the lands of Saba', Dhī Rādīn and Ḥadramāt preceding it in the title.

Sprenger's remark, Das Leben und die Lehre des Muhammad, Berlin 1865, iii. 437: "The Mahrites were called Sachalites by the Greeks", is misleading; the land around the Sachalit Gulf is in the conception of the author of the Periplus and of Ptolemy not only Mahra, but also the land lying east of and especially the part of al-Shiby south of it. The wider sense, lying west of it, the land of the Ka'atīt (cf. the article KABIKATI in Ralemenes), the regio tartēna in Piby, xii. 52 (vi. 101) is probably to be understood as Zafīr in the narrower sense but may include Mahra to which alone Glaser refers it (Die Abhassier in Arabien and Afrika, Munich 1895, p. 125; see at the beginning). The Ḥamīl in Herofotos, ii. 73, in the story of the phoenix is practically a reference to Mahra (Hommel, op. cit., p. 138) although it is not mentioned by name. On the Ḥamīl in Stephanus, see below.

The inscriptions which, according to Pliny, Nat. Hist., vi. 150, are inscribed on stone pillars on an island off the South Arabian coast (cf. the article RHENNE in Ralemenes), cannot, as Ritter for example (Erklärt, Vol. viii., Sect. 1, xii., Berlin 1846, p. 290) thought, be attributed to the Mahri who settled in the neighbourhood of Cané but were probably Minasaeans (or Nabataeans). The position of the emporium of Kāšī which according to the Periplus, § 27 and Pliny, vi. 104 belonged to the frankincense country and is also mentioned by Ptolemy, vi. 7, 10 cannot be definitely ascertained. Recently several scholars, following Glaser, op. cit., p. 175; C. Landberg, Arabic, iv., Leyden 1897, p. 75 sq. and Etudes sur les dialectes de l'Arabe Méridional, i. (Hadjamūnt), Leyden 1901, p. 196 and earlier writers (see the list in Ralemenes, s.v. Saba', col. 1330), have argued in expressed the view that this port is probably to be considered as the place of Sihl al-Ghurahā (Nielsen in Handbuch, op. cit., p. 8) while Sprenger, Geographie, p. 83sq. placed it at Bāl-Hāf. Since Sprenger, nothing new has been produced in favour of the old view and against his localisation. In favour of the latter is the description in the Periplus, § 27 according to which two uninhabited islands, the "Owbar Ṣarīqe ("Bird Island") and Ṭībaṣārī were 120 stadii distant from Kane. These, according to Sprenger, are the islands of "Hilani and Gibus, also called al-Sikka" (to be written: Hillaniya and Kansāh also called Sakha; see Landberg, Arabic, iv. 66). Their mention makes certain the reference to Bāl-Hāf as the opposite point on the coast from which they are 110 and 150 stadii distant respectively, but not to Ḥiṣn al-Ghurahā which, according to Carter, is only a mile from Hillaniya. Landberg himself tells us that the island of Ḥanūs seems never to have been inhabited. The distances from the same adduced by Glaser from Ptolemy, which besides varying in the manuscripts, naturally yield nothing really convincing in favour of Ḥiṣn al-Ghurahā (particularly of Ra's al-ʿAṣīda, the equivalent of Cape Kane, west of Kane), according to Glaser, op. cit., p. 216; but this promontory of al-ʿĀṣīda is at Bāl-Hāf); these measurements can equally well be made to fit Bāl-Hāf. H. v. Maltzan, Rasse nach Schiffahreiten, Brunswick 1875, p. 225 sqq. who could not yet have known of Sprenger's view, had already called attention to the Bāl-Hāf (he transcribes it Cane) occurring in the (third) smaller inscription of Ḥiṣn al-Ghurahā (a re-production in Landberg, Arabic, iv., Pl. ix.), and connected it with "Cane Emporium"; J. H. Nordmann, Z. f. M. G., xxxix. (1885), 333 likewise explained it as Kašī, the harbour of the citadel of al-Ghurahā. Even if we readily grant that the uncertain word in the text of the inscription, most recently and probably definitively published and translated by B. Makser in W. Z. K. M., xxxiv. (1927), p. 72, really reproduces the name Kašī, this does not prove, as Sprenger, op. cit., p. 83 has pointed out, that the ancient seaport lay on the present rocky point of Ḥiṣn al-Ghurahā. It must also be remembered that the names of many Arabian harbours have in course of time been transferred to other places in the vicinity, e.g. Zaḥīr [q.v., No. 4] and Mināḥ. Landberg's
objection (Arabic, iv. 76) that the Periplus, if Kane had been Bil-Haf, would not have said (§ 29) that after Kane came another gulf running far inland, the χαλκοτρύπες, but would have mentioned the harbour of BI-Alli the coast of it, is not a cogent one. The Periplus gives a list of the most important gulf of South Arabia, and the comparatively small bay of BI-Alli might well be overlooked behind the broad Socotra gulf which runs far inland, especially as the use of the term χαλκοτρύπες is a fairly elastic one (cf. the article SOMARITANS in REA, iv., and the list of the places on the coast in the Periplus is not as a rule scientifically complete and exact but sometimes even gives wrong names (e.g. MARGA), to say nothing of the fact that in many places on the South Arabian coast, the harborage conditions have changed since ancient times. Landberg himself (op. cit., p. 65) observes that the promontory of Hār al-Ghārūn must have had a different appearance in earlier times. M. Hartmann, also, who had previously overlooked (in his article DERR AUSLÄNDER) the later statement of SOERENSEN, l., Berlin 1909, p. 175, 371 declared for the older views, and later in the very same work, p. 418, 614 that he had now adopted Sprenger's opinion. The δαρμοὶ in the inscription is still not sufficient ground for the conclusion that the identification of Kane with Bil-Haf should be rejected in opposition to Sprenger, who himself appreciated the force of this evidence. The form of the name used by Sprenger, Bil-Hafl (BIL-HAF), is incorrect however (as also in Glaser's RI al-Haf; cf. Landberg, Iṣfahān, p. 193); δαρμοὶ is equivalent to δαρμός. But Sprenger rightly recognized that in this name there is a reminiscence of a name of glory in the history of Ka'b and of Basra of the Mahra (al- Ḥikri, i. 19; Tafsir al-Arusi, iii. 531; see below).

The Arab geographers had no accurate knowledge of Mahra, not of Ḥadramawt; modern explorers have found out much more about these regions. Al-Hamdāni, Sufa Bīrūnī al-Árab (ed. D. H. Müller, Leyden 1884), p. 45 mentions al-Árāb — which Landberg Ḥadramawt, p. 125, wishes to restore to al-Asfahān from manuscript preferences — as the capital of Mahra, which, according to Glaser, Messimer, p. 87 stretches to the district lying roughly between Damhūt and Ras Duqát. All, almost, in the centre of the modern coast region of Mahra. (p. 53) he says, so Ibn al-Muqaffar and others after him, that the Mahra people also inhabited Soqotra (on the conversion to Christianity of the mixed population of Soqotra, see Yāqūt, Muḥṣīn, iii. 142; al-Muqaffar, Muqaffiy, iv. 369, etc., further particularly in the article Soqotra).

On p. 31, he talks of the Mahra tribes and their fighting and on p. 36 of the road from Ḥadramawt to Mahra and tells us about the tomb of the Prophet Iblā. This sanctuary on the frontier between Ḥadramawt and Mahra is still held in particular veneration and is much visited by the inhabitants of these two lands (a text from Ḥadramawt showing this is given in Landberg, Ḥadramawt, i. and the geographers Aḥmad Mahra in the Yemen, e.g. Yāqūt, Muḥṣīn, p. 504). On p. 76 he refers to the Mahra in Yāqūt, Muḥṣīn, iv. 700; who in this, his main reference, also repeats the view that Mahra is the name of a tribe and that the correct form is Mahra (al-Ḥadhr Mahra in Mahra is mentioned on iv. 697). It is sometimes moreover accurately defined as "in extreme (furthest) Yemen", e.g. Yāqūt, Muḥṣīn, i. 280; ii. 510 (= Muḥṣīn, p. 160); iii. 366; iv. 345, 495; Muḥṣīn, p. 415. The Arabs speak of a Najdī in the land of the Mahra (Yāqūt, Muḥṣīn, i. 220; iii. 681; iv. 345, 495; 697; Muḥṣīn, p. 394; 415; cf. al-Muqaffar, al-Ṭahārī, ed. do Goeje, l. 1908). This is also the Najdī (or Naẓīḥ) which Carter also mentions as a district in which the frankincense especially flourishes, the highland country about two days' journey north of the coast within the latitude which Carter has also defined, although too narrowly (cf. SAKR). The Mahra are also said to be inhabitants of the coastland of al-Ṣiḥr (q.v.), for example by al-Maṣ'ūdī, i. 333 and Yāqūt, Muḥṣīn, iv. 387 and we find the land of Mahra is called al-Ṣiḥr (al-Ṭasāḥhī, op. cit., p. 25 = Ibn Hawāḳal, op. cit., p. 32; cf. al-Ṭarīqī, l. 48; ibn Khālid, ed. Kay, op. cit., p. 132; cf. al-Ḥambalī, Ṣūfī, p. 51 and al-Ḫakīm on al-Ṣiḥr; the statement in Rommel, Auhulf dr Achatian, Evidenzen, Göttlingen, 1902, p. 52, op. cit., is obscure). It is the latter general use of the name is applied to the coast not only of Mahraland proper but of the land of Ṣaft also, that is of the frankincense country generally, i.e. the "frankincense coast" which is identified by many modern writers with the Mahra country but at the same time includes the part of the Ḥadramawt which adjoins on the west (cf. Ibn Khālid, op. cit., p. 132), i.e. in general the name of the shores of the Gulf of the Moon, finally in a still wider sense, the name of the whole coast between 'Aden and Ṭimān.

Al-Ṭasāḥhī, op. cit., p. 35, and almost in the same words, Ibn Hawāḳal, op. cit., p. 32, also al-Maṣ'ūdī, l. 333 op. cit., al-Ṭarīqī, l. 48, 150; Abu 'l-Fadl (see Rommel, op. cit., p. 331, 38); ibn Khālid (loc. cit.) describes Mahra as a desert in which there are no palm and no agriculture and the inhabitants therefore are not acquainted with bread. Carter, like these Arab writers, also emphasizes the contrast between the frankincense region and the dreary desert west and east of it and more recent travellers like Bent agree with him. The only possessions of the inhabitants, according to these authorities, are goats and very fine camels, particularly renowned for their swiftness, mentioned also by al-Ḥamdāni, op. cit., p. 100, 101; Ibn Ḥiṣām, Sirā, ed. Wittingfeld, p. 963 and the posts as well as the Liṣn al-Árāb, vii. 36; ζίνιμ, i. 455 and Tafsir al-Árāb (Mahra); the Liṣn quotes three plural forms: Makkariyya, Makhariyya, Makharīya; on the first see Howell, Grammar, i. 997, 1000. The camel which Muhammad chose for himself out of the booty after the battle of Badr had been purchased in Mahra; his governor in the Yemen procured Mahra camels for the Caliph Sulaymān in 'Abd al-Malik (714—717) (al-Kawawm, Adwāt, ed. Wittingfeld, ii. 41), Ibn Hawāḳal (ibid.); ibn Khālid, op. cit.; cf. al-Ṭarīqī, l. 48) adds that the Mahra live on mint, milk and its products; and fish (cf. al-Muqaddasi, op. cit., p. 100) and that they also feed their camels and goats on fish. Yāqūt, Muḥṣīn, iv. 700, records a note that the Mahra camels do not take their name from the land but from the ancestor of the Mahra's, Haidān (cf. al-Lugwārī, also ζίνιμ, Καμήλ and Tafsir, loc. cit., and Rommel, op. cit., p. 33). According to Landberg, Ḥadramawt, p. 806, and others the Mahra riding camels have for long had a bad reputation, as they are really not swift; the best of this kind are said to be those of the Banī
In 1837 he obtained some information about conditions along this coast through his intercourse in Ujida with merchants from Hadramout or Mahra (in Journ. Asiat. Sc. Paris, vol. v. 307 sqq., vol. xi. 329 sqq.; he gave an account of Ghizin, the capital of Mahra and the Sulān whose authority did not extend beyond the walls of the city. His description of the boundaries of the country was incorrect. Much more detailed and accurate were the topographical data collected by Capt. S. B. Haines, who was appointed in 1854 to make an astronomical and nautical survey of the South Arabian coast from Bir al-Mandālī westwards (as far as Rās al-Hadd). In his Memoir of the South and East Coast of Arabia (in J. R. Geog. Soc. London 1845, xvii. 104 sqq.), he describes the southern boundary of Mahra, the Wādī Massīl, which is rich in water and well tilled by the Mahra and contains many villages lying among palm groves. He then gives his short notes on the town of Sulān east of the Wādī and corroborates Fresnel's account of Ghizin about which he is the first to give fuller details. C. Niebuhr, Beschreibung von Arabien, Copenhagen 1772, p. 257, had already mentioned "Keschin" and the independent shākat there, who was also lord of Sulān; he also gives a plan of the harbour from a drawing executed by an Englishman, whom he had met in Bombay (PL xxvii). Haines observes, like later writers, that Ghizin is only a wretched little village of at most 200-400 inhabitants, which consists mainly of reed-huts and has only a few stone houses and that the trade there is very slight. He also gives some details of the Mahra people and its tribal divisions, its customs and dress, and in confirmation of Fresnel's observations their attitude to Islam, which only the chief, professes, while the people are indifferent to the Kāfīr and are not even able to perform the daily salāts. He ends by giving the promontories and villages on the coast east of Sulān as far as the eastern frontier of Mahra towards Sulān. The English officers cooperating in this survey of the coast visited a few points on it, which were previously confined to the Gulf of Ghizin because their duty was really confined to surveying the coast west of Mahra. Valuable information about the Mahra is given in II. J. Cattell's Notes on the Mahra Tribe of the Southern Arabs, with a Vocabulary of their Language, in J. N. A. S., Bombay Branch, July 1847, vol. ii., pp. 339 sqq. Malzahn combined ethnological research with his study of the Mahra language (in the introduction of his edition of Abdīh von Wedel's Reise in Hadramaut, Brunswick 1873 [the preface is dated 1870], p. 18 sqq., and 28 sqq., and in his article cited below) but regarding the country itself which he never entered, he knows no more than the English naval officers. The reports in Ritter, op. cit., xii. 625 sqq. and 635 sqq. he says, are sufficiently accurate according to his own information. The constellations east of Wàdī Massīl to Rās al-Hadd, i.e. Mahra, Zafār and "Oman he however calls the great "terra incognita of Oceanic Arabians". "The names Mahra and Gār (also written Gara) by which the two countries on the coast are distinguished, he described as "not clearly defined" (op. cit., p. 28). We now know that these are the Mahra and Kāfīr (the hill-people of Zafār) and the language of the latter is Karwāt (Grawat) or Shāwāt, in modern times also called Ḥakīlī or Shehrah [cf. Zafār]. Malzahn recognised...
that the two peoples are fundamentally different in language, modes of life, and religion from the people of Central Arabia.

Glauner, *Ethnol.,* p. 26, wrongly identifies *Masquna* in Sirrah, xvi, 768 (quoting Eustathius) with Mahra (Keelkentz, s.v. *Sabi*), 1334-49. On p. 20 he gives the land of *Hajramot* (after the fall of the *Abyssinian-Arab kingdom*) too great an extent (as far as Mirbat). On his note that the *Tabaskas* of Pyle are the hill-people of all Mahra cf. *Keelkentz, s.v. ISKAPITAL.* — As a result of the enquiries made by him on his travels in Arabia, he states (ibid., p. 80) that there are three distinct divisions of the Mahra tribes: the eastern is called Sheikh or Jaz and inhabitants, according to his information, the coast from *Ras Nisr* (55° 17' East Long.; from Ge.) according to another authority from the island of Majara, to *Ras Darbat* *(All)* (53° 3' East Long.), the western of which is the name Mahra is generally applied, stretches from Ras Darbat to *All* to Shi(it) while the third group inhabits *Soqotra* (cf. above on *Tbs al-Madjjar*). — L. Hirsch gives not a little new and valuable information about the people of the southwestern coast. His account of Mahra is based on his ten days' stay (1893) in Gihain (or Gaihan) surnamed Ghaban or Kishin; Hirsch writes sometimes (p. 48, 49, 51, 50) Gichin and sometimes Keschink, like W. Hein and others (p. 2 etc.), he gives "Kaschen" in the Index as the Mahri pronunciation which is also given by Jahn (see below). Of the wretched little capital of the country, he tells us, practically agreeing with Heinrich before him and Hein and Bent after him, that it consists almost entirely of isolated mud-houses in a ramshackle condition and a few ragged tents and reed-huts which, being scattered aimlessly over a wide area, leave irregular wide open spaces between them. Even the palace of the Sultan whose rule over Gihain and Shi(it) and other places on the coast is quite nominal, as he cannot do nothing without the approval of his Beduins, is a broken down mud building; there is said to be only one building in the town that is kept clean, the house of another Sultan. According to Hein, the most imposing of the mud-houses, which are not built according to any system, is that occupied by the reigning Sultan's bodyguard. There is nothing like a regular market or regulated trade there. Even the most rudimentary necessities of life are acquired by barter and money is unknown. From the government buildings a little mosque may be seen. While Meltman, corroborating Frenzel and Haines, pointed out (Wieders's *Rasism* p. 29), that the Mahra have long been distinguished as heretics from the great majority of the orthodox and indeed can hardly be called Muslims at all, Hirsch says that at least in Gihain and Shi(it), the Mahra are no less attached to Islam than any other Arabs; he saw them regularly performing their salat. This contradiction may perhaps be explained by the observation already made by Haines on the same question. According to Hirsch the ruling Sultans of Shi(it) are part Arab and part Mahra's. In any case the attitude to Islam of Bedouins living north of the coast territory is quite superficial. The Sultan of Gihain belongs to a dynasty which has also a kind of suzerainity over Soqotra. The Mahra coast, like Soqotra, is under British suzerainty. Hirsch (p. 76 sq.) and on his map gives the names of several places on the coast of Gihain. The

Bent (Southern Arabia, London 1890, p. 285) notes the striking contrast between the sandy plain of Gihain, which he did not succeed in reaching, and the fertile stretch of the coast of Zafar. Shortly before his arrival in Zafar (in the winter of 1894-1895) the sultan reigning in al-Hafa had been fighting with the Mahra tribes. The town of Rakhvütt, west of Raisat, has a little fort to defend it from the Mahra. Bent gives a more detailed account of the Mahra who live in Soqotra [s.v.]

The statement in A. Jahn (Südostafriken, *Expedition der Vierten Orientalischen Gesellschaft, ill. Rep.* Die Mehr-Sprache in Südarabien), p. 1: *"The Mahri is the language of the South Arabian coast between Hajramot and Zafar which is called *Al jedną* by the Arabs*" — is misleading. Hajramot lies roughly in the centre of the Mahra coast in 50° 39' East Long., N.E. of the capital Gihain. — W. Hein, who was sent out by the Vienna Academy to continue the work of collecting specimens of the language begun by the South Arabian expedition, arrived in Gihain with his wife in 1902. During his stay of 66 days, during which his work was much impeded as he was interned most of the time, he collected, among other information, statistical and topographical data for the adjacent parts of the coast and also for the interior (see his article, *Ein Beitrag zur Statistik Südarabien,* in the *M. Geogr. Ges.,* Vienna 1903, p. 219 sqq.). In D. H. Müller's *Prefix to vol. ix. of the South Arabian Expedition,* introductory remarks to W. Hein's record of his journey are given (p. viii. sqq.). According to him Gihain is the name of the whole stretch of country along the coast from Rds Shrin to Ras Derja for a breadth of 5 to 15 miles. About 2 miles to the north of the coast a ridge runs parallel to it. Immediately on the coast lies the *Allaria* fields of the district of Magholt, behind it, the centre Gihain, the district of Rikhît, in which the Sultan rule, east is the most important district Yemnit, west of Rikhit: Selâla, the western boundary of which is the Wadi Ghahin. Further inland lies Darth, where prominent Sultans have their homes. Hein clears up many statements by Hirsch and gives further topographical details about the surroundings of the capital. Gihain has an area of about 50 square miles. Hein estimated the permanent population at 2,386; Hirsch put that of the capital and immediate neighbourhood at about 500.

From the results of exploration so far, it appears that the country of Mahra stretches from Wadi Masalé eastwards to Rds Darbat. "Ali i.e. from 53° 12' to 53° 3' East Long., and between 16° and 17° 30' N. Lat. The Mahra rule the lower course of the main wadi which runs through Hajramot. No European has yet penetrated into the interior of the country, their presumed original home; it was however equally unknown to the Arab geographers.

In the coast district of al-Shîr (Mahra to Ombs) old South Arabian dialects are still spoken, which differ essentially from Arabic and indeed from Semitic in general. The Mahra as a rule speak very little Arabic. Al-Fihr, *cf.* p. 225: Hilî Haqal, *cf.* p. 32; al-Ibrîsî, 41, 250 who identifies it with the old Himyari language, *cf.* Shi(it) [s.v. *Soqotra*], Abû 'I-Fîdî (see Rommel, *cf.* p. 33) and others describe it as unintelligible to Arabic. Al-Handanî also (Sifs,
is called Shajrāt") Hakifī is the name given by Glaser (Śīrāz, ii, p. 95) to the inhabitants of Maḥra whose tribal name in the form Ekhkīl, Fresnel took for the name of the language spoken there and thus introduced it into European philological literature. Landberg's opinion (Arabica, v, Leyden 1898, p. 153) that the name Ekhkīl is "toute à fait juste à côté de la vraie forme Hak[ī]-li", is contradicted by Hirsch's testimony (ep. cit., p. 32; from Śēhāt) that the name Ekhkīl applied by European scholars to Meḥrī is taken there and simply means *barbaric, unintelligible*. Hommel records (ep. cit., p. 153) that Glaser had interesting specimens of the Kaṭt dialect and of Meḥrī and Sāḥqāt; but these have not been published.

Glaser (cf. Śīrāz, ii, p. 20, 96, 187, 240, 503, Aṣbaḥsīn, p. 24, and Hommel, Ethnologie, p. 12, 148, 159 sqq.) further developed these ideas of Maṭrān on the South Arabian-Ethiopic group of languages. According to the latter, the Ethiopic alphabet came from the Axum inscriptions and that of the later literature in the Ge'ez language from a variety of the alphabet of the South Arabian inscriptions, once common in the Maḥra country and the frankincense land in general was the ancestor of the Semitic, Amharic and Ambätī. Against this view, that the name of the latter is a plural of Maḥrī, is sufficient to quote the form Ambrāhī (Hommel, ep. cit., p. 152, N°. 182). There is no reason to doubt contacts between Meḥrī and Ethiopic (Hommel, p. 153). That in ancient times members of the people called Ḥabagḥat in the South Arabian inscriptions (cf. Glaser, Śīrāz, i, p. 25, 27 and Aṣbaḥsīn, p. 28) were settled in Arabia suggested by the mention of the Aḥasmat in Stephanus Byzantinus v.s. from Urmiya's Arabica (mere vēs Σαβανών Χάραμπατ, Aḥasmat) and the Aḥesma in Ptolemy, vi, 7, 11 (in Zafar, q.v.). From the first passage, Glaser, Aṣbaḥsīn, p. 88 has concluded that the Aḥasmat lived east of Ḥadramōt, while in Śīrāz, i, p. 26 he had previously supposed that by the Maḥra was understood the whole coast from Ḥadramōt to Maḥra and islands lying off it: his further identification, which however had been suggested by his predecessors, of the Aḥasmat with the Abyssinians (cf. Sahātīche Domkhdulter by J. H. Moedtmann and D. H. Müller, Vienna 1883, p. 40, where attention is called to the Abahṣhām of the inscriptions) is however worthy of attention. C. Conti Rossini in his article Saggi Habbariti (R. R. A., Vol. xvi, Ser. 5, 1906, p. 39–59) has however shown that the old home of the Ḥabagḥat in the South Arabian and Axumite inscriptions was in the southwest of Arabia and on the plains along the coast west of Sāḥbū, which however has been proved to be Ḥadramōt by Latham and Zaibī. In the Aḥasmat of Urmiya, Rossini rightly sees only a prehistoric people of this coast and military settlement. Glaser wondered (Śīrāz, i, p. 27) that at once identified the people as a people mentioned in the Monumentum Aedalimum (cf. D. H. Müller, Geographische Domkhdulter aus Abyssiniens, Definitionen, Abh. Wiener, dritte, p. 5, 7 347) with the Maḥra and the people of the islands off the coast, which cannot at all be considered proved. In any case one cannot draw any deductions from the spread of Meḥrī regarding the extent of an old Ḥabagḥat kingdom (with Glaser, Śīrāz, p. 179) nor assume that as late as 900 A.D. the kings of Ḥabagḥat.
were established, in the land of Maha (Hommel, Ethnologit, p. 151).

D. H. Müller and his collaborators were the first to collect and investigate texts in the Maha language in a systematic and comprehensive fashion. In Vol. I of the Sybarisische Expedition, Vienna 1902, Die Mehr- und Sogzor-Sprache (I) he published Biblical texts, stories, poems and proverbs, which he collected for the most part on the Syrian steamer placed at the disposal of the expedition from the months of native, who had been taken of the Steamer 'Adam' and Sozorzi. For Maha particularly, he had a single authority, the same name as Jehu had. In the third volume of the same collection appeared Die Mehr- Sprache in Sozorzi by D. H. Jahn; texts and glossary, Vienna 1902. On these two works cf. the brief review by Glaser, Zwei Wiener Publikationen über den babylonisch-persischen Dialekt in Sybaris, Berichte der Münchener Allgemeine Zeitung, 1902, No. 186 and 187 of 15th and 18th August, and the very thorough and expert criticism by Landberg, Die Mehr- und Sozorzi-Sprache in Sybaris, ... von A. Jahn und D. H. Müller, herausgegeben von Landberg, 1902, Vol. II, ed. by D. H. Müller, Sozorzi-Texte, Wien 1905; forms Vol. vii. of the collection).

The already mentioned traveller W. Hein had in 1902 in Gzagh with the assistance of various natives collected Mahri and Urartian texts. He died in 1903 before he was able to put his material into its final form; D. H. Müller edited and published it in 1904, vol. ix. of the collection (Mehr- und Urartian-Texte, Vienna 1909). Some of these texts are also included in vol. vii. of Mehr-Texte (II) by D. H. Müller, Vienna 1907 and supplied with Shoyarti and Sozorzi parallels.

M. Bittner's grammatical studies in Maha are full of matter and excellent in method (see bibl.). The modern South Arabian dialects in spite of some features in common with Sabean cannot be explained as daughter-languages and the last surviving relics of the South Arabian language which is found in the Shafeen and Musan inscriptions (Jahn, op. cit. p. 1; see also sozorzi.) In them, especially Mahri and Sozorzi, we can at most recognize with Hommel, op. cit. p. 152 a daughter language of south Arabian dialects formerly spoken there (in Mahra-land and on Sozorzi), a pronunciation to which Maltait had already come very near. On the other hand, Glaser went too far when he described Mahri and Sozorzi as remains of the oldest 'Parthian' Arabic (Die Wahlheim und Sozorzi, Berichte der Münchener Allgemeine Zeitung, 1899, No. 170 and 171 of May 27 and 29) as descendants of the old language of Hubaysh from which Ethiopic and Amhara are also said to come (see Hommel, op. cit. p. 153, note 4 and 4 in Nishan's Handbuch, p. 91). According to Volkers (Z. d. xii. 223) the South Arabian dialects go back to the time of the settlement from 'Om, the immigrant Ass, not long before the coming of Islam, had occupied Mahra and introduced their language by their dialect. So early as in 1901, D. M. and his collaborators described a mixed people, Glaser (Skizze, p. 188 and 96) also speaks of the influence of Shafeen and north-eastern peoples on the Maha language, but he wrongly applies to Parthian and Indian elements 'the notable corruption of the Arabic language in the district of Mahra Thas'.

Hypothesis is in any case sufficient to help to explain the similarity of Ománi to the neighbouring dialect of Assab. As regards Maha, the possibility of older and deeper causes for its fundamental divergence from Arabic must be taken into consideration. That the foundations for the modern South Arabian dialects were laid long before the coming of Islam is not improbable. The Mahra language, as has already been suggested, be the remains of an original population, which was driven into the inhospitable south from more habitable territory by later immigrations of Arab tribes. Even now, as Glaser, Skizze, p. 187 tells us, the whole area in which Mahri is spoken is becoming more and more Arabic because no foreign people is now predominant in these regions, but traders who are mainly Arab. The cultural level of the Mahri is very low. They have never played a part of any note in history.

AL-MÁṬÍDÁ (¼), the Table, title of the fifth Sira of the Kur'an.

along with al-Theʿalibī’s Sīr al-Adāb fī Maḏzārī ʿUṯmān al-ʿArabī, Teherān n.d.; s. Wejers, Orientalia, i. 368 nqg.; two anonymous commentaries thereon Leyden, Nq. cvii., cvii. (s. Wejers, op. cit., i. 371 nqg.); a synopsis prepared by his son Ābd Allāh b. Saʿdī (f. 539 = 1144; s. Suyūṭī, Bugyāt, p. 254) in the order of al-Djawhartī’s Ṣahābah entitled al-Azīm fī ʿal-Azīm is perhaps in Leyden, Nq. cvii. Besides a grammar Nushāt al-Tarīq fī Ihm al-Ṣarf (Brit. Mus., Or. 5904; pr. Stambul 1299), a syntax with Persian notes al-Farābī: Nqīf al-Tarīq, with anonymous commentary on the verses Leyden, clxii. (also Paris, Schœfer, Nq. 6066), and minor grammatical treatises (Leyden, Nq. clxviii., Paris, Nq. 7900), he wrote a critique of al-Djawhartī’s Ṣahābah, mainly based on al-Azhartī’s (f. 370 = 980) Takhālīf al-Lughā, entitled Kaid al-Ahind al-Min al-Īrānī, Berlin, Ahlwardt, Nq. 6942.

The first inclination (al-Mail al-ṣawwād) is an arc of the circle which goes through the two poles of the equator and one degree (point) of the ecliptic, namely the arc which lies between this point and the equator. This circle is perpendicular to the equator. The second inclination (al-Mail al-dīrās) is an arc of the circle, which goes through the two poles of the ecliptic and a point of the equator, namely the arc which lies between this point and the equator. This circle is perpendicular to the ecliptic.

In the figure let $a$ be the ecliptic, $a$ the equator, $b$ be perpendicular to $a$, $c$ be perpendicular to $a$, then $b$ is the first and $c$ the second inclination. For the calculation it is important that we should have a right angle in each of the two spherical triangles, $a$ $b$ $c$ and $a$ $b$ $d$. The first inclination is also called Mail al-falak muʿaddī al-mahār, inclination towards the equator.

Of special importance is the obliquity of the ecliptic, i.e. the inclination of the plane of the ecliptic to the equator; it is equal to the first inclination in the solstitial points. It is called Mālik falak al-dawwāb, inclination of the ecliptic, al-Mālik al-dawwāb, the greatest inclination, al-Mail al-baʿdah, or al-Mail al-kullah, the whole inclination. To distinguish it, the inclination of any degree is called al-Mail al-dīrās, the degree-inclination.

If it is a question not of points on the ecliptic but of some star, the arc corresponding to the first inclination is called $\mu \delta a$, "interval" that corresponding to the second $\alpha \delta$, "width". We speak in the first case quite generally of declination, in the second of latitude.

The obliquity of the ecliptic is man of the fundamental magnitudes of the solar system. It was therefore continually being calculated anew and almost always so as to obtain the altitudes of culmination $a_1$ and $a_2$ of the sun at the summer and winter solstices. The sin is at these times at the same distance from the equator, north or south, in the one case and south in the other. The obliquity of the ecliptic is the $a_1 - a_2 = n$. It should be mentioned that Muḥammad b. Ṣaḥḥālī (c. 875) claims to ascertain the magnitude from three different points (O. Schirmer, op. cit., p. 32).

The first method was that used by Hipparchus, Ptolemy and Eratosthenes, using the most varied instruments, the two rings, the quadrant, and the armillary spheres. In the Muslim period these observations were continued with larger and larger instruments and account taken of the fact that the sun does not always enter the solstices in question by day but may do so at night, that the heavens may be obscured at the time etc. From observations made before and after the time in question the value has to be obtained by interpolations. This is how al-Khujandī, for example, worked (on the instruments used, cf. e.g. E. Wiedemann and Th. W. Jauwoll, Astronomische Schriften über sin von ihm vorgelegten Beobachtungsinstrument, Acta orientalia, v. 1926, p. 81-167). The values ascertained have been calculated by O. Schirmer (O. Schirmer, Studien zur Astronomie der Araber, S. B. P. M. S. Erl., livi., 1926, p. 30-90). From the measurements, it was found that the obliquity of the ecliptic decreases in course of time, i.e. that the plain of the ecliptic approaches the plain of the equator. A conception of the views of Muslim scholars on this question has been given by O. Schirmer (op. cit.).

Further expressions used in this connection are al-kaff al-māli, the inclined horizontal; it means any horizontal, except that of the equator, i.e. the horizontal inclined towards the horizontal of the equator. Kaff al-māli is an expression which lies perpendicular to the equator on the globe of the earth either north or south. Falak māli is an expression which lies parallel to the equator on the globe of the earth either north or south. Falak māli is an expression which lies parallel to the equator on the globe of the earth either north or south. Falak māli is an expression which lies parallel to the equator on the globe of the earth either north or south.

MAIMANA, situated at 36° N. and 64° 45'E., was formerly known as al-Yahdīdīn, al-Yahdīdīn (Yāḥūt also calls it Yahūdān al-Kneṣa), but the name was changed to Maimana, "the auspicious town," for the sake of good omens. It is at present the capital of the little province of Almar in Afgānistan on the trade route between Herāt and Balkh. Afgānistān includes the western Khānates of Sar-i-pul, Shahrābād, Andkhūl and Maimana, sometimes classed together as the Čahār Wilayāt. Dost Muhammad took this territory from Būkhārā in the year 1855; the sovereignty remained in dispute between Kābul and Būkhārā, till it was settled in favour of Kābul by the Anglo-Russian agreement of 1873.

The low spurs and offshoots of the Band-i-Turkistān range subside gently into the Oxus plains and this favoured part of Afghanistan is
rich in agricultural possibilities. Until Maimuna was visited by Professor Vambery in 1863, but one European, Captain Stirling, had set foot within it. According to Vambery, the place consisted of some fifteen hundred mud huts and a dilapidated brick mosque. Its inhabitants are Uzbeks with a sprinkling of Tadjiks, Heratis, Jews, Hindus and Afghans. Trade is now considerable and Maimuna is renowned for its carpets and other stuffs made partly of wool and partly of camel's hair. It traffics with Persia and Bagdad in raisins, aniseed and pistachio nuts. Horses are good, plentiful and cheap.

(R. E. WHITNEY)

Maimuna, the last wife that Muhammad married. She was the daughter of al-Shir't, chief of the Haxzin tribe of Shem and a sister-in-law of 'Abbas. After she had divorced her first husband, a Tashkent, and her second, the Kuriqet Aht Rukn, had died, she lived as a widow in Mecca where the Prophet weeped for her, primarily no doubt for political reasons on the 'uma' asked him in the year 7. He wish to marry her in Mecca was refused by the Meccans in order not to prolong his stay there; the marriage therefore took place in Sarif, a village north of Mecca. Her brother-in-law 'Abbas acted as her guardian at the ceremony. The question whether the Prophet on this occasion was still in the 'ibda was met with a much disputed and variegated answered question. The bridal gift is said to have been 500 dinars. Maimuna survived the other wives of the Prophet and died in 67 (681) in Sarif, where she is said to have been buried on the spot where she was married.

Maimuna. [See Ibn Maimun.]

Maimun, the name of a district in southern Iraq.

The origin and significance of this name, which fell into disuse in the late middle ages, is unknown. There is no certain trace of it in the cuneiform inscriptions; for the Babylonian Misg, which Hommel (Hethomys. and Geogr. des alt. Orientes, Munich 1926, p. 261, 263) identifies with it is as little worthy of serious consideration as the Old Testament Misuw' (NEBT, Gen. x. 30) which Biblical exegists frequently quote. Maimun first appears in the form Misuw in Strabo in the first century A.D. Ptolemy gives Maimunu as one of the names for the innermost part of the land of the Persian Gulf. The word is certainly not Greek; the meaning "middle land," the land between two rivers, may be dismissed as a fanciful etymology. The territory of Mesene is in the cuneiform inscriptions the region of the southern Khas estates, especially the most southerly Bit-Yakin; at the same time we find in them the term the sea-land (matt-tamid) as almost identical with Bit-Yakin; the part of Mesene between the Tigris and Khâzastân was in the Babylonian period the home of the nomadic Aramaic tribe of Gambul; cf. Streck, Asirumepul, Leipzig 1916, iii. 778, 783, 796-97.

In classical literature Mesene was usually absolutely synonymous with Charrakene. Mesene or Charrakene appears in the second century A.D. (after ca. 129) as a small independent kingdom founded by a certain Herus, the last of whom our knowledge of whom is practically limited to his name. After an existence of three and a half centuries Ardashîr I put an end to this kingdom shortly after his accession, between 224 and 227 A.D. for Arab sources for this event, see Noldeke, Gesh. ii. Arab. und Perser zur Zeit der Sassaniden, Leyden 1879, p. 15 (Tubari, i. 818). In the strict sense of the word, Charrakene is only the delta of the Euphrates and Tigris before the junction of the two streams, the land on the north was Mesene, we have no information about the eastern and western frontiers of Charrakene. Perhaps, as Weisbach suggests (see Bibl.), Mesene was only later conquered by the rulers of Charrakene and its name transferred to this southern district. The Talmud knows Mesene as Misuw (and Miswâ), Syriac literature as Mâyshân. Among the Persians we have Maysan and the Armenians Masian; cf. the Persian Schandar, op. cit., p. 11. The Arabs took the word over as Masfân; but we occasionally also find Masfân (e.g. Tabari, iii. 870, 8). The old name Mesene is perhaps concealed in that of the little town of Masfân, which, according to the Arab sources, was near Bâzra and was celebrated as the birthplace of the Masfân.
As in the case of Mesene-Charakene, we have no exact information about the medinaal Arab Masiun, which would enable us to define exactly the area and boundaries of the district. According to Yagut, lv. 714 and Kaswin, p. 316, Masiun is an extensive district with numerous villages and palm groves between Basra and Wasit, and was taken over by the Arabs (q.v.) and was called Sabgha-i Bahamun or "the Tigris district"; the name Furrat-Basra is also found. It was divided into four divisions (faslugu, q.v.) namely, Bahman Ardagh, Masiun, Dastimaisun and Abas-Kubah; according to Kudama (R.G.A., vi. 236, 24), these four divisions of the Tigris district later passed into the administrative district of Basra. All four faslugu are to be located on the east side of the Tigris. Bahman Ardaghi, the capital of the district of the same name, lay on the left or south bank of the Tigris, opposite Ubulla on the west or south side of the river (the latter roughly on the site of the modern Ashahih, the port of modern Basra). The second division, Masiun, in the narrow sense, must have been that in which stood the capital of the whole district of the same name. Al-Mahjar however usually figures as such in the Arabic sources; it may be supposed that this was the successor of an older town called Masiun. The locality of al-Majdar cannot be exactly fixed (see below); it lies on the east bank of the Tigris, about thirty miles (as the crow flies) north of Kurna. Dastimaisun also is to be sought east of the Tigris, in the region of al-Majdar, probably south or south-east of it. As to the fourth division, Abas-Kubah, a name, which Marquart, op. cit., p. 47 and Hersfeld, id., xi. 160 would emend to Eshana Kahuhi (Kubahd), relying on a passage of al-Idjahabani (Zi'r-i-Qashq, ed. Gottwaldt, p. 57), this also must be placed east of the Tigris not too far from al-Majdar. A reference in Kudama (p. 235, 24) agrees very well with this, according to which the four divisions of the land of Masiun lay east of the Tigris.

Even under the Abbasids there was a separate Nustorian ecclesiastical province of Massûnian which was again divided into four subdivisions, the bishoprics of Perâl de Massûnian, Karkûh de Massûnian, Bith Raima and Nehar Gâl (Gur); cf. especially Sachau, op. cit., p. 48 sqq. Marquart, op. cit., assumed it as certain that these four dioceses must correspond to the four political divisions of the district of Masiun. This view in itself probable and first found by Sachau, p. 49 as worthy of consideration is untenable, as Schaefer, op. cit., p. 29 sqq. has shown. Perâl de Massûnian is certainly identical with Bahman; but the second bishopric Karkûh de Massûnian does not correspond to the massuhi of Masiun or Massûn but it is to be located much farther south in the district of the modern Muhammadda. Bith Raima very probably lay not on the east but on the west bank of the Tigris at some distance N.E. of Basra, so that it does not even come into consideration as the equivalent of one of the four Arab divisions. Nehar Gâl (Gur) may be equated to Naheh Zobar of the Arab geographers (see Sachau, op. cit., p. 51; Schaefer, op. cit., p. 37). This is to be sought towards Khâlasian somewhere in the neighbourhood of Hwawan (see below). Whether the fourth massuhi Abas-Kubah corresponds to it cannot be settled.

If then the capitals of all four divisions of the Tigris district are to be located on the east bank of the river, the lands on the west bank, also included in the sawadd must have belonged to the same district as did the whole delta down to the Persian Gulf; for there is no district to which only the doubtful western and southern divisions might be allotted. In the Sasanian period, according to the Turfan fragments (cf. Schaefer, op. cit., p. 25), the term Masiun was usual for the whole of southern Iraq (or Mesûnian) and this remained the case under the Arabs. But according to the Muslim sources, it does not seem to have been limited to the south proper but to have extended a considerable distance northwards. The quotations above given from Yagut and Kaswin show that Masiun was considered to stretch northwards toWasit (q.v. and vol. i., p. 676, 2a, art. KASSAR); indeed it is most probable that the extreme N.E. frontier of the area known as Masiun lay in the vicinity of the modern Kât al-Amâra (q.v.); the Mahjar of the Arab geographers; cf. 969 sp.; Streck, Babyloniens, ii. 310 sqq.). The district of Kasser also stretched up to here and seems in the main to have included lands east of the Tigris (cf. KASSAR). To avoid misunderstandings it should here be expressly mentioned that for the Arab period, of the present course of the Tigris only the Shatul-ar-Arab and the stretches as far as al-Malja came into question; in those days the Tigris bed corresponded with that of the Nahar-al-Gharrât (Shatul-al-Malja) which was the western boundary of the district of Masiun. For further details of the hydrography of Masiun, see below. Masiun is occasionally used as synonymous with Kassar; cf. Schaefer, op. cit., p. 14, 17 sq. Masiun probably stretched to the east as far as the alluvial land of the sawadd, up to the frontier of Khâlasian in places beyond the present frontier of Iraq. At least Hwawan (the modern Hwawan [q.v.]) which is now on Persian soil, is expressly mentioned as a town belonging to Masiun.

The swamp region, al-Bat'ib, for the most part came within the area of Masiun. On this cf. Al-Râfînî and the articles on al-Bat'ib in al-Ma'âlûm by 'Ali Sharrî in the periodical Lâghat al-Arab, lv. (Baghdad 1927), p. 372-384, 474-477, 526-530 and vi. 277-279; also Hâshim al-Salim, Lâghat al-Arab, Baghad 1927, p. 11. More important of the swamps (khar) are given.

In modern times the practically synonymous name al-Majdar (plur. of khar) is used for al-Bat'ib (see 'Ali Sharrî, q.v. cit., lv. 376). The two specifically Iraqi words khar and khar, which are very often used indiscriminately in European works, especially on maps (usually the one form khar) (cf. Al-Râfînî where khar is wrongly given for khar), have to be carefully distinguished. For khar (older alternative khal), popularity khar = "permanent swamp, temporary lake, land liable to inundation" (cf. B.G.A., ed. de Goeje, iv. 379; O. le Strange, J.R.A.S., 1895, p. 298) and al-khar, popularity khar = "arm of a river, creek, lagoon-like gulf", cf. especially the remark of Père Anastase-Marie, the editor of the Baghdad periodical Lâghat al-Arab, in M. Lidzbarski, Das Johannesebn-Mandavels Mandäer (Gleisner 1915, p. 145).

One of the divisions of the Tigris district was called, as already mentioned, Dast-i Masiun. The
name is also vocalised Dastu- and Dasta-Maisan in our Arabic texts. Ibn Khalifīn always writes the Persian form Dastu-i Maisān; cf. Marūdī al-Itīhād, ed. Jaynhill, v. 468. Dastu, dastu can thereby only be the Persian dastū (=plain). Schaar's assumption, cp. s.v., p. 34, that dass represents an abbreviation of the Pahlavi Daskert (Arabic Dasse, q.v.) seems to me hardly tenable. Why this division in particular was distinguished as the "plain of Maisān" from Maisān proper (especially from the second division of the district), is however not apparent. Could it be that there has been a more level plain, less filled with swamps? In any case, it is not correct to equate Dastu-i Maisān without more ado to Maisān (as does G. Le Strange, The Lands of the Eastern Caliphate, Cambridge 1905, p. 43). Yaḵšī (l. 574) thus defines Dastu-i Maisān:

"It is an important district between Wāṣīt, Baṣra and al-Ąwja (q.v.) (= Khūšīnān, q.v.) lying near the last-named. The capital is Baṣmārā. Dastu-i Maisān is not identical with Maisān but is connected with it; it is also said that it is a district with the capital al-Ubtūra and Baṣra belonging to it." Nothing further is known of Baṣmārā, here mentioned as the capital of Dastu-i Maisān. The form in which the name is handed down varies (see the variants in the Marūdī, ed. Jaynhill, v. 468); it is apparently identified with Baṣmārā which al-Maḳḥaddīn (E.G.A., iii. 114, 1) details among the places of the district of Wāṣīt (cp. Tābis, iii. 1558, 12; Z. D. M. G., xxix. 660; xxx. 26). From the rather general remarks in Yaḵšī the boundaries of the district of Dastu-i Maisān cannot be ascertained. We have brought a step forward by a note in Ibn Roṣṭa (E.G.A., viii. 94, 4) which expressly states that a place named "Abādağī, frequently mentioned in Arabic sources, is in Dastu-i Maisān. When Yaḵšī in another connection (l. 275, s. 3) mentions "Abādağī alongside of Dastu-i Maisān (i.e. distinguishing the two), as a division of Kaškar, this probably is an inaccuracy. From the passage of Ibn Roṣṭa quoted, it is further evident that "Abādagī must have been above al-Maḳḥaddī in the direction of Wāṣīt. In keeping with this is an itinerary given by Ṣādīn al-Ąwja (E.G.A., vi. 126, s. 5), according to which a route from Wāṣīt via Ḫūšīnān (5 farshāhs) to the E. of Wāṣīt (cp. Yaḵšī, l. 461) to Baṣra passed successively through: Abādağī ("Abā-

The distance of Budhibūn from Abādağī is put at 5 stages (rīḥān); and from Abādağī to al-Maḳḥaddī at 8; cp. also Streek, Babyl. Sus., i. 33-14. As a rīḥān on the average may be put at 4-5 miles (see Streek, cp. s.v., p. xv) the distance from Budhibūn to Abādağī may be estimated at 30-40 miles; from Budhibūn to Wāṣīt was about 15 miles. To this location of Abādağī agrees very well a note in Ibn Hawšī (E.G.A., ii. 159, s. 5), who says that the date-palm groves of the district of Barṣā are stretched without interruption for over 20 parasangs = 150 miles from Abādağī (then away to the south on the seaward side). As far as Abādağī (1), the latter must therefore mark the northern limit of the Budhibūn district of Baṣra. From the passages mentioned we have to look for Abādağī a fair distance to the north of al-Maḳḥaddī, probably rather near the bank of the eastern arm of the Tigris which was dry in the middle ages. The position given to Abādağī by G. Le Strange in his map to Ibn

Schrappen (t. R. A. S., 1895) and in The Lands of the Eastern Caliphate (map ii), — south of al-Maḳḥaddī on the left bank of the Tigris (in map ii), or on the right bank opposite al-Maḳḥaddī — cannot be maintained. For further reference to Abādagī (with the variants "Abādasī, "Abādas or Abādas; according to Ḥamza al-Įsfāhānī in Yaḵšī, iii. 603, 19, a Persian word) see B. G. A., iv. (glossary), p. 94. The approximate identification of the position of Abādagī, which we have obtained, gives us a clue to that of Dastu-i Maisān. This must have been above Maisān proper (with al-Maḳḥaddī), and have comprised roughly the most northern part of the whole district of Maisān in the wider sense. It should be noted that in which the four divisions of the Tigris district are officially given (Bahman Ardasī, Maisān, Dastu-i Maisān, Abas-Kabīrī; see above) is apparently that from south to north rather north-east. To the east Dastu-i Maisān extended as far as Khūšīnān. But it should not be forgotten that the eastern frontier of Maisān during the caliphate must have undergone changes as a result of several alterations in the organisation of the provincial administration (cp. Schwarz, cp. s.v., p. 290, 291); this explains the apparent contradictions in our sources, in which one and the same place is sometimes put in the Irāq, sometimes in Abūnā (q.v.). (Khūšīnān, q.v., "Abādagī, see "Arabikāh.

When we know definitely that Dastu-i Maisān was separated by the division of Maisān from that of Bahman Ardasī which to Utūla belonged, it appears rather remarkable that in Ibn Khordhūbī, as well as in Yaḵšī (cp. Streek, cp. s.v., p. 16, 19) Dastu-i Maisān is mentioned.

If this is not simply a mistake, it might at most be explained, as Schaeffer does (cp. s.v., p. 35), by saying that under the "Abādasīs the headquarters for the collection of taxes for Dastu-i Maisān was moved to Utūla. The whole system of division into sawād, originally simply made for convenience in taxation, had lost any practical importance, at least under the later rulers of this dynasty. We are further definitely told that the Tigris district later passed under Baṣra, in which no doubt some of the officials of the old administrative district were moved to towns near Baṣra like Utūla.

A part of Dastu-i Maisān was known as Dīḵāhī. It must have lain to the west of the modern course of the Tigris roughly from al-Maḳḥaddī to Abādagī. Ibn Roṣṭa (cp. s.v., p. 953) tells us that in Dīḵāhī between the two towns just mentioned, a part of the Tigris water was directed into a small river and then into a swamp, before the river altered its bed in the direction of Wāṣīt. From the account of the campaigns of the Khārjis in the Umayyad period when the Dīḵāhī was a favourite place for these rebels to assemble (see vol. ii, p. 905); it is evident that this district must have occupied the position here sketched out for it; cp. Wellhausen, in N. G. W. Gitt, N. S., vol. v, no. 2 (1901), p. 22, Whether al-Dīḵāhī stretched as far as the Nahār al-Ġharīf (Šitt al-Ġayl) and even beyond it, we do not know. There is a Tell Dīḵāhī at some distance from the west bank of the Nahār al-Ġharīf, to be exact in 45° 52' E. Long., Greenwich, and 34° 45' N. Lat. It is possible that the medieval name of the division Dīḵāhī has survived in that of this mound, which conceals the ruins of the very ancient, not unimportant town of Umma (ideographically written Gitt-Ḡib).
For Umma, which is mentioned in inscriptions as early as 3200 B. C., and disappeared from history even before the time of Hammurabi, see Hommel, op. cit., p. 354—355, 1019, 1102 (Index) and Ungar in the Realleit. der Vorgeschichte, xx. (1928), p. 3-4. Names like Djughā, Djiwhā, Djawhān are found elsewhere in the mediaeval geographical nomenclature of Irāk and Khūruzīstān; see Yākūt, it. 669, 15-16; li. 143, 144, xi. 15; cf. on Djughā (Djiwhā) also Schaeder, op. cit., p. 23.

In Southern Irāk, to which the district of Maisān of the Arab middle ages roughly corresponds, in course of time far reaching changes have taken place in the appearance of the country. The history of the hydrography of this area is thus a very complicated problem and the solution of topographical questions especially difficult. The first thing to note in this connection is the fact that the Persian Gulf, the Khalīji al-Baṣra al-Firās, as the modern inhabitants of al-ʿIrāq call it (cf. Ḥāšim al-Sadī, op. cit., p. 41, Abū al-Raṣūd al-Ḥassān, op. cit., p. 115; Luḥāt al-ʿArāb, i. 58, and the article MARD AL-FARADD), stretched much farther north in ancient times than the middle ages with it does today. In the Babylonian period it was a lagoon almost as wide as a sea called Nāṣr Al-Murrân (see Streck, Assurkunde, Leipzig 1916, iii. 796) and stretched northwards nearly as far as 31° N. Lat. The lagoon must have stretched from Baṣra in a westerly direction indicated by the later course of the Euphrates or the modern swamps (khirb) of Abū Kālim and al-Ḥam'am, as far as the region of the mouth of rivers of Abū Shahra (c. 12 miles S.W. of al-Mukhayyir-Ur), Abū Shahrūn, the ancient Eridu, certainly lay on the shore of this lagoon as we know from inscriptions found there; cf. Langdon, Ausgrabungen in Babylonien seit 1918 = A. O., xxvii. (1928), p. 3-4; Weissbach's objections to the equation Abū Shahrūn = Eridu (in Fauly-Waissawa, op. cit., vi. 1205) now disposed of.

From Kūnr the lagoon probably sent an arm to the east as far as the Kūhrūn. The land south of Kūnr beyond Baṣra on both sides of the broad arm of the sea now marked by the bed of the Shatt al-ʿArāb was probably only partly under water in ancient times (cf. Hersfeld, in Sarre-Hersfeld, Archäolog. Reise im Euphrat und Tigrißgebiet, vol. i. Berlin 1911, p. 251), although it was probably exceedingly swampy. In any case in the Sargonid period, the Euphrates, Tigris, Kerkhā, and Kūhrūn all entered the sea or rather the lagoon running up from it by separate mouths. Cf. also AL-RĀTIQ and lii. p. 777.

If then the question of the extent of the advance of the delta since the beginning of the historical period can be approximately answered, it hardly seems possible to allow accurately the increase in land to each century, as we do not know if the sea always retired at a constant rate. In the middle ages (al-Hambān, q. v. and below) in 48° 22′ E. Long, Greenw. and 30° 12′ S. Lat., c. 45 miles in a direct line from Baṣra, was still regarded as the most southerly town of the Īrāq. According to Ibn Bāqīya's Travels (ed. Paris, ii. 18) in the first half of the sixteenth century, it was already an hour's journey from the coast. This distance has now increased to over 20 miles. In the last 50 years there has been an average increase of land of at least 2½ miles a century. For further information on the steady formation of land by alluvial deposits at the north end of the Persian Gulf cf. SHATT AL-ʿARĀB; S. Genthin, Der Pers. Murrerei, Marburg 1896, p. 54 sq.; The Persian Gulf (= Handbook of the Historical Section of the Foreign Office, 30th. 76, London 1920), p. 13; Ḥāšim al-Sadī, op. cit., p. 54-52. Since the last century Nahr al-Shatīr the most southerly settlement immediately on the sea has been the telegraph and lighthouse station of Fāq; on this cf. below.

On the hydrographical conditions in Southern Irāk, especially the course of the Euphrates and Tigris and the canal systems connected with them, as well as the swamps there (al-Baṣṭā, q. v. or al-Baṣṭīh), we have a full and lucid description of the beginning of the tenth century in the part of the Geography of Ibn Serāqa that has survived as is seen the pertinent passages in Le Strange's edition, in J. R. A. S. 1895, p. 9-10 (sect. i—iii), 28-30 (sect. xiii—xv), and translation and notes on p. 33 sq., 46 sq., 296 sq. 311.

The Tigris, probably in ancient times forked at the site of the modern Kūh al-Amāra (q. v.), the Mudhārāf of the mediaeval Arabic sources (see above) into an eastern and western arm. For four centuries the main body of the Tigris has used the eastern bed running via Amāra to Kūnr, while the western arm, a much canal-like channel only navigable at high water, has connected it with the Euphrates. This western arm is in modern European literature known as Shatt al-Hāiy. This seems to be a name coined by European travellers, apparently first found in the last decades of the xviiith century (in Beaucamp; see Ritтер, Erdkunde, xi. 1753). Shāt al-Ḥai is the "river of al-Ḥaiy" and was still the name given locally to the northern stretch of the river reaching as far as Ḥaiy, but its whole course is usually called in the ʿIrāq Nahr al-Ghārāf (cf. the quotations noted below from the works of Ḥāšim al-Sadī and Abū al-Raṣūd al-Ḥassān); Yākūt (ii. 533, 549; iii. 781-3) already knows Nahr al-Ghārāf as the name of one of the five arms of the Tigris and of a district belonging to it, The Nahr al-Ghārāf was at one time called al-Muarrad; cf. Luḥāt al-ʿArāb, i. 51. At the little town of al-Ḥaiy the Nahr al-Ghārāf divides into five channels of which only the western Abū Ḥamārī has any water, while the eastern Shatt al-ʿArāb (or Awaṣ; on the name cf. above ii. 777) is now quite dry; cf. Luḥāt al-ʿArāb, i. 51, with note and correction on p. 255 sq. Four miles above Ḥaiy the main western arm also divides into two channels: the larger Nahr al-Ẓafra in the west, which enters the Tigris at Naṣīrīyeh (Naṣīrī, see KUT AL-ʾAMĀRA), the capital of the land of Mumsīf— for some years joined by a branch line to the station of al-Mukhayyir-Ur (Ur-Junction) on the Baghādā-Baṣra railway —, and the smaller eastern Nahr Ḥaṭṭe (Bakha) said to have been originally dug out by the Mumsīf which enters the ʿIrāq al-Ḥamām somewhat east of Sīḥ al-Shiyānī (q. v).

On the Nahr al-Ghārāf (Shatt al-Ḥaiy) and the territory through which it flows, of which now as in the Turkish period, the northern part (including al-Ḥaiy) belongs for administrative purposes to the Ṣanṣ of Kūh al-Amāra and the southern to the Ṣanṣ of al-Mumsīf (cf. KUT AL-ʾAMĀRA, vol. i. 276, ii. 515 sq., and KUT AL-ʾAMĀRA and Streek, Babylonien, iii. 311 sq.; Luḥāt al-ʿArāb, i. 51 sq., 159, 217, 219).
A little below the modern Karan; cf. l. 676, 969 sq. ii. 119. Vakšt's account differs seriously from Ibn Serapion's description of the Lower Tigris. How far Yıkšt, who lived 300 years after Ibn Serapion, reflects an alteration in the river system, it is impossible to say. According to Yıkšt (ll. 553, 3 sqq.; cf. thereon Strecki, Babylonien, l. 39-40 and above l. p. 670), the Tigris after passing Wāsit divided into five arms, which reunited at a place called al-Mašāra. This Mašra (var. Mašrā and Mašrāh in B.G.A., il. 53, 35; ii. 161, 3) lay a day's journey from Bāṣra i.e. about halfway between this town and Karan.

These five arms of the Tigris were, he says, the Nahr Sāšt, Nahr Gharrāf, Nahr Dāšār, Nahr Dāšār and Nahr Mašāri. Dīnār is mentioned in another passage in Yıkšt (ll. 115, 10) as a place above Wāsit. Gharrāf has already been mentioned as the usual modern name for the western arm of the Tigris (Šāṣat-El-Haïr). The Nahr Dāşār (apparently the Aramaic form of the Arabic Dīnār) flowed, according to Yıkšt, iv. 830, 21, or v. 838, 2, near the Nahr Abī l-Asad and east of the Nahr Dīnār. The latter was (see Yıkšt, v. 838, 3) between Wāsit and Nahr Dāšār. The Nahr Mašāri, finally, seems to be identical with the Dīnār al-'Awrāf from al-Mašāra to the mouth of the Nahr Abī l-Asad (cf. also Yıkšt, l. 603, 4).

The bed of the upper Dīnār al-'Awrāf which seems to have been dammed at al-Mašāra was apparently also fed by the waters of the Nahr Abī l-Asad. The Arab geographer Khādīja (B.G.A., ii. 833, 2 sq.) says: "After leaving the Bāṣra, the Tigris divides into two arms, the one of which goes to Bāṣra and the other to al-Mašāra." On the banks of the Nahr Mašāri, "between al-Mašāra and Buṣāra," lay the village of al-Bazīr (Vıkšt, l. 603, 3).

As to the Euphrates, we are told that in the middle ages it poured its waters into the Bāṣra in two channels below Kufa and Hillah, like the main body of the Tigris in the west; cf. especially Ibn Serapion, ed. G. Le Strange, in T. R. A. S., 1895, p. 10, 18 sqq. (and p. 47, 260) G. Le Strange, The Lands etc., p. 74, and above II., p. 514, 27, art. AL-FAKURT.

The Nahr Abī l-Asad, which runs out of the Bāṣra and is often described by the Arab geographers as the eastern section of the western Tigris (cf. above and Yıkšt, iv. 830, 22) might, with a certain amount of justice also be claimed as the last stretch of the Euphrates. It is in this sense that Yıkšt (iv. 561, 3) says that al-Mašra, mentioned above, is "on the bank of the Tigris and of the Euphrates at the junction of the two." On the alterations in the lower course of the Euphrates in the later middle ages down to the eighteenth century we have very little information (cf. al-Fakurt), but we may assume that since about the fourteenth century, at latest since the beginning of the eighteenth, the whole volume of the Euphrates no longer appeared in the swamps but a portion ran in a definite channel which roughly coincided with the course of the modern bed, and ultimately used the channel of the Nahr Abī l-Asad and thus effected a direct connexion with the Eastern Tigris. From the reports of European travellers (see G. Le Strange, The Lands etc., p. 28 sqq.) it is evident that at the junction of the two rivers there stood since at least the middle of the eighteenth century a castle named al-Karn (now a small
town; see also below, iv. 364). Since the great scheme for regulating the Euphrates was carried out by Willocks in the first decade of this century (cf. ii., p. 518 and Maṭṭi Al-‘Arabī) only a small and insignificant arm of the Euphrates now flows out at Karma, while its main arm cuts through the swamps of al-Hummar in a new channel and enters what is now called the Shatḥ al-Arāb above Karma ‘Ali (c. 16 miles N. of Basra). On this modern Euphrates channel called after Karma ‘Ali (popularly Karma and Curma ‘Ali) cf. Hājī Muḥammad al-Sa’dī, op. cit., p. 26, q. 5, 36, it., 159, 3 sq.; Abū al-Razzāl al-Qasimī, op. cit., p. 69, 65; Lugsah al-Arāb, i. 365, 8 sq.; ibid. 427; 2: Mesopotamia (Handbook of the Foreign Office, No. 65), London 1920, p. 5, 52 sq. 55 and cf. ii., p. 515.

The Eastern Tigris from al-Maḥdīr to its mouth on the Persian Gulf bore in the middle ages the name of Dī👇lyṭ al-‘Arīṣī or the “one-eyed Tigris” (on this cf. above, ib. 777); cf. especially Ibn Rosta (B. G. A., vii.), p. 94 sq. and Ibn Serapion (J. R. A. S., 1895, p. 28, 299–303). Streck, Babylonien, i. 41–42; G. Le Strange, The Lands etc., p. 43; Schaefer, op. cit., p. 34–35 and cf. i., p. 676, 696 sqq. ii., p. 513 sqq. Yāḏḥūr (iv. 530 sqq.) however limits the name Dī👇lyṭ al-‘Arīṣī to the stretch from al-Maḥdīr to the sea, i.e. the combined Euphrates and Tigris. At the same time we find other special names for this last section among the Arab authors of the middle ages like Dī👇lyṭ al-Baṣra (the Tigris of B.), Fāṭim al-Baṣra (cf. e.g. Yāḏḥūr, ill. 933, 30), Badhsaward (Yāḏḥūr, ill. 406, 8). A specifically Persian name is Bahmahār (the river of the district of Bahmahār) (cf. ii., p. 777; see Yāḏḥūr, ii. 779, 80).

Even in the Babylonian period the lower Tigris seems to have had a special name, Surūfqa; see Meiūser, op. cit., p. 5. For nearly two centuries the combined Euphrates and Tigris has been known as Shāṭi‘ al-‘Arāb or the “river of the Arabs”, because its banks, although since 1840 (with interruptions) they have been in parts incorporated in the Persian kingdom, are almost exclusively inhabited by Arab tribesmen. (The name Shāṭi‘ al-‘Arāb is found in the middle of the 13th century in Nasiri Khurrāw Rāfī‘un, ‘Abdu al-Sa‘īd, op. cit., p. 89) but this is only a late occurrence. In its lower half the Shāṭi‘ al-‘Arāb has since that date formed the often contested frontier between Persia and Turkey or (since the World War) the Kingdom of Iraq; about an hour’s journey above (or west of) Muhammara, the eastern bank becomes Persian. Cf. also the article Shāṭi‘ al-‘Arāb and The Persian Gulf (Foreign Office Handbook, No. 76), London 1890, p. 15, 54.

The stretch of the Dī👇lyṭ al-‘Arīṣī corresponding to the modern Shāṭi‘ al-‘Arāb in the middle ages sent out numerous canals on either side; the very complicated canal-system of the country round Basra was especially celebrated. The most important canals on the west bank were the Nahr Mu‘āl (still to-day the name of a small village 22 miles north of Basra) and the Nahr Ubullū (apparently the modern Nahr al-‘Ashārū) which united at the town of Basra and connected it with the Tigris. The mediæval Nahr Abū Khusaṭ, 15 miles south of Basra on the west side, may also be mentioned: this still exists to-day and has given its name to a district and its capital (belonging to the shāmjāk of Basra); see Curneck, op. cit., p. 23; Abū al-Razzāl al-Qasimī, op. cit., p. 118. Of the canals on the west bank the most important was the Nahr Bayān (cf. Schwarte, Iran im Mittelalter, p. 318, 390–391). The Nahr Bayān formed a artificial channel connecting the Tigris and the Karma ‘Ali. We have also medieval references to a similar communication between these two rivers. Another canal still in existence on the west side is the Nahr Bayān (Bayān; modern Riyān) north of the Nahr Bayān. The most northern canal on the east side which left the Tigris about the neighbourhood of the modern Kurna, was called Nahr al-Muḥābāt, not Nahr al-Muḏīr (cf. thereon de Goeje, in J. R. A. S., 1895, p. 741; emendation to J. R. A. S., 1895, p. 59, 297, 308 and Streck, Babylonien, i. 41). Generally speaking, there are not now so many canals in the Shatḥ al-‘Arāb as there were in the middle ages. The best account of conditions in the caliphate is that of Ibn Serapion: see the text in J. R. A. S., 1895, p. 29–30 (thereon p. 303–311); cf. also Streck, Babylonien, i. 42 and G. Le Strange, The Lands etc., p. 46–48. Cf. particularly the article al-Bayān wa-al-‘Ashārū, which gives a list of old and new names of canals, in Lugsah al-Arāb, ill. (1913), p. 57–68, 128–129 and p. 673–674 (additio) and p. 700–704 (indices); al-Nababbī, al-Turjī al-Nababbīfī, Tārikh al-Dīฬār al-Arābīyya, 2nd ed. Cairo 1342 (1923), ii. 45–53.

After the hydrography of the district of Māsān, we may now deal briefly with the more important places in It. The mediæval Arab geographers give as its capital the already frequently mentioned al-Maḥdīr on the eastern bank of the Tigris, 4 days' journey from Basra. The Shāfī‘i inhabitants according to Yāḏḥūr (vi. 408) had a splendid mosque here with the tomb of ‘Abd Allah b. ‘Abd Allah who fell at Karbalā in the year 680; on this see the references in Winterfeld, Géographie des Tableaux de la région de la Babylonie, Register (1853), p. 8 and Yāḏḥūr, vi. 506; cf. also Bahmahār. This sanctuary still survives and it enables us — which has not been noticed before (for example, the inaccurate locations by G. Le Strange in J. R. A. S., 1895, p. 300 and in The Lands etc., p. 42) — to define quite exactly the site of al-Maḥdīr. The name al-Maḥdīr is no longer known on the spot; on the old town the highly revered ‘Alīid sanctuary is all that remains, the place is now called simply ‘Abd Allah b. ‘Abd Allah, who passed here on his way up the river in 1824, speaks erroneously of “the residence of Sheikh Abdullāh bin Ali, an Arab chief”; cf. his Personal Narrative of a Journey from India to England (London 1827), i. 91. According to Chemery’s map (see: Expedition for the Survey of the Rivers Euphrates and Tigris, London 1856, Atlas, ii., p. 2) Usair and ‘Abd Allah are only 10 miles apart in a direct line, a figure which has however to be doubled when allowing for the many windings of the river if one goes by boat. The traveller Schafft, who in 1862 went down the Tigris on a steamer, took two hours to go from ‘Abd Allah b. ‘Ali to Usair; cf. his Reisen im Orient (Winterthur 1864), p. 137; Rich took six hours to ascend (Kitter, xi. 945). On my own journey in March 1927 I visited ‘Abd Allah b. ‘Ali; the steamer covered the distance from here to Usair with the river in favourable condition in not quite three hours. ‘Abd Allah b. ‘Ali lies on a slight eminence ten minutes from the left bank of the Tigris, which describes a curve here. The mosque of the tomb with its dome
visible from a long distance off stands within the south side of an ahlong court, to which entrance is given by a door in the slightly built north wall. The Mahfâmo-pas de al-Hajri, born in Mashân (near Bayr) is said by Yâkût (iv. 468) to have died in al-Madâhir. As Itm. Rossâ (G. G. A., vii.), p. 95 tells us, the tide came up as far as al-Madâhir; this agrees with Schâfфи's observation (cf. cit.). The tide indeed is sometimes-perceptible as far up as the town of Kâ'fî al-Sûlî, farther north; cf. Hâshîm al-Sâdî, op. cit., p. 29, 2; cf. also The Peruvian Gulf Pilot, London 1836, p. 295.

Opposite al-Madâhir, on the west bank was the little town of al-Hâdi (Yaqtû, iv. 947, 26). With it as a border in one passage (iv. 714) it is stated that the capital of Mashân was also called Mâsin, he can only be referring to al-Madâhir, the centre of the district of Mâsin in the narrower sense, not perhaps, Futû' Mâsin, for which we also find an abbreviated form Mâsin. The name al-Madâhir probably first came into existence in the Muslim period, perhaps for a new foundation on the site of the old town of Mâsin.

As to Kâ'fî al-Sûlî already mentioned on the left bank of the Tigris which like 'Abîd Allâh b. 'Abî Alig belongs to the lea of 'Amira, see Hâshîm al-Sâdî, op. cit., p. 151, 'Abî al-Razzâk al-Hâshibî, op. cit., p. 125-126, and Lâzúqî al-Arâbî, iv. 277, 278, 279. The town of modern origin is a couple of hours' journey below 'Abî Alig b. 'Abî Alig has now about 3,000 inhabitants (including many Mâsinânis). The site of al-Madâhir cannot be marked by Kâ'fî al-Sûlî for al-Madâhir was certainly of moderate extent and the 'Abîd mosque is to be sought within it and not in its vicinity.

As to 'Usâir already mentioned (now usually pronounced 'A'sir), south of 'Abîd Allâh b. 'Abî Alig. The town on the west bank of the Tigris, it is especially mentioned that it belonged to the district of Mâsin, see Yaqtû, iv. 319, 714; Kazanî, 'Abî Alig, n.d. Wettenfelder, ii. 310. The proper name of this place with the alleged tomb of Ezra (Mássî) in the middle ages was, according to Arabic and Jewish sources, Nahr Samura (popularly Sîmûra); cf. e.g. Yâkût, iv. 840, as on 'Usâir especially D. S. Sassoon, op. cit. (see Bib.) J. R. Gaussma, op. cit. (see Bib.), p. 189 sq. and the article 'A'sir.

The town of 'Abâst (Abâst or Abas) to the north of al-Madâhir has already been discussed. On the town of Huwâza (now Hawâzîa) also belonging to Mâsin see above 1, p. 676 and art. Wâzî; the Mâsin Bibliography may now be added: Layard in J. R. S. Asia 1880, p. 34-35; J. de Morgan, Mission scientifique à Perse, Étude géographique, iii. Paris 1895, p. 278 and Schwartss, Ein Mann Mittelalter, p. 352 sqq.; Lâzúqî al-Arâbî, vi. 277 sq. An extensive swamp (fata) (cf. p. 876) takes its name from this town: the water from which flows into the Tigris a little south of Kâ'fî; cf. Hâshîm al-Sâdî, op. cit., p. 21, 21.

The modern towns of importance on the Nahr al-Qâshâr (Shat al-Hâiy) are of recent origin and are still developing. They are from north to south: Haiy (Kâ'fî), a town with 9,000-10,000 inhabitants (cf. above and 1, p. 876; Lâzúqî al-Arâbî, i. 152, 224) Kâ'fî al-Sûlî with 1,500 and Shat al-Hâiy with 7,000 inhabitants; on these three places cf. Cuinet, op. cit., iii. 290, 210 sq. 312-313 (where Kâ'fî al-Sûlî is wrongly given for Kâ'fî al-Sûlî); Sachan, Am Ephrata et Tigris, Leipzig 1900, p. 69 sqq.; 'Abî al-Razzâk al-Hâshibî, op. cit., p. 111-112, 130 sqq.; Hâshîm al-Sâdî, op. cit., p. 147, 162-163.

At the spot which up till some two centuries ago was regarded as the junction of the Euphrates and Tigris stands the little town of Kâ'fî (Korna, Gurnâ) with 2,000 inhabitants. It is not known to have existed in the middle ages; on it cf. above and Mignan, Travaux in Chaldée, London 1829, p. 284 sqq.; Ritter, xl. 1018-1023; Cuinet, op. cit., iii. 211 sqq.; 'Abî al-Razzâk al-Hâshibî, op. cit., p. 113; Hâshîm al-Sâdî, op. cit., p. 156; Lâzúqî al-Arâbî, ill. 57. Halfway between Kâ'fî and Shat al-Hâiy must have stood al-Mâsin where, according to Yaqtû, the two arms of the Tigris, or the Euphrates and Tigris met in the middle ages; cf. above. About 3 hours' journey above Shat al-Hâiy on the right bank of the river is the little village of Kâ'fîn. All, where as already mentioned, the main stream of the Euphrates flows into the Tigris or the Shatt al-Arab.

In the Muslim period, Bayr was the largest and most important town in the old district of Mâsin and in its practice its capital, although under the 'Abâsids, al-Madâhir may have for a considerable period been regarded as the official capital. On Bayr, mediæval Basra, modern Basra and al-'Ashshâr, cf. the article BASRA.

Al-'Ashshâr stands approximately on the site of Ubulûla which as a suburb and port on the Tigris for the mediæval Basra was of some importance. In our sources we are expressly told that Ubulûla lay north of the canal which bore its name, partly on an island, which was formed by the Tigris and the two canals of Nahr al-Mâskî and Nahr al-'Ubulûla which joined one another at Bayr. The modern Nahr el-Mâskî which leaves the Shatt al-Arab about one hour south of al-'Ashshâr, cannot be the Nahr al-'Ubulûla (in spite of Lâzúqî al-Arâbî, ill. 63). The modern al-'Ashshâr, the principal commercial centre of southern Iraq, is only a little inferior to Basra as regards numbers of population. The two (or three) together now have a population of 50-60,000. On Ubulûla, the ancient Arbûkâr kaurus (see B.H. Wissowa, Reallex. der kl. Altertumswissenschaft. Suppl. Bd. i. 111), cf. G. Le Strange, F. A. S. 1895, p. 306 and The Land at the Feast of the Feast, p. 47; Drouin, in O. C. Litt., p. 93; Sachan, Arch. Pr. At. W., 1919, iv. 20. 51 sq.; ibid., xi. 151; Lâzúqû al-Arâbî, v. 477, vi. 200, v. and the art. Ubulûla.

Opposite al-'Ashshâr, on the east bank of the Shatt al-Arab stands the little town of al-Tauâni (cf. Lâzúqî al-Arâbî, ill. 129, p. 230, 2; 'Abî al-Razzâk al-Hâshibî, op. cit., p. 115; Hâshîm al-Sâdî, op. cit., p. 156, etc.). On its site or at least somewhere in the neighbourhood, there was already in ancient and mediæval times an important harbour, known to Pliny as Phai (cf. also Drouin, op. cit., p. 8). In the Tailmâ (see Berliner, op. cit., p. 44) and in Syriac sources it is called Perat de Mâsinâ in the mediæval Arab authors Perat Mâsinâ or Phai at al-Mâsin. In Syriac and Arabic texts we also find Perot or Furtû, without the addition of Mâsinâ; with Furtû = Euphrates the name has no connection. When the first Sādatîn king Ardshîr I. founded the city it received from him the new name of Bahman-Ardshîr, shortened to Bahmanshîr; see Haman el-Yâshînt, Tûriḳ, ed. Gottwald, p. 37 sqq. 46 and 64, xi. 149. Cf. the above mentioned.
specifically Persian name of the Dūljat al-'Awrār and Banīšah (Bāhānshīr) as a name of an arm of the Karīm (cf. v., p. 777). That so-called Persean Ma'ān was restricted to the left bank is quite clear from the Arabic references: cf. Wellhausen, Abh. G. W. Goit., N. F., v., No. 2, 1901, p. 34 and Schaefer, op. cit., p. 31. The identification of Furtat Ma'ān with the modern Başra or with old Başra (Berлина, op. cit.) has been championed by different scholars (Nöldeke in S. B. Ak. Wien, 1893, Abh. 3, p. 18; Marquart, op. cit., p. 41; Sachau, Abh. Fr. Ak. W., 1919, No. 1, p. 49; only modestly as a possibility by Harnack in Sarre-Herfeld in Achet. Reise im Euphrat- und Tigrisgebiet, i, 251) is therefore untenable. Persepolis Ma'ān was the scene of the Nestorian metropolitan which was later moved to Başra (first certain reference in 893) (cf. Sachau, op. cit., p. 49 and Schaefer, op. cit., p. 31). The old name of the diocese Persepolis Ma'ān was still frequently used in place of Başra even after the transfer of the episcopal see. If we have on one occasion, c. 900 A.D., a mention of a bishop of Ma'ān simply, we should refer it to Persepolis Ma'ān rather than to Karkh Ma'ān (as Sachau, op. cit., p. 30) because the abbreviation Ma'ān for Persepolis Ma'ān is found elsewhere in Syrian literature (cf. Schaefer, op. cit., p. 32-33). As to the coinage of the Omayyad period of the mint of Ma'ān, this is probably to be explained also as al-Furtat Ma'ān and not as Karkh Ma'ān (cf. Mordtmann, Z.D.M.G., xxxiiii. 126) or Ma'ān (al-Mahdī) as Schaefer, op. cit., p. 34 thinks. Abn. 1-Bida, Taqwa al-Bulūnd (ed. Reinhard, p. 296), also is obviously identifying Furtat Ma'ān not Ma'ān (al-Mahdī) when he says "Ma'ān is a little town in the lower part of the land of Başra".

On the west bank of the Shatt al-Arab about where the Eunuch or Dūjdū (the modern Karīn [q.v.]) joins it, Alexander the Great built a new town on the site of an older settlement, which he called Alexandria after himself. After its restoration by one of the Sasanians, it was known as Antioch China. When Spahines (Hyphasis) created a kingdom of his own in Mesopotamia-Charrake, Antioch-Cina=Antioch was his capital and was known as Karkh Asiya; under this name (Arabic Karkh Asiya or simply Karkh) it is mentioned in the Palmyrene inscriptions. Another refoundation of the town is ascribed to Ardashīr I, hence its official designation in the Sasanian period as Arslān (also abbreviated to Arslān); cf. Nöldeke, Gesch. d. Arab. und Pers. aus Zeit der Sāzānids (Leiden 1879), p. 14; Marquart, op. cit., p. 41; Herzfeld, ibid., xx. 150; Hama al-Jamāli, op. cit., p. 47. It is the (correct?) form of the name Ingh Ardashīr. The older name Karkh more exactly defined by the addition of "al-Mahdī" remained in existence. The Syriac texts always write Karkh al-Mahdī. There was a Nestorian bishopric here, which seems soon to have disappeared under Islam; see Sachau, op. cit., p. 49-50 and Schaefer, op. cit., p. 33. The Syriac took over the Syriac name as Karkh [q.v.]. Ma'ān; cf. e.g. Yākūt, iv. 207, 1. The Persian traveller Nāṣiri Khusrav who visited the Irāk about 443 (1051) (cf. his Šefaremla, ed. Schefer, p. 56) mentions, besides Başra, in the district of Ma'ān a place called Akt Ma'ān, probably an inaccurate reproduction of Karkh Ma'ān. The site of Karkh Ma'ān is usually sought on that of the Persian port of Mu'hammads, which has only arisen since about 1812, or at least in its immediate neighbourhood; cf. Andreas in Pauly-Wissowa, Realenzykl., i, 1394 sqq.; Drouin, op. cit., p. 7; Herzfeld in Sarre-Herfeld in Archäologische Reise, i, 251; Sachau, op. cit., p. 50; Schaefer, op. cit., p. 33. This identification does not have the old, generally certain Karkh Ma'ān is perhaps to be located farther to the north; cf. e.g. the objections of Mordtmann in S. B. Ak. Ak., 1875, vol. ii., Suppl. Heft, iii., p. 14. Cf. also on Alexandria-Charrake Spasni: Karkh Ma'ān the important article "Alexandria" by Andreas in Pauly-Wissowa, Realenzykl., i. 1390 sqq. and the article Charak Spasni by Weilschad, ibid., iii. 2122; Drouin, op. cit., p. 7; A. W., 15; Schaefer, op. cit., p. 31 sq. On coins struck in Karkh Ma'ān of the Ašrakī and Sasanian periods cf. Mordtmann, Z. D. M. G., xxxiii. 126 sqq. and C. F. Hill, Catalogue of Greek Coins of Arabia and Persia in the British Museum (London 1923); cf. also Mardiana and also Bull. ii. p. 777.

In the middle ages the most southerly towns in the Irāk were ʿAbbādīn, which then lay on the coast—under the later ʿAbbādī it was already some distance from it—and was an important harbour. Cf. above and the article ʿAbbādīn.

At the beginning of the twentieth century it was still an insignificant little village. It is only since the last twenty years that it has undergone an unexpected development, because of the Anglo-Persian Oil Company making it the terminus of their pipes from Meshet and Mādnī in Bahān (cf. ii., p. 777). The oil is now pumped into tankers at ʿAbbādīn; important factories, warehouses etc. have been built there. On the Thames five minutes west of ʿAbbādīn proper, has developed into a flourishing town which bears the name Khūrān ʿAbbādīn or ʿAbbādīn al-Hadīlī = New ʿAbbādīn. On the meaning of the word ʿAbbādīn (a particular kind of date) cf. Lūgḥat al-ʿArab, i. 125; sqq.; 443; s; iii. 594, 1 from below. In Brīm are the ruins of a palace or castle said to date from the time of the Caliph Hārūn al-Rashīd; cf. Lūgḥat al-ʿArab, i. 126 sqq. ʿAbbādīn is now next to Başra-Ashūr and Muḥammar the largest and most important town in the whole of the Shatt al-Arab. On the other place on the islands of ʿAbbādīn cf. Lūgḥat al-ʿArab, i. 128 sqq. The island, which before the war belonged to the Shāhī of Muḥammar who was under Persian suzerainty, was leased about 1931 by England for 99 years. On māna ʿAbbādīn cf. Lūgḥat al-ʿArab, i. 121-129; on modern ʿAbbādīn and the works of the Persian Oil Company, ibid., i. 175-184; W. Schweer, Die türkisch-persische Erde, Hamburg 1919, p. 112-115.

ʿAbbādīn close to the sea coast there stood in the middle ages the lighthouses known as al-Tarākāk (q.v.).

As has already been pointed out, ʿAbbādīn is now over 20 miles from the sea. The most southerly town in the Irāk, for about a century was the important lighthouse and telegraph station at Fūs (q.v.), built on the shore of the Persian Gulf; on it and the district, cf. Gueder, op. cit., ii. 606-707; Ābed al-Razzāq al-Ḥāṣib, op. cit., p. 118; Ḥāşim al-Sulṭān, op. cit., p. 21, 155, 1 from below; cf. above and art. Shāt al-ʿArab. The Turks fortified this important strategic point (see Persian Gulf [Handbooks etc.], p. 54: Med
The remarkable sect of the Mandeans (the Sinha’ of the Kūrān, q.v.), now called Subhī, had from their early times their headquarters in southern Irāq, in Ma’isān, especially in the swamp country. On their geographical distribution in the sixth century cf. Chwolson, Die Subhī er der Sabirin (St. Petersburg 1859, l. 124–145) and Euting, in Das Auland (1876), p. 204–205. According to enquiries which I made in 1927 of Mandeans, the number of Mandeans in the larger towns of the Irāq may be approximately estimated as follows: in ‘Amāra and Hawza 1,000 each; in Kafāt Shīlī and Majmūma 500 each, in Baṣra 300 and in Kūrma 100. The language of the Mandeans, who represent a remnant of the original native Aramaic population of Babylonia, is probably identical in the main with the Aramaic idiom which was once predominant in southern Irāq, the dialect of the old kingdom of Mesene-Charakenn, the Mešīt dialect as it is called in the Targum; cf. Noldeke, Mandalkche Grammatik (Halle 1875), xxvi and Pognon, Inschriften. manîdiche des vouges de Khosrab (Paris 1868–1899), p. 13–14, 274.

The Indians people of the Dīl (Arab. Dīl) and the Zindī from East Africa, who were settled on the soil of Ma’isān at the end of the first (seventh) or in the third (ninth) century a.d. above i., p. 676 and the articles Dīl and Zindī.

As to the industries of the people of Ma’isān in the middle ages we need only mention the mats made here, which are praised as the best of their kind; cf. S. Frankel, Die aram. Fremdwörter in Arabisch. (Leiden 1886), p. 92. The red-beds of the marbes supplied excellent material for them in enormous quantities. Even at the present day the manufacture of red-mats continues to give employment to many hands; for the people of the flat lands in southern Irāq like to use long two-shaped mats called cappār, the walls of which are made of red-matting.

The history of Ma’isān since the introduction of Islam practically coincides with that of the Irāq, especially that of the northern part (the province of Baṣra and the Battāla); the reader may therefore be referred to the articles Irāq, Baṣra and At-Battāla. Here we will only point out that the administrative district of the Tigris belonging to Ma’isān was conquered by Dāmt-i Māsān in the year 14 (635) on this conquest cf. Baldhūrī, op. cit., p. 340–342 and Caesanti, Annali dell’ Ist. din., iii. 252, 301–304 (§ 6 and 81–86); ci. 108 (Indux x. v. Mayān).

Al-Mahār, the capital of Ma’isān, was the scene of important military happenings at the time of the Arab invasion and frequently later also. In the year 12 (633) al-Khīlīlī and al-Muhannā fought a great battle with the Persians at this town, the first in their invasion of the Irāq. This battle is sometimes called after an adjacent canal, called al-Thīr (Yākūt, l. 937 sqq.). The defeated Persians are said to have lost 30,000 men in this encounter; cf. Baldhūrī, op. cit., p. 242, 272, 291; Caesanti, op. cit., v. 2026–2029; al-Ma’ābūnu, op. cit., iv. 209; Mulīr, Der Ist. din., i. 228; Caesanti, op. cit., ii. 959–962 (§ 196–200). In the fighting with the Khurāsānī for whom the district of Dāmt-i Māsān frequently served as a hidingplace, there was a desperate battle in 47 (664) in and around the town of al-Mahār. These rebels were forced to retreat by the Khurāsān under the leadership of Ma’īl b. Kais; cf. Wellhausen, Abb.
MISARA, a Berber chief of the Maghrib, who rebelled against Arab authority in 122 (739-40). He belonged to the tribe of the Maghātra and the historians give him the surname of al-Hādirī the "low-born" because he was of humble origin and before his rebellion had been a water-seller in the market of al-Kairānān.

After the recall of Mūsā b. Nūṣār at the end of the first century a.h., rebellion began to smoulder in North Africa. 'Umar b. Abd Allāh al-Murāt, governor of Tangier, and a grandson of 'Ubayd b. Nāfi', Ḥālib b. 'Abī 'Ubaida, governor of Sīsā, were inflicting grievous wrongs on the Berbers by treating them, as regards taxation, as a conquered people not converted to Islam, and by taking the freedom of their women to send as slaves to Damascus.

The governor of Sīsā was sent from Sīsā with his troops to the conquest of Sicily, his departure was the signal for insurrection. A movement on a large scale broke out: at its head the Berbers put Misarā al-Magharī. With the related tribes of the Mālikūn and Barāghwātī [q.v.] Misarā advanced on Tangier and seized it. The Arabs tried in vain to withstand him: the governor of Spain, 'Ubayd b. al-Hadīghī, even crossed the Strait to help Tangier but his efforts were in vain. It was not long before Misarā was disarmed and killed by his own followers but his successors al-Khālid b. Hamdūn al-Zanjītī was more fortunate at the beginning of 123 (740) he inflected on the Arabs on the banks of the Waḥil Shāfī (Cheffī) the disastrous defeat known as the "battle of the nobles" (ghawrāt al-ḥārīf). It required a great expeditionary force to be organised in the cast in order to overcome finally this general rebellion, which was not done without considerable losses.

MAISIR, cutting lots by arrows, a method by which a herd of cattle was divided. This was the custom of the Arabs before Islam. The word has survived almost to mean lucky chancy, easy success, from ja'iz, to be easy, ja'izat, to succeed; cf. maiṣīra, comfort, riches. A group of ten Arabs used to buy a young camel, which was cut into ten portions and the yariz presiding distributed the portion among his companions by means of arrows on which he had written their names and which he threw at random out of a bag. In another system 28 portions were made of the animal; there was one past for the first arrow, 2 for the second and 3 for the third and so on up to 7; the last just got nothing. These arrows were deposited with the guardians of the temple in Mecca.

The game was considered a pagan practice and the Kanīn (ii. 210 and v. 92) forbade it along with wine and idols as a major sin.

The word maiṣīr has acquired a wider sense among the commentators and in certain traditions.
Zamakshari gives it the same sense as bānir [q.v.], according to a tradition of the Prophet, which is applied also to dice: "these accursed dice are the cause of Rewards (ma’sūr al-salāmah)", according to a tradition of transmission and chaos (presumably in so far as dice were used in these games) and according to Ibn Sīrīn to every practice in which there is an element of chance.

Cf. the Dictionaries, the Kanzul, Lawhart, Zamakshari, Kanzul, ed. Nasar, Leen, i. 380; al-Yaqūbī, ed. Hootman, i. 360 sqq.; Huber, über das Ma’sūr genannte Spiel, Freytag, Einleitung, p. 179 sqq.

(6. CARA 290. VAUX)

MAISUN, daughter of the Caliph Yazid b. Umair [q.v.], mother of the Caliph Yazid I. We do not know if after her marriage with Mu‘awiyah she retained the Christian religion which had been that of her family and of her tribe. A few verses are attributed to her in which she sighs for the desert and shows very slight attachment for her husband, but the attribution to Maisun of this fragment of poetry, which is in any case odd, has been rightly disputed. She took a great interest in the education of her son Yazid and accompanied him to the desert of Kāthir where the prince passed a part of his youth; this temporary separation from her husband gave rise to the later legend of her repudiation by Mu‘awiyah. She must have died before Yazid became Caliph. Bibliography: This is given in Lammens, Récr. sur le régime du califat omeyyade, iii. 380—387, 395, 312—314. (M. LAMMENS)

MAISUR (MYSORE) (Skt. mahīgha-Caṇṭha "buffalo town"), the premier Hindu State in India, is a principality in Southern India under the British protection, having an area of 29,433 square miles, between 10° 36' and 15° 28' N. and 76° 38' and 78° 36' E. Its Hindu rulers preserved their independence until the middle of the sixteenth century, when Haidar Ali [q.v.] took possession of the country. It remained in his and his successors, Tipu Sultan’s [q.v.], possession until the capture of Seringapatam by the British in 1799. Maisur was then restored by Lord Wellesley to the old Hindu dynasty. The majority of the Musalmans are Sinhais, very few being Shāfs. Of Muhammadan buildings the most noteworthy are the Gumbaz of Mausoleum of Haidar Ali and Tipu at Gandikot, and the Darya Dowlat, a palace at Seringapatam. The population at the census of 1911 was 5,869,193, of whom 314,494 are Musalmans, mostly Sinhais. The capital of the principality bears the same name, Maisur. The languages spoken are Kannada, Hindustani, Tavare and Telugu.

(M. HINDERT HOWARD)

MAITA (M.), femimine of ma’at, dead (used of senseless things); as a substantive: it means an animal that has died in any way other than by slaughter. In later terminology the word means firstly an animal that has not been slain in the usually prescribed fashion, the flesh of which therefore cannot be eaten, and secondly all parts of animals whose flesh cannot be eaten, neither because not properly slaughtered nor as a result of a general prohibition against eating them.

In addition to Sūra xxxvi. 33, where ma’at appears as an adjective, the word occurs in the following passages in the Kūrān in the first of these meanings: xvi. 116: "He has forbidden you ma’at blood, pork, and that over which another than Allah has been invoked; if however anyone is forced (to eat these) without wishing to transgress or sin, Allah is merciful and indulgent" (of the third Meccan period, since vi. 119 may refer to this context and the appearance of the same exception for cases of coercion in vi. 146 [cf. below] is then only easily explained in view of the whole trend of the passage, if there were an earlier passage, namely xvi. 115, given full justification; cf. Nöldeke-Schwearl, Geschichte des Koran, i. 146 sq.); Grimm, Mohammad, ii. 26 transfers the whole Sūra to the later Meccan period); vi. 140, 149: "They have said: 'What is in the womb of this cattle belongs to the males, and is forbidden to our females'; but if it is ma’at (still born), all have a share in it.... Say: I find in what is revealed to me nothing forbidden, which must not be eaten, except it be ma’at or congealed blood or pork — for this is filth — or a slaughter at which another than Allah is invoked, but if anyone is forced (to eat it) without wishing to commit a transgression or sin, thy heart is merciful and indulgent" (of the third Meccan period); cf. Nöldeke-Schwearl, i. 161; Grimm, ii. 26); ii. 168: "He has forbidden you ma’at blood, pork, and that at which another than Allah is invoked but if anyone is forced (to eat it) without wishing to commit a sin or transgression, it is not reckoned as a sin against him; Allah is merciful and indulgent" (of the year 2 of the Hijra, before the battle of Badr; cf. Nöldeke-Schwearl, i. 178; Grimm, ii. 27): v. 4, 5: "Forbidden to you is ma’at, blood, pork, at which another than Allah is invoked, and which has been strangled, killed by a blow or a fall, or by the horns (of another beast), that which has been eaten with wild beasts — with the exception of that which is made pure — and that which hath been sacrificed to idols.... But if anyone in this hunger is forced to eat of them without wishing to commit a sin, Allah is merciful and indulgent" (in all probability revealed after the victorious pilgrimage of the year 10; cf. Nöldeke-Schwearl, i. 227 ff.; Grimm, ii. 38 dates the Sūra to the year 97).

It is quite evident from Sūra vi. 140 that the ma’at was of some significance for the Meccans in the many laws about food and which Arab paganism was acquainted (cf. Wellhausen, Religionsgeschichte, 2nd ed., p. 168 sq.). Although it is no longer possible to define exactly the part it played (even the statements recorded by Tabari from the earliest interpreters of this passage, which moreover only refers to a detail, reveal the complete disappearance of any reliable tradition), it may be assumed without misgiving that the Kūrānic prohibition contained a corresponding pre-Islamic prohibition, although it perhaps modified it. Both go back to the religious reluctance to consume the blood of animals, and indeed in all the Kūrānic passages quoted, blood is mentioned alongside ma’at. It is unnecessary to assume that Muhammad was influenced by Judaism on this point and the suggestion may be rejected especially as the prohibition in its stereotyped form occurs again in Sūra ii. 168 just at the time of vigorous reaction against Judaism and Sūra vi. 147 (Madinness, s
late insertion) which contrasts the prohibition of maita etc. with the Jewish laws relating to food.
What Muhammad understood by maita, he tells us himself in the latest passage dealing with it, v. 4: in the second half of the verse the principal kinds of maita are given (with the exception of the animal that dies of disease), which had already been mentioned in general terms; the commentators were thus able to interpret the single cases given as examples wrongly as different from the maita proper. The purification (in the Kur'an only mentioned in this passage) must mean ritual slaughter, by which, even if done at the last moment, the animal does not become maita but can be eaten.

These prescriptions of the Kur'an are further developed in the Traditions. According to the latter, it is forbidden to trade in maita or more accurately its edible parts; some traditions (mainly on the authority of Amin b. Hambal) even forbid any use being made of all that comes from maita; others again expressly permit the use of hides of maita. An exception from the prohibition of maita is made in the cases of fish and locusts; these are in general considered as the two kinds of animals that are permitted, i.e. no ritual slaughter is demanded in their case (because they have no "blood", cf. above). While some traditions, extending this permission by the earliest hujj, say that all creatures of the sea, not only fishes, can be eaten without ritual slaughter, including even sea-fowl (in this case it is said that "the sea has performed the ritual slaughter"), others limit the permission to those animals and fishes which the sea casts up on the land or the tide leaves behind in contrast to those which swim about on the water. But there is also quoted a saying of Abu Bakr expressly declaring what swims on the surface to be permitted. In this connection we have the story of a monster cast up by the sea (sometimes described as a fish) which (as a Muslim army under the leadership of Abu Ubida when they were in dire straits; but in this tradition and in the interpretation that has been given it (that it is the only ate of it out of hunger i.e. took advantage of the Kur'anic permission for cases of need) is clearly reflected the uncertainty that prevailed about such questions as were on the border line. In the Traditions, we find it first laid down that portions cut out of living animals are also considered maita. The way is at least paved for the declaration that all forbidden animal-dishes are maita. The regulations found in the Kur'an appear again here, e.g. the permission to eat maita in case of need and star for properly eating animals at the moment to prevent them becoming maita.

Some traditions handed down through Hanbalid from Ibrāhim al-Najahī bring us to a somewhat late period (in the Kitāb al-Ādār): one says that of the creatures of the sea only fishes can be eaten; another, which is found in two versions, limits the permission to what is thrown up by the sea or left behind by the tide; ritual slaughter is not demanded in this case. The question whether the embryo of a slaughtered dam requires a special purification i.e. ritual slaughter, is raised in one tradition and decided in the affirmative.

The most important regulations of Muslim law about maita, which express the last stage of development are as follows: It is unambiguously agreed that maita in the legal sense is impure and "forbidden" (karaːm) i.e. cannot be eaten and also that fish are exceptions to this; the Malikis and Hanbalis also except the majority of creatures of the sea, and according to the more correct Shi'is view, this applies to all marine creatures (the Hanbalis here hold the opinion of Ibrahim al-Najahī, except that the two ideas of "thrown up" and "swimming on the surface" are later overlaid and destroyed by the term extent synonymous "slain by another cause", "died of itself"). The edible parts of maita are also maita, as are the bones, hair etc. among the Shi'is, but not the Hanbalis, and among the Malikis only the bones; the hide when tanned, is considered pure and may be used. Emergency slaughter (dhabar or hikāy; ritual slaughter in general is dhabar or mayr) is according to the Hanbalis and the better known view of the Shi'is (also according to al-Zuhri) permitted, even if the animal will certainly die, provided it still shows signs of life at the moment of slaughter. According to the view predominant among the Malikis, such slaughter is not valid and the animal becomes maita (in contrast to Makk's own view). The question of the embryo (cf. above) is answered in the affirmative by the Hanbalis, following Ibrahim al-Najahī and Abu Hanifa (al-Shāhīd himself held for the Malikis view, to be mentioned immediately) but in the negative by the Malikis and Shi'is (in this case it is said that "the ritual slaughter of the dam is also the ritual slaughter of the embryo") except that the Malikis made it a condition that the embryo should be fully developed (Makk himself also demanded its slaughter "to draw the blood from it" in the case where the embryo had been dropped). That anyone who is forced to eat maita may do so, is the unanimous opinion; only on the questions whether one is bound to eat maita to save his life, whether he should satisfy his hunger completely, or only eat the minimum to keep life alive etc., there is a difference of opinion. The Shi'is and Hanbalis further demand that one should not have been brought to these straits through illegal action (a different interpretation of the Kur'anic regulations).

A clear definition of maita and its distinction from other kinds of forbidden animal foods was never reached. Sometimes it is separated on the authority of the Kur'anic passage itself from its own 4 subdivisions given in Surat s. Sometimes its validity is extended over extensive allied fields. As is evident from the Fikhip books, this terminological uncertainty has not infrequently caused still further confusion in the discussion of differences of opinion.

Bibliography: Lane, Ar-Engr. Lexikon, R. V.; the books of Hadith and Fikhip; Wenasik, Handbook of Early Muhammadan Tradition, s. v.; Juynib, Hümeyth 1: 45, s. v. Mehmudanise, Werke, p. 169 sq. (J. Schalch): MAIYAFAŘIKIN, a town in the north-east of Diyarbakr (q.v.). The other Muhammadan forms of the name are Mafarín, Mafārīn, Mafārīn (whence the name of origin al-Farīk) etc. The town is called in Greek Martyropolis, in Syrian Mphetepē, in Armenian Nhpkrēt (later Mhakhn, Mphargn). According to Yâkūt, iv, 703, the old name of the town was Mafarārīn (read *maita nh ālakā in Armenian, "town of the martyrs"). On the identification of Tigranocerta with Māyāfaṛikīn see below.
Geography. The town lies to the south of the little range of the Harez which rises like the first tier of the amphitheatre of the mountains, the higher parts of which consist of the summits (Darkkash, Antok) rising to the south of Mshgh and separating the course of the eastern Euphrates (Muridz-cai) from those of the Tigris and its left bank tributaries.

Maiyafarikin lies 25 miles north of the Tigris and 12 west of the Batman-ku. It is watered by a little river (now called the Farkin-su) which flows into the Batman-ku 12 miles to the southeast, an important left bank tributary of the Tigris which drains the wild and mountainous country south of Mshgh (the cantons of Kulp and Shaghn). The old names of the Batman-ku are Nicephorius (Roman period), Nymphios (Byzantine period), Syriac Kallath, Arabic Sattadam (a word of Aramaic origin transcribed Shithithma in Armenian and explained as “drinker of blood”); Roman. Geog. of the seventh century, Marquart, Erzahlung, p. 161), Armenian Khallir and perhaps Manuqht (Faustus of Byzantium). Some of these identifications, as we shall see, are still uncertain.

Maiyafarikin is the meeting-place of a number of roads from the north following the different streams which go to form the Batman-ku: 1. Cabakhdiq (on the Murudz-cai-Dhul-I-Karram-Lidje-Boishat-Maiyafarikin, 2. Mshgh-Kulp-Peir'in-Maiyafarikin, 3. Mshgh-Koht-Tingirt (Shaghn) Maiyafarikin. Routes 3 and 4 passing Shaghn are still little known. The distance between Deyrakask and Maiyafarikin is about 45 miles. The old road Deyrakask-Bittis, which used to run through Maiyafarikin, now runs farther south and crosses the Batman-ku south of Almasdin (Deyrakask-Sinad-Zek-Weisicharni-Bittis).

Maiyafarikin has thus lost the advantage of being a stage on the road between Armenia and upper Mesopotamia. Since 1260 it has no longer been a political centre around which gravitated the interests of the country around. It retains only its importance as a market for the produce of the mountainous and pastoral country drained by the Batman-ku.

Ancient History. The mountains to the northeast of Maiyafarikin have long sheltered the remnants of ancient aboriginal peoples. About 600 A.D. Georgius Cyprius (ed. Geiser, p. 48), mentions the Khoshtalai and Sanansoontai there who gave their names to the districts of Koht and Shaghn. Marquart (1916) supposes there are elements of the aboriginal language in names like M-pher-ku and „M-mshgh-ku which are, he says, formed with Caucasion (“Zid-kaukaisch”) prefixes. According to tradition (Yukti, iv, 703), the founder of Martopoly, Martush b. Laytish, was the son of a woman of the mountains, and Marquart sees in Laytish a mutilated form of the name of the people Urug (Hansel Amerogo, 1915, p. 96; 1916, p. 123). The Marzndk Abul Nasr was married to the daughter of Sangerab, lord of the Khoshtalai, cf. Amudrez, on J.R.A.S., 1913; Lehmann-Haupt thinks he can recognize at Maiyafarikin traces of an ancient Assyrian settlement, “eins von Haus aus assyrische Anlage” (Armenien, i, 360, 398).

Tigranocerta = Maiyafarikin (1). As early as 1258 von Moltke had suggested that Maiyafarikin was the ancient Tigranocerta i.e. the new capital founded by Tigranes II about 80 B.C., which was taken by Lucullus after the victory won on the banks of the Nicephorius (Oct. 6, 69 B.C.) and again in the reign of Nero by the legate Corbulus (63 A.D.); it is regularly mentioned down to the middle of the fourth century A.D. Other scholars had sought Tigranocerta at Sirt (d'Anville), Arzun (H. Kiepert, 1873), near Keft-Djiha (Kiepert 1875), at Tell-Armen west of Nisibin (E. Saebus; cf. Dunasier) etc. Late Armenian tradition gives the name Tigranocerta to Deyrakask. Moltke's idea was taken up vigorously by Lehmann-Haupt and W. Belck, after their expedition to Armenia in 1898-99.

On the north wall of Maiyafarikin is a mutilated Greek inscription. It was deciphered and published by Lehmann-Haupt, who attributes it to the Armenian King Pap (369-374), which is quite in keeping with the known facts of the reign of this monarch. In spite of his criticism of the details of Lehmann-Haupt's hypothesis, Marquart (1916) has rather corroborated him by bringing forward new considerations.

In view of the many contradictions found in the classical sources regarding Tigranocerta the question comes to be, if Maiyafarikin is not Tigranocerta, what other unknown town existed here in the time of Pap, unless the stones on which the inscription is engraved and which are now hopelessly disarranged (“in hellosor Verwirrung”) were brought from another place when Martyropolis was being built?

The main objection to the identification of Tigranocerta with Maiyafarikin is that, according to Eutropius, vi. 9, and Faustus, v. 24, Tigranocerta was in Arzunene (Ardzunikh); on the other hand, the river Manuqht seems to have formed in the fourth century the western frontier of this latter province. From this fact (Halbschmied, Die allarmen. Ortsnamen, Indogerman. Forsch., 1904, p. 475-475), it seems that Tigranocerta ought to be placed east of the Batman-ku if this river is identical with the Manuqht. This last name was connected by Marquart with the name al-Musiliya, which Maqaddast, p. 144, gives to one of the tributaries of the Tigris (on the left bank) and apparently corresponding to the Batman-ku. [A district of Musiliya (?) still exists farther east on the upper course of the Birti-cai, in the area of the ancient possessions of the Barik Musili (for: Ksawri, in Yekud, ii. 551-552].

To reconcile the statements of Faustus, iv. 24 and 27, with the position of Maiyafarikin (12 miles W. of the Batman-ku), Marquart proposes to identify the Manuqht = Nicephorius with the Farkin-su while the Musiliya would be applied to the whole system of the Batman-ku (Nymphios, Sattadam etc.). The insignificance of the Farkin-su, which rises in the hills about 3 miles north of Maiyafarikin (Dhul al-Azraq, calls its source Ra'a al-Ain; the Lakiin-nam, p. 437: 'Ain al-Hawj) does not suit the description of the hermitage of Mambri, which, according to Faustus, must have been on the right bank, makes Marquart's hypothesis less attractive. If finally we consider the position of Maiyafarikin from the point of view of the interests of Tigranes, one is forced to admit that against an enemy coming from the west (Lucullus') Tigranocerta = Maiyafarikin was devoid of natural defences, while in the event of an enemy coming from the east it ran the risk of being easily cut off from Armenia on the main road from Birti (the ancient Kastabz Birit'elzw, cf. Tomaschek,
The site is said to have been founded on the site of a "large village" (şarva 'eine) by the bishop Mariṭši, who had obtained the authority of Vardank I of Persia to do so. This ecclesial flourished between c. 583 and 420 (see C. Marquet, op. cit., p. 91-92, 125). The town of Martyropolis to which Mariṭši brought the remains of the Christian martyrs of Persia is mentioned for the first time in 410. The etymology of the Syrian name Mifberk is uncertain (cf. above). In Armenian the town is mentioned for the first time in the Geography of the viith century as Nphr kert (once Nphrèt).

By the peace of 397 with Diodetian, the province of Sophene, within which Martyropolis lay, had become part of the Roman empire. Even after the disastrous peace made by Jovian of 363, Sophene remained to the Emperor, and under theodosius II (401-450), the new town sustained quite near the frontier, acquired considerable importance and became the capital of Sophene (as Great Tsopkh). The town was still insufficiently fortified and it was the Sasanian Kawağh b. Përōz seized it and carried the inhabitants off to Khusistān where they were gathered for the town of Abar-Kobağh (Yakūt, iv, 707) (cf. Amīch-Kawād = Arraqūn; cf. Marquet, Erāšarak, p. 41, 307). Anastasius began the fortification of Martyropolis but Justinian, after his accession (527), was the first to reorganise completely the eastern frontier between Dērzā and Trebîzond. Martyropolis, the headquarters of a commander under the strategos of Theodosiopolis (Erzerum), became one of the most important military centres. From the beginning of the 6th century, the urban development of the town continued, and it became a centre of trade and commerce. In 589 the town fell into the hands of the Sasanians but in 591 came back to the Byzantines in return for the support given by the Emperor Maurice to Khusraw II. Heraclius held it till the year 18 (59) (Yakūt, l.c.). [The date is not given in Muqāt, Chronogr. bar., l.c.]

The vicasituation of Martyropolis probably explain the fact that in the Armenian Geography of the seventh century (ed. Patkanow, trans., p. 45; Marquet, Erāšarak, p. 18 and 161) the Persian province of Abznikār (Arranēnē) is separated from Tsopkh (Sophene) by the line of the Khatišt (Baştān-ç, while in the description of parts of Armenia Nphret (= Npherkert) figures as one of the 10 cantons of Arranēnē.

Christian legend as preserved by Mān Atrak and Yalūk gives very full details of the building of the town in the time of Mār Mārûkh: the arches (fēnām) of the walls in which the remains of the martyrs were placed, the eight gates of the town, the names of which are carefully recorded, the convent of SS. Peter and Paul, the buildings erected by the three ministers of the Byzantine emperor, each of whom built a tower and a church. There is still to be seen in Mayfârîkîn the remains of a magnificent basilica and of the Churh of the Virgin (al-'Adhrā'). Miss Gertrude L. Bell, who has studied these monuments, dates the basilica "not much later than the beginning of the fifth century", and suggests that the Church of the Virgin was one of the two built by Khusraw II in recognition of the assistance lent by Maurice; cf. Abu l-Faradî, Mkhâshar, ed. Pocock, p. 98.

Under Islam. In 13 (640) in the reign of the caliph Umar, Mayfârîkîn was taken by 'Abd al-Ghānim without a blow being struck (Balâqār, p. 175-6) and henceforth shared the lot of Diyarbakr.

The intermediate character of the position occupied by Mayfârîkîn puzzled Arab geographers. Ibn Rusta, p. 106, puts the town in Djêydar and the others (Ibn Hawqal, p. 246) regard it as belonging to Armenia. According to these authors, Mayfârîkîn was a little fortified town having an unhealthy climate on account of the stagnant water but not without its amenities (Isqārāt, p. 76); Ibn Hawqal, p. 131, 131, 132; Muṣnaṣṣat, p. 54). The region (gyqāʾ as-bālā) of Mayfârîkîn and Aras in the time of Ibn Hawqal was however entirely depopulated.

The Hamdānids and the Buīyids. Mayfârîkîn formed part of the territory of the Hamdânids (q.v., 317-394). They built a castle (bāṣ) there near the gate Bāb al-Farâbawī, the gate (Yalūk); its ruins are apparently mentioned by Ewīya (1655), iv, 71-4 under the name Saif al-Dawla Sarayāt. The Bāb al-Mulân gate also dates from Saif al-Dawla (333-356). This prince was buried at Mayfârîkîn; cf. al-Qāmīs, p. 437. In 352, Naṣr, a client of the Hamdānids, rebelled in Mayfârîkîn. In 362 (July 4, 973) Hībat Allāh b. Naṣr al-Dawla defeated the Byzantines in the vicinity of the town.

In 367 (978) the Buīyids Aẓūd al-Dawla disposed the Hamdânids who had supported his cousin Bakhtyâr and in 368 Abu l-Wâfi, a general of Aẓūd al-Dawla, took Mayfârîkîn (Ibn Miskawich, ed. Amorosi, ii, 199, 266, 314, 384).

The Marvânids dynasty. After the death of Aẓūd al-Dawla (374), Mayfârîkîn and the rest of Diyarbakr fell into the power of the Kurf Bādī (cf. KURDISCH and MAWĀNID) who had the Dailami garrison of Mayfârîkîn massacred and was able to defend what he held against the Buīyīd Şamshān al-Dawla, who had meanwhile returned to Mawāl. After the death of Bādī, his nephew, Abu Allā Ḥasan b. Marwān, established himself in Mayfârîkîn and for a century this town remained the capital of the Marvânids (350-479 and again in 586). In 384 the governor Mammûz, appointed by Abu Allā, succeeded in checking the turbulence of the inhabitants who had been incited by Hamdânī lullabies. There is an inscription of Mumahhid
al-Dawla dated 391 (1000) on the wall of the town. In 520 an 'Alid pretender again stirred up trouble in Maysafirin. In 401 after the assassination of Mumahid al-Dawla, his murdered Sharwa, son of Mammil, with the help of his Georgian guards seized Maysafirin but Saliq Abi 'Nasr came from Aran and began his long and brilliant reign (401-453).

A fine castle decorated with gilding was built in 403 on the little hill on which stood the convent and sanctuary of the Virgin. This Christian sanctuary (the connection of which with the al-'Aqṣā mosque is not quite clear, cf. above) was transferred to the Melkite church. Later they built a hospital, a mosque with a clock (houalla < Pers. ʿānqā) and baths. Water was led to all the town from the spring of Raʾs al-Ain. A palace was built on the banks of the Sīrādah (Baṣāma-ūn) and the water was raised to it from the river by a noria. A bridge spanned the river Hawr (Hasā). A well frequented by Saliq Abi 'Nasr al-Munṣi endowed the mosque (mouk) at Maysafirin with a library. A fort was built to protect the town against the Sasanian (people of al-Sāʿūn).

This list from Ibn 'Abd al-Aziz is supplemented by the statements of Nāṣir-i Khwāzūm, who visited the town under Abi 'Nasr on the 6th Djamād 2 (438). The Persian traveller speaks of walls, built of huge blocks of white stone (Ibn Miskawī, ii. 354: “strong walls of black stone”; Lehmann-Haupt: “gelbhüttener Kalkstein”), the western gate all of iron, the Friday mosque, the water-channels passing before each house (one uncovered with drinking water and the other covered serving as a sewer). Outside the town were the caravanserais, the hot baths, and a second covered mosque. To the north of the town was the suburb of Muhāsah, also with a Friday mosque and baths. A distance of a farsāk from the town (on the bank of the Sīrādah) was a new little town called Naṣīfīn built by the emir then reigning.

After the death of Abi 'Nasr, who was buried in the town, the Sālijūq began to interfere in the affairs of Maysafirin. In 438 Sallās Khurāsānī sent by Tughrīh arrived before the town with 5,000 horsemen. In 463 it was visited by the celebrated Nāṣir al-Mulk. In 478 by orders of Malik Shāh the former vizier of the Mawāsids, Ibn Ḫūshir, besieged the capital of his masters, which surrendered in Djamād 2 (478). The treasures of the Mawāsids valued at 4,000,000 dinars were carried off by Ibn Ḫūshir. In 482, 'Aḍī al-Dawla, son of Ibn Ḫūshir, was appointed governor of Maysafirin. After the death of Malik-shāh (485), the Mawāsids Naṣir al-Dawla succeeded in re-entering Maysafirin, but the Sālijūq Tugāt of Syria took the town in Rabīʿ I 486; cf. Ibn Arāj in Amurād, J. E.A.S., 1903. In 534 (Ibn al-Albhī, ii. 435) the last representatives of the Mawāsids family disappeared from the neighbourhood of Maysafirin.

The Ţūrijīs and the Ayyūbīs. In 575 (1181) the Sālijūq Sultan Mahmūd added to the possessions of II-Ghāzī, founder of the line of Ţūrijīs of Mosul, the lord of Maysafirin, to which II-Ghāzī appointed his son Salmān (516-518); cf. Abu'l Faradj, ed. Pocock, p. 249 and Kāmil Fardī, Mawāsids Mūsāt-ī Ţūrijīs [Arabic] (Istanbul, 1913) (written in 942-4357), ed. Al-'Amīr ʿEmīrī, Constantinople 1331, p. 20. Six successive Ţūrijīs ruled Maysafirin till 589 (1184). In 587 (1191) the last Ortukīd Yūmān Arādnī again seized the town and held it for a time.

In 581 the Ayyūbīs had become masters of Maysafirin and held it till 638 (1240). Sālijūq al-Dīn built a mosque there for which the columns of the Byzantine basilica were used (Gertrude L. Bell, op. cit., Pl. xl.). Maysafirin had a mint under the Ayyūbīs: the coins which they struck (dated 591, 599, 600, 614, 618) bear curious human figures which are portraits of symbolical personages (Ghilâb Bāhmūn, Catalogue de monnaies turcomanes, tl. vii. n.s., Constantinople, 1894, p. 439-467; S. Lane-Poole, Catalogue of Oriental Coins in the British Museum, vol. iv., p. 355; see vol. iii., p. 24 for a Marāwīd coin of this mint). On the walls of the town are inscriptions of the following Ayyūbīs: Aḥmad Naṣīm al-Ayyūbī (of 600 a.d.), Malik Aḥmad Mīsīr (607-617), Malik Mūṣṭafā Ghāzī (623), Malik Kāmil Maḥmūd (654). A complete list of rulers at Maysafirin from 315 to 658 prepared by van Berchem is given in the appendix to Lehmann-Haupt, Materialien, p. 134.

The Mongols. In 659 (1261) the Ayyūbī Shāhī al-Dīn Ghāzī had received the summons from the Mongol Khātān to submit and raise the tribute of the town but gave an evasive answer. In 660 (1262) the Mongols occupied the country round Maysafirin. During Hūlagū's expedition to Syria in 668 (1270) the army of the prince Vaghnāt besieged Maysafirin which was defended with great bravery by Malik al-Kāmil. The blockade produced a terrible famine in the town which was forced to surrender. Only 70 of the defenders survived. Kāmil put to death in cruel fashion and his head carried on the point of a lance through the streets of Damascus (Rashīd al-Dīn ed. Quatremère, p. 330-331, 350-375; d'Ohsnow, Histoire des Mongols, iii. 354). Before his death, in 662 (1264), Hūlagū gave the district of Dīyarbakr to his general Tuḥān (cf. above), three years later, Aḥṣā al-Tawfīq al-Maysafīrī to his father's widow, Kūsāy-Khatun. Maysafirin later lost its independence and henceforth shared the lot of Dīyarbakr [q.v.]

In 706 during Timūr's stay at Mārḍīn, a number of Maliks including those of Aram (Ar'i) and Baṭmīn came to pay him homage but the Zafār-nīmā (I. 665) does not mention the lord of Maysafirin. After the conquest of Dīyarbakr, Timūr on his way to Māt in took the road via Maysafirin (ibid., I. 685) and Śewān (the name of a summit in al-Sūrī east of al-Antak). This march is the only example of a considerable force following the direct road Maysafirīn-Mughān.

The Saławīds and the Ottomans. Our information about the rule of the Turkish dynasty ( Kara-Koyunlu and Al-Koyunlu) in the region of Dīyarbakr is still very deficient. In pursuit of his campaign against the last Al-Koyunlu Murād, Shāh Ismāʿīl I Saławī in 915 occupied all the region of Dīyarbakr, the government of which was entrusted to Khān Maḥmūd Ustālūj (Shahrnūb, I. 408; 'Alamü-arūṣ, p. 23-25). The defeat at Cālīfān produced risings against the Persians throughout Kurdistan. The Kurd chief Saliy Ahmad Beg Rāzākī seized Maysafirīn and at Aṭāk (Hārnāh, cf. the Karšūr Arzāxī of Georgios Cyprus), Maysafirīn passed definitely under Ottoman rule after the battle (941) of Koc-Ḥūr (south of Mārḍīn) in which the Persian general Kara-Khān was defeated (von Hammer, G.O.B.S., i. 731-741).
Köpr. 1344, fol. 212v—315v, upon which Ibn 'Abd Rabbihi in Ḥid al-Farādī (Cairo 1305), I. 380 sqq. and al-Ṭarīqī, Siyar al-Mulūb (Buitrago 1289), p. 32 sqq. have again drawn. The word 'Dhikra' came to have the more general meaning of lecture, e.g. in Mas'dī, Marājī al-Dhahab (ed. Paris), v. 431, and perhaps also Dhibis, K. al-Bukhārī, p. 212, 17, where it appears along with poetry, proverbs and tales of battles as an essential element in Arab education. In the third century A.D., however, the word began to sink from this higher sphere; it became the name for a beggar's appeal, which had to be framed in carefully chosen language, more the literary training of the adhā, once a privilege of court circles, became disseminated among the people; an example of these appeals is preserved by Dhibis in Bahāʾī, K. al-Makāmān wa l-Maṣāḥiḥ (ed. Schwally), p. 513 sqq. The appeals of beggars seem to have paved the way for the literary genre proper (cf. A. Masʿūd, ʿAlī al-Kāẓim, p. xxii/xxiv). This owes its existence to Hamadhānī [q. v.]. He created a typical representative of this literary Bohemianism to which he himself belonged, which entered upon the inheritance of the adhā poets of the early days of Islam, like al-Ḥujjat. The very witty execution of the constantly changing part of his hero Abū l-Fath al-Iṣkandārī and from the point of view of form the adoption for his tales of rhymed prose, which was already beginning to dominate the finer style of letter-writing, are the two special characteristics of Hamadhānī's work. To the hero himself, too, he gave the person of a narrator, ʿIṣa b. Ḥājīm, who sometimes appears instead in the role of a trickster, as in makāmā 12. In the 7th also — one of the poorest of the way — in which a certain Ḥusayn b. Badr al-Faṣ Finite records a, i.e. have found in Dhuʾl-Rawāni, the principal hero takes no part. Six of these stories are only intended to glorify his patron, Kahlāf b. Abal-Rahem ruler of Sudjātan, to whom as Marguoiloth supposes (cf. fumajūlī) the whole collection was dedicated. Sometimes he only uses the makāmā form to give expression to his own views on literary questions, e.g. for example, in the first on ancient and modern poets, in the fourteenth on the masters of prose, al-Dhibis and Ibn al-Muṣṭafā in the 25th makāmā, another in which al-Iṣkandārī does not appear, he puts his polemic against the Muʿāṭīla in the mouth of a madman. He does not always make al-Iṣkandārī appear as a rogue but in the 45th makāmā he displays a knowledge of the world which is quite innocent of guilt. No. 26 (Syrian, lacking in the Baritt edition) and 31 (the Rusafī, incomplete in the Hāriri edition) contain specimens of erotic language and cant-language; of purely lexicographical interest is makāmā 30, edited and elucidated by Alward in Chahif al-Alonga, I. 555 sqq., which also with a competition instituted by Saif al-Dawla for the best description of a horse. The last (No. 52 in the Hāriri edition) is of quite another character and has only the rhymed prose in common with the makāmā proper; it is on this account classed with nine other anecdotes as makāmā in the Stambuł edition and put in an appendix.

How far al-Ḥāfiz's statement quoted above, a.v. Hamadhānī, that al-Hamadhānī got the idea from Ibn Daniūl's Ārābātī is true cannot be ascertained as this work has not survived. In any case he is entitled to the credit of having created a new literary form, which might have proved very fertile in Arabic literature which is not exactly rich in forms. It is perhaps impossible to appreciate his talent fully if we may believe the tradition that the 53 specimens that have survived to us and which were apparently all that were known to al-Ḥariri represent only about an eighth of his whole output. His contemporaries and immediate successors were however not able to follow him on the path he had indicated. One only of his contemporaries, the court poet of Saif al-Dawla, Abū Naṣr, Abū ʿAbd al-Aʿīs b. ʿUmar al-Saʿdī († 405—939), has left us a makāmā (Alward, Vers. der ar, Händschr. Berlin, in No. 8536). Not till a century later do Ibn ʿAbd al-Ghaffār and al-Ḥarīrī again take up the form created by him. The former (Abu ʿĪsā al-Ḥāfiz Abī Aḥūf, Abhū al-Bāhlā Alī Muhammad b. Ḥusayn b. 15th Dhu ʿl-Ḥaḍa[1] (March 12, 1020) in Baghāh, d. 4 Muḥarram 485 (Febr. 15, 1021), of whose other poetical and philological work nothing has come down to us, does not keep strictly to the model created by al-Hamadhānī in the nine makāmās preserved in a Stambul MS. (Fātāl 4097; M.O., vii. 112) as much as he does not have one hero all through and also introduces various persons as narrators, but the main point is the polished form, in which he tells his story otherwise remarkable stories (cf. Ch. Huard, Les dōars d'ʿAlī Nūyī, T. A., ser. 10, vol. xi., 1908, p. 453—454, and the edition by O. Rescher, in Beiträge zur Magusus-Literatur, Heft 4, Stambul 1914, 125—153). It is not till al-Ḥarīrī [q. v.] that the makāmā revives as such. In the latter at the same time considerably limited its subject matter in such a way as to make the anecdotes recorded by al-Ḥarīrī b. Ḥammān centre round a hero, Abū Zeid of Sārinj, and relates the adventures of this Bohemian, whose wit is never at a loss and who is able to meet all difficulties, in a style sparkling with wit and full of all the tricks of language. That he owed the stimulus to his work to an encounter with a real tramp may be legend; al-Subkī, Taḥāṣī al-Shaykhī (1926, in Ibn Tarnūgbīrī, iii. 23), says he was a Bashār al-Maguerī (Ibn Tarnūgbīrī says al-Manṣurī) b. Sallār (cf. D. Damās, Le hēros des maganīn de Harīrī, Abū Zeid de Senūjī, Algiers 1917). The story at least may be quite true that the Makāmā al-Harāmīya said to be inspired by this meeting was the first of its kind. In any case Ḥarīrī's tricks of rhetoric (cf. the analysis in Crussard, Études sur les dōars de H., Paris 1923) so overshadowed his subject matter in the eyes of later generations that henceforth the form became the essential characteristic of the literary genre, and it could be used to cover the crudest variety of material, as in later generations it became the characteristic literary genre, and it could be used to cover the crudest variety of matter. Al-Qanārī (d. 505 = 1111) and Abū ʿAbd al-ʿAzīz al-Samʿānī (d. 505 = 1117) in their Makāmāh al-ʿUṣnān bāna yadda al-Kaḥfī (Alward, Vers. der Hafs, Berlin 4537, 1) and Makāmāh al-ʿUṣnān bāna yadda al-Kaḥfī (Balādī Khafifa, N. 147a) attempt to go back to the original form. But the Spanish Almār al-Tāhir Muhammad b. Yūsuf al-Anjūkāna (d. 535 = 1143) in Cordovero's version gives us a makāmā to have come nearer to Harīrī in his Makāmāh al-Qaṣrānīyya (in Stambul, Lalliet, N. 1928, 1923). He also set himself the classical number of 50. Al-Zamakhi (d. 538 = 1143) on the other hand disregards
such affinity; his makāmās are simply moral admonitions and like their counterparts the Nusḥātā al-ˤAlamī and the Aḥqāq al-Dhakhīr, are intended to be appreciated mainly as tours-de-force of rhetoric (cf., for ed. Berlin, 1345). But the translation by Lechler, in Beltrana sur Maqāmāt-Litteratur, Heft 6, Greifswald 1891, whether the Maqāmāt al-ʕāliyā of Shihāb al-Dīn al-Suhrawardi (d. 587 = 1191), which deal with mystic terminology (cf. Cat. of MSS. Brit. Mus., No. 1349, 23), belong to this class at all is doubtful. On the other hand, the Maqāmāt al-Dīwānīyāh fi ˤal-Mašrīq al-ʕāliyā (Leyden, No. 426, Cambridge, No. 1098, Escurial, Dérenburg, No. 542), which the author Ibn al-Dajwīzī (d. 597 = 1200) himself provided with a lexicographical commentary, are certainly modelled on those of Ḥarīrī. The al-Maṣḥūmāt al-Maḥfūzāt of the Christian physician Abu ʿl-:selected text here, def., p. 551) definitely prefers to be a single imitation of the latter; they have a hero and a narrator but the subject matter is varied, usually of a learned and technical nature (cf. Flügel, Verz. der Hist. Wtsch, No. 384). To the end of the sixth century A.H. it seems to belong to Abu ʿl-ʾAlāʾ Ahmad b. Abī Bakr b. Abī al-ʾAlawi al-Ḥasanī who dedicated 30 makāmās to the chief ʿṣīlī Muhīl al-Dīn ʿAbd al-Ḥamīd Muhammad b. Muhammad b. al-ʾAlawi al-Shāhrazūrī (not the same as mentioned in Ibn Khallīkān, Rūyāt 1399, l. 597). The only indication of his date is the mention of the Ḥājīr of Shirwān (51:1); this title was first borne by Maḥmūd II, about 550 A.H. (cf. iv., p. 384). His aim is to imitate Hamshābī and Ḥarīrī but to use simpler language. Like them he introduces his hero and a narrator and is fond of elaborate descriptions, frequently dropping into the obscene; a number of the makāmās go together in pairs, the one being complementary to the other (cf. the edition in O. Rescher, Der Tưibī sur Maqāmāt-Litteratur, Heft 4, p. 1—115). Of the eighth century A.H. we only need mention an imitation of Ḥarīrī's makāmās, 50 in number, dedicated to the family of Dīwānī (cf. its Tārīkh al-Ẓāḥib, ed. Mīrā Mūḥammad G. M. S. xvi, l. iii., note 2) by Shams al-Dīn Maʿādhī (Maḥmūdī) b. Naṣr al-Ḥamīd b. al-ʾAlawi in 672 (1275) (Ḥājījī al-Khālīfī, No. 12709) entitled al-Maṣḥūmāt al-Zainīyāt (s. Brit. Mus., No. 669, 1403; Stambul, Nīr-i ʿOghmānīa, No. 4273). The Syrian Egyptian poet Mūḥammad b. ʿAlī al-Dīn al-Tashkisi al-Ẓāḥib al-Zarīl (d. 688 = 1289) applied the form in the field of love-poetry, sometimes with lascivious subject (Maṣḥūmāt al-ʿAlīyā, No. 3847). Fāṭḥū al-Maḥīṣī Makāḥāt al-Maḥīṣī and al-Maṣḥūmāt al-Hitiyā wa l-ʕāliyā, Ahlward, Ver. Hist. Berlin, No. 8594, 4: 5). These imitations become more numerous in the ninth century. In 730 (1339) ʿAbd al-Muṭṭāf al-ʾAlawi composed al-Maṣḥīmāt al-ʿAlīyā wa l-Qāḍīyā (tr. Tunis 1303, Les douze chants de Chérīz A. H. M. al-Maḥīṣir, publ. by M. Sullivan al-Harain, Paris 1828 [1853]). The form was occasionally used for religious subjects, e.g. by Abu ʿl-Fath Mūḥammad b. Sāyid al-Miṣr (d. 734 = 1334) in praise of the Prophet and his companions in al-Maṣḥīmāt al-ʿAlīyā fi l-Kāramāt al-ʕāliyā (s. Rosen, Neues sammlung al-Maṣḥūmāt ..., No. 225, 4: 4; St Petersburg, No. 126, No. 146, 42), for mysticism by Shams al-Dīn Mūḥammad b. ʿAlīm al-Dīnābādī (d. 747 = 1347) in al-Maṣḥīmāt al-ṣāḥīfāyā wa l-Tarbiyāt al-ʕāliyā, in number 50 (Cambridge 1102), and again for the panegyric in 749 (1349) by Zān al-Dīn ʿOmar b. al-Ẓāfīr in the makāmā on the plague of which he died in the same year entitled al-Naḥāj wa ʿl-Wahī (Ahlward, Berlin, No. 8550, probably identical with the maḳāmā which Shūrī put in his work on the plague). The maḳāmā was adopted for the panegyric by the Meccaḥī Abī ʿl-Nāṣr al-Ḥājīr in his al-Maṣḥīmāt al-ʿAlīyā wa l-Tarbiyāt al-ʿAlīyā in honour of the Manṣūrī Ṣāḥīb al-Ḥākīm (906-922 = 1500—1516; s. Persch, Verz. der Hist. Gotha, No. 4773). The great encyclopedist of the ninth century, al-Ṣūrī, naturally did not omit this form of composition, which he used with complete confidence for its traditional use to treat of subjects from the most varied branches of knowledge, religious as well as profane, e.g. the question of the fate of Muhāmmād's parents in the other world, the merits of different perfumes, flowers and fruits; nor did he hesitate to use it for obscene subjects (cf. the article ʿālīyā where the printed editions are given). His contemporary, the South Arabian Ẓāhid ʿIsābām b. Mūḥammad al-Ḥādīwī b. al-Warīr (d. 914 = 1508), used the maḳāmā for theological instruction in al-Maṣḥūmāt al-ṣāḥīfāyā wa l-ʕāliyā wa al-Ṣīqāh al-ḥādīwī (Leyden, No. 438; Brill-Ital., No. 67), as did Shūrī's rival Abī ʿl-Muṭṭāf b. Mūḥammad in laṣīāt al-Ṣādātī (d. 923 = 1517). The maḳāmā of the al-ʿArīsīyya (Stambul, Kūsūlī, No. 784). Even in the centuries when literature was at a low level, the ʿAlīyā and ʿAlīyā, the maḳāmā was still used for the most varied purposes. In 1078 (1667) Dājwīzī al-Dīn Abu ʿl-Fath b. Alawīn al-Kābrī composed a maḳāmā on the war then being waged by the lords of Bāṣṭ al-Husain, Pāsha and ʿAlī Pāsha, when he elucidates in the commentary Zāw ad-Maṣḥīmārī (Brīt. Mus., No. 1045—6, Bāghdād 1924), used by R. Mīnqūn in his History of Modern Bengal, p. 269—286; s. St. H. Longroiy, Four Centuries of Modern Iraq, Oxford 1925, p. 328). His compatriot Abī ʿl-Khāīr Abī ʿl-Raḥmān (d. 1300 = 1786) used the form to string together a series of old and new proverbs in a witty context (Maṣḥūmāt al-ʿAlīyā al-Siṣīrīa, Cairo, 1340, No. 1215) and the same in al-Maṣḥūmāt al-ʿAlīyā wa l-ʿAlīyā, Berlin, No. 8582—83). An imitation of the maḳāmā in 50 anecdotes, the scene of which is laid in India, of an Abu ʿl-Zafar al-Hindī al-Sīyāṣī, which al-Nāṣir b. Fāṭūb narrates was finished in 1228 (1715) by ʿAlī b. Abī Bakr b. Mūḥammad Bābdī al-ʿAlawī (lit. at the Māfī al-Ulm Press 1264 entitled al-Maṣḥūmāt al-Ḥasnāwī, 9. M. Hidayat al-Husnān, Catalogue raisonnable of the Süleimān Library, l. 459). Ḥarīrī himself had already allowed his art to degenerate to mere juggling with words, when he used in the Rūyāt al-Sīnāyā wa l-ʕāliyā, not included among the maḳāmās, in the columns of the words with ṣīn and in the other only those with ṣīn (just as a contemporary of Simonides had written a Greek hymn without a sigma in it, cf. Wilhelm, Kultur d. Gegenwart, i., lll. 49); also al-Ḥanāfī's maḳāmās contain such juggling with words; Abī ʿl-ʾAlāʾ b. ʿAbd al-Ḥārīm (d. 1184 = 1770) wrote al-Maṣḥūmāt al-Ṭahurātīyā wa l-ʕāliyā in which the words are arranged in pairs only distinguishable by their diacritical points.
Finally the metropolitan of Nisibī 'Abdihū (Ebodēghū) who died in 1318, composed in 1290–91 on Harṭī’s model 50 Syriac poems, religious and edifying in their subject matter in two parts, called after Etoch and Eblis, the artificial language of which he himself elucidated in a commentary in 1316 (the first half: Parādixūnā Edīnən sar Parādixūn Edīnin ₃ərəmən, ed. Gabriel Cardahl, Basle 1880).

(C. Brockelmann)
and asked Washam, the brother and successor of Māzdāwīd, to surrender the province to him which he did. Henceforth very friendly relations were established between them on the strength of which Māzin threw off the yoke of Bugāā. When Amir Naṣr b. Ahmad learnt this, he despatched Ahmad, the commander of the army of Khurān, against Māzin who was defeated after a desperate struggle of 7 months and forced to flee to Washam at Ra'y. Ahmad followed him thither, and defeated the combined forces of Māzin and Washam at Injīshkāh (near Ra'y) on 21st Rabī' 1, 329 (December 25, 949 a.d.). Māzin was shot in the head by an arrow and fell dead. His head was cut off and sent to Bukhārā.

**MAKARI. [See MAHARI.]

**MAKDISHŪ, a town in East Africa, on the shores of the Indian Ocean, capital of Italian Somaliland. Population 21,000. Setting aside the question of some ruins perhaps South-Arabian, Makdishū arose in the 5th century a.d. as an Arabian colony. The immigrations of the Arabs reached Makdishū in different times successively, and from different regions of the Arabian peninsula, the most remarkable one coming from al-Akhār on the Persian Gulf, probably during the struggles of the Caliphate with the Romans. Papyrus, at the same time also Persian groups emigrated to Makdishū; and even to-day some inscriptions which have been found in the town demonstrate that Persians from Sīrvān and Nakaḥlrā were dwelling there during the Middle Ages. These foreign merchants were, however, obliged to unite themselves politically against the nomadic (Somali) tribes that surrounded Makdishū on every side; and eventually against other invaders from the sea. Therefore a federation was concluded in the same 6th century a.d. and composed of thirty-nine clans: 12 from the Māziī tribe; 13 from the Ḍilāfī tribe; six from the 'Akbārī tribe; six from the 'Issālī and three from the 'Affī tribe. The trade was even more developed under such conditions of internal peace; then in the town the Māziī clans acquired a religious supremacy and, having adopted the Māziī, the 'Abbāsī 'Aqīfī, formed a kind of dynasty of 'Abūlāmī and obtained from the other tribes the privilege that the 'Abūlāmī of the federation should be elected only from among themselves.

But, in the second half of the 6th century, 'Abū Bakr b. Fakhr al-Dīn established in Makdishū a hereditary Sultānate with the aid of the Māziī clans whom the new Sultān recognized again the privilege of giving the Sultān to the town. During the reign of Shāhīk 'Abī Bakr b. 'Umar, in the year 1332 a.d., Makdishū was visited by Ibn Battīṭa, who described very carefully its conditions in his Rihla. Shāhīk 'Abī Bakr b. 'Umar was probably a Sultān from the family of 'Abū Bakr b. Fakhr al-Dīn; and under this dynasty Makdishū reached in the 15th century the highest degree of prosperity. Its name is quoted even in the *Maqṣūf ilā Mīrāf*, a book by the king of Abyssinia Zara' Ya'qūb, with reference to the battle fought by the same king against the Mussul- men at Gomut, December 23rd 1445 a.d. In the 16th century a.d. the dynasty of the Muzzafar succeeded to the dynasty of Fakhr al-Dīn. However, in the region of the Wēh Shābelī, viz. the true commercial hinterland of Makdishū, the Adhārān (Somali), who had constituted there another Sultānate friendly and allied with Makdishū, were defeated by the nomadic Ḥaẃī (Somali) who conquered that territory. Thus Makdishū was cut off by the Bedouins from the interior of the land and began to decline from its prosperity. The colonial enterprises of the Portuguese and the British in the Indian Ocean hastened even more this decadence. Vasco da Gama, when he came back from India in 1499 a.d., assailed unsuccessfully Makdishū with his squadron; and even Da Cunha in 1507 a.d. did not succeed in occupying the town. In 1532 a.d. Makdishū was visited by Dom Estevam da Gama, son of Vasco, who came there to build a ship. In December 5, 1700 a.d. a British squadron of men-of-war stopped threateningly before Makdishū but they did not land any force and after some days went away probably to India. During the wars between the Portuguese and the Ilam of 'Omn, Makdishū and other towns on the Somali coast were occupied by the soldiers of 'Ilam of Sultān 'Abūlāmī (died 1704); but after a little while the 'Ilam ordered his troops to come back to 'Omn.

In the meantime the Sultanate of Makdishū was practically finished; and the town divided in two quarters (Jama'a-Wes and Shangiī), each of them being inhabited by civil wars. The Somali had so penetrated, little by little, into the ancient Arabian town that the clans of Makdishū changed their Arabic names with new Somali appellatives; the 'Akhārī clan became the 'Abī Shāhī; the 'Ilāfī clan were called 'Sān-dīshī', the 'Affī took the name of 'Gūm-māna' and even the Māziī ('Aqīfī) changed their name for the Somali 'Abī Fakhrī'. But in the 17th century a.d., the Bedouins (Somali) Dān-dālla, excited by exaggerated traditions of the wealth of Makdishū, assailed and conquered the town. The chief of the Dān-dālla, who had the title of 'Ilam, established himself in the Shangiī quarter; and the privilege of the Khājālī about the election of the Shāhīk was again recognised by the new masters of the town. In the first half of the 18th century the Sultān of 'Abūlāmī occupied Makdishū and ruled the town by means of a Shāhīk. In 1889 the Sultan of Zanjījar leased the town to Italy, who afterwards in 1906 bought all the settlements of Zanjījar on the Somali coast.

Makhzin (ጉን), from ከሃግዑር, "to shut up, to preserve, to board". The word is believed to have been first used in North Africa as an official term in the second century AD. It is applied to an iron chest in which the French b. Al-Aghlab, emir of Ifrikiya, kept the sums of money raised by taxation and intended for the Abbassid caliph of Baghdad. At this time, which in Morocco is now synonymous with the government, was applied more particularly to the financial department, the Treasury.

It may be said that the term makhzen meaning the Moroccan government and everything more or less connected with it at first meant simply the place where the sums raised by taxation were kept, intended to be paid into the treasury of the Muslim community, the al-māl. Later, when the sums thus raised were kept for use in the countries in which they were collected and were no longer paid into the treasury of the Muslim community, and they became as it were, the private treasuries of the communities in which they were collected, the word makhzen was used to mean the separate local treasuries and a certain amount of confusion arose between the makhzen and the ḍālī al-māl.

We do find in Spain the expression 'abd al-makhzen but it still means slave, of the treasury.
rather than slave of the government, and it seems that it was only later in Morocco that in proportion as the state became separated from the whole Muslim community after being successively under the Omeyyads of Damascus, the 'Abdulids of Bagdad, the Omeyyads of Spain and the Fatimids of Egypt that the word mahzen came to be used for the government itself.

To sum up, the word mahzen, after being used for the place where the sums intended for the bit al-nil of the Muslim community were kept was used for the local treasury of the Muslim community of Morocco, when it became separate under the great Berber dynasties: later with the Sharifite dynasties the word was applied not only to the treasury, but to the whole organisation or less administrative which lived on the treasury, that it is to say the whole government of Morocco. In tracing through history the changes in the meaning of the word mahzen, one comes to the conclusion that not only is the institution to which it is applied not religious in character but on the contrary it represents the combined usurpations of powers, originally religious, by laymen, at the expense of which it has grown up through several centuries. The result of these successive usurpations is that the mahzen which originally was only a chest in the treasury came to mean first the treasury itself, and the government and to represent to the Moroccan the sole principle of authority.

We know that the fundamental principle of Muslim society is that of the community: the head of this community is simply an administrator who has to exercise his functions, say the caliph ‘Omar, like an honest teacher, solely concerned with the interests of his pupils. Of this ideal the one part remaining in practice is that the members of the community are effectively in tutelage. In rapidly surveying the history of the Mahzen, we can see how this arbitrary government became gradually established while using the prescriptions of Islam, and how it succeeded in forming in face of the native Berber element which surrounded it a kind of Arab facade, behind which the Berbers in spite of the slowness of their gradual Islamisation, have preserved their institutions, superstitions and their independence. In this connection it cannot be too strongly emphasised that, in spite of their perhaps disputable orthodoxy, the Berbers are Muslims and consider that they belong to the Muslim community. No doubt they do not practice it very often but they have the pride of Islam and its intolerance; they have taken Muslim elements into the service of their native savagery and it would be a dangerous error to think that they could be open to anti-Muslim sentiments and particularly to imagine that their religious belligerence ought to make them favourable to us.

No organisation was made at the first conquest by 'Ojba b. Nafi in 63 (652 A.D.). All the representatives of Arab culture had to do was to levy heavy tribute in money and slaves to satisfy their own greed: and to enable them to send valuable gifts to the caliph of Damascus.

It was the same in 90 (705) with Musul b. Nusair but the conquest of Spain brought over to Ibadin a large number of Berber tribes by promising them a share in plundering the wealth of the Visigoths. On the other hand the exactions of the Arabs and the desire to escape the demands of the caliph facilitated the spread of Khartjiji doctrines, the many schools of which made any unity of power impossible and on the contrary increased decentralisation.

The Idrisid dynasty, which its Sharifite origin gives a claim to be the first Muslim dynasty of Morocco and which completed the conversion of the country to Islam only exercised its power over a small part of Morocco. Alongside of it the Barmawati [A.D. 975-1227] heretics and numerous Khartjiji emirs continued to exist. The Zentia, Mleka, Maghrawa and Banat Irin at a later period were no more able to effect a centralisation of power. It was not till the sixth century A.D. (11th A.D.) under the Sanjaridi dynasty of the Almohads that in the reign of Ya‘qub b. Tashfin we can see the beginning of a mahzen which only becomes clearly recognised under the Almohad dynasty.

It was under the latter that religious unity was first attained in Morocco. The heresy of the Barghawati and all other schisms were destroyed and a single Muslim community, that of the Almohads, replaced the numerous more or less heterodox sects which had been sharing the country and its revenues. It may be said that the organisation of the mahzen which we found in Morocco is fundamentally based on this unification and the measures which resulted from it. The Almohads regarded theirs as the only true Muslim community. All who did not belong to it were infidels whom it was lawful to fight, to kill, to reduce their women and children to slavery and to seize their goods and lands for the benefit of the Almohads, the only orthodox community. The Almohads were thus able to apply to all the territory of their empire the ideal Muslim principle of dealing with land, i.e. that all the lands conquered by them from non-Almohads and even from Almohads whose faith was regarded as suspect were classed as lands taken from infidels and became qubbas of the Muslim i.e. Almohad community. These qubbas districts were those whose occupants have to pay the tax called kharad. In order to levy this the Sultan ‘Abd al-Mu‘min had all his African empire surveyed from Gubes to the Wadi Nain.

A few years later Ya‘qub al-Mansur brought to Morocco the Almoravids and Banat Hilal Arabs and settled them on lands belonging to the Muslim community, which had been unoccupied since the destruction of the Barghawati, the wars of the Almohads with the last Almoravids and large despatches of troops to Spain. These Arab tribes who formed the qalsh (pronounced giel in Morocco) of the Almohads did not pay the kharad for the lands of the Muslim community which they occupied. They were Mahzen tribes who rendered military service in place of kharad. We shall find later the remains of this organisation with the giel tribes and the tribes of mawd. The efforts of the Mawatu to reconstitute a giel with their own tribes did not succeed and they had to return to the mahzen of Arab tribes brought to Morocco by Ya‘qub al-Mansur and even added to it contingents of the Mall Arab tribes of Sīḥs.

Under the Banat Wajīla this movement became more marked and Spanish influences became more and more felt in the more complicated organisation of the central Mahzen and by the creation of new offices at the court and in the palace.
The conquests by the Christians caused the development of the sâdâs and the fall of the Banû Watîân brought about the rise of the Sa'dâns [q.v.], of Wadî Darâ. The latter with their primitive manners as Saharan tribes and under the religious influence of the shâkîn of the brotherhoods began to try to bring back the exercise of power to the patriarchal simplicity with which it was wielded in the early days of Islam. The necessities of the government, the intrigues of the tribes and the wars of members of the ruling family against one another soon made necessary the constitution of a proper makhzen with its military tribes, ministers, its crown officials of high and low degree, its governors to whom were soon added the innumerable groups of palace officials which will be mentioned below.

The frequent intercourse between the Sa'dâns and the Turks, who had come to settle in Algeria at the beginning of the eighteenth century brought to the court of Morocco a certain amount of eastern ceremonial, a certain amount of luxury and even a certain degree of pomp in the life of the sovereign and in that of his entourage and of all the individuals employed in the Makhzen.

It is from this time that really dates the existence of this entity, which is really foreign to the country itself, which lived by exploiting rather than governing it and is known as the Makhzen.

The increasing official relations of Morocco with European powers, the exchange of ambassadors, the commercial agreements, the ransom of Christian slaves, largely contributed to give this Makhzen more and more the appearance of a regular government. The jealousies of the powers, their desire to maintain the status quo in Morocco and the need to have a regular government to deal with them further strengthened the Makhzen both at home and abroad and enabled the Sultan Mâwîyâ al-Hassân to conduct for nearly twenty years this policy of equilibrium between the powers on one side, and the tribes on the other, who kept till his death the empire of Morocco in existence, built up of very diverse elements, of which the Makhzen formed the façade.

The very humble, almost humiliating, attitude imposed on the European ambassadors at official receptions increased the prestige of the Sultan and the Makhzen in the eyes of the tribes. The envoy of the Christian power, surrounded by the presents which he brought, appeared on foot in a court of the palace and seemed to have come to pay tribute to the emir of the Muslims, who was on horseback. All the theatrical side was developed to strike the imagination of the Makhzen with much care and succeeded in creating an illusion of the real efficiency of this organisation in the eyes of both tribes and powers.

Under the Berber dynasties, the Aâmulids, the Marinids and the Banû Watîân, the military tribes, the ghâsh, were almost all Arab; under the Sa'dâns they were entirely Arab; to the Dûghâm and Banû Hîlîl Arabe were added the Ma'âlî Arab of Sûna. On the other hand, the Sa'dâns had removed from the registers of the ghâsh a certain number of the Arab tribes who then paid in money the khârîj for the hârûn lands of the Muslim community which they occupied. These tribes, in contrast to the ghâsh, were called tribes of the nûri, that is to say, according to the etymology proposed for the word, they were under the tutelage of the makhzen (from nûrî "tutor" or "substitute" for a father) or perhaps that they paid the tribes of the ghâsh a sum for replacing them (from nînâ, to substitute).

From this time on, Morocco assumed the appearance which it had when France established her protectorate there. The frontier, settled with the Turks in the east, had hardly been altered by the occupation of Algeria by France and the territory of Morocco was, as it still is today, divided into two parts: 1. bilad al-makhzen or conquered territory; 2. bilad al-rîd or land of schism; the latter was almost exclusively occupied by the Berbers.

The bilad al-makhzen, which represents official Morocco, was formed of territories belonging to the hâbîs of the Muslim community and liable to the khârîj. This land was occupied by Arab tribes, some ghâsh others nûri. Morocco consisted of an Arab government (makhzen) which administered the regions liable to khârîj, and occupied by Arab tribes, the status of which varied according as they were ghâsh or nûri.

The Berber tribes of the bilad al-rîd not only refused to allow the authority of the makhzen to penetrate among them, but even had a tendency to go back to the plains from which they had gradually been pushed into the mountains. One of the main endeavours of the present dynasty, the 'Alawi Sharif of Tafisilt, which succeeded the Sa'dâns in the seventeenth century has been to oppose this movement of expansion of the Berber tribes. This is why Mawlay Isâmîl, the most illustrious Sultan of this dynasty, built 70 hâshâs on the frontier of the bilad al-makhzen to keep down the Berbers. Hence we have this policy of equilibrium and intrigues which has just been mentioned and which up till quite recent years was the work of the Makhzen.

As we have already said, it was not a question of organising the country nor even of governing it, but simply of holding their own by keeping rebellion within bounds with the help of the tribes of the ghâsh by extracting from the ports and from the tribes of the nûri the all that could be extorted by every means. From time to time expeditions led by the Sultan himself against the unsolicited tribes asserted his power and increased his prestige.

The Makhzen, gradually formed in course of centuries by the possibilities and exigencies of domestic policy, as well as by the demands of foreign policy seems to have attained its most complete development in the reign of Mawlay al-Hassân, the last great independent Sultan of Morocco (1873—1894). The government of Mawlay al-Hassân consisted in the first place of the Sultan himself, at once hereditary and also, if not exactly elected, at least nominated by the nîsâb and notables of each town and tribes from among the sons, brothers, nephews and even the consorts of the late ruler. This proclamation is called hâshâ. It is in general he who takes control of the Treasury and of the troops when the moment comes to assume the right of succession. It sometimes happens that the late sovereign has nominated his successors, but this does not constitute an obligation on the electors to obey it. There is then no rule of succession to the throne.

Formerly there was only one viceroy, the grand vizier: the grand vizier, a kind of Home
Ministry, was divided into three sections, each managed by a secretary (kālīd):
1. From the Strait of Gibraltar to the Wād Bī-Regreg.
2. From Bī-Regreg to the Sahara.
3. The Maghrib.

In the reign of Sidi Muḥammad (1859—1873), the more frequent and intimate relations with Europe and more particularly the working of the protectorate made it necessary to found a special office for foreign relations, and a wakīr al-bahr, literally Minister of the Sea, was appointed. This does not mean minister for the Navy, but for all that came by sea, i.e. Europeans. This minister had a representative in Tangier, the wālī al-mulūk, who was the intermediary between European representatives and the Central Māhkān. His task was to deal with European complaints and claims from perpetual settlements and to play off against another one the protégés of the European powers, who were certainly increasing in numbers and frequently formed an obstacle to the traditional arbitral role of the Māhkān. The régime of the consular protectorate, settled and regulated in 1880 by the Convention of Madrid, had also resulted in discouraging the Māhkān from extending its authority over new territory.

The exercise of this authority was in fact automatically followed by the exercise of the right of protection and from the point of view of resistance to European penetration, the Māhkān had everything to gain by keeping in an apparent political independence the greater part of the territory which thus escaped the influence which threatened in time to turn Morocco into a regular international protectorate.

By a conciliatory native policy and cautious dealing with the local chiefs, the sheikhs of the ṣūqyān and the Sharīfī families, the Māhkān was able to exert even in the remotest districts a real influence and never ceased to carry on perpetual intrigues in order to divide the tribes against one another.

It maintained its religious prestige by the hope of preparation for the holy war which was one day to drive out the infidels and sought to penetrate by spreading the Arabic language and the teaching of the Kurān and gradually substituting the principles of Muḥammadan law of the 'ābādī for Berber customs. In a word, it continued the conquest of the country by trying to complete its Islamisation and making Islam permeate its customs.

In the reign of Mawlay al-Ḥasan, the Māhkān consisted of the grand vizier, the wālī al-bahr; minister of foreign affairs, the 'ālīfī — afterwards called minister of war, the sālih al-wānāmī, —afterwards minister of finance —, the ḥālib al-'aqqāṣī, secretary for complaints, who became minister of justice by combining his duties with that of the ḥālib al-baqāt, Kādī of Kafr. These high officials had the offices (banītīl, pl. banītēn) in the mausāwar at the Palace.

The offices were under the galleries which were built round a large courtyard. At the top of the mausāwar was the office of the grand vizier, beside which was that of the ḥālib al-maṣṣūr, a kind of captain of the guard, who also made presentations to the sultan. The ḥālib al-maṣṣūr was in command of the police of the mausāwar and he had under his command the troops of the ḥālib, maṣṣūrīn, maṣṣūtīn (banītīl — as : ḥālta) etc., as well as all the bodies of servants outside the palace; the muwāli al-rūmi, grand-master of the stables, the ḥāqṣīs, who had charge of the sultan's encampments.

In addition to these banītīn of the maṣṣūr, mention must be made of an individual, who as was shown in recent times could play a more considerable part in the government than his actual office would lead one to expect. This is the ṭāfīfī [q.v.], literally the "curtain", i.e. an official placed between the Sultan and his subjects like a curtain. His banītīn was situated between the maṣṣūr and the palace proper and he had charge of the interior arrangements of the Sultan's household. Under his orders were the various groups of domestic servants (banāt al-dakhkhilīn), maṣṣūltīn al-rūmī, who looked after the washing arrangements, muwāli al-frīsh who attended to the beds, etc., etc.; he also commanded the eunuchs and even was responsible for the discipline of the women of the Sultan, through the "artsī or mistresses of the palace. The ṭāfīfī is often called grand chamberlain, although he does not exactly correspond to this office.

Around these officers gravitated a world of secretaries of different ranks, of officers of the gādir, then the ḥālib al-rāqī, who was in theory in command of 300 horsemen, the ḥālib al-maṣṣūtī, who commanded 100 down to a simple muğūddām. All this horde of officials, badly paid when paid at all, lived on the country as it could, trafficking shamelessly in the influence which it had or was thought to have and in the prestige it gained from belonging to the court, whether closely or remotely. The influence of these court officials spread throughout the regions controlled by the organisation of Māhkān officials, which contributed to the centralisation of authority and its profits.

In this organisation it may be noticed that the authority of the Māhkān properly so-called, i.e. of a lay power, continually increased at the expense of the religious power by a series of changes. No doubt the basis continued to be religious, but the application of power became less and less mo and the civil jurisdiction of the ḥālib and of the Māhkān more and more took the place of the administration of the gādir by the ḥādir, which finally became restricted to questions of personal law and landed property.

The authority of the sultan was represented in the towns and in the tribes by the ḥādir, appointed by the grand vizier and by the muwaṣṣūlīn, whose office owed its origin to the religious law of the 'ābādī. The muwaṣṣūlīn supervised and controlled the gādir, fixed the price of articles of food and inspected weights and measures and coins.

The tax of the ṭāfīfī, which represented the old ḥādir, wa levied on the non-hādir tribes by the ḥādir of these tribes. It was one of the principal causes of abuses; the amount of this tax was never fixed and the sum which came from it were in reality divided among the ḥādir, the secretaries of the Māhkān and the vizier without the sultan or the public treasury getting any benefit from them.

The grand vizier also appointed the muṣṣār officials, who from the reign of Mawlay 'Abd al-Rahmān, had been attached to the local nūrūs of the banūs of the mosques and sanctuaries. The ḥādir were appointed by the ḥādir al-baqāt; at the present day they are appointed by the minister of justice.
They propose the 'udul but do not actually appoint them. The financial staff, 'umani, who control the customs, the possessions of the Makzen (al-amir), the mansif (market-places and tolls etc. called makra), the controller of the 'ilm al-mad (popularly aln-l-masnul) i.e. the official who intervened to collect the share of the Muslim community from a state of deceased persons and who also acted as curator of intestate estates (wali al-gainty). All these officials were appointed by the amir al-umani who was later known as the minister of finance.

This organisation was completely centralised i.e. its only object was to bring all the resources of the country into the coffers of the State and of its agents, but there was no provision for utilising these resources in the public interest. No budget was drawn up, no public works, no railways, no navy, no commerce, no port, nothing at all was provided for. Military expenses were confined to the maintenance of a regiment commanded by an English officer, of a French mission of military importance, and a body of armed garrisons directed by Italian officers and of the building of Rabat of a fort by a German engineer. These were really rather diplomatic concessions to the powers interested than a regular military organisation. In the spirit of the Makzen the defence of the territory was to be the task of the Berber tribes, carefully maintained out of all contact with European behind the elaborate display maintained by the court.

In the event of war, the Makzen, faithful to its system of equal favour, purchased arms and munitions from the different powers and kept them in the maktin of Fas to be able when necessary to distribute them to the tribes when proclaiming a holy war.

The expenses of the education service were limited to the very modest allowances granted to the 'ulama of al-Asrayyan at Fas. These allowances were levied from the habal and augmented by gifts made by the Sultan on the occasion of feasts (jub).

Nothing was done for public health and one could not give the name of hospitals to the few hospitals to be found in certain towns, where a few desirable creatures lived in filth, receiving from the habal and the charity of the public barely enough to prevent them dying of hunger and of disease without receiving any medical assistance.

On the repeated representations of the Powers the Makzen had ultimately delegated its powers to the members of the diplomatic corps in Tangier, which had been able to form a public health committee in order to be able to refuse admission to infected vessels if necessary. In spite of its defects, the Makzen constituted a real force; it formed a solid bloc in the centre of surrounding anarchy which it was interested in maintaining, to be able to exploit it more easily on the one hand and on the other to prevent the preservation in the country of any united order which might become a danger to it.

In brief we may say that the Makzen in Morocco was an instrument of arbitrary government, which worked quite well in the social disorder of the country and thanks to this disorder, we may add, it worked for its own profit and was in a way like a foreign element in a conquered country. It was and still is a regular cause with its own traditions, way of living, of dressing, of furnishing, of feeding, with its own language, al-lughat al-maghribiya, which is a correct Arabic intermediate between the literary and the spoken Arabic, composed of official formulae, regular clichés, courteous, concise and binding to nothing.

This Makzen which was sufficient in the old order of things which it had itself contributed to create and maintain, was forced, if it was not to disappear at once, to undergo fundamental modifications from the moment this state of things had rendered necessary the establishment of a protectorate.

Various changes have always been made in the old regime, which has been a matter of regret to many as reducing sources of profit. The vizierate of foreign affairs and that of war have been handed over to the Resident-General, that of finance to the Director-General of finance who administers the revenue of the empire alike to those of a regularly organised state.

The director-generalships of agriculture and education, which are regular ministries are held by French officials as are the management of the postal service, telegraph and telephone and the board of health.

Two new vizierates had been created, that of the regal domains (al-amali) and that of the habal. The vizierate al-amali has just been suppressed and the domains are administered by a branch of the finance department. The vizierate of the habal is under that of the Shari'ia affairs. This organisation represents the principle of protectorate in the Moroccan government itself and in order to realise "the organisation of a reformed Sultan Makzen" in keeping with the treaty. (Ed. Michaux-Beliarc)

(M. Burret)

MAKHZUM (RANK) along with the Omanis,
the aristocratic clan of Mecca. This
assertion is contrary to the theory popularised by the
Sira in virtue of which the ancestor of the
aristocratic families was Kusayy [q. v.]. About the
middle of the 21st century A. D. we find that among
the clans of Kuraish [q. v.] that held in most
consideration was the band Makham, which traced
its descent through Ya'qub b. Mirra to the legendary
Fih (Kuraish) without going through Kusayy. At
this period the Makham controlled everything at
Mecca, except the sanctuary. They alone were able
to counterbalance the growing influence of the
Omanis. It is at this time that their name becomes
occasionally synonymous with Kuraish.
(Im Durâid, Kitâb al-Lughât, ed. Wissmefeld,
p. 94, 1a.)

The Makham seem to have owed their primacy to Mughira b. Abd Allah, a contemporary of Abd
al-Majdrib and grandson of the eponymous
ancestor of the clan. The adjective Maghîth thus
comes to be used for Makham. His son, Hujjâm
b. al-Mughira, is even said to have had the title
*Ibaru (rab) of Mecca'* (Im Durâid, Kithâb, p. 93, 4b). The Kuraish are said to have dated one
of their emirs from the death of this individual, if
the reference is not to Wâlid b. al-Mughira.
Tradition hesitates between these two Makhamites.
The influence of the Makham was preponderant in
the sula, or council of notables which decided
affairs at Mecca. It is frequently a Makhamite who
speaks in name of the sula, as for example in the
discussion with Muhammad, at the beginning of
the preaching of Islam. They are believed to
have opened up to Meccan commerce the principal
routes to foreign markets. For their intelligence,
their activity they were said to be *ardent as
Makhzum — Al-Makin

fire" (Alqam, Hilal, xv. 8; infra) — their patrician pride and particularly their wealth they were envied by the other Meccan clans. In a word they threw into the shade the descendants of Kuraish like the Banu Hashim, for whose benefit the traditional theory seems to have been put into circulation. They lost a large number of members at the battle of Badr; after this disaster from which they never recovered, they had to yield the first place to the Omayyads.

What injured their reputation in Muslim tradition was their opposition to the rise of Islam. Tradition has chosen from them in the person of Abu Dujhdh [q. v.] the type of the irrefrangible opponent of Islam. In Mecca the Maghzm clamor of al-Maghrb was numbered among the "mockers" of the Prophet. Several verses of the Meccan suras are said to be directed against him (Ibn Duraid, Lailak, p. 60—61). Before becoming the "sword of Allah" Khald b. al-Walid [q. v.] fought with the majority of his people against Muhammad and Bishr, Othub, Khudak, etc. This persistent opposition explains why they and the Omayyads are called al-Aljfarin min Kuraish, "the two wicked classes of Kuraish" (Tabari, Tafsir al-Kuran, xiii. 130).

After the Fatih (conquest of Mecca) they adopted the new religion without enthusiasm; many went and settled in Madina, which now became the capital of Islam, so as to get in touch with the governing circles. The Prophet was able to use the military talents of Khald b. Badr to his advantage, as they refused to come to terms with the Omayyads and submitted themselves to the advance of the Muslims (Ibn Al-Hashim, Sira, ed. Wustenfeld, p. 202, 275—57). When the father of Abd Bakr heard that his son had been elected Caliph, the old man's first question is said to have been: "Did the `Abd Manuf and Makhzum give their consent?" (Ibn al-Athir, Usul al-Ghada, iii. 222). The author of the Tafsir Darni 'I-Arak (ed. Mann, p. 170, 26) expresses surprise at his discovering in the pre-Halra genealogies of the Makhzumians, names like `Ubed and al-Walid, showing pre-occupation with religion.

Abd Bakr's father had promised with Khald b. Badr to send his men to wage war in remote lands and giving him vast tracts of land. With the second caliph there was open conflict. `Umar, although he is said to have been the son of a Makhzum mother, had to suppress the turbulent general, more used to conquer than to obey. The Makhzumians came into conflict with `Omar over 'Ammar b. Vasit [q. v.], a client of their family (Mash'ari, Marvd d al-Ashab, ed. Paris, iv. 121, 260, 279, 360). They declared against `Ali in the body. Abd al-Rahman b. Khald b. al-Walid [q. v.] who at first supported Mu'awiya in the end by his independence aroused the misgivings of the Omayyad caliph. The Makhzumians accused Mu'awiya of having had their relative poisoned and assuming the right to wreak vengeance, they gave a new proof of their independent spirit. From this time they were on bad terms with the Omayyad caliphs, as they had been with the earlier rulers, being naturally inclined to resist authority and to offer a useless opposition. When `Abd Allah b. al-Zubair [q. v.] rebelled against Yazid I, they adhered almost without exception to his cause. In return the Meccan anti-caliph appointed one of them as his representative in Basra.

The Mawrids, after their triumph agreed to bear no grudge against the Makhzumians. They even chose members of the clan for the office of governor of Madina, hitherto reserved for an Omayyad. After, as before, the Mawrids, the Makhzumians continued to be reckoned among the richest capitalists in Mecca. They had about 5,000 mithqal of gold laid out in the caravan, which was the cause of the battle of Badr. It was to them that Muhammad applied on the eve of Humaia for a loan of 40,000 dirhams. Their systematic opposition to authority put them completely out of the running for any of the great administrative offices in which the members of the Kuraish clans enriched themselves. Their aristocratic pride did not prevent them however from seeking profit in commerce and even in industry. We know this from the story of 'Omar b. 'Ali Rabi'a [q. v.], the most famous of the Kuraish poets. 'Omar kept 70 of his slaves employed in the weaving-mills established in Mecca (Alqam, 1. 37, 3). Another Makhzum, a contemporary of 'Omar's, was known as "the monk (rahid) of Kuraish" on account of his merit and his asceticism of prayer (Ibn Sa'd, Tabakhat, ed. Sachau, v. 153, 16). Much better known than this ascetic and continually quoted on questions of Fikr and Hadith is the Makhzum b. al-Musiyib [q. v.], one of the most famous rabis of the first century a. h. With the coming of the 'Abbaids, influence passed over to the Irans, gradually the Makkhid, like other Kuraish clans, fell into obscurity. At the present day there are still families bearing the name Makhzum. It remains to be seen to what extent they are justified in claiming descent from the Makhzum, if it is not in the female line in the case of Siraj al-Din al-Makhzum al-Humdi (cf. Beckelmann, C. A. L., ii. 98). Kalkaendar (Sahih al-Abi, Cairo, i. 213) justly remarks that the tribe of the Basal Khald which led a nomadic life around Hijaz has only the same in common with the great Makhzum captain. The male line from Khald b. al-Walid is said to have become extinct very early (cf. Ibn al-Asw, Usul al-Ghada, v. 249, infra), a statement disputed by the Siraj al-Din mentioned above.

(H. LAMMEN)

AL-MAKIN b. AL-AMID, DIRJIS (AND AL-AMIN)
b. ABI 'IBRAHIM, the Christian author of a World-chronicle in Arabic. His life has been several times treated by western authors in encyclopedia and other works of reference; but nothing can be learned of their sources from their articles. Even Beckelmann (i. 248) has to content with giving the traditional biography and relying upon his European predecessors. To avoid repetition...
here, we only give the dates of his birth and death, 602 (1202) and 672 (1273). The latter date is given by Ḥadžīlī ʿAbd al-Rahmān ibn ʿAṣim. His grandfather, according to J. H. Hottinger, *Pamphlet* in *Pamphlet*, vol. 75, 1877, died in 606 and his father in 630.

Al-Makki's world-chronicle consists of two parts, the first of which deals with the pre-Islamic world from the Creation onwards and the second with Muslim history down to 658 (1260). The work is so planned that the whole history of the world is given in the form of successive numbered biographies of its most important men. Near the beginning of the discussion of some of the questions and the several times is inserted. Describing the reign to 586 B.C., it is based on Biblical history; the numeration of the biographies begins with Adam as No. 1. For the period after the destruction of Solomon's temple there comes upon the usual scheme of the dynasties of the Eastern Asia, which in turn are succeeded by Alexander, the Romans and the Byzantines. In this and in the second part, as the author himself tells us, he is following the model of the Sibylla's chronicle.

The work which is entitled al-Makki's *al-Makki* al-Makki exists in various manuscripts. The first part is regularly quoted with a Latin translation by Hottinger, *Smejke Orientale* (1858) in the chapter De non lingua Sarmatian in theologia historia on various facts of history. The chapter on Alexander the Great has been edited in English by E. A. W. Budge, *The Life and Explorations of Alexander the Great* (1896). The second part was edited and translated by Th. Leblanc under the title *Historia Sarmatia* by G. T. Wilkins, 1625; English and French translations appeared soon after. Many emendations were given by Rücker in *Die sarmatische Erforschungen*, viii–ix, xi, xiv, xvii. A critical edition of the whole work is an urgent desideratum. How important it is for Christian church history has been shown by A. v. Oesterley, *Verzeichnisse der Patriarchen von Alexandria* et al. (1899, p. 395–525). This is sufficient to show how necessary would be a comprehensive investigation of Al-Makki's place in historical tradition, which could only be undertaken on the basis of a certain text. Besides it is evident that Al-Makki used old sources independently which are not known to his immediate predecessors like Eutychius (q.v.) and his contemporary, much quoted by him, Ibn al-Rabīʿ (Brockelmann, *G. A. L.* 349), where of course it should be 660 = 1270 with whom he agrees in the numeration of the biographies which are also used by Al-Makki. In the chapter on Alexander the Great, the English translation of which edited by Budge, agrees very closely with the Arabic original. Budge's work is an urgent desideratum. The author himself tells us, he is following the model of the Sibylla's chronicle.

Al-Makki's work is, therefore, of great importance for the study of the history of the Middle East. It contains a wealth of information about the early Islamic period, which is not found in any other source. The work is particularly important for the study of the history of the Byzantine Empire, as it contains a number of biographies of important Byzantine figures. The work is also important for the study of the history of the Jewish community in the early Islamic period, as it contains a number of biographies of important Jewish figures.

**Bibliography:**

In addition to the works mentioned above, Al-Makki's work is also important for the study of the history of the Christian church in the Middle East. It contains a number of biographies of important Christian figures, which are not found in any other source. The work is also important for the study of the history of the Islamic period, as it contains a number of biographies of important Islamic figures. The work is also important for the study of the history of the Jewish community in the early Islamic period, as it contains a number of biographies of important Jewish figures.
he taught: hadith in a way that attracted much attention. He again made stays at Jerusalem and Damascus where he was received at the Madrasa Djamé in Damascus by the learned Ahmad b. Shihin. In this city also his lectures on Muslim Tradition were largely attended. He then returned to Cairo and while he was preparing to return to Damascus to settle there permanently, he fell ill and died.

In spite of his long stay in the East, it was in Morocco that al-Maqqari collected the essential materials for his work as the historian and biographer of Muslim Spain, especially at Marrakesh in the library of the Sa'diyyan Sultans (now in part in the Escorial); this is how al-Maqqari consulted among other works the unique copy of the Manuss of Ibn Marzuki: cf. Historia, v. 8, p. 23). Indeed his masterpiece, written in the East at the suggestion of Ibn Shihin from materials collected by him in the Maghrib, is a long monograph on Muslim Spain and on the famous encyclopaedic of Granada, Lisan al-Din Ibn al-Khatib, Nafah al-Thib min Vagham al-Andalus wa-Dhikr Waziriin Lisan al-Din Ibn al-Khatib, an immense compilation of historical and literary information, poems, letters and quotations very often taken from works now lost. It is this that gives the Nafah al-Thib an inestimable value and puts it in the first rank for our sources of Muslim Spain from the conquest to the last days of the "Reconquista". Even for the later period it is the only Arabic source that we still possess.

The Nafah al-Thib consists of two quite distinct parts, a monograph on the history and literature of Muslim Spain and the monograph on Ibn al-Khatib. The first part is divided as follows: 1. physical geography of al-Andalus. 2. Conquest of al-Andalus by the Arabs, period of the governors. 3. History of the Omeyyad Caliphs and of the petty dynasts (Muwallid-dawlati'iyin). 4. Description of Cordova, its history and its monuments. 5. Spanish Arabs who have made the journey to the East. 6. Scholars who have made the journey to Spain. 7. Sketches of literary history, the intellectual and moral qualities of the Spanish Arabs. 8. The "reconquista" of Spain and the expulsion of the Muslims. The second part contains 1. Original biography of the ancestors of Ibn al-Khatib, 2. biography of Ibn al-Khatib, 3. biographies of his teachers, 4. letters in thumim prose of the chancellors of Granada and of Fûs, sent or received by Ibn al-Khatib (mukhabarat). 5. a selection of his works in prose and verse. 6. analytical list of his works.

The Nafah al-Thib was printed in full at Basra in 1291 and at Cairo, in 1302 and 1304 (2 vols). The first part was published at Leyden from 1855 to 1861 under the title of Almanates sur l'histoire et la litterature des Arabes d'Espagne, by R. Dusy, G. Duquet, L. Kehr and W. Wright. In 1862, D. Pascale de Gayangos had published in English, at London, under the title The History of the Muhammadan Dynasties in Spain, a version adapted from the part of the first half which deals with the history of Muslim Spain. A critical translation of this monumental work in its entirety remains to be done.

Al-Maqqari also wrote other important works, among which special mention must be made of a lengthy monograph on the famous khidr, the Song of Ahmad al-Khatib, published at Tlem in 1322 in 2 vols. A list with reference to known MSS. will be found in Brockelmann and Ben Chenin.

**Bibliography:**

**AL-MAKKAR, ABU TÂBÈ MUHAMMAD BEN ALI AL-HIRIMI, d. in Baghdad in 380 (996), an Arab mu'madin and mystic, head of the theological madrasah of the Sâlihiya [q.v.] of Basra. His principal work is the Kâr al-Kutub (Cairo 1310, 2 vols.) whole pages of which have been copied by al-Ghazâlî into his Ilyâ'hu 'llah-Din.

**Bibliography:** Brockelmann, G. A. E., i., 200; Sâlih Qarmut, Kârîb al-Din, i. 67, 68 sq.; Sâlih Qarmut, Kârîb al-Din, ed. Cairo, ii. 28; Ibn 'Abd Rundi, Kârîb al-Din, lith. Fès 1320, p. 149, 200-201.

**MAKRAN,** the coastal region of Balûsht, extending from about 35° to 65° 35' E. and inland from the coast to the Styhân Range, a little beyond 25' north. This tract was known to the Greeks as Gedrosia, and was inhabited by the febbyphragi, or fish-eaters, the Persian translation (Mâh-Khurân) of whose name supplies a fanciful derivation for its present name, which is traced, with more probability, to a Dravidian source.

In Persian legend Kalkisrasaw of Iran captured the country from Ahrasiybu of Turan, and both Cyrus and Semiramis marched through it. In 325 B.C., it was traversed by Alexander in his retreat from India, and fell, later, under the dominion of the Sâlihiya, but was occasionally assailed into the Hindu kingdom of Sind. It was annexed by the Arabs in the course of the rapid expansion of the empire of Islam in the early days of the caliphate, and it was through Makran that the Umayyad b. Kûsim invaded Sind in 711 A.D. and established the first Muslim settlement to the east of the Indus. Marco Polo mentions it in 1290 as the most westerly part of India, under an independent chief, probably a Muslim, who found it unnecessary to make any pretense of submission either to Persia or to India. Indigenous tribes ruled the country until they were ousted by the Gikhis from India, but the Persian monarchs reckoned Makran as part of Bâlûsht, which was included in the great province of Kîrman. In the middle of the eighteenth century the Aymâhas of Kûst, established their suzerainty over the country, and in 1879 Colonel Geldard demarcated the frontier between Persian Makran and eastern Makran, which remains subject to
the Khān of Kalāt, though British intervention has frequently been necessary to compose the disputes between him and the dominant tribes of the province, Gīlān, Neīrūz, Buzurdān, and Mirāzwān. Cultivators of the soil are Bālūčis, and tribes of inferior social status and the fishermen form a class apart.

The climate of the country varies with the altitude. Near the coast it is uniformly hot, but not unpleasant; in Keč or Kej, from which eastern Makrān is known as Keč Makrān, the winter is dry and cool, the summer intolerably hot; and higher still Pandjīq is bitterly cold in winter and moderately hot in summer.

(T. W. Hig.)

AL-MAḴRĪZĪ Abū 'l-Qādir Abū Ḥabīb Abū Ḥabīb Al-Maḵrīzī. A descendant of the Umayyad dynasty, he was a regent of the Abbasid Caliphate and a prominent figure in the intellectual and cultural life of his time. He is known for his contributions to various fields, including literature, astronomy, and mathematics. His interest in astronomy led him to translate and comment on the works of Ptolemy, and his astronomical works were influential in the medieval Islamic world.

Abū Ḥabīb Al-Maḵrīzī was born in the city of al-Maḵrīzī, a part of the larger region of Makrān, in present-day Iran. He was educated in the sciences and was known for his mathematical and astronomical achievements. His work in astronomy was so influential that it helped to establish the Umayyad dynasty as a leader in the Islamic world.

Abū Ḥabīb Al-Maḵrīzī is also known for his work in philosophy and theology, and his contributions to these fields were significant. He was a follower of the philosophy of the Persian philosopher al-Kindī, and his works in this area were influential in the Islamic world.

Abū Ḥabīb Al-Maḵrīzī's scientific works were highly regarded in his time, and his contributions to astronomy, mathematics, philosophy, and theology were highly influential in the Islamic world. His works were studied and copied by many later scholars, and his legacy continues to be felt in the fields of science and mathematics.

in a collected volume; Rishāl al-Makah wa 'l-
Mawṣūl al-Shārī'iyā, ed. O. G. Tychsen, Rostock 
1806). He also wrote a general geography under 
the title Zāni al-Asār min al-Waf al-nuṣfār 
(Berlin, N. 6049, Cairo, v. 40) what he 
dedicated; for this is still uncertain; in Paris, 
N. 591 the Istirāj al-Maḥāfīz fi 'l-ṣerār al-
Fāh is said to be the basis; Lavi-Provençal, 
Les Historiens des Croі, p. 361 identifies it 
with the al-Waf al-nuṣfār ft Kaḥar al-Aṣrī 
mentioned by Ḥaḍidh al-Khalfa, iii, N. 6598 
of Abū ʿAmmār al-Ḥumaydī; (Abū 'Abd Allāh Muhammad b. 
'Abd al-Mu'min al-Ḥumaydī, which is said still to exist in the 
Karamayn mosque of Fez. In some of these shorter 
theses he touches on theology, a subject he does 
not otherwise deal with, dogmatics in the essay 
composed in 813 (1410) entitled al-Dūāh al-
hafidh ft 'l-Farāk bain al-Tawḥīd wa 'l-Tālād, the autograph 
of which is in Leyden, Amin, N. 188 
(cf. also Cairo, vii, 565), Tājīrīn al-Tawḥīd (in 
Paris) and tradition in lectures on the family and 
domestic arrangements of the Prophet, which he 
delivered at Mecca (Tājīrī 'l-faṣl fī 'l-
Nabi min al-Hadidhā wa 'l-Mahbūba, 6 vol., Gotha 
1830, Stambul, Köprülü, N. 1004). To supplement 
this work, towards the end of his life, he planned 
a work which beginning with the Creation, was 
to be also a general geography to give the genealogies 
of the Arab tribes and the history of the Persians 
down to the Shāhānshah under the title al-Khabar 
āmī 'l-Baḥr, at which he was still working in 
844 (1441) (parts in the autograph Stambul: Aya 
Sophia, N. 3362, and Falūq, N. 4328-4344, 
other in the copy, Aya Sophia, N. 3365-3366, 
T. Tauer in Islamica, i, 357-364). Even 
with this work which he quotes in his works, in the essays 
Dīnak al-Sāri' ft Muḥāṣib Tawḥīd al-Dīrāt 
in the Leyden collected volume and also in

**Makrūh.** [See Shari'a.]

**Maks, tolk. customs duty.** Is a loanword 
in Arabic and goes back to the Arabica 
makās, cf. Hebrew mašeq and Assy. maqās; from it is a 
verb mašequ in the 2nd pers. pl. makkat, the 
collector of customs. According to the Arabic 
tradition preserved in Ibn Sīdā even in the Dāhilīya 
there were market-dues called maks so that the 
word must have entered Arabic very early. It is 
found in Arabic papiri towards the end of the 
first century A. H.

Becker has dealt with the history of the maks, 
especially in Egypt, and we follow him here. The 
old law books use maks in the sense of 'mār, 
the tenth levied by the merchants, more properly 
the equivalent of an excise duty than of a custom. 
They still show some opposition to the maks, 
then give it due legal force, but the word con-
tinued to have unpleasant associations, cf. the 
ḥadd: 'insa makkat 'l-makās fī 'l-nār: "the tax-
collector will go to hell": Goldziher has suggested 
that the Jewish view of the publican may have 
had some influence here.

The institution of the customs duty was adopted 
by Islam about the beginning of the Omaiyad 
period or shortly before it. While theological 
tendency demanded a single customs area in Islam, 
the old frontiers remained in existence by land 
and water, and Egypt, Syria and Mesopotamia 
were separate customs areas. The amount of the 
duty in the canon law was settled not so much by 
the value of the goods as by the person, i.e. the 
religion of the individual paying it; but in practice, 
attention was paid to the article and there were 
preferential duties and no attention was paid to 
the position of the owner in regard to Islam. 
The laws of taxation were very complicated and 
graduated; the duties rose in course of time from 
of the tenth ('mār) to the fifth ('Shamī).

The Egyptian maks was levied on the frontier 
at al-Arish and in the ports (tawziq) 'Ālīdāh, 
al-Kaṣīr, al-Ṭur and al-Suways but there was also 
an octroi to be paid in al-Fuṣṭāt at a place called 
Maks. This name is said to have replaced an old 
Unum Dunain and then became identified with the 
Maks = custom-house of Cairo. All grain had to 
pass through here before it could be sold and 
two dirhams per arteba and a few minor 
charges had to be paid on it. Further details of 
the administration of the maks in the earliest period 
are not known but there are references towards 
the end of the first century A. H. to a maks maks 
Mafṣūr in papiri and in literature also.

The conception of the maks was extended in the 
Fatimid period when all kinds of small dues 
and taxes became known as makās, especially 
emphasizing the already mentioned unpleasant 
associations of the word — the unpopular ones which 
the people regarded as unjust. Such occasional 
taxes had been levied from time to time in the 
early centuries of Islam. The first to make them 
systematic was the dreaded financial secretary 
and noted opponent of Ahmad b. Ṭṭīn, Ahmad b. 
A. Madabbīr. The latter introduced not only an 
increase in the ground-tax and the three great 
monopolies of oilers, fisheries and soda (in 
connection with which it is interesting to note 
a revolution was made to old Roman taxes), but also 
a large number of smaller taxes which were called 
makāsān and marjūb and included among the 
hilālī, the taxes to be paid according to lunar 
years. Such artifices (known as makās from the 
Fatimid period and later as mukāṣim, ḥimṣātān, 
rīyalāt or mūṣāt) (karaq) were destined to develop 
in time into the main form of oppressing the 
people and to become one of the principal 
causes of the economic decline of Egypt, until under 
the Fatimāt a limit was reached where hardly any 
thing was left untaxed and mukāṣim were even granted 
feats and "misfortune became general" (wa-'amān 
maṣlāhā nāμāt). These small taxes however (but not 
the monopolies) were repeatedly abolished by 
reforming rulers, indeed ʿlāl al-makās (other terms 
are raqā, munāṣib, ḥabba, waqf, rafʿ al-makās) 
even formed part of the style and title of such 
rulers. Thus it is recorded of Ahmad b. Ṭṭīn that 
he abolished some duties, and later of Salahādīn, 
Bābars, Ṣāḥīb al-Dawla and his sons Khağı and 
Nāṣīr Muhammad, of Aḥmad Shābān, ʿAṣrāf 
Dājā
MAKS. Makrit gives a long list of makuk abolished by Salahin and Kalkashandi gives copies of the texts of musimmah, which are decrees of Mamlik Sultan abolishing taxes or granting exemptions from dues which were sent to the governors and read from the minbars and sometimes contain very full details, while shorter decrees were probably carved on stone and are given among the fragments published by van Berchem. It would of course be wrong to deduce from such abolutions of taxes that the government was a particularly good one, while on the other hand the continually recurring extortion of the same taxes shows that the abuses had been restored in the interval. Makrit, i. 111 concludes with the well known jibe at the Copts: *“even now there are makuk, which are in the control of the viceroy, but bring nothing to the state but only to the Copts, who do exactly as they like with them to their great advantage”.*

Among the great variety of dues which were of course not all levied at the same place and at the same time were the following: ahldi—taxes on ovens, baths, ovens, walls and gardens; harbour-dues in Gizch, in Cairo at the corn-guayy (jahl al-ghalaa) and at the arsenal (jidda), also levied separately on each passenger; market-dues for goods and caravans (bahdi, awa-bahdi) especially for horses, camels, mules, cattle, sheep, poultry and slaves; meat, fish, salt, sugar, pepper, oil, vinegar, turnips, wool, silk, linen and cotton; wood, earthenware, coal, halfa, straw and henna; wine and oil-presses, tanned goods; brokerage (samura) charged on the sale of sheep, dates and linen. Taxes on markets, drinking-houses and brothels which were euphemistically called munayy, al-milaya. Warders deprive prisoners of everything they have; indeed this right is sold to the highest bidder; officers consume the fees of their soldiers; peasants pay their lords forced labour and give them presents (bahdi, hadiy) and many officials (shadd, muckatsh, mukhabiran and waru) also accept them; when a campaign is begun the merchants pay a special war-tax and a third of inheritances falls to the state; when news of victories is received and when the Nile rises, levies are made; the dhimmis, in addition to paying the poll-tax, have to contribute to the maintenance of the army; pilgrims to the Holy Sepulchre pay a tax in Jerusalem; separate special taxes are levied to maintain the embankments, the Nilometer etc.

Outside of Egypt we occasionally hear of the makuk as toll or market-duty, e.g. in Dijida, in North Africa (cf. Dory, Suppl., ii. 606). Ibn al-Hajj, iii. 87 mentions a wusimmah mahal, but does not use the word makuk in this sense.

Sébèl; at Tlemcen, we find the word derradí which again crops up in the Algerian towns.

The master in the Kur'ánic school has as his only intellectual equipment a rule a perfect knowledge of the text of the Kur'án. He cannot understand or expound it; he hardly knows any grammar or any of the branches of religious knowledge. The most learned masters are those who have devoted themselves to learning a certain number of the seven ways of reciting the Kur'ánic text according to the principles laid down by the seven šaykh al-ّarabiyá.

In some towns there are Kur'ánic schools for girls but this is exceptional. The mistress is known as fàsíka or fàsíra (Morocco).

The pupils are called ilmán in the towns, gendís in the country districts and mulájí in the towns of Morocco. Their ages run from six to eighteen. Where there are schools for girls, little boys are sent there also up to the age of six.

In Kur'ánic schools nothing is studied but the Kur'án and without any explanation. The task of the master is to learn the sacred text by heart. Ibn Khaldún in his Muqaddamah says that in his time the schools of Spain and Tunisia taught children reading and writing and the Arabic language before putting them to study the Kur'án, which they then learned without much difficulty while in the rest of the Maghrib they were only taught to recite the Kur'án and from the beginning of their studies. It is this latter that is still the usual fashion in North Africa of our day.

The Kur'án is not studied to know and understand it. It is learned by heart for the reward promised in the next world to those who know it and to benefit by the virtue of al-kuráh of the divine verses. The latter point of view is very much in keeping with the mentality of Musulmán peoples with a strong belief in magic.

When the boy begins his studies he is taught to smear a wooden slate with a fine white clay called qamal; sleeped in water. When the slate is made dry, either by being exposed to the sun or held to a fire, the master traces on it the letters of the alphabet, with the point of a bâlâm (reed sharpened for writing) without any ink. He cuts into the clay by forming the letters on the slate and the pupil then asks to go over them with the bâlâm dipped in ink (which is made from burned wood). At the same time the child learns by heart the names of the letters and their descriptions without the master, however, thinking it worth while to point out to him on the slate that a certain character corresponds to a certain name of a letter. It is therefore not surprising that with such a method a pupil has to devote two or three years to learning to read and to write.

When the child can write to dictation, the master dictates verses from the Kur'án. The child writes them one by one. As soon as he has finished writing one he says azma mîn al-sabâ on reaching the last word he has to write. The master then dictates the next verse and so on till the slate is completely covered with writing. Then the pupil goes to the bottom of the class and begins to learn by heart what has been dictated to him aloud. When he knows the text by heart, he recites it to the master. If the latter is satisfied he orders the child to clean his slate. For this purpose the boy washes it in the mistâ, the vessel of water in the corner of the school; then he covers his slate with clay again and begins all over again.

If we reflect that the master has 30 or 40 pupils in front of him all of whom is at a different place in the Kur'án and that his method of instruction is individual, we can see that to learn the whole of the Kur'án, even the most intelligent pupil requires several years if he is not discouraged before reaching the last sâra.

The study of the Kur'án begins with the first chapter, the fâtiha. After this sâra the last and then the second last, then the ante-penultimate is learned and so on back to the second sâra, that of the Cow. The Kur'án is thus learned in reversed order. This method is explained by the fact that the sâras have been classed, except for the fâtiha, in order of length, the shortest being at the end. Since at the time of prayer, the believer repeats a sâra, usually one of the last, there is some point in the study of the Kur'án beginning with the sâras at the end of the book. When the pupil has learned the sacred text in the reverse order, he repeats it in the proper order.

The Kur'án is divided into sixty parts called khâis; each khâa is divided in its turn into four rûb' of quarters, each quarter into two dhâhâs or eighths, and each eighth into two kharîitta or sixteenths.

The time-table of the Kur'ánic school is as follows: the master and pupils arrive at dawn, at least in theory. They study without a stop till lunch-time. Some go home to eat and return as soon as possible; others are given their lunch in school and eat either in the class, which is not encouraged, or outside near at hand. If the master goes out, his place is taken by an older pupil. They continue reciting the Kur'án till sunset when everyone goes home to dinner; they frequently return to the school till the hour of the palât al-ّalâ. No recreation is provided for. The only relaxation is the recreation by the pupils in a body of panegyrics of the Prophet. In the Maghrib there is no school from Wednesday at midday till Friday after the noon palât. Tradition has it that the Caliph 'Umar (who founded the first Kur'ánic schools) prescribed the Thursday rest. It is said in explanation that the triumphal return of the Muslim troops after the conquest of Palestine took place on a Thursday; the pupils having had a holiday to take part in the festivities, the Caliph 'Umar decided that henceforth Thursday should be a holiday in the schools. In the Hûl Jûl the holiday is Tuesday (cf. W. Martini, Textes Arabes de Touger, p. 184, note 2).

The schools are also closed on the occasion of the religious feasts and the fast of Ramadân for one week or two, each country having its own special habit in this respect (cf. especially Michaux-Belair in Archives Marocaines, xvii, p. 77).
with different colours. It is to be noted that this mixture it not always includes eggs. Some verses are written on the slate. A procession is formed to go to the house of the child, who is the hero of the occasion; part of the Qur'an is recited and a copious repast eaten. A collection made after the feast and also at the houses of the relatives and friends of the family procures the teacher a supplement to his salary which he much appreciates.

Discipline is maintained in the Qur'anic school by corporal punishment. The master keeps in his hand a long stick with which he strikes more or less cruelly inattentive children on the head. To punish serious faults he inflicts a certain number of blows on the soles of the delinquent's feet. The boy is laid on his back, with his legs in the air and laid together; one of the older pupils holds his feet up to the master who beats them rhythmically with a rod of the wild quince tree. If the pupil is too strong for his comrades to be easily able to keep him in the desired position, his feet are fastened to a wooden bench (jala'a) which two of his comrades hold up. These corporal punishments have been frequently condemned (cf. especially Mu'addii'ah) but they continue to be applied with the unanimous consent of the parents. Indeed the parents very often commission the master to punish children for faults committed out of school.

The master's duty is to give the children a good education; that is to say an education that is entirely religious. He generally does his duty very badly, at least from the European point of view.

The results obtained in the traditional Qur'anic teaching are generally bad. After long and monotonous years spent in school, the child only knows a few sections of the Qur'an and like his master is unable to write a letter correctly or read a book. Wherever general education has made some progress we find the Qur'anic schools losing their importance in spite of the piety of the people. The child is often taken there to learn a few suras after which he is taken away and put at the primary school. Very often the child goes to the Qur'anic school outside of the hours of the primary school and only for a year or two. On the other hand in cases where the people are at all backward but ardent in their faith, the Qur'anic schools are numerous and largely attended.

The children at the Qur'anic schools play a certain part in social ceremonies on account of the doubly magic character which their youth and knowledge of the divine word gives them. On Thursdays the go in a master under the conduct of the master to recite the Qur'an over the graves of pious recently buried; when a woman's accouchement is difficult and threatens to be dangerous, the children from the neighbouring school go round the town chanting litanies behind a piece of cloth held by four of them; in the centre of the cloth is an egg; the passers-by throw coppers into the cloth and utter good wishes for the sick woman. The school-children, slaves in hand are also sent to seek mercy from a conqueror for a conquered town or tribe; to appeal for rain in time of drought, the Qur'anic schools are also called upon to take part in processions.

The organisation of Qur'anic teaching is rudimentary. In the towns, it is the khatib who in theory supervises the schools; in reality he only interferes in cases where complaints are made against the teacher. In the tribes it is the 'adil who takes the place of the khatib in this connection.

The teacher is very often a stranger to the country, more often from the country than the town, which is to some extent explained by the magic character common to the state of being a foreigner and to Qur'anic study.

In the towns he receives a very small sum monthly from the parents of his pupils; on the Wednesday, the children pay him a few coins on leaving school; on the occasion of school-feasts and holidays he receives a few more gifts. He also makes amulets which he sells. In the country the falsch is paid in kind. The relatives of his pupils feed him in turn, giving him, eggs, butter, cereals and lambs; sometimes the village or donor shares the labour of working a plot of ground and gathering its yield for him. Payment in kind of the services of the teacher is the subject of a regular contract between the representative of the village or of the donar and the falsch. The latter is then called falsch mukarrir. The teacher is also the imam of the village; he washes the dead and prepares them for burial; he is also occasionally tailor and public letter writer. In brief although he enjoys the respect of those around him he lives very poorly.

The choice of a teacher is often decided by the reputation which he enjoys. The consent of the parents in the town's, of the qaima in the country gives him the right to exercise his functions. Tunisia however has endeavoured since the French occupation to regulate more carefully Qur'anic instruction and to demand a certain standard of knowledge and morality in the teacher. Qur'anic instruction by its very nature seems to have remained unchanged from the early days of Islam.

MAKTAB — MĂKŬ

dictionnaire pédagogique; Moulléras, Le Maroc
imménu, ii. 49; Revue du monde musulman,
vol. vii. (1909), p. 85 and vol. xv. (1911),
p. 422 and 452. (L. Brunot)

MĂKŬ, a kăнате in the Persian province of Āḏarbāḏūm.
Măkū occupies the N.W. extremity of Persia and forms
an enclave between Turkey (the old sandjāq
of Būyażid) and Transcaucasia. In the west of this
frontier with Turkey follows the heights which
continue the line of Zagros in the direction of
Ararat. The frontier then crosses a plain stretching
to the south of this mountain (valley of the Šar-šu)
and runs over the saddle between Great and Little
Ararat. Down to 1920 Great Ararat formed the
frontier between Russia and Turkey while Little
Ararat was divided between Russia and Persia.
Since 1920 Great Ararat has been completely
surrounded by Turkish territory, while Little Ararat
is divided between Turkey and Persia. The Turco-
Persian frontier at the present day comes down
to the Araxes. The Lower Kāra-su and the Araxes
(to its confluence with its right bank tributary
Kūṭur-šāl) form the frontier between Măkū and
the Turkish territory of Nakhšivan which forms
part of the Armenian Soviet Republic. The left
side of the triangle i.e. the inner boundary between
the kānate and the Persian province of Kōhi is
somewhat vague. When the prestige of its khan
was at its greatest, their lands stretched to the
districts of Āḏar-pāră, Ėlīštān (Kāńăn-Aimet) and
Alând. The little kănate of Avadāḏ (30 villages
belonging to the Airunlu Kāńăn) on the Būyażid-
Čaldērūn-Kōhi road forms a little enclave close
to the Turco-Persian frontier.

The kănate consists of a series of heights and
fertile valleys. In the centre between the valley of
the Zāngiṁar and that of the Aḵh-šāl rises the
isolated mass of Šoḵūr. At the foot of the Little
Ararat along the frontier chain and on the slopes
of Šoḵūr there are excellent pastures.

The lands of Măkū are very well watered. The
streams that flow into the Araxes on the right bank
are as follows: i. in the northwest the lower Kāra-su
which runs almost parallel to the Araxes and receives
on the right bank the waters from Dambat (a high plateau to the S.E. of Little Ararat where in
1905 Minorsky discovered the ruins of the ancient
town which local Armenian tradition identifies
with Arshakan, cf. Moses of Chorene, ii. 27
and ibid., i. 30); 2. the mountain-torrents Yllandārāş and Šar-šu; 3. the river Zāngiṁar (Zāngiṁar, Măkū-šāl) which consists of three main branches,
one coming from the kănate of Avadāḏ, the other,
the Tīghūl, from the S.E. corner of the plain of
Čaldērūn from the vicinity of the village of Tīghūl
(Armenian: Ėmān = muddy); the third from
the central canton of Bahāḏūk. The combined
waters run through the defile in which lies the
town of Măkū and water the rich district of Zangi-
başar ("watered by the Zāngiṁar"). Here the Zāngiṁar receives on its right bank the waters
from the central massif of Šoḵūr (this tributary
seems to have been once known as the Kāhan),
and on the left bank the Šar-šu (different from the
above mentioned Šar-šu) which rises on Turk-
Asiac territory in the north of Būyażid and flows
a considerable distance parallel to the central course
of the Zāngiṁar. 4. The Aḵh-šāl, the sources of
which are on the eastern face of the chain which
separates Turkey from Persia and on the southern
face of the transverse chain (Āḏar-pāră) which separates
Aḵh-šāl from Tīghūl. The waters of the Aḵh-šāl
and its tributary irrigate the canton of Sŏgmač-
āwā, flow into the fertile plain of Ėlīštān and flow
into the Kūṭur-šāl which waters the plain of Kōhi.
Below this confluence the Aḵh-šāl receives on its
right bank the waters of the district of Āḏar which
rise near the Turco-Persian frontier to the south
of the sources of the Aḵh-šāl and the north
of those of the Kūṭur-šāl.

The town. The site of the town of Măkū is
very striking. It lies in the short gorge through
which the Zāngiṁar here runs. The cliffs rise
perpendicularly on the right bank. The cliffs on
the left bank rise to a height of 600 feet above
the river. The little town lies in an amphitheatre
on the slope. Above the town at the foot of the rocks
are the ruins of ancient fortifications and a spring.
Then the mountain wall rises almost perpendicularly
and at a height of 180 to 200 feet leems forward.
There is therefore an incredible mass of rock
suspended over the town. (According to Monteith's
estimate the dimensions of the cavern thus formed are:
height 600 feet, depth of the cavern 800 feet (7),
breadth 1,200, thickness at the top of the arch
800 feet). It is only for a brief period daily that the
sun penetrates into this gigantic cave. Just above
is a cave which used to be entered by a perilous
scaffolding. At a later date when the cave was used
as a prison, the prisoners were hoisted up by
a rope. (The only European who has been inside
it is A. Iwanowski).

The population. The population of Măkū consists
of Turks and Kurds. The former, who are in the
majority, occupy villages along the rivers of the
kănate. They are the remnants of the Turkoman tribes of Bayat, Pornāk etc. The canton at the foot of the Šoḵūr is called Kāńăn-Koçułu.
The people (about 900 houses grouped into 26
villages) belong to the Aḥ-šāık faith (R. M. M.,
XL, p. 66) which is indirect but interesting evidence
of the character of the heresy of which the Turkom-
0

an dynasty of the Kāńăn-Koçułu was accused
(MūneĎdji-mbaşlı, illi., p. 153). The old enmity
between the Turkoman tribes survives in the general
name applied by the Kāńăn-koçułu to their Shīa
"Twelve" neighbours: they call them Ağı-Koçułu
(Gordievsky, p. 9).

The Kurds of the kănate are semi-nomads.
The Džallāt (cf. on their supposed ancestors, "Alam-
āz, p. 339 under the years 1017—1018) occupy
the slopes of Ararat and in summer betake them-
selves to the pasturages along the Turco-Persian
frontier. Many sections of them lead a troglodyte
life in the caves of the Dambat region.
The Mītān live between the Araxes and the
massif of Šoḵūr where they pass the summer.
At Kāńăn-Aimet (in Kūrdis Kaledi) there are
Haidārānu.

Before the war there were only 1,200 Armenians
left in Măkū. It is remarkable that the confidential
servants in the houses of the kănate are an
Armenian nationality. The celebrated and imposing monastery of St. Thadden (Thadevos-Arakel = Kāńăn-Kišia among
the Muslims) rebuilt in 1247 (St. Martin, Misoiées
sur l’Arménie, ii. 463) is in the central canton
of Bahāḏūk. It is regarded with a certain respect
even by Muslims who kiss the Gospels on entering
it. A long inscription recording the foundation,
given it by Shâh Ağaş adorns the doorway. At one time the villages at Măkū and
at Khoi belonged to the monastery and paid their rents to it. Another Armenian monastery (Sam Stepanos, Dastpil-Peuch) was located below the mouth of the Kotur-cai on the borders of Mäkti. The little village of Daghbärü is inhabited by Yazidis.

Ancient history. The oldest monuments of Mäkti go back to the period of the Khatl (Vanitic) kingdom. The chamber carved in the rock near Sangar (on the Mäkti-Bāşirān-Bāyazid road) is one of a number of similar constructions in Bāyazid and in the country west of Urmi (Minorisk, Kelo-Siah, Zogh., xxiv, p. 171). A Khaldi inscription known as that of "Mäkti" seems to come from Bastin on the Akh-cái (district of Cai-pān). It is of King Rusi II, son of Arghisht (c. 680-695 n. c.; cf. Sayce, A new Vanitic Inscription, J. R. A. S., 1912, p. 107-115; N. Y. Marr, Nadv. Rus. I is Mäkti, Zogh., xxv, 1921, p. 1-54). The inscription is important as showing that the power of the kings of Mäkti was extended to the region of Khoi.

Mäkti later formed part of Armenia. It corresponds to the canton of Artas of the province of Vaspurakan (Armenian seventeenth century Geography). According to Moses of Chorene, the district was at first known as Shutwarsh but was given the name of Artas in memory of the old home of the Alán whom Aratahs̄ transplanted hither (cf. Ardaz in Ossetia). The name Shutwarsh may be explained from the rule of the Artrasun kings among whom the name Shwarak (Šwarak = Šawrak = Mod. Pers. Shurshyr) was frequent (cf. Marquart, Erzrabihr, p. 4, 177). The suggestion of this scholar that Artas is connected with the older Arzana etc., Strabo, xii, 14, 3, is untenable because Artas is above Artaz which again is above the last of Artaz = Mäkti. The Aradni kings who later established themselves north of the Araxes must also have ruled in Artas for the diocese of Mäkti is called Amatunez̄-tan (Adonta).

The names Mäkti and Hæcium (= Hasm) north of Mäkti are mentioned in the History of Thomas Artaruni written in the tenth century, in the passage (ii. 3) describing the frontier of the lands ceded by the Sasanian Khuršar to the emperor Maurice in 591 (Brosset, Coll. d'Hist. Arm., St. Petersburg 1874, i., p. 75). On the many Armenian monuments in the land of Mäkti cf. the work of Minorisk on the antiquities of the khatene; cf. also Hübschmann, Die altarm. Ortsnamen, 1904, p. 344 and Adonta, Arménia v epliu̇ T'uttiniana, St. Petersburg 1908, index.

According to a legend recorded by Moses of Chorene (iv. 2, ii. 40) Tigiranes, having defeated the Medes (in Arm. Mard) Abdalshak settled his descendants all around Maas (Ararat). Neither the Arab historians (Tabari, Ibn al-Athir) nor geographers know this corner of Armenia although the name looks very old. It would be tempting to explain Mäkti as Mān + Kūh = Mountain of the Medes (P ers. måk and Arm. wär go back to the old Iranian Māda). The form Mākti (*Māktia) which is found in Hamdullah Mustafavi however presupposes a different final element.

History under Islam. Hamdullah Mustafavi (Nnebát al-Kulib, ed. Le Strange, p. 89) is the first writer (740 = 1340) to mention Mäkti among the cantons of the kingdom of Nakhčivan. It is a cleft in the neck of a rock and at the foot lies a village which stands in the shade till midday. In this place lives the Christian chief priest (ṣaqlik) whom they call Mass-Häšar (this reading is preferable to Margusha of Le Strange; cf. Aram. Margushat = the Lord Bishop).

The Spanish Ambassador Clavijo who visited Mäkti on June 1, 1404 still found it inhabited by Armenian Catholics ruled by their prince Noradin, who enjoyed practical independence. Timur did not succeed in taking Mäkti but by a treaty Noradin agreed to supply him with 20 horsesmen when required. The oldest son of Noradin was taken to the court of Omar Mirza and converted to Islam when he was given the name of Sargatunx (Seyr-g charismatic); as to another son, Noradin intended to send him to Europe to be consecrated a bishop. Clavijo mentions a monastery of Dominicans at Mäkti, "en el dicho lugar" (Frayles de Sancto Domingo, Viage a las anteladas, ed. Sennenschwi, St. Petersburg 1881, p. 158-162 and 376) trans. Le Strange, London 1928, p. 144-145). Clavijo gives an accurate description of the town (a castle in the valley; on the slope, the town surrounded by walls; higher, a second wall, which was reached by steps cut in the rock).

On the death of Timur, Kara-Vüstüf the Kara-Koyuni disappeared on the scene and Mäkti was one of the first places he conquered in 806 (1406) (Sharaf-nimaa, i. 376). Henceforth the country must have become rapidly Turkised. According to the Sharaf-nimaa (i. 295, 298), in 892 (1574) the Ottoman government ordered the Kurds to look after the Mähmûdî tribe (cf. above ii., p. 1145) to take Mäkti (one of the cantons of Nakhčivan) from the Persians and to restore the fortresses. I twas given to Mäkti as vajhsar. After his death in 1002, Sultân Muhammad II gave the fortresses to Mustafa Beg, son of I twal.

When in the summer of 1014 (1605) Shâh Abbas was in the vicinity of Khoi the Mähmûdî Kurds of the district of Mäkti and Pasak (a village on the Alân-cai to the west of Khoi) did not come to pay homage to the Shâh. Abbas I transferred the clan of Manšur-beg to the Trâk (Persian) and took the field in person against Mâhtaf, beg of Mäkti. The historian Iškandar-munghi mentions two forts at Mäkti, one at the foot of the mountain (fuy-i väk) and the other on its side (moiyan-i vádi). The former was taken by the Shâh's troops but the capture of the other was "not so easy". Orders were given to plunder the Mähmûdî tribe which was done. The women and children were carried off and the Mähmûdî men executed. The booty was so great that cows were sold at 2 dirhams = 200 (Persian) dînârs a head. The royal camp remained for 10 days at Mäkti but the upper fortress "in spite of the constretness of the place and the lack of water" held out and the Shâh left for Nakhčivan without having obtained its surrender (Ālam-i-nahr, p. 479).

The Turks and Persians attached great importance to the position of Mäkti. Murad IV in the campaign of 1045 himself realised the importance of Kotur and Mäkti and in the instructions given in 1046 to Kâna Mustafa Pašā ordered him to demand that the Persians should destroy the two fortresses. Indeed by the treaty of 1049 (1639) the Persians decided to raise Kotur Mäkti, (read Mäkti) and Mazhabār (Zarikh-i Nâ'immü, i. 686). However Murād IV died and in the reign of Selim I, the Persians reoccupied Kotur and Mäkti (Ewliya Celebi, iv., p. 279).
The next stage is recorded in the Persian inscription engraved on the rock above the fortress (Minorsky, Dramaotsi, p. 23). It tells us that Şah 'Abbas II ordered the destruction of the fortress because it sheltered the embattled (mufsadat). The fortress is compared to a Kaţa‘-y′a Khabib; the ex
cutor of the Şah′s order was a certain Akbar and the date is 1052 = 1641-1642 (Chronogram ḡ-n-f). The history of 'Abbas II (Kıpšl-Ab-khānī, Bibl. Nat. Paris, Sapph. Per., N° 227) throws no light on the incident but as (fol. 74v) an Ottoman embassy to the court of the young Şah in 1052 is mentioned, it is probable that it was not without influence on the destruction of the fortress, on the preservation of which Persia had formerly laid stress.

Contrary to the tenor of the inscription, Ewliyyā Celebi, II, 337-339 claims that it was the Ottomans who, after the peace of 1049, destroyed Mākū and at the same time recalled the Maimudī Beg who was their representative there. In 1057 (1647) the Kurd Beg of Shāhkī (a stronghold on the borders of Persia) rebelled against the Turks. The Persians, while protesting against his raids, seized the occasion to introduce to Mākū 2,000 riflemen from Māranderd. The Ottomans sent an army of 32,000 men against Shāhkī. Muṣṭafā Beg of Shāhkī was defeated and sought refuge in Mākū. Ewliyyā accompanied the Pasha and the detachment that went to Mākū to demand the extradition of the rebel. Satisfaction was given them and the wali of Erzerum Mudīm from Fatih the Persian envoys in a very friendly fashion. He told them however that if the Persians did not withdraw their troops from Mākū and destroy the fortress he would attack Erivan and Nakhchivan. The result is not known but Persia′s possession of Mākū recognised in 1639 does not seem to have again been seriously disputed by Turkey.

The family which ruled Mākū from 1747 to 1923 belonged to the Bāyāt tribe, the clan settled around the Sūkhar (on the Bayat cf. Koprulizade Memed Pīşkū, Oğlanı Bustaniye, David Türk, İstanbul, 1925, p. 16-23). According to oral tradition Ağman Salām Bāyāt was in Khorāṣān in the service of Nūr-Şah. After the latter′s assassination, he seized one of his wives and a part of their treasure and returned to Mākū. Very little is known about him or his son Hamān Khatūn (Monteith′s host) who died in 1835. It is possible that under the Zand dynasty and at the beginning of the 19th century the real authority in the region N.W. of Aharbābdājān belonged to the family of Dumbull Khatūn [cf. Kurde], whose headquarters was at Khol (cf. Tārīkh, the special history of the Dumbull is not accessible in Europe). The disappearance of the Dumbull must have opened the way to the Bāyāt. 'Ali Khatūn (1775-1865), son of Hamān Khatūn, is often mentioned by travellers (Fraser, Abich, Flandin, Ćirko, Likhtin) as an influential chief jealous of his prerogatives. We know that the Bāb was entrusted to the guardianship of 'Ali Khatūn from June to December 1847 and that the latter treated him very kindly. The Bāb in his esoteric language calls Mākū ḡakāh-ḵī, īstif in contrast to ḡakāh-ḵī (i.e. ġahrī, cf. salmās) where his imprisonment was more rigorous (cf. Brown, A Traveler′s Narrative, 1891, li, p. 16, 271-277; Jān-Khāḥānī, Nuqat ul-qīf, G. M. S., vol. XV, 1910, p. 131-132). During the war of 1853-1856 'Ali Khatūn derived great material advantage from the neutrality of his territory which lay between Russia and Turkey. His son Timūr Pasha Khatūn (1820-1859?) profi
ted by a similar situation during the Russo-Turkish war of 1877-1878. In 1881, his appearance at the head of the Mākū horsemen in the district of Salmās accelerated the collapse of the invasion of Kurds under Şahīkh 'Ubaidallah [q.v.]. Timūr Pasha Khatūn was hailed as the saviour of Ahihrbābdājān and the people even called him Mākū Pādkhatūn.

His son and successor Murtaḍā Kulli Khatūn Igbal al-Salāma (1863-1933) at first continued the policy of isolation and aggrandisement of the khatūnate but his activity aroused suspicion on all sides. At the beginning of the war of 1914 Russian distrust earned him a forced stay in Tiflis. In time Mākū became part of the theatre of war. The Russian troops built a light railway from Shāh-čaft (on the Araxes) to Bāyāzīd and the station of Mākū became a busy centre. In 1917 the Sanīder returned home and held his position till the coming of Rūdān Sīnī Pahlawī, when, accused of intrigues, he was arrested on 25th Mihr 1912 (Oct. 17, 1923) and transported to the prison of Tābriz where he died suddenly. A Persian officer was appointed governor of Mākū (Nawbahkt, Shāhīngūsh Khatūn, Thānī 1834, p. 112).

MĀL (a.), means in the old language possession, property, referring among the Beduins particularly to camels, but also to estates and money, in any case to concrete things. The word is formed from māl and means properly anything that belongs to any one. As a noun it is of course treated as a med. stem from which a
verb is then formed. In the meaning "money" the word is used in the expression māl qašāt "dumb property" in contrast to māl waṣṣāt "speaking property", applied to slaves and cattle. There is a full definition of the conception in the introduction to the Jihrā' illā Mafāsiṣ al-Tulā' al-Abū 'l-Fadl Dja'far b. Abī al-Dimashqī (Cairo 1318, p. 2 sqq.) studied and for the most part translated by H. Ritter, Isi., vit. (1916), 1-91. There and in the Mafāṣṣil al-Ulūm (see Bibli.) p. 59, the different classes of property are enumerated. As māl includes property in its different aspects the word can also mean " storia.

The attitude of the Muslim religion to money and property and its acquisition was of course a subject of discussion from the beginning of the literature. The authoritative religious and ethical point of view is that of al-Ghazālī (so to be written, cf. Moh. ben Cheneb, R.A.A., vii., 1927, p. 224 sqq.) in the second decade of the 15th, especially book 13 (Ritter, op. cit., gives an analysis) and 14 (transl. by H. Bauer, Berlauern und verworbene Güt = Islamische Ethik, ill., 1922; cf. R. Hartmann in Isti., xiv.).

The acquisition, guarding and disposal of property is one of the four main sections of economics (Tadhīr al-Munāfīq), the second part of practical philosophy, which is divided into ethics, economics, politics and justice, just as it entered Islam with the rest of Hellenistic sciences. As the Politics of Aristotle, the first book of which deals with ethics, the Muslims had to be content with the only translated work on economics, composed by the Neo-Platonian Ps.-Bryson which has had a decisive influence on the whole economic literature of Islam. The text, the Greek original of which is lost, was first edited by L. Chichko in Moschr. xix. (1921) and has been recently published with the Hebrew and Latin versions and a German translation by M. Piessner (cf. Bibli.). The interesting chapter on māl in it was further expanded by Muslim authors of the school of Ps.-Bryson, particularly from religious literature. A standard work is the Abūl Ishaq b. al-Tūlī (q.v.) of which the economic section has been analysed and translated by Piessner. The view of the origin of money which Aristotle holds in the Nic. Ethik. reached Islam direct, besides coming through Ps.-Bryson; it is first found in the Tuhfāt al-tūlī (Miskawakh (this is his correct name and not Ibn Miskawakh (q.v.) e.g. Cairo 1322, p. 38 (cf. also KAMUS AND DHAHAB).

The word māl very early became a technical term in arithmetic. It is first found in exercises in dividing inheritances applied to the property of the testator which is to be divided. We later find the word used regularly for the unknown quantity in an equation; in this meaning it was afterwards replaced by kifāh (q.v.). Used for the unknown in quadratic equations it became the word for the square of a number. The fourth power is called māl al-māl, the fifth māl ka'bah, the square of the cube. The history of this change of meaning has been elucidated by J. Ruska, Arch. oriental. Geschw. und Rchronik (S.B. Ab. Heid., Phil.-hist. Kl., 1917, No. 2, esp. chap. vii., cf. also Index, s.v. Māl).

MĀL AMĪR, more accurately Māl-ʾAmīr, a ruined site in Lūristān. It lies in the centre of a flat plain about 3,100 feet above sea-level, in 46° 45′ East Long. and 31° 50′ South Lat., 3-4 days journey east of Shīzar (q.v.) and marks the site of a mediaeval town for which during the caliphate the name Iḥṣādī (sometimes vocalised Alḥṣādī) was exclusively used. The modern name Māl-ʾAmīr seems to be first used in the Mongol period; at least the first known occurrence is in the first half of the sixteenth century in Ibn Batṭūta (ii. 29) in the Arabic form Māl-ʾAmīr. Iḥṣādī under the 'Abbāsid was the capital of a district of the province, and was also described more precisely as Iḥṣādī al-Ahwāz (Khuṭustainā), sometimes called after Rāʾiṣ (a)burnur to distinguish it from a place of the same or similar name in the region of Sarmāzand (cf. Yūḥān, i. 416, 417: Iḥṣādī, ii. 496).

Even under the Šāfiʿīs and the somewhat inaccessible district of Iḥṣādī seems to have enjoyed a certain independence. When the Arabs for the first time invaded Khuṭustainā in 17 (635) they came to a friendly arrangement with the lord of Iḥṣādī by which the latter was guaranteed the possession of his power (Tabarits, i. 2553). Eleven years later (29 = 649) however, the governor of Banū, 'Abd Allāh b. Ṭāmr (q.v.), was forced by a rising in the newly won province to undertake a military expedition which took him incidentally to Iḥṣādī; see Baladī (ed. de Goeje), p. 384 and above, ii. 4.

Under the caliphate Iḥṣādī played no prominent part. During the troubles in the last decade of the Omayyad rule Abū Dja'far al-Manṣūr afterwards Caliph (cf. v. Vloten, in Z. D. M. G., iii. 314) administered the district of Iḥṣādī for the 'Abbāsid pretender `Abd Allāh b. Maʿṣūma (q.v.). A son, afterwards the caliph al-Mahdi, was born to him here, apparently by a woman of Iḥṣādī (see Tabarits, ill. 527). The family of the latter apparently kept up its connection with Iḥṣādī for Yūḥān (i. 416) speaks of descendants of al-Mahdi who bore the family name of Iḥṣādī. The name Māl-ʾAmīr, "prince's estate", might date from the time of al-Mahdi when the 'Abbāsids seem to have had lands in Iḥṣādī. But this name of Iḥṣādī, as already mentioned, does not occur in an Arabic source till 500 years later, so it may be assumed with greater probability that it arose in the time of the Atabegs of Lūrān Buzurg (q.v. = Great Lūr) under whom Iḥṣādī attained its greatest prosperity. This ruling family, which traced its origin to a Kurd chieftain of Syria, is also called the Fāṭimids dynasty after an ancestor of the Ḥazāraspid after the proper founder of their power, Malik Ḥazārasp. Their rule over East and South Lūr-
rihatia dated from about 530 (1135). The capital was Iddhajj. At times the power of these princes stretched eastwards as far as the vicinity of Iyahan and southwards to Byasar and to the Persian Gulf. They owned the suzerainty of the caliphs or of the Mongol Khanas who replaced the Abbásids; in practice they were fairly independent. Among the Uthbees of this dynasty mention may be made of Almahud Nuṣrat al-Din (596–730 or 733 = 1226–1329 or 1332). According to Ibn Battūta, he built 160 madrasas in his kingdom, of which 44 were in Iddhajj. He also improved caravan traffic by hewing roads through the rocks. Under his successor Abū Bakr ibn al-Cast, Ibn Battūta spent some time in Iddhajj and gives an interesting description of this city in the course of this journey. The Timurids in 827 (1424) put an end to the rule of the Fatālī dynasty. On this dynasty cf. above ii. p. 48 sg., and the genealogical tables in Justi, *Iranisches Namenbuch*, Marburg 1895, p. 460 and E. von Zambait, *Manuel de Géographie et de Chronologie pour L'Histoire de l'Islam*, Hanover 1927, p. 334.

On the later history of Iddhajj nothing is known. The town probably became gradually deserted after the fall of the Fatālīs. Its ruins are now represented by a large mound of earth, about 35 feet high, of irregular shape with smaller mounds of rubble around it. Cf. Layard in *J. G. R. S.*, xi. 1846, p. 74 and Layard, *Early Adventures in Persia*, Sarisar and Bokhala, London 1887, l. 403, and Jequier, *op. cit.* (s. Bibl.), p. 134.

It may be mentioned that the Bohīd Sultanān struck coins in Iddhajj in the name of Shemimit. In the neighborhood of these border ranges, as is the S. E. and is linked up to the Mungabat hills farther south (cf. Rawlinson in *J. G. R. S.*, x. 80–81; de Bode, *op. cit.*, xii. 100; Layard, *op. cit.*, xiv. 74 and de Bode, *Travels*, ii. 39) within which stood the fortress of the same name, which played an important part in the middle ages (Mungabat, Mankhlih, Mandjaj; cf. also above iii., p. 466 sq.).

The ridge which shews in the plain of Māl-Amūr in the east or N.E. is called Kūh Gheghūt. According to Jequier, there is a large artificial lake in the north (northeastern) part of the plain, which finally disappears in the swamp. According to de Bode (*J. G. R. S.*, xii. 104), there was in his time two small lakes there, the so-called Shatt-bend's, which dried up in summer like the marshes and the small streams which run through the plain. The water of the latter came in the main from the lake of Deridjelī Bandān, south of the plain of Māl-Amūr, behind which Hotun-Schindler (see Bibl.) ascended the steep wall of the Tanawat range. The lake called Fam al-Bawwāb described by Yāqūt may be identical with this stretch of water; cf. La Strange, *op. cit.*, p. 245; Schwarz, *op. cit.*, p. 337.

Among the numerous ravines which are to be found among the hills that border the Māl-Amūr plain on the N. E. the most interesting from the archaeological point of view is that of Kūh-l Fārūk (see the plan in Jequier, *op. cit.*, p. 135). Kūh-l Fārūk, according to O. Mann in Lütr "little ravine"; cf. above iii., p. 41 b,Dieulafoy and Schindler have erroneously reproduced this to them unintelligible word by Kal'a or Kūt = fortress: see Weissbach, *op. cit.*, p. 743, note, whose suggestion about the meaning of Kal'a is now ruled out. For Fārūk, H. Schindler gives the form Ferra and Ferendi (Franks, Europeans), the latter apparently based on a Lūtr interpretation of the male costume in the reliefs there. Earlier travellers (Layard, de Bode) write Kūl-Fārūn, apparently because their Lūtr authorities identified the same Fārūk with Fārūn (Pharaoh) whom they saw from the Kūrān.

The majority of the sculptures of pre-Irānian (Elamite) origin in the region of Māl-Amūr are to be found in Kūh-l Fārūk. Quite close to the entrance to the ravine is a large stele with very small human figure in high relief, a row of smaller figures with a well preserved 24 line cuneiform inscription and 10 smaller inscriptions (the latter giving the names of the individuals represented). According to the large inscription it is a monument erected by a certain Ḥánī, son of Ṭabẖiḫān. Opposite, on the other side of the ravine at intervals on blocks of stone and on the wall are five tablets with other reliefs of rude execution. Special mention must be made of a great procession with 67 figures. The total number of figures in Kūh-l Fārūk is according to Layard 341.

Opposite the ravine of Kūh-l Fārūk, in the hills which bound the S. W. side of the plain of Māl-Amūr is the cave with many corridors of Shīkefte-i Salmān, "the cave of Salmān." According to the Bahktiyārs who hold this place in great honour, the name is derived from that of Salmān al-Fārist [q.v.], the first Persian to adopt Islam, who is buried there, contrary to the modern Sunnite and Shi'i tradition which locates the tomb of this companion of the Prophet in al-Madīna (`Salmān Fāris; cf. above iii., p. 79). In Shīkefte-i Salmān have survived four primitive bas-reliefs of the Elamite period of which two are outside and two inside the cave. Among them is a figure, over life size with a 36 line cuneiform inscription which also dates from the Ḥāńī above mentioned. On a little explanaede to the south of the cave are the ruins of a little Muslim sanctuary, probably erected on the site of an older sanctuary. In the corner of the spring is a spring which rises one of the little streams that water Māl-Amūr.

Apart from the monuments of Kūh-l Fārūk and Shīkefte-i Salmān there are a series of other monuments and remains of the ancient and mediaeval periods in the plains of Shīkefte-i Salmān. For example, in the southwest part of the plain near a ruined inamandī (saint's tomb) which the Lārs call Shāh-Suward (the king on horseback) on a slope of the hill is a small stele, obviously also of the Elamite period, with 6 figures and an inscription which has been destroyed. According to Layard, there are many popular traditions about this place. A little north of Shāh-Suward at a place called Kūh Wādī are the ruins of a palace. In the opposite direction in the N. E. section of the plain rises a round palace on the summit of a rock, called Ķal'a Gāshdoun (Scorpion Hill) by the natives. A ravine near by is called Hōng; in it
may be seen a much weathered Sassanian rock-sculpture of great dimensions; probably of the earlier period (c. 5th). That the plain of Mä’l-Amir enjoyed comparative prosperity in the Sassanian period is evident from the remains of canals of this date.

In the S.W. of the plain a narrow road runs to the village of Hallâd (de Bode: Halegem). Near it are old ruins of the period of the Atâbeg dynasty. There is an Atâbeg citadel, an Atâbeg bridge and well. The numerous traces of buildings probably date from a medieval town. Of recent date is the ruin (mentioned by de Bode) of a palace of Hasan Khan, a chief of the Bakhtîyâr tribe of Čahâr-Lâng who lived here about 1821. Here is another little river called Hallâd-jân or Shîth-Rüben which is probably connected with the lake at Bâshidj-i Bândân already mentioned (cf. Layard, J. R. G. S., xvi. 74 and Early Adventurers, i. 403.; de Bode, J. R. G. S., xii. 100 and Travels etc., i. 404.

In the N.E. of Mâl-Amir runs an old road paved with huge blocks of stone, which is now called Râk-i Sulân (the Sulân’s path) or Diâtet-i Atâbeg (= Atâbeg road) to the Sar-i Râk (Rädjî) some 3,500 feet high, the highest point, and thence to Işfâhân after several days’ journey. It has already been mentioned above that the Atâbegs did a great deal for road-making in their lands. But the original planning of the road probably goes back to a great antiquity; cf. thereon de Bode, J. R. G. S., xiii. 102–104, and Travels etc., ii. 6–8, 35–46. Perhaps, he suggests, the ‘ladder-steps’ (ṣâhûnencias σκάλας) over which Eumenes passed, as mentioned by Diodoros xix. 21, may be identical with the Atâbeg road. Remains of old roads paved or hewn out of the rock are also found in other places in the neighbourhood of Mâl-Amir; cf. iii. 516. The natives ascribe them at once to the Atâbegs, as they do the ruined caravanserais found everywhere. Near the Sar-i Râk pass about 12 miles east of Mâl-Amir is a place called Kâsl-i Medrese, where chiefs of the Bakhtîyârs meet every year. There are the ruins of two Sassanian buildings; cf. Unvala, in Revue d’Asiologie, xxv. 1924, p. 86–88, who gives a detailed description of them. Schwarz, op. cit., p. 340, thinks that this Kâsl-i Medrese — in spite of the discrepancy in the distances given corresponds with the place Hallâd-jân mentioned by Ibn Bâji (ii. 41). A ruined site of the same name, also with two Sassanian buildings is according to Unvala 24 miles S.E. of Masdîd-i Sulâmân (cf. assan); 4–5 hours N.E. of Mâl-Amir are the ruins of Sûsân [q.v.].

The Arab geographers of the middle ages reckoned the celebrated stone bridge (bantara) of Išdâdi crossing the Djudjâl (Kajfez) among the wonders of the world. It was also called Kântara Khurrâsân from the alleged (otherwise unknown) name of the mother of Ardashir I, who is said to have built this bridge and another in the town of Ašwâs (see Schwarz, op. cit., p. 321). Otherwise we only know the masculine form of the Persian name Khursâd (cf. Schwarz, op. cit., p. 338 note 4 and Jastrow, Iranisches Wörterbuch, Marburg 1895, p. 180). In the 16th (5th) century this bridge of Išdâdi was restored by the vizier of the Bâshid Rûkân al-Dawla after two years of work. De Bode identifies it with the “Atâbeg” bridge at Hallâd-jân; probably he should, with Rawlinson, op. cit., p. 53 and Schwarz, op. cit., p. 339, identify it with the “Old Bridge” crossing a small tributary of the Kârlûn N.E. of Kâl’a-i Medrese. For further information on the Bridge of Išdâdi cf. Yâkût, i. 416, iv. 189 and Schwarz, op. cit., p. 338–339.

The rulers who had the sculptures and rock inscriptions of Kâl-i Zârâ and Siâjkfeh-i Salâmân made, belong to the period of the latter E. Elamite kingdom, to the period between Neo-Babylonian 1 (1146–1123) and the rise of Assyria in the first half of the 16th century i.e. about 1000 B.C. It cannot be decided whether king Hanni, son of Shîth-Rüben, from whom the monuments and inscriptions date, and the Shûtar Nakhkhûnî, son of Indada mentioned by him, ruled the whole of Elam or whether they are to be regarded as members of a local dynasty ruling perhaps the district of Mâl-Amir. The inscriptions are in the Elamite language but contracts written in the Babylonian language have also been found in Mâl-Amir; cf. the Bibliography.

Here it may be mentioned that following de Bode the town of the Uxians which Alexander the Great passed on his way from Susa to Persepolis after passing the “Süsan Gates” has often been sought in the region of Mâl-Amir; de Bode, Travels etc., ii. 47 sq.; Spiegel, Ermanische Altertumskunde, i. Leipzig 1876, p. 409 and Kaezst in Pauly-Wissowa, Realencykl. d. class. Altertums-wiss., i. 1424.

Since the late middle ages (beginning of the vi/viiith century) the Bakhtîyâr Lürs have settled in the district of Mâl-Amir (cf. above iii., p. 428, 435). They spend the winter there on account of the fine green pastures. On the Bakhtîyârs see Sakhtûyârs and iii., p. 426, 435, 436, 506.

Bibliography: B.G.A., passim (s. Indica); Yâkût, Muṣīyân, ed. Wüstenfeld, i. 416; Hând Allah Mustâwî, Nuzhat al-Kelâb (G. M. S., xxii.), p. 70; Ibn Bâji, ed. Paris, ii. 39–427; G. L. Strange, The Lands of the Eastern Caliphate, Cambridge 1905, p. 245; P. Schwarz, Iran im Mittelalter nach den arabischen Geographien, iv. Leipzig 1921, p. 293, 335–340; 441, note 5; 421, note 6; 439–440; Ritter, Erdkunde, i. 152–157, 218. — It is only since the xixth century that we have more exact accounts of the plain of Mâl-Amir and its monuments from European travellers. On those for the period 1841–1889, see Weisbach, op. cit. (see below), p. 745. Rawlinson was not himself in Mâl-Amir but heard of the ruins there when in the neighbourhood in 1836; cf. his article in J. R. G. S., ix. 82–84. — For the archaeological monuments of Mâl-Amir the most valuable records are those of Layard and C. A. de Bode who both visited it in 1841 and that of Jâquier at the beginning of the xixe century. C. A. de Bode in J. R. G. S., xiii., 1843, p. 100–104 and in Travels in Kurdistan and Arabia, London 1845, i. 400–404; ii. 1, 6–8, 25–50, 102–100; Jâquier, Description du site de Mâl-Amir, in Délégation en Perse, Mémoires, vol. iii., Paris 1901, p. 133–143 (with 2 plates). Cf. also the description by A. Houtum Schindler (Reise 1877), in Zeitschr. d. Gesellsch. f. Erdkunde zu Berlin, xiv., 1879, p. 45 sq. Cf. also the descriptions of the monuments of Mâl-Amir in Weisbach,
For the Elamite bas-reliefs in Mal-Amir and the cuneiform inscriptions with them the reader is referred to Weisbach, op. cit., p. 745-747 for illustrations, squatters, editions, decipherment, and commentary as regards the Bibliography down to 1893. The inscriptions were first edited by Layard in his Inscriptions in the Cuneiform Character, London 1851, Pl. 31-32, 36-37. Mention should also be made of: A. H. Sayce, The Inscriptions of Mal Amur, in Acta du six Congres International des Orientalistes, 3. Leyde, vol. ii., Leyden 1885, Weisbach gave a new edition in the publication above mentioned; a new transcription and translation of the Mal-Amur texts with commentary; cf. op. cit., p. 748-754, 759-777 (and plates i-iv.). A transcription, differing in many points from Weisbach, of the two great inscriptions of KUL-FAR and Shikkeb-Salman (with notes) was given by G. Husing in Zeitschrift für Assyriologie (M. V. G., ill., Heft 7), Berlin 1898, p. 21-34; cf. also Husing's short articles in O. L. Z., ix., 1906, vol. 605-606; xi., 1908, col. 337 sq. The latest edition of all the Mal-Amur inscriptions — including the fragmentary one of Shikkeb-Salman quoted by Weisbach — is that of Scheil, Délégation en Perse, Mémoires, vol. iii., Paris 1901, pl. 27-36; transcription and translation under: N. X. I., and tav., p. 102-112. Scheil (ibid.) also published autotype fascimiles of the bas-relief and a 'picture of the cave of Shikkeb-Salman': cf. pl. 27-33. In his travels in Pakistan O. M. Mann also visited Mal-Amir and took squatters of the inscriptions there (cf. O. L. Z., xi., 605); but so far as I am aware he has published no more about them. — On the particular form of cuneiform used in the Mal-Amur inscriptions see Weisbach, op. cit., p. 752-759 (syllabary) and the epigraphic tables on pp. 762-780; cf. on the question of transmigration Husing, Beiträge zur K. G., p. 15-21 with table of characters and data. In O. L. Z., vil., 1904, vol. 437-440.

In Mal-Amir have also been found cuneiform tablets of a legal nature (contracts) written in the Babylonian language; 16 of these contracts have been edited, transliterated and translated by V. Scheil in Délégation en Perse, Mémoires, vol. iv., Paris 1902, pl. 19-20 and p. 169-194. (M. Streck)

MALABAR, a district of the Madras Presidency in British India, situated on the west coast of the peninsula, between 10° 15' and 13° 48' N. latitude and 73° 14' and 76° 15' E. longitude, and extending for 450 miles along the shores of the Arabian Sea; on the E. the district is bounded by the Western Ghats, the hills of which attain an average elevation of 5,000 feet, but occasionally rise to 8,000 feet. Out of a total population of 2,093,333 (according to the Census of 1921) there are 1,008,327 Muslims, of whom 93.60 per cent are Sambas; the greater part of them are Mappilas [q. v.]; the Labbais [q. v.] form the next largest group.

The Arabs, who, in the latter part of the 17th century, established themselves on the Arabian coast, and who gradually increased their power, were not, however, driven from the coast by the Portuguese, but established themselves on the adjoining territory, and were thus enabled to trade with both the east and west.

Trade with Arabia appears to have led to the introduction of Islam into the Malabar coast at an early period, and the exact date of which is uncertain. Hindu rajahs encouraged the Arab traders and the commerce of the western coast had passed almost entirely into their hands by the end of the 18th century when the Portuguese arrived to dispute it with them. The Arabs did not give way without a struggle, but by the middle of the 19th century the petty coasting trade was left in Arab hands, and when the power of the Portuguese declined in the 19th century their place was taken by English and Dutch traders. In 1766 Haidar Ali [q. v.] added Malabar to his dominions, but found it a turbulent possession, and his son Tipu Sultan [q. v.] in 1792 had to abandon this territory to the British.
MALAGA — MALAGA

317th century. After the middle of the 16th century, Malacca territory was increased by the conquest of Pahang (on the East coast of the Peninsula); and for a time the kingdom included all the coasts of the central and South of the Peninsula to about 4° N., together with a sovereignty over the parts of Smatra lying opposite to it. Siam made several unsuccessful attacks on Malacca during this period.

The growth of this incipient empire, which however already showed signs of decay in the form of internal divisions and bad administration, was cut short by the Portuguese conquest in 1511, whereby the town and its immediately adjoining territory, together with the command of the sea, fell into European hands. Though often challenged by the attacks of their Muslim neighbours (especially the new state of Aceh [Achim] in Northern Smatra), the Portuguese maintained their hold on Malacca till 1641, when after a prolonged siege it was taken by the Dutch. In 1795 it was occupied by the British, in the name of the Prince of Orang, and held until 1808, when it was returned to the Dutch under the provisions of the treaty of Vienna. In 1824 it finally became British and in 1826 it was incorporated in one government with Penang and Singapore and made subject to the East India Company.

During the Dutch period the importance of Malacca as a trading centre declined; it was never allowed to compete seriously with Batavia, and in the end it was quite overshadowed by Penang (founded in 1786) and Singapore (founded in 1819).

In recent times it has shared in the general economic development of the Peninsula; but it only ranks as the fifth town in British Malaya, with a population (In 1931) of 36,071 (of whom about one-fifth were Muslims) in an area of 3.5 English square miles. In the whole settlement or territory of Malacca, including the town itself, the population was 153,522, of whom 53,658 were Malays proper (including a considerable number of Minagakban descent), 2,777 other Muslims (such as Javanese, Banjarans, etc.) of Indonesian stock, 1,146 Muslim Indians, 2,575 Chinese, and 56 Arabs, making an approximate total Muslim population of 57,571; almost all of whom were Sons of the school of Shafi'i. Of the rest of the Asiatic population about four-fifths were Chinese and one-fifth Hindus.

(C. O. BLACNON)

MALAGA, Arabic Malakt (ethnic: Malakj), a large town in Spain on the Mediterranean and capital of the same name, has at the present day 133,600 inhabitants. It is built at the centre of a bay commanded by the hill of Gibralfaro (the Llano Fino de Tari). The town is traversed from north to south by a narrow dry (Arabim arid) of the Guadalmedina (called 'Samalbin') which, while very often dried up, sometimes overflows in the rainy season. To the west of the town lies the Vega or Hoja of Malaga where the vegetation is exotic and extremely luxuriant.

Malaga, the ancient Malaca, was founded by the Phoenicians and retained for long under Roman rule. A trace of deep Phoenician influence; its port under the Empire was one of the most important in the Iberian peninsula. At a later date it was the see of a bishop. It was taken from the Byzantines in 571 by the Visigothic king Leovigild. In 711 it was taken by a Muslim force sent from Reja by Tarik. It soon became an important Muslim town and in time supplanted Arabidhona (Archidona, q.v.) as capital of the province of Reja (Latin: regio) where in the time of the governor Abu 'l-Khatta' Abu al-Haitham b. Diri al-Kalbi the Arab Tone (Jordan [al-Urdum]) was settled in 125 (744). Malaga welcomed the founder of the Osmayud dynasty of Spain, 'Abd al-Rahman 1 al-Daghili, after his landing at Almuñecar and his triumphal progress through the districts of Elvira. But, in the second half of the third (nineteenth) century, the province of Reja including Malaga became closely involved in the troubles stirred up by the nationalist 'Umar b. Hafsan. In the reign of the Emir Muhammad b. 'Abd al-Rahman b. b. Hikam, according to the historian Ibn Hafsan, the province supplied for a summer expedition (2000) against Geralia an imposing number of horsemen: 2,600. Later, when the rebel was causing anxiety to the Emir 'Abd Allah an expedition on a large scale had to be undertaken against the province of Reja. An army under the command of prince Abu son of 'Abd Allah took the field in 993 (694) and inflicted a severe defeat on the troops of Ibn Hafsan. Three years later, the same general had to besiege Malaga which was held by the rebel Musaddir b. 'Abd al-Rahman. Another expedition was again led against Malaga in the reign of 'Abd Allah in 997 (699).

The great caliph 'Abd al-Rahman III, on ascending the throne, had no peace until he succeeded in putting down the rebellion of Ibn Hafsan. In the early years of his reign several expeditions were again sent against the rebels in the province of Reja of which Malaga was the port but not yet the capital. Once order was completely restored by the sovereign, Malaga entered on a long period of prosperity which continued till the end of the Umayyad caliphate.

From being capital of a province, Malaga became the capital of an independent kingdom in the period of the maslak al-mu'tamid. The Hamudids after having had to renounce their claims to the caliphate of all Muslim Spain were able to hold out in a little principality in the S.E. of Spain with Malaga as capital. At the same time another branch of the same family founded a little kingdom around the town of Algeciras. The Hamudid dynasty of Malaga survived till 449 (1057) [on it cf. the article HAMUDID]. The king of G-ana, the Zirid Badi b. Habbas, had hitherto been nominally their vassal. He decided to clear off their sovereignty and seize their principality. He did this with ease and called the last Hamudids to Africa; his son al-Mu'ta' was appointed ruler of Malaga. On the death of Badi in 466 (1073) his kingdom was divided between his two grandsons 'Abd Allah and Tabuin and Malaga
felled to the latter. The town very soon passed to the Almoravids and then to the Almohads. When, in 629 (1232) Muḥammad I Ibn al-Abjar founded the Nasrid kingdom of Granada, Malaga and its province formed part of his lands and remained in the power of the dynasty till the period of the Catholic Kings. Fentinland and Isabella took Malaga from the Moors on Aug. 18, 1487; after a close blockade.

The Arab geographers of Muslim Spain almost all give enthusiastic descriptions of Malaga. Idrisī (xith century) mentions two of its suburbs, praises the sweetness of its waters and the flavour of its fruits. Ibn Baṭṭūṭa in the second half of the xith century says much the same and adds that a fine gilt porcelain was made at Malaga which was exported to the whole Muslim world. Finally Ibn al-Khathīb frequently speaks of Malaga in his description of the kingdom of Granada; one of his minor works is devoted to a comparison of Malaga with Salé, the Musulmano Málaga de Salé (the Arabic text has been published from two MSS. of the Escorial by M. J. Müller, Wettstreit zwischen Málaga und Salé, in Beiträge zur Geschichte der westlichen Araber, p. 1-13).

Very few monuments of the Muslim period survive in Malaga, which have not been very much altered. The old chief mosque has become the cathedral. According to the author of al-Rawī al-maṣfūr, this qāya had five naves and five doors, two on the side facing the sea, one on the east front (Bib al-Wāṣl) and one on the north side (Bib al-Khanīkh). Another mosque of Malaga built in the grafa is said to have been founded by the traditionist Muḥammad b. Sīrīb of Emsa (d. 158 = 775). The old Muslim citadel is still called Aḥzarrāya. There are very few relics of Jālim in it, a vaulted gateway (Arco de Cristo) and a tower (Torre de la Vela). This citadel was joined to another fortress by a double rampart built on the hill of Gibralitar; it was restored at the end of the xiii century by the Nasrid rulers of Granada.

Malaga in the Muslim period remained an important sea-port and an active centre of shipbuilding, less important however than its neighbour Almeria. This Dar al-GeVīna, the name of which has survived in the form Atravanna, occupied the actual site of a market and one of the gates with the motto of the Nasrids (al ḥālaḥa illa Allāh, "There is no victor but Allāh") is still standing.

MALĀḤIM (h., sing. malāḥa) came, after a long and obscure development, to mean "destinies", either simply al-malāḥim, or kutub al-malāḥim or in the singular. The word was already quite adequately explained by De Sacy in his Christi

nominative arab., ii. 298-303, on the basis of several passages in Ibn Khaldūn’s Muhaditha. There Ibn Khaldūn defines al-malāḥim as "numerous bones on dynastic changes and events (hīsidjūn al-durai), written in verse and prose and ražīs, many of which are spread abroad amongst the people, some dealing with the changes in the Muslim people (al-milīla) as a whole, and others with particular dynasties, but all ascribed to well known indivi
duals", although, in Ibn Khaldūn’s opinion, it would be difficult to prove the correctness of any of these ascriptions (Quatremer’s text, il. 192 foot; De Slane’s transl., il. 226). The most famous case of this is the book called al-Dānaf (q. v. and the references there). Such predictions as to public affairs have close connection with, and were probably developed from the Jewish and Christian apocalypses. As there are many stories, both in sober historians and in popular tales, describing these books as secretly preserved and consulted by dynastic leaders for their own guidance, they have also contacts with the Roman Sibylline books. The popular doctrine of the Mahdī (q. v.) and of the Last Day (al-Kiyāma [q. v.]) became inextricably confused with this branch of Muslim literature.

The derivation of malāḥama and the development of its meanings are obscure. The word does not occur in the Kur’ān which has the root only in lāḥū and lāḥūn with the concrete meaning, "flesh". Yet the root lā/m,n, like the cognate Hebrew root, had apparently very two separate but old meanings, "food" and "fighting". Further, the fact that the Hebrew food-word, leḥem, means "bread", while its exact equivalent in Arabic means "flesh" would suggest a separation very far back rather than a borrowing (cf. the comparative treatment and references in Browne-Driver’s Handbooks, Hebrew Lexicon, p. 535 sqq.). In old Arabic the meaning of decisive fighting, leading to defeat, pursuit and slaughter, seems to be certain (cf. the treatment in the Līḥā, xxii. 9-11, and add to the quotations there Hamshā, ed. Freytag, p. 124, 726; Duwān of Taftūn b. ‘Awf, ed. Krenkow, p. 7, l. 29, with translation and note on p. 15).

The Līḥā mañana to connect the meanings (flesh; warp and woof in weaving; close, entangled fighting) under the general idea "being intricate, mixed" (lāṭāṭā, lāṭāṭā) or with the picture of the flesh of the slain on the battle-field. But, in view of the Hebrew usage, it is better to be satisfied with the meaning of malāḥama as "a stricken field"; the Līḥā (p. 10) reiterates the idea of war and fighting with much slaughter and especially in the Fītā (bāṭīnā), its only allusion to the prophetic and eschatological usage. An epithet of Muhammad is "the prophet of the malāḥama", indicating that the Līḥā gives two explanations: (i) "the prophet who was sent with the sword" (as in another tradition, būṭītān bāṭīnā); (ii) "the prophet of union and good order" (bāṭīnā, bāṭīnā).

There is very little general prophecy in the Kur’ān to future historical events in this world; but in Tradition there is a great deal. Even the two Sāfi’s have sections on such future fiṭām—
apparently the oldest word for them and frequent in the Qur'an — especially those leading up to the Last Day. In Bukhari (Bullaq 1315, i. 46-61; Book 92 in Wensinck, Handbook) the Prophet is quite explicit in foretelling such woes and tries to come in and in warning how they must be set.

In Muslim (Constantinople 1320-1333, viii. 165-210; Book 52 in Wensinck, Handbook) there is a similar series of hadith or prophetic sayings, but, also, an explicit statement (p. 172 sqq.) that the Prophet foretold everything which would happen to his People until the Last Day. By Ibn Khaldun (Muhammadan, ed. Quatremere, i. 182 sqq.; transal. De Slane, ii. 212 sqq.) this tradition is cited and others, by later and less weighty authorities, which make the Prophet give a dynastic history for future Islam, with the names, fathers' names and tribes of all leaders of revolts until the end.

The use of the term malākīm in connection with such prophecies appears first among the 'Alids in their doctrine of the Dajir. The Futūh gives two occurrences: Ali b. Ya'qūb (D. A. B. 182; p. 224, l. 22) had a Kitāb min umūr al-Malākīm and Isma'il b. Mihrān (p. 225, l. 20) had a Kitāb al-Malākīm. But the name must have spread very rapidly. In the Maqāalah of al-Baghawi (Cairo 1318, ii. 126 sqq.) those traditions are classified and one section is Kitāb al-Malākīm (p. 130-33). All the traditions bear on the wars of the Last Days but the word malākīm itself occurs only in the early part of the Kitāb section (p. 132 middle) in such phrases as "the Malākīm," "the great Malākīm," connected with the capture of Constantinople and the appearance of al-Da'dūl. In the Mukhātkh al-Malākīm (Dhibi 1327, p. 396 sqq.) the text is practically the same, only adding the names of the collections from which the traditions are taken, Abū Daws and al-Tirmidhî. Abū Daws has a separate section on malākīm (No. 36 in Wensinck).

In such a book of edification as the Taḥdhib of al-Qurtubî (l. 671 = 1272), in the Mukhtasar of al-Shahrâbi (Cairo 1334) the sections on the Malākīm have swallowed up the whole doctrine and history of the Mahdî (p. 115-21), to the aid of whom there is sent an angel called Dâmkîr (f), qâkîr al-malākīm.

Ibn Khaldun has recorded the final form which these prophecies took. Traditions put in the mouth of the Prophet were supplemented and largely displace by calculations of astrologers and by the speculations of pantheistic Sufis using the science of Simyâr [q. v.] in the interests of the 'Aliids. We have thus to distinguish sharply between (i) the malākīm-predictions registered in the canonical books of traditions and in the literature of edification based upon these and (ii) the malākīm-books based upon secret tradition and on astrology which went back to the 'Aliids and are represented best by the Dajir. For, besides the Dajir ascribed to Dâ'âr al-Sâlihî, there was also an astrological Dajir, ascribed to Ibn Ishaq al-Kindi, dealing with the dynastic desinies of the 'Abbasids. An asserted fragment of this, called the Little Dajir, was in circulation in the Maghrib in Ibn Khaldun's time, but had apparently been composed in the interests of the Musawwids. Further Ibn Khaldun had known as in circulation in the Maghrib several poems of this class in the interests of different western dynasties. In the Orient he had heard of several such malākīm ascribed to Ibn Sind and he had actually had knowledge of one such ascribed to Ibn al-'Arabî.

In Cairo he had found another, also ascribed to Ibn al-'Arabî, giving a horoscope for that town. In the Orient, too, he had seen a malākîm-poem by a certain Sâlih, Muḥammad al-Bâqîrî, of the Karândî Fraternity of darwishes, who left behind him a heretical sect, al-Bâqîrîkhâya, and who died 724 (1324). Ibn Khaldun gives a mass of details on this malākîm and on its author, who called it a Dajir. It dealt with the dynasties of the Mamûlîks and Ibn Khaldun knew it in two recensions from which he quotes. For still more details on this genre of literature, based on Ibn Khaldun's personal knowledge, see Quatremere, text, ii. 193-201 (the Bullaq texts are not complete) and De Slane's translation, ii. 226-237.

In stories, there are frequent references to the science of malākîm as one of the esoteric sciences along with astrology and qârîb al-rumâl. Thus, in Habîch's text of The roots of night (ed. Breslau, ill. 218) in the Story of Kamar al-Zamân and Badrî, a form closely akin to the version of Galland and different from that in the second Calcutta and the Bullaq editions, Marzâwan, the foster-brother of Badrî, is described as learned in the sciences of astronomy and the sphere and reckoning and algebra and rumâl and malākîm.

Bibliography: is given in the course of the article.

(D. B. MACDONALD)

MAL'ÂK. [See MAL'ÂKA.]

MAL'ÂKA, angels, is the Arabic broken plural of an early Semitic (Canaanite?) word malāk, meaning "messenger". The evidence would suggest that it is a loan-word, coming into Arabic from Hebrew; there is no trace of a verb in Hebrew (nor in Phoenician, where the noun occurs in later inscriptions), and in Arabic the root, even, is in the greatest uncertainty, being referred to a dubious 'lāk (Lane, p. 81, s.; Lîân, xii. 273 sqq.; Tabari, Tafsir, i. 150) and to a still more dubious 'lāk (Lîân, xii. 370). The singular in Arabic is normally malâk without harša, and so always in the Qur'â'n; although the Lîân in two places (xii. 274, 4, 371, 3) quotes the same verse as a proof that malāk does occur, but as an exceptional form (shâdlâk). Both singular and plural in Arabic are used only in the sense "angels".

In the Qur'â'n it occurs twice in the dual (malākāt, ii. 96; vii. 19), of the two angels Hâdît and Mârîf (q. v. and under shâdlâk), and of Adam and Eve being tempted in the Garden to believe that they may become angels. The plural occurs very often in the Qur'â'n (in Flügel's Concordance under 'lāk, p. 171) but the singular only 12 times (Flügel under malâk, p. 183). These are of the people demanding revelation by an angel rather than a human being (bâshar, vi. 8, 9, 50; xi. 15, 33; xvii. 97; xxx. 8); women think Joseph an angel for his beauty rather than a human being (bâshar, xii. 31); an angel's interchange (gâfûrâ', liii. 26) does not avail; twice as collective for angels, beside the arâb (lxx. 17), and in rows and rows (lxix. 43).
"the Faithful Spirit" (al-rāh al-āmin); he brings down the revelation to the ḍhīl of Muhammad in a clear Arabic tongue. There are other descriptions of him, still unnamed, in Kurān iii. 5—18 and lixxi. 19—25, as appearing plainly to Muhammad in revelation. He, as "our Spirit" (rūhānī), was sent to Maryam (t. xii. 17). He is called the "Holy Spirit" (rūh al-hūdā) in xxiv. 118 and Allah addressed ʿIšā'ī with the same (li. 84, 254; v. 169). ʿIšā'ī (variant Mikāli) is named (li. 92) as an angel of the same rank as ʿIšā-query; see a long and apparently true story of how his naming came about in Baidāwī (Feisčicher's ed., l. 74, 163 sqq.); in traditions he, with ʿIšā-query, appears to Muhammad and instructs him; he does not laugh (Wenslock, p. 152b); Muhammad called the two his wazīr of the angels. To Isrāfīl (p. 128, the angel with the trumpet of resurrection, there is no reference either in the Kurān or in canonical traditions but very much in exegiastic legend. In Kurān xliii. 47, the trumpet heralded to call to the keeper of hell, "O Malik!" (l. 15) and xxvi. 18, the guards of hell are called al-Zabānīya, an otherwise unused word, meaning apparently, "violent thunders." (Līlāt, viii. 55): the number of these, Kurān lxxiv. 39, is nineteen and they are asserted specifically to be angels, apparently, to guard against the idea that they are devils; they are called "rough, violent" (zāhirīh, ahdāf). Another class of angels are those "Bewitched Near" (to Allah), al-musānārīya (iv. 170); these praise Allah day and night without ceasing (xxi. 20); Baidāwī calls them also al-muṣāmūn (on Kurān li. 28, Feisčicher's ed., l. 47, 57; and al-musāhirīya on Kurān iv. 170 (Feisčicher's ed., l. 243, 48) as those that we answered, the word. The same term, musāhir, is used of the Kurān (li. 40) as he is in the company of the angels nearest Allah; of article 168, above, for his semi-angelic character. At the beginning of the Surah of the Angels (Kurān xxxvii) there is a significant description: "making the angels messengers (rasūlim), with wings two and three and four; He increases in the creation what He wills"; this has had much effect on later descriptions and pictures. They are guardians (ḥāṣifūn) over mankind, cognizant of what man does and writing it down (ḥāṣifūn; Kurān lixxi. 10—12). In xxvi. 94 the writing down is referred to Allah himself. In lxx. 4; lxixvii. 56; xxvi. 4, there occurs the very puzzling phrase "the angels and al-rāh". Baidāwī on the first two passages shows how perplexing the distinction was found (Feisčicher's ed., li. 350, 8: p. 352, 1): the rāh is an angel over the spirits (al-sālihāt); or he is the whole genus of spirits; or ʿIšā-query; or a creation (ḥāshi) mightier than the angels; al-ī, too, of Al-Wāzin's ḍhīl, ed. Waterfield, p. 36. For spirits and the conception "spirit" in ḍhīl see article al-ḥāshi. In the Kurān there is no reference to the two angels, Munkar and Nakir, who visit the dead man in his grave, on the night after his burial, and catechize him as to his Faith. Thereafter, if he is an unbeliever, his grave becomes a preliminary hell and if he is a believer, it becomes a preliminary paradise from which he may pass at the Last Day into paradise; it may even, if he is a saint, be a preliminary paradise. This is called technically the Questioning (al-ṣaḥīf) of Munkar and Nakir and also, the Punishment of the grave (ḥāishi al-ḥāshi). This doctrine, similar to the Lesser Judgment of Christian theology, is one of the ṣaḥīfīya (to be believed on oral testimony) and is based on the implicit meaning of Kurānic passages (xiv. 341; xl. 11; liii. 25) and upon explicit traditions (Tafsīr al-ʿĀbī's commentary on Nusairī's Aḥādīth, ed. Cairo 3521, p. 199; Mawṣīf of al-ʿĀbī with commentary of al-Djurjānī, ed. Bulbul, 1266, p. 590 sqq.). There is a still fuller account and discussion by the Ḥanbalite theologian Ibn ʿAṣim al-Jawziyya (Broekelmann, G. A. L., ed. 106, No. 23) in his Alīth al-ʿĀbī, ed. Haidarābād 1374, p. 62—144, viii. 81—114. The angels are also called the heavenly host, or multitude (al-malakūt al-aṣlād, xxxvii. 68; xxviii. 69) and guard the walls of heaven against the "listening" of the āfān and shurān. See further on this under ʿIšā-query, lii. p. 410.
to above. These two angels are supposed to have yielded to sexual temptation, to be confined in a pit near Babil and there to teach magic to men. But: it is answered, the Kurān says nothing of their fall; (ii.) teaching magic is not practising magic; (iii.) they always first warn those who come to them. "We are only a temptation (fīzā); so do not disbelieve" (Kurān ii. 96); and, further, Taftāzān on the Āniyād of Naṣṣāf, ed. Cairo 1321, p. 153.

In Bāṣawī on Kurān ii. 32, there is a long discussion of the angels' nature (ed. Fleischer, i. 544, to p. 552, 8) which, however, runs out in the despairing statement that knowledge on the point is with Allāh alone (al-Allāh la huwa yahūd). Perhaps Ibīs was of the gīrūl as to his actions (fī zaman), but of the angels as to species (fīnaw). Also, Ibn 'Abbās has a tradition that there was a variety (jātrah) of the angels who propagated their kind (this has always been regarded as an essential characteristic of the gīrūl and of the šālihat's as opposed to the angels) and who were called al-gīrūl; and Ibīs was of these. Or, though he was a gīrūl brought up among the angels and identified with them; Or, that the gīrūl were among those commanded to prostrate themselves to Adam. Or, that some of the angels were not impeccable, although that was their characteristic in general, just as some men, e.g. the prophets, are guarded against sin but most are not. Further, perhaps a variety of the angels are not essentially different from the šālihat's but differ only in accidents and qualities; as men are virtuous or evil, while the gīrūl unite both, and Ibīs was of this variety. The tradition from 'Abbās is no answer to this explanation; for light and fire in it are not to be taken too precisely; they are used as in a proverb, and light is of the nature of fire and fire of light, they pass into another; fire can be purified into light and light obscured to fire. So al-Balādāwī.

With this should be compared the scholastic discussion in the Mašīfī on al-Allāh, with the commentary of al-Khujāridjī (ed. Mīrās 1366, p. 576). In it the objector to the šāniha of the angels over the angels has two grounds: (i) their urging upon Allāh that he should not create Adam showed defects (slander, pride, malice, finding fault with Allāh) in their moral character; (ii) that Ibīs was rebellious, as above. These grounds are then answered scholastically. Then various Kurānic texts, as above, on the submission and obedience of the angels are quoted. But it is pointed out that these texts cannot prove that all of them, at all times, are kept free from all sins. The point, therefore, cannot be absolutely decided. Individual exceptions under varying circumstances may have occurred, just as, while the šālihat's as a class were created for evil (šālihat al-nahrā), there is a definite tradition (Shāb by al-Muhtar) on al-rāfī by Allāh ascribed to Ahmad, ed. Haḍaradźh (p. 545) of one Muslim šālihat, a great-grandson of Ibīs, who appeared to Muḥammad and was taught by him certain sûras of the Kurān.

The story of Ḥārūn and Mūsā suggests that the angels possess sex, although they may not propagate their kind. But they are not to be described with either masculinity or femininity (Cāzīd of Naṣṣāf, ed. Cairo 1321, p. 153). Taftāzān and the other commentators in this edition explain that there is no authority (maṣūf) on this point and no proof by reason (nābīst) it should, therefore, be left unconsidered and that, apparently, was the course followed by al-Isī and al-Kurānjī. They may have sex and not use it. In that respect man who has in him the possibility of sin and must himself rule his appetites of lust (žawāra) and of anger (ṣādqa) has a higher potentiality of excellency than the angels (Bāṣawī on Kurān ii. 28, ed. Fleischer, i. 48, et seq.).

This leads to the second question as to the angels, which scholastic theology has considered, the relative excellency of angels and men, and, especially, of angels and prophets. This is stated shortly by Naṣṣāf (p. 147 of ed. cited above): (i.) "The Messengers (ruṣūm) of mankind (al-baṣar) are more excellent than the Messengers of the angels and (ii.) the Messengers of the angels are more excellent than the generality of mankind and (iii.) the generality of the angels." Taftāzān develops that there is general and indeed necessary agreement on the excellency of the messengers of the angels over mankind in general, but that the other two statements (i. and iii.) will bear argument. He urges (i.) the prostrating of the angels to Adam; (ii.) that Adam was taught all the names of things (Kurān ii. 29); (iii.) that Allāh "chose" (lā fārī) Adam and Nuh and the family of Ibrāhīm and the family of Ibrāhīm over all created things (al-šāri'ātam; Kurān iii. 50); (iv.) that mankind achieves excellences and perfection of knowledge and action in spite of the blindness of lust and anger. But the Maṭīlīwī and the "philosophers" (al-halālu'I) and some Agārīwīs held the superior excellency of the angels. They urged (i.) that they were spirits, stripped of materiality (farār madājarwad), complete actually, some of even the beginnings of evils and defects, like lust and anger, and from the obscurities of form and matter (gūnūd al-hayā taw wa l-jār), capable of doing wonderful things, knowing events (bašā'īn), past and to come, without error. The answer is that this description is based on philosophical and not Muslim principles. (ii.) That the prophets learn from the angels, as in Kurān xxvi. 193; (iii.) The answer is that the prophets learn from Allāh and that the angels are only intermediaries. (iii.) That there are multiplicity of names both in Kurān and in tradition where mention of the angels precedes that of the prophets. The answer is that precedence is because of their precedence in existence or because their existence is more conceded (al-šāri') and, therefore, faith in them must be emphasised. (iv.) In Kurān iv. 173 "aš-šāniha does not disdain to be an "aš-šāniha" to Allāh nor do the angels' must mean, because of linguistic usage, that the angels are more excellent than Šāri'. The answer is that the point is not simple excellency but to combat the Christian position that 'Iṣā is not an "aš-šāniha" a son to Allāh. In the Mašīfī (p. 572–578) there is a similar but much fuller discussion which involves a philosophical consideration of the endowment, mental, physical, spiritual — of all living creatures from immaterial spirits to the lower animals (al-baṣar). In the "Aṣwāf al-Mažābirāt of al-Kawāmī (ed. Wittemfeld, p. 55–63) there is an objective description of the angels in all their classes, in which the statements of Kurān and Summa are adjusted to the Aristotelian-Neoplatonic universe.
with its spheres (al-aṣṣīf), in accordance with al-Kaswirī’s general aim to give a piction of the created universe in its details and wonders. Yet, apparently, while the angels possess the quality “life” (ṣayyāf), and are the inhabitants of the heavens and of the heavenly spheres (ūnhīmūn al-thayyāmūl), they are not to be reckoned among the animals (al-thayyāmūl). Al-Damiri includes mankind and the djinn, even the diabolic (mutanāḥṣantūn) djinn, such as the ẓayın, in his Ḥaṣāl al-Thayyāmūl but not the angels. Equally acute and scholastic with the discussion in the Munawwīfī, and more spiritual than that by Kaswirī, is al-Ghazzālī’s treatment of the mystery of the angelic nature in some of his specialistic smaller treatises. For him it is part of the general question of the nature of spirit to which his smaller Maqāmūn is devoted. See, too, the larger Maqāmūn (ed. Cairo 1305) in Rukn, ii., p. 43 sqq. and the translation by W. H. T. Gairdner of his Miṣkīf al-Anwar (London, Royal Asiatic Society, 1924), parrin.

The above is a statement of Muslim ideas as to the angels. But Muslim literature also takes account of non-Muslim ideas on them, as those of “philosophers”, Christians, dualists, idolaters. These will be found given shortly by Badāwī on Kurʾān ii. 28 (ed. Fischer, i. 47, 48 sqq.) and in more detail in Dict. of tebub. terms, p. 1327 sqq.

MALĀṬYA, an old city, not far from the upper Euphrates. It lies at the junction of important roads (in antiquity; the Persian royal road and the Euphrates route; in modern times Samad—Sûwa—Malatya—Diyarbakir and Kars-Sivas—Malatya—Kharput) in a plain, the fertility and richness of which in all kinds of vegetables and fruits was celebrated by the Arabs geographers, as in modern times by von Moltke and others. It is the northern foot of the Taurus not very far south of Tokhmas (Arab. Naḥṣ al-Kubāk) which is there crossed by the old bridge of Kargöl. The town was supplied with drinking-water by the springs of Uṣūn Dâwīya and by the Euphrates. Weaving used to be a flourishing industry there; according to Ibn al-Shāhla there were once 12,000 looms for spinning wool in Malatya but they no longer existed in his time.

The town appears as Melitade in Assyrian cuneiform inscriptions and two “Hittite” steles have been found there (to be more accurate: Ar-sin Tepe, a little south of Malatya: Meuseræschmit, Corpus Ins. Hittít. in M. V. A. G., 1900, part iv., p. 13; 1906, part v., p. 7). It is probably also to be identified with the district called Mele (last letter un保留) in the inscription of king ZABA of Hamat, (c. 600 B.C.) which Poggio found in “Afla near Aleppo. Pliny (Nat. Hist. viii., 3) calls the town Melita: a Semitic root; the name of the legendary founders has perhaps survived in that of the fortress of Shimrit which Michael Symus (Chronicon, transl. Chobert ii., 272) mentions in the sixth century in the land of Sawaad in the region of Malatya. To its position on the Oriental itineraries Malatya owed its great prosperity in the Roman period. From the time of Titus it was the headquarters of the Legio XIV (Felimina); it was much extended by Trajan and under Justinian raised to be the capital of the province of Armenia III. Anarapis and Justinian reformatted and beautified it. After his severe defeat at Malatya in the autumn of 575, Phoebus I burned the town (John of Ephesus, vi., 9; E. Stein, Studien zur Gesch. d. Byzantin. Reiches, Stuttgart 1915, p. 56—57 sqq.; note 97: 200 Ḥābiḥ b. Maslama al-Fihri sent by Ṣaḥāb b. Ghiyām from Armenia VI (Shamshā) against Malatya and took the town; but it was later retaken by the Muslims. When Mu’tawiyah became wāli of Syria and al-Dajjār, he again sent Ḥābiḥ b. Maslama against the town. He stormed it in 36, left a troop of cavalry in it to guard the frontier and placed a governor in it. Mu’tawiyah himself visited Malatya on his campaign against Asia Minor and left a large garrison in the town which henceforth became one of the headquarters for the summer campaigns into Bilâd al-Rūm. When the people abandoned the town in the time of the caliphs Abū al-Malik and Abū Allāh b. al-Zubair, it was taken and sacked by the Byzantines; on their withdrawal, it and the whole of Armenia IV was settled by the Armenians and Malatians, that is Aramaic speaking peasants, driven out of his kingdom by the emperor Philippicus. (Nöldeke, Z. D. M. G., xxx. 125; al-Baladhurī, ed. de Goeje, p. 185; Michael Syrus, trans. Chobert ii., 192 sqq.; according to Theophanes the Armenians were settled in Malatya by Philippicus in 712 A. H.) They increased very much and were valuable allies of the Arabs in the wars against the Byzantines (Michael Syrus, loc. cit.). The caliph Omar settled the fugitive inhabitants of Turanda (now Derenda) in Malatya and made al-Dajjār b. al-Harthī of the tribe of the Bani Ḥarith of the confederation of the Bani Sa’d the governor. In 133 (740—741) a Greek army of 20,000 men under Aḥkāvīq, the general of the Theme Armeiniakon, advanced against Malatya and plundered the country round it. The inhabitants closed the gates and sent a messenger to Ḥājjām in al-Rūm; but the latter soon heard that the Greeks had withdrawn and sent the messenger back with a body of cavalry. Later, when he himself took the field against the Byzantines, he camped before Malatya until the rebuilding of the town which the enemy had destroyed was completed (Baladhurī, loc. cit.; Michael Syrus, ii., 306; Theophanes, ed. de Bovor, p. 743; P. Diomys, ed. Chobert, year 1051). The Emperor Constantine V (Copronymos) in 133 (750) advanced on Kamath and Malatya, whose inhabitants looked in vain for help to Mesopotamia, as a civil war was raging there. As the emperor knew this he demanded that the inhabitants should abandon the town. After at first refusing they finally agreed, being exhausted by the siege, left the town with all their goods and chattels and went to al-Qādīzār whereupon Constantine levied Malatya to the Crown; nothing but a half ruined granary remained standing. Henī Kallawīyā was also destroyed and its inhabitants, like those of the other villages in Armenia IV, carried off into captivity (Baladhurī, loc. cit.; Michael Syrus, ii., 518; Baethgen, Abh. d. K. d. Morgenl., viii. 3, p. 34, 127; Weil, Gesch. d. Chalifs, ii., 15). Six years afterwards (139 A. H.) the Mal❣wī wrote to Sābīl, b. ‘Abd Allāh who had in the
previous year defeated an army of 100,000 men under Constantine and retaken Malatya (G. W. Freytag, Selecta ex histor. Hafci, Paris 1819, p. 62, note 58) ordering him to rebuild and fortify the town. He then appointed his nephew, the Imam 'Abd al-Wahhab b. Ibrahim, governor of al-Djazira and its marches (al-Tabari). He arrived there in 140 with al-Husain b. Khaṭaba and Khaṭaba's troops, who were reinforced by Syrian and Moslem

was also rebuilt (Baladhitur, loc. cit.; Michael Syrus, ii. 522; P. Dioni, ed. Chabot, p. 67; Vidi, Muqarnas, iv. 653; Well, Grec. d. Chalifat, i. 55); a frontier fort was built 50 m. from the town and another on the Nahr Khabūlī (Tehrāna-šī). Al-Mansūr sent 4,000 Mos科普otamian soldiers to Malatya to whom he gave increased pay and allotted lands as fiefs.

In the next year (141) Muḥammad b. Ibrahim was sent to Malatya with a Khurāṣi army to protect the town from the enemy. The former inhabitants, at least those who were still alive, thereupon returned to Malatya. An expedition sent by

the Byzantines against Malatya was defeated by Ḥārūn al-Rashīd (Baladhitur, loc. cit.). In the reign of al-Ma'mūn, his son, al-ʿAbbas, who was governor of al-Djazira conducted a campaign against the Byzantines (Well, op. cit., i. 259) from Malatya. In the summer of 222 (837) the emperor Theophilus went into Armenia with Zilāṭa, which he sacked and burned, and on his way back passed through the country of Malatya which was also laid waste and its inhabitants carried off prisoners by Byzantium (Michael Syrus, iii. 89; Maḥfūl, Muḥāfīl, viii. 133 sqq. Tabari, Yaʿqūbī and other Arabs wrongly date this campaign in 223 [838]; cf. for the contrary view Well, op. cit., iii. 310, note 1 and Bury, Hist. of the East Roman Empire, 1912, p. 260, § 1; Marqwarī, Hamīd-e Amāryā, xxviii., 1914, p. 42). The town itself, which was handed over to him by the Roman prisoners there, he spared out of fear of an approaching army of the enemy. Towards the end of the following year al-Maʾṣūm sent the Syrian amir Abū ʿAbd Allāh al-Muḥammad b. Ṭūlūn against the Byzantines but he only met with moderate success; the people of Malatya under Ḥāfiz and the amir ʿOmar b. Ṭūlūn b. Marāwīn al-Aṭīa of Malatya in alliance with the Armenians and 10,000 Turks then defeated the emperor. Theophilos near the fortress of Duzman (al-Maʾṣūm, E.G.A., viii. 169; Marqwarī, Chronogr. Byz., p. 418, 729; Well, op. cit., i. 312). In 841, however, the Byzantines conquered al-Hadīlah, Marāb and the land of Malatya. When in the middle of the 11th century the Palaiolecos (Arab: al-Baṣṣārī, al-Baṣṣārī) some of whom lived in the country west and north of Malatya (Karapet Ter Marĉenī, Die Palaiolecosen., Leipzig 1853, p. 116 sqq.) rebelled against the Byzantines, the amir of Malatya, ʿOmar b. ʿAbd Allāh al-Aṭīa, protected them from their persecutors; their leader Kurkaši built in this region the fortress of ʿAṣūna (Argwāta), Tephrike (Dıwright) and Amara (Emeril, near Varpuz). Fighting went on for some years with varying results (Well, op. cit., ii. 363–365); finally ʿOmar al-Aṭīa was completely defeated on a campaign in Asia Minor in Radijb 249 (863) by the valiant Petronas (al-Bayānī), Michael III's general, with his whole army on the Mardj al-Uṣaf (Well, op. cit., iii. 380; Tomaschek, Sasan u. d. Quellenquellen des Tirgir, S. H. Ak. Wien, xxviii., vol. iv., 1893, p. 23; on the site of the 'Bishop's Meadow': Le Strange, Eastern Caliph., p. 138). The Emperor Basil I in 871 went against Tephrike and Taranton (Derece), he plundered Zilāṭa and Sumnaš and then encamped at ʿAṣūna (Nahr al-Zarnūṣ; now: Cirmikl-šāl, hūsra ʿAṣūna in der Theophanis continuator, ed. Bonn, p. 465; Kastor Kurbans, Hahsebruch, Charta, x., 1920, ed. Abbeleho-Lamy, 1921, now: Cirmikli, cf. Tomaschek, Beitr. z. alien Gesch. u. Geogr., Friedrichs, f. H. Klopstock, Berlin 1898, p. 141). But he was not able to take Malatya which was fortified (Heremōtōr, Phoemenus, ii. 442; Well, op. cit., ii. 471). His army suffered heavy losses during the siege and the emperor himself was nearly captured. Whether he undertook a second campaign against Malatya was doubtful (Well, op. cit., ii. 475).

The Arab general Mūsīn in 304 (916–917) devastated Cappadocia from Malatya. (Well, op. cit., iii. 653); similar invasions took place in 310 and the following years. It was not till 314 (920–927) that the Byzantines were able to avenge their revenge. Under the brave Domestikos Joannes Kurbans (Ibn al-ʿĀthir, ed. Tornberg, vii. 211: Abūnāmīzīr, Kurbāk; Michael Syrus, iii. 122 sqq.; 158: Kyriakos), they entered the district and advanced up to the suburbs of Malatya, laying waste the country and going as far as Shimākht (Arsamanta) (in 315 according to Hūnāz al-Iṣfahānī, Taršīh, ed. Gottwald, p. 205; trans. p. 158, wrongly "in fœde Samometanis inverso"). Kurbans forced the amir of the town to send his son, Abū Ḥafṣ (ʿAṣūja), and the general Abu l-ʿAwšār (Aramaxē) to him and to acknowledge the suzerainty of the emperor (Symeon Magister, Bonn, p. 741 sqq.; Georg Monach., ed. Muralt, p. 854), while the Bonn edition p. 908 and Theophanes continuator, ed. Bonn, p. 416 and Georg Kedrī, ed. iii. 310 sqq. wrongly write "Arnaxos"). Kurbans, himself an Armenian by birth, seems to have granted the lands of Malatya and Sumnaš to the Armenian prince Michel (Arab. Malīḵ, Greek Μάλαχ), who was again driven out of Malatya and Sumnaš in 320 by Saʿīd al-Dawla, uncle of the Hamadān Nāṣr al-Dawla of Mawsīl (Well, op. cit., ii. 659; Zappakh Imp., Akad. Nauk, xlv. 102 sqq., following Dāmīl al-Din b. Zāba). But in 934, after the death of the two friends of the Byzantines, Abū Ḥafṣ and Abu l-ʿAwšār, Kurbans and Michel again appeared before the town, which at that time was protected by a double wall and a ditch full of water. The inhabitants found themselves forced by starvation to negotiate about the surrender of the town. During the negotiations the Greeks succeeded by a stratagem in forcing an entrance through the north gate of the town and taking it on May 19, 934. The inhabitants, in keeping with the promise that had been given them, were allowed to leave the town. The walls were razed so that the town was henceforth open to all attacks (Michael Syrus, iii. 122 sqq.; Ibn al-ʿĀthir, viii. 221; Ramraš, L'Empire Grec au Xeme siècle, Paris 1870, p. 433 sqq.; Rosen, op. cit., ii. 89 sqq., 105, 108). In the next decade Saff al-Dawla repeatedly invaded the territory of Malatya.
His mamliq Nadji, in his campaign to Hanit in 1550 (961–962) encountered Abd Allah of Malatya and put him and his friends to flight (Freystag, Z. D. M. G., sq. 1917; Rosen, sp. cit., p. 383). Two years later he again ravaged the land of Malatya for 18 days with fire and sword (Freystag, p. 264, 265).

When the emperor Nicephorus enquired Syria, he wished to repopulate Malatya, which was deforested and deserted. But the Greeks refused to leave there for fear of Arab raids. His advisers therefore recommended him to invite Syriac Jacobites to the country. He did this and promised the Patriarch Makl Vahanan Saragas, that he would repopulate Malatya, Hanit and the pessaga (skrapa), he would no longer persecute the Jacobites (Michael Syrus, iii. 132 sq.; Barhebræus, Chron. eccl., ed. Abello, Lamy, i. 411 sq.; Markwardt, HANDL. AMORASCH., xxx., 1915, p. 212, note 1). People now flocked to Malatya from all parts (La 969 A. D.). Monasteries were built. About 1100 there were said to be in Malatya and district 53 churches and 60,000 Christians capable of bearing arms, including many Melkites (Michael of Tinina in Renand, Hist. Patr. Alexandr., Paris, 1713, p. 405; Barhebræus, sp. cit., i. 424, note 1). The emperor did not, however, keep his promise; persecutions again became of everyday occurrence and drove the Jacobites more and more into the arms of the Arabs (Michael Syrus, iii. 131, 132, 147).

According to Ibn al-Athir (al-Kamil, ii. 565), Malatya at this time was placed in the beira of Armenvan (Armenvan) which he says stretched to the Bosporus (Khalif al-Kutbâniyye) which he says stretched to the Bosporus (Khalif al-Kutbâniyye).

The Emperor John Tzimiscas (Shimbski) in 1071 on his campaign to Nisibis crossed the Euphrates at Malatya (Yabûl al-Antakhi in Rosen, sp. cit., p. 183 note; Schlembarger, L'Epopee byzantine, i., Paris, 1896, p. 255.).

The rebel Dardas Schlevra in 1168 (976–977) seized the town of Malatya, imprisoned the strategos who was governing it for the Emperor and had himself proclaimed basileus. When Schlevra was fighting against the imperial general Michael Barqes (al-Barqi) there was with him a Shukh who had been converted to Christianity, the priestic Ubâdi Allah al-Majnûyûs of Malatya, who is perhaps identical with the ’Abd Allah mentioned in 350. Schlevra made him suggitres and sent him with one of his slaves, the smith, Kantidh (’Abd al-‘Ali, Sallalha) whom he raised to the rank of khudás (*“Count”), to Antikliya against the basileus Kutalb, the imperial governor of this town. Kutalb surrendered to them Antikliya, the Thoughts and the whole of the Orient; he and the most prominent citizens of Antikli were then sent as prisoners to al-Kutbâniyye (Cappadocia) (Rosen, sp. cit., p. 3 sq., and note, p. 81–90 sq.; Schlembarger, L'Epopee byzantine, i. 359, 362, 376 sq.). Schlevra however at once sent the Antikli inhabitants back to their homes and made Kutalb basileus of Malatya (Rosen, sp. cit.; Schlembarger, i. 386) while on the other hand Ubâdi Allah soon went over to the emperor Basil (977–978). When after a seven-years' interment on the Tigris island of Madida near Baghdad, Dardas Schlevra succeeded in gaining his freedom, he escaped to Malatya with the help of Beduins, where he was at once (in Shawwal 376 = March 987) seized the basileus Kutalb who had gone over to the emperor, and himself again proclaimed basileus (Yabûl, transl. Rosén, p. 22; Schlembarger, i. 678). Bardas Phocas, who took Bardas Schlevra prisoners by treachery and then claimed the imperial title for himself, passed through Malatya on Sept. 14, 987 on his way westwards straight through Asia Minor (Schlembarger, i. 695).

In 1009 (1008) the Hamdaniyân Abû l-Haithâm fled to Malatya before the Minâshd Mâshûr b. Lîlîn, where the emperor appointed him suggitres (Rosen, sp. cit., p. 51; Schlembarger, ii. 442).

The most important event during the Byzantine occupation of Malatya was the invasion of the Turks. Their first inroad into the area of the town was in 1058; the inhabitants fled before them mainly into the adjoining mountains where they perished of hunger and cold. The Turkish force 3,000 strong under the amir Abû Dinâr remained to days pillaging Malatya and laid the country waste for a day's journey round. On their retreat the Turks were surprised by the people of the Armenian district of Sasamun (Arab. al-Sânâmû, now: Sânûn) and all slain, with the assistance of the prisoners and fugitives from Malatya (Michael Syrus, iii. 158 sq.), according to whose erroneous chronology these incidents took place in the 9th or in the last year of Constantine IX (i.e. 1050–1051 or 1054–1055); Matthis of Edeess, transl. Dulamieri, p. 107–109; Arslânâ Kastavi, in Tomasea, Siyatt u. das Qenilgöolheit des Tigris, S. B. Ab. Wüten, xxivii, vol. iv., 1805, p. 29 sq.).

One of the prisoners who survived, the Syrian monk Joseph, wrote three memoirs on these events; the patriarch Vahanan X bar Ghobin also composed 4 memoirs on the devastation of Malatya (Baumstark, Gesch. d. syr. P., ii. 291 sq.). By the time of the Emperor Isab II. (1057–1059) we again find the Turks raiding the country of Malatya and carrying off prisoners from it. His successor Constantine X Ducas (1059–1067) restored the two walls and the ditch at Malatya (probably in 1060–1061). When the imperial decree regarding this was published, a number of citizens of Malatya, who were in Constantinople returned home and arranged for a large number of workmen and builders to be brought from Asia Minor and Antikliya; in a very short time owing to the continual threat to the town, the fortifications were rebuilt on the old foundations (Michael Syrus, iii. 165 sq.). The Byzantine saggitaris Kînootes was afterwards killed with his wife and children and the town “henceforth knew no peace” (Michael Syrus, loc. cit.).

These constant invasions of the Turks, which specially affected the region of Malatya (Skyllitzes in the ed. of Kedros, Bonn, ii. 660 sq.) met with very little opposition. Then the legions quartered around Malatya, whose pay and provisions had been withheld, refused to cross the Euphrates to meet the enemy along with the local volunteers. The Turks did not besiege the town but went on to attack Kamariya, which they stormed (Skyllitzes, loc. cit.). When Romanus IV Diogenes attacked the Turks in 1068 he sent a general from Göksüt, perhaps as Gfyorix suggests (Histo, Gesch., iii. 720), the Bulgar Alshinasa, to Malatya to guard the frontier against the raids of the Turk Afîthin (Alyvâskin). The general however did not leave Malatya so that Afîthin was able to advance against the emperor undisturbed (Skyllitzes in Kedrosos, ed. Bonn, ii. 674; Weil, sp. cit., iii. 112, note 2).

In the same year the emperor appointed the
succeeded in conquering Abulustain, the district on the Djiailan and the whole country round Malatya (Michael Syrus, iii. 195). The Atibeg of the Sultan of Malatya (probably Bālāk), in 1111 again deprived him of his lands on the Djiailan. Khūlid Arab’s widow left Malatya to marry the doughty Amir Bālāk (Michael Syrus, ii. 200). A Turkish cavalry leader offered to sell Taghiril Araskan the fortress of Ziyād; when the young Amir of Malatya wanted to take possession of it, however, it was taken from him by the son of the Amir of Kharṣa without a blow being struck. On the 11th March 1118 the Amir Mangāngi of Kamashi pillaged the country round Malatya; the Khāṭīn of Malatya thereupon turned to Joscelin of Edessa for help (Michael Syrus, iii. 204). In the following year the Sultan of Malatya conquered Abulustain and the lands on the Djiailan; the region of Kūf was passed as a gift to Malatya (Michael Syrus, ii. 205). Taghiril Araskan owed his success to the Governor Bālāk, who advanced as far as Kamak, defeated the Greeks with the help of al-‘Abī Bālāk; Dānishmand, again took Ḫūṣa Ziyād and defeated the Armenians of Garag on the Ephrates (Michael Syrus, loc. cit.). When, after further considerable successes, Bālāk fell fighting the Franks before Manbijj, his kingdom was divided; the Sultan of Malatya received Massad and Garag with the result that there was soon fighting with Sulaiman of Ḫūṣa Ziyād. On this occasion al-Qādis of Siwa and his son-in-law Mas‘ūd attacked Malatya and besieged it from June 13 to Dec. 10, 1224. The town suffered exceedingly from famine and the Khāṭīn’s reign of terror and the inhabitants breathed more freely when the ruler left the town with her son and all her followers and al-Qādis entered it (Michael Syrus, iii. 219 seq.; Matthias of Edessa, p. 215). Under him Malatya enjoyed continued peace. His son Malik Muhammad, who succeeded him in 1135 left Malatya soon afterwards when the news of the approach of the Byzantine Emperor reached him (Michael Syrus, iii. 257). When John II Comnenus invaded Syria, Mas‘ūd invaded Cilicia from Konya and carried the inhabitants of Adham prisons to Malatya (Michael Syrus, ii. 245). Malik Muhammad in 1139 also invaded Cilicia and took from the Greeks the fortresses of Bahgā and Galnāpur (Bāg, Karsner, Armen. Vaghe, Gabor; Michael Syrus, ii. 248; Röhrich, Gesch. d. Kyr. Jenen, p. 211, note 2). Two years later he was fighting with the Franks who had advanced as far as Zilaatj, Azāk and Abulustain and came at Nīkār opposite the emperor John, who had again taken the field against the Turks, for six months without fighting (Michael Syrus, iii. 249). After his death (Dec. 6, 1143) Dhu ‘l-Nūn succeeded him in Malatya (Syr. Dānūn in Michael Syrus, iii. 253 and Suppl., p. 116; Byz. Ḫwās). When however his brother ‘Al ‘Alal-Dawla (Michael Syrus, only Dawlā) advanced against him, the Turkish garrison of Malatya broke through the Basālījūt gate and surrendered the town to him (Michael Syrus, iii. 255). Sulṭān Mas‘ūd of Konya besieged Malatya when ‘Al ‘Alal-Dawla went not to submit to him of his own accord, first from June 17 to Sept. 14, 1143 and again in 1144 without success (Michael Syrus, ii. 254, 258, 257.; Röhrich, p. cit., p. 246, note 5). After ‘Al ‘Alal-Dawla’s death (June 12, 1152) his minor son Dhu ‘l-Karmān succeeded him, for whose mother first acted as regent but she was soon banished as she
plotted against his life (Michael Syraxis, iii. 305 sq.).
Mas'ud again (July 24, 1154) tried without success to take the town. Dhu 'l-Ka'bah was succeeded in October, 1162 by his minor son Nasir al-Din Muhammad (Mahnud) who made himself so detested by his excesses that he had to leave Malatya (1170).

His place was taken by his brother Abu 'l-Kasim (Taqar al-Din Kasis; Michael Syraxis, iii. 336 sq.). In May, 1172, when 15, he married the daughter of the lord of Hün Ziyâd. During the wedding festivities he fell from his horse while jouthing and died of his injuries (Michael Syraxis, iii. 343). He was succeeded by his younger brother Ferîdûn (Afânânî) who had to marry the princess intended for the brother. On the news of these happenings, Kîlîdja Arslân II attacked Malatya, where however preparations were rapidly made for the defence under the direction of the emir Sa'd al-Din. Kîlîdja Arslân had to withdraw but carried off with him 30,000 prisoners from the country round (Michael Syraxis, iii. 346). On Feb. 15, 1175, Ferîdûn was murdered by his brother Muhammad, who after many adventures had returned in disguise to Malatya by a secret agreement with the princess of Ziyâd who had left her husband (Michael Syraxis, iii. 362—364). When Kîlîdja Arslân II thereupon again besieged Malatya, the discontent with Muhammad was so great that he no longer felt safe in the town but withdrew to Hün Ziyâd. Kîlîdja Arslân after a four months' siege entered Malatya on Oct. 29, 1178 (Michael Syraxis, iii. 372). He repaired the walls of the town (Michael Syraxis, iii. 383).

The Turtukmâns, who since 1185 had been ravaging wide tracts of Asia Minor also invaded and plundered the district of Malatya (Michael Syraxis, iii. 402). In 1189 (Michael Syraxis, 1191 according to Arabic sources) Kîlîdja Arslân gave the town of Malatya to his son Ma'izz al-Din Kâmil Shâh (Michael Syraxis, iii. 407; Rec. Hist. Ori. Croeina, ii. 56; iii. 265). Kîlîdja Arslân later found himself forced to hand the town over to his other son Kûbî al-Din Malik Shâh; but Ma'izz al-Din went to Shalâh al-Din (580 = 1191—1192) and regained his position with his help (Rec. Hist. Ori. Croeina, i. 406; Rec. Hist. Ori. Croeina, ii. 56; iii. 265; v. 44).

To strengthen the alliance he married the daughter of Malik al-Azîd and accompanied Shalâh al-Din's army to Taxhûn (Rec. Hist. Ori. Croeina, ii. 117). In June 1200 Rukn al-Din Sulaimân of Dükân (Taşküt) deprived his brother Ma'izz al-Din of Malatya; the latter fled to his father-in-law Malik al-Azîd (Barhebræus, Chron. Syraxis, ed. Redjan, p. 406; Rec. Hist. Ori. Croeina, ii. 71). Sa'dîn's son, al-Muhammed al-Zâhir, who had only Sumâriz left of his inheritance, submitted in 1207 to Rukn al-Din of Malatya and Konya (Barhebræus, Chron. Syraxis, p. 408). In the next year Rukn al-Din took Anqor, a few days later he died (Barhebræus, p. 418 sq.). He was succeeded by his young son Kîlîdja Arslân III, who was however soon thrown into prison by Ghiyâspâl al-Dîn Kâmil-Shâh (Barhebræus, p. 419). After the latter (d. 1208) came his son 'Isa al-Dîn Kâmil-Khusraw, who while on a campaign against Malik al-Ashraf in Malatya developed consumption from which he died on his return (Barhebræus, p. 437; Rec. Hist. Ori. Croeina, ii. 550 sq.). In the reign of his successor 'Abî al-Dîn Kâmil-Khusraw, the Tartars in 1231 penetrated to Hün Ziyâd and to the Euphrates near Malatya (Barhebræus, p. 463). 'Abî al-Dîn took Kâtîb from Malik al-Ashraf in 1232. When in the next year the latter along with his brother Malik al-Kamîl of Egypt occupied Hün Mânazir, 'Abbî al-Dîn collected an army of over 100,000 men, took Hün Ziyâd (Barhebræus, p. 467) and besieged al-Rukn al-Dîn the following year; the inhabitants of Jarras fearing an attack on Malatya sent him the keys of their town (Barhebræus, p. 468; Kamâl al-Dîn, transl. Illoche, 'A. C. J., v. 89). His successor Kâmil Khusraw II (1237—1245) at the beginning of his reign drove the Khwarizmians out of his kingdom; on their retreat they defeated the commander (Sîhâs) of Malatya Saîf al-Dawla and crossed the Euphrates at Masîrû (var. Munzir) (Barhebræus, p. 471). In 1241, the emir of Malatya again suffered an annihilating defeat from fanatical Turkoman horsemen under the prophet Pâpît (Bâbû) (Barhebræus, p. 474). When the news of the victory of the Tatars at Kozâ-Dagh (1243; Barhebræus, p. 475) reached Malatya, the Sihâs Rashid al-Din and the other court officials broke into the royal treasury, shared the treasure among themselves, and fled to Halab. Many prominent citizens followed them; but they were surprised by the Tatars on the hill of Bîr hârî, a day's journey from Malatya and some taken, some taken prisoners. The inhabitants of the town, Muslîms and Christians, asked the Metropolitan Mîr Dâmasî who Angûr to direct the defence of the town. After two months during which Malatya was watchfully defended, the Tatars withdrew. In 1244 the Tatar chief Iusuf (var. Naçîwit) Nuyun besieged Malatya and ravaged the country round until Rashid al-Din caused him to retreat by rich presents (Barhebræus, p. 477—479). After the division of the Saltûk empire by Hüthîq, there ruled at first 'Isa al-Dîn at Malatya; then, after his deethronement, his brother Rukn al-Dîn (Barhebræus, p. 482). At the end of 646 (1251—1252) and in July 650 (1252—1253), the Tatars again besieged the town under Jâwûr and wasted its surroundings (Barhebræus, p. 491). When in 1257 'Izâ al-Dîn sent an Araptâr (Bâgîr) to the district of Malatya to seek recruits and the latter allotted the town to the Kurd chief Shahrâl al-Dîn Almûn. Bîsû, the inhabitants did not have him as they had sworn fealty to Rukn al-Dîn and feared his Tatar patron Bahlîji. It was not till 'Izâ al-Dîn had sent a second envoy, Bîsdûr, that they admitted him into the town; but the latter soon fled again before Bahlîji and only returned when he had gone, but again found the gates closed against him and was only admitted after famine had broken out in Malatya as a result of his siege (Barhebræus, p. 498—500).

In 1260 'Abîlîcî built bridges over the Euphrates for his vast host at Malatya, Kâlî'âl al-Rûm al-Dîn and Karîsîyâ (Barhebræus, p. 509). The Egyptian governor of al-Dîn Hâdar (Bâhûrî) in 1282 laid waste the country round Malatya (Barhebræus, p. 546).

The Mongol Khân Abâka (1265—1282) again divided the kingdom of Rûm between two Saljûq cousins of whom Mas'ûd received Arrîjân, Siyûl and Malatya.

In the xiv and xilîh century lived the two great Syriac historians, both born in Malatya, to whose chronicles we mainly owe our knowledge of the history of the town: the patriarch Michæl I (1056—99), son of the priest Elyûth, who belonged to the family of Kindap in Malatya and the Malatyan Gregor Abu Tûrâjî called Barhebræus (1236—86; q.v.), whose father, the baptised
Jewish physician Abü Fudur had restrained his fellow citizens in Malaya from stupidly flying before the Tatars (Bunsmark, Gesch. d. syr. Lit., p. 308—310, 312—20). Michael’s principal authority, Ignatius (d. 1104), was also metropolitan of Malaya (Bunsmark, sp. cit., p. 201).

The increasing weakness of the Seldjucks about 1300 favoured the formation of local Turkoman and Armenian petty states, especially in the east of Asia Minor. According to Abu ‘l-Fida’, Christians and Muslims in Malaya in those days lived on the best of terms with one another; the town took the side of the Tatars and informed them of everything that went on in the country. During his war against the Tatars, Sultan d-Malik al-Nasir in 715 (1315) decided to send a large army under the nābī of Damascus, Saif d-Ilgin Tuncu who was joined by his vassal Abu ‘l-Fida’ of Hamah, against Malaya. The army went by Halab, Ani, Hiss Manşir and Ziziha to Malaya and encamped before the town on April 28. The inhabitants sent their bakīm Djamal d-Ilgin al-Khiyri, whose father and grandfather had filled the same office in their time, through the south gate; Bahl al-Kadi, to Tungs, who was willing to afford them protection and security, if they surrendered the town. But he was unable to fulfill his pledge for the soldiers could not be restrained from plundering and ravaging in the town. Among the prisoners was the bakīm Ibn Kerkaghâ and the sāhib of Hiss Arkam, Shishq Minjâd. The greater part of the town was finally burned down (Abu ‘l-Fida’, Annates Musam, ed. Reiske, v. 68—92, ed. Stambul 1286, iv. 77 sq.; trans. also in Rec. hist. syr., 1801; Welh, Gesch. d. Chalifs, v. 310 sq.). The Sultan made the territory of Malaya a separate frontier province, which included seven districts (Khišt d-Zahir, Zunba, ed. Rassale, p. 52). There were seven citadels around the town: Mûsâr or Minishr, Kum, Karâhidzat, Kâari, Kâfri, Kâfri Nawamand (?) and Kâfri al-Khri (Khalil, sp. cit.; Gaudet-Marinu, Le Syrie à l’époque des Maoméciens, p. 97, s. 105).

Malaya for the next few decades belonged to the Manālik Sultanate, as their remotest province, its capital with Halab in 917 (1317) the scene of a great rebellion led by the governors Minšâr and Yellbâgh against Barqûk [n. v.]. About this time the Turkish family of the Dhu ‘l-Khadroghlu [n. v.] began to rise to power in the region of Malaya and Albitan where they ruled till 1515 under Egyptian suzerainty. About 974 (1317/18) Bayrâd I conquered the town and in 1400 (Tmrt). By the battle of Kéif Hisâr (1346) it fell into the hands of Selim I [n. v.] who destroyed the Dhu ‘l-Khadroghlu. This was the cause of his war against Egypt, which was rapidly decided on the field of Mârâš and was finally decided on the field of Mârir (Kesabu). The town in 1278 was the headquarters of the Ser-xâker Háfi Pâsha, with whom Mâlik was attached. It is said to have suffered much at the hands of the troops quartered there for months before the battle of Nîzrb. After the earthquake of 1893 Malaya was rebuilt on the site of the suburb of Asmûn S.W. of the older site now called Eski Shehr, but the old town continued to be inhabited. It has now about 30,000 inhabitants, including many Armenians, Kurds and Kashmiri.

b. History: al-Balâbaki, ed. de Goeje, S. 184—88, 190, 195; Abu ‘l-Fida’, Annates Musam, ed. Reiske, v. 286—92, ed. Stambul 1286, iv. 77 sq.; transl. also in Rec. hist. syr., 1801; Welh, Gesch. d. Chalifs, v. 310 sq.). The Sultan made the territory of Malaya a separate frontier province, which included seven districts (Khišt al-Zahir, Zunba, ed. Rassale, p. 52). There were seven citadels around the town: Mûsâr or Minishr, Kum, Karâhidzat, Kâari, Kâfri, Kâfri Nawamand (?) and Kâfri al-Khri (Khalil, sp. cit.; Gaudet-Marinu, Le Syrie à l’époque des Maoméciens, p. 97, s. 105).

MALAY PENINSULA is a name sometimes rather loosely applied to the whole tract of land south of the Isthmus of Kra (Lat. 10° N.) but so far as the Northern part of this tract is concerned the name is a misnomer, the bulk of the population there being Siamese and Chinese, not Malay. Excluding from the total Malay population of Siam [n. v.] as a whole some 50,000 Malays scattered in Ayuthia, Bangkok, Chantaburi and the rest of the Eastern shore of the Gulf of Siam, the remaining 350,000 are in Southern Siam and mainly in the parts South of Kra. But it is not till about Lat. 7° N. that one meets with districts where the majority of the inhabitants are Malay, viz. on the West coast of Palms and Satun and on the East coast the province of Pahani formerly an important Malay state, finally conquered by Siam in 1854. Of the approximate total population of 370,000 in these three districts the greater part consists of Malays. The Southern boundary of Siam, running irregularly between 6° 43' and 7° 45' N., separates them from the rest of the Peninsula, which is attached to the British Empire and with which we are here concerned. The area of this latter portion is about 52,600 English square miles.

The geological structure of the Peninsula includes calcareous rocks and limestones, chert, shales, quartzite, volcanic rocks, granite, alluvial deposits, and the ferruginous substance known as laterite. The most important minerals are tin and tungsten. The former has been exploited for more
than a thousand years and is still a very important product.

Until about fifty years ago the rivers, though mostly small and only navigable for small craft, were the chief and almost the sole means of access to the interior, which was then an almost trackless forest of luxuriant vegetation, traversed by a number of mountain ranges, some running roughly north and south, others transversely or irregularly. A few of the highest points exceed 7,000 feet (roughly 2,100 metres). At sea-level the average temperature is about 82°F. (about 27°C.) with a daily and annual variation of not more than about 10°F. (about 4.5°C.) in each direction; the annual rainfall varies locally from about 60 inches (about 150 cm.) to four times that amount. The N.E. and S.W. monsoons prevail, but are subject to periods of slight or variable wind. The climatic conditions are therefore very favourable to the main staples of native agriculture, viz.: rice, coconuts and miscellaneous local fruits; to these, foreigners have added the cultivation of other products, such as tapioca and coffee (now almost abandoned) and especially Para rubber, in the cultivation of which the Peninsula has led the way. The economic development of the Peninsula may be said to date from the institution of the Residental system in three of the Western states in 1874, which led progressively to the making of a network of excellent roads and a State railway system now comprising a trunk line from Singapore to the western part of the boundary with Siam, where it links with the Siamese system, and a number of branches, one of which turning northward through the centre of the Peninsula is destined to join the Siamese railway at a point near the eastern end of the frontier.

From the administrative point of view, the British portion of the Peninsula falls into: 1. the British colony styled the Straits Settlements (which is an abbreviation of “British Settlements in the Straits of Malacca”), comprising the three “settlements” or divisions of Singapore, Penang and Malacca; 2. the Federated Malay States, viz. Perak, Selangor, Negri Sembilan, on the West coast and Pahang on the East coast, which are united in an administrative union under a Chief Secretary to Government at Kuala Lumpur (in Selangor) and 3. the Unfederated Malay States, viz. in the extreme North and on the West coast, Pérlis and Kedah, and on the East coast, Kelantan and Terengganu, and in the extreme South, Johor. Administratively the Island of Labuan off the coast of North Borneo, and the Cocos Keeling Islands and Christmas Island to the South-West of Java form part of the “settlement” of Singapore; and the State of Brunei (Brunei) in Borneo is an unfederated Malay State ranking with those of the Peninsula.

The Colony has the usual administrative machinery, consisting of a Governor (who is also the High Commissioner for the Malay States), together with executive and legislative councils, and a Supreme Court. Each of the Malay States has a Malay ruler, who usually bears the title of Sultan, and also a British official, styled in the Federated Malay States the British Resident and in the unfederated ones British Adviser or General Adviser, and a State Council. For the Federated States there is in addition a Federal Council and a Judicial Commission. In these States the chief administrative departments are federalized under federal heads, and in one or two cases (such as Education) are linked up with the corresponding department in the Colony. Both the Colony and the States are divided into administrative districts, and the officials in charge of such districts in the Colony and Federated States are mainly Europeans. The same applies to the heads of the principal departments of Government. Many of their assistants are also Europeans. In the unfederated States the administrative machinery is not so elaborately organized and the proportion of Europeans is smaller. Government schools have been established in the principal villages and give elementary instruction exclusively through the medium of Malay. In towns there are also higher schools, supported but not founded or managed, by Government, which give instruction through the medium of English. The college at Kuala Kangsar, which is bilingual, is mainly for the sons of Malay rajas and chiefs though others are admitted. Female education has developed more slowly but is gaining ground.

The ancient history of the Peninsula is obscure. Palaeoliths and neolithic implements have been found in various places. The so-called aborigines, amounting in 1921 to about one per cent. of the total population, comprise in the extreme North a few thousand woolly-haired Negritos, generally termed Siam, in the centre a much larger number of wavy-haired light brown people known as Sakai, and in the South mostly straight-haired people of the Indonesian type, often referred to as Jakun. The first two groups and a portion of the third speak languages containing a strong Mon-Khmer element, the remaining Jakun speak Malay dialects with some alien admixture. From about the 5th century a.d. Sanskrit inscriptions on stone found in Kedah and Province Wellesley (opposite Penang) attest the presence of Buddhists using a South Indian script. An inscription of 775 originally set up at Ligor (Nakhon Sri Dammarat) about Lat. 8° N. indicates that before that date certain points on the isthmus were held by the Saflendra kings of Sri Vijaya (Palembang in Southern Sumatra), who controlled the trade route through the Straits and across the isthmus probably till near the end of the 6th century. It would appear from a notice in the History of the Liang dynasty of China (502-556 A.D.), Book 54, that this isthmus had formerly been controlled by the state of Fanau, which centred round the mouths and lower course of the Mekong river. An inscription found at Chiiya (Juli, near Lat. 10° N.) and probably dated 1183 refers to the king who presumably set it up a princely title which points to the Malay region of Southern Sumatra, adjoining Sri Vijaya to the North-West. Another inscription of Chiiya dated 1230 was set up by the local king Candrabhuana who according to the Mahavamsa and other sources raided Ceylon on two occasions (probably about 1250 and 1256) with his "Javaka" (i.e. Malay) force.

It is plain, therefore, that between the 7th and the 12th centuries the settlement of the Peninsula by Malaya from Sumatra had been going on. A few years later, but before 1280, the Siamese from Sukhothai (Sukhothai) put an end to Malay rule in Ligor, thus beginning the extension of Siamese influence to the southward. In the Javanese poem Ngarakrtanagama (1365) a
number of places on both coasts, from Kedah and Sai (in the old Patani state) in the North to Singapore [q. v.] in the South are claimed as vassals of the Javanese empire of Majapahit. In the same century, but at a date which cannot be precisely fixed owing to the fragmentary condition of the record, the earliest Malay inscription in the Arabic character as yet discovered makes it plain that Islam had recently become the state religion of Trangganu. In the 15th century Islam was being spread in the Peninsula under the influence of the then most important state, Malacca [q. v.] and after its fall in 1511 at the hands of the Portuguese its dynasty continued to rule in the internal (Johor) and neighboring islands, while another branch held Pahang, and Perak eventually came into the hands of a family claiming to descend from the senior line of the same stock. In or before the 16th century, an immigration of Minangkabau settlers from Sumatra founded a number of small states inland of Malacca, which all eventually admitted the suzerainty of Johor, save the southermost, Nanging, which in theory at any rate a subordinate ally of the Portuguese. In the early part of the 17th century the Achinese raided Kedah, Perak, Johor, etc., and for a number of years exercised some sort of suzerainty over Perak. Meanwhile the Northern states came intermittently under Siamese influence, which varied with the strength of that power but retained the character of an external suzerainty till Kedah in 1821 and Patani in 1832 (this last finally) were conquered by Siam.

The Dutch tenure of Malacca (1641-1795), while it controlled to some extent the external trade of the Malay states, did not interfere with their internal affairs. In the eighteenth century Bugis adventurers settled in the Riau-Lingga Archipelago and made their influence felt on the mainland, ultimately establishing the new state of Selangor under a still ruling Bugis dynasty. British influence dates from the founding of Penang (1786), which was followed by a temporary occupation of Malacca (1795-1818), its final cession in 1824, the founding of Singapore (1819), and the incorporation of all these settlements in one government (1826), which in 1857 was transferred from the control of India to that of the Colonial Office. The policy of non-interference with the Malay states was maintained until long-continued disturbances in Perak, Selangor, and Sungai Ujong (part of Negri Sembilan), due to Malay dynastic quarrels and civil war between unruly gangs of Chinese tin-miners, coupled with an increase of piracy in the Straits, led in 1874 to the inauguration of the Residential system. This ultimately developed into the present system whereby since 1895 Perak, Selangor, Negri Sembilan and Pahang form a federation administered under the direction of British officials. Perak, Kedah, Kelantan and Trangganu were ceded by Siam in 1909 in return for certain concessions, one of which was the abolition of the extra-territorial privileges of British subjects.

The population in 1921 of the part of the Peninsula and adjacent islands under British administration or protection was about 3,525,000, nearly half being immigrants, mainly Chinese, and to a less extent Indians, among whom males predominated very considerably. The great bulk of the native-born population consisted of Malays, and the total number of Malays, properly so-called (including, however, something like 100,000 persons of Minangkabau descent in Negri Sembilan and Malacca) numbered 1,418,195. The other Muslims Indonesians amounted to 171,315 (including 112,775 Javanese, 37,848 Banjarese, 9,772 Banyans, 8,588 Bugis, 727 Achinese, 859 Kedari, and 946 Mendeling). The 47,465 non-Indonesian Muslims comprised 41,537 Indians, 4,315 Arabs, 1,500 Chinese, and a few Persians and Turks; the total Muslim population was 1,636,978, the great majority being Sunnis of the school of Shafi'i. Of the non-Muslim population roughly three-quarters were Chinese and about one-quarter Indians but there were also 32,448 so-called aborigines of the Peninsula (a few of whom may, however, have been converts to Islam), 18,178 Siamese, 14,833 Europeans (mostly British, but including Continental Europeans and Americans of European descent), 12,629 Eurasians, 6,989 Japanese, and 2,215 Sinhalese, besides several smaller communities.

MALAYS. People. In this article only the Islamic features of the Malay nation will be dealt with, so neither ethnographical nor anthropological questions will be discussed. It may be sufficient to say that the Malays originally—we do not venture to say: as autochthons—were established in the middle part of Sumatra, especially in Palembang, and spread over the eastern and northern parts of that huge island, and settled in the Straits, mainly in Malacca [see MALAY PENINSULA], and founded colonies in Borneo, along the great rivers, and elsewhere eastward. They belong to the widely dispersed Polynesian (or Indonesian) race, whose languages extend from Madagascar to the Philippines and from the peninsula of the utmost S.E. point of Asia to the remoter islands of Micronesia and Melanesia in the Pacific. The Malay chronicles, for the greater part mythical, and a few epigraphical data, make it clear that there was a highly cultivated Hinduised Malay kingdom in Palembang, the seafaring people of which went over to several adjacent and more distant countries; it was along the ways of commerce that they carried the Malay language to sundry ports and lands. It is not exactly known in what century Islam swept away Hinduism, but it is a fact that the new religion on its arrival in the Straits found Malay people settled in the Peninsula and the Malay language introduced there as the generally adopted speech of commerce and political intercourse.
Language. It is due to Islam that Malay, being already a language enriched with many Sanskrit words, became an idiom of very mixed lexigraphical character. The Islamic current brought words of Tamil origin, innumerable Arabic words, some of them in Dekhanised or Persian-like garb, many Persian words, some of them with Indian characteristics, and a small quantity of Hindustani vocables. In that heterogeneous form Malay became the vehicular language of the new religion. Undoubtedly it had found its way already to the most visited ports in the Archipelago in a simplified form fit for intercourse with all kinds of natives and foreign merchants, later also with European, namely Portuguese and Dutch captains and ambassadors. It was Islam that gave Malay a literary character, and when it had established itself as a medium into which innumerable Arabic books were translated, its form became crystallised and its orthography was fixed systematically. That uniformity made it the appropriate language for literary and liturgical purposes and also a medium for dogmatics and mysticism, as well as for romantic and historical literature. It has to be borne in mind that there is a great difference between the patois or lingua franca heard in most of the sea-ports, and the cultivated literary language, which became highly developed in Malacca, once the seat of a Muhammedan court and a royal library. When Arabic and Indian learned men came to Aceh, they discussed theological questions in Malay and even wrote books in that language. The literary form is sustained uniformly to the present day, literary products being written in archaistic formulas, and the colloquial style being used in different parts of the Archipelago, the purest in Johore and Malaya in general and the East-coast-districts of Sumatra; the least pure in Java and more eastern islands. In the Moluccas, especially in Amboyna (Ambon), the preaching of Christianity availed itself of Malay and in those islands this language has therefore assumed an individual character. As to its linguistic character, it may suffice to notice that Malay, like all Polynesian languages, belongs to the agglutinative type, declension not existing, conjugation being limited within narrow bounds, and amplification of the mainly disyllabic stems with a quantity of prefixes, infixes and suffixes giving opportunity of forming words for almost all grammatical and logical relations. There are some traces of the influence of Arabic grammar on Malay syntax, but on the whole the Malayanic current has not essentially altered the character of the language; it has only enriched it with an enormous number of words, and given to its written literature an individual Islamic character.

Literature. Of pre-Islamic literature nothing is known. As far as may be concluded from a few old inscriptions in Hindu script, it seems that Malay was written in Kawi-like characters, but literature, in its earliest known form, is written in Arabic letters only. The oldest manuscripts are preserved in the Cambridge and Oxford libraries; they date from the last years of the xvth and the first decade of the xviith century. The only literary-historical evidence of the existence of written literature in the xviith century is the mention, in a xviith century chronicle, of the use made of a royal library at Malacca at the time when the Portuguese endeavoured to capture that town (1511).

Malay literature, as it presents itself now, is only for a very small part original. Hardy any of the chronicles, tales and poems are derived from Arabic sources directly, most of the religious and semi-historical romances having been translated from Persian, but all these literary products are imbued with the Muslim atmosphere, being full of Arabic words and phrases, and laden with Islamic theory. There are, it is true, some indigenous farcical tales, and some fables, especially the bedtime highly appreciated mouse-deer-tales, moreover some original romances with Hinduistic influences, and several adapted old Javanese tales, that do not betray real Islamic influence but the very fact that all these books are written in Arabic characters makes them overflow with Arabic words, and in that way shows that they belong to Islamic mentality. In this short account there will be no mention of literary products going back to the great Sanskrit epic poems, nor of the tales that do not show traces of Muslim influence; only in so far as Malay literature has Islamic features, will it be treated here. The originally genuine Indonesian deer-fable has undergone an Islamic corretion. The historical writings, more or less mythical and semi-romantic, are almost absolutely Islamicised. To that class of works the chronicle Siyarak Melawi, and other ones, as the chronicles of Kutawaringin, Kuta, Aceh and Pasai are to be reckoned. A partly historical, but for the greater part fictitious, romance is the Hikayat Hong Tuak. A host of romances, dealing with foreign princes and princesses and their endless adventures, has been spread over a great part of the Malay-reading East-Indian World; the titles of all those popular, but for European readers less attractive, books, may be found in the catalogues of Malay manuscripts at Leyden, Batavia and London. Some books of fiction have been translated from Persian, Arabic or Hindustani. A group of them is to be traced to the Hitopadesa-collection, another one to the Tuti-nama-series, a third one to the Bahkhtiyar-cyle. By way of exception foreign authors have written in Malay; e.g. the Radjput Nair Al-Din al-Ranti [q.v.], who wrote a great encyclopaedic chronicle at the instigation of an Achehese queen. A very great number of texts deals with the old prophets, the Prophet Muhammad, his family and friends. Those works, like e.g. the romances of Amir Hamza and Muhammad b. al-Hanafiya, have Persian originals. The purely religious books cannot be regarded as Malay literature.

Poetical literature has a different character. The real Malay kind of poetry, though not devoid of Persian influences, is the pantun, i.e. popular quatrains, whose first two lines deal with a natural scene, or a well known event, and are intended to prelude, phonetically, the 3rd and 4th lines, that contain the real meaning of the usually erotic poem. The other "genre" is the ghoirs. Its form is the stanza of four rhyming lines. Some of these very extensive overlauing poems are from the Javanese, some others are versified versions of prose romances; moreover historical events, scenes, religious matters, mystical speculations etc. are dealt with in innumerable ghoirs, the titles of which may be seen in the following catalogues: Leyden University Library, by H. H. Juyboll; Supplement thereto by Ph. S. van Ronkel; Batavia, the Hague and Brussels by the same; London (R. A. S.) and ibidem E. I. H. (India Office Library) by H. N. van der Tuuk.
MALAZGERD, district (Köf), and town in Armenia, to the North of the lake of Van. Of the name, there occur, in old-Armenian, the forms Manavazkert, Manavaskert, and Manazkert resp. as well as the Arabic form Manaksd, from which, by old-Armenian Manavazkert, the original form, Manavazak represents a popular etymological formation, from the name of the noble family of the Manavazans, which, in olden times, resided in the district. For it is phonetically impossible, that an old-Armenian form Manavazak should regularly become Manazkert. This is the theory of Hübschmann, who admits however the possibility, that an earlier Manavazak may have been arbitrarily shortened in pronunciation, so as to become Manazkert, the word being otherwise too long. W. Belks has conjectured, that in the first part of the word, there may be hidden the name of the Urartian (pre-Armenian) king Menus of Van. This conjecture is based on the fact, that from an inscription of Menus it appears, that the city Menus was supposed to be the capital of a kingdom, which was called Menus (Menazkert-town), thus it would, according to Belks, be very probable, that Malazgerd, in whose environs there have been found many inscriptions of Menus, was this very town, named after him. If such be the case, then the old-Armenian form Manavak must have originated from a later, popular etymology. From the fact, that names of towns formed with -kert (= -karat) seem to have originated not before the Parthian epoch, as Häubschmann observes, it would follow, that the memory of the old king Menas was still alive in the relatively late Parthian time. This difficulty, however, is not insoluble, for it seems, that the name of another Urartian king of Van also may survive in classical Armenian quasi-historical tradition as Aram. The oldest and best Arabic spelling of the name of the town is Manavazqird, with n; the form with l are later, and on them is based the modern name (Malazgerd). The spelling with n we find e.g. in al-Iṣṭakhrī; Yākūt, the author edited by Houtsma in Rec. des textes rel. à l'hist. des Sélençéites, ii; al-Nasawi (ed. Houdas); in a varia lectio of the text of the Rūbat al-Sadūr (G. M. S., New Series, ii, 119); and in the text quoted J. R. A. S., 1902, p. 797. The spelling with l, common in later texts, occurs, among older authors, in al-Mukaddasi; Ibn al-Athir; the Rūbat al-Sadūr (the reading adopted by the editor); Ljuwaini, and the Nasbat al-Kušk. The terminations -gird and -bird also alternate in the apokope, this variation is already noted by Yākūt (Malāṣgif, iv, 648). As regards the form Manazav, cited by Marquardt (Erönahr. p. 162) from Thomas Ariuni, cf. Häubschmann, Die altarmen. Ortsnamen (in dgl. Forschungen, xvi.), p. 450. For the year 1198 the number of inhabitants of the district Malazgerd is given as 21,000, viz. 12,000 Kurds, and the rest Armenians. The district belonged to the vilâyet Biltu, massjıf Mūṣh. In this hilly country, the highest elevation is the Sipān-Daghi (3,000 m.); perhaps the same mount as the Song-i Sefīl, which is, according to Yākūt (Malāṣgif, iii, 165), a mountain in these regions. The soil of the district is fertile; its main products are wheat, barley, millet, lentils and peas, which are also exported, as are also sheep and buffaloes, e.g. to Dīyarbekr. The region of Malazgerd produces also salt and mineral stone, which becomes hard when brought to the day light. Its wild animals are the wolf, the fox and the stone-marten, which is hunted for its fur. Textiles are manufactured in, and exported from the district. The town of Malazgerd is situated on a tributary of the Murād Sū, called the Tula Sū; Hājījī Khānīsa (Qīshān-nunār, p. 426) reckons 2 marbālā between Malazgerd and Erzrum. The town lies, moreover, on the way from Sivas to Artaq, and also at the crossing of the two different ways, which connect Mūṣh and Bāṣayd. The city it surrounded by a high wall and towers; at the East of the town there is the citadel, built from black volcanic stone. In the 12th century, Malazgerd had a triple wall, and it was well furnished with drinking water from within (Cedrenus, ed. Bonn, ii, 590). More than one fruitless siege of this place is recorded in its history.

Belks supposed, that the well-known battle between the Assyrian king Tīghlath-pīleser I against the allied Nātri-kings took place in the plain of Malazgerd (Z. d. M. G., ii, 560). If, at that remote time, the town of Malazgerd existed already, it is not certain. That it existed in the time of the Urartian king Menas, who, as Belks thinks, gave his name to the town, is made probable by an inscription of that prince, from which it would appear, that he rebuilt an older citadel and an older palace on that place. The environs of the modern city of Malazgerd are remarkably rich in cuneiform inscriptions, which were discovered by Lehmann and Belks during their stay there. They found an Assyrian inscription of Tīghlath-pīleser I and several Urartian inscriptions, belonging others, of Menas (± 800 a. c.) and Argisht (± 714—ca. 690 b. c.). It appears from these documents, that Menas devoted great attention to the irrigation of the land, by constructing several canals.

In the early Middle-ages, the town of Malazgerd (Manazkert), lying on the confines of the cantons Harkh and Apanahkh, was sometimes assigned to the former, sometimes to the latter. That in old-Armenian times here resided the family of the Manavarans, has already been remarked. For these matters, and also for the quotations from Byzantine and Armenian authorities regarding them, cf. Häubschmann, Die altarmen. Ortsnamen, p. 325, 330, 449 ff.

Malazgerd belonged, since the beginning of their dynasty, to the realm of the Bagratides of Armenia, who allowed it to be ruled, as well as Alahā, Artaq and "Perki" (= Ergir), by a family of their vassals. This family, whose members bear Arabic names, became in course of time independent of the Armenian kings, but, on the other hand, was obliged to pay tribute to the emperors of Byzantium (Constantius Porphyrogenetus, De admin. imp., ed. Bonn, p. 192 ff.).

Yākūt says, that the inhabitants of Malazgerd are Armenians and Byzantines (Nāṣī); a native of this town was Abū Naṣr al-Manṣūr (this, therefore, is the niha of the name), who was wazir to one of the Marwānī princes of Dīyarbekr. This Abū
Nasr died 437 (1045—1046) and, according to our authority, was a good poet: Ya'qub cites two fragments from his poetry (Ma'djam, iv. 648 sq.). Regarding another al-Mahri, cf. Y. R. A. S., 1902, p. 788, note 1.

A topic of political events connected with the town of Malazgerd, it may be noted that, on the occasion of the campaign, which the great Hamdanid Saif al-Dawla undertook into Armenia (325—940), there is mentioned one 'Abd al-Hamid, prince ('abd al-Hamid) of Malazgerd and Sibalwarq (Sewerw) (Y. R. A. S., 1902, p. 797): the name, 'Abd al-Hamid, occurs among the names of the dynasty of Malazgerd, recorded by Constantine Porphyrogensous, and this contemporary of Saif al-Dawla doubtless belonged to that family. But he cannot be the 'Abd al-Hamid of the Greek text, who, from a chronological point of view, must have lived some two generations earlier (cf. the genealogical table of these dynasts of Malazgerd in Baudouin Animalier, Le Catalogue des Comtes de Constantinople, iii. 372). In 353 (964) a certain Naquil, a ghulān of Saif al-Dawla, received against his master, after taking possession of that part of Armenia, which was ruled by one Abū ʿI-Ward. The latter was slain, and, among the places conquered by Naquil, Malazgerd also is cited (Ibn al-Shihab, ed. Tornberg, viii. 408); in the year 359 (971—972) Malazgerd was taken by the Byzantines (ibid., viii. 445); they must have lost it again before 382 (992—993), for in that year they besieged not only Aḥkāt and Ardashīr, but also Malazgerd, but this time they could not take it, but returned home after concluding a treaty for ten years with Abū ʿAlī al-Husayn b. Maḥmūd (ibid., ix. 67). In 440 (1049—1050) it must have belonged to the Byzantines, for the same Naquil, whom 'Abd al-Hamid, Toghril Beg's brother, undertook into the Byzantine empire, attacked also the territory of Malazgerd (ibid., ix. 372). And it is explicitly stated by Ibn al-Shihab (ibid. iv. 411), under the year 446 (1054—1055), that Malazgerd was in possession of the Byzantines, for there he relates, that this strong city resisted a siege by Toghril Beg himself (cf. also Cadmus, ed. Bonn, ii. 596 et al.). The most important historical event, with which the name of the town is connected, is the battle of Malazgerd (463—1071) between Alp Arslan and the Byzantine emperor Romanus Diogenes, in consequence of which the eastern part of Asia Minor, viz. Armenia and Cappadocia, was lost for ever to the Greek empire (Ibn al-Shihab, x. 44; Rec. des textes relatifs à l'histoire des Soumouch, ed. Toutain, ii. 38 et al.; Richter und Seefeld [G. 32, New Series, ii.], p. 119; Zenara, ed. Dindorf, iv. 313, et al.; cf. also IL Gelber in K. Krennreich's Geschichte der byzantinischen Literatur, v. 1010). After this event, therefore, Malazgerd passed into the possession of the Seljuks. In 531 (1137) it was given by King Malikshah, along with Erzerum and part of the territory of Aḥkāt, to his brother Sahlshah, as a gift (Rec. des textes relatifs à l'histoire des Soumouch, ed. Toutain, ii. 185). In course of time, the city was besieged in 942 (5897—1191) by Toghril ibn al-Shihab (Ibn al-Shihab, xiv. 141). During the disturbances, of which Armenia was the scene in the beginning of the sixteenth century, mention is found several times made of Malazgerd. In 603 (1206—1207), a former manāhīd of the Shih Arman took possession of Malazgerd; and, after that, also of Aḥkāt. He had, in addition, control of Ardashīr and other places. This man, whose name was Ballān (the vocalisation of the first syllable is uncertain), was assisted by the prince of Erzerum, Mughul, ʿAlī ibn Toghril. Shah b. Kühli, Arslan, against al-Malik al-ʿAwād, son of al-Malik al-ʿAḍī of Egypt. Later on, Ballān was murdered by his ally of Erzerum, who tried to enter Aḥkāt and Malazgerd, but in vain, so that he was obliged to return to his own state (Ibn al-Shihab, xii. 168, 180 sq.). In 623 (1226), Toghril ibn al-Shihab of Khwarazmshāh ʿAlī ibn Mūhammad occupied Malazgerd, as he intended to attack Ḥusayn ibn ʿAlī al-Shihab, in Aḥkāt. But, since his attempt on this town did not succeed, and as the winter also set in (he had entered Malazgerd on Dūn 2-Ka'ba 13, November 4, 623), and the Turkomans invaded his own realm, he was obliged to retire (Ibn al-Shihab, xii. 301). In 626 (1229) however he succeeded in taking Aḥkāt, after which he besieged Malazgerd, first in person, afterwards leaving one of his generals in charge of the siege, but on this occasion without success (al-Nasawi, ed. O. Houda, ii. 116, 205; translation, p. 345, 344, 347).

MALDA (properly, Māldah or Māldah), a District in Eastern Bengal and in the Rajshāhī Division of the Presidency of Bengal. Area, 1,899 sq. m. Pop. in 1911, 1,004,159, of whom 465,521 were Hindus, and 539,506 Muslims. In old times it was famous for its two capitals of Gaur (q.v.) or Lakhānawī, and Pandua, where there were many ruins of the mosque and other buildings of the Muhammadan kings of Bengal.

MALDIVE ISLANDS, a group of coral-islands and islets in the Indian Ocean, lying between 7° 6' N. and 0° 42' S. lat., and 72° and 74° E. long., and consisting of seventeen atolls with a great number of islands, of which about 300 are inhabited, the population being estimated at 70,000. The Mowrish traveller, Ibn Battūta, lived for more
than a year (1543–1544) in the islands, but the first Europeans to visit them were the Portuguese, who established a factory in them in 1518. The Maldives were much harassed by Māpipī (Mōpiāk) pirates from the Malabar Coast and in 1645 the king, who is entitled " spécialisé de the Twelve Thousand Isles", placed himself under the protection of the Dutch in Ceylon, with which island the Maldives have, since that time, been politically connected. The natives are Muslims and fall into three ethnographic divisions, (1) the northmen, with a strong admixture of Dravidian blood from India; (2) the central, under the immediate rule of the Sultan, who resides in Male, which has acquired from Arab traders and settlers a strain of Semitic blood; and (3) the natives of the southern clusters, who have had little communication with the central group, and preserve more of the primitive type, resembling the Sinhalese villagers of Ceylon. All are peaceful, intelligent and industrious, growing their own crops and weaving their own cloth and mats. The chief exports are copra, oil, and dried fish products. The language is a dialect of the Sinhalese, somewhat Islamised, but many read Arabic more or less fluently.

MALHAMA. [See Malāwī.]

MALL, a town, which no longer exists, the old capital of the Mandingo empire, in the western Sudan, also called Māli, Māli, Māli, Mōla, Muni or Mané. All these names are dialectic or local variants of the same word which is the name of the country of origin of a people whom the French call Mallinck, following the Paul and Tocqueville, and the American "Mannah"; following the form used by one section of this people on the Lower Gambia.

The name used by the Arab authors for this town was not the one used by the inhabitants themselves and the latter is not given us by the geographer Idris, nor the historian Ibn Khalids, nor the traveller Iun Bārūtta, nor Leo Africanus. It was only in 1913 that the translation of an Arabic manuscript not long before discovered in the Sudan, the Tārīkh al-Fatḥah, enabled us to learn that in reality there were two successions capitals of the Mandingo empire or of Māli: the older was called Diarība or Diarība and there was later another called Nani.

Recent researches in the valley of the Niger have enabled the sites of these two towns to be discovered. The first was situated at the junction of the Niger and the Senegal, and at the place called Māni or Māli-Tombo, i.e. ruins of Māli. There are still traces of a very ancient and important town, which the natives regard, according to their traditions, as the ancient residence of their former sovereigns and the place where the latter are buried.

As to the second town, a copyist's error in the text of Ibn Khalids concealed the true name till the publication of the Tārīkh al-Fatḥah in 1915. It was recently recognised that the capital in question should be located on the left bank of the Sankaran, and at the level of Siguini, not far from the place where there is still a town of the same name, Nani.

Djerba was no doubt the cradle of the Mandingo dynasty of the Keita of the 18th–19th century. We have no information about it. We are more accurately informed of Nani. It is supposed to have been founded in 1238 after Sundjata Keita, ruler of the Mandingo, had defeated in 1235 at Kōrima the emperors of Sānha, Samanurak-Kante, his rival and enemy. Gongo Mūsā, often wrongly called Kankun Mūsā, was ruling there a century later, when on his return from a pilgrimage to Mecca, he attracted to his court an Arab poet named al-Sāhili, who belonged to a Granada family. By orders of Gongo Mūsā, this foreigner built in Gao a mosque with battlemented terrace and pyramidal minaret. According to tradition, this was the first building of the type, now so widely spread in the western Sudan, the origin of which is North African.

In 1522–1533 in the reign of Sulaiman Keita, brother of Gongo Mūsā, the Arab traveller Iun Bārūtta visited the town. It was then a completely Africanise and Moroccan legal authorities, students of Islam, readers of the Koran, the mosques, and merchants. No description of the different quarters of the town has come down to us but we have a fairly detailed account of the sovereign's palace. The ruler gave his audiences in a room looking out on a courtyard, with six windows of wood, three of which were covered with plates of silver and above these three covered with plates of gold. These windows were hidden by curtains, which were lifted to show that the hour of audience had come.

The empire of Māli retained its power down to the beginning of the xvth century when its decline began. According to Leo Africanus, who visited the Sudan in the first half of the xvth century, the capital Māli or better Nani was inhabited by about 6,000 families who included many artisans and traders. Islam was flourishing, the town had still a number of mosques and prosperous schools but it had lost its former glory.

In 1545, Dā'īdī, brother of the akhīya of Gao, marched to Nani; the ruler of the Mandingo having succeeded in escaping, Dā'īdī occupied the town which he plundered for a week before withdrawing, ordering his soldiers to despoil the palace of the king with orders.

In the xvth century the growth of the fourhn kingdom of Songa and Kaarta contributed to overthrow what was left of the old Mandingo power, the last chiefs of which, learning Nani, took refuge in Kangaba.

There is no doubt that Nani was visited on several occasions by the Portuguese. We know nothing of the expeditions which set out from their factories in Lower Gambia to the interior; on the other hand, we have notes about the Mandingo capital on the journey made in 1483 of an embassy from Elmina (now the Gold Coast Colony). João de Barros describes it in his Book III of his Aflar: *By the route of the fortress of Minas (Elmina) he (John II) also sent an embassy to Mahamid b. Marnagui, grandson of Mūsā, king of Songa. This city is one of the most populous of this great country which we usually call the
land of the Mandingoees". Another author, Barth, claims to identify the Songo of the Portuguese historian with the land of the Songoh on the Niger. This is clearly wrong. But is Songo a name applicable to the Mandingo capital? M. Delafosse does not think so; he calls attention to the fact that the country of the Mandingoes is still known among the coast peoples of the Gulf of Guinea and in all the Fanti and Ashanti country under the name of Songo, so that among those with whom the Portuguese of Elmina mixed, the word was simply a synonym of Mandingo or Mali.

(Henri Labouret)

**MALIK (L), King.** In the Kurân the word, in addition to being used of the kings of this world, is also applied to Allâh, e. g. xxi. 113: "So is Allâh exalted, the King, the Truth". In iii. 25, Allâh is the mâlik al-mulk, the possessor of royal power, which he gives to and takes from whom He will: in the Fâtiha many Kurân readers read mâlik (for mâlik) yawan al-mulâ; God's kingdom is also described as mâlik and mulâkah (cf. Allâh).

Muslim rulers do not generally call themselves kings; as in the Kurân, the use of the word was confined to the rulers of foreign peoples in so far as it had an earthly significance. The application of the word to Muslim potentates was regarded not so much as blasphemy but rather as implying a form of rule which was contradictory to Muslim political theory. It was considered very much to Mu'tawiya's discredit that he described himself as the first king in Islam; and as a kingdom, which is contrasted with the imamate, the dignity alone worthy of the Muslim rulers, the rule of the Omayyads was attacked and despised by the pious old-fashioned party.

While religious constitutional literature does not recognise the word mâlik as a term for Muslim conditions, it plays a very much greater part in the literature of mirrors for princes which is indifferent to religion, but only when it is a question of a ruler in general and not of specifically Muslim rulers. Al-Dhâbic gives his K, al-Tabî, the subtitle Fi Ahlak al-Mâlik and al-Fârâ'î deals very fully with the duties of a king, in the ethical encyclopaedias which deal with all three moral sciences, ethics, economics and politics (cf. Mal.), like the Sullûk al-Mâlik fi Tadhîr al-Imamîh of Ibn Abî 'l-Ra'îîi, the king appears as the subject of special chapters in the scheme of division of the kind of literature.

With the spread of Islam and the Arabic language into Asia, mâlik became used as the equivalent of the Persian shah and as a royal title was particularly favoured by mediaeval dynasties of Turkish origin. We find the title mâlik as early as the Sâmidîs and in the next century the Bitîid Bâhî al-Dawla calls himself Malik al-Mâlik, a title modelled on the ancient Iranian title of "King of Kings". Among the Sâdûqîs, Atâbib and Urtûqûs, it is the regular title of sovereignty, usually combined with an honorific epithet. It is not so generally used by the Ayyûbids and Mâmilûs. In the feminine it is the royal title of the Ayyûbîs Shâhjâr al-Durî, who calls herself "queen of the Muslims" (Malika al-Musulûmûn). One of the rare occurrences in India of the title is also in the feminine Malika, which queen Raşaîn of Delhi uses in place of the Sultân of the other members of the dynasty. After being practically extinct for several centuries in the Muslim world mâlik has quite recently been adopted as the royal title in the new kingdoms of Egypt, 'Irâq, the Hijârz and Afghanistan so that it has suddenly, if somewhat artificially under the influence of the western conception of kings, come to be the royal title par excellence in the Muslim world.

(M. Plessner)

**MALIK 'AMBAR HABASHI, an Abyssinian slave, who rose to great power and influence in the Deccan.** When Ahmadnagar was conquered by prince Dânîyûl in 1609 (1600), Malik 'Ambar and Râkî Mî ('Ambar, a Deccan chief, divided the remaining territories between them. About this period owing to the rebellion of Sulân Salîm, the death of Akbar, and the revolt of Sultan Khurshî, 'Ambar found time to regulate his country and raised large armies, and even dared to seize several of the imperial districts. He introduced a new revenue system into the Deccan, perhaps in imitation of Tûdâr Mill. When the authority of the emperor Dâjûngar was established, he sent several expeditions to the Deccan, but 'Ambar could not be subdued. At last he restored the places taken from the Mughals to Shah Dâjûn, to whom he became attached and remained loyal to him until his death, which occurred in 1655 (1642), in the 8th year of his age. He was buried in Dâwanatîyad (q.v.).

**MALIK AL-KÂMIL I, NEṢRÊN DÎN ABU 'L-MÂLÎ MAḤMAD B. AL-MÂLÎ AL-ṢÂDIQ B. AYYÛBĪD, was born in Râbi'î 576 (Aug. 1180) and knighted with full ceremony on Palm Sunday (May 29) 1192 in Akkâ by Richard Coeur-de-Lion who was on friendly terms with his father. A few years later his name begins to appear in the history of the Ayyûbids wars. When his father, who was besieging Mârîdûn (q. v.), with his army, left it after the death of al-Âzîz, Saîdîn's brother, on 27th Muharram 595 (Nov. 29, 1198) to seize the capital, Damascus, for himself, he entrusted the conduct of the siege of Mârîdûn to his son Kâmîl. The governor of the town had begun to negotiate with him for surrender, when reinforcements arrived and after a fight which went badly for al-Kâmîl, the latter was forced to withdraw and join his father in Damascus. Al-Kâmîl's death (7th Dhîqânûd, 1145—Aug. 31, 1248) left the difficult task of clearing Egypt of the Crusaders, who had landed near Damietta in the beginning of summer and had begun to besiege the town.
On the news of their landing, al-ʿĀdil [q.v.], who was then in Syria, sent troops to Egypt and al-Ẓāmit endeavoured to defend the land as best he could. The Christians gained the upper hand at first and by the end of Shaban 616 (July 1219), Damietta had fallen into their hands. It took nearly two years for al-Ẓāmit, who had had homage paid to himself as suzerain of Egypt and Syria after the death of his father, to retake the town with the help of the other Ayyūbīs, particularly his brother al-Malik al-Muʿāṣraṯam the Christians by this time were tired of fighting and in Raijib 618 (the end of August 1221) they offered to abandon the town if given a free passage. Al-Ẓāmit, who feared not without reason that they would soon receive reinforcements from Europe, gladly accepted their terms whereupon the Franks left Egypt. But then troubles broke out within the Ayyūbī ranks. When al-Muʿāṣraṯ died (end of Dhū ʿl-Ḥejja 624 = Nov. 1227) al-Ẓāmit and his brother al-Malik al-ʾAṣghaf attacked his son and successor al-Malik al-Ḥāṣir Dāwūd and finally took Damascus from him (Shaban 626 = June/July 1229); al-Ẓāmit next occupied southern Syria and Palestine and al-ʾAṣghaf was recognized as ruler of Damascus under the suzerainty of al-Ẓāmit, while their nephew Dāwūd received al-Karnak, al-Shawbak and other remote fortresses as compensation. Al-Ẓāmit had previously entered into negotiations with the Emperor Frederick II and concluded a treaty with him by which he ceded Jerusalem to him with a corridor to Jaffa and the Emperor in return promised to help him against all his enemies. After some time the Ayyūbīs came into conflict with the Saljuqs. Kal-Ẓāmis I [q.v.] had previously quarrelled with al-ʾAṣghaf and sought to bring against him a confederation of petty Mesopotamian dynasties and under his brother and successor Kal-ʿAlī b. [q.v.] it came to open fighting. The successes won by al-Ẓāmit in this war, however, aroused the jealousy of his relatives and they formed a coalition against him (cf. ʿAdilīn). Al-Ẓāmit then left for Egypt and advanced victorious as far as Damascus. He succeeded in taking this city also but died very soon afterwards (in Raijib 635 = March 1238). As a ruler he was undoubtedly one of the most distinguished of the Ayyūbīs. He was a brave soldier and a skilful diplomat and rendered lasting services to the development of his country. He devoted special attention to irrigation and in his reign the defences of the citadel of Cairo were completed. He also took a lively interest in the cause of learning.

AL-MALIK AL-KĀMIL II. [See Shawkan]

MALIK SARWAR, KHALWĀD-ī DIJKHAN was a sūnuq given by Salāḥ al-Dīn to his grandson Muḥammad, son of ʿAlī Ẓāhir Tughlak, in whose service he rose to be chief suunq and controller of the elephant stables. He was faithful to his master in all his troubles, and in 1530 received the title of Khwāja Shāh Di̇jk汗 and was made muqarr. Muḥammad's son, Muṣṭafā Shāh, sent him in March, 1394, to govern the eastern provinces, with his headquarters at Dījkhanpūr, and conferred on him the title of Malik al-Shārqi, or lord of the east. He took thither with him Karanfūl, a slave and water-bearer of ʿAbū Tughlak, whom he had adopted, and his brothers. His administration was most successful and his adopted son Karanfūl served him loyally. On the disruption of the kingdom of the Tughlak dynasty after Timur's invasion, Malik Sarwar assumed the title of Sultan al-Shārqi and established his independence in Dījkhanpūr. Karanfūl received the title of Malik al-Shārqi, and his brother Ibrāhīm was made commander of the fort and city.

Malik Sarwar died in 1400 and was succeeded by Karanfūl, who ascended the throne of Dījkhanpūr under the title of Muḥarrak Shāh.

(T. W. HARC)

MALIK b. ANAS, a Muslim jurist, the inām of the maqāṣid of the Malikīs, which is named after him, and frequently called briefly the inām of Medīna.

I. The sources for Malik's biography

The oldest authority of any length for Malik, Ibn Sa'd's account (d. 250) based on al-Waqidi (d. 207) in the sixth class of the Medīna "successors", is lost as there is a hiatus in the manuscript of the work, but it is possible to reconstruct the bulk of it from the quotations preserved, mainly in Tabari (ii. 2519 sqq.), in the Kitāb al-ʿAṣāīn (Frazen, hist. arab., 1. 297 sqq.), in Ibn Kathīr and al-Suyūṭī (p. 7 sqq., pp. 39 sqq., 44, 45). From this it is evident that the brief biological notices in Ibn Kathīr (p. 275) and the somewhat more full ones in the Fihrist (compiled in 377) are based on Ibn Sa'd. The article on Malik in Tabari's (d. 310) Dālī al-Mudḥayyal is essentially dependent on the same source, while a few other short references there and in his history are based on other authorities. Al-Samʿání (c. 550) with the minimum of bare facts gives only the legendary version of an otherwise quite well established incident, while in Ibn Kathīr (d. 672) and particularly in al-Nawawī (d. 676) the references are more pronounced although the isolated facts of importance are also preserved by them. Al-Suyūṭī (d. 911) gives a detailed compilation from Ibn Sa'd and other works, most of which are not, however, accessible but are for the most part of later date and unreliable, like the Musnad ʿAbdu ʿl-Mawṣūfa'ī of al-Ṭāhirī, the Hilya of Abū Naṣīr, the Kitāb al-Maṭṭūṣah wa ʿl-Muṭṭalaf of al-Khatib al-Baghdādi, the Kitāb Tarikh al-Muṭarrīk of al-Kāfī Ḥaṣṣ, the Fihrist Malik of Abu ʿl-Ḥasan Fīrāz. The bulk of the later Maṭarrīk, for example that of al-Zawādī, is of no independent value.

II. Malik's Life

Malik's full name was Abū ʿAbd Allāh Malik b. Anas b. Malik b. Abū ʿAmir b. ʿAmar b. al-

The date of his birth is not known; the dates given, varying between 90 and 97, are hypotheses, which are presumably approximately correct. As early as Ibn Sa'd we find the statement that he spent three years in his mother's womb (over two according to Ibn Kazakhs, p. 290, a legend, the origin of which in a wrong interpretation of an allowed statement by Malik on the possible duration of pregnancy is still evident in the text of Ibn Sa'd). According to a tradition preserved by al-Tirmidhi, Muhammad himself is said to have foretold his coming as well as that of Abul Hanifa and al-Shafi'i. His grandfather and his uncle on the father's side are mentioned by al-Sam'ani as traditionists, so that there is nothing remarkable in his also being a student. According to the Kitab al-Azghani, he is said to have first wanted to become a singer, and only exchanged his career for the study of Fiqh on his mother's advice on account of his ugliness (cf. Goldscheider, Minh. Studien, ii, 79, note 2); but such anecdotes are little more than evidence that some one did not particularly admire him. Very little reliable is known about his studies, but the story that he studied Fiqh with the celebrated Rabia b. Farihik (d. 132 or 133 or 143) who cultivated roqay in Medina, whence he is called Rabah al-Roy, can hardly be an invention, although it is only found in somewhat late sources (cf. Goldscheider, op. cit., p. 60). Later legends increase the number of his teachers to incredible figures; 900, including 300 tashfin are mentioned. It is said he has learned kirah from Nan b. Abu Nula'am. He transmitted traditions from al-Zuhri, al-Naih, the Mawlid of Ibn 'Umar, Abu Ja'far al-Ash'ami, Abu Ja'far al-Rawah, Hisham b. 'Urwa, Yahya b. Sa'd, Abul 'A'ib b. Dinar, Muhammad b. al-Munkad, Abu 'Zoheir and others, but the insors of course data insufficient evidence that he studied with the authorities in question; a list of 95 shuyukh is given by al-Suyuti, p. 48 seq.

A fixed chronological point in his life, most of which he spent in Medina, is his being involved in the rising of the 'Aliid pretender Muhammad b. Abul 'A'ib in 145 (on the other hand the story of Malik's alleged dealings with Ibn Hurrax in the same year gives the impression of being quite apocryphal). As early as 144 the caliph al-Manasir sent to the Hassanids of Mecca through him a demand that the two brothers Muhammad and Tahir b. Abul 'A'ib suspected of being pretenders should be handed over to him; this shows that he must have already attained a position of general esteem and one at least not openly hostile to the government; he was even rewarded out of the proceeds of the confiscated property of the captured 'Abul 'A'ib, father of the two brothers above named. This mission met with no success. When Muhammad in 145 by a coup made himself master of Medina, Malik declared in a fatwah that the homage paid to al-Manasir was not binding, because it was given under compulsion, whereas many who would otherwise have held back joined Muhammad. Malik took no active part in the rising but stayed at home. On the failure of the rebellion (147) he was punished by flogging by Djasar b. Sulaiman, the governor of Medina, when he suffered a dislocation of the shoulder, but this is said to have still further increased his prestige and there is no reason to doubt that the stories of Abu Hanifa's ill-treatment in prison are based on this episode in the life of Malik. He must have later made his peace with the government; in 160 the caliph al-Mahdi consulted him on structural alterations in the Meccan sanctuary, and in the year of his death 179 the caliph al-Rashid visited him on the occasion of his pilgrimage. While this fact may be considered certain, the details in the Kitab al-Uyoun are already somewhat legendary and in Suyuti, following Abu Nu'aim, quite fantastic. The story of al-Mansur found as early as Ibn Sa'd, in a parallel ra'awiy in al-Yabari of al-Mahdi, is quite fictitious and is given again with fantastic detail in al-Suyuti (from Abu Nu'aim) of al-Rashid, though the caliph wanted to make the Musawwa canonical and only abandoned his intention on the representations of Malik.

Malik died, at the age of about 85, perhaps in the year 179 in Medina and was buried in al-Baq'iy. 'Abul 'A'ib b. Zainab, the governor there, conducted his funeral service. An elegy on him by Djasar b. Ahmad al-Sarrad is given in Ibn Khallikani. Pictures of the sahaba over his grave are given in al-Batamani, al-Rihla al-Hadhjiyya, opposite p. 256 and in Ibrhim Rifat al-Pasha, Mir'at al-Murarani, vol. i, opposite p. 426. As early as Ibn Sa'd (certainly going back to al-Waki'i) we have a fairly full description of Malik's personal appearance, his habits and manner of life, which however cannot claim to be authentic, nor can the sayings attributed to him which became more and more numerous as time went on. The few certain facts about him have been buried under a mass of legends; the most important facts have already been noted, and the others will be found in al-Suyuti and al-Zawawi.

On the transmitters of his Musawwa and the earliest members of his madhab see Sect. III, iv; here we will only mention the most important scholars who belonged on traditions from him. These were 'Abul 'A'ib b. al-Mubarak, al-Awaq, Ibn Dinar, Hammadi b. Zaid, al-Layth b. Sa'd, Ibn Salama, al-Shafi'i, Abu 'Ubaida, Ibn 'Uyaina, Yazid b. 'Abul 'A'ib and his shaykh al-Zuhry and Yahya b. Sa'd; al-Suyuti, p. 18 seq., gives a long list of transmitters but most of them are not corroborated. We may just mention the apocryphal story of Malik's meeting with the young al-Shafi'i (Progen. hist. ar., i, 359; Wustenfeld, Gatt. Aeg., 1890, p. 34 and 1891, p. 1 seq.), which is simply an expression of the view that was held of the relation between the two Imams.

III. Malik's Writings

Further sources for his teachings

1. Malik's great work is the Kitab al-Mumawwa, which, if we except the Corpus Juris of Zaid b. 'Ali, is the earliest surviving Muslim law-book. Its object is to give a survey of law and justice, ritual and practice of religion according to the ijma' of Islam in Medina, according to the sunna usual in Medina and to create a theoretical standard for matters which were not settled from the point of view of ijma' and sunna. In a period of recognition and appreciation of the canon law under the early 'Abbasids, there was a practical interest in pointing out a "smoothed path" (this
is practically what al-muwattāʾ means) through the far-reaching differences of opinion even on the most elementary questions, Malik wished to help this interest on the basis of the practice in the Ḥadīth and to codify and systematise the customary law of Medina. Tradition, which he interprets from the point of view of practice, is with him not an end but a means; the older jurists are therefore hardly ever quoted except as authorities for Malik himself. As he was only concerned with the documentation of the sunna and not with criticism of its form, he is exceedingly careless as far as order is concerned in his treatment of traditions. The Muwattāʾ thus represents the transition from the simplicity of the earlier period to the pure science of Ḥadīth of the later period.

Malik was not alone among his contemporaries in the composition of the Muwattāʾ; al-Muqaddasi (d. 164) is said to have dealt with the consensus of the scholars of Medina without quoting the pertinent traditions, and works quite in the style of the Muwattāʾ are recorded by several Medina scholars of the same time (cf. Goldziher, op. cit., p. 219 sq.) but nothing of them has survived to us. The success of the Muwattāʾ is due to the fact that it always takes an average view on disputed points.

In transmitting the Muwattāʾ, Malik did not make a definitive text, either oral or by munawala, to be disseminated; on the contrary, the different riwaṭs (recensions) of his work in places differ very much (cf. Goldziher, op. cit., p. 223). The reason for this, besides the fact that in those days very little stress was laid on accurate literal repetition of such texts and great liberty was taken by the transmitters (cf. Goldziher, op. cit., p. 221), lies probably in the fact that Malik did not always give exactly the same form to the same lectures in different "classes". But the name Muwattāʾ, which certainly goes back to Malik himself, and is found in all recensions is a guarantee that Malik wanted to create a "work" in the later sense of the term, although of course the stories which make Malik talk of his writings reflect the conditions of a later period. In later times the Muwattāʾ was regarded by many as canonical (cf. Goldziher, op. cit., p. 213, 265 sq.; al-Suyūṭī, p. 47) and numerous legends deal with its origin (al-Suyūṭī, p. 42 sq.).

Fifteen recensions in all of the Muwattāʾ are known, only two of which still survive in their entirety, while some five were studied in the sixteenth centuries A. D. in Spain (Goldziher, op. cit., p. 222, note 2 and 4) and twelve were still available to al-Raḍānī (d. 1094) (Heffening, fremdenrecht, p. 144, note 1):

a. the vulgar of the work transmitted by Yahyā b. Yahyā al-Maḥmūdī (d. 234), often printed, e.g. Delhi 1216, 1296 (without ināda, with Hindustānī translation and commentary), 1307, 1308, Cairo 1279-1280 (with the commentary of Muḥammad b. Abī al-Bākī al-Zarqānī, d. 1122), Lahore 1889, Tunis 1250; numerous commentaries, editions and synopses; cf. Brockelmann, G.A.L., l. 156; Ahlwardt, Katang Berlin, 1145; Muḥammad Abī al-Hayy al-Halakhwī (Introduction to the edition of the recension 4); Lucknow 1297, p. 21 sq.; al-Suyūṭī, p. 3 and passim (work of al-Fakhūrī), p. 57 (cf. Abī al-Barr) and p. 58 (chief passage); Goldziher, op. cit., p. 330, note 2; Schacht, Abb. fremdenrecht, p. 253, note 2); and al-Suyūṭī, Isfākh al-Muwaṭṭā li-Ridāṭ al-Muwattāʾ, Delhi 1320 and Muḥammad b. Ṭāhir al-Patrī, Muḥṣim b. Ḥiṣār al-Anwār, Lucknow 1285;

b. the recension of Muḥammad b. al-Hāsan al-Shahtānī (d. 189) which is also an edition and critical development of Malik’s work, as al-Shahtānī at the end of most chapters gives his own views and that of Abī Ḥanīfa on the questions discussed, sometimes with very full reasonings; often printed e.g. Lahore 1211-1219 (with Hindustānī and Arabic translation and notes), Lucknow 1291, 1292, 1293, 1297 (with introduction and commentary by Muḥammad abī al-Hayy al-Lakhnawī, d. 1910, edn.); several commentaries; cf. Brockelmann, op. cit., Schacht, op. cit., No. 2, 24, 24; and the works quoted under a.

On the relation of these riwaṭs to one another cf. Goldziher, op. cit., p. 223 sqq.

c. The quotations from the recension of Abī al-Ḥāfīz b. Wahib (d. 197) which are preserved in the two fragments of al-Ṭabari’s Kitāb al-Bukhārī al-Faṭḥā (ed. Kerm, Cairo 1902, and Schacht, op. cit., No. 22) are fairly comprehensive; this riwaṭ follows that of Yahyā b. Yahyā quite closely.

The other recensions of the Muwattāʾ are given by al-Lakhnawī, op. cit., p. 18 sqq.; further lists of transmitters of the Muwattāʾ are given in al-Suyūṭī, p. 48, 51 and in al-Nawawī.

2. Whether Malik composed other works besides the Muwattāʾ is doubtful (the statements in the Fihrist, p. 199, 9 sqq., which speak of a number of such writings by Malik are quite vague and uncertain).

The books ascribed to him fall into two groups: legal and otherwise. Among the legal we read of a Kitāb al-Sunnah or al-Sunnah (Fihrist, p. 199, 9 sqq.) transmitted by Ibn Wahib or by Abī al-Ḥāfīz b. Abī al-Ḥākam al-Miṣrī, a Kitāb al-Muṣannaf (al-Suyūṭī, p. 40), a Kitāb al-Muṣallāt, transmitted by Ibn Wahib (ibid.), a Kitāb al-Ṭawāf, transmitted by Abī al-Ḥāfīz b. Abī al-Dalīl (ibid., p. 41) and a Kitāb al-Ṭawāf, transmitted by Khaṭīb b. ʿAṣār and Muḥammad b. Muṣṭafī (ibid.). The genuineness of all these is, however, uncertain and even if they go back to Malik’s immediate pupils (sometimes they are actually attributed to the latter; cf. al-Lakhnawī, op. cit., p. 18) Malik’s own share in them would be uncertain. A book (Gotha 1143) said to have been transmitted by Abī al-Ḥāfīz b. Abī al-Ḥakam al-Miṣrī and heard by him along with Ibn Wahib and Ibn al-Ḵāsim is certainly apocryphal and besides does not pretend to give any attestations of Malik himself.

Of other titles are mentioned a Taʾfīr, a Kitāb al-Ṭawāf, another taʾfīr, a Kitāb al-Muṣallāt, a Kitāb al-Naẓīm and a Kitāb al-Sirr (al-Suyūṭī, p. 40 sqq.) which are in the usual style of the apocryphal literature. The suspicion of falsity is also strong in the case of the Kitāb containing advice to the caliph al-Rashīd, mentioned as early as the Fihrist alongside of the Muwattāʾ (printed Bīrū ḳī, 1311; cf. Brockelmann, op. cit.) which look like a Malikic counterpart of the Kitāb al-Daqrāt of Abī Yūsuf even al-Suyūṭī doubted its genuineness, although for reasons which are not convincing to us.

3. There are two other main sources for Malik’s teaching (setting aside the later accounts of the doctrine of the Malikī madhhab):

The more important is the al-Mudawwana al-Kubra of Saʿūdī (d. 240) which contains replies by Ibn Ḵāsim (d. 191) according to the school of Malik or according to his own raʾiy to questions of Saʿūdī as well as traditions and opinions of
Ilbn Wahb (d. 197) (cf. Brockelmann, op. cit., p. 177; Heffening, op. cit., p. 144; Krenkow, in the article SAHNUN).

Al-Tabari, who in his Kitāb Ihtīlāf al-Fuḥṣābī has preserved fragments of the Mawṣūṭa-recension of Ibn Wahb (cf. above), also quotes frequently traditions and opinions of Malik in his commentary on the Kurān on the “legal” verses.

IV. Malik’s position in the history of Fīkḥ

Malik represents, in time, a stage in the development of Fīkḥ in which the reasoning is not yet thorough and fundamental but only occasional and for a special purpose, in which the legal thought of Islaılm has not yet become jurisprudence and, in place, Medina where the decisive foundations of Muslim law were laid down. One of the main objects in the juristic thought that appears in the *Mawṣūṭa* is the permeation of the whole legal life by religious and moral ideas. This characteristic of the formation of legal ideas in early Islaılm is very clear, not only in the method of putting questions but in the structure of the legal material itself. The legal material, having in itself no connection with religion, that has to be permeated by religious and moral ideas, is the customary law of Medina, and we can only mean primitive but adapted to the demands of a highly developed trading community, which for us is the principal representative of old Arabian customary law: it appears in Malik sometimes as ṣawma “use and wont,” sometimes it is concealed under the Medina idjamūl which he ascertains with great care; broadly speaking this only means that objections on religious grounds have not been raised by anyone against a principle of customary law. The older jurisprudence had another main object: the formation of a system which sets out from principles of a more general character, which aim at the formation of legal concepts in contrast to the prevailing casuistry and is in some respect rounded off in a codification, if still a loose one, of the whole legal material.

While the Islamisation of the law had been already concluded in its essential principles before Malik, many generations had still to work at its systematisation; therefore Malik’s own legal achievement can only have consisted in the development of the formation of a system. How great his share in it was cannot be ascertained with certainty from the lack of material for comparison. The surprising success achieved by the *Mawṣūṭa* of Malik out of a number of similar works, would in any case be completely explained by the fact that it recorded the usual consensus of opinion in Medina without any considerable work of the author’s own and came to be regarded as authoritative as the expression of compromise (just as the works on Tradition came to be regarded as canonical). The *Mawṣūṭa* would in this case have to be regarded less as evidence of Malik’s individual activity than as evidence of the stage reached in the general development of law in his time. It may be said that this average character was just what Malik aimed at (cf. Sect. iii. 1).

The high estimation in which Malik is held in the older sources is justified by his strict criticism of Ḥadīth and not by his activity in the interest of Fīkḥ (al-Ṭabarī, ill. 2484, 2492; al-Saḥṣaḥ; al-Nawawī; Goldizher, op. cit., p. 147, 168; do., Zāhirīn, p. 230); even this only means that with his Ḥadīth he kept within the later consensus. That al-Ṣaḥḥi’s devoted special attention to him out of all the Medina scholars (cf. his Kitāb Ihtīlāf Malik wa’l-Ṣaḥḥi’) is explained by the fact that he was a disciple of his.

As to the style of legal reasoning found in the *Mawṣūṭa*, Ḥadīth is not by any means the highest or only court of appeal for Malik; on the one hand he gives the ṣawma, the actual undoubted practice in Medina, the preference over traditions, and on the other hand in cases where either Medina tradition or Medina idjamūl existed, he laid down the law independently; in other words he exercises ṣawma, and to such an extent that he is occasionally reproached with *tawārīkh* agreement with the Ṣaḥīḥīs (cf. Goldizher, *Mukh. Studien*, ii. 217; do., Zāhirīn, p. 4, 2, note 1). According to a later anti-ṣawma legend, he is said to have repented of it on his deathbed (Ibn Khallīkān). It is scarcely to be supposed that he had diverged seriously from his Medina contemporaries in the results of his ṣawma.

V. Malik’s Pupils

The Malikī Maḏḥab

In the strict sense Malik no more formed a school than did Abu Ḥanīfah; evidence of this is found in the oldest names Abī al-Ḥṣūrīs and Abī al-ṣīrī in the class of Malikī law. These names at times indicate the probable origin of the Malikī maḏḥab; after a regular Ṣaḥḥī school had been formed, which in view of al-Ṣaḥḥi’s personal achievement, is quite intelligible in the development of Fīkḥ (cf. Bergsträsser, op. cit., p. 76, 80 sq.), it became necessary for the two older great schools of Fīkḥ, whose difference was probably originally the result of geographical conditions in the main, also to combine to form a regular school, when a typical representative of the average views like Malik or Abū Ḥanīfah was regarded as head. In the case of Malik the high personal esteem, which he must have enjoyed even in his lifetime (cf. Sect. II) do not doubt contributed to this also. But it is to his pupils that his elevation to the head of a school is mainly due. Traces of this process are still to be found in the varying classification of old jurists as of the Ḥṣūrī school or as independent mujtahids (cf. also Fihrist, p. 199, sq.).

Among Malik’s pupils and companions who soon became known as Malikī may be mentioned: al-Lātīn b. Sa’d (d. 161 or 165 or 175), Abī al-Raḥmān b. al-Kāsim (d. 191), Abū Allāh b. Wahh (d. 197), Ma’n b. Ishaq (d. 198), Aḥbab b. Abī al-Āṣir r. (d. 204), Abū al-Malik b. Abū al-Āṣir (d. 212), Abū Allāh b. Abī al-Ḥakam (d. 214), Abī Allāh al-Kaḥibi (d. 221), Iṣlāh b. Uwayṣ (d. 226) and his brother Abū Bakr, Saḥnūn (d. 240). Saḥnūn was too late to hear Malik himself; with him the formation of the Malikī maḏḥab is already concluded.

Of the later Malikī literature two short compendia attained special fame as textbooks: the Ṣaḥīḥ of Abī Allāh b. Abī Zaid al-Kairawānī (d. 386) whom the author of the Fihrist mentions as an important contemporary (p. 201, sq.) and the Maḏḥabgar of Khalīl b. Lādiq (d. 707); numerous commentaries on and editions of both exist and they have also been discussed in Eran-
pean languages (cf. Bibl.). Their importance has sometimes been exaggerated in Europe; development did not stop with them (cf. Pröester, Zeitschr. f. vergl. Rechtswiss., xlii. 422 sqq.; Pröester deals with an important later jurist, 'Ismā'īlī, ii. 430 sqq.). His immediate pupils are not to be regarded as opponents of rā' y any more than Mālik, and the Mālikī madhab is not at all more conservative or traditionalist than the Ḥanfī for example (B. Ducati in Islamicq, iii. 214 sqq., even endeavours to show that it is the most juridical of the Muslim schools of law).

The Mālikī madhab spread mainly in the west of the Muslim world; after it had succeeded in driving out the madhabī of al-Awāzī and the Zahir school, it prevailed not only in the Maghrib (Tunis, Algeria, Morocco, including Muslim Spain) but in all the rest of Africa, so far as it has adopted Islam. The Mālikī school has many followers in Egypt: in Upper Egypt it occupies the ancient position as the Shāhī thus in Lower Egypt. This geographical distribution seems to go back to corresponding conditions existing before the formation of the madhabī. Particularly ardent or successful disciples of Mālik's teaching were Ḥāfiz Alī al-Mālikī, d. 238 or 239, and Ḥāfiz b. al-Manṣūr (l. 282; Fikhrī, p. 199) but there must also have been earlier scholars for whose time the existence of a regular school is doubtful.

The older Maxikīte are given in Fīkhrī, p. 199 sqq. Of the Mālikī 'Abd al-Hā'īn the works there have been printed e.g. al-Dābī, ed. Ibn Farḥān (d. 799) along with the Tuhf al-Dābīsī of Ahmad Bāḥη b. 'Abd al-Hā'īn, ed. Ibn Farḥān (d. 1032), Fez 1898 and Na'il al-Dābīsī bi-Tārikh al-Dābīsī of the same Ahmad Bāḥη, Fez 1817 (cf. Fafiṣan, in Festschrift Cederer, p. 105). Individual Mālikī jurists cf. the articles on them. On the spread of the Mālikīs: Ahmad Pāsha Taimur, Nāsara fārkhān fī Ḥadīth al-Mālikī fī al-baḥrān, Cairo, 1944; Jungbluth, Handbuch der tiberischen Gesch., p. 243; ibn Hanbelid1 2, p. 21; Ibn Farḥān, op. cit. 177; Bergsträsser, Z. D. M. G., 1914, p. 410 sqq.

Discussion of the Mālikī teaching in European languages (some further references): Perron, Précis de jurisprudence ma'lidiane (transl. of the Mukhtasar with extracts from the commentaries), 1848; Sautaya-Chebron.
to him a series of poetical improvisations on this occasion, in which, after the fashion of the old Beduin paladins he explains and excuses his flight.

The defeated leader tried to make a stand at Liya, a few hours south of Tafif where he had a durr. What was a durr? In Medina at the time of the Hijra the name was given to an enclosure commanded by an ajam or tower. Malik's had probably only brick walls like the little strongholds in Yemen described by the geographer Maqdisi (Abūan al-Tawāš, ed. de Goeje, p. 84). A century ago, the traveller Maurice Taminier (Voyage en Arabie, Paris 1840, ii. 5) passing through Liya saw there "une forteresse flanquée de tours" intended, as in the days of Malik, to guard the road. In any case, whatever the strength of the little building, Muhammad easily destroyed it. When Malik learned of the approach of the Muslims, he thought prudent to seek refuge behind the ramparts of Tafif.

In the interval of the bloody t separate the story of the prisoners, Muhammad said: "If Malik comes to embrace Islam, I shall return him his family and property with the addition of a gift of a hundred camels". Whatever the decision adopted by Malik, this declaration could not fail to compromise him with the Thaqafa. He righty recognized that his position in Tafif had become untenable. He succeeded in escaping from the town and presented his submission to Muhammad who fulfilled his promise. Malik then pronounced the Muhammadan confession of faith and, to use the traditional formula, "his Islam was of good quality".

The new proselyte had extensive connections and was remarkably well acquainted with the Thaqafa region. The Prophet was glad to use him against Tafif which he had been unable to take by force. He put Malik at the head of the Ka'at tribes who had adopted Islam. Malik therefore organized a guerrilla war against his old allies in Tafif. No caravan could leave Tafif without being intercepted by Malik's men. Exhausted by this incessant struggle, the Thaqafa decided to sue for terms. Malik then became the representative of the Prophet among the Banu Hashim, and the emir, Abū Bakr, later confirmed him in the office. He took part in the wars of conquest, and was at the taking of Damascas and the victory of Kadijya in the Ittāk.

**MĀLIK b. NUWAIRA, chief of the Banū Warbū**. A considerable clan of the Banū Hashim, who were in turn a branch of the confederation of the Banū Tamim [q.v.]. His liberality, magnanimity and especially his courage had earned him a great reputation before the Hijra. His contemporaries said that in the last respect he was without a peer. There was a proverbial saying: lātū wa-ta lā-kā mālik, "a hero no doubt, but not comparable to Malik". His fame, however, came principally from the impression made by his tragic death and from the collection of elegies, which his brother Mu'tammins [q.v.] devoted to him.

Along with several other Tamim notables he embraced Islam in the lifetime of Muhammad. In return the latter appointed him to collect the canonical taxes, jāzādāt, from among his fellow-countrymen. By giving him an appointment like this the Prophet hoped to bring him definitely to his side. The death of the Prophet and the incident of the ridda [q.v.] served to show the foolishness of this hope. Like most of the nomads, Malik had joined Islam as a political organisation, having clearly made up his mind that he would not be absorbed by it to the extent of sacrificing the independence of his tribe and his own prerogatives.

When the Muslims, or more accurately the Kūnaqš, of Medina gave their votes for Abū Bakr, Malik refused to recognize the validity of this election which had been carried through without his participation in it. He argued for the strictly personal character of the sūrah, as the Beduins interpreted it. He explained himself in verse, for he was also a poet: — "If the thing turns out badly, we shall bring a remedy, crying: — long live the faith of Muhammad!". He did not stop at this but passing from words to deeds, he divided among the Tamim the taxes which had been collected. An even graver step, he next plundered a caravan which was taking to Medina the contributions of those nomads who had remained loyal. Then — an eminently Beduin trait — he celebrated in verse this strange exploit, which was equivalent to a declaration of war. He finally compromised himself completely by joining his cause with that of the prophetess Sahlah [q.v.].

In Medina, Abū Bakr had at first to shunt his eyes to these things. But as soon he felt himself master of the situation, he decided to act vigorously. Khalid b. al-Walid was sent against the secessionists. His orders were to spare only those who declared themselves Muslims. The individualism of the Beduins singularly facilitated the task. He attacked separately the tribes, who were divided or hesitating, and succeeded without difficulty in defeating the rebels in small sections. Thus he came to the Banū Tamim. The chiefs were suspicious of one another and declined to combine for joint action. Surprised by Khalid and finding himself almost alone, Malik had to refrain from fighting forces so markedly superior to his, and surrendered on an assurance that his life would be spared and finally declared himself a Muslim.

The prisoners including Malik were, nevertheless, executed with refinements of cruelty. It was said there had been some misunderstanding of Khalid's orders for which dialectic differences were to blame; so say those authors who feel the need of exculpating Khalid. It was by no means the first action of the kind in the impious Makhlīma. Did he want to get rid of a rival or deal the last blow to a rebellion by sacrificing, even against the laws of nations and his own orders, a person so highly esteemed as the chief of the Warbū? As he had been anxious to marry Lellà, the vivacious wife of Malik, he was credited with the first aim. 'Umar demanded that the
faithless leader should be dismissed and brought to judgment, but Abû Bakr refused. "Never," he replied, "shall I put back in the scabbard a blade which Allah has brought out of it!" The elegies on Mâlik by Mutamâmin remained celebrated in literary tradition. "No dead man," said the Arabs, "was ever lamented as Mâlik was by Mutamâmin".

(M. H. Lammens)

**Mâlik al-Tâlî**

Abî Walîd Mâlik b. Abî 'Sumî, was one of the greatest singers and composers of the Umâyяд and early ʻAbbasîd period. He was born during the reign of Mu'awiyah I (48–60 = 666–680) in the land of the Ṭâlî, his father belonging to the Banî Ṭâlî, a branch of the Ṭâlî, whilst his mother came from the Banû Makhrîz. In this way Mâlik could claim to be one of the aristocracy of Islam, and as a child he was adopted by 'Abdallah b. Dîjâfîr, the famous art-patron of Madîna, and was given a good education. In the year 64 (684), he became enamoured with the singing of the celebrated Ma'bâdî [q.v.], whom he heard at the house of ʻAmr b. 'Abdallah b. al-Zubairî, and the event changed his whole career. Taking lessons from Ma'bâdî and Dîjâfîr [q.v.], in singing, he soon astonished everyone by his abilities, and he became very popular with the aristocracy. He thus came to be recognized as a professional musician, for indeed his protector, 'Abdallah b. Dîjâfîr, had made his house a veritable conservatory of music (al-Masâ'îdî, _Mawâdî_ , v. 385, text). On the death of 'Abdallah b. Dîjâfîr, Mâlik attached himself to Salamîn b. 'Abî at-Tâhirî. In spite of this however (cf. J.A., Nov.–Dec., 1873, p. 499), Mâlik was favoured by the Umâyяд Yazîd b. Abî al-Mâlik and al-Walîd b. Yazîd. On the accession of the ʻAbbasâids (132 = 750) Salamîn was appointed governor of the Lower Tigris, and Mâlik accompanied him to his seat at Basra. After a short stay in this city, Mâlik returned to Madîna, where he died over eighty years of age about the year 137 (754).

Mâlik was certainly a fine singer. In one place in the _Ağhânî_ at least (i. 98; cf. ii. 127), he is mentioned as one of the "four great singers", by no means an authority than 'Abd al-Mawâsîlî, although the latter in another place ranks him after Ibn Surârîjû, Ibn Mu'âzîm, Ma'bâdî, and 'Abî Qarâdî (Ağhânî, ii. 151). He was apparently not an original composer but a good adapter. It would seem (Ağhânî, i. 173; xiii. 64). Certainly, he was at a disadvantage in not being a performer on the lute (ṣîrî), and Ma'bâdî had to correct his compositions for him.

(H. G. Farmer)

**Mâlikshâh** b. _Abî Arslân_ Abû 'l-Fâthî, _Sâlîdî_ _Sulţân_ (465–485 = 1073–92), born on the 9th or 19th Dümâdî, i. 447 (Raŵâdî and _Lubûh al-Tawârîkh_ wrongly 445) = Aug 6th or 16th, 1053. He accompanied his father on his last campaign into Transoxania and homaged was at once paid to him as Sulţân by the vizier Niṣân al-Mulk and the Turkish amirs on Alp Arslân's death. His uncle Kâwûrd [q.v.], the ruler of Kirmân, was not satisfied with this, however, because he thought that, as the oldest member of the family, he had the best claim to the throne and set out with his troops for Hâmadîn. When attacked by Mâlikshâh they made but feeble resistance, Kâwûrd himself was captured and later strangled (April 9). Mâlikshâh then returned to Transoxania by forced marches for the Kâshân of Şamsîn and, on hearing of the death of Alp Arslân, had seized the opportunity to occupy Tirmîdî and even Bâlkî had opened its gates to him. The Sulţân governor Ayîsî, a brother of Abî Alp Arslân, happened to be away at the time and when he hurried back, he suffered a terrible defeat and died soon afterwards. Şams al-Mulk, however, did not dare to risk another breach with Mâlikshâh, so the latter re-occupied Tirmîdî and proceeded to Şamsîn. The Kâshân thereupon submitted; Bâlkî and Tuhâkîristân were granted to Mâlikshâh's brother Tâzâh. These campaigns prevented the Sulţân from going at once to Bâghdâd to receive the homage of the Caliph in person, and an ambassador was sent to carry through the ceremony. The Caliph was quite ready to do so, and gave the Sulţân the honorific titles of Dilâjî al-Dawâlî, Mu'âzî al-Dawâlî, Kâsîm Amîr al-Mu'mînîn.

Our sources are silent about the happenings of the next few years; it is not till 472 that we hear of a campaign against Kirmân, which, however, came to a peaceful termination for Sulţânshâh, Kâwûrd's son, submitted to the Sulţân and was confirmed by him in the hereditary possession of this province. In Ibn al-Kalântîr (ed. Amedroz, p. 115), we are told that in 475 Mâlikshâh came to Ḥalâb, but Ibn al-Atlîhî and the other sources accessible to me make no reference to this. At this time the Sulţân made the mistake of discharging 7,000 of his soldiers, although those who were advised him against it, pointing out that if these men were deprived of their livelihood, they would in desperation become robbers and rebels and a public danger. This is what actually happened. The men went to Tâzâh and he thought that with their help he was strong enough to rebel against his brother. He took several towns and was preparing to occupy all Khorâsân so that Mâlikshâh was forced to take the field against him. Tâzâh then retired to Tîrîmîdî, and submitted when besieged there; on this occasion he was pardoned, but when he again rebelled without success a few years later (477 = 1054), he was blinded and thrown into prison in Takrit. In 479 (1066) Mâlikshâh left Isâfân which he had made his capital and went via al-Mawâsîlî, Harrân, al-Ruhâ and Kaṭîf Dîjâfîr to Ḥalâb. His object was to establish and re-organize Sâlîdî rule securely in these places, but one great inducement for this campaign was that the commander of Ḥalâb had appealed to Mâlikshâh because he was threatened by the latter's brother Tâzâh [q.v.]. The latter had conquered the Sâlîdî ruler of Asia Minor, Sulamîn b. ʿAbd al-Mu'âzîmî [q.v.], and was trying to
nated successor to the throne but died in 482 (1088). The obvious thing was for Prince Barkyaruk to take his place as was desired by Nişām al-Mulk and the Turkish amirs but Malikshah had in the meanwhile married another wife, the Princess Turkan Khatun, who made every effort to secure the throne for her son Mahmud born in 480. Malikshah, however, was more anxious about his daughter who had married the Caliph, for she was unhappy in Bagdad and complained of being neglected by her husband, so that finally the Sultan demanded that she should be sent home with the little son whom she had borne to the Caliph. She, therefore, returned to her father but died soon afterwards in 482; her son Dżafar however, became his grandfather's pet and he gave him the name of "Little Commander of the Faithful" in the hope that he would one day bear this title in reality. At the same time he decided to make Bagdad his winter capital and had extensive building operations carried out in the N.E. of the town when he was there in the winter of 1091/92, including a great mosque, the Dżami' al-Sultan; he also ordered Nişām al-Mulk and his amirs to build residences for themselves there. During this period the great amirs from the west, Aşkınçor, Tutuš etc., had come to Baghdad, great hunts and other pleasure parties were held, but the Caliph was completely ignored.

When in the autumn of 1092 he was on his way from Isfahān to Baghdad for the third time, the aged vizier Nişām al-Mulk was stabbed by a šahād at Sahn. It was now for the first time apparent how much the existence of the Seldjuk empire depended on this one man, for when the Sultan and his wife were no longer guided by his advice, they committed the gravest errors, which were very soon to plunge themselves and their empire into destruction. Scarcely had the Sultan arrived in Bagdad then, with the intention of making his grandson Caliph, — which was contrary to Maḥmudan law as he was a minor — he announced to Turkan that he must at once abdicate and leave the town. With difficulty the Caliph obtained a few days respite which he was spending in prayer and fasting, when suddenly the news came that the Sultan was dead. The exact date is not certain but it was about the middle of Shawwal 485 (middle of November 1092). He was said to have caught a severe fever while out hunting, which they attempted to cure without success by bleeding, and he died soon afterwards. But it can hardly be doubted that he was poisoned, as some writers expressly state: cf. Foutema, in Journal of Indian History, Sept. 1924, p. 147 sqq. The usual funeral ceremonies were not held; the body was sent to Isfahān and buried there. The Caliph had no difficulty in coming to terms with Turkan Khatun; he offered to recognize her young son Maḥmud as Sultan, if she would hand over to him his own son, the Sultan's grandson. This was done.

Next year, when the course of events took a disastrous turn for the Caliph and Turkan Khatun with the rise of Barkyaruk, the tragic deaths of the Sultan and his vizier were celebrated in verse by Mu'izz; cf. Schefer, Sürretevnik, suppl., p. 62 sq. Malikshah's was a highly honourable character, he was loyal to his relatives and to his servants, brave, just and gentle. His rule is, therefore, much praised by Christian as well as Muslim
authors, but he was uncultured and owed to his
viceroy the reputation of a patron of learning,
whose name is associated with a reform of the
calendar [cf. the article Malikshah], and with certain
new legislation; cf. al-Mas`ūdī al-Malikshahiyah,
in `Urdu fi ḥikayat al-Sulṭānihyyah, ed. Sülheim,
p. 63 sq. His connection with the Rûslāl-ı Malikshāhı,
a geographical work used by Hamād Allāh Mestawī,
is unknown but it was certainly not written by the Sulṭān himself, as Hākīm Khalīfa
says (6:71).

The name Malikshāh was further borne by: 1.
Malikshāh, the infant son of Barqayrūk, who after
the death of his father in 1104 held the title of
Sulṭān for a short time, but had soon to give
way to his uncle Muḥammad. 2. Malikshāh b. Muḥ-
mīd who, after the death of his uncle Mas`ūd
in 1152 became Sulṭān, but after a few months
was thrown into prison as he was quite an incapable
ruler, escaped from confinement, spent some time
in Khorasan and died in 1160. We also find in-
dividuals of this name among the Seldjūks of
Rûm and Syria and among the Khārzhūmāshīhs.

Bibliography: cf. the article Sulṭānih.
The best sketch of the character and reign of
Malikshāh is in the article on him by Ibn Khallikān,
who had taken many of his facts from a
history by al-Hamādī (MS. of vol i. till the year 307 in Pārī, Bibl. Nat., No. 1469).

(M. The Houtrma)

MALTA, the chief island of the Mal-
tese archipelago (Malta, Gozo, Comino,
Cominotto, Filfla and minor rocks), inhabited in
ancient times by a Mediterranean race, whose
megalithic monuments are preserved at Ħagiari
(Kim "standing stones"), Hal Tarxien and Hal
Safieni. It was colonized very early, certainly
before the 4th century B.C., by the Phoenicians,
and formed a base for their trading ships.

It is not certain that the name of Malta is
derived from the Phoenician, while the Phoenician
origin of Gozo (Gozo), meaning "a merchant
boat of round shape", seems certain.

The Carchagimers became masters of the island
in the 6th-7th century B.C., and kept it for
five or six centuries. The Romans conquered it
in 218 B.C., and for the next ten centuries Malta
remained under Roman and Greek influence,
being situated near Eastern Sicily, Gozo had only
Greek coins, and Greek and Roman coins in great
number were minted in Malta. Very early, with
St. Paul in the first century, the island was
converted to Christianity; during the Western Empire's
decay the Byzantines established themselves in it;
after their conquest of Northern Africa the pos-
session of Malta became indispensable to them.
The Muslim conquest of Malta is usually ad-
scribed to the year 756 (869-870); in reality it
was occupied long before. Ibn al-Aslih informs
us that in 221 (835-836), the Aghlabid Ibrahim
"despatched a fleet against the islands"; we have
every reason for believing that he refers to the
islands between Africa and Sicily, comprising the
Maltese islands. Further when Ibn al-Aslih speaks
of an army sent to Malta from Sicily in 256, he
adds that at that moment "the Christians raised
the siege". If Malta was besieged, undoubtedly
by the Greeks of Byzantium, it may be concluded
that it had already been occupied by the Muslims,
who probably, having landed in 824 at Mazara, in
Sicily, had occupied the Maltese islands beforehand.
The raids against Sicily and Malta began in
the 8th century A.D., and it is not rash to believe
that Malta fell before 800 A.D. under
Muslim influence. This is also de Goeij's opinion
(Z. D. M. G., lvii. 905, note 2).

In Malta the Muslim occupation was certainly
more permanent and strongly established than in
Sicily; the narrow island was completely subjugated
by the conquerors; and this helps us to under-
stand how the Arab-Berber Muslims of Africa
succeeded in forcing upon Malta the Arabic language,
from which the modern Maltese dialect is derived.

The question of the origin of the Maltese dialect
has occasioned many discussions between those who
sustained its Phoenician origin (Vassalli, Bres, 
Bellermann, Cambo, E. Caroana, Freca) and those
who derived it from Arabic (Gasenius, de Sačy, 
L. Bonelli, Stimmle, Nóldcke). The conclusion
must be accepted that Maltese is an Arabic dialect,
which in some ways shows resemblances to the
Eastern Arabic dialects, in many others recalls the
Arabic dialects of the Maghrib. Peculiarities of
Maltese phonetics are the i̯mblu of ā, which tends
to become İ and I (ye at the beginning of words,
as vānd for vando), the pronunciation of ĝ as hamsa,
the existence of ść and ści sounds in neo-latin and
arabic words; in morphology the use of ĝa as
prefix of the 1st person singular forms the main
affinity with the Maghrib dialects. The accent
tends to fall towards the beginning of words. In
Malta itself are to be found dialectal varieties
between town and country; in the country
and in Gozo the dialect is nearer the original Arabic,
sounds like ģē and ģō not heard in Valletta, are
noticeable in the Gozo vernacular.

A study of the Maltese lexicon, to show how
affinities with Arabic dialects, Eastern and Western,
may be explained, and how word-fossils have
been preserved in Maltese, is still to be under-
taken. The prevalence of the Latin-Italian race and
the flourishing of Italian civilization and culture
in the island have influenced its dialect, both as
to syntax and as to phonetics. The percentage of
Latin, or rather Italian, words in spoken Maltese
varies according to the degree of individual culture.
The Maltese, up to a few centuries ago, had
not chosen any particular alphabet for their dialect,
as they did not use it as a written language. In
the xviiith century Agnus de Soldanis, a Maltese,
turned his attention to the dialect and began to
study it; since his time several attempts have been
made to systematize the writing of Maltese; it
was also proposed to use the Arabic alphabet,
and a diacritical transliteration, precise and scientific,
was tried. In practice the use of the common
Latin alphabet, with the modification of some few
letters, was continued. The last attempt of this
kind, which has not met with public favour nor
with the approval of the vernacular press, was
that of the Ghajda takkitobta tal-Maltdi *Association of
the writers of Maltese", which has published a
small grammar, particularly concerned with the
sounds, called Tiegħef l'eg il-kita b matiż, Malta
in 1924; the preface mentions the precedent systems
of writing Maltese. The same Ghajda, in 1925,
began to publish a quarterly review called It-Maltdi;
it is mostly concerned with grammatical questions,
and has promoted a movement in favour of pure
Maltese (maltd saft).
Since about 1850 the question of the Maltese dialect has also acquired a political character; the English rulers favoured the development of the dialect at the expense of the Italian language (which remains the language of culture, of the Church and of the Bar). Bibliographical information on Maltese literature to about 1900 is to be found in the works of L. Bandull and H. Stumme.

Besides the Arabic dialect and place-names the Muslims have left in Malta a few coins and a considerable number of inscriptions on tomstones; one of them, the celebrated inscription called of Maimuna, dated 1173 A.D., was published more than a century ago, and repeatedly studied by orientalists (Italiani, Lanci, Amari, Nallino etc.); another one, found in Gozo, is to be seen in the Malta Museum; about twenty more have been found in the excavations made in 1922—1925 at Râhat (near the city Notabile); they are preserved in the Museum of the Villa Romana, near the place of excavation.

The Muslims lost Malta in 1565, when the Normans conquered it; they were however allowed to live on the island under the Norman government until 1249. From 1530 to 1798 Malta was the seat of the Order of St. John of Jerusalem, which the Turks had expelled from Rhodes in 1522. The Order organized there an important war navy. The island was in constant relations with the East and with Barbary; thousands of Muslim slaves were taken to Malta; the Maltese ships had repeated encounters with those of the Forte and of the Levantine and Barbary pirates. The Turks attempted to occupy Malta in 1565, with their well-known expedition which ended in disaster, and again in 1614; more than once they threatened to invade it under Sultan Muhammad IV.

Considering the Order's relations with the Muslim East and the fact that an important portion of the registers of Rhodes was saved, the importance of the Order's archives for the history of the Mediterranean Levant and of North Africa in the sixteenth-eighteenth centuries is easily understood.

A few Arabic MSS. and nautical charts, of no great value, are preserved in the Public Library of Malta and in its Museum.

Bibliography:

(ETTORE ROMI)

Malta, or properly Ma'At-tajjâ, the Arabic name of two villages in the ka'dâ of Dâhik in the old wîlîyet of Mawâlî. They are about 30 miles N. N. W. of Mawâlî at the point where the river of Dâhik (left bank tributary of the Tigris) enters the plain, whence the Aramaic name Ma'alâh is Malhâj, "entrance".

The pass of Ma'alâh, giving access to the country to the south of Lake Van must have played an important part in ancient times. Its importance is indicated by the famous bas-relief carved on the rock half an hour's walk to the south of Ma'alâh. They reproduce the same scene four times: a king standing in an attitude of adoration before a procession of seven gods, six of whom are standing, each on a mythological animal, and the seventh is seated on a throne placed on the back of a lion. There are no inscriptions accompanying them. Since, however, they are evidently connected with the similar bas-reliefs at Rûfîwân (30 miles N. E. of Mawâlî on the Khasir, a right bank tributary of the great Tôb) and these belong to the kings Salmânassar II (860—823 B.C.) and Sennacherib (689—681), it is supposed that the bas-reliefs of Ma'alâh were also executed in the time of Salmânassar II. The figures of the gods are especially interesting as forming a link between Assyrian and Hittite art.

Among the Nestorian Christians Ma'alâh gave its name to a diocese (also called šîw-Tâhu-Nâhâhî). A Nestorian bishop of Ma'alâh is mentioned as early as the fourth century (Lohm, op. cit., p. 52, 210); there are other references to the years 497, 544, 551, 576, 585, 605, 692, 1063, 1074, 1092, 1263 (Chabot, Synodicon Orientale, Paris 1902, Index, and Hoffmann, o. c.). In the seventh century the Metropolitan of the Jacobites, Mânîth, still numbered among his subordinates a bishop of Ma'alâh (Labort, Le Christianisme dans l'empire grec, 1904, p. 240). At the present day Ma'alâh is still inhabited by Nestorians (in part in union with the Catholic Church).

Balâqurt, p. 331, mentions al-Mâalla (sie) among the places in Mawâlî conquered by U'tiba b. Fâkhd in 641. Mânahaddi, p. 139, 145—146, talks highly of the wealth of the vicinity of Ma'alâh in coal, fruits, salt, meat and camphor. He locates the little town on the road from Mawâlî to al-Husayna (as Zakhbû on the little Khabûr; cf. M. Hartmann and G. Bell). The importance of this route for communication with the lands of the Kurds is evident from Ibn al-Athir (vili, 521). Yâkût, iv. 528, knows Ma'alâh as a little town (bâlût); the name of which is occasionally mentioned in the history of the later period.

MALTIA — MALWA

Ninil, wife of Assur (a lion), Enill (a horned lion), Shu (a dragon), Shamma (a harnessed horse), Adad (a horned lion and a bull), Ishtar (a lion).

According to Thureau-Dangin the bas-reliefs should be attributed to Sennecherib; as to the motif of the mounted gods, usually explained as showing Hitite influence, examples are found in Sameraco-Asyrian art. Cf. also Bachmann, Palastreliefs in Assyrien (Bauwien, Malbath and Gumiluk), publ. by the Deutsche Orient-Gesell., Berlin 1927.

(V. Minoryev)

MAL'ULÀ, a town in Central Syria north-east of Damascus. It is mentioned as early as Georgios Kyripos (ed. Gelzer, p. 168, No. 993) as MUSAQ'ILA (MESS. MUSAQ'ILA, MUSAQ'ILA) in Phoinike Libanessa. Yakut also calls Mal'ula an islam (isla) near Damascus with many villages. The modern Mal'ula, a village of Christians, is picturesquely situated at the west end of a deep ravine of the Anti-Lebanon, which splits into a western and southern arm. At the entrance to the northern lies the monastery of Mar Takla built half into the rocks. The two ravines form the way to the other monastery of Mar Sarkis, which stands on a rocky plateau above the village. Numerous caves, mostly ancient dwelling-places, have been found on the west and southern corner of the rock on the eastern slopes of which the modern village is built in the form of an amphitheatere. Some Greek inscriptions have been found in the caves (Waddington, Inscriptions, N°. 1863—1865; Moritz, p. 145—148, N°. 30, including one dated 107 and 167 A.D.). Mal'ula and the adjoining villages of Bab'ha and Djabb 'Adin are noted for the fact that the Western Arabic dialect still spoken there represents the last remnants on Syrian soil of the Syriac spoken throughout Palestine and Syria in the time of Christ.

(E. Hönigmann)

MALWA — proper is an inland district of India bordered on the south by the Vindhyas, and lying between 23° 30′ and 24° 50′ N. and 74° 30′ and 75° 30′. To this tract, known in the age of the Mahebharata as Nishadha, and later as Avant, from the name of its capital, now Ujjain, was afterwards added Akara, or Eastern Malwa, with its capital, Bhilsa, and the country lying between the Vindhyas and the Satpuras. The province formed part of the dominions of the Mauryas, the Western Satraps, the Guptas of Magadha, the White Huns, and the Kingdom of Kanawâl, and then passed to the Malwa, from whom it has its name. These, when Hinduised formed the Paramâra (Pawar) tribe of Râjpûts, which bore sway in Malwa from 800 to 1200, and was overpowered in 1053 by a confederacy of the Câlukyas of Avalihâla and the Kalâcharas of Tripurâ. In 1235 Shams al-Din Itutmîsh of Iltihâl captured Ujjain, demolished the temple of Mahâkâlî, and sacked Bhilsa. Malwa became a province of Dilm, and, with interludes of Hindu revolt, remained so until, in 1320, on the dissolution of the kingdom of Dilm after Tûmûr's invasion, the Afghan governor, Dilwâr Khân Ghûrî, made it an independent kingdom. He was murdered in 1405 by his son Alp Khân, who ascended the throne under the title of Hâshâg Shâh. He transferred the capital from Dilm to Mândû [q. v.] and founded Hâshâgâbâd. On his death in 1435 he was succeeded by his son Ghâzî Khân, who, after a reign of a few months, was succeeded by his son's son Malûdân Khan. The child was removed by his cousin and guardian, Malumb Khâlid, who in 1436 ascended the throne as Malumb I, and whose reign of thirty-three years was the most glorious in the annals of Malwa. He waged war successfully against the kings of Gujûrât, the Dakhân, and Jâmpûr, the small state of Kulpî, and Râhû Kumbhâl of Cîtor; he retired, but without disgrace, before the superior power of Dilm, and he extended the frontiers of his kingdom on the north, the east, and the south. On his death in 1469 his third son, 'Abd al-Kâhir Ghiyâth al-Din, who succeeded him, surmounted with public business during his father's strenuous reign, retired into his harem and left the administration of the kingdom to his son, Nâsir al-Din, who in 1500 poisoned his father and ascended the throne. Nasir al-Din met his death in 1510 by falling, in a fit of drunkenness, into a tank or cistern, where his attendants, thankful to be rid of the monster, let him lie. He was succeeded by his son Mahmuûd II, who was as unfortunate in war as the first of that name had been fortunate. With the help of Muâsa'îr II of Gujûrât he rid himself of his powerful Râjpût minister, Medînî Râzi, but in doing so embroiled himself with Sangrama Kânâr of Cîtor, who defeated him in the field and took him prisoner, but generally released him. He then, with inconceivable folly and ingratitude, bitterly offended Bahâdur Shâh of Gujûrât, who invaded Malwa and, after giving Mahmûd every opportunity of averting his error, carried out his vengeance. On March 27, 1531, Mahmuûd and his sons were sent in custody towards Câmpûner, but the officer in charge of them, apprehending a rescue, put them to death.

Malwa now became a province of Gujûrât, and in 1555 the emperor Humâyûn, invading that kingdom, defeated Bahâdur Shâh at Mandosor and captured Mândû, but was recalled to Hindûstán in the following year by the menacing attitude of Shîr Khân in Bengali, and Malûdân Khân, an officer of Mahmuûd II, established himself in Malwa and assumed the title of Kâlûsh Shâh. Shudjâ'at Khân and Hâshâg Khân, two officers of Shîr Shâh, drove him from Malwa and assumed the government of the province. Shudjâ'at Khân died
in 1554, and was succeeded by his son Malik Bāyāzīd, known as Bāz Bahādur, who, during the decline of the power of the Sūr emperors, became independent. A severe defeat at the hands of the queen of the Gond kingdom of Garha Mandola engendered in him a distaste for warlike enterprise and he devoted himself to music and to the embraces of the beautiful Rūpmatī. In 1561 Akbar's army under Adham Khān surprised the volubility at Sārangpur, defeated his troops, put him to flight and captured his mistress, who took poison rather than become the conqueror's paramour. Bāz Bahādur fled into Khandesh and Pīr Muhammad Khān, second-in-command of Akbar's army, who followed him thither, was defeated by Mubārak Khān of Khandesh and drowned in the Narbādā. Bāz Bahādur returned and again reigned in Māndālī, but in 1562 another army under ʿAbd Allāh Khān the Usbāk invaded Mālwa and compelled him to flee to Cītor. He remained a fugitive until 1570, when he submitted to Akbar and entered his service.

Mālwa was now a province of the empire, and remained so until, in 1743, the Marāthās extended their rule over it, and the Peshāwā was made deputy-governor.

It was afterwards divided between the great Mārāthā generals whose descendants, Sindhyas of Gujrat, Holkar of Indore, and the Powānas of Bāhrā and Dewās still hold most of it.

From 1780 until 1818, when British supremacy was firmly established, the province was one of the principal arenas in which Muslim, Marāthā, and European contended for empire. Since then its history has been uneventful, but sporadic risings took place at six military stations during the mutiny of 1857.

Bibliography: Firroth, Guishonda Firokhī, Bombay 1833; Alī-ʾMos Akhbar, translated by Blochmann and Jarrett; An Arabic History of Gujarāt, ed. E. Denison Ross; The Cambridge History of India, vols. i. and iii.; History of the Mahārājas by G. C. Grant Duff, London 1921, Imperial Gazetter of India, 1908, vol. xvii; (T. W. Hail); MAZMAR B. AL-MUTHANNA; [See Asta URADA]; MAMLŪK (Ar. plural mamlūkûn and mamliktî), participle passive of mamlûk "to possess," denotes the slave in his master's possession. The term owes its origin probably to the current phrase of the Kurān mi nūdabat aynabandum "what your right hands possess," a general designation of slaves without specialisation of gender. Mamlûk occurs only in the Kurān (xvi. 79), in the expression ʿad mamlikt "a slave in the possession of his master," mamlûk alone not yet being a technical term for slave, but in appearance. In šudūtb, ʿad mamlikt occurs likewise (Dārīnī, Siyār, h. 04), but throughout the literature of šudūtb mamlikt alone is already a technical term synonymous with ʿadī. — The distinction between a slave born and a slave born from free parents, must be made by the addition of a genitive to ʿadī, in the former case ʿin (ʿadīn ʿinmīn), in the latter mamlūkha (mamlūkān ʿinmīnān). It may be remarked that neither in šudūtb nor, to all probability, in Arabic literature, has the term mamlûk ever received the religious meaning of devotee, as in the case with ʿadī.

The Kurān enjoins the master to be humane towards "what his right hands possess" (xvii. 40). Ṣudūtb is copious on this point. It assures us that Muhammad on his death-bed did not cease repeating "I recommend to you ʿadīn and what your right hands possess" (Ahmad b. Ḥanbal, Muṣnad, iii. 171; al. 76). "Whosoever does not treat his mamlûk as he ought to do, shall not enter Paradise" (Ahmad b. Ḥanbal, i. 8). "When the mamlûk performs ʿadīn, he is thy brother" (Ibn Mādjī, Adab, b. 19). "The mamlûk may claim his food and raiment" (Muṣlim, Ḧādhah, trad. 41). "The Apostle of Allāh used ... and to protect the mamlûk who appealed to his help" (Ibn Mādjī, Zaḥd, b. 16). "The mamlûk who acquits himself of his obligations towards Allāh and towards his master, will receive double wages" (Bukhārī, Ḥadīth, b. 31) and "one is bound to pardon his mamlûk even unto seventy times a day" (Ahmad b. Ḥanbal, ii. 111).

For the legal position of slaves see ṬADī.

For the Egyptian dynasties called the Mamlûk, see the following article. — It may be finally remarked that in certain circles mamlûk had the special meaning of white slave. See Fagnan, Addition aux lexiques arabes, a. v. (A. J. WENSINCK)

MAMLŪK, a dynasty of rulers of Egypt and Syria.

A. Period from 1250 to 1517. The history of this dynasty is dealt with under the separate rulers; the general questions of art, religion and economics of their time are also dealt with in these articles and notably in Becker's article EGYPT [q. v.], and Hartmann's article DAMASCUS [q. v.]. Only a brief survey of the whole period is given here.

They were, as their name shows (cf. MAMLŪK), former slaves from the bodyguards of the sultāns and amirs who had distinguished themselves by ability and been given their freedom by their masters. A somewhat arbitrary distinction is made between two dynasties, the Bahri [q. v.], from 648—702 = 1250—1390 and the Burdji from 724—922 = 1324—1517. The name Bahri Mamlūk was given to the guards of Sultan ḑasim al-Dīn Ayyūb (637—47 = 1240—49), whose barracks were on the island of Roja [q. v.] in the Nile (Bahri). Except for the first three the Bahri Sultāns were chosen by the Mamlūks from among the descendants of the Sultan. Thus after Bahīrs there ruled two of his sons, after Kāliṣṭān two sons, a series of grandsons and a great grandson. It was different with the Burdji Mamlūks, a bodyguard founded by Kāliṣṭān, who were quartered in the towers of the citadel of Cairo. The first Burdji, Barāḏīr [q. v.], was able to secure the succession of his son and even a second son succeeded for a brief period to the throne, but after this the Mamlūk guards never tolerated hereditary succession again; no Sultan's son, who was proclaimed heir-apparent, ever succeeded in keeping the throne (the only exception is al-Nāṣir Muhammad II who occupied the throne for nearly three years). The Mamlūk did not always choose the ablest, but more often the oldest; a kind of system of seniority developed. The first Mamlūk on the throne was ʿAzīz al-Dīn Aḥsān (648—55 = 1250—57), the husband of Shajjar ad-Durr [q. v.] a slave whom Ayyūb had married.

In the period of its greatest extension under the Mamlūks, the frontiers of Egypt were in the west the Libyan desert as far as Barka, in the
the provinces. Every governor was a little Sultan who had to some extent the same retinue as the Sultan in Cairo. The Syrian governors were in general independent of one another (very few like the Amir Tengiz [see Damascus, i., p. 906] had other governors subordinated to them). In the beginning the Mamluks, perhaps influenced by the Mongols, had the tendency to make all offices secular and fill them with Mamluks who, as lords of the sword (ṣāhib al-sayf), belonged to the military caste. They kept this up in the highest offices throughout the dynasty, but they had to create the important offices of private secretary (kāth ib al-irr) and head of the chancellery (ṣāhib Divān al-ین) and fill them with civilians and even admit Christians, Jews, and especially converts to Islam to them, because the Turkish ruling caste was not fitted for them. The above mentioned chief official or the military and administrative aide remained however reserved for the constantly increasing oligarchy, into which neither native Moslems, nor the sons of Mamluks were admitted. It hardly ever happened (I only know of 3 cases of Arabs) that Arabs or sons of Mamluks became amirs of 1,000, or rose to the highest posts in the legal and scholastic world and in the other branches of the civil service.

The Mamluks were purchased on behalf of the government by a high officer, the purchaser of Mamluks (ṣāhib al-mamālik), educated in the first place in the Mamluk School in Cairo, then distributed in the different branches of the corps of pages to act as armour-bearers, cup-bearers, carvers, polo-grooms, club-bearers etc., for further training and then placed in the service of the amirs or of the Sultan as vacancies occurred. The Sultan’s lifeguards were called ṣāhib al-sayf and the amirs had also similar bodyguards. The army consisted of a) the bodyguard of the Sultan, b) the Ḥunayn, enlisted troops, who were paid in money and with the yield of the crown estates, c) the guards of the great amirs and former Sultans. In later times there was a body of reserves, awlad al-khālid, who were only called up for service in times of war but also received pay in times of peace. Military expeditions were usually decided upon by the council of state; the amirs were given money to equip and maintain their troops, to be able to lead them into the enemy’s country.

In addition to the military officers there were civil officials, ʿāqib al-balām (lords of the pen): a) the religious officials (al-ʿaynīya), who filled posts in the legal and scholastic world, and a series of other offices; b) the regular administrative officials (al-dawānīya) for the rest of the civil service.

The Sultan’s revenue was made up of the ground-rent and poor-tax, from the yield of the fields (in the Egyptian system of appanages cf. ii., p. 96) out of which he gave the necessary funds for the army and officials, the customs, the state factories and extraordinary taxes on goods and markets, which, not being laid down in the Kūrān, were considered illegal and resisted. He also sometimes made money by forced purchases and sales. The government bought up goods at a fixed price and forced purchasers to take them at a definite price. Finally there were monopolies out of which the Sultan made profits. Another favourite means of raising money was for the Sultan to visit some great man from whom he extorted large sums while a guest (especially Kūrān I., q.v.). Things
seem to have been similar in Syria but we know little about the division of the fees there.

The importance of the Mamlikūs in history lay in the fact that, protected by the deserts and the nomads they stemmed the flood of Asiatic conquerors; they conquered Cingla Khān’s Mongols and later the hordes of Timūr Lenk, who had conquered Syria for a short time, and other conquerors. After the defeat of the Tatars and the retreat of Timūr, the Sultans were forced to concentrate on the struggle with the gradually increasing power of the Ottomans. The struggle was long avoided by the formation of buffer states on both sides; among these the most notable were the dynasties of Dhu ‘l-Ghādir and of the White and Black Sheep (so-called from their standards). The success of Ka‘ib al-Qāda’s policy postponed the end but the rulers who followed him were weak. The rule of the Mamlikūs lost its vigour. They were weakened in long wars; their finances became quite hopeless as a result of their immediate expenditure, not commensurate with their means and a defective system of taxation, which in the later period enabled the Ottomans to escape the taxes. They therefore could not permanently resist the Ottomans, especially as the lack of discipline among the Mamlikūse leaders and the weakness of their field artillery made the army useless. The well-equipped fortresses were not defended against the Ottomans; they fell through treachery. The himself sultan Qansūh Ghaṭṭī was defeated and slain in 922 (1516) at Manṣūr Dālāj (in the province of Aleppo). The way to Egypt was thus opened to Sultan Selim; after six months’ residence the last Sultan ʿUmar ibn al-Jumhūrī had to surrender. He was hanged from the liṭh Zuwaille in Cairo. A number of the great smurs and the Caliph were taken to Constantinople. The caliphate ceased as no new Caliph was appointed; the Sultan of Constantinople became the first ruler in Islām. The protection of the holy places also passed automatically to him.

The period of the Mamlikūs was marked by great activity in building (IL 235). Of secular buildings, few palaces have survived; on the other hand fortresses (Cairo, Aleppo, Damascus and Birejīk) which were entirely rebuilt in the Mamlikūs period, as well as a large number of fine tombs, hospitals, baths, fountains and aqueducts still exist. Of religious buildings splendid mosques with schools attached to them were built. While even under the Ayyūbīs there had been only one “great mosque” in each town or independent suburb, where the Friday service was held, it became the custom under the Mamlikūs that many Sultans and governors and occasionally even one of the gullivers built “great mosques” for the Friday service in the large towns. Mention may be made of the mosques of Baybars, Kālibīn, Muḥammad al-Nāṣir, Sultān Hasnān, Dārūs, Muḥarrar, Ka‘ib al-Qāda in Cairo, as well as the mosques in the provincial capitals Aleppo, Damascus and Tripoli. While agriculture, industry and art showed great prosperity, trade suffered very much under the later Mamlikūs through the exorbitant taxes of the government. The trade through Egypt, based on treaties with Frankish and Oriental rulers, yielded huge sums. The customs and the treatment of merchants by the Sultans finally became so intolerable that the European powers did everything possible to secure the sea-route to India in order to avoid the transit through Egypt with its enormous expense and the roguery to which it was exposed.

The object of the last wars of Sultan Qansūh Ghaṭṭī was to gain a footing in South Arabia and nearer India to secure the Egyptian share in Indian trade.

Bibliography: Only the most important of the rich literature on the Mamlikūs is cited below (s. especially in van Berchem’s index to Mālikūs for a Corpus Inscriptionum Arábiarum, i., Egypte, Paris 1903, the full list):

7. Medina: Sambuli, Wafa' at-Maqala (1856); Geschichte der Stadt Medina, transl. Wüstenfeld, Göttingen 1861. (M. Sobernheim)

B. Period from to 1517 to 1798. It is a significant fact, that even this period of nearly three centuries, during which Egypt belonged to the Ottoman Empire, may still be designated as a third Mamluk period. The change brought about by the conquest of Sultan Selim in 1517 was, after all, not so radical one, from the point of view of government. Egypt and its inhabitants remained under the rule of a powerful minority of foreign race. The antagonism that existed in the beginning between Ottoman Turks and Mamluks and which had led at first to much bloodshed (execution of 500 mamluks by Selim I in Cairo) did not last very long after the troubles of the occupation were over. The Turkish soldiers and officials who entered Egypt during Ottoman rule soon became mixed up to a large extent with the numerically more powerful class of the Mamluks, whose aid was, moreover, indispensable, for the government of the country. Besides, the number of Mamluks (al-Sharhā) continued to receive additions by purchase of slaves from the Caucasia. An author of the xviii. century (Vandue, p. 13) says that Egypt, in his day, was inhabited by Copts, Mouns (by whom he means the Islamised population), Arabs, Turks, Greeks, Jews and Franks. The "Turks" were the governing class and composed of Ottomans and Mamluks, between whom no distinction is made. We may even speak of a mamlukisation of the Ottoman element; the actual ottomatisation of the country belongs to the xixth century. In accordance with what is said, the history of those centuries never shows, among the parties and factions into which the Mamluks were divided, a pro- or anti-Ottoman party; those quarrels were only of local and personal character. Even the first governor of Egypt, Gehanbek, was a Mamluk, although, after him, the Pasha were sent, without exception, from Constantinople.

During the first 100 years, it is true, the authority of the Pasha sent from Constantinople to govern the country was undisputed. The Pasha could rely on three contingents of troops (vedāq) of which the inhabitants were added under Sulaimān I, composed of Mamluks. Their nominal strength was 20,000 men in all. They were not commanded by the Pasha, but by their own commanders, who belonged to the vedāq of the Janissaries and resided in the citadel of Cairo. Afterwards these troops behaved more and more independently and were able to depose Pashas whom they did not like, until, in the xviii. century, this military force became the instrument of some all-influential Mamluk bey. Important matters of administration were treated by a great Divan (or State Council), which only met in extraordinary cases and in which the high functionaries were represented, as well as the military chiefs and the high religious dignitaries. Local and special government functions were exercised by twelve Sandjak Beys; these represented at the same time the feudal aristocracy; from the beginning however, the ties that linked them to particular provinces seem to have been rather loose, for among them are mentioned the Khāja of the
Pasha, the Da'ud Pasha, the Amir al-Ḥaḍīfī and the Amir al-Kāẓim, the three first of whom were also members of the great Divān. Other Beys were commanders at Suez, Damietta and Alexandria, and governors of the five big provinces in the Nile delta. Besides these twelve Beys there were twelve other Beys with similar functions. The real provincial administration was exercised by a class of functionaries called Kāšīfī. Their chief task was the collection of the revenues. They may be considered as a kind of governor; some of the great Beys themselves were also Kāšīfī in their districts or had different Kāšīfī under them. Vansleb mentions 32 Kāšīfīs. As to the revenues, they were collected in various ways, the local customs in different parts of Lower Egypt and Upper Egypt varying considerably. The most common form was the farming out of revenues (hilāṭun); the multations had different kinds of right of possession on the lands, which were hereditary. They collected the revenue, in taxes or in kind, from the fellahs, generally through the village notables called Kāšīf al-Balad. In the tax-collating there were further employed, a host of subordinate technical and financial functionaries, many of whom were Copts. Some Kāšīfīs were at the same time multations. This system of administration characteristic of the close relation between administration and land-owning, which has always been characteristic of Egyptian conditions (cf. Εύνομο). It was the continuation of the system which had prevailed under the Mamlūk Sultāns (regulation by Kāfī Bay) and was regulated again in the Kāsim-nāmi Mīr of Sulaymān I (cf. i. von Hammer, Die osmanischen Reichsverfassung u. Staatsverwaltung, Vienna 1845, i. 101—142); here a special stress is laid on the rights and obligations of the Kāšīfīs.

In Cairo a large chancery, the chief of which was the Kāsim-nāmi, had to collect these taxes and look after the registers; the revenues collected were reserved partly for the pay of the troops and works of public utility such as irrigation, building of bridges and dikes, etc. and partly for the yearly tribute to the Sultan, which was in the beginning 800,000 ducats and afterwards lowered to 600,000 and later to 400,000 ducats. In the xviii century the paying of tribute practically fell into disuse.

Besides the land-tax, there existed a great number of other taxes, under different denominations; they were collected more or less arbitrarily, and, as in course of time, the anarchy in the government assumed greater proportions, they pressed ever heavier on the population. The rural population had as much to suffer from the exactions of their Mamlūk administrators and proprietors as from the raids of Arab tribes, which the government was unable to control.

The history of Egypt during this period is a not very interesting succession of domestic intrigues, struggles and revolts. Under the beginning of the xviii century the Pashas could more or less maintain their authority, but they were replaced often to have a lasting influence. No less than 117 Pashas governed Egypt until the arrival of the French (a complete list of them is given in Thurey, Sehil-i Ottoman, iv. 335 sqq.). Many of them tried to make their short stay as profitable for themselves as possible, and several of them had to pay their capitivity with their lives after their return to Constantinople. In the xviii century the real power in the country was exercised by the great Beys in Cairo, who had the troops in their hand and tolerated only those Pashas who did not interfere with their affairs. By this time the most powerful positions in the country were those of the commander of Cairo, called the Shālik al-Balad, and of the Amir al-Ḫaḍīfī. Some of the Shālik al-Balad are reputed as good rulers, especially Ismā'īl Bey, who held that office from 1757 to 1774. But the changes of power were always of a violent kind and prevented the forming of a dynasty; Ismā'īl's shālik al-baladship itself had been preceded by a curious struggle between the two rival parties of the Dhu 'l-Fikriyya and the Kāsimīya, which had lasted for three months outside Cairo. In 1747 the Porte tried for the first time to re-establish its authority by ordering the governor Rāghū Pasha to exterminate the Mamlūk Beys; this attempt failed, however, completely and the disorders continued until the appearance of the young Mamlūk 'Alī Bey [q. v.] who made himself for a short time independent Shālik al-Balad and ruler of Egypt, for the years 1770—1771. By this time the Porte began to take more serious measures to retain its hold on Egypt, but the regime of the Mamlūk Beys did not end until a foreign power, France, temporarily occupied Egypt (cf. Kurgiev).

Under such a regime the conditions of living of the population could not be flourishing. It was not so much the position of Egypt within the Ottoman province that caused the suffering of the population, as the lack of a strong central power. European travellers like Vansleb and Lucas point to the fact that Egypt was, in the xviii century a rich country and that by the practical stopping of the payment of tribute, all the money remained in the country itself. But the riches remained only in the possession of the ruling minority, while the rural population was oppressed very hardly. The bad organisation caused, moreover, from time to time terrible famines, while, about the middle of the xviii century, began a series of ravaging epidemics of plague. Since the last period of the Mamlūk Sultāns the country had lost, moreover, a rich source of revenue by the change of the trade-route to India. The transit trade was now restricted to inner African products and coffee and aromatics from Arabia, while the exportation of Egyptian products such as corn, cotton and sugar was limited. The timber that the country needed had to be imported from Turkey. Moreover, the trade with Christian countries often experienced serious hindrances from the arbitrary measures of the local authorities. At the same time the local industries declined rapidly; one of the causes may have been the transportation of a large number of skilled craftsmen to Constantinople by Selim I; the once flourishing guild organisation was paralysed by this measure (cf. Thorning, Beiträge zur Kenntnis des islamischen Vereinswesens, Berlin 1913, p. 85 and Al-Dibārī, l. 20).

In the decline of Egypt's economic strength, on the other hand, made Egypt a relatively quiet possession for the Porte. Only in the very beginning of Ottoman rule, in 1524, a Turkish governor, Ahmad Pasha, tried to take the title of sultan of Egypt, but afterwards no attempts to recover independence were made until the time of 'Ali Bey. Then, however, the political needs of the European colonial powers
made Egypt appear again as an important stage on the way to India and opened new possibilities of a more independent development, which were to be realised in the sixteenth century. In the meantime the possession of Egypt had been useful to Turkey in many respects; the Porte could always count on an Egyptian contingent of troops in its wars and the country itself was a base of action for the military operations in Syria, the Hijaz, and Yemen. The reconquest of Yemen under Selim II was carefully prepared in Cairo. As soon as the tendency to independence appeared, however, as under 'Ali Bey, the Turkish hold on Syria and Arabia was immediately endangered seriously.

The predominant position of Egypt in Islam was not seriously affected by the Ottoman occupation. Al-Ashar [q.v.] remained one of the most important centres of Islamic learning; the Turkish Pashas and other dignitaries showed their acknowledgement of this fact by gifts and by the execution of restorations to the building, as they did occasionally for other religious instituions in the country. Though Islamic science continued to flourish, Egypt did not produce many prominent figures in this period. In the domain of fiqh the most important figure was al-Ramlî (q.v.; d. 1596), the commentator of al-Nawawi, further the mystic al-Sharâni (q.v.; d. 1556), and, as representative of Arabic philology, 'Abd al-Kadir al-Baghdadi (q.v.; d. 1682). In popular mysticism the veneration of Ahmad al-Badawi [q.v.] by the Ahmadiya held a large place.

The period of Ottoman domination in Egypt is not wholly without interest from the point of view of architecture and art. Several governors, beginning with Khârbebek have constructed mosques; these mosques show a kind of transition from the Mamlûk to the Ottoman architectural style. There are also in Cairo several mosques founded by the Mamlûk Beya, like the mosque of Abd al-Habib, the traitor of 'Ali Bey, constructed in 1773. Some beautiful palaces have likewise been built by the Mamlûks, but only few of them are still extant (cf. on this subject: Mme. R. L. Devonshire, L'Egypte musulmane et les fondateurs de ses monuments, Paris 1926, p. 115 sqq.).

Bibliography: The sources for the history of Egypt under Ottoman rule have not been much studied. Of the many Arabic works to be mentioned (cf. Brockelman, G. A. L., ii. 289 sqq.), Ibn 'Iyâs, Badât al-Zubîr fi Waqtâ al-Dînâr, iii, Bâlak 1312, (until 1523); al-Mînakî, al-Badûr al-zubîr fi mun wałiya l-Kâhirah, MS. Vienna, N° 912 (until 1540); al-'Azhârî, al-Badât al-zubîr fi Ahhâr al-Fattah, MS. Cairo, N° 450 (until 1599); Ibn Zunbul, Falâs Fezîrî, many MSS. (1512—1519); al-Islâfî (cf. Bahârî, G. O. W., i. 360 sqq.), Dawlât al-Azhârî fi mun wałiya l-Diyâr al-Mirya also called Lâsîf al-Azhârî fi ma’twarqa fe-Misr min Arâb al-Dunâl, several times printed in Cairo 1276, 1296, 1300, 1304 (until 1623); do., al-Rawâf al-Asâm fi Ahhâr mul wałiya min al-Ahadîn, MSS. Paris, N° 1562 and Brit. Mus., N° 1251 (until 1623); al-Chilî, Dâhârât al-Asâm fi l-Tîrî bâl-Adresse, l-Mirya fi l-Falâsîr, only in MSS. (poem, until 1610); Muhammad b. Muhammad b. Abd al-Surâr, al-Tufsî al-Bâkîa fi Tâmilûk al-Ughrîn al-Diyar al-Mirya, several MSS. (until 1634); do., al-Rawâf al-Zubîrâ fi Waqtâ Misr al-Kâhirâ al-Mâshîya, several MSS. (until 1651); do., al-Rawâf al-Zubîrî al-Akhbâr Min al-Mâshîya, several MSS. (until 1645); al-Awâlî, Tâmurîdât al-Sânîbîh fi Waqtâ Min al-Sânîbîh, several MSS. (treats of some events in the years 1658 and 1661); 'Abd al-Kâdir, Târîkh, MS. Berlin (G. A. L., ii. 299; the years 1603—1643); Ibrahim al-Kâhirî, Mabâda' al-Awâlî, li-mâmil dhâlî al-Misr min al-Malâkî, MS. at Cairo (G. A. L., ii. 299; written about 1721); al-Damirî, al-Durrâ al-Ma'âlîm wa l-Wâfi, al-Kinâmî, several MSS. (G. A. L., ii. 300; the years 1688—1755); Muhammad ib. Ibrahim, Târîkh Misr, MS. Copenhagen, N° 159 (the years 1686—1739); al-Diabârî, 'Abd al-Azîz al-Tîrîkh l-Misrî wa l-Akhbâr, Cairo 1360, vol. i and ii. (from 1694 up to the French occupation).

Among the Turkish sources all the great historical works of the Ottoman Empire since the time of Selim I should be mentioned, to begin with the different Selim-nâmes; on the conquest of Egypt: Haidar Celebi, Tagebuch des ägyptischen Feldzügers Sultan Selim, tran. by K. Held Edhem, Weimar 1916 (Deutsche Orientbibliothek, vol. xx). The following deal specially with Egypt: 'Abd al-Samad, Nasîrûd-din al-Akhbâr, several MSS. (G. O. W., p. 58 sqq.; Turkish translation and continuation of an older Arabic work, up till 1540); Sâlih b. Diabâr, Târîkh Misr, several MSS. (G. O. W., p. 100 sqq.; written in 1546); Yusef b. Nurî-al-Allah, Târîkh Misr, MS. Turin (G. O. W., p. 121; Turkish translation of an older Arabic work and continuation up till 1592); 'Ali, 'Abd al-Kâhirî, Min al-Akhbâr al-Zubîrî, several MSS. (G. O. W., p. 133; written in 1595); Mahmut b. 'Abd Allâh, Târîkh Misr, several MSS. (G. O. W., p. 243 sqq.; up till 1769).

J. J. Marcel, Histoire de l'Egypte depuis la conquête Arabe jusqu'à l'âge des Français, Paris 1834, p. 416 sqq. (this author uses the more important Arabic sources); M. Delaporte, Abrégé chronologique de l'histoire des Mamelouks d'Egypte depuis leurs origines jusqu'à la conquête des Français, in Description de l'Egypte 2, xv, Paris 1826, p. 322 sqq.; M. A. Lacret, Mémoire sur le système d'imposition territoriale et sur l'administration des provinces de l'Egypte, in Description de l'Egypte 2, xi, Paris 1822, p. 451 sqq.; François Charles-Roux, Les origines de l'expédition d'Egypte, Paris 1910; the general works on the history of the Ottoman Empire.

Vansleb, Nouvelle Relation d'un voyage fait en Egypte, Paris 1677; Ewliya Çelebi, Seyhmet-nâme, 8th part, not printed; Paul Lacun, Voyage dans la Turquie, l'Asie, l'Arabie, le Paléiste, la Haute et Basse Euphrate, etc., Amsterdam 1720, 2 vols.; B. de Maillet, Description de l'Egypte, Paris 1735; cf. also the articles Egypt and Sûfî. (J. H. Kramers)

AL-MAMûN, 'Abu l-Akhbâr 'Abd Allah [s. Hârîrî], 'Abd al-azîd caliph, born in Rabî' I 170 (Sept. 786), son of Hârîrî al-Rashid and a Persian slave named Marâfî. After a desperate struggle, which ended in the assassination of the Caliph al-Amin [q.v.] in Maharram 198 (Sept. 813), the latter's brother al-Mamûn ascended the throne; it was six years, however, before he could make his entry into Baghdad. On account of his sympathy for things Persian, which was stimulated by the vizier al-Farîb b. Sulî [q.v.], the Caliph was not
at all popular with the Arabs. An 'Alid Muhammād b. Ibrāhīm, usually called Ibn Ṭabātābā, therefore set up as a pretender to the throne in Kūfa in Dhu’ al-Qa‘dah II 159 (Jan.–Feb. 815) and was supported by a former adherent of al-Ma‘mūn, Abu l-Sarayyā. The rebels had some success at first but Ibn Ṭabātābā died suddenly and when the general Halhama b. A’ayān [q.v.] advanced against him, Abu l-Sarayyā had to take to flight. Soon afterwards he was taken prisoner and put to death (Rābi‘ II 200 = Oct. 815). In the meanwhile the movement had spread, but the ‘Alids made themselves so hated that Halhama’s troops were able to restore order everywhere without difficulty. The victorious Halhama, however, was shamelessly rewarded for his services. After he had occupied Merw, the suspicious Caliph had him thrown into prison where he soon died (Dhu’ l-Qa‘dah II 200 = June 816). This increased the general discontent. While al-Ma‘mūn remained for the time in Merw, the people of Baghdād rebelled and placed al-Mansūr, a son of the Caliph al-Mahdī, at the head of the movement. When in Ramādān 201 (March 817) al-Ma‘mūn designated an ‘Alid, ‘Abd al-Ḵīda [q.v.], as heir apparent and argued the green of the ‘Alids instead of the black of the Ṭabātābās, the people of the capital elected Ibrāhīm, another son of al-Mahdī, Caliph (Iltu l-Ḫūṣayn 201 = July 817). There were troubles in Egypt and in Ḥadhrābdād, the pests were stirred up by the Khurramī Bālāk [q.v.], who terrorised the northern provinces for nearly 30 years. In these circumstances al-Ma‘mūn had finally to leave Merw and go to the Ḥurāz (202 = 817). But when the Arabs murdered the vizier al-Ṭaḏlī who was particularly hostile to them, and ‘Abd al-Ḵīda died suddenly, and in addition, the governor of Ṭūsṯ, al-Ḥasan b. Sahil, the vizier’s brother went mad, or at least was treated as such, the people of Baghdād had really no longer reason to support al-Ḫūṣayn and in Ṣaḥr 204 (Aug.–Sept. 819) al-Ma‘mūn entered the capital and the ‘Alid colours were exchanged for the ‘Abhāṣāt. Al-Ḥasan b. Sahil was then restored to his government, and a few years later the Caliph married his daughter Būrān [q.v.]. As soon as the Caliph had left Khurramā a rebellion broke out among the Ḥurāz. At the end of 205 (June/ July 820) or beginning of 206, Ṭāhir b. al-Ḥusayn [q.v.] was appointed governor of Khurramān. He proved in every way fitted for his difficult post but carried his independence so far that in 207 (822) he denounced his fealty to the Caliph. Although he died the following day, the Caliph did not dare to deprive his son of Ṭāhir’s government, and in this way the dynasty of the Ṭāhirids was founded in Khurramān. In 210 (825–826) ‘Abd Allāh b. Ṭāhir [q.v.] after defeating Nasr b. Shabštīr went by the Caliph’s orders to Egypt. Here the Yamānis, who were loyal to al-Ma‘mūn, had begun to fight with the Ḥūṣaynīs who sided with al-ʿĀṣim and the struggle lasted till the latter’s death. A more peaceful period ensued, but soon new troubles broke out, and with the arrival of the Spanish Muslims, banished by the Caliph al-Ḥasam I [q.v.] the situation became still more complicated. The latter seized the town of al-Iskandariya, but when ‘Abd Allāh b. Ṭāhir arrived in Egypt the native rebels had to submit, and the Spanish intruders retired to Crete. When ‘Abd Allāh was appointed governor of Khurramān, the Caliph made his brother, afterwards the Caliph al-Mu‘tasim, governor of Egypt. But in 214 (829) the Egyptians rose again against his deputy so that al-Mu‘tasim had to go himself to Egypt to bring the rebels to terms. Two years afterwards the people of Lower Egypt again rebelled against al-Mu‘tasim’s officers. The Copts defended themselves with desperate vigour until the Caliph himself arrived with fresh troops and ruthlessly put down all resistance. Towards the end of the reign of al-Ma‘mūn, the old struggle with the Byzantines broke out again. The cause is unknown but probably Bābāk was being supported by the Emperor Theophilos. In any case the Caliph in Muharram 215 (March 830) took the field against the Byzantines accompanied by his son al-Aṣim [q.v.]. In the next two years campaigns were conducted by al-Ma‘mūn in person; as usual the fortune of war varied, but the Muslims succeeded in taking the fortress of Luṭ’ in a long siege, whereupon the Theophilos wanted to make peace. But his offer was refused by al-Ma‘mūn and in 218 (833) he again invaded Byzantine territory but died in Ṣadjāb (August) of the same year in Badūnān not far from Tarās, after having had al-Mu‘tasim proclaimed as his successor.

In spite of all political troubles al-Ma‘mūn found time to devote his attention to religious problems and to the cause of learning. His rationalistic tendencies made him join the Mu‘tazilis, whose most prominent representative then was the Kāhī Ṭaḥmāš b. ‘Abd Allāh [q.v.]. Urged on by him, the Caliph went so far as in Rābi‘ I 212 (June 827) to publicly proclaim the dogma of the creation of the Qur’ān and therefore to raise the Mu‘tazilis to be the State religion. While he persecuted the orthodox and catechised them severely about the soundness of their belief in the Mu‘tazilis, he treated the ‘Alids with the greatest consideration. In his reign poetry and learning reached their golden age. It was then that lived men like Abū Tammām and al-Ṣulṭānī, each of whom collected a Ḥamālīn, the historian al-Wāṣqānī, the traditionist al-Bukhārī and the jurist Ṭabātābā b. Ḥanbāl. The Caliph also took a special interest in philosophy and the exact sciences. In Baghdād he built an astronomical observatory, with a fine library, and the medical school in Dhimādī Sāhīr [q.v.] was an object of his special care. Scientific works by Greek physicians and natural philosophers had previously been translated into Arabic through the Syrian, but under al-Ma‘mūn there was a great revival of activity in this branch of learning.

which made him master of Cordova. Six months later, al-Ma'mun was poisoned on the 11th Dhu 'l-Ka'da 407 (June 28, 1075) either at the instigation of al-Mutamid, king of Seville, or of Ibn 'Ukasha. His son Yahya al-Kadir succeeded him. A few years later, Alfonso VI took Toledo.

The long reign of al-Ma'mun is quite characteristic of the period of the caliphate of the Iberian Peninsula. He certainly increased his dominions but his conquests were ephemeral and he was one of the first to have no scruples about an alliance with the Christian princes of Castile and Leon in order to fight other Muslim princes of al-Andalus. He even allowed hospitality at his court for nine months to Alfonso VI when the latter was deposed by his brother Sancho of Castile.

AL-MA'MUN, ABD L-'ALI, ibn YUSUF, abd al-Ma'mun b. Abd 'al-Mu'tasib, last ninth sovereign of the Almohad dynasty, born in 581 (1185-1186) in Malaga, of the marriage of his father with the Spanish princess Sufia, daughter of the amir Abd al-Allah b. Mardanish (Martines). The Arab historians pay high tributes to the good qualities of this prince who was very well read, equally well versed in profane and religious learning. At a time when the Almohad dynasty was much troubled by the strife stirred up by pretenders, he was able by his energy to postpone for several years its final collapse.

At first al-Ma'mun served in Spain as the lieutenant of his brother Abü Muhammad 'Abd Allah al-Adil then on the throne. The latter had soon to leave the Peninsula and return to Morocco without having been able to subdue the rebel leader Abu Muhammad al-Bayazi supported by Ferdinand III of Castile, but he was soon betrayed by his own men in his own land and assassinated in 624 (1227). This murder was followed by the almost simultaneous proclamations of al-Ma'mun and another Almohad pretender, nephew of the preceding, Yahiya b. al-Nasir b. al-Ma'mun, who took the honorific 'Abd al-Mu'tasib billah. On his accession and without leaving Spain, al-Ma'mun was soon able to make himself recognised in the greater part of his empire and to get rid of the rebel al-Bayazi. But almost immediately a rebellion broke out in the east of al-Andalus, in which Muhammad b. Yusuf of the powerful family of the Banu Hbid was proclaimed caliph in the town of Murcia. At the same time the pretender of Yahiya al-Mu'tasim appeared in Morocco and his partisans became more and more numerous. Feeling himself powerless in Spain and forced to turn his eyes towards Africa, al-Ma'mun was forced to seek an alliance with the king of Castile. The latter agreed to support al-Ma'mun under very harsh terms, including the surrender of ten Muslim strongholds of the frontier and the building of a church and the granting of freedom of worship in Marrakush. In return, al-Ma'mun received a body of 12,000 Christian mercenaries with whom he was able to enter Marrakush in triumph, after having
defeated the army of al-Mu'tasim in 627 (1230).

Enraged at the defection of the Almohad Malik ibn al-Nasir, he turned his attention to the Maghribi Almohads, who had also defected from his father. The Almohad Malik ibn al-Nasir was convinced of having betrayed him. The rest of the Almohad army was spent in trying to put down several rebellions in the Maghribi; but he did not succeed in bringing his rival to terms for the latter was able to escape and plunder Marrakesh. On hearing this, al-Ma'mun, then busy with the siege of Ceuta, hurried off to the capital at once but was ill and died on the way in the valley of the Wadi 'l-Abyad at the end of Dhu l-Hijjah 629 (Oct. 1232).

(E. Levi-Provençal)

MA'MUNIS, name of a dynasty.

In the 11th (5th) century Qurshiyiyya, to the north of modern Khiva, was a dependency of Bukhara and was ruled by a line of princes called the Ma'munis. Nothing is mentioned about them by the Oriental historians till 982 (994) when Ma'mun b. Muhammad b. 'Ali, ruler of Qurshiyiyya, is said to have assisted Amir Nuh b. Mansur the Samanid in his exile during the temporary occupation of Bukhara by Buhriz Khan, ruler of Kshgar. In 985 (995) Ma'mun attacked Abu 'Abd Allah, ruler of Kshgar, in order to punish him for his treachery to Abu 'Ali Siminjiri, took him prisoner and annexed Kshgar. Ma'mun was assassinated in 987 (997). His son Abu 'l-Hasan 'Ali succeeded to the throne, and married a sister of Sultan Mahmud of Ghazna. Abu 'l-Hasan died about 999 (1008-1009) and was succeeded by his brother Abu 'l-Abbâs Ma'mun. Abu 'l-Abbâs married his brother's widow, the sister of Sultan Mahmud. Shortly after this he gave offence to his army by doing homage to Sultan Mahmud. The commanders of the army organised a rebellion against him, put him to death on Shawwalt 15, 407 (March 16, 1017) and raised one of his sons to the throne. On hearing this, Sultan Mahmud marched to Kshgar to avenge the death of his brother-in-law, defeated the rebels at Haskara on Safar 3, 408 (July 3, 1017), and executed the leaders of the insurrection. All the scions of the royal house were taken prisoners and sent to Khurasan. The kingdom of Kshgar was annexed and placed under the command of Altunshah with the title of Kshgarshah. But after the return of Sultan Mahmud to Ghazna, Abu 'l-Abbâs, father-in-law of Abu 'l-Abbâs Ma'mun, tried to establish himself in Kshgar but was defeated by Altunshah.

The rulers of this dynasty were famous patrons of learning, and it was at the court of Abu 'l-Abbâs Ma'mun that Abu Kairân al-Biruni, the astronomer, Abu 'Ali b. Sinâ and Abu 'l-Khair b. Khâmîskh, the physicians, and Abu Nasr b. 'Arrâk, the mathematician, flourished.

This dynasty has been confused by the Târîkh-i Qazâda and Târîkh-i Qâbân Areb of Kâudi Ahmad Ghaflî, with the Fatimites who were the rulers of Dînuqânâna.

MA'MUR ET AL-'AZIZ, the name given to the new town of Messer, built beside Kharput [q.v.] in honour of Sultan 'Abd al-'Aziz. In time the name became applied to the new wîlayet formed in 1879 around Kharput-Messer; this consisted of three sandjaks: al-'Aziz, Khozât and Ma'tyiya. As a result of the administrative reforms of 1340 (1921) each of these sandjaks became an independent wîlayet but later modifications were made.

According to the official annual of 1925—1926, the wîlayet of Ma'mur et al-'Aziz has an area of 11,299 sq. km. or 12,428,900 dîwans, of which 3,124,590 are arable. It contains 6 kâdas: the central kâda, Pâli, Kharput, Kebkâ, 'Arabkîr, Kemâliyyâ (this new name replaces the historical one of Egin).

The annual of 1926—1927 records an even more radical reorganisation. The area of the wîlayet of al-'Aziz is given as 17,268 sq. km. with 1,582,906 dîwans of arable land. The wîlayet which lost the western kâda ('Arabkîr and Egin) has been extended on N. and E. It has 11 kâdas subdivided into 32 mukhtars with names little known and difficult to transliterate:

1. the kâda al-'Aziz, with the mukhtar: Khânkendi, Malek-kendi, Tême, Khâlîqiyya ([?], Erener (Aywus), Bist-Bey, Kharput, 'Aârûkîr, 'Arabkîr (= Avust-kîr), Kemâliyyâ (Dîlîhî)

2. Kebên, with only one mukhtar: Tahir.

3. Bûskîl: Mûshâr-Huyuk, Lûli (Kumîr-khan), Karsebân (Merwân), Seywan.

5. Khûzât (Dersim): Hâlbân (Elghazî), Kermîli, Amûcta, Sn, Dere-Aghamîn.

8. Çabâbçûr: Perkhegûk (Kamûra).

The kâdas without mukhtars are:

Oswâlîk.

The wilâyet (without Cemîcīh-gesek) has therefore 171,651 inhabitants. The events of the war and the suppression of the Kurd rising in 1925 must have had far-reaching effects on the ethnic aspect of this territory. Before the war the population was mixed: Kurd, Armenian and "Zam" (a people speaking an Iranian dialect, q.v.).

(M. MINORSKI)

MA'ÎKH AS-ABS, an early Muhammâdân poet of the tribe of the Bani Muzain. His period can be established with some accuracy. From the Kiûtî al-'Aghâni we know that he composed a panegyric on 'Omar I and a lampoon on 'Abd Allah b. al-Zubair for his lack of hospitality; the latter is preserved in the Aghâni as is the beginning of the former. The panegyric survives also in the Dîmâr, where it is dedicated to 'Omar's son 'AbdAllah. The Aghâni further records that Ma'in lived to the beginning of the fitna between 'Abd Allah and Marwûh b. al-Hasâm, i.e. to 634 (656). The poet must therefore have been born about the beginning of the Muslim era. The Aghâni further gives details of his private life and the Dîmâr also gives similar information. He had an estate in Arabia and made journeys to Syria and the 'Irâq. One of his wives came from Syria. He also took part in the wars of his tribes. In his old age he became blind.

Up till recently all that we knew of Ma'in's poems were the fragments preserved in the Aghâni and elsewhere. P. Schwarz however discovered in the Escorial an incomplete manuscript of the Dîmâr with a commentary, the work of al-Khiyânî [q.v.] which he published in 1903 with a short introduction and translation of the notices in the Aghâni. H. Reckendorf supplemented this. In 1947 Kamal Mustafà published an edition in Cairo. It lacks some poems given by Schwarz; on the other hand it has two fragments not given by him. The introduction is in part literal translation of Schwarz, who is mentioned by name. It is not clear from it on what the edition is based. It seems however to be based simply on Schwarz's edition without new manuscripts and, compared with it, only shows corruptions of the text, omissions and additions from other sources.

Ma'in Ibn Aus, Hayyâtuhu, Shîra'uhu, Addârâhu, 'Amîânahu Kamal Mustafà, Cairo 1927.

(M. PLESSNER)

MA'ÎN B. MUHAMMAD B. AHMAD B. 'SAHâMIH AL-'UIGÂTî AL-'AWâQizont al-'Awâ'iq, al-'Awâ'iq, founder of a dynasty in the little principality of Alîm in Eastern Spain in the middle of the 18th century. The principality had been founded in 1052 by the two Amirî 'Slâvâ' Khârînî and Zohair. On the latter's death in 1037, their heir Abd al-'Azîz b. Abî 'Amîr, king of Valencia, declared it his property and in 1043 placed his brother-in-law Ma'in b. 'Sa'dîm as governor there. The latter belonged to a noble family of Arab origin; his father had been one of the generals of the celebrated Hadîjîh al-Mansûr [q.v.] and was governor of the town of Huesca. Ma'in remained loyal to the king of Valencia for nearly four years, when he cast off his allegiance and declared himself independent. He reigned at Almeria for a few years longer and died in Ramadân 443 (Jan. 1542).

(E. LEVI-PROVENÇAL)

MA'ÎN B. ZAI'DA, Abu 'l-Walîd al-Jâhânî, a Muslim general and governor. In the Omânî period Ma'in was in the service of the governor of the 'Irâq, 'Abd b. 'Omar b. Hubâirs, and took part in the fighting against the 'Alîd rebels 'Abd Allah b. Ma'âwiya and the general of the 'Abhâsîs, Kâhatûns b. Shâbîb as well as against his son al-'Iyâs. He thus gained the enmity of al-Mansûr al-Musîr and after the murder of Ibn Hubâirs had to go into hiding to escape the vengeance of the 'Abhâsîs. But when the Rawandis [q.v.] went to al-Hâgîmîyâ (probably in 141 = 758–759) and tried to storm the palace of the caliph, because he had had his ringleaders arrested, Ma'in came out of his retirement, drove back the rebels with his men and rescued al-Mansûr, who at once pardoned him and gave him the governorship of the Yaman. Here he favoured his fellow tribesmen, the Bani Rabî'î, while the Yamanis were treated with the greatest severity. He was transferred to Suljûk, according to the main date, in 131 (768–769) and his son Za'idâ followed him as governor of the Yaman. Soon afterwards, probably the next year, Ma'in was murdered in Bust by some Khârijîs, who had gained an entrance to his house by pretending they were workmen doing repairs. 131 and 158 are given for the year of his death, in addition to 153.

(K. V. ZETTERSTEN)

MA'ÎN (BAND), Emir of the Lebanon. Their political history begins with the Turkish conquest of Syria. We do not know if they were of Arab origin like the Bani Bâjtîr, or Kurds like the Dîmârî, or Maghribi like the Bani Abd al-Samad, the Talbût, etc., who came to the Lebanon in the time of the Fatimids. When, in the 12th century, the biographer Mahâshîfî (Khânîlîî al-Mishîrî fi 'l-Ma'n al-Masî'îh) [squares, i. 206] was collecting the records of the family of the Banî Ma'in, he found they were not agreed about the genealogy of their ancestors. But he is certain that they had long been in possession of the emirate of Shîîf (Southern Lebanon). He is certain that they did not belong to the princey family of the Lebanon Tu'mâhî. It is none the less surprising that in the monograph, which he devotes to the latter family (Tû'mâhî Batûrî, ed. Cheikhâ) Shîîf b. Yâhîya deliberately passes over the Banî Ma'in.

The Ma'in seem to have early adopted the teaching of the Druses. This step secured them the sympathies of the Druses of the Lebanon and...
of the Wālid 'l-Taim at the foot of Hermon. In the latter district they were allied with the Shihāb emirs. Enfeebled by the struggles with the 'Alam al-Dīn — their relations and also their secular rivals — the Banū Tanūkḥ, themselves divided into Kādis and Yamānis, endured the fate of such exhausted organisms and ended by breaking up. The Maʿnids were only waiting the opportunity to seize their political heritage. This was given by the Ottoman conquest of Syria.

On the eve of the battle of Dāhib (1546) between the Turks and the Mamluks of Egypt they divined in time to which side victory would incline; and wiser than the Tanūkḥ declared for the Turks. Their chief at that time was the emir Fakhr al-Dīn I. He was one of the first of the Syrian chiefs to hasten to Damascus to congratulate Selim I on his victory. Favourably impressed by his protestations of devotion, the Sultan sent him back to the Lebanon with enhanced prestige and authority at the expense of the Tanūkḥ. In this accession of power, the Maʿn emir was much assisted by Ghasālī, a traitor to the Mamluk cause, to whose fortunes he had decided to link that of his family. We do not know how he escaped the catastrophe that overwhelmed (Jan. 1521) his protector Ghasālī, who in the end played traitor to the Turks also.

In 1544 the emir Kurkūmās succeeded his father Fakhr al-Dīn and in 1585 there took place at Dūm ʿArkh the plundering of the caravan which was being taken to Constantinople the taxes collected in Egypt and Syria. The Ottomans accused the Maʿn of complicity and of having sheltered the criminals. Their troops invaded the Lebanon. The emir Kurkūmās shut himself up in the inaccessible rock of Shāfiṭ Turān near Dūm (Southern Lebanon) and died there of chagrin or poison (1585).

The most remarkable of the Maʿnids was undoubtedly the son and successor of Kurkūmās, called Fakhr al-Dīn (1585–1635), like his grandfather. The partisans of the cause of independence in the Lebanon regarded him as a precursor and have never ceased to invoke the example of his efforts for his country. For an account of his career see the article on him (ib., p. 45). The conquests beyond the Lebanon and his relations with European powers brought down upon him the vengeance of the Porte. He had to go into exile in Italy and leave to ʿAli, the eldest and most gifted of his sons along with his own brother Yūnūs, the administration of the Lebanon (1613). On a promise to dismantle the chief fortress of the Lebanon the Porte recognised ʿAli and even, after five years of exile, allowed his father Fakhr al-Dīn to return to the Lebanon. His son ʿAli displayed no enthusiasm at his return (1618). The new conquests of his father soon began to disturb the Porte, who resolved to make an end of the troublesome Maʿnīd vassal. Surprised by superior forces in the Wālid ʿl-Taim his son ʿAli fell fighting bravely and Fakhr al-Dīn was taken to Constantinople and put to death (1645).

The Central and Southern Lebanon, "the Mountain of the Druses" as it was officially called, was then handed to the family of the ʿAlam al-Dīn, whose ambitions had never ceased from the beginning of the rise of the Banū Tanūkḥ, to thwart the efforts of all the rulers of the Lebanon. One of their first acts was to exterminate the last actions of the Tanūkḥ. This crime facilitated the rise to power of the Shihāb. Their excesses and the regret for the Maʿnīds soon made the ʿAlam al-Dīn unpopular. After their expulsion from the Lebanon the Maʿnīd emir Muḥlim followed; his son Ahmad succeeded in regaining a precarious authority under the jealous supervision of the Turkish Pashas. The more distinguished of the two emirs was Muḥlim, son of the emir Yūnūs and nephew of the great Fakhr al-Dīn. He ruled for about 20 years. Both continued the liberal traditions of their illustrious ancestor. Like him they protected the colonies of Christian agriculturists whom he had invited from northern Lebanon and for whom he had built churches and monasteries.

Ahmad, grand-nephew of Fakhr al-Dīn II, died in 1657 without leaving male heirs and the family of the Maʿnīds thus became extinct. Turkey could no longer have any illusions about the rebellious nature of the Lebanese and their impudence under a foreign yoke. To assume the direct government of the Lebanon was not attractive to the Porte and would have forced it to undertake its conquest. The grave political crisis through which Turkey was then passing prevented a new expedition being undertaken, the risks of which were very well known. On the other hand the rule of the ʿAlam al-Dīn with official support had not given satisfactory results. On promise of the payment of an annual tribute, the notables of the Lebanon were authorised to form a general assembly at Sumḥānīa (province of Ṣūfī) to elect a governor to inherit the legacy of the Banū Maʿn. Their choice fell upon the Shihāb emirs, allies and relatives of the old emirs.

**Maʿn Emirs**

- Fakhr al-Dīn I (†1544)
- Kurkūmās (†1585)
- Fakhr al-Dīn II (†1635)
- Yūnūs (†1635)
- Muḥlim (†1657)
- Ahmad (†1697)

**Maʿnī (A.)** means in the old language vense, signification and is so used as a grammatical term. In philosophical language the use of the word varies from the most general to the most particular so that it is impossible to give a general translation for it. It occurs in quite untechnical connections as "thought", "what is meant" or simply "thing" etc. but also has the special meaning of "conception" or as the Dictionary of Technical Terms, ed. by Sprenger, has it as "an image of the intelligence" in so far as a word corresponds to it, i.e. in so far as
it is meant by a word". Horten has investigated the special meaning of the word in metaphysics
(Was bedeutet ḥulul als philologischer Terminus?, in Z.D.M.G., 95, 391 sqq.). According to him, ḥulul is an "incorporeal reality" not merely a subjective conception. In this use, it is regularly contrasted to īsmā.

The plural mišālim is the name of a branch of study, namely, rhetorical style.

Bibliography: in the article; cf. also the dictionaries and Tafsīrkūprāzā, Miṣḥāb al-Salādā s.v. Ḥulul al-Manāfīn. (M. Plessner)

MANĀF is the name of an early-Arabian tribe which was originally a portion of the Kuraish and Hudhali, as may be concluded from the fact that among these clans the name "Abd Manāf servant of Manāf" occurred. It is said that one of Muhammad's ancestors — the pedigree being Muhammad b. 'Abd Allāh b. 'Abd al-Muttalib b. Ḥāshim b. 'Abd Manāf — received this name, because his mother consecrated him to Manāf, who was then the chief deity of Makka.

Whether this last statement be true or not, it does not restore to life a deity whose individuality remains to us as dim as that of all its companions. Ibn al-Kalbī knows nothing of its whereabouts, except that menstruating women were compelled to keep themselves at a distance from it.

The name does not occur either in the Kurān or in classical bādīḥ. It derives from a root n-n-n, which in several Semitic languages conveys the meaning of "being elevated".

MANĀKIB (A.), plural of manākib, means the merits and doings of a miraculous nature of celebrated holy persons of Islam, heads of schools, saints and founder of iconography. Other terms like kawāmel, fādi'āt are used with the same meaning but less frequently. We have the titles or manuscritps of several works on eastern manākib. Ḥālijā Khālifā gives a long list of them. Among the most notable may be mentioned the manākib of 'Umar b. al-Khaṭṭāb, of Ahmad b. Ḥanbal, of al-Shāfi'i and of Abū Ḥanīfa.

The literature of the manākib assumed a special development in Morocco from the end of the middle ages. The majority of the šukās who played a part in the great renaissance of Islam in this country at that time had one or more monographs devoted to their manākib after their deaths.

For a more detailed study of the place occupied by the genre of manākib in the Arabic literature of Morocco cf. my Historien des Chorfas, Études sur la littérature historique et biographique au Maroc du XVIe au XXe siècle, Paris 1922, P. 44–54 and 220 sqq. (E. Levi-Provençal)

MANĀRA, tower, minaret.

Material, structure and adornment. The use of brick or stone for manāras depended on the material generally used for building in the country in question. The manāras in Spain were therefore of stone so far as one can judge from those still extant, in the African Maghrib mainly of brick, in Cairo of stone, in Arabia, Syria, Anatolia, Armenia and Mesopotamia of both, in the Ḥira, Persia and Afghanistan of brick and in India of both. In Persia there are isolated exceptions, like the manāra in Kerāt, a structure of stone and lime with an outer covering of tiles; indeed stone and lime were very often used for the foundations and bases without affecting the character of the edifices themselves in brick. Of considerable importance from the artistic point of view is the outer covering of a layer of tiles in Persia and the Ḥira, from the variations and patterns of which the manāras receive their decorative interiors; by alternating horizontal and vertical layers (šārāfīyā, banding), by alternating reliefs and depressions, ornamental areas are formed from which strips of ornament or script arise formed of tiles specially prepared for the purpose. The Tuskešan and Timurid manāras are decorated with coloured glass. In the Timurid period also the glaze continually appears, especially in the pair of minarets which now commonly flank the entrance to a mosque (Tabrīz, Mashhad, etc.). It is in the Guldests, the balconies round the top, that the art of working decoratively in brick reaches its height. Here the necessary basis for the balcony was formed by brackets arranged in layers or rows of cells (stalactite-like cornices, wāṣṣar, mābūz).

Object and Significance. The term manāra or minār is applied to all Muslim towers. They were not only for religious purposes as places from which to call to prayer and to mark mosques but also, as before the Muslim conquest, for profane purposes as watch-towers and signal-towers. The tower on the top of a hill at Kerāt in Khorāsān (cf. below) is from its isolated commanding position intended as a signal-tower or column of victory and it shows that these towers were built in the Muslim period exactly like the manāras of mosques. In form and style these erections, serving different purposes, form one category, into which they also fall objectively from having the same name. There are a number of early references to such manāras, which were intended to be indicators for: caravans and watch-towers (cf. Dix, Persien, Islam. II. in Khorāsān, p. 59). Such towers were however found all over the Asian plains and through China to the Pacific Ocean. Of course very few of them were works of art. There are a number of exceptions in the contemporary names for such towers, like that of Mahmud of Ghazna which is called an ʿināb in an inscription (see below). One of the minarets of the maqāṣid in Kerāt is called simply ḫumarat in the inscription (cf. Niedermayer-Dieu, Afghānistan, p. 59). The ʿbanks of Ḫumarat erected by king Akoka in India between 250–332 H.C. may be claimed as precursors of the minarets of eastern Islam; although actually pillars of much smaller size than a minār, many of them already show the same division into a polygonal and a cylindrical section. Their object was also half religious and half monumental in character. They in turn came from the Indo-Aryan columns of wood which were put up from the earliest times as symbols of the deity. The Indo-Buddhist stambha of brick in Kābul of uncertain date is a connecting link between these and the earliest Muslim memorial towers in Ghazna (see below).

Shape. From this similarity just mentioned, it is evident that the manāras follow the traditional shape of the towers of the country in question. In the Mediterranean lands, as H. Thiessch has shown, it was the lighthouses and in Syria the watch-towers, dwelling- and church-towers that
were the predecessors in form of the manāras. The mālwiya's of Sūmārt and the manāra of Ibu Ṭīlīn in Cairo again go back to the Old Persian models. In Persia and Sīdjar, also, Nestorian church towers may have given the early manāras their square and polygonal shape (cf. Diez, Persien, t2, Ek. im Khwarzm, p. 75); but in the rivalry of shapes in the eastern empire the slender cylindrical manāra, which is often also called mil, won. It was the victory of the monumental building without windows over the western dwelling-tower with windows. Their earliest precursors were already mentioned, the Indian lātas. The observatory towers built by Sulaymān Maḥmūd and Manṣūr III in Ghazna were built as memorials of victories like the Indian Dīya-rāmabhās. Their shape was suggested by India but remodelled by the spirit of Muslim Persia and given a character of their own (cf. Diez, op. cit., p. 76 and 152 sqq.).

The best monumental evidence of Indian inspiration is the Kūh Minār [q.v.] in Dehlī (beg. of viiiith = eight century; cf. M. v. Berchem, in Diez, Chronologische Baukunde, p. 109 sqq.). The fact that the Persians called them mil points to their ancestry, the primitive poles and pillars used as indicators. To such poles, which can still be found at the present day at Sāmiyā’s tombs, revered by the common people in the country districts of Persia, may perhaps be traced the square and octagonal decorative shafts of the city and mosque towers, found in pairs in Persian towns with Turkish inhabitants and in Asīr Minor. Although they are frequently in the shape of minarets and have a gallery, their object is as a rule merely decorative. Both groups of manāras, the square and the round, are hollow towers with a staircase winding up inside opening out on the gallery. In the old Persian minarets of brick, these galleries or gateaux have been completely destroyed as they were made of wood. We must imagine them to have stood on cornices of cells with carved wooden railings, rafters and roofs such as may be seen everywhere in the surviving mināras at popular places of pilgrimage like Karbalā’, Kūm and Maḥāīb. A comparison with the galleries in the towers of the wooden churches of Eastern Europe (e.g. in Transylvania) points to the descent of the Isma‘ili galleries from wooden buildings of an everyday character.

Form and Significance of the manāras. In spite of the similarity of purpose there is a marked difference, indeed contrast, between the minarets of eastern and western Islam. The square and polygonal minarets of the Maghrib, Egypt, and Syria are still essentially buildings for habitation; the cylindrical manāras of the eastern lands are on the other hand distinctly monumental buildings, pillars symbolic of the deity. The angular minarets of the west are divided into stories by mouldings and have windows for communication with the outer world; they are usually heavy on a broad base, while in contrast the cylindrical minarets of the east incorporate the symbol of the absolute which has this form, the unique, the abstract, the irresistible ascension to the deity without intermediate stages or stopping places. The minarets of the west remain individual towers, of which hardly two are alike; in the second half of the viith (xiiith) century the cylindrical form was already established as the absolute and only one, never to be altered nor made capable of ascension, as the only possible form of manāra. The minarets of the west thus remain ex-watch-, church- or lighthouse-towers without bells or lights, decorative survivals of a culture foreign to their nature; those of the east on the other hand were etherealised and became spiritual manāras. The Cairo minarets were an interesting sport in their shape, the Persian and Turkish on the other hand a confession of faith in monumental form. They soar up to the heavens with unimpeded vigour. The silhouette of their tiled decoration rises upwards on a close inspection till finally the eye of the beholder is held by the marked effects of light and shade on the gilded. The form of the gilded however is chosen with an idea of magical effect. The spire rests on a gallery of cells, the secret of the construction of which the spectator cannot easily grasp and the decorative gallery of wooden rafters and railings glitters with bright colours above it. A coat of glaze and the gilt top reflect far and wide a magic reflection like the glazed domes.

Shaping Development of the manāras in different countries. — Syria is the original home of the square manāra, which there took over the old native form of watch-towers, dwellings-towers or grave-towers and the church-tower which succeeded them. Iṣnām at first used the existing pre-Islamic towers as minarets, on to which mosques were frequently built, when old churches which already had towers were not taken over and adapted (cf. Brünnow in Thiersch, Pharaos, p. 101). The oldest minarets of this kind are in Hawrān, the land of stone building where given, which contained many old undecaying stone-towers (Boomān, manāra of the mosque of ʿOmar b. al-Khaṭṭāb, inscription on the time of the Caliph ʿOmar, Dar al-Muslim, etc.). In Damāsānas the two southern minarets of the Omāyād mosque began by Walīd in 86 (705?) belonged to the old church of St. John, while the northern minaret was a completely new building of Walīd’s. This is therefore the oldest independent Muslim manāra. The manāras of the Omāyād mosque became models not only for Syria but through the Omāyād migration to Spain (Cordova) for the Maghrib also. Wherever we later find in Syria the Egyptian tower-form, there is always definite Egyptian influence present and as a rule they are Mamlūk foundations. It is still hardly possible to compile a chronological list of Syrian manāras (cf. Thiersch, op. cit., p. 99—110 and the illustrations).

Palestine. In this country on the borders of Egypt, the influence of the latter country made itself felt. The octagonal manāra on a square base predominates. The manāra of the chief mosque in Qasba shows an octagonal diminishing in width by successive stages, while the minaret of the mosque of al-Ḥākim has the same diameter throughout and is only divided into four stories with windows, by large mouldings. The smaller mosques have short square octagonal minarets. The manāra of ʿAli Bakr in Hebron is half rectangular and half octagonal with a high miḥrāb-like niche in the lower story. The octagonal tower is found as far as Jerusalem, where it meets with the northern Syrian square towers. The latter is again found at Ḥarām al-Sharif and in the mosque of ʿOmar ʿOmar beside the Church of the Holy Sepulchre and along the coast in Jaffa, Hāifa, Sidon, Tyre and Haith. And in the interior in Tiberias, Şafāḍ, Nablūs, etc. On the other hand

Cairo: sections of the two Minarets with outer covering of the Mosque of Hakim

Sandbag near Machtul in Ghouta: Minaret of a Flaigmak (early) cent.
the manāra in Ramla of the viii (xiii) century is unique with its buttresses and pointed arched niches and dwarf pillars and columns. Thiersch takes it to be a copy of the most celebrated Christian tower of the country, the bell-tower of the Holy Sepulchre, built in 1160—1180 in Jerusalem, of which only the base is still standing; (cf. Thiersch, op. cit., p. 119 sqq. and the pictures there).  

Egypt. The oldest manāra in Egypt is the tower of the Di'amālī in Tulīn. Like the Malwiyya of Si'amārī, this minaret stands outside the mosque and resembles them in form also, although it differs in its material which is limestone. The first storey is a square tower with a window with horseshoe arches, the second is cylindrical and an outer staircase leads up around them. The two upper octagonal stories are later in date, having been erected by the Mamluk Sultan Lādi'īn. Nothing final can be said about this minaret, apparently erected by a foreign architect and combining a number of foreign influences. The manāras next to it in time are the five towers of hewn stone of the mosque of Ḥakīm with their covering of tiles of a later date; they must be contemporary with the mosque, which was built in 393—404 (1002—1013), and were covered by Bahbars II and given new spires (703 = 1303—1304). They are of different shapes. The northern tower is cylindrical on a square base, the southern has a square lower half and four octagonal upper stories, each narrower than the one below it, the first of which has four semi-cylindrical cornices in the corners. The decoration in relief on the stone has analogies in the gateway of the same date (pictures in Dier, K. d. isl. Pāk., p. 58; , p. 54). Of these two towers the southern one may be considered the ancestor of the minarets of Cairo. Its square-octagonal form, usually crowned by a cylindrical storey, survives. The further development is limited to the proportions, which aim at greater elegance and slenderness, and the breaking up of the surface with niches and múcharāt cornices. Towards the end of the second Mamluk period, say under Kālīn Bey, it reached its culmination. The minaret of the mosque at his tomb was never to be surpassed in grace and wealth of ornament. A list of the most important minarets of Cairo between 1000—1356 A.D. is given by Thiersch with many illustrations.

Arabia. As in Palestine, in Arabia there was no native type of manāra and indeed Arabia never developed any sacred architecture with a character of its own. The minaret of the mosque of Wālid in Medīna may have been Syrian in form. The manāras at present standing in Medīna belong to the sixth restoration of the mosque by Kālīn Bey in 888 (1485). They are slender minarets of the Mamluk type with octagonal and cylindrical stories. The seven manāras in Mecca, the sanctuary of which was ten times restored, only show modern forms of tower, frequently influenced by the slender Turkish form (cf. Thiersch, op. cit., p. 123). Two slender round minarets of the xiv (xvii) century still flank the ruined mosque on the island of Baalbān (cf. Dier, Jādhr. d. al. Kunr., 1925, ii. 3).  

Maghribi. The oldest manāra of the Maghribi are called, in Africa in Kānāwān, the massive three storied tower of the mosque of Sīdī Qāhrān of 1052 (764). The two upper receding stories with blind niches are of later date than the unadorned upper storey with loopholes on three sides and three windows only on the side that looks on the court. The cistern in the basement and the measurements of this tower which are exactly half those of the Pharos, suggested to Thiersch that it was an imitation of the Pharos. Another manāra, also of the ii (viii) century was the minaret of the Jāmā al-Zīthān in Tunis before its restoration in the xvi (b) century. Old pictures of it show a plain square lower storey with a narrower octagonal upper storey and the platform on top enclosed by a breast-high parapet with a pillared gallery. Of this probably only the lower part is old, while the second storey and the parapet date from the restoration of 1653 (pictures in K. d. O., ii. vu; Kühnel, Maurische Kunst, vi.). Egyptian influence, in so far as such existed, extended to Tunis. West of Tunis begins the Spanish sphere of influence, the model for which was the manāra in Cordova built by 'Abd al-Raḥmān III in 339—340 (951) and restored in 1153. A description of it is given by Idriṣī (c. 545 = 1154). According to him, the minaret of Cordova was a high quadrangular tower, square in plan, the sides of which were richly adorned with inscriptions in relief. The upper section terminated in two rows of blind arcades probably like those still to be seen in the mosque of Cordova and on other minarets of the Maghrib. On the platform was a second, probably also square, storey with four doors and upon the dome which crowned it shone three balls of gold and two of silver and lily leaves (cf. Thiersch, op. cit., p. 127). This minaret however had a predecessor in a more modest tower built by 'Abd al-Raḥmān I, the model of which according to Marqāz (Rev. Afr., 1906) was Wald's minaret in Damascen. The second, imposing and splendid, minaret at Cordova seems to have served as a model for the manāras of Seville and Morocco. At the same time we must consider the claims of the minaret of the Kāf's Bānī Ḥamadh built in 393 (1001), the only tower that survives of the Fatimid period, which was half destroyed by the Almohads in 1152 (cf. Saladin, Bull. arch., 1904, p. 243 sqq.). It is a high square tower of hewn stone, smooth on three sides and embellished on the courtyard side only with shallow blind niches and balcony doors in three layers above. one another (pictures in Thiersch, op. cit., p. 130; Kühnel, op. cit., xvii.; Saladin, Manuel, p. 217; Marqāz, Manuel and op. cit.). This tower already shows the scheme of decoration of the Giralda and allied towers, namely the vertical combination of two windows or doors of the middle axis above one another by flanking double high shallow niches. The almost contemporaneous Giralda in Seville of about 1120 A.D., the so-called Tower of Hasan in Rabat and the ḫubityā in Mārktkūsh are alluded to it, the two latter of the end of the viii (xix) century (pictures in Thiersch, Kühlén, Marqāz, Marqāz, and Manuel). All square with narrower square top stories, of which only that of the ḫubityā still survives. These towers already show the system of decorating the surface now becoming typical in the later Maghrib manāras, the network of geometrical patterns in high relief and the beautiful windows with horseshoe and toothed arches and múcharāt niches. In the other towers of Morocco, in Fes, Tetuān, Tangier, etc., are more modern minarets. The characteristic type of Algeria is best seen in the numerous minarets in Tiemcen, mainly of the xvii—xviii
century. They continue the form, characterized above, only the geometrical decoration in relief gains the upper hand and the windows disappear; their appearance is not quite so solid. On the other hand, the huge minaret of the great mosque of Manṣūra is highly thought of in Morocco for its size as well as its decoration, because it was built by a Moroccan Marinid (701-702 = 1302). The square tower therefore dominates the whole of the west. It is only later in the xviith century that we find the octagonal tower appearing in Timbuktu, when Saladin attributes to Harun influence.

The ‘rîkû and ‘sâlik are given a picture of glazed decoration similar to that of Persia and the lands east of Persia. The oldest minâras still standing, the two maqâmats in Sâmarra of the iiiith (ixth) century, have remained the only examples of spiral towers but they are significant monuments of the early Muslim Arab variation of Babylonian architecture (the spiral as motif). These genuinely Arab buildings were followed by a reaction towards the Mediterranean style with square and octagonal towers and with the coming of the Turkish peoples and Salûqûk rule the cylindrical minaret, usually on a polygonal base. The following list is given by Hirschfeld (Arch. Relis, ii. 229): Ra’ûs, mosque extra muros, rectangular tower of the ivth (xth) or vth (xiith) century; Ra’ûs, intra muros, a round tower, Nur al-Dîn 561 (1166); Abû Hurairâ, round; Bâlî, octagonal, 589 (1193) to 615 (1218); Irrîl, round on octagonal base 586-650 (1190-1234); Sinjâr, round on polygonal base 598 (1201); Baghîdâl, Sinlân al-Ghazlî, round on a base (ivth (xth) = 1232); Mâsûlî, minaret of the great mosque, round on a cubical base; Mâsûlî, minaret of the Kasû, round on a cubical base; Mâsûlî, Manâra al-Makâsîra; Ta’dîk, round shaft on a polygonal base. In addition there is the unique octagonal minaret built of small broken stones with a covering of plaster, on the island of ‘Ain in the Euphrates of the viith (xiiith) century (Hirschfeld, op. cit., ii. 319, and PI. 137) and the bulk of the later minarets from the vith (xiiith) century onwards, which repeat this type.

P e r s i a. The oldest minâras of Iran and the countries adjoining on east and north, Afghanistan, Sâmarra and Turkmenistan seem to have been usually octagonal, as the ruins of the minâra, possibly of the iiiith (ixth) century in Zarandî, Nûd al-‘Ali, Sûdûst (now 25-30 feet, originally twice as high; cf. G. P. Tate, Selçûks, Calcutta 1910, p. 202 and Plate) shows. The models for these earliest minâras may have been the watch-towers found all over the Asiatic steppes, hence the blind window and the great diameter. Octagonal minarets still exist in Amârîn, Sûdûst (viith—viiith century); octagonal with cylindrical upper storey are the two observatory towers of Ghazna of about 410 (1019-1020) and 495 (1101-1102) (the original height was estimated at about 140 feet; the inscriptions on the two towers only say that their erection was ordered by Masûmî and Masûmî respectively, both with full titles; cf. Dieu, Chmr. Biran., p. 152 sqq.). Counterparts to these towers in two parts are the minarets in Sirward, east of Herât (c. 100 feet high) and Kariz in eastern Khorasan (c. 80 feet high), with octagonal bases and cylindrical shaft, both of the viith (xth)—viiith (xiith) centuries. Cylindrical minarets of the viith—viiith (xth—xiith) centuries still survive in Persia and the lands east of it in Sângbas, Fârâb, Kânâmâh (Sûdîjastân), Khorasûrd (Sâhrazar) of the year 505 (1111), Damghân, (2) Bastâm, Sàwà, Sên- nâ, Taba, Kûnûy Urgenj (old Khiwa), Termes on the Amû Daryâ, Bûkhasrî, Mâsûrî Kâlsû 542 (1147-1148), Kûshân, Mestoryûn (Turkoman steppes north of the Atrek, 2 towers) and ‘Ishânî (4) (cf. the list in Dieu, Pervins, Ist. Hist. in Chârûs, b. 165-169). In the Timurid period with the general flourishing of architecture the minâras are given a further last increase in their embellishment, a few examples of which are still to be seen in the Timurid ruins in Heraût. Here we still have a ruined group of nine polygonal-cylindrical minarets the soles of which are usually of marble, white marble with inscriptions in relief, the shafts to the top covered with glazed mosaics of fabulous beauty which in their delicacy recall the work of the carver in ivory (cf. Niedermayer-Dieu, Afghanistan, p. 58 sqq., and illustrations, p. 157 sqq.). To this Timurid group also belong the minâras in Samâkand mostly in ruins and the minarets of the Masjd-i Shâh in Mâshhad built by the ‘âmir Malik Shâh and the two minarets now destroyed of the Blue Mosque in Tâbrîz, built in the time of Dâhân Shâh (841-872 = 1437-1467). The last mentioned minarets belong to the group of double towers found all over Persia and Turkestân which either flank the doors or stand at the corners of the wall of a mosque or are built on the top of the doors. These double towers which become more and more common after the Salûqûk and Mongol invasions never of course attained the height of the single minarets just described and their importance lies mainly in their decoration.

A s i a M i n o r and Turkey. Among the Salûqûk and Ottomans the minaret lost the character and individuality which it revealed among most other peoples, at least in the early period. Apart from isolated exceptions like the very interesting fluted minaret at Aïdâla (pictures in Lancoronski, and Thiersch, op. cit., p. 149), the minarets are henceforth subordinated in the general architectural scheme to the main building, either placed as a pair at the gate or as a single tower built into the wall of the mosque. It is true that these arrangements are found also in Persia, which was filled with Turkish tribes, but there was constant change there, while in Asia Minor a certain style soon became predominant which culminated in the absolute uniformity of the Ottoman minarets. The early minarets of Asia Minor of the xiiith century usually have their surfaces broken up into round and smooth areas which give them a certain charm, especially when this plastic ornamentation is combined with the painting of frescoes and with relief (Laranda Masjd and Sandic Minareli, Konî, Içik Medrese, Sîrots, etc.). The Ottomans heightened the minaret which they had taken over from the Salûqûks, made it still more slender and gave it a long conical spire which has become typical. According to the importance of the mosque, it was given one tower on the front or flanked with two or even 4 or 5 minarets (the Mosque of Sulaymân Ahmad, Constantinople) and these were given one, two or three galleries.

I nd i a. In India there is only a single old minaret of importance: the Kûth Minâr (q.v. and the illustrations) in Old Delhi built by order of Aibeb Kûth al-Dîn and completed by Itutmish (diameter 45 feet and height 240 feet). The three lower stories of this, the highest and finest ma-
In the Muslim world, are built of red sandstone, the two upper, which have been restored, of white marble with layers of sandstone. The pavilion which once crowned the top fell down in 1803 during an earthquake and was put up again on the ground. The exterior is of angular and rounded flutings and ornamented with inscriptions from the Qur'an. There is no reason to doubt that the numerous mosques of the Pathan dynasties also had minarets but most of them seem to be destroyed and so far as I am aware no one has yet studied the subject. Isolated surviving manāras like the detached slender round minaret of the Lat-ki-Masjid in Hisar show however that they were usual (cf. Arch. Surv. India, Annual Report, Pt. 1, 1913–1914, Pl. I). But their occurrence in India was confined to particular areas. The mosques of Dāwnpur, Sirkej, Manda, Kulbargah and other places usually of the xviith–xvith century have no minarets. On the other hand they are characteristic of the xvith–xvith century mosques in Aḥmadābād, built in pairs flanking the doors or at the corners of the surrounding wall, as in the Mongol mosques of Persia. In shape, the towers of Aḥmadābād are quite Indian with well marked outlines, Many mouldings outside and six to ten galleries. In the Moghul empire again the smooth round or faceted minaret of Persian origin again became predominant but was hined by the pavilion placed on the top and by other alterations.

Bibliography: The fundamental monograph on the manāra is Herman Thiersch, Pheres in Antike, Islam und Occident (B. G. Teubner, Leipzig and Berlin 1909); where references are given to the detailed literature. Further general works: E. Dier, Die Kunst der islamischen Völker (Supplement to Hidhe. d. Kunstwiss. Wildpark-Postdam, 1 1915, 2 1917); Saladin, Manuel d'art musulman, Paris 1907; new ed. by G. Marçais, 1925; cf. also M. v. Berchem's article Architecture in this encyclopaedia.

For the separate countries:

MANĀT, an old Arabian goddess. Her character can only be deduced from her name, which may safely be connected as a plural (manāmat) with the Aramaic manāth, plur. manāmūth, portion, lot, Hebrew Modi, plur. Modi and also with the god of fate Modi, I. xxv. 11 (cf. lxv.). In Arabic we have corresponding to Lid, maniya, plur. maniyā, "the allotted, fate, especially of death." She was therefore a goddess of fate, especially of death. Her main sanctuary was a black stone among the Hudhaylas in Ḫudaib near Medina near a hill called Mudhhallal. She was however worshipped by many Arab tribes, primarily by the Aws and Khārajd in Ṭabarīb. In Mecca she was very popular along with the goddess al-Lat and al-ʿUzza [q.v.]; the three (according to the Qur'an) were regarded as All the daughters, and in a weak moment Muhammad declared their worship permitted (cf. Sur. liii. 19 ṣaqq). The obscure expression "Manāt, the third, the other" is probably due simply to the rhyme. According to Ibn al-Kalbi, she was the oldest deity, whose worship gave rise to that of the others, because names compounded with Manāt occur earlier than other theophoric names. Another view is found in the poem of Ibn Ḥabīb, p. 245, where the two daughters of ʿUzza" are Manāt and al-Lat. As an independent deity we find her in the Nabataean inscriptions of al-Hudār, where ṣaqq (the Aramaic plural form; cf. above) is often found among Δγλά and others. Manāt is connected in a peculiar way by some writers with the great ṣaqq [q.v.], for we are told that several tribes including the Aws and Khārajd assumed the ṣaqq at the sanctuary of Manāt and on the conclusion of the rites cut their hair there and dropped the ṣaqq [q.v.]. Wellhausen sees in this an erroneous confusion of an independent pilgrimage to Manāt with the great ṣaqq, as later writers acknowledge none but the latter; it is however possible that some such confusion may have really taken place in pagan times.

That Manāt was also a domestic deity is evident from the story in Ibn Ḥabīb, p. 350 (cf. Wākidī, ed. Wellhausen, p. 350). The destruction of the
great sanctuary in Kusaid after the capture of Mecca is attributed by some to Abu Sufyân, by others to ‘Ali, according to Wâkidji, op. cit., Ibn Sa‘îd, iii. 15, 35, to the Awwa Sa‘îd b. Zaid.

MANÂZÈRED. [See MAÎZÈRED]

AL-MANÂZIL (A), pl. of al-mawâli, morn full, manâzil al-bamar, the stations of the moon. Just as for the sun the zodiacal circle is divided into 12 stations each of 30°, which it traverses in the course of a year, so the course of the moon is connected with 12 groups of stars, each of which corresponds to one day of its course, so that on an average each is an arc of 13° apart. The settings of the sun at these stations, Arabic new, pl. awmâ, are of decisive importance for the beginning and forecasting of the phenomena of the weather and the fertility or otherwise of a year which depends on them, i.e. for the peasant's calendar. He regards the testimony of the Arab poets, the reader may be referred to the verses given by al-Kawâni. M. Steinacker in particular has published very thorough investigations of the importance of the stations of the moon among the Hindus and Arabs from Arabic, Hebrew and Latin sources. The Arabic names of the stations and the constellations belonging to them are as follows:

1. al-Sharâfârân, "the two signs", also al-Abârî; the horns of the Ram (γ Ariës).
2. al-Bâjân, "the little paunch"; the paunch of the Ram (ζ Ariëts).
3. al-Turâyîyyân, "the Pleiades" ([v.]).
4. al-Dabûsâri, "the Aldebaran" ([α Tauri] with the Hydra.
5. al-Hâfâ, three small stars on the head of Orion.
6. al-Hamî, the stars al-Ziër and al-Maîmûn (γ Geminorum).
7. al-Dhârî, "the Lion's Paw"; Castor and Pollux ([α Geminorum).
8. al-Nâzîrî, "the nostril" of the Lion or fence with ass (in Cancer).
9. al-Turîf, i.e. Turîf al-Azâd, "the eye" of the Lion (ξ Cancri = Leonis).
10. al-Dhâbî, i.e. Dhâbî al-Azâd, "the forehead" of the Lion ([γ = Leonis).
11. al-Zubrî, i.e. Zubrî al-Azâd, "the mane" of the Lion ([β = Leonis).
12. al-Shurfa, "the weathercock" ([B Leonis).
13. al-Sârwa, "the barkers" or Dogs (β β Virg.)
14. al-Sinâlî, "the prominent", more accurately al-Sinâlî al-dâlî, the unarmed S. ([β = Spica; cf. E. L., iii. 450).
15. al-Shâhî, "the cover" ([δ Virgini).
16. al-Strûrî, i.e. Strûrî al-Azâd, "the placers" of the Scorpion (α Librae).
17. al-Dîlî, "the crown"; i.e. the head of the Scorpion, the three stars (δ, ε Librae).
18. al-Kâîrî, "the heart" of the Scorpion, the Antares (α Scorp.)
19. al-Shârûlî, "the tail" of sting of the Scorpion (α Scorp.).
20. al-Ne'mânî, "the ostriches"; 8 stars in Sagittarius (ε ε * Sagittarii).
21. al-Balîdâ, "the town", an area in Sag. without stars.
22. al-Sâdî al-Dhâbî, "the luck of the slayer" or sacrificers (α Caprici).
23. al-Sâdî al-Dhâbî, "the luck of the devourer" (κ Aquarii).
24. al-Sâdî al-Sâhî, "the greatest luck" (β Aquarii).
25. al-Sâdî al-Dhâbî, "the luck of the tents" (ε * η Aquarii).
26. al-Durâf al-mâwâ, "the fore socket" on the palm ([α Pegasi).
27. al-Durâf al-Dhâbî, "the hinder socket" on the palm ([γ Peg. = Androm.]

MANÎBIJ (Bâmbyke, Hierapolis, an ancient city in northern Syria, two days' journey or to farsakh N.E. of Halab, about 3 farsakhs from the Euphrates. It lay in a fertile plain, and had a double wall built by the Greeks. According to Ibn Khurdâhibhî, there was a very fine church there, built of wood (B.G.A., vi. 161 sqq.). Ps. Dionysius (ed. Chabot, p. 47, 68) mentions a church of the Virgin and another of St. Thomas in Manbijh. There were no buildings in the neighbourhood of the town (Nâsir-Khâsraw, ed. Shihâs, p. 31); Abu ‘l-Fida’ mentions the many canals, fruit- and particularly mulberry-trees there, the latter for the silkworm culture. As K. Ritter (Erzähluungen, p. 105 sqq.) showed, the name Bâmbyke for the silkworm can hardly be connected with "Bambyeke", the old name of Manbijh; on the other hand, the Levantine trade-name bembazino, bembago, common in the middle ages for raw cotton, seems to be derived from Manbijh; it is perhaps also concealed in the name of the ancient Phrygian Hierapolis, Pambuk-Kalef (as early as Michael Syrus, ed. Chabot, i. 148; Mabûb in Phrygia). The Arabs called the town made in Manbijh, manibijâmîja (Lammems, Fâtima, Rome 1912, p. 71).

Kansal dîn b. b. al-Adam gives the following account of its origin: Khâsraw [1] built it when he conquered Syria (in reality: the town in 540 A.D. ransomed itself from a threatened siege by paying tribute), built a fire-temple there and made a certain Yazdânîr of the family of Ardashîr b. Bâhak his governor. According to other authorities, Manbijh was the name of the fire-temple from which the town took its name (Ibn al-Shihâma, al-Durâf al-mâwâ, ft. Türkîh Halab, ed. Sârî, Beirut 1909, p. 227). Mabûb (Aqâpios) b. Kustânî of Manbijh says in his history of the world written
in the tenth century, at the end of the history of the patriarchs (ed. Vasilev, Patr. Orient., v. [1910], p. 664); "in the year 31 after the birth of Levi, the son of Jacob, queen Samrin built a great sanctuary for the worship of the idol Κυρ ρως, and on the banks of the Euphrates (κυρ ρως) installed 70 priests and called the town Hieropolis (Μαμύβ: Ιουν αλ-Σιήμα, p. 247? "Ιουν αλ-Σιήμα, v. 317, i. e. the City of the Priests; this was the town Mambyδ al-Attah). For Κυρ ρως κυρ ρως was read on the coins of Hieropolis this deity seems also to be depicted (Wroth, Catalogue of the Greek coins of Galatia, Cappadocia, and Syria [Brit. Mus.], 1899, ii. iii.), and the Armenian Epiphanius (ed. Finch, p. 12) says: "Εραπίς consists of 3 towns: it is called Mnpēchē; in it is the idol Κυρ ρως;" with Preussen (Getting, Göt. Ana., cxvii. [1905], ii. p. 362. note 3) we should therefore also read Κυρ. The city of Mambyδ has already been acknowledged to the Assyrians (as Nappig or Nampi in Samalas, Karag-Menhul, rev. 35; Johns, Assy. Bibl., xi. ii., 82; cf. also Bamukki on the cuneiform tablet Brit. Mus. K 180, in Johns, Assy. Dirt. and Documents, No. 773; Chetn [Czech], Encycl. Bibl., s. v. Carcemith). If the name is of Semitic origin, it perhaps goes back to a Syriac word namapē "spring" (Nöldeke, Nachr. G.G.W., 1876, p. 5, note 8). The Greeks knew as the name of the town besides Hierapolis (on coins always Hierapolis) also the native form of Βαμῦβ (rarely Βαμῦβ): Βαμῦβ. (Bird., x. [1915], p. 197, col. v., l. 100); in the common proper name Βαμυβλογē etc., Nabataean Mambugha, the name of the town is concealed (for references see Pansy-Wissowa, Relig., suppl. vol., iv, p. 733). The town which at first was included in Kysrhene and afterwards was made, probably by Constantius, the capital of the Syrian Euphrates, played an important part in ancient times as the centre of the worship of Attargia. Bardaia was brought upon him by a heathen priest Anubdar and his son Kuduz. After the triumph of Christianity, the pagan cult was supplanted by the worship of holy relics, which also brought numbers of the faithful to Bambugo (Procopius of Gaza, Panegyr., ch. 18, in Migne, Patr. Gr., laxxxvii., iii., col. 2817). From the third century onwards the town is frequently mentioned as the place for the concentration of troops for campaigns against the east or for the defence of Syria. In the Byzantine period it was a great centre of the Monophysites, according to whose tradition Justinian married Theodora in Hierapolis; she is said to have belonged to the neighbourhood of the town (Michael Syrus, ii. 189). After the end of the Byzantine period, it was for a considerable period a stronghold of the Mononites (Michael Syrus, ii. 412, 517).

In the year 16 A.B. Abū Baida went to Ḥalab al-Sadīr and sent Ḥna al-Gūmīn to on Mambyδ. The inhabitants capitulated under the same conditions as the people of Antioch; when Abū Baida reached the town, the agreement was ratified (al-Baladkuri, ed. de Goeje, p. 1561, al-Yaṣīrī, ed. Hosea, 161; Ibn al-Shinba, ed. Bahrī, p. 228; Husain, Annal. d'un Caire, iii. p. 709, § 284, p. 797, § 390, p. 816, § 33). Mambyδ seems to have enjoyed a certain degree of independence down to the time of Yāṣīr I; the inhabitants of the town, for example, asked Umur for permission to trade within the caliphate (Lammens, M. F. O. Bu., vi. 431, note 1). The vicinity of the town was settled by Yamani tribes (Michael Syrus, iii. 47), notably the Basil Taghilī (Lammens, op. cit., p. 445, note 1). Ḥalab, when he created the Ḧāzim of Ḥinārīn threw Mambyδ into this military province (al-Baladkuri, p. 1831; Lammens, p. 437 sqq.). Hārūn al-Aschārī separated it again, made it the capital of the frontier district of the 'Awīs (q.v.) in 786 and appointed 'Abī al-Malik b. Ṣalīh b. Ḥārūn, "All as wall there in 973, to whom the town owed many buildings (al-Baladkuri, loc. cit.). In 131 (748) it was severely damaged by an earthquake, in which the church of the Jacobites collapsed during mass and buried many of the worshippers in its ruins (Ps. Dioneios, transl. Chabit, p. 47; Michael Syrus, ii. 510; Beal, Abū d. K. d. Mail, vi. 518, 1884, p. 126). The brother of the caliph Maṣ'ūs al-Asbās, who had taken part in the mutiny led by the general Uqdāf b. Anbaha, was tortured to death by Ḥaṣān b. Kāwūs, the Abbās of Uqūš, at Mambyδ in 223 (838) (Tabari, iii. 1265; Ibn al-Ṭabari, ed. Tornberg, vi. 334; Michael Syrus, iii. 101; Weil, Gesch. d. Chalf., ii. 320). The conquest of Syria by Ahmad b. Ṭūlūn in 264 (875-878) brought Mambyδ also under Egyptian suzerainty (Ibn al-Shinba, p. 228). In the account of the Māreq of Edessa, said to have been compiled by the Emperor Constantine Porphyrogentos, a miracle is mentioned that took place in the time of Christ at the κόστος Ιαυροῦ, τοῦ Μαμπόγκη, τοῦ τώτου Μαμπόγκη (De imag. Edess., in Migne, Patr. Gr., lxixii., col. 433; better in von Dobschütz, Christusbilder, in Texte u. Unters. z. christl. Lit., xv., 518). Abgar's envoy, who was spending the night in a brickwork near Mambyδ on his way back from Jerusalem hid there among the bricks the sacred handkerchief with the portrait of Christ. Terrified by the bright light like that of fire, the heathen inhabitants of the neighbourhood hurried next morning to the brickworks and found there a brick with a miraculouis copy of the portrait, which they carefully preserved in their city. The ʿAmār Jamʿu Saʿīd al-Dawla, soon after the capture of Mambyδ in 947, made his cousin, the poet Abū Firās, governor of Mambyδ (Drovška, Abū Firās, p. 75). When the Domuskos Nicephorus Phocas invaded Syria in 962, Abū Firās, who happened to be hunting outside the town, was taken prisoner by the strategos Būdrus (Theodoros, Petros?), a nephew of the emperor, and taken first to Kharshana and then to Constantinople (Drovška, p. 98 sq.; Weil, iii. 17) where he wrote poems full of longing for Mambyδ and for his mother there (Drovška, p. 300, 302, 327, 397). In 962 when emperor, Nicephorus encamped near the sacred brick (al-Khirma, i.e. ιερογλύφων) but did them no other injury (Yahyā al-Antaki, Cod. mar. Bibl. Nat., rev. v. ser. Ar. No. 131 A, fol. 96v; the translation by Freytag, Z. D. M. G., xi. 213, has been corrected by Rosen, Zasch. Imp. Acad. Natur., xliii., 1883, p. 97-98, note d). The Byzantine writers who apparently did not know that Μαμπόγκη was the Arabic name of Hierapolis and sought to locate it in Palestine or near Hims, wrongly make Nicephorus take Mambyδ in 968 and carry off the brick and some hairs from the head of John the Baptist (which was only done...
by his successor) (Leo Diaconus, Bonn, iv. 10, p. 71; John Skylitzes, ii. 364; Zonaras, xvi. 25, p. 505; Glykas, Bonn, p. 569 etc.) but this statement cannot be reconciled either with the route given for his campaign of 968 (cf. v. Dobschütz, op. cit., p. 172, note 1; Schümberger, Nicoph. Phocas, p. 704—706, note 5), nor with the bounds of his conquests given by Kamāl al-Dīn (in Freytag, 7. P. M. G., xi. 232). It was his successor John Tzimiscas, who first tried by his energies to carry on the work of Manbīj in 974, and found there Christ's sandals and some still bloody hairs of John the Baptist, which he brought as relics to Byzantium (Leo Diaconus, x. 4, p. 165).

In the year 1025 the Mirdasid Silīḫ took the town (J. J. Müller, Historia Meridieorum ex Halkænuseos Cemaliddinii annalibus exerpta, Bonn 1819; Rosen, op. cit., p. 68). The breach of the treaty between Māhmd and 'Atīya (cf. Ḥalāb, ii. p. 345) Manbīj passed in 456—457 to 'Atīya (Müller, op. cit., p. 56 sq.). In 472 (1079—1080) Tādji al-Dawla Tutanq occupied the town (Müller, p. 88). The emperor Romanus IV Diogenes took it on his Syrian campaign in 1068 and strengthened the defences of the citadel (J. J. Müller, Bonn, ii. 673, 675, 685; Michael Attalates, Bonn, p. 108 sq.; 111, 116; Zonaras, xvi. ii. 26, Bonn, iii. 691; Michael Syrak, iii. 168; Matthäus of Ûfham, transl. Dulauner, p. 162; Weil, iii. 112; Kamāl al-Dīn, transl. Müller, op. cit., p. 63 sq. where it wrongly stated that Manbīj remained Greek for 70 years). It was not till 479 (1086) that Malikshāh deprived the Greeks of Manbīj and al-Rūbah, and gave the rule over Halab, Hamā, Manbīj and al-Lādhikīya to Al-Suṣhūr (Ibn al-Ṭair, x. 98; Weil, iii. 131).

In 504 (1110—1111) the Franks conquered Manbīj, occupied and plundered the town and advanced as far as Balis which they burned (Röhrich, Gesch. d. Krgr. Jerusalem, p. 88; Weil, iii. 193; according to Michael Syrak, iii. 215, probably wrongly, in the year 502). But they lost Manbīj again in the same year (504) (Aбу 'l-Fīda', Annal. Moslem., ed. Reiske, iii. 370). Baldwin II in 513 (1119) invaded the lands east of Halab as far as Manbīj and al-Nakra, and Joscelin, in the following year, was on the pretext that one of his followers had been imprisoned in Manbīj and that no compensation had been given to him for it, plundered the lands of al-Nakra and al-Abas (Recueil hist. eccl., iii. 623, 625). When Nūr al-Dawla Balag enticed the amir of Manbīj, Ḥasan al-Baṣalbakki, within his power and then imprisoned him in Pūlib, Ḥasan's brother 'Īsā seized the citadel of Manbīj, which Balag then attacked with siege artillery (1242). 'Īsā then appealed for help to Joscelin and had him proclaimed lord of Manbīj, but Joscelin suffered a severe defeat before the walls of the town. On the next day, however, Balag was mortally wounded by an arrow shot by an unknown hand (according to Kamāl al-Dīn, by 'Īsā himself; according to Matthäus of Ûfham, by a sun-worshipper). In 518 (1124) Ḥasan was liberated and returned to Manbīj (Ibn al-Ṭair, x. 436; Michael Syrak, iii. 211; Matthäus of Ûfham, transl. Dulauner, p. 311 sq.; Röhrich, op. cit., p. 161 sq.). The Crusaders never again took the town after the brief occupation in 504. Although we know of Frankish archbishops of the town (cf. William of Tyre, xii. ii. 14, xv. 14, xvii. 17) one of whom, Frano, took part in the Council of An-
Saladin’s third son Malik al-Zahir (Chast in 589 (1193) was allotted Ḥarim, Tell Ḥasār, Manbij, A’zaz and other fortresses (Reussel, 1176; Röhrich, Gesch. d. Kgr. Terr., p. 658). In 591 (1195) the latter set out from Kinnasrin to Kurš Ḥasār in order to besiege Manbij which then belonged to al-Malik al-Manṣūr of Hamd but on receiving disquieting news hastened to Damascus (R. O. L., iv. 209). Saff al-Din ʿUṯūr al-Zahirī died a division of the army from Ḥamā, which attacked Manbij in 595 (1199), took many prisoners and brought them to Malik al-Zahir, who however released them again (R. O. L., iv. 218). The lord of Ḥamā in 596 (1200), at the request of Malik al-ʿAdil, gave Isḥāq al-Din Ibrahim al-Muqaddas the towns of Manbij, Fāmiya and Kafr Ṭārā in compensation for Fāmiya (Well, iii. 434, note 4). When the latter died in Fāmiya, Manbij was to go to his brother Shams al-Dīn ʿAbd al-Malik whom however Malik al-Zahir in 597 deprived of his rule over Manbij and Kālʾat Naḵẖān and carried off a prisoner with him; he offered the two towns to al-Malik al-Manṣūr of Hamā, who once previously in 588 (1192–1193) had refused Manbij (Reussel, v. 267, note 3), if he would assist him against Malik al-ʿAdil, which however he declined to do (Röhrich, ap. cit., p. 685). Al-Zahir thereupon destroyed the citadel of Manbij lest it should fall into an enemy’s hands and gave the town, now deprived of its defences, in 597 (1201) to al-Ḥaddājīs as a fief (R. O. L., iv. 222) and in the following year to Imād al-Dīn b. Saḥil al-Dīn al-ʿAbbās b. Aḥmad al-Maṣṭūḥ (Abu l-Fidaʿ, Uṣūl, ii. 193). But very soon afterwards, al-Zahir had again to send the amir of Ḥalab, Muḥammad b. Ḥakim al-Dīn, to the siege of Manbij; the latter however withdrew on the approach of Malik al-ʿPaṭ sims, son of Malik al-ʿAdil. Malik al-ʿPaṭ sims entered Manbij, rebuilt the citadel and fortified it. He then returned to his father al-ʿAdil in Nīraba, but while the Ḥalab troops avoided an encounter (R. O. L., iv. 223). Soon afterwards the Ḥalab army again marched on Manbij but was recalled by Malik al-Zahir, who was besieging Damascus. A little later, al-Zahir himself set out against Manbij to avenge himself on the inhabitants who had taken the side of the al-ʿPaṭ sims; but he was appeased by his amirs, pardoned the town which submitted to him and gave it as a fief in 598 (1202) to Ibn al-Maṣṭūḥ (R. O. L., iv. 224). The Sālājids, Kaḵānīs in 615 (1218–1219) went to Manbij, which opened its gates to him, placed one of his officers, Shīrīn al-Dīn al-Manbijī, as governor there and repaired the walls of the town; but when al-Malik al-ʿAlīsīs left, the town again and suffered heavy losses in his retreat (Reussel, v. 268; Uṣūl, i. 146; Kašiṣ al-Dīn, in R. O. L., vi. 37; Abu l-Fidaʿ, Ann. Mus, iv. 266). When the Sulṭān of Ḥalab, al-Malik al-Nāṣir, concluded an alliance with the Sulṭān of Rūm for their mutual defence against the raids of the Turkomans, he sent the ṣāḥīb of Manbij, Abū al-Dīn, as a confidential envoy to him (R. O. L., v. 94). Al-Malik al-Maṣṭūḥ of Ḥarān fled in 635 (1237–1238) before the Khwārizmīs to Manbij to seek protection with his aunt (R. O. L., v. 103). When the Khwārizmīs three years later invaded Syria, a Ḥalab army met them but suffered an annihilating defeat on the Nahr al-Ḏahab (R. O. L., vi. 3). Thereupon the Khwārizmīs advanced on Manbij; the inhabitants of which retired behind its walls and barricaded the place where the walls were no longer standing. The town was stormed on the 21st Rabīʿ II 638; numerous inhabitants put to death, the houses destroyed and rich booty taken; the enemy even entered the mosque where many women had taken refuge and violated them (R. O. L., vi. 6). After the Khwārizmīs had been driven back, al-Malik al-Manṣūr re-entered Manbij (R. O. L., vi. 17). In the treaty between Sulṭān Kaḵānī and Leo of Armenia in the 1st Rabīʿ II 684 (June 6, 1285), Manbij is mentioned among the Egyptian towns (Makrizī, ed. Quatremère, Hist. des Sultans d’Mamūs, i, 168; transl., p. 205).

According to Ibn al-Shihāna (Barīʿī, p. 228), Manbij which previously, excluding its 8 suburbs, had paid annually 510,000 dirhams to the Sulṭān’s Diwān, was destroyed by the Tatars (who invaded Syria several times between the end of 699 (1299) and 702 (1302)); perhaps there is here a confusion with the Khwārizmīs. According to Abu l-Fidaʿ, the fortifications and the town were for the most part in ruins in his time; Kaḵān al-Zahirī does not mention it at all.

After the Russo-Türkisch War (1879) Circassians were settled in Manbij; since that date the few remains of antiquity noticed by earlier travellers have almost completely disappeared.

The ruins of Bahmiq, as the name of the place is now pronounced by the natives with a marked echo of the ancient Bambeye (Eating in M. Hartmann, Zeit. d. Gesch. f. Erdk., Berlin, xxix. 325; Littmann, Amer. Arch. Exped. to Syria, iii. 171, note 3), have been visited by Mannrell (1699), Poocke (1737), Drummond (1747), Sachau (1879), Cumont (1907) and Hogarth (1908). The old town walls, surrounded by a broad ditch which were several times restored in the middle ages, still survive almost in their entirety (Ainsworth, A personal narrative of the Expedition, i. 1888, p. 235).

MANHIDJ — MAND

The town of *Kāmūlūb*, the site of which is important to fix the limit of the habitations of the Mand, is sometimes located in Hind (Iṣṭāqīrī, p. 176), sometimes between Sind and Hind (Idrisī). The form of the name is uncertain (Fāmān, Mānḥal, Mānḥal, Anbal). Elliott, l. 365, identified it with Anahawārī; cf. al-Ibrī, p. 100. This last town (Anahiwāra, Nuhrwāra, founded in 746 a. d.) is identical with the modern Pīsim (on the Sarawat in northern Baroda; cf. imp. Gauhati of India, 1908, vol. xx.; Cunningham, op. cit., p. 290, places *Mānḥal* at Umarī). In all cases Kāmūlūb must mark the limit of the pastureages of the Mand to the S. E. of al-Muqrā (Hādārādārī), on the Indus; cf. Elliott, l. 370.

Among the Muslims sources a special place is occupied by the Mudjimil al-Tawdarī, written in Persian in 520 (1126). This work gives extracts from a book which was composed first in an Indian language, then translated into Arabic by Abu Sāliḥ b. Shīb ḫīb b. Dālī (in 417 = 1028) and finally translated from Arabic into Persian by Abu 'l-Ḥasan 'Ali b. Muhammad al-Halabī, librarian in Tughrā. This source which is a very accurate resume of the Miḥābārat, begins with a chapter on the Mand and the Zuğt, two peoples of the land of Sind, descendants of Chām (Hūm), son of Noah. The Mand had conquered the Zuğt, who withdrew to the banks of the river Pas (or Bahr) and from there attacked the Mand by water. Finally tired of fighting, the two peoples agreed to approach king Dāhshāh b. Dālīrān (Duryodhana, son of Dhṛtarāṣṭra) to ask him to appoint a king over them. Dāhshāh sent them his sister Dūṣāl (Duqqāl), married to Bālindī (Jayadratha) who became a powerful king. At the request of Dūṣāl, Dāhshāh sent 50,000 Brahmans to people Sind. One part of the country was given to the Zuğt, who were given a ruler Lūfīrī (Yudhīhārī, eldest son of Dhṛtarāṣṭra). The Mand (Mudīyān) also were given a special office of Keepman, Fragments arabici et persiani relatifs à l'Inde, 1845, p. 2—3, 25—27.

Here we have an attempt to connect the history of the Mand and Zuğt with Indian tradition by quoting a passage in the Miḥābārat which says that Duqqāl was given in marriage to Jayadratha, "king of the lands watered by the Indus," (transl. Fauche, Paris 1863, i. 290, where 2742). Indian tradition however contains nothing definite of value about the Mand. In the Rāṣ-ha-Sambha, transl. Kern, J. R. A. S., 1871, p. 81—86 which is one of the sources for the enumeration of the peoples of India in al-Biruni (ed. Sachau, p. 150—157, transl. ii. 290—303), we find a Māndārāya people (located in the centre, north or northwest of India). The derivation of the Arabic Mand from some such name may be suspected (cf. the name of the
The old name of the river is usually transcribed in Arabic characters Sakkān (Iṣṭakhîrī, p. 120; Ibn Hawākin, p. 191; Ibrāhīm, tr. Jaubert, l. 401) but the orthography varies: Thākān, Fārān-nām, G. M. S., p. 152; Nushāt al-Kullā, p. 154; Zakān or Zakkān, Nushāt al-Kullā, p. 217; Sītāgān, Zābhīn-numa, p. 247; cf. also Sāḥikān in Haan Fāṣıl.

The identification of the Sakkān with the Eravāzs mentioned in the Periplo of Nearcchia (Arrian, Indica, xxviii. 8) is generally recognized. The identity of Sittakan with the Sittogasan (Sittoges) mentioned by Pliny, Nat. Hist., vi. 26 is also usually admitted (Weinbach, 1927), but Herzfeld (1907) relying on the existence of another river, the Shādhkān (= Sittogasan?), has suggested doubts about the identification of the Sittakan with the Sittogasan. Now, according to Iṣṭakhîrī, p. 119, the Shādhkān flows into the Persian Gulf at Drah al-Dastakān (north of Būghtir). This Shādhkān must be identified with the river Shācxxīr. The Fārān-nām, ed. La Strangé, p. 163, mentions Rūbdāl-i Sītāgān (the banks of the Fārān-nām) as a station on the road from Shīla to Tawwaj. From this fact and especially from the name, Sītāgān seems to be connected with the left bank tributary of the Shācxxīr. Pliny, who follows Oesigerus, adds that by the Sittogasan one reaches Baṣaragedes in 7 days (qua Pastragades septima die navigatur). Whatever be the identity of the Sittogasan, the exaggeration in this statement is evident (especially in the direction of the sea to Pastragades) and the waters of Baṣaragedes (Mugād-i Murgāh) do not flow into the Persian Gulf. But there is nothing to prove the absolute impossibility of using the Sakkān as a subsidiary means of transport in the season of floods (the winter). According to Arrian, Nearcchia found at the mouth of the Sittakan large quantities of corn which Alexander had brought there for the army. Iṣṭakhîrī, p. 99 places the Sakkān among the rivers of Fārs which are navigable almost (al-zankāt al-khāli allāt tākhinē al-awfīli 1650 adhriyat fī-kā).

Another identity is the phonetical identity of the name Sittakan (Sittogasan?) and Sakkān. According to C. F. Andreas, Eravāzs is a nominative restored from a supposed genitive *Eravēzs (Sītākān); Sittogasan is a mistake for Sittogasan; but the peculiarity of the Arabic script could explain the change of Sittākān to Sakkān. Here we may add that Haan Fāṣıl gives one of the stretches of the river the strangely written form Sībākān (=<Sīthākān). Iṣṭakhîrī however derives the name of the river from that of the village of Sakk (Nushāt al-Kullā: Zakkān) in the district of Kasu considerably below the Shādhkān stretch of the river. To sum up the identification of the Sittakan with the Sittogasan does not seem sufficiently established.

The course of the river. The Sakkān (Mand) describes a great curve. At first it runs in the direction N.W.-S.E., to the northern base of the Kuh-i Marza-yi Shīkāf, which separates it from the valley of the river Shācxxīr. It follows this direction (c. 100 miles) to the end of Amān-gird mountains around which it makes a bend and turns south (70 miles). It then meets the parallel ranges which run along the Persian Gulf and continues its winding course to the sea in a westerly direction (c. 160 miles).

The Sakkān (Mand) and its tributaries drain and irrigate a considerable area. Iṣṭakhîrī says that
its waters contribute the largest share to the fertility of Farrā (akbar-i ‘Imārin). The sources of the river (Kān-i Zand, Chiluj-i Shahr and Sargh-rag) rise in the mountains of Kūh-i Nūr and Kūh-i Marrayj-Shikhta in the N.W. and W. of Shiraz. These streams unite before Kān-i Zinnān in the district of Mājār in the great Shahr-i Kāzirūn-Bāšīr. Iṣṭaḵtr, p. 120, places the sources of the Sakkān near the village of Shīkhbār (7) in the district of Kuwaydīn (9). In the same author, p. 130, Kān-i Ḍazand in the Sakkān corresponds to the modern Khan-i Zinnān. The Farrānāma (and the Nuzhat al-Kulāb) places the sources of the Sakkān near the village of Čāriyā (7). Under the Turkish name of Kārahānī, i.e. "the river of the dun," the combined streams flow through the districts of Mājār (=Kūh-i Marrayj-Shikhta), Siyāh (Iṣṭaḵtr, p. 120: Siyā), and Kāzirūn. In this last district, Rivadanezya, iii. 51, going from Shīrkūh to Fīrūzābād crossed the river by a "substantial bridge." It is in the district of Kāzirūn that Ḥasan Fas’ī gives the river the name of Șājičān. In Kāzirūn (Hasan Fas’ī) there used to be the barrage of Band-i Rawān, where a subterranean channel (jūmāt) part of the water was led into reservoirs (fīrūz) and then to the fields. In the bulūk of Șāji (Iṣṭaḵtr, p. 105: Șāji), which must be distinguished from the district of the same name in the kūra of Iṣṭaḵtr, the river turns south. AUCHER-ELROY, who crossed the river on the road (from Fīrūzābād to Djarūn (Djūrām) calls it "Tangui Tschaka" (= Tang-i Șājiḵār) and speaks of its "beautiful valley," Rivadanezya continuing his journey by Fīrūzābād to Djarūn crossed the river by a ford between the villages of Tawān and Assun-Dochehū (Asmīngūr). He also admires the pleasant and flourishing aspect of Șāji. Below the latter, the river enters the bulūk of Siyākān where, near the village of Sarghān, it receives on its left bank, the branchhi (šahr) river of Duhrām, and then flows through the ravine of Kāzirūn, and waters the bulūk of Șī-aw Kāzirūn. Abbott coming from Fassā crossed the river by a ford between Șī-aw-Bāšīr and Līfārūjān (cf. the name of the river of Kūr (in Farrā), Lìfārūjān, Iṣṭaḵtr, p. 113), where it was 100 yards wide and the water rose up to the horse’s belly. Farther down below the ford, Stack, going from Șīrok to Kāzirūn crossed the river, here 60 yards broad, by the bridge of Ṭarūs, built in a zig-zag and in two stories ("the queerest structure in the way of a bridge"). Near the village of Ni[h-śābīr, the river enters the bulūk of Aftār. After having wound round the fort of Kān-i Șājiḵār the river receives (near the place called Cam-i Kakkāh) the name of Bāz and then irrigates the bulūk of Khund (cf. Ibn Baṭṭūṭā, ii. 246: Khund-bāl = Khund-i Bal). In the district of Djarūn, the bulūk of Qalla-dār the river has two tributaries: near the village of Gahūr, the Dīr al-Muṣān, and two farsakh lower, that of Duhrām. The Dīr al-Muṣān comes from the left (east) side of the bulūk of Aftār. The Duhrām much more important comes from the right side after watering the historic district of Fīrūzābād (the ancient Gūr, capital of Ardashīr-Khurra); cf. the details in Le Strange, p. 256. Iṣṭaḵtr, p. 121 makes this tributary come from Djarūn (of Siyāh) and water first Khaniqāhī and then Gūr (in place of the name of the river Tema). Iṣṭaḵtr, p. 99, 121, one should probably read Būzāz; cf. of the Farrānāma, p. 151.

Nuzhat al-Kulāb, p. 117-118: Ḥakim Būzāz was the sage who dried up the Lake of Gūr.

After Djarūn, the river enters the district of Sanā’-wa-Shumā of the bulūk of Duhrām, and near the village of Bāghān receives on the right bank the river Čānkā which comes from the district of Taṣībū Dāštī. Finally near the village of Dūmālū the river enters the coast district of Māductān and receives the name of Mādūn. It flows into the sea near the village of Ziyārāt, halfway between the old harbours of Nadḵūn (to the north) and Siyā (to the south).

Māuditān. The district forms part of the bulūk of Duhrām (which is to be distinguished from Dāštī-Duhrām to the north of Duhrām up to Būshīh). Duhrām (35' × 18 farsakh) is composed of 4 districts: 1. Bādūtān, the part of the coast which is in the part of Dairī. 2. Māduitān on the coast to the north of Bādūtān and the two banks of the river Mādūn. 3. Sanā’ and Shumā on the river above Māduitān. 4. Taṣībū-Duhrām, a very narrow valley (11' × 1/2 farsakh), watered by the Čānkā and separating Sanā’ and Shumā from the bulūk Arba’ (on the lower course of the river of Fīrūzābād).

The whole of the bulūk belongs to the torrid zone (garmāsht) of Farrā. Māduitān (12' × 5 farsakh) includes lands so flat that the current of the river is imperceptible and the water cannot be used for irrigation. Agriculture (wheat, barley, palm-trees) is dependent on the winter floods. The district has 49 villages. The capital of the district and of the bulūk is Kākī. It used to be a few small families in Māduitān: the Shakhījān and the Ḥādji-Julūm. During the disturbances under Afghān rule (1722-1729) the Ḥādji-Ra’s Djamāl exterminated the Shakhījān and founded a little dynasty of hereditary governors who were able to annex the district of Bādūtān through matrimonial alliances. One of his descendants, Muḥammad Kān (d. at Būshīr in 1299 = 1881), was noted as a poet under the pen-name of Duhrām. Ḥasan Fas’ī explains the name Māduitān by a popular etymology: the place where the water flows slowly (waṣṣāmūda). Names in -ṣān are common in Farrā (Lāristān, Bādūtān) but even if such a formation was possible in a river-name, the element Mādūn would still be a puzzle. It is curious that Ḥasan Fas’ī sometimes writes it Mādūm (read Mādūm) and sometimes Mund (read Mādūm). It might be suggested as a pure hypothesis that there is a connection with the people Mān (cf. Man), of which there might have been a colony in Māduitān.

C. Rox, Notes on the river
MANDINO, a people of the Western Sudan whose country of origin was on the Upper Niger stretching from Bamako to Seguiri inclusive. This region includes the gold-bearing district of Bource, Bute, or Bito as well as the provinces of Lower Faleme and of Bambuk which also produce gold. At the present time the Mandingoes have spread into the mountainous country in which the two branches of the Senegal arise; they occupy Sangaran, Gangaran, Bambuk, and the valley of the Gambia to the South while to the North they extend as far as the Western Sahara. In the 18th century, they colonised a part of the modern Mauretania and, according to the Arab authors of that period, who mention them under the name of Gangara (sing. Gangar) or Wangara a word which seems to be a corruption of the name of their country of origin: Gangara, Gwangara or Gangaran — they were to be met with in Holli. In our time the first of these names has been kept by the Moors and the Sarakole, the second by the Songhoy, the Pul of Massina and the Hausa.

The country of these natives is called according to the different dialects: Manding, Mandi, Mani, Mandeng, Maneng, Mande, Mans. The inhabitants are called by the names of Mandinka, Maninka, Maninga, Mansinka, Maninka or Manenga in the dialects of the Centre and of the East and Mandinko or Mandingo, in those of the North, South and West. This last form in use in the British possessions of Gambie and Sierra Leone has been adopted by the English while the French keep the form Manding or Mandingue.

The name of the country corrupted by the Pul has become in the language of these natives Mali, Malla, Malu, Melli, and that of the inhabitants has become Mallink or Maline. This last word has now come to stand for the South-Western portion of this people, or for their dialect.

Ethnography. The Mandingo group constitutes a well-marked ethnological group, but it does not form an organised people under one rule. Three chief divisions can be distinguished, and these can again be subdivided into many sections. They are the Malinke, the Bambara, or Banamba, and the Diula or Gula.

A Sudanese historian of the 18th century, Malikomed Kotti, who wrote the Turath-ul-Fasih in Arabic, distinguished in his time between the Malinke and the Wangara, regarding the former as warriors and the latter as merchants and traders. The Malinke are the least advanced of the Mandingoes from the social point of view, many of them remaining faithful to the matrilineal system and are still cultivators of the soil, hunters and gold-diggers.

An attempt has been made to derive their name from that of the hippopotamus: mati or mar, and thus "malinka" would signify the "people of the hippopotamus." This explanation is erroneous, the suffix "ka" signifying the nationality, can only be joined to the name of a country or of a tribe and never to that of an animal. It is possible however, that the name of the country which was the cradle of their race, could come from ma, mother, and dieg or dieg, child; this word then would signify "child of the mother," in allusion to the descent by the female line which is customary amongst them.

The Bambara inhabit the valleys of the Niger and of the Bani as far as Lake Debo, they are numerous in the Sahel. They are more advanced agriculturists than the Malinke and they recognize descent by the male line. An attempt has been wrongly made to derive their name from that of the crocodile: bama or bama. Some authors, on the other hand, have held that their name signifies "refusal to obey a master" (bana: refusal, ma: master, na: towards). This explanation, although it could be accepted linguistically, is not, according to M. Delafosse, to be rejected. He prefers that of "renunciation of the mother" (bana: refusal or renunciation, ba: mother, na: or na: to). The Dilu or Giula inhabiting some fairly important centres are chiefly merchants and traders. They are met with in small colonies, settled amongst the indigenous peoples to the East of Bani as far as the Upper Volta and the Gold Coast. Having been converted at an early date to Mahomedanism, they have remained fervent Muslims and there are amongst them quite a large number of learned men.

Their name is said to signify "from the foundation, from the stock" (diu). According to their own account, it was given to them because their ancestors belonged to families of noble birth.

At the basis of Mandingo society is an extended family (goba or gwa) comprising all the living descendants of an ancestor, sufficiently near in place and in time, for all the ties of relationship not to have been forgotten. In general this extended family covers four generations: the patriarch, his brothers and cousins, their children, the children and grand-children of the latter, and an equal number of generations of slaves. Persons of the same generation placed on the same level are called by the same name: father, brother, son, without distinguishing the fathers from the uncles, the brothers from the cousins, the sons from the nephews, all are collectively sharers in the family property, which they have helped to acquire and to augment by their labours. This family property consists of crops, of animals, arms, surplus utensils and clothing, as well as treasure in gold, silver or cowries gathered together by the founder of the family. It is administered by the patriarch, who cannot dispose of it without the consent of the majority of the other members. Each of those, man or woman, possesses in addition a private store of which he has the free use.

The chief exercises a political, domestic and religious authority. In this capacity he is charged with making sacrifices and offerings to their ancestors and to the patron deities of the family. A number of families observing the same religious prohibitions and bearing the same name (diu) form a clan; the members, who form a clan are of the same origin, but so far removed by birth
that it is impossible to trace their descent back to a common origin.

The chief Mandingo clans are those of Keyta, Kante, Tanore, the Deunbele, the Kanate, the Kalunahli, the Kuruma, the Diura, the Samake, the Mareko, the Kamara, the Bakayoko etc. None of them is either organised or under a single ruler.

There exists between persons of different clans a particular tie called yuobayu, without doubt the remains of an ancient phraternity which obliges them to assist one another and to exchange presents on certain occasions; the same persons can also quarrel among themselves or fight with one another without involving any serious consequences.

The organisation which is lacking in the clan and in the tribe shows itself on the contrary in each inhabited centre in the form of the hierarchical brotherhoods, which combine all the young people and the men of the same age who have together submitted to circumcision and to the tests of successive initiation. The first is that of men, grouping together the boys from the ages of 7 to 14 years, then there come the so-called secret societies, such as those of the houm or of the mame which consist of politico-religious groups within the village.

The village or dieng is the administrative unit, the union of a number of villages and the lands which surround it forming a district or kafé; a number of districts constitute a province or a kingdom, diamana, at the head of which there was in former times the Mansa or Massa. The latter was surrounded by different ministers and assisted by a treasurer.

Although Muhammadanism has long penetrated amongst the noble families of the Mandingo, the greater portion of the population has remained faithful to the worship of natural forces and of protecting deities, dungen la siré, yene and belli. The great religious festivals are the agrarian feasts and the most important correspond to the periods of sowing and harvest.

The Language. The Mandingo properly speaking are in number about 2,500,000 of whom 77,000 are in Senegal; 1,000,000 in French Sudan; 200,000 in the Upper Volta; 2,500 in Nigeria; 250,000 on the Ivory Coast; 55,000 in French Guinea; more than 680,000 live in Gambia, Sierra Leone, Portuguese Guinea and the Republic of Liberia. In addition to these natives, whose mother tongue is Mandingo, more than 2,000,000 other people speak this idiom; for this reason it is often spoken of as a language that is still spreading.

The Mandingo belongs to the African Negro language and more especially to the group which M. Delafosse calls Niger-Senegalaise; D. Westermann: Mandingo; and A. Drexel: Nko-Nice; it is closely alliled to Susu. Foreign Idioms seem to have had little influence, although it has borrowed certain abstract and religious terms from the Arabic; from Phoenician or Punic it has borrowed expressions relative to horsemanship and cotton; from Berber about a dozen words, and finally during the space of the last fifty years it has further borrowed from several European languages.

The roots are monosyllabic or disyllabic and many of them can be traced to an ancient African Negro origin. For example: fàkà, the action of killing or being dead, seems to come from a root fà or fàg; cf. in Susa šàlù; Hausa: fàwà; Mossi: fàwà; Fang: wà; Ful: wà (de); Musgu: fàdà; Congo: faw; Swahili: fà and wà; Ancient Egyptian: fà. The nominal class does not exist in this language.

Mandingo uses derivative suffixes which are used to form distinct substantives used as substantives only; for example: kà, kà, or nég, the instrumental suffix: tege, to cut; tege-à, the instrument for cutting, axe. It employs also adjectival suffixes; for example: ma or ma indicating the possession of the thing mentioned: gyì, water; gyì-à, "all of water"; là indicating on the contrary the lack of the thing expressed: gyì n-là, "without water".

Certain suffixes, joined to a simple or derived root, indicate the possession of a quality or of a state; for example: yo-surà, "short, little"; surù, "shortness" and also "to shorten or to approach". Suffixes also exist, indicating determination or relationship.

The Mandingo conjugation employs prefixes denoting the perfect, the aorist, the injunctive. Certain auxiliary prefixes serve to indicate time.

This language does not possess any trace of a system of syntax of agreement; the relations between one element of a sentence and another are entirely determined by the respective position of the two elements and their grammatical function is often determined only by the place which they occupy in the sentence.

In the syntax of this language, the complement of a noun, pronoun, or verb always precedes the noun, pronoun or verb in question; the adverb qualifying or determining a noun always follows this noun; the noun of number always the noun of the thing numbered; an adverb modifying a word follows it. The order of the words in the sentence is subject, prefix or auxiliary of conjugation, direct complement of the verb, verb root or derivative, indirect complement of the verb, adverb modifying the statement.

Mandingo is divided into a fairly large number of dialects revealing differences more or less marked. We distinguish the Bambara or Bamana dialects, the Dioula dialects and lastly the Malinke dialects, which are themselves divided into the Malinke of the Hill and the Malinke of the North (sometimes Kassonké), of the West and of the South.

History. The wide diffusion of this language is due to certain historical circumstances, and to the rise of the Mandingo hegemony which extended over almost all the Western Sudan from the year 1250 to 1500.

According to local tradition, the Mandingo sovereigns bore the title of Mansa or Massa; they belonged to the Keyta and married into that of the Koné or Kone. In the beginning, they owed their influence to their knowledge of sorcery and magical practices and little by little they emerged from obscurity. Ibn Khalid has transmitted to us the name of the first of them, Baramenlans, who about the year 1050, was converted to Islam, in order to obtain, according to al-Bakri, the end of a drought, which was cruelly trying the country of Mandin; thereon he made the pilgrimage to Mecca.

Native tradition has kept the name of two of the descendants of this prince, Hamana and Dyiigm-Bilali. The son of the latter, Mass, called Allakoy, reigned from the year 1200 to 1318. Four times he made a pilgrimage to Mecca,
and he extended the power of his dynasty. On the other hand, his son Nare Famosa (1218-1230) suffered a great reverse and was defeated by his neighbour, the king of Soso, Sumanguru Kante, who annexed Mandingo in 1224 and put to death eleven out of the twelve sons of the conquered monarch. The last son, Suta Diata or Mari Diata (1230-1255), who was weak and delicate suddenly recovered his health and strength after touching his father's sceptre. Little by little he got together a powerful army, with the help of which he conquered a part of Futa Djalon, the country situated between the Niger and Bani, in the region of Kita and that of Beledugu. In 1235 he attacked his enemy Sumanguru Kante and defeated him at Kirina, not far from the Niger. After having subdued shortly afterwards the whole of the Soso, he advanced in 1240 as far as the celebrated city of Ghina which he plundered. During the following years, Suta Diata took possession of Gangaran and of the gold-bearing district of Bambuk, without neglecting the good administration of his lands, in which he encouraged agriculture and extended the cultivation of the cotton plant. Towards the year 1240 he abandoned the ancient capital of the Mandingo, Djeriba, and transferred it to Niani, wrongly called Mali or Mellili by the Arab historians. He died in 1255 in the vicinity of this town. One of his sons succeeded Suta Diata, whose name only is handed down to us, namely Mansa Ule or the Red King (1255-1270). After him reigned the princes Walt, Khalib and Abu Bakari between the years 1270 and 1285 about whom we possess no information. After the death of the latter, the power passed into the hands of a slave of the Keya called Sakura or Sahakura, who kept it from the year 1285 to 1300. Then the Keya regained the throne and under Gaun, Manaku, and Abu Bakari they held it from 1300 to 1307. At the end of this undistinguished period, Khanan Musa, also called Gongo Mūsā (1307-1322), the son of the last of these sovereigns, seems to have raised to its zenith the power of his dynasty. We owe to Ibn Khaldun some details about his person and the events of his reign. He was an ascetic prince and full of piety, and he made a pilgrimage to Meccca in 1325 and on his return he brought back with him to the Saha, al-Mamer, a descendant of the founder of the dynasty of the Almohads, as well as the Arab poet al-Saḥīḥ. When he was still in the Sahara, Kankan Musa learnt that his troops had seized Gao, Tumbuktu, Walata and the kingdom of Songhay. He decided to visit the first two of these towns, and on the advice of the strangers who accompanied him he built in each of them a mosquée and a palace, thus introducing Arab architecture into the country. When he died in 1322, his authority extended from the valley of the Bani to that of the Faleme, and from the Sahara as far as the thick forest, and he had entered into relations with the Sultan of Fez.

His son and successor Maghan (1332-1350) was not able to keep intact the kingdom bequeathed to him by his father. During the reign of this prince the Mossi pillaged Tumbuktu, and Songhay cast off the Mandingo yoke.

On his death, Saliamin (1355-1359), the brother of Kankan Musa, ascended the throne. According to Ibn Khaldin, the first son of the new sovereign was to assert his authority in his possessions in the North. He was not successful in regaining Songhay, but he established peace and security in his kingdom, which he reorganised. The traveller Ibn Battūta, who passed through Mandingo in the year 1351-1352 furnishes us with valuable information on the country, the administration, justice and the court.

Kamba, the son of Saliamin, succeeded his father but was deposed at the end of a few months by Mari Diata, the son of Maghan who kept his power until 1374. He died of sleeping sickness and is remembered as a cruel, debauched and extravagant prince.

His successors Musā II (1374-1387), Maghan II, Sandgul, Maghan III, Musā III and Musā Ule II reigned until the beginning of the xvth century. From this time onwards exact information ceases, as our authority, the historian Ibn Khaldūn, died in the year 1406.

The decline of the Mandingo empire was hastened during the xvth century by the attacks of the Tuaregs, the Songhoy, the Mossi and the king of Tekrur. In the year 1451 Mansa Mamadu feeling himself to be in danger, approached the Turks who were established on the coast of Africa and sought their protection. This movement and others similar which followed it influenced the kings John II and John III in sending to the court of the king of the Mandingo two ambassadors, the one in 1483, the other in 1534, but without leading any military aid.

In the year 1545 the Askia Dīdī of Gao came and plundered the Mandingo capital. The Moroccans who had come from Tumbuktu some months before, joined in the year 1591 the enemies who surrounded the kingdom. The period from 1660-1670 marks the last stage of Mandingo power. But two new principalities were formed on its ruins at Segu and in Kaarta.

According to the legend, the Bambara under the guidance of two brothers, Baramangolo and Niangolo, were flying before their enemies. They were on the point of perishing under the blows of their enemies, since a river barred their route when they were saved by a miraculous fish which carried them to the opposite bank. After this miracle they took the name of "Kulu bali", that is to say the men without boats.

In the middle of the xviii th century the descendants of Baramangolo had spread into the valley of the Niger and of the Bani but they paid tribute to the inhabitants of Djenne and to the Moroccans of Tumbuktu; their capital was Segu. Biton Kulubali (1660-170) liberated them from this tutelage. Having collected a powerful army and fortified Segu, he made war first against the sovereign of the Mandingo, then seized the great bank of the Niger and finally Massina and even Tumbuktu. He died of tetanus after organising his kingdom and dividing it into sixty districts.

His son Denkoro (1711-1730), a cruel and debauched prince, was assassinated; All, the brother of Denkoro, only reigned a few days and was deposed by the army of the Tonlou or government troops. The period 1736-1750 was troubled by internal disorders, and in the year 1750 the power passed to the family of the Diara, who kept it until 1861. At this time the conquering al-Mujāhidī 'Omar seized Segu and put All, the last king of the dynasty, to death.

The descendants of Niangolo Kulubali are cal...

led "Massasi", that is to say "royal race". At the end of the xviiith century, they occupied all the province of Kaarta itself and they were the rivals of the Bambara of Segu. In the middle of the xviiith century, Massa Bakari succeeded in bringing under his authority Kaarta, Kingui, Bakana, Guidjene and Dafuna. One of his successors, Bessekoro, received the explorer Mungo Park at Guené in the year 1796. In the year 1854 the last sovereign of the line of the Massasi, called Kandian, was reigning at Nioro when al-Halidji 'Omar seized the village and executed all members of the royal family.

After these events the Mandingoes remained divided and until the year 1860 only played a modest part in history. In this year, there arose in the vicinity of Kankan, in the district of Wassulu, Samori Ture, at first the leader of a band and then the sovereign of the province of Bissandugu. This new conqueror, although he was quite illiterate, seized in a short time the whole of Wassulu and took the title of "Almami". Crossing the Niger he extended his warlike expeditions into Sankaran and advanced within 80 miles of Kita, a post recently founded by the French. The latter fought against Samori first from the years 1881 to 1886 and in the next year imposed upon him the treaty of Bissandugo, which he respected for only a few months. From 1885 to 1891 Almami attacked Tiebe, the king of Sikasso, without any success; thereafter he resumed hostilities against the French, who at the end of the year 1893 occupied Wassulu. Samori then fled into the Upper Ivory Coast, which he ravaged from the year 1894 to 1897, and destroyed Konon, Bondoukou and Buna. In front of this town, a detachment commanded by Captain Brulot was exterminated in the year 1897 by the warriors of Sarantie Mori, his son and his lieutenant. France thereupon determined to settle with Almami against whom a combined force was sent. It resulted in the capture of Samori and of his army on 29th Sept. 1898 at Gueleunu on the Upper Ivory Coast. Samori was deported with his family to the Cabo where he died in 1909; he was about 65 years old. Since the dismemberment of his warriors, no event of importance has disturbed the peace of Mandingo.

Bibliography:

Mandu, a fortress now in ruins, was formerly the capital of Malwa [q.v.], and stands in 22° 21' N. and 75° 26' E. It has probably been a stronghold from time immemorial, but little is known of its history until the fortifications were erected in their present form by Dilavkar Khân Ghûrî (1392—1405), the first independent Muslim king of Malwa, and his successors. His son, Hūshang Shāh, made it his capital, and it remained the capital of the kingdom and province of Malwa throughout the period of Muslim rule, and he stood many sieges. Its streets run with the foundation of 19,000 Jaqqâl, laden by Mahdī II of Malwa when he recovered his capital from his rebellious troops.

Of the ten gates of the fortress (two on the south, two on the west, one on the east, and five on the north), the Târâjûl Gate was built by Dilâvar Khân, the Dâ妖怪grî Pîrâ Gate by the emperor Dâ妖怪grî, and the Alamgir Gate by an officer of the emperor Awarangî in A.D. 1668. The Bhagwânâla Gate was built in 1577, in the reign of Mahdī Khânâ, and the Songâr Gate is an old gate rebuilt early in the nineteenth century by Maina Bai, the great Râj of Dhâr. The Lawati, Rûmpol, Dhilli, and Bhangi Gates are old, but bear no inscriptions. The last has
temporarily a token coinage in copper to be withdrawn from currency when the finances of the state improved. 800 mängir was struck to the oke of copper and put into currency as half aspers. When the situation did not improve, the value was raised to one asper; the remedy proved worse than the disease for very soon the country was flooded with copper coins and gold and silver driven out of circulation.

Mängir is also the name given to imitations of sequins in brass or other cheap metal worn as ornaments.

**Mängishlak**, a mountainous peninsula on the eastern shores of the Caspian Sea, first mentioned under the Persian name Siyah-köhe ("Black Mountain"); cf. B. G. A. i. 218; the same name was given to the hills west of the Sea of Aral (op. cit., vii. 92; see *Müti-Daryà*). According to Išqahšir (op. cit., i. 219), the peninsula used to be uninhabited; it was only shortly before the present time (or that of his predecessor al-Balkhi) that Turks, who had quarrelled with the Ghuzz (q.v., i.e. with their own kin, had come there and found springs and pastures for their flocks. Ships which were wrecked on the cliffs of the peninsula used to be plundered by these Turks. Muğaddast (or Muğădiš) mentions the mountain of Binkishlah as marking the frontier between the land of the Khazars and *Ljurdjâna* (q.v.) (cf. B. G. A., iii. 355).

In the form Mankšlakh (vocalised Mankšlāgh by Yākūt) the name first appears in documents of the vii-th (xith) century (W. Barthold, *Turkestan*, i. 34, 44 and 79) and in Yākūt (iv. 670). According to Yākūt, this name was borne by a strong fortress near the sea between Khwarīzim (q.v.), *Sağsïn* (q.v.) and the land of the Rus. The peninsula was evidently no longer, as it had once been, a place held in terror not only for its natural conditions but also for its inhabitants; via Mängishlak there ran, as later almost to modern times, an important trade route from the Volga territory to Khwarizm; goods were unloaded in the bay near Cape Tīb-Karag and taken to Khwarizm by caravans. Before its conquest between 1127-1128 and 1138 by the Khwarizmshāh Širāz (q.v.), Mängishlak was a separate and practically independent principality on the frontiers of the Muslim world (it was, of course, regarded as within the empire of the Sadjiš; q.v.). As the verse quoted shows, the conquest resulted in the destruction of the town. No permanent settlement is again mentioned on the peninsula until its occupation by the Russians, in spite of its importance for commerce.

For the latter centuries (perhaps even earlier) the peninsula has been inhabited by Turkomans. Towards the beginning of the xiv-th (xv-th) century these were the Salar (q.v.); on the coast lived the "inner Salar" (išqī Salar), on the road from Khwarizm to the coast (about 500 miles; it took 20 days to traverse) lived the "outer (taghī) Salar" (Zap., xv. 208). Abu 'l-Ghazz (ed. Dehamsahs, p. 267) gives the Ensu or the Salar; towards the end of this century, this tribe was almost completely driven out by the Mangūt (q.v., i.e. by the Nogai; later we find the Kalmucks (q.v.)
conquering here. On their rule in Mangishlak, cf. Abu l-Ghâstî, p. 316; the name of the peninsula is written by Abu l-Ghâstî (see Index). Mangishlak, Mangishhâl, and Mangâshhâl. In addition to the regular traffic by sea with Astarâkhan [q.v.], frequently mentioned in Russian sources, there was also a connection with Shîrwan mentioned by Abu l-Ghâstî (p. 257 and 273) and other sources. Three Turkoman tribes, the Cavward, the Igdir and the So'mdâlûz, were deported by the Kalmucks under Ayaks (1670—1724), according to others as early as the reign of Tamsuk-Mulak (1667—70) from Mangâshhâl to the northern part of the Caucasus, but a section of the Cavward continued to dwell in Mangishlak. When, under Russian rule, the land of the Turkomans was organized as the "Trans-Caspian territory" (Zakazhsky oblast'), the "district of Mangâshhâl" was included in it; the capital was the little settlement founded in 1839 as "Novo-Petrovskoye—ukreplenyî" and known from 1859 as "Fort Aleksandrovsk" (now: Fort Uryekogo). In the sixth century the Turkomans were gradually driven out of Mangishlak by the Kazakhs [cf. Kergiz]; therefore after the Revolution the district of Mangâshhâl was separated from the land of the Turkomans and now belongs to the republic of Kazakhstan.

After the western shore of the Caspian Sea had passed under Russian rule, it was recognized that the Gulf of Balakhan [q.v.] formed a better gateway to the Central Asia than Mangishlak. In 1819 the ambassador Murayzew proposed to the Khân of Khiva, Muhammad Rafhi, that the caravan route from the Caspian Sea to Khiva should no longer start from Mangishlak but from the port of Krasnovodsk on the Gulf of Bokhan. The Khân replied: "It is true, the road via Mangishlak is much longer than the road via Krasnovodsk but the people in Mangishlak are my subjects, whereas the Yomut as far as Astarâkhan belong for the most part to the Kajdars [q.v.] (N. Murayzew, Putezhodstviye v Turkmeniyu i Khvino, Moscow 1822, p. 134). It was only after Russian rule was firmly established in Central Asia that this question could be settled in favour of the Gulf of Balâkhân. Since Krasnovodsk became the starting point for the Central Asian railway, Mangishlak has lost any importance it had in favour of the Gulf of Balâkhân. According to the census of 1897, the population of Krasnovodsk was 6,322 and of Fort Aleksandrovsk only 895.

Bibliography: given in the article.

Descriptions of the district of Mangishlak will be found in all works on Turkistan, e.g. V. Manâfâski, Turkestanskiy Král', St. Petersburg 1913, p. 627 sq. (W. Bartkold).

Mangit, the name of a tribe and a people. In the time of Chieghâ-Khân [q.v.], the word Mangit appears as the name of a Mongol people in Rashid al-Din (Trudy Vost. Otd. Arkh. Obšč., vili. 205 sq.: Mangít). From the Mongol period onwards the name Mangit (written Manghit, Manghit, Manghit, Manghit and Manghit) like many other Mongol names (Naimân, Yemân, etc.) appears as the tribal name of Turkish or Turkicizing peoples. According to the Zafar-nâma (Ind. and. l. 277) the Mangit were a tribe (nîmâ hiti) of the Golden Horde, which produced the celebrated Emir Idigâ (in Russian sources Vedigâ), the contemporary and opponent of Timur and Toghtamish. The people called Nogai in Russian sources is always called Mangit by Abu l-Ghâstî (see Index) and other Oriental sources of the same period. Now Nogai alone is used as the name of the people. The statement that the Mangit tribe makes up about 90% of them wants more careful investigation (M. Timshqaev, Materiali k istorii Kurgan—Karabkhoj mora, Tashkent 1925, p. 28); the name Mangit is said to be also found as the name of a family among the Yavuts. In the Bâb al-Arsor of Mahmûd b. Wali (MS. Ind. Off., N° 575, f. 35b) the tribe (nîmâ hiti) of the Mangit: and the tribe (li) of the Kangrat are mentioned as the two most important branches of the Ozbek. The Mangit tribe was of some political importance for the political life of Bukhârâ and Khivârum. In the fighting with other tribes the Mangits of Bukhârâ were supported by their brethren in Khiva and vice versa but it was only in Bukhârâ that they became supreme. On the dynasty of the Mangit see there article BUKHÂRÂ (there written Manjkit); the dynasty was overthrown in the revolution of 1920. In Khiva the Mangits combined with the Nâkîs to form a double tribe (the other double tribes were the Ujger—Naimân, Kîtaî—Kîla and Kiyat—Kungrat).

The place called Mangit on modern maps was only founded in Radjab 1215 (Nov.—Dec. 1800) by members of the tribe who had been driven by the Turkoman Yomut to the east (History of Khiva, MS. of the Asiatic Museum, p. 590 supra, l. 73). At the present day the Mangits number 99,000 in Bukhârâ (of whom 44,000 are in Bukhârâ itself and 31,000 in Karshi; q.v.) and only 10,300 in Khiva.

Mangû. [See MONGâK] Mangû-Timûr, so on his coins, Mongol Môngke-Timûr, as in the article BEKE, [q.v.], written Mongîk (e.g. Rashîd al-Din, ed. Blochot, p. 199), in the Russian annals Mengutim and Mengutem, Khan of the Golden Horde (1266—1280), grandson of the Khan Bâlî [q.v.], son of Timur Tâuilân. According to Egyptian sources, the death of his predecessor Berke took place in 665 (Oct. 1266—Sept. 1267); in Safar 666 (Oct.—Nov. 1267) an embassy left Cairo which was to bring the new Kâhân an expression of sympathy and congratulations from Sultan Batârî I [q.v.]. In 667 (Sept. 1268—Aug. 1269) an embassy from the Kâhân arrived in Egypt. The exchange of embassies was maintained throughout the whole of the Kâhân’s reign. When in 670 (1271—1272) an embassy on the way to Egypt was captured by a Frankish ship from Marseilles, the ambassadors and all their goods had to be released on the Sultan’s demand. When in 680 (April 1281—1282) an Egyptian embassy left for the Golden Horde nothing was yet known of the death of the Kâhân. Only later did they learn that he was no more, having died in Rashî [1279 in the district of Akâlah (apparently nowhere else mentioned);
In death is said to have been caused by the unskilful removal of a boil on the neck. In Rashid al-Din (ed. Blochet, p. 142) the date of Mangü-Timur's death is given as 681 (Apr. 1228–March 1229); there are coins of his brother and successor Tadj-Mangü struck in this year.

The Egyptian government tried to induce the Khân to resume the war on the Persian Mongols by his predecessor Berke; but soon after his accession Mangü-Timur concluded peace with Abâksâ and never again attacked Persia. Rashid al-Din by an oversight attributes to Mangü-Timur the campaign against Arghûb of the year 689 = 1290 (in Blochet's edition in p. 140, we have read for Hûc' d'Olhosson (Hist. des Mongols, iv. 42) and Barthold (article AKBâN) have been misled by this.

On Mangü-Timur's participation in events in Central Asia down to the Kurultâi of 687 (1296) (sending an army of 50,000 men under Berkenjâr, a brother of Ber and Berke) see the article AKBâÂN. Accounts of this are found in the still unprinted parts of the DîjâmÁl Târîkhât of Rashid al-Din (reign of Abâksâ, cf. d'Olhosson, op. cit., iii. 428). The alliance between Mangü-Timur and Kâlidih, whom he was then supporting, is also mentioned later; when in 1277 two sons of the emperor Kubilai Khân were taken prisoners in the war with Kâlidih, the latter had the princes sent to the court of Mangü-Timur, from which they were later sent back to their father (Rashid al-Din, ed. Blochet, p. 83; d'Olhosson, op. cit., ii. 452 ff.).

Russian rulers appealed to Mangü-Timur for support as they had done to his predecessors and successors. Law of Galicia received assistance from him against the Lithuanians but the Tatai auxiliaries proved a great burden not only to his enemies but also to their protectors. In 1277, a Russian army was fighting in the Caucasus against the Alani under the Khân's orders. From Mangü-Timur dates the earliest extant edict of a Khân of the Golden Horde on the privileges of the Greek orthodox clergy; it is dated in the year of the Hare (probably 1267). The bishop of Sarâ, Theognostes, was sent by Mangü-Timur as an ambassador to Constantinople.

In contrast to the last two decades of the xiiith century the Golden Horde under Mangü-Timur was a great power, free from internal troubles. Coins were still struck only in the old commercial city of Buğârâ (q.v.) but, unlike those of his predecessors, in his own name not in that of the Great Khân. Of his coins, the seal of the Golden Horde appears for the first time.

**MANI**

- See ZINDIK.

**MANI** is the name given in Ottoman Turkish to popular songs in quatrains. The name is a corruption of the Arabic word *mâna*, meaning "thought, idea", and is by no means found throughout the whole area where Ottoman Turkish is spoken. In many districts isolated quatrains, like songs of several verses, are simply called *târâk*. Songs in quatrains are known among almost all Turkish peoples; they must therefore be considered to have been known to the original Turkish stock.

The rhythm of the mani is, as in Turkish popular poetry generally, sometimes purely sylabic (a definite number of syllables without a fixed caesura), and sometimes depends on the accented syllables with a fixed caesura and therefore with the order of weak and strong syllables to some degree fixed. The lines show as a rule 7 syllables (4-3, 3-4, rarely 2-3-3-2). Quatrains with all four lines alike are rare, the third line usually differs from the others (3-4, 4-3, 3-4, or 4-3, 4-3, 3-4, and so on). The original arrangement of the rhyme in Turkish quatrains is * ABIY* (two lines rhyming) which clearly shows the quatrain was originally a distich. In the Ottoman mani we have a development of this form also, with three rhyming lines (AABY). The rhyme however which connects the second and fourth lines is often fuller and more distinct than that which connects the first and second lines. Alliteration, which is highly developed among many Turks, especially in the north, is only found sporadically in the mani; it is found both as line alliteration (similarity in the initial letters of the words of a line, e.g. karâ beyan hamrammar, getâ memah bieh, etc.) as verse alliteration (similarity of the initial letters of the lines in a verse, e.g. sari güllüm yermel, semin inauf merdece, sede yeş olun diyem, sana şımpir veremem).

As regards matter, the majority of the mani fall into two distinct parts, an introduction dealing with nature, and a concluding part of a personal character. Originally the two parts must have been very closely connected. It would however be a mistake to find such a connection in all the manis, because the singers very often only improvise new conclusions to ready made introductions taken from older poems, without troubling in the least about the train of thought. The great majority of manis are tinged with eroticism, but we also find satirical ones, also soldiers' and robbers' songs in the form of quatrains. The quatrains composed on the Anatolian regicide Çakûlulj have been much admired by European scholars. Isolated, originally independent manis are now often strung together to form ballads of some length. It would therefore be wrong to regard mani and târâk as two fundamentally different classes of songs.

The number of mani current among the people is enormous. They are sung at all kinds of festivals and ceremonies, and by people over their work in the house in the long winter nights. On Hâdîres, St. George's Day (April 23), they are used as maqâl by young girls.

Very popular also among the Ottoman Turks are the so-called *gânî* mani: punning manis. These are quatrains, the rhymes of which are identical syllables but have each a different meaning.

**Bibliography:**

Collections of manis are also found in the following works: Kuno, *Türkische Volkslieder, W. Z. K. M.*, iv. (1890),
Christothemia Turcica, Budapest 1899; E. Littmann, Tschakidsch, ein Räuberhauptmann der Gigenwar, Berlin 1915; T. Towalski, Piastowscien kudowsko- łowicki i wójtostwo łowickie, Krosno 1915.

Mani, a mountainous region in western Anatolia which is famous for its ancient monastic communities.

MANISA, Magonisia (Μαγονία), in Arabic Maghniya, capital of the district of Sarya in western Anatolia.

Maghnia is a two-hour drive distant from the southern part of the river Gedi or Gedis (the ancient Hermos); on its course, cf. Tschakhach, Avis Minor, ii (1860), p. 232, estimated on the northern slope of Mount Maghnia-dagh or Yanamlar (the ancient Sipylos) which separates it from Smyrna (the distance between the two towns by the Sabunci-belki pass is only 20 miles; by rail 40 miles).

In ancient times the town "Maghnia ad Sipylos" was mainly noted for the victory won in its vicinity by the two Scipios over Antiochos the Great of Syria (190 a.c.). The town was then incorporated in the Roman empire. It flourished until the fifth century as its coins show. Maghnia is also often mentioned in Byzantine history: after the taking of Constantinople by the Crusaders in 1204 John Kolonas returned to Magnesia where he held out till 1255.

The Byzantine chief Surni Khan [q. v.] who had formed a principality for himself on the ruins of the Seljuk kingdom of Konya, took Magnesia in 1313 and the town was the capital of his dynasty for 78 years. It was in the reign of Surki Khan that Ibn Battuta (ii. 312) visited the town where he stayed in a konya of the brotherhood of the Mutfan. The town was large and beautiful, rich in gardens and with a plentiful supply of water. On the buildings erected by the Surki Khan dynasty see the article on them.

After the battle of Angora (505 A.D.) Timur ordered his grandson Sultra Muhammad to lay waste (ālibān) the district between Brusa and Magnesia and to take up his winter quarters in the latter town. The author of the Zafar-nama, ii. 466-467, 480, calls it "Maghni-stūl in the Sarya-el" [cf. Urdı-begii, p. 34; Sürık-hanı and comments on the excellence of its water-supply and the pleasantness of its climate. According to Turkish sources (cf. Urdı), Tavallsh-ı Ali Ömer, ed. Bahinger, p. 34-35; "Ailbick-paša, p. 70; Münzeo- džim-bašhi, ii. 33]. Timur restored the fiefs of Anatolia to their old holders (kayb-keyyem) but by 813 (1410) Sultra Muhammad I had retaken the region of Surki Khan [q. v.].

Magonisia became the residence (Ziyān-kum, p. 635: Ziyān-al-umma) of the Ottoman princes but for a time (1405-1425) its district was within the sphere of influence of the rebel Djünesid (son of the Ottoman governor of al-Aydınd; von Hammer, op. cit., p. 271-327). Murad II having abdicated the throne in 1444 chose Mahgusa as his place of retirement. The Ottoman offensive drew him out of it but after the victory of Warna (Nov. 10, 1444) he returned to Magnesia (v. Hammer, G.O.R.3, i. 351, 357) where the remains of his palace and gardens can still be seen. Murad III (1574-1595) and his wife also contributed to beautifying the town; cf. Ziyān-kum, p. 835: Chandler, Travels in Asia Minor, Oxford 1775, p. 207-209 and 260-268 speaks of the palace and precious jewels of Murad III) and of his foundations (tekkēs = college of arishes, luminous auxiliaries etc.).

In 1633 in the reign of Murad IV, the governor of Kars (q. v.) Ilyas Pasha rebelled and laid siege to Magnesia which was taken and plundered for three days. Ilyas was taken prisoner and the Sultan in ordering him to be beheaded reproached him with having devastated "the residence of his ancestors" (l. c., iii. 115-114).

In the xvii cent. Magnesia became the capital of the powerful family of the Kara Othman Oghlu whose authority extended from the Maonsid to the Pontus. It was not till 1844 that these hereditary chiefs, whose administration is praised by Keppel, Narrative of a Journey across the Balkans, London 1831, ii. 294-301, were replaced by a regular Turkish governor.

With the introduction of the system of vilaiets, Magnesia became the capital of the sandjak of Sara-khan in the vilayet of Aydınn (Smyrna). Simid-bey, Kanik al-Afâm, Constantinople 1898, vi. 4348 estimated the population of the town at 76,552 of whom 21,000 were Muslims, 10,400 Greeks, 2000 Armenians etc. Magnesia which is divided up by streams into 3 quarters had 25 djumā, 38 mosques, 25 mevlas, 18 tekēs etc. The kadi of Magnesia had 4 nāhibi: Amlāk, Vont-dagh Palamut and Belek. Cuinet, La Turquie d'Asie, iii., 1894, p. 523-534 gives the following as the nāhibi of the sandjak: Magnesia, Soma, Kırık-Ağhaç, Aş-Keşir, Kasaba, Gürdüm, Demirli, Sali- b, Kule, Ali-shehr, Eghine. After the reform of 1921 Sara-khan became a vilayet with 11 kadaş (the old nāhibes). The population of the new vilayet is 302,752 souls and of the kadi's Magnesia, 75,021 souls; cf. the Türkiye Dışarn-yetinçisı (Sad-i-nebi, 1926-1927, p. 926-933. In view of the movements of the population the ethnical composition of the sandjak must have undergone profound modifications.

MANSHUR (m. a.) means literally "spread out" (as in the Kur'an xvii. 14 and iii. 34: opposite maqṣūr "folded"), or not sealed (opposite maqṣūr) hence means a certificate, an edict, a diploma of appointment, and particularly a patent granting an appanage.

In Egypt in the early Arab period mansūr seems to be a name for the passes which the government compelled the felātān to have in order to check the flight of colonists from the land, which threatened to become overstocked (Ziyān-kum, as above, ii. p. 44 and 994b). In any case the Führer durch die Ausstellung (Pfyser, Erhebungen Rainer), N°. 631 (cf. also N°. 601-602) such a certificate of the year 1890 (796) is called a mansūr and in Makrī, Ḫāljī, ii. 493, we are told
document was then sent by courier (harid) or pigeon post (ṣalṭ al-adnaihāt al-bābīm) to Cairo to the government (al-abulbīl al-ilāfī). Here it was received by the postmaster (dawādar), later by the private secretary (ḥattāt al-bābīl al-adlīl) for approval, to receive the sultan's signature (ḥattat al-adlīl) and the note (ṣulūk) ("let it be written out"); see Kalkashandi, 167–199). The document then went to the Military Dictum in Cairo (al-dīwān al-adlīl), occasionally also called (al-dīwān al-adlīl), where it was filed, after what was called the murābba's file had been made out. The latter was sent to the (al-dīwān al-adlīl) and the private secretary, the head of this Dictum, wrote his requisition (ṣuṣīn) for the (al-dīwān al-adlīl) writer concerned and now finally the patent of the appanage (manṣūr) proper could be made out in the (al-dīwān al-adlīl) in Cairo, while the murābba's file in the army Dictum remained filed in the (al-dīwān al-adlīl) as ṣuṣīn (proof) (cf. Kalkashandi, vi, 201).

Full particulars are given in the formulae used in these manṣūrs and of their outer form in Shikhīn al-Dīn b. ʿAfdj Allāh, al-Tūrīf iṣṭ al-Muṣtaṣaṭ al-Ṣarīf, p. 88 sq.; Kalkashandi, xiii, 153 sqq. and Quatremaire, Histoire des Sultanis Manṣūr, p. 300 sq., note 83. There are many variants of format (ṣuṣīn, q.v.) and script according to the military rank of the recipient. Thus manṣūr for the Muḥammadan iṣṭ al-Muṣtaṣaṭ were written on ʿad-al-ṣaṣūn, for the Ṣafīban al-Tubbaṣān on ʿad al-ṣaṣūn, and for the Manṣūr al-Muṣtaṣaṣaṭ and Muḥammadan iṣṭ al-Muṣtaṣaṭ were written on ʿad al-ṣaṣūn. Many rules were laid down for the wording to be used; the text is to be shorter and less florid than in the other appointments and there are none of the usual rules about script (ṣuṣīn); an original "virgin" (muṣṣaṣaṭ al-adlīl) is recommended as the finest form of a manṣūr. Special formulae are further required for grants of appanages which were concerned with renewal (ṣuṣīn, add.), addition (ṣuṣīn, add.) or substitution (ṣuṣīn, add.). A regular signature of the sultan, such as is usual on appointments as information (ṣuṣīn, add.), is not usual on the manṣūr; instead of this the sultan writes formulae like: God is my hope (Allāhu ʿAmār), God is my Protector (Allāhu Waṣīyy), God is sufficient for me (Allāhu Ṣāliḥ), To God belongs the rule (al-Mustu ʿalā), or: God alone has grace (al-Miṣr Ṣāliḥ waṣiyy). Occasionally the manṣūr for the highest ranks (Muḥammadan iṣṭ al-Muṣtaṣaṣ and Muḥammadan iṣṭ al-Muṣṭaṣaṣ) had a ṣaṣūn (q.v., q.) at the top. The ṣaṣūn were prepared by a special official beforehand and gummed on to the finished diplomas. In Kalkashandi, viii, 165 sq. the ṣaṣūn of Naṣīr Muḥammad b. Kaṣhānī (693–741) were reproduced and described; they differ considerably from the better known formula of the ṣaṣūn of the Ottoman Sultan. After Ashraf Shābān, ṣaṣūn were no longer used on the manṣūr; these were only used for purposes of display on letters to infidel rulers.

The completed manṣūr was then again taken back by a courier from Cairo to the town concerned, e.g. Damascus and handed over to the tenant of the appanage. The inspector of the army there (ṣuṣīn al-dīwān) however first entered it in his register for he had to keep a roll of the holders of siefs in his province. Kalkashandi, xiii, 167–199 gives as examples of manṣūrs no fewer
than 26 texts, beginning with one drawn up by Muhayi T-Dum b. 'Abd al-Zahir in the reign of Khālid b. al-Walid.  

The term mağhar was also used for patrons of appointment in the Ottoman empire; but it does not seem to have been used to designate an official status or exclusively in this sense; there are however mağharī for viziers, generals, and governors (seccahat mağharī, muhāfizet mağharī, eyālet mağharī), and in the treaties of peace made after the Balkan War in 1913, it is still provided that the chief muftis may be appointed in Bulgaria and Greece are to receive their mağharī from the Şāh al-Aslām in Stambul and they have also to put forward for approval the mağharī of the ordinary muftis subordinate to them (cf. e.g. Karl Strupp, Ausgewählte diplomatische Aktenstücke zur orientalischen Frage, Gotha 1916, p. 295, 308).

The name mağharī was also applied to the pastoral letters and epistles of the Christian patriarchs and bishops. In conclusion it may be mentioned that mağhūrī in mathematical language means "prism" (varieties e.g. M. mīrzā bilobū'īx prism, M. 6ā'sīm straight prism, M. mawṣūmānī 6-ā'xī parabolic prism, M. mawṣūmānī regular prism, M. mawṣūmānī triaxial parabolic prism, M. mawṣūmānī triangular prism, M. mawṣūmānī trapezoidal prism), and in the language of the Persian poets the epithets are called "the mağharī writers of the garden" (mawṣūmānī mağharīn-i sāleẖ).

(M. W. Būrkman)

MANSŪKH [See Ninaksh.]

AL-MANSūR, ABU DHA'BAR 'ABD ALLAH B. MUHAMMAD, the second 'Abbasīd caliph. His mother was a Berber slave girl called Sulāma, his brother the Shi'ite Abu l-'Abbas al-Saffār [q.v.]. In the fighting against the Omajjads he distinguished himself and took part in the siege of Wāṣit, which had been fortified by Ibn Hubaira [q.v.], the last important supporter of Marwān. The treacherous murder of Ibn Hubaira, to whom the two 'Abbasīs had expressly promised a pardon, is however not out of keeping with Abū 'Alī's character. His brother gave him the governorship of Armenia, Aḥzābādji and Mesopotamia, which he administered till his accession. On the way back from the pilgrimage, he learned that Abu l-'Abbas had died in 'Iṣla b-Ṭāfṣa 136 (June 754) and that he himself had been proclaimed caliph. His uncle Abu 'Alī B. All [q.v.] wished to dispute the succession but was defeated by Abū 'Abdul-Malik [q.v.]. Soon afterwards the Copts had the latter put out of the way, which led to a rising in Khurāsān. The leader of this was a Persian named Suhbāb; he advanced far into Media but was defeated between Hamādhan and al-Rayy by the caliph's troops led by Dhuwar b. Mārza and soon afterwards slain. When Dhuwar also cast off his allegiance to the caliph, the latter sent an army under Muhammad b. al-'Abbās against him (138 = 755–756). Dhuwar was defeated and fled to Aḥsharūdja, where he was put to death. About the same time the Khaṭīrīs rebelled in Mesopotamia under their leader Māmūn b. Zayd b. Hāmara b. Shāhīhī who inflicted severe reverses on al-Mansūr's armies, until the rebellion was finally suppressed by Khālid b. Khazīma in 758 and Muḥammad al-Ghāfari at al-Aḥsharūdja also there was a rising (probably in 139 = 758–759). A body of the so-called Rāwandi [q.v.] who identified the caliph with God himself, went to the capital and when al-Mansūr had some of them arrested, they were forcibly rescued by their friends. But for the valiant Ma'n b. Zayd [q.v.] it would hardly have been possible for the caliph to dispose of these mad fanatics. A few years later, the 'Alīs also rebelled under their leader 'Abd Allāh b. al-Ḥassān [q.v.]. In the autumn of 762, a rebellion broke out in al-Madinah, and Muḥammad son of 'Abd Allāh was proclaimed caliph there, but in Kūsa 140 (Febr. 763). In Spain the Ommayyad 'Abd al-Rahmān b. Mu'āwiyah had founded an independent kingdom in 758 (767) and in Africa there was fighting for several years with the Berbers and Khārdjīs. It was only after the Abkhād Abū ʿAbd al-Mīr [q.v.], had been defeated by the Caliph's troops under Yazīd b. ʿAbd al-ʿAzīz in 767 that order was restored there. Yazīd remained in Kūsa as governor till his death in 780 (785). In Khurāsān a new rebellion broke out in 768–769 (775) and 770. The leader Ustāzīdāhsī declared himself caliph and gathered numerous followers around him but was defeated by Khālid b. Khazīma, who 'erected a fearful massacre among the rebels. The frontier also resumed with the noise of battle. The war against the Byzantines was continued under al-Mansūr, but was confined mainly to raids or the destruction of individual strongholds. Al-Mansūr devoted special attention to protecting the frontier by building fortresses, and the two towns of Malaṭya (Melitene) and al-Maqṣūta (Mopsuestia) were rebuilt in his reign. Several expeditions were sent against Dīlam and Taḥarīsīn in the early years of al-Mansūr's reign and after the extinction of the old line of Ishāhshūs of the Bath of Dīlam [q.v.] in Taḥarīsīn, this province too received Arab governors. In 765 (766) the Khāzars invaded Armenia, seized the town of Tiḥrīf and defeated the caliph's troops but retired again. There were also encounters with the people beyond the Oξass and in India; but these were of little importance. At first al-Mansūr lived at al-Aḥsharūdja near Kūsa, as did his predecessor; he later decided to build a new capital and in 768 (774) he founded the foundation stone of Boghdād [q.v.].  

(M. W. Būrkman)
recognise him. His career however was brief and his power unenduring: for when in 933 (1003) he died, his governor in Šan‘a' had already gone over to Yūnāf al-Dīrī. He was however the first since al-Nāṣir Ahmad, and the fourth in all to be entered — although by everyone in the lists as Imam of Yemen (but cf. on the above claimants: Munaḍjījumāt, in Sachau, Ein Verzeichnis neunzehnter Dynastien, in Abh. Pr. Ak. W., Phil.-hist. Kl., 1923, i 23).

Only for an equally short time 942-449 (1010-1013) his son al-Hāsm b. al-Mahdi was able to regain his father's office. His early death in battle is noteworthy because it produced a quite un-Zaidi belief in his return and for a period founded a special sect, the "Husnīnīya" in the name of that consecrated imām. Some years later another son of al-Kāsim, Liǧārī, began a struggle full of vicissitudes with the other 'Allid claimants to the imamate, which was complicated by a party grouping of the tribes of the country: about 453 (1061) San‘ī fell to the Iṣmā‘īlī Shāhids and then to Hamdānī chiefs. Only in 545 (1150) Aḥmad b. Sulaimān al-Mutanawwakhīhī, whose genealogy also goes back to al-Nāṣir Ahmad b. al-Hāfd but neither through the Khāleṣī nor the Muḥtārī, succeeded in restoring the imamate for a long and brilliant period. For the history of the following centuries, which were full of incidents and individual imāmas of importance cf. the article AL-MANṣūR AL-DIN AL-AllāH a. f. The family of Yūnāf al-Dīrī remained victorious in the end. His descendant in the twelfth (11th) generation: IL. AL-MANṣūR AL-DIN AL-AllāH (cf. supra, p. 1109), was the founder of the modern Yemeni dynasty. At the end of 1005 (1597) he appeared in the field and held his own against five Turkish governors. Not only did he find opponents and people he could not trust among his own Zaidis, who went over to the Turks but among the latter the change of governor frequently led to trouble and even to mutiny: the tribes were an incalculable element; the Turks were often able to call to their help the Iṣmā‘īlīs (Karagjstāns), always hostile to the Zaidis. The lack of equipment was a great hardship to the Imām; for example in one battle he is said to have mustered only 20 rifles against the Turks' 800. It is very difficult to get a clear idea of this minor war but the following are the main facts that emerge: After the proclamation of the holy war at Djiḍijī al-Šihrī in the northern district of Shāhī al-Šarqī at the end of Maharrar 1006 (Sept. 1597), al-Kāsim conquered the highlands of al-Himīn and al-Shāfī‘a, the latter with the fortress of the same name, which had been a bulwark of the Zaidis for 300 years with occasional interruptions; turning to the southeast he established himself in the mountains of Ḥāḍir al-Shāfī‘ī (also called Ḥāḍir Bandi Aṣī; cf. the article gADIF in the important Thulī [see IHH] in the N.W. of Šan‘a'; his followers then rose throughout the land and for a time even cut off the Turkish communications with the sea. But after two years, the collapse began before General Sinīn: by the end of 1010 or beginning of 1011 (1602) he had to flee from Shāhīra. But in 1605 again he rebelled against Sinīn in the district of Shāhīra who had been appointed governor this time from Shāfī‘a; he also took Ša‘da. After Sinīn Fadl was recalled, al-Kāsim was able to induce his successor Liǧārī Fadl to make a truce, which
was observed for about ten years with a few interruptions especially on the arrival of new governors in 1022 and 1025. After renewed fighting a formal peace in 1028 left the imām in possession of the four separate areas: around Shaḥrūz, around Khāshab in the east, around Saʿda in the north, and lastly in the S.W. of Saʿdir around Ḥaima [q.v.], the inhabitants were however for the most part not Zaidi but Ṣahābī. Al-Kaʿīsam died in Rabiʿ I 1029 (Feb. 1620). In the middle of 1038 (beg. of 1629) Hādar Paḥa had to evacuate Saʿdi before his son and successor al-Muʿayyad Muḥammad.

Al-Kaʿīsam b. Muḥammad was a conscientious Zaidi, as a youth when a fugitive before the Turks he had studied with many spiritual authorities; he composed numerous appeals for the rebellions; works of a legal and dogmatic nature by him still exist.

(R. STROTHMANN)

AL-MANṢŪR, the sixth ruler of the Ḥammādī dynasty, succeeded his father al-Nāṣir in the year 481 (1085). The latter had witnessed the rise to the height of its power of the dynasty of somewhat artificial development of Ḵāl’s Bānt Ḥammād [q.v.], as a result of the destruction of Ṣarawān by the Arabs. Two years after the accession of al-Mansūr, the Arabs, who had advanced towards the west and who had spread over all the region adjoining the Ḵafā, began to make existence there difficult. The prince moved his capital from Ḵafā to Bougie which he considered less accessible to the nomads; it should be mentioned that his father al-Nāṣir had already made preparations for the exodus by transforming a little fishing port into a regular town, which he called al-Nāṣiriyah and which was to become Bougie, while on the other hand, the Ḵafā was not completely abandoned by al-Mansūr and he even embellished it with a number of palaces. The Ḥammādī kingdom had therefore at this time two capitals joined by a royal road.

After taking up his quarters at Bougie, al-Mansūr had the first place to quell the revolt of one of his uncle, Belhar, the governor of Constantine. He sent against the rebel another Ḥammādī Emir, Abīl Yakhān. The latter after his victory was given the governorship of Constantine and shortly after he in his turn as well as his brother, who had been given the governorship of Bone, rebelled. These risings over which al-Mansūr, thanks to his energy, was triumphant, brought to the side of the rebels of the Ḥammādī family the Zirids of al-Mahdiya, who wished to get back some power in Barbary, the Almoravids of the Maghrīb, who wished to extend towards the East and the Arabs who were always ready to join in the feuds of their powerful neighbours.

Al-Mansūr was, on the other hand, led to oppose the advance of the Almoravids who were curiously allied with the traditional opposition of the Zenātīs [q.v.]. With the probable object of disarming the opposition al-Nāṣir and al-Mansūr had married two sisters of Mākhūkh, the chief of the Banū Wānāni, at that time the most powerful of the Zenātī group. This alliance did not hinder the time-honoured feud from breaking out again. It became more acute when al-Mansūr murdered his wife, the sister of his enemy, The latter then asked for support from the Almoravids.

From Tlemcen, where they had been installed for more than twenty years, the Almoravids had after many attempts, endeavoured to expand towards the East at the expense of their brethren of the same race, the Ṣanḥādja b. Ḥammād. Al-Mansūr had twice reduced them to impotence. It was at this time that the murder of the sister of Mākhūkh by al-Mansūr drove the Wānāni chief into an alliance with the Almoravids of Tlemcen. The alliance formed in this way was a great blow to the Ḥammādī kingdom, Algiers was besieged for two days; Asīr was taken.

The fall of the latter fortress, the oldest stronghold of the family, was bitterly resented by al-Mansūr. He got together an army of 20,000 men, composed of the Ṣanḥādja, the Arabs and even the Zenātīs; he marched against Tlemcen, met the governor Tāḥfūn b. Tinʿamer to the North-East of the town and put him to flight. Tlemcen was not spared even at the supplication of Tāḥfūn’s wife, who invoked the ties of relationship uniting them with the Ṣanḥādja (496 = 1104).

After the defeat of the Almoravids, al-Mansūr severely punished the Zenātīs and the rebel tribes of the Bougie district, whom he forced to flee into the mountains of Kabylia.

Thus al-Mansūr seems on the eve of his death (498 = 1104) to have thoroughly re-established the power of the Ḥammādīs. According to a tradition, which is not above suspicion, recorded by Ibn Khalduhn, the two capitals owed very important buildings to him: Bougie, the Palace of the Star and the Palace of Salvation; the Ḵafā, the government palace and the Kaṣr al-Mansūr the beautiful donjon of which is still in part extant.

(G. MARÇAIS)

AL-MANṢŪR, Ahmad b. Muḥammad, born in 1549, seventh ruler of the Ṣaḍiyan dynasty of Morocco, son of Sultan Muḥammad al-Mahdī and Sahāb al-Rahmāniya. His victories and his wealth earned him the epithets al-Mansūr and al-Dhahabi.
He was still a child when on the accession of his eldest brother 'Abd Allâh (1557) he accompanied into exile his other brothers 'Abd al-Malik and 'Abd-al-Mu'min, who went for safety from Sijilmâsâ to Tiemcen. The fugitives were potential claimants to the throne of the Shartfons, by virtue of an agreement concluded in the lifetime of their father by which the one to inherit the power was not the Sultan's heir but the eldest of the family. 'Abd al-Mu'min was assassinated at the instigation of his nephew Muhammed b. 'Abd Allâh called al-Mutawakkil and Aḥmad retired to Algiers to join 'Abd al-Malik who was already there. He was henceforth always a loyal lieutenant of his brother whose ability he fully realised. The death of 'Abd Allâh in 1574 gave the exiles the opportunity to assert their rights. Pretenders and rebels could always rely on the support of the natural enemies of every reigning shârîf: Spain and Turkey.

Philip II had remained deaf to the repeated appeals of 'Abd al-Malik, who appealed to the Grand Turk and in 1574 went to Constantinople where his marriage with the daughter of the renegade al-Hâjî[M] Morato assured him of patronage. In Algiers Aḥmad conducted successful negotiations with certain Moroccan notables, mainly in Fès. It was perhaps he who gave the signal when an expedition appeared to have some chances of success. He was at his brother's side when the latter entered Morocco in 1576 with a Turkish army led by Ramadân Pâsha and helped him to raise troops in the region of Tiemcen. We do not know exactly what part he played in the battles of al-Rukn and al-Sharrij which gave Morocco to 'Abd al-Malik but we know that he was the task of pursuing the dethroned sultan on his flight to Marrâkûsh.

One of 'Abd al-Malik's first acts was to recognise his brother as his heir. It seems, however, that he did not show the latter as much esteem as affection and he had left in Constantinople, with his wife, his son Isma'il. But he was, according to his policy. In these circumstances Aḥmad naturally had the vice-royalty of Fès. He did not stay there long, for he was recalled to save Marrâkûsh from a return of al-Mutawakkil. Taking command of one of the three armies charged with pursuing the vanquished sultan in al-Sûs and the Atlas, he does not seem to have found an opportunity for a decisive military success; he returned to his governorship while Muhammad was driven to seek refuge behind the walls of Ceuta.

In June 1578, 'Abd al-Malik summoned him with all his forces to Kaşr al-Kabîr (Alcarnaguir, q.v.) to stop the advance of the King of Portugal's army. The latter had foolishly sought to realise the dream of conquering Morocco cherished by John III. When Muhammad b. 'Abd Allâh after vainly appealing for help to Philip II, turned to Sebastian, he at once received a favourable reply. A large army, with about 20,000 effective fighters left Portugal in June, headed at Tangier, crossed the Strait of Giribaîn, and went to the cities of Sûs, which 'Abd al-Karîm b. Tûda had just relieved, and proceeded by land towards Larache. The Moroccan forces coming from MARRAKESH and Fès met them at al-Kaşr. Aḥmad found his brother seriously ill, poisoned by the şâ'id of his staff, it is said. The battle was fought a few miles from al-Kaşr on Aug 1578. Sebastian's men, abnormally led, having exhausted all their provisions, fought with their backs to the river of the Wâdi 'Al-Makhlûsîn. The šârif arranged his army in a crescent. In about 5 hours the Christians were annihilated by the Moorish cavalry. 'Abd al-Malik died in his litter during the battle. Sebastian was killed or committed suicide and al-Mutawakkil was drowned. That evening Aḥmad henceforth known as Aḥmad al-Mansûr was proclaimed emperor.

Elegant, cultivated, very learned in religious matters, more a man of the council-chamber than of the camp, he was succeeding a popular and fearless ruler, of exceptional energy, who having acquired a taste for innovations in Turkey had begun to introduce them, perhaps too eagerly, into Morocco. Designated as his successor by 'Abd al-Malik, and benefiting by the great reputation left by his father, Aḥmad al-Mansûr was rapidly able to overcome the difficulties which awaited him, as they did every sovereign of Morocco on his accession: mutinies of the troops, demands from allied tribes and the Zawiyas, and agitation among the Berbers. While in Spain it was feared that the Christian garrison would be attacked and swept away, al-Mansûr had to hurry to Fès to make himself recognised as ruler there, to put down unrest and behead a few notables. He inflamed the people by playing the skin of Muhammad al-Mašîkh to stuff with straw in the regions of al-Sûs and the Atlas, where the influence of the former sultan had survived for a brief space his tenure of the throne.

Aḥmad al-Mansûr very soon sought means of enriching himself. The booty taken in the field of al-Kaşr, the work done by the prisoners reduced to slavery, the ransoms extorted from the gentlemen gave the šârif and his people enormous sums. The Sultan kept the nobles for himself, so were soon brought to him and he set about bargaining about them. In a little time, less than a year, the ransoms had been arranged.

The haste displayed by foreign courts to congratulate the Moor on his triumph was remarkable. Ambassadors thronged to Marrâkesh; those of Spain and Portugal bringing magnificent gifts. Aḥmad al-Mansûr had the sense to understand that these presents were the most he was likely to get from European action. For its neighbours, Morocco was a weak and troublesome state. The cupidity of its neighbours was its best protection. Many reasons urged the Turks to obtain a footing there: the cupidity of the beglerbegs of Algiers ambitious of extending their powers to the west; the naval basis of Mazagan of al-Ma'mûn and of Larache; the formal promises that had been given by 'Abd al-Malik, when he was begging assistance, and there was always the troublesome question of spiritual supremacy, as the Turkish Sultan did not admit that the Moorish šârif had an authority in religious matters as great as his. To extricate himself, al-Mansûr played the usual game, following the example of his brother, who had made advances to the kings of Spain, Portugal and France, to the Queen of England and to the Grand Duke of Tuscany; he turned without ceremony from the Grand Turk and threw himself into the arms of Philip II, overwhelming the Catholic King with demonstrations of friendship, of which the most significant was the return without ransom of the body of Sebastian; he was even promised Larache. The quarrel with Turkey was soon to come to an end. 'Akk, Beglerbeg of Algiers, exerted all his influence to get war declared. Aḥmad al-Mansûr
Duke, who freely received Moors in Tuscany and did all he could to develop commerce between the two countries, with Elizabeth, with the English, French and Dutch traders, relations were close. Sugar was exported from the South and Morocco also supplied corn in good years, gold from the Siāla, saltpetre, copper and hides. It imported principally cloth and for Al-Manṣūr himself, the materials for his buildings. From the Shariah court there went undefinable surveys, at once ambassadors, spies, procurers of jewels and of women. But on the other hand especially interested the Sharif, contraband of war and the sale, advantageous for every one, of the cargoes and slaves brought in by the corsairs. The English were the most pitiful contrabandists and the trade with Morocco developed so well that in 1585 the Barka Company was founded with a monopoly and a regular constitution. But Ahmad al-Manṣūr was not too fond of regular traders. The many Christians settled in Morocco must be considered to have been adventurers. Quasi-prisoners of the Sharif and his people, they were able to realise illusory fortunes, always liable to extortions. In 1585 bare appertences were numerous in Morocco and the royal company could not survive. The captives of the sovereign drove off many other foreign traders.

These economic relations gradually developed into political ones. It was to exercise pressure on Spain that Ahmad al-Manṣūr pretended to submit to the wishes of a combination of Dutch and English. After the destruction of the Armada in 1588, he entered without hesitation into the English camp; he received at his court Don Christoffo, son of the Portuguese pretender Don Antonio, and agreed to a loan to Elizabeth. Then he turned back again. The taking of Cadiz in 1596 again influenced his feelings; he spoke of an alliance and made definite offers. Nothing resulted from these demonstrations, except a painful impression caused by the cloak after deception. So long as Elizabeth was alive, relations were friendly, for the two rulers had kindly feelings for one another, but James I, on his accession, at once showed a much less benevolent attitude towards the Shariah court.

It was in the direction of the Siāla that Ahmad al-Manṣūr gave reign to his desire for glory and conquest. His troops had had some experience in the Sahara. In 1581, the vases of Tult and Tīgārīn, which had long been free from the Shariah yoke, had been conquered brilliantly. In 1584 an unsuccessful expedition had ended in the disappearance in the desert of a large army which had not even reached Teghān. In 1590, having sought a quarrel with the usāba Ishāk over the ownership of the salt mines of Teghān, al-Manṣūr persuaded his Council to go to war; a little army under the Pasha Dājūlībīr crossed the desert and destroyed the Siālan empire. The occupation of the conquered country was nothing but systematic plunder and massacre. The Shariah collected great wealth there; he received the congratulations of the Powers and gained a prestige which still survives; his lieutenants also enriched themselves. With remarkable regularity, almost every year, reinforcements set out for Gago and very often reached it. Fourteen years brought gold, wealth and slaves back to Marrākush. The most famous of the prisoners was the Jezzi Ahmad Bāhi (q.v.) for whom Marrākush was a gilded prison where he taught quite freely. The
Sudan was drained dry. In 1600 al-Manṣūr saw the necessity of reorganising trade there but does not seem to have succeeded. Morocco was, on the whole, prosperous during his reign. The first Sa’dians had done much for the development of commerce and agriculture. Sugar factories were built up and down the country which were the Sultan’s private property but were farmed out by him to Jews and Christians. Trade was active at the ports. The profits from the sale of captives or their labour contributed to make the nobles wealthy and through this to the prosperity of the country. Besides the industrial monopolies, the normal revenue came from the customs duties and the taxes established by Muhammad al-Mahdi, which al-Manṣūr heavily increased. The collection of these taxes provoked murmurs of discontent and served as an excuse for military demonstrations which maintained good order in the country. Al-Manṣūr had also a considerable army (he never formed a fleet) composed of excellent troops, Moors from Spain and particularly renegades, a nursery for jazīrīs and officers of ability and energy. He was rich enough to pay them well. All this contributed to make rebellions few and they were always quickly and harshly suppressed by the Sharif’s lieutenants: the rising of the people of Sakāṣa, stirred up by Māwīlī Dāwūlī, son of ʿAbd al-Muʾāmmīn in 1581 and the rebellion of the Berbers of Amīzīnt in 1597. The throne itself was never seriously threatened except in 1596 when al-Nūṣir came from Spain and landed at Mālīla. Starting without resources, for Philip II would do nothing for him, al-Nūṣir nevertheless proved a redoubtable enemy for gathering round him all those who were dissatisfied with the rule of al-Manṣūr and raised troops from the Barānsī (Braves), always ready to rebel and who had until lately been vassals of the Turks. He took Tānī and tried to raise the Rif and the country around Fès. Defeated at al-Rukn on Aug. 3, 1595, he held out till May, 1596. Decisively defeated at Taghātī, he was put to death. Al-Manṣūr had rarely need to leave Marrākush and he did not like to do so. His mother had acquired a great reputation for her pious foundations. He himself, six months after his accession, began the building of the palace of al-Baḍī‘ which was finished in 1602. Marble for it came from Italy and artists from Spain, and Marrākush became one great workshop. A splendid palace arose, sumptuous pavilions surrounded by beautiful gardens in which stood numerous fountains. Foreigners were fitted out and the Sharif displayed his generosity specially on the occasion of religious festivals: he displayed great pomp and ceremony. His wealth earned him great fame abroad and it was no doubt to it that he owed most of his glory. At his court the principal posts were held by renegades: Jews who had charge of his finances, Christians who conducted his private trading for him, and the agents of foreign consuls. Al-Manṣūr was one of the richest and most courted rulers of his time. Spain kept a regular ambassador or a representative permanently at Marrākush; France had a consul there; there was a constant passage of embassies between the Sharīf and the Señoríle Parte. The palace of al-Baḍī‘ was destroyed by Mawīlī Imaqīl. The mausoleum in it still remains, a very fine specimen of the art of a decadent period.

Towards the end of his life al-Manṣūr was thinking of creating a new Marrākush on the model of Fès. ʿAbd al-Manṣūr at first ruled as an autocrat. His orders were clear, his decisions rapid and sometimes, as might be expected, drastic to cruelty. His intimates, the jazīrīs Rūḥī, a Jew, whom we only know from European sources and ʿAzīz, seem to have been his secretaries, like al-Fīḥīsī, his biographer and poet-laureate whose works have not survived. The Paulīs ʿRājīm, very powerful in the beginning of the reign, acquired such influence that the Sharīf had him beheaded in 1581. In time the notables acquired a great deal of independence and the Sultan hardly dared check their abuse of their power; two factors caused him much anxiety, the anti-French and audacious ʿAbd al-Karīm b. Tuda and his own son Abū Fāris. By a concubine, al-Khazīrnānī, al-Manṣūr had two sons, al-Shaikh and Abū Fāris, and by his wife ʿAbālī ʿAbū I-Iṣān was killed in 1594. In 1579 he had designated as his heir al-Shaikh, called al-Maʿmūn who held the vice-royalty of Fès. The remainder of Morocco was divided into governorships under other princes. These were several times rearranged; Abū Fāris, having considered everything, remained at Marrākush near his father to be ready in case of his death. In Fès, al-Maʿmūn, supported by his favourite Munṭaṣafī, conducted himself like an independent ruler. He had displayed his gifts of energy, leadership, and bravery on the occasion of al-Nūṣir’s escape in 1595; living in great pomp, beloved by his troops, he was undoubtedly a cause of anxiety. His father allowed himself to be led by Abū Fāris. The conflict broke out in 1598. Forced to sacrifice his favourite, he threw himself into prison and then half pardoned, al-Maʿmūn had to renounce all hope of winning in the struggle against Zāīdat who was supported by Abū Fāris. After 1600 he sought support from Spain and Algiers.

Under ʿAbd al-Manṣūr, the dynasty attained its zenith. But it is hardly correct to say that the decline of the Sa’dians only dates from the death of the great Sultan. After the conquest of the Ḍmūn portions, the anarchy reigning in Algiers, the weakness of Spain in Europe, the death of al-Nūṣir, the conversion to Christianity of another pretender, al-Shaikh, Morocco was rich, seemed powerful and the Sharīsīs throne stable. ʿAbd al-Manṣūr, by not being able to arrange for his own successor, nor even to keep his son in obedience, gave his country the chance to destroy itself. This process began under his own eyes, He had gone to Fès to try to reconcile his children and put through the appointment of Abū Fāris as heir apparent when the plague carried him off in 1603. Civil war broke out over his dead body. He had passed the last few years of his life wandering about living in a tent, shifting his camp every ten days, driven from Marrākush by the plague, which had begun to rage in Morocco in 1598.

(C. Fonse-Brentano)

AL-MANSUR IBN ABI 'AMIR, a famous hākim of al-Andalus in the tenth century A.D., was the amanuensis of the Christian chronicles of medieval Spain; his full name was Ibn ʿAmir Muhammad b. ʿAbd Allah b. Muhammad Ibn ʿAbi ʿAmir. He belonged to an Arab family which had settled in the Iberian peninsula at an early date: one of his ancestors, ʿAbd al-Malik al-Maʾsūrī, had landed there with Thārīk [q.v.] and settled at Torrox in the province of Algeciras where he had founded a family. Al-Mansūr's father, ʿAbd ʿAmir ʿAbd Allah, was a jurist noted for his knowledge and piety who died on his way back from the pilgrimage at Tripoli in Barbary at the end of the reign of the Caliph ʿAbd al-Rahmān III al-Nasir (cf. Ibn al-ʿAbbās, Tahābil al-Sīla, B.A., v—vi, NR. 1351, p. 437—438; al-Maḥāfīr, Anadīlec, l. 904).

While still quite a young man, Muhammad Ibn ʿAbi ʿAmir conceived great political ambitions; they were to dominate his whole career. After studying in Cordova and holding a minor office with the qāḍī of the capital, Muhammad b. al-Salām, he entered the service of the Omayyad court (in 356 [969] as superintendent of the estates of a princess of Basque origin, ʿUbdh, the wife of the Caliph al-Hakam II and his son ʿAbd al-Rahmān, who had just been born. Ibn ʿAbi ʿAmir was not long in making his persona grata with this princess and it was without doubt on the intervention of the latter that the young superintendent found himself within two years the holder of the new offices of superintendent of the mint, treasurer and administrator of intestate estates. A few years later (in 358 [970]) he was appointed qāḍī of the district of Seville and Niebla. In 361 [972] the Caliph al-Hakam II gave him command of a section of his police corps (shārtā).

All these offices, combined in the person of Ibn ʿAbi ʿAmir assured him a considerable income and soon enabled him to lead a very luxurious life in Cordova. He built himself a palace in the aristocratic quarter of Rūṣdā and his generosity, courtly disposition and his splendor soon placed him in the forefront of the dignitaries of the Omayyad court. In a few years he had filled the first part of his programme: to become popular and indispensable, to make numerous friends, ready to support him on the day on which he would begin his attempt on the throne of the caliph.

Ibn ʿAbi ʿAmir very soon realised that it was not sufficient to be popular in Cordova but that he had also to create reliable friends among the generals of the Caliph's armies. The circumstances of the time were peculiarly in his favour. Al-Hakam II, following the example of his predecessor ʿAbd al-Rahmān III, had his North African policy and his armies were busy suppressing a Maghribi revolt which had broken out as a result of an expedition of reprisal sent against the petty Idrīsīd dynasty of Tangier, ʿHasan b. Gannūn. The Omayyad troops, under the orders of the general Ghālib, were sent to dethrone all the petty Idrīsī rulers of Morocco who were more or less vassals of the Fāṭimids. This expedition was crowned with success and ʿHasan b. Gannūn was obliged to take refuge in a fortress of the Rif, ʿHadżrat al-Naṣr, in which Ghālib besieged him. But the Spanish army in Africa was a heavy burden on the treasury of the Caliph. Ghālib had distributed money recklessly among the chiefs of the Berber tribes of the North of Morocco in order to buy them over. Al-Hakam II decided to send over a controller-general of finance and he chose Ibn ʿAbi ʿAmir who set off with the title of chief qāḍī (ḫāṣib al-ḥaqāʾiq) and exact instructions. He carried out his very delicate task with untarnished tact. He returned to Cordova at the same time as the army. When al-Hakam II died, leaving the throne to his young son ʿHishām in 366 (976), the new Caliph at the same time as he appointed ʿAbd al-Rahmān the favorite vizier of his father, ʿAbd ʿHasan ʿAlī b. ʿUthmān al-Muṣṭaffa, appointed Ibn ʿAbi ʿAmir as the latter's vizier. The ambitious minister now worked unceasingly to get rid of his chief, al-Muṣṭaffa. In the first place he was able to reduce to nothing the considerable power which the Slavs (Ṣaḥḥaṭa, q.v.) had in the Caliph's entourage. In Cordova they formed a body of mercenaries who guarded the royal palace, and at this time their leaders were two of their number, Fāṭiḥ al-Naṣīr, grand master of the wardrobe, and Dāwūdar, grand goldsmith and chief falconer. On the death of al-Hakam they had attempted to oppose the proclamation of ʿHishām who was still a child and to put on the throne of Cordova his uncle al-Muṣṭafa. The latter was slain at the instigation of al-Muṣṭaffa and it seems likely that Ibn ʿAbi ʿAmir played an active part in the plot which ended in this murder. In any case very soon after the accession of ʿHishām II as a result of the rigorous measures taken against them, the Slavs lost all influence at the Omayyad court to the great satisfaction of the people of Cordova who had long suffered from their abuses. Ibn ʿAbi ʿAmir also gained in popularity, still further increased when he displayed for the first time the possession of military talents which had not been suspected.

A little later he succeeded in getting the command of an expedition against the Christians of the North who had taken up arms against ʿĪṣām as soon as al-Hakam II had fallen ill. Setting out from Cordova in Ṣaḥīb 366 (Feb., 977) he laid siege to the fortress of los Ríos in Galicia and returned to the capital with considerable spoil. He then cultivated the friendship of the aged and
distinguished general Ghâlib, governor of Madinat Sûlim (Medinaceli, q.v.), and obtained his help to bring about the fall of the hâjîlî al-Mu'ajjał. Ghâlib on the intervention of Ibn 'Abî Amir received the much coveted title of lîn il-futûrsâtiin and the command of the forces on the frontier in the expeditions against the Christians. This friendship was strengthened in a new campaign in which Ibn Abî Amir commanded the troops from the capital alongside of Ghâlib. This expedition was again crowned with success and earned Ibn Abî Amir a new and honourable office, that of commandant of Cordova in place of the son of al-Mu'ajjał who was dismissed. Al-Mu'ajjał, conscious of the danger which threatened him, then tried to play off Ghâlib against Ibn Abî Amir but this was labour lost. The young minister even became son-in-law of Ghâlib who gave him the hand of his daughter Assâ. A few months later, al-Mu'ajjał and the members of his family, who still held offices at the court, were dismissed and their property confiscated. On the same day Ibn Abî Amir was appointed hâjîlî. With his father-in-law, Ghâlib, he was at the head of the administration of the empire.

It was not only the plots he had woven with success nor his personal ability that had enabled Ibn Abî Amir to advance so rapidly in his career. It seems very probable that the princess Şuhî, widow of al-Hakam II and mother of the reigning Caliph, was the mistress of the former superintendent of her son’s estates. This liaison was not unknown to the Cordovans and produced bitter criticisms of the princess and her lover. Public opinion, which had at first been so favourable to the hâjîlî, began to be hostile to him. A plot to overthrow Hîshâm II and put in his place another grandson of Abî al-Rahîm III was prepared but halted in the bud. The Cordovans jurors then spread the rumour that Ibn Abî Amir was devoted to philosophy and that his orthodoxy therefore was quite nominal. He proved them wrong. Ibn Abî Amir did not hesitate to burn from the splendid library formed by the cultured al-Hakam II all the books dealing with branches of knowledge prohibited by the ‘Ulama’. He conciliated them by this act of vandalism the gravity of which can hardly have escaped him. But with his absolute and unfettered ambition nothing which might prevent him attaining his object was allowed to deter him.

But the young Caliph Hîshâm II was now growing up. He had to be prevented from taking an active part in the conduct of affairs. Business was then conducted in the Caliph’s palace in Cordova. In order to set aside the ruler finally, Ibn Abî Amir in 368 (978) decided to build near the capital a regular town for administrative purposes. This was al-Madînat al-Zahîra [q.v.] which in a few years became an important city at the very gates of Cordova. As to Hîshâm, he then began the life of a recluse, either at Cordova or at Madînat al-Zahîra, which was to last throughout his reign. At the same time as he settled the problem of the possible intervention of the ruling prince in the affairs of state in a manner as energetic as it was unscrupulous, Ibn Abî Amir was reorganising the army and inaugurating a new policy in the country. The Omayyad army, in the form in which it was then constituted, was recruited in the country itself and the permanent bodies of mercenaries were not large. Ibn Abî Amir required new ones; this is why from now on till the end of his life, he appealed for Berber volunteers from the north of Morocco and Al-Hisâya. At the same time he realised that the occupation of certain parts of the Maghrib by the Omayyad was only a source of annoyance to the Caliph’s treasury and that any plan of territorial expansion in that direction would be disastrous to the ruler of Cordova. He therefore abandoned all theseprojects, retaining in Africa only one of the keys of the Strait of Gibraltar, the citadel of Ceuta. The administration of the rest of the country he handed over to petty local dynasties under the nominal suzerainty of Cordova. Along with the Berber troops in his pay, Ibn Abî Amir formed other corps by recruiting Christian mercenaries from the north of Spain, from Leon, Castille and Navarre. He was able by his generosity and attentions to secure the complete devotion of his new soldiers.

Having thus a strong and veteran army at his disposal, Ibn Abî Amir renewed with ardour the old feud against the Christians on the frontiers of the empire. He first of all got rid of his father-in-law Ghâlib, whom he had displeased by the manner in which he had upset the old military organisation of the country; then he undertook in 371 (981) an expedition on a grand scale against the kingdom of Leon. He took and plundered Zamora, where he took 4,000 prisoners. The King of Leon, Ramiro III, then made an alliance with Garcia Fernandez, Count of Castile, and the King of Navarre. But all three were defeated by the Muslim general al Rueda to the south-west of Siviance and this town itself was taken by him. Ibn Abî Amir continued his advance on the town of Leon and inflicted another defeat on Ramiro III. The return of the Hâjîlî to Cordova was a regular triumph and it was on this occasion that he took the honorific ḥâbâb of al-Mansûr bî’lîth, "the victorios in God".

All powerful at Cordova and a successful general, al-Mansûr Ibn Abî Amir was to devote the rest of his life to an unceasing war on the Christian frontiers and to increasing considerably the territory ruled by the Muslims in the Peninsula. After his defeat, the nobles of Leon had deposed Ramiro III and proclaimed in their place Bermuda II. The latter finally found himself forced to seek al-Mansûr’s help and to recognise him as suzerain. Al-Mansûr then decided to make an expedition into Catalonia in 374 (985): he defeated Count Borrell and stormed Barcelona, which he sacked. According to Ibn al-'Abbâr, it was the Amirid’s twenty-third campaign.

Ibn Gannûn, the poet Idrîsid dynasty in the north of Morocco having again rebelled against Cordova, al-Mansûr sent his cousin Ibn 'Ashkalûdja to subdue him. Ibn Gannûn surrendered on being promised his life. But al-Mansûr had him executed along with Ibn "Ashkalûdja whom he accused of having plotted against him. This breach of faith and brutal execution having produced a reaction of feeling in the capital, al-Mansûr to rehabilitate himself undertook a pious work: in 377 (987) he extended the cathedral mosque of Cordova which had become too small. Eight new naves were built on the east and the western wall of the hall of prayer and of the qûmân was moved out 150 feet. The Arab historians say that al-Mansûr made gangs of Christian prisoners do this work, for the greater glory of Islam.
In the same year the war against the kingdom of Leon was resumed. The Muslim troops, that al-Manṣūr had sent there, had oppressed the country and Bermuda II had finally driven them out. Al-Manṣūr, punished his boldness with the greatest rigour. In two campaigns several months apart, he took Oviedo, which he laid waste, Leon which he left completely in ruins, and Zamora. The Counts of Leon had then to lay down their arms and submit to al-Manṣūr and Bermuda II was only left possessions very much reduced in extent.

The campaigns that followed were again directed against the N.-W. of the Peninsula. The best known is that of St. Jorge de Campoamor in 387 (997). This famous sanctuary of western Christianity (cf. the article SANTO VÁLKB) was taken by the Muslim troops on the 2nd July (1084 August) and only the tomb of the apostle was spared, by order of al-Manṣūr.

The last expedition against the Christians dates from the year 1003. Its object was Castile. Al-Manṣūr took the capital and destroyed the convent of San Millán de la Cogolla. But on his return from the expedition, he fell ill and died at Madrid in the 27th Ramadan 392 (Aug. 10, 1002). He was buried in this town.

The last years of the life of al-Manṣūr in spite of his successful career and victorious expeditions had been marked by events which might have been fatal to him if he had not once again displayed an iron will and extreme violence in the suppression of plots hatched against him. The few attempts that were made on behalf of Hishām II to regain for him the power, which had been betrayed by his first ministers was in vain. In 381 (991) al-Manṣūr gave up his title of Ḥāfṣih in favour of his son Abū al-Malik. Five years later he assumed with an undaunting worth of him the princely title of malik kirmā "noble king" and reserved for himself the title sayyid "lord". The only thing that he did not dare to do or could not do was to announce the overthrow of the Omeyyad caliphate and the constitution of an Amīrid caliphate in its stead. He arranged however for the power to pass to his heir after him, and it was his son Abū al-Malik al-Manṣūrī who succeeded him on his death and he continued for a few more years the destinies of the Muslim empire in Spain.

Various judgments have been passed on al-Manṣūr. His lack of scrupulosity has been emphasised and the often criminal means which he used to attain his ends. His career is nevertheless an extraordinary one. This dictator was undoubtedly one of the greatest men of affairs that Islam has ever produced and under his "reign" Muslim Spain remained the great nation, which in the caliphate of Abū al-Rahmān III had shown itself one of the most remarkable centres of culture and civilisation in the medieval west.

**MANŠÜR v. NÜH, THE NAME OF TWO SÁMMÁN RULERS:**

1. MANŠÜR b. NÜH I (Abū Saʿīd), ruler of Khorásan and Transoxiana (359—363 = 969—976) succeeded his brother Abū al-Malik b. Nūh (q.v.). Ibn Hāshān was able to describe the internal conditions of the Sámmān kingdom under Manṣūr as an eye witness; cf. especially ib. G. A., i. 341: Manṣūr b. Nūh; p. 344—45 on the character of Manṣūr the justest king among our contemporaries, in spite of his physical weakness and the slowness of his frame. On the virile Hāshān, see saʿīd where also information is given about the Persian version of Tabari's history composed in 352 (964) by or by orders of this vizier. On the rebellion of the commander of the Sámmān bodyguard, Al-Teqī, and the independence kingdom founded by him in Ghazna and on the establishment of Sámmān rule there in the reign of Manṣūr and the son and successor of Al-Teqī, Muḥammad b. Abū Isḥāq (cf. Abū Isḥāq, IBRĀHĪM) see see ABBASI and IBRAHĪM, in Barthold, Der islamische Iran, G. M. S., New Series v., p. 551, note 4, Abū Isḥāq, Towifūk should be read for Isḥāq b. Brāthim (this passage is misunderstood in the Russian original), in other directions also in the reign the Sámmān kingdom prospered in its foreign affairs; the fighting with the Byūjids (q.v.) and the Byzantines was a rule victorious.

2. MANŠÜR b. NÜH II (Abū ʿI-Hārūk), ruler of Transoxiana (387—389 = 997—999). His father Nūh b. Manṣūr, to whom out of all the Sámmān empire only a portion of Transoxiana was left, died on Friday 14th Rajab 387 (July 25, 997) but it was not till Dhul-ʿIlāh (November) that the succession was paid to Manṣūr as his successor. Ibn Bābak (ed. Morley, p. 503) talks highly of his courage and eloquence; on the other hand he is said to have been feared by every one for his extraordinary severity. During his brief and impotent reign he was hardly able to restore terror into any one. The last Sámmānids were quite helpless against the kings and generals who were surrounding over the inheritance of the dying dynasty. One of these generals, Fārīsh, succeeded even in taking Bukhārā at the head of only 3000 horsemen; Manṣūr had to fly to Ṭirmiz (q.v.), but he was called back by Fārīsh. The last months of his reign were devoted to fruitless efforts to settle peacefully the question of the government of Khorāsān, which
was claimed by various parties, but before the
problem had been settled by force of arms, Mansur
was deposed on Wednesday, 12th Sahr 339
(Peb. 1, 999) by his general Fakh and Baghlan,
who succeeded him in the caliphate.

Bibliography: On the chronicles of the
11-13 centuries, ed. by later historians for
the Fatimid period, cf. Becker,
"Bibliographie zur Geschichte der Ägypten" unter dem Titel:

AL-MASSUR, Abu Tahrih or Abu
Tahrih, the Fatimid caliph, was 33 when
he succeeded his father Abu T-Kaisim al-Kahim in
Shawwal 334 (May 946) under particularly difficult
conditions: Abu Yazid, the Khairidji agitator
supported by many Berber tribes and the people of
Kairawan had failed before the Mahdiyya but
was still besieging the city. Abu Mansur executed
his father's death and did not alter the formula of
the Khairidji, of the coin-legends or of the standard
coin. Abu Yazid should profit by the weakness of
Ayub, which was a regular feature of Arab
rule. The siege was relieved by the efforts of the
rehma of the caliphate, which was sent by Abu Mansur
to relieve it. After a short siege, the city was
opened to the attack. Abu Mansur tried to make
peace with him and gave him back his property
in Kairawan. Abu Yazid, in spite of his promise,
attacked him again and was completely defeated
in a pitched battle (Aug. 946). He was then pursued to the
west. After a long delay caused by the illness of Abu Mansur,
Abu Yazid, who was a victim of the caliphate of
Abd al-Malik, was forced to return to
Baghlan, where he was taken prisoner by the
Djibiel Khayma, north of Mina, in Muharram 336 (Aug. 947).

This success established Abu Mansur's
caliphate. A section of the tribes of the Central Maghribi
who had embraced the cause of Abu Yazid made their
submission, like the Maghribi under Muhammad
b. al-Kairi. Taking advantage of the
difficulties of the Fatimids, the Qaamiyah of Spain had
surrendered themselves more securely in Western
Baghlan. A former Fatimid officer, Maimun b. Yusuf,
was ruling the Maghribi in the name of the caliphate
of Cordoba and laid siege to Tiberias. Abu Mansur
released the town and appointed the Imam of Cordoba
b. Muhammad to rule it. He invested with
considerable authority the chief of the Saidiyya Ziri
b. Mansur, who had proved a loyal ally
during his days of trial.

In the case of Kairawan, Abu Mansur had again to
take the field against the son of Abu Yazid who
was trying to stir up a rebellion. Besides
taking the steps in Baghlan and to put an
end to the Khairidji movement, Abu Mansur
developed the naval power of Ifriqiya. His freedman
Farid, supported by the governor of Baghlan,
won a striking victory over the Greeks in the south
of Italy and came home laden with booty (340 = 951).

Lastly Abu Mansur holds a high place among the
builders of Ifriqiya for his buildings. The capital
was no longer Mahdiyya but was Baghlan
where he himself made it so. From 947
Baghlan, also called al-Mansuriyya from its founder,
was the capital. The town built at the gates
of Kairawan was beautified by the palaces which he
built and grew rich on the basins which he
removed from the old city.

Al-Mansur was 39 and had ruled 7 years, when he
died suddenly on a journey from a chill caught
by taking a bath in cold weather (Shawwal 29, 344
= March 953).

the Fatimid period, cf. Becker,
"Bibliographie zur Geschichte der Ägypten" unter dem Titel:

MANSUR, founded by Mansur b. Uqamdat
al-Kalbi, was from 258 (871) the capital of Sind
under the Arab. It is described as more
fertile and populous than Multan. Before the arrival
of the Arab, it was uninhabited
(probably identical with the modern Khairdah) and the capital of
Sind, and its name was changed to Mansur after
the Arab conquest. For notices of Mansur by
early travellers to India, see Gazetteer of the Bombay
Presidency, i, Part 1, p. 566, 567, 571, 575.

Bibliography: al-Baladur, Fakh al-
Baladun, p. 439, 444, 445; Abu T-Fids, Tel-
'Ata al-Bulund, p. 62, 346, 350, and E. H. Atkin,
"Gazetteer of the Province of Sind" (Kharoch
1907), p. 94, 96 and 508.

MANSUR, a large town in Lower Egypt,
on the right bank of the Damietta branch of the
Nile, capital of the province, and a large
branch of the Nile went from here to
Ashmun in the north-eastern direction. It
was originally a camping-place for the army, founded
in 616 (1219) by al-Malik, when he
tried to recapture Damiet, then occupied by the
Crusaders. In 1249 the Crusaders were defeated in the
neighbourhood of al-Mansur by al-Sufi of
Mas'ud Tahir, which occasion Lewis IX of
France was taken prisoner. The town is now
an important emporium for the cotton trade; in
1917 there were 46,187 inhabitants. (Baudeler.
It possesses no remarkable buildings; a railway
bridge crosses the Nile at this place.

There are still various other places in Egypt,
called al-Mansur.

J. H. KRAMER.

MANSUR, the name of a town now
ruined built by the Sufis of Fakr about 5
miles to the west of Tlemcen. The very
precise account given by Ibn Khaldun enables us
to reconstruct with certainty the history of this
typical town-camp. In the year 688 (1291) the
Mansurid Abu Ya'qub Yusuf, who had come to lay
siege to the capital of the Berber-Abi-al-Wal,
which he had closely surrounded with entrenchments, set up his camp on the plain which stretches to the west. As it was a long drawn out blockade he built a few dwellings for himself and the leaders of his army and laid the foundation of a mosque. In the year 702 (Y.2) the "Victorious Camp", al-Maḥalla al-Mansūra, was given the form of a regular town by the construction of a rampart. Besides the mosque, the dwellings of the chiefs, the store-houses for munitions and the shelters for the army, there were baths and caravanserais. As Tlemcen was inaccessible to caravans, al-Mansūr or New Tlemcen, as it was called, naturally attracted to itself the business of the invested town. After a siege of eight years and three months the Marinids withdrew from Tlemcen, and al-Mansūr was methodically evacuated under the direction of Ibrahim b. 'Abd al-Daula, the vizier of the Sultan Abu al-Hasan. The people of Tlemcen were compelled, by the terms of the treaty made with the Marinids to respect the rival town for some time. Some time after, when the entente between the two empires had been broken, they demolished its buildings and rendered uninhabitable the entrenchments left at their gate by their hereditary enemy.

Thirty years later, in the year 735 (1335), the Moorish army under Sultan Abu al-Hasan was once more at the gates of Tlemcen. On this occasion the 'Abd al-Wad Capital was forced to surrender (27th Ramadān 732 = 1st May 1332). Al-Mansūr was rebuilt. It became the official capital of the Marinids during their occupation of the central Maghrib. It was in fact, during this time that the great mosque was built and that the "Palace of Victory" was erected.

After the retreat of the Marinids, al-Mansūr, once more abandoned, fell little by little into ruins. At the present day the rampart of terre pisé flanked by square towers is still comparatively intact; but the interior is land under cultivation and contains a French village. There still exists, however, the ruins of a palace no longer distinct, a section of a paved street, and a very much deteriorated wall of the mosque, but instead of the great minaret in stone, which arose above the principal entrance. Although the inlaid ceramic work has almost entirely disappeared, the façade of the square tower, which is 120 feet high, is one of the most perfect pieces of Maqṣūrī art of the 10th century that survives. The columns and the capitals in marble of the mosque are preserved in the Museum of Tlemcen and Algiers.

MANTIK (A.), Logic. The logic of the Arab philosophers is that of Aristotle, here and there modified by the Stoic and Neo-Platonic tendencies of the Greek commentators. The Arab philosophers did not develop this logic but they gave résumés of it, reproduced it and wrote commentaries on it, often with success; they understood it very well and it is in logic that they came nearest to the authentic Aristotelianism. As to the matter, it was easier for them to grasp the exact sense of the logical writings of Aristotle than of his other works since the translation of the Logic had been made and remains with great care (cf. e.g. the two versions of the beginning of the Interpretation in J. Pollak, Die Hermeneutik des Aristoteles in der arabischen Literatur, Leipzig 1915) while the translation of the Metaphysics for example was very defective and incomplete. The system of the Ḥikma al-Ṣafīr — who evidently did not care much for the subject of logic — at the beginning of his little treatises on logic "the ancient ages have dealt with these subjects and their work is in the hands of the reader, but they are very diffuse, for the translators did not understand the exact meaning" is then not justified.

To the six works of Aristotle, the Categories, Hermeneutics, the Prior Analytics and Posterior Analytics, the Topics, and the Sophistics, the Arabs, like the latest Greek commentators — added the Khoter and the Politics (as to the Physics, Aristotle himself had regarded it [Khoter, i.e. 1356 a 9] as a lateral branch of the Dialectics and Politics). They explained the order of these works in the manner of the later Greek commentary (cf. Elia in Aristotelis Categoriarum Comment., ed. Bonetus, p. 116 sqq.). The most important of these treatises was the fourth, the Posterior Analytics, to which the three preceding are only the preparation and introduction; in the Posterior Analytics Aristotle was thought to have treated of the absolutely True, in the Poetics of the absolutely False and in the intermediate treatises, according as they approach the Poetics, the element of improbability begins to preponderate. Then, still in the manner of the Greeks, they placed in front of these works the Enquiry of Porphyry which as its name, Ṭāʿārāt, and the "Apostrophe of Parleying", Kibla, is one of the several works to which al-Mansūr shows an introduction to the logic of Aristotle.

Among the Greeks there were two further kinds of introduction to philosophy or — since the study of philosophy began with logic — to the logic of Aristotle. In the one which preceded the categories, Ṭāʿārāt (enquiry), ten questions were put (among them: Whence came the names of the different "philosophical schools"? What is the division of the works of Aristotle? etc.) to which a brief reply was given. Among the Arabs, we still find an introduction of this kind in a little work by al-Fārābī, Kīlāt fi-tāriakh an-nahyāt wa-fla'īlīm, translated as "Dictionnaire des Sciences" (transl. Schmoller in his Deux écoles, philoz. arah). The other kind of introduction, the prototype Ṭāʿārāt, is composed of which is given by the pupil of Erasistrus, Ammonius Hermias, was introductory to the Ṭāʿārāt. In the first part two definitions were dealt with in the second division of philosophy. The Arabic treatises on the division of the sciences go to this kind of introduction which they further developed. We still possess from the pens of the two of the greatest Arab philosophers, al-Fārābī and Avicenna, such treatises on the divisions of the sciences. Avicenna's entitled Majāliṣ fi Taṣawwuf al-Ḥikma wa l-Uṣūl was printed at Constantinople.
among the Tafsīrīs, the Ḥijrama, and the Tauba'īyya. For the manuscripts, the publication—a little review of the text, Tafsīrī, in 1924 at Saida (Syria)—and the emendation of the text of al-Fardūlī, Kitāb ʿIrāq al-ʿUlamāʾ, cf. the excellent study by M. Bouyges S. J., in the Milamagre de l'Université St. Joseph, vol. xx, fasc. 2, Beirut 1922. These two treatises were translated into Latin and that of al-Fardūlī in particular, with the Latin title De Scientiis; since it was incorporated almost completely into the De divisione philosophorum of Gundissalinus, had a great influence on the European scholars of the middle ages.

There were three opinions among the Greek logicians as to the relationship of logic to the system of philosophy: 1. To the Peripatetics, logic was simply a methodology, an introduction to philosophy; 2. except for its integral realism the structure of reality is in conformity with the structure of the mind; the rules of logic therefore deal with realities themselves and logic would then be a part of philosophy; this was the opinion of the Stoics and especially of Plutarch, ʿEma, 1, § 3; 3. the combination of these two views in several Neo-Platonic writers: logic was at the same time an introduction to and a part of philosophy. Among the Arabs these three points of view were also represented (cf. Kharrati, Kitāb Mashāfî al-ʿUlamāʾ, ed. van Vloten, p. 152) but the Peripatetic view was in the majority. The third view is found, for example, in Avicenna (cf. Logica, f. 20, Venice 1508).

Logic, according to the Arab logicians, leads, to a knowledge of the unknown from the known (cf. Aristotle, Post. Anal., at the beginning) but its supreme object, according to them and the later Greek commentators, is that, by making us distinguish good from evil, it can guide us to the greatest perfection of soul and the greatest happiness.

Although, on certain points in logic, there were differences among the Arab Aristotelians, they argue on the main lines and even Averroes, who frequently attacks his predecessors with vigour, in other passages of his works often expresses his support of their views that have been disputed; further, the solutions of problems in the Aristotelians and perhaps in other philosophers also sometimes consist of formalism, the meaning of which on examination is not always quite clear. I may here note some general points which are connected with the great problems of Metaphysics.

As for Aristotle, knowledge for the Arab logicians is a representation, an image of reality; there are in the soul resemblances of things (quaqabara, amīqat) which in judgment are put together. According to the Aristotelian conception, since it is at the same time affirmed and denies the knowledge of reality—thought would never be in contact with reality. Naturally implicit or explicit, this contact is often affirmed by Aristotle. A curious example of the conception of knowledge as an image, but in which at the same time the contact with reality is openly affirmed, is found in the theory of the duality of existence, a theory which the Arabs took over from the Greek commentators. The two categories have a double existence, according as they are found in the outer world or as images in the soul and the word existence has therefore two meanings: 1. reality or objective existence and 2. subjective existence of the soul. The intelligence may direct itself in an intention primus (prima ṣaḥib) towards the exterior world of which the highest kinds are the ten categories, but it can turn inwards upon itself in an intention secundus (secunda ṣaḥib), upon its concepts, of which the highest kinds are the five vowels of Porphyry. Everything has an existence, if not in the exterior world, at least in the soul. This theory gives rise to difficulties: in the first place the term "existence" becomes ambiguous; secondly, since the negation of such kind of existence is the soul, "what is not in the soul" must exist in the soul. It is particularly in the Kalām (q.v.) notably among the Ashʿarīs and probably under the influence of Stoic discussions on the existence or non-existence of the "not things" (ʿawna) that the existence of concepts like the impossible and the negative has been discussed.

The Arab Aristotelians were very often content to admit a concept "thing" (ʿamal, the rv. of the Stoics) more general than being, without paying too much attention to the fact that by this they were contradicting the thesis that everything is. For the rest, in the Aristotelian philosophy the concept of existence or of being gives rise to grave difficulties (it is used in Islam, not only among the philosophers but also for metaphysical questions connected with it among the theologians and the mystics. Aristotle had already affirmed (e.g. 1040, b 18) that existence or being is neither kind nor substance and the Arab philosophers al-Fardūlī, Avicenna, Ghazālī and Averroes supported this view with the stereotyped reasoning that existence cannot express the essence of things, since being man implies being animal, being a-living body, being a body etc., but it does not at all imply that man is being. On the other hand being (rv. ūd) and substance (ʿawna) are synonyms in Aristotelian philosophy. How are these two views to be reconciled? Avicenna says, as the theologians had already done before him, that only in God substance (being) and existence coincide; for the other substances, existence must be added to them as an accident. For Averroes on the other hand, as before him for the Ashʿarīs, being is always substance and never accident and he says that in judgments, in which being is predicated and thus apparently an accident, as when one says "substance is", "is" is an intention seconda.

As to the theory of ideas, the Arab logicians deny, with Aristotle and using his own arguments, the separate existence of the universals, but admit with Plato their supersensible existence. This is the theory very prevalent in the last period of philosophy (in the Middle-Platonism, Neo-Pythagoreanism and Neo-Platonism) according to which ideas or universal forms exist from eternity in God. The intelligibility of things comes from this, that their essence is an intelligence; as the idea of the statue in the soul of the sculptor is the essence of the existence and intelligibility of the statue, so the intelligence of the creator of the world is the cause of the intelligibility of natural things. Avicenna expressed this theory by the formula that the Universe is ante multitudinem in multiplicitate (in things) and post multitudinem (in our soul). It is the second element in this formula "in multiplicitate" that offers a difficulty (a difficulty already found in Aristotle): how to conceive of the existence of universals in things which are themselves individuals? Often a conceptu-
nalist tendency is seen in the Arab Aristotelians; it is explicitly stated that the universal is only found in the mind; and following Averroës, the forms in matter, the nozha ala, are regarded as individuals. But since in the system of Aristotle, forms are universals by definition, contradiction cannot be avoided, and the theories of the universals among the Arab philosophers are often very complicated and very obscure. Another nominalist or subjectivist tendency is found in their conception of the relation, which they call — with the Stoics — *what the mind puts into things*. But it is the theologians who under the influence of materialist, nominalist and sensualist Stuartian have developed a nominalist system which often admits atomic and individual facts without a connection, in which all relation is regarded as subjective or even non-existent.

The ambiguous manner in which we deals with the concepts *possible*, *impossible*, and *necessary* gives rise in Aristotle as well as in the Arab logicians, who follow their master faithfully, to grave difficulties. Aristotle (*Prior Analytics*, 32a, 81—85) — like the Arab logicians (cf. Avicenna, *Ikhârī*, ed. Forget, p. 34) — distinguishes two aspects of the concept of the possible; the possible is the negation at once of the impossible and of the necessary, but he does not always observe these two aspects and thus the necessary and the actual are considered as possible since what happens is not impossible. On the other hand, the actual is considered as the necessary, since what happens, happens necessarily; and although the definition of the possible is *what may or may not happen*, for Aristotle *possible* is also *what will happen* since what never happens is not possible. These contradictions are occasioned by the fact that the problem which is at the basis of all this, that is to say, the objectivity or subjectivity of the possible and of the necessary, is differently treated by Aristotle. Aristotle hesitates between determinism and indeterminism. Of two future events, he says in the *Hermeneutics* that one of two will be true, but which is not determined in advance. He says that nothing does not govern the celestial world and that the whole of the world is the reign of contingency. He also says that God alone is absolutely necessary, that all the rest is hypothetically necessary, that is to say, contains an element of contingency. On the other hand, everything is caused, and goes back necessarily to a first cause. All these contradictions are found among the Arab Aristotelians. The Maturakîlims, who, like the Stoics, wish to exclude the possible from reality (but they sometimes regard, like certain Stoics, the *possible* and *necessary* as both subjective; thus affirming that everything is possible) have with justice declared that: if there is a necessary cause, the effect of it must also be necessary and that there is therefore no contingency in the world. According to the Maturakîlims, Ghazâlî seems to admit the justice of this argument but elsewhere he repeats all the theories of his master.

Although Ghazâlî confesses that theology, while opposed to the metaphysics of the philosophers cannot however deny the evidence of their logical techniques, certain arguments of Greek scepticism against logic are sometimes repeated by the Maturakîlims. Definition, *they say*, not possible, because by the particular one cannot reach the universal, and the syllogism is a *petitio principii* since the conclusion is already contained in the major premise. These arguments are justified against Aristotelianism, regarded as an empirical theory which sets out from the particular fact. There is however a rationalistic tendency in Aristotle and the Arab logicians; they admit that the intelligence can at once know first principles and that without induction from particular facts it can grasp relations between universals. But when the Maturakîlims say that knowledge and the Universal cannot give the truth, since according to the definition of truth, agreement must exist between true knowledge and reality, and knowledge is universal and reality individual, they reveal by this argument one of the greatest contradictions in Aristotelianism.

Averroes tried in vain to refute it.

**MANÛF**, name of two towns, in the region between the two main Nile arms called al-Liûna, generally distinguished as MANûF al-'Ulyâ and MANûF al-Sûfî. The latter was situated on the right bank of the western Nile arm, while the former lay more to the east on a smaller canal. Both are described by the geographers as large towns, surrounded by fertile districts and inhabited by wealthy people, especially MANûF al-'Ulyâ, where, according to Ibn Hawâk (p. 92), there resided a governor. The *alâra* of MANûF al-'Ulyâ is often called the *alâra* of Damas and MANûF, while the *alâra* of MANûF al-Sûfî is designated as Tawwâ and MANûF (cf. e.g. al-Maqrî, ed. Wiet, i, 307). Both the ancient towns have decayed since the 11th century, and al-'Ulyâ only knows a village of that name. The name has survived, however, until our day, in the name of the province al-Manûfîyya, the capital of the *mawâlîf* of his name is now Shihûn al-Kawm, and the modern MANûF is a provincial town, situated to its southwest.

MANûF al-'Ulyâ is known in Greek sources as 'Ouâ'ôzôs, *the Coptic name being Penouft Rts; the other MANûF is not mentioned in Greek documents and is called in Coptic *Penouft Htn.*

**MÁPPILLAS** (Moplahs), a group of Musulmân, of mixed Arab and Hindu descent, of the west coast of Southern India, numbering 4,099,453 according to the Census of 1921. Their name is said to be derived from the Malayalam word *māp* ("great") and *pillā* ("child"), an honorary title originally bestowed upon all foreigners and
first applied to Christians, Jews and Muslims, but now confined to the last; this derivation, however, is disputed (Thornton, p. 460—461). They owe their origin to Arab merchants, who were attracted to this coast by the trade in spices, ivory, etc.; settling in various commercial centres, they intermarried with the natives of the country and added to their numbers by proselytising; but fresh accessions of the Arab element having ceased long ago, the Māppillas now approximate to the aboriginal type and exhibit no signs of any admixture of foreign blood. The earliest date of their settlements is uncertain, and the legendary accounts given by the Māppillas themselves are of no historic value (Zain al-Dīn, p. 23—25).

The foreign traders appear to have been encouraged by the Hindu rājas, who made use of them to man their fleets, and by the beginning of the xvii century the Māppillas were estimated to have formed one-fifth of the population of Malabar (Barboza, p. 310), but the arrival of the Portuguese in this part of India checked the growth of Muslim power and ruined the Arab trade. The Māppillas are still successful traders, especially on the coast; inland, many of them are agriculturists. There are both Muslims and Shi’is among them; the former belong to the Shi‘ī school. Their religious leaders are called Singal (an honorific plural of the personal name Zanoor, commonly used in addressing superiors) and are treated with profound respect; many of them receive their training in a college attached to the Džāmī’at mosque in Ponnāri, the chief centre of their religious organisation; the Singal of Ponnāri is an Arab who claims descent from the Prophet; in accordance with local custom he inherits his sacred office in the female line, i.e., his nephew and not his son succeeds him.

The history of the Māppillas is full of incidents of fanaticism and turbulence. In 1524 they attacked the Jews in Cranganor and massacred them without mercy, so that in 1565 the remnant of them fled into Cochin, where they founded the Jewish settlement that survives to the present day (Zain al-Dīn, p. 50—51); Francis Day, p. 351—352). The Māppillas also persuaded Zanoor of Calicut to expel the Syrian Christians from his dominions (Francis Day, p. 357), Even their co-religionists found them to be turbulent subjects; they joined the Hindus in fighting Haidar Ali, as did the Hindus in fighting Haidar Ali, after he had extended his power over the Malabar coast, and they rose in rebellion against Tipu Sultan (q.v.) in 1785, and frequently plundered their territories (Francis Day, p. 365). During the last hundred years as many as 58 fanatic outbreaks have taken place among them, especially in the Ernak sub-divisions of the district of Malabar. Some Māppillas generally begin by murdering a Hindu landlord and then seek martyrs by slaying kith and kin; others join them, after divorcing their wives, and clad in the white clothes of the martyr (gadd, q.v.) go out to die fighting against the infidel, with a complete contempt for death. They destroy and burn Hindu temples, and forcibly circumcise such Hindus as they do not murder. None of these outbreaks appears to have been stimulated by agrarian discontent at the oppressive action of Hindu landowners, but the last (in 1921) was entirely political in character and was excited by the Khilafat movement; it differed from all preceding ones in its wide-spread and clear evidence of systematic preparation and organisation; the outrages committed upon Hindus were of a specially revolting character.

The Māppillas of South Malabar generally observe the Muhammadan law; those of North Malabar follow the local Maromakkattayam system of inheritance, according to which the sons of a man’s sister inherit his property, and his wife is not regarded as a member of the husband’s family but resides in her mother’s home and only receives periodical visits from her husband. On the other hand, a man’s self-acquisitions usually descend to his wife and family in accordance with Muhammadan law.

The Māppillas speak the Malayalam language, but use a modified form of the Arabic script in writing it. The majority of them are illiterate, and few only can read and write. Their literature is mainly composed of songs descriptive of religious war, and they are fond of singing them in order to stir up fanaticism. Their mosques are quite unlike those of other Muhammadans, having no minarets and often consisting of several stories, with two or more roofs; they often resemble Hindu temples in style, and in fact many Māppillas mosques were once Hindu temples.

Māppillas are also found in the Laccadive Islands, Ceylon, the Straits Settlements and Burma.

MARABUT. (See Muraqqa’-e-Maghrib).

MARAGHA, the old capital of Khwarizm. Position. The town lies at a height of 4,500 feet above sea level on the southern slope of Mount Sahand (11,300 feet high) which separates it from Tabriz (q.v.). This explains the very considerable difference in climate between the two towns which are only 50 miles apart as the crow flies (by the high road 80 miles). The climate of Maragha is mild and rather moist (Hamad Allah and Mocqueney, 1904). The plentiful water supply makes the vegetation rich. The fruit of Maragha is celebrated in Persia and a good deal of it is exported to Russia via Astabad. The district is watered by the streams which come down from the Sahand and then

Māpillas, or Māppillas, a Vernacular term. (See Muraqqa’-e-Maghrib.)
turns west to Lake Urmia which is 20 miles from Marāqha. The town is built on the left bank of the river Ṣift (Ṣofī) which then waters Bināb. A little distance to the east runs the parallel river Murdīrī which waters the district to which Mecquennem gives the name Pahandur (Bayan dur); on the left bank of it are the heights of Mandilur (= with head bound). The next stream is the Lašlan which flows into the Dighzah (= sānduq-nulku). The rivers farther east (Kasamūnghū and its sources which water the Haagurālīd district) belong to the system of the Safid-rād (= q.v.), i.e. the basin of the Caspian Sea.

From the geographical point of view, Marāqha is quite independent of Tabriz. It lies a little off the great road from Tabriz to Kirmāngāhī which runs near Lake Urmia (via Bināb). The direct bridle-path Tabriz—Marāqha by the passes of the Sahand is only practicable in summer. There is also a direct route along the Sahand on the south and southeast side, joining Marāqha to Ardīl and Zanjān. This road has always been of importance whenever Marāqha was the capital of Ardābhālid. The important place on the route was Kīānāra (cf. below).

At the beginning of the sixteenth century, Marāqha had 6,000 families (Jārān al-Sabāḥī, 1789 (1850) it had 13,829 inhabitants of whom 6,394 were men and 6,394 women (H. Schindler). Mecquennem (1894) gives Marāqha 15,000 inhabitants.

At the present day the inhabitants speak Kūhī Turkish but in the sixteenth century they still spoke "arabishic Pahlawi" (Nūḥāt al-ḵᵛān; pahlānī-yī mawdū′āh), which means an Iranian dialect of the northwestern group.

The walls of the town are in ruins. Its gates have the following names: Āmbarī, Kirān Khān, Alyādāk, Fālūr, Bināb (or Gilāsāt) and Ḥalajūl-Mnal. The quarters are: Ḡalāb-berg, Madān, Darbāz, Sānduq Khān.

Prehistory. The valley of the Murdīrī is famous for its deposits of fossil vertebrates discovered by Khanykov in 1853. Excavations have been conducted by Gooch (Russia), Stran, Rodler, Pohlig (Austria), Günther (England) and Mecquennem (France). On occasion there have been found an hippopontus, the rhinoceros etc. dating from the period before the eruption of the volcano of Sahand. Cf. J. F. Brandt, Über die von A. Geobot ... bei der Stadt Maragha gefundenen Säugethiere, Deutsch. u. Natureforscher-Verins in Riga, 1876, and the bibliographies in Mecquennem, Contribution à l’étude du géographie des murdirois de Maragheh, Paris 1905; cf. another article of the same author and title in Annales de paléontologie, 1924, 3, 123—160.

The name. According to Bālāḏūrī, the town was at first called Akn-țūrī (Ibn al-Fakhrī, p. 283; Aḥmad-țūrī; Yāḥyā, iv. 476; Aḥmād-țūrī). This name which means in Persian the river of "Akūn" recalls very much the name of the town of Ḥāshā who Mark Antony besieged in this region on his campaign against the Pāhlāns in 36 b.c. (Plutarch, Vtn Antuk, xxvlix, Parthia, 1804, p. 1113 and Persol. Appian, Parthia, ed. Segréhen, Leipzig 1785, iii. 77, 99). It has long been supposed that the names Šiva in Strabo xi., ch. xii. and Index, p. 935, Ḥashā, Ptolemy, vi., ch. xii., Ḥashā, Dēn Ča, aliv. 25 are varieties of the same name which was probably that of the ancient capital of Atropatene; cf. Ritter, Erdkunde, i., p. 770. If the identification of Ḥāṣā (summer capital, Strabo) with Tabāt-ī Sallān, suggested by Rawlinson has been accepted (cf. Hoffmann, Amschige aus orientischen Abteten, p. 252; Marquart, Erdehār, p. 108; William Jackson, Persia, Past and Present, p. 136), the identification of Ḥāḥā is still uncertain. On general principles it is improbable that a town like Marāqha so advantageously situated by nature was not in existence in Roman times as the ancient name of Marāqha increases the probability of the identification Ḥāḥā = Marāqha (of course with a reservation as to the exact site of the ancient town).

A place-name Marāqha is mentioned in Arābī (Yaḥyāī) and a little town of the same name is in Egypt near Tašā. The etymology "place where an animal rolls" (from marā-ğ) proposed itself to the Arabs here, but in Ardābālān (cf. also the village of Marāqha near Abarkhōr, Nūḥāt al-ḵᵛān, p. 122) the name is rather a popular Arab etymology of some local name. It is to be observed that Ptolomy, vi., ch. 2, calls Lake Urmia Margiane (margiān; Ḥašā) and gives the same name to the country along the coast of Assyria. Lastly Marqūṭ in Erthehār, p. 143, 221, 313 retains the variant Marqūṭ but Ḥašā seems also to be based on a good tradition (cf. Ptolomy, i., 1838, p. 391).

The Araba. Marāqha must have been among the towns of Ardābālān conquered by Mūṣṭafā b. Shībā al-Thakāfī in the year 22 (Balāḏūrī, p. 325; Yaḥyāī, Kirāt al-Balāḏūrī, p. 271). Mūṣṭafā b. Muḥammad returning from his expedition to Mān and Gīlān in 123 (740) (cf. Yaḥyāī, Historia, iii. 365) stopped here. As the place was full of dung (šargātī < Pers. šargūn) the old village (šargūn) was given the name of Marāqha (cf. above). Marāqha did some building there. The town later passed to the daughters of Ḥārūn al-Raḍīlī. On the rebellion of Wāḏfī b. Rawādī, lord of Tabrīz (q.v.), Būṣūzīma b. Ḥākīmī who was appointed governor of Ardābālān and Armutula (probably in 187; cf. Yasmer, Kermānologie amnesti, Armutul, Zap. Kultur, vestebewexr, 1925, 1, 397), built walls round Marāqha and put a garison there. Whom Bāzak rebelled in 201 the people sought refuge in Marāqha. Marūn sent men to restore the walls and the suburb (rūbad) became inhabited again (Balāḏūrī, l.c.). In 231 Marāqha is mentioned as the winter-quarters of Ḥūṣain in his campaign against Bāzak (Tabart, ii. 1556).

In 260 (893) the Sulṭān Muḥammad Ṣafī b. Dīwān seized Marāqha from a certain Abū Allāh b. Ḥusain, who was killed (Tabart, iii. 2337; Marāqha, Marāqha, viii. 145). In 290 (908) the caliph confirmed Ṣafī b. Dīwān in possession of Marāqha and the whole of Ardābālān. A diwān is known of this year struck by Ṣafī at Marāqha (Yasmer, O mēmehēk Sulṭānāber, Bārī, 1925, p. 14). According to Ibn Ḥawki, in 328, there was at Marāqha a military camp (waṣākh), a governor’s residence (dār al-waṣākh), a treasury (fīṣārān) and government offices (dawwāran al-mudhālay) but Yūsuf razed the walls of Marāqha and transferred the capital to Ardābil (cf. Iṣlahār, p. 184). Marāqha is only mentioned as the name of a place where the last Sulṭān Abū l-Māṣīfī al-Ṭūlī was killed in 317 (920) (Arīb, Tabarī, continuatoris, ed. de Goeje, p. 145).

The Daijamīr. In 322 (932) (during the rule
MARAGHA

263

of the Dailam Mustafaids) the Russians (Karali) had taken Bayshs's [q. v.] Ibn Miskawali (G. M.S., vi. 100) speaks of the diseases which decimated them because they ate too much fruit in Maragha. This reference to Maragha is quite unexpected: in the text and Margoliouth has rightly proposed to read خِبَّرُ in place of خَبَّرُ. A coin struck at Maragha in 337 by Muhammad b. 'Abd al-Razzaq is a record of the brief conquest of Adharbaydjan by the general of the Rupid Ruka al-Dawla (Vasmer, Die Chronologie e. Gestaufen, Islamica, iii. 4, 1927, p. 170). Of 347 we also have dirhams of Maragha in the names of the two sons of the Dailam Murzubak, Ibrahim and Djastan (ibid., p. 172).

The Rawwadi and the Saldjaks. After the disappearance of the Dailams we find in Tabriz the family of Rawwadi Kurds who seem to have been related with the Murzubaks by marriage only. On the other hand, it is very likely that the Rawwadi were already the descendants of the Assyrians Rawwadi al-Audi, lord of Adharbaydjan (Balshahuri, p. 331) who became assimilated by their neighbours in Adharbaydjan. The best known of these Rawwadi is Mawlabd b. Mamalik (Muhammad; the change of d to t in Kurdi is common) who is mentioned between 420 and 446 (Ibn al-Khatir, 727, 351, 410) and who in addition to Tabriz possessed other strongholds in the mountains (Sahand). When in 420 the Ghuris reached Maragha and executed there a great number of Hasbûd Kurds, the latter united under Wahshadan and drove out the Ghuris (Ibn al-Khatir, 37, 446-472). This incident shows that the district of Maragha was already the sphere of influence of Wahshadan. In 446 Wahshadan became a vassal of the Seljukids, but Ibn al-Khatir, 410, p. 410 says nothing about the extent of his possessions around Sahand.

In 357 the peace between the sons of Malik Shah, Barkiyaruck and Muhammad was signed near Maragha and in 408 Muhammad visited Maragha.

The Ahmadids. In 356 we have for the first time mention of the Amir Ahmad b. Ibrahim b. Wahshadan al-Rawwadi al-Kurdzi, lord of Maragha and Kurdu (Kilisara?) (Ibn al-Khatir, 361). He was the founder of a little local dynasty, which lasted till about 624. We know very little of the history of the Ahmadids, which has never been closely studied.

Ahmadid was certainly the grandson of Wahshadan b. Mamluk of Tabriz (cf. above) and this explains the insistence with which the attihge of Maragha tried to refute Tabriz. Only inescractable hereditary rights can explain the strange fact of the possession of a Kurd among the vassals of the Seljukids. The name Ahmadid is a peculiar formation; the name of Mamlukid, a village to the south of Maragha, belongs to the same category of diminutives. The Ahmadid however very soon adopted Turkish names.

Ahmadid with a large army took part in the Anti-Crusade of 505. During the siege of Tell Bashir, Joscelin came to terms with him (inforh) and he withdrew from the town (Kamlit al-Din, Tell Bashir, Rec. des hist. des croisades, iii. 509). Ahmadid soon abandoned Syria entirely, for he coveted the lands of Sukmai Shah-i Arman who had just died. We know that Sukmai had extended his sway over Tabriz [q. v.] and the reference is probably to this town. According to Shih b. al-Djawa, ibid., p. 536, Ahmadid had 3,000 horsemen and the revenues from his fiefs amounted to 400,000 dinars a year. In 516 (or 508) Ahmadid wasstabbed in Bagdad by the Isma'ilis to whom he had done much injury (ibid., p. 536; Ibn al-Khatir, s. 361).

Akh-Sunukr I. In 514 Malik Mas'ud, governor of Mawri and Adharbaydjan, rebelled against his brother Muhammad and gave Maragha to his attihge Kanim al-Dawla al-Buzurj but the rebellion collapsed and in 516 Akh-Sunukr al-Ahmadid (client of Ahmadid?) lord of Maragha, who was in Bagdad, was authorized by Sultan Malik Mas'ud to return to his fief. As the Amir Kuv-tughid, atabeg of Malik Tughid (lord of Astar, Ibn al-Khatir, 390), had died in 515 Akh-Sunukr expected to get his place with Tughid. The latter ordered Akh-Sunukr to raise 10,000 men in Maragha and set out with him to conquer Ardabil in which they failed. In the meanwhile Maragha was occupied by Djuqshiy Beg, sent by Sultan Malik Mas'ud. The Georgian Chronicle (Brosset, i. 368) mentions under 516 (1123) the defeat of Akh-Sunukr (whose he calls Akh-Sunukr, atabeg of Rana) (Rana) during a demonstration against the Georgians carried out by Tughid from Shurwam. In 533 Akh-Sunukr took a part but not a very active one in the suppression of the intrigues of the Mustafids Dabistan. In 534 he was one of the promoters of the election of Sultan Dawsid, whose attihge he was. In 536 Tughid, uncle of Dawsid, defeated the latter and occupied Maragha and Tabriz (al-Bundari, cf. Houtouma, p. 161). Dawsid along with his uncle Mas'ud and Akh-Sunukr sought refuge in Bagdad. With the support of the Caliph and the assistance of Akh-Sunukr, Mas'ud reoccupied Adharbaydjan. After the capture of Hamadan, Akh-Sunukr was killed there by the Isma'ilis (537) instigated by Tughid's viceroy (al-Bundari, p. 169).

Akh-Sunukr II. The name of Akh-Sunukr's son is transmitted in different forms. Ibn al-Khatir, 1166 and 172, calls him Akh-Sunukr (II); cf. also Tariq al-Din al-Istakhris, p. 475, who calls him Al-Mir al-Kabir Nizafat al-Din Khayb, and, p. 243, Nizafat al-Din Arslan Abu (cf. Khashgari, Dima al-Iskandar al-Turk, i. 80). The Khusrau al-Sunukr, p. 241, 244, 252 gives his name the attihge of Arslan Aba, Al-Bundari treats him as an equal of the great amir Idgah [q. v.], whose family finally triumphed over the lords of Maragha. Akh-Sunukr II's adversary was the amir Khushbukh li Bilingeri (?) who was the favourite of Sultan Mas'ud and sought to establish himself in Astar and Adharbaydjan. This Khusrau had besieged Maragha in 541 (al-Bundari, p. 271). In 545 Sultan Mas'ud took Maragha and Al-Bundari refers to these events (ibid.) but a second Sevilmishid later took place between Khushbukh and Akh-Sunukr II under the walls of Rayy-nd (cf. below). The execution of Khusrau in 547 (1153) by Sultan Muhammad alienated Idgah and Akh-Sunukr II and they installed Salamini on the throne of Hamadan. Muhammad on his return to power sent an embassy to restore good relations with the two lords of Adharbaydjan (Khusrau A). Peace was concluded in 549 and the two great amirs shared Adharbaydjan between them (al-Bundari, p. 243). On his deathbed (554) Muhammad entrusted his young son (Malik Dawsid, cf. the genealogical tree in the Khusra al-Sunukr) to Akh-Sunukr. As Idgah was furthering the interests
of his ward Sultan Arslan, Pahlawan b. Idigiz advanced against Aq-Sunkur II but the latter with the help of Shah-i Arman defeated him on the Safsil-rud. In 556 Aq-Sunkur sent 3,000 men to the help of the governor of Kaly, Ismail, who was fighting Idigiz. The latter gained the upper hand and in 557 Aq-Sunkur II took part in the expedition of Idigiz against the Georgians ( Ibn al-Atbar, xi, 189). In 563 however, Aq-Sunkur II obtained recognition for his ward from Haiduddin. Pahlawan b. Idigiz at once besieged Aq-Sunkur in Maragha (ibid., p. 218) but a peace put an end to hostilities.

In 564 the Amir of Kaly, Ismail, was killed (Ibn al-Atbar, xi, 270). The Turhi b. Gudush, p. 72, seems to suggest that the rebellion in Maragha of Kutlug b., brother of Aq-Sunkur II, was due to Ismail's influence. He was punished by the Atabeg Pahlawan b. Idigiz and Maragha was given to his brothers 'Ali al-Din and Bakr al-Din.

Under 370 Ibn al-Atbar (xi, 280) mentions at Maragha Falak al-Din, son of Ibn Aq-Sunkur (i.e. son of Aq-Sunkur II), to whom his father had bequeathed his estates. Pahlawan besieged the fortress of Ruyin-din and Maragha. On this occasion peace was concluded on the cession of Tabriz to the family of Idigiz. This important detail shows that down to 570 the isf of the Ahmaddi comprised all the country round mount Sahand including Tabriz [q.v.].

In 602 the lord of Maragha 'Ali al-Din came to an agreement with the Atabeg of Arbil Musaffar al-Din to give him Fakhr-al-Din to deprive the Idigiz family of the castle of Idigiz. Al-fakhr al-Din whose brothers were Idigiz, died in 605. Al-fakhr returned to his own lands and Al-fakhr Baker with his brothers had left Maragha. Al-fakhr al-Din had to surrender the fortress which was the bone of contention but was given in compensation of the town of Urmiya and Ushghil. In 624, 'Ali al-Din whose brother was Idigiz and lived near Maragha, died and left one son, a minor. A brave servant of 'Ali al-Din assumed the guardianship of the child but the latter died in 630. Al-fakhr Baker then took possession of all the lands of the Ahmaddi except Ruyin-din where the servant already mentioned had entrenched himself with his late master's treasures.

It is not clear if 'Ali al-Din Kahe-Sunkur II is identical with the brother of Al-fakhr al-Din mentioned in 564. For the date of his accession and his importance we have a hint. According to the praise of the Haft-pakht of Nishat [q.v.], this poem (finished in 593) was composed at the request of 'Ali al-Din Krb (i.e. Arslan (the Rizai) who had paid him tribute [Al-masin]; the Georgians suffered reverses at his hands). This poem was definitely identified by Rieu, Catologe, ii, 595 and Supplement, 1895, p. 154 with 'Ali al-Din of Maragha. Nishat mentions two sons of 'Ali al-Din, Nuqarat al-Din Muhammad and Ahmad, but to reconcile this with Ibn al-Atbar we should have to suppose that both died before their father.

The family of the Ahmaddi was continued for some time in the female line. In 618 the Mongols arrived before Maragha and the town was stormed on the 4th Safar. The Mongols sacked and burned the town and massacred the inhabitants (ibid., xii, 246, 263) but the lady of Maragha (daughter of 'Ali al-Din), who lived in Ruyin-din, escaped the catastrophe.

Djalal al-Din. In 622, the Khwārezmshah Djalal al-Din came to Maragha via Dalalak. He entered it without difficulty for the inhabitants were complaining of all kinds of oppressions and raids by the Georgians (Nasawi, Sīrmat Djalal al-Din, ed. Houdas, p. 110). Djalal al-Din tried to restore the prosperity of Maragha; cf. Ibn al-Atbar, xiii, 285, 286.

In 623 (1227) while Djalal al-Din was in the Persian Ispah, his visitor Sharaf al-Mulk was forced to reconquer Ardashirbad. In the course of his campaign he besieged Ruyin-din, the lady of which was a grand-daughter (mīn khaḍīdil) of the Atabeg 'Ali al-Din Karim b. (Nasawi, p. 129). This princess was married to the dead-mute Khamīš, only son of the Eldigizī Izber. The Atabeg Nasrat al-Din, son of Khamīš, mentioned incidentally by Dunawī, G.M.S., ii, 242, must have been his son. As a way out, she offered her hand to Sharaf al-Mulk. Djalal al-Din suddenly arrived from the Ispah, and married the princess himself. Ruyin-din was given to a certain Sab al-din who occupied the castle containing some thousands of houses (k̲h̲awīd) occupied by the former inhabitants of the town (jālân-dar). Sa'd al-Din decided to evacuate them but as a result of his tactlessness the fortress closed its gates again (to Sa'd) (Nasawi, p. 129, 137). Ibn al-Atbar, xii, 322 seems to deal with the course of these events. Under 627, he says that the troops of Djalal al-Din besieged Ruyin-din for some time. The fortress was about to capitulate when some malcontents summoned the assistance of a Turkoman amir Sindi (Sindī) of the tribe of Kūsh-yalun. The domination of this chief and his relatives who succeeded him only lasted two years.

Ruyin-din. This fortress lay near Maragha (Ibn al-Atbar, xii, 322). According to Zakriya Kawsani who gives a very accurate description of Ruyin-din, it was 3 farakhs from Maragha. It was almost uninhabited at times (Djalal al-Din, 85, 337) and the Atabegs of Arbil occupied the town some years (337) (k̲h̲awīmatk̲h̲awī mašqal) suggests that it was built on the site of Sahand. The Russian map marks on the Solt-e Tail 40 miles (c. 3 farakhs) above Maragha a place called Yav-akhtār (in Turkish = "summer-town") besides which two streams flow into the Solt-e Tail (on the left bank) and between them is written the corrupt name "Ras or Eras". It is very probable that this is the site of the famous fortress on either side of which there was a stream (nahr); for Ras one should read Rizai kahe Ruyin-din. The date of this final destruction of Ruyin-din is unknown. As late as 751 the Coleman Alasaf imprisoned his vizier there. (v. Hammer, Gesch. d. Äthemen, ii, 337) but the Nuzhat al-Gulāb, 740 (1340) only knows the other Ruyin-din, that of Sindiwān (still in 1340 a farakhs from Ardashir).

Kāzāra. Ibn al-Atbar, xii, 340, calls Almādī "lord of Maragha and of Kūshā"). This last name (k̲h̲awīmatk̲h̲awī) seems to be a corruption of Kāzára (Kūshā) or Kūzāra, a little town well known to the Arab geographers on the Maragha-Ardabil road (10-12 farakhs from Maragha and 20-27 from Ardashir); cf. Ibn Khurdādbih, p. 120; Ku-
The Mongols. Maragha was definitely taken by the Mongols in 628 (Jum al-Athar, xii. 324). After the taking of Bagh hlūd in 650 (1258) Hulūg took up his quarters in Maragha and ordered an observatory to be built there from the plans of Nāṣir al-Dīn Tūsī (who had as advisers four astronomers, one of whom, Fakhr al-Dīn, was a native of Maragha). Rashid al-Din, ed. Quatre- mère, p. 352). The observatory was built on a fort at the hill to the west of the town where only traces of foundations of the walls are still to be seen. According to Schindler's plan (1893), the levelled area on the hill measures 137 x 347 metres. On the observatory cf. Tourdjane, Mémoires sur les instruments employés à l'observatoire de Maragah, in the Magasin encyclopédique, edited by A. L. Milin, Paris 1800, vol. vi, p. 45-101 (transl. of an Arabic MS. belonging to the Bâbî National Library and attributed to Nāṣir al-Dīn's colleague Muâẓzam al-Dīn al-Āndī and Ritter, Beiträge zur, i.e. p. 839-843. To contain his treasure Hulūg built a castle on the island of Shāhī 1-2 days distant from the capital. Here he was buried. On the fortifications of Shāhī cf. Tabori, ill. 1171. The hand- some sepulchral towers of which there are four at Maragha (Meqemmon 1908) date from Hulūg or his immediate successors: 1. the one at the entrance to the bridge of Shār-i-ān is built of red brick on a square foundation and has a vaulted cellar (Gunhah-Khurram); 2. similar, situated in the gardens to the south of the town on the road from Khānāqā; 3 and 4 near the old cemetery in the interior of the town; the octagonal tower No. 3 is of red brick overlaid with blue enamelled tiles (Gunbad-i kābūṭ) and No. 4 is round, covered with plaster which is decorated with arabesques (Ān-i harg) *Tower of the Ram.* There is a photograph of No. 1 in de Morgan (1894), p. 337 and Särrä, op. cit., text, p. 15-16: of No. 3 in Särrä, ibid., and of No. 4 in de Morgan, ibid., p. 340. H. Schindler claimed to have read on the Gunbad-i Khurram (No. 2) the name of Akū Bākī Sa'd-i Zangī (allegory of Fārs, 623-638). According to Särrä, No. 4 is later than 1550. The monuments require to be again studied on the spot. Lehmann- Haupt says that inscriptions will still be seen in their interiors.

The early Mongol Ilkhanids led a semi-nomadic life which explains the absence from Maragha of any other kind of memorial. It was only with Chāsīn that a regular capital was built at Tabriz [q.v.]. Maragha continued to be of some importance as a center of its post-ragras and was a station on the road between Adharbājān and Mesoopotamia. Its name continually appears in the history of the Ilkhanids. In 703 (1304) Ūljûji received at Maragha the ambassadors from the Khan of China and installed at the observatory the son of Nāṣir al-Dīn Tūsī. In 712 (1312) Kâšān-kâr, son of Ulmūr, of Aleppo, bearing the wrath of the Sultan of Egypt, Nāṣir, sought an asylum in Persia with Uljůjji who gave him Maragha. Ibn Baṭṭūṭa, who tells this (I. 779) adds that this town was known as "Little Damascus" (Dimūq al-ṣaḥāba). Kâšān-kâr died in 728 (1230) (d'Ohsson, Hist. des Mongols, iv. 699).

The Geographers of the Mongol period. Zanburī Kašwī (1735) seems to have been personally acquainted with the town. According to him there were in the town members of the pre-Islamic period. He describes the mineral springs (near the village of Kāyāmat-ābād) and a cave which must correspond to the Čai-bāgh visited by Motār, Lehmann-Haupt, Minorsky et al. Kašwī also mentions the mountain of Zandāqūn with a cedarspring, the village of Ḫulqūd (Gunbadā) with a bottomless well (p. 350) and gives a description of Rūyūn-dīr (p. 358).

The Nakkût al-Kutub (written in 1349), ed. M.S., p. 27 estimates the revenues of Maragha paid to the treasury at 70,000 dākār (Arslūd paid 58,000) and those of its wīlāyāt at 150,000 dākār. The fauna of Maragha comprised the southern part of Adharbājān, in the north it was bounded by the wīlāyāt of Tabridis, in the west by that of Khūz (Urmāz), in the south by the lands of Kūrūz (Vaurus) and in the east by Fārsī Adham (Zaujīn, Sāfjān). All the lands now under the modern Sawādūlkhāl [q.v.] were then ruled from Maragha. As dependencies of Maragha, Hāmid Allāh gave the towns of Dīh-i Khwāmān (in popular Turkish Tahārgūn) to the south of Tabris, Lālūn on the right bank tributary of the Djāhgu (cf. Rawlinson, 1841, p. 39: the ruins of Kābūt-i Bātista) and Pāwst in Lāhūstān, in the valley of the Tīrīn (cf. Rawlinson, 1841, p. 39: the ruins of Kābūt-i Bātista). The town comprised six cantons (the names are much mutilated): Sāfjān (f.), Nāyāfān (f.), Dāzgrīh (f.) the mountain Dâzgrīh on the middle course of the Djāhgu), Gāfwāk (at the confluence of the river of the Khwāmān the name is also read Gawdīl, Gawdawmān. It is remarkable that Firdawsi (ed. Moli, vii. 141, 151) mentions in these regions.

Dāšt-i Dīrkh and Kābūt Dīrkh where Bahram Cūhān was defeated by Khwārīz (Bīhūzīn) (probably the district of Hācht on the Tāsūwā, Bāghtān (to the east of Shāhān on the Kārāngūn). The district of Angūrān on the Kūlānān was also a dependency of Christia.
of John the Baptist 2/3 of a farsakh north of Mağrâba. After the accession of Gáhân (1295) the persecution of the Christians began, instigated by the Jew. The mob plundered the residence of the patriarch and the church of St. George built by the monk Rabban Šawra (it had been furnished with articles from the portable church of Arghán’s camp). The patriarch sought refuge in the suite of the Armenian king Hâton. On his return to Mağrâba, Gáhân punished the sowers of the troubles. In 1298 Yakhâbâd was confirmed in his rights. In Sept. 1301 he finished the monastery of St. John. His biographer and contemporary gives an account of the beautiful buildings, the numerous relics and riches of the monastery (Chabot, op. cit., p. 133). The village of Dahrî (7) to the east of Mağrâba was purchased to serve as a waqf of the monastery (to the N.E. of the town there is still a village of Killás-kândi “village of the church”). Gáhân and his successor Udjušt visited the monastery. Yakhâbâd died and was buried there in 1317.

On the south side of the hill of the observatory there are chambers carved out of the rock (2 rooms 12 feet high communicating with one another, and a corridor). Inside there are niches in the shape of altars. Local tradition sees a church in these (perhaps the Sînânian period); cf. MacDonald, Kinneir, H. Schindler, Lehmann-Haupt and Mimirsky, Zesp., xxiv, 1917, p. 167.

After the Mongols. In 1237 (1237) the Ilâyirid Shahiš Hâsan inflicted a defeat on Tughril-Timûr [q.v.] near Mağrâba (or at Haşhtarâb). The pretender Muhammad was buried at Mağrâba in 736 (Naṣīdīr, p. 319). Later the political struggles of the Turksmans’ had their principal arena in the northern part of Arbar-budjin. In the same period the Kûshâb inhabitants of the districts south of Lake Urmia became consolidated and received reinforcements from the districts of Mâwar (Shiwar-nâmâ, l. 238). The Mâkrî Kurds united extended their influence over Mağrâba and even as far as Dîh-Khwarâ Gian. The Turks during their rule over Arbarâbîjin included Mağrâba with Taxta and levied 15 kharâvars of gold per annum on it which caused its inhabitants to go away (ibid., p. 294). In 1303 (1293) the name of the fortress of Saru-korgan (demolished in 795 by Timûr; cf. Shiwar-nâmâ, l. 628 and rebuilt by the Mâkrî) in the region of Mağrâba often occurs in the Shiwar-nâmâ, p. 294–295; this name recalls that of the Sar, the right bank tributary of the Dijâghît. During the second Ottoman occupation (1725) Mağrâba was governed by ʿAbd al-ʿAzîz Paschâ; this administrative unit consisted of 5 sandjakâ of which 2 were hereditary and 3 granted by the government (v. Hammer, iv. 228; according to Celebi-zâde). In 1442 (1729) Nâdir defeated the Ottomans at Miyânsâbîl on the Dijâghît and occupied Dim-lâm, Sawdji-bâd, Murâq and Dîh-Khwarâ Gian (Maldî-ḵân, Torqâ-i Nâdir, Tahâr 1284, p. 66; transl. Jones, l. 104). According to the recently discovered history of Nâdir, the monarch transplanted 3,000 inhabitants from Mağrâba to Kalâb (Borthicolor, in Zesp., xxv, p. 58).

The Morning. As early as the time of Nâdir, the Turkish tribe of Mûdâqand (Mâsrud) is mentioned as settling in the region of Mağrâba (Macdonald, Kinneir: 15,000 men). Aḥmad Khan Mûdâqand played a considerable part in the affairs of Ablâk-bâdûn. Janbâr, Yezîdî, p. 160 knew him in 1805 as beghelâbi of Ablâk-bâdûn under prince ʿAbd al-Mârîz. In 1810 he exterminated the Bûlûs chief whom he had invited to Mağrâba (cf. Sâwâd-mlâk). According to Morier, Second Journey, p. 293, this patrician was aged 90 in 1815 (cf. Brylîghe, Dynasty of the Kozârî, p. 60). The governor of Mağrâba ʿEmâd Kân, a partisan of Muhammad i. the Shâh who besieged Taxta in 1909, was of the family of Aḥmad Kân. At the present day the Mûdâqand are concentrated round Miîyûndûbah.

In 1828 Mağrâba was occupied by Russian troops. In 1878, the Kürd invasion by Šâhîk Ubâydi was reached the gates of Mağrâba. The town was not taken but the whole country round was in ruins when H. Schindler visited it in 1882. During the war of 1914–1918, Mağrâba was within the zone of the Russo-Turkish operations (cf. Tanâj). Bibliography: In addition to the native sources quoted in the text: Panânt, Nîkâh al-Anwâr, G.M.S., xx, fol. 519 (he also derives the nîkâh Mağrâba from the clan al-Mârîz of the tribe of al-ʿAzîz); Ḥosâb Khalîfa, Dâhirî-nâmâ, p. 389; cf. Mâhtab-Čelbi, Shiwar-nâmâ, iv, 573 (confused and of doubtful reading); Zain al-ʿAbîdîn, Bastîn al-Siyâṣa, p. 555.

(V. Minorsky)

MARAND (r.), a town in the Persian province of Arbarâbîjin.

Position. The town lies about 40 miles N. of Tabriz, halfway between it and the Araxes (it is 42 miles from Marand to Diilût). The road
from Tabriz to Khoi also branches off at Marand. A shorter road from Tabriz to Khoi follows the north bank of Lake Urmi and crosses the Mishowdagh range by the pass between Tawidj [q.v.] and Dität al-Dim. Marand, which is surrounded by many gardens, occupies the eastern corner of a rather beautiful plain, about ten miles broad and sloping slightly to the west. To the south the Mishowdagh range (western continuation of the Sawalalda) separates it from the plain of Tabriz and Lake Urmi. The pass to the south of Marand often mentioned by historians is called Yam (Mongol — post-station). The pass between the plain of Marand and Tabriz [q.v.] takes its name from the village of Waliyyan. To the east of Marand lies the wild and mountainous region of Karadjadagh (capital: Ahar). To the north, the plain of Marand is separated from the Araxes by a range, a continuation of the central heights of the Karadjadagh which is crossed by the defile of the Darab. The plain of Marand is watered by the river Zanife which flows into the Araxes (an important right bank tributary of the Araxes) about 20 miles N.E. of Khoi. The length of the Zanife is about 40 miles (Hund Allah Mustawf, 8 farasakhs). Hardt. A lofty tell which rises beside the town is evidence of the great antiquity of this as an inhabited site; it must have existed in the time of the Zoroastrian and Sassanian kings. Its Greek name Mesopotamia is perhaps connected with the people Macepdamia who, according to Ptolemy VI, the king of Euromus, is included in the lands as far as Lake Urmi. A legend of Armenian origin based on the popular etymology mae and ma-"mother" informs that Marand is the tomb of Noah's wife (Hübchenschmitt, De alto antiquitatis Ordinum, 1904, p. 346 and 452; Ker Porter, Travels, I, 217). Moses of Choreme places Marand in the district of Bakurazet. There was another Marand mentioned by the Armenian historian Orbelian (c. 1300) in the province of Surikik (north of the Araxes) and a village of Marand still exists east of Tightam in the khanaate of Mahal [q.v.].

Ibn Batţit. After the Arab conquest a certain Háshas of the tribe of Rabi'a took Marand. His son Ba[h]t, a soldier of fortune (ma'dah) in the service of Ibn al-Rawdát, fortified Marand. Muhammad b. Ba[h]t erected castles there (barād) (Baladgar, p. 330). This chief had acquired considerable authority. In 790 (815) he had taken from the family of Rawdát, the strongholds of Shâht and Tabrīz (Tabarti, iii. 1377). In another passage, Tabarti, iii. 1379, mentions Yakdar [i] in place of Tibriz, Ibn Ba[h]t lived at Shâht which stood in the centre of Lake Urmi (the peninsula of Shâht, where at a later date Hâshas Khuâs kept his treasure and where he was buried). Ibn Ba[h]t was at first on good terms with the Khurram Bâhâk, whose authority must have prevailed in the Karadjadagh in particular, in the north-eastern corner of which was his residence al-Bâshâm. Ibn Ba[h]t suddenly changed his tactics and seized by a ruse Ígam, one of Bâhâk's generals whom he sent to the caliph al-Mu’âmin. In 770 Ibn Ba[h]t accompanied Bagha on his expedition against the Bâshâm (Ibn Khawdît, 1379, 1503). Under the caliphate of Mutawakkil, Ibn Ba[h]t committed some crime (al-bâd) and was imprisoned in Surman-ma‘a. On the intercession of Bagha al-Sha[fb], 50 people of repute became guarantors of Ibn al-Bâshâm’s good behaviour and he must have been allowed considerable liberty. For in 734 (848) he escaped to Marand. Ibn Khurâdâdhîthi, who writes in 734, mentions Marand as being Ibn Ba[h]t’s bâgh. Tabarti, ii. 1379—1386, gives a very graphic account of the expedition sent against this town. The wall which enclosed Marand and its gardens was a faraday (stout wall). The caliph ordered a great ditch to be dug round within it. The dense forest outside was a further protection to the town. Ibn Ba[h]t collected 2,000 adventures who were reinforced by a number of non-Arabs (wâsl) armed with slings. He had ballistae constructed to repel the assailants. During the 8 months that the siege lasted, 100 individuals of note (muhditt al-nukhût) were killed and 400 wounded. When Bugha al-Sha[fb] (Baladgar, p. 330; Bugha al-Saghir) arrived he succeeded in detaching the men of the tribe of the Rabi’a tribe from Ibn Ba[h]t. Ibn Ba[h]t and his relatives were seized and his house and those of his partisans plundered. In Shaywâl of 735 Bugha arrived with 180 prisoners at the caliph’s courts. The capital of Marand was fortified but the latter receded towards the south and the caliph was astonished by his poetic gifts (rasm wa‘dan bu-alad) and gave him his life. Ibn Ba[h]t died in prison and his sons entered the corps of mercenaries (al-jâbiyyâ). According to one of Tabarti’s authorities (iii. 1388), the caliph al-Ma’âm and Ibn Ba[h]t also quoted his Persian verses (al-fâristâns). This important passage already quoted by Barhold, Bull. School of Oriental Studies, vol. ii., P. 11, 1923, p. 835—838, is evidence of the existence of the cultivation of poetry in Persia in the N.W. of Iran at the beginning of the ninth century. Ibn Ba[h]t must have been transmigrated to a considerable extent, and, as he has been mentioned, he reigned for support on the non-Arab element in his state (Shâht al-wâliyyân). Later History. The Arab geographers of the tenth century (Izlaysh, p. 182; Ibn Hawâlî, p. 239) mention Marand among the little towns of Aghbârâdân where the material called sâk was manufactured. Muâthâd, 51, 374, 377, puts Marand under Dâhâl and notes its gardens, its flourishing suburb and a cathedral-mosque in the centre of the market. The same author, p. 384, mentions a direct road from Marand to Marâghâ (via Nûrîn [i], somewhere west of Tabrîz). Later, Marand must have shared the fate of Tabrîz [q.v.]. According to Yâakhir, iv. 505, the town had begun to decline after it was plundered by the Georgians (Karâd) who carried off its inhabitants. This is valuable confirmation of the Georgian expedition to Persia, a detailed account of which is given in the Georgian Chronicle for 1208—1210 (605—607) (cf. Taran and Târîx). Among the theologians, born in Marand, Yâakhir mentions one who died in 745 and another who had studied in Damascus in 433. In 624 (1226) Marand which had not sufficient defence, was occupied by the Emir al-Muktafi of Akhât, Sharaf al-Makr, governor for the Khârijim, retook the town and wrought great slaughter in it (Izlaysh, ed. Houssay, 150, 161). The only historical monument in Marand is the old mosque now in ruins with a mowdâd in a tamarisk bearing the date of rebuilding: 734 (1331) (reign of the Muhâd Alih Sa’îd). Cf. Sarre, Denkmâler pers. Baukunst, Berlin 1910, p. 24—25 and pl. xvii.
and the observations by Herfeld, Die Gumbalchli, Marawiyah, in the Folio... presented to E. G. Browne, 1922, p. 194-195. In the same period (1340) Hand Allah Mustawfi, Nuhshat al-Kulub, G. M. S., xxii., p. 58, counted 60 villages in the district of Maras. The walls (kurdi) of the town were 8000paces (qusim) around but the town only occupied half the area.

Maras is several times mentioned in connection with the Turco-Persian wars. According to Emily Celebi (in 1647), SipahHNmanna, ii. 242, Maras was a hunting-resort of the Timurid Shhurra. In spite of the damage done by the invasion of Sultan Murad, the town looked prosperous and had 5000 houses. Emily enumerates a number of celebrated theologians buried north of Maras.

In the autumn of 1724, Abd Allah Pasha Kopruli sent the Kurd Khan of Bithia Muhummad (see above) to occupy Maras and the inhabitants of which had fled. Resistance centred around the town of Zunfa (10 miles N. of Maras) which had 7000 (?) houses and a castle called Diza by the Persians. To dispose of the threat to their flank, the Janissaries before advancing on Tabriz, fought a battle here in May 1725 with the Persians of whom a large number were slain. Diza was taken and dismantled (cf. van Hamman, G. O. F. A. S., iv, p. 226, following Celebi's tale).

Maras has often been mentioned by European travellers since Chardin (1811 edition, i. 518; cf. the notices by Ker Porter, Jaubert, Miroir, Quenev and Moutech of which a resume is given by Kitter, Erdkunde, i., p. 907). Maras has recently gained in importance since it lies on the modern high road from Tabriz to Dizful built by the Russians in 1906 and replaced by a railway in 1915.

(a) A town in the district of Khultei, in the north of the Oman; cf. Makaddani, p. 49, 290-291.

(Y. Minorsky)

MARASH, a town in Syria near the Asian Minor frontier (al-Turbet at el-Shawwah). It lies about 2000 feet above sea-level on the northern edge of the hollow ('Amak or Marash; now Cağal Owa and south of it Sheker Owa or Marash Owa) which lies east of the Lasham and is separated by its tributary, the Nahirdhitt (Ak-Su). As a result of the construction of the roads which run to Antaklya, to Atin Zara and el-Masjaya, to Anissan (Abu Shara) and Yarpita, via Goksin (Kokosso) to Kasiant, via Behemsi (Bahanah) to Summaiali and via el-Halab and Zibata to Malajja, Marash was from the earliest times one of the most important centres of trade in the Syrian frontier region. It is repeatedly mentioned as early as Assyrian texts as Marash, capital of the kingdom of Gurgum (cf. the article MARASHI), and several Hittite monuments have been found there (cf. Unger, MARASHI, in Elberth's Realthef. d. Vorphisch., viii., 1927, 48).

In the Roman imperial period it was called Germanikel in honour of Caligula (on the coins of Germanicus; cf. Grorée, Rev. d. Études. publ. en Bul. II, 1908, p. 247 sqq.). The identity of Germanikel with Marash is certain from numerous literary, especially Syrian, references. The Armenians probably knew, but probably from a learned tradition only, the name Germenik (Kermigian in Vahram; cf. Math. of Edessa, ed. Dulauz, p. 217 infra; St. Martin, Min. sur l'Arm., i. 200). The statement in the Description of the district of Hala (Paris, MS. Arm. N. 4682, fol. 72b) that the Armenian name of the town was Nahirik (Blochet, R.O.I., ii, p. 325 sq., note 6) is wrong; this is a mistake for Gurnak, a name later given to the neighbouring village al-Halab (ibid.). The Emperor Heraclius passed the town in 626 (Theoph., Chron. ed. de Boue, p. 315; Ramsay, Class. Review, x. 188; Gerland, Byz. Zeitsschrift, iii., 1894, p. 362). The Emperor Leo III came from Marash (Germanikia); later authors (like Theoph., op. cit., p. 391 wrongly called him "Isarnian" (a confusion with Germanikia); cf. K. Schenck, Byz. Zeitsschrift, ii., 1896, p. 296-298).

In the year 16 Abd ul-Haider sent Khaddib al-Walid from Mambij against Marash and the Greek garrison surrendered; the fortress on being granted permission to withdraw unmolested; Khaddib then destroyed it (Caetani, Annali dell' Istit., iii., 1910, p. 794, 806; Syfifin b. Awf al-Ghamidi in 30 (650-651) set out from Masm and settled soldiers in this "Arab Castle" (as Laumann, M. F. Ö. B., vi, 1913, p. 437 calls it). After Yezid's death the attacks of the Greeks on the town became so severe that the inhabitants abandoned it.

After Muhummad b. Marwan in 74 (693-694) had broken the truce concluded by Abd al-Malik with the Greeks, in Dumat al-Jandal in the following year the Greeks set out from Marash against al-Amys (= Amis of Antiokia; cf. Le Strange, Palestine, etc., p. 351) but were again driven back in the Amis of Marash. Marash was restored by al-Athbi, son of al-Walid (I.), and fortified and repopulated; a large mosque was also built there.

The people of Kinnar (i.e. probably the tribe of Kinnar) had to send troops every year to Marash. During Marwan II's fighting against Himas, the Emperor Constans restored again besieged Marash, which had finally to capitulate (746) and was destroyed (al-Balduhurt, ed. de Goeje, p. 182; Theophanes, Chron. ed. de Boue, p. 422; Georg, Kedronos, ed. Boni, ii. 7). The inhabitants migrated to Mosopotamia and the Djam of Kinnar. After the capture of Himas, Marwan sent troops to Marash, who rebuilt the town in 130 (747); the castel in the centre of the town was therefore called al-Marawiyun after him (Yama, ed. Wustenfeld, iv. 498 sq.). But by 337 (754) the Greeks again sacked the town. Al-Mansur then had it rebuilt by Salih b. 'Ali (d. 150 = 767) and gave it a garrison which al-Mahdi strengthened and supplied with ample munitions (al-Balduhurt, ed. de Goeje, p. 189; Theophanes, Chron. ed. de Goeje, iii. 445, ed. de Goeje et de Hozov, Thesmophorion K. 'Hababak). The Arabs in 769 (1080) entered the 'Amak of Marash and deported the inhabitants of the region who were accused of espionage on behalf of the Byzantines, to al-Raml (Michael Syrus, Chron. ed. Chabot, ii. 526). According to the Syrian inscription of Enauch on the Epistle, in 770-777 A.P. (1088 S.P.) the people of the hollow (umank) of Marash invaded Asia Minor (Beth Rama'tay) to plunder (Chabot, J. A. soc. ix. viii., 1900, p. 286 sq.; Pogrm, Livre, secre. de la Syrie et de la Mésopotamie, p. 146-150, No. 84). A Greek army of 16,000 men in 161-162 (778-779) under Michael Lachanodrakos besieged Marash which was defended by 'Abu b. 'Ali (Tirahud in Theophil, op. cit., p. 541), grandson of the Caliph al-Mahdi, destroyed al-Halab and laid waste the Syrian frontier (Weil, Grieck. d.
Alexius later sent the general Butumites against Marash (රི་མོ་བན) who took the town, fortified the surrounding small towns and villages and gave them garrisons and left Monastru there as Ὁσσος (Anna Comnena, Ἀλαζάς ed. Reifferscheid, i. 232, n. 12; F. Chalandon, Les Communes, i. Paris, 1900, p. 234). The town of Marash was placed under the Armenian prince Thadak, who had distinguished himself in its defence against Byzantium (Matthews, Descriptions, ed. Dufour, ii. 90); Chalandon, Les Communes, i. 102, p. 1). But by 1104 he had to abandon it and surrender it to Joscelin de Courtenay, lord of Tell Rıbaa (Matthews, op. cit., p. 257, ch. cxxxviii.; Rauol de Caen, ch. 148; Röhrich, op. cit., p. 49, note 8; p. 32, note 4). This Thadak is perhaps the same Armenian as had given his daughter in marriage to Godfrey's brother Baldwin (in William of Tyre, x. 1, he is called Ταφους; in Albert of Aisa, iii. 31, v. 38; Theophas. continuat., ed. Boum, p. 280). According to the Παρεγωγιων, Ταφους (ἐν θείωσισ) settled, Migne, Patrolog. Graec. cxxvi. 1891, Abb. viii. 66, is therefore presumably wrong). The Byzantine Andronicus in 292 (904—905) invaded the region of Marash, defeated the garrisons of Taras and Monastir destroyed Kurus (ibn al-Athir, ed.Tornburg, vii. 317; al-Tabari, ii. 2298; Well, op. cit., ii. 533; Vasili, Φιλοστράτιον Αρχαίον, i. 555, 1902, p. 154). The Armenian Melch (Arch. Malby) plundered Marash in 916; 50,000 prisoners were carried off from it and Taras (Well, op. cit., i. 654; Vasili, op. cit., p. 223 sq.). In the fighting against Siuf al-Dawla, the Greeks under John Kursas took Marash in the spring of 537 (949) (Kanul al-Din in Freytag, Z. D. M. G., xi. 187; Well, op. cit., i. 14, note 1; Vasili, op. cit., p. 268). In 341 (954) the Hasmoneans defeated the Demokritos of Marash and in June rebuilt the defences of the town (Freytag, op. cit., p. 191; Vasili, op. cit., p. 291). When the Hasmonids Abu 'I-Aqbar in 950 was taken prisoner by the Byzantines, his father-in-law Abu Firas followed as far as Marash in the attempt to rescue him but could not overtake his captor (Dufourc, Aba Firdaws, Leyden 1895, p. 31; Vasili, op. cit., p. 297). Necrophores Focas in Eubai. i. 541 (Aug. 692) occupied Marash, Dulfik and Rabban (Freytag, op. cit., p. 199; Rosen, Zaptique Imp. Abad. Notit. alv. 152, note 160). Bagdattakin in 382 (992) carried out a raid on Marash and came back with great loot (Freytag, p. 248; Rosen, p. 250, 263). The Armenian Philaretes Brachamias (Filardins al-Rum) who in the second half of the 9th century, as leader of a robber band and ally of the Byzantine emperor, conquered a little kingdom for himself on the Syrian frontier, belonged to the village of Shurfa in the district of Marash (Michael Syrus, iii. 173, 174, note 9). After the Franks under Godfrey de Bouillon had taken Marash in 390 (1007), they installed a bishop there (Michael Syrus, iii. 191). Bohemund of Antioch was taken prisoner in June 1100 in the 'long Marash in the village of Gâniz (Michael Syrus, iii. 188) on his campaign against Malaya by Gümüşhisar in the Dinarbakh (Recueil des hist. or. des évêques, i. 389; Röhrich, Gesch. des Koenigs Tremis, p. 97; Well, op. cit., i. 179). The emperor
and Hüs Mangür; Nûr al-Dîn kept the rest (Michael Syrus, ii. 397; Will. of Tyre, xvii. 16). When Malik's son Kûlid Arslân, lord of Marâşh (Michael Syrus, iii. 318), attacked an Armenian village, the Armenians under Stephan, brother of the prince Thori, in 1156 revolted themselves by setting Marâşh on fire and carried off the whole population into captivity, during the absence of the Sultan and his Turks (Michael Syrus, iii. 314 [expanded from Barhebræus, Chron. syr.]; differently in Abd Şâma, Rec. hist. or. crit., iv. 927; F. Chalandon, Les Communs, ii. [1921], p. 434). Among those carried off was the bishop Dionysios bar Salih, who escaped to the monastery of Kâbulû (according to Chabot, loc. cit., the karmân Karbûyûn of Anna Comnena, ed. Reifferscheid, ii. 219) and wrote three amîrûn about the devastation of his former diocese of Marâşh (Michael Syrus, loc. cit.; Baumgart, Geist, d. syr. litér, p. 298). Thori of Little Armenia in 1156 plundered Marâşh (Barhebræus, Chron. syr., ed. Strozzini, ii. 331; Rûrîchitz, op. cit., p. 319, note 8; Chalandon, loc. cit., ii. 531, note 1). Nûr al-Dîn again took Kûlid Arslân II when he was on a campaign against the Dînâmânshidî Dhu l-Nûn (Michael Syrus, iii. 350) in the beginning of Dhu l-Ka'dâd 568 (June 114, 1173) and Babunsh in Dhu l-Hijjâd (Rec. hist. or. crit., i. 43, 592; iv. 158; Mathioli Utayyecî, ed. Dunzlâver, p. 360; Abu l-Fîdä, Ann. Mâlikî, ed. Reiske, iv. 4; Rûrîchitz, op. cit., p. 303, who is followed by Chalandon, Les Communs, i. 463, wrongly puts these events as early as 1159).

Nûr al-Dîn perhaps handled Marâšh over to his ally Meşh of Little Armenia. When the dynast of Marâşh raided the district of Kâbulû, al-Malik al-Zâhir in 592 (1196-97) took the field against him, whereupon the lord of Marâşh sought forgiveness and recognized his suzerainty (Kamil al-Dîn, trans. Hlochet, K. O. L. I., iv. 318). The Armenian ruler Rûpen III took back Mamiu Mîn of Anjûkîya prisoner in 1185 and forced him to code the territory from the Dînâmânshidî up to Kastûn (Michael Syrus, iii. 356 sp.; Rûrîchitz, op. cit., p. 403, note 7; 607). Ghûayb al-Dîn Kaktûsurw, son of Kûlid Arslân II, in 605 (1208), when on a campaign against Little Armenia took Marâšh (Abu l-Fîdä, Annal. Mâlikî, ed. Reiske, iv. 252) and made Hûsam al-Dîn Tâmmûz governor of the town. He was succeeded in this office by his son Abû Zakîr, who in turn was succeeded by his son Nuqûr al-Dîn, who ruled Marâšh for 50 years. The long reign of his son Munqîr al-Dîn was followed by that of his brother Imâd al-Dîn who however in 656 (1258) abandoned the town which was much harassed by the Armenians and Georgians, after failing to find support either from the Dhu l-Ka'dâd of Rûm or al-Malik al-Sâlîr of Egypt. The town then surrendered to the Armenians (Ibn al-Shîrûn, Bûyûr, 1190, p. 192.

Marâşh did not escape during the great Mongol invasion of Asia Minor. Balâbars I of Egypt in his campaign against them in 670 (1271) sent from Lebdis a division under Taybars al-Wazîrî and Talh b. Mahbûb, who drove all the Tatars from there and set Diet (Rom. Act., ii. 246; Maktûrî, ed. Quatremère, Hist. de Sûltan Mûsî, i. 107). In the wars with the rulers of Little Armenia troops from Halab went as far as Marâšh in 675 and destroyed the gates of the outer town (Weiss, Gesch. d. Chal., iv. 77). In the next few years Barbars negotiated with ensayn from Sûl, from whom he demanded the surrender of Marâşh and Bahmûn; but he was satisfied instead with a considerable sum of money (Maktûrî, ed. Quatremère, sp. cit., i/ii. 1125 [year 673 = 1274]; i/ii. 1124 [668 = 1268]). It was not till 692 (1292) that aikâni Khâlîfî by a treaty received Bahmûn, Marâşh and Tell Harîb (Maknûsî, b. Abû l-Fâjdî, Hist. des Sûltans Mûsî, i. 232; in Patriâ, Orient., xiv. 557; Weiss, op. cit., i/ii. 1386; S. Lane-Poole, Hist. of Egypt in the Middle Ages, London 1901, p. 287). But the Armenians must have taken the two last named towns not long afterwards (Weiss, ii. 215, note 1), for in 697 (1297) Marâşh was again taken by the emir Bâban Tabâkhî, Nîlîh of Halâsh, for Lûtîn. A treaty was then concluded with the ruler of Little Armenia, by which the Dînâmânshidî was to be the frontier between the two countries; Hâmûn, Tell Hamûnî, Kûhûrâ, al-Nâkîrî (its position cf. L. Allâhî, Sîmûn, p. 495-496), Hûdâr Shughîn, Sîrfandâkî and Marâşh thus passed to Egypt (Maktnî, sp. cit., i/ii. 63; Abu l-Fîdä, Ann. Mâlikî, i. 410).

In the second half of the viiiith (ninth) century Zain al-Dîn Karâjî and his son Khâlîfî, the founders of the house of the Dhu l-Kadâr-oghlu, conquered the lands along the Egyptian Asia Minor frontier with Mâlûtayy, al-Bâsîrî, Marâşh, Bahmûn and Kârâtîrî (cf. Ibn al-Kârim). In the mosque of Marâšh one of his successors, Malik Arslân, was murdered in 870 (1465-66); his portrait with the inscription Sultan âlîlûn is painted in the Codex Venetus 516 of the Geography of Plaimy, which he apparently intended to dedicate to his father-in-law Mahmûd II (Olsheimen, in Herber, xv., 1856, p. 417-418).

Conquered by Selîta I, Marâşh became Ottomân; on his campaign against the Dhu l-Kadârîya in 1515 he encamped on his way back before Marâşh and then returned via Karî Marâşh (now Kaur Bâkîr or Karî Dhu l-Kadârîya) and Gûmûn to Kariyatî (cf. Tschänscher, Türk. Bibl., xxii., p. 39, note 4). From 1832 belonging to Egypt, Marâşh passed finally in 1840 back to the Turks. The town was occupied by the French from 1918-1920, after its evacuation it was the scene of massacres of Armenians (F. Tourneux, in Dict. d'hîst. et de géogr., milit., iv, Paris 1925, 401, 360-362).

Marâşh is now the capital of a wîlâyêt which in 1928 had about 185,000 inhabitants; the town itself has about 50,000 inhabitants.

The extent of the territory belonging to Marâşh was liable to vary considerably with the vicissitudes of the town in the middle ages. The following places are mentioned as belonging to the territory of the town.

Ushayrî (Michael Syrus, ii. 447); cf. Ouoph, Upsîl neal Allahîn, Stammî, p. 2389. This place perhaps lay on the Nahr 'Affûn (Asyr. Aprîc) which Barhebræus (Chron. Syr., ed. Abelbevis-Laymy, i. 599 sp.) calls Nahru 'Ufrûn.

Beheîdûn "which is now destroyed" was the
birthplace of Nestorius near Marañ (Furat Orient., vol. 162 sq.).

Shelah, the birthplace of Philaretos (see above).

Zaitun, north of Marañ, scene of the Armenian rising against Turkey in 1844-1845, noted for its rich iron mines (Aghass, Zaitun, Paris 1897; Anatolio Latino, G. Armoni e Zeitum, Florence 1897)

Altibah (q. v.), also north of Marañ;

Andarin, west of the town and the Djafân (not to be confused with Aderin in the Syrian steppes); the capital of the town is Kaban (Armen. Chalan), the capital of Leo of Little Armenia;

Pekanjâli, between Marañ and Altibah; the capital is Bagdian.

AL-MARÅSHI (See SHEBAHART).

MARÅTHA, commonly mis-spelt in Hindi and in Indian Persian Maratha, is the name of a people of western India inhabiting Mahârâstrâ, the country lying to the west of the Western Ghats between the seventeenth and the twenty-fifth parallels of north latitude and extending at one point as far east as the seventy-ninth degree of east longitude. The Maratha state is an agricultural caste, of common origin and nearly identical with the great Kuka caste, but sometimes claiming a Kshatriya descent. The Marathas served in the armies of the Muslim Kingdoms of Southern India, and there gained military experience, but their opportunity came with the decline of the power of the Mughal Empire in the seventeenth century, when their national hero, Shivâji Bhonsla, converted the peasant population of Mahârâstrâ into a military nation. Shivâji was born at Shiner, near DJUNAR, in 1627 and with his fanatical followers he carved a small kingdom of the Carnatic for Bajâpur obtained possession of many hill forts in the Western Ghats. The Satîn of Bijâpur was unable to subdue him, and in 1659 he slew Aâjî Khan, commander of the army of Bijâpur, at a friendly conference. In 1664 he sacked the city of Shantar, and was obliged to contend with an imperial army sent by Awrangzeb to punish him. In 1666 he was induced to pay homage to the emperor at Dîhi, but was so disgusted by his reception that he escaped and, returning to the Deccan, extended his authority there until in 1674, he assumed the title of Râja, and was ennobled at Rejjgarh. He gained possession of the province of the Carnatic which his father had received from Bijâpur, and died in 1680. His eldest son and successor, Sambhedji, fell into the hands of Awrangzeb, who put him to death, but preserved his infant son Shahu, whom he retained at his court, and Râja Râm, Shivâji's younger son, became the ruler of the Marathas, now a nation. On the death of Awrangzeb in 1707 Shahu was liberated, and mounted the throne of his grandfather, but was never more than a puppet-king, and left all business of state to his Brahman minister, or Pishâw, Bajâdî Wahswamit, who reduced his sovereign to the condition of a state prisoner and founded the dynasty of the Pishâws. He left an army to Dîhi, and exerted himself for the effe government, and for the recognition of the Maratha state and the right to levy tax, or one-quarter of the revenue, throughout the Deccan. In the time of his two successors, Bajâdî Râo I (1720-1740), and Bajâdî Râo II (1740-1761), the Marathas conquered Gujûjarat, Mâlwa, Berar, Goudâwina, and Utra, and invaded the Carnatic, Bengal, and the Pasûjâla. They seemed to be on the point of superseding the Mughal power in India when Akbar Shah Abulâ or Durrânsi [q. v.] crushed them at the battle of Pansâ in 1761. The Maratha power survived, however, in the hands of the Pishâw, Bajâdî Râo II, who had founded the dynasty of the Pishâws and had become a great power, and the Mahrâstra, in 1775, tempted the Bombay Government to intervene. In 1778 the Marathas surrounded the Bombay army near Puna and compelled its leader to sign a humiliating convention, but an army sent from Bengal by Warren Hastings humbled Goliath and the Pishâw, and another force defeated Sindhiya and captured Goliath. Peace was restored on terms favourable to the Marathas, but their confidence was much weakened. In 1803 Bajâdî Râo II, who had died from Pünâ, took refuge with the Government of Bombay and entered into a subsidiary alliance with the Government of India. He was reinstated in Puna by
Major General Arthur Wellesley, but Sindhya, Bhonda and Holkar, resenting the Pashawar's suzerainty to the British, took up arms, and the third Maratha War began. In the Deccan Arthur Wellesley captured Ahmednagar, won the decisive victories of Assaye and Argaon, and stormed the strong fortress of Gwalior. In Hindustan General Lake defeated Sindhya's army at Laswari, and occupied Dihli. Bhonda, Josi Jyotis and Berar, Sindhya his possessions in the Deccan, and his guardianship of the emperor, and Holkar was humbled, but after the peace the freebooters known as the Pindaris, whom the Marathas had employed, continued to ravage states under British protection, and even British territory, and when in 1817, the Marquees of Hastings concentrated troops to deal with these marauders, the Pishwa, Bhonda, and Holkar rose against the British Residents at their courts. The first was defeated at Khikri, and the second at Sitaula, and the army of the third was destroyed at Mahipata. The dominions of the Pishwa were forfeited and annexed to the Bombay Presidency, and Holkar and Bhonda lost much territory. Bhonda died in 1855, and his dominions were ceded, in default of male issue, to the British Government. The dethroned Pishwa also lived until 1853, and his adopted son, Douda Panj, was the Naib Sthal of the Indian Ministry. Three great Maratha states remain to this day: those of Sindhya in Gadilwar, Holkar in Indir, and Gekewar in Gujjarat, but not one of them is in Maharrashtra.

MARDITES. These are the Djaradjins [q.v.], singular Djaradjin, of the Arabs: they are sometimes confused with the Djarawinka, singular Djarawina, so called from the name of their town Djarawina. They occupied the rugged regions of the Amur and of the Taurus, separating Syria from Cilicia, as well as the marshy districts of Antioch. They enjoyed a semi-independent dominion under the Byzantines to whom they furnished recruits and irregular troops. When the Arabs seized Antioch the Mardites agreed to serve them as auxiliaries and scouts and were thus enabled to watch the passes, the "Palis" of the Amur. In the small forts built on the heights beside the cities commanding the entrance to or the exit from Syria, they, in conjunction with the Arabs, supplied the garrisons. Exempt from the poll-tax, they obtained the right to quaff on the field of battle. They were in every sense of the word irregular, lying by war and by raids and asking only to fight for whosoever paid for their services; half-nomads, they came and went again like a flash. Very lukewarm Christian Monomphetics or Monophysites — we do not know exactly — their loyalty either to the Byzantines or to the Muslims was quite intermittent. Sometimes, says Bakalhurst, "they obeyed our officials; at other times they betrayed us for the benefit of the Greeks." The precarious nature of the Arab conquest in the North of Syria — a varying frontier region continually devastated by the Muslims and by the Byzantines — and the difficulty of gaining access to the land of the Mardites, made it impossible to chastise such nockie allies.

Towards the year 46 (668) the Greek Emperor succeeded in sending them against Syria. This was not a raid of the type usual to the mountainous parts of the Amur, but a regular invasion supported by a few squadrons of cavalry and led by officers of the imperial army; their bands penetrated into the heart of the Lebanon and occupied its chief strategic points as far as Palestine. The Mardites, discontented with Arab rule and also the thousands of slaves whom the Muslim conquers on land and on sea had collected in Syria, hastened in a body to take refuge with the invaders. The highlanders of this country, who had kept their independence, also threw in their lot with the Mardites. At all costs the Omayyad government had to put an end to this dangerous movement, limit the extent of the invasion and to make sure at once of the neutrality of Byzantium who had let loose this hurricane. Not for a moment did Mu'awiyah hesitate to subscribe to the generous terms of the Emperor — an annual tribute of 3,000 pieces of gold, the liberation of 3,000 prisoners, the delivery of 50 thoroughbred horses. In return the Emperor agreed to withdraw from the Mardites his support in men, arms and money. There is, however, no evidence that these adventurers definitely evacuated from that time their strong positions in the heart of the Syrian mountains. The neutrality of the Empire, the partial checks sustained by them and finally the establishment on the border of the Mardite territory of a strong colony of Tizi [q.v.] reduced for the moment to inaction the Djaradjins, abandoned by the Byzantines.

A quarter of a century later, they once more attracted attention. This was under 'Abd al-Malik, who was engaged in an interminable war with the anti-Caliph Ibn al-Zuhair and was taken by surprise by the sudden rising of the Omayyad 'Amr al-Asi [q.v.] in the year 69—70 A.H. (688—689). The Emperor Justinian II took advantage of these difficulties to let the Mardites once more loose against Syria. The result was the repetition of the movement in the reign of Mu'awiyah I. Byzantium furnished them with subsidies and with arms. At the same time he sent the army of Anatolia to advance and support the irregulars. In the same manner as in the first invasion their ranks were swollen by the accession of thousands of slaves, fugitives and miscontents, amongst whom one could probably reckon the Monomphites [cf. Trlahan]. Taken unaware, 'Abd al-Malik at once followed the policy of Mu'awiyah. The Emperor increased his demands. In addition to the conditions previously agreed to by the Sufyânid Caliph, the Arabs were forced to abandon to the Byzantines half the tribute of Cyprus, of Armenia and of Iberia. In return for this, Justinian agreed to withdraw the Mardites. The majority of the invaders agreed to evacuate Syria. One of their chiefs, who persisted in continuing the war on his own account in the mountainous massif in the districts of Homs and of Damascus, perished, treacherously assassinated by a partisan of the Caliph. A few Mardite bands remained in the country, where we find them again still feared
and handled carefully in the caliphate of Walid I.

Entrenched in the Amanus, protected by the great marshes and the lake region of 'Umk in Antioch, the Djaródjum lived in practical independence of the Empire and of the Caliphate. They chose their masters and their rulers at their own convenience. At the same time some of them were quite ready to put their swords at the service of the Arabs. Amongst these must be named a leader of a band called Malīma or Maimun. He with his contingent (about a thousand men, probably all Mardawīd like himself) perished at the siege of Tyane. His compatriots in the Amanus seem to have wished to profit by the death of 'Abd al-Malik to renew their raids upon the Syrian provinces. Mādāma, the son of the Caliph, resolved to put an end to these rebels. He penetrated into their country, laid siege to their capital Djaród, and forced it to capitulate. Thousands of Mardawīd perished in this campaign. To the remainder he granted the right to retain their Christian faith, to serve in the Muslim armies, in fact he gave them the same terms as were obtained by their ancestors at the beginning of the Arab conquest. After this severe lesson the Mardawīd peril, which had been the cause of incessant trouble during the reign of the preceding caliphs, was practically at an end. The people of Antiochene saw emigration begin to thin their ranks, many of them having decided to emigrate to Anatolia or to enter the service of the Emperor. This resolution, however, did not prevent the Mardawīd, who remained in Syria, from fighting under the banner of the Caliph. We still find them in the reign of Yazīd II when they co-operated with the Syrian army in the suppression of the troubles in the Ṭrik.

H. Lammens

MARDAWĪD B. ZAYN, AHI-'ES-HĀDĪDAH, the founder of the Ziarādī dynasty, was descended on his father's side from the rulers of Gīla and on his mother's side from the Isphahānīs of Rūyān. He had taken service under the 'Abīd ruler of Tabaristan and was a captain in the army under Abū Sāfār b. Dār al-Dawat, who died (948), and shortly after that rebelled against Asfār, made himself independent at Zanjān which he held in ḫiyār and captured Kāzvīn. He then defeated Asfār, forced him to fly to Tabas in Kuhistan and put him to death in 950 when he was attempting to reach the castle of Alamāt (q.v.).

Mardawīd thus became master of Razī and Tabaristan. He then defeated Mādāma (q.v.) and annexed Tabaristan. Mādāma attempted twice to capture Tabaristan, with the help of powerful allies, but Mardawīd defeated him on each occasion and forced him to take refuge in Khorāsān. At this time (970—976) 'Alī, Hasan and Ahmad, the three sons of Bawār, who were commanders of the army of Mādāma, deserted to Mardawīd who conferred on 'Ali the eldest the governorship of the province of Karadāj.

Having consolidated his power over Tabaristan and Gurgān, Mardawīd next turned his attention to Džūbāl, defeated Ḥārūn b. Ṣharīb the governor, in the neighbourhood of Hamedam in 978 (931) and conquered the whole of Džūbāl up to the confines of Hulwān. In the following year Maḥ- tadīr, the Caliph, formally recognised him as ruler of the provinces which he had conquered on condition that he evacuated Isfahān, but as Maḥtadīr was assassinated shortly after this Mardawīd evaded compliance. About this time 'Ali b. Bawār, the governor of Karadāj, rebelled and took possession of Isfahān. Mardawīd sent his brother Washmūn against 'Ali who abandoned Isfahān and retired to Arradžān. To deal more efficiently with 'Ali, Mardawīd made an alliance of friendship with Yāḥūn, governor of Shirāz, marched to Isfahān and threatened to take the field against 'Ali. 'Ali now offered submission and, as a guarantee of good faith, sent his brother Ḥasan as a hostage to Mardawīd.

In 979 (934) the Caliph Kāhīr confirmed Mardawīd in his government on the condition of his evacuating Isfahān. Mardawīd obeyed and sent instructions to his brother Washmūn, the governor of Isfahān, to deliver the province to the Caliph's agent. Mādāma, however, but as Kāhīr was deposed shortly after this in Djaródjum of the same year (April—May 979 A.H.), Mardawīd again evaded compliance.

In Saffar 353 (Jan. 973) Mardawīd was assassinated by his Turkish slaves at Isfahān. He was loved by his soldiers, who, it is stated, carried his coffin on their shoulders all the way to Rayy for burial. Mardawīd was a man of high ambition and had drawn up a plan for the conquest of Buhārī and the restoration of the Persian Empire in his own person, but he was murdered before he could carry out this scheme.

MARDIN (written Mādīrī in Arabic, in Syrian Mārdā, a town in upper Mesopotamia (Diyar Kahrāmān). Position. In Upper Mesopotamia, the watershed between the Tigris and Euphrates where they emerge from the heights which culminate at Karadj-dagh (9,636 feet) S.W. of Hāyar-bakr. This broad massif is continued eastwards in the direction of Djasrat Ibn 'Omar by the limestone chain known in ancient times as Māsās and later as Ila(la (q.v.). The eastern part of this ridge forms the district of Djasrat-Tür or Tür 'Abdīn (q.v.) the capital of which is Midrāj. From the southern slopes of the Māsās descend numerous watercourses, the majority of which join one another before flowing between the mountains of 'Abīd al-'Āzī (in the west) and Tell-K historian and Singā (in the east); their combined waters form the river Ḥabīr (q.v.).
Mardin lies near the point where there is an easy pass through the mountains from the lands south of the Tigris to the Tigris, on the slopes of the Khabur [the stream called Zawirak which rises north of Mardin], in other words Mardin commands the Diyar-bakr-Nisinlun road (which then turns towards Ijjar in the south), to the land of the sources of the Khabur. On the other side towards the west several (Ritter, xi. 356, gives three) direct roads connect Mardin to the Urfa and Birejik (on the Ephesus); to the S.W. a road runs from Mardin to Kâs al-Ayn (there is now a railway) and to Harran. The direct distances are as follows: Mardin-Diyar-bakr 55 miles; Mardin-Nisinlun 30 miles; Mardin-Sawur-Midyât 55 miles; Mardin-Birejik 160 miles; Mardin-Adana (by rail) 450 miles.

The advantages of this position at the intersection of important roads are enhanced by the very strong natural situation of the town, built at a height of 4,000 feet on an isolated eminence on the top of which is a fort 300 feet above the town (cf. the sketch in Cernik, pl. ii., No. 17). Buckingham compares its position with that of Quito in South America. All travellers (cf. Ibn Hawšâb, p. 352) have been struck by the unique spectacle of the vast Mesopotamian plain which from the height of the town is seen to stretch southwards as far as the eye can see. Only a hundred years ago Mardin was still considered impregnable, but the difficulty of access sensibly affected its commerce. According to Cernik loaded camel trains could not ascend right up to the town. A branch line 13 miles in length now connects Mardin with the station of Darbâzîya on the "Baghîdâd" railway, but the station for Mardin is five miles from the town.

Ancient History. It is noteworthy that in spite of its remarkable situation Mardin does not seem to be mentioned in the cuneiform sources. Ammi-yanas: Marcellinus (ix. 19, 4) is the first to mention two fortresses "Mardite and Lorne" between which the road passed from Amid (Diyar-bakr) to Nisibin. Theophanes Simokaita (ii. 2, 85) mentions the Makedon and (v. 3, 17) the Makedon 3 parasanges from Dara. Procopius, De Aedificiis (ii. 4) mentions the Makedon (or Makedon) and the Aëtoci and Georgius Cyprius, ed. Gelter, 1826, p. 462. Makedon Aëtoci.

The name Makedon is in Ptolemy, vi. 1, however, refers to another place in Assyria to the east of the Tigis.

Muslim Conquest: The Muslims under Tup b. Ghanm occupied the fortress of Mardin along with Tur 'Abdin and Dara in 19 (620) (Bâlâshîh, p. 176). In 133 Mardin is mentioned in connection with a rebellion in Upper Mesopotamia. The town formed part of the possessions of Buraka chief of the Râsa who was defeated by the "Abbadî Abd Allah 'Divar (Talari, iii. 53). In 279, Aliya b. Hâl took Mardin from Muhammad b. 'Isa b. Kandilî (iibid., iii. 229b). Hamdan b. Hamdan attacked the town in 87 (1472) seized Mardin. In 879 the caliph Ifhidam marched on the town, Hamdan fled and left Mardin to his son. The latter surrendered the fortress which was dismantled (iibid., iii. 2142). The "grey fortress" (al-kâr al-

dispossessed by his brother Fu'dl Allah 'Abd Taghibil. By the peace of 363, concluded between the Bayad Bakhtîyâr and 'Abd Taghibil, Hamdan recovered his possessions with the exception of Mardin. (Ibn Miskawîh, ed. Amedro, ii. 254 and 319).

The Arab geographers give few details about Mardin but they emphasise its importance. According to Ibn al-Fâkid, p. 132, 366, the Mârîf of Mardin was equal to that of Mayyâr (865,000 dirhams). Ishaqîhîrî, p. 76k, says that it is a large town on the summit of a peak the ascent of which is a faraşî in length; Duniaizâr [q. v.] was one of its dependencies. Ibn Hawšâb, p. 143, gives the ascent at two faraşîs. The quarters of the town itself was flourishing; thence populated with large markets. The water supply was brought by subterranean canals from the springs to the town. The rain-water was also collected in cisterns (ja-hârîj wa-birâk). Yâkût, iv. 390 (cf. al-Kazwîni, p. 172), speaks of the splendour of the quarters outside Mardin (i.e. below the town itself) and its many madrasas, hânîfîs etc.; as to the "l-a" there was nowhere in the world so strong a defence; its dwelling-houses rose in terraces one above the other.

The Mazâwîids and the Sa'dîjîs. It is probable that Mardin was within the sphere of influence of the Marwânis, for according to their historian (cf. Amedro, J. R. A. S., 1904), their ancestor Bâdî (d. 830 = 990) had extended his power over Diyar-Karâbîn (Nisibin, Tur 'Abdin). The Sa'djîs ruled there next. After the death of Malikshah, Tutbuz b. Alp Arslân seized for a time all the lands as far as Nisibin. Under Barkîyâr Mardin was given to his old bard (mughamîn).

The Ortoqids. At this time arose the dynasty whose fortunes are especially associated with Mardin. The son (or grandson) of Ortoq called Ya'kîti assumed the title of sultan in the town which he had been imprisoned but he was taken from him by his brother Sakmân b. Ortoq who died in 498. In 502 we find at Mardin Il-ghezî b. Ortoq (Ibn al-Luhî, x. 269, 321) whose line ruled there till 811 (1406) (cf. the art. of Ortoqids). On their coins attacked at Mardin in 599, 600, 654, 657, 648, 655, 656 etc., (cf. Ghâlib Edhem, Catalogue des monnaies turcomanes, Constantinople 1894.

S. Lane Poole, Catalogue of Oriental Coins in the British Museum, vol. iii. and x. (Index, s.v., Mârîf).

In 759 (1183) Saladin came to Harram (6 miles S.W. of Mardin) but was unable to take the town. In 594 Malik 'Adil b. Alyûb seized the suburb which was pillaged but the siege of the town itself was abandoned in the following year. In 599, 'Adil sent against Mardin his son al-Sharaf who appointed governor (zâhîbî) in its dependencies. The Alyûbîs of Aleppo al-Zâhir b. Salâm al-Dîn offered his good offices and 'Adil was content with an indemnity of 150,000 dinars and the acknowledgment of his suzerainty by the Ortoqîs of Mardin (cf. Abu 'l-Faragî, ed. Poço
cas, p. 439, 445, 447).

The Mongols. In 657 the Mongol HüLisa Khánr demanded the homage of the prince of Mardin, Nasâm al-Dîn Ghâsî Sa'dî, who sent his son Mu'azzâm to him but maintained a neutral attitude. In 658 the town was besieged for 8 months by the troops of Yâshûrîn, son of HüLisa, Famine and an epidemic raged in the town. Ac-
ccording to Rashid al-Din (ed. Quattrémère, p. 375), Muqaffar killed his father in order to put an end to the sufferings of the inhabitants (Abu 'l-Faraj) and Waṣṣīf give different versions, cf. d'Oizieux, iii. 368, 358). Muqaffar was confirmed as lord of Mardin; his descendants also received from the Mongols the insignia of royalty (crown and parasol). In the reign of Salih b. Mas'ud (765-780/1367) whose sister Dūnay Khādītī was the wife of the tālukdar Khandāsh, Ibn Batūta (i. 442-445) visited Mardin.

The Ak-Koyunlu. The Ortoqdī Salīnā Isḥāq (778-809) was king of Mardin at the invasion of Timūr in 796. Sulțān Isḥāq came to pay his homage to the conqueror but the citizens attacked those of Timūr's men who ventured into the town. Mālit Isḥāq was put in chains and taken to Sulțāniyya (Zafar-nāma, i. 663, 671—672). In April 1404, Timūr returned to the attack and the town was taken by storm. Then the siege of the upper fortress (Abū naṣr al-ḫālkhār) was begun but it was never taken. Timūr was content with presents and promises of kharāj and returned to the plain (ibid., i. 676—679). Then the people of Mardin obtained an amnesty on the birth of Ulugh-beg. Sulțān Salīh was appointed at Mardin in place of his brother, Sulțān Isḥāq (ibid., i. 676—681), but three years afterwards the latter was pardoned and restored to his sīf (ibid., i. 787). When in 803 Timūr reappeared in Mesopotamia, Sulțān Isḥāq shut himself up in Mardin. As the siege would have taken some time and supplies were short, Timūr did not stop before the town but ordered Kara Othmān An Koyunlu to besiege Mardin (ibid., ii. 354).

The Ak-Koyunlu. This was the beginning of Ak-Koyunlu interference in Mardin but Kara Othmān's forces were not yet equal to this task. In 805, Sulțān Isḥāq came of his own accord to Timūr and was pardoned (ibid., ii. 512).

For a brief period the Kara-Koyunlu tried to resist the extension of Timūr's power of the Ak-Koyunlu to Mardin. When, after the death of Timūr, Kara Yusuf left Egypt to re-enter into possession of his territory he joined Sulțān Isḥāq and advanced against Kara Othmān. The battle lasted 20 days and was settled by agreement. As soon as Kara Yusuf had left for Adhābdjiqān, Kara Othmān returned to the attack, defeated Sulțān Isḥāq near Dāwās (there is a Dāwās 10 miles W. of Mardin on the road from Derek) and besieged Mardin but once more without success (Mīr Mīrād-jīm bījāh, ii. 685). It is not clear what connection these hostsilities had with an expedition against Diyarbekr conducted by Bābak in or Dījkān (governor of Aleppo, a former Mamlūk of Barākāk) in which Mīr Bābak took part. In the battle which Muhammad (?) son of Kara-Bījāh and Kara Othmān fought against the allies on the 15th Dībā 'l-Kāda' sūq, Sulțān Isḥāq sūq, Sulțān Isḥāq sūq was slain (cf. the Egyptian sources consulted by Rice for Howorth, iii. 685). Sulțān Şehīb succeeded a second time to Sulțān Isḥāq, but the Ak-Koyunlu continued to harass him and finally in 811 he ceded Mardin to the Kara-Koyunlu who gave him Mawṣil in exchange.

We do not know the exact course of subsequent events but, according to Mīr Mīrād-jūlāh, Kara Othmān's successor 'All Beg (832-845, cf. Ahmad Tewfiq, Muḥi't Imp. Ottoman, Mâr., mar., part iv., Constantinople 1905) gave his brother Hammān the task of establishing the Turkomans in the vicinity of Mardin. Dīhāngir (848-857), son of 'All, was already master of the town. In the reign of Utnān Hasan, Joseph Bartholomew visited Mardin and was lodged in the hostel (ospedale) built by Dīhāngir Beg (Zangia). We have coins struck at Mardin by Utnān Hasan (875) and by his son Yaḵūb. After the death of Yaḵūb 'All al-Daula, prince of the Dībā Ḳadard Turkomans, seized the land of Diyarbekr but, as the anonymous Venetian merchant shows, the Ak-Koyunlu retained Mardin. In 903 (1409) Abu 'l-Muṣafar Kāsim b. Dīhāngir dated his firman to the name of the prince of Egli from his capital (diyar Dūsûlu) Mardin; cf. Balāspī, Der älteste Firman der Congi-shehi, Wisswiss. Mitt. aus Ostasi, i. vi., Vienna 1869, p. 497. The coins of Erken come down to 908. The taḵāna of Kāsim-pāshā which Niebuhr mentions must date from the same ruler.

Persian Conquest. In 913 (1507) all the lands as far as Malatya were conquered by Shāh Ismā'īl who appointed his general Ustādu'llah Muḥammad to it. According to the Venetian merchant who travelled there in 1507 (op. cit., p. 149), Mardin was occupied without bloodshed. The same traveller mentions the fine palaces and mosques of the town; there were more Armenians and Jews in Mardin than Muslims. The battle of Kābilār (914) shook the power of the Persians. In place of Ustādū'llah Muḥammad killed at Kābilār, his brother Kara-Kāhān was appointed and established his headquarters at Mardin. Soon the Ottomans occupied Diyarbekr and then the town of Mardin, but the Persians who never lost the fortress restored the status quo.

Ottoman Conquest. Finally in 922 (1516) Kara-Kāhān was defeated and slain in battle at Kargarhan-dede near the old town of Koč-bişār, 10 miles S.W. of Mardin. Persian domination in Upper Mesopotamia thus collapsed, but the fortress of Mardin still remained in the hands of Salāmān Kūhan, brother of Kara-Kāhān. The siege lasted a year and not till Bābak Muḥammad Pāšā arrived from Syria with reinforcements did it storm and its valiant defenders put to the sword ('Ālam-ud-dīn, p. 24, 32; this Persian source mentions 'Ālam-ud-dīn [?] in place of Koč-bişār) (v. Hammer, G. O. A. Z., i. 736—740, quoting Abu 'l-Fadlī, son of Dāwās and continuus of his Hammān). In the Baghdad campaign of 941, Mardin was created a sanjak and included in the eyālet of Diyarbekr. Ewliya Celebi, iv. 59 gives Mardin 36 qasâm and 455 timāshāts; Mardin could put in the field 1,060 armed men (dēvēčī). In the xviiith century Mardin became a dependency of the Pāšā of Baghādād; Otter (1737) found at Mardin a tawza made appointed by Ahmad Pāšā. As late as the time of Kāmīr (1810), Mardin was the frontier town of the pashašī of Baghādād and was governed by a mütevālius sent from Baghādād.

The reforms of Mahmut were badly received in Upper Mesopotamia. In 1832 (Alinsworth) Mardin rebelled. Power in Mardin had passed to the Kurd beyis. Southgate (1836) speaks of a heterogeneous family who ruled in Mardin. The two brothers of the "ruiling bey" seized the power and refused to recognise the authority of the Porte. (It may be asked if these beyis were not of the Mill tribe; or their chiefs cf. Buckingham, cf. cit., p. 156). Rashid Pāšā, the pacifier of Kurdistan, besieged the town and blew up the great mosque.
MÄRDIN

(Ainsworth). Order was temporarily restored. Considerable works were undertaken to improve the road giving access to the town. Rashid Pasha died in January 1837 (Foujoulas). When the Egyptians invaded Syria, their partisan Timur b. Ayûb of the Millî tribe seized Mardin (Sir Mark Sykes, The Callip's Last Heritage, London 1915, p. 328) but was killed. The defeat of the Ottomans at Nîrîsh (June 1839) brought matters to a head. The Porte entrusted Mardin to Sa'îl Allah Pasha of Diyarbakır but the inhabitants preferred to submit to Ibrahim Pasha of Mawlawi who was opposed to the Shâmilis. This Pasha appointed a governor to Mardin but the rebel still held the citadel (Ainsworth 1840) and the governor soon perished in a rising. By the šâmilî law of 1287 (1870) Mardin became a sandjak of the vilayet of Diyarbakır. It had 5 šâmilís: Mardin, Nişîrîn, Diyarbakır, Midyân and Âzînî. The area of the sandjak was 7,750 square miles and the number of towns and villages 1,008. The sandjak was mainly agricultural. The town of Mardin produced a small quantity of silk, wool and cotton, leather, shawls etc., but in spite of the excellence of the work these articles were mainly meant for local consumption (Çufnet). By the reforms of 1921 Mardin formed a vilayet with 6 šâmilís: Mardin, 19 towns and villages, and 123,509 inhabitants (Yüreğî Dönmü 'ıçinde 1925—1926 Siyâsetî Mecmuası). The Siyâsetî of 1926—1927 made a number of changes. There are now 8 šâmilís. The area is 6,000 square miles with 6 1/2 million akçe of arable land.

922

The wilayet now marches with the zone of the French mandate.

Population. Niebuhr (1766) counted 5,000 houses in Mardin (of which 1,000 were Christian) with 60,000 inhabitants. Dupré (1808) estimated the population at 27,000 of whom 20,000 were Turks (i.e., Muslims), 3,200 Jacobites, 2,000 Armenians and 5,000 Shia. The statements of other travellers are as follows: Kinneir (1843): 11,000 of whom 7,500 were Armenians; Southgate (1857): 3,000 of whom 1,700 were Muslims, 500 Armenian Catholics, 230 Syrian Catholics, 100 Chaldaens; Mühlmann (1852): 12—15,000 inhabitants; Sachau (1859): 20,000; Çufnet (1891): 25,000 of whom 15,500 are Muslims. According to Southgate, Arabic and Kurdish are the predominating languages in the town. The rural population of Tar. 'Abdin speaks the "Tarîçî" dialect of Aramaic; cf. Prin. and Socin, Der new-aramäische Dialect des Tur-'Abdin, Göttingen 1881; on the Kurd dialect of Makas, Kurdîsches Texte aus der Gegend Mardin, Leningrad 1924.

Among the religious sects of Mardin the Şamaliya would merit a special study. In the time of Niebuhr (1766) there were about a hundred families in the town, and Buckingham (op. cit., p. 192) and Southgate (1857) also mention them. The Şamaliya probably represent the last survivors of a local pagan cult. Towards the middle of the 18th century they were led to declare themselves Jacobite Christians but only formally (cf. Ritter grim, p. 503—505).

Christianity at Mardin. The district of Mardin has played an exceptionally important part in the development of Eastern Christianity. A brilliant period of the Nestorian church which begins in 755 is closely associated with Mardin. Towards the end of the eighth century numerous monasteries were established round the town by the bishop John of Mardin. In 1771 the Jacobite patriarchate was transferred from Diyarbakır (Amid) to Mardin. In 1307 it was moved to Delî-Zâfaran. the few's journey from Mardin, to return to Mardin in 1555 (Assmann, Bibli. Orient., u. 110, 221, 470; Winlock, A short Hist. of Syria, Literature, 1891 [Index]). On the position of the Christians before 1914 cf. the works of Southgate, Parry, Cufnet etc.

Antiquities. According to Niebuhr, there are many Arabic inscriptions at Mardin. Those of the Orkûkis have been studied by 'Ali Emiri Efendi who examined the inscriptions relating to the principal buildings of this dynasty at Mardin (cf. Kâbit Ferdi [1944]. Mardin Mucâm-ı Evrakî Tarihî, ed. and annot. by 'Ali Emiri, Stambul 1931). For the list of buildings cf. the article Evcûkûs. The monuments of Mardin which must be of considerable artistic interest have never been described in detail. Buckingham (p. 191) gives a few details about the minaret of the "great mosque" (a cylinder decorated with carved arches, on a square base, etc.; a stone gallery with a pointed roof on the top); i.e., the Mosque of Na'dam al-Din Ali Alpt built in 536—573; but the buildings have never been studied. We do not know if the monuments of Kâbit Pâdashâh Al-Koyanî (Niebuhr) is still in existence. The domes of the mosques of Mardin are "ribbed and guttered," their vertical ribs radiating from the summit.

MARDJ RĀHĪT, the name of a plain near Damascus. On leaving Damascus in the direction of Homs, just before crossing the pass of the Eagle, al-'Ukāb, one reaches the village of Mardj Adhrā. To the east of this place stretches the plain, Mardj Rāhīt, which extends as far as the desert. It was here and not in the "Hocheleine von Qatīfah" (11. Mardīj's the time of the Omacyids after the death of Mu'sawira II was settled. This decisive battle since it was fought in the neighbourhood of Mardj Adhrā was named by the poet al-Kaṯīr after this place. With greater exactitude the contemporary poet al-Aḫṭal, who was more cognizant with Omacyid history, places this battle "between the 'Ukāb and Rāhīt" namely in "the vast plain of Mardj" mentioned by the poets (Aḏkahtī, xvii. 112).

During the discussions of the congress of Dijbīya [q.v.] the concentration of the Kaṭi forces was taking place under the command of Dāhīb b. Kāš [q.v.] supported by the Yemen contingent and the Kaṭi maḥṣūntūt to the south-east of Damascus. Their total — which has probably been exaggerated — has been placed at 30,000. Mardj b. al-Jafak had at his command eight or ten thousand combatants, the majority of whom were Kāšī. The Kāšt seem to have taken up their position first at Mardj al-'Ṣaffar [q.v.] to the north of Dijbīya. After an engagement in this place had settled to their disadvantage, they were forced to double back to the north. In the meantime a sudden attack launched against Damascus which was depleted of troops, had delivered into the hands of the Omacyids supports the treasury and the arsenals of this town. The Kaṭi in order to avoid being caught between the capital and the Kaṭi army advancing from Dijbīya retreated, while harassed at this quarter by better-armed forces. These engagements occupied nearly twenty days.

On arriving on the heights of Mardj Rāhīt, trapped between the defiles of 'Ukūb and the desert, they accepted battle. One must ask how the Kaṭi succeeded in making up for their glaring inferiority in numbers. Mardj b. al-Jafak, without explaining further, speaks of a stratagem devised by Mardīj. This stratagem, which is mentioned by the author of
the 'Irak al-safar, should be described not as a case of war but as a crime. After the advantage gained at Marj al-Suflar, the Omayyads had had the time, and without doubt made use of it, to detach from the Kharij their temporary allies, the Yezidis, of the Sufyānids. It was the very pressure of these states that had brought upon the 'Irak by the family of Ziyād b. Abīth. They may have been of assistance in doing this. The Syrian Arabs, not at their ease in the camp of Daḥḥik, do not understand how much the triumph of Ibn al-Zubair would be prejudicial to their hitherto privileged position and to the hegemony wielded since the days of the Sufyānids by the Syrian tribes. Their defection must, we think, have determined the issue of the engagement at Marj Rāḥit and hastened the triumph of the Omayyad army. Whatever was the cause this victory was decisive (the middle of July 684). 3,000 Kharij are said to have been killed. The death of Daḥḥik seems to have been the signal of defeat, which became a popular disaster, in which the principal chiefs of Kālib and Kūtīm died, the last being most prominent among them, Zafar b. al-Hārith (q.v.).

The memory of Marj Rāḥit was deeply impressed upon the Kharij. It detached them from the Omayyad cause. Under the first two Marwānī caliphs, their battle-cry became "Vengeance for the victims of Raḥit!". From this time a smile is said never to have appeared on the countenances of the surviving chiefs. Between them and their ancient rivals of Kālib the split became much deeper. Between the latter's songs of victory answered the cries of rage of the Kharij. In celebrating the battle of Raḥit the Kālib poets gave more emphasis to their triumph than to that of the Omayyads. Their compositions clumsily develop this theme without regard to the Marwānīs, their debtors rather than their sovereigns. This glorious victory afforded the aged Marwan the opportunity of proclaiming himself as Caliph of Damascus before beginning the conquest of the old Sufyānid lands now under the authority of Ibn al-Zubair. In the bosom of the Caliphate, it nourished the most dangerous rebellion; it inaugurated a savage war of extermination between Kālib and Kūtīm. The tribes of Kūtīm's first, then the Yezidis and lastly the Taghlib saw themselves in turn fatally involved. These internal feuds in which the members of the Marwānī family had the impudence to take part, to the satisfaction of their maternal connections, precipitated the fall of the Omayyad dynasty by destroying the agreement and the unity amongst the Arab tribes, which had been but imperfectly realised with the Sufyānids and the Taghlib.

**MARDJ AL-SUFLAR, a plain situated 20 miles south of Damascus near the modern Tell Saḥḥa; a stream called the "Wadi Atārūn" runs through it. The place plays a part in the military history of the first century A.H.; first in the accounts of the Arab conquests of Syria and later at the beginning of the Marwānī dynasty. The name has been sometimes confused with that of Marj Rāḥit (q.v.). For the history of Syria in the first century A.H., we are exclusively dependent upon the 'Irak annalists. Forgetting that the name "Marj" abounds in the toponomy of the Damascus region, writers have confused two distinct battles and made them one and referred them to Marj Rāḥit, a name which occurs frequently in the poems of the Marwānī period.

At the close of the year 13 A.H., the Arabs, victorious at Fih, endeavoured to reach Damascus by cutting across the Ḥawwāl. One of their bands, under the command of the Omayyad Khalīl b. Saḥīf, encamped at Marj al-Suflar and allowed themselves to be taken by surprise by the Byzantine troops. The latter killed and dispersed the contingent decimated. But the arrival of Muslim reinforcements enabled them to regain the advantage. The Greeks then proceeded to shut themselves in Damascus to which the Arabs at once laid siege.

In the month of May 684 (64), supporters of the Omayyads joined with Dabīhya (q.v.) in order to elect a successor to Muḥammad II. Daḥḥik b. Kās (q.v.), the leader of the rival section of the Zabīlātī and the governor of Damascus, was invited to the conference. He promised to come to the conclave and marched out of Damascus at the head of imposing forces. But, having gone about half way on the road to Dabīhya, on the heights of Marj al-Suflar, he determined to await events there. The presence of water and of forage made it suitable for the encampment of an army. An excellent point of observation, the site not only commanded the congress of Dabīhya, but also commanded the road leading to Damascus. Daḥḥik brought about at this point the concentration of the Kharij of Syria, who were in revolt against the Omayyads. At Dabīhya after 40 days' deliberation, the Kharij and the Omayyad partisans elected Marwān b. al-Hakam (q.v.) to be Caliph. Then in their advance upon Damascus, they attacked Daḥḥik and the Kharij encamped at Marj al-Suflar and succeeded in defeating them.

Of this campaign the 'Irak annalists and their copyists have only recorded and have only desired to record the decisive battle, namely that of Marj Rāḥit, to the north of Damascus. For a quarter of a century no mention is made of any battle between the Kharij and the Khalīl b. Marj Rāḥit. The extraordinary prominence given to this latter battle by the poets of both sides helped to throw into oblivion the preceding engagements commencing with that of Marj al-Suflar. Certain texts have however preserved their memory. Yāšir (Maḏjar, iii. 400) places in this place a battle celebrated in the history and poetry of the Marwānī period." Otherwise there is no reference to Marj al-Suflar in the military history of the younger branch of the Omayyads. As regards poetry it has kept for us the testimony of the Taghlib poet al-Akhṭal (Dīwān, ed. Salhani, p. 324, v. 1). This contemporary poet, who was a habitant of the Omayyad court while praising the glorious deeds of his
tribe, claims for it "many victories even before Mardjar al-Suffar". As we know that the Taghlibites fought in the ranks of the Omayyads, for whom they showed themselves at all times strong partisans, the reference must be to this battle. Moreover the manner in which al-Akhali praises this victory suggests that he was not dealing with a small skirmish.

In the meanwhile an Omayyad partisan residing at Damascus had seized the capital. The position became untenable at Mardjar al-Suffar for the Kharijas. It was to avoid being caught between Damascans and the victorious Khalids that Daljak fell back precipitously to Muruj al-Dahhah where he was defeated and killed. On the 22d June 564, the election of Muruj b. al-Hakam was proclaimed at Djasirah. It is probable then that the battle of Mardjar al-Suffar must be located in the early days of July.

MAREA. [See MAREJ].

MARGHELAN, originally Marghian, a town in Fergana [q. v.]; where also the minor importance of the town in the 19th century (E. G. A., iii. 272; 273; maghiana) and its rise in the centuries following are discussed (Samand, K. al-Amidi, G.M.S., xx, 1. 528; min maghian al-Balad-dan; Ya'qub, iv. 500; 511; min maghiana al-Ab). The town does not seem to have been of political importance during this period, although raids were occasionally struck here under the dynasty of the Ilek-Khans [q. v.]; A. Markow, Inventories of A. Markow, Katalog manumisi, unter dem Namen K.(p. 260, 265 and 273). Bahar (fac. ed. Beveridge, fac. ed. Beveridge, p. 8) gives a brief description of the town at this period. The population at this time consisted of Slavs [q. v.] i.e., according to the linguistic usage of the time, of Tajiks [q. v.]; since then the Tajiks have been driven by the Oghuz and the others there outside of the plain. The more recent, probably Slav form Marghian is found for example in Abd al-Karim Bukhari (ed. Schifer, p. 94) whereas the Russian Margelian; the river on which the town stands is called Margelian-Sai. In literature the old form Marghian or Marghian is still frequently used e.g. in the Turki Shakhkari, ed. Pantusow, p. 195.

Margelian was occupied without resistance by the Russians on the 12th Sept. 1873; New Margelian founded as the capital of Fergana in 1877 by the Russians about 7 miles from Marghelan was called Skobelew from 1907 (since the Revolution: Fergana). The original Margelian was mainly noted for its silk industry: according to the census of 1897, the population was 36,490, in 1911 45,780 of whom only 144 were Russians. A building which is certainly not ancient is called Ishkandar Pasha and said to be the tomb of Alexander the Great (W. Massalisky, Turkestanische Kriti, Petersburg 1913, p. 705 sq.).

Bibliography: in the text.—(W. Baptist).
3. 'Omar Nīṣām al-Dīn al-Fārghānī. Two works by him are recorded: 1. Ǧīhād (H. Khūn, No. 9305); 2. Ǧīhayāt al-Fīḥā, which he compiled from the Māshayiq of Zāhīr and other works (H. Khūn, No. 4291; MSS. in Brockelmann, G. A. L., l. 376, note 2, where the mark of interrogation should be deleted; cf. Kurshū, l. 394; Laknawī, p. 149).

II. Another family of Ḥanāfi lawyers goes back to ʿAmbūr al-ʿAḍīz b. ʿAbū al-ʿArāzīr b. ʿAnār, al-Dīfārī b. Sulaymān al-Maḡīribīn, who died in 477 (1084–1085) in Maḥmūdīn at the age of 68. Of his six sons who attained fame as muftis we may mention Abī ʿl-Ḥasan Zaḥīr al-Dīn ʿAṣūr (忿 506 = 1112–1113). His son and pupil was Zaḥīr al-Dīn al-Raḥmān b. Abī ʿAbī Dāʾūrīl al-Maḡīribīn. Four works by him are recorded: Ǧīhayāt, Ǧīhād, Fawā'id, and Zaḥīrīyya; only the last of which survives in manuscript. He was the teacher of the famous Fakhr al-Dīn Kaḥlidīn (忿 592 = 1196) and of Burūz al-Dīn al-Maḡīribīn (q.v.).

Maʿrib (Marin) a town in the southwest of Arabia, formerly the capital of the Sabaeans and now the capital of the province of the same name.

The ancient town of Maʿrib, which so far has only been visited by three European travellers,
vol. iii. [1874], p. 22) thought — distinct gateilik breaks in the stone walls. They are now called Bāb al-'Aṣīr (W.), Bāb al-Ḥadd (S.W.), then along the south wall to the east and from here to the north, Bāb al-Nāṣr, Bāb Abū 'l-Kār, Bāb al-Maḥram, Bāb al-Darb, Bāb al-Kibla, Bāb al-Maṭṭāna. The names Bāb al-Nāṣr, Bāb al-Darb and Bāb al-Ḥadd are still borne by the gates of the modern village of Mārib but the modern Bāb al-Nāṣr corresponds to the Bāb al-'Aṣīr of the ancient town, since from the latter by traversing the whole of the old town the village is reached through the Bāb al-Nāṣr.

The old town forms at the present day a considerable mound or rather a number of mounds of ruins, out of which project remains of walls and portions of columns. Excavations conducted here would, as Glaser pointed out, bring to light most unexpected things. Four distinct areas may be distinguished in the site: 1. The mound on which stands the modern village which stands in the eastern part, almost in the S.E. corner, of the old town and seems to consist entirely of refuse and rubble, beneath which at a considerable depth one comes upon old buildings. Glaser believed that these old buildings represent the oldest part of the town upon which in the later centuries of the Sabaean period which was shot. It is also possible that the town of Mārib or at least many of its buildings have been several times destroyed. The topmost stratum is of course of comparatively recent date if we exclude the many old stones with Sabaean inscriptions. The village, which, according to Glaser, can hardly have more than 600 inhabitants, consists of about 80 houses, usually in several stories on a rectangular plan narrowing a little as they ascend. Only the lower parts are of stone, the rest is of clay. Only the two fort-like houses of the anits are built entirely of hewn stone. The outer wall of the village consists simply of the walls of the outermost houses, which are built on to one another and are linked up by connecting walls. The village has two gates of some size, one facing west and the other south, and several small doors. There is an old well outside the village between this and the eastern gate of the old town, and also the chief sanctuary (Māṣjūd Sulamān). 2. The Maḍīnān Umm al-Kī identified by Glaser in his Karteibuch, p. 8 with Umm Bilba, in the S.E. corner with great mounds of ruins, which perhaps come from castles. 3. The S.W. area which apparently contained temples and castles. 4. A large round open space (Maṣādīn) in the N.W. and western part of the town which does not seem to have been built on in ancient times either. It stretches almost to the modern village and particularly on the south side is surrounded by portions of columns and other ruins (E. Glaser, Karteibuch Mārib, p. 48 sqq., 73). These faceted columns which still protrude 3-4 feet out of the ruins, one of which lying on the ground measured 15-15 feet, are also mentioned by Arnaud (p. 22).

The place is probably identical with the "Champs de Mars" mentioned by the French traveller in his report to Frendel (J. Ar., ser. iv., vol. v. [1845], p. 325).

The place in any case was at one time surrounded by large buildings which are now in ruins and form great mounds, which are also dotted with fragments of columns and Glaser leaves the question open whether there were here the palaces of the kings and notables or the temples of the ancient Sabaean. To the south of the Māḍīnān in particular may still be seen the foundations of a colossal building which Glaser wanted to identify with the famous royal citadel of Sallūn celebrated by later tradition.

The old town which occupied an area of about 1,000 yards square, a calculation by E. Glaser, which agrees with Th. Arnaud's plan of the town (J. Ar., ser. vii., vol. iii. [1874], p. 11) [Glaser gives the distance between the two opposite gates as 1/4 hour], is built entirely on the left bank of the Wādī Dammāne. It seems, to conclude from the remains of the 3 feet thick wall around it, which has only survived in places, to have practically formed an oblique angled parallelogram. The longer sides of which follow the line of the Wādī Dammāne while the eastern and western sides (breadthwise) run practically due north and south. The southern wall which runs parallel to the river bank turns from north to east at an angle of 60° and runs almost E.N.E. This fact is clear not only from E. Glaser's description of his Karteibuch Mārib (p. 36 sqq., 48) and the Mārib Tügebuch but also from Glaser's Skizzen (N°. 51) which is based the appended plan of Mārib and vicinity. It is a striking contrast to Th. Arnaud's description and map (J. Ar., ser. vii., vol. iii. [1874], p. 11) which makes the wall around Mārib describe a circle and also to Glaser's earlier sketches in his large Kartei-

The wall which unfortunately is almost completely destroyed, does not run in a straight line but at regular intervals there are rectangular projections, as is clearly shown in E. Glaser's already mentioned sketch N°. 51 and in that of his Tügebuch, xii., p. 125, which moreover gives the plan of the town as a rectangle — Glaser notes here the city wall was apparently built as a quadrilateral" — while N°. 51 shows rather a trapezium the base of which lies away from the river while the shorter side parallel runs along the river. The rectangular projections found at regular intervals were probably towers, which strengthened the defences and stood out as regular intervals in the style we know from Assyrian fortifications (cf. the similar quadrangular plan of a fortress with gates near the corner and towers covered by steeple battlements in B. Meissner, Babylonien und Assyrien, 1. Kulturgesch., Bibliothek, i. 3). Heidelberg 1920).

That the city walls of Mārib had towers is also evident from the great inscription (Glaser 418-419) which is older than the great Sīwāt inscription GI. 1000. In this we are told in line 4 that the unknown ruler built "the two gates of Mārib (22) and built towers for Mārib of Balāk stone" (cf. N. Rhodokanakis, Mésopotamische Texte, l. 6 sqq.).

Rhodokanakis suggests, presumably rightly, that this king was continuing the work of the unnamed son of the Sabaean monarch Somunha-Salās. Yānāf (22) (22) 22 who, according to the inscriptions (Glaser 418 = Arnaud 41, 419 = Arnaud 42, 414, 427, 445, 500, 510, 537, 580, 600, 634 and perhaps also 751) "built a wall around Mārib
through Karâbî xxvii, 23 and were still standing in his time and so firmly rooted on the ground that they could not be overthrown. Glaser, Reise nach Mârib, p. 139 however assumes that the reference here is to the Haram of Bîlîs with its pillars but admits the possibility that a citadel of the town proper is being described, since Salîn is talked of immediately afterwards. Dujdjîl Sâlîn, Khalîl al-Arâbṣh bîd al-Islam, p. 143 also assumes that the palace of Salîn is referred to. Sprunger, Poroi u. Reisertuena, p. 140 also tells of this throne of Bîlîs that it stood on stone pillars 29 ells high which were still intact and the foundations were as deep as its height (this statement is erroneously attributed by Sprunger to Bakrī but presumably comes from Ibn al-Mujâhid). The Bîlîs-ward also (cf. Jomard in F. Mengan, Histoire de l'Égypte, p. 244) says that the throne of Bîlîs was built on columns 28 ells high in Bâb (Mârib). This sounds very improbable if we should really understand by arâb a throne, which according to Nashîwân al-Himyari, p. 50, stood in the palace of Bîlîs in Mârib. When however we are told by Nashîwân, p. 70, that arâb is a castle which was built on columns of stone and the verse of Asâd Tabhâ's quoted gives the name arâb to the palace of Bîlîs, we may then in the above passages take it to mean a citadel rather than a throne and with Glaser, Reise nach Mârib, p. 73, look for it in the S.E. corner of the old town. Legend has associated the name Arâb Bîlîs with other localities also. According to Abû '1-Râshid Sulaimân b. al-Râshid in Yâkânî, Mû'jamân, lii, 619, it is the name of a place a day's journey from Dhamman on which stand six great marble columns and the principal group of pillars of the old ruins of Sârîwâ still bear this name (J. Halâwy, Reptor, J.A., ser.vi, xiv. [1872], p. 67 sq.; Glaser, Reise nach Mârib, p. 179). On the other hand, it is an open question where the two other citadels al-Kâshîb and al-Hajjar mentioned by al-Hamdânî and Bakrî (Mû'jamân, lii, 502) are to be located. According to Yâkânî, Mû'jamân, iv, 104, al-Kâshîb was built by order of king Sharâbîh b. Yâhush, who put up on it a copper plate inscribed "They who built this castle are Thawbân and Sabâr; its building was entrusted to them by Sharâbîh b. Yâhush, the king of Sabâ and of the Tihāna and its Arabs". D. H. Müller in Burgen u. Schlösser, i, 1039, note 1 has already identified Sharâbîh b. Yâhush with king Tihâshrâb Yâbîhî of the Sabaean inscriptions (Glaser, N°. 444, 250; Bibl. Nat., N°. 2) and for Thawbân compared the Sabaean Thawbî and for Sabâr (so to be read, not 202) the similar Sabaean name. If the inscription given by Yâkût really goes back to a genuine mansard inscription, Kâshîb must have been built about the first century A.D. If the Sabaean king here mentioned whose epithet in the Himyarrî bâbil (verse 109) publ. by A. v. Kemes is to be read Yâhush, in the Sabaean inscription Bibl. Nat., N°. 2 (cf. article Sâlîn) speaks expressly of Salîn, Ghumdân and Sârîwâ only and does not mention al-Kâshîb, this is not itself proof that Yâkût's foundation inscription is not genuine. The building might easily be later than the inscription Bibl. Nat., N°. 2. A difficulty however is raised by the fact that al-Hamdânî (in Müller, Burgen und Schlösser, i, 1039) and Nashîwân al-
Himyar (quoted ibid, note 1) give al-Kabīb b. Dhi ḫaṭaf as the builder. Glaser, *Reise nach Mārib*, p. 155, goes so far as to say that the name ḫaṭaf is derived from the verb ǧabba or ḥāṣa, which frequently occurs in dedicatory inscriptions, and the form of the king’s titles points to the last period of ḥimyar rule, and the king is to be identified with Shahrabīb Ya‘fur; indeed, it must be conceded that the style and titles are quite unusual for a king of Saba‘ and Dhi ḫaṭaf, and for this reason the *Naskāh* inscription must be regarded as a forgery. This does not mean that al-Hamdānī’s note is to be rejected as worthless. F. Hommel, *Ethnologie u. Geographic d. alten Orientes*, p. 666 and note 2, has shown that the possibility that the castle of Ḩadjar (the name means “the town”) was perhaps the principal castle, on the ruins of which the modern village of Mārib was planted and, the older and more celebrated Sallāh was a smaller castle. If we remember the meaning “new” given in *Yūfr*, iv. 164 and Nashawān, p. 86 a, v. ḫṣaṭa, al-Kabīb might also be an epithet of the citadel as “the new” which came to be erroneously differentiated from al-Ḥadjar as the name of a third castle. Al-Bakri, *Ma’dīqas*, ii. 505, 754 explains the difficulty by saying that al-Kabīb was the last of the castles to be built in Mārib and therefore called the “new”.

The Masqūd Sulaqīm lies to the west just below the village which is built on a great mound of rubble. This Masqūd Sulaqīm is Dīwādīn, now the principal mosque of Mārib, according to Aramaic (J. A., viii. 8, vol. iii. [1874], p. 13) an obviously modern building, square with a flat roof and built of hewn stones, is of interest because according to E. Glaser (*Reise nach Mārib*, p. 41, 73 esp.), its north side is built against 7 or 8 colossal columns (monoliths) which correspond exactly to those of the Haram Biḥrā and the Ammād to be discussed below. Glaser suggests that there was once a temple here similar to the Haram Biḥrā. F. Hommel, *Ethnologie u. Geographie d. alten Orientes*, p. 664, 665 affirms the Masqūd Sulaqīm was the temple of the chief deity. This principal temple in his opinion formed a group with the second temple, which lay on the south side of the Ma’dīqas, According to Aramaic (plan of Mārib) local tradition this was the site of an ancient temple. The length (2,000 yards), suggested by this second temple, is greater than that of the Masqūd Sulaqīm, is however too high, as both Glaser and Aramaic put the distance between the two opposite walls at only 1,000 yards. J. Halévy’s figure (Raupach, J. A., sec. vii., xix. [1872], p. 96) which puts the diameter of the Mārib ruins at about 500 yards would give a much shorter distance but the estimate is certainly a very casual one and hardly to be taken seriously.

In the south and west outside the old town walls lies an old cemetery with a number of tombs, some vertical and some horizontal, the latter of which have a small opening at the top. It is now called Medjennat (or Diḥījāb) Ghara. It is probably from here that have come a number of old Sabaean tombstones (Glaser, No. 436, 574, 575, 581, 582, 605, 664, 665, 667, 685–689, 745, 759, 775, 792) with rectangular niches sometimes rounded below or peaked at the top, in which is placed the bust of deceased with an inscription below. On two of these tombstones (Glaser, No. 684, 745), Glaser found the bust let into the stone still in its place (cf. *Reise nach Mārib*, p. 75, 91; *Tājebāt*, xi. 59). We may probably find a model of the tombs in the steles of Asa‘ūr. Stone sarcophagi are also sometimes found. One is still in use in front of the great well of Mārib as a drinking-trough for animals (*Reise nach Mārib*, p. 74).

In the southwest of the old town outside the city walls, Glaser found a remarkable building still partly preserved (cf. the plan of the immediate vicinity of the old town of Maryah) which was probably used for distributing the water and had on its north side the inscription Glaser 474 = 1671. It consists of two huge stretches of walls running due east and west in one line with a gap in the centre. The two corners of the northern entrance of this passage are angular while at the south side the two are rounded. The inscription, which is placed on the north side of the eastern wall states that Dimmi-alays Watar, Makkulis of Saba‘, son of Karla-bu, built a ʿbjel (şajj) opposite (cf. in front of) the sanctuary of Attagat. Glaser actually found some 3000 N.W. or W.N.W. of this building, actually outside of the old city walls but close to them, a ruin unfortunately reduced to a heap of rubble, from which a plan suggests a sanctuary, since on the N.E. side (the right stretch of wall) the niches for an idol can still be seen (*Reise nach Mārib*, p. 406; *Tājebāt*, xi. 47; H on the plan of the immediate vicinity of the old town of Maryah).

S.S.E. of the modern village of Mārib (A) at a distance of about 3 miles between the Wāḥi Dhume and Wāḥi “Feledj” is the Haram Biḥrā (D) which was visited by Th. J. Aramaic on July 20, 1843 and by E. Glaser on March 8, 1858 (cf. J. A., sec. vii., vol. iii. [1874], pp. 14-15). Glaser, *Reise nach Mārib*, p. 41, 44; 73, 137, 141; the latter corrects Aramaic on a number of essential points. The Haram is a large, elliptical in form, the longer axis of which 300 feet long runs from N.W. to S.E. The shorter axis runs N.E. to S.W. and is 250 feet in length. It is built of regularly hewn square blocks which are placed one above the other in 31 layers up to the frieze so that the height of the wall is 31 feet. This wall is finished off with a double cornice at the top which consists of two rows of blocks which follow one another at short intervals and look like dice on top of the wall, the result being a mournful-like frieze which recalls the relief found by Th. Bent in Jehl in Abyssinia (cf. Th. Bent, *The Sacred City of the Ethiopians, London* 1893, p. 141) and the relief of the Sabaean relief in D. Nielsen, *Handbuch der altäthiopischen Altertumswissenschaft* (p. 137, fig. 44). The rows of blocks below the lower cornices form a simple and effective decoration by placing the blocks four to six inches apart so as to leave little gaps. A similar kind of mural decoration is known from the Sabaean temple of Jehl (cf. Deutsches Akademie-Expedition, ii. 86, fig. 165). The frieze is still quite intact in places, especially on the east side. There is no trace of a roof, but it cannot be asserted definitely that there never was one, as Glaser assumes; the windowless building was (at least) have been lit by sky-lighters. There are two doors in the wall, the larger (a) at the northeast end of the shorter axis and the smaller (b) at the N.W. end of the building at the end of the larger axis.
Exactly N.E. of the centre of the building there are four other monolithic pillars in the wall itself. Originally there were a larger number here, so that the main gateway (a) had a pillared way leading to it. N.E. of these at a distance of 32 paces are 8 columns which are also erected in a line running from S.E. to N.W. (F). They are rectangular prisms, smooth, 15 feet high without capitals and terminate in dice-shaped tops 4 inches long on which stood the architrave. On the S.S.E. side of the Haram just outside the wall, four small pillars form a little square the sides of which lie W. to E. and S. to N. (J). Perhaps we have here the pillars for the canopy of a throne which was probably similar in appearance to the Almonite king’s throne illustrated in Deutsches Akanum-Expedition, ii. 65, fig. 139. The floor of the building never seems to have been levelled, as a natural rock rises almost in the middle. Unfortunately in the interior the walls are nowhere clear, so that Glaser could form no deductions as to what it must have looked like inside. He expressly states however that he could discover no chambers in the walls as he had expected. On the other hand, the fine inscriptions on the outside of the walls give us information as to the purpose of the building — it is a temple of the Sabean moon-god Almakah — as well as the history of its erection. Armand was only able to copy 3 of these inscriptions, two others whose existence he established were covered by sand, which has since made further progress, so that he could not copy them. The oldest in-
and in other Sa'ean inscriptions was this very temple. From it the god Almahkā is called "lord of 'Awn" (אֲחַמֵּה). The completion of this temple which was begun by Yif'lis'il Dhibārī, by Tikhrāša, son of Sumumah-ālaya Dhibārī, king of Sa'ān, is stated in the inscription Glaser, 485 = Arnaud 55, which is on the west side of the Hāram on the 14th layer of stones (cf. N. Rhodokanakis, Studien, ii, 12 n. 99). Glaser, 485 = Arnaud 56, which is on the 13th and 14th layer on the north side records the completion of the wall from the inscription to the top by Tubakānī, a prominent official and general of three Sa'ean kings (N. Rhodokanakis, Studien, ii, 15 n. 99). Connected with this are two inscriptions of similar context, Glaser, 482 = Arnaud 54 on the south side of the 13th layer and Glaser, 483 = Arnaud 54 on the east side at the same height.

They record the restoration of a ruined part of the wall (presumably of the part of the temple) under King Tikhrāša's wara' Yāhānām of Sa'ān and Dhit Rāidān, the son of Dhibārī-ālaya Bayān, and his son Halīk-šaman. Whether this concludes the history of the building of the Hāram seems doubtful since, according to Glaser, Reise nach Mārib, p. 46, inscriptions may still be concealed under the sand on the north and west sides also.

The orientation of the building is of interest. The little door of the Hāram (ב) faces that temple of the old town of Mārib on the site of which now stands the Masjid al-Balāmīn. On the prolongation of the shorter axis to the N.E. lies the ruin called al-Mikrāb, and Glaser has, perhaps, rightly, suggested from this arrangement of the two buildings that there was some connection between their purposes. Both buildings are moreover oriented by the course of the Wādī Dhimme. On the south side of the old city wall may still be seen the remains of a bridge which was built almost exactly in the direction of the Hāram and, according to the local tradition, once reached to it. Even if this is an exaggeration it is nevertheless probable that a bridge was built over the river Dhimme on the same axis as the road which must certainly have inundated the fields; the continuation of this bridge to the Hāram was probably only a dam of which no trace now remains.

However unusual the elliptical form for the plan of a temple may appear, this is certainly not an isolated example in Southern Arabia. F. Frendel (J.A.A., ser. iv., vol. vii. p. 223) mentions the great ruins of Khatrā (Surwāl) which cover an even greater area than those of the Hāram Bīlkiš and include a semi-elliptical and long rows of pillars still in position. According to Arnaud, this elliptical plan has also been found by Halāy (J.A.A., ser. vii., vol. viii. p. 67). Glaser, Reise nach Mārib, i, 110, 137; Śekine, i, 67 n.

According to the inscription Glaser, No. 901-903, its builder was the Sa'ean mukarrib Yil'dīs'il Dhibārī, who also built the temple of 'Awn and the round temple of al-Maṣjidādī.

F. Hommel (Ehremologie, p. 664 n. 47) has endeavoured to show how this temple came to have its modern name of Hāram Bīlkiš. In analogy to the Assyrian and Babylonian temples extra murus which were always dedicated to the wife of the chief deity and in which in the month of the new year his wedding ceremony took place, Hommel seen in the Hāram Bīlkiš the wedding house of Almahkā, the sanctuary of his wife Harimat and seems to assume that the name is also connected with this. D. H. Müller (Bungen und Schläfer, ii, 976 sq.) has shown how the Arab archaeologists transformed the god Almahkā into Yāhānām and then gave this name to the legendary Bīlkiš and also made a haram (women's apartments) out of the temple so the sanctuary of the god, E. Frendel's reasoning moves on similar lines (J. A.A., ser. iv., vol. vii. p. 326 sq., 373 sq.). He assumed that Bīlkiš was not the correct name of the queen of Sa'ān but rather Bīlkiš (so Ibn 'Abbās in the "Abū al-Farrāb ibn Al-Dhawār in the Mit̲aj al-Zaman) which was formed from Almahkā. The queen of Sa'ān was in this way defiled by the Sa'eans and became the isla of the Arabs.

In the S. S. E. of Mārib and according to Arnaud 1/4 hour E. E. S. of the Hāram Bīlkiš — while the latter, according to Glaser, Reise nach Mārib, p. 41 lies almost due east barely 1/4 hour from the five pillars there stand on the opposite bank of the Wādī Dhimme, 1/4 hour or 1½ miles (according to Glaser, Śekine, No. 51) from the town, the pillars called 'A'mād'id. Five are still upright; these are 25-30 feet high, 32 inches broad and 24 deep, prismatic, rectangular monoliths which were erected perpendicular to the direction of the Wādī Dhimme. Two which have been overthrown lie beside them on the ground. The pillars had no capitals and were just like the other pillars (at the Hāram Bīlkiš and other ruins outside the town). On the fragments of the two fallen pillars Glaser discovered inscriptions on which (Glaser, 479 and 480 = Arnaud 53) from which it appears that a sanctuary Barān (בָּרָן | בָּרָן) dedicated to the god Almahkā or some such sanctuary stood here. This name occurs not only in this inscription but is mentioned in Ottoman Mas., No. 17 (Z. D. M. G., xxxiii., 436, No. 1, 2) where J. H. Mordtmann reads [הָרָן] [בָּרָן] and the name of this place is also found in Halāy, No. 43, No. 48, No. 49, No. 53 (תָּרָן) and No. 54 (תָּרָן). To the west just beside the pillars lies a mound of ruins, which perhaps represents the remains of this sanctuary. Arnaud (J. A.A., ser. viii., iii. [1874], p. 13) describes these pillars as pilasters of the Hāram Bīlkiš and puts their height at 28 spans. In contradiction to Glaser, Arnaud says they have square capitals. His illustration under the plan of the Hāram Bīlkiš shows a pillar with a stepped capital like those from Akūnīn and Kohailo in Abyssinia (Deutsche Aksum-Expedition, ed. by D. Krencker, Berlin 1913, p. 102, fig. 222 and p. 155, fig. 319a). Which of the two explorers is right, it is difficult to say as Glaser is usually very accurate in his observations. On the other hand, Arnaud cannot possibly have invented this rather unusual but nevertheless typical form for ancient South Arabia and made his drawing accordingly. The only way out of the difficulty is to suppose that in Glaser's time the capitals — of which Arnaud says he cannot say definitely that they belonged to the pillar — had been broken off. According to Arnaud, the pillars stand close together at intervals corresponding to their thickness. That the pieces of stone on the ground are the rows of pillars once being longer than the pillars still noticed by Arnaud (p. 16) although he copied one of the inscriptions on them (Arnaud 53 = Glaser, No. 480) (cf. E. Glaser, Reise im Mārib, p. 401, 414).
The numerous separate finds made by Glaser in the neighbourhood of Mārib, sacrificial altars, masons' workshops etc. cannot be discussed here. On the other hand, there is one erection which demands a rather thorough discussion as it surpasses all these already mentioned in magnitude and preserved the fame of Mārib down to the late Islamic period, namely the dam and works connected with it, known in Muslim tradition as Sudd Mārib or Sudd al-Arais. The Wādī Ḍheerah in the course of time had cut its course through the Balāq hills here and divided the rocks into two parts Balāq al-Kibīl and Balāq al-Awsāq. The Sabaens had built a dam of earth across the gap some 770 paces long behind which the water was collected. The dam, which Glaser (Reise nach Mārib, p. 58 172-173 sq.) describes minutely, rises some 20-25 feet above the present level of the Wādī and is simply a mound of earth the section of which is an isosceles triangle the angle at the top of which is quite sharp. The angle of inclination of the two surfaces to the base is about 45° and the breadth of the base about 30 feet. The proper base and the height of the dam cannot be accurately ascertained as they have been completely overgrown by the depth of many feet. But it can be assumed that the dam rested on a foundation of rock as the narrow passage between the two Balāq hills has a rocky foundation which comes up very nearly to the surface. But for this firm foundation of rock it would have been impossible to build the dam at all. The side of the dam which met the water (the western) is covered with small sharp unshaven stones, held together so strongly by mortar that it is impossible to detach one of them. The dam, which is 11/4 hours from Mārib, is flanked in the north and south by two great sluices, the southern one of which is known as Marbay al-Dīlima. Here on the site of the dam a great rock (A) 95 paces long and 15 in width, at the narrow place only 8-10 has become detached from the Dheer Balāq al-Awsāq; it runs to the N.E. with a slight tendency to E.-N.E. The main body of the rock, the northern wall of which runs eastwards forms with this isolated rock a pair of lines converging towards the S.W. end of the latter. The two rocky walls do not meet here but are separated by a gap spanned by a wall six paces long and 12 feet high (C). In the opening of the angle but within the eastern ends of the two walls is another detached block of rock (B) the north side of which runs parallel to the first mentioned detached rock and the south side parallel to the main rock (C) but quite close to the latter. All three rocks, particularly the main body (C) and the loose block (B), have steep sides, not however over 12 feet high. On the north side the great isolated rock (A) is very irregular in shape. It almost looks as if we had an artificial cleavage here. But Glaser does not think this possible because an earthquake is quite sufficient to account for the remarkable cleavage of the rocks. In any case it looks as if human hands had worked a good deal on the natural lines of fracture. The great block of rock (A) rises 25 feet above the present level of the river bed and has two inscriptions engraved on its south side (Glaser, N° 512, 523).

On all three rocks there are or were great buildings of hewn stone. The large block of rock (A) seems to have supported the main building. Its masonry consisting entirely of finely hewn blocks of stone, arranged in pairs one above the other and held together by melted lead poured into corresponding cavities; it follows closely, especially on the south side, the rock which forms the foundation so that it does not form a straight line, as Arnau (J. A., v. vii., vol. iii., p. 64, Dégue de Marco) has represented it. The whole length of this wall is about 200 feet, its average breadth 15 feet, the height at the S.W. end about 13 feet, rather more at the N.E. end, as the rock is not high enough here. In general the top is horizontal, but with slight differences of level where it rises and falls. The S.W. corner of the masonry consists of round towers (a) facing S.W. which stands about 3 feet above the level of the rest of the walls. The whole building and the tower have perpendicular sides and do not slope at all. The dam which runs N.N.W. seems to have joined the wall 25 feet from the towers on the N.W. On the side facing the Wādī at the N.E. end of the rock, steps have been hewn out of the rock which led from the bottom of the river bed (in S.S.W. direction) to the walls. Almost exactly south of the already mentioned tower which has also very steep steps cut in a perpendicular passage hewn into the side of the rock, there stands on the natural mass of rock (C) a second tower (d) of the same height, round on the west but flat on the other sides. Between the two towers, is the already mentioned wall linking up the two rocks. As already mentioned, the top of this wall is 20-25 feet above the level of the river so that the towers are 35 to 40 feet above it. The dam seems to have been not much higher than the connecting wall. The out-flow of the water must have taken place over the connecting wall as well as through openings under the wall, probably now filled up with rubble, into the Ḍaḥēlīn canal, and under or rather through the rock on which this great piece of masonry stands, into the Ḍaḥēlīn canal. Indeed one can still see quite clearly the surface of the great isolated rock is covered deeply down by a ridge of rock (i), only the rounded top of which is visible, with the smaller block, so that the two channels were separated from one another. It is also possible that in earlier times the outflow went below and only later, when the water-level was raised by silting, over the wall. Grooves for boards are still recognizable. The smaller block of rock, steep and high on the western side, slopes steeply to the east down to the level and has step-like cavities in it everywhere with stones still perpendicular on it, as if it had had a balustrade, especially above the steep wall in the west. At its eastern end where it joins the level ground it shows regularly hewn cavities of prism shape, which look like water-troughs for the cattle or like stone graves. The main rock shows the same features. The step-like cavities were perhaps not only used for climbing, but also to measure the level of the water to regulate the outflow.

Both towers and the other buildings in connection with the sluices, except such walls or railings as may have existed of the smaller block, are preserved intact. The hewn stones are so arranged that long stones are everywhere and then three crosswise which give the otherwise parallel layers great cohesion. This is particularly the case with the inner filling of the wall, as can be observed in all very large buildings a section of
which comes to be exposed. The square blocks in the dam are also held together by little blocks of lead about 10 cm. high and about 10 cm.³ in the section. These little rods of lead were placed in holes specially made for them about 2-5 cm. deep and the next block above was placed over with the corresponding cavity filled with the top half of the little rod. The Sabaeans only used mortar in the stone work of the dam as a top covering to prevent damage being done by the rain-water.

The northern system of sluices consists of three walls of which the southern and largest  

a kind of railing of masonry. The whole wall is coped with excellent cement.

Almost exactly S.E. about 11 paces from the S.W. end of the part, 114 paces long already described (B) runs to the S.E. a wall 36 paces long and 21 broad at its N.W. end, the S.E. end of which is narrow and rounded. This wall is exactly the height of the long wall. At the present time there is on it a modern sjara (stone-house) built by the emir 'Abd al-Rahum which probably existed in Aramae's time and certainly in Halévy's.

Between the two walls, four paces from either,
walls thus formed, like the three rocks on the
south form two channels of exit, both of which
however, it is worth noting, flow into one
and the same main channel, which runs almost exactly
east for about 1,000 yards to a large building for
distributing water. This canal ran between two
parallel dama of the same style and construction
as the dam proper, but the bed, which is paved
with cemented stones, runs above the plain, especially
on the south side some 20–25 feet. The dam
proper, barely higher than the two walls of this
canal, joins the east side of the most southern
wall, 32 paces long.

The Northern Sluice-system

S.S.W. of Mabna al-Haftarji (see below) lies
Haften al-Kafal, a later building erected on the
remains of old water-works, which formed the end
of the main channel, already mentioned in con-
nection with the northern sluices. It lies 32; about
exactly the same level as the dam and several
yards above the surrounding country. It consists
of several walls, some of hewn stone and some
of ordinary stones and cement, which sent the
water out in eight different directions. The aqueduct
runs practically westwards up to the northern
sluices of the dam. Although perfectly preserved
the bed of the canal has been in many places
filled up with blown sand.

Similar distributing works existed throughout the
whole plain of Marib. Glaser saw traces of aqui-
ducts (with double dama) at different places. In
the bed of the Dheene not far below the dam
he saw a remarkable erection of stone not unlike
a weir. Unfortunately the inscription on it which
might have given us definite information had
been removed some years before. Canals seem to
have led the water from the great distributing
centres to the smaller ones (ma’mir) from which
it was taken direct to the palm gardens and fields.
The most of the ma’miri are in the form of cubes
or shallow prisms and are rarely more than 6 feet
high and 12 to 15 feet long. As a rule a canal
leads out of them from the centre, usually walked
on one side. Nothing is left of the canals which
connected the ma’miri with the larger distributing
centres and on the other side with the fields. Deep
farrows torn out of the ground by the periodic
deluges of rain and, like the greater part of the
plain, becoming gradually filled with desert sand
are now the characteristic feature of the once
flourishing plain of Sahe’.

The great barrier of the dam between the two
Bakka mountains seems however not to have suf-
ficed for the strain upon it. A second dam called
Mabna al-Haftarji was therefore built N.N.E.
of the dam and west of Marib which seems to have been intended to regulate the water of the Wadi 'I-Sa'ila (cf. Glaser, *Reise nach Marib*, p. 49 sq.), which carried the waters of the north Balaq hill, the Djabal Halla and the Khaghab hills into the plain of Marib and joined the Wadi Dheneé below the village of Marib. This barrage consists of three walls of black porous stones, running very irregularly which are held together by mortar and arranged in 3 strata which perhaps point to 3 periods of building. The first of these walls (A) which dammed the river-bed begins last on the right-bank of the Sa'ila and runs 240 paces E.N.E. where it joins a prism-shaped erection (a) 7 paces broad, 12 long and about 15 feet high, which lies N.W. to S.E. 7 feet N.E. stands a second similar building (b) parallel to the first and continued to the S.E. in a narrower wall (c) 36 paces in length. The space between these two buildings must have been an outlet. With a very small space between, the second mortared wall (B) runs N.W. from the second building (b) and with many windings turns N. and N.W. where it joins the rocks. Its length is 265 paces, the space between it and the second building is 10 paces (b). 21 paces N.E. of the second building are two others (d, e) which give an outlet to the N.E. The southern of the two is only partly preserved. It points to the S.E. end of the 36 paces long wall (c); perhaps the two were once connected or there was a sluice between. From the building (d) which forms the northern boundary of the second outlet two walls run: the one (third) wall (C) runs with many windings almost parallel to the second great wall (D) and like it runs up to the northern hills; it is 182 paces long. The other building (F) runs in a curve to the north, 36 paces in length, to a third outlet, exactly opposite the second, which however consists of buildings (g, h, i) 8 paces from each other, with the ground between them covered by a layer of stone masonry. The outlet is to the N.E. On the S.E. is a wall 12 feet long now partly collapsed. Glaser copied 10 Subaru texts at al-Haghari, which came from other ruins and show that these works belong to a later period, like the late tombstone built into the wall here (Glaser, No. 599).

The various constructions date, as we learn from the inscriptions, from different periods. The southern system of sluices was erected as early as the Makarrib period. Samih Allah, son of Dhimit-alaya, Mukarrib of Saba', according to the inscription Glaser, No. 513—514, made here an inlet in the barrage at Rahib, which was extended two generations later by the unknown author of the inscription Glaser, No. 418—419 (cf. N. Rodökamakis, *Atlaskische Texte*, t. 7: *Studien*, ii. 97, 99 sp.; Glaser, *Studien*, i. 70 sq.; *Reise nach Marib*, p. 59 sq.; Hommel, *Ethnologie*, p. 666). Where the barrage at Rahib was is not certain. Perhaps we should assume with Rodokamakis, *Studien*, ii. 100 sq. that it was built on the rib of rock (e) between A and B. About a generation later than the Rahib barrage is the similar con-

**The Encyclopaedia of Hejz, III.**
walls thus formed, like the three rocks on the south form two channels of exit, both of which however, it is worth noting, flow into one and the same main channel, which runs almost exactly east for about 1,000 yards to a large building for distributing water. This canal ran between two parallel dams of the same style and construction as the dam proper but the bed, which is paved with cemented stones, runs above the plain, especially on the south side some 20–25 feet. The dam proper, barely higher than the two walls of this canal, joins the east side of the most southern wall, 38 paces long.

**O** Places with inscriptions.

a a little lower than b.

The canal, which led the water to the lower šup, about 1,000 yards away, comes up to b and d.

d a large intervening wall standing by itself.

S.S.W. of Mahbūl al-Ḫashṣādī (see below) lies Ḫūṣn al-ʾAṣfāl, a later building erected on the remains of old water-works, which formed the end of the main channel, already mentioned in connection with the northern sluices. It lies at about exactly the same level as the dam and several yards above the surrounding country. It consists of several walls, some of hewn stone and some of ordinary stones and cement, which sent the water out in eight different directions. The aqueduct runs practically westwards up to the northern sluices of the dam. Although perfectly preserved the bed of the canal has in many places filled up with blown sand.

Similar distributing works existed throughout the whole plain of Marīb. Glaser saw traces of aqueducts (with double dams) at different places. In the bed of the Dhaurn, not far below the dam he saw a remarkable erection of stone not unlike a weir. Unfortunately the inscription on it which might have given us definite information has been removed some years before. Canals seem to have led the water from the great distributing centres to the smaller ones (manūṣūh) from which it was taken direct to the palm gardens and fields. The most of the manūṣūh are in the form of cubes or shallow prisms and are rarely more than 6 feet high and 12 to 15 feet long. As a rule a canal leads out of them from the centre, usually walled on one side. Nothing is left of the canals which connected the manūṣūh with the larger distributing centres and on the other side with the fields. Deep furrows turn out of the ground by the periodic deluges of rain and, like the greater part of the plain, becoming gradually filled with desert sand are now the characteristic feature of the once flourishing plain of Saba'.

The great barrier of the dam between the two Balh mountains seems however not to have suffered for the strain upon it. A second dam called Mahbūl al-Ḫashṣādī was therefore built N.N.E.
of the dam and west of Ṣairib which seems to have been intended to regulate the water of the Wadi Ḥaṣṣa'la (cf. Glaser, Reise nach Ṣairib, p. 49 sqq.), which carried the waters of the north Balkh hill, the Djabal Haiian and the Khazab hilfs into the plain of Ṣairib and joined the Wadi Ḥeṭ̂̇´̄m below the village of Ṣairib. This barrage consists of three walls of black porous stones, running very irregularly which are held together by mortar and arranged in 5 strata which perhaps point to 3 periods of building. The first of these walls (A) which dammed the river-bed begins just on the right bank of the Ṣa'ila and runs 240 paces E. N. E. where it joins a prism-shaped erection (e) 7 paces broad, 12 long and about 15 feet high, which lies N. W. to S. E. 7 feet N. E. stands a second similar building (b) parallel to the first and continued to the S. E. in a narrower wall (c) 36 paces in length. The space between these two buildings must have been an outlet. With a very small space between, the second mortared wall (b) runs N. W. from the second building (b) and with many windings turns N. and N. W. where it joins the rocks. Its length is 268 paces, the space between it and the second building 10 paces (b, 21 paces N. E. of the second building are two others (d, e) which give an outlet to the N. E. The southern of the two is only partly preserved. It points to the S. E. end of the 36 paces long wall (c); perhaps the two were once connected or there was a sluice between. From the building (d) which forms the northern boundary of the second outlet two walls run: the one (third) wall (C) runs with many windings almost parallel to the second great wall (B) and like it runs up to the northern hills; it is 182 paces long. The other building (f) runs in a curve to the north, 50 paces in length, to a third outlet exactly opposite the second, which however consists of buildings (a, A) 8 paces from each other, with the ground between them covered by a layer of stone masonry. The outlet is to the N. E. On the S. E. is a wall 12 feet long now partly collapsed. Glaser copied to Sabean texts at al-Ḥujjarī which came from other ruins and show that these works belong to a later period, like the late tombstone built into the wall here (Glaser, No. 509).

Mehna el-Ḥujjarī

The various constructions date, as we learn from the inscriptions, from different periods. The southern system of sluices was erected as early as the Mukarrab period. Sultanūn-Ṣallā, son of Uḥmūn-Ṣallā, Mukarrab of Saba', according to the inscription Glaser, No. 513–514, made here an outlet in the barrage at Rahāb, which was extended two generations later by the unknown author of the inscription Glaser, No. 418–419 (cf. N. Rhodokakakis, Altsabaische Texte, i. 77; Studien, ii. 97; 99 sqq.; Glaser, Skene, i. 79 sqq.; Reise nach Ṣairib, p. 39 sqq.; Hummel, Ethnologie, p. 666). Where the barrage at Rahāb was is not certain. Perhaps we should assume with Rhodokakakis, Studien, ii. 100 sqq. that it was built on the rib of rock (e) between A and B. About a generation later than the Rahāb barrage is the similar con-

THE ENCYCLOPAEDIA OF ISLAM, III.
truction at Ḥababîb, which was probably built at the junction (ṣ) of the Marià al-Dimm. The Mukanīrī Vījī amāra Bayān, son of Sama‘īl-‘alayh Yasmîn, built a water-course for it, as his father had done for the Ṭabk (according to Glaser, No. 523, 524 = Aranđ, No. 12, 13 = Hālevî, No. 673; cf. Rhodokiankâ, Studien, i. 102 sq.; Glaser, op. cit.). The northern sluice-works are much later; according to Glasser (Relief nach Mārib, p. 66–68), they did not get their present form till the time of king Shannan Yavari (c. 300 A.D.) and may perhaps even be not older than the fifth century A.D. The oldest parts of the works are partly covered by silt (p. 68) to the period 1000–700 B.C.; which is probably rather too early.

The great system of dams did not long exist in this form. This we know from two great prismatic monuments, which are inscribed on all four sides and tell us of the later history of the dam. The one with the inscription Glasser, No. 554 is 7 feet long, 30 inches broad, and a foot thick, the second, even larger, bears the inscription Glasser, No. 618. Both lay close beside the junction of the northern wall of the northern sluice with the rocks of the Ṭabk (according to Glaser, No. 554, king Shârâbîl Yâfar in 449 A.D. had a thorough renovation of the works carried out. But these lasted barely a year, for in 450 A.D. the waters broke through the dam so that the works had again to be completely restored. But the collapse of the great system was not to be prevented. From Glasser, No. 618 we learn that under the rule of the Abyssinian viceroy Abraha (542 A.D.) another breach occurred in the dam. Once more restoration work on a large scale averted the threatened disaster, but the final catastrophe must have occurred not long afterwards, which transformed the fertile plain of Saba' into a barren desert, alluded to in the Kûrîn (Sûra xxiv. 14 sq.; cf. Glasser, Zwei Inschriften aus dem Dombruch von Mârib, p. 13 sqq.; Reihe nach Mârib, p. 60, 64, 144 sqq.).

This can be seen by Glasser in the action of wind and rain which gradually wore down and weakened the east side. Another main cause of destruction must have been the silt which so filled the reservoir in course of decades that the water level over the dam. A mention of the bursting of the dam in the Kûrîn (pád al-‘amîr) and the importance of the event for the town of Mârib and the country round it has resulted in Muslim tradition devoting attention to this catastrophe and its consequences, so that all sorts of scraps of information about the dam were collected. Nevertheless it is remarkable how little even authorities on South Arabia like al-Ḥamadànî (Sīâ, p. 80 and 876, viii., in H. H. Müller, Burgon and Schlierer, ii. 938 sq., 1031, 1038; cf. N. Rhodokiankâ, Studien, i. 105 sq.; al-Bakî, Mûg’d, l. 402) really knew about the dam. Al-Ḥamadànî only says that the dam was built against a wall which was built on to the side walls of the reservoir, of great blocks of stone linked together with iron. The arrangement for distributing the water from the farms were still there as if their builder had only finished yesterday. Al-Ḥamadànî saw the building which had survived on one of the two sides (i.e. on one bank) namely the one which rose out of the water intact (i.e. the sluices). The breach had only affected the barrage but even this portion remained intact which was adjoined by the gardens on the left and was 15 ells in breadth at the base.

Thus we are to interpret these statements of al-Ḥamadànî, we learn from the description of the reservoir of Kŭhâtî in Abyssinia (Deutsche Akad.-Expedition, ii. 150 and pl. 23). There a central wall is flanked by two side walls, one of which is at right angles to a third. That the stones were bound together with iron is evident from Glaser’s description. When Vâkît (Muqām, iv. 352), who pays very little attention to the dam itself, tells us that it lies among three hills, the reference is probably to the massif of the Ṭabk (al-Ḥamadànî, iii. 368 sq.), that the barrage was one pāsan in length and breadth and contained 30 round openings, each of 3 feet in diameter, through which the water was led to the four large fields by the advice of learned men.

The importance of the dam for the prosperity of the country is evident from the descriptions of the Arab historians and geographers, who in this connection usually quote the reference in the Kûrîn to the two gardens of the Sabaeans, while, according to al-Ḥamadànî, this irrigated area included not only the plain of Saba' but stretched to the borders of the desert of Sandī; Glasser (Reihe nach Mârib, p. 52) held the view that the water accumulated by the dam would suffice to irrigate amply all the land on the borders of the desert as far as Hadramât and transform it into a vast garden. It is therefore perhaps not to be regarded as an exaggeration when al-‘Mun‘îl (Murrûf al-Ḍabkâh, p. 366 sq.) describes the land of Saba' with its wealth of gardens and fields, broad meadows and extensive irrigation system as the most fertile part of Yemen, the beauty of which had become proverbial throughout the world. According to him, a man on horseback would take more than a month to cross the rich cultivated country and any one travelling on foot or on horse used not fear the sun from atop of the land to the other, as he could always travel in the shade, so rich was the vegetation (cf. A. v. Kremer, Sägen, p. 10, note 1). According to Ibn Rosta, p. 114, who also waxes eloquent over the fertility of the land of Saba', a basket on the head of a man walking between the fruit trees would very soon have filled itself with fruit without one pulling or gathering them.

Under such circumstances it was natural that the catastrophe of the bursting of the dam, known as sīla‘ al-Birûn throughout the Muslim world, should have the most far-reaching effects. The migration of the Hûmir tribes to the north is con-
connected with the catastrophe and the Banu Ghassín took this event as the starting point of an era of their own (Zam udheib; al-Mas'ûdî, Kitâb ut-Tâhâb, p. 202). There is hardly any historical event of pre-Islamic history, that has become embittered with so much that is fanciful and related in so many different versions, as the history of the bursting of the dam. Al-Mas'ûdî alone (Mu'adjdî al-Qâhirî, iii. 370 sq.) dared attribute it to natural causes; he thought that the water had worn away the foundations of the dam and in time undermined them without its being noticed. When the masonry of the dam and the barrage had become so weakened that they could no longer resist the force of the water, the waters when unusually big broke through and flooded the plain. But even al-Mas'ûdî sees in the catastrophe a punishment for the arrogance of the Sabaeans and gives a good deal of space in his history to the legendary version of this event (op. cit, v. 573 sq.), which in the main agrees with that of Yâkût. Mu'adjdî, p. 345—348. Ibn al-Mudjâwîr al-Mishrîn (according to Sprenger, Post-und Reservenut, p. 153 sq.) tells the history of the destruction of the dam in quite a different way from the older historians. According to al-Mas'ûdî the story is briefly as follows: the king 'Amr b. 'Amir who lived in Mârib was warned of the imminent catastrophe by his brother 'Imrân, who was a soothsayer and by his wife Zarifat al-Khair, also skilled in prophecy. 'Imrân foretold that the people would be scattered in different directions and told his brother Zarifat on the other hand dreamed of a great cloud which covered her country and sent forth thunder and lightning. It burst and burned everything upon which it fell. All this pointed to a terrible inundation and Zarifat was confirmed in her idea by other signs that the catastrophe was imminent. She warned 'Amr and urged him to see to the dam. If he should leave the dam then tearing out holes with its fore paws and throwing out big stones with his hind feet, the misfortune was inevitable and imminent. 'Amr went to the dam and actually saw a mouse which turned over with its feet a stone which 50 men could not have moved from the position. 'Amr himself then dreamed of an inundation by the dam and now decided to realise his possessions and leave the country with his family which he was able to do surreptitiously without arousing suspicions. Soon afterwards the collapse came, which destroyed the whole country, even high lying fields and places a considerable distance off.

While there are considerable differences in detail in the different versions of the story—the collapse took place for example, according to Yâkût not under 'Amr but under his brother 'Imrân—there is still greater disagreement about the date. Hzâma al-Isfahânî, for example, puts it 400 years before Israîl, i.e. in the third century A.C. According to Ibn Khaldûn, the catastrophe took place under Hzâma b. Thîbân âs'ad (with A. v. Kremer, Sêrû, p. 120 sq., and note 4) is to be identified with Abdurrahân âs'ad and according to Glaser (Schte, p. 542) reigned from 385—420. Among Eastern scholars Gossellin goes farthest back in putting the date at 374 B.C., while Reiske thinks it took place 30—40 B.C. and Schultens puts it at 30—40 A.D. Peroon 553 years before Muhammad and Silvestre de Sacy 210 or 170 A.D. Yâkût, iv. 383 comes nearest the truth; he says it took place in the period of Abyssinian rule. As the term 'unpost i.e. 542 B.C., according to the inscription Glaser, No. 848, may be the last disastrous breach in the dam as occurring between 542 and 570 A.D. An exact date unfortunately cannot be obtained as the necessary data are lacking. Besides, the stories of the bursting of the dam in Mas'ûdî, p. 393 sq. and Ibn Rosch, p. 114 sq. which speak of the land being twice devastated by the waters of the dam, may contain a memory of the actual course of events, and the final collapse of the dam may have taken place after the catastrophe of 542 A.D. when the dam was carried away for the first time.

The various attempts to explain the etymology of Mârib are not satisfactory. When, for example, Yâkût, Mu'adjdî, iv. 382 sees in Mârib a place-name from Arabic = 'Alujum or from arÂUBU, this clearly shows what difficulties the explanation of this name gave the philologists. His further statement however that Mârib was the name of the Sabaeans kings is worthy of note (cf. H. Fleischer, Alsufludat hist. antiquitates, p. 114), especially as in Naqshba al-Himyarî a gloss is preserved according to which Mârib in Himyaritic means 'lord' (cf. Blau in Z. D. M. G., xxv. 391, note 7). Dîrjîl Zaidînî, Kitâb al-'Arabîjî al-Islâmî, p. 142 explains Mârib as a loanword from the Aramaic, a compound of 'àbî and sabî. E. Osland, Z. D. M. G., xix. 162 takes Mârib to be connected with the root of the Sabæan proper name DÂTÎ and of which Riyûb and Bûlûb correspond in Arabic. J. H. Mordtmann, who deals in Z. D. M. G., xxx. 322 sq. at length with the etymology of Mârihis, points to the DÂTÎ and form DÂTÎ of the inscriptions which he connects with the Arabic ra's, 'domus crassus, magnus gulis'.

D. H. Müller does not accept this derivation (Burgum und Schlîser, ii. 968 sq.). Al-Bakri, Mu'adjdî, ii. 502 says, following al-Hamdânî, that Mârib was the name of a tribe of the 'Ad after whom the town is called and in fact al-Hamdânî in Ibn Khaldûn, viii. (Müller, Burgum und Schlîser, ii. 960, 1040) says that Mârib and Mârîb are the names of two Arab tribes. In the older Sabæan inscriptions the town is called DÂTÎ to which the Greeks added an a to give it a Greek form. Eurototheus and Antimachus (Strabo, xvi. 706, 778) call the town Maslûsû. The later inscriptions mention it under the name DÂTÎ in which we have, with Khodîkanî, the later contracted form, from which comes the name of the Muslim tradition. The Sabæan capital is however known to the classical authors and Arab geographers by another name, viz. Dâbî (Agatharchides, p. 100 in Geogr. Gr., min., i. 188 and in Steph. Byz., s. Dâbî and Tâdaw, cf. Tâdaw in the Art. Saba, N. B. H. B., ii. A., col. 3516) and Saba' Tâdaw (col. 1391 sq.) is seen in contrast to J. H. Mordtmann (Schoihe Deutsche, p. 3: note 1), E. Glaser (Schte, 4, 15) Südarabische Sprachfragen, p. 10) and A. Sprenger (Die alte Geographie Arab., p. 219) that in this double name of the Sabæan capital not an error but a belief that Sabâ, while not the usual, was no wrong name for the capital.

Against this Glaser, Schte, 4, 15, rightly emphasized that the capital of the Sabæan kingdom Maryâb or Mârib was never known as Saba', Saba' was—so far as the inscriptions are concerned—
cerned—never anything but the name of the land or kingdom of the tribe which had the hegemony in this land, to which the name Saba’ has remained attached to the present day. This is quite clear from the inscriptions. Thus, in the first inscriptions of Glaser, N° 418—419, 1000 A and 1000 B (cf. N. Rhodokanakis, Altkabardin Texte, i. 99 sq. 79), Almaqah (the principal deity of Saba’) and Saba’ is the formula by which the Sabaean, first a theocratic and then monarchic, state is known. That the predominant tribe Saba’ is however never described as a tribe in the older period is clear evidence of its hegemony as Rhodokanakis points out (Handbuch der altkabardin Altertumskunde, i. 121). It was different in the later periods. For example, in the inscription Glaser, N° 542, set up by king Shamun Yuha’ish, king of Saba’ and Dhu’r Ridad, of the tribe of Saba’, the reference is always to the “lords of the town of Märib and its valleys” (cf. N. Rhodokanakis, Altkabardin Texte, ii. 14), as a definite sphere of influence which had been allotted to them in the government of Märib and the administration of its territories. Deliberately contrasted with them as citizens of the town and the highly cultivated areas round it are the “Beduins of Märib” (cf. E. Glasier, Die Abessinier in Arabien und Afrika, p. 128 sqq.), who probably lived around the town (for references as regards Saba’, cf. M. Hartmann, Die arabischen Frage, p. 385—389). The idea that Saba’ was a town, which we find in the classical authors, which was criticized as early as C. Niebuhr, Beschreibung von Arabien, p. 279, is therefore to be put down to a misunderstanding rather than to be taken seriously. This is also true of the identification of Märib with Saba’ among the Arab geographers (cf. the references collected by Jomard in Mengin, Histoire sommaire de l’Egypte, p. 347—344). Yaqût for example (Mushtariq, p. 259) identifies Märib with Saba’ as does Abu ‘I-Fida’ (Geographie, p. 130 and Historia universi, p. 114); but the latter expressly points out that Märib was known as the town of Saba’ and it was also said that Märib was the name of the king’s palace while the town was called Saba’. It is in keeping with this that we find al-Suhaib in Yaqût, Musjam, iv. 382 referring to Märib as the name of a castle of the Azd. In al-Karwint and in the Dkhian-and the town is called Saba’. Ibn Rostafa, who includes Märib in Hadramaut and mentions it under the name Madhbat Saba’ or Saba’, mentions the ruins of a second large town with wonderful buildings, which was close to Saba’ and which the people of Saba’ considered to have been the town of Saba’. Saba’, they said, was two towns, which lay opposite one another and were a day’s journey in length. As there are a number of buildings which belonged to Märib on the right bank of the Wadi Dasime, it is intelligible why the mistake should have been made of imagining two towns running parallel to one another, especially as the two are still considerable ruins adjoining the Haram Billas, the “Am’Ar” and the “pillars of Bilqa” as we have seen. The alleged length of a day’s journey is of course much exaggerated and indeed the description in Ibn Rostafa generally shows how little was known in later times of the ancient Märib. The association of the origin of the town of Märib with Saba’ b. Yashid probably led to the name of this legendary ruler being transferred to the town or Saba’ as a tribe being identified with Märib, as Agatharchides had already done. The varying form in which the name is handed down, sometimes town of Saba’ and sometimes Saba’ alone, makes this development very probable. Besides al-Hamdun (Sijma, p. 7, s) identifies the Saba’ of Ptolemy with Märib and always calls the town Märib.

The earliest history of the town is unfortunately wrapped in obscurity. The mention of kings of Märib in the comparatively late inscription, Glaser, N° 302, shows, it is true, that the town was still independent in the time of the older Sabaean Mükarrab — for these “kings of Märib” are their contemporaries — but gives no clue to the date of its foundation. It probably arose about the same time as the old royal city of Strwah. The great inscription Glaser, N° 418—419, shows Märib already in possession of the Sabaean Mükarrab and not long afterwards it became the capital; this at least seems evident from the great inscription Glaser, N° 481, where we are told that the founder of the inscription “brought as far as Maryah the peace between Saba’ and Kataban”. This we can only interpret with Rhodokanakis (Studien, ii. 24) as meaning that the general (he is called Tuba’barka, son of Dhu’yam сдела, of the clan of Dhu’amar) returned to the capital of Saba’ after the conclusion of peace. Not long after the foundation of the great Sabaean kingdom, of which the inscription Glaser, N° 1000 A B relates, it must have replaced Strwah, the oldest capital of the Sabaean kingdom; indeed there seems to be evidence that this had already taken place in the reign of the king who set up the two great Strwah inscriptions Glaser, N° 1000 A B, Karibul-Watar, founder of the great Sabaean kingdom. For when we are told in Glaser, N° 1000 B, 1 sq. (N. Rhodokanakis, Altkabardin Texte, i. 23) that he had built the upper part of his palace Shum (Sijma) which is probably identical with the famous citadel Sulm at Märib, it may be assumed that this Mükarrab resided here. The great building which went back to the older generation of Sabaean Mükarrab, must have then transformed Märib and the country round it into the flourishing oasis which made the town the centre of a great kingdom. The Mükarrab Sumbu-alaya Yasnaf and his father Yid-bi-lu Dharis as well as Yit’jam’amara Bayin also did much for the development of the town and the country around it.

We do not know exactly when Märib ceased to be the capital of the Sabaean kingdom. Glaser (Zwei Inschrifiiber den Dammsbruch von Märib, p. 29) supposes that the capital was removed to Zaafar (near Yasnaf) at latest towards the end of the third century A.D., but probably as early as the first century A.D., since the Periplus marit Immrnikv, § 33 already knows Zaafar as the capital.

Indeed the evidence of the Periplus which is supplemented by Pliny, Nat. Hist., vii. 104, who knows Saphar as a royal residence, can hardly be interpreted otherwise than meaning that Zaafar was already the residence of the Sabaean kings about 60 A.D. With the transfer of the capital to Zaafar, the cause of which Glaser finds in the attacks of the Axamites on the independence of the Sabaean kingdom, while M. Hartmann (Dis arabisches Fragent,
p. 460) supposes the reason to have been the victory of the Hamdanids over Himmur (cf. C.H.H., 347; and M. Hartmann, op. cit., p. 146 sq.), Mürab’s army had passed away; the decline probably did not set in at once but: Glauser must be right in assuming that Mürab was now neglected and this is how the dam, so important for the cultivation of the land, fell into disrepair. Isolated references in Muslim sources show that the town had however not yet lost all its importance. Al-Bakri, Muqṣid, i. 308 (cf. A. v. Kremer, Sega, p. 138) knows Mürab as one of the treasures of the Himyars, and according to the Himyar kaṣaḍa, verse 56 (A. v. Kremer, Sega, p. xii., note 1 and p. 69), Shammar Yarīsh (c. 381 A.D.) kept his prisoners in Mürab. The two breaches in the dam which were in place in 450 A.D. and under Abyssinian rule in 542 A.D., must have done grave injury to the prosperity of the town. In the last period of its brilliant history Mürab was for a short time (certainly in 542 A.D.) the capital of the governor of the Ethiopian king Ramsīl Zāhilanā, Abraha, and even had a Christian church (cf. Glauser, Zwei Inschriften über den Dombruch von Mürab, p. 47). The final catastrophe sealed the fate of the town. Its inhabitants left the sore tried town and migrated to the Hijāz.

Mürab was resettled in the Muslim period. The favourable situation of the place and perhaps the rich deposits of salt in the neighbourhood (3 days’ journey east of Mürab at Sāfīr, mentioned in the time of the Prophet, who appointed Abīd Mīlūlṭi-al-Ashārī governor of Mürab; E. Glauser, Reise nach Mürab, p. 26; al-Bakri, Muqṣid, ii. 502; al-Hamdānī, Sīfa, p. 87, 102, 155; 201; A. Sprenger, Postw. Reisereisen, p. 139) also kept the place from being quite forgotten. Ibn Khordādbih (B.G.A., vi. 138) and al-Mukaddasī (B.G.A., i. 89) mention the village of Mürab; al-Hamdānī, Sīfa, p. 199 says the savannah of Mürab is a speciality of the Yemen. Al-Idrisī, Geographie, p. 149 calls Mürab a barji (according to Ibn al-Majdījawīr in A. Sprenger, Postw. Reisereisen, p. 140), Mürab (c. 630 A.H.) had a market and a mosque and was of some importance as a resting-place for the night and fruit could be obtained there at any time of the year. Since Yākūt, Muqṣid, iv. 436, also says, the district of Mürab is rich in palms, it seems to have in part at least regained its old fertility.

The present little kingdom of Mürab owes its foundation to the gharīb Ḥūsain from al-Zāhir in al-Djāfwa, who took a vigorous part in the expulsion of the Turks from the Yemen in 1640. He was the first to assume the title of emir. His dominion extended over the whole land from Raghwān in the southern Djāfwa to Bībājān, which he divided among his four sons. Only one of these, Khālid, to whom Mürab fell, could exert effective authority; the others never gained possession of their inheritances although their descendants still play a certain part in Bābāj, Harīb and Raghwān.

do to doubt the essential correctness of this story, as there is no particular bias in it and it contains all sorts of details which do not look like inventions, so that it is exaggerated scepticism when Lammens supposes that the "mother of Ibrahim", after whom the maghara was called, was some Jewess. On the other hand, in view of the fact that all the marriages of Muhammad after the Hijra were childless, it would have been surprising if evil-minded people had not cast suspicions on the paternity of Ibrahim, and that this actually happened is evident from some traditions the object of which is to defend Maryam from this suspicion.

On the other hand, it is not so easy to justify the part which Qur'anic exegesis makes Maryam play in the exposition of Surah lixi. In this Surah, the Prophet speaks in a very indignant tone against one of his wives, because she has betrayed a secret to another, which he had imparted to her under a promise of the strictest secrecy. At the same time Allah blames him, because in order to please his wives, he has bound himself by oath to refrain from something which is not definitely stated and because he does not use the right granted him by Allah to release himself from his oath. In addition, there is a word of warning to the two women who had disobeyed him and a threat to all his wives that he might divorce them in order to marry more pious ones (cf. xxxviii. 28 sq.). According to the usual explanation, the two wives are Hafsa and 'A'ishah and the revelation is said to have been provoked by the fact that Hafsa, on returning unexpectedly to her house, found 'A'ishah and the Prophet in an intimate tête-à-tête and that on a day which by rotation belonged to her (or 'A'ishah). In his embarrassment he pledged himself by oath to have no more intercourse with the Cord girl. But after Hafsa's breach of faith, Allah tells him to release himself from his oath. This explanation fits very well in some respects and that the promise of continuity is connected with marital complications is illuminating. That there are hadiths, which explain his quarrel with his wives quite differently, does not mean very much, for they are no doubt invented to drive out of circulation the popular, less edifying version. But, on closer examination, there is one flaw which makes the latter uncertain, for it does not answer the question how Muhammad could call the situation in which Hafsa caught him and Maryam a secret that he trusted to her.
Rhagid (van Berchem, *Voyage*, p. 304, note 7) was the reference to Rhagid [rather Raghid] al-Din in Le Strange, *Palestine* is shown to be wrong); his statement seems to be correct, however, that the citadel was built out of material from ancient ruins. The Byzantines occupied al-Markab and other fortresses in the vicinity under the general Kantakuzenos in 1104 (Anna Commnen, *Alexiad*, ed. Relliefscheid, lii. 138: τι τη Άργο-πολεστιανον [= Στιφλα] τη καλυβουσμον Μαρκζαντ [- = al-Markab], τη Γιβαζιλαν [Qibala] και Άλατα τον). When in 511 (1117-1118) the Crusaders approached the fortress, its lord Ibn Mu\' \#raf surrendered it on condition that he and his family were allowed to remain in it; but after a few days the Franks expelled him and allotted al-Ma\'\#raf to him in exchange for al-Markab; Franks and Armenians were settled in the latter. The first recorded lord of the fortress was Kainal Mansas, the constable of the prince of Antioch. After the earthquake of 1170, from which the fortress must have suffered damage, Bertrand of al-Markab, perhaps out of fear of Saladin's threats, handed it over on Feb. 1, 1186, to the Knights of St. John. In July 1186 Saladin passed below the watch tower (now Burd al-Sahli), which from ancient times had commanded the road along the coast (cf. Dussaud, *Topcge*, p. 127, note 5) below the fortress and was connected with it by a wall which protected a subterranean passage, but did not dare to attack Markab any more than Tarifs (q.v.). Prince Isaac of Cyprus, a descendant of the Comnenoi (not the Emperor Isaac Comnenos as van Berchem, op. cit., p. 298 sqq., note 5 says), was taken prisoner by Eichard de Coeur-de-Lion on May 31, 1191, and imprisoned in Markab till his death (Neophytus, in *Renoul hist. cxxvi, hist. greco*, ii. 562 with note, ii. 489: ιε κατεληκαν καλυβουσμον Μαρκζαντ). Sul\#an al-Malik al-Zahir Gh\#azi of Halab whose lands adjoined those of the Knights of St. John sent in 601 (1204-1205) troops against the fortress, who were said to have just succeeded in destroying the towers of the walls when their leader fell and they again retired without accomplishing their object. In 628 (1231) and 638 (1240-1241) the Knights were again at war with Yusuf, Sul\#an of Halab. From this period (1221) dates the very full description of the strong fortress by Willbrand of Oldenburg. Built on a high hill and surrounded by a double wall and many towers, it was regarded in the period when the power of the Crusaders was beginning to decline, as maximum totius terrae illae solutum; the bishop of Valencia (Bni\#\#a) had moved into the fortress by 1242 out of fear of the Muslims. King Henry of Andalusia in 1217-1218 gave funds for the maintenance of the Crusaders which had given him an honourable reception (Rohricht, *Regesta Hierosolym.*, p. 243, No. 998). The straits to which the humiliating treaties with Bila\#ars had reduced the Knights Orders is lamented by the Grand Master Hugo Revel in 1268 in a letter in which he says that the possession of its last two fortresses, Cratium and Margatum (= H\#n al-Akr\#d and al-Markab), was only granted the Order on payment of oppressive taxes (Rohricht, *Regesta Hierosolym.*, Additamentum, Genoponti 1924, p. 91, No. 1358d). After the loss of H\#n al-Akr\#d, the Templars and the Knights of St. John in 669 (1271) by a treaty which they concluded in Arqa with Sa\#f al-Din Balab\#an al-Daw\#ad\#ar ("the secretary") al-Rumi, the Sul\#an's plenipotentiary, had to cede half of the coastline (\#afi\#) of Antar\#s\#a, al-Markab and Bni\#\#a and bind themselves not to build any new defences (Mufa\#dal b. Ahi l-Padi\#il, *Gesch. d. Mamlukensitaten*, ed. Blechert, in *Patrol. Orient.*, xii. 536). After a raid by the Franks (Oct. 1279) the Emperor Sa\#f al-Din Balab\#an al-Tbild\#\#khi, the governor of H\#n al-Akr\#d for Qala\#\#an, in the beginning of 1281 sent troops against al-Markab, but they were driven back with heavy losses (Mufa\#dal, op. cit., xiv. 484, and the sources quoted in van Berchem, *Voyage*, p. 301, note 5). In the treaty between Qala\#\#an and the Templars of 651 (1282) al-Markab is mentioned among the districts half of which were to be ceded (Mufa\#dal, op. cit., xiv. 445; van Berchem, op. cit., p. 302, note 2). The pilgrims Burchardus de Monte Sion in 1283 mentions the "Cestrum Margab fratrum hospitiorum sancti Johannis"; it was still at this date the see of the bishop of Valencia (*Peregrinatores*, ed. Laurent, p. 30, 170).

On 10th Safar 684 (April 17, 1285) Qala\#\#an appeared before al-Markab and began the attack as soon as the siege artillery arrived. On the 10th Rabi\# I (May 25) the Emir Fakhr al-Din Mu\#raf received the surrender of the fortress. On account of its strategic value for defence against possible attacks from the sea, it was not destroyed but included in the "royal province of the fortunate conquist", the capital of which till 688, when Tarbulus was taken, was the Castle of the Kurds, still governed by Sa\#f al-Din Balab\#an al-Tbild\#\#khi al-Manfuri. Qala\#\#an in 684 ordered him to repair the defences of the citadel as an inscription found in situ shows (van Berchem, *Inscriptions de Syrie*, p. 71 sq.). Among those present at the capture of the fortress were the 12 years old Abu l-Fida\#, who was then on his first campaign with his father, and the historian Ibn 'Abd al-Rah\#m, the continuator of Ibn Wasi\#l's chronicle. The best account of the taking of al-Markab is in Qala\#\#an's biography entitled *Ta\#zir al-Siyaha wa l-\#U\#b al-Sirat al-Sul\#\#an al-Malik al-Manfuri* (Paris, MS. ar., No. 1704, fol. 149 sqq., ed. and transl. in van Berchem, *Voyage*, p. 310-320).

In the vi\#h (xvii) century al-Markab belonged to the province of Tarbulus (Ummari, *Tarif*, transl. by R. Hartmann, Z. D. M. G., lxx. (1916), 36; Khalil al-Zah\#ri, *Zahirat ka\#\#f al-Manmuri*, ed. Rava\#\#se, p. 48; Ka\#\#kashandi, *Sul\#an al-Daw\#ad\#ar*, ed. Cairo, iv. 145 sqg); at this time it was used as a state prison (van Berchem, p. 305, note 2).

Its harbour is mentioned in documents of 1193 and 1399 (van Berchem, p. 309, note 3); it was presumably at the mouth of the Wadi 'Al al-Kh\#\#be (in Walpe: al-Mina). As al-Markab lies on the outer spur of the Ana\#y range it has often wrongly been included among the fortresses of the Isma\#li (\#ella al-Duma) (so Umari, op. cit., in the Berlin and Gotha MS. but not in the others; Hartmann, Z. D. M. G., lxx., 36, note 7).

So far as we can judge from the brief notes by visitors, it was not till about the middle of the xiv century that it began to fall into ruins. About 1885 at the request of the ka\#\#manik\#\#an of the ka\# of al-Markab the seat of the government was transferred from the ruined Kal\#\#at al-Markab to Bni\#\#a (M. Hartmann, Z. D. P. V., xxii., p. 163, No. 27).

MARRAKESH

(Marrakesh, popular pronunciation Marrakesh), a town in Morocco, and one of the residences of the Sultan.

The town Marrakesh, adopted by the administration of the protectorate, is of recent origin in French. During the year 1890 the town was always known as Maroc (Morocco) in French. The kingdom of Morocco, distinct in origin from those of Fès and Sûs, finally gave its name to the whole empire. At one time it only consisted of the country south of the wide Umra Râbî' as far as the range of the Great Atlas.

Marrakesh is situated in 30° 37'35" N. Lat. and 7° 59'42" East Long. (Greenw.). Its mean height above sea-level is about 1,510 feet. The town is 150 miles south of Casablanca. It is through the latter that almost all the traffic with the coast passes at the present day. It used to go via Safi which is the nearest port (100 miles). Sidi Muhammad b. 'Abd Allah in 1765 tried to supplant it by Mogador (115 miles), where he built a town and harbour through which it ended in the eighteenth century most of the trade between Marrakesh and Europe passed.

Although Marrakesh is only 235 miles from Fès as the crow flies, it is over 330 by Casablanca-Rahat-Meknès which is the only road that has been used for over a century, the direct road by the Tadla having been rendered impracticable by the traditional insecurity of the country.

The temperature which is very mild in winter is very hot in summer. The average maxima of 20° in the month of August 1927 have nothing unusual and imply extreme temperatures reaching or passing 50° on certain days. Rainfall is low (284.5 mm. in 1927, against 706.5 in Rabat and 1,007.3 in Tangier). But water fed by the snows of the Atlas is found at no great depth. It is collected by a system of small subterranean galleries (khatâfa, plur. khatâfi) which bring it to the surface by taking advantage of the very slight slope of the surface. This method of obtaining water, which is described in the 18th century by Idris, has enabled the vast gardens which surround the town to be created. The Almohads and the dynasties which succeeded them also built aqueducts and reservoirs to supply the town with water from the springs and streams of the mountains.

Contrary to what was until quite recently believed, Marrakesh is by far the most thickly populated town of the empire. The census of March 7, 1926 gives 149,263 as the total population, 3,652 Europeans, 132,893 Muslims, 12,718 Jews.

The probable growth of the population is, as yet, insufficient to explain the difference between the present day figures and the old estimates, almost all far below the truth and varying greatly among themselves: from 20,000 (given by Diego de Torres in 1585 and Hôst in 1768), 25,000 (Saint Olos, 1693), 30,000 (Ali Bey el-Absassi, 1804), 40 to 50,000 (Gateil, 1864 and Eug. Aubin, 1902), 50,000 (Lambert, 1868), 60,000 (Bonnier, 1868), 80 to 100,000 (Washington, 1830) up to the obviously exaggerated figure of 270,000 given by Jackson in 1811.

About 40 miles N. of the Atlas, the vast silhouette of which, covered by snow for eight months of the year, is in the background, Marrakesh is built in a vast plain called the Hâwz which slopes very gently towards the wide Tânsîf, which runs 3 miles north of the town. The extreme uniformity of the plain is broken only in the N.W. by two rocky hills called Gilîts (1,700 feet) and Kudiyat al-Abîd. In 1912 at the time of the French occupation, there was built a fort which commands Marrakesh.

The modern European town called the Gueliz lies between this hill and the walls of the old town. The wide Istit, a left bank tributary of the Tânsîf, a stream often dried up but transformed into a raging torrent after storms, runs along the walls of the town on the east. To the north of Marrakesh as far as the Tânsîf and to the east stretches a great forest of palm-trees, the only one in Morocco north of the Atlas. It covers an area of 13,000 hectares and possesses over 100,000 palm-trees, but the dates there only ripen very imperfectly.

The town is very large. The walls which run all round it measure at least 7 miles in length. The town in the strict sense does not occupy the whole of this vast area. The part built up forms a long strip which starting from the  réussi of Sidi bel Abdâs in the north runs towards the kâbba which stands at the southern end of the town. On the two sides lie great gardens and estates among which we find in the neighbourhood of the chief gates inside the walls, isolated quarters grouped into so many villages around their stib and their mosque.

The town consists mainly of little low houses of reddish clay, often in ruins, among which are scattered huge and magnificent dwellings without particularly imposing exteriors built either by the visiers of the old mahzen (e.g. the bârîya, now
the Résidence Générale, the old palace of the Bé (Mâdi, vizier of Mawâl al-Hassan) or by the great Ṣaʿida, chief of the tribes of the country round. This narrow and overhung streets in the central area broaden towards the outskirts into sandy and dusty squares and crossroads. The colour, the picturesque architecture, the palm-trees, the branches of which appear over the walls of the gardens, the presence of a large negro population, all combine to give the town the appearance of a Saharan zar of vast dimensions.

The centre of the life of the city is the Djemma al-Fna, a vast, irregular, ill defined open space, surrounded until quite recently by wretched buildings and-reed hats, overshadowed by the high minaret of the Kutubiya Mosque. Its name comes, according to the author of the Taʾrîkh al-Sanâdas, from the ruins of a mosque which Ahmad al-Mansûr had undertaken to build there. As he had planned it on a wonderful scale, it had been given the name of mosque of prosperity (al-ḥadd); but his plans being upset by a series of unfortunate events, the project was unable to finish the building before his death and it was therefore given the name of mosque of the ruin (djemma al-fenda). This origin having been forgotten; an attempt was later made to explain the name of the square from the fact that the heads of rebels used to be exposed there (mosque or place of assembly of ruin, of death). It was there also that executions took place. Lying on the western edge of the principal agglomeration of buildings at its most thickly populated part, close to the sâk, connected with the principal gates by direct and comparatively quiet roads, Djemma al-Fna is the point of convergence of the roads. At all hours swarming with people, it is occupied in the morning with a market of small traders: barbers, cobblers, vendors of fruit and vegetables, of medicines, of fried grasshoppers, of tea and of soap (parira); in the evening, it is filled with acrobats and jugglers (Awliâd Sidi Ahmad b. Mâsû of Tazrâ-wlî), sœcers, story-tellers, fire-eaters, snake-charmers and ḥāsh dancers. The audience consists mainly of people from the country who have come into town on business and want to enjoy the distractions of the town for a few hours before going home. These visitors are always very numerous in Marrakesh. Besides the regular inhabitants there is a floating population the number of which has been put at 20,000 to 25,000. For Marrakesh is the great market for supplying not only the Haws but also the mountain country, the Sts and especially the extreme south, Dâdèn, Dar'â (Draâ) and the Anti-Atlas. A portion of this traffic will probably be diverted via Agadir when this port is opened to trade. Marrakesh used to be the starting-point for caravans going through the Sahara to trade with Timbuktu. They brought back chiefly Soudanese slaves for whom Marrakesh was an important market. The conquest of the Soudan by France has put an end to this traffic.

To the north of the Djemma al-Fna begin the siks which are very large. As in Fas and in the other large towns, the traders and artisans are grouped by trades under the authority of the muhayyib (mâsû), a kind of provost of the merchants. The most important siks are those of the cloth merchants (musâriyya), of the sellers of slippers, of pottery, of basket work, of the embroderers of harness, of the dyers and of the smiths. An important Thursday sîk (al-hamâl) is held outside and inside the walls around the old gate of Fas which has taken the name of the market (Bâb al-Khamis). This sîk was already in existence in the sixth century.

There is no industry to speak of in Marrakesh. The most important is the making of leather (tanning). The manufacture of slippers occupies 1,500 workmen who produce over 2,000 pairs each working day. There are the only articles manufactured in the town that are exported. They are sold as far away as Egypt and West Africa. The war interrupted communications and did great damage to this industry. For the rest, Marrakesh is mainly an agricultural market. The whole town is a vast fenda in which are warehoused the products of the country, almonds, caraway seeds, goat-skins, oils, barley, wool, to be exchanged either for imported goods (sugar, tea, cloth) or for other agricultural produce (wheat, oil, which the tribes of the mountains and of the extreme south for example do not have).

The town is divided into 32 quarters: Zâwiya A-Bâbbâsiya, Sidi Ben Slimân, Asfâl, Rîyâd al-Arzîs, Sidi Abî ʿAmîr, Bîb Dukkâla (divid ded into two quarters), Sidi Abî al-Arzîs, Rabât Azâbî, Daʾbîhî, Kammârîya, Rîyâd al-Zîthîn al-djâdîlî, Dîjâma al-Mundhirî, ben Shouqra, Kâsîr, Mâwâlî, Rîyâd al-Zâhab al-ṣâlih, Arâs Mawâlî Mûsâ Khîtû, Arâs Mawâlî Mûsâ Şûfûra, Bûb Halîkîn, Sidi Mûmûn, Ben Şâbîb, Sidi Aïlyûbû, Bûb Zakrî, Kâsîr ben Modjâr, Bîb al-Dabâbîhû, Hârâst al-Shûrâ, Mawâkîf, Arahîm, the bâsha containing the royal palaces (again subdivided into several sections: al-Bâtu, Kašabat al-nîbâjû), Berrima, Bûb Aḥâmârî, Masakin Sidi ʿAmâra and the mellâb or Jewish quarter. We may further mention outside the walls near the Bîb Dukkâla, a quarter called al-Hara where the lepers live. Until recent years the gates of the town were closed during the night. The superintendents of the quarters (mûshaḍḍûn) have watchmen (ʿarâs) under their orders. The old custom still survives of firing a salvo at midnight on the Djemma al-Fna as a curfew.

Marrakesh being an imperial town, the sulûn who only stays there at long intervals is represented in his absence by a ḥâlîf, a prince of the imperial family (usually the son or brother of the sovergn). The role of this khâlîf is purely representative. His main duty is to preside at the ceremonies during the ritual celebrations. The governor of the town is a bâsha, assisted by a delegate (nâhî) and several khâlfûs. One of the latter supervises the prisons and the administration of justice. Another has the title of bâsha of the kašā. He governs the southern part of the town which includes the imperial palace and the Jewish quarter. Formerly the bâsha of the kašâ was independent of the bâsha of the town and served to counter-balance the power of the latter. He commanded the gûšî, an armed contingent furnished by the warlike tribes (Uâlîya, Aḥ Imîlûr etc.) settled in the vicinity of the town by the sulûns on the domain lands. At the present day the gûšî is under the control of the bâsha of the town and the bâsha of the kašâ only retains of his former powers certain rights of precedence and honorary privileges.

Muslim law is administered in Marrakesh by three kâds: one is established at the mosque of Ibn Yûsûf; the other at the mosque of al-Mwâshû and the third at the mosque of the kašâ. The latter's competence does not extend beyond the limits of
his quarter. That of the others extends over the whole town and even over the tribes of the area governed from it who have no local ḳāḥī. Marrakesh is not numbered like Rabat and Tetuan among the ḫaṭifiable towns, i.e. it has not, like them, an old established citizen population, not of rural origin, with a bourgeois whose tone is given by the descendants of the Moors driven from Spain. In the sixteenth century however, Marrakesh did receive a colony of Moriscos large enough to give one quarter the name of Ḫaṭifa, a town of Andalusia from which they came. The foundation of the population consists of people of the tribes for the most part Berber or Arabs already mixed with Berber blood. Shūḥ is much spoken in Marrakesh, although the language of the tribes around the town (Rḥāmāa, ʿUṭdaya) is Arabic. The movements of the tribes, the coming and going of caravans, the importation of slaves from the Sudan have resulted in a constant process of mixing in the population and the old Maṣūṃidian race which must with Almoravids have been the primitive population of Marrakesh is only found in combination with amounts difficult to measure of Arab, Saharan and negro blood. Even to-day this process is going on. The newcomers come less from the valleys of the Atlas than from the Sūs, the Dra, and the Anti-Atlas, from the extreme south which is poor and overpopulated. The greater number of these immigrants soon become merged in the population of the town but the Eżemāt al-ʿaw-l ṣaḥyl had been seen by L. Masson in 1923–1924 (Paris 1925) yielded some very curious information about the survival in Marrakesh of vigorous groups of provincial, specialising in particular trades: the makers of silver jewellery (at least those who are not Jews) owe their name of ḫaṭifiable to the fact that they originally came from Tāqūf Mūsi in Sūs; the Meṛfīa are charcoal-burners and green-grocers, the Ḥibhīya, salters; the people of the Togha, gatherers of dates and ḫaṭifiable, i.e. diggers of wells, who specialise in water-channels (ḫaṭifiable); the Tūfilla, porters and paviors; the Warrāṭa, water-carriers and of Ṭatta (Anti-Atlas), restaurers of the Dra, water-carriers and ḫaṭifiable, etc. This division is not the result of specialisation but arises from the fact that artisans once settled in Marrakesh have sent for their compatriots when they required assistance. Thus groups grew up, sometimes quite considerable. The list of the corporations of Marrakesh gives a total of about 10,000 artisans. These corporations have lost much of their power under the pressure of the Makhten. Some of them however still retain a certain social importance: in the first place that of the shoemakers which is the largest (3,500 members); then come the tailors (439), the cloth (237) and silk (100) merchants, the ḥabūşi wholesalers, then some groups of skilled artisans, highly esteemed but of less influence, embroiderers of saddles, makers of mosaics, carpenters, sculptors of plaster etc.

Religion and intellectual life. Mosques are numerous in Marrakesh. Some of them will be the subjects of brief archaeological studies. Those which play the most important part in the religious life of the town are the mosque of al-Mwaṭi, the mosque of Allā豁 Yūnī, both close to the sāki, that of Sīdī b. Abdāb, and that of the Ḫaṭifa. Some come the Ḫaṭifa, the mosque of the Bāb Dukāla, of the Bāb Atlān, of Berrima, and the Dījma Ibrāhīm ʿl-Saḥāḥ. There are also many little mosques in the various faubourgs. But although it can claim illustrious men of learning, Marrakesh is not like Fās, a centre of learning and of teaching. The Almoravids built schools and libraries there, brought the most illustrious scholars, philosophers and physicians from Spain, like Ibn ʿṬafīl, Abd al-Mawān Ibn Zūhūr (Avenzoar) and Abu ʿl-Walīd Ibn Rāghūd (Averroes) who died at Marrakesh in 595 (1198). These great traditions did not survive the dynasty. In the beginning of the sixteenth century, in the time of Leo Africanus, the library of the Almohad palace was used as a poultry house and the madrasa built by the Marinids was in ruins. At the present day in the town of the Kutubiyah there is not a single bookshop. A certain number of Ḫaṭifa still live in the madrasa (Ibn Yūnās, Ibn ʿṢaḥāḥ, Sīdī b. Abdāb, Berrima, Ḫaṭifa) but the teaching of Marrakesh has neither the prestige nor the traditions which still give some lustre to the teaching at al-Karaṣṣiyah in Fās, much decayed as it is. Although they attempt to imitate the customs of Fās (they celebrate notably the "festival of the sulām of the ḫaṭifiable" [cf. ʾkhīnī every spring] the students are far from holding in Marrakesh the position their comrades enjoyed in Fās.

The devotion of the people of Marrakesh expends itself particularly on the cult of saints, not at all orthodox but dear to the Berber. Their town has always been famous for the great number of sāḥī who are buried in its cemeteries and who justify the saying: *Marrakesh, tomb of the saints*. But in the time of Mawlān Ṣamḥīl, the Shāhīb Abd al-Ḥasan b. al-Ṣawādī, by order of the prince organised, in imitation of the old established cult of the Ṣabīṭ al-Riḍāā (the seven saints of the Ṛagrā, around the Djabal al-Hadjīd, among the Ṣaḥāma) a pilgrimage to the Sabīṭ al-Riḍāā of Marrakesh including visits to seven sanctuaries and various demonstrations of piety. The following are the names of the seven saints in the order in which they ought to be visited: 1) Sīdī Yūnī b. Allā豁 ʿl-Saḥāḥ, a leper, d. 593 (1196–1197), buried outside the Bāb Aghmāt on the spot where he had lived; 2) the Ṣaḥāḥ Yāḥyā, 476–544 (1083–1149), ʿl-Saḥāḥ of Cuţa, then of Granada, a learned theologian, author of the Ḩabīb, a celebrated collection of traditions, buried beside the Bāb Aitla; 3) Sīdī b. Abdāb al-Saḥā, patron saint of Marrakesh and the most venerated of the saints of the region 524–601 (1130–1204). He came to Marrakesh when the town was being besieged by the Almohads and settled there, at first in a hermitage on the Djabal Gilla where a ʾsawāṣ was dedicated to him and can still be seen. But the principal pilgrim is to his tomb at the northern end of the town where Abdāb Fāris b. Ahmad al-Maṣūṭī built a ʾsawāṣ and an important mosque at the beginning of the sixteenth century; 4) Sīdī Muḥammād b. Suṭmān al-Dījālī, d. in 876 (1465) at Afaγhāl on the hospital, a celebrated Saṭṭ, leader of the Dījālī brotherhood. His body was brought to Marrakesh in 930 (1523) by Ahmad al-ʾArāf, the Saṭṭān; 5) Sīdī ʾAbd al-ʾAnī al-Talibī, a pupil of al-Dījālī, d. in 914 (1508); 6) Sīdī ʾAbd Allāh b. Ḥaṭiṣāb, popularly called Mawi ḫīl, d. in 935 (1528); 7) Sīdī ʾAbd al-Raḥmān al-Suḥailī, called the Imām al-Suḥailī, a native of the district of Malaga, d. 581 (1185) and buried outside the Bāb al-Rabb.
It is quite an arbitrary choice that these seven individuals have been chosen as the Sah'ayn Rijāl. Others could equally well have been chosen, as the town of Marrakesh and the cemeteries which stretch before it, contain a very large number of other venerated tombs. The principal are mentioned in the article by H. de Castries, *Les Sept Patrons de Marrakesh* (Hespéris, 1924). Legend of course plays a great part in the cults of the various saints. We may mention for example the sayings and songs which perpetuate the memory of Laiulū 'Uda, mother of the Sulṭan Ahmad al-Mansūr, a real personage much transformed by the popular imagination. The various trade corporations have chosen patron saints. Thus Sidi Ya'qūb is the patron of the tanners, Sidi bel 'Abdān of the soap-makers and lacemakers, Sidi Mas'ūd "slave" of Sidi Muhammad b. Slimān is the patron of the masons, Sidi 'Abd al-'Aziz al-Tabba of the dyers, etc. The majority of the artisans are also affiliated to the religious brotherhoods. In Massignon's investigation will be found details of the attraction which some of the latter have for certain trades.

The Jews. At the foundation of Marrakesh, the Jews had no permission to settle in the town. They came there to trade from Aghmāt Allān where they lived. Al-Idrīsī relates that under 'Ali b. Yūṣuf they had not even the right to spend the night in Marrakesh and that those, who were caught within the walls after sunset, were in great danger of losing their lives and property. They settled there at a later date. At the beginning of the xvith century there was, according to Marmol, a ghetto of over 3,000 houses. It lay near the silk on the site now occupied by the mosque of al-Maṣūm. When this mosque was built by Sulṭān ‘Abd Allāh al-Ghālibī, the more scrupulous refused to pray there for some time on the pretext that it occupied the site of a Jewish cemetery. It was ‘Abd Allāh al-Ghālibī who, about 1560, settled the Jews on the site they still occupy, along the wall of the kašba to the east, where the stables of the palace had been. In the beginning of the xvith century, there was here, according to the French traveller Mocquet, "like a separate town, surrounded by a good wall and having only one gate guarded by the Moors; here live the Jews who are over 4,000 in number and pay tribute". A century later, there were about 6,000 Jews and many synagogues. The Jewish quarter, called mellāḥ after the example of the Jewish quarter of Fās (the name mellāḥ is attested for Marrakesh as early as the end of the xvith century), has 1,000 inhabitants at the present day. As regards policing, it is under the authority of the shaikh of the kašba but otherwise is administered by an elected Jewish council. Questions of personal law are judged by a rabbinical tribunal of three members nominated and paid by the Makhten. The Jews of Marrakesh are beginning to leave the bounds of the mellāḥ. For the most part they wear the ritual costume: gaberdine, skullcap and black slippers, but the younger generation shows a tendency to emancipate itself from this dress. They have little influence on the corporations of Marrakesh and are not allowed to settle in the niks. They are limited to certain trades (jewellers, tinsmiths and embroiderers of silk) and share with the people of Fās the wholesale trade. They trade particularly with the Shīāb of the mountains.

History. The Roman occupation never extended so far as the region of Marrakesh. It is quite without probability that some writers, following the Spanish historian Marmol, have sought at Aghmāt or at Marrakesh the site of Bucanum Emerum (Bucanum Emerum, Βουκανος Εμερων of Ptolemy), a town of Tingitans, the site of which is now unknown. The earliest historians agree that the place where Marrakesh was built by the Almohads was on a barren, marshy plain where only a few bushes grew. The name Marrakesh given no clue to the origin of the town. The etymologies given by the Arab authors are quite fanciful: according to al-Marrākushi, it was the name of a negro slave who occupied and set up as a brigand there. Another writer explains it by a punning interpretation: "the meaning of the name in the language of the Maṣūdīs is "go away quickly"! The place was actually a place of ambush for brigands". It was, it appears, in 449 (1057—1058) that the Almohads advanced from Sās north of the Atlas and took Aghmāt Warika. It was there that they settled at first. But after the campaign of 452 (1060) in the course of which they conquered the country of Fāsr, Meknes and of the Lawität and Fās, they wanted to make their position more permanent and independent by creating a kind of camp, which could be used as a base for their further campaigns and would threaten the Maṣūdīs of the mountains and could be used as a connecting link between the south from which they came and the kingdom of Fās. Yūṣuf b. Tāḥṣīn therefore purchased from its owner an estate on the frontier between two Maṣūdī tribes, the Hālīlim and the Hāmmar, and pitched his camp there. So far was he from thinking of founding a great capital, a thing for which this Saharan nomad felt no need, that at first he lived in a tent here, beside which he built a mosque to pray in and a little kašba in which to keep his treasures and his weapons; but he did not build a surrounding wall. The native Maṣūdīs built themselves dwellings surrounded by palisades of branches beside the Almoravid camp. The town grew rapidly to a considerable size, if it is true, that in the reign of ʿAlī b. Yūṣuf it had at least 100,000 hearths, but it did not lose its rural character until Ibn Tūmāt appeared and the threat of the Almohad movement revived by force forced ʿAlī b. Yūṣuf to defend his town and surround it by a rampart which was built in eight months, probably in 520 (1126). Some historians give the date 526 (1132) but it is certain that the walls were already built in 524 (1130) when the Almohads attacked Marrakesh for the first time. Marrakesh, the creation and capital of the Almoravids, was to be the last of their strongholds to yield. When Ibn Tūmāt had established his power over the tribes of the mountains he tried to attack Marrakesh; he then sent an Almohad army under the command of Shāḥīd al-Baghtīrī, who, after defeating the Almoravids in the vicinity of Aghmāt, pursued them to the gates of Marrakesh. The Almohads could not enter the town but established themselves before its walls. After 40 days' siege, ʿAlī b. Yūṣuf received reinforcements and made a successful sortie which forced the attackers to retreat. This was the battle of al-Baṣīra (524 = May 1130) from the name of a large garden, Bahirat al-Rakālī, near which it was fought. It lay to the east of the town before the Bab Dabābh and the Bab Allān. Al-Baghtīrī was slain and Marrakesh repented for 17 years. Ibn Tūmāt died a few months
later. It is hardly likely that 'Abd al-Mu'min should have made his ascension, as the Kifīrīs say, a new attempt to take Marrakesh. The memoirs of al-Baidāḥī, which give such full details of all the events of this period, make no mention of it. They show on the contrary the Almoravid armies busied at first in conquering the country before occupying the capital, taking Tadla, Sale, Taza, Ouan, Timcen and Fās and only returning to lay siege to Marrakesh after the whole country had been occupied and the capital alone held out as the last stronghold of the dynastic dynasty. It was in the summer of 1146 that 'Abd al-Mu'min laid siege to Marrakesh. He made his headquarters at Giltis and, seeing that the siege would be a long one, at once had houses built in which to install himself and his army. The siege lasted eleven months. An unsuccessful sortie by the Almoravid seems to have hastened the fall of the town. Disguised by lack of success and by famine, a number of the besieged went over to the enemy, 'Abd al-Mu'min had scaling-ladders made and distributed them among the tribes. The assault was made and, according to Ibn al-Athīr, the defection of the Christian soldiers facilitated its success.

The Almoravid Sulṭān, Isāḥ, a young boy who had sought refuge in the fortress, was slain, along with a large number of the Almoravids. This event took place in 541 in the month of Shawwāl (March 6—April 3, 1147), according to the majority of the historians.

The Almohad dynasty which came from the south naturally took Marrakesh as its capital. It was here that 'Abd al-Mu'min and his successors usually resided when they were not in the country. The town prospered exceedingly under their rule. They gave it many important public buildings: the ḥāba, mosques, schools, a hospital, aqueducts and magnificent gardens. During this period of prosperity, there were very few events of particular interest in the history of Marrakesh. In 547 (1152—1153) according to Ibn Khaldūn, in 549 (1154—1156) according to al-Baidāḥī and the Kifīrīs, the Banū Aṃghīr, brothers of the Mahfīl Ibn Tīmār, entered the town and tried to mislead the inhabitants against 'Abd al-Mu'min who was away at Sale. The rising was speedily put down and ended in the massacre of the rebels and their accomplices. But on the decline of the dynasty, i.e., after the battle of Las Navas de Tolosa (1212) and the death of al-Nāṣir, son of al-Mansūr, Marrakesh became the scene of the struggle between the royal family descended from 'Abd al-Mu'min and the Almohad shāhīds descended from the companions of Ibn Tīmār who, quelling traditions of the latter, claimed the right to grant investiture to the shāhīds and to keep them in tutelage. Abū Muhammad 'Abd al-Walīd, brother of al-Mansūr, was imprisoned in Sept. 624 (1224). His successor al-Adīl was drowned in a bath in the palace (Oct. 624 = 1227) and the Almohad shāhīds appointed as his successor the young Yahyā b. al-Nāṣir, while Abu l-'Ula Idrīs al-Ma'mūn, brother of al-Adīl, was proclaimed in Spain. The whole country was soon in the throes of revolution. Yahyā, bearing the defection of the Almoravids, fled to Tīmār (April—May 626 = 1229). Disorder reigned in Marrakesh, where a governor named al-Mu'mūn was finally appointed. But four months later, Yahyā returned to Marrakesh with fresh troops, but al-Mu'mūn's governor to death and after staying seven days in the town was forced to go to Gilita to fight a battle (Feb. 1230), for al-Mu'mūn had arrived from Spain to take possession of his kingdom. Ferdinand III, king of Castile, had given in return for various concessions, a body of 12,000 Christian horsemen with whose assistance al-Mu'mūn defeated Yahyā and his followers, entered Marrakesh and installed an anti-Almohad regime there, marked not only by a terrible massacre of the shahīds and their families but by a new orientation in religious matters quite opposed to that of the preceding reigns. On his arrival in Marrakesh, al-Mu'mūn mounted the pulpit of the mosque of the ḥāba, recited the kifīrīs, solemnly cursed the memory of Ibn Tīmār and announced a whole series of measures, some of which are given by the Kifīrīs and Ibn Khaldūn and which show he intended to do everything on opposite lines to his predecessors. His innovations revived the discontent so that two years later (1232) while al-Mu'mūn and his militiam presented at Ceuta, Yahyā again occupied Marrakesh and plundered it. Al-Mu'mūn at once turned back to the rescue of his capital but died on the way (Oct. 1234 = 629 a. H.). His widow, al-Ḥabīb, succeeded in getting her son al-Raghd, aged 14, proclaimed by the leaders of the army, including the command of the Christian mercenaries. In return she gave them Marrakesh to plunder if they could reconquer it. But the people of the town, learning of this clause in the bargain, made their own terms before opening their gates to the new sultan. The latter had to grant them the awāda and pay the Christian general and his companions the sum they might have expected from the plunder of the capital — according to the Kifīrīs, 500,000 dinars.

In 633 (1235—1236) a rebellion of the Khōlij drove al-Raghd out of Marrakesh and he took refuge in Sidījlīma while Yahyā recaptured Marrakesh. Al-Raghd however succeeded in retaking it and Yahyā finally was assassinated. It was in the reign of the Almohad al-Sulṭān (1242—1249) that the Marinids who had arrived in the east of the country in 1216, seized the greater part of the kingdom of Fās. His successor ʿUmar al-Murtuẓa, proclaimed in 646 (1248), found himself in 658 (1260) reduced to the solitary kingdom of Marrakesh, to the south of the Ḫum Raḥib. In 660 (1261—1262), the Marinid Abū Yusuf Yaḥyā b. 'Abd al-Ḥaṣā laid siege to Giltis which he threatened the town. Al-Murtuẓa sent his cousin, the Sayf al-ʿUla ʿIdrīs, renowned Abū Dabūl, to fight him. The emir ʿAbd Allah b. Abū Yusuf was slain in the battle and his followers lost heart, abandoned his plans on Marrakesh and returned to Fās at the end of Raḥib 661 (beg. June 1262).

From this time one feels that the dynasty is lost, although peace was made, which moreover showed the humiliation of the Almohads who consented to pay tribute; but they were to destroy themselves. Falling into disfavour with his cousin al-Murtuẓa, Abū Dabūl, this great-grandson of 'Abd al-Mu'mūn, in the preceding year had defended Marrakesh against the Marinid sultān, sought refuge with the latter and obtained from him the assistance necessary to overthrow al-Murtuẓa on condition that he shared the spoils. Victorious and proclaimed sultān in October 1266, Abū Dabūl forgot his promises. Abū Yusuf Yaḥyā came in person to remind him of them. He laid siege to Marrakesh in 1267 but Abū Dabūl had a stroke of good fortune for
the Mamlūk had to raise the siege to go on and defend the kingdom of Fās against an attack by the sultan of Tlemcen, Yaghmurīn. The campaign being over, Abū Yūsuf Yaḥyā returned to Marrakesh. He entered it in Muḥarram 668 (Sept. 1269). The gīrāsīd tells us that he gave the usūl to the inhabitants and to the surrounding tribes, whom he overwhelmed with benefits and ruled with justice and remained seven months to pacify and organize the country. By accepting Mamlūk rule, however, Marrakesh lost for two and a half centuries its position as a capital. The new dynasty made Fās its capital.

Its inhabitants, however, did not neglect Marrakesh especially during this period (end of the thirteenth and first half of the fourteenth century). The chronicles record many sojourns made by them there but its great days were over. The town began to lose its inhabitants. Abū ʿl-Ḥasan ʿĀlī was the only Mamlūk to undertake building of any importance at Marrakesh (a mosque and a madrasa). In the absence of the sovereign, the government of the town and district was entrusted to powerful governors as befitted a large town remote from the central authority. For nearly 20 years, from 668 to 687 (1269-1288), this office was held by Muhammad b. Abī Ṭufail, a chief greatly devoted to the Mamlūks, says Ibn Khalīdīn, and allied by marriage to the family of their ruler. But in February 1288, fearing treachery from Muhammad b. Ḥabīb, Abī Ṭufail imprisoned and gave his office to Muhammad b. Ḥabīb, ʿAmīr al-Qurṭubī, a client and confidant of the royal family, to whom the sultan further entrusted his son Abū ʿAmīr. Abū Yaḥyā had not left Marrakesh six months when the young prince Abū ʿAmīr rebelled there and proclaimed himself sovereign at the instigation of the governor Ibn Ṭūlūn (Nov. 1288). Abī Ṭufail hastened to Marrakesh which he took after several days siege. The young Abū ʿAmīr had time to escape and seek refuge in the mountains among the Masmāṭ tribes, after plundering the treasury.

The custom of giving the governorship of Marrakesh to a prince of the ruling family was kept up. Towards the end of May 1307, under the walls of Tlemcen, sultan Abū Tāhir gave his cousin Yūsuf, son of Muhammad b. Abī Ḥādī, b. ʿAbd al-Hādī, the governorship of Marrakesh and the provinces depending on it. By the end of the year, Yūsuf rebelled and proclaimed himself independent at Marrakesh after putting to death the governor of the town, al-Hājīdī, Masʿud. Defeated by the imperial troops on the banks of the Lūm Rāḥ, the rebel fled to the mountains, plundering Marrakesh on his way (Jan. 1308). The punishment inflicted on the rebels was severe. Yūsuf b. Abī Ḥādī, handed over by a dhākhīn with whom he had taken refuge, was put to death and the heads of 600 of his followers went to adorn the battlements of the town. Abū Saʿdī al-Ulūmī stayed at Marrakesh on several occasions. He did much rebuilding from 1320 (1320). Peace and prosperous prosperity seem to have reigned there under the rule of Abū ʿl-Ḥasan until this prince, as a result of reverses suffered in his struggle with the Hafsīdīs, found his own son, the ambitious Abī ʿInān, rebelling against him. During the troubles which now broke out, Ibn Khalīdīn tells us, the town was seriously threatened with being sacked by the Masmāṭ of the mountains led by ʿAbd Allāh al-Sạwīr. Abī ʿInān was able to consolidate his power and avert this danger. The struggle between father and son ended in the region of Marrakesh. Abū ʿl-Ḥasan, defeated at the end of Safar 757 (May 1350) near the town, sought refuge in the mountains with the sultan of the Hafsīdīs and died there just after becoming reconciled to his son and designating him his successor (June 1353).

During the course of the fourteenth century, the sultan of the Hafsīdīs played a very important part in the country. The position of the tribe on an almost inaccessible mountain, from which it commanded Marrakesh, gave its chiefs comparative independence and predominating influence among the other Masmāṭ. Abī ʿInān took the offensive against the emir ʿAbd al-ʿAzīz who had given asylum to the fugitive Abū ʿl-Ḥasan. He retained him in the command of his tribe, which he gave a few years later to his brother ʿAmīr. In 1353, the latter, becoming chief of all the Masmāṭ tribes and sufficiently powerful to keep under his thumb the governor of Marrakesh al-Muʿāzamīd, son of Abū ʿInān, very soon succeeded in making himself completely independent. He received and for a time held as hostages two rebel Mamlūk princes Abū ʿl-Ḥādī, son of the Sultan Abū Sālim, and ʿAbd al-Rahmān, son of Sultan Abī ʿAlī. Quarrelling with his protectors Abū ʿl-Ḥādī whom he had made governor of Marrakesh, he retired into his mountains and for several years defied the armies of the sultan. He was in the end captured and put to death in 1370.

After the death of Sultan Abī ʿAlī, the pretender Abū ʿl-Abbās, son of Abū Sālim, had himself proclaimed in Fās with the help of his cousin ʿAbd al-Raḥmān b. Abū Ḥallīsīn, himself a pretender to the throne. The latter as a reward for his services was given the independent governorship of Marrakesh and the country round it (June 1374). The empire was thus completely broken up. The two rulers soon began to quarrel but then signed a treaty of peace in 1378. There was a new rupture and a new truce two years later after Marrakesh had been besieged for two months without result. Abū ʿl-Abbās in the end took Marrakesh in Dhu al-Qaʿdah 784 (July-Aug. 1380), and ʿAbd al-Raḥmān was slain. Abū ʿAlī, however, dispossessed in 1384 and exiled to Gardama, succeeded in reconquering his kingdom in 1387 and sent to Marrakesh as governor his son al-Mustajir. This event is the last recorded by Ibn Khalīdīn. From this time his record ceases and throughout the 15th century we are incredibly poor in information about the history of Marrakesh. The town appears to have continued to form a large governorship in the hands of princes of the royal family. The only information at all definite that we have comes from a Portuguese historian who records that during the three years which followed the capture of Ceuta by the Portuguese (1415—1418), Morocco was a prey to the struggles among the pretenders. While Abū Saʿdī al-Ulūmī was ruling in Fās, Majūlī biʿAllī, king of Marrakesh, was fighting against another Masmāṭ prince called Fāris. The "kingdom" or governorship of Marrakesh does not seem to have completely broken the links which bound it to the kingdom of Fās for the governors of Marrakesh supplied contingents to the army which tried to retake Ceuta. But they very soon ceased to take part in the holy war in the north of Morocco and their name is not found among the opponents of the Portuguese.
Marrakesh by 1430 seems to have become de facto if not de jure independent but we do not know within fifty years at what date theHinta emirs established their power; they were descended from a brother of A'mir b. Muhammad. They were "kings" of Marrakesh when in 1508 the Portuguese established themselves at Safi, taking advantage of the anarchy prevailing, for the power of the Hintas emirs hardly extended beyond the environs of their capital and they could not effectively protect their tribes against the attacks of the Christians. By 1512 the Portuguese governors of Safi had succeeded in extending their power over the tribes near Marrakesh (Awlad Mi'si) and the town lived in fear of the border raids which on several occasions brought the Portuguese cavalry and their Arab allies into the district. The king of Marrakesh, overawed, entered into negotiations in 1514 but the terms were nothing less than his paying tribute as vassal and the building of a Portuguese fortress at Marrakesh. Agreement could not be reached. The occupation of Marrakesh remained the dream of the Portuguese soldiers. An attack on the town led by the governors of Safi and Azemmour failed (April 23, 1515). This was the period when in reaction against the anarchy and foreign invasions the Sa'dian sharifs began to come to the front in Sâs. Ahmad al-A'rajd, who appeared in 1513 to the north of the Atlas, had himself recognised as leader of the holy war and accepted as such by the local chiefs, even by 'Abd al-Nâzir, king of Marrakesh. In the month of April 1514, it is recorded that he was in Marrakesh with the king. At the end of 1521, al-A'rajd established himself peacefully in Marrakesh which he found partly depopulated by famine and married the daughter of the king Muhammad b. Nâzir called Bu Shen'tu. The latter in 1524 having tried to kick against the treads of his too powerful son-in-law, al-A'rajd and his brother Muhammad al-Shaikh, seized the ǧâshâ, which seems still then to have been held by Bu Shen'tu. They disposed of the latter by having him assassinated in the following year (1525). Marrakesh became the Sa'dian capital. The king of Fâs, Ahmad al-Wâttaśi, tried unsuccessfully to take it in June 1527. It remained in the hands of al-A'rajd till 1554, when it was seized by his brother Muhammad al-Shaikh, up till then king of Sâs. After the insurrection of Muhammad al-Shaikh in 1557, al-A'rajd as put to death at Marrakesh with seven of his sons and grandsons, so as to secure the crown for Mawlây 'Abd Allâh al-Ǧâhilû. The whole of the latter part of the century was for Marrakesh a period of great prosperity. 'Abd Allâh al-Ǧâhilû built a series of important public works: arrangement of the palace and of the provision storehouses in the ǧâshâ; in the town, the madrasa Ibn Ǧâsus and the al-Wattâin mosque etc. Ahmad al-Mansûr finished his brother's work by building in the ǧâshâ from 1578 to 1594 the famous al-Badr palace. The sultan, enriched by several years of peace and good government, and by the gold brought from the conquest of the Sûdân (1591-1592), lived almost continually in Marrakesh, to which he restored a splendour and a prosperity that it had not enjoyed since the end of the 15th century. But the death of al-Mansûr opened a period of trouble and civil war "sufficient to turn white the hair of an infant at the breast" to use the expression of the historian al-Ifrînî. While Abî Fâris, son of al-Manşûr, was proclaimed at Marrakesh, another son, Zîdân, was chosen sulânî at Fâs. A third brother, al-Shaikhî, came and took Fâs, then sent against Marrakesh an army led by his son 'Abd Allâh, who seized the town in Dec. 22, 1606. But Zîdân, who sought refuge first in Tetouan, then made his way to Sâs, via Tafûlât and coming suddenly to Marrakesh, had himself proclaimed there while 'Abd Allâh b. al-Shaikhî while escaping with his troops was attacked in the midst of the gardens (qânaw Rukbûr) and completely defeated (Feb. 25, 1607). In October of the same year, 'Abd Allâh returned after defeating Zîdân's troops on the Wâdî Tafûlât (Oct. 2, 1607), fought a second battle with them at Râs al-A'īn (a spring in Tânsif), regained possession of the town and revenged himself in a series of massacres and punishments so terrible that a portion of the population having sought refuge in the Giffâr, proclaimed 'Abd Allâh, Muhammad, great-grandson of Ahmad al-A'rajd. 'Abd Allâh was forced to fly (Jan. 25, 1608). Zîdân, recalled by a section of the populace, regained possession of his capital in a few days. The struggle between Zîdân and his brother al-Shaikhî, in the year following, centred round the possession of Fâs. Zîdân failed in his plans to retake it and henceforth Fâs, given over completely to anarchy, remained separate from the kingdom of Marrakesh. On these happenings, a marabout from Tafûlât, named Abî Maḥsûlî, attempted to intervene (1611) to put an end to the fighting among the pretenders, which was inflicting great suffering on the people. His intervention only made matters worse. He took Marrakesh on May 20, 1612. Zîdân took refuge in Safi and succeeded in again gaining possession of his capital with the help of an influential marabout in Sâs, called Yâhîa b. 'Abd Allâh. After a battle near Giffâr, Zîdân withdrew into Marrakesh on Nov. 30, 1613. But Yâhîa, succumbing to ambition, rebelled himself at the end of 1618, against the ruler whose cause he had once so well sustained. Zîdân had again to take refuge in Safi. He was soon able to return to Marrakesh, taking advantage of the discord that had broken out in the enemy ranks; 'Abd al-Malik (1627-1631), son and successor of Zîdân, has left only the memory of his cruelty and debauchery. He was murdered in May 1631. The remonades, who killed him, also disposed of his brother and successor al-Wâdi in 1636. A third brother, Muḥammad al-Shaikhî al-Aṣghar, succeeded him but had only a semblance of power. He managed however to reign till 1655, but his son Ahmad al-Abîâs was completely in the hands of the Shabũnû, an Arab tribe who assassinated him and gave the throne to 'Abd al-Karim, called Kârtîm b. Ḫâlidî, in 1659. "The latter", says al-Ifrînî, "ruled under his sway all the kingdom of Marrakesh and conducted himself in an admirable fashion with regard to his subjects". His son Abî Bakr succeeded him in 1668 but only reigned two months until the coming of the Filâtî Sulânî al-Râghînî, already lord of Fâs, who took Marrakesh on July 31, 1668. Called to Marrakesh by the rebellion of his nephew Ahmad b. Muhammad al-Râghînî met his death there in the gardens of al-Sâghilî, his head having been injured by a branch of an orange tree against which his horse threw him when it stumbled. Mawlây Ismîl had some difficulty in getting himself proclaimed at Marrakesh, which preferred
his nephew, Ahmad b. Muhammad. Ismaili forced his way in on the go SAFAR 1083 (June 4, 1672). In the following year, Marrakesh again welcomed Ahmad b. Muhammad. After a siege of two years (March 1675—June 1677), Ismaili reoccupied Marrakesh and plundered it. He passed through it again in 1694 (1683) on his way to Sis to fight Ahmad b. Muhammad who was still in rebellion. Marrakesh was no longer the capital. Mawlay Ismaili took an interest in it and destroyed the palaces of the kasba to use the materials for his works in Meknes. In 1114 (Feb. 1703), a son of Mawlay Ismaili, Muhammad al-'Ali, rebelled against his father, seized Marrakesh and plundered it. Zidan, brother of the rebel, was given the task of suppressing the rising, which he did, plundering the town once more.

Anarchy again broke out after the death of Ismaili. Its centre was Meknes. Mawlay al-Mustadji, proclaimed by the 'Abd in 1738, was disowned by them in 1740 and replaced by his brother 'Abd Allah. He sought refuge in Marrakesh. His brother al-Nasir remained his khaliifa in Marrakesh till 1743, while al-Mustadji vainly tried to reconquer his kingdom. Marrakesh finally surrendered in 1746 to Mawlay 'Abd Allah who sent his son Siddi Muhammad there as khaliifa. The government and the reign of the latter (1757—1799) formed one of the happiest periods in the history of Marrakesh. Siddi Muhammad completely restored the town, made it his usual residence, received many European embassies there, including a French one led by the Comte de Breugnon in 1767, and developed its trade. Peace was not disturbed during his long reign except for a riot raised by a marabout pretender named 'Umar, who at the head of a few malcontents tried to attack the palace in order to plunder the public treasury. He was at once seized and put to death (between 1766 and 1772, according to the sources). On the death of Siddi Muhammad b. 'Abd Allah, the situation remained very unsettled for several years. After taking the oath of allegiance to Mawlay Yazid (May 3, 1799) the people of Marrakesh took in his brother Mawlay Mustajir and proclaimed him. On hearing this, Yazid abandoned the siege of Ceuta, returned to Marrakesh, plundered it and committed all kinds of atrocities (1792). Mustajir, supported by the 'Abd and the Dukkala, marched on Marrakesh. Yazid, wounded in the battle, died a few days later in the palace (Feb. 1792). Marrakesh remained faithful to the party of Mawlay Mustajir, but very soon the Rhamna abandoned him to proclaim Mawlay Hussein, brother of Mustajir. He established himself in the kasba (1209 = 1794—1795). While the partisans of the two princes were exhaustively themselves in fighting, Mawlay Silman, sultan of Fès, avoided taking sides in the struggle. The plague rid him at one blow of both his rivals (July 1799) who had in any case to submit some time before. The last years of the reign of Mawlay Silman were overcast by troubles in all parts of the empire. Defeated at the very gates of Marrakesh, he was taken prisoner by the rebel Shirda. He died at Marrakesh on Nov. 25, 1822. Mawlay 'Abd al-Rahman (1824—1859) did much for the reforestation of Agdz and restored the religious buildings. His son Muhammad completed his work by repairing tanks and aqueducts. These two reigns were a period of tranquillity of Marrakesh. 1862 however, while Siddi Muhammad b. 'Abd al-Rahman was fighting the Spaniards at Tetuan the Rhamna rebelled, plundered the Siik al-Khamis and closely blockaded the town, cutting off communications and supplies, until the Sulajr, having made peace with Spain, came to relieve the town (June 1862). Mawlay al-Hasan hardly ever lived in Marrakesh but he stopped there on several occasions, notably in October 1875, to punish the Rhamna and the Bil 'Isha, who had rebelled, and in 1880 and 1885, to prepare his expeditions into Sis.

During the last years of the reign of Mawlay 'Abd al-'Aziz (1894—1905), it was at Marrakesh that the opposition to the European tastes and experiments of the Sulajr made itself most strongly felt. The xenophobia culminated in the murder of a French doctor named Manchamp (March 19, 1907), and the spirit of separatism in the proclamation as suljan of Mawlay 'Abd al-Hajj, brother of 'Abd al-'Aziz and governor of the provinces of the south (Aug. 24, 1907). But 'Abd al-Hajj becoming ruler of the whole empire (Aug. 24, 1907) and having signed the treaty of March 24, 1912 establishing the protectorate of France and of Spain over Morocco, the anti-foreign movement broke out again in the south. The Mauritanian marabout al-Hiba had himself proclaimed and established himself in Marrakesh. He only held out there for a brief period. His troops having been defeated at Sidi Bil 'Ummâna on Sept. 6, 1912, the French troops occupied Marrakesh the next day.

Relations with Europe. Five minor friars sent by Sr. Francis were put to death at Marrakesh on Jan. 16, 1230, for having attempted to convert Muslims and having insulted the Prophet Muhammad in their discourses. Their martyrdom attracted the attention of the Holy See to Marrakesh. A mission and a bishopric were established by Honorius III in 1225 to give the consolations of religion to the Christians domiciled in Morocco: merchants, slaves and mercenaries in the suljan's army. In the Almoravid period, the suljans had Christian mercenaries recruited from prisoners reduced to slavery or from the Mozarab population of Spain whom they had from time to time deported to Morocco by entire villages. In 1222, Abu 'l-Cla Idris al-Ma'mun having won his kingdom with the help of Christian troops lent by the king of Castile found himself bound to take up quite a new attitude to the Christians. He granted them various privileges, including permission to build a church in Marrakesh and worship openly there. This was called Notre Dame and stood in the kasba, probably opposite the mosque of al-Manqat: it was destroyed during the rising in 1232. But the Christian solliydi continued to enjoy the right to worship, at least privately, and the bishopric of Marrakesh filled by an episcopal commendatory bishop at Seville, existed so long as there was an organised Christian solliydi in Morocco, i.e. to the end of the sixteenth century. The title of Bishop of Marrakesh was borne till the end of the sixteenth century by the suffragans of Seville (cf. Father A. Lopez, Los obispos de Marruecos desde el siglo XIII, in Archivo Ibérico-Americano, IV, xili, 1920). A Spanish Franciscan, the prior Juan de Prado, who came to re-establish the mission, was put to death in 1631 at Marrakesh. A few years later (1652), a monastery was re-established beside the prison for slaves in the kasba. It was destroyed in 1659 and 1660 after the death of the last Sulajr. Henceforth the Franciscans were obliged to live in the kasba.
where - they had down to the end of the xviiith century a little chapel and a monastery. As to the Christian merchants, they had not much reason to go to Marrakesh in the middle ages. Trade with Europe was conducted at Cants from which the Muslim merchants carried European goods into the interior of the country. In the xvith century, 'Abd Allâh al-Ghâlîb had a fenda or "bunded warehouse" built in the sâbah where the Christian merchants were allowed to live; but the majority of those who came to Marrakesh preferred to settle in the Jewish quarter. It was here also that foreign ambassadors usually lodged, at least when they were not made to encamp in one of the gardens of the palace of the sultan.

Monuments. The present enceinte of Marrakesh is a wall of clay about 20 feet high, flanked with rectangular bastions at intervals of 250 to 300 feet. Bab Aghmâêt, Bab Allûn, Bab Darâbghâr, which still exist more or less rebuilt, are mentioned in the account of the attack on Marrakesh by the Almohads in 524 (1130). Bab Tântân, Bab al-Makhzen, mentioned at the same time, have disappeared. Bab al-Atâîbâ (no longer in existence: it stood on the site of the melâbâgh) and Bab Dukkala (still in existence) figure in the story of the capture of the town by the Almohads (1147). The plan of the wall has therefore never changed. It has been rebuilt in places from time to time, as the clay crumbled away, but it may be assumed that a number of pieces of the wall, especially on the west and south-west, are original, as well as at least three gates all now built up, to which they owe their survival, but have lost their name. According to Abu 'I-Fâdî (xvith century), there were in Marrakesh seventeen gates; twenty-four at the beginning of the xvith century according to Leo Africanus. It would be very difficult to draw up an accurate list, for some have been removed, others opened, since these dates or the names have been altered. Ibn Faîl 'Abd Allâh al-Umari (beginning of the xvith century) adds to the names already mentioned those of Bab Nîsa, Bab Mulâsh, Bab Mesru, Bab al-Râhah all four of which have disappeared, Bab Taghût, Bab Fûs (now Bab al-Khâsib), Bab al-Râb which still exist. The only other constant changes, which have been made in the walls of Marrakesh since they were built, have been the building of the kashba in the south and in the north the creation of the quarter of Sidi el-'Abîsâ. The tâbîya, which as late as the xvith century stood outside the walls beyond the Bab Taghût, was taken into the town with all its dependencies.

The Kâsha. The little kasha and the palace of Dâr al-'Ummâ built by 'Uthâf b. Tâshfin, lay north of the present "Mosque of the Booksellers" or Koutoubia. 'Ali b. 'Uthâf added in the same quarter other palaces called Sîr al-Hajjâr, or Kâsîr al-Hajjâr because they were built with stones from the Gillec, while all the other buildings in the town were of brick or clay. It was here that the first Almohads took up their quarters, according to Ibn Battûta. The obscure passage of the irîshârî, Abd Ya'kâb b. 'Uthâf seems to have begun the building of a "fort" in the south of the town but it was Ya'qûb al-Mânsûr who built the first kasha (1189-97); that is to say he joined to the southern wall of the town a new walled area within which he built palaces, a mosque, and a regular town. Nothing remains of the Almohad palaces, but one can from pieces of wall and other vestiges follow the old wall, at least on the north and the east side. There also the line of the wall has hardly changed. The magnificent gateway of carved stone by which the kasha is now entered, must be one of al-Mânsûr's building. Its modern name of bab Aghmâêt (the Negro's Gate) is not found in any old text. It probably corresponds to bab al-Kuhl (Gate of the Negroes), often mentioned by the historians.

Ibn Faîl 'Abd Allâh al-Umari, in the xivih century, Leo Africanus and Marmol in the xvith, have left us fairly detailed descriptions of the kasha, in spite of a few obscure passages. In the Almohad period, the kasha was divided into three quite distinct parts. One wall in the northwest, around the mosque of al-Mânsûr which still exists, contained the police offices, the headquarters of the Almohad tribes and the barracks of the Christian soldiery. From this one entered through the Bab al-Tublî, a second enclosure in which around a huge open space, the "Cerequera" of Marmol (aiyâr), were grouped the guardhouses, the offices of the Master of the army, a guest-house, a madrasa with its library and a large building called al-kâsîb (the porticoes), the "Acequife" of Marmol, occupied by the principal members of the Almohad organisation, the "Ten", the "Fifty" and the "Pâ". The royal palace, sometimes called the Alhambra of Marrakesh, in imitation of that of Granada, was entered from the Aïsârâg and occupied the whole area east of the kasha. The palaces of al-Mânsûr were still in existence at the beginning of the xviih century when the Sa'dians took possession. 'Abd Allâh al-Ghâlîb incorporated them in the new palaces which he was building. Ahmad al-Mânsûr added in the gardens to the north, the famous al-Badi palace celebrated for its size and splendour. Only a few almost shapeless ruins remain of it, but its plan is perfectly clear. Mawly Ismâ'il had it destroyed in order to use its materials, the kasha remained so completely in ruins that Sidi Muhammad b. 'Abd Allâh when he became governor of Marrakesh in 1770-1746, was obliged to live in a tent until his new buildings were finished. It is to him that we owe an important part of the present palace with its inner garden, "Arâs al-Nil. Other works were later undertaken by Mawly Slâmân and his successors. Some large unfinished buildings date only from Mawly 'Abd al-Hafiz. A number of gates, in addition to the Bab Aghmâêt give admittance to the kasha: these are Bab Berrima and Bab al-Ahmar in the east, Bab Igâlî and Bab Kâsîr in the west. The palace has vast gardens belonging to it: Dînân al-Afîsya, Agdîl, Dînân Rîdwan, Ma'mûna, Manâra, the latter, two miles west of the town, contained in the xviith century a pleasure house of the sulûm. The palace of Dâr al-Balîsâ, situated in the Agdîl, took the place of a Sa'diian palace. It was rebuilt by Sidi Mohamed b. 'Abd Allâh and has since been restored. As to the gardens of the Agdîl, they seem to have been created in the xivith century by 'Abd al-Ma'âmin.

Mosques. Nothing remains of the early Almoravid mosques, in the building of one of which 'Uthâf b. Tâshfin himself worked along with the masons as a sign of humility. But the cathedral mosque of "Ali b. 'Uthâf, where Ibn Tûmâr had an interview with the sulûm, although several times rebuilt, still retains its name. The Almohads, on taking possession of Marrakesh, destroyed all the mosques on the pretext that they were wrongly
orientated. The mosque of 'Alī b. Yūsuf was only partly destroyed and was rebuilt, 'Abd Allāh al-Ghālīb restored it in the middle of the xviiith century. The present buildings and the minaret date from Mawlay Sīmān (1792—1822).

Kutubiya. When the Almohads entered Marrakesh, 'Abd al-Mu'min built the first Kutubiyya of which some traces still remain and it has been possible to reconstruct its plan. As it was wrongly orientated he built a new mosque, the present Kutubiyya, in prolongation of the first but with a slightly different orientation. It takes its name from the two booksellers' shops which used to be around its entrance. It is a very large building with seventeen naves, which with its decoration in carved plaster, its stalactite cupolas, the moulding of its timberwork, its capitals and magnificent pulpit (minbar) of inlaid work, is the most important and the most perfectly preserved work of Almohad art. The minaret, begun by 'Abd al-Mu'min, was only finished in the reign of his grandson al-Mu'ayyad (1195). It is 230 feet high and its powerful silhouette dominates the whole town and the palm groves. It is the prototype of the Giralda of Seville and of the tower of Hāsān at Rabat. It is decorated with arcatures the effects of which were formerly heightened by paintings still visible in places, with a band of ceramic work around the top.

The mosque of the Ḫaṣba or mosque of al-Mansūr is the work of Yaʿqūb al-Mansūr. It was begun in 1189—95 and built in a great splendour. It has been profoundly altered, first by 'Abd Allāh al-Ghālīb the Sa'diān, then in the middle of the xviiith century by Muḥammad b. 'Abd Allāh, then more recently by Mawlay 'Abd al-Rahmān (1822—1859). The minaret of brick is intact and magnificently ornamented with green ceramics. The lamp holder supports a gūmūr of three bowls of gilt copper, which occupies a considerable place in the legends of Marrakesh. They are said to be of pure gold and to be enchanted so that no one could take them away without bringing on himself the most terrible misfortunes. This legend is wrongly connected with the gūmūr of the Kutubiyya.

Among the religious monuments of Marrakesh of archaeological interest, may also be mentioned the minarets of the mosque of Ibn Sābab (dated 731 = 1331) and of the sanctuary of Mawla ʿAṣūr, built in the Marinid period in the Almohad tradition, and two Sa'diān mosques: the mosque of al-Muwaṣīn or mosque of the Sharifs, which owes its origin to ʿAbd Allāh al-Ghālīb, and that of Bāb Dukkāla, built in 965 (1557—58) by Līlā al-Maʿṣūd, the mother of the Sultan 'Abd al-Mansūr.

Madrasas. An Almohad madrasa, built "to teach the children of the king and the children of his family in it," formed part of the buildings of Yaʿqūb al-Mansūr. This royal school was presumably different from what later were the Marinid madrasas. It stood on the same plot in front of the palace and now stands still in existence in the time of Leo Africanus. The Marinid Abu 'l-Ḥasan in 1347 built another madrasa, also described by Leo. It lay north of the mosque of the Ḫaṣba, where traces of it can still be seen. The madrasa of Ibn Yūsuf is not, as is usually said, a restoration of the Marinid madrasa. It was a new building by 'Abd Allāh al-Ghālīb, dated by an inscription of 972 (1564—1565), the only surviving example of a Sa'diān madrasa.

Sa'diān tombs. The two first founders of the dynasty rest beside the tomb of Sīdī Muḥammad b. Sīmān al-Dirāḍī in the Ryūdī al-ʿArwī quarter. Their successors from 1557 were buried to the south of the mosque of the Ḫaṣba. There was a cemetery there, probably as early as the Almohad period, which still has tombs of the xviith century. The magnificent kūbās which cover the tombs of the Sa'diān dynasty must have been built at two different periods. The one on the east under which is the tomb of Muḥammad al-Shāhīk seems to have been built by 'Abd Allāh al-Ghālīb. The other, with three chambers, seems to have been erected by ʿAbd al-Mansūr (d. 1603) to hold his tomb.

with many new instruments for the Mongol Khán Hulajga (1259) and the observatory of Samarakand, where Ulugh Beg employed the astronomers of his time. Following him in many points but also stimulated by European astronomy Djal Singh in India built the great observatories, the remains of which still arouse admiration in Delhi, Djaipur, Ujjain, Benares and Mathura.

MARATHYA (n., plur. marathēs), translated variously by elegy or dirge, is a poem in Arabic (and other languages following Arabic tradition) in memory of a deceased person. The word elegy is hardly applicable in most cases as such poems differ somewhat from the style of Greek and Latin poems bearing this name; some notable exceptions exist and the finest example of a real elegy is perhaps the poem of a woman named Barra al-Khānīyiya preserved in the Kitāb al-T Estherain, and still unpublished. It was the custom of the ancient Arabs after the usual naʿb or lamentation of women [q.v.] that a member of the family, gifted as a poet, should commemorate the noble qualities and deeds of the departed in a poem by enumerating them. These poems as a rule do not contain the tażība or amatory introduction like ordinary ḍajīdas and in many cases have a peculiarity in their diction, the introduction of a kind of internal rhyme resembling raʿf, called tarqī. This has been fully discussed by Khodakarmina in his analysis of the poetry of al-Khānīya, but is found in many other marathiya. Many poets, remembering the widespread, nay universal, belief of the ancient Arabs in futurity, embellish their poems with descriptions to show that nothing can escape inevitable fate. A typical example is the long poem by Abī Dhuʿāb (Dīwān, No. 11; Muḥafṣafāyatī, No. 126) in which three vivid pictures are drawn of the impossibility of escaping death, both for man and beast. This tradition has been followed by Arabic poets from the times of paganism to the present day, and the quantity of poems produced for example upon the death of the Egyptian statesman Zagrīlt Pāhkā proves that the taste for them has not abated. The collected poems of al-Zahawi, the most prominent living poet of
famous was Sari al-Sakatī [q.v.], who in his turn became the master of Dhu.Na'id. The story that Ma'rawī was a client of the Shībī Ismā'il, 'Alt b. Mūsā al-Ridā, before whom he made profession of Islam and induced his parents to do the same, deserves no credence. Among the sayings attributed to him are the following: *Love is not to be learned from men; it is a gift of God and comes from His grace*. *The saints are known by three signs: their care is for God, their business is in God, and their flight is unto God*. "Sa'dīn consists in grasping the realities (̣ hådā'î ̣ b) and re-nouncing that which is in the hands of created beings". Ma'rawī was venerated as a saint, and his tomb at Bāghdād on the west bank of the Tigris is still a great resort for pilgrims. Kūshsirī relates that the people used to go there in order to pray for rain, saying: "The tomb of Ma'rawī is an approved remedy (tīyāt muğaffarán)."

(R. A. Nicholson)

**MARÚF RÚṣAFTI,** one of the best of contemporary Arab poets, born in Bāghdād of a Kurd father and a Beduin mother in 1292 (1875). His šāfīiyya have been collected into a Dirāwī and edited by Māhīyī al-Dīn al-Khājaī, Bārīt 1910, following quite an original classification 1. Kāma'ī, 2. Ḥaṣīf ̣ yāt ̣ ̣, 3. Ta'likhī, 4. Waṣfīya, Rūṣāfti Buff has devoted an excellent study to him (in al-Adab al-Abbāsī f. 1 Irāk al-Arâfī, Cairo, Ṣa'īla 1922, p. 67–96).

(L. Māshīqīn)

**MĀRŪT.** [See Harūt and Mārūt.]

**MARW.** [See Marw.]

**MARWA.** [See Molavia.]

**MARWA N. AL-HAKAM,** the father of the Marwānīd Caliphs, was born at Mecca or at Taif, probably several years before the Hijra. Tradition, by placing his birth 2, 4, or 5 years later than the beginning of this era, aims at depriving him of a right to the title of "Companion" by showing that he could not have effectively accompanied the Prophet, as he must have followed his father who was exiled to Taif. Further, it endeavours in its hostility to give him the epithet of ṭārīf in al-Ṭārīf, "the banished son of the banished man". After becoming Caliph, his grand-uncle Uthmān adopted him as his secretary and under this title he is said to have governed in his name. Seriously wounded on the "Day of al-Dār," at the siege of the palace of Uthmān, he took part later in the battle of the Camel in which he received fresh wounds. All his life his health suffered from these terrible shocks. Mu'āwiya I used him alternately with Sa'id b. al-'As [q.v.], his cousin, to govern Medina and the Hijāz. He showed in this function a capacity and vigour, far above the ordinary.

Finally dismissed from office, he passed into obscurity during the latter years of Mu'āwiya, who dreaded his ambition. When Ḥusayn b. 'Ali refused
to recognize the Caliph Yazid, Marwân advised Walîd b. 'Uthâma, his successor at Medina, to employ force against the rebel. The revolt of the people of Medina caused him to be expelled with all his followers from this town. He returned to it in the train of Muslim b. 'Uqba [q. v.], whose military operations he was supporting. Put to flight once more after the death of Yazid I, he took up his residence in Syria and attended the court of the Caliph Mu'awiyah II. After the disappearance of this prince, Marwân, despairing of the fortunes of the Omayyads, was disposed to recognize Ibn al-Zubair, when Ubaydallâh b. Ziyâd persuaded him to set up himself as candidate. Acclaimed at the assembly of Djâbiya, he defeated the Ka'ats under Dhu'ayb b. Ka'is [q. v.] at Marsî Râhî [q. v.]. The submission of the whole of Syria was the first result of this victory.

The reign of Marwân may be epitomized as an uninterrupted series of battles. Immediately after his official installation at Damascus he was forced to take up the gauntlet. He laid it down only to die in his capital. His chief task was the conquest of Egypt. A rapid campaign gave him possession of it, while his lieutenant repelled a raid into Palestine by Ibn al-Zubair. At Djâbiya he was compelled to recognize as his eventual successors, Khâlid the son of Yazid I and the Omayyad 'Abd al-Rahmân [q. v.]. After laborious negotiations, he was able to end them to the advantage of his own sons 'Abd al-Malik and 'Abd al-'Azîz, the latter being nominated by him governor of Egypt. This was the last success of his adventurous career. Worn out, the septuagenarian caliph died at Damascus on the 27th Ramadân 65 (5th May 685). He is said to have been murdered by the wife of Yazid I, the mother of the Sufyânî Khâlid, whom he had married after Marsî Râhî.

The estimates of the length of his reign vary between 8 and 11 months, according as they count the first recognition of him at Djâbiya or the second — the exact date is not known — more ceremonial one at Damascus. We do not know his exact age any more definitely. The two extremes 61 and 81 years reveal the inconsistency of tradition. The 63 years sometimes given to Marwân is merely a lucky number which has been much abused to give the ages of the older caliphs. It has the advantage that it takes us back to the year 2, often said to be the year of his birth. Our texts describe him as an old man, sha'iâh hábir, when he ascended the throne and contrast him with the kálâ, middle-aged man, Ibn al-Zubair who, however, was nearly sixty. There must therefore have been an appreciable difference of age between the two competitors. Marwân, therefore, seems to us to have been over seventy. The last five years of his life, filled with rebellions, his two exiles, his share in the campaign against Medina, and in those of Syria and Egypt to reconquer these provinces of his empire finally wore out the constitution of this vigorous old man, who had never been completely cured of the effects of his terrible wounds he received in his youth. This long been wizened old man — these physical characteristics earned him the nickname kâhit bâti — was destined to fall a victim to the great epidemic that swept over the East. In 65 H. the plague reached Syria from the 'Iraq; it had begun by carrying off Mu'awiyah II, the decrepit predecessor of Marwân, as well as Walîd b. 'Uthâma, a relative of both; it ended by laying low the first of the Marwânî caliphs.

Marwân showed himself a statesman worthy of the highest rank. A contemporary of the great Mu'awiyah, he had under the Umayyads to accept — without ever resigning himself to it — the lot of a brilliant second. He attained the caliphate, ever the object of his wishes, at the moment he had ceased to care about it. He allowed himself to be raised to the throne, rather than mounted it himself. But once at the top he regained that power of lucid decision and spirit of initiative which had earned Mu'awiyah's appreciation, though he feared his ambition. The new ruler remained on the throne just long enough to save the Omayyad fortunes from an imminent collapse and to save the future of the younger branch of this dynasty which bears his name. The work was continued by his favourite son 'Abd al-Malik. He early recognised the merits of this, the elder, man, and with a brutality and absence of scruple which was thoroughly Arab, he put him in the place of the young Khâlid b. Yazid I, who was less well fitted for the difficulties of the restoration. This is sufficient to characterize his place among the Syrian caliphs. It will explain the hatred of 'Abd al-Malik and 'Alî historians, a hatred adopted by Muslim tradition. In energy and knowledge of the art of government, Marwân, recalled his illustrious relative Mu'awiyah. He would have equalled him, if to these eminent qualities he had been able to add that variety of political knowledge, a mixture of cunning and homonimy, so appreciated by the Arabs, which they call bi'îm. He became Caliph in most critical circumstances and had to display firmness above all things, to put down rebellions, and to defend himself against the ambition and resentment of his relatives, frustrated in their attempts on the throne, or spoiled by him of their rights to it. If it had been given to him to live longer, we may well believe that he would have rivaled the first of the Omayyad Caliphs in nobility of soul.

(H. LAMMERS)

MARWÂN II b. MUHAMMAD, the last of the Omayyad caliphs in Damascus. He was the grandson of the caliph Marwân b. al-Hakam. As governor of Mesopotamia and Armenia his
father Muḥammad for several years directed the campaigns against the Byzantines. His mother was a Kuṭubī slave-girl. Mālūm b. ‘Abd al-Malik (q.v.) was one of those who followed Muḥammad after Marwān to war; it is not till 715 (733–734) that we find Marwān coming to the front as governor of Armenia and Aḥdarbiyān. In this position, which he held for 12 years, he fought with success against the peoples of the Caucasus and thus acquired military experience which enabled him to reorganize the Muslim army. In place of divisions consisting of the different tribes he created regular, paid troops under professional commanders; the men levied for military service were divided up into smaller divisions (kaṭābāt) which possessed much greater mobility and strength than the long Arab battle-lines. After the death in 726 (744) of Yazīd III the succession passed to his brother Ibrāhīm b. al-Walīd; the latter however was only recognized in the southern part of Syria. Under the pretext of protecting the interests of the sons of the murdered Walīd II, Marwān crossed the Euphrates into Syria where the Kalbīs at once joined him. At Ammān b. Dārār between Lebanon and Anti-Lebanon he encountered the Kalbīs under Sulaymān, a son of the caliph Hārūn. In spite of his years of experience in war with the Byzantines the latter was no match for Marwān. He was defeated and fled to Damascus, where he put to death the two sons of Walīd II. He then went with his father, the nominal caliph Ibrāhīm to Palmyra, the capital of the Kalbīs, whereupon Marwān entered Damascus and received the homage of the people (Ṣafār 26, 127 = Dec. 744). After arranging matters in the capital he made his headquarters in Harrān, where he could rely upon the support of the Kalbīs who were devoted to him. The result was a rising of the Kalbīs in Syria. Marwān soon succeeded in restoring order but when in the following year he was preparing a campaign against the Ibrāhīmīyya, his older brother, he made the mistake of levying Syrian troops also who were to join the rest of the army on the march. On reaching al-Ruṣāfā where Sulaymān b. Hārūn lived, the Syrians deserted from Marwān and proclaimed Sulaymān commander of the faithful. When Sulaymān occupied Kinnasrīn, Marwān had to come back. A battle took place near the town, Sulaymān was defeated and fled first to Ḥims and then to al-Kifā. After a siege of several months Ḥims was forced to surrender; Marwān raised its wall to the ground and also those of Baalbek, Damascus, Jerusalem and other large towns of Syria. In the summer of 746 (747) peace was finally restored in Syria.

In the eastern provinces however complete anarchy reigns. The government of the Ibrāhīmīyya had been given by Yazīd III to a son of the caliph ‘Omar b. ‘Abd al-‘Azīz, named ‘Abd Allāh b. ‘Abd al-‘Azīz. The latter of course did not recognize the claims of Marwān to the caliphate and the ‘Allīd ‘Abd Allāh b. Mu‘āwiyah (q.v.) also rebelled in al-Kifā. Marwān appointed a new governor Nazīr b. Sa‘īd al-Harāshī to restore peace and security; the latter however soon fell in battle with ‘Abd Allāh b. ‘Omar and only the approach of a danger that threatened the two sides, the Ibrāhīmīyya movement brought the two opponents to terms. The Khārijīs a little later seized the town of al-Mawṣil: ‘Abd Allāh, the son of the caliph, was defeated and had to retreat. In the late summer of 747 (748) however the Khārijīs leader al-Daḥḥāk b. Kays al-Shaḥrānī [q.v.] fell in battle with Marwān himself and in the following year the power of these dangerous rebels was finally broken after one of Marwān’s generals Yazīd b. ‘Omar b. Huṣayn had taken the Ibrāhīmīyya from them.

Soon afterwards however a cloud that boded evil appeared in another direction. ‘Alī b. Sāliḥ al-Laythī, governor of Ḫorassān, had long before warned the caliph of the seditionary activities of the ‘Abbāsīds and arrogantly appealed for assistance to render their cunning agitation harmless. Marwān however had his hands full and could devote no attention to the distant east. In Ramādān 129 (June 747) the long prepared rebellion broke out in Ḫorassān. Apart from a few isolated successes, the government troops were defeated by the rebels and after the fall of al-Kīfā, Abu b. ‘Abd Allāh who with his brother Abu Dārā had taken command of the ‘Abbāsīd party had himself proclaimed caliph on the 12th Rabī‘ I, 132 (Nov. 28, 749). In Hujjādād II of the same year (Jan. 750) Marwān was defeated on the upper Zāh. He then fled from one place to another till he was overtaken at Būṣīr in the district of ‘Uqaybayn in Upper Egypt. Here the last Damascus caliph of the Omayyad dynasty fell fighting bravely (end of 132 = Aug. 750).

K. V. Zettersten

MARWĀNĪDS, Muḥammad b. Dynasty in Diyar Bakr, founded by the Kūtāb chief Bādh, who had begun his career as a shepherd and then took to brigandage. With the help of a body of similarly inclined, he seized the town of Ardabīl in Armenia with other strongholds on the Armenian frontier. After the death of the Būyid Aṣlād al-Dawla (372 = 983), he invaded the province of Diyar Bakr and captured Amid, Mālīk b. Ṭāhir and Naṣḥīn. The armies, which were sent against him, were defeated and Marwānī also passed into his hands. But when he tried to seize the capital, Baghdād (Ṣafār 373 = July–Aug. 983), he suffered a complete defeat and had to abandon al-Mawṣil. After vain attempts to retake this town, he took the field again in 380 (990–991) but was defeated by the Ḥamdānids, the lords of al-Mawṣil, and fell in the battle. Abū ‘Ali al-Ḥasan b. Marwān, his sister’s son, then married his widow and thus came into possession of the lands conquered by Bādh and continued the war against the Ḥamdānids whom he twice defeated. After the murder of Abū ‘Ali in 387 (997–998) in Amid, his brother Māmāḥid al-Dawla Abu b. ‘Al-‘Ādhrī succeeded him. The third brother ‘Alī b. ‘Abd Allāh al-Dawla Abu b. ‘Al-‘Ādhrī continued his efforts and at first attempted to dispute his authority but without
success. In 402 (1011-1012) Abu 'l-Manṣūr was poisoned by one of his generals, whereupon Abu Naṣr was recognised as lord of Diyar Bakr. During his rule of fifty years, peace and quiet as a rule prevailed, and poets and learned men found a welcome hospitality at his court. In 433 (1041-1042) the Ghuzz [q.v.] who had invaded Mesopotamia in the previous year, raided Djaṣrat Ibn 'Omar; but Sulaimān, son of Abu Naṣr, succeeded in drawing and capturing their leader whereupon the others dispersed; they soon returned however and continued their plundering, although Abu Naṣr released their chief and gave them a considerable sum to induce them to withdraw. They then occupied al-Mawsil, which was completely sacked while the emir slept, Karwāsh b. al-Muʿakkallad (q.v.) saved himself by flight. In 453 (1064) he finally succeeded in driving out the Ghuzz whereupon they withdrew to Diyar Bakr and thence to Adharbājān. When the Saḥluḫ Sultan Toghrūl Beg in 448 (1056-7) advanced against Djaṣrat Ibn 'Omar, Abu Naṣr gained him over by gifts and a friendly relationship was established between them. Abu Naṣr died in 453 (1061-1062) aged over 80. He was succeeded by his son Nāṣir al-Dawla Naṣr, who had however to go through a hard struggle with his brother Sād. The former was victorious in Mālāfārān, while the latter had to be satisfied with Amid. In 463 (1070-1071) Naṣr submitted to the Saḥluḫ Sultan Alp Arslan. After Naṣr's death (472-1080) his son Manṣūr was recognised as his successor. Soon afterwards the Saḥluḫs overthrew the Marwānid dynasty. In 478 (1085-1086) Ibn Djaṣrat, Malik-Shah's vizier, and his son Zām al-Ru'uz' Abu 'l-Kāsim conquered the towns of Amid, Mālāfārān and Djaṣrat Ibn 'Omar and then brought the whole province of Diyar Bakr under the rule of the Saḥluḫs. Manṣūr, the last Marwānid, died in Manṣūr in 489 (Dec. 1095-Jan. 1096) in Djaṣrat Ibn 'Omar.

K. V. H. Leitertstein

MĀRYĀ, a tribe in the Western zone of Erīṭra. They are— for the most part— shepherds and inhabit the middle valley of the 'Anābā river in the district of Karān. Their tribe is formed by two sections of nobles: Māryā Ṣayīth “the Red Māryā” and Māryā Ṣallūm “the Black Māryā”; and the families of the vassals. The “Red” Māryā have been traditionally in a lower position than the “Black” and they were obliged to pay on certain occasions special gifts to the “Black” as, for instance, when the chief of the “Black” died. The vassals were practically divided between the Red and the Black as every family of them lived under the patronage of the chief of a noble family. Both the paramount chiefs of the noble sections had some particular rights over all the vassals of the noble families of their sections as they had, for instance, the power to order that every vassal may give to them the same gift as to his individual patron or to oblige the patrons to pay, as a duty to the highest representative of the tribe, the tenth part of every gift or duty of their vassals.

The Māryā claim to be descendants of a warrior, Māryā, born from Saho stock, who emigrated with seventeen soldiers to the borders of the ‘Anābā and was received there as a guest by the natives. But, afterwards, the sons of Māryā had so greatly increased that they were able to occupy the whole land and to subdue the native tribes who became their vassals. These natives, who are called tigrān on account of their origin, were really Abyssinians and Bedja. However, the Māryā and their vassals to-day speak only the Tigrā language; and the Saho, as the Bedja, has been wholly forgotten. The Māryā were Christians but, about half a century ago, they were converted to Islam. Even their clan (as the ‘Aš ‘Ad Te-mīkāw, a section of the “Red”) and their ancestors till recent generations bore Christian names. In any case, Islamic law has gradually gained great influence, among the Māryā; and this has been from many points of view a real profit to the population, as the laws of Islam may moderate in a good way the ancient rough customs which strongly oppressed the privileges of the nobles and their monopoly on the vassals. As a matter of fact, in the hereditary law, the prevalent right of the first born son and the exclusion of the daughters from the succession of their father's estates became gradually disused on account of the Islamic influences. In the same way, the custom of declaring slaves those vassals who could not pay their debts to the nobles and the great differences, in the penal law, as to the punishment of crimes perpetrated by the nobles or by the vassals, had already been diminished after the conversion of the Māryā to the Islam. When the occupation of Erritrea by Italy caused the complete abrogation of those rules.

Enrico Cercelli

MARYAM, Mary. The Arabic form of the name is identical with Mary and Māryā which are used in the Syriac and in the Greek Bibles in the New as well as in the Old Testament. In the latter it corresponds to the Hebrew 'Maryam'. This name, like other ones with the same suffix, such as 'Amram, Bīlīm, points to the region between Palestine and Northwestern Arabia as its home. According to Muslim interpretation the name means "the pious" (al-jāhid; cf. the commentaries on sūra iii. 31). It occurs frequently in the Kurān in the combination [Iṣā] Ibn Maryam "Jesus" the son of Mary" (sūra ii. 81, 252 sq. iii. 31 sq.; iv. 136, 169; v. 19, 50, 76, 82, 106, 12, 114, 116; ix. 31; xix. 35; xxiii. 52; xxxiii. 57; lii. 27; lix. 6, 14), no father being mentioned, because, according to Muslim tradition also, Iṣā had no earthly father. In the majority of these passages Iṣā is clearly regarded as the higher of the two. Yet Maryam's place is important from a dogmatical as well as from a historical point of view.

Maryam is mentioned in the Kurān, from the oldest parts down to the later Madīnēn sūras. To the first Makkān period belongs sūra xxiii. 52: *And we made the son of Maryam and his
mother a sign; and we made them abide in an elevated place, full of quiet and watered with springs." Here is possibly the first allusion in the Kur'an to the virgin birth. This idea is accentuated in sura xix. 20, where Maryam gives the spirit (i.e. the angel) who announces to her the birth of a male child, this reply: "How should I have a male child, no human man having touched me?" In sura lxxxvi. 12 the conception is ascribed to this divine spirit (cf. Luke i. 34, 37). Then said Mary unto the angel, How shall this be, seeing I know not a man? And the angel answered and said unto her, The Holy Ghost shall come upon thee, and the power of the Highest shall overshadow thee.

The virgin birth is also mentioned in sura lxxxvi. 12 (Madinah): "And Maryam kept him that kept her body pure. Then we breathed into it from our spirit. She acknowledged the truth of the words of her Lord and of his book and she belonged to the obedient."

A third mention of the announcement and the virgin birth is in sura iii. 37: "When the angels said, O Maryam, verily Allah has elected and purified thee and exalted thee above the women of all created beings. O Maryam, be obedient unto thy Lord and prostrate thyself and bow down with those who bow down." (cf. Luke i. 28). Maryam is indeed reckoned as one of the four best women that ever existed, together with Asiya (q.v.), Khadija (q.v.) and Fatima (q.v.) (Ahmad b. Hanbal, Munmad, i. 135), and the chief of the women of Paradise (Ibn Hanbal, ii. 64, 80).

According to tradition the announcement took place in the following way: Djibril appeared to Mary in the shape of a beardless youth with a shining face and curling hair, announcing to her the birth of a male child. She expressed her amazement, but, on the angel's reassuring answer, she complied with the will of God.

Then upon the angel blew his breath into the fold of her shirt, which she had put off. When the angel had withdrawn, she put on the shirt and was made pregnant. The announcement took place in the cavern of the well of Silwût, whereafter Maryam had gone, as usual, to fill her pitcher; she was then 10 or 13 years of age; and it was the longest day of the year. In Christian tradition also the voice of the angel was heard by Maryam for the first time when she had gone to fill her pitcher. According to a different tradition Isha's spirit entered Maryam through her mouth (Tabari, Ta'rif, vi. 22).

A second important dogmatical feature is that Maryam belongs to the Trinity according to the Kur'an. A glimpse of this conception is given in sura v. 79: "al-Musth, the son of Maryam, is an Apostle only, who was preceded by other Apostles, and his mother an upright woman; and both were wont to take food." This verse is apparently meant as a refutation of the Christians who venerated Isha and his mother as divine persons, elevated above human needs. With this verse may be compared sura iv. 169: "People of the book, beware of exaggeration in your religion and say of Allah nothing but the truth. Isha b. Maryam is only the Apostle of Allah and His word, which He conveyed unto Maryam, and a spirit that came forth from Him. Believe, therefore, on Allah and His Apostles and say not 'three'. Beware of this, this will be better for you. Allah is but one God" etc.

Clercer is sura v. 116: "And when Allah said, O 'Isa b. Maryam, hast thou said to the people, 'Take me and my mother as two Gods besides Allah? He answered: Far be it, that I should say to what I am not entitled. If I should have said it, Thou wouldst know it." etc.

The commentaries also describe the Trinity as consisting of Allah, Isha and Maryam. Al-Baghdari, however, admits that in sura iv. 169 there could be an allusion to the Christian doctrine of one God in three hypostases: Father, Son and Holy Ghost.

The question how Muhammad had come to conceive of Maryam as one of the persons of the Trinity, has often been asked. Maracci has made a reference to Epiphanius, Ado. Haeres. Haeres. lxviii. 325, where this author speaks of women in Arabia who venerated "Mary as God, and offered to her cakes, from which the heresy is often called that of the Collyridians. Sale, in his Preiminary Discourse, p. 45, mentions the Mariamites, who worshipped a Trinity consisting of God, Christ and Mary, referring to a passage in the work of al-Makki. It may, however, be that Muhammad's conception was not influenced by any sect, but by the veneration of which Mary was the object in the Church itself. Or it may be an inference due to the identification of Isha with the Holy Ghost (cf. sura iv. 169 as translated above), which made a vacant place in the Trinity, which Mary seemed entitled to occupy. A different explanation is attempted by Sayou, l.c., p. 61 (see Bibliography).

A comparatively large place is occupied in the Kur'an by the story of Maryam and Isha. Many of the features narrated agree, partly or wholly, with narrations in the apocryphal Gospels. Sura xxiii. 52 (see above) mentions the elevated place that was prepared for Isha and his mother. It is not clear which tradition is here alluded to. According to S. Luke i. 39, Mary went to the mountains to visit Elisabeth. In the Protevangelium Jacobi (chap. xxii; Syrian text, p. 20) it is Elisabeth who flees together with John to a mountain, which opens to protect them against their persecutors. The Muslim commentaries mention Jerusalem, Damascus, Ramla, Egypt as being possibly meant by the "elevated place". Maracci thinks of Paradise.

In two passages of the Kur'an there is a fuller narrative of Isha's birth and what is connected with it, viz. in sura xix. (which bears the title of Maryam), vs. 1-35, and in sura iii. 31-42.

Sura xix. opens with the story of Zakariya and Yahya (vs. 1-15); on this follows the story of Maryam and Isha (vs. 16-34). Sura iii. 31-42 contains a. the birth of Maryam; b. the announcement of Yahya (vs. 33-36); c. the announcement of Isha (vs. 37-41). The comparison of sura xix. with sura iii. makes it probable that Muhammad became acquainted with the story of the birth of Maryam later than with those of Yahya and Isha.

a. The birth of Maryam. This story goes back to a Christian tradition corresponding closely with that which is contained in the Protevangelium Jacobi and De notissimiar Moriam. Maryam's father is called Irmân in the Kur'an, Joachim in Christian tradition; Isha, 'Hasíd (Isha, ii. 144) is also acquainted with the name Joachim. It has been supposed that the name of Irmân, which apparently corresponds with the Biblical 'Amram, the father of Moses, as well as the fact that Maryam is called
a sister of Härūn (sūra xix. 29), is due to a confusion
between the two Biblical Maryams. Sale, Gerock
and others think such a confusion improbable.
At any rate Muslim tradition assures us that there
is a distance of 1,500 years between the Biblical
'Amram and the father of Mary.
Imrān's wife, 'Isa's grandmother, is not mentioned
by name in the Qur'ān. In Christian as well as in
Muslim tradition she is called Ḥānna. It is only
in Muslim tradition that her genealogy is worked
out. She is a daughter of Fāṭūhah and a sister of
Iṣḥābā', the Biblical Elisabeth.

---

According to a different genealogy Iṣḥābā' and
Maryam were sisters, daughters of Imrān and
Ḥānna (Mas'ūdī, Murūgī, i. 120 7f.; Ṭabarī,
Tafsīr, iii. 144):

---

Then the Qur'ān relates how she invaded on behalf of Maryam and her posterity Allah's protection
from Satan. On this verse is based the well-known haddāz: "Every child that is born,

The Qur'ān further relates (vs. 32) that the child grows up in a chamber in the temple (miṣyār; cf.
the sārās in Proter. Jēn., vi.; Syr. text, p. 5 7f.) under the divine grace and under Zakari-
yā's care. According to Muslim tradition, Imrān had died before the birth of Maryam, and Zakari-
yā's claimed authority over her on account of his being her uncle; the rabbis did not recognise
his claim; his right was proved by an ordeal,

consisting in the parties throwing their pens
or arrows in a river; the only one that floated
was that of Zakariyā'. Sūra iii. 39 refers to this.

Christian tradition knows of an ordeal only in
the case of Joseph, who, because a dove comes
forth from his staff, is recognised as Maryam's guardian.

As often as Zakariyā' enters Maryam's miṣyār, he
finds her being provided with food in a miracu-

alous way (vs. 32). This feature also belongs to
Christian tradition (Proter. Jacobi, chap. v.;
Syr. text, p. 7). The person of Joseph is not
mentioned in the Qur'ān. In Muslim tradition he
takes care of Maryam, his cousin, because Zakari-
yā's is no longer able to do so, on account of
old age. Maryam stays however in the temple,
which she leaves during her monthly period only.
According to Christian tradition, Joseph takes her
into his house when she attains to womanhood, lest
she should defile the temple.

6. The annunciation of Yaḥyā. See this art., and ZAKARIYĀ'.

---

The more detailed narrative is that of sūra xix. 16 app.
Maryam retires to "a place situated eastward", where
she hides herself behind a curtain. The

commentaries do not know whether a place to the

east of Jerusalem is meant, or the eastern part
of her house, to which she returns every month. It is said that this is the origin of the
biblical phrase of the Christians.

In vs. 17-21 the story of the annunciation is given
(cf. above), followed by that of 'Isa's birth, which,

according to some Muslim traditions, followed the

conception either immediately or very soon. The

dates of child birth came upon Maryam when she

was near the trunk of a palm. "She said, would

I liken to God I had died before this, and had become

a thing forgotten, and lost in oblivion. And he

was beneath her [i.e. the child, or Iṣḥābā',

or the palm] called to her crying, Be not grieved;

God has provided a rivulet under the sky and

shake the trunk of the palm and it shall let fall ripe

dates upon thee, ready gathered. And eat and
drink and calm thy mind". This story may,

perhaps, be considered as a parallel to the Christian

tradition in which it is related that, during the

flight to Egypt, the baby Jesus ordered a palm in

the desert to bow down in order to refresh Mary

by its dates; whereupon the palm obeyed and

stayed with her head at Mary's feet, till the child

ordered it to stand upright again and to open a

vein between its roots in order to quench the

thirst of the holy family (Apocryphal Gospel of

Matthew, xx. 26). The Qur'ān goes on (vs. 26):

"And when thou seest any man, say, I have

vowed a fast unto the Merciful; so I may not

speak to any man to-day!" The commentators

say, this was meant to avoid importunate questions.

This feature is not in Christian tradition; yet in

the Protocanonical Jacobi it is to be found (chap. xii.;

Syr. text, p. 17) that Mary, who was then 12 years
of age, hid herself from the Israelites. According
to Muslim tradition, she stayed in a cavern during
forty days. "Then she brought him", continues

the Qur'ān (xix. 28), to her people, carrying

them. They said, O Mary, now thou hast done

strange thing. O sister of Härūn, thy father

was not a bad man, neither was thy mother a

harlot. Then she pointed to the child". Then the

child begins to speak, one of the well-known:
MARRYAM — MARZUBAN

miracles ascribed to Ṭāhir. The "very shameful calumny" which the Israelites brought forth against Maryam, is also mentioned in Surah iv. 155.

As to the words "O sister of Hārūn" (cf. above), it may be added that, according to the commentators, this Ṭāhir was not Moses' brother, but one of Maryam's contemporaries, who was either a wicked man, with whom she is compared in this respect, or her pious brother.

A legend about loaves of bread which Maryam gave to the Magi, is mentioned by al-Mas'ūdī, iv. 79 ff.

The flight to Egypt is not mentioned in the Qur'ān, unless the "elevated place" (ṣūra xxii. 52; cf. above) should be an allusion to it. According to Muslim tradition which is acquainted with it, the abode lasts 12 years. After the death of Herod the holy family returns to Naṣrā.

After his alleged death Ṭāhir consolates his mother from heaven. According to others it was Mary Magdalen. The stories of the Transitus Mariæ have not obtained a place in Muslim tradition. Instead of these, there is a narrative of how Maryam went to Rome in order to preach before Mārtī (Nero), accompanied by John (the disciple) and Shīm'ī, the coppersmith. When Shīm'ī and Tādūs (Thaddaean?) were crucified with their heads downward, Maryam died with John. When they were persecuted the earth opened and withdrew them from their persecutors. This miracle was the cause of Martin's conversion.

MARZUBAN, Arab. form of the title of provincial governors in the Sasanian empire, especially the "wardens of the mace", the "wardens of the muschel". The word is derived from marz which still means in Persian a frontier district (Horn, Grundriss der neupersischen Etyologie, p. 218) and is found in Pehlevi in the form marzgan (in the Kūr-nāmeh; cf. H. S. Nyberg, Hilfsbuch des Pehlevi, i., Upsala 1928, p. 54) which suggests a north Iranian origin (cf. Leitz, Z. T. L., iv. 255, 295), as we find alongside of the marzgan in Persian (Horn, loc. cit.). The title is not found, however, before the Sasanian period and in the great inscription of Paikuli, the wardens are called ṣīyajkh (Arm. șiyanxag), also a north Iranian title (Hersfeld, Paikuli, Berlin 1924, p. 155; cf. also Marquart, Erasm. u. P., 167 sqq.). In Syriac we find the forms marwānī and marwānūnī (Payne-Smith) and the Armenian has mazōpe and mazōpan (Hubschmann, Armenische Grammatik, p. 193). Persian finally has kept the word as marwān, marwānūn or marwānūn (cf. e.g. the Barāhīn-i Ḵāra'.

It is from Arab sources that we are more particularly informed of the duties of the marwūn. Al-Ya'qūbī (Ṭābrīzī, ed. Houtsmul, i. 201) says that it was the title of the ruler of Babylonia, while the four great divisions of the empire were governed by pādshāhīn. The historians al-Tābarī and al-Baladhurī tell us that the different marwānūn encountered by the Arabs in their conquests (cf. the list of provinces ruled by a marwānūn, drawn up by Baladhurī, and given by Nöldeke in Gesch. d. Perser und Araber, Leyden 1879, p. 446). In this period we find these governors acting independently of any higher authority and concluding treaties and treaties. They sometimes retained their offices after the Arab conquest. Under the Sasanians the marwānūn were far from having such an independent position. We sometimes find them acting as generals under the command of the pābūd (e.g. Jusuf Stylites, cf. Wright, p. 61).

Although the title gradually fell into disuse, Muslim Persia still retained the word, used in its original sense of "warden of the marches". It is frequently found in literature (cf. Sa'īdī, Houshān, ed. Graf, p. 73). On the other hand after the Sasanian period, marwānūn and its variants became a proper name (in Arabic sometimes al-Marrwān) among Muslims and also among Persians (cf. the names of the copyists of Pahlavi manuscripts; cf. especially Justī, Iranisches Namenbuch, s.v. Marvān).

(J. H. KRAMER)

MARZUBAN B. RUFIAM, a prince of the Bāvand dynasty of Ṭabāristān [q.v.] regarded as the original author of the Marzūbān-nāma, a work in Persian prose containing a series of short stories and fables of a moral and didactic character. This book is known in two versions in elegant Persian of the 16th century, the author of one of which was Sa'd al-Din al-Warrānī; he dedicated it to Abu l-Kāsim Rābī al-Din, vizier of Uzbecks b. Muhammad b. Ilī. A. Athīb of Aḥlāfādī from 1210 to 1225. These dates give us probable limits for the composition of the book. The other version is the work of Muhammad b. Ghāzī al-Malāyawī, secretary and later vizier of Rūm al-Din Sulaimān-shāh, Saldān b. Rūm, who reigned from 1192 to 1204. It is called Rawjat al-ʿUṣāl and differs a good deal in form and contents from the other, which is called the Marzūbān-nāma.

In the preface by Sa'd al-Din al-Warrānī we are told that the original work had been written in the language of Ṭabāristān and the ancient Persī, the popular language, but that thanks to him this valuable work had been given a new life after 400 years (p. 6 and 32 of Mirzā Muhammad Karimī's edition). In the first chapter Marzūbān b. Shārīn, descendant of Kāyīs, brother of the Sasanian king Anuširvān, is mentioned as māz-
The Kauṣānī-nāma in which Firuzi was used (cf. Nöldeke, Geschichte des Artachīr i Pāpāzān, Göttingen 1879, p. 27) and the source of a poem like *Wu 1-nāmān*, a text which no longer pleased the taste of the literary connoisseurs of the 13th century.

The Marzubān-nāma was published by Mirzā Muhammad Kašwini in 1908 (G.M.S., viii.) from a manuscript in the British Museum (Or. 6476) with the help of two other MSS. in the same collection, one in the Bibliothèque Nationale and another sent from Persia. The Paris manuscript had already been used for the publication of extracts from the *Marzubān-nāma* in Ch. Schefer's *Christo- 

mathe anverse*, Paris 1885, p. 172–199. The Kauṣānī-nāma is represented by a manuscript in Leyden (cf. M. Th. Houtum, *Eine unbekannte Bearbeitung des Marzuban-nāme*, Z. D. M. G., iii. 359–392) and another in Paris. Mirzā Muhammad has given extracts from it in the preface to his edition. There is also an Arabic version of the same work from the pen of Ibn *Arabābāh*, based on a Turkish version of Sād al-Wawīnī's recension; this Arabic text was lithographed at Cairo in 1278.

**Bibliography:** The philological data have been collected by Mirzā Muhammad Kāhn in the preface of his edition; Schefer's observations (p. 194–211) are to be utilised with caution. Cf. also: H. Ethe, *Neuereiche Literatur*, in *Grundriss d. iran. Phil.*, iii. 328 sqq. and E. G. Browne, *A Literary History of Persia*, ii. 115, 489.

MAS'A. [See SA'AV.]

MASAGAN. [See MAZAGHĀN.]

MASCARA, a town in Algeria (department of Oran), 50 miles S.W. of Mostaganem and 60 S.E. of Oran. Its position is 35° 26' N. Lat. and 8° E. of Greenwich. It lies on the southern slope of the Ben Shīgbān range, called by the Arabs *Shārib al-Rūd* and is built on the edge of a ravine at the bottom of which runs the Wild Sidi Tadjīman on the other side of which the N.W. lies the native faubourg of Bih 'All. Mascara commands the plain of Eghris, which measures 25 to 30 miles from W. to E. and 12 miles from N. to S. and is one of the most fertile regions of Algeria. The natives have grown cereals here from the earliest times and the Europeans have introduced tobacco and created vineyards, the produce of which is celebrated. It is the market for a region, becoming more and more prosperous, and by the census of 1926 had 30,669 inhabitants of whom 16,630 were natives.

Mascara of considerable antiquity. According to Baki (Mastil, transl. de Slane, rev. by Fagnan, p. 160), it included among its inhabitants people who came from THIR (Thirat) some of whom went and settled at Igbān, a day's journey S.E., when this town was founded by Yāhū b. Muḥammad, son of Sāḥib the Irānī, in 335 (949–950 A.D.). Ibn Hawkal (Description de l'Afrique, transl. de Slane, *Journ. As.,* 1842 and *Irkūz* (transl. of Goeppe, p. 96) mention Mascara as a large and watered village rich in fruits. The Almohads seem to have built a fortress there. The Ziyānīs of Tlemcen kept a governor and a garrison there. Leo Africanus (bk. iv, ed. Schefer, vol. iii., p. 34) notes the importance of the market which was held at Mascara "one of the towns of the Beni Rasi" (Bani Ṛashīf) where one could buy, along with cereals in large quantities, cloth and articles of
harness manufactured in the country. The rulers of Tlemcen drew considerable revenues from it: 40,000 pistoles, according to Marmol (Africa, vol. ii., p. 441). The Turks established themselves at Mascara in the xviiith century and placed a garrison there. In 1701 they made it the capital of the beylik of the west, which had hitherto been Mastina in Dahr. The boys lived there till Oran was reoccupied by the Algerians in 1792. During this period, Mascara, which had hitherto only been an insignificant place, began to look like a regular town. The boys built two mosques and a madrasa, a wall and a kasba and brought in a water-supply. The manufacture of burnOUSE and deeks, celebrated throughout the Regency, enriched the inhabitants. This prosperity began to decline after the boys left Mascara and especially after the risings, which broke out in the province of the west in the beginning of the xixth century. The Darâkân Ben Sherfi seized the town in 1805 and held it for a time. In 1827, it was attacked by the marabout Muhammad al-Tijânî. Supported by the Hâshim he gained possession of the faubourg of Bâb 'Ali but was killed by the Turks when preparing to storm the town itself. At the end of Turkish rule, 'Abd al-Kâdir [p. v.] who had been proclaimed Sultan by the tribes of the plain of Egâtis, established his seat of government at Mascara, but barely lived there. An expedition, in the month of December 1836 led by Marshal Clauzel, occupied Mascara which the French abandoned next day, after burning down part of it. The emir returned to the town and held it till May 30, 1841, when a column under Bugeaud occupied it finally for the French. Mascara, then half in ruins, had only a population of 2,860 inhabitants.

Architecture.

A. Origin of the Mosque.

The word "masjid" is found in Aramaic, the earliest occurrence being in the Jewish Elephantine Papyri (ed. Sachau, pl. 32, ed. Ungnad, Nr. 335; Cowley, Aramaic Papyri of the Fifth Cent. B.C., ii., pp. 443, also frequently in Nabatean (Corp. Ins. Semit., ii., 161, 176, 185, 188, 195, 215; cf. Schwalby, Z.D.M.G., III., 1898, p. 134; Littbarski, Handbuch d. nordem. Epigraph., p. 152, 328; Cooke, North Semitic Interpositions, p. 238). The word formed from "masjid" to "prostrate oneself" seems to mean in Nabatean a stele, a sacred pillar, although the meaning "place of worship" has also been suggested. In the Elephantine Papyri, where it is named by ḫalid and ḫalid, (cf. the Lexicon) is like the Amharic ḫalid derived from the Arabic, while the Ethiopic ḫalid "temple, church" is perhaps a genuine formation from the verb (which is certainly borrowed from the Aramaic: cf. Nöldeke, Neue Beiträge z. sem. Sprachw., p. 36). The Arabic masjid may have been formed independently from the corresponding verb, which also undoubtedly comes from the Aramaic; probably the above-mentioned Aramaic substantive was simply taken over, although no links can be shown between the Nabatean inscriptions and the Korân.

The word in any case can hardly have been formed by Muhammad himself from its specific connection with divine service ("place where one "ṣalâ" or prostrates oneself").

1. The Meccan period.

The word is used in the Korân especially of the Meccan sanctuary (al-ḥaram al-masjid, Sûra ii. 140, 141, 145, 187, 192, 214: v. 7; vi. 34; ix. 7, 19, 28; xvii. 1; xxii. 25; xviii. 27; according to later sources, this was the usage in the Meccan period (cf. Ya'qûbi, ed. Houtsma, i., 285, 35). According to tradition, the term al- ḥaram al-masjid (Sûra vii. 1) means the Jerusalem sanctuary (according to Schrieke, 111, vi. 1 nq.; cf. Horovitz, ibid., ix. 150; the reference is rather to a place of prayer in heaven); and in the legend of the Seven Sleepers masjid means a tomb-sanctuary probably Christian, certainly pre-Muhammadan (Sûra xvii. 20). The word is also applied to pre-Islamic sanctuaries, which belong to God and where God is invoked, although Muhammad was not always able to recognize the particular cult associated with them. It is undoubtedly with this general meaning that the word is used in this verse of the Korân: "If God had not taken men under his protection, then monasteries, churches and places of prayer (qubûs) and masjids would have been destroyed" (Sûra xxiv. 41). The word is also used in a hadith of an Abyâd church (Buhârî, 72, bâh 48, 54; Muslim, Masjid, Tr. 3) and in another of Jewish and Christian tomb-sanctuaries (Buhârî, 72, bâh 55; Muslim, Masjid, Tr. 3). Even Ibn Khaldûn can still use the word in the general meaning of a temple or place of worship of any religion (Muḥammad, fasc 4, 6 at the end). There is therefore no question of a word of specifically Muslim creation. This is in entire agreement with Muhammad’s original attitude to earlier religions. Just as Abraham was a Muslim, so David had a masjid: (Tabarî, i., 2408, 7.)

To the Prophet the Meccan sanctuary always remained the principal mosque, known as Baṣr Allah even before the time of the Prophet. It was a grave charge brought against the Kharijî in the Meccan period that they drove the believers out of al-masjid al-ḥaram (Sûra ii. 214; v. 3; vii. 34; xxii. 25; xviii. 25), which was considered by all the more unjust as they worshipped the true lord of the sanctuary. To the true God belonged al-masjid (Sûra lxxii. 18, Meccan); it is therefore an absurdity for the godless to prevent the wor-
ship of God in “God’s own mosques” (Sūra ii. 108). The result was that it was revealed in the year 9: “It is not right for polytheists to frequent the mosques of God” (Sūra ix. 17 sq.) and the opponents of the new religion were therefore excluded from the sanctuary. The Sūra agrees with the Kūrān, that the sanctity of "Masjid al-harām" to which Muḥammad had been used from childhood was always regarded by him as indisputable. Like other Maccans, he and his followers regularly made the ṭawfī around the Ka’ba and kissed the Black Stone (6: g. Ibn Hishām, p. 183, 13 sqq., 239, 4, 251, 1); it is frequently stated that he used to sit in the masjid like his fellow-citizens, alone or with a follower or disputing with an opponent (Ibn Hishām, p. 233, 16; 254, 11; 252, 14; 259, 260, 204, 18 sq). It is related that he used to perform the saḥāl between the Yaman corner and the Black Stone, apparently from the narrator’s context: very frequently (Ibn Hishām, p. 190, 9 sqq.). After his conversion, Umar is said to have arranged that believers performed the saḥāl un molested beside the Ka’ba (Ibn Hishām, p. 224, 15 sqq., 17 sqq.), strongly Muḥammad felt himself attached to the Arab sanctuary is evident from the fact that he took part in the traditional rites there before the Hijr (Sūra viii, 2); in the year 1, one of his followers, Sā‘d b. Mu‘āsh, took part in the pilgrimage ceremonies and in the year 2 he himself sacrificed on the 10th of ‘Lūl al-Hijrīa on the maṣṣāla of the Banū Salīlīn. He therefore, here as elsewhere, retained ancient customs where his new teaching did not directly exclude them. But when an independent religion developed out of his preaching, a new type of divine service had to be evolved.

In Mecca, the original Muslim community had no special place of worship. The Prophet used to perform the saḥāl in secret, in the narrow alleys of Mecca with his first male follower ‘Abī and with the other earliest Companions also (Ibn Hishām, p. 159, 166, 23 sqq.). The references are usually to the solitary saḥāl of the Prophet, sometimes beside the Ka’ba (Ibn Hishām, p. 190, 9 sqq.), sometimes in his own house (Ibn Hishām, p. 203, 9 sqq.). That the believers often prayed together may be taken for granted; they would do so in a house (cf. Ibn Hishām, p. 202). Occasionally also Umar is said to have conducted the ritual prayer with others beside the Ka’ba (Ibn Hishām, p. 224) because ‘Umar was able to defy the Kūrāsh. When the Prophet recited in the mosque the revelation, later abrogated, recognising al-‘Uzza and Manākī, according to the legend, not only the believers but also the polytheists present took part in the misjif (Tabarī, i. 1192 sq.). Abū Bakr is said to have had a private place of prayer (masjīd) in Mecca in his courtyard beside the gate; the Kūrāsh, we are told, objected to this because women and children could see it and might be led astray by the emotion aroused (Ibn Hishām, p. 240; Bihārī, Sūrat, B. 36; Kafṣāla, B. 14 sq. etc., see Al-Mālikī, B. 22).

In the days of reign by Muḥammad a sanctuary was not a fundamental necessity. Every place was the same to God and humanity in the presence of God, of which the ritual prayer was the expression, could be shown anywhere; hence the saying of the Prophet that he had been given the whole world as a masjid, while earlier prophets could only pray in churches and synagogues (Wākīdī, transl. Wellhausen, p. 403; Carpus Juvius de Zois b. ‘Ali, ed. Grīfini, p. 50 and clxxix; Bihārī, Sūrat, B. 56; Taṣawwum, B. 1; Modern Masjīdī, Tr. 1) and also the saying: “Whenever the hour of prayer overtakes thee, thou shalt perform the saḥāl and that is a masjīd” (Muslim, Masjīdī, Tr. 1), that he nevertheless remained firmly attached to the traditional sanctuary of the Ka’ba, produced a confusion of thought which is very marked in Sūra ii. 136 sq. When in Medina he was able to do as he pleased, it must have been natural for him to create a place where he could be undisturbed with his followers and where they could perform the ritual saḥāl together.

2. The Foundation of the Mosque in Medina.

According to one tradition the Prophet came riding into Medina on his camel with Abū Bakr as ṭāhīr surrounded by the Banū Nadījīh. The camel stopped on Abū Ayyūb’s farm. Here (according to Anas) the Prophet performed the saḥāl, and immediately afterwards ordered the mosque to be built and purchased the piece of land from two orphan, Sahl and SAHIH, who were under the guardianship of Mu‘āsh’s b. ‘Abīd, for 10 dinars, after declining to accept it as a gift; he lived with Abū Ayyūb until the mosque and his houses were completed. During this period he performed the saḥāl in courtyards or other open spaces (Buhārī, Sūrat, B. 48; Muslim, Masjīdī, Tr. 1; Ahmad b. Hanbal, Musnad, iii. 212 above; Ibn Hishām, p. 336; Tabarī, i. 1258 sqq.; Mas‘ūdī, Murādī, iv. 140 sqq.). According to this tradition, the building of the mosque was intended by the Prophet from the first and the choice of the site was left to the whim of his mount. According to another tradition the Prophet took up his abode with Abū Ayyūb, but during the first period of his stay in Medina he conducted the saḥāl in the house of Abū Umāma As-Sād, who had a private masjid, in which he used to conduct the saḥāl with his neighbours. The Prophet later expressed the desire to purchase the adjoining piece of ground and he bought it from the two orphans, who, according to this tradition, were wards of As-Sād (Balādhurī, Fīrah al-Baladīra, ed. de Goeje, p. 6; cf. Wüstenfeld, Gesch. d. Stadt Medina, p. 60). The site was covered with graves, ruins (khurārī; also barhī, Tabarī, i. 1259, 15; 1260, 17; cf. Ahmad b. Hanbal, Musnad, iii. 212, 7, perhaps due to an old misreading) and palm-trees and was used as a place for keeping camels (and smaller domestic animals, Buhārī, Wūfū”, B. 66). The site was cleared, the palms cut down and the walls built. The building material was bricks baked in the sun (tablī) (Ibn Hishām, p. 337; Buhārī, Sūrat, B. 62, 65; according to one tradition they were baked at the well of Fātima, Wüstenfeld, Stadt Medina, p. 31); in places it was a courtyard surrounded by a brick wall, on stone foundation with three entrances: the gateway were of stone. On the ṭūbā side (i.e. the north wall) at first left open, the stems of the palm-trees which had been cut down were soon set up as columns and a roof was put over them of palm-leaves and clay. On the east side two butt of similar materials were built for the Prophet’s wives Sawālī and A’ishah; their entrances opened on to the court and were covered with carpets: they were later increased so that there were nine.
little houses for the Prophet's wives. When the ḥabla was moved to the south, the arches on the north wall remained; under this arch a small room was built for the Prophet's monks. The arch was very small. It was really only a court yard with a wall round it; the ḥabla was already mentioned as a shed for the Prophet's monks. However, this is not certain, and it is possible that the Prophet may have intended to have it as a simple shed for the monks.

According to the sources, the Prophet's intention was to build a mosque at once in Medina; according to a later tradition he also commanded the name of God to build a house for God (Khamis, i. 387 infra), but this story is coloured by later conditions.

It has been made quite clear, notably by G. J. Caetani (Annali dell' Izzia, i. 432, 437 et seq.) and later by E. L. H. L. A. W. M. D. G. (cf. Annali dell' Izzia, i. 440), that the earliest madrasj had nothing of the character of a proper mosque. Much can be quoted from this view for the Hadith and Sirat (cf. Annali dell' Izzia, i. 440). The first mosque to be received by the Prophet in the month of Safar was the famous Madrasj in Medina, which was not completed until 22 years later. This mosque was the first to be erected in Medina, and was the place where the Prophet delivered his sermons, and where the bodies of the deceased were kept for burial.

3. Other Mosques in the Time of the Prophet.

The mosque of the Prophet in Medina was not the only one founded by Muslims in their lifetime and according to tradition not even the first, which is said to have been the mosque of Kuḥā. In this village, which belonged to the territory of Medina (see Wüstenfeld, Geschichte der Stadt Medina, p. 120), the Prophet on his Hajj stopped with the family of 'Amr b. 'Awf, the length of his stay was variously given: 3, 5, 8, 14 or 22 days. According to one tradition, he found a mosque there on his arrival, which had been built by the first emigrants and the Ansār and he performed the salāt there with them (see Wüstenfeld, p. 360). According to another tradition, the Prophet himself founded the mosque on a site, which belonged to his host Kuḥā, and was used as a mihrāb for drying dates or according to others,
to a woman named Labha, who tithered her ass there (Wüstenfeld, Medina, p. 131; Ibn Hījām, p. 333; Ṣahābi, 1. 1260, 2; Ibn Sa’d, 1. 1; Masʿūdī, Murūdī, iv. 139; Dīyārbarī, Khamsit, i. 381; al-Sīra al-Hadībiyya, Cairo 1320, ii. 38 sq.). Out of this tradition arose a legend based on the story of the foundation of the principal mosque in Medina: The Prophet makes (first Abū Bakr and 'Umar without success, then) 'All mount a camel and at the place to which it goes builds the mosque with stone brought from the Harra; he himself laid the first stone, and Abū Bakr, 'Umar and 'Uthmān the next ones (Khamsit, i. 384). The Prophet is said to have henceforth visited the mosque of 'Kubah' every Saturday, either riding or walking and the pillar is still shown beside which he conducted the service (Bukhārī, Fadl al-Saḥīf Masjīd Makka na 'l-Medina, bāb 2, 4; Muslim, Haddīqī, i. 94; Khamsit, i. 382; Baidhūrī, p. 5). We are occasionally told that he performed his salāt on the Sabbath in the mosque at 'Kubah' when he went to the Banū Najīr in Rabī‘ of the year 4 (Wāḥīdī-Wellhausen, p. 161).

It is obvious that the customs and ideas of the later community have shaped the legend of this mosque. The only question is whether the old tradition that the mosque was founded either by the Prophet himself or even before his arrival by his followers is also a later invention. We thus come to the question whether the Prophet founded or recognized any other mosques at all than that of Medina. L. Gæteaal, in keeping with his view of the origin of the mosque, is inclined to deny it; pointing to the fact that there was later an obvious tendency to connect mosques everywhere with the Prophet and that Sūra 108 strongly condemns the erection of an "opposition mosque" (M. al-Dīrāṣr). The Kur‘ān passage is as follows: "Those who have built themselves a masjīd for opposition (ābab) and unbelief and division among the believers and for a refuge for him who in the past fought against God and his Prophet; and they swear: we intended only good. God is witness that they are liars! Thou shalt not stand up in it, for verily a masjīd which is founded on piety from the first day of its existence has more right that thou shouldst stand in it; in it are men who desire to purify themselves and God loveth those who purify themselves" (Sūra ix. 108—109). According to tradition this was revealed in the year 9; when the Prophet was on the march to Tabūk, the Banū Sālim said to him that they had built a mosque to make it easier for their feeble and elderly people, and they begged the Prophet to perform his salāt in it and thus give it his approval. The Prophet postponed it till his return, but then this revelation was announced, because the mosque had been founded by Munāṣirūn at the instigation of Abū 'Amir al-Rāhilī, who fought against the Prophet. According to one tradition (so Ibn 'Umar, Zaid) the "mosque founded on piety" was that of Medina from which the people wished to emanipulate themselves; according to another (Ibn 'Abbas) the reference was to that of 'Kubah'; Abū 'Amir and his followers were not comfortable among the Banū 'Amir b. 'Aww and therefore built a new mosque. According to some traditions it was in Ubī Awwā. The Prophet however had it burned down (Ṭabarī, i. 1704 sq.; Ibn Hījām, p. 337).
for the roof (Baladānūrī, p. 346 sq., 350; B. G. A., 2434 sq., 2451 sq.; 187 sq.; Yākūt, Muğām al-Baladānī, l. 642, 6 sq.; Tābarī, l. 2377, 1 sq. It was similar in Kūfā which was founded in 17 by Saʿd b. Abī Waqqās. In the centre was the mosque and beside it the Dār al-Imāra was laid out. The mosque at first was simply an open quadrangle, gahar, marked off by a trench round it. The space was large enough for 40,000 persons. It seems that reeds were also used for building the walls here and later Saʿd used tāsām. On the south side (and only here) there was an arbour, ṣultān, built (cf. Baladānūrī, p. 348, 1 sq.; Yākūt). The Dār al-Imāra beside the mosque was later by Umar's orders combined with the mosque (Tābarī, l. 2481, 1 sq., 1 sq., 2485, 1 sq., 2487 sq., 2494, 1 sq.; Yākūt, Muğām, iv. 323, 1 sq.; Yūnān, Muğām, p. 275, 1 sq.; Annals dell' Islam, ill. 846 sqq.). The plan was therefore an exact reproduction of that of the mosque in Medina (as is expressly emphasised in Tābarī, l. 2489, 1 sqq.); the importance of the mosque was also changed in its position and the commander lived close beside it. There was no difference in al-Farasa, which, although there was already an older town here, was laid out as an entirely new camp in the year 21, after the conquest of Alexandria. The mosque was laid out in a garden where 'Amr had planted his standard. It was 50 dârā long and 30 broad. Eighty men fixed its ṣbāla, which however was turned too far to the east, and was therefore altered later by Kūra b. Shahrīr. The court was quite small, surrounded by a wall and had trees growing on it; a simple roof is mentioned; it must be identical with the above mentioned ṣultān or ṣuṣa. 'Amr b. Abī Ṣaʿd lived just beside the mosque and around it the Abl al-Ḳiyam. Like the house of the Prophet, the general's house lay on the east side with only a road between them. There were two doors in each wall except the southern one (Yākūt, Muğām, ill. 386 sq.; Māqātī, Kāhiyyāt, i. Cairo 1326, 4 sqq.; Ibn Duknāk, K. al-İntizar, Cairo 1893, 59 sqq.; Suyūṭī, Ḥasan al-Maḥdārī, l. 63 sqq.; ill. 135 sqq.; cf. Annals dell' Islam, ill. 554, 557, 563 sqq.).

We find similar arrangements made in al-Mawṣil twenty years earlier (Baladānūrī, p. 331 sqq.).

In other cases the Muslims established themselves in old towns either conquered or surrendered by treaty; by the treaty they received a site for their mosque (e.g. Baladānūrī, p. 216, 14, 147 sq.). But the distinction between towns which were conquered and those which were surrendered soon disappeared and the position is as a rule not clear. Examples of old towns in which the Muslims established themselves are al-Madī'in, Damās and Jerusalem. — In al-Madī'in Saʿd b. Abī Waqqās after the conquest in 16 distributed the houses among the Muslims and Khāqān's Āwān was made into a mosque, after Saʿd had conducted the Salat al-Fath in it (Tābarī, l. 2443, 15 sq., 2451, 1 sqq.). In Damās which was occupied in 14 or 15 by capitulation, according to tradition, the Church of St. John was divided so that the eastern half became Muslim from which Muslim tradition created the legend that the city was taken partly by conquest and partly by agreement (Baladānūrī, p. 125; Yākūt, Muğām, ii. 591; Ibn Duknāk, Kāhiyyāt, i. 262; Y. A., ser. 9, iv. 376, 351, 404). As a matter of fact however, the Muslims seem to have laid out their own mosque here just beside the church (cf. Damās); and close beside it again was the Khaqānas, the commander-in-chief's palace, from which a direct entrance to the maqṣūra was later made (B. G. A., ill. 159). Conditions here were therefore once more the same as in Medina. But the possibility of an arrangement such as is recorded by tradition cannot be rejected, for there is good evidence of it elsewhere; in Hims for example, the Muslims and Christians shared a building in common as a mosque and church, and it is evident from al-Īṣāṣī and Ibn Hawkāz that this was still the case in the time of their common authority, al-Balūkī (399 = 991) (B. G. A., l. 61, 1 sq.; ill. 111, 1 sq.; ill. 156, 1 sq.), and a similar arrangement is recorded for Dāhil in Armenia (B. G. A., l. 188, 2 sqq.; ill. 244, 1 sq.; ill. 317, 1 sq).

There were special conditions in Jerusalem. The Muslims recognised the sanctuary there, as is evident from the earlier Kībā and from Sīna xviii. 1 (in the traditional interpretation). It must therefore have been natural for the conquerors, when the town capitulated, to seek out the recognised holy place. Indeed we are told that 'Umar in the year 17 built a mosque in Jerusalem on the site of the temple of Solomon (F. Bantgen, Fragmente syr. u. arab. Hist., p. 17, 110, following Ḥabīd ibn ʿAbd al-Malik, metropolitan of Baṣra after 700 a.d.; cf. for the viiith century Theophanes quoted by Le Strange, Palaestina under the Moslems, 1890, p. 91 note) That the Khaqānas al-Ṣaʿīda (q. v.), which the Mosque of 'Umar replaced, stands on the old site of the Temple is undoubted. How he found the site is variously recorded (cf. al-Īṣāṣī). The building was, like other mosques of the time of 'Umar, very simple. Arculf who visited Jerusalem about 670 says "The Saracens attend a quadrangular house of prayer (domus orationis, i.e. musjid) which they have built with little art with boards and large beams on the remains of some ruins, on the famous site where the Temple was once built in all its splendour" (Histoire Hierosolymitana, ed. F. Geyer, 1898, p. 226 sqq.; transl. P. Mickle, in Das Land der Bibel, ii/3, 1917, p. 19 sqq.). It is of interest to note that this simple mosque, like the others, was cast in the form of a rectangle; in spite of its simple character it could hold 3,000 people, according to Arculf.

As late as the reign of Muʿawiya we find a new town, Kāira, being laid out on the old plan as a military camp with a mosque and Dār al-Imāra in the centre (Yākūt, Muğām, iv. 213, 1 sqq.). As Baladānūrī, for example, shows, the Muslim conquerors even at a later date always built a mosque in the centre of a newly conquered town, at first a simple one in each town, and it was a direct reproduction of the simple mosque of the Prophet in Medina. It was the exception to adapt already existing buildings in towns. But soon many additional mosques were added.

2. Tribal mosques and Sectarian mosques.

There were mosques not only in the towns. When the tribes pledged themselves to the Prophet to adopt Islam, they had also to perform the salāt. It is not clear how far they took part in Muslim worship, but if they concerned themselves with Islam at all, they must have had a Muslim place of meeting. Probably even before Islam they had, like the Meccans, their maqṣūra or naṣrā or dār ʿibnā, where they discussed matters of general importance (cf. Limmens, Moğūn, p. 205; Zibād
As the mosque was only distinguished from such places by the fact that it was also used for the common *Ṣabāb*, it was natural for tribal mosques to come into existence. Thus we are told that as early as the year 5 the tribe of Sa'd b. Ḳabr founded mosques and used *ṣabāb* (Ibn Sa'd, *t.f.* 44, n, not mentioned in Ibn Ḥṣām, p. 943 s.v.; Ṭabarī, ii. 1722); it is also recorded of the Banū Ḫudaym that they lived near Mecca that they built mosques in the year 8 and introduced the *ṣabāb* (Ṭabāqāt-Wellhausen, p. 65). How far one can rely on such stories in a particular case is however uncertain. A later writer, like al-Diyarbakri, says of the Banū Ḥudaym that they *ṣarāfūn na-bārā* masjidjī (Ṭabāqāt Khāsimī, ii. 132, cf. Annals of Islam, ii. 221); in the early sources this is not found. Nor is the story, told by Ibn Sa'd at all probable, that envoy's from the Banū Ḫanīfa received orders to destroy their churches, sprinkle the ground with water and build a mosque (Ibn Sa'd, *t.f.* 56, s.v. Ṭabarī, p. 943 n; Ṭabarī, i. 1737; and Baladhurī, p. 86 s.v. say nothing about it). But that there were tribal mosques at a very early date is nevertheless quite certain. The mosque at Kūba* was the mosque of the tribe of Amr b. Ṭawfīq* (Ibn Sa'd, *t.f.* 6, 6, and cf. above) and according to one tradition, the Banū Ḥathem b. Ṭawfīq were jealous of it and built an opposition mosque (Baladhurī, p. 3; Ṭabarī, Tafsīr, i. 21 infra). A Companion, who had taken part in the battle of Badr, Ṭabāk b. Malik, complained to the Prophet that he could not reach the *ṣabāb* of his tribe in the rainy season and wanted to build a mosque for himself (Buḫṣaṣ, Ṣafāt, bāb 46; Muslim, Masjidjī, bāb 47). The Prophet himself is said to have visited the *ṣabāb* of the Banū Zurāj (Buḫṣaṣ, Liḥlabād, bāb 50–58) and in the *ṣabāb* of Balad Ṣalīma during the prayers, there was revealed to him Ṣira ii. 139, which ordered the new *ṣabāb* to be made. Therefore it was called Masjidjī Liḥlabādīn (Wṣṭenfeld, Medina, p. 62).

The tribal mosque was a sign that the independence of the tribe was still retained under Islam. Indeed we hear everywhere of tribal mosques, for example around Medina that of the Banū Kuraṣa, of the Banū Ḥarīrī, of the Banū Ṣafar, of the Banū Ṭallūf, of the Banū Ḥāṣim, of the Banū Zurāj, etc. It is said to have been the first in which the *Ṣabāb* was publicly read, that of the Banū Salīma etc. (see Wṣṭenfeld, Gesch. d. Stadt Medina, p. 29, 37 s.v., 44, 50, 57, 136 s.v.; the *ṣabīb* of the two Kūba* belonged to the Banū Sa'd, b. Ghamūn b. Kāb* b. Balad (Wṣṭenfeld, Medina, p. 41). This was then the position in Medina: the tribes had usually their own mosques and one mosque was the chief mosque. This was probably the position within the Prophet's lifetime; for in the earliest campaigns of conquest, mosques were built on this principle. Umar is said to have written to Abī Miṣṣ in Baṣra telling him to build a mosque in *Ṣabāb* and mosques for the tribes, and on Fridays the people were to come to the chief mosque. Similarly he wrote to Sa'd b. Abī Waḳṣ in Kufa and to *Amr b. ʿAṣ in Miṣr, on the other hand in Syria where they had settled in old towns, they were not to build tribal mosques (Makrīṣī, *Ḳaṣīf*, iv. Cairo 1336, p. 4 ) infra. It is actually recorded that the tribes in each *Ṣabāb* had their own mosques around the mosque of *Amr in al-Fuṣṣī (cf. Ibn Ǧaḍnūn, p. 62 infra s.v.) and even much later a tribal mosque like that of the Rāḫilā was still in existence (Makrīṣī, *Ḳaṣīf*, iv. 64, s.v.). Even in the chief mosque, the tribes had their own places (Umd, p. 9, s.v.). We have similar evidence from the *Ṭaʾf*. In Baṣra for example there was a Masjidjī Banū ʿUṭbah (Baladhurī, p. 356, n), one of the Banū Ṭabāk (B. G. A., vii. 201, s.v.), one of the Banū Ṭaʿ (ibid., v. 191, s.v.) and one of the Amār (cf. Goldziher, Muḥammadīnātīn, Sūtrān, i. 77, note 5); in Kufa we find quite a number such as that of the Amār (Ṭabarī, ii. 284, s.v.); of the Banū al-Ḳān (ibid., i. 657, s.v.), of the Banū Dhūmūn (ibid., p. 670, n), of the Banū Makhrūr (ibid., p. 734, s.v.), of the Banū Ḥiṣāl (ibid., i. 1657, s.v.), of the Banū ʿAdī (ibid., p. 1703, s.v.); of the Banū Ḥuṣain and Banū Ḥujayjī (ibid., p. 532, s.v.); of the Dhujarān (ibid., p. 535, s.v.); of the Banū Ḥaṣām (ibid., iii. 2500, s.v.); and the Banū Anṣār even had several masjidūn (Baladhurī, p. 278, s.v., also p. 284 and Goldziher, loc. cit.).

During the wars these tribal mosques were the natural rallying points for the various tribes; the mosque was a masjid, where councils were held (Ṭabarī, ii. 532, s.v.), and the people were taught from its minbar (ibid., p. 284); battles often centred for this reason round these mosques (e.g. Ṭabarī, i. 130, 148, s.v.). “The people of your mosque”, abī masjidūḏ (ibid., p. 532, s.v.) became identical with “your party”. Gradually as, new sects arose, they naturally had mosques of their own, just as Musallāma before them is said to have had his own mosque (Baladhurī, p. 90, s.v.), and Ibn Ḥanbal, Muṣnad, i. 404 infra). Thus we read later of the mosques of the Ḥanbalis in Baghdaḍ, in which there was continual riot and confusion (Liḥlabād, bāb 60–58) and in the *ṣabīb* of the Banū Ḩāṣim the *ṣabāb* was called Masjidjī Liḥlabādīn (ibid., ii. 135, s.v.). Sometimes it happened that different parties in a town shared the chief mosque (B. G. A., iii. 102, s.v.), but as a rule it was otherwise. In particular the Sunni and Shīʿī as a rule had separate mosques (cf. Mez, Die Reichsweiten des Islam, p. 63). Sometimes it even happened that Ḥanafis and Shīʿīs had separate mosques (Abū al-Muṭṭaṣim, *Ṣafar*, i. 459, cf. B. G. A., iii. 323, s.v.). These separate mosques were a great source of disruption in Islam and we can understand that a time came when the learned discussed whether such mosques should be permitted at all. But the question whether one might talk of the Masjidjī Banū Ḥaṣām was answered by saying that in the time of the Prophet, the Masjidjī Banū Zurāj was recognised (Buḫṣaṣ, Ṣafāt, bāb 41; Liḥlabād, bāb 60–58) and Ṭabarī, Tafsīr, xi. 20 after the middle of the page).

3. Adaptation to Islam of Older Sanctuaries; Memorial Mosques.

According to the early historians, the towns, which made treaties with the Muslims, received permission to retain their churches (Baladhurī, p. 121, in the middle; Ṭabarī, i. 2405, 2407) while in the conquered towns the churches fell to the Muslims without any preamble (cf. Baladhurī, p. 120 infra). Sometimes also it is recorded that certain number of churches were received from the Christians, e.g. fifteen in Damasci according to one tradition (ibid., p. 124, s.v.); otherwise p. 121; cf. J. A. S. E., vii. 403). It is rather doubtful whether the process was such a regular one; in any case the Muslims in course of time appropriated
many churches to themselves. With the mass-conversions to Islam, this was a natural result. The churches taken over by the Muslims were occasionally used as dwellings (cf. Tabari, i. 2405, 2407); at a later date it also happened that they were used as government offices, as in Egypt in 146 (Makrizi, iv. 35; cf. for Kufa, Baladhuri, p. 286). The obvious thing, however, was to transform the churches into mosques. It is related of 'Amr b. al-As that he performed the salat in a church (Makrizi, iv. 6) and Zaid b. All says regarding churches and synagogues, Perform thy salat in them; it will not harm them." (Corpus juris di Zaid b. All, ed. G. T. Grifflini, No. 364). It is not clear whether the reference in these cases is to conquered sanctuaries; it is evident, in any case, that the saying is intended to remove any misgivings about the use of captured churches and synagogues as mosques. The most important example of this kind was in Damascus where al-Walid b. 'Abd al-Malik in 86 (705) took the church of St. John from the Christians and had it rebuilt; he is said to have offered the Christians another church in its stead (see the references above, B. 1; and also J. A., 9 Ser., vii. 369 sqq.; Quatremere, Hist. Sult. Maml., ii. 262 sqq. and the article DAMASCUS). He is said to have transformed into mosques ten churches in all in Damascus. It must have been particularly in the villages, with the gradual conversion of the people to Islam, that the churches were transformed into mosques. In the Egyptian village there were no mosques in the earlier generations of Islam (Makrizi, iv. 28 sq., 30). But when al-Ma'mun was fighting the Copts, many churches were turned into mosques (ibid., p. 30). It is also recorded of mosques in Cairo that they were converted churches. According to one tradition, the 'Rashtik mosque was an unfinished Jacobite church, which was surrounded by Jewish and Christian graves (Makrizi, iv. 63, 64) and in the immediately vicinity of the 'Asikum turned a Jacobite and a Nestorian Church into mosques (ibid., p. 65). When Djiwbar built a palace in al-Khira, a dir was taken in and transformed into a mosque (ibid., p. 265); similar changes took place at later dates (ibid., p. 240) and synagogues also were transformed in this way (Masha'di Ibn al-Barr, ibid., p. 265). The chief mosque in Palermo was previously a church (Yekhi, Ma'asir, i. 719). After the Crusades several churches were turned into mosques in Palestine (Sauvage, Hist. de Jérusalem et d'Hébron, 1879, p. 77; Quatremère, Hist. Sult. Maml., i. 7, 40).

Other sanctuaries than those of the people of the scriptures were turned into mosques. For example the Masjid al-Shams between Hilla and Kerbela was the successor of an old temple of Shamash (see Goldscheider, Mab. Stud. ii. 331 sq.). Not far from Isfākbar was a Masjid Sulaimān which was an old "fire-temple," the pictures on the walls of which could still be seen in the time of Mas'ud and al-Mahdi (8th century) (Mash'adī, Muraqquâb, iv. 77: B. G. A., iii. 444.) In Isfākbar itself there was a djâmi, which was a converted fire-temple (ibid., p. 436). In Maṣṣa, the ancient Mopsuestia, the Masjid in 140 bought a mosque on the site of an ancient temple (Baladhuri, p. 165 sqq.) and the chief mosque in Dhibh was originally a temple (Ibn Batuta, iii. 151); as to 'Aṣif al-Taghī, Jāmi, ibid. 10. Thus in Islam also the old rule holds that sacred places survive changes of religious opinion. It was especially

**THE ENCYCLOPAEDIA OF ISLAM, III.**

easy in cases where Christian sanctuaries were associated with Biblical personalities who were also recognised by Islam: e.g., the Church of St. John in Damascus and many holy places in Palestine. One example is the mosque of Job in Shaikh Sa'd, associated with Sūra xxi, 83-88, viii. 40; here in Silvia's time (fourth century) there was a church of Job (Masjid, l. 91; Badeker, Fasîlî, 1879, 1910, p. 147).

But Islam itself has created historical associations which were bound soon to lead to the building of new mosques. Even in the lifetime of the Prophet, the Banî Sâlim are said to have asked him to perform the salât in their masjid to give it his authority (see above A 3). At the request of 'Iṣâh b. Malik the Prophet performed the salât along with Abî Bakr in his house and thereby consecrated it as a musâlla, because he could not get to the tribal mosque in the rainy season (Bukhârî, Sa'îd, bâb 47; Tâhâfudz, bâb 30; Muslim, Masjid, l. 46; a similar story in Bukhârî, Kâfî, bâb 47, Tâhâfudz, bâb 33 which is perhaps identical in origin). After the death of the Prophet, his memory became so precious that the places where he had prayed obtained a special importance and his followers, who liked to imitate him in everything, preferred to perform their salât in such places. But this tendency was only an intensification of what had existed in his lifetime; and so it is not easy to decide how far the above stories reflect later conditions. Mosques very quickly arose on the road between Mecca and Medina at places where, according to the testimony of his companions, the Prophet had prayed (Bukhârî, Sa'îd, bâb 89; Wâkidî-Wellhausen, p. 421 sqq.); the same was the case with the road which the Prophet had taken to Tabûk in the year 9 (Ibn Hishâm, p. 907; Wâkidî-Wellhausen, p. 394; there were 19 in all, which are listed in Anwâr dell' Islam, ii. 246 sqq.). Indeed wherever he had taken the field, mosques were built; for example on the road to Baṣra, where according to tradition Abû Bakr had built a mosque (Wâkidî-Wellhausen, p. 39, also Wûstefeld, Medina, p. 135). The mosque of al-Fadlî was built on the spot where the Prophet had prayed in a leather tent during the war with the Banî Nadir in the year 4 (Wâkidî-Wellhausen, p. 165; Wûstefeld, Medina, p. 137). He is said to have himself built a little mosque in Khâibar during the campaign of the year 7 (Dîyâr bârî, Târîkh al-Kâmî, ii. 49 sqq.; cf. Anwâr dell' Islam, ii. 19). Outside 'I'd a mosque was built on a hillock, because the Prophet had performed the salât there during the siege in the year 8, between the tents of his two wives, Umâ Salâma and Zainab (Ibn Hishâm, p. 872; Niẓâmî, Wâkidî-Wellhausen, p. 399); in Liyya the Prophet is said to have himself built a mosque while on the campaign against Taif (Ibn Hishâm, p. 872; Wâkidî-Wellhausen, p. 368 sqq.). Mosques arose in and around Medina, "because Muhammad prayed here" (Wûstefeld, Gesch. d. Stadt Medina, 1908, 31, 38, 134 sqq.). It is obvious that in most of these cases later conditions are put back to the time of the Prophet; in connection with the "war of the Ditch" we are told that: "he prayed everywhere where mosques now stand" (Wâkidî-Wellhausen, p. 208). Since, for example, the Masjid al-Fadlî is also called Masjid al-Shams (Wûstefeld, Medina, p. 132) we have perhaps here actually an ancient sanctuary.
Mosques became associated with the Prophet in many ways. In Medina, for example, there was the Masjid al-Qibla where footprints of the Prophet’s mule were shown in a stone, the Masjid al-Ijāba where the Prophet’s appeal was answered, the Masjid al-Fath which marks the victory over the Meccans, etc. (see Wüstenfeld, Medina, p. 136 sqq.). In Mecca there was naturally a large number of places sacred through associations with the Prophet and therefore used as places of prayer. The most honoured site, next to the chief mosque, is said to have been the house of Khadija, also called Mawlid al-Sa‘idja Fātima, because the daughter of the Prophet was born there. This house, in which the Prophet lived till the Hijra, was taken over by ‘Uqail, ‘Ali’s brother, and bought by him through Mu‘awiya and turned into a mosque (Chronikhe d. Stadt Mecca, ed. Wüstenfeld, l. 425; iii. 435, 440). Next comes the house in which the Prophet held his first secret meetings. This was bought by al-Khaizurra, mother of Ḥafīn al-Rashid, on her pilgrimage in 171 and turned into a mosque (Chron. Mecca, iii. 112, 440). She also purchased the Prophet’s birthplace, Masjid al-Nabī, and made it into a mosque (ibid., l. 422; iii. 439). If Mu‘awiya really bought the Prophet’s house from his cousin, it was probably the right one; but the demand for places associated with the Prophet became stronger and stronger and we therefore find more and more places referred not only to the Prophet, but also to his Companions. Such are the birthplaces of Hama, ‘Umar and ‘Ali (Chron. Mecca, iii. 445), the house of Māriya, the mother of the Prophet’s son, Ibrāhim (ibid., l. 447, 460) who also had a mosque at Medina (Wüstenfeld, Medina, p. 133). There were also a Masjid Khadija (ibid., l. 324) and a Masjid ‘A ‘ba (ibid., iii. 454), a Masjid of the “granted appeal” in a narrow valley near Mecca, where the Prophet performed the ḥajj (ibid., l. 455), a Masjid al-Dijān, where the Dijān overheard his preaching (ibid., l. 424; iii. 453), a Masjid al-Ra‘ya, where he planted his standard at the conquest (ibid., l. 438; iii. 439, 453), a Masjid al-Ra‘ya where the first homage of the Medinians was received (ibid., l. 448; iii. 444). In the Masjid al-Khalīf in Mina is shown the mark of the Prophet’s head in a stone into which visitors also put their heads (ibid., l. 438). Persons in the Bible are also connected with mosques, Adam, Abraham and Isma‘il with the Kâba, beside which the Masām ibrahīm is shown and in ‘Arâfa there is still a Masjid Ibrahim (ibid., l. 415, 435) and another in al-Zahrī near Mecca (Ibn Djami‘r, Ribâ‘, 1907, p. 112). To these memorial mosques others were later added, e.g. the Masjid Abū Bakr, Masjid Bilāl, the Mosque of the Splitting of the Moon (by the Prophet) etc. (Ibn Djami‘r, Ribâ‘, p. 114 sqq.; B.G.A., iii. 102 sqq.; Suouck Harrongne, Mecca, II. 27; al-Batanî, al-Ribâ‘ al-Hadjīya, 2, Cairo 1339, p. 52 sqq.).

In al-Hijāz the Muslims thus acquired a series of mosques which became important from their association with the Prophet, his family and his Companions, and made Muslim history live. On the other hand, in lands formerly Christian, they took over sanctuaries which were associated with the Biblical history which they had assimilated (see Le Strange, Palestine, passim). Other mosques soon became associated with Biblical and Muslim story. The mosque founded by ‘Umar on the site of the Temple in Jerusalem was, as already pointed out, identified as al-Masjid al-Aqṣā mentioned in Surâ xxvi. 1 and therefore connected with the Prophet’s night journey and the journey to Paradise. The rock is said to have greeted the Prophet on this occasion and marks in a stone covering a hole are explained as Muhammad’s footprints (sometimes also as those of Idris; cf. Le Strange, Palestine, p. 136; al-Batinî, Ribâ‘, p. 165; Schedeler, Palestine, 1910, p. 52 sqq.; cf. Ya‘qûbî, ed. Houssain, ii. 311). The name al-Masjid al-Aqṣâ was used throughout the early period for the whole Ḥaram area in Jerusalem, later partly for it, and partly for the burials in its southern part (B.G.A., vi. 100; Sauvage, Hist. Jérusalem, p. 95, 121; cf. Le Strange, Palestine under the Moslems, p. 95 sqq.). Then there were the mosques which had specifically Muslim associations, like the Masjid of ‘Umar on the Mount of Olives where he encamped at the conquest (B.G.A., iii. 172).

In Egypt not only was an old Christian sanctuary called Maḥbad Mûsâ (Makrizi, iv. 259), but we are also told, for example, that the Mosque of Ibn Ţīlûn was built where Mûsâ talked with his Lord (Makrizi, iv. 36); according to al-Khûṣî there were in Egypt four Masjids of Mûsâ (Ibn Duqmâk, ed. Vollers, p. 92); there was a Masjid Ya‘qûb wa-Ya‘qûb (B.G.A., ii. 200) and a Joseph’s church, certainly dating from the Christian period (Makrizi, iv. 315). There was also a Mosque of Abraham in Muslim Ibu al-Khaṣb (Ibn Djami‘r, p. 58). The chief mosque of San‘a was built by Sheb, son of Noah (B.G.A., vii. 110). The old temple near Iṣṭakhr is mentioned above was connected with Salamân (Mas‘î, al-Nawâfi‘, iv. 77; Ya‘qûbî, i. 299). In the mosque of Kûf there were not only Ibrâhim but one thousand other prophets and one thousand saints, described as nasîf, are said to have offered their prayers; here was the tree Ya‘qûn (Surâ xxxvii. 146); here died Yaghîl and Ya‘qûb, etc. (Ya‘qûbî, iii. 325; also Ibn Djami‘r, p. 211 sqq.) and in this mosque there was a chapel of Abraham, Noah and Idris (Ibn Djami‘r, p. 212); a large number of mosques were used associated with Companions of the Prophet. What emphasis was laid on such an association is seen, for example, from the story according to which ‘Umar declined to perform the ḥajj in the Church of the Resurrection in Jerusalem, lest the church should afterwards be claimed as a mosque.

4. Tomb Mosques.

A special class of memorial mosques consisted of those which were associated with a tomb. The graves of ancestors and of saints had been sanctuaries from ancient times and they were gradually adopted into Islam. In addition there were the graves of sick men, the Sünûr (Sura xviii. 20) but it is not clear if this was recognised. As early as the year 6, the companions of Abû Bakr are said to have built a mosque at the place where he died and was buried (Ya‘qûbî-Wellhausen, p. 262). The Prophet is also said to have visited regularly at al-Ba‘kî in Medina the tombs of the martyrs who fell at Uḥd and paid reverence to them (Ibn).
Whatever the exact amount of truth in the story, there is no doubt that the story of the tomb-mosque of Abu Bakr is ante-dated. The accounts of the death of the Prophet and of the period immediately following reveal no special interest in his tomb. But very soon the general trend of development stimulated an interest in graves which led to the erection of sanctuaries at them. The probable date of this tendency is more marked in al-Wākidī, who died in 207 (823), than in Ibn Isbāhān, who died in 154 (768).

The collections of Ḥadīth made in the third century contain discussions on this fact which show that the problem was whether the tombs could be used as places of worship and in this connection whether mosques could be built over the tombs. The hadiths answer both questions in the negative, which is certainly was in the spirit of the Prophet. It is said that “Salāt at the graves (h 'lamābihār) is maṣbūh” (Buḥkārī, Saḥīh, bāb 52); “sit not upon graves and perform not salāt towards them” (Muslim, Dārīqāt, tr. 33); “hold the salāt in your houses, but do not use them as tombs” (Muslim, Saḥāb al-Musāfiri, tr. 28). On the other hand, it is acknowledged that Abu Ārub performed the salāt at the cemetery (Buḥkārī, Saḥīh, bāb 48). We are also told that tombs cannot be used as masjīdiyya (Buḥkārī, Saḥīh, bāb 48; Dārīqāt, bāb 62). On his deathbed the Prophet is said to have cursed the Jews and the Christians because they used the tombs of their prophets as masjīdāt. Ḥadīth explains this by saying that the tomb of the Prophet was not at first accessible (Buḥkārī, Saḥīh, bāb 48, 55; Dārīqāt, bāb 62; Amīn, bāb 50; Muslim, Māṣīḥāt, tr. 3), as a matter of fact its precise location was not exactly known (Dārīqāt, bāb 96). The attacks in Ḥadīth insist that tomb-mosques are a reprehensible Jewish practice: “When a pious man dies, they build a masjidīūn on his tomb” (Buḥkārī, Saḥīh, bāb 48, 54; Muslim, Dārīqāt, bāb 71). Although this view of tomb-mosques is still held in certain limited circles (cf. Ibn Tāmīya, the Wāḥshiyya, the old pre-Islamic custom still also became a Muslim one. The expositors of Ḥadīth like al-NAwawī, (on Muslim, Māṣīḥāt, tr. 3, lith, Dīlūg, 130-142, p. 201) and al-Āshkallānī, (Cālqūt, 1329, p. 354) explain the above passages to mean that only an exaggerated ta'zīm of the dead is forbidden so that tombs should not be used as a khilār; otherwise it is quite commendable to spend time in a mosque in proximity to a devout man.

The name given to a tomb-mosque is often ṭakūra, a word which is used of a tent (Buḥkārī, Dārīqāt, bāb 62; Ḥadīth, bāb 64; Fard al-Khmār, bāb 19; al-Ḍīqiyya, bāb 15; Tārāfa, Dīlūg, vii. 1). But later came the dome which usually covers tombs and thus became the general name for the sanctuary of a saint (cf. Ibn Dījrān, Rībā, p. 114, 115; cf. Dānt, Ṣallāḥ, -); Muṣāḥāt also means a little chapel and a saint's tomb (v. Berchem, Corpus Inscrip. Arab., ii, no. 72, 73, etc.; cf. index). The custom of making a ṭakūra at the tomb of a saint was firmly rooted in Byzantine territory, where sepulchral churches always had a dome (Herrog-Hauch, Rostomayolu, 2, p. 284). The usual name however for a tomb-sanctuary was masjīhad; this is applied to places where saints are worshipped, among Muslim tombs particularly to those of the friends and relations of the Prophet (v. Berchem, Corpus Inscrip. Arab., 1, p. 32; 63; 417; 544; Maṣūrī, [iv. p. 265], 397 agg.) but also to tombs of other recognised saints, e.g. Maṣūrī, Māṣīḥāt in Maṣūrī (Ibn Dījar, Rībā, p. 236) etc.

The transformation of the tombs of the Prophet and his near relatives into sanctuaries seems to have been a gradual process. Muḥammad, Abū Bakr and 'Umar are said to have been buried in the house of 'Ā'ishah; Fatimah and 'Ali lived beside it. 'Ā'ishah had a wall built between her room and the tombs to prevent visitors carrying off earth from the tomb of the Prophet. The houses of the Prophet’s wives remained as they were until the al-Walid rebuilt them. He thought it scandalous that Ḥasan b. Ḥasan b. 'Ali should live in Fatimah's house and 'Umar's family close beside 'Ā'ishah's home in the house of Ḥazāna. He acquired the houses, had all the houses of the Prophet's wives torn down and erected new buildings. The tombs were enclosed by a pentagonal wall; the whole area was called al-ṣamā' il 'ṣurūt, the garden; it was not till later that a dome was built over it (Wüstenfeld, Medien, p. 66, 72-73, 78, 79, 80). In the cemetery of Medina, al-Brā'ī, a whole series of Masjīhdāt came to be built where tombs of the family and of the Companions of the Prophet were located (ibid., p. 140, 99; Ibn Dījar, Rībā, p. 105, 99). It is often disputed whether a tomb belonged to one or the other (e.g. Tabarī, iii. 2430, 899). Such tomb-mosques were sacred (maṣūباح) (Ibn Dījar, Rībā, p. 114, 15, 15); they were visited ʿl-ṭawbah. The name al-Rawṣa of the Prophet's tomb became later applied to other sanctuaries (Ibn Dījar, Rībā, p. 46, 16, 52, 17). Separate limbs were revered in some mosques, like the head of al-Ḥusayn in Cairo, which was brought there in 491 from 'Aṣkalānī (Allī Fāhī Mālākā, al-Makkah, al-Riṣāla al-Ḍīljīdā, iv, 91, 99; cf. Sauvage, Hist. Jérini. Hibr., p. 16); his head was also revered for some time in the Masjuẖb al-Būt in Damascus (according to Ibn Shāhīr, J. A., 9th ser., vii. 385).

Gradually a vast number of Muslim tombs of saints came into existence; and to these were added all the pre-Islamic sanctuaries which were adopted by Islam. No distinction can therefore be drawn between tomb-mosques and other memorial mosques. It was often impossible to prove that the tomb in question ever really existed. In the Masjīhd 'Ali for example, 'Ali's tomb is honoured but Ibn Dījar leaves it in doubt whether he is really buried there (Rībā, p. 272) and many located his grave in the place at Ḫāṭ and elsewhere (Maṣūẖ, Maṣwī, iv, 259; v. 68; B. G. A., ii. 165). In 'Ain al-Baqar near Akkā there was also a Masjīhd 'Ali (Yāfī, 379) and also in the Mosque of the Umayyads (Ibn Dījar, p. 267); on this question cf. B. G. A., iv, 46. Names frequently became confused and transferred. In Mecca between Ṣaffā and Marwā there was a Kaḥba, which was associated with 'Umar b. al-Khaṭṭāb but Ibn Dījar says that it should be connected with 'Umar b. 'Abd al-Azzī (Rībā, p. 115, 116); in Dījar there was a Masjīhd Abī Hurrāra, where the memory of this Companion of the Prophet was honoured; it is said to have been originally the grave of another Abī Hurrāra (Maṣūẖ, i, 335, 99). Wherever Shī'īs ruled, there arose numerous tomb-mosques of the Abī al-Būt. In Egypt Ibn Dījar gives a list of 14 temples and five women of the Prophet's
family, who were honoured there (Rihla, p. 46 sq.). Islam was always creating new tombs of saints who had been distinguished for learning or asceticism or miracle-working, e.g. the tomb of al-Shafi'i in Cairo and Abu al-Badawi in Taht. There were mosques, chiefly old established sanctuaries, of Biblical and semi-Biblical personages like Rubai (Reuben) and Asiya the wife of Pharaoh (ibid., p. 46). In and around Damascus were a number of mosques, which were built on the tombs of prophets and unnamed saints (Ibn Dhubair, Rihla, p. 273 sqq.). In Palestine could be seen a vast number of tombs of Biblical personages (cf. Le Strange, Palestine under the Muslims, Index, and Condel in Palestine explorer, Fund, quarterly Statements, 1871, p. 80 sqq.), usually mosques with a kabba.

After the sanctuaries of persons mentioned in the Bible came those of people mentioned in the Quran. For example, outside the Djami' in Akka was shown the tomb-mosque of the prophet Shishak (Nasir-i Khusrav, Sefer-Namkeb, ed. Schefer, p. 15, = 49), and in Syria that of his son (Ibn Dhubair, p. 46); that of Hudey was also shown near Akka (Sefer-Namkeb, p. 16, 5 = 52), farther east that of Sha'a'il and of his daughter (ibid., p. 16, 18 = 55); the tomb of Hudey was also pointed out in Damascus and in Hadramat (Yakin, ii. 596 sqq.); then we have peculiarly Muslim saints like Dhu 'l-Kif, the son of Job (ibid., p. 16, 4 = 52). Then there are the sanctuaries of saints who are only superstitially Muslim but really have their origins in old popular superstitions, like al-Khwariz who had a mausoleum in Damascus (Yakin, ii. 596 sqq.), or a saint like 'Akka, founder of the town of Akka, whose tomb Nasir-i Khusrav visited outside the town (Sefer-Namkeb, p. 15, 5 from below = 51). Such tombs were much visited by pious pilgrims and are therefore frequently mentioned in literature (on Masakhid of the kinds mentioned here in the Irsh, see R.G.A., iii. 130; for Mawil etc., ibid., p. 146). In this way ancient sanctuaries were turned into mosques and it is often quite a matter of chance under what names they are adopted by Islam (cf. Goldziher, Muh. Studien, ii. 325 sqq.).

It therefore sometimes happens that the same saint is honoured in several mosques. Abu Hurairah, who is buried in Medina, is honoured not only in the above-mentioned tomb-mosque in Djits but also at various places in Palestine, in al-Ramla and in Yubah south of Tabariya (Khulil ed-Tahliri, Zewakht Kuch al-Maslahi, ed. P. Rassamie, p. 42, 1 from below; Sefer-Namkeb of Nasir-i Khusrav, ed. by Ch. Schefer, p. 17, 1 from below = 59; Yakin, ii. 512 sqq.; iv. 1007, 11; cf. Symonds Oriental Fast, Supple., ii. (1928), 31). The tomb of the Prophet Jona is revered not only in the ancient Niniveh but also in Palestine.

Just as the kabba under which the saint lay and the mosque adjoining it were sanctified by him as vice-versa a kabba and a mosque could become a place of a deceased person to become considered a saint. It was therefore the custom for the mighty not only to give this distinction to their fathers but also to prepare such buildings for themselves even in their own lifetime. This was particularly the custom of the Mandiluk sultans, perhaps stimulated by the fact that they did not found dynasties in which power passed from father to son. Such buildings are called kabba (van Berchem, C.T.A., i., No. 82 sqq., 95, 96, 126, 138 etc.), exceptionally

sawiya (ibid., No. 98), frequently furusa (ibid., No. 38, 63, 88, 105, 116 etc.); the formula is also found as 'this kabba is a turba' (No. 67); the latter word acquired the same meaning as masjid, partly saint's grave and partly sacred site (cf. Ibn Dhubair, Rihla, p. 114, 160); but this word does not seem to be used of ordinary tomb-mosques, although the distinction between these and mosques in honour of saints often disappeared. In these kabbas the regular recitation of the Qur'an was often arranged and the tomb was provided with a kiswa. The mausoleum might be built in connection with a great mosque and be separated from it by a grille (Yakin, iv. 509, 429).

5. Mosques deliberately founded.

In the early period the building of mosques was a social obligation of the ruler as representative of the community and the tribes. Very soon a number of mosques came into existence, provided by individuals. In addition to tribal mosques, as already mentioned, there were also sectarian mosques and prominent leaders built mosques which were the centres of their activity, for example the Madjdi 'Adi b. Hadiim (Tabari, ii. 130), the Madjdi Sinak in Kaf (Ibn Dhu. 1653), the Madjdi al-Ash'ath etc. As old sanctuaries entered Islam, the mosque received more of the character of a sanctuary and the building of a mosque became a pious work; there arose a hadith, according to which the Prophet said: "for him who builds a mosque, God will build a home in Paradise"; some add "if he desires to see the face of God" (Corpus juris di Zaid b. 'Ali, ed. Grifin, No. 370; Bahijah, Sahih, b. 65; Muslim, Madjdi, tr. 4; Zakdi, tr. 3; Makri, iv. 36). Like other sanctuaries, mosques were sometimes built as a result of a revelation in a dream. A story of this kind the year 557 is given by al-Sayhudi fore Medina (Wustenfeld, Medina, p. 91 sqq.) and a similar one in a mosque in Damascus (J. A., Ser. 9, viii. 384); a mosque was also built out of gratitude for seeing the Prophet (al-Madras al-Shafiyya, Makri, iv. 209). It was of course particularly an obligation on the mighty to build mosques. Even in the earliest period the governors took care that new mosques were built to keep pace with the spread of Islam (cf. Baladhuri, p. 178 sqq.). About the year 1000 the governor of Medina, Badr b. Husamwah, is said to have built 3000 mosques and hostels (Meir. Die Renaissance des Isisams, 1922, p. 24). The collections of inscriptions, as well as the geographical and topographical works, reveal how the number of mosques increased in this way.

In Egypt, al-Hakim in the year 403 had a census taken of the mosques of Cairo and there were eight hundred (Makri, iv. 264); al-Kufi (d. 454 = 1062) also counted the mosques and his figure is put at 30,000 or 36,000 (Yakin, iii. 901; Ibn Dhu'aym, ed. Völ. ers, p. 92; Makri, iv. 264) which seems quite a fantastic figure (there is probably a mis taking before the i.e. 1036). Ibn al-Mutawwadi (d. 739) according to Makri counted 480, and Ibn Dhu'aym (above) gives in addition to the incomplete list of djami's a list of 472 mosques, not including madrasas, khanaqahs etc.; the figure given by Makri is smaller. The fantastic figure of 30,000 for Baghdad is found as early as Ya'qub (R.G.A., vii. 250). It is also an exaggeration when Ibn Dhu'aym was told in
Alessandria that there were 12,000 or 8,000 mosques there (p. 43). In Bassra where Ziyād built 7 mosques (B.G.A., v. 191), the number also increased rapidly, so that in 700 AD (B.G.A., vii. 361). In Damascus, Ibn ‘Asākir (d. 571 = 1176) counted 241 within and 148 outside the city (F.λ. Ser. 9, vii. 383). In Palermo Ibn Hawkal counted over 300 and in a village above it 200 mosques. In some streets there were as many as 20 mosques within a bowshot of one another; this multiplicity is condemned: everyone wanted to build a mosque for himself (Ya‘qūt, i. 719; iii. 409, 410). As a matter of fact, one can almost say that things tended this way; Ya‘qūt mentions in Baghdad a mosque for the Anbari officials of the tax-office (B.G.A., viii. 245) and several distinguished scholars practically had their own mosques. It occasionally happened that devout private individuals founded mosques. In 672 Tālāl al-Din built a mosque and a separate chamber in which he performed the ṣalāt alone and meditated (Ma‘ṣūrī, iv. 90). The mosques thus founded were very often called after their founders, and memorial and tomb mosques after the person to be commemorated. Sometimes a mosque is called after some devout man who lived in it (Ma‘ṣūrī, iv. 97, 265 ᵇ.γ.: ), and a madrasa might be called after its head or a teacher (ibid., iv. 235; Ya‘qūt, Uṣūl, vii. 82). Lastly a mosque might take its name from its situation or from some feature of the building.

6. Al-Muṣallā.

In addition to the mosques proper, al-Ma‘ṣūrī mentions for Cairo 8 places for prayer (muṣallā) mainly at the cemetery (iv. 334 ᵇ.γ.). The word muṣallā may mean any place of prayer, therefore also mosque (cf. Sīra, ii. 119; cf. Ma‘ṣūrī, Khiṭṭat, iv. 25, 87: ; Ibn, ed. Bums, p. 91, 17; Ya‘qūt, Mu‘awwana, iv. 326, 2-3) or a particular place of prayer within a mosque (Tabari, i. 2408, 86; Bukhārī, Gāhib, bāb 17; Sa‘īd, bāb 91). In Palestine, there were many open places of prayer, provided only with a miḥrāb and marked off, but quite in the open (cf. for Tiberias, Sa‘īr Nāmeh, trans. Schofer, p. 56). It is recorded of the Prophet that he used to go out at the two festivals (al-Fitr and al-‘Aṣgha) to the place of prayer (al-muṣallā) of the Banū Salman. A lance which the Negus had presented to al-Zahrah was carried in front of him and planted before the Prophet as entreaty. Standing in front of it, he conducted the salāt, and then preached a sermon without a minbar; the rows were in front of him (Tabari, i. 1281, 58 ᵇ.γ.; Bukhārī, Tafsīr, bāb 6; Sa‘īd, bāb 90; Nu‘aym, bāb 6). He also went out to the muṣallā for the salāt al-ṣīrafi‘ (Muslim, Iṣbaḥa, tr. 1). This Muṣallā was an open space and Muhammedan is even said to have forbidden a building on it (Wüstefeld, Medina, p. 127 ᵇ.γ.). This custom of performing the salāt on a muṣallā outside the town on the two festivals became mu‘ālasa. There is evidence of the custom for several towns. In Medina however, a mosque was later built on the muṣallā (ibid., p. 128 ᵇ.γ.) which also happened in other places. An early innovation was the introduction of a minbar by Marwān (ibid., p. 128; Bukhārī, Iṣbaḥa, bāb 6). When Sa‘īd b. Abī Waqqās built a mosque in Kīra’s Tāwārīkh al-Madīna, at the festival in the year 16 it was expressly stated that

C. The Mosque as the Centre for Divine Service.

1. Sanctity of the Mosque.

The history of the mosque in the early centuries of Islam shows an increase in its sanctity which was intensified by the adoption of the traditions of the church and especially by the permutation of the cult of saints. The sanctity already associated with tombs taken over by Islam was naturally very soon transferred to the larger and more imposing mosques. The expression Ba‘is Alilah “house of God”, which at first was only used of the Ka‘ba came now be applied to any mosque (Corpus inscr. d. Zentral. All., No. 48, cf. 136, 985; Chem. Mekka, ed. Wüstenfeld, iv. 164; cf. Corpus Inscrip. Arab., i., No. 10, t. 16; Ibn al-Hādhāli, K. al-Makkah, i. 20, 233, 25, 73, ii. 45; 56; Ba‘is Rubin, ibid., i. 25, 73, ii. 56). The alteration in the original conception is illustrated by the fact that the Munā‘ir-al-Malik al-Zahrah Bahars declined to build a mosque on a place for tending camels because it was unseemly, while the mosque of the Prophet had actually been built on such a place (Ma‘ṣūrī, iv. 91; Abū Dāwūd, Sa‘īd, bāb 22).

In the house of God the Miḥrāb and the Minbar (see below) enjoyed particular sanctity, as did the tomb, especially in Medina (Bukhārī, Fadl al-Salāt fi Masjid al-Madīna wa ʾl-Madina, bāb 5). The visitors sought baraka, partly by touching the tomb or the railing round it, partly by praying
in its vicinity; at such places "prayer is heard" (Chron. Mecca, iii. 441, 442). In the Masjid al-Ka'bah in Mina, the visitor laid his head on the print of the Prophet's head, and thus obtained the (ibid., iii. 438). A mosque could be built on a site, the sanctity of which had been shown by the finding of hidden treasure (Mašqiri, iv. 75). There were often places of peculiar sanctity in mosques. In the mosques at Khaḍī and Medina, the spots where the Prophet used to stand while praying were held to be particularly blessed (Baladhurī, p. 57; Bukhārī, Saūdī, bâb 91; Wasmend, Medina, p. 65, cf. 82, 109). In other mosques, places where a saint had sat or where a divine phenomenon had taken place e.g. in the Mosque of 'Amr and in the Ashr Mosque (Mašqiri, iii. 19, 52) or the Mosque in Jerusalem (Mašqiri, B. G. A., iii, 170) were specially visited. From visitors made samāfī [q.v.] between such places in the mosque (Mašqiri, iv. 20) just as in other religions we find parents dedicating their children to the service of a sanctuary, so we find a Muslim woman vowing her child or child yet unborn to the mosque (Bukhārī, Saūdī, bâb 74; Mašqiri, iv. 20). The fact that mosques, like other sanctuaries, were sometimes found after a revelation received in a stream has already been mentioned (ibid. 5). This increase in sanctity had as a natural result that one could no longer enter a mosque at random as had been the case in the time of the Prophet. In the early Umayyad period, Christians were still allowed to enter the mosque without molestation (cf. Lammens, Me'sūma, p. 13 sq.; Goldscher, in W. Z. K. M., vel. 100 sq.). Mu'āwiyah used to sit with his Christian physician, Ibn Uthlîh, in the mosque of Damascus (Ibn Abū Usbîbhī, i. 117). According to Ahmad b. Ḥanball, the Aḥl al-Khidr (or Aḥl al-Aḥṣā) and their servants, but not polytheists, were allowed to enter the mosque of Medina (Mašmârī, iii. 339, 392). At a later date entrance was forbidden to Christians and this regulation is credited to 'Umar (Lammens, op. cit., p. 13, note 6). A strict teacher of morality like Ibn al-Hajjâj thought it unseemly that the monks who wore the mât for the mosques should be allowed to lay them in the mosque (Mašbâhî, ii. 57). Conditions were not always the same. In Hebron, Jews and Christians were admitted as payment to the sanctuary of Abraham until in 664 (1265) 'Abbas ibn Abū Bakr forbade it (Quatremère, Hist. Sult. Maml., i. 27). According to some traditions, a person in a state of ritual impurity could not enter the mosque (Abu Dâwûd, Taḥkîrâ, bâb 62; Ibn Mâjdî, Taḥkîrâ, bâb 123) and in any case only the pure could acquire merit by visiting the mosque (Muslim, Masjidî, tr. 564; Corpus iuris di Zaid b. Abi, Nî, Nî, 48), and in a later period it is specially mentioned that the word al-masjid cannot be undertaken in the mosque itself (Mašbâhî, ii. 47 infra) nor could shaving (ibid., p. 58 sq.). It is always necessary to be careful not to spit in a mosque, although some traditions which are obviously closer to the old state of affairs say, "not in the direction of the kiblah, only to the left!" (Bukhārī, Saūdī, bâb 33 sq.). The custom of taking off one's sandals in the mosque is found as early as the time of 'Abū 'UbdAllâh (second century A.D., ibid., p. 272, 65 sq.) and according to al-Maḥbûl (see below) is also mentioned by Abu Dâwûd. Al-Ṭabarî puts the custom back to the time of 'Umar (1. 2408). That it is based on an old custom observed in sanctuaries is obvious (cf. on the history of the custodii, F. Camont, Feuilles de Droit-Éthique, 1926, p. 60 sq.). The custom however seems not to have been always observed. In the viiiith century in the Mosque of the Umayyads the shoes were taken off only in the maṣṣāf, because the floor was covered with mats; but in 827 an Egyptian superintendent ordered that the mosque should only be entered with bare feet (F. A., ser. g., v. 211, 217). The visitor entering should place his right foot first and utter certain prayers with blessings on the Prophet and his family (which Muḥammad is said to have done!) and when he is inside perform two rakâ' (Bukhārī, Saūdī, bâb 47; Tāḥkîrâ, bâb 25; Muslim, Saūdī, al-Maṣṣāf, tr. 12 sq., Taḥkîrâ, i. 2454, 2532). Certain regulations for decent conduct came into being, the object of which was to preserve the dignity of the house of divine service. Public announcements about stray animals were not to be made, as the Beduins did in their houses of assembly, and one should not call out aloud and thereby disturb the meditations of the worshippers (Bukhārī, Saūdī, bâb 83; Muslim, Masjidî, tr. 13; more fully in Mašmârī, i. 19 sqq.). One should put on fine clothes for the Friday service, rub oneself with oil and perfume oneself (Bukhārī, Dinâm, bâb 3, 6, 7, 19) as was also done with Phú for the Ḥâjjâjī (Bukhārī, Ḥâjjâjî, bâb 143). A question which interested the teachers of morality was that of the admission of women to the mosques. That many did not desire their presence is evident from the hadith that one cannot prevent them as there is no ārdā connection with it, but they must not be performed (Muslim, Saūdī, bâb 29; Bukhārī, Dinâm, bâb 13; cf. Chron. Mecca, iv. 168). Other hadiths say they should leave the mosques before the men (al-Nāṣârî, Saūdī, bâb 77; cf. Abû Dâwûd, Saūdī, bâb 14, 48). Sometimes a special part of the mosque was railed off for them; for example, the governor of Mecca in 256 had ropes tied between the columns to make a separate place for women (Chron. Mecca, ii. 197 infra). According to some, women must not enter the mosque during their menstruation (Abu Dâwûd, Taḥkîrâ, bâb 92, 103; Ibn Mâjdî, Taḥkîrâ, bâb 117, 127). In Medina at the present day, at one time a wooden grille shut off a place for women (al-Batūnî, al-Muṣlihîn, p. 240). At one time the women stood at the back of the mosque here (Yâlûl, Udâbî, vi. 400). In Jerusalem there were special maṣṣāf for them (B. G. A., i. 100). Ibn al-Hajjâj would prefer to exclude them altogether and give 'Arabs as his authority for this.

Although the mosque became sacred, it could not quite cast off its old character as a place of public assembly and in consequence the mosque was visited for many other purposes than that of divine service. Not only in the time of the Umayyads was considerable business done in the mosques (Taḥkîrâ, ii. 1118; cf. Lammens, Zaidî, p. 98) which is quite in keeping with the hadith (Bukhārî, Saūdī, bâb 70 sq.) which, actually found it necessary to forbid the sale of wine in the mosque (ibid., bâb 73), but a writer in the viiith century, Ibn al-Hajjâj, records with disapproval that business was done in the mosques: women sit in the mosques and sell thread, in Mecca hawkers even call their wares in the mosque. The list given by
this author gives one the impression of a regular market-place (Ma'thad, ii. 34). Strangers could always sit down in a mosque and talk with one another (see E.C.E., iii. 205); they had the right to spend the night in the mosque; according to some, however, only if there was no other shelter available (Ma'thad, ii. 35 infra, 49 supra; see below D. 1b). It naturally came about that people also ate in the mosque; this was quite common, and regular banquets were even given in them (e.g. Makriti, iv. 67, 121; cf.: in Hadith: Ibn Majah, At'ima, b. 24, 29; Aḥmad b. Ḥa扎实, ii. 106, 106, 2030, from below). Ibn al-Haḍjīdji laments that in al-Aksa people even threw the remains of their repast in the mosque; animals were brought in, and beggars and water-carriers called aloud in them etc. (Ma'thad, i. 53 supra). It is even mentioned as a sign of the special piety of al-Shirazi (d. 476 = 1083) that he often brought food into the mosque and consumed it there with his pipe (Wüstenfeld, Der Indam Schafi, iii. 298). Gradually the mosques acquired greater numbers of residents (see D. 2b). In the Al-Arba Mosque it was the custom with many to spend the summer nights there because it was cool and pleasant (Makriti, iv. 54). This was the state of affairs about 800 a.d. Similar conditions still prevail in the mosques.

2. The Mosque as a Place of Prayer. Friday Mosques.

As places for divine service, the mosques are primarily "houses of which God has permitted that they be erected and that His name be mentioned in them" (Šura, xxiv. 36), i.e. for His service demanded by the law, for ceremonies of worship (Manahi), for assemblies for prayer (Disna), and other religious duties (cf. Chron. Mekh., ii. 164). The mosques were mawāla (Makriti, iv. 117, 140). In Medina after a journey, the Prophet went at once to the mosque and performed two rak'a's, a custom which was imitated by others and became the rule (Bukhari, Salat, bāb 59); Muslim, Šaḥi al-Maṣājid, tr. 11; Ṣa'ādī al-Muḥaddihin, p. 412, 436). In this respect the mosque served exactly the same public in worship similar to that of the Ka'ba in Mecca at an earlier date and the Rabba sanctuaries in Ẓafar. The daily salāta, which in themselves could be performed anywhere, became especially meritorious when they were performed in mosques, because they expressed adherence to the community. A salāta al-aṭlāma, we are told, is twenty or twenty-five times as meritorious as the salāt of an individual at home or in his shop (Muslim, Maṣājid, tr. 42; Bukhari, Ši'rū, bāb 87; Bukhari, bāb 49). There are even hadiths which condemn private salāta: "Those who perform the Šafr in their houses abandon the sunna of the Prophet" (Muslim, Maṣājid, tr. 44; cf. 48; Bukhari, Ši'rū, bāb 52). If much rain falls, the believers may, however, worship in their houses (Bukhari, Qiyama, bāb 14). In this connection a blind man was given a special rak'a; it is particularly hard to leave the mosque after the as-Siyam (Muslim, Maṣājid, tr. 45). It is therefore very meritorious to go to the mosque; for every step one advances into the mosque, he receives forgiveness of sins, God protects him at the last judgment and the angels also assist him (Muslim, Maṣājid, bāb 49; 51; Bukhari, Ši'rū, bāb 87; Ṣa'ādī, bāb 30, 37; Qiyama, bāb 4, 18, 31; Corpus inus et Zaid b. Ali, No. 48, 156, 983). This holds especially of the Friday salāt (Salat al-Qa'im), which can only be performed in the mosque and is obligatory upon every free male Muslim who has reached years of discretion (cf. Junboll, Handbuch, p. 86; Goldi, Sommario del Diritto Maltsiuti, i. 105 supra). According to Ibn Hāshim (p. 290) this salāt, which is distinguished by the khutba, was observed in Medina even before the Hijra. This is hardly probable and besides is not in agreement with other hadiths (see Bukhari, Qiyama, bāb 11) but the origin of this divine service, referred to in Šura ix. 9, is obscure. The assemblies of the Jews and Christians on a particular day must have formed the model (cf. Bukhari, Qiyama, bāb 11). Its importance in the earlier period lay in the fact that all elements of the Muslim camp, who usually went to the tribal and particular mosques, assembled for it in the chief mosque under the leadership of the general. The chief mosque, which for this reason was particularly large, was given a significant name. They talk of al-Masjid al-Qa'im (Tabari, i. 2494: ii. 734, 1701, 1702, Kifā: Baladhuri, p. 5; Tabari, Taṣrif, xi. 21, centrum; ibid. also al-Masjid al-Qa'im, Medina; cf. al-Masjid al-Bahr, B. G. A., vii. 245) or Masjid al-Qa'im (Yākuti, iii. 806, al-Fusṭāṭi, also Tabari, i. 1119; Ibn Kutabah, Ma'dar, ed. Wüstenfeld, p. 106); Masjid al-Qa'im (Makriti, iv. 4); Masjid Qa'im (Baladhuri, p. 289, Madinah; Yākuti, l. 643, 647, Baṣra); then Masjid al-Qa'im (Yākuti, iii. 899, iv. 885; B. G. A., ii. 298, 343, 387; viii. 110). As an abbreviation we find also al-Qa'im (Yākuti, i. 400; Ibn Baṭṭa, iv. 543; cf. Masjid al-Qa'im, Baladhuri, p. 348) and especially Qa'im. As the khutba was the distinguishing feature, we also find Masjid al-Kutba (Makriti, iv. 44, 64, 87), Qa'im al-Kutba (Ṭahari, iv. 55) or Masjid al-Mihrab (B. G. A., i. 316 for Qa'im, i. 8).

Linguistic usage varied somewhat in course of time with conditions. In the time of Umar there was properly in every town only one Masjid Qa'im for the Friday service. But when the community became no longer a military camp and Islam replaced the previous religion of the people, a need for a number of mosques for the Friday service was bound to arise. This demanded mosques for the Friday service in the country, in the villages on the one hand and several Friday mosques in the towns on the other. This meant in both cases an innovation, compared with old conditions, and thus there arose some degree of uncertainty. The Friday service had to be conducted by the ruler of the community, but there was only one governor in each province; on the other hand, the demands of the time could hardly be resisted and, besides, the Christian converts to Islam had been used to a solemn weekly service. As to the villages (al-Qa'im), Amir b. al-Aṣ in Egypt forbade their inhabitants to celebrate the Friday service for the reason just mentioned (Makriti, iv. 7). At a later period then the khutba was delivered exceptionally, without minbar and only with staff, until Marwan in 132 introduced the minbar into the Egyptian Salat al-Sab to place it in the qabba (Tabari, i. 2451). Of a mosque in which a minbar had been placed, we are told that a minbar is called ṣa'ya Qa'im (Bukhari, Qa'im, bāb 15; cf. Madina Qa'im, B. G. A., ii. 321), an idea which was regarded by Bukhari (d. 256 = 870).
as quite obvious. In introducing minbars into the Egyptian villages, Muraw was apparently following the example of other regions. In the fourteenth century, Ibn Hawkal mentions a number of minbars in the district of Iskakh (B.G.A., ii. 182 sq.), and a few in the vicinity of Marw (ibid., p. 316) and in Transoxiana (ibid., p. 378; cf. p. 384), and al-Makdisi does the same for other districts of Persia (B.G.A., iii. 309, 317) and he definitely says that the Turks of Palestine are gharr minabar (ibid., p. 176; cf. l. 58); Balkhwar (p. 331) also uses the same minbar for a village mosque built in 235; in general, when speaking of the great mosque, there is talk of manabar and not of guriyim (cf. B.G.A., i. 63). Later however the term Madjdi (gurj) is used for a Friday mosque (Ibn Tubair, p. 217). The conditions of primitive Islam are reflected in the teaching of the Hanafis, who only permit the Friday service in large towns (cf. al-Mawardi, al-Mahasin al-Sultaniya, ed. Enger, p. 177).

As to the towns, the Sharifs on the other hand have retained the original conditions, since they permit the Friday service in only one mosque in each town (cf. Jaw'ma and cf. cihat, p. 178 sq.), but with the reservation that the mosque is able to hold the community. The distinction between the two rites was of importance in Egypt. When in 569 Shâh al-Din became supreme in Egypt, he appointed a Sharif's chief khatif and the Friday service was therefore held only in the Hâkim mosque, as the largest; but in 665 (1266) al-Malik al-Dhâhir Ri'âz gave the Hanafi preference and many mosques were therefore used as Friday mosques (Makrizi, iv. 52 sq.). in-Suyuti, from al-Muqaddas, i. 140; Quotsaouters, Histi, Salt, Maml. (ii. 39 sq.). During the Cuzzbell period and to some extent in the A'bdâli period, the number of gurijim in the towns were still very small. The geographers of the third and fourth centuries in their descriptions of towns as a rule mention only the gurjim (Ibn al-Fakhr, c. 290 (903), sometimes says mansur gurjim wa-minabar, B.G.A., v. 304-306, also minbar simply, p. 305. In keeping with the oldest scheme of town planning, it was very often in the middle of the town surrounded by the business quarters (B.G.A., ii. 298, 325; iii. 274 sq., 275, 280, 314, 316, 375, 376, 415, 426, 427 etc.; Makrizi, Khurasan, ed. Schefe, p. 35, 41, 50) and the dar al-tamara was still frequently in the immediate vicinity of the chief mosque (B.G.A., ii. 298, 314; iii. 426).

Istakhri mentions as an innovation in Islam that al-Majduli built a gurjim in al-Wasi in 1240, although there was already one on the east bank (B.G.A., i. 82 sq.; cf. iii. 118; viii. 358). Ibn Tubair (Ribba, p. 211 sq.) mentions only one gurjim in Kufa, called Mansur al-Kuфа by Ibn al-Fakhr, although he also mentions other mosques (B.G.A., v. 173; cf. 174, 183 and iii. 116). In Bagdad where Yahâk (278 = 891) already mentions 7,000 mosques (B.G.A., viii. 351), al-Majduli (375 = 985) gives 3 gurijim (B.G.A., iii. 117). In Samarra', among many mosques, there was one gurjim (Ibn al-Fakhr, vii. 258, 259), which was later replaced by another (ibid., p. 260 sq.); al-Mutawakkil also built one outside the original town (ibid., p. 256; see also T. Schwarb, Die Abdarinstudien (1939, p. 32). In Baghdad, Yahâk (278 = 891) mentions only one gurjim for the eastern town and one for the western (B.G.A., vii. 240, 245, 251, 253; the almost contemporary Ibn Rosti just mentions the old western town and its gurjim, ibid., p. 109) although he gives the fantastic figures of 13,000 mosques in the east town (ibid., p. 254) and 30,000 in the west (or in the whole region, ibid., p. 250). After 820 there was added the gurjim of the eastern palace of the caliphs (Mez, Renan, p. 385 quoting al-Kharm al-Baghdadî, Tadhkira Baghda'dî, a private gurjim of Hârîn al-Râshîd in the Bustan Ummal Musulmi is mentioned by Ibn al-Khi, Tadhkira al-Hâmîma, ed. Liperti, p. 433 infra). These 3 gurijim are mentioned about 340 (951) by Istakhri (B.G.A., i. 84), who also mentions one in the suburb of Qalwâd, Ibn Hawkal in 367 (977) mentions the latter and also the gurjim al-Bârî (B.G.A., i. 164 sq., of 329; Mez, loc. cit.), a fifth was added in 379, a sixth in 383 (Mez, p. 389); thus al-Khâshî al-Baghdadî in 450 (1058) gives 4 for West Baghdad, 2 for the east town (cf. Le Strange, Bagdâdî, p. 324). Ibn Tubair in 581 (1185) gives in the east town 3, and 11 gurijim (Ribba, p. 225 sq.) for the whole of the Bagdad region. For Cairo, Istakhri gives two gurijim: the 'Amr al-Mu'in mosque (B.G.A., i. 49) besides that in al-Karbâa, which was mentioned as a separate town (cf. Ibn Rosti, p. 290 = 903, B.G.A., vii. 116 sq.). al-Makdisi, who writes that 395 (985) shortly after the Fatimid conquest, mentions the 'Amr and al-Mu'in mosques, the new mosque in al-Khâria (al-A'zûr), also one in al-Djama, in Djem al-Karbâa (B.G.A., ii. 198-200, 209; the gurjim in al-Djama, also gurjim Mikyân al-Makrizi, ih. 75), is mentioned in an inscription of the year 485; see van Berchem, Corpus, i, N9 39). As these places were all originally separate towns, the principle was not abandoned that each town had only one gurjim. The Fatimids however extended the use of Friday mosques and, in addition to those already mentioned, used the gurjim al-Jâkîn, al-Mâkîn and al-Râshida (Makrizi, iv. 2 sq.) and Jaub al-Khusrâw in 439 (1047) mentions in one passage the gurijim of Cairo, in another seven for Miṣr and eleven in all (cf. Schefe, p. 134 sq., 147). This was altered in 569 by Shâh al-Din (see above) but the kingdom, being still regarded as separate towns, retained their own Friday mosques (cf. for the year 607 in al-Karâa: Makrizi, Khurasan, p. 125).

After the Friday service in Egypt and Syria was freed from restriction, the number of gurijim increased very much. Ibn Dundzlit (about 900) gives a list of only eight gurijim in Cairo (cf. Volter, p. 59-75), but this list is apparently only a fragment (in all he mentions something over twenty in the part of his book that has survived); al-Makrizi (d. 843 = 1442) gives 130 gurijim (iv. 2 sq.) and in Damascus, where Ibn al-Jâzir still spoke of 'the gurjim', al-Makrizi (d. 1521) gives twenty gurijim (7 sq., ii. 317 sq.), and according to Ibn Bâji'âta, there were in all the villages in the region of Damascus marjât al-gurjim (i. 256). The word gurjim in Makrizi always means a mosque in which the Friday service was held (ibid., 76, 115 sq.), but by his time this meant any mosque of some importance. He himself criticizes the fact that since 799 the jât al-gurjîa was performed in al-A'zûr, although another gurjim stood close beside it (ibid., 76; cf. also 86).

The great spread of Friday mosques was reflected in the language. While inscriptions of the eighth century still call quite large mosques marjât, in
3. Other religious activities in the mosque.

"The mentioning of the name of God" in the mosques, was not confined only to the official ritual ceremonies. Even in the time of the Prophet, we are told that he lodged Thāqīfī delegates in the mosque so that they could see the rows of worshippers and hear the nightly recitation (Waḥāki-Welshhausen, p. 382). Although this story (which is not given in Ibn Hishām, p. 916) may simply be a reflection of later conditions, the recitation of the Qur'ān must have come to be considered an edifying and pious work at quite an early date. In the time of Maḥdi, the Qur'ān was recited in the mosques on Fridays in the daytime, in the early morning and recited till the 17th of the month (B.G.A., iii. 348), and the same author tells us that in the Mosque of 'Amar in Egypt the "asimūt al-kūrā" sat in circles every evening and recited (Ibid., p. 205). In the time of Ibn Dūbair, there were recitations of the Qur'ān in the Umayyad mosque after the ṣaḥābah and every afternoon after the ṣaḥābah (Khdā, p. 271 sq.). Besides the recitation of the Qur'ān there were praises of God, etc., that is chanted as dāhir, and which was particularly cultivated by Ṣifārīn. This form of worship also took place in the mosque. The 'Alī al-Tawāfīd wa' t-Mawṣīfīn formed nāfūsīs al-dāhir, who assembled in the mosques (al-Makkī, Ḳūṭ al-Kulṭī, i. 152). In the Mosque of the Fatimids and other mosques of Damascus, dāhir was held during the morning on Friday (Māqīdī, p. 49). In the Maqīd al-Abāṣī the Hanafis held dāhir, and recited at the same time from a book (B.G.A., iii. 182). In Egypt, Ahmad b. 'Uṯmān and Khānūnāwī allowed twelve merchants to set up in the mosque near the minaret to praise God, and during the night four of them took turns to praise God with recitations of the Qur'ān and with pious kāfālas. From the time of Ṣaḥīh al-Dīn an orthodox 'āṣīdā was recited by the mu'addhinīn in the night (Ibid., p. 49). Ibn al-Hādīdī claims that the recitation of the Qur'ān alone should take place in a mosque for the special purpose (masnūn masjīd) as otherwise pious visitors are disturbed (Māqīdī, ii. 53, 67). Mosques and particularly mausoleums had as a rule regularly appointed reciters of the Qur'ān. In addition there was, e.g. in Hebron and in a mosque in Damascus, a shāhiq who had to recite Būkhārī (or also Muslim) for three months (Sauvaget, Hist. Juris. Hbū, p. 17; J.A., ser. 9, iii. 261). In Tunis, al-Būkhārī was read daily in a hospital (Zarkašī, travel, Fugān, Rec. Soc. Arch. Constantiæ, 1834, p. 188).

Sermons were not only delivered at the salāt al-salaat. In the 'Irāq, even in al-Maḥdi's time, one was preached every morning, according to the wāza of Ibn 'Abbās (B.G.A., iii. 150), it was said. Ibn Dūbair, in the Niyāmīyya in Baghdis, heard the šāhīq recite a Friday sermon after the 'ṣalāt on the mimbar. His sermon was accomplished with the skilled recitation of the kūrās who sat on chairs; they were over twenty in number (Ibn Dūbair, p. 219-222). In the same way, the calls of the mu'addhinīn to prayer to the Friday khutba were delivered to a musical accompaniment (see below, II. 4). The unofficial sermons, which moreover were not delivered in mosques alone, were usually delivered by a special class, the kashfīs (plur. of kashfī), (on these cf. Goldsichier, Muh. Stud., ii. 161 sqq.; Mes. Die Renaissance des Islams, p. 314 sqq., and the article kusīq). The kusīq, who delivered edifying addresses and told popular stories, were early admitted to the mosques.

Tamin al-Dūrī is said to have been the first of these in Medina in the caliphate of 'Umar before the latter's decease, he used to deliver his sermons at the Friday salāt and under 'Umar he was allowed to talk twice a week in the mosque; in the reign of 'Alī and of Mu'sāiyya the kusīq were employed to curse the other side (Maḥīzī, iv. 16 sqq.). In the Mosque of 'Amr in Cairo by the year 38 or 39, a kashfī was appointed, named Sulīmān b. Ṭīr al-Tūfīdī, who was also kāfī (Ibid., iv. 17 wrongly: Sulaimān; Kīndī, Government and Judges, ed. Guest, p. 303 sqq.). There are other occurrences of the combination of the two names (Ibn Ḥudaijār [d. 83], Kīndī, p. 317; Khārīr b. Ṣu'ānī in the year 120, ibid., p. 348; cf. Ḥusayn al-Muḥammadī, i. 134, Dībārī, according to Thawbah b. Ni'am, Ḳātī, i. 136 infra; ʿĪbārī, Ḳīdūrī, Ḳāfī al-Kārī [d. 304], Kīndī, p. 427; see also Maḥīzī, iv. 15) which shows that the office of kashfī was quite an official one. There is also evidence of the employment of kusīq in the mosque of the Irāq in the 'Abbāsīd period (Yākūt, Usūlī, iv. 268; v. 446). The kusīq read from the Qur'ān standing and then delivered an explanatory and edifying discourse, the object of which was to instil the fear of God into the people (Maḥīzī, iv. 18). Under the Fātimids also, kusīq were appointed to the mosques; for example, in 405 the Imam undertook to officiate in the mosque of 'Amr (Maḥīzī, iv. 18 infra) and the rulers had also a kāfī in the palace. The kāfīs were called ṣāḥib al-karāzī, because they delivered their discourses on the kūrās (al-Makkī, Ḳūṭ al-Kulṭī, i. 152; Ibn al-Hādīdī, Māqīdī, i. 159; cf. Maḥīzī, iv. 121). Their discourse was called dāhir or wa'īr wa'īrī, whence the kāfī was also called mu'addhin. (B.G.A., iii. 205) or wa'īr. Specimens of their discourses are given by Ibn 'Abd Rabbihi (al-Tūbī al-farīd, Cairo 1321, i. p. 294 sqq.). It was not only the appointed officials who delivered such discourses in the mosque. Ascetics made
public appearances in various mosques and collected
interested benedictions around them (cf. e.g. Makrizi, iv. 135). In the Djami al-Karafa, a whole society,
the Banu Djarbati, delivered wa's discourses on a
curfet for three months on end; their servant
collected money in a begging-bowl during the
discourse and the shahid distributed some of it
among the poor (ibid., iv. 121).

The qaswa was completely taken over by popular
Sufiim and later writers would hardly reckon,
as al-Makki does, the "story-tellers" among the
mutakallimin (Kitt al-Kulliyy, i. 152). The whole
system degenerated to trickery and charlatanry of
all kinds, as may be seen in the Maqasima literature
(cf. thron Vak't, Ufad, iv. 167 sqq. and see also
Maz and Goldstahler, op. cit. ). Al-Makriy therefore
distinguishes between al-khawas al-khatiba, the
regular and seemingly dignified discourse in the mosque,
and al-khawas al-'amma, which consisted in the
people gathering round all kinds of speakers, which is
mahbur (Makrizi, iv. 17). Others also have
recorded their objections to the khawas Ibn al-
Hashid uttering a warning against them and wants to
forbid their activities in the mosque completely,
having his deliver "weak" narratives (Madhabh, l. 150 sqq.; ibid. 153, 50). He says Ibn 'Umar, Mazik
and Abi Alwood rejected them and "Ali ejected them
from the masjid of Basra. It is
of little significance that al-Makrizi in 254 forbade
them to sit in the mosques and forbade people
to gather round them, for he issued a similar
interdict against the fakahah and the reasons were
evidently political (Tabari, ii. 2165); it was for
political reasons also, but with a very different
motivation, that 'Abd al-Daula forbade their appearing
publicly in Bagdad shortly before 400, because
they increased the tension between Summis and
Shi'is (Maz, op. cit., p. 319). As late as 580 the
wara' was still flourished in the mosques of Bagdad,
as is evident from the bihe of Ibn Djibari
(p. 219 sqq., 224), and in the ninth century there
was in the Azhar mosque a maqallia al-'amal as
well as a fakahah al-supir (Makrizi, iv. 54).

When Ibn al-Hajjji denounces speaking aloud
in the mosques, it is in the interest of the pious
visitors who are engaged in religious worries and
meditation. Pitha q. v. retirement to a
mosque for a period, was adopted into Islam from
the older religions.

The word 'abk means in the Karan the
ceremonial worship of the object of the cult (Suru vii.
134: xx. 93, 97; xxii. 53, 74; cf. Hadijismayid, ed. Horovitz, p. 86, 13) and also the
ritual stay in the sanctuary, which was done for
example in the Meccan temple (Suru ii. 119; xxii.
25). In this connection it is laid down in the
Koran that in the month of Ramadan believers
must not touch their wives "while ye pass in the
mosque" (khaf'un fil-masjid, Surra ii. 183), an expression which shows, firstly
that there were already a number of mosques in the
lifetime of the Prophet and secondly that these
had already to some extent taken over the character
of the temple. The connection with the early period is
evident from a hadith, according to which the
Prophet decides that 'Umar must carry out
worship in one night in the Masjid al-Dirham made in the Hijaliya (Bukhari, I'tikaf,
hb. 3, 15 sqq.; Fawo al-Kuran, hbb. 19; Makrizi,
hb. 341, 344; see 'I-Nuhab, hbb. 29). It is
completely in keeping with this that the Prophet,
according to the hadith, used to spend ten days
of the month of Ramadan in the Fath in the mosque of
Medina (Bukhari, I'tikaf, hbb. 1; Fawo al-Kuran al-Kadw, hbb. 3), and in the year in which he
died as many as twenty days (Ibid., I'tikaf, hbb. 17).
During this period the mosque was full of
booths of palm branches and leaves in which the
shahids lived (Ibid., hbb. 13; cf. 6, 7). The Prophet
only went to his house for some very special
reason (Ibid., hbb. 3). This custom was associated with
the asceticism of the monks. The faithful
were vexed, when on one occasion he received
Safiya in his booth and chaffed for an hour
with her (Bukhari, Fawo al-Kuran, hbb. 4:
I'tikaf, hbb. 8, 11, 12). According to another
tradition, his I'tikaf was broken on another occasion
by his wives putting up their tents beside him and
he postponed his I'tikaf till Shawwal (Bukhari,
I'tikaf, hbb. 6, 7, 14, 18). According to Zaid b.
'Ali, the I'tikaf can only be observed in a chief
mosque (djami) (Corpus juri di Zaid b. 'Ali,
N1. 447). During the early period, it was one of
the initiatory rites for new converts. In the
year 14. 'Umar ordered the retreat (al-siyum) in
the mosques during the month of Ramadan
for the people of Medina and the provinces (Tabari,
i. 2377). The custom persisted and has always been
an important one among ascetics. "The man
who retires for a time to the mosque devotes
himself in turn to salat, recitation of the Kur'an,
meditation, dhikr etc." says Ibn al-Hajjji (Madhabh,
i. 50). There were pious people, who spent their
whole time in a mosque (shahada filhi; Makrizi,
i. 97). of one we were told that he spent
his time in the mosque of the of Amr
(Fathas, ibid., p. 44). Al-Samhudi says that during
the month of Ramadan, he spent day and night
in the mosque (Wustenfeld, Medina, p. 93). Sa'd
al-Din (4. 644) spent the month of Ramadan
in the Mosque of the Unayzah without speaking
(Ibn Abi Usbaha, ii. 192). Nocturnal vigils in
the mosque very early became an established
practice in Islam. According to Hadith, the Prophet
frequently held nocturnal salats in the mosque with
the believers (Bukhari, Djami'a, hbb. 29) and by
his orders 'Abd Allah b. Unais al-Ansari came from
the desert for twenty-three successive nights to pass
the night in his mosque in rites of worship (Ibn
Knatila, Masa'if, ed. Wustenfeld, p. 142 sqq.);
Out of this developed the tahajjuda [v. q. v.], particularly recommended in the law and notably the tarawih
salats [v. q. v.]. In Dimi on these occasions
women singers actually took part (Ibn
Bartria, iii. 155).

During the nights of the month of Ramadan
there were festivities in the mosques and on other
occasions also, such as the New Year, sometimes
at the new moon, and in the middle of the month.
The mosque on these occasions was illuminated;
it was eating and drinking; incense was burned
and dhikr and tarwih performed.

The Friday Salat was particularly solemn in
Ramadan, and in the Hijri period, the calliph
himself delivered the khutbah (see Makrizi, ii.
345 sqq.; Ibn Taghirib, ii/1, ed. Juyubill, p. 482-
486 and ii/1, ed. Pepper, p. 331—333). The
mosques associated with a saint had and still
have their special festivals on its mausoleum [q. v.];
they also are celebrated with dhikr, tarwih etc.
(cf. Lane, Manners and Customs, ch. xxiv, 449).
The saint's festivals are usually local and there
are generally differences in the local customs. In the Maghrib for example in certain places the month of Ramadhan is opened with a blast of trumpets from the masjid (Masjidul, ii, 69).

The mosque thus on the whole took over the role of the temple. The rulers from Umars onwards dedicated gifts to the Kaaba (B. G. A., v. 20 sq. and GI., s.v. Shawala), and as in other sanctuaries we find women vowing children to the service of the mosque (Bukhari, Sahih, bab 74; Makrizi, iv. 20). The word 'was performed, as at the Kaaba, in mosques with saints' tombs as is still done, e.g. in Hebron. Muddasir bin Dun recognized a pre-Islamic custom in this (Sauvart, Hist. des M. et de Tiberias, p. 5). Especially important business was done here. In times of trouble the people went to the mosque to pray for help, for example during drought, for which there is a special salat (which however usually takes place on the musalla), in misfortunes of all kinds (e.g. Wustenfeld, Medina, p. 19-20; Makrizi, iv. 57); in time of plague and pestilence, processions, weeping and praying with Kur'ans uplifted, were held in the mosques or on the musalla, in which even Jews and Christians sometimes took part (Ibn Taghrifin, ii/ii, ed. Popper, p. 67; Ibn Battuta, i, 243 sq.; cf. Quatremere, Hist. Sult. Man., ii/ii, 35, 40; ii/ii, 199) or for a period a sacred book like Bukhari's Sahih was recited (Quatremere, op. cit., ii/ii, 35; al-Djabarti, Merovii Historiae Mahometicae, French transl., ii, 43). In the courtyards of the mosques in Jerusalem and Damascus in the time of Ibn Assar sul-lemena penance was done on the day of 'Arafa (6th Safar), an ancient custom which had already been introduced into Egypt in the year 27 by Abul al-Anz b. Marwan (jazir after the 'Aqiq, cf. Kiudi, Wustet, p. 50). Certain mosques were visited by barren women (Wustenfeld, Medina, p. 135). An oath is particularly binding if it is taken in a mosque (cf. Joh. Pedersen, Der Eid bei den Semiten, p. 144); this is particularly true of the Kaaba, where written covenants were also drawn up to make them more binding (ibid., p. 143 sqq.; Chrom. Mecca, i, 160 sqq.). It is in keeping with this idea of an oath that Jews who had adopted Islam in Cairo had to take oaths in a synagogue which had become a mosque (Makrizi, iv, 265). The contract of matrimony ( dokładnie) is also often concluded in a mosque (San-tillana, Il Mushtasir, ii, 548; Madhkhali, ii, 72 infra; Sanouk Hurongraca, Mecca, iii, 163 sqq.), and the particular form of divorce which is concluded by the Nasi (q.v.) takes place in the mosque (Bukhari, Sahih, bab 44; cf. Joh. Pedersen, Der Eid etc., p. 114).

It is disputed whether a corpse may be brought into the mosque and the salat al-dinawr performed there. According to one hadith, the bier of Sa'd b. Abi Waqqas was taken into the mosque at the request of the Prophet's widow and the salat held there. Many disapproved of this, but 'Abd al-Malik pointed out that the Prophet had done this with the body of Sayf b. Bajik (Mshinid, tr. 341, cf. also Ibn Sa'd, i, 14 sqq.). The discussion on this point is not unconnected with the discussions regarding the worship of tombs. In theory this is permitted by al-Shafi'i, while the others forbid it (see Juynib, Handbuch, p. 170; I. Ghali, Il Mushtasir, i, 151). The matter does not seem to be quite clear, for Kuth al-Din says that only Abul Hanifa forbids it, but he himself thought that it might be allowable on the authority of a statement by Abul Yussuf (Chrom. Mecca, iii, 208-210). In any case, it was a very general practice to allow it, as Kuth al-Din also points out. Qutb conducted the funeral salat for Abul Bakr in the Mosque of the Prophet and Umars own dead body was brought there; later it became a general custom to perform the ceremony in Medina close to the Prophet's tomb and in Mecca at the door of the Kaaba; some even made a seventeenth salat with the corpse around the Kaaba. This was for a time forbidden by Marwan b. Abul-Hakam and later by Umara b. Abul-Aziz (Kuth al-Din, ii, 36; Wustenfeld, Medina, p. 77). The custom was very early introduced into the Mosque of 'Amr (Makrizi, iv, 7, sqq.). That later scholars often went wrong about the prohibition is not at all remarkable; for it is not at all in keeping with the ever increasing tendency to found mosques at tombs. Even Ibn al-Hajjaj, who was anxious to maintain the prohibition, is not quite sure and really only forbids the loud calling of the sura (Mshinid, ii, 50 sqq., 64, 81). When a son of Sulaiman al-Ma'ayyad died and was buried in the eastern kubba of the 'Umayyad mosque, the khaqan delivered a khutba and conducted the salat thereafter and the sura recited for a week at the grave, while the amirs paid their visits to the grave (Makrizi, iv, 246, sqq.). In Persia, it was the custom for the familia of the deceased to sit in the mosque for three days after the death and receive visits of condolence (B. G. A., iii, 440 infra).

4. Mosques as Objects of Pilgrimage.

As soon as the mosque became a regular sanctuary it became the object of pious visits. This holds especially of the memorial mosques associated with the Prophet and other saints. Among them three soon became special objects of pilgrimage. In a hadith the Prophet says: One should only mount into the saddle to visit three mosques: al-Masjid al-Haram, the Mosque of the Prophet and al-Masjid al-Aqsa (Bukhari, Passal Salat fi Masjad Masjid Miska wa/i-Medina, bab 16; Dziakini, i, 351, bab 25; Ibrani, bab 67; Muslim, Haddi, tr. 93; Chrom. Mecca, i, 303). This hadith reflects a practice which only became established at the end of the 'Umayyad period. The pilgrimage to Mecca had been made a duty by the prescription of the Haddi in the Kur'an. The pilgrimage to Jerusalem was a Christian custom which could very easily be continued, on account of the significance of al-Masjid al-Aqsa in the Kur'an. This custom became particularly important when Abul al-Malik made it a substitute for the pilgrimage to Mecca (Ya'qub, ed. Houtsoum, ii, 311). Although this competition did not last long, the significance of Jerusalem was thereby greatly increased. Pilgrimage to Medina developed out of the increasing reverence for the Prophet. In the year 144 Abul Dja'far Mansur on his hadj visited the three sanctuaries (Talutari, iii, 129) and this became a very usual custom. Mecca and Medina however still held the preference. Although those of Mecca and Jerusalem were recognized as the two oldest (the one is said to be 40 years older than the other; Muslim, Masjid, tr. 1; Chrom. Mecca, i, 301), the Prophet however is reputed to have said: A salat in this
mosque is more meritorious than 1,000 salâts in others, even the al-Masjid al-Haranî" (Buhttîrî, Fosî al-Salât fi Masjid Makka wa 'l-Madîna, bâb 1; Muslim, Hudâjî, tr. 89; Chron. Makka, i. 305). The ḥadîth is aimed directly against Jerusalem and therefore probably dates from the Omayyad period. According to some, it was pronounced because someone had commended performing the salât in Jerusalem, which the Prophet was against (Muslim, loc. cit.; Wâkidî-Wellhausen, p. 349). The three mosques however retained their pride of place (Ibn Khaïdâm, Masjidîm,tfoot 6; Ibn al-Haḍîjjî, Maṣbâḥal, ii, 35), and as late as 662 (1264) we find Balîbîs founding ṣawâfî for pilgrims who wished to go on foot to Jerusalem (Quatremère, Hist. Sult. Maml., i, 1, 248).

Although these three mosques officially held a special position, others also are highly recommended, e.g. the mosque in Kûbâl (see Al-Maṣâma). A salât in this mosque is said to be as valuable as an 'umra or two visits to the mosque in Jerusalem (Uyaybâoki, Ahamî, i. 381 et al.). Attempts were also made to raise the mosque of Kûba to the level of the three. It is said to have had some one who wanted to make a pilgrimage from Kûfa to Jerusalem that he should stick by the mosque of his native town, it was "one of the four mosques" and two rakâ'îs in it were equal to ten in others (B. G. A., v. 173 et al.; Yâkût, Muṣjam, iv, 325); in another tradition, salâts in the provincial mosques are said to be of general worth as much as the pilgrimage (Maktrî, iv, 4), and traditions arose about the special blessings associated at definite times with different holy places of Islam (B. G. A., iii, 183) and especially about their superior merits (B. G. A., v. 174). The Meccan sanctuary, however, always retained first place, which was marked by the Ḥaḍîjî. It was imitated by al-Mutsawakkîl in Sâmarra'; he built a Kûbâ as well as a Miṣâ and an 'Arafa there and made his amirs perform their ḥaḍîjî there (B. G. A., iii, 122).

D. Equipment of the Mosque.

I. The Development of the Edifice.

Except in the case of Mecca the earliest mosques as described above (B. 1) were at first simply open spaces marked off by a ṣawâfî. The space was sometimes, as in al-Fasqî, planted with trees and usually covered with pebbles; e.g. in Medîna (Muslim, Ḥaḍîjî, tr. 95; Balâdhûrî, p. 6) and al-Fasqî (Maktrî, iv. 8; Ibn Dukma, iv. 6; Ibn Tağhîû, l. 77) which was later introduced in Byzantium and Kûfa the courtyards of which were otherwise dusty (Balâdhûrî, p. 277, 345). These conditions could only last as long as the Arabs retained their ancient customs as a closed corporation in their simple camps. The utilisation of churches was the first sign of a change and was rapidly followed by a mingling with the rest of the population and the resulting assimilation with other cultures.

Umâr made alterations in the mosques in Medîna and in Mecca also. He extended the Mosque of the Prophet by taking in the house of 'Abbâs; but like the Prophet, he still built of lâhîn, palm-trunks and leaves and extended the booths (Buhttîrî, Ṣalâtî, bâb 62; Balâdhûrî, p. 6). In Mecca also his work was confined to extending the area occupied by the mosque. He built the surrounding houses and took them down and then surrounded the area with a wall to the height of a man; the Ka'ba was thus given its fâna' like the mosque in Medîna (Balâdhûrî, p. 46; Chron. Makka, i. 306 et al.; Wâstenfeld, Medîna, p. 68 et al.). Umâr also extended these two mosques but introduced an important innovation in using hewn stone and plaster (qâfir) for the walls and pillars. For the roof he used tent (ṣâfi). The booths, which had been extended by Umâr, were replaced by him by pillared halls (rausîha, sing. rausîh) and the walls were covered with plaster (Buhttîrî, Ṣalâtî, bâb 62; Balâdhûrî, p. 65; Wâstenfeld, Medîna, p. 70 et al.). Sa'd b. Abî Wâkidî is said to have already taken similar steps to relieve the old simplicity of the barely equipped mosque in Kûfa. The ṣawâfî consisted of pillars of marble adorned in the form of Byzantine churches (Tabbîrî, l. 2495; Yâkût, iv, 324).

This was little in keeping with the simple architecture of the original town, for Byâra and Kûfa had originally been built of reeds and only after several great fires were they built of lâhîn (see above 661). Ibn Kutaibî, Mâṣfûrî, ed. Wâstenfeld, p. 270). As to Kûfa, Sa'd by 'Umâr's orders extended the mosque until it became divided with the Dûr al-Imâra. A Persian named Rusbeh b. Bûrûdûm was the architect for this. He used bricks (datîr) for the building, which he brought from Persian buildings and in the mosque he used pillars which had been taken from churches in the region of Hîrî belonging to the Persian kings; these columns were not erected at the sides but only against the Ka'ba wall. The original plan of the mosque was therefore still retained although the pillared hall, which is identical with the ṣawâfî already mentioned in 200 dîbîr broad, replaced the simple booth and the materials were better in every way (Tabbîrî, l. 2491 et al., 2494). Already under the early Caliphs we can therefore note the beginning of the adoption of a more advanced architecture.

These tendencies were very much developed under the Omâyâds. Even as early as the reign of Mu'âwiya, the mosque of Kûfâ was rebuilt by the governor Ziyâd. He commissioned a pagan architect, who had worked for 'Abbâs, to do the work. The latter had pillars brought from al-Âhwâs, bound them together with lead and iron clamps to a height of 20 dîbîr and put a roof on them. Similar halls, built of columns (here like the old booth in Medîna called ṣawâfî; Tabbîrî, l. 2493; but also ṣawâfî, pls. ërâdî; Tabbîrî, l. 235 et al.) were added by him on the north, east, and western wall. Each pillar cost him 12,000 dirhems. The mosque could now hold 80,000 instead of 40,000 (l. 2492 et al., cf. 2494; 72; Yâkût, Muṣjam, iv. 324; 9; Balâdhûrî, p. 276). Al-Haḍîjîdî added to the mosque (Yâkût, iv, 345 et al.), Ziyâd did similar work in Baýra. Here also he extended the mosque and built it of stone (or brick) and plaster and with pillars from al-Âhwâs, which were coated with lead. We are told that he made al-ṣawâfî al-mashâdîma, i.e. the ṣawâfî hall, with 5 columns. This seems to show that the other sides also were as in Kûfa, pillared halls. He erected the Dûr al-Imâra close to the kibla side. This was taken down by al-Haḍîjîdî, rebuilt by others, and finally added to the mosque by Hûrîr al-Rushîd (Balâdhûrî, p. 347, 348 supra, 349; Yâkût, l. 642, 243). In Mecca also in the same period.
similar buildings were erected. Ibn al-Zubair and al-Hādhāchī both extended the mosque, and Ibn al-Zubair was the first to put a roof on the walls; the columns were cut by 'Abd al-Malik and he made a roof of tappak (Chron. Mekka, i. 307, 309).

The Mosque of 'Amir was extended in 53 with Mus'awiyya's permission by his governor Maslama b. Mukhallad to the east and north; the walls were covered with plaster (niṣīra) and the roofs decorated; it is evident from this that here also the original booth of the south side was altered to a covered hall during the early Omayyad period.

A further extension was made in 79 in the reign of 'Abd al-Malik (Maqrizī, iv. 7, 8; Ibn Daʾūd, b. 62). Thus we find that during the early Omayyad period and in part even earlier the original simple and primitive mosques were some extended, some altered. The alteration consisted in the old simple booth of the Mosque of the Prophet being gradually enlarged and transformed into a pillared hall with the assistance of the craft of architects possessing a higher degree of civilization. In this way what has essentially been an open place of assembly developed imperceptibly into a court, surrounded by pillared halls. Very soon a fountain was put in the centre of the court and we now have the usual type of mosque. The same plan is found in the peristyle of the houses and in the nihra of a basilica like that of Tyre (Herzog-Hauch, Realencyclopädie, x. 780).

The great builders of the Omayyads, 'Abd al-Malik and his son al-Walid I, made even more rapid progress. The former entirely removed the original mosque in Jerusalem and his Byzantine architects erected the Dome of the Rock, a Byzantine building (cf. Sauvain, Jérusalem Héron, p. 57 sqq.). Al-Walid likewise paid equal attention to the oldest form of mosque when, in Damascus, he had the church of St. John transformed by Byzantine architects into the Mosque of the Omayyads. As al-Malakiyya distinctly states, they wanted to rival the splendours of the Christian churches (B. G. A., iii. 159). The new mosques, which were founded in this period, were therefore not only not longer simple, but they were built with the help of Christians and other trained craftsmen with the use of material already existing in older buildings. Al-Hādhāchī, for example, used materials from the surrounding towns when building his foundation of Wāṣīt (Tabari, iii. 321; Baladhurī, p. 290). Columns from churches were now used quite regularly (e.g. in Damascus: Mas′ūdī, Murādī, iii. 408; Ramān, B. G. A., i. 165; cf. Baladhurī, p. 143 sqq.; for Egypt see Maqrizī, iv. 36, 124 sqq.). Sometimes remains of the older style remained alongside of the new. In Irāq, al-Malakiyya found in the chief wooden mosque columns of the time of Abū Muslim along with round columns of brick of the time of 'Amr b. al-Laqith (B. G. A., iii. 316). The building activities of al-Walid extended to al-Furūṭ, Mecca and Medina (cf. B. G. A., v. 106 sqq.) where no fundamental alterations were made, but complete renovations were carried out. With these rulers, the building of mosques reaches the level of the older architecture and gains a place in the history of art. There is also literary evidence for the transfer of a style from one region to another. In Ḥajrīn, for example, there was a ḥāshar (B. G. A., iii. 436 sqq.; cf. for Shirāz, p. 430). Al-Walid also rebuilt the Mosque of the Prophet, in part in the Damascus style (B. G. A., iii. 80; Kāzimi, ed. Wüstenfeld, ii. 71).

This revolution naturally did not take place without opposition any more than the other innovations, which Islam adopted in the countries with a higher culture which it conquered. After the Mosque of the Prophet had been beautified by Christian architects with marble, mosaics, shells, gold etc. and al-Walid in 93 was inspecting the work, an old man said: "We used to build in the style of Mosques; you build in the style of Churches" (Wüstenfeld, Medina, p. 74). The discussions on this point are reflected in hadiths. When 'Omar enlarged the Mosque of the Prophet, he is reported to have said: "Give the people shelter from the rain, but take care to make them red or yellow lest you lead the people astray", while Ibn 'Abbas said: "You shall adorn them with gold as the Jews and Christians do." (Bukhārī, Sunna, b. 62). Ibn 'Abbas here takes up the Omayyad attitude and 'Omar that of old-fashioned people, according to whom any extension or improvement of the gūla was only permissible for strictly practical reasons. The conservative viewpoint is predominant in Ḥadīth. It is said that extravagant adornment of the mosques is a sign of the end of the world; the works of al-Walid were only tolerated from fear of the jinn (Ibn Ḥanbal, Mawsūā, iii. 134, 145, 155, 206, 283; al-Nakā, 'Masjid, b. 2; Ibn Mūja, Masjid, bāb 2). The lack of confidence in pious conservatives in the great mosques finds expression in a hadith according to which the Prophet (acc. to the story of Amas) said: "A time will come over my umma when they will vie with one another in the beauty of their mosques; then they will visit them but little" (al-Asqalānī, Fath al-Bārī, i. 302). In the Fihār, we even find divergence from the oldest quadrangular form of the mosque condemned (Guldī, al-Muhtasar, i. 71). Among the types which arose later was the "suspended" (wuṣūlāt) i.e. a mosque situated in an upper storey (e.g. in Damascus, J. A., ser. ix., vol. v. 409, 415, 424, 447, 430).

2. Details of the Equipment of the Mosque

a. The Minaret (see also Masāra).

The earliest primitive mosques had no minaret. When the ʿaṣḥāb al-khawāṣṣ was introduced, Bīlāl is said to have summoned the faithful in Melita to the early sallāt from the roof of the highest house in the vicinity of the mosque (Ibn Ḥishām, p. 348; Wüstenfeld, p. 75); on the day of the conquest of Mecca, the Prophet instructed Bīlāl to utter the call to prayer from the Kaʿba, according to al-ʿArrāṣī, from the roof (Chron. Mekka, i. 192; cf. Ibn Ḥishām, p. 822). During the early days of Islam, the muʿāththīn did not however utter his summons from an elevated position (cf. below G 2 d). It is doubtful in the first place when the minaret was introduced, and in the second whether it was adopted into Islam, expressly for the call to prayer.

The Omayyad caliph al-Walid (86–96) undoubtedly had considerable importance for the history of the minaret, although even earlier in 703 ʿUthmān b. Ṭālahūn in Kairwan had been built by Ḥassān b. Nuʿmān with a minaret (so according to Uskūn. Sīrat al-Ḥusayn, 189, p. 9). There was also a minaret in the
The mosque has 3 minarets. At the present day, the mosque has 3 minarets. As was the case in the time of Ibn Dhubair, who mentions two on the west and one in the north (Rihla, p. 266), but Ibn Batūtā also says there were three and adds that one was in the west, another in the east and another in the north (l. 203), which agrees with present day conditions. One of the earliest authorities, Ibn al-Qalḥānā, d. 289 = 903, however, mentions only 2 minarets (mlāhīha) and says that in the days of the Greeks it was a watch-tower (mādran), which belonged to the church of St. John and was left standing by al-Walid (B. G. A., iii. 108). Al-Maqrizī, d. 375 = 985, mentions only one minaret, which was above the Bab al-Farrādī, when he calls it a mawāra mubāหa (B. G. A., iii. 159) he may perhaps mean a renovated minaret (cf. Le Strange, Palestine under the Moslems, p. 229) and besides, his description does not exclude the existence of other minarets. The tradition that the minaret of the Omayyad mosque was taken over from the predecessors of the Muslims long survived; for Yūnās, who mentions the east and west minarets, says that the western belonged to a fire-temple and a flame used to be visible on it (Mudāja, ii. 596) and according to Ibn Batūtā, the east and west minarets had been built by the Byzantines while only the north one was built by the Muslims (l. 203, aq.; a story also given by Abū ʾI-Bayrātī, d. 1093 = 1594) quoting Ibn ʿAsikir (d. 571 = 1171), see J. A., ser. 9, vii. 423; Quatremère, Hist. Sali. Musul., ii. 273). In Mecca also, al-Walid built turrets (jumāfīrah; Chren. Mutka, i. 310), sometimes minarets (as is evident from ibid., p. 310, 311). They were later increased so that Ktb al-Din mentions 7 minarets (ibid., iii. 424--426). According to al-Samhūdī, he also built in Medina 4 towers but Sulaymān b. ʿAbd al-Malik, in the year 97 had the southwestern tower taken down, because the shadow of the maʿīthahuma from it fell upon hπ., whereas he was in the house of Marwān b. ʿAbd al-Ḥamid. While al-Samhūdī says that there were no minarets in Medina before al-Walid, he asserts on the other hand that ʿOmar had already built towers in the four corners of the mosque (Wustenfeld, Madina, p. 75; cf. Ibn Batūtā, l. 272). In the time of Ibn Dhubair (in 580) there were still only 3 minarets there (Rihla, p. 195). It was not until 706 that ʿAbd al-Malik b. ʿAbd al-ʿAzīz rebuilt the fourth minaret (Wustenfeld, op. cit., p. 76). After the time of al-Walid, minarets became more and more numerous. In Ramlā his brother Ḥishām built a beautiful minaret (B. G. A., iii. 165, 8). For the mosque in Jerusalem Ibn ʿAbd al-Rahūmībī about 400 mentions 4 minarets (Ibīd., Cairo, 1334, iv. 274, aq.) which Maqrīzī al-Din claims to go back to the time of al-Malik (Sauvage, Hist. Jérus., et Hébron, p. 135). Ibn Ḥawqal (367 = 977) expressly notes of the Dāmī (dā̄mī) in Fāraṭa in Khurasan that it did not have a minaret (B. G. A., iii. 321) and he seems to consider it impossible to build two minarets (ibid., p. 13, aq.). Apart from the isolated reference by al-Samhūdī to ʿOmar’s building activities, to which very little importance can be attached, it is probable from this evidence that al-Walid was the first to introduce the minaret into Syria and the Ḥijāz. That he introduced it into Iṣlām itself, is however not certain. According to al-Baladhūrī (d. 279 = 892), Ẓiyād b. Ḥaṣan, where he was governor in 45, built the minaret of shīne, when he built the mosque of brick (p. 348). This seems to suggest that there was already a minaret there. According to the Egyptian historians, Maṣlama b. Muqāakhir in al-Fuṣūlī multāwīa b. ‘Abd al-Malik’s orders in 53 built a tower at each corner of the mosque of ʿAmr (pawūna), which had not been done before (Maqrīzī, iv. 7, 44; Ibn Tabgrībīrī, l. 77). The staircase leading up to the minaret was originally outside the mosque, but was later put inside. Maṣlama is said to have introduced the minaret into other mosques in al-Fuṣūlī (i.e. in all except those of Tujīb and Khwālan; cf. Maqrīzī, iv. 44; Ibn Tabgrībīrī, loc. cit.). How old this story is, cannot be ascertained, but the view often put forward that al-Walid was the first to introduce the minaret (cf. Schwally, in Z. D. M. G., iii. 1898, p. 143--149), is in any case not certain. There are three names in common use for the minaret. Maḍṣūna or mīṭḥana, "place of the ashāb call", which is in general use in Egypt and Syria at the present day, is frequently found in literature and inscriptions (B. G. A., iii. 225, 35; v. 108, 5; Maqrīzī, iv. 19; 30; 41; 121; 130; 5; Ibn Asīfī, ii. 204, a form below; v. Berchem, Corpus, i., n. 25, 63, 88, 89, 90 and others from the 9th century onwards). Sawūna, especially used in North Africa (Maqrīzī, Les Monuments arabes de Tlemcān, 1903, p. 45), is frequently found (Ibn Dhubair, Rihla, p. 91, 100, 145, 195, 266; Ibn Batūtā, l. 203, 272; ii. 2, 12, 13; Maqrīzī, iv. 7, 47; Ibn Tabgrībīrī, l. 77). This word means also cloister or cell and in the older literature is used as the equivalent of datr (Sūra xxiii. 41; Ibn al-Haṣān, p. 115; Buḫkātī, Al-Amlī & l-Sāḥib, p. 7; Maḍījī, p. 35; Abīyās, p. 48; B. G. A., i. 154; Maqrīzī, iv. 389; Ibn al-Farīdī, Tāʾyīna, p. 561). Manārī is the most usual word in literature (Maqrīzī, iv. 7, 63; cf. v. Berchem, Corpus, i., n. 63, K. al-Maṣḥūlī, i. 63, 67). This word has the same meaning as Sūr. ʿarba`a but is probably an analogou, independent formation. The word means light, position in which a light is put (Imnūr, Dīwān, 148, 37; Abū Dhubair, Dīwān, ed. Bell, i. 60; B. G. A., vii. 132); also lighthouse (B. G. A., iii. 177; Kindl, Wustl, p. 64; Ibn Dhubair, Rihla, p. 41). Manār (l.) also means a boundary stone or a signpost (Sīdīm; Lūṣān, vii. 99, a. from below; Kaīs al-Ruṣayyī, p. 37; 70; 8, Ibn Saʿīd, 115, 135; Fr. Mutka, Hist. Arab., ii. 22 and (2); or a watch tower (Ṭabarī, i. 864, 873). The boundary stones of the barna area, for example, are called Manār al-Ḥaram (B. G. A., ii. 25) and Alabrah was called Dhuʾ l-Manār, because he put up signposts (Lūṣān, vii. 105, 19; Dīwān, Ṣāḥīl, i. 410); obelisks are also called manārā (B. G. A., vii. 117, 118, 120). The derivation of the last named name, menārā from mithrā, is little likely and still less probable is a derivation from a Persian building for fire-worship (v. Berchem in E. Diez, Chron. arabs. und byz. Bödenkmls., i. (1908), 112, 129, who distinguishes rather ingeniously between menār "light" from nūr and manār = "fire-tower" from nūr). Probably there is only a single word in question and the signposts received their name from the watch-tower (note that alam also is used of the minaret: Ibn ʿArābī, Vit. Timurī, ed. Manger, 1767, iii. 704). There are a number of references to the existence on the coasts of a series of manārī and each manārī gave warning by light-signals of the movements of the enemy (B. G. A., iii. 177). According to al-Baladhūrī
(p. 129: manâzir), this was already the custom in 'Omar's time and was in all probability an inheritance from the Byzantines. Similar watch-towers (simanturion) were used inland in the Byzantine period e.g. in the eastern Ḥawrân, and the Persians had similar towers on their frontiers (manâzir: Tabari, i. 864, 878); a similar manâzir in the 'Irâk is described by Ibn Djbair (p. 210; cf. B. G. A., v. 175); in the Maghrib also, fort-like towers are called manâzir, e.g. in Tunis and Gabès (al-Tâkidîn in 706–708; J. A., ser. 4, xx. (1652), 99, 144). That these towers used fire-signals is very probable and Musli gives evidence of this custom for the Edom territory (Arabia Petraea, ii. 2, 232). In the valley (in the 7th century) are mentioned the same 'Umâri (Târikî bi-l-Maghrib al-'Ashrâf, Cairo 1312, p. 109 sq.) refers to the use of a series of heights and towers for light-signals, including the Ma'dhanat al-'Arîb, one of the minarets of the Omayyad mosque of Damascus (on the whole question see R. Hartmann, in Z. D. M. G., lxx. 1916, p. 486, 505; Meissner, iii. 323; ibl., i. 385 sq.). It is obvious that the tower of the mosque was given the name ma'dhâr from its resemblance to similar watch-towers and it is possible that its use for fire-signals was more general in earlier times. In Fâs the hours of prayer were indicated by lamps from the minarets (J. A., ser. 11, xiii. 1918, p. 411). This does not however answer the question why the minaret was introduced into Islam. From what has been said above it is probable that the minaret was introduced specially for the adhâb call.

According to Ibn Al-Fâkîh and others, it was incorporated in the Mosque of the Omayyad, simply because it was already there as a part of the church (cf. above); this agrees with de Vogüe's observation that the use of towers in churches and the public buildings in Syria in the 16th and 17th century was common (La Syrie centrale, i. 57). The tower in the mosque of Baṣra is thought to be an original church-tower (cf. Dies, Die Kunst der islamischen Völker, p. 19 sq.). This indicates that the minaret in Syria became part of the mosque in a purely architectural way. But after its introduction, it was soon used at a place in which the mu'adhdhin could stand which must have been an obvious thing to do. This did not happen at once however. From Tabari and others we can see that the call to prayer at such a later date could still be uttered in the street, and al-Farazdak (d. about 110 = 728) who refers to the existence of manâzir al-mu'adhdhin (Kâmil, p. 481; Aghâni, 2nd ed. Cairo, xix. 18) also speaks of mu'adhdhin on the city wall (Tabari, ii. 1302; Naqqash, p. 365; see J. Horovitz, in Isl., xiv. 1927, p. 853, 855) with which we may compare the tradition that the Prophet considered whether he ought to permit the call to prayer to be uttered on the fortifications of Madina (Calâ' al-dîmân al-Madîna; cf. Ibn Sîd., i. 7).

It is however by no means impossible that the minaret may have arisen elsewhere in a different way. If we can trust the account by Al-Makrîzî and others (see above), the minaret was introduced into Egypt by Mu'awîya's orders as a corner tower. Here it was at all times used in a way which recalls the dew-towers of ascetics. It was used for the adhâb, but not only for the five calls to prayer but also for vigils, in which the mu'adhdhin repeated litanies (Makrîzî, iv. 44 middle) and its architect, Maslama b. Mukhallad, used it for the fi'ilâb (ibid., p. 44). An ascetic who died in 409 lived in the manâzir of the Mosque of 'Amr (Yâkût, Uda'ib, iv. 274). This suggests the meaning of minaret expressed by the word wâdâ' (cf. also Makrîzî, iv. 7, 8) as a saint's cell. According to one source, rather late however, al-Walîd is said to have found a monk in the tower of the church of St. John who lived in the wâdâ' there (cf. J. A., ser. 9, vii. p. 189; Quartemière, Hist. Sainte. Maml. al-Fâs, 264). This use of the minaret was kept up during the golden age of Islam. Thus Ibn Djbair records that he saw in the west minaret of the mosque of the Abbasids called Minaret Maghribi and in the topmost chamber, where al-Ghazâlî had lived in fi'ilâb, there was now a sâhid (Râhî, p. 266, 349–407); Ibn Tumart also lived there (Yâkût, Ma'dhâm, ii. 556, 17 sq.) and 'Abd al-Latif also found another devotee living there (Ibn Abî Usâîla, ii. 204, 4 from below). According to al-Makrîzî, the Egyptian minaret was not introduced in a purely architectural way, but even from his account it appears most likely to be Syrian in origin.

If the minaret did not have a single origin, it is improbable that a single type of tower served as the model for it. Ziyâd is said to have built the minaret in Baṣra of stone. The quadrangular Syrian Omayyad type (B. G. A., iii. 182), which was taken over from the church-tower, was also of stone. In Egypt, on the other hand, according to al-Makrîzî, minarets for many centuries were only built of brick and the earliest stone minarets in this country were not built till shortly before 720 in al-Manṣûra and al-Âqaba (Makrîzî, iv. 234). In North Africa where the Omayyad, Syrian type was introduced, a round minaret of brick in 7 stories with pillars was built in Abâsîya south of Kairawân in 814 (800) (Yâkût, Ma'dhâm, iv. 119). Ibn al-Hâdi'dî condemns minarets of his time as being built too high. It is interesting to note as throwing a light on what was considered bid'â that he regards the round form as the old and genuine one (Ma'dhâm, ii. 61 below). — For literature see Fraenkel, Schwall, v. Berchem, R. Hartmann, Horovitz quoted above; Doutte, in R. Afr., iv. 1900, p. 339 sqq.; J. H. Gotthelf in J. Am. O. S., xxx. 1909–1910, p. 133–154. K. A. C. Creswell, in Burlington Magazine, xlviii. 1926, p. 134–140, 252–258, 290–296. 3. The Chambers.

The old mosque consisted of the courtyard and the open halls running along the walls; these were called al-mughâbbât (B. G. A., iii. 158, 165, 182) because they were roofed over. When we are told that in Palestine, except in Jericho, towers were placed between the mughâbat and the courtyard (ibid., p. 182), this seems to suggest that the halls were closed, which would be quite in keeping with the winter climate of this region.

The halls were particularly extensive on the fîlla side, because assemblies were held here. The space between two rows of pillars was called mood of arwûbah or ra'i (B. G. A., iii. 158, 159; Makrîzî, iv. 50, 11, 12, 49). Extension often took the form of increasing the number of the arwûbah. In some districts a sail-cloth was spread over the open space as a protection from the sun at the time of the service (B. G. A., iii. 205, 430).

The courtyard was called fâhû. The open space around the Ka'ba is called fâhû as well.
There were not at first enclosed chambers in the halls. A change in this respect came with the introduction of the maṣṭāra [q.v.] (on this word cf. Quatremere, Hist. Sult. Musul., i, p. 164, note 46). This was a box or compartment for the ruler built near the miḥrāb. Al-Samhūlī gives the history of the maṣṭāra in Medīna (Wustenfeld, Medīna, p. 71, n. 99). The traditions all agree that the maṣṭāra was intended to protect the ruler from hostile attacks. According to some men, 'Abū Ḥanīfa built a maṣṭāra of lakīn with windows so that the people could see the Imam of the community (ibid. and Makrī, iv, 7). According to another tradition, Marwān b. 'Abd al-Ḥakam, governor of Medīna, after an attempt had been made on him by a Yāmān in the year 44, was the first to build a maṣṭāra of dressed stone with a window (Baladhūrī, p. 6 below; Ṭabarist, ii, 70). Muḥāwīya is then said to have followed his example. Others again say that Muḥāwīya was the first to introduce this innovation. He is said to have introduced the maṣṭāra with the accompanying guard as early as the year 40 or not till 44 after the Ḥijrīdījī attempt (Ṭabarist, i, 3465, s. B. Ṭabarist, v, 109, s. 3; Makrī, iv, 12a, s. 89); according to one story because he had seen a dog on the minbar (Baladhūrī, ed. Schwally, p. 393 below; cf. on the whole question: H. Lammens, Maṣṭārah, p. 202 sq.). This much seems to be certain, that the maṣṭāra was at any rate introduced at the beginning of the Omayyad period and it was an arrangement so much in keeping with the increasing dignity of the ruler that, as Ibn Ḥalīlī says, it spread throughout all the lands of Islam (Maṣṭārah, Cairo 1322, p. 232 ap., foâl 37). The governors built themselves compartments in the principal mosques of the provinces, e. g., Ziyād in Kūfa and Basra (Baladhūrī, p. 377, 348) and probably Kurra b. Ṣhārīk in al-Fustāṭ (Makrī, iv, 12). In Medīna, we are told that 'Omar b. 'Abd al-ʿAzīz as governor (86–93) raised the maṣṭāra and built it of teak, but al-Muḥādī had it taken down in 160 and a new one built on the level of the ground (ibid., p. 7; Wustenfeld, ap, cit.; Baladhūrī, p. 7 centre). We are further told that in 161, al-Muḥādī prohibited the maṣṭāra of the provinces and al-Muʿāūdūn even wanted to clear all the boxes out of the masjidīd ġūlām, because their use was a sumur introduced by Muḥāwīya (Makrī, iv, 12; Yaʿqūbī, ed. Houtsma, ii, 571). By this attempt success did not occur. On the contrary, their numbers rapidly increased. In Cairo, for example, the Dājīmi al-ʿĀskār built in 1695 a maṣṭāra (Makrī, iv, 33 sq.) and the mosque of Ibn Ṭullūn had a maṣṭāra beside the miḥrāb which was accessible from the Dār al-lnsāra (ibid., p. 36, 37, 44; Ibn Ṭabaristi, ii, 8, 14). The maṣṭāra was found in the larger mosques. In the Dājīmi al-Kalīf, Muḥammad b. Kalīfūn in 718 built a maṣṭāra of iron for the Sulṭān’s ṣālī (Makrī, iv, 132). According to Ibn Ḥalīlī, the maṣṭāra was an innovation of Islam’s own. The question must however be left open, whether in its introduction and development there may not be some connection with the boxes of the Byzantine court, at least, for example, when the Tūrkā in the Ṭabārī Dājīmi in Brussa put the Sulṭān’s box over the door (R. Hartmann, Im neuen Anatolien, p. 27).

Although the maṣṭāra was introduced with the object of segregating the ruler and was therefore condemned by the strict as contrary to the spirit of Islam (e. g., Maṣṭārah, ii, 43 sq.), maṣṭāra were probably introduced for other purposes. Ibn Ḥalīlī mentions three in the Mosque of the Omayyads: the old one built by Muḥāwīya in the eastern part of the mosque, one in the centre, which contained the minbar, and one in the west where the Ḥanafīs taught and performed the ṣalāt. There were also other small rooms shut off by wooden lattices, which could be sometimes called maṣṭāra and sometimes ṣāwīya. As a rule, there were quite a number of ṣāwīya connected with the mosque which were used by students (Rīhī, p. 265 sq.). We find the same state of affairs in other mosques.

While the groups of the kūra, the students, lawyers etc. had originally to sit together in a common room, gradually the attempt was made to introduce separate rooms for some of them. Small compartments were either cut off in the main chamber or new rooms were built in subsidiary buildings. In the former case we get the already mentioned maṣṭārah or ṣāwīya. Ibn al-Ḥājīdī says that a madrasa was often made by the simple process of cutting off a part of a mosque by a balustrade (dahrnāmā) (Maṣṭārah, ii, 44). Thus in the halls of the Mosque of Amr there were several compartments for teaching, which are called maṣṭāra and ṣāwīya, in which studies were prosecuted (Makrī, iv, 26, 61, 91). In the Ashar Mosque a Maṣṭārah Fāruma was made in the time of the Omayyads, where she had appeared, and the emin in the following period made a large number of such maṣṭāra (Maṣṭārah, p. 125, 126). In the Aṣr Mosque about 300 A. H., there were three maṣṭāra for women (B. G. A., v, 100). These divisions might be a nuisance at the great Friday assemblies and this is why the numbers wanted to remove them in 161 from the maṣṭājah al-dījamāt (Ṭabarist, ii, 486).
and Ibn al-Hasnî condemned them as works of the *swâhîl* and numbered them with other embellishments with the *azkâr al-'idâlah* (Mâṣṣâlî, ii. 43 sq.).

The muʿādhdhîns not only lived in the minarets, where, at any rate in the Tâllâmîd period, they held vigils (Mâktrî, i. 48). They had rooms (gâzûf, sg. gâzûf) on the roof and these rooms in time came to be numerous (ibid., p. 13, 14). All kinds of rooms were put in subsidiary buildings, for the khâthî (ibid., p. 13), for judges, for studies, etc. In addition there were dwelling-houses, not only for the staff but also for others. As already mentioned, devout men used to take up their residence in the mosque for a considerable period, for *ibâdât*, and any one at any time could take up his quarters in the mosque; he could sleep there and make himself at home. It therefore came quite natural to the devout to reside permanently in the mosque. As ascetics often lived in the minaret (see above), a *sâhib* lived on the roof of the Aţzar mosque, others made themselves cells in the mosque, as a *shâkhî* in Naṣîrîd days (Ibn Djihaîrî, Alkhâfa, p. 240; cf. in Harrûn, p. 235) and as happened in Salâh al-Dîn's time in the mosque of the Omayyads (Ibn Abî Usâibî, ii. 182). It was however usual for very few to live in the side rooms of the mosque, as was the case for example, in the Mosque of the Omayyads (Ibn Djihaîrî, p. 269; Ibn Batûṭa, i. 206). In particularly holy mosques like that in Hebron, houses for al-*mawâlik* were built around the sacred place (Sauvare, Hist. Jumra, et Alhôr, p. 11 sq.) and also beside the Masjid Nabî at the ancient Ninevah (C. G. A., ii. 146). Kitchens were therefore erected with the necessary mills and ovens and cooked food (dîjâqer) and 14–15,000 loaves (râṣâqâr) were daily distributed to those who stayed there and to visitors (Sauvare, p. 20 sq.; cf. Quatremère, Hist. Sult. Mâmîlî, i. 11, 235). Bread was also baked in the mosque of Ibn Tâlîn (Quatremère, op. cit., i. 123) and kitchens were also found in the mosques (for al-Aţzar, see Djihaîrî, Merveilles, iii. 238 sq.; Salââmîn Rasûl, Kans al-Djâhâër fi Ta'rîkh al-Ă('~)lî, p. 71 sqq., 107 sqq.). Those who lived in and beside the mosque were called *mawâlik* (cf. B. G. A., ii. 146; for Jerusalem, Nâzîrî Khosraw, p. 82, 91; for Mecca, Ibn Djihaîrî, p. 149; for Medina, Ibn Batûṭa, i. 279, where we learn that they were organized under a *fâddîm*, like the North Africans under an *amîr* in Damascus; Ibn Djihaîrî, p. 277 sq.). They were pious ascetics, students, and sometimes travellers. The students generally found accommodation in the madrâsât but large mosques like that of the Omayyads or al-Aţzar had always many students who lived in them. The name of the halls *rîwâyât*, plur. *arîwâyi* was later used for these students' lodgings (cf. V. Berchem, Corpus, i. 43, note 1; perhaps Maâktrî, iv. 54 sq.). Strangers always found accommodation in the mosques (cf. C. 1). In smaller towns it was the natural thing for the traveller to spend the night in the mosque and to get food there (Yâkût, iii. 385; al-Kûfî, Ta'rîkh al-Hamâma, ed. Lipperie, p. 252). Travellers like Nâzîrî Khosraw, Ibn Djihaîrî, Ibn Batûṭa, al-Âbdalî (J. A., ser. 5, iv. 185 sq., p. 174) were always received by the whole Muslim world from one mosque to the other (or madrâsîn or rişâ'. That the traveller could even leave his money for safe keeping in a mosque (Sâfar-al-mu'âm, p. 51). Large endowments were bequeathed for those who lived in the mosques (Ibn Djihaîrî, op. cit.; Ibn Taghribrîdî, vii. 105 sq.).

In later times the rulers often built a lodge or pavilion (*manâjara*) in or near the mosque (Mâktrî, ii. 345; v. 13; cf. on the word: Quatremère, Hist. Sult. Mâmîlî, i. 11, 15).

There was often a special room with a clock in the mosques; this also is probably an inheritance from the church, for Ibn Rosta (290 = 903) talks of similar arrangements in Constantinople (B. G. A., vii. 126 supra). Ibn Djihaîrî (p. 270) describes very fully the clock in the Mosque of the Omayyads (cf. J. A., ser. 9, vii. 205 sq.). It was made in the reign of Nâr al-Dîn by Fâkhr al-Dîn b. al-Sâdî (Ibn Abî Usâibî, ii. 182 sq.), an expert was kept to look after it: ibid., p. 191.

There was a clock in the Mustamîrîyn in Baghdad (Satre and Herzfeld, Arch. Restor., i. 170) and the Mosque of ‘Aţur also had a *gâzûf* (Mâktrî, iv. 13, 15). In the Mosque of Ibn Tâlîn it is still kept a sundial of the year 696 (1296–1297; cf. v. Berchem, Corpus, i. No. 514) but the clocks were usually mechanical (see also Desy, Supplement, s.v. minjâma and on the clock generally E. Wiedemann, in Novis Acta der N. Leop. Carol. Akad., vol. C, Halle 1915). In the Maghrîb we also find mosque-clocks, e.g. in the Bilâdînî (J. A., ser. 11, xii. 357 sqq.).

The very varied uses to which the mosques were put resulted in their becoming storehouses for all sorts of things. In 668, the Mosque of the Omayyads was cleared of all such things; in the courtyard there were for example stores for machines of war and the *zîwâyât* of Zain al-Âbdîn was a regular *kâlb* (J. A., ser. 9, vol. vii. 225 sq.).

C. Mîhârî b. q. v.

Whether the Prophet considered it necessary to erect an indicator of the direction of prayer in Medina may be considered doubtful. According to Tradition, when the revelation of the alteration of the *kiblâ* came to him, he turned round in the middle of the prayer without further investigation (Wüstenfeld, Medina, p. 41, 63; Tâbâri, Ta'âfîr, x. 25 centre; Muslim, Mâṣṣâlî, u. 2). On the masjîd however and on journeys he used a spear, which was stuck in the ground right in front of him, but this *sârâ* (q. v.) was not intended so much to give the direction as to be a substitute for the wall, to mark the area of the worshipper; it could therefore also be an animal or something living thing (Bakîjârî, Sulât, B. 18, 80, 90–92; Muslim, Sulât, tr. 46; Zakânî on Mâṣṣâlî, p. 183; Abî Dîwâli, l. 69; A. Hanbal, Mâsâlî, ii. 106). At the present day the mîhârî is often called *kâlb* (and as early as Ibn Taghribrîdî, i. 355; Yâkût, i. 647).

In Al-Fusâlî ‘Aţur is said to have ascended the *kiblâ* very carefully with the help of many others (Maâktrî, iv. 6 supra; B. G. A., viii. 359; Ibn Taghribrîdî, i. 75 sq.). But we are not told how it was indicated, probably by a pole or something of the kind. The *kiblâ* was too far to the east, so that during the prayer the worshippers turned more to the south. At first they were probably content with the direction, roughly correct, in keeping with a hadith of Abî Hurairâ, according to which the *kiblâ* in general lies between east and west (Tâmirîîh, Minâkî al-Sulât, p. 139; Maâktrî, iv. 24). The first mosque in Isâbaa was built where Abî Mâsîah had performed the *salât*, and a brick placed in position...
by him was taken as the ḥibba (B. G. A., vii. 200). But later the problem was tackled seriously. Maḵrit mentions the different solutions of it in Egypt (iv. 21-33). Al-Ašhar had the ḥibba accurate; the maḥdir al-ghaḥba, i.e. that of the Mosque of ʿAmr and those of the mosques in Dīnār, Bībī, Alexandria, ʿAṣīr and Assūnī were too far to the east, that of the Mosque of Ibn Ṭūlūn was founded by commission to be 14 daraḥ too far west, those of the villages too far west. The direction was ascertained from the stars. Many however followed the ḥibba of Syria. In the transformation of churches into mosques, frequent under Al-Maʿṣūm, their orientation from east to west was decisive. The door on the east side as a rule was made the miḥrab (Maḵrit, iv. 30).

The word miḥrab before and after the beginning of Islam meant in the first place a palace or a part of one. Imruʿul-Qays, p. 52, 35, South Ar.; Ṣafqāḏāšiyāt, p. 21, 17, Persia; Baḥtrān, Hāzīda, p. 404, 4; Kāṣṣal-Ruṣāyīt, p. 2, 59, 49, 8; also women's apartments. Omar b. Rabīʿa, p. 136, 8; 247; 5; Maḵrit, iv. 378, 4, a secondly a niche where a bust stood; e.g. before Imruʿul-Qays (Ibn Kuṭab, ʿUyān al-ʿAḥāb, p. 356) and for the Muslim period (Ḥuḡat al-ʾAḥāf, p. 90, 44; Baḥtrān, Ṣafqāḏās, p. 692), especially of a too small with an image, a Christian saint (ʿUmar b. Rabīʿa, p. 262, 9). Perhaps the part of the palace, called miḥrah in the above examples, is simply a niche with a throne in it (cf. exp. Ṣafqāḏāšiyāt, p. 21, 17). The same use of the word is found in the Kūrān. In Sūrā xxxvii. 20, it means the part of the palace where the king in it; xxxiv. 12, most important in the mosques where images are put, and iil. 32 sqq., xix. 12, a temple or rather a cell in a temple where one prays. At a still later date we find expressions like miḥrah al-madāḥah, apparently a name for the apse in the church behind the altar (J. A., ser. 9, vii. 189). Miḥraḥ has been derived from kaḥba "spear" and from South Arabic mikrah, Ethip. meḥarrī, "Temple" but the etymology is not certain (see on the whole question: Fequet, Fromodwörter, p. 234; Rhodock-Neukirch, in W. Z. K. M., xiii, 1905, p. 296-9; Prütstorfer, in Z. D. M. G., xxxi, 1907, p. 621 sqq.; Nöldeke, Neues Beiträge zu sm. Sprachen, p. 52, note 2; Lammen, in J. A., ser. xi, vi. 247; Becker, Islamstudien, ii. 492 sqq.; J. Hörvitz, in Ilt., 1947, p. 260 sqq.).

If the word miḥrah means the niche placed in the mosque in the direction of prayer, this concept quite well with the usual usage of the word. All are agreed that the miḥrah did not originally belong to the mosque and that it was taken over from the church and finds confirmation in Muslim literature (see Lammen, Zādd, p. 33, note 7; 94, note 1) and it is evident that the innovation found its way into the mosque by a purely architectural way. The miḥrah became the place where the imām stood during the salāt it is therefore be assumed that it was one of the principal niches in the church, which was taken over into the mosque, it may have contained the bishop's throne or the image of an important saint.

There is no unanimity as to the date when the miḥrah was introduced into the mosque. Muṣawīyya is occasionally mentioned (B. G. A., v. 109, 3) as a rule, however, and probably with greater right, al-Walīd. His governor ʿOmar b.

ʿAbd al-ʿAzīz is said to have introduced it into Medina (Wustenfeld, Medina, p. 74; B. G. A., iii. 80, 17 however takes it for granted that ʿOmar b. ʿAbd al-ʿAzīz only revived it); similarly his governor Kurra b. Sharkī (90-96) is recorded to have introduced the prayer niche (miḥrah madāʾanṭum) into Egypt (Maḵrit, iv. 6, 12, 9; Ibn Dājmūk, iv. 62, 12 sqq.; Ibn Taghribīrā, i. 76; Sayyūtī, Ḥasan al-Maḥdiyya, ii. 135 sqq.). Only occasionally is Muṣawīyya's governor Maslama b. Muḥammad (77-82) or ʿAbd al-ʿAzīz b. Marwān (65-94) mentioned as having introduced this innovation (Maḵrit, iv. 6). It therefore seems that it is wrong when one of the maḥdir in the Mosque of the Omayyads is described as the oldest in Islam. But it is an anachronism to call it miḥrah al-ghaḥba and attribute it to Muṣawīyya (Ibn Dībāḥ, p. 265; Ibn Bāṭṭūtā, i. 203). The miḥrah is however said not yet to have come into general use in the second century (see Lammen, Zādd, p. 94, note 1) on the other hand, Ṭabari presupposes a miḥrah in the Muslim sense as early as David (Ṭabari, i. 2408, 7, 11; B. G. A., ii. 112, 26 sqq.); other prophets also had their miḥrahs in Jerusalem, ibid.

In the larger mosques there were usually several miḥrahs, used by the different madāʾanṭum; in the mosque of ʿAmr, for example (according to Ibn Taghribīrā, i. 79, in Hebron (Sauvage, Hist. Jérusalem, i. 17, in the mosque of the Omayyads (J. A., ser. 9, viii. 215 sqq.; Ibn Dībāḥ and Ibn Bāṭṭūtā as above). They might be of wood, but as a rule they were built of marble or put on pillars. They were often highly ornamented. In the miḥrah of al-Walīd, a looking-glass that had belonged to ʿAḥīṣa is said to have been placed (Karwīn, ii. 71). A Fāṭimid adorned a miḥrah in the mosque of ʿAmr and one in the Asbar mosque with a silver girdle which weighed 5,000 dirhams (Maḵrit, iv. 52).

The general objections to adorning mosques were also applied to the miḥrah. A ḫadhlū is said to have forbidden this as an inheritance from the churches; it is compared with the altars (see Lammen, Zādd, p. 33, note 7, 94, note 1), but even a puritan like Ibn Ḥaḍīl does not reject the miḥrah in principle; hence condemns its adornment (Madkhal, ii. 48). In fact the miḥrah was held in special respect as the most important part of the mosque which found expression in the erection of a ʿaḥba over it (e.g. Maḵrit, iv. 91; cf. v. Berchem, Corpus, i, No. 79). The special importance of the miḥrah is shown from the fact that its position was occasionally revealed in dreams, e.g. in Kaʾrāwān (Yaqūt, iv. 233) and in the Mosque of Ibn Ṭūlūn; here the Prophets appeared to Ahmad b. Ṭūlūn and showed him the miḥrah and the spot was surrounded by ants (Maḵrit, iv. 39). In the principal mosque of Sāmū there was a prophet's tomb under the miḥrah (B. G. A., iii. 110), which recalls Christian altars. As the most sacred part of the mosque, the miḥrah is compared not only with Christian altars, but the word is used of the sacred place of prayer in any sanctuary, e.g. in the pre-Christian temple, which stood on the site of the later mosque of the Omayyads (J. A., ser. 9, vi. 247, note 731). In Palestine, in keeping with this idea, very many miḥrahs are said to have been the miḥrahs of Biblical personalities (see Sauvage, Hist. Jér. et Hébr., p. 42, 76, 96 sqq., 102; Le Strange, Palestine, Index).
In contrast to the miḥrāb, the minbar was introduced in the time of the Prophet himself. The word, often pronounced minbar (cf. Brockeßmann, Grundwörter, I. 161), comes from the root m-n-b high; it could be derived from the Arabic quite easily with the meaning elevation, stand! But it is more probably a loanword from the Ethiopic (Schwally, Z. D. M. G., II., 1885, p. 145–148; Noldeke, Neue Rechtslexig., 8. SEM., Sprachw., 1910, p. 49). Its case is therefore somewhat similar to that of masjid. It means seat, chair (e. g. Chron. Metha, ii. 8; Ashäni, Cairo, xiv. 75) and is used, for example, for saddle (Tabari, Gisl.) and of a litter (Ashäni, xiii. 158; cf. Schwally). It is therefore identical with madžfa (Buhammad, Qumara, B. 23), with varī (Kamit, p. 20; Ashäni, iii. 3), ṣuvar or horat (Ibid., I. 214; cf. also Becker, Kassim, p. 8). The use of the word for the pulpit is in keeping with its history.

When the khāṭib (q.v.) spoke among the Arabs, he usually did so standing (cf. Musulmânul Syâr, ed. Iyyal, cxi. 1; Dīyārbakr, Bayâni, Cairo 1932, i. 129; ii. 143) frequently beating the ground with his hands and shouting (Ibid., i. 105; Lahid, 7, 15, 9, 45). He used not just to stand there but also on the steps of the pulpit (Bayâni, i. 27, 33; i. 141). The Prophet did both of these things. In ‘Arafah he sat on his camel during his khâṭa and on other occasions, when addressing the community during the early period, even as late as the day of the capture of Mecca, he stood (cf. Sīra Ixii. 11). The people sat on the ground around him (Buhammad, Qumara, B. 28; Tobâin, B. 6). In the mosque in Medina he had a particular place, as is mentioned in the stories of the introduction of the minbar. Sometimes, we are told, he stood beside a tree or a palm-tree (Buhammad, Manâshi, B. 25; ed. Kreil, ii. 400) as a rule however, beside a palm-trunk (Dīyārbakr, so Ibn Sa’d, i. 9, 10, 11, 12) and on a few occasions beside one of the pillars (Buhammad, Manâshi, B. 25; ed. Kreil, ii. 400; cf. Dīyārbakr, Khâns, 172). This is undoubtedly the original tradition: the Prophet stood beside one of the palm-trunks used as pillars in the mosque. For “beside” (usually ḥâna la; Buhammad, Bayâni, B. 32; Ibn Sa’d ibid.) “up” (Qumara, al.; already in Buhammad, Qumara, B. 26) is sometimes found later and for the column or trunk, we find a stump on which he sat.

Various passages record how the minbar was introduced, notably the following: Ibn Sa’d, i. 11, 8–10; Buhammad, Sâlih, B. 18, 64, 91; Qumara, B. 26; Bayâni, B. 32; Hikah, B. 3; Manâshi, B. 25; Muslim, Masjid, tr. 10; a. also Wimink, Handbuch...s. u. v. Füllit; Uth al-Idâba, i. 43 infra; 214; Wüsstenfeld, Medina, p. 62 sqq. a. Ibn Batuta, i. 275 sqq.; the whole material is in Dīyārbakr, Khâns, i. 139; b. 75 sqq. and Sirat al-Halâl, ii. 146 sqq. The details are variously given. The minbar, we are told, was built of palm wood or tamarisk from the woods near Medina; the builder was a Byzantine or a Copt and was called Bâkîr or Bâkh, but the names Bâkh (Ibid., i. 43); Maimûn, Ṣabîh, Kullâb, Mina, see Kâmans), are also given. He was a carpenter, but a slave of the wife of one of the Ansâr (or Buhammad, Hikah, B. 2) of the Muhâjirûn. Others say he belonged to al-‘Abbas. The suggestion is sometimes credited to the Prophet and sometimes to others. The palm-trunk is said to have whined like a camel or a child when the Prophet mounted his new seat but was calmed by stroking and kind words from the Prophet. Most stories take it for granted that the minbar was primarily intended for the khâṭa; in some it is added that the object was to enable the large assembly to hear him (Ibn Sa’d, i. 10, 11). We are told also that the Prophet performed the salat on it and, during the war of Ḥâshim, he came down from it. He also took care that the people could see his salat and follow him (Buhammad, Sâlih, B. 18; Qumara, B. 26). This last tradition however presupposes the later custom of standing upon the minbar (note that the same idea of the palm-trunk occurs in Qumara, B. 26).

In this connection it is interesting to note a tradition in Ibn al-Athîr, according to which the Companions asked the Prophet to take up a raised position as many wasfu were coming (Uth al-Idâba, i. 43). Another tradition is in keeping with this, according to which the Prophet, when he was visited by a man named Tâmir, stood on a horat and addressed him from it (Ibid., I. 214; cf. Lâmmes, Medinah, p. 204, note 5). Here he took a seat of honour on which the Qur’an sits. This is undoubtedly in keeping with the character of the minbar; while the raised seat was in general use among the northern Semites the Arabs usually sat on the ground, often leaning against a saddle. The raised seat was the special mark of the ruler or, what is the same thing, of the judge. We are told that Rabî’ b. Muhammad was the first to sit on a minbar or wasf when acting as judge (Ashäni, 2nd Cairo ed., iii. 3; Maqrizi, iv. 6 sqq.). Al-Ḥâjîdji, for example, when he addressed the people (hardly in the mosque) sat on a chair which belonged to him (Kurîr, Tubã, B. 959) and when he threatened and condemned his enemies, a wasf was erected for him (Ibid., p. 1199); in the same way a horat was placed for Yazid when he issued his orders for a battle (Ibid., p. 1107; see also Becker, Kassim, p. 8).

This tradition usually suggests that the minbar was introduced exclusively for the khâṭa, this seems to be a somewhat one-sided view. The minbar was primarily, as Becker was the first to point out, the throne of the mighty Prophet in his capacity as a ruler. In keeping with this is the tradition that it was introduced in the year 7, 8 or 9 (Tabari, i. 1591; Khâns, ii. 75; Uth al-Idâba, i. 23). The Prophet used it for the publication of important announcements, for example, the prohibition of wine. That he should also make his public speeches to the community from the new seat was only natural. His khâṭas however were not confined to the Friday services when he could still deliver a khâṭa without the minbar, e. g. at the festival on the musalla, where Marwân was the first to put up a minbar (Bâkhârî, Sâlih, B. 6) and beside the Ka’bah after the capture of Mecca ( Ibn Hishâm, p. 823).

The Prophet’s minbar is often called a wád from its material (Bâkhârî, Sâlih, B. 64; Qumara, B. 26). It consisted of two steps and a seat (Maqrizi: Khâns, ii. 75; Bâkhârî, Qumara, B. 23; wasf: Tabari, i. 1591). After the time of the Prophet, it was used in the same way by Abu Bakr, ‘Umar and ‘Othman (see below). Its significance as a throne is seen from the fact that in the year 50 Mu’awiyah wanted to take it to Syria with him; but he was not allowed to do so but he raised it by 6 steps. At a later date, ‘Abd al-
Malik and al-Walid are said to have wanted to take the Prophet's minbar to Damascus (Tabart, ii. 92 sq.; Khawārij, ii. 75; Yağıt, ed. Houtoua, ii. 285; B. G. A., v. 23 sq.; Wüstenfeld, Medina, p. 63). In the time of the Prophet, it stood against the wall so that a sheep could just get past (Bukhārī, Sahih, p. 91). In the time of al-Maṣṣūni, in the centre of the Mughāfāt there was pointed out the position of the old minbar, above which Ma'ūn's lay was said to have built his new one (B. G. A., ii. 82; cf. ii. 26 and Kašwāt, ed. Wüstenfeld, ii. 71). According to somejudiths, it was over the hūṣat of the Prophet (Bukhārī, Sahih, fi Manāha, B. 5; Taqā'ī al-Madīna, B. 5, 12 and pass.). At a later date, new minbars were erected in the mosque (see Wüstenfeld, Medina, p. 64, 96).

That the Omajjays should have a minbar of their own was natural; they sat on it, just as their predecessors had done (cf. Goldziher, Mekh. Stud., ii. 42). Ma'ūn's lay took it with him on his journey to Mecca (Chron. Mecca, i. 333); he also had it taken to the festivals on the musqāqā (Yağıt, ed. Houtoua, ii. 265), just as Marwān used to do in Medina (see above); it was therefore still portable and indispensable for the sovereign, when he wished to make a public appearance as such. In Ibn Dūfār's time, the minbar al-khūṣāt in Damascüs was in the central musqāqā (Riyāh, p. 265). According to Ibn Khādūn, Mu'āwiyah was the first in Muslim to use the throne (tārir, minbar, būhār, būrit) but he is clearly not referring to the minbar of the mosque (Muhammad, Cairo 1322, p. 205 sq.; fotl. 3, N. 37).

The minbar taken to Mecca by Ma'ūn's lay remained there till the time of al-Raṣḥid; when the latter visited Mecca on his hajj in the year 170 or 174 a minbar muḥāsirī with 9 steps was presented to him by the emir of Egypt and the old one was put up in 'Arafa. At a later date, al-Wāthīk made minbars for Mecca, 'Arafa and Mināf (Chron. Mecca, ii. 333; iii. 114). The Meccan minbar was a portable one. It usually stood beside the musqāqā but was put beside the Ka'ba during the khūṣāt (Ibn Dūfār, p. 95, 97; Chron. Mecca, iii. 429). According to al-Batānī, this custom was kept up until Sulaymūn Qaṣīmī (926-974) built a marble minbar, north of the musqāqā (al-Riyāh al-Hijāzīyya, p. 100).

It seems at first to have been defendable whether muḥāsirī should be put up in the provinces or not. According to al-Ḳātī, 'Amr had a minbar made in al-Fars but 'Omar ordered him to take it away: he was not to raise himself above the Muslims so that they would have to sit below his heels (Maṣāih, iv. 6 sq.; Ibn Taghtāribī, i, 76; Sayyūtī, Ḥikāya al-Muḥāṣirīn, i. 63; ii. 135). The idea obviously was that the throne belonged to the caliph alone. After 'Omar's death however, 'Amr is said to have used a minbar (Maṣāih, iv. 8, 27). It stood there till Kurra b. Shārik rebuilt the mosque. During the rebuilding it was put in the Khaṣāṣur, which was used as a mosque; only when the mosque was completed in the year 947, did Kurra put up a new minbar. Tradition however is uncertain. The minbar removed by Kurra, perhaps dated from 'Abd al-Ḳasīt b. Marwān, who had taken it from a church or had been presented with it by the Nubian King (Maṣāih, iv. 8; Ibn Taghtāribī, i. 78), Kurra's minbar remained till 379 when the Fātimid vizier Yağıt b. Kiliṣa replaced it by a gilded one. A large new minbar was placed in the mosque of 'Amr in 405 by al-Ḥākim (Maṣāih, iv. 8; Ibn Taghtāribī, i. 78 sq.).

We hear of no objections in other places to the minbar in the amṣār. In al-Madī'a it was early as the year 16 Sa'd erected a minbar in the mosque improvised in the Iwān of Qisrā (Tabart, i. 245, 9). In Baṣra, Abd Manṣūr put up a minbar in the middle of the mosque. This was however found inconvenient because the Imām had to cross from the minbar to the tārir "over the necks" of the (seated) believers. Ziyād then placed the minbar against the south wall (Yağıt, i. 642). On the other hand, we are told that 'Abd Allāh b. ʿAbīlās (governor of Baṣra 36-40) was the first to mount the minbar in Baṣra (Dhāhir, Bayān, i. 170). When Ziyād had to fly from Baṣra he saved the minbar which he put up in his Masjid al-Hadīm (Tabart, i. 344 sq.). The minbar was the symbol of the ruler and the mosque in which it was set up constituted him as representative of the ruler. It therefore formed a feature of the Masjid al-Djamā', where the community was officially addressed. In the year 64 therefore, there were minbars in all the provinces.

In this year homage was paid to Marwān b. al-Ḥakam not only in the capital but in other amṣār in the Ḥijāz, Mīr, ʿAlla, Dāstra, Isfahān, Khurasān, and other amṣār (B. G. A., viii. 397). Special mention is made of the fact that Tabariyya had no minbar.

In the first century and beginning of the second, we find the war in the smaller towns, delivering the khūṣāt standing, with the staff only. But in 132 the governor 'Abd al-Malik b. Marwān had muḥāsirī put up in the kūsa of Egypt (Maṣāih, iv. 8, 17 sqq.; Ibn Taghtāribī, i. 350 sqq.). When the khūṣāt became purely a divine service and the ruler was no longer the khāṣṣīr (q.v.), the minbar became the pulpit of the spiritual preacher and eventually the Friday service was celebrated was given a minbar. At the same time, i.e. after al-Raṣḥid, the change was gradually completed and the preacher spoke, standing on the pulpit. Hadīth therefore came into existence, according to which the Prophet used to deliver two khūṣāts on Friday, standing "just as is done to-day" (Bekhārī, Dāmirra, p. 27, 30 and 'Omar, ibid., p. 2).

The minbar was thus now quite analogous to the Christian pulpit. It is very probable that this latter also influenced its form. We have already noted above, of a minbar in the mosque of 'Amr, that it was said to be of Christian origin. The same thing came to be said of the Prophet's minbar (Wüstenfeld, Medina, p. 65). Mu'āwiyah made the Medina minbar larger, while the one brought by him to Mecca had only 3 steps, and was of course portable. We again hear of portable minbars later, which did not exclude their being large (cf. above on the minbar of Mecca). Thus the minbar in al-Maghrib is said to have been portable. Ibn al-Ḥākim regards this (the oldest) custom as ḥadīt and therefore ascribes it to al-Hadīm (Maddihat al-Ḥadā'i, i. 47, 48 sqq.). The oldest minbars were all of wood. There is however one hadīth which says that the Prophet had a kūsrī of wood with iron legs made for the reception of Tamīm (Istād, i. 314, a from below; cf. Lammas, Mu'āwiyah, p. 273; note 3); it is however uncertain what relation this had to the minbar. A minbar of iron was made as early as the Omajjay period (Ibn Taghtāribī, i. 78, 8; al-minbar al-ḥadītī probably correct in
spite of Becker, *Kamil*, pp. 10; note; cf. 79, 9; see below); and also of stone (Goldscheider, *Muh. Stud.*, ii, 42, note 5 with a reference to Ibn Hadjar); later they were also built of bricks (Wiistenfeld, *Medina*, p. 64, 96). As a rule the minbar stood against the kibla wall beside the mihrab. Al-Mahdi had tried to reduce the muinābīr to their original small size (Tabari, iii, 496, 9; Makrizi, iv, 12, 15, 139), but he could not arrest the develop-
ment. In the larger mosques several muinābīr were even built. Ibn al-Fakhri about 500 a. H. already mentions 5 minbars in the mosque in Jerusalem (*B. G. A.*, v, 100, 8 sq.). In the Sultan Husan mosque in Cairo 4 were planned and 3 erected when a minaret fell down in 762 and diverted attention to other work (Makrizi, iv, 117, 18 sq.).

The importance, which the minbar already had in the time of the Prophet, caused special reverence to be paid to it and the sanctity of the mosque was concentrated round this and around the mihrab. The governor of Kufa Khālid b. Abdul Allāh al-Kari (105—120) received a letter of censure from the minbar (*Kamil*, p. 20, 15, 9). A false calumny was even taken on or beside the minbar of the Prophet and led to a violent argument between the government and the Muslims. Ibn Hanbal, *Ma'in*, ii, 329; cf. John Pederson, *D. E. A.*, pp. 144, 147). Legends grew up which represented the Prophet seeing into the future from the minbar (Bukhari, *Q. S.*, b. 29) and being able to follow the battle of Mu'ta from it (cf. Wāкиdī—Wellerhausen, p. 31; Ibn Ḥṣām, p. 796) and also telling how his prayers on the minbar were specially efficacious.

Just as the Ka'bah was covered (bāzā) so was the thing done to the minbar. ʿAbd al-Malik is said to have been the first to cover the minbar of the Prophet with a *hijāma* (*Kamil*, ii, 75, 9; see below). Mu'awiyah did the same thing when he had to give up his attempt to abolish it (*ibid.*, p. 75, 9; Tabari, ii, 92, 9). It was not quite the same thing when al-Hāmid covered the already mentioned minbar and covered it with gilt leather because it was covered with dust (read: hadgār) i.e., not (Ibn Ṭabarī, i, 79, 9; 9). Under the 'Abbāsid a new *kiswa* was sent every year for the minbar of the Prophet from Baghdad; the Sultāns later did not renew it so frequently (Wiistenfeld, *Medina*, p. 64). We find other references to the covering of the minbar on special occasions (Ibn Dūhair, p. 149, 9). Ibn al-Ḥātidī (*Madāḥ al-nizām*, ii, 74) demands that the imām should put a stop to the custom of putting carpets on the minbar. —

(On the question of the minbar see: C. H. Becker, *Die Kaaba in Kultur des altent Islam*, Niederdeutsch-Festschrift, i, 131—134 = *Islamstudien*, i, 450—

**a. Dākka.**

In the larger mosques there is usually found near the minbar a platform to which a staircase leads up. This platform (dākka, popularly often *dikka*) is used as a seat for the mu'nūdhaṭins when pronouncing the call to prayer in the mosque at the Friday service. This part of the equipment of a mosque is connected with the development of the service (cf. below under H.4 and C. H. Becker, *Zur Geschichte des islamischen Kultus*, iii, 1912, p. 374—399 = *Islamstudien*, i, 472—500; E. Mittwoch, *Zur Entstehungsgeschichte des islamischen Gebets und Kultus*, Abb. Pr. Ak. W., 1913, Phil.

**f. Kurš, Kūrinān and Rekka.**

In the mosques there is usually a kūrinā, that is a wooden stand with a seat and a desk. The desk is for the Kurš, the seat for the *kūrinā* or reader, *jāhib*. Ibn Dūhair attended a divine service in Baghdad at which a celebrated preacher spoke from the minbar, but only after the *sīlah* sitting on *kūrinā* had recited portions of the *Kūrinā* (*)Niharī*, p. 219, 222). The *sīlah* is often identical with the *jāhib* sitting on a *kūrinā* made of teak (Ibn Dūhair, p. 200; Ṭūsī, *Udābā*, ii, 319; Makrizi, iv, 121).
sometimes he spoke from the minbar to which the wā'iq often had access (cf. Ibn Djbair; see Mzr, Renaissance des Islam, p. 320). The ḥusṣan are called al-Makki aṣhāb al-ḥarāṣī which is in keeping with this (Kitb al-Ḳublā, l. 152, quoting K. al-Makkiḥārī, l. 155). Several karāzī are often found in the mosque (cf. for the Mosque of ’Amr, Makrīzī, iv. 12). When the karāzī mentioned for the earlier period always had a desk cannot be definitely ascertained. The karāzī with dated inscriptions given by van Berchem in his Corpus all belong to the 8th century (N.B, 364, 302, 335, 359, 401). According to Lane, at the Friday service while the people are assembling, a ḥaṭīr on the karāzī recites the 21st Suūr up to the aṣghān (Manuscripts and Costumes, p. 86). The same custom is recorded by Ibn al-Hajjīdī and condemned because it has a disturbing effect (K. al-Makkiḥārī, iv. 44, middle).

The Kurūn very soon received its definite place in the mosque like the Bible in the church (cf. Buhkārī, Shfi, bāb 91: they prayed at a pillar beside al-muṣafāh). According to one tradition, ’Othmān had several copies of his Kurūn sent to the provinces (e.g. Noldeke-Schroeder, Gesch. d. Qur., ii. 112 sq); al-Hajjīdī, a little later, is said to have done the same thing (Makrīzī, iv. 17).

The mosques had many other copies beside the one kept on the kurūn. Al-Hākim put 814 muṣafāh in the Mosque of Ibn Tulūn, where the founder had already put boxes of Kurūns (Makrīzī, iv. 36, 40; cf. Ḥasan al-Muṣafāh, ii. 135) and in 403 he presented 1,289 copies to the Mosque of ’Amr, some of which were written in letters of gold (Makrīzī, iv. 12; Ḥasan al-Muṣafāh, ii. 135). Even earlier than this there were so many that the qādi al-Hārith b. Mlikūn (237-245) appointed a special qaṭān to look after them (al-Kindī, Wustā, p. 469); there are still a very large number in the Mosque of the Prophet (see Batānīnī, Rīḥā, p. 241 above). Of particular value was the Muṣafāh Aṣmā’, belonging to the Mosque of ’Amr, prepared by ’Abd al-Asr b. Marwān, later bought by a son and afterwards by his daughter Asmā’; her brother left it in 128 to the mosque and it was used for public readings (see its whole history in Makrīzī, iv. 17 sq). Besides it, another copy was for some time also used for reading, which was said to have lain beside ’Othmān, when he was killed and to have been stained with his blood, but this one was removed by the Fatimids (Ikhā, p. 19). In the time of Ibn Baṭṭūṭa, a Kurūn for which the same claims were made was kept in Bāṣra (ii. 10). On New Year’s Day when the Fatimids caliphs used to go in procession through the town, the Caliph at the entrance to the Mosque of ’Amr took up in his hands a muṣafāh said to have been written by ’Ali and kissed it (Ibn Taghhrīrīh, t. 1, p. 422 middle); it was perhaps the Muṣafāh Aṣmā’. In Syria, Egypt, and the Hijāz, in the fourth century, there were Kurūns which were traced back to ’Othmān (B.G. A., iii. 143; cf. ii. 117). One of the Kurūns made for ’Othmān was shown in the Mosque of the Omayyads in Damascus in the time of Ibn Djbair. It was brought there in the year 507 from Tiberias (Djahh, Thūrīs, Hāshahrād, 1537, ii. 25). Other Kurūns of ’Othmān were shown in Baghdad and Cordova (see Mzr, Renaissance des Islam, p. 327)

and Ibn Djbair saw another in the Mosque of the Prophet; it lay in a desk on a large stand, here called muṣafāh (Rīḥā, p. 193; cf. thereon Doyt, Supplement, s. v.). The Fāṭimīya Madrassa also had a Musaf of Uṯmān, bought by the Kādi al-Fāṣil for 30,000 dinārs (Makrīzī, iv. 197) and there is one in Fāsun (Archives Marocaines, xviii., 1922, p. 361). Valuable Kurūns like these had the character of relics and belonged to the kāfīnā of the mosque. They were often kept in a chest (ṣanāḥāk) (Ibn Djbair, qf. previously in Musafāh, Bukhārī, Shfi, bāb 95, Musul has al-muṣafāh, see al-Aṣkālānī, Fath al-bārī, i. 385), also called rāḥit (Ibn Djbair, p. 104). In the Kaʿba, Ibn Djbair saw two chests with Kurūns (p. 83); Ibn al-Fāṣil mentions 16 chests with Kurūns in the Jerusalem mosque. (B. G. A., ii. 100). In the mosques there were also ṣanāḥāk for other things, such as lamps (Makrīzī, iv. 53; Wustenfeld, Med., p. 82 = Ibn Djbair, p. 194), a rāḥit for alms (K. al-Makkiḥārī, ii. 44, infra), for the bāl al-māl or the property of the mosque (see below). There were also chests for rose-wreaths (Makrīzī, ii. 30) which were in charge of a special officer. In the Mosque of ’Amr there was a whole series of ṣanāḥāk (Makrīzī, iv. 9).

The Kurūns were not the only relics to be kept in the mosques. Bodies or parts of the bodies of saints (cf. B. G. A., ii. 4, 22) and other žikkar were kept and revered in mosques: the rod of Moses, (in Kūfa, Yūkū, iv. 325, cf. on Moses, see Golzdiher, Mut. Stud., ii. 361), the Prophet’s sandals (in Hebron, B. G. A., v. 101, also in Damascus, where the Msharīya Madrassa had his left and the Damāṃghīya his right sandal; T. A. ser. 9, iii. 271 sq, 402), his cloak (in Aḥḏūr, B. G. A., ii. 178), hair from his beard (in Jerusalem among other places, Batānīnī, Rīḥā, p. 165) and many other things (see Golzdiher, Mut. Stud., ii. 358 sqq.; Mzr, Renaissance des Islam, p. 325 sq). These relics were often kept in valuable reliquaries. The head of Huṣain was buried in a ḥaṭīr in his mosque in Cairo (Ibn Djbair, p. 45). There was a black stone like that in the Kaʿba in a mosque in Shahrastān (B. G. A., iii. 433).

On the other hand, pictures and images were excluded from the mosques, in deliberate contrast to the crucifixes and images of saints in churches, as is evident from Ḥāẓīr (Bukhārī, Saʿdī, bāb 94, 54), Ḥanāwī, bāb 71; Musul, Makriḥārī, iv. 3; cf. on the question Becker, Christliche Polemik und islamische Dogmengeschichte, Z.A., xxvi. = Islamstudien, l. 445 sqq.). It is of interest to note that in the earliest period, Solvī b. Abī Wākāna has no scruples about leaving the wall-paintings in the Iwan of Kisa at Madīna standing, when it was turned into a mosque (Tabārī, ii. 4433, 4451). The case was somewhat different, when, before the chief mosque in Delhī which had been a Hindu temple, two old copper idols formed a kind of threshold (Ibn Baṭṭūṭa, iii. 157) although even this is remarkable (cf. Soucek, Morgenland, Verspreide Geschichten, ii. 451 sqq. = Z.D.M.G., lix. 1907, p. 186 sqq.). In some circles the opposition to pictures extended to other relics also. Ibn Tahfīrīh condemned the reverence paid to the Prophet’s footprint, which was shown, as in Jerusalem, in a Damascus mosque also (Qaṣumiwine, Hist. Sult. Maml., ii. ii. 245). g. Carpets.

Carpets were used to improve the appearance of the mosque. The custom of performing the
the Ka'ba and hung two lanterns on each of the walls of the mosque (ṣurū'īḥā; cf. Ibn Dübair, Riḥla, p. 149, 150, 155, 271; v. Berchem, Copt. Inschr. Arab., I, No. 506). Khalīd al-Ḳaṣrī had the mas'ād also illuminated during the pilgrimage and in 219 the torches called ʿamāṭῑḥ were placed here and ʿOmar b. ʿAbd al-ʿAzīz ordered the people, who lived in the streets of Mecca, to put up lamps on the 1st Muharram for the convenience of those visiting the Ka'ba (Chron. Mekk., i. 200-202, cf. 348 sq.). In 253 Muḥammad b. ʿAḥmad al-Maṣṣūrī erected a wooden pole in the centre of the ṣurū' and ʿamāṭῑḥ on ropes were hung from it. This was however very soon removed (ibid., ii. 190 sq.). About 100 years later, al-Maḏāki ordered the Ṭawfīq wood poles on which hung lanterns (ʿamāṭῑḥ) in which were placed candles for the kings of Egypt, Yemen, etc. (B. G. A., ill. 74). Ibn Dübair describes the glass ʿamāṭῑḥ which hung from hooks in the Meccan Haram (Riḥla, p. 103) and lamps (ṣurū'īḥā) which were lit in iron vessels (ibid., p. 103, cf. p. 143). Similar silver and gold ʿamāṭῑḥ were seen by him in Medina (ibid., p. 192 at the top; see also Wüstenfeld, Medina, p. 83 sqq.). According to al-Ṭabīḥ (before 300), 1,600 lamps were lit every evening in Jerusalem (B. G. A., v. 100) and in the next century al-Maḏāki says that the people of Palestine always burn ʿamāṭῑḥ in their mosques, which were hung from chains as in Mecca (B. G. A., ill. 182). The illumination was thus very greatly increased. In the year 60, when Ibn Ziyād was searching for his enemies in the mosque of Kūf, the lamps were not sufficient, and large torches had to be used in searching the pillars (Ṭabāṭ, ii. 259 sq.). This, like what has already been said about Mecca, shows out of what modest beginnings this part of the mosque's equipment developed.

In the time of the ʿAbārāids, lamps and lanterns were part of the regular furniture of the mosque. Al-Maḍīnī is said to have taken a special interest in this. He ordered lamps to be put in all the mosques, partly to assist those who wanted to read and partly to prevent crime (Baihaqī, ed. Schwally, p. 473). For this purpose, the ʿamāṭῑḥ, already mentioned, hung on chains were used, as at the building of the mosque of Ibn Tūlūn (Maṣūrī, iv. 38, 39), in the Azhar Mosque and elsewhere; they were often of silver (ibid., p. 56, 63). Golden ʿamāṭῑḥ were also used and were of course commissioned by Ibn al-Hāḍīl (Maḍīḥī, ii. 54) as ostentatious. At the same time, candles (ṣamūr or ʿamāṭῑ) were used in large numbers, the candlesticks (ṣawwār, sing. sawr) often being of silver (Ibn Dübair, Riḥla, p. 45, 131, 194; cf. Wüstenfeld, Medina, p. 95, 100). About 400, large candelastra were made in Egypt, which from their shapes were called tanūrī, stoves. Al-Hākim presented the Mosque of 'Umar with a tanūrī made out of 100,000 dirhams of silver; the doors of the mosque had to be widened to admit it. He also gave two other lamps (Ṣayyīḏ, Ḥasan al-Muṣṭafī, ii. 136 infra; cf. Nūrī b. Khaṣraw, ed. Schefer, p. 51 [text]; p. 148 [tr.]; Ibn Taghhrībid, ed. Popper, ii, p. 105). In the Mosque of al-Hākim, in addition to lamps and candle-lanterns, he also had a silver tanūrī and he made similar gifts to the Azhar and other mosques: the lamps were of gold or silver (Maṣūrī, iv. 51, 56, 63; cf. Ibn Taghhrībid, ii, p. 105). The tanūrī and other lanterns could also be made of copper (see v. Berchem,
Corpus, i. N. 504, 503, 506, 507, 511), as, for example, the celebrated candelabrum of the Mosque of Mu'ayyad (Makrit, iv. 137) which was made for the mosque of Hassan but sold by it (ibid., p. 118).

This great interest in the lighting of the mosque was not entirely based on practical considerations. Light had a significance in the divine service and Islam here, as elsewhere, was taking over something from the Church. When, in 237, the caliph was on his deathbed, he asked that the sahâb should be performed over him with candles and incense (bei l-mumâr wa l-bu'dâh) exactly after the fashion of the Christians (Ibn Asâr, i. 165; cf. ii. 89). The dependence of Islam on Christianity is also seen in the story that 'Othman, when he was going to the evening sahâb in Medina, had a candle carried in front of him, which his enemies condemned as bid'a (Ya'qubi, ed. Houtsma, ii. 187). The Sahâb bias does not affect the significance of this story. A light was used particularly in the minârât, because it represented the holy cell, to which light belongs (cf. Str. xxiv. 35). Then, in Mecca, lamps were placed before the insâms in the minârât and there were considerable endowments for such minârât lamps (Ibn Djibair, Ri'ba, p. 103, 144). Light, as was everywhere the custom in ancient times, was necessary in mausoleums and the documents of endowment show that a large number of oil-lamps were used in this way (e.g. the document for al-Makk al-Ashraf's mausoleum, v. Berchem, Corpus, i. N. 252). But in the mosque generally the use of lights had a devotional significance and lamps might be endowed for particular individuals (cf. B.G.A., iii. 74, quoted above). The lamps so given by al-Hakim were therefore placed in the mosques with great ceremony, with blasts of trumpets and beating of drums (Ibn Taghribirdi, n. i. 105).

On ceremonial occasions a great illumination was therefore absolutely necessary. In the month of Ramadan, says Ibn Djibair, the carpets were renewed and the candles and lamps increased in number, so that the whole mosque was a blaze of light (Ri'ba, p. 143). On certain evenings trees of light were made with vast numbers of lamps and candles and the minarets were illuminated (ibid., p. 149-151, 154, 155). In the Mosque of the Prophet in the time of Sambhid, forty six lamps were burned around the sacred tomb, and three to four hundred lights in the whole mosque (Wustenfeld, Medina, p. 100). On the ma'lûd al-nabi, says Kuf. al-Din, a procession went from the Ka'ba in Mecca to the birthplace of the Prophet with candles, lanterns (fumunât) and lamps (masluk), see Chron. Mecca, iii. 439). In the Haram of Jerusalem, according to Makrit al-Din, 750 lamps were lit by night and over 20,000 at festivals (Sauvage, Hist. Jérus. et Hébron, p. 138). In the dome of the Sahâba in 452 a chandelier and 500 lamps fell down (ibid., p. 69); at the taking of the town in 492 (1009) the Franks carried off 42 silver lamps, each of 3,600 dirhams, 23 lamps of gold and a tamûd of 40 risâ of silver (ibid., p. 71). It was similar and still is in Cairo and elsewhere in the Muslim world. For the intâlat al-wâli in the Mosque of 'Amr, 18,000 candles were made for the Mosque of 'Amr and every night eleven and a half thousand of good oil were used (Makrit, iv. 31 and more fully ii. 345 upp.). The four nights of illumination fell in the months of Rajab and Shaba, especially Nu'af.

Shâdâ (Quatremerre, Hist. Sult. Masm., ii. 131; cf. also Snouck-Hurgrunge, Mecca, ii. 77). Quite recently (1908) electric light has been introduced into the Mosque of the Prophet (al-Batani, Ri'ba, p. 245 sqq.).

On the question in general see Clermont-Ganneau, La lampe et l'olivier dans le Coran, in Recueil d'Archéologie Orientale, viii, 1924, p. 183-228; on the copper candelabra see A. Wingham, Report on the Analysis of various examples of Oriental Metal-Work etc. in the South Kensington Museum etc., London 1892; F. R. Martin, Alters Kupferarbeiten aus dem Orient, Stockholm 1902; on glass lamps see G. Schomann, Altorientalische Glass-Gefasse, Vienna 1898; V. Berchem, C.F.A., 527 sqq.; Max Herr Bey, La Mosquée du Sultan Hassan (Comité de Conservation des Monuments de l'Art Arab), 1899, p. 8 sqq.; see also the Bibliography in Int., xvii., 1928, p. 217 sqq.

j. Incense.

According to some traditions, even the Prophet had incense burned in the mosque (Tirmidhi, i. 116; see Lammens, Mo'awwia, p. 367, note 8) and in the time of 'Omar, his client 'Abd Allah is said to have perfumed the mosque by burning incense while he sat on the minbar. The same client is said to have carried the censer (midjam; cf. Lammens, loc. cit.) brought by 'Omar from Syria before 'Omar when he went to the sahâb in the month of Ramâdan (A. Fischer, Biographie von Grundherrnmenon etc., p. 55, note). According to this tradition, the use of incense was adopted into Islam very early as a palatable imitation of the custom of the Church. In keeping with this is the tradition that in al-Tabari as early as the governorship of 'Umar, the mu'adhdhin used to burn incense in the mosque ('Abd al-Hakam, p. 132; cf. Annali dell' Islam, iv. 365). The Sahâba Mosque had incense burned in it during the consecration ceremony (Sauvage, Hist. Jérus. et Hébron, p. 53).

Under the Omayyads, incense was one of the regular requirements of the mosque (fîh al-masjid: Tabari, ii. 1234, sq.; Mo'awwia is named as the first to perfume the Ka'ba with perfume (khulâb) and censer (tayyaba: B.G.A., v. 20, sq). It became the custom to anoint the sacred tombs with mask and fîh (Chron. Mecca, l. 150, sq.; Ibn Djibair, Ri'ba, p. 191, sq.) to bathe washed the Ka'ba with rose-water (Makrit, iv. 96, sq.). Incense, as well as candles, was used at burials (cf. de Goeje, Z.D.M.G., 1905, p. 403 sqq.); Lammens, Mo'awwia, p. 436, note 9). Al-Mu'awwia's desire to be buried with candles and incense (tâbûb) exactly like the Christians (Ibn Usâila, l. 105, sq.) shows that they were aware that the custom bore much the same relation to the Christian usage, as the mosque building did to the Church. The consumption of incense in the mosques gradually became very large, especially at festivals (see for the Fatimids: Ibn Taghribirdi, n. l. 484, sqq.; n. ii., ed. Popper, p. 106, sq.; Makrit, iv. 51); on vessels for holding incense see the Bibliography in Int., xvii., 1928, p. 217 sqq.

j. Water-Supply.

Nothing is said of a water-supply in connection with the oldest mosques. The Mosque of Mecca occupied a special position on account of the Zamzam well. In the early days of Islam, two basins (jarwâ) are said to have been supplied by it, one behind the wall, i.e. just at the side of the mosque for wudu and one between the wall.
and the ṭūdūn for drinking purposes; the latter was moved nearer the well by Ibn al-Zubair. In the time of Sulaymān b. Ṭabd al-Mallik, a grandson of ʿAbd Allāh b. Ṭabdūs, for the first time a ṭūdūn was built a ḥubbā in connection with the Zemmām (Chron. Mehbūba, l. 299). At the same time the governor Khālid al-ʿAṣārī laid down lead-piping to bring water from the well at al-Thāqif (wandāq) to a running fountain (frūnīnā) between the Zemmām and the ṭūdūn, probably on the site of the earlier ṭūdūn. It was intended to supply drinking-water in place of the saltish water of Zemmām, but a branch was led on to a ṭūwāf at the Bāb al-Safā, which was used for ritual ablutions. The people, however, would not give up the Zemmām water and immediately after the coming to power of the ʿAbbasids, the provision for drinking-water was cut off, only the pipe leading to the ṭūwāf being retained (Ibid., l. 339 sq.). In Ibn Dūbabī's time, there was, in addition to the Zemmām, a supply of water in vessels and a bench for performing the ṭūdūn (Rihāla, p. 89). ʿAbd Allāh's plan, arrangements for ablutions at the entrance and a running fountain in the ṭūwāf, seems to have been the typical Omayyad one and to have been introduced from the north. Such fountains were usual in the north, not only in private houses, but also for example in the astūrīn (stūrīn) surrounded by pillars, which, from Eusebius' description, formed part of the church of Tyre (see Haucq in Herzog-Hauck, Realencyclo., s. v. kirche, u. chald. Wörterbuch, iv. 81); Fraenkel, Forstwirt., p. 124; ṭūsāt, found in al-ʾArṣārī, Chron. Mehbûba, i. 340 is probably due to a slip). At the same time, however, ṭūwāf or ṭūsāt or ṭūdūn (which probably comes from the Persian) (cf. Fraenkel, op. cit., p. 287) or the old Arabic ṭūmū is also used. The arrangements for ablutions were called μαθηδί or μαθηδί, now usually μαθηβά, "place for ṭūdūn". This accommodation in Mecca just mentioned was later extended. Ibn Dūbabī mentions a building at al-Zāhār, 1 mile north of Mecca which contained μαθηδί and ṭūsāt for those performing the minor ṭūdūn (Rihāla, p. 111).

In Medina, Ibn Dūbabī mentions rooms for ṭūdūn at the western entrance to the mosque (Rihāla, p. 197, 13 sq.; cf. the plan in al-Batānī, Rihāla, facing p. 244). At the same time Ibn Zābaila mentions seven receptacles for water in the ṭūdūn in the year 199, probably for drinking-water; later (viii Cent.) a large basin surrounded by a railing is mentioned in the centre of the court. It was intended for drinking purposes but was used for bathing and was therefore removed. Baths and latrines were built anew by al-Nāṣir's mother (Wūstīnfeld, Medina, p. 99 sqq.).

In Damascus, where every house, as is still the case, was supplied with water, Yākūt (d. 626 = 1229) found no mosque, madrasa or kāh-nākāh which did not have water flowing into a ṭūwāf in the ṭūdūn (Yākūt, li. 590). Ibn Dūbābī describes the arrangements in the Mosque of the Omayyads. In the ṭūdūn, as is still the case, there were three ṭūsāt. The centre one rested on four marble columns, and below it was a basin with a spring of drinking-water surrounded by an iron grille. This was called ʿaṣṣāf al-maʾrūzī "water-cage". North of the ʿaṣṣāf was a Masjd al-Kullās in the ṭūwāf of which there was again a ṭūdūn of marble with a spring (Ibn Dūbabī, Rihāla, p. 267). There was also running water in an adjoining maṣrūba (p. 269), in the kāh-nākāh and madrasa (p. 271), and in a hall beside the living apartments there was again a ṭūdūn of marble (kāh-nāh) and spring, water in the ṭūwāf (p. 269). There were also ṭūwāf against the four outer walls of the mosque, whole houses being built up with lavatories and chambers (p. 273); a century earlier, we are told that at each entrance to the mosque there was a μαθηβά (B. G. A., iii. 159). The whole arrangements correspond exactly to those made by Khālid al-ʿAṣārī in Mecca in the Omayyad period and must therefore date from the Omayyads.

It was the same in other Syriac and Meṣopotāmian towns. In Sūmarī, al-Mutawakkil built in his new ḍāmī a frūnīnā with constant running water (B. G. A., vii. 265). In Nāṣrīn, the river was led through the ṭūdūn of the mosque into a ṭūdūn; there was also a ṭūwāf at the eastern entrance with two μαθηβά of the mosque (Ibn Dūbabī, Rihāla, p. 239). In Mesnyy in the mosque, which dated from the Omayyad period, there was a spring with a marble cupola over it (Ibid., p. 255). In Ḥāzān, there were in the ṭūdūn three ṭūsāt with ṭūdūn and drinking-water (Ibid., p. 246), in Ḥalb two (Ibid., p. 253). In Kīfā there were three ṭūwāf with Euphrates water in front of the ḍāmī (Ibid., p. 212) but in the mosque a μαθηβά a domed building with running water (Yākūt, iv. 325, 326, here called ṭūwāf; cf. B. G. A., v. 173; Ibn Dūbabī, p. 59, 267). It was the same in Amīd (Nāṣirī-Khwaraz, ed. Schefer, p. 28) and in Zarānd in Sīdīsīn (B. G. A., ii. 298 sq.). The principal mosques of the ʿIrāq had μαθηβά at the entrances, for which, according to a remarkable note by Mushīnī, rents were paid (B. G. A., iii. 129, read ʾaḥdāt; cf. μαθηβά: Ibn Dūbabī, p. 89). In Palestine also, in the Al-Masjd's time, there were conveniences for ablutions at the entrances to the ḍāmī (μαθηβά: B. G. A., iii. 182; Ṭālib: i., 58) and in Ṣāmānī in the fourth century, beside each mosque, there was water for drinking and for ṭūdūn (B. G. A., vi. 111). In Farsī also, it was the custom to have a μαθηβά in front of the mosque (B. G. A., iii. 318) and there was drinking-water in the mosque itself on a bench (kāh-nāh) in iron jars into which ice was put on Fridays (Ibid., p. 327). Not only at the Zemmām well but also in the mosques of the ʿIrāq, men appointed whose duty it was to distribute drinking-water (Tabari, iii. 2165). The regular custom, therefore, was to have at the entrance to, or in front of the mosque, to have at the entrance to, or in front of the mosque, was the exception for the μαθηβά to take place in the mosque itself.

In Egypt at first the Mosque of Ibn Tūlūn was arranged similarly to the Syriac mosques. In the centre of the ṭūwāf there was a giūst dome, supported by sixteen marble columns and surrounded by a railing. This upper storey was supported by nineteen marble columns and below was a marble basin (kāh-nāh) with a running fountain (frūnīnā); the ṭūwāf was called from the dome (Māṣjīrī, iv. 37; the description is not quite clear). People complained that there were no arrangements for washing (μαθηβά) there. Ibn Tūlūn replied that
he had not made them because he had concluded the mosque would be polluted thereby. He therefore made a miṣiq'a with an apothecary’s shop behind the mosque (ibid., p. 38, 39; Ḥusain al-Muḥādara, ii. 139; Ibn Tağhrībadī, ii/1, 10). This suggests that previously in Egypt the washing arrangements had been directly connected with the mosque. After the fire of the year 376, the fawā'id was renovated by al-Āziz (Maḏrīzī, iv. 40) in 666 again by Mūsa ʿAmmār, whose inscription still exists (C.F.A.I., ii. 11, NP. 16). A new miṣiq'a was built in 792 beside the old one on the north, outside the mosque (Maḏrīzī, iv. 42).

The Mosque of ʿAmr first got a fawā'id in the time of al-Āziz. In 378–379 his vizier Yāḥyā b. Kallīs installed one in the cupola, already in existence for the baṭī al-mūd. Marble jars were put there for the water (probably drinking-water) (Maḏrīzī, iv. 9, 11; cf. Ḥusain al-Muḥādara, ii. 130; Yāḥyā, ii. 899). A new water basin was installed by ʿAbd al-Dīn beside his maqṣara in the mosque. The water was led to the fawā'id al-ṣikhiya from the Nīl. This was prohibited in the reign of Baḥr al-Bunduqdār (658–676) by the chief ʿAbd, because the building was being affected by it (Maḏrīzī, iv. 14; Ḥusain al-Muḥādara, ii. 143). The emir, who restored it, brought the water for the ṣikhiya from a well in the street (Maḏrīzī, iv. 15).

Like Ibn Ṭūlūn, the Fāṭimid rulers did not seem to have considered the miṣiq'a indispensible. For the Aṣbār Mosque had originally no miṣiq'a: as late as al-Hakim’s waḥif document for the provision of miṣiq'a, money is given only with the provision that something of the kind should be made (Maḏrīzī, iv. 51, 54). At a later date we hear of two miṣiq'a, one at the adjoining Akhūnghāwīya (ibid., p. 54). On the other hand, there was already a ṣikhiya in the centre of the court, but whether it had existed from the first is not known. It had disappeared, when traces of it were found in 827 in laying-out a new ʿibād (ibid., p. 54). The ṣikhiya of the Mosque of al-Hakim was not erected by the founder. Like that of the Mosque of ʿAmr, it was removed in 660 by the ʿAbd al-Talā al-Dīn but after the earthquake of 702, it was again rebuilt and provided with drinking-water from the Nile (ibid., p. 56, 57) and again renovated after 780 (ibid., p. 61). A small miṣiq'a, later replaced by another, was in the vicinity of the entrance (ibid., p. 61). Other Fāṭimid mosques had basins in the ṣāḥn, which were supplied from the Nile and from the Khalidī (ibid., p. 76, 81, 120).

The traditional plan was retained in the period following also. For example, we know that the emir Taḫṣṣṣ ṣ in 815 placed a birka in the centre of the ʿAlī’s Ḥaqqīn which was covered by a roof supported by marble pillars and supplied by the same pipe as the already existing miṣiq'a (Maḏrīzī, iv. 107, cf. 124, 138, 139 etc.). At the ceremonial dedication of mosques, it was the custom for the patron to fill the birka in the ṣāḥn with sugar, lemonade or other sweet things (e.g. al-Muṣayyaf, in 822: Maḏrīzī, iv. 139; Māḏrīzī, iv. 131; Māḏrīzī, iv. 224, 227; ibid., p. 256). The importance of the birka of the mosque, as a drinking-place, diminished as pious founders erected drinking fountains everywhere (cf. for Mecca: Chron. Mich., ii. 116–118; also B.G.A., iv. 221, s. v. ṣabā; p. 258, s. v. ṣabīl) and especially when it became the custom to build a sabil with a boy's school in part of the mosque (see below, E 4 end). A ṣanāfī for watering animals was also sometimes built in the vicinity of the mosque (Maḏrīzī, iv. 76). Sometimes also the birka of the ṣāḥn was used for washing. In the year 799 the emir ʿAlībūghā built arrangements for this in the Aṣbār mosque so that one could get water for ṣanāfī from taps at a birka put up in the ṣāḥn (Maḏrīzī, iv. 76). Maḏrīzī condems this addition, but only because there was already a miṣiq'a at the entrance and the ṣāḥn was too small for the new one (ibid.) and also not original, and it was only because the wall was damaged that the emir's gift was removed in 815 (ibid., p. 77).

The custom of using the water supply of the ṣāḥn for ṣanāfī survived in many places in Egypt. The arrangements were therefore usually called miṣiq'a al-ṣāḥn or ṣalād (which is not found in the inscriptions). If they had taps, they were called ṣanāfīya; according to Lane's suggestion because the Ḥanafis only permitted ablations with running water or from a cistern to ells broad and deep (Lexicon, s. v.; cf. Manners and Customs, Everyman's Library, p. 69; cf. on the question: Max Herr, Observations critiques sur les basins dans les Šāhns des Meqare, H. I. E., iii/7, 1896, p. 47–51; do., La Mosque du Sultan Ḥasan, p. 2; Herr wrongly dates the modern usage from the Turkish conquest in 1517). In quite recent times the miṣiq'a have often been moved outside to special buildings. Ibn al-Haḍḍāʾ condemns bringing water into the mosque, because the only object is for ablation and ablutions in the mosque are forbidden by *our* learned men (Maḏrīzī, iv. 47 sq.; 49): like shaving, ablutions should be performed outside the mosque in keeping with the Prophet's saying: ʿaffāl wa-ḥabībūn ʿallā abūbād maḥḍīlikum (ibid., ii. 58). It was in keeping with this principle that in earlier times the miṣiq'a was usually put at the entrance and the barbers took up their places before the entrance (cf. the name Fūḥ al-Musawiyin "The Barbers' Gate" for the main entrance to the Aṣbār mosque). Miṣiq'a were also to be found in hospitals; thus the "lower hospital" was given two in 346, one of which was for washing corpses (Ibn Duḥṣān, p. 99 infra).

E. The Mosque as a State Institution.

1. The Mosque as a Political Centre. Its Relation to the Ruler.

It was inherent in the character of Islam that religion and politics could not be separated. The same individual was ruler and chief administrator in the two fields, and the same building, the mosque, was the centre of gravity for both politics and religion. This relationship found expression in the fact that the mosque was placed in the centre of the camp, while the ruler's abode was built immediately adjacent to it, as in Medina (and in al-Fuṣṭāṭ, Damascus, Baṣra, Kūfah). We can see how this was achieved at or before the Kūfah-Tabari, ii. 230 sq., *ṣāḥn al-ibnāra: ibid., p. 523* with the growth of the mosque gradually became incorporated in it. In al-Fuṣṭāṭ and Damascus and was replaced by a new building. The tradition remained so strong that in Cairo, where the chief mosque Dżāmīʿ al-Asgar was being planned in 169, a Dār Ummār ʿMiṣr was built beside it with direct access to the mosque (Maḏrīzī, iv. 33
and when Ibn Tültün built his mosque, a building called the Dar al-imāra was erected on its south side, where the ruler, who now lived in another new palace, had rooms for changing his dress, etc., from which he could go straight into the maqṣūra (ibid., p. 42).

The Abābids at the foundation of Bagdād introduced a characteristic innovation, when they made the palace the centre of the city; the case was similar with Fātimid Cairo; but Sulaimān b. 'Abd al-Malik in Ramla had already built the palace in front of the mosque (Baladhūrī, p. 143). Later rulers who no longer lived just beside the mosque, had special balconies or something similar built for themselves in or beside the mosque. Saʿīd al-Dīn built for himself a sünūfara under the great minaret of the mosque of ʿAmr (Makrizi, iv. 15; Ḥasan al-Maḥṭūṭa, ii. 137) and just to the south of the Aṣzar mosque the Fāṭimidars had a maqṣūra from which they could overlook the mosque (Makrizi, i. 343).

The caliph was the appointed leader of the state and the khalif of the Muslim community. The significance of the mosque for the state is therefore embodied in the minbar. The installation of the caliph consisted in his seating himself upon this, the seat of the Prophet in his sovereign capacity. When homage was first paid to Abū Bakr by those who had decided the choice of the Prophet’s successor, he sat on the minbar. ʿOmar delivered an address, the people paid homage to him and he delivered a khutba, by which he assumed the leadership of the Muslim Hākem, p. 1017; Tābarī, l. 1828 sq.; K. al-Qāmiṣ, ii. 751; Yāfṣīḥī, ii. 142); it was the same with ʿOmar and ʿOthmān (ibid., p. 157, 187).

The khutba, after the glorification of God and the Prophet, contained a reference to the caliph’s predecessor and a kind of formal introduction of himself by the new caliph. It was the same in the period of the Omayyads and ʿAbābids (see for al-Walīd: Tābarī, ii. 1177 sqq.; al-Amin: ibid., iii. 764; al-Mahdī: ibid., iii. 389, 451, 457; cf. on this question also Bukhārī, ʿĀbāb, l. 43). The minbar and the khutba associated with it was still more important than the imāmat at the sünūfara, it was minbar al-muṭla (Hamāma, ed. Freytag, p. 656, v. 4). According to a hadith, the Prophet carried the little ʿHasan up to the minbar and said, “This my son is a chiefman” etc. (Bukhārī, Manāḥīb, l. 25). This reflects the later custom by which the ruler said that homage was paid to his minbar, the maqṣūra; this also was done from the minbar (cf. khutba yaqīn al-ʿājīma, “al-Muṭla b-taṣkīf b-ayyāt al-ʿAbd, Tābarī, iii. 2131). The Fāṭimid caliph showed honour to a distinguished officer by allowing him to sit beside him on the minbar (Ḥun al-Maḥṭūṭa, ii. 91); in the same way Muʿṣīyi allowed Ibn ʿAbī al-ʿAbīs to sit beside him “al-farāsīrī” (Ibn Abī ʿUsābīa, i. 119) whether the reference is to the minbar is perhaps doubtful. The kātba could also be received by another on behalf of the caliph but it must be accepted on the minbar. Thus the governor of Mecca in 596 accepted on the minbar homage to ʿAbd Allāh b. Maʿṣūm and the deposition of Maḥammad b. Ḥarrūn (Tābarī, iii. 864 sq.; cf. for al-Mahdī: ibid., p. 399). There are other cases in which the solemn deposition of a ruler took place or on the minbar (Agāhī, 2nd ed. Cairo, i. 12; Wüstenfeld, Medina, p. 15). Even at a much later date, when spontaneous acclamation by the populace was no longer of any importance, the ceremonial安装 on the minbar was still of importance (Makrizi, iv. 94). It had become only a formality but still an important one. Homage was paid to the ‘Abbasid caliphs in Egypt in the great maqṣūra of the palace or in a tent in which a caliph had been put up, and similarly to the sünūfara whose investiture was read out from the minbar (cf. Quattām, Hist. Sult. Maml., i/1, 117, 149 sqq., 183 sqq.). If one dreams that he was sitting on the minbar, it means that he would become sünūfara (ibid., i/1, 117).—The Abābids caliph had however long had his own throne after the old Persian fashion in his palace (al-Tādīf fi Aḥkām al-Muṭla, ed. Alparslan Zaki, Cairo 1914, p. 7 sqq.) and so had the Fāṭimidars (Ibn Taghtibrī, 2/157 and the Mamluks (Quattām, op. cit., i/1, 87; cf. 147). When later we find mention of the kātba (v. Berchem, Corpus, i, N° 333, sünūfara al-muṭla (Corpus. Mecca, iii. 133), sünūfara al-sünūfara (Makrizi, i. 157; cf. al-sanā’an, royal throne: B.G.A., ii. 282, 285; kātba similarly ibid. Ibn ‘Arabshāh, Vite Timuri, ed. Manger, ii. 486) or sünūfara al-muṭla (Quattām, op. cit., i/1, 61), the reference is no longer to the minbar. This does not mean that the ruler could no longer make public appearances in the mosques: thus in 648 Muḥammad Aibak regularly gave audiences in al-muḥādara al-ṣaḥāba (Quattām, Hist. Sult. Maml., ii. 17) and memorial services for Raibars were held a year after his death in several mosques, mudarris and khawāsin in Cairo (677 = 1278; ibid., i/1, 164 sq.).

The caliph spoke chiefly from the minbar of the capital, but when he made the pilgrimage he also spoke from the maqṣūra in Mecca and Medina (cf. e. g. Tābarī, ii. 1234; Yāfṣīḥī, ii. 341, 391; Chron. Mecca, i. 160). Otherwise in the provinces, the governor stood in the same relation to the minbars as the caliph in the capital. He was appointed “over sünūfara and sword” or he administered “justice among the people” and the sünūfara (Tābarī, iii. 860), he had “province and minbar” under him (ibid., ii. 611, al-muṣtaṣar wa l-khutba (B.G.A., i. 337). Speaking from the minbar was right which the caliph had delegated to him and it was done in the name of the caliph. ʿAmr b. al-ʿĀṣ therefore refused to allow people in the country to hold “khutba” except under the direction of the commander (Makrizi, iv. 7). This point of view was never quite abandoned. The khutba was delivered “in the name of” the caliph (ibid., p. 94) or “for” him (I: ibid., p. 66, 74, 198, Ibn Taghtibrī, ii/5, 85 infra; B.G.A., iii. 485 infra) and in the same way an emir delivered a khutba “for” a sünūfara (Makrizi, iv. 213, 214). The sünūfara did not have the “secular” and the caliph the “spiritual” power, but the sünūfara exercised as a Muslim ruler the actual power which the caliph possessed as the legitimate sovereign and had formally entrusted to him. During the struggle between the different pretenders, there was thus a confession of one’s politics if one performed the sünūfara with the one or the other governor (Tābarī, ii. 228, 234, 258; Chron. Mecca, ii. 168). The pretenders disputed as to whether the one or the other could put up his standard beside the minbar (Tābarī, iii. 2009).

Like the caliph, the governor also made his formal entry into office by ascending the minbar.
and delivering a khutba; this was the symbol of his authority (e.g. Tabari, ii. 91, 238, 242; Chron. Mekh., ii. 173; cf. Hist. Arab., ii. 660, v. 2—3; Dāhîj, Bayânî, iii, 135). After glorifying God and the Prophet, he announced his appointment or read the letter from the caliph and the remainder of his address, if there was a war going on, was exclusively political and often consisted of crude threats. The khutba was not inseparably connected with the Friday service. The commandant-in-chief could at any time issue a summons to the qādī and deliver his khutba with admonitions and orders (see Tabari, ii. as above and p. 260, 297, 300, 385, 1179) and it was the same when he left a province (ibid., p. 244); a governor, who could not preserve his authority with the khutba, was dismissed (ibid., p. 592).

Since war was inseparably associated with early Islam and the mosque was the public meeting-place of rulers and people, it often became the scene of warlike incidents. While the governor in his khutba was issuing orders and admonitions relating to the fighting, cheers and counter-cheers could be uttered (ibid., p. 238) and councils of war were held in the mosque (Tabari, i. 3451; ii. 258; Baladhuri, p. 267). Soon after his election 'Abd al-Malik asked from the minbar the word which would take the field against Ibn al-Zubair and al-Hāshid, shouted that he was ready to go (Chron. Mekh., ii. 20). After the battle of the Camel, 'Abd Allah sent the body to the mosque of Basra and 'Abd Allah led to another mosque (Tabari, i. 3178, 3783).

Rowdy scenes occasionally took place in mosques (Kindi, Wustenfeld, ii. 18): Ziyād was stoned on the minbar (Tabari, ii. 88); one could ride right into the mosques and shout to the governor sitting on the minbar (ibid., p. 683); fighting often took place in and beside the mosque (ibid., p. 960, 1701 spp.; Wustenfeld, Mediina, p. 13 spp.). Sometimes for this reason, the governor was surrounded by his bodyguard during the qādī or on the minbar or even clothed in full armour (al-Walid: Tabari, ii. 1934; Yakhibi, iii. 344; al-Hāshid: Tabari, ii. 274); Sabāt and sword were thus closely associated in reality.

It thus came to be the custom for the enemies of the ruler and his party to be curried in the mosques. This custom continued the old Arab custom of regular campaigns of obloquy between two tribes that can also be paralleled by the Byzantine ecclesiastical anathematism of heretics (cf. Becker, Introduktion, ii. 485; Geset. d. Islam., Kultur).

The first to introduce the official curse of the 'Aliids from the minbar of the Prophet is said to have been Khalid al-Kaari (Chron. Mekh., ii. 36). The reciprocal cursing of Omayyads and 'Aliids became general (cf. Tabari, ii. 12, 42; Aghlab, and edition Cairo, x. 102; Ibn Taghribirdi, i. 248; see also Lammens, Mekh, p. 180 n. 94). Like the blessing upon the ruler, it was uttered by the jāyîs (Mahmud, iv. 14); it was even recorded in inscriptions in the mosque (Ibn Taghribirdi, iii. ed. Popper, p. 63, 64; cf. also Mez, Renaissance, p. 61). As late as 284, al-Ma'tamid wanted to renew the anathematism of Mu'tamids from the minbar but abandoned the idea (Tabari, iii. 2164). Anthems were also pronounced on other occasions, for example, Saladin had al-Hāshid (Chron. Mekh., ii. 37) and al-Mu'tasim Ibn Tahir solemnly cursed from the minbar (Tabari, iii. 2028, 444) and other rulers had Mu'tamid heretics cursed from the pulpit (see Mez, op. cit., p. 198; cf. against Ibn Taimiya: Qu'atmera, Hist. Sult. Maml., ii. 250). Ibn Bat'a lists the tumultuous scene with thousands of armed men uttering threats in a mosque in Bagdad when a Shī'ī khūtba was on the minbar (ii. 58).

It was very natural to mention with a blessing upon the ruler in whose name the Friday Khutba was delivered. Ibn 'Abbās, when governor of Basra, is said to have been the first to pronounce such a daw' over 'Ali (Ibn Khaldûn, Mukhâtkamât, jâzil 37, end); it is not improbable that the custom arose out of the reciprocal obloquies of 'Aliids and Omayyads; the jāyîs, who had to curse the 'Aliids in the mosques, used to pray for the Omayyads (Maqârî, iv. 17). Under the 'Abbāsids, the curse became the usual form of expressing loyalty to the ruler (Ibn Taghribirdi, iii. 151). After the caliph, the name of the local ruler or governor was mentioned (ibid., p. 156, 161); even in Bagdad in 369 by order of the caliph al-Tâ'î, the actual ruler Alqâd al-Dawâr was mentioned in the daw'a (Ibn Miskawaîh, vi. 405; Cairo 1915, p. 396) and the Rûyâ, according to al-Makdisî, were generally mentioned in the khutba even in the remotest parts of the kingdom (this is evident from the above-mentioned expression khutba tâ'î, for which we also find alâ'ik; see: R. G. D. C. ii. 20; iii. 317; 338, 400, 472, 485; cf. Gloumary, s. v.). There is also evidence that prayers used to be uttered for the hearer (Maqârî, iv. 37; Kâlid al-Wusîrî, ed. Amédroz, p. 420). Under the Ma'mûlîk, the sultan's heir was mentioned (Quattûmera, Hist. Sult. Maml., ii. 105; iii. 3). Under the Fâtimids, it was even the custom to call salât upon the ruler from the minaret after the adhan al-fadîl (Maqârî, iv. 45); this also took place under the Ma'mûlîk (e.g. in 696 = 1207, when Li'din was elected; Quattûmera, Hist. Sult. Maml., iii. 45). The prayer for the sovereign in the khutba did not find unanimous approval among the learned (see Snouck Hurgronne, Versprode Geschriften, ii. 214 n. 31).

In general, the mosque, and particularly the minbar, was the place where official proclamations were made, of course as early as the time of the Prophet (Hikmah, Sulûk, bâb 71). 'Omar's blood-stained shirt was hung upon the minbar (Tabari, i. 3555); messages from the caliph were read from it (ibid., iii. 2084). Al-Walid announced from the minbar the death of distinguished governors (Ibn Taghribirdi, i. 242); the results of conflicts were announced in khutbas (Yusuf, i. 647; al-Salih al-fardî, ii. Cairo 1321, p. 149 n. 4). In the Fatimid and 'Abbâsid periods also proclamations, orders, edicts about taxation etc. by the ruler were announced in the principal mosque (Tabari, ii. 40; iii. 2165; Ibn Taghribirdi, ii. 68; Maqârî, Istîlas, ed. Buni, p. 87 supra; Quattûmera, Hist. Sult. Maml., iii. 39; iv. 44, 131); documents appointing the more important officials were also read upon the minbar (Kindi, ii. 58, 599, 603, 604, etc. pass.); Maqârî, ii. 244, i. 43, 85; frequently the people tramped into the mosque to hear an official announcement (Kindi, Walid, p. 144; cf. Derry, Geset. d. Mauren in Sfâbâla, i. 170).

After the position of the caliph had changed, tradition was so far retained that he still delivered the khutba in the principal mosque on special occasions,
particularly at festivals. Thus the Fātihmi al-'Azm
preached in the mosque of al-'Hākim on its com-
mition (Maṣṛīt, iv, 55) and in the month of Ramaḍān he preached in the three chief mosques
of Cairo, one after the other (ibid., p. 53; cf.
61 sq.). Ibn Taghitīrī, ii, 1482 sqq.: exceptionally
also in al-Rāghibī: Maṣṛīt, iv, 63). The Abbasid
caliph also used to preach at festivities (e.g. al-'Rāfī
Yaḥyā, Usdālī, ii, 549 sq.); it was widespread
when a zealous like al-Mustāfī (255) followed
the old custom and preached every Friday (Mas'ūdī,
Muraddī, vii, 2). Even the caliph falsūn in Egypt
preached occasionally (Maṣṛīt, iv, 942 Quatremère,
Ist. Sult. Musul., ii, 138 sq.). Although the mosque lost its old political importance in its later history, it has never quite lost its character as the place of assembly on occasions of public
importance. This is evident from al-Djâbârī's history
and even quite recently large meetings have been held in the mosques of Egypt on questions
of nationalistic politics.

3. The Mosque and public admnistration.

The actual work of government was very early transferred from the mosque into a special dâr al-ru'a
and negotiations were carried on and business frequenly done in the bâr al-muṣir (cf. Tabārī, ii, 230 sq.). But when
financial business had to be transacted at public meetings, the mosque was used for this in particular evidence from Egypt. Here the director of finance used to sit in the Mosque of 'Amr and auction the farming out of the domains, with a crier and several financial officers to assist him. Later the Dīwān was transferred to the Dārī aṣ-'Adm b. Ṭallīn but even after 300 a.h.
we find. Abū Bakr al-Māḏārīya's sitting on such
cases in the Mosque of 'Azm. Under the Fāṭimid
the visier Yaḥyā b. Killīs used first the dâr al-
munā of the Mosque of Ibn Ṭallīn (see above), later his own palace and afterwards the caliph's hār was used (Maṣṛīt, i, 171 sq.). In the same way, in the reign of Muḥammad, the Coptic church was used and the taxation commissio took up
their offices in them (Papyri Erknerus Raineri,
Führer durch die Ausstellung, No. 577); and Ibn Rosta (o. 290 = 903) says that the officials in charge of the measurement of the Nisāf, when they noticed the rising of the river, went at once to the chief mosque and announced it at one hārba after another, at the same time scattering flowers
on those seated there (B. G. A., vii, 116).

The connection with administration was also
seen in the fact that the treasure-chest, the hār al-muṣir (identical with the dâr al-ru'a) (Kindī, Walīṭ, p. 70, 117) was kept in the mosque. In al-Fustāčīs Uṣama b. Zakī, the director of finance, in 97 and 99 built in the Mosque of 'Amr a hārba on pillars in front of the minbar for the hār al-muṣir of Egypt. A drawbridge was placed between it and the roof. In the time of Ibn Rosta (o. 300) it was still possible to move about freely below the hārba but in 578-579 al-'Arsī put up a running fountain below it (B. G. A., vii, 116; Maṣṛīt, iv, 9, 11,
137; Haṣn al-Mujāhidī, i, 136; Yaḥyā, iii, 809). Al-Kindī records an attempt to steal the chest in 145 (Walīṭ, p. 112 sq.). In the disturbed years about 300, the wa't al-Nishārī closed the mosque between the times of sāfīl for the safety of the chest, which was also done in Ibn Rosta's time

(Kindī, Walīṭ, p. 266; B. G. A., vii, 116). New
approaches to the hār al-muṣir were made in 442 from the bār al-muṣir of the mosque and from the Dīwān
(Maṣṛīt, iv, 13).

In Khīfa, the bār al-akāmil, at least during the early period, were in the Dār al-umma (Jahārī,
ii, 2497, 2497 sq.); in the year 38 during the
fighting it was saved from Rāns and taken with the minbar to the Mosque of al-Ibādī (ibid., p.
3414 sq.). In Palestine, in the chief mosque of
each town, there was a similar arrangement to
that in the Mosque of 'Amr (B. G. A., i, 182). In
Damascus the hār al-muṣir was in the most
western of the three hārba's in the court of the Mosque of the Omayyads; it was of lead and rested on an 8 columns (B. G. A., ii, 157; Ibn Lāhitīrī, p. 264, 267; Ibn Bāṣār, i, 200 sq.) it is still
In the time of the two travellers mentioned,
the hārba only contained property of the mosque. Ibn Lāhitīrī saw a similar hārba in the chief mosque of Isra'īl and says that it came from the Byzantines (p. 240). In Ibn al-Qādī (as
by the time of the Byzantines had everywhere introduced (B. G. A., i, 184); in Isrā'īl, the centre of the court,
there was a building with marble columns and doors (B. G. A., i, 136) which perhaps points to a
similar statement of affairs and in Armenia it is recorded that the hār al-muṣir was kept in the Dārī
in the time of the Omayyads as in Mīr and elsewhere
(B. G. A., ii, 241). The hārba was usually of lead
and had an iron door. Ibn al-Ḫālidī considers it
highly illegal to shut off a dāwīn in a mosque, which is the same as forbidding entrance to it. This
shows that the custom still survived in his time.

Ibn Lāhitīrī's remark about Harrān suggests that here again we have an inheritance from Byza-
tantine. It was probably the building belonging to the pê̄sima (cf. above) that the Muslims put to a practical use in this way. For the Byzantines had the treasury (sēkēr) here and it is doubtful if the treasure-chambers of the church (šmēd xīvālı̇ahn) were built in this way (cf. Franz Dölger, in Byzantinisches Archiv, Heft 9, 1927, p. 26, 34).

The Mosque as a court of justice.

That the Prophet used to settle legal questions in his mosque was natural (see Bohārī, Aḥšāb b. "Abd Allāh 189 sq., cf. Šarī'ī, lâh 71, Ḫādīmī, lâh 4); but he could also deliver judgments in other places (ibid., pass. In Ḫalīdī, it is recorded that some qādīs of the earlier period (ṣūr, al-Sirāyī, Yāḥyā b. Ya'qūb, Marwān) sat in judgment beside the minbars, others (al-Hāsān, Zainab b. Abī Ams) on the open squares beside the mosques (Bohārī, Aḥšāb, lâh 15). The custom had all the better chance of survival, as churches were
used in the same way (Joshua Stylites, ed. Wight-
ch. 29; cf. Met, Renaissance, p. 223). Sitting
in judgment was primarily the business of the ruler
but he had to have assistants and Abī Bakr's qâdī is mentioned as assisting Ṭūmar (Tahārī,
l, 2135) and a number of judges appointed by
Omar are mentioned (B. G. A., vii, 237). In the reign of Ťūmar, 'Abd Allāh b. Marwān is said
to have been judge and financial administrator of Kūfā (Ibn Katalba, Marāfī, ed. Wustenfeld, p. 128).
On the other hand, we are told that 'Abd Allāh
b. Nawfal, appointed by Marwan in 42, was the first kāhi in Islam (Tabarî, iii. 2477); it is recalled that in the year 132 the kāhi of Mecca administered justice in the mosque (ibid., p. 2505). In Basra, we are told that al-Aswad b. Sari' al-Tamâm immediately after the building of the mosque (i.e. in the year 14) worked in it as kāhi (Bahâdîrî, p. 346). In the early period 'Omar wanted to choose a kāhi, who had been already acting as a judge before Islam (Kindî, Wâli, p. 301 sq.; 92 a-Muhâsâra, ii. 86). Even the Christian poet al-Âdham was allowed to act as arzîl in the mosque of Kâfâ (see Lammens, Mu'tawî, p. 435 sq.).

In al-Fâṣî'î, as early as 23 or 24 A.H., by command of 'Omar, 'Amr b. al-Âst appointed a kāhi named 92 a-Muhâsâra, ii. 86; Kindî, Wâli, p. 300 sq. The kâhis held his sessions in the Mosque of 'Amr but not exclusively there. The kâhi 92 a-Muhâsâra, ii. 86; Kindî, Wâli held his sessions sometimes before his house, sometime in the mosque and for Christians on the steps leading up to the mosque (Kindî, Wâli, p. 351 sq.). A successor of his (177-184) invited Christians who had lawsuits into the mosque to be heard (ibid., p. 391); of another judge (205-211) it is recorded that he was not allowed to sit in the mosque (ibid., p. 428). It seems that the kâhi could himself choose where he would sit. A judge, officiating in the year 217, sat in winter in the great pillared hall turning his back towards the 92 a-Muhâsâra, ii. 86; Kindî, Wâli, p. 590, sat on Tuesday and Saturday in the mosque and laid down the law (Mâqûrî, ii. 246; iv. 16, 22; cf. Kindî, Wâli, p. 587, 589; cf. Cefner-Nahm, transl. Schefer, p. 149).

In 92 a-Muhâsâra, ii. 86; Kindî, Wâli, the judge of the east city used to sit in his chief mosque (B.G.A., viii. 245), in Damascus the kâhi in the fourth century had a special tâlî in the Mosque of the Omayyads (B.G.A., iii. 153), and the notaries (al-shâhîn) also sat in the Mosque of the Omayyads at the Bab al-Salâ (ibid., p. 17). In Nishâbûr, every Monday and Thursday, the madîjis al-khâmis was held in a special mosque (ibid., p. 328). In contrast of time the judge was given a madîji of his own (cf. 92 a-Muhâsâra, ii. 96) and in 279 al-Mu'tâjîl wanted to forbid the kâhis to hold sessions in the mosque (Ibn Taghribirdî, n1, 87 supra; perhaps however we should read 92 a-Muhâsâra, ii. 86; Kindî, Wâli, p. 612; cf. Ibn Taghribirdî, ed. Popper, n1, p. 69; Kalkandish, Sa'd al-Dîn, ii. 487; for 439 = 1046, see Na'jî; Khosrow, ed. Schefer, p. 31, text, p. 149, transl.). In Mecca, the dâr al-kâhi was in direct connection with the mosque (Ibn Dhubair, p. 104). In the eighth century Ibn Bâjûja attended a court presided over by an eminent jurist in a mosque (madrasa) in Sânâ' (ll. 55, 65; cf. also al-Mu'tâjîl, ii. 54 infra), and in Damascus the shâfi'i chief kâhi held his sessions in the 'Adîlîyya Madrasa (so Ibn Khallikân, Quatremère, Hist. Sult. Maml., ii. 22; cf. also for Egypt: ibid., p. 87, n1, 253). The vice-kâhi sat in the 'Zâhîriyya Madrasa (Ibn Bâjûja, i. 218). The judgment might even be put into execution in the madrasa (ibid., p. 220). During the Mamlûk period in Egypt, we occasionally find a small mosque being used as a madâjid for judges (Mâqûrî, iv. 270; Ibn Dhuqânî, p. 98 supra). Ibn Khallîkân held legal settings in the Madrasa al-Sâlihiyya ('Thârîv, vii. 453).

A mutâ'a, mostly in the large mosques, was also frequently appointed; he sat at definite times in a ḥâla al-'tâs-falâ, e.g. in Cairo (al-Kawrînî, Hâṣ a-Muhâsâra, i. 162; Dhuqânî, al-Dîn, ibid., p. 187), in Tunis (Zarkâghî, Zarkâghî, transl. Fagnan, Rev. Mus. Sec. Arch. Constantine, vol. xxxi., 1895, p. 197, 204, 215, 248). In Baghdad Abû Bakr al-Dinawârî (d. 405) was the last to give fatâwa in the Mosque of al-Ma'mâr according to the madhâbah of Sufâyûn al-Thawri (Ibn Taghribirdî, ed. Popper, n1, p. 120).

F. The Mosque as an Educational Centre.

1. Islamic Studies in the Mosque to the end of the Fatimid period.

The new studies stimulated by Islam were from their nature associated with the mosque. The learning by heart and the understanding of the Qur'an formed the starting-point and next came the study of Hâdîth, by which the proper conduct for a Muslim had to be ascertained. The Prophet was often questioned on matters of belief and conduct, in or outside the mosque (Bukhârî, Jâmî, bâb 6, 52; 23, 24, 26, 46). After the death of the Prophet, his Companions were consulted in the same way and scientific study began with the collection and arrangements of hadîth as has been shown, notably by Goldziher. This process is reflected in the hadîth themselves. According to them, even the Prophet in his lifetime was asked about hadîth (ibid., bâb 4, 14, 331 tr. 9, 51, 53); the Prophet sits in a mosque surrounded by a ḥâla and instructs his hearers; the latter repeat the hadîth three times until they have learned them (ibid., bâb 8, 30, 35, 43). The necessity of al-ilm is strongly emphasised and the ḥâla al-tâs-falâ is recommended; a man is held up as a model because he undertook a month's journey for the sake of a single hadîth (ibid., bâb 19–22; cf. Goldziher, Mâqûrî, Mâqûrî, n2, 33 sq. = 175 sq.). Jewish influence is perhaps to be recognised when learning is compared with the drinking of water (Bukhârî, Jâmî, bâb 20; cf. Porozh, xviii. 4; Pêrçâ Abûkâ, i. 4, 11) and the teachers are called râbî Âbîyân (Bukhârî, Jâmî, bâb 10). A special class of students, Akl al-Ilm, was formed who spread the knowledge of traditions throughout Muslim lands (ibid., bâb 7). They collected people around them to instruct them in the most necessary principles of the sciences of Islam; 'Abd Allah held one of these mawâlî every Thursday, only once a week, in order not to tire the people (ibid., bâb 12). In this simple form of instruction which was indistinguishable from edifying admonitions lay the germ of Islamic studies. The teacher shâhâra his hearers; elsewhere it is called ṣâfâra or altâma and the knowledge imparted is
We hear of a mosque named Hurul in the Medina mosque in the 1st century A.D. (Ahn. ii. 48: iv. 162 sq.), Yazid b. Abi Halab sent by 'Omar b. 'Abd al-Aziz as mufti to Egypt (d. 128), is said to have been the first to teach in Egypt (Ahn. i. 131). He is mentioned as another as teacher of al-Latt (Kindt, Wulfs, p. 89) and the latter, upon whose pronouncements fatwas were issued, had his khalifa in the mosque (Hus. i. 134). 'Omar II had before this sent al-Nafi', the Mawla of Ibn 'Omar to Egypt to bring them the sunan (ibid., p. 130). He also sent an able reciter of the Qur'an to the Maghrib as kadi to teach the people fim'a (ibid., p. 131). Education was arranged for by the government by allowing suitable persons to give instruction in addition to their regular office. From the very first, education in Egypt was closely connected with litigation to right living. The first teachers in the mosques were the Fatwa, as a rule kadi, whose discourse dealt with the interpretation of the Qur'an and the proper conduct of divine service (cf. C 3). Their sunna was the direct continuation of the moral instruction given by the old companions (cf. Bukhari, 'ilm, bab 12). The instruction started in the mosque of Amr was continued for centuries. In the third century A.D., al-Shafi'i taught various subjects here every morning till his death (240) (Hus. i. 134: Yaqut, al-Dhakirin, vi. 383). It was after that time the study of Fikh marked clearly to the front and the great teachers used at the same time to give fatwas (cf. Hus. i. 182: 'Abd Allah al-Kazwini, d. 315: i. 185; 'Abd al-Rahman al-Razi, d. 339). In the year 358 (958), the Shafi'is and Malikis had each its own group in the mosque of Amr (Ibn Sa'd, ed. Laqluq, p. 24). The Malikis Musa bin 'Abd al-Nasir (d. 286) had so many hearers that the class occupied the area which 17 pillars included (Hus. i. 207). In the fourth century, al-Ma'sudi mentions the groups (buhuits) of Fakhr al-Din, Abu al-Abbas al-Latifi, who sat in the mosque (B. G. A., iii. 205; cf. for the 6th century 'Abd al-Samad Khurrawi, ed. Schefler, p. 50 (text), p. 148 (transl.). He also mentions that the followers of Abu Hanifa held meetings in the Masjids al-Akza with al-fakhr, which here must mean something like lectures, where they read out the famous and the fakhr used to sit in the mosques of Palestine generally, to teach between the al-unz (B. G. A., iii. 182). In the third century, Ibn al-Fakhri tells how the fakhr sat in the mosques of Sidjst, Bokh and Herat, while the people crowd around them (ibid., ii. 317). The fakhr which later lost its importance had also their study-circles in the mosques. For example al-Ma'sudi says that the Dawaliya had study-groups in Fars (iii. 439) and the Awzay had even a madrasa in the mosque of the Omayyads (ibid., p. 179).

Arabic philological studies were ardently prosecuted in the mosques. The interest of the early Arabs in rhetoric survived under Islam; the fakhr Sa'id b. al-Masayyab (d. 95) (cf. Tabari, ii. 1266) discussed Arabic poetry in his masjid in the mosque in Medina; but it was still thought remarkable that poems should be dealt with in a mosque (Ahn. iv. 148: iv. 162 sq.). In the year 256, al-Tabari by request dictated the poems of al-Tirmidhi beside the Bait al-Mal in the Mosque of 'Amr (Yaqut, al-Dhakirin, iv. 432 infra). In the chief mosque of Ta'izz, the Afdal al-Arabuya sat together and were visited by 'Abdul b. Salama (d. 167 or 169) while he made Husain al-Basri give lessons (ibid., iv. 135). In Granada we hear of a nabi who gathered many pupils around him in the dzma (Ma'kari, ii. 254). In Tunisia in the 9th-10th century, the Makama of al-Hariri were actually read in the Ljami Za'itina (Zakarti, trans. Fagnan, Rec. Soc. Arch. Constantine, 1894, p. 111). In Baghdad al-Kisqi gave his lectures in the mosque, which bears his name and the pupils used to take their place in the front of him after the morning salat (Yaqut, al-Dhakirin, iv. 243 sq.). About 200 A.H. we hear of lectures on ta'dir in the principal mosque of the same town (ibid., vii. 105). At the same time, the study of Hadith still retained its importance (Wustenfeld, Saby, iii. 362). The Mosque of al-Masjid remained the most distinguished school, the goal of all the learned (Yaqut, al-Dhakirin, iv. 246 sq.). When a traveller came to a new town, he could go to the dzma in the confidence that he could attend lectures on Hadith there (B. G. A., iii. 415, in Sais). In Mecca, for example, al-Shafi'i lectured (Yaqut, al-Dhakirin, vi. 391), in Medina Ibn Ishaq, who died in 234 (ibid., p. 400, 401). In Damascus we hear of some one who lectured on fiqh (Hus. i. 182) and of another, Abu Tahir al-Ikandari (d. 359) who lectured on Hadith in the same place (ibid., i. 185). Teachers went from one town to another. Makki b. Abi Talib came from Kairawan to Mekka, Mecca and Kursiba; in the last named place he put up in two riwaqs in the chief mosque, where he lectured on fim'a, afterwards in another mosque, and he was much sought after on account of his 'ilm (Yaqut, al-Dhakirin, vii. 174). At quite an early date we read of special apartments (which were certainly also lecture-rooms) for authorities on the Kur'an, for, according to al-Wakidi, 'Abd Allah b. Umm Makta'mi lived in Medina in the Door al-Kureit (Hus. al-Maktaba, ii. 142).

As is evident from the examples quoted, studies were not only prosecuted in the chief mosques but also in other mosques. In Egypt, not only
the Mosque of 'Amr but also the chief mosques of later date were important centres of study. As soon as the Mosque of Ibn Tulun was founded, a pupil of al-Shafi'i began to lecture in it in 861 Hijri (Hji 182, 16odiac, ii. 139). During the Fatimid period this was continued. In the year 301 (913), the Ashar Mosque was finished. Soon afterwards, the new Shi'i Kātib, 'Ali b. al-Nū'mān, lectured in it on Fikh according to his school; in 378 al-Azźī and his visier Ya'llī b. Killis founded 35 lectureships and in addition to their salaries, the lecturers were given quarters in a large house built beside the mosque (Makrizī, iv. 495; Sulaimān Ṭaṣūṣī, Kusā al-Dhimmāar fī Turāth al-Akbar, p. 52 sqq.). Immediately after the foundation of the Mosque of al-Hākim, the fāhidā gave lectures (kaṣālaṣṣa: Makrizī, iv. 55) in it. In the Fātimid Mosque of al-Aqmar, also founded in 319, teaching was carried on from the very first (ibid., p. 77).

We can therefore say definitely that mosques were from the beginning through the centuries educational institutions, that learned men occasionally used to live in mosques and that under the Fatimids and probably much earlier, there were special houses for the learned teachers. The mosque therefore corresponded to church, town hall and school and sometimes hostel. It was, then, a public place of assembly for the town. Nāṣrī Khosrow in 349 (1047) gives a vivid picture of the activity in the Mosque of 'Amr which was visited by 5,000 people daily, teachers, kūtān-reciters, students, strangers, who drew up bill of exchanges and contracts etc. (ed. Schefer, text, p. 50 and transl., p. 148). It was therefore an exception when the Saḥra Mosque was open only on Mondays and Fridays (Sauvage, Histoire de l'Islam, p. 54) which happened with very few other sanctuaries, also unusual for the mosque only to be opened for prayer, as sometimes happened out of consideration for the safety of the bai al-ma‘āl. The people demanded unrestricted access to the mosque at all times (cf. Makrizī, iv. 54).

2. Special Educational Institutions.

In the descriptions of the larger mosques the libraries are often mentioned. These collections were gradually brought together from gifts and bequests, and it was a common thing for a scholar to give his books for the use of the Muslims or Aḥl al-‘ilm (cf. al-Khāṣṣī, Ṭabarī: Ya’llī, Usulā, i. 252; cf. iv. 287). Many other libraries were semi-public; these often supplemented the libraries of the mosques, because they contained books in which the mosques were not much interested, notably on logic, falasfa, geometry, astronomy, music, medicine and alchemy; the latter were called al-Shī‘ī al-nilātī (Ibn Aḥī Uṣayba, i. 113, uses this already for the pre-Islamic period) or al-nilāt al-nilā‘ī (on them see: Goldziher, in Abh. Pr. Ab. W., 1915, Phil. Hist. Kl., No. 8, Berlin 1916). The academy, Beṣtal-i-Hikma, founded by al-Ma‘mūn (98-312) in Baghdad, deserves first mention. It recalls the older academy founded in al-Madīnah, to which Manṣūr had invited Gorgias b. Ḥabīl as head of the hospital; he also translated works from the Greek (Ibn Aḥī Uṣayba, i. 113 sqq.). In the new academy there was a large library, and it was extended by the translations which were made by men qualified in the above-mentioned fields; there was also an astronomical observatory attached to the institution in which there were also apartments for the scholars attached to it (Flügel, ed. Flügel, p. 243; cf. Ibn Aḥī ni-Kī, Ṭabarī al-Hikmat, p. 98). When the caliph al-Ma‘mūd (279-289) built himself a new palace, he had apartments and lecture-rooms in an adjoining building for men learned in every science, who received salaries to teach others (Makrizī, iv. 192, 2 sqq.; Fātir al-Ma‘mūd, ii. 142).

Private individuals of wealth continued benefactions on these lines. ‘Ali b. Yahiya, who died in 375 and was known as al-Manṣūrdjinn, had a palace with a library, which was visited by those in search of knowledge from all lands; they were able to study all branches of learning in this institution, called Khāsim al-Hikma, without fee; astronomy was especially cultivated (Ya’llī, Usulā, v. 467). Al-Manṣūrdjinn also presented a whole library to Fath b. Khāsim (ibid., p. 459, infra; on al-Sā‘ī’s library, see ibid., vii. 176, 1 sqq.). In Mawṣil, Dijfar b. Muhammad al-Mawṣil (d. 523) founded a dār al-I‘lām in a library in which students worked daily at all branches of knowledge which were even supplied with free paper. The founder lectured frequently on poetry in it (ibid., ii. 420). In the fourth century al-Ma‘landsf visited in Šahrā a large library founded by ‘Ajīd al-Dawla (362-372) to which people of standing had access. The books were arranged in cases and listed in catalogues, and the library (khāsim al-I‘lām) was administered by a director (mukattat), an assistant (khāsma) and an inspector (nafkisir) (B. G. A., iii. 449: cf. a little later: Ya’llī, Usulā, v. 446, 4 sqq.). In the fourth century, a certain Ibn Sawwār founded both in Boṣra and in Kā‘un-Humus a large dār al-I‘lām with stipends for the scholars who worked in it; in Boṣra a shaliq used to hold classes (mu‘barir) on Mu‘tasii al‘lām (B. G. A., iii. 413, 4 sqq.). In al-Ra‘ī, there was at the same time, a bāt al-I‘lām with over four hundred camel-loads of books, which were catalogued in a ten-volume ṭabārī and included many Shi‘i works (Ya’llī, Usulā, ii. 315, 3 sqq.). In the year 383, the vizier Sā‘īr b. Ardāshīf founded a dār al-I‘lām in Karīkh with a large library for scholars (Ibn Taghribirdi, ed. Popper, p. 51, 76 sqq.; Ibn al-Ash‘ī, ix., Cairo edition, p. 357 sqq.).

Many of the libraries had a strongly, but by no means exclusively, Shi‘a character. As to the dār al-I‘lām, the ‘Abbāsid, as already mentioned, were interested in them and the Omayyad Khalīl b. Yaqūb b. Mu‘awīya studied alchemy and medicine along with Hadīth (Ibn Taghribirdi, ii. 240, 3; Ya’llī, Usulā, iv. 165). But the connection between the Shi‘a systems and Hellenistic science which we have evidence, for example in the khāsim al-Safa, perhaps caused a greater interest to be taken in this branch of knowledge among the Shi‘a than among the Sunnis. In Cairo, the Fātimids founded similar institutions in the interests of the Shi‘a. In their palace there was a library which was said to be the largest in Islam. It had about 40 rooms full of books and all branches of knowledge were represented; they had for example 1,200 copies of al-Tabarī’s History and 18,000 books on the “old learning” (Makrizī, ii. 251-255). The vizier Ya’llī b. Killis founded an academy with stipends for scholars and spent 1,000 dinars a month on it (Yahiya b. Sa‘īd, ed. Tallquist, fol. 1088; Ibn Khallikān, Wafayāt, Cairo 1310, ii. 334; cf. Makrizī, iv. 192, 6). It was
and one built by Abū Sa‘īd Ḥamīd al-Astārshālādī and another built for the teacher Abū Isḥāq al-Isārthīn. A Niẓāmīya was also built here by Niẓām al-Mulk for the Imam al-Ḥaram al-Djumāwī (Maktrāzī, iv. 192; Ḥusn al-Muḫṣidāra, ii, 141 sq.). It was an event of great importance when Niẓām al-Mulk (456—485, vizier of the Šalṭāq sultan Abū Arslān and Malik Shībī) founded the celebrated Niẓāmīya Madrasa in Bāghdād; the building was begun in 457 and on the 10th Dhu ‘l-Ḵaḍra 459 (Sept. 1067) it was consecrated. It was founded for the Shī‘ī teacher Abū Isḥāq al-Shārtrī; but he at first refused to accept the call, because on the ground which it was built was said to have been acquired illegally, and Abū Naṣr Ibn al-Sabbāghīn therefore held the office for the first twenty days (ibid.; and Wustenfeld, Schāfī‘i, iii. 297; Ibn Khallikān, Wajšiyāt, Cairo, i, 143 sq.).

The Muslim historians are in some doubt about the history of the madrasa. Niẓām al-Mulk is given the credit of having founded it, but al-Maktrāzī and al-Suyūṭī point out that madrasās were already in existence before him and mention the four above-named, but, as we have seen, even they were not innovations. Al-Suhkī thinks (says al-Suyūṭī) the new feature was that Niẓām al-Mulk endowed scholarships for the students. But this again was nothing new as we have already seen. But the enthusiasm and energy of Niẓām al-Mulk meant the beginning of a new period of brilliance for the Madrasa. The sūṭān and men of high rank were now interested in it and the type evolved by Niẓām al-Mulk, a school in which the students were boarded, became the prevailing one after his time. We may presume that the older schools also had a place for prayer in them, i.e. they resembled mosques. The type of school known to us is built as a complete mosque. Since even the older mosques containing living-rooms which were frequently used by students, there is no difference in principle between the school and the ordinary mosque; only the schools were especially arranged for study and the maintenance of students. This character is expressed by the name madras, plural madāris; it is a genuine Arabic formation from the word dāra, "to read, to study," taken from Hebrew or Arabic roots (Šura lxvii. 37 and elsewhere; Ḥuṣaynīyāt, ed. Horovitz, p. 53; Aghrānī, xiv. 2nd Cairo ed., p. 78; cf. dāra "to teach"; Bukhārī, Bād‘u ’l-Wā‘īs, bab 5 and elsewhere; "to study"; Kātibi, ed. Wright, p. 17), where Buṭl Māridūs is a Jewish school (Bukhārī, Ziyā, bab 6; Ibn Hihshām, p. 383, 388); it is therefore an analogues formation to Masjīd (cf. also Fliesser, Klein. Schriften, ii, 122 sq.; Nöldeke, Neue Beiträge z. sem. Sprache, p. 58).

In the time of Niẓām al-Mulk and immediately afterwards, the madrasa spread in the Ḫurāṣ, Būrāṣ, al-Ḳaṣrā, etc. He was not content with the two he founded in Niẓām al-Dār and Bāghdād. There was also a Madrasa Niẓāmīya in Balkh (Wustenfeld, Schāfī‘i, iii, 240), in Mawṣil (ibid., p. 319), in Herāt to which al-Šāhī (d. 485 = 522) was called from Ghurma and in Merv (Wāṣir, iv. 509). Ibn al-Sabbāghīn, who had to give up his position in favour of al-Šāhī, received a promise from Niẓām al-Mulk that he would build a madrasa for him in Bāghdād, but the death of this scholar prevented this being done (in 477; ibid., p. 304). The great vīr’s rival Tādż al-Mulk (d. 486 = 502) in Bāghdād founded a Madrasa Tādżīya (ibid., p. 311). In Niẓābūr, other madrasa were founded at the same time, for example, one by al-Manṣūr who died in 492 (ibid., p. 277) and a Shāhīyā (ibid., p. 322). In Mawṣil, al-Samṣārī who died in 484 taught in a Shī‘ī madrasa (ibid., p. 321; cf. above). In Merv al-Rūdhī, Ahmad al-Manṣūr (d. 512) built a madrasa (ibid., p. 326).

The prosperity of the madīrīs stimulated by Niẓām al-Mulk in the fifth century survived for a long time in the east. In the sixth century Ibn Djabalār (580 = 1184) mentions some thirty madīrīs, all in the eastern part of the town, the most notable being the Niẓāmīya, renovated in 504 (Abūnā, p. 229). In 631 (1234), the caliph al-Manṣūr founded the magnificent Mustansīrīya as a school for the four rites, each with a teacher and seventy-five students and a teacher for Ḥadīth, as well as a physician. Attached to it was a library, baths, hospital and kitchens; one could enquire there for a clock at the entrance; beside it was a garden where the caliph had a pavilion (mn̄̃oparā) from which he could survey the whole building (cf. La Sanguenne, Bāghdād, p. 206; Wustenfeld, Akademien der Araber, iv. and 29).

The Māṣjīda and the Mustansīrīya survived the destruction of Bāghdād by Ḥūlāfī and both are mentioned at the beginning of the eighth century by Ibn Baṭṭūta (ii. 198 sq.) and the building of the latter still exists. Ten others are known of the eighth—ninth century including the Madrasa ‘Abd al-Kādir al-Qāṭaqī (688 = 1286), Madrasa Abū Ḥanīfī (of about the same date) and al-Miṣrīyī (738 = 1337), all still in existence, which were founded for Shī‘ī, Ḥanāfī and for the study of Ḥadīth and Ḥadīth. Besides these there still exist seven madrasas founded in Bāghdād in the xvīth and xvīth centuries (I. Masson, Les Médecins de Bāghdād, B.I.F.A.O., vii, 1909, p. 77—85; the inscriptions, d., in M.I.F.A.O., xxxi, 1912). Although the Tatars in 699 (1293) destroyed many madīrīs (Quatremère, Hist. des Sult., ii, 163 sq.), Ibn Baṭṭūta shows that in the eighth century there were still flourishing schools in the east. In Wāsīt there was a madrasa which specialised in tāfsīr al-Kur‘ān; it had three hundred rooms for foreign students (ii. 3). In Tustar, the sūṭān expended one-third of the revenues on madrasas and monasteries (ii. 31) and in Shībā and other Persian towns he also founded madrasa (ii. 62 and pass.). For Niẓābūr, he mentions four madīrīs besides the chief mosque (ii. 80); according to Ḥāfiz Abru (c. 820 = 1417), this town still had eight madīrīs under the Aḥṣā‘īs and he mentions seventeen in which Shī‘īs (rīs) was taught (Seif Nameh, ed. Scheler, p. 281). For Merv, Yāḥīyā about 600 mentions, in addition to the Niẓāmīya, the school founded by Abū Sa‘īd Mūḥammad b. Manṣūr al-Mustawāfī (d. 494), also the Amūnīya and the Khāṭāmīya (iv. 509). Large madīrīs were still being built in Persia in the xvīth century and they are still to be found there in modern times (E. G. Browne, A Year amongst the Persians, 1916, p. 104, 217 sq.). Although the institution had for long a Sunni tendency, it could of course be taken over by the Shī‘īs without any difficulty. 728 (1328) in Māshād ‘Alī, Ibn Baṭṭūta found a large Shī‘ī madrasa (i. 415). The Mongols also built madīrīs, e.g. Karaka Khān, the descendant of Cingis Khān (Quatremère, Hist. Sult. Mont., vi. 56). Ḥūlāfī’s mother built two madrasa in Bukhārā.
where 1,000 students studied daily in each (J.F.A., ser. 4, xx. 389). The period of greatest prosperity of the madrasas in Central Asia was under the Timurids, notably in Samarqand, where Timur built a djamā in "the Indian style", and his wife a madrasa (ibid., 248). The two madrasas of the "Mazār Akbarī, Vitol Timur, ed. Manger, 1767, p. 444 ap., see also Diez, Kunst der islam. Volker, p. 99 sq.

In the towns of Mesopotamia and Syria the movement spread from the fifth century onwards. Nūr al-Dīn b. Zangi founded madrasas for Shāfi‘ī in Damascus, Hālab, Hāmā, Hims, Ba‘albek (J.F.A., ser. 9, iii., p. 428; cf. 488; Makriz, iv. 192).

Kamāl al-Dīn (d. 573) founded a madrasa in Māski, two in Naṣībān and one in Damascus (Wüstenfeld, Schāb‘, p. 317). Tahtī al-Dīn, the nephew of Śalṭāl al-Dīn, built a madrasa in al-Ra‘īsh (Ma‘rizi, iv. 195, 56). Ibn Dzhīhār who travelled from Ṣinā‘ (1153) to 587 (1161) mentions two in Naṣībān (p. 240), one in Ḥarrān (p. 247) and a large Ḥanafī madrasa in Hālab and four or five others (p. 255), three in Ḥanām (p. 257), one in Ḥims (p. 297). Furthermore, in Damascus notably the great Nūrīyya (p. 283; s. 289) and one founded by Ẓāhirī, two in Māski (p. 236, 237); a madrasa in the last-named town was built in two stories with a Dar al-Hadīth on the ground floor (Ibn Aby Uṣā‘ī, ii. 204, in the year 585).

The development in Damascus was of particular importance. Information about this is contained in the Tūnūkh al-Talāb wa Fighī al-Darās of Muḥyī al-Dīn al-Nu‘aymī (d. 927 = 1521), the synopsis of which by ʿAbd al-Bāṣīr al-Ḥimawi (d. 1059 = 1549) has been published by Sauvare (J.F.A., ser. 9, iii., viii., vii.). The substance had already been given by Fleischer from Mīkhāil Meṣḥās, (K. Schriften, iii. 306, = Z.D.M.G. xvi. 814, 1854, p. 349 sqq.; cf. iii., 1849, p. 123; there are a few differences in points of detail between Fleischer's and Sauvare's publications). A Dar al-Kur‘ān, the Rtrimayy, was founded here about 400 (J.F.A., ser. 4, xx. 362) and the first madrasa for Ẓāhirī studies was the Ḥanafī Shāfī‘ī, which was founded beside the Mosque of the Omayyads by Shāhīd al-Dawla Sa‘īd in 491 (1097) (ibid., iv. 286); next came, sometime before 520, the likewise Ḥanafī Turkhāniyya (ibid.) and in 514 the Shāfī‘ī Amīnīyya founded by the Ḥanafī Aṣ‘īm al-Dawla (ibid.), iii. 395, then the Ḥanbalī Sharī‘īyya founded by a scholar who died in 536 (iv. 467), the Ḥanafī Khāṭṭīnīyya built extra muros by a princess in 526 (ibid., p. 254), the Ḥanafī Omartiyya founded by a shaykh who died in 528 (ibid., p. 473; cf. Fleischer, K. Schriften, iii. 328). The two rulers Nūr al-Dīn b. Zangi (541-569 = 1146-1163) and Śalṭāl al-Dīn (570-589 = 1174-1193) displayed a manifest activity in this direction as did their emirs and relatives. Nūr al-Dīn founded a Dar al-Ḥadīth and the Nūrīyya (ibid., iii. 280), and the following Shāfī‘ī madrasa: al-Shāfī‘īyya (ibid., p. 414), al-Ṭūsīyya (ibid., p. 428), al-ʿAṣ‘īmīyya (ibid., p. 430), al-Kullās (ibid., p. 439), and he began the building of the Alīdīyya (completed by al-Shāhīd; ibid., p. 422), and as a Ḥanafī madrasa, the large and small Nūrīyya (ibid., iv. 388, 291). In his reign an emir also built the Alīdīyya for Shāfī‘ī and Hanafī (ibid., iii. 387), another emir a Shāfī‘ī Mudāhirīyya inside and outside the town (ibid., p. 440); of Ḥanafī madrasa, an emir al-Ṣuṣ‘ī built two, the al-Balqā‘īyya and the Nūrīyya (ibid., iv. 245 sq.), a slave of Nūr al-Dīn, the Ra‘īshīyya in 529 (ibid., p. 259), an emir the Nu‘‘īyya in 555 (ibid., p. 281); a lady built a Hanbali madrasa with a Dar al-Ḥadīth, the Alīmīyya (ibid., p. 477), a Ḥanbali Shaykh, who died in 596, the Muṣāmīrrīyya (Fleischer, op. cit., p. 329). Śalṭāl al-Dīn rebuilt the Shāfī‘ī Kullās, which had been burned down (J.F.A., ser. 9, iii. 459) and himself founded the Mālikī Shāhīyya and a Mālikī šāfiyya in the Mosque of the Omayyads (ibid., iv. 460 sq.). There were also built in his reign a Dar al-Ḥadīth by the Kādī al-Fajjāl (ibid., iii. 277), a madrasa for Shāfī‘ī and Hanafī, the ʿĀḍ ḥrawīyya, by his daughter or brother's daughter in 580 (ibid., p. 425), six Shāfī‘ī madrasas (ibid., p. 391, 399 sqq., 403, 435, 440, some five Hanafī including one founded by his (previously Nūr al-Dīn's) wife (ibid., iv. 256, 266, 277, 284 sq.). This building activity was continued into the seventh to ninth centuries so that al-Nu‘‘īyya can give the following totals: seven Dar al-Kur‘ān, sixteen Dar al-Ḥadīth (one, the Kūṭya, is not given in Fleischer), three for both Kur‘ān and Hadīth, sixty Shāfī‘ī (two of them also for Hanafī; in Fleischer, Nrs. 16 and 30 are not given), fifty-two Ḥanafī (twenty of them especially for Shāfī‘īs). Of these some forty, or Dar al-Hadīth of Shāfī‘ī as Dabābighiya, four Mālikī and ten Ḥanbalī madrasas (in Fleischer, one of the two Dijīyya is not given; on the other hand he has the Muṣāmīrrīyya), also three Madrasa al-Šīṣī, all of which belong to the seventh century. The founders were mainly rulers and emirs, but also included merchants and quite a number of men of learning, and a few women also. As in the east, especially in earlier times, a madrasa was often founded for a particular scholar (ibid., iii. 400, 488) and sometimes finds a learned man handling over his house to be a madrasa (al-Dawla’s, ibid., p. 403, cf. 419; iv. 470). According to Mīkhāil Meṣḥās, in his time (14th century) these madrasas had practically all disappeared or were used as dwelling-houses, because their endowments had disappeared and there were only five left in his time (Fleischer, op. cit., p. 317=311). Śalṭāl al-Dīn introduced the madrasa into Jerusalém. In 585 (1189) he endowed the Khānsāḥ Shāhīyya, in 587 the Zāwīyya Khatunyya south of al-Aṣká for a particular scholar and in 588 he turned the Church of St. Anna into the Shāhīyya Madrasa; in 589, 593 and 598 emirs built similar institutions and in the seventh—ninth centuries a whole series of them came into existence. According to Muḥīr al-Dīn (d. 927 = 1521), there were thirty-one madrasas and monasteries (which were in part used in the same way as madrasas) in direct connection with the Haram; and or near it, and sixteen at some distance from them. Of these there were one Dar al-Kur‘ān and one Dar al-Ḥadīth (Sauvare, Hist. doc., p. 139 sqq.; v. Berchem, Corpus, ii. 1; cf. for Śalṭāl al-Dīn: Ibn Kallikā, Wafayāt, ii, Cairo 1310, p. 402 sq.). In Hebron there was also a madrasa, that of al-Malik al-Nasir (Sauvare, op. cit., p. 23). Next to Niṣām al-Mulk, Śalṭāl al-Dīn has the greatest reputation as a builder of madrasas. He owes this mainly to the fact that his great activity as a builder lay in countries, which became of great importance in the Muslim world, Syria with Palestine, and Egypt. Even before the fall of the Fātimids he had founded in the year 566 in the vicinity of the Mosque of ‘Amr, the Nasīrīyya
example (Yākūt, Udākhāri, vii. 20). These attacks on libraries did not mean they were tired of books as Yākūt (Udākhāri, v. 389) suggests, but was only one expression of the reaction against the Shī'īs.

3. Origin and spread of the Madrasa.

While the institutions called the Dār al-Ilm developed in Fātimid countries into centres of Shī'ī propaganda, the madrassa grew up in the east out of similar Sunni institutions. It is interesting to note that in 400, al-Hākim built a Sunnī Dār al-Ilm in Cairo. In it lived two Mālikī scholars, who gave instruction and gathered about them men learned in Ḥadīth and ʿĀthā (Ibn Taghribirdi, ed. Popper, ii. p. 64, 105, 106; al-Ḍhabābi, Duwan al-Ilam, Haidarābdī, 1337, i. 186). As the instruction (see the first reference) was given in the Dār, the institute must have been connected with a mosque, probably that of ʿAmr. It owed its existence however only to a passing fancy and after three years, the institution was abolished and the two learned teachers executed. With the growing strength of the Sunna, especially in the Shāfiʿī and Ḥanafī form, many educational institutions arose in the east which had a pronounced Sunnī character; the Sunna in the fourth century wanted to have influence with the other schools (B. G. A. iii. 323, 365, 415). Many teachers built houses of their own, where they dictated hadīth and held lectures on ʿĀthā, e. g. a teacher who died in Merw in 420 (Wustenfeld, Islam Schafft, ii. 232). Abū Ḥātim al-Bustī born in 977 (890) founded in his native town a school with a library with apartments and allowances for the maintenance of foreign students (ibid., p. 163). In Aμur, al-Rūyūni (d. 502) built a school; he himself taught in the mosque, also in al-Rāy (ii. 245). In Tābarān a school was built for al-Ḥātimi (d. 393 = 1003) (ibid., ii. 202). In Baghdād, al-Isnaʿī (d. 396 = 1006) founded two lectureships in ʿĀthā studies, one of which was filled by al-Isaraʾīnī, who otherwise lectured in the mosque of Ibn al-Muḥarrak, and the other by al-Bābi (ibid., p. 204, cf. p. 217). The philologist and hijjāʾ poet al-Zawānī who died in 465 lived with other learned men in a madrasa al-Sayyūf (Yākūt, Udākhārī, vii. 409).

In Nisābūr especially, where studies were vigorously prosecuted in the mosque (e. g. Wustenfeld, Schafft, iii. 236) many such institutions arose. Thus a special school was built for the Shāfiʿī ʿĀthā scholars al-Sālıq al-Nisābūrī (349 = 960; ibid., i. 156; cf. 160). Abū ʿAli al-Ḥusaini (d. 393) himself founded a school in which to teach Ḥadīth and it was attended by 1,000 scholars (ibid., p. 200). Ibn Fārāk (d. 406; ibid., p. 216) did the same and in the year 437 Abū ʿĀṣān al-Kūshāri (ibid., ii. 284) and for Rukan al-Din al-Isaraʾīnī (d. 418 = 1027) a school was built which surpassed all others (ibid., ii. 290). As early as the tenth century we thus find al-Maḳdisi praising the very fine madrasa of Isfahān (B. G. A., iii. 315). In the first half of the fifth century, there were four especially famous madāris in Nisābūr: al-Madrasa al-Balḥakya, founded by al-Balḥaki (d. 384), when he became a teacher in Nisābūr in 441 (Wustenfeld, Schafft, ii. 270; al-Suyūṭī is therefore wrong in ascribing its foundation to before the birth of Niẓām al-Mulk [in 408]; see Husain, ii. 147, al-Saʿdiyya founded by the emir Nāṣr b. Subuktakān (governor of Nisābūr in 389).
for Şahîn and the Kamhiya for Mâlikis; for Şahîn also the Sharifiyas (called after its head also Madrasa Zain al-Tuğâdar) and notably the great Şâlihîya or Nâşirîya (for the identity of the two cf. Maqrîzî, iv. 254, with Hussain al-Mukhâbâra, i. 142 sq.) beside al-Shâfi‘î’s mausoleum; he also has had a madrasa beside the Mağhâd al-Husain and in 572 a. Hanâfé madrasa the Şuqîyiya, and he turned the house of an emir named Sa‘d al-Sû‘adâ into a khanâqâh (Husain al-Mukhâbâra, ii. 21 sq.; Maqrîzî, iv. 192 sq.; Ibn Khalîkîn, ii. 402 sq.). Those around him emulated this activity. His visitor the Kâdi l-Fâdîl in 580 built the Fâdîliya for Şahîn, Mâlikis and for Iskârî (Maqrîzî, iv. 197), a brother the Sâ’îfîya (ibid., p. 199), another, al-Mâlik al-Âdîl, the Madrasat al-Âdîl (ibid., p. 195), his nephew Ta‘kî al-Dîn built in Cairo the Manzûl al-Isâr or Takwâniya for Şâfi‘îs (ibid., p. 194; Ibn Dî‘kâmî, p. 93) and three others in the Fâyûm (Maqrîzî, iv. 195). Other emirs and their relatives followed his example (ibid., p. 196, 199 sq.) and even a merchant, al-Arsâfî, founded a madrasa in 570 (ibid., p. 194). Ibn Dî‘kâmî, who travelled through Egypt in the time of Şâlih al-Dîn, speaks of several madrassas in Alexandria (Rihla, p. 42) and particularly of one beside al-Shâfi‘î’s tomb, which looked like a whole town (ibid., p. 48).

During the period of the Ayyûbiyyas and Mâlikis the number of madâris increased to an extraordinary degree. In the street called Bâin al-Kâsaţân there were two long rows of madrasas on the site of the old Fa‘ṣîmîd palace in Cairo (cf. P. Ravaïsse, in M. M. A. F., iv, 1887, p. 409 sqq., pl. 3). As a rule, the madrasa was placed in the street, and the house. Ibn Dî‘kâmî mentions that in Cairo only two stood isolated (p. 98). Al-Nu‘aymî and Ibn Dî‘kâmî describe several madrasas (and madâris) as masâ‘i‘î makes e. above the ground-floor. Ibn Bâţîsh, who travelled at the beginning of the eighth century, found madrasa even in quite small towns, e. g. in Dâmûs, Munyat h. Khashîb, ‘Înâ, Kus, Asmâ‘ (i. 65, 96, 106, 108). Ibn Dî‘kâmî (p. 92-99) about 900 gives a list of twenty-four madâris; this is obviously very incomplete; on the other hand, it contains nine names, not given by al-Maqrîzî. This author (d. 845 = 1442) mentions 73 madrasas, fourteen for Şâfi‘îs, four for Mâlikis, ten for Hanâfîs, three for Şâfi‘îs and Mâlikis, six for Şâfi‘îs and Hanâfîs, one for Mâlikis and Hanâfîs, four for all four rites, two exclusively used as dâr al-harîshî, while the rite of twenty-five is not mentioned and four remained unfinished. Of these madrasas, according to him, about thirteen were founded before 600, twenty in the seventh century, twenty-nine in the eighth century and two after 800. To the two schools of Ma’dhûb (al-Kâmiya of the year 622 and al-Khawarijya of about 780, see iv. 201, 211 sq.) is to be added the Marғâjî, mentioned by Ibn Dî‘kâmî (p. 99). A notable feature is the decline of the Hanbalî and in contrast to Damascus the large number of schools which included all four rites. The first Egyptian madrasa to include all four rites was the Şâlihîya, founded in 640-641 by al-Mâlik al-Şâlihî (Maqrîzî, iv. 209 sq.) probably on the model of the Mustaqmîriya.

In Şahîn al-Dîn’s time, the madrasa was also introduced into the travel of Hâjî. In the year 579, the governor of ‘Aden built in Mecca a madrasa for the Hanâfîs and in the following year a Şâlihî madrasa was also founded there (Chron. Mecca, ii. 104). Up to the beginning of the ninth century, eleven madrasas are mentioned (ibid., p. 104-107) but others were added (ibid., iii. 177 sq., 211 sq., 225 sq., 351 sqq., 417). In the xviii century they ceased entirely to be used for their original purpose (see Sooneck Hurgronje, Meḵkân, ii. 229 sqq.). Madrasa were also built in Medina (Wistenfeld, Medina, p. 58, 95, 112).

In Asia Minor, madrasas spread under the Şâlihîs; the oldest known date from the seventh century. In Konya for example there were the Şâlihî Madrasa of the year 640 (1242-1243), Şâlihî Madrasa 649 (1251-1252) and Indjemînârî Madrasa 674 (1274-1276) (cf. Huart, Konîa, 1897, p. 156, 160, 178; Fr. Sarre, Reise in Kleinasien, 1886, p. 48 sq., 51 sq.; Gottscho, in Munich Annalen, 1928, p. 106 sqq.). In Siwâ‘ three madrasa date from the year 670 (1271-1272) namely the Şâlihîya or Gok Madrasa, founded by Fâkhr al-Dîn, that of Muqaffar Barîndî and that of Shams al-Dîn Muhammadd. The first mentioned is probably identical with the Dîr al-Tâdîrî described by Ewliyâ‘, which contained eighty rooms in two stories (see v. Berchem, Corpus, iii, p. 18 sqq., 26 sqq., 31 sqq.). In Diyārî, a madrasa has been built in the Dîmîs [Dâmîs] Aḥmad Şâh erected in 626 (1228-1229) (ibid., p. 71 sq., 80). About 753 (1333) Ibn Bâţîsh found madrasa all over Asia Minor, even in quite small towns (ii. 260, 267, 269, 285, 296 sqq., 340, 343, etc.). Building activity was continued under the Ottomans (cf. Huart, Konîa, p. 59, 97, 109; Fr. Sarre, Reise in Kleinasiens, index; R. Hartmann, op. cit., p. 24 sq.).

According to the Kûrâs, the madrasa was brought to North Africa as early as the time of Şahîh al-Dîn, for we are told that the Almohad Ya‘kûb b. Yûsuf (580-595 = 1184-1199) built mosques, hospitals and madrasas in Ifriqiyâ, the Maghrib and al-Andalus (Tornberg, Anmäne Regnum Mauritaniae, Upsala 1843, i. 143); but no exact details are given to corroborate this statement. The Maghribi madrasas were exclusively Mâlikîs.

In Tunis, many madrasas were erected under the Hafsîs (625-941 = 1228-1354), the oldest being the Madrasat al-Ma‘rîd about 650. In the Chronicle of Tunis (Zarqâshî, in Chronique de l’Alomahdet et des Hafsides, trad. E. Fagnan, in Rev. Des. et Hist. Soc. Arch. Cons., xxii, 1895, see index) eleven are mentioned including the Madrasat ‘Unî al-Djâmil of 742 (1344), the Madrasat Ibn Tâbrîdîn, founded by a learned man in 766 (1364), the Madrasa Shamâma‘îya (before 734 = 1333; see op. cit., p. 105, 106, 221), Madrasat Belkhallafîn in 796 (1393) (ibid., p. 183), and six of the ninth century (see op. cit., index; cf. also Margais, Manuel d’Art Musulman, ii. 500, N° 2). Ibn Bâţîsh mentions at the beginning of the eighth century the Madrasat al-Kutabîyîn (i. 20). There is no trace of madrasas of the Almohads and the statement in the Kûrâs regarding them does not agree with the other sources. The first madrasa in the Maghrib was, according to Ibn Sa‘îdî, Mustança‘î, the Madrasa al-Sa‘îdîân built by the Marinid Abd al-Yûsuf Ya‘kûb b. Abd al-Haṣîn (566-685 = 1258-1286) in Fâs in 685 (also called al-Halîfiyya, see the edition by Lévi-Provençal, in Heritier, v., 1925, p. 34 (Arabic) = p. 44 (French)). In Fâs, we are told by the same source, Abd Sa‘îdî (725-731) and his son Abu ‘l-Haṣan (731-749) built several madrasas: the M. al-Madina al-Bâdrî (M. Dîr al-Makhrî in Fâs Djâphil) in 721 (1323), the M.
interest in the specialised madrasa decreased considerably and the great builder of the xith (xviiiith) century, the emir Khâjudû, still built madrasas, but his real interest was in the mosque (see below). Lane only mentions the Arhangelsk as an important centre of study in Cairo. The development in Mecca was similar, where in modern times studies are only prosecuted in the mosque (Saouer Hurgronje, Mekhâ, i. 17, and cf. above). On education and the madrasa in general cf. also F. Wüstfenfeld, Die Akademien der Araber und ihre Lehrer, Göttingen 1837; Kremer, Kulturgeschichte, 1877, ii. 479 sqq.; Haneberg, Abhandlung über das Schul- und Lehrwesen der Muhammedaner im Mittelalter, 1850; v. Berchem, Corpus Inscriptionum Arabicarum, ii. 252—
269; G. Gabrielli, Manuale di Bibliografia Musulmana, i., 1916, p. 109 sqq.

4. Development of the Madrasas and similar Institutions.

a. Madrasa, Masjid and Dâmî.

There was, as already mentioned, no difference in principle between the madrasa and other mosques. Even after the introduction of madaris, the regular mosques remained schools as before. Ibn Batûta, who travelled in the eighth century, in the period when madaris flourished most, attended lectures on Hadith not only in the Dâmî of Shâri'a but also in the Dâmî Maṭrî in Baghdad (ii. 83, 110). In Damascus in 580, Ibn Dâhûr refers to rooms in the Mosque of the Omaiyâ, which were used for Shâri'a and Mi'llîkî students, who received considerable stipends ( alfârî, mi'llîk) and among them were many Maghâribîs; the mosque had large endowments (ma'dîkî) for strangers and the al-talab (khûla, p. 266 sqq., 272 supra). Ibn Batûta also speaks of the helalî al-madhâbî of this mosque in the different sciences (i. 212). In Egypt in the time of al-Mâkrit (ninth century), there were 8 rooms for fiqh studies in the Mosque of 'Amr and before 749 there were over 40 hâlebî in it (Maṭrî, iv. 20, 21). In the Mosque of Ibn Tâlîn after its renovation in the reign of Lâdîn (696—708) courses of fiqh, according to the four madhâhib, and other studies were arranged (ibîb., p. 41; cf. Quatremère, Hist. Sult. Mont., ii/ii. 47 sqq.) and in 767 an emir appointed 7 teachers in Hâsînî fiqh there (Maṭrî, iv. 42). In al-Ahâr in the seventh century and later after the earthquake of 702 many lecture-rooms with paid teachers were built (ibîb., p. 52), likewise in the Mosque of Hâkim, where, after the earthquake, lecture-rooms in fiqh for each madhâhib and for Hadîth were founded with salaries for the teachers and scholarships for the students (ibîb., p. 57). In Fâtîmid mosques, like the Dâmî al-Zâhir and the Dâmî Ma'kâs built by al-Hakîm, Mi'llik emirs founded new lecture-rooms (ibîb., p. 66, 81) and not only in the Ma'shad al-Husainî but also in the Ma'shad al-Nafisi were studies carried on in the eighth century (Hass al-Ma'sâîfâr, i. 195; Mûlîyî l-Dîn).

When a particular room was set apart for teaching purposes in a mosque, this was often called a madrasa; for example 6 of the Damascus madaris were in the Mosque of the Omaiyâ: the Shâhîsî, Ghaûlîsî, 'I'zîyî, Mâdîkî, Mâdîk'sî, or of which the first and third were also known simply as helâhî (J. A., i. 193, ii. 89, 410, 434, 437; et. al. 262, 276, 481; others: vii. 230); al-Hâkim's Mi'llik madrasa was
in the Mosque of ‘Amr (see above) and Ibn Du‘mān (p. 100 sq.) mentions 8 zawāyā in this mosque, which were endowed for ṭāfīsī. The madrasas were often built close beside the large mosques so that they practically belonged to them. This was the case in Mecca (Chron. Mubāh, ii. 104 sq.; cf. Ibn Baṭṭūta, i. 324), in Damascus where there was a Šāhī madrasa beside the western gate, Bāb al-Barid (Ibn Lūḥār, p. 271), in Niṣābūr (Ibn Baṭṭūta, iii. 80) and in Cairo where al-Madrasa al-Taḥārīya in 709 and al-Aqṣābāhīya about 730 were built so close to the Azhar Mosque that they had common walls and windows in them, which was specially permitted by a fetwa; these were afterwards completely incorporated in the Mosque (Maṭrī, iv. 223 sq.). In Fās, the chief madrasas are arranged round the great mosque al-Kanrawīn and the same arrangement is found in Mārrakāsh (Pauty, in Hosp. Fr., 1923, p. 514 sqq., 523).

If the madrasa, as a building, had little independence, its character as a home for students and place of instruction was very marked. But even where it was quite an independent institution, the distinction between madrasa and ordinary mosque was very slight, all the less as sermons were also preached in the madrasa. In the fifth century the minbar had already been introduced into a large number of mosques. In the Niṣāmīya in Niṣābūr, services were held as soon as it was finished (by ʿAbd al-Raḥmān b. Wūṭiṣefīn, Šafīʾ, ii. 285) and the Niṣāmīya in Baghdaḍ had a minbar (Ibn Lūḥār, p. 219). A problem was however raised by the fact that these madrasa buildings were inhabited by the Šāhīs and this school held that only one mosque in a town could celebrate the Friday service, unless the town was of very considerable size and we are definitely told that al-Djūwānīt conducted the Friday service in the madrasa in Niṣābūr although he was also khaṭīb at the Manṭī mosque (Wūṭiṣefīn, Šafīʾ, iii. 251). In Egypt from 569 to 665 there was only one Friday khaṭīb, but after this there was usually a minbar in the large mosques. The callih actually preached in the madrasa built by Kāhsīn (676–689; Maṭrī, iv. 221). The minbar for the djūmā in many mosques is expressly mentioned, e.g. the Ḥadījīya 761 (ibid., p. 222 sqq.), the Baṭṭīsī 776 (ibid., p. 236), the Zaṭṣāmīya 797 (ibid., p. 241), the Ǧīlī (ibid., p. 249). The Šāhīya, which had not a minbar at first, was given one in 758 and was henceforth used for the Friday service (ibid., p. 205). In Fās the mixed type of ḍījīm and madrasa was found in the Bīr Ānāfīya (Bel, X.A., ser. 11, xii. 339).

It was only natural that the madrasas should also be called masḏijī (cf. Ibn Djaḥār, p. 48, 11 with line 19, 20). Ibn al-Ḥajjīd in the viith century still wants to distinguish between masḏijī and madrasa and to give more importance to the former (Maṭbaqā, ii. 3, 48). The distinction remained however quite an artificial one and this is also true of the distinction between madrasa and ḍījīm. The name madrasa was decided by the main object of the institution and the special style of the building. The name ḍījīm was only given if the Friday service was held in it. Thus, as late as 772, we find the emir Bihārī building a madrasa and opposite it a ḍījīm; but in the year 815, the madrasa was given a minbar and used as a ḍījīm (Maṭrī, iv. 235 sq.). If these two uses of the building were equal) either name may be used (cf. the double name in an inscription of the emir Mūkbbīl: van Berchem, Corpus, i., II, No. 201). In some cases a Friday mosque can be said to be in the madrasa (Ibn Battūta, ii. 39). The great Djiṃī ʿHasan begun in 757 was also one of the largest madrasas in Cairo (Maṭrī, iv. 117 sqq.) and on the other hand, the Djiṃī Khaṭīr in Bīṭāb built in 737 and the Djiṃī Aslam founded in 746 were educational institutions (ibid., p. 116, 111; Ibn al-Muḥāfṣara, i. 192). In the ninth century the Djiṃī al-Maʿāyīdy was the most important new madrasa in Cairo (Maṭrī, iv. 139). The same variation in nomenclature is often found in this century (cf. v. Berchem, Corpus, i., II, 235, 253, 262). On the other hand Maṭrī, in the ninth century, only uses masḏij as a name for quite insignificant mosques (iv. 263 sqq., where masḏij are mentioned). In the xith century the emir Kattūḥād built 18 large mosques and many smaller ones and his interest in the furtherance of learning was specially displayed in his buildings at the Azhar mosque, which had developed at the expense of the specialist madrasa (al-Djābūṭī, Merveilles Biographiques, ii. 230 sqq.; Sulaimān Rasād, Kanz al-Djūwāhî fī Turāḥ al-Āshār, p. 74 sqq.); for the similar situation in Mecca cf. above.

The connection between maszūlum and mosque was also found with the madrasa. The tomb of the founder was placed in Nūr al-Dīn’s madrasa in Damascus (Ibn Djaḥār, p. 284, 1) and during the Manūlīk period it was the regular custom for the founder of a madrasa to be buried under a ḥubbā in it.

8. Monasteries.

A close connection arose between the monastery and the madrasa. As already mentioned, it was quite a common thing for devout men to live permanently in the mosque e.g. in the minaret or somewhere else on the roof or in subsidiary buildings or in a cell in the mosque. Such a cell which can be used for teaching or for meditation is called wiṣāwīya, lit. corner (Ibn Djaḥār, p. 246, 245, 266; Maṭrī, iv. 20; cf. Greek ṣanw; see Dossy, Supplement, s. v.). Pious ascetics however had retained from the older religion the custom of living in special monasteries e.g. in Djaḥālān in the fourth century (B. G. A., i. 188); Muslim historians trace these back to the time of the Companions (Maṭrī, iv. 272 sq.); in the fourth century ascetics and Sūfis, especially the Karrāmīya [q. v.] or Karrāmīya (cf. Men., Renaissance, p. 273), had quite a number of monasteries (ḥāmīmīn, also ḥīmīmīn, sing. ḥāmīmān) in Farghānā, Murc al-Rūd, Samarkand, Djūmūn, Ṭabaristan etc. (B. G. A., iii. 343, 365); Jerusalem and in Egypt also the Karrāmīya had their monasteries in which they held ḥāmīn (ibid., p. 179, 182, 202).

The distinction between ḥāmīmān and ṣfrū (plur. ṣfrūn) is one of origin rather than fact. Ṣfrū was simply a dwelling place of men of learning who possessed the ḥāmīn on the frontier but the word was also used by the Sūfis who waged a spiritual ḥiṣba (cf. Maṭrī, iv. 292 sqq.). There was a ṣfrū in the Maṭjī in the fourth century in the Wādir Salt (B. Γ. A., ii. 56). When Ibn Marrūṣa says that they had only two ṣfrūn of the eastern kind (in Saff and Salt, Hosp. Fr., v. 36, 71), it is doubtful whether he means an establishment of Sūfis or of ḥāmīmīn. In the vth (xst) century there were several military ṣfrūn on the river Niger, from
which the Almoravids originated. From the 12th century onwards many were built in Morocco against the Spaniards and Portuguese. Maʿārī is the usual word for riḥāʾ (see Bel, J. A., ser. II, ix. 1917, p. 325, No. 1). In the east in the fourth century, rubūj are frequently mentioned, which probably had a military character (H. G. A., iii. 303, 354, 415). The original distinction between khasmāh and riḥāʾ is never quite forgotten; as late as the beginning of the 18th century we find riḥāʾ used of barracks (Maʿārī, iv. 270). Ibn Baṭṭūta says that the word khasmāh had not reached the west; that the old Arabic term ṣamīr was used (Ibn Baṭṭūta, ii. 77). khasmāh however in Ibn Marzûq, Hisprīs, v. 35 sqq.). Usually we find the three terms used without any definite distinction being made between them (pawma also seems to be used in the Kirfās of a Muslim monastery, see Turnberg, Annates, p. 143; cf. p. 18); for all three names are applied to Sīfī monasteries, which are also taken, in sīfīs, e.g. are used as hospices.

Ibn Baṭṭūta mentions many monasteries in the Ifrīq and Persia. Besides the tomb of al-Ribāṭ, not far from Wāṣīt was a riḥāʾ, which he calls ṣamīr, where "thousand of poor men," i.e. Sīfīs, lived (ii. 4). In al-Lūr especially, he found a vast number of monasteries; the sūlān there built 460 rsaādīs and spent 1/2 of his revenues on them and the madrāzs (ii. 31).

In Ibn Djabṣir testifies to the flourishing monasteries which were often regular palaces and he says that the names khasmāh and riḥāʾ are used indiscriminately (p. 243, 271, 284); the word khasmāh sounded strange to him as a westerner, as to Ibn Baṭṭūta (p. 284). Nevertheless al-Nuʿaymī differentiates the three terms and mentions 29 khasmāk, 23 rubūj and 26 rsaādīs. The oldest khasmāh mentioned by him (Dawaira) was founded for a learned man who died in 401 (Sauvare, in J. A., ser. IX, v. 269, 377, 387 sqq.).

It was similar with Egypt. The first khasmāh was built by Salīḥ al-Dīn in 569 in Cairo (al-Sallīḥīa, originally called Dār Salīḥ al-Sawādā; Maʿārī, iv. 273), the next in the seventh century by Baḥr as-Bunduqdārī, who also founded new monasteries in Syria (ibid., p. 282, 293). Of khasmāk, al-Maʿārī mentions 22 (Ibn Duknāk only one), of the sixth century: one, seventh: one, eighth: 18, ninth: one. Of rubūj 12 (Ibn Duknāk 8), of the seventh century: 9, of the eighth: one, besides 5 on the Kufa. Of rsaādīs 26 (Ibn Duknāk, 9); these were mainly outside the town and were obviously quite small, often being simply the house, later the tomb of some devout man. The oldest dated from the sixth century. In Jerusalem also Salīḥ al-Dīn built a khasmāh (v. Berchen, Cervas, ii. p. 87 sqq.). Among the khasmāk, rsaādīs and rubūj in this city the last named seem to have been specially intended as hostels for pilgrims (ibid., p. 197 sqq.; see also Sauvare, Jérusalem, et Hébron, index). In Mecca 50 ruṣūj are mentioned; the oldest dated from 400 (Chron. Mekka, ii. 108–115). At places of pilgrimage, the monasteries played an important part as hostels but even in other places they also gave accommodation to strangers. Ibn Baṭṭūta on his travels usually stayed in them (he calls them rsaādīs) but he also lodged in madrāzs, which were generally used as hospices (cf. Quatremère, Hist. Sall. Islam., ii/35, note). Some of these institutions were convents for single women (Maʿārī, iv. 293 sqq.).

The main object of monasteries, however, was to afford Sīfīs a home and place for their devotional exercises. In the khasmāh of Baḥr as-Bunduqdārī founded in 766, 400 Sīfīs were maintained (Maʿārī, iv. 276 infra) and in the khasmāh of Sīrākīs founded in 100 (ibid., p. 285). They were given lodging, food, clothing and money; there were often baths attached to them. The building was arranged for ḍhūʾ exercises, and also for ṣalāt so that it was a kind of mosque. Ibn Djabṣir mentions a riḥāʾ on the summit of Abī Kūnīs in which there was a mosque (p. 108). The riḥāʾ may be actually called a madrāz (Maʿārī, iv. 294; cf. khasmāh and masajjīd, p. 282 and the term masajjīd al-riḥāʾ. Ibn ʿArabīshī, Vida Timūrī, ed. Manger, iii. 886). The monastery founded by Salīḥ al-Dīn was actually given a minaret in 780 (mtājama) and it is recorded that people used to wear sandals to walk in the ṣalāt (Maʿārī, iv. 275 infra). Sometimes only the occupants of the monastery are admitted to the ṣalāt (ibid., p. 277: Khasmāh Baḥr as-Bunduqdārī). There was therefore an imām on the staff of the khasmāh (ibid., p. 287). Like other sanctuaries the monasteries sometimes preserved relics; the Ribāt al-Khāṭir, for example, preserved a piece of iron and wood which had belonged to the Prophet (ibid., p. 295). We sometimes find a khasmāh built close to a large mosque like the khasmāh of Aḥū futḥalās beside the Aḥār Mosque (ibid., p. 292; cf. p. 350, ʿUṣārī) or the founder built a masajjīd for the Friday ṣalāt beside the monastery (Sīrākīs, ibid., p. 285). The occupant of the Sūlīhīya Khasmāh took a prominent part in the Friday service in the mosque of Ḥikīm (ibid., p. 274). At a later date, we find the monasteries themselves arranged for the Friday ṣalāt. This was the case with the Ribāt al-Afrām, which in 664 was given a minbar for the Friday and festival kūḥas (ibid., p. 297) and al-Muʿāyadī made a house, that had been begun before he came to the throne, into a ḍārīn wa-khasmāh (ibid., p. 134 infra) just as ḍārīn wa-dārī could be built with living-rooms for Sīfīs, e.g. the ḍārīn al-Bāṣīt (beginning of the 12th century, like the preceding, ibid., p. 140 infra) and in the 13th century, the ḍārīn al-Shāhīn (before the building of his khasmāh, ibid., p. 113). Baḥr as-Bunduqdārī was buried in his khasmāh and the monasteries had as a rule tombs, either of the founder, or of devout men who had lived in them.

The development of the monastery is therefore quite analogous to that of the madrāzā; the one institution merges into the other, because learning and manifestation of piety are inseparable in Islam. Learning was also cultivated in the monasteries; at the present day, we find students living in a monastery and attending lectures in a madrāzā. Some scholars lectured on Ḥadīṯ in their rooms in a monastery (ibid., p. 294, 295, 303) but instruction was also arranged for in some monasteries just as in the madrāzā. ʿAbd al-Lāṭif (d. 529 = 1231) lectured in a ribāt in Baghdad on ʿuṣūl, ḥadīṯ, etc. (Ibn Abī Usākhīs, ii. 203) and a Ribāt al-Khāṭirī is mentioned here, which had a library (Ibn Ḥimṣī, ed. Lippe, p. 260). There are other references to libraries in monasteries (see for Masr: Yāḥṣī, iv. 599). In Khānahkāh Shaikhtī founded in 756, an extensive course of lectures, Fiḳh according to all four Madhāḥībī, Ŧaḍīḥ and
Iṣrā' (Maqrizi, iv. 283), was given. In the Ribāṭ al-Āthār in the eighth century, instruction was given in Suḥrū' Fī Ḥikāh (ibid., p. 296) and in the Dār al-Faḡḥāṣ built in 821, arrangements were made for students as well as for Sāfu (ibid., p. 136); the Ḥanafi madrasa al-Djamāliyya (730) was also a khibnākāh (ibid., p. 238 supra); they had a common director.

In the eighth and ninth century this combination of the two institutions became quite frequent, for example in the Nīṣābiyya in Cairo of the year 757 (v. Berchem, Corpus, i. 242 sqq.), in the madrasa of Basbāl 935 (ibid., p. 365 sqq.; cf. Ibn Iyās, li. 21, 22, 41), of al-Malik al-Āṣrāf al-Insāl, 855—600 (ibid., no. 271 sqq.) and of Kāṭb Bī 879 (ibid., p. 431 sqq.). The same institution thus came to be given different names (cf. ibid., p. 172 sqq.) and al-Suyuti deals with the khwānākāh under the madrasa. In the east, Ibn Bāṭnija found the same relationship, for example in Shinās and in Kerbelā' (li. 78 sqq., 88, 99) and this is what he means when he says the Persians call the zāwiyya madrasa (li. 30, 32). In the west, he lands his own sovereign, who had built a splendid zāwiyya in Fās (l. 84); here also learning and Ṣafīṭism were associated (see the quotation in Dassy, Supplement, u. v. zāwiyya) and the zāwiyya still plays an important part in North Africa (see Djurf and Coppolani, Les Consécrations Religieuses d'Al-Mansūr, Alger, 1897; El-Hachaiachi, Voyages au Pays des Senousses, transl. Serres and Lasram, Paris 1912). Cf. on the monasteries: v. Berchem, C. I. A., i. 163 sqq., 174 sqq. c. Hospitals.

We commonly find, e.g. in Ibn Djufrī and al-Maqrizi, the hospital, mārūṣātān, māṣrīṣātān, mūṣrīṣātān, mentioned in close connection with the madrasa, probably because it was administered by learned men and as a rule also contained a medical school. Al-Walî said it had been the first in Islam to build a hospital, in the year 88 (Maqrizi, iv. 258 sq.; B. G. A., v. 106). In Cairo in 259 or 261 (i.e. before the mosque) Ibn Tulun built a hospital for the poor. At the same time he installed a dispensary behind the mosque and a physician used to sit there to be consulted every Friday. According to al-Maqrizi, his māṣrīṣātān (called in Ibn Dujmāl, p. 99 the "upper") was the first in Egypt; this probably means the first free public hospital; it is improbable that this Hellenistic institution did not already exist in Egypt (Maqrizi, iv. 38, 39, 258; Huss, ii. 139). Al-Maqrizi (iv. 259 sqq.) mentions in addition to this hospital in Cairo the mūṣrīṣāt al-Kuṭb (in 346, perhaps identical with that called the "lower" by Ibn Dujmāl, p. 99), al-Maghtāż (232–247), al-Mansūri (682), al-Mu'ayyadī (821). To these must be added the two which Sulṭān al-Din maintained in Mīṣr and Ḥādira (Ibn Dujmāl, p. 51, 52; cf. Ibn Khalīlān, Cairo 1502, ii. 402 sqq.). In Damascus Ibn Dujmāl found two hospitals, one of them the mūṣrīṣāt al-Nūr (p. 283, 284; cf. Ibn Khalīlān, ii. 403). He also mentioned one in Nīṣābūr (p. 240), in Ḥarrān 2 (p. 247), in al-Malāb 1 (p. 251), in Ḥamā (p. 457); in Baghādād he refers to a number without particularising them but we know of hospitals here from the third century and in 304 Sinān b. Thābit was director of the hospitals of Baghādād; he was responsible for the foundation of three more (Ibn al-Kift, ed. Lippert, p. 193; cf. Khākh al-Wasāṣ, ed. Amedrov, p. 21 and on the whole question: Mez. Renaissance, p. 326 sqq.). There was a hospital attached to the great Mustawriyya madrasa (Le Strange, Bagdad, p. 268).

As regards the teaching of medicine, Ibn Abī Usāibīa's shows (l. 103 sqq.) that it was continued without interruption in Islam; for example, he mentions 'Abd al-Malik b. Ablātār, who was in charge of the medical school in Alexandria, and after the conquest adopted Islam. At a later date, the chief medical schools were in Anjāfiyya and Harṭān, among other places (l. 116 sqq.). For a long period most of the physicians were Christians (cf. also B. G. A., iii. 183). Teaching was usually given in connection with the hospitals. The head physician collected the students around him whom he treated (khābād) and they assisted him (e.g. the Georgios, summoned from Gundishāpur to Baghūdād by Manṣūr: Ibn Abī Usāibīa, l. 124). Kāṭb b. b. Ṣalāh had a lecture-room installed in his hospital, the Māṣrāt, where the rāwī al-qāṭibāt lectured on medical science (Maqrizi, iv. 260); instruction was also given in the great al-Bīmāṣrīṣāt al-Nūr in Damascus (Ibn Abī Usāibīa, ii. 192). Lectures on medicine (fīhā) were sometimes also given in the mosques but in this case it was for the most part a theoretical science closely connected with philosophy. Ibn al-Haitham (d. c. 430) lectured on fīhā in the reign of al-Ḥākim (ibid., ii. 90) and when Lāḏān restored the mosque of Ibn Tulun he also endowed lectureships on this subject (Maqrizi, iv. 41; which shows that fīhā should be read in Quatremére, Hist. Sult. Maml., iii. i. 47). Sīhū could also be studied in a madrasa; for example, al-Ḍilī, who died in 641 lectured on it in the 'Aṣbawāya in Damascus (Ibn Abī Usāibīa, ii. 171). At the same time there were special madrasāt al-fīhū, thus in the seventh century three were built in Damascus (J. A., ser. 9, iv. 497–499; Fleischer, "K. Schr.", iii. 329). The teachers in them could also be physicians at the hospitals (Ibn Abī Usāibīa, ii. 266).

d. Children's Schools.

These were older than Islamic science, since at the very beginning of Islam, reading and writing were taught in Arabia. In Medina the teachers were often Jews (see Balāḏūrī, p. 473 infra; cf. the name ṣabbānī for the teacher: Sīhū, iii. 73; v. 48, 68; Būkūrī, "Ibn, bāb 10; Yaḥyībī, Hist. Kontuna, ii. 243); but ability to write was not so common here as in Mecca (cf. on the question Nidke-Schwall, Gesch. d. Quaran, ii. 83; Goldschmer, Mekk. Stud., i. 110 sqq.). After the battle of Badr, several captured Meccans were released to teach writing in Medina (Kāmil, ed. Wright, p. 171; cf. Goldschmer, op. cit., p. 114; Spranger, Leben Mekk., iii. 131). After the capture of Kaṣfāyā, the prisoners were settled in al-Ḍurūf and some were taught in the school (kahhād) (Balāḏūrī, p. 142). Another contemporary of 'Ammar's, Djufrī b. Ḥaṣyā, who was later an official and governor, was a teacher (muṣallīn kahhād) in a school in Taʿfīr (Ibn Haiḍār, Ṣuḥāba, Cairo 1323, i. 235). Maʿṣūriyya, who had acted as the Prophet's amanuensis took a great interest in the education of the young: They learned reading, writing, counting, swimming and a little of the Kūrā and the necessary observances of religion. Famous men like al-Hadīṯī and the poets Kumātī and Tīmūḏān are said to have been schoolmasters (Lammens, Mekkā, i. 329 sqq., 356 sqq.). The main subject taught was adaḥ, so that the schools of the children were called madāṣīla ʿadāḥ (Aghānī, xvii, 2 Cairo ed., p. 101), and the teacher was called
mu'allim (e.g. Ma'qrizī, iv. 223; cf. Yāqūt, Uḍūdā, iv. 272; vi. 105), also mu'allim (Khākhār, Dīyārā, līhā 27; Yāqūt, iii. 410; IbnBatūṭah, i. 213) in modern times fīlīth (see Lane, Manners and Customs, Everyman's Library, p. 61). The teacher was as a rule held in little esteem, perhaps a relic of the times when he was a slave, but we also find distinguished scholars teaching in schools; thus Dālālāb b. Musājīm who died in 105 or 106, the ezegist, traditionalist and grammarian, had a school in Kūfa, said to have been attended by 3,000 children, where he had to ride up and down among his pupils on an ass (Yāqūt, Uḍūdā, iv. 372 sq.).

As language was of the utmost importance, we find a Bedūn being appointed and paid a teacher of the youth in Bāṣra (ibid., ii. 239). Schools spread during the Omayyad period. They were found in Kūfā and instruction was also given at home in the houses (see Haneberg, Schul- und Lehrweisen, p. 4 sq.). Under the Fatimid, there was a boys' school in the palace where the youth of the upper classes was prepared for the Caliph's service (Ma'qrizī, ii. 209-211). It is natural to find a children's school also attached to the mosque; but education became probably more and more centred round the Kūrān. In the Mosque of the Omayyads children were taught (Ibn Batūṭah, i. 213; Ibn Dābir, p. 272) and the teachers had special rooms at the north door of the mosque (Ibn Dābir, p. 2). In Palermo most of the numerous mosques were also used for teaching the Kūrān (ibid., p. 33); according to Yāqūt (iii. 410) there were no less than 300 teachers here, but, as he adds, because they were exempt from military service; but in the fourth century Ibn Hawākāl counted 300 kāṭībīn in Palermo, the teachers of which were held in high esteem (B. G. A., ii. 37).

To this day children are taught in the sāla of the Azhar Mosque. In the sixth century there were also many independent schools. In Cairo, Ibn Dābir found a large number of schools mainly for orphans and poor children and the teachers and pupils were maintained by the Sultan (p. 52) and in Damascus he saw a similar large institution (p. 272). In Jerusalem Sallāh al-Dīn built a school (v. Berchem, Corpus, iii/5, 108 sq.) Ibn Dābir says that in these eastern countries, the Kūrān was only taught orally (by kāṭīn) while writing was practised with pens etc., out of respect for the Kūrān (Rīḥā, p. 272). This did not hold generally however. At a later date (ixth century) we are told that a pipe was led from a school in the Azhar Mosque to the tomb of the founder so that his grave could be watered by the water in which the slates, on which sentences from the Kūrān had been written, were washed (Sulaimān Rasād, Kunū al-Dīwānwar fī Tarīkh al-Ashār, Cairo 1320, p. 73). As a rule the school was placed close to the mosque and beside a drinking fountain. During the Mamluk period, nearly every founder of a madrasa built in connection with it a similar institution for orphans and poor children who received free instruction and sometimes also maintenance in it (see Ma'qrizī, ma'madārī, passim). The object of such a school beside the mosque of Ibn Tulūn is thus defined by Lādānī: "to teach the orphans of the Muslims to recite the Book of God, the Exalted and also for other works pleasing to God and the various kinds of piety" (Ma'qrizī, iv. 41). Elsewhere it is said to be "to teach them the Kūrān". In the Maghrib also, the children only learned the Kūrān, i.e. to recite it, while in Andalus they also learned reading and writing (kāṭībīn), poems and a little grammar. In Ifrīqiyā they learned, beside the Kūrān, some Hādīth and a little of other sciences (Ibn Khaldūn, Muqaddimah, p. 447 sq.; Hafiz, v. 32).

The children's school is called kāṭībīn (e.g. Yāqūt, Uḍūdā, iv. 272; Ma'qrizī, iv. 201) or kāṭībīn (Khākhār, Dīyārā, līhā 27; Ballādhuri, p. 142; Ma'qrizī, p. 197; 240); those founded for poor children kāṭībīn nabi or kāṭībīn sabīl (cf. e.g. Ma'qrizī, iv. 53, 117, 199, 201). The word sabīl characterises the school as a public benevolent institution; cf. the expression: "she made a kāṭībīn li'sabīlī" (ibid., p. 235); of Kālūn's hospital, ibid., p. 260; cf also Dusy, Supplement, v. 9; Quatremère, Hist. Scur. Maml., i/2, 229 note and B. G. A., iv. 211, 258). — Cf. on elementary education: Goldziher, Art. Education, in Hasting's Encyc. of Rel. and Eth., Men, Renaissance, p. 177 sq.; Lane, Manners and Customs; Snouck Hargroene, Mekka, ii. 144 sqq.

5. Libraries.

In Mecca, as well as in Medina, there were large collections of books in the mosques (Ibn Dūsār, p. 80, 193; on modern conditions in Medina, see Batmānī, Rīḥā, p. 254 sq.). The Dīwānī Zaftūn in Tūnis had a large library (Kec. Soc. Arch. Constantine, 1894, p. 287). The Niẓāmī in Baghādīd had a library of which al-Lafarīn (d. 488) was librarian (Wustenfeld, Sūfi, iii. 314). The Musanbriya was better supplied in this respect than any other madārīa (Chren. Mekka, ii. 174). In Māzīr, there were in the sixth century 20 public endowed libraries in the mosques and madārīa, two of them in the chief mosque, one of the latter containing about 12,000 volumes (Yāqūt, iv. 591). Among the madārīa in Cairo, the Fāshiliya was particularly well endowed in this respect; it contained 100,000 volumes (Ma'qrizī, iv. 1973); these were acquired by al-Kāfī al-Fāšili from the Fātijmad Academy (Shāhīb al-Dīn Abū Shīma, K. al-Rawḍàtānī, Cairo 1287, i. 200, 268; Ma'qrizī, ii. 255 sqq.) and in Kālūn's hospital there were according to Ibn Taghtīfīn (ii/483a), 100,000 volumes from the same library. These libraries were often broken up and portions put in other madārīa. During the famine of 954, the students of the Fāshiliya sold the valuable books for a loaf a volume (Ma'qrizī, iv. 197; cf. also p. 256). In Syria, Aṣīn Mīnūr (v. Berchem, Corpus, iii/6, 26 sqq.) and in the Maghīrb (J. A., ser. ii, x. 109 sqq.; Hafiz, v. 35) and elsewhere, libraries formed part of the endowments of the madārīa. With the decline in interest in learning many of these libraries became neglected. What survived has often been collected and placed in new libraries, as for example in Cairo in the Royal Library since 1851: for Damascus see Hāshib al-Zaynī, Kāfīb al-Kutub fī Dimānīh wa-Darūthā (Cairo 1902).

6. The subjects taught and the methods of instruction.

As already explained, in the earliest period the principal subjects studied in the mosque were Kūrān and Hādīth to which was added the study of the Arabic language. In Bukhārī (K. al-Imām)
TIM still means Ḥadith but, with the development of the laws of science and theology, these were also taught in the mosques. In the mosque of al-Mansūr in Bayra, al-ʿĀqīṣāʾi heard al-Djuḥābīʾi expand the Muʿṣalā takām (Whitfield, Sāḥibī, p. 131); closely connected with this was methodology (al-Muṣābātān was ʿl-Nūrā, cf. Yaḥū, Udaḥa, vi. 385). But many different subjects could also be taught. Al-Khaṭīb al-Baghdādī, who taught in Masjid al-Jāmīʿ in Baghdad, lectured on his history of Baghdad (Yaḥū, Udaḥa, i. 245 sqq.). Philosophy proper however disappeared from the mosques. In Spain, we are told, falsafah and kanājīyah were only cultivated in secret, as those who studied them were branded as ẓindikī, even stoned or burned (Makki, ed. Dozy, i. 136). The madāris were mainly established to teach the established systems of fiqh and originally each school was intended to represent only one madhhab. Where the four madhāhīb are represented in one school, one can talk about four madāris, e.g. al-Madāris al-Sāḥibiyah (Makki, iv. 209, 282); also al-Mawdūsāfiyyah, because it was divided by the street, p. 209; cf. v. Berchem, C.I.A., i. 104, note 1). The custom, often occurring before Nīṣām al-Mulk’s time of founding a Dār al-Ḥadith, was also continued after him. Al-Maḏrizī mentions two of them in Cairo: al-Kāmiyyah, founded in 1295 by al-Mulk al-Kāmil (iv. 211 sqq.) and al-Kharāṣīyah, founded in 785 (bidāʿ, p. 201). The former was restored in 1166 again as a ḥadith school (v. Berchem, C.I.A., i. 131). Before al-Mulk al-Kāmil, Nūr al-Dīn (d. 399) had founded the Nīṣāmīyah in Damascus as a Dār al-Ḥadith (Makki, iv. 211; cf. J.A., ser. 9, iii. 280); when al-Maḏrizī says this was the first built on the earth he must be corrected. In Damascus many similar schools were built. 16 are mentioned, and 3 ʿArʿān and Ḥadith schools besides (J.A., ser. 9, iii. 271 sqq.; Fleischer, Kl. Schriften, iii. 218 sqq., 320 differs slightly).

The ordinary madāris however included other subjects: the study of fiqh alone. Special mention is made of ʿaṣāf (al-Sāḥibiyah, Makki, iv. 205). In the Niẓāmīyah in Baghdad and in other madāris in the east, philological studies were proscribed (cf. Yaḥū, Udaḥa, vi. 409; v. 425 sqq. and iv. 255, but it must be an anachronism when Sulaymān al-ʿĀbd al-Kāmil is said to have taught philology in 403 in the Niẓāmīyah in Baghdad). In 604 (1207) al-Mulk al-Maghārī built beside the Sāḥibra mosque a Madrasa makāniyyah, exclusively for Arabic linguistic studies (Savvaire, Hist. J. et Élit., p. 86, 140) and schools for special subjects were not rare (cf. Subki, Miṣāʾl, ed. Myrmann, p. 153). In addition to those in Makki, there are frequent references to ʿomra both (often al-ʿomra al-lābiḥah, ṣafārīt, ṣafārīt and miʿād (devotional exercises; cf. therexon Quatrems, Hist. Sali. Mosl., ii/47). Al-Suhbī mentions, in addition to the special Ḥadith schools, also Madāris al-Tafsīr and Madāris al-Naqib (Miṣāʾl al-Naqib, ed. Myrmanm, p. 153).

In Ibn Ḥumaydīn (J.A. 6, N8, 4 sqq.), Ibn Khaldūn gives a survey of the divisions of Islamic studies. They are divided into ʿilm al-ṣafārīt and al-makāniyyah. The former are based on observation by the senses and deduction and are therefore also called falsafah or ʿalāʾib, the latter are dependent on revelation by the "legitimate determiner" (al-ʿilm al-ṣafārī, al-ʿilm al-ṣafārī). They are therefore based on special communication. "The ʿilm al-makāniyyah therefore comprises all branches of knowledge which owe their existence to Islam, namely Kurān, i.e. tafsīr and the seven Ḥadith (N9, 5), Ḥadith with the sciences auxiliary to it, including falsafah wa-l-μaṣlama, maṣlama al-ḥadith (N8, 6), al-ṣafārīt with special emphasis on al-falsafāt, the law of inheritance (N8, 7–8), al-falsafāt with the principles of law including methods of deduction on the differences between the madhāhīb (N9), al-ḥadith, theology, which is makāniyyah in so much as it is really a further development of imān which comes under the head of religious duties, but is still ʿalāʾib in its nature since it is entirely based on abstract proofs (N9, 10), maṣlama al-ṣafārīt, something like practical theology (N9, 11), ʿalāʾib, interpretations of visions (N9, 12).

Linguistic sciences come next to the study of Kurān and Ḥadith (cf. N9, 4, 37 beginning), which are divided into 4 parts: al-ṣafārīt, al-ḥadith, al-ṣafārīt, al-ṣafārīt (N8, 37), and in the last named category comes the whole study of Arabic literature.

The ʿilm al-ṣafārīt are variously classified, usually into 7 main sections (N8, 13) and are al-ṣafārīt, logic, which is the foundation of all others (N8, 17), al-arīğhiyyah, arithmetic, including ʿalāʾib etc. (N8, 14), al-manār, geometry (N8, 15), al-hawāli, astronomy (N8, 16), al-ṭāriʿ, the theory of tones and their definition by numbers etc. (see N8, 13); then there is al-ṭāriʿ, the theory of bodies at rest and in motion: — heavenly, human, animal, plant and mineral: among its subdivisions, special mention is made of al-ṭāro, medicine, and al-ṭāro, agriculture (N8, 18–20); cf. N8, 29). The seventh and last head is ʿilm al-ṭāro, metaphysics (N8, 21). Magic, talismans, mysterious properties of numbers etc. also form branches of Muslim learning (N8, 22 sqq.).

As above remarked, medicine was not only taught in special schools but also in the mosques; about 600 A. H., ʿAbd al-ʿAṭari lectured in the Azhar Mosque but it is not quite clear whether his instruction in Ḥadith was also given there (Ibn Abī Ṭālibi, ii. 207) and in any case the "philosophical sciences" in particular were cultivated in the mosques. Another division which still prevails, developed, that into principal sciences, those having a definite aim (makāniyyah) and instrumental sciences (dīnāf or makāniyyah). To the former belong sūf, al-maṣlama al-dīnīyyah (ethics, practically the same as savvah), ṣafārīt, ṣafārīt, Ḥadith (al-ṣafārīt and ṣafārīt), ṣafārīt. The latter comprise linguistics, (garf, ṣaḥīf, bayān, ṣaḥīf, bayān, ṣaḥīf, bayān, ṣaḥīf) and in addition metrics and prosody (ṭāriʿ, ṣafārīt), logic (manār) including the theory of proof (ṭāriʿ al-ṭāriʿ) probably the same as the older maṣlama and nasm, mathematics (ṭāriʿ and ṣafārīt), maṣlama al-ḥadith (cf. Muḥammad Bāzīm, Rīvīz, Cairo 1902, p. 201; Snouck Hurgronje, Mehnay, ii. 200 sqq.). There are no hard and fast lines drawn. When in 1162 Ahmad Pasha came to Cairo as governor, no ṣafārīt in the Azhar could give answers to simple questions on mathematics and astronomy, because they only knew much as arithmetic as sufficed to deal with questions raised by the law of inheritance; a very few studied these subjects privately. The Pasha pointed out that astronomy was necessary for the study of religious duties, to settle the times and seasons (al-Djāhāri, Miracites Biographiques, ii. 110 sqq.; cf. also A. Sprunger, Die Schriftsteller und die Scholastik der Muslime, E.D.M. Gxxii, 1878, p. 1–20).
The method of teaching was by lectures which had to be learned by heart afterwards (taṣbih). The first task was to learn the Kur'an by heart and then acquire many traditions as possible. The hadith was repeated three times so that the student could remember it (Buḫhari, I, p. 39). Lecturing soon became dictation (miḥā), when the student wrote down what was said, except in the case of the Kur'an (approved: Buḫhari, I, bāb 34, 36). The method was the same for linguistic or literary subjects as for Hadith, Taṣfīr, etc. The philologists not only used to dictate their grammatical works, as for example Ibn Duraid (Wüstenfeld, Schāfī, i, p. 127) or ‘Amr b. ‘Abd al-Walīd (d. 344) who dictated from memory 30,000 words on ṣuḥūfa (Yaḵšī, Udbāda, vi, 26) but also the text of the poets, like al-Ṭabarī, who lectured on al-Tīrām-nāzī in the Mosque of ‘Amr in 256 (ibid., vi, 432). Abū Bakr b. al-Anbīrī (d. 327 or 328), who dictated in one part of the mosque and his father in another, knew by heart 300,000 aḥādīth for the Kur'an and 120 commentaries on verses of the Kur'an with their iṣābād (ibid., vii, 73). Dictation was specially important in the case of Hadith, as the exact establishment of the text was the first necessity. It is therefore always said "he dictated Hadith" (Hussain al-Muḥādjīrī, ii, 159; Wüstenfeld, Schafī, p. 210, 224, 248, 257, 287 etc.; Ibn Kūfūbī, Taḥāhī, al-Ṭanāfīyya, ed. Flügel, p. 51; Yaḵšī, Udbāda, i, 246). The position of a teacher is therefore maglis al-ilmi (ibid., ii, 243; vii, 74), and his family is among the students: is al-mustāmīl (cf. ibid., vi, 282; vii, 74). Problems of fīlārah were also dictated (so Abī Yūsuf, Ibn Kūfūbī, ed. Flügel, No. 249).

Instruction frequently began immediately after the salat and the students lamented along with the teacher. The class (jāmī) began with the recitation of the Kur'an by a ḥātu, with blessings on the Prophet, and the other religious formulas (Madīkal, i, 56; cf. Mez, Renaissance des Ṣamār, p. 172 sq.). At the present day, the teacher as a rule simply pronounces the bismahah himself. Dictation alone was not everywhere the custom. In time, there came to be so many copies of the chief texts that the students were able to get copies for themselves. The text was in this case read aloud and the teacher gave his comments and emendations on the text (Yaḵšī, Udbāda, i, 255). It was only natural that the dictation of texts was first abandoned in philology; it said to have been dropped as early as the fourth (tenth) century (Mez, Renaissance, p. 171 with a reference to Schafī, Taḥāhī, al-Ṭanāfīyya, ii, 259; Sayūbi, Mithkāl, i, 30). This does not mean that dicating was completely abandoned for the teacher still made his pupils write down his comments, for example Muhammad b. ‘Abd al-Raḥmān (d. 584) dictated a commentary on Ḥarrī (Yaḵšī, Udbāda, vii, 20), and the method of having a text read aloud, while the lecturer explained any remarkable phrases was used as early as by the teacher of Hadith, Ibn Kasān (d. 299; iibid., vi, 282). At the present day, either the teacher or his famulus reads the text to be expounded from printed copy.

Cooperation between teachers and taught by questioning one another has always been an important feature of method. Ibn Khālidān laments that so few teachers in his time understand the correct methods of teaching (barak al-taṣbih). They put difficult questions at once to the pupil instead of which the taṣbih must be arranged systematically, so that it is always combined with exposition and it is a fundamental principle that the pupil should not mix the different subjects. In Spain and North Africa in particular in his time, the instruction was not particularly good, and they laid too much stress on learning by heart (ḥifṣ) (Muhāṣṣādīn, p. 344, 443 sq.; 445 = iṣābād 6, No. 2, 39, 39; cf. Subkī, Maʾṣūl al-Naṣīf, ed. Muḥyīmīn, p. 151 sq.). Mechanical learning by heart is required for the Kur'an. It is therefore regularly said "he dictated and expounded" (e.g. Wüstenfeld, Schafī, p. 220, 316). When the above mentioned Ibn Kasān expounded hadith, he also asked his hearers about their meaning (Yaḵšī, Udbāda, vii, 282). Vice versa, the class was at liberty to catechise the teacher. Al-Ṣafī ann't used to sit in his great bīla in Mecca and say: "Ask me what you want and I will then give you information on the Kur'an and sunna" (ibid., vi, 391; cf. B. G. A. T., iii, 379). The teacher was sometimes overwhelmed with questions (Yaḵšī, Udbāda, v, 273). Ibn Džairī saw written questions being handed to the teacher in the Nāṣīyya in Baghdiyā (p. 219 sq.). Both practices are still in vogue and even in large classes the student may interrupt with questions. Ibn al-Ḥāḍidī condemns irregular interruptions of the lecture (Mudīkal, i, 57).

7. The Teachers.

The name for a teacher is muṣarrī or (also in the pre-Muhammadan period): Ibn Abī Usābahī, i, 104; muṣāfah is a kind of honorary title (see Yaḵšī, Udbāda, i, 113, 209; ii, 271; v, 353, 354, 358, 448) and is still in use and applied also to students. There were a very large number of teachers in the great mosques. In the madrasa at first only one was appointed, for example in the Nāṣīyya in Baghdiyā (see above), in the first of those founded by Sulāḥ al-Dīn in Cairo (al-Nāṣīyya: Maḵrī, iv, 193) and in many others. A madrasa frequently took its name from a distinguished teacher (e.g. the Ṣaḥāmiyya in Cairo: Maḵrī, iv, 235; the Naṣiriyya: originally the Nāṣīyya: ibid., i, 193; M. Ibn Rašīd: ibid., p. 195; cf. Maḵrī, 351). Ibn al-Ḥaddī appointed 4 lectures to the Kāmīyya in Cairo (ibid., p. 193 sq.); in this case a definite number (20) of students was allotted to each teacher (cf. Chev. Mithkāl, ii, 105 sq.).

It is easily understood that the conditions in the older mosques, where every one could come and go, were freer than in the madrasa, which were built for particular teachers and students. There was certainly no official recognition of a teacher in the earlier period. After text-books had come into use, the certificate of recognition was the ḥifṣah, and so it has remained to modern times. Any one who had studied with a teacher could get permission from him to teach from the book, which he had copied out and studied from his dictation; the teacher wrote this permission (iḫfāṣ) in the book (e.g. Yaḵšī, Udbāda, i, 253; ii, 272). A teacher could also give an iḫfāṣa ḫamīn, which permitted the individual concerned to teach from all his works (Ibn Raṣīdī, p. 251). In Damascus, Ibn Raṣīdī was given quite a number of these "diplomas" (i, 251-253). It was the usual thing for a travelling scholar to collect numerous iḫfāṣa;
thus 'Abd al-Latif had certificates of this kind from teachers in Baghdaad, Khurâsân, Egypt and Syria (Ibn Abî Uṣâlàh, ii. 202). As late as about 1700 we find al-Nâbulûsî acquiring ʿidā ithâr on his travels (Z. D. M. G., xvi. 160). There were special formulae for the ʿidā ithâr for šâbīr and farrūq (al-ʿÎlāqānî, Sunûh al-ʿArâbî, al-ʿArâbî, vii. 322 sq.). Some scholars only gave occasional lectures. 'Abd al-Wâhid (d. 494) lectured on Hadîth every Friday in the Niṣâmîyya (Wûstenfeld, Schâbî, p. 287) and originally this was the case in the Azhar Mosque (see above).

The calîph al-Ḥâdrî, in his earlier days, used to lecture every Friday in a mosque in Baghdaad (ibid., p. 233). Some scholars only dealt with a very limited subject; thus one was appointed to the Niṣâmîyya to lecture on Bukhârî’s Ṣaḥîh because he had attended lectures on this from a celebrated teacher (ibid., p. 288). There were however many learned men who devoted themselves mainly to teaching and taught several subjects. Thus al-Shâbî began his ʿidâ immediately after the šabîr al-qalîb and taught students of the Qur’ân, at sunrise the students of Hâshîm came to him and heard his comments; later in the day he lectured on method (mihārâh wa ʿl-nâwar); at the ṣafâ the aḥî al-ʿArâbî came to him and he lectured on ʿurūd, maṣūr and ʿaṣr. He went off at midday (Yâkût, Uṣâlàh, vi. 383). About 300 a. d. he was found Ibn Kâsin lecturing for the best part of the day on a number of subjects in somewhat the same order (ibid., vii. 176; Ibn Abî Uṣâlàh’s, ii. 207, n. 345) and pious teachers even spent the night in the mosque in prayer (Wûstenfeld, Schâbî, p. 258). Sometimes a young teacher began by dictating ḥadhîth and later received a post with a wider scope in a mosque (ibid., p. 239).

The distinction between teacher and taught was not absolute; any one could have an ʿidâ ithâr in one subject, while he was still a student in others and even men of ripe scholarship attended the lectures of notable teachers. This led students to travel from one seat of learning to another, just as they used to travel in early days to collect ḥadhîth (Bukhârî, ibn, p. 7, 19, 26). All the biographies of learned men give examples of this; the old Hellenistic custom was thus continued (cf. J. W. H. Warden, The Universities of Ancient Greece, New York 1910) and royal courts still played the same part; at them learned guests received donations, which enabled them to appear as teachers in the mosques (e.g. Ibn Ḥaṭîm, ii. 75 sqq.; Ibn Khâlidîn, Nûmî al-albâ, Bulletin 1284, vii. 452; Ibn Abî Uṣâlàh, iii. 207; cf. Mommsen, Romische Geschichtsche, v. 589). Distinguished scholars were of course much visited by lovers of learning; of one of the latter, it is said râshîla ḥalîth or ḥalîth bâsit ʿatârîbi they used to travel to him” (Yâkût, Uṣâlàh, vii. 174; Mungan al-Muhâtârâ, l. 207; cf. p. 141). 4–600 ʿaʃârâkî had gathered round the teacher in the Mağrib in the time of Ibn al-Ḥâdrî (Ma’dhîb, ii. 5). Sometimes a scholar attended another’s class to try him with questions (see e.g. for al-Bukhârî: Brunnsw-Fischer, Christen- muthik, p. 193) and disputes often took place in which the pupils used to support their teacher vigorously. If the stranger was recognised, the teacher might receive him with marks of honour (al-ʿAbâfîst at al-Kâṣî’s: Yâkût, Uṣâlàh, iv. 243 sqq.). As in the Christian universities of Europe, public disputations were held in the mosques, in which considerable feeling might be displayed, e.g. in the disputations in the Raṣîf mosque in Baghdaad between Ibn Surâsîd (d. 366 = 918) and the son of Dâwûd al-Ẓâhîrî in which the former was victorious (Wûstenfeld, Schâbî, p. 110 sqq.). The teachers of the Niṣâmîyya also used to hold disputations (ibid., p. 309). Celebrated teachers were not only visited by other scholars. When (about 500) Ibn Kâsin was lecturing, about 100 horses etc. used to stand outside the mosque because prominent men were listening to him (Yâkût, Uṣâlàh, vi. 282). The teachers made up the class of “the turban-wearers” (mumârîm, mumârîm, arâbî al-imâmâ, aḥârî al-imâmâ; see Makrî, ii. 246; Quatremère, Hist. d’art, ii. 244 sqq.; ii. 268; Dozy, Supplément, ii. 169) in eastern Andalus, they did not wear the ṣi’ma, but this was exceptional (Makrî, i. 137). The Kâdî Abî Yûsûf (d. 82a) is said to have settled the dress worn by learned men (Ibn Ḥaṭîm, ed. Flügel, N. 249).

In spite of all this flexibility a certain stability developed in the teaching staff of the mosques. This was connected with the question of pây. It was for long in dispute whether it was permitted to accept payment for giving instruction. In the collections of Ḥâdrî, the practice is both supported and condemned and it is said that the teacher may accept money, but not demand it, and avocaricious teachers are strongly condemned. There are many references to people who gave lectures without payment (Bukhârî, Ithâr, bâb 16; Abî Dâwûd, Ḥaṭîm, bâb 36; Ibn Mâdhâ, Figâdî, bâb 8; cf. Goldziher, Muḥ. Studies, ii. 184 sqq.; Art. Education, No. 3–4 in Hasting, Encyclo. of Rel. and Ethics; Lumen, Lokus, s. v., p. 300 sqq.; J. A. 1901, p. 143; Wûstenfeld, Schâbî, p. 295; Mes, Renaissance, p. 176). The custom of the older Jewish scholars of exercising a handicraft was not common among the Muslims but was found occasionally. Among men of learning we find shoe-makers, lock-smiths, sandal-makers (Wûstenfeld, Schâbî, p. 227, 231, 267; cf. also Mes, Renaissance des Islam, p. 179). It was the rule however for the teacher to be paid for his work. This might be quite a personal donation from a prince or other rich man, for example al-Ẓâhîrî was given a sum of money when he taught in the Mosque of Al-ʿAmr (Yâkût, Uṣâlàh, vi. 428; cf. the remarks above on wandering scholars); it was as a rule however a regular salary which was paid out of endowment, so that the position was a regular professorial chair (see under G); this was especially the case in the madrasas. The salaries of the teachers (maṭâlîm, also āsârîm, esârîm; see Dory, Supplément, s. v.) varied considerably, according to the endowment. The lecturer in the Suyûfîyya received 11 dirhams a month (Maṭârî, iv. 196) but in another of ʿAlî al-Dîn’s schools, the Ṣâlîhîyya or Nâṣîrîyya, the pay was much higher; the principal teacher received 40 dirhams (of 121/2 dirhams) a month and 10 dirhams as principal, along with 60 ṭâbîn of bread and two beasts of burden, to bring water from the Nile (ibid., p. 251). In the Djâmî al-Dîn madrasa, each teachers got 300 dirhams a month (ibid., p. 253). The teachers also received donations in kind on special occasions; in the other Nâṣîrîyya school they received sugar and meat every month at the festivals (ibid., p. 222).
in the Ḥādīṣiya on 'Id al-Īdra' different kinds of bread and biscuit (ka'ād and ḥanūkūnahā), and the feast of sacrifice meat and in Ramadān food was prepared for them (p. 223). According to al-Makrī, learned men might have 50 dinars a month in all in addition to allowances in kind (iii. 364). On ceremonial occasions, they often were given special marks of distinction, such as gifts in money and robes of honour.

The men of learning were organised in a gild. How the organisation worked in detail is not known. At the end of the third century we find the institution of the rīḍā in established in Egypt. While Ya‘qūb b. Ḥālid (d. 128) is called faṣāḥ Miṣr wa-ḥaḍīṣaynā, and sa‘īyidūm wa-ulūmīm, and Ubaidallāh b. Abī Dīfā (d. c. 135) faṣāḥ tawāsinī (Hum, i. 131), it is said of a series of scholars beginning with Abū 'Abd al-Raḥmān b. Abī al-Kāsim (d. 161), Abū 'Abd al-Azīz (d. 204), Abū 'Abd al-Mu'min (d. 214 or 215) that they had al-rīḍā in Egypt (Hum, i. 133) which seems to mean that they belonged to an organisation. The position is also called rīḍāt al-īmān, as, for example, with reference to Yūnās (d. 264) (ibid. i. 136). When the madhhab arose, each school had its own rīḍī in the district. The formule for this was intakat ḥukmīr 'iradāt wa-madhhab mālīkī; e.g. of Ibn al-Mawāzī (d. 281), and others (Hum, i. 136; Ibn Taghrībirdī, ii/ii. 116) for the Shāfi‘īs e.g. Isfahānī, died 406 (Ibn Taghrībirdī, ii/ii. 121 sq.; cf. Hum, i. 156; Ibn Dājibār, p. 219, 220; for the Ḥanafīs e.g. al-Kāddī, died 340 (Ibn Kūtubīlah, Nî, 115; cf. Nî, 11, 13; Ibn Taghrībirdī, ii/ii. 116; for the Ḥanbalīs al-Barbahārī (d. 329) (Hum) with Kawkāwshī, i, Cairo 1905, p. 260). Besides rīḍī we find other names like Imām al-Hanafīya bi-ḥāṣadh or bi-ḥaṣadhen or Shāfi‘ī, ṣāhih al batūnī, nābīn al-Nahī (Ibn Kūtubīlah, Nî, 57, 96, 196; cf. Shāfi‘ī al-Hanafīya: Ibn Taghrībirdī, ii/ii. 116; Shāfi‘ī al-Mālikīya fi Ḥaṣābī: Hum, i. 209). With such names it is not always clear whether they are simply epithets like Imām Wāḥidi, Imām ʿAṣrī (Ibn Kūtubīlah, Nî, 206, 217), Ustādī Zāmahatī (Hum, i. 141), al-hās al-ʿAlamī (ibid., Nî, 192), Sayyidīnā (ibid., Nî, 50), “the teacher of the Hanbalis and their Fakhrī” (Ibn Taghrībirdī, ii/ii. 114). There is also evidence of the Rīḍāya within the special subjects, e.g. Shāfi‘ī al-Nu‘ayrī bi-Mīrā (Hum, i. 230), Rīḍāyat al-Ḥadīth al-Mīr (ibid., i. 163; al-Raṣīd), Rīḍāyat al-Fatwā (Quatremeré, Hist. Sult. Maml., ii/ii. 27), Rīḍāyat al-ʻIrāq wa-l-ʻUṣāfi in Alexandria (Hum i. 210). The physicians of a district had their Rūṭ al-ʿAṣrī (Makrī, iv. 237; Ibn Abī Uṣāf, ibid., ii. 247); a Kāfūr was appointed in 684 (1285) chief of the physicians (Quatremeré, Hist. Maml., ii. 81). There was also a Rūṭ al-Muḥādātan (Makrī, iv. 224). Shāfi‘ī al-Islām is found as a title of honour for a scholar, e.g. in the viii, viii, ixth century (Hum, i. 143, 205; Quatremeré, cit., ii. 68, note; it. 270, 280; Ibn Taimīyā), probably also used earlier (Maz. Renaissance, p. 179), while Shāfi‘ī al-Shaykhuṣayn means the most distinguished leader of the Sufis (Makrī, iv. 285).

It is not clear what real importance the organisation of teachers had. In the earlier period. In different districts there was a principal director of the organisation, a rūṭ al-ulāma, in Medīna (Ibn Dājibār, p. 200, 3), in Baghādā (ibid., p. 220, 3), in Cairo and Upper Egypt (Hum, i. 141, 143, 191), also called rūṭ al-rīḍā (Ibn Abī Uṣāf, ii. 204; Ya‘qūb, Uṣāf, i. 248). Every madhhab has its rīḍā for the district (Hum, i. 148, 14; Ya‘qūb, iv. 512). The chief rūṭ could interfere in the activities, for example, of the teacher of Ḥadith (Ya‘qūb, Uṣāf, loc. cit.). He is probably identical with the nābī al-ṣūrāfī, without whose permission the caliph would not admit a teacher to the Mosque of al-Musīr in 455 (ibid., i. 246 sq.). This shows that the head of the gild of learned men even then could exact influence on the appointment of new teachers. Whether appointments were made after an examination we do not know. The right of lecturing was in any case limited in this way in practice, but a systematic set of regulations hardly existed. ‘Abd al-Lā‘īf lectured in the Masjid al-Ḥādīth Lu‘Lai‘, being paid by the Kāfūr al-Faqīh and afterwards in the Ashar, paid out of the Bait al-Māli (Ibn Abī Uṣāf, ii. 205, 207), but what his relation to the gild of teachers was is not known. In later times the chief of the learned men in Cairo and Mecca was of great influence, because he decided who should be admitted into the gild of teachers and also controlled salaries (see G 23).

The teacher had his particular place in the mosque, often beside a pillar: this was his madīrī, which was inherited by his successors. Al-Buwāṭī was ḥaṭīṣātun ‘l-ṣūrāfī fi ḥaṭīṣātun (Hum al-Musīr, i. 135; cf. 181 infra, 182; Makrī, iv. 5; Ya‘qūb, Uṣāf, iv. 135; Wüstenfeld, Schaf, p. 239). The outward appearance of the class did not alter through the centuries. His hearers sit in a circle (ḥulī: the listeners ṣabālāt): Makrī, iv. 49, 91 sq.; cf. on the word Quatemire, Hist. Sult. Maml., i/ii. 197 sqq.) on the ground before the lecturer. The teacher sits on a carpet (mudāṣfāda, cf. Ya‘qūb, Uṣāf, i. 254) or skin (jarsam). This was described as a symbol of his dignity in his majīsya (al-Umarī, Twṣf, p. 134). It is quite irregular for any one to teach standing (Ya‘qūb, Uṣāf, v. 424, 4; for the other view see Bakhārī, Hm, bbb 45). On the other hand, we often find in large audiences that the teacher has a raised seat (for the older period see Ibn Batūta, i. 212). Ibn al-Ḥādīthi condemns this because the teacher must not raise himself out of the circle of his hearers; he even wants to reject the use of the skin and carpet as elevamento (Mashfad, i. 96 sq.).

It was not the custom for teachers, to live in the mosque. Of course a teacher, like any other pious individual, could stay in the mosque and even: have a room there; al-Ghazālī for example lived in the mosque of the Umayyads, where Ibn Dājibār saw his room and Ibn Batūta saw a teacher, al-Ku‘tābī, who lived on the roof of the Ashar Mosque (Ibn Dājibār, ii. 92; cf. also Ibn Abī Uṣāf, ii. 204). But there were exceptions; al-‘Azrī built a dwellinghouse for the teacher in the Ashar near the mosque (Makrī, iv. 49). The earlier madrasī founded by Nāṣīm al-Mulk had often lodgings for the teacher, especially as the teacher sometimes made his lodging his classroom and this is also found later. Thus al-Khadżīrī, who died in 543 (1149) lived in the Bāṣṣātīyya (Wüstenfeld, Schaf, p. 307) and in the Shāfīya the head of the college had his home within the buildings (Ibn Dājibār, p. 48). Shams al-Dīn (d. 637) lived in Damascus in the ‘Aḍīlīyya where he taught fikr (Ibn Abī Uṣāf, ii. 171; cf. also p. 260). This must also have been the case in other madīzīs. But in any
somewhat modernised, was still given. The education in the madrasa is linked up with the new universities in Calcutta and elsewhere (Calcutta University Commission, 1917-1919, Report, Calcutta 1919, i. 143-187; v. 60-70). In 1922 there were already 14 universities of which five were founded after 1919 (Oriente Moderno, iii, 1922, p. 60); on earlier discussions on the foundation of a university see R. M. M., xxi. 1912, p. 268 sqq.). The older universities, founded on the model of Oxford or London, are those of Calcutta 1857, Madras and Bombay 1857, Lahore 1882, Allâhâbâd 1857 (R. M. M., vi. 4; on Chiefs' Colleges, ibid., p. 1-51; ix. 44-81). The essential feature of the reforms is the new method of instruction, the systematic organisation of the courses, which are concluded by examinations, and the creation of a qualified body of competent teachers.

Inspired by the same spirit, if not so thorough, were the reforms which were carried through at the capital of Islamic studies, the Azhar in Cairo without the assistance of a European power. In 1872 an examination for those beginning teaching was instituted and the ordinance expanded by new regulations in 1855, 1888 and 1895. The principal could however appoint teachers without examination. The students had to be registered so that unworthy persons should not share the stipends. On June 4, 1895, a council of five members was appointed to prepare reforms. They dealt with the finance and organisation. In 1896 the mosque-schools in Tantâ, Damiëtta, and Dassiük and in 1903 those of Alexandria were put under the Azhar. On July 1, 1896 (supplemented in 1897 and 1898) examinations for students were arranged in history, geography and mathematics were introduced as voluntary subjects and it was forbidden to read glosses and super-commentaries in the first four years.

The driving power in the council was one of its members, Muhammad 'Abduh, but he retired in 1905. The Khedive 'Abbas II Hilimi in 1908 and in 1911, after several commissions had been working at the subject, promulgated a new law which is still (1928) practically in force. The administration of the Azhar Mosque and the institutions connected with it (particularly other mosques and the Kâdi School) were reorganised. The organisation is based on the old organisation of the staff with the principal as head of the 'alam and the heads of the maâshubih as members of the committee of management. New subjects were instituted, such as âshâb in combination with the sirr, history, especially Muslim, geography, natural history, chemistry, mathematics, drawing, hygiene, education. Instruction is given in three divisions, each of which is estimated to cover 5 to 7 years. To obtain admission a student must be 10-17 years of age, be able to read and write and know the Kurân by heart (by the law of 1911 he was allowed to learn half of it in his first six months in the Mosque, but this was abolished in 1921). Each year ends with the examination in the month of April; the final examination of the first section enables the successful candidate to teach in elementary schools, that of the second to obtain an appointment in certain offices or to be imam or âshâb in the mosques; by the examination, the candidate obtains the highest degree of 'aimân, and can become a teacher in the Azhar, or judge or council in the Sharia courts. By new laws of 1921, 1925 and 1924, the examinations were reformed and the relationship to the Kâdi School, Dâr al-'Ullâm and other educational institutions reorganised so that in the Azhar, a kîma al-taâkhirî for Fîhûn, Tajât, Ḥadîth, Tawbâh, Manûfî, Waqîé, Bayân, Ahkâm, Islamic history and practical courses in teaching and court practice were instituted. When by the law of Aug. 26, 1927, a university was founded with faculties of arts, law, science and medicine (cf. Oriente Moderno, v, 1925, p. 110 sqq., 434-436; vi. 1927, p. 627 sqq.), the question of education in the mosque again came up and a new commission on Nov. 27, 1927 was charged to consider new proposals (for the reforms of Egyptian institutions see P. Arminjon, L'enseignement, la doctrine et la vie dans les universités musulmanes d'Egypte, 1907, Muftîfâ Bâirâm, Risâla, 1910; Sulaimân Rašâd al-'Alîyât, Liwa'ab fi 'Uthûr al-Azhâr, 1925, p. 143 sqq.; Amâl Maâshub al-Idârât al-Azhâr, Cairo 1323, anonymous, but by 'Abd al-Karîm Salîmî, cf. al-Mâshå, xxv, 1324, p. 703; Commission de la Réforme de l'Université d'El-Azhâr, Projet de Réforme présenté par M. Pacha Sâlîd, Cairo 1911, and the official regulations; Joh. Petessen, al-Azhâr, Copenhagen 1922, p. 67 sqq.; A. Sékâly, in Revue des Études Islamiques, iii, 1927, p. 95 sqq., 465 sqq.; ii, 1928, p. 47 sqq.; Orientale Moderno, v, 1925, p. 113 sqq.; vii, 1927, p. 634). In Morocco the ruler in 1844 introduced European subjects into the Madrasa in Fès Djaïdîl (whence its name Madrasat al-Muâhadînî); these innovations did not become permanent but in 1916 the madrasîs in Fès and Rabat were reformed (Bell, in J.A., ser. 11, x. 152; Périer, in Arch. Maroc, xviii, 1912, p. 257 sqq.; see also for Tunis: R. M. M., iii. 385).

Since the World War, throughout the world of Islam, particularly in Turkey, very far reaching reforms in education have been introduced the results of which cannot yet be surveyed.

The Administration of the Mosque.

1. Finances.

The earliest mosques were built by the rulers of the various communities and the members of the community did all the work necessary in connection with the primitive mosques. The later mosques as a rule were erected by rulers, emirs, high officials or other rich men in their private capacity and maintained by them. The erection of the mosque of Ibn Tûlûn cost its builder 120,000 dinars, the Mosque of Muâçâyêr 100,000 (Maâtrakî, iv. 32, 137, 138). The upkeep of the mosque was provided for by estates made over as endowments (waqf, hâshî). Cf. thereon besides the Fihî books: L. Krismârî, Das Wâghrecht, E.Z.M. G., xlv. 1891, p. 571-576; E. Mercier, Le code du hâshî au waqf selon la législation musulmane, 1899). In the third century we thus hear of houses which belonged to the mosques and were let by them (Pajûsîs Erverzor Rûnî, Fûhrâr, N. 775, 837) and Ibn Tûlûn handed over a large number of houses as an endowment for his monastery and hospital (Maâtrakî, iv. 83). This custom was taken over from the Christians by the Muslîms (see Becker, in Islam, ii. 404). According to Maâtrakî, estates were not given as waqf endowments until Muhammad Abû Bakr al-Mâdâhârî (read thus) besought Bîshât al-Hâshî and Sayyâf as endowments (about 300 A.H.); this was however cancelled by the Fâtimids again (ibid.). Al-Ḥâkîm made large endowments not only for his own,
but also for mosques previously in existence, such as the Ashar, al-Khākim, Dār al-Iltihāb and Džamī' Maṣūm and Džamī' al-Khāmya; the endowments consisted of dwelling-houses, shops, mills, khasāysa and hamāla, and the document (ibid., p. 50 sq.) specifies how and for what purposes the revenues were to be distributed. Baths were also given as endowments for mosques (ibid., p. 76 for 529; cf. 81 of the year 543). Salāb al-Dīn granted lands to his mašāli: in 566, for example, a khashāya to the Khānyūk and a ḍawâ in Al-Fayyūm and the teachers received wheat from Al-Fayyūm and in the same year he endowed the Nāṣiriyyah with goldsmiths' shops and a village (ibid., p. 193 sq., cf. another document: p. 196 sq.). During the Mamlūk period also, estates were given as endowments for documents of this period see van Berchem, C.I. A., i, N°. 247, 252, 528; Moberg, in M.O., xii., 1918, p. 1 sqq.; J.A., ser. 9, iii. 264–266; ser. 11, v. 158 sqq., 222 sqq.; J.A., x, 357 sqq., 256 sqq., 365 sqq.). They were often a considerable distance apart: the mosques in Egypt often had estates in Syria (v. Berchem, C.I. A., i, N°. 247; al-Makrīzī, vi. 507, 137). Not only were mosques built and endowed but already existing ones were given new foundations for teachers, mubarizza, stipends for Kursā reciters, teachers etc. There were often special endowments for the salaries of the imām and the mu'āshāhids, for the support of visitors, for blankets, food etc. (see Ibn Djuibar, p. 277 with reference to the Mosque of the Umayyads). The endowment and the purpose for which they might be used was usually laid down in the grant and the document attested in the court of justice by the kāfīr and the witnesses (cf. al-Makrīzī, iv. 50, 196 infra). The text was also often inscribed on the wall of the mosque (cf. ibid., p. 76; the above-mentioned inscriptions amongst others. Documents from Tashkent see R.M.M., xii., 1911, p. 278 sqq.). Certain conditions might be laid down, e.g. in a madrasa that no Persian should be appointed there (al-Makrīzī, iv. 202 infra) or that the teacher could not be dismissed or some such condition (v. Berchem, C.I. A., i, N°. 901), that no woman could enter (J.A., ser. 9, iii. 369), that no Christian, Jew or Muslim could enter the building (ibid., p. 405), etc. Endowments were often made with stipulations for the family of the founder or other purposes. That mosques could also be burdened with expenses is evident from an inscription in Edfu of the year 797 (1395) (v. Berchem, C.I. A., N°. 359). If a mosque was founded without sufficient endowment, it decayed (e.g. al-Makrīzī, iv. 115, 201, 203) or the stipends were reduced (ibid., p. 251), but in the larger mosques as a rule the rulers provided new endowments. According to al-Mawardi, there were also special "Sūlṭān-mosques," which were directly under the patronage of the caliph and their officials paid from the Bait al-Mal (al-Ashārī al-Sulṭāniyyah, ed. Enger, p. 172 supra, 176 supra.) Just as the Bait al-Mal of the state was kept in the mosque, so was the mosque's own property kept in it (e.g. the "houses or khashāya at-Khān", which is mentioned in 'Omar's time and was preserved to have existed under his predecessors (al-Khābīr, ed. supra; C.M., i. 307; ii. 14. The Bait al-Mal al-Džamī' in Damascus was in a khāba in the ṣāfī (B.G.A., iii. 157; Ibn Djuibar, p. 267; Ibn Baṭṭal, i. 201; cf. for Medina: Wustinfeld, Medina, p. 86). Rich men also had their private treasure-chambers in the mosque (see E. Schürrer, Gesch. d. Jud. Völker i, 1907, p. 322–328; F. Cumont, Fouilles de Douar-Europei, 1926, p. 405 sq.).

**Administration.**

As imām of the Muslim community, the caliph had the mosques under his charge. That was also the case with the sūlṭān, governor or other ruler who represented the caliph in every respect. The administration of the mosques could however not be directly controlled by the usual government offices. By its endowment the mosque became an object sui generis; it was withdrawn from the usual state or private purposes. Their particular association with religion gave the kāfīr special influence and on the other hand the will of the testator continued to prevail. These three factors decided the administration of the mosque but the relation between them was not always clear.

**The administration of the separate mosques.**

The mosque was usually in charge of a nāṣir or wali who looked after its affairs. The founder was often himself the nāṣir or he chose another and after his death, his descendents took charge or whoever was appointed by him in the foundation charter. In the older period the former was the rule and is said to have applied especially in the case of chief mosques, if we may believe Nāṣir-i Khwarazm, according to whom al-Fāmi paid the descendents of Ibn Tūlūn 30,000 dināris for the mosque and 5,000 for the minaret and similarly to the descendents of 'Amr b. al-'Aṣ 100,000 dināris for the Mosque of 'Amr (Sefi-i Nūr, ed. Schefer, p. 39 and 146, 40 and 148). In 578 we read of an administrator (mu'awallih) of the mosque in Jerusalem (al-Makrīzī, iv. 11). In the case of mosques and madrasas founded during the Mamlūk period, it is often expressly mentioned that the administration is to remain in the hands of the descendents of the founder; e.g. in the case of a mosque founded by Bābars (al-Makrīzī, iv. 89), in the Džamī Maṣūm when the vizier al-Makrī paid it (ibid., p. 66), the al-Sābiyyah (ibid., p. 205), and the Karānumūrīyyah (ibid., p. 322) etc.; also in the Badiyya in Jerusalem ("to the best of the descendents", cf. van Berchem, C.I. A., ii/ii. 129). Other cases are also found. Sometimes an emir or official was administrator e.g. in the Mu'ayyad (al-Makrīzī, iv. 140), the Ta'īzirīyya (ibid., p. 224), the Ashar, (ibid., p. 54 sq.) or the Mosque of Ibn Tūlūn (Kalkhashandī, Sād al-Abānī, xi. 159–164). In Džamī al-Dīn's madarsa, it was always the šāhīd al-wallā (al-Makrīzī, iv. 250), in the Madrasa of Bābars the khāniqāh and his successors (v. Berchem, C.I. A., i, N°. 352); but it was more frequently a kāfīr; for example in the mosque of Bābars just mentioned, the Ḥanīfī kāfīr was to take charge after the descendents (al-Makrīzī, iv. 89); in the Aqbarha-wyia, the Şāhīd kāfīr was appointed but his descendents were expressly excluded (ibid., p. 225). In the Mosque of the Umayyads during the Mamlūk period, the Şāhīd's chief kāfīr was as a rule the nāṣir (Kalkhashandī, iv. 191) and in the Nāṣir mosque in Cairo (ibid., xi. 262–264). In this city we find during the Mamlūk period that emirs and kāfīrs alternately acted as nāṣirs in the large mosques (e.g. the Mosque of Ibn Tūlūn:}
MAQTR, iv. 42). Cases are also found however in which descendants of the founder unsuccess fully claimed the office of nāfir (Maqtr, iv. 216, 253). This was the result of the increasing power of the kādh (see below). In the maqāris the nāfir was often also the headmaster; the two offices were hereditary (ibid., p. 204: the Şabîhiya al-Bahā'îya, p. 235: Ṣubur: the Djamâliya). In Tushtar a descendant of Sahl as nāfir and teacher conducted a madrasa with the help of four slaves (Ibn Batuta, ii. 25 sq.)

The nāfir managed the finances and other business of the mosque. Sometimes he had a fixed salary (in Balâshr, Kābolnāv 500 dinhams a month: v. Berchem, C. A., l., i. N°, 252; in the Dilmâniya in Damascus in 847 only 60 dinhams a month: Z. D. M. O., xlv., 1807, p. 354). But the revenues of the mosque were often applied to his personal use. His control of the funds of the mosque was however often limited by the central commission for endowments (see below). The nāfir might also see to any necessary increase of the endowments. He appointed the staff and fixed their pay (cf. e.g. Maqtr, iv. 41). He could also interfere in questions not arising out of the business side of administration: for example the amir Sawdâb, the nāfir of the Ashar in 818 ejected about 750 poor people from the mosque. He was however thrown into prison for this by the Sulhân (ibid., p. 54). Generally speaking the nāfir's powers were considerable. In 784 a nāfir in the Ashar decided that the property of a mudâhir, who had died without heirs, should be distributed among the other students (ibid., p. 54).

In Mecca, according to Kāthi al-htm, the Al-Mu'izzî al-Harrâwî was in charge of the great festival of the mawlid of the Prophet (12th Rabi' I) and distributed robes of honour in the mosque on that occasion (C. M., iii. 439). In the Ashar, no nāfir was appointed after about 1100 but a learned man was appointed. Shâhi al-Ashar, principal and administrator of the mosque (Sulaimân Rasâd al-Zâyîyî, Kâmil al-Dinârâr fi Tulûth al-Ashâr, p. 121 sqq.). Conditions are similar in Mecca (Sârâbî, Hurgongne, Mekkâ, ii. 235 sqq., 312 sqq.). As we have seen, kâdhs were often nāfirs of mosques. This was especially the case in the maqāris, where the kâdhs were often teachers (cf. Maqtr, iv. 209, 219, 222, 238, etc.); the kâdhs were particularly anxious to get the principal offices in the large schools (cf. Kâhalâshidi, ii. 235). Their influence was however further increased by the fact that, if a nāfir qualified by the terms of the founder's will no longer existed, the kâdhs of the madhab in question stepped into his place (Z. D. M. O., xlv., 1807, p. 354). By this rule, which often gave rise to quarrels between the different kâdhs (e.g. Maqtr, iv. 218: the Şabîhiya), a kâdhs could accumulate a large number of offices and "milâh the endowments" (ibid., iii. 354). Sometimes their management was so ruthless, that the schools soon declined (e.g. the Şabîhiya and the Djamâliya: Maqtr, iv. 204 sqq., 235). They also exercised influence through the committee of management of the mosque.

A Centralisation in the Management of the Mosques

The large mosques occupied a special position in the Muslim empire, because the caliph had to interest himself particularly in them: especially those of Mecca and Medina where the rulers and their governors built extensions and executed renovations (cf. C. M., i. 145; iii. 83 sqq.). During the ʿAbbasid period, the kâdhs occasionally play a certain part in this connection; for example al-Mahdî (158-169) presented the kâdhs with the necessary money to defend and repair the Meccan mosque (C. M., 1. 312; ii. 43). In 265, al-Muwallâf ordered the governor of Mecca to undertake repairs at the Kaʿbah (ibid., ii. 200 sqq.). In 271 the governor and the kâdhs of Mecca co-operated to get money from al-Muwallâf for repairs and they saw the work through (ibid., iii. 136 sqq.). In 281, the kâdhs of Mecca wrote to the vizier of al-Munṣîd about the Dâr al-Nadwa and backed up his request by sending a deputation of the staff there (sâdun). The caliph then ordered the vizier to arrange the matter through the kâdhs of Baghdâd and a man was sent to Mecca to take charge of the work (C. M., iii. 144 sqq.).

The importance of the kâdhs was based primarily on his special knowledge in the field of religion. A zealous kâdhs like al-Ḥarîrî b. Miskin in Cairo (237-245) formed a kind of mosque to recite the Kûrûs melodiously: he also had the maqâshîf in the mosque of ʿAmr inspected and appointed an amin to take charge of them (Kâmil, Wilâyat, p. 469). After the building of the Tulûth mosque, a commission was appointed under the kâdhs L-Kâdhs to settle the kîlê of the mosque (Maqtr, iv. 21 sqq.). But at a quite early date they also obtained a say in the management of the funds. The first kâdhs to lay his hands on the aḥâla was Tâwba b. Namir al-Ḥarrâmî; while hitherto every endowment had been administered by itself by the children of the testator or some one appointed by him, in 1118 Tâwba brought about the centralisation of all endowments and a large diwân was created for the purpose (Kâmil, Wilâyat, p. 346). How this system of centralisation worked is not clear at first, but it was carried through under the Fâtimids.

Al-Mu'izzî created a special diwân al-ḥâšî and made the chief kâdhs head of it: at least as of the dâwâr wa-l-maşajîd (Maqtr, iv. 83 and 75; cf. Kâmil, Wilâyat, p. 585, 587, 589, according to whom al-ʿAzîza specially appointed the chief kâdhs over the two dâwar's), and a special bâdî al-hâlî was instituted for it in 363; a yearly revenue of 130,000 dinhams was guaranteed; anything left over went to form a capital fund. All payments were made through this office after being certified by the administration of the mosques (Maqtr, iv. 83 sqq.). The mosques were thus administered by the kâdhs, directly under the caliph; the diwan al-ḥârîr wa-l-kaʿba wa-l-dâwâr in Baghdad (Mez, Renaissance, p. 73) perhaps served similar purposes.

Al-Hâshim reformed the administration of the mosques. In 407 he had an investigation made and when it proved that 800 (or 830) had no income (ghallâs), he made provision for them by a payment of 9,220 dinhams monthly from the Bait al-Mulûk; he also made 455 new endowments (of estates) for the officials of the mosque (Maqtr, iv. 84, 264). Under the Fâtimids, the kâdhs used to inspect all the mosques and maşajîd in and around Cairo at the end of Ramadan and compare them with their inventories (ibid., p. 84). The viziers of the Fâtimids, who also had the title kâdhs did much for the mosques (Djâhwar, Yaʿqub b. Killîs, Bâdî al-Djâmilî; cf. v. Berchem, C. A., l., i. N°, 11, 376, p. 631).
Under the Ayyubids, conditions were the same as under the Fatimids. The dīwān al-‘arbā’ī was under the ḥāds (Maqrizi, iv, 84). Salāḥ al-Dīn gave a great deal to the mosques, especially the madrasas (cf. above); 20,000 dirhams a day is a figure given (Ibid., p. 117). When Ibn Dhi‘ayīr says that the money paid the salaries of the officials of the mosques and schools of Alexandria, Cairo and Damascus (p. 43, 52, 275), he must really mean the Dīwān already mentioned.

The same conditions continued for a time under the Mamluks. In the time of Balbars, for example, the chief āsār Talḥ al-Dīn was shāfi‘ al-‘arbā’ī. He caused the Mosque of ‘Amr to be renovated and when the funds from the endowments were exhausted, the Sulṭān helped him from the Bait al-Mal (Maqrizi, iv, 14); after conferring with experts, the chief āsār forbade a water-supply brought by Salāḥ al-Dīn into the mosque (Ibid., p. 14; Suyūṭī, Ḥāṣn al-muḥādharā, ii, 137). In 687 the chief āsār Talḥ al-Dīn complained to Kallān that the ‘Amr and Aḥār mosques were falling into ruin, while the sāfhas were much reduced. The Sulṭān would not however permit their restoration but consented to repair some of the mūqarns to certain limits, one to each (Maqrizi, iv, 14, 15). This principle was several times applied in later times and the ensembles frequently gained influence at the expense of the sāfhas. Thus after the earthquake of 707 (1305) (cf. theecon Quatremerre, Hist. Sult. Maml, ii, ii, 314 sqq.), the mosques were allotted to emirs, who had to see that they were rebuilt (Maqrizi, iv, 15, 53). From the middle of the seventeenth century, we often find enems as administrators of the chief mosques. The āsār had however obtained so much authority that he was conceded *a general supervision of all matters affecting the endowments of his madrasah* (al-Umari, Tūrīf bi l-maṣālik al-sharī‘, p. 117; cf. Z. D. M. G., xiv, p. 559); according to this theory the āsār could intervene to stop abuses. In Syria in 660 (1262) Ibn Khalīkān became āsār over the whole area between Arish and the Euphrates and supervinted the mālik, mawṣūl, mādīrān etc. (Quatremerre, Hist. Sult. Maml, i, 170).

Sulṭān Balbars reformed these endowments and restored the office of nāqīr al-‘arbā’ī or nāqīr al-‘arbā’ī al-mukābir or n. dīfā‘ al-bayr (Kalāshiddu, iv, 34; 38, v, 465; l, 256; xi, 252, 257 sqq.; cf. Khalīl al-Zāhirī, Zuhd al-Ra‘if al-Mamūlī, ed. Ravaisse, p. 109). According to al-Maqrīzī, the endowments were distributed among the Mamlikhs in three departments (dīfā‘ī): 1. dīfā‘ al-āsār, managed by an emir, the Dāwā‘ari; this looked after the funds of the mosques, in 740 in all 130,000 fards; 2. dīfā‘ al-mālik al-bayr wa l-khāṣṣa wa l-‘ālī, which administered dwelling-houses; it was managed by the Shāfi‘īs and the Sūfis, with the title Nāqīr al-‘arbā‘ī. This department came to an end in the time of Malh al-Nāṣir Farajī because an emir supported by the opinion of the Ḥanafī chief āsār spent a great deal and amassed the funds; 3. dīfā‘ al-‘arbā‘ī al-mālik al-bayr, comprised all the endowments which still had particular nāqīs, either descendants of the testator or officials of the Sulṭān and the āsār. The emirs seized the lands and the Bārī‘ū, before he became Sulṭān, sought in vain to remedy the evil by appointing a commission. The endowments in general disappeared somewhat later because the ruling emirs seized them (Maqrizi, iv, 83—86). In modern times, as a rule, endowments in Muslim lands have been combined under a special ministry.

To be distinguished from the administrators of the mosques is the nāqīr who is only concerned with the supervision of the erection of mosques. Any one could be entrusted with the building of a mosque (e.g. Maqrīzī, iv, 98). Under the Mamluks there was also a clerk of works, mutawwili juḥad al-‘arbā‘ī or nāqīr al-‘arbā‘ī: he was the overseer of the builders (Ibid., p. 102; see Zubdat Kāfri al-Mamūlī, ed. Ravaisse, p. 115, cf. p. 109; v. Berchem, C. I. A., i, 742 sq., 751).

The caliph or the ruler of the country was in this, as in other matters, supreme. As we have seen, he intervened in the administration and directed it as he wished. He was also able to interfere in the internal affairs of the mosque, if necessary through his usual officers. In 353 (1067) after the rising in the Fāyūm, the chief of police issued strict orders by which it was forbidden to say the ḥusnun al-a‘m al-masjīd in the mosque: the number of prayers in the month of Ramadān was cut down, the āsār from the minarets were silenced (Ibid. Bahrur Surārī, Fihir. No, 788). In the year 394, the governor Ḥakīm al-Nāṣirī had the mosque of ‘Amr closed except at the salāt because the Bait al-Mal was kept in it, which however produced protests from the people (Maqrizi, iv, 11; Kindt, Wüste, p. 266; H. G. A., vii, 116). Many similar examples could be mentioned, especially during periods of unrest. In 821 the mālī in conjunction with the kāfīr revised the budget of the Mosque of the Omayyads and made financial reforms (J. A., ser. 9, vii, 220). The mālīn were laid down in edicts by the ruler (Maqrizi, iv, 44, 45). In the year 373, the vizier in Baghda‘d had a man whipped who had recited a variant text of the kūrin in the misbāb, after he had been heard in his defence in the presence of the kāfīr and learned men (Ya‘qūb, Uṣūlī, vii, 300). The importance of the the mosque depended on his personality. As a rule, he recognised the authority of the regular officials. When for example al-Khāṭīb al-Baghdadī asked the Caliph al-Kā‘im for authority to read Ḥadīth in the mosque of al-Ma‘ṣūrī, the latter referred the question to the nāqīr al-‘arbā‘ī (Ya‘qūb, Uṣūlī, i, 246 sqq.; cf. Wattenfeld, Schāhī, iii, 280).

The consecration of the mosque was attended by certain ceremonies. When for example the midday service was conducted for the first time in the Dīwān al-Salāh in Cairo, a representative from Baghdad was present (Maqrizi, iv, 81). At the consecration of the Mosque of Im Īm in 997, the builder gave al-Kā‘im b. Sulaimān, a cup of al-Shāhī, who lectured on Hadīth there, a purse of 1,000 dinars (Staunefi, Haṣn al-Muḥādhorah, ii, 139). Al-Maqrīzī describes the consecration ceremony at several mosques. In the M. al-Ma‘ṣūrī the Sulṭān was present seated on a throne surrounded by his officers; the basin of the āqīn was filled with sugar and salt, the people ate and drank, lectures were given, then the salāt was read, and ḥusnun delivered and the Sulṭān distributed robes of honour among the officials of the mosques and Shāfī‘īs (Maqrizi, iv, 139); similarly at the Zāhirīya (p. 662) and poems were also recited: cf. Quatremerre, Hist. Sult. Maml, i, 170, 228 sqq.; Madrasat Dīwān al-Dīn, p. 811; al-Sārghīmī, p. 757 (Maqrīzī, iv, 217—247, 255, 526).
H. The Personnel of the Mosque.

1. The İmām.

From the earliest days of Islam, the ruler was the leader of the salat; he was imām as leader in war, head of the government and leader of the community salat. The governors of provinces thus became leaders of the salat and heads of the khardan and when a special financial official took over the fiscal side, the governor was appointed ʿala ʿl-qālāt wa ʿl-bahr. He had to conduct ritual prayer, especially the Friday salat on which occasion he also delivered the khutbah. If he was prevented, the chief of police, shark al-qātir, was his khutbah. (Cf. Maqrizi, iv. 83.) Amir b. al-ʿAla', the last Abbasid governor permitted the people of the villages to celebrate the two festivals, while the Friday divine service could only take place under those qualified to conduct it (who could punish and impose duties; ibid., p. 7). This was altered under the ʿAbbāsids.

The caliph no longer regularly conducted the salats (after the conquest of the Persians: Maqrizi, iv. 45.), and ʿAbd aṣ-Ṣālaḥ, the last Arab governor of Egypt (238-242), was also the last emir to conduct the salat in the ʿamīrī. An imām, paid out of the ʿābd al-mīrād, was now appointed (ibid., p. 83), but the governor still continued to be formally appointed ʿala ʿl-qālāt. Henceforth the ruler only exceptionally conducted the service, for example the Fāṭimid son on ceremonial occasions, especially in the month of Ramaḍān (Ibn Taghribirdi, ed. ʿUyayn, ii, 482 sq.; ʿAlāʾ al-Dīn, Sharh al-Aʾthār, ii. 509 sq.); in many individual mosques probably the most prominent man conducted the service; according to the Ḥadīth, the one with the best knowledge of the ʿuṣūl and, failing him, the eldest should officiate (Bukhārī, Aḥbāb b. 46, 49).

The imām appointed was chosen among those learned in religious matters; he was often a Hāshimi (Mes., Rūmāsī, p. 147), or might be at the same time a šaykh or his aʿlīb (see Kindi, Waṣīf, p. 575, 580; Ibn Batūta, i. 276 sq.). During the salat he stood beside the miḥrāb; al-Maṣkūl mentions the anomaly, that in Syria one performed one's salat "in front of the imām" (B.G.A., iii. 202); he could also stand on an elevated position; on one occasion ʿAbd Allāh ʿArafa conducted the salat in the Meccan mosque from the roof (Bukhārī, saʾla, bāb 17). In Mecca, in Ibn Dāliʾs time, each of the four recognized madhab (with the Zaidīs in addition) had an imām; they conducted the salat, one after the other each in his place, in the following order: ʿAbdāl, Mālik, Ḥanafī, and Ḥanbalī; they only performed the salat al-maghrīb together; in Ramaḍān they held the ḍahf in different places in the mosque, which was also often conducted by the kūrā (Rīhāʾ, ii. 101, 102, 143 sq.). This is still the case; very frequently one performs the salat, not after the imām of his own madhab (Snouck Hurgrone, Mykka, ii. 79 sq.). In Jerusalem according to Muḥammad b. ʿAmr al-Dīn the order was: Mālikī, Shāfiʿī, Ḥanafī, Ḥanbalī, who prayed each in their own part of the Haram; in Hebron the order was the same (Sauvain, Hist. Jér. et Hébron, p. 156 sq.). In Ramaḍān extraordinary imāms were appointed (ibid., p. 138).

When the imām no longer represented a political office, each mosque regularly had one. He had to maintain order and was in general in charge of the divine services in the mosque. In al-Maṣkūl's time the imām of the Mosque of ʿAmr read a āja in the ʿuṣūl every morning after the salat (B.G.A., iii. 205). It was his duty to conduct every salat, which is only valid fi ḍamāʾa. He must conform to the standards laid down in the law; but it is disputed whether the salat is invalid in the opposite case. According to some, the leader of the Friday salat should be a different man from the leader of the five daily salats (Maṣrūq, al-ʿAbāb al-Mashīr, ed. Lang, i. 171 sq.; Ibn al-Ḥārīmī, K. al-Maṣkūl, ii. 41, 43 sqq., 50, 73 sqq.; al-Tabarī, Muḥib al-Nīmān, ed. Muyīlī, 195 sq.; al-Ḥādīthī, s. Westcott, Handbuch, p. 109 sq.). Many cherished misgivings against being made for religious services and quoted in support of their view a saying of Abū Anīfa (B.G.A., ii. 127).

2. The Khutbah.

The development of this office is analogous to that of imām. When the ʿAbbāsids caliph no longer delivered khutbas regularly, a man learned in religious matters was appointed to the office of khutbā (see D.1 and the article KHUTB). It could be pointed out that the Prophet himself had a khutbah namely ʿUṭbīrī b. Ḥadīth (Darāʾī, Bayān, i. 175) and sermons outside the Friday service had in any case become quite usual. Thus ʿAbd al-Raḥmān was already a noted preacher (ibid., p. 190). Later it sometimes happened that a general like Djawhar himself acted as imām at the salat, while the khutbah was left to a learned man (Maqrizi, iv. 44). As the khutbah in theory represented the ruler, he uttered a blessing upon him; to this extent the office had a political significance. The caliph was blessed and the heir-apparent and the king of the country (cf., above D. 1). When the caliph himself preached, he also pronounced a prayer for himself (Yâkūn, Uddāb, ii. 349 sqq.) and the Fāṭimid mentioned their fathers. The sermons gradually became quite stereotyped; Ibn Batūta (1355) praises the khutbah in Mecca, because he gave a new sermon every Friday. A ʿājīb was frequently chosen as khutbā and a chief ʿājīb could sometimes preach in a large mosque (Kindi, Waṣīf, p. 596; Maqrizi, iv. 132; Ibn Djubair, p. 156; according to Qutman, Hist. Sait. Maml., ii. 15, a ʿājīb was for the first time appointed khutbā in 694/1295 in Damascus). The khutbah could also be a "witness" (Ḥīlāl al-Sibī, K. al-Wasāra) or hold another office like that of ʿāṣib al-sīrī (Maqrizi, iv. 137, 138, 139, 140); in the last mentioned case the office was hereditary, which we also find elsewhere (ibid., p. 98; Sayyid, al-Maṣkūl, p. 185; al-I拉萨ī).

The khutbah had frequently a khutbastā, in the Mecca mosque, where in 1412 two khuttās were deliberately appointed, they both preached at the same time on the minbar (Maqrizi, p. 63 sq.). Later we find in the larger mosques a number of khutbas being appointed who relieve one another.

In Mecca the khutbah was a particularly imposing figure. In his black cloak, trimmed with gold, and turban with julūbi, he went up to the minbar between two black hunters carried by mināṣifhūs, while a servant walked in front of him cracking a whip; after he had kissed the Black Stone, the chief mināṣifhūs went quickly in front of him with the sword with which he guided him on the minbar (Ibn Dāliʾ, p. 95 sq.; Ibn Batūta, i. 376 sq.).
The whip (ṣurkū`a: Ibn Djbair, p. 96, 97, 144, 156; Ibn Batūṭa, i. 376, 379, 390, 394; see B. G. A., iv., s. v.) is also used as he goes out and on other occasions. The black was the colour of the `Abbasid; it was also used in Egypt (Ibn Djbair, p. 50). The Jihādī khaṭṭah was a cap (halawnumma: Makrizī, iv., s. v.) and the dress of the ḥuṭbār differed with time and country (cf. ibid., p. 90; O. G. G., ii., 129, 416; Ibn al-Ḥudūd, Maḥkamat, ii., 73). In Mecca there were celebrations when a young man became a ḥaṭib (Ibn Djbair, p. 149).

Very frequently the khaṭṭah and the imām were on different shoulders, especially in the smaller mosques, but sometimes also in larger ones (Yābdū, Uddâtā, viii., 174, 179; Makrizī, iv., 122). Ibn al-Ḥudūd even regards this as the normal thing (K. al- Ḥudūd, ii., 59, 60, 73, 74); s. also al-Ṣubkī, Muḥī`, p. 160 sq.; and the article Ḥaṭīm.

3. Ḥaṭīm and Ẓari`. On these see C 3. Sometimes, in the later usage ḥaṭīm is used as the official speaker, very like khaṭṭah (cf. Ibn Ḥaṣaṣṣa, iii., s. v., while al-Ṭari` is only applied to the street story-teller (al-Ṣubkī, Muḥī` al-Naṣrī, p. 161 sq.). The ḥaṭīms are also frequently appointed to madrasas and particularly to maṣāḥebe (Makrizī, iv., 232; Yābdū, iv., 509; Subkī, Muḥī`, p. 162; v. Berchem, C. T. A., i., No. 252).

[4. The Mu`ādhdhin.]
