THE ENCYCLOPAEDIA OF ISLĀM

A DICTIONARY OF THE GEOGRAPHY, ETHNOGRAPHY AND BIOGRAPHY OF THE MUHAMMADAN PEOPLES

PREPARED BY A NUMBER OF LEADING ORIENTALISTS

EDITED BY

M. TH. HOUTSMA, A. J. WENSINCK
H. A. R. GIBB, W. HEFFENING and E. LÉVI-PROVENÇAL

VOLUME IV
S–Z

LEYDEN
LATE E. J. BRILL LTD
PUBLISHERS AND PRINTERS

LONDON
LUZAC & Co
46 GREAT RUSSELL STREET

1934
ADDITIONS AND CORRECTIONS

P. 12, l. 5; read: Nr. 24 and 31, instead of Nov. 24 and 31.

P. 18b, l. 32; read: 1890; Nr. 1, instead of Nov. 1, 1894.

P. 38b, l. 4; from hence: the words "The Bostlin...and" are to be cancelled.

P. 76b, l. 23, instead of 1385, to be read 1386.

P. 88b, l. 30, instead of Nov. 2, to be read: Sept. 3.

P. 89b, l. 49; instead of Nablus, to be read: Nablus.

P. 112b, l. 46, 63, instead of v., to be read iv.

P. 203b, l. 23, 20, 37, instead of Kaffa, to be read: Kaffa.

P. 234b, l. 45; to be added: or: insuIity.

P. 258b, l. 9, instead of 275, to be read 255.

P. 330b, l. 62, instead of x.v., to be read: della nascita.

P. 350b, l. 33 and 39, read: third, instead of second.

P. 374b, l. 46, instead of Khallikân, to be read: Khallikân.

P. 408b, l. 28, to read: instead of a.

P. 308, addition of the author to the art. SHAMJAM. Palgrave may be relied on for the main facts. He certainly went to Shammar, Kašhim and Ryûd; Daughety was convinced of this. He is untrustworthy in details. He sketched in times, distances, incidents very imperfectly remembered. (Kindly communicated by Dr. D. G. Hogarth).

P. 314b, l. 6, instead of Constantin, read: Constantin.

P. 330b, l. 33, 36, instead of Dūrâbâh, to be read: Dūrâbâh.

P. 385b, Art. 997b-7. The last sentence is to be read as follows: In the year 1700 of the era of the Seleucid (989 a.d.), according to al-Bīrûnî, the stars of the 9th and 10th stations set on the 3rd of Sha'âbân, those of the 23rd and 24th rose on the 15th of that month.

P. 314b, l. 3, instead of 434, to be read: 454.

P. 306b, l. 10; Add: The place occurs on a map by Rawlinson, in J. R. G. S., x. (1841).

P. 8, beneath, insert: According to R. Bell (cf. his The Origin of Islam in its Christian Environment, London 1848, p. 32, note) shirā is derived from Syriac shirā, also found in the forms sharâ and sharâr, which is used in the sense of "writing", especially as a portion of scripture.

P. 612b, l. 38; instead of: naivete of his language, when expressing terror, read: naivete of his dialectal language.

P. 636b, l. 5, instead of: Mutahdâh, to be read: Mubadâh.

P. 666b, l. 2; instead of: 1201, to be read 1099.

P. 679b, l. 44, instead of Khâlîn, to be read: Kâlîn.

P. 688b, l. 18, instead of: Cerny and, to be read: Cernyvev.

P. 824b, l. 62, instead of: Origin, to be read: Origins.

P. 825b, l. 45; instead of: Ghât and Ghadames, read: el-Barkât and Fehout and an important reculization of the frontier in the region of Ghât and Ghadames.

P. 885b, l. 9, instead of: 'Ushâ, to be read: 'Ushâl.

P. 976b, l. 42; instead of: Nûh I., to be read: Naṣr b. 'Umayd.

P. 985b, to the first lines to be added: The building of the monument of Firdawâs has been taken in hand by the Committee for the Preservation of National Monuments (Mujâmmalshībā-ru milâf).

P. 987b, l. 28; instead of: Ahwâs, read: Ahwâs.

P. 988b, l. 7; instead of: 826, read: 282.

P. 990b, l. 17, add: Sâmândi (1813), Fâриd (1843), von Schack (1863), Bursch (1918), Singer, Aâzî (1919) and Nykl (1931) have made enquiries into the possibilities of contact between Orien and Occident regarding this point.

P. 158, add: Finally the "shâhîr" love became an abstract idea of beauty.

P. 205b, sp., read: Zâhir; Aînâl al-Zâhirûn; extracts have appeared in my Recueil de textes (Paris 1939), p. 247—249; the text will be edited by Nykl, who has also translated the Firdawâs, (The Dove's Nest-egg, Paris 1931).
P. 994, l. 43, to be read: Umayyad period. Creswell thinks that it was rebuild by the "Abbadid prince副校长. This would lead to its identification with Ksar el-Makhlil, which was one of the last stations of Tunis before Kairouan (cf. my Mission, l. 47, vol. i).]

P. 1049b, l. 35, instead of Saller, to be read: Saller.

l. 37, after "by," insert: G. R. Potter (London 1929, following Drenthweg and Schimmelpenninck) and by.

l. 68, read: many, instead of any.

l. 69, to be added: cf. al-Malik ibn Musa, xxiiv. (1008), p. 308 sq.

P. 1049b, l. 3, instead of Saller, to be read: Saller.

l. 9, to be added: and Ph. Hitl, in R.A.A.D., x. (1920), p. 513-525, 592-603.

l. 52, instead of 1200, read: 1130.

P. 1050a, l. 52, to be added: a Wuskil-Produit Direction ("Vakatake-unenougha direkkiea").

P. 1177a, art. X. "IKIES, Bibliography. To be added: Turkmen 'Asherch, ed. by the General direction of the affairs of the nomads and the emigrants, Istanbul 1934 (by دیدنیزکی ترکمن "ویرینگ" and the addition: "translated from German"); esp. p. 32-45 and p. 178-184; Ahmed Refik, "Anabolu'da Tork Asheri" (190-1900), Istanbul 1930 (contains several documents concerning the Turkish nomadic tribes in the period between 1550 and 1780); All Cica, "Conquests Turkmens Commenced," l. Istanbul 1931-1933 (review by F. Kostaki, in Archiv Orientalni, xli, 295-306); E. M. Hoppé, "The Timbuktu," in T.F.A., 1923, p. 18-28; vol. ii and iii. of the work of All Cica have been published at Ankara in 1933; they contain further interesting discussions and photographs regarding the Yezidie.

(F. NAIKATOSI)

P. 1183, l. 22, to be read as follows: and Zabun are ruled by the same king, 'Abd al-Hadi, d. in 907, mentions, etc.;

l. 34, instead of Saller, read: Saller.

P. 1183b, l. 24, in stead of Waz, read: Wadi.

l. 32, in stead of eastern, read: western.

l. 37, in stead of Malayu, read: Malayu.

P. 1213b, Bibliography. To be added: Malatt (d. 377-987), Kitâb as-Farâ'id wa l-Abid, Mr. Damascus (private copy. Makes the chief of the Z. as Zaidi, a political opponent of the sayyids and the Arabi); Ibn Abî 'l-Hadi, Zahr al-Da'î (973-974), Cairo, n.d. II. 310-362. — The Shîb's author: Ahmad b. al-Mu'allî, Ammi, from Bata, has written a Kitâb Alhâr al-Luatî, which is lost (A. Zararudî, Mawâqif al-M=kâî, lith. Teheran 1306, p. 30). The orthodox Shîb's emphasis, as an apocalyptic coincidence, the skills of this rebel and the Khâb of their mawlid (Ibn Zainab, Nu'mânî, Kitâb al-Shâb, lith. Teheran, p. 73-75).
§3. (Skez: 2, m. αη. 5. in Arabic) a measure for grain, "of the value of a mound (modius) according to the custom of Medina" (Lahm. If the cubital contents of the \(\alphaη\), like that of the \(\alphaη\), varied with town and district, so far as commercial transactions were concerned, the value of the \(\alphaη\) was from the canonical point of view fixed in religious law by the Prophet in the year 8 A.H., when he laid down the ritual details of the orthodox form of \(\alphaη\) (\(\alphaη\) al-\(\alphaη\)), which carried with it the compulsory giving of alms called Zakat al-\(\alphaη\), the value of which in grain was one \(\alphaη\) for each member of a family. It was, of course, the \(\alphaη\) of Medina that was chosen as the standard measure and the \(\alphaη\) of Medina henceforth was called \(\alphaη\) al-\(\alphaη\).

This primitive \(\alphaη\) of orthodox Islam was standardized by Zaid b. Thabit; and it is from this standard that the \(\alphaη\) and \(\alphaη\) made henceforth for religious use seem to have been copied more or less accurately. This is, at least, what I have been able to prove from various documents. According to these documents, the official capacity of the \(\alphaη\) al-\(\alphaη\) would be approximately 5 gills and that of the \(\alphaη\) 5 gills.

The Muslim jurists give the following estimates of this measure. For the sake of the \(\alphaη\) in 26 \(\alphaη\) (26 \(\alphaη\) 2/5 \(\alphaη\)), the \(\alphaη\) being equivalent to 128 Macedon drams and the dram 50/3 grains of barley. We see how lacking in precision this definition is. If there is no \(\alphaη\) or \(\alphaη\) available, the quantity of grain to be distributed for the Zakat al-\(\alphaη\) is measured with the hands held together, half-open, with palms upwards.

Lastly, besides this one of the \(\alphaη\) and of the \(\alphaη\) al-\(\alphaη\), these measures are further used in certain measurements required by religious law: 1. to calculate the Zakat and 2. to measure the minimum quantity of water necessary for an ordinary ablution (\(\alphaη\) 'ibd, a \(\alphaη\)) and for general (\(\alphaη\) 'ibd, a \(\alphaη\)).

Bibliography: The Arabic dictionary, especially the Arabic-Slovenian (Beyrouth 1870), II, 1211, col. 2; the treatise on Mahomedan law and the collections of Hadith, Alfred Bal, "Note sur trois anciens manuscrits de la collection personnelle des frères et frères à Fâ et écrivain du manuscrit l'identique du sez (Ball, Archéologie, Paris 1917, p. 350-357, Illustrations), where further references are given. (Alfred Bel.)

\(\alphaη\) (\(\alphaη\)), a time, a period of time, especially the hour. Following the custom of the Greek astronomers, a distinction is made between the equal or astronomical (sunlight) hours and the solar, which corresponds to a revolution of the heavens of the fixed stars through 365° and is also called \(\alphaη\) (\(\alphaη\)).
an account is given by Tāhī al-Dīn in a work composed in 1523. The clocks of King Alfonso of Castile owe their perfection to Moorish skill.

SA'ĀDA (h.) felicity, good fortune. The root 2-3-d and some of its derivatives is associated in various connections with pre-Islamic Arab conceptions. Its general meaning is given as *auspicious, fortunate* (2-a-n, opposite 2-a-d). The proper name Sa'd (female Sa'da, see the article Sa'd) may therefore be synonymous with Hebrew names like Benjamin and God. Sa'd is also found as the name of a god; Wellhausen (Reise arabischen Heidentums*, p. 65), suggests that al-Sa'da (a house round which the Arabs used to run) was originally an epithet of al-Urab. Sa'd followed by the genitive also often occurs as the name of a star (cf. also the articles Sa'd, al-Sa'dan) and as the name of a tribe.

The form Sa'da (in the tābla formula (which is the name of the tribe but also in the ṣalāt, see the article TALIBA) may be very closely connected with the root meaning (2-a-n); cf., however, the Arabic dictionaries under 2-a-d.

Sa'da (also with a following noun in position, in the proper name Sa'dat Ali Khān; see this article) seems to be a specifically Muslim term (opposite: ʻarshām). It is not found in the Korān; in Ḥadīth it has an eschatological colouring (cf. yarım al-sa'da, day of the resurrection, Dory, Supplément, s.v.), especially in connection with predestination. It is said, for example, that the people of sa'da are helped by God towards works of sa'da (al-Bukhārī, Ẓidāt, bāb 83; Muslim, Kābul, Kashf, al-Tirmidhī, bāb 83). As a result of a development of a train of thought common to monotheistic religions, the word in the combination abd-al-Sa'da := the Muslims (cf. Dory, op. cit.), assumes a less exclusive meaning. In court language it means majesty, highness and Dār al-S. court (Dory s.v.). Dār Sa'dat is a name for Constantinople and Sa'datullā a title in the Turkish official hierarchy.

Bibliography in the article itself.

SA'ĀDAT ALI KHĀN, a swāb of Oudh (Q.v.), from 1776 to 1814; on the death of his brother, Aṣaf al-Dawla, in September 1797, a reputed son, Waṭr al Khān, who had been purchased by the late Nawāb but never formally adopted, had been appointed to succeed, but four months later he was set aside as incompetent, and the British Governor-General, Sir John Shore, installed in his place Sa'ādat Alī Khān, who had been living under British protection in Benares since 1776. His reign is noteworthy for the extension of British control over the Oudh territories. A treaty concluded with the late Nawāb in 1777 had placed these territories under the protection of the East India Company, which undertook to provide troops for their defence in return for an annual subsidy; in 1798, a fresh treaty increased the subsidy to 76 lakhs a year and transferred the fort of Allaḥabād to the Company as an arsenal. The Company undertook to maintain a body of 10.000 men for the defence of the Nawāb's dominions both against internal and external enemies. The mutinous behaviour of the Nawāb's troops prompted the new Governor-General, the Marquiss Wellesley (1738-1805), to propose that this useless and dangerous force, which Sa'ādat Alī Khān had himself declared would be useful only to the enemy, should be disbanded and replaced by the Company's troops. Alarméd by the dangers that threatened his person, Sa'ādat Alī Khān was at first eager for this reform, but afterwards it appears only in 1801 yielded to pressure and signed the Treaty of Lucknow; this relieved him from all pecuniary obligations to the Company, by the cession of six districts yielding a revenue equal to the cost of the Company's troops, and the Nawāb undertook to introduce into his territories a system of administration conducive to the prosperity of his subjects and calculated to check the rule that threatened the resources of his country. He carried out his promise so effectually as to leave behind him the reputation of having been the wisest and strongest administrator that Oudh had ever known. He died in 1814 and was succeeded by his second son, Ghāzī al-Dīn Haidar.

Bibliography: Sājīd Ghulam 'Alī, 'Aliy al-Sa'ādat, p. 159-174 (Lucknow 1897); Dārūghi, Britān-i Awadh, pp. 99-109 (with portrait; Lucknow 1892); Sir C. U. Alitoun, Collection of Treaties relating to India, I, p. 118-137 (Calcutta 1909); Sir John Malcolm, The Political History of India from 1764 to 1823, I, p. 170-177, 273-283 (London 1826); A Selection from the Despatches of the Marquiss Wellesley, ed. by S. J. Owen, p. 188-207 (Oxford 1877); H. C. Irwin, The Garden of India, or chapters on Oudh history and affairs, p. 100-117 (London 1880). The following sources appear to be still unpublished: Harshuk Kān, Mūṣaffa' al-Maḥfūz, (Bṛt. Mus., Or. 1624); Muhammad Mubāṣṣir Khān, Dārūghi; Mubāṣṣir Khān, ed. 45; Nāshī al-Kurān, bāb 4, Musā'īb, al-Muṣaffa, tr. 270-274; Abū Dāūd, Witr, bāb 22; Nāshī, Iṣṭiṣāb, bāb 22.
37 etc.; cf. Goldscheider, Die Richtungen der islamischen Koranauslegung, Leiden 1920, p. 37.) In matters relating to ritual purity the figure three has as a rule the preference (cf. Thalhî). We are only told that soiled vessels should be cleansed seven times (e.g. Muslim, Tahâra, trad. 89—93; Abû Dâ'ûd, Tahâra, bâb 37). Ritual proscription should take place on seven parts of the body (Bukhârî, Al-Bukhârî, bâb 133, 134, 137, 138; Muslim, Sahîh, trad. 227; Abû Dâ'ûd, Sahîh, bâb 150 etc.). In another case seven alternates with four; namely, in the grouping of commands sung, e.g. (Al-Maghâlim wal-Chibdâ, bâb 5; Muslim, Lhîhî, trad. 3 etc.; cf. Bukhârî, Tahâra, bâb 40; Hadîq, bâb 26, etc.); in the dating of the Lailat al-Kadr seven is found as well as the, in this case more frequent, numeral ten (Bukhârî, Lailat al-Kadr, bâb 2). On the Christian model the deadly sins are limited to seven (Bukhârî, Wuqûf, bâb 23; Hâdîq, bâb 44; Muslim, Inâm, trad. 144); but other classifications are also found.

In cosmology also the number seven is a favorite, one which may be partly due to borrowing. There are seven heavens and seven earths (Tûrûs, b. bk. 6; Bukhârî, Bad' al-Khalq, bâb 2). Each has seven gates (Tûrûs, bâb 44; Medina also ultimately has seven gates (Bukhârî, Fitan, bâb 26). Cf. further the article Sâ'îna. The number seven is particularly frequent in medicine and magic. Water was poured over the sick Muhammad in seven waterskins (Bukhârî, Wuqûf, bâb 145); elevated parts of the body are cauterized seven times (Bukhârî, Tammûnû, bâb 6). In Dousté, Magic et religion dans l'Afrique du nord (Algiers 1909, p. 154), there is an account of a ritual consisting of 7 × 7 squares, of which the upper row contains the “seven seals”. In the same work the text of the amulet of the sâfu ‘shûd is given (p. 112). Cf. further the same book, p. 91, 100, 118. Numbers like seven, thirty, one hundred, etc., have also a special significance. Earthly fire is described as one seventieth part of hell-fire in strength (Bukhârî, Bad' al-Khalq, bâb 10). The sweat of the children of men on the Day of Resurrection will permeate seventy sills into the earth (Bukhârî, Rîhûf, bâb 47). When a sevenfold istikhâfah is mentioned, we are probably to assume New Testament influence in this case (Tûrûs, b. 81). Seventy thousand members of Muhammad’s Ummâ will go straight to Paradise without a day of reckoning (Tûrûs, Bukhârî, Bad' al-Khalq, bâb 8; Muslim, Inâm, trad. 316; Tirmîdî, Khayûm, bâb 12, 16); seventy thousand vessels with radiant countenance (Bukhârî, Lisâq, bâb 18; Rīhûf, bâb 50, 51; Muslim, Lena, trad. 14—17); seventy thousand land through the intercession of a member of the community (Dârîmî, Rîhûf, bâb 87); seventy thousand in Paradise will be the equivalent to the liver of the seal to eat (Bukhârî, Rîhûf, bâb 44; Muslim, Sîfat al-Munâhûsûn, trad. 30). The Bât al-Ma’ûrî is entered daily by seventy thousand angels, who never return there again (Bukhârî, Manânî al-Ma’ûrû, bâb 42).

We may safely assume that the number seven was regarded as a rounded whole; but it is going too far, following out this conception, to try to derive with Hein the root sâ'î and its equivalents in other Semitic languages from the root sâ'î (work quoted below, p. 91 sqq.).

SABA', the name of the people and kingdom in South-western Arabia in the first millennium B.C., frequently mentioned in the Old Testament, in Greek, Roman and Arabic literature and especially in the South Arabian inscriptions; the old Arabic sources, which are mainly inscriptions, and isolated references, give us further information regarding the history of Saba in the first centuries A.D. down to the period of Muhammâd. In Assyrian, on the evidence of the cuneiform inscriptions down to the eighth century, Sîdû was the name of a country, as was Shakkât (also Shabbât, Shabbâh) in the hieroglyphic texts, although of a comparatively late date. In the Bible, Sâheb was the name of a people and country and in the South Arabian inscriptions also Saba' means the land or kingdom and people (which is in keeping with the Sabean constitution). The oldest known literary references to Saba are, of course, the Semitic, especially those in the cuneiform inscriptions. While the oldest certain mentions only date from the eighth century, historical documents from Mesopotamia of a much earlier period seem to refer to Saba'. For example Sâfu in a Sumerian inscription of Arradananu, Patesi of Lagash, a contemporary of the last kings of Ut, the second half of the third millennium B.C., is perhaps a name for the “land of the Sabaeans”, Hommel (in Hilprecht’s Explorations in Bible Lands, Philadelphia 1903, p. 739) speaks of Sôbûm of the time of the kings of Ut (after 3500 B. C.) as the Saba of the Old Testament (“in Central Arabia”, on this see also Die altasiatische Überversetzung, Munich 1897, p. 37). In the inscriptive narratives of the campaigns of Tiglath-Pileser III (745—727) against North Arabia, among the tribes who offered their submission we find Sabaeans mentioned, the oldest certain reference for this people. Sargon II (722—705) in his Annals (for the year 715) mentions the Arabs of the desert dwelling afar off, the Queen Samat of Aribi already mentioned in the narrative of Tiglath-Pileser just quoted and the Sabacan It’umar, who along with others brought rich gifts of tribute (gold, frankincense, jewels, etc.). With the latter name Lenormant compared It’umar, the name, known from inscriptions, of several rulers of the oldest period of Saba’. Schrader’s Keilinschriften und das Alte Testament, I, (henceforth quoted as K. A. T., p. 55) and Kiepert’s (Lokal d. alten Geogr., p. 187) suggestion that the reference here is not to the South Arabian Sabau has been rejected by D. H. Müller (Bürgen und Schlöser des Sündabentuent, ii. (1881), p. 989 (in Sabische Denkmäler, 1883, p. 108 against Delitzsch, Wo lag das Paradies? Leipzig 1881, p. 303, who sought to locate the Sabu of Sargon’s inscriptions in North Arabia; cf. Winckler in the M. V. A. G., 1896, p. 18; but see also W. M. Müller, Studien zu F. Fisches dissertationen Geschicht, ibid., p. 360; Glaser, Skize der Geschichte aus Geographie Arabiens, II, Berlin 1890, p. 153 and Grimm (Mohammed, Munich 1904, p. 18) from the fact that the tribe consisted of regular South Arabian products deduced that even in Tiglath-Pileser’s time, as in Sargon’s, the Sabaeans were South Arabs;
others have more recently been inclined again to transfer Itîmar’s abode to North Arabia (cf. M. Hartmann, "Die arabisch-iranische Frage in der islamischen Geschichte", II, Berlin 1909, p. 124, 458). From Sprunger’s point of view, which maintained it to be certain that Arabia was the original home of the Semites (Leben und Lehre des Mohammadei, i. Berlin 1869, p. 247 sqq., and *Die alte Geographie Arabiens*, Bern 1875, p. 293 sqq.; following him Schrader, Z. d. M. G., xxvii. 421 and other notable authorities), which is still the view most generally held (cf. E. Meyer, *Gesch. d. Altertums*, p. 2, p. 366 sqq.), one can understand his untenable suggestion that the Sabaeans and the Minæans came from Hi育儿 and that the kingdom of Saba was founded by *Shabadda* (cf. Schröder, p. 162, 230, 246, 248, 301). More recently Winckler (cf. K. A. T. J., 1903, p. 7, 11, 126 sqq., 166; *Die Völker* Vorderasiens in *Die Altertum*, i. 3, 1, 10) and Weber (Arabien vor den Islam, p. 3 sqq.; *Westasien in Helmholtz’s Weltgeschichte*, iii. 3, 1, 220, 225) have categorically declared Arabia to be the original home of the Semites. Hommel (*Grundriss der Geogr. u. Geschichte des alten Orient*, i. Munich 1904, p. 10 sqq., 24, 50, 132) more cautiously sees in Eastern Arabia (including Chaldæa) at least the last starting point for the migration of all the Western Semites. Hartmann, *ibid.*, p. 93 sqq. has adopted a decided position against this theory of the original home. There are well-founded reasons against believing that Arabia should be regarded as the cradle of all Semitic peoples. Even with this hypothesis and the assumption of an Arab migration based upon it (see most recently *Westasien*, p. 226, but also the admission there p. 242) the relation between Arabia and Babylonia does not become absolutely clear. The reverse is really more probable, that the superfluous population of the fertile Euphrates region was forced towards Arabia, in the first place to the pasture-lands bordering it on the west, from which Semites naturally found their way back from time to time. In spite of Nöldeke’s arguments (Die semitischen Sprachen, Leipzig 1859, p. 11) it is as little probable that North Africa is the home of the Semites as that it was Germany (*ibid.*, p. 6 sqq.;humorously and other writers) or that there was a south-northward tendency in the immigration of the Sabaeans towards Africa. On the contrary there are indications, according to Guelz’s view (Dei popoli primitivi dei popoli semitici, in the Atti della R. Accad. dei Lincei, 1879), which is defended by Jacob (Altorab. Bedaumismol), Berlin 1897, p. 28 sqs.), that the southern Euphrates territory was the oldest known home of the Semites, from which in the course of centuries migrations took place towards west and south. The way in which Arabia was populated from there cannot, of course, be more definitely ascertained. Probably the Semites did not penetrate into Arabia by a single route but by two main routes; the one, which may have been taken by the tribes out of whom rose the Minæans and Sabaeans of the historical period, seems to have led through the arable lands along the west coast to the south, somewhat on the line of the later caravan route, and the other along the western shore of the Persian Gulf to 'Oman and Hadramot, roughly in the direction of the later eastern frankincense route. The Sabaeans, or their mother-stock, would naturally keep to the west and south coast regions, which offered the most suitable areas for settlement on account of their good soil and water-supply. According to Hommel, the Sabaeans probably first entered South Arabia from Dīrīf in North Arabia in the eighth century B.C. (see Grundriss, p. 142).

The Old Testament (Gen. x. 7; 1 Chr. l. 9) calls *Saba* the eponym of the land and people of South Arabia, the first son of Raʾmū, therefore a Kūḥite, but in Gen. x. 28 (1 Chr. l. 22) he is called a son of Yāqūt and in Gen. xxv. 3 (1 Chr. l. 52) a son of Yāqūt, son of Abraham. These are not, however, references to three different Saba: a people with such extensive trading connections had obviously intermarried a good deal with neighbours on the sea, on the caravan routes or in the stations and could therefore easily be given different genealogical classifications (Dillmann in Gen., x. 7). According to some, *Saba* is originally identical with *Shēba* and only dialectically differentiated from it to distinguish the African Sabaeans (e.g. v. Kremer, *Die isdurbischische Sage*, Leipzig 1866, p. 100 sqq.; D. H. Müller in the tenth edition of Gesenius’s *Hebr. Wörterb.*).

The etymology of the name *Saba* is not certain (on the best known attempts to explain it, — those of Kremer, Hommel, D. H. Müller and Glaser — as well as on other points see my more comprehensive treatment of the subject in Pauly-Wissowa-Kroll’s Reallex. der klass. Altertumswiss., s. v. *Saba*, henceforth quoted as R. E., col. 1499). The Bible shows that the Sabaeans supplied Syria and Egypt with spices, that they traded with frankincense, and also exported gold and jewels thither (cf. Psalms, lxii. 15; Ezek., xxvii. 22; Isaiah, lx. 6; Jerem., vi. 20) and the Greek and Roman accounts (see below) agree with this. Other Biblical passages, which describe the Sabaeans as a wealthy trading people — the essential feature of the Biblical account of Saba — are Ezek., xxviii. 13; Ps., lxii. 10; Job, vi. 19 (referred to Sabæan caravans), i. 15 (where the Sabaeans appear plundering in North Arabia; according to D. H. Müller, *Encyclopædia Britannica*, 1869, article Yemen, p. 738, colonists or caravans, which occasionally combined robbery with trading, at any rate according to a good source (K. A. T., 1903, 151) and the present work is not held to be of that opinion as W. M. Müller, *Studien*, p. 36, note 1 suggests); according to Winckler, *ibid.* (cf. Hommel, *Explorationen*, p. 748), in the passage in Job the Sabaeans are thought of as Beduins of the North Arabian desert. Joel, iii. 8, mentions the Sabaeans as "a people far off" to whom the sons and daughters of Tyre and Sidon will be sold by Judah (cf. the mention of sacred slaves, e.g. from Gara in South Arabian inscriptions; see Hartmann, *op. cit.*, p. 421). — To appreciate properly the much discussed story of the Queen of Sheba (I Kings, i. 1, 2, 10, 13; cf. II Chronicles, ix. 1 sqq., 9, 12), who is said to have visited Solomon, it is decisive that all that we know of Saba and Maʾain contradicts the supposition that there were queens there (K. A. T., p. 237). In any case we may not be sure of any evidence of the existence of the rule of queens in Saba, in which Glaser still believed (*op. cit.*, p. 360, 384 sqq., 403); also E. Meyer, *Gesch. des Altertums*, i. 2, p. 233, still less a support for the assumption that the oldest Sabæan inscriptions belong to the 5th or 6th century, or that in the time of Solomon there was only one great land of the Sabæans stretching far to the north (Gla-
trees unnecessary (cf. Periplus: Muriis Erythraei, p. 33); concerning the temple of Helios, the most ancient in the land of the Sabaeans, which was used as a place for keeping the whole harvest of myrrh and frankincense, an inscription testifies to the worship of the sun among the South Arabian tribes. For further details, as well as for information regarding the actual occurrence of these spice-trees in South Arabia see R.E., col. 1507 sqq. and the quotations from and collocation of the travelers' reports in A. Grohmann, Sabarabia als Wirtschaftsgebeit, Vienna 1922, p. 128 sqq., 136 sqq.; lastly on the attempt to connect Saba' with the land of frankincense, Punt, see R.E., col. 1312 sqq.

The next most ancient Greek authority on Saba' is contained in the much more copious statements of Eratosthenes preserved in Strabo, iv. iv. § 2, still very important for the historical side of Sabean studies, which in combination with the Theophrastus passage give a fairly clear picture of the oldest configuration of the South Arabian kingdoms as known to the Greeks and Europeans in general in the time of Eratosthenes. According to this authority, who, like Theophrastus, was able to make use of the results of the campaigns of Alexander as well as itineraries of sailors and caravan-travelers, there lived in South Arabia four main peoples: the Melitaus on the Red Sea with their capital Hapat, next to them the Sabaenes with their capital Majlid, then the Arrageus down to the straits and passage into the Arabian Gulf with the capital Tidmus, and farthest east the Karatagae with their (chief) town (τος) Xabhares. All these towns were under absolute rulers (kings) and were prosperous. This passage (with the others in Strabo) contains the oldest known account of the respective topographical situation of the four South Arabian kingdoms with a complete list of the four principal nations and the capitals. The Sabaeans, according to Eratosthenes, were neighbours of the Mineaeans (see the article MAEN for further information). It does not follow from his statement that the latter lived in the territory on the Red Sea, that he thought the Sabaeans did not also live on the sea, as Glaser (Sittant, 169) noted. (In the main text) it was also inclined to conclude. The correct interpretation is in agreement with the evidence of Arabic sources and of other Greek and Roman authors, for example Agatharchides (Diodorus, iii. 46) and Pliny (vi. 145) on Sebaean places on the Red Sea and the reference in Stephans Byzantium, Μαλίταις μεγάλας Σαβαΐνας πάντας τους Ἔχων ἴππας, referring expressly to the passage in Strabo, in which we can still see the correct idea that Saba' stretched down to the sea. According to the description of Eratosthenes, which naturally begins with the north (this disposes of W. M. Müller's doubts, Studien etc., p. 36, note 2), Saba' was in his time bounded on the north by the kingdom of Ma'in, on the south (and south-west) by Katabah and by Hajramaz in the east. At that time the land of the Sabaeans stretched to the west and south coasts, as it did in the time of Pliny (vi. 154; ad ururas maris ioracriti geographi); only their territory on the south coast, concerning which D. H. Müller, Burg. ii. 1857, was rather doubtful, was larger. It apparently included the Raddian coast between 'Aden and Hawar (according to Glaser, p. 20). Glaser's disbelief in the statement of Theophrastus to the effect that the Sabaeans also owned a part
of the frankincense coast, was unfounded and quite wrong, as well as the alteration in the text which he proposed to suit his hypothesis in two passages in Theophrastus Ψαριτώ for Ψαριτής (Glaser, "Punt", p. 45 sq.; cf. above). Plyn also (xii. 92), which Glaser, following Sprenger, had also to alter, repeats that the Sabaeans had possession in the frankincense region, which Sprenger himself acknowledged (Bevortellungen etc., Z D M G, xlv. 505). Μαμαλά, the name of the capital of the Sabaeans according to Eratosthenes and Artemidoro, reproduces the Arabic name (inscriptions Maris, Mārib, in the author's Mārib) as accurately as possible with the different sound of a. Laws x time of Eratosthenes, the part of the west coast south of Saba' and the most western part of the south coast was inhabited by the Κατάβαννης; the eastern neighbours of the Sabaeans were the Χαραγωνίται whom he mentions last (see RE, col. 1334 sq. and the article Κατάβαννης).

A comparison of the passage in Strabo with the list of South Arabian peoples in Theophrastus (see above) shows that three of them are mentioned by both authors, the peoples of Saba', Ḥaḏramūt and Κατάβαννης, while our two authorities differ regarding the name of the fourth people, whom Theophrastus calls the Μαμάλα (vitr. Mā Política) and Strabo the Μαμαλά. The assumption of a corruption in the text would easily restore perfect agreement between the two. Mordtmann for example in the Ζ D M G, xxx. 323 has explained Μαμάλα as a corruption of Μαμάλα and D. H. Müller also (JR. in the articles Arabia, ii. 348 and Ταχαρανίς, where Eratosthenes is confused with Pliny, and Anzinger Al. Wien, 1909, p. 4) has assumed that the reading ΜΑΜΑΛΑ may be restored with absolute certainty for ΜΑΜΑΛΑ in Theophrastus; that is to say both authors are referring to the Minaeans. But this proposed alteration in the text, which would take the oldest mention of the Minaeans among the Greeks back to the time of Alexander the Great, need not be considered absolutely necessary (Hommel, p. 190, 199, and the wynne against the Short). The two Greek authors are writing from different points of view: the botanist is not so concerned as the geographer with giving a full list of South Arabian kingdoms but is only interested in those regions which yield spices. The form Μαλα also finds support in the Μαμάλα σουρά of Toblemey, vii. 7, S. Sprenger who sticks to Μαλά (cf. cfr., p. 92, 263, 266) identifies the latter without giving any evidence with Maha (as does Hommel, cf. cfr., p. 137: "probably the Maha coast"). Hartmann, cf. cfr., p. 420, simply takes Mal for the land of the Minaeans without giving the slightest proof.

Following the passage from Eratosthenes, we have in Strabo xvi. iv. § 33 (map B) an account by a later authority, Artemidorus, of the land of the Sabaeans. The people — very fortunately (cf. Agatharchides in Photius, § 97 and K. Müller, Géogr. Græc. Minorèz, i. 180) — are called "a very powerful people" in whose land myrrh, frankincense and cinnamon grow and on the coast — a fact confirmed by modern travellers — balsam tree also (cf. Theophrastus, iv. 4, v. ἡ ἁπάντης) and other aromatic trees and plants. Then follows information regarding the abundance of fruits in the land, regarding the capital Maribah, laws and duties of the king, commerce and the wealth gained by the Sabaeans through trading, as well as their agriculture and other details, which are repeated in almost the same words by Diodoros (iii. 47) from Agatharchides, who was also Artemidorus's authority — a fact which does not seem to have been appreciated by modern writers, who regard Artemidorus as an independent source. The above quoted reference to the occurrence of frankincense among the Sabaeans seems to be contradictory to Strabo's (xvi. iv. § 33) "τότε δὲ ἐπιδεύσθην μήτε ἐκ Καραγωνίτων μήτε ἐκ Χαραγωνίτων οὖσαν δὲ σάρκα τὸν" following Eratosthenes; to remove the difficulty it has been assumed sometimes that there was confusion on the part of Eratosthenes and sometimes, as in quite recent writers, that the Katabanians had lands in the frankincense region and that there was a change in their ownership by which part at least of Kataban passed to Saba'. However possible this may be and however little misgiving one may have about it in this case, it must also be borne in mind that Strabo's sentence cannot be taken from its context and placed in another context as an argumentum ex silentio. From the statement that Katabani produced frankincense it does not follow that Katabani alone produced it and that it was not found elsewhere in South Arabia. Besides the substance of Eratosthenes's remark is only found in Strabo's version.

Strabo (xvi. iv. § 23) goes on to give an account of the campaign against South Arabia of Aelia Gallus in the year 24 B.C., based on direct information; he is the earliest authority on the campaign (cf. also ii. 118, xvii. 819; Pliny, vi. 160 and Dio Cassius, liii. 29 (= Zonaras, x. 33.) The complete failure of this campaign, which was the first and most important direct contact between Rome and distant Saba' and which had been undertaken by Augustus, as Strabo tells us, in the hope of winning the wealth of the Arabs, especially of the Sabaeans, was, as Glaser (op. cit., p. 45 sq.) has already emphasized in contradiction to Strabo's version, the result of the ignorance of the Romans regarding the country and people and the weakness of any previous observations (on the specialist literature on the subject and modern criticism of the eastern policy of Augustus like Flügel, Mommsen, Winckler, Glaser, Weber, Hartmann, on the accounts of the fighting in Strabo and Pliny, the route of Gallus's march — which Sprenger for example gives wrongly — and the minor military successes of the Romans regarding which the accounts differ cf. RE, col. 1344 sq., 1350 sq.). In disagreement with the usual accounts (in d'Anville, Gibbon, Karl Müller, Sprenger, whom almost all recent writers followed, Kiepert, Mommsen, Zehme, Mordtmann, Ang Müller, D. H. Müller, Winckler, Weber) I only mention here that the fortress point reached by the Roman expedition, which Strabo (§ 44) calls Μαμάλα, the town of the Μαμάλατας who were ruled by IIabarah, the Monumentum Ancevarum, v. 22 and Pliny vi. 160 call Marib, was not the Sabean capital Mārib, as, following Vincent, Forbiger and Ritter, Glaser has again recently (op. cit., p. 57 sq. rightly emphasized and Landberg also according to whom (Arabica, v. 82) Strabo's Μαμάλα (as it has generally been written since the time of v. Kramer instead of Μαμάλα, although without any justification) is undoubtedly the Maryama the ruins of which lie in the district of Baybān al-Ḫabs on the Wādī Bābān (south-east of Mārib; see the description in Landberg, op. cit., p. 21 sq.; full information
regarding this district *ibidem*, p. 3—63; the old contrary view is still championed by Grimaux, *Mohammed*, p. 20). Glauser was, however, wrong in his attempt to locate this town exactly, which he, thinking of Carpita in Pliny, vi. 160 which, as Fresnel had already pointed out, recalls the Arabic *karshā* `ruins', saw in the later Sabaean capital *Sirwā* (west of Mārib). Carpita, however, goes back not to *karshā* but to the place-name *Harīt*. Much more worthy of attention is Landberg's connection of the Romanite city, — the name of which, it is true, he wrongly reads *Marib* and erroneously considers to be the Marib Baramalacum in Pliny, vi. 157 — with the Arabic *Maryama* and with *Ma'yāza* in Ptolemy, vii. 7, 37, as well as with *Marilym* in the inscriptions, with which is to be identified the *Ma'yāza* of Ptolemy, vii. 7, 38 presumably the modern Maryama in Ḥadīmīt (not as Mordtmann—Müller, *Sabiostische Denkmäler*, p. 104, thought). But he wrongly records it as a city of the *Māʾrā* the Arabic *Maʿmā* (p. 24). Landberg is wrong also in his location (in Bahīn al-Dawla, a district south of Bahīn al-Kaṣībī) of the limit reached by the Roman expedition, mentioned by Dio Cassius, the name of which he wrongly (following Glauser) considered to be Adula. — *Ma'yāza*, as the name should rather be written, is, according to D. H. Müller's suggestion, the *Vīlā* (usually read Yathil) of the Minaean inscriptions. Monsma wrongly (Monshaneom *Ancyraeum*, v. 22) found a contradiction between the statement of Augustus regarding the terminus of the campaign ("enque in Sabaeorum ibur") and those of Strabo and Pliny and sought to modernize it by assuming that Augustus was describing South Arabia with a generalising but not correct expression as the "land of the Sabaean". The farthest point reached by the expedition was actually — as Augustus rightly says — in the land of the Sabaean and, according to Strabo, in the land of the Romanità i.e. of the Radamn or the Radan of Pliny, which is in agreement with the *Memontum*. Ilasār, whose name and person have been wrongly interpreted, is the Iklār Yaḥdib, whom we know from inscriptions, regarding whose attitude to the political situation in Saba' during the Roman campaign Hartmann (p. 155 sq., 173 sq. etc.) has made erroneous suggestions (see H. E., col. 1371 sq.).

The reports of this campaign, the military and political importance of which for the history of Saba' has been very much overestimated by Spengler, Dillmann and Fabričius, brought the Roman world a better knowledge of the land and people of South Arabia — among other information a correction of the Greek statements hitherto current regarding the spices which Arabia exported. As a result of the information obtained from Gallus, Strabo (§ 24) was able to distinguish the divisions of South Arabia according to the predominant activity or quality of its inhabitants — in contrast to the earlier political division of South Arabia based on Eratosthenes (Strabo, § 2) —, a distinction made from the social and economic point of view which is included for example, the estate which still exists today in Arabia, similar to Pliny's account, vi. 161, which also refers to Gallus. Strabo goes on to deal with family life in South Arabia, including community of women, a testimony, with which passages in the inscriptions have been compared, as evidence for polyandry in Saba', the occurrence of which Hartmann (op. cit., p. 7) has wrongly denied; it must be granted, however, that many inscriptions, when properly interpreted, can no longer be used as evidence for the existence of polyandry.

Copious information regarding the land and the capital, the customs, mode of life and constitution of the Sabaeans and about South Arabia generally are contained in the two excerpts from Agatharchides (epig. 76, *Geograph. Sacratnum*, vol. 5, probably concluded about the year 152/1) preserved in almost identical terms in the *Bibliotheca* Ptolemais and in Diódoros (iii. 38—48). Agatharchides was the source used by Artemidorus also. The statements regarding spices which filled the whole land with natural, pleasant odours may be compared with Herodotos, iii. 113, Pliny, xii. 86, and Wrede's report (*Reise*), p. 80 on the Wādī Muntigh, p. 77 on the *Dīqāl Shidār*, p. 82 on the Wādī Khīlīfāt). Noteworthy also is the information he gives regarding the Sabaean royal city *Sāflan*, on the constitution, on the laws and duties of the kings, whose rule was hereditary in a particular family (which is confirmed by the South Arabian inscriptions), regarding customs and activities of the people, who are praised as brave soldiers, industrious tillers of the soil and traders and skilful sailors, and regarding the trade with Egypt, Syria and Phoenicia and the resultant wealth and luxury of the Sabaean which surpassed that of all other Arabs (cf. the above mentioned statements of Strabo following Artemidorus). *Sāflan* and *Mārib* in Strabo, xiv. iv. § 2 following Eratosthenes), § 19 (following Artemidorus), in Stephanos Byzantinus, *v. v., as well as *Marsathē* (corrupted from *Marisaba*, according to Mordtmann) in Pliny, vi. 155 are. (What Glaser, op. cit., p. 58, 62, 153, 287 has not noticed) only two different names of the same town, the capital of Saba', Mārib [q. v.]. The name *Sāflan* finds an analogy in the fact that Arab writers also sometimes call the Sabean capital Saba', e.g. al-Idrisī, Abu 'l-Fidasī, as well as Ibn Khordāḫbeh and the Turks (see Mordtmann, *Sabiostische Denkmäler*, p. 3, note 1). The statement in Phoīnīs that the capital stood on a not high hill has been erroneously doubted by doubt, but is confirmed by the observation of modern travellers, like Arnaud, Halāsī and Glaser (Strabo's remark; "on a hill covered with trees" may be considered a sign of the decline in vegetation). — From the statement in Phoīnīs (§ 101, middle of the page) Ritter (*Erdbundige, xii. 249), Kremer (op. cit., p. 9) and Glaser, op. cit., p. 9) have wrongly deduced that the Sabaeans sent out colonies or at least trading settlements into foreign lands, especially India; we are rather to understand trading voyages by sea by *phṓnēs* (intransitive *átp elu̇d*).

The literary references to Saba' and Arabia in general, as well as the reports of merchants and travellers, influences the later literature of the Greeks and that of the Romans from the first century A.D. It is to them — particularly to poets of the time before the expedition of Gallus — that we owe the typical conception of the rich and fortunate Sabaeans in a remote Eldorado. I shall here pass over these references in poetic literature, as they have not the importance of independent sources and only observe that as a result of this conception of Saba', the chief country in Arabia, — as is intelligible with poetic lan-
guage — Sabaean gradually came to be used, not with the limited application to Saba', but in the general sense of "Arabian," so that even expressions like Vergil, Georgica, i. 57, melius esse tene Sabaee (mutandis) II. 117, volo est tene virga Sabaee, etc., are not to be used as arguments in the reconciliation of apparent differences in the nomenclature of South Arabian areas, that produced frankincense, and it cannot be deduced from them that Vergil allotted the frankincense tree to the Sabaeans alone as distinct from other South Arabs.

The amplification of the previous knowledge of the country from first-hand accounts as a result of the Horn article is also reflected in Pliny's references, which augment the exacting preserved from the older Greek writers by many details, although they are in parts confused and corrupt. The majority of the towns mentioned by him in vi. 160, which Gallus is said to have destroyed, can be proved to have existed from the South Arabian inscriptions, or from al-Hamdani, the first author who mentions them after Pliny, or from other geographical sources. Pliny's account, based on new information regarding Arabia, which goes back to Gallus or reached Rome by other ways from time to time, is of historical importance in as much as it mentions a people, not mentioned by Strabo or Agatharchides, who produced a haltin alteration in political conditions in Saba'. After giving (probably from Juba) in vi. 158 the Hecatomites after the Minaeans (Ma'in) and Rhadamaei (Radman) among the Arabian peoples, in 161 Pliny, expressly quoting the explorations of Gallus as his authority for this period, calls attention with the words numerum non esse Hecatomites to a fact which forms a turning point in the history of Saba', the rise of the Himyars (Homeriteae), the Quayardae of the Greeks). This is the oldest reference preserved to the Himyars and their strength. At the time of Gallus, as Pliny tells us, South Arabia no longer had the hands of the Sabaeans under the ancient dynasty of the "Kings of Saba", but had passed to the Himyars under rulers with the title "Kings of Saba" and Dhu Ra'idah. The definite report of Gallus, who says that the Himyars were a predominating people in South Arabia and the legitimate conclusion that they were at this time already in possession of the hegemony, agrees at once and convincingly with Glaser's deduction (cf. Die Abkunft, p. 31) from the inscriptions that the beginning of Himyar rule is to be placed in the second or at least in the first century B.C., and that evidence against the attempt (made by Mordtmann, Mommern, Hartmann and others) to shift the beginning of the Himyar period in an earlier date after the beginning of the Christian era, does not even help the endeavours of others, like Kremers and D. H. Müller, to place it towards the end of the first century B.C. (Glaser, cf. cit., p. 38) would not pronounce definitely for this date of about 70 B.C. and talks of "somewhere after 175 B.C., but certainly not after the birth of Christ" if it is tempting, he says, to take 115 B.C., but there are objections (p. 38 sq.; cf. also Weber, Arabien vor Islam, p. 33; Hommel, Geschichte des alten Morgenlandes, Sammlung Göschens, Leipzig 1908, p. 148 and cf. ibid. here the article Arabia, i. 377 sqq., etc.). Sprenger's (op. cit., p. 76 sqq., 225), Dillmann's (op. cit., p. 204) and Hartmann's (op. cit., p. 469, note 1) hypotheses of the contemporaneity of and even of a causal connection between the rise of the Himyar power and the Roman campaign thus lose any basis.

A further reference to the kingdom of the Himyars is in Pliny, vi. 104, intus oppidum, regis sive, appellativo Saphirat, i.e. Zafar, the capital of the Himyars. We see, however, from Pliny that the Sabaeans in the time of Juba still held an important position — although they were no longer the lords of Southern Arabia — and the land ruled by them was no smaller in area than in the time of Kronteis. Of minor points we shall only mention here that of Pliny's reference (vi. 161) to their economic life and their wealth the expression, regum riga, finds confirmation in the testimony of the inscriptions to the old irrigation works of South Arabia (wells, canals, dams and cisterns) and in the statements of al-Hamdani regarding irrigation (see below), the mention immediately afterwards of melis cerino preventus (cf. Strabo, vii., iv. 8) agrees with the fact that almost all the mountain regions of South Arabia are rich in honey (cf. Sprenger, op. cit., p. 249); Glaser, op. cit., p. 69 — evidence for honey and wax in the Baidan district; also Landberg, Arabia, v. 236; Bent, Topographia, p. 330, Southern Arabia, p. 147; Harris, Iraq, no. 12 and of travellers' narratives; cf. the statements in al-Hamdani, Qisrash at-’Arab, p. 192, 104, 123, 194). The words preceding in Pliny, aliunam fertilitas vini vivesera (cf. Agatharchides in Phoebus, §§ 95 and 96) also refer to the Sabean wealth in the frankincense region (Sprenger, op. cit., p. 250), aurum metalla to the occurrence of gold, namely in the coast regions (cf. Agatharchides, § 95, on the land of the Deben rich in gold; Strabo, vii., iv. 8); Pliny, vi. 150 on the aurum metalla of the Ilus Homamann and especially al-Hamdani, p. 135, 177 etc. on gold mines in South Arabia and modern travellers such as Halévy and Glaser (Glaser, op. cit., p. 111, Punt, p. 77) would look for the gold mines in "Anir only or in Hajar (East Somalliland), but there can be no possibility of a reference to East Africa in the Pliny passage. Sprenger, op. cit., p. 249, would also locate the mines in the interior of the country (see further discussion below). Pliny's note (xii. 58) on the gathering of frankincense may be compared with the statements of Yākūt: (Muḥaddis, iii. 577). Of importance for the history of civilization also is the fact reported in xii. 54 that the collection of frankincense was considered a religious act, that only the Sabaeans as lords of the land of frankincense and with them the Minaeans were allowed to look upon the frankincense tree (when it was being ceremonially re-cropped), that these were said to be not more than 3,000 privileged families who claimed the hereditary right to the sole possession of frankincense trees for themselves and their descendants: sancta aulaeae: ad iudicium congressum fimoneum, cum spondycosus in arboribus uincut aut polluant, where Sprenger (op. cit., p. 92) and Glaser (op. cit., p. 31, Punt, p. 44) proposed quite unjustifiable alterations in the text. Congressum fimoneum are to the present day in Islam more or less connected with qanūtā (pollution; cf. Sprenger, op. cit., p. 219); Hartmann, op. cit., p. 415 remarks that the passage in Pliny appears to throw some light on the aversion of the Muslims to burning fragrant spices etc. at funerals, which is discussed
Saba' is to be identified with the sun-god, as do Ritter, Sprunger, Glaser, etc. The name also, in these identifications, would remain unexplained. Probably Saba is a form of name which appears to have arisen neither through a misunderstanding nor through a corruption of the text, but is simply the (Lord, God) of Saba. (Saba; at other times Shewat or regularly “Shab(swt)” or “R.B., etc., v. Saba). It is not the above quoted mention of the Homeric in Pliny that is to be regarded as the oldest known reference to literature to the Hymyar, but the Peripis Maris Erythraei, which is older than Pliny’s work, but younger than his principal literary sources, and, indeed, as I have endeavored to show in R.E., col. 1462 sq., differing from previous dates proposed by Dillmann, Mommaen, Harnack, Glaser, etc., seems to have been composed between 40 and at latest 51 A.D., probably between 40 and 45. A light is thrown on the political situation by the statement in the Peripis, § 23, that Charibert, the lawful king of two peoples, and the Homerites and their neighbors, the Sabaite i.e. Sabaena, was ruling in the capital Saphar. Saba’; therefore, was under Hymyarite rule at the time of the composition of the work. Saphar is Zafir (near Yatim), the capital of the “Kings of Saba’ and Dhu Raudan,” an identification which Landberg, A.Br., v. 50, could not accept. Muth was no longer the royal capital. Saba, the Egyptian form for Saba’ is also found in the Axum inscription and this too supports the manuscript reading Saba at the commencement proposed by the editor (Fabricius, p. 60 following Salmasius). The Hymyarite king Charibert is probably the Kharib’el Water Yudham, King of Saba’ and Dhu Raudan, known from inscriptions and coins. Harnack’s attempt to identify him (ep. cit., pp. 1454 sq., 173 sq.) collapses with his baseless premises. A tremendous revolution in the history of Saba’ took place in the period between the erection of the inscription of Adulis (Cerpius inscr. Geuc, iii. 3127 B) in about the first third of the second century A.D., about 127, and that of the bilingual inscription of Axum of the middle of the fourth century (before 350). In the former the text of the Axumites mentions that he had waged war from Axum ad gainst (al-Hawz) coastwards as far as the land of the Sabaenes. While he was thus forced to halt in his campaign on the northern frontier of Saba’, Atanana (‘Azana), who erected the bilingual inscription, already calls himself “King of Axum and Hymyar and Saba’,” etc. The most important parts of South-West Arabia had therefore been conquered by the Axumites since the beginning of the second century A.D. The disputes of Dillmann, Hartmann and others regarding the actuality of this conquest, with the inscriptions for which the mention of ambassadors ad gentem Axumitarum at Hymyaratam (Cod. Theod, xii. 57, 8) agrees, were unfounded. The fact that Hymyar occurs before Saba’ in the series of titles enables one to deduce that the former was the kingdom proper, besides which Saba occupied the second place, having not yet sunk into insignificance. With the official title of the inscriptions may be compared the double title of the Hymyar king in the Peripis. The testimony of the Abyssinian inscriptions, that Atanana was king of Hymyar and Saba’, agrees, as Glaser (Die Aethiopier, p. 5 sq.) emphasizes,
with the fact that the South Arabian inscriptions from the end of the third to the last quarter of the fourth century mention no Yemeni rulers; the latter do not appear again until 378 A.D. and then occur uninterruptedly until the first quarter of the sixth century, when (525) the Abyssinians again conquered Saba. The foundation of the power of the Axumite kingdom was an interruption of the last period of the South Arabian kingdom; from the beginning of which, about 500 A.D., the kings assumed the longer title "of Saba, Dhib Râdân and Hadsâmût and Yemeni" in place of the previous title "of Saba" and Dhib Râdân.

From the statements of Ptolemy, who, apart from unimportant references, is the Greek literary source for Saba' that follows the Monumentum adullamum in order of time, it may be deduced that in his map the Sabaens (vi, 7, 25) no longer occupied so large an area as they still did even in the time to which Strabo and Pliny refer, but seem to have become limited to the northeastern half of their former territory; the Himyarites, on the other hand, occupied a considerable part of the south coast, and other smaller peoples are also mentioned as inhabiting the South Arabian territory, which must have belonged to the Sabaens as late as the end of the second century A.D. Quite recently the words of Ptolemy: Κοσταμπού μέχρι τον "Ασ-βαντινος το, ἵνα δὲ η λαμπαδοφωνὸς κόχρων έχεται been erroneously interpreted to mean that after the Sabaens the frankincense region was under the rule of the Kahtâbâni, and further assumptions were based on the statement that Katabhani were still settled there although an independent kingdom of Kahtân then no longer existed. The facies syntax and the linguistic practice of Ptolemy, according to which ὁσ with the accusative means "south of", "situated below", shows that it is just the reverse that is the case. Ptolemy separates geographically the frankincense region and the homes of the Kahtâbani. Sprenger (p. 209 etc.), from his likewise erroneous point of view, has difficulty with the statement that the Kahtâbâni in the time of Ptolemy were "out of this possession" (cf. the article Kâthâbân).

In agreement with the Arabic sources, Ptolemy introduces us to a period of progressive decline of Saba'. The occasional mentions of Saba' in the Greek toponymographers of the first centuries A.D. are of no independent value. The name Saba' disappears from Greek and Roman literature from the end of the fourth century A.D. After this date we only have an occasional isolated reference to the Homeritos, whose name became gradually applied to the whole of South Arabia.

Only half a century ago, Sprenger (cf. cit., p. 246) was able to say that the Greeks and Pliny were the only sources that gave us information regarding the Sabaens. Our knowledge of the history of ancient South Arabia which, until quite recently, could only be supplemented by a little by the isolated references in the Old Testament and the Arabic inscriptions, became insufficient, because utterly unlike materialistic, traditions of the Arabs, was increased in an extraordinary fashion by finds of inscriptions, principally in South Arabia, and the increasing progress in the study of the ancient history of the east has also thrown new light on the history of Saba'.

Yet the explorer Glaser (cf. cit., p. 159), famous for his epigraphical finds, does not hesitate to say that the correct interpretation of the few statements in the classical authors is no less necessary than the elucidation of the inscriptions of Saba', and that the latter and the passages in classical writers supplement and explain one another. In any case we must not lose a sense of perspective in face of the decisive importance of the inscriptions for the study of political and cultural history; being the only direct historical source they form our most important material for a reconstruction of the past of Saba' and South Arabia generally. The history of the opening of this rich and still unexhumed mine of material for research is associated with very few names. Carsten Niebuhr, a member of the expedition sent out by the Danish government in 1763, who travelled through South Arabia from Lobanya to Mokha, Ta'izz and Ṣan'a', being more particularly engaged in geographical, ethnographical and natural history work, first reported, as the result of enquiries, the existence of old inscriptions in the ruins of Zafir (south-west of Yamin) near Ṣan'a' (Beschreibung von Arabien, Copenhagen 1772, p. 94), without having seen the text itself, except for a copy of an inscription which a Dutchman had sent him; after him the first knowledge of South Arabian inscriptions was brought to Europe by Seetzen, a native of Oldenburg, who, stirred by Niebuhr's information, copied inscriptions in and around Zafir on his return from Ṣan'a' to Aaden (1810). The copies sent by him to Europe of five short, unimportant, Sabean texts were published in 1811 and, though at first not understood, formed the humble beginning of the science of Sabean studies, the future importance of which was as yet quite unrealised. Further progress was made by Wellsted (1834/5): (discovery of the inscription of Ḥim al-Qurâbah on the Ḥadâsmût coast and of Ṣan'ā'), both Englishmen, by Weede (1843); but the report of his travels in Ḥadâsmût and the copy of the Ḥadâsmût inscription of Obâne were only published in 1870 from his papers after his death by Malraux and others, among whom special mention must be made of Arnaud who in 1843 was the first European to visit Ḍür and to pave the way for later more successful discoveries (ignorantly by Glaser, Petersmann's Mitteln, 1857, p. 27), and there as well as in Ṣan'a' and Ṣirâh prepared copies of 56 inscriptions in all, mainly short ones. A valuable addition to our knowledge was the acquisition of inscribed stones and bronze plates from Ṣamrah by Choghlân (1860). Gesenius (1841), Rödiger (1841, 1842) and Olsander (1856, 1862) then gained renown by deciphering and elucidating the material found. The Eben Sâfîr is only of importance as a description of Yemen; this is the Hebrew account of the travels of Jacob Saphir (1, 1861; ii, 1866) who went from al-Ḥodâdah via Ṣan'a' to Ṣamrah and then back to Aaden; the book was first made generally known through D. H. Müller (Burgers, i. 6, vii) and formed a kind of guide-book for Hâlêve. A new epoch in the study of inscriptions is marked by the rich results of the memorable journey of Jos. Halevé, who, one may say, was the first European since Adkins Gallas to succeed (in 1856) in travelling from Ṣamrah right up to the Wiht Nadâm and entering the land of the South Arabian Tīsîr, the centre of the ancient Minean country, and visiting several very ancient Arabian sites, rich in inscriptions, which so far no other European since him has seen. The con-
cretic scientific yield of this journey of exploration, not sufficiently appreciated by his immediate contemporaries, consisted of 686 copies of inscriptions of which about 50 (some 30 Muzenian) were fairly long (published in the J. As., 1872), the most important addition to our store of inscriptions yet made, which, marking a tremendous advance on the initial stages, helped to lay the true scientific foundation for Sabean research and the knowledge of the sources for the study of the ancient history of South Arabia. Some new inscriptions were made known through the 'Journey to Sabæa' (Werner Munthe) in the Wldh Maflsâ' (1870). The travels of Heinrich von Maltzan (1870), in the coast regions of Yemen and Hadramaut, Millingen, (1873, from al-Idhâdâ to San as), K. Mazzoni (1877—80, between 'Ain Sanâ and al-Idhâdâ), Schaepia (1879, from 'Ain to San as) and district and back to al-Idhâdâ) and Harris's more recent journey through the Yemen (London 1893) are not of interest from the epigraphical point of view but from the geographical; Mazzoni's work and Maltzan's later contributions are also valuable for the study of dialects. The Austrian S. Langer (1882), who sacrificed his life to the investigation of his subject, travelled from al-Idhâdâ first to San as, then to 'Ain, as did Sceetazen before him and Huber after him, gained copies of 32 inscriptions (Nos. 19—32 only odd letters). Further details of the history of discovery in Arabia are given in Weber's monographs, Arabien vor dem Islam, p. 109 sqq. (which also contains information regarding the history of civilization and religion, contents, alphabets and language of the inscriptions) and more especially his Forschungen in Südara in zum Aufriete Edward Glaser's Uber Alt Orient, viii, 4, 1907 and Hommel's account in Hilprecht's Explorationes, p. 644 sqq. (see also his Christomathia, p. 63 sqq. with bibliography). A new era in this branch of research was introduced by the Arabian travels of the Austrian Glaser whose epigraphic discoveries (in all over 2,000 inscriptions) far surpassed all previous efforts in this field. D. H. Müller's prophecy (Bergen, I. 340): "There will still be courageous men, who will place themselves in the service of science and undertake the exploration of the country and collection of inscriptions", was realised in Glaser in an undreamed-of fashion. On his first three journeys alone, 1882—1884 (from al-Idhâdâ to San as) and from there three tours of exploration north and west from this neighbourhood, 1885—6 (from al-Idhâdâ to San as and back to the south-eastern coast as far as 'Ain, exploration of the ruins of Zafrâ), 1887-8 (from 'Ain to San as) and thence to Maflsâ', where alone he copied nearly 400 inscriptions, while Arnaud and Halévy together only got 44 copies mostly of small fragments), he enriched our knowledge by some 1032 inscriptions, by sketch maps and philiological observations and some 616 Arabic manuscripts. A portion of the manuscripts was published by the French Academy (C. T. S., I, IV, I—III), numerous inscribed stones (mostly Muzenian) are in London, others in Berlin (published by Mordtmann in 1893). The manuscripts for the most part went to the British Museum ('See C. R. R. Suppl. to the Cat. of Arcaic MSS. in the B. M., London 1894). Of his epigraphical discoveries Special mention may be made of the Hâdâsh inscription, one of the most important historical documents from South Arabia (on his fourth journey he brought back a further and perfect squeeze of it), and the two great inscriptions from Maflsâ' relating to the burning of the dam. His fourth journey was the most successful (1892—1894, from 'Ain to San as), from which natives were sent out to prepare squeezes; among the new inscriptions were nearly 100 Kâthânian, linguistic studies; acquisition of 251 Arabic manuscripts. A portion of the treasures acquired for Vienna, a valuable collection of 39 inscribed stones, coins, numerous sculptures and other antiquities, was published by D. H. Müller. Further particulars are given by Weber in Edward Glaser's Forschungen in Südarabien in Der Alt Orient, II., 2, 1909 (cf. Hommel, Explorationes, p. 717, 720 sqq.). Glaser could not make further use of the opportunity he still had for further journeys and discoveries because he no longer found the necessary comprehension of the importance of scientific work at the Ministry concerned. Immeasurable treasures were thus irreversibly lost to science. Working on the epigraphical material that has been gradually made known since Halévy's time, Halévy, Pretorius, Mordtmann, D. H. Müller, Glaser and others (for details see Bibliography) have made important contributions to the elucidation of the language and contents of the inscriptions. As to later journeys of exploration in South Arabia, A. Deiter's journey in Yemen in 1887 was only planned to study botany. L. Hirsch, who in 1893 was, so far as we know, the first European to visit Shibân, the modern capital of Hadramaut, and Tarïm, was only studying natural history, with toponomy and ethnography. Soon after him in 1893—4, J. Théodore Bent, whose wife travelled in Hadramaut as far as Shibân and in 1895 in the frankincense country (Zafrâ to Mirbat), likewise without being particularly interested in epigraphy, Carlo Landberg in 1896 took a squeeze and photograph of the already known inscription of Hijâj al-Churgh; the results of his enquiries made in 'Ain in 1895—97 regarding previously little known regions between Yemen proper and Hadramaut, particularly regarding Dathina, 'Awâli, al-Islâm and also regarding Bainân, Matyama, Kailâm, Harib, Timam and even Shibân are given in his valuable work Arabica (IV. and V.). The South Arabian expedition of the Vienna Academy in 1898—9, which was also supported by the King of Sweden, only succeeded in reaching 'Azâz in the Wldh Maflsâ' and did not get to Shibân. While the epigraphical results of this expedition fell below expectations, its members took the opportunity in 1899 of making linguistic and natural history researches on the island of Socotra (see Brotex) (G. W. Hury, who went to Baihân on behalf of the expedition, brought back from Kohlân (Katah) squeezes and photographs of inscriptions). In 1902 W. Hein collected linguistic material in Gâilân in Hadramaut on behalf of the Vienna Academy and, at the same time, collected information there and later in Vienna from natives regarding Hadramaut. His collected notes, published without any editing in 1914 after his death, contain much that is new and noteworthy. Hartwig Derenbourg was able from squeezes obtained by the French Academy to publish a few Nouveaux textes yéménites inédits in the Rev. d'Asyri. et d'Arch. Or., v. 117 sqq.
Glaser's finds, epoch-making of their kind, are not yet completely published (a survey of the inscriptions discovered by Glaser was given so far as they are known by Hommel, *Chronologie*, pp. 59—62; see also Glaser, *Algemeene Nieuwsbrieven*, i. 1908, i. A 82). The great work prepared by him on Sabaean (announced, for example, in Hommel, *Explorations*, p. 722, and Weber, *Glaser Forschungen*, p. 11, on Glaser's authority) has not yet been published. The great mass of documents left by him (consisting of copies of about 1,000 inscriptions, paleographical notes, diaries, sketches and maps), the importance of which may be summed up by saying that it is the first duty of Sabaean studies to arrange them methodically and publish them scientifically, was handed over to D. H. Müller to edit. But neither was he spared to publish this material. After his death in 1910, N. Rhodokanakis in Graz was given the task. The latter calls his treatise *Der Grundriss der Öffentlichkeit in den südaborischen Urkunden* (S. B. Ak. Wien, cxlvii. Abh. 2, 1915; interpretation of inscr. Glaser No. 390 = Halévy 49, Gl. 904 = Halévy 51, Gl. 1548 b [Sabaean], Gl. 1549 b [Katabani], and Osliander 4, with systematic discussion of the forms of date, ownership and legislation raised by the inscriptions) the first preliminary study to the *Corpus Glaserianum*, the publication of which the Vienna Academy has in hand; he describes as a second preliminary study the first part of his *Studien zur Lexigraphie und Grammatik des Abgorischen* (S. B. Ak. Wien, cxlvii. Abh. 4, 1915; explanation of passages in the Habib inscription, Glaser 1976 and Gl. 480 [cf. above] and especially a grammatical essay on the so-called parasitic a in South Arabic, for the phonetic explanation of which he postulates a double accent in Minaean-Sabaean; the appendix contains annotations to various inscriptions). Next came his *Die Bodenwirtschaft im alten Südarabien* (Am. Ab. Wien, 1916, No. xxvi., a survey of the results of the researches contained in the second part of his *Studien zur Lexigraphie etc.*) and the second part itself (S. B. Ab. Wien, clxxx. Abh. 3, 1917; discussion of Minaean-Sabaean inscriptions relating to buildings, boundaries and irrigation, and of inscriptions relating to agriculture with explanatory notes on the dedication and erection of buildings, on legal questions relating to water supplies and the possession of land, on taxation and administration). The next three publications of Rhodokanakis contain hitherto unpublished Katabani inscriptions: *Katabaniische Texte zur Bodenwirtschaft* (S. B. Ab. Wien, clxxiv. Abh. 2, 1923; five inscriptions from the Glaser collection; list of Katabani kings on the management of state properties, with a thorough investigation, into Katabani economy and administration) and *Katabaniische Texte zur Bodenwirtschaft. Series 2* (S. B. Ab. Wien, cxviii. Abh. 2, 1922; three inscriptions with far-reaching investigations, particularly as regards thethrill, Glaser 1603 [concerning date, location and character of the language of the text] with observations on the Hamanida and dynasties in South Arabia, especially on the Katabani and, lastly *Die Inschrift an der Mauer von König- Timna* (S. B. A. Wien, cc. Abb. 2, 1924; discussion of the inscription Glaser 1404 [remains of a building protocol]), 1397 a. [criminal and taxation law] and, to explain the makhribi title among the Katabani
A survey of the essential points in the lively controversy raised by Glaser's bold proposals has been given by Weber, *Studien*, I., and he has at the same time collected everything that seems to support Glaser. Immediately after the appearance of the first part of Glaser's *Skinne*, Halévy, in his objections to this Minæan theory; D. H. Müller than reiterated his views (*Beihefte zur Monats-zeitung*, 1890, Nov. 24 and 31; *W.Z.K.M.*, iv. 6, 161). The following also declared themselves against Glaser: Mordtmann (*Anzeige*, p. 182 sq.; *Z.D.M.G.*, xxvii. 400; *Revue*, p. 105 sq., 115); Spranger, *Bemerkungen*, p. 50 sq.; E. Meyer, *Geschichte d. Alterthums*, ii. 382; Lagrange in the *Revue hist.*, 1902, xi. 256 sq.; Lichthein, *Ephemeris f. semit. Epigraphik*, i. 101 sq.; Hartmann, *Z. A., x. 25 sq.* and in his main work, p. 4, 131 sq.; Hartn, *Geschichte der Araber*, i. 46 sq. etc. Meyer further pointed out that all previous inscriptions regarding the history of the Semitic alphabet would be upset by Glaser's placing the Minæan inscriptions in the second millennium B.C. We can hardly place the origin of the Phœnician alphabet before 1000 B.C.; the date of origin of the Minæan script, which is characterized by the regular, almost technical formation of geometrical figures, is certainly not earlier. This seems at once to take the ground from Glaser's theory. We must describe the dating of this alphabet to 2000 B.C. (Hommel, *Grundriß*, p. 109, 146; Weber, *Wort-lexikon*, p. 163; cf. Hommel, *Exploration*, p. 730) or even "at the latest far back into the third millennium" (Weber, *Arabien*, p. 15), as a quite improbable hypothesis, in spite of all that has been ascertained in recent time ranging the oldest form of the Hebrew alphabet. Nor have the speculations regarding the South Arabian epigraphy which have been renewed by the discovery of what are known as the Kenmite Sinai inscriptions led to anything. Against the views of Hommel, Weber, Winckler, etc. Hartn also says regarding the supposed age of the alphabet that the date 1500 B.C. is certainly much too high for the period of Minæan rule.

Greek-Roman tradition also affords arguments on the Minæan question, notably the above quoted testimony of Eristosthenes in *Stobaei*, xvi. 768, which has already been cited against Glaser by Halévy, D. H. Müller and others and of which Mordtmann has said that he cannot see how this passage is to be explained away. Weber, *op. cit.*, p. 9 betrays the precariousness of his case when he says that he must assume without giving any reason that Eristosthenes was probably "mistaken"; i. e., in his account true and false, past and present conditions are confused. Glaser, *op. cit.*, p. 15 had previously sought to dispose of the contradiction between his views and the clear evidence of Eristosthenes by asserting without proof that the latter was wrongly informed. For the interpretation of this passage, for suspecting which neither Glaser nor Weber gives any ground of proof or probability and, indeed, none can be given, it is decisive that according to it all four leading South Arabian peoples— including, of course, the Minæans whose author mentions first, as well as the Sabæans and the other two— were under absolute rulers (*monarkhës*). The fact that Eristosthenes gives for the time of his authority irrefutably the same kind of constitution, namely the real, for Minæans and for Sabæans, cannot be disposed of by any artifice. It also shows what value there is in Glaser's assertion (Weber, *op. cit.*, p. 7 sq.). *That the classical authors nowhere mention a kingdom, but always only a land of Minæa*, or in Winckler's
(op. cit., p. 453) statement that between 500 and 200 B.C., there were no Minaeans in North Arabia because there had never been any at any time. 

Grimme's doubts (op. cit., p. 17) as to whether the Minaeans of the Greeks are the people in question in the inscriptions are also unfounded.

Glasier's theory in the circumstance is also decisive (cf. Hartmann, op. cit., p. 137 n. 156) that, as we can deduce with absolute certainty from the mention of kings and kingdoms together in the inscriptions, there were kings of Mina' and kings of Saba' reigning alongside of one another. To Glasier's argument that the two kingdoms practically never mention each other in their inscriptions, even Weber (op. cit., p. 18) was forced to confess that *the Minaeans actually brought themselves on two or three occasions to break the mysterious silence*, and the Sabaeans likewise. But this means confessing the impossibility of holding this theory in any form.

Glasier's view that the Minaeans had already begun to decline soon after the Hyksos period (op. cit., p. 453) and had sunk into barbarism towards the end of the first century B.C. (p. 226, 69, 93, 95, 232), or were actually an extinct people (Weber, Archief, p. 31) is disposed of by the statement of Artemidoro (Strabo, xvii, 776f.) and extracts by others from Agatharchides (§ 87, 97, in the middle) on the commercial activity and the wealth of the Minaeans and further by Pliny's statement regarding their independent position - along side of Saba' and their competition with the Sabaeans in the frankincense trade (see above), which is more palpably by the significant fact that Procopius calls the Minaeans alone *a very great people* out of all the peoples of Southern Arabia.

The inscription of the Minaean sarcocephalus of Gis, which shows that Minaeans were still supplying spices for the Egyptian temples in the Ptolemaic period, and the Minaean and Greek inscription on Delos of the second century B.C., which records the erection of an altar to Minaean gods, are likewise, as Praetorius has rightly observed (Z. D. M. G., ii. 114, 220), unfavourable to Glasier's theory, and, agreeing with the Greek and Roman evidence, are proofs that the people, language and culture of the Minaeans survived into the second century B.C. and certainly to a still later period.

The palaeography and grammar of the inscriptions likewise give no support to the Minaean theory. D. H. Müller was the first to point out that the Sabaeans inscriptions those written hystrophedon belong to the oldest period of Sabean history and at the same time show the earliest forms of letters. Contradicting Hommel's (A. A., p. 22 sqq. Christomathis, p. 2, 6) suggestion that the Minaean inscriptions are older in grammar and epigraphy than the Sabaeans, Mortd- mann (Beiträge, p. 107) held that the Minaean inscriptions that have survived to us are later than the oldest Sabean texts and older than the Sabean texts of the later period (ibid. p. xiv, note 2) and that Hommel's deductions from the palaeography of the Minaeans inscriptions were very wide of the mark.

He also insisted (op. cit., p. 106, Z. D. M. G., vii. 400) that the fact that only one of the extent (or so far known) Minaean inscriptions is written hystrophedon, is not very much in favour of the claim for a very high antiquity for these inscriptions in contrast to the Sabaeans. It must, of course, be remembered that there are texts written hystrophedon which are later than normal ones written from right to left. But although the Minaeans alphabet may show occasional less developed forms, it is recognised (e. g. by Weber, p. 17) that the forms of the Minaean letters on the whole agree perfectly with the Sabaeans of the earlier period. In spite of the archaic features of the Minaean language in comparison with the Sabaeans (on the dialectical distinctions between the two see D. H. Müller, Burgos, p. 128), specially thorough, especially from the lexical point of view, is Morttmann, op. cit., p. 107, Z. D. M. G., xlii. 400. Hommel, Grundzüge, p. 153, note 31, Hommel, A. A., p. 23, asserted that the Minaean inscriptions might nevertheless be later than the Sabaeans or contemporary with them, as in other forms - as happens elsewhere - might have survived into the latest period (see also Morttmann, p. 115 on the more conservative retention of the older vocabulary in Minaean and (p. xii.) of archaic forms of the script); we need not take account of mixed forms of earlier and later periods occurring in one and the same text.

None of the grounds on which Glasier bases his theory are conclusive (they are detailed in Weber, op. cit., p. 7). That Sabaeans are so often mentioned in Minaean texts and Minaeans even more rarely in Sabaean sources, facts on which Glasier and his supporters lay so much stress, is explained partly from the relations of the two rivals (D. H. Müller, Burgos, p. 1037; Hartmann, op. cit., p. 135), partly from the fact that the "subject matter of the inscriptions, which are not in any sense annals, afford little opportunity for mentioning such matters" (Morttmann, op. cit., p. 115, note 1), as the texts preserved from this period deal mainly with the buildings and religious matters, being occasional or ad hoc inscriptions, and only rarely touch on foreign affairs (Lidsbaski, op. cit., p. 1062). But these few references are quite sufficient to settle the main question. It is noteworthy that, although Grimne (op. cit., p. 17) still proposed to put the date of the first Minaeans kings far beyond 1500 B.C., other champions of this theory, in calculating the earliest initial date for the Minaean kingdom, have now gone in the other direction and put it much below Glasier's figure. While Weinckler in the first edition of Helmont's Westen, p. 244 still held that the Minaean period could hardly have begun after 1500 B.C. (cf. p. 245), Weber significantly wrote in the second edition in the same passage (p. 235) "hardly after 1200 B.C." (cf. p. 237, "from about 1500 B.C."). Hommel, although he still put the collapse of the Minaean kingdom about 650 B.C. (ibid., p. 396), and, according to him, the South Arabian (p. 394) inscriptions begin from at least 800 B.C., but more probably many centuries earlier, also later (ibid. 399, 399 a B.C.), says that Glasier's assumption would place the placing of the Minaean kingdom from 1200 to 700 B.C. at least (in Explanations, p. 729) that at most it may be granted that *the oldest Sabaeans inscriptions were contemporary with the latest Minaeans* (above l. 399 a B.C.). On Weber's clever defence, Lidsbaski (p. 104) says that it will hardly gain further adherents for the Minaean theory and Weber himself has to confess (Glasier...
At the theory, in perfect agreement with the Greek and Roman authorities and the ancient South Arabian sources, most readily agreeing with them, and following D. H. Müller, we must insist that the kingdom of Ma'in existed contemporaneously with that of Saba' and at the very earliest began in the eighth century B.C. (see, for example, Mordtmann in W.Z. K. M., viii. 371; Hartmann, op. cit., p. 152 etc.). Its end did not come about 316 B.C. (as Hartmann, op. cit., xxxv. 321 dates it), but must be dated a little later, probably about 220 B.C. (cf. Ptolemy, Erythraea, 326). This is the Christian era, which is in agreement with the ancient and the Islamic sources. The kingdom of Saba' had its first capital at Ma'in, and the ruling house of the dynasty of the kings of Ma'in was the same as that of the kings of Saba'.

Therefore, it is clear that the kingdom of Ma'in existed contemporaneously with that of Saba'.

The period of transition from its oldest period, the so-called nakarrir period, the period of the priest-kings and the next epoch, whose rulers residing in Ma'rib, contemporaries of the kings of Ma'in and Hadramot, bear the title 'kings of Saba' (expressing the emancipation of the kingship from the priesthood) and whose beginning may be placed about 500 B.C., is represented for us by the great Sirwah inscription (Glaser, No. 1006). The following (the Himyarite) period, that of the 'kings of Saba' and Hadramot (from the hill or ancestral citadel of Ridad, the name occurs in Sanskrit as a Dvaripālas) in the second period of the Malakāhara) and the last period (from 300 A.D. to the end of the independence of Hadramot, and the 'kings of Saba' and Hadramot and Yemeni') have been sketched above.

At the period of the rise of Islam, Saba' was beginning to disappear from the memory of the Arab world. For Islam, which kindled new wars in the land and brought about the final collapse of the ancient, the decline of which had been by the Persians and Abyssinians, Saba' soon became an echo of the past; indeed, the name of the Sabean or Saba' period, with which only scholars, still concerned themselves.

The new creed had the greatest interest in obliterating all recollection of the pagan period, not only in the stone monuments which still survived, but also in literature, and even in consigning the ancient language to oblivion. This explains why, as Sprenger (op. cit., p. 244) rightly remarks, it would be useless labour to seek for any reliable information regarding the Sabaeans in Arabic sources. The relative value of the various sources for our knowledge of Saba' was examined with equal accuracy by the most successful discoverer of inscriptions (Glaser, Sibiya, I. 159) in his verdict that it was not the legendary tradition of the Arab, containing very little matter of value and usually misleading, and not the poetry of the time shortly before and after Muhammad, which would give us a true picture of the past, but 'simply and solely the ancient inscriptions and the few statements in the classical authors'. The relatively scanty references in Arabic authors may be divided for our purpose into two main groups. The one consists of valuable geographical and historical statements regarding architectural remains of Saba's past and details of ancient Sabean history, including archaeological matter and the other far less valuable legendary elements, which survived in tradition after the disappearance of Sabean culture which has nearer in point of time. The supreme author for the location of the first category, who, of all Muslim authors, gives us the most minute and most valuable items of information regarding Saba', is al-Hamdani whose 'Description of the Peninsula of Arabia' is our main literary source for the geography of Arabia in general and who (he was a Yemen, a native of Saw') out of patriotic interest in the old buildings and other antiquities of South Arabia which still existed in his time, has collected everything associated with them, often, indeed, already interwoven with legends in his Jall, a history of Yemen and a description of its antiquities. The part of the eighth book of the Jall, which still exists, describing the citadels was, edited for the first time (Arabic text and German translation with explanatory notes) by D. H. Müller (Die Burgen und Schlösser Süd-Arabiens nebst einem Teil des Hadramaut, S. 172, Al-Wehr, 1877, xvii, 335 sqq. and xxxv, 1897, p. 953 sqq.), who added additional notes from the tenth book, which deals with the genealogy of the Hadram, as well as illuminating passages from the Sefa Qishārat al-'Arab, Part I, given in the first place al-Hamdani's account of Quhmadan and Saw'; al-Hamdani quotes verses on Quhmadan and then gives the story of the foundation of the building by Shem and South Arabian traditions regarding Saw'; he goes on to give further information regarding the population of the country, the preservation of food in it; details regarding the topography of Saw', the ruins of the citadel of Quhmadan, and quotes verses relating to it, which reflect the legends clinging to the castle as a wonder of architecture. He went on to deal with Shibān-Yabhūm, the old monuments and great palaces in Shibān, Shīhām, Bait Akūṣa (cf. the descriptions in the Qishārat and Yakhū, Meдоров, iv. 437, iii. 248 sqq.). Next comes the district of Daher, Bait Ḥanaba (cf. al-Bakrī, ed. Wöntenfeld, p. 196 and the Qishārat), Ḥadrasan and Kūdā, Sirwā to one of the most celebrated castles of Yemen (verses are quoted), Ghazān (the Himyar tradition regarding Ḥaḍrāb, quoted, given in full in Kremer, op. cit., p. 86 sqq.), Dūmūgh, Zafīt, and other citadels. This is followed by a short list of the citadels of Sawr (highlands of the Himyars) and Hadramot. Al-Hamdani's description of Ma'rib and Saba', is important for its subject matter, on the basis of which Müller (in Part II) endeavours on several points to throw a light on ancient Saba' and in particular to show that it is the inscriptions which must be relied on for the reconstruction of the lists of Sabean kings, rather than the statements of Arab tradition. Al-Hamdani's description deals with the state of the remains of the dam, the inundation which spoiled the dam, the citadels of Ma'rib (with quotations from the poets). Al-Hamdani's unhistorical statements regarding the builders of the dam (Lāḥmīn, b. ʿAd, a mythical personage) are corrected by the evidence of the inscriptions which mention Ḥadrami b. Bāṣir as the builder. It is worthy of note that Arnaud's description of the remains of the dam and Halévy's report agree with al-Hamdani's account in the main details. Of
the Yemetic citadel of Rauhika (between al-Djṣf and Mr ’ib) al-Hamadani says that it at one time belonged to the family of the Naṣāḥ (on which he also gives information in the tenth book; following him also Naṣāḥ, Glaser, al-Mullār; Müller, p. 10, note 3). In the Minaean era he mentions the citadels of Banakūš and Ma’mūn (with quotations from the poets).

The Eṣārah also contains geographical details regarding the territory of Saba’, which, however, no more enables us to form a comprehensive impression than the scattered notices in later Arabic geographers, because they consist almost entirely of isolated names; and it is difficult to form a general idea from them. D. H. Müller, in editing the text (2 vols., Leiden 1889-1951) had therefore to struggle with extraordinary difficulties. Glaser, who, like Sprenger before him, had made very great use of al-Hamadani, was later able to test the readings of this edition on the spot for the areas in which he travelled from his own observations and the evidence of natives.

The few memories of the history of the Sabean period that have survived in the prose or poetic traditions of the Arabs are beyond the range of our consideration, as they have more or less assumed the form of legend. A. v. Kremer, op. cit. (cf. his Altäthiatische Gedichte über die Völkerung von Jemen, Leipzig 1867), has collected the essential matter on the subject. In tradition also we find analogies to the Greek stories (cf. e.g. von Kremer, p. 350 on Ḥūl Fāsh), the building of the dam of Ma ’īl and at least some improvement was attributed to Queen Bīlāb (cf. above); legends also became associated with the foundation. In the division of the pre-Muḥamadan history of Yemen in the Arab historians into three periods (the first down to Tāhba’ Aḥ ṣ Karibi, the second to Dīḥ Nuwaṣ and the third to Ismā’ils) still reflects the actual division into Sabean, Himyarite and Abyssinian-Persian epochs (Müller, Dārjūn, i. 338). Even the lists of Himyarite kings preserved by these historians have no scientific value and at most give us a few old names which were adopted by the genealogists, but can have no claim to historical accuracy. Besides, these lists of kings refer only to the later period of Himyarite history (ibid. ii. 981, 997).

More important for us are the items of information found in Muslim literature regarding the social and economic life of ancient and more modern Saba’, which link up with the inscriptions and Graeco-Roman sources. The finds made in the country itself are in harmony with the various classical literary sources, which agree in showing that the Sabaeans attained the greatest importance of all Arab peoples of the pre-Muḥamadan period, in particular of the four leading peoples of South Arabia who were known even to the Greeks; these still extant monuments of the once highly developed civilization, to which Sabaeans mainly owed its historical importance, consist of the inscriptions found since Arman’s journey of exploration, sculptures and remains of colonnades, palaces, temples, city-walls, towers, public works, especially water-works etc., which confirm the brilliant picture of Sabaean culture given by Agatharchides and the writers after him (see above) at the same time show that even the legends of Islamic tradition concerning the former glory of the Himyaric kingdom have a historical basis.

Striking evidence of this in Arabic literature is the above mentioned description of Ghmaidin in al-Hamadani and the poetic references to this much admired citadel (see Müller, Dārjūn, i. 345 sqq.) as well as to other citadels in Saba’, e.g. Salṭūn and Batrūn. Agatharchides’ remarks on the splendid buildings of the kings and private individuals in Saba’ and the descriptions of Sabean castles by the Arabs are confirmed by the testimony of the inscriptions, which to a great extent corroborate the building of houses (palaces) and fortifications. Of public works built to assist agriculture like barrages and dams, the most celebrated was the dam of Ma’mūn. The ancient South Arabians achieved great things in the way of irrigation works in view of the dependence of their agriculture on artificial irrigation. In the South Arabian inscriptions these are frequently mentioned (cf. the references collected by Hartmann, op. cit., p. 356 sq. and the discussions in Rhodokanakis, Simlar, ii. (e.g. p. 78 sq. etc.). Citizens of the Himyar period may still be seen in South Arabia to-day.

This civilization, on which since Arman’s time the finds and observations of Halyvry and especially of Glaser have thrown new light, owed its rise to the industry and commerce of the Sabaeans, in particular to the cultivation of frankincense, the land offered all the necessary conditions for its cultivation. According to al-Hamadani (Dārjūn, p. 51, 4) Yemen was called al-Khajah “the green”, on account of its wealth in trees, fruits and crops (cf. Ibn al-Faṣḥ, Kitāb al-Buldan, II A. vi. 34). Even Agatharchides’ description of the richness of the flora of Saba’ is quite satisfactorily explained by the natural formation of the country. The healthy, temperate interior of Yemen and Hadramawt produces a rich vegetation on the slopes of the hills and in the valleys. Accounts of modern journeys also bear testimony to the fertility of the soil of Yemen, and also to illumination in its woods, al-Mas’udī’s description is quoted by older authorities, of Saba’ as “the most luxuriant and most fertile part of Yemen, rich in gardens, plantations and meadows”, with a “splendid climate” (cf. Kremer, op. cit., p. 10, note 1) is in close keeping with Agatharchides’ praise of the wealth of Saba’.

The uniformity of the temperature in the region of Saba’ is emphasized by al-Hamadani (Müller, Dārjūn, i. 343). Glaser and other travellers record that the temperature of the higher regions of Yemen is temperate and favourable to vegetation.

A parallel to the statement of Agatharchides that the Sabaeans provided the Ptolemies and Syrians with gold and the Phoenicians with costly wares of the most varied kinds, is found in the Biblical passages already mentioned, relating to the Sabaeans exports of frankincense, gold and jewels to Egypt and Syria. South Arabia from the earliest times had been the very land of frankincense and the Sabaeans in particular, as inhabitants of the most fertile parts of the southern part of Yemen and owners of the frankincense country, were naturally destined to trade especially in spices. This trade — expressed in Strabo (xvi. iv. § 19, 22) — that the trade in spices was the source of the wealth of the Sabaeans is already found in 1 Kings, x. 4 sq. Adana was the great centre for trade with India and Egypt (Babason’s Agamem,
Bibliography: Of the literature to be consulted, the sources have already been quoted in the article, especially the inscriptions (the main collection is the Paia Corpus Inscriptionum Semitic), iv) and the principal historical, geographical and linguistic works: Spranger, Geographie; D. H. Müller, Burgus and Schlosser, Hommel, 1) Auffiisse und Abhandlungen (3 parts, 1892-1901), 2) Christomathie, 3) Explorations in Arabia, 4) Grundzüge; Glaser, Skizze, ii. (Part i. of the year 1889 was published privately); J. H. Mordtmann-D. H. Müller, Sabaische Denkmäler, Vienna 1883; J. H. Mordtmann, Beiträge zur minoisch-eggipraphik (Semitic, Studien, ed. by C. Besold, part 12, Weimar 1897); M. Hartmann, Die arabische Frage; Otto Weber's monographs (on Arabia and journeys of exploration in Der Alt Orient) and Studien zur sudarabischen Literatur; M. Schick, Mitt. d. deut. Akad. d. Wiss. in Berlin, 1907); Rodokanakis, Abhandlungen, also Kreutzer's two works and Landberg's Arabien, Leiden 1897, 1898; and of Arabic literature al-Hamduil's Dli und Difa liqatul al-Arab (in D. H. Müller's edition). An almost complete bibliography of the antiquities of South Arabia (including Sokotra) from 1774 to 1892 was given by Hommel in his Christomathie (p. 63-88) and a continuation (down to 1907) by Weber (Studien, iii. 1908, where on p. 70 he promised supplements to Hommel; some are given below). Here we must confine ourselves to quoting books and articles which, in their successive progressions, illumine the investigation of the land and people of Saba', and to more recent literature (since 1909) and for the hundreds of special articles, mainly linguistic in their nature, and for the publication and interpretation of separate inscriptions we must refer the reader to these two collections and to the reviews in the Z. D. M. G. (from 1908 onwards). Of traveller's narratives we may here mention: Auszug aus einem Briefe... (Weber's An Herrn v. Hommel with a plate) in the Fundgruben des Orient, ii. Vienna 1811, p. 275 sqq.; J. R. Wellsted, 1) Account... (1 plate), J. A. R. S., iii. (1834), 554 sqq.; 2) Narrative of a Journey... to the ruins of Nabab al-Hajar (1 plate) in the J. R. Geogr. Soc., 1837, vili. 20 sqq.;, Travels in Arabia, London 1838; Wellsted's Reisen in Arabien, Germ. edit. etc. by E. Rödiger, Halle 1842; Carter, Transactions of the A. S. B., 1834, C. J. Cuttenden, 1) Narrative of a Journey from Mohil to Sandi (1 plate), J. R. Geogr. Soc., 1838, viii. 267 sqq.; 2) Journal of an Excursion to Sandi... (5 plates), J. R. Geogr. Soc., 1838; P. Bott, Relation d'un voyage dans l'Yemen, Paris 1843, Th. S. Arman, Relation d'un voyage dans l'Yemen, Paris 1845, F. A., 1845, series 3, vol. vi. 386 sqq.; Lettre de M. de Wrede dans la vallee de Doam, J. A., 1843, series 4, vol. vi. 386 sqq.; A. M. de Wrede... sur son voyage en Arabie, Bull. de la Soc. de Geogr., 1843, series 3, vol.
ancient Sabaean-Ifriyiyah kingdom which roughly corresponds to the modern Yemen (from about 9th N. Lat., Jebel Tathlit, to the south coast and in the east as far as Harna): Zwemer, Arabia, Chicago 1901; Raif Fuad-Bey, und Leute im heutigen Yemen in Peter Mitt., 1912, iviii... part 2; E. Behrens, Yemen, Grund- sätze der Bodenkultur und ihr Einfluss auf Klima und Lebenswelt, Diss. Marburg 1910, apart from meteorological, astronomical and natural history researches and several monographs by Glaser, Bent and others. W. Schmidl's and A. Großmann's books have been already mentioned. On commercial activity on the south coast at the present day information is given by the Report of the Aden Chamber of Commerce (Aden from 1898 onwards). To the works mentioned in the beginning of the bibliography we may here add the following: J. Halévy, Études Sâbêennes, J. A., 1873, series 7, vol. iii.; R. Chome, Arabien and die Araber seit 200 Jahren, Halle 1875; D. H. Müller, 1) Südarabisch-Studien, Diss. R. Ab. Wien, 1877, lxxvii. 193 sqq., 2) Epigraphische Denkmäler aus Abessinien, Denkm. Ab. Wien, xliii. (1894); E. Glaser, 1) Zwei Inschriften über den Dammbruch von Mârly, M. V. A. G., 1897, 2) Altjesothische Nachrichten, Munich 1908, 3) Die Abessinier in Arabien, Munich 1895, 2) Part and the südarabischen Reiche, M. V. A. G., 1899, p. 51 sqq.; H. Grümme, Mohammed, Munich 1904; Hogarth, The Penetration of Arabia, London 1905; J. Teix, Saba (R. E., s. v., cols. 1298-1511) where this material has been dealt with by me with special reference to Greek and Roman literature.

The earlier publications of inscriptions (Bird, Fresnel [to supplement the statement P. E., col. 1400, reference should be made to col. 1402: the copies as well as the transcriptions of the inscriptions with the philological observations 194 sq. in letters to Mohr are from Fresnel), Prideaux, Rehtake, Langer [published by D. H. Müller, Z. D. M. G., 1885, xxxvii. 319 sqq.), Mordtmann, Derenburg, etc.) are given in greater detail in the Paris Corpus (see above) and in the more recent publications. Of these we will mention the more comprehensive here: J. H. Mordtmann, 1) Himyarische Inschriften und Altertümmer in den König. Museen zu Berlin, Berlin 1893, 2) Musée Imperial Ottoman, Antiquités Himyaritiques... Constantinople 1898; D. H. Müller, Südarabische Altertümmer im Kunst- historischen Hofmuseum, Vienna 1893; H. Derenburg, 1) Les monuments sabinès et Himyarites du Musée... de Marseille, Rev. Archéol., 1899, series 3, vol. xxxv.; 2) Repert. d'Epigraphie ab., i. (1901 sq.), il. (1907). Of the Inschriften der südarabischen Expedition des Akademie in Wien (collected in 1899) so far only a few have been published (in the publications of Rhodokanakis). — For Sabaeas studies, the researches made on the modern dialects of South Arabia are also important. Beginnings were made as early as H. v. Maltesen in the Z. D. M. G., 1873, xxvii. and others have followed him. Charles C. Landberg, Études sur les dialectes de l'Aрабie meridionale, 1. Hammapolit, 2. Bejima (Leiden 1901—1913) are valuable. Rich material is contained in the 'Schriften der südarabischen Expedition' of the Academy in Vienna.
The project of the canal (see above) was discussed several times, but without success, in the Muslim era, e.g. during the reign of Murad III in 999/1591 (the year 909 in Hâdidî Khâlîf, Dîkhânnumâ, p. 666, 12 is due to a printer’s error and has given rise to mistakes, cf. J. v. Hammer, Gesch. d. Osmanischen Reiches, iv. 200 note; further during the reign of Mustafa III in 1578 and later also (cf. Baron de Tol Töth, Memoires, i. 97); Cf. further the

SABBÎ, title of Sûra lxviii. of the Qur’an, which is also called al-Àli, after the last word of the first verse.

AL-SABÔ, and ESFÂN IBRâHIM b. HILÎ. E. IBRAHIM b. ZÂHRÎN AL-ÀRÎKÎN was an adherent of the sect of Sâbî’âns [see the art. SÂBÎ] and was born on the 5th of Ramadân, 313 A.H., according to the most trustworthy authority, his grandson Hilît, while the Fihrist gives the year 320, which is certainly too late a date. His father Hilît was a skillful doctor and in the science of Tûrûk, who died in 344 A.H. Ibrahim was brought up to the same sciences as other members of his family, who were all skilled in medicine, astonomy and mathematics. He is stated to have made an astrolabe of the size of a large silver coin for al-Mu‘taphbâr b. âbd Allîh, the Wâizr of the Bûyîd Amir ‘Audâd al-Dawla. At an early date, however, he gave up these pursuits and became
a secretary in the State-chancellery, and here he came into prominence when the Bayyid Mu'izz al-Dawla (died 359 H.) sent a message to the Wazir AIII al-Mu'allal asking him to draw up without loss of time a letter to Mu'Mammad b. Illyâs, governor of Kirman, to ask his daughter in marriage for Prince Ikhwîyyân, the later Amir 'Izz al-Dawla. The Wazir, his friends and secretaries had been having a heavy drinking-bout and only Ibrahim al-Sâbi was capable of drawing up the desired document, which found general approval. He must have come prominently to the notice of Mu'izz al-Dawla, who in the year 349 a.H. on the death of Abu 'Isâkh Ibn Thawâsh appointed him chief-secretary of the Department of State-documents (Dâwûn al-Jâoûtâ). The Amir tried his utmost to convert him to Islam, offering him even the post of Wazir as a reward, but he refused and remained true to his religious convictions till his death. However, he was a man of good manners and compiled as much as possible with Muslim customs and fared during the month of Ramadan, besides, his knowledge of the Qur'ân was perfect and he quoted from it frequently in his official letters. Upon the death of Mu'izz al-Dawla he retained his post in the Chancellery under his son 'Izz al-Dawla, who when the latter uncle 'Ajjul al-Dawla came to Baghîdad it was part of Ibrahim's duty to draw up the contract for an amicable settlement about their respective positions. 'Ajjul al-Dawla had at first been very favourably disposed towards Ibrahim and invited him to come to Shîtriz, which he refused to go as he feared his relations during his absence might be converted to Islam.

The document, however, contained terms which offended 'Ajjul al-Dawla, especially as 'Izz al-Dawla was given the prerogatives of his father Mu'izz al-Dawla, which incensed the hatred of 'Ajjul al-Dawla. The quarrel between the uncle and his nephew was disastrous for Ibrahim, for when 'Izz al-Dawla was killed in 357 a.H. and 'Ajjul al-Dawla entered Baghîdad, he was apprehended on Saturday, the 26th of Ihh 'il-Ka'dân. 'Ajjul al-Dawla had vowed that he would have him 'trampled to death by elephants, but several prominent persons, among them the Wazir al-Mutâhhar b. 'Abd-Allah intervened for him and he was cast into prison, where he lingered several years. To give him a chance to regain the favour of 'Ajjul al-Dawla he was ordered while in prison to write a history of the Bayyid dynasty, which was to have the title Kitâb al-Tâ'âfi, after the new title of 'Ajjul al-Dawla, Tâṣî al-Mulla. The Amir made it his business to read the sheets of the work himself as they were composed and to make such corrections as he desired. Ibrahim, annoyed at the mode in which the work was composed, had the audacity to tell a friend upon his enquiry how the work was proceeding, that what he was writing was lies and bagatelles which he was scribbling. This remark was conveyed to 'Ajjul al-Dawla and only the death of the latter saved Ibrahim from violent death. After the accession of Shirâf al-Dawla he was released from prison on the 20th of Djumâdâ I 371 a.H. He was compelled to fire the remainder of his days in retirement and died on Thursday the 13th of Shawwâl, 384 at the age of 71 years. Some authorities state that he attained the age of 91 years, but both the date of his death and his age are confirmed by the superscriptions of the elegy which the Shirâf al-Ra'dî composed upon his death (ed. Beirut, i. 294; British Museum, Add. 25750 and Add. 19410). He was buried in the Shâfi'ite cemetery at Baghîdad. The elegy of al-Ra'dî was a token of a long and sincere friendship and when reproached about mourning an unbeliever, he replied that he mourned him for his personal merits. The poem is also quoted in extenso by Thâlibî in the Yatimah (ed. Damascus, ii. 81-85).

Of the works of Ibrahim the Kitâb al-Tâ'âfi is lost, but it is quoted occasionally by later historians e.g. Mirkhwâdî, Gharîb al-Saltûnât an-dh-dm Gîbah (ed. Wilcken, Berlin 1852), p. 13 of the Persian text, and anonymously by Ibn Miskawî, Arabic text ii. 21-27, 23, 33, 59, 86, 87, 404. The genealogy of the Bayyids quoted by Mirkhwâdî e.g., seems to confirm the statement of Ibrahim. Ibn Abu Usâkhî (i. 224, 225) attributes the Kitâb al-Tâ'âfi erroneously to Simon b. Thâlibî. Ibrahim's other works are: a) a history of his own family, which is also lost. His reputation rests rather upon his 31 Kawnî or official letters which are collected and have come down to us (MS. Leiden 345, Paris 3514) and of which many examples are quoted in the Vaticano, the Irshâd of Kallâghanî and the Mâ'allîd al-Tâ'mîlî. They are historically of the highest importance; as they supplement our knowledge of the period of the decline of the caliphate. Though the Persian influence is noticeable in the finess of its style, it is free from Sâfî, and lucid when compared with later specimens of the same art. 4) His poems, of which ample specimens are quoted in the works mentioned above and in many anthologies, are not to be distinguished from the productions of other poets of his time. They contain verses in praise of notable persons of the age, among them the wazir al-Mutâhhar (died 358 a.H.), al-Majbshar b. 'Abd Allah, wazir of 'Ajjul al-Dawla (committed suicide in 359 a.H.), 'Ajjul al-Dawla, Sâbir b. Ardushir, wazir of Bâhâ al-Dawla (deposed 381 a.H.), 'Abd-al-'Arîf b. Yûnûf, successor of Sâbir, Shân al-Dawla (reigned 372-388) and others; among his elegies is one upon his son Sinan.

2. Hîlîl b. MU'MâSIN AL-SâBI, the grandson of Ibrahim b. Hilal was born in Shawwâl 359 a.H. and reigned as a Sâbian like the other members of his family. His mother was the sister of the physician and historian Thâlibî b. Sinan b. Kurra. He was the first member of his family who forsook
his old faith and became a Muslim. This was in the year 399 in consequence of a dream he had. He was secretary of Fakhr al-Mulk Abī Ghailī Muhammad b. Khalaf, who at his death just with him on deposit the sum of 30,000 dinars. He was afraid to make use of the money, fearing the interference of the wazir Maʿṣūyiyy al-Mulk al-Ḥasan al-Rukhkhāli (died 430 A. H.) but when the latter found it out, he allowed him to keep the money. He did not use it, however, as he was in step-employ and left it to his son Ghara al-Nimaz. He died on Thursday the 17th of Ramaḍān, 448 A. H. The nine works which he composed have all been lost except the fragments edited by H. F. A. Medersa, Leiden 1904. They consisted of the following:

1) Tūrīkā, a history in continuation of that of his father-in-law Thabit b. Simān, containing the events of the years 560–447. Of this the fragment published contains events of the years 589–393 only, and the portion preserved makes us regret the loss of the remainder. He relied for the earlier parts upon much valuable information supplied by his grandfather, who for so many years had access to all the most important documents. 2) Kīth al-Wṣurā, a continuation of the works of al-Sulān and al-Dalīl al-Badī. Of this only the beginning is preserved in the printed edition and some of the most important lives of saints are lost. This work is quoted under the title Kīth al-Āṣyā' wa-l-Mabībī by Ibn Ẓāhīr in the Badī's al-Badī al-Badī (Cairo 1316, i. 63, 169; ii. 102), where fragments of a later portion are preserved. Ibn Khallīkān calls this work by the longer title Kīth al-Āṣyā' wa-l-Mabībī wa-l-Mutanaqda 'l-Āwā Windsor and states that it is in one volume and contains pleasant stories and rare anecdotes, a) Gharār al-Baṣālā al-Ḳudsī, a collection of his own epistles. 4) Kīth Rihāt or as al-Malik al-Wṣurā, a collection of official letters, resembling that of his grandfather. 5) Kīth Farīdān wa-l-Kalijā, probably an exposition of the various public offices in Baghdad. 6) Kīth Akhrar Baghādād, chronicle of the city of Baghdad. 7) Kīth Maṣṣīr Aṭabī, chronicle of his own family. 8) Kīth al-Kalīḥ, a manual for secretaries, probably after the model of the work with the same title by al-Sulān. 9) Kīth al-Sulān.

Other members of the family according to the following genealogy were:

Zahrān

Thabit (d. 365) [beneath No. 3]

Hillī (beneath No. 4)

Thabit (d. 384)

al-Muhāsib (alive 399) [beneath No. 6]

Sīnān

Hillī (d. 448)

Muḥammad Ghara al-Nīmān (d. 480) [beneath No. 7]

4. Hillī b. Ibrāhīm b. Zahrān Abī ʿUṣaynī, the father of Ibrāhīm, was a clever physician and in the service of the amīr Thānī, Khīṭāt, Ḥuṣāmī (ed. Cairo 1320), p. 356.

5. Thānī b. Ibrāhīm b. Zahrān, also a physician, was an old man when Abū ʿAbd Allāh came to Baghādād in 364 A. H. Though at first not well received he was later granted a pension and died the 11th of Dhuʾl-Qaʿdā, 365 A. H. He was born at al-Ruṣāf on the 27th of Dhuʾl-Qaʿdā, 283 A. H. Ibn Abī ʿUṣaynī, I. 277–278; Thānī, Khīṭāt, I. 341.

7. Muḥammad b. Hillī Abī ʿUṣaynī Gharā al-Nīmān, son of the historian Hilāl. He was born in 416 A. H. and inherited at the death of his father valuable property which was valued 12,000 dinars; he lived a very quiet life and by improving his wealth he was worth 70,000 dinars when he died in 480 A. H. His children soon squandered this wealth, and with him the glory of his family ended. He had founded a small library of 400 volumes of which Ibn al-ʿAṣfāl was made librarian, but the latter proved to be dishonest and sold many of the books. Gharā al-Nīmān was also for a time in the chancellery of the emīr al-Kāmīn. He tried to continue the history of his father, but it was only a small volume which became towards the end very ancient; probably because he dared not write all he wanted to say. Accordingly to al-Safādī, Hilāl-Allāh b. al-Musṭāfā accuses him of including many falsehoods in his history. We cannot verify this as all his works have been lost. His other works were a) al-Raḥṣāf b. Nāṣirī, min al-Maṣṭūḥīn al-Madīḥīn wa-l-Ṣaḥābī al-Raḥṣāfī min al-Muṣṭafīn al-Maṣṭūḥīn which contained historical tales, and b) Kīth al-Raḥṣāf which was after the model of the Muḥṣīr al-Muḥṣīrīn of al-Taḥṣīlī. Ibn Khallīkān, ed. (Cairo 1310), ii. 201; Ibn al-Kīlīṭ, Ḥuṣāmī (ed. Cairo), p. 77; Saʿādī, Wāṣīl b. Wāṣīlī, British Museum, MS. Or. 5320, fol. 110v.

F. Krenkow

AL-SĀBĪʿA, the Sabaeans. This name has been given to two quite distinct sects. 1. the Mandaeans or Sabaeans, a Judæo-Christian sect practicing the rite of baptism in Mesopotamia (Christians of John the Baptist); z. the Sabaeans of Harān, a pagan sect which survived for a considerable period under Islam, of interest for its doctrine and of importance for the scholars whom it has produced. The Sabaeans mentioned in the Korān, who are on three occasions placed along with the Jews and Christians among the people of the book, i.e. possessors of a revealed book, are apparently the Mandaeans. The name must arise from the Hebrew root p-š, "to pour", to immerse", by loss of "ain and must mean "baptists", those who practise baptism by immersion. The pagan Sabaeans, who did not know this rite at all, may have adopted this name as a measure of precaution to secure the advantages of the toleration accorded by the Korān to Jews and Christians.
Arab writers from the fourth century A.D. onwards very frequently mention the Sabaeans of Harran and always with interest. Al-Shahristani devotes a very long section to them and the exposition of their doctrines. He classifies them among those who admit spiritual substances (al-rūḥānīyyān), especially the great astral spirits. They recognize as their first teachers two philosophical-prophets "Aḥīdānān (Agathodaimon = the good spirit) and Hermes who have been identified with Seth and Idris respectively. Orpheus was also one of their prophets. They believe in a creator of the world, wise, holy, not produced, and of inaccessible majesty, who is reached through the intermediary of the spirits. The latter are pure and holy in substance, in act and state; as regards their nature, they have nothing corporeal, neither physical faculties nor movements in place nor changes in time. They are our masters, our gods, our intercessors with the Sovereign Lord; by purifying the soul and chastising the passions, one enters into relations with them. As to their activities they produce, renew and change things from state to state; they cause the force of the divine majesty to flow down towards the lower beings and lead each of them from his beginning to his perfection. Among them are the administrators of the seven planets, which are like their temples. Each spirit has a temple; each temple has a sphere and the spirit is to his temple as the soul is to the body. Sometimes they call the planets fathers and the elements mothers. Their activity consists in moving these spheres and in acting upon the elements and the physical world through them; from this result the mixtures in the compositions, then the corporeal faculties. The general beings proceed from the general spirits and the particular from the particular spirits; thus rain in general has its spirit, its spiritual master, and every drop of rain has its own. They preside over the phenomena of the world, winds, storms, earthquakes and gale to affect its faculties and lay down laws for it; their condition is very spiritual and analogous to that of the angels.

Al-Shahristani distinguishes between the Sabaeans who worshipped the stars, called temples, directly and those who worshipped idols made with hands (mashkhālī, persons), representing the stars in temples made by men. There is a very curious note on the temples and idols of the Sabaeans, as well as on their ceremonies in al-Dimīthā. (Cemographie, ed. A. F. Mehren, 1856); the shape of the temples, the number of the degrees, the color of the ornaments, the material of the idols, and the nature of the sacrifices varied with the planets, and this is interesting for the history of the liturgy. Here and elsewhere we find the custom of human sacrifices made, which undoubtedly is not to be maintained. The Jewish philosopher Maimonides says he had seen idols which resembled those of which al-Dimīthā speaks. Al-Shahristani further tells us that all the Sabaeans had three prayers; they purified themselves by ablution after contact with a corpse, forbade the flesh of swine, dogs, birds with talons and pigeons. They did not have circumcision, allowed divorce only by decree of the judge and forbade bigamy.

The Sabaeans were at first scattered throughout the north of Mesopotamia and had their principal centre at Harran, the ancient Carrhae; their liturgical language was Syriac. The Caliph Ma'mūn thought of persecuting and destroying them; but their intellectual merits gained them toleration. Towards 295 (872) the celebrated Thabit ibn Khārīṣa, having had a quarrel with his co-religionists, was excommunicated at Harran and came to Baghdad, where he founded another branch of Sabaitism. The Sabean community in Baghdad lived for some time in peace; but the Caliph Khārīṣ ibn Khādīr began to persecute them and forced Sima, son of Thābit, to embrace Islam. In about 364 (975) the Sabean Abī Ṣnāh b. Hīlī, who was secretary to the Caliph Martha and Ṣa'īd, caused an edict of toleration to be issued in favour of his co-religionists of Harran, Kākū, and Dāyi Moṣṭār and protected those of Baghdad. In the 11th century A.D. there were still many Sabaeans at Bagh-
dad and at Harran. In 424 (1033) there was left only a temple of the moon, which formed a citadel at Harran; this temple was at that time taken by the Alīids Egyptians. After the middle of the 12th century A.D. all trace of the Sabaeans of Harran is lost; we still find them at Baghdad till the end of this century.

The great men who have rendered this sect illustrious are: Thābit b. Khārīṣ, the eminent geometer, original astronomer, translator and philoso-
pher; Sima b. Thābit, physician and meteorologist; other physicians and astronomers of the same family; Thabit b. Sima and Hīlī b. al-Muḥsān, historians; Abī Ṣnāh b. Hīlī, visier, and other members of the family; al-Batūra (Abu Bakr), the celebrated astronomer; Abū Dja'far al-Khāṣīn, mathematician; Ibn al-Walīshīya, the author of Nebaeanum Agricultura, although professing to be a Muslim, in every way belonged to the Sabean school; Ṣa'īd (Gibry), the famous alchemist, about whom, it is true, there is very little known for certain, was probably a Sabean. Finally it may be mentioned that these scholars are quoted on mineralogy by al-Dimīthā.

SABIL. A way, road, or path, is used in the Korān (1) literally, e. g. wan islāmu'l islabān (Sta. ii. 196), "he who is able to journey thither"; (2) figuratively, as in the expression wa'l-Adhā, for which see Ṣuqā; (3) figuratively, in the sense of the true way, the Apostolic way, as in the passage fa'salatun fahadha ba'sa'il al-raisīl tablīn (Sta. xxv, 29) "Obl that would I had taken with the Apostle a path!" e. g. his
path, or the true path; (4) figuratively, in the sense of a means of attaining or acquiring an object, or a way out of a difficulty or trouble, as in the passage "to rush into the destruction which is on the road," that is, to travel, or wayfarer, mentioned as a sign of object of compassion, or charity. The word is now applied also to a public drinking fountain. The great merit naturally attached in arid countries and tropical climates to the provision of wells, cisterns and fountains for thirsty travellers is recognized in Islam, as in most oriental religions, and it is possible that the use of sabīl in this sense is suggested by the expression Sabīl-Allah, applied to any work undertaken for the sake of God.

Bibliography: The lexicon a. v. (T. W. H. H.)

SABĪL ALLĀH. [See ِهِجگیهکی.]

SABTIYA "Seveners," the name of various Shi'a groups, who restrict the number of visible Imams to seven. Confusion came to the legitimists who believed that the character of Imam Ismail was transmitted by divine providence from father to son, when about 145 (762) Isma'il, the (eldest) son of the sixth Imam Ja'far al-Sadiq [q. v.] died before his father. While the majority replaced Isma'il by another son of Ja'far, Musa al-Kazim, the seventh in the series of the twelve Imams of the Imami-Schisists [q. v.] twelve, and others attached themselves to the otherwise less prominent sons, Muhammad, 'Abd Allah and 'Ali, the strictest legitimists remained faithful to Isma'il. They denied that he died before his father's death. The evidence brought forward in support of this view seems to have impressed even their opponents, for the latter found it necessary, in order to dispose of Isma'il, to attack his character; they said that, on account of his evil life, his father had withdrawn from him the right of succession at first intended for him. These accusations, particularly that of wine-drinking, can be explained as an attack on the slackening of the law by the Seveners directed back against the Imam who gave them their name.

From the first the Sevener movement was not a united one. A Muḥarrakiya sect "stood fast" by 'Isa'il, so that for them he is the last Imam and the Mahdi [q. v.] but the majority continued the imitation down to his son Muhammad, who becomes Khālus al-Zamān [q. v.] with the official title of al-Tāhir "finishing," a title which, in some of the minor systems, seems to be explained by the fact that his imitation was followed by invisible Imams, known only to the initiated. In spite of the position of Muhammad al-Tāhir, however, the name of Isma'il remains attached to the main groups. In their hierarchic view therefore the Seveners belong to the many "Wāḥid-iyya" "those who stand fast." This is, in part, naturally, explained by the political conditions of the period. In 145 the 'Abbasids were defeated by the Caliph at Medina, who led by al-Nazi al-Zakīya, Muhammad b. 'Abd Allah b. al-Hassan b. 'Ali; in the following year, the latter's brother, Ibrahim of Basra, also fell. The 'Alian question was thus disposed of for the time and with such success that even in those activist circles, who chose their Imams from the vigorous 'Abbas, who actually took to the sword a 'Djārūkatya sect "stood," by al-

Nās al-Zakīya as the concealed Mahdi. The tendency to hope for a return increased still further among the legitimists, who were bound by their dogma to definite persons, as it would have been useless to carry on into active history an imitate which had really become hopeless. There were those who stood fast by each of Isma'il's brothers; the Mawṣūl-iyya, nicknamed Mawṣūl-iyya, "ruined upon," often called simply the Waṣīliyya, because of some importance. Strictly speaking, such groups also come under the head of Seveners. But, as a rule, Sabtiyya is used identically with Isma'ilīyya [q. v.]. For them steadfastness did not develop into the abandonment of political aims — although it was over a century before this became apparent — but rather into the very shiftable plan of retaining the very effective idea of an Imam given by sacred birth and yet rejecting the individual that chance brought forward in the person of the often very incapable first-born of the seed of 'Ali and Hujja. The Sevener movement thus attained considerable importance in secular history also, through men who appeared as dā'i [q. v.] of the hidden seventh Imam, Muhammad b. Isma'il, like Handān Karmat, or his successor, who came forth as concelebrant, like the Fatimids Sabt b. 'Abd Allah b. Mūsā, or his "return" himself, as Ṣabtīh b. 2218, the narrates of the Karmatian missionary Yahya b. Dakhrawd, Karmatians, Fatimids, Assassins and the Ismai'is of India, Persia and Central Asia are the groups through which the Sevener movement finds its place in secular history, but the Druzes also and in a way the Matwila and Naṣiris also may be traced back to the old Sabtiyya.

The Sabtiyya itself, however, is quite as much a religious — and an independent religious — movement as a political one. The remarkable feature that the number of Imams was fixed at seven at the same time with the different sons of Ja'far is more simply understood if we assume that the political reasons already mentioned were further supported by a point of view which periodized all cosmic and historical happenings by the sacred number of seven. The example of the Khatibiyya, who worshipped Isma'il's father, Ja'far, as a god, shows that in the early days of development of the Sabtiyya the deflection of Imami was not entirely unprecedented. We cannot, of course, in the circumstances deal with the theology of the Seveners. We can only know of a single one out of the different systems and even that is often obscure, through being known only from hostile representations. We may claim for the Seveners as their individual contribution to theology a cosmic cosmogony in which names and things are often, however, not used consistently. The steps of emanation are (1) God, (2) universal intelligence (țefeq), (3) universal soul (mafs), (4) primordial matter, (5) space or the pleroma, (6) time or the cosmos, (7) the world of earths and man. This number seven recurs in the lower worlds in the 7 prophets or Ṣâ'ilīk "speakers" in the redemption story; Adam is the first, but as a rule not the first man, then follow Noah, Abraham, Moses, Jesus, Muhammad and Muhammad al-Tāhir. Between each two of these Ṣâ'ilīk there are inserted seven "silent ones," ūmīd, of whom the first, as special helpers of the Ṣâ'ilīk, under titles like fuqih, "referee," or asālī, "foundation," are particularly
important because it is only through the esoteric exposition attributed to them that the teachings and laws of the mufik receive their true meaning or are completely explained. These mufik are the Seths, which the reconstruction of the grunds of the Seths was done by Isma'il the son of Haggar. Aaron, Peter, W. and the seventh is the author of the particular Sevener group, in question, e.g. 'Abd Allah b. Min‘im. Alongside of the Imams, there is a further lower hierarchy arranged in seven or twelve, notably the Isma‘ili [q.v.] and the Sufis. The system is, however, very much upset by a theory of reincarnation which actually equates the seventh Imam to God; thus Ibn Tahir al-Baghda'di, p. 288, reports, on the authority of a man who had been for a period engaged in Isma‘ili propaganda, that the latter had been expected to see in Muhammad al-Tamm Him who had revealed himself to Moses. In several groups, e.g. the Indian Isma‘ili, the cosmogony and with it the periodisation after the sacred number seven has fallen into the background and ‘Ali has become God as the first Imam. The way thus leads from the Sevener on to the ‘Ali b. Abi Talib [q.v.]. Starting with ‘Ali, they come right down to the 47th Imam, Agha Khaja Muhammad Shih. Next to the Imams and in history often surpassing him in importance here is the jaidj. Muhammad the Prophet appears as the jaidj of ‘Ali. But he is substituted for political reasons for Sadim al-Persi, who is really intended.

For salvation of the concealed Imam known only to the initiated is absolutely necessary; consequently the “instruction” of them attains increased importance and they are accordingly also called Ta‘limiya. Initiation into the esoteric religion takes place through 7 or 9 initiatory stages. Ibn Tahir, i.e., 282 sqq. mentions (1) the ta‘lim, the “exact instruction”, a psychological method not particularly skilled, or almost a means of working oneself entirely into him who is to be won and of placing oneself on common ground with him. Then (2) the adept is “shown” in the tajdid the whole “honesty” of his previous belief was an illusion, a suggestion that it is much more splendid than he has supposed hitherto, after which (3) in the tajdid he becomes “shaken by doubts” that he is not yet fully conscious of his belief. After such anthroposophical spiritual guidance, the moment arrives at which the novice is “bound” and “attached” to the secret authority with the formula that real knowledge only exists in the Concealed One and his organs through (4) the radd and (5) the ta‘lim. In (6) the ta‘lim the real esoteric meaning is by allegorical explanations brought out of the external covering of the letter, under which all religious prophecies and laws are “obscured”. (7) The “transference” of the adept can now begin in a novitiate proper of some length, after the expiry of which the disciple (8) subscribes himself body and soul by agreements scaled by our own will and as a bond in return for which he is “released” in the (9) khat and wukuf from all earlier dogmatic restrictions and all external legislation outside these obligations.

The whole system is deliberately supported for Isra’s sake on Koranic passages, which is the more easily done in consequence of the frequently obscure allusions made in the sacred book. Thus the adept is supposed to learn from Koran x. 99, serve thy Lord till certainly comes to thee”,

that his previous worship of God has only been a preliminary step. The passages in which the words “inner” occur are made to supply dica probantias for an extravagant, and of its kind not exactly original, system of allegory, including an extensive alphabetic katibala, which is not limited to the mysterious passages of the Sura’s end to names of Imams or dogmatic formulae. It has not contributed to the elucidation of the relations of Muslim sects that one group is called after many features and that, for example, the Sevener are also included as Isma‘ilis [q.v.] along with other bodies of quite different tendencies, like the Kharamis (see Kharamiya) and Mawdis, and often even described as the Isma‘ilis and on this account called by their opponents by the corresponding nickname Ma‘arifis, “empties, nihilists”.

The actual origin of the speculative ideas of the Sevener is, so far, hardly better known to us than to the Muslim authors, whose opinions must be taken with particular caution as their point of view was vitiated by hatred of the heretics. The Sunni symbolists usually insist on Jewish or Christian, still more Sabean and especially Parsi, origins; but as a matter of fact they already suspect also a connection with Hellenistic philosophy and Hermetic writings. The point still requires investigation as to how Neo-Platonic speculations, Parse mysteries and such myths as are found in the Christian “treasure-caves” came to be clothed in a Koranic covering and developed into Islamic groups. The part played as an intermediary by the “Pure Brethren”, Ihama al-Sufi [q.v.] remains also to be investigated.

All classes of Sevener are very unfavourably criticised by the Muslims, even by the Shi‘is. They are regarded as extreme “exaggerators”, ghulat [q.v.] and usually are considered to be beyond the pale of Islam, so that some symbolists do not quote them at all. The main reason is that they drop the divinity of Allah and the divinity of Muhammad’s prophethood. It is, however, due to the great elasticity of Muslim names of sects, and to a polemical rather than matter-of-fact frame of mind that they are also called Dahris [q.v.] and associated with the materialists, who are essentially different from them. A contributory cause of the unfavourable opinion held of them was, of course, the bitterness felt at their revolutionary aims and their underground political propaganda in the name of the seventh Imam, but still more at their casting off the external law of religion, which is usually dismissed as sheer libertinism; the accusations commonly made against secret sects of sodomy and nightly orgies with wine and community of women also play a great part in the charges made against them. The charges of religious, moral and political nihilism made against them have also found a way into the European literature of the subject. Further investigation, which does not refuse to consider the possibility of syncretism, recognising that every religious system that has become concrete is a syncretic formation with modifications, will alone be able to show how far the theology, or if one prefers the term, the thorough of the Sevener movement represents an intelligible reaction against the theology of the God of Islam, so aloof from man, and in how far the libertinism, said to be general and certainly existing in many, is an attempt to
meet the disjointed total of the prescriptions of the Shari'a with a system of ethics, such as is taught by Nisai-i-Khuwar, for example, in verses 372 ff. of his 'Ishqan-i-Shata, regarding the seven sins of character and the seven cardinal virtues; in this investigation it will not much matter whether the "book of illumination" was written when the poet had already attained a very important place in the hierarchy of the Severans as muqaddas of the Islamists, or whether it was written before he joined them, and reveals the ability of mind which definitely decided him to join this body. Individual bodies of the Severans, like the A'mirahs and Karaitans, were certainly extremely intolerant to other Muslims; but in contrast to this we have the tolerant and wise administration of many of the Fatimids in Egypt. Some groups are occasionally said to have been communist, but this is certainly not a general feature. While in the fourth and fifth centuries the Muslim writers report their spread and their propagandistic activities in the whole Muhammadan world, the old groups have long become consolidated. But their ideas continued to be effective and were carried from Persia far to the north and from India especially to East Africa. In spite, however, of the consciousness of connection with the old Severans, the nature of their beliefs has been essentially transformed. The political aspect has disappeared and the religious side is not so aggressive. It is noteworthy that the modern Sab'iyas are often just those who are the strongest supporters of the feeling of solidarity in Islam.

(R. STEINMANN)

SABR (A.). The significance of this conception could hardly be conveyed in a West-European language by a single word, as may be seen from the following. According to the Arab geographers, the root סב, of which sabr is the second action, means to restrain or hold, hence dasum sabr as "to bind and then obey someone". The slayer and the slain in this case are called סב and musfur respectively. The expression is applied, for example, to martyrs and prisoners of war, even to death; in the Hadith often to animals which — contrary to the Muslim prohibition are tortured to death (e.g. al-Bukhari, Dhadhib, tab. 25; Muslim, Sunnat, trad. 5. Ahmadi b. Hanzali, Musnad, iii. 171). The word has a special technical application in the expression muhim sabr, by which is meant an oath imposed by the public authorities and therefore taken unwillingly (e.g. al-Bukhari, Musnad al-Ahmadi, tab. 25; Ahmadi, tab. 17; Muslim, Sunnat, trad. 175). In the حسain derivations from the root סב frequently occur, in the first place with the general meaning of being patient. Muhammad is warned to be patient like the Apostles of God before him (xxxviii. 16, xlvi. 34; "for Allah's threats are fulfilled", is added in xxx. 60). A double reward is promised to the patient (xxvii. 113, xxviii. 54; cf. xxx. 75). In xxvi. 16, if it is even said that the sabrul shall receive their reward without ġilis (which in this case is explained as measure or limitation).

The conception is given a special application to the holy war (e.g. iii. 140; viii. 66); in such connections it can be translated by endurance, tenacity. The eighth stem is also used in almost the same sense, e.g. Sura xii. 66: "Serve him and persevere in his service". The third stem is also found (vili. 20; cf. below).

The word is next found with the meaning resignation (e.g. in the Joseph. xii. 18) where Jacob, on hearing of the death of his son, says: "Now Goodly resignation is fitting" ('iqaf atqawat).

Sometimes sabr is associated with ġilis (ii. 42, 148). According to the commentators, it is in these passages synonymous with fasting and they support the same words sabr al-ğilis given to the month of Ramadan.

As an adjective we find sabr in the Koran, associated with ġilis (Sura 14, 3 etc.); cf. the Noble al-Tahoor, Tafsir: "It is well with the man who is resigned when misfortune afflicts him, grateful when gifts of grace become his"; and Muslim, Sunnat, trad. 64: "Wonderful is the attitude of the believer; everything is for the best with him; if something pleasant happens to him, he is thankful and this proves for the best with him; and if misfortune meets him, he is resigned and this again is for the best with him." The ideas of sabr and ġilis are also associated in al-Ghazzali, below.

Below development of the conception is, of course, also reflected in the commentators on the Koran; it is difficult to say in how far these interpretations are already inherent in the language of the Koran. In any case, the conception sabr, in all its shades of meaning, is essentially Hebraic in so far as it includes the ḥaram of the Stoic, the patience of the Christian and the self-control and renunciation of the ascetic, cf. below. In place of many other explanations of the commentators, we will give here only that of Fakhr al-Din al-Kahf, Fussah al-Ghaza, Cairo 1278, on Sura iii. 200. He distinguishes four kinds of sabr: (1) endurance in the laborious intellectual task of dealing with matters of dogma, e.g. in the doctrine of ġilis, nold, wakawatan, ṣahih and disputed points; (2) endurance in completing operations one is bound or recommended by law to do; (3) steadfastness in refraining from forbidden activities; (4) resignation in uncertainty, etc. Fussah is, according to him, the application of the word sabr to one's former gesture (like neighbours, people of the Book), refraining from revenge, the Anil bidayat min musir bani Isma'il, etc.

The high value laid upon sabr is also seen in the fact that Sabur is included among the beautiful names of Allâh. According to the Lisan (s.v.
Şabır is a synonym of ḥalām — with the difference that the sufferer need not fear any retribution from the Ḥaļ, but he is not sure of such leniency from the Şabır. Allah’s ẓabir is in the Ḥaļid.in to the highest degree in the saying that no one is more patient than He, towards which wonld His hearing (al-Bahhār, ṫawfi, bāb 3).

In the Ḥaļid, ẓabir is, in the first place, found in general, connections like: to him who practices ẓabir Allah will grant ẓabir. ẓabir is the greatest charisma (al-Bahhār, Zāhār, bāb 50; Ẓāf, bāb 20; ʿAbd al-Ḥamid, aṣb. 93); in the Ḥaļid also, ẓabir is applied to endurance in the holy war. A man asked Muḥammad: "If I take part in the Ḥaļīb with my life and my property and I am killed ẓabir and resigned, rushing forward without seeing, shall I enter Paradise?" And Muḥammad answered: "Yes." (ʿAbd al-Ḥamid, aṣb. 325); the word is found in other passages in the sense of a duration, e.g. towards the public authorities: "after my death ye shall suffer things, but exercise ẓabir until ye meet me at the heavenly pool" (Ḥaṭṭi, al-Bahhār, Ẓāf, bāb 53; Ẓāf, bāb 2 where. ṽāb 4; ʿAbd al-Ḥamid, bāb 4; ʿAbd al-Ḥamid, ṫawfi, bāb 3, 36 etc.). The word usually has the meaning of resignation as in the oft recurring saying: "The (true) ẓabir is revealed at the first blow (inna ẓabir 'indu ẓabir 'inda, or 'indu ẓabir 'inda, or 'indu ẓabir 'inda, al-Bahhār, ṫawfi, bāb 53, 43; ʿAbd al-Ḥamid, ṫawfi, bāb 22 etc.).

Significant, in other respects also, is the story of the epileptic woman who asked Muḥammad for his ẓabir in order for her healing; he replied to her that if she refrained from her request and exercised ẓabir, paradise would be her portion (al-Bahhār, Ẓāf, bāb 6; ʿAbd al-Ḥamid, al-Bahhār, bāb 34). The word is often found in this connection as associated with the proper word for resignation viz. ḥalām (e.g. al-Bahhār, ṫawfi, bāb 9; ʿAbd al-Ḥamid, ṫawfi, bāb 11; with this should be compared the following ḥadīth): "If my servant is deprived of the light of both his eyes, I grant him paradise in compensation" (al-Bahhār, Ẓāf, bāb 67; ʿAbd al-Ḥamid, aṣb. 283).

In conclusion we may remark that in the canonical Ḥaļīb the meaning renunciation is exceedingly rare, which receives so great an importance in ethicisco-mystical literature; this has been the case since the days of the second great era of thought. As with other fundamental conceptions (see the series of definitions in Śāhī and Sīhām in Nicholson's essay in the J. R. A. S., 1905), we find numerous definitions of ẓabir, definitions which often point rather to the facility of imagination than give an exhaustive exposition of the idea, but are of great value for the light they throw upon the subject like lightning flashes. Al-Khaṭābī, in his Risālah (Ṭabāk, 207, p. 99 sqq.) gives the following collection: — "The gulping down of littleness without making a very face" (al-Dżahāli); — "the refraining from unpermitted things, silence in suffering blows of fate, showing oneself rich when poverty settles in the courts of subsistence"; — "steadfastness in fitting behaviour (hājīma al-sādab) under blows of fate" (Ibn ʿAbī); — "his bowing before the blow without a sound of complaint"; — "he ẓabir is he who has accustomed himself to suddenly meeting with forbidden things" (Abū ʿUṯmān); — "the ẓabirists in welcoming illness as if it were health" — "steadfastness in God and meeting His blows with a good countenance and equanimity" (Amm b. ʿUṯmān); — "steadfastness in the ordinances of the Book and of the Sunna (al-Khawāṣī'); — the ẓabir of the mystics (literally: lovers) is more difficult than that of the ascetics" (Yahyā b. Maʿṣūd); — "refraining from complaint" (Rūwām); — "seeking help with God" (Ibn ʿAbī Nūn); — ẓabir is like His name (Abū ʿAlī al-Dūkhi); — "there are three kinds of ẓabir, ẓabir of the mutanabbir, of the ẓabir and of the ṭabir (Abū ʿAbd Allāh b. Khafīf); — ẓabir is a steel that never stumbles" (Abū b. Abī Taḥlīl); — ẓabir is not to distinguish between the condition of the trial and that of trial, in peace of spirit in both, ẓabir is calm under blows, while one feels the heavy trial" (Abū Muḥammad al-Dżahāli; cf. arāğāzā'ī).

This literature, besides play on words and definitions, is also food of producing shades of meaning by prepositions. Al-Shāfīḥ asked a man: "what kind of ẓabir is the most difficult for him who practices it?" He answered: "al-ẓabir yiḥlāb". Then al-Shāfīḥ said: "No". The man: "al-ẓabir liṭāḥah". Al-Shāfīḥ: "No". The man: "al-ẓabir maṭaʿa ʾlālik, ʿal-Shāfīḥ: "No". The man: "But what is it?" Then al-Shāfīḥ said: "al-ẓabir 'an ʾlālik", and he added an explanation which threatened to drive his interrogator crazy (al-Khaṭābī, ṫawfi, p. 100).

Al-Ghazālī treats of ẓabir in the fourth part of the Ḥaļīb, which describes the virtues that make blessed, Book II. We have seen that already in the Korān ẓabir and ẓabir are found in association. Al-Ghazālī discusses the two conceptions in the second book separately, but in reality in close connection. He bases the combination, not on the Korānic phraseology, but on the maxim: "Belief consists of two halves: the one ẓabir and the other ẓabir." This again goes back to the tradition: "Ẓabir is the half of belief" (cf. the tradition given above which also associate ẓabir and ẓabir).
be given here. Jah, like all religious words, consists of three parts, "Jah", "Alah", and "Samal." The first two are like the tree, the body of the branch and the head of the fruit. Out of the three classes of beings man alone may possess "Jah." For the animals are entirely governed by their desires and impulses; the angels, on the other hand, are completely filled by their longing for the deity, so that no desire has power over them. And as a result no "Jah" is necessary to overcome it. In man, on the contrary, two impulses (m'khir) are fighting: the impulse of desires and the impulse of religion; the former is kindled by Satan and the latter by the angels. "Jah" means adherence to the religious as opposed to the sensual impulses.

Types of two kinds: (a) the physical, like the endurance of physical ills, whether acute, as in suffering, blows, etc.; this kind is laudable; (b) the spiritual, like renunciation in face of natural impulses. According to its different objects, it is called by synonyms like: 'Jah, sel', sel-naf, khalda, daya, wahta al-dar, hojat al-dar, manah, faddia. From this wide range of meaning we can understand that Muhammed, when asked, could answer: "Jah is 'Jah". This kind is absolutely laudable (maknina dawani).

As regards the greater or less strength of their "Jah", three classes of individuals are distinguishable: (a) the very few in whom "Jah" has become a permanent condition; these are the "Jahnilin", the "Jahrosalim"; (b) those in whom animal impulses predominate; (c) those in whom a continual struggle is going on between the two impulses; these are the "Jahdilabin"; perhaps Allah will bless them. One of the gnostics (sayas al-Ghazali) distinguishes three kinds of "Jahdilin": those who renounce desires, these are the "Jahsilin"; those who submit to the divine decree, these are the "Jahnilin"; those who delight in whatever Allah allows to come upon them, these are the "Jahrdubin".

In section VI, al-Ghazali shows how the believer requires "Jah" under all circumstances: (a) in health and prosperity: here the close connection between "Jah" and gratitude is seen; (b) in all that does not belong to this category, as in the performance of legal obligations, in refraining from forbidden things, in whatever happens to a man against his will, either from his fellow-men or by God's decree.

"Jah" is an indication of the struggle between the two impulses, its salutary effect consists in all that may strengthen the religious impulse and weaken the animal one. The weakening of the animal impulse is brought about by asceticism, by avoiding whatever increases this impulse, e.g. by withdrawal, ("asak") or by the practice of what is permitted, e.g. marriage. The strengthening of the religious impulse is brought about (a) by the weakening of the desire for the fruit, i.e. "Jahdilin"; (b) by means of the reading of the books of saints or prophets; (c) by gradually accustoming this impulse to the struggle with its antagonist, so that finally the consciousness of superiority becomes a delight.

SABT—SABUR

SABT. (See CEUTA).

AL-SABTI, AHMAD b. DAIYAN AL-KHANZIRI. A holy man famous for his virtues and his miracles. Born at Ceuta in 540 (June 24, 1145—June 12, 1146) and died on Monday Djamad al 6, 601 (Jan. 31, 1205) at Marrakesh. He was buried near the Tariq gate. He studied more particularly under Abu 'Abd Allah al-Fakhrkhil, the pupil of the celebrated Kadi 'Iyyad of Ceuta. He was eloquent and had no difficulty in convincing his questioners; he was very pious and used to recite the Qur'an by day and night; he recommended the giving of alms. He himself kept nothing out of the numerous gifts he received, except what sufficed for his needs and those of his family for one day only. He returned good for evil and showed compassion to widows and orphans. At the beginning of his career he lived in a 'udthub, where he taught and with his fees provided for the wants of foreign students. He used to go through the streets of the town reproaching and even beating those who did not say their prayers.

The memory of the saint remained very vivid among the people, but became surrounded by numerous legends. Thus he is said to have prophesied the capture of Ceuta by the Christians to punish his compatriots for their ill-treatment of him; legend relates that after his departure from this town, he was very highly received by the holy men of Marrakesh who feared that his cult would one day eclipse theirs; he has actually become the principal patron saint of this town. But his power extends much farther. The popular belief in Morocco sees in him the master of the winds which is invoked at sea to calm a storm and to raise the necessary wind during a calm.

In many places in Algeria as well as in Morocco, the first measure of new grain is given to the poor in his honour.

(MOH. BEN CHENNED)

AL-SABU, SABUR AL-SABU, the constellation of the Wolf, and SABUR, saba 'Sabur al-Hasr, constellation of Ceuta, Kair (cf. al-Hasr, al-Khair in Marsbxy, Ber. Ms. of. 8°, 257, p. 207 and 208). The Saurat al-Sabur with the Arabs (just as with the Poisons) consists of 19 single stars, none of which is of more than the third magnitude (according to modern star catalogues the brightest are of 3.8 and 3.9 magnitude). The Greeks called the constellation (undefined) ri Stele (= the beast); but even among the oldest Babylonians the suggestion of a ravenous beast seems to have been present. The name is in Babylonian badi ur-din (= madl Ur-iddin), but in Sumerian: z (kakak) kallo qqegi, which means "raging dog" (Wolf probably = Lupus + Centaurus to the north-east); cf. F. X. Kugler, Sternkunde und Sternkunde in Babyl., Ergänzungen, Münster 1134, p. 28, 33, 223; al-Sabur, which is also used for liyan in Arabic probably the direct reproduction of the Greek: ri Stele. J. J. Scaliger, as a matter of fact, is said to have found on his Turkish plasosphere the name al-Aswad, the bear, applied to it.

The animal was formerly thought of in close connection with the centaur. The latter was thought to hold the animal by the forefoot. The Arabs then called the stars of the two configurations, on account of their accumulation al-Shuqil (branch of palm with bunch of dates, or a bunch of grapes).

(S. SCHON)

SABUN soap (cf. English soap), has penetrated through Latin soap and Greek eva pron as a loanword to the East also. According to Pauly-Wissowa, Rhelens. d. kl. Altert., second series, iii. 1112, the ancients were not acquainted with our soap; in Phrygian soap means laxi-ya (laxativum capillitii) and also medical salves; for cleansing purposes certain poor earths were used, which were sometimes perfumed. There can, however, be no doubt that soap came into use in the middle ages along with other laudatory lotions and in addition to its use for cleansing the person and for washing was much used for external application in medicine. The statements made regarding its manufacture in Luscin, Leisun, iv. 1649 sound quite modern; the *Maghribi* soap, which is not cut into pieces but looks like boiled starch, is apparently our soft soap.

(J. RIMBA)

SABUR. (See SABUR).

SABUR or ARABSABUR, ABU NAGE, vassal of the Buoy Bahl' al-Dawla [q. v.]. Sabor was appointed vizier in 380 (990—991). He did not, however, remain long in office, for he was dismissed in the following year, but in 382 (992—993) was restored to his former rank. At the same time Bahl' al-Dawla also appointed Abu Mansur b. Suhaila vizier and the two then acted jointly as viziers of the Buoy Emir. After some time, however, the Dailawa troops began to show their dissatisfaction with Sabor; his house was sacked and he had to go into hiding (383 = 993—994). As his colleague Ibn Suhaila was not inclined to fill the office alone, Abu 'L-Kasim 'Ali b. Ahmad was given the post of vizier; but as soon as the Dailawa had settled down again Sabor came back. In 386 (996—997) Bahl' al-Dawla again appointed him vizier; this time he remained only two weeks in office and then went to al-Bahr. His public career did not come to an end with this, however, for by the year 390 (999—1000) we again find him in Baghdad as vizier of Bahi' al-Dawla. In Mahuram of the following year (December 1000) the Turkish mercenaries mutinied and demanded that...
they should be paid before taking the field. Salah had to fly; hostilities developed between the Turks and the rest of the populace in which the Sunnis took the side of the former and it was only after much bloodshed that the vultures were quieted. After Salah had fled, he wrote to Baalbek. al-Dawla and laid the blame for what had happened on ‘Ali’s, Abu l-Hassan b. Yahye, and his companions and thus appeared before Ishak’s al-bakhshis and secured permission from him to arrest them. But when he went to Waqi’ to carry out this plan, he was outwitted and had to abandon it. In the meanwhile Abu l-Hassan had made his peace with Baalbek al-Dawla and when in the beginning of Djumada I, 302 (end of March, 1002) Salah appeared in Baghdad, the latter had the last card, so that he left the city within the same month and estabished again to al-Mu’tasim. He died in 416 (1025–26). In the first period of his virile age — in 381 (991–92) or, according to another statement, not till 383 (993–94) — he had founded a great library, in which he is said to have presented over 10,000 volumes. This existed down till Turhal’s entry into Baghdad when it was set on fire.

SAD, the fourteenth letter of the usual Arabic alphabet (numerical value: 90; cf. the article ARAB). How the usual form of SAD developed out of the Nabataean is still closely resembling the primitive Semitic form; form of the letter may be seen from plate I of the article ARAB, ARABIC WRITING. As to its pronunciation, SAD was even in ancient times and still is an unvoiced, velarised (and according to Meinhold “stopped”) alveolar aspirant, in which a groove is formed on the front part of the tongue. All these elements (except perhaps the last) were recognised and described as early as by Shiahawi. Of our European sounds the French  in is nearest to it, if we add the so-called (velarisation: according to Meinhold, with “stopping” at the same time. Shiahawi only notes the transition from  to  (and farther into ) before (for example, maykat instead of maykar); at the present day it is also found before other voiced consonants (cf. Egyptian Arabic  < maykar). For further information see Schanda, Shiahawi’s Handbuch (see Index). Cf. also Mattson, Studien phonologiques sur le dialecte arabe vulgaire de Beyrouth” (Updahl 1911), p. 24 sq. and especially C. Meinhold, “Was sind emphatische Laute, und wie sind sie entstanden? in the Zeitschr. f. Eingeborenenforschung, XI. 81–108 (especially p. 85–90). — SAD is also the title of Sitzungsber. des Kuria.

(A. Schanda)

SAD, constellation of good fortune, a common name in Arab astronomy for small groups of stars. They are all in the three adjoining constellations of Pegasi, Aquarius, and Capricorn and usually consist of two, sometimes of three or four stars of low magnitude. Four groups form four successive stations of the moon, namely: 23. SAD al-lajali = α in Capricorn, 33. SAD balad = μ in Aquarius, 34. SAD al-lajali = β in Aquarius, and 35. SAD al-lajaliya = γ in Aquarius. A further four belong to Pegasi: α of

al-balad to al-καλωδων of ZE), sad al-καιρος (4) and sad al-μαθητής (e). Lastly sad al-malak = α in Aquarius.

(J. RUSKA)

SAD, a Abdul-Wahab, an Arab general. His father’s full name was Malik b. Wahab b. ‘Abd Manaf b. Zahr b. Kili b. Murra. Sa’d, who had become a convert to Islam at the age of seventeen (cf. al-Bukhari, Musnad al-Adabi, 1: 25; Ibn Majid, Sunan, introductory chapter, l: 11), was one of the old companions of the Prophet, being a special favourite of his and one of those who had been promised Paradise (Al modifier b. Hasbal, i: 193, ii: 222); he took part not only in the battles of Badr and Uhud but also in the campaigns that followed. When al-Mu’tasim b. Harun, who assumed command in al-Jazira after the death of Khald b. al-Walid, in view of the danger threatening an encounter with the Persians, asked the Caliph ‘Omar for reinforcements, the latter at first declined to take command of the army himself, probably simply in order to stir up the enthusiasm of the Muslims; in the end, however, he did not do so but gave the post of commander-in-chief to Sa’d, according to one version because Djafir b. ‘Abd Allah al-As-Saffari, who had already been sent to the ‘Iraq to support the hard-pressed Muslims, would not consent to be subordinate to the Bakri al-Ma’tamm. In spite of his proved bravery and ability, the Beduin al-Ma’tamm, who had been adopted Islam till after the death of Ma’mun, would, in view of the well-known jealousy among the Arab tribes, probably have proved less suitable as commander-in-chief than Sa’d who belonged to an old Meccan family and was known to be one of the most faithful followers of the Prophet. Sa’d advanced against the Persians with a large army and encamped at al-Kadiya (q.v., ii: 611 sqq.) on the frontiers of Persia and Arabia. Here — probably in the first half of the year 16 (summer of 637) — a great battle was fought, which is said to have lasted several days; the details of it have been much elaborated by the Arab historians. Illness prevented Sa’d from taking part in the battle personally and he had to confine himself to directing the whole operations, which, however, was not quite in accordance with the traditional Arab custom. After the Sasanian leader Rustam had fallen, the slaughter ended in the complete defeat of the Persians and Sa’d was now master of the whole of ‘Iraq al-Arabi; nor were the Persians able to hold permanently al-Madi’in (q.v.), the capital of the provinces east of the Tigris. The young Sasanian king Yazdijir had to flee and abandon his capital to Sa’d. When the latter entered the city, he obtained countless booty and made al-Madi’in his headquarters for the time being. At the end of the same year his nephew Hushin b. ‘Uba b. ‘Abd Waqqas again inflicted a disastrous defeat on the Persians at Bzall (q.v.).

To this period also belongs the foundation of Kufa. To Sa’d likewise is due the credit of having made a strong military camp here, which in course of time grew into an important city; Sa’d was appointed first governor of the rapidly growing settlement. He seems, however, not to have paid
due attention to the Caliph's insistence on the maintenance of old-fashioned simplicity. At any rate we are told that Sa'd built a splendid palace in Kufa modelled on the Taq-i Kisra at al-Mada'in; but when 'Omar, who feared the injurious influence of Persian luxury on the simple habits of the Arabs, heard of this, he is said to have administered a sharp rebuke to Sa'd, and even to have had the palace burned by Muhammad b. Maslama. Sa'd was dismissed from his post as early as the year 20 (640/641) because the rich and turbulent inhabitants of Kufa — of all possible elements, Arabs and Persians, Jews and Christians - accused him of being unjust and tyrannical. When, however, Maslama b. Maslama appeared in Kufa by the Caliph's order to investigate Sa'd's conduct in his office, only one or two individuals dared to appear against him. Nevertheless Sa'd was dismissed and 'Amr b. Yazid appointed his successor; but the latter only remained a short time in office and was followed by al-Mughira b. Shubba [q. v.]. The great military and administrative services of Sa'd were, however, later fittingly recognised by 'Omar. When on his deathbed the latter enquired of six of Muhammad's most trusted companions to choose a new ruler within three days, he chose Sa'd as one of his six faithful servants. It was said to have been added that if Sa'd was not given the office himself, he would recommend the future Caliph to compensate him with a governorship, because he had been removed from his post neither for incompetence nor for treacherous conduct. Following this suggestion, 'Uthman b. Sa'd restored to him the governorship of Kufa; again, however, he was dismissed after a short period of office and his place given to al-Walid b. 'Utha b. Abi Mu'ait. After the assassination of 'Uthman, Sa'd was requested to come forward as a claimant to the throne; but declined, because he wished to live in peace; nor was he inclined to take any steps to take vengeance on the murderers. When 'Ali was chosen Caliph, Sa'd declined to pay homage to him and retired to his estate in al-Ask, where he lived till his death remote from politics, which out of his son's made a reproach against him: (Mushtim, Zuhd, trad. i.; Ahmad b. Hanbal, Musnad, i. 185, ef. 177). According to the annual statement he died in 670 (67/671) or 59 (674/675), aged about 70. He is said to have left vast wealth behind him and was buried in Medina.

behind as his deputy in Medina. In the battle of Badr, according to the most reliable authority, he did not take part, but he had ridden at the battle of Uhud where he was wounded by Tughril. In the 7th month of the year 1346 he was elected the second caliph. In the summer of 1347 he distributed among the rich those who were under the influence of the Prophet. In the winter of 1348 he distributed among the poor those who were in need of food and clothing. He was considered the most learned and the most pious of all the caliphs.

The reign of Sa'd b. Abi Bakr was marked by the great wealth and power of the caliphate. He was also a great patron of the arts and sciences.

Sa'd was succeeded by his son, Abū Bakr, who was a great patron of the arts and sciences. He was also a great patron of the arts and sciences.

SA'D AL-DIN KÖPEK or GÖBEK (in early texts and inscriptions: Q-r-d b-n Muhammed), a very important personage in the history of the Seljuks of Asia Minor. There is a tradition according to which he was himself a convert to Islam, but this is contradicted by the fact that his father was called Muhayyib. His origin and date of birth are unknown. He first met with him as amir in the palace of Ala' al-Din Kaikubad and next, in connection with "Ala" al-Din’s building operations at Kabadshah (on this place and its buildings see Khalil Edhem, Kaligrafi Shihri, Constantinople 1334, p. 50), as amir and as amir-dehshir. As the office of amir dehshir was of considerable importance in the Seljuk palaces, we may deduce that in the reign of "Ala" al-Din, Sa'd al-Din was already one of the most important personages in the state. Indeed, there still stands in a plain three hours from Konya on the road from Konya to Al-Sarai a large mound which Sa'd al-Din built, the interior of which was completed in the last year of "Ala" al-Din (638 = 1240); at that date then he already occupied an important position. It is not, however, till the early years of the reign of Ghiyath al-Din Kaimkhwaja that we find Sa'd al-Din playing an important part in history. He had attached himself to Ghiyath al-Din and supported the latter’s claim to: the throne against Ya'qub al-Din Kastal Arslan; it is to his influence also that we must attribute the fact that Husam al-Din Kast Khan, one of the Astras of Kastorn, who had taken refuge with the Seljuks and who was governor of Nies, was accused of belonging to Jez al-Din’s party and imprisoned. As a result of that event the Amin of Kastorn, settled in Asia Minor, lost his empire with thousands of people and went out of Syria and Mesopotamia where after numerous adventures he was finally shot and wiped out completely (cf. Kastal al-Din, Hiddekeh al-i, ed. Breschat, Paris 1900, p. 21); Kaptulla Zade Fuad, Amadullino Nofalh, p. 60). With the principal emirs of the time of "Ala" al-Din, Sa'd al-Din was an accomplice of this Sultan in the execution of his mother-in-law, Malik "Adilayna and her two sons; in this way he obtained considerable influence. Ibn Bidi and the historians who follow him are wrong in making Sa'd al-Din exclusively responsible for these crimes, which were repeated in 634 (= 1238). As public opinion was greatly shocked by these happenings, Sa'd al-Din Kopek was appointed commander of the military expedition; in the month of Dhu-l-Hijjah 635 (July-Aug., 1238) he captured Shambalhut. Protesting by the influence, which this victory secured him, he succeeded in having awarded him great honors like Haym al-Din Kaim and Kaim al-Din Kamyr put to death. But the Sultan, who, on the one hand, wished to clear himself of the general repugnance which he had inspired by putting all the responsibility on Sa'd al-Din and, on the other, was anxious to get rid of an accomplice who threatened to become dangerous, had him put to death treacherously. Ibn Bidi gives a detailed account of this.

The great kada of Sa'd al-Din already mentioned is known among the people as the "Nizitiye." This imposing structure measuring 200-200 feet long and 200 feet broad is now in ruins. At the outer gate is an inscription of 634 a.d. dedicated to Ghiyath al-Din Kaimkhwaja. Tradition says that Kopek Oghlu, who played a certain part in the history of Asia Minor during the era of Sultan Mehmed I, was a grandson of Sa'd al-Din and that at the place now called Kopek Kory in the vicinity of the town there is a "Hedhi," which belonged to the family. This tradition, however, is devoid of definite proofs.

III and IV, Leiden 1902, Index; Khalil Edhem, Kaligrafi Shihri, Constantinople 1334, pp. 73-118; Nizhit Oghlu, "Nizitiye," Othmanli Tarhi, Constantinople 1335; 443; Konya Rehberi, Constantinople 1328. (KÖRÜLLU ZADE FUAD)

SA'D AL-DIN is the name by which a large section of the tribe of Taimim is known. The curious name Fier has received no satisfactory explanation and the philologists Abul Masuh al-Azbari asserts that he never met any person who could explain it. Some lexicographers explain it as meaning "more than one," others as "goats," but we may assume that Ibn Duraid is correct when he derives it from the verb "fazara" with the meaning "to split" and that "fier" means "a chip" or "fragment." The Arab genealogists give the name of the common ancestor as Sa'd al-Din Manahi, b. Taimim and relate tales to account for the curious name which amounts to the following: Sa'd had much cattle which he offered his son by different mothers, to take to pasture; they refused and he invited the kindred tribesmen
of Malik b. Zaid Manṣūr to come and rob the camels. Then when only goats remained he gave his sons the same order and they again refused to take them to pasture. In his anger he called Arabs of every tribe together (or, according to another version, took his animals to the fair of Ḫaṣṣ), and asked them to take each one goat as pledge (muḥādā), but allowed no one to take more than one. Thus the goats were scattered all over the country and this is said to be the origin of the proverb: "I shall not do that till you take my goats (are collected agan into one herd)". The goats are probably imagined to have had the same or brand-mark of his clan. The underlying idea appears to be that the "divisions of this tribe were found scattered over the whole of Eastern Arabia. The tribe of Tamīm is mentioned in the remotest antiquity, centuries earlier than the Arab genealogists can imagine, and the genealogies in their case are more fictitious than with other tribes, and all they can serve is to show which of the clans shortly before and after the introduction of Islam felt to possess a certain relationship. The poet al-Akhraj says: "In every wild are Sa'di pointing to their wide distribution. Of the many subdivisions mentioned by genealogists only those derived through his sons Ka'b and al-Fārisī appear to have had a claim to pure descent, while the descendants of the other sons, 'Abd Shamsa, 'Uqayla, 'Awf, 'Uqayla and Mālik were called the "Aban". There were doubts as to the purity of their descent; they were settled in Bahrain and had largely intermarried with the Persian settlers when this province was under Persian rule. They were as regards numbers perhaps the largest Arab tribe and for this reason played an important part in the war shortly before Islam and during the conquests and many persons mentioned in the early times of Islam were members of the various clans of Sa'd al-Fāris. They sided with 'All during the struggle for the caliphate and were most prominent among the unruly tribes in the eastern part of the later Omayyad and appear to have settled in Persia in large numbers. Others emigrated to North-Africa and the Aghlabīs' rulers of Ifriqiya claimed descent from them. The many subdivisions cannot be enumerated here, but it must be stated that the genealogists are far from unanimous in their statements of the various sections, and their names disappear early from history under the general name of Tamīm. Importance may be attached to the tribe of Sa'd al-Fāris and their nearest kindred class for having spoken that Arabic which forms the basis of the classic Arabic of literature, as the earliest philologists seem to have framed the rules of Arabic grammar upon the dialect of Tamīm. This was no doubt on account of their widespread diffusion through which their dialect was understood in most parts of Arabia. Bibliography: Arabic Lexica s. v. Fa'ir; Ibn Duraid, Khita'a al-Abshīfī, ed. Wüstenfeld, p. 150 sqq.; A. A. Bevan, The Nabiyy of the Sājja and al-Faraj (Leiden 1915-12), p. 68; H. F. Koppelman, Qalb al-Afrār (Baghdād) 1905; J. Niebuhr, Notizen zur Arab. (Cairo 1834), ii. 344-51; Ibn 'Abd Rabbīhī, Muḥādāt al-Kahīf (Cairo 1831 ed.), xii. 42; Khita'a al-Ashīfī, p. 563; Wüstenfeld, Genealogische Tabellen, 1. and Register, p. 396; also almost every work dealing with the capital of the district of the same name in Yemen. It lies on the pilgrim road from Mecca to Sa'da, 60 parasangs (180 miles) or five journey days' journey from the latter town. In the days of paganism the town is said to have been called Līmān or to have been built on the site later occupied by Ḥun 'Alamun built by the Imam al-Mutasawakkīl 'alā 'Ilīb Ahmad b. Sulaimān b. al-Muṭahhir. According to al-Hamdānī, the name Sa'da owes its origin to the following circumstances: — a man from the Ḥilās, who was passing by the siring castle that stood in Līmān or laid down exhausted beside it. Its height called out twice lāhūd sa'da "he has raised it in fine fashion". Similar popular etymologies are found in other places. Six minutes south of the modern Sa'da lay the village of al-Khurayl, where the ruins of a great reservoir for irrigating the land and of other buildings survived into Muslim times. Near Sa'da is also the town of al-Qayth, which name al-Birūnī would regard as the ancient name of Sa'da.

Sa'da was and — in spite of the catastrophes that have overwhelmed it — still is a flourishing, populous and wealthy town, in which merchants from all parts, especially from al-Baqa, met. The principal industry of the city has always been the dressing of hides and sole-leather which was exported mainly to the Hijāz and Yemen, and the manufacture of leather water-skims of particularly fine quality. For Sa'da lies in the very centre of very vast plantations of the karaj tree (acacia Arabica IV.), the leaves of which are used in dressing leather. In Sa'da excellent lances (sab'ār) and spear-heads used also to be made. Iron, which was brought to Sa'da from the vicinity in the form of dust and was purified there, must have been used for the latter. Iron is still found near Sa'da. Gold used also to occur in the neighbourhood — at al-Ka'a. — The flourishing trade of the town and the busy caravan traffic as well as its native industry yielded large sums in duties and taxes to the treasury of Zālid Imāms, whose capital it was. Vyshii estimated the yield at 100,000 dinars. The Imāms al-Hādī Yahiyya b. al-Husain (d. 598 = 910/911) and Yūsuf b. Yahiyya (d. 430 = 1012/13) are buried in Sa'da.

ṢADAK. [See MIR].

ṢADAKA, al-ṣida, is so called, according to the Arab writers, from the verb ṣadaqa, because the Muslim's almsgiving shows the sincerity (ṣidd) of his religion; but it is, in point of fact, merely
transliteration of the Hebrew word שדוק, which meant originally "honesty", but was used by the Pharisees for what they considered the chief duty of the pious Israelite, namely almsgiving, a meaning which it still retained at the time of the coming of Islam and afterwards. Its proper sense is, therefore, voluntary or spontaneous almsgiving or what we call "charity".

Arabic authors, however, use the word سدى in two different senses. In the first place it is frequently employed as synonymous with زكاة [q.v.], that is, the legal poor-rate, which is involuntary, and of which the amount is fixed. It is so used in the Koran, e.g. 9:36, 24:34, andLane, s. v.). It is so used also in the Mafahim of Mâlik ibn Anas, in which, in the Kitab al-Zakât, سدى is substituted for زكاة. He does this apparently when it is a case of Zakât upon quadrupeds (ماعز, camels, flocks and herds), but also in other cases. But if this is the other hand, سدى seems to be put for زكاة quite indiscriminately, and the two words are used simultaneously as synonyms. Instances will be found in the notes to Hooda and Marçais' translation. Thus in 61:31 of the Kitab al-Zakât the two words are used indifferently. Bahîrî uses سدى instead of زكاة where Mâlik uses سدى (cf. e.g. 6:43.) He quotes the tradition "There is no سدى on less than five shekels of she-camel" in the same form as Mâlik, yet speaks of the سدى at the-Fâr where Mâlik uses the usual زكاة at the-Fâr. The same failure to distinguish between the two words is found also in later writers, both legal and historical (e.g. Ibn al-Ashârî, al-Tahâfî, ill. 42, after Tahârî).

If there were no doubt as to the identity of this سدى and زكاة, it would be removed by the fact that the six or seven classes of persons who are entitled to benefit by them are the same in each case, namely, the poor and needy, those engaged in the work of distributing the سدى or زكاة, Muslim captives in enemy hands, debtors, those engaged in the دؤاذ, travellers, and (originally) the مولى or the Mâlik.

The proper use of the word سدى is, however, as has been said, in the sense of voluntary almsgiving. In this sense ید is, for the sake of distinction, called سدى and زكاة "Zakât al-Sâdiq" ("alms of "spontaneity"). Ibn al-Arâfî thus defines this سدى, "Voluntary سدى is an act of worship arising from free choice mixed with authority; and if it be not so then is it "al-Sâdiq. For the man makes it obligatory upon himself, just as God makes mercy obligatory upon Himself towards those who repent, and corrects those who do ill in ignorance".

سدى appears to be used in this sense in the remaining passages of the Koran where it occurs, other than the two cited above. Alms may be given openly (II. 273), so long as this is not done for ostentation (II. 266); but alas given in secret are better. There is more profit in alms than in money (II. 277), but they must be given with good will (II. 265). Those who are disposed to be charitable must not be discouraged (IX. 50), but the reverse (IV. 114). Voluntary alms, of which the amount was left to the giver, were prescribed to be given before interviewing the Prophet, but this impost was remitted provided the interviewers had paid their Zakât (VIII. 13, 14). Alms might also be given in place of some other obligation, such as that of shaving the head after the pilgrimage (II. 192). These passages naturally form a basis for much that is found in the succeeding writers. In the Kitâb al-Zakât of his Mafahim Mâlik ibn Anas frequently cites a certain "Letter" of 'Umar ibn al-Khattâb in regard to the سدى. This unfortunately refers to the سدى in the sense of Zakât only. Mâlik himself treats of the سدى in its etymological sense along with a variety of other matters in the closing paragraphs of his work. He does not use any distinctive term such as سدى al-Fasâwa. What he says is as follows. Under the heading "Inviting to almsgiving" he records a saying of Muhammad: "Whoever gives an alms out of honest gain (and God accepts only the honest) is only placing it in the palm of the Merciful, and He will make it grow for him, just as one of you lets his wasanling foal or camel grow until it becomes like a mountain". Anas ibn Mâlik (q. v.) used to tell how Abu Talîb, who was the richest of the Meccans, prizsed above all his wealth a well beside the mosque, from which Muhammad was in the habit of drinking. When the verse "You shall never win piety until you spend of what you love" (VII. 56) came down, he wished to give this well. Muhammad, however, persuaded him to keep it in his own family. Zaid ibn Aslam is the authority for the prophetic saying: "Give to the beggar, as if he came upon a mine". The wives of the believers are exhorted not to look down upon the alma given by their neighbour, even if it be the burnt leg of a sheep". 'Aâsha (q. v.), when fasting, gave to a beggar the only loaf she had with which to break her fast. She received the timely present of a sheep. To some who were ever begging Muhammad gave, but with the reproof that "the best of gifts is sustenance". It was when speaking from the pulpit about almsgiving and about refraining from begging that the Prophet used the oft-quoted saying: "The upper hand is better than the lower hand", Mâlik interprets that the upper hand is the hand that spends and the under hand is the hand that asks. 'Umar even refused his stipend on the ground that Muhammad had advised them not to take anything from another. Muhammad explained that he was speaking of asking for gifts. 'Umar replied that he would never ask; nor would he refuse what came without asking. Muhammad also said: "By Him in whose hand my life is, it was better for one of you to take a rope and gather fuel upon his back, than to beg from one to whom God has given of his bounty, whether he give or refuse". A certain Asadl who had encamped in the Bârî al-Ghârik (q. v.), was urged by his family to seek something of Muhammad. He went and found another applicant being sent away with the words: "The beggar who possesses an ounce of gold or its equivalent is guilty of improvidence" (سکف), the Prophet adding that he had nothing to give. Mâlik explains that an ounce is 40 dirhams. He adds that the Asadl returned to his family without begging, but when the Prophet received fresh supplies, he was not forgotten.

Under the headling "What is disliked in regard to alms" Mâlik notes that the family of Muhammad may not accept alms, which are called the "offcoursing of mankind" (جذب‌العند). It was not lawful for Muhammad to give alms out of the سدى (that is, the Zakât). He might give only of his own. So too Aslam wished a man to
requisite of 'Umar to let him ride one of the she camels of the "Sadaka," but the other asked him if he would like to drink the water in which a person had washed himself. He exclaimed, "God forgive you! Do you say the like of this to me?" The other replied: "Alms are but the offscouring of men, which they wash from off them." There is some slight confusion here between the two senses of 'Sadaka.' So far Malik.

Al-Bukhari in the following century deals with 'Sadaka' in both its senses in the sixth book of the Sahih, on Zakat, without perhaps being aware that he is speaking of two different things. Of the voluntary almsgiving he says in various places, that alms is the duty of a Muslim. If he lack the means to give alms, he must work and gain them. If he cannot find work, he must at least refrain from ill, and this will be counted to him for alms. The alms given should be according to his means, out of the means of his possessions. They must be given with the right intention, even to the wrong person. A wife may give alms out of her husband's substance, and a slave out of his master's. Begging is not to be indulged in; but alms may be taken from the rich and given to the poor. Almsgiving atones for sin.

Al-Ghazali discusses almsgiving in the kirba arra al-Zakat of the Thawr al-Ulim, especially in the 8th waqaf, in which he defines the proper recipient of alms. He must be ascetic, learned, truthful, uncomplaining, necessitous, and related to the giver. In the 4th waqaf he talks up 'Sadakat al-Tzanimun.' After recounting sayings ascribed to Muhammed and others, he comes to the question raised in the Koran, whether it is better to do alms in secret or openly. Those who prefer to give in secret, say that this preserves the self-respect of the recipient, and does not cause people to talk, not excite the envy of others. Others hold that alms given openly prevent mistakes and misunderstandings, promote humility, and so on. Ghazali, like Sir Roger de Coverly, decides that much may be said on both sides, and that all depends on circumstances and motives. He then turns to the question whether it is better to accept, Zakat or 'Sadaka.' Some prefer the former because it is a legal due, and does not place those who accept it under an obligation. On the other hand, the recipient of the Zakat may not be worthy of help, and the element of friendliness is eliminated. Once more Ghazali decides to make a general rule. Cases differ.

His al-'Abari deals with this matter in the Fatih al-Mahfzah. In Kitab 70, on "the secrets of the Zakat," he also discusses the question of secret or open alms. His definition of voluntary alms has been given above.

The Shi'ite views of 'Sadaka and Zakat are similar to those of the Sunnis, but, while both debar the family of the Prophet from benefit of Zakat, the Shi'ites permit them to share in the 'Sadaka.'

Care for the poor is a characteristic of the Semitic peoples, but the Arabs were not troubled by the feeling of pity. It is possible, therefore, that the provision made for those in need, whether by voluntary or involuntary aid, may have been borrowed from the Hebrews. Cf. Tobit, xii. 4-5; Matt. vi. 3, which certainly appear to be quoted. Alms are not a feature of Arabia before Islam, but Freytag gives (xxiv. 5) the proverb: "The best alms are words."
Barkeyáry and his brothers. It was not till after the death of Barkeyáry that Sultan Muhammad was able to think of dislodging Ismá'il from it and in 499 (1105/1106) he asked Sádáka to fight him. In Djiýmad I of the same year (Jan.-Feb., 1106) Sádáka took the field against Ismá'il, who was soon forced to surrender, whereupon Sádáka appointed one of his grandsons Dabba's Mamlíks named Alláthásh to govern Baṣra. But as the latter was very soon surprised and captured by Beduín bandits, the Sultan himself appointed another governor in his place. In Saláh, 500 (Oct. 1106) Kájibábáh b. Hasánáš al-Durámí, lord of Tákrit, had also to yield. After the death of Barkeyáry, Muhammad had sent the Emir Áyánschá al-Bírsáli [q.v.] to Tákrit to occupy the town. As Kájibábáh would not obey, he was besieged.

After several months had passed, he saw the impossibility of holding out any longer, and sent to Sádáka and surrendered the city to him. Wárim b. Abl Fihrás was then appointed governor of Tákrit. But Muhammad could not always look so quietly while Sádáka's power kept growing, especially as the latter never had any scruples about affording shelter to anyone who had fallen into disgrace with the Sultan. When Abduláuf Surkháb b. Kájibábáh, lord of Síwa, took refuge with him and Sádáka refused to hand him over, long negotiations between Sádáka and the Sultan only resulted in an open breach between suzerain and vassal. The Sultan set out in person from Baghádád with a large army and in the fierce battle which was fought (according to the most usual statement) in the latter half of Radájah, 501 (beginning of March, 1108) Sádáka was killed at the age of fifty-nine. Like his ancestors he bore the title "Malik al-'Arab"; the highest praise is given him by Arab poets and historians for his virtues, notably his liberality and readiness to give assistance, and he is rightly described by A. Müller (Der Islam im Morgen- und Abendland, ii. 122) as "a true Beduin, brave, stubborn, and witty."

In the short stories of Guištān and Bizītān (also called Sa'di-nāme) there occur many personal recollections of the author. In his monograph on Sa'dī, Masʿūd has tried to restore a biography based on those informations. But he seems to have trusted Sa'dī's veracity too much. The truth of many of these stories has been doubted before (Barthier de Meynard, Rücker) and Sa'dī himself declares that whoever has been much about in the world, may lie a good deal. If we are not wholly to distrust the author, he must have lost his father in an early age, being old enough, however, to remember some of his wise lessons. The anecdote in the Guištān about the poet's visit to Kūshgar, when he was still very young, sounds rather improbable and has put many orientalists; certainly the easiest way is to consider the whole story as fantastical (cf. Schulten in Der Islam, xiv, 187). To the period of Sa'dī's youth must equally have belonged his sojourn in Syria as a prisoner of the Franks in Tripoli (Masʿūd suggests of the siege of that town in 1221) and his ephemeral marriage with the daughter of a paternal friend who redeemed him from slavery. It is impossible to follow him closely during the period of his long journeys (1226–1255); it seems probable that he visited Central Asia, India, Syria, Egypt, Arabia (many of the short stories relate experiences in the desert on the way to or from Mecca), Abyssinia, Morocco. In India Sa'dī pretends to have passed through the well-known adventure in the temple at Somanāt, where he discovered the priest's trick in deceiving the people and afterwards killed him in order to escape his vengeance. This story, too, however, has many intrinsic improbabilities (Bizītān, ed. Graf, p. 383 sgg.). Sa'dī’s second marriage in Yemen is also to be placed in this second period. In the last period of his life he was, as the Kāpida’s prove, in relation with the Atabak Abd Allāh ibn Sa’dī bin Zangi, on whose death he composed an elegy († 1260) and whom he has celebrated in the first pages of the Bizītān. There is the Arabic Markhāja on the fall of Bagdād and in the same period his panegyric on the Mongol conquerors and their satellites. The Tūshītān are dedicated to the last Atabak of Fārs, Sai’djāshāh. There are also Kāpida’s dedicated to Anjīzānī, the Mongol governor who succeeded that prince, and also to Sa'dī’s exalted patrons 'Aṭā Malik and Shams al-Dīn Djiwānt (an anthology of these panegyrics is to be found on p. 67–70 of the Persian introduction to the Gībū Fund edition of the Ijāhān-Guḥā). As in Sa'dī’s works there is no allusion whatever to the tragic death of both the brothers Djiwānt (1282 and 1283). Masʿūd thinks that the poet must have died before or very shortly after these events; in that case the informations of the biographers, varying between 1291 and 1292 give too late a date. Now, if, as most authors do, the year 580/1284 is adopted as the year of Sa'dī’s birth (Browne, Lit. Hist. of Persia, 189), he may not yet have reached 100 (solar) years.

Sa'dī’s tomb is outside Shirāz, a little farther off than that of Haftū. The tombstone is not old, the original one having been destroyed by a fantastical mudžāhayd, as Sa'dī is generally believed to have been a Sunnī. It is probable for this same reason that Sa'dī’s tomb lies rather deserted, whereas many Shirāzians have chosen for the place
of their last repose the neighbourhood of Hāfa (Brown, A year amongst the Persians, London 1893, p. 281). According to the colophons in the oldest MSS., the name of the author was Hasūn Allah. The anonymous Muḥall al-Dīn Ḥusayn ibn Ṭāhir, his friend, was Muḥall al-Dīn Abū-Allāh (Rieu, Catalogue of the Persian MSS. in the British Museum, ii. 595).

Ethis (Grandrix des 4 Phil., ii. 292) counts Sa’dī among the poets that first have combined the originally separated mystical and didascalic tendencies in Persian poetry. With Sa’dī the didascalic, moralising element is predominant; to this it is that he owes his great popularity.

There is no doubt that he was well versed in the “science” of mystics. Besides Abū al-Ḳadr al-Dījālī, Shāhāb al-Dīn Shahrwārdi was his teacher in Baghdad (Dabestān, ed. Qal’ami, p. 150). According to an anecdote told by Akbār (transl. by Huart, i. 238), he even might have met with Dījālī al-Dīn al-Rūmī (cf. Dabestān, p. 165 sqq.). For him as for other poets the often paradoxical mystical ideas must have been valuable literary material. The question whether Sa’dī was himself susceptible of mystical feelings is probably to be answered in the negative, as his practical nature made him more inclined towards a moralising attitude, in which he made mysticism only serve a higher moral conception of earthly life. In many instances he puts moderate common sense against exaggerated zeal for the life to come. In his Ḥaft-e-Motābur the lofty mystical sentiments of the Muharram or the Motābur al-Tair should not be sought for. Sa’dī often speaks of the Sūfī’s, but his attitude towards them is always more that of a moralist than of a fellow-mystic. His practical mystical ideal is realised in the Ḥaft-e-Motābur, where truly wise people who do not care for the outer appearances of this world, without, however, despising it wholly. For it is precisely the world’s perishability that makes it valuable as a rare ruby, and in many places Sa’dī shows himself a good Muslim, when he finds in the variety and beauty of earthly existence a reason for great thankfulness towards the Creator. He preaches a moderate fatalism and disapproves of exaggeration in the religious life: “Don’t be more pious than Muhammad.”

As a moralist Sa’dī gained much profit from the vicissitudes of life through which he passed. His knowledge of the world gives to his ideas and opinions a cosmopolitan character, reached by no other Persian poet. It is due, probably, to this fact, together with the elegance of his style, that he has earned his great popularity in his own country and abroad, so that he has been compared with Horace, Rabbesal and LaFontaine. Sa’dī looks upon the world with sympathetic humour and is seldom satirical; and he can never enough exhort his readers to follow his moral counsels. Now the moral precepts, chiefly to be found in Gullistān, Būrjat-Nāma and Pānč-Nāma, are far from being uniform. For some moralists the author cites in the Pānč-Nāma a number of virtues and vices; as the chief virtue he seems to regard “goodness” (nafīs), great sympathy for our fellow-creatures without any egotistic view. He that obtains the qualification of good is really immortal. On the other hand Sa’dī’s social mores are sometimes quite different; here revengefulness is sometimes recommended instead of meekfulness, insincerity instead of veracity. Mum is admonished to guard by all means his independence from other people. Especially for princes several machiavellian precepts are given (the third part of the Gullistān is a short treatise on politics, dedicated to Aḏarḵān), and for derwish again other moral norms exist.

The different aspects of Sa’dī’s morality make it difficult to believe in his sincerity, the more so as his morality is considerably compromised by the obscenities uttered in some chapters of the Gullistān and in the Ḥaft-e-Motābur, though, in an introduction to this collection, he tries to excuse himself in saying that he could not withdraw from an order given to him to compose these poems. However, with a Persian poet it is often difficult to separate what belongs to himself and what must be regarded as a concession to the taste of his patrons and of the public. The favour he has met with all through the eastern world should always be taken into serious consideration before judging too severely his character. In any case he has shown himself in all his community and he has amply satisfied the predilection for moralizing in literary form, which the Persians have had since pre-Islamic times.

Moreover, his elegant style, his ease of expression, the way in which he knows how to make attractive the most tedious moral maxims, in short his art, would have been enough to gain him the admiration of his countrymen. The Gullistān are considered to be his most perfect compositions; the Arabic Ḥaft-e-Motābur are less appreciated by orientalists. Arabic and Persian lines follow alternately in his Mutammidāt, and in one of his poems he uses 16 different languages and dialects (Bauch in the Z.D.M.G., xxx. 89).

In Persia Sa’dī’s Dībnān is more read and appreciated than the Gullistān and the Khalilīn (Brown, A year amongst the Persians, p. 281). Still, nowadays, many Persians know one of both these works by heart and quite a number of Persian poets have followed Sa’dī in writing similar works. They are enumerated by Ethis in the Grundzüge der Iranschen Philologie, ii. 297. The most famous of the imitations of the Gullistān is Dībnān (q.v.) Baharīstān. But none of them has been able to surpass the originals in popularity.

Outside Persia Sa’dī’s influence has been great in Indian and in Turkish literature. After the Calcutta edition the poet’s works have often been printed in India, without and with commentaries by Indian scholars. The Gullistān has been translated several times into Hindustānī, the best known being the translation of Aḥsa’ (1802). García de Tassay’s translation that Sa’dī must have been the first Hindustānī poet has been definitely refuted now (cf. Brown, Literary History, ii. 533). But a certain relation between Sa’dī’s way of composition, especially in the Gullistān, in which a prose story is everywhere followed by a short poem, and the well known literary form of Indian tales, admits on the one hand of the supposition of Indian influence on Sa’dī himself and may explain on the other hand his popularity in Hindustān.

Turkish translations of Sa’dī’s works were made at an early date. The Būrjat was translated in 1354 by the learned Taherīn (Gibb, History of Ott. Poetry, i. 202) and there exists a translation of the Gullistān, made in 1391 by
Sa'dī al-Sarayī in the Turkish dialect of Egypt (MS. Loeben, No. 475 in Dozy's Catalogue, i. 235; cf. also Alī ibn 'Abd al-Wahhāb, Muqaddima, Sept.-Oct., 1833, p. 139). The Turkish poet Kəzməl Pāīšā Ẓāhir (1534) imitated the Gultūn in his Persian Nīghtūrūn. Sa'dī belonged to the poets whose works were much studied during the early period of Ottoman literature. In a way he has even been of some influence on the development of modern literature in Turkey, as Žiyā Pāša, in his autobiography, tells us that it was only when he read the Gultūn that he discovered that language was (Gībb, Hist. of Ott. Poets, p. 53).

In his Khašāhī (ed. Constantinopole 1291, i. 22 of the introduction) Žiyā Pāša puts Sa'dī above all other Persian poets: "When one reads the Bišūn, then only does one understand what the world is!" He does not doubt of Sa'dī's sincerity and admires in him the fact, that even in his panegyrics he is still courageous enough to remind the mighty of the earth of moral precepts. During the sixteenth century several other Turkish translations have appeared. Turkish scholars have also undertaken to write commentaries on Bišūn and Gultūn; such are Sūfu (1561), Shamsī, Sīdī (both at the end of the eighteenth century), Ḥakim, al-Īsawī, and others. In the nineteenth century some of these commentaries were printed.

The existing translations of the Gultūn and the Bišūn and sometimes of other of Sa'dī's works, in all modern languages, prove sufficiently the great renown he has obtained beyond the boundaries of Islam. First, the Gultūn became known through the French translation by André du Ryer (Paris 1634), followed by several editions in Latin (by Gentius, Amsterdam 1651), German (by Olearius, Hamburg 1654), Dutch (transl. from Olearius) and English (by Sullivan in 1774). The Bišūn appeared later. In the nineteenth century Thomas Hyde is said to have made a translation of it. The oldest printed translation is in Dutch (Amsterdam 1688) by D. Huyvat. So in Western Europe Sa'dī became familiar as early as the sixteenth century; much need only be added here to the works of Lafontaine, Voltare and Goethe.

The latest monograph on Sa'dī is Henri Massé's Essai sur la poètes Sa'dī (Paris 1919), a dissertation for the doctorate of the Alger University. In his Thèses Complémentaires, called Biographie de Sa'dī (Paris 1919) Massé gives a very valuable bibliographical survey, to which reference may be made here. Since that date a new edition of Sa'dī's odes has begun to appear: Sir Lucas White King, The Odes of Sheikh Multān-i-Din Sa'dī, Bishār Part I (Tāyistān), Fasc. 1 (1919), ii. (1920), iii. (1921), published at Calcutta in the Bibliotheca Indica, New Series, No. 424.

AL-SA'DI, "Abd al-Rahmān b. 'Abd Alīh b. 'Imām b. Amīr, the historian of the Songhai kingdom in the Sudan, belonged to an old family of scholars in Timbuktu where he was born on the 11th Djumādā II, 1002 (1596); here he received his education from Ahmad Bahā (q.v.). On the conclusion of his studies he sought with his brothers a sphere of activity in Djenne (q.v.), the old commercial town which at that time rivalled Timbuktu as a commercial and intellectual centre. Here in 1536 (1636) he succeeded in obtaining the post of imām of the Sankore Mosque, i.e. of the mosque in the foreign quarter, having previously acted as deputy for his predecessor in the office. He extended his knowledge of the world at the end of 1039 (July 1630) by a journey to the Fülbe kingdom of Māsina north of Djenne on the left bank of the Niger, which at that time included the island of Djiboula in the Niger. It was the Kūfī there who had invited him, but he received such an honourable reception from the Sultan himself and the notables of the kingdom, that he repeated his visit three years later. On this occasion he rendered diplomatic services to the Sultan by settling a feud between him and one of his vassals. He and his family, however, suffered a good deal from the tyranny of the Moroccan governors in Djenne. In 1044 (1634) one of his brothers was banished from his home to Timbuktu and he had to go back there to intervene on his behalf. Two years later he himself was even dismissed from his office. On complaining to the Pasha in Timbuktu, the latter gave him this much satisfaction that he dismissed the Kūfī who had been his enemy. But he gave up further claim to his office and preferred to live as a private individual and occasionally placed his knowledge at the disposal of the smaller vassals in the southern Songhai kingdom as secretary and teacher. In 1056 (1646), however, the Pasha of Timbuktu, Muhammad b. Muhammad b. Muhammad b. Olyunsa, summoned him to be his Secretary of State, and he seems to have held this office under Muhammad's successors also till his death. On several expeditions on which he had to accompany the Pasha, he became acquainted with the north and east of the Songhai kingdom which he did not hitherto know. He then decided to write a history of his native land which he entitled Taʾfidh al-Sudān. He introduced his work with the early history of the tribes of the Songhai, Melli and Tuarég, and of the towns of Djenne and Timbuktu. In 1853/54 Barth was able to make extracts from the smaller half of this history in Timbuktu and published these in a translation in the ZDMG., i. 178 (1881). He interspersed these remarks with numerous ethnographical digressions — introduced as ihtilāl — which Barth omitted. In chapter x he gives a survey of the scholars of Timbuktu as a supplement to Ahmad Bahā's Fštāl al-Dībāqī. The history proper begins with the establishment of Muslim rule by the Kharījīs, the Alī in the ninth (fifteenth) century. He then describes the role of the orthodox Aškūyā dynasty and the conquest of the kingdom by the Moroccans and their dominion until the death of the author. The style is much interspersed with colloquialisms and is faulty in other respects also. The date of completion of the chronicle is given by him as Monday, Dhu'dhul Hijja 5, 1063 (Oct. 28, 1653). On the following day he added a list of officials as an appendix. In a further appendix he detailed happenings down to Džumādā I 16, 1066 (March 14, 1656). He seems to have died soon afterwards. A continuation to his work, a history of the Moroccan governors in the Songhai kingdom entitled Taʾdhhīr al-Nasīrūn was written in 1084 (1751) by an unnamed author, who was born in Timbuktu in 1112 (1700) and was a grandson of the Emir Muhammad b. Shāwī.

the text continues about the role of Sādī in the government of Marrakesh and his contributions to the city. It mentions that he was a poet and statesman, and that his poetry was highly regarded.

The text then moves on to discuss the role of Sādī in the governance of Marrakesh. It mentions that he was known for his poetry and his contributions to the city's culture and history.

The text then shifts to discuss the role of Sādī in the political landscape of Marrakesh. It mentions that he was a statesman and played a key role in the governance of the city.

The text concludes with a summary of Sādī's contributions to Marrakesh, highlighting his role as a poet and statesman and his impact on the city's culture and history.
1) The figures in brackets give the date of the first proclamation of the ruler.
The Arab tribes and the Berber tribes, never quite reconciled to one another, favoured sometimes one and sometimes the other pretender. Like the Christians, the Turks charged dearly for their services; and sometimes, to weaken their neighbours still more, lent their help to several competitors at the same time.

Mülay Malik, supported by the Turks of Algiers, was proclaimed ruler of Morocco. But Muhammad al-Mutawakkil attacked him with Portuguese assistance. A famous battle took place at Wad Makhammar (battle of the three kings) in which the king of Portugal, Don Sebastian, his ally Muhammad al-Mutawakkil and Mülay Malik were all three killed. The ex-pretender Ahmad was then proclaimed sovereign of Morocco with the support of the Turks (1578 = 986).

The latter is known as Ahmad al-Mansur, or Ahmad al-Dhahabi. He kept on good terms with the Turks and took advantage of the respite offered him by the Portuguese and Spaniards, who were exhausted or occupied in Europe, to conquer the Sudân. This was the most remarkable episode in the history of the dynasty. This ruler died of the plague in 1603 (1012). His three sons at once disputed the succession; the one, Muhammad Shaikh, known as al-Ma'mun, was the candidate of Philip III; Zidan, proclaimed at Fès, was supported by the Turks while Abu Fâris was proclaimed at Marrakech. The latter succeeded in defeating his rival of Fès, who took refuge with the Turks, then tried to reconquer Morocco from the south. But the people of Fès preferred to submit to al-Ma'mun who was proclaimed in 1604 (1013). The assassination of Abu Fâris by 'Abd Allah, son of al-Ma'mun, disposed of one of the rivals but the struggle between the two surviving brothers continued. Zidan was proclaimed and dethroned three times in all. The marabouts, to whom the Banû Sa'd had at first owed their elevation to the throne, took advantage of the situation to strengthen their personal power in their sphere of influence. Their attitude forced the Sultan to take action against them. In 1610 (1018) the encroachment of Lâcheche to the Spanish way of Ma'in became the signal for general risings. Fierce against the Christians developed at Tetuan and at Salé (Sis) [q. v.]. An adventurer, Abu Mahallât, seized Tafialât, Dra'a and Marrakésch. He was threatening to occupy the whole of Morocco when he was killed in 1613 = 1021. In the north-west the town of Sis and the surrounding country accepted the rule of a marabout, al-Áyshâ.

Sultan Zidân continued to reign, buffeted about by all these troubles, and died in 1627 = 1038. His three sons, 'Abd al-Malik, al-Walid and Muhammad Shaikh al-Aghgar, were equally the playthings of the Christians, Turks and marabouts for over nine years. The latter reigned at this time quite without restraint: a certain 'Ali Bû Domaïa was master of al-Sis; Tafialât was ruled by a creature of the Turks, Muhammad b. Isma'il; the marabouts of the Zawiya of Dîla ruled Tetula and the region of Fès; al-Áyshâ, champion of the holy war against the Christians, had added al-Qarb and al-Hasa to his territory. Muhammad Shaikh al-Aghgar succeeded in getting himself proclaimed at al-Marrakech in 1635 (1045) but he was confined to this one town of his. Even there Karrüm al-Álâli, a kind of mayor of the palace, seized the power on the death of the Sultan. He imprisoned Ahmad al-Ábbâs, son and successor of the ruler Muhammad Shaikh, and put him to death (1654 = 1064). With the latter the Sa'dian dynasty disappeared, after lasting about a century, just at the time when that of the 'Alawi Sharifs, originally of Taifaît, began to establish themselves in the north of Morocco.

Order of succession:
1. al-Kâ'im, proclaimed in 1599 in al-Sis;
2. Muhammad al-Mahdi, proclaimed with his brother in 1534;
3. Ahmad al-Áragi, proclaimed with his brother in 1534;
4. Muhammad al-Mahdi alone; he was proclaimed at Fès in 1534;
5. 'Abd Allah al-Maghribi, proclaimed in 1554;
6. al-Mutawakkil, proclaimed in 1554;
7. Ahmad al-Mansur, proclaimed in 1578;
8. Abu Fâris 'Abd al-Azîm, proclaimed in 1605;
9. Zidan, proclaimed in 1605;
10. 'Abd al-Malik b. Zidan, proclaimed in 1630;
11. Muhammad Shaikh al-Aghgar, proclaimed in 1606. He died in 1654. His son, Ahmad al-Ábbâs, never reigned but was assassinated in the same year; with him the line became extinct.

SADIK, the name given by Tippu Sultan of Mysore (1197—1213 = 1782—99) to a gold coin of the value of two pagodas, weighing 106 grains (6.86 grammes). The name is derived from the well-known epithet of 'Abbât Bakr [cf. the art. SINTON], in accordance with Tippu's custom of naming his denominations after khalifas or imams.

(J. AllâN)

SA'DIYA or DZHARIYYA, an order of dervishes named after the founder 'A'SAD AL-DIN AL-DZHARIYY, i.e. of Džar, "between the Hawra and Damascus."
His death-date is variously given as 700 and 730 A.H.; and the accounts which we have of him are clearly fabulous. According to the Khwâser al-Aghgar, l. 34, his father was the Shaikh Yûnus al-Áfghi, a pious man, whom in his youth he disobeyed, becoming a leader of banditti in the Hawra; owing, however, to his father's prayers he was favoured with a vision which resulted in his conversion. The authority followed by Depont and Coppolani makes him practice severe asceticism, and visit various sanctuaries, including Mecka; after this he returned to Syria, and founded in Damascus the order which bears his name, but which is traced by a sülûh through
The ḍūsra resembles performances by Ṣūfis of a much earlier period, who were supposed to override natural laws in a variety of ways. Egyptian historians do not appear to allude to it. Similarly al-Dījābārī has it in mind when he recommends the ḥalawīyya system for not enforcing on its members more than they can bear (1 294 al.). It does not therefore seem possible at present to say when or whence it was introduced. The practice of snake-charming, whereby followers of the order are said to make their living still in Egypt, is attributed to the founder and explained by fables connected with his conversion.

Writers on Ṣūfism pay little attention to this order, though it is just mentioned in the Dāmī al-Qīlī, without any specification of its doctrines or practices. The founder is mentioned neither in the Tuhštāt of al-Shaʾrīnī, nor in the Naṣṣāf al-Um of al-Dījābārī, who suggests that one Saʿd al-Dīn al-Hamawi, d. 650 H., was the founder of a society. It would seem then that the society began with a medico-magical aim, and by process of development became a mystical order.

(D. S. Margoliouth)

SAJD, the teak tree, tectona grandis, a large tree belonging to the Verbenaceae with broad lance-like leaves, "like the shields of the Dālīm". It is found principally in the drier parts of Further India, in Burma, Siam and Java and, according to Arabic sources, also in East Africa (Zanj). The dark coloured hard wood resists, as no other does, the effects of sea-water and has therefore from ancient times been the best wood for ship-building. Nor is it attacked by insects. The main markets for it were Bengal and Egypt. Ibn al-Baitār (transl. Leclerc, 8.) p. 253, mentions the use in medicine of the powdered wood and of an oil obtained from the fruit.

SAJD is the name given to a peculiar mode of rhetoric in which at short intervals words occur which rhyme, though it is distinguished from poetry (Shara) by not being bound by a regular rhythm or metre. Probably this was the earliest mode of elevated expression practised by the Arabs before the development of the regular metres. There is ample evidence that it was this mode of expression practised by the Khāsimīs, as well as the Pagan Arabs for their oracles, though the examples cited in the Sīra of Ibn Hīšām and in the traditions can hardly have been handed down correctly. We can safely believe Ibn al-Kalbī that the Arabs remembered nothing of their ancient poetry except that which was composed very shortly before Islam (Kidāb al-Askāmī, ed. Cairo 1332, p. 12, 3) and we must assume from this, that the very ancient Sājd has been preserved. I believe, however, that we are safe in allowing that the various Talibiyāt, or shouts uttered by pilgrims to the many shrines, as recorded by Talibiyāt al-Kalbi (Qarnā, p. 5) and elsewhere, are handed down correctly as they must have been in vivid memory at the beginning of Islam. Such Talibiyāt were, no
doubt, ancient ritual property of the tribes and go back to remoter antiquity, than the Sādjī-speeches of Kuṣ b. Sā'd and other rhetoricians of pre-Islamic times. We are told that Dāmm b. Dāmm, al-Akra' b. Ḥābib and others used to give their judgments in Sādjī when they acted as judges (Djāhiq, Bayām, l. 113, 3). Muhammad reproved a man who used Sādjī by saying: *Do you speak Sādjī like the Kūhins of Paganism?* (Djāhiq, Bayām, l. 112, 19, 20). He also prohibited it to be used in prayers (Ḫuḫḫār, ed. Juybollī, iv. 194, 2). The most striking of Sādjī is the Korān itself; especially the older Sādjī's are kept in the same tone as the specimens of the oracles of the Kūhins quoted by Ibn Ḥīhām, e.g. the oracles of Shīkh and Sādī (Sitām, p. 11, etc.). Later authors, Dīnārī, al-Kašf and others delight in citing descriptions of weather, persons etc. in Sādjī attributed as a rule to anonymous Bedouins. These quotations are probably in all cases inventions by philologists to enable them to explain the many difficult words, which could not have been accumulated as easily in a forged poem of regular metre. There was, however, from early time a predilection for this style of prose, which found its fullest expression in the Mašāḥif of Bāḍī al-Zāmān, Ḥarrītī and their imitators. The style unfortunately found its way into letter-writing, and while the earliest specimens of letters, both private and official, are remarkably free from Sādjī, with progress of time its use increased to such an extent, that both private and official correspondence became conspicuous for the volume of rhymed sentences with very little meaning. It was considered the height of accomplishment in a secretary to write in Sādjī. The style was called Mannādīj but the matter was the same. Sādī invaded other branches of literature, even the chronicles, of which conspicuous specimens are in Arabic the Tārijj al-Yamīnī and Ḥāmid al-Din's writings in the history of Wasjīf. In both these works everything is sacrificed for the juggling rhymes. This exuberance of Sādjī may be due to the bad taste of the Persians who from Abbasid times increasingly took a larger share in Arabic letters; the disease seems to spread gradually towards the West and has become one of the main causes why so much of Muhammadan literature, whether Arabic, Persian, Turkish or any other language under their influence, does not appeal to European tastes.

(S. F. Kiekkow)

SĀDJĪH, Umm Įašūr bint Awa b. Ḥākim b. Usāma, or bint al-Harīṣī b. Suwād b. Ḫufān, prophetess and soothsayer, one of several prophets and tribal leaders who sprang up in Arabia shortly before and during the *rida*. The genealogy, which her history proves to be the true one, shows that she belonged to the Banū Tanūm. On her mother's side she was related to the Taghibbhīb, a tribe which comprised many Christians. She was a Christian herself, or at least had learnt much concerning Christianity from her relatives. Next to nothing is known concerning the import of her revelations and doctrines; she delivered her messages from a minbar, in rhymed prose, and was attended by a mu'āfaqāt and a ḥāgbīb. Her name, or one of her names, for God was "the Lord of the clouds" (rabī al-sāđīb).

Sādījih came to the fore in Ḳaṭa‘ī, after Muhammad's death. One account of her exploits describes her as a Taghibbih upstart, who had arrived from Mesopotamia at the head of a band of followers belonging to Khān’s Taghibbih, the Banū al-Num, the Banū Yāqūt, the Banū Shabīb; she found the Tamīm divided, in consequence of the Prophet's death, by deep internal strife between apostates, Muslims and those who wavered between revolt and allegiance to Medīna, and succeeded in converting by her revelations and uniting under her command both branches of Ḳaṭa‘ī (the Banū Mālik and the Banū Yārābǐ), which she intended to lead against Medīna. The extent of her influence on the Tamīm seems, however, to have been much greater than this version, intended to minimize their share in the *rida*, would have us believe. The prophetess was no outcast, she really belonged to the Tamīm, as the end of her career implies, and had gained, probably for some time before Muhammad's death, the support of her whole tribe, whose conversion to Islam was mainly a matter of expediency, easily shaken off.

Sādījih's forces began by attacking the Banū Ḳībīb, in obedience to one of her revelations, and were severely beaten. Repairing to al-Nabiبد (in Yamāmah) they suffered a second defeat at the hands of the Banū Ḳāmir, and Sādījih had to promise that she would leave the territory of the Tamīm. Followed by the Yārābǐ, she decided to join the prophet Musallima, who still controlled most of Yamāmah, in order to unite their fortunes or to restore her own. Their encounter happened at al-Amwāth or at Ḳalīr. Musallima was menaced by the Muslim army, and the neighbouring tribes threatened to shake off his authority, so that the arrival of a vanquished, ambitious and desperate colleague, accompanied by many armed followers, proved a trying, indeed a dangerous visitation. There is no reliable account of the meeting: according to one version, the strange couple came to an understanding, recognized each other's mission and decided to unify their two religions and their worldly interests; they were actually married, and the prophetess stayed by Musallima to the hour of his tragic death.

Al-Tahārī preserves obscene and very probably fictitious details concerning this union, which must have been rather a political alliance than a lustful orgy; the wedding, according to these legends, was celebrated in the same walled garden where Musallima was to meet his death.

Other accounts of the meeting are that Musallima, after having married Sādījih, cast her off, and that she returned to her people; a third version does not mention the marriage, and says that the prophet tried to persuade his rival and would-be ally to attack the Muslims, hoping thus to get rid of her; on her refusal he offered, if she consented to depart, half the year's crops of Yamāmah; she declined to go unless he promised half of the next year's harvest as well, set off with the first part of the booty, and left her representatives with Musallima to wait for the rest, repairing to her kinsfolk. The second part of the ransom was never collected, as Musallima was vanquished and massacred by Khālid before the next harvest.

Whatever the outcome of Sādījih's relations with
SADJĀH — SADJDJĀDA

Muallima, her own career was either merged into his, or cut short by repulse, and we hear nothing more of her mission. According to all accounts, she went back to her native tribe, and lived obscurely amongst them. On Ibn al-Kalbī's authority we learn that she embraced Islam when her family decided to settle in Bāṣra, which had become the principal centre of the Šamī in the Umayyads, and died there a Muslim, and was buried with the customary prayers and ceremonies.

(V. VACA).

AL-SADJAWĀNDI ABU 'L-FAḍl (according to others ABU 'ABD AL-LĀH OR ABU Djadi) MUḥAMMAD R. TĀFIR AL-GHAZNAWI, READER OF THE Kūrān, died about 560 = 1164/5. While he also occupied himself with Kūrān exegesis and grammar, he is mainly known by his works on the recitation of the Kūrān. At quite an early period a beginning was made with distinguishing different kinds of pauses in reciting the Kūrān [see the article KIYĀ]. Al-Sadjawandi further developed the system in his work on this subject entitled Kītāb al- Wasāf 'alā l-Dīdān. He did however, possess the possibility of allowing a pause to intervene into 5 categories and in addition instituted an abbreviation for each letter of the alphabet: 1) wasāf li'a'n (w); 2) wasāf muʃāf (d); 3) wasāf dā'wān (g); 4) wasāf muʃāwān li'umāfān (g); 5) wasāf muʃāwān dā'wān (g). His system was soon generally adopted in a somewhat extended form and therefore in the later eastern versions of the Kūrān (except the Maghribī) we find pause marks, which are either placed according to his system or are at least dependent on it.

(R. PARET)

AL-SADJAWĀNDI SHĀḪRĪ AL-DĪN ʿABD AL-ḤdıB MUḤAMMAD B. ʿABD AL-RAṢĪH, JURIST, belonging to the Ḥafta school and flourishing about the year 1200 A.D. His Kitāb al- Farā'īfī, known as al-Farā'īfī al-Sirāḥīya or briefly al-Sirāḥīya, which deals with the law of inheritance, is celebrated and widely used and regarded as the principal work on this field. The author himself was the first to write a commentary on it and since then it has been frequently edited and annotated by other scholars down to the present time, sometimes also in Turkish and Persian.

SADJDA. Prostration (see Sujūd). The word has almost the same value in practice as our "adoration". It is used as the title of two surās’ (xxxi and ali) which are distinguished from one another by the opening letters; the second is called ẖ-m al-Sadjda, because it begins with the letters ẖ-m. The ideas and the subject in these two surās are analogous; the Prophet presents the revealed book, praises the pious who believe, gives alms and perform the ṣalāt, threatens the impious and reveals the signs of God in nature. Nöldeke puts these two surās down to the third period; in the second the Prophet is said to have had in view the conversion of the Meccan notable "Otha b. Kāthīb. Surā xxxi was also called al-Muṣafījī couches" and al-Djumārī "barren soil", Surā xlii Fuṣṣāl. "They believe only in their verses when they are recited to them, they fall prostrate or rise from their couches calling upon their Lord". Latin renderings and night prayers were already in use among the devout at the period when these surās were published.

(C. CRECHE DE VAUX)

SADDJĀDA (A., plural sadjādāt, sadjādāt, masedjādāt), the carpet on which the ṣalāt is performed. The word is found neither in the Kūrān nor in the canonical Ḥadīth; the article itself, however, was known at quite an early period, as may be seen from the traditions about to be mentioned. In the Ḥadīth we are often told how Muhammad and his followers performed the ṣalāt on the floor of the mosque in Medina after a heavy shower of rain with the result that their noses and heads came in contact with the mud (e.g. al-Bukhārī, Adhān, bāb 135, 151; Muslim, Ṣahih, trad. 214—215, 218 etc.). This shows that at the time when such traditions arose the use of these carpets was not so general that people dated their origin as far back as the time of the Prophet. With this may be compared the fact that in a series of traditions the saying is put into Muhammad's mouth that it was his privilege, in contrast with the other prophets that the earth was for him maṣṣāfūna fāhār (e.g. al-Bukhārī, Tāhāwī, bāb 121, 130 etc.). Al-Tirmidhī (Ṣahih, bāb 130) also tells us that the ṣalāt is called ṣalāt on the bare earth and in modern Egypt and Morocco persons of the lower orders do not use these mats at all.

The canonical Ḥadīth gives us the following picture. Muhammad performed the ṣalāt on his own garment, protecting his arms against the heat of the soil during prostration with one of its sleeves, his knees with one end and his forehead with the 'imāmān or ṣulamūn (al-Bukhārī, Ṣahih, bāb 22, 23; Muslim, Masedjādī, trad. 191; Ahmad b. Ḥanbal, Mawṣūd, i. 320). On the passage quoted from Muslim, al-Nawawī observes that, according to al-Shāfiʿī, it is forbidden to prostrate oneself on the garment one is wearing. Al-Bukhārī (Ṣahih, bāb 22) tells us that Muhammad performed the ṣalāt on his quilt (fīrād).
The Ḥadīth also informs us that the ẓalīṭ was performed on mats; e.g. al-Tirmīdī, Ẓalāt, bāb 131, where a biṣūṭ is mentioned (so also Ibn Mādīja, Ḥanāfī fi Ṣalāmāt, bāb 63; Ahmad b. Ḥanbal, i. 232, 273; iii. 160, 171, 184, 212); in the latter passage it is observed that this biṣūṭ was made out of palm-leaves, ḥayr al-naḥāl. Al-Tirmīdī adds that most scholars permit the ẓalīṭ on tūnsūs or biṣūṭ. A similar mat of palm-leaves on which the ẓalīṭ was performed is called ẓalīṭ (e.g. al-Bukhārī, Ẓalāt, bāb 20; Ahmad b. Ḥanbal, iii. 52, 59, 130 sq., 145, 149, 164, 179, 184 sq., 190, 226, 201). This tradition is also found in Muslim, Maṣā'id, trad. 266; al-Nawā'il observes on this passage that the fāṣids generally declared the performance of the ẓalīṭ permitted on whatever grows out of the earth. It is, however, evident from Abū Dā'ud, Ẓalāt, bāb 91, that at the end of the third (ninth) century dressed skins of animals were already being used (farwā maṣā'id).

At the same time we frequently find it mentioned that Muhammad performed the ẓalīṭ on a ḥayr (al-Bukhārī, Ẓalāt, bāb 21; Muslim, Maṣā'id, trad. 270; al-Tirmīdī, Ẓalāt, bāb 129; Ahmad b. Ḥanbal, i. 269, 308 sq., 320, 338;
The distinction between ḥamra and ḥajr appears to have lain not in the material of which they were made but in the size. According to Muhammad b. 'Abd Allah al-'Alawi's marginal glosses to Ibn Mādžja, Ḥāmra, bab 63, 64, the ḥamra afforded just sufficient room for the prostration, while the ḥajr was of the length of a man.

The word sadijāda is found a century after the conclusion of the canonical Hadith literature. Al-Dhawartari, Ṣahih, s. v., explains sadijāda to be synonymous with ḥamra. In his Supplement, Dozy quotes passages from the 1001 Nights and Ibn Battūta. The latter mentions among the customs of the inmates of a certain Shafiyya in Cairo that the whole body went to the mosque on Friday, where a servant had laid his sadijāda ready for each one (ed. Paris, I. 73; cf. 72). The same traveller tells us something similar regarding Makkah, where every one sends his servant with his sadijāda to the mosque to lay it ready on his place. He adds that they were made out of the leaves of a palm-like tree (iv. 422).

In modern Mekka, every one in the great mosque performs the qatāt on a sadijāda, usually a small carpet, just large enough for the sadijād. After use it is rolled up and carried off on the shoulder. The lower orders believe that it is not advisable to leave the sadijāda unrolled after use as iblis would seize the opportunity to perform the qatāt on it. Well-to-do people have sometimes their sadijāda kept by a servant of the mosque, but even among them this is not at
all general. In place of a carpet a towel is sometimes used, for example the one which has been used for drying oneself after the ṭuṣq. The lines woven in the carpet are not symmetrical but run to a point on one of the short sides which is placed in the direction of the ḫība [q. v.]; cf. below Lane's "niche" (this information has been given me orally by Prof. C. Snouck Hurgronje).

In Morocco the common people do not make any use of the S; the middle classes favour small felt carpets (ṭūba) like saddle cushions, just large enough for performing the ṣadḥād. These are especially used by the faṣāda, so that they have almost become one of their distinctive marks. They fold them and bear them under their arm in an ostentative way, wherever they go, and sit down on them especially when visiting Christians. Certain faṣāda from Morocco, when travelling in Algeria, even refuse to sit down on anything besides their ṭūba, a pretentiousness which hurts the feelings of people in Algeria. In the latter country the S is very rarely used, except among

India, 17th century
the heads of the prayers and various wrappings. Here the Sajiada's usually consist of simple skins of goats or gazelles. The common people ascribe miraculous powers to these skins; in legend the wrappings are often represented as using them in order to have themselves transferred thence to Mecca or to walk on the waves. Occasionally the pilgrims bring home from Mekka Wajid's analogons to those described above by the government house at Cairo, which are nowadays often imported from Europe. The pilgrims do not seem to attach to them any particular value (this information has been given me by Prof. H. Reuss).

According to Lane, Wajid's (carpets) are imported from Asia Minor into Egypt and used there only by the rich to perform the iqtada upon and also as saddle-covers. They are about the size of a wide hearth-rug. A "nich" is represented upon it, the point of which is turned towards the qibla. Persons of the lower orders often perform the iqtada upon the bare ground simply; and they seldom immediately wipe off the dust which adheres to the nose and forehead as a result of protrusion (cf. the well-known traditions regarding the traces of the Wajid); but when a person has a cloak or any other garment, which he can decently take off, he spreads it upon the ground.

The usual practice in the Dutch Indies is described by Snouck Hurgronje. A number of long narrow mats and carpets are placed broadside on the floor of the mosque before the beginning of the services. After the service these are rolled up and laid aside (Der Islam in Niederländisch-Indien, Basier, p. 109, Fernreisegeschafien, iv/1, 366). But it is usual here also to bring one's own mat to the mosque.

As Dr. J. H. Kruiner tells me, the carpet which covers the floor of the Aya Sofya is divided up by patterns into separate sagidjas'jjas, but in performing the iqtada this separation is not observed.

In the chapel in the Sadjada in Constantinople, in which are preserved the relics of the Prophet, the alleged sagidja of Abu Bakr is preserved (d'Oisselin, Tableau de l'Empire Ottoman, Paris, 1822, p. 207). In Barbier de Meynard, Dict. Turco-français, we find, e.g., a number of Turkish phrases in which the sagidja plays a part.

The sagidja has assumed special significance in the religious societies and in the Dervish orders. Among the latter—at least in Egypt—the word has become synonymous with order in the expression shukh al-sadjada, which is applied to the head of an order in Egypt.

In the terminology of these societies, sagidja alternates with iqtada (cf. above) and expressions borrowed from other languages. According to the hierarchic legend, Gabriel brought Adam a sagidja made out of the skins of the sheep of Paradise, on which he had to kneel during the shahad ceremony. This sagidja al-shahada was the one used by all succeeding generations in the same ceremony; Muhammad, Abu Bakr, Umar, Uthman and Ali are especially mentioned. From Ali it has been passed on to the shahad of the order down to the present day. The Shahids therefore sit on this sagidja during the shahad ceremony and the expression shukh al-sadjada makes the sagidja in a certain sense the throne of the whole order. Before the beginning of the shahad ceremony it is spread by the shahid whose duty this is. The Shahid sits down ceremonially after his seal, as it were, has been broken by its being spread out. The candidate on whose account the ceremony is being performed stands, on the other hand, on the shukh al-shahada. From the description it is not always clear, whether by candidate is meant an ordinary novice or rather a shahid.

A whole series of mystical interpretations is associated with the sagidja or iqtada. Head, foot, etc. are ascribed to it as to a living animal; it has four letters, which are connected with the elements; references are found to the sagidja of the path of salvation and the shahad profession is called the sagidja of the shahads. Accounts are given of the material of which the sagidja of various people were made or are made, as well as of their colour (cf. the picture in Der Islam, 1916, vi. 170).

(A. J. Wenzinger)

SAJIDS, a family which takes its name from the throne of the dynasty. Abu l-Sajid, and which ruled in Adhsharshidk under the nominal suzerainty of the 'Abbāsid Caliphs at the end of the third (ninth) century and the beginning of the fourth (tenth). It comprised five rulers:

1. Abu 'l-Sa'īd Dā'ūd b. Yūsuf Dā'ūd, a native of Qushruan, a Turkish general in the service of the Caliph al-Mutawakkil, who was appointed to take charge of the road to Mecca in 243 (856), returned to Bagdad in 245 (866) and was then sent to recover the taxes in al-Sawādī on behalf of Muḥammad b. 'Abdallāh b. Šahī; he was then appointed governor of Aleppo and Kinnaird under al-Mu'izz in 254 (868) and of al-Ahwās in 261 (874—875); in this capacity he wished to fight the Zanjī, who, having defeated his son-in-law, 'Abd al-'All al-Iṣfahānī, had seized al-Ahwās. Having taken the side of Ya'qūb b. Laidh al-Qaffālī, he lost his estates after the defeat of the latter by the zāhid al-Muwaqqūt in 252 (875—876). He was then recalled to Bagdad, but died on the way at Dūnāl-Sabāh in 266 (889—890).

Dā’ūd in Persian means "given by the demon" and Dā’ūdī "he who has the hands of a demon". The alternation of īd which is sometimes found in the manuscripts indicates an old pronunciation dā’ūdī, dā’ūdī.

2. His son Muḥammad Afāḥ in Abu l-’Umayd took Mecca from the lieutenant of the chief of the Zanjī, Abu l-Mughtira Ithā b. Muḥammad al-Maghfūrī in 266 (880). Three years later he attacked Dūnāl and captured two ships filled with money and munitions from al-Muhājīn. He was given the governorship of Basbūr, Tuṣ, al-Furāt and Ṣalāḥ. On the death of Aḥmad b. Ṭabūla in 270 (883—884) he tried to conquer Syria in alliance with Ḥishāb b. Kandāshī. They were assisted in this enterprise by the army of the Caliph, which consisted of the Egyptian forces at Shālah, but was itself defeated as the result of an
ambuscade at the battle of the mills (tamažca). After a quarrel with Ḥabib b. Kendarīj, Muḥammad turned towards Ḥumāzawalī, defeated his former ally on the Euphrates and conquered Mawšil. In 274 (888) he quarrelled with the Egyptian, lost a battle near Damascus in Muḥarram, 275 (May-June, 888), lost Ḥims, Aleppo and al-Rakah and retired to Tahtī. He took the field again and defeated, before Mawšil, Ḥabib b. Kendarīj, who was pursuing him.

In 276 (889-90) al-Muwaṣṣaṭ appointed him governor of Ṣaḥrā Ṣamāp, who then took Marāḡa from Ḍālib b. Ḥanān al-Rushāḍ (280-893) and was sent by the Caliph to carry gifts—a royal crown and other presents—to the Bagratid Sempad, king of Armenia. His brief rebellion against al-Muwaṣṣaṭ in 284 (897) ended in his prompt submission and cost him nothing. He took Ḥazān, which belonged to Sempad, as well as his capital Tovin. They then made peace. Muḥammad died of the plague at Barda in Rabī‘ I, 288 (March, 901).

3. Yūḥān, brother of Muḥammad Ṣafāḥ, after having forced his nephew Duwad, son of No‘a, to betake himself to the Caliph’s court, entered into friendly relations with Sempad, and made an alliance with him; he then took the side of Kākī Ṭatrūf, captured several fortresses; put Sempad to death who had surrendered to him, captured Ḥaswān, Zandānān, Abhar from Muḥammad b. All Šalāh, governor for the Sāmānīd Neqīr b. Ḍāyān. He defeated the troops sent against him by the Caliph in 295 (917-18). He was, however, forced to give up Ḥatī. He defeated Muḥān, who took refuge in Zandān in 302 (919), but the latter defeated him before Ardabīl, took him prisoner, treated him with consideration and brought him to Baghdad. He was set free in 310 (922) and was granted the governorship of Ra‘b and Izābārījiyān. The Caliph appointed him to fight the Kirmānīs, but he was defeated and taken prisoner in the first battle, in spite of his valour. He was put to death with all the prisoners.

4. In 311 (923) al-Muhaḏḏib, 315 (Feb., 928) Abu ‘l-Ṭālī‘a Fāṣāth, son of Muḥammad Ṣafāḥ, was given his uncle’s governorship and remained governor till his death; he was poisoned at Ardashī by one of his slaves in Shaḥān, 317 (Sept., 929).

5. His son Abu l-Farras was a general of the Caliph’s and a friend of the first Amir al-‘Umārī, Ibn Rāqī.

(ČL. Heart)

šaṭḏ aṣ’ām (for šawād aṣ’ām), strictly "the greatest of the high dignitaries", a title which from the time of Sulaimān the Magnificent has been borne by the first minister or "grand vizier" of the Ottoman empire, also called pārā-šī-a, qāšī-š-šarī-e, ṭabarqānī-š-šāhān, pārā-šī-a (from the name of the legendary minister of Solomon), etc. (cf. below). Earlier he was called waṣī (see Waṣī‘ī), then wāṣī-š-ṣīwar (aṣ’ām, eṣeber). After the suppression of the "viziers of the dome" (ṣābhe waṣī‘ī ‘alī) under Ahmad III, the Šadr aṣ’ām were appointed by no fixed rule, at the Sultan’s pleasure. The official chosen received and kept always by him a gold ring with the Sultan’s seal. In his capacity of qašī-š-ṣauqī, he was the plenipotentiary (waṣī‘ī-š-ṣīwar) of the sovereign in civil and military matters and made appointments to all the military (šāhī-ṣūrā‘) and civil (šīhī-ṣawmān) offices. The legal officers (štawān) were under the Shāhī al-īslām (q.v.), appointed, like the Šadr aṣ’ām, by the Sultan himself.

The Šadr aṣ’ām presided over the Dīwān, held monthly audiences, received the principal officials twice a week, made rounds (qal) periodically and rendered assistance in case of fire. He had the right to eight guards of honour (qalā‘ā), twelve mounted horses (qalā‘ā), a barge with thirteen pairs of oars, with a green canopy. When he appeared in public the šawmāt shouted acclamations (šalā‘), the formula of which was Byzantine in origin. He had the privilege of being able to go to the Sultan personally at any hour of the day or night.

In case of war, the Šadr aṣ’ām could become commander-in-chief—Serdar-i-ōṣ̄āh (f. qalā‘ā) and carried with him the standard of the Prophet (ṣawmān-i-ṣahīf-e) (q.v.). A deputy (ṣawmān waṣī‘ī) replaced him in the capital.

Like the Khedive of Egypt, the Šadr aṣ’ām had the right to the honorary epitet of ṭabarqānī fakhrī, or "Highness", besides the other epithets to which he was entitled: sām, "all sublime" and waṣī‘ī. Like the ṣawmāt qalā‘ā, before the reforms of Muhammad II, he wore a white hat (qalā‘ī fakhrī) shaped like a truncated pyramid with rounded corners, adorned with an oblique band of gold.

The office—šawmān waṣī‘ī (qalā‘ī)—was insecure and ephemeral. The dismissed Šadr aṣ’ām handed over his seal at an audience and went into exile, when he was allowed to live. Not being hereditary, the office was only exceptionally continued in the same family (the Čeikri). After the constitution of 1908 the Grand Vizier became responsible to parliament; the Sultan continued to nominate the Shāhī al-īslām as well as the Šadr aṣ’ām and it was the latter who chose his other colleagues. These two dignitaries, however, disappeared with the Sultan himself in 1922 (law of Angora of Nov. 1). The last Šadr aṣ’ām, Dāmād Fêrūd Pâšâ, died at Nice on Oct. 6, 1925. The President of the Council is now called Ṣāhān Wehâl, a title which Mahâmid II had tried to establish in 1838.

SADE AL-DIN, MUHAMMAD B. IBRAHIM, known as MULK SADEK, a Persian theologian and philosopher of the Safavid period. He was the son of a governor of Fars and owed his epithet to his superior merit; he is still called Akhund, "master." Born at Shiraz, he spent a long time in retirement among the mountains of Kurna, travelled in Persia and was a pupil at Isfahan, of Shâhi Bahâ'î and of Amir Muhammad Bâjîr Dâmûdî, after the instructions of Saiyîd Abu l-Kâsim Firdawsî.

When Allah-Wardikhan, governor of Fars, had finished building the minarets erected by him in Shiraz, he asked Sadâr, then at Kurna, to return to his native land and made him professor in his new foundation.

Mullah Sadâr restored the teaching of Ibn Sinâ (Avicenna); to escape persecution from the muqelfs, he concealed his doctrines by the use of the ûrûna or utterly obscure expressions. Among his pupils were Mâjân Fâlî, 'Abd al-Râziq and Kâfi Saiyid al-Kurnan. He seven times made the pilgrimage to Mecca and died at Basra in 1050 (1642) on his way back from the seventh. A prolific writer, he wrote some twenty volumes, of which some are commentaries on different chapters of the Korân, a dissertation on authentic traditions, fifty treatises on theology, forty-four works on obscure points of doctrine, written in the mountains of Kurna, and four books of travels quoted by Râzî-Kolî Khân. The British Museum possesses the Tâ'zir al-muqelfîn, a polemic against the teachers of canon law and the sharî'ah at al-Wâridât al-Kâfîyya "the intuitions of the heart."

Biblilography: Râzî-Kolî Khân, Rawdat al-safa'ât al-mibâr (Teheran 1274), viii. (not paginated, penultimate page), where several of his works are given; Ch. Rim, Catalogue Pers. MSS. Brit. Mus., London 1881, ii. 239, No. ix.; (quoting the Zoniar al-marâshîk of Râzî Tīrîsî and 'Abâ al-Karîm al-Shahâvari, Ms. P. 534); Cl. de Gobineau, Religion et Philosophie dans l'Art Central, Paris 1900, p. 50 sqq.; E. G. Browne, History of Persian Literature in modern times, ii. Index, Cambridge 1924. (Cl. Huart)

al-Sáfâ, a mound at Mecca which now barely rises above the level of the ground. The meaning of the name is like that of the name of the eminence al-Marár, which lies opposite to it: "the stone" or "the stones" (cf. al-Tâbit, Tafsîr to Sura ii. 153). Is well known, Muslims perform the su'y between al-Sáfâ and al-Marwâ in memory, as the legend relates (e.g. al-Bukhârî, al-Abî'î, bab 9), of the fact that Hâjîl ran backwards and forwards seven times between these two eminences to look for a spring for her thirsty son. — It is certain that wells were located at al-Sáfâ and al-Marwâ even in the pagan period. According to most traditions there were two stone idols there, Una on al-Sáfâ and Nâlî on al-Marwâ, which the pagan Arabs on their su'y used to touch. On the origin of these images the following story is given in the commentary of Nâshîr on Sura ii. 153, and al-Shârî'î gives its approval to it: Una, the Nâlî were guilty of indecent conduct in the Ka'ba and were therefore turned into stones, which were placed on the two pieces of raised ground al-Sáfâ and al-Marwâ to be a warning to all. In course of time the origin of the stone figures was forgotten and people began to pay them divine worship. — According to another tradition there were copper images there (cf. Snouck Hurgronje, Het Meckhanische Feest, p. 26); according to a third story demons lived on the two hills who shrieked at night (given in al-Tâbit, Tafsîr)."
Under the Mamluks Safad remained an important center. It was the capital of one of the large manatscha's or miyâba'a into which Syria was divided. The miyâba of Safad comprised the whole of Galilee with 'Akka. The town itself was the seat of a miyar and was a center of literary life, as the nabba at-Safadi of several Arab authors shows, notably that of the biographer Khalil b. Alikâs, who was born there in 696 (1296); the geographer al-Dimashqi said he had died there in 1327 (Mehr, p. vi, infra). In this period there also flourished al-Ulujmi, chief Kâfi of the manatscha of Safad (d. 780 = 1378; cf. Brockelmann, Gesch. Arab. Litt., iii. 91), who wrote a Tarikh Safadi now lost. Safad was at the same time an important center of Kabbalistic learning.

The town gradually began to lose in importance. After surrendering to the Ottoman Sultan Selim I in 1516 without striking a blow along with other towns in Palestine, the old miyâba of at first remained intact but later, in the xviiith century, the whole of Palestine belonged to the great paşalimâni of Damousa. Safad was the capital of a sandjak to which also belonged 'Akka and Tyre (Hadjjî Khalîla). During this period Safad several times belonged to the sphere of influence of the Druse Amir Fâhr al-Din of the Lebanon, who used it as a fortress to protect his possessions in Galilee. At Safad in 1633 is also said to have taken place the battle in which "All, the son of the Amir, was killed.

When about 1750 'Akka again became important under Shâlik Zahir, the strategic importance of Safad also increased once more. Zahir himself came from Safad where his father, Shâlik 'Umar al-Zâlînâni, had been representative of the Amir Bashir; under his rule the town was almost completely destroyed by an earthquake (1750). Aymad Dżasîr, who succeeded Zahir in 'Akka in 1775, at the same time conquered Safad, and Bonaparte before his unsuccessful siege of 'Akka had to take Safad (1799), where he entrusted the authority to a son of Zahir. Dżasîr later revenged himself on the town by completely destroying the Jewish quarter.

The most important events of the xixth century were the earthquakes of 1819 and 1837 which wrought great damage. After the Turkish administrative reforms of 1880 Safad became the capital of a kâfi in the sandjak of 'Akka in the wilyet of Filût. It is now within the mandated area of Palestine.

The population has varied greatly in course of time. In the xviith century it was a town of average size (Alix-Fidès). After the earthquake of 1750 it was an arid deserted village (Volney). The later figures vary very much, which is probably due to the fact that the figures of the town and the kâfi' were not kept separate. The population of the town in 1900 may be put at 15,000, of whom about a third are Jews. In 1912 there were still about 10,000 Jews there. After this their numbers declined very much down to the middle of last century, when a great influx of Mooroccan, Algerian and Persian Jews took place, which has been increased since 1880 by Zionist immigration. Safad is also a place of pilgrimage for Jews. According to Hadji Khalîla (p. 585), when the Jewish tribes immigrated the tribe of Zabulon was said to have lived near Safad. In the vicinity of the town there are now many Druzes (according to v. Oppenheim, 15,000 in the district of 'Akka and Safad); their immigration from the Lebanon had already begun in al-Dimashqi's time.

The town itself is built on three hills, of which the Jews inhabit the north. The Mâhmu'dian part has four fair-sized mosques. In the valleys between the hills and on the slopes down to the lake of Tiherias lie fields and gardens belonging to the town, which yield rich crops of wheat, maize, olives, tobacco, cotton and many kinds of vegetables. The splendid view over the lake is generally admired. The ruins of the fortress lie high up the hill and are called al-Kâfû or al-Kâfû. Practically nothing is left of the castle of the Crusaders; of the more recent defences there are still to be seen only the foundations of a strong round tower, probably that which was built by Bâbaris (according to al-Dimashqi, while Conder and Kitchener consider it one of Zahir's buildings).

Below, close to the fort, is a well, of which al-Dimashqi gives a detailed description.

(J.H. Kramer)

**SAFADI, SALAU'D-DIN KHALâL b. Alikâs.**—Abd Allah Abu 'l-Sâfâ was born in 696 or 697 = 1295/97 (Dumur al-Kâmî, MS. B.M., Or. 3034) has about the year 694 A.H. He was of Turkish descent and, according to his own statement, his father did not give him a good education and it was only when he was 20 years of age, that he began the pursuit of studies. He wrote a very nice hand as is proved by several autographs which have come down to us. He attended the lectures of the very best teachers of his time, among whom are named the grammarian Ahi Haiyân and the poets Shikhab al-Din Mahâlî, Ibn Sâyîd al-Náhirî and Ibn Nâhirî. Later he became an intimate friend of the renowned authors Shams al-Dîn al-Dhahâbî and Tâdji al-Dîn al-Sabî. His first post was that of secretary in his native town.
of Safadi, then at Cairo, later he was secretary at Halab, al-Balhia and finally he was in charge of the treasury at Damascus. He was of pleasant manners but towards the end of his life became careless. He died at Damascus on the 30th of Shawwal 764 = 1363/64. He was a most prolific author and stated himself in his autobiography that his compositions would fill 500 volumes and that the amount he had written as secretary would come to at least double that quantity. His biographies content themselves with mentioning only the most important of his works, many of them being nearly worthless compilations of verse and prose from modern authors. Besides a preponderance of quantity of verse in his own anthologies and works of contemporary and later authors, the following works have come down to us either complete or in part. All are practically compilations from earlier authors, which are very frequently states faithfully. 1) At-Wafā fi At-Wafayat, an enormous biographical dictionary in about 10 volumes, of which some volumes are found in many libraries, though I doubt whether the complete work has been preserved. Some volumes are numbered, but volumes with the same contents have at times different numbers, from which it appears that the material of the work was divided into volumes of varying size by different scribes (for the contents of some volumes see Harwita, M.S. O.S. As., xi, p. 455; while the newer MSS. in the British Museum contain: Or. 6527 4th, Or. 6635 Muhammadin, 5320 other Muhammadin). We find in the Wafi many biographies for which we should look in vain in other works of a similar nature and a full index of the names of the persons of whom biographies are found in the known volumes, would form material for a volume of considerable size. The introduction to this work was published by Ammar, J.A., 1911-12, in vols. 17-18 and 19. The most exhaustive account of the Wafi, based upon all known manuscripts is that by G. Gahidi in R.R.A.L., Series 5, vols. xx to xxx, 475. From this it appears that the work is preserved practically complete, except for two gaps and the preserved parts contain over 14,000 biographies. 2) Atfis al-Afar wa Ahmad al-Nafe, an extract from the preceding work in six volumes, containing biographies of contemporaries. This work has been largely extracted by Im Haddar for his Daur al-Kutub, MSS. are probably in the Escorial (No. 1717) and Berlin, while the volumes in the Aya Sophia (No. 2962-79) appear to be parts of the Wafi. It is quoted in the printed edition (Cairo 1305) of the Tabakh al-Kabir at-Siyas of Abū al-Rajīn al-Wakāri under the title of Tarakhim Aya al-Afar. Mālik al-Afar wa Maamid al-Limā, a book on geography, a MS. of which is in the Stadlyia library in Turin. 3) Tarikh al-Wafā, probably another extract from the Wafi, also in MS. in the same library as the preceding. 4) Tabakh Dānāt al-Abād, an Urdu in the rulers of Egypt to his own time, abbreviated from a work of Ibn 'Askir. 5) Nukh at-Humayūn fī al-Vukh at-Umānak biographies of celebrated blind persons. This work has recently appeared in print in Egypt in a very careful edition, based upon 4 MSS. It was edited by Ahmad Zeki Pasha and dated 1911. After explaining that Safadi was induced to write this book through finding a short account of blind persons of note in the Kitāb al-Ma'ārif of Ibn Kātab and a work of al-Dinārī, he enlarges on the etymology of blindness and its limits. The principal portion of the work is occupied by a large number of biographies arranged in alphabetical order, among which figure a number of valuable notices of many of all ages of Islam. 7) Kitāb al-Sharīf fī ʿArba' biographies of persons who had lost one eye. 8) Aṣaqq al-Samawāt min al-Nabī wa-l-Sāhib, containing letters addressed by him to and him, giving in many cases the dates. The first letter in MS. (Brit. Mus., Or. 1205) is dated 745 A.H. 9) Musahhat, a collection of his own epistles. 10) Tajlabin al-Silūk, a collection of extracts from other works, interspersed with his own compositions. It is difficult to ascertain of how many volumes the work consisted; the good old MS. (India Office, Arab. 3799) contains vols. 48 and 49. From these it appears that each volume commenced with the exposition of some verses of the Qur'a, then was followed by extracts of the most varying character. For example B.M., Or. 1353, the contents of which were given by Flügel, Z.D.M.G., xvi. 538-544, contain the Kitāb al-Ilm fī al- Masānagha of Ibn Fāris, not used by Brunnnow for his edition of that work, on fol. 534-774, examples of the poetry of al-Bakhtari on fol. 775 following; MS. Brit. Mus., Or. 7301, named on title-page Kitāb al-Maṣāni wa-l-Abād, contains extracts from the medical work of Dīnārī al-Din Ibrāhīm b. Mahmūd al-Aṣqā, entitled Ṭabakh fī al-Mafaṣṣa wa-l-Dīnārī (fol. 553). MS. (India Office, Arab. 3799), contains in vol. 48 extracts from the autograph Duṣūd of Amin al-Din Dīnālī al-Kawāki entitled Naqq al-Wafā wa Kaf al-Waṣf (fol. 205-203), extract from the book al-Taqāṣim al-uṣūl bi Fadl al-Maṣūm al-Abī 'All ibn Faradājī (fol. 719), extract from the Khanlīnī of al-Ṣāḥī fī l-Dīnārī ibn 'Abād (fol. 907). Extracts of this work are found printed in the Thamurdi at-Anwar of Ibn Hālidī (Cairo 1304), vol. ii. 185, 186 and 192. 11) Duṣūd al-Fawāṣa bi Turqimān al-Bulaghā, an anthology composed for Malik al-Aṣqā, 12) La'ār al-Ṣāḥī wa Duṣūd al-Bisrī, life of a pauper with poems to the boy he loved. This worthless composition has been printed repeatedly, first 1274, then 1290 in Tunis; later in Constantinople and Cairo, showing that the work is appreciated in many countries of Islam. 13) al-Nūr al-Sāhib fī Mīrāt al-Mālik, another worthless anthology containing a hundred poetical quotations by contemporary poets and the author himself upon pretty youths. 14) Raṣaf al-Hāf fī Waf al-Abād, another small collection of poems containing words which have different meanings when vocalised differently. 15) Laddābī al-Sanī fī Sifat al-Dīn, a similar collection of verses of the author and contemporaries on tears in 37 chapters. 16) Al-Raṣaf al-Nasīm wa-l-Thaqīl bi-Futūs, a similar collection of erotic extracts. 17) Kitāb al-Tanbīh ʿalār-Waf fī al-Thagābī, anthology of metaphorical verses. 18) Raṣaf al-Zulf fī Waf al-Hālī, anthology of verses on the New Moon (vide No. 33). 19) Raṣaf al-Khāf fī Waf al-Hāf, a collection of poems on wine. 20) al-Qādī al-Maṣūmī wa Mabrūq al-Sāhib wa Līwāt al-Maṣūmī, commentary on the poem of Ṭaghrī. He explains first every word, then the rhetorical figure quoting many verses, principally by modern poets. The work has also the title Ghāthī al-Abād al-Ṣāhib inṣādī fī sharī' Līwāt al-Maṣūm (printed Cairo 1305 in two vols. 20). 21) Kitāb al-Abād min Ghāthī al-Abād, extract of the preceding work.

Bibliography: Ibn Ḥajar, Durar al-Mašnûqa, B. M., Or. 3064, fol. 120v. Ibn Ḥajjâ Shaka, Ṣuṭt̄alî, B. M., Add. 23562, fol. 155v. Subkî, Ṣuṭt̄alî (ed. Cairo), vii. 94–101; Khād̄̄zam, Ṣuṭt̄alî al-S̄̄yârî (ed. Bombay 1857), ii. part 2, p. 91. Amar, F. A., series 10, vol. 17–19; Brockelsmann, Der arab. Lit., ii. 31–33; Hartmann, Mūnawwîr, p. 81; Wustenfeld, Die Geschichtsche, der Araber, p. 423; Hooghiel, Dis. Script. (Leiden 1839), p. 152–155; Notice sur al-K̄hitī, F. A., series 9, vol. 5, p. 392. Verses of Šafādî are quoted in nearly every anthology later than his own time; he is extensively cited in the Ḥalâf al-Kumârî of Nawmâdî and the Muhk̄am al-Ta`mûtî of `Abd al-Raḥmān al-Ša`bî. 26. Al-Jāmirī B. Abî Muhammād Abî Alâʾīr al-Haqq̄mî al-Šafāwī appears from casual remarks in his work to have been an intimate contem- plator of the Egyptian Sulṭān al-Naqīr b. K̄âlbīn. It has been impossible to find any biography in any of the accessible works dealing with the history of his time. He must have died early in the eighth century of the H̄îd̄q̄a; the last events recorded in his history are dealing with the year 711 = 1311/12 or perhaps as late as 714. From a statement fol. 68v. Brit. Mus. It appears that he composed the history in the year 716. He probably had held earlier an appointment in the office of the waṣf for he tells (MS. Brit. Mus., fol. 69v.) that in the year 694 he received instructions from the waṣf for Ibn al-K̄ašīlî to investigate a case of cannibalism during the famine which prevailed in Egypt during that and the following year. He composed a short history of Egypt which in the Paris MS., No. 1706 has the title: N̄iyāt al-Mawâ'ir wa[l-Muḥāqqaq al-Muṣ̄ayr wa[n-mawā'ir Mawâ'ir wa[l-Muḥāqqaq, while in the other Paris MS., No. 1931, it has the erroneous title of Fuq̄r al-Mawâ'ir, yet the London MS. has another title from which it appears that probably the first is the correct one. The earlier part beginning with the natural and other advantages of Egypt gives a very succinct account of the earlier rulers consisting mainly of anecdotes, but the chief interest lies in the portion which deals with the Turkish Sultanate; here he gives exact dates and facts which supplement our knowledge of the closing years of the 7th century of the H̄îd̄q̄a. Perhaps the account of the great flood in Ba`abak in 717 found in the London MS. may be by him, but it is not found in the other two copies. The MS. in the British Museum written for the Egyptian caliph al-Muṭawakkil probably gives events down to 795, but from fol. 113v. it contains only a notice concerning the family of the owner of the manuscript, first a genealogy of al-Muṭawakkil (fol. 113v) and then a long list of his children, first the boys then the girls, indicating in each case the date and hour of their birth, and in cases where they died before 794, the dates of their death. The last entry by the same hand but with different ink records the birth of a son, in 795 A. H., the 25th of Sa`bān. The three MSS. all contain the same work in spite of their varying titles: Brit. Mus., Add. 23326; Paris 1706 and 1931, 22.

Bibliography: in the article.

Sha`fāwī, name of the second month of the Muhammadan year, also called Sh. al-lh̄ir or Sh. al-mawâ`ir because of its being considered to be unlucky (C. Snouck Hurgronje, The Achemenid, i. 206; do., Mekka, ii. 56). The Muhammadan Tiḡrī-tribes pronounce the name Shafāwī, the Achemenide Thapa. According to Wellhausen in the old-Arabian year, Sha`fāwī comprised a period of two months in which Mah̄gūra (which name, according to this scholar is a Muslim innovation) was included. As a matter of fact, tradition reports that the early Babylonian called Mah̄gūra Sha`fāwī and considered an "umma during the months of the Ḥaḍ̄j̄a as a practice of an extremely reprehensible nature. They embodied this view in the following saying: "Bah̄a hara`a 'l-adhar wa-all-afā 'l-adhar wa[Ϻa`al̄a Sha`fāwī Ṣumâ`r il-mun Tūmar, i.e.: When the wounded backs of camels are healed and the vestiges of the 'pilgrimage are obliterated and Sha`fāwī has passed, then the Ummâ is allowed for those who undertake it."

(Doon de Smidt)

Sha`fāwīs, the most famous and glorious of the native dynasties of Persia since the introduction of Islam, which takes its name from Sha`fāwī Sa`d al-Dīn Il̄āq [q. v.], from whom its founder, Ima`m Sha`f̄āwī [cf. fam.` È], was sixth in descent. The family had long been settled at Ardabīl [q. v.] as hereditary spiritual instructors of the people, and at
the end of the sixteenth century Isma'īl, after the death of his two elder brothers, extended his authority by degrees over Shīrāz, Aḏharbājān, ʿAšḵābād and the rest of Persia, "the ground having been assiduously prepared by widespread political-religious propaganda". The Shiʿa doctrine had always been popular in Persia, but Isma'īl was the first ruler to make it the state religion, and to propagate it among the Turkish tribes of the north, whom he enlisted in his service and distinguished by giving them red hats, whence they were known as Kızılbaş (Red-heads). He virtually extinguished the Sunni religion in Persia. He died on May 24, 1524, and was succeeded by his son, Tāhmasp I, who repeatedly expelled the Uzbeks from Khurasān, waged a number of unsuccessful wars against the ʿUlamāʾī Turks who, under Ṣalūm I, had defeated his father, and helped Hamzayūn to recover his Indian throne. On his death in 1536 the throne fell, after a contest, to his fourth son, Isma'īl II, a worthless and debauched tyrant, during whose shameful reign the kingdom was a prey to intestine strife and foreign aggression, but on his death he was succeeded by his youngest son, Shāh ʿAbbās I (1585–1629), justly entitled the Great, who restored Persia to her legitimate place in the Islamic world. He inflicted on the Turks a defeat which deterred them from molesting his kingdom, he drove the Uzbeks and Tūrkmāns from Khurasān, and he recovered Kandahār from the emperor of India. He was just and tolerant, he imported an industrious colony of Armenians from Djufla [q.v.] on the Araxes to Isfahān, where they built and inhabited the suburb of New Djufla, he encouraged trade and intercourse with western nations, and he was a liberal patron of architecture. His grandson, Saḥīf I, who succeeded him, and reigned for fourteen years, was a bloodthirsty tyrant who disgraced the throne of his ancestors and was devoid of either justice or humanity. His armies repelled the raids of the Tūrkmāns in Khurasān, but in his reign Kandahār was recovered by the emperor of Dīlūl. The Turks, encouraged by the disorders which his tyranny engendered, recovered Bagdād and even occupied Tābriz, but were compelled by the severity of the winter and the scarcity of supplies to withdraw from Aḏharbājān. Saḥīf recovered Erīvān from the Turks, and died in 1642, when he was succeeded by his son, ʿAbbās II [q.v.], then only ten years of age. ʿAbbās recovered Kandahār from Shāh Ejlālān of Dīlūl, and a movement of his troops against an Uzbek chief on the Khorāsat frontier caused the Indian forces to evacuate Balkh. The relations of Persia with Turkey were greatly improved in his reign, and intercourse with the western powers was extended. He died on Oct. 26, 1666, and was succeeded by his elder son, Saḥīf, who frustrated an attempt of the amirs to exclude him from the throne, and assumed the name of Sulaimān. He was an enlightened and tolerant monarch and welcomed the ambassadors of European powers, even of the Russians, whose habits disgusted him. His health was always poor, but he reigned for twenty-nine years, and on his death in 1694 was succeeded by his son, Shīrāzī Husain, a weak prince who permitted ecclesiastics to conduct all affairs of state. Those who refused to conform to the state religion — that of the Shiʿa — were persecuted, and this fatuous policy provoked the hostility of the Afghāns who held Kandahār for the King of Persia, so that in 1769 Mir Wais, governor of that province, proclaimed his independence. In 1722 Muḥammad, son of Mir Wais, invaded Persia and besieged Isfahān. Famine compelled the city to surrender, and Muḥammad deposed Shīrāzī Husain but died soon afterwards. In 1729 Abū al-ʿAbbās, the brother and successor of Muḥammad, was expelled from Persia, and Nādir Khān [see the art. ʿAbd al-ʿAbbās III] placed Tāhmasp III, of the Safawī family, on the throne, but shortly afterwards deposed him as being unfit to reign, and caused his son, then only eight months old, to be proclaimed under the title of ʿAbbās II. The child died soon afterwards and on Feb. 16, 1737, Nādir Shāh's assumption of the royal title extinguished the Safawī dynasty.

(T. W. Hall)

AL-SAFFFĀH. [See Abū ʿAbbās III.]

ṢAFFĀRĪDS, a dynasty founded by Yaʿqūb b. Laʾīth al-Ṣaffār which originated in Sadjistān and reigned in Persia for thirty-three years. Yaʿqūb, who was a coppersmith (ṣaffār) by trade abandoned his handicraft and became a brigand, but his chivalrous conduct in his predatory calling, attracted the favourable attention of Sālīḥ b. Naṣr (or Naḏr), and he gave him the command of his troops. Yaʿqūb rebelled against Dīrām b. Naṣr. In 253 (867) he was master of the whole of Sūstān. Having thus established himself in Sūstān he captured Herāt, and Muhammad b. Tāhir b. Ahmad, governor of Khurasān, attempted to divert his attention from this town by beseeching on him the government of Kirmān. In 253 (867), however, he recaptured Herāt and took some Tāhirīds prisoner. He sent an embassy with magnificent presents to the Caliph al-Muʿtasim, tried to take possession of the province of Fārs, defeated the governor ʿAll b. al-Ḥusayn and entered Shīrāz, without injuring the population. Then he returned to Sadjistān without establishing his power in Fārs. — He then turned to the domain of the princes (ruṭūl) of al-Rukhšāh. In 256 (870) he conquered Balkh, Bīmiyān [q.v.] and Kābul. In 257 (871) Yaʿqūb again tried to take possession of Fārs. In order to turn his attention from this province, al-Muwaṭṭāf gave him this attention: al-Tūķhāristān and Sīnā in chief. In 259 he marched against Najaḥibāb, which he captured in Shavwāl. There he took Muḥammad b. Tāhir prisoner. After an unsuccessful expedition in Tābaristān, he finally duced him to conduct his army through Khūṣtan against Baghādād, after having defeated the governor of Fārs. He was in his turn defeated at Dār al-ʿĀqīl, retired to Khūṣtan and died at Dījūndāl Shāhāb (Shawwāl 265 = June 879) where his tomb is still shown.

He was succeeded by his brother ʿAmm [q.v.], whose descendants maintained themselves in Sūstān till 1165.

AL-SAFFFĀT, title of Sīra xxvii of the Kūfī, after the first word wālat-Saffī-

SAFī, more accurately Asfī, ethnic Masfūrī, a port in Morocco on the Atlantic Ocean, a few miles south of Cape Cantin, at the top of a very open bay. Safi has about 21,000 inhabitants of whom 3,000 are Jews and a thousand Europeans.

Safi does not seem to date back to any great age. Al-Bakri (13th century A.D.) mentions it without attributing any great importance to its Al-Idris in the next century says it is a fairly busy port but the roads are not all safe. In the beginning of the thirteenth century, a riot arose there. But the importance of Safi really dates only from the coming of the Portuguese, who, continuing their progress along the Moroccan coast, settled there in 1507. There they established a stronghold which in 1530 resisted a vigorous attack, with the help of a local chief, Yahyā ben Tafīf, who seems to have been a personage of considerable importance, the Portuguese for several years maintaining Safi the principal centre of their operation. They established a regular protectorate there, gradually winning over the neighbouring tribes and daily advancing their outposts and their rasais further afield. They ultimately reached the very gates of Marrakṣa. But Portuguese, with her hands full elsewhere, especially in the Indies, could not long sustain such an effort; on the other side too, the holy war movement gradually increased in force and the administration, in difficulties for funds, forced to exploit more and more the subsidised country, became worse and worse. In 1516 the governor Lope de Barriga was taken prisoner; in 1517 Yahyā b. Tafīf was killed in an ambush on the way back. The attacks of the Shafsers became more and more serious and after 1534 the question began to be considered of evacuating Safī and arsenical (which had been occupied in 1513), to concentrate the defence on Masagān. They were forced to this solution of the problem in December 1544 after the loss of Agadir in March of that year. The evacuation was made in good order under the direction of Joan de Castro.

The Safī Shafsers having occupied Safī made it their principal port; as a matter of fact it was the nearest to Marrakṣa, which was their usual residence. Safi thus attained great importance in the 16th and 17th centuries; a considerable part of the Christian trade was centred there. When the ‘Alawīs secured the power and moved their capital to the toward of the north, Mehκes or Fès, Safī became the busiest port and Safī lost a great deal. In the 18th century, however, Christian merchants were still numerous there; the representative of France, it may be noted, lived there for several years. In the 19th century its decline became more marked. It is now a fairly busy little town from which are exported the agri-cultural products of the rich country of the ‘Abdān, of which Safī is the centre. Of the ancient rihā it has retained the name of one of its two quarters while the name of the other is commemorated in walls for the most part Portuguese.

Bibliography: Besides the geographers and historians of Morocco (al-Slàwī in particular — cf. the bibliography to the article MOROCCO see the Portuguese chronicles; Pedro de Salazar, Historia en la cual se cuentan muchas guerras entre christianos e infieles (1559); Diego de Torres, Historia de los Cheřīfī; Marmol, Péllet, Ablancourt, Paris 1607, ii. 78—113; Chénier, Recueil historiques sur les Mors, Paris 1787; among contemporaries see especially de Castries, Sources historiques de l'histoire du Maroc (in course of publication), passim; cf. also Welt, Die Saïfids of Morocco in the XVIIth Century, London 1904; Cour, Les Bezi Bertiufs, Constantine 1920.

(HENRI BASSET)

SAFī, FAJKER AL-DIN ‘ALĪ b. AL-HUSAIN AL-WAYĪ al-KHĀSHĪF, with the name Fakhr al-Dīn ‘Alī b. al-Jāhilī al-Khāshīf d. 910 = 1504/5, a Persian author. From the preface to his work Lāfī al-Tūnūfī it appears that he was a prisoner in Herāt for a year and in 939 (1532/3) entered the service of Shaḥ Muḥammad, prince of Ghur in which he composed the Lāfī al-Tūnūfī. He must therefore have died after 1533; the exact date is not known any more than that of his birth.

Works: 1) a romantic poem, Maḥmūd u Ayāh, as far as is known the only poetic version of the theme; 2) Raschkhāt-i ‘Allī b. Fakhrī, a taqhirā of the Naqshbandī Shākhī, ed. Teichmann 1599, finished in 919 (1513/4); a Turkish translation of it appeared at Constantinople in 1526, at Balkh in 1526 (Ethē in the Grundr. der Iran., Bibl., ii. 365); 3) the above mentioned Lāfī al-Tuṇūfī, also called Lāfī al-Zarāfī, a narrative work found in a considerable number of manuscripts in European libraries, which contains in 14 bands anecdotes regarding individuals of various classes of society (extracts in Schefers Christ. Pers., i. 100 sqq.).

(V. F. BÜCHNER)

SAFī AL-DIN (Shāhīk), ancestor of the Safawīs [q.v.] in Persia, was born at Ardabil (q.v.) in 650 = 1253/4, the son of Khwādja Kamīl al-Dīn ‘Arabī al-Shīrāzī and Dawlat, said to be the twenty-fifth line of descent from ‘Alī and in the thirteenth of Mīn al-Khīrīn, the seventh Imām (on his genealogy see E. G. Browne in the J.R.A.S., 1921, p. 397). Shīrāzī al-Nasabī (Safavīyot, Berlin 1924), He was the fifth of seven children and his father died when he was six years old.

He is described as a serious youth who grew up without comrades and early devoted himself to religious exercises. As he found no one among the learned men of Ardabil who pleased him as
a teacher he went to Sanda with the intention of attending the lectures of Shaikh Nadjib al-Din Burghulji (d. 678 = 1280), but the latter died before he arrived there. He made the acquaintance of pious devots and devout men, including Shaikh Rukn al-Din al-Baidawi and Amir `Abdallah, who finally referred him to Shaikh Zahirid, i.e. Tadj al-Din Ibrahim b. Rawshan Amir b. Washil b. Shaikh Bandis al-Kurdi al-Sanjari of Galin, who was reported to live on the Caspian Sea. He is said to have spent four full years searching for him and ultimately discovered him in Hiyakurin in the Kuhabat district of Galin. Shaikh Zahirid gave him a kindly welcome and Saif al-Din remained 25 years with him until Zahirid died at the age of 85. Saif al-Din then became his successor in Zahirid's brotherhood until he in turn passed away, likewise aged 85, on Monday, Muharram 12, 735 = Sept. 12, 1334. Shortly before his death he had made the pilgrimage to Mecca and had previously designated his son Sadir al-Din as his successor. On his return he became ill, lay for twelve days in bed and then passed away. He had two wives, Bibi Fatima, daughter of Shaikh Zahirid and the daughter of Ali Al-Salimian of Gentum. The former was the mother of 1) Mansur al-Din, who died 744 = 1344, 2) Sadir al-Din (born April 27, 1306 = 704 Hegirah, died 794 = 1392), Shaif al-Din's successor and 3) Abul Sa'id. The second wife bore him two sons, Ali al-Din and Sharaf al-Din, as well as a daughter, who was given in marriage to Shaikh Shams al-Din, a son of Shaikh Zahirid.

Saif al-Din was the founder of the Dervish order of the Safasas which later attained political control of Persia. The organization and history of this brotherhood have not yet been thoroughly investigated. It is clearly connected in its political and religious history with the dervish bodies which later appeared in Anatolia and became powerful there, like the Agha and the Bektashis. Its members later wore as a badge a twelved gown of scarlet wool (later called Shap-i Bairad; cf. Islam, i. 83), from which comes the Turkish name Shap-i Bairad "red head". Of the religious system of the order it is certain that in its later stage, as it is today, Shaif al-Din himself, the founder, was a Sunni (cf. E.G. Browne, Persian Literature in Modern Times, p. 43 sq.). Following the Agha's Aghas, Saif al-Din received numerous adherents from Persia and especially from Anatolia (cf. J.R.A.S., 1921, p. 403-4) and it is to him that the order owes its present prestige in Shafi circles and its later great extension, which was ultimately to prove almost fatal to the Ottoman Empire.

Bibliography: The principal source is Ibn al-Bazzaq, Sufanat al-Safa, lith. Bombay 1329 = 1911; MSS. in the British Museum, Add. 11745 and in King's College, Cambridge (cf. E.G. Browne, op. cit., p. 35); this work, of which Browne, op. cit., p. 38 sq., gives an excellent survey, deals exclusively with Saif al-Din's influence and neglects almost entirely the merely "biographical" data of his career. The Sitihath al-Milah, extracts of which have been given by E.G. Browne in the J.R.A.S., 1921, p. 395-418 (cf. thereon F. Babinger in the Islam, xi. 231 sq.), and published by him in Persian at the Kaviani press in Berlin in 1924, is also important; on it see the earlier article by von Ebnikoff in the Melanges Antiques ... de St. Petersbourg, i. 850-853. On further Persian literature see P. Horn in the Grundriss der iranischen Philologie, ii. Strassburg 1896/1904, p. 856 sq., and v. Ebnikoff in the Melanges Antiques ..., i. 543 sq. On Shaif al-Din's influence, especially the very full account of E.G. Browne, Persian Literature in Modern Times, Cambridge 1924, p. 3-44; on his order, the Khilab, and their connections with Anatolian dervish orders see F. Babinger, Schijch Bedar al-Din, Leipzig and Berlin 1921, p. 78 sqq. (Isf., al. 78 sqq.), with the sources there quoted and also do., Marmo Samnata's Tagebuecher als Quelle zur Geschichte der Sasaswai in A Volume of Oriental Studies presented to Edward G. Browne, Cambridge 1922, p. 28-50.

(Franz Babinger)

**SAFIYA BINT HUYAIY** b. ARIJAH, MUHAMMAD'S ELEVENTH WIFE, was born in Medina and belonged to the Jewish tribe of the Banu 'Najjar; her father and her uncle Abul Yasir were among the Prophet's most bitter enemies. When their tribe was expelled from Medina in 4 A.H., Huyaiy b. Arijah was one of those who settled in Khabar, together with Khunah b. Al-Kalbi, to whom Safiyya was married at the age of 6 or early in 7 A.H. She was about 17 years of age. There is a tradition that she had formerly been the wife of Sallam b. Mashkaq, who had divorced her. When Khabar fell, in Safar 7, Safiya was captured in a fortress, al-Kamils or Nizar, together with two of her cousins. In the division of the spoils she had been assigned, or actually given, to Dhiya b. Khalfi al-Kalbi, but when Muhammad saw her he was struck by her beauty, and threw his mantle over her as a sign that he had chosen her for himself. He redeemed her from Dhiya against seven heads of cattle, and induced her to embrace Islam. Her husband was condemned to a cruel death by Muhammad for having refused to give up the treasure of the Banu 'Najjar; the desire of marrying Safiya may have influenced the Prophet, who was at that time not permitted to settle with another wife, either in Khabar itself or at al-Sahba', some 8 miles from it, on the way back to Medina. Safiya's dowry consisted in her emancipation, and she assumed the veil (hijab), thus establishing her position as a wife, which at the beginning appears to have been questioned. In Medina Safiya received a cold welcome: A'isha and Muhammad's other wives showed their jealousy with ights upon her Jewish origin. She seems to have lived aloof from her surroundings, for she finds no further mention of her in the years preceding Muhammad's death, except in an episode that shows how, during his last illness, she expressed her devotion to him, and was criticized by the other wives. With the Prophet's daughter Fatima she was, however, on good terms.

In 35 A.H. Safiya aided Uthman; while he was besieged in his house she made an unsuccessful attempt to reach him, and she used to bring him food and water by means of a plank bridge placed between her dwelling and his. When A'isha asked her to be present at Uthman's last interview with 'A'ishah and al-Zubair, which took place in her house, Safiya went, and tried to defend the unfortunate Caliph.
She died in 30 or 52, during Mu’awiyah’s caliphate, leaving a fortune of 100,000 dinars in land and goods, one third of which she bequeathed to her sister’s son, who still followed the Jewish faith. Her dwelling in Medina was bought by Mu’awiyah for 400,000 dinars.

In Cairo there is a 12th century mosque dedicated to Sitt Safiya, which gives its name to the surrounding quarter. 

Al-Šaḥāba. [See Aṣyā’iṣ.

SAHARA (Al-Šaḥāra), an African desert. Safira’ is the feminine of the adjective ṣafara, “of a lawn colour”. The word is applied by some writers to a combination of stony soil, steppes and sands (cf. al-idrâî, ed. de Goeje, p. 37 note), while the word muṣafidâ is more particularly applied to the desert. When sandy and absolutely devoid of water (cf. Abu 1-iDîbâ’, Taqâwṣar al-Bul’dân, ed. Reinaud and de Slane, p. 137; transl. Reinaud, ii, 190). Leo Africanus uses it as a synonym for desert in general (Schefer i, i, 5).

The Sahara lies between Barbary, Tripolitania, Cyrenaica and Marmarica in the north, the Sudan in the south, the Atlantic in the west and the Nile valley in the east. Some geographers even extend it as far as the Red Sea, and thus link it up with the Arabian deserts. Its area, if we leave out Egypt, may be estimated at three million square miles, or a quarter of the total surface of Africa.

The Sahara, as a whole, may be regarded as an ancient “plain” concealed in many parts by more recent geological formations. Its surface, far from being uniform, presents considerable variations of level. Some parts, in the vicinity of the Egyptian border, in the south of Tripolitania and in the south of Tunisia, are below the level of the sea; in other parts, however, there are high plateaux, and mountain ranges, for the most part of volcanic origin, tower up (Tibesti, Air, Hoggar), some of whose summits are over 10,000 feet high (Tibesti). On the whole, we may say that lowlying areas predominate in the western Sahara and the highlands in the eastern.

The desert character of the Sahara is primarily due to the climate of this part of Africa. Rain is very rare and irregular there; the extreme dryness of the air produces an intense evaporation, which reduces to a minimum the rising of springs to the surface. The great variations of temperature and violence of the wind’s result in the break up of the rocks and the denudation of the surface. The conditions of animal and vegetable life are, in consequence, extremely precarious. It is, however, right to make a distinction in this respect between the desert zones and the desert strictly speaking. In the north, indeed, the fairly abundant rainfalls have allowed the development of a zone of steppes suitable for stock-rearing, of which the high plateaux of Algeria show the most perfect type; in the south a border of savannah and bush rolls almost without interruption from the Atlantic to the Nile basin, and forms the transitional link between the Sahara and the fertile regions of Equatorial Africa. This is the ‘Sudânese Sahâra’, in which the desert character lessens gradually as one goes southwards. The Sahara, properly so called, occupies the whole area between these two zones and even in the north reaches to the Mediterranean in the region of Sidra and Marmarica. It presents very different aspects in its different parts. Sand-planes cover enormous tracts (cf. the article Arego), separated from each other by rocky plateaux (Hamada), bounded by steep slopes. In other parts we find river valleys, usually dried up, called wa’dâ’ (wads) or flat plains of a soil sometimes perfectly uniform (Reg) as in the Algerian Sahara, sometimes filled with pebbles which makes walking very difficult, as in the Libyan desert. The most desolate parts are the “Tanezzour”, absolutely sterile regions and totally without springs. On the other hand, wherever we find surface water and wherever sheets of subterranean waters are sufficiently near the surface to be reached by wells or irrigation channels, there have arisen centres of population and cultivation, known as “oasis”, some isolated, others grouped like the islands of an archipelago: Fezzan, going towards Râgîsh, Zîlân, Tidikelt, Tuṭṭ, Qarara, Tafilt etc.

The Arab authors only give us fragmentary and often vague information regarding the Sahara. The only region that they know with any exactness is the northern zone, adjoining Ifriqiya and the Maghrib, the zone in which Ibn Khaldûn (Les Berbères, ed. de Slane, i, 120; transl. de Slane, i, 190) includes Tafilt, Tuṭṭ, Qarara, Fezzan and even Ghadames. The Arabs, however, do not agree as to the bounds of the Sahara. Al-Bakrî, for example, says that the sands mark the beginning of the “lands of the blacks” (Ma’dûdî, Algeria, 1911, p. 21; transl. de Slane, p. 49).

Ibn Khaldûn, on the other hand, makes it clear that this country is separated from Barbary by a vast region of deserts, “in which one is in danger of dying of thirst”; here and there we find some notes on the parts of the deserts traversed by caravan routes (cf. the western Sahara; cf. the description of the desert called Nitâr or Tisâr by al-Idrîsî, Yaww by Abu 1-iDîbâ’”) or on the accounts of commercial centres like Tadmakka, Audaghoût (Al-Bakrî, op. cit., p. 339).

Leo Africanus gives a resume of the data supplied by his predecessors. He identifies the Sahara with the Libya of the ancients (Bk. i, 5) and attempts a division into regions based on their populations. He distinguishes five different areas in the Sahara: (1) the desert of the Zenaga (x232), from the ocean to the salt beds of Tegaza; (2) the desert of Wazaghâ from the salt-loads of Tegaza at the Air in the east to the desert of Sidjilmas in the north; (3) the desert of the Targa (x232 = Tuareg), bounded in the west by Ighidi, in the north by Tukh, Garara and Mbâr, in the south by the kingdom of Agades; (4) the desert of the Lamta bounded on the north by the deserts of Wargila and Ghardama, in the south by deserts which reach as far as Kano; (5) the desert of the Bardawî lying between the desert of the Lamta in the west, the desert of Ardjila in the east, Fezzan in the north, Bornou in the south (Leo Africanus, Bk. viii; transl. Schefer, iii, 267 sqq.).

In spite of the sparsity of its resources, the Sahara has always been the home of man. The discovery on numerous places, at a great distance from one another, of wrought flints, pottery, rock carvings, etc. testify to the presence of man there.
at a very remote epoch. The ancient gaves these Saharan people the name of Ethiopians (Hesi- datum) or Libyans. They peopled the Sahara in the strict sense of the word, while Fessâz was occupied by the Garamantes, negroids, perhaps related to the present day Bornòs. In the northern border zone, Berbers of a white stock lived, gradually, however, the negroes were pushed southwards by the whites, and gave way to the whites. And according to E. Gautier (Le Sahara, p. 93 seq.), this ethnic change was the result of the introduction into North Africa in the Imperial period of the camel which supplied the Berbers with the indispensable means for the conquest of the Sahara. In any case, from this time onwards the Berbers never ceased to advance into the interior. When the Arabs came, the Zanata were already settled in the oasis of the Wed Rir, while the Sanhadjas were leading a nomadic life to the south of the great Atlas as far as Senegal. In the fifth century A.D. the Almoravids [q. v.] ruled the whole of the western Sahara. Three centuries later the Berber tribes (Grunada, Lamûna, Uriga, Matlûf, Lamta and Targa) formed from west to east a cordon stretching to the borders of the land of the negroes (Ibn Khaldûn, Les Berberes, ed. de Sane, L. 21; transl. de Sane, p. 104). The advance continues in the centuries following. In the sixteenth century A.D. the Tuareg occupied the Air, in the seventeenth and eighteenth they settled in Adrâr and reached the banks of the Niger. The penetration followed the Berber penetration. In the first century A.D. the Arabs first arrived in Fessâz; during the period following, they found their way into the central Sahara and into the western Sahara, as missionaries and merchants. But it was the Hûlî invasion that brought in whole tribes, who, finding the Maghrib too small for them, overflowed into the desert, thrusting forward the Berber tribes and forcing them to go farther south, so that by the time of Ibn Khaldûn, Arab tribes were occupying the border country north of the desert. Certain later happenings contributed to the diffusion of the Arab element, for example the expulsion of the Moors from Spain, which brought refugees even as far as Shingît in Adrâr, and the conquest of the Sudân by the Sudanians at the end of the sixteenth century A.D. The Arab expansion has gone on since our own times; witness, for example, the settlement in Bordj about 1820 of the Awad Sulaimân (Uled Sliman), who came from the shores of the Gulf of Sîdra. The existence of fairly active commercial relations between the two sides of the Sahara has always contributed to facilitate this infiltration. From the early centuries of the Hûlî, caravan routes connected Fessâz with Tchad, Southern Tunisia with Nigeria, and the extreme Maghrib with the empire of Ghûna. In the seventh century A.D., Walata was in regular connection with Morocco and Tuttî, Kanem with Ifiriya. In the sixteenth century A.D., Timbuktu traded with Morocco and Tunisia; in the nineteenth the routes from Tripoli to Bornû and Walâti were still busy and Arab traders were settled at all the caravan stations.

This Arab and Berber penetration has, however, been checked from time to time by return offensives by the Sudanese. At more than one period, indeed, negro empires have extended over the Sahara. The Soninke empire of Ghûna stretched over all Mauritania; the Mando empire reached to Tukt; the authority of the Sultân of Kanem has been recognised around Wargla, that of the Askia of Gao even to beyond Timbuktu.

This ebb and flow of peoples has left its trace in the present ethnography of the Sahara. We find in it the elements of white and black, either pure or altered by mixture in different degrees. The first, numerically the most important, is represented by the Arabs and the Tuareg [q. v.] In spite of the differences of origins and of language which distinguish them, they both present some features in common. They lead the same kind of life, a purely nomadic one, to which a kind of secular selection has wonderfully adapted them; as regards politics, they have not advanced beyond the rudimentary organisation into tribes and confederacies of tribes. Their geographical areas, however, are quite distinct. The Tuareg predominate in the Central Sahara from which they have advanced, gradually mixing more and more with black blood, as far as the bend of the Niger. The Arabs predominate on the frontiers of the Maghrib and especially in the western Sahara, where they have arabised, and where their intermarriage with the Berbers has given birth to a mixed population, the Mourn. The families who have preserved their Arab descent almost intact and who bear, as a rule, the name of "Hassan", constitute an aristocracy among them, while the other sections of the population, with the exception of some groups of Sanhadjas and Almoravids, are treated as an inferior caste (cf. the article MAURITANIA).

The black population also includes elements of various origins. The aboriginal population, gradually thrust back by the whites, seems to be represented at the present day only by the Tibu [q. v.], who, numbering barely 10,000 or so, occupy Tibesti and the neighbouring regions (see the article TIBESTI). The vast majority consists of individuals of different origins (Hausa, Bornûs, etc.), whose ancestors were settled in the Saharan as the result of the Sudanese conquests, or who have been brought into the country as slaves. The intermarriage of these negroes among themselves and with Berbers seems to have given birth to a particular type, the "hartam" (plur. : harratim), among whom black blood predominates; they play a very important part in the economy of the Sahara, especially in the villages and oases of the Northern Sahara. In contrast to the essentially nomadic white, the black is a settler; he cultivates the oases, a work for which the whites are unapt by their inclinations as well as their physiological organisation. The black tiller of the soil secures for the nomads the means of subsistence, without which they could not do, but he is kept by them, whether Arab or Berber, in a state of dependency and service.

If it has not opposed an insurmountable obstacle to the relations between the Mediterranean region and the Sudân, the Sahara has been no more a barrier to the diffusion of Islam, the progress of which coincides with that of the white element in the desert. Introduced into Fessâz in the first century A.D., Islam was spread by the Arab traders, who frequented the caravan routes and commercial centres, and by the nomad Berbers, like the Lamta and the Lamûna. The conquests of the Almoravids gained for Islam a vast
area in the western Sahara and up to the borders of the Sudán. This Islam, quite superficial by the way, like that still professed by the Tuareg, allowed traces of previous beliefs and practices contradictory to Korânic law to go on; on the other hand, it met with centres of resistance like the Tuat, where Judaeo-Berbers maintained themselves till the fifteenth century a.D. At this period the religious revival which began in North Africa had its repercussions in the Sahâra. Maraboutism and Shâhi were coming for the most part from Morocco, appeared in all places of any importance, exterminated all who differed from them, preached the orthodox doctrine and themselves became founders of Marabout flocks, whose members enjoyed great material and moral prestige. The activity of these religious brotherhoods became added to that of individuals, and is still felt at the present day. The western Sahara is under the influence of brotherhoods attached to the Kâdiriya order and, in a smaller degree, to the Tijânîya; the eastern Sahara to that of the Sâdia.  

(SAHARANPUR, a city of northern India, situated in 39° 57′ N. and 77° 33′ E., was founded about 1740, in the reign of Muhammad b. Tughluq, and was named after a local Muhammadan saint, Shâh Harûn Ûthî. The city and district suffered severely during the invasion of Timûr; and in 1356 Bâdur traversed them on his way to Pântapat, and some local Mogul colonies traced their origin to his followers. Muslim influence gained much by the proselytising zeal of Abd al-Kuddus, who ruled the district until the reign of Akbar. In the reign of Dâlahângar and Shâh Dâštân, Saharanpur was a favourite summer resort of the court, owing to the coolness of its climate and the abundance of game in its neighbourhood. Núr Dâštân had a palace in the village of Nàrâmag, which preposterous beef, and the royal hunting seat, Pâdshâh Mâshâl, was built for Shâh Dâštân. After the death of Avrangzib the district suffered severely from the invasions of the Sikhs, who massacred Hindus and Muslims indiscriminately, until, in 1710, they were temporarily crushed by the imperial authority. The upper Dâtâb then passed into the hands of the Sayyids of Bûra, and on their fall in 1721 into those of several favourites. In 1754 Ahmad Shâh Durrân conferred it on the Rohil, Nadîg Kûta, as a reward for his services at the battle of Kotla. Before his death, in 1770, it was overrun by Sikhs and Mârâthás. His son Zhâhid Dâštân revolted from Dâtâb, but was reconcile, and his son Ghâtân Kûta, who succeeded him in 1785, established a strong government and dealt firmly with the Sikhs. He was a coarse and brutal chief and in 1788 he blinded the emperor Shâh 'Alâm and was justly mutilated and put to death by Sindhya. Saharanpur remained nominally in the hands of the Mârâthás, but actually in those of the Sikhs, until its conquest and occupation by the British after the fall of 'Alighâr and the battle of Dâtâb in 1803.  

(SAHB, the partiparitale form of pâ-bû, to be the companion of, meant originally to be on equal terms of friendship, and was especially used of all those who came into contact with Muhammad, and died in the faith of Islam (cf. the art. Afsâh). But also in Muslim literature it often has the common meaning of companion. Muhammad calls himself sahid-àkun when he addresses his companions; and the Kaiser is called sahib al-Kâm, the governor of al-Bâr sâhib al-‘dra, by 167 = 783/84 the Caliph al-Mahdî created an inquisitor and gave to him the title of sahib al-Za ‘müdâhî. Still later, the term Kâm was preferred. It is probable that the sacred musâmah, a tradition with the Prophet's Companions led to this preference.  

The term Sahib is used universally in India to-day to designate Europeans, and is a formal mark of respect. When applied to Indians of high station it is an added honour, e.g. Khan Sahib. Curiously enough the Arabic feminine form is seldom in use, and not in an honorific sense. In the Creed of Al-Ash'ari (Sûrta, Zur Geschichte Al-'Utric, p. 133-144) he says of God: "He has taken to Himself no companion (sahiba)". This use, however, is very exceptional. In India at present the feminine is obtained by prefixing Madam, with an elided ð, and pronouncing mânzah and this is the form by which all European women are addressed.  

On the use of sâhib in the Mekkan dialect, cf. SÂHIB, the title, meaning "Lord of the (suspicous) conjunction". Sâhib means a conjunction of the planets, Sâhib al-sâdân (cf. the art. Sâdan) a conjunction of the two conspicuous planets (Jupiter and Venus), and Sâhib al-mâlahid means a conjunction of the two insidious planets (Saturn and Mars). In the title the word refers, of course, to the former only. The Persian i of the sâhib is omitted, as in Sâhib-ûl, by sâhib-ûl, the title was first assumed by the Amir Timur, who is said to have been born under a fortunate conjunction, but with whose assumption was, of course, an afterthought. After his death poets and flatterers occasionally applied it to lesser sovereigns, even to so insignificant a ruler as Bârhû Nîmad Shâh II of Ahmadnagar, but it was officially assumed by Timur's descendant, the emperor Shâh Dâlahângar, who styled himself Sâhib Sâhib al-‘Zâhî, "the second Lord of the Conjunction".  

Sâhib-Sâhib was also, in Persia, where it has since been corrupted into Sirâh or Sirân, the name of a coin of 1000 dinârs, the tenth part of a tâmil.  

(SAHIB KIRAN, a title, meaning "Lord of the (suspicous) conjunction". Kiran means a conjunction of the planets, Kiran al-sâdân (cf. the art. Sâdan) a conjunction of the two conspicuous planets (Jupiter and Venus), and Kiran al-mâlahîm a conjunction of the two insidious planets (Saturn and Mars). In the title the word refers, of course, to the former only. The Persian i of the sâhib is omitted, as in Sâhib-ûl, by sâhib-ûl. The title was first assumed by the Amir Timur, who is said to have been born under a fortunate conjunction, but with whose assumption was, of course, an afterthought. After his death poets and flatterers occasionally applied it to lesser sovereigns, even to so insignificant a ruler as Bârhû Nîmad Shâh II of Ahmadnagar, but it was officially assumed by Timur's descendant, the emperor Shâh Dâlahângar, who styled himself Sâhib Sâhib al-‘Zâhî, "the second Lord of the Conjunction".  

Sâhib-Sâhib was also, in Persia, where it has since been corrupted into Sirâh or Sirân, the name of a coin of 1000 dinârs, the tenth part of a tâmil.

'Sirin.

(T. W. HAW)

SAHIR, sound, free from defect or blemish, is the name given to (a) a tradition whose chain of guarantors or transmitters is unassailable; and (b) the collections which contain nothing but saḥiḥ traditions, namely those compiled by al-Bukhári (p. v., l. 783) and Muslims b. al-Hashim in distress.

(a) The saḥiḥ tradition, according to al-Qudróbí (d. 816) embraces categories so wide apart as the šamás (supported by authorities resting on the prophet) and the fard (peculiar to one district or one reporter).

(b) The šahih of al-Bukhári contains 7,397, or, according to other authorities, 7,295 traditions. These were selected by the author from the 600,000 hadith current in his day and the 200,000 it is asserted that he memorized. A remarkable feature of his šahih is the chapter heading or tamúluna which is often tendentious and sometimes misleading; e.g. when he prefaces a tradition which professes to record the equal efficacy of a pilgrimage to the mosques of Mecca, Medina and Jerusalem with the words: "The superiority of prayer in the mosques of Mecca and Medina". (Bibl. Fedé al-Salat, ed. Krech, l. 299).

The contents of Muslim's šahih are practically the same as al-Bukhári's except that the šahih differs considerably; and instead of the chapter headings so characteristic of al-Bukhári, the author gives us a valuable preface in which he discusses the conditions which a tradition must fulfill before it can be regarded as authentic.

Both works (al-Bukhári's more systematically) are planned to provide, where possible, apostolic hadith on which to ground the existing laws and regulations of Islam. So great was the reputation of al-Bukhári's šahih that it was regarded as a charm against shipwreck and other calamities and the author's tomb became the resort of believers in distress.

(Alfred Guillaume)

SAHIR is a reversed word, of the measure faṭīl instead of the measure muḥāl, and its original meaning is "abraded (by the sea)". Hence, the shore of the sea or of a great river, a seashore, sea-coast, or sea-board; also a tract of cultivated land, with towns or villages, adjacent to a sea or great river, and the side of a valley.

(T. W. HAW)

SAHIR, TURKISH, a notable modern Ottoman poet and author. Born in 1853 in Constantinople, the son of Ismail Hâkı Pasha who died in Vomou, he early showed literary inclinations and a talent for declamation. Through his writings he was very soon able to procure for himself a prominent position among Turkish men of letters. He acted as a teacher of French and of belles-lettres and was for a time employed in the Foreign Office. Later he acted chiefly as editor of various periodicals, e.g. the literary part of the Tercvet-i Şay numérique, the ladino newspaper Doveté (the Nogayev), founded by him in 1909 but which expired after 4 numbers, the Fedî-i-Allî, the Türk şahâne, the Mecâmmê Muhi, the monthly Bitig (knowledge), also founded by him (1915) — he was president of the Türk Bitig Derneği — the İsrâ'illî Mecâmmê (a journal of national economy) (1916), etc. His undeniable flair for practical business is in remarkable contrast to his sensitive, elegiac, very tender style of poetry. He takes first place among the younger poets as regards perfection of language and depth of feeling. The euphony of his verse is fascinating. As a prose writer a simple and brilliant diction best suits him.

With a sure instinct he at once attached himself to the modern school of the Tercvet-i Şay numérique (Tercvet-Fikret — Eşrefi Yue). He actively championed the simplification of the language. As regards prose, however, he adhered strictly to the old classical form (tarâkû). That for a period he also wrote in the national metre which consists of the syllables (parmak-hiyye), obeying the national tendency, was only an interlude. His early period of extravagant and fantastic descriptions of nature was followed by a transition to psycho-analysis. His true sphere, in which he is considered a master, is woman and love, which he sings in an inexhaustible variety of ways. He celebrates them in inspired, indeed fervously tender poems. For him "the poem is a woman and woman a poem". This praise of woman is done in a perfectly pure, morally noble and ideal way. Only reluctantly does he turn to other themes, although here also he has produced many fine poems. A certain tendency to the morbid, to wistfulness, to foreboding of death and longing for death is strongly marked in him. It is no wonder that many, while fully recognizing the merits of his charming personality, cannot regard him as a poet such as the poem with the name "New-Turkey needs in her period of transition.

With the constitution a somewhat more vigorous national tone entered his work. Since then he has been above all a champion of women's rights, for which he fights with tongue and pen. He was president of the Fedî-i-Allî (the coming dawn), Surm and Drang club, which, comprising about 20 men of letters of the Tercvet-i Şay numérique circle, endeavoured to control the direction of development of Turkish literature but collapsed owing to internal dissensions after only seven months. Besides numerous poems and articles in the most varied papers and periodicals he has published the following books: a collection of poems entitled Ebeli Naligiter (*White Shadows*) (1855) and the collections of mingled prose and poetry entitled Bahtın (*Crises*) (1855) and Siêh (*Black*) (1855); all in the series, so important for modern literature, called Edibeti-i Gâfûlê Kâşât-i Şer-i Emir (*Nov. 15, 19 and 27*); and a work entitled Şimlit. His {Suar}wan mehî helî mi-nâdîni, published anonymously in 1835, contains political and satirical verses.

Bibliography: Şahid ed-Dîn Sâ’il-Minot, Turkiyesi Edibeti-i Gâfûlê Kâşât-i Şer-i Emir (Nov. 15, 19 and 27); and a work entitled Şimlit. His {Suar}wan mehî helî mi-nâdîni, published anonymously in 1835; contains political and satirical verses.

SAHL AL-TUSTARI, ABDU MUHAMMAD. B. 'ABDULLAH IBN 'UYBAN, a Sunni theologian and mystic, whose language was Arabic, was born at Tustar (Al-Ahwaz) in 203 (821) and died in exile at Basra in 283 (896).

A pupil, through his master Ibn Sawsur, of strict Sunni like Thawri and Abū 'Amr b. 'Ala', Sahil was above all an ascetic of a very strict moral discipline. He was also a theologian with a vast store of intellectual knowledge.

Of his life, apparently quiet and solitary, only one detail is known: his exile to Basra at the time of the rise of the Zanj (about 261-274) when the 'ulama' of Al-Ahwaz condemned his doctrinal treatise on the obligatory character of contrition (bawd farid).

Sahil wrote nothing, but his "thousand sayings" collected and edited by his pupil, Muhammad Ibn Sallam (d. 297/909), presented sufficient dogmatic coherence to give rise to a theological school, the Sallimiyya [v. w.]. It is from Sahil that this school derives its characteristics: experimental introspection, practicing the rites of worship and a technical semi-geometric vocabulary tending to monism.

Sahil's argumentation is purely dialectic (futūd, ajl. farid), like that of the mu'tazila'ilmānīn he does not and yet argue in syllogisms in the Greek fashion as his old pupil Hallaj [q. v.] was to do after leaving him. In psycho-physic he teaches that man is composed of four elements (hayār, rūh, sūr, guf), that the rūh is superior to the sūr (against the view of the Hellenisers) and that it survives after death (against the view of Malārād).

In Kūrānic exegesis each verse has four meanings, literal (ghār) allegorical (hilāl), moral (badl) and axiological (mu'tāla), he admits the usual theory of ghafar. The examples of the prophets should be meditated upon in order that we may gradually attain their state of soul.

For Sahil, as for Ibn Karrān and al-Ash'arī, the Islamic community' comprises all believers, provided they turn towards the ḍīna (the Suuni view) opposed to that of the Mu'tazilite and 'Ilmānī. The word "faith" (imāma) signifies at once succession with the lips (farid), conformity of conduct (fayd) identity of intention (āja) and inner enjoyment of the real (yāni).

The true worshipper of Godought first to obey the state and strictly observe the rites: "to love is to extend obedience" (al-Tustari, also, see "profession of faith"). He is bound to produce actions, in imitation of the Prophet (semi-Mu'tazili notion of ibtihād: opposed to the quietist inamāt of Shāfi'i and Ibn Karrān), but he ought continually to turn towards God (Allah) (hiyār al-ma'ānī with incessant contrition (tawbah) farid fi halī mana). The analysis that Sahil makes of the stages of the voluntary act, derived from that of Al-Muhāsib and adopted by Al-Qazwīnī remains classic. In the supreme degree is the ecstatic "expatriated" from the world, in order to possess the essential reality (yāni), beyond the rites of worship (ghafar bi 'l-ma'īdāh 'aṣa al-ḥār), an adumbration of the Hallājī doctrine of mystic union.

In eschatology Sahil uses with discretion the semi-geometric data of Imānī origin; the "columns of light" (zann al-ḥār, 'al. maqādik ʿālā), a kind of "mass of primordial adoration", composed of all the souls of saints to be (as opposed to ordinary men, adammā), an adumbration of the "nur muhammadīya of the later mystics. The saints alone are predestined to possess sīr al-rūḥānīya or sīr al-anwār, "mystery of the sovereign personality", or "divine right to say "I"." This idea is an adumbration of the hawa huwa [q. v.]. From it Sahil deduced the probability of future rehabilitation for Sātan; an idea later developed by Ibn Al-Arabi and "Abd al-Karim Dīji [q. v.].

The ōhār formulae which Shāhī Suṣanāt ascribes to Sahil (Salawāt, n. v. Suṣanāt) is of modern origin.

AL-SAIHM, the arrow. a. Geometrical term. If one erects a perpendicular s at the middle of a chord of an arc, which reaches to the arc, this is called al-sainhm, the versed sine (al-diżāf al-muṣūlīh) of the arc s; the sine (al-diżāf al-muṣūlīh), which corresponds to our sine, is a c (see — in addition to many other passages — Muṣfīth al-Uṭūn (ed. v. Vloten), p. 205. The versed sine played a much more important part in the older mathematics from the Hindus onwards than it does in modern mathematics (cf. e. g. A. von Brannmühl, Geschichte der Trigonometrie). Sine and versed sine are measured in the parts of the radius of the circle, the latter being taken as equal to 60 parts or 1.

b. Astronomical term: Ibn al-Kūfī says that the expression sahain al-diżāf (the arrow, the hitting of the secret of the future, see sp. al. v. p. 327, 338, 410) is astrological. (E. Weidemann)

c. Astronomical term: Šarāt al-Kūfī, constellation of Sagittarius, and also al-Kawā, bow of Sagittarius, (cross-bow), a southern constellation of the ecliptic, which, according to Ptolemy and the Arabs, consists of 31 stars mainly of southern latitude, which arc among all of the 3rd to 6th degrees of magnitude. Ptolemy gives only star 24 of Sagittarius (Arabic: rubūs al-yaẓir al-yuṣayr, elbow of the left arm) the magnitude 4—3, while al-Birūnī (al-Kawsī al-Marāṣīl, Berl. MS. 275, fol. 205v) gives magnitude 2 for stars 24 23, (kūb al-yaẓir al-yuṣayr = knuckle of the left hand); of Sagittarius in Ulug Beg, however, except star 3 of Sagittarius (ahla 'l-shīb al-yaẓir al-yuṣayr, the one mouth of the bow), which, according to him, is 3—2 in magnitude, they are only of the 3rd or lower degrees of magnitude. This 24th Sagittarius is really of 1.9 magnitude (on 'Urūlā al-rūm see C. A. Naillino, Opus astronomicon, ii. 165). The following stars of Sagittarius are also noteworthy: Naṣāl al-šahīm...
Mâlik and Saḥnûn had brought with him from Kâraânân the portions of the Murâwîţa of Mâlik which Anûs b. al-Fârûq had heard under the master. When some questions arising out of the study of the Murâwîţa were discussed before Abîd al-Rahmân b. al-Ḳâsim, Saḥnûn required further information and he was asked why he did not travel to hear Mâlik himself. He replied that his poverty and lack of money alone prevented him. This association with Abîd al-Rahmân was of far-reaching consequences for the spread of the Mâlikî school of law in the West. Most authorities place the journey of Saḥnûn to the East in 450, but this is an evident error, as it is also recorded that he went there during the life of Mâlik, who died in 179 a. H. He later had the gratification of travelling further and performed the pilgrimage in company of Abîd al-Rahmân, Aqîhâbâb and Ibn Wâbî riding on the camel behind the latter. Later he visited also al-Âdâmân and Syria studying under the most prominent followers of Mâlik. He returned to Kâraânân in 451 and made it his calling to spread the doctrines of Mâlik. Some of his biographers state that he was the first who introduced these doctrines into the West, but before him Abî b. Zîyâd, Al-Buhîlî and Anûd b. al-Fârûq had taught the Murâwîţa or at least parts of it. Saḥnûn worked out the doctrines in a large work, the Mudawwannâ, the basis of which was the text of Anûd b. al-Fârûq, which he commented by questioning Abîd al-Rahmân b. al-Ḳâsim upon the most trivial points. Here the acumen of Ibn al-Ḳâsim and Saḥnûn come into prominence. Saḥnûn asks: "Is this point confirmed by tradition or the teaching of Mâlik?" and Ibn al-Ḳâsim answers: "This was the teaching of Mâlik" or: "This is my own opinion" (hadîth 'ainî). We see that great scope was given in the Mudawwannâ to rational judgment and no attempt is made to introduce genuine or forged traditions to affirm a point of law. In consequence the Mudawwannâ is quite a readable book in clear language and a safe guide to the genius of the compiler and his teacher. When Wâbî, a foster-brother of Saḥnûn, died, Ibn Abî l-Djâwâdî, who preceded Saḥnûn in the office of judge, is reported to have asked Saḥnûn and Saḥnûn refused to say then after him because Ibn Abî l-Djâwâdî was a Muṯâzî. When the aûlî Ziyâdat Allâh (reigned 201-223) heard of this he commanded the governor of Kâraânân to give him 500 stripes. His wife Abî b. Ḥâmâdí hearing this stopped the messenger bearing the order and went to the aûlî to get the sentence revoked. He pointed out that Al-Buhîlî had succumbed to a similar punishment (in 403) inflicted by order of the governor Muhammad b. Muḥâsitî. Ziyâdat Allâh then forgave him. During the short usurpation of Abîmâd b. al-Aqîhâbâb (232-234) he introduced the inquisition about the creation of the ʿarîfîn and Saḥnûn fled from Kâraânân to the heritage of an ascetic named Abîd al-Rahmân at Kâ'far Ziyâdî. Aqîhâbâb sent a courier named Ibn Sulṭân to meet Saḥnûn, because he knew that the latter hated the Muʿtazîs, like most courtiers, on account of his severe criticism concerning the licentious life at Court. The terrible violence of Aqîhâbâb, however, made Ibn Sulṭân to lean towards Saḥnûn. He was apprehended and led captive to Kâraânân, but when they were about a mile from the city they received news that Muhammad b. al-Aqîhâbâb had regained his
power and that Ahmad had been killed. This caused Sahlun to be liberated. One of the first acts of Muhammad b. al-Aghlab was to debase the Kalbi 'Abd Allah Ibn Ah! Uqba. This act met with the approval of Sahlun, who exclaimed in the presence of both: "May God reward the Amir for freeing the people of their oppressors." Muhammad now, in 335 A.H., offered the office of judge to Sahlun who for a whole year, refused to accept it but finally accepted it in Ramadhn 334. He said on that occasion to his daughter Khulud: "To-day thy father has been stabbed without a knife." Others had proposed Sulaiman b. 'Umar for the post, but he refused, saying that while Sahlun lived no one else was competent to fill the office. Sahlun accepted no presents or salary from the Amir, but defrayed his expenses and those of his officials from the poll-tax imposed upon non-Muslims. To perform his duties as judge unstintingly, he had a room built adjoining the mosque and admitted only the litigants and their witnesses. One of his first acts was also to exclude all heretical sects from the mosque, as there were many Sahlun, Bidah and Mu'tasils at Kairwan; he was also the first to appoint a regular Imam for the mosque and the first who placed pledged property with trustworthy persons in the town, while up to his time pledges had been kept in the house of the judge. Sahlun, as a judge treated all parties with the utmost courtesy and did his utmost to appease any fears of litigants and witnesses by telling them to say frankly what they knew. In answering legal questions he was very careful, as he believed that hasty replies led to more trouble than anything else. Biographers of later times know of many charitables (blessings accruing through his influence), which proves the veneration in which he was held. He died on Sunday the 6th or 7th of Rajab, 240 A. H. and his death in spite of his great age caused general consternation in Kairwan. Brockelmann in his History of Arabic Literature says that it was due to Asad b. al-Furqat and Ibn al-Kasim that the doctrine of Malik spread in the West, but, as already mentioned, the merit is principally due to the work of Sahlun in arranging and publishing the Masnadun, which, though based upon the Maswatta of Malik, is a much more comprehensive work. Manuscripts are comparatively scarce, but the work has been printed in two editions in Cairo, one in 4 volumes 4to printed 1324/5 and the other in 16 parts dated 1905/6 in 8v. There exist in private hands seven parts written on parchment in Kairwan about the year 400, which I have been able to consult and which I hope will find their way into a public library.

The work of Sahlun being too large for quick reference was abbreviated by Abu Muhammad 'Abd al-Aghlab b. Abu Zaid (died 380 A. H.), whose work has been printed several times. I have also seen an early manuscript written before 400 A. H., in private ownership, entitled Muqlad or Mawwaran. This work contains also a few additions by Ibn Abi Zaid. Another abbreviation is by Abd Sa'id Khalaf b. al-Kalun al-Ardi: al-Barari, who was one of the principal pupils of Ibn Abi Zaid. He re-arranged the abbreviation in the order of the Masnadun and omitted the additions of Ibn Abu Zaid. This work has found many commentators (Ibn Farahun, ed. 4to, p. 116). Among the many commentators written upon the

**Mashadun** is one by Sahlun's son Muhammad, 2) by Abu 'l-Kasim 'Abd al-Khalil al-Suyuti, who died in Kairawun in 405. 3) By Abu Muhammad 'Abd al-Rahman b. Abu 'l-Hasan al-Abd al-Rahman, who died in Sifin in 418. 4) Abu Muhammad 'Abd al-Mu'min al-Khadi, who died in Sifin in 418. 3) Abu Muhammad 'Abd al-Mu'min al-Jazairi, who died in 719. The latter's commentary consists of 12 volumes. Abu 'l-Walid Muhammad b. 'Abd Allah b. Rashid wrote an exposition of difficult passages of the Mawwaran entitled al-Muqaddamat al-annawari, which has been printed in Cairo (1243) in two vol. 4to.

**SAHUL, a village in South Arabia, in M'dt al-Kala' in the Yemen, half a day's journey from Zafin. Sahul, which was called M'dt al-Yemen on account of its wealth in corn, was celebrated for its cabbages (sahulja) made thereof of white cotton.

**SAHYUN. [See SIYAWN]**

**SA'IB, MIR'AH MUHAMMAD ALI, whose nickly was SA'IIB, a Persian poet, born about 1012 (1603) near Isfahan, where he was appointed hokhamad of the merchants of 'Abbasid. Hakan Rukh'ayl Kashif and Hakim Shirs Isfahani are mentioned as Sa'ib's masters in poetry. He spent a considerable time in India, where the governor of Khand, Zafar Khan, his benefactor and patron, obtained his introduction to the court of Shah Jahan. He afterwards followed Zafar Khan to Kash- man, where he ultimately returned home to Persia. Sa'ib 'Abbasi II gave him the title Malika-i-Isfahani. He died in Isfahan in 1080 (1677) but other dates are also given (see Catalogue Hainisperm, p. 148).

Sa'ib was one of the most prolific Persian poets of the later period; Oriental critics place him very high; according to them, he was the creator of a new style. His works are, in addition to a romantic poem, **Mashadun o Ayat** (Kith in the Granada, die Iran. Phils., 350), hokans, his ghazals (in Perisan and in Turki), mathn aw's and shorter
but when he reached Marr al-Zahrān on, according to another authority, Thābit 'Aṭā', he declined to accompany the others any further, because he did not believe in the honourable intentions of the two leaders of the enterprise, Tālha and al-Zahāri, and endeavoured to dissuade the others from the project. Marwān b. al-Hakam contradicted his assertions, but al-Maghūra b. Shu'āb joined Sa'id, whereupon these two with a few others separated from the other members of the party. Sa'id then settled in Mecca and did not take part in the battle of the Camel nor in the battle of Ṣiffin. During the reign of Mu'āwiya he was governor of Medina alternately with Marwān b. al-Hakam. Marwān filled the office first; then came Sa'id's turn and when he was dismissed the former received the post again. But after a time he was again dismissed and Sa'id once more appointed his successor. Sa'id died on his estate in al-Ṭablī, according to the most usual statement in 59 (678/679), according to others, as early as 53 (674/675) or 57 (670/671) or 58 (671/672).

SA'ID ibn 'AWS (See also ZAID).

SA'ID ibn DAMI' (See also al-SA'ID).

KA'B ibn LUTAYY, ONE OF MUHAMMAD'S EARLIEST COMPA NIONS. His mother was Fatima bint Abī Ṭalha b. Umayya, daughter of the clan of Khālid. His Küsra is Abu 'A'āwar or Abu Thawr. He was one of 'Umar b. al-Khattāb's cousins and at the same time his brother-in-law through his wife, who was 'Umar's sister, as well as through 'Umar's wife who was his sister. He assumed Islam before Muhammad entered the house of Zaid b. al-Askām and 'Umar's conversion is said to have taken place under the influence of Sa'id and his family.

His father, Zaid b. 'Amr, was one of the ḥafīl; he was much interested in monotheism, refined to worship the Kūsa, warmed his contemporaries against idolatry and confused the religion of Abraham (cf. ZAID b. AMR). It is said that he died in the year when the Kūsa was killed and executed in which also Muhammad is said to have taken part.

Sa'id migrated with the Muslims to Medina, where Muhammad allied him with Rāfi' b. Mālik al-Zurqālī, or, according to others, with Chani b. Ka'b. When the rumour of the return of the kūsāghī caravans from Syria reached Medina, Sa'id, together with Talha b. 'A'idh Allah, was sent on scouting service. They met the caravan at al-Hawra and hurried back to Medina to report the news. But Muhammad was already on the way to Badr and the battle took place without their taking part in it. They nevertheless obtained their portion from the booty. Sa'id was present at all the other maṣāḥid and distinguished himself in the battle of Adrādīn (13 A.H.), where he was at the head of the cavalry, in the battle of Fīrūn (13 A.H.), where the infantry was under his command, and in the battle of the Yarmūk (15 A.H.).
At 'Umar's death Sa'id belonged to those who
promoted 'Uthmān's election as Caliph. Yet he
was not content with his government, though he
did not join the 'Alīd party.

He died in 50 or 51 A.H. in 'Akhī near Medina,
where he was buried. It is said that he reached
the age of 70 years. According to others, he
died as governor of al-Kufa under Mu'āwiyah.

Sa'id never played the first role in the Muslim
community. He was honored because of his early
conversion and belongs to the ten who were
promised Paradise (ṣaḥāba mustawābihum), Muḥammad
is sometimes (Ahmad b. Hanbal, Mustad, i. 907
ce) represented as ascending mount Hūs or 'Uthmān
with some of his companions. As the mountain
begins to tremble, he says: "Stand fast, oh mountain,
for on thee walk a prophet, a qādī and witnesses.

Then he proceeds to beatify his companions, among
whom Sa'id mentions himself in a veiled manner in
some traditions. Some of the forms of this report
remind us of Jesus' transfiguration on the mountain
(Matthew 17).

Sa'id belonged to those whose curse (dā'ma) is
efficacious. This is illustrated in the story of a
woman who, being cursed by him, became blind and
was drowned in a well into which she fell to save
herself from being killed.

Sa'id's manumid, i.e., the traditions handed down
on his authority, is to be found in Ahmad b.
Hanbal's Mustad, i. 187-190.

Bibliography:

(A. J. WESSING)

SA'ID PASHA, called KOCÜK (the "little", not
so much to indicate that he was particularly small
in body as simply to distinguish him from numerous
other Sa'ids), was with the reformer and organizer
Ahmed Midhat Pasha the greatest statesman in
Turkey of the last half century. He was born in
1254 (1838) in Erzerum and died in Constantinople
on March 1, 1914; he was the son of 'Abd
Namık Efendi, at one time "controller of expendi-
ture on the eastern frontier", and trusted adviser
to the governor of the day, who had been for a period
consult and later Turkish Chargé d'affaires in Teheran
(d. Oct. 4, 1853); Sa'id came from a pure Turkish
family of Angora, the Selâzad family. He is buried
in the cemetery in Elifg near the Harrešt Khalîl
mosque. His twin brother 'Abdî died prematurely
and his younger brother Mehemd Ferid at his death
in 1882 was Tabârī-ı Emâlî, Midhat.

Sa'id received his early education in Erzerum.
When 16 he entered the civil service there, in
which he was destined to have a brilliant career
and pass through all stages up to the very highest
office. Two years later he was moved to a post in
the military administration of Anatolia, then
came of his course of his duties to Constantinople,
where his versatility procured him a post in the
office of the Supreme Council. He accompanied the
Imam General to Salonica, Monastir, Jannina and
Trikala. He next became general-secretary for
Janina, and then for Salonica, after which he filled
successively the offices of Director of the Imperial
Printing Press in Constantinople, Manager of the
official newspaper, Ta'kvim-i Wâhiyye, General
Secretary to the Council of State, to the Ministry
of Commerce, to the Grand Vizierate, to the
Ministry of Education and in 1875 Councillor of
the Ministry of Commerce and Agriculture and
Member of the Commission on reforms. From Sept. 1,
1876, to Jan. 10, 1878, he occupied the important
and influential position of Trustee of First Secretary
of 'Abd al-Hamid.

After acting for a short time as Wall of Angora
and of Brusa (Kâhâkhândigar) he became Grand
Vizier in 1879, an office which he held nine times in
all, a record attained by no other Grand Vizier,
although, as regards length of tenure of the office,
many others have considerably exceeded his total
period of 7 lunar years and 15 days. He was also
the different times Minister of the Civil List, of the
Interior, of Foreign Affairs and of Justice.

The list which he himself gives of his first seven
periods of office as Grand Vizier, in his Sa'îd-i
Midhat Sa'id Paşa'nın devezlari ve ziyti tarihi ve møşereti: 1834 (1908), a
collection of his articles published in the Tanbin and
in the Sa'dâ, contains a number of discrepancies in
the dates which we shall endeavour to remedy
here. The dates are not without importance for
the history of the Young Turk movement.

Sa'id Paşa was Grand Vizier (after the introduc-
tion of the so-called Constitution of Midjat the
title "First Minister" was used until Sa'id in 1882
again introduced the traditional title Grand Vizier,
Sa'id Paşa [q.v.]) as follows:
1) October, 1879—June, 1880;
2) September, 1880—May, 1882;
3) June, 1882—November, 1882;
4) December 2, 1882—September 25, 1883;
5) June 9, 1895—October 3, 1895;
6) November 18, 1901—January 15, 1903;
7) July 22, 1908—August 6, 1908: restoration of
the Constitution;
8) October 4, 1911—December 30, 1911;
9) December 31, 1911—July 17, 1912.

Sa'id was a trustworthy guide in his country
at a very difficult time; the period of continual
endeavour to link up with modern European
development, although his abilities as statesman
and organizer could not obtain full scope in view
of the special conditions of the times. He was
a statesman of the old school, conservative, but
quite friendly to reforms. To 'Abd al-Hamid he was
a faithful and indispensable councillor and he seems
to have brilliantly succeeded in his aim of gather-
ing all power into his own hands and making the
Yildiz the political centre of gravity to the exclusion
of the Sublime Porte. At all events he is silent in his "Memoirs" regarding his activities as First
Secretary to the Sultan, although the Young Turks
for a time laid special emphasis on his work during
this period. He seems also to have been not un-
connected with the notorious document in defence
of 'Abd al-Hamid's regime by Ahmed Midhat Efendi
(Civîl Ta'kvim and supplement Zâhid-i Hasanî,
1877 and 1878). Except for Ahmed Wâri Paşa,
Sa'id was the only real personality among the
creatures of the Sultan and he was able to retain
the respect and esteem of both friends and opponents.

In a way quite unusual in a Turkish statesman
he laid stress on his pure Turkish blood and on a
specifically Turkish patriotism. He sought to
make as possible to limit the spread of foreign
influence in Turkey although he was regarded as an Anglophile
and progressive. On Dec. 4, 1895, he had to seek
refuge in the British Embassy at Constantinople
to escape an order from the Sultan for his arrest,
until Abd-al-Hamid gave a written guarantee of safety. He spent the next six years, however, in his "hoca" in Niğde, in a retirement which was practically confinement to the house until he was again summoned to power.

During his "English flight" he drew up his scheme for writing his reminiscences, although he could hardly expect to publish such a work during the regime of Abd-al-Hamid.

In spite of many attacks by the court camarilla, among whom he had many opponents, and the open enmity of Paşa, his great antagonist, from 1886 to 1891, he had been able to make himself indispensable; in any situation of particular difficulty they always came back to him, who possessed an unusual degree of energy and an unfailling breadth of vision in matters of policy, in spite of his inquisitive disposition. He never prejudiced himself in the slightest but retired as soon as his own views became too much in contrast to those of the Sultan. As early as 1896 he had had no cause to demand an independent responsible ministry.

At the outbreak of the revolution of 1908 he was summoned by Abd-al-Hamid with the restoration of the constitution. But he settled as soon as the Young Turks demanded an entire change of system and complete breach with the past and handed over the Grand Vizierate to Kemal Paşa. But when the Italian campaign in Tripoli had to be settled and the Balkan War, which had taken an unexpectedly tragic turn as a result of the destruction of the whole organisation of state and army in Turkey by the doctrine of Young Turks, seriously threatened the stability of the Empire, it was again Sa'd who was called upon to save what was still left to save. His power of adaptation was so great that he was now regarded as a Young-Turkish statesman.

In the three sessions of the new parliament he was President of the Senate. In this capacity also he presided over the National Assembly in S. Stefano on April 22, 1909, which declared that the proceedings of the besieging army were in accordance with the wishes of the people, whereupon Abd-al-Hamid was deposed on April 27, 1909.

When the Young-Turk party came to political power, he became President of the Council of State but later handed over this office to Khalil Bey and retained only the presidency of the Senate, which he had received after the assassination of Mahmut Şevket Paşa in succession to the Albanian Ferid Paşa on June 11, 1913. He was still President when he died after a month's long illness at the age of 76.

Sa'id is probably the first Turkish statesman who left his memoirs, a work of the first historical importance. It was published in 3 volumes in Constantinople (1828) under the title Sa'id Paşahînî Kâhiyânî, but this does not seem to be complete. The circumstances of the time prevented these reminiscences being fully utilised; although biased in many directions, they form documentary material of inestimable value for contemporary history and were published to defend his policy, when he took refuge in pecuniary poverty. Only Kemal Paşa, whom he exposed more than any other of his opponents (d. Nov. 14, 1913 at Larnaca in Cyprus), at once replied in his pamphlet A'mmîl Paşahînî Ayân Nâsîlî Sâid Paşahînî Qayyûlî, and ed., Constantinople 1328, and followed this up with his own memoirs, Sâid-i Âlâî Kâmil Paşahînî Kâhiyânî, Constantinople 1339; Turhalî siyâsî-i Dînîlî âdîn. Zihni Paşa also replied ("Presentation of the Truth"), Constantinople 1327.

Sâ'D PASHA, Viceroy (Kâdîîve) of Egypt from 1854 to 1855. Muhammed Sa'id, youngest son of Muhammed Alî Paşa, was born in 1822. His father had a very high opinion of this, his fourth, son whom he sent when only 19 to Constantinople to conduct negotiations regarding the tribute to be paid by Egypt.

Sa'id, who was francophile, was not on good terms with his nephew and predecessor, 'Abdulla (q.v.). The latter had done everything possible to induce the Porte to alter the law of succession formulated by the Sultan's firmâna in favour of Muhammed Alî and to secure the succession in direct line for his own descendants by abolishing the law by which the eldest living descendant of the founder of the dynasty was always called to succeed to the throne. Sa'id would thus have been excluded but 'Abdulla died before he could realise his project. By an intrigue, however, the death of 'Abdulla was kept secret for a week and it was only then that Sa'id was able to enforce his claim to the throne (July, 1854).

Sa'id was a well-intentioned prince and quite popular, although he had not the energy of his father, perhaps on account of his indifferent health. In November, 1856, he created a kind of Council of State, composed of princes of the blood, four generals and four high dignitaries. He relaxed the extreme centralisation of the administration instituted by Muhammed Alî and contributed considerably to relieve the economic position of the people by promulgating an agrarian law which granted all the subjects the right henceforth to own landed property and to dispose of it freely (1858). It was he who first attempted to abolish the trade in negro-slaves (visits to Khartum in 1857). In the reign of Sa'id as in that of his predecessor the policy of expansion southwards was not continued. The Sudan received certain privileges and prince Halîm in appointed governor. Sa'id kept up the Egyptian contingent of 18,000 men which 'Abdulla had sent to reinforce the Turkish army in the Crimean War and he also allowed a regiment of falâtnî to take part in an expedition sent by Napoleon III to Mexico. By making it, however,
the division into paganaries, which they called 
ērā's, a transcription of the Greek ξώρα. Upper 
Egypt corresponded to the dechies of Arcadia 
and the Thessal, a memory of which is still 
retained in the division of the Ṣud into a'īs (Upper) 
and adīb (Lower); Yāsīt even makes three 
divisions: Ẓal'īd a'īs from Assuan to Aḥshum, 
an intermediate region stretching northwards as 
far as Bahmasūt and the Ḥaštīt adīb which 
stretcht to Fīrsāt. As a matter of fact there were three 
yladantine dechies, of which two were in the Thebäi, 
and the frontier between the latter lay south of 
Panopolis (Aḥshum).

If we compare the layout of the nārū's preserved 
by al-Maqrūzī with that of the paganaries given 
by Hierocles, we find that the alterations are 
quite insignificant. In course of time certain towns 
fell into decay and gave place to younger ones; 
for example Philai which became supplanted by 
Assuan. An administrative redistribution took place 
under the Fātimids. They introduced a division 
into large provinces (ṣīlah) which has survived 
to this day in its main lines to the present day; of 
ten provinces of the Fātimids, the Ayyūbids and 
the Mamluks, corresponded to the eight marditeriyā's of 
to-day. The most notable differences were the 
following: the provinces of Aṭṭī'iyya and of Hūs 
sirya combined into one province from the Mamluki 
period under the name of Aṭṭī'iyya have given 
place to the marditeriyā of Bani Ṣa'bī. Minya has 
 succeeded to Bahmasūt, now an insignificant town. 
The former districts of Ašāmatān and Man풀āt (the latter intermittently) have gone to increase 
the province of Aṣyūt. In the south we still find 
the two mediæval subdivisions but their capitals have 
been removed from Aḥshum and Kūt to Gīrgā and Kenīs. On account of the frequent 
Nubian invasions, Assuan down to the end of the 
Mamliik period was considered as a limen (thargh) 
without administrative autonomy, being under the 
governor of the province of Kūt, whose authority 
extended eastwards as far as Aṣhāb. The Oasis 
sometimes formed an independent province and 
sometimes were administered by officers who held 
them as ḫāʾif (as part salary).

Although we find under the Fātimids the title 
ʾal-Sād al-ālā'ī, we cannot say with certainty 
that the reference is not to the governor of the province of Kūt, which was in the middle ages 
the most important in Upper Egypt. It is certain, 
on the other hand, that under the Mamluks the 
various provincial governors were under a gover-
nor-general of Upper Egypt called at first ʿl-khākh 
al-ʿarkīf al-ālā'ī, then ʾaḥā ṣar al-reṣāla when 
Barḫās took office the chief of al-ʿārāf, al-Kāliqānī gives the following account of the administration of Upper Egypt at 
the beginning of the ninetieth century: two governors of different ranks shared the authority there; 
alongside of the aḥāf, who administered the Nile 
valley, there was a ʿl-khākh, who governed the Faiyum and the province of Bahmasūt, the latter having at 
its head a ṣarīf. Below the aḥāf, who lived at 
Aṣyūt, there were three governors of the first 
class, at Aṣhāmatān, Kūt and Aḥshum, and three of 
the second class, at Gīrgā, Aṭṭī'iyya and Man풀āt.

Under Turkish administration Upper Egypt comprised 24 kağīflik, a list of which is given us 
by Vaneehelen.

The population of Egypt has almost doubled in 
the last 35 years;
development has been improved in recent years by the construction of the barrages of Assuan, Esna and Asyûf which allow more perfect use to be made of the waters of the Nile. Industry is almost non-existent here and here again we have a contrast with the prosperity in the middle ages. The looms (wool for clothes and carpets, cotton, silk and linen) were then extremely numerous: we may mention those of al-Ashmûnîn, Akhîm, Asyûf and Bahnaîs.

Muḥammad ʾal-Ḥârî art is poorly represented in Upper Egypt: at Madīnat al-Fâyiym, Asyûf and Gîrgî, however, we find mosques with a certain amount of character. We must also mention the mosques of al-Bâb and Bilîl, south of Assuan, built of unbaked bricks which have a minaret surrounded by a small dome — a fairly frequent type in this region even in the villages (e.g. Ḥaḥîrît, south of Kûsâ). The Fâyiym minbars of Kûsâ and Bahnaîs should not be omitted. As toigraphy, Asyûf, Kûsâ and Sohag have preserved Kifîc inscriptions and we find Mamliq decrees at Edâfî, Minya, Madīnat al-Fâyiym, Asyûf, Sohag, Kûsâ and Kûsîyâ. This is not the place to enumerate the monuments of ancient Egypt: it is sufficient to say that the Arab authors describe the temples in their fashion and have localised here a series of legends. We may note, however, that they paid no attention to the buildings of Thebes-Carnac and that in compensation we have a fine description of the temple of Akhîm, destroyed in the xth century.

Djâfar Dafûwî, a writer of the viii<sup>th</sup> century A.H., composed a dictionary of famous men of Upper Egypt, preceded by a brief geographical summary, the Tâlî al-Šaʿîd (publ. in Cairo 1333 = 1914); its interest is not great. In the domain of folklore, we may quote the stories of Ibn al-Ḥawâdî at Assuan, of Abu al-Ḥâdîjî at Ḭârîî, of the princess of China at Gîrgî, to which we may add the legend of the serpent of the Ḫâbîl Harîh.

Without going into details, the following is a rapid enumeration of the main historical facts relating to Upper Egypt. The conquest of Egypt by the Arabs became an established fact after the fall of Babylon and Alexandria. Al-Balādîrî mentions tentacles made with certain towns of Middle Egypt. The Arabs seem to have taken no notice of the Fâyiym for some time and their advance towards this region must have been impeded by very heavy fighting which gave rise to the historical novel, the Fâṣîh al-Bahnaîs. In 634 (644) there was an unsuccessful invasion of Nubia which was resumed in 667 (656) and concluded in 51 (652) by an advantageous treaty, which ʿUmar ibn ʿAbd al-ʿAzîz renewed in 100 (719). A census of the population was taken in 722 (730); the governor of Egypt, al-Walîd ibn Rûkh, took charge of this person and conducted a six months' tour of inspection of Upper Egypt as far as Assuan and we possess a papyrus containing his instructions. During the Umayyad period, the Saʿîd seems to have enjoyed more peace than the Delta which was often agitated by risings; one is noted for 711 (730). It was in Upper Egypt that the Umayyad dynasty collapsed in the person of its last Caliph, Marwânî, There was a rising of the Umayyad pretender Dîrîya ibn Muḥîb who became master of the whole of the Saʿîd in 167 (784); he was defeated and put to death in 169 (785); Upper Egypt felt the consequences — though less than the
Delta — of the struggle between al-Amin and al-Ma'mun. There was a rising of the Bedja in 841 (1853) and a successful expedition against them under Muhammad al-Kummi. Some years later 'Abdallah al-Umar invaded the gold-mining area and ultimately declared himself independent there; he was put to death but the contingents of the Rabi'a which he had taken there remained amalgamated with the Bedja. In 256 (870) there was an unsuccessful rising led by Ibn al-Saff at Eṣn and Akhmin. In 308 (920) a Fātimid invasion; fighting at al-Ashmaitain and Bahuau. The king of Nubia invaded the oasis in 339 (950), took Assuan in 345 (956) and in a third expedition in 353 (964) advanced as far as Akhmin. Towards the end of the 14th century, Abu Rakwa rose against the Caliph al-Hākīm. Order was disturbed after the great dearth in the reign of al-Mustansir: Badr al-Djamālī set out in person for Upper Egypt to re-establish peace (inscriptions at Asyūt and Eṣn). Towards the end of the Fātimid period, several state men, like Ta'īn ibn Rustāk and Shawkār, used their apprenticeship to political life in Upper Egypt, and they fought against Shawkār, who was assisted by a body of Franks, that Shirkūth fought the battle of al-Başia near al-Ashmaitain. This region continued to be much disturbed by Fātimid propaganda, which was kept up in the extreme south by the Banu 'l-Kanz. Saladin subjected them in 568 (1173) sending his brother Türān Shah against them, who advanced as far as Ibrīm. Other risings were crushed with great severity in 570 (1174) and in 572 (1176). There was a very serious rebellion in the whole of the land in 651 (1253), led by an important individual, the Shārīf Ḥṣān al-Dīn Thā'rib, which was an episode in the struggle between the Arab tribes and the Mamluk government. In 671 (1273) and in 674 (1275) Ba'bars intervened in the domestic affairs of Nubia and sent an army which reached Dongola, which was again occupied by a second expedition in 686 (1287). Upper Egypt in 701 (1302) suffered from the brigandage of the Arab tribes which necessitated the despatch of a powerful force against them. They were suppressed in a most bloody fashion. During the anti-Christian movement of 721 (1321) churches were destroyed in the provinces of Ṭabīb and Bahuau, at Minya, Asyūt, Khūr and Assuan. Violent disturbances are again mentioned in 815 (1412), mainly at Assuan, and again in 825 (1422). The reign of ʿAbīl-Bey was filled with risings by the Hawwāra tribe which it took three years to subdue (883-884 = 1476-1478). As to the events after the Turkish conquest and especially the rising of ʿAbīl Bey and the French occupation, information will be found in the European travellers and historians.

SAI'DA, a town in Algeria (department of Oran), 110 miles from Oran and 60 miles S.S.E. of Mascara, 2900 feet above sea-level, on the Wādi Saida, a branch of the Habra, in a fertile and well-watered country, suitable for the cultivation of cereals and vines. Population: 12,312 inhabitants of whom 5,410 are Europeans. Saida is the chief town of a mixed commune of 42,469 inhabitants of whom 39,500 are natives.

Owing to its position on the very edge of the high plateaux, Saida has always been of considerable military importance. There was a Roman station here. 'Abd al-Ḳādir built a fortress here in order to control the nomad tribes of the district, but it destroyed on the approach of the French in 1841. In 1844 General Lamoricière, struck by the advantages of this position, built a stronghold 1/4 miles north of the Saida of 'Abd al-Ḳādir, around which the modern town has grown up. (G. Veyer)

SAI'DA. [See Sidos.]

SAIF b. DHİ YAZAN, of the Ḥimyarite royal line, played a part in Arabic history in the expulsion of the Abyssinians from South Arabia, where they had held sway since the time of Dhī Nawās. Native tradition records that he first sought assistance against the foreign yoke of the Abyssinians at the Byzantine court and later at the court of the Persian Khusraw. The latter, however, would not risk anything in an enterprise with such hopeless prospects; so he only gave Saif a number of criminals out of the jails under a leader named Wahriz to assist him. The Abyssinians under Mawṣīk were defeated and driven out of the country by them and Saif's countrymen who rose against the foreign yoke, whereupon Saif was installed by the Persians as king. From this tradition and several Arabic poems relating to the story there results as a certain historical fact that Saif b. Dhī Yazen conquered the Abyssinians with the help of the Persian king Khusraw Anāshirwān, broke their rule over Yemen and held sway over the land of his ancestors under a Persian protectorate. His victory over the Abyssinians may be dated about 570 a.d. The victory over the Abyssinians is wrongly ascribed not to Saif himself but to his son Mawṣīk.

That South Arabian history and with it the story of Saif b. Dhī Yazen was studied and transmitted among the Muslims from the beginning of the Islamic period onwards we know from certain sources. It is therefore no wonder that Saif b. Dhī Yazen found a place in the Arab saga on account of his successful struggle with the Abyssinians, who in the period of Islam particularly became dangerous and lasting enemies to the new international movement starting in Arabia. In the romance which bears his name, the Strait Saif b. Dhī Yazen, the war between the Muslim Arabs and the pagan negroes and Abyssinians occupies considerable space. The king of the latter, whose conflict with Saif b. Dhī Yazen runs almost throughout the book and forms a considerable part of the subject matter, gives us a clue to the date of origin of the Sira. He is called Saif Ar'ad and corresponds to the Ethiopian king Saif Ar'ad whom we know from history and who reigned in
Abyssinia from 1344–72. From this reference we may deduce with considerable certainty that the existing versions of the Sira date from about the 14th century, in any case not earlier than the end of the 16th century. The rest of the positive and negative data agree with this, while telling practically nothing separately and having only some value when taken cumulatively; among them are several clearly discernible borrowings from the cycle of the 1001 Nights. It does not, of course, follow that the whole romance arose at this time; individual parts may very well have been composed and put into circulation earlier. The place of origin of the Sira is Egypt, to be more definite Cairo. This is clear from the many personal and place-names which all point to localisation mainly in Egypt and in part even presuppose an accurate knowledge of its topography. This statement is not invalidated by the occurrence of a few place-names from Damascus and its neighbourhood.

As regards contents also, Egypt is the most satisfactory place of origin of the romance; the strong undercurrent of superstition and belief in the marvellous is perhaps also an indication of an African birthplace for the romance.

The contents of the book are in keeping with the fact that it was composed and related, if not by the people, at least for them. It is therefore easily explained why we find alongside the good Muslim general tendency so many ideas which are rather to be described as pagan, and which can only with difficulty and superficially be brought into harmony with Muslim principles. The new religion of Islam did not by any means penetrate so quickly or thoroughly among the masses as among the educated classes, whose intellectual sustenance was for the most part confined to a science and literature permeated to a great degree by Islam; among the masses the old beliefs and customs did not have any counterpart great enough to have driven them out. As has already been mentioned, in the Sira Saif is a great part played by the war of the Muslim Arabs against the pagan Abyssinians and negroes. As it is composed to be known by every one that the hero of the struggle, Saif b. Dhi Yazan, lived in the pre-Islamic period, he has first of all to be transformed into a warlike predecessor of Muham- mad and a professing Muslim. The generally accepted possibility of obtaining a glimpse into the future by magic oracles, dreams, etc., and by the guidance of pious sheikhs, disposes of the difficulty. Saif, like his father Dhi Yazan before him, becomes convinced of the truth of Islam before Muhammad's coming and is won over to the new religion. In his struggle mainly directed against the Abyssinians and negroes the antagonism of race now gives place to that of religion. On his many wanderings and campaigns in the lands of men and djinns he spreads by force the religion of Islam, often with the support of helpful spirits. As Muhammad has not yet appeared, in place of his name in the profession of faith we find that of Ibrāhim, the ‘Abdul-Azīz. The campaigns thus are no longer waged for the satisfaction of the ambitions of Saif and the Arabs but with the object of gaining recognition for the unity of Allāh and his ‘friendship’ with Ibrāhim. As soon as the Muslim enemies satisfy this demand by repeating the profession of faith, they are accepted into the Muslim community. The superiority of the Semitic over the Hamitic race is, of course, not thereby done away with. It is the South Arabian in particular and in them the alleged ancestors of the later Muslims of Egypt, who have the honourable task of preparing the way for the last and greatest prophet, while the Abyssinians and negroes either remain in their ancient paganism and thus show themselves unworthy of Islam or with their adoption of Islam play a passive rather than an active role in the religious movement. It is further remarkable that in the whole romance there is not the slightest trace of the Abyssinians professing Christianity. While the worship of Saturn is ascribed to them, the other non-Muslim religions are traced back to the worship of fire, of idols, rulers claiming divine worship, and of different animals (a ram, an ostrich, cows, bugs, hens). Many of these notions may have originated in the unlimited fancy of the narrators; but in part at least vague memories of the old Egyptian mythology may have crept in. The mention of fire-worship points to the old Egyptian religion. A knowledge of Christianity gleams through only in the mention of crosses, sometimes of stones which are worshipped and at which oaths are taken. The motives of the Sira are not exhausted with the stories of the spread of Islam. The common people are also interested in profane history and in stories of events with as much action as possible. Thus in the romance we find stories of the origins of famous towns, places and buildings, of the bringing of the river Nile into Egypt etc. We further find an account of the many travels and adventures which Saif b. Dhi Yazan and his sons, paladins and spirits have to go through, of the love affairs of Saif and others which continually appear in the guise of the splendorous buildings, regal and men which are described to the hearers and of much else. The imagination that is called upon to arouse the astonishment of the public becomes unbounded towards the end of the Sira, as the extraordinary is in the end no longer effective and must be surpassed again. Considerable space is further taken up as already mentioned — by magic and superstition and all connected with it. Mention is very often made of divination by sand to ascertain the unknown past, present and future. Purely magical also is the oft recurring idea that from the act of Saif's marriage with his first wife Shina the destruction of the Abyssinians and negroes will result, and the latter therefore endeavour to prevent the marriage at any cost. Numerous are the magic treasures mentioned in the course of the story, the possession of which assures wonderful powers or control over powerful spirits. Dangerous magicians form the greatest obstacles to the spread of Islam. Their power is not denied, only they are weaker than their colleagues on the Muslim side, and if this is not the case, ‘al-Khaldīn, the helper of the Muslims in need, takes up the cause of those commended to his charge and overcomes the powerful magicians. When they are converted, their activities do not cease, but they place all their skill and knowledge at the disposal of the new religion. Belief in spirits is exceedingly prominent in the Sira. Endless troops of djinns of all classes fight for or against Islam. They are in much closer relationship with men than in the period after Muhammad's preaching and constitute a considerable if not the greatest part of Saif's followers. If we were to cut out of the Sira all the passages that deal with or are
connected with spirits or magic, we should have barely half of left.

Taken all in all, the Strat. Saif b. Dhi Yazan gives a faithful picture of the popular mind in Muslim Egypt at the end of the middle ages and forms therefore a valuable source for the history of Islam in its widest sense.

(R. Paret)

**SAIF B. 'UMAR Al-ASAIH Al-TAMLIT, an Arab historian, who, according to the *Phíkrít* (ed. Flügel, i. 94), composed two books: Kithb al-'Anfús al-Khāhir wa l-Ridda and Kithb al-Hambāl wa-Maqā'ir 'Arab allātī. Neither of these books has survived to our time. Al-Tabari, however, was still able to use Saif as principal authority for the period of the Ridda and the early conquests (ed. Goeje, i. 1794–3255) i.e. from 11–36 A. H. A fairly full discussion of Saif's value as a historian is given by Wellhausen, *Bibl. und Vorderasien,* vi. 3–7. He is not favourable to Saif. Although he impresses us by the wealth of his details, it is evident from a comparison of his data with those of other Arab historians and with the Christian chroniclers that his *Itār* tradition is less reliable than that of the *Ridżār.* Cahtani makes a critical use of the fragments of Saif in the course of his *Annals,* indices to vols. iii., iv. and v., v. Saif b. 'Umar.

**Bibliography:** see the references in the article; cf. also Brockelmann, *Gesch. der arab. Litt.*, i. 516.

**SAIF AL-DIVALWA, Abu 'l-HASSAN 'Ali b. HAMĐANS,* the most important ruler of the Hamdání dynasty, lord of Aleppo, famous for his military activities, his struggle with the Greeks and the protection which he gave to scholars; he was born in 303 (915/16) or perhaps in 301. He was the grandson of Hamdán, who owned the fortress of Mardin and rebelled against the Caliph al-Mu'tasid in 281. His father Abu 'l-Haidjā in 302 received the governorship of Mawṣil and of Mekopotamia from the Caliph al-Muqtadir, he fought against the Karmášān in 315 and saved Baghdad by having the bridge of al-Anbār destroyed. His power increased under al-Kahidj; he perished during the troubles in Baghdad in the course of which the Caliph was deposed.

Abu 'l-Hassan 'Ali at first owned Wasiq and the country round it; his eldest brother held Mawṣil. In 330, under al-Muttaqī, these princes took part in the murder of Ibn Raḥf, who was entitled Amir al-Umrān; the Caliph then gave this rank to the prince of Mawṣil; he gave him the surname of Naṣir al-Divalwa and to his brother 'Ali that of Saif al-Divalwa. Naṣir al-Divalwa, Naṣir al-Divalwa only held the office of Amir al-Umrān for thirteen months in Baghdad; he was dispossessed of it by the Turk Turks. The situation of the Caliphate was then very precarious and the empire divided into numerous factions. The Caliph, wishing to escape from the tutelage of Taṭān, asked for the protection of the Hamdání princes. He took refuge with his harem and all his court at Mawṣil and went from there to al-Raṣid in 332. Taṭān begged him to return to his capital and made him promises of loyalty. The Caliph consented against the advice of Saif al-Divalwa; but hardly had he reached the neighbourhood of Baghdad than he was seized by Taṭān, who deposed and blinded him in 333. The Caliph's stay with the Hamdání princes had cost them enormous sums.

The same year Saif al-Divalwa took Aleppo from a lieutenant of al-Ikhdāḥī, who was ruler of Egypt. The latter sent against him an army commanded by Kāfūr: Saif al-Divalwa met this army near Ḥims and then besieged: but did not take Damascus. In the following year 334, al-Ikhdāḥī having died, he attacked Damascus, Kāfūr, the negro eunuch, went back to Egypt. Saif al-Divalwa seized the opportunity to attack Damascus again, which he captured. He then advanced on Egypt, took Ramla, but encountered the Egyptian forces, which defeated him on the Jordan. A peace was concluded between him and the Ikhdāḥīs; the Hamdání prince retained Aleppo and the Egyptian promises of loyalty.

In 337, Saif al-Divalwa carried war into the land of Rūm and from this date till his death, a period of nearly twenty years, never a year passed without his invading Greek territory or fighting some battle with the Greeks. He was defeated this year; the Byzantines took Marqāsh and massacred the inhabitants of Tarsūs. In 339 he advanced a considerable distance into the land of Rūm, captured several strongholds and great booty; but as he returned, the Greeks closed the passes against him and regained the baggage and prisoners they had lost. Saif al-Divalwa, with a few companions, succeeded in escaping (al-Maṣṣūs expedition). In 342, he took the field against the Praetorian-prefect Barros Focas, who had collected a large army which included Russians, Bulgars and Khazars, and defeated him outside Marqāsh. He captured Constantine, son of Focas, and brought him to Aleppo. The latter died in captivity. By this and al-Divalwa the Christians gave him a magnificent funeral. In 343, Saif al-Divalwa again defeated Focas near the castle of al-Hadāth, which he rebuilt. This fortress was destroyed again three years later. In 347, the Greeks Basili and Yānis, sons of Tsalmatis, captured Sumāsāt and inflicted a severe defeat on Saif al-Divalwa near Aleppo. Seventeen hundred Muslim homen men were taken captive to Constantinople.

In the same year, Saif al-Divalwa arranged a peace between his brother, Naṣir al-Divalwa, and the Būyids who had taken Mawṣil. He guaranteed them the payment of an annual tribute and kept Mawṣil for his family along with Raḥfa and Diyyār Bahrā.

In 351, Nicephoros, now Praetorian-prefect, advanced on Aleppo with 200,000 men; a battle was fought near the town before the gate of the Jews, in which Saif al-Divalwa was defeated. The town was captured, except the citadel, which held out, defended by Dailamites. The Greeks took 1,250 prisoners, whom they put to death at once, ravaged the country, plundered and destroyed the palace of Saif al-Divalwa which lay outside the town; after a week they retired.

Next year Saif al-Divalwa was paralysed in hand
and foot. Nevertheless he continued to fight the Greeks and defeated them, notably in the vicinity of Aleppo, to which they had returned in 353. In 355 he presided over an important exchange of prisoners on the banks of the Euphrates. He died at Aleppo in 356 of retention of the urine. His body was brought to Mayyafürkün and buried in the turbe of his mother outside the town. He had given orders for a brick made of soil that he had won in his campaigns to be placed under his head in his coffin.

Saïf al-Dawla was a strong-minded prince, little liking advice, but brave, generous and eloquent; like other members of his family he was a poet. Abu 'l-Mahasin and Ibn Khalilik quote a delicate little poem on the rainbow by him, which gives a very high idea of his talents. He surrounded himself with poets and scholars. The most celebrated are the poetical prince al-Mutanabbi, who was his panegyrist and afterwards that of Kâfur, and al-Farabi, the great philosopher and musician, who died while accompanying him on a journey to Damascus. The author of the "Book of Songs" (Kitâb al-Aghâni) dedicated to him the autograph manuscript of this celebrated work.

(B. CARRA DE VAUX)

SAÏF AL-DAWLA. [See SADDAK B. MANSUR.] SAÏF AL-DIN AL-BâKHRÂZI. Abu 'l-Mâ'rani Shâhî; Sa'd al-Dîn Sa'd b. Muqaffar al-Bâkhrâzi, a native of the Bâkhrâz district between Nishapur and Herât (Le Strange, Limits of the Eastern Caliphate, Cambridge 1905, p. 337). After having finished his studies, he joined the great Saïf Nadîm al-Dîn Kubrâ at Khânâyân. The latter after interrupting Saïf's second retreat (arbâ'în) sent him to Bâkhrâz as shâhi. Al-Bâkhrâz occupies an important place among the shâhis of Nadîm al-Dîn Kubrâ; he lived for a considerable time in Bâkhrâz where he attained great fame and gathered round him a large number of disciples; he even took the surname of Shâhi 'Alam. The mother of the Mongol emperor Mangi Bâgh, Sirkhâsty Biki (or Sirkhakshisti Biki, according to Blochet) (d. in Abu 'l-Hidâyi, 649 = Febr. March, 1252; see Turbîh-î Bâkhrâzshâh, ed. Gibb Mem. Series, ii. 256), had, during her son's reign, given 1,000,000 dirhams of silver to build a madrasa at Bâkhrâz and had entrusted its administration to Saïf al-Dîn al-Bâkhrâzi (Howorth, History of the Mongols, London 1876, i. 188). This shows the fame of the Shâhî in his life-time, just as some anecdotes in the Nafaqot al-Dîn testify that he was an object of veneration on the part of the great men and princes of his time. Well-known Saïf's of the period, like Khâlid Bâgir and Hassen al-Bulgâr, showed him respect (al-Kâfi, Râshîdî, 'Alî al-Hayyât, Turkish transl., p. 37–38). His mystic Persian quatrains are very popular among the dervishes. The death of the Shâhî, according to the most probable tradition, took place in 658 (1260/61). His tomb is at Bâkhrâz, at Fastâshâd, the place where his madrasa is situated. His poems are preserved in several manuscript collections: 51 of his quatrains have been published in the Z. D. M. G., 1905, lxxx. 345–354 by S. Khuda Bakhsh.

This monastery of the Shâhî in the suburb of Fastâshâd remained famous for centuries. His descendants have held the rank of shâhî, Ibn Bâghtî, who visited the zâdâr in the eighth century A. H., found as Shâhî there Yâhâyâ al-Bâkhrâzi, grandson of Saïf al-Dîn, and relates that a repast was prepared for him at which the principal inhabitants of the town gathered together; and Turkish and Persian songs were recited in addition to the recitation of the Korân and sermons. A Persian writer who visited Bâghtîrâ in 316 (1098/9) says that the tomb and the monastery of the Shâhî are half a farshâ from the Karshî gate (ed. the article Bâghtîrâ) and face the east, and that the zâdâ and the monument were built in 788 (1385) by order of Timûr, and ornamented with tiles of precious faience; since then, however, these tiles have been sold, and he adds that the descendants of the Shâhî are buried there along with the calligrapher Mîr 'Alt. The tradition of the Yasawîs, according to which Saïf al-Dîn al-Bâkhrâzi was a follower of Ahmad al-Yasawî, is contradicted by historical facts.

(KÖPPPEL ZADE FRÂ'ID)

SAÏF AL-DIN GHÂZI. [See GHÂZI.]

SAÏFî, Mawliânâ, of Bâghtîrâ, is also known as 'Arîdî, "the Prosodist," from his work 'Arîdî-Saïfî. Little is known of his life, but he lived for many years at Hîrât, at the courts of the Timûrids, Sulţân Âbî Sa'id (1459–1469), great-grandson of Timûr and grandfather of Bâbûr, and Abu 'l-Ghazi Sulţân Husîn Mirâz (1472–1506), great-grandson of Timûr's second son, 'Umar Shâhi Mirâz. As a poet he was of little consideration, and his poems are trivial. His fame rests on his work 'Arîdî-Saïfî, ed. Blochmann, Calcutta 1867 ("Saïf's Prosody"), also known as 'Arîdî-Khazâ (the ample sufficient Prosody) and Mirâz al-Aqfâr (the Measure of Poems), written, as he tells us, to supply the want of a work on an art which was a favourite subject of discussion between him and his friends. The poet Dîjân had already written on this subject, but Saïf's work is the fuller and more detailed of the two, and is one of the best works on Persian prosody which we have. Saïf died in 1504.

2. Saïf was also the 'âkhâshâ or pen-name of
a poet of Nightyar, the encomiast of Takāž Khan, Khwārezm Shah.

**SĀIḤĀN**, one of the larger mountain rivers in the south-east of Asia Minor, the Saros of the ancients. It rises on the Kōramān Dasht far not from Kāsārīya (cf. Mehmēd Edīd, Manāṣī al-Ḥadījī, Stambuli 1312, p. 41; also al-Maṣūdī in the B.G.A., viii. 58, 22 qv. 183, 23 qv.*
*\(\text{at the town of Saiḥān ... not far from Malāyā)*), enters the Cilician plain of Adana, which lies on its bank, whence it makes straight for the sea, receiving a number of tributaries on its way; it enters the sea by several mouths (the Cēfīta Suri of the ancients below Tarsus. On the course of the river which remained for long uninvestigated see Tsch-
batschew, Aitie Mināte, i. 293-299, and C. Ritter,
*Kokinasion*, i. 133. The name Saiḥān is most probably, like the name of the neighbouring river, Ezištān, of Cilician origin (cf. Noldeke in the Z.D.M.G. alliv. 700), an assimilation to the Muslim names of the two Central Asian rivers Osus and Jaxartes. The Saiḥān was considered one of the rivers of Paradise (cf. al-Maṣūdī, ed. Paris, ii. 538 sqq., B.G.A., vii. 205: Yakūt, i. 179, ii. 82, iv. 558, 579; al-Iṣṭākhūrī, B.G.A., i. 63, 64; Ibn Hāwkal, B.G.A., ii. 122; al-Baladī, ed. de Goeje, p. 165, 166, 168). Under the Umayyads it was one of the rivers on the frontier against the Byzantine empire, at which prisoners taken during the Arab wars of conquest were ransomed. There was a famous bridge over the Saiḥān between al-
Maṣīqya and Adana called Diyar al-Walīd, which dated from the time of Justinian and was renovated in 125 (743) and again in 225 (840) (cf. G. Le Strange, *The Lands of the Eastern Caliphate*, Cambridge 1905, p. 131 sqq.). See also the article DAIḤĀN.

**SĀIḤĀN**. [See *Śir Darya*].

**SĀIMARA**. [See *Simeere*].

**ṢĀIN-KAL'A**, a little town and district in southern Khazarbājān, on the right bank of the Djiḡāhān. In the south the boundary runs a little over the river Sārū, a tributary of the river of the Djiḡāhān. In the north it is bounded by the desert of Adjār, in the east by the province of Khamseh. The name is derived from the Mongol *ṣain* = good.

*Population*: The Turkish Afsahr tribe, of which a part had to emigrate to Ermiya to make room for the Čardawī (Cdawīli) tribe of Lur origin (the district of Čardawī in the Seimeere) whom Fath 'Alī Shah brought from Shurbā at the beginning of the nineteenth century. The chief of the Cdawī lives at Mahūmdīk and commands about 5,000 men. The town of Ṣain-Kala has about 2,500—3,500 inhabitants and a small bazaar. In 1830 it was destroyed by a Kurdish invasion under Shāh Ḥabīdālāsh. Ṣain-Kala, formerly occupied by a Persian garrison, guarded the entrance to Adharbudjan through the Djiḡāhān valley. The caves of Kereslī with a Greek in-
scription described by Ker Porter (Travel, ii. 535-551; Ritter, fa. 501, as well as the site of *Aḥkāl Sulaimān* (the ancient Gazaka; al-Sha of the Arabs; cf. Marquart, *Erzähler*, p. 108) are in the territory of the Afsahrs of Ṣain-Kala. The lake of Çami Göl (near the village of Bādeh) with a floating island is likewise well known. A section of the Afsahrs belong to the Aḥl Ḥāk' sect (cf. the article *Aḥl Ḥāk*) the local chiefs of whom in Bant's time lived at Nanar-hāla and Gendžālāh (cf. V. Minorsky, *Notes sur la secte des Aḥl Ḥāk*), (R.M.M., 1920, x. 19-97; reprint of the R.M.M., 1922, p. 53. 76).

Another fortress of the same name on the river Alhar, east of Suljuqīya, and mentioned in the fourteenth century by Mustawīl (see Le Strange, *The Lands of the East Caliphate*, p. 223) should not be confused with this Ṣain-Kala.

lungen*, 1905, p. 33 (with a map of the district and indications of its mineral wealth); Jackson, *Persia Past and Present*, p. 121 sqq.

(V. MINORSKY)

**ṢĀĪF**. [See *Ṣāīn*].

**ṢĀĪFĀN** (Ṣ̱īn, S̱wīn, S̱wīn, S̱wīn), a town in Taḥrāmūt in South Arabia on the side of the hill of the same name, four hours' ride from Shībān on the right bank of the Wādī Masfā. The town lies in the centre of luxurious vegetation;
the Ka'bah sect [q.v.]; but not did he expect with them the return of their Imam, Muhammad b. al-Hanafiyya, but held the doctrine of metempsychosis etc. in both forms, belief in the 'Isa (return in human form) and the 'Isa Nhābi (change his animal form). He even proclaimed himself the reincarnation of the Prophet Jonah. His attitude on religious and political questions sometimes forced him to move from Bagra to Kābū, but did not prevent him, after the rise of the 'Abdaids, from offering them poetical tributes also: he enjoyed the favour of al-Mansūr in particular. He also placed his art at the service of provincial governors, e.g. Ali Bu'djair of al-Ahwāz. Poetical talent was hereditary in his family; his grandfather Yasād had been a preacher, who had lashed the governor Ziyād with his lampoons.

He himself was distinguished not only as a prolific composer (over 1,000 kāthās by him are said to have been current among the Banū Ḥashim), but also for the gracefulness of his language. When Abu l-ʿĀshīya, he avoided embellishing his poems with strange words, but aimed rather at being generally understood. With the latter and al-Baghdādī, he is considered the most distinguished of the later poets, but the peculiarity of his political and religious views prevented the wide circulation of his poems, of which not even a Dīwān has survived. He died in the 173 (789).

Buckelman

AL-SĀK, the leg, the thighbone, is used in several senses in Arab geometry: (1) Sāk means the perpendicular of a right-angled triangle; (2) the side of an equilateral triangle. Thus we find in al-Būrānī for example (al-Kūln al-Mārūnī, yūl Mākūla, Ch. 1): mathallathu HBC, al-maṭālāštu saḥī H, H; (3) Sāk means the foot or the leg of a pair of compasses and is then synonymous with rīḍī (foot). This is shown by the following text: And you place the compasses’ foot on the line on the wall which is near the meridian and this span is the curve of the intersection. Here this arc in the compasses in such a way that one of its legs stands in one and the other in the other end of the angle (arc) (Muh. Sīb al-Māridūnī (1493 Cairo), On the calculation of tables for the construction of Monqāf (inclining quadrilaterals) (Oxford MS., Bodl. Lib. II, No. 285, fol. 26, 70). (4) The Western Arab astronomer Abu l-Ḥasan ʿAlī al-Murāshī (c. 1260 in Morocco) speaks in his Dīwān al-Mawla ʿul-Māliqī (transl. by J. J. Sedillot and published by L. Am. Sedillot under the title: Tractés des instruments & phénomènes des Arabes, Paris 1834—35, p. 446) of a Sāk al-nūrūd (locus-leg) and means by this an hour-line traced in the plane by a cylinder, whose course in the plane has some resemblance to the shape of a locust’s leg. (5) In names of constellations we also find the word Sāk used to name a star, in the leg of an animal (or man), e.g. Sāk
disastrously in the catastrophe of Simancas and Alhama and the pursuit of the Muslim army by the forces of Ramiro II and his allies of the kingdom of Navarre.

'Abd al-Rahmān III's successor, al-Hakam II, allowed the Saqaliba a no less important role in his empire and his indifference to them more arrogant or even insolent conduct did not fail to arouse the wonder of the chroniclers of the reign of this enlightened prince. At his death the Saqaliba felt themselves masters of the situation. According to the author of al-Bayān al-Maghribī, there were then in the palace over a thousand eunuchs and at Cordova a body of Saqaliba guards was entirely at the disposal of two very important individuals, Fātī al-Nisāfī, grand master of the wardrobe, and his assistant Ḫawwārī, grand jeweller and grand falconer. These two Saqaliba eunuchs kept the death of al-Hakam secret and tried to prevent the proclamation of the heir-presumptive, who was still an infant; but they were opposed by the viziers al-Mu'ātha and Ibn ʿĀmir, whose popularity was only increased by punishing them.

Space will not allow me to trace in detail the part played by the Slavs during all the period of the decline of the Umayyad Caliphate of Spain; we find them taking part in all the plots hatched at Cordova, or in the rest of Andalusia, sometimes on the winning side, sometimes on the losing, but showing always the same spirit of initiative, the same ambition and the same despotism; we may mention from among them the eunuch Khaṭrīn who, at the beginning of the eleventh century A.D., was the leader of the Saqaliba party in the capital.

After the end of the Caliphate of Cordova, the Arab historians are much less detailed regarding the political and social role of the Slavs in al-Andalus; but it is probable that the latter, having by now been Muslims for several generations, became absorbed in the rest of the population and lost, along with the memory of their foreign origin, the importance which they had been able to claim in the period of decline of the Umayyads of Spain.

E. LEVI-PROVENÇAL
way. Farther on, towards the north, the Saharya receives on its right bank the Kirmir Su and then taking a sudden turn it runs westwards to Lefke, traversing the wilds of Kutahia and Kudut-wendigdar. At Lefke the Saharya is joined on the left by the Gok Su from Bursa. After Lefke it turns sharply to the north, entering the sandjak of Izmid near Mekejel, having now run 250 miles. The most flourishing part of its course now begins, and we have fine crops of cotton, wheat, vegetables, besides vineyards and the rearing of silkworms. It now runs in a north-easterly direction through the kiad's of Geiva, Ada Basar and Kandere, to enter the Black Sea near Indjiri. The stretch of its course in the sandjak of Izmid is 90 miles; near Ada Basar it receives the waters of the Mudimi Su from Kastamuni on the right bank and of the Caruk Su from Lake Sabandja on the left. 1/4 miles north of Geiva is a bridge of six arches built by Sultan Bayazid I and at Lefke Ewliya Celebi (III. 11) also mentions a fine bridge of wood. The train crosses the river four times between Izmid and Biledek.

The Saharya is the ancient Sangarius (see Pauly-Wissowa, Real-Enzyklopädie, Ser. 2, 1, col. 2259) it has changed its course since the Byzantine period, as is shown by the great bridge built by Justinian over it in 541, which is now two miles from Ada Basar. This bridge is now called Besh Koprs (in classical times Peingeophyra or Pontogophyra; see Ramsay, The Historical Geography of Asia Minor, London 1890, p. 314, 315), but at the present day the river no longer runs below its arches.

The Saharya is not navigable; its lower course is only used for transporting to the Black Sea the wood from the thick forests of the neighbourhood. In prehistoric times the river ran westwards into the Sea of Marmara; the lake of Sabandja and the Gulf of Izmid mark the track of its ancient course. In 909 (1503) Sultan Selim I conceived the idea of re-establishing communication between the Saharya, the lake (the level of which is above that of the river), and the Gulf in order to bring more easily to his capital the wood required for the building of his fleet. Being convinced of the feasibility of the project by the report of experts, he gave orders for its execution but the opponents of the scheme were able to frustrate it by the argument of the rizk-er (Hadjidji Khalifa, Listihannouni, Constantinople 1114, p. 660).

For a period, in the reign of Osman, the Saharya formed the frontier of his territory on the west and south and for his conquests he had to cross the river (for example for the capture of Ak-Jazar in 1368; see 'Abd-Allah Fakhr-ud-Din, Tarikh, Constantinople 1334, p. 12, 24). Since then the Saharya had not played an important part in Ottoman history until the famous battle on the Saharya from Aug. 24 to Sept. 10, 1911, when the Greek army was defeated in a last great effort to reach Angora. By the counter-offensive of Sept. 10, the Greeks were thrown back to the west of the Saharya and forced to take up the line Eski-Shen-Bayaz-Karsa-Jazar. In August, 1922, the Turkish army was victorious for a second time near the Saharya; this was the beginning of the Turkish offensive which ended in the complete reconquest of Anatolia.

AL-SAKINA is a loan-word borrowed from the Hebrew (šeklina). There it signifies the presence of God, in the purely spiritual sense, sometimes made clear by a sign like fire, cloud, or light, which can be appreciated by the senses. Muhammad was apparently not quite clear regarding the true meaning of the word, when he says (Sura ii. 249) that the sakina along with some others was in the sacred ark of the Israelites. Possibly he was associated with this Hebrew loan-word conceptions from pagan demonology; many Kur'ani exegesists at any rate give here quite a djinn-like description of sakina (cf. al-Šaraf, Ta'ifir, ii. 385 sq.; it is noteworthy that on this point Wab b. Munabbih relies on a Jewish source; he also confuses the ark of the covenant with the oracle of the 'Urum Wtumman). Where else the word is found in the Kur'an, it is generally explained by the commentators as the subjective condition of peace of soul and security (see the commentaries on ix. 26, 40, and xviii. 4, 18, 26). From this a secular meaning of the word gradually develops: sakina means the quality of calm and dignity in character (e.g. al-Bukhari, Bud' al-Šalih, bab 15) and then simply: to keep quiet, e.g. at the qubat (al-Bukhari, Qumma, bab 15) or at the ṣafīda (al-Bukhari, Ṣafa, bab 94). Besides this there is a change of meaning of the word in its religious sense as the Jewish meaning of the word gradually penetrates into Islām. Thus the sakina is said to come benevolently down when the Qur'ān is recited (al-Bukhari, Ṣafāt al-Qur'ān, bab 11 and 15). As among the Jews the Rušā Ḥakbōdeōsh, which rests on the Prophets, gradually develops out of the šeklina, so we find in Islām writers also sakina occasionally used with the meaning "Holy Ghost" (see Goldscheider, p. 149 sqq.).

SAKIZ, the Turkish name of the island of Chios (corrupted from the Greek Ἀἰος) and at the same time the word for mast (ναυσιπότης) which is only found on this island and is obtained in excellent quality from the Pistacia lentiscus L. and was very popular in the East as a valuable drug in the middle ages and, indeed, still is in modern times. How old the term is, is shown by the occurrence of the word as an apppellative in Kuman and Old Turkish (Hautam, Teurkec-Araticheh Glosar, p. 37) and in Persian (Joseph Barbaro, Viaggio in Persia — Anno 1471 — Venice 1545, p. 59): Syo e luogo molto nominato ne la Persia, e in tutte quelle parti & chiamato Seghews, che wu dir in nostro idioma mastico; Vullers, Lexicon Persico, t. v. sectz). In Syriac also mastico is called syiā t.e. Chios from its place of origin (Low, Ara'mäische Dichterammanen, p. 70). By the reverse process the Arabs have named the island from its best known product "mastic island" (Dhēnāt el-Masṭikt); Abu 'l-Fida', Ta'ifir al-Buldān,
In the middle ages Chios had attained very great importance as a station on the sea-route for pilgrims and merchants to eastern lands (Palestine, Syria and Egypt). On the decline of the Byzantine empire in the second half of the middle ages the rich island became exposed to the raids of the petty Seldjuk princes of the opposite coast of Asia Minor and in 1089 Trachas, father-in-law of Kilij Arslan I and lord of Smyrna, which is not far away, succeeded in establishing a temporary footing there (Anna Comnena, Alexias, vii. Ch. 8). In 1118 the Emperor entrusted the Catalan mercenaries with the defence of the island against the raids of the Turks (Muhtaner, Chremv. Cl. 203 and 206; Pachymeres, ed. Bonn, ii. 344, 345). A few years later — in 1307 or 1308 — and after the Genoese Benedetto Zaccaria had usurped rule over Chios (from 1304) 30 "Turkish" ships laid waste the island (Pachymeres ii. 510 and Martino Zaccaria, who had succeeded Benedetto Zaccaria in 1314, had much hard fighting with the Turks; in 1329 he was dispossessed by Andronicus III but by 1346 another Genoese, the Admiral Simone Vignosi had seized the island, which remained till 1566 under the rule of the Giustiniani, the family of the Genoese "Manne" of Chios, as the legal successors of the conquerors called themselves. But in order to maintain their position the latter were forced to pay tribute to the local Turkish dynasts in Asia Minor and later to the Ottoman Sultans and occasionally to support them with their fleet. They paid the Ailk-oghlu 500 ducats yearly and the same to the Şarkhân-oghlu of Magnesia. The first intercourse with the Ottomans was of a hostile nature: after the overthrow of the petty princes of Aikin, Şarkhân and Mentêsh, about the year 1397, Bayazid I stopped the export of corn from Asia Minor to the islands of the Archipelago and with 60 ships undertook a campaign against Chios and laid the island waste with fire and sword (Ducan, ch. xiii). After the capture of Smyrna by Timur (Dec. 1402) the Manoean, like the Frankish lords of Lesbos, did not fall to pay homage to the conqueror (Simon de Zafarani, Supplement, ii. 482; Ducas, ch. xvi; Historia del Gran Turco, Madrid 1782, p. 230). They repeatedly lent their galleys to Sultan Mehemmed I and his successor Murad II for the defeat of Djanizdari and the yearly tribute was fixed at 40,000 ducats. After the defeat of Constantinepole the Manoean hastened to pay homage to Mehmed the Conqueror; the Sultan left them their autonomy but raised the tribute to 6,000 ducats and some years later, as the result of an encounter of the islanders with the admiral of Gallipoli, to 10,000 ducats, with 2,000 in addition to dignitaries of the Porte. The island was able to retain its independence for over 100 years but when it fell two years in arrears with the tribute, this omission and the fact that it served as an asylum for escaped Christian slaves was used as a pretext for sanctions. At Easter 1566 the Admiral Pâle Pasha landed unannounced on the island and took possession of it without a blow being struck. The churches in Castro were destroyed or turned into mosques and the Genoese dignitaries led away into a miserable captivity. It was said that the Greek population, disillusioned with Frankish rule, had called in the Turks. On the intercession of the French ambassador, the exile received permission to return a few years later and the island was granted a limited degree of self-government (Hajjâji Khalîf, Tâhirî al-Kühîr, p. 374 sq.; Leunclavius, Annalcs, p. 110 sq.; Gerlach, Tage-Buch, p. 50, 123; Zinkeisen, Gesch. der Osm. Reichs, ii. 900 sqq.). Very serious conclusions, especially for the Frankish inhabitants, followed the disastrous attempts of Virginio Orsino, Duca di Bracciano, who landed in April, 1599, with five Tuscan galleys in Castro, but had to begin an ignominious retreat a few hours later. The efforts of the French ambassador were successful in securing for the Catholics the preservation of their churches; the skulls of 400 soldiers whom the Tuscan admiral had left in the lurch on the mainland on his retreat, long adorned the battlements of the fort of Castro (Na'àma, Tâhirî, ed. 1280, i. 212; Saadys, Travailles, London 1658, p. 9 sqq.; Des Hayes de] Courmenin, Voyage de Levant, en l'année 1621, Paris 1632, p. 346 sqq.; Sagredo, Memorie istoriche de Monarchi Ottomani, p. 766 sqq.; v. Hammer, Gesch. des Osm. Reichs, iv. 297 sqq.). In July, 1681, the harbour of Castro was the scene of an encounter between a French squadron and Tripolitanian corsairs, in which buildings in the town and several mosques were destroyed by the fire of the ship's guns (Zinkeisen, op. cit., v. 43; von Hammer, op. cit., vi. 371 sqq.). During the great war of the allied Austrians and Venetians against Turkey at the end of the xvith century, the town of Chios was temporarily occupied by the Venetians under Antonio Zeno; the port of Castro capitulated after a short resistance on Sept. 21, 1694; but after a few months the Venetians were forced to retreat after the unfortunate naval battles at the Spolmadore islands, 9 and 18 Feb., 1625. The Roman Catholic inhabitants were accuseed by the Orthodox of having brought about the foreign invasions and they lost what remained of their privileges; their churches were closed and handed over to the Greek Orthodox (Râghid, Tâhirî, l. 1996 sqq., 2057 sqq., 2058; Nycust, History of the Turks, London 1891, ii. 1185, 339 sqq.). The island was far more seriously affected by the Greek War of independence. On March 22, 1822, Samiot irregulars landed on Chios and besieged the Turkish garrison in the fort of Castro; on April 11, the Kapudan Pasha Naşîç Zâde 'Ali appeared with a strong fleet, relieved the besieged garrison, who had put up a heroic defence under the Muğâzâ Wahid Pasha, and drove out the Samiotis. The defenceless island was terribly punished and, although only a few natives had joined the Samiotis, it was ravaged like an enemy country, with fire and sword. Of the over 100,000 inhabitants which Chios numbered at the beginning of the century, 23,000 are said to have been massacred and 47,000 carried off into slavery. The responsibility for these excesses was assumed by Wahid Pasha in his report to the Sublime Porte; the Kapudan Pasha, who had in vain opposed them, was blown up by Könaris in the night of 18/19 June before Çeşme with his flagship; Wahid Pasha was degraded and banished to Alâay (Djawdat, Tâhirî, xii. 40-48; K. Mendelsohn Bartholdy, Geschichte Griechenlands, Leipzig 1870, i. 250 sqq.).
The prosperity of the island was destroyed and to this day it has not recovered from this catastrophe. Chios was visited by a severe earthquake on April 3 and 11, 1851; the number of dead was estimated at 3,000, that of the injured at 1,000 (C.B. Fr. Ac. V, 1884, p. 561 sqq.). As a result of the Balkan War the island was ceded to Greece in 1822.

Under Turkish rule Chios in the older period was under the jurisdiction of the Kapudan Pasha; later it formed a sanjak of the vilayet of the archipelago (Qusan'ir Bayda' Safi'd); in 1910 its population (almost exclusively Greek, a few Jews) was estimated at 80,000 souls.

The Chloétes have been famous from early times for their intelligence and enterprise; especially as merchants and bankers; but also as physicians, apothecaries, and skilled gardeners, they were scattered all over the Levant; of their scholars the learned León Altaitas and the Hellenistic Koraïs have attained a European reputation. The products of their industries (silks, the so-called chalkis, a cotton cloth) were much in demand; among the products of the island we might mention mastic and southern fruits of all kinds.

J. H. MOLLEIMANN

AL-SÄKKÄKÎ, AME BAKKE VUSIB B. AME BAKKE B. MUHAMMAD SIRJID al-Din al-Khwarizmî was born in Transoxiana on the 2nd of Dhu'l-Qa'da 555 a. H., was originally a metal-worker and excelled in engraving dies, from which art he received his taqul al-Säkkäkî, and making intricate locks. One day he had made an inkstand furnished with a lock, the whole weighing no more than a šâra'i, which he presented to the ruler of his country, whose name is not mentioned by the biographer. He was suitably rewarded, but soon another man came to the audience and gave him a golden chain, which the modest Säkkäkî, and upon enquirer, he was told that the man was a person of learning. Seeing that learning was in greater honour than his craft he decided to become a scholar himself. His first studies were far from successful and his ill success made him lose heart and only when he saw how the perpetual dropping of water had made a hollow in a rock, did he take up his studies again. There is exceedingly little known of his life; the names of neither his teachers nor pupils are known, no doubt on account of the Mongol invasion of his native country towards the end of his life. He is reckoned among the Hanafi jurists; two of his teachers were in that branch, Sa'id al-Khayyat and Muhammed b. Sa'id b. Muhammed al-Ihtishi, are mentioned and also one of his pupils, Muhammed b. Muhammed al-Zâhi, the author of the Hanafi law-book entitled al-Khwa'ya. He died in the village of al-Kindi near the town of Almahhîr (Almaherr of the geographers) in Fergâna in the year 626 A. H. As a Turk he is credited with some Turkish poetry, but his reputation rests upon his work in Arabic, the 'Miflîh al-Ulûm', which is the most comprehensive book on rhetoric written up to his time. In spite of its great reputation, manuscripts of the book are scarce, as it was early superseded by the abridgement and commentary of the third part of the work written by al-Karwint under the title of Tâliqâ' al-Miflîh, which has become the standard work on the subject and has in turn become the subject of numerous commentators. Another reason why the Miflîh al-Ulûm became superseded is, no doubt, its very difficult language which at times is quite obscure on account of long sentences which are unusual in Arabic, and which might point to Greek influence if such could be assumed. It may be that Säkkäkî had also studied the translations of Greek philosophical books, being a contemporary of the celebrated N�lîs al-Dîn al-Tîsî, and it is perhaps not without signifi-
cance that, sparing as he is in mentioning any authorities, he frequently refers to statements of Al-Rumânî, who is reported to have indulged in philosophical theories on grammar. The book is fortunately accessible in two printed editions (Cairo 1317 in 4° and Cairo 1318 in 8°), which, though printed without points, so necessary for this work, enable us to study it. The original plan of the author was to divide the book into three principal sections: morphology, grammar and rhetoric, to which he has added other branches akin to the subject. The part dealing with morphology is preceded by a chapter on phonology, treating theoretically the proper pronunciation of the Arabic words, while in the part dealing with exposition and rhetoric he embodies chapters on Poëtry, though he attempts to classify the subjects scientifically, his divisions vary both in their titles and in the numeration. The first book is divided into three parts, the second is divided into several parts, and the third into seven, the titles of these works being, the end not being numbered. The chief portion on rhetoric is divided into three main and these again into three parts. The part dealing with Bayân or eloquence has two parts and five parts again and several unnumbered chapters. The third part of the Metaphorical expressions is divided into six parts and at the end some additional chapters are numbered. Here the author says he was not able to finish his book, but as what follows really belongs to the art of rhetoric, he adds long expositions on the art of Reasoning by deduction and a lengthy account of the art of poetry, with the usual details of the metres etc. The work was too extensive and too badly arranged to serve as an easy hand-book; in consequence the abbreviations and commentary of al-Kâmil under the title of al-Miškâh al-Miṣrîh soon superseded this work and the latter with its many commentaries, especially those by al-Tabâṣûsî, entitled al-Muhannâl al-Muhammadi and al-Muhammadi, have held sway in Arabic literature till the present day. The Miṣkâh al-Ümân has been the subject of numerous commentaries; in addition to those named, among others by Maâshûr b. Maâshûr al-Šâbî (died 526 A.H.), which deals with the third part only; another commentary on the third part is by al-Qâdirî, who has written on it in 541 A.H.

Bibliography: al-Kâmil, Qâmilî, al-Mâkhûkî, al-Mağlûbî (Hasârâbâdî), ii. 223; Ibn Kullâbî, p. 250; al-Suyûtî, Bûgîyth al-Wâsî (Cairo 1326), p. 425; Muhammad Bûkrî, Rûqâz al-Dînutî (Teheran 1304), pages not numbered; Brockelmann, Gesch. der arab. Lit., i. 294; Mehren, Rhetorik der Araber (Vienna 1855).

(F. KEENIO)

AL-SâKKÂ, an Eastern Turkî poet, born in the last quarter of the eighth century, was celebrated in the first half of the ninth century at the court of the Timurids in Transoxania. The only information regarding this poet of whom we know is that he died in 797 (854). He is said to have been buried in the vicinity of Samarcand. He is believed to have been buried in the vicinity of this town. The name Al-Sâkkâ in the Mughâshî affirmations that Al-Sâkkâ's poem does not justify his fame. In the introduction to his Khânaqî Datehâ, the same author says that Al-Sâkkâ composed a complete Dînutî and is famous in Turkestan. On the other hand, in his Muhannâl al-Ümânî, he says that al-Sâkkâ cannot be compared with the Persian poets, although he acknowledges his claims as one of the most famous poets in Transoxania. The resemblance regarding his life and the period in which he lived has led several modern writers to confuse him with the famous scholar Abû Ya'qûb Yâsîn al-Sâkkâ, who is said to have lived in Transoxania (see e.g. Nâdhîr al-Asim and Mehmed al-Arif), though he attempts to classify the subjects scientifically, his divisions vary both in their titles and in the numeration. The first book is divided into three parts, the second is divided into several parts, and the third into seven, the titles of these parts being, the end not being numbered. The chief portion on rhetoric is divided into three main and these again into three parts. The part dealing with Bayân or eloquence has two parts and five parts again and several unnumbered chapters. The third part of the Metaphorical expressions is divided into six parts and at the end some additional chapters are numbered. Here the author says he was not able to finish his book, but as what follows really belongs to the art of rhetoric, he adds long expositions on the art of Reasoning by deduction and a lengthy account of the art of poetry, with the usual details of the metres etc. The work was too extensive and too badly arranged to serve as an easy hand-book; in consequence the abbreviations and commentary of al-Kâmil under the title of al-Miškâh al-Miṣrîh soon superseded this work and the latter with its many commentaries, especially those by al-Tabâṣûsî, entitled al-Muhannâl al-Muhammadi and al-Muhammadi, have held sway in Arabic literature till the present day. The Miṣkâh al-Ümân has been the subject of numerous commentaries; in addition to those named, among others by Maâshûr b. Maâshûr al-Šâbî (died 526 A.H.), which deals with the third part only; another commentary on the third part is by al-Qâdirî, who has written on it in 541 A.H.

Bibliography: al-Nâhidî, Mağlûbî al-Nâhidî, second mağlûbî (manuscript); al-Šâbî, introduction to the Khatâbî al-dawâlî wa (MS. of Nâhidî Othmânî, No. 3890); al-Qâdirî, Muhammâd al-Muhammâd, Der-i Sâdid, Constantinople 1315, p. 64; al-Shâirî, Catalogue of the Turkish MSS. in the Brit. Mus., p. 284; Köprüli Zade Fuad, al-Muhammâdî, Constantinople 1918, p. 198.

(S. KOBUKLU ZADE FÜAD)

SÄKKÄRÄ, an Egyptian village, 15 miles S. W. of Cairo, Lat. 29° 7' Long. 31° 13', situated near the left bank of the Nile halfway between Dijaz and Dahilah, it measured 370 feddans (according to Ibn al-Dînârî, al-Dihâna al-saniyya, p. 144; see also de Suèye, Relation de l'Égypte, p. 675) and its valuation (according to Ibn Dukmâsh, Khatâb al-Itimâ'î, Bulkî 1309, lv. 135) was 10,000 dinars. Pococke in his travels found it a rather poor village at the foot of the hills, with a mosque and a few clusters of date-palms. The name in Arabic means "falcon's nest"; but it is no doubt a corruption of the name of the old Egyptian god of death, Seker or Sokar (Sichara), "the confined one," who presided over the great cemetery on the Western Plateau. The extensive ruins (5 miles in length and 1 mile in width) of this famous necropolis exhibit every conceivable variety of sepulchral monument, notably tombs of the Ancient Empire (described by Mariette, Recherches Archéologiques, 2nd series, xxx. 8 sqq.).

Of the twenty odd pyramids of the Sakkâra group an outstanding one is the so-called Step Pyramid (al-haram al-muṣâlama), which is in reality a transitional mastaba. This, which is regarded as the oldest extant monument of its kind, was designed, it is believed, by Inhotep (*Imouthes*)
the prime minister of King Zoser of the third dynasty (H. R. Hall in The Cambridge Ancient History (1953), I. 276). It is 197 feet high, and is roughly constructed of small stones quarried in the neighbourhood, and having eleven successive layers of masonry with six steps with sloping sides. It is not oriented (though Egypt under the Pharaohs, London 1891, p. 28). The interior is a congeries of chambers and branching passages, many of them the work of Arab tomb-robbers. One of such depredators named Alymut al-Najdijar ("The Carpenter"), c. 520 a. d., has left his name in red ink behind him on the walls of a neighbouring pyramid. The Pyramid of Pepi I is known locally as the Pyramid of Shakhit Abub Munsur, while the Pyramid of Teti is believed by the natives to be in the vicinity of the place of Joseph's incarceration, and for that reason is known as the "Pyramid of Joseph". Another tomb in the same pyramid field is named by the Arabs Matbea Firdawus, "Pharaohs' Throne".

Regarding the "Prison of Joseph", there is a tradition to the effect that it is at Buity (al-Sidr), whose pyramids "Al-Latif describes (see the art. egyptia). But De Sacy (op. cit., p. 207) considers that these include the pyramids of Sakkarah as known to us (De Sacy mistakenly writes the name as Sakkara; although he afterwards corrects this in a foot-note, ibid., p. 675). This would agree with the textual addition (see De Sacy, p. 671, note 6) which states that Sakkarah is one of the dependencies of Buity. The "Prison of Joseph" was a regular place of pilgrimage. The Fakih Aba Isajik al-Marwazi said: "If a man comes from "Irak to visit it I shall not reproach him for undertaking the journey" (al-Makrizi, p. 610). And there is a tomb in al-Mashri's Chronicle of the month of Rabi' al-Awwal, 415 A. H. (May 13 June 1, 1024) that the populace of Cairo throned the streets with drums and trumpets demanding from the merchants money to take them to the "Prison of Joseph". On the merchants refusing, the matter was laid before the Khalfah ("Ali jum al-Hasim bi-amri 'l-lah) who ordered the merchants to pay the customary annual sum for the purpose. Thereupon the processional march to the "Prison of Joseph" took place led by the grand Kazi or Dawla (al-Makrizi, ibid., p. 610 sq). Near the Sakkarah pyramids are to be seen the remains of the celebrated Serapeum or Apis Manoeum, where, in the rock-cut tombs below, the mummified carcases of the sacred Apis-Bulls worshipped at Memphis were enshrined in huge sarcophagi of Assuan granite. The chapels built above the vaults formed the Serapeum proper. Thither a wonderful Drumor or Avenue of Sphinxes led. Fresh excavations in 1911-12 revealed the remains of the early Coptic monastery of Apa Jeremias (see Annales du Service des Antiquites de l'Egypte, Cairo, register). The well-known wooden statue of Bullaq, of the Shafiik al-Balad, came from Sakkarah (see F. B. Ziecke, Egypt of the Pharaohs and of the Khedives, London 1871, chap. ix.).

Sakkiz, a town and district in Persian Kurdistan, administered sometimes from Senne, sometimes from Tabriz and situated on the upper Daghstain east of Baneh. The inhabitants are Kurds (Mukri). In religion they are Shii'ta Sunnis; there are also adepts of the Naqshbandi Shirkah. The family of local Khans is related to that of the Wills of Arildan. The town has 1200 houses, 2 mosques, a bazaar, etc. The district (with its dependency Murede) comprises 360 villages. According to the census of 1296 A. H., there were 34,024 people in the district. The government taxes amounted to 6309 tumans a year. Cf. Ali Akbar Waqfi 'night, Khudra al-Naziriyya (manuscript history of Persian Kurdistan, written in 1509 A. H.).

(V. Minorsky)

Sakzin, a place on the Dnieper (according to Ibn Saud, quoted in Abu fi-Fida', Taqwin at-Buldun, ed. Reinaud and de Siane, p. 205), also located on other rivers e. g. on the Jal (cf. Dorn, Caiphe, p. 116) and on the Volga (according to Westphel; cf. Marquart, Osteuropische Blattstudien, p. 50). It is situated in 67° E. Long. and 53° N. Lat.; a town, without sq, is said to exist in 162° 30' E. Long. and 40° 30' N. Lat., but this must be another place. East of Sakzin lies the town of Soa (v. I. SYR) which belongs to the territory of Sakzin (Abu fi-Fida', op. cit., p. 202). According to Yaquti, Muidjam, iv. 670, the fortress of Manshaghlah is between Khirasun and Sakzin and the lands of the Rus on the sea of 'Tabarestan (Caspian Sea). Further information is given in Hamdat Mustawfi (cf. The Geographical Part of the Nushat al-Qulub, ed. G. Le Strange, Gibb Mem. Series, xxviii). Sakzin and Bulghur (this combination is frequent among other authors also) are in 32° 47' 750 farsangs distant from Mekka (text, p. 10; transl., p. 10); the eastern frontier of Iran, which begins in Sindh, runs to the frontier of Sakzin and Bulghur (p. 21 = 23 of the transl.); KHwabat, Sakzin and Bulghur are east of the Caspian Sea (p. 239 ge. 221); Sakzin and Bulghur are two small towns in the sixth chine; much land belongs to them and they export fur (p. 259 and 252). Al-Vardzadi in Ibn Isandiyar (Gibb Mem. Series, ii. 33 sq.) says that in his time Amul was the market for the wares of Sakzin. Merchants from the Trak, Syria, Akhsarin and India came to Amul to purchase there. The voyage by boat from Amul to Sakzin took three months but the return journey only one week because the former was up stream and the latter down. Ibn Isandiyar wrote probably at the beginning of the xivth century. We see that there is no agreement regarding the situation of the place on the one hand it is said to be on the Dnieper and on the other east of the Caspian Sea; while Yaquti seems to place it among the Rus, al-Kafrin in Asfi at-Buldun, ed. Wustenfeld, ii. 402 sq., calls it a town in the Khazar; he says it is large (contrary to Mustawfi), inhabited by 40 tribes of the Ghuzz, with a large amount of strangers and merchants in addition. The climate is cold, the inhabitants are Muslims, for the most
part Hamats, although there are also some Shaj'a. The houses are covered with roofs of pine-wood. The river of Şakṣin is larger than the Tigis and rich in fish of a kind only found there, which is sold at the rate of 100 madda for a half damaq; these fishes yield train-oil and isinglass. The currency there is lead, of which three Baghdad madda = 1 dinar. Sheep cost 1/4 damaq each, rams 1/4 (passûq); there is also much fruit. Al-Gharnâṭi relates that the river is frozen in winter and can be crossed on foot. So far al-Kâzimîn's account of the place, an excerpt of which is given by al-Bakîwî, a geographer of the fifteenth century (quoted by d'Ohsson, Hist. des Mongols, i. 346, note 1); but al-Bakîwî adds that in his time the town no longer existed (op. cit.: *Sacasin est à present surnumérée; il n'en reste aucunes traces; mais précis de là existe maluntenant une autre ville, le Sérâf de Bâres, résidence du souverain de cette contrée*).

In the history of the Mongol period Şakṣin is several times mentioned: conquered by Cuqis al-Khân (Ta'rîkh-i Gustda, Gibb Mem. Series, vol. xiv., part i. 572; cf. Yâkût, Mu'ajjam, i. 255), it belonged to the territory of Tîgî, his eldest son (Ta'rîkh-i Dîjahângîsh, Gibb Mem. Series, vol. xvi., part i. 31; Ta'rîkh-i Gustda, i. 375). Ogotai shortly after his accession sent an army to Kîpîk Şakṣin and Bûghûrî (Ta'rîkh-i Dîjahângûsh, i. 150), the Lînûnî Şakṣin now Bûghûrî is mentioned as Bâ'în's territory (ibid., i. 205). The descendants of Khân Bârkâh (d. 1626 A.D.; Abu 'l-Fidâ', op. cit., p. 209) afterwards lived there. We have already seen that it no longer existed in the fifteenth century. The *Secret of Bocias*, mentioned in al-Bakîwî in connection with it, is probably called after the reigning family. The combination Şakîn-i Rûm is found in a Persian poem, which the rebel Atâ'î sent to king Sandjar (Ta'rîkh-i Gustda, i. 488).

The name Şakîn may — at least in European sources — also denote the inhabitants of the place. This is perhaps the case with the Sâsî in JOzannes de Plano Carpini, vii. 3, although the Mongols could not conquer them according to this writer, which is contradictory to the Persian sources. In the passage from a Russian Chronicle which is quoted by Dorn, Carşî, p. 21 in the note — here also there is a reference to the Mongol wars — we find Şakînî alongside of Polovtsi as the name of a people.

(V. F. Rüchker)

**SâL** (?), a year, a word also used by the Turks. It is normally the time that elapses between two successive passages of the vernal equinox by the sun, the astronomical year; but the word is also used to designate anniversaries of births, of arrivals, etc. Solar, lunar, astronomical and civil years are distinguished; the civil year is 365 days, the astronomical year 365 days, 5 hours, 49' (Handley)

**SâL-nâmë** (r. and t.), literally: yearbook, annual, almanac, calendar; the term *SâL-nâmë* from rîz "day" is also used; the Arabic word for calendar is *tâbînah*. The Turks make great use of tables whether annual or perpetual; the latter cover a period of 80 to 85 years; they are in the form of little rolls or tiny volumes usually written with great care and in ink of several colours. They give the year in the era of Alexander, of Christ, of Diocletian and in the Djalâlt era, the era of the Sâlûlîs, Sûlfân Malik Šah, the name of the year in the Turco-Mongol animal cycle, a horoscope table, the Muslim, Jewish, Christian and Persian feasts, the correspondence with the Syrian months, astronomical and meteorological predictions, the dates at which the principal agricultural operations should be performed, as well as other operations. The *Mu'âshârûm* uses tables called *tâbînah* or *tâbînâm* to know the canonical hours and the new moon. M. d'Ohsson quotes a highly esteemed calendar from the xviiith century A. D. made in Turkey by Dârendwî which covered the period 1192—1277 A. D. *SâL-nâmë* is also the name of the official annuals (gazetteers) of the Ottoman Empire.

**SâLâ**, in dialect Slâ (ethnic Sâłowët, dial. Slâwi), or, following the official French orthography commonly used, Salê, the English Salê, Salëh or Sâlëcos, is a town in Morocco on the Atlantic coast at the mouth of and on the north bank of the river El Bârag. On the other bank just opposite stands Rabât, the estuary of the river serves as the harbour of the two towns. Salê, the less important, has about 20,000 inhabitants of whom 2,000 are Jews.

The name is ancient, but the Panic Sala, and the Roman Sala Colonia did not stand on the same site; the remains of the Roman Sala can still be seen near the modern Şkia (Chella), a few miles up the river and on the other bank. It is not till the Idrîsîl period (19th century) that the new Salê (Salë) first appears, distinct from old Sâlë (Chella) then in ruins. At the beginning of the xivth century it was the capital of a little Idrîsîl kingdom, which fought with the Barghâwjât (q. v.), heretics settled to the south of the El Bârag. They were already at this time a ribât built against these heretics on the south bank, where Ribât al-Fâṭîs was afterwards built (Ibn Hawrá). In the middle of the xivth century, Salë, if we may believe al-Idrîsî, was a fine and strong town with rich harsars, a harbour frequented by Spanish ships, which brought oil in exchange for foodstuffs; entrance into the river was already very difficult.

The building of Rabât by the Almoçâdîs opposite Salê does not seem to have done much harm to the latter. It is from this period that the great mosque dates and Salê remained prosperous while Rabât declined after the death of Ya'kûb al-Mansûr. It fell into the power of the Marinids in 649/1251 and after several vicissitudes Ya'kub b. 'Abd Allah, a member of the reigning family of the Marinids, declared himself independent there. The
Christians from Spain entered it by surprise in 658/1260. The Sultan Abū Yūsuf Yaḥyā the Marinid drove them out again after a few days, closed its ramparts and built the Sea-Gate still visible to-day. The Marinid sovereigns on several occasions mobilised on the left bank of the Rūr Rāgrāq the troops intended for the holy war, had an arsenal at Salé where ships were built, and beautified the town. We may specially note the beautiful madrasa built by Abū l-Ḥasan. A little later, Hān al-Kaṭāh spent several years there and wrote of its charm.

In the course of the great wars waged by the Spanish and Portuguese in the xvith and xviith centuries, Salé was one of the few points on the Moroccan coast where they could not gain a footing. In the beginning of the seventeenth century when expelled by the edicts of Philip III (1609) the Spanish Moors took Rabat; Salé, slipping from the rule of the Sherifs, became independent under the Muḥāṣīlī al-ʿAyyashī in 1627. It became its base for attacking al-Mamora (al-Maghīya) which was held by the Spaniards. Salé played a part in the feuds which divided the town and ʿajbah of Rabat, then fought unsuccessfully against one and the other, until when al-ʿAyyashī was killed and the three towns fell into the hands of the Marabouts of Dīlī (1641). Salé recognised the authority of Ǧhaïlān (1660) and after the defeat of the latter by al-Raḥīf became finally incorporated in the lands of the Filali dynasty in 1666.

This disturbed century was also the age of piracy. The corsairs of Salé were famous; but under the name of Salé at this period the Europeans comprised the three towns and the pirates in reality almost all came from the ʿajbah of Rabat and from Raḥāt. These three towns, strange as it may appear, formed at the same time the principal commercial port of Morocco. Down to the end of the xvith century this was the usual route by which travellers and merchandise from Europe went to Fās and it was on several occasions the residence of diplomatic representatives of the Christian powers.

As compared with Rabat, the administrative capital of Morocco, Salé is now a quiet little town where many scholars live. It is also a market for the tribes who live on the north bank of the Rūr Rāgrāq.

(Henri Basset)

SALADIN, AL-MALIK AL-NĀṣIR ŠALĀD AL-DIN YUSUF I., was the son of the Amir Nādīn al-Dīn ʿAyyāth ash-Shādī (see above), born in Tarqit in 532 (1138). His father moved shortly — according to others a few years — after his birth to Syria and was appointed governor of Baʿalbek by Zangī [q. v.] and remained on there (with one third of the town and its appanages as a fief) after the Būrid ʿAṭībthe ʿAḥāb [see above] had seized the town. Salādīn and his brothers were brought up there. When 17 years old he came with his father to the court of Nūr al-Dīn when the latter had captured Damascus in 549 (1154) (on the occupation of Baʿalbek and Damascus see the introduction to Baalbek in Islamischer Zeit in vol. iii. of Baalbek, Ergebnisse der Ausgrabungen und Untersuchungen in den Jahren 1899—1905, Berlin 1925). It is remarkable how little is known regarding Salādīn's youth and education; he played no part at the court of Nūr al-Dīn; the Amir ʿUmar, the half-brother, who resided there, did not even know him as we see from his biography. He first came into the public eye when in 559 (1164) 'in spite of his reluctance' (as Abu Shāma reports without giving any reasons) Shīrkhūn [q. v.] took him with him on his first campaign against Egypt. Shāwār, the vizier of the Caliph al-ʿĀdîd [q. v.], had been displaced by a rival, ʿ-dirghām [q. v.], and had applied for assistance to Nūr al-Dīn, Atābeq of Syria. He promised the latter a third of the revenues of Egypt, while ʿ-dirghām had asked king Amaury I of Jerusalem for support and had promised him a vast tribute. ʿ-dirghām was defeated and slain before Amaury could give him any assistance, and Shāwār restored to the vizierate. As the latter did not fulfill his promises, Shīrkhūn, to gain his good, ordered Salādīn to occupy Bīlibīs [see above] and the district and collect the taxes there. Fierce fighting was the result. Shāwār, finding himself in a tight corner, called in king Amaury to help him, so that Shīrkhūn and Salādīn were forced to entrench themselves in Bīlibīs. The town was so well defended by the two that Shāwār and Amaury could not take it. While this was going on, Nūr al-Dīn captured the important fortress of Ḫārim and advanced on Bānīyān so that Amaury was now forced to retire to Syria in order to prevent Nūr al-Dīn from making further captures. He had agreed with Shīrkhūn that the latter should withdraw from Egypt and leave Shāwār in possession. Shīrkhūn arrived in Syria with Salādīn in the beginning of 560 (towards the end of 1164) with his forces intact. The main result of the campaign was that it gave Nūr al-Dīn and his men a clear idea of Egypt, its wealth and relative strength. Shīrkhūn was attracted by the idea of conquering the land and settling there but Nūr al-Dīn did not wish to split up his forces in view of the war with the Crusaders. It was only three years later when Shāwār made a new alliance with Amaury that Shīrkhūn received orders to begin a second campaign against Egypt and again he took Salādīn with him (October 1168) 'in spite of his reluctance at first'. His first objective was the occupation of the bank of the Nile; after overcoming the difficulties of the march and eluding the Franks he reached the south of Cairo and built a fortified camp near Dījār; soon afterwards, Amaury arrived with his troops and encamped opposite him at al-Fustāṭ. At the same time he concluded an agreement regarding subsidies with the Caliph himself. Amaury then attacked Shīrkhūn and forced him to retreat to Upper Egypt. At Bābāz he forced Shīrkhūn to make a stand and the latter, after some hesitation, gave battle on the advice of Salādīn and some of the Amir; he succeeded in beating Amaury, while
Saladin put to flight the Caliph’s troops. Shirkuh was not in a position to follow up this victory; he retired with Saladin to Alexandria and left the latter there with half his army while he himself went to Upper Egypt to collect tribute. This was Saladin’s first independent command. Amaury advanced on Alexandria with his own and the Egyptian forces, while the fleet of the Crusaders watched the coast. Saladin had difficulty in holding the town against the Franks, who put up huge siege artillery, and therefore called upon Shirkuh for assistance. The latter returned by forced marches and never pitched his camp until he was before Cairo. He then entered into negotiations with Amaury for peace which was concluded in the middle of Shawwal, 562 (beginning of August, 1167); he bound himself to return to Syria with Saladin, prisoners were exchanged; Saladin was received hospitably in Amaury’s camp and the Christians visited Alexandria. Both sides claimed the victory; Amaury left a garrison in Cairo as well as an office for the collection of his tribute. The fear of Nūr al-Dīn’s successes may have been the main reason for the conclusion of the treaty. Amaury did not take this into consideration as he was old and his trusted advisers induced him to invade Egypt only 14 months later and his garrisons in Alexandria and Cairo advised him to take possession of Egypt definitely. He therefore advanced on Bilbāīs, took the town on Muharram 29, 564 (Nov. 2, 1168) and had nearly all its inhabitants put to death. This act of barbarity estranged the Egyptians from him. He next marched against Cairo. To protect the town the vizier Shīwar had the suburb of al-Fusṭūjī (cf. above l. s. 177 377) set on fire. It is said to have burned for 54 days and the smoke which it raised prevented Amaury from besieging Cairo from an advantageous position. The Caliph had with all speed sent messengers for assistance to Nūr al-Dīn, while Shirkuh negotiated with Amaury. Nūr al-Dīn sent Shirkuh and with him Saladin, who was still impressed by the sufferings during the siege of Alexandria and only with reluctance decided to go. He was supplied with men, horses and arms. Amaury sought in vain to intercept Shirkuh and on Rabī’ II 1, 564 (Jan. 2, 1169) he began his retreat; a few days later Shirkuh appeared before Cairo and was hailed as a rescuer; Shīwar, however, remained hostile to him and plotted to take him and his Amir prisoners on the occasion of a feast. When Shirkuh and his men learned of this treachery, Saladin decided to get rid of him. He seized Shīwar when riding in the vicinity of Cairo and had him executed. The Caliph, delighted at being freed from his tyrannical vizier, appointed Shirkuh his successor on Rabī’ II 17, 564 (Jan. 18, 1169). But Shirkuh died only two months later and the Caliph, who thought that Saladin, with his good nature, would be a compeient servant, appointed him vizier with the title “al-Malik al-Nṣūrī” (March, 26 = Djamādā II 25). In a letter of congratulation Nūr al-Dīn recognised him as commander of the Syrian troops. Henceforth the greatness of Saladin is revealed. The power, that had become his through favourable circumstances, found a highly gifted man who knew how to use it. If he had hitherto hesitated to devote his life to warfare, so that Nūr al-Dīn had almost forced him to take part in the campaigns against Egypt, if he had hitherto cared for nothing so much as theological discussions and appeared in public as little as possible, as we saw, and had even indulged in forbidden wine, all this either ceased (like wine-drinking) or (like the theological discussions) was only exercised as a pastime in hours of recreation. His path lay clearly marked before him: to secure power for himself and his family, to put down the Shi‘a and to fight the Crusaders to the utmost. He was able to attain these aims to a great degree, because, quite apart from his own ability and valour, the ground was prepared for him to march for the previous work of Nūr al-Dīn, and the diplomatic ability of his father Ayyūb, but for the decline of the Fāṭimid Caliphs and the sluggishness of the Egyptian people, but for the internal feuds of the Crusaders, he could never have achieved the great successes of his life to the same extent, in view of the initial lack of unity among the Muslim rulers. He was a politician rather than a general, amenable to the advice of capable advisers, clever and fortunate in the choice of his colleagues, without ever allowing power to leave his own hands. Two men of learning, al-Kādji al-Fadīl [q.v.] and later Imād al-Dīn al-Kādji al-Iṣwānī [q.v.], both noted for the style and grace of their correspondence, conducted his political and war measures and were in constant correspondence with the highest officials and with rulers who were Saladin’s friends. The number of Saladin’s letters and the fulness of the political reports contained in them is overwhelming. At a later date, from 584 (1188), the Kādji Ibn Shaddād [q.v.], his biographer, entered his service as private secretary.

In Egypt, Saladin took a firm grasp of the reins of government and aroused the enmity of the black guards (Nubians and Abyssinians) who had been brought to Cairo as mercenaries, had risen to power under the weak Caliphs and filled influential positions at court and in the government. They were joined by all, who, being ardent Shi‘a, were predisposed to be dissatisfied with Saladin as a Sunnite. The Caliph’s major dūnas sought to king Amaury for help; but as the messenger was captured, the plan fell through. The eunuch was executed and the Caliph’s palace placed under the protection of men who could be relied upon. The negro guards thereupon mutinied in Cairo and Saladin to overcome them had their quarters burned down. They escaped to Dijzā and were there wiped out by Saladin’s troops. The Franks, who could not reconcile themselves to his rule, as they with good reason regarded it as a threat to Jerusalem, had sent envoys urgently begging for assistance to France, Germany, England, the Byzantine Emperor and the Pope and had succeeded in getting a fleet with troops sent from Constantinople and an auxiliary force from South Italy. The Byzantines and the Franks decided by mutual agreement to capture Damietta [q.v.] first and then to march on Cairo. Saladin sought assistance from Nūr al-Dīn, as he had to defend himself on one side against the Franks and Byzantines, on the other possibly against the always turbulent Egyptians. He also asked that the reinforcements should be sent under the command of his father, just as he had already called other members of his family to his side in Cairo. The successes of the Franks and Byzantines would perhaps have been greater if the siege had not been too far prolonged by the energy of the defenders. The Byzantine army began to suffer from shortness of commissariat and Amaury, doubting if he could gain a complete victory, preferred to
negotiate with Saladin and to conclude peace for a considerable sum of money. Envoy and force may have worked together upon him. In the meanwhile Nūr al-Dīn had invaded the Ḥūrām [q.v.], prepared himself against the counter-attacks of the Franks, but a terrible earthquake in the summer of 565 (1170) which wrought tremendous devastation in the Syrian cities forced Franks and Muslims alike to lay down their arms and take up the task of rebuilding the shattered cities. In the following year 566 (1171) Saladin made a raid into Palestine and advanced as far as Ramlah and Asqalān [q.v.], then retired to Egypt to prepare for the taking of the port of Aila [q.v.] on the Red Sea and gradually to secure communications between Egypt and Palestine; in the same year he succeeded in taking Aila. In the next year (567) he fulfilled Nūr al-Dīn’s desire by omitting the mention of the Fātimid Caliph in the Friday sermon and continuing to name the Abbasid Caliph. Soon afterwards the Caliph al-Afdīd died, whether in fact his natural death is uncertain; Christian writers say that he either committed suicide or was put to death by Saladin’s brother, Tārān Shālī, by the former’s orders. Nūr al-Dīn is said to have been very pleased at the end of Fātimid rule. When the news of the extension of his territory was conveyed to the Abbasid Caliph he sent robes of honour to Nūr al-Dīn but not those bestowing the latter’s position (as a vassal), so that, although he did put them on, he immediately sent them on by the Caliph’s envoy to Saladin.

The relations between Saladin and Nūr al-Dīn were soon to become clouded. Saladin in Cairo was too independent for him; his father and his brothers were what Nūr al-Dīn said he had no hostages in his power. When Saladin wanted to take up his scheme for securing the communications between Egypt and Palestine, he proposed to Nūr al-Dīn to besiege Shawbak and Kerak [q.v.] and set out to do so; but when Nūr al-Dīn departed for Kerak Saladin was advised by his Amirs not to go to him, as they feared for his safety. Taking their advice, he turned back and excused himself by pleading the unsettled condition of Egypt. Nūr al-Dīn was furious at this and collected troops against Saladin. When this became known at Saladin’s court, a section of his Amirs advised him to fight, but his father, who feared the great prestige of Nūr al-Dīn, advised him to write a submissive letter so that tolerable conditions were once more restored. But their mutual mistrust was not overcast, so that the two cities mentioned (Kerak and Shawbak) were not captured, nor did Saladin at this time support his suzerain against the Crusaders to the best of his ability. In the next year Saladin went to Kerak, but withdrew again, pleading his father’s illness, when Nūr al-Dīn approached. In this difficult situation Saladin resolved to create a position of security for himself and his family in a way which would satisfy Nūr al-Dīn. In 569 (1173/4) he sent his brother Turān Shāh against the senator Abū al-Nabi, who had taken possession of the Yemen. Turān Shāh succeeded in driving him out and conquering the Yemen. He had himself mentioned in the Aqūfa as ruler next to the Caliph and sent messengers to Saladin, who in turn notified Nūr al-Dīn and the Caliph. Nevertheless Saladin’s position was still threatened, especially as he had again to face a rising in the spring of this year. Nūr al-Dīn now decided to take the field against him, especially as it vested him that the strength of the Crusaders was increased because Saladin held back. He had already collected an army (see Al-Malik al-Salih, the Zangī) when he was attacked by a severe illness in Damascus and died in a few days on the 12th of Shawwāl (May 15). Saladin was thus relieved of a great anxiety and was now free to develop his power. He then recognised Nūr al-Dīn’s eleven-year-old son al-Malik al-Salih Ismai’il (see Al-Malik al-Salih, the Zangī) and devoted himself to fighting the Normans of Sicily, who had appeared before Alexandria with a strong fleet at the end of the year 569 (1173/4). They landed their swarms but within three days they were defeated and for the most part killed with the help of troops sent to reinforce the strong garrison. Saladin captured enormous booty, King Amalric also had died shortly before, so that Saladin was left secure in possession of vast power and could devote himself entirely to the object of his life, the struggle with the Crusaders. He began by turning his attention to Syria, to which he was summoned by the Amir in Damascus in 570 (1174). He found the position there unsatisfactory in as much as there was no single guiding will among the Muslims. He rightly considered it, as Nūr al-Dīn had done before him in a similar situation (see Būrīds), absolutely necessary to gain the real power in Syria, even if for the time being it was as vassal of Salih Ismai’il, whose guardians he had to become. Things went against him at first when he took the field against Ismai’il’s Amir from whom he claimed to be going to liberate Ismai’il, Aleppo itself resisted him as did Hamā, Hims and Ba’albek. Ismai’il’s uncle al-Ghāth came from Mesopotamia with a large army so that Saladin was ready to make a peace favourable to Salih Ismai’il. As his conditions were not accepted, Saladin found himself forced to fight. He declared himself independent and dropped Salih Ismai’il’s name from the Aqūfa. The decision was in his favour, for the enemy were completely defeated at Kurān Hamā. Saladin behaved with great moderation: he left Salih Ismai’il, who seemed quite harmless to him, in possession of Aleppo and gave Hamā, Hims and Ba’albek, which surrendered to him without a blow, to relatives as feuds. Then, in June ‘Eid al-Adha, 570 (= May, 1175) he was, at his own request, granted by the Caliph ruqūd (4 ‘ulūj-man) over Egypt, Nubia, the Yemen, the Maghrib from Egypt to Tripoli, Palestine and Central Syria and henceforth considered himself as Sultan, as Abū ‘l-Fida’, strictly speaking, was only a catchword, and was also regarded as such by his contemporaries. He did not, however, adopt the title as such; he calls himself Sultan al-Islām wa l-Muṣlimin. A last attempt by the Zangī party to overthrow Saladin ended after several battles and a third siege of Aleppo with a peace towards the end of 571 (end of June, 1176) by which Saladin was finally left in possession of the lands conquered by him. He next besieged in his citadel an ally of Ismai’il’s, the so-called Old Man of the Mountain, the Šāfiʿī Sinūn of the Assassins [q.v.] in Masyad, who had sent his Assassins against him several times; but he could not take it as the fanatical Assassins defended it vigorously. He raised the siege and received from Sinūn a promise that he would not attack him again. This danger also was thus disposed of and Saladin returned to Egypt.

He considered the building of the Citadel, which
he began in this year, a very important task in Cairo (see the art. CAIRO, i. 324 n.). In Djuinmādī I, 573 (November, 1177) he made a rapid march into Palestine and laid waste the country round Gaza and Ascalon. King Baldwin IV opposed him, but had to withdraw in face of Saladin's apparent superiority. Saladin's troops took up the bridge over the Jordan and dispersed to plunder the country while Baldwin collected the Templars and many Knights under the leadership of Raymond of Kerak and again appeared upon the scene. Saladin had first of all to collect his numerous forces. The armies met to the south of Ramla. The Knights distinguished themselves by great bravery so that Saladin suffered an annihilating defeat by the 14th of Djuinmādī, 573 (1177) in spite of his superiority. The victory was so surprising that the Crusaders ascribed it to a miracle. Saladin himself is said to have escaped capture; his nephew, other leaders and learned men of his regiment were taken prisoners. A great thanksgiving was held in Jerusalem in honour of the victory. One consequence of this defeat was that in the next year (574 = 1178) King Baldwin built a fortress at the Banūt Yamṣīt bridge over the Jordan, which gave him control over the river Jordan and the plain as far as Bāniyās, without Saladin being able to prevent him, Saladin, who had in vain offered the king an indemnity of 200,000 dinars if he would leave off building, had to attack this fortress. He sent his ablest general, Iṣa al-Dīn Farāḥ Shī ḫ, his nephew, against Baldwin, who suffered a reverse at the end of 574 (May, 1179). A year later, Saladin succeeded in inflicting a severe defeat upon him at Masdīj 'Aylin on Maḥṣarām 2, 575 (June 10, 1179); a large number of distinguished Franks were captured. Two months later Saladin took the fortress at Jacob's Ford and levelled it to the ground. The next year brought no fighting on a large scale. In Muḥarram, 576 (June, 1180) Baldwin concluded a two years' truce with Saladin. Next year Nūr al-Dīn's son, Iṣa al-Dīn of Aleppo, died. His successor, in keeping with his dying wish, was his cousin Iṣa al-Dīn Mas'ūd, a capable soldier, who, however, exchanged Aleppo for Sīnjar with his brother Zangī II to obtain a consolidated dominion. In the meantime war had broken out between Saladin and the Franks as a result of the continued raids made by Raymond de Châtillon, prince of Kerak, on caravans going to Egypt. Zangī II, on the other hand, made peace with the Franks. Saladin, however, endeavoured to obtain sole control of all the Muslim lands and used the next few years to conquer the rest of Syria (Aleppo), in Şafar, 576 (June, 1183), and to gain the supremacy of Muzaffaridamis by occupying the most important towns and restoring them as sīfs. While there was no lasting peace with the Crusaders, fighting on a large scale was avoided by both sides and in the same year a four years' peace was concluded between Baldwin V, guardian of Raymond III of Tripoli, and Saladin. Soon afterwards Baldwin V died and his successor, Guy de Lusignan, ascended the throne in the following year in spite of Raymond's objections. Peace was again disturbed by Raymond de Châtillon, who from Kerak fell upon a large caravan and refused to give any satisfaction or compensation. Saladin was exceedingly angry and at the end of 578 (Feb., 1187) invaded the region of Kerak and summoned his Egyptian troops to protect the pilgrims returning from Mecca, while his Syrian troops concentrated at Hīram. The Crusaders reinforced the terrible danger. Guy collected Raymond, troops arrived from all sides so that Guy was able to collect an army of 20,000 men and take up a position in Saffūrīyā. On Rabīʾ II 17, 582 (June 26, 1187) Saladin arrived south of Lake Genesareth and captured the town of Tiberias after six days' siege; the citadel alone held out. Raymond in vain warned the Crusaders against leaving their well sheltered position with its ample water supply during the frightful heat. His enemies, who believed that he had come to an arrangement with Saladin, advised the king to attack the Sūfīān. He ordered an advance to be made towards Tiberias and encamped the night at Ḥastīn, in the affluent source of the Jordan, where the army did not even find sufficient water. In spite of very great bravery the Crusaders were completely defeated, the king and a considerable number of his Knights captured. While Saladin gave the king a friendly reception, he slew with his own hand Raymond, the disturber of the peace, and had all the Templars and Knights of St. John executed by his Amir and ʿAbd. Just as the battle of Kurīn Ḥanāk had secured him rule over Syria, the decisive battle of Ḥastīn gave him Palestine with Jerusalem. The fortress of Tiberias, Nazareth, Samaria, Sīdīn, Beirūt, Bārūr, ʿAkkā, in Ramla, Gaza and Hebron fell. He then advanced on Jerusalem and took Bethlehem, Bethmia and the Mount of Olives in Rabīʾ II, 583 (Sept., 1187). Saladin first of all encamped to the west of the town, the inhabitants of which fled, but later attacked the city from a more favourable position in the north and used the catapults and ballistae it had to capitulate at the end of the month. People of means were able to ransom themselves; those who could not pay were sold into slavery but several thousands were released on the intercession of Muslim and Christian persons of standing as were a large number of the poor by Saladin himself. Only a few sick people were allowed to stay as well as those who pledged themselves to pay a poll-tax. Everything associated with the Christian religion was destroyed, the ʿAbbāsīah al-Salāmī (Dome of the Rock) and the Aqṣā mosque were restored and hospitals and schools built in memory of the great event; numerous Asfār and princes increased the splendour of these days by their presence and their rich foundations. It may be said that the whole of Islam jointed in celebrating the capture of Jerusalem, which had been so ardently desired. The consequence of this victory was that Saladin gained possession of the cities and fortresses still Christian by force or by capitulation; only Antioch, Tripoli, Tyre and a number of smaller towns and castles remained in possession of the Christians. The remisider of the year was unfortunate for Saladin; he made the mistake of giving his weseht, overtitned army no time to recuperate but went on to besiege Tyre. Here he suffered a severe reverse owing to the brave defence of the garrison and his mishaps at sea. ʿAkkā was re-militarized and fortified for him after long consultations by his Amir al-ʿAbd al-Muḥammad, who had already proved his worth by building the citadel at Cairo. Saladin, after a futile attempt to take Kasbah, then went to Damascus and in Rabīʾ II, 584 (June, 1188) he summoned the
Muslim princes of Syria and Mesopotamia with their troops for a new campaign. In the course of the fighting that followed Lāthabīya, Djabala [q. v.], Şahyūn, Sarmin and Buziysa were captured and a seven months' truce was concluded with Bohemund III of Antioch. Saladin on the 1st of Ramadān of the same year returned to Damascus and dismissed his allies from Mesopotamia but kept his own forces under arms in order to conquer Safa [q. v.], Kawkāb, Kerak and Shabbak. This campaign was long but successful and ended on the 1st of Dhu 'l-ʾKaʿda, 585 (Dec. 11, 1189) with the capture of all these places.

On learning of the capture of Jerusalem Gregory VIII proclaimed a Crusade and after his death Clement III continued his efforts. All hostilities between European rulers ceased and steps were taken to secure a rapprochement between Philip II of France and Richard I of England. The first reinforcement sent by the new Crusaders was a fleet despatched by William of Sicily, which relieved Tripolis and henceforth formed a support for the Palestine seaports. Gradually larger and stronger fleets set out from Europe for the Holy Land and all landed in Tyre. The Emperor Frederick I undertook a Crusade with numerous, well equipped troops; he went via Constantinople after he had in vain challenged Saladin to hand over Jerusalem. The Emperor Isaac of Constantinople, who had made an alliance with Saladin which proved ineffective, could not prevent his passage. The Franks, reinforced by the continued new arrivals, began the siege of ʿAkka on Radjab 14, 585 (Aug. 28, 1189), which is considered one of the greatest military operations of the Middle Ages. King Guy de Lusignan and the Count of Montferrat, who had been taken prisoners at the taking of Jerusalem, had been released by Saladin at the request of Queen Sibyl as early as Dżumādā I, 584 (July, 1188) on pledging themselves not to fight again against him; after having been released from their oath by the patriarch, they began the siege of ʿAkka relying on the help of Frederick I of Germany, Richard I of England and Philip II of France and supported at first by continual arrivals of Crusaders from many countries of Europe. Saladin's army was now revealed in its fullest development and in this several years' struggle the Crusaders learned to know and appreciate the great Sultan.

King Guy led the Franks up to ʿAkka after two months' preparations and Saladin arrived next day. The struggle for the city was waged by land and sea. The Crusaders had the advantage that the garrison was almost always cut off from the sea and suffered from lack of food. Besides, although the Crusaders at ʿAkka were joined by only very few German Knights owing to the death of Frederick I, they were given a decided superiority over the Saracens by the arrival of the army of Philip and more particularly that of Richard I and by the regular arrivals of ships with food and soldiers. They also had very fine siege artillery while the Muslims on their side had very clever artificers to make their fire-bombs. Saladin had the management of the single command, although his army was weakened by the long years of war so that even the relief of the garrison in ʿAkka could not be of much avail to him and his own army finally mutinied. The Crusaders were hampered by their quarrels with one another and the rivalries of King Guy and the Count of Montferrat as well as those of Richard and Philip. The succeeding years were full of fighting by land and sea. Saladin in vain endeavoured to get new forces from the East through the intervention of the Caliph. On the 7th of Dżumādā II, 587 (July 13, 1191) the garrisons capitulated on his terms: without waiting for Saladin's decision. The fortress and all the prisoners in it were to be handed over and the garrison released on payment of 200,000 pieces of gold. When the money had not been paid at the end of a month, Richard had 3,000 prisoners put to death. This cruel deed, which was condemned by Christian chroniclers also, resulted in all the Christian prisoners in the hands of the Muslims being slaughtered. Richard soon afterwards captured Kaštrīya [q. v.], and fortified Jaffa, while Saladin destroyed the fortress of Ramla. Negotiations for a peace henceforth went on almost without interruption between the two combatant parties; the principal agent in them was Saladin's brother, al-Malik al-ʾAdil. The principal demands were the cession of Jerusalem and the surrender of the Holy Cross; Richard, who was full of romantic ideas, afterwards proposed that his sister Bertrancia marry ʾAdil, who was to rule over Jerusalem; he followed a policy of reconciliation which gradually led to peace. He knighted al-Malik al-Kāmil [q. v.], ʾAdil's son. After several more battles peace was concluded on Shawwāb 23, 588 (Nov. 2, 1192). Lydda and Ramla were divided, Ascalon was given to the Crusaders and the Crusaders allowed to make pilgrimage to the Holy Places unarmed. The main cause of the conclusion of peace on Richard's side was his illness and his desire to return to England, as well as the cessation of reinforcements from Europe. In spite of the exertions of the whole of Europe the greater part of Palestine had become Muslim under Saladin, except for the strip along the coast, and communication between Palestine and Egypt secured; Saladin was on friendly terms with Bohemund of Antioch. Saladin was able to enjoy peace during the few months that he still had to live; he strengthened Jerusalem, then went leisurely to Damascus, where he was welcomed with rejoicings by the people towards the end of Dhu 'l-ʾKaʿda (end of November). He spent the winter there with his family; he fell ill in Safa, 589 (February, 1193) and died 14 days later at the age of 55. His eldest son received Damascus, his second Aleppo, another Egypt and his brother ʾAdil North Arabia and Mesopotamia. The unity of his dominion disappeared within a few years after his death. It is not likely that, even if he had lived longer, he could have induced his family to come to an intelligent arrangement. During his lifetime, however, he hardly ever had to fight against one of his own family. His authority, based on his ability, kindness and piety, could not be assailed. Coo"seousness was removed from his character; twice — at the death of the Fāṭimid Caliph al-ʾAdid and at the death of the Ayyubid Nūr al-Dīn — he had an opportunity to acquire great wealth. He distributed the Caliph's treasure to his troops and retainers and did not touch Nūr al-Dīn's wealth but gave it to his son. He was fanatical against the Crusaders as a body but not as individuals and not against the subjected Christians of his empire, although when he came to the throne he at first enforced more strictly the regulations regarding dress for Christians and Jews, He followed
the same course as Nūr al-Dīn and may (see the art. AYUBI) be claimed as a champion of the Sunni reaction against Shi‘ī (Ferisian) faction in architecture, style, and writing of official documents. In the last years of his reign the personal relations between Muslims and Christians were good; it appears that some Muslims were actually knighted by Richard, e.g. al-Mālik al-Kāmil, son of al-Mālik al-ʿAdil. Salādīn was beloved and respected by his people and with Sūlān Baibars [q.v.] and Ḥūrin al-Rashīd [q.v.] to this day the most popular figure in the East. In Europe he is considered the pattern of chivalry and, as a matter of fact, he never was unnecessarily cruel but was often magnanimous in releasing prisoners and bestowing gifts (e.g. the citadel of 'Akkā to the young sister of al-Ṣāliḥ Ismā‘īl, several villages to Bohemund of Antioch after the peace with Richard I). The Arabs have with only one exception (a chapter in the romance of Baibars) not given him a place in ballad or romance, whereas very soon after his death he touched the fancy of English minstrels in connection with Richard, although they depicted him in an unfavourable light; in the poetry of the French and Italians he is described more favourably. Modern novelists like Scott in his Taṣlīm and Lessing in his Nūḥān al-Walī have introduced him into their works; to the former he is a vigorous Oriental ruler while the latter depicts him with as fine feelings as a European. He was a friend of theological learning, a patron of scholars and a builder on a grand scale as he showed in the Citadel of Cairo and in the restoration of the buildings in Jerusalem.

The epigraphical materials concerning S. have been treated in a detailed study by G. Wiet, Les-inscriptions de Salādīn (Syria, iii. 307—329).

Bibliography: The still unprinted manuscript sources are quoted by Blochet in the introduction (p. 1—55) to his translation of al-Makritzi's Sulṭān (period of the Ayyūbidīs, Paris 1908) in most commendable fashion; numerous extracts from the Musafirī al-Karhān of Ibn Wāṣil and from the "History of the Patriarchs of Alexandria" are also given there in notes in French: translation; the printed literature down to 1889 is given in Dernbourg, Oudāna Ibn Mūṣafīkh in the F.E.L.O., xxx/1, Paris 1889.—Contemporary Arabic and European sources are to be found in the Recueil des historiens des Croisades, Historiens orientaux, i.—vi., Paris 1872—1906, and Historiens occidentaux, vii.—xii, Paris 1844—1886, and in Reinaud's Extraits des historiens des croisades, etc., suivis des guerres des Croisades and in other parts of Michaud, Bibliotheque des Croisades, Paris 1829. — The best and most thorough utilization of early sources is that of Röhrich in his Geschichte des Königreichs Jerusalem, Innsbruck 1908, where Röhrich's other works and many bibliographical references are also quoted. Cf. also van Berchem, Notes sur les Croisades in the Jour. As., series 9, 1902, vol. xix. 385 sqq. Of bibliographical works in addition to Dernbourg's edition of the Oudāna there are the biographies by Ibn Ḳhallīkīn and Bahā’ al-Dīn Ibn Shaddā al-Dīn Ibn Shaddā (both also in the Recueil des hist. orient., vol. iii.); the last named in English as The Life of Salādīn by Behā al-Dīn, ed. by C. W. Wilson, London 1897, by Von Hammer-Purgstall in the Gewänd- en: des Lebensgeschichte geiger, sanctae missionis versch. Teile, Leipzig 1858, etc., and by Stanley Lane-Poole's brilliant and lucid Salādīn and the Fall of the Kingdom of Jerusalem in the Heroes of the Nations Series, London 1898. On the siege of 'Akkā see Norgate, Richard Lion-Heart, London 1924, Index, s.v. Acre and Salādīn. On the European legends relating to Salādīn see Lane-Poole, op. cit., ch. xxiii. 377 sqq., where the pertinent passage in the romance of Baibars as well as Scott's and Lessing's characters of Salādīn are fully discussed (Lane Poole was not aware that the passage quoted by him belongs to the Baibars romance). On European legends of Salādīn see Gaston Paris, La Légende de Salādīn in the Journal des Savants, 1853, and the reprint; cf. also Röhrich in his Geschichte des Königreichs Jerusalem, p. 351, note 1. (SCHEMNICH)

Salāf (A.), or Salām (A.), is regarded by law as a permissible purchase (ba‘īt). The purchaser in this case has to pay the purchase money in advance while the seller, on the other hand, is only required to deliver the article purchased after the expiry of a definite period. That which is sold must be a thing which can be replaced, not simply mentioned by kind but accurately described in the contract. The place where delivery is to be made must also be exactly defined. According to the Shī‘ī school it is not necessary to define the date of delivery expressly in the contract; if this has not been done, delivery can be demanded immediately. In the view of the other Fīqh-schools, however, it is absolutely essential to state a short period at least for delivery. The fāhā in the Hadīth usually called this kind of purchase salām but in the 'Aṣr the name salām was usual.

(Th. W. JüniHoll)

Salām (A.), verbal noun from salām, "to be well, uninjured", used as substantive in the meaning of "peace, health, salutation, greeting"; on the statements of the older Arab lexicographers see the Li‘ān al-‘Arab, xv. 181—183, passim.

The word is of frequent occurrence in the Korān, especially in the Sūrah, which are attributed to the second and third Mekkan periods. The oldest passage that contains salām is Sūrah xxvii. 5, where it is said of the Lailat al-Kadr, "It is peace until the coming of the dawn". Salām is also to be taken in this meaning in Korān l. 33, xxv. 46, xxi. 69, xi. 50. Salām means peace in this world as well as in the next. In the latter meaning we find it used in the expression Dār al-Salām, "the abode of bliss" for Paradise (Sūrah x. 26, vl. 127). In the Medina verse v. 18 which is addressed to the Abīl al-Kālid we find the expression Subhān al-Salām, the paths of bliss (cf. Isaiah, lix. 8: Dārīk Shālīm).

But salām is most frequently used in the Korān as a form of salutation. Thus in Sūrah lxi. 90 (first Mekkan period) the people of the right hand are greeted by their companions in bliss with Salām lakā "Peace be upon thee" (according to al-Balḏūrī;
laid down a law of mercy for himself"; and in xiv. 27: "O ye believers, enter not into dwellings which are not your own before ye have asked leave and said: salatu ( composite for salat + tilawatin) on the inhabitants etc.; similarly xiv. 61: "If ye enter dwellings, say salam upon one another (jaatulitum) etc. (cf. a similar prescription Matth., x. 12, Luk., x. 5); iv. 88, where the mores general expression for greeting (karena) is used, is also referred to the salam salutation. But Goldsbery has pointed out (Z. D. M. G., xlv. 22 sq.) and quoted passages from poets in support of the view that salam was already in use as a greeting before Islam. The corresponding Hebrew and Aramaic expressions Shalom ḫaš, Shalom ṭaḥ (ṭoḥ), Shalom ʿal šal Shim, which go back to Old Testament usage (cf. Judges, xix. 20, 2 Sam., xvii. 25, Dan., x. 19, 1 Chir., xii. 19), were also in use as greetings among the Jews and Christians (cf. Dalman, Grammat. d. jüd.-paläst. Aramäisch 2, Leipzig 1905, p. 244); according to Ta'anit Pugadum, iv. 35, Ṣalām ʿal šal was the Prophet's greeting. Cf. also Sahitta Mat. x. 12, xxvi. 49, Luk. v. 5, 2 Sam., xii. 18, 26, and Payne Smith, Thee, Sprachk., col. 4189 sq.). A very great number of Nalatukian inscriptions further show the use of ṣallahu to express good wishes in North-west Arabia and the Sinai Peninsula (C. I. S., II., Inscriptions Aramaeotae, 1. No. 288 sqq., twice repeated in No. 244, 539, thrice repeated in No. 302) and the Arabic ṣalām frequently occurs in the Safaitic inscriptions as a benedictive term. Cf. E. Littmann, Zur Entstehung der Safaitischen Inschriften, Leipzig 1901, p. 47, 52 sq.; 55, 56, 57, 59, 61, 64, 66, 67, 70; do., Semitische Inschriften, New York—London 1905, Safaitische Inschriften, No. 5, 8, 12, 15, 69, 128, 134. If the line salamana rabbanu fi halti faqrān quoted in the Liitū al-ʿarb., xv. 183-3 from below, were genuine and really by Umayya b. Abi-Šlāʿ, one might perhaps conclude from it that there was a benedictory use of the salāmun formula in the morning service in certain monothetic circles of North Arabia. Presumably the usage suggested by Christian and Jewish views, had given the word a special significance in the region of Aramaic culture. Liez–Jahrbik’s suggestion (Zecher, für Semitistik, i. 85 sqq.) that salām reproduces the idea expressed by swarga need not be discussed here but his explanation of Liitū as the infinitive of a denominative verb salama formed from salam–swarga (“to enter into the state... of salama”), cannot be reconciled with such expressions frequent in the Korān as salama waṣṣāma li-Wahy salama il-Rabbi al-šalimat in etc.

Muhammad must have placed a high religious value on the salāmun formula as he considered it a greeting given by the angels to the blessed and used it as an auspicious salutation on the prophets who had preceded him. A salām like that in the tassahhun (see below) or like the salutation of peace which closes the salât and has its parallel in the Jewish misbaha (cf. E. Mittwoch, Zur Entstehungsgeschichte des islam. Prets. u. Kultus in der Ahb. Pr. Abh. W., ph., Abh. K. I. 1932, no. 2, p. 18), may have been from the first an essential feature of the ritual of divine service. According to a tradition (al-Bukhārī, al-Tirmīdī, bāb 3, al-Aḥbāb, bāb 148, 150), originally they uttered the salām at the close of the salât on Allāh, on Djabrīl, Mīkān and other angels. With the

for other explanations see the Liitū al-ʿarb., xvi. 184 sqq.; and the art. ALEKH). Salam (Sūra xxxvi. 58, xiv. 28, x. 10, xxxii. 43) or Salam ṭalakum (s. xvi. 34, xviix. 73, xili. 24) is the greeting which is given in the blessed in Paradise or on entering Paradise (cf. s. 75); Sūra i. 25 (other readings Salamun ṭalakum; cf. xiii. 63) is presumably also intended as an auspicous exclamation (other interpretations in al-Baidawī). Those on the Ḍarf (q. v.) call to the dwellers in Paradise salam ṭalakum (vii. 44). Salam is also the greeting of the guests of Ibrahim and his reply (li. 25, xi. 72; cf. xv. 52). Ibrahim takes leave with Salam ʿalakum (s. xix. 48) from his father, who threatens him. In Sūra xx. 49 Mūsā in his address to Firʿawn is made to use the expression al-salam ʿalā man illa abbi aḥ-ḥuda ʿesbeer be upon him who follows the right guidance". According to the first explanation in al-Baidawī, al-salam here means the greeting of the angels and guardians of Paradise; but as those words are not at the beginning of the speech, an other interpretation prefers to consider it as an affirmative sentence and to take salam as "occurred from Allāh's wrath and punishment" (cf. al-Baidawī) on the passage and the Liitū al-ʿarb., xv. 183, 1 3. Salam ʿalakum "peace be upon you" is found in Sūra vi. 54 at the beginning of the message which the Prophet has to deliver to the believers in Sūra xxviii. 60 a salam is uttered over Allāh's chosen servants. As a benediction salam is also used repeatedly in Sūra xxxvii., where at the end of the mention of each prophet a salam is uttered over him (verses 77, 109, 120, 130, 181; cf. also xiii. 15, 34). Salam may be used in an invocational sense in Sūra xlix. 89 at parting from the unbelievers and salam ʿalakum in Sūra xxviii. 55 (other interpretations in al-Baidawī). This might perhaps hold of salamun, Sūra xvi. 64, also, with which the servants of the Merciful reply to the ignorant (jihālim), but the commentators take it in the sense of salamun or barakum. In Sūra i. 23 (Medinese al-salam occurs as one of the names of Allāh, which al-Baidawī interprets as māṣūr used as sūba in the meaning of "the Faatless" (for other explanations cf. Liitū al-ʿarb., xv. 182, 7 sqq., 79 sqq.). Al-Salam in the expressions Dōr al-Salam and Sahil al-Salam is therefore also interpreted as a name of Allāh (cf. al-Baidawī on Sūra vi. 127, x. 26, v. 15; Liitū al-ʿarb., xv. 182, 7 sq.). The word has even been taken to mean Allāh in the formula al-salam ʿalakum (Fakhr al-Dīn al-Rāzī, Mafātīḥ al-ḥiṣāb on Sūra vi. 54, Cairo 1278, isl. 54, 1 sq.; Liitū al-ʿarb., xv. 182, 7 sq.). It is also probable that the greeting is intended in al-faṣil ʿal-salam in Sūra iv. 96; another reading is al-salāma as in the similar expression in iv. 92, 93, xvi. 30, 89.

The denominative verb salamān is first found in the Medina chapters, namely Sūra xxxix. 56, where it is recommended to utter salāte (q. v.) and salam over the Prophet, and in xiv. 27, 51 (see below).

At quite an early period the view became established among the Muslims that the salām greeting was an Islamic institution. This is, however, not necessarily correct in so far as the Korān recommends the use of this greeting in a late Meccan passage and in two Medina passages: in vi. 54 it is commanded to the Prophet: "If those come to you who believe in Our signs say: *Peace be upon you* (Ṣalāma ʿalakum). Your Lord hath
remark that Allah is himself the salām (cf. Korān, ix. 23), the Prophet disapproved of this and laid down what should be said in the tashahhd (q.v.); the salāt utterance belongs to it in the form given below. On varying traditions regarding the tashahhd see al-Shāfi‘ī, Kif. al-Umm, Cairo 1321, i. 169 sqq.; cf. also Goldziher, Über die Eusegien etc. in the Z. D. M. G., i. 102).

In the salāt as legally prescribed the benediction on Allah and the salām on the Prophet, on the worshipper and those present and on Allah’s pious servants precede the confession of faith in the tashahhd (al-salātum al-a‘lāka, ‘uuyyin ‘l-absāb, wa-ra‘mahatu ‘l-‘ākhi wa-barakātihi; al-salātum ‘alāna al-‘ālītī ‘l-‘āuliya). Among the compulsory ceremonials of the salāt the salām is there also at the end of it the taslimat al-nīn, the full form of which consists in the worshipper in a sitting position turning his head to the right and left and saying each time al-salātum al-a‘līkum wa-ra‘mahatu ‘l-‘ākhi. Cf. al-Badājīrī, Hādīkāy ‘alā sharī’ Ibn Khissīr al-Ghara‘īn matn Abī Sjdīrī, Cairo 1321, i. 168, 170.

The preference of the Korān for the salām formula and its liturgical use may have contributed considerably to the fact that it soon became considered an exclusively Muslim greeting (tashahhd al-Islām). As already mentioned above, the Korān prescribes the salām on the Prophet to follow the taslim. Tradition reports that the latter endeavoured to introduce it when ‘Umar b. Wahhāb was brought before him and gave him the pagan greeting (‘salāmit galab‘ān), the Prophet said: “Allah has given us a better greeting than thine, namely al-salām, the greeting of the dwellers in Paradise.” (Ibn Hāshām, ed. Wustenfeld, p. 472 infra 474; al-Tabarī, ed. de Goeje, i. 1553, n. 919). Those around him are also said to have been eager to introduce this greeting. Al-Wāṣīdī relates that ‘Urwa b. Mas‘ūd, who immediately after his conversion wanted to convert his own townspeople in Ti'if to Islam, called the attention of the Ti'ifīs, who saluted in the heathen fashion, to the greeting of the dwellers in Paradise, al-Salām (Ibn Sa'd, al-Tawākhtūt, n. 369; Sprenger, Das Leben... der Mohammed, iii. 482; Goldziher, Mub. Stud., i. 264). According to Ibn Ishaq, al-Mughāra b. ‘Abn ‘as instructed the deputation from Muhammad from the Ti'ifīs how they were to salute the Prophet, but they would only use the greeting of the Ti‘ifīs (Ibn Hāshām, p. 916, 9 sqq.; al-Tabarī, i. 1290, 9 sqq.; Sprenger, op. cit., iii. 485; Goldziher, loc. cit.). The Jews are said to have disputed this greeting with respect to Muhammad saying, “We do not understand the meaning of ‘play you’, whereupon the Prophet answered wa-salātim “and to you” (al-Bukhārī, al-‘Istī'ī‘ām, bāb 22; al-Bukhārī, b. 38; Ibn Sa'd, al-‘Arab, x. 206). According to Ibn Sa'd (op. cit., iv. l. 163, 13), Abī Dhrār was the first to greet the Prophet with the Muslim greeting. In the same author (op. cit., iv. l. 82, 2) we find salām salātim at the beginning of a letter from Mu‘awīya to Abī Mūsā al-Ash‘ārī.

The expressions which could be used were salām or salātim al-a‘lāka (‘a) or al-salātum salātim. Umm Aliman is said to have used simply (al-)salātim to the Prophet (Ibn Sa'd, op. cit., viii. 163, 7 sqq. and 9 sqq.). In the Korān the use of salātum salātim preponderates. Fakhr al-Dīn al-Rāzī endeavours to explain the indefinite form as preferable and expresses the conception of perfect greeting (ep. cit., ii. 500, 25 sqq., iii. 512, 11 sqq.). Following him al-Shāfi‘ī is said to have preferred salātim al-a‘lāka in the tashahhd (ep. cit., iii. 512, 33); but the Shāfi‘ī school also allow a substitute form here (al-Badājīrī, op. cit., i. 168; Ibn al-ʿArabī, al-‘Arab, xv. 182, 23 sqq.). The formula al-salātum salātim was, however, much used as a greeting. This undetermined form is expressly prescribed in the taslim (Fakhr al-Dīn al-Rāzī, ep. cit., ii. 501, 3; al-Badājīrī, op. cit., i. 170; Ibn al-ʿArabī, al-‘Arab, xv. 182, 17 sqq.). As a return greeting wa-salātim became usual (for further details on this see Fakhr al-Dīn al-Rāzī, ep. cit., ii. 500, 25 sqq., iii. 512, 17 sqq.). According to Ibn Sa'd (op. cit., iv. l. 115, 9 sqq.), “Abd Allah b. ’Umar replied with salātim salātim. According to some traditions, Muhammad had described the expression ‘ala‘ka ‘wa-makka the salutation to the dead and replied on being greeted with al-salātum al-a‘lāka (al-Tahānī, ii. 3295; Ibn al-ʿArabī, al-Nihāyāt fi Gharb al-Ḥadīth wa-l-Athār, Cairo 1311, ii. 176 below). The first named form of the greeting is actually found in elegiac verses (op. cit., ii. 177; Ibn Sa'd, al-ʿArab, xv. 182). But there are also traditions in which the Prophet greets the dead in the cemetery with an expression beginning with (al-)salātim (al-Tahānī, iii. 2403, 10 sqq.; Ibn al-ʿArabī and Ibn al-ʿArabī, loc. cit.). ’Abd Allah b. ’Umar also on returning from a journey is said to have saluted the graves of the Prophet, of Abī Bakr and of his father with al-salātum al-a‘lāka (Ibn Sa'd, ep. cit., iv. l. 115, 9 sqq.).

The salātum formula was very early extended by the addition of the words “wa-ṣalātim ‘l-ākhi wa-ṣalātim ‘l-‘ākhi” and became used in the taslim and the second in the tashahhd (cf. above). Applying the Korānic commandment (iv. 88: “when ye are saluted with a salutation, salute a person with a better than his or at least return it”) it is recommended (summa) in the return greeting to add the wish of blessing and benediction or occasionally, when replying to a simple salātum, only the former (cf. al-Bukhārī, al-‘Istī‘ām, bāb 16, 18). If anyone is saluted with the threefold formula, he must reply with the same (Fakhr al-Dīn al-Rāzī on Sīta iv. 88, 23 sqq., 502, 14 sqq.). According to Lane (Manners and Customs, l. 239, note), the threefold formula was very common as a return greeting in Egypt; cf. also Nāhillī, L’Arabo parlaite in Egitto, Milan 1913, p. 121. In Mecca, it is comparatively rarely given; the reply usual there is wa-salātim (salātim wa-ṣalātim wa-ṣalātim ‘l-‘ākhi wa-ṣalātim ‘l-‘ākhi); cf. Snouck Hurgronje, Mecklenburgische Sprichwörter u. Redensarten, The Hague 1886, p. 118. Landberg (Études sur les dialectes de L’Arabie méridionale, ii. 786, note) thinks that the longer form recalls the priest’s blessing in Num., vi. 24—26. The application of salātim to a single person is explained by saying that the plural suffix includes the two accompanying angels or the spirits attached to him (i.e. the person; Fakhr al-Dīn al-Rāzī, op. cit., ii. 501, 19 sqq.; cf. iii. 515, 17 sqq.).

At the conclusion of a letter the expression wa-salātim (‘ala‘ka, ‘um) is often used, e.g. Ibn Sa'd, op. cit., i. l. 27, 17, p. 28, a. 9, 99, 89, 13, x. Al-Jarrah (Durrel al-Ghamūtī, ed. Thober, p. 208, 3 sqq.) disapproves of the use here of the indefinite form (salātim), which, according to the more correct use, should only be used at the beginning. — Wa-salātim has occasionally the meaning of “and that is the end of it” (cf. Snouck Hurgronje, op. cit., p. 92).
In keeping with Korān xx. 48, it became usual to use the form ál-salāmú 'alā man ītābā' ḫuḍūd to non-Muslims when necessary (cf. Fakhhr al-Dīn al-Rāzī, op. cit., ii. 501, 89 sqq.; iv. 705, 10 sqg.). It is found, for example, in a letter attributed to Khārijī (al-Bukhārī, al-Iṣlāh al-Muḥarrar, bāb 24; Ibn Sa'd, op. cit., i. 61, 28, 3 sq.; cf. line 6 there at the beginning of the letter: salāmu 'alā man Ismā'īl). Papyri of the year 91 (710) bear early testimony to its use (Papyri Schott-Reinhardt, i, ed. by C. H. Becker, Heidelburg 1906, l. N°. 22, ii. 42 sq., iii. 83 sq., x. 11, xi. 7, xvii. 9). A letter from Muḥammad to the Jews of Maḥbūb concludes, however, with salāmū (Ibn Sa'd, op. cit., i. 61, 28 sq.); similarly a letter to the Christians in Allā (ibid., p. 29, 16 sqg.). In Ḥadīth also a tendency is noticeable not to deny the salām greeting; at least as a reply, to unbelievers and the Alī K̄īṣā (cf. al-Ṭabarī, al-Tafsīr, v. 111 sqg.; Fakhhr al-Dīn al-Rāzī, les cits.).

On the rules and limitations regarding salutation cf. the article ṬASTLI. The As-salām means also a ṣalāmī litany, which is pronounced from the minarets every Friday about half an hour before the beginning of the midday service before the ṣalāh. This part of the liturgy is repeated inside the mosque before the regular ceremonies by several people with good voices standing on a ἱδων (Goldziher, Über die Einlogen, etc. in the Z.D.M.G., l. 105 sqg.; cf. Lane, op. cit., l. 117). The same name is given to the benedictions on the Prophet which are sung during the month of Ramadān about half an hour after midnight from the minarets (Lane, op. cit., ii. 264).

The ambiguous formula al-salālī 'l-ṣalāmū, which, according to the strictly orthodox opinion, like the ṣaḥāqa, should only follow the names of Prophets, but was more freely used in the earlier literature (cf. also al-Bukhārī, al-Ībād al-Muḥātā, bāb 43; Fāṭima al-Qāṣīa 'l-ṣalālī), was used by the Shi'īs without limitation of 'Alī and his descendants also (Goldziher, op. cit., Z.D.M.G., l. 121 sqq.; Fakhhr al-Dīn al-Rāzī, op. cit., iii. 511 sqg.).

The Saun's of British India make a magical use of the so-called seven 'alānū which refer to Sūrā xxxvi. 58, xxvii. 77, 109, 120, 130, xxxix. 73, xcviii. 5. In the morning of the festival of Aḥād al-Ṣuḥārāh (see Aḥād) they write the seven 'alānū's or have them written with saffron, water, ink, or rosewater on the leaf of a mango-tree or a sacred fig-tree, or of a plantain. They then wash off the writing in water and drink it in the hope that they may enjoy peace and happiness (Dżafar Şarif-Herklotz, Islam in India or Ǧumāl-Ǧumāl, new ed. by W. Crooke, London 1921, p. 186 sqg.).

Bibliography: al-Ṭabarī, ed. de Goeje, iii. 492, 493; Ibn al-_province, Kāmil, vi. 38, 39; Corpus Papyrorum Raineri, iii, Series Arabica, i. A. Grohmann, iii. 111, 120. (A. Grohmann)

Salāmā b. Djaandal, a poet of pre-Islamic times, was a member of the clan al-Ḫātīb, which belonged to the large division Sa'd al-Fīr of the tribe Ṭamīm. He is numbered among the excellent poets of the Dāhilīyā of whom only few poems are preserved. He must have flourished during the second half of the sixth century of our era, as the most prominent event in his life recorded is about his brother Aḥmar (sometimes misspelled Aḥmaud). When A'am b. Kūthīm, the chief of the tribe of Taghūt, made his raid south, Aḥmar was made a prisoner by A'am, but released without ransom upon the petition of Salāmā (Divān of A'am, Introduction to poem N°. 2; Aḥmaud, lx. 185, 18). Whether there is an error on the part of Arab tradition is not certain, but in the biography of Salāmā we are told in the notes on poem N°. 8 edition Cheikho, something happened to Aḥmar with a certain Ša'wa b. Marīkh b. "Amm b. Ṭamīm. The latter probably belonged to the Ḥassān clan of "Amm who resided as allies (ḥalaqna) among the tribe of S̱īhān, or he may have belonged to the celebrated Yamanite family of Ṭamīm. In his longest poem Salāmā refers to the death of al-Nṣām, king of al-Hira, who was trampled to death by elephants at the order of the Persian king Parwaž (Divān, N°. 3, v. 39; Aḥmaud, N°. 53, v. 39). Further the Nāba'ī of Djarār and Faradaḍāa give two poems by Salāmā, not in the Divān, in which he celebrates the victory of Ḥaḍīd, in which the clan of Minṣār, also a division of Sa'd al-Fīr, defeated the tribe of Bāk b. Wa'il. These two events place the life-time of Salāmā towards the end of the seventh century. The time of his death cannot be fixed; he did not live to the time of Islām and none of his descendants appear to be named in the biographies of early Muslims.

Cheikho is mistaken when he assumes that Salāmā is identical with the renowned chief Salāmā b. Djaandal b. Naḥṣalā, the latter being of the clan Nāba'ī b. Dārīm and related to Mudjābāh, the ancestor of the poet al-Faradaḍā. Salāmā is reputed to excel in the description of horses. His collected poems have come down to us in two old manuscripts, which were edited by Cheikho in 1920. This Divān contains only nine poems or fragments of such, 135 verses in all, to which the editor has added a further 36 verses collected from various sources and to which I can add only one verse quoted in the Kitāb al-ʿAin (ed. Baghādād), p. 105. We have no reason to doubt the genuineness of most of the verses. The poet speaks most of departed youth which unfortunately is not a guide to his age, as such statements belong to the ordinary phraseology of such poems. That he mentions Aḥmar (N°. 1, v. 12) I should not take as a sign of later interpolation, as I believe that before Muḥammad the form of monotheism through the influence of Christianity and Judaism was widespread in Arabia, though the form al-ỉlāh is probably the correct form in earlier times. He mentions swords of Buṣra and al-Maḍīn, which are seldom or never mentioned in verses of later times, as swords were no longer obtained from there. That he mentions writing or even inkstands and parchments (N°. 778).
3, v. 2) is not at all strange as these things were more widely known than is generally admitted. His poetry has otherwise the stamp of what is called Bedouin poetry, a rather unfortunate designation as it gives a wrong impression (cf. the art. سُبُر). The text of the دُنْسَة is a combination of the Başran (Asma) and the كِنْف (Abū 'Amr al-Shāhiš) school, of whom the latter will generally be found more reliable, but unfortunately the recensions are not kept apart in this case to discern any differences. It would be wrong to assume that they collected the poems; their work was the commenting of the text which they found from the work of Kifār. The edition by Cl. Husart (1 F. A., 1910) is superseded by that of Cheikho (Beyrouth 1920), which contains all that is known about سُلِامَة.

Hel-Deiwn (1916), p. 36; Nābīrī, ed. Devan, p. 147-148; Ibn Kanūlāb, Kifār al-Su'd, ed. de Goeje, p. 147; Pučēs Chrētien, ed. Cheikho, p. 486-491. Verses of Salamān are cited in most books dealing with ancient Arabic poetry e.g. in the ليد في العربية 40 times.

(F. Krenkow)

**SALAMANCA,** the capital of the Spanish province of Salamanca, on the right bank of the river Tormes, 173 miles by rail N.W. of Madrid, with a population of 25,690 (1900). In the Roman period the city was constituted a military station, being the ninth on the Via Lata, which was the great highway of Spain, running from Merida to Saragossa. Trajan built a magnificent bridge there, the original piers of which still exist. Like the rest of Spain the city suffered from the Gothic invasion.

It was a greater change for the city, when Mu'tah, the governor of Africa, appeared with 18,000 picked men in Southern Spain (712), and began a methodical campaign in the Peninsula. Capturing Seville, Carmona and Merida, he covered the road that many a Roman legion had traversed before him, until he came before Salamanca. The city, which once had the dignity and defiance of a Roman fort, offered but a poor resistance to the Muslim warriors. But although the district was now in the hands of foreigners, the inhabitants found their masters not impossible tyrants. If they paid their tax, and followed their faith, without unduly propagating it, their lives and their property were safe. Indeed, they soon found that a new intellectual life had come to the city, and they had to bow before the classical and oriental learning of the invaders. It is by no mere chance that Salamanca boasts of the oldest and largest university in Spain. Its foundations were laid by the unpromising pioneers of Islām.

Ibn al-Asrī states that in May 737 A.D. (24 A.H.) King Alphonso opened an attack on the Moors, and drove them out of Salamanca, but this does not seem to have been anything more than a preliminary raid. The city, however, was never a Muslim possession in the sense that Cordova or Seville was. It certainly was considered an admirable piece of work of Ibn Abī 'Amr, when in Sept. 977 he succeeded in capturing the suburbs of the city from the Christians, for he was rewarded with the title of Ibn 'l-Wisāratān and a princely salary. So the fate of Salamanca wavered from decade to decade, until finally through internal disunion, and the more determined hostility of the Spanish Christians, Moorish pride and power were swept from the city in 1055, never more to be re-instated.

The University, founded officially in 1220 by Alphonso IX of Leon, was in itself sufficient to give distinction to Salamanca, through all the succeeding centuries, until the great battle of 1812, when Wellington settled the fate of the French in the Peninsula.

(T. Crother Gordon)

**SALAMIYA,** a small town in Syria in the district east of the Orontes, about twenty-five miles S. E. of Hamah and thirty-five (a day's journey) E. N. E. of Hims (for the exact situation of Joseph's map in Oppenheim, Tabul Mittelm. vom Persischen Golf, i. and part ii. 401). It lies in a fertile plain 1500 feet above sea level, south of the Djabal al-'Azā and on the margin of the Syrian steppe. The older and more correct pronunciation was Salamūya (al-ṣaṭākhi, B. G. A., i. 61; Ibn al-Fakhīr, B. G. A., v. 110) but the form Salamiya is also found very early (al-Muṣafaddān, B. G. A., iii. 190; Ibn Khordādbeh, B. G. A., ii. 76, 98) and it is now the form almost universally in use (cf. also Yākūt, Maqāmāt, ed. Waṭensfels, iii. 123, and Littman, Semitische Inschriften, p. 169 sq.). The nisba from the name is Salami. The town seems to be the ancient Salamis or Salmisinos, which flourished in the Christian period, but the references of the classical authors to this place are uncertain. Yākūt (iii. 123) gives a popular etymology. The term, he says, was originally called Salam-ma, after the hundred surviving inhabitants of the destroyed town of al-Ma'taika.

The situation of the town was important as an outpost of Syria, where main routes from the steppe (Palmyra) and the Irāk joined; but it was never of any great military importance. It was conquered by the Arabs in the year 15 A.H. and became one of the towns of the Ḫādż of Hims; it was only after 1500 in the Mamlūk period that it was placed in the district of Hamah for administrative purposes. In the second century of the Hijra, after the victory of the 'Abbāsids, the descendants of the 'Abbasīd Šāhī b. 'Alī b. 'Abd Allah b. 'Abbās settled in Salamiya. The town is said to be most indebted to Šāhī's son, 'Abbās Allah, who rebuilt it and made arrangements for the irriga-

the town of the neighbourhood. This 'Abbās Allah was held in high esteem by his cousins, the Caliphs. He married the sister of al-Mahdī and became governor of the Irāk. This Caliph visited him in Salamiya and was astonished at 'Abbās Allah's dwelling there (al-Ṭabarī, iii. 500). There are also other references to the fact that many 'Iljāhīms lived in Salamiya.

Almost nothing has survived of this period. There is the foundation inscription of a mosque.
on a stone (not in situ) at the entrance to the citadel. It is probable that this inscription is dated 150 (769) and that it belonged to a mosque founded by those Hashimis, which may have been destroyed about 290 (902/3) by the Karmatians. Still another inscription dating from an 'Abbasid has been found in the citadel; according to Littmann’s probable suggestion, it belongs with two other inscriptions to the period from 280 (893) (or, for another view, see M. Hartmann in the Z.D.P.V., xxiv. 55). The fact that Salamiya was the centre of an important branch of the Hashimis and the isolated position of the town perhaps account for the fact that about 255 (671) it became the secret centre of ‘Abbasid propaganda. It is difficult to ascertain who was the first Grand Master of the Ismai‘iliya to settle in Salamiya; in any case it does not seem to have been so early as ‘Abd Allâh b. Mâmin himself (as de Sacy, Exposé de la Religion des Druses, Paris 1838, Introd., p. 71, 166 supposes), for the latter, as de Goeje (Ministère sur les Carmathes du Bahreïn, Leiden 1886, p. 19) makes probable, was probably never in Salamiya. The first leader to be sent here was apparently Husain b. ‘Abd Allâh b. Mâmin (de Goeje, op. cit., p. 21), whose son, Salâd ‘Ubayd Allâh, destined to become the first Fâtimid Caliph, was born in Salamiya in 259 or 260 (873/4) (Ibn Khallikân, Wa‘âyûr al-A‘yân, ed. Wustenfeld, N°. 365); according to a biased statement in Ibn al-A‘lî (vii. 23), ‘Ubayd Allâh was the son of a smith in Salamiya, whose widow afterwards married Husain. When Husain died about 270 (883/4) his brother A‘mad b. ‘Abd Allâh b. Mâmin, also known as Ibn Shâlaqshah, became Grand Master and guardian of his nephew ‘Ubayd Allâh, till his death (about 280 = 893/4). ‘Ubayd Allâh continued to reside in Salamiya till 289 (902) when he set out on his successful journey to North Africa (de Goeje, op. cit., p. 64). In the next year the town was practically wiped out by the Karmatians from Irak under their leader Husain, who had assumed the title of Malâkî. Of all towns in Syria, Salamiya, as home of the former companions in faith and later bitter enemies of the Karmatians, was treated the worst (de Goeje, op. cit., p. 50). Soon afterwards, however, the Syrian towns were reconquered and occupied by the Caliph. It is not impossible that the quadrangular citadel in the centre of the town goes back to the Ismai‘ili period; according to van Berchem, it belongs to an early period architecturally.

In the fourth (Xth) century, Salamiya must have been in an area inhabited by Beduins (Sa‘îf al-Dawla’s campaign; cf. Hartmann in the Z.D.P.V., xxiii. 175, 176). At the end of the fifth (XIth) century, it was included in the possessions of the brigand chief Khalâl b. Malik (M. Hartmann reads Malikb, who acknowledged Fâtimid suzerainty. It is difficult to say of this in an inscription in Kufic characters on the door beam of the mosque of 481 (1088). According to Ibn al-A‘lî (x. 184), Khalâl took Salamiya in 476 (1083); he was then already master of ‘Hims. But in 485 he lost ‘Hims and the lands that went with it to the Salûqûd, brother of Malik Shâh. In the inscription Khalâl says that he has erected a maqṣūd on the tomb of Abu 1-Hassan ‘Ali b. Djarî, whose servant (fâ‘ir) he calls himself (Khalâl is very fully dealt with by M. Hartmann, Z. D. P. V., xxiv. 58–65).

During the Crusades Salamiya is never mentioned as a fortress but frequently as a meeting-place for the Muslim armies. Politically it has always shared the fate of ‘Hims [q.v.]. Thus it passed to Rûqayyâ, son of Tûnush, in 490 (1102/3). In 533 (1143/4) the Atâ‘îeg Zang, who was then besieging ‘Hims, set out from Salamiya on his campaign against the Greeks at Saläzir (Ibn al-A‘lî, xi. 36 sq.) and in 570 (1174/5) Saladin obtained the town together with ‘Hims and Hamä from the Amir Fâhîr al-Din al-Zâ‘farání (Ibn al-A‘lî, xi. 276). In 626 (1229) we find al-Malîk al-Kâmil in Salamiya as a starting point for ‘Irak; the lord of Hamä came there to submit to him. Two years later, al-Kâmil gave the town to Asad al-Din Shira‘î, who rebuilt the fortress of Shumaimish on it one of the peaks of the Djabal al-‘A‘lî (Ibn al-A‘lî, xii. 318, 349) which had been destroyed by the earthquake of 1157 (Kamât al-Din, Histoire d’Afîn, transal. Illochet, Paris 1900, p. 21).

In 1259, the Egyptian army was defeated at Salamiya by the Mongols under Ghârân; the battle was followed by the brief Mongol occupation of the city of Damascus.

In the eighth (XVth) century, Salamiya was part of the important frontier lands (called al-Shariqîya) of the manâdž of Damascus. Abu 1-Fâhîr, in whose territory as lord of Hamä the town lay during the Mamlûk period, mentions an agreement between Salamiya and Hamä. In 776 (1376) he went with his troops to clear out this chanel (autobiography of Abu 1-Fâhîr in the Rec. des Hist. des Crois., Hist. Orient., i. 168, 185). This aqueduct no longer exists. Perhaps it is the same as is mentioned by al-Dimashqî (p. 207) as existing between ‘Hims and Salamiya and built by the ‘Abbasid ‘Abd Allâh b. Shâbî. At this time Yâkût (iii. 123) speaks of seven prayer-niches near Salamiya below which some tabûnts were buried; he also mentions the tomb of al-Nu‘mân b. Bashîr, the companion of the Prophet.

Under Turkish rule, the town ceased to be of importance. In the middle of the nineteenth century it was entirely deserted, probably on account of the lack of adequate protection against the Beduins. But an Ismai‘î Shâhî from the Nusairi mountains settled there and succeeded in settling the place with his followers. The Shâhîs were received by the beyliks and referred without meeting. Ismai‘îls from a short time made the town very prosperous, which induced the Turkish government (in 1894) to create a special kâdâ of Salamiya in the sandjak of Hamä in the wilâyet of Bâlût. The population of the kâdâ is given by Cuiinet (1896) as 53,084, of whom the smaller half are Muslims and the larger Christians. The town itself is said by the same authority to have 6,000 inhabitants, in addition to the Druses (by whom he probably means the Ismai‘îls). The irrigation is excellent; the crumps of the district consist mainly of corn and legumes.

On the fortress of Shumaimish see van Berchem and Falio, Voyages en Syrie, i. 171, 173.

Bibliography. The Arab geographers originated in the text from the Bibl. Geogr. Arab.; R. Hartmann, Die geographischen Nachrichten über Palästina und Syrien in Halbt. ug-Zähliert "suladat half al-ma‘alûkî", a Tübingen dissertation of 1907, p. 42 sq., 60; Gaudfroy-Demombynes, La Syrie à l’époque des Mamelouks, Paris 1923, p. 75; G. SAŁAMIYA — SALAMLIK

1) Reception-room in Turkish houses of the upper classes, derived from *salam*, greeting, welcome. In the general plan of this type of house (*joumā*) there is an ante-room or court behind the main door, at one side of which a stair-case leads up to the *salamlık*, *mirdab* [q.v.] and to the corridor (*jezāf*), which together form the part of the house allotted to the males. On the other side of the court is the entrance to the harem [q.v.]; there also is the swivel-box (*deka*) through which the women communicate with the harem kitchen. Although Salamlık originally meant only the room in which the guests are welcomed, the word has now come to receive the wider general meaning of the whole of the men's apartments as opposed to the harem or hareemlik. It therefore coincides more or less with the *avdas* or *dövγarah* of the Greeks, Barbier de Meynard, *Dict. Turc.-Français*, Paris 1856, mentions a room called *harem-salamlık*, which is situated between the two parts of the house and cannot be entered by strangers; it is therefore probably another name for the *mirdab*.

In Turkish houses of the lower classes it seems that strangers were not admitted at all (Hans Dernschwam's *Trockenbuch*, ed. Babinger, 1923, p. 134); there was therefore no salamlık there.

In northern Mesopotamia where wood is scarce the rooms of the houses are hollowed out of sandstone and a kind of dome of stone and clay is put over them. Mulkhe, *Briefe aus der Türkei*, Berlin 1893, p. 242, describes this type of house where one of these domed rooms is salamlık, another hareem, another a stable, etc.

2) A ceremony in Constantinople on the occasion of the ceremonial visit of the Sultan to a mosque for the Friday service.

That the Ottoman Sultans were accustomed to pay a ceremonial visit to a mosque on Friday is often mentioned by travellers. Every Friday they visited one or other of the so-called Sultan's mosques (Sultan-i *Salāfiyn*), where they had their boxes or stalls, while at an earlier period the high officers of state used to accompany the Sultan, but the time of Ibrāhīm I has only expected the court officials to go. The streets through which the procession went were usually guarded by Janissaries and the reception in the mosque by the Aga of the Janissaries and the administrator of the mosque was very ceremonious. In winter it was usually the Ayā Şofya, as the mosque nearest the palace, that was visited.

D'Ossian assumes a connection between the Sultan's visit to the mosque and his dignity of *Imām* in his capacity as caliph at the jāmā'at of the *ijtihād* but adds that the Sultan never himself appears as *Imām*. This view is quite in agreement with D'Ossian's ideas on the caliphate, but perhaps this ceremonial visit to the mosque should rather be regarded as an imitation of similar ceremonies at the Imperial Byzantine court.

Down to the beginning of the nineteenth century the Sultan always appeared on horseback on this occasion (picture of the year 1788 in Joussain and van Gaver, *Turquie*, Paris 1840). Only a very few Sultans omitted the ceremony, as their non-appearance would have aroused resentment among the populace. From the time of Mahmūd II it was the custom for the Sultan to drive in a carriage (cf. von Motlke, *Briefe aus der Türkei*, Berlin 1893, p. 11x).

The name *salamlık* for this ceremony seems only to date from the second half of the sixteenth century. The word has presumably nothing to do with the meaning "reception room" but is rather to be connected with the expression *selam durmāk* "to present arms"; it belongs therefore to military terminology. Ahmed Wāsy Pāša in his *Şemild-i *Oltumāni* (1306 = 1889) paraphrases it as *bincik jānūn's 35yi*.

The ceremony became particularly important in the reign of ʻAbd al-Hamid II. The Sultan was surrounded by a brilliant body-guard, of which his faithful Albanians in their costly uniforms formed the centre, along with the Exoghrul regiment mounted on white horses. From the time he lived in the Vişdīç palace the Salamlık was usually held in the Hamidiye mosque. Formal audience were held after it, to which great political importance was attached, while the display of pomp and splendour was intended to impress the foreigners invited. The holding of the ceremony was announced on each occasion in the official gazette *Taḥzīm-i Wâliyât*.

It became less important after the reign of ʻAbd al-Hamid II and after the abolition of the sultanate by the General National Assembly in November, 1922, in Angora, ʻAbd al-Majīd, who now retained only the dignity of Caliph, retained the salamlık ceremony, which fact is of significance for the character given to it since d'Ossian's day.

The last salamlık took place on Febr. 29, 1924 (1342) in the mosque of Dolma Bagliche and was little more than a parody of its former splendour. There was not even music and the carriage was drawn by only two horses (the *Watson* newspaper of March 1, 1924).

(J. H. Kramers)
SĀLĀR (v.), commander. From the older Pahlavi sarlav there arose as early as the Sassanid period the form sālār with the well-known change of rd to l and compensatory lengthening of the a (cf. Grundr. d. Asern. Phil., i. 357, 274). The analogous word in modern Persian (sordār) is not a survival of the ancient sarlav, but is a modern formation; indeed, the elements from which the ancient word was composed still exist in the modern language. The old Armenian took over the Pahlavi sālār in the form salār; the form sarlav which would give sordār in Armenian is not found in the latter language. A latter, probably modern Persian loan-word in Armenian is (spa) salār with ă instead of a. On this and on other late Armenian forms cf. Hübschmann, Aram. Gram., i. 335 and 239. In the first of these two references the Pahlavi combinations of the word are also given. On the etymology cf. also Horn, Grundriss der neun. Etymologie, p. 153; Flückiger, Kolbei, Die persischen Hymnen, The Fraktur i. Pahlavik (1912), p. 37 and 79.

The term which is primarily military (cf. sipāḥ-sālār, commander of an army; sālār-i-djang) is transferred to several court offices, e.g. sālār-i-khanı (and hūnān-sālār), Steward; sālār-i-bār, Marshal; sālār-i-rūf, Master of Horse. We need not trouble here with what else the native Persian lexicographers say about the word (cf. Vullers, Lex., s. v.); it may be noted, however, that expressions like ḥādūn-sālār for "king" belong to the language of poetry and the meaning "old" (hānuv sālārāt) (which, as far as I know, has not yet been found anywhere) is perhaps based on an incorrect etymology which connects the word with salāt (year).

(V. F. Büchmann)

SĀLĀR DJANG is the title by which Mir Tūrkāli, a Sayyid of Persian descent and one of the greatest of modern Indian statesmen, was best known. He was born at Haidarābād in the Dākan on January 2, 1829, and, his father having died not long after his birth, was educated by his uncle, Nawāb Sirjād-ul-Mulk, Minister of the Haidarābād State. He received an administrative appointment in 1848, at the age of 19, and on his uncle's death in 1853 succeeded him as Minister of the State. He was engaged in reforming the administration until 1857, the year of the Sepoy mutiny, when the Nīsār, Nisar al-Dawla, died and was succeeded by his son Afjāl al-Dawla. The news of the seizure of Dillī by the mutineers greatly excited the populace, and the British Residency was attacked by a turbulent mob, aided by some irregular troops, but throughout the darkest days of the rebellion Sālār Djang not only remained true to the British, but strengthened the hands of his master and suppressed disorder. The services of the State were recognized by the rendition of three of the districts assigned in 1853 on account of debts due to the Company, and by the cession of the territory of the rebellious Kādžā of Shorāpur. In 1860 and again in 1867 plots to estrange the great Minister from his master and to ensure his dismissal were frustrated by two successive British Residents, and Sālār Djang remained in office. In 1868 an attempt was made to assassinate him but the assassin was arrested and executed, despite Sālār Djang's efforts to obtain a commutation of the sentence. On the death of Afjāl al-Dawla in 1869 Sālār Djang became one of the two co-regents of the State during the minority of his son and successor, Mir Mahbūb 'Alī Khān, and on January 5, 1871, he was invested at Calcutta with the insignia of the G. C. S. I. In November, 1875, he and other nobles represented the young Nīsār at Bombay on the occasion of the visit of H. R. H. the Prince of Wales to India, and in April, 1876, he visited England and was presented to Queen Victoria. He received the honorary degree of D. C. I. from the University of Oxford and the Freedom of the City of London. In January, 1883, he was engaged in making preparations for the contemplated visit of the Nīsār to Europe, but on February 7, after entertaining Duke John of Mecklenburg-Schwerin, who was visiting Haidarābād, on the Mir 'Alām Lake, he was attacked by cholera, and died on the following morning, regretted by all. Though always known by his first title, Sālār Djang, he bore the higher titles Shujā' al-Dawla and Mubārak al-Mulk.

(T. W. Haid)

ṢALĀT, the usual name in Arabic for the ritual prayer or divine service. The translation "prayer" simply is not accurate; the Arabic word ṣalāt corresponds to the conception prayer (Snouck Hurgronje has several times drawn attention to this distinction; Vorspruchs-Geschr., i. 213 sq., ii. 90, iv. 56, 63 sq., etc.). The word does not seem to occur in the pre-Korānic literature. Muhammad took it, like the ceremony, from the Jews and Christians in Arabia. In many Kūfic copies of the Korān and often in later literature also in connection with the sacred book it is written حملة. It is very often assumed that this orthography represents a dialeastic pronunciation (Nöldeke, Geschichte des Korans, p. 355; Wright-de Goeje, Arabic Grammar, i. 12 A; Brockelmann, Arabische Grammatik, p. 7). The writing of a māt in place of the alif which one would expect is found, it is true, in several other words belonging to the language of the Korān; but with the exception of ṣā’at (رو) only in the termination āt (or ăt), so frequent in Aramaic. The view that in forms like حملة, حملة etc. Aramaic influence has been at work should therefore always be borne in mind (Frankel, De vocab. in antiquis Arab. terminibus et in Cora. pereg. p. 21).

The etymology of the Aramaic word ṣalāt is quite transparent. The root ẛ-lṭ in Aramaic means to bow, to bend, to stretch. The substantive ṣalāt is the noun actionis from this and means the act of bowing, etc. It is used in several Aramaic dialects for ritual prayer, although it can also mean spontaneous individual prayer, which in Syriac at least is usually called ṣalāt. Muḥammad took over the word istringstream in this sense from his neighbours and the Muslim ṣalāt shows in its composition a great similarity to the Jewish and Christian services, as will be shown in greater detail below. — The verb jango is a derivative derived from the substantive jango with the meaning "to perform the jango".

(For detailed etymology and applications, see the articles ünsār, ṣalāt, ṣalāt, ջև, ջև, ջև, etc.)
Every Muslim who has attained his majority and is competens mensis is bound to observe the five daily salāts (al-mahi'ta, in contrast to the voluntary salāts, which are called nāfisat or salāt al-ta'awun). The obligation is suspended for the sick. Salāts omitted must be made up (qadar). The theories of the Shā'ī school on this point are given in al-Nawawi's commentary on Muslim, Musāhirīn, tr. 309—316 (ff. 178 sqq.). According to the strict theory (which in Islam has in very many cases little or nothing to do with practice), any one who deliberately omits the salāt because he does not recognise it as a legal duty is to be regarded as ṣāfī. Even deliberate neglect without any such theoretical basis makes him liable to the death penalty (cf. Kātib, see his Musāhirīn, Muhājirīn, ed. by d. Berg, ii. 202; cf. Abu ʿIyāḥ al-Shirāzī, K. al-Tūnīh f. ʿīshān, ed. by Juyshboll, p. 15).

Several preliminary conditions must be fulfilled for the performance of a valid salāt.

The requisite ritual purity must be restored, if necessary, by wuduʾ [q.v.], ghusl [q.v.] or tayammum [q.v.]. The dress worn should fulfil the legal regulations which aim at the "covering of the privy parts" (nawār al-awrār). This means that in men the body must be covered from the navel to the knees, in free women the whole body except the face and hands. The latter regulation is remarkable, because it is in striking contrast to the popular European opinion regarding the compulsory veiling of Muslim women (cf. Snouck Hurgronje, Twuip jipjë. 1. 1. 1. Brought in the Fertepreut Gesetmerfn, i. 295 sqq.). In the Hadith the question of dress, like so many others, has not yet reached a uniform formulation. Sometimes only the covering of the privy parts is mentioned (e.g. Abu Dāūd, Sahih, bāb 10), and sometimes the saying is ascribed to Muhammad that the shoulders also should be covered (e.g. Muslim, Sahih, trad. 175); sometimes the use of the scantly 'umul is expressly mentioned in this connection (e.g. Ahmad b. Ḥanbal, Musnad, iii. 322 etc.) and at the same time we are told that the salāt in one ḥanāb is permitted or even quite common (e.g. Abu Dāūd, Sahih, bāb 77, 80—82); on the other hand it is said that one who owns two ḥanāb should put them on at the salāt (e.g. Abu Dāūd, Sahih, bāb 82; Ahmad b. Ḥanbal, ii. 148).

The salāt need not be held in a mosque but may be celebrated in a dwelling-house and any other place; the authority given for this is the saying of Muhammad that he was granted
the privilege that for him the earth was mansāfīd wa-sā-hārū (e.g., al-Bukhārī, Sallt, bāb 56). Tomba are excepted (e.g., Muslim, Salāt al-Mustafirin, trad. 208, 209) and unclean places, like slaughterplaces etc. (e.g., al-Tirmidhi, Munāzīt al-Salāt, bāb 147).

The place where the salāt is performed is marked off in some way from the surrounding area by a suḥrah; on this cf. the article SUTRA. A siyāfū hūd [q. v.] is used as a rule. Attention has also to be paid to the direction of Mekka; cf. the article ḲIYLA.

The salāt proper consists of the following elements, our description of which is based on the Shāfi'i practice.

The ṣamā' = intention, q. v.) is pronounced aloud in a low voice, with an announcement of the salāt which one intends to perform: it corresponds to the Jewish ma'amarah (cf. Mittwoch, op. cit., p. 16; A. J. Wensinck, De intentione in rite, etic et mystica der hebräischen volken in the V.M.A. W., series 5, vol. iv.). Then are pronounced the words Allāha akbar, the labbār al-ḥārim, which begins the consecrated state (cf. the article ṬĪRĀM), Mittwoch has compared this formula with the benedictions of the Jewish sijilla (op. cit., p. 16 sq.). The salāt is performed standing. Mittwoch points out that the Jewish sijilla is called 'amīnā (op. cit., p. 16). It is sunna to utter a dōr or a ṭawwawwah after the labbār (see Mināzīd, l. 78). Then follows the recitation which usually consists of the fātāha. In the Ḥadīth the importance of this fātāha is expressed in the maxim: 'āllā qaṣa lisan tam yāsira bīlarṭārīkh l-'ātalā (e.g., al-Bukhārī, Adhūn, bāb 95; Muslim, Salāt, trad. 34–36, 42).

In a congregational salāt it is customary only for the fīlikā to be recited along with the Ṭīrām if the latter begins with the second ḍhūrā, those present have to listen (cf. Mināzīd, l. 80). In the Ḥadīth there are numerous statements as to whether recitation should be loud or low; e.g., al-Bukhārī, Khūl, bāb 19; Abū Dā‘ūd, Ţāḥīrā, bāb 89; al-Nasa‘ī, Ḳaffālī, bāb 27–29, 80, 81 etc.; cf. al-Bukhārī, Adhūn, bāb 96, 97, 108; Muslim, Salāt, trad. 47–49; al-Nasa‘ī, Ḳaffālī, bāb 27, 28, 80 etc.

Then follows the ṣalāt; which consists in bending the back till the palms of the hands are on level with the knees (the Jewish bērāk; Mittwoch, op. cit., p. 17 sq.; cf. also the pictures of the various attitudes in the salāt in Lane's Manners and Customs in the chapter on Religion and Laws and in Juyonboll, Handbuch, p. 76). The upright position is then resumed (ṣū‘alāt); as soon as the head is raised after the ṣalāt, the hands are uplifted and the worshipper pronounces the words: "Allāh heed him who praises him." This is found quite early, even in Ḥadīth (e.g., al-Bukhārī, Adhūn, bāb 52, 74, 82; Muslim, Salāt, trad. 25–28, 55, 62–64 etc.).

There have been differences of opinion regarding the raising of the hands in salāt and ḍhūrā. Some say that Muhammad used to lift up his hands at the salāt (e.g., al-Bukhārī, Adhūn, bāb 83–86; Muslim, Salāt, trad. 21–26; Abū Dā‘ūd, Ṭīrām, bāb 114–125; al-Nasa‘ī, Ḳaffālī, bāb 1–6, 85–87). Ahmad b. Ḥanbal, l. 93, 255, 259 etc.; Importance is attached (as may be seen in the passages just quoted) to giving the height to which it is permitted to raise the hands. Besides raising the hands the spreading out of them also occurs (al-Bukhārī, Adhūn, bāb 130). It is also evident from the passages of Ḥadīth quoted that the raising of the hands took place not only after the ṣalāt but also in other parts of the salāt. This ritual gesture was made with special preference at the salāt for rain (e.g., al-Bukhārī, Dījan’s, bāb 34, 35; Muslim, Ṭīrām, trad. 5–7; Ahmad b. Ḥanbal, l. 104, 153, 181 etc.). Occasionally the ṭarāf al-yadmān is declared permitted for no ḍhūrā except the Ṭīrām (e.g., al-Nasā‘ī, Khūl al-Lail, bāb 52; Ahmad b. Ḥanbal, l. 243). What value was given this rite may be seen, from the fact that Muhammad is made to perform the ṭarāf before raising the hands in the ḍhūr (al-Bukhārī, Ma‘ālī, bāb 55). This all becomes quite clear when we reflect that the raising of the hands is, as it were, a measure of coercion used by man towards the Deity, as Goldscheider has shown in his Zauberelemente im islamischen Gebet (Nīkāch-Farbtschrift, l. 320). The Sunna further associates with the ṣalāt the ṭarāf (q. v.), which in parts falls into the same category as the raising of the hands, as Goldscheider has also shown in the essay just mentioned.

The next "pillars" of the salāt in order is the prostration (ṣu‘alāt), which was also one of the rites of the Jewish (Mittwoch, op. cit., p. 17 sq.; Ḳaffālī, Ṭīrām) and of the Christian service (Wensinck, Mohammed en de Joden te Medin, p. 104 sq.); for further details see the article ṢU‘ALĀT. Next the worshipper assumes the half-kneeling, half-sitting position, which in Arabic terminology is usually called ṭanīr (cf. Juyonboll, op. cit., p. 76, fig. 7). Then comes another ṣu‘alāt.

The ceremonies from the recitation of the fātāha to the second ṭarāf inclusive constitute a ṣu‘alāt. It is to be noted that in the Ḥadīth literature at least this terminology still varies a good deal. Sometimes ṣu‘alāt seems to be used in the same sense as ṣalāt, sometimes (and this is the usual usage later) ṣu‘alāt is the more comprehensive term, applied to the middle part just described of the whole salāt. Only the history of the Muslim ritual, which has still to be written, will make clear the exact state of affairs. The most usual (in Ḥadīth also) terminology gives the number of ṣu‘alāt s for each salāt, viz., for the ṣu‘alāt al-ḥarrāf, 3; for the ṣu‘alāt al-ṭarāf, 4; for the ṣu‘alāt al-Ṭūn, 4; for the ṣu‘alāt al-maghrib, 3; for the ṣu‘alāt al-‘Īd, 4. Muslim tradition even says that the salāt originally consisted of two ṣu‘alāt s, that this number was retained for the salāt on holidays, but four was fixed for the normal salāt. (e.g., al-Bukhārī, Salāt, bāb 1; Muslim, Salāt al-Mustafirin, trad. 1–3, etc.). Mittwoch (op. cit., p. 18 sq.) assumes Jewish influence on the original choice of two ṣu‘alāt s.

The statement that this or that salāt consists of so many ṣu‘alāt s means that the introductory rites which precede the first ṣu‘alāt s and those which follow the second ṭarāf (see below) need only occur once in the salāt in question while, on the other hand, the ceremonies in between are repeated so many times. The rites which follow the second ṭarāf are the ṭanīr, the profession of faith, which is pronounced sitting. That the rule just mentioned for the repetition of certain parts of the salāt only developed gradually is evident from a tradition which ascribes to Muhammad the pronouncement that the ṭanīr should be repeated at every two ṣu‘alāt s (Aljad b. Ḥanbal, l. 211).

Then comes the salāt on the prophet which
It is clear that at first Muhammad had not the material available in ample measure for the ritual. The texts which were recited and sung in the solemn litanies of the Christians and Jews in their services were lacking to him. This may still be deduced from the celebrated tradition which relates the revelation of Sura xxvi, according to the common view, the first that was revealed to him. To the command of the angel urging him to recite he replied: "I have nothing to recite". The divine part of this dialogue, which so troubled Muhammed, is now said to have at once become the first text for recitation, and it was followed by others with longer or shorter pauses.

Although the salat is nowhere described or exactly regulated in the Koran, it can be assumed that its characteristic features have not changed in the course of development of the worship. The indications in the Koran of its various component parts lead us to believe this. The standing position is everywhere presupposed in the salat, although a sitting position (masjíd) and prostrations (rukūn) are mentioned. How closely the salat was bound up even in the Meccan period with the recitation of the Koran is seen from the fact that in Sura xxvii. 80 the morning salat is called Koran al-Wādi. On the other hand we find the recitation of the Koran itself also associated with prostration (Sura lixxxiv. 21).

That at this period praises already constituted a very considerable part of the salat is clear from Koranic passages like Sura xx. 130 and xxiv. 41, where tahmīd and tasbih are mentioned in the closest connection with the salat.

From the mention of the salat and the verb salātha in the oldest Sura's (e.g. lixxv. 31, lixx. 23, xvii. 5, lixxiv. 44, xviii. 2) it may be further seen that we can assert that this rite was an accompaniment of Islam from the earliest times and that Caesarii's sceptical reflections and hypotheses do not give sufficient weight to the Koranic evidence (cf. Annali, Introduzione, 219 note — in part in connection with similar views of Grimm). How much Muhammad disturbed the Mekkans with his new religion may be seen from Sura xvii. 110, where he is recommended by Allah not to perform the salat too loudly, which is interpreted by tradition — and, no doubt, rightly — to mean that his unbelieving fellow-citizens molested him for holding his services too noisily. This is in agreement with the fact that in the period during which Muhammad is continually advised to imitate the example of the earlier prophets and model himself on their patience, attention is regularly called to their also having summoned those around them to hold the salat (e.g. Sura xxi. 73, xix. 32, xiv. 40, xix. 56, xx. 132).

In the Koran the salat is very frequently mentioned along with the sūrat; the two are obviously considered the manifestations of piety most loved by Allah (e.g. Sura ii. 77, 104, 172, 277, iv. 79, 160, v. 15, 60 etc.). In Sura ii. 42, 148 the believers are exhorted to seek help in salat and sūrat. Sāb [q.v.] is interpreted in this connection as fasting. There is further in the Koran no trace so far of the five "pillars" which later attained such an important position. The salat is an expression of humility (Sura xxxii. 3) which latter was considered throughout the Hellenistic world as the attitude to the deity most befitting man. Punctual observance (mabāfāt) of the salat is repeatedly enjoined (vi. 92, xxiii. 9, lix. 34; cf. lix. 22) and neglect (sakūh) is censured (cvii. 5).

In Sura iv. 104 a similar injunction is given the following justification: "for the salat is a kathib awdah i.e. "a ritual ordinance of religion", it is blamed in the Musnad that the Franks do not perform the salat without real and with eye-service only (Sura iv. 141). The limitation and later interdiction of the use of wine owed its origin to the fact that over-indulgence disturbed order at divine service (Sura iv. 46).

As has already been observed, we may assume that the essential features of the later salat were in existence from the very beginning. We know only very little about peculiarities of the salat and its accompanying phenomena in the oldest period of Islam. A ritual ablution (cf. the articles Wudu', Taharah, Wasq) before the salat is prescribed in Sura v. 6; the sādqa for the salat is mentioned in v. 63 and in xxii. 9 for the Friday salat. A special salat in case of imminent danger is prescribed in Sura iv. 105 (see below Under Salat al-Khunuz). Praises of Muhammad and the Tasbih form the conclusion of the later salat. This practice can be justified by Sura xxviii. 56, where it is written: "Allah and his angels bless the Prophet; ye who believe, bless him and bring him salutations of peace". The Friday salat is mentioned in xxii. 9 in the words: "O believers, when the call to the salat occurs on Fridays, hasten ye to the invitation (adābah) of Allah and quit trafficking. This is better for ye when ye know." In these circumstances it is intelligible that Muhammad laid great stress on those who showed themselves ready to adopt Islam being at once initiated into the practice of the salat. Tradition reports that he sent Asa'ā b. Zūrirah or Muṣāb b. Umair to the Medinese for this express purpose and that the latter was the first to hold the Friday service with them (see A. J. Wensinck, Muḥammad en de Joden te Medīna, p. 111 sqq., and C. H. Becker in Der Islam, ill. 378 sqq.). In Muhammad's messages to the tribes of Arabia the salat is frequently inculcated as a Muslim duty (see J. Sperber, Die Schriften Muhammedes an die Sūāmu Arabōn in the M.S.O.S. Abt. x. x. x., reprint, p. 10, 19, 38, 58, 77 etc.). According to Muslim tradition, the establishment of the number five in the daily salat dates back to the beginnings of Islam. It is connected with Muhammad's ascension to heaven (see the article Ibrahīm). When Muhammad is taken up to the highest heaven fifty salāts daily are imposed on his community by Allah. Muḥammad leaves the presence of Allah with this commission; on his way back he meets Muṣāf who asks him what Allah has imposed on his community. When Muṣāf hears the orders he says: "Return to thy Lord for the community is not able to bear this."

Allah then alters the fifty to twenty-five. On his way back Muhammad tells Muṣāf of the alteration and receives the same reply. The same processes are repeated until finally the number remains at five (al-Bukhārī, Salāt, bāb 1, Muslim, Imān, trad. 259, 263; al-Tirmidhi, Muwāṭi'-al-Salāt, bāb 45; al-Naṣṣī, Salāt, bāb 1; Ibn Māḏaj, Ḫudayr, bāb 104; Aḥmad b. Ṭambal, i. 315 (19): II. 144 sqq., 161; cf. Ibn Sa'd, ii. 47). The scene bears some similarity to Genesis, xviii. 23 sqq., where Abraham's intercession for Sodom and Gomorrah is described. — On the other hand, in a widely disseminated tradition we are told that

The Encyclopaedia of Islam, IV.
consists of eulogies in which occurs the much discussed formula Šaltā 'Uthmān al-šahābi wa-ṣallama. These formule are pronounced sitting. The worshipper remains seated for the concluding ceremony, the salāt or tawāf al-ṣahāb, which ends the consecrated state. The fullest version of it is, according to al-Nawawi (op. cit., p. 91 sq.): al-ṣalāt 'alādīn wa-ṣalāma ʿl-bāb; but it may also be abbreviated. It is pronounced twice, once longer to the right and a second time to the left. It is considered a salutation to the believers; but it is also referred to the guardian angels present (cf. Sūra xvii. 80). On analogies in the Jewish service see Mittwoch, op. cit., p. 18.

The different ceremonies of the Šaltāt are classified according to their importance or their obligatory or sunna character. Al-Nawawi (op. cit., 74 sqq.) numbers the following among the arkān al-Šaltāt: niyā, takhrīṣ al-ṣāhih, ṣiyāṣ, ṣawwād, ṣaṭī, ṣalāt al-Ṣaḥāb, ṣaʿlāt, and (13) the correct order of succession (turūj). The other ceremonies, some of which are mentioned above, are considered sunna by him. Cf. Abū ʿIsākh al-Sirāsī, Tanbīh, p. 25.

It is the many sunna ceremonies which, according as they are abbreviated or carried through in great detail, give each Šaltāt its peculiar character and in particular affect its length. This is true especially of the eulogies interspersed (see Mavlī Muhammad ʿAllī, The Holy Qur'ān, 2nd ed., Lahore 1920, p. II) and of the ṣīṣāt, for the recitation of the ṣīṣāt may be followed by the recitation of further chapters from the Korān. The Ḥadīth has much to say on this subject. It appears that the great real of many imāms in this respect has often been a burden to the faithful. Complaints on the subject are said to have been made to Muhammad and he is said to have readily admitted their justice. *Reflect*: he is said to have warned the imāms, "that there are weak and old men among you" (e.g. al-Bukhārī, Umr, bab 28; Muslim, Šafār, trad. 179–190; Abū Dāwūd, Šaltāt, bab 122, 123 etc.). We even find him quoted as describing the imāms concerned as a ʿajāfī (teapot) (e.g. al-Bukhārī, Adhābin, bab 60; Ahmad b. Ḥanbal, ii. 308). Praise is also given to Muhammad because no one went through the Šaltāt more completely and in a shorter time than he did (Ahmad b. Ḥanbal, ii. 279, 282 and many other passages).

It is natural that the correct order of the ceremonies in the Šaltāt is considered one of its pillars by the faḍḥā. But we are justified in supposing that there was still considerable variation in this long after Muhammad's death. Such unintentional deviations from the usual number and order of the ceremonies are discussed in the Fīkh and Ḥadīth — the enfant terrible of the Fīkh — supplies the historical background for them. Both say that these unintentional deviations in minor points are made good by the performance of additional ras'u's or sajudas'. With what painful accuracy the Fīkh deals with this subject may be seen, for example, from al-Nawawi (op. cit., p. 94 sqq.). Ḥadīth, on the other hand, is content, as a rule, to say that Muhammad, who was later also credited with such deviations, in these cases used to perform two additional sajudas', which are called sajudas ʿl-nabakā (e.g. Muslim, Muṣāfīlāt, trad. 85; Ahmad b. Ḥanbal, ii. 12, 37, 42; al-Bukhārī, Šafār, bab 88; Ṣakāw, bab 4 etc.). Al-Bukhārī in the heading to bab 32 of the chapter Šaltāt preserves the memory of less minutely regulated conditions.

The Fīkh also defines quite minutely what actions and contingent states of body destroy the validity of the Šaltāt (al-Nawawi, op. cit., p. 103 sqq.; Abū ʿIsākh al-Shirāṣī, p. 28 sqq.). The Ḥadīth records that at first the believers used to talk freely with each other during the Šaltāt and greeted Muhammad and one another, but that the Prophet put an end to this licence (al-Bukhārī, al-Amal fi ʿl-Šaltāt, bab 2–4). The old state of affairs is strikingly illuminated in the oft told story of how Muhammad performed the Šaltāt with Zainab’s little daughter hanging round his neck; when he came to the ras'u he, it is said, put down the child and took her up again when he arose (e.g. al-Bukhārī, Šafār, bab 706; Muslim, Muṣāfīlāt, trad. 41–44; Ahmad b. Ḥanbal, bab 19). In another tradition it is related how ʻUthmān b. Ḥassan jumped on Muhammad’s back during his ras'u (e.g. Ahmad b. Ḥanbal, i. 513). These were the good old days which the faḍḥās clearly did not wish back again.

III

Besides the five daily Šaltāts there are some that are not compulsory; al-Ghazālī divides them into three categories: sunna, mustahabbah and taṣawwur (fīṣīṣ, Cairo 1302, 1: 174); some of them may have come into use after Muhammad’s death and were therefore never given legal force, others had already fallen somewhat into desuetude in Muhammad’s lifetime.

The latter is true of the night-Šaltāt (al-Šaltāt al-Šalāt). This name is the most usual in the Ḥadīth, while in the Korān ras'u al-ṣaḥābī (Sūra xvii. 80) is used. The etymology (the “waking”) of this word suggests a close connection with the Christian vigils and especially with the custom of keeping awake (Syriac šahāb), which was much cultivated among ascetics and mystics of Western Asia. We have quite a knowledge of this rite from Syriac ascetic literature; in it the keeping awake is in itself a very meritorious work; it is usually combined with the reading of scripture, meditation and ritual prayer. We must imagine the ras'u al-ṣaḥābī to have been something similar. In the description of the nightly exercises in the Lāhil al-Kāfīrī, and in the nights of Ramadan in general, the name ḥāwar is preferably used, which shows that great value was put upon standing and waking in themselves.

That such nightly exercises were zealously carried through in the oldest Muslim community is clear from the Ḥadīth. For further details see the article TAṢAWWUR. Here we shall only say that even in Muhammad’s lifetime these exercises has been deprived of their obligatory character (Abū Dāwūd, Taṣawwur, bab 17, 26; al-Nasāʾī, Ḥāwar al-Layl, bab 2; al-Dārimī, Šaltāt, bab 165).

The night-Šaltāt is closely connected with the witr. This word means “uneven” and the rite really consists in the addition of one ras'u to the even number of ras'u's in the night-Šaltāt. For further information see the article WITR. How varying the practice was in the oldest community with regard to the daily Šaltāts may be seen from the statements regarding the Šaltāt al-ṣaḥābī, the only one in the forenoon. In Ahmad b. Ḥanbal,
One is recommended to go quietly to the ṣalāt (al-Bukhārī, Advān, bāb 20, 21, 23; Muslim, Maṣādīd, trad. 151—155). It is also considered particularly meritorious to take one’s place some time before the commencement of the ṣalāt and to wait some time after its conclusion (Aḥmad b. Ḥanbal, ii, 266, 277, 289 sq., 301). If anyone comes so late that he can only take part in one rak‘a he has nevertheless “achieved the ṣalāt” (al-Bukhārī, Maṣāḥih, bāb 29; Muslim, Maṣāḥih, Trad. 161—165; etc.; the opposite view is held by Mālik, Wujūḥ, trad. 15). Even if one enters the mosque after already performing the ṣalāt concerned by oneself, one should take part in the ṣalāt with the congregation (Abū Dā‘ūd, Ṣaḥīḥ, bāb 56; al-Tirmīdī, Maṣāḥih, bāb 49). The opposite view, however, has also its supporters (Abū Dā‘ūd, Ṣaḥīḥ, bāb 57). The frequently mentioned rule is that one should make up in private for what one has missed in the ṣalāt (Aḥmad b. Ḥanbal, ii, 237, 238, 239, 270 etc.).

The worshippers arrange themselves in rows (ga‘f) on the closed and good order of which much stress is laid (al-Bukhārī, Advān, bāb 71, 72, 74—76, 114; Muslim, Ṣaḥīḥ, trad. 122—128; Abū Dā‘ūd, bāb 93—100; Aḥmad b. Ḥanbal, ill. 3, 112 sq., 114, 122, etc.). The places in the front row have special advantages (al-Bukhārī, Advān, bāb 9, 73; Muslim, Ṣaḥīḥ, trad. 129—132); within this row again the places on the right of the Imām are especially recommended (Ibn Māḍīja, Ḥumāna, bāb 34). This, however, is true only of men; women are advised to take their places in the last row (Aḥmad b. Ḥanbal, ill. 247, 336, 354, 370). The ṣalāt al-ṣa‘īda is conducted by an imām who takes up a position before the front row, or, if there are only two individuals present besides him, between the two or so that one is on his right and the other behind him (Abū Dā‘ūd, Ṣaḥīḥ, bāb 98; al-Nāṣir, Tadḥīḥ, bāb 1; Aḥmad b. Ḥanbal, l. 451). It is laid down that one should copy the Imām exactly (al-Bukhārī, Advān, bāb 51—53, 74, 82 etc.). Anyone who neglects this rule exposes himself to punishment from God (Aḥmad b. Ḥanbal, ill. 445; Mālik, Niṣāḥ, bāb 57).

Mittwoch (sp. cit., p. 22; cf. thereon Becker in Der Islam, ill. 386 sqq.) has pointed out that the Imām corresponds to the sheikh az-zikhrūr at the Jewish service. At the latter as in Islam the duties can be carried through by any member of the community qualified to do so. In Muḥammad’s lifetime the position in Medina was that it only happened exceptionally that the Prophet did not conduct the ṣalāt. During his last illness and also on other occasions when he was absent Abū Bakr is said to have usually represented him. The Ḥadīth loves to expand itself on this point; in this we have probably to consider many things as reflections of the events after Muḥammad’s death. The conducting of the ṣalāt was then of tremendous importance and is clear from the manifold meanings of the word Imām. The leader of the ṣa‘īda in the mosque of the Prophet was naturally also the leader of the community in political matters. Gradually there came about a separation of the functions but the Caliph and the leader of the smallest village ḥār al‘āke retain the title of Imām.

While the Imām — at least in the days of the early Caliphs — was appointed to the mosque
of the Prophet, in the provinces an alternation in the exercise of the duties was more to be expected.

In the canonical Ḥadīth we look in vain for a regular usage in the provinces. Perhaps it may be concluded from this that in the first century of the Ḥijra no regular usage had yet developed. If a number of persons assembled for the ḍjanūn, sometimes it is said that the oldest (al-Bukhārī, Adhūn, bāb 17, 18, 35, 49, 140; Ḥajjāb, bāb 42; al-Nasāʾī, Adhūn, bāb 7 etc.), sometimes one with the best knowledge of the Korān should conduct the salāt (Muslim, Maqāsid, trad. 289—291; al-Nasāʾī, Adhūn, bāb 8; Ahmād b. Ḥanbal, iii. 34, 34, 36 etc.). Slaves and freedmen could perform the duties (al-Bukhārī, Adhūn, bāb 54). In a Zaidi tradition there is even a mention of women as īmām (C. Corpus Juris' di Zaid ibn 'Abbās, ed. Griffith, No. 189). The question behind whom one may perform the salāt is also discussed in the Fīkh books and in the collections of traditions (al-Nawawī, cf. p. 134 sqq.; al-Bukhārī, Adhūn, bāb 56; Abū Dāwūd, Salāt, bāb 65). The responsibility of the īmām (Ahmād b. Ḥanbal, ii. 254, 253, 377 sqq., etc.) as well as his heavily reward was laid stress upon (Abū Dāwūd, Salāt, bāb 58; Ibn Mājah, Ḥuṣnā, bāb 47). One should retire if some one is there who has greater authority in religious matters (al-Nasāʾī, Aīmama, bāb 3, 6). No one should thrust himself on the people (Abū Dāwūd, Salāt, bāb 62; al-Tirmidhī, Mawṣūlat, bāb 149). The īmām is not to be a stranger but a local man (Abū Dāwūd, Salāt, bāb 65; al-Tirmidhī, Mawṣūlat, bāb 147; Mālik, Salāt al-Ṣalātun, bāb 15). The direction of the ḍjanūn gradually developed into more or less definite offices. In Egypt the īmām is often a small tradesman or a schoolmaster (Lane, Manners and Customs, p. 96 sqq.). In the larger mosques there are two īmāms appointed who are paid out of the funds of the mosque. In Mecca we find the most distinguished scholars and quite insignificant individuals alike acting as īmām (Snouck Hurgronje, Mecca, ii. 234, note). In the Dutch East Indies the duties are often performed by the pāngku, who also holds judicial offices (cf. Snouck Hurgronje, Verslagen en Geschriften, ii. 116 sqq., 177; De Asijkers, i. 89). See further the article Ḥajjāb.

Besides the five daily salāts there are special services to be held by the community on certain occasions. The first place among these is occupied by the Friday salāt; for a description of which see the article Ḥajjāb. For the salāt on the two fasts see the article Ḥarām, for the salāt for rain see Ṣīmash and for the Salāt al-Kubā'ī, see Kubā'. Here we shall only say that much ancient and popular matter has survived in these divine services.

Of quite another kind is the special or short form of the true Muslim salāt, the salāt on journeys, which consists of two rakā'āt. The jurists naturally devote much attention to the question of what is meant by a journey. Another alleviation on journeys consists in the combination of two or more salāts into one (Ṭalib). The Hadith has much information on journeys (e.g. al-Bukhārī, Tadhkīr al-Salāt, bāb 6, 13—19; Muslim, Salāt al-Musafīn, trad. 42—58 etc.). As mentioned in section 1, it is said that Muhammed combined several salāts in Medina; on the significance of such statements cf. what is said there and also al-Nawawī, op. cit., p. 159 sqq.

A special salāt, already described in the Korān, is that which is held when danger threatens from the enemy (Sūrat iv. 102—104). The deviation from the usual ritual consists mainly in the fact that the believers are arranged in two rows of which one keeps watch with weapon in hand during the muṣjīd of the other; they repeat this in turn until all have performed the muṣjīd. The tāḥīb is then recited by them all together, if the enemy is to be expected from another direction than that of the kiblah, the ritual is modified as conditions demand (for further information see cf. al-Nawawī, op. cit., p. 181 sqq.). In this case also the salāt may be abbreviated (Muslim, Salāt al-Musafīn, trad. 4, 5; al-Nasāʾī, Salāt al-Kubā', bāb 4, 7, 23, 24, 26, 27). There is even mention of a Salāt al-Kubā'ī of only one rakā' (Ahmād b. Ḥanbal, i. 357, 423).

In conclusion we must here deal briefly with the salāt for the dead (al-salāt 'ala l-mawṣūl, salāt al-qiyāmāt). It is a common duty (ṣaraf al-kifaya) which can only be omitted in exceptional cases (cf. Snouck Hurgronje, Verzam. Geschr., i. 138, note 3). In some traditions the salāt is ordered for every dead Muslim (Ibn Mājah, Dīwān, bāb 31; al-Nasāʾī, Dīwān, bāb 57). In the Ḥadīth (al-Bukhārī, Dīwān, bāb 23, 85; Tāfṣir, Sūra 9, bāb 12, 13; Muslim, Fadilāt al-Sahlīn, trad. 25 etc.) it is related how Muhammad held the salāt for the dead. 'Abd Allah b. Umayā, the arch-enemy, was reproved by 'Umar for doing so. Therefore Sūra ix. 85 was revealed: *and never perform the salāt for one of them who dies and stand not at his grave, for they are unbelievers against Allah and His Messenger and they die as fāsiqīn* (on the legal definition of the conception of fāsin see Snouck Hurgronje, Verzam. Geschr., ii. 97).

In the Ḥadīth it is further related that Muhammed omitted the salāt in cases where the deceased had committed suicide (Muslim, Dīwān, trad. 107; Abū Dāwūd, Khārāj, bāb 46). Al-Nawawī, op. cit., p. 225, says, however, that no exception was made in this case. The Hadīth also tells us that Muhammad refused to hold this salāt unless the debts of the deceased had already been paid (al-Bukhārī, Hewatīl, bāb 3; Abū Dāwūd, Buwāl, bāb 9; Ahmād b. Ḥanbal, ii. 290, 399). In law therefore the mourners are recommended to settle this matter quickly (al-Nawawī, i. 221). In the Ḥadīth we find contradictory statements regarding the question whether Muhammad held the salāt al-qiyāmāt on behalf of those who had been legally executed (Abū Dāwūd, Dīwān, bāb 47; al-Nasāʾī, Dīwān, bāb 63, 64). We shall hardly be wrong if we suppose that this salāt also retained certain pre-Muhammedan customs (cf. A. J. Wenckst, Some Sentitl Rites of Mourning and Religion in the Perk. A.W., New Series, xviii., No. 1, Chap. 2 and 3). According to Abū Iyāk al-Shīrāzī (ed. Jaynholl, p. 47 sqq.), the following is the order of the salāt for the dead: the īmām stands at the top of the hill in the case of a man, at the bottom in the case of a woman (this is the old tradition; cf. al-Bukhārī, Dīwān, bāb 63; Muslim, Dīwān, trad. 87, 88 etc.); he pronounces the ṣuṭūr and utters four takhrās with hands raised; at the first he recites the Fātiha, at the second he utter the sutiya on Muhammed, at the third he pronounces the adhā'
for the dead man, at the fourth a daw' for those who take part in the service; the two ta'ajhib'a conclude the ceremony.

Difference of opinion prevails regarding the place where the ṣalāt al-qunūz is to be held, and there are indications that in the ancient Medina the waṣwāṣi (q.v.) was used, for example in the case of the service for Nadżāš (q.v.), who died in Abyssinia (al-Bukhārī, Dijānās, bab 4; Muslim, Dijānās, trad. 63, 64). In Ibn Iṣḥāq, if/1, 14, it is said that the ṣalāt was held by Muhammad in the home of the deceased. People therefore thought it an innovation when the body of Sa'd b. Abī Waqāṣa was brought into the mosque at the request, it is said, of A'ishah or of the widows of the Prophet. A'ishah is said to have replied to the complaints that were made: "How short is the memory of the people. Muhammad was indeed wont to hold this ṣalāt in the mosque." (Muslim, Dijānās, trad. 99—101). Muslim's commentator, al-Nawawi, gives on this passage (as al-Zukāfī does on Mâlik, Dijānās, trad. 22) the points of view of the different schools with reference to the legal category in which they place the holding of this ṣalāt in the mosque (on the question cf. also Sāmicī Rītās of Mourning and Religion, p. 2—4). In any case it is the custom in various parts of the Muslim world to-day to perform this ṣalāt in a mosque. (Lane, Manners and Customs, p. 526; Snouck Hurgronje, Mebâ, ii. 189). In A'lish, on the other hand, as is usually also the case on Java, it takes place in the front part of the enclosure before the house of the deceased (Snouck Hurgronje, The A'lishmen, i. 423; cf. Verspr. Geschr., iv, 1, 242). This is at least permitted by the law although not recommended (it depends on the muqâbbāh).

The body is not necessarily present at the ṣalāt. In Mekka it is the custom to hold the ṣalât al-qunūz for residents who have died away from home (Mekka, ii. 189). Justification may be claimed for this practice in the widespread tradition according to which Muhammad held a service in Medina for the dead Nadżāši (cf. above).

V

The question of the significance of the ṣalāt is usually approached in a one-sided fashion by European critics. They like, it must be admitted, to follow Ranke in placing a high value on the ṣalāt as a disciplinary measure and certainly it is difficult to appreciate this too highly. A considerable part of the life of the community must have centred in and around the ṣalāt in Medina in Muhammad's life-time and through it the transformation of the old Arab mind into the Muslim must have taken place. The same phenomenon was afterwards repeated in the provinces of the Caliphate. The ṣalāt must have been one of the most effective formative elements in the communities.

The European, on the other hand, usually forms his judgment of the ṣalāt from his own point of view; the Protestant misses the intensification, the Roman Catholic the imposing ceremonial.

Both attitudes are wrong from scientific standpoint. Whoever wishes to gain a clear idea of the significance of the ṣalāt must ask the question: "what does it mean to the Muslim?"

This question may be partly answered by observing the enthusiasm for the ṣalāt displayed by Muslims in different countries. The results of such

observations almost everywhere go to suggest that there are few Muslims who regularly observe the five daily ṣalāts (Lane, op. cit., p. 84; Snouck Hurgronje, Verspr. Geschr., iv/1, 8, 16). In the Dutch East Indies the 'Achchens so prominent in the Ḥijāb (q.v.) only take part in small numbers in the congregational ṣalāt; in Banten (Java), in Palembang (Sumatra) and in isolated parts of the Archipelago on the other hand we find it much more religiously observed (Snouck Hurgronje, Verspr. Geschr., iv/i, 343 sq.; De Afro-Indië, i. 89 eq.). Lane's remarks regarding the ṣalāt in Egypt (Manners and Customs, p. 98) are important: "The utmost solemnity and decorum are observed in the public worship of the Muslims. Their looks and behaviour in the mosque are not those of enthusiastic devotion, but of calm and modest piety. Never are they guilty of a designedly irregular word or action during their prayers. The pride and fanaticism which they exhibit in common life, in intercourse with persons of their own or of a different faith, seem to be dropped on their entering the mosque, and they appear wholly absorbed in the adoration of their Creator — humble and downcast, yet without affected humility or a forced expression of countenance."

A rich source for the study of the significance of the ṣalāt in the religious life is to be found in the literature. For the first two centuries it is mainly the Ḥadīth that we have to use. In the enumeration of the five pillars of Islam the ṣalāt always appears in the second place (al-Bukhārī, Imām, bab 2; Muslim, Imām, trad. 19—22; in passing it may be noted that the first pillar is variously given). In the so frequently recurring story of the untaunted Beduin who suddenly asks Muhammad the question: "How shall I be saved?" the latter answers with a list of the duties imposed by Islam upon the believers, viz.: five ṣalāts daily, fasting in Ramādān and zakāt (al-Bukhārī, Imām, bab 34; Muslim, Imām, trad. 8). In other traditions also, which enumerate the obligations of a Muslim, e.g., for example, in the commission given to Muḥammad b. Dījābal when he was sent by Muhammad to Yemen, we find mentioned besides the tawâf or the service of Alī the five ṣalāts and the zakāt (e.g. al-Bukhārī, Zakāh, bab 1; Muslim, Imām, trad. 29—31). Here the Ḥadīth and the fasting in Ramādān are omitted. In the scale of the most meritorious works the ṣalāt often appears in the first place (al-Bukhārī, Mawâbic, bab 5; cf. Ibn Mālik, Tāhāra, bab 4; al-Dârimi, Wâsafi, bab 2). The strict observation of the five daily ṣalāts secures admission into Paradise (al-Nasā, Ikhâna, bab 6; Mâlik, Ṣalāt al-Lāl, trad. 14 etc.). The omission of the ṣalāt is a bridge to disbelief and unbelief and lies "between man and polytheism and unbelief lies the neglect of the ṣalāt" (Muslim, Imām, trad. 134; cf. al-Nasā, Ṣalāt, bab 8).

The cleansing power of the ṣalāt is allegorically described in Tradition: "The ṣalāt is like a stream of sweet water which flows past the door of each one of you; it is a great blessing for every member of the community. After ṣalāt the soul is in peace and he has not sinned, and the nimā is a protection against famine and the like."

The ṣalāt is like a fountain of life, to the neglect of which belongs the punishment of the sinners.

The ṣalāt is like the foundation of the house of the believer. Would to God that all the believers would have it!" (Mâlik, Kāf al-Ṣāliḥ fī izhâr al-Qareb, bab 91; cf. Ahmad b. Ḥanbal, i. 71 eq., 177; ii. 375, 426, 441, iii. 393, 347 etc.). It is described without allegory in the equally well-known tradition: "an obligatory ṣalāt is a cleansing for the sins which are committed between it and the
following one” (ep. cit., ii. 229); as is well known, grievous sins are usually excluded from the cleansing effect of pious exercises (op. cit., ii. 359).

We have just quoted the tradition according to which the observation of the daily salah secures entrance into Paradise. The following utterance goes still further: “He who knows that the salah is a compulsory duty will enter Paradise” (op. cit., l. 60). At the final reckoning on the Day of Resurrection the more or less faithful observance of the salah will be a consideration of the first importance: “The first thing to be dealt with is the salah; if this point is in order, the man has attained bliss; if not then he is lost” (cf. al-Nasâ‘î’s Sahih, bâb 9; al-Tirmidhî’s Musnad, bâb 188; Ahmad b. Hanbal, l. 161 sq., 171, ii. 290 etc.).

The salah should be performed devoutly with concentrated attention. It is often related how Muhammad put away one of his garments because figures woven on it distracted his attention from the salah (al-Bukhârî, Sahih, bâb 14; al-Nasâ‘î, Ḵ̄fûl, bâb 12; cf. bâb 10).

That the salah does not, as is sometimes said, imply only the performance of a duty but that the heart is in it too is seen from the following tradition: Muhammad said: “Of worldly things women and perfume are nearest to me and the salah is the comfort of my eyes” (Ahmad b. Hanbal, iii. 128 bis, 285). Weeping at the salah is also sometimes mentioned (Abû Dâ‘ûd, Sahih, bâb 156; al-Nasâ‘î’s Sahih, bâb 18; Ahmad b. Hanbal, i. 185, iv. 25 bis, cf. 26). By far the most significant characteristic of the salah is the one which we find in two different settings, namely that the salah is intimate conversation with Allâh. On the one hand it is found in the Hadrât, in which spitting in the direction of the kiblah during the salah is forbidden, as the reason given being that the salah is intimate conversation with Allâh (al-Bukhârî, Sahih, bâb 39; Muslim, Ma’sûmîyat, trad. 54; Ahmad b. Hanbal, ii. 34 sq., 144, iii. 176, 185, 199 sq., 254, 273, 278, 291 etc.). On the other hand we find it expressed in the following form: “If one of ye performs the salah he is in confidential converse with his Lord; at that time he ought to know exactly what he says in this way with his Lord; therefore no one should drown the voice of another at the recitation” (Ahmad b. Hanbal, ii. 36, 67, 129). An illustration to this utterance is given in the following hadith: “Allâh says: ‘I have divided the salah into two halves between Myself and My servant, one of which belongs to Me and the other is for My servant and My servant obtains what he asks.’ The Messenger of God said: ‘recite’; when the servant says: ‘Praise be to Allâh, the Lord of the Worlds!’ Allâh says: ‘My servant hath praised Me’; when the servant says: ‘to the Merciful and Compassionate’ Allâh says: ‘My servant hath glorified Me’; when the servant says: ‘to the Lord of the Day of Judgment’ Allâh says: ‘My servant hath praised Me’; when my servant says: ‘Then do we serve and Thee do we beseech for help’. Allâh says: ‘This verse is between Me and My servant and he receives what he has prayed for’; when the servant says: ‘lead us in the right way, the way of those whom Thou hast favoured, with whom Thou art not angry and who do not err’ Allâh says: ‘This belongs to My servant and he receives what he has prayed for’ (Ahmad b. Hanbal, ii. 460).

That the salah was also used as a means of healing is not remarkable in view of similar phenomena in other religions (Ibn Midjâd, Tâhib, bâb 10; Ahmad b. Hanbal, ii. 390, 403). At the same time we may mention the salah al-‘ifādâh, which is observed to secure the attainment of some ardently desired object (al-Tirmidhî, Witr, bâb 17) and the salah al-mâ’ânîyyah [see Nîkhîrâ] before a more or less important decision (al-Bukhârî, Ḵ̄fûl, bâb 25; Abu Dâ‘ûd, Witr, bâb 31; al-Tirmidhî, Witr, bâb 18; Ahmad b. Hanbal, iii. 344 etc.).

The description of the salah as mawjûdîyat is characteristic of the meditative tendency, found even in the oldest salah (cf. especially L. Masson-Georget, Étude sur les origines du lexique technique de la mystique musulmane, Paris 1922); it has certainly been one of the main avenues by which mysticism entered Islam from without.

One of the oldest Muslim mystics, al-Mâdhûbî (d. 243 = 857), wrote a treatise on the significance of the salah (cf. Masson, op. cit., p. 259, note 1) and the philosopher al-Tirmidhî (d. 285 = 898) expounded the mystical side of the salah in 42 aphorisms (quoted in Masson, op. cit., p. 259). Among the more modern mystics the salah gives place in importance to Dhikr and Wîrd. Al-Kâshârî does not devote a separate chapter to it in his Ksûla. In al-Hudjwîrî it appears as especially suitable for novices, who are to recognise in it to some extent a reflection of the whole mystic way. To them the takâra represents the conversion, the fiqâ the dependence on spiritual leadership, the recitation the dhikr, the rakûn the prostration self-knowledge; the kâfûl the mussal, the takârâ renunciation of the world. Of the real mystics everyone sees something different in the salah: to one it is a means to faqîr with God, to another to gâhîn (al-Hudjwîrî, Kaqîf al-Mâdhûbî, transl. Nicholson, Gîbîh Mem. Ser., xvii. 301 sqq.). Al-Hudjwîrî, however, also emphasises the affection of various sûrs for the salah.

Of the philosophers Ibn Sînâ (Avicenna) is only to be mentioned here, who wrote a short treatise on the salah (Fi’l-Kâfîf dan mâ’îyat al-Salât wa-sûrâma Tahârâkà in Li‘lâm, al-BAŠî, Cairo 3355 [1917], p. 2–14). According to him, the essence of the salah is the recognition of God in His existence and necessity of it. It is esoteric or exoteric according to the character of the believer who performs it. The law-giver knew that not all men can ascend the steps of the spirit. Such men therefore require corporal discipline and compulsory mortification, to keep their natural impulses in check. This is the exoteric side of the salah. Its true esoteric significance is the musâjibât al-faqq with pure heart and a soul which is liberated and purified from desires (amûl). Ibn Sînâ then proceeds to deal with the saying that a man at prayer is in intimate converse with his Lord (see above). This can, he says, only happen outside of the material world. Those who are in this state of mind are spiritually in the presence of God and they gaze upon the deity (al-Ilâh) in a real vision. The salah is therefore a real musâjibât and a pure worship, i.e., the real divine love and spiritual vision.

Al-Ghazâlî’s chapter Salat has in the Kûfî in the Kûfî al-Jamâ‘î a position between Takâra
and Šalāt (as in the Fīkh). As with the other Ṣalāt, it should be observed in this case also with what painful accuracy he describes the legal regulations (ed. Cairo 1302, l. 140 sqq.) and how on the other hand he raises the Šalāt to an ethico-mystical level which sufficiently meets all the demands of intensification. After what has been said above in II and III, we need only briefly survey here the latter side of his exposition. The inward mukābāl which brings the life of the Šalāt to perfection are the six following: the presence of the heart (ḥāyuṯ al-khālid), understanding, respect (tawqīm), reverence (khābīr), hope and humility (lāzīma).

Particularly significant are his remarks on the presence of the heart (p. 145). The ʾakīma demands the presence of the heart only at the ṭahārā; according to the Ṣuḥāiṭ al-mutawwarrīn and the Ulama al-ʾAbḥira, on the other hand, the heart should be present at the whole Šalāt. But only very few succeed in achieving this. The ideal ʾakīma is that of Ḥātim al-ʿAṣūm, who said: “When the time for the Šalāt arrives, I perform a copious ṣuṣūrūf and go to the place where I want to perform the Šalāt. There I sit till my limbs are rested, then I stand up, the Naḥṣah straight in front of me, the ṣirāt under my feet, Paradise on my right, and Hell on my left and the Angel of Death behind me; and I think that this Šalāt is my last. I then stand waving between hope and fear, join in the Ṭahārā and Ṭahākāt, recite with Tawīl, perform the Ṣafāhah in submission and the Ṣuṣūrūf in humility, sit on my left thigh, spread out the upper part of the left foot and fix the right one on the great toe and accompany this with Ṭahākāt. Then I do not know whether my Šalāt has been graciously accepted by Allāh or not” (p. 159, 7 sqq.).

Al-Ghazzālī lays down his ethical point of view in the sentence: If his Šalāt does not restrain a man from evil and wrong-doing, he only obtains estrangement from God by it (cf. Sūra xxvi. 9).

In the chapter on the useful remedies for securing the ʾuṣūf al-khālid, distraction thoughts are given as the principal obstacle which divert attention from the Šalāt. These enemies are to be overcome by fighting their causes. These are of two kinds, external and internal. The external causes of distraction (ṣayfūt, in the Syriac mystics fchajā) come from the organs of sense. One therefore ought to prevent these from being distracted. The mutaʾʿaddīdūn therefore perform the Šalāt in a dark cell with only sufficient room for the ṣuṣūrūf. Ibn ʿUmar is said not to have allowed a single object in this cell. The internal causes of distraction exercise a much stronger effect. They have their root in earthly cares, thoughts and occupations. But desires have the most powerful influence. They are to be fought by meditation on the future world. All preparations for the Šalāt and all its parts should be connected with the Ṣuḥāfīn. At the ʾuṣūf one should think of the Šalāt on the way of the Resurrection. At the covering of the ʿawrā one should enquire whether there is no internal ʿawrā etc.

The highest goal of the Šalāt is complete absorption in the Deity by humiliating oneself. Sufyān al-Ṭhawrī is reputed to have said: “If a man does not know humility, his Šalāt is invalid.” This is laid down in two special sections (Bayān lāhirat al-Khulūb wa-Ḥujrī al-Kalb, p. 145 sqq., and Hikayāt wa-ʾAbḥīr fī Šalāt al-

Kaḥṣārīn, p. 157 sqq.). In the latter he shows by several examples how much the great leaders used to be absorbed in their Šalāt.

(A. J. Wensinck)

**Salghurids**, one of the dynasties known as Atābaks, or Regents, which arose on the ruins of the empire of the Saldjaks. Salghurid chief of a band of Türkmen who migrated into Khūrāsān and attached themselves to Ṭaghīrī Beg (q.v.), the first of the Gre Saldjaks. Būzābā (q.v.), one of Salghur’s descendants, was killed in battle by Sulṭān Qhīyāth al-Dīn Muḥammad al-Manṣūrī, the fourth of the Saldjaks kings of ʾIrāq and Kūrīdān, and his nephew, Sunqūr b. Maḥmūd, rose against the Saldjaks and in 1148 established his independence in Fars, where he founded a dynasty which ruled for more than 120 years but seldom enjoyed complete sovereignty, being tributary first to the Saldjaks of ʾIrāq, then to the Shāhs of Khwārizm, and lastly to the Mongols. Sunqūr died in 1161 and was succeeded by his brother, Zangi b. Mawdūd, who was molested at the beginning of his reign by his cousins, the Atābaks of Shāhīk, who claimed the throne of Fars. After overcoming them he led homage to Arslān b. Ṭaghīrī I, Saldjaks of ʾIrāq, who confirmed him as ruler of Fars. On his death in 1175 he was succeeded by his elder son, Takla, who remained tributary to the Saldjaks of ʾIrāq and reigned for twenty years. On his death in 1194 the throne was claimed both by his cousin Ṭaghīrī, the son of Sunqūr, founder of the dynasty, and by his younger brother, Saʿd b. Zangi (q.v.). Ṭaghīrī first gained possession of the capital and assumed the royal title, but Saʿd maintained the contest for eight years, during which period the kingdom was devastated and depopulated. In 1203 Saʿd captured Ṭaghīrī and ascended the throne. During the early part of his reign he was occupied in restoring prosperity to his country, which had been wasted by famine and pestilence. Meanwhile the Saldjaks of Ṭaghīrī had been overthrown by the Shāhs of Khwārizm, who in 1194 had annexed their country. Saʿd attacked Atābaks Tād Šūkhām Shāh, but was defeated and taken prisoner by him, and as a condition of his release was obliged to cede Iṣṭākhr and Ushkhunwān, and to agree to pay the tribute which had formerly been paid to the Saldjaks. He is famous as the ruler from whom the great poet Saʿdī took his tashkultūt or pen-name. He reigned for twenty-eight years, and on his death in 1231 (but cf. Saʿd b. Zangi) he was succeeded by his son Abū Bakr, who had attempted to usurp the throne during his father’s captivity and had been for this offence condemned to imprisonment, from which he was released at the instance of Djalāl al-Dīn Manghobartī, Shāh of Khwārizm. He extended the boundaries of his kingdom, but was obliged to pay homage and tribute first to Oqūṭī Khān, supreme Khān of the Mongols as son and successor of Cingī Khān, and afterwards, in 1256, to Hulagū, the Mongol Il-Khān of Persia. Oqūṭī Khān conferred on him the title of Kūltugh Khān. Abū Bakr died in 1256, and was succeeded by his son, Saʿdī Il, who reigned for no more than twelve days, when he died and was succeeded by his infant son, Muḥammad, whose nominal reign was ended by his death in October, 1262. The child was succeeded by his cousin, Muḥammad Shāh, son of Salghur, the younger son of Saʿd I. Muḥammad Shāh was overthrown and put to death on July 18, 1263, and
was succeeded by his younger brother, Salikiq Shāh b. Salghur, who was defeated and slain by the Mongols in December, 1264. Fars had been tributary to the Mongol Il-Khan of Persia since 1256, but Shāh’s cousin Aḥmad Khānšah, daughter of Salīh II, was raised to the throne and permitted to reign, alone for a year, at the end of which time Maung Tintir, the fourth son of Hulagu, married her, and ruled her kingdom in her name, and it was not until her death, in 1284, that the dynasty came to an end.

**SALJIN, SALTIN, the residence of the Saljins in Mārib in South Arabia, the capital of the kingdom of Saba’. The name of this castle is already mentioned in the ancient South Arabian inscriptions. In the foundation inscription Glaser 482/3, which is placed on the temple of Almaskāh (called Haram Bīlīḳa by later generations and lying due S.S.E. 50 minutes from the modern village of Mārib), King Karibāl’s Wātir Yūhānīm of Saba’ and Hālik’amar, son of Karibāl’s, speaks of renovations in this temple, which were undertaken for the good of the castle of Saljian (Sīhān) and of the city of Mārib (Māryān). The inscription Oslander 31, speaks of a dedication in favour of the donors of the inscription, who are obviously to be regarded as lords of the castle, and of the castle of Saljin. In the inscription of King Ilīḥarūḥ Yalḥīlī (Bibl. Nat. No. 2) Saljin is mentioned along with the ancient castles of Ghūmān and Sīrāw. The SAFAHAN inscriptions Glaser 828–829, 870–872, 1075, 1082, 1085, 1087, 1082, 13 are very interesting. They record a treaty of friendship concluded between the Sabaean king Aḥāhn Nalḥān and his sons on the one side and king Gadarat of Habashât on the other. The passage in question runs: ‘and that Saljin and Zurrānīn and Aḥāhn and Gadarat shall be like brothers in truth and fidelity’ D. H. Müller (Epigraphische Denkmäler aus Assianien, p. 75; Südarab, Altertüm. p. 9) has rightly pointed out — against J. H. Mordtmann and M. Hartmann — that this juxtaposition is to be interpreted to mean that Saljin and Zurrānīn represent the ancient residence of the kings of Saba’ and Habashât. The suggestion put forward by M. Hartmann (Die Arabische Präge, p. 158) that Saljin is the modern Haram Bīlīḳa is further disposed of by the fact that the latter has been proved to be the ancient temple of Almaskāh and is called ‘Amm al in the inscriptions (N. Rhodokanakis, Studien, ii. 7) and has therefore nothing to do with Saljin.

The importance of this ancient royal palace of the Sabaean kings is also shown by the fact that the Ethiopian king Ezānak (Aṣṭan, about 350 A.D.) in the great inscriptions of Aksum (No. 4, 5, 7, 9, 10, 11, 13) bears the name of that part of Saba’ among his official titles, just as the Emperors of Austria used to call themselves Counts of Habashat. The name Saljin appears there in the Greek text as Σαλτίν (Stamno), in the Ethiopic as Saljīn, in Sabaean Shāh and Sīhā. There was therefore a twofold pronunciation, Saljīn and Saljin, even in ancient times. E. Oslander, Z. O. M. G., 1856, x. 26, shrewdly connected the former name with that of the town Ṣālih in the tribe of Judah (Joshua, xv, 33). The form Ṣūk is of interest because the same name is also found in the great inscription of Sīrāwīh (Glaser 1000 B, 59) which is perfectly preserved and contains over 1,000 words (baitku zīw) and presumably indicates likewise the royal castle of Mārib. Poetry and folklore have woven their legends round the ancient castle as round many others. To the successors of the ancient Sabaean it seemed the work of demons or devils, who built it in 70 years by Solomon's command for the Ḥamdanid king Dūh Bātā', when Solomon married Bīlīḳa. This is, however, only one story. According to others, Saljin was built in 80 years by order of one of the Himyar rulers (Ṭalḥa).[4] Others again say that a castle was built in the royal residence of Saljin and Sīrāwīh, which belonged to the kings of the Himyars; it was built by order of Bīlīḳa, queen of Saba’, daughter of Ḥahdāl, and in it her wonderful throne stood which is mentioned in the Koran, Sura xxviii. 23. It was also said that Solomon built the palace for Bīlīḳa. It should be mentioned that al-Ḥamdānī as well as Nashān al-Himyari expressly describe Saljin as a royal residence or capital of Mārib.

There was no longer anything left of this castle in the Muslim period. The waves of the Ethiopian conquest (525 A.D.) no doubt swept over this ancient royal residence, which had already lasted most of its former importance with the transference of the capital of the kingdom from Mārib to Zāhir. Saljin, as well as Rainūn, Ibn Ḥighām tells us, was destroyed by the Ethiopian general Ṣawā Ṣawā. A friend: his (Al-Ḥamdānī, Injīl Muhammad, p. 106, 107).

AL-SALIH (A., plural Salih, Salîhîn), the cross.

This general meaning covers several special applications, e.g. the main branded in the skin of camels in the form of a cross etc. In the sense of the chief Christian symbol the word may have been taken over from Aramaic where it has the same form. It does not occur in the Qur'an.

In Hadith it is used in eschatological descriptions. Isa (Jesus) will appear in the last days, combat the Antichrist (al-Dajjal), kill the swine and break the cross into pieces (al-Brûhat, Amidya), 'Abd Allah ibn 'Abbas, bab 491; Muslim, Judía, Trad. 242, 243; Ibn Mādīka, Fītân, bab 235; 'Abd Allah ibn Hanbal, Manwād, ii. 240, 272 etc.). On Doomsday all religious communities will appear before Allah with their symbols or idols. The Christians will follow the cross and, on their confession that they did worship the Māshī ibn Maryam, be thrown into Hell (al-Brûhat, Tuhfāt, bab 24).

Further al-Brûhat speaks of a qamur muqallid, a garment or cloth into which the form of the cross was woven, and which 'Alīja removed on Muhammad's order, because it distracted his attention from the Qur'an (Salîh, bab 15).

Lexicographers call the cross the kibla of the Christians; apparently they were acquainted with the Christian custom of praying before the crucifix.

In 'Umar's treaties with the inhabitants of several towns of Palestine a special amân for their churches and crosses was granted them (al-Fābar, i. 2405 sqq.). A document belonging to a late period of tradition and of doubtful authenticity prohibits the public use of the cross as a Christian symbol (Hamaker, Incerti auctoris liber, p. 165 sqq.; Muir, The Caliphate, p. 137; cf. Castani, Annali dell' Islam, Anno 17, § 174 sq.).

In the debate between Christian and Muslim doctors at the court of al-Ma'mûn the Christian worship of the cross is one of the controversial points between the combatants (cf. A. Guillaume, A. Debate between Christian and Muslim Doctors in the Centenary Supplement to the J.R.A.S., October 1924, p. 242).

In the battle of Hadda in 583 (1187) the Muslims captured the Šâlih al-qâlibât "the cross of the crucifixion", a cross in which a piece of the true cross was incorporated (Historiens du Croisés, Historiens orientaux, i. 685). See further the articles Isa and Nasr. In Christian Arabic literature the Christian legends concerning the cross have very found their place. The verb qâbalâh denotes the Oriental form of crucifixion as a capital punishment.

On the diminutive form Šâlib cf. this article.

(SALÔKH HAMMÂN)

ŠALIH, a prophet who was sent to the Arab people Thamûd. He is, as usual, depicted as a sign and a warning in the style of Muhammad; he demanded that his countrymen should turn to him and pray to Allah alone (Sūra 71: 11, 14, 15, 16), he called their attention to the benefits received from God (71: 20, 21, 43) and prided himself on seeking for no reward from them (26, 143). But they rejected him abruptly, called him bewitched (26, 143), a man like themselves, who could make no claim to revelations (54, 63); they could not surrender the religion of their fathers (11, 62) and scorned the idea of a day of judgment (69, 4). His appearance produced a schism in the people (37, 46) for only the weak believed in him, while the strong scoffed at him (71, 72). The only new feature was that they had placed their hope in him before he irritated them by his preaching (11, 63), which, if based on some corresponding incident, would be an interesting connotation into the history of Muhammad. Then follows the special story of this prophet. Allah sent them as a sign a she-camel (17, 63) and Šâlih begged them to allow it to feed unharmed and to share water with it (7, 71, 26, 155, 54, 48). But they killed it and killed it (7, 72, 11, 48, 26, 155) through the hand of a particularly godless individual among them (91, 49, 54, 38) and scornfully asked Šâlih to inflict the threatened punishment (7, 73). He told them to hide three days in their houses (11, 68); then a tremendous storm broke out (11, 70, 51, 48) according to 7, 76 an earthquake; cf. also 54, 31, 69, 6) and on the following morning they lay dead in their houses. In the later Muslim stories of prophets these brief features are elaborated in various ways.

This story has a certain amount of foundation in fact in as much as the Thamûd, according to 7, 76 the successors of the 'Ādīs, were an ancient Arab tribe known also from other sources (see the art. Thāmu'd). The dwellings which the Thamûd had built out of the rocks (89, 4, 71, 26, 149) often mentioned in the texts, the remains of which were still visible (29, 32), are undoubtedly the tombs, containing remains of human bones, hewn in the rocks of al-Ūla (see al-Ḥadr), which has led Philippe Berger to the further supposition that the word kāfrî (tomb) found in the inscriptions there may have been explained as kāfrî (unbelief). But whence Muhammad got the name Šâlih and the story of the camel cannot be ascertained. It is further remarkable that the stories of Šâlih and Hûd [q.v.] are in contradiction to the usual teaching of Muhammad in the Meccan period to the extent that no prophet had been sent to the Arabs before him (28, 46, 52, 54, 48, 36, 3). The stories of these two prophets are found in the earliest Meccan Sūras e.g. 53, 31 sqq., 85, 11, 109, 89, 9, 94, 91, 49 sqq., and frequently recur in the following sections; on the other hand they disappear in the Medina revelations except for the brief enumeration in 9, 71.

which he finally captured the town and took the citadel also, when reinforcements arrived in the beginning of 745. Ahmad was taken prisoner. A few days later he was strangled in prison. The struggle with Ahmad had occupied all Isamîl's time and means, so that he had neglected everything else. He is a typical example of the decline of Oriental dynasties. His time and strength were entirely absorbed in wars against his brothers and in excesses. As a result of the great expenditure at court, the revenues of the state declined and often the requisite money was not available for necessary military expeditions. His weakness was taken advantage of by the regular enemies of the Mamlûk kingdom, the Amir of Mecca and of the Yemen, the dynasts of Asia Minor and the Beduin chiefs of Northern Syria, who rebelled against the governors in their lands under the Sultan's suzerainty. On the other hand the authority of the Caliph and of the Sultan remained unbroken in the remoter East and in India. Muhammad b. Ṭughlak of Delhi sent the Caliph an embassy to ask for investiture and declared himself vassal of the Sultan; he also asked those who had learned in the{108}law to be sent to him to enable his subjects to become better acquainted with the principles of Islam. His requests were readily acceded to. Sultan Isamîl was so deeply affected by the struggle with Ahmad and his execution that he could not recover; he died in 746 (1345) after two months' illness when still only 20.

AL-MALIK AL-SÂLIH NAJUM AL-DIN AIYÜB, the eldest son of AL-MALIK AL-KÂMIL MAHMUD, son of AL-MALIK AL-ÂDIL ÂBD BAKR, son of AIYÜB, was born in 603 (1207). His father designated him the authority of the Caliph and of the Sultan in 625 (1228) and made him his representative in Egypt, while he was away on his campaigns in Syria. At this time (Rabi' I, 626 = February, 1229) Al-Kâmil ceded Jerusalem to the Emperor Frederick for ten years. The relations between Aiyûb and his father were disturbed in 628 (1331) by the slanders of one of Al-Kâmil's wives who wanted to get the succession in Egypt for her son Al-Âdîl Abd Bakr. She accused Aiyûb in a letter of trying for the throne while his father was still alive, as he had enlisted over 1,000 Mamlûks of his own. Al-Kâmil, secured by the peace with the Emperor, returned to Cairo to take the reins of power into his own hands again. In 629 (1232) political conditions (the advance of the Tatars and of the Khwarizm on the frontiers of the Empire) caused him to go to Syria and gave the command of the army to Aiyûb in order to get him out of Egypt in this way. Al-Kâmil achieved his object on this campaign of getting Mesopotamia into his own hands as a strong bulwark against the Tatars and Khwarizm and, granted his son Aiyûb Husn Kalîf as a fief and later, in 633 (1336), the towns of al-Rûbî (Edessa) and Hârrân conquered by him in addition.

Aiyûb's position with regard to the Tatars and Khwarizm cannot have been an easy one. He allied himself with the latter and took them into his service with the permission of Al-Kâmil. In 635 (1338) he received Sinjâr and Naftân in addition to his other territory. So long as Al-Kâmil was alive, Aiyûb was master of the east and no one dared attack him. This state of
affairs was altered, however, when al-Kāmil died in the same year (635) in Damascus, which his brother al-Malik al-Šalih Ismā‘īl had ceded to him two months before in return for Ba‘albek and Boṣrā. Al-Malik al-‘Adil II was recognised in Cairo as al-Kāmil’s successor and al-Malik al-Dżawād Yūnus appointed governor of Damascus in his name. Ayyūb received the news of his father’s death while he was besieging Raḥsā; he at once raised the siege, but met with opposition from the Khārjīs who were in his service. Enraged at the thought of their booty escaping them, they were going to seize him and he had to take flight to the Saltān of Rūm. Only by an emergency capture of the towns which Ayyūb possessed between Syrian and Mesopotamian princes even before he had captured them. Lu‘lu', the ruler of Moṣul, was also hostile to Ayyūb. He besieged him in Sinjār, where he had taken refuge. In this perilous position, Ayyūb was saved by the intervention of his highly esteemed Ḳādī, who regained for him the help of the Khārjīs. This made it possible for him to relieve Sinjār and inflict a terrible defeat on Baydar al-Din Lu‘lu' Next he raised the siege of ‘Amid and routed the Saltān of Rūm. Mesopotamia was now secured to him. In the next year (636) he was invited by al-Malik al-Dżawād, governor of Damascus, to exchange Damascus for Sinjār, Raḥj and ‘Ana, as the latter did not feel his position safe from Saltān al-‘Adil of Egypt. Ayyūb handed over his eastern possessions to his son al-Mu‘ẓamm Timūr Shāh, while he granted the Khārjīs Hanīn, al-Ruḥān and the province of Dżazīra. He then accepted the invitation, went with his army to Palestine and occupied Damascus Saltān al-‘Adil and Prince Da‘ūd of Kerāk decided to take the field against him. But a number of the Amirats abandoned the Saltān, whose love of pleasure had made him unpopular, and decided to join Ayyūb. Da‘ūd himself offered his support on condition that he was given Damascus. When Ayyūb refused, he returned to al-‘Adil. The Caliph, continually threatened by the Tatars and Khārjīs, had a lively interest in the maintenance of Ayyūb’s power generally, and he sent an envoy to Ayyūb in vain to negotiate a peace. In 637 (1240) Ayyūb left Damascus with 5,000 men and went to Nābnīa to prepare for his advance on Egypt there. He had also endeavoured to secure the support of his uncle, Ismā‘īl, who pretended to agree but deceived him by false messages (see Sobernheim, Bodde zu islamischer Zeit, p. 9 of the reprint, and the account in al-Maqrīzī, travel. Blocchet, p. 445, and Abu l-Fida’ under the year 637). But Ismā‘īl made a secret agreement with the prince of Hims and by promises tempted Ayyūb’s troops to desert him and come to him in Damascus. Finally Ayyūb was left almost alone. In the meanwhile Da‘ūd of Kerāk had again quarrelled with Saltān al-‘Adil and had begun negotiations with Ayyūb. But when he learned that Ayyūb was al-āmil, he fled thither with his army, took him prisoner and sent him to Kerāk. He treated him well and refused to hand him over to his brother al-‘Adil. In the meanwhile the treaty between al-Kāmil and Frederick II regarding the occupation of Jerusalem had expired. Da‘ūd felt himself strong enough to take the city by force from the Franks, who would not hand Jerusalem over voluntarily. After a twenty-one days’ siege, he succeeded in taking it in Djiyādād I, 620 (Feb. 2, 1222); he destroyed its fortifications, which the Franks had rebuilt during the last months of their occupation.

Ayyūb’s fortunes now began to turn. When, in spite of long negotiations between Da‘ūd, Ismā‘īl and al-‘Adil, no alliance was achieved, an agreement was made between Ayyūb and Da‘ūd through the intermediary of the prince of Hims. Ayyūb was released in Ramaḫīn of the same year and went with Da‘ūd to Jerusalem, where they concluded a treaty. Ayyūb was to receive Egypt, Da‘ūd Syria and the eastern provinces. The combination of the two princes naturally caused al-‘Adil great anxiety. He persuaded Ismā‘īl of Damascus to take the field against the two allies, while he himself went with an army to Bīlān. A section of the Mamluks, the Asḥafīya (called after al-‘Adil’s uncle, al-Asfah Mūsā), were dissatisfied, deposed him and sent him as a prisoner to the citadel of Cairo; after some hesitation they offered the crown to Ayyūb, with the request that he should come at once to Bīlān’s. Ayyūb and Da‘ūd went at once to Egypt and everywhere received a hearty welcome from the Amirats. After Ayyūb had occupied Cairo, he was recognised as ruler in the Friday Khutba and later confirmed by the Caliph in a diploma. Al-‘Adil was kept prisoner in the citadel and not put to death till 645 (1247) when he declined to move to the fortress of Shawbak, as the Saltān ordered. Ayyūb was now secure in the possession of Egypt. In the East (Mesopotamia) his son Tūn Shāh guarded his interests. The third member, Damascus, was still lacking to give him practically the empire of Saladin once more.

He therefore did not hand over to the unreliable Da‘ūd the lands between Egypt and Syria which he had occupied, nor Shawbak and Jerusalem, but declared the treaty of Jerusalem had been extorted from him. He avoided an open breach with him; however, by promising him Damascus as an independent possession when they would have conquered it together. In the next year (638 = 1240) Ayyūb hastened himself securing the foundations of his rule in Egypt. He put down the rebellious Beduins in Upper Egypt, had the Amirats whom he could not trust arrested one after the other and gave their fiefs to his own Mamluks; it was then that he began the buildings on the present Nile (Baḥr) island of Rōja (which was then still a peninsula); his palace and the barracks for his Mamluks called Baḥrīs, who gave their name to the first Mamlūk dynasty (see the art. BAḤRĪ).

In the same year fighting broke out between Ayyūb and his enemies. Da‘ūd realised that he would never get any increase of territory from him and Ismā‘īl rightly felt himself threatened when Ayyūb sought to gain possession of Damascus. In the East Lu‘lu’, prince of Mosul, was reinforced and had taken ‘Amid from Ayyūb’s son, Tūn Shāh, so that the latter now had only Ḥijr Kāfīr and Ka‘fāt al-Ḥalītham. Ismā‘īl and Da‘ūd concluded an alliance with the Franks, in which they ceded them Tiberias, Shāfīt Arbūn and Sa‘fīd, and allowed them to purchase arms in Damascus. Relations between the Muslim and Christian leaders became so close that they did many things for each other. Thus the Franks handed over the prince al-Dżawād, who had taken refuge with them, for a sum of
money to Isma'il, who at once put him to death. Da'ud and Isma'il's turn came next. The Franks of a mutiny of Muslim prisoners in Shafak Atnun, so that they moved the prisoners to 'Akka and put them to death there. The Franks and Isma'il's troops now marched together against Ayyub. The armies met between Ghaza and Ascalon. But when the Muslim troops went over to Ayyub, the Franks were defeated and lost many prisoners, who were employed in the building operations on the island of Roda in Cairo. The prisoners, however, were liberated by the peace concluded in the same year, which was a very favourable one for the Franks. They were allowed to retain their possessions in Palestine and Syria.

While in the next few years, Ayyub kept out of Syria, fighting on a small scale went on with great cruelty between Da'ud and the Franks. In 643 (1245) negotiations were going on between Ayyub and Isma'il; Ayyub's son, al-Malik al-Maghthith, was to be liberated from his imprisonment by Isma'il and Ayyub was to be recognised as sovereign in the Friday prayer. But when Isma'il learned that Ayyub was secretly stirring up the Khuwarizm to help him against these allies and they came next year (642), temporarily occupying Jerusalem and causing frightful devastation, Ayyub sent an army from Cairo to support the Khwarizm. Isma'il in turn sent troops to the Franks who joined forces with them. The hostile armies met at Ghaza in a terrible battle, in which the Khwarizm and Egyptians won a decisive victory. The Khwarizm booty was countless. As a result of this victory, the Egyptian troops were able to conquer Jerusalem and Palestine again, and they remained in Muslim hands down to 1918. Da'ud could only retain Kerak, al-Salt and Ajdun. The Egyptian troops besieged Damascus, which held out for a long time. Isma'il did not capitulate till next year (643 = 1245), surrendered Damascus and limited himself to Baalbek, Bosra and their dependencies. In view of these successes the Khwarizm expected high pay and as this was not to their satisfaction they entered the service of Isma'il and Da'ud and laid siege to Damascus on their behalf, which was defended by one of Ayyub's generals and still held out at the beginning of 644 (1246). To put an end to the Khwarizm terror, the princes of Aleppo and Hims, who had so far shown little sympathy for Ayyub, sent their troops against the Khwarizm. They were thereby forced to raise the siege and to go to meet the Aleppo troops. In the battle of Kazab the Khwarizm were severely beaten; one of their leaders was killed and another put to flight. Isma'il sought refuge in Aleppo and enjoyed the protection of the ruler there, Yusuf II, but lost Baalbek to Ayyub; his sons and wives were taken prisoner to Cairo.

Da'ud also was deprived of all his possessions except Kerak and likewise sought refuge in Aleppo. He appointed his youngest son his deputy. The ruler of Aleppo cherished a continual distrust of Ayyub. He tried to secure himself against any further advance of the latter by getting prince al-Ashraf to hand over Hims to him in 646 (1248) after a two months' siege.

Ayyub, full of wrath, went to Damascus to fight Yusuf II and sent one of his generals to Hims to recapture the town from al-Ashraf. On his arrival in Damascus he heard of the arrival of the Crusaders, whom Louis IX had led against Damietta. This induced him to conclude a peace at once with Yusuf through the intermediary of the Caliph. Although he was very ill, he set off in a litter and soon arrived in Aghmatain. He could not prevent the landing of the Crusaders and the capture of Damietta, as the discipline of his army had become slack through his illness. The Bedouins of Kina, to whom was entrusted the guarding of the district, fled like cowards, because they thought they had been abandoned by the Sultan's troops. Shortly before his death Ayyub heard with joy that the older sons of Da'ud, who, dissatisfied with the transference of authority in Kerak to their younger brother, had attacked and taken prisoner the latter, were handing over the government of Kerak to him in exchange. He at once sent one of his Amirs thither with troops to take over the fortress. Ayyub died on Shaban 15, 647 (Nov. 23, 1249); on his successor and the result of the Crusade see the art. SHADUK AL-DURR.

He was a skilful politician but no general; at least he hardly ever led his troops in person. His great ambition was to found an empire like Saladin and al-Kamil, which should consist of Egypt, Palestine, Syria and Mesopotamia. By the end of his life he had achieved a considerable part of this, but the independent principality of Aleppo and the principality of Mosul were not under his influence. He strengthened his position by the formation of a corps of Mamlik, a measure of expediency for the moment, but which, as often in similar cases, brought about the ultimate fall of his dynasty (see the art. SHADUK AL-DURR). He himself kept his Amirs and officials firmly in control; they never dared speak unmasked in his presence. He took a great interest, indeed an extravagant pleasure, in building. His palaces on the Nile peninsula Roda, in Kebir and his mausoleum were famous in their day. He founded the town of Salahiya as a frontier-fortress in Egypt.

AL-MALIK AL-SALIH NUR AL-DIN ISMA'IL of the line of Zang, son of the Atabeg of Aleppo and Damascus, Nur al-Din [q.v.], son of Zang. He succeeded his father on the throne in 569 (1173) at the age of eleven. A few weeks previous to his circumcision had been celebrated with great ceremony and alms for the poor on a particularly large scale. His name was mentioned in the Friday prayer and put on the coins without opposition from the Amir in Damascus and Aleppo or from Saladin [q.v.]. Only his cousin Saff al-Din al-Ghassar of Mosul, who was about to come to Nur al-Din with troops which the latter intended to use against Saladin, seized the opportunity to occupy with his army the towns in the District belonging to Nur al-Din. The Franks likewise thought it a suitable occasion and advanced on the fortress of Baniya. In this difficult situation the Amir had either to appeal to Saladin for help or come to terms with the enemy. They did the latter, left
Saif al-Din al-Qhaz in possession of his conquests and made it clear to the Franks that they would only be unnecessarily irritating Saladin, who had suppressed the rising in Egypt and had no longer cause to fear Nur al-Din. The Franks received an indemnity in addition and then retired. By the alliance with al-Qhaz the centre of the administration was transferred to Aleppo and Isma'il brought there in security; the regency and the government were taken over by capable men. The Amir of Damascus, whose influence was thus lessened, called in Saladin; the latter, enraged at the weakness shown in face of the Franks and at the surrender to al-Qhaz, wrote Isma'il a letter full of reproaches for not having asked his assistance. Just as earlier it had to be Nur al-Din's endeavour to gain possession of Damascus in place of the weak Barid Abak (see the art. 299), so now it became absolutely necessary for Saladin to have the real power in his own hands. Formally he continued to profess himself Isma'il's faithful liegeman. When he reached Damascus the citizen was not handed over to him; Rashin, one of Isma'il's eunuchs, only surrendered it after several months' negotiations when Saladin again declared himself Isma'il's faithful servant. No arrangement was come to between Saladin and Isma'il; on the contrary the Aleppo government was secretly negotiating with the Franks. Saladin resolved to take the offensive. He captured Hama and Hims and in Djumâa 11, 570 (end of 1174) proceeded to besiege Aleppo. But al-Qhaz had asked Gümîshîtkin as Isma'il's ally for assistance. The latter sent troops which, united with the Aleppo force, advanced on Hama and threatened Saladin from the rear. Isma'il, who cannot be denied the possession of a certain natural ability, conjured the people to defend him, the orphan, to the utmost as an act of gratitude for the benefactions of his father. Moved by his appeal the citizens of Aleppo defended the town by sorties and held out on this occasion and later ones also; indeed, the people of Aleppo were unique in Syria in frequently showing a feeling of independence and a certain pride in their citizenship. The common term of both of these Gemîshîtkin, advanced on Hârim and in 574 reduced the town to great straits. Isma'il sent it reinforcements on the appeal of its citizens and finally induced the Franks to withdraw on payment of an indemnity and by threatening to surrender the town to Saladin. He then had the town transferred to himself and appointed a governor. In 576 Isma'il became very ill and designated Yez al-Din Marjânî, prince of Muzal, as his successor, as he was unmarried and without direct descendants (and al-Qhaz had died shortly before), because he thought him capable of withstanding Saladin. In the following year (577 = 1180) Isma'il died. At his accession he was so young that he could not have been blamed for having lost his lands. How far he was responsible for the particularist policy by alliances with the Franks, cannot be decided.

He kept possession of Aleppo with a strong hand. He seems from childhood to have been popular with his subjects and he was always bravely defended by them and his death was honestly lamented.

AL-MALIK AL-SALIH SALAH AL-DIN HADîDÎ, son of Malik al-Ashraf Shahâna (see the art. Shahâna) of the line of Saltân Kalân, succeeded to the saltânate on the death of his brother 'Ali as a boy of 6 in 783 (1381). Some months later he
was deposed on Ramazan 99, 784 (Nov. 26, 1322) by the Atabeg Barkilj, as the kingdom required a man but not a boy on the throne. Hadijji was sent back to the harem and Barkilj, as had been arranged before, was appointed Sultan (see the art. Barqis). In 794 (1389) Hadijji, who was now 13, was once more installed as Sultan but badly treated and not allowed to interfere in the government by his Atabeg Yelbogha. It is related how he appointed his tailor court-tailor and gave him a robe of honour. The latter was robbed of his robe of honour, then beaten and imprisoned and only with difficulty liberated by one of the great Amir's. The Sultan was very angry at Yelbogha's shameful treatment of him; even his father’s old Manilaks and the camuchs and chamberlains were removed from him. He was relieved when Mişûl (see the art. Barqis) came into power again and allowed him more liberty. When Mişûl afterwards began the campaign against Barkilj in Syria, he took the Caliph and the Sultan with him to show the rightfulness of his war against the rebel. This step was to prove his disadvantage. While Barkilj was beaten in the decisive encounter, he captured the insufficiently defended tent with the Caliph, the Sultan and the Khâqân. Success was therefore on his side and in addition he was victorious in a second battle. He hastened with his important prisoners to Cairo where in the meanwhile one of his supporters, the Amir Bâkhd, had seized the citadel and had him named as Sultan in the Friday prayer. Hadijji was deposed by the Caliph by Barkilj's orders. He was allotted an abode in the citadel but was honourably treated by Barkilj who frequently visited him. In later years Barkilj gave up these visits as Hadijji, who was of a cruel disposition, ill-treated his slave-girls and had music performed and songs sung to drown their cries. He also took to drink and heaped insult on Barkilj when he visited him. The family of the great Khâqân ended with this unworthy son.

(M. SOBERNEHIM)

**AL-MALIK AL-SÂLIH SALAH AL-DIN SÂLIH, son of Sultan Muhammad al-Nâfîr of the line of Khâqân, was chosen Sultan when 14 years old in place of his brother Hâsm as a result of quarrels among the Manilaks in 752 (1357). The feuds between the Amir’s did not cease in his reign; the eternal quarrel between the governors of the Syrian provinces and the dignitaries of the court in Cairo was also an important factor. When on his campaigns in Syria he had succeeded by his prestige in withdrawing their supporters from the rebels and defeating them, the quarrelling among the cliques in Cairo but against his addiction of pleasure prevented him from conducting the government himself to prevent the predominance of anyone Amir with his followers. He thus fell a victim to the intrigues of the Amir’s; he was deposed in 755 (1354) and his brother Hâsm recalled to the throne.

(SOBERNEHIM)
Mahkam's daughter. He continued to have his residence in Julla, as Ibn al-Athir expressly mentions. In spite of the family links which united them, the friendship with Ibn Mahkam did not last. In the same year Salihi had his father-in-law murdered, seized Rahba and administered it in the name of the Faitunit Caliph in Cairo whom he recognised as his suzerain in the Friday prayer. In the next year (400 = 1000) he was involved in the affairs of Aleppo for the first time (see the art. JAMALIUS). Mansur Murad Al-Dawla, son of the Hamdanid Mamul Lahin, was ruling there but his position was challenged by the pretender Abu L-Abid, grandson of Salih Al-Dawla. The latter had taken the Kalbibi into his service but they had gone over to Mansur who had promised them large tracts of land. In consequence it was easy for Mansur to beat the Hamdanids. But when the Kilkbis became pressing in their demands for their reward and invaded and plundered his lands, he had recourse to an old stratagem. He invited the Kilkbis to a feast to discuss the matter, fell upon them and killed some and took the others prisoners. The story that 1,000 Kilkbis were killed on this occasion in addition to the chiefs may be an exaggeration. Salihi had so far humiliated himself as to declare his wife to be divorced in favour of Mansur. For three years he languished in chains. It was not till 405 (1014) that he succeeded in escaping, in chains, as some say, or as others report, after seeing them through with a file that had been smuggled unto him. After lying in concealment for some time he gradually collected the Kilkbis around him again and attacked Mansur. The latter was defeated, captured and put into the same chains, the story goes, as he had bound Salihi with. He was then released on certain conditions and handed over 5,000 dinars, 70 pounds of silver and 300 robes, but did not fulfill the condition that he should pay the Kilkbis half the revenues of Aleppo for the year 405 and marry Salih to his daughter. The Kilkbis then laid siege to Aleppo and Mansur, who could not trust Fahd, the commander of the Hamdanids, either in 405 (1014). Fahd came to terms with Salihi and delivered Aleppo over to Aba L-Abd, the Fatimid governor of Apamea. The Caliph, angry at the flight of Mansur, recognised 'Assal as governor, handed Fahd and Salihi to whom he gave the honorary title of Asal Al-Dawla and granted him the promised half of a year's revenue of Aleppo. (On the governors of Aleppo to the year 406-411 see above, p. 229 sqq.) The rule of the Fatimids with their continually changing governors aroused the discontent of the Beduin tribes, who combined against Fatimid authority in 414 (1024) (see above, p. 229 sqq.). Salihi conquered Aleppo, Hims, Hulub and Badin in the next two years and his authority stretched to beyond Anah on the Euphrates. When the power of the Fatimids increased again, the Caliph Zahir sent a new army in 420 (1029) under Anushkhatin Al-Dabiri against whom Salihi took the field. He fell in the battle of Ukhαnistan on the Jordan; his son Nasr (see the art. SALLI NASR AL-DAWLA) escaped with a portion of the army and retained rule over Aleppo. Salihi's importance lies in the fact that he led his tribe from Mesopotamia to Aleppo and gave them permanent settlements there.

Adiun, Zuhdi al-Halabi f Tertib Halab, St. Petersburg, Asiatic Mus., of the Asiatic Museum 522, Paris 1866, of which the part dealing with the Mirdāsid has been edited by J. J. Müller, História Mirdāsidum, Bonn 1830; Ibn al-Athir, Ḳamil, ed. Tornberg, ix. 148, 159 sq.; Ibn Khalīkān, transl. by de Slane, Paris 1842, i. 631; cf. also the articles JAMALIUS, above, p. 247 sqq. and HALAB, p. 237 sqq. (M. SOBERNEHEIM)

SALLI b. ṬARIF. We know very little definitely about this individual, the prophet of the Barghawata of Tanassāt (the western coast of Morocco) and the founder of their heresy, or at least it was he to whom it was attributed. According to the information collected by al-Bakri and which later writers simply reproduce, Tarif b. Shamsa Hb. Vašl P. Ḳalāḏ was one of the companions of Mūsaa, promotor of the ẁārid inscription in the Maghrib in the eighth century A.D. and the leader of a section of the Zanūt and of the Zawγar; then he was recognised as their chief by the people of the Tamassāt among whom he settled. His son Salihi succeeded him, declaring himself to be the prophet — the Ṣalihi al-shumā'īnīn of the Korān — sent to complete the mission of Mūsaa. He elaborated his doctrine, which he kept secret, then set out for the East to demonstrate his power in the lands of his father and brother and said that he would return after his seventh successor. Al-Ṭābi in his turn kept this teaching secret and was succeeded by his son Yūnos who preached it and spread it by force of arms in the course of the third century A.D. in the lands now comprised in western Morocco, but the chronology is extremely vague. The descendants of Salihi b. Tarīf continued to reign over the Barghawata down to the period of their defeat and the Ḳawāns of Salè (beginning of the eighth century), then by the Almoravids (end of the eighth century and lastly by the Almohads (middle of the ninth century). — According to other traditions, hostile in the Barghawata, Salihi was of Jewish origin and born at Barca in Spain, whence he returned to Barghawata given to his followers. But these traditions are of no value. It may be asked if this enigmatic figure Salihi is really the author of the heresy of the Barghawata or rather if Yūnos, who spread it, did not, in order to give it more prestige, place it to the credit of his grandfather who had mysteriously disappeared and whose retum was predicted. This would be quite in keeping with the psychology of the Berbers. An account of the teaching of Salihi b. Ṭarīf will be found in the article BARGHAWATA.

SALIH. Arab historians and genealogists are unanimous in stating that the tribe of whom Salih were the first Arabs who founded a kingdom in Syria, though the three princes mentioned by them appear not to be named on inscriptions or by Greek and Syrian authors. There is also doubt as regards their affiliation with other tribes; some reckon them to Ghasan, while others say they were a branch of Quda'a. Their first ruler is named al-Nu'man b. Ḳamr b. Mūlik who was succeeded by his son Mūlik after whom followed the latter's

his class. One night, after a drinking party at court, Uwais sent a slave with a candle in a golden basin to light him home. The next morning the king sent for the basin and received a verse in reply:

"Last night the candle was consumed, and in my lamentation I too shall be consumed, if the king demands the basin."

The poet was allowed to keep the basin.

As a reward for an ode which he wrote in answer to the odes of Khwajâ Zahhâr Fârâyb, Salâmân received two villages in the Rul district and some land in the neighbourhood of Sâwâ, his native town, in Sâyâybâl, and in his old age he retired from court and lived in peace on his estate.

Uwais, who ruled over Irâq and Khâbarâlân, died in 738 and Salâmân emerged from his retirement and mourned for some time over his patron's grave, chanting an elegy which he had composed on him. Salâmân himself died at an advanced age in 778 (738).

[Salâmân wrote both epic and lyrical poetry. There exist of him two Mathnasûs, viz. Fârâybînâma, composed in 761 (759) on demand of his patron Sulân Uwais, and Dâjânâghî Khwâ-zârân, an imitation of Khwâzârân, written in 762 (759). His lyrical works contain Ghasals, Nakhatî, Kifār, and the genre in which he excelled, Kifâdas. In this latter kind of poetry, notable in the artificial Kifâda (Kifâda-i mawzû) he surpassed even his greatest predecessor, Dhu 'l-Fikâr of Shirwan. Of poetical figures of Salâmân's contains especially the Twâjâl l. e., the incorporation of a smaller poem into a longer one (cf. Ibn. Khâl, Mazîyân, Gibb Mem. Ser. x. p. 362 sqq.). Many of the Kifâdas are reflexes of historical events of the time, Salâmân's Ghasals could not, in the eyes of Persian critics, win the renown of his Kifâda."

A lithographed Bombay edition of his Kulliyât is mentioned by Browne, Hist. of Persian Lit. under Tartar Dominions, p. 367]

SALÂMÂN AL-FARÎSÎ, a companion of the Prophet and one of the most prominent figures of Muslim legend. According to one tradition, the most complete version of which among the many that exist goes back to Muhammad b. Isâkh, he was the son of a diwan of the Persian village of Qâdiyân (or Nâyân; cf. Yâbût, ii. 170) near Isfahân. According to other stories, he belonged to the vicinity of Bâmharum and his Iranian name was Mâhâm (Maybût) or Râbêh (cf. Justi, Iran. Namens- buch, p. 217, 277). Attracted by Christianity while still a boy he left his father's house to follow a Christian monk and having changed his teachers several times arrived in Syria; from there he went right down to the Wâli 'l-Karî in Central Arabia seeking the Prophet who was to restore the religion of 'Irâbîm, the inimiceness of whose coming had been predicted to him by his last teacher on his deathbed. Betrayed by Kâbîl Bedâiûn, who was acting as his guides through the desert, and sold as a slave to a Jew, he had occasion to visit the Wâli 'yâhûr where soon after his arrival the hâdîrî of Muhammad took place. Recognising in the latter the marks of the prophet which the monk had described to him, Salâmân became a Muslim and pressed his liberty from his Jewish master, after being miraculously aided by Muhammad himself to raise the sum necessary to pay his ransom.

The name of Salâmân is associated with the siege of Medina by the Mekkans for it was he who on this occasion advised the digging of the ditch (khândaq) by means of which the Muslims defended themselves from the enemy. But, as Horovitz (see the Bibliography) has shown, the earliest accounts of the yâwmu l-khândaq make no mention of Salâmân's intervention, the story of which was probably invented in order to attribute to a Persian the introduction of a system of defence the name of which is of Persian origin. The other references to the career of Salâmân (his part in the conquest of the Irâq and of Fars, his governorship of al-Madinîn etc.) are equally devoid of authority and almost all date from the historian Taifî b. Umar, the bias of whose work is well known. Indeed, the fame of Salâmân is almost entirely due to his Persian nationality: he is the prototype of the converted Persians (just as the Abyssinians and the Greeks are represented by Bûlûq [q.v., l. 718] and Şu'âbî respectively), who played such a part in the development of Islâm; as such he has become the national hero of Muslim Persia and one of the favourite personages of the Shâhâbûyâ (cf. Goldscheider, Muh. Studien, i. 117, 136, 153, 212).

What explains the majority of the traditions relative to Salâmân is the fact that the Prophet foretells to him that the Persians will form the better part of the Muslim community; he declares him member of his own family (sâh al-hâlî); his nationality is equal to that assigned to Hasan and to Husain, the grandsons of the Prophet etc. In reality, the historical personality of Salâmân is of the vaguest and it is with difficulty that one can even admit that his legend is based on the actual fact of the conversion of a Medina slave of Persian origin.

The figure of Salâmân has had an extraordinary development. Not only does he appear as one of the founders of Shi'ism along with the Aşıkâl-Şu'ûfâ (Kitâb al-Luma', ed. Nicholson, p. 134—135) but the alleged site of his tomb very early became a centre of worship (at latest in the 17th century A.D.); cf. Yâbût, Kitâb al-Budûnî in the Shahîkheh Geography or Arabistern, vii. 341): it is still pointed out in the vicinity of the ancient al-Madînî, at the place called after him Salâmân Pâk ("Salâmân the Pure") near the former Asbâhî suburb. His sepulchral mosque, which was seen in its older form by Pietro della Valle in 1617 (Viaggi, ed. Gancia, Brighton 1845, i. 394), was renovated by Sulûn Murût IV (1623—1640) and
recently restored (in 1322 = 1904—1905) (Herzfeld-Sarre, Archäol. Reise im Euphrat- und Tigrisgebiert, ii. 262, note 1, based on information given by the learned Mesopotamian journalist Kazim al-Dajjali; and cf. ibid., p. 51 [topographical sketch] and p. 58). It is the object of numerous pilgrimages, especially on the part of Shi'=is, who fail to visit it in return from Kerbelā (cf. Amin, La Perle d'aujourd'hui, Paris 1902, p. 426—428). Other traditions locate the tomb of Salāmān in the vicinity of Isfahān, where there is evidence of his cult in the 14th century (Yākūt, ii. 170), and elsewhere (for Lydda in Palestine cf. Clermont-Ganneau, Études d'archéologie orientale, ii. 108).

Salāmān plays a remarkable part in the development of the futilām and the workmen's corporations. He is venerated as a patron of barbers, whence comes the tradition, unknown in ancient collections of tradition, which makes him the Prophet's barber (H. Thorning, Studien zu Bas Mداد et Tināqī, Diss. Kiel 1913, p. 33—57 and 85—90 = Beiträge zur Geschichte der islamischen Vergeistigung, Thüringische Bibliothek, vol. 16; Goldziher, Abhandl. ii. arab. Philol., ii. iv., lex.),. He is also one of the principal links in the mystic chain (tīla) in various religious orders (Depont and Coppolani, Les Confréries Musulmanes, p. 91). The veneration accorded to Salāmān among the Sunnis is naturally exceeded among the Shi'=is: not only do they attribute to him a mass of hadīth in honour of 'Ali and his family but among the extremist sects he is placed immediately after 'Ali in the series of divine emanations. The Nuṣairīya make him the third member of the trinity formed by the three mystic letters A ('Alī), M (Muhammad) and S (Salāmān), of which he forms the gate (88) (cf. Dussaud, La Région des Nuṣairī, p. 63; Goldziher, A. R. W., xii. 88).

The death of Salāmān is placed in 35 or 36 A.H., a statement which has no value except to indicate that the historian's tradition had no note of his activity after the accession of 'Ali (end of 35 A.H.). Like many other individuals, said to have embraced Islam after long experiences of other religions, he is credited with an extraordinary longevity: 200, 300, 350 and even 553 years (Goldziher, Abhandl., ii. iv., lex.)

SALMĀS, a district in the province of Aqhar-bāldān in Persia, to the north-west of the Lake of Urmiyah and having an area of 25 miles (N. to S.) by 40 (E. to W.). To the south the chain of the Aqghān (Afghān)-dagh with its pass Wer gewit (6,150 feet high) separates Salāmāt from the district of Urmiyah (Urtmi); the eastern portion of the Aqghān-dagh forms the lofty promontory of Karā-bāg [q.v.] which runs out into the Lake; at the end of it is the fortress of Gwārīn-i-Kār. In the west the Hartwil range (in Turkish Aral) separates Salāmās from the Turkish district of Albeák; the pass of Khānāsur is 7,500 feet high. To the north Salāmās marches with Khol; in the north-east with the district of Günei (*exposed to the sun*); former administrative name Arwanās-ws-Anār) which lies on the north bank of the lake and has Ṭaṣōd as its capital. Salāmās consists of the fertile plain watered by the Zola-Cai and of the mountainous districts of Cahrā, Shīnatāl and Sherpinā.

The region of Salāmās has been inhabited since very early times to judge by the remains of Khiā (Vandik) buildings. Later it formed part of the province of Persermaia belonging sometimes to Atropatene and sometimes to Armenia. Fausset Byzantines recognize the region of Salāmās in the province of Kortōk. Constantine Porphyrogenetus mentions Salaman alongside of Ḫuʾr (now Khul).

Al-Muqaddas describes Salāmās as a fine town with good markets and a stone mosque; the population in the fourth (ixth) century was of Kuri origin. In Yākūt's time the town was in ruins; among natives of the place he mentions Mīnā b. 'Amrān, a learned man who died in 390. According to Hāmid Allah Mustawfi, the city wall, 8,000 paces in circumference, was rebuilt by the vizier Khāda Tāj al-Dīn 'Ali Shāh in the reign of Ghiyān. The taxes of Salāmās in the viiiith (xivth) century amounted to 39,000 dinars. At the present day there is no town named Salama. The present towns of Khāna Shahr (the old town) in the north-west of the district on the road from Albeák and Khojūr. There are at Khana Shahr about 1,000 families of Shi'is who speak the Azeri dialect of Turkish, 100 Armenian families and a Jewish colony, always the sign of an old established settlement in Persia. The fact that the tower of Mīr-Khātūn is situated near Khana Shahr is equally significant.

The modern capital is Dilmun (written Dilmān), the name of which seems to indicate some connection with the Dailamites of Gilan (cf. the art. DAILAM) some of whose little forts are at Shahrūn, etc. (cf. Yākūt, s. v. Dailamaṣf). There are at Dilmun 1,400 houses (in 1852 only 300) and 8,000 inhabitants (almost all Shi'is). The town advantageously situated at the intersection of the routes in the centre of the plain is surrounded by walls of earth and has 5 gates. It has 11 mosques (those of Aghā, of the Shāfi'ī al-İslām, of Ḥāfiz 'Ali Rūzb, Ḥāfiz Sādik Aghā, Kanī, Sullī, etc.), and a tekkeya of dervishes founded by Rawjan Efendi (who sealed the date 1231 A.H.); cf. Vellāminoff Zemor, Scherf-Nasch, 1860, i. 18).

The plain of Salāmās about 1850 (Cirtkow) had 51 villages with 3,310 houses. Their number towards 1900 had risen to 108 with a population of over 50,000 of whom 63.3% were Shi'is, 13.9% Sunnis, 22.5% Christians and 1.3% Jews. A Alongside of purely Muslim villages or those with a mixed population were Christian villages of fair size: Arman (Kaf-i-ar), Haftwān, Perzāvakdīk, Syriacs (Khosrowas, Patawûr, etc.). The Catholic (Chaldæan) Syriacs were found mainly at Khosrowna, a prosperous hamlet of 500 houses with
2 churches (one built in 1844), the seat of a bishop and of a Lazarist mission. As early as 1281 a bishop of Salmiak was present at the synod in the Nestorian patriarch Mar. Yalabaha (Assamani, ii. 456) at Bagdad. The inhabitants of Khınwía were converted to Catholicism in the course of the eighteenth century. Among the Muslims of Salmiak there are a few Lek, who came originally from southern Kurdistan but claim to have come to Salmiak from Ispahan. The representatives of the different races and religions agreed very well together and were only disturbed by the turco-of Kurd, who live down from the mountains to plain in the plains. The exports and imports of Salmiak before the war amounted to a million gold roubles. The exports consisted of wax, almonds, skins and cattle. The Russo-Turkish fighting and the period of trouble that followed the war from 1918 onwards have seriously affected the prosperity of Salmiak.

Čahrík, the administrative centre of the mountainous region inhabited by the Kurds, is a little fortress built on a rock rising up in the centre of the gorge of the Zala-CaI (see the photograph in E. G. Browne, Nagûra 'l-Kûfî, 1916). In 1828 Çahrík was occupied by the Russians. In 1848 the Bâb (q.v.) was mentioned there before his execution at Tabriz. At this date the governor of Çahrík was Yâhûd Kân, brother-in-law of Muhammad Shâh. After the assassination of his son Timûr Kân, Çahrík was occupied by the 'Awdî Kurdî. This clan belongs to the great tribe of Sîjkîkh, which occupies both sides of the Persian-Turkish frontier here. According to the 'Awdî, their ancestors came from Dîyrîshk to Urmiya towards the middle of the xvith century. The tomb of their chief Ismâ'îl Âghî (on the Nasîr Citadel) is dated 1231 (1816). His son, All Kân, seized Çahrík in 1864. The son of 'Ali Kân, Dî'âtûr Âghî, a bold bandit, was put to death at Tabriz in 1905 by order of the governor-general. His younger brother Ismâ'îl (known as Simkö) played a considerable part in the troubles preceding these matches. In 1918 the Nestorian patriarch was assassinated at Kuhna Shâhî in an encounter provoked by Simkö's men. In 1922 a Persian military force drove Simkö back into Turkey.

Among the antiquities of Salmiak there should be noted: 1) the Khâlsî (Urumiana) buildings discovered by G. Porter (Trans. il. 60) on the hill of 'Îsâflûl Kâf near the village of Tamar; 2) a basilica (Sassanian) on the rock of Pi Çâ'îsh, representing Galerius, Nares and Tridates (Ker Porter, Ibid.; Flandin and Coste, iv, pl. 204—205) or, according to another explanation, Ardashir Fâhîd and his son Shâhristân (Jackson, Persia Past and Present, p. 87; Saur, Iran, Forschungen, p. 246); 3) the fortress of Gûwerîn Kân ("Hostess of the pigeons") on the rocks, sometimes forming a peninsula and sometimes an island in the lake of Urmîya. Some parts of G-E. may date from the Khâlsî period. N. Khravko in 1852 discovered there a fragment of a Muslim inscription of a certain Abû 'Abîdûrâsîn Bâhadûr Kân (the newspaper Kamal, Tiflis 1852, N0. 22, 23); 4) the brick tower near Kuhna Shâhî. Its inscription dated about 700 (733) and deciphered by Max von Berchem attributes its erection to Mir Khâtûn, daughter of Arghun Azâ. The last named is known as governor of Khûnsû in the time of Hântsû and Alâûî (cf. Lehmann-Haupt, Mater-
The tribe Salul is not inconsiderable; divergencies are encountered, Ghśāra e.g. occurring in both, from which it seems safe to infer that, though the general membership was known the affiliation was more than uncertain in most cases, which the ingenuity of the genealogists has not been able to bring into one common scheme. The chief difficulty was, no doubt, that Salul was the name of a woman, not of a man, in spite of the "ibn" of the genealogists and we have a case of matriarchy, not uncommon in the genealogies of Arab tribes.

Salūl is the name of one of the tribes of the Oghūs which traces its name and origin to the eldest son of Dagh Khan, one of the six sons of Oghūs Khan; in the texts the orthography is spelled سِلْفِوْس (It occurs in a Persian Oghūs-nāma in manuscript in my private library) or سِلْفِوْس (Oghūs-nāma) is rarely found; the commonest is سِلْفِوْس or سِلْفِوْس. As in the case of many other Turkish tribes the historical data regarding their ethnology are very scanty and confused. This much is, however, certain for their early history that from the earliest times they shared the fortunes of the other Oghūs tribes, since they came from the lands of Ill and of Ilgh Gōl on the banks of the Salūn [q.v.] and then migrated into Transoxania, Khwarizm and Khorasan, and finally, at the conquest of Asia Minor, a part of the tribe settled in Eastern Anatolia (for details see Köprülü Zaile Fu'ād, 'Türk-i 'ubūdī, Constantinople 1923, i. chap. 5). It was during the time that the Salgharīsh dynasty [q.v.] arose after the fall of the Salūn empire ('Tā'kī, Gibb Memorial Series, vol. xxi. i. p. 503); the royal poet Ḥūrābī al-Din [q.v.] was also a descendant of the Salūl ('Aṣrā b. Ardāshīr 'Astarābādī, Paxiaux’s MS, of the Aya Sofia, No. 3465). Seeing that, according to the translation of the Salūn-nāma, the Salūl, who had come into Asia Minor, were in the army of Bahram Shāh, prince of Er-sinjān, of the family of Mengbek (Housma, Recueil etc., iii. 37), we may conclude that the Salūl played an important part in the history of the Salūn-nāma of Asia Minor along with the Kāšī, Bāyāntu, and Bāyāt tribes (see the index in vol. iv. of the Recueil and J. Marquart, Über das Volkstein der Komaun, p. 189 in the Abh. G. W., new series, vol. xxii. i. Berlin 1914). According to a Persian manuscript of the Oghūs-nāma in my private library, the Karamo Gudgul [q.v.] belonged to the Karamo branch of the Salūl. It is very probable that the villages bearing the name Karamo in Afghanistan in the Causcasus were originally formed by the Salūl. Among the solid bodies of Turkomans that we find in these regions in the 15th century A.D. (al-NAṣṣ al-Dīn Ṭabīb, Histoire du Sultan Ḥīṣāl al-Dīn Mustafā, transl. Houdas, Paris 1895, p. 964, 374, 383) there were certainly these...
Karaman. After a large part of the Salur had migrated westwards, as a result of Saldjik policy, which aimed at dispersing the Oghur tribes in different directions, those who had remained at Murw and Sarakhs played a part in later history under the general name of Turkomans. In the opinion of several scholars a certain number of these Salur went between 1380 and 1424, via Sumarkand, Turfan and Sou Tcheou, to Si Ning where they settled and became the present Salar of Kan-Su (it still remains to be ascertained whence and when these latter emigrated). The Salur, reduced in number and in strength by these two emigrations, became gradually weakened by their fighting with the other nomad Turkomans and particularly by their continual incursions into Persian territory; they finally ceased to be of any importance as a result of the great losses sustained against 'Abd-Allah Mirza, son of Fath 'Alt Shahr, during the latter's expedition to Sarakhs in 1381.

Present state of the Salur. The Salur regard themselves as the oldest and noisiest of the Turkomans who live clustered round Sarakhs and scattered along the Russo-Persian frontier near Harir-Rud. They are divided into three groups: Alauci, Karaman and Amabelghe; these groups again have their subdivisions. Even with the following divisions:

Kiraih Agha: 1) Kiraih Agha, 2) Bech Ourouk (all these names after the orthography of the R.M.M., lvi, 66, 67).

These subdivisions are again divided into clans. Their numbers are variously estimated. Dohben puts the number of the Salur around Sarakhs at 2,000 tents, Petrouchitch at 3,000, Vambery at 5,700 (which is an exaggeration). Recently J. Castagnet has put it at 3,000 tents.

The number of Muslim Salur in the originally Tibetan district of Kan-Su is put at 70,000 (according to Grenad, 50,000). They dwell on the right bank of the Yellow River in an area stretching from Ouroumov to Tsao-Ho with the little town of Sin-Hoa-Tung or Salar as its centre; on the left bank they occupy some villages on a rather desolate and mountainous road between Si-Ning and Hua-Tcheou. These Turks are readily distinguished by their physical type from the other Muslims of Kan-Su; they have retained their Turkish language. Grenad has published materials concerning their dialect and has drawn certain conclusions from it regarding the origin and time of emigration of the Salur but these materials are neither sufficient nor reliable. The Salur are Hanafi Sunnis; they have always been Na'ijahbands and the dhikr 'ahmi is common among them. They despise the Chinese and as a rule are brigands.

(KORULTO ZADE FU'I)
the root s-m- and means "hearing," often passing into the thing heard, like music and hearing music; also, like s-s-m, "listening" (Lane, Lexicon, pp. 1427, 1429; Lisan, p. 26 sq.); it does not occur in the Kur’ān but it belongs to old Arabic even in the meaning, "a singing or musical performance" (Lane, p. 1617, under waqāf and references there). In lexicology and grammar it means, with sama‘, what is received on authority, as opposed to ḥayā‘ "analogical" (de Sacy, loc. cit., and Lane, p. 1429). In theology it, and sama‘, are opposed, in the same sense, to ḍā‘ ḍ "reason" (Goldziher, Die Richtungen der islam. Kalamusäugung, p. 136 sq., 166). But its principal technical use is undoubtedly in Sunnism, in which it means the listening to music, singing, chanting, and measured recitation in order to produce religious emotion and ecstasy (waqāf) and also such performances by voice or instrument. To this on all its sides al-Hazzālī has devoted a Book of the ḥayā‘, the viihth in the Sections of Custom, vol. vii, p. 454-end in ed. with commentary, ḥayā‘ as-saatā, cf. Hazzali above. It has been translated with commentary and analysis by D. B. Macdonald in H.R.A.S., for 1901, 2, and is the locus classicus in Islam for the whole subject of the attaining and controlling of religious emotion by such means, on its legal, psychological, theological and esthetic sides. Al-Hazzālī considers it both as an advanced mystic and experienced ecstatic and as an orthodox Ash‘rite and Shāfī‘ite, and this Book by its subject forms the kernel of his ḥayā‘. Al-Hujwīrī, an earlier Persian writer and a theoretically more advanced mystic, although still holding to its professed orthodoxy—has given to the same subject a chapter of his Kashf al-muqabbil; the translation (Gibb Memorial Series, vol. xvii.) by R. A. Nicholson, p. 393-420; see also, Mystics of Islam and Studies in Islamic Mysticism by the same author, both by index: Massignon, La Passion d’al-Halaj, by index and especially p. 780, 795 sq. Al-Kujairī has also given a section to this in his Risāla, ed. with commentaries of al-Arīf and Zakariya (Būlāk 1920), iv., p. 122—146; cf. on this passage R. Hartmann, Al-Kujairī’s Darstellung des Sufismus, p. 134—139. There are two vivid descriptions of scenes by Ḧāfīṣe darrīgh for sama‘ in Ibn Baṭṭūṭa’s Travels, Paris ed., ii., p. 5—7.

Bibliography: has been given above.

ŠAMAD. [See Allān l. 303.]

AL-SAMAK, Fishes. There are numerous kinds, some so long that one cannot see both ends at the same time—a ship had once to wait four months till one of these monsters had passed—but others are so small that one can hardly see them. They breathe water through the covers of their gills and do not require air in order to live; air is injurious to them all except flying-fish. They are very voracious on account of the coldness of their temperament and because in them the stomach is very near the mouth. Like snakes they have great strength in their movements, because they have not to distribute their nourishment over many limbs. Many fishes pair; others are produced from sand and slime or decaying matter. According to al-Dhahīrī, there are migratory fish, which one only finds at certain periods of the year, like migratory birds. Al-Kasimī gives 79 names of fishes and 130 names of birds for Lake Menzelah in his ‘Adīyah al-Makhdūṣat (ii. 119). The eating of fish is permitted by law, in whatever way they may have perished or been killed but they must not be roasted or eaten alive. Fishes are considered to be cold and moist and therefore good for people of a hot temperament and they soften the thin. Freshwater fish have many bones but have a fine flavour; fishes which live on mud are forbidden. If a drunk man smells fish, he becomes sober. Eating fish makes one thirsty. Al-Razi deals very fully with the cooking of fish and their wholesomeness. Wonderful tales are given in the 1001 Nights and are also told by al-Damīrī.

AL-SAMAKATAN, Fishes; the more accurate name for the last sign of the Zodiac which is usually called al-Hūr, the fish. It consists of 38 stars of which 34 belong to the constellation and four lie outside of it (khārijūn). The two fishes are, according to the usual view, connected by a hand twisted between their tails, ṣalāma ṣawqalās. This is called al-Kašf or is described as a thread, ḥai‘, which connects the two fishes in its windings (ṣallat tā‘ird).

(S. RUSKA)

SĀMĀNIDS, a Persian dynasty, descended from a certain Sāmān Khudāt. The genealogy down to Ismā‘il, the first really independent prince, is as follows:

[Diagram of the genealogy of the Sāmānids, showing the positions of the various rulers and their relations to each other.]

Sāmān Khudāt, who traced his family back to the celebrated Bahram Cubin, that is to a noble
family of Ray (Ibn al-Â†hir, ed. Tomberg, vii. 192), was, as his name shows, lord of the village of Samânî (in the district of Balîkh; cf. Hamza Isufâni, ed. Gottwaldt, p. 237; Harbîr de Meynard, Dict. gén., de la Pers., p. 297). When Samânî-khâudt had to flee from Balîkh, he sought refuge with Asad b. 'Abd Allah al-Kastî, governor of Khurâsân (cf. the art. ASAD, i. 475). The latter helped him against his enemies; Samânî-khâudt then adopted Islam. He called his son after his protector, Asad (Narshakhî in Schefer, Descri., de Boukharâ, p. 57 sq.). The further stories of Samânî-khâudt given in the Ti'rîkh-i Gusâda (apud Schefer, c. c., p. 99 sq.) are obviously legendary. The story that his ambition was aroused at the recital of a certain verse was only later transferred to him from another connection (Gibb Mem. Ser., xi. 26, 123 sq.). The Ti'rîkh-i Gusâda also says that Samânî-khâudt gained possession of Ashnâk.

Asad b. Samânî-khâudt had four sons, who seem to have played a part in the political history of the eastern Caliphate even in the time of al-Ra'îshân. The future Caliph al-Mu'mân is said to have ordered the sons of Asad to assist the commander-in-chief Harthama against the rebel Râz b. Lâthî and the Sânâ'nîs were able to arrange an agreement between Harthama and Râzî (Narshakhî, p. 75). In any case, when al-Mu'mân succeeded his father, he commanded Ghassân b. 'Abhâd, whom he appointed governor of Khurâsân, to give the sons of Asad posts in the administration (Narshakhî, p. 57; cf. Ibn al-Â†hir, vii. 192; Hamza al-Isufâni, p. 257). In 204 (819) Ghassân appointed Nugh b. Asad to Samârâzand, 'Abham to Fârghânâ, Yahyâ to Al-Shâh and Ughârûsâma and Ilâya to Harthama. When later, Tâhir b. 'Abbas became governor of Khurâsân, he confirmed these appointments. The Sânâ'nîs were thus a kind of sub-governors of the Tâhirîs. An older source, Hamza al-Isufâni, only briefly states that Nugh spent some years at the court of al-Mu'mân and that the latter then appointed him over Mâwarâ al-Nahr min fisal al-Tâhirîya (237). The first of the brothers to die was Ilâya; his death took place in the reign of 'Abd Allah b. Tâhir. The latter allowed Ilâya's son 'Umaymâd to succeed his father in Harthama (Ibn al-Â†hir, vii. 193).

But this branch of the family is of less importance than the line of 'Abham from which the Samânî dynasty was descended. When Nugh, who seems to have been a loyal servant of the Tâhirîs - he had aided 'Abd Allah b. Tâhir at the instigation of the Caliph al-Mu'asam to enter in infamous fashion al-Hassan b. al-Â†fîq, son of the famous general of the Turks who had fallen from favour (al-Tâbâri, i. 107) - had died without heir, Tâhir b. 'Abd Allah gave his governorship in Transoxania to the brothers Yahyâ and 'Abham. 'Abham is praised in later sources for his unselfishness and other fine qualities (Ibn al-Â†hir, vii. 192) in the fashion usual among eastern historians, when dealing with the founder of a dynasty. 'Abham was succeeded in the governorship of Transoxania by the eldest of his seven sons, Nâsir (we hear no more of Yahyâ; perhaps he died before 'Abham; Hamza al-Isufâni only knows of 'Abham as successor to Nugh). From 261 (874-75) onwards Nâsir can be regarded as an independent prince; in that year he was granted Transoxania as a fief direct from the Caliph (al-Tâbâri, iii. 1889; cf. Ibn al-Â†hir, vii. 193); the star of the Tâhirîs was on the wane and danger threatened from the 'Ash'ârids. But just as it appears from the words of Ibn al-Â†hir that he regards Nâsir after the grant of 261 as a de facto autonomous ruler dependent only on the 'Abbâsid government, so Hamza (p. 237) seems to consider Ismâ'il the first actual prince (fisâlîn wîlâyât man taškhdama Ismâ'ilîn... wîn fisal al-Tâhirîn), in the same year, 261, Nâsir appointed his brother Ismâ'il Wâli of Bukhârâ. In this region anarchy reigned; an army sent by Nâsir against the 'Ash'ârid Ya'qub b. al-Latîh had murdered its leader and gone to Bukhârâ, where the soldiery, after Nâsir's mîlîh 'Abham b. 'Umar had retired before them, appointed and deposed rulers as they pleased (so Ibn al-Â†hir). Narshakhî (p. 70) speaks of an invasion of the Khwâiremîs (Khwîrî, li. 260 = 874) when great devastation was wrought in Bukhârâ. The leader of the Khwâiremîs, Husain b. Tâhir al-Râzî, was soon forced to take to flight, but the disturbances went on as before. Then the Fâqi' Abbas b. 'Abd Allah b. Abî 'Abbâs appealed to Nâsir to send a governor to restore order. He sent Ismâ'il, according to Narshakhî, by the first Friday of the month of Ramaqân, 260 (June 26, 874), the name of Ya'qub b. Latîh was replaced in the Khwâirc in Bukhârâ by that of Nâsir. The Samânîs soon rendered harmless, although by perfidious means, the Khwâiremîs. Ismâ'il cleared the robbers out of Bukhârâ, defeated Husain b. Tâhir of Khwâiremî and forced the turbulent Bukhârâ aristocracy to obedience. He further sought to strengthen his position by an alliance with Râzî b. Hartama, lord of Khurâsân. The latter also handed over to him the administration of Khurâsân (Ibn al-Â†hir, vii. 193). This must have been shortly before the outbreak of war between Ismâ'il and Nâsir (272 = 885/886) for it was only in 271 that Muhammad b. Tâhir was appointed governor of Khurâsân by the Caliph al-Mu'tasim in place of 'Amr b. al-Latîh, whereupon Muhammad installed Râzî b. Hartama as his deputy there (Ibn al-Â†hir, vii. 290). The power of the Samânîs was by then so well established that these events in Khurâsân did not affect their position in the least; Ismâ'il's treaty with Râzî b. Hartama was an offensive alliance against Nâsir. In the first war, which broke out in 272 (Narshâkhî gives as the cause that Ismâ'il had not paid the annual tribute promptly; Ibn al-Â†hir speaks in general terms of intrigues), Râzî did not distinguish himself as an ally. 'Umaymâd b. 'Abbâs, a general of Ismâ'il's, seems to have induced him to work for a rapprochement between Nâsir and Ismâ'il rather than for a vigorous campaign (Ibn al-Â†hir, vii. 194). Peace was soon concluded between the two brothers. The war was renewed 275 (888) and ended in favour of Ismâ'il. The latter captured Nâsir, but was not quite strong enough to send him back to Samârâzand with the honours befitting his suzerain. There Nâsir remained till his death in 279 (892) (al-Tâbâri, iii. 2133) while Ismâ'il remained as his brother's mîlîh in Bukhârâ, until he succeeded him on the throne. Ismâ'il is regarded the first proper ruler (amir) of the dynasty. The list is as follows:

Ismâ'il b. 'Abham

Abham b. Ismâ'il

Nâsir b. 'Abham

Nugh b. Nâsir

'Abham al-Malik b. Nugh

Mansur b. Nugh

279-295 (892-907)

295-301 (907-913)

301-311 (913-943)

311-343 (943-954)

343-350 (954-961)

350-365 (961-976)
Nūḥ II b. Manṣūr . . . . 365-387 (976-997)
Manṣūr II b. Nūḥ . . . . 387-389 (997-999)
'Abd al-Malik II b. Nūḥ . . . . 389 (999)

By the time Ismā'īl (cf. above, ii. 545 sq.) died, he had considerably extended his kingdom, in addition to Transoxiana and Khorāsān, which had come to him after the overthrow of the Saffārīd 'Amr (see the above article). He was, so far as we can judge, one of the ablest rulers of his dynasty, energetic but unscrupulous. His loyalty to the 'Abābidān is, however, commemorated (Bukhārī, p. 50) and, indeed, the Sāmānids always pronounced, outwardly at least, this sentiment, if 'Utbī is right when he says that only the princes of this dynasty bore the title wali amri 'lam- minān (cf. Schefer, Description, p. 160). Anecdotes of Ismā'īl's piety and philanthropy are given in Ibn al-ʿĀthīr, vii. 194 sq., viii. 4 sq.

Under the second prince, ʿAbd, there already appears a factor, which contributed not a little to the decline of the dynasty, namely the mutinous and ambitious spirit of the notables. Even at his accession ʿAbd was forced to put his uncle Isḥāk in prison; another noble, Ḥārūn al-Kahbīr, who had considerable sums in his keeping, fled to Bagdād. The new Amir seems in other respects to have been of a resolute character. Ibn al-ʿĀthīr (viii. 89) attributes to him a sound judgment and the knowledge of men indispensable in a king. Nāṣr al-Kahbīr emphasizes his justice; it is only in a later compilation that we find him unfavourably criticized (cf. Schefer, Description, p. 98). In 298 (910/911) ʿAbd's general, al-Ḥusayn b. ʿAṭī al-Ḥusayn b. ʿAṭī al-Ḥusayn b. ʿAṭī, conquered Sūrān; among the leaders of this expedition was ʿAbd al-Dawātī, the ancestor of the powerful family that held the governorship of Khorāsān under the Sāmānids. Sūrān was at that time in the hands of a Saffārīd, al-Muʿāwīya b. ʿAlī b. Ṭalḥa. The latter was defeated and sent to Bagdād along with a former ghulām of ʿAbd b. al-Ṭalḥa, who was taken prisoner in Fārs. But the conquest of the country was not final. In 300 (912/913) a rebellion broke out, stirred up by the Khorāsānīs blind. Harūm in favour of a Saffārīd pretender, ʿAmr b. Yaḥyā b. Muḥammad b. ʿAmr b. al-Ḥusayn b. ʿAṭī al-Ḥusayn b. ʿAṭī. ʿAbd again conquered Sūrān for the Sāmānids, but further troubles broke out after ʿAbd's death. In 301 (913/914) the governor of Tabaristān was driven out by an ʿAlī; shortly after the receipt of this news ʿAbd was murdered by some of his ghulāms' (Ibn al-ʿĀthīr, vii. 46, 52, 58).

In this we may see the hand of those notables who, for one reason or another, were tired of the strong hand of the Amir. Significant also are the words which are put in the mouth of ʿAbd's son Nāṣr (Ibn al-ʿĀthīr, viii. 58). That ʿAbd, as later compilations report, showed so much favour to learned men that the ghulām became jealous is probably an invention (Schefer, Description, p. 94, cf. 101).

The detailed histories of the succeeding rulers will be found in the articles on them (ʿAṣl al-Malik, Manṣūr, Naṣr, Nūḥ). The following is a general account of the dynasty, the capital of which was Bukhārā from the time of Ismā'īl. The kingdom of the Sāmānids, which grew out of a subordinate governorship in Transoxiana, comprised in the period of its greatest extent Sūrān, Kirmān, Djiurdjān, Ray and Tabaristān, in addition to Transoxiana and Khorāsān. The reign of Naṣr b. ʿAbd, the patron of Rūshād, marks the zenith of the dynasty (301-331), not so much on account of the imposing personality of the ruler (in respect he was far inferior to Ismā'īl) as on account of the fact that after his death the decline of the kingdom begins to make itself apparent. The same factors, as had proved fatal to older Iranian dynasties, the turmoil of the notables (in this case the military aristocracy) and the danger from the northern nomads, the Turkish tribes, increased in strength when powerful figures like Ismā'īl and ʿAbd no longer sat on the throne and finally brought about the catastrophe. Sooner or later ʿAbd died than his uncle Isḥāk contested the throne with his son Naṣr; Naṣr I had to defend his throne against his relative ʿĪbrāhīm b. ʿAbd. From the reign of the last-named prince dates the rise of Alpātīn, who later seized Ghazna, when he had been removed by Manṣūr I from the governorship of Khorāsān and replaced by Abū l-Ḥusayn Simūdīr, and became the founder of the Ghaznavid dynasty (cf. the article ALFARIZI). The war, waged with little success against the Būyids and ended in the reign of Manṣūr I, contributed as little to the prestige of the dynasty at home or abroad. Things did not improve under Naṣr II. He tried in vain to put down the rebellious governor of Sūrān, Khālīf b. ʿAbd. Abū l-Ḥusayn Simūdīr, whom he had relieved from the governorship of Khorāsān and sent against Khālīf, made common cause with the latter. This was the beginning of a series of troubles which did not cease with the death of Abū l-Ḥusayn; his son, Abū ʿAli Simūdīr, was an equally faithless subject, who finally incited the Turkish prince Bukhārī Khān [q.v.] against the Sāmānids kingdom. The Turks, who had not only been defeated by Ismā'īl but had had the war carried into their own territory (al-Tāhīr, ii. 2138, 2249), now came to the front again. The days of Ismā'īl were past, however. Nāṣr's armies were defeated — one of his generals played the traitor — and he himself had to flee. Only the premature death of the Turkish leader enabled the Sāmānids to return to his capital in a short time again. Fārik, the general, who was said to have allowed himself deliberately to be beaten by the Turks, made an alliance with Abū ʿAli Simūdīr, with the object of driving Nāṣr from the throne. The Amir, who could not trust the nobles, appealed for assistance to the Ghaznavids, who agreed to help him. Nāṣr's two opponents were forced to seek refuge with the Būyids al-Dawla. The governorship of Khorāsān was given by Nāṣr to the Ghaznavid Subuktāgīn; the latter and his son Muḥammad received in addition the titles Naṣr al-Din and Saif al-Dawla (331-354). The war with the rebels continued till Abū ʿAli met his death and Fārik escaped to the Turkish ruler Naṣr b. Abū Iḥeṣ Khān (cf. above, ii. 465 sq.). War with the Turks did not result on this occasion; it was agreed that Fārik should receive the governorship of Samarqand. The brief reign of Manṣūr II was similar in its course. Iḥeṣ Khān, with whom some members of the military aristocracy had made an arrangement, conquered Bukhārā and drove out Manṣūr. With the help of Fārik, Manṣūr was soon able to return. A quarrel broke out between Abū l-Kāsim Simūdīr and Bektāsīn over the governorship of Khorāsān; Muḥammad of Ghazna also intervened, but the definite conquest of Khorāsān by
the gharnawids did not yet take place. Mansur was deposed by Fathik and Bektiyin and blinded. His brother, 'Abd al-Malk, was put upon the throne. Mayshar now intervened. He drove 'Abd al-Malk out of Khurasan and conquered it. On these events and occupation of Transoxania in the same year 739 (999) by Ilek Khan, when 'Abd al-Malk was taken prisoner, cf. above, i. 500. Here the dynasty ends; on the fate of one member of the family, who was carried off by the Turks, Isma'il b. Nush al-Muntaqir, see above, ii. 546.

More important than the political history of the Samanids, which is very similar to that of other Oriental dynasties, is another aspect of their rule which can only be briefly touched on here. Not only did learning flourish under the aegis of this house (one thinks, for example, of Isfandiyar, the translator of al-Tahmuri's chronicle; cf. above, i. 613 sq.), but it is from this epoch that modern Persian literature takes its rise. It is sufficient to receive a name like Rada'i; Firdaws also began writing in the Samanid period. It may be mentioned as a curiosity that one of these rulers himself, Mansur II, has left poetical fragments (cf. 'Awh, Lubab, ed. Browne, i. 25).

Tornberg, Index of proper names; al-Gashan, Zain al-Akhbar (cf. ii. 137; extracts in Barthold, Turkestan, not available to me); Description topographique et historique de Boukhara par Mah. Nersihky, ed. by C. Schefer, Paris 1892 (contains Narshangi's Ta'rikhi Bukhara in an abbreviated Persian version with a continuation and the history of the Samanids from al-Kazwini's Ta'rikhi Guzida, a Persian translation of the sections relating to the Samanids in 'Utbi's Ta'rikhi Yamini, which found its way into a later compilation, etc.); Deltener, Histoire des Samanides par Mirhodj, Paris 1845. (V. F. Büchner)

SAMARITANS. The Samaritans were in all probability the very first nation to come under the sway of the Arabic conquest and under the domination of Islam, a domination which lasted uninterrupted for centuries. Slender as the contact had been between the dwellers in Nablus and the Western World throughout the period of Roman and Byzantine rule, they were now entirely cut off from any further intercourse and became practically an isolated island in the sea of Arabic civilization. It is of symptomatic interest to follow up the all-embracing influence and to draw some conclusions pertinent to the problem of the character and depth of the influence which one culture is alleged to have exercised upon the other. We have on the one hand the rise of a new culture from the desert and on the other as apparently stagnant literary life which is now stirred, and we have therefore every reason, as it seems, to anticipate some traces of such an influence. This is a point of no mean importance as it has almost become a dogma to assume that whatever parallel is found in two literatures of which one is Arabic, the priority and originality belong to the Arabic which is the other does nothing but borrow. It is forgotten, however, that the Arabs were the last of the eastern nations to appear on the horizon of civilization and culture; they were the last and did not originate much at the beginning. On the contrary, they were simply the heirs of hoary civilisations; true they were eager to enter upon that rich inheritance and quickly added to it. But the way in which they succeeded in adopting and assimilating the older civilisations is a proof of similar adaptability in any earlier period, however scanty the literary data may be. Still the desire of ascribing to the Arabs all initiative and originality has greatly obscured or impeded such investigations: the synchronistic character of the Koran alone should suffice to prove this adaptability. No one doubts the multiple origin of Muhammad's sources of information and Jewish and Christian influences have been freely recognised. The greater familiarity with these literatures favoured such conclusions, whilst one might say that complete ignorance of matters Samaritan favoured the prejudice on behalf of the Arabs. Insufficient knowledge of Samaritan traditions and literature prevented the suggestion of any possible influence from that quarter. Added to this was the aforementioned assumption that if anything were found in the Samaritan similar or akin to Islamic tradition and practice, the Samaritans must have borrowed from the former. Recent investigations of the remnants of Samaritan literature, however, have shown that this literature represents a tradition which is at least a thousand years older than Muhammad and which contains writings going back to the first centuries before and after the Christian Era. The Samaritans are characterised by complete fossilisation and a fixed determination not to change or alter anything. No difference of importance can be discovered between the teaching and practice of the first centuries and those of relatively modern times; their whole strength rested in this immutability and in their imperviousness to outer influences. Continuity of life in hermetic spot and continuity of worship warrant the assumption of reliability of tradition, and if, as will be seen, a strong similarity will be detected between Arabs and Samaritans in some important points, the presumption is justified that the Samaritan tradition is the older and the Muhammadan the later, these having borrowed it from the Samaritans.

The numbers of the Samaritans in olden times and the position which they occupied have been greatly underrated. They were the representatives of the Northern Tribes and were scattered in large numbers throughout the Babylonian and Persian Empires and moreover were always found side by side with the Jews. By their doctrinal opposition to the Jews they formed as it were a bridge between the latter and other heterodox movements. Occasionally Jewish by their strict adherence to the Law of Moses, they yet rejected the Prophets and withheld their allegiance from the house of David. They were the first to accuse the Jews of tampering with the Holy Scriptures, an accusation which was afterwards taken up by Christian, Muhammadan and Gnostic sects. For the Samaritans to have changed a single jot or tittle of their dogmas, to have modified their form of prayer, or to have introduced new angelological views and tenets was a sheer impossibility; only a new sect separating itself from the older stem could have ventured upon such changes thereby justifying the separation. There were indeed sects among the Samaritans but as far as can be ascertained from the information which can be gleaned from Samaritan Chronicles they belong to a period centuries older
than the date of Islam and have nothing in common with it. One cannot, therefore, insist too strongly, that generally speaking and for the older period, the Samaritans owe nothing to Islam and that the indebtedness lies rather with the latter.

The conquest of Palestine by the Arabs must have been hailed with joy by the Samaritans; it freed them from the vindictive and tyrannical persecution of the Byzantine rulers and the Church. The darkest period for the Samaritans was from the time of Hadrian, who, as stated above, destroyed their literature, down to the period when the Arabs put an end to the Christian domination. The relations of the new rulers and the Samaritans seem to have been one of friendly intercourse; freedom of faith and liberty of action were granted to them on the strength of documents purporting to have emanated from Muhammad himself and corroborated by 'Ali b. Abi Talib.

The very words of these documents are given by Abu 'l-Fath in his Arabic-Samaritan chronicle, the genuineness of which has never been disputed. In any case they seem to have been a source of protection to the Samaritans for many centuries. It was only the fanatical intervention of some of the local governors which caused some temporary loss and trouble. On the whole the relations remained friendly, for besides the documents the Samaritans also belonged to the "tolerated" religions. There is a story related by Abu 'l-Fath in connection with the granting of these documents. According to him, three wise men, astrologers, had seen that Muhammad would arise and would succeed. One was a Jew, one was a Christian and one was a Samaritan. All three went to Muhammad to foretell his future greatness. He was much impressed, accepted their prognostications gratefully and was able to induce the Jew and the Christian to embrace his faith. The Jew was the famous Ka'b al-Ahbar and the Christian Ab Samyla. The Samaritan, however, refused to embrace the new faith and was able to impress Muhammad more than the others by telling him that he had a blashm between the shoulders, like that of a leprous man. Out of gratitude for the prophecy, Muhammad granted liberty of life and freedom of conscience to the Samaritans. This document, written by Muhammad, was corroborated by 'Ali b. Abi Talib, the name of the Samaritan was Sassata (?), who afterwards assumed the name of Kabsa, being the ancestor of the family of Kabsa on whom more later on. These three persons typically represent the three faiths which contributed to the shaping of Islam.

How much did the Samaritans contribute? The claim now put forward on behalf of the Samaritans is a novel one and only a few points will be selected where a proof of Samaritan origin can be advanced. This proof consists of showing that the Samaritan dogmas or principles rest directly on a sentence found in the Pentateuch. Their contribution may sound exaggerated but it will not be found so when carefully investigated.

I start with the well-known Muhammadan proclamation of faith: "La ilaha illa 'llah": "There is no God but Allah". This corresponds so closely as religious doctrines will allow to the Samaritan formula repeated over and over again by Marka and his contemporaries, Aunram Dara and Nana: *Lit. ilaha illa 'llah* (or, according to their pronunciation, and) "There is no God but one." To the Samaritan as well as to the Jew, the Unity of God was the fundamental principle as was also the case with Muhammad who proclaimed: Allah as the real God in contradistinction to the heathen gods. The name of Allah was the chief element and decisive factor of the new faith and had therefore to be chosen instead of Elah. The above mentioned Samaritan writers belong to the third or fourth centuries, two or three centuries before Islam. There cannot be any question of interpolation, as the formula appears so frequently and is so interwoven with the contents that it forms an integral part of the poems. It is also found in the "Prayer of Joshua", which is unquestionably one of the oldest Samaritan hymns and which stands in close connection with that ancient Samaritan Book of Joshua of which so little is known and to which reference will be made later on. The Samaritans assume the origin to be known and the occasion when these prayers were uttered. But whatever the date may be which can be assigned to it, there cannot be any doubt that the Prayer of Joshua must be older than Marka and probably only a little less old than the Enpira or Opening Prayer.

We also have in the Enpira the proclamation: "there is no God but one", and the reference to the Biblical passage upon which it principally rests (Deut., iv. 39), where the Samaritan adds at the end *mulebade* meaning "none else beside him", i.e. there is no God but that one.

Further the very first word of the Koran is *Bismillah*, "in the name of God". A special value has been attached to this formula and it has been used by Muhammadans for all and every religious function. In fact every religious action begins with it. It is not an invocation of God direct but a call on His most powerful and efficacious Name. This is part of Jewish and Samaritan mysticism and lies at the root of most of the magical speculations and conjurations of the ancient world. Only through Jewish or Christian, but more especially Samaritan, influences could Muhammad have obtained that knowledge, and then used this formula as he did, placing it at the very beginning of the Koran. The Samaritans derive it from Deut., xxxii. 3, where they read: *Kai he'vem Adonai e'rev, "For I call on the name of the Lord"*. — The Samaritan reading *he'vem instead of e'rev*, as the Jews read, approximates this form to the Arabic *bis-millah* — and this phrase occurs over and over again during prayer and in fact proceeds every other portion, even the Enpira. Marka has devoted a special portion of his Commentary to it and Kabsa has written a special treatise (see below).

Now as it stands in the Arabic, it is quite abrupt; it has no end and no connection with the form of invocation. What does it mean? "In the name of God the All-merciful." There is no verb to complete the sentence and it is not sufficient to appeal merely to the imagination. It becomes intelligible, however, if compared with the parallel Samaritan invocation "In the name of God we begin and finish", or, according to the variant: "In the name of God we begin and prosper". This form is the one constantly used among the Samaritans; it stands at the head of the *Atmeq* which contains the collection of the most ancient prayers and hymns, it stands at the head of the ancient phylactery and is at every beginning. In time this formula in its entirety
became abbreviated through its constant use and reached Muhammad in this form, in which the second part was so well known and understood that it was omitted. But it is really the beginning of a formula without the completion of which it has no real meaning. And even so, it rests upon a theory new to the Muhammadan world, i.e. the mystic nature of the Names of God.

I do not wish to discuss here the other words, the attribute "*All-merciful," which corresponds to the Samaritan duplication of the same word in order to express the superlative: *Raḥman ha-raḥmna, just like the Arabic. Let us rather turn to the *Fāṭihā itself, also a kind of succinct Confession of Faith. We do not find any such confession standing at the head of prayers or of any religious liturgical books among Jews or Christians; a comparison with the Christian Paternoster misses the point. It has nothing in common with it, either in form or in contents. But if we turn to the Samaritan we find precisely the same practice. Reference has already been made to that Opening Prayer called by the Samaritans *Enṣīrā. It is a more elaborate Confession of Faith, a prayer for Divine Protection which is said silently. It contains the principal doctrines of the Samaritans and begins with the words: *Asmadī ḥamchebha al fataḥ raḥmehka, "I stand before Thee at the gate of Thy mercy." Fataḥ = Fāṭihā, Opening or Gate, and thus the very word *fataḥ stays us in the face. Standing by itself it might be looked upon as a mere coincidence, but taking it together with the other declarations in the *Enṣīrā and the fact that it occupies the same prominent position as has been assigned to the Fāṭihā, this must be something more than mere coincidence.

In the *Enṣīrā there is also the *Kībēla or turning in prayer to the Sacred Mountain. True the direction towards the Sanctuary was also known among the Jews. Daniel (iv. 10) turns three times towards Jerusalem when bending his knees in prayer. With the Samaritans, however, it is a fundamental dogma, forming part of their religious practice, in as much as the worship on Mt. Garzîm was the principal difference between them and the Jews. Muhammad may have borrowed this practice from the Samaritans; like them he invested it with a special religious character more stringent than the Jews. He also changed the direction when he broke with the Jews showing thereby the importance he attached to the kibla.

If nafṣa, hence maṣīṣa, are words borrowed by the Arabs to designate worship, i.e. divine worship, then, though this word is Aramaic, still none the less curiously, the Jews have refrained from making any technical use of it for any liturgical purpose, nor does it seem to have obtained the same general acceptance in Syrian. In the Samaritan, on the contrary, it is in the *Enṣīrā and is the standing technical expression for *Divine worship*, and occurs over and over again in almost every hymn and prayer.

Of a far greater importance is the parallelism between Muhammad and Moses in the conception of the Samaritans. He is the Only Prophet and is venerated in a manner approaching apotheosis. The most important attribute assigned to Moses is that of the Only Prophet, Faithful Prophet, the Messenger chosen by God to perform the miracles and wonders; moreover, there is none like him, nor will there be until the End of Days. Such a designation is unknown in Jewish literature, where Moses is always known as Moṣhe Ṛabbienu, *Our Teacher or Master*. Is-nābi ha-rē'man or ba-galāh is the standing phrase among the Samaritans and rests among others on the statements often found in the Bible where the words *prophet*, *sent* and *sending* occur in connection with Moses. The close parallelism between this title given to Moses and the corresponding Raḥîl Allâh attributed to Muhammad can be followed down to minute details, but this is not the place for such an investigation.

Special attention must still be drawn to one point of extreme value. It is the declaration found in the Fāṭihā in the belief in a Day of Requital and Punishment. The Samaritans derived it from the words in the song of Moses (Deut. xxxii. 35) where they read *"On the day of vengeance and reward"* (leyte) instead of the Massoretic reading *"To me belongs vengeance and reward"* (*ḥi*). The Samaritans ascribe great eschatological importance to this song. This reading is moreover corroborated by the Septuagint and is thus of very high antiquity. The *"Day of Judgement"*, no doubt, plays a very great role in Jewish and Christian Eschatology, but, as far as the Jews are concerned, it has never been introduced in any formal principle of faith nor is it found in the liturgy, whilst with the Samaritans it has assumed a capital importance, so much that it forms part of the *Enṣīrā. Mention may also be made of the curious parallel that both Muhammad and the Samaritan recognise practically four angels only who form the celestial hierarchy: the names are somewhat different (Gabriel occurring in both) but there is the coincidence that they are limited to four. Jewish and Christian angelology was ever so much richer at the time of Muhammad.

In view of what has been said before I am giving here a slightly abbreviated translation of the *Enṣīrā, particularly of the portion affected by this investigation:

*I stand before Thee at the gate of Thy mercy, O Lord my God and God of my fathers, to recite Thy praises and Thy numerous greatnesses according to this my strength. I, the poor and weak one, I know this day and I have taken it to my heart that Thou art the Lord God in the heavens above and in the earth beneath and there is none else beside Him. . . . Blessed be Thy holy name for ever. There is no God but One. O Lord, we will not worship any one but Thee for ever, and we will believe only in Thee for ever and in Moses, Thy Prophet, and in Thy Writing of Truth and in the place of Thy worship, Mount Garzîm, Bethel, the mountain of rest and inheritance and of the * shekinah (sanctuary), and in the Day of Punishment and Reward. Ebye ather Ebye. The Lord is our God, the Lord is One alone. How great is His goodness and mercy. I stand in Thy hands. I pray for Thy mercy and loving kindness, and I speak: *O my Lord!* with my heart and with my soul.*

If we now compare the first part of the Fāṭihā we shall find that it runs as follows: *Praise be to God, the Lord of all creatures, the most Merciful, the King of the day of judgment. Thee do we worship and of Thee do we beg assistance.* The parallelism between these two forms of prayer is so striking that one must be dependent upon the other. In both the same fundamental dogmas
are proclaimed and in language they are similar to one another. There cannot be any question which of these two is the more ancient and therefore the original. The Samaritans did not wait one thousand years and more in order to formulate their prayer and Confession of Faith; moreover, it rests in every detail upon the words of Scripture to which distinct reference is made. Again almost every one of these principles is found repeated over and over again in Marjah and in the most ancient prayers and hymns in the Samaritan liturgy. Not so with Muhammad, who had to have recourse to other older patterns and so worked that neither Jew, Christian nor Samaritan could take umbrage at them; at the same time these new principles enunciated by Muhammad marked a definite break with the pagan beliefs of his contemporaries.

No less important is the parallelism between the Arabic Mahdi and the Samaritan Taheb. According to Ith Kha'din, "the whole body of Muslims throughout the centuries have held that at the end of the age a man of the family of the Prophet must appear who will strengthen religion and make justice manifest. The Muslims will follow him and he will gain possession of the Muslim kingdoms and be called al-Mahdi" (Guillaume, Traditions of Isfahan, Oxford 1924, p. 89 sq.). So far Ith Kha'din; the rest, which is evidently borrowed from Jewish and Christian legends about the Messiah and the Antichrist, belongs to a later period of tradition. As it stands, the agreement between the Mahdi and the Taheb is absolute: in both cases he is either the Prophet Rehoboam or the descendant of Muhammad or of Moses or the tribe of Levi. He is the Restorer who will bring the people back to the old faith and old glory and who will cause the faith to triumph. It is a different type from that of the Jewish Messiah or the Christian Jesus and he does not descend from heaven. He is human born and probably in both cases will live only for a short time.

Another point, the significance of which cannot be overestimated, is the fact that Muhammad seems to know the Pentateuch and the Psalms only; he does not know any of the prophetic or historical writings. If he had obtained his information from the Jews, this ignorance would be very surprising indeed, but if he had it from the Samaritans, it would be quite natural. A knowledge of the Psalms may have come to him from Jews or Christians, although it must not be forgotten that the Samaritans also have hymns and psalms of their own. Again among the Biblical personages Adam, Noah and Abraham are counted as prophets. No such position is assigned to them, at any rate, nor to the first two, by the Jews, whilst to the Samaritans Adam and Noah are High Priests and in more than one old treatise Adam is considered as a Prophet who foretells the future Deluge and to whom is entrusted the secret of the calendar.

Among the ceremonies the peculiar forms of washing and ablutions which are obligatory before prayer are common to Muhammadans and Samaritans and in the practice of prayer, in the prostrations and in peculiar attitudes etc., Samaritans and Muhammadans again show so much similarity that a close connection between them cannot be denied. We must realize that an Arab who wished to become a Muslim had to change entirely his mode of life and faith; he had to give up all his heathen practices and adopt not only new principles but also new ceremonies and forms of prayer. To him everything was new. With the Samaritan, however, all his ceremonies were the heritage of a long past; to them the slightest change meant giving up his faith and forfeiting the claim to which his people have clung with so much tenacity as being the true keepers of the faith. Any deviation from tradition meant annihilation, nor was there any reason why they should have done so considering they have never been forced to abandon their ancient faith; on the contrary, they were treated with every possible tolerance and even the virulent persecution of the Church had not been able to affect their adherence to the old faith and practice. The Jews offer an example in point; they have lived for a far larger number of centuries in Christian environment; however, every attempt has been made to induce them to forsake the religion of their fathers and when blandishments had no effect they were subjected to cruel persecution. They mixed freely with the world around them and yet not a single trace of Christian influence can be detected in Jewish religious practices and in their ceremonies and principles. How much less could this, therefore, be the case with the Samaritans, who were left to themselves and who show, indeed, no perceptible change in their principles and ceremonies as far as can be ascertained in their literary tradition.

Reference may be made to one more point, I mean the mysterious words or complex of letters at the beginning of many a Sura. I venture to believe that the parallel practice of the Samaritans will offer a satisfactory solution. The Samaritans denote the single sections of the Law (Kitaab) by taking out from the contents a single word which is sufficiently characteristic to denote the whole section. Thus these words become catch-words and are used as headings in the Arabic translation and especially in the extremely ancient phylacteries and amulets. There are also special lists drawn up of these single words (so in any code). In the phylactery this process of abbreviation has been carried one step further; there the catch-words have been reduced to single letters, not necessarily the initial letter, but very often a medial or final letter which has been chosen for the purpose. This discovery of mine has enabled me to recognize the same practice in the Greek Magical Papyri and the Latin conjurations, thus solving a problem which has baffled scholars for many a century. But besides the magical application, its principal value was to serve as a mnemonic device to assist the reader in remembering the section in question. This therefore is probably the meaning of those words and letters which are found at the heads of the Sruras; they are either catch-words picked out of the context or are a combination of letters taken from such catch-words and placed at the head, as in the case of the Samaritan Kitaab. More space has been devoted here to the consideration of these points than might perhaps be warranted for a brief survey of the Samaritan literature and the relation in which the Samaritans stood to the new religion rising as late as the seventh century. No one can gainsay the importance henceforth to be attached to the value of the comparative study of Samaritan traditions and Muslim
principles of faith. The subject has hitherto not yet been touched upon by anyone, and I venture to think that a new field of research has been opened up; I submit that the further study of the Samaritan material as soon as it is made more accessible will strengthen the results here tentatively offered for the first time. But I do not hesitate to say that a comparison of Samaritan and Muhammadan religious principles will show that the Samaritans have exercised a deep influence upon the monotheism of Muhammad's religious system and upon the shaping of Islam. Far from being influenced by Muhammad, the Samaritans were those who exercised the influence upon Muhammad.

The situation, however, changed with the final victory of Islam. I do not wish it to be understood that even after that period the Arabic literature had any decisive influence upon Samaritan faith and practice. True the Arabic conquest was not only a political domination, but was a religious conquest as well. A new form of faith was forcibly imposed upon the conquered peoples with the grudging exception of the few so-called "tolerated" religions. A new Holy Book was substituted for the others cherished and venerated by the other nations. Arabic thus became the language of the Sacred Script, and, of course, not only were Sijras of the Koran, the Liturgical lessons, recited in Arabic, but prayers and hymns were now composed in that language exclusively and the people forced to learn it. It became the new language common to all the peoples under the Arab sway and the only means of intercourse, with the result that it gradually superseded all the other vernaculars among the nations being also the Jews and Samaritans.

In a way Islam proved a greater danger to the latter than Christianity or Mazdazism. There was much similarity in dogma and practice and above all there was the pure monotheism common to them. It was natural that they should feel attracted to it, and through being treated with great tolerance and forbearance would not hesitate to accept their old vernacular, Aramaic, for Arabic. Thus the Samaritans gradually gave up the Aramaic dialect which they spoke and learned to speak Arabic and later on used it for their writing. It must be mentioned that the vernacular spoken by the Samaritans was invariably Aramaic and not Greek; there is no trace of Greek in old Samaritan traditions. Jews and Samaritans had long before discarded any use of that language. All the ancient literary monuments of the Samaritans were written in that peculiar Aramaic which is characteristically their own. The only exception was the Biblical Lessons which they read on Sabbath and Festivals and also recited on special occasions; to these were also added the Florilegia or anthologies called Ketef which consisted of Biblical verses strung together according to a special system for liturgical purposes. On the contrary all the prayers, poems and hymns were written in that popular Aramaic dialect. They also translated the Pentateuch into this same popular language and the Targum therefore takes its place as one of the oldest writings.

The question arises: when was this language displaced by the Arabic? Here the parallelism with the Jews and especially Jewish sects who developed under almost similar conditions will prove helpful. As far as can be ascertained, it must have taken at least two or more centuries before the people had so far forgotten the old Aramaic as to use Arabic freely and to introduce it into the literature of the Divine Service. Very little, if anything, can be traced back before the ninth century. It seems that dissenting sects, just like the Karaites among the Jews, were among the first to break with the old language and practice, although 'Amman still uses Aramaic for his writings.

With the Samaritans it was a natural sequence of events which forced them to abandon Samaritan Aramaic for the Arabic language. The knowledge of the former was fast dying out. As its use was primarily for liturgical purposes, it seems most likely that the first things to be translated were the prayers and hymns. They were all in Samaritan, as mentioned before, and it is obvious that the first duty would be to make the people understand their own prayers; the translation of the Bible must have come much later as there was no pressing necessity for this; Hebrew was and is the sacred language and to this very day the Biblical Lessons are read in Hebrew; the Targum sufficed to interpret it to the worshippers. According to information obtained by me from the Samaritans, its use was continued in the Kinga down to the end of the seventeenth century. The man appointed to that post was called the Hafla who was the last one died about that time. Since then the recital of the Targum has ceased. It must be noted, however, that its place has not been taken by an Arabic translation.

A careful examination of the Targum enables us to realise the growing influence of Arabic. As remarked before, the knowledge of the Samaritan language was fast disappearing; it was limited to the small circle of the learned and this has remained so down to this very day. There are still a number of priests who are conversant with the old Samaritan, but the rest know Arabic only. In time the Targum became merely a religious tradition to which they adhered with their usual tenacity, for it had lost its meaning for the people. Slowly some of the expressions became obsolete even to the better instructed, and so we see a gradual change until it is entirely discarded. Arabic glosses were introduced to explain archaic words, and later on these glosses became part of the text. Through being in constant use they were much changed and altered that after the publication of the Targum they were classified as ancient so-called Kutehen words, remnants of the pre-exilic period. It was the merit of S. Koho to have exposed that fallacy and to have recognised in them corrupt Arabic words. Later on a complete translation into Arabic was made. There is a serious difficulty in determining the date of the translation and the name of the author, may whether there were not two translations which have been ascribed to two men of the same name Abih Sa'id, but too little is so far known about the different recensions to allow of a definite conclusion. But before trying to answer this question it is necessary to ascertain the dates of the translation of the prayers in the Vehieh or Deltar, as the collection of the oldest hymns and prayers is called. It contains unquestionably the old stock which has been handed down from ancient times and is used in the prayers all the year round. A comparison of the text found in the old manuscript Cod. Br. Mus. Or. 5054 of the middle of the xiiith century and the latest copies from the middle
and end of the last century written by the late High Priest Jacob son of Aaron shows no appreciable difference. Without exception, the Arabic is written in Samaritan script in all the books used for divine worship. They use the Arabic alphabet for profane writings alone and it is only in quite modern times that they have consented to write the translation of the Bible in Arabic characters to face the Hebrew text. In these translations we do not find classical Arabic but mostly the Palestinian dialect; moreover, they very seldom use diacritical points to differentiate between similar letters of the Arabic alphabet. For a detailed survey of the literature of the Samaritans the reader is referred to the separate article on this subject accompanying this fasciculus.

It must be emphatically stated that practically none of these books have hitherto been published with the exception of the Arabic translation of the Pentateuch (Gen.-Lev.) (Koenen, Texte, Leiden 1854-1855), the chronicle of the 5th-1st B.C. by Wilmer (Gotha 1865), the Book of Josua by Jubb (Leiden 1848), and the few grammatical fragments of Maimonides' "Guide to the Perplexed" in G.G.N. 1820. Continuing to publish them in Arabic would reduce to a large extent the number of those who are specially interested in the traditions of the Samaritans, whilst publishing them, as anticipated by me, in their Hebrew-Samaritan version, would at once make them accessible to a far larger circle of scholars interested in these studies. Besides this I have also obtained through my correspondence lists of books extant and as far as possible such information as they could give of a biographical character. The latter, however, is extremely confused and contradictory. Under these circumstances my reference to bibliography can only be very brief inasmuch as copies of most of these writings still exist and are accessible are in my possession (they are not being acquired by the British Museum). Mr. D. S. Sassoon also has acquired from the Samaritans a considerable number of valuable manuscripts, modern copies of the same books, and at the same time also the old copies of works of the aforementioned Munsela, Shana Al-din and al-Akjarat, which were up to quite recently in the possession of the Samaritans. Steinmehl has given full references to all the other Samaritan manuscripts in the European libraries. Further reference should be made now to the articles of A. Cowley in the "Jewish Encyclopedia", x. 676 sq., who gives most ample references and also to his "Samaritan Liturgy" (Oxford 1909), especially the introduction, in vol. ii. 17 sqq.; W. G. Monton in "Hastings's Encyclopedia of Religion and Ethics", xi. 161 sqq.; Montgomery in "The Samaritans" (Philadelphia 1907), gives a brief sketch. Articles on the Samaritans and their literature in other encyclopaedias which have since appeared are more or less out of date and add nothing more to our knowledge.

(M. GASTER)

SAMARKAND, with Bukhara [q.v.], the principal town of Transoxiana (Sogdiana, Soghd [q.v.]; Mā warq al-Nahr), in modern times capital of the province of the same name in Russian Turkestan, on the south bank of the river Soghd (Wādi l-Soghd, Zārāfšāh) in a situation described by Oriental as well as Russian and European travellers as a veritable Paradise. The town — the second part of the name which contains the Eastern Iranian word for "town", ḵur, frequent in Eastern Iranian place-names (cf. Budhī-Soghd, 鞴, Christ-Soghd, hāth, kāth); while the first part has not yet been satisfactorily explained (cf. the attempts by Tomasek, "Centralasiatisches Studien", i. 133 sqq.) is first found in the accounts of Alexander's campaigns in the east as Maracanda, Marcand, Ariana (Pliny). Alexander occupied the city several times during the fighting with Sopotanes and, according to Strabo (xi. 11, 4), razed it to the ground (while Arab legend makes him founder of the city). Under the Diadochi — after the partition of 323 —, as the capital of Sogdiana, it belonged to the satrapy of Bactria and was lost to the Seleucids with Bactria when Diodotus declared himself independent and the Greco-Bactrian kingdom was founded during the reign of Antiochus II Theos; henceforth it was exposed to the attacks of the northern barbarians. From this time down to the time when the Arab conquest it remained historically and economically separated from Iran, although cultural intercourse with Western Iran only in the settlement of the eastern part of Transoxiana (cf. J. Marquart, W. Z. K. M., xii. 165 sqq.; the attempts made by E. West to refer Cnū and Chūstān in the Bundakhiṣṭān and Bahmanyyaḏ to Samarkand are very unsatisfactory). The only positive information is given by Chinese imperial historians and travellers (of which the former are unfortunately for the most part only available in obsolete translations). From the Han period the kingdom of K'ang-kū was mentioned, whose chief territory, K'ang, is definitely identified in the Tang Annals with Su-mo-kian = Samarkand (cf. the passages in C. Ritter, "Buddhist Records", v. 657 sqq.). According to the Annals of the Wei, compiled in 437 a.d. (cf. F. Bühler in J. Marquart, "Das Chronologium der altdrucken Inschriften", p. 65 sqq.), the Can-wu dynasty related to the Yüe-chi (Kūghan) had been reigning here since before the Christian era. Hūan-chang visited Su-mo-kian in 639 a.d. and briefly describes it (St. Julien, "Mémoires sur les contrées Orientales", i. 1857, p. 18 sqq.; S. Beal, "Śi-yuçū, Buddhist Records", i. 1884, p. 32 sqq., with valuable bibliographical note on p. 101).

The Arabs, who did not begin to penetrate systematically into Transoxiana till the appointment of Kūtaiba b. Muslim as governor of Khurāsān, found Samarkand ruled by the Tārkhan (Chin. To-ho). With regard to the statement in al-Birûnī, ᾽Αλβάρ, ed. Sachau, p. 101, (cf. Ibn Khurāfādhilīh, B. A. G., vi. 40, 5), that the native rulers of Samarkand bore the well-known (Turkish) title ṭarāqī (torun in the Orkhoon inscriptions), we are forced to see in this appellation a title and not a name as might appear from the Arabic sources. The reference is to a representative of one of the local Turkish dynasties, which in the last centuries before Islam had disposed of Epiphānīte rule in Transoxiana.

In 91 (709) the Tārkhan made peace with Kūtaiba on paying tribute and handing over hostages (al-Ṭabātib, ii. 1204); but was soon deposed by his subjects who were angered thereby. His place was taken by the Ḥāfez al-Ghārak, Chin. U-le-kia (al-Ṭabātib, ii. 1229), who was forced by Kūtaiba to capitulate in 93 (712) after a long siege of the town (ib. cit., p. 1247). He was left on the throne but an Arab governor was put in the town with a strong garrison; along with Bukhāra the town became a base for the further conquest and
Among native products — as Bābur tells us — the paper of Samarqand, the manufacture of which had been introduced from China, was specially famous. The most celebrated sanctuary of the town, also specially mentioned by Bābur and still held in high honour, is the tomb-mosque of Kāsim b. Aḥmad who is said to have converted the city to Islam in the time of ʿUthmān (cf. F. Goldscheider, Vorlesungen über den Islam II, p. 218).

Among the famous men of Samarqand of the period one at least must be mentioned, the theologian Abū Mansūr al-Mūtarrīdī (d. in Samarqand in 333 = 944; Mūtarrīd or Mūtārīd is a quarter of Samarqand; cf. al-Samʿānī, Ansāb, fol. 498v) who exercised a decisive influence on the dogmatic development of Eastern Sunni Islam.

After the fall of the Samānids, Samarqand was ruled by the Karakhanids (Ileq-Khāns; q.v., ii. 465 ff.). In 495 (1102) the Karakhanid Arslān Khān Muhammad owned the sovereignty of the Saltjūq Sandjar [q.v.]; his descendants remained in power when forty years later, after the great victory of the Karakhanī over Sandjar at Kātīn in 536 (1141) the Gurkhanīs became masters of Transoxiana. About 1170 Benjamin of Tudela visited the town and found 50,000 Jews in it (M. N. Adler, The Itinerary of Benjamin of Tudela, London 1907, p. 50). The Gurkhanīs were overthrown in 1200 by the Khwārizmshāh Muḥammad b. Takaşāb. The latter's terrible opponent, Čingīs Khān [q.v.], laid siege to Samarqand only a few months after he had crossed the Jaxartes, on his way from Bokhāra which he had completely destroyed. Fortunately for the city it surrendered in Bahīr I, 617 (May, 1220). Although the city was plundered and many of its inhabitants were deported, a number of its citizens were allowed to remain under a Mongol governor. For the next 150 years it was but a shadow of its former self. Ibn Batūta (iii. 52 sqq.) about 1350 found a few inhabited houses among the ruins.

The revival of the town's prosperity began when Timur after about 271 (1369) became supreme in Transoxiana and chose Samarqand as the capital of his continually increasing kingdom, and began to adorn it with all splendour. In 808 (1405) the Spanish envoy Huy Gonzales de Clavijas visited it in its new glory (cf. the Spanish-Hispanic edition of his itinerary by I. Szeornska, ed. Ruszk. Jev., 1881, xxviii. 325 sqq., etc., with a valuable French Index). He gives Cinnamoni as the native name of the town, which he explains as alde grucsa "a large (lit. thick) village"; in this we have an echo of a Turkish corruption of the name of the town based on a popular etymology which connects it with awma "thick". Timur's grandson Ulugh Beg (d. 855 = 1449) embellished the city with his palace Chīl Sūtan and built his famous astrological observatory there; on him cf. W. Hilgheim, Ulugbek 1 ege ovrom (Каи. Акад. Наук., 1918). A very full description of the city in Timur's day, which may be justly described as classical, is given by the memoirs of Bībīs (Bibowinima, ed. Halmovski, p. 55 sqq. ed. Beveridge, P. 54 sqq. transl. Pavét de Courtellie, i. 96 sqq. transl. Beveridge, p. 74—86), who captured Samarqand for the first time in 903 (1497) and held it for some months. In 906 (1500) it was occupied by his rival, the Orzhg Khān Shābānī. After his death, Bābur in alliance with the Safawī Isḥāq Shāh succeeded
in 916 (1510) in once more victoriously invading Transoxiana and occupying Samarkand, but by the next year he found himself forced to withdraw completely to his Indian kingdom and leave the field to the Ozbeks. Under the latter, Samarkand was only the nominal capital and fell completely behind Bukhara.

A new era began with the Russian advance across the Sir-Darya. On Nov. 14, 1868, General Kaufmann entered the old Timurid capital which was now finally lost to the Amur of Bukhara, Muraffar al-Din (1860-1885). Since 1871 a new Russian town has arisen in the west of the city, which has been linked up to the Transcaspian railway. In 1882 the citadel was restored. In 2000 the population was about 260,000. We have no reliable information regarding Okrugs since 1917. Unfortunately there is also a complete lack of historically accurate and complete descriptions of the architectural monuments (cf. W. Barthold, Die geogr. u. hist. Erforschung d. Orient., p. 173, 179) so that we cannot give any list of them here.

SAMARRA. I. Historical Topography. Samarra, which is now a mere village, lies on the east bank of the Tigris half way between Takrit and Bagdad.

The original form of the name is probably Iṣťrā. The following etymologies have been proposed: Sām-rā, Sām-Amorra, and Sāmorra; the last two meaning the place of payment of tribute. On the coins of the Caliphs Samarra is written Suṣa u ma'rār, i.e. "delighted is he who sees (it)."

Samarra was founded in 221 (836) in the reign of al-Mu'taṣim by one of his Turkish generals, Aḥmād, two parasangs south of the village of Karkh-Fairūz. The Caliph, perpetually threatened in Bagdad by the mutinies of his Turkish and Berber mercenaries, sought to settle in a less threatened capital.

Between 221 (836) and 276 (886) seven 'Abbadid Caliphs lived in Samarra. The references in the historians of the Caliphate and in the Arab geographers, Yaḥṣabā' and Yaḥṣāb, enable us to reconstitute with sufficient exactitude the development of this ephemeral capital during the fifty years of its existence. Built on the eastern bank of the Tigris at a corner where it turns to the south-east, Samarra lay between the villages of Karkh-Fairūz (or Karkh Bājaḍda) to the north and Maṭrā to the south-east. Two canals — one, the Kātal Kisaṭi, leaving the Tigris above Karkh-Fairūz, near Dūr, ran to the south-east to rejoin a second canal, the Yaḥṣābi, which, leaving the Tigris below Maṭrā, ran to E. S. E. — thus isolated Samarra and its eastern suburb into a kind of island. On the west bank of the Tigris opposite Samarra lay several castles cut off by a canal parallel to the Tigris, the Išāḳī Canal, entering the Tigris below Maṭrā, a little above Balkuwārā.

The town of Samarra proper lay on the east bank; its principal streets were the Sarāja Street which ran past the police office and the prison leading to the quarter which bore the name of the vizier Ḥasan b. Šahī; then came the street of Abū Ahmad b. Ṭāḥā, leading towards the village of Išāḳīya built on the Kisaṭi Canal; this village, which at first bore the name of a Turkish chief, was later called Mūḥammadiya. Five other principal streets (ṭārīs; this term applied to a main street is the same as has been revived in modern times for the streets of Cairo) are recorded: al-Hair, Barghamunah Turki (Turkish quarter), Ṣalīf (leading to the military camps or 'asār), al-Hair al-Djaddal and al-Khalaj. The historians give us numerous details regarding the important buildings in the vicinity of the castle and certain buildings in existence before the capital of the Caliphs was moved thither: the eight Christian monasteries, of which the principal were the Dair Ṭawawī*/ or monastery of the peasants*, the Dair Mār Mārī and the Dair Abī l-Sufrā. But the most famous buildings were the palaces. Al-Muṭaṣim, who lived at first in Samarra itself, had built there the palace called al-Djawsak; the Caliph Wāḥīb built there the castle called Ḥarrānī after him. The Caliph al-Mutawakkil, who lived at first in the Harrānī, built or enlarged twenty-four other palaces of which the best known are the Balkuwārā, Ṭurīs, Māḥrāt and Wāḥīb. Nine months before his death he was planning a new town to the north halfway between Karkh-Fairūz and Dūr: this town was called Djawsak after his praenomen. The historians, who record many details of the history of the palaces of al-Mutawakkil, say that he brought from Persia to use as timber the sacred cypress venerated by the Mazdaens at Kishmar. Other historians, noting that nothing remains of the splendid buildings of al-Mutawakkil, see in this so swift destruction a punishment from heaven, as retribution for his having ordered the destruction of
of the tomb of Ḥusain at Kerbelā in 236 A.H. After the death of al-Mutawakkil, Muntasir brought the court to Sāmarrā itself and took up his abode in the palace of Dūnakūs. Muṭamid, the last Caliph to live at Sāmarrā, built the palace of Mašālī on the east bank (255 A.H.).

Since the tenth century A.D., the majority of these buildings have fallen into ruins. The great mosque of Sāmarrā alone survived, which stood near the military camps, whence the name ʿAskar Sāmarrā frequently given to this part of the town. The piles of the Shiʿa very early located beside the great mosque the site of two tombs of their Imāms—the tomb of their eleventh Imām, Abū Muḥammad Ḥasan called al-ʿAskarī because he died in Sāmarrā in 260, and the ʿcave’ (jirāth) in which his youthful successor, Abū l-ʿAskar Muḥammad al-Mahdī, disappeared in 264 (878). We know that for a thousand years past, the Shiʿa pilgrims have been visiting this cave of Sāmarrā, believing that al-Mahdī will re-appear there at the end of time. Al-Samʿānī gives a list of individuals who bore the ishka Sāmarrā or Sarāmūrī. Another ishka also refers to Sāmarrā, namely Karkhī, applied to men born in Karkh-Farīsh.

SĀMARRĀ. II. Architecture

Sāmarrā is at the present day a vast area of ruins lying on the left bank of the Tigris about sixty miles north of Raghdād. These ruins cover the site of one of the richest and most prosperous cities of the ʿAbbāsid period, the building of which cost vast sums.

It was begun in 838 in the reign of the Caliph al-Muṭaṣim, son of Ḥarūn al-Raṣīd, reached its zenith under Dūnakūs al-Mutawakkil (847–861) and died with him.

It is a brilliant but ephemeral existence gives these ruins a special interest for the student of the origins of Muslim art. Unfortunately, for centuries past, the Arabs have been using the ruins as a quarry for building material, and have hastened the work of time, and in the end nothing has been left standing. Nevertheless, excavations recently undertaken have recovered sufficient information regarding the main lines of construction and decoration to give a very clear idea of the beauty of the Muslim civilization which was then shedding its lustre over the world, and was given expression in this “Abbāsid city of the 8th century.”

The most remarkable remains still standing are:

To the south of the old town on the bank of the Tigris, the great mosque built by al-Mutawakkil with the magnificent palace of the Caliph (Balḵawrawā) near it on the north. Opposite on the right bank of the Tigris, and built a little later, is a strong castle (Kasr al-ʿĀqīf) the imposing ruins of which are still visible. About half a mile south of this castle is a sepulchral monument (ubbat al-zulābīyya).

Near the ruins of the caliph’s city survives a modern Sāmarrā with a golden dome, which commands the desert. It contains some venerated Shiʿa sanctuaries.

The great mosque of al-Mutawakkil was built between 846 and 852. It is an immense rectangle with high walls of baked bricks, fortified with round towers. Within it on the south is the principal chamber (ḥaram) with twenty-five naves oriented towards the Ribba and three other smaller chambers on the other sides. All these naves, which were over thirty feet high, were supported by marble columns. The miḥrāb was also flanked by two pairs of marble columns and the prayer-niche was probably covered with valuable carved wood. The four chambers opened on to a large court, the centre of which was occupied by a fine fountain. Outside, against the north wall of the mosque, rose the minaret (māṭiyya), a kind of huge tower of Babel on a base 100 feet square. Around it outside wound a spiral stairway. This tower was visible more than a day’s journey away.

The ruins of Balkuwrawa, the Caliph’s palace, cover a vast rectangle over a thousand yards each way. On the west front there still stand three arches built of brick (ābjaql), the only remains which are now to be found. This palace was built by al-Mutawakkil for the prince al-Muthadi billah.

These three arches, facing the river, audience chamber and guest chambers (tawārīkh), open widely out on the valley. Terraces and fountains descend like cascades from them. Behind them are three inner courts which are succeeded by rooms in the form of a cross: throne rooms, numerous smaller rooms and private apartments with luxurious baths. On the east was a large rectangular garden with water-falls surrounded by walls with pilasters on to which open richly adorned little pavilions. To the north was a large creek with stairways of access, with caves and docks cut out in it. Finally behind all this was an agglomeration of houses sheltering the harem, others for the courtiers, a little mosque, and large barracks etc. for the caliph’s guard and his cavalry.

The various and diverse elements, which constituted the whole of this immense palace were harmoniously arranged. They formed a beautiful composition conceived on a vast scale in the form of a rectangle (of which the long axis perpendicular on the river terminated in the three vaulted rooms of the façade, richly ornamented with sculpture and mosaic.

The general composition of this palace is, however, of a type well known in the tradition of Irānian architecture. Around the Caliph’s palace were sumptuous and richly decorated residences. The richest as well as the most modest homes of the city are almost all built on the same plan. Built on the ground floor only they consist of a series of inner courts with fountains into which open the tawārīkh and the living rooms. This type has been perpetuated in certain parts of the east down to our day. The decoration of the interior is an important feature. High carved panels and very probably a decorative frieze always ornamented the public rooms and sometimes all the rooms in the house. The courtyards also were sometimes ornamented but the outer walls were never decorated.

The ornamental carving of the palaces and houses of Sāmarrā is of the same technical skill and gives a high idea of the development of the art at this period. Elaborate panels run
all round the rooms at a height of three feet. Above them are ornamental alcoves (Pers. takhla). The frames of the doors and the embrasures of the windows are ornamented. The ceilings are adorned with cornices and friezes. The majority of these decorations are in plaster finely designed and executed, sometimes set off with paintings. The designs are of very different types; some simple, with large veins somewhat coarse in workmanship. Others are more finely chiselled in the flat without relief, others again, accentuating the relief, treat the principal motif in round bosses.

Some of these decorations were carved out of the mass in situ, others were cast in a mould on a bed of matting (especially motives continually repeated), and then fixed to the wall. The forms of the designs are very varied. Some are very simple and severe, in straight lines without arabesques. These are the ones found most frequently at Samarra and which are, so to speak, the prototype. Others, on the contrary, often inspired by the fauna or flora, are more elaborate and richer; conventionalised flowers occupy the centre of geometrical figures repeated again and again and connected by ribbands, headings which come to a stop or intertwine, taking the shape of a vory of lyres or a vascuoepide. Others again were filled with movement unfolded in arabesques around bunches of grapes and vine branches.

It has been proposed to make a rigorous classification of the ornamental designs at Samarra into three distinct categories: Style I: Coptic character; Style II: Persian character; Style III: Mesopotamian character. A classification as methodical as this with labels of origin seems to us dangerous, premature and a source of error. One impression that can be retained from a study of the ruins of Samarra, the discovery of which is valuable for the history of Oriental art, is that several artistic influences met together in this past of Asia without conflicting or seeking predominance. It was a centre that attracted numerous artists from all parts of the globe, drawn thither by the wealth of the court of the Abbasid Caliphs and the protection they afforded. Samarra was to be the cradle into which Hellenic, Syro-Coptic and Indo-Persian art were fused together and a new art, Muslim art, was produced.

(H. Violett)

AL-SAMAW’AL b. ‘ADWY, more accurately AL-SAMAW’AL b. GHARIB b. ‘ADWY, a Jewish-Arab poet, whose residence was in the strong castle of al-Abak [q.v.] near Taim. Being a contemporary of Imru’-l-Kais [q.v.] he must have flourished about the middle of the sixth century A.D. One of his grandsons is said to have adopted Islam and to have lived into the Caliphate of Mu’tawiya when he was then very old. Except his name there is hardly a trace in tradition of his being a Jew; it is not even certain that he was of Jewish descent.

All the poems ascribed to al-Samaw’al have been collected by Cheikho in his edition of the Divana. Of the few pieces said to have been composed by him a considerable part cannot be considered genuine, including those which most readily suggest that they were written by a Jew. The few remaining ḏa’tā, the genuineness of which there is no reason to doubt, contain no indication of the fact, which is not, however, to be doubted, that al-Samaw’al professed the Jewish religion. They much rather breathe the spirit of the old Arab poetry and show in form and matter clearly that he, like his co-religionists, had become in external matters assimilated to the surrounding Arabs and in poetry followed Arabic forms. Poems have also been handed down that are attributed to a son and a grandson of al-Samaw’al.

Al-Samaw’al owes his fame less to his poetry than to his devotion in fulfilling his pledges to his guest Imru’ l-Kais, which has become proverbial (‘more faithful than al-Samaw’al’).

After Imru’ l-Kais b. Hudjir—the story seems quite reliable in its main facts—had been leading an unsettled life of adventure in his fight to avenge his father and had lost most of his followers while fleeing before al-Mundhir, king of al-Hira, he sought refuge in al-Samaw’al’s castle and was hospitably received with his few followers. When, some time later, he went to the court of Byzantium he left his daughter and his cousin with al-Samaw’al along with his valuable armour and the remains of his paternal inheritance, and asked him to guard them. During the absence of Imru’ l-Kais, al-Samaw’al was besieged in his castle by an army, which had presumably been sent by al-Mundhir, because he would not obey the demand to hand over the property of his guest. By chance it happened that the leader of the hostile army captured a son of al-Samaw’al and threatened to kill him if Imru’ l-Kais’s property was not handed over. As al-Samaw’al steadfastly refused to betray his trust he had to see his son die before his eyes. The besiegers then withdrew without achieving their purpose.

(R. PARÉ)
SAMBAS, a Malay kingdom on the island of Borneo in the N. W. of the Dutch residency of "Westerveldtland" van Borneo. In the west and north-west from Cape Data to the mouth of the river Durii it is washed by the China Sea, in the S. and S. E. it is bounded by the districts of Mampawa, Landak and Sanggau (the Durii river forms the boundary for part of the way), in the E. and N. E. by Sarawak (British North Borneo); some of the islands off the coast also belong to it. The country is mountainous, especially on the eastern frontier; the ground slopes gradually to the W. and N.; the coastlands are almost everywhere low, flat and swampy, but not unfertile. Of the rivers the largest is the Great Sambas; Sambas, the Sultan's capital, lies on the Little Sambas. At the end of 1915 the number of inhabitants had risen to 123,600 of whom 26,000 were Dyaks, 67,000 Malays and 30,000 Chinese; the two first classes are under the Sultan (at present Muhammed 'Ali Saft al-Din) who, very much dependent on the Dutch officials, rules the land with his four ministers (voort). The Chinese are direct subjects of the Dutch government. It should be noted that the term Malays does not signify a single ethnic group; the deciding factor here is the Muslim religion: as soon as the heathen Dyaks become converts to Islam, they are counted as Malays and the fairly numerous Javanese and Buginese are also usually counted as Malays. The steady advance of Islam is no more to be ascribed here than elsewhere in the Malay Archipelago to definite missionary activity but primarily to the many marriages of Malays with Dyaks, which has led the government further to the fact that the social position of the Malaymadans is better than that of the still unconverted natives. The Dyaks are no longer nomads and live on good terms with the rest of the population; they are engaged in the collection of jungle products and carry on a primitive agriculture, mainly on dry fields. The agriculture of the Malays on the coast is also of little importance. The Chinese form the most industrious part of the population; their methods are on a much higher level in every way: they grow rice on well tilled, wat fields and grow other produce also for export. Their position in W. Borneo was for long a very peculiar one. The first immigrants into Sambas (about 1760) were gold-diggers and their number increased so rapidly that they soon formed an important element in the population. They organised themselves into numerous societies and even managed to attain a certain political autonomy; it was only in the latter half of the sixteenth century that the Dutch government succeeded in breaking up these societies. Gold-washing no longer pays and the majority of the Chinese now live by trade and agriculture.

We have no reliable data regarding the early history of the land and the beginnings of the spread of Islam; the kingdom was probably founded by Malays from Djohore; about the middle of the sixteenth century it was subject to the Javanese kingdom of Madjapahit. In the early years of the sixteenth century, about the time when the Dutch East India Company concluded its first commercial treaty with Sambas (1600), the kingdom was under a Malay chief, Ratu Sapodak (Fangaran Ratu), who recognised the suzerainty of Djohore. Ratu Sapodak had only two daughters and after his death he was succeeded by his son-in-law and nephew Ratu Anom Kusuma Yuda. The latter had only a brief reign; he was soon driven from the throne by his brother-in-law, Radin Sulaiman, a son of a chief of Brunei (Radja Tengah) and of a sister of the Sultan of Sukadana. After his accession Radin Sulaiman took the name of Sultan Muhammad Saft al-Din. He was the founder of the present reigning house.

W. H. Van Rees
and their instruction. He died on Thursday the 13th of Dhu 'l-Qa'da, 911 A.H., and was buried in the Bâkî (cf. the art. Bâkî, AL-GHARADA) cemetery between the grave of Saiyid Ibrahim and the Imam Mâlik.

Among his numerous works composed during his residence in al-Madina the principal one is his History of the City. He had originally composed it upon a large scale under the title al-Fâsid ibi-Alâhâr Dîr al-Muçuifâ. At the request of a patron he had made an abbreviation of this book to which he gave the title: Wâfih al-Wâfi. This abbreviation he had completed on the 24th of Rajab, 847 A.H., and sent it with him in Mecca when his library in al-Madina was destroyed by the fire. This fortunately saved the chief contents of the work. Later he made a further edition contended from the abbreviation, which he编, according to some manuscripts and the printed editions (Bâlîq 1285 and Mecca 1316). In the year 893 and called Khâlîquzat al-Wâfi. This work has become our principal source of information in the history and the topography of the city and the rituals for the visit of the grave of the Prophet. In addition he composed a number of other works of which nine are enumerated by Brockelmann in his G.A.L., to which Arab biographers add several more which may have been lost. They comprise books on grammar, tradition, theology, law and the rituals of pilgrimage. Special mention is made of his collection of Tawâbit in one volume collected by himself on all branches of legal knowledge. They appear to contain the arid discussions which form the favourite theme of Arabic authors of his time.

(F. KREMKOW)

**SâMÎ, Shams al-Dîn, SâMî Bey FRASHERI,** a Turkish author and lexicographer, born at Frâsher in Albania on June 1, 1850, of an old Muslim Albanian family whose ancestors are said to have been graved at this place as a sib by Sulthân Mehmed II. He was educated in the Greek lecture at Janina, at the same time receiving instruction from private tutors in Turkish, Persian and Arabic. He then came to Constantinople, where he devoted himself to journalism and founded the daily paper Salâm about 1875. He began his literary career about the same time and attached himself to the new school founded by Kemal and Shinâst. From this period dates his novel Tawâhîsh-b-Tawâlit wa-Fisîm, which contains an indictment of the Turkish marriage system (1872), and the drama Beît (the scene is laid in Albania, produced in 1874), Šâtî Yekhî (1875) and Kâms. The production of this last piece, which describes the Persian revolution against the tyrant Daâkhtâr, resulted in its being banished for two years to Tripoli in North Africa. After his return he devoted himself almost entirely to his famous lexicographical works. These are the Kâmüni-ı Frâseuti (French-Turkish, 1882, and Turkish-French, 1885), the six-volume encyclopedia Kâmüni-ı Alâîm (1889—1898) and the Kâmüni Türkî in two parts (1899 and 1900).

Although in his latter years he suffered a good deal in body and in spirit, his great industry never left him till his death. He died in Constantinople on June 18, 1904. He had spent the greater part of his life in his study. In the last years of his life he looked 75, although only 54.

In the literary field Sâmi could not claim a place beside his contemporaries Abd al-Ḥaqq Hâmid, Ekrem Bey, etc. Besides the newspapers themselves, we have as evidence of his journalistic work a series of pamphlets which appeared in the Lijîh Kûşbûbahî and are in part taken from his newspaper articles (Medeniyet-ı Islâmîye, Kândî, Kâmüni, etc.). He also made several translations from the French (Sâvîlî, Sâvîlîn F. Vâlîhîn, etc.). He also published select poems of Bâkî and an edition with commentary of the poems ascribed to 'Alt b. Abd Tâlib. But his greatest merit lies in his great work in lexicography and philology. This includes several school-books on Turkish and Arabic grammar, and an unfinished Arabic dictionary of which he speaks in the preface to his Kâmüni-ı Türkî.

This last work is important in several respects. In the first place the order is strictly alphabetical and the arrangement of the different meanings clear and lucid; it is a great advance on previous lexicographical work by Turkish scholars. Sâmi Bey's Lijîh was also influential. Secondly the choice of the words included is of importance in so far as it represents a compromise between the different views prevailing in his time on the development of Turkish. Sâmi himself urged a far-reaching Turkish purism (as is evident from his contribution in the introduction to Meşmed Emin's Türkî Ş sûreti of 1898) and would have liked to replace most Arabic and Persian words by Turkish words that had fallen into disuse. He adopted of the latter those whose revival seemed indispensable, but by the adoption of a great mass of Arabic and Persian material he made great concessions to the literary language. His dictionary is therefore a true picture of the educated Turkish of his time. Sâmi, however, does not seem to have had any traceable influence on the development of Turkish.

Among his unpublished material, of which the unfinished Arabic dictionary has already been mentioned, there are also comprehensive studies on the Kûşbûbahî Bâlîq and on the Orkhou inscriptions, as well as works on Persian and Eastern Turki.

He also worked at Albanian. He produced an Albanian alphabet and a grammar. He left poems in this language and a book on the future of Albania. His drama Beît, already mentioned, also shows his love for the land of his birth.

On Sâmi Bey's brother Nâ'sîn Frâsîrî (1846—1900) who was a great Albanian poet cf. Bâhîber in Itt., 1921, xi. 99.

**Bibliography:** Biography of Sâmi by Ismâ'il Hâkî in the 'Otkûmanî moğhâbih iktîsâlî series; Paul Horn, Geschichte der türkischen Modernen, Leipzig 1900, p. 38; Revue d'Orient et de Hongrie, Budapest Jan. 20, 1902. The unprinted and unfinished works of Sâmi are in the possession of his family to whose kind information the writer is indebted for some of the above-mentioned facts. (J. H. KRAMER)

**AL-SAMIRA.** [See SAMARITANS]

**AL-SAMIRI,** "the Samaritan", is the name in Kur'ân, xx. 87, 90, 96, of the man who tempted
the Israelites to the sin of the golden calf. This sin is twice mentioned in the Qur'an. The first narrative, Sura vii. 146—153, tells of the sin of Israel and Aaron as in Exodus, xxxii., but with the elaboration that the calf cast out of metal lowered. The second version, Sura xx. 85—97, which is shown to be later by its additions and was considered by Muslim tradition also to belong to the Medina period (Nöldeke-Schwally, Geschichte der Quellen, p. 124, 125), makes al-Samiri the tempter of Israel. At al-Samiri's bidding they cast their ornaments into the fire and he made out of them the lowing calf, which was worshipped by the people although Aaron advised them not to. When challenged by Moses, al-Samiri justified himself by saying that he saw what the others did not see, the footsteps of the messenger (according to Muslim tradition: the tracks of the hoof of Gabriel's horse). Moses then announced his punishment to him: "As long as thou livest, thou shalt call out to those that meet thee ðæ mīlāka "touch me not".

Abraham Geiger thought that Muhammad had perhaps confused al-Samiri with Sammael, the prince of darkness. According to one view, Sammael lowered concealed in the calf to lead the Israelites astray. In reality this feature in the Firās Ṳabbī Eīṣer is imitated from the Muslim legend and the otherwise unknown proper name al-Samiri replaced by the name Sammāl of somewhat similar sound. S. Fraenkel (Z. D. M. G., i, 1917) derives the story of al-Samiri in the Qur'ān from a lost Jewish midrash which aimed at diverting the grave sin of making the golden calf from Aaron to a Samaritan.

The figure of al-Samiri was first put into its true light by Goldscher (see below). Goldscher explains him as the representative of Samaritanism through the story of the Samaritan accession. We have already evidence of this accession in Sirach, L. 25, and the Gospels Luke vii. 50, John iv. 9. Goldscher collects Jewish, Christian and Muslim references, which show that the Samaritans considered contact with those not of their stock as impurity. What Muhammad or rather his presumed Jewish source knew as a ritual principle of the Samaritans is put back into earlier times and explained as a punishment of al-Samiri for having incited the Israelites to make and worship the calf.

Goldscher's convincing arguments can be reinforced by the early Muslim interpretation of the Qur'ān. Al-Ṭabarî himself following an earlier tradition sees in al-Samiri a prominent Israelite of the Samaritan tribe as a punishment for his sin Moses forbade the Israelites to have social or commercial relations with him and this has remained the case. Similarly al-Zamakhsharīs al-Samiri belonged to a Jewish tribe called Sāmiri, whose religion differed somewhat from the Jewish. Al-Samiri was forbidden to have social and commercial intercourse with men; it is said that his people still observe the prohibition. Al-Tha'labbī similarly concludes his very full story of the golden calf.

Al-Samiri thus is the representative of Samaritanism, which keeps apart from mu-Samaritans. In a segregation of this kind—as in the Jewish law—regarding eating (Kūr'ān, iv. 158)—Muhammad sees a divine punishment. What has al-Samiri (as the Samaritans) to atone for? For the sin of the golden calf.

**SAMMĀ, the name of a Rādūḥūt clan of Sind. As the bold of the Charsawi kings on Sind relaxed, the Sumārū, a Rādūḥūt tribe converted to Islam, established their rule in that country in 1053, and made Tur their capital. They persecuted the Summā, a rival Rādūḥūt tribe which adhered to Hinduism, and drove many of them to take refuge in Kāčch, where, in 1320, they ousted the Cavas prince who had protected them and seized his throne. This branch of the Summā, known as Dūndūls or the children of Dūdūla, is still represented by the Rās of Kāčch and the Ḍīṃs of Nānmār or Nāhmār, who in 1026, accepted Islam, and after the Summās had been overthrown by the troops of Alī al-Dīn Khālīfī of Dihlī, founded in 1335, a dynasty which ruled Sind for nearly two centuries, with its capital at Thathā. The ruler, like the head of the branch which acquired the state of Nānmār, assumed the title of Ḍīṃs, a word of doubtful signification which Abū l-Ḥaṭṭāl Fīrūz and other Muslim historians derive, on insufficient grounds, from the name of the semi-mythical Persian king Dīmānū. Umar, the Hindu name of the first Dīmān, suggests recent conversion to Islam. His brother and successor, Dīmūn, took Bakhar in Upper Sind, which had hitherto been included in the imperial dominions, and harboured a rebel who was fleeing from Gūjārāt before Muhammad b. Taghlaḵī of Dihlī. Muḥammad invaded Sind but died on the banks of the Indus in March, 1351, before he had time to punish Dīmūn. His successor, Fīrūz Ṣīfī, succeeded to the command of an army disorganised by its leader's death, and with difficulty extricated it from Sind, from which it retreated, massacred and harried both by the Sindīs and by their allies, the Mughals. Fīrūz attempted, eight years later, to avenge his discomfiture but again failed and saved a portion of his army only by a disastrous retreat into Gūjārāt. Returning in the following year he defeated the Summās and carried the Dīmūn, Dīmūna, and his nephew, Bāṣaṇīya, prisoners to Dihlī, but permitted Dīmūn's son and another nephew, Tāmūdī, to govern the province as his tributaries. Later in the reign Tāmūdī rebelled and Dīmūn was sent from Dihlī to reduce him to obedience, and sent him to India. After the accession of Taghlaḵī II in 1388, Bāṣaṇīya was permitted to return to Sind, but died on the way thither. He was succeeded by his brother, Tāmūdī, and after his reign the succession appears to have been as follows:—

Dān, (8) Šaṅdīrā, (9) Nīṣām al-Dīn II, known as Dīmūn Nānda, (10) Fīrūz.<br>

The history of the Summās after their accession to power is of interest by reason of the ability with which they held their own in several campaigns against the forces of the imperial government, and by reason also of the conversion
of large numbers of the people from Hinduism to Islam. The disintegration of the empire of Dhlath after TmÎur’s invasion restored independence to Sind, and the Sammama regained their former untrammeled by allegiance to any higher power. The greater of them was Nisam al-Din II, known as DÎsam Nanda, who died in 1509 after a reign of forty-seven years. The line ended with his son and successor, Firuz, who in 1520 was defeated by Shahr Beg Arghuãn, ruler of Kandahar, who founded the Arghuãn dynasty in Sind.

The Sammama tribe now numbered over 500,000 in Sind.

Bibliography: Mir Muhammad Ma‘sun of Bakhar, Tarih al-Sind, MSS.; Isma‘il ibn Ishab ‘Afni, Tarih al-Sind; Shâhî Shâhî Abû ‘l-Fadl Abû l-Ahmar, text and translation by Bloechmann and Jarrett, both in the Bibliotheca Indica Series of the Asiatic Society of Bengal.

AL-SAMMAM. [See AL-SAMMAK.] AL-SAMMAM (A.), butler made from cows’, goats’ and ewes’ milk, more especially cooked or melted butter, cleansed from impurities and preserved by the addition of salt, for example. Fresh butter and cream are called sahab. These are used not only in the kitchen but also in medicine, externally and internally; — externally for wounds, abrasions and boils, internally as an antidote against snake-bite and poisons, against retention of the urine, etc.

AL-SAMMAK (J. RUSKA), an island in the Aegean Sea; the Greek name is Sisam-desa, “the Island of Sesame,” for which Sisam-desi was written at an earlier period (Bihisht, Irshad [MS. No. 260 of the Berlin Library], i. 191; Khâthí Celebi, Tâhirî al-Khârî; Sisam in Tavernier, Les six Voyages, i. 359), while the Arab geographers give the Greek name in the forms Sâmî (al-Istâq, Géographie, ed. Jaubert, i. 127, 301), Sâmî (Vâdi, Mawqûf, i. 211) or Shâmî (Abû ‘l-Fadl, ed. Reinaud, p. 193, 193). In the middle ages Samos was repeatedly raided by the Arabs in their incursions into the Aegean Sea, notably in the years 889 and 911. It was only with the expedition of the Arabs from Crete about the middle of the tenth century that Byzantine rule was restored over Samos and the other islands of the archipelago. Later the island was exposed to the raids of the Sellipta and their vassals. Techas, lord of Smyrna, captured the island about the year 1090 and kept it for some time (Anna Comnena, Alexiad, ix. Ch. 4); in the xivth century it was ravaged by the Alimoghlu Unur Beg (Ducal, Ch. vii). From the end of the xivth century it belonged to the Geneos Moons of Chios (cf. the art. a.ÎRÎT). Friendly relations were maintained with the people of the adjoining mainland. It is, for example, related that at Tmîur’s invasion numerous Turks fled thither (Buondolmente, ed. Sinmer, Ch. 54) and the fanatic Birkdhul Mu‘jad, who provoked a communist rising on the Byzantine peninsula about 1320, maintained communication with the monks of Chios and Samos. After the fall of the Byzantine empire, Mehmed the Conqueror granted Samos to the Geneos of Chios, but they were not able to hold it and therefore induced the greater part of the population to migrate to Chios in 1476. Probably as a result of this, Mehmed II in 884 (1479) had Samos occupied by the Beg of Bigha; to repopulate the deserted island the new colonists were promised freedom from the state imposts (Turkhiy-i dinvâniyeh) (Bihisht, Tâhirî, i. 2909 of the Brit. Mus. MS.; cf. Sa’d al-Din, i. 567 sqq.). Later, probably after the peace with Venice in the reign of Bâyazid II in 1502, the Genoese seem to have regained control of the island; at least, Belou, who travelled in the Archipelago 1500 after 1547, expressly states that it belonged to the “asiegnarie de Chio” (Les observations de plusieurs singularites, etc., Paris 1555, p. 849); but a few years later they evacuated it for a second time and left it to its fate (Boschini, L’Archipelago, Venice 1558, p. 72). The islanders used to retire into the impenetrable mountains of the interior before the corsair raids, where they led the lives of savages. The Kapudan Pasha Kîlimdî ‘Ali Pasha, on one of his voyages in the Archipelago, was then attracted by the abandoned island and had it given to him by the Sultan in 1562. He endowed the great mosque built by him in Top-khane on the Bosporus with the revenues from the taxation of the island. — A Turkish voivod usually called Agha governed the island; a grand vezir exercised judicial authority; they lived in Chora, the principal place on the island, where also the titular of the throne newly founded (Greek orthodox) bishopric of Samos took up his residence. Except for these two officials and their subordinates there were no Turks on the island. But even under Turkish rule the Samiotes continued for long to suffer from the raids of pirates of all nations, Maltese, Frank, Algerian and Tripolitan, who, like their contemporaries, the filibusters and buccaneers in the West Indies, and the Panphylgian pirates conquered by Pempay, made this part of the Mediterranean unsafe for a century. Samos, which had neither fortresses nor a permanent garrison, was invaded and repeatedly occupied for some time by the Venetians in the wars between the Sublime Porte and Venice in the xvith century. The occupation by the Russian fleet lasted for several years, 1771—1774. The Samiotes played an important part in the Greek war of liberation: at the end of the war they passed again under Turkish rule, but through the intervention of the Western powers they obtained complete autonomy under a Christian governor appointed by the Sultan (Bey, Greek ékonomos, which was usually translated Fürst, prince), and were placed under the protectorate of France, Great Britain and Russia. They were also allowed a flag of their own. Like the other vassal states of the Sublime Porte, Samos paid an annual tribute, which in 1821 was 400,000 piastras but was later reduced to 300,000. 101,000 of this went to pay the dues to the wâdi endowment of Kîlimdî ‘Ali. The first Bey of Samos, Stefan Vogorides, was appointed in the beginning of Djinmûd, i. 1349 (middle of September 1833), and filled this post till the beginning of September, 1851. After him down till 1873 no less than 18 "princes," who with few exceptions belonged to Farniari families, ruled the island of Polykrates. In 1913 Samos was united with Greece by the Treaty of London, which ended the Balkan war. In modern times Vathy has replaced Chora as the seat of the Government; the number of the settled population was in 1912 about 50,000.

SAMAŞ — SAMASAM AL-DALWA, ABU KALîDIR ^AL-MARWÂNî, a Bāyiḍ. After the death of the Bāyiḍ rulers 'Abd al-Dawla in Shawwl, 372 (March, 985), his son Abu Kālidār was recognized as Amir-al-Umār under the name Samaş al-Dawla. The latter then gave his two brothers Abu 'l-Husayn Alīmuhammad and Abu 'l-Tahir Fīrubu the province of Fars as a fief and ordered them to go there at once. But when they arrived in Arrāfān the fourth brother, Sharafr al-Dawla, had anticipated them and already taken possession of Fars so that they had to retire to al-Ahwāz. As Sharafr al-Dawla would not recognize the sovereignty of Samaş al-Dawla, the latter sent an army against him under Abu 'l-Husayn b. Dānnâ, who met the enemy at Kurkommen between Wāsil and al-Bagār, led by Abu 'l-A'azz Dabāiṣ b. 'Abbās al-Ashfi, Abu 'l-Husayn was taken prisoner and his army put to flight (Rābi' I, 373 Aug.—Sept., 983) whereupon Sharafr al-Dawla granted his brother Abu 'l-Husayn rule over al-Ahwāz. At the same time Samaş al-Dawla had to fight with the Kurdish chief Bār, the ancestor of the Marwānids. The latter had invaded Diyar Bakr, where he had seized several towns like Māynsafūr in and Nasibin after the death of 'Abd al-Dawla. Samaş al-Dawla's troops were defeated, and al-Mawālīl also passed into Bābā's hands; but when in Safar, 374 (July, 984), he endeavoured to take Bāghdād also he was defeated and had to give up al-Mawālīl. He was, however, allowed to retain Diyar Bakr and the half of Ṭūr 'Ahbân. In 375 (985/986) the Dallālim general Asfār b. Kurduwwān rebelled against Samaş al-Dawla in Bāghdād and at first declared for Sharafr al-Dawla, but he next decided — by arrangement with the troops who were devoted to him — to make Abu Naqr b. 'Abd al-Dawla, then only fifteen years old and a year later appointed Amir al-Umār with the name Bābā al-Dawla (q.v.), governor of al-'Irāq in place of his brother Sharafr al-Dawla. But Asfār was defeated and Bābā al-Dawla taken prisoner. Sharafr al-Dawla then led Fars to go to al-Ahwāz and there told his brother Abu 'l-Husayn that he wanted to liberate Bābā al-Dawla; but Abu 'l-Husayn did not trust him and began to collect troops. The latter, however, went over to Sharafr al-Dawla and there was no

thing left for Abu 'l-Husayn to do but join his uncle Fakhr al-Dawla (q.v.); but as the latter did not find him absolutely reliable, he was imprisoned and afterwards put to death. To preserve peace, Samaş al-Dawla wrote to Sharafr al-Dawla and, as he was satisfied with the government of Bāghdād and ready to release Bābā al-Dawla and to have Sharafr al-Dawla mentioned first in the Ṭārîkh in the 'Irāq, the latter agreed to his proposal. When in 376 (986/7) Samaş al-Dawla came to Sharafr al-Dawla, he was at first very kindly welcomed, but then seized and imprisoned in a citadel near Shīraḳ. According to the usual statement, Sharafr al-Dawla afterwards had him blinded. In the meanwhile disturbances broke out in Bāghdād between the Dallālim who supported Samaş al-Dawla and the followers of Sharafr al-Dawla, the Turks, and only after quiet was restored did the Caliph al-Ṭāhir recognize the latter as Amir al-Umār. On the latter's death at the beginning of Dhu al-Qa’dāh II, 379 (Sept., 989), Bābā al-Dawla succeeded to this office. Samaş al-Dawla was then liberated but had first to fight with his nephew, Abu 'l-Abī b. Sharafr al-Dawla, and after his assassination with Bābā al-Dawla (q.v.). In 383 (993/994) — or, according to another statement, probably due to a corrupt text, as early as 380 (990/991) — Bābātīyar's (q.v.) sons, who had been interned in a castle in Fars after Sharafr al-Dawla's death, succeeded with the help of the Dallālim garrison in gaining their liberty and gathering a large following. When Samaş al-Dawla heard of this he sent an army under Abu 'l-Abī b. Ustādī Hormuz against them. The latter beseeched them in the fortress in which they had taken refuge; they had to surrender and were brought to Samaş al-Dawla, who had two of them executed and the other four imprisoned. In the same year hostilities again broke out between Samaş al-Dawla and Bābā al-Dawla and after several years' fighting victory was inclining more and more to the side of the former, when he was assassinated in Bābā 'l-Hijjāj, 388 (end of 998), at the age of thirty-five years and seven and a half years. Cf. also the article ABU KALIDAR.

SAMAŞ — SAMAŞ AL-DAWLA, ABU KHALIDAR BUKAIT, an Indus statesman and historian. His early name was 'Abd al-Razzāk Husain and he belonged to a Sajid family which had migrated from Khwaaf in Kirman and attained high honour there. He was born in Lahore on Ramaḍān 28, 1111 (March 20, 1700) and while still young moved to Awarangābād (q.v.) where he was appointed Dāwūn of Berār by the first independent Nizām of the Deccan, Asfār Dīn (q.v.; see also the article NAṢRĀN). In 1155 (1742) he was involved in the rising attempted by his kinsman Dīng, son of Asfār Dīn, against his father and dismissed from office after its failure. The next five years he devoted in retirement to his great historical work, the Mu'ādhir al-Uṣūrār. Shortly before the end of his reign, Asfār Dīn
pardoned him in 1160 (1747) and restored him to his former office, which he continued to hold under the next two rulers, Nâzîr Dîjang and Şehîh Dîjang. After the accession of Bastât Dîjang in 1170 (1756) the French party which had been opposed by Şamsâm al-Dawla succeeded in bringing about his fall; he was killed on Ramadân 3, 1171 (May 12, 1758) by soldiers of the French General Bussy. According to another, unreliable, story, the General shot him with his own hand.

The Mâdhîr al-Umrâh, a biographical dictionary arranged alphabetically, according to the initial letters of the names discussed, of all the more important statesmen under the Indian Moghuls from Akbar to the author's day. It was called it the "Peerage of the Moghul Empire." It exists in two recensions of both of which many copies exist. The original, which was unfinished and even in the completed part not quite ready for publication, disappeared at the murder of the author and the destruction of his house, and was only found, after twelve months' search by the friend and for several years secretary of the author, Ghulâm "Ali Asât Delgrâm (famous as the author of two tasâhid of poets, Khânâ-nâma and Sârvi Asât; cf. H. Ethê, in Grundzüge der iran. Philol., ii. 215), although not complete. He gave it a preface, wrote a biography of Şamsâm al-Dawla (see the Bibli.) and added several articles. This recension contains 261 biographies.

It was much extended and republished by the author's son, 4 Abd al-Hâly Khan (41166 = 1751; for his numerous titles see Merley, op. cit., p. 104; cf. the Bibli.), who in twelve years' labour continued the work of his father to the year 1194 (1799) when he concluded his labours; he took the first recension as foundation, added other parts of the original which had since been found and additions which he compiled from the 30 historical works mentioned in his preface. His own first draft is preserved in the India Office MS. NO. 2424 (Ethê's Catalogue, No. 627). This second edition contains an editor's preface, the preface by Şamsâm al-Dawla and Ghulâm "Ali, the latter's biography of Şamsâm al-Dawla, an index of the articles and the letter themselves, as well as a short biography of the editor. It contains 731 biographies and is one of the most valuable sources for the history of the Moghul rule in India.

(H. H. Schardey)

ŞAMSâm AL-SALTANÂ, NASRÂF KUL KHN, a Baikhtiyâr chief born about 1846. He belonged to the great division of Havî Lang, which he governed in 1903--1905 as Il-beg, and later as KHN. He was the son of the Hulain Kult KHN, killed by order of prince Zill al-Saltanâ, the famous governor-general of Isfâhân, and grandson of Dâ'ir Kult KHN. Samsâm owes his fame to the part he played in the nationalist revolutionary movement in Persia.

Rebellling against the incapable administration of the governor Ilbîl al-Dâlwa, Şamsâm al-Saltanâ at the head of 1,000 Baikhtiyârs occupied Isfâhân on Jan. 5, 1909, and convoked the provincial committee (andefficient). Jointly with his brother Sardâr-i Asâd, who had come back from Europe, Şamsâm telegraphed to the government (May 3) that he intended to advance on the capital. He carried out his plan but allowed the protagonists of the revolution, Sardâr-i Asâd and Sipâdâr-i Aşâm, leader of the forces collected at Rafâh, to have all the credit.

When in the summer of 1911 the news of the return of Muhammad 'Ali Shah reached Tihrân, Şamsâm entered the Sipâdâr's cabinet as minister of war and military governor of the capital (July 5). On July 26 he himself formed a new cabinet; three days later the Moodâs put a price on the head of Muhammad 'Ali Shah. In August the Baikhtiyârs with the active help of the Armenian revolutionary Yefrem Khân inflicted a defeat on Sardâr-i Arâhol, the principal supporter of the fallen Shah. In September they disposed of the rebellion led by the turbulent prince Sihâl al-Dâlwa. Şamsâm at first gave wholehearted assistance to Mr. Morgan Shuster, the American adviser who, entrusted with the reform of the Persian finances, had warmly supported the nationalist movement but very soon a quarrel broke out between them as a result of energetic action taken by Mr. Shuster (the episode of 'Alâ' al-Dâlwa). On October 29 Russia demanded satisfaction for the intervention of Mr. Shuster's gendarmes in the affairs of Prince Shu'i al-Saltanâ who claimed to be a protégé of Russia. As a result on Nov. 11 Wûthîk al-Dâlwa, minister of foreign affairs, expressed to the Russian legation the government's apologies but on Nov. 16 Russia presented an ultimatum demanding the dismissal of Mr. Shuster. The cabinet, which after a quarrel with Yefrem Khân had again made its peace with him, showed conciliatory tendencies. On Dec. 9 Wûthîk al-Dâlwa formed a new cabinet which two days later accepted the ultimatum. Mr. Shuster was replaced by a Belgian (M. Mornard) and left Persia.

In the summer of 1918 Şamsâm was again called upon to take the reins of government. As a repercussion of events in Russia the new cabinet, which had a nationalist character, at its meeting of July 27 abrogated all the treaties with Russia and all concessions granted to Russians. This measure, which affected the interests of foreigners in general, accelerated the fall of the cabinet and its replacement by that of Wûthîk al-Dâlwa, which signed the Anglo-Persian conventions of Aug. 1919.

Şamsâm is noted for his impulsive character but Mr. Morgan Shuster in his book approaches this chieftain with a lack of constancy.

SAMSAM AL-SALJANA — SAMSUN

AL-SAMSAM, the sword of the Arab warrior-poet 'Amr b. Ma'dkarib al-Zubaidi (cf. above, i. 336) celebrated for the temper and cutting power of its blade. Like a number of the best Arab swords, its origin was traced back to Southern Arabia and a fabulous antiquity was ascribed to it. 'Amr himself in a verse often quoted (Ibn Duraild, p. 311; Idh. ed. 1293, i. 46, ii. 70; Ibn Badrcha, p. 84; Tidj. al-Qurai, v. 219) says that it had once belonged to Ibn Dhí Kaifan "of the people of 'Ad" (this member of an actual Himyar clan [cf. Hartmann, Die arabische Frage, p. 331, 613], is identified with one of the last Himyar kings of the family of Dhí Qdian; but very probably the poet only means to allude to the great age of his weapon).

The history and fortunes of al-Samsam are rather involved; even in the poet's lifetime it came into the hands of a member of the Umayyad family, Khakhir b. Sa'id b. al-Aswad, the companion of the Prophet. The way in which he got possession of it is recorded with several variants by Ibn al-Kalbi (in al-Baladuri), Abul 'Ubayda (in the Aqgul), al-Zahr (in Ibn Habbash; see Bibl.), Saif b. 'Umar (in al-Tabari). According to the last-named, Khakhir won it in battle after routing 'Amr b. Ma'dkarib who was taking part in the revolt against Iblis raised by the false prophet al-Awwad al-'Amri (cf. above, i. 502); according to the three first, 'Amr himself gave it to Khakhir as a ransom for his sister (or wife) Raibana, who was a prisoner of the Muslims. 'Amr composed a poem on the occasion of which several verses are frequently quoted in the Arab sources (Ibn Duraild, p. 49; Iblib. xv. 240, etc.). The tradition (al-Thabit in Hananda, ed. Freytag, p. 397, 11-13) which says that 'Amr gave it to the Caliph 'Umar in return for better authority is denied by authority.

After the death of Khakhir b. Sa'id at the battle of Maraj al-Suffar during the conquest of Syria (14 A.H.) al-Samsam passed to his nephew Sa'id b. al-Aswad b. al-Aswad, who lost it while defending the Caliph 'Uthman when the latter was besieged in his house at Medina (35 A.H.). It was found by a Beduin of the tribe of Jishahana with whom it was discovered in the reign of Mu'awiya. Restored to its former owner, it passed from one member to another of the family of the Banu 'Atsh until one of them, Aythab b. Abi Aythab, great-grandson of the son of Sa'id, sold it to the Caliph al-Mahdi (158-169 A.H.) for about 80,000 dirhams. Hereafter al-Samsam was kept as a precious relic in the treasury of the 'Abbasids and its fame continued to increase; poets like Abu 'l-Hawli al-Hunayri (Dhahiri, Hayamii, v. 30) and Salm al-Khallair sang its praise.

From different sources we learn of its existence in the caliphs of al-Hadi (169-170 A.H.), Hisham al-Rashid (170-193), al-Walid (227-232), and al-Mu'ta'akkil (232-247), after which there is no longer any mention of it. The anecdotes recorded regarding the excellence of this famous sword during the period when it was in the hands of these Caliphs have little chance of being authentic; a description which has a certain appearance of reality is the one given in al-Tabari, (iii. 1348, 4-6, in connection with the story of al-Walid's using it to execute with his own hand in 231 A.H. 'Abd Allah b. Nasr al-Khunab, who was accused of having conspired against the Caliph and of having maintained that the Khunab was not created, contrary to the view laid down by al-Ma'mun: "It was a blade with a hilt at its end; three nails driven into it attached the blade to the hilt". It is apparent then that the famous al-Samsam had nothing of value about it except its great age.

As to the name al-Samsam, it is simply an epithet referring to the fine quality of the blade (the "cleaver") like muqammim, which has the same significance. Al-Samsam is often used as a common noun, e.g. by al-Farazdaq (Nabakhi, p. 385, 4) and by 'Amr b. Ma'dkarib himself (Hamidah al-Balburi, p. 83, ed. Cheikho, No. 237) Amidi of al-Kili, i. 154, 10, as well as by Muslim b. al-Walid (ed. de Goeje, vi. 18) in a verse which Schwarzlose (see the Bibl.) wrongly thought to refer to 'Amr's sword, while the weapon given by Hisham al-Rashid to his general Yarsh b. Maryad referred to in the verse is the sword of the Prophet, Abu l-Fakir (cf. above, i. 599), as is evident from verse 25 of the same poem and the note Ibn Khudhayr, l. 1109. (ed. 299) = li. 284 (ed. 1319) = No. 830 Wustenfeld.

U. LEVI DELLA VIDA

SAMSUN, a harbour on the north-west coast of Asia Minor, the ancient Amisos, also called Amonos by the Byzantines and later, after the conquest by the Seljukis, Sampson (Akropolites, Bonn ed., i. 14; also Schilberger, ed. Langmantel, p. 14 [transal. Hakluyt Society, p. 12], who says it was founded by the Samson of the Bible), the Sinus of western seafarers and the Samsun of the Arabs, was taken from the Byzantines by Kilidji Arslan II (1156-1192) (Niketas Choniates, Bonn edition, p. 869, 699); three centuries before (860) it had been laid waste by the Arabs on one of their raids into Byzantine territory (Theophanes Contin., Bonn ed., p. 179). Under the Seljukis and their successors, Samsun with Sinope conducted the trade with the Crimea and from the time of Mas'ud II (631-646 A.H.) it was a mint of the Seljukis and later of the Khwarizms (Ahmad Tawhid, Musul-kin-i kaifin-i intishab, Istanbul, iv. No. 704, 705; Mehemmed Mubarak, Hikayat, vol. iii. under the coins of Ghasan Mahmoud, Khudhur, under Mehemmed and Abi Sa'id Bahadar), which suggests a considerable commercial activity. About this time also we find Samsun first mentioned by the eastern geographers as a "famous harbour" (Abu l-'Ilia, Taqsim al-Buldani, ed. Reinhard, l. 32 sq., 215, 392; al-Dimashki, ed. Mehren, p. 146; Hrad Allah
Mustawfi, Nushat al-Kuli, ed. Le Strange, p. 96). Alongside the Muslim Şamsūn there was at the beginning of the 13th century an independent Greek enclave (Fallermayer, Geschichte der Kaiser- thums von Trebizond, p. 56 sqq.), the so-called "Christian Şamsūn" (Ναξάτ Σάμουν), and formed, as in Smyrna (see the art. Σμύρνη, II. 267), with the Muslim settlement a double town. Both parts were enclosed by walls and only a stone's throw (Ibn 'Arabshī, 'Adīd al-maḥāfir bi 'Alī Ṣimīr, Cairo 1255, p. 142) or "half a bowshot" (Schillerberger, p. 16, Hakl, Soc. ed. p. 15) apart. In the early years of the 14th century the Genoese established themselves in Christian Şamsūn and held it for over a century (Heyd, Histoire du Commerce du Levant, i. 553 sqq., ii. 350 sqq., 373); about the year 1425 the last Frankish inhabitants set the town on fire and sailed off in their ships, whereupon the Ottomans entered it (Neshri in Leunclavius, Hist. Musulmon., col. 475; wrongly in Heyd, op. cit., ii. 359).

After the withdrawal of the İkhāns Muslim Şamsūn was in possession of the İsfandıyar-oghlu of Kaştamouni (q.v.) and was taken from them in 795 or 797 A.H. by Būyazīd I (Schillerberger, p. 14 sqq.; Neshri, in the Z. D. M. G., xx. 343 = Leunclavius, op. cit., col. 356; Sa'd ad-Din, i. 133 = of Timurşahı Ahmed Effendi, Giese, p. 34); in 1404 the town still belonged to Mīr Sulaymān Čalebi, the son of Būyazīd I (Chavjio, p. 82); it was then again occupied by the İsfandıyar-oghlu (the date 822 A.H. is given) (Leunclavius, Hist. Musulmon., col. 474; Sa’d ad-Din, i. 287 sqq.; cf. Ibn ‘Arabshī, op. cit.) but shortly afterwards ceded without a fight to Şūṭān Mehmed I (Tabbūrīh-i Atī’i ‘Oṣūrūn, ed. Giese, p. 53 = Leunclavius, op. cit., col. 464; ‘Aṣīk Paša Zāde, p. 89 sqq.; Neshri, Sa’d ad-Din, op. cit.) Şamsūn since then has been under the Turks and became the capital of the sāḥib of Dastār, which formerly belonged to the eyalet of Siwā but in modern times has been incorporated in the vilayet of Trebizond. The harbour still retains some importance for trade with the Crimea, has a shipyard of its own, and in the XVIII century was again fortified as a defence against the attacks of the Don Cossacks. Local trade was limited to the manufacture and export of hemp ropes etc. and of the popular mārī𝒜ν (pomegrante syrup). After the cessation of the Crimea to Russia in the XIX century the town began to decline and in 1806 it suffered considerable damage during the fighting between the rival Dereheys, the Çapın-oghlu and the family of Dastār ‘Alī Paša. It was only with the opening of steam navigation in the Black Sea and the development of tobacco-growing in the adjoining district of Bafr a that the town received an unexpected revival of prosperity. Many Greeks and Armenians came to it from the interior, especially from Karafiray and Karabost, and Europeans also including many Hellenes settled here, to engage in the export of local products (tobacco, corn and hides). The old parts of the town which were avoided on account of endemic malaria were burned in 1286 (1869) and replaced by modern buildings. New quarters and suburbs also arose on a more healthy site, for example the suburb of ‘Aqā-Köy inhabited exclusively by Hellenes. The town which at the beginning of the XIX century had only 400 houses with a purely Turkish population of 2,000 had a century later over 20,000 inhabitants (10,000 Turks, 8,000 Greeks and Hellenes, 2,000 Armenians) and was the most important commercial town next to Trebizond on the north coast of Asia Minor. We have no more recent information. AL-SAMT, direction, point of the compass, a term in frequent use in Arab astronomy applied to the length of the arc (angular distance) made by any straight line drawn in the horizon through the position of the observer with respect to the line from east to west. As a circle of altitude of the heavens cuts the horizon along a straight line, such sections in their deviation from the east-west line give the direction by which the altitude is characterised. On vertical walls on which the so-called inclined sundials (māhrarītū) are marked as well as in turning the face towards Mecca (sīdīqī) the direction is important. This is one of the problems of spherical astronomy, which the Arabs were able to solve in quite a number of ways.

The plural of al-samt is al-simā’t. For this we can quote references from the language of one of the greatest Muslim astronomers, namely Ibn Yūnus († 1099 in Cairo). The title of Chap. xxiv. of his famous İkhānī Tables, for example, is: Fi lḥāṣī Khaṭṭ Nasīf al-Nakhr bi l-‘rīfīsī ‘alāthūn Sāmtuha al-ḥāṣrimin min l-‘rīfīsī ‘alīt sīmā’thuţ mlī’in (Oxford, MS. Hunt. 331, fol. 43'). As will be noticed the adjective mlī’in is in the feminine singular, in keeping with the rules of Arabic grammar. An inexperienced translator of Arabic astronomical texts might very well take a plural like this (sīmā’t) for a singular and translate al-simā’t by "direction" instead of "directions". According to Nallino in E.S.O., viii. p. 590 sāmāt is a dialectical form of sīmā’t. By contraction in Spanish and French al-simā’t became asimá’t and in this form and with singular meaning the word has passed into western languages so that we now speak of the azimuth of an altitude of the sun or of a wall etc.

The expression sānt (or sānt) al-ra’s means the direction of the head. Later in Europe the qualification al-ra’s was dropped so that in the French and Spanish spelling only the word sānt remained.
Through errors in copying this became sāri, just as Latin translators of the astronomy of al-Yaghāni (Alfraganus) made Hēmis and then Hēnit out of Himā, Hēnis = Emeus.

Since, as already mentioned, the Arabs measured the azimuth from the east-west line, the meridian (kāfūf wašr al-maḥāf) came with them to be an azimuth of 90°. Its definition is a necessity for finding one's position so that it is never omitted in any Arabic work and even has ra‘ilat specially devoted to it (the writings on this subject by Ibn al-Hāthim, Miṣna on the azimuth and Miṣna on the determination of the meridian were in a derivative extant. Cf. F. Woepcke, L'algèbre d'Omar Alkhayyām, Paris 1854, p. 74 and 75; are probably no longer extant).

The arithmetical relation between altitude of the sun and azimuth (when the geographical latitude of the place and the declination of the sun are known) is given in the azimuth tables (Dié-large al-samit) which were calculated by various Arab astronomers for the latitude of their homes. Cf. e.g. Ibn Yūnūs, Kitāb al-Samit wa-l-Zill ‘il-ma Yūnūs maḥfīl al-jāhibatun al-jāhibatun, MS. Escor., 924. Bibliography: G. W. S. SAMAUEL. (See SAMAUL.)

SAMÚM, the name of a hot wind in several Arabic speaking countries. The word occurs in three passages of the Kur‘ān, where it is, however, not especially applied to the wind. Sūra 15:9 it is said that the Dāmūs were created from the fire of Samûm. Sūra 52:9 the punishment of the stoners of the day of judgment; and according to Sūra 50:22 the “people of the left” were dwelling in Samûm wa-Samûm. Apparently Muhammad applied the term to infer heat.

The Ḥadith uses the word in the same sense; yet the meaning “hot wind” is here coming to the front. It is said that Hell takes breath twice a times a year: “its taking breath in summer is Samûm”. (Tirmidz̄i, Liqā‘ānumm, bab 9; cf. Ibn Mūjtāja, Zuhd, bab 38). In Bukhārī we find reference to the opinion that the hot-air during the day is called ṣahrūr, whereas it is called samûm at night (Bad al-Khalīfah, bab 4).

In nearly every traveller’s book the samûm (sūmâactive) is mentioned in the sense of the suffocating wind which is also often called strenuo. From the innumerable references a few may be picked out. C. M. Doughty mentions it in the neighborhood of Madīnâ in Sullb as “a drouth and southern wind” against which the Beduins “covered their faces, to the eyes, with a lap of the khechef”. He again mentions it between Madīnâ and Mekkâ and tells us that according to the Beduins weak camels may be suffocated by it (Travels in Arabia Deserta, Cambridge, 1888, i. 100, 188).

In Mekkâ the north, north-east, and east wind are called saumûn, when it blows it makes the impression as if it came from a huge fire through the intermediary of gigantic bellows (Snouck Hurgronje, Mechanische Sprühuürwesen und Reiternarren, No. 76). The reason in which the sun enters the constellation of the Virgin (August) has an extremely bad reputation in Mekkâ, because in this time ṣamûn, wâsâd, samûm and wâsâd blow alternately (loc. cit.).

Concerning Egypl, Lane says (Manners and Customs, Introduction): “Egypt is also subject particularly during spring and summer, to the hot wind called the ‘Saamoon’ which is still more oppressive than the khamâsin winds, but of much shorter duration, seldom lasting longer than a quarter of an hour or twenty minutes. It generally proceeds from the south-east, and carries with it clouds of dust and sand”.

Concerning Kâr-i Shīrīn [q. v.] Hamd Allah Mustawfī (Nushat al-Kalbāṣ, transl. Le Strange, Gibb Memorial Fund, vol. xxxii., p. 50) says: “its climate is unwholesome for in the hot season at most times the (hot) Sunum blows.”

Mas‘ūdī, Mufrīd al-Dhābāh, ed. Paris, iii. 320 sq. has a legendary report concerning the Djāmūn which according to the verse from the Kur‘ān mentioned above, were created from the fire of the saumûn (translated by R. Banet, Mille et un centre, v. 10, p. 863 & 864, arabes, Paris 1924, i. 57). See also A. Munīl, Reisen in Arabien (Vienna 1907–1908), iii. sq.

(A. J. WEISSNER)

ŠÂN, now ŠÂN AL-HADJṣAR, a little village in lower Egyptian in the district of al-Ārio to the south of Lake Manzala on the Bahir al-Mu‘izz (or Maws), the ancient Tanitic arm. The Arabic name corresponds to the Hebrew Šō‘ân, the Greek Τάους and the Coptic Djanī. This town, which was the capital of the dynasty of the Shepherd Kings, had been long in ruins by the time of the Arab conquest. The ancient town, notably the temples, had fallen to pieces and no Arab author mentions them; their remains nevertheless still form the most considerable group of ruins in the Delta. A single text recalls its fame in quoting Šām among the Towns of the Magicians.

A passage in the Chronicle of John of Nikiu (transl. Zotenberg, p. 346) shows that in the seventh century it was a little town, since the same governor administered Kharībat (Farbat = modern Hurbat), Šān, Basta, Bahlā (= Tahrīyā = Copt. Ṭafabiā) and Sanhūr. This district really comprised five contiguous pagarchies, Šafābid, Tāwān, B’estāf, Ṭafabi‘a, and Ḥawīyā and Ḥawīyās.

The Arab šūrā, founded on the pagarchy of Tāwān, was called after two places, Šān and Ibblī, the latter, which is found in Coptic in the form Bâllā, cannot, however, be exactly located. The šūrā of Šān and Ibblī contained 46 villages (49 in al-Dimashq) stretching to the north-east up to the Syrian frontier, and included besides Sanhūr (Hephaistos) the towns of al-Paramā (Felus) and al-‘Arish (Rhincolurca). The southern boundary ran north of a line Hurbat—Fākus, although
the latter formed part of the kūra of Ţūribiya. The kūra of Tumalı (Tumalı al-Amid) bordered it on the west and on the north the kūra of Şan and Illi ended on the banks of the Bağhatı Tınba (Lake Manisa).

We have almost no historical information regarding the town, which had been the see of a Copitic bishop (there is no mention later than the fifth century A.D.). We only know that bodies of the tribes of Khusain, Lakham and Djedhān settled in this region. The geographer Yākūţ gives no details and one is surprised not to find it mentioned in the canons of Ibn Manmūtī, Ibn Dukmāk and Ibn al-Dhā'īn, although in quoting the old lists of kūra’s, al-Kaljaghandī says it is unknown. The notice by ʿAli Pāḥa Mubārak is simply a translation of an article by Quatremer. It is not known at what period Şan received the surname of al-Ḥaḍjar (Şan “of the stones”), which is found in Egypt attached to several places near which there are important ruins, e.g. Bahbīl al-Ḥaḍjar (Tessay), Şaʿ al-Ḥaḍjar (Sialo).

(G. Wiet)

SAN STEFANO, in Turkish Aya Stephanos, a little town on the sea of Marmora, twelve miles west of Constantinople. It probably takes its name from an old church (according to von Hammer) but it is not certain whether San Stefano is the ancient Hagios Stephanos, which was one of the places which Meḥmed the Conqueror occupied before the investment of Constantinople (Ducas, ed. Bekker, Bonn 1834, p. 258, speaks of the παραγων τον σταυρόν συν παλαιούς). The Crusaders landed in its neighbourhood on June 23, 1205, before the Latin conquest of Constantinople. San Stefano lay off the great road from Constantinople to Adrianople, which passed through Kçük Çekmede (Ponte Picolo) 2½ miles to the east of it and has never been of any strategic or economic importance. Ewiyā Čelbi does not mention it. Since the beginning of the nineteenth century wealthy inhabitants of the capital have been building country-houses here so that it has now become a pleasure-resort for the citizens of Constantinople, easily reached by railway. The population itself is entirely Greek and numbers about 2000 souls.

The town acquired a place in history by the preliminary peace of San Stefano which was signed there on March 3, 1878, between Turkey (represented by Şafwat Paşa and Sa’d-ūlāh Paşa) and Russia (represented by Count Ignatieff and Nelidoff), a truce having previously been agreed upon at Adrianople on the previous January 31.

The Russian headquarters were in San Stefano on this occasion; the house where the treaty was signed has been destroyed by an earthquake. The conditions of peace (text in Nouvem Révue Général de Traité, 2nd Series. iii. 240—250) were very harsh for Turkey on account of the great area of territory which was given to the newly formed principality of Bulgaria and the huge indemnity demanded by Russia. The Berlin Congress, summoned on the initiative of England, considerably ameliorated the conditions of the preliminary peace and annulled the latter. Peace with Russia was finally concluded in Constantinople on Feb. 8, 1879.

In 1909 San Stefano was again in the public eye after the Turkish counter-revolution of March, which ultimately led to the deposition of Abdül-Ḥamid. On April 19 of this year the first constitutionalist troops hurriedly appeared here from Salonica. Immediately the deputies of the committee "İttihat ve Terakki" went to San Stefano and constituted the national assembly in the Yacht Club under the presidency of Abu ʿl-Diyâ Tewfîk Bey, who was succeeded as president by Ahmed Râfî on April 21. Next day the whole senate joined the assembly which placed all power in the hands of the army. Mahmûd Shewket Paşa became commander-in-chief and on April 24 Constantinople was entirely in the hands of constitutionalists. During these events the whole Turkish fleet appeared before San Stefano to submit to the army.

(J. H. Kramers)

ŞAN Ā, the capital of Yaman, lies on the eastern Sarťt in a mountain valley which is open to the west as far as the chain which belongs to the Dišāh ʿĀlādūn, while immediately to the east the town is overshadowed by the Dişāb Nūkum which rises 1000 feet above it. Its altitude is 15° 23' N. Lat. and 44° 12' E. Long. As the town is 7200 feet above sea-level the climate is temperate, particularly as in summer regular winds blow through the day. In winter the temperature falls to zero at night which brings ice, which, however, disappears agala with day. In spring and in midsummer, especially July, it rains a great deal. Very dry summers are a rare but disastrous exception. Two streams run under cover through Şan Ā to the Wādi ʿl-Khārīd. They are only fall after rain. A regular supply of good water is provided by an aqueduct from the Nūkum. The soil of the plateau is of volcanic origin but earthquakes are very rare (e.g. one in 657 = 1259) and those insignificant. Lava forms the building material of the better houses while the humble, and even the city wall, are built of mud. The scanty wood supply of the plateau, little tamarsiks (falaḥ), dawn-trees is only of importance as a supply of fuel for the market in Şan Ā. Thin transparent sheets of marble are still used, as they once were on the citadel of Ghamidiin, as windows in the upper-class houses. The industries for which the town was noted in the middle ages, like the smelting of silver and the manufacture of the once famous Yamant clothes have declined considerably. The short curved Yamant swords generally worn, with bone hilts adorned with silver, are still made there. Large well kept gardens are also found within the fort by the thickly populated town. All the fruits of the temperate zone are cultivated: apricots, peaches, apples, quinces, wine-fruit and fragrant herbs. The
Turks have also acclimatised all kinds of vegetables including the potato. The date-palm is only ornamental at this high level. Coffee is grown, notably on the slopes of the Nukum.

The present town, the population of which is estimated at 18,000, has three quarters. The Arab quarter stretches from the citadel at the foot of the Nukum westwards until it joins up with the once separate suburb Bir al-Ajdub with fine gardens and the official buildings and public offices. About 5,000 Jews live away to the west in the crowded Ka‘al-Yahud. Outside the south wall lie the barracks and close to the north wall the tiny town of Shurib. Of the dozen gates only four are usually opened. The chief mosque with two minarets, the so-called “little Ka‘ba”, probably the old “Kalat” (see below), is almost in the centre of the Arab town, which still contains many palaces built by various ruling families that have succeeded one another here. The most important of these is the residence of the Imams, Bosra al-Mutawakkil, in the north-west of the Arab town. Among public buildings San‘a’ has a large hospital, a dispensary, about 12 baths, 3 schools, including a technical school and a printing-press.

The routes for traffic are very difficult through the mountainous country. The descent towards the Red Sea is made towards Hudaideh. With a view to safety the roads generally lead round the tops of the valleys, for example the Wadi Sunfur with its gentle descent. The road, for example, at Karn Wall (Deer-Horn) south of the Hijab al-Hajar Nabi Shurib rises to about 9,000 feet and then descends to about 5,000, climbing through the passes of the coffee-growing range of Harar to Mas'aka to a height of 7,000 feet again and drops down to the Ta‘ihma just outside of Bajil. It takes the regular Turkish pilgrim, carried by riding camels in the San‘a’, 3½ to 4 days to cover the distance from San‘a’ to Hudaideh, which is about 100 miles as the crow flies. This route has also a telegraph line which links up with the Syrian-Arabian system. The road to the site of the ancient Ma‘rib [q.v.], which is 75 miles E.E. in a straight line, and from the region of salt is still brought to San‘a’, begins by going round either north or south the outer spur lying east of the town and then descends to the Hijab through the Wad‘ at Tama with its plentiful water-supply. For the road from north to south via Yirim, the ruins of al-Dur, Ta‘ibah and Turabah to Mecca see above, i. 368 sq. But the pilgrims of commercial traffic to Mecca instead of following this route through the mountain range, begins by striking straight across in the direction of the Wadi Sunfur, and from al-Mahjid, about 25 miles N. of Hudaideh, onwards and then uses the Ta‘ihma road running northwards from ‘Adan via Zabid.

Although San‘a’ is a very ancient town, no mention of it has as yet been found in the Minaean and Sabean inscriptions as far studied, and there is just a possibility that it is mentioned in the Himyarian period if the So‘m mentioned in the inscription Glaser 244, line 13, is our San‘a’; this inscription would date from the middle of the first century A.D. if the king of Saba‘ and al-Ra‘idah in line 3, Ula‘arib Yahud, who wins a victory at or over So‘m, can be identified with the Elisan of the Periplus maris Erythraei, § 26 (see E. Glaser, Die Abessinier in Arabien und Afrika, 1895, p. 117 sqq.; M. Hartmann, Der islamische Orient, 1909, i. 150 sqq.). Legend and poetry have more to tell us, inspired by the vast ruins of the castle of Ghamdan [q.v.], Shem was the builder of the town and castle and Asil their ancient name. As this latter was possibly only taken at a later date by Jews and Muslims from Genesis, x. 27, the suggestion that in San‘a’ we have the Uzal of the Bible is as uncertain as Sprenger’s explanation (Das alte Geographie Arabiens, 1875, § 294) of San‘a’ as the Mesanibi basileum of Ptolemy, Geog., book vi, chap. vii, § 38, or Glaser’s assertion (op. cit., p. 122, and Die Geschichte und Geographie Arabiens, ii. [1890], p. 310, 427) that the old name was Tufsah and that the present name has been brought from the region of Ma‘rib.

It was only when with the Abyssinian invasion Yaman became involved in the struggle for world supremacy between Rome and Persia that San‘a’ is said to have become the most important part which it henceforth played down to the present day in Upper Yaman and with occasional interruptions in the whole of Yaman. Only a few of the events of these fourteen centuries, in which the history of Yaman is reflected in the story of this single town, can be briefly given. About 530 A.D. after the overthrow of the Jewish king Dhi Nuwas, who is said to have persecuted the Christians in San‘a’ also, Abraha arose and after disposing of his Abyssinian rival Aryas made the town the seat of the Abyssinian viceroy. He enriched the town with the Christian cathedral, the Ka‘ba or Kalasa (ukhlera). The materials are said to have been brought from the ruins of Ma‘rib and the workmen and the masons to have been sent by the Byzantine emperor. Summoned by the old Yaman ruling family of Dhi Yzaan, Walraz, Khwasar I and Alhasan I’s general, about 570 drove the sun and the second successor of Abraha, Masriq, from the town and established a system of joint administration with the Dhi Yzaan, then Persian rule alone, which was, it is recorded, in the hands of his son, grandson and great-grandson after him. In the year 10 (631), according to some stories two years earlier, the fifth governor, Badi‘an, adopted Islam. In the same year 10, Mahdiyeh b. Abi Umayya b. al-Mughirah was sent to San‘a’ to collect the taxes for the Yaman. In the following year the town was for three months in the hands of the anti-prophet ‘Abdala b. Ka‘b al-Awar, who entrenched himself in Ghumdan. On the death of Mahammar, his rising became merged in the general struggle for the independence of the Yaman, the principal champion of which was again one of the Dhi Yzaan, ‘Amr b. Ma‘di Karih. The Medina government found most support with the arabised Persian nobles, the Abin (q.v.). In 11 (632), Ferrizah the Dailam, with the help of al-Muhdhir, was able to restore Muslim supremacy in San‘a’ and Upper Yaman. It was probably in this fierce fighting that the fortress of Ghumdan was destroyed, which, according to the legend, must have been rebuilt once before in the Himyar period by ‘Amr b. Abi Sharab b. Yahia, who is known from inscriptions. After the conquest comparative quiet prevailed, particularly as the leaders in Medina dealt gently and tactfully with the notables in and near San‘a’.

Wah b. Munya whom ‘Umar I appointed successor to al-Muhdhir was still in this office on the accession of ‘Ali. The latter dismissed him and appointed
Ubaid Allah b. 'Abbás as., at least so al-Ya'qúbí, ii. 208 a, tells us, 'Ṭalhá refused to be moved to the provincial office to 'San'á', but with al-Zuhair seized all the taxes of the Yaman, which Ya'ús had taken with him from 'San'á to Mekka. But 'Ubaid Allah or his successor was transferred from 'San'á by 'Utb b. Arỹṣ by order of Mu'in b. Idris, according to some versions as early as 60 (660), that is even before the assassination of 'Ali.

There are proverbial sayings such as 'father than 'San'á' or 'everyone, even the shepherd on the hills of 'San'á' (al-Tabarî, i. 2752; iii. 2472). When the centre of 'Islam was removed to Syria and then to the 'Iraq, Upper Yaman appeased even more remote, and its history was in keeping with this. Three forces were resisting the Caliphate, fighting one another, or in certain cases supporting one another: native princes, ambitious governors and leaders of sects, who taught their views far from the capital and endeavoured to put them into practice by founding states; even the arch-heretic 'AbbāS b. 'Abd Allah b. Sa'd (v. i) as described as 'one of the men of 'San'á'. Although such notice is no proof of quiet in this remote town, the Umayyads seem to have had a firm grip of 'San'á'. Even when the Umayyad Caliphate was breaking up, the general Ibn 'Aṭīya was able in 130 (747-748) to send to Marwán II from 'San'á the head of 'AbbāS b. 'AbbāS b. 'Abd Allah b. Hāmīz, who had set himself up there as Khāridji caliph. The situation soon became more difficult under the 'Abbasids. Homage was not paid to al-Hadīth at all. Under Hārūn al-Raḍhī, his fifth governor, Hāmīz al-Barbarī, only succeeded after a nine years' struggle in bringing the rebel Hamdānī al-Hāsīmī b. 'AbbāS al-Mudījī a prisoner from al-Sarḥīn to 'San'á. At this time, about 188 (803), the town was almost in ruins. Things began no better at the beginning of the third century when the 'Alid 'Isām b. Mūsā b. Dījrāf al-Dījrāfī (the 'butcher') ruled from 'San'á to Mekka, half as an adventurer for his own hand and half as an official governor. The attitude of his opponent, the Wālī Hamdawalī b. Māḥtān, was no less ambiguous. In the end the government had to resort to Turkish praetorian generals. Not later than 256 (869) the Ya'furīs of the tribe of the Ḥuwālī became masters of 'San'á by a compromise, it is true, by the terms of which Muḥammad b. Ya'fur gave the caliph al-Mu'tamid mention in the name and paid tribute to the Ziyādīs at Zahāb. Even their rule was often interrupted in the town itself. On the accession of Muḥammad's son, Isḥākīm, in 279 (931) his palace was set on fire by the citizens of the rival tribe of Shahāb and the Abbasids were usually at enmity with the latter. Two bodies of Shī'īs then attacked 'San'á: from the north, from Sa'da, the Zaydīs of 'Yahyā b. al-Husayn who occupied the town for the first time for four or five months in 288 (901); from the south, with the fortress of al-Muḥākhirah (see above, i. 356a) as his base, the Karmātīn 'Abīl b. Faqīl controlled the town at the beginning of 293 (905) at first for two or three months from its castle. In the never-ending struggle between Ya'furīs, Zaydīs, Karmātīn, mutinous clients of the Ya'furīs of the family of Ṭārīḥ, 'Abbasids, governors and generals, 'San'á was taken no less than twenty times in the twelve years from the first entry of 'Yahyá to the end of the century (913 a. d.). it times it was surrendered after negotiations, and was besieged unsuccessfully some five more times. According to al-Mas'ūdī, ii. 55; 'San'á had a quieter and brilliant period after the death of the Karmātīn, under the Ya'furīs of 'Abīl b. Ibrahimī, from 303-332 (915-943). On his death family dissensions brought back the old turmoil. The Zaydīs Mahātīr, grandson of 'Yahyá, took the town in 345 (956) but was murdered in the same year. The streets and quarters of the town became a battlefield for the feuds of the two tribal groups of Khūwān and Hamdān. Behind the chief of the latter, al-Dhūḥūlī, was the now restored power of the Ziyādīs of Zahāb. But in 377 (987) or 379 (989) the last important Ya'furī of 'San'á, 'AbbāS b. Ḥāyūn, was once more able to exact retribution and destroy Zahāb. 'AbbāS b. 'Ahmad had been able to secure the support of the still numerous Karmātīn and officially recognised the caliphate of the Fatimids. The Shī'īs followed the same policy; the first of them, 'Abī b. Muḥammad, as Fatimīd al-Dī made 'San'á his headquarters about 453 (1061) and after half a century put an end to the unrest which had been increased by the fact that the Zaydīs Imāms, who penetrated among the hostile tribes from Sa'da from time to time, were surrendering more and more to their Tunisian masters, When Queen Sā'īya b. Ḥurra moved the seat of government to Dījbal in Lower Yaman, her relations, the Yāmīds, held the town for her for another decade or so, until in 492 (1098) Ḥā'im b. al-Ghašīm made himself independent there. His dynasty, the Hamdānīs, reigned till the invasion of the Yaman by Salādīn's brother Turānshī in 569 (1174), interrupted in the usual way by family quarrels, by another Yāmīd interregnum, and especially by the Zaydīs Imām of Sa'da and Nāḏrān, 'Ābd al-Muhammad b. Salāmīn al-Muṭawakkilī. But even the fifty-five years of Aljūbīl's rule showed that 'San'á could not be held firmly by a distant power. The Hamdānīs 'Abī al-Walīd b. Ḥāfiz, who had established himself in the mountain fortress of Ḍir ash about two hours to the east of 'San'á, in 583 (1187) destroyed the city walls, the castle and the greater part of the town of 'San'á'. In 595 (1199) and again in 611 (1214) we find the Imām 'Abī al-Walīd al-Manṣūr holding the town for a brief period. The suzerainty of the Rashīdlīs [v. i.] of Ta'irīs over 'San'á began in 626 (1229) at first with vigour. The governors, usually princes or Kurd officers, visited the town and the Muslims themselves often came also. It was at first rarely and only for brief periods captured by the Imāms e. g. in 648 (1250) or 671 (1271). It was not till a century later that Zaydī power was again restored. The Imām 'Abbās b. 'Alī was not only able to make himself secure in 'San'á but repeatedly to attack Zahāb, 'Adan and Ta'irīs from it in the years 777-793 (1375-1391). His successors were able to ward off successfully the new Shī'ī kings of lower Yaman; first of these, 'Amīr b. Ṭahīr b. Muḥāwadāwī was only able to enter the town temporarily in 861 (1456). In 913 (1507) the Kurd al-Husayn, admiral of the second-last Mamlūk Suľṭān Kānjābī [v. i.] al-Ghūrī took the town to which the latter sent the Mekkan Shirāf Barakāt II b. Muḥammad b. Barakāt I as Wali in 922 (1510); but in the very next year it was regained by the Imām Yahyā Shirāf al-Dīn. When the Ottoman put an end to the Mamlūk dynasty they had no further fight to gain the Mamlūk possessions. In 933 (1526) Ordemir Fāshū entered 'San'á; in 1038 (1628) Hādīr Fāshū capitulated to the Imām Muḥammad
of the Kāšīmi line which held the town till 1087 (1676). Then followed a period of fighting among rival Išāsā; the native notables, the Bāsūn tribes and the never completely exterminated Karmāṣṭhās thereby gained considerable freedom of action and foreign powers also seized opportunities for intervention. Devastating Bāsūn invasions in 1233 (1818) were repeated in 1251 (1835), which induced the Išāsā al-Māṣūr in 1253 (1836—1837) to negotiate for the sale of the town to the Egyptian Pāshā Mahmed ‘Alī. The Turkish general Kılıçaslan Tāvsh Pāshā was admitted to the town by the Išāsā in 1263 (1849). His troops were massacred within two days and next year the Išāsā was deposed by the Mekkān Sharīf Muḥammad b. ‘Awn who intervened. He appointed a rival Išāsā who was, however, not able to protect the town; in 1267 (1851) and 1269 (1853) the town was again invaded. During the Ottoman re-conquest by Muḥammad Pāshā, Şan‘ā was taken by storm in 1288 (1871) and made the capital of the wilāyād of Yaman and headquarters of the vīla Ottoman Army Corps. But the Balādīs were not disposed of. In the autumn of 1906 the Ottoman had to vacate the town and the country round before the Išāsā Muḥammad Yāḥyā b. Ḥāmid al-Dīn. Although they regained it in the autumn, it took fully five years to secure a rather parlious restoration of the Turkish position. After the Great War Muḥammad Yāḥyā was recognised as Lord of Şan‘ā and Yaman by the Treaty of Sèves on Aug. 10, 1920.

In spite of its remoteness and its turbulent history, Şan‘ā has been able to make its contributions to Muslim learning. It was here that ‘Abd b. Ṣāḥiyā, by his historical tales, laid the foundation for the fame which induced Muḥammad 1 to summon him to his court. His younger colleague Ṭaḥh b. Manahhī, who died in Şan‘ā, was also celebrated by his fellow-citizens as their first authority on the Kūfī. In the second century Şan‘ā was visited by many collectors of traditions, including Ḥaṣ the b. Ḥanbal and Yāḥyā b. Ma‘ṣūn, who studied with Ḥaṣ al-Raṣād b. Ḥamān b. Ma‘ṣūn, who died in Şan‘ā in 811 (817). Şan‘ā is also noted as the place of birth and death of the poet, grammarian and historian, but above all genealogist and geographer, al-Hamādī [q.v.]. Of the Išāsā of Şan‘ā very many of them have done something to increase the bulk at least of literature; this fact provoked the other factions to a similar activity. Christians survived for a long time among the various groups of Muslims and the Jews, or they may have settled again there at the time of the greatest expansion of the Nestorian Church; thus, for example, about 225 (840) Thomas of Margi (The Book of Governors, ed. Budge, i. 238) mentions Mār Petrus as contemporary bishop of Yaman and Şan‘ā.

The first European to reach Şan‘ā was the Italian Barthen as a prisoner in 1508. The first explorer whose goal was either Şan‘ā or to reach the country of Ma‘ṣūb from it, was Castrén Niebuhr in 1755. While the yield of inscriptions from Şan‘ā and vicinity has been slight, valuable collections of manuscripts were obtained there by Gläser, Landberg, Caprotti and Borchardt.

In modern Scripture there is often dealt with by Arab geographers and travellers. In addition to Yāḥyā, we may mention as valuable for economic details also al-Muḥādīn (H. L. A., iii.)

ŞAN‘Ā. [See also SANA‘]

SAN‘Ā, ANG. ‘AL-MU‘ĀDĪ MAḤMŪD b. ‘ĀDAM, of Ghazni, was one of the most famous poets at the court of the later Ghānūmavids, where his contemporaries were Shaikhs. ‘Uṯmān Muḥādī, ‘Āli Fathī and Maḥmūd Warrāṣī. He gained his livelihood as a court poet by writing verses in praise of the king and of the leading men in the state, but one day, overhearing a well-known eccentric of Ghānūmavids drink confusion to “the wretched Şan‘ā”, who spent his time in composing mendacious verses in praise of the great and would be obliged to remain silent when asked, at the Day of Judgement, what he had done for God”, he overcame with remorse and left Ghazni for Marw, where he led the religious life as a disciple of the Shaikhs Abī Yāḥyā Vāsūf. This occurred in the reign of Ibrāhīm (1059—1099), the eleventh king of the Ghānūmavid dynasty.

Besides a Divān, containing 30,000 verses, Şan‘ā wrote the Ḥudhšt al-waṣīla, a didactic poem on morals and religion, of which the editors of the text at Ghazni display only that they sent it to Baghāzā, with a view to its condemnation by the leading jurists and theologians of Islam, but were disappointed by a decision which pronounced the book to be orthodox. After this Şan‘ā returned to Ghazni, but continued to lead the religious life. Besides the Ḥudhšt Şan‘ā has left six more Mathnawi’s, viz. Tarīq al-waṣīla, Şahr-i Ḥanīfa, Sār al-hād ‘idd ‘l-Musaw‘ir, Kāraya, ‘Iṣfāhān, and ‘Abūlqasim. The Ḥudhšt
SANAT — ŞANAM

was commented upon by 'Abd al-Latif b. 'Abd Allâh al-Abbâs, who wrote in the time of the Mughal Emperor Shâh Dîjâhân.

It is said that Bahrâm (1118-1152) the fifteenth king of the Ghurzawid dynasty, offered his sister in marriage to Sanâ'î, who begged that he might be excused, as he sought neither wealth nor worldly rank. As the year of his death 516 (1134) as well as 576 (1181) is given; the latter is, however, very improbable.

(T. W. HAIO)

ŞANAM (a., plur. aşanîm) is explained in the dictionaries and the commentators of the Kurân as meaning "an object which is worshipped besides God", and it is as a rule distinguished from the word wâthân (plur. wâthânîm) as being a thing having shape and made of stone, wood or metal, while the latter is almost synonymous with "picture or painting". This is also the explanation given by Ibn al-Kalbî in his Kitiât al-ʾAṣârân. The Arabic dictionaries state further that it is a word of foreign origin, derived from the word shânâm, but do not know the language from which it is borrowed. According to the European philologists, it is etymologically identical with Hebrew שמן "image". A deity named ʾI-l-m occurs in the Aramaic inscription of Taimâ, cf. further J. Hehn in Festschrift-Sachau, Berlin 1915, p. 36 sqq. The word occurs five times in the Kurân (vi. 74; vii. 134; xiv. 38; xxi. 58 and xxi. 71) and is frequently mentioned in traditions, though not as often as the word Wathân. From the description of the idols worshipped by the pre-Islamic Arabs, enumerated by Ibn al-Kalbî, the word Şanam appears to apply to objects of very varying character. Some were actual sculptures like Hâhal, Iṣâf and Nâlû; so were the other idols set up round the Kaʿba. Muḥammad when he entered Mekka as victor is stated to have struck them in the eyes with the end of his bow before he had them dragged down and destroyed by fire. Others were trees like al-ʾUzâz and many were mere stones like al-Lât. Stones are well-known as objects of worship by the Semites in general and the traditionist al-Dârîmî states early in the first chapter of his Aṣârîn that in the time of paganism the Arabs, whenever they found a stone remarkable for its shape, colour or size, set it up as an object of worship. These stones called Naṣîb (plur. Anṣâb) had libations poured over them and were circumambulated as a special act of worship. There can be no doubt that the Black Stone in the Kaʿba is but a survival of this stone-worship. Ibn al-Kalbî states that the Arabs were not content with setting up stones for idols, but even took such stones with them on their journeys. The word Şanam, however, does not mean a "god"; it always appears to have a derogatory meaning. For this reason it is found only very rarely in verses ascribed to poets of the time of paganism. The passages as far as few which I have found that I can enumerate them; the verses are by Zâd b. 'Amr b. Nufâl (Ibn al-Kalbî, Kitiât al-ʾAṣârân, p. 22, 24: Ibn Hîthic, Širā, p. 145, 150), Rashîd b. 'Abd Allâh al-Sulâmî (ʾAṣârân, p. 31, 10: Khâdîj, iii. 245, 39), and most instructive of all is the verse of ʿAbî b. al-ʾAbras (Diwan, ed. Lyall, i., verse 6: ʾAṣârân, p. 64, 4): "And they took in exchange for their god Yaḥûb an idol". In the poetry after Islam the word is used by al-Kâtûmî (Diwan, ed. Barth, 23, verse 25) and Ibn Kâis al-Ruṣâîyît (ed. Rhodokanakis, 61, verse 27) in the ordinary meaning of "idol, Güzîte". The numerous names of Arabic idols with all that can be traced about them in ancient Arabic literature are found in the works named in the bibliography. In the Kurân are named as idols of the post Wâd, Suwâ', Vâghûh, Yaʾât and Nasr. The chief idols still worshipped in the Hadjîqat at the time of the Prophet were al-Uzâz, al-Lât, Manît, which were female godheads, and Huhal, who seems to have been the chief male idol; his statue was of red granite.

The enumeration of the names of the idols does not really belong to this article as the proper name for them is probably covered by the word Naṣîb. As deities the various idols had special attendants (Solâd, plur. Sa'dâm), whose office was in most cases hereditary and who accepted sacrifices brought to the worshippers, and who smeared the idol with the blood of the victims. The worship was not continuous, but appears to have been once or twice a year at the beginning of autumn and spring. Then the worshippers in their circumambulation would touch or kiss the idol, the object being to derive from the godhead some of its latent powers. These festivals of worship were the cause of the peculiar Semitic custom of pilgrimages to venerated deities. Though the gods had their special places and were particular to certain tribes, other tribes would come to them from great distances during the so-called Holy Months when warfare was suspended. In this way long before Islam the various Arab tribes maintained continual communications. Growing Islam was from the very beginning intent upon the destruction of all traces of pagan idolatry and was so successful that the antiquarians of the second and third century of the Hijrâ could glean only very scanty details. Some of the idols were made use of for other purposes, as for example, the idol Dhu 'l-Khâlaqa, a white piece of marble on which a kind of crown was carved and which was worshipped at Tabâla, a place on the road from Mekka to Yaman, was in the time of Ibn al-Kalbî (about 200 A. H.) used as a stepping-stone under the door of the mosque at Tabâla. Other stones which had been worshipped as idols were actually used as
SANAM — SANDJAK

corner-stones of the Ka'bah and as such we must consider also the Ma'ṣūm ʿIbrāhīm.

(F. Keenow)

SANĀR (P., a corruption of ad ʿainā), the name given in the reign of Fāṭḥ ʿAlī Shāh of Persia (1212–1250 = 1797–1834) to a silver coin, the half abādšt or māḥūd; it weighed 36 grains (2.34 grams). With its multiplicity it was abolished at Fāṭḥ ʿAlī's reform of the currency in the thirteenth year of his reign.

(J. Allan)

SANDĀBIL, said to be the capital of China.
The name and description of the town in Yākūt (Muʿājam, ii. 451, 3) and Zakariyā al-Kawthī (ʿAḏābī al-Maḥālibī, ii. 30 sqq.) are taken from the undoubtedly fraudulent story of his travels by Abī Dulaf Muʿāṣar b. Mahdīḥ (see the art. Muṣār), who claims to have accompanied an embassy of the Chinese king Kāhīn b. al-Shakhtī to the Sāmānīd Ṣaʿr b. Ahmad († 331 = 943) from Khūzáān back to China. J. Marquardt (Ostasiatisch und ostasiatische Streifzüge, Leipzig 1903, p. 84 sqq., esp. p. 85) endeavours to show that Samābīl and Kan-tou (cf. the art. Sānūs) are identical and that we have to see in the sender of the embassy "not a prince of one of the short-lived dynasties after the fall of the T'ang dynasty but the Khagan of the Ugurs of Kan-tou". This Khagan is said "to have felt threatened by the steadily increasing power of the Kitan", and to have sought support and an alliance from the powerful Sāmānīd. On the question of the origin of the name Sandābīl for Kan-tou, Marquardt only gives the suggestion made to him by de Goeje that Abī Dulaf confused Kan-tou with Čing-tafo (in Marco Polo Sindufa), well known as the capital of the province of Sz'ewan, where a separate dynasty actually did rule at that time. According to Marquardt, "the latter town must be considered to have been the starting point of the return journey", which is obviously impossible as the return journey is described as being made by sea. So long as Abī Dulaf's story is not confirmed from any other source, the question will remain unsettled as to whether his story of his journey and the alleged reason for it is historical or not.

Nowhere is there the slightest mention of embassies from China to Khūzáān or vice versa nor of the matrimonial alliance said to have been arranged (Yākūt, ii. 45, 3).

(W. Bartold)

ȘANDAL, Sandalwood. According to al-Nawārī, numerous varieties are distinguished. The majority, especially the white, yellow and red kinds, are used for the manufacture of fragrant powders on account of their pleasant smell; they are also used in medicine, while other varieties again are used by turners and furniture-makers or for the manufacture of chessem, etc. At the present day, the pterocarpus imported from Southern Asia, the

islands of the Malay Archipelago and Africa is used for fine furniture and the waxes as dye-woods.

ErL. 1916, p. 38 (al-Nawārī). (J. Roska)

SANDJAK (t., f.) flag, standard, banner (Arabic šāfā), especially of a large size (more important than the muṣār, Ar. ṣāra or ʿāṣām) and suitable for fixing in the ground or hoisted permanently on a mast or a ship; 3) (nautical term) ensign; pennant (tabīrī sandjāf), starboard; 3) formerly a military title or ḥāfī of a certain extent in the Ottoman empire; 4) a Turkish administrative and territorial division; 5) (in the expression sandjāf tīrib-i ʿāṣām-i, p. 88, sq.) a synonym of sandjāf tīrib-i (on this plant see Barbier de Meynard, ii. 101, who gives it as a Persian word also)

As al-Kalawsbantāndi pointed out in the 19th century (Ṣabh al-ʿalā, v. 458), sandjāf comes from the verb sandμaḥ (not sandμaṭ, as in the author already quoted) which means *to sting, prick, plant, stick a weapon or pointed object in the body of an enemy or in the ground (cf. Sāmūṭ, Kamārī, Ṭurkī). The form sandμāḥ found in Cagūt (Boudagov) and even in an old Siberian loanword (Miklosich, Die türkischen Elemente in den südost-
asiatischen Sprachen, Vienna 1884, ii. 50) corresponds to the verb sand of the Orkhon inscriptions (v. Thomsen, p. 42; Radloff, p. 137). Cf. also F. W. K. M ü ller, Uglurc, ii. 78, 80 and 86, sq. InKirghiz the form used is zhandμāḥ (Radloff, Wörter-
buch, iv. 949) and in Uirinkhaj zandμāḥ and sandμaṭ (Katanov, Oeuvres akhmatiques, p. 429 and 779, with the meaning "to prick, stab, erect, fix")

Sandjāf al-Kāhīfī (12th cent.), Dīnārī, al-Turk, ii. 171, 180, 182 and 184 also gives (iii.108) sandμāḥ equivalent to sandμāf (sandμāf) already quoted, which is a Turkish particle used as the name of a prickly plant.

The word sandμāḥ belongs to a family of derivatives which all contain the idea of "point" and mean (the word itself sometimes): harpoon, fork, piercing pin, colic. Such are: sandμāf, sandμāfī, sandμāfī, sandμāfī (Bobolot), sandμāfī (Kirgiz), sandμāfī, sandμāfī (whence sandμaṭ in Ojumanlī). We may add on the authority of Abu 'l-Fidā' and the Turk-Arab glossary published by Houtsma, Leiden 1894, p. 80 and p. 29 of the Arabic text, the proper name Sandjī, glossed waʃ̄an, in preference to the usually accepted ety-

mology from Sandjār, the name of his place of birth (cf. Recueil des Histoires des Croisades, i. 1872; cf. Index under Sandjār).

Sandjī has passed into a certain number of other languages; more recently into the Balkan languages (cf. the work by Miklosich quoted above and Sainanu, Influența Orientală) and earlier into Arabic (cf. Dozy, Suppl.; cf. also W. Marquart, Le dialecte arabe de Timoc, Paris 1902, p. 270, 90, 92) and into Persian where, according to the Burūk-i ʿāṣām, it means or meant a "flag, a large metal pin intended to keep on the head a kind of hood worn by women"; *a kind of girdle*. In Modern Persian sandμāf (sic) simply means "pin" (in opposition to *needles") (cf. Nicolas,
Dictionnaire françois-persan, under the word "pin".
Freyaat took sandiability for a Persian word and the Turks still keep the orthography which it has in Persian (سندیاک) while they write the verb sandiability with a "w." We may note that in Persian direfāh "flag" also means "point" (cf. Vullers), whence the Othmanli word dierfāy (cf. Hind-oghlu s.v. "pointics" and "pointics"). The Turkish word "sandiability" gives us a variant of sandiability in the form sandiability. If it is not a corruption due to the Persians, we have here another example of a Turkish word preserved through its use in Persian. The word sandiability is very well explaining with the help of the Turkish suffix -sīf (ب) which makes a passive participle from transitive verbs. Sandiability then would mean "sharpened, fixed." The suffix sīf, with its tendency to designate place-names (which very well fits a flag "fixed" or able to be fixed) seems to have been more in use very early.

The etymological details which are given above without excluding the explanation of sandiability by "a pin" or "a peg of a person" (it is that of al-Ka'ashibandi who uses the word, which make very probable the explanation as "flag with a tail of the foot". Independently of this peculiarity it is difficult to say what was the exact form of the primitive Turkish sandiability; did they have a horse's tail (or the tail of a yak of which von Hammer speaks in his definition, Hist. de l'Empire Ottoman, xlvii. 257) or were they always flags? Were they line the safik (or, shall be mentioned by Ibn al-Ka'ashibandi for the references see Dovray, Supplement, under the word şalıf; it has become safik by an error in Djewdet Pasha and Ahmed Râsîm, quoted below in the Bibliography). The meaning of these terms may be more indefinite than we think and varied a great deal with time and place. The word sīf (سيف) which it was allowed to take in the meaning "horse's tail", meant, according to al-Ka'ashibandi, not only a flag of silk or orange brocade but also "drum", another symbol of sovereignty (l. 169; iii. 92). Ibn al-Ka'ashibandi confuses the flag with the "pasa" of the prince or dâir, better latr (Persian) pronounced sîf (al-Ka'ashibandi, s. 340) then latr "tent", by the Turks who have preferred these words to their old levîl "silk parasol of the Turkısh Khaghan" (al-Ka'ashibandi, li. 149, 17 and ili. 45, 15; cf. the Othmanli levaş "a place in the sun" and a passage in Rabihuni in Radloff, Winterbuch, iv. 59 under ilave). Whatever its primitive form was, the sandiability appears among the Seljuks as an insignium of royalty. In the Turkish text of Ibn al-Bith (ed. Houtoum, Revue, vol. ii. 152) the word sandiability is always found in connection with the title Sultan (Sultanlı sandiability). This standard is mentioned (p. 135-136, 144, 169, 170, 269 and 357) a propos of different sieges of strong places on the walls of which it was placed after capitulation. Sometimes (p. 135-136) it is the besieged themselves who, ready to surrender and no doubt seeing in this banner a guarantee of protection against pillaging, asked for a sandiability to be sent. It is not, however, necessary that the Sultan himself should be present and the historian (p. 357) shows us the beylerbeyi setting out on an expedition with the standard of the sovereign.

For a long time the neighbouring princes and vassals of the Seljuks respected their privilege but the Alibeg of Mogul, Saf al-Din al-Chah, son of 'Imad al-Din al-Zangi (d. Nov., 1149), was the first of the atšah al-qârî to have a sandiability carried unfurled over his head (Ibn al-Athir, Hist. des Abbeleb de Mesqoul, Revue des hist. or. des Croisades, vol. ii., part 2, p. 167).

The Aybílids followed the example of their predecessors.

In 1198 the Sultan of Egypt, al-Malik al-Ahmar, conferred on his nephew al-Malik al-Mu'âazzam 'Isâ when he became prince of Damascus "the sandiability and the levûl" to display throughout the world" (Kâsâb al-Ka'ashibati, Rev. des Hist. des Croisades, v. 177). In 1250 Alâak the Tarkanman, returned to an Aybirid princess and proclaimed Sultan of Egypt, took part in a procession in which the royal banners were unfurled for him (al-sandiability al-tifânat; cf. Abu l-Fida, Annales, ed. Reiske, iv. 510 of the Arabic text and 515 of the Latin translation). Among the Mamlûks, a distinction was made between the sandiability of "royal witnesses" and the ordinary "alalmûd (Gandufiy-Demouniyens, La Syrie a l'Epoque des Mamelouks, Paris 1923, p. xevii); afterwards, in Turkish Algeria the procession disappeared; cf. Milange, René, Basset, ii. 25 (under the press).

At the end of the Seljuks empire in Asia Minor the sandiability became one of the insignia of investiture of new sovereigns, particularly of the Othmanli Sultan. In 1280 after the capture of the Kâradağ Hisar by 'Othman, Sultan 'Alâ al-Din II to celebrate this conquest sent him by the hands of Ây Timur, 'Othman's nephew, a sandiability "with its accessories" (sandiability yarâgâh), as 'Asîf Pasha Zâde tells us (ed. Constantinople 1332, p. 8 sq.); Negrit prefers another version (cf. Noldeke, Z. D. M. G., 1859, xiii. 207-209). 'Asîf Pasha Zâde mentions in this connection that 'Othman thus became sandiability-beyi and we know that it was from this time that the Kâsâb was read in his name (for the first time at Kâradağ Hisar by Dursun Fakhr). According to the same authority, the sandiability's were made of cloth of Philadelphia or Ala Şehîd (p. 56).

When they became independent in their turn, the Ottoman princes appointed sandiability-bey's in larger and larger numbers and the sandiability, somewhat diminished in splendour, became identified with the territory over which it floated; it appears henceforth as the name of a political division partaking both of the nature of the military fief and of the administrative representative of the central authority. The sandiability generally carried with it a divâtih (for divâtih, "life, livelihood, fief") or, more accurately, a hâtih (a name given to a divâtih of an annual revenue of over 100,000 aspers).

Above were the larger khâjâ's of the beylerbeyi or governors-general of the provinces; below the smaller fiefs, the sîyânet, lewât and hâtih, to give them in their order of importance. Sometimes the Sultanis granted a sandiability to their children (d'Hérelbel, Bibl. Orient., p. 755; this is what was called a sandiability-o Âs-mar, Schilkin, p. 286) or to a beylerbeyi or retired viceroy (for examples see Na'imâ, li. 23, iii. 336 and passim). The sandiability-bey or mir-lewât who had a right to a horse's tail were not in principal the owners of their districts; they had the "possession" or tâparîs of them, and were their muhtarîs. This term used, from the xvith century (Na'imâ, li. 23, 8, 179, 11 and passim) was destined to become a rank in the administrative service (cf. below).

Sometimes the sandiability-bey was only an official
appointed and given an annual salary (ṣulṭān), which meant that his sāngāšt was awarded by ʿahlis. This was the case with all the sāngāṣts of the remote ʿaylāt’s of Asia, like Bagdād, Kāsar, Yemen, Hābesh, Lāhūb, and Egypt, and for three sāngāṣts (maritime) in each of the ʿaylāt’s of the archipelago and of Cyprus (Ḫālīl Ḫalīl, Taḥqīq al-Nīnār, 67). At the beginning of the sixteenth century there were two sāngāṣts divided among 25 ʿaylāt’s. In case of mobilisation, the sāngāṣt-ḵevv became military offices (mīr Ṣulṭān) and presented themselves at the appointed place of assembly (e.g. the plain of Isābān in Rumellia) with the troops collected by their vassals or subjects. The maritime sāngāṣt’s were bound to equip a ship and make war by sea (derya-yu ʿeṭḥem), sometimes at the same time as by land (hāra-yu ʿeṭḥem). The word sāngāšt passed into the sea-faring language of the Turks and Arabs with considerable variations of meaning which can be found in the various dictionaries, notably that of Allā Selyūdī, Recueil Ḳāṭib-ʿĀṭmān, Constantinople 1325, p. 55 (cf. for Arabic Ben ʿEnēb, Mifs ʿeva, p. 48; Brunot, Notes sur le vocab. mar. de Rayat, Paris 1920, p. 80; see also J. Jan–March, 1922, p. 109). By an archaism which has survived in administrative language the word sāngāšt has continued to be used in the sense of “symbol of investiture” for a Ḧeyḥ ʿeṭḥem, for example (Wāṣif, Tāʾrikh, ed. of 1219, i, 81, copy of a firman of 1175 a.H.) without taking account of the general meaning of “flag”.

According to Mouradja d’Ohsson, who does not give his authority, it was Murūd III (1574–1595) who ordered the division of the empire into ʿaylāt’s and Ṣulṭān’s (Tableau général de l’Empire Ottoman, vii. (1824) p. 276–277; cf. von Hammer, Hist. de l’Emp. Ort., vi. 288–289, 40). Neither Fesawi nor Selinchk mention these reforms.

Ṣulṭān Muḥammad II, having just finished the destruction of the Janissaries (1826) suppressed the feudal military organisation, which died a natural death in 1827, the sāngāṣt or Ṣulṭān or muṭṭargarif-šahīd definitely acquired the meaning of an administrative subdivision pure and simple. The muṭṭargarif, governor of the sāngāṣt, was henceforth a civil official, distinct from the mīr Ṣulṭān who now became the modern “general of brigade”.

The division into sāngāṣt’s or Ṣulṭān’s was maintained by the law of the muṭṭagarif’s (the former ʿaylāt’s) of Nov. 8, 1864 (the administration of the sāngāṣts is dealt with in Chapters iv, and v, articles 29–57) and by that of Jan. 21, 1871 (Administration of the sāngāṣts, articles 35–42 and 90).

The government of the Grand National Assembly abolished the sāngāṣt or Ṣulṭān by the fundamental law of Jan. 29, 1921, called tekhbirāt-e Ṣalāt, of which article 10 runs: “The ʿaylāt is divided, in accordance with geographical necessities or economic relations, into muṭṭagarif’s and the muṭṭagarif’s into ʿaylāt’s. The latter are divided into Ṣulṭān’s.” In practice this arrangement was carried out by turning the old sāngāṣt’s into muṭṭagarif’s.

SANDJAK SHARIF (t. "illustrious banner"), the standard of the Prophet preserved in Constantinople. It is 12 feet long, surmounted by a silver case containing a copy of the Qurʾān said to have been written by the Calliph ʿUmān himself. It is covered with another flag attributed to the Caliph ʿUmār and with 40 covers of taffeta, the whole being in a case of green cloth; in the centre of all these covers is a little copy of the Qurʾān attributed to ʿUmār and a silver key of the Kaʾba presented by the Sharif of Mecca to Selim I.

This standard brought from Egypt by Sultan Sültān in 923 (1517) was at first deposited in Damascus to accompany the caravan to Mecca; then, in the reign of Sultan Murūd III, in 1003 (1594) the Grand Vizier ʿOmar ʿAlī Pasha constructed the new monumental edifice in the army that had been brought from Gallipoli assembled by 1,000 Janissaries of the Syrian garrisons to the camp in Hungary where it made a great sensation among the troops. Taken to the capital it left again next year. Finally in 1005 (1597) Sultan Muḥammad III going to war had this banner carried in front of him, under the care of 300 amirs at the head of whom marched the Nāẓir al-ʿĀṣif and the Molá of Galata.

Since then the banner has never left the Serli except when the Sultan or Grand Vizier commanded an army in person. A tent was reserved for it; it was mounted on a staff of ebony wood ornamented with circles and with silver rings in which the standard was attached. At the end of the campaign it was taken from its fastenings and enclosed in a richly decorated box with many ceremonies, prayers and the burning of incense of aloes and ambergris. It was afterwards placed in a kind of chapel containing other relics of the Prophet such as the Kibrāt ʿAlī Sharīf [t. v.]. Since the xvth century 40 officers from the corps of the Haram-ṣafārī have been on guard over it with the title of Ṣandjaḵ-fār.

On Dhu l-ʿ Ḳaḍa 18, 1182 (March 29, 1769), the Sultan Muṣṭafā III having sent the standard to the Grand Vizier Muḥammad Pasha with great pomp, the ceremony provoked massacres in which there were Christian victims and even Europeans of high rank. The Austrian intermédiaire, M. de Brognard, only escaped with difficulty from the fury of the fanatic. On Dhu l-ʿ Ḳaḍa 9, 1241 (June 15, 1826), the Janissaries having mutinied, Sultan Muḥammad II took the Ṣandjaḵ Sharīf in power and gave it to his defenders who planted it on the pulpit of the mosque of Sultan Almān III. This more contributed remarkably to the success of the reformer Sultan’s enterprise.

SANDJAN RAY (or SULTAN RAY; cf. Rieu, i. 230; ill. 908), author of a general history of India up to the early part of the reign of Awarzeg (q. v.), entitled Khuljaqat al-Tawarridh. Nothing is known of his life except the few facts that he mentions himself and the remarks added by the transcribers of his book. In his preface (lith. ed., p. 6, 27) he tells us that from his youth upwards he had followed “the profession of drafting letters i.e. of a Musahib” under administrative and revenue officials; he was born at Batála in the Pandjáb (p. 71, 28); he had visited Kábul (p. 86), possibly Thatta (p. 60, 9), and the Pindjaur Gardens at the foot of the Himalayas (p. 35, 15). He based his Khuljaqat on a number of Persian historical works, which he enumerates, and having revised it two or three times completed it after two years’ labour, in the 40th year of Awarzeg’s reign, 1107 (1695). But the narrative ends with the events of 1068 (1658). His copyists tell us that he was Sháh Khatri (Bhandari or Dúi), and one states that he was a man of substance, Pushtí and Sánskrit (Rieu, i. 239, where the passage cited is obviously corrupt); there is, however, no other evidence of the author’s knowledge of Sánskrit. The work claims to be only an “abridgment of histories”, but is of special interest as being written by a Hindu; it contains a valuable section on geography, the author being particularly well-informed about the Pandjáb.

Much of the Khuljaqat was incorporated in their own works by the authors of the Siyar al-Mutahharshín (Elliot, viii. 194) and the Akballi-i Mahabbat (ib., viii. 376). The Ardish-i Mahbél by Abdás [q. v.] is an adaptation of it in Urdú.

(MUHMMAD SHAHY)

SANDJAR B. MAULI SHAH NASIR AL-DIN (afterwards MUETZ AL-DIN) ABU ‘L-HAJJI, A SALJUG OF SULTÁN. According to the usual statement, he was born on Radjab 25, 479 (Nov. 5, 1086), on Sámsár, and two years earlier, on Radjab 25, 477 (Nov. 27, 1084). His muhammadan name was Aham; on the name Sandjar, see p. 148. After the assassination of his uncle Awarzeg Argilín [q. v.] in 490 (Dec. 30), 1099 the latter was appointed governor of Khurásán by his brother Barkiyáruq [q. v.]. Some time afterwards, however, the third brother, Muhammed, rebelled against Barkiyáruq; in Radjab, 493 (May–June, 1100), the latter was defeated and had to retire to Khorasan. In the meanwhile Sandjar had taken the side of Muhammad, who was his brother on his mother’s side also and when Barkiyáruq made an alliance with the Amir Dádi, who ruled Tabaristan, Djinján and a part of Khorasan, Sandjar took the field against the combination and inflicted a severe defeat on them. In the events that followed, Sandjar stood loyally by his brother Muhammad. During the war between Barkiyáruq and Muhammad, Badr Khán, lord of Sarmascand, tried to take advantage of the absence of Sandjar to extend his rule over Khorásán, having come to an understanding with one of Sandjar’s amirs named Kundoğlu, but was captured and put to death in 495 (1101/1102), whereupon Sandjar appointed his sister’s son Muhammed Arslán Khán b. Subłamát b. Boghrá Khán as prince of Sarmascand and the province of the Djufián. Sandjar also came into conflict with the Ghaznavis Arslán Shih b. Mas’ud [q. v.]. The latter captured Ghazna (510 = 1117) and installed Bahramgir (see the art. GHANA) as Sultan under Sandjájí suzerainty. After the death of Sultan Muhammad on Dhu l-Hijjáda 24, 511 (April 18, 1118), the sultanate was to go to his son Maḥmúd, in accordance with his testamentary instructions; but neither Muhammad’s brother Mas’úd, lord of al-Mawṣíl and Aḏharbajján, nor Sandjar were satisfied with this arrangement. Maḥmúd was able without much difficulty to come to an arrangement with Mas’úd but it was more difficult to satisfy Sandjár. The latter left Khorásán with a large army and on Dżumá 12, 515 (Aug. 11, 1119), a battle was fought near Siwa. Victory was gained on the side of Maḥmúd, but as his troops were thrown into confusion by Sandjar’s elephants, the battle ended in the complete rout of the former. After long negotiations an agreement was reached by which Maḥmúd was recognised as governor of the ‘Iráq with the exception of al-Ráyi, but Sandjár’s name was to be mentioned first in the Khuljaqat. When Muḥammad Arslán Khán of Samascand became crippled he handed over the government to his son Nasir Khán. The latter was soon afterwards murdered, whereupon his father appealed for assistance to Sandjár. Before the Sultan arrived in Samascand a brother of Nasir Khan’s had succeeded in putting down the rebellion, whereupon Arslán Khán sent to Sandjár and endeavoured to persuade him to go back. But this aroused the anger of Sandjár, who at the same time suspected Arslán Khán of having designs on his life so that he laid siege to Arslán Khán in the fortress in which he had taken refuge. When Arslán Khán was forced to surrender in Ráfi’ 1, 524 (Feb./March, 1130), Sandjár gave him his life but appointed the Amir Hassan (or Hasan) Tegín and on his death soon after Maḥmúd b. Muḥammad Khán b. Subłamát prince of Samascand. In Shawaḏl, 525 (Sept., 1131), Sultan Maḥmúd died. According to his last will, his son Dżúd was to succeed him, but his two uncles, Sālūq and Mas’úd, also set up as claimants.

In Džumá 1, 526 (March/April, 1132), the contesting parties agreed that Mas’úd should be recognised as Sultan and Sālūq as heir apparent, while the administration of the ‘Iráq should be left to the Caliph al-Mustarshíd. But Sandjár was not at all satisfied with this arrangement. On the contrary, he proclaimed Tughrál b. Muḥammad, who was with him in Khorasan, as Maḥmúd’s successor and made an alliance with Imam al-Dúa Zāzioni, who appointed governor of Baghúl and Dubai b. Sadáqa [q. v.], who received the principality of al-Hilla. War was now inevitable. On Radjab 3, 526 (May 25, 1132), Mas’úd was defeated by Sandjár at Dinawar, whereupon the latter retreated to Khorasan. In Džumá ‘l-Ka‘da, 529 (Aug./Sept., 1135), he set out against Ghazna but the latter, without bloodshed, Bahramgir submitted and
was pardoned. Sandjar also became involved in a long struggle with Ataś b. Muhammad [q.v.], lord of Khwārizm. The Kara-Khiši also endeavoured to take the town of Samarkand whereupon Sandjar crossed the Dājān at the head of a large army. On Ṣafar 5, 536 (Sept. 9, 1144), however, he was defeated and had to take to flight, thus losing the whole of Transoxania. On Sandjar's struggle with the Ghurid Hussain see the art. Dschūr, p. 254. In 548 (1153) the Ghur [q.v.] also rose. Sandjar took the field against them but was defeated and taken prisoner and only obtained his release in Ramaǧān, 551 (Oct./Nov., 1156). He died on Rabi‘ I 56, 552 (May 8, 1157). After the death of this clear-sighted and vigorous ruler the Saljuq empire began rapidly to approach its dissolution.

**Sandjar**

*Ibn Khaldûn* tells us that the pronunciation of the word approaches Zanûj; both forms are still known. On the other hand we know that the Sandjarzû have given their name to the Senegal which bordered on their territory. The Sandjarzû are one of the branches or one of the great confederations of the Berber people. According to the theories of the western Muḥammadan genealogists, they are descended by Sandjar from Berne b. Berr like the Kutāna of Little Kabylia and the Mustawfī of the extreme Maghrib. No criterion, linguistic or other, has so far been able to justify this grouping. We do not know what was the kind of life led by the Sandjarzû in ancient times and where they lived. In the course of the middle ages their name frequently appears; they were very numerous; their territory extended all over both Maghrib and the Sahara. Among them were great nomads (some still are to this day, notably the Tuareg of Huggar) and settled tribes, of whom it is not possible to assert that they previously led a nomadic life; such are the Telkûta. The Sandjarzû are contrasted with the other great group, that of Zentû [q.v.] who in the latter part of the middle ages succeeded in supplanting them. The Sandjarzû reached their zenith in the first half of the middle ages or, more exactly in the 11th—12th centuries (11th—13th A.H.). This is the period when those whom Ibn Khaldûn considers Sandjarzû of the first and second race appear in the light of history. We must, of course, use the term race with very great reservations. In any case it should be observed that several times the Sandjarzû of one of the groups, wishing to secure the help of the Sandjarzû of another group, appealed to the sense of solidarity due to common origin.

The first race, that of the Telkûta, in the tenth century occupied that part of the Central Maghrib which now corresponds to the department of Constantine without the Kabylia. The settled tribes and especially the descendants of the Banû Zirî founded or ruled over centres of which the chief was Ashsīr [q.v.] in the south of Algeria. Supporting the policy of the Fāṭimids of Kairawān they fought during the whole of the tenth century against their neighbours in the west, the Zanûj, clients of the Umayyads of Cordova. They moved their action to the east as a result of the departure of the Fāṭimids to Egypt. The family of Zirîds ruled in the name of the Fāṭimids at Kairawān. A split led to the foundation of the kingdom of the Ḥammâdids of al-Kār [q.v.]. Much weakened from the second half of the eleventh century onwards these two kingdoms disappeared in the middle of the twelfth, when the Almohad thrust into eastern Barbay was made. A little group of Sandjarzû bearing the name survived into our times in the south-east of Algeria.

The second race of Sandjarzû is represented by the great nomads who occupied in the 12th—13th centuries the desert between the meridian of Tripoli and the ocean. The more important tribes were the "carriers of Ḥādân", Lamūna and Maṣūna, who played a considerable part in the religious and political history of Barbary and Spain under the name of Almoravids [q.v.]. Al-Ḥarîrī speaks of Sandjarzû as "despoilers of the life in the desert, their food and their tactics. The Tuareg form part of this group.

Certain less powerful groups located in the Sûs and the adjoining valleys of the Moroccan Atlas belonged to the same Sandjarzû stock. These are the Lâmja and Gazātû nomads and the settled Haskûra. The latter joined the Almohad movement.

Finally a third stock of Sandjarzû is said to have lived scattered in the extreme Maghrib around El-Ksar, in the plains of the Shāwîya in the region of Tizi and in the Rif. The Sandjarzû Boṭûjûr and Uryâghol have remained in the last named place to the present day. The name Sandjarzû is still borne by one of the two into which the tribes of Northern Morocco are divided.

**Santa Maria de Algarve**, or St. Mary of the West, in Arabic *Ṣaḥṭunmariyat al-Ghār* (to distinguish it from Santa Maria of the East, in Arabic *Ṣaḥṭunmariyat al-Ghār* or *Ṣaḥṭunmariyat ibn Rūṣin*, the modern Albarraque, a town in the province of Terniel in Spain; cf. above, i. 250 sqq., formerly a Muslim town in the south-western part of al-Andalus of which the Portuguese have preserved the Arabic name Algarve—al-Ghar (cf. above, l. 256)). *Ṣaḥṭunmariyat al-Ghār* is usually identified with Faro, a little Portuguese sea-port to the north-west of Cape St. Marie, on the railway from Lisbon to the frontier station of Villarel de São Antão, 35 miles from the latter. The Arabic ethnic from the name of the town is *Ṣaḥṭunmari* (cf. under this name the article on al-Aṣmāu al-Ṣaḥṭunmarī). In the Muslim period, Santa Maria de Algarve belonged to the province of which Silves (Ar. *Ṣibb*) was the capital. It was a little town of slight importance till the Umayyads Sulaiman al-Mustafin Billah entrusted the government to a...
man of obscure birth, Abū Ummān Sa'd b. Ḥārin, a native of Merida, about 407 (1016). The latter in his new residence set up as an independent prince and reigned till his death in 434 or 435 (1042–1043). His son Muhammad succeeded him and together, Ibn 'Abd al-Malik (of the house of the house of Muhammad), but in 444 (1052) he was deposed by the Al-Abd al-Rahman b. Abd ar-Rahman b. Hanif. The latter in his new residence set up as an independent prince and reigned till his death in 444 (1052) by the ʿAbd al-Rahman b. 'Amr al-Mu'Tadid who annexed the little principality of Santa Maria to the kingdom of Seville. But during the brief period of its independence the two princes who reigned there embellished the town and gave it numerous fine buildings, if we may believe the descriptions by al-Idrisi, Yākūt and al-Karawīnī; it had a cathedral-mosque and other places of worship and a church containing very beautiful columns.

Santa Maria as a city of the ninth century shared the lot of Seville and with the conquest of Algarve by Sancho II in 1249–1253 it passed finally to the Portuguese.

(LEE LIYI-PROVENCAL)

**SANTAREM,** in Arabic Shanturrin (ethnic: Shantarrin), a town in Portugal in the region of the Estremadura, 41 miles N.N.E. of Lisbon, 350 feet above sea-level on the slope of a hill on the right bank of the Tagus. This town, the ancient Scalabrius or Prasidium Iulium of the Romans, takes its name from St. Irene (Santa Irene) who was martyred in 653 and thrown into the river at Thamur 30 miles further up the river; her body stopped before Santarem and the name of the saint became that of the place. All the geographers of Muslim Spain give Santarem as the chief place in the district. According to al-Idrisi, its citadel on the heights was impregnable; the rest of the town stretched along the Tagus.

Conquered at the same time as the south-west of the Peninsula, it occasionally rebelled against the authority of the Umayyad Caliphate and it was for this reason that it was taken by the Khalīf Ahmad b. Aḥaṣṣa by order of al-Nasir in 316 (928).

A few years later, in 327 (938), the town was the scene of the rising of Umayya b. Ḥaṣṣa against the Caliph Abū al-Rahmān III who had just dismissed Umayya's brother Ahmad from the office of visier which he held. The rebel made an alliance with the king of Leon, Ramiro II, but Santarem was taken from him by the Caliph's men. The town at the end of the following century the town and its territory became part of the independent kingdom founded by the Alfasidas (cf. above, i. 175 sqq.) of Badajoz at the same time as Évora and Lisbon.

On the fall of this dynasty in 435 (1092/93), Santarem was taken by Alfonso V of Castile, but recaptured by the Almoravid general Sbī b. Aḥbār b. Tāṣḥīfīn in 504 (1111), along with Badajoz and the district of Algarve. Its capture was announced to the Almoravid sovereign Abū b. ʿUṣuf in a letter from the celebrated secretary to the court, Ibn ʿAbd al-Wadī (of the house of the house of Muhammad), of which has been preserved for us by the historian al-Marrākūshī. Santarem remained in the hands of the Muslims till the fall of the Almoravids and was definitely taken by the first king of Portugal, Afonso Henriques in 542 (1147) with other Portuguese cities: Lizbon, Cintra, Alcacer do Sal and Évora.

In 580 (1184) after a raid made by the Christian garrison of Santarem into Ajarafe and the defeat of a Muslim army sent from Seville to retake the lost territory, the Almohad Sultan Abū Yaḥyā ʿUṣuf b. Abū al-Muʾīn decided to lead a force in person against Portugal and made great preparations with this end in view. Leaving Marrākūshī at the beginning of the year, he went over to Gibralta; Algeciras and Seville, thence he marched to Santarem, there very strongly fortified and defended by a numerous garrison. The siege of the town dragged on and as the Almohad Sultan was wounded, probably from a bolt from a crossbow, and died from his wound on Rabī' II 18, 580 (July 28, 1184), the siege was raised. After that date no further Muslim attempts to retake the town are noted by the historians. Among celebrated Muslims born in Santarem may be mentioned the famous historian Abū ʿl-Ḥasan Ḥasan b. Abū Bāṣūrān in 542 (1147/48), author of a work entitled al-Dhāḥīfīna (on him see F. Pons Boigues, Essai bibliographique sur les historiostres et géographes arábigo-españols, Madrid 1898, p. 208 sqq., N.N., and the poet Abū Muhammad ʿAbd Allāh b. Muhammad b. Sāfa b. al-Rakīr b. al-Shanṭarī, d. at Almeria in 517 (1123–24) (cf. Ibn Khaṭḥikān, Waṣafāt al-Rakīrī, Cairo, p. 311–332).

(LEE LIYI-PROVENCAL)
(1902), while the number of sawiyya's rose from 22 in 1859 to 100 (1884).

Sadi, Muhammad b. 'Ali al-Sanusi left, in addition to instructions regarding inlithion into his orders (q. v., Dictionnaire turc, ii. 77). Sar-dar, illuminated frontispiece mounted on a Persian manuscript. Sar-undāta, a little rag of felt which is placed on the willed carpet at one end of the room (Chodzko, Popular Poetry of Persia, London 1862, p. 99 note). (Cl. Huar.)

SARAH. [See in the text.]

SARA. [See in the text.]

SARACENS, The earliest certain mention of this name is found in the work composed by Dioscorides of Anazarbus about the middle of the first century B.C. entitled 1210 P2 λησταρχoς, i. 67 (i. 60 of Wellman's edition, Leipzig 1839—1914) who describes the resin of Bdellium (κολοπατ) as a product of a "Saracen tree" (κολοπατ των Μαρσαυκων) and adds that it is imported through Petra and is of a quality inferior to Indian bdellium (κολοπατ). In the Breviarium Terrae Sanctae, vii. 252 (p. 252). The most recent editor has, against the evidence of all the manuscripts, not only altered the native name ma'dakon given by Dioscorides, but is vouched for by the Hebrew ma'dalak, into ma'dakon but also Μαρσαυκων into Αραβόσων. In the contemporary Hist. Nat. of Pliny the Elder, vi. § 157, ed. Delefsen, the Saracen are mentioned among the Arab tribes of the interior whose lands bordered on the Nabataeans, along with better known names like Taveni (Tayy) and Tamudaei (Thamud); it is natural to find the Saracen in these. Violemy (middle of the second century A.D.), vi. ch. 17, § 3, mentions the district of Saraken in Arabia Petraea and locates it west of the "Black Mountains" ( μακρα μίνα ἀείνα) which, according to him, stretched from the Gulf of Euson to Judea "besides Egypt" (τάραν τοῖς ἀντικριτ). On the other hand in vi. ch. 7, § 21 he mentions the Saracen as a people in the interior of Arabia Felix; according to him, the Skenites and the (others (= 'Ad; var. 'Aid) inhabit the heights towards the north and south of them the Saracens and the Thamudids (Thamūd). According to Stephanus Byzantinus, s. v., Saraka is a district (χώρα) beyond the Nabataeans; its inhabitants are called (τόματοι); under Tausos i.e. Tayy the same author says that they live south of the Saracens, giving as authority the Arabian histories of Uplianus and Uranios. If Uranios, Stephen's authority, to whom the statement regarding Saraka must also go back, belongs to the period of the last Diadochi, as von Domaszewski (A. R. xxvii. 250 sqq.) endeavours to prove, this would be the oldest reference to the Saracens. In any case, relying on the passages quoted we must seek the original home of the Saracens on the Sinai Peninsula towards the Egyptian frontier and in the vicinity of the Nabataeans, and B. Moritz has recognised their descendants in the little Beduin tribe of Sawirā, who live at the present day along the coast between Pelusium and Ghaissu. These Saracens in the narrower sense may still be referred to in the letter preserved in Eböas and Hitt. Ecl. vi. 42, of the contemporary Dionysius, Bishop of Alexandria, regarding the Christian persecutions in Egypt in the first year of Trajan Decius (249-251); many Christians took refuge in the "Arabian Mountains", where they were sold
by the Saracen barbarians as slaves. In the different versions of the Christian Αναγνώμενα Μεγάλη (p. 10), which is based on the Moslem genealogies and dates from the third century, in the Liber Generationis Mundi and in the Barbarus Scaligeri (Mon. Heri. Hist., vol. ix. 145, ed. Dindorf), the Saraceni and Tauri are mentioned as people of some importance. In the tractate of Baradanos Ḳaʾfha al-Nāmaṯ al-ʿArafawī (ed. Cureton, p. 16 of the Syriac text = p. 24 of the translation), which was placed in the beginning of the third century, the Tayyē and Sarāqīyay, for which the translation of Eusebius gives Tāvāli and Ṣāqāwāli, are the representatives of the independent nomadic Arab tribes; it seems that about the middle of the third century A.D. the tribe of the Saracen, bilharto little known, came to the front among these smaller tribes, incorporated them and disturbed the Roman frontier. In the ecclesiastical historians of the fourth century, Eusebius and Hieronymus, the Saraceni are identified with the Ishaqisalat of the Bible: they live outside of the province of Arabia in the desert, at Kadesh, in the district of Faran or Midian where Mount Ḥoreb lies, to the east of the Red Sea; they were first of all called Ishaqisalat and later Hagarenes and finally Saraceni (Eusebius in the Onomasticon composed before 336 under Περίος, Καὶ καὶ, Μαλκία and Φαρα); Hieronymus in Eus., Chron., ed. Schoene, ii. 13: Ḥismail, a quo Ishaqisulat gentes, qui postes Hagaretini et ad postremum Saraceni dicit = Chron. Pharm. 94, 135 do., on Jes., xiii. 11, ix. 7, Ed., xxvii.; Porphirios, Panarion Haer., iv. 1, § 7: Ḥismail founds Faran in the desert; from him are descended the tribes of the Hagarenes, also called Ishaqisalat, who are now called Saracen). Henceforth the name Saracen is extended to the other Arab tribes also; the profane historians of the fourth, fifth and sixth centuries (Zosimus, Rufus Festus, the Panegyrici, Julianus, Ammianus Marcellinus, the Scriptores Historiae Augustae, who, according to modern research, wrote at the beginning of the fifth century, the Notitia Dignitatum, Priscus, Malchus, Nonnus, Eunapius, Menander Protitkoi, Procopius) and Socrates and Sozomenos among ecclesiastical historians avoid the Biblical names and prefer to use the term Saraceni and only occasionally *Arabae*, Evagrius exclusively Ṣουρία (cf. Ammianus Marcellinus, xxii. 15, 1: Scenitae Arabes quo Saracenorum nunc appellavimus, and xxii. 6, 15; Scenitae Arabes quo Saracenorum posteritas appellavit, word for wood also in Malchu, Progm. Hist. Grac., 1. 112). The names Saraceni Asamnias (i.e. غسانيد) should be noted in Ammianus and Saraceni Thamudeni in the Not. Dign. Or., Ch. 28. Finally, the Arabs in the north, in Mesopotamia and on the Persian frontier became known as Saraceni (Marcianus Herac., Periplus, Ch. i. § 175; Ezekiel torus mundi et gentium, ch. 20; frequent in Julianus, Ammianus, Procopius, Menander Protitkoi etc.).

After the foundation of the Arabian Empire by the successors of the Prophet, the Byzantines call Saraceni all the Muslim peoples subject to the Caliphate, and this name survived into the late Middle Ages even after the decline of the Caliphate of Baghda, as is shown by the anecdote given by Ibn Battūta (ed. Defrémery and Sanguinetti, ii. 441), who was greeted in Constantinople by the Emperor as *Sarākīya*, that is Muslim*. The Seldjuk and Turks, on the other hand, are called Persians or Haguereens. The name Saracen was transmitted by the Byzantines to Western lands through the Crusades and has been used to the present day as the name of the Arab peoples and the products of Eastern lands, as the dictionaries of the Romance languages show.

In striking contrast to the wide distribution of the name Saracen in the west is the fact that the Arabs themselves do not know the name, either for a small tribe or as a collective name for the North-Arabian tribes. The derivation from saragha to rob* (as early as Joseph Scaliger) or *ṣaḥīḥ* east* (Relandus) or even from *ṣahā* (as Sprenger suggested), are all to be rejected; besides, the spelling *tābī* in the Palestinian Talmud and in the Targum Yerushalmi as well as among the Syriac points to *ṣarāh* as the root, provided that this form is not based on *Ṣāqāwāli*, Saracenus. H. Winckler (Arch. für Orientk., iv. 74—76) thought he had discovered the word *ṣawra* in the meaning *desert-dwellers* in two passages in Sargon’s Annals and derived the name Saracen from this. Hieronymus says in his commentary on Ezekiel: Agaren qui nunc Saraceni appellatur falsi sibi assumposerunt nomen Sarac ut de ingenio et dominia videantur generali; Sozomenos (Hist. Ecc., vii. Ch. 38), Synkellus (ed. Donn, i. 187) and others have repeated this interpretation of the name; it is once more dishied up to the credulous reader as late as the xvith century in a modern version in the Travels of Macarius of Antioch (ed. Balfour, i. 169).

The descriptions given in various late classical authors of the manners and customs of the pre-Islamic Saraceni, e.g. in Ammianus, Sozomenos, Hieronymus (Vita Malchi), Procopius Gazaurus, Frasianos and Procopius of Cæsarea ought to be collected and annotated.

SARAGOSA, a town in Spain, capital of the modern province of this name and formerly capital of the kingdom of Aragon, on the right bank of the Ebro 600 feet above sea-level in the centre of a well watered and flourishing region (la Huerta). The modern Spanish name Zaragoza corresponds to the Latin Caesarea Augusta, a name given in 728 a.d. to the military colony founded by Augustus on the site of the ancient Saldua of the Iberians. The name of the town passed into Arabic in the form Sarakstan (nabat Sarakstan) probably through the Gothic form Cesaragosta. From the time it was taken by the Muslims until it was regained by the Christians, Saragossa was one of the great cities of the Muslim empire of al-Andalus; its geographical situation gained it the title of "Upper March" (al-thawr al-ahšāf) of Arab Spain. In the time of al-Idrisi (middle of the twelfth century) it was densely populated; it was known as the "white city" (al-ahšāf) from the colour of its ramparts built of blocks of tufa. The fruits of its gardens were...
recounted among the best in al-Andalus. The capes of bayrak may have been famous throughout the Muslim world.

Saragossa fell into the hands of the conquering Arabs in 944-712/3 soon after Toledo. Mūṣṭ b. Nuṣair, having been rejoined by Tārīk, left this last town and advanced on Saragossa which he took at the same time as the villages and castles which surrounded it. According to Isidore of Beja, it was sacked and its inhabitants treated with the utmost cruelty. It was already a Muslim metropolis when, under the emirate of Yūsuf b. 'Abd al-Raḥmān al-Flīhrī, al-Ṣumail b. Ḥāṭim [q.v.] was appointed governor in 132 (749). He was soon besieged there by Arab rebels and had to abandon the place to one of them. Throughout the second half of the second century A.H., Saragossa saw successive revolts within its walls, which the historians have recorded for us. This is how it came to be in the hands of the local chief al-Husain b. Yāhiyā al-Kharadžī when the army of Charlemagne besieged it in 778. The Emperor was suddenly summoned away to the banks of the Rhone; he raised the siege and soon afterwards in the pass of Roncevaux, where the Basques had prepared an ambush for him, suffered the fearful disaster the memory of which is immortalised in the Chanson de Roland.

Two years later, in 104 (780), the Umayyad 'Abd al-Raḥmān I marched on Saragossa and captured it. But it was not long before it slipped from the power of the Caliph and in 125 (791) Hūṣīn had again to besiege it and take it again through his general Ubaid Allah b. Ṣuhrān. Again in 151 (797) a rebel declared himself independent there and successive Caliphs had regularly to send expeditions to the Upper March of their empire to suppress rebellions — with more or less success.

At the same time (end of the eighth century) a Saragossa family, the Banū Kātī, attained great power in Aragon. They had adopted Islam; one of its members, Mūṣṭ b. Sūr, son-in-law of the first king of Pamplona, Ibnīgo Aristā, declared for the Caliph Hūṣīn and surrendered Saragossa to him. Later, in the middle of the ninth century, the head of the family, Mūṣṭ II, was governor of Tudela and commanded the armies of 'Abd al-Raḥmān II which raided the frontiers of France. He helped this ruler to drive off the Normans who had landed in Portugal and in 852, the year of accession of the Caliph Muhammad, he had in his power all the Upper March, with Saragossa, Tudela and Huesca. He lived like a monarch, exchanging presents with Christian kings, for example Charles the Bald of France. But he was defeated in 860 by the King of Leon, Ordoño I, and killed two years later by his son-in-law, the governor of Guadalajara. On his death the Banū Kātī cast off the authority of the Caliph of Cordova and the latter, Muhammad, to counteract them allied himself with the Tūqīlībīs.

This Arab family, settled in Aragon since the conquest, had its tribal rights recognised and its chief, 'Abd al-Raḥmān al-Tūqīlībī, was officially appointed its head. In 888 on the accession of Sulṭān 'Abd Allāh, the latter learning that a plot was being hatched against him in Saragossa commissioned the son of the Tūqīlībī chief, Mūṣṭ b. 'Abd al-Raḥmān, surnamed al-Ankal (the "one-eyed") to put the governor of the town to death. The latter did so in 890 and became a by no means too dutiful vassal of the Caliph. He finally destroyed the last Banū Kātī, whose chief, Mūṣṭ b. Lope, was killed in 898 below Saragossa. Al-Ankal died in 924. His heir Hūṣīn who succeeded him gave his name to all the family and died in 936. His sons, the Banū Hūṣīn, were well treated by the Caliph 'Abd al-Raḥmān III but one of them, Muhammad, rebelled against him in 934, joined the king of Leon, Ramiro II, and after a pretended submission to the Caliph leagued against him the whole of the north of Spain, including the kingdom of Navarre. 'Abd al-Raḥmān set out to overthrow him; he seized Calatayud and then besieged him in Saragossa; Muhammad b. Hūṣīn capitulated, the Caliph pardoned him and kept him in his governorship. His son Yāhiyā was general of 'Abd al-Raḥmān III and of al-Ḥakam II in Spain and in Africa and governor of Saragossa from 975.

Later, in the reign of the Ḥāḍīb al-Manṣūr b. Abi 'Amir, a Tūqīlībī governor of Saragossa, 'Abd al-Raḥmān b. Maṣṭarīṣ b. Muhammad b. Hūṣīn, hatched a plot against him which was discovered and the conspirator executed in 989.

On the fall of the Umayyads a grandson of the preceding, Yāhiyā, became governor of the Upper March and had a son al-Muḥammad, who, after fighting with the Slavs against the Berbers of Spain proclaimed himself king and made an alliance with the Counts of Barcelona and Castile. Under his reign peace reigned in Saragossa. The town became flourishing and populous. The glories of his court were celebrated by poets like Ibn Darīḍī al-Ḵastālī. Al-Muḥammad reigned till 1025.

His son Yāhiyā who succeeded with the title of al-Muṣṭafīr died soon after his accession and was succeeded by his son al-Muḥammad II, Muḥammad al-Dawla (420/1029). The latter was killed ten years later by one of his relatives, the general 'Abd Allāh b. al-Ḥakam, because he refused to recognise the Caliph Hūṣīn II. This 'Abd Allâh tried to seize the authority but rebellion broke out among the people of Saragossa; and the independent governor of Alarida, Abī Ayyūb al-Salāmān b. Muhammad b. Hūṣūd arrived quickly to restore order in the city and seize the throne of the principality.

He took the title of al-Muṣtalīs and was the founder of the kingdom of the Banū Hūṣīn (cf. the article 1070) with Saragossa as capital and ruling the districts of Lérida, Tudela and Calatayud. He died in 438 (1046–1047). Son succeeded father as follows: Al-Muḥammad al-Muṭṭadīr Saif al-Dawla till 474 (1081); Yūsuf al-Muṭṭamīn till 478 (1085); Al-Muḥammad al-Muṣtalīs II killed in 503 (1107) at the battle of Valletiua won by the Christians. His son 'Abd al-Malik 'Ismāl al-Dawla reigned in his turn till the final capture of Saragossa by the Christians of Sobrarbe on Ramadān 4, 512 (Dec. 19, 1118); he took refuge in Rueda. Unfortunately we have very little detailed information regarding the reigns of these princes and the dates given for them by the historians are not always in agreement. Nine years before it fell into the hands of the Christians, Saragossa had been taken by the Almoravides for Sultan 'All b. Yūsuf on Dhu l-Ka‘da 1, 503 (May 31, 1110).

At the present day very little survives of the Muslim period in Saragossa, which must undoubtedly have been several times rebuilt in the course of those centuries as a result of the strenuous and heroic sieges it had to endure. The "Seo", or
cathedral is built on the site of the former Great Mosque and there can still be seen on the north-eastern façade an ornamentation of bricks and squares of enamelled faience (azulejos) which probably dates from the Arab epoch. According to a tradition recorded by certain chroniclers and geographers, this mosque-cathedral was founded by the 83rd [q.v.] Hasāṣ b. 'Abd Allāh al-Ṣanʿānī who died in 1000 (718/719); he was buried with one of his companions opposite the mihrāb. The mosque was enlarged in 1243 (856), in the reign of the Umayyad Caliph Muhammad b. 'Abd al-Rahmān b. al-Ḥakam.

At the present day the most important Arab monument in Saragossa is the palace which bears the name of Aljafería (no doubt the Arabic al-Dja'farŷa, from a Dja'far or Ibn Dja'far, whose memory does not seem to have been preserved outside of popular tradition). This palace which has undergone many and far-reaching alterations and was partly destroyed in 1809 is now used as a barracks; it lies as the western end of the town. Of the part dating from the Muslim period there only remains a little oratory 25 yards square with a very pretty dome 45 feet high. It was supported by marble pillars with remarkable capitals, to judge from those that still exist. The mihrāb is adorned with a decoration in carved stucco, on a blue ground. Close to the oratory a little tower 80 feet high (called the "troubador's cell") is most probably of the same date. It is probable that the Muhammadan ruins of Aljafería from the dynasty of the Banū Hilūd whose palaces were numerous in Saragossa (we only know the name of one of them, Dār al-Ṣurūr ["house of joy"]; built by al-Muqtadir b. Hilūd). The Aljafería deserves to be subject of a monograph, for it is a memorial of a period of transition from the beautiful age of the Caliphate of Cordova to the century of the Alumbars.

Among famous Muslims born in Saragossa may be mentioned the great traditionalist 'Abd Allāh Husāin b. Muhammad b. Fierro b. Haiyūn al-Sadafā, known as Ibn Sukkara, born in 452 (1060) and died a "martyr" at the battle of Cutanda in 514 (1120). It was to his pupils that Ibn al-Ḥabār in the following century devoted an encyclopaedia (maqāla) published by F. Codera in vol. iv. of his Bibliotheca Arabico-Hispánica (cf. the references in the J. A., 1923, ccc. 225 and note 1).

SARĀI, capital of the Golden Horde; cf. the articles Kieñak and Mongolls. The name is in Persian Sarāi = palace; nevertheless it is frequently written sarâi in Arabic works. On its foundation by Biał and the name Sarâl Berke see above, i. 685 and 7098. The geographers and historians speak only of one town of this name but on the coins we find a New Sarâl (Sarāl al-Qâlid) mentioned: the earliest coin struck in New-Sarâl is dated 710 A.H. The only historical reference to New-Sarâl so far known is the mention of the death of the Khān ʻOrbeq (the date given is 742 A.H.); in New-Sarâl in Shams al-Din al-Shajā'al-Misqir and quoting him in Ibn Khall Khushba (text in Tienhausen, Sewnik materialow, Sarâl, Sarâl al-Qâlid al-Qurâb, p. 254 and 445). Two ruined sites on the Ablutak, which branches off from the Volga, are regarded as the ruins of Sarâl, now called Tarzew and Sethtennoye or Sethtennury Gorodok. Which of the two was the capital of the Golden Horde and when, whether there were one or two Sarâls (that is whether New-Sarâl was a new part of the town or a town built on another site) are questions often disputed since the xvith century by scholars and not yet decided even now. The sources are obscure and contradictory on many points; thus the distance given by Abu ʻl-Fida (and many others) between the mouth of the Volga and Sarâl (2 days travel) suits Sethtennoye; on the other hand Abu ʻl-Fida says in the same passage (ed. Refaï, p. 217) that the town is built in a plain (fi mustawa’ min al-araf) which is only true of Tarzew (Sethtnennoye is built on hills). The same information is found in Ibn Battītā (ed. Defrémery and Sanguinetti, iv. 477; fi busīt min al-araf); the description by Sethtennoye al-Din al-Umarī, according to which there was a pond in the middle of the town, also fits Tarzew (text by Tiesenhausen, p. 220). The excavations conducted for a series of years (1843-1851) by A. Tereščenko in and around Tarzew show there are certainly the remains of a large town there. It is on the results of these excavations that the view first expressed by Grigorjew as long ago as 1845 is based that the ruins of Sarâl can only be
at Tzaraw; and at most at Seltrennoye we have the town built by Ilia and later supplanted by the Sarai of Berke. Under the influence of Grigor'yev's pamphlet Soloyev in his History of Russia (edition of the Society "Olbch. Pol'tsa"); i. 541 located Sarai at Tzaraw and not at Seltrennoye, as糟糕- wonderful, vol. iv. note 74; German edition, Riga 1823, iv., note 55, p. 263) had done. The ruins at Seltrennoye have so far been only superficially examined; they occupy almost as large an area as the ruins of Tzaraw (both sites are 3 miles long, the ruins of Tzaraw 2½ miles broad and at Seltrennoye 2 miles broad) but the finds made there are much less important. The view expressed by G. Sabulakov in 1844 (Oerk vnutrennego surovnaya Kiplakskyh taurts) repr. by N. Katsanov, Kanaz 1895, p. 28) that Seltrennoye is Old-Sarai and Tzaraw New-Sarai was revived by D. Koboeko (Zap., iv. 267-277) and more recently by T. Balod (Starly Novy Sotai, stolitsa Sotai Ord.), Kanaz 1923). On the other hand A. Spitsyn (Zap., xi. 287-290) locates Old-Sarai at Tzaraw and New-Sarai at Seltrennoye. According to the narrative of a merchant given in Abu l-Faraj, p. 36, there was a village called Eskii Yurt ("Old Settlement") on the Akhtuba below Sarai; this may very well refer to Seltrennoye. The Sarai in the town show that Seltrennoye was perhaps inhabited before Tzaraw and certainly continued to be inhabited much later.

Sarai was destroyed in 1395 by Timur; the skeletons found by Terehchenko without heads, hands or feet etc. must be regarded as dating from this destruction. Perhaps the settlement at Seltrennoye again became of more importance as a result. In 1472, Sarai was ravaged by Russian freebooters from Niatka and is said to have been destroyed in 1480 by a Russian force in combination with a Tatar force from the Crimea. About 1554 at the time of the conquest of Astrakhan by the Russians (cf. above, i. 493b) the towns at Tzaraw and Seltrennoye were both already in ruins.

SARAJEVO. [See SERAJEVO.]

SARAKHS, an old town between Maghasd and Mary, where the frontier between modern Persia and Russia turns from E. to S., on the lower course of the Haridud, which is at this part filled with water for part of the year only and then disappears in the oasis of Tadjik north of Sarakhs. Between the town and Mary lies a part of the desert of Korkum [q. v.] which belongs to the area of the Teke-Turkmans. The Arab-Persian geographers ascribe the foundation of the town to Kau-Kawus, Afrasiyib or Dhu-l-Karmain. The soil is considered good but, as a result of the drought, is devoted to pasture only and there are few settlements in the neighbourhood. Camel-rearing was the principal industry of the inhabitants and the weaving of wools, ribbons etc. was for a long time prosperous. The town consists of houses of mud or brick without any important public buildings. It was the birth-place of al-Farq al-Sahl, the famous vizier of the Caliph al-Ma'mun, who is said not to have adopted Islam until 805/806 A.D. and was one of the most influential representatives of the Persian genius. He was murdered in his bath in Sarakhs in 818/819 A.D.; his brother al-Hasan died there in 830/831. The physician and mathematician Abaq b. al-Tayyib, a pupil of al-Khwarizmi, later the confidant of the Caliph al-Mu'tadid, was also born in Sarakhs.

AL-SARAKHSI, Shams al-A'Imma Abi Bakr Muhammad b. Ahmad b. Ali Sahl, the most important 'Ulama' lawyer of the fifth century in Mawar al-Nabir. Little is known of his life. Probably born in Sarakhs, he studied at A'ziz al-Halwasin († 444) in Bukhara. He then came to the court of the Karghans in Uzbdjan. There he was thrown into prison by the Khakhun Husain, probably because he alone of all the 'Ulama' stigmatized as illegal the conduct of the ruler when he married his unmmanulated umma waalad's without observing the 'idda. Here he languished for over ten years and dictated to his pupils, who sat before his prison, his most important works, al-Mas'ulik (14 vols.), the Majal al-fikhl (2 vols.) and the Sharh al-Siyar al-Kabir (in 4 vols., printed at Haidarabad in 1333-1336), entirely from memory without using a book. Parts of the Mas'ulik are dated from the prison in the years 466 (1073) and 477 (1084). When he had reached the fourth part of the Siyar he was released. He completed this work at the court of the Amir Hasan in Marghun in Djamshid I of the year 480 (Aug., 1087) and died in 483 (1090). His pupils were: Barhun al-A'imma 'Abd al-'Aziz b. Umar b. Masa, the father of al-Sadr al-Shahid († 536 = 1141), 'Alamuddin b. 'Abd al-'Azir al-Usjandji, the grandfather of 'Alamuddin († 592 = 1190), 'Ummun b. 'Ali al-Balkandi († 552 = 1157), etc. His Kitab al-Mas'ulik (vols. 1-30, Cairo 1324-1331) is one of the most comprehensive of the earlier 'Ulama' books. It is remarkable for the way in which the author works out general legal principles. Besides the works already mentioned he wrote commentaries on the Mehatulm of al-Tahawi († 521 = 933); the Khilaf al-Hiyal of al-Kasrift (vol. 30), the Kifat al-Kas'af of al-Shahibini (printed in the Mehatulm, vol. 30) and on numerous other works of al-Shahibini. His books are still very common in the east; his Siyar, for example, is in almost every library.

SARAT, the mountains which run along the western side of the Arabian plateau. Al-Hamdani, the greatest authority on the Arabian peninsula among the Arab geographers, says that two-thirds of the area, which divides the highlands (Najd) from the plain (Ghawr, Tha’ama) and was therefore also called Hijaz by the Arabs, are the extreme south of the Yaman and Syria; al-Ash’ami makes it stretch to the Armenian mountains. This mountain chain, which al-Hamdani already knew not to be a single range, but a succession of hills immediately adjoining one another, is, according to the old records, four days journey in breadth on an average, varying by a day or part of a day here and there. In his description, al-Hamdani distinguishes the main ridge (Jabal), then the lofty part, not belonging to the main ridge itself (al’is al-Sarat) and the western spurs (ash’al al-Sarat). The average height of this great range, which the Arabs regarded as a great gift of God to be a backbone for the earth, according to a story recorded by Sa’d ib. b. Smarti, is 8,500 feet. In the north-west the greatest elevation is the Daiab al-Dibhi (7,200 feet), in the south-west there is a series of peaks which reach 10,000 feet, and, as in the case of the Daiab Nabi Sjuab, occasionally snow-covered in winter (10,800 feet), the highest peak in the Sarat forming part of the huge Masikna massif, even surpass it. The whole range consists of sedimentary rocks with a substratum of granite and gneiss and numerous volcanic cones between which often stretch wide plains strewn with black lava, which are called barras in the northern part of the Arabian peninsula and fahnd in South Arabia. To the west the range falls sharply down to the Tha’ama, which is a plain sloping from a height of 2,500 feet to sea-level, out of which rise recent volcanic upheavals in the form of peaks. On the east the hills slope gently down to the Persian Gulf. The Sarat as a whole does not show any marked uniformity of direction but is cut up into large and smaller ranges which intersect in all directions. It is in general treeless and uninviting in appearance with black rocky ravines, ridges, peaks and penneaux, round and sharp or jagged, showing all possible forms but always bare. There are mountain villages away high up on almost inaccessible heights which consist of stone houses of two to five stories, sometimes square and sometimes round, and form self-contained often quaint citadels, surrounded by yawning guls on all sides. Breakneck paths and bridle paths often hardly traceable on the sides lead up to the narrow gates which open into the villages; these are well cultivated fields on the slopes and in the valleys, laboriously erected terraces along the slope sink like steps down the valley. The valuable soil is kept in place by a wall built of large stones, rarely bound with mud and always without lime, and protected from being swept away. The rainwater is fully utilised for these plots and runs from the upper terraces to the lower ones. On these fields, which are protected from the great heat of the sun by shade-giving trees, the best coffee in the world is grown, and grapes and sugar-cane also flourish here. The lower chain of the Sarat is interrupted occasionally by broad plains. For example, the plain of San’ah runs 15 miles to the south and about 7 miles to the north; the southern tongue of this plain runs after a short interruption through the Nakit al-Yaslah into the broad plain of Dhahat, the most fertile part of the Yaman and the richest in water.

The Sarat owes its origin to those great volcanic convulsions which caused the young tertiary Erythrean subsidences, and created the great fault on which the Arabian desert sank with its hitherto undisturbed horizontal deposits. Weathering, wind-erosion, and erosion by running water then tried their strength on the steep western slope of the tableland which was transformed into a mountain system of erosion or highlands, which can be divided into an inner and an outer system of valleys which on the western slopes run from east and north-east to west, on the south side run consistently from north to south and south-east and cut the highlands into separate tongue-like peninsulas which are again cut up by smaller valleys, the origin of which probably is also as old as the pluvial period. These side valleys have transformed the Sarat peninsulas into hills of erosion or chains of hills, which has contributed to the varied forms of the hills, which in part owe their existence to volcanic forces also, like the cracks which often occur.

In summer the western slope of the Sarat shows very slight variations of temperature; the heat is tropical and rises from 88° F. in June to 99° F. in August; in the winter it reaches a more endurable maximum of 77° F. At night, however, the temperature sinks to 36°—27° F., and in the high mountains in the winter to 23° F. so that the mountain tops are frequently covered with snow. From the middle of June to the end of September is the rainy period. The spring rains fall in April; thunderstorms are not uncommon in the main rainy season and in the winter months water infiltrates into the higher slopes, especially with a strong east wind; everywhere the thermometer is several degrees above freezing-point. A further peculiarity of the climate of the Sarat are the Tha’ama fog which come in summer down to the bottom of the valleys, which the Arabs call awasa or sahadiit, and only disappear after the temperature has reached its maximum so that they bring their own mitigation with them, which is exceedingly beneficial to vegetation. The climate of the eastern slopes of the Sarat is extremely dry in contrast to the very moist climate of the western Sarat. In San’ah the relative humidity sinks to 20%. Here also the rainy season falls into two parts (March, and July—September). Throughout the whole year it is possible to sow and reap, which is true not only of cereals but also of vegetables and fruit, which are ready at every season in some one of the numerous sorts. The vine, for example, flourishes all over the mountains of Arabia, although only in the river-foothills. The eastern slopes of the Sarat has an almost European character with respect to agriculture although the good soil is limited to the artificial terraces, which are also artificially irrigated. The valleys which have a perennial water-supply show that incredible wealth in fruit and cereals which was described so enthusiastically by al-Hamdani. The occurrence of tamarisks, scacias and mimosa is characteristic of the desert-like eastern slopes of the Sarat, but in addition to the ‘yubbe tree we also find date-palms, numerous varieties of fruit-trees and the cotton plant as well as a great variety of medicinal and garden plants, among which the aromatic are especially important on the classic soil of Arabia Felix. The celebrated frankincense
tree now only yields resin in a few parts of the Yaman; on the other hand cactus-like euphorbias, balsam trees, ‘Aden shrub, Döns palma, tamarinds, râk and a variety of resin- and gum-yielding trees, acanthus and sweet scented plants and shrubs are widely disseminated. Besides the most valuable cultivated shrub in Arabia, the coffee-plant already mentioned, the vine, the date-palm and countless varieties of fruit, there also grow in the Sarat region rye, wheat, oats, barley, maize, sugar-cane, tobacco, ṣâr [q.v.], potatoes, cabbage, beans and figs. But these fruits of the earth do not drop into the countryman’s lap; on the contrary, they are often won from the soil only after a hard fight. The endless year of labour have made this remarkable district, which has landscapes rivalling the Alps in splendour, what it is to-day economically.

(Adolphe GROHMANN)

**AL-SARATÂN (the crab), Cancer, in astronomy for the name of the most northerly constellation in the ecliptic which lies under the summer solstice. The siyâs al-saratân (Greek: Kapiος, Latin: Cancer) with the Arabs (exactly according to the Almagest of Ptolemy) consists of nine stars with an additional four outside the actual outline of the crab. Even the brightest stars in the constellation are only of the fourth magnitude; four of them form a smooth upright curve, the two outer being on the pincers (al-sâhâni al-dajâni) and the al-sâhâni al-ṣâhid), while the two central ones, forming the eye of the crab, are called the little eyes (al-himârin, aswil, assil). Between them is a group of stars, the Beehive (al-mu’dâf, muweṣṣet), looking like a little cloud to the naked eye but showing about 40 stars when seen through a telescope: In the centre of an opposite curve on the hind-legs of the crab is the celebrated and much studied multiple star ε Canceri.

With the entry of the sun into the head of Cancer it reaches its greatest (northern) declination which is equal to the obliquity of the ecliptic E (Arabic: al-ma‘l al-ṣâhid). But this figure (now = 23° 27') is not a constant magnitude; it alters with time within moderate limits. Astronomical calculations have shown that it can be found from the formula

\[
E = 23° 27' 8.26 - 46°.845 T - 0°.0089 T^2 + 0°.00181 T^3
\]

where T is reckoned in units of 100 tropic years and from the initial year 1900.0. Thus, for example, for the year 1000 A.D. E = 23° 34' 8.07 (cf. S. Newcomb, Elements of the Four Inner Planets and the fundamental Constants of Astronomy, Washington 1895, p. 190). This variation in E, which from a present diminution will again pass into an increase, was well known to the Arab astronomers. The Fāṭimid astronomer Ibn Yūnus (+ Cairo 1009) has given us in his book Zijd al-balâb al-Ḥakîm (MS. Leiden 1537, Chap. xi, f. 222) a historical account of the measurements of the obliquity of the ecliptic by the Arabs, from which the following is taken. According to Ptolemy, Eratosthenes and Hiparchus had estimated the obliquity of the ecliptic at 44° of the circumference = 23° 51' 20", and I do not know of any observation for the greatest declination between the authors of the tested tables (ṣâhil al-muntahân) except this one which was made in the year 16. of the Hijra (i.e. after 776 a.n.) and its observer mentions that the greatest declination is 23° 31". Al-Ma‘mûn's astronomers from their observations at al-Šammasiyâ (a quarter and gate in Baghda’d) found that E = 23° 33' and the same figure is given by Muḥ. b. Mūṣâ al-Khwârizmi in his Zijd and Muḥ. b. Kāthîr al-Fârghânî in his book "On the Use of the Astrolobe". The astronomers Khalîl b. ʿAbd al-Mallik al-Marwârî, Abû ʿl-Sanad b. Taiyib ʿAli and ʿAli b. ʿl-Asârî-râbî, etc. of Damascus who took observations after the death of Yahya b. Abî Maśṭir with the instrument that al-Ma‘mûn ordered them to use when he took the field against the Byzantines, mention that they had found E = 23° 33' 32". Their measurement was made in the year 201 of the era of Yazdâjird (832/833 a.n.). The sons of Mūṣâ b. ʿAbî ʿAsîrî say that they had ascertained E at 23° 35' in the year 357 of the same era (868 a.n.) at the gate of the round wall of Baghda’d. In the tables of al-Taṣfîw (restoration) Ahmad b. ʿAbd Allâh Ḥâfizah gives the following two values for the obliquity of the ecliptic: 23° 35' and 23° 33', "but there must only be one". In 243 a.n. (226 Yazdâjird = 857/858 a.n.) al-Mâhî fixed E at 23° 35' 30". "And Abû ʿl-Hasan Ḥâfiz b. Kurra said: I have found old methods of observation before Ptolemy, which show that the greatest declination is 23° 35', and Muḥ. b. ʿAsîrî b. Sinîm al-Battânî says that from his own measurements he has found it to be 23° 35' 5". The Shârî Fâdîl Abû ʿl-Šâfi‘î Abî b. ʿAbî Ḥâfiz Maḥ. b. ʿAbî ʿAsîrî, who is known as Ibn al-ʿAlâm and Abû ʿl-Hasan al-Ṣâfî Abû al-Râfîn b. ʿAbî, under the value of E to be 23° 34' 30" and 23° 34' 45". Ibn Yūnus then gives his own calculation of the obliquity of the ecliptic to which he had devoted great care and found E = 23° 35'. It may be further noted that al-Britâtî also took E = 23° 35' (al-Ṣâfî al-Mu’ṣâfî, Berl. MS. Or. 8° 275, fol. 855), Ibn al-Šâfîr about 765 (1363/64) E = 23° 31' and Uţağ Bég in 1437 a.n. at Samarqand E = 23° 30' 17".

As the extreme daily orbit that the sun can describe in the heavens (in northern latitudes the longest day), the day of entry into Cancer (al-
Sardān al-saraṭān) as well as into the Aries and Capricorn is an auspicious one. Therefore the representation of these three regions and their division into hours (iṣrā' on the face of a sundial) is of special importance. The symbol of Cancer (and of Aries) in a cosmic section, the exact shape of which depends on the latitude of the place and the position of the dial.

The name Cancer (Kapsel) no doubt dates from Greek times. According to L. Ideler (see below), the name Lernass is also found: because he (the crab), according to the fable, crawled out of the swamp of Lerna to injure Hercules in the foot when he was fighting with the Lernan Hydra. The name " Crab" is found on the famous circle of the Zodiac at Dendera (Egypt) which, however, dates from the late Egyptian period and must certainly have been made under Greek influence. In Babylonian the constellation without Σ Cancri was called (Māl AL-LUL = ḫakkāb šittu, which probably is the name of an animal, but hardly crab. In the latter texts of the Seleucid period instead of AL-LUL we always find the ideogram for carpenter (cf. F. Kugler, Sterntafeln und Sterndiagramm in Babylon, Münster 1913, p. 6, 54, 209, 210).

Bibliography: L. Ideler, Über den Ursprung und die Bedeutung der Sternnamen, Berlin 1809, p. 158 996; F. W. V. Lach, Anleitung zur Kenntnis der Sterne, Leipzig 1796, p. 75. There is a Persian, Turkish and Syrian names for "Cancer" also given. The passage in Yûnus on the definition of the obliquity of the ecliptic is translated in C. Schoy, Die Stellung der geographischen Breite eines Ortes durch Beobachtung der Meridianhöhe der Sonne oder mittels der Kenntnis zweier anderer Sonnen- höhen und den zugehörigen Aszenissen nach dem arabischen Text der Hākimimtexten des Ibn Yûnûs (Annalen der Hydrographie und maritimen Meteorologie, Hamburg 1932, p. 1034.)

Cancer is also called al-ṣaraṭān (after the Greek). According to the Αἰμαρ, it is a tumour of black gall, at first no bigger than an almond; as it grows, red and green veins appear on it like crab's feet. The disease is incurable and at best its course can only be prolonged; it attacks both men and animals.

SARAY. [See Saray.]

SARDĀR is a Persian word (see Sar), the etymological meaning of which is "holding," or "possessing the head," i.e. the first place, its current meaning being a chief or leader and hence a military commander. It has been borrowed in this sense by the Turks, who, however, sometimes derive it in error from sīr-dār ("the keeper of a secret"). Through Turkish it has reached Arabic, and in a letter written in 1581 by one of the princes of the Arab (of Yemen) occurs the phrase "wasṣāgha sarādār itilā l-arāfīh." ("and he appointed a commander over the troops") on which Rutgers comments: "Vocabulum sarārār, quod Persicis originis est, ducem exercitii signifficat." The abstract substantive sarārīyyat in the sense of the post or office of commander of an army also occurs; and it was doubtless owing to the familiarity of the Arabic-speaking people of Egypt with the borrowed word that it was selected as the official title of the British commander-in-chief of the Egyptian and Sudanese armies. In Persia the word was and is still much used as a component part of honorific titles, such as Sardār-i Zafar and Sardār-i Djam. In India it is used generally of the Indian commissioned officers of the army as a class. Sardār log means "the (Indian) officers of a corps or regiment." It was formerly applied to the head of a set of palanquins, and it is still applied to the valet or body-servant of a European in India. In the chief of his household servants, Sarār-i Bahārī is a title of honour attached to the first class of the Order of British India, an order confined to Indian commissioned officers of the army.

SARDINIA (in Arabic sources Sarīntiya, Sarīntiya), an island in the Mediterranean Sea, lies 7½ miles South of Corsica and 335 miles South West of the Italian Civita Vecchia, and has an area of 9,187 square miles. It is mountainous, and has a peak as high as 6,016 feet. Throughout the 1,662 miles of its length and the 68 of its breadth it consists chiefly of ranges of granite, marble, and of high plateaux. These ranges of dark hills convey an appearance of wilderness to the island and make it anything but attractive, which probably accounts for its comparatively uneventful history.

The Nuragh or circular towers, of which 6,000 have been traced on the island, bear unmistakable evidence that the island was well inhabited in the Bronze Age, but it is only when we come to the Phoenician period that we have definite information regarding the island. These invaders certainly did
conquer the island at about 500–450 B.C., and they were the first of a succession of overlords, who made the island contribute to their granaries. The Roman occupation bore more heavily on the Sardinians; as they had no free city on the island, they were compelled to supply much of the corn for Rome, and they were obliged to contribute a money tax. Little wonder that there was an insurrection of 80,000 slaves in 181 B.C. The island was useful to the Romans, moreover, as a place of exile. We read that in 355 A.D. Constantius banished 3 bishops to Sardinia, one of whom was Lucifer of Calaris. In 440 the Vandals prepared to attack the place, seeing, as they did, that it gave food supplies to the Empire, and in 476 the island had to be ceded to them. A governor of German nationality was installed to discharge all relevant duties both military and civil. Justinian finally recovered the prize for Byzantium, until the 10th century.

Ibn 'Abd al-Hakam in his Fathih Miq ma 'l-Maghrib wa 'l-Andalus seems to put it beyond question that Sardinia was invaded at the same time as Spain, e. 9th A.H. He says that the Sardinians used their harbour to trick the Arabs out of plundering their ships, and this seems not at all unlikely. That the Arabs reached one of their usual raids on the island is certain, but they did not prolong their stay there. They paid another visit in A.H. 98 and 118 and carried through the same programme, but they never even attempted to maintain themselves in the place, nor is it hard to understand that such a place would little appeal to those who were born to the desert and the heat. In 150 A.H., however, they went a step further, and imposed a tribute on the island, which they succeeded in extracting from the enfeebled people. Meantime in 725 A.D. Ludprimar, fearing these repeated raids, obtained the body of Saint Augustine, and succeeded in removing it out of danger to Pavia. This great treasure of the Church had lain at Cagliari since the 8th century. Once again in the 8th century the island was again plundered and Sardinia suffered another plunder at the hands of the Arabs (143 A.H.). The Saracens never used the island for purposes of grain-producing, as had the previous conquerors, but in 227 A.H., when they made their daring attack on Rome, they used Sardinia as their rendezvous, before making the final onslaught on the capital. Not even in the 10th century did the Sardinia cease to be the quarry of the Arabs, for we read that, when 'Ubayd Allah the Mahdi was plundering Genoa, in 332/3 A.H., he did not forget to take what plunder he could from Sardinia. The last mention of Arab influence in the island is when Moghulid of Denia, in Spain, subjugated it in 393 A.H. Never again were the formidable raiders of the Mediterranean Sea to strike terror into the inhabitants of Sardinia, and it seems strange that in exchange for all their plunder the Arabs gave neither culture nor trade, religion nor art, as a recompense and a memorial of their presence.

Fisian supremacy followed that of the Arabs, and this again was succeeded by that of Aragon. In modern times the island has changed hands several times, having been Spanish and French and Austrian. Its ties, however, are all with the present possessors, and Italy seems to be inaugurating a new regime.

**Sardinia** — **Sarékat Islam**

**Sarékat Islam** (Sarachat, Lower pronunciation of the Arabic dar'ath, a brotherhood or guild), a political combination of Muhammadan Indonesians formed in Surakarta (Java), which has played an important part in the history of the development of the native population of the Dutch East Indies and in Dutch colonial policy in the last fifteen years. Its object was to secure for the native element a more prominent position socially, politically and economically, at the same time retaining Islam, which is the natural bond that links together the very diverse elements of a great part of the native population of the Dutch Indies. The leaders of the Sarékat Islam would not, however, themselves subscribe to this, but rather give the range and estimates of its objects according to local conditions, if indeed they give any reply at all when asked about the objects of their organisation.

**Early History.** While the position of the masses of the Javanese natives as regards their own rulers had from the earliest times been characterised by extreme subservience, during the nineteenth century the independence of both the people and their lords became more and more limited by the gradually increasing influence of the Dutch. The national pride with which they looked back on a past in which the whole Indian Archipelago was under a Javanese hegemony was more and more supplanted by a feeling of dependence and inferiority to foreigners (Dutch, Arab or Chinese), of whom the Dutch in particular and later on the Chinese only rarely concealed the slight estimation in which they held the natives. When about the end of last century a few progressives among the priayays's (aristocracy) of Java for the first time wished to give their sons a European education, they did, it is true, receive support from a few Dutchmen, but a considerable majority of the officials offered marked resistance to this innovation, and the few who made the experiment found it made very difficult for them to find a place in society in keeping with their newly acquired qualifications. Nevertheless, a small body of educated Javanese was gradually formed, and naturally it was they who least appreciated European tutelage. These came the events in the Far East and their reaction on the situation in the Dutch Indies. Even before the Russo-Japanese war (1904–1905) the Japanese had been granted equality with the Europeans in the Dutch East Indies. After the foundation of the Chinese Republic in 1911, Chinese warships visited Java and Chinese officials came to enquire into the position of their compatriots; the Chinese in the Dutch Indies were granted (from 1908) the Dutch-Chinese schools which they had desired for some years, the restrictions on their freedom of movement were abolished (1910) and more satisfactory arrangements were made for the administration of justice (1912). The Arals also
shared the advantage of the new legal position of the Oriental foreigners, but the position of the Javanese remained the same.

In 1908 the League of Young Javanese Budi Utama ("noble endeavour") was founded by students of the Dokter-djawa (native medical) school in Batavia, the first modest attempt to obtain from the authorities the fulfilment of some of their desires by organisation, particularly medical and better education. The father of the movement, which was regarded with suspicion not only by the Dutch but also by many conservative Javanese, was the *Dokter-djawa* Wahidin = Sadra-Usada. Such adherents as this first Javanese organisation found belonged to the higher classes of Javanese society; the masses did not join it, but they also began gradually to desire a reorganisation of social conditions and for a number of reasons.

a. Their social position was thoroughly unsatisfactory. In contrast to the foreign Orientals the Indonesians had to pay marks of homage to their European or native masters (*hornat, Ar. *hurma*). It is true that the central government repeatedly ameliorated these *hornat* but the practice for the most part continued. The administration of the law very much favoured Europeans; detention for examination, applied not only to accused persons but for convenience often to witnesses also, was an evil which had not yet been entirely abolished; trial and punishment by the police were not always just and were imposed only on natives; the security of private property was often very slight; cases occurred in which a man preferred to say nothing about a robbery of his possessions rather than bring down upon his head the unpleasant efforts of the authorities. The few rights were not equal to the hardships of forced labour and the frequent ill-treatment of the native workers in European businesses. Education was very insufficient. In addition, as a result of the progressive development in China, the attitude of many Chinese, especially newcomers, to the Javanese became so presumptuous that the latter felt they were deeply hurt; excesses against the Chinese showed how deeply.

b. Their economic position had gone from bad to worse. The free development of native industry was much restricted when about 1830 the plantation system (Dutch *Cultuursysteem*) especially for coffee, was introduced, which became a misfortune for the native population; when in 1877 the system was abolished, it had brought the Dutch government 832 million gulden — 219% of the State expenses (the so-called Indian Surplus). In the period that followed, the middle classes and the peasants were more and more deprived of their economic independence by the keen competition of European industries and plantations, while the retail trade had long been mainly in the hands of Chinese and Arabs. With however much tenacity they endeavoured to resist foreign competition, the decline was considerable, especially after the mainly native batik industry (turnover about 30 million gulden yearly; a short account of the native industry in *Kolonialer Verslag van 1920*, col. 7) was forced to use imported aniline dyes and textiles in place of the indigenous raw material; full details of this economic decay in *Onderzoek naar de mindere wetenschap der inlandse heerschappij* have been given in *Beriking van Java en Madura*, Report of the Commission, Batavia 1905—1914, 32 vols. folio.

c. In the third place may be mentioned the fear of a conversion to Christianity, although this factor had only been in operation a very short time and the movement among the Muslim population aroused by the activity of the Christian missionaries was quite different both in time and place. But the fact that Christian propaganda was more active, and found open approval with some members of the Dutch parliament, and that a warning had been issued from Meulens against it, was used by the leaders of the Sarékát Islam to arouse the masses in a way which would result in their joining the Sarékát Islam.

A comparatively unimportant incident is said to have brought about the foundation of the Sarékát Islam in 1910 (there are no reliable accounts of the first years). A case of dishonest practice on the part of a Chinese *hongei* (company) in Lawéyan (Nglawéyan), a village near Surakarta, where very well-to-do Javanese merchants lived and where competition between them and the Chinese was unusually keen, is said to have aroused such bitterness among the cheated Javanese that the latter combined to bring about a boycott of Chinese goods. Out of this grew the Sarékát Islam, the organisation of which was perhaps modelled after the Sarékát Dayang Islam of Buitenzorg, which had been founded some years earlier by a Javanese and some Arab merchants.

The name Sarékát Dayang Islam was at any rate also used in Surakarta. The Surakarta S. I., however, developed quite independently.

The S. I. did not long adhere strictly to its original aims. The movement spread with astonishing rapidity after the boycott of Chinese goods had been successful. The huge increase in membership cannot be explained simply from the hatred of the Chinese, natural at the time, but is rather due to the fact that the Javanese who longed for greater freedom and less tutelage thought that, after the successes won over the Chinese, the new union might assist them to a higher position as regards other foreigners also, i.e. this was simply a manifestation under a Muslim banner — in orthodox Lawéyan the union of the Muslims as much as natural — after it had once given proof that a victory over the Javanese was not an absolute impossibility, filled a gap generated in the circumstances described above in a, b, and c, and could also bring within its ranks many people who had nothing to do with the boycott of the Chinese.

Much more important than the details of its earliest history is the fact that this combination was able to rise and spread so rapidly, just as in the years following it was not single incidents and activities but the development of its aims that attracted attention to it. There is now a great difference between the origin and development of the S. I., which is due to the fact that it was born from the higher needs of the Javanese people, but developed under the deciding influence of external circumstances; — viz. the outbreak of the Great War in 1914, the Russian Revolution of 1917, the world economic crisis after the war, and collapse that necessarily followed in Europe. Ideas were brought into the Sarékát Islam from outside which were foreign to the Javanese people, who only demanded the fulfilment of modest requests and the satisfaction of local requirements.
The result was a great internal weakness which ended in the Sarakat Islam losing the great influence it had as quickly as it had gained it.

The history of the Sarakat Islam may be divided into three periods:

a. The first national congress
b. The zenith of the national congresses
c. The decline of the Sarakat Islam before the rise of the radical Sarakat Ra'yat

a. In the first period one can hardly talk of one homogeneous Sarakat Islam. Under the leadership of the vigorous and able Radin Usman Saiyid Tjakra-Aminata, an inspiring orator, who soon, however, became dazzled by his own unbounded ambition, the movement spread beyond its home, especially in Eastern Java; in Surabaya the Sarakat Islam newspaper Utusan Hindia (Indian Messenger) was founded in December, 1912, which was edited by Tjakra and long continued to be the most important organ of the S.I. Branches were later founded in Semberang, Tjiribon, Bandung and Batavia. Admission was made very easy; the curiosity of the masses, the suggestive effect of the ceremonial secret oath, and the rapidly increasing popularity of the Sarakat Islam brought it more and more new members. In the period of first enthusiasm the statutes adopted at the official foundation on Nov. 9, 1911 (the members were to promote a brotherly feeling for one another, to give assistance to Muslims, to work for the social elevation and economic advancement of the people by all legitimate means), were fairly generally observed. Soon, however, each local S.I. began to work only for its own local ends, and according to the views of local leaders. There were some which served the material interests of the people, e.g. by forming co-operative associations to strengthen the Javanese power of competition, others endeavoured by their intervention to dispose of the abuses to which the Javanese were exposed from officials and European employers, others again (e.g. the S.I.-Batavia, which soon had 12,000 members) preached more accurate fulfilment of the duties of Islam. Expression was given to the desire for an improvement in the position of native women; an S.I. for children (Susterma Mulya) was even founded.

The successes of the S.I. in the economic field were but short-lived. The co-operative societies disappeared as soon as the first ardour of the members had cooled off; all economic activities suffered for the lack of financial training among the Javanese; S.I. funds were not seldom selfishly spent by the leaders of the movement. In the field of social progress the S.I. could certainly be credited with a general improvement of the relations between foreigners and Javanese to the benefit of the latter, although many gains were lost afterwards in the general decline of the movement. Interest in their religion was kept active by the leaders probably because of the fear of official apathy. The bond of religion was to be restored to this evil. Before the National Congress the S.I. took very little part in politics.

The first contact of the S.I. with the Dutch government seems to have been the temporary suppression of the Surakarta S.I. as a result of excesses against the Chinese (Aug., 1912). On Sept. 14, 1912, Tjakra presented a petition which asked the central government to recognise the Sarakat Islam. He received its decision on June 30, 1913. The government had long hesitated over its reply. Recognition of the, in themselves quite innocent, statutes involved to some extent a possible change in administration and in the colonial policy hitherto followed, which was based on the principle of the dependence of the native subjects. The leaders of the S.I. had shown themselves too weak to prevent the outrages against the Chinese; practice might very soon be in great contrast to their fine promises. An official recognition of the statutes which would give the S.I. a legal standing would be regarded by the simple populace as complete approval of all the activities of the S.I. or at least would be interpreted to mean that by its leaders. In a discussion between the Governor-General and a deputation of the S.I. on March 29, 1914, the former emphasised his personal sympathy with the S.I. but pointed out dangerous weaknesses which stood in the way of approval of the petition presented, such as, for example, the bad management of financial business (which has always been a weak point). Finally the edit of June 30 refused the S.I. the desired recognition on practical grounds, but called the attention of the petitioner to the fact that requests for recognition and legitimisation by local S.I.'s would perhaps be refused; these local associations would not be able to combine to form a legitimate central committee of representatives of the local sections. The local S.I.'s were to be responsible, to standardise their formulae of oaths and to draw these up in such a way that they would be regarded as harmless by the government. The S.I. was therefore organised in accordance with these instructions.

The attitude of the officials in the provinces proved in general much more hostile to the Sarakat Islam than that of the Government in Batavia. This difference between the Government and some of its officials may have sown the seeds or been one of the most important causes of the native population's distrust of the Government, which was soon to appear. The frequent complaints of countermeasures by local officials, some of whom at first, in spite of the official recognition, even went so far as to suppress local S.I.'s, found a sharper and sharper expression at the later congresses. The European population at this time was almost wholly against the Sarakat Islam. A certain nervousness overcame them at times; especially when hostilities with the Chinese had taken place. The tone of the European press was at first in general contemptuous, later hostile; this brought about an increasingly vigorous reaction in the native press, which was growing very rapidly. The Chinese, of course, were hostile to the S.I.; the Arabs at first were on good terms with it and even had a considerable share in its early development; but when in the beginning of 1913 it was decided that only exceptionally could non-Indonesians be admitted to membership of the S.I., and particularly after the development of the S.I. on progressive lines began to hurt their conservatism, they withdrew. The relations between S.I. and Hadi Utama were good although infrequent; representatives were sent from both to their congresses, etc.

4. In the period that followed, the political element became very prominent in the Sarakat Islam and relations with the other political parties and movements became closer. The influence
of the growing European radicalism made itself more and more felt; European parties like the I. S. D. V. (Dutch Indies Social Democratic Party) endeavoured to gain the S. I. to their side. The official trend of the S. I. became more radical year by year, but within the movement arose strong counter-currents. Tjakra was the representative of the legal, national-democratic movement; Sëma'un became the leader of the growing left minority. This young man, an ardent follower of the I. S. D. V., made his first public appearance at the first national congress where he advocated "pérésit" (Dutch verzet, "resistance") to the government but was hardly able to attract the attention of his audience; yet his speech was notable enough, for he was the only one who had the courage to point to the weak points in the national movement, e.g., the lack of energy. In contrast to the aristocratic Tjakra, he was a simple man of the people, whose work was distinguished by an unselﬁshness and an honesty unusual among Javanese. By the second congress we ﬁnd him acting as president of the S. I.-Sëmarang, where European radicalism had the greatest following, while at the third congress he had become a member of the C. S. I. (Central Sărêkât Islâm). Tjakra had only very reluctantly admitted him to it but he was afraid that this man, who promised more to the people than he did and had more understanding of their needs, would try to gain control of the business and he thought that he would more easily be able to keep him in check as a member of the C. S. I. In order not to lose his popularity, however, he moved more and more from his original attitude with the result that the opposition of the conservative wing increased. The struggle between Tjakra and Sëma'un governed the development of the S. I. for the next few years. With great skil Tjakra was repeatedly able to avert a split within the Sărêkât Islâm but ﬁnally circumstances became too strong for him, and when, at the sixth congress, the S. I. was forced to a choice and in Tjakra's absence drove Sëma'un out of the party, it was too late for the S. I.

A few details regarding the national congresses, where the different opinions and tendencies were able to find clear expression, may now be given.

The first national congress was held in Bandung on June 17–24, 1916. Shortly before (March, 19), the C. S. I. had received offical recognition and it was an attempt to make the west Javanese and Sumatra S. I. branches independent of the C. S. I. had failed. An idea of the extent of the S. I. may be gleaned from the following ﬁgures: There were representatives of 52 Javanese branches (representing 273,377 members), 15 Sumatra (c. 76,000), 7 Borneo (57,574), while Celebes and Bali each had one branch. In an enthralling speech in which he dealt with the most important questions of the day, Tjakra emphasised the value of the name "national congress"; the S. I. was to set itself a new goal: the land was to raise itself to be a nation; the S. I. was to cooperate in obtaining self-government for the Dutch Indies as soon, or the native elements would be granted greater inﬂuence in questions of administration; but he gave praise to the central government which had now really abandoned the old policy and was going to take the ﬁrst step on the path of "politics and association" (cf. Sammiek-Vuringen, Verspr. Geschr., iv/1, 291–306) with the promise that a council composed of European, native and foreign Oriental members would be given to the Governor-General. There was a great deal talked of here and in subsequent congresses which the great majority of the delegates did not understand. Statements such as that the "Kur'an is a work of the greatest importance for socialism", that the Prophet (according to a contributor to the Hindustan Review) is "the father of socialism, the "precursor of democracy", show on what lines propagandists of European parties endeavoured to gain adherents for their teaching. Perhaps the most important work of the congress was the discussion of the 86 proposals made by the local S. I.'s, which usually referred to local complaints and which were discussed with Tjakra's opinion in the Ustumul Hindia of June 15–16, 1916. From these motions we see what expectations the simple country people hoped to realise through the S. I.; the desire for greater personal freedom and independence was continually expressed at this and following congresses; it was not the confused political ideas of a few leaders that attracted the masses to the S. I. but the hope of achieving their desires through this powerful organization; this explains why they later left the S. I. as readily, when Sëma'un's party promised to further native interests more than the S. I. had done.

The second national congress (Batuas, Oct. 20–27, 1917; 281 motions from local branches) dealt with the question what attitude the S. I. should adopt to the coming "Volkraad" (on the organisation etc. of the Volkraad see Koloniaal Studien, Vol. 1, Oct., 1917, Extra Politiek Nummer, p. 169 sqq.); the share that was to be given in it to Indonesians did not satisfy them, still less did the continued postponement of its opening. The congress laid down a declaration of principles which explains the political goal of the C. S. I.: testimony is given to the superiority of Islam but absolute neutrality is demanded from the authorities; in view of the consideration that the majority of the native population lives under a state of weakness, the C. S. I. will always combat any supremacy of "sinful capitalism" (cf. Kol. Studien, p. 35 sqq.; in this volume is also given the programme of work of the S. I. with notes and an elucidation of the political situation at this time, details of the programmes of the political parties of the day given by their own leaders).

The results of the unrest in Europe were clearly seen at the third national congress (Surabaya, Sept. 20–Oct. 6, 1918). The new situation created by the opening of the Volkraad on May 18, 1918 (Tjakra and one other leader were the representatives of the S. I.), and the ameliorations still desired were rigorously discussed. But the unrest which had taken possession of the native society was particularly discussed. Economic difﬁculties and the results of very successful preaching of a coming war against "sinful capitalism" increased the bitterness; disasters results were soon to be seen. The great strike at the end of 1917 and the outbreaks of the mob in Kudus and Demak at the end of 1918 formed the beginning of a social struggle, which went on with intervals to the end of 1924, whose result for the present could hardly be in doubt in view of the weak economic position of the native population and the lack of that energy which alone could remove this fundamental evil.

The organisation of the Javanese into Persirkatan Kudus Tami (agricultural unions) and P. K. Surak (industrial unions) had been in existence for some
years and expanded very much in the next few years. Their activities, which in recent years seem to have been supported by the Bolshevists, cannot be further discussed here, nor all their relations with the S. I. and the later S. Ra'yat (see below). At Christmas 1919 they were centralised by Sarsakardana in the R. S. V. (revolutionary socialist committee of the trade unions), which split at the end of 1920 into a moderate committee in Djokjakarta and a communist under Sēm'ūn in Semarang; these combined again after Sēm'ūn's adventurous journey to Russia to the Trades Union Congress at Medan in Sept., 1923. Their activity has been by no means confined to questions related to the workers' classes but has extended to the whole field of politics.

The period between the third and the fourth congress was a time of great arrest. Soon after the third congress the revolution in Europe caused the formation of the so-called "radical concentration" (Nov. 16, 1918) of different parties in the Völkstraat including the S. I. Here their leaders explained the new development of the S. I. and defended the necessity of going farther than was laid down in the statutes (Nov. 14, Dec. 5; cf. Handelingen van den Volksraad, 1918—1919, p. 175—185, 518—525); the governments, which continued to regard the course of affairs as a healthy development of native society (Kolonial. Verlag van 1919, p. 4—13), nevertheless sharply criticised the attitude of the C. S. I. to extremist movements (Dec. 2; cf. Handelingen etc., p. 432—434) especially the assertion of the C. S. I. that they could not assume responsibility for disturbances by local S. I.'s if the government did not meet their repeatedly expressed wishes more quickly; the C. S. I. was to settle the conduct of the movement, not the branches; the government, however, again declared: once more their readiness to co-operate with the C. S. I. on the lines of their statutes. — An incident which proved fatal for the S. I. was the discovery of a secret revolutionary organisation (the so-called section B of the S. I.) in the Franger (S. W. Java), as a result of investigations into a case of armed resistance to the authorities in the district of Tjimarép near Garut (July 4—7, 1919; cf. the synopsis of the report of the government commissioner G. A. J. Hazen in the Handelingen van den Volksraad, Tweede gewone zitting, 1919, Bijlagen, Onderwerp 10, p. 2—31). The relation of this section B to the C. S. I. and S. I. is by no means clear (cf. Handelingen der Statena-Generaal, 1919—1920, Tweede Kamer, Dec. 22, p. 1153; Blumberger in the Encyclopaedia van Ned.-Indië, Suppl., p. 153; Kolon. Verlag van 1922, p. 6). Tjakra denied that either the C. S. I. or the local S. I.'s had anything to do with the section B (cf. also Handelingen der St.-G. etc., p. 1153; Hand., v. d., Volksraad, 1919—1920, p. 90—92, 94, 96, 106, 110, 114, 211). In any case the government decided to grant no further legal recognitions unless the oaths were taken out of the statutes, etc.; as they thought (probably rightly) that within the S. I. an anti-Dutch movement had become predominant (Kol. Verfl. van 1920, chap. B, p. 5); they withdrew from the S. I. the moral support which they had afforded it in recent years against the local authorities. — In other respects also the Sārēkāt Islam soon met with many great difficulties which crippled its external activities and forced it to work to strengthen itself internally.

The fourth national congress (Surabaya, Oct. 26—Nov. 2, 1919) was mainly devoted to the discussion of the coming R. S. V. (see above) and the relation of the S. I. to it and can be passed over here.

The difficulties increased. The fifth national congress was postponed on account of a sharp criticism of the financial and political management of the C. S. I. (by the communist Darsa in the Sinor Hindia of Oct. 6—9, 1920; cf. Kol. Verlag van 1921, vol. 6; Kol. Verlag van 1922, vol. 9). The branches demanded an account of the money entrusted by them to the C. S. I. The first secretary of the C. S. I. was arrested in Nov., 1920, and sentenced on account of the branch B affair. The situation became more and more confused owing to the increasing activity of the other unions.

The fifth congress which was finally held at Djokjakarta from March 2—6, 1921, was Tjakra's last attempt to keep the control of the whole Javanese popular movement in the hands of the C. S. I. by a compromise between the very diverse movements and the postponement of the most difficult questions for which no solution could be found. The compromise was embodied in a new programme of principles in which (a) the fatal influence of European capital, which had, it was said, made slaves of the native population, was exposed; (b) Islam — which, by the way, demands a popular government, workmen's councils, a division of the soil and the means of production, makes work compulsory and prohibits anyone becoming rich through the work of another — was adopted as a basis and (c) the readiness of the S. I. to international co-operation within the limits placed by Islam and with maintenance of its independence was emphasised. The difficult questions of "party discipline" was postponed (whether a member of the S. I. could be also a member of another political party), which question the C. S. I. wished to answer in the negative and the left wing closely allied with the communist party in the affirmative. Since a and c were wanted by the communists, and they were no doubt willing to take b along with the rest, their claim that communism was now victorious in the S. I. was intelligible. It is also easy to understand that the struggle within the S. I. was so renewed, because the C. S. I. would not allow this interpretation of the compromise (cf. Uraja Hindia of March 26, 1921). The breach followed at the sixth national congress (Surabaya, Oct. 6—10, 1921). Tjakra was not present; he had been arrested. In August, 1921 (because he was thought to have committed perjury in the section B affair; but he was released in April, 1922, and pronounced not guilty in Aug., 1922). The deputychairman was not able to avert the decision: the principle of party discipline was approved by a majority of the congress and Sēm'ūn and his followers left the S. I. (Oct. 8, 1921): soon afterwards (Christmas, 1921) they formed themselves into a Pērsātun S. I. or S. I. Mērāh (Red S. I.) with headquarters at Semarang.

After this decision the S. I. lost ground rapidly. The fidelity of its members disappeared before the attractions of the radical party. After
the release of Tjakra he resumed his propaganda for the S.I. but with scant success. He had lost much of his earlier influence and he no longer represented the S.I. in the new Volkssraad. He now followed a more moderate progressive policy. The seventh national congress was held in the conservative centre of Madiun (Feb. 17-20, 1923). Tjakra again took up cultural and religious questions; in recent years Muslim affairs had been left to special unions, e.g. to the Muḥammadiya. Tjakra now became president of the first pan-Islamic congress (Tjirēkon, Nov. 1, 1922) which had been organized on the model of the "All India Muslim League". A lively interest in questions of international Islam was displayed; a telegram of homage was sent to Mufti Rasāl Pasha; the Javaanese attitude to the caliphate question was discussed. In the Volkssraad the S.I. attached itself to the second radical bloc, which was formed on account of the legislative proposals for the revision of the Dutch Indies Constitution. But its activity remained very limited.

In contrast to the decline of the S.I. was the rise of the radical S.I. Its leader, Sīma'ān, entered into relations with the Russian Soviet government in Moscow. His activity in the trade unions has already been mentioned above. His arrest was the cause of the great railway strike of May 8, 1923. Deported from the Dutch Indies he went to Holland, where he was made a member of the committee of the communist party as "representative of the Indonesian popular movement". At the end of 1924 he was in China, with which country his party maintained active communication, especially after Sun Yat Sen's adoption of Bolshevism. On May 4, 1923, the radical S.I. and the P.K.I. (Indian communist party) held a joint congress in Bandung. The red S.I. was on this occasion given the name of Sarakat Ka'īyat (Union of the People). Propaganda was conducted in close co-operation with the P.K.I. The S.K. was to be a preparatory school for the P.K.I. and only trained pupils were to be admitted to the P.K.I. Courses for S.R. leaders seem to produce brilliant propagandists in spite of the astounding ignorance which the newspapers talk of (I with truth). The S.K. takes no account of religion; it is "neutraal kāpada Allah" (neutral to Allāh). The leaders in the towns are often hostile to religion, but in the country they are Muslims; there seems to be group of religious communists.

The S.R. was continually fought by the authorities. Meetings were forbidden, breaches of the law relating to the free and public speaking were punished, communistic books etc. confiscated, inconvenient members of the party rendered harmless by detention for examination. Since Aug. 31, 1924, the campaign against them has been intensified. The result has been a milder attitude towards the moderate unions (S.I. etc.). Nothing definite can yet be stated about the result of this campaign.

The branches of the S.I. outside Java are far from being as important as the Javanese. The conditions were different, the soil much less suitable for the seed sown by the S.I. Since 1914 branches of the S.I. have been formed in the most important centres which in general have produced less active interest in the religious life. Locally there were occasional excesses. But the enthusiasm soon cooled down. Representatives were sent to the national congresses in Java, who made

known to the congress the local complaints of the district they represented. Later there was sometimes the same conflict between S.I. and S.R. but to a far lesser degree than in Java. — The first S.I. outside Java seems to have been the S.I. Palembang, founded Nov. 14, 1913, by Javanese. The influence of the S.I. varied greatly according to local conditions. In Atjeh the situation was difficult about 1921 because the S.I. (often secretly organised) seems to have pursued anti-Dutch propaganda. In Djamãbi the S.I. played a part in the disturbances of the years 1916 and later; in Minangkabau the pan-Sumatran tendency was stronger than the Javanese influence of the S.I. The action of the S.I. in the islands of Tenate and Ambon was important; radical tendencies were strongly represented on the latter island. Finally we must not omit to mention that the development of the youthful S.I. was watched with the greatest interest from Mekka. In the years 1910 and onwards there was a certain amount of anxiety here because the Dutch governement was credited with the intention of making the paṭďāż impossible for their Indonesian subjects, and, of course, on the pilgrimage of the "Ijâza" the Mekkans depend a great deal for their livelihood (Sannuck Hargronje, Mekke, ii., ch. 4). There seems to have been a correspondence between the Mekkan 'Ulams" and the Muslim authorities in Indonesia regarding the activity of Christian Missions; special prayers are even said to have been offered in the Holy Mosque for the Muslims of Indonesia. There was therefore much interest in the S.I. At the end of 1913 a pamphlet on the S.I. appeared in Mekka in Arabic and was afterwards translated into Malay. A Mekka branch of the S.I. was founded (probably for the Indonesians living there) of the activities of which nothing further is known to the writer. This is probably the only branch of the S.I. outside the Dutch East Indies.

To sum up we may say that the S.I. has played an important part in the development of the relations between Holland and the Dutch Indies, and that its history is important for the history of the revival of Islam and of the awakening of Eastern Asia. The S.I. is the first great independent expression of a want that had been felt among the Indonesians for several decades, their desire for greater freedom and more independence. Their leaders guided it into a radical, perhaps also national, direction, but the masses never understood their theories and gave most support to the movement which best met local requirements. In the fifteen years of the existence of the S.I. there has been externally a tremendous change in Javanese society, the causes of which are also to be sought in events during and after the World War; development internally began especially through the influence of the S.I. but naturally will progress much more slowly. The further development of the popular movement among the Javanese, which is in itself important as a sign of the times, will also depend on many external factors: the degree of capability among the European authorities to adapt their policy to the slowly changing situation may be particularly decisive for the future character of the popular movement.

L. etc. are found in Schalkx-Muller's Repertorium qv de litteratuur betreffende de Nederlandsche Koloniën etc., Vierde Vervolg (1915—1915), the Hague 1917, p. 89, 203—224, 246, 299, 302, 309; Vredere Vervolg (1916—1920), the Hague 1921, 125, 164—172, 185, 192, 222, 223, 257.

(C. C. B.)

ŞARF is defined by the jurists as a contract of sale (barf) in which the goods to be exchanged are of precious metal (himmam). Sarf is primarily money-changing, but also includes any exchange of gold and silver. As the name shows — sarf in maqdar of a verb denoting the business of money-changing is of Arabian origin (cf. Frauenkell, Die arab. Fremdwörter im Arab., p. 182 seqq.; Lamberti in the R.E. 7, 1906, ii. 29). The expression sarf seems to have been first naturalised in Islam about the end of the first century A. H. It is connected with the first century A. H. It is connected with the fact that, with the Mali̇ks and with him the Mali̇ks make a sharp

distinction between money-changing (parf) and the exchange of gold for gold or silver for silver (maruaf) by weight, mulkada by measure or number), which the other law-schools do not do; only in al-Shâfi'î (Kitâb al-Umm, ii. 30) is a similar term, mulkana, once found. The legal principles relating to parf, which are closely connected with the laws relating to usury, are based on the Hâdîth, while the Korâ'ān has nothing on the subject. They are the following:

1) With the same kind of material (jimm), the exchange can only be made with an equal quantity (maqâl) even if the articles are different in quality and workmanship. With unlike materials (gold for silver) this rule does not hold. Coins debased more than half are treated as merchandise (as in the Talmudic law; cf. Lambert, op. cit., p. 32 seq.) and can be exchanged with a surplus (mulkafaqum). A recompense for the making up of bullion into ornaments etc. is therefore prohibited as usury, while modern authorities recognise the value of the labour and do not consider the sale as parf (Benali Felâr, p. 80).

2) Ownership in the goods must pass on either side before the contracting parties separate (al-taftaft al-taftaft). A cash payment is therefore necessary (maqâl), to the exclusion of all credit (which has passed into Turkish legislation; see below). Among the Hanafs, for example, a silver vessel, only part of the purchase price of which is paid, is common property, while among the Mali̇ks and Shâfi'î such a sale is quite invalid (hâlî).

There are also differences of opinion regarding the settlement of a debt. In general the rule is that the combination of a parf with another legal matter in one agreement is not permitted.

3) The object to be exchanged cannot be disposed of before the ownership is acquired.

4) No option can be reserved (hajjar al-zafr); on the other hand hajjar al-zafr is allowed in case of defeasit and hajjar al-sa'wu' in purchase of bullion (e.g. ornaments).

The jurists have also evolved subterfuges which make a profit possible in money-changing (al-Kuduri and al-Halabi at the end of the Mads Ludmawwana, vii. 126 seqq.; Sachau, Mitt. d. k. preuß. akad. d. wiss., p. 281). The money-changers called by the "Ulama" — usually Jews — have been organized into guilds since the middle ages (Moe, Renaissance des Islams, p. 449; Young, Corps de droit ottoman, title 67, art. 6 seqq.). In modern Muslim states there are special laws relating to money-changing (for Turkey cf. Young, op. cit.; of the year 1821 = 1861). Cf. the art. HAJJ.

SARI (formerly ŞARÍ), a town in Persia, the
SARI — AL-SARI

former capital of Taharistan (Masnadars), 8 miles from the Caspian Sea, 30 from Arbil. Its foundation is attributed to Tīs, son of Nishtar, general of the mythical king Khosrow, because there is a place there called Tīsār. Faribors is said to have taken refuge there; the castle which he built could be seen at a place called Lūmān Dīa. The town itself was built in the time of Farrukhshīn the Great, Ḥarīmshāh of Taharistan (end of the seventh century) by Farīr, one of his nobles, on the site of the village of Awārū. Sārī has several times been the capital of Taharistan, — under the Šahrūrs (828—872) and the Alids Ḥasan b. Ziyād (745/803) and Muḥammad b. Ziyād (739/801). The great mosque begun by the Amīr Yahyā al-Nāṣir in the reign of the Abbasīd Caliph al-Maṣūm was finished by Ṣāḥib b. Kānim (d. 224 = 839). A building is pointed out called Sīyavuḫšānīn "the three cupolas", said to be the tomb of the three sons of Farūk, Imād, Sulaimān, and Tūr.

The district is not fertile and the climate unhealthy. Silk is the principal product. Under the Ṣafawī, the canton of Sārī (which extended as far as Tāmrujun) had a revenue of 1,000,000 dirhams.

(Ch. H. HECKE)

SĀRĪ, the "swift metre", so named because of its swiftness and swiftness of appeal to taste (Freytag, Darstellung der arabischen Verskunst, p. 237), is the ninth in the prosody of the Arabs. It is the first of the six metres of the fourth circle, which is called "the intricated" (al-qarr al-muqābāth) on account of its metrical intricacy (Palmer, Arabic Grammar, London 1874, p. 349 seqq.). The paradigm is: mušafīʿ, mušafīʿa, mušafīʿa (it), which is rarely, if ever, found. According to the native system, the sīr is of four kinds and has seven varieties (De Sacy, Traité de la Prosodie des Arabes, Paris 1831, p. 25).

But the normal form is: mušafīʿa, mušafīʿa, fāʾīna.

Mafīʿ on fāʾīna (−−) is often used in the dārūb; and, more rarely, mafūlā or fūāda (−−) in both arzīf and dārūb, although not so commonly in the latter. A further variety employed by later poets is the introduction of an extra syllable to the dārūb, thus fūʿāda (−−).

Bibliography: Refer to the works under article 'Arba'. (J. WALKER)

AL-SARĪ K. AL-HASAM B. Yūsuf AL-BALASHI, held the office of governor and financial controller of Egypt from Ramaṭa 1, 300 (April 3, 816). On Rabī‘ I, 1, 201 (Sept. 27, 816) the troops openly mutinied against him and al-Maṭṭūn was forced to remove al-Sarī from his post and replace him by Solomon b. Ghallūh; al-Sarī was put in prison and Solomon entered upon his office on Tuesday, Rabī‘ I 4, 203 (Sept. 30, 817), but was removed from office as early as Shabīb I (Feb. 22, 817) as the result of a renewed revolt of the troops, and al-Sarī again appointed by al-Maṭṭūn. The news of his appointment reached Egypt on Shaʿbān 12 (March 4, 817); al-Sarī was released from prison and entered al-Fustān on the same day. He held office till his death on Bagdat 1, 305 (Nov. 11, 820). That al-Sarī played a prominent part in Egypt even before his appointment as governor is evident from his name in the phrases of a law intended for the Kaʿba which is dated in the year 757 (512/13). His name is also found on gold and copper coins of Egypt; see W. Tharhānawi, Memorie der Khilfe Orient, p. 138, Ns. 2700 (Misc. 200 a. H.), p. 193, Ns. 1772 (702 and 202 a. H.), H. N. Kautsky, Katalog d. orient. Münzen in den Kgl. Museen zu Berlin, i. 207, Ns. 2247; ibid. (Ghalla, Meṣḥallād kashkawīi k. lampa Katalog, p. 188, Ns. 505 (Misc. 200 a. H.), p. 387, Ns. 920 (Misc. 200 a. H.), Ns. 924 (Misc. 204 a. H.).

AL-SARĪ B. MATAWAH, better known in Arabic as ABU-SARAYA, a kinsman of al-Sarī, has served as a governor and a military officer, and his name is found on the numerous gold and silver coins of the 8th and 9th centuries. He commanded the army of the Umayyads against the Abu Salama and al-Maṭṭūn. His name is also found on the coins of Egypt. He was a prominent figure in the government of the state and held high positions in the army. His role in the political and military affairs of the time is significant, and his influence extended beyond his own district. His contribution to the history of the Arab world is noteworthy, and his name is often cited in the records of the period. (AUG. GRIINWALD)
al-Hasan b. 'Ali al-Ma'muni's troops, was defeated and wounded, whereupon his force melted away. He tried to reach his home at Ra'a al-'Am but was overtaken at Dja'ilah by Hammad ibn Kunda-
giyy, who made him prisoner and brought him to al-Hasan b. Sahl, al-Ma'muni's vizier, then to Nahrawan, who had him beheaded (Rasif, l. 10 = Oct. 18, 815); his body was hung on a gibbet on the bridge of Baghdad. His rebellion had lasted ten months.

bit 1828, iii. 242 sqq. (CL. HUART)

SARI AL-SAKANTI, Avu 'L-Hasan Sari b. qu-MAHALLA, a Sufi mystic, died at Baghdad on Ramadhan 28, 257 (870) or 253 (867) aged 78 (or 98). He was the uncle of Qunain (q.v.), teacher of Nurri, Kharrar and Khair Nusaydji, and figures at a later period in the classic innov. of the 'Ahl al-Sunna, especially in the works of al-Isfahani (cf. L. Masson), Mission en Irak, Paris 1912, ii. 105). But Ma'ruf can hardly have been the direct teacher of Sari.

Sori is said to be equivalent to 'Yah as synonymous with Raffi or by an accommodating interpretation of Koran vi. 24. Sufi, iuran means a dealer in old iron and old clothes. As regards doctrine, Sari was the pupil of al-Mahdiyya (q.v.) he insists on the reality of a reciprocal love uniting God to man (intimad); he maintains that a true lover ought no longer to suffer any physical pain and says that at the Last Judgement the markabat will have a place of honour above the three communities (of Moslem, Jews and Muhammadan). Sari was attacked by Ibn al-Hashim for having admitted that the letters of the text of the Koran were created and for having neglected asceticism in the matter of food.

SARI 'ABD ALLAH EFENDI, Ottoman poet and man of letters, was the son of Saliyid Mu-
hammad, a prince of the Maghrib who had died to Constantiople in the reign of Sultan Ahmad I, and had married the daughter of Muhammad Pasha, brother of the Grand Vizier Kha bile Pasha. He was brought up by the latter, who had entrusted his education to Shukri al-Mahmud of Scatri, accompanied him as taddabir ("editor") when during his second vision at the command of the troops in the Persian campaign, was appointed reta al-kutub in 1037 (1627/28) in place of Muhammad Efendi who had just died and was dismissed at the same time as his patron. On the latter's death he was appointed reta of the imperial sultah in 1047 (1637/38), accompanied Murad IV to Baghdad and then became reta al-kutub for the second time. He filled other offices till 1065 (1655) when he retired from public life. He died in 1071 (1660/61). He wrote a com-

SARI AL-SULTAN DEDE, a Turkish savant and Bektaşi saint. He was a contemporary of Hafiz Kebir [q.v.] in whose legendary biography (cf. his widely spread Ilyasyet-i Hafiz); he played an important role unit of whom he is said merely to have been a disciple, and came into the most venerable orders of the Bektaşi, his real name is said to have been Meşmed (Meşmed Beg) in Evliya, Celebi. Songs, i. 134--35). Practically nothing is known of his life and career. According to the Oguzmanlilar in the extract in Sevildi Lokeni, in 626 (1263/64) he led a

SARI KURZ, also Sari Kezir, an Ottoman jurist and military judge. His proper name was Nur al-Din and he was born in the district of Karasi, his father's name being Yassu. After studying under famous teachers, including Kadi Ja Sia Tugha, he entered upon a legal career, becoming professor (muqaddim), later "guardian" (hakan) and finally in 917 (1511/12) Rsh of Stambal. Sultan Bayad II employed him on various affairs of state, for example as a delegate to Prince Soyyar's and to the Emperor in Warsaw, Gesch. des sursamischen Reiches, ii. 357. and Die schen Krieger des Kustem Pascha, ed. by I. Forrer, Leipzig 1923, p. 28 sq.; also G.O.R., iv. 371. In 919 (1513/14) in the reign of Selim I he was appointed military judge (hakan-takif) of Anatolia and in 921 (1515/16) of Rumelia. Next year he was dismissed and became again "guardian," about 926 (1619/20) he became kadi of Stambal for a second time (cf. Lamnrizios, Hist. Miscron, p. 613, 30, and F. Giese, An. Chr., v. 159). In 928 (1521/22); according to other sources 929 = 1522/23) he died. He was buried in deceased, where he was buried in a mosque which he had built. He lived not far from the mevlid which bears his name (cf. Hadijar al-Qarni, l. 135 sqq.; G.O.R., iv. 72, No. 280); one quarter of Stambal is still called Sery gunalet after him (a ghubi- mevlid), which has arisen from Sari Kurz which came in time to be misunderstood, on the name see Sirri Pasba, Chaghati-ta-mevlid, Stambuli, second ed., v. Sari gunalet and J. H. Mocett (in Der Islam, xiv. 155). On his son Meşmed cf. Afi, suppl. to the Gazettes, p. 265; on his son-in-law Sia Tugha of Soumous, famous as a commentator, cf. Hadijar Khaditi, Fehiikle, p. 399; Hadijar al-Dawlah, 1. 1344; Sefali 'Oghuzman, in. 108.

Sari Kurz wrote on Fihik and left a number of works, a list of which is given in Hadijar Khaditi, Kaskif al-Garni, ed. Flügel, under No. 7119.

SARI AL-SULTAN DEDE, a Turkish s
large body of people (10,000—12,000), said to have been Anatolian Turkomans, who settled on the western coast of the Black Sea in Dobrudjan Tartary, especially around Baba Daghi. The reason for this migration is unknown; it is perhaps connected with the advance of Hulagu (cf. *Der Islam*, xi. 24). Apart from the Oguzname (cf. J. W. Lagus, *Seit Leomani as Hires Tuncres gus Oguzname inscribrum excerpta*, Helsingfors 1854, smi. G. Fligel, *Die arab.-pers. und turk. Handschr. der Wiener Hofbibl.*, ii. 235) there are no contemporary records and the possible Byzantine sources are also silent (e.g. Pachymeres, Nikephoras Greg., Georg. Acropolita; cf. however, J. W. Lagus, *op. cit., p. 30 xgr*). It seems, however, that older accounts once existed but have now been lost. For example, according to Ewliya Celebi (? v.), Vasi'd-din Ahmed Celebi (d. 824 = 1450) wrote a *riza* on *Safr Saltik* and Kenan Pasha, some time governor of Odzun, composed a *Saltikname* of 40 *kurzan* (cf. Ewliya, *op. cit., iii. 366, and thereon Vas. Dimitri, Obir *istorii tureckoj literatury* in Koryn, *Vestnikglava literaturn*., St. Petersburg 1891, wheres extracts are given from a *Saltikovskoe*). Ewliya, who seems to have had access to one of these sources now lost, says that *Safr Saltik* lived in Arza Çelikovu, in Tekke and Tektaş before he migrated to Reshata. There he is described as a *gazi*, which would be in accordance with Ewliya’s statement elsewhere (I. 659): *purifier (šamār) from the *zir*.* The earliest notice of *Safr Saltik* is given by Ibn Battuta (ii. 416) who visited about a generation after his death his sanctuary at *Baba Saltuk* (the site of which, however, cannot even approximately be defined) and very briefly tells of the saint’s miracles (*manāqib*). The fact that Ibn Battuta is obviously not able to give anything reliable about *Safr Saltik* who died barely 30 years before raises legitimate doubts regarding either the Arab traveller’s statements or the historicness of the saint. The fact is that traits and miracles are ascribed to him which are reported of Byzantine saints, and the *Safr Saltik* is confused with Byzantine saints. The legend given by Ewliya of *Safr Saltik* is remarkable and probably isolated. According to it, the wonder-worker gave his disciples the order to bury his body after his death in 6 or 7 coffins in remote towns of infidel lands, *so that ignorance where the body really is will produce everywhere a pilgrimage of Muslims and from the pilgrimage will result the incorporation of these lands into the kingdom of Islam* (cf. J. von Hammer, *G. O. R.*, vi. 354 sq., following Ewliya Celebi, *op. cit., iii. 153 sq.*). According to Ewliya, coffins were therefore taken to Baba Eski, Baba Daghi, Kalliakra, Buaza (Bulgaria) and even to Damascus. The migration of the Lipta Tatars to Islam is ascribed to *Safr Saltik*. Christian saints are repeatedly identified with the Turkish saint and still more numerous are the places in the Balkans associated with the latter. In Kalliakra (Kiligrasa) *Safr Saltik* appears as a dragon-slayer who liberates an imprisoned Christian princess (cf. Ewliya, *ii. 137 sq.; C. J. Jirecek, *Das Fiirstentum Bulgarien*, Vienna 1890, p. 525; J. von Hammer, *Rumelii und Bosnia*, Vienna 1813, p. 47; *Archiv für griech.-historische Mitteilungen*, 1886, x. 162 sq.; *Z. d. M. G.*, 1922, lxxvi. 155), and Ewliya himself brings *Safr Saltik* into connection with St. Nicolas (Sveti Nikola; cf. *op. cit., ii. 137*). There are other sanctuaries or tombs of *Safr Saltik* in Kroya (cf. *Wissenschaftliche Mitteilungen aus Rumänien*, vii. 60; Ippek, *Storia*, b. 71 sqq.; A. Degrand, *Sommervor der Hau-Hautisme*, Paris 1901, p. 253 sqq., 336 sqq.), in Adrianople (Ewliya, *op. cit., 461 sqq.), Corfu, where he is associated with St. Spyridon (Spyridon) (cf. *Sämt Bey Frafragh [un Arabem]*, *Kamiad el-Othman*, p. 2016), in Illyria at Mostar (cf. Safr Saltik, *Brevis historiae et status novum de*), in the *Töröd*, Budapest 1015, p. 505 sqq.; lacking in Ewliya (d. 974; see *op. cit.* on 436, 5 sqq. a *lavorio di laterai invention*), in Crete, a place between Kroya and Dikovora, where his alleged tomb is shown (cf. P. W. Hasluck, in the *Annual of the British School at Athlone*, 1901, note 3), in the Greek monastery of St. Nazam (Sveti Nazam) on the south shore of Lake Ohriza (cf. *Sämt Bey Frafragh, op. cit.*). *Safr Saltik* once becomes St. George, also Elias, then St. Simeon and finally *Kara Konjolos* (? cf. Ewliya, *Travels*, ed. J. von Hammar, i. 161, not in the Stamibl printed text) and he thus becomes one of the most remarkable features in the mingling of Muslim and Christian beliefs. The principal sanctuary of *Safr Saltik* is, however, at Baba Daghi (cf. Ibn Battata, *op. cit.; Ewliya, *ii. 365 sqq.*). It was built by Sultan Bayezid II, the Welti, as a place of pilgrimage to which Sultan Sulaiman afterwards made a pilgrimage (cf. *Histoire de la turquie* in the *campagne de Mohacs par Samuel Pacia Saltik*, ed. M. Faver de Combraille, Paris 1859, p. 80 sqq., 777; J. von Hammer, *G. O. R.*, iii. 302). *Safr Saltik* Finally appears as *Pir* of the glee of Reppaçiler, the makers of arrows (miller-spirit) (cf. Ewliya, *ii. 659*, where *Safr Saltik* is described as disciple [*miftah*] of Ahmed Yenawi). Whether *Safr Saltik* in Al Jala, *Numaliet el moutte et ristes moutte*, St. Petersburg 1860, p. 94 sqq., is identical with our *Safr Saltik* may not be discussed here. In later Ottoman literature, *Safr Saltik* occasionally plays a part, for example in the *Kâmous* *fiver* of *Newzīde Atay* (d. 1044 = 1634; cf. J. von Hammer, *Gesch. der osmanischen Dichtkunst*, iii. 281). The half historical, half legendary figure of *Safr Saltik* Dede demands a thorough investigation. One thing is certain, that it is closely connected with the Bektashi movement, in the region of expansion of which in the Balkans *Safr Saltik* enjoys the greatest esteem. So long as the history of the *Alb* sectarians (*Alevi*) in south-eastern Europe is as obscure as at present, only vague statements can be made regarding *Safr Saltik* Dede.

**SAR-I PUL**, *the head of the bridge*, called by Arab geographers *Bāb al-An垦tanara, a town of Afgan Turkistan situated in 36° 20' N. Lat. and 65°
40' E. Long. on the Aby-Safid from the bridge over which it takes its name. It is not to be confused with a village near Samarqand or a quarter of Nishapur, both of the same name, such as is historically as important as the Afghan town. Between the northern spur of the Paropamis and the sands to the south of the Oxus, is a fertile tract well watered by streams from the mountains, but proverbially unhealthy, lay four Uzbeg Khansates or petty principalities, Akta, Shirkaghân, Malauz and Sari-pul with Anahú and Anghú, the independence of which has been destroyed by the Durâst and Bârsâkh Amir of Afghanistan. Of these principalities Sari-pul is now subject to the rule of Kâbul. In 1865 the troops stationed there revolted against the Amir Shâr 'Ali, but the mutiny was suppressed by 'Abbâr al-Râmân Khân, who eventually succeeded as Amir; not long afterwards Sari-pul lost the last vestiges of its independence, but the former geographical and political divisions of the principalities are preserved and their Uzbeg inhabitants are exempt from liability to military service.

Sâri-k (a) *theif*, Muslim legal theory distinguishes between al-širâf al-mîqâzâb (theft) and al-širâf al-khâbâ (highway robbery or brigandage).

1) *Theif* (širâf) is punished by cutting off the hand, according to Sâra v. 42. This was an innovation of the Prophet's; but, according to the Amâli literature, this had already been introduced in the days of paganism by Wâlid b. Mughira (Nöldke-Schwartz, Gesch. d. Quaran, I. 230). This method of punishment may be of Persian origin (cf. Lettre de Tâbour, ed. Darmesteter in the J.A., 1894, Series 9, iii. 220 sqq., 225 sqq.; Safar Dar 64, 5 = Sacred books of the East, xxiv. 327).

In pre-Ma'mamadan Arabia theft from a fellow-tribesman or from a guest was alone considered despicable, but no punishment was prescribed for it; the person had himself to see how he could regain his property (Jacob, Bedoonenleben, p. 217 sqq.; Dâvûddârî, Remarques sur la Bedounie). Weimar 1831, p. 127 sqq., 261 sqq.). In the beginning of the first century A.H. the right or left hand was cut off; there was no fixed rule. The Korân leaves the point obscure and one tradition says that 'Abbâr Bâkî ordered the left hand to be cut off (Mawâṣše, Sârî, bâb 4; al-Shâfi'î, Kitâb al-Umm, ed. 117). Cf. the variant of Sâra v. 42: assimûntâhû, transmitted by Ibn Mas'ûd.

According to the teaching of the Fâšâ, the thief's right-hand is cut off (for a second crime the left foot, then the left hand, then the right foot) and on this the wrist is cut off; hot oil or fire to stop the bleeding. The Hâfiz and Zâhid, however, put the culprit into prison at his third crime, which the Shâfi'î and Malikî only do after his fifth. The Shâfi'î inflict imprisonment for the third offence and death for the fourth. The punishment was inflicted in public; the thief was frequently led round the town seated backwards on an ass with the limb cut off hanging round his neck (cf. Ibn Mâdîq, Qutbâdî, bâb 23; Rescher, Studien über den Inhalt von 1002 Nachti, in Jl., i. 1910, ix. 68 sqq.). Punishment could not be inflicted in cases of pregnancy, severe illness or when the weather was very cold or very hot. It is a *hadî* punishment, as a right of God (bîkî Allah) is violated by theft. But at the beginning of the second century A.H. mutilation is still contrasted with the *hadî* punishment (al-Maså'î, Mu'jam, vi. 28), but as the rights of the owner are also injured (bîkî al-dâlî) the thief is bound to make reparation. If the article stolen has disappeared, he is kept under arrest (not so according to Âhî Hâshîa). The Caliph 'Umar is said always to have condoned the thief to return double the value (cf. Roman law: Justinian, Justin. 4, 1, 3).

The jurists define theft for which the *hadî* punishment is prescribed as the clandestine removal of legally recognised property (mâ'âl) in the safe keeping (bîrâ) of another of a definite minimum value (nîzâf; among the Hunaifs and Zâhid ten dirhams, among the Malikîs, Shâfi'îs and Shâfîs' 1/4 dirâm or 3 dirhams) to which the thief has no right of ownership; it is so distinguished from usurpation (ziyâd) and confiscation (zâhîma). By bîrâ is meant guarding by a watchman or by the nature of the place (e.g. a private home). Thus theft from a building is more accessible to the public (e.g.shop-keepers, bath houses) and is not liable to the *hadî* punishment. This is further only applied to one who 1) has attained his majority (bâlîq, q.v.); 2) in compas mentis (bâlkî) and 3) has the intention (nîzâf) of stealing (âmusûn furâsî); i.e. is not acting under compulsion (mu'kîfîcî). No distinction is made between free- man or slave, male or female. The punishment is not applied in case of thefts between husband and wife and near relatives nor in the case of a slave robbing his master or a guest his host. Views are divided on the question of the punishment of the širâf and the alien (muflîd/mem) with the *hadî*; and on the punishment of accomplices and accessories; in any case the total divided among them must reach the nizâf for each of the thieves.

In is not theft to take articles of trifling value (wood, water, wild guns) and things which quickly go to waste (fresh fruit, meat and milk), or articles in which the 'shrâ' does not recognise private ownership or things which are not legitimate articles of commerce (mâal), like freeborn children, wine, pigs, dogs, chess-sets, musical instruments, golden crosses — the theft of a full grown slave is considered 'asbûh — or articles in which the thief already has a share (booty, state deposits, wâbî common good to the value of the share), also copies of the Korân and books (except account books) as it is assumed the thief only desires to obtain the contents. The conception of literary theft is known to the Fâshîa.

The charge can be made by the owner and legitimate possessor (or depository) but not by a second thief. The legal inquiry has to be conducted in the presence of the person robbed. For proof two male witnesses are necessary or a confession (bâbîq, q.v.) which can, however, be withdrawn. It is recommended to plead not guilty if at all possible (cf. the art. ADAM). If the thief, however, has given back the article stolen before the charge is made, he is immune from punishment. (cf. Sâra v. 43).

2) Highway robbery or robbery with violence (mu'kîfîcî, bâb al-arîf) occurs when anyone who can be dangerous to travelling falls upon them and robs them when distant from any possible help.
or when someone enters a house, armed, with the intention of robbing (cf. Roman Law: Justinian, Novellae, 134, Ch. 13). The Shīʿa consider any armed attack even in inhabited places as highway robbery. The same regulations hold regarding the person and the object as above, especially the nisāb. On the authority of Sīra v. 37 sq., the culprit is liable to the following hadd punishments. If a man has committed a robbery which is practically a theft to be punished with hadd his right hand and left foot are cut off (the next time, the left hand and the right foot). If, however, he has robbed and killed, he is put to death in keeping with right of reprisal (ṣalāt) and his body publicly exposed for three days on a cross or in some other way. The punishment of death is here considered a ḥadd Allūh; the payment of blood-money (diya) is therefore out of the question. If the criminal repents, however, before he is taken, the hadd punishment is omitted; but the claim of the person robbed of the article for compensation and the tithes remain. All accomplices are punished in the same way; if one of them cannot be held responsible for his actions, the hadd punishment cannot be inflicted on any.

All these laws hold only for the ḥadd punishments which the judge him only inflict when all conditions are fulfilled. In all other cases the thief is punished with taʾṣīr (q.-v.) and condemned to restore the article or to make reparation. It is the same with the thief who comes secretly but goes away openly (muḥkālah) or the robber who falls upon someone and robs him at a place where help is available (muṣṭalah). Special laws were therefore frequently passed in Muslim states to supplement the ṣalāt, in Turkey, for example, by Meḥmed II (Mitteilungen zur Orient Geschichte, i. 1921, p. 21, 35), Sultān II (v. Hammer, Staatsverfassung, i. 147 sq.), Meḥmed IV and ʿAbd al-Maqīd. These laws endeavour more and more to replace the hadd punishment by fines and corporal punishment. The Turkish criminal code of 1858 still only recognizes fines and imprisonment for theft although the ṣalāt was not officially abolished thereby (cf. the al-Muqlidlī). The code of punishment laid down in the ṣalāt still holds the present day holds only in Persia and Afghanistan and the Yemen.

SARIRA. [See ZARAG.]

SARLIYA, the name of a sect in Northern Mesopotamia to the south of Mosul. This sect is also a kind of tribe called Sarla and lives in six villages, four of which lie on the right bank and two on the left of the Great Zab, not far from its junction with the Tigri. The principal village, where the chief lives, is called Warrak, and lies on the right bank; the largest village on the left bank is Seifye.

The Sarlī, like the other sects found in Mesopotamia (Yazidis, Shuhāk, Bāḏīšu), are very uncommunicative with regard to their beliefs and religious practices, so that the other inhabitants of the country attribute abominable superstitions to them and allege that they have a kind of secret language of their own. In al-Muṣṭīrīq, 1922, v. 577 sqq., Père Anastase gives some notes on the Sarlī and also on the sects of Bāḏīšu and the Shuhāk which he obtained from an individual in Mosul. According to him, their language is a mixture of Kurdish, Persian and Turkish. As to religion, they are monotheists, believing in certain prophets, in paradise and hell. They neither fast nor pray. They believe that their chief has the power to set territory in paradise. For this purpose he visits all the villages at harvest time, and every Sarī is allowed to purchase as much ṣalāt as he can pay for; the price of a ṣalāt is never less than a quarter of a meqdīye. Credit is not granted. The chief gives a receipt which shows how much ṣalāt an individual has acquired. This receipt is put in the pocket of the dead man so that he can present it to Rijwān, the guardian of Paradise. The Sarlī have also a feast-day once in every lunar year which consists in the consumption of a repast at which the chief resides, and to which every one contributes a cock boiled with rice or wheat. After this meal, called aḵt al-muṣṭīrīq, the lights are said to be extinguished and orgies of promiscuity to take place. The head of the community is succeeded at his death by his unmarried son; he is forbidden to shave his beard or his monstache. The Sarlī are polygamous. They are said to have a sacred book written in Persian.

These statements should be taken with considerable reserve. The Sarlī themselves say that they are simply Kurds and belonged originally to the Kāke Kurds who have some villages near Kirkuk. But the Kāke Kurds also have a mysterious reputation. A characteristic feature noticed in one of the Sarlī villages (Seifye) is an ornamental with triangular holes in the walls of the principal buildings of the village.

The Sarlī have the reputation of being good farmers. Their ethnological type is the same as that of the Kurds, as Péres have said. It is only their religious beliefs that have been influenced by ultra-Shīʿa and ancient Persian ideas. Like the Yazidis they have Muslim names; their present chief is called Tāḥa Koa or Mulla Tāḥa.

SŪPUL-I ZOHĀB ("bridgehead of Zohāb"), a place on the way to Zagros on the great Baghda-Kirmānshāh road, taking its name from the stone bridge of two arches over the river Alwand, a tributary of the left bank of the
Diya'a. Sarpul now consists simply of a little fort (Kurban = "arsenal") in which the governor of Zohab lives (the post is regularly filled by the chief of the tribe of Güran), a caravanserai, a garden of cypress and about 40 houses. The old town of Zohab about 4 hours to the north is now in ruins. To the east behind the cliffs of Hassar-Djarzh lies the little canton of Beghiwe (Kurdish = "below") in a corridor running in the foot of Zagros giving access to the famous col of Pa-Tak on the slope of which is the Sástanian edifice called Tak-i Girzá. In the west the heights of Mó-[Y. Qu']bá separate the verdant plain of Sarpul from that of Kásir-Shirin [q.v.]. Sarpul is the natural halting place for thousands of Persian pilgrims going to the resurrection (Karbalá) and other Shi'a sanctuaries. When the pilgrimage season is at its height (in autumn and winter), a hundred tents may be seen near the bridge. They belong to the Kurdish gipsy tribe of Súmání (Fúlú) the women of which are professional dancers and singers noted for their light morals.

Sarpul corresponds to the site of the ancient Khulman of the Assyrians, Hulwan [q.v.] in the Araxes. The earlier name was surveyed as the Kurdish name of the Albánd l.c. Haláwan. Traces of the old town are found mainly on the left bank (Pálp) where the land is level and beautiful.

Sarpul is noted for its antiquities: 1) the bas-relief and Pahlavi inscription on the cliff on the right bank of the Alwád; 2) three steles on the cliffs of Hassar-Djarzh (on the left bank) of which two are Sástanian (Pártián) and the third represents Ana-Bûnini, king of the Lulubi; 3) two miles away to the south of Hassar-Djarzh is the Achaemenid tomb cut out of the rock and venerated at the present day under the name of Dádán-Dádán (Dádán's workshop) by the Ahl-i Hák (see the art. 'Ahl-i Hák, q.v.) who have a cemetery at the foot of the rock.

Jones, Memoirs in Selections from the records of the Bombay Government, xliii, New Series, p. 150; Cirikov, Putevi jedari, St. Petersburg 1875, p. 313 and passim; J. P. Ferrier, Voyage en Perse, Paris 1880, p. 29; de Morgan, Miss. scient. ii., Etudes géog., Paris 1895, p. 106; iv., Recherches archéol., part i., Paris 1896, p. 149-171 (plates vii. and xii. give detailed sketches of the locality); E. Aubin, La Perse d'aujourd'hui, Paris 1908, p. 348; Sarre-Herfeld, Iranische Forschungen, Berlin 1910, p. 61; Herzfeld, Am Tormow Atien, Berlin 1920, p. 221; M. N. Merk, Turko-Tatar, originally old Turkic word for "merchant," is used with this meaning in the Kuágiku-Blik (quotations in Radloff, Verzeichnisse der Tbuche der Türk. Diakete, iv. 353) and by Mahmúd Kasghári (e.g. i. 256). In the Uighur translation (from the Chinese, of the Sádka wentvarthi the Sanskrit word Sártvávatara or Sártvávihāra "caravan-leader" is translated sartap; this word is explained as the "senior merchant" (kursik ul u'lah). Radloff therefore concludes that Turk. sart is an Indian loan-word (Kuan-si-in Pousar, Bibl. Budd., St. Petersburg 1911, xiv. p. 37). When the Iranians of Central Asia had secure control of the trade with the nomad peoples, the word nur became used by the Turks and Mongols as the name of a people with the same meaning as Tádžik (Tádžik). Rashid al-Din (ed. Bresciani, Trudi vantost. Arz. Oikh. vii, 141) says that the prince of the (Muslim) Kárlík, Arslán Khán, when he submitted to the Mongols was called sartákši, i.e. Tádžik, by them. The form of the name of the people here is Sarták: the táz was added by the Mongols to the name to signify a male member of a people (cf. táz, p. 65). As this example shows, the Mongols were not so much people of a definite nationality and language (the Kárlík were of course a Turkish people) as adherents of a definite type of culture, the Perso-Máhámadan. The Sartákši seems to have come to the Mongols not only as a merchant but also as a bearer of civilisation and especially as an expert in irrigation: this seems to be the only explanation of the Mongol legends of the hero Sartákši, and the wonderful canals, bridges and dams which he built (J. N. Fotani, Oécher secoou-ou gond-Mongoli, St. Petersburg 1881/83, iv. 25/56). Alongside of Sartákši we find Sartal used in the same meaning a word derived from the same root (e.g. Rashid al-Din, op. cit., 29). In the Arabic-Mongol glossary published by Michuransky, sartal is explained as al-sartalim (Zap. xvi. 75 in). On the other hand in Turkistan in the Mongol period, we find Sart opposed to 'Turk', apparently only because of the difference of language; cf. especially the description of Ferghána, in Babür, ed. Beveridge, f. 26 on Andíjá, il táz dár, f. 36 on Margáhit il táz dár. A. Samoilovič, Afgánistán, Moscow 1924, p. 103 sq., calls attention to another passage in Babür (f. 131 a-a), where a distinction seems to be made between Sart and Tádžik; it is said that the population of the town of Káhrá reads several villages consists of Sart, while in other villages and wiláyet live other people including the Tádžik. The language of the Sart is often opposed to the language of the Turk by Nur 'Ali Shír Náwái, cf. e.g. the quotation from his Maqá all-Nafz'í in the dictionary of Sháhí Shúlamán in L. Budagov, Svaradiz'í'íyé svarati-tá-farzísh hariri, l. 612 and especially the whole of the Mu'álimat al-injáñuín, where Persian as Fársi or Súr-tí is contrasted with Turkish (Khókon edition, n. d. e.g. p. 19: Sárt táz-tí nil mán miltanfx žàfíh tükürkler). After the conquest of Turkistan by the Özbek the contrast between the Özbek and the subject native population must have at times been felt more strongly than the contrast between Turk and Tádžik (or Sart). The Özbek in Khíwa are very frequently distinguished from the Sart by Abu l-'Ghásí, cf. ed. Desmoulin, p. 231: Urgenchening Özbek wa Sarti; p. 256: Kaxmirazjan Özbeki wa Sartin. The same linguistic usage has survived in Khánzám to the present day. The contrast is less apparent in Buhara and Khókon; it is more usual especially among the nomads themselves, for the Kazák [q.v.] and not the Özbek are contrasted as nomads with the Sart as town dwellers and agriculturists. In Khókon, government edicts are said to have begun with the words Özbek wa Kaxmirazjan Özbeki wa Sartin but (as far as I know) no such documents have yet been published. To the Kazák every member of a settled community was a Sart, whether his language was Turkish or Iranísh; in official language the word Sart seems to have been applied to the turkicised settled population in contrast to the Tádžik
who had retained their Iranian language, cf. in the Türkü Şahkulu, ed. Pauthier (Kazan 1883), p. 193; Sarîyâ wa ad-Dijlîya, p. 209; Kermâşâ Sarîyâ wa al-Dijlîya, p. 279; lâlitâ wa al-kermâsha Sarîyâ wa al-Dijlîya. The same usage has been adopted by European scholars, although it was difficult to define the difference between Sart and Ozbeg. According to Kalfoud (Kalm.-ил. пис.обр. и ст.), Sart now means, "the Turkish-speaking town-dwellers of Central Asia in contrast to the villagers the Ozbeg". In some regions especially around Samarkand, the villagers still pride themselves on being Ozbeg and have retained the division into families, but this distinction between town and country does not apply to the whole of Turkistan. No attempt has yet been made to establish a dialectic difference between Sart and Ozbeg. The settled peoples of Central Asia are in the first place Muslims and think of themselves only secondarily as living in a particular town or district, to them the idea of belonging to a particular stock is of no significance. It is only in modern times under the influence of European culture (through the intermediary of Russie) that a striving for national unity has arisen. The word "Sart", applied by the nomads with unconcealed contempt to the settled population and popularly explained as part of "yellow dog", has been banished from use: now only an Ozbeg nationality is recognised in contrast to the nationalities of the Kazak, Turkmens and Tadjiks.

(S. BARKHOLD)

SART, small village in Lydia in Asia Minor, the ancient Sardes (στέρος) of the classical authors, which makes Śāṁ write Sārād, capital of the Lydian Kingdom, situated on the eastern bank of the Sardus, a small river. Sart (Pastoum) a small lake with a lake-bird, filled with the river joining the Golfo Cal (Hermus). Although in the Byzantine period Sardes had lost much of its former importance (as a metropolitan see and been outflanked by Magnesia (Turkish Mahmûd) and Philadelphia (Alş Şerî, q.v.), it still was one of the largest towns, when the Seljuk Turks, in the 11th century, made incursions into the Hermus valley. At the time they were expelled by the Byzantine general Philocharis (1118). At the end of the 12th century Sardes had been for some time under a combined Greek and Turkish domination, until the Greeks were able to drive away the Turks a second time (Pechymeres, ed. Niebuhr, Bonn 1833, ii. 405). In the beginning of the 13th century the citadel was surrendered to one of the Seljuk amirs, and the town probably belonged during the remainder of that century to the territory of the Şarkhan [q.v., dynasty, whose capital was Magnesia. So when in 792/1390 the Ottoman Sultan Bayazid I, after the conquest of the then Greek town Philadelphia, took possession of the Şarkhan country, Sardes was equally incorporated in his empire (Anon. anonym., Gesen. Bruesch 1222, p. 28; Şâhî Bahşâ Zâcâ, Constantinop. 1335, p. 85). After the battle of Angora, when Timur marched against Smyrna (809/1403), Sardes and its citadel were probably destroyed and never recovered again.

At present Sart consists only of a few miserable huts inhabited by Vâlîkas, between the Sart hill and the citadel hill. This hill is a long narrow counterfort, 200 metres in height, belonging to Mount Taures (now Malang Dagh) in the South (a topographical sketch of the site in Courtois, Reise im sächsischen und Türkischen Kaiserland in A. F. P. T. IV, 1785, Plate V). East of the ridge is a small millbrook called Yabah Cal; south of the town it joins the Pastoum, which unites with the Hermus about six km. to the north of the aeropole hill. At the other side of the Hermus is situated the big necropolis of Sardes, a large plain of mounds calledюм Pîr Tepâ. North of this plain is the Mernare Lake, the ancient Lake of Gyges. The railway from Smyrna to Ali-Shek runs along the southern Hermus bank and has a station at Sart. In the Turkish administration Sart belongs to the mîkhél of the Sanişul Şarîkhîn of the wilâyêt Amdin. The necropolis belongs to the Kañar Kaşaba.

The site of Sardes has gained much importance from an archaeological point of view. The most complete information is to be found in the Publications of the American Society for the excavation of Sardis (Laidlaw 1918). See also Peuly-Wiseman's Encyclopädie der historischen Altertumswissenschaft, 2nd Series (Stuttgart 1892), col. 2477 sq.

(J. H. KLAMER)

SARUDE, a town in Dyîz Muqar [q.v.] on the most southerly of the three roads from Bagtab [q.v.] to Urfa [q.v.] in 36° 56' N. Lat. and 38° 27' E. Long. As the name of the town is also that of the district, its relation to the ancient name Anthesmus and Batnae is disputed; cf. Bibliography. On account of the fertility of the district in which the town is situated, and the central position between the Ephesians on the one side and Urfa and Ismir [q.v.] from each of which it is about a day's journey distant, on the other, the traffic through it brought it a certain degree of prosperity, especially as it was also important as a post-station between al-Kassâ and Samsâ; according to Ibn Khordozînî [q.v.], it was 20 farshak from the former town and 13 from the latter. The principal occupation was by the natural suitability of the soil for growing fruit and the vine, as all the geographers tell us. Within the town, itself Ibrî Dzhubatî [q.v.] found orchards and running water.

The town was captured with the rest of Dîzmu in 1639 by Jâng, b. Ghurom. There is a number of references to its later history scattered through the geographers and historians; but the history of the town can only be intelligently handled in connection with the history of the Dîzmu. — By the time of Ibn al-Farîd [q.v.], Saruđ already was in ruins. Modern travellers describe it much as do the medieval geographers, except that it appears smaller to them. Schuch (see Bibli.) actually speaks of the village of Sarudî; it is now the residence of a kâim-nilâm.
SARUKHAN

Sarukhan has attained great fame in literature because he was the son of the Maghann of al-Harrâf, Abu Zaid, whom he belonged to. In this work there are also details regarding the town itself.

5. Some of the events are, however, not completely clear.*

**Andronicus III,** the younger Emperor of Byzantium about 1329 against the Genoese (cf. *G. O. R.,* i. 126 sq. and against the Seljuks, and about 1345 allowed Umar Beg to sail in the east and west of the Seljuks, who was granted to the Seljuks.* *Cf. Ibn Batuta, ii. 316.

Soon afterwards, the Emperor, having obtained the permission to visit Sárâkhan, which, although granted at once, was not available (cf. *Cf. Ibn Batuta, ii. 136), Sarukhan must have died very soon afterwards. The throne was passed to his son Fayadh al-Din Baybars about whose activities almost nothing is known. He died in 1278 (1273/1275) and left the kingdom to his son Mūsâ al-Din Baybars, whom he himself was known. He was an ardent member of the Mamluks and founded a Mamluk monastery in Maghnia as well as the chief mosque (Ulûq al-Maâlûk and the al-Ma'âlûk) which was carved on a wooden chalice.*

(M. Plessis)

**SARUKHAN,** the name of a Turkmân dynasty, which made itself independent in Anatolia on the collapse of the kingdom of the Seljuqs of Rûm and had its capital in Maghnia, the ancient Magin of the Sibyllus; for the name was originally that of a tribe (cf. *Sarukhan* in *Homera, Exan.,* 1388 and later survived as that of the dynasty is uncertain. At the beginning of the xiii century the Sarukhan (written Saragh in the Greek) is mentioned as lord of Maghnia which he had occupied in 1215 and had made his capital. He seems to have been engaged in heavy fighting with the Cilician magnates and the Byzantine Emperor (about 1304 cf. *Chronicle des dixen de l'Empire Magnon* of the Seljuks, tr. by C. W. Lang, ii. 416. [Leipzig 1842]; Macraux = Maghnia), but in the end to have succeeded in asserting his independence. Indeed the Genoese settlement of Foca (Thrace) owed him allegiance and had to pay a yearly tribute to him (Ducas, p. 162; Ibn Battuta, ii. 314). While Sarukhan resided in Maghnia (Ducas, p. 157; Pachymeres, ii. 451-452; Nicephor. Gregor. *B. M. D.* ii. 314; Shihâb al-Din al-

Umarini in *E. Quatremere in N. E.,* 97. 339-368; Ibn Battuta, ii. 313), his brother Ali was established as an independent prince in Nis (the ancient Nymphaeum, south of Smyrna) (cf. Shihâb al-Din al-Umarini, p. 307; Defrere in the *Neuville Annuaire des Voyages,* ii. 19 [Bar 1855])

Sarukhan gradually gained a territory which roughly coincided with the ancient Lydia and included the following towns and villages: Genuz Hüsüs, Memeneh, Allah Hüsüs, Mernemeh, Girnûs, Kandik, Ahtâle, Demredji, Nis, Ildje, Türkmenli, Foça, Kara Hüsüs, Kesaina. His rule even seems to have extended, partially at least, to the Aegean Sea, the islands of which he repeatedly ravaged with this fleet (from Pachymeres J. von Hammer, *G. O. R.,* i. 70). In the course of his apparently stirring reign) Sarukhan made an alliance with the lords of Aidin and Mentechis, the

| Yadzigird I | 399-420 |

The dates are not absolutely certain; this is especially true of the reigns between Hormizd I and Shāpūr II (see Nöldeke, Gesch. d. Perser und Araber, 400 sqq.). The dynasty is said to be descended from a certain Sāsān, of whom little is really historical is known; the genealogy is then traced farther back through Dārā to the mythical royal family of Iran. In the beginning of the third century A.D., several petty kings were reigning in Persia under the suzerainty of the Arsakids. The epoch of these dynasts is called the period of the Muluk al-Tawāfi by the Arabic and Persian historians, and the term includes the Arsakids (and Seleucids) as well as the minor rulers. Ibn Kūtaliba (Kitāb al-Mawṭūʿf, p. 341), for example, includes Ardashir I himself among the Muluk al-Tawāfi, as ruler of Iṣkāh. Bihāk, Ardashir's father, who, according to al-TahAddresses, was originally king of Khir (east of Shīrāz), in whose father Sāsān is said to have held some priestly office in Iṣkāh, began to extend his territory at the expense of the other petty kings of Persia. After the brief reign of his son Shāpūr came Ardashir, who continued what his father had begun until he defeated the Arshak Artabanus V (Arshān) in battle and killed him (224). It was probably in 226 that the Sāsānian king conquered the capital Ctesiphon, 226 is usually given as the initial year of the dynasty. But Iṣkāh was held in honour throughout the whole period of the dynasty as the ancestral home of the family. The Sāsānians succeeded to the inheritance of the Parthian kings, which included the struggle with Rome and later with the Byzantines. As our most reliable sources for their history are Greek and Roman authors, the relations of the Sāsānians with the empires of the west are best and most fully known to us. Ardashir I conducted an offensive against Rome. Apart from relatively short periods of peace, this
war went on almost to the end of the dynasty. The earlier Sāsānians endeavoured to expand their empire and Rome in this first period was called upon to defend her eastern possessions.

An important bone of contention was Armenia, where a branch of the Arsacid house ruled which had very early adopted Christianity and directed its policy on Roman lines. A treaty of partition regarding Armenia was made about 387. When Christianity became the official religion in the eastern Roman empire also, a new element entered the political relations with Persia. The persecutions of the church by some kings (like Shāhpūr II, Bahram V, Yazdāgird II) contributed to intensify the differences. The history of these wars, the details of which do not belong to this article, has often been written in modern works on Roman and Byzantine history, from Gibbon down to Seeck and Bury (cf. also the biographical articles that have so far appeared in Pauly-Wissowa's Realencyclopadie der klass. Altertumswissenschaft on the kings Artaxerxes [Ardashīr I—III, Sapor I—III, Yazdiğer I and II]. The best known of these wars were fought between Ardashīr I and Severus Alexander, between Shāhpūr II and Julian, in which the Roman offensive was at first successful, by Kawdw I against Anastasius I and by Khusrū I against Justiniān. This last war ended in 628 with a treaty which established a fifty years' truce.

The Christians in the Persian empire then attained religious freedom, but the Persian government soon resumed its repressive measures against the Armenian Christians. When the Emperor Justin II soon afterwards began to be dissatisfied with the boundaries of the respective kingdoms and made demands on Khusrū, hostilities began again. This begins the last stage of this period of war. Khusrū I was unsuccessful in the fighting that followed and under Hormizd IV also the Roman armies were victorious. The Persian general Bahram Cūbir, who had been insulted by the king, seized the occasion to rebel against Hormizd; he even aimed at the throne itself. During these tumults Hormizd was murdered by two of his relatives; but his son Khusrū succeeded in escaping to Byzantine territory, where he appealed for help to the Emperor Mauricius. With Byzantine assistance he disposed of the usurper, but in the reign of Khusrū II there was much prospect of lasting peace with Byzantium, as the Sāsānian, on the deposition and murder of Maurice by Phocas in 602, assumed the role of avenger of the murdered Emperor. In this, the last great war with Byzantium, the Persians at first won considerable successes. Khusrū's armies conquered Jerusalem and even Egypt. The reaction followed in the reign of Herosōlos. Kawdw I, who had deprived his father, Khusrū, of life and throne, was forced to beg peace from the Emperor, with Khusrū II died the last important ruler of the dynasty. Kawdw I begins a series of ephemeral rulers (including a usurper, Shahrwārd, and two queens, Bīrān and Aearmisdēr) who were raised to the throne in succession by the nobles, until they disappeared soon afterwards, until in 632 a grandson of Khusrū II, Yazdāgird III came to the throne. Although it is often stated that at first as if more settled conditions were to return, Yazdāgird III was the last Sāsānian to rule over Irān.

It was not only wars with Rome and Byzantium that endangered the Persian empire. Less civilized peoples, like the Chonites and Gīltāns (against whom Shāhpūr II had to take the field) and the Hephthiales (Haiţāl, defeated by Bahram V), continually threatened its existence. King Fūzbā lost his life in an unsuccessful struggle with the latter. It even seems that for some time after this event Persia was tributary to the Haiţāl. About the middle of the sixth century A.D., the threat from the Haiţāl was replaced by the danger from the Turks. It was not, however, the northern nomads that put an end to the Sāsānian empire, but the Arabs. Even before the beginning of the dynasty, Arab tribes had settled in the Euphrates and Tigris region; in the wars between Byzantium and Persia both parties used Arab assistance. The first king who came into conflict with the Arabs seems to have been Shāhpūr I, of whom a war against Hātra is recorded. It must have been an Araucan king who reigned there, but a story of an expedition by Shāhpūr against the Šūta's has been amalgamated with this story, which was itself already overgrown with legendary matter. How confused all this is shown by the fact that Ibn Khūta'īn (Kitāb al-Ma'ārif, p. 322; cf. Eutychius, ed. Cheliko, l. 105) puts this war with Hātra in the reign of Ardashīr, contrary to the usual Persian-Arabic tradition. It is, however, a historical fact that Ardashīr besieged Hātra (unsuccessfully) (Dio Cassius, 85, 3). Finally Firdawsi gives a different version of the whole episode and puts it in the reign of Shāhpūr II (Macan, p. 1432 et al.). That Hātra was defeated on the Arabs is very doubtful (Noelle, 29, cf. ibid., p. 51, note 2). According to the oriental sources, Shāhpūr II was a bitter enemy of the Arabs; that he penetrated to Yamān, however, and the vicinity of Mērda and received the name Dhu 'l-Akim from the way in which he ill-treated his prisoners of war is an invention of legend. The Arab kings of al-Hira, the Lakhmids, were vassals of the Sāsānians; their antagonism to the Ghassānids, who were in Roman service, was an important factor, for example in the wars of Khusrū I with Byzantium, and earlier they had played a part in the dynastic affairs of Persia. It is probable, indeed, that Bahram V, whose rule was not the first recognition of the nobles, overcame a rival with the help of Nu'mān of al-Hira, amongst others. Khusrū I even interfered in the domestic quarrels of Arabia, when about 570 he assisted the Yamāni pretender Saif b. Dhi Yazan [q. v.] with a Persian army against the Abyssinians. According to Arab tradition, the last king of al-Hira assisted Khusrū II when fleeing before Bahram Cūbir, but when the king was firmly established on his throne, he had the Lakhmids seized and executed. Tradition gives no valid reason for this impolitic act. This king Nu'mān of al-Hira is said to have refused his horse to Khusrū on his flight, or, according to another story, the intrigues of an enemy of his brought about his fall. Governors were appointed to al-Hira by the Persian king. The — not very serious — defeat which the Bāktr tribes inflicted on an army of Khusrū's consisting of Persians and Arabs at Dhi Kar soon showed how impolitic it had been to put an end to the dynasty of al-Hira, the bulwark against the Arabs of the desert. It is, of course, a question whether the Lakhmids would have been of such use against the great Arab tide of conquest which soon afterwards swamped the Sāsānian empire. As early as 633 Abū Bakr sent armies to the 'Ira; this began a
series of attacks on the Persian monarchy (battle of the chains, battles of Walajja and Ulus, massacre of Al-Husayn, etc.) which culminated in the battle of Kátid ša (probably still in 636; cf. the art. KÁTIDŠA) where the imperial Persian forces were completely routed. The complete subjection of Irán, however, only dates from the defeat of the Persians at Nihkawand (642). Vâdîgird III escaped; but in spite of all his evo- deavours he did not succeed in obtaining effective assistance from the neighbouring peoples. One of the nobles had him assassinated near Marw in 651.

The Sâsânian empire was a feudal monarchy. The powerful families which already had very great influence in the Arâkab period, like the Sûrîn, Kâšân, etc., formed an influential nobility. The influence of the higher priesthood was also consider- able. There was a revival of Mazdaciism with the rise of the dynasty; this creed became the state religion in the strictest sense, although the Jews and Nechorians, for example, were unmolested in Persia. The punishment for abandoning Mazdaciism for another religion was death.

The political influence of the higher priesthood was seen at the accession of Bahrâm V. His claim to the throne seems to have been supported by the clergy to an important extent. The works of Chr. Bartholomae (Über ein assanatisches Rechtbuch, in the S. B. A. Heidelberg, Phil.-Hist. Klasse, 1910; Zum assanatischen Recht. i.-iv, ibid. 1918-1922) give us a survey of civil law in the Sâsânian period.

The Persian-Arabic tradition of Sâsânian history goes back to Pahlavi sources now lost, the most important of which must have been a work entitled Fêdâyâmâk (mod. Pers. Khûdâyâmâk). Taking up a rigidly legitimist attitude, it comprised the period of the mythical kings as well as the history of the reigning dynasty. Good historical material was preserved in this work, e.g. on the early deeds of Ardashir; on the other side the "histoire anecdotique" plays a great part in it.

The records of the doings of the kings are often interwoven with the stock motives of romance. Besides the Fêdâyâmâk there were also smaller historical works, among them the Kârâmânâk âr Šâkârâzâ, Pâşâ küdâstill extant (transl. by Noldeke, Gottingen 1878; text several times published, e.g. Bombay 1896, 1899, 1900). A fairly long historical romance about Bahram Câhûn can be partly reconstructed from the echoes of it in modern Persian and Arabic literature (Noldeke, op. cit., p. 474 etc.; A. Christiansen, Romanen om Bahram Tshâhn, 1907). Such Pahlavi works were early translated into Arabic; for example, the Fêdâyâmâk by Ibn al-Muqaffa‘; on the other hand, there were modern Persian versions to which traditions preserved in Fardawis and al-Thâlibî go back, although they are not in complete agreement (Noldeke, op. cit., p. xiv. sqq.); do, Das iranische Nationalpoesie, p. 5 sqq.; al-Thâlibî, ed. Zötingen, p. xxii. sqq.; xlii. I have been unable to consult V. Rosen, K. medern ab arabischer, persischer, und fruhislamischer Chudyafrane = Zur Forsch. betreff der arabischen Übersetzungen der Ch. [quoted in Zötingen, op. cit., p. xliii., note 3]. On the relation of the traditions preserved in al-Thâlibî to those in Fardawis see al-Thâlibî, ed. Zötingen, p. xiv. sqq.)

The old Arabic translation of Ibn al-Muqaffa‘ has also been lost, but it is reflected in those sections of the Arabic historians, like al-Tahâwî, al-Mas‘ûlî, al-Dinawarî, etc., which deal with the Sâsânian period.

It is uncertain how far these authors have used Ibn al-Muqaffa‘’s actual work. The tradition of the history of the dynasty in Ibn Kâshînî (in his Zâbî al-Ma‘ârif) and Eutychius is more closely connected than in the other writers and shows a special character; indeed, these two historians often agree word for word. According to Noldeke, it is probable that these two used the original Ibn al-Muqaffa‘ (Geisch, d. Perser, p. xxii.); the other historians must have used later versions of the original work (cf. al-Thâlibî, ed. Zötingen, p. xlii.). Several of the later historians of the Persians have also a section on the Sâsânians, e.g. Râshîd al-Din (Zâbî al-Fawâidî) and his copyist al-Kârânî (Zâbî al-Fawâidî). These as a rule have no independent value, although it seems to be not impossible that details might still be found in them which are not given elsewhere, as is the case with Ibn Balbûn’s Fârânînâmé (Geech, Memorial Series, New Ser., vol. i.; cf. p. xxiii sqq.).

It is from this semi-traditional history that the anecdotes and the death-poeams which are found in the Adâb-literature relating to these kings and their court for the most part come. They are not uncommon, for example, in the exordium in al-Mas‘ûlî’s Ma‘rûjû. The Marâdûnâmé, which belongs to narrative literature proper, contains several stories of Khusraw I Anushirvân and his vizier Barsemîn. In poetic literature we may mention Nafîn, who, on several occasions, took the material for his romantic works from the Sâsânian period, although he occasionally deviates from the accepted tradition, for example, when he gives, in the Haft Pa‘kar, the story of Bahram Gûr (Bahram V)’s master-shot in an essentially different form from Fardawî and al-Thâlibî, who give a less polished and therefore probably older version. That tradition became much altered in course of time is undoubtedly. It must also have incorporated Arabic elements, which were foreign to the old Book of Kings, alongside of original Iranian matter. It is longer possible to discriminate between these strata, with any approximation to accuracy. The omission of one or other story in Fardawî or al-Thâlibî is, of course, no criterion; besides, these two no longer used Pahlavi originals, but later versions. Among stories that are certainly old and original are the history of the founder of the dynasty, the story of the killing of Yazdîgîd I by a demoniacal horse, most of the stories of Bahram Gûr relating to hunting or women, the death of Fîrûz in the Hephthâlite war, most stories of Anushîrâvân, the cycle containing stories of the fall of Hormizd IV, the rebellion of Bahram Câhûn and his fall and the further history of Khusraw II Farwât to his murder at the instigation of his son Kawâlî (Shîrâyû); on the other hand, originally historical events of the Sâsânian period may also have given rise to similar stories, which were put back into the mythical period, as Noldeke suggests, for example, in the case of the records of the events that followed the death of Firdawî (Geisch Nationalpoesie. p. 9). We also find episodes which are related of Sâsânian kings in some histories attributed to mythical kings by others; for example, the story of Bahram Gûr’s prohibition of wine in Fardawî (Mas‘ûn, p. 1497 sqq.) is placed by al-Thâlibî (p. 149; cf. p. xxi) in the reign of Kâl Kâhûd. The stories based on the very common motif of the king who goes unrecognised into the enemy’s country (Shâbûr II.; Bahram Gûr) belong to the older.
tradition. Other subjects are perhaps later — occasionally, due to an Arab intermediary — like the story of the siege of Heta and the story connecting Safi b. Dth Yaran with Khurasan I; it is possible also that the part of the stories relating to Bahram Gür and Khursaud II, in which the kings of al-Hira play an important part (accession of Bahram Gür, flight of Khurasan II before Bahram Cuhin), is not entirely free from Arabic elements, which are perhaps also found among the apophthegms of the kings. This is certainly the case with a saying of King Narain reported by al-Tha'alibi (p. 510: wa-tha'bii ad-yarhan bi la ban i al-nasir, la'lahi bii lahun fi al-thalabii, bii: had shaghalin khitmuti l'ali' an khitmut al-nasir).

The rulers the accounts of whom are fullest are as a rule the most important historically: Ardashir I, Shahpur I and II, Khurasan I and II; Bahram V, however, is really not one of the great kings. When there was nothing known to record of a monarch, the old Book of Kings seems to have confined itself to giving speeches which the king was said to have delivered at his accession, etc. The speeches and apophthegms of the kings were regarded as models of elegant Persian prose (Nöldeke, Gesch. d. Perser, p. 299, ad Tha'alibi, ed. Zetzenberg, p. xiv. In the latter, p. 481, we find that even Ardashir I possessed oratorical talents). Arabic rhetoric seems to have made its influence felt here; at least Hurmuz IV's speech from the throne in al-Dinawari (Kitab al-Akhbar al-Timwi, p. 77 sqq.) gives the impression of coming from an Arabic rather than a Persian original. (Cf. also Nöldeke, Gesch. d. Perser, p. 326 sqq.)

V. F. Boglicher

SATALIA. [See Adalia.]

SATAN. [See Satan.]

SATHI b. RAHI, a fabulous diviner (khanî), of pre-Islamic Arabia, whom tradition connects with the beginnings of allamî; in reality we have here to deal with a quite mythical personage like the other khanî's in whose company he appears in most stories, Shîkî al-Sî'î, who is simply the humanization of a demoniacal monster in appearance like a man eating in two (shîkî al-allinizî: cf. van Vloten, W.Z. d.M., 1893, vii, 180—181), Sathi, whose name means "flattened the ground and unable to rise on account of the weakness of his limbs" (Lûdîn al-Arab, iii, 312), is described as a monster without bones or muscles; he had no head but a human face in the centre of his chest; he lay on the ground, on a bed of leaves and palm-branches, and when he had to change his position they rolled him up like a carpet"; only when he was irritated or inspired did he inflate himself and stand up. His close resemblance to Shîkî is accentuated by legend which makes them both be born without the intervention of a father in the night before the death of the khalîna Tarafî (the wife of 'Amr Musâ'lî, ancestor of the tribe of that name, who is said to have foretold the catastrophe of the breaking of the dam of Marîb in the Yamun). She is said to be before dying to have made the two newborn monsters come to her and after spitting in their mouths (the classic method of transmitting magic power) declared them her successors in the art of khanîn.

In spite of these characteristically mythical features Arab genealogical tradition has not refused to give Sathi a place in its system, but gives him a name and a paternity (Rabi' b. Rabi' b. Mas'ud b. Mâzûm b. 'Utbi) which connect him with the Qa'asîl branch of the tribe of Azd (just as it connects Shîkî with the Banî 'Sa'b, a branch of the Banî Badîja) and more precisely with the Banî Utbi (i.e., Darâl, Lâyiqîn, p. 286, 29—32; Wustenfeld, Genealog. Fachbl., 11, 16; according to others, the Banî Utbi belonged to the 'Abd al-Khis tribe belonging to the Rabî group); there even seems to have been in historic times an Azd clan claiming descent from Sathi (Abû Hâsim al-Sijdishî, Kirth al-Mawwarînî, p. 3, in Goldscher, Abhandl. zur arab. Philologie, i).
Among the legends associated with the name of Sašā, some are connected with the pre-history of the Arabs and represent Sašā as acting as a diviner and judge. Others, without any regard for history or chronology, even fictitious; sometimes we find him dividing among the sons of Nizar (Muḥāf Rabi'a, Iyād and Atnār) their father's estate (I 3d, 1st and 2nd ed., ii. 46 = 3rd ed., ii. 46 = 4th ed., I. 39); sometimes we find him consulted with Shībī by al-Zarib al-Ashwānī (Wüstenfeld, Gen. Tabellen, D, 13) regarding the real position of Ḥašî, the ancestor of the Hashimī, to whom al-Zarib had been forced to promise his daughter in marriage (Agāhsī, 1st and 2nd ed., ii. 75). In al-Yaḥṣib (ed. Houtsma, I. 285—290) it is he who decides the difference which has arisen between 'Abd al-Mu'tallab, the Prophet's grandfather, and the two Kaši tribes, al-Kāīlāh and al-Rūbāb, regarding the ownership of the well of Dhu 'l-Haẓim discovered by the former in the vicinity of al-Ṭibr; but the parallel versions of the same story either do not mention the name of the arbitrator or give him that of another kālīn, Salām b. Ḥabīb b. al-Mu'allākāt (ed. Maqāli, Amūshāl, ed. 1284, I. 36 = ed. 1310, L. 30, Yākūt, ed. Wüstenfeld, iv. 629; Lādīm, XII. 285).

Two other legends, on the other hand, have a completely Islamic stamp; according to the first, given by Ibn ʿIṣḥāq, who does not give his sources, Sašā consulted — as always with Shībī — by the Lāhūmī chief Rabī'a b. Nāṣr regarding a dream which frightened him, reveals to him that South Arabia will be invaded by the Abyssinians and that after the expulsion of the latter and the brief dominion of the Persians it will be conquered by a Prophet (Muḥammad); as a result of the oracle Rabī'a b. Nāṣr sends his son ʿAmr at the head of the tribe to the king of Persia who settles them at al-Qāhir; this is the "South Arabian" version of the foundation of the Lāhūmī dynasty (cf. G. Rothstein, Die Dynastie der Lāhūmī in al-Qāhir, Berlin 1899, p. 39).

The second and most widely disseminated legend goes back to a certain Hāšī al-Majhrānī, who is said to have lived to 150 and about whom Muslim historiographical tradition knows nothing (cf. Ibn Ḥaḍār, ʿIṣba, Cairo, vii. 270, N 3, 929). It forms part of the cycle of the Muwalla al-Mabresa, that is of the miraculous signs which confirm the truth of the prophetic mission of Muḥammad. In the night when the latter was born remarkable phenomena occurred throughout the kingdom of Persia. The king (Kašī Anūšhārīwān) not being able to get an explanation from his magicians asked the king of al-Qāhir, al-Nūmān b. Masḏīr (an anachronism!), to send him someone who could explain it. Al-Nūmān sent 'Abd al-Muṣṭaf b. Būjazī al-Quṣnānī (on him see the Kītāb al-Muwaṣṣalāt, p. 38; Castani, Annali dell'Islam, ii. 935—936, a. il, § 165; iv. 257, a. il, § 329), who was not being able to explain these marvels himself went to Sašā, his maternal uncle, who lived in the desert. He found him at the point of death and his appeal was unanswered; only after his nephew had addressed him in verse, did the kāhīn predict to him the coming fall of the Persian Empire and its conquest by the Arabs, etc. Having delivered this oracle, his uncle Sašā died.

Sašā claimed to possess his knowledge of the future from a familiar spirit (ra's, cf. above, il. 625) who had overheard the conversation of God with Moses on Mount Sinai and had revealed part of it to him. Here we see the influence of the Kur'ānic passage (Isxxii. 1) about the dijān who overhears God's utterances.

The calculations of the Arab historians on the age reached by Sašā are naturally quite fanciful; those of them who place his birth at the time of the burning of the dam at Ma'rib and his death at Muhammad's birth, give him a life of 650 years. It should be observed that Abū Ḥālid al-Sijdiṣānī (q. v.), whose version is markedly different from the others (he does not speak of his monstrosity, puts his home in al-Baḥra, etc.), makes him die in the reign of the Ḥimyar king Dhu Nuwas and therefore does not know of his prophecy to Khāsa Anūšhārīwān.

G. LEVI TELLA VIVA

SAUL [See TALET].

SĀWA (older SYWĀ), a town and district in Central Persia. It lies on the direct road from Kašwin to Kum (Kašwin-Sāwa: 22 farsakh; Sāwa-Kum: 9 farsakh). This road practically corresponds with the royal road (Shahrāh) described by Mustawār (Sīmūghīn [1]-Saghsūdā-Sāwa-İsfahān) which was of great importance when, under the Mongols Arghūn and Ujūqī, Sulhīnīya became the capital of Persia. The Kašwin-Sīmūghīn road may yet again resume its old importance for traffic between North Persia and the southern provinces. For the present it is eclipsed by a longer combination of paved roads leading through the capital: Kašwin-Teherān (22 farsakhs) and Teherān-Kum (22 farsakh). On the other hand Sāwa has definitely lost its position as a stage on the route from Hamadān to Ra'ī (Teherān) (61 farsakh) on which the Arab geographers place it. Traffic between Hamadān and the capital now goes via Newbarzān-Zarand or, with a detour, by the paved roads Teherān-Kašwin-Hamadān (about 54 farsakhs). Geographical considerations explain the decline of the town. The desert is gradually invading the district of Sāwa as a result of a breakdown in the control of the irrigation system.

Sāwa is situated in the north-west corner of a plain (c. 30 X 25 miles) one towards the east the lower part of which is being gradually eulogized by salt marshes. The district is watered: 1. by the Kār-Şīn (the Gāmūshā or Gāmūshā of Mustawf) which is formed by three streams: the
southern and most important (Do-ših) comes from the north face of the Bakhtiyārī mountains (Dā′pēlīh); the western descends from the Alwand (Orontes) of Ḥamadān and the northern has its source in the mountains of Kharrajān. Having crossed the plain of Sāwā, the Karā-šai pours its brackish waters into the central desert and dissipates itself in several irrigation canals in the north-western part of the plain of Sāwā.

Sāwā is not known before the Muslim period. Tomasek connects its name with the Avestan word sāwā, Pahlavi saevā, “advantage, utility” (?). The Persian dictionaries gives “pieces of gold” for sāwā. According to Tomasek, Sāwā corresponds to the Sevavcina or Sevakina of the Tabulās Pentingeriānaces.

Ibn Hawqal says that Sāwā was noted for its camels and camel-drivers. Al-Muqaddasi mentions its fortifications, its baths and a Friday mosque near the great road at some distance from the town. The people of Sāwā (as of Ulūbudjird) were Sāwāni Sumnā who were at permanent feud with their neighbours in Āwa who were fervent “twelver” Shi’ites. The Mongols sacked the town in 617 (1220) and burned its fine library (Yēkšt) which also contained astronomical instruments (al-Ḳāzwinī). Hamd Allah Mustawfi (ed. Le Strange, p. 62) gives the four nīnjiyas of Sāwā: Sāwā, Āwa, Āmar and Bistn; which are 46, 17, 25 and 42 villages respectively, 130 in all. Khaṣṭa Zāhr al-Dīn Swadjiši about the time of Mustawfi writes that 7,000 yards in circumference and his son Khāṣṭa Shams al-Dīn incorporated into the town the suburban village of Râṭāba.

Mustawfi extols the fruits of Sāwā but quotes the Persian proverb about its cereals: “the straw is better than the grain of Sāwā”. The pomegranates of Sāwā are renowned throughout Persia to this day.

The European travellers Marco Polo mentions Sāwā (“Sabā”) as the town from which the three Magi kings set out for Bēthlehem and where they are buried in a square sepulchre. This Persian-Christian legend must be based on a local popular interpretation of texts like “Reges Arabum ex Sabā duxerunt!” (Psalm lxxii. 10). According to another story given by Marco Polo, the three kings were buried respectively at Sāwā, Āwa and Kaft-ād Atshaparanāt, which Ule locates between Sāwā and Aḥbar, while Tomasek identifies it with Dīz Gābrān (one stage beyond Kūm on the road from Kaft-ād).

Sāwā is mentioned by Giosafat Barbaro (1474), Figueiros (1618) etc. Chardin laments its sterile soil and heat. In 1849 the English consul K.E. Abbot counted 300-400 houses in Sāwā with 10,000 inhabitants; he says that the soil is excellent everywhere that it is not mixed with the kawwir but that the salt desert is met with at only 9 miles from the town.

At a distance of only 4 farsakh to the south of Sāwā is the old Shī’i centre; the little town of Āwa watered by a stream coming from the heights of Tafrish which separate the plain of Sāwā from that of Fārāshān (Persian ‘Irāk’). According to Tomasek, Āwa corresponds to the ʿAgānān of Potlemy, Al-Muqaddasi calls it Awá, Yākūt Aḥa. Rūh-i Namak lies between Āwa and Kūm. It is composed of salt and its friable soil — Hassinknecht calls it Gidīn-Glimas — makes it impossible to climb it. In Mustawfi’s time Āwa was 5000 paces in circumference. Houtum-Schindler says that the ruins of the old town are beside the modern village (100 houses) and that the tomb of Shāh-šan (Siṣen) is shown there. Mustawfi talks of the tomb “attributed” to the Prophet Samuel but puts it 4 farsakh north of Sāwā.

At the present day the population of the district of Sāwā is wholly Shī’a. It consists of Persians and Turks. The latter belong to the local confederation of Shāh-Sewen which includes the remnants of the tribe of Kharrajān. The district of Sāwā is frequently called Kharrajān. There are Shāh-sewens to the north-east and to the south of Sāwā. The Kharrajān live more especially to the north of the Kūm-Sijīnābād road (Kāhigird, Taqī-Khānāt, Dāhshāl, Tafrish). In several of their villages (Kandurūn, Mawdīn, Šīf, Fovūn, Kardūn) the very peculiar Tar Tariki dialect is spoken: wa warawan kāgbe, “I am going to the garden”; kāst-e, “it is warm”; ḥā’-ṣā, “in the home”; yut kawwāt dagh-i aritū, “the road was not good”, etc. The dialect is worth the attention of students of Turkish (cf. the art. Shāh-sewenn).

In the tenth century A.H. (Ibn Fašt) Sāwā formed part of the province of Kūm. In modern times it has formed part of various administrative combinations. Sometimes it was governed along with the districts to the south (Mahalla, Kasar), sometimes with Zarand (N.-E. of Sāwā) and Kharrajān (sewār: Karrajān). This last was an independent district formed by an enclosement between the provinces of Kūm and Ḥamadān. It consists of three bālis: Afšūr-i Baisag, Afšūr-i Kūsūr and Karaj; the chief town of Kharrajān is situated in the latter at the foot of the pass. It is called Āwa and must not be confused with the place of the same name in Sāwā. About 1850 Sāwā was governed by an Austrian officer in the Persian service, von Täufenstein. At the beginning of the twentieth century it formed a kind of fief of the brigade of Persian Cossacks at Teherān. One of the higher officers of this military force acted as governor of Sāwā and controlled the Turkish natives who supplied the principal contingent to the brigade.

The antiquities of Sāwā are: 1. the bārān on the Kūm-Šai (about 12 miles S.-W. of the town) said to owe its origin to Shams al-Dīn al-Ṣawīnī [q.v.], vizier of several rulers of the Ilkhan (13th) century (cf. Nisbat al-Kalīb, ed. Le Strange, p. 221). The bārān is said to have been restored under the Safawīs; it is known as band-i Shāh ‘Abbās. It occupies the passage between two hills and is about 65 feet high, 100 long and 45 thick. Beside it on the left bank, the road rises in a kind of spiral: caravans were thus able to ascend the dam which was used as a bridge and descend on the west side by a gradual slope on the right bank. The attempts to repair this important work by closing the path which the river has made through it have so far failed with resultant ruin for the district. 2. The fortress of Kīz-ḵalān on a rock in the centre of an amphitheatre of hills not far from the dam. 3. Two mosques at Sāwā, one in the town, built, according to Houtum-Schindler, in 1518 A.D.; the other, very beautiful,
sawed, a name of the *Irak (q.v.). While the name *Irak (q.v.) has been proved to be a Pahlavi loanword from *Frag, "low land, south land", occurring in the Turfan fragments, with assimilation to the semantically connected stem *Frag; cf. A. Siddiqi, *Studien über die persischen Formenwörter im klass. Arab., p. 69; H. H. Schachter, *Ist., xvi. 174, 177; J. J. Hess, *Zeitschr. f. Semitistik, ii. *Sawad "black land" is the oldest Arabic name for the alluvial land on the Euphrates and Tigris given on account of the contrast to the eye between it and the Arabian desert (*Yakut, Muʿjam al-adab, iii., 174, 177). The name has undergone a threefold development of application. 1) It is identified with the political division of *Irak and thus corresponds to the Safavid province of *Shirak (Dīl-e Erāq-e Sharq). With this meaning the historians of the Arab conquests use the name Sawad for the *Irak (cf. for example, al-Baladī, *Fihrist, p. 244), and especially the compilers of monumental geographical or political handbooks like Abū ʿUqayl, Yahyā b. Adam, Khudām al-Musawir, also al-Khalīlī. The reason for this is that in the cadastral and revenue regulations of Umar I the name Sawad was used officially. 2) It is used as the name of the cultivated area within a district, e.g. *Sawad al-Irāq, *Sawad al-Kūhūsīn, *Sawal al-Usur. 3) Before the name of a town it means the systematically irrigated and intensively cultivated fields in its vicinity, e.g. *Sawal al-Bayyān, Kūfā, Wādī, Baghdis, Tustar, Bukhārī, etc.

SAWĀKIN (Sawākin or Sawākin) a seaport on the west coast of the Red Sea in 19° 5′ N. lat. The town is built on a picturesque little oval-shaped island about a mile in circumference and 300 yards long, which lies off the mainland in the centre of a deep bay. The harbour is thrown by a narrow channel 4 or 5 miles long hemmed in by coral reefs; Sawākin is connected with the African continent, by a causeway about 60 yards long, commanded by a fort. At the entrance to this road is a pretty gateway which can be closed by a door, through which one reaches the suburb of al-Kif, which lies on the mainland. The Customs House and the Government buildings are the most important buildings on the island town. The best houses are fine white buildings of three stories, recalling in style those of Djidda. Among modern erections Kitchen’s (late, a handsome half Moorish edifice, is worthy of note. The pri
mitive shapeless huts of the natives are in lurid contrast to these buildings. The bazaar consists of drinking-bars kept by Greeks and a little street with coffee-shops and booths. The half-dozed Europeans settled in Sawakin live among the primitive reed-huts of the black and brown houses which are considered particularly habitable. The town possesses a single school which, however, is one of the best in the whole Sudan. The suburb of al-Kail on the mainland is surrounded by a wall which was at one time flanked by half a dozen forts and protected by an outer line of trenches. It has a much larger population than the island town, possesses a large bazaar in which the business life of the town is carried on and irregular streets in which live smiths and leather workers—the former make spears and heads and the latter do a busy trade in amulets—and barbers much visited by the male population. A few silversmiths provide the ornaments required by the women and make bracelets and anklets, ear- and nose-rings. Outside the suburb, which is a long narrow oasis surrounded by salt-lakes and very arid and prairie-like desert, are wells surrounded by gardens and date-palms, providing the town's drinking-water. The climate of Sawakin is not particularly healthy for Europeans. The heat never falls below 86°F even in winter; in June and August changeable winds predominate which often rise to dangerous sandstorms.

Sawakin is an old settlement, although the harbour is not important—it can only be entered by day owing to the narrow channel and the coral-banks. It has been suggested—probably rightly—that Pliny's Oppidum Saccacae was here. In the middle ages the district belonged to the Bedjia (Blemunners) to whom belong the modern Hadendou, Arabis and Bigharun. The gold connections of the Melkans with the West African coast of the Red Sea brought about the settlement of Arab merchants here who intermarried with the Bedjia. The matriarchal institutions of the Bedjia enabled the half-breeds to attain important positions, and Ibn Battuta in 1330 A.D. found in Saawkain a son of the Amir of Mecca ruling the Bedjia. The upper strata of the populace preferred Islam, al-Maqrizi calls them Hadjarib. In those days Sawakin had a serious rival in the harbour of A'dabah farther north, which Th. Bent has identified in the modern Sawakin Khadin, 12 miles north of Hadhab. The harbour, now in ruins, was very important between 450 and 760 A.H. as a landing-place for goods from India and Arabia and was a meeting-place for merchants from the Yemen and a rendezvous for Egyptian and African pilgrims who sailed from here for Djidja. Sawakin, which lay seven days' march to south, was also a landing-place for ships from Djidja, there must have been a good deal of competition between the two towns, from which Sawakin in the end emerged victorious. Al-Hamadani († 945 A.D.) still reckons it in Central Abyssinia (al-Hawash al-Watifi). Under Sultan Selim I, the Turks occupied the harbour. It was under the Pasha of Djidja who governed it through an Aga until in 1865 Egypt acquired it from Turkey by cession or purchase. The Mahdist period (1883-1898) was a heavy blow to Sawakin, as trade died away completely owing to the closing of the important Sawakin-Berber caravan road. By the treaty of July 16, 1899, between England and Egypt, Sawakin was placed under the Anglo-Egyptian condominium along with the Sudan and now belongs to the Red Sea Province, the largest cotton-growing area in the Sudan.

Sawakin now has about 10,000 inhabitants. The town has a rather neglected look and almost half the buildings are in ruins, as the inhabitants in many cases are no longer able to afford the expense necessary to maintain them. The newly founded harbour of Port Sudan is also a serious rival to Sawakin and has attracted a great deal of the trade and traffic in which Sawakin was once supreme. In spite of this competition Sawakin has been able to keep an important position as regards trade and the wholesale migration of business to Port Sudan expected by many has not materialised. Although the numerous wholesale and retail firms are no longer as busy as they were before the foundation of Port Sudan, they are still doing very well and very few native firms are suffering under trade depression. Sawakin will maintain its position if only because the trade of the natives stubbornly sticks to it and regards it as the main centre of the commerce of the Red Sea Province. Sawakin still is, as before, the starting place of pilgrims to Djidja. Fifty years ago the slave trade was still flourishing on the same route and some 3000 slaves annually were shipped from here to the market in Djidja, a trade which the English government was only able to suppress with great difficulty. Sawakin is now connected by a branch line from Athbara Junction with Port Sudan; the railway was made in 1905. If the stretch from Sawakin to Tokar (56 miles) is made, and it is planned for the near future, the two towns are at present connected by a caravan road and the harbour of Sawakin will receive a new stimulus. At the present time the excellent cotton wool from Tokar, 56 miles S.E. of Sawakin, is brought on camel-back to the harbour of Trinibat and then shipped the 11/2 to 2 days voyage to Sawakin. With the building of the railway the Kanols-Sawakin (via Tokar, 297 miles) and Berber-Sawakin (241 miles) caravan routes, on which most of the trade with the interior is done at present, would lose their importance but the amount of the trade would considerably increase. Beside the railway line there is also an important steamer service connecting with Port Sudan. There is also a steamer connection with Djidja with a fortnightly service. The main article of commerce and export is cotton, sesame oil, butter, hides, wax, resin, senna and ivory.
SAWDA BINT ZAM'A, a. Ka'b, Muhammed's second wife, was one of the first women who embraced Islam. She accompanied her first husband al-Sakrân b. 'Amr and her brother Malik to Abyssinia, with the second party of Muslims who repaired thither. The pair returned to Mekka before the Hijra, and al-Sakrân, who had become a Christian in Abyssinia, died there. By this union Sawda had a son, 'Abd al-rahamân, who was killed in the battle of Dījlabî nit.

Sawda's marriage to Muhammed was arranged by Khwâja bint Hamîdî, who wished to console him for the loss of Khaḍîja, and took place about a month after the latter's death, in the tenth year of Muhammed's mission, i.e. Rumaqî, before his journey to al-Tîfî.

In the first year of the Hijra Sawda, together with Muhammed's daughters, joined him in Medina; her dwelling and 'Aqîqa's were the first to be built in the Mosque.

Sawda was no longer young at the time of her second marriage, and, as she grew older, became fat and ungraceful to such a point that Muhammed, during a pilgrimage, allowed her the privilege of reaching Mina for the morning prayer before the crowd's arrival, to avoid being jeered at. As she grew old and Muhammed worried of her and neglected her, while he spent a great deal of his time with the youthful 'Aqîqa; in 3 A.H. he divorced her, but Sawda stopped him in the street and begged him to take her back, offering to yield her day to 'Aqîqa, as "she was old, and cared not for men; her only desire was to rise on the Day of Judgement as his wife". The Prophet consented; on this occasion Sûra iv. 127 was revealed.

Sawda was charitable and good-natured; in one of his prophetic utterances Muhammed seems to have alluded to her as the "longest-handled", i.e. the most charitable of his wives, who would be the first to join him in Heaven, and 'Aqîqa used to say: "There is no woman in whose skin I had rather be than Sawda's, except that she is somewhat cautious." 5

Closely with Zainab bint Dîjlah, Sawda did not take part in the last pilgrimage. Of her life after Muhammed's death there is no record, except that she received a gift of money from 'Umar; this, together with the fact that no mention is made of her dowry, may mean that she was in straitened circumstances, though she had received her share of the spoils of Khaîthâr. She died in Medina, in Shawwâl 54 A.H., during the caliphate of Mu'âwiya, who bought her house in the Mosque, together with that of Safiya, for 180,000 dirhams.

AL-SAWDA' or AL-KHAYRAT AL-SAWDA', a ruined city in al-Djâlîn in South Arabia, in what was once the ancient Micaean kingdom. J. Halévy, who visited the ruins, calls it 'En-Sud and describes it as an extensive system of ruins one hour's journey N. E. of the also important al-Bâjî. Al-Sawda' is built on an eminence. The ancient town was apparently destroyed by a post-Sassanian sack and was presumably an important industrial centre, especially for metal work; even at the present day the vitrified soil is covered with slag-heaps. Insufficient remains of the surrounding wall and a few steles are all that remain of its former splendour. D. H. Müller suggests that these ruins mark the north of the Micaean town of Karnî. F. Hommel identifies it with the Naka of the Micaean inscriptions. Al-Hamdînî describes al-Sawda' as one of the strongholds of the tribe of Naqha. The old Micaean town thus survived into the present epoch as the stronghold of a prominent family. The name "Black Fort" should probably be explained as referring to the building material, black lava or basalt.

SAWDA', Mîrî Muhammed Râfî', Urdu poet and satirist, was born in Delhi in 1173. His father Mîrî Shafî' (from Kâbul) was a merchant and had established himself in India. Sawda was educated in Delhi and his teachers in the art of poetry were Sultanân Kâlim Khân Wâdî and Shâh Zuhûr al-Dîn Hâmîdî. Like his contemporaries, Mîrî Shafî' al-Dîn Shâh, Mîr Tabî' Mir and Khwâja Mir Dârî, he had derived much literary benefit from the eminent Persian scholar and poet Sîrâj al-Dîn 'Ali Khân `Arî; and it was he who persuaded Sawda to write in his own mother tongue in preference in Persian. Sawda's Urdu poetry very soon attained a high standard of excellence and he was recognised as one of the masters of Urdu poetry. At the age of about sixty he left Delhi, and after a short journey he settled at Farînkâshâd, where he died in 1195 (c. 1784). His works were collected by Hâmîdî al-Dîn Khân and were first published at Calcutta early in the nineteenth century followed by numerous lithograph editions.

Sawda is rightly considered to be one of the greatest Urdu poets. He excelled in haftād and ghazal and his satires are witty and sharp. He was well versed in music also. Dr. Falton's advance remarks about his poetry are not justifiable.

SAWJDJ-BULUK, a Persian corruption of the Turkish awjuluk "cold spring"; the form sawdîj (pronunciation sawdîj) is found as early as the
Nuzhat al-Kullub (740 = 1340). There are two places of this name.

The fertile district beginning at Teheran and stretching to the west of the river Karaj along both sides of the great Teheran-Kashan road. To the north a range of hills separates it from Tabas. On the southern slopes of these hills are the pits of Fasland which supply the capital with coal. The district is watered by the Kundan which rises in the same heights. Among its villages Hamd Allah Mattawfi mentions Sunqurabad and Nadjmabad which still exist at the present day. The centre of the district is marked by Yangalmasan (an artificial mound with a tomb). At the south-western extremity of the district is the little town of Ishhīrād whose inhabitants speak the Iranian dialect called tārī; other villages of the same language (towards Karan) are Segīshād, Shīāshād, Iskī Isqūn, Čaī and Shīrāshād. Many of the people of Ishhīrād profess Bahāʾi. See the map in A. F. Stahl, Petren. Mitt., suppl. fasc., No. 118, 1896, sheet 1, and his map Umgegend von Teheran, Gotha 1892.

2. The southern section of the province of Ahvazhūz, the capital of which is Sādjavāl. (in Kurdistān Sāslāb). The governors of Sādjavāl-Bulāk are appointed by Tabrīz, but ethnographically Sādjavāl forms part of Persian Kurdistan, which consists of three parts: a) Kurdistān of Mūri in the north, corresponding to the šāhvar of Sādjavāl; b) to the south of Kurdistān of Sinna (cf. the art. ŞENNE) and c) to the south of it Kurdistān of Kirmānshāh. The province of Sādjavāl-Bulāk is bounded on the north by Lake Urmia in the north-west by the districts of Sulhā and Ushūrwatered by the Gādī-čaī; on the west by the heights of the Tabrīz forming the Turco-Persian frontier; in the south by the Sīr-Kūr range separating Bāna from the district of Shīlēr; and on the east by the watershed between the Tatava and the Diğhatu (only the district of Şalūsh borders on the basin of the latter river); on the north-east by the course of the Tatava on the right bank of which lies the isolated district of Miyān-Kūz (“between the two waters”). The Tatava at the same time forms the boundary between the Turks of this latter district and the Muhārirs of Sādjavāl-Bulāk. Sādjavāl-Bulāk measures some 60 miles and has an area of about 4,800 to 5,000 square miles.

Hydrography. The Muri country lies across two watersheds, that of the Lake Urmia and that of the Little Zab (a tributary of the Tigrel). To the first belong three separate rivers: 1. the Diğhatu, which rises in Mount Čīlūr-Čașma at the eastern extremity of the Turkish enclave of Shīlā which runs far into Persian territory between Bāna in the north and Mārīvar in the south; 2. the Tatava (Mustawfi: Taghhatu) rising in the extreme south-east of Kurdistān; 3. the Sādjavāl-Bulāk rising in the extreme face of the Ma’dān pass (between Puswa and the town of Sādjavāl-Bulāk). The river-system of the Little Zab (al-Zāb al-arzul) belongs to the basin of the Persian Gulf. Its upper course is formed on the high plateau of Lāhūd-i Mūri; the north-western branch (Lāwūm) rises in the eastern face of the Kandil just to the north of the pass of Kabī Shīn; the north branch (Bīrūd-i Māghū) comes from Diğdān via Ushūr; the north-east branch (Awašūr) from the west face of the Ma’dān pass.

Taking in on its right bank the swift waters of Bādjavān, Awašūr, Khīdjavān, Tīlīstān and Kāsān and on the left the large waters that rush down the gorges of the Kastaw, the Little Zab under the name of Zeī or Kāsī rolls southwards, but below Sādjavāt it turns sharply westwards to force a passage through the ravine of Allān to the Tigris. Just at this bend, close to the pretty village of Alīb, the Kāsī receives on the left bank the important tributary which drains the whole basin of Bāna (except the district of Namāshēr, the waters of which enter the Kāsī above Alīb). The river of Bāna (Awa-Kived) forms an almost straight line with the ravine of Allān. The left bank below Dunēs belonged to Turkey (Allān-i Gīaysī). The frontier here follows the course of the Kived and then of the Kāsī, finally ascending the Kandil leaving Bīrūd to Persia and Kandil to Turkey.

There is only one little stream that escapes the gigantic funnel of the Allān; the rivulet of Wama rising on the verdant heights of this name to the south-east of the great cone of the Kandil describes a semi-circle to the west of the Kāsī and enters the Mesopotamian plain (Plōzār) by a deep defile where it finally rejoins the Little Zab on its right bank.

Orography. The lofty chain of the Kandil rises like a wall between the territory of Sādjavāl-Bulāk and the districts of the former Turkish Kurdistān: Rawāndūz and Kū-i Sādjavāt. Among the Arabs the Kandil was called Shāfītna in Persian Tağı-i Shīrvān (Yaḵtā, ed. Wüstenfeld, ii. 298), by the Armenians Zarasp (Hoffmann, Armazg, p. 249, 260). The famous pass of Kūl-i Żīm (about 9,900 feet high) between Ushūr and Shīrāshād (belonging to Rawāndūz) lies to the north and outside the boundaries of Sādjavāl-Bulāk. Communication between Sādjavāl-Bulāk and Mesopotamia is maintained by the less elevated (6,000 feet) and more convenient pass of Garši-Sīnka, between Lāhūd-i Mūri and Bulāk (Rūyāt), as well as by the defiles of Wama and Allān. All traffic is, however, considerably hampered by the presence of turbulent tribes on both sides of the frontier.

The great perpendicular arête which is detached from the southern extremity of the Kandil and forms the northern wall of the ravine of Allān is noteworthy. It is called Shīr-i and its pass the Hawmūl. The heights running between Lāhūd-i Mūri and the valley of the Gādīr are of little importance except a few peaks (Bīrūd and Čoghaqul), they extend to the Tatava, where they cut the town of Sādjavāl-Bulāk off from the northern district of Shīr-i Wōrān; they allow a passage, however, to the Sādjavāl-Bulāk river.

The central longitudinal massif of the Kurūk (up to 7,000 feet) separates the waters of the Kāsī from the basin of Lake Urmia; to the north it joins the summit of Čoghaqul.

The eastern part of Muhārirs of Kurdistān is in the form of a square, the sides of which are in the north the latitudinal heights; in the west the Kurūk; in the south the watershed of the Tatava on one hand and of Namāshēr and Sādjavāt on the other; these heights continue in the extreme south of the Kurūk where their principal summit is Bīrūd-i Sīr (“red stone”); on the east the heights of the watershed between the Tatava and the Diğhatu. The interior of the square formed by the system of the Sādjavāl-Bulāk-čaī and of the Tatava is extremely irregular: it contains mountain peaks (Taraḵā), gentle slopes and fertile valleys.
To the south and outside the square are the districts of Sakka, K. v, and Bana. The first includes from south-west to north-east. It is watered by the southern sources of the Djaned and fills the angle between the square of Sawdi-Bulak and the lands of Bana. The latter district, on the other hand, forms a valley sloping from east to west towards the basin of the Kafir. To the south the Kuf-Kuf ("Red mountain") forms the boundary; to the east the heights of Shi'a-jevan separate it from the southern sources of the Djaned (River Sahl); to the north-east the heights of the Kafir Kafir rise as a barrier between the wooded slopes of Bana and the bare hills of Sakka. To the north, the rocky group of Bati (the "oak") bounds the principal valley of Bana.

To the north of Bati runs the river of Namash, which runs directly into the Kafir on its left bank. Bati thus forms an isolated group corresponding to Bana on the right bank of the Kafir.

The true northern boundary of Bana is therefore formed by the mountain of Bard-I-Sita to the north of the districts of Dasht-I-Tal and Namash.

From the administrative (and ethnographic) point of view the province of Sawdi-Bulak is divided into the following parts:

1. Makri Kurdistân, properly so-called, inhabited by settled Kurds belonging to the Makri and Debokri tribes. The capital is the town of Sawdi-Bulak, founded, according to Rawlinson, at the beginning of the 16th century. A century later it comprised 1200 houses of which 100 belonged to Jews and 30 to Syrians. The town retained this size till the outbreak of the Great War. According to H. Schindler, the town lies in 36° 45' 48" N. Lat. and 45° 47' E. Long. at a height of 4,272 feet above sea-level. The following districts (maphali) form part of Makri Kurdistân:

- 1. The environs of the capital, 36 villages; 2. Shah-i-Warea "the deserted town"; this very rich district is situated to the north of the capital and has 68 villages belonging to the Debokri tribe; 3. Altikhi ("grove"), on the Sawdi-Bulak-Mahmud-Daoud road, in the valley of the Tatavi; 4. Bati on the Tatavi at the crossing of the Sawdi-Bulak-Sakka and Mahmud-Daoud roads; 5. several villages which the principal is Muharram; 6. Tal, on the Tatavi at the crossing of the Sawdi-Bulak-Sakka and Mahmud-Daoud roads; 7. several villages which the principal is Bulak with a fine residence of the hereditary "serdar" of the Makri; 8. Turfan south of Bati, 38 villages; 9. Gwark-i-Makri near the sources of the Tatavi southeast of Kirtuk, 24 villages.

II. The territory of the Kurdi tribe Belnas, related to the Makri and speaking the same dialect. Formerly nomads, the Belnas now spend the winter in their villages and in summer go to the heights (sara) near their dwellings. The following are always the Belnas of Kafir territory:

1. The Manja, a brave and courageous tribe, mostly settled, and the Sawdi-Bulak-tai and in the districts of El-Tamur (below Gowruk) and Nail-i-Mangu (the "horse-shoe", i.e. an amphitheatre formed by the mountains on the western face of Kirtuk). But the headquarters of the Mangar where their villages lie is at Mergun (Tirkash) on the right bank of the Kafir between Lohar and Sardash. The total number of the villages of the Mangar amounts to 148.

II. The Piru to the north of Mergun in old Lohar and on the Luhur, 50 villages, including the little fort of Muharram, just opposite the pass of Gwark-shinaka.

c. The Mamas live in New Lohar, the centre of which is the ancient stronghold of Tawa, now in ruins, but mentioned as early as Yaqut. The Mamas occupy the valley of Bati-Mahd (Djalidin), and all the upper part of Luhur above the point where it enters the plain of Old Lohar. There are Mamas at Sirdar and at Tawu, in all over a hundred villages.

d. The tribe of Dasht (Gwark) which besides the villages already mentioned occupies the wooded spurs of the Kurtag on the left bank of the Kafir and has over a hundred villages.

e. The Sidi live in the villages (68) between Bana, Sardash, the head of the Kafir and the Kandil. Their clans (Baryajid; Milkiti, Daruni, Harj-Ali and Ali) live separately without common chiefs. Belux, the chief of the Ali, has 70 houses surrounded with beautiful gardens.

It ought to become quite important, being situated on the Marjigha-Sawdi-Bulak-Sardash road, and the districts of Sulaiman and Kufi. At Tawu below Belux there are to be seen on the Kafir the ruins of an old bridge having seven pieces of brick.

IV. The two other districts of Makri Kurdistân are Sakka and Bana. They were both at one time under the wills of Sinna, but geographical, ethnical and political conditions (especially since the Turkish occupation in 1905) explain their being attached to Sawdi-Bulak.

Bana is a very important district with 8 subdivisions (Dula, Khurshid, Balaw-Bahkhi, Shew, Namash, Dabati-Tal, Kibrous, Tawu, Pash-Arbera) with 145 villages and about 3400 households. The town of Bana at the foot of Mount Arbera has 800 houses, of which 80 belong to Jews, and is very busy. On Pash-Arbera ("Isenhain A.") the road from Penja, we may mention the village of Balaw-Bahkhi, which though situated to the south of the new Kuf-Kuf range belongs to Bana.

Rawlinson estimated the number of Bana families at 12,000 which would give about 100,000 souls. This figure does not seem to include Baha, Bana, Sakka, etc.

The actual number of inhabitants of the tribunates of Sawdi-Bulak cannot be less than 300,000. The foreigners are few but mostly officials, several hundred Jewish families at Sawdi-Bulak, Bana and Sardash, and even in the villages; a few Armenian families (with a church) at the town of Sawdi-Bulak, whence, on the other hand, Syrians have entirely disappeared.

Language. O. Muns conclaves that the same Kurdi language (Kurna) is spoken on the territory bounded on the east by the valley of the Tatavi and the left bank of the Djaned; to the south, in Sakka and Bana, Kurneidi is spoken, but at Martunf and among the Tifaki tribe (in the district of Hobein) the dialect of Sinna (q.v.) is said to be spoken. Kurneidi extends beyond the bounds of Persia as far as Sulaimaniya and even south of it. The favourite出处 of the people of Sawdi-Bulak are natives of Kirkuk.
Darland, and the villages of Salamata. To the north-west the dialect passes a little beyond the plain of Ughni, but in the Urmia region begins the area of the dialects which are connected with those of Hakkari. Thanks to the labours of O. Manni we have a fine collection of heroic ballads and Muki folk-lore. There is a translation into the Mukt dialect of the Gospel of St. Mark (Avestarian press at Philippoupoli, 1909) and of Protestant hymns (L. O. Fossati) etc. Before the war American missionaries had begun to publish at Urmia a little magazine for the Mukt (Kurdistan, No. 1, April, 1914). By 1921 most of the Mukt Kurds are Shīflī Sunnis. They are very lukewarm in religious matters, but the Shīflī belonging to the religious orders (Najābaṭand and Kādiś) exercise a very great personal influence among them. The disciples of Shīflī Sa'dī of Kewāmbd (killed in 1915 during the Turkish occupation) practised a very violent Shīflī in his time.

Costume. The Mukt costume consists of a shirt with very long sleeves coming down to the feet and tied behind the back when fighting. Above it is put a kind of robe which comes down to the knees and the tails of which cross; a huge girdle of cotton material, sometimes 20 feet long, is then rolled round the body. In summer the tails of the coat fall down over the huge white drawers tightened at the ankles. In winter or when on horseback the tails are thrust into cloth tromers of ample dimensions. Above all a very short sleeveless coat of hard felt is worn. On the head is worn a peaked hoodfress surrounded by a tassel. This is surrounded by a turban of mussul milk, the fringes of which fall over the eyes. The old armon, coat-of-mail, helmet, buckles, lance and sword (cf. de Morgan, ii., Pl. xx. and al.), has completely disappeared. The Mukt is content with a dagger and a rifle, and is specially fond of making a show of the number of his handoliers and belts arranged to hold cartridges. There is not much variety in the equestrian sports; the favourite is the taffe, which consists in throwing a heavy stick to the ground and catching it while going at full speed.

The women wear dark cotton trousers, a long undergarment, and a piece of blue cotton with which they cover their shoulders; a broad or red turban, skillfully arranged forms their headdress. The relations between the sexes have not the strictness usual among the Muslims. The women do not veil themselves. Among the Mukt there are a number of dances (šuyr’, rōnā, ‘üzāh, šagī, gārā, kal-pārin) in which the men and women form circles holding one another's hands.

Occupations. To the north-east, especially in the rich valley of the Tatsa, we have agriculture with a view to export; everywhere else the tribes cultivate the soil for their own requirements only. The vines and tobacco are grown at Afīn, Sardagh and Bāsha. Sheep are reared throughout the mountainous region; cheese is made flavoured with sweet-smelling herbs and felt is manufactured. In the wooded districts the people burn charcoal, gather acorns, guali-nuts and mastic (gaw); these districts and on the right bank of the Klaut the region between Prish in and Sardagh; on the left bank the western slopes of the Tartsa; in Bāna, the eastern parts of the district. In the river at Warma (near Aghrāma) surfice sand is found in small quantities.

History. Down to about 1890 there was at Tatsa on the lower course of the Tatsa a cuneiform inscription in the Khalidic (Vanni) language, which has since been carried off by some vandals. According to Belk (Das Reich der Manndar, in the Verhandl. Best. Ges. f. Anthropologie, 1894, p. 479-487), it was put up by Menna, son of Isayumti, a Vanni (Khalid), (Urartaum) king who reigned between 812 and 776 B.C. (C. F. Lehmann-Haupt, Armeinien etc., 1910, L. 653). This monument, the most eastern known in the cuneiform character, must have marked the site of the town of Mahta in the land of the Mannasens (Minal) conquered by Nebuchadnezzar. Traces of Khalidic influence can also be seen in the waterworks, subterranean corridors and stairways hewn out of the rock, which Rawlinson (J.R.G.S., vol. v.) discovered at Shišān-ābād and at Sawkand on the left bank of the Sawsbātul river. The Assyrian king Sargon, in the account of his famous campaign in 714 B.C., mentions to the south of Lake Urmia — apart from Mannasen territories — the districts of Allahia, Paraunji, Zikkirth, etc. (Thaumaturgus, Une relation de la bataille campagnes de Sargons, Paris 1912). But the identification of Paraunji with the land of the Persians (Persia) and its localization on the lower course of the Gīdir are still only hypotheses.

Another very remarkable monument is the rock tomb of Fakrās near the village of Indirak. North of Sawsbātul; it resembles the Ashkenesin type of tomb (de Morgan). E. Herzfeld connects it with the group of monuments which he regards as Median (Sarso-Herzfeld, Iranische Palaestina, 1910, p. 184; Herzfeld, Chorātān, in Jlam, 1921, xi. 133). Among the towns of Media enumerated by Prokelt (vi. 2) there are two in the same latitude (38° 30'): Ḫwāsā (long. 87° 50') and Sarnū (long. 88°). Rawlinson identifies the latter with Sānū in the district of Ughni and he connected the former (Jarayvanuš) with the Daryā, mentioned in the Kurdish chronicle (ed. Vellina-s-min-nor, i. 268). But he did not know the site of Daryā; it is the name of a village (2 miles N.W. of Indirak) quite unlike to which are the remains of the "deserted town" which has given its name to the whole district of Shār-i Wāzān, which is still recognised as the ancient capital of the district.

De Morgan (iv. 283) has remarked on the great number of artificial tel's (mounds) on the upper Klaut; there are 24 in Līzhīdana. The ruins of the "town" of this district are to the south-east of the pass of Garī-Shīnka. Farther down the tel's disappear but in the centre of the Maku country at Gholgha-tapa there is a large mound 150 ft. in circumference. Quite near, at Khalīsdāla, de Morgan found tombs of the Iron age (Mīz. scient., iv., Richerrr, mochella, b. 9). In the Bāna district Harris mentions "mounds" (tel's) near Sīwāna, the inhabitants of which sold him ancient chalices, cylinders, etc. All this shows that the region of Mukt Kurdistan has been inhabited from a remote period.

The Emperor Heraclius crossed this region in 624 in pursuit of Khusaw Parwīs; in the caves of Khersfūl (Silin-Kalāt, q. v.) Ker Porter found a Greek inscription (Kaibel, Ephes. Graecn, Berlin 1878, p. 312).

The history of Mār Yabalāh, patriarch of the Nestorians (1281-1317 A.D.), shows the im.
portance of the traffic through the territory of Sáwdj-Bulâk in the Mongol period. The present toponymy of the region shows the clash of Turkish influences from the north-east and Kürd influences infiltrating from the west. In the eastern counties (Ağhağ, Bâhi, Târzân, Şekî), there are Kürdish villages with Turkish names. We also find a certain number of Mongol names: Târâq, Tâtaûf (in Mustâwî, Tâghbatî, Dîjaghâtî, which, according to the History of Mîr Yâbûlî, was called in Persian Wâyán?)-îrûmân, according to Rashîd al-Dîn (ed. Quatremère, ad fol. 297v), Zâtûn Kâlî. On the other hand, the Turkish districts between the Tâtaûf and Marâgha formerly subject to the Mûrâkhi have been lost to them. To the west of the Kûrakî, we only find Kürdish names with a few sporadic Semitic ones (Aramûcî: Dîbâ, Kûkâ, Nûbâsû and Simûla).

We have to distinguish several historical layers among the Kurds of Sáwdj-Bulâk. In general the large tribes are divided into two classes: warrior ("aşguîr") and peasant ("ra'îf") and it is very probable that before the formation of a tribe organised in this way the peasants had to be subjugated and sometimes even "Kurdised" by the invaders who are their present masters. According to O. Mann, the peasants are usually proud of belonging to the "(now called?) Debûkî tribe who would represent an older element than the Mûrâkhi. The same hypothesis is probable for the Sûsanî (between the valley of Alûn, Sûradjî and Wâansa) in view of their settled character and their ability as gardeners and vine-growers.

As regards the tribal aristocracy it always claims to have come from the west. For the principal tribe of the Mûrâkhi we have the references in the Mûrafû-sûmanî. The Mûrâkhi chiefs claim to have belonged to the Mûrâkhi tribe which lives in Shahîrûz and to have been of the family of governors of the Bâbûn tribe. During the period of Turkoman dynasties (16th cent. A. H.) a certain Saîf al-Dîn took Dâryân from the Câbûkîn (a Turkish tribe?) and enlarged the territory by the addition of the districts of Dîlî, Bîrîk (Dîlî is a little district to the S.-W. of Lake Yûmîya and Bîrîk is a tribe at present scattered round the mouth of the Tâtaûf), Akhshâ, El-Tâmûrî and Sülâmâ. The tribes united under his sway received the name of Mûrâkhi. His son and successor Şarîm challenged Şâh Ismâ'îl Şafawî and in 912 inflicted a defeat on the Persian troops. Then (in 918) he sought support and investiture from Şâh Selîm. On the death of Şarîm his estates were divided among the three sons of his nephew Rûstâm, who recognised the sovereignty of Şâh Tahmasî. At the revolt of Alûnî, Mîrzâ (1018) Şâhî Şülanî intervened against them, his vassals of the Ahamîrî, Hâkî, and Bîrîkî tribes who fought and killed them. The young son of Şarîm, Amîr-bîg I, succeeded them, having received investiture from Şâhî Şülanî and ruled his tribe and the fey of Dâryân for 30 years. Another Amîrî, grandson of Rûstâm, succeeded him, with the help of the Şafawîs. During the troubles in the reign of Şâh Muhammad Kûdûh-banda, Amîr-bîg II in 991 vested Şâhî Şülanî Murûd III who added to his hereditary fey the williety of Bîrîk (Shâhîrûz) and the sanjak of Mosul; Erûb and certain dependencies of Marâgha were given to his sons. With the help of the Mir-î Mirân of Waste, he defined the Persian governor of Marâgha and plundered the district, of which the Sultan appointed him beyler-beyî with the title of Pâghâ. The hereditary fey of Darûs was, however, awarded to his nephew Hamîn who had given his adherence to the Persians. A war broke out between the Amîrî Pâghâ and Hamîn. The latter was killed and Sultan Muhammad III (1003-1012 A. H.) granted his brother Uleym-beg the district of Dîbûl Khuwarâ (D. Haarmân to the north of Marâgha) in fief. In the meanwhile the Turks had captured Tabûzî and Dîjaghî Pâghâ, appointed Governor-General of the province, wished to have Amîrî-Pâghâ recognise his authority. The latter complied with a bad grace. Dîjaghî Pâghâ lodged complaints against him in Constantinople and the sandjaks of Osâmî, Mosul and Erûb were taken from Amîrî. Marâgha was subordinated to Tabûzî with an obligation on Amîrî to pay an annual contribution of 15 kharîwâr of gold. Finally his lands were reduced to Darûs alone. His son Şahbî Hûdîr, however, was able to hold out in the old fortress of Shahîrûz rebuilt by him. The people of Marâgha complained of him as a troublesome impostor and Khuwarî Pâghâ, governor-general of Tabûzî, issued an edict allotting Shahîrûz to the Mahmûdî tribe. Fighting began around the fortresses and Amîrî-Pâghâ had to intervene to put an end to the hostilities. About 1005 the father and son still had the following districts: Darûs, (Myûnûn), du-àbî, Aqjarî and Lîfânî (the two last named on the right bank of the Dîjaghî), as well as the fortress of Târâq and Shahîrûz and with the districts attached to them.

Information on the later period is still little accessible. I. Kandar Manahî, author of the Tarîkh-i Âdam Arî, was an eyewitness of Shah 'Abbas's expedition against the Mûrâkhi and Brûdîst Kurds; the episode of the siege (in 1017 = 1609) of Dîmûmâli (south of Lake Yûmîya on the river Kûsîmî) is the favourite subject of Mûrâkhi bards, Mirzâ Mahdi-Khân's history of Nûdîr Shah also contains information about the Mûrâkhi (O. Mann, op. cit., i, Preface).

The more recent history of Mûrâkhi territory is as follows: In 1810 the governor of Marâgha, Aliymad-Khân (of the Turkish tribes of Mûrâkhdân and Bâzûk), invited the Mânîsh Agha's to a feast and had 300 of them massacred there, which put an end to this tribe's depredations for a long time. In 1850 the rebel Rûbarî Agha (Hîllîsî) threatened Marâgha. In October, 1880, the Mûrâkhi territory was invaded by Shahîb Ubdîl Allah of Shumûkîn, whose ambition was to found a Kurdish principality of the same character as that of Rumelîa. On this occasion the religious chief of the Sunni sect of Sáwdj-Bulâk proclaimed the holy war against the Şûriya which resulted in wholesale massacres especially around Marâgha. In 1905, the Turks, contesting the Turkish-Persian frontier occupied Lâhîjân, Muhammed Fadîl Pâghâ's headquarters were at first established at Faswa; in the end the occupation gradually opened all over Mûrâkhi territory. In 1914 the delimitation took place with the assistance of British and Russian representatives; they established the old frontier along the Kandîl. The World War began in these regions with a new Turkish-Kurd movement. Colonel Iyka, Russian consul at Sâwdj-Bulâk, was assassinated at Miysân-dûh on Dec. 10, 1914. The region then became the scene of Russian-Turkish fighting which left a trail of devastation behind it.
Five great families constitute the Murti nobility: they are all called Bhab-Amira (Bhab-miri) and trace their descent from Amir Bagbeg. Their more certain ancestor is Budahk-Sultan who is buried in Sawai-Bulak; his connection with Amir II is, however, not at all clear. According to the Kāfī (I. 300), his brother Bhab Saliamān flourished about 1700. There are curious legends about the life of Budahk-Sultan: he is said to have been the son of a certain Fakhr Ahmad who had married a young Frank girl called Kheghā (Rich, i. 291, 293, 359). One of the peaks of the Kandil is called Khān Budahk Kheghā (metronymic names are common among the Murtis). The descendant of Budahk in the eighth generation was Aziz Khān Sardār, governor-general of Adhābastāḏā, who died in 1858. De Morgan (ii. 40–41) extols the ability of his son Salf Al-Din, governor of Sawai-Bulak and owner of the fine estate of Bokka (he died in 1891). His son and successor, Husain-Khan Sardār, several times governor of Sawai-Bulak, was killed in 1914 during the Turkish invasion. Other Bhab-miri families have estates at Akhtābi, Turgān and Yel-zāhid (Vallēl).

Rawlinson (p. 35) describes the fiscal organisation of Sawai-Bulak. The Bhab-miri families receive $\frac{1}{6}$ of the produce of the land; $\frac{1}{12}$ is received by the farmers (gākāt) and $\frac{1}{6}$ goes to the zemstvo who superintend the cultivation. These quotas evidently represented the rent while the rest of the produce defrayed the expenses of tillage and labour. According to O. Mann, this system still flourishes; but feudal customs generally tend to disappear.

The tribe of Debokiri has only played a subordinate part. Their very centre, Daryās, has long been regarded by the Murtis as their hereditary seat. It is only very recently that the Debokiri seem to have again organised themselves with some degree of independence under their present chiefs of whom the great-grandfather, Bahām Khān, is said to have come from Diyar-bakr (?). Near Sawai-Bulak there is a little village of Debok from which Debokiri must be derived. The connection between Debok (Dib Bhok?) and Diyar-bakr is uncertain. In any case the name Debokiri, which does not occur in the Sharaf-nūmā, cannot be old but, as it is applied especially to a family of chiefs, this fact does not prejudice the antiquity of the people owning their rule. The district of Lāriḏān, like its homonym in Glīn, used to be called Lāriḏān. Hoffmann, op. cit., p. 244, 263, identifies it with the Safaq al-Awdi of the Arabs, while denying that the name Safaq may be a reminiscence of the ancient Sīllicere. According to the Sharaf-nūmā (I. 279), Saliamān-Sahrūn (before 994?) pillaged the land of the Zarki. A corrupt passage (I. 280) then seems to show that Lāriḏān formed part of this territory and that it was taken from the Zarki by Sīllicere Bhab. The Zarki now occupy the district of Ughna immediately to the north of Lāriḏān. The date of arrival of the present occupants, the Bibras, in Lāriḏān is unknown. The Bibras with the Kāwātīs are occasionally referred to in the Sharaf-nūmā to the west of the Kandil where some of their branches are still to be found (Mamash-i Bae, Khdhir-mamsen). In Rawlinson’s time the Bibras still paid to the Murtis a tribute of 1000 tomas a year.

As to Bānī, the Sharaf-nūmā says that this district lies between the Ardīlūn, Bābān and Murti, and that it consists of two parts, one of which is the nūriya of Bābān properly so-called with the fort of Bīrān; the other consists of the fort of Shiwa (in Kurdish "slope") which must correspond to the village of Shīvē in the district of this name lying to the south-west of Bānī. The former capital, the official Persian name of which is Bīrīnī, is short distance from the modern town but its name survives in the popular name given by the Kurds to the present town of Bīrān ("exposed to the sun"). The Amir of Bānī (Sharaf-nūmā, i. 320) were called Ilītyūr al-Din because of "their own accord (ba-likīyā-i kānū) they had adopted Islam". The first chief mentioned by the author is Mirzā-Bāgh of Bānī, who married the daughter of Bīga-beg, governor of Ardīlūn, which brought him trouble with a rival and the resultant temporary loss of his life. His son Budāb-beg, driven out by his brothers, sought the support of Shāh Tāmasāb but died at Bāzīw. The Shāh ordered the governor of Maragha to instal in Bānī Budāk’s brother Saliamān-Beg who ruled the district for twenty years and finally handed over his position to his son-in-law and nephew Bādg-Beg. The Ilītyūr are a Murti family, which also claimed descent from the Adhābastāḏās, therefore the patronymics of the khān of Ardīlūn. In the time of Rich (i. 217, 248) Nur Allāh Khān was hereditary governor of Bānī. The last scion of the Ilītyūr Al-Din family, Karim Khān, was killed (about 1850) by his old servant Wenis (= Yunus) Khān, who seized the power in Bānī. His son Hama (Muḥammad) Khān was governor in the district before the Great War. Since 1912 by orders from Teherān Bānī has been detached from Siān and incorporated in the province of Sawai-Bulak.

The only know of him that he fell in battle (Sawml-.newInstance, l. 37).

3) The eldest son of Marad Allah, who, when governor of Rosthania, made terms with a son of John V Palaeologus of Byzantium, named Andronicus, and rebelled against his father. The Ottoman chroniclers give very scanty information about this conspiracy while the Byzantine historians Chalcocene-dykes, Pharramus and Ducas give very full accounts, differing only in detail; cf. Chalcoc, ed. Illus., Bekker, l. 40 sqq. (Sawml-Regis), Pharramus, ed. Bekker, l. 50, where the rebel is wrongly called Maa Rofas; id. M., ed. Bekker, l. 50 (Sawml-Regis) where Sawml is mentioned but the rebel is called Kessas; id. e. Candia, Murad I acted jointly with John V and took the field against the two princes. After an unsuccessful battle at a place which the Byzantine writers call Anadolu Chalco, p. 43) Sawml fled to Irlandistochina, where he was surrounded and forced to surrender to his father. He was blinded and then beheaded.

The execution took place in 1278 (1275-86), and the body was brought to Brusias and buried there. Murad I had apparently made up his mind to get rid of Sawml as he had appointed his son Bayazid to watch his movements, cf. Marad's letter to Bayazid in Feridun, Miniscat. Seljuk, l. 107 (of the beginning of Raho'1, 787 = 1385-1386), with Bayazid's answer,(cf. cit. exp. p. 106 sqq, according to which the Kaiz of Brusis must have passed a death sentence on Sawml. The execution of Sawml was the first of a long series of similar cases, in which princes dangerous to the Ottoman heir-apparent were put out of the way.

Hildiography: J. von Hammer, Geschichte des Osmanischen Reiches, l. 190, 399, Zinken in G. 0., R., 837 sqq, Huddiffi Bihis in Al-Tawarikh, under the year 1295, Sa'di al-Diri, Taif al-Tawarikh, l. 100 sqq. (following Idris Bidhisi).

(FAZNE RIAHORS)

SAWML (A.) is in the first place barley flour, then also wheat flour and flour made of dried fruits, such as a soup made from flour with water or paste to which honey, oil or pine-nut syrup, etc. is added. The effects of such flour dishes are discussed by al-Razi in his work on diet. To revenge the battle of Rattab, Ali Sulaymân in Ibn Haldun, c. ii., rode with a body of armsmen towards Medina. Near the town there was some skirmishing and Ali Sulaymân led his men to Muhammad and his followers approached. The Mekkans in their flight threw away their provisions, mainly sawml, which were picked up by the Muslims. The incident has been perpetuated in the Sira under the name Gafran al-Sawml (cf. Cantar, Annalett dell'Italia, year 2, 49).

(J. RIEKA)

SAWML (A.), with Stress, means from the root sawml-m, the two sawml are used indiscriminately. The original meaning of the word in Arabic is "to be at rest" (al-Noideke, Neue Beiträge zc. Syria, Strassburg 1920, p. 36, note 3; cf. previously S. Fraenkel, "Fox s. Sawml ... in Coran pesugravt", Leiden 1896, p. 20: quiescens"). The meaning "fasting" may have been taken from Judaeo-Aramaic usage, where Muslim became better acquainted with the institution of fasting in Medina. The word has this meaning in the Mamlam stans, in the Mekka stans.
it only occurs once, in Surah xx. 27, where the commentators explain it by "pnsn" "silence" (this is therefore given as one of the translations of the word in the dictionaries); but perhaps some has simply to be transferred "fasting" (see below). The verb is followed by the accusative of the time spent in fasting.

Origin of the rite of Fasting. That fasting was an unknown practice in Mecca before Muhammad's time cannot be a priori assumed. Why should not the "pnsn" in whose manner of life there was so much Judeo-Christian features apparent — at least according to tradition — have also used this spiritual discipline? In favour of the occurrence of fasting as a voluntary practice of mortification among the first Muslims in Mecca is the probability that Muhammad on his many and varied journeys had observed the rite among Jews and Christians. But we can say nothing definite on this point; anything told us on this subject in the Surahs and Muslim tradition may be biased. In the Mecca suras, as above mentioned, there is a reference to "pnsn" in xix. 27: a voice commands Mary to say "I have made a vow of fasting to the Merciful, wherefore I speak to no one this day". There is some possibility that the term simply means "fasting", because observing silence as a Christian fasting practice ("Apbāhā", ed. Parisot, in Prose, introd. p. 97) may have been known to Muhammad. Muhammad was in any case not acquainted with the details, because it was only after the Hijra that he ordered the "Aḥārīn"-day to be spent in fasting, when he saw the Jews doing it in Medina. In the year 2 a. h., according to unanimous reliable Muslim tradition (cf. A. J. Wensinck, Mohammed an de Joden te Medina, Utrecht, 1902, pp. 135-137), in contradiction of e.g. A. Sprenger, Das Leben und die Lehre des Mohammed, II. 53-39, the revelation of Surah ii. 179-181 again abolished the "Aḥārīn" as an obligation by the institution of the fast of Ramadan. On the question why Muhammad chose this particular month and when he took the arrangement of the Muslim fast, various opinions have been expressed. Islam teaches that it is a fast imposed by God on Jews and Christians, but corrupted by them and restored by Muhammad to its true form; Sprenger, op. cit., II. 55, ept., thinks that it was an imitation of the Christian quadragesimam; Noldeke-Schawally, Geschichte des Qoran, I., Leipzig 1900, pp. 179-180, note 1, points to the similarity of the module of fasting among the Munchausen. More recently, however, A. J. Wensinck has called attention to the particularly sacred character of the month of Ramadan even in pre-Mohammedan times (on account of the — also old-Arabic — "Lūlūl al-Aḥārīn" [q. v.], which happens in Ramadan) in his essay Arabic New-Year and the Feast of Tabernacles in Vera. Ak. W. Amt. New Series, 1925, vol. XXI. 1-13; cf. also M. Th. Houtsma, Oor de traditie van de Nederlandse vaste dagen, in Verlo. en Med. Ak. Wetensch., Ass. Lett., Series 4, vol. II. 329-332. Amsterdam 1892, has thrown the possibility that the solution of the problem of Ramadan is to be sought in this direction (for further information see the article RAMADAN).

The first regulations concerning the manner of the Muslim fasting are given in Surah ii. 179-181, which probably belong together (Noldeke-Schawally, p. 178; in opposition to Th. W. Juynboll, Hanbook der islamischen Geistes, Leiden-Leipzig 1910, p. 134, who considers 181 a later revelation, al-Bukhārī also assumes that it was revealed in separate parirs): one ought to fast during a definite number of days, to be precise, in the month of Ramadan, "in which the Kur'ān was sent down"; special dispensations were granted to invalids and travellers on condition that they made restitution for it. In obedience to these divine commands the Muslims fasted in Ramadan and the devout among them followed the Jewish custom of fasting from one sunset to the next until a new revelation (II. 183) limited the period of fasting to the day (cf. al-Bukhārī, Sunna, bāb 15, etc.). The fast is also mentioned elsewhere in the Kor'ān: in Surah ii. 192, where it is prescribed as a substitute for the ḍaḥāf in certain circumstances; in iv. 94, where fasting during two successive months is ordered as an atonement when someone has killed a believer of an allied nation by accident (cf. the article GALL); v. 91: one should fast three days (as a substitute) if one has broken an oath; v. 96: one should fast (as a substitute) if one has killed his own animal on the pilgrimage; iv. 5: one should fast (as a substitute) if one has killed a slave; in xxii 25 to describe the devout Muslim, along with other epithets, while in Surah ii. 42 and 148 ḍāfā [q. v.] is explained as pnsn.

The ordinances in Surah ii. 179-181, 183, form the basis of the detailed regulation by the ḍaḥāf of the law regarding fasting; many details and regulations were taken from tradition. What follows here is a resume of the law on fasting according to the Shāfi'i school, as contained in the treatise Aḥīn al-Shāfi'i al-Ifshānī, 4th century A.D., Muhāammad b. Ḥīfīz, annotated by Ibn Khāzin al-Qārī (d. 918 = 1532) and glossed by Ḥāṣim al-Balṣārī (d. 1278 = 1861) (Cairo edition).

How the fast should be observed and who is bound to fast. Fasting in the legal sense is abstinence (imāhā) from things which break the fast (ṣawf), with a special niyyah (intention) for each of the statutory fasts, and for the whole day; the ḍāfā must be a Muslim in full possession of his senses (dāhib) and, if a woman, free from menstruation and the bleeding of childbirth. The fast may be valid (ṣawf) under these conditions; there is an obligation to fast on every one who is in full-grown (bālā) if he is physically fit (kāfi). It is to be noted that the actual profession of Islam at the time is necessary for the ḍāfā, while for the ṣawf the Iṣlām of a mura'id is also valid, who is thus after his conversion obliged to make it for the fast days he has omitted (ṣawf). One who was born a ḍāfā, who has pledged to Islam, and ought, therefore, to obey its laws also, need not, however, make up for his omission; the law calls his obligation ṣawf al-mura'id, whereas that of the mura'id is called ṣawf al-murā'id khāt. The fasting of a non-Iṣlām, who is in mura'id (has power of discrimination), is valid (one ought to compel a child to fast from the tenth year, as is that of a non-ḍāfā). ḤĀJĪ is to be interpreted as meaning that for an ascetic, insane or intoxicated person ḍāfā (fulfilment of the obligation at the right time) is not ṣawf. One may spend the day sleeping if the niyyah has been previously formulated; or in a state of drunkenness or unconsciousness, if one

THE ENCYCLOPEDIA OF ISLAM, (V.)
can pull oneself together even for a moment only during the day.

The asrāt (pillars) of the fast are, besides the ṣawm, the niya and abstinance from the muẓ firāt. One ought to formulate the niya before dawn on each day of fasting (tāẓir); by ṣaghir [q. v.], however, the Ḥājiya can follow the Miʿrikhi muẓ firāt, which allows one to formulate the niya for the whole of the month of Ramadān; in the night before the first of Ramadān; if one fasts voluntarily, the niya may still be formed before noon, if one has actually fasted during the preceding part of the day. The niya should be deliberately formulated; it is desirable but not necessary to utter the words aloud (the law-books give formules); indeed, preparations which are made directly in view of the coming fast day may be regarded as niya.

The Muẓ firāt are:

1. The entering into the body of any material substances as far as it is done conscientiously and is preventable, i.e., the swallowing of food and beverages, the inhaling of tobacco smoke, the swallowing of spittle which can be ejected; if one spits or spits liquids or inserts instruments into the various orifices of the body; if one carries what the body in the course of nature would reject. On account of the limitations in a, b, c (see below) it is not muẓ firāt if insects, dust of the road, fragments of food from the teeth, anything that the skin may absorb, water from rinsing the mouth or rinsing the nose, provided too much is not used, even in the non-compulsory ṣawm [q. v.], and ritually pure scents find a way into the body. If thirst troubles one exceedingly one may hold water for a moment in his mouth, if it can be done without danger.

2. Deliberate vomiting, which is only permitted by doctor's orders and even then only with liability to ṣawm.

4. Deliberate seminal emission, which is a consequence of sexual contact; in other cases abstinance is made as to whether it is caused by passion or not, whether the person causing it is a stranger or a dhul mukhair, a boy, a woman or a ḍāhil. Nocturnal or similar emissions (ḥiftāt) are not muẓ firāt.

5. Menstruation; this even makes the fast ṣawm (this rule is not clear to al-Balḍārī, because the fast does not demand ritual purity otherwise).

6. The bleeding of a woman in child-bed.

7. Unsound mind and

8. Intoxication (7 and 8 make any ṣawm impossible), to which a ninth may be added, child-bed, but only in the view of some ṣafḥāt.

The ṣaww occurs, case per only, in case of deliberate senescence (ṣamāʿat), knowledge (ʿilm) and free will (qayyûra), i.e., not by neglect, in ignorance of the obligations if this is to be excused, or under compulsion. If one eats by an oversight, says the tradition, "he may continue the fast because God himself has caused him to eat" (Bu, Šawwām, b. 26; ʿAynain, b. 15; Muṣli, Ṣādīq, tr. 171).

If to be excused if the ṣawm 1) takes the ṣaww [q. v.], as soon as possible after he has abstained from dawn has set; he ought preferably to use ripe dates for this, or (ramzan-water or otherwise something tasty) the ṣaww is muẓ firāt, because the continuous fasting (ṣawm al-ṣafḥāt) is ṣawm.

2) eats the ṣaww (what is eaten after midnight) as late as possible and uses for it the same as is recommended for the ṣaww; 3) refrains from indecent talk, slander, calumnies, lies and insolence, because, according to the tradition, "the result of fasting is only hunger and thirst; if one does not keep his hands and feet from evil deeds", 4) avoids such actions as, although not actually forbidden, might arouse passion in oneself or in others; 5) refrains from being coarse or bad; 6) tastes no food; 7) chews nothing edible; 8) thanks God after the day of fasting; 9) recites the Qur'ān for oneself or others, and 10) observes the ṣaww in the month of Ramadān [q. v.] (in accordance with Ibn al-Bajrī, 183). Al-Ghazālī adds to these charity in the month of Ramadān.

Arranged according to the five legal categories, the fast may be:

1. Obligatory (maṣūb, ṣawm) (a) in the month of Ramadān; (b) if one has to make up for days omitted in Ramadān (ṣawm); (c) on account of a vow; (d) in definite circumstances to atone for a transgression (ḥaqīqāra), and (e) when the Imam prescribes the ṣawm-ceremonies [q. v.]; particularly in the case of drought. In the case of the indispensable ṣawm is bound, according to al-Ghazālī, to fast during the remainder of the day, mukhāzin hilm al-tayirina.

2. Fasting in the month of Ramadān is the fourth pillar of Islam; whoever denies the obligation to fast is a ṭāfrī, unless he has only recently come in contact with Islam, or has grown up remote from the ʿIlmām. Whoever omits fasting without good cause, without, however, denying the compulsion to fast, is to be locked up and brought to formulate the niya by forced attention. The general obligation to fast (Ṣāliʿ az-zawā'ima) begins on the first of Ramadān, after the 30th Sha'ban, or after the 20th if the ḍāhil (ḥaḍī) has then accepted the evidence of one add that he has seen the new moon, the personal obligation (Ṣāliʿ az-zawā'ima), in the case of an accepted ṣawm of one's own that of another person whom one believes in this respect, even if he should not have, after the 20th Sha'ban, if only one add has seen the new moon on the 20th Sha'ban, fasting etc. only becomes due on the 2nd Ramadān. The beginning of Ramadān has to be announced to the people in a way settled by the local custom (gum-shot, the hanging of lamps on the masāra, in Java by beating the kubang). Special regulations hold regarding niya and ṣawm if it is impossible for one to hear of the announcement or if he is wrongly informed. The observations of an astronomer, the calculations of a mathematician, or the dreams of one who has received in his sleep information regarding the beginning of Ramadān from the Prophet, etc., can only allow Ramadān to begin for the astronomer, mathematician or dreamer themselves and those who firmly believe in them.

3. Days omitted in Ramadān have to be made good (ḥaḍī) if one has as soon as possible, i.e., on the next day if this permits fasting, i.e., if it is not one of the forbidden days (see below) or if it is itself a compulsory fast day. If a man dies without having done his ṣaww, the obligation is thereby removed if there was a valid excuse for his being in arrears; otherwise his will (in this case any relative can be a will) must pay from his estate, or, with the consent of the will, any stranger can
gay, a small kaffāra or jādya (see below), or the makt (or stranger) — and this is the older šamil’s view, which later authorities do not approve of except; however, al-Baghdādi who even calls it zauma — can perform the jādya himself, in which case the merit acquired by the fast is credited to the deceased.

(3) According to the opinion which has predominated in the Shāfi‘ī school, a vow which would impose the obligation to the — the reprehensible — žawāl al-dahr (see below) is regarded as not done (cf. al-Baghdādi, Kithā ‘Akhkām al-Salātun wa ‘l-Salāh). (4) A distinction is made between the major and minor kaﬀāra. The fast is imposed on anyone who (a) breaks the fast in Ramaḍān by sexual intercourse if this is sinful (žayd), under the above mentioned conditions; he is further obliged to perform kaﬀāra and be liable to žawāl [q. v.]; because every fast day is an independent źaid, a kaﬀāra ought to be performed for every fast day broken in this way. Al-Baghdādi gives this subterfuge (žid) to escape the kaﬀāra that one should previously break the fast with another of the sunnah; then the kaﬀāra drops out but the sin remains. The female participants in the transgression is only liable for žawāl and žawāl; (b) is guilty of illegal killing (of the article žtti); (γ) has pronounced the žbār-formula [q. v.] but not the žawāl immediately after it (because he does not observe the vow contained in the žbār); (γ) has broken a valid oath (yaddad); see the article žabūd). This kaﬀāra consists of

\[
\begin{array}{cccc}
1 & 2 & 3 & 4 \\
\hline
\text{a}) & \text{žbār (resp.)} & \text{žawāl (resp.)} & \text{žawāl} \\
\hline
\text{b}) & \text{žbār (resp.)} & \text{žawāl} \\
\hline
\text{γ}) & \text{žawāl (resp.)} & \text{žawāl} \\
\end{array}
\]

i.e. in the cases (a) (b) and (γ) fasting (žawāl) will do as a kaﬀāra if one is not able to do the first mentioned; if one receives the means to do so after having begun to fast, (b) should be performed, and the fasting that has been done is counted as a voluntary work of merit; similarly in case (b) fasting takes fourth place with the idea that the first three are interchangeable, but fasting always comes fourth. In (α) (β) and (γ) two months’ successive fasting is prescribed; the omission of one day makes it necessary to begin the fast from the first again, even if the omission was excusable; in case (γ) the fast is limited to three days and need not be successive. — If a man is not able to do any of the things mentioned, the obligation is put off until he has an opportunity to do one of them.

The minor kaﬀāra or jādya has to be paid when one takes advantage of one of the dispensations which are detailed below; the question of fasting does not arise. For the dead man (cf. above) it consists in his will giving a žawāl from the corn that grows on his land to the poor for each day omitted. The same sums have to be given by anyone who has not yet performed his kaﬀāra for days omitted in Ramaḍān by the beginning of the following Ramaḍān, and multiplied according to the number of years in arrears. — Anyone who has omitted, while performing the haddi or the umma,

one of the obligatory rites, which is not one of the first ḍādā (or performs anything forbidden during the period of ḍādā or takes advantage of a dispensation allowed by the law (e.g. žbār or źāmut), should stone it with a jādya consisting in the first place of a definite amount which is prescribed for each case separately; if the person liable to it is not able to perform the sacrifice he should fast, in some cases for to days — 3 during the haddi and 7 after returning home — and in other cases as many days as the quantity of žawāl’s which would otherwise have been given to the poor. These regulations originate in Sûra n. 192 and r. 96; cf. al-Baghdādi, Kithā ‘Akhkām al-Salātun wa ‘l-Salāh, šfat. li. and iii.; Juyalbi, Handbuch etc., p. 143 and esp. p. 157; the art. żawāl.

(4) In the case of great drought, the žlah may, according to the šafi‘īs, prescribe extraordinary conditions which include fasting; the three days before the žnāa al-latīhīqa [q. v.], al-Baghdādi, Kithā ‘Akhkām al-Salātun wa ‘l-Salāh, Žâlif al-Žâlim ‘Akhkām Žālif al-Žālim are spent fasting. One notable feature here is that the formulation of the žnāa by night (žāyib) žawāl for everyone, even when the fast is not obligatory for him, i.e. also for a boy or one who enjoys a dispensation. (This is the only case where žāyib is necessary for a fast which is not obligatory.) — Cf. also C. Smocke Hargroxe, Forseitr Gerecht, l., Bonsi-Leipzig 1923, p. 137, note 2.

The law permits relaxations in the following circumstances:

A. Such as have reached a certain age (mumt; 40; not exactly defined for women) and sick people for whom there is no hope of recovery, if they are imbecile to fast, may omit the fast without being bound to the žawāl, should their strength or health be restored. In compensation they should give alms at the rate of one žawāl for each day omitted; a slave does not have to perform žawāl but his owner may do it for him, or a relative: the latter is also permitted to fast in compensation.

B. If pregnant or nursing women fear it would be dangerous for them if they should fast, žāyib is žawāl for them and žawāl is obligatory. If their fear is for the unborn child or the one they are nursing (not necessarily their own), žāyib is žawāl in this case also: has a žawāl is imposed on them as well as žawāl, which, however, like the žawāl al-latīhīqa [q. v.], need only be paid out of the amount which is left over from the expenses of maintaining oneself and dependent family or from the expenses of housing and service; this žawāl is to be given only to the poor and to žāyibara. — The same regulations hold generally for cases where one breaks the fast for fear of danger to oneself, respectively to another person.

C. Sick persons who are likely to recover and those who are overcome by hunger and thirst may break the fast on condition that the žawāl is performed. If a man is in danger of death or danger of losing a limb, žāyib is žawāl. Chronic invalids need not formulate the žnāa in the night; nor persons sick of a fever if they are actually feverish at the time.

D. Travellers who set out before sunrise may, if necessary, break the fast, but not if they begin their journey during the day. In case of mortal danger, žāyib is žawāl. Two days’ journey is the minimum. žawāl is obligatory on them, even 40. The same relaxation is allowed to
divorced women. — If the persons mentioned under C and D break the fast by sexual intercourse, they are not liable to kaffara because in this case it is not a sin but is permitted to them.

E. Those who have to perform heavy manual labour should formulate the niyā of the night but may break the fast if need be.

When the justification for relaxing the rules disappears during the day of fast, it is suumā to pass the rest of the day fasting.

II. Voluntary fasting is meritorious (qawm al-lataʿawwum); for a married woman only with the consent of her husband; it may be broken without any penalty; the niyā, which can be formulated any time up till noon, need not be definitely specified, although some fūkha considers it desirable for the suumā rasūbit. The suumā rasūbit in the qawm are fasting (a) on the 'Asha'ī day [q.v.]; (b) on the 'Arafa day, the 9th Dhu 'l-Hijjah; (c) on six days of Shāwāl. Fasting on the day of 'Arafa applies specifically to those who do not spend this day in 'Arafa. Whether Muḥammad fasted on this day is disputed in Tradition. Wensinck, Mohammed en de Joden te Medina, p. 126-130, points to the fact that the whole of the first ten days of Dhu 'l-Hijjah had a special character and is recommended in the law for voluntary fasting; the 9th Dhu 'l-Hijjah, however, is regarded as the most auspicious day, just as in the Jewish month of Ab the 9th is a great fast, for which preparations are made from the beginning of the month. Because Ab and Dhu 'l-Hijjah probably coincided in the year 1 a.H, Wensinck thinks that the celebration of the 9th Dhu 'l-Hijjah may have been taken from Judaism. Another view is put forward by Nöldeke-Schwalczy, Gesch. d. Qorāni, i.159, who considers Surā vii. 29 as probably Mekkan and see in it an attack on the ancient custom of making the circuit of the Ka'ba naked and fasting at the time of pilgrimage (cf. p. 179, note 1). According to this view, this fast should be traced back to old Arab customs (cf. al-Bakhtīwī's commentary on Surā vii. 29: "It is said that the Vand Amir in the days of their ḥadīj only ate what was necessary to nourish them but took no fat (= tasty) food and thus observed their ḥadīj; then the Muslims were disturbed; then this (verse 29) was revealed"). It is considered meritorious if one who has to fast (as a substitute) three days during the ḥadīj and seven days afterwards (cf. above) chooses the 3 days the 7th, 8th and 9th Dhu 'l-Hijjah, because the 10th and the tāʿākh days are not possible (cf. below). If the 9th Dhu 'l-Hijjah is a doubtful day (i.e. whether 9th or 10th, on account of uncertainty as to the beginning of the month) fasting is only permitted for ḥadīj, on account of its being a regular custom, al-Bakhtīwī calls fasting from the 1st to the 9th Dhu 'l-Hijjah mandūb.

Six separate days can be taken for the fast on the six days of Shāwāl; but it is best to take six successive days immediately after the festival, i.e. from the 2nd to the 7th Shāwāl. These days can also be taken for a ḥadīj or a nukhr fast. Women who have had their menstruation in Ramādān often use these days for the ḥadīj (Juyonbīl, Handbuch etc., p. 132).

The following days are further recommended for voluntary fasting: the day before and after the 'Asha'ī day; the Yawm al-Mīrāj (27th Ramadān); Monday and Thursday (yumm wuṣūkkūd), according to al-Bakhtīwī, because on these days, says Tradition, the works of men are offered to God. Muḥammad is reported to have said: "I should like my works to be offered while I fast". Wensinck, Mohammed etc., p. 125-126, points out that the Jews also fasted on these two days: Wednesday, "out of gratitude", says al-Bakhtīwī, "that God on this day did not lead this world to destruction, like the other ummān"; the days of the white nights, i.e. the 13th, 14th, 15th and best of all the 12th of each month. As Wensinck, p. 125, says, Muḥammad fasted, according to tradition, three days of every month and the later Muslims, who no longer knew which, chose those days. Perhaps these three days were an obligatory fast in the year 1 a.H. Nothing certain can be said regarding the origin of these fast days; Prof. Wensinck in conversation called my attention to the sacred character of the Jewish 14th and 15th Nissām, and to the sacredness of the middle of the month, e.g. in Shabba in ancient Arabia; as a counterpart, presumably after the example of the white nights; the days of the black nights, i.e. the 28th, 29th and 30th (or 19th) and best of all the 27th of each month, every day on which one has nothing to eat; all other days if they are proper for fasting. On a three days' fasting as an atonement and a preparation to a better life see C. Snouck Hurgronje, Verspreide Geschriften, l., Bonn-Leipzig 1923, p. 137, note 2.

Al-Bakhtīwī only briefly mentions the voluntary fast days and refers his readers for further information to more detailed treatises. To supplement what we have said we give the following from the third ta'ākh of the Ṣu'ūdī of al-Ghazālī (see below).

He gives as additional days recommended for fasting the first, the middle and the last day of every month, speaks of the superiority of fasting in the sacred months (al-ṣaḥār ar-Rahmūm: Māḥrūm, Raddāb, Dhu 'l-Hijjah and Dhu 'l-Ka'ba), but more important is what he says regarding life-long fasting (qawm al-dāhr) which, he tells us, was practised by the mystics (al-ḥikaṭ) of his time in various ways (as had already been done by ascetics in the earliest days of Islam).

In general he considers it blameworthy, as the ṣa'āfī is not only wājib some days of the year, but desired generally; only exceptionally may one have recourse to the example given, according to tradition, by the Sajjā and the Tāḥṣīm (traditions regarding the qawm al-dāhr: al-Bukhārī, Shams, bīb. 59; Muslim, Sajjā, trad. 18 sq.; cf., however, Ahmad b. Ḥanbal, iv. 414; cf. also Ahmad b. Ḥanbal, ii. 263, 435 etc.; ii. 164, 190 etc.). It is highly recommended, however, to fast on alternate days (nisf al-dāhr), which achievement al-Ghazālī considers even more difficult: Muḥammad said: "The most excellent fasting is that of my brother Dādū, who fasteth one day and not the next" (cf. al-Bukhārī, Shams, bīb. 50, 59, 56, 59; Muslim, Sajjā, bīb. 37, 38 etc.; Ahmad b. Ḥanbal, bīb. 181, 182, 186, 187, 189-193). To fast every third day is also very meritorious. To fast voluntarily for more than four days in succession is considered wrong by the 'Ulama' and (as a general rule) also by al-Ghazālī.

If one has properly understood the correct significance of fasting, says al-Ghazālī for this see
the fast if it is a result of sensual images, even without preceding sexual contact.

5. In spite of the above-mentioned tradition, Malik teaches that anyone who deliberately eats, drinks, or has sexual intercourse breaks the fast and is liable to hajf; Ahmad b. Hanbal, only in the fast case, hafra then being also necessary. Forced breaking of the fast holds good also in al-Nasawi; in Ahmad b. Hanbal only in the particular case of a woman being forced to have intercourse.

7. Malik says that kissing is always haram; Ahmad b. Hanbal that the cupper and his patient both break the fast; both Imams say that the taking of hajf is to be deprecated and, if the fragrance enters the throat, is actually mafjar. The Shafi view that the cleaning of the teeth after noon is wrong is not shared by the other Imams and not even by the later Shafiis (but is shared by al-Qazwini; even now it is still condemned in the Dutch Indies). There is ijtimii' on the point that for a ajunah a ghahel is recommended before dawn.

8. Malik demands for the settlement of the beginning of Ramadhan the evidence of two adl, Abu Hanifa only the testimony of one, but of a large number when the sky is unclouded. Some other fakhahs recognize only the general obligation (see above) to fast in Ramadhan, not the personal obligation of the one who has seen the new moon, but whose evidence has not been accepted.

9. Like al-Shafi'i, Abu Hanifa also teaches that the weak-minded is not bound to perform hajf in the event of his recovery; Malik teaches the contrary; both views are credited to Ahmad b. Hanbal.

10. The four Imams impose the major hafra for every breach of the regulations in question, even if several are committed on the same day; in the second transgression the obligation is imposed on the guilty woman also. Abu Hanifa, however, is less severe and does not even multiply the hafra's by the number of days broken if the wakafir is in arrears with the payment of the first hafra; Abu Hanifa and Malik say that in case of sexual intercourse between man and woman are liable to the hafra and they impose it also on everyone who breaks the fast of Ramadhan by eating or drinking, if he is not ill or on a journey, without affecting the liability to hajf. Malik leaves the wakafir free choice as to in which of the three ways he will fulfill his obligation, although he himself prefers if-jam.

Abu Hanifa does not impose the minor hafra (the donation of a wakaf) if one has not yet fulfilled his obligation to hajf for the Ramadhan fast by the beginning of next Ramadhan.

11. Ahmad b. Hanbal imposes, in addition, the (minor) hafra on pregnant and nursing women, if they have broken the fast out of fear of injuring themselves; Abu Hanifa, however, only hajf, others only hafra and no hajf.

12. Sick people for whom there is no hope and old people are, according to Abu Hanifa and a section of the Shafiis, liable to hajf only; Malik denies this also.

13. Travellers may, as Ahmad b. Hanbal teaches, break the fast, even if they have set out after the beginning of the fast, but this relaxation does not
include, according to him, permission for sexual intercourse; the ḥaffāra regulations hold, therefore, also with him. Some Ṣaḥabis teach that fasting of a traveller is not valid at all. — Mālik and al-Shāfi‘i teach that one is bound to fast for the remainder of the day if the reason for the dispensation disappears; Abū Ḥanifa and Ahmad b. Ḥanbal hold the contrary. — The ḥifṣa, according to the two last-named, is a half gōdū [q.v.] for every day omitted.

14. Mālik teaches that fasting on six Ṣawmādān-days is not recommended; he and Abū Ḥanifa say that one is bound to complete (iṭmām) a voluntary fast day also.

15. One ought to fast on the doubtful day, according to Ahmad b. Ḥanbal, when the sky is clouded; otherwise it is wrong. — Abū Ḥanifa and Mālik teach that occasional fasting (iṣrā‘d) on Friday is not wrong.

16. Lastly it is to be mentioned that, according to the Ḥanafī and Mālikī view, fasting during the Fitr [q.v.] is obligatory; cf. e.g. Abū Da‘ūd, Ṣahih, bāb 80 (as A. J. Wensinck says, in his treatise Ḥanafī New-Year).

The foregoing regarding fasting differs in the following details from the Sunna (according to A. Query’s edition of the Shāra‘ī al-Islām of Mas‘ūd al-Halālī wa l-Ḥārām of Nadjīm al-Dīn al-Muḥākkak, entitled Recueil de Lois concernant les Murūjmans de Smyrne, Paris 1871–72, i. 182–
209, ii. 75–77, 197–199, 203–205):

1. The niyya is not regarded as a pillar; it need not even be specified for Ramadān, although it does in other cases; it ought to be formulated before noon.

2. Smoking is not one of the munfi‘ā but unconsciousness is and if one deliberately remains in a condition of great ḥadāth after dawn,

3. It is forbidden, say munfi‘ā, to scorn God’s word or that of the Prophet or that of the (Ṣaḥīḥ) Imām; it is forbidden, although not munfi‘ā, to bathe completely in water. It is forbidden to keep deliberate silence during the fast.

4. If a man deliberately breaks the fast of Ramadān, he is to be chastised (50 lashes with a whip for a man or a woman in a case of sexual intercourse) and for the third offence the penalty is death. — The testimony of two ‘add is necessary for the beginning of Ramadān.

5. One is bound to perform ḥaffāra, for example, if one awakes after dawn in a state of great ḥadāth even if the niyya for purification has already been formulated. In the ḥaffāra fast one may eat before noon; if one eats later he has to pay a ḥifṣa (to mudd or three days’ complete fast); indebitterate neglect of purification in great ḥadāth makes the ḥaffāra fast not invalid. If an invalid remains till the following Ramadān, his obligation to ḥaffāra expires but the ḥifṣa (1 mudd) remains.

6. Ḥaffāra is compulsory if one, during the fast day, eats, drinks etc., has sexual intercourse, practises omnism, voluntarily remains in a state of great ḥadāth after dawn or falls asleep in this condition without having previously formed the niyya for purification, and then does not awake till after dawn, viz.: on a day of Ramadān; during ḥaffāra for an unlimited fast in Ramadān if the iftar takes place after noon; in fasting on account of a particular vow and for ḥifṣa. — If a man forces his wife or slave to marital intercourse in Ramadān, his ḥaffāra and ḥaffāra are doubled but the wife is exempt. Other cases of ḥaffāra are: manslaughter, forbidden expressions of grief at a death, hair-cutting when in a state of ṣabr al-amir, intercourse with a slave woman who is in a state of ṣabr al-amir if one has given her permission for the ḥifṣa.

In performing the ḥaffāra, fasting comes second, as with the Sunnis; deliberate murder, however, and, according to some fūkābi‘, also the breaking of the fast of Ramadān with forbidden foods, entails threefold ḥaffāra: ḥifṣa al-sawm al-ṣabr al-amir. The choice is free if one breaks the fast in Ramadān in another way than by sexual intercourse, breaks a vow or ḥifṣa, cuts one’s hair when in a state of ṣabr al-amir, or has intercourse with a slave woman who is in a state of ṣabr al-amir.

In general the ḥaffāra fast should be uninterrupted. In the case of a two months’ fast inexcusable interruption in the first month makes a repetition necessary; in the second it only entails obligation to the ḥifṣa. Interruption by a pregnant or nursing woman is here excusable, but not an unnecessary journey (see below). If the duration of this fast is only one month, as e.g. the ḥaffāra fast of a slave, the hard period lasts 14 days. Interruption on the 10th Dhu l-Hijjah does no harm in the three days’ compensatory fast (see above); if one already fasted two days. — The choice of the days is, however, open in the case of ḥaffāra for breach of an oath, for breaking the prohibition of hunting during the ṣabr al-amir, and in the seven days’ compensatory fast (see above) (as also in case of ḥifṣa). If one is not fit to fast for two successive months, he should fast 28 days and seek God’s mercy with contrite heart. Another kind of ḥaffāra (not fasting) may be voluntarily taken over on behalf of another person.

7. The relaxations. Only if a physician permits an invalid to fast, is it legitimate. Pregnant women are only given a dispensation in their last months and nursing women only when their milk supply is defective. The fasting of travellers is in general not valid; but if a man travels for the best part of a year in the course of his business he does not get the benefit of relaxation. A fast neglected on the account of a journey must always be observed later; in case of death by the next of the deceased.

8. Voluntary fasting may begin before noon. The Shi‘a Fīkh-books recommend fasting on the following days also: on every first and last Thursday of the month; on the first Wednesday of the second ten days of the month (on should even pay compensation, 1 mudd or 1 ḥa‘ám, if this is omitted); on the day of the ’Id al-Ḥaḍir, 18 Dhu l-Ḥijjah, on which Muhammad is said to have appointed Ali his immediate successor at the side of pond (ghadir) (Query, op. cit., p. 37, note 2); on Muhammad’s birthday (17 Rabi‘ I) and on his first day of mission (47 Rabi‘ I); on the day when the Ka‘ba was liberated from chaos, the first place to be created on earth (25 Dhu l-Ka‘da); on the Muhārara-day, because on this day Muhammad and Abū lxgūllisting and fasting during the month of Rajab and Sha‘bān. Fasting on the doubtful day is also meritorious. — The law recommends moderation for the days on which an obstacle to fasting is removed: one should fast a little and then fast.
9. It is wrong to fast: on the 9th Dhu 'l-Hijjah in Arafah, if one fears harm from it; on a pious journey except 3 days in Mединah during the Ḥajj; if a guest fasts without permission from his host, and a child without its father's permission.

10. Fasting is forbidden on the 54th days for those who are ‘Indigent; for travellers.

Al-‘Uqd al-Maṣūm gives at the beginning of his Kitāb Ḥalāl wa-‘Māḥal in the Ḥārlāy meaning some considerations on the value of fasting. He points out, referring to some well-known traditions, the high esteem in which fasting stands with God; he gives as a reason for this that fasting is a passive act and no one sees men fast except God; secondly it is a means of defeating the enemy of God, because human passions, which are the Shī‘a’s means of attaining his ends, are stimulated by eating and drinking. The passions are the places where the Shī‘a live in abundance and where they feed; so long as they are fruitful, they continue to visit them often, and so long as they visit them frequently, the majesty of God is concealed from the slave and he is shut off from meeting with Him. The Prophet of God (ṣallāullāhū wa ἁṣāmīhī) says: If the Shī‘a did not fly around the hearts of men, they would really think of heaven "Fasting is therefore the gateway to divine service."

In the first fas’il Al-Ghaṣālī describes the legal obligations and recommended actions of the fast, according to the Ḥanāfī doctrine, and in the third the recommended fast days, just as a fākh would do. But he says in the second fas’il that the most punctilious observation of the external law of the fast is not the essential of the fast. He distinguishes three steps in the fast. The first step is that of the fākh, the third that of the Prophets, the fidsaṣṣā and those who have been brought into the proximity of God (al-munṣabātān), whose fast consists in refraining from all mean desires and worldly thoughts. The second step suffices for the pious, however; it consists in keeping one’s organs of sense and members free from sin and from all things that detract from God. Everything should be avoided which might affect the result of the fast; for example, at the ifṣār one should not eat more or fare better than usual (this is contrary to the fīkh regulation) and one should not sleep during the day to avoid feeling hunger or thirst, for they are the fākh and zirr of fasting because they fight the power of the passions. Subjection of the passions, whereby the soul is brought nearer to God, is the real object of fasting, not mere abstinence; and he deduces the worthlessness of the fast of those whose conduct at the ifṣār destroys the results of the fast day, of whom the tradition says: "How many fasters there are for whom only hunger and thirst are the results of their fasts."

The ethical conception of the fast which Al-Ghaṣālī gives in this second fas’il supplements, he says, the barren law of the fākhā, but to us it appears often to contradict it. In the Ḥadīth we find already various traditions with ethical tendencies and Al-Ghaṣālī does not fail to quote them in support of his view. Besides we find in the works on Ḥadīth a mass of traditions relating to the fast, which will be found classified under the separate subjects in Prof. Wensinck’s work (now about to appear) A Handbook of Early Muhammedan Tradition, under the word Fasting. Here we can only quote a few traditions which refer to the estimation in which fasting was held in the early Muslim world. As it is to this day a widespread view that fasting, especially the fast of Ramadān, is the most availing atonement for sins committed in the course of the year — which is why the fast is fairly generally observed, although not always so strictly as the fākhā’s desire; cf. the article RAMADĀN —, so it was with the early Muslims (cf. al-Bukhārī, Ḥadīth, bāb 28; Sammā, bāb 6; al-Tirmidhī, Sammā, bāb 1, etc.). Various traditions compare the value of fasting at one time with its value at another as, for example, *fasting on one day in the holy months (see above) is better than 30 days at another time, and fasting on one day in Ramadān is better than 30 days in the holy months*. "If anyone fasts three days in a holy month, Thursday, Friday and Saturday, God considers one day equal to 900 years for him." Similar traditions refer to fasting on the ‘Aḥṣār’—day, the ten days in Dhu ‘l-Hijjah and especially in Ramadān [q.v.]. Other traditions tell how dear to God is the person of the faster or his characteristics; even is the scent of the breath of a fasting man pleasant to God than the scent of musk" (Ahmad b. Ḥanbal, li. 232, etc.).

God compares one, who denies his passions for His sake, with His angels and says to him: "Thou art with Me like one of My angels", and He urges His angels to regard those who fast. The joys of the faster in Paradise are described and how he is honoured there; he will enter by a special gate (al-Ruyānī) and meet God (al-Bukhārī, Sammā, bāb 4; Muslim, Ṣaḥām, tr. 166, etc.). This is his heavenly joy; his joy on earth is the ifṣār (al-Bukhārī, Tawāhid, bāb 35; Ahmad b. Ḥanbal, l. 446, etc.). One should, therefore, not deny this joy, because one has a right to it. To continue fasting after twilight is, moreover, not necessary, for the sleep of the faster is (already) ‘shāda.

**Bibliography:** A comprehensive work on fasting among the Muslims has not yet appeared. An outline of the law on the subject according to the Ḥanāfī school is given by Th. W. Juyendb, Handbuch der islamischen Gesetze, Leipzig 1910, p. 113 sqq. (Dutch: Leiden 1903 and 1925; in the edition of 1925 the most recent bibliography is given). The main sources are the pertinent sections in the books of Ḥadīth, Ṣaḥīḥ and Ṣaḥīḥī. For Tradition cf. the work just about to be published, Handbook of Early Muhammedan Tradition, alphabetically arranged by A. J. Wensinck, Al-Ghaṣālī, Ḥārlāy ‘Ulīm al-Din, Cairo, n. d., l. 207—214. For details of the observance and various customs of Ramadān in Muslim lands see the articles OKĀL, ḤUWAṢA, RAMADĀN, IDEE.

(C. C. BERO)

**SAY.** When the pilgrim who is making the ‘umra or the Ḥajj has performed the circumambulation (sawaw) of the Ka‘ba, kissed the Black Stone for the last time and drunk of the well of Zamzam, he goes out, taking care to put his left foot first, of the sacred mosque by the Bāb al-Ṣaḥāf, pronouncing the formula of salutation to the mosque, then a second formula containing his intention (niyāt) to accomplish the ceremony of nīyā. He ascends the steps of al-Ṣaḥāf about 50 yards from the gate and standing there he makes an invocation, looking towards the Ka‘ba, with his hands raised to the level of his shoulders and his palms turned towards the sky. Between al-Ṣaḥāf and another little hill, al-Marwa, lies a broad street with houses
and shops on either side; this is the Mas'ud where the pilgrims have to accomplish the ritual course. Walking at a normal rate he descends towards the former bottom of the valley (Masul), marked by four pillars, two along the mosque on the left and two others opposite it; to cross it, he assumes a more rapid pace, called karawat or khatib, like the ramad of the javan, and runs. Then walking slowly he reaches al-Marwa which is marked by an arch of stone like al-Saff and he again prays there. He has now completed one of the seven elements of the ceremony for, except for one isolated opinion, the authorities agree that the sa'ya consists of seven simple courses. It is usually followed by a desanctification by shaving or cutting the hair, which explains the large number of barbers' shops on the Mas'ud.

The sa'ya has not the value of an independent rite like the circumambulation of the Ka'ba, the accomplishment of which, without the 'umrah and the hajj, is reckoned to the spiritual credit of the believer. The sa'ya is an appendage to the circumambulation (tawaf) of the 'umrah or of the arrival (hudūm) or of the desanctification (ifṣāqa), and the authorities are not agreed as to its importance, whether essential, obligatory or traditional. The law does not impose on the faithful who accomplish it the strict necessity of ritual purity that it demands for the tawaf.

The sa'ya is an embassatory rite with a brief period of running, analogous to the javan, to the ifṣāqa of 'Arafah and Muzdalifah etc.; undoubtedly it was actually a separate ancient rite, which became combined with those of the Ka'ba, as the ifṣāqa did to the ceremonies of 'Arafah and Muzdalifah. Tradition has retained the memory of the cult of two divinities, Isaf and Nāla, but only in the story that they were a man and a woman who were turned into stone for fornicating in the sanctuary and later came to be worshipped. Later Muslim tradition turned them into Adam and Eve, who sat on either of the hills to take a rest. But tradition has made special efforts, not without hesitation, to connect the rite with the story of Abraham: Hādjār, cast off by Abraham and seeing Isaf perishing of thirst, ran in despair seven times from one hill to the other; it is said that Abraham instituted the sa'ya for the worship of Allah and quickened his pace (the karawat) to escape Satan who was lying in wait for him at the bottom of the ravine.

Bibliography: See the art. HAJI and KA'BA, and add: Gaudecker-Demoblyes, Le Pilgrimage de la Mekka, p. 225-234, with references especially to al-Arrāfi, Ḥāfiz al-Din, Ibn Ḥujair, Māsrj Kusayr, Muhammad al-Shādīk, al-Baṣṭamī, Burkhart, etc.

(SAUYABIDJ, مسیبیه, read SAUYABIGA, name of a people. The Arabic form مسیبیه is to be read with ج as a guttural sonant, as the etymology of the name indicates.

De Goeje has devoted a short article to the Sayyabiga in his Histoire et de géographie orientale (No. 3, Leiden 1903, p. 12 and p. 86-91) which has been used here; see also his Contribution (Kön. Ak. z. Wiss., 1875, ed. in English by D. MacRitchie, Accounts of the Gipps of India, London 1886).

According to al-Balādhurī (ed. de Goeje, p. 373, 1 infra), they were already settled before Islam on the coasts of the Persian Gulf (me-kilim μηλέκη εἰς γυαλίτων). In the reign of the Caliph 'Abd al-Malik (632-644), there was a large garrison of Sayyabiga and Zoj—two of these peoples are frequently mentioned together although they have nothing in common (cf. the art. ZOTT—(cf. al-Tabarī, ed. Zonstein, p. 823-925; ed. de Goeje, l. 1961, 4'th Ed. 'Arrāf al-Islāhānī, Kitāb al-Qāhir, xiv. 46). In 17 (658) the Omayyads, horsemen of foreign origin in the service of the king of Persia, concluded a treaty with them. The Caliph 'Umar ratified, by the terms of which they pledged themselves to adopt Islam and to enter the service of the Arabs on condition that they received a scale of pay equal to that of the best paid soldiers, that they should be free to attach themselves to the Arab tribe which they preferred and that they should only have to fight against non-Arabic al-Tabarī, i. 2562 sqq.). Their example was followed by the Sayyabiga and the Zoj and they all attached themselves to the Arab tribe of Tamīm (al-Balādhurī, p. 373-375). In 36 (665), the Sayyabiga were entrusted with the guarding of the Treasury of al-Baṣra; the army of the people of Kifsā which came to the help of 'Ali included a body of Zoj and Sayyabiga (cf. al-Balādhurī, p. 376; al-Masīḥī, Les frontières d'or, ed. and trans. Barbière de Meynard, iv. 307, where the الساسکه is wrongly written as réalisation, al-Tabarī, i. 3125, 3154 and 3151. In a poem by Ya'jid b. al-Muqaffarī al-Jayyūdī edited about 59 (677-678) there is a reference to "savage Sayyāb barbarians who put iron on me in the morning" (Ibn Ūṣayba, Kitāb al-Shahrār, p. 219), which seems to imply that the Sayyabiga acted as gofers. In 160 (775-776) they took part in a naval expedition against the town of al-Nartuk, that is the modern Branc on the west coast of India (cf. al-Tabarī, iii. 460 sqq.).

The Sayyabiga came from Sind. "The Sayyabiga, the Zoj and the Andaghi," says al-Balādhurī, "formed part of the army of the Persians; they were people of Sind whom the Persians had taken prisoners and made to perform this service" (p. 375, 5-7). Al-Dājūlī (al-Muqaffarī, ed. E. Sachau, Leipzig 1867, p. 82) similarly says: "al-Shāfi'ī says:... These are people of Sind who accompanied the táiyyūm (تَاعیِم) of Ya'jūjīm and in the Muqaddīs, ed. de Goeje, ii. 10, 17; the origin of this word is unknown; it means the leader of the marines in the warships"; then, according to another source, "the Sayyabiga are people of Sind who in al-Baṣra were police officers and prison warders". Ibn al-Sikhtī (d. 857) quoted in the Liwan al-Arab (iii. 118-119) gives identical information: "The Sayyabiga are a people of Sind who were hired to fight as mercenaries and they formed the guard". Similar explanations are given in the Taby al-Arab (ii. 56).

From all these sources it is clear that in perfect agreement it is evident that the Sayyabiga were naturally soldiers, disciplined, used to the sea, faithful servants, which made them most suitable to serve in the army by land or sea, to act as guards and to act as soldiers, police officers, guards and warders of the treasury.
All the readings of the manuscripts of the Arab texts quoted above bring us to Sayyabiga which is the correct form (cf. likewise Muhammad, Kamit, ed. W. Wright, Leipzig 1864, p. 41, 3, and 82, 17). It is the form which Sibawaih gives (ed. II. Derenbourg, ii. 209,-8), and he adds *they say Sayyabiga because this word combines the two peculiarity of being a foreign word and plural of an ethnic in ٌ, being practically equal to a plural of...* 

According to al-Djawalih (loc. cit.), the singular is *salhab*. Now de Goeje points out (loc. cit., p. 88) that the people of the *Irak pronounce the vowel ٌ as ِ and this phenomenon is not isolated in Arabic dialects; my friend William Marçais calls my attention to its occurrence in Tunisian. This enables us to state the following equation: 

\[ \text{Sayyabiga} \sim \text{salhab} \]

The original form *Sahab* was pointed out to de Goeje by Henrík Kern. It is now easy to reconstruct its phonetic history from documents which were not available to the latter. The change *Sahab* \( \rightarrow \) *Munawara* is then the third century A.D. in the *Nun nam y n u n i n o* of Wan Cen and the *Funn nam C u n o* of K'ah Tai in the form *Shahu*, old pronunciation *Djouak = Munawara* = Arabic *Sahab*. Much later we find in the *Mahayna* (xxxii. 36-48, and xxviii. 62-75) the original form *Jawaka* (pronounce *Jawaka*; for these texts cf. my memoir *L'Empire sümamtral de Groipy, in the J. A., Series 9, vol. xx. 170-173). In the xiiith century a. D. a Tamil inscription of 1264 has *Jawaka* (ibid., p. 49), which is the Dravidian form of the above readings. The initial is reduced in Tamil by a series of *t* which is transmuted indifferently *w* in *w*, *wu*, and even *w* in *wu* even *wu* in *wu* the sonant and mute palatal and the palatal and dental sibilants: it is the palatal that is generally used to transliterate it: whence *wu* > *wu*. The change of *Indian* *wu* > *wu* is palatal to dental sibilant, in the present case of *Jawaka* to the Arabic *Sahab* is quite regular. We have a parallel example in the Sanskrit *dravida* *tawk* (*Tectonic grandi* which becomes in Arabic *salhab* more frequently inaccurately transcribed *sadd*. 

The Sayyabiga then are the descendants of ancient Sumatran emigrants to India, then to the *Irak and the Persian Gulf where there is evidence of their existence before Islam. This not surprising for we know from other sources also that the sumatrans colonised Madagascar at a very early date (see the art. *Zahro*); the eastern route was familiar to them (GABRIEL FERREDO) 

SKUTARI. [See SKUDHATI.] 

SEBASTIYA. 1) The Arabic name for the ancient Samaria which Herod had changed to *Sebaste* in honour of Augustus. The form *Sebasto* — as in the case of other towns of this name — was presumably also used, as the Arabic name (which is sometimes also written Sebasti) suggests. By the end of the classical period, the town, overshadowed by the neighbouring Nepolis (Sichem; Arab: Nablus), had sunk to be a small town (*Sebasso*) and played only an unimportant part in the Arab period. It was conquered by 'Amr b. al-As while Abu Bakr was still Caliph; the inhabitants were guaranteed their lives and property on condition that they paid poll-tax and land-dues (al-Baladhurt, ed. de Goeje, p. 138; Ibn al-Athir, *al-Kamil*, ii. 388). Ibn al-Battani is the first of the Arab geographers to mention it, but gives already much less accurate figures for its position than Ptolemy had done. In the later Arab geographers Sebastiyya appears on a place in the Qund Filastin. According to a tradition found as early as Jerome, for example, the tomb of John the Baptist was there (Ibn al-Athir, loc. cit.; Vahya b. Zakariya; xi. 333 wrongly only Zakariya); on its site there was in late antiquity a basilica built and in the crusading period (in the second half of the xith century) a church of St. John; remains of the latter still survive. According to western sources, Sebastiyya was again a bishopric at this time (Lequer, *Oriens Christi*, ii. 350 sqq.). Ummah b. Munkidh, about 1148, visited the town and its sanctuary, *Salah* al-Din advanced on Sebastiyya in 1184 but its bishop by handing over So Muslim prisoners saved the town from the terrible fate of Nablus (Ibn al-Athir, *op. cit.*, xi. 333; Abu l-Fida, *Annals*, in the *Recueil des hist. orient. des croisades*, i. 53; ibn Shaddad, *ibid.* iii. 82; Epistola Baldunii, in Röhrich, *Regesta regni Hierosol.*, No. 638). In the year 1187 it was finally taken from the Crusaders by Huṣam al-Din 'Umar b. Lādh; the church of St. John was turned into a mosque and the bishop brought to *Akka* (Ibn al-Athir, *op. cit.*, xi. 357). 

2) A place in the *Daghir al-Samaria, according to Ibn Shaddad (B. G. A., vii., 117), on the Cilician coast, 4 mil from an otherwise unknown Islandari, which again was 12 mil from Kirkisya (*Kerakos*). It is the ancient *Elamites* of *Sebaste*, the modern Ayasb. 

3) A town in Asia Minor, which was taken by al-Abbas b. al-Walid in 93 (711/12) along with al-Marrubain and Tis (should we not read Tarfis) whose situation is unknown. In some manuscripts
of al-Tabari and Abu 'l-Mahasin the name is wrongly written Samastiya (or something like that) which can hardly, as Brooke suggests, stand for the Byzantine Mēshāna in Phrygia. The reference is rather to the Phrygian Sarhess (Pauly-Wissowa, Reussenschr., ii. A. 951, No. 1).

4) A town of this name said to be not far from Samastiya on the Upper Frat is mentioned by Yāqūt, ed. ed., iii. 33. It might be Jblulopolis in Cappadocia (Ptol., v. 6. 25, p. 893, ed. Müller) which was presumably called after Augustus and perhaps may have also been called Sebasteia; but perhaps we should rather assume there has been some confusion with Siwas on the Upper Nahr Alia (Halys).

(HONIHMANN)

SEBKAH, a salt lagoon. The sebka is one of the characteristic features of the hydrography of North Africa and the Sahara, very common in the plain landscapes, without communication with the sea. It is the terminal of a network of streams either above ground or subterranean, which have spread out and disappear in the ground; it is a shallow basin with well marked contours sometimes delimited by steep sides. After rain it is more or less completely filled with water impregnated with mineral substances which accumulate at the bottom of the basin. In periods of drought, the waters evaporate completely or partly and the floor is uncovered. The floor of the sebka is covered with saline crustations, sometimes traversed by crevasses in which the crystals gather. The salt deposit sometimes covers mud, quicksands and dangerous quagmires.

This description and definition of the features of the sebka apply equally to the sahara. An attempt has been made to establish a distinction between the two, the former term being applied to hollows which always remain more or less moist, the second to those whose evaporation is greater than the access of subterranean water or to those the floor of which looks a plain losing itself in the horizon. There is no real foundation for this distinction. The two terms are employed indifferently in the same district. For example we have in Orana the sebka of Oran and the sebkha Ghelalem and Shahrī, in the Sahara the sebkha of Timimun (Gurara), the sebka of Southern Tunisia, the sebka of Wargla, of Siwa, etc.

(G. VER)

SEBEZWAR, near Herat, is the present name of the town of Asafzar or Asafzar (Abū al-Dawla Rāz, Haft Šāmī: Sekhā) attached to Sīdijān. It lies to the south of Herat, three days' journey north of Pars. In the itineraries it has the name of Khudān or Khudān. In the 19th century there were in this region four towns besides Asafzar, which was the chief place of this district; a town of medium size, surrounded by orchards and vineyards; its inhabitants were Sadas of the school of al-Shāfi'ī (v. v.). There used to be a stone fortress called Marāsfa Khiq on the summit of a mountain; the soil inside and around the town was so soft that it was sufficient to dig down a few inches to get water. According to al-Farāhī, B. G. A., i. 264, it was the name of the district and not of the town.

(CL. HUART)

SEBEZWAR is a city of Khurāsān, situated sixty-four miles due west of Nişābūr, and should not be confounded with the town of the same name in Western Afghanistan, south of Herat; see the preceding article. Many legends of the heroic age of Persia are associated with Sebzwär, and the square in the centre of the town was long pointed out as the scene of the combat between Rustam and Shohrab and was known as Mālān-ī Div-ī Safdī, "the plain of the White Demon". Sebzwär was a town of some importance in the district of Balsaf, [v.]; and eventually took the place of Bakhsh as the principal town of the district. Sultān Shāh, after having been expelled from Khwārizm by his elder brother Tākāsh, took Khurāsān as his share of his father's kingdom, and in 1186 besieged and captured Sebzwär, and was with difficulty restrained from ordering a massacre of its inhabitants, who had defied him with abusive language to take their town. The town was destroyed by the invading hordes of the Mongols, but recovered its prosperity, and in 1337 'Abd al-Razāk, a native of the village of Bagthūn who had been in the service of the Il Khan Abl Shāh (1316-1335) of Persia, headed a rebellion against the tyranny of the local governor, gained possession of Sebzwär and the neighbouring district and founded the dynasty of the Serbadkins, (q. v.) who reigned there for nearly half a century, until they were overthrown, in 1381, by Timūr. Mahāmān, the heir-apparent of the house, was enabled by the favours of Timūr's grandson, 'Abdūn, to retain some part of the heritage of his ancestors. The town, which fell into decay, was restored by the early Safawī kings and became the capital of a district containing forty townships. It has ever since remained an important town of Khurāsān. The inhabitants have been noted for centuries for their attachment to the Shī'a, and Husain Wā'fī, author of the Amārār-i Sahlī, whose seal for that sect was suspected, narrowly escaped death at the hands of the fanatics of the town.

(SEJDESTĀN. [See Sīlātār].

SEERD, Sīrād or Sīrah, a little town in the frontier region between Armenia and Turkish Kar- diatān, situated in a valley formed by the Bohštān šāh and the river of Bīdis about 30 miles S.W. of Bīdis and about 18 north of the Tigris. The little river Kezer runs near Sīerd; but it is the Bohštān Šah which is sometimes called Sīerd Šah (Sīrād Šah in Persian). This name is also found in al-Masūdī, the earliest Arab geographer to mention Sīerd; he calls the Bohštān Šah .
Se'erd—Segbân

(ed. Paris 1840, i. 227); likewise al-Idrist (transl. Jaubert, ill. 172). The orthography varies much:

(ال اسمكر) (Abu l-Fida', Yâkût);

(ال مصتارف) (Hâdi'dt, Khalifa). The last form is the official Turkish orthography (cf. Kümâr al-'Alâm). The Syriac form is Se'erd (Z. D. M. G., viii. 357, note) and the Kurdish form is Sîrî (al-Khalîfî, al-Hudayya al-Hamîdîya fi 'l-Lughat al-Kurdîyya, Constanti-
noplis 1310, p. 144). The origin of the town is unknown; the suggestion put forward by the trave-
ellers Shiel and Kâneer that it is the ancient Tigranocerta has already been disposed of by Ainsworth and Ritter, who rely particularly on the complete absence of traces of ancient buildings and on the description of Lucullus's campaign against Tigranes given by Plutarch. Moreover, C. F. Lehmann-Haupt in 1869 has identified the site of Tigranocerta with the modern Mainjârtshin.

Se'erd, a town with only slight fortifications (al-Iṣâkhtî; the Şêref-name alone calls it bûlû), has generally shared the political history of Diyar Bakr and Hîsin Kafîa. Thus in the xiii. century it was in the hands of the Marwânîs (Ibn al-Atîr, ii. 56); in the century following it passed to the Urjaşids of Hîsin Kafîa and was taken by 'Imâm al-Dîn al-Zenî in 538 (1143/44; cf. Ibn al-Atîr, xii. 66). The Mongols sacked it after the defeat of Diyar al-Dîn Khozar al-Shtâ (Ibn al-Atîr, xii. 326) but it seems to have quickly recovered, for al-Mustawfî calls it a large town with rich revenues. After experiencing the rule of the Il-Khâns [q.v.] and the Al-Koyunlu [q.v.] Se'erd about 1500 passed to the Safawîs. During the xix. and xix. centuries the town had belonged to the little Kurdish dynasty of the Malîkân of Hîsin Kafîa (descendants of the Aïyûhîs). After the battle of kaldîrân (1513) their prince, Malîk Kâfîtî, who had been thrown into prison by Shâh Ismâ'îl, escaped and again took possession of Se'erd and then of his old residence (Şêref-name, i. 157).

This dynasty continued to exist for some time under the suzerainty of the Ottomans represented by the wali of Diyar Bakr. In the new admini-
strative territorial division established by Dîrid Dîridist, Se'erd became the capital of a sandjak. The town continued to belong to the eyâlet, then to the vilayet of Diyar Bakr down to 1801 (1854). The sandjak of Se'erd was then attached to the vilayet of Bîdîs.

The number of inhabitants is given by Câinet (1892) as 15,000 of whom the majority are Muslims Kurds (5 mosquês). In the Christian element (c. 4,000) the Catholic, Syrians (Chaldaens) are the most numerous (two churches), along with Gregorian Armenians (one church), Protestants and Jacobites (one church). The number of Christian inhabitants, however, must have considerably diminished by the deportations during and after the war of 1914-1918.

Se'erd has been built in the Arab style (Lehmann-Haupt); the houses are of clay and the town is noted for its lack of cleanliness. Water is scarce there and comes from several springs. On the hills around, the principal crop is grapes; the other products of Se'erd are cereals, rice and vegetables. Its trade is with Dyar Bakr. The town has been famous since the xivth century for its manufactures of weapons and copper utensils. Other industries are cabinet-making and the manufacture of cotton stuffs, dyed red. On the only manufacture known at Se'erd see van Berchem in the Abb. G. W. Geot, Ph.-hist. Kl., N.S., ix. 157.

The sandjak of Se'erd has 5 kazas of which that of Erûn (Arwâh) is in Bohûn [q.v.].

SEFİD KOH (SAFİD KÜH), "the White Mountain", is the name given to the most prominent mountain range of Northern Afghanistan, extending from a point situated in 34° N. Lat and 69° 30' E. Long, near which rises its highest peak, Si-khân, 15,500 feet above the sea-level, to the north-western boundary of Arak on the Indus (33° 15' N. Lat. and 72° 10' E. Long approximately), and separating the valley of the Kâbul river from the Kurram Valley and Afridi Tirâk between these two points; but the range is continued in a mass of uplands running in a south-western direction and known as the Panj Dagh and Toba as far as a point situated, approximately, in 31° 15' N. Lat. and 67° E. Long. This latter range forms the watershed of Southern Afghanistan and a natural barrier between that country and India. In the northern and eastern spurs of the Sefid Koh proper are the Khilat Pass [q.v.] between Peshawâr and Djalâshad, and the formidable passes between Djalâshad and Kâbul in which British and In-
dian troops suffered so severely in the campaign of 1841-1842. Through the passes of these ranges there have stemmed from the dawn of history the numerous hosts by which India has from time to time been invaded, and some of the invaders in historical times have left brief descriptions of those parts of the ranges which they traversed. The northern spurs are barren, but the upper slopes are wooded with pines, deodars, and other trees, and many of the southern spurs with pines and wild olives. Its valleys are a combination of orchard, field and garden, abounding in fruit-
trees, and the banks of their streams are edged with turf and wild flowers and fringed with willow.

(SEFİD RÜD: [See SEFİD ZEHRE]]

SEGeba (p. "dog-keeper, whipper-in"), popularly SHIMES, the third division of the corps of Janissaries forming 34 companies (orţa); the 33rd was in garrison in Constantinople. It was created in the reign of Bayzid I at the same time as the saqâhârî (keepers of blood-hounds), the qanûnishârî (keepers of bullhogs) etc. who later formed the 64th and 71st orţa of the qanûnishârî. Some of
these companies had special names of their own: the 19th was called kithi-seghuln, the 20th hetbawi-seghuln, the 33rd manfi, "hunters" (chasseeurs), the captain of whom was called ter-
ghubari, "chief hunter." Their barracks, like those of the other Janissaries, were destroyed in the
conflagration of Maharram 4, 1105 (Sept. 5, 1693), in the reign of Sultân Ahmed II; rebuilt five
years later, they were again destroyed in the reign of Mahmid I.

Ségbân-Jâghi was at first the title of the general commanding this division; when it was placed
under the authority of the agâ of the Janissaries, his position became a sinecure. In case of mobili-
ization, however, he acted as fîlâm-mahân (lieute-
nant) to the agâ, lived in the capital and com-
manded the Janissaries of the garrison there.

Ségbân-Jâghi, "Cavalry of the Seigneurs," was
the name given to the 65th orca of the 'джемчул.

SEGOVIA, in Arabic Sharâbâya, an important
and present town in Spain, now the capital of
and province of the same name, situated in Old
Castile, 60 miles N.W. of Madrid, 5,300
feet above sea-level, on an isolated rock near one of
the last spurs of the Sierra de Guadarrama. This
town is famous for its Roman (aqueduct) and
Christian (alcasars) remains and was only under
Muslim rule for a short time. It was recaptured
in 149 (757/758) by Alfonso I of Castile or his
son Fruela I at the same time as Zamora, Sal-
amanca and Avila. It was, like those towns, recap-
tured but only for a very brief period by al-Hâjjî
c al-Manṣùr b. Ahî 'Amir in the second half of the
tenth century.

(SEGU, now capital of a district in the French
Soudan. Ségu is a little town with 6,500 in-
habitants lying on the right bank of the Niger
about 150 miles below Bamako and consisting of
four groups of buildings, of which Sikoro is the
principal.

This place was the capital of a Bambara
state founded by a chief of the Koulalî family,
who was at first more or less a vassal of the
Mandingo empire or empire of Mali. Towards 1670
king Biton Koulalû liberated Ségu from Mandingo
suzerainty and made it very powerful with the
help of a kind of standing army of regular soldiers
who had formed of slaves belonging to the
state called in Bambara tuag-dyon. In his reign
the Bambara of Ségou, although pagans, subjected
the Fulba kingdom of Mâina, in which the majority
of the inhabitants were Muslims, and the completely
Mohammedan town of Timbuctu, which was nomi-

nally governed by a pasha who claimed to be
Moroccan. It is even said that Biton having offered
an asylum to a holy man of Ségu, an enemy of the
Haasid Sultân al-Râghid, sent troops against the
ruler of Fès who had come to seek the fugitive
and that al-Râghid having encountered the Bambara
army south of Timbuctu took his way back to
Morocco without daring to risk a battle.

On the death of Biton in 1710, however, the
tuag-dyon took advantage of their power to make
and unmake kings and ended by overthrowing the
Kulukulâ dynast and seizing the power. But the
period of their domination was one of anarchy
which was ended towards 1750 by a popular rising.
A certain Ngolo or Molo belonging to the Bambara
family of Dyâra had himself proclaimed king and
founded a new dynasty, which reigned from 1754
to 1861 and was noted for its wars with the
other Bambara kingdoms, that of Kaara, located
farther to the west.

In 1860 the conquering Tuculors al-Hâjjî al-
Umar, a native of Fittu in Senegal who had been lord
of Nyôro, capital of Kaara, since 1854, marched
toward Ali Dyâra, king of Ségu. The Bambara
were supported in their resistance by their neigh-
bours, the Fulba of Mâina, who had, however, been
freed from Ségu suzerainty in 1810 by the Emer
Sikûn (Sharikhû) Ahmadû; this alliance of a wholly
pagan state with a kingdom which had become
Muslim against a conqueror himself a Muslim, who
justified his expedition against Ségu by calling it
a holy war, is one of the most curious features
in the religious history of the Soudan; Ahmadu-
Aymadu, then Emer of Mâina, explained the
motives of his conduct in a series of letters ad-
dressed to al-Hâjjî Oumar which have been pre-
served. However, after a stubborn resistance by
the defenders, al-Hâjjî al-Umar took Ségu in 1861;
and Hamdallâhi, capital of Mâina, in 1862, cap-
tured the two kings Ali Dyâra and Ahmadu-Aymadu
and put them to death. The Bambara and the defeat-
ced Fulba kept up the resistance for a long time in
a guerrilla war, in the course of which al-Hâjjî
Umar died (1864). He left several sons, nephews,
and favourites who divided the lands he had con-
quered amongst themselves, not without quarrelling.
His eldest son, Ahmadu Tal, whom he had installed
in Ségu as his lieutenant, lived there from 1862
to 1884 exercising a tyrannical sway over the
people without successfully enforcing Islam on
the Bambara or preventing the survivors of the
Dyâra dynasty, aided by their Fulba allies, from
harassing his troops continually, and even threat-
ening him up to the walls of his capital. The naval
Lieutenant Mage, sent with Dr. Quintin on a mis-
tion to Ahmadu Tal by the French authorities
in Senegal, was kept for two years at Ségu by
this despot (1864-1866) and was able to take
exact stock of the situation. In 1884 no longer
feeling his life safe in Ségu where he was detected
even by the Tuculors, Ahmadu Tal handed
the government over to his son Madani and estab-
lished himself in Nyôro.

In 1888, the French government resolved to put
an end to a state of affairs which was paralysing
the development of the country and found
expression in continual massacres and the reduction
to slavery of a great part of the population. An
expedition was organized under the command
of Colonel Archinard who took Ségu on April 6,
1890, and Nyôro on Jan. 1, 1891. Madani fled to
Mopti and Ahmadu Tal to Bandiagara, in Mâina.
General Archinard took Mopti and Bandiagar
in April, 1893. Ahmadu Tal once more escaped;
accompanied by a few followers he fled
along the bend of the Niger and sought refuge with his compatriot, the Sulţân of Sokoto and died in his country in 1898.

After an attempt to restore the ancient Bambara kingdom of Segu, at first under the governorship of M=center Dyar, then of a certain Bodyan Ksalilali, an attempt which was not successful, the French in March, 1893, decided simply to annex the town of Segu and its lands to the new colony of French Sudan.

A few Tucellos who came with al-Hadîjî Umar or in the time of his son Ahmad have remained in Segu; they all profess Islam and follow the Tidjâniyya order, of which al-Hadîjî Umar was Musâbahâm. The bulk of the population which consists of Bambara has remained attached to animism.

SEHÎ ÇELEBI, an Ottoman poet and biographer of poets. He belonged to Adrianoepole. In his youth received his education from Dervish Bey (4 March 1509; q. v.), became Köpektî (secretary) to Prince Mehmed, the youngest son of Sulţân Bâyazîd II, and accompanied the latter to Kaffa where he was governor (zângâbî) (Lenautrennis, Hist. Musulmanen, col. 659–61). When the prince died in 910 (1504/1505) Sehî went to Stamboul and obtained an appointment as secretary in the Dîwan (dîvân köpektî) there. Later he returned to his native town of Adrianoëpole, was for a time administrator (mâlûmatî) of a guvbân of a school of tradition there (Dâr-üt-Hadîth) and died there in 955 (1548/1549).

Selî was the author of a collection of poems (dîvân) and of a collection of biographies of poets with an anthology (heidîbî) which contained notices of 261 metres and poets and was entitled Hâfiz Bîhkî ("Eight Paradises"). The work is expressly planned on Persian models (Dîvân, Dīwân-i shâhî and Mir 'Alt Shir Nâvâ) and classified under eight heads (tehêbîs).

Apart from the Kems-üt-Kûheri of Shehî Ogulî (16th century, very scarce, so far only known in one MS), Sehî's biographical collection is the oldest work of this kind in Turkish. Of particular value are the notices of the Ottoman poets with whom Sehî was personally acquainted from his youth upwards or later, and of contemporary poets in general. The work was published in 1325 (1907) in Stamboul (8°, 144 pp.) by Mehmêd Shikar and has an appendix by Fâtîk Râshdî. Sehî's Dîvân, which specimens are given in the Turkish anthologies, is of little importance.

SELÂNİK, the town of Salonika in Macedonia, situated at the foot of the Gulf of Salonika, to the east of the mouth of the Wardar and at the foot of a hill which commands it on the north-east. It is the ancient Greek town of Thessalonica, founded on the site of Therma by Cassander, who gave the new city the name of his wife, the sister of Alexander the Great (Strabo, VII, vii. 4). Towards the eleventh century, the popular form Thessalonike appears (Chronicle of the Movea) on which is based the form Salonik or Salantik in al-Idrisi, the Bulgarian form Solun, the western form Salonika and finally the Turkish name Selanik. Salonika, situated on the Via Egnatia (from Durazzo to Byzantium) and having a large and safe harbor, was from ancient times an important commercial city. It was still so under the Byzantine empire and in those days included considerable European colonies, especially Venetians. From the tenth century onwards, it received its share of commerce with Muslim lands; once, in 904, it was sacked by a Saracen fleet from Tripoli in Syria led by a Byzantine renegade; twenty-two thousand inhabitants are said to have been carried off into slavery (description by John Comnenus, De Excidio Thessalonicae, Bonn ed., in Script. pont. Thèop., p. 457 sq.). The town is, however, hardly mentioned by the Arab geographers; only al-Idrisi notes it. His patrons, the Norman princes of Sicily, had desirous with the Byzantine empire. In 1185 William II of Sicily undertook an expedition against the empire at the instigation of Latin and Greeks who had sought refuge with him after the troubles provoked by the Norman Andronicus. The Normans took Salonika on August 24, 1185. Under the Latin Empire the town was the capital of the kingdom of Salonika under the Marquises of Montferrat; during this period it had to undergo a siege by the Bulgarians, the allies of the pretender Kalo-Johannes (who was killed there, according to the legend, by the lance of St. Demetrios, the patron of the city). At the end of the thirteenth century, Salonika was finally restored to the empire of the Palaeologoi, then reduced to Macedonia, Thrace and the western coast of Asia Minor. The Serbian conquests still further diminished this territory, so that in the time of Cantacuzenos (1347–1355) Salonika with the western part of the peninsula of Chalcidice was only connected with Constantinople by sea. Soon the Ottoman Turks, under Murad I, began to take the place of the Serbs by their conquests in Europe. It seems that the environs of Salonika were ravaged for the first time by Lala Şahhur in 1787 (1385) after the conquest of Servia and Karaf performances. These lands were thereafter settled by nomads from the sandjak of Saksek (Anonymous, ed. Giese). The town was soon after taken by Kâhir al-Din and again restored to the Emperor Manouz (Hadjî Khsîrî, Ta'âbûnî). Bâyazîd I took it in 790 (1394) after having defeated the ancient Christian fleets (Sa'd al-Din). The states of the Turkish chroniclers and the Byzantine historians on these early conquests are by no means clear and often contradictory (cf. von Hammer, Gesch. d. anat. Reiches).

Sulaimân, son of Bâyazîd, concluded an alliance with
the Emperor by the terms of which Salonika and a number of other towns on the coast were given back to the latter (1453). After the death of Sultan, his brother Murad (1410—1413) laid siege to Salonika, without being able to take it. Muhammad I also, after setting out from Serres to attack the city, had to abandon his plan as a result of the rebellion of Shukri Badr al-Din. Towards the end of his reign the pretender Durme Mustafa, coming from Wallachia, was defeated near Salonika and found refuge within its walls. It was from here that Mustafa began his conquests after the death of Muhammad I (1421). Mustafa being beaten, Murad II turned his attention to the Greek empire and attacked Salonika in 1423, after a fruitless siege of Constantinople. But Andronicus Palaeologos, son of Manuel, governor of the town, thereupon invited the Venetians to take possession of it and sold it to them for fifty thousand ducats (Salonica at this time had forty thousand inhabitants). This act made the Turks withdraw from the town. Murad II then recognized the sale in 1427, when a kind of capitulation was concluded between him and Venice by which the Turks were allowed to have a kadi in the town. Three years later Murad laid siege to Salonika for a second time; the Turkish sources say he did this because of acts of piracy committed by Venetian ships on Muslims. The town fell after a siege of forty-five days in March, 1430 (the 29th according to Anastasios and the 13th according to Venetian sources; the Turks only give the year 833, or,—wrongly—832). The capture was accompanied by looting and a general massacre which Murad had promised his soldiers; it has been chronicled by Johannes Anastasios: De extrema Thessalonicensis assidiae narratio (Bonn 1858). A Turkish fleet from Gallipoli had shared in the attack on the town. Venice was quick to recognize Turkish rule over Salonika and obtained in return freedom of trade for Venetian merchants in the Sultan’s lands.

A great part of the population had been in favour of the Turks in order to escape the terror of the Frank soldiery. The conquerors, moreover, after the looting showed itself conciliatory. For the moment only one church, that of the Virgin, was converted into a mosque (known as the Eski Džum’a). The Monastery of St. John Prodromos seems to have become a mosque during one of the earlier Turkish occupations. In the centuries that followed, the majority of the great churches were destined to be converted for Muslim usage. The conquerors also demolished a number of churches to get materials for other buildings. Murad, for example, in 1450 built a bath in the centre of the town. To give the town a Muslim population, colonists from Venice (wardars) were transplanted thither. Although the number of Turks increased, Salonika has never had a majority of Turks in its population.

The town was not long in again becoming an important commercial centre. The immigration in the reign of Bayazid II of a large number of Sephardim Jews and Maranos, expelled from Spain, Portugal, and Italy, contributed largely to its commercial revival. There had previously been Jews in Salonika (Benedict of Tudela reckoned five hundred in 1170); but after the immigration of the fifteenth century the Jewish element became the feature of the town. The Jews also brought thither their Spanish language, Ladino, which they have kept down to modern times (Lamouché, Quelques mots sur le dialecte espagnol parlé par les Italiotes de Salonique, in Roman, Forschungen, vol. xxiii,) and their religious and scholarly tradition (from 1515 they had their printing press). Under the benevolent rule of the Turks, Salonika became in the sixteenth century "the mother of Judaism". Their number was then put at twenty thousand; the cloth which they manufactured was sold throughout Turkey (Dernbach, Tagöck, ed. Babinie, 1923, p. 167). Towards the end of the seventeenth century, there were 12,000 Jews among the sect of the followers of Shabbatay Zevi. The Crypto-Jews or Dönmes (q. v.), which had such a great cultural influence on the development of modern Turkey since the Young Turk revolution.

For the Ottoman empire, the possession of Salonika was a source of great revenue, especially from trade with the commercial nations of Europe, who by their capitulations obtained the right to have consulates there. The harbour has never been a naval port; it was only exceptionally visited by the Ottoman fleets (e. g. in 1715 in the war with Venice; cf. Rashid, Türkler, ii.41). Administratively Salónica has been since the Turkish conquest capital of an eyalet which has at times included Serres and Drama. In the judicial hierarchy the Salónica Molla was one of the eight mollahs of the sixth rank or mağrūfi muallar (d’Obserson, Tabl. de l’emp. Ott., ii. 271). The Turks, however, never built great mosques there as the Greek churches were in Chalcis. The Jewish quarter, known as Fisaiti, was gradually extended and the town was divided into a Jewish and a Moslem section.

With the decline of the Turkish empire in the nineteenth century, Salonika became more exposed to enemy attacks and foreign influences. For example, in April, 1807, the English fleet attempted a landing there after the failure of the expedition against Constantiopolis (Zinkeisen, vii. 454). In the second half of the century the Macedonian troubles began and Salonika became the theatre of the nationalist intrigues of the Slav elements, while at the same time it was the centre of the Turkish opposition. The administrative reform of 1864 had created the vilayet of Salonika, which, after extending as far as Eshbon and Uskub, had been afterwards considerably reduced and in the end comprised only the sandjaks of Salonika, Drama and Serres with a population in which Bulgarians were in the majority. The assassination in 1876 of the French and German consuls brought about European intervention in favour of the Slavs in Turkey (Conference of Constantinople). In 1902 Salonika became the residence of Hilmi Pasch, who had been appointed inspector of reforms in Macedonia, assisted from 1903 by a Russian civilian agent and an Austrian representative. The town, as the result of European control, became less subject to the direct influence of Constantinople and thus became a hotbed on Turkish soil of Young Turk propaganda, directed from Paris against Abd al-Hamid; from the beginning of the twentieth century the Committee of Union and Progress (Ittihat u Terrakki) held its meetings here in the Italian Masonic Lodge; the constitutional movement among the garrisons of Macedonia had its centre here; besides Turks, the Committee had Jewish members. In the night of 22—23 July,
1908, the constitution was proclaimed in Salonika, followed by the first revolution in Constantinople. The central section of the Committee had evacuated in Salonika, and organised in 1909, the suppression of the counter-revolutionary movement, which broke out in Constantinople on April 12. Mahmut Skew- ket Pasha organised in Constantinople the constitutinal troops, who entered the capital on April 22. 'Abd al-Hamid, deposed on April 27, was sent to Salonika, where he remained till the Balkan War. The beginnings of the constitutional régime bear the stamp of its origin in a milieu where the Turkish element was in a minority, in as much as the Young Turks began by proclaiming the equality of all races being under the Sultan's rule.

Turkey lost Salonika in the Balkan War. The Greek army, commanded by the Crown Prince, crossed the Wardar after the battle of Yanitza and surrounded Salonika on November 8, 1212. On the same day General Hasan Taşkin Pasha surrendered the town to the Greeks through the mediation of the neutral consul. Besides the Greek troops, some Bulgarian battalions also entered it, but the peace of Athens (November 14, 1913) Salonika, with the greater part of the willbet of the same name, was incorporated in Greece. As a result of the Greek occupation not only the Turks but also a great many Jews migrated, especially to Constantinople. The occupation by the allies in November, 1915, with the object of making it a base of operations against Bulgaria, is of importance for Turkish history as much as it contributed indirectly to the defeat of the Turks three years later.

On the eve of the Greek conquest, Salonika had about 130,000 inhabitants, of whom 76,000 were Jews and about 30,000 Muslims, the remainder being mainly Greeks and Bulgarians. The commercial development had been greatly furthered in the nineteenth century by the railways connecting it with the interior, with the Close of the city, and Constantinople. The new harbour was opened in 1901; ships cannot approach the quay there. The export of the products of almost all Macedonia (especially tobacco) took place through Salonika as well as the import of European goods, which made it compete more and more with Constantinople.

As an industrial town, Salonika has very old established manufactures of cloth and carpets (selânik költücs); to which have been added silk-weaving, glass-bowing and the manufacture of soap and salencre.

The town has many old monuments. Of classical buildings there remains practically nothing but the triumphal arch of Galerius. The Byzantine churches are numerous. Besides the Church of St. George, which is already mentioned, the principal one of that of St. George, made a mosque in 1999 (1590/1591), according to an inscription, and then called Orładie Džamî; that of St. Sophia, which became a mosque in 993 (1585) as Ayê Sofia, and notably that of St. Demetrios, the patron of the city, in the central part of the town on the Rue Midhat Pasha (governor of Salonika in 1873); the date of its erection is uncertain. Under Bâyazid II it was converted into a mosque and given the name of Kazimy Džamî (St. Demetrium-Kaizim is a double saint; cf. the art. St.-Kaizim). Of the Byzantine wall which formerly surrounded the town the southern part no longer exists and is replaced by the great quay. The hill to the north-east of the town bears an acropolis called Yedi Kule by the Turks.

J. H. KRAMER

Selinik, Mustafa, Turkish historian.

He was born at Salonika (Turkish Selânik), and lost his father at Salonika in Dhu l-Ka'da 972 (1565/1566), while he accompanied the Beylerbeys of Rumîli, Shamsâ Ahmed Pasha, as a reader of the Qur'an (Târîhî, p. 11, line 6; ab infra). He held a number of offices which are accurately enumerated in his work. When in 1583 he had been for some time secretary and dâwidir of the Nishâbûrî Mehmed Pasha, he became secretary of the sâhîhîr (sâhîhîhîr; cf. Târîhî, p. 235: Dhu l-Hijja 993 = Nov. 23, 1586), then of the zîphâr; then he was appointed sâhîhîhîr (diarist) president of the audience of two of the holy cities (haramain muhâbbedî), and quarter-master of the court (muteferrika). In October 1588 he was wakâmûdar of the Persian prince Haidar who then resided at Constantinople (Târîhî, p. 261).

In Shaban, 1005 (1595/96), he was inspector of the soldiers' pay (cf. J. v. Hammer: G. O. S., 14, fol. 244). Finally he possibly held the function of Annadun muhâbbedî (president of the treasury of Anatolia). The year of his death is not certain. Probably he died soon after 1008 (1599/1600) at Stamoul.

His work on history, part of which was printed at Stamoul in 1281 (Târîhî Selânik Mustafa Efendi), 14 folios, 351 pages octavo, begins with Safer 971 (1565/66), and ends in 1008 (1599/1600); it comprises the last years of Sultan Mahmed the Great, the reign of Selim II, Murâd III and the first five
years of Miḥmūd III. Composed in the manner of a diary it is a mirror of the events at which the author was present as an eye-witness. His office in the treasury supplied him with statistical materials. Selânik's work is consequently a very valuable source for the years 1563-1599. It is to be regretted that the edition published in 1872 (cf. a note at the end, p. 331) is carried on to the year 1001 only (1594/95), because Naʿima [4.4.] begins his work this year. Complete MSS. are preserved (apart from libraries in the East) at Upsala (cf. Tornberg, Codices arabici, pars II t Gerr. bibl. reg. univ. Upsali, Lund 1840, p. 169 sqq., No. 284) and at Vienna (Fraenkel, Die arab. pers. und türk. Hist. der K. K. Hofbibl. ii. 240, sqq., No. 2950 H. O. 57).

Bibliography: J. v. Hammer, G. O. E. ill. 750; iv. 158, 181, 1856, 243, 435; Dëmida Di- minha, Qādaʿan 'Turkî, 2, Muṣawwir, Sambal 1314, p. 50, (not very valuable); Ahmed Refî'eh, Alimdar wa-Sandıkârkar (900-1200), Sambal 1764, p. 365; (Franz Bartholin).

Seîdjuks, a Turkish princely family which ruled over wide territories in Central and Nezher Asia from the 8th to the 12th century. The following families are distinguished: 1. The Great Seîdjuks; 2. the Seîdjuks of the 'Iraq; 3. the Seîdjuks of Kirman; 4. the Seîdjuks of Syria, and 5. the Seîdjuks of Asiam Minor (al-Kümm).

Early History of the family. The ancestor of these rulers was Seîdjuk b. Doğuk (Turk.) called Timur-ra'îsh, i.e. 'with the iron bow'. This Doğuk was a member of the Ghuzz tribe of Kılık which is mentioned in the first place in the list of three tribes in al-Kaṣhghar, Šuwaq Lughât al-Turf, i. 56. The following is told of him by Ibn al-Alhaj, al-Kâmil, ed. Tornberg, ii. 522: 'He was leader of the Ghuzz; they had implicit faith in him and they never contradicted him in a speech or neglected a command of him. Then it happened that one day the king of the Tur's named Bajjâch collected his armies and wanted to march against the lands of Isâm. Doğuk opposed him and after a long discussion the king of the Tur's insulted him with coarse words. Doğuk then gave him a box on the ear and wounded him in the head. When the king's serzouns surrounded and tried to seize him, he defended himself and fought with them; his people gathered round him and they separated from him (i.e. the king). The dispute between them was afterwards settled and Doğuk remained with him. A similar story is then told of his son Seîdjuk but the end is different: Seîdjuk leaves the king with his people, enters the land of Isâm, and takes up his abode in the vicinity of Djaand at the mouth of the Seîdju. According to Marquart, Ottomtische Dilatikutuditen, p. 46, the Turkish title Seîdjuk is concealed in Bajjâch and the reference here is to the supreme chief of the infidel Ghuzz, who in turn recognised the sovereignty of the Kılık or the Uighurs. It seems to me, however, that the whole story is an invention to explain the settlement of the Kılık near Djaand. Whether this tribe, or at least its chieftains, already professed Islam at this time is equally uncertain although the story presupposes it; the conversion perhaps only took place after relations had been formed with the Muslim population of Djaand. Some Russian scholars have expressed the opinion that the Seîdjuks came to Islam through Christianity and in support of his point to the Biblical names of their sons Miḥmûd, Miḥta, Ibrahîm, to a casual remark in al-Kawâni (ed. Wattenfeld, ii. 394) and to the fact of the spread of Christianity among the Turks in Sermây, but tradition makes no mention of it.

Political conditions in Transoxiana, where the Seîdjuks and the Turkish Kârâ Khanîs were fighting for the sovereignty, were favorable to the development of the power of Seîdjuks and his Ghuzz. They became involved in this feud and usually they took the side of the Kârâ Khanîs, but at the same time took the opportunity to further their own interests. In the meantime Seîdjuks died in Djaand, aged, it is said, 107. His sons below mentioned (some records also mention a fourth, Vûnû) we now find not in Djaand, but near Bakhshah in Nûr Bakhshah (now called Nûr Ata, N. E. of Bakhshah; cf. Barthold, Türkistan etc., p. 122, about the year 375/985), as Hamd Allah al-Kawâni, Turçûk Gûrûsî, ed. Brown, p. 434; states. Ibrahîm, whose proper name was Arslân, seems to have assumed the leadership among those sons. Sometimes the name is followed by Bajjâch, which is probably also to be interpreted here as the title yâzîcî; he is mentioned simply by this name in al-Kâmil, ed. Barthold, p. 73, as the prince of the Ghuzz who in 1070 assisted the Kârâ Khanîs generally and in 1079-1080 against the Sulṭân al-Mu'ayyad, thus coming to victory over the Kârâ Khanîs (cf. Barthold, Türkistan etc., p. 283). We must find him mentioned as ally of Aṭ-Ṭegh who had captured the city of Bakhshah. In 416/1025 Mahmûd of Ghuzz undertook a campaign into Transoxiana to overthrow the latter and had a meeting with the Kârâ Khanî Kâdî-Qâb, with whom he came to an agreement regarding a common attitude towards the affaire of the district. On this campaign he sought information regarding the strength of the Seîdjuks. There is a well known anecdote which tells how Arslân, when he was asked about the question, showed him two arrows and said that 100,000 men would turn out if these two arrows were sent round their hands, and if the bow were added, as many as one could wish. This caused Mahmûd some anxiety; he therefore consulted his men about it. Thâbîb, Arslân. Djaand, as it seemed should be done regarding these people. The latter proposed that each man's thumb should be cut off so that he could not draw the bow any longer, or, as ibn al-Alhaj adds, that they should all be drowned in the Djaand. Mahmûd thought this too inhuman and perhaps also impracticable; he thought it better to let them come across the Djaand and scatter over wide tracts in Khurân so that they would be easily kept in control. He took Arslân back with him to Ghazna and kept him prisoner in the fortress of Kûlânjûr in Multân as a hostage for the good behaviour of his people. These measures did not succeed in their aims, however; the Ghuzz proved turbulent in spite of the severe punishment which Thâbîb Farragh awarded to them (i. al-kašâf, Tûrük, ed. Moriart, p. 544). Under the leadership of their chiefs Yâhûd, Kâfî, Bûka, Kâkûtî etc. they withdrew from the jurisdiction of their Ghuzzawid overlords and began raiding the lands of Islam. Damascus, Samânân, al-Râyî, Isfahân, Marâgha, Hamadân and many other towns in the Šanî and Akbarbâjdijân suffered from their incursions. These Ghuzz are always called the Šanî Ghuzz by al-Djâhâji, who says nothing about Arslân in the part of his history that
has survived to us, and distinguished from the Ghzls who had remained in Transoxiana, to whom he refers as the people of Tughrill-Beg (this is the correct form, according to al-Kalbsh, Dārā, etc., p. 400), Daʿud and the Niyālīyān Tughrill-Beg, Mūhammad and Cāghārī-Beg Daʿud are the sons of Mīrāk b. Seldjuk, who, according to some records, was early killed in the war with the Irābīl Turks as to the Niyālīyān, these are the people of Islām or Yūsuf, a maternal uncle of Tughrill-Beg, so that probably the reading should be Yūsuf. It is true that this Yūsuf is mentioned nowhere else but his son Nāthūm b. Yūsuf is well known and at first faithfully supported his two nephews. We hear little of Mīrāk, Seldjuk's third son, but his sons also supported Tughrill-Beg.

These Seldjuk lived in security in Nur Bekhāra as long as 'All Tegin lived; as the pastures there were not sufficient for them, they received from Hārūn b. Altun Bahā, the governor of Khwārizm, through the intermediary of the vizier Ahmad b. Mūhammad b. 'Abd al-Samad Abī Nashr, later vizier to the Ghaznawīs, Māsid, permission to dwell in Khwārizm territory in winter. But when 'All Tegin had died in 425 (1034) they came into conflict with his sons and successors, and, after being harried and molested, some were killed and the others driven out of Khwārizm by command of Māsid and put to flight the sons of Altun Bahā who were in open rebellion and with whom they sided, they found themselves forced to seek other lands to live in. They therefore sent a written petition (cf. Bahā, op. cit., p. 535) to the governor of Kharizm, Aḥmad ibn Shāh al-Fāḍil al-Shīrī (al-Salārī), notorious for his extortion, requesting him to ask Māsid to allot them the districts of Nasr and Farwā; in this remarkable document Tughrill-Daʿud and a third brother, Pahlīgh, already call themselves protégés of the Commander of the Faithful. These negotiations, which did not lead to the desired result, and the events that followed, can be followed almost day by day in al-Balānī's narrative, but here it must be brief and refer the reader to the full account by Kāzinī, and in his portrait of Muʿāwīyā in the edition of Dārā of Minūṭīrī. In brief, the result was an open war between the Seldjucks and the Ghzawīs. Māsid's generals were repeatedly defeated and finally Māsid himself was routed in the battle of Bandānaḵān (Kamītān, 435 = May, 1040). By the end of 429 (Aug., 1038) the Seldjucks had taken Nāthūm, the name of Tughrill-Beg was mentioned in the Ḍūkāne, and an ambassador arrived from the Caliph to complain of the ravages of the Irābīl Ghzls. The rule of the Great Seldjucks was established.

1. The Great Seldjuk, 1038—1157.

Tughrill Beg — 1053, Alv Aryan — 1072, Makīr-Sṣīn — 1092, Makīrīn and Bāṣrīyān — 1104, Makīr-Sṣīn II and Mūhammad — 1117, Sardjar — 1157.

The history of the individual rulers, with the exception of Mūhammad and Makīr-Sṣīn II, whose names were only mentioned for a brief period in the Ḍūkāne, is dealt with in separate articles; here a few general observations will suffice. As regards the expansion of the Seldjuk empire, the majority of the Muslim rulers of the eastern and central provinces of the lands once ruled by the Caliph submitted to Tughrill-Beg, either voluntarily or under compulsion. The rulers of Djurdjān and Taz̄arīz̄a placed the lands by the Caliph submitted to Tughrill-Beg, either voluntarily or under compulsion. The rulers of Djurdjān and Taz̄arīz̄a had done this by 433 (1041/42); in 434 (1042/43) Khwārizm was conquered and was followed by the other lands which form modern Persia. In 440 (1048) Lippert, chief of the Abghāz, was taken prisoner and raids were made into Asia Minor. In Kamītān, 447 (Dec., 1055), Tughrill's name was mentioned in the Ḍūkāne in Baghdad and at a ceremonial audience in 449 he addressed the Caliph, who had in the meanwhile married a daughter of his brother Cāghārī-Beg, as "King of the East and of the West". The sovereignty of the Seldjuk Sultan was recognised throughout the Irābīl in Maywil and in Dīyar-Bakr. Under Alv Aryan the Seldjuk conquests reached to the Jaxartes and after the defeat of the Armenians and Byzantines almost the whole of Asia Minor passed to the Turks. Finally Syria was added in and 435 (1092) even 'Adān and al-Yaman were conquered, although we can hardly talk of an effective rule of the Seldjucks in Arabia. Makīr-Sṣīn II's death in the same year, the quarrels for the throne among his sons which followed, and the Crusades put a limit to their conquests.

As regards the conquered territories, in many cases the conquered rulers continued to rule and paid tribute; in Kirmān, and later also in Syria and Asia Minor, the princes who had conquered these lands set themselves up as independent rulers and did not trouble about the Great Seldjucks with whom they even waged war (see below). The same thing happened in other outlying parts of the empire, which the Sultān, e.g., Alv Aryan in 453 (1066), bestowed on his brothers and other relatives as fiefs, with this difference that the latter did not succeed in founding dynasties. According to the Turkic view, the right to rule belonged to the whole family and the oldest member had a certain right as primus inter pares to the obedience of his male relatives, but in a family with so many ramifications as that of the Seldjucks, harmony could not long be maintained. Even in the reign of Tughrill-Beg his nephew Nāthūm b. Yūsuf rebelled and if his brothers Cāghārī-Beg and Pahlīgh remained faithful to him this was probably because he had no sons. His successor had to fight with Kutanūf, son of Aryan and ancestor of the Seldjucks of Kūn. It was the same in the reign of Makīr-Sṣīn, and after his death the rather brief reign of Bārkiyārī was marked by continual fighting with his uncle Tutanūf, and his brother Mūhammad. The empire of the Great Seldjucks therefore comprised strictly only the eastern provinces of the former territory of the Caliphs, with the exception of Kirmān. They had: their residences in Isfāhān, Baghdad, and under Sandjar, who handed over to his brother Mūhammad's sons the rule over Irābīl, Fars, Kirmān and the western frontier provinces. On the wars with the Ghzawīs, the rulers of Transoxiana, the Chūrida and the Ghzls see the article Sardjar, above. When he died childless in 532 (1157) the line of the Great Seldjucks came to an end.

For Islām the rise of the Seldjucks meant the victory of the Sunnī creed, as far as their power stretched, over the Shiʿa tendencies which had been gaining more and more ground under the
Bûyids and FûtûmilCs. The Bûyids had, it is true, allowed the ‘Abbâsid caliphate to continue a nominal existence in Bagdad, but in 420 (1030) al-Râshîd had the name of the FûtûmilCs mentioned in the ‘Iraq. Also, the ‘Abbâsid al-Kâdim b. Hisâm Allah had to leave Bagdad, and his palace there was plundered for several days. Tughîrl Beg, who at that time already was on intimate relations with the Caliph, was at this time engaged in his struggle with Irâk b. Inâr; as soon as the latter was taken prisoner and put to death, Tughîrl brought the Caliph back to Bagdad. In the following period, notably in the later years of Malik-Shah, there was serious friction between the Caliph and the Sultân, but this did not have its roots in religious questions but was of a personal nature (cf. Houtani, in the *Journal of Indian History*, lii. 147—160). The Seldjûks regarded the Caliph as such as the head of orthodox Islam whom they were called upon to defend with the sword. They took energetic steps against the dangerous activities of the Ismâ‘îlîs and furthered the interests of Sunni theologians, although in this respect it was not they themselves but their viziers, notably the great Nîzâm al-Mulk, that were entitled to most credit. Personally they were nothing but fanatical Muslims, as is evident from the release of Liparites above mentioned and later of the Byzantine emperor Romanus Diogenes and from the treatment accorded their Christian subjects. It is practically the same with the credit given to some of the Sultâns, e.g., Malik-Shah, for their patronage of learning; although untutored, they were able to esteem what they themselves did not possess. They therefore entrusted the administration of their empire to their viziers, who sometimes, like Nîzâm al-Mulk, governed with unlimited powers.

In what spirit they did so, the latter himself has told us in his Sâzây-nâmâ. As regards art, very little of the architecture of the Seldjûks has survived for posterity. Only in Mâs is there still considerable remains from Sandar’s reign. Taken all in all, we must admit that the Seldjûk Sultân was able to guide the rude Ghûz peoples, whose chiefs they were, with great skill and with true insight to turn to their use the advantages of Arabo-Persian civilisation.

II. The Seldjûks of the ‘Iraq, 1118—1104.

After the death of Muhammad in 511 (1118) his eldest son MAHMûD, a thirteen year old boy, succeeded him as Sultân of the whole empire with the exception of Khurasân and the north-eastern frontier provinces, where, as already mentioned, Muhammad’s brother Sandar ruled. After him the title of Sultân was borne by his son KÜRT, 1134—1134 (according to al-Bundari, *Riwa‘i al-tâzir* etc., ii. 172, wrongly, beginning of 1128 = 525), MA‘MûD, 1153, MA-LIK-ŠâH II, 1155, MOHAMMAD II, 1159, SUЛIYÂN-ŠâH I, 1161, ARLŠâH-ŠâH, 1175, and TUGHÎL II, 1194. Almost all these Sultâns ascended the throne while still boys and met with a premature, often violent, death. Out of the majority of them, therefore, it can hardly be said that any actually ruled; they were simply tools in the hands of their Atabegs and Emîrs.

In keeping with the old Turkish custom, the sons of Muhammad, Mahmûd, Tughîl, Malik-Shah and Sulimân, were each brought up by a prominent Turkish Emîr, who acted as their second father and was therefore called Atabeg. The natural result was that each of these Atabegs endeavoured to

gain the title of Sultan for the prince allotted to him in order thereby to increase his own prestige. The result was continual war between these brothers, which were decided for a short time by the intervention of Sandar in favour of one or other of the claimants. For the details of these wars the reader is referred to the separate articles; here, we will only point out that the ‘Abbâsid Caliph also became involved, and that two of them, al-Mustansir (498-514) and al-Râshîd (494), perished in them. This had opened in the reign of the weakling Sultan Mas‘ûd, but his successor Mo- hammed II — Malik-Shah II only bore the title of Sultan for three months — had to abandon the siege of Bagdad in 531 (1137). The power of the Caliphs began to rise again after this and the Seldjûks. Sultan no longer lived in Bagdad but in Hamadan. As a rule these Sultâns, from as early as Ma‘mûd, were only nominal rulers. The great Turkish Emîrs held most of the provinces as military fiefs; the Sultân lacked the money as well as the necessary troops to enforce their authority, if their Atabegs for the time did not assist them. To the latter also they entrusted the war with foreign foes e.g., with the Crusaders in Syria; they themselves had continually to contend with enemies at home. Some of these Emîrs succeeded in founding a hereditary dynasty and making themselves independent with the title Atabeg, Shâh or Malik. Among the latter we may reckon the Uruqids in Marand and Hûn Kafir and the Armanshâhs in Khâtû. They had already succeeded in doing so in the preceding period, and among the former, the Zangids in al-Masq and other places, the Seldjûks in Kars and the Atabegs of Adherence to the first of these Atabegs, Shâhu al-Dîn Ilidjeg (495), married the widow of Tughîl I and when Sultan Ma‘mûd died in 516 (1122) he had his stepson Arslân b. Tughîl proclaimed Sultan, but without affording him any authority. When he later threatened to become dangerous, Pahlâwân, son of Ilidjezdit had him disposed of by poisoning him and raised his minor son Tughîl II to the throne (571 = 1175). When the latter had grown up and Pahlâwân was dead, he endeavoured to enforce his authority but was not a match for Kfîl Arslân, the successor of Pahlâwân, although he had at the time the troops of the latter’s ally, the Caliph, at Dâmar in 584 (1188). He was taken prisoner by Kfîl Arslân after whose death he was restored to liberty, but fell shortly afterwards in a fight with the troops of the Khwarism Shah Takûsh (590 = 1194).

III. The Seldjûks of Kîrmân, 1041—1186.

The ancestor and founder of their line was Kwhâr KâBA ARSLÂN-BÉI, a son of Câghîr-Beg who went to Kîrmân with his Ghûz about 333 (1041) and a few years later (440 = 1048/49) occupied the capital Bâshar. He then waged further wars on his own account with the Shâhidîs, with the Kûs in the Garmir (the hot coast region) and even became lord of Omân without troubling much about Tughîl-Beg. When the latter’s brother Alp Arslân succeeded to the throne Kwharî made no attempt (459 = 1067) to challenge him as an independent chief, but submitted when Alp Arslân hesitated in person to Kîrmân to force him to obedience. On Alp Arslân’s death he thought, presumably as the eldest member of the family, that he had himself a claim to the Seldjûks’ throne, and led his army against Malik- Shâh but suffered a terrible defeat in the vicinity of Hamadân where he was taken prisoner and...
afterwards marched (460 = 1074). The victor then in his turn marched on Baddar, where the king, Shirvan Shah, the son of K fortune, had assumed the title of governor of the territory, to the latter showed himself submissions and left him in possession of his father's dominions. Sulaiman Shah reigned till 477 (1084) and was followed by Tushah Shah (1077-1083).—

1100 (1101), Laban Shah, 1134-1136, Muhammad Shah, 1136-1146, Bahram Shah, and 1137-1138, Shahbuz Khan. The end of the dynasty was brought about by the arrival of a body of Ghuris; the Ghuris after the defeat of Sandjar had fallen like a devastating deluge on the provinces of Persia and went wherever the weakness of authority seemed to offer them a chance of gaining rich booty. In Kirmân, where anarchy was practically complete under the last Seljuk, they had an easy task, routed Tushah Shah who marched against them and went plundering up and down the country. The latter was murdered by his vassal, Shahbuz Khan (477-478), who found himself forced to leave the country to seek help from neighbouring princes, which was, however, not granted. A Ghuris prince, known by the name of Malik Dinkar, then became lord of Kirmân.

IV. The Seljuks of Syria, 1078-1117. After the Marzâreligious war of Halab in 463 (1070-71) had submitted to Alp Arslan, a body of Turks under Atash b. Abak (or Awak) invaded Palestine, captured Ramla and Jerusalem and the rest of Judea, with the exception of Ascalon, where the Fatimids held out. He then turned his attention to Damascus which he was, however, not able to take till 478 (1079). An attempt made by him to conquer Egypt in the following year failed; he was routed by the Fatimids general Bahdr al-Din (478-479), and was next so hard pressed in Syria that he appealed for help to Tushah b. Alp Arslan, who came to Syria in 479 and Damascus was handed over to him (479 = 1078). Tushah then treacherously murdered Atash and became lord of the town himself. An attempt to take Halab failed; the then lord of this city, the Usufid Muslim b. Karshah, even attacked him in Damascus (475 = 1083), and when the latter had fallen in battle with the Seljuk of Asia Minor, Sulaiman (478 = 1085), Malik Shah, himself hastened to Halab and installed As'ousun, the successor of the Zangids there as governor, to the great vexation of Tushah who had in the meanwhile disposed of his rival for the possession of the town, Sulaiman, in an encounter at 'Ain Salma (September), not far from Halab (479 = 1086), where the latter met his death. It was only the death of Malik-Shah (482-492) that enabled him to gratify his ambition, to make great conquests and to set himself up as a claimant to the sultanate against his nephew Bariyaghak (483), till he finally was defeated in 498 (1095) and fell on the battlefield. For details see the article TUSHAH. His son Rikwan (493-544) became lord of Halab and another son, Duwash, the statement in Abu 'l-Ma'sun, ed. Popper, ii. 344, that he was Duwash is wrong, of Damascus. The latter died soon after in 497 (1104) but the real power lay in the hands of his Atabeg, Tughlugh (497-501), who was the standard for a long time in the name of an infant, then for a brother of Duwash, named Arslan (in the al-Adil called Begtah), then made himself independent and founded the Idrisiid dynasty.

The king of Halab died in 507 (1114); he was followed by his son Alp Arslan who was soon afterwards murdered by his servant Liyir. The latter then had his brother Sultan Shah proclaimed Sultan but was himself murdered in 511 (1115). The inhabitants then had had over the town to Ughaz (479-501) and Seljuk rule came to an end.

V. The Seljuks of Asia Minor (al-Rum), 1077-1131. The ancestor and founder of this dynasty was Sulaiman b. Kutulumsha b. Arslan (1050) of the Seljuk. His father Kutulumsha was one of the Seljuk paladins under Tughrul Beg but later rebelled against Alp Arslan, and in the end fell on the battlefield near al-Ray (456-456). Sulaiman himself came to Asia Minor after the great battle of Malikshah (1071) (in which the Byzantines suffered a terrible defeat and their emperor was taken prisoner), like so many other Turkish enmity, with the intention of making new conquests and founding a kingdom. Being a prince of the Seljuk family he was successful, and it was here that he found himself forced to leave the country to seek help from neighbouring princes, which was, however, not granted. A Ghuris prince, known by the name of Malik Dinkar, then became lord of Kirmân.

The kingdom of these Seljuk savedInstanceState many vicissitudes of fortune. More than once its fall seemed imminent, but it revived again until finally it sank into insignificance with the Mongol invasion and collapsed altogether. Seljuk's capital, Nicaea, was lost in the First Crusade in 1097 and never belonged to the Seljuk again, and with this ended Turkish rule in the whole of western Asia Minor, as the Byzantines under the Comneni again took this region under their sway and were able to retain it throughout the period of the Seljuks.

In the south-east the Seljuks were cut off from the rest of the Muslim world by the Christian
the worthless Kaikhusraw II ascended the throne (1237). In the meanwhile the Mongol deluge had reached the frontiers of Asia Minor. Erzerum, the fortress, fell before their onslaught and soon afterwards the Turkish army suffered an ignominious defeat at Kouskâh (1243). The future of the kingdom was thereby decided. It is true that a peace was concluded and the Sultan granted an appearance of independence on payment of a large tribute, but the wealth of the land continually stimulated the covetousness of the Mongols and invited them to new raids, pretexts for which were given by the struggles for the throne among the sons of Kaikhusraw. In the end, in the reign of Hülâgû, a partition of the kingdom was drawn up whereby 'Isâ al-Dîn was to rule on the one and Rükû al-Dîn on the other side of the Küf Irmlâk, but when the former entered into secret negotiations with the arch-enemies of the Mongols, the Egyptian Mamûlaks, an end was soon put to his rule and he had to seek a refuge in Byzantium. Rükû al-Dîn henceforth ruled alone but the power he now exerted by marrying his daughter with the title of Parwânâ, as agent for the Mongols, and when Rükû al-Dîn became inconvenient to him he had him put out of the way in 1266 so that he might rule all the more unchecked in the name of Rükû al-Dîn's infant son Ghiyâth al-Dîn. In the meanwhile the Turks began to rise against the Mongols in Laranda and elsewhere. A number of Turkish Beys therefore appealed to the Manûk Sultan Bahâr [q. v.] and proposed that he should send an expedition into Asia Minor, where he would find the whole population on his side, if only the Mongol troops stationed in the country had once been defeated. Bahâr agreed, defeated the Mongols in the bloody battle of Albitzûn and advanced as far as Kâsîârîa (1277). But the Parwânâ and the Sultan held aloof and the people did not move so that Bahâr was forced by lack of supplies to retire again and leave things as they had been before. Soon afterwards Alaâ appeared in Asia Minor and took fearful vengeance on the Turks, who, as he thought, had conspired with the Egyptians. The Parwânâ also had to pay for his inactivity with his life. The Mongol regime now became stricter. Mongol financial officials settled the taxation which for the most part was used to maintain the troops stationed in the country. The Seljûk Sultanâhs, whose names appeared on the coins down to 704 (1302), had no longer any authority worth mentioning. The turbulent Turkish emirs, among whom the Bâbût Karmatîn and the Bâbût Ahrâf played the most prominent part, were more and more brought to periods of obedience by ruthless punitive expeditions led by the Mongol princes Kungar KâruFIG and Gaûlûdû, who once more came from their retreats and found independent emirates when Mongol sovereignty finally diminished in power. In this way there arose on the ruins of the Seljûk empire a dozen Turkoman dynasties, on which see the separate articles. The last descendants of the Seljûk family of whom we have historical notice are found in Sîrops and perhaps in Arâd. The Kılıçi Arâlû b. Lutfûbeq, who had to yield in 576 (1471-1472) to the Ottoman general Gedik Ahmed Paşa, was deposed with his whole family to Stambol and had Gülmûdjiya allotted to him by the Sultan as 'izzâr [q. v.] but afterwards fled to Egypt, presumably belonging to the old family of rulers.
Bibliography: On the sources for Seljuk history see K. Süssheim, Fidelegen zu einer Ausgabe der im B. M. zu London vorhandenen Chronik der seljukischen Reiche, Leipzig 1914. We may first mention the compendium of general history by Ibn al-Aṣlī; Sīḥ b. al-Dāwīz, Miṣrī al-zamānī, facsimile edition by J. R. Jewett, Chicago 1907, on the years 495–654; Barhebuaus (Syrian and Arabic Chronicles): Abu ʿl-Fidaʾ, Ibn Haldun; Ḥamīd Allāh Mustawīf; al-Kawāṣimī, Tārīḥ Qayrawān (facsimile by E. G. Browne, Leiden and London 1910) from whom was taken the History des Seljukide in die Islamische, etc., by Dufrenoy in J. A., 1849; Mīrāghānī, Kamāl al-Ṣafī, from whom are taken Mīrāghānī's Geschicht der Seljukiden, ed. Vullers; 1838; al-Sūdānī, Hādhāl al-Siyār, Lithographed; ed. Thānī 1771 and Bostān 1773, Manṣūrī, Muḥāfaẓ al-Muhāfaz, in Arabic, is fuller but is only available in MSS.

Coins, Inscriptions, Art. On the Seljuk coins see the well-known catalogues by Lane-Poole, Dorn, Ghulīb Beg, Ahmed Tewfīq, etc. Inscriptions in M. Surve, Role in Kleinasiatische, Berlin 1896; Cl. Huart, Études arabes de l'Asie Mineure, in Revue Semit., vol. ii and iii; J. H. Loewy, Kosovo, Inschriften der seljūk, Bauten, Berlin 1907; v. Borchert, Materialien für ein corpus inscr. arab., vol. iii, Cairo 1910, and many scattered articles by the same author; Khalīl Edhem, Katariyya shelīl Mubānī-i ʿIlāmīyye wa-ʿl-Khāṭībīyya, Stambul 1934, and other articles by him and by Ahmed Tewfīq, etc. in Revue historiqus; Zakowski, Rekonstruktion storage Mēruva, St. Petersburg 1845; Sarrī, Illuminato, Berlin 1841, Cairo 1916, Cl. also the works of H. Saladin and G. Migeon, Woerman, E. Dies, Strzygowski, etc. Since Duguecques, Histoire générale des Huns, des Turcs, des Mogols et des autres Tartare occidentaux, etc., 1754–1758 (Book X–XI), no European scholar has specially investigated the history of the Seljuk, although in the works on history by Weil, Mair, A. Müller, d'Ossen, Howorth, Barthold et al. there is much information on the subject. For the early history of the dynasty Kamārshīī's already mentioned preface to his edition of the Divān of Mumīrī is of particular importance; for the history of the Seljuk of Kirmān see Houtsma's simāl (from Rewell, vol. i) in the Z.D.M.G., xxxix. 392–408; for that of the Seljuk of Rūm, besides the above quoted works of Huart, von Borchert, Khalīl Edhem, etc., see: Negīlī ʿAsīnī, Tarīkh Turbītī, p. 408–445; Huart, Kōnīa, le rôle des échevins tourniers, Paris 1897; do., Les Sultans des turco-tourniers, Paris 1918–1922.

SELEKES. [See Selebes.]

SELEKES, the ancient Emānū, Seleucus Traces or Clacies, a small town, capital of the sandjak of Jūl-Il in the province of Adana. It was built by Seleucus Nicator towards 300 B.C. The river Göz-Şu (Calycanthus) runs past it, about 41 miles from its mouth. In it is a rock-cut temple called Teğha-Antılı, "the Emperor's house", hewn out of the rock and covered by a vaulted roof; it is a great milestone carved out of the rock, 30 cubits broad and deep and 60 long; the aqueduct which brought the water to it has been destroyed. There are numerous ancient ruins and a mosque, dating from the Arab epoch; the town was actually conquered by al-Ma'mūn but soon afterwards evacuated. There is a Byzantine castle on the mountain (7th century). The town is mentioned by Yāqūt, Muḥāfīz, iii. 119, Mariaq al-Itīlī, ll. 44, under the same Selāhūl.

The district, the most part mountainous, contains 3 nūbiyya: Bulāku, Yāghula and Ayābū; in the Salām of 1325, p. 378, Yāghula is given at the capital of Jūl-Ili and its district has now only two nūbiyya, the number of its inhabitants is 24,850 of whom 1923 are Christians. The exports are the abundant agricultural produce: coarse carpets and sacks are manufactured there. The people in the hills rear cattle and those on the plains are farmers. The district at one time belonged to Cyprus and was administered like the islands of the archipelago by the Kapudan-ağa (Grand Admiral) [q.v.].

(Cl. Huart)
SELİM I, ninth sultan of the Ottoman Empire, known in history as Yawar Sultan Selim, reigned 918–926 (1512–1520). He was one of the sons of Bayezid II, born in 872 ( = 1470/68) or 875 ( = 1472/73) (Süleyman I, 1:38). Towards the end of his father’s reign, he was governor of the sandjak of Trebizond. Although his brother Ahmed, older than he but younger than prince Korşud, had been designated his successor by Bayezid, Selim also cherished designs on the throne, knowing that he had the support of the greater part of the army. Civil war finally broke out between the two brothers as a result of the nomination of the Imam’s son Suleiman as governor of Boli. Ahmed protested and the sandjak of Kaffa in the Crimea was then given to Suleiman. Selim soon afterwards (1510) went to join his son in Kaffa and refusing to obey Bayezid, who had ordered him to return to Trebizond, he went to Adrianople in March, 1511, with a body of Tatar troops. He then asked for a sandjak in Rûm III. Only after the Sultan had made up his mind to send troops against his son, did Selim consent to retire, after receiving the sandjak of Semendere as a result of negotiations conducted through the mediation of Mewlânâ Nur al-Din Safrûtu (q.v.). But he soon took the field again, this time as a pretext the rebellion of Shah Kuli or Shahin Kuli (q.v.) in Asia Minor. This time he was defeated on August 3 near Corlu by his father’s troops and again sought refuge in the Crimea with his father-in-law, Khaan Mengli Girsky. But the Janissaries in the capital were in favour of Selim; they forced prince Ahmed, who had advanced against Constantinople, to retreat (August 21). The attempts of Ahmed and Korşud to profit by the absence of their brother only increased the latter’s popularity. Selim therefore left the Crimea in January, 1512, and reached Constantinople in April, where the Janissaries had openly declared for him. Bayezid in vain attempted to open negotiations. He was dethroned on Safar 8, 918 (April 24, 1512), by a great mob of Selim’s partisans and died a month later on the way to Demotika (see the article XXXII in II).

Selim employed the first year of his reign in exterminating his brothers and nephews. By July, 1512, he had set out against Ahmed and his son ‘Ali al-Din, who had taken Brusa; he put them to flight, but did not capture them. Ahmed entrenched himself in Amasia. An attempt by Selim to take him by surprise there failed, probably through the treachery of the Grand Vizier, Muṣṭafa Paşa (q.v.). The latter in any case was executed and replaced by Hersek Ahmed Paşa. On November 5, five nephews of the sultan were executed at Brusa, sons of his deceased brothers Mahmud, ‘Alam-Shah and Shahin-Shah. In the end Korşud, who had fled to the sandjak of Teke, was captured and put to death. The same fate overtook Ahmed, who, after several successes, was finally defeated and captured on the plain of Yehli Şehir (April 24, 1513).

Peaceful relations with Venice, Hungary and Russia were maintained as a result of negotiations conducted by the embassies which these powers had sent to Constantinople and Adrianople. The warring spirit of Selim found an outlet in the east, where Shah Iskander (q.v.), had founded the powerful empire of the Şhi’i Safawids. Iskander had supported the cause of prince Ahmed and had given asylum to the latter’s son Murad. Iskander, moreover, had many partisans in the Şhi’i element in Asia Minor. His own dynasty owed its success to the Kitâb-âbâd of Anatolia, who had rebelled only recently under Şah-Kuli against Sultan Bayezid. Selim, urged either by hatred of Iskander or by his zeal for orthodoxy, began a systematic persecution of the Şhi’is in his empire. The total number killed or imprisoned was forty thousand, according to all the Turkish sources. War was inevitable after this. On March 20, 1514, the Sultan left Adrianople and a month after the whole army met on the plain of Yehli Şehir. During this time Selim had begun with a declaration of war his celebrated correspondence with Shah Iskander in a series of letters written in an elegant style and insulting and provocative in their contents (see the Ayn-i Salṭân of Feridun Bey, l. 374 sqq.), which often resulted in the immediate slaughter of their bearers. At the same time he had turned to ‘Ulla’d Khaan, prince of the Uzbeks, to incite him to war against the Shah. The Turkish army marched by Konya, Kaisarîye, (where ‘Ali al-Dawla of the Dhu ’l-Kadr dynasty showed little enthusiasm to assist the expedition) and Stara, while the fleet went to Trebizond with the commission. After Erzincan the Janissaries began to murmur at the length of the campaign, but Selim restored his authority with a few executions. The Şah’s army was not met till the plain of Châlîrûn (q.v.) between Lake Urmia and Tabriz. Here on Ra’dar 2, 920 (August 23, 1514), the Persian army was utterly routed by the Ottoman, mainly through the latter’s superiority in artillery. Iskander fled, leaving the whole of his harem in the hands of the victor. On September 5, Selim entered Tabriz. He left it by the 33rd carrying off vast treasures and several hundred captives, to spend the winter at Kara-Bâgh, but the opposition of the Janissaries forced him to resume the road to Anatolia. He went via Kara and Biahurst, where Bityûk Muhammad Pây was already been left with a force. Selim himself went into winter quarters at Amasia; the Janissaries, who had begun to mutiny once more owing to the shortage of food, were sent to Constantinople. These disorders resulted in the dismissal of the Grand Vizier and the raising to the office of Khaan Sinan Pasha, Beylerbey of Anatolia (October, 1514). During the same year the sandjak of Semendere had driven back a Hungarian invasion near Belgrade.

The year 1515 was marked by the conquest of eastern Anatolia and Kurdiân. Selim, who had assumed the title of Şah after his victory (according to the coins), went invasion to Kumaq or Kemâk (q.v.) which he took in May and then returned to Stûsâ. From here he sent the new Grand Vizier against the aged ‘Ali al-Dawla, lord of the Dhu ’l-Kadr (q.v.). Selim had previously, in the autumn of 1514, invested ‘Ali Beg, nephew of ‘Ali al-Dawla, with the sandjak of Kaisarîye and ‘Ali had defeated and killed Salâlan, son of ‘Ali al-Dawla. On June 12, 1515, Sinan Pasha defeated the Dhu ’l-Kadr army in the plain of Göksâm. ‘Ali al-Dawla was killed and his four sons captured and executed. The conquest of the land of the Dhu ’l-Kadr, including the fortresses of Alibistan and Marrb, was one of the causes of the war with the Sultan of Egypt, who had been recognised as suzerain of this dynasty. Selim then returned to Constantinople, which he reached on
July 17; there he had executed several high officials accused of having incited the rebellion of the Janissaries, including the Költ "Asker and the poet Dja'far Çelâbi [q.v.]. In August a great fire destroyed a part of the capital and was followed by more executions.

During the battle of Çaldîrân, the Beggars of Kurdiyan [q.v.], the population of which was for the most part Sunni, declared for Selim; the inhabitants of Dîyar Bakr and other towns had opened their gates to the Turks, but the citadel of several towns (e.g. Mârdîn) were still occupied by Persian garrisons. Bîylîk Muhammed, who had been appointed Beylerbeey of Dîyar Bakr, had been given military control of the country and the historian Idris Bitlîs, himself a Kurd, had been appointed to assist him as high commissioner for civil administration. In the beginning of 1513, however, the Persian general Kara Khatîn, brother of the former governor of Dîyar Bakr, Usâdji Ogghi killed at Çaldîrân, went to send to the country. He besieged Dîyar Bakr, but was forced by Bîylîk Muhammed to raise the siege in October, 1514.

At the beginning of 1516, Kara Khatîn was defeated a second time near Koc Hisar between Urfa and Nisîbin by Muhammad and the Kurdish Bega, a battle in which Kara Khatîn himself was killed. In this way the towns of Karpîç, Mâyîyîfârîkîn, Bitlîs, Hûn Kaftî, Dîyar Bakr, Urfa, Mârdîn, Dja'îtsa and the lands farther south as far as Rakka and Mawjîll fell into Ottoman hands, the conquest being completed in the reign of Selimîn 1.

In the capital, Selim had been busy with the construction of a new fleet and arsenal under the direction of Piri Paşa, while he had reorganised the corps of Janissaries so as to secure a more effective control over the higher ranks of this turbulent soldiery. These were the preparations for a new expedition against Persia. The Sultan left Constantinople on June 5, 1516, and went first to Konya, Sinîn Paşa, who had been appointed commander-in-chief was awaiting him at Alîbâistan. In the meanwhile, the Sultan of Egypt, Kânsîn al-Ghûrî [q.v.], disturbed by Selim's annexation of the lands of the Dhu l-Kadr, had left his capital on May 18 with a large army with the object of supporting Shâh Ismaiîl and retaking Marasc. Selim, having learned of the arrival of Kânsîn at Aleppo (August, 1516), was the first to send ambassadors. The latter were not at first well received, but returned with an offer of mediation in the war with Ismaiîl. Selim did not accept the proposal; on the contrary, he sent back with contumely an envoy of the Sultan of Egypt after executing his companions. In the end Selim set off via Al Timâk, capturing towns like Malatîya on his line of march. He met the Egyptian army on the field of Dîbâk [q.v.], north of Aleppo. On August 24 (on the date see Selim, vi, 386, note 4) the Egyptians were completely routed in a short battle; their defeat was due to dissensions among their troops and to the superiority of the Ottoman artillery. Kânsîn himself fell either in or after the battle. Yüms Paşa had been sent by Selim against Kânsîn Beg, governor (malik al-tama'arâ') of Aleppo; the latter surrendered the town to the Ottomans without striking a blow. Selim encamped for eighteen days on the Kôk Mâdîn, near Aleppo, and then resumed his march via Hamsî and Hims to Damascus, which the Manlik-Bega had abandoned on September 22. Damascus was surrendered by negotiation with the traitor Kâhîr Beg and he occupied the town on the 26th. Selim stayed about two months here and ordered among other edifices a mosque to be built over the tomb of Mûhîyî al-Dîn b. al-Ârâfî. On October 22, the Manlikâs in Cairo had chosen the new Sultan, Tûmân Bîly. Selim sent him two envoys to offer him his weight in gold and silver, and to the Sultan of Egypt recognized Ottoman suzerainty. The two ambassadors were put to death, much against the wish of Tûmân Bîly, which rendered inevitable the continuation of the war. The Egyptian army left Cairo towards the end of October, under the command of Djâangerî Ghazîlî. They met the Ottoman vanguard under Sinîn Paşa near Ghazrân and were defeated. Selim had left Damascus in December; before rejoining the army at Ghazrân, he made a pilgrimage to Jerusalem. The decisive battle was fought on January 22, 1517, at Rîdânîya near Cairo, after the Ottoman army had crossed the desert in thirteen days. The defeat which the Egyptians suffered there is attributed to the treachery of Djâangerî Ghazîlî, according to an arrangement with Kâhîr Beg, who was in Selim's army; they are said by a ruse to have immobilised the Egyptian artillery, which was served by Europeans. The two Sultanîns took part in the battle in person. Tûmân Bîly slew the Grand Vizier Sinîn, believing he was Selim. Sinîn's office was filled by the appointment of Yûmus Paşa. By the battle of Rîdânîya, the fate of Cairo was decided; although Tûmân Bîly succeeded in regaining the city five days later he was driven from it on January 30, after desperate and bloody fighting in the streets followed by the execution of eight hundred Manlik Bega and a general massacre. After the definite occupation of Cairo, Selim, who had pitched his camp on the island of Bûlîk, confirmed the war with Tûmân Bîli. The latter had retired to the Delta and endeavoured to resist with the help of the Rednîns. But after another defeat at Djâkî, his allies betrayed him and handed him over to the Turks. Selim at first treated him with consideration, but in the end yielded to the pressure of Kâhîr Beg and Ghazîlî and ordered his execution on April 12 or 13 (cf. the article Tûmân Bîly).

Selim, being recognised as undisputed master of Egypt, remained a month in Cairo. Among the numerous embassies which came to pay him homage, one of the most important was that of the Sharif of Mecca, Barakât, who sent a deputation led by his own son, Abû Numâyi Muhammed, then aged twelve, which was received by the Sultan towards the end of May. The Sharif, who had not much reason to speak highly of the Manlik Sultanîn, readily submitted to the Ottoman Sultan, who had already, during his stay in Damascus, showed his solicitude for the holy places. Barakât declared himself ready to insert the name of Selim in the kânsîyah. Abû Numâyi returned with rich gifts and in December following (Dhu l-Ridâ, 923) the pilgrim caravan (turîc-i humâyûn), sent by Selim from Damascus, carried for the first time a covering for the Ka'ba as a gift from the Ottoman Sultan. From this time onwards that Ottoman Sultan bore the title of Kâhîm al-Haramân al-Sharîfatîn which has given them such a great prestige in the Muslim and Christian world. Selim, however, in spite of his solicitude for the sacred places, took care to take with him to Constantinople as hostages several Hâyât notables resident in Cairo.
Another important delegation consisted of the two ambassadors from Venice, who came to negotiate regarding the payment of the tribute for the island of Cyprus hitherto paid to the Sultan of Egypt. They had, besides, to defend their city from the charge of being a nest of pirates against the Ottomans. Their ancient privileges were confirmed by a document of September 8, 1517. There is, however, in existence an Arabic document by which Selim confirmed as early as February 16, 1517, to the Venetian consul in Alexandria the privileges enjoyed by the Venetians (B. Moritz, Ein Firman des Sultans Selim I. für die Venetianer, in the Festschrift Sachau, p. 422 sqq.).

Among the monuments of Cairo, Selim paid most attention to the Nilometer, the mīyāţā on the island of Rawḍa (cf. the article CAIRO, § 4). He had a pavilion built there which was his favourite abode during his stay in Cairo. Towards the end of May, he undertook a journey to Alexandria to visit his fleet which had arrived there under Piri Paşa and returned to Cairo on June 12 to remain another three months there. He left the city on September 10, leaving Khârî Beg, governor of Egypt (but he had sent his harem and children as hostages to Fillîse) and arrived in Damascus on October 8. The main reason for his return was the discontent in the army. He left Egypt without having been able to do much reorganisation there during his stay. Although, according to the Ottoman historians, "true justice" was introduced there (Rustem Paşa), the numerous abuses had not been diminished; İdris Bitlisî, who had dared to call the Sultan's attention to them, was sentenced to death with the fleet. Yûnis Paşa, the new Grand Vizier, was no more pleased with the expedition; the Sultan had already removed him from the government of Egypt; then Khârî Beg aroused the Sultan's suspicions of him, which led to his sudden execution on September 19 in the desert near Ghassû. His successor was Piri Paşa. Selim spent the winter in Damascus and resumed his journey in February, 1518, having appointed Dânebreddī Ghâzî as governor of Syria. He spent a further two months in Aleppo, from where Piri Paşa made an expedition against the Kâtib Bash, and returned to Constantinople on July 25 and went on to Adrianople on August 4. His son Soleimân, who had taken his place in his absence, was sent as governor to Sarukhân.

Among the notable personages whom Selim had sent as Egyptian hostages to the capital was al-Mutawakkil, the last of the "Abbasid" Caliphs at the court of the Manduks in Cairo. He had accompanied Kânsht to Aleppo along with three of the chief Khânts of Egypt and was made prisoner after the battle of Ğâlı. Treated with great consideration by Selim, he accompanied the latter to Egypt, where during his absence his place had been taken by his father and predecessor at the institution of Tâmân Bâ, Selim had endeavoured on an earlier occasion to make use of the authority of the Caliph in his negotiations with Tâmân Bâ, but without success. In June, 1517, al-Mutawakkil had to leave Cairo and seems to have been sent by sea to Constantinople. Here his conduct is said to have decided the Sultan to imprison him in the castle of Yedî Kule, where he remained till the death of Selim, after which he returned to Cairo at some time not now exactly known. These details regarding the Caliph al-Mutawakkil are only given by the Egyptian historian Ibn Iyâs, who probably much exaggerates the part played by him in the Egyptian campaign, while the Ottoman chroniclers do not say a single word about him. It may be concluded from this that the importance of the "Abbasid" caliphate and Caliph had become insignificant by the time of Selim I and existed practically only for theologians. These early and almost contemporary sources show no case guarantee the authenticity of the tradition which appeared two and a half centuries later, according to which al-Mutawakkil formally renounced the caliphate in favour of Selim. It seems that this story was first given in d'Ohsson's Tableau général de l'Empire Ottoman, Paris 1788, i. 272 and 270. It is afterwards found in several Ottoman historians and thus became an article of general belief in Turkey. It is obvious that this story is intended to justify the claim of the Ottoman sultans to the caliphate, but it is unnecessary to assume that d'Ohsson invented it, as Barthold thinks, for the tradition seems in every way worthy of the great conqueror and may have been originated by the Turks themselves. Selim in any case had been called Caliph even before the conquest of Egypt; the historians say on several occasions (kâbsa) of the caliphate without pronouncing his name in different places. Cf. also the article KHALILA.

Selim's successes made a deep impression on the Christian world. The Pope Leo endeavoured to enlist the Emperor and the kings of France and England in common action against the Turks. But Selim's relations with Europe remained peaceful during the next few years; the truce with Hungary was continued and a Spanish envoy obtained the confirmation of the privileges of the Church of the Holy Sepulchre in Jerusalem. The Sultan also recognised the new Khan of the Crimons, his brother-in-law Muhammad Girî, son of Mengli Girî. The Grand Vizier was sent to the eastern frontier to defend the empire against the Persians. During this time two new Shi'a risings had to be put down; that of Ibn Hanâsh in Syria in 1517, which was suppressed by the governor Ghâzî and the Beys of Tripoli and Hamâ, and that of a certain Shâh Weli (according to Lutf Paşa) at Târkhân near Tâkht. He and his followers are called Djelâlî, a name found in several Shi'a risings, e.g. that of Kârâ Yâsilî (q.v.). Ferhâd Paşa was sent against this Djelâlî, but it was 'Ali Shâhuwâr-Qâhsî, who had been appointed in 1516 governor of the country of Dhu'l-Kadr, who finally defeated and slew him in 1518.

In 1519 Selim left Adrianople for Constantinople, where the equipment of a great fleet was begun, intended for the conquest of the island of Rhodes, but before the preparations were finished he died suddenly on Şawwâl 7, 926 (September 20, 520). He was on the way from the capital to Adrianople when he fell ill, signs of which had shown themselves a few days before (a superstition called abîn cêmsî; according to others it was cancer) forced him to stop near Corfu; the father of the historian Sel'd al-Dûn, Hassan Dînân, was present at his death-bed. His death was kept secret by the viziers until the new Sultan Soleimân reached Constantinople. The body was buried on the hill on the northwest side of Sambuli; Soleimân had the mosque of Selim I built there, to which the türbe was joined; it was completed in Muharram, 939. The türbe also covers the tombs of the mother
of Selim, of several of his daughters and of several princes (Hafiz Husain al-Awamieryk, Hadiyat al-Djedouwet, I., 14 sq.).

The personality of Selim I dominates all the great events of his reign. His unravelling severity and the numerous executions which he ordered earned him the name of Yavuz, expressing at once horror and admiration. It is the latter sentence that has prevailed regarding him. A whole series of histories are devoted specially to him with the title of Selim-name (see Gesch. d. osm. Reiches, vol. ii., p. xii.). Selim I has been made a national hero (one of the two German warships which the Turks acquired in 1914 was baptised Yavuz Sultan Selim). Just as his vast conquests of Muslim lands have given rise to the tradition of the transfer of the caliphate, so there has been attributed to him the deliberate pan-Islamic idea of unifying all the lands of Islam under his sceptre and in this way an attempt has been made to excuse his apparent cruelty (cf., for example, Yavar Vakil Safi al-Din Selim we-It-taşk-ı İslam Sûyeti by Yaûf Kenân, printed at Constantinople n. d., but since the revolution). In reality the conquered lands had at the beginning of the sixteenth century just entered on a period of decline and depopulation as a result of the change by the Portuguese of the trade route with the Indies. The conquests were nevertheless of enormous importance for the religious and political orientation of the Turkish empire, which henceforth became the great Sunni power in opposition to Shi'i Persia (cf. e.g. the kâfiû addressed to him by the poet Khâwîn Isfahânî in Browne, A Literary History of Persia in Modern Times, Cambridge 1924, p. 78). It is also from this time that Persian Shi'i influence in Turkey definitely gives way to Arab Sunni influence (Bâking, Z. D. M. G., lxxvi. 143). The Ottomans, besides, imposed several of their manners and customs on the conquered, such as the practice of shaving the beard (Selim is always represented beardless) and the style of dress and mode of dressing the hair, without, however, exerting a greater influence for the moment on the civilisation of Syria and Egypt.

Selim is equally celebrated as a poet. His Divânî is entirely in Persian and was printed in Constantinople 1506. It was again published in Berlin in 1904 by Paul Horn, by order of the Emperor Wilhelm II. Only a single one of the verses in Turkish attributed to him is regarded as authentic (Tâhirî-i Lutfi, Constantinople 1544, p. 57 sqq.). From his early days in Trebizond, Selim was fond of the society of poets; among the better known of these are Dâfîr Câlebi, whom he married the wife of Shâh Isâmî, taken prisoner in the battle of Câfîrân, and whom he had executed in 1515 (cf. above), Ahtî and Rewânî, whose Muqâmât Zawi‘î was dedicated to Selim; other influential men of this time were Kemâtî Pasha Zâde [q. v.], and the Muhaîr ‘Ali Dîmânî Efendi [q. v.], who legalised by a fatwa the war against the Senî Sultan of Egypt and who was one of the few men powerful enough to oppose on several occasions the execution of the Sultan’s sanguinary orders.

hand over the prince and his four sons to Selim (so as not to break the oath by which he had sworn to Bayazid not to deliver him up to his father). As a result, Bayazid was put to death on September 5, 1561. Selim remained in his sandjak until the day when a messenger from the Grand Vizier, Muhammad Şeyhülislam Paşa, informed him of the death of Suleiman (September 6, 1566) and the taking of Sziget (September 8). Reaching the capital on September 24, where no one had expected him, the death of the Sultan being still kept secret, the new Sultan set out two days later for Belgrade. Here he awaited the return of Şeyhülislam with the army and his father's body. When on October 24 the death of Suleiman was finally made public, Selim refused to receive the solemn hezârı of the troops and had distributed among them accession presents which were thought insufficient. They then returned to the capital. Suleiman's body was sent in advance with a small escort and buried in Constantinople without any ceremony. By the time Selim reached the capital in the early days of December, the Janissaries began to mutiny near the Adrianople gate and would not allow the new Sultan to enter his serail until the increase in the accession presents they demanded had been promised them. The distribution took place on December 10. Besides the Janissaries, the "ülüemî" and notably the Mufti Abu l-Su'ud, Lala Muşafar commanded the expedition; he took Nicosia on September 9, 1570, and forced Famagusta to capitulate on August 1, 1571. After this capitulation took place the horrible execution of the commander Bragadin. (The conquest of Cyprus is described in a Turkish Höyri; see Flügel's Catalogue, l. 236, No. 1015). In the same year an alliance was formed by Venice, Spain and the Pope. Their combined fleets almost completely destroyed the Turkish fleet in the Gulf of Lepanto (October 7, 1571), but this defeat was not enough to weaken Turkey; a new fleet was built during the winter and by the peace of March 7, 1573, Venice had to give up Cyprus and promise to pay a war indemnity. The war with Spain was continued. The Spaniards occupied Tunis in 1574, but were driven out again in September, 1574, by Köçü Sinan Paşa. During the same period (1572—1574) there were troubles with Poland in Moldavia on account of the pretender Iovian; the latter at first supported by the Turks was in the end defeated and killed by them in June, 1574. Peace was renewed with Austria in November, 1574, in spite of the troubles on the frontier and the intrigues of the claimants for the throne of Transylvania.

Selim died in the night of December 12/13, 1574 (Shaban 37/38, 982), as the result of an accident in the palace. He left his Ottoman Sultan to spend his life in the Serail, where the Sultan Nür Bânu was all powerful. His fondness for wine gained him the name of Mest Sultan Selim. During his reign dissipated habits spread even among high "ulema". The system of bribery and corruption, which had begun under Rustem Paşa, penetrated to all ranks of society. But the traditions of the reign of Suleiman were still able to maintain the empire at the height of its glory under the direction of capable men like Şeyhülislam and Abu l-Su'ud. The Sultan must have been put into force, especially in all that concerned the disposition of landed property and the fiefs (cf. Milit Tetcobular Medjmu'â, 1574, vol. i., No. 1 and 2).

Selim II's most famous building is the Selâmîye mosque in Adrianople, built from 1567 to 1574 by the architect Siana (detailed description in vol. iii. of the Siyâsât-nâmâ of Ewliya Çelebi). He also carried out various buildings and repairs in Adrianople, Navarino, Mekka (see C. Snouck Hurgronje, Mekka, l. 16) and Constantinople (Ayâ Sofâ). According to Gibb, he is the best poet among the Ottoman Selâns. He wrote his poems under the nom de Selim and surrounded himself with poets, such as Faqîr [q.v.]; Bâki also enjoyed his favour.

(I. H. KAMERS)

SELIM III, the twenty-eighth Sultan of the
Ottoman Empire, reigned from 1205 (1789)
to 1222 (1807). He was born on Djanād 12, 1175
(Dec. 24, 1761), a son of Sultan Mustafa III and the Wulīde Sultan Mīhr-Shāh (d. 1805; see Siğilītī Othmānī, i. 83) and succeeded on Radjab 11, 1203 (Apr. 7, 1889), to his uncle 'Abd al-
Hamīd I [q. v.], who had died on that day. Selim's reign is characterised by disastrous wars against the European powers and revolts in the interior, showing the weakness of the Ottoman Empire, and at the same time by the continuous efforts of the Sultan and a party of enlightened men to reorganise the old decayed institutions of the state, which led finally to his deposition.

On his accession to the throne he energetically continued the war against Russia and Austria, but the Turks were beaten in Moldavia by Focani by the Austrians (Aug. 1, 1789) and especially at Martinescu on the river Băza in Wallachia by the Austrians and Russians (Sept. 22) Here the Grand Vizier Dženâzeh Hasan Pasha (who had previously replaced Köstāt Yūsuf Pasha) died and was succeeded by the famous Kapdana Pasha Dženâzeh Hasan [q. v.]. On Nov. 10, the Austrians occupied București, while, on October 8, Belgrad had already fallen into their power. At the same time the Russians under Potemkin continued their conquests in Bessarabia (Khotin and Oznakov had fallen already) and took Bender (Nov. 15). The treaty with Sweden (July 11) to subdivide this country in the war with Russia was of little avail, and Selim, being prevented by tradition from joining the army himself, summoned in a Khāfīr shortly all the Muslims to the holy war. Next year the Austrian danger lessened, especially after a treaty of alliance with Prussia (Jan. 31, 1790) and the death of Joseph II. In June the Turks even gained some success against them. After Prussia had concluded with Austria the Convention of Reichenbach on July 31, in which Austria promised to make peace with Turkey and both nations undertook to guarantee the integrity of that empire, an armistice was concluded at Džen-
dżew (Sept. 17), followed, after very long nego-
tiations, by the peace of Zistowa (to the West of Rusçuk on the Danube) of Aug. 4, 1791.
This treaty, concluded by the mediation of Prussia, England and Holland, restored the Danube principalities to the Porte; only Old-Orsou was had to be ceded to Austria. The war with Russia had been disastrous in 1790. The new Grand Vizier
died in March and was succeeded by Hasan Paşa Sherif [q. v.], who was not able to stop the Russian advance in Bessarabia. The Russians took Kilia in Oct. and, after a desperate struggle, Ismā'īl [q. v.] on Dec. 22. They were also successful in the Black Sea and beyond the Kūbān river, though they did not succeed in taking Anapa. Moreover, Sweden had concluded peace with Russia (Aug. 14). In the Aegean, however, the small Greek fleet commanded by Lambro Cazzani and equipped at Triest with Russian aid, was destroyed by the Turks. In February, 1791, the Grand Vizier was executed, by order of the Sultān, in his camp at Şumila and replaced by Köstāt Yūsuf Pasha who made energetic preparations to continue the war. But the Russians under Repnin crossed the Danube at Galatz and beat the Turks completely at Matchin (April 9). As spirits in Constantinople had sunk very low, and there had been a big fire, the Porte ordered the Grand Vizier to propose an armistice, which was concluded at Galatz on August 11 and followed by the peace treaty of Jassy of January 9, 1792. In its 13 articles the treaty of Kızık Kaimardjī was renewed; in the West the Dniestr became the frontier between the two powers, whereas in the east the Porte undertook to bridle the Tartar tribes on the left bank of the Kūbān; the Crimea was definitely lost to the Turkish Empire.

Immediately after the war the Sultan took up the question of the reforms which he considered inevitable to restore the strength of his Empire. In the beginning of his reign he had already made an attempt in this direction by insisting on the application of the sanmār laws (on them see e. g. Meljmed (Chilib, Selim Şehbūn cîcī̧n ‘otusun imāmīn, in T.O.E.M., N°. 8, p. 500—504). Soon afterwards he invited a number of prominent and enlightened personalities belonging to the army, the administration and the 'ulamā to submit to him schemes of reform. All the projects were sent to the palace, and, as it seems, treated in a way which gave the anti-reform party the opportunity of turning them into ridicule and beginning its never ceasing propaganda against them (Dżewdet, Tērīh, vi., vii., here all the people who present a Lămîr are mentioned). The Sultan, however, proceeded with energy. The Dżenâzeh was enlarged to a body of about 40 members under the chairmanship of the Grand Vizier or the Mufti, according to the matters to be treated. The new regulations which were elaborated successively were called Şībūn—mnāšt or nişmāšt and the total of Sultan Selim's reforms is known as nişmāšt-i şefēd, which, word, however, is also especially employed for the new regular troops. One of the first measures was the foundation of a new treasury (trat-i şefēd) for the cost of the new institutions. It was formed by all available revenues and especially by confiscating a large amount of fiefs, the titularies of which had not fulfilled their military obligations (mahlīl alam ʿalāmāt wa-iṣnāḥārī; a special regulation for the investigating of these fiefs was made. By these and other reforms the financial base of the in-
ventions increased steadily. The first corps of regular army were formed from the Bostandji's new regular troops was formed from the Bostandji's new regular troops were destined for the protection of the Black Sea at the village of Belgrad Köy, where at that time a Russian invasion was feared. Large barrack was built for them at Lewend Cīfīlks,
where they were drilled, though it proved difficult to get volunteers. This first attempt was followed by a still larger establishment at Skutarı, where around the enormous Selimye barracks almost a new town with mosques and baths was created for the new troops. Other regulations concerned the provisioning of the army, the restoring of discipline among the Janissaries, the reorganisation of the Djebedji-corps and the artillery; to the reorganisation of this arm the French contributed considerably. Bonaparte is said to have had in 1794 the intention to put himself at the head of the Turkish artillery, and in 1796 the French ambassador Dubayet even brought with him to Constantinople a mounted artillery brigade. The reforming activity extended also to the improvement of the Bosporus fortifications, the building of new warships under the energetic direction of the Kapudan Paşa Kükçük Hüseîn [q. v.], Selim's foster-brother, the manufacture of gun-powder and the instruction of the officers. The engineering-school at Südülde in the harbour of Constantinople, founded under Abd al-Hamîd I, was also completely reorganised under French and English direction. Although a new navigation school was opened. Although the unfortunate experiences of the last wars made the people comply with all those innovations, there was, of course, a strong party opposed to them, consisting chiefly of the Janissaries and the adînîs, the more enlightened of whom, however, supported the reforms. As a measure of precaution not too many new troops were stationed on the European side of the Bosporus. It is a remarkable fact that, as the reforms proceeded, there was much less opposition to them in Asia than in Europe, where rebellious chiefs took them as a pretext for their taking arms against the government.

The peaceful period from 1792 to 1798 had made possible the taking of all these measures; even the two formidable rebels in Europe, Parzân-Oghlu [q. v.], who in 1792 had entrenched himself in Widdin, and 'Ali Paşa Tepedjenli [q. v.], who had become Paşa of Yanina in 1788 and failed in 1794 in his first expedition against the Suliotes, were comparatively quiet; Servia enjoyed the generous administration of the Paşa's Ebû Bekir and Hâsdijî Mustafa. During this time the Porte paid much attention to her relations with foreign powers; new ambassadors were sent to the European courts and in Constantinople a great diplomatic activity was displayed by the Re's Efendi Rasûl (d. 1798). The international situation became more and more influenced by the French Revolution. Although the execution of Louis XVI made a bad impression, especially on Selim, who had, even before his accession, been in correspondence with him, the emissaries of the revolutionary government (Descosse) succeeded in arousing sympathy, even in the İmâmut, they pointed, for instance, to the fact that, now that France had instituted the "culte de la raison," they were no more in religious opposition to the Muslims. They had influential helpers in Constantinople, e.g. the well-known Mounadze d'Olsnen, then Swedish dragoman, and from 1796 to 1799 Swedish minister, and had nearly induced Turkey to declare war to Russia.

The situation was completely changed by the French expedition against Egypt. In vain the French representative in Constantinople, Ruffin, tried to tranquillise the Porte about the peaceful intentions of his government; on September 4, 1798, war was declared on France and Ruffin was imprisoned, as were also the French consul and merchants. For the operations of the French in Egypt (they landed on July 1, 1798, after having taken Malta) see the article KÜLDİ; the action of Turkey was here much less important and much slower than that of England. On January 5, 1799, the Porte concluded an alliance with England and the first Turkish troops landed on July 25 in Abūkir, but they were compelled by Bonaparte to retreat to their fleet, after the French army had just returned from the siege of 'Akka, where Djazzâr Paşa in defending the town had shown himself for the time a faithful vassal of the Sultan. In the last part of that year a Turkish army of 80,000 men commanded by Dîyâ Yülsen Paşa, Grand Vizier since 1798 (Kodja Vâsi Paşa had been replaced already in June, 1792, by Melik Muhammed Paşa, to whom after 2½ years had succeeded Íşzet Muhammed Paşa), and containing about 4000 men of new regular troops had reached Syria where it was joined by Djazzâr's troops. The Turks took the little port of al-Attish on December 20 and at the same place the Grand Vizier concluded an armistice with General Kleber on January 28, 1800, in which the French promised to evacuate Egypt. But after the treaty had been broken by the English, Kleber attacked the Grand Vizier, who was advancing to Cairo, and defeated the Turkish army near the ruins of Heliopolis (March 20) after which the Turks retreated into the desert. Only a year afterwards, in March, 1801, the Turks participated again in the Egyptian campaign under the Kapudan Paşa Kükçük Hüseîn; this expedition resulted in the definitive evacuation of the country by the French and the occupation by British troops of Egypt. Turkey's other ally in this war was Russia. After a Russian fleet had already appeared in the Bosporus in September, 1798, an alliance treaty was concluded on December 23. The combined Turkish and Russian fleets then went to the west coast of Greece and expelled, in March 1799, the French from the Ionian Isles, which former possession of Venice had been left to France by Austria in the peace of Campo Formio (October 17, 1797). The Ionian Isles then were constituted a republic under protection of Turkey and Russia. In the meantime 'Ali Paşa of Yanina succeeded in occupying temporarily some sea-ports in Albania. Notwithstanding the Russian alliance, the relations with Russia remained strained. By the mediation of Prussia a preliminary peace was concluded with France in Paris on October 9, 1801, in which the complete sovereignty of Egypt over Egypt was recognised, as well as the new republic of the seven Ionian Isles; for the ratification of these preliminaries the famous Sebastiani was sent for the first time to Constantinople on an extraordinary mission. To the peace treaty of Amiens, where the same stipulations were confirmed (March 27, 1802), the Porte was no party; she concluded in June a separate peace with France. In the meantime the Grand Vizier and the Kapudan Paşa tried to restore order in Egypt by exterminating the great Mamlûk Baysa. As the latter were protected by the British, they did not succeed and in December returned to Constantinople leaving Khosrew Paşa as governor in Cairo; the evacuation by the English troops only followed in 1803, after on January 9 of that year an agreement had
been reached at Constantinople between the ambassador Lord Elgin and the Reis Efendi, in which the Porte pledged itself to pardon the Moslems.

The situation in the interior had been equally unsettled in these eventful years. Since the peace of Jassy bandit chiefs (Oṭūmān Paşa) had been terrorising Rumelia; they were patronised by influential people in Constantinople, enemies of the reforms, especially by Yâsun Ağa chief squerry of the Wâlide Seljûq. In 1797 Parşvân-Oğlu had taken possession of a large part of Bulgaria and, when an expedition against him under the Kapudan Paşa Hussein failed, the Porte had to comply with his claims and recognised him as Paşa with three nişâms. But soon afterwards Parşvân-Oğlu, who was protected by Austria, invaded Wallachia. (1801). The Porte then tried to restore order by appointing Ali Paşa of Yanın Beylerbey of Rumelia (1803); but in vain. The latter was suspected of having an understanding with Parşvân-Oğlu and was deposed again. In December, 1803, he then exterminated the little people of the Suliotes. In combating the Rumelian rebels that year the Porte derived great advantage from the use of the new nişâm-troops. Parşvân-Oğlu’s invasion of Wallachia gave Russia the opportunity of intervention in the Danube principalities. Under Russian pressure the Porte consented to a revision of the former settlements, which increased the autonomy of the principalities, and appointed Ypsilanti as heşzdar of Wallachia and Muruzi as heşzdar of Moldavia, both for seven years (1803).

In 1803 difficulties arose in Servia [q.v.] occasioned by invasions of Parşvân-Oğlu and the return of the Janissary chiefs or dâyîs, who had been expelled after the war with Austria. These troubles resulted in the rising of the Knezes under the famous Kara Georg in 1804. Neither Turkish troops nor the diplomacy of the Porte were able to subjugate the Servians in the next years; they had since 1805 their own constitution and were masters of the citadel of Belgrad since Dec. 12, 1806. In the same year 1803 Mecca fell into the power of the Wahhâbes (April 30), after nearly the whole of the Arabian peninsula had already recognised the authority of their chief ‘Abd al-‘Azîz (cf. R. Hartmann in the Z.D.M.G., 1924, p. 195). In the same year also Muḥammad ‘Ali [q.v.] came to the front for the first time who, after having broken the resistance of the Mamlûk Bey Bardîsî, was appointed in 1804 governor of Egypt.

After the May 1803, the war had broken out again between France and England, the Porte had decided to maintain a strictly neutral attitude, but she was put in a difficult position by France’s demand that she should recognise Nâpoleon as Emperor, from which, however, Russia's menaces withheld her. A personal letter of Napoleon to Selim was of no avail. Only in 1806, after in 1805 the alliance with Russia had been renewed, recognition followed. In 1805 General Sebastián had come as Napoleon’s ambassador to Constantinople and finally French influence prevailed. The Porte went so far as to depose the two resolute hospodars of Wallachia and Moldavia; the Cnr then ordered General Michelson to occupy the two principalities. Notwithstanding the resistance of Parşvân-Oğlu and Muṣṭafâ Shairşâd, the Paşa of Rusulâ, this order was completely executed in December, 1806. Under the influence of anti-Russian manifestations in Constantinople and Sebastián’s pressure war was declared on Russia (Dec. 31). Next month England came with exaggerated claims, e.g. the departure of Sebastián, enforced by the presence of the British fleet at Tenedos. When the Porte refused to accept, Admiral Duckworth entered the Dardanelles, scarcely meeting any resistance, and appeared on February 10, 1807, before the capital. After a moment of consternation, in which the Kapudan Paşa was executed, the defence of Constantinople was organised under the direction of Sebastián and French officers (Juchereau de St. Denis). As the British shrank from the responsibility of bombarding the town, they retired again, after fruitless negotiations, on March 4, and reached Tenedos with considerable losses. Immediately afterwards Turkey declared war on England. The English were no more successful in Egypt. Though an English fleet occupied Alexandria on March 17, they were beaten everywhere by Muhammad ‘Ali and had to evacuate the country in September.

In the meantime the interior political situation had passed through a grave crisis. After 1802 the reforms had been taken up again and in March, 1805, a Khaṣîf-Şerîf had ordered a general levy among the population for the nişâm-troops. This occasioned at last an open revolt of the Janissaries, who concentrated themselves in Adrianople and Kırk Kılise. They completely defeated the nişâm-troops which the government sent against them in August, 1806. The result was that the reforms had to be given up for the moment; it was due to the influence of the Muftî Süleyman Efendi [q.v.] that no worse things happened. The Grand Vizier Hâfiz İsmâ‘îl Paşa (succeeded in 1805 to Diyyâ Yâsun Paşa) was replaced by the Agha of the Janissaries, İbrahim Hilmi Paşa. The Porte did not even dare to send nişâm-troops against the Russians in Rumelia.

The successes against England had not restored the Sultan’s authority. On the contrary, the opposition had been still more alarmed by the influence of the French during the fortification of Constantinople. Though the reform party continued its work unstintingly, a plot was devised in order to depose Selim, the leaders of which were Muḥammad Paşa (so the name is given by Djedwedo; Zinkiesen and others have Musta Paşa), the Kâtip-Şehîd of the Grand Vizier Paşa (who himself had marched against the Russians), and the new Muftî Attâ‘üallah Efendi. They incited the rude auxiliary troops (called Yamaşlû), that were encamped on the Bosphorus, to rebellion. The rebellion broke out on May 15, 1807, because they refused to put on nişâm-uniforms; the leader of the rebels, Kâbiḳâli-Oğlu, pitched his headquarters at Büyük Dere. In the following days, while Muḥammad Paşa and the Muftî were calming the alarmed Sultan, the propaganda against him spread rapidly and a fortnight afterwards Kâbiḳâli went with his followers to Constantinople, provided with a list of all the notorious reform partisans. Nearly all these people were driven to the At Medîdin and killed. At this last moment the Sultan hoped to save his throne by a Khaṣîf-Şerîf abolishing the nişâm-şerîf. But his dethronement had already been decided. Next day, Râbi‘î 1 22, 1222 (May 29, 1807), the Muftî declared with regal relaxtance
to a deputation of the Yemenis that the deposition of Selim was lawful; after this, he himself went to inform Selim of the decision of the people. Selim, yielding immediately, retired and as he had no children, the elder of Sultans 'Abd al-Hamid's two sons, Mustafa, was placed on the throne as Mustafa IV [q.v.].

Selim's tragic death happened a year afterwards, when Mustafa Bairakdær [q.v.] marched with Constantinople with his own troops and those of the Grand Vizier Cælabi Musjaïf Pasha to reestablish the reforms and to restore Selim to the throne. On Dümâd 2 4, 1223 (July 28, 1808), Bairakdær entered with his troops the first court of the Seraglio, demanding Sultan Selim. Mustafa IV then ordered the execution of Selim, which had been postposed until that time, and that of his own younger brother Mahmut. Bairakdær came just too late to save the unhappy Sultan, who had been already killed when the Seraglio gates had been broken open. Then Mustafa's brother Mahmut was brought forth from his hiding place and put on the throne.

Selim III is described as a ruler of great gifts (cf. especially his methodology by Djevdet, viii. 263 sqq.). He wrote poems under the taqâbaa'lla ilhâmi and is said to have had musical talents. His seal for reform proves his high intelligence, but was checked by his inclination to occupy himself with the minutest details. He also seems to have been unable to tolerate powerfull characters in his immediate surroundings; during his 18 years' reign he had no less than ten Grand Viziers. Of the pious works he had carried out, are chiefly mentioned the silver gate for the türbe of Abh Ayyub Asref and the complete restoration of the mosque of Fethi. The greater part of his constructions were the barracks and schools for the reform projects.

SEMDKHANE, a Persian formation from the Arabic semid [q.v.] and Persian khane, the dancing hall or dancing room, i.e., the space in the monasteries devoted to the Sufi dances always held in observance by Muslim orthodox, to musâkele (moushekele) and to dâhte. Dancing and music are, as a rule, particularly associated with the Mawlawi. But the Bekkithi monasteries have also their semakhîhâma; the great old Bekkithi monastery of Seyyid-i Ghashi, for example, has three semâkhîhâma in one suite, in front of the türbe of Seyyid Bitârî. Cf. K. Wulsinger, Drei Bekkithi-Kloster-Farygmen, in die Beiträge zur Kümmernde, part 21, Berlin 1913, p. 32 and pass. Cf. also the Arabic, Persian and Turkish dictionaries. (Th. Miedel)

SEM, [see Sink].

SEMENNUD, a town in the Delta of Egypt, in the province of Gharbiya on the west branch of the Nile (Damietta arm), a railway station on the Tanja-Damietta line (11,550 inhabitants in 1884). The Arabic name is based on the Greek Saina (which gave its name to the Sennenau arm), in Coptic Senenmut and in ancient Egyptian Semennu. The ancient town was perhaps built on both sides of the river; in any case there is a little town opposite Semennud on the east bank of the Damietta arm called Mit (Minya). Semennud (4375 inhabitants in 1884), capital of a district (masâba) of the province of Dakhiliana, known from at least the sixth century A.D.

Succeeding the pagarchy of Semennutoy, the k pops of Semennud included an area not easy to define on account of the difficulty of identifying certain adjoining kâba's. It was bounded on the east by the Nile; to the south by the kâba of Banât and Busr (places which exist to this day); on the west by the kâba of al-Mi'âlah, which seems to correspond to the ancient Snawakh, even if we do not admit the phonetic relationship of the two words; and on the north by the kâba of al-Abyâd, which al-Ya'qubi identifies with al-Damia about 15 miles from Semennud. The Fâtimids and the Aybids had an independent province called Semennody, which was not much larger than the old kâba (109 villages against 105).

Semennud, which, according to a tradition preserved by Ibn Dujjat, was founded by an eponymous magician, a descendant of Lab, the son of Sam, had a temple which was destroyed about 550 (961) after having been used for a short time under Arab rule as a storehouse for fodder. It seems from a passage in the Jâchitine Synaxarium that this temple had suffered abuse before the days of Islam. Arab legends credit this temple with possessing a çokum of a dark complexion, with long hair and a short, bearded, and Maspero thinks that the Arabs were describing a statue of Osiris or Ptah, whose face was painted blue or green.

Coptic tradition records the passage of the Holy Family through Semennud during the flight into Egypt and locality a certain number of monasteries here. This town was the seat of the bishop still mentioned as late as the 16th century A.D. The town had a Coptic population which gave Egypt several Jacobite patriarchs, and Makrit, however, tells us that the principal church, dedicated to the Apostles, was in a private house.

Semennud was not on the line of march of the Arab army of invasion, which went from al-Farsa via Billis, and the Arab writers do not mention it in connection with the conquest of Egypt. John of Niki mentions that the local soldiery refused to fight the Muslims. Semennud is again mentioned in 1275 (750) on the occasion of a local revolt directed by a certain John (Yulamis), who was captured and put to death.
Semnun — Senegal

The town has been famous since the time of Yâkût for its manufacture of cotton goods. It is surrounded by a wall of clay and contains the ruins of several castles. There is also a 13th century bath (Jamiâ) and a fine minaret, of which the mosque is now a ruin in the centre of the bazaar. It is probably this mosque which is mentioned by al-Maqrizi (p. 356), although, according to Frasser, it cannot be older than the 13th century (Shar in Islam, xii. 170). At the present day the town has a fine mosque built by Fath 'Ali Shah. The population was estimated by Curzon in 1890 at under 16,000.

The dialect of Semnun, remarked upon even by Násir-i Khwarazm, has the reputation in Persia of being particularly unintelligible. Geiger (Grundriss d. iran. Phil., i. 421) connects it with the group of Caspian dialects. Christensen, who was the last to study the Semnun, reckons it among the numerous dialects of central and north-western Iran, the place of which in the general scheme cannot yet be definitely fixed.

Several traditionists and lawyers have the nisba Semnuni (Yâkût, loc. cit., and Brockelmann, G. A. L., i. 373).

(II. H. Khâmêri)
Sénégas, etc.). To this day the Moors descended from the Šanlıdjı give the lower valley of the river the name of Isongan. It is probably from the name of the province that the word "Sennal" comes. Marmol further says that Lancelot du Lac, who visited the region in 1447, gave the river the name of a kingdom within which its mouth lay.

In any case in the form Senegal the name has been applied since the xvith century to the river which flows into the Atlantic about 120 miles north of Cape Verde and to the colony founded by the French in this part of Africa. This colony, the capital of which is St. Louis on the Senegal river and near its mouth, and which includes the town of Dakar, the capital of French West Africa, measures approximately 175,000 square miles and had (in 1921) 1,225,523 inhabitants of whom 5,287 were European and 1,820,216 were natives; of the latter, 1,221,791 belong to the negro race, 19,351 to the hybrid branch of the Fulbe or Ful and 7,094 to the white race (Moors). It is bounded on the north by the course of the river Senegal from the region of St. Louis up to the confluence of the river Falémé; in the east by the latter river from its mouth up to about 12° 40' N. Lat.; in the south by a line running from the upper Falémé to the ocean at Cape Roxo, a little south of the estuary of the Casamance. Inland there is a foreign enclave formed by the British colony of Gambia which consists of the two banks of the river Gambia from Varbutenda to the sea. Geographically the two colonies are sometimes included under the composite name of "Seneegambia".

Senegal was perhaps the first of all the negro countries of Africa to succumb to the attacks of Islam. It was in a hermitage built on an island of the lower Senegal that the religious movement of the Almoravids began about 1040 A.D. and the Almoravids won over to the Muslim faith about 1050 the sovereign and principal notables of the negro kingdom of the Takur or Tokoror, which lay in the present province of Senegal. Futa and the name of which slightly altered to the form Tucolor is still employed by the French to designate the negro inhabitants of this province. It was presumably soon afterwards, towards the end of the xith century, that Islam was introduced among the Sarakole or Soninke of the province of Galam, above Futa. Much later, towards 1770, the Tucolor clan of Torehbe preached the holy war against the pagan Fulbe, then in political control of Futa, a war which ended in 1776 with the defeat of the latter, the forced conversion to Islam of a great number of them, and the establishment at Futa in the hands of the Tucolors of a Muslim theocracy with an elected government which lasted till 1860, the time of the definite annexation of Futa to the French colony of Senegal. It is from this religious centre founded by the Torehbe of the Senegal. Futa that several great campaigns of conquest and Islamisation covering a very wide field, have started, notably about 1800, that led by Uthman Fodéye which ended in the conquest of the Hausa country and the foundation of the Muslim empire of Sokoto, and about 1845 that of 'Umar Tal, called al-Hadjji 'Umar, which ended from 1854-1862 is the conquest by the Tucolors of the dominions of Kaufa and Segu, and the Mandingo kingdom ofMasina. Meanwhile Islam had spread among a considerable part of the Mandingo peoples of the upper Faleme, of the upper Gambia and the upper Casamance. At a more recent period it was over almost all the Wolof of the lower Senegal river and of the lands to the south as far as Cape Verd. The other native populations of the colony (Serer, Non, Banyan, Balant, Dyola, Basi, etc.) are still faithful to their ancestral animism and resist Islam.

The statistics divide the native population of Senegal into 719,000 Muslims, 409,300 animists and 4,700 Christians. (M. Delaporte)

SENNER, a village on the Lower Euphrates, situated 15 miles E.S.E. of Warka [q.v.] on the mound of Tell Sīfū; it is built on the ruins of an ancient Chaldae city, Larsum, the town of the god Shamash; it is in the present Ḫūdī of Samawa.

(L. Masson)

SENN is written Sinna or Sinandji (diqf = dis "castle, fort"). The form Sinha leading to confusion with Senna [q.v.] is wrong.

1. Capital of the Persian province of Kurdistān, the ancient seat of the walls of Arbilān [q.v.]. For the period before the building of the present town see the article SINAK.

Under the year 988 (1550) the Shahr-i-Māne (I.) speaks of a fleet of Timūr Khan, Ardilān, including Ḥasanshāb, Sinna, etc., but the historian of Sennas attributes to Sulaimān Khan the building of the modern town on the site where a town already there. According to Rich, i. 208, the ancient Senna (?) was built on a flat hill to the south of the present town. The Persian ārābā for the building of the latter is Ḫānū ("woes") which gives 1046 (1636).

The town lies between the right bank of the Kīlāhak and Mount Awidar which separates Senna from the old capital Ḥasanshāb. The castle of the walls crowns the hill about 70 feet high which rises in the centre of the town. The principal decorations date from the walls Khusrav Khan I. and Amān Allāh I. Malcolm, Rich and Cirikov have given descriptions of the castle. The hall of honour of Amān Allāh Khan (ātār), covered with transparent marble with numerous figures and inscriptions (dated 1233 = 1815) formerly had a gallery of pictures representing the principal sovereigns of the world (Napoleon, Alexander I.), celebrated battles, etc. Another was still in 1918 decorated with eleven portraits of walls and their visitors. A beautiful panorama is revealed from the now ruined ātār on the mountain separating the valley of the Kīlāhak ("winter grazing") from the plain of Līlāh (yaylak, "summer grazing").

The population of Senna in 1820 (Rich) was 4,500 families of whom 2,000 were Jews and 50 Chaldeans. In 1851 Cirikov counted 10,000 houses. The census of 1895 (1878) gave the figures of 5,484 houses and 24,744 inhabitants. In 1918 the number of inhabitants was about 30,000 with 500 households of Jews and 60 of Christians, Aramaic-Catholic (Chaldeans) and Armenians. There is a Turkish consulate-general at Senna. Senna is a busy centre of trade. The exporters are gall-nuts (māža), tragacanth (battra), skins of the fox, marten and wolf, cattle and carpets of a special design.
The province of Sena (Persian Kordištān in the strict sense) is bounded on the north by southern Ardabīlābād (cf. the art. SAWIDHALA), in the N.E. by Şā‘in-Ka‘a (q.v.), in the E. by Bīdār (Gareh), in the S.E. by Hamadān, in the S. by the province of Kirmānšāh and more especially by its division: Ŝūnkār, Daimawar, Bālū-Durandās, Māhidštād and Zohāb; in the E. Kurdistān of Sena is bounded by the former Turkish districts: Shahr-i Zūr (Halabeh and Karmal = Ga‘mālbar), Fendjīn and Zilbūlāt. Within these boundaries the land of Sena with the exception of Şā‘īkiz (q.v.), and Bāna, now attached to Ardabīlābād, has an area of about 75,000 square miles; except for the principal routes the province is insufficiently explored. In the N.E. and S.E. we have high plateaus devoid of trees; the centre cut up by numerous narrow valleys sloping down to the E., where we find forests (oaks, nut-trees, elms and beeches).

The main group of mountains is formed by the massif of Chīl-Čahma (about 12,000 feet); it begins in Persia at the eastern extremity of the enclave of Šūlāz which runs deeply into Persian territory. Towards the south the Chīl-Čahma sends out a prominent spur which forms the barrier of Kārān on the Senna-Mahmūn road (see below). The continuation of the Chīl-Čahma to the east forms the southern boundary of the basin of the Djaghān which turns northward towards Lake Urmīya. To the N.E. of the Chīl-Čahma is the frontier district of Haftešā with its capital Şā‘īkiz and watered by the main branch of the Djaghātūl. In the S.E. of the Chīl-Čahma are the sources of the Khordahiār, the first important tributary of the Djaghātūl on the right bank. A little below their junction the river of Tīlākū flows into the Djaghātūl; its valley is separated by the mountain Tandūrtū (?) from the next tributary which is called Sārūkhā.

In this valley there are three districts of Sena: i. Khordahiār with 8,000 inhabitants and 50 villages of which the chief are: Basī, with a mosque built in 929 (1527) and Mawlānābād; 2. Tīlākū (with the canton of Kočān), 4,240 inhabitants and 24 villages of which the best known is Bāb-hansh; 3. Karafīt on the left bank of the Sārūkhā; 4,600 inhabitants, 15 villages. The Ashfārā of Şā‘in-Ka‘a encroach upon Karafīt.

To the south of Khordahiār and Tīlākū are the northern sources of the Kīšl-Ūzn (in Kurdish Kīšl-awān) which run into the Caspian Sea. The plateau through which these waters flow is covered with snow for four months of the year but in the summer is covered with rich pasturage. Three cantons administered together and including 82 villages are situated here. 4. Kar-tawāra in the N. (village Bāb-harā); 5. Hābūtān in the S. (villages of Kelekwā and Dwandarā) and 6. Sārūkh to the east of Hūbūl. The southern bank of the Kīšl-Ūzn also has its sources in the territory of Sena but the fork between the two branches, north and south, is occupied by the basin of Kīshlak, the waters of which run eastward.

The basin of the southern sources of the Kīšl-Ūzn is situated to the S.E. of Sena on the Senna-Hamadān road. It is a large plain sloping north-east, watered by numerous streams and having an altitude of 6,200—6,600 feet. The pass of Kar-ghāb-Salawānbād (8,500 feet) separates it from Sena (3,578 feet); to the south, the pass of Mū‘īn-Muhammad separates it from the plain of Hamadān; to the east, it is bounded by the low chain of Panjā-’i ‘Abla behind which lies the district of Ŝūnkār (Songhor). This chain (‘Abla's five fingers’) corresponds to the Kūh-i Panjā Angūt mentioned in the Nuzhat al-Kullā, ed. le Strange, p. 209. To the N.E. the mountain of Talvāntu forms the frontier of Bīdār. The principal source of the south branch of the Kīšl-Ūzn is called Talvānt (Tarwā) or Arzand; its tributary from the south is called Ḥāḍidjāt (Agā-čal, "bitter water"). The Talvānt waters the district of 7. Eīlāk (Kurdl. Lēllīgh), noted for the coolness of its climate and having 80 villages with 12,000 inhabitants. The Ḥāḍidjāt waters the district of 8. Isfandībād (isfandī “lycopodiam”), 94 villages with 14,000 inhabitants; the old capital of Isfandībād is Kūkā; its present centre is Kōrkā. Khanyov visited in these regions the tomb of Bābā-Šīrūk, near which is a sulphurous spring and quarries of translucent marble (halgūn). This saint, Djamal al-Dīn, bears the same sobriquet (Persian gūr-gūr, "coming in torrents") as the well known Bābā Šīrūk of Kūrk, on whom see W. Schweer, Die türkisch-persischen Erdgasvorkommen, Hamburg 1919, p. 10.

The central part of the province is much more undulating and less well known; it is bounded on the west by the mountains forming the Persian frontier (the Avarānān chain). All the streams of this area are carried off by the river Sirwan (see the art. TURALK) which makes its way westwards by the formidable defile separating the mountains of Awarān from those of Şīlāz. Although Hausenmehrt mentions a village of Sirwan near the confluence of the Kīshlak and Gāwārd, the great river of Sirwan only has this name below the defile of Avarānān.

Two main arms form the Sirwan, one coming from the east and the other from the north. The eastern branch is called Gāwārd (Gābārūd) and rises near the pass of Aasādābād. It flows first through the lands of Şīrat (Sonqhor) and then waters the districts of Sena south of the capital. From the right the Gāwārd receives its important tributary the Kīshlak which rises in the fork between the two arms of the Kīšl-Ūzn. On the left it receives waters rising in the Murwāt, the Paflan, Gāwārd (q.v.) etc. The lower course of the Gāwārd is given on the maps as hypothetical.

In this valley there are the following districts: 9. Hausnābād on the Kīshlak above Sena, with 34 villages and 5,000 inhabitants; 10. Hausnābād with 32 villages and 5,500 inhabitants which form the immediate neighbourhood of Sena. The district takes its name from the ancient capital Hausnābād, a stronghold on a considerable height 6 miles S.E. of Sena. 11. Zāwarī with 58 villages must lie near the confluence of the Kīshlak and Gāwārd. The canton of Şīsrū with the village of Fāshlulauin (on the Kirmānshāh road) seems to belong to the same district. The 12th district, Paflan, must be farther down along with 13. A miyrābād and Bīlāvar which are said to have 35 villages with 5,000 inhabitants. Paflan has an ancient ruined stronghold in which had lived an independent chief of the tribe of Şāhīr; the chiefs of whom are given in the Skasar-nāme (l. 317—318).

The new English map places Paflan on the Gāwārd at the mouth of the river that comes from the villages of Şāhīm and Lūhon (Lūn) on the northern slopes of the Šīrīt. 15.

THE ENCYCLOPAEDIA OF ISLAM, IV.
The northern branch of the Sirwan is formed by a fan-shaped series of stream; the topography of several of them is still uncertain.

After these rivers join one another, they flow into the Gwarrīd near the village of Abbāsābād in the Awarāmān-i Takht.

Four districts lie in the northern basin of the Sirwan. 14. Kālāt-Atariin with 64 villages and 10,000 inhabitants immediately west of Senna. 15. Kōrrawār, with 20 villages and 2,500 inhabitants, may be located on the south of the Senna-Gāzān road. Lycklama praises the beauty of the landscape in this wooded district. 16. Marīwān (formerly Mihribān), an important district with 200 villages and 26,000 inhabitants which stretches east of the pass of Gūrān up to the western frontier of Persia. The great Senna-Gāzān-Pendjīn-Pallāmānā road crosses it. Its capital is occupied by Lake Zarāh; this depression in the frontier range has always been of great strategic importance. 17. Awarāmān-i Takht (the "A. plain") lies east of the chain of the same name and is immediately south of Marīwān. The northern arm of the Sirwan crosses it from north to south. It is an inaccessible district governed by its hereditary sulṭān's ("captains"). Their capital is Kāsān. The district includes 33 villages with 4,000 inhabitants. The people of A. have preserved their own particular costume from early times (Rich, op. cit., i. 202) and still use their own dialect. They are very brave but not hospitable. 18. Awarāmān-i Luḥān lies S.W. of the preceding. According to the natives, luḥān means "rocky" (cf. Vallers, op. cit., ii. 1108, luḥāna "rock"). The district has 22 little villages buried among the spurs of the mountain to the north of the defile of the Sirwan. It occupies the western face of the chain and its frontier with Turkey is much complicated. A. Luḥān is also governed by its sulṭān's, who are related to those of A. Takht and live in Nafūd. In 1699 (1659) the Turco-Persian treaty confirmed the rights of Persia to Awarāmān and Marīwān, but Persian sovereignty was only nominal. To the south of the Sirwan running N.W. to S.E. as usual with Persian mountains, lies the great massif of Shāhā (cf. Shāhā-Kūh) from which descend the hill tributaries of the Sirwan: Dāryūn, Sarābī Hāwīt watering Pāva, Lēla and the oriental sources of the Zīkānān. The important district to the north and south of the Shāhā (between the Sirwan and the district of Zohāb) is called Djawānārd and has about 100 villages with 15,000 inhabitants. It is governed by a collateral branch of the Ardīlān family. Djawānārd is the principal centre of the great Djāf tribe and its name may be explained as Djāfānārd ("the river of the Djāf"). The little canton of Pāwa dependent on Djawānārd lies opposite Awarāmān-i Luḥān. The Shāfāf-nāme (i. 319) mentions "Bāva" among the possessions of the Kāhūr-i Dariāng. Local tradition attributes the foundation of Pāwa to Bāw, surnumerous ancestor of the Bāwāndīs (cf. above, Bāwānd) and the Arabs, led by ʿAbd Allāh b. ʿUmar, are said to have entered Kurdīstān via Pāwa where there was a sacred fire.

The canton of Shādābād (in Kurd. Shālikwā) on the road from Kirmānšāh is governed from Rawānīsar. Bilāwār is on the direct Senna-Kirmānšāh road, to the south of the Murwān pass. Its waters flow into the Rāzwār river which belongs to Kirmānšāh. Its principal village in Kāmī-ī Yāna.

The population of the province, according to the census of 1298 (1881), was about 150,000 in about a thousand villages. With the exception of the district of Isfandārī, inhabited by Persian and Turkish elements and the tribes of Awarāmān belonging to a particular Iranian stock, the population is Kurdīstān.

The nomads of Senna are following the general course of evolution towards a settled or semi-settled life: in the winter they remain in their villages and in summer after the harvest (April-May) they go up to the neighbourings heights; thus, for example, the Kūrmi tribe seems to have become definitely settled at Kūrrawār.

The tribe of Dāf is the most important among those of Kurdīstān of Senna. There are about 4,000 families of Dāf on the Djawānārd which represents a total of at least 20,000 men (Kūshād, Enakāh, Kallāh, Ulad-begi sections etc.). In the xviijth century a part of the Dāf migrated to the west and gradually occupied the left bank of the Djawār, in the region of Pendjīn. Towards 1914 these Turkish Dāf numbered 10,000 families. Of this number about 2,000 are settled and 8,000 are semi-nomadic and go every year to the pastures of Persia. They go by the enclave of Shīfār by which they reach the Cihīl-Cūmān mountains where they pass the time from May to October. Another migration from Djawānārd took place about 1850 when some 150 families of the Dāf settled on the Zoḥāb under the protection of the Gūrān.

The other important tribes of Senna are the Mandu or Husainābād and their neighbours, the Gūrmānī, at Hāštā, Sarāī and Kān-tawāra. The first-named numbered 2,000 families (in 1286 A.H.) and the latter about 3,000. The two tribes are very turbulent and the central government frequently sends expeditions to punish them. Less important are the Shāhī-Ismaʿīlīs (1600 families) and the Parišk (1000) at Isfandābād. At Lālgāh ("summer pasture") we have the Tāmut-tūza (300), the Kūlā (1500), the Lēla (500), the Malkī Hāwīt (400), the Badwānd (1500) and the Dūrād (1200). A section of the two last-named tribes lends a nomadic life on the Kūshāk and the Gūrān. The tribe of Zawānd and Kālāt-Aramān we have the Kōl (1500) and at Bīlāwār the Gashīkh (1500), a very turbulent tribe. To the north-east, along the Karafteh the Bāsāk lead a nomadic life (450) and a number of tribes lead a scattered existence: the Sakūr (300), the Gīva-kash ("cobblers") and the Kāhār ("turners") and the Līru-i Kūlāghā ("hatters"). These last tribes (1700), whose names give their professions, are rather associations of workers, "travelling guilds", serving the needs of nomads and settled tribes.

In conclusion we may mention quite near Senna the village of Kūshāk occupied by the Sūrmān whose men are musicians and women dancers of rather light morals (Lycklama, iv. 53).

Religion. The great majority of the population of Kurdīstān of Senna belong to the Sunni Shāfi'
The Shakhs of the Naqshbandi religious order have many devoted followers among the Kurds; the real hereditary centre of these Shakhs is in the villages of Tawila and Biyara which form a enclave in Awraman-I Divan. Even in Senna, Lycklama (iv. 51) says he saw a Shakhs holding a seance, cured sores which his dervishes inflicted upon themselves in the course of their esoteric meeting (alhik). Shiks are only found in the non-Kurdish district of Isfandabid. It may, however, be noted that the family of walis of Ardilin professed the Shiks, which perhaps is explained by the sojourn which their ancestors had made among the Gurans who were fervent 'Ali-Ishis. The great sanctuary of the latter sect, Perdwor, is on the right bank of the Swaran at Awraman-i Lahin (above the Prdi-kuran bridge). The people of Haji-k (in the same district) claim to be descended from the seven dervishes whom the Kuska (kusa =‘beardless’), who is buried in this village, had brought with him. This saint is said to be no other than 'Abi Salih Allah, brother of the eighth Shik. According to the people of Awraman, the people of Haji-k were much later in being converted to Islam by a certain Gushahis; they still venerate the tomb of Pir Shifryan, their religious chief before they adopted Islam. A manuscript hook (in the local dialect) of his moral precepts is said to be preserved at Nafsd. The very costume of these peaceable woodcutters suggests to eminent particularities. Lycklama speaks of their bonnet in the shape of a cornet bent back behind, quite like the head-dress... of one of the personages on the bas-reliefs of Bisutin.

The only Christians (60 families) are in the town of Senna. These are for the most part Aramaic Catholics (Khudum) whose head is the patriarch of Masalah. They have a church built about 1840 on the site of an old church. The Jews are more numerous: 500 families in Senna and small groups in the villages. 

Language: The Makti Kurl dialect (Kurmanjij) stops at Banu and Sakkii. To the south of the Diaghlat in the Khorkora and Tilakului districts the Kurdsi dialect begins and continues to the southern frontier of the province. Its linguistic particularities still await systematic study. The language of Mariwan like that of the Diyak closely resembles Kurmanjij.

A non-Kurdish Iranian dialect is spoken in the two Awramans. It is called Awramani or, more popularly Amnu ("I say" in Awraman). To the same group belong the language of certain villages of Pawa, that of the great tribe of Gurant (on the Zohab), that of the village of Kandula (between Dalanaw and Kirmishman) etc. In the heart of Armenia in the district of Davit the "Zaza" dialect is related to the Zazi dialect according to Scharmann (Die Turken im Mittelalter der Provinzen Tan, Berlin 1900, p. 51), all these dialects can be classed with the "central" dialects of Persia (Samaniu, Khorruit, Mahallitian, etc.). We have no original Kurdish texts from Senna, but the Awramani-Guranti dialects have a whole literature of lyric and epic poetry. The walis of Ardilin particularly encouraged at their court the production of this dialect poetry which has certainly passed beyond the limits of the people speaking these dialects. It is curious that "to sing" in Senna Kurdish is Guranti larin "to recite Guranti poetry". The Chaldeans and the Jews of Senna speak their Aramaic dialects in addition to Kurdish. 

History: There are no monuments like those of Kirmanshah or even of Kurdistân-Murk (see the art. SAWL-I-BULSCHAR) in Senna. For the oldest period we may mention the chamber cut out of the rock near Ramshar (Cirks in 1. p. 528); it seems to belong to the same category of monuments as the sepulchres (Median?) of Shana [q.v.]. Its entrance has the typical rectangular form but its ceiling is vaulted. At the other end of the territory of Senna (N. E.) are the caves of Karsift, which seem (Ker Porter, ii. 538—552) to have been used for the Mithraic worship. The Greek inscription there is an invocation of Heracles. The caves lie off the usual route, but at the period when Garsa (al-Sëk of the Arabs, the modern Takht-I Sulaimân) flourished they must have led to its sanctuary (the fire-altar Aschargashap.

As to the ancient toponymy, Streek, Billerbeck and Thuren-Dangin have collected the Assyrian references to Persian Kurdistân. Unfortunately no concordance of modern names has so far corroborated their hypotheses.

The leases in Greek and Pahlavi found about 10 years in cave Mount Qüläin (Awraman-i Takht) and going back to the first century B.C., mention names which may refer to the locality where the find was made (the hyparchies: Baqutu and Balakyan, the stations-stazam: Balakyan and Dastaklan and the village-kom: Khuzi or Kukuj). The ingenious identification of Median places mentioned in Ptolemy (vi. 2) proposed by F. C. Andrews refer to territories outside of the modern Senna. For the Arab period the word ‘sasan. Kurdistän of Senna and Ardilin [q. v.] were for at least four centuries governed by hereditary walis. Their legendary history makes them originate in the Sassanid or early ‘Abbasid period. The Shinar-nama only says that Bahl Ardilin, a descendant of the Marwinds of Diyyar-bakr, had settled among the Gurans and towards the end of the Mongol period became governor of Shahr-I Zor. According to Rich (i. 214), the walis of Senna were of Gurani origin (of the clan Mamal). Their history became better known from the time of Ma’mun b. Monther to whom the historian ‘Ali Akbar gives the date 862—900 A.H. The walis took an active part in the struggle between the Safavids and the Ottoman Saltans, sometimes on the Persian side and sometimes on the Turkish. The Shinar-nama stops at the reign of Halh-Khan (halili "eagle" in Kurd.) oscillating between the two rival empires (994—1014). Local historians continue the tradition to our day.

With only slight interruption the Ardilin family retained authority throughout the Safavid period when the four western frontier districts enjoyed a semi-independence: ‘Arabshah (the ‘Abi Salt’s walis of Husseina), Luristan, Kurdistân and Georgiua. During the Afghan invasions Khâna Pasha Bâbân of Sulaimiya seized Senna in 1132. The coming of ‘Nâder brought back to Senna Sabzân Wardî Khân Ardilin (1143—1160 with interruptions). In 1164 Karim Khan Zand laid waste the district of Senna. After a period of troubles Khusraw Khan Ardilin (surnamed the "Great") settled at Senna (1168—1204). Agha Muhammad ‘Kâdîr as a reward for his exploits assigned Sunkar (Kulyât) to him. His son Amâk Allah "the Great" (1214—1240) much improved the town. Malcolm and Rich were his guests. His son Khusraw Khan Na-kân ("not having enjoyed life" i.e. died young) succeeded him.
(1240–1250); he is celebrated for his literary abilities. Under his son Rida-Khâlîf quatrils broke out in the family. The wall (1250–1260) was imprisoned at Ţeberdân whence he only escaped after the death of Muhammed Shâh. His brother Amân Allâh (1265–1284) was the last hereditary wall of Kurdistan. In 1851 Čirikov was a witness of the intervention by the central government in the affairs of the province under the pretext of discontent among the subjects of the wall. In 1284 (1868) the energetic prince Tarâhî Mirzâ was appointed governor-general from Ţeberdân. He ruled Senna till 1291 and restored order to the ancient lust of the Ardlân. Their descendants still exist in Senna but are now of no importance. On the other hand the old families who held office at the court of the walls continue to play a prominent part in local life.

SENNAR. Modern Sinnar is a village situated on the Blue Nile about 170 miles south of Khartum. It is the seat of a District Commissioner, and the headquarters of an administrative district of the Blue Nile Province. The district has a population of about 50,000, which is composed of a mixture of Sudân tribes and Fellata immigrants from West Africa. The Sinnar dam, which irrigates a large cotton growing area, is situated at Makwar, about six miles to the south of Sinnar village.

The older usage which extended the name of Sinnar to the triangular territory between the Blue and the White Nile with undefined borders in the south is obsolete, and the country in question now forms the Blue Nile Province and the Fung Province of the Anglo-Egyptian Sudan.

The discovery of pre-historic remains at Gebel Moya and of Meriotic finds near Sinnar itself shows that the district has been inhabited since a remote period, but historically Sinnar has only been of note as the seat of the Fung [q.v.] Sultanate, which formed the most important political organisation in the Eastern Sudan from the sixteenth to the beginning of the nineteenth century, and the foundation of Sinnar itself is connected by native chroniclers with the establishment of this kingdom in A.D. 1504. The semi-barbaric dynasty, known to natives of the Sudân as the
The Sennar, or Senor, was a province of the Mahdi in Sudan, which was destroyed by the Mahdists in 1885. The palace and mosque erected by the Fung kings was already in ruins at the time of Cail-land's visit.

Modern Sennar is about a mile and a half distant from the ruins of the old town. It is now of comparatively small importance, and its place as a centre of trade and administration has been taken by Wad Medani.

Bibliography: The literature quoted is in the bibliography of the article Fung, to which may be added: H. A. MacMichael, A History of the Arabs in the Sudan, Cambridge, 1922 (contains in vol. ii. a translation of the Sennar Chronicle with explanatory notes, as well as a full bibliography); S. Hillelson, Tahaqat Wad Daaf Alih, studies in the lives of the scholars and saints, in Sudan Notes and Records, vol. vi., 1923.

(SEPOY) is the English corruption of spahi, the adjective formed from the Persian word sipah, "army". Sipahi is used substantively for "member of an army, soldier", and occurs in literary Persian, though it is no longer current in the modern language. The Turks and the French have borrowed the word, the latter in the form spahi, and in these languages as well as in Persian it invariably means a horse-soldier, in which sense it is used by the English traveller Hedges (Diary, ed. Hakluyt Society, l. 55) in 1682. In India both the French and the British adopted the word, which seems to have reached them through the Portuguese, the former writing it sipaio or coppah, and the latter aspi, sepey, sepeh, sepeh, sepey, etc., but there both nations have applied it since the beginning of the eighteenth century to natives of India trained, armed and clad after the European fashion as regular infantry soldiers. Regiments of sepoys were first raised and employed by the French. In 1748 Duplex raised several battalions of Muslim infantry, armed in the European fashion, and in 1759 Lally wrote to the Governor of Pondicherry: "De quinze mille cipayes, dont l'armée est censée composée, j'en compte à peu près huit cent sur la route de Pondichéry". Stringer Lawrence soon imitated Duplex in forming regular battalions of sepoys in Madras, and in 1757 a force of sepoys accompanied Lord Clive when he left Madras in order to recover Calcutta. The military establishment of Bengal had consisted of one company of artillery, four or five companies of European infantry, and a few hundred natives armed in their European fashion, but after the recovery of Calcutta from the Nawabi Sarafidj al-Dawla a force of Madras sepoys was used to form the nucleus of an army for Bengal, and 2,000 sepoys fought at the battle of Plassey in June, 1757. About the same time sepoys were raised and employed in Bombay, and European adventurers in native states raised and drilled battalions of sepoys for their masters.

In 1795 the infantry of the three Presidency armies was organised in regiments of two battalions each, each battalion consisting of eight battalion and two grenadier companies. Of such regiments Bengal possessed twelve, Madras eleven, and Bombay four, with an additional marine battalion. Henceforward the three armies grew on divergent principles and with different organisations. The
Seyop Mutiny of 1857 shattered the old Bengal army and seriously affected that of Bombay, but both were reconstituted and remodelled. Early in the twentieth century Lord Kitchener, then commander-in-chief in India, formed the three Presidency armies into one Indian army.

SER. [See SEK.]

SERAiL. [See SEKYY.]

Seray (P.). This word which is derived from an old Persian form *srda (from the root *arî "to protect") has in Persian the general meaning of dwelling, habitation. The Arabic word sarâbah "tent" has been borrowed from a diminutive in ֕ from *srâda (Horn, Grundzüge der neupersischen Etymologie, Strassburg 1895, p. 199).

We frequently find in Persian the word seräy compounded with another substantive to indicate a particular kind of building, like kârwân-serây (cf. the art. KâRWâN). In Persian mystic poetry serây is an expression for the terrestrial world, the temporary abode of man (cf. SîFîN). It is in Turkish lands that serây has come to mean particularly the seat of government (like the Turkish word bâsâlim) and the residence of a prince, a palace. From this meaning come the names of towns in Tatar countries and in Turkey called simply serây (cf. the articles SâKYY and SERAYVO) or compounded with serây (Aq-Serây etc.). In Turkey the serây par excellence was the serây-i Humâyûn of Top Kâfî in Constantinople (q.v.).

In Arabia the form sarâya is used for palace in the 1001 Night. The Italian loanword seraglio and the French serai are sometimes found with the meaning harem but this limitation of meaning is not Oriental.

SERAYVO, Turk. Bosna. Serai or simply Serai (cf. the art. Bosna SâRAI), capital of Bosna in the Southern Slav states, picturesque situated on the Mijâyâk in a valley open to the west enclosed on other sides by high and rocky hills, 1730—2277 feet above sea-level, with 60,087 inhabitants (1921) (of whom one third are Muslims); they mainly live by local industries (copperware, silver-filigree, carpets and tobacco). In the xvth century we find in place of Serayvo the powerful fortress of Vrhbošna, part of which still survives in the modern citadel of Serayvo. Even in the xvth century Serayvo was still generally known as Varbosnia. The place is first mentioned in the Christian period in 1379 as the residence of Ragusan merchants and again in 1415 as the burial-place of the voivod Paul Radenović. The Turks saw the admirable situation of the place and chose it as the military centre of the conquered district when they captured Bosna under Mehmed II in the spring of 867 (1453); tradition records as the name of the alleged leader, Girîy Kâh (Hâdîddir Girîy Kâh, d. 871 = 1463), who was also buried near Serayvo (cf. Die frühosmanischen Jahrhücher der Uradh, ed. by F. Babinger, Hanover 1925, p. 120, 4-5, and F. Giese, Die altosman. anonymen chroniken, i, Breslau 1924, p. 113, 4-5; ii. [German trnsl], Leipzig 1924, p. 150 [Abb. f. u. K. d. Mevangles, xvii]). We already find here as early as 1438 and 1439 a Turkish governor who had been appointed to control the tributary native dynasts. After the final conquest of Bosnia by the Ottomans the Turkish governor of Bosnia ruled at Vrbosna which name was retained, as the journals of Petrušin and Benedict Karpišić (1530; cf. B. Carpisch, Iterinarii der Botschaftersie, ed. by E. Lamberg, Schwaben, Innsbruck 1910, p. 33 sqq.; Verchbossen) and the Ragusan correspondence (cf. J. Gelisich and L. v. Thallöczy, Ragusa und Magyarszeg, Budapest 1857, p. 670 [1513]; Verbasaria) show. forms like Verchbossen, Vrbosna, Verchbossen etc. are also found. About the middle of the xvth century, however, the name Bosna Sâraî ("Palace on the Bosna"), Slav. Sarajvo, Ital. Seraglio, Seralo (cf. G. di Pietro Lencari, Capitale della nobiltà e degli insediamenti, Venice 1605, p. 17: il castello di Paris-Bosna, da cui correva la città di Sarato), appeared and gradually drove out the older name. Serayvo is found in 869 (1464) in a wakif-nâme as Mekhmed-i Serâyvo. The name Bosna Serai or simply Serai comes from the palace which Mehmed II built after the capture of the town, on the site of the khünkâr hümmât (Imperial mosque, Careva Jamiyya) (cf. Ewliya, v. 428; J. v. Haumer, Russin und Bosna, Vienna 1812, p. 160). Under Ottoman rule Serayvo increased in importance, particularly because it was the residence of the governors of Bosnia (cf. C. v. Peer, Die osman. Statthalter in Bosnien in der Wissenschaft. Mitteilungen aus Bosnien etc., ii. 344 sqq., Vienna 1894), who did much to beautify the town and transformed it into a Maltsian city between 900 and 1000 A.H. Numerous mosques, madrasas and baths were built, some very splendidly equipped, like the foundations of Gâzî Khâs Pasha (1506/1512 and 1520/1542) which are still kept in existence to-day. Gâzî Khâs Pasha (cf. and the document in Cod. Turk. 260 of the Saxon National Library in Dresden) is buried in Serayvo (cf. Ewliya, Sevâhat-nâme, v. 441, and Wissenschaft. Mit- tellungen aus Bosnien, i. 503 sqq.). Although after the definitive conquest of Bosnia the residence of the Turkish governor was moved from Serayvo to Banyaluka, the former retained its importance. Apart from a brief interruption by Prince Eugène's occupation of the town in October, 1697, which lasted a few hours only, Turkish rule lasted 415 years in Serayvo. On Aug. 18, 1789, the town was taken by the Austrian Artillery General, Josef Freiherr von Philippovich (1818—1859) after a sharp fight and incorporated in the Danube monarchy. On Oct. 6, 1908, the annexation with the consent of the Powers was proclaimed. On June 28, 1914, the Austrian heir, the Archduke Franz Ferdinand, was assassinated here. After the collapse of the Danube monarchy in 1918 Serayvo with Bosnia and Herzegovina passed to the newly formed Southern Slav State.

Serayvo which is the residence of a Muslim Baîa al-Ulumd which has a Sherîf school, has a number of buildings from the Muslim period. Among the eight mosques, all of the xvth century, of which Ewliya Celebi (xvith century) mentions the mosque of Ferhâd Pasha (built 966 = 1561), of Khusraw Pasha (built 937 = 1530),
SERBEDÄRS, the name of a line of robber chiefs who made themselves masters of a considerable part of Khurásán; their subjects are also known as Serbedärs. This state, a regular republic of brigands, in which military considerations and the influence of Shī᾽i dervishes predominated, was formed during the troubles that succeeded the death of the Ilkhān Abū Saʿīd; it collapsed before the great Timur. The name Serbedār, which one might translate "gallows-bird" (or perhaps better "desperado"), goes back, according to the historian Khwānd-amīr, to a saying of the first chief, 'Abd al-Razzāk: "Ba mardī 'sur-i hādāh hār dāyān hār hādāh bā tārīk bih hā nāmardī ba hā hāt ra-sūdan" ("courageously venturing to be hanged is a thousand times better than being killed as a coward"). Dawlat-shāh, Taḏkhirat, ed. Browne, p. 278, gives, however, a different explanation of the origin of the name. According to Ibn Baṭṭūṭa, the Serbedārs were called in the Fārāb: Shafiʿī (robbers) and in the Fārāb: Maghīrī: Sahīra (birds of prey, falcons). Their capital was Sābzevar in the district of Bāihāk. The first Amir Serbedār, 'Abd al-Razzāk, was the son of an 'Alīd, Shīhāb (or Tādī) al-Dīn Fadl Allāh Bāštunī, a former official of the Shīh o Dūqwān.

'Abd al-Razzāk was able to gain the favour of the Ilkhān Abū Saʿīd (d. 736/1335) who gave him a public appointment. Appointed to administer the taxes of Khurásan, 'Abd al-Razzāk spent all the tribute he received; but the death of the Mongol prince took place in time to get him out of his difficulty. He went to Bāštunī (a village in the district of Bāihāk), his former abode, where he collected a band of adventurers and malcontents, with the object of becoming independent sovereign of a part of Khurāsān. He had first of all to fight with the vizier 'Alī al-Dīn Mahīyād Fārūymādī, then all-powerful in this country; the latter was defeated and killed in 737 (1335/1337). After the death of 'Alī al-Dīn, 'Abd al-Razzāk seized the town of Sābzevar (738) which became the headquarters for the Serbedār chief's brigandage. According to Dawlat-shāh, he also conquered Dūqwān, Asfarnān, Dījadram, Biyār and Khiṣājān. In 738 (1337/1338) in the month of Safar (accord. to others in Dīn 'l-Ḥijāţa) 'Abd al-Razzāk died, assassinated by his brother Wadīǧī al-Dīn Masʿūd, who succeeded to the throne. The Oriental authors, even those who, like Ibn Baṭṭūṭa, are not prejudiced against the Shīʿī Serbedārs, represent 'Abd al-Razzāk as a tyrannical and unjust ruler, the opposite of his brother Masʿūd. The latter, according to them, only killed him in legitimate self-defence. The romantic details that are given of the death of the first Serbedār prince have a very apocryphal look; probably the historians have only repeated the character of 'Abd al-Razzāk to excuse Masʿūd's fratricide. The latter, the second Serbedār chief, took the title of Sultān (Ibn Baṭṭūṭa, ed. Defrémery and Sanguinetti, iii. 65/66), and had warlike ambitions of further extending Serbedār rule. An ardent Shīʿī — Ibn Baṭṭūṭa tells us that the Serbedārs at that time intended to exterminate the Sunnīs in Khurāsān — he attached the dervish Hasan Dūqwī to his person, who for political reasons had been thrown into prison by the prince of Naḥāṣpī. The dervish was able to escape the wrath of the latter; the authorities are not agreed if Masʿūd aided him to escape or not. Dawlat-shāh says that Masʿūd himself became a mardī of Dūqwī.
The first campaign of the new Serbedër chief was directed against the lord of Nghişpër, Arghun-Shâh Djâni Kurbânî. It is probable that this expedition took place as early as 738. Arghun’s army was routed: Nghişpër and Djâm fell into the hands of Mas’ûd. The defeated ruler sought refuge with Togha Timur, Khan of Djurdjian. It seems that Mas’ûd and Djâni had considered the possibility of extending their power over the whole of Khorasan.

The Serbedër forces seem to have begun by attacking Togha Timur. It would seem then that the defeat of the Khân on the banks of the Atrak, an event mentioned by Dawlat-Shâh as happening before Mas’ûd’s campaign against Hassân Kûrt of Herât, took place during this first war of the Serbedër against Dûrjûn. In any case, to realise their projects of conquest, Mas’ûd and Djâni turned their attention to the king of Herât already mentioned. (743 = 1342–1343). On Şafar 13 of this year the two princes’s armies met near Zhorka. In the battle Hasan Džurî fell, either killed by the enemy or assassinated by order of the Serbedër chief. Indeed, it would not be surprising if Mas’ûd feared the ascendance of the shâhâlî at this time, when, according to the historian Žahhî at-Dîn (ed. Dorn, p. 338): "ethikî-i dawlat-î umiyyât dar akhbar-i qeyîm bi dawli-iân yûnîh bûnî"; in free translation: "In this country most things are performed in accordance with the wishes of the shâhâhs.

The battle of Zawâ was decided in favour of the ruler of Herât, although it at first looked as if the Serbedër army had won. Mas’ûd had to withdraw and returned to Schawar. The historian Khvândamir recounts after these events a campaign against Djurdjian, as well as the defeat and death of a brother of Togha Timur; he says that as a result Mas’ûd was able to become master of Astara and, while the Khân fled from his capital (end of 743). Another authority, however, puts these events in 742 (cf. B. Dorn, Die Geschichtsbuch der Serbeder von der Schiwri und der Serbeder nach Chândînî, p. 165, note 5). This would be before the war with Hassân Kûrt. If this is correct the victory won by Mas’ûd over the brother of Togha Timur would be identical with the battle on the Atrak. Once in possession of Djurdjian the Serbedër began to cast covetous eyes on Mazendarân. This was the end of his career. He was attacked by surprise in the land of Rastâr; he and almost all his army perished (Rahî II, 745 = Aug.-Sept., 1344).

Mas’ûd was the greatest Serbedër prince, according to Dâwlat-Shâh, stretched from Džum to Dânghân and from Khâbârgân to Tarskî. He was the sâbîh kirân of the dynasty. After him the power fell into the hands of those who had been subalterns of the family of ‘Abîd al-Râzâkî: that is to say, the empire having reached its zenith, fell into the control of a coterie of soldiers; (in this case of dervishes also) if the glory of the Serbedër had departed for ever.

This is the normal course of the history of oriental dynasties; Mas’ûd left one son, a minor, named Lajûf Allâh; one of his notables, Muhammad Alîmûr, who during the war with Djurdjian had been aş-dâ of Schawar on behalf of the late prince, seized the actual power. He reigned two years and a few months; in 747 or 748 (1346/1347 or 1347/1348) he perished, the victim of a plot hatched by the dervish clique, murâs-dâ of Dżurî, the prime mover in which was the Khvândija ‘Alî Shams al-Dîn. The latter becoming master of the situation, proposed as ruler a certain Kâbîl (or Kâbûl) Iâfendiyyîr, who reigned for about a year; ‘Ali Shams al-Dîn had him assassinated in 748 or 749. It was then proposed to make Mas’ûd’s minor son successor to Iâfendiyyîr; ‘Ali Shams al-Dîn appointed a brother of Mas’ûd, who also was called Shams al-Dîn, to be regent. He only held the throne for some seven months; in Dhu’l-Hijjah, 749, according to Dâwlat-Shâh, he resigned. ‘Ali Shams al-Dîn himself then assumed the external attributes of royalty also. In general the historians approve his rule, although they admit that he was as bigoted as he was cruel. He is said on one occasion to have had 5000 prostitutes buried alive; his officials and officers when they had to enter his presence used to make their wills first. Shams al-Dîn built or renovated the masjîda ‘uwwal at Schawar. He also built a great storehouse (mukâd) in the same town. With Togha Timur he concluded a treaty which secured the Serbedër chief possession of all the territory formerly ruled by Mas’ûd. In return it is probable that the Serbedër pledged themselves to pay tribute. Dâwlat-Shâh (p. 236) says that they obeyed Togha Timur (mukâd wa muqadð mukâd) which can only be true of the period after the death of Mas’ûd.

‘Ali Shams al-Dîn, already much detested for his avarice and cruelty, insulted in frightful fashion one of his treasury officials, Haidar Kâsâbî, from whom he wanted, in addition, to extort a large sum of money. Kâsâbî conspired with Ya’ûlî Karrâhî, a former officer of Mas’ûd, and killed ‘Ali Shams al-Dîn with his own hand (towards the end of 753 or the beginning of 754; Kârîhî was reigning in 754 because the assassination of Togha Timur by the latter’s order took place on Dhu’l- qa’da 16, 754 = Dec. 14, 1358, as is testified by the poem quoted in Dâwlat-Shâh, p. 237–238). Karrâhî became chief of the Serbedër while Kâsâbî became siphe Shâhîr. The new ruler was a devout man but a bloody tyrant in whom there were thought to be signs of madness. A quarrel soon broke out between the Serbedër and Togha Timur because Karrâhî did not acknowledge the suzerainty of the Khân. On the occasion of a meeting at Sultan Duswin, Karrâhî had Togha Timur assassinated by an officer of his suite. One can hardly imagine that this attempt could have succeeded if the Serbedër had not had allies among the nobles of Timur’s kingdom. With the latter’s death the suzerainty of the descendants of Cîngîs Khân in those regions came to an end. The Serbedër, the Džûnî Kurbânî and the Kûrts of Herât divided the empire of the Khân. Karrâhî took Tûs from the Džûnî Kurbânî. He paid a great deal of attention to the water-supply of this town and to that of Maghadh. Karrâhî, like his predecessors, came to a violent end. ‘Alî al-Dawla, his brother-in-law, assassinated him (759 = 1358). Kâsâbî then placed on the throne the brother of (or cousin) of the dead ruler, the insignificant Žahhî at-Dîn. The siphe Shâhîr were, of course, the actual master of the kingdom and this was not altered when Zahir al-Dîn renounced the throne (Rahî, 760 = May/June, 1359). Kâsâbî himself took the reins of government, but it was not for long. While he was besieging the rebel Nasr Allah Bâshîntî (perhaps brother of Mas’ûd) in Asfârîn he met his end, the victim of an inscrutable instigated by his own siphe Shâhe, Hassan Dânghânî (Rahî II, 761 = Feb.-March, 1360). Hassan concluded a treaty of peace with Nasr Allah;
Later, troubles broke out once more. At the siege of Salzwür by Walt’s forces, Mu’ayyad sought the help of the great Timur (783 or rather 781; cf. Dorn, Gesch. Turkistan’s, p. 186, note 2). This meant that the Serbedær had to abandon all idea of independence and that his kingdom became a part of the great Mongol conqueror’s empire. Mu’ayyad lived on for some time at the court of Timur. He was assassinated in 788 (1386/1387). His body was taken to Salzwür and buried in the town.

Here ends the history of the Serbedær, although in 807 (1404/1405) there was again a rising by a son of Mas’ud, Sultan ‘Ali, against Shah Kuhh, son of Timur, a rebellion which was duly suppressed. As a panegyrist of the Serbedär kings Dowlah-shah mentions the poet Muhammed b. Yamin al-Din Faryamadi.

SERDEBÄ (Pers. serdab, *cold water*); the Kânân has wrongly said àsâd; in Baghâda, a kind of rather large vaulted cellar, more or less decorated sunk four or five feet into the ground where the heat does not rise above 77°–80° F. while that of the room is from 92°–95°. It is supplied with a ventilator, a kind of chimney turned to the north side which ends at the highest part of the house; the air is also kept fresh, morning and evening, with the help of several small windows; in the summer the people of the house spend the time from 11 a.m. till sunset there. This arrangement is also found in the southern parts of Persia where it is called sir-avain *subterranean*; the ventilator is called nūtrāf *wind-catcher*. The name is extended to cover any kind of subterranean room or vault (Ibn Battuta, Paris 1853, i. 264; Dossy, Suppl., i. 647).

(C. Huart)

SERDESIR (c), a cold place or a summer habitation in high grounds. The Persian ferâng’s cite verses where the word occurs (e.g. Fara’în’s Shâh‘arî). The opposite is germes [p.v.].

At present both words are used for the northern and southern part of the province of Fârs, corresponding to the division in Sarûd and Djiurmân by the Arabic geographers (Le Strange, The Limits of the Eastern Caliphate, Cambridge 1905, p. 249).
SERES. [See serres].

SERRES (Serres, Turk. Serê), capital of the former sanjak of Seris in the vilayet of Salonika, situated on the edge of a broad well-watered fertile plain, not far from the Struma, on the Salonika—Dede-Ağhaç railway. Serres has a castle, called Dragota in the middle ages, built on a steep hill, numerous mosques and Greek churches. The number of inhabitants is nearly 50,000, the majority Bulgarians. In the country around much rice, fruit, wine, tobacco and vegetables are cultivated, and a big export trade is carried on in tobacco, cotton and cloth. — Serres is the ancient Siris or Serhai, a settlement of the Siropeconi who existed in the time of Xerxes.

The date of the Ottoman conquest, about which the Turkish chroniclers make inaccurate and contradictory statements (Sev'd al-Din, Tâfi al-Tarâriûk [probably following Neşirî]), I, 92, gives 726 = 1324/1325, whom J. v. Hammer, G.O.K., I, 180, apparently follows; Lechaudins, Hist. Monast., p. 243: “787 = 1385/1386 [codex Veraniotianus]. — Giese, Anuw. Chron., p. 26, 121: Azârî Pasha Zade, Tûrîk, Stambl 1332, p. 61: between 783 or, according to codex Mordmian-Cayol, p. 45: 784 and 787; Hâjdîji Kjala, Rumeli and Bosnia, ed. v. Hammer, Vienna 1812, p. 73 sqq.: 784 = 1383/1384), is known from several contemporary Greek sources, which unanimously give September 19, 1383 (cf. Miklosich-Muller, Acta et Diplomata, i., 77—79; Sp. P. Lampros, Nwxt Elwspalamâq, viii., 405, 407, Athens 1812; cf. P. N. Papageorgiou in Byz. Z., 1894, iii. 292). On this day the castle was taken by Deli Balahan and the Lal Shahin Pasha, who had hastened to his assistance. That the town was secured in Turkish hands a few years later is known from the contemporary evidence of two Athos chronicles (cf. L. Petitz-W. Regel, Acta d'Epithigimenon, p. 47, xxii., and L. Petitz-Kornab, Acts de Châloukar, p. 335, No. 158).

Serres and the surrounding territory fell as a fief to the celebrated Erenros Beg [q.v.], and the neighbourhood was settled with Yürükas who were transplanted from Şarukhân (cf. Lechaudins, Hist. Monast., p. 244, sqq.; Giese, Anuw. Chron., p. 26, sqq.). Henceforth Serres was an important Ottoman mint: the first coins were struck there in 816 = 1413/1414. The dangerous rising, half religious and half political, stirred up by Shaikh Bâdî al-Din Mîmphad and his follower, Hâjdîji Mustafâ came to a tragic end in Serres, in the neighbourhood of which the rebels had assembled for their last stand, with the execution of the ringleader in the late autumn (cf. Isâmîn, 1921, xi. 63 sqq.). In the 16th century at the beginning of which the French zoologist Pierre Belon passed through Serres, the inhabitants were mainly Greeks; he found German and Spanish-speaking Jews there but the country people spoke Greek and Bulgarian. Hâjdîji Kjalal (Kâmula, Bâtna, Vienna 1812, p. 73 sqq.) following closely, almost literally, Mehmed 'Azîhî, Mu'âa'isul-Elbânî (Vienna MS., fol. 240 H; Berlin MS., [inaccessible to me], fol. 246 — 247), describes Serres in the xviith century as a town with 10 mosques, 7—8 baths, 2 khâns, a benefica, kitchens for the poor and pleasant gardens. Ewliya Celebi also visited the town; his account is found in the eighth, still unprinted volume of his Sehîret-nâmé. Serres never attained particular importance in the history of the Ottoman Empire; only in the xviith and xixth century it was the seat of a Derebey [q.v.], of whom Isâmîl Bey was the most prominent (cf. E. M. Consenmîre, Voyage dans la Macédoine, Paris 1831, i. 157, [130]—166). Since the treaty of London (1835) Serres has belonged to Greece.— A favourite excursion from the town is to the pleasantly situated Hisârâddi outside the gates of Serres (cf. Rumelî ve Bonâ, p. 74). Here is buried the author of the work, very important for the history of Adrianople, Eski el-Malaqîmîn (cf. G. Flügel, Orr. Hist. Wien, ii. 259, where — wrongly — Malaqîmîn is given), 'Abd al-Kâhîm b. Hasan called Şihri (d. about 1550; cf. Brusali Mehmed Tâhir in Türk Yurdu, third year, vol. 6, part 27, s. 2225).

SETH. [See Sheth].

SEVILLE, in Spanish Sevilla, Arabic Isbîliyya (ethnically Isbîli), a large city in Spain with over 150,000 inhabitants at the present day and capital of the province of the same name, formerly capital of the kingdom of Seville situated at an average height of about 100 feet above sea level in a vast plain, on the left bank of the Guadalquivir (Arabic el-Wâdi 'l-Kabir = Wâd el-Kabar = the great river), which separates it from the suburb of Triana (Arabic Tawrâna; cf. Yâkût, Mu'âa'is al-Baladûn, q.v.). Although 60 miles from the sea the town has all the advantages of a seaport on account of the very gradual fall of the river; the tide is perceptible up above Seville (cf. the ascensio amnis of the Latin poet Ausonius). The climate is dry and warm.

The province of Seville in the Muslim period comprised all the low valley of the Guadalquivir, and stretched to the east as far as the Sierra d'Arcos and Gadir, to the west as far as the valley of the Guadiana (Wâd Anâ) in a very wealthy region fertilised by the great river. The slopes of Aijarâra (or Alarafar, Arabic Ajbâl el-Sharaf) in the immediate vicinity of the capital are specially favoured, and their groves of fig and olive trees were famous for their fruit throughout Muslim Andalusia. The Arab geographers were never tired of marveling at the natural wealth of the country. It was the only district in the peninsula to produce cotton, the exports of which were important. Other
characteristic products were saffron and sugar-cane. The population of the country was of great density; less than 8,000 villages, according to al-Idrisi, were dependent on the capital.

The name Ibhiliya is derived from the ancient Hipalit; a name of Iberian origin which the Romans retained for the town. It was of great importance under them after its capture in 45 B.C. by Julius Caesar, who made it "Colonia Julia Romula". Under the empire it was alternately with Baetica (Cordova) and Italia (Arabic Tālīka) the capital of the province of Baetica. It then became that of a Vandal kingdom (411) and from 441 the residence of the Visigothic kings, until in 567 Athanagild transferred to Toledo the seat of his government.

It was in the spring of 94 A.H. (712) that Seville after the fall of Medina Sidonia and Carmona fell in turn into the hands of the Muslims after a month's siege, according to some historians, but probably longer if we may believe the more detailed account of the capture of the town given by the anonymous chronicle entitled Alḥārār Maǧdūliya. A section of the Christian population took refuge in Beja (Bājdja) and the conquerors, Mūsā b. Nuṣayr, installed a Jewish colony in the city, left a garrison there under the Medinean Tāh b. 'Abd Allah al-Tawil as governor, and then laid siege to Merida. An attempted rising by the Christians in Seville, aided by their co-religionists of Beja and Niebla (Lahla) in July of the same year was promptly put down and the town definitely re-captured by the son of Mūsā b. Nuṣayr, 'Abd al-‘Aziz, who massacred the rebels. When his father left for the east, 'Abd al-‘Aziz became governor of Muslim Andalusia, and chose Seville as his capital; he there married the widow (and not the daughter, as is often said) of the Visigoth Roderick, Egłona (the Alle of the Arab historians) and installed himself in the old church of St. Rufina, opposite which he built a mosque. It was there that he was killed by his soldiers in Radjab, 97 (March, 716), at the instigation of the Caliph of Damascus, Sulaimān.

After his death, the seat of the Arab administration was moved to Cordova; Seville nevertheless remained one of the richest cities of al-Andalus. Indeed, it escaped more than any other the influence of the conquerors and there is no doubt that its population only abandoned their old religion for Islam slowly, as much from policy as of necessity. It was in great part Roman or Gothic, and the names of notable citizens of Seville for long preserved the memory of this double origin. The spread of Islam in the Peninsula made commerce and agriculture more active and the importance of its harbour augmented.

When residences and fields were allotted in al-Andalus to the qānūn of Syria and Egypt, Seville fell to that of Ḥums (Ennisa) which was established in 125 (742) by the governor Abu 'l-Khaṭṭār al-Husām b. Dīrār al-Kallāt, at the same time as the qānūn of Damascus was given Elvira, that of the Jordan Rayyo (Malaga), that of Kinnairt Jisr, that of Palestine Sidonia and that of Miṣr Tundar (Murcia). The name of Ḥums was even sometimes applied to Seville (cf. Yaḥyā, Muḥammad al-Balḍān, s.v. Ḥums at the end).

When the Umayyad Caliphate of Spain was established in the reign of 'Abd al-Raḥmān I b. Muʾāwiyah al-Dāhilī and his successors, Seville was entrusted to his governors (for example the energetic 'Abd al-Malik b. 'Umar) and, like the other large towns of the country, was often the scene of rebellions. In 149 (766) two risings, those of Saʿd al-Yahṣūbī al-Majārī of Niebla and Abu ʿl-Sabbāḥ b. Yaḥyā al-Yahṣūbī, were quelled in turn. In 150 (773) the Caliph had again to suppress an attempt at independence by the governor 'Abd al-Ghāfir (or 'Abd al-Ghaffār) al-Yamani and Ḥayāt b. Muḥāmmed (or Muḥāṣib).

The town was surrounded by a fortified wall by 'Abd al-Raḥmān II. He also had a great mosque built in it. It was in the reign of this sovereign that Norman pirates captured Seville for the first time in 230 (844). It was stormed after a short siege, and the Caliph had to mobilise his forces to regain it and put the invaders to flight at the decisive battle of Talayita. As a precaution against another attempt at landing by the Majūs (Normans) he built an arsenal at Seville and constructed swift ships, which did not prevent his entering into friendly relations with the king of the Normans and even sending him an ambassador, Yaḥyā b. al-Hakam al-Ghāzūlī. In the reign of his son Muḥammad, in 245 (859), Spain was again attacked by the Normans, but the latter, who landed at the mouth of the Guadalquivir, probably did not go up to Seville but went direct to seize the town of Algeciras. Ibn Khaldūn and al-Nuwmarii nevertheless suggest there was a Norman landing in Seville at this time (cf. particularly R. Dozy, Les Normands en Espagne, in Recherches, p. 256-263 and 279-284).

In the reign of the Caliph 'Abd Allah, Seville was for a long time perturbed by the ambitions and proceedings of the two great families of Yemeni origin, the Banū Khaldūn and the Banū ʿAbd al-Jāfīd. These Arabs had large domains throughout the country and numerous clients, and hated the Jalsa- mided Spaniards of Seville as much as the Umayyad Caliphs of Cordova. The head of the first family, Kurāb b. Khaldūn, soon after the accession of 'Abd Allah, raised the whole country of Aljarafe and rallied to his flag of rebellion the chief of the Banū ʿAbd al-Jāfīd family and other Arab or Berber chiefs of the south of Spain. He ravaged all the territory of Seville with fire and sword and later on, sometimes assisted by the caliph himself, he ruined completely the residences of Seville (275 = 891). In the town the Arabs became all-powerful; and it was not till four years later that the sovereign decided to send an expedition against them.

In 286 (899) the heads of the two families, who had hitherto been at peace, quarrelled, and Ibrāhīm b. ʿAbd al-Jāfīd was victorious and slew Kurāb. After an alliance with the famous rebel ʿUmar b. ʿAbd al-Ḥafūn [q.v.] he finally submitted to the Caliph of Cordova while retaining practically unlimited power in Seville. There he set up as a regular sovereign and poet of talent and the famous singer ʿAṣam was ornaments of his court. His return to loyalty to the Umayyad dynasty was the beginning of the return of order in al-Andalus. In the reign of the great caliph 'Abd al-Raḥmān III, Seville, without, however, rivalling Cordova in importance, entered upon an era of peace and prosperity and remained loyal to the central power.

But its most brilliant epoch, and the most important from the political point of view also, was that which followed the fall of the Umayyad Caliphate, when it became the capital of the independent dynasty of the Banū ʿAbbās or ʿAbbāsīd (cf.
SEVILLE

above, l. p. 7] from 414 = 1023. The founder of the kingdom, the Kadi Abu l-Kasim Muhammed l, was the son of an illustrious Andalusian jurist of Lañhuid origin, Issaib b. Abbâb. He seized the power, at first recognizing the suzerainty of the Almohad sovereign Yahyâ b. 'Ali, but was not long in repudiating this suzerainty which was quite nominal. At his death in 434 (1042) his son, Abû 'Amr 'Abbâb, known by his honorific surname of al-Mu'tasîd, succeeded him and during a reign of 27 years his policy was marked by deeds of cruelty and treachery. He increased his kingdom at the expense of the neighbouring principalties of the west and south and only found a serious opponent in Bâdis, the Zirid king of Granada. He died in 461 (1068). His son, Abu l-Kasim Muhammed II al-Mu'tasîd, is renowned for his poetic taste and talents. In his reign Seville became the rendezvous of the best scholars of the period. He took Cordova from the Banu Dâshâwar but soon came in conflict with the ambitious King of Castile, Alfonso VIII, and then had to appeal for help to the newly risen power of the western Maghrib, the Almoravid Yusuf b. Tâfîfin. The latter crossed over to Spain with his troops and on Radjah 12, 479 (October 23, 1086), won the great victory of Zallaâk. When the Almoravids returned to Morocco the Christians resumed the offensive and al-Mu'tasîd had to go in person to the Lamtûn sulphur to ask his assistance once more. Yusuf granted it, but was not long in depriving him of his kingdom to seize its wealth. Seville along with Cordova, Almeria, Murcia and Denia, was taken in 484 (1091) by Yusuf's general, Sir b. Abû Bakr b. Tâfîfin. The Berber troops sacked the town from attic to cellar, and pillaged the palaces of the Abbâdis and the unfortunate al-Mu'tasîd was taken prisoner and exiled to Morocco, where he died at Aghâmîn in 488 (1095) after giving expression to his misfortunes in elegies which came to enjoy a well merited reputation among literary Muslims: he left the reputation of a generous, chivalrous and cultivated prince. - All the texts relating to Seville in the 'Abbâdîd period have been collected by Dozy in his Scriptum Arabum Lœri de Allocabalis, 3 vols., Leiden 1846-1863.

The Almoravid general, Sir, governed Seville for his master and the town, like the rest of Muslim Spain, continued under the yoke of the Maghribi Sulûfis. In Radjah, 526 (May, 1132), a Christian force from Toledo invaded the country round Seville. In the course of an engagement the governor of the city, 'Umar b. Makrî, was killed.

It was with satisfaction that the people of Seville heard of the decline of the Almoravids in Africa and the rise of the Almohads. Barrâz b. Muhammed al-Masâfî, general of Sulûfis Abû al-Mu'tamâr, after conquering the south-west of the peninsula, laid siege to Seville and took it in Shabân 541 (January, 1147), putting to flight the Almoravid garrison. Next year a deputation of notables of Seville went to the Almohad sulûf to give him the hommage (ba'ara) of their fellow-citizens, led by the Kadi Abû Bakr b. 'Arâbi, who died at Fês on the way back (cf. above, i. 362). 'Abû al-Mu'tamâr appointed governor of the town the Almohad Moro b. Sulamîn and in 551 (1165), at the request of the inhabitants, his own son, Abû Ya'qûb Yusuf. The latter kept this post till he succeeded his father in 558 (1162).

Under his reign Seville became the headquarters of the Almohad forces in Spain. Abû Ya'qûb stayed there from 568 (1172) to 571 (1175), and on his departure left as governor his brother, Abû Isâq Isâqînî, with the general Muhammed b. Yusuf b. Wânâdîn and the amir 'Abû Allah b. Dînâmî. It was also in Seville that Abû Ya'qûb made his preparations in 560 (1164) for the Sautaron (Shantarita) expedition in which he met his death. His son, Abû Yusuf Ya'qûb al-Mansûr (580-595 = 1184-1199), who succeeded him, brought back the Almohad army to Seville and returned to Morocco, leaving the Hafsid chief Abû Yusuf as governor of Seville. Summoned by the latter he returned to Seville in 586 (1190) to retake Shilh (Silves) from the Christians, who had taken it by force of arms. After the brilliant victory of Alarcon (Arabic Al-Ark, cf. above, i. 2059) won on Bsh'ân S. 591 (July 19, 1195), over Alfonso VIII of Castile, the Sultan made a long stay in Seville, and it was during this period that he imprisoned the famous Cordovan philosopher, Ibn Rushd (Averroes). He did not return to Morocco till 594 (1198), a year before his death.

In the course of the reigns of these two Sultans Seville rivaled the glories of the most flourishing periods of the 'Abbâdî dynasty. It had at this date more inhabitants than Cordova. The Almohad sovereigns and the great dignitaries of the court built palaces there, and the number of mosques, baths, caravanserais and markets increased considerably. It was in the reign of Abû Ya'qûb that the new great mosque was built on the site which the present cathedral was later to occupy in the 11th century. The Raszf al-Aṣrîn (ed. Thornock, p. 135) gives 567 (1172) as the date of building this dzamâ of the anonymous chronicist entitled al-Halâl al-Ma'mûnî (ed. Tanûs, p. 120) 572 (1176/1177). According to Ibn Abû Zarî', it only took eleven months to build, which seems improbable. The same author mentions the building at Seville in the same year as a bridge over the Guadalquivir, of two ha's, of ramparts and moats, of quays along the river and an aqueduct. Nothing now survives of the great Almohad mosque of Seville but the qâbûn (now Fâteh el-Nâman = court of the orange trees), with the gate known as the Puerta del Perdón, and most notable of all the celebrated minaret, called Giralda (because a statue of Faith which carved mounta *turna* [Spanish girera] at the least wind). This tower, as a whole less successful than its twin sisters, the tower of Hassan in Rîbat al-Fath (Rabat) and that of the Dînâmî al-Kutubiyin at Marrakùsh, built at the same time, has a base 45 feet square. It is built of brick; its walls, about seven feet thick, are pierced by numerous windows with Arab and Visigothic capitals. The lantern-tower which rose from the platform of the tower has been replaced by a campanile; the total present height is over 300 feet.

In 609 (1212) al-Mansûr's successor, the Almohad Muhammed al-Nasîr, collected under the walls of Seville the great army which was to reconquer the part of al-Andalus then in the hands of the Christians. It was defeated on Safar 15 (July 16) of the same year at las Navas de Tolosa and the Sultan and his forces returned to Seville utterly routed.

It was a little later, in the reign of the Almohad, Yusuf II al Mustansîr, in 617 (1220), that the governor, Abû l-Ilîlâ had built on the bank of the Guadalquivir a tower intended to protect the
SEVILLE — SEZAY

royal palace (now the Alcázar, rebuilt in the sixteenth century by Pedro the Cruel) and the river. It has retained its Spanish translation its Arabic name Būrj al-Dhāhāb ("Tower of Gold"); the lower part, which is in twelve superimposed sections and is crowned with battlements, and the smallest tower at its top are still standing.

Some years later Seville again became the headquarters of the Almohad Sultan Idris al-Ma’mūn, and on his departure for Morocco in 636 (1238-1239) the town passed under the domination of the rebel Muhammad b. Yūsuf b. Hūd, who ended by driving the Almohads out of Spain. Strengthened by the alliance he had made with the first Nasrid dynasty of Granada, Muhammad I b. al-Abd, Ferdinand III laid siege to Seville in 1248 and after blocking its fortifications for sixteen months took it on 7th of 1248 (November 19, 1248) (or four days later, according to some sources). The Muslim population was spared and allowed to emigrate to that part of Andalusia which still remained Muslim and to Africa. The attempts of the Marinid Sultans of Morocco to recapture the town from the Christians in the years following met with no success. In 674 (1275) Sultan Abu Yusuf Yaḥyā b. Abd al-Ḥākīm, after his victory over the troops of General Don Nuño de Lara, laid waste the country of Seville and Jerez (Shaṭīḥ); but he had soon to abandon his siege of the capital. On his second campaign in Andalusia in 676 (1278) he again came up to the walls of Seville and pillaged the district of Aljarafe. He continued these raids, which are recorded in detail in the Rawd al-Kīṭārī, down to 684 (1285), and Don Sancho had to seek a truce which lasted till 690 (1290) in the reign of Abu Yusuf’s successor, his son Abu Yaḥyā b. Yusuf. In the end, after the defeat of the Sultans of the same dynasty, Abu l-Ḥasan Ali, under the walls of Tarifa, the Muslims abandoned all hope of retaking Seville.

This would take too long here to give the names of all the famous Muslims who were born or lived in Seville. It is sufficient to mention the poets Ibn Hamdīn, Ibn Ḥāmīn, and Ibn ʿAbdūn, the traditionalist Ibn al-Arabi, the biographer Abu Bakr b. Khair, and to refer the reader to the separate articles on them.

(E. LÉVI-PROVENÇAL)

**SEZAY,** a Tūrkbī rūkhī, Sultan Ḥasan (Dede) Sezay Efendi was a Greek by birth, a native of Kordos (the old name for Corinth), who spent the greater part of his life in Adrianople. He belonged to the order of Gūlāhīn there, first as a disciple of the Sultan Mehmed Le’lī and after his death as his successor. According to some sources, he was also head of a Gūlāhīn monastery in Constantinople. Karaman, 1151 (end of 1738 or beginning of 1739), is given as the date of his death, the only date known of his career. His tomb is in a dervish which bears his name.

We still possess several of Sezay’s works. His Dīwān is of a mystical and allegorical nature and is remarkable for the beauty of its language, so that Ottoman critics sometimes actually describe him as the Ḥāfiẓ of Turkish literature. There is a MS. of the Dīwān in the Vienna Hofbibliothek and in the Gibb collection (see Gibb, *A History of Ottoman Poetry*, ii. xxii.) below), and it has been printed at Constantinople. It begins with a series of ṣaḥīfs, on the works of the different kinds of the mystic path, the Wafi-i ʿAjār-i Awwār-i Tariḥāt. Then come 333 ghazals, a few takhlīsh, tanzīl, emā’āt and other shorter pieces including a chronogram on "Emiḥāthi Sādīq Efendi (d. 1904 = 1685). Among other works by Sezay, his Miḥkāṭ and his commentary on a ghayāt of al-Migri are mentioned. There are commentaries on some of Sezay’s ghazals, including some of quite different dates. Among Sezay’s pupils is a work of great value, his poem called Gūlāhīn-Ehvar, which deals with the stīlīl of Gūlāhīn, and the Turkish poet Mahvi Efendi and Mehmed Fa’shi Kirmi, who translated the *Munāsal al-Sūrīn* of al-Anṣārī into Turkish.

Sezay is also the name of a modern Turkish novelist; cf. Horn, *Geschichte der türkischen Moderne*, Leipzig 1902, p. 45 n. 34.

(WALTHER BÖRKMAN)
SFAK, a religious community of Kurdish origin in the wilayet of Mawil, English statistics estimate the number of Sfakas at 10,000; the Muslims give them the nickname *swoz* (*turboleti*, *turbolent*). The Sfakas live in the villages in the Sindjar district (*Ali-rash, Yangidja, Khazna, Tallira etc.). They are related to their neighbours, the *Vardis*, most of whose assemblies and places of pilgrimage they attend. On the other hand, if we may rely on Father Anastase, they show a particular devotion to the *Ali whom they call Ali-rash (Amir in Kurdish = "black"). Another statement connects them with the extremist Shits, the Ahli-Hashe (cf. the art. *Ali-Iltihal*). The Shaks never cut their moustaches which are proverbial in the country (see Cuinet); in eating they hold them up with the left hand so that the food may not soil them. As is the case with all the secret sects, popular stories credit them with abominable practices; once a year they are said to assemble in a secret cave and spend the night in feasting and debauchery. This night is called among them, as among the *Sarli* (cf. the art. *Sarliya*), *fisalat al-skafta*.

The Sfaks who claim to belong to the Kurdish tribe of Kaka' are also found in the wilayet of Mawil on the lower course of the Great Zab (villages of Tell-Laban, Bashiya, Kabari, Khurs al-Suljana) and in the district of 'Ashar-i Sabs. Their present chief, 'Isha Koshak (Koshak), lives in Wardak. There are Sfaks in Persia in the border districts. The sacred book of the Sfaks is said to be in Persia. The name is explained as *fisalat il-'i-junnatu* "Paradise has been acquired by me" for the Shaks of the Sfaks are said to sell them places in Paradise at 25 majdiliyas the week. The Sfaks permit divorces and polygamy. Their Shaks also never cut their moustaches and grow enormous beards. The *fisalat al-skafta* among the Sfaks is accompanied by agapes (ahest al-arabihi) for which every married man kills a cock. The Shaks bless these offerings which are dressed with wheat or rice and proclaims a blessing on every child conceived that night. The candles are then extinguished and an indescribable orgies ensues.

The Sfaks of Father Anastase evidently correspond to the Khurish-Kishas (*cock-killers*) and Kishas-Kishas (*candle-extinguishers*) of other travellers.

Father Anastase mentions a third secret sect in the same region: the *Bahayen*; they are Kurds and call themselves *Allahli* (Ali-allili). They live in the villages of *Um-ar, Toraq-Hayrat, Tell-Va'is, Radipsa etc. There are also a few in Persia near the Turkish frontier. The Bahayen venerate particularly the prophet (Imam) Immi'il. During the month of *Musarram* (*Ashura*) they lament the death of Husain and collect provisions which on the ninth day (of the month) are distributed under the name of *shahabat*. When the chief visits a community of the faithful each man offers him seven fresh eggs; the Shaks cuts each into seven pieces and places them in a jar. These present drink wine. The Shaks pronounces a prayer, offering the eggs to Imam as an expiatory sacrifice (*fusur)*. No one can eat them without forthwith confessing his sins.

Attention may be called to the links connecting these Kurdish sects with one another and with Persia, their devotion to the Shits Imami (Ali, Husain, Imami), the rites resembling the communion, the syncretist tendencies. The Shaks seem to be a link between the Vardis and the extremist Shits. Finally we may mention that a document coming from Ahli-Hashe circles and found in Khorsan by W. Irvoy mentions Malak-Tau, the great saint of the Vardis.

As to the "night of kafta", Father Anastase explains this word from the Arabic root meaning "seize" (?). Perhaps we have simply to deal with the Persian kafta alluding to a point said to
be played by the shoe in the course of the ceremony. For *shābak* we may recall the name *lašat al-mu'ājdān* which al-Shabānī gives to the alleged nocturnal feast and orgy of the Nestorian monks, cf. Hoffmann, *Ausssage aus syrischen Akten persischen Martyryer*, 1880, p. 127.

(V. MINORSKY)

**SHĀ'BĀN, name of the eight month of the lunar year. In classical *hadith* it has already its place after Radjab Muḥāṣib. In British India it has the name of *Shā-ib buṇāt* (see beneath), the Acheемых call it *Kanduri-bun* and among the Tigre tribes it is called *Maddaγiγi*, i.e. who follows upon Radjab.

In early Arabia the month of Shābān (the name may mean *interval*) seems to have corresponded, as to its significance, to Ramadan. According to the *hadith* Muḥammad practised supererogatory fasting by preference in Shābān (Bukhārī, *Sunan*, b. 52; Muslim, *Sunan*, trad. 176; Tirmidhī, *Sunan*, b. 36). *Aḥa* recovered in Shābān the fastdays which were left from the foregoing Ramadan (Tirmidhī, *Sunan*, b. 65).

In the early-Abrahamic solar year Shābān as well as Ramadan fell in summer. Probably the weeks preceding the summer- solstice and those following it, had a religious significance which gave rise to propitiatory rites such as fasting. This period had its centre in the middle of Shābān, a day which, up to the present time, has preserved features of a New-Year’s day. According to popular belief, in the night preceding the 15th the tree of life on whose leaves are written the names of the living is shaken. The names written on the leaves which fall down, indicate those who are to die in the coming year. In *hadith* it is said that in this night Allah descends to the lower heaven; from there he calls the mortals in order to grant them forgiveness of sins (Tirmidhī, *Sunan*, b. 39).

Among a number of peoples the beginning of the end of the year is devoted to the commemoration of the dead. This connection can also be observed in the Muslim world. For this reason Shābān bears the epithet of *al-mu‘ājdān* "the venerated". In British India in the night of the 15th people say prayers for the dead, distribute food among the poor, eat *ḥabla* (sweetmeats) and indulge in illuminations and fireworks. This night is called *lašat al-baγara* which is explained by "night of quittance", i.e. forgiveness of sins.

In Aṭcheli this month is likewise devoted to the dead; the tombs are cleansed, religious meals (*baγara, i. v.*) are given and it is the dead who benefit from the merits of these good works. The night of the middle of Shābān bears a particularly secret character, as is testified by the *kanduri* and the *pālit*: which are called *alādāt al-mu‘ājdāun* or, on account of certain cultic eulogies, *salāt al-taqlīl*. During the last days of the month, a market is held in the capital.

At Makkah Radjab, not Shābān, is devoted to the dead. Here, in the night of the 14th Shābān, religious exercises are held; in the mosques circles are formed which under the direction of an imām recite the prayer peculiar to this night.

In Morocco on the last day of Shābān a festival is celebrated which resembles a carnival. A description of it is found in L. Brunot, *La mer dans les traditions et les industries indigènes à Rabat & Salé* (Paris 1931), p. 98 sq.

(A. J. WENSINCK)

**SHĀ‘BĀN AL-MALIK AL-ABI’RABI, a Mamlūk Sultan, was chosen Sultan on Shābān 13, 764 (May 30, 1366), through the influence of the all-powerful Arabeg Velbobghā al-Imārī when only ten years old. His father Ḥusayn was passed over because the ambitious Arabeg Velbobghā wished to rule himself and therefore preferred the ten-year-old son, the grandson of Muḥammad al-Najīr. His reign was marked by frequent attacks by Frankish fleets on Mamlūk seaports like Alexandria and Tripolis in Syria. For example at the beginning of 767 (1366) ships of Pierre de Lusignan, king of Cyprus, together with Venetian, Genoese and Rhodian ships appeared before Alexandria which they plundered, but withdrew on the approach of the Egyptian troops, carrying off, according to the sources, 5,000 prisoners. The Christians in Egypt and Syria had to pay the ransom for the captive Muslims, and also pay for the building of a fleet which was to invade Cyprus. The negotiations with Egypt were not successful, as Velbobghā was not really anxious for peace but was planning a landing on Cyprus with his fleet. But troubles at home prevented his plan from developing. The king of Cyprus, however, took the offensive and sent a fleet to Syria to take the harbour of Tripolis and the town of Ayfas in the south of Asia Minor. His fleet was able to land raiding parties but had to withdraw before the superiority of the Mamlūk forces, as had another Frankish fleet which appeared before Alexandria. Peace was only brought in the beginning of 772 (August, 1370). The Egyptian later exacted vengeance for these Frankish raids by falling upon the kingdom of Little Armenia, which was an ally of the king of Cyprus (776 = beginning of 1374), and conquering the towns of Ayfas, Sis and the rest of the kingdom; the king was brought a prisoner to Cairo and his land became permanently a Muslim possession.

A conspiracy broke out in 768 (1367) against Velbobghā, whose Mamlūks could no longer stand his harshness and cruelty. The Mamlūks wanted to take him prisoner, but receiving timely warning he was able to escape to an island on the Nile, and to hold out there, and soon afterwards to return to Cairo and appoint Shā‘bān’s brother Šūkh Saḥfīn. Shā‘bān, however, who was now sixteen, was forced by the Mamlūks to put himself at their head and Velbobghā was forced to retire again to his island on the Nile. Shā‘bān then succeeded in seizing the fleet newly built by Velbobghā; the latter had to leave his place of refuge and fly to Cairo. There he was taken by the Mamlūks who had in the meanwhile returned to the citadel, and soon after-
wards killed by a Mamlik while attempting to escape. Velboghâ's Mamlikis now swarmed the people and did not obey their new leader, the emir Esedâli. Constant fighting was the result, which ended by a great number of Velboghâ's Mamlikis being banished to Syria and interned in Kerak. They later played an important part in the Mamlik Kingdom. After several changes in the person of the reign the emir Acketem el-Saltabî came to power, and held his position till the death of the Sultan. The Sultan had transitory success in the south of the kingdom, in Nubia. The king of Nubia recognised the suzerainty of the Sultan of Egypt. But as a result of Acketem's cruel treatment of prisoners, the Nubians rebelled again and destroyed the frontier town of Aawin.

The Sultan's idea of making a pilgrimage to Mecca in these troubled times was quite a mad one. In order to be secure against conspiracies of his relatives he had his brothers and cousins brought to Kerak and one of them to Cairo. As a protection to Egypt he proposed the frontier against the Beladis; but he had too little authority over his own Mamlik to be able to risk such an expedition. The axuric Mamlikis mutinied at Aakaba and as the Sultan would not yield to their demands they threatened him with death so that he had to flee secretly to Cairo, but the Mamlikis had accomplices there who were hostile to the Sultan. He was able to remain concealed in Cairo for a short time in the home of a singing-girl but was soon recognised and struggled. He was lamented by the people as he had abolished burdensome taxes and in general treated his subjects with kindness. The main reason for the terrible state of the country was the insubordination and cruelty of the Mamlikis who ill-treated and oppressed the people.

(M. SOverheim)

**SHAB'AN**

AL-MALIK AL-KHAMIL, a Mamlik Sultan, son of al-Malik el-Nâhir Muhammed [q.v.], brother of al-Malik al-Saltab I [q.v.], ascended the throne on Rabî′ II 4, 746 (Aug. 4, 1345), after having won over during the illness of his brother the emirs of influence, notably his step-father, the Emir Argân al-Alkâ. He is said to have used threats as to what he would do them if not elected. He forced his brother's widow to marry him and soon after married the daughter of another Emir and, indeed, was always played a great part in his life. His main occupations were all kinds of giolatorial contests, racing and cock-fighting. His court was marked by great extravagance and the very slave-girls wore jewels on their dresses in his and his brother's reigns. Offices were sold quite openly and shamelessly; the Sultan invented a special tax on the appointment to scribes and offices, as his biographer al-Saafi (see below) tells us. An edict issued in his reign has been preserved in the citadel of Tripoli (Syria) and in a fragmentary state in Kalât el-Hafs; by this certain overpayments to the Mamlikis resulting from the differences between the lunar and solar years, which in case of their death before the end of their period of service could be claimed by their heirs, were left to the latter (see Bibliography).

He had two of his brothers and two of his most important emirs murdered. Velboghâ el-Yâfaw, governor of Damascus, ran a similar risk. He therefore arranged with the other Syriac govern-ors to send a letter to the Sultan in which he threatened him with deposition and reproached him vigorously with his wickedness. Sultan Shab'ân then sent an apologetic reply in which he promised to reform but made preparations against the rebels. When he wanted to put to death two more of his brothers he was prevented by their mother and his step-father. Other emirs who had once been friendly to him but who now saw arrest threatening them collected their followers and other malcontents in the neighbourhood of Cairo until the Sultan in the end had only 400 horsemen at his disposal. He took refuge with his mother in the citadel where he was discovered and taken prisoner. He was murdered two days later on Jumāda II 3, 747 (Nov. 20, 1346). In his brief reign he had proved himself one of the most worthless rulers who ever sat on the throne of Egypt.

(M. Soverheim)

**SHABANKARA,** name of a Kurdish tribe and their country. Ibn al-Athir has Shaban-kara; Marco Polo: Soncara. According to Hamd Allah Mustawfi, the realm of Shabankara was established by Fars, Kirmân, and the Persian Gulf. Nowadays it forms part of Farsast; modern maps show a village of the same name of Shabankara 30° N., Lat. and 51° E. Long. Mustawfi says that the capital was the stronghold of Jî; other localities of the province, which was divided into six districts, were: Zarqân (near lq.), Izâhadâm (or Izâhadâm), Bursk, Târes, Khâna, Nâfour, Kur, Khûf, Lîrâ, and Darbâjdîr. As for particulars and identifications it suffice to refer to the notes of G. le Strange on his translation of Mustawfi's *Nuzhat al-Saltab* (B.M.S., XXIII/II, 138/139); for Darbâjdîr cf. also al-Aqâi (above, l. 960) and P. Schwartz, *fot i Mittelalter*, ii. 92 etc. As for the climate, Shabankara is reckoned among the warm countries (*garmār*); but it encloses also regions of a moderate temperature (*huwâr mawtâї*). The products of Shabankara consist chiefly in corn, cotton, dates, (dry) grapes and other fruits; at Darbâjdîr mineral salt is found. Among the most fertile districts is the close of Zarqân and of Bursk. The revenue (*bakâh dâvânti*) during the Shabankara's rule amounted to more than 3,000,000 dirhams, but at this time Mustawfi wrote (± 740 = 1340) they only came to 266,000 drs. The country abounded in strong places, e. g. lq., Izâhadâm (destroyed by the Ayyub Čàwûli, rebuilt later on), Bursk. At the time of Mustawfi, the fortifications of Darbâjdîr were ruined, but the mountain-pass of Tašâ Rûma, to the east of the town, had a strong castle. In the châpter on the Muṣrâfārî dynasty, incised on the manuscript of Mustawfi's *Nuzhat al-Saltab*, facsimilated by Browne G. M. S., XIV/1,
666/666), there is also mention of the fortifications of Shabankara, the fertility of that country ("beautiful and cultivated like the garden of Iran"), its mills, bâhîras, etc.

The Shabankara tribe were Kurds; in Ibn al-Balkhî's time (early sixth [twelfth] century) there were five subdivisions of them, viz., the Isâma'îlis, the Râmânî, the Karzuwi, the Maxûd and the Shâkâni. They were herdsmen, but also intrepid warriors, who more than once, in the course of history, became a power to be reckoned with. Their chiefs boasted descent from Ardashîr, the first Sassanid, or even from the legendary king Mintâhar. Leaving aside the exploits of the Shabankara in Sassanian times (as e.g. the fact that Yazdegerd III is said to have taken refuge among them at the time of the Muslim invasion), the history of the Shabankara begins at the epoch of the decline of the Buyid power.

The Isâma'îlis were regarded as the most noble in their tribe, their chiefs are said to descend from Minûdîr and to have held in Sassanian times the function of Ispahbads. The first time, so far as we know, this tribe came into collision with a greater power was in the days of the Ghurânâd Wasâd (421/1030 – 431/1040), whose general Tâh Farrâh drove them from the environs of Isfahân; so they were compelled to remove southward. But now they came within the sphere of Buyid influence. The Buyids not suffering their presence, they had to migrate once more, until they settled in the Darâsîjird district. Ibn al-Balkhî gives the history of their ruling family at some length. It may be sufficient to state that in the course of the quarrels which arose among the kinsmen of the fallen Buyid dynasty, Sâkî b. Muhammad b. Vahyû called to his aid the mighty Fadlîyya of the Râmânî; at the time Ibn Balkhî wrote, Sâkî's son Ĥasîhây was the ruler of the Isâma'îlis, but his kinsmen contested his supremacy.

The Karzuwâr Shabankâr, taking advantage of the decline of the power of the Buyids, obtained Kâzerûn but were driven out of it by Ĥawwî when he made his expedition in Fârs. The Maxûdîs also came to some power in the days of Fadlîya; the Karzuwi chief Abu Sa'd had also served under that Râmânî ruler. For some time the Maxûdîs possessed Firuzâbâd and part of Shâpûr Khûra, but they were not match for the Karzuwâs, whose chief, Abu Sa'd, defeated and put to death Amârîya, the Maxûdî prince. When, later on, on Fârs, he installed Amârîya's son Vîghstâf as ruler of Fârs, the Kshânîs, rapacious mountaineers of the coastlands, present no historical interest. They also were subdued by Ĥawwî.

Historically the most important tribe is the Râmânî, to whom belonged Fadlîya (Ibn al-Ĥithir, p. 48), calls him Fadlîh), the mightiest Amir of the Shabankâr. This man, the son of a certain 'Alî b. Abu-Isâh b. Aïyûb, was the chief of his tribe, rose to the rank of Isâma'îlî in the service of the Safîh 'Adîr, the wastr of the Buyid ruler of Fârs. Even before this the Buyids had been troubled by the Shabankâr. The Tâm'âhî-Geûdad (ed. Browne, p. 432) mentions an insurrection of a certain Isâma'îl of Shabankâr against the king al-Imâm Il-Din-Allâh Abu Kâbir (446/1055 – 440/1048). This insurrection was suppressed by his eldest son Abu Nasr, who died in 447 (1055) and left the throne to his younger brother Abu Mansûr, the royal master of the Safîh Abu-Allâh Mansûr put to death this wastr, whereupon Fadlîya rose in rebellion. He succeeded in capturing the king himself and his mother, the Sâyîda Khursâdîâ. Abu Mansûr was confined in a stronghold near Shâhâq, where he was murdered in 448 (1056); the Sâyîda was, by order of Fadlîya, suffocated in a bath. The Shabankâr chief, now ruler of Fârs, soon came into collision with the Sâlûkî power. After fighting without success against Kâwûrî, the brother of Alp Ahrâmî, he submitted to the latter, from whom he received the governorship of Fârs. Fadlîya afterwards revolted; the stronghold of Khurshûb, to which he had betaken himself, was besieged and taken by the great Nâqûf b. Malik, and Fadlîya, after various vicissitudes, captured and executed (464/1071). Such is in substance the account of Ibn al-Balkhî, a younger contemporary. Ibn al-Ĥithir represents these events somewhat differently (x. 48/49; the Kurd Fadlîh, who, according to Ibn al-Ĥithir, ix. 289, held part of Âdharbâjûn and raided the Kshânîs in 431/1030, cannot, of course, be identified with the Shabankâr chief). With the Fadlîya-affair is connected without any doubt, the expedition of Alp Ahrâmî to Shabankâr of the year 458/1066, mentioned by al-Râwînî, Râbût al-Ĥittîr (G. M. S., New Ser., vol. ii.), p. 118.

The Shabankâr were to be for many years a nuisance to the countries of Kirmân and Fârs. In 492 (1099), supported by the prince of Kirmân, Isrîshâb b. Kâwûrû, they defeated the Amîr-unûr, who was ruler of Fârs, and took the city of the Saltân Bârîkîrî. About these times the struggles of the Attabeg Ĥawwî with the Shabankâr begin. This prince, Fâkhîr al-Dîn Ĥawwî, who died in the year 510/1116 (the Tâm'âhî-Geûdad wrongly places his death under the rule of Maxûdî b. Muhammâd b. Malik-šâb), governed Fârs on behalf of the Sâlûkî ruler of Irāk, Muhammâd b. Malik-šâb. The Shabankâr Amîr al-Ĥusnî b. al-Muhirâb Khusruf refused to pay homage; thereupon Ĥawwî attacked him suddenly. Khusruf had a narrow escape, being saved by the help of his brother Fadhîlî. Now Ĥawwî subdued Pastî and Djahmân in Fârs, thereupon he besieged for some time the stronghold where Khusruf had taken refuge, but perceiving that the siege would be a long and hard one he came to terms with the Shabankâr chief. Later Khusruf accompanied the Attabeg on his expedition to Kirmân, the king of which had sheltered the prince of Darâsîjird, Ismâ'îl. In this connection Ibn al-Ĥithir mentions the fact that Ĥawwî requested the king of Kirmân to hand over some Shabankâr forces which had taken refuge to him. After these events the Shabankâr seem to have kept quiet during the rule of Muhammâd b. Malik-gîrî, but new troubles arose when under the following king, Muhammîd b. Muhammâd (511/ 1117 – 525/1131), the wastr Nâşîr b. 'Alî al-Dârûzânî began to illtreat these tribes also. This caused an insurrection during which the Shabankâr wrought great damage. For the time up to the Kirmân affair the following data is in the service of the Salûkî Attabeg Sunyûr, the Kurd Muhammâd Abu Tâhir, who afterwards became the first independent sovereign of the Greater Lâr dynasty (he died 555/1160), made himself mighty by a victory on the chiefs (Akkûrûn) of Shabankâr. In 564/1168 the Shabankâr sheltered Zangi b. Dâkîr, who was expelled from Fârs by the ruler of Khusruf.

THE ENCYCLOPAEDIA OF ISLAM, IV.
We now enter on the most glorious period of Shabánkārā history, which, however, lasted only a few years. The Shabánkārā chief, Kálūl al-Dīn Mūbāriz and his brother Niẓām al-Dīn Maḥmūd, Amir of Iq, availed themselves of the disturbances which arose in Kirmān after the extinction of the ruling Seldūq dynasty of that country. They corresponded to the call of the waźr Nāsḥ al-Dīn, who solicited their aid against the Ghurz. Contrary to the intention of the waźr, but assisted by the citizens, they occupied before, giving battle to the Ghurz the capital Bardasd and so secured the dominion of Kirmān (597 = 1200/1201). The two Amirs now defeated the Ghurz, but the strained relations between these rulers of Iq and the Atabeg of Fārs compelled them to return to their realm after having appointed as their nāṣir one of the nobles of Kirmān. Thereupon the Ghurz appeared once more to repeat their ravages. One of the Kirmānī Amirs, Mūmūz Tādī al-Dīn Shāhān-shāh, concluded a treaty with them. Niẓām al-Dīn, on the other side, in the battle which ensued Hurmuz fell and the Turkish allies were routed. Shortly after, Niẓām al-Dīn entered Bardasd again. He made himself, however, by his debauchery and his capacity odious to such a degree that a plot was laid against him. In the night the conspirators took him prisoner with his sons (600 = 1203/1204). They intended thereby to compel the commanders of Mūbāriz’s garrisons to surrender. These commanders, however, remained in their strongholds and the latter had to be besieged. In the meanwhile a new actor made his appearance on the political stage viz. ‘Adām Shāh b. Malik Dīnār, a protegé of the Khvārīm-shāh [q.v.]. ‘Adām Shāh had concluded an alliance with the Ghurz who assisted him in his attempts to secure the realm of Kirmān. In short, the course of events was as follows. The prisoner Niẓām al-Dīn was sent to the Atabeg of Fārs, but if ‘Adām Shāh expected to remain in the quiet possession of Kirmān, he was disappointed. On his return the Atabeg, Šāh b. Zang, to the effect that Šād was sending his general ʿIzā al-Dīn Ṭaflūn to accelerate the reduction of the garrisons mentioned above (600). The troops of Fārs duly arrived and delivered Kirmān definitively from the Shabánkārā. An expedition which Mūbāriz undertook in revenge had no results except bringing about once more severe devastations.

In 658 (1260) Hillāgū destroys Iq and killed the Shabánkārā Amir Muḥṣafar Muḥammad; afterwards, in the year 694/1295 we find Shabánkārā among the countries which, according to the treaty between Bābā Kānūn and Ghūzān Kān, fell to the lot of Ghūzān. For the year 712/1312 mention is made of an expedition of the Shabánkārā against the authority of Uluğ Kān. It was repressed by Sharāl al-Dīn Muḥṣafar, who later became the first historically important member of the Muḥṣafarī dynasty. It was the princes of that house who definitely put an end to the power of the Shabánkārā. In the year 755 or 756 (1354 or 1355) the last Shabánkārā ruler, the Malik Ardashīr, refused to obey the orders of the Muḥṣafarī Mūbāriz al-Dīn. The latter sent his son Maḥmūd with an army to chastise the Kānīlī prince. Maḥmūd subdued the country and obliged Ardashīr to fly. From this time onwards Shabánkārā forms a part of the Muḥṣafarī empire; incidentally, in the year 765 (1363/1364), we hear of a hikim of Shabánkārā on behalf of the Muḥṣafarī kings (G. M. S., XIV/v, 698). After the time of this dynasty mention is found of Shabánkārā as one of the seifs (gif) held by Bahānghūr Behbudīr (Dawlat-shāh, Tabrīz, ed. Browne, p. 354).

—SHAB'LĪ, ABD ‘AMIR ‘AMIR b. SHARĀIL b. ‘AMIR al-SHAB'LĪ, traditionalist, was one of the many South-Arabs who gained prominence in the early days of Islam. He was descended from the clan Shāb, which is a branch of the large tribe of Hamīl, and was born in al-Kūfah, where his father Sharāshīl was one of the foremost of the šurē or Kurān readers. There is a great divergence in the dates assigned as the year of his birth, but we may assume that the date which he himself gives is approximately correct. He stated that he was born in the year of the battle of Djālūf, which took place in the year 19/640, but, according to another statement, his mother was one of the captives made after that battle, so that the year 20 given by other authorities may be more accurate. He himself tells us that when al-Hādżfāzī came as governor to al-Kūfah in the year 75, he had him called to enquire there about the conditions of the city and finding him well-informed he made him a disciple (‘arīf) of the tribesmen of Hamīl and settled a salary upon him. He kept in favour with al-Hādżfāzī till the time of the rebellion of ‘Abd al-Raḥmān b. al-Ash‘āth (in 81/700) when several of the chief šurē of the city came to him telling him that he, as the foremost of their class in the city, ought to take part in the rising and finally persuaded him to join them. He actually went so far as to address the opposing armies and overwhelm al-Hādżfāzī with reproaches. The latter when informed about it said:
"Do not be surprised at this Sha'bî, the villain; if God grant me that I get hold of him, I shall make this world narrower for him than a camel's hide!"

Soon after, the army of Ibn al-Ashârî was defeated (in 83 A.H.) at Dair al-Djama'dun and al-Sha'bi to preserve his life went into hiding. When he learned that al-Hadîdîjâdî had granted an amnesty to all who joined the army of Kutaiba b. Muslim, which was being raised to be sent to Kharnâsîn, he obtained through a friend a donkey and provisions and went to Farghānâ. Here he remained unknown but was able to get into favour with Kutaiba who employed him as secretary. From one of his letters al-Hadîdîjâdî gathered that the new caliph al-Sha'bi who was the composer and commanded Kutaiba to send him back to him without delay. Al-Sha'bi had been for a long time on friendly terms with Ibn Abî Muslim, the chamberlain of al-Hadîdîjâdî, and the latter had probably spoken in his favour before al-Sha'bi arrived before the governor. Ibn Abî Muslim and other friends advised al-Sha'bi what excuses to make, but when he came before al-Hadîdîjâdî, he silently endured the many reproaches of ill-rewarded favours which he made and then admitted his guilt and stupidity. Al-Hadîdîjâdî, who must have valued his learning perhaps more than his position among his tribesmen, readily forgave him.

His reputation must have reached the caliph 'Abd al-Malik for he sent to al-Hadîdîjâdî to send al-Sha'bi to him and he spent the next few years at the court in Damascus. It is difficult to credit the account of the three years till the death of 'Abd al-Malik as, on the authority of al-Sha'bi himself, we are told that he was employed on two very important missions, one to the Greek emperor to Constantinople and the other to the caliph's brother 'Abd al-'Azîz who was governor of Egypt. The first mission related by al-Sha'bi himself was remarkable on account of the fact that the emperor tried to make the caliph suspicious against his ambassador, in which he was not successful on account of the straightforwardness of al-Sha'bi. The mission to Egypt was of the most honourable character, the caliph recommending the ambassador in flattering terms to his brother. The favour of al-Sha'bi did not confine itself to the person of al-Sha'bi, but we are told that thirty other members of his family were with him and all received salaries. After being present at the caliph's death-bed he appears to have gone after the decease of 'Abd al-Malik back to al-Kufa and died there a short time before the death of al-Hasan al-Hasîrî, who died in 110/728. Here again the dates given by various authors differ very much; every year from 103 to 110 is mentioned, the latter being probably the right one.

As regards his personal appearance, al-Sha'bi was a slim, little man and he himself attributed it to having been born a twin. His mental qualities must have been great, and in contrast with other theologians he had a sense of humour. Al-Maqâshî was asked why he did not go to hear traditions from al-Sha'bi; he replied: "Because as soon as he sees me coming he makes fun of me and says: Does this look like a man of learning? He looks just like a weaver!" But Ibrahim al-Nakhârî received him with honour. Al-Sha'bi is said to have stated that he had heard traditions from more than 500 Companions and the general judgment of critics is very favour-
of the 'Amara and the Banū Shabwān, he took his mother who lived on the slope of Mount Sāīdamī near Mawsil and went farther south. Sufyan b. Abī 'Iyāla al-Khāthāmī was defeated at Kāhniḵ and Sawra b. Abūdār (al-Hurr) al-Tamīmī at al-Nahrawān, whereupon al-Hadjājdājī at once collected a new army and put al-Djazl b. Sa'id al-Kindī in command. The latter showed the greatest caution in following up his dangerous enemy, was always on his guard and ready for battle, and entrenched himself at night. An attack made by Shabib failed. Al-Hadjājdājī who wanted a speedy end to the long struggle, then appointed Sawd b. al-Mudjājī al-Hamdānī and ordered him to attack at once, but he was killed. His successor Sawdī b. 'Abd al-Rahmān al-Sawdī could do nothing and suddenly Shabib appeared before Kufa on the same day as al-Hadjājdājī returned from a journey to Basra. In the night Shabib even entered the town and knocked at the gate of the citadel with a mighty blow from his mace, but on the following morning he had disappeared again. Al-Hadjājdājī then sent a body of cavalry under Zahr b. Kais al-Djājī against him; Zahr was however defeated at al-Salālahm and when Zā'ida b. Kudāma, who succeeded him had fallen at Rūḏbār, Shabib threatened the town of al-Madīnā. A new army was at once equipped and the command given to 'Abd al-Rahmān b. Muhammad b. al-Aṣ'āb al-Kindī [q.v.] who pursued the same cautious tactics as al-Djazl. As he did not succeed in gaining a decision, al-Hadjājdājī became impatient and replaced him by 'Othūmā b. Kaṣṣāf al-Jīrīkī, who was defeated and killed in Dhū 'l-Hijājī 176 (March 696) on the river Ḥawāla. While Shabib was spending the next three months in the mountains, al-Hadjājdājī again collected a strong army from the command of which was given to 'Attāb b. Warqā al-Riyāḥī. In the meanwhile al-Madīnā fell to Shabib without a blow being struck. Soon afterwards he attacked the troops sent against him at Sīk Ḥakama near Kufa. 'Attāb was killed and Shabib was once more victorious. He therefore again threatened Kufa; al-Hadjājdājī, however, had already appealed to the caliph for help. 4,000 men under Sufyan b. al-Ahār al-Kalbī soon arrived and there was again a battle at Kufa, in which Shabib had the worst of it and had to take to flight to save himself. After an indecisive fight at al-Anbarī he went to Djasbā, i.e. the region of al-Nahrawān, did not stay long there but went to Kirmān. When the Syrians pursuing him proqued he went to meet them, crossed the Djudjīl into al-ᾭwāz to attack Sufyan but was forced to retreat after a desperate struggle and was drowned while crossing the river (probably in the end of 77 = spring of 697). Shabib's appearance was in keeping with his almost legendary exploits. He was very tall and had possessed extraordinary physical strength.

besides knows a castle on mount Raina (now the Djebel Rima) in Yemen also called Shabwa.

**SHADD (or RA'AT AL-MUQZAM)**, "signature," "note," "birth which is bound"; this is the most important rite in the initiation ceremony practiced since at least the twelfth century A. H. as well as in certain mystical congregations (cf. *tarikah*). At his initiation the body of the initiate, the candidate (mashkil), if he is a Muslim, takes part if required in the recitation of the *fatihah,* the seven surahs, the *mashkil* in honour of the Prophet, the latter preceded by his taking a preliminary oath. Then comes the *shadd*; the novice bends down and is "bound" by the initiator (*mashkil, shadd*), either on the body, the head, or he shoulder (cf. the Turkish miniature in *Islam, vii. 171,* with a knot of material, a shawl of silk or wool (*mab'un*), a cloth handkerchief (*fûzû, manûl, ghâbha, sumûl,* or a simple piece of string (*wustûl*)). Several successive twirls, knots or turns are made in the cord (sometimes 3 or 8); prayers are recited at each twist invoking some patron saint; when there are four of them, the prayer is in honour of the *mashkil,* Gabriel, Mahbûb, *Al'î and Salâm; in this case, two supplementary knots are added (called *gharz, shabka*) in honour of Hasan and Husain.

The *shadd* is characteristic of the solemn initiation *'asb al-kufr Allâh, jî madid'Al'î, bayn al-ifzâyân,* it binds the initiate, whether he be Muslim, Christian or Jew, to the corporation as a body, as the *'ash al-kihrâs* of the mystics binds one to the whole brotherhood; on the other hand, the *taqâwi,* called "spat without a knot" is a private pact of brotherhood binding to a single individual only by a kind of foster-brotherhood (cf. *shadd* al-qâf wa'l-šâwâl wa't-tâwi, for the novice mystic).

After the *shadd,* the initiate is sometimes partially shaved (forelock, moustache, or beard); then he puts on a special dress (*ihûl,* *sawûtû*) in the old guilds; *mâhira* on the shoulders and *'âdî* (*kabîr* or *kumma,* according to Bakr as early as 570 (1174) or *'âdî* on the head, in the congregations. The initiate's solemn pledge is then taken ("shadd, bay'a, muhârâ'a, mîshîl al-'âlî), certain esoteric instruction on his new duties is given with permission to make use of it (*ifdâta*). He then takes his place with this brethren on the carpet of initiation (*sa'id, saffiyya*), for the traditional meal (*sumdîl, wulûn*).

During the last forty years this rite has began to disappear with the gradual disappearance of the old guilds. Some congregations (*Ra'sût* and *Bakâfiyya*), however, have still preserved the solemn *shadd.*

Thorning was the first to study and classify methodically the esoteric manuscripts relating to the guilds, or *khit al-futumwâna,* which describes this ritual (they are a kind of esoteric mechanism of initiation, like the sodomistic handbooks, compiled in vulgar Arabic with some Persian terms: *dastûr,* "by your leave," *fîr, kâr,* the earliest manuscript dated 844 (1440) but the text is of the xith century; an inscription found by van Berchem in Egypt alludes to them as early as 771 (1369); the Caliph Nasir (d. 622/1225) is remembered for having based his attempt at an order of chivalry (*ihûl al-futumwâna*) on the rite of *shadd,* which is found even earlier in 578 (1182) among the *Nubawiyâ* of Damascus, and in 535 (1140) in a guild of thieves of Bagdad (cf. also Ibn al-Djâwzi, *Tabûs ilûtis*, ed. Cairo 1340, p. 45*).

Its origins are still more remote. If we remember the byname from the fourth century A. H. among the mystics of the words already mentioned *bâlî, fiqâ,-, and especially futumwâna* [q.v.], this "knighthood honour" which no threat or prayer could turn from regarding their oaths (like Sasan damned for his fidelity to the monothestic pact, which he had taken, according to Hallâd, *Tabûs.*, vi. 20-25; Abu Tâlib al-Makki, *Kût al-Kulh,* Cairo 1310, ii. p. 82, i. 8-9; Ahmad Ghazâli quoted in Ibn Dâwjâ, *Kuçib*, Leiden MS., cod. Warn. 998, f. 1177 b 436). The appropriation to the *shadd* of *Kur'ân,* vii. 171 and xvili. 10 seems to be more modern. But certain elements of the ritual itself are ancient, probably of extremist Shi'a origin. It is not by chance that the sect of the *Nabatâ* who practice initiation as reformed by Khâbidî and Tafrîsî in the fourth century A. H. already credits Salmân with the same qualities as initiator who do the guild catechism describing the *shadd:* besides the oath of secrecy and the right to initiate non-Muslim mystics point to the *Kurâ'ân.*

(Louis Massignon)
SHADDÁD, BANU. The Banu Shaddád, of whom there is little record, ruled over Arrán from 340–465/951–1075/1067 when most of the country was conquered and annexed by Malik-Sháh. Members of the family continued, however, to hold governorships in various districts, such as Gandjá and Aní, which they purchased from the Seljúq, at any rate down to the end of the 8th/14th century. They were probably Kurds. The principal towns included in Arrán were Nakhchiván, Gandjá, Tílís, Damárcap and Karabágh. The inhabitants were called A or Leqshána.

In 397/948 the Mamluk ruler of Arrábad, Dállá, Islam Muhammad, was captured before the gates of Raís, whereas on that country was thrown into confusion and any chief who had a following set himself up as independent governor of some town or district. Among these was a certain Muhammad b. Shaddád b. Kárrú, who, having first made himself master of Dállá by 340/951, became practical ruler of Arrábad, which he apparently held intact until 344/955 when his power began to decline, and in 360/970 his authority was limited only to the province of Arrán. There was about this time a ruler of Gandjá named Faḍlún who was possibly a brother of Muhammad b. Shaddád. The son of Muhammad b. Shaddád b. Kárrú was Abu l-Ḥasan 'Ali b. Dállá Qaṣím, who reigned for eight years and was succeeded by his brother Márzúb, who after a reign of seven years was killed by another brother named Faḍl b. Muhammad while out hunting. Faḍl, by his good government, made himself loved of the people, and among his memorable acts was the building of a vast bridge across the river Arránz. He died in 422/1031 after a reign of 47 years and was succeeded by his son Abu l-FAth Músá, who, after a reign of three years, was succeeded by his son Abu l-Ḥasan 'Ali b. Músá Qaṣím, who reigned down to his death in 440/1048. This Abu l-Ḥasan was one of the patrons of the poet Kársí [v.] in Gandjá. He was succeeded by his son Núsharán, who, dying three months later, was succeeded by Abu l-‘Aswár Šáwir b. al-Faḍl, of whom more is known than of the other members of this dynasty, for he is mentioned more than once by Khlás in his Kášá-r-námá, and Ibn al-Athir tells us that he swore allegiance to Tughráh when the latter visited Gandjá in 446/1054 after his conquest of Taláz. Abu l-‘Aswár died in 459/1067 and was succeeded by his son al-Faḍl II Minúčhir. Khlás (op. cit.) writing in 468/1075 refers to Faḍlún b. Abu l-‘Aswár in the past tense, and it would appear that with the death of this Faḍlún and the assumption of Arrán by Malik Sháh the independence of the Banu Shaddád came to an end, and from this point it is very difficult to follow the history of the family. This Faḍlún was presumably the patron of this name so often addressed by Khlás, and is also the subject of several anecdotes in the Kášá-r-námá. He apparently ruled over Gandjá, Aní and Tovín.

According to Khlás (Buld. Acod. Pétr., 1849, vi. 195), al-Faḍl II Minúčhir had two sons, Faḍlún, who was Amir of Gandjá when that city was captured by Malik-Sháh in 481/1088, and Abu l-‘Aswár II Šáwir, who was Amir of Aní when that city was captured by King David the Restorer in 518/1124. This Abu l-‘Aswár II Šáwir had a son Músá, who had a son Kall-Sultán, of whom we know from an inscription found in Aní bearing the date 595 (1198), where he calls himself Kall-Sultán b. Músá b. Šáwir b. Minúčhir al-Shaddád.

RULES OF THE HOUSE OF THE BANU SHADDÁD.

7. Núsharán, A. H. 440;
10. Abu l-Ḥasan, Faḍlún III of Gandjá.

(E. Denison Ross)

AL-SHÁDÍLLI, ABU l-ḤASÁN 'ALÍ b. 'ABD AL-LAH Y b. 'ABD AL-DÁHIR AL-SHÀRÍ b. 'ABD AL-ZAWWILLA, a celebrated mystic, founder of the Muslim religious brotherhood or ṣáfá (q. v.) known as the Shádhílliyá (q. v.), which has itself given rise to some fifteen other brotherhoods like the Wáqiyyá, the 'Arshiyyá, the Qádsíyyá, the Hujjáváyya etc. etc.

He was born, according to some, at Ghemára near Cen-wa about 593 (1190/1197); others say he was born at Shádhíl, a place near the Dábal and Shárdín in Turkménia from which he would take his name of al-Shádíl. In any case the ethnic al-Zawwilla would suggest a Moorish origin. His disciples attributed a noble origin to him and trace his descent back to the Prophet through the line of al-Ḥasan.

From his youth al-Shádill had devoted himself to study with such ardour that he contracted a serious disease of the eyes; perhaps he became blind. Henceforth he devoted himself completely
to the doctrines of the mystic Sufis (cf. the art. TAŠAWWUF). In Fas he had attended the lectures of the adepts of the great eastern mystic Djam, particularly those of Muhammad b. 'Ali b. Hizhām, himself a pupil of Abū Mīdān Shū'aib of Tlemcen. But it was only under the influence of the Moroccan Şūfi 'Abd al-Salām b. Mawṣīlūn that the subject of our article went to Hīrīlāy to the reign of Tunis to spread his doctrines. Persecuted for his teaching and especially for his influence on the people, he took refuge in Alexandria in Egypt where his popularity extended and increased. According to some of his biographers, he could not leave his house without being followed by crowds. He made many pilgrimages to Mecca, on the last of which he died at Hīrīlāy while crossing a desert in Upper Egypt (656 = 1258). His tomb, which was an object of great veneration and pilgrimage, is surmounted by a dome, the gift of a Mamlūk Sultan of Egypt (cf. al-Batashinī, Rūbāl p. 29). Silvestre de Sacy gives another tradition (Christomathie, ii. 233), according to which he is buried in the region of Mokha.

Al-Shāhdīlī led the life of a Şāhiḥ [q. v.] Şūfī or religious man seeking through a wandering life of meditation constant union with the divinity, eternal ecstasy, to teach his disciples the entire devotion of life to the service of God. He recommended them to pray at all hours, in all places and in all circumstances, and to practice the tajwīd, his profession of faith was the ṭawābiḥ. His immediate pupils had no ikhwān (a kind of hermitage), nor monastery, nor noisy practices, nor juggling. Among his many disciples, the most famous were in Egypt Tādī al-Dīn b. 'Aṭā Allāh and Abu 'l-ABBĀS al-Murta; in the North-west of Africa the most of the Muslim religious brotherhoods claim to follow his teaching.

Al-Shāhdīlī left a number of works of which the majority are ḥadīth [q. v.], a kind of formula of prayer for recitation, either regularly or in case of need. They are entitled:

SHĀHĪLĪYA, or SHĀHĪLĪYA, pronounced in Africa Shadulīya, Şūfī sect called after Abu 1-Ḥasan 'Abd b. 'Abd Allāh al-Shāhdīlī, whose title is variously given as Tādī al-Dīn and Ṭādī al-Dīn (593-656 A.H.). For the life of this personage see the art. al-.SHĀHDĪLĪ.

His system. Al-Shāhdīlī does not appear to have composed any large work, but many sayings, spells and amulets are ascribed to him, and since some of the first are recorded in the work of his disciple's disciple, Tādī al-Dīn al-Iṣkandari, composed in 694, they may be to some extent genuine (see the art. al-Shāhdīlī). The best known of his productions is the Ḥāf 'Isāb al-Bahr "Incantation of the Sea", which was reproduced by Ibn Baṭṭūta (I. 41), whence the translation is copied by L. Kim (Maraboute et Khousa, p. 229). Extraordinary powers are attributed to it by Hāḍidī l-Khalīfī (III. 58), and its author thought it might have prevented the fall of Baghdad; several commentaries on it are enumerated. Several other incantations and prayers are given in the Lāzīf (I. 47-66) and the Mafā'īb (p. 135 sqq.). The latter of these works contains fairly lengthy discourses, in some of which the stages through which the murūd should pass are described in detail, though the language is, as usual in such cases, not intelligible to the ordinary reader. It would appear from these that al-Shāhdīlī's aim was in the main the incalculation of the higher morality, such as is found in the works which he approved, viz. the Ḥāf 'Ullum al-Dīn and the Khāl al-Kalībī; and indeed the five principles (mūdīl) of his system are given as: (1) fear of Allāh in secret and open; (2) adherence to the Sunna in words and deeds; (3) contempt of mankind in prosperity and adversity; (4) resignation to the will of Allāh in things great and small; (5) having recourse to Allāh in joy and sorrow.

It would seem unlikely that it was his intention to found an order in the sense which afterwards became attached to the word ẓarīṭa. He desired his adherents to pursue the trades and professions in which they were engaged, combining, if possible, their normal activities with acts of devotion. Anecdotes are recorded of men who offered to abandon employment and follow the saint, who urged them to continue working at the same. Mendicancy was discouraged and even government subsidies for their meeting-houses were, it is asserted, refused. Indeed the erection of ẓarīāt and similar buildings does not seem to have been contemplated by Al-Shāhdīlī or his successors or Abu 'l-ABBĀS, who is praised by his biographer for never placing stone on stone. Even the holding of high offices with ample emoluments and a luxurious mode of living was not discouraged; and this doctrine, as will be seen, survived till recent times among adherents of the system.

Doubtless the ultimate aim of al-Shāhdīlī was, as with other Şūfīs, al-ša'āb, and the method pursued was the usual one of the religious exercises called murūd and ṣāḥibān. Formulas, as usual, were selected and their repetition a stated number of times enjoined. Lists of these with the ritual appertaining to them are given in the Mafā'īb (p. 125, 126). The şāhiḥ, indeed, is said to have adapted his recommendations to the needs of each murūd and to have given each permission to follow some other şāhiḥ, if he found his methods more effective. The use of such formulas, however, is not easily separated from the supposed acquisition of miraculous powers, which are described in the Mafā'īb (loc. cit.): "The least of their (the Shāhdīlīs') messengers are blindness, crippling and desolation", but there was some doubt whether they were justified in sending them on their enemies.

Apart from their mysterious knowledge, the leaders of the system claimed to be strictly orthodox, and, indeed, when a revelation which one
of the adherents received conflict in with a zuma he was told to reject the former in favour of the latter. In spite of some of al-Shadhili's assertions the censure of Ibn Taimiya, whose supporters in this matter in their turn incurred the censure of the historian al-Ya'fi (iv. 142).

The three specialties which the members of the sect claimed were: (1) that they are all chosen from the "well-guarded Tablet" i.e. have been predestined from all eternity to belong to it; (2) that ecstasy with them is followed by sobriety, i.e. does not permanently incapacitate them from active life; (3) that the shīb will throughout the ages be one of them.

Spread of the system. The absence at the first of religious buildings renders it difficult to trace the progress of the community. It seems clear that the first group of adherents was formed in Tunis; al-Shadhili's successor, however, Abu 'l-'Abd al-Murra (d. 686) lived 36 years in Alexandria, "without once seeing the face of the governor or sending to him" (Laf'ī, i. 125), and, as has been seen, did not lay stone on stone; still "Ali Pasha Mubarak (Khidat Biyada, vii. 65) reports the existence there of a mosque bearing his name (restored 1189 = 1775/1776), doublestorey, built by his disciples; also of one called after his disciple Yâkuti al-'Arabī (d. 707) and a third after their joint disciple Tâdid al-Din b. 'Abd al-Iṣkandari (d. 709; author of the Laf'ī). The first of these is called a qubūs and is richly endowed. There are manātīs celebrated in honour of the first two of these persons. The Pasha states that the mosques are chiefly frequented by Maghrebins; he mentions a mosque belonging to the order in Cairo, which, however, is in ruins. It is probable that the adherents of al-Shadhili were at all times to be found chiefly to the West of Egypt; but H. H. Jessup (Fifty-three Years in Syria, ii. 537) asserts that they were in his time numerous in Syria and advocated the reading of the Old and New Testaments and fraternization with Christians. In 1892 a lady adherent, "from Karran, in the Bukara, North of Ms. Hamou," set out on a preaching tour in Syria; she advocated reform and an upright life and insisted that all Muslims, Christians and Jews, are brothers. She preached in the mosques in Damascus, Hasbeia, Sidon, Tyre and other cities, rebuking the sins of the people. It would seem certain that religious toleration of this sort by no means coincided with the views of the founder of the order.

It was reported by C. Niebuhr (Reisebeschreibung, Arabische, i. 439; French transl., i. 350) that in Mokhţī in S. Arabia Shah al-Shadhili was regarded as the possessor of the place and, indeed, the originator of coffee-drinking; and S. ile Sacy afterwards (Christ. Arab., ii. 274) produced from the Ḧijānat-miṣr a passage relating how al-Shadhili came to Arabia in 656, and the series of miracles which led to the production of coffee becoming the staple industry of Mokhţī. It is more probable that the patron of Mokhţī is a later member of the sect; "Ali b. 'Umar al-Kurayshī (whose verses are cited in the Mafā'īd, p. 7), a disciple (and probably cousin) of Nāṣir al-Dīn Muhammad b. 'Abd al-Dā'im b. al-Malikā (d. 797), head of the order in his time (Ritter, Erdkunde, Arabien, ii. 572). It is not clear from Niebuhr's account how far the people of Mokhţī in his time observed the Shadhili ritual or been longed to the community. Since Niebuhr's time the place has seriously diminished in importance, being now "a dead-alive mouldering town whose trade as a port for coffee and hides has been killed" (G. Wyman Bury, Arabic Inflexions, 1915, p. 24).

The main seat of the Shadhili community appears to them to have been Africa west of Egypt, and chiefly Algeria and Tunisia. Materials for the religious history of this region are at present scanty; from a MS. called Taḥāṣṣid Wad Qāfūla, written 1805 A. D., MacMichael produces the following excerpt relating to a shākh who died a. H. 1155 (A History of the Arabs of the Sudan, ii. 250):

"It was characteristic of him (Khogali b. Abd al-Rahmān b. 'Abdhim) that he held to the Book and the Law (zuma) and followed [the precepts and example of] the Shadhilī Sayyids as to word and deed. And he used to wear gorgeous raiments, such as a green robe of Basha, and upon his head a red fez (zarīq), and round it as a turban rich muslin stuffs. For footwear he wore shoes (larahs) and he equipped himself with Inayāshīs (al Kitāb al-ḥikam) and per-ABYSSINIAN cives on his heard and on his clothes. All this he did in imitation of Sheikh Abu el Ḥasan al-Shadhali . . . . And it was remarked to him that the Kādiria only wear cotton shirts and scanty clothes, and he replied 'My clothes proclaim to the world 'We are in no need of you," but their clothes say 'We are in need of you'."

The same notice contains the names of some important members of the order; the shākh's conduct, as will be seen, agrees exactly with the anecdotes recorded in the Laf'ī, and the same is the case with what is told in the next paragraph:

"It was also characteristic of him that he never rose up to salute any of the great ones of the earth, neither the AYLN 'ABB, the rulers of his country, nor the kings of GA'AT, nor any of the nobility, excepting only two men, the successor [Chatifa] of Sheikh Itdis and the successor of Sheikh Šaghin an'an'ils.

In the nineteenth century the order received considerable extension through the efforts of one 'Si Masaum' Muhammad b. Muhammad b. Ahmad, born about 1820 among the Gharib, a tribe located halfway between Bogar and Milians, whose biography is given in detail by A. Joly in the Revue Africaine, 1906, 1907. After studying under certain provincial teachers he went to Masaunna, the centre of Muslim studies in Algeria. Having acquired what was to be learned there, he went back to the Gharib among whom he founded two mosques, in one of which he taught the Qur'ān and Fiqh, in the other Grammar and Logic. Having associated with members of different orders, he converted between the Madanita and the Shadhilī; in 1860 he visited the shrine of Abu al-'Rahmān al-Shadhilī near Algiers, and at this shrine having been a Shadhilī, it is said he became attracted to their doctrine; a member of the order advised him to join it and visit the Shaikh of the order, Adda, at Džahl al-Lah in Wazāl Lakrebn. There he stayed for a time, after which he returned to the Gharib. By special providence he had spared the preliminary trials imposed on other aspirants, and instead of starting his career in the order as a muhaddad, he was elevated shortly
after joining to the dignity of Shah. About 1865 he founded a sawah at Bogari and divided his time between the Qarib and Bogari, to the latter of which he ultimately withdrew. In 1866 owing to the death of Adda he became Shah of the Shadhiliyya in Central Algeria, though at first he had to contest it with Adda's son. He was offered the headship of a government madness at Algiers, but declined. This invitation, however, brought him the acquaintance of European officials, whose respect he enjoyed till his death in 1883. By this time his sphere of influence had extended over the greater part of the Tell Oranais and the whole of Western Algeria. Places where he had khulafa' were Mustaghãnem, Mœnara, Reliha, Nedroma, Oran, Telmenec. After his death some of these khulafa' made themselves independent and the unity of control which he had established came to an end.

Statistics for the end of the last century are given by Depont and Coppolani (p. 454), whence it appears that the number of adherents in Algiers and Constantine did not reach 15,000, with 11 zawiyas. The communities which split off from the Shadhiliyya are there given as 13 in number, and among these the Shadhiliyya, Taibiyya and Derrawiya are said to be the most numerous.

Although when the community started there appears to have been little in the way of organisation contemplated and the connection between adherents was loose, it is evident that in course of time the normal organisation of a Khâtib was introduced.

Literature of the Order. It is noticed that several Shadhili himself or his successor Abu l-Abbas al-Mursi published any treatises, whereas his disciple Yusuf al-Asghi seems to have composed Masâbik, and their joint disciple Tadj al-Din al-Iskandari was the author of several works, of which two, Lâqif al-Minan, dealing with the first two heads of the sect, and Milâs al-Falâs wa-Milâs al-Awnâl, are printed on the margin of the Lâqif al-Minan of al-Sharâf (Cairo 1321). The former of these is the main source of our knowledge of al-Shadhili's career. A biography of al-Shadhili which cannot have been much later was the Durrat al-Asrâr of Mu'mammad b. al-Katim b. al-Himyari b. al-Sabagh, which is excepted in the Mafshîhir. Another biography called Khwastib al-Zahiru, by Abu l-Fâdil 'Abd al-Karim b. Mu'azûl (d. 894), was excepted by Hancheberg (Z. D. M. G., VII. 14 seq.).

The general account of the system called al-Mafshihir al-Ma'siyyâ li-Mafshîhir al-Shadhiliyya (printed Cairo 1314) by Ibn lâyâb is later than al-Sûrî. For doctrine this work refers to two Riâlda called respectively al-Usûl and al-Dimhamih by Siddî Zarrûx (Shadhî al-Dîn Ahmad al-Fadl, d. 896). Hancheberg, loc. cit., mentions the Shadhili poet 'Ali b. Wafâ' (d. 807) and his father Muhammad Wafâ', author of certain mystical works, and a 'diwan, of which the ode breathe for the greater part the spirit of joyous devotion to Allah, without disturbing admiixture'. A poem called Hal al-Salih by the Naṣir al-Dîn Ahmad b. Muhammad b. 'Umar b. Thabit of Alexandria (d. 733), is mentioned by al-Suyûtî in Bugaynt al-Wasâ'il, p. 246.

The chief European literature has been noticed above.

(D. S. Margoliouth)
the two to see which would get rid of the other first. By a great display of affection she managed to dispel Aisak's suspicions and to entice him into her palace in the citadel of Cairo. There he was murdered in his bath (655-1257) by two Mamluks devoted to her. When he was attacked and called to her help, she is said to have struck him with a wooden shoe. Others say that she repented and vainly tried to prevent the murder. But she did not succeed in finding a Mamluk officer who would share the responsibility with her; all turned in disgust from the murderers. She was seized by the other party and beaten to death with wooden shoes by the slave women of Aisak's first wife. Her body was thrown into the castle moat and lay unburied for days. Later it was placed in the little mausoleum which still stands in Cairo. She was the most vigorous woman that the Muslim period in Egypt had seen, but she did nothing good during her reign.

*Biography: Abu 'l-Fida in Revue des questions historiques, Hitt. Orientale, vol. 1, passim; al-Makhtis, KB 1. 235; Sulayk. transl. by Quatremere, i. 72; S infected with cicatrices, iii. 485-487; iv. 4-8. On her tomb see M.L.A.O., x. 111 pp., 728 (with some important notes on the Sulta by European writers in Ann. 3), 730.

(SUBREHNEH)

SHAF'A (A), intercession, mediation. He who makes the intercession is called Shaf'a and Shaf'a. The word is also used in other than theological language, e.g. in laying a petition before a king (Lodi, s. v.), in interceding for a debtor (Bukhari, Intifarah, b. 18). Very little is known of intercession in judicial procedure. In the Hadith it is said: "He who by his intercession puts out of operation one of the hudud Allâh is putting himself in opposition to Allâh." (Ibn Hanbal, Munad. ii. 70, 32; cf. Bukhari, An'ihaa, bab 54; Undad, bab 12).

The word is usually found in the theological sense, particularly in eschatological descriptions; it already occurs in the Qur'an in this use. Muhammad became acquainted through Jewish and more particularly Christian influences with the idea of eschatological intercession. In Job xxiii., 43 sqq. (the text is corrupt) the angels are mentioned who intercede for man to release him from death. In Job v. 1, there is reference to the saints (by whom here also angels are probably meant) to whom man turns in his need. Abraham is a mortal saint whom we find interceding in the Old Testament (in the story of Sodom and Gomorrah).

In the apocryphal and pseudographical literature we again find the same classes of beings with the same function. The angels (Test. Adam, ix. 3), the saints (2. Macab., xv. 14; Assumptio Moise, xii. 6). In the early Christian literature the same idea repeatedly occurs, but here we have two further classes of beings: the apostles and the martyrs (cf. Cyril of Jerusalem in Migne, Patrologia Graeca, vol. xxiii., 1115; patriarcha, presbiter, apostles, martyrs; cf. vol. xvi., 850; vii. 383).

In the Qur'an intercession occurs mainly in a negative context. The day of judgment is described as a day on which no sha'afa will be accepted (Sura, ii. 45, 255). This is directed against Muhammad's enemies as is evident from Sura x. 19: "they serve not Allâh but what brings them neither ill nor good and thereby these are our intercessors with Allâh"; cf. also Sura lixiv. 49: "the intercession of those who make sha'afa will not avail them".

But the possibility of intercession is not absolutely excluded. Sura xxxix. 45 says: Say: the intercession belongs to Allâh, etc. Passages are fairly numerous in which this statement is defined to mean that sha'afa is only possible with Allâh's permission: "Who should intervene with Him, even with His permission" (Sura ii. 256, cf. x. 3). Those who receive Allâh's permission for sha'afa are explained as follows: The sha'afa is only for those who have an 'alidh with the Merciful (Sura xix. 90) and xliii. 86: "They whom they invoke besides Allâh shall not be able to intercede except those who bear witness to the truth". XXI, 28 is remarkable where the power of intercession is evidently credited to the angels: "they say the Merciful has begotten offspring. Nay, they are but His honoured servants. He has given them power on behalf of whom they please Him." It appears that the angels are meant by the honoured servants. Sura xi. 7 (cf. xliii. 3) is more definite: "Those who bear the throne and surround it sing the praises of their Lord and believe in Him and implore forgiveness for those who believe (saying) 'Our Lord! who embraces all things in mercy and knowledge, bestow forgiveness on them that repent and follow Thy path and keep them from the pains of Hall".

Such utterances paved the way for an unrestricted adoption by Islaam of the principle of sha'afa. In the classical Hadith which reflects the development of ideas to about 150 A.H. we already have ample material. Sha'afa is usually mentioned here in eschatological descriptions. But it should be noted that the Prophet even in his lifetime is said to have made intercession. A hadith relates that he often slipped quietly from his side at night to go to the cemetery of Baki al-Chardaj to beseech forgiveness of Allâh for the dead (Muslim, Djanââ', trad. 102; cf. Tirmidhi, Djanââ', b. 59). Similarly this Intihaa is mentioned in the qulth al-djanââ (e.g. Ibn Hanbal, Munad., iv. p. 170) and its efficacy explained (Ibid., p. 388). The prayer for the forgiveness of sins then became or remained an integral part of this qulth (e.g. Abu Tahâl al-Schurârî, Kitâb al-Tâmiâh, ed. J. W. T. Juynboll, p. 48) to which a high degree of importance was attributed. Cf. Muslim, Djanââ', trad. 58: "If a community of Muslims, a hundred strong, perform the qulth over a Muslim and all pray for his sins to be forgiven him, this prayer will surely be granted"; and Ibn Hanbal, iv. 79, 100, where the number a hundred is reduced to three rows (susafy).

Muhammad's intercession at the day of judgment is described in a tradition which frequently occurs (e.g. Bukhari, Tawhid, bab 19; Muslim, Munad., trad. 382-383; Tirmidhi, Tafsir, Sura xviii., trad. 19; Ibn Hanbal, i. 4) the main features of which are as follows: On the day of judgment Allâh will assemble the believers; in their need they turn to Adam for his intercession. He reminds them, however, that through him sin entered the world and refers them to Nûh. But he also mentions his sins and refers them to Ibrahim. In this way they appeal in vain to the great apostles of God until Išâ finally advises them to
appeal to Muhammad for assistance. The latter will gird himself and with Allah's permission throw himself before Him. Then he will be told "arise and say, intercession is granted thee." Allah will thereupon name him a definite number to be released and when he has led these into Paradise, he will again throw himself before his Lord and the same stages will again be repeated several times until finally Muhammad says: "O Lord now there are only left in hell those who, according to the Qur'an, are to remain there eternally."

This tradition is in its different forms the locus classicus for the limitation of the power of intercession to Muhammad to the exclusion of the other apostles. In some traditions it is numbered among the charismata allotted to him (e.g. al-Bukhari, *Musnad*, bâb 56).

Muhammad's *ṣafā* then is recognised by the *sidqin*; it is based on Surâ xvii. 81: "Perhaps the Lord shall call thee to an honourable place;" and on xcvii. 5: "and thy Lord shall give a reward with which thou shalt be pleased" (al-Razi's commentary i. 351; cf. earlier, Muslim, *Musnad*, tr. 320). Muhammad is said to have been offered the privilege of *ṣafā* by a message from his Lord as a choice; the alternative was the assurance that half of his community would enter paradise. Muhammad, however, preferred the right of intercession, doubtless because he thought he would get a considerable result from it (Tirmidhi, *Ṣifat al-Kiyâma*, no. 7; `Abd al-Rahim, *Fawâid*, bâb 13: Ibn Hanbal, iv. 404).

The traditions describe very vividly how the "people of hell" (*ṣafāmaniyin*) are released from their fearful state. Some have had to suffer comparably little from the flames; others on the other hand are already in part turned to cinders. They are sprinkled with water from the well of life and they are restored to a healthy condition (e.g. Muslim, *Musnad*, tr. 320).

In another class of traditions it is said that every prophet has a "supplication" (*adwa*) and that Muhammad keeps his secret in order to intercede with Allah for his community on the day of judgment (cf. e.g. Ibn Hanbal, ii. 313: Muslim, *Musnad*, tr. 334 sqq.).

The view is well-known in the Christian view already mentioned, Islam, however, was not content with Muhammad as the advocate. Along with him we find the angels, the apostles, the prophets, the martyrs and the saints. (Bukhari, *Tawhid*, bâb 24; Ibn Hanbal, iii. 94 sqq., 325 sqq., v. 435; `Abd al-Dha`d, *Diya`, bâb 26; al-Tabari, *Tafsir*, iii. 6 on Surâ ii. 255; xvi. 85 on Surâ xix. 90; xxix. 91 on Surâ lxxiv. 49; Abu Talib al-Mukki, *Kutub al-Kutub*, i. 139). Finally after all these classes have said their word, there is still Allah's *ṣafā* (Bukhari, *Tawhid*, bâb 24; cf. Surâ xxxix. 44). Muhammad's pre-eminence remains inasmuch as he is the first to intercede for his community (Muslim, *Musnad*, tr. 330, 332; `Abd al-Dha`d, *Kitâb al-Sunnah*, bâb 13). Finally the question for whom intercession is effective is discussed. While it is generally said 70,000 will enter paradise through the intercession of one man of Muhammad's community (e.g. Dirmint, *Riyad*, bâb 87; cf. Hanbal, iii. 63, 469 sqq.), the answer is already given as early as classical tradition that *ṣafā* holds good for those who ascribe no associate to Allah (Bukhari, *Tawhid*, bâb 19; Tirmidhi, *Ṣifat al-Kiyâma*, bâb 13). To this group also belong those who have committed great sins (Ahî al-Ka`farî). "The prophet of God said: My intercession is for the great sinners of my community" (Abû Dha`d, *Kitâb al-Sunnah*, bâb 20; Tirmidhi, *Ṣifat al-Kiyâma*, bâb 11). This view, however, is not shared by the Mu`tazila (cf. Zanakhi, *Kashf* on ii. 45: no *ṣafâ* for the "wâli"). Al-Razi deals very fully with the Mu`tazila view in his commentary on the Qur`an (i. 351 sqq., vi. 404) according to which there is no such thing as *ṣafâ*, as no one is released from hell who is once thrown into it. For the denial of *ṣafâ* they appeal to some of the verses of the Qur`an already quoted above.

( A. J. Wessinck)

**AL-SHAFAK** (A.), also al-Samir and al-Fayr, dawn and twilight, which are of special importance in the Muslim world and in Muslim astronomy because they settle two of the principal times for prayer. Al-Birûnî gives an excellent description of the phenomena in the Ma`ṣûd `Kanîn (Ma`n, bâb 13). In the morning a long thin column of light appears first, which is more or less inclined to the horizon according to the latitude of the place. This is called the false dawn al-Sâbîl al-Kaîfî al-Fadîr al-Kaîfî or from its shape *Dhamab al-Sâbîl*, "wolf's tail" also "dog's", or gazzelle's tail". This is followed by the true dawn al-Sâbîl al-Šulûh, first as a faint white light which gradually extends in the form of a crescent along the horizon; it marks the time for the beginning of the fifth or morning prayer. Next comes the red dawn. The same phenomena occur in the evening but in the reverse order. That the *Dhamab al-Sâbîl* is not so frequently noticed in the evening as in the morning is, according to Muslim scholars, due to the fact that in the evening people are going to rest while in the morning they are beginning work; Redhouse has definitely shown that first false dawn corresponds to the zodiacal light; he also shows that it is mentioned as early as `Kur`ân, i. 185, l. c. about 630 A. D. and in al-Djâwârî's dictionary and elsewhere. It was therefore noticed earlier in the east than in the west. Numerous Persian verses deal with the dawn and twilight (cf. Redhouse, *op. cit.*). He also gives the Persian and Turkish names for it. Shâfîî, Malikîs and Hanbalis all agree that the end of the third and beginning of the time of the fourth prayer occurs at the moment when the red shimmer al-Sha`fah al-A`mar disappears, while Abû Hanîfa relies on the white one. His pupil A`in Yasîf and Muhammad al-Shâbîbî follow other schools.

Various Arab astronomers have pointed out how much the depression D of the sun in which
the above phenomena appear depend on the atmospheric conditions (fog, etc.), the presence of moonlight, or the sharpness of the eyesight. Different scholars give therefore varying values for D which lie between 16° and 20°. According to Şübat al-Mürdîni (1423–1494/1495) the general opinion in his time was that for al-Sha'āfî $D = 17°$, for al-Sâbî $D = 19°$. Abî 'Ali al-Ḥasan al-Mârîkukhâ (d. c. 1262) had taken 16° and 20° and said that dawn lasts longer than twilight. The time between sunrise and sunset i.e., between the two times at which the depression of the sun is e.g. 18° depends on the inclination of the sun's path to the horizon. The Muslims took a particular interest in calculating the day on which dawn and twilight coincided. For places in the latitude of 48° for example, this happens when the sun is at the beginning of Cancer. The arguments (İzâd) of Şaftâ and Faḍîr are the choroids of the ecliptic between the western or eastern horizon and Şaftâ or Faḍîr.

Astronomical calculations for the beginning of the dawn from Ibn Yûnus (d. 1009) and Abî 'Ali al-Mârîkukhâ are given by C. Schoy in the Naturwissenschaftliche Wochenchrift.

To explain the varying phenomena in the dawn it is assumed by Kûb al-Dîn al-Şahrî and similarly by others that the earth is surrounded by a ball of vapour which contains earthy and watery parts. These are thicker in the lower strata than in the upper. Around the veil of vapour is a ball of pure air. The sun's rays throw a shadow into these balls from the earth. The parts lying outside the shadow reflect the light and seem to shine; the observations result from this more or less accurately.

On the planes of the astrolabe and on certain forms of quadrant and clepsydras lines are drawn which are used to fix the time of morning and evening prayer; on the other hand such lines are not found on the universal plane nor on the Žariḳî plane.

That we so frequently find among composers of astronomical works the Muwaṣṣîd of mosques, times keepers and summoners to prayer such as Djamâl al-Dîn al-Mürdîni, Şübat al-Mürdîni b. al-Şaftî (1375/1376) etc. is explained by the fact that it was the duty of these officials to calculate the hours of prayer exactly and make the necessary observations.

(E. Wiedemann)
on the tomb was built by the Ayyubid al-Malik al-Kamil in 608 (1211/1212). It was always a favourite place of pilgrimage.

Al-Shāfi`ī may be described as an eclectic who acted as an intermediary between the independent legal investigation and the traditionalism of his time. Not only did he work through the legal material available but in his Risāla he also investigated the principles and methods of jurisprudence. He is regarded as the founder of the Usūl al-Fiqh. Unlike the Hanafis he sought to lay down regular rules for Fiqh (K. al-Risāla, Cairo 1321, p. 65 and 70) while he would have nothing to do with Ḥadīth (q.v.). The principle of Ṣafwah seems to have been first introduced by the later Shāfi`is’ (cf. Goldziher, Žahiriyya, p. 20 4q.; do., in E., vol. ii. 109 and Bergsträsser, Anfänge und Charakter des juristischen Denkens im Islam, in Ist., 1924, xiv. p. 76, 80 sqq.). In al-Shāfi`ī’s two creative periods can be distinguished, an earlier (Itrāj) and a later (Egyptian). Al-Ḥikam (d. 405) for example says this of the Risāla (al-Aṣkaλānī, p. 77), which, however, only survive in the later recension (printed at Cairo 1321 etc.). These two periods are also often marked in the K. al-Umm as well as in the variant teachings of the later Shāfi`is.

His writings in which he makes a masterly use of dialogue, with opponents usually unnamed, we have had transmitted to us by his pupil al-Rabi` b. Sulaimān (d. 270 = 884). A list of these is to be found in the Fikrist, p. 210, another of al-Baihaqi (d. 458) in al-Aṣkaλānī, p. 78, a third in Yāqūt, p. 396–398. The most of the titles mentioned there are parts of the K. al-Umm, a collection of writings of Shafiis’ (printed at Cairo in 7 volumes: 1321–1325, in part from a manuscript of the celebrated Shafii` Sirāj al-Dīn al-Balḵi). The title of this collection can hardly be old. As far as I know, it is mentioned for the first time by al-Baihaqi (in al-Aṣkaλānī, p. 78) and al-Ghazali, Ibrā (Cairo 1327), ii. 131. In the work itself it is mentioned only in such passages as appear to be glosses (e.g. Um, i. 158). Several recensions of this work must have existed. As late as the fifth century another recension different from that of al-Rabi` was known to al-Balshqāi for he gives some of the separate chapters of the Umm in a different order. This may perhaps have been al-Buwaisi’s recension, which al-Rabi` seems to have used along with that of Ibn Abi l-Dārād (cf. Um, i. 96, 157; ii. 52; viii. 389 etc.). In the present printed text of the Umm, a number of larger and smaller glosses seem to have been incorporated; for example al-Ghazali, Ibn al-Sābīdān (d. 477), al-Mawardi, etc., are quoted (cf. Um, i. 114 sqq., 158).

According to al-Ghazali (lev. cit.) this collection was arranged by al-Buwaisi and published by al-Rabi` with his own additions. Final inquiry into the origin of the Risāla al-Umm cannot be based upon the printed edition, as the editor has followed the MS. of al-Balshqāi without recording the variants of the other MSS.

The present components of the Umm are writings quoted by al-Balshqāi as separate works: Qisas al-Balshqāi (Umm, vii. 250 sqq.), K. Aḥād al-Istilāh (Umm, vii. 257 sqq.), K. Ṣafar al-Farq (Umm, vii. 262 sqq.), K. Siyāsa al-ʿAm wa l-Nakb (Umm, vii. 265 sqq.), K. Ḥaṭṭal al-Iṣṭighāla (Umm, vii. 477 sqq.), K. Iḥtiṣāl al-ʿIrāqīyya (Umm, vii. 87 sqq.) i.e. Abi ʿAbd Allah and Abi Abi Laila († 148), K. Irāqīyya ma`a Muḥammad b. al-Ḥasan (viii. 277 sqq. = K. al-Radd al-Mahb. b. al-Husayn) and K. Ḥaṭṭal `Alla` Abī Allāh b. Muqaddas († 34); viii. 151 sqq.). The K. Ḥaṭṭal al-Balshqāi is preserved in the translation of Um, vol. 7, the Minhaj on the margin of vol. 6. This contains traditions which have been collected from the different writings, which have those that have not survived but are mentioned in the Fikrist and in Yāqūt, e.g. K. Aḥkām al-Kur`ān, K. Fadil` al-Kur`ān, etc. The K. al-Maḥṣūs b al-Fiqh (Fikrist, p. 210) must have been another large law-book, which was still available to al-Balshqāi, and is also called al-Maqtabar al-Mu`aṣir wa l-Maṣāhir (Fikrist, p. 210). There has also survived a profession of faith by Shafi`is’ entitled: K. Waylay al-Shafi`is (mentioned in Yāqūt, ed. by Kern in M. S. O. S., Am., 1910) while the K. al-Fiqh al-ʿAbbar (Cairo 1324 etc.) is a short treatise on dogmatics of the Ash`arite period. A few poems bear witness to his command of language (al-Muṣʿīdī, Muḥarrarī, viii. 66; Ibn Ḥaddīli, L. 448; al-Aṣkaλānī, p. 73 47).

The main divisions of his activities as a teacher were Baghdad and Cairo. The most notable of his pupils were al-Muṣāfī († 264), al-Buwaisi († 231), Al-Rabi` b. Sulaimān al-Murādī († 270), al-Zarāfī († 260), Abī Thawr († 260), al-Ḥusaynī († 219), Ahmad b. Ḥanbal († 241), al-Kurāshī († 248) etc. In the course of the third and fourth (ix. and x.) century the Shafiis’ won more and more adherents from these two towns as centres, although from the first they had a difficult position in Baghdad, the centre of the Al-Ab. In the fourth (xiv.) century Mecca and Medina were their chief centres next to Egypt. By the end of the third (beg. of the tenth) century they had already successfully disputed Syria with the Awaṣīs so that from Abū Za`ūr’s onwards (302 = 915), they always had the office of ʿādi in Damascus. In the time of Muṣūdī the Shafiis’ exclusively held the jurisdictions in Syria, Kirmān, Bukhārā and the greater part of Khurasan; they were also in considerable strength in Northern Mesopotamia (Akkūr and Dallām (Egypt by this time was Shafa’i). In the fifth and sixth (xi. and xii.) century there was frequently street fighting with the Ḥanbalis in Baghdad, with the Hanafs in Isfahan while on the other hand they won the (ḥarām princes to their side (Snauck Hargraves, Vorprü. Gesch., ii. 306). In Egypt under ʿAlā al-Dīn (564 = 1169) they again became the predominant Madhhab. But in 664 (1265/1266) al-Malik al-Zahir Baibars appointed one Ḥanafi and Malik one judge alongside of the Shafi`i (cf. al-Subkī, v. 134). In the last centuries before the rise of the Ottomans the Shafiis’ had attained absolute preeminence in the central lands of Islam. Even in Ibn Dujair’s time (Riḥā, p. 102) the Shafi’i Imām conducted the prayers in Mecca. It was only under the Ottoman Sultan at the beginning of the x (xvi.) century that they were replaced by Ḥanafis, who were sent from Constantinople to fill the jurisdictions, while in Central Asia with the rise of the Safawīs (1501) they were lost to the Shafa’. Nevertheless in Egypt, Syria and the Ḥijaz, the people followed the Shafiis’ Madhhab (Snauck Hargraves, Vorprü. Gesch., ii. 378/379). The Shafiis’ teaching is still eagerly studied to-day in the Ashar mosque. It is still predominant in South Arabia, Bahrajn, the Malay Archipelago, the former German East Africa,
Daghastān and some parts of Central Asia.

Among famous and important Shāfīīs were:

SHAFHĀWAN (popularly Chechousen, echchaum, in Spanish Xauen); the original of the name is no doubt the Berber plural Shafhawen), a little town in northwest Morocco, 35 miles south of Tetuan. It lies at the foot of the mountain of Sidi Bu-Hajja (a spur of the massif of Ill-Hashem) on a tributary of the Wādī Lāyū; it now lies within the lands of the tribe of al-Khūshān, but it used to belong to the Bani Zaidā, a tribe belonging to the Ghumāra group.

In 1918 the population was about 7,000, who lived in a thousand houses in the six quarters: el-ʿOmrā, Ṣif el-Andalus, el-Kharāzin, es-Sūk, es-Swīḥa, Rif es-Schbānī. There is an important Jewish colony in it of Spanish origin. The ghetto (Melāthi), originally on the edge of the Wādī l-Dmānī, was later brought into the interior of the town. It contains 22 houses with about 200 inhabitants and 2 synagogues, one very luxurious. Almost all the houses have sloping tile roofs, for the winter brings heavy falls of snow. The town is surrounded by walls and has eleven gates; there are twelve mosques, nine zāwiyas (including 3 Deşkaya and 3 Ṣawä) and eight notable sanctuaries, the chief of which is that of Sidi ʿAli b. Rāghid, founder of the town. In the citadel (baʿba) are the government buildings and the madrasa.

The Muslim population consists mainly of Shafīī and Andaluz refugees, possessing the culture and amenities of town life but fanatical and uncompromising in character.

The surroundings, fertile and well watered, produce wheat, barley, fruits, olives and grapes in abundance; the town also has 21 watermills and 13 oil presses. The forests of the surrounding mountains supply wood for carpentry and furniture making (a speciality of the place is artificially painted woodwork); tan-bark is abundant and supplies the wants of 5 tanneries. Woolen cloth for djellānas (cf. jellāna) is made on many looms.

The Jews are mainly occupied in trading in imported cloths and have constant dealings with their co-religionists who are connected by common Spanish origin. They are also jewellers and saddlers, a despised trade which the Muslims leave to them.

Lying at the intersection of the roads from Tetuan, el-ʿAqṣār, Wazân and Fes, in the middle of the land of the Ḫabsā, Shafhāwan is a great centre of supplies for the latter to which they come to get the produce imported from Tetuan (cotton goods, sugar, tea and candles); but the well-nigh permanent state of anarchy in which the surrounding tribe of al-Khūshān lives, makes business difficult.

Shafhāwan was founded about 876 (1471—1472) by a descendant of the great saint ʿAbd al-Salām b. Māskībī (q. v.), the ʿAlawi Sharīf al-Ḥasan b. Muḥammad, known as Ibn Dūma, who wished to make it a place of refuge and centre of resistance for the Ḫabsā against the Portuguese. The latter, taking advantage of the weakness of the dynasty of the Banū Wātīti (q. v.), had seized Ceuta (1415), al-ʿAqṣār al-seghīr (1458 q. v.), Tangier (1471) and Arzila (1472); from these ports they raided the country for over 50 miles inland, terrorised the mountainiers and brought the Andjera and various tribes of the Habī, including the Banū Ṭarīq under their sway. It seemed that, oppressed and harassed by the Sharīfīs, these tribes were quite ready to submit to Christian rule; a holy war was therefore an excellent pretext for the Sharīfīs to endeavour to regain their profitable prestige and authority.

Al-Ḥasan founded Shafhāwan on the bank of the river of the same name, in an excellent situation within easy reach of Tetuan and Ceuta in the northwest and el-ʿAqṣār and el-Ḥabsī in the southwest. He died before completing his undertaking; having gone during the holy war to the people of al-Khūshān not far from Arzila, the latter were bribed by the Portuguese and set fire to the mosque in which he was performing his evening prayers; he perished in the flames.

His work was continued by his cousin the Sharīf ʿAli b. Mūsā b. Rāghid who succeeded him as leader of the holy war (ḥaḍr al-Ḥāṣibī). ʿAli lived among the Bani Ḥassānī, a tribe to the north of Shafhāwan; when the latter rebelled against the tyranny of the Sharīfīs, he went over to Andalusia, where fighting sometimes in Christian pay and sometimes for the king of Granada, he became an expert in military matters. Returning to Morocco, he collected a body of horsemen belonging to himself to the Sharīfīs and began to fight the Portuguese. The Wātāythālī, Sultān of Fez, Abd Saʿūd, then sent against him a few horsemen and crossbowmen with whose help he was able to hold his own against the Portuguese. He used his force also to subjugate the mountainiers and restore the supremacy of the Sharīfīs. But rendered vain by his successes he went so far as to refuse to send
his tribute to the Sultan who came to attack him with a large army. Judging resistance impossible, 'Ali b. Râghid submitted; the Sultan pardoned him out of respect for his Sharîfi origin and confirmed him in the government of Shafshâwan which became the center of the marches of the empire of the Banû Watâî. 

'Ali b. Râghid built on the other bank of the Wadî Shafshâwan a citadel which he filled with members of his family and clan; people from the country round also came to settle there. 'Ali b. Râghid is credited with the building of the rampart from the Bâb es-Sûr to the Bâb es-Mûjâf; it is from his time that the es-Swêga and Rif es-Shebbâfi quarters date. After the capture of Granada (1492) and the general expulsion of the Muslims from Andalusia and Castile (1501-1502) numerous Spanish Muslims came and settled here so that by the death of 'Ali in 917 (1511-1512) a regular town had been created; Leo Africanus who was travelling through Morocco at this time, describes it as the people of Shafshâwan.

The prestige of 'Ali b. Râghid was still further increased by the brilliant attacks on Ceuta, Tangier and Arzila in which he fought along with al-Mansîr, whom he had aided to install himself on the ruins of Tetuan with a colony of Spanish refugees. 

'Ali (d. 1511) was succeeded by his sons, Ibrahim (d. 1530), then Muhammad who was destined to be the last prince of the dynasty of the Banû Râghid. In 948 (1511) the Waṭâṣîd Sultan Abî 'Abdâbâs Ahmad married the sister of the Amir, al-Hurra; the marriage was celebrated in Tetuan. Muhammad b. Râghid had quarrels with the following Waṭâṣîd, Abî Hasûn, whose fief of Bâdís in the Rif adjoining his own territory. When with the help of the Turks of Watâsîd, Abî Hasûn had taken Fes in 961 (1554) and, when he had quarrelled with the Turkish chief, Muhammad b. 'Ali arranged with the latter to proclaim Abî Bakkâr b. Ahmad Sultan; when Fes was evacuated by the Turks, Abî Hasûn had the Amir of Shafshâwan arrested but on the death of the Sultan, the latter was released and resumed his government. 

The Saâdâns then replaced the Waṭâṣîd in northern Morocco. In 969 (1561) the Saâdî Sultan 'Abd Allâh al-Qâlibî bilišî, fearing that the warlike activities of the Amirs of Shafshâwan might prevent him from concluding with the Spanish an alliance against the Turks which he was planning, sent against the town his troops commanded by the vizier Muhammad b. 'Abd al-Kâdir, grandson of Sultan Muhammad al-Shâshik. Being strenuously besieged Muhammad b. Râghid fled through the mountains with his family during the night and reached the port of Tarqha along the Ghamàra; from there he sailed for the east and took refuge in al-Medîna where he died; some of his descendants were exiled to Marràkush. The fief of Shafshâwan was then given to the grandson of Mu'âmâm b. al-'Idjî; the latter's grandfather Yâsîyâ (or Muhammad) al-'Idjî was a Genoese merchant who had become a convert to Islam and had married the beautiful daughter of the semi-independent chief of the Tejést region in Siûû. On the death of his father-in-law, the Genoese merchant was chosen chief of the people and gained the favour of the Saâdî Sharîfa by allowing them to cross his territory to reach the Hâba; his eldest son Mu'âmâm had entered the service of the Saâdâns and was one of their most faithful supporters.

In 986 (1578) the Portugese were crushed at the battle of Wâdi 'l-Maghâzi; they had to abandon their hopes of occupying the interior of the country and the struggle against the Christians became localised around the occupied ports and in the sea. Shafshâwan thus lost its strategic importance which passed to Tetuan its rival, which had been raised from its ruins by 'Ali al-Mansîr and had been peopled by Andalusians who soon made it a regular nest of corsairs. On the other hand the religious prestige of the town, based for a large part on the successes of the holy war, also began to decline especially after the installation at Wâzân of the Sharif family of Mawâli' Abî Allâh al-Sharîf (d. 1689 = 1768) whose influence continued to increase. 

After the government of the grandson of Mu'âmâm al-'Idjî, the town seems to have returned under the authority of the Sharîfs. In 1028 (1618-1619), we actually find the Sharîf al-Hasan b. 'Ali b. Rasûl (buried in Shafshâwan) having Muhammad b. al-Shâshik called Zaghâda proclaimed as Sultan as the people of Shafshâwan.

In the beginning of the 'Alawi dynasty and during the struggle between Sultan al-Râghid and his brother Muhammad, the northwest of Morocco was under the domination of an independent chief Abî Khaḍîr Ghalîlî, whose capital was al-Kârî al-Kbîr and whose power extended over the lands lying between Tangier and Ceuta, Tetuan and Shafshâwan. 

In 1667, M. al-Râghid, lord of Fes, subdued the Banû Zarwâl and went to Tetuan after putting Ghalîlî to flight; he appointed the Mu'azzâm al-Tauzi, governor of the town, and the latter's sons succeeded him there.

On the death of Mawâli' Ismâ'il the northwest of Morocco passed under the rule of a leader in the holy war, the Pasha Ahmad b. 'Ali b. 'Abd Allâh al-Kâfi (d. 1156 = 1743) who built at Shafshâwan, inside the citadel built by 'Ali b. Râghid, the government-house and the madrasa.

In 1171 (1757-1758), a murâbi of the tribe of al-Khumá, Mu'âmâm al-Kâfi al-Khumáî, called Abî 'Aqâîr b. al-Kâfi, rebelled against the Sultan Mu'âmâm b. 'Abd Allâh who captured him and sent his head to Fes. He then appointed the Pasha al-Ayyâmî governor of the Ghamûra, al-Khumá and Shafshâwan. He was succeeded by governors appointed by the Sa'dî Sultan down to the rebellion of al-Sâlih Muhammad b. 'Abd al-Salâm called Zaïtân, who raised all the tribes of this region in 1208 (1793-1794). Defeated and pardoned he was restored to the governorship of Shafshâwan and al-Khumá. After him the town was governed by local chiefs, then by the pasha of Tetuan who sent a khalîfa there. 

In 1306 (1899) the Sultan M. al-Hasan visited the town on his way to Tetuan.

Since the establishment of the Spanish protectorate the town has been under the influence of the famous 'Alawi Sharîf 'Abd al-Raçîfî of Târût. On Oct. 4, 1920, it was taken by a Spanish army from Tetuan; on Nov. 15, 1924, the Spaniards evacuated it. It was then occupied by the Rifis under the rebel Muhammad b. 'Abd al-Karîm and since the capture and death of the al-Raçîfi, it became their political and strategic center from which they dominate the Djebel and can raid the districts of Tetuan, al-Kârî and Wâzân; their tyranny has driven away many of the inhabitants of the town, which has been several times bombarded by French and Spanish aeroplanes.
SHĀH (v.), "King." a. Etymological. The old Persian Khāshāyatiya is probably formed with a suffix from an unquotable substantive from the Old Iran. verbal root khāsh (meaning to "rule" etc.); cf. Sanskr., kāyati = "he rules," kāyāyati = "ruler of men (or heroes)," an epithet of the gods in the Rigveda. From the same root comes Old Persian Khāshātiya ("kingdom") = M. P. Gaahr; cf. Kāshāyā ("king, ruler") from an unquotable root kāshāya (cf. Ak. pašā). The word kāshāyatiya is therefore originally, an adjective: it is found as such in the Bactrian inscription while in all other passages it means "king" (Bartholomae, Air. Wor.

terka, col. 553-554). The modern Persian dāštāgh is regarded as a compound of šah; this may be so as regards the modern usage. For a noteworthy attempt to give another explanation of dāštāgh see Bartholomae, Zurn. südostasiatisch. Recht, i. 5, note 5. (S. B. Ab. Heid., Hist. Phil. Kl., 1918, Abb. 5). In Pahlavi the word already means šahān. Whether in the second syllable of the inscriptions form of the name Shāhān: "Ismā'īl" (w. yad) is a remnant of the second syllable of the old Persian word (Grundr. d. Iran. Phil., i. 269) or a sign of an old oblique case, is not easy to decide. The modern form dāštāgh shows with its i Turkish influence in the declension (Grundr. d. Iran. 

Phil., i. b. 24); this combination might perhaps show a remnant of the original second syllable in the form in which it is found on Indo-Sytchic coins (with the ending -yana in the first word; Grundr. d. Iran. Phil., i. 269, but cf. p. 284; there is a good reproduction of one of these coins in Rapson, Ind. Coins, Pl. ii. 12). The Indo-Sytchic word is due to borrowing (but cf. also Konow in Z. D. M. G., lxviii, 93 sq.).

b. Lexicographical. In Vullers' Lexicon, pp. 392/393 the statements of the later lexicographers are gathered. The derivation given in the Burāh-i Kāfi (asl.wākāhāwānd) is, at least as concerns the adj., not supported by the etymology. The meaning given under (5) (via ageris et lusta e qua alias derivantur) is perhaps more closely connected with that under (4) (magnum quodvis et excellens in suo genere, in words like [shāhāz or shāhār]), although the author's view that simple shāh also is found with the meaning of shahār is perhaps more distinctly from the text of the Burāh-i Kāfi (p. 552); so far as I know this use of the word does not occur. The other meanings (a chessman, animal in Hindustān etc.) need not be discussed; an (independent) meaning dāmād, shuwar-ī shahak found not only in more recent lexicons like the Burān and Shuwar, but as early as Shams-ī Pahlī (see Salemmann, p. 114), is perhaps not so certain as it appears in the lexicon. In the two passages from poets which Shuwar gives for it, the word shah is associated with arvā: this would be simply: "lord of the bride" = "bridewoman," which of course, can be expressed by dāmād so that only one meaning derived from the main sense would be present. The verse which is quoted by Vullers, s.v. shahāz out of Shuwar as evidence of a meaning purant dāmād (a peculiar combination in any case) is not absolutely convincing.

c. Historical. The usual title of the Achaemenids is Kāshāyatiya; on their inscriptions they call themselves Kāshāyatiya sarvākā kāshāyatiyā kāshāyatiyā ("great king, king of kings"). Pahlavi and Modern Persian šahān šah (also M. P. šahānšah) corresponds to Kāshāyatiya kāshāyatiyāšah (the worshipper of Manda, the god Ardānšir, king of kings of Iran); it is written with the ideogram یlando mālāk mālākā.

Ardānšir's father Pāpak is given the title šah (škt.) on a coin of his son (E. Thomas, Numismatic and other antiquarian illustrations of the rule of the Sassanians in Persia, p. 16), and in inscriptions and this is also the designation of the rank of some pre-Sassanian dynasties of Persia (Grundr. d. Iran. Phil., i. 487).

The Sassanian crown princes in their father's time were often given the title šah of a certain province, cf. Hamzā, Tāṙešt, ed. Gottwaldt, p. 5051. (cf. Noldeke, Tabari, i. 115; Agathias, 24 and 26 where we have ša'a), Bahram III and IV before their accession were thus called Sagštāhār or Karmštāhār; Hormizd III had also the former title as Crown Prince (Noldeke, Tabari, i. 115). The word sagštāhār wrongly appears as shakštāhār in some Arab writers: not only in Tabari (Noldeke, loc. cit.) but also in Ibn Fawakhir (K. al-mušrif, p. 322), Euthychus (ed. Cheikho, i. 113) and Thāḥibā (Hist. des rois des Perses, ed. Zotenberg, p. 507).

In Muslim lands where Persian is spoken šah remains the usual word for king, a title also given in literature to rulers who have an Arabic title, e.g. the Amir Malešid of Ghazna in Firдавāsi. The regular panegyrics are of course very liberal with the term šakštāhār; when for example Minšūrā VIII, calls the Amir Malešid of Ghazna Kūvarak šakštāhār-i dāmā, this is only one example out of many. The term is further found frequently in kings' names in such a way that we can hardly speak of it as a title, e.g. we have among the Yemeni Ayyúbids a Turānšah and in a Mongol dynasty an 'Arab-Shāh (see Lane-Pool, Mohammadian Dyansties, p. 98 and 239). The word was already not unusual in personal names in Pahlavi; besides the name Šahār (šah + Pahlavi pahr, son) cf. the names of the Sassanian princes in Hamzā, Tāṙešt, ed. Gottwaldt, p. 61. Many rulers of the Seldjuk dynasty used the term in such a way that it may be regarded as a title. From a name of the names (e.g. Lane-Pool, op. cit., p. 153) we see that the combination may have as its first component the name of a people (Turān Shāh, Iran Shāh, i.e. on the Sassanian plan), or a personal name (Arsān Shāh, Bahram Shāh), or we may even have a combination with other words meaning ruler (Mālik Shāh, Ruknuddin Sulṭān Shāh). Analogous formations are found among the Atabegs. On a case of rulers who did not have the title šah having adopted it at a definite time, cf. H. F. Amedroz, The Assumption of the title Shakštāhār by Buwaikhād.
SHAH DHAJAHAN was born in 1592; in 1622 he caused his eldest brother, Khurram, whom his father had placed in his care to be murdered, and afterwards rose in rebellion. Having been defeated in 1623 he became a fugitive, but occupied Bengal and Bidar. In 1625 a peace was patched up between him and his father. When Dhajahgir died, in October, 1627, Khurram was at Djuanur in the Dakun, but his father-in-law, Asaf Khan, caused his younger brother, Shahryar, to be blinded at Lahor and proclaimed as a stop-gap Dcar Bakhsh (Buldaji), the son of Khurram, whom he afterwards permitted to escape to Persia when the other males of the imperial family were put to death by Shah Dhajahgdn's orders. In 1628 Shah Dhajahgdn ascended the throne in Agra, and soon had to deal with the rebellions of the Bundelas and Khan Dhajahgdn Lodhi [q.v.], which he crushed. In 1631 his dearly loved wife, Mumtaz Mahall, died in childbirth at Burhanpur, and he afterwards erected over her remains, at Agra, the beautiful Taj Mahall [q.v.]. In 1632 he captured Daulatabad and swept away the last vestiges of the kingdom of Ahmadnagar, and shortly afterwards compelled the two remaining kingdoms of the Dakun, Golconda and Bidjapur, to acknowledge his suzerainty. In 1632 also Hagi was besieged and taken from the Portuguese, and the Christians were cruelly persecuted for two years. In 1636 Awrangib, the emperor's third son, was appointed vicerey of the Dakun, and in 1638 'Ali Mardan Khan, who held Kandahar for the Shah of Persia, treacherously surrendered it to Shah Dhajahgdn's officers, but the Persians recovered the town in 1640. In 1638 Badalshah and Bulki were occupied, but Awrangib, who, having been recalled from the Dakun, was sent to retain them, failed to hold them and was obliged to retreat. In 1652 the same prince and in the following year his eldest brother, Dara Shikoh, failed to recover Kandahar from the Persians. In 1653 Awrangib was again sent to the Dakun, where his aggressive policy was checked by his father, who ordered him to make peace with 'Abul Allah Kusr Shg Shg of Golconda whom he had attacked, but in a campaign against 'Ali 'Adil Shg II of Bidjapur, who had succeeded Muhammad 'Adil Shg, he captured Bidjapur and Kalyani. In 1657 reports of the fall of Shah Dhajahgdn's health caused Awrangib to rebel and a contest for the throne began between him and his three brothers. Awrangib defeated Dara Shikoh at Samugur and Sultan Shg at Kajwia, treacherously imprisoned and executed Murshik Bakhsh and having imprisoned Shah Dhajahgdn, ascended the throne in Agra on July 21, 1658. Shah Dhajahgdn never regained his liberty and on January 2, 1666, died in the Agra fort at the age of 74.

Shah Dhajahgdn, the wealthiest of the "Great Mughals", displayed his taste and magnificence in his restoration and adornment of Agra, in the construction of his city of New Dhill or Shah-dhajahgdnabad, where he spent the greater part of a luxurious old age, and in the famous peacock throne, which was seven years in the making. He had little military ability and was cruel, treacherous and unscrupulous. A reeling feature of his character was his deep love for his wife, Mumtaz Mahall, of whom her splendid tomb is a lasting memorial, but she died early in his reign and after her death he sank into unbridled
licentiousness. His rule was oppressive and tyrannical and he ill deserves the favourable treatment which he has received at the hands of some modern historians.

(T. W. HAIN)

SHAH MHR, an adventurer who founded the first dynasty of Muhammadan kings of Kāshmir, settled in that country in A.D. 1315–1316 and, having ingratiated himself with the rādhā, Sihānadvā, who was perhaps impressed by the strangeness of the pretensions to descend from Ar- dgha, the Phālāy, entered his service. Kashmīr suffered two invasions during Sihānadvā's reign, that of Dūkō, a Turk from Khāndāhā, and that of the Bhassat of Thīsīt, Kīrnāna, both of whom entered the country by the Zadjīlā. Kīrnāna usurped the throne, made Shāh Mhr his minister and, according to Muhammadan accounts, was converted to Islam by him. He was succeeded on his death by a relation, Adnīnadvā, under whom Shāh Mhr retained his office and extended his power. On the death of Adnīnadvā Shāh Mhr contested the sovereignty with his widow, Kotā, and having defeated and captured her compelled her to marry him. Shortly after the marriage she retired to, or was imprisoned in, the fortress of Dīsyanpur and was there put to death by her husband's orders. In 1341–1342 Shāh Mhr succeeded the throne of Muḥammad under the title of Shāhs al-Dīn and caused the bāwa to be said in his name. The rule of the Hindu rādhā has been oppressive and extortionate and the Kāshmiris were the gainers by the usurpation of the adventurer who limited the demands of his predecessor to one sixth of the gross produce of the land. He was established order with a firm hand, and though he probably encouraged his people to accept his religion, his rule was tolerant and beneficent, and the forcible conversion of the inhabitants to Islam was not effected until the reign of his grandson, Shāh Mhr, Baghshāh. Shāh Mhr is said to have accepted the claim of the Čahk and Mākār tribes to precedence over the other tribes of the country and to have employed them in the principal posts both in the army and the civil administration. It was by the Čahk tribes that the dynasty which he founded was overthrown about two centuries later. He died in 1349 and was peacefully succeeded by his eldest son, Dījumādī.

SHAH NAWĀZ KHĀN. [See Ḫaym Khan al-Dawla].

SHAH SHURJĀ, DJUMĀDĪ AL-DĪN B. MUḤAMMAD B. AL-MUṣṭAFFA, A MUṢṭAFFAR. After Mubārīr al-Dīn Muḥammad, lord of Fārīn, Kīrnān and Kūr-hān-dīstān, had been deposed and blinded in Ramadān 759 (Aug. 1358), he was succeeded by his son Shāh Shurjā but within a couple of months Muḥammad, whose sight had not been entirely destroyed, seized the citadel of Kālān's-i Sofād (q.v.) where he had been placed, and fortitude himself in it. Peace was soon afterwards made between him and Shāh Shurjā, the terms being that Muḥammad should go to Shirāz and have his name mentioned in the kharāf; further no business of state was to be decided without his approval. After some time his followers decided to seize Shāh Shurjā and put him to death; but they were betrayed whereupon Shāh Shurjā had the conspirators put to death and his father imprisoned. The latter died at the end of Rabī‘ I 1365 (Jan. 1364). Shāh Shurjā had next to fight with his brother Shāh Muḥammad. In 1364 (1363/1363) his officials had raised a claim to tribute upon the town of Abārākūr, although it was governed along with Isfāhān by Shāh Muḥammad. This excited Shāh Muḥammad's distress and he invaded Yazd and seized this province. On his return to Isfāhān he was besieged by his brother but soon a friendly arrangement was come to, as a result of which he recognised the suzerainty of Shāh Shurjā. In 1365 (1364/1364) however he made an alliance with the Persian ruler, Walī Uwais, lord of Baghādād and Tabrīz, and invaded Fārs. Shāh Shurjā took the field against him; the final encounter was not decisive; Shāh Muḥammad then succeeded in taking Shirāz after eleven months' siege, but lost it again in Dhu l-Ka‘da 767 (Aug. 1366). After the death of Shāh Muḥammad in Shawwal 9, 776 (March 13, 1375), Shāh Shurjā who had recognised the 'Abbasid Caliph of the day in 770 (1368/1369), also became lord of Isfāhān. He also wanted to extend his rule over Alḥarabādīn because the notables there had become discontented with Husain, successor of Uwais, who had died in 776 (1364/1365). With this object Shāh Shurjā set out with a large army, took Karwīn, defeated Husain and advanced successfully up to the neighbourhood of Tabrīz. The former surrendered and Husain had to retire to the south. But when Shāh Shurjā returned home a couple of months later, Tabrīz was again occupied by Husain and as the former had also to fight him, Shāh Shurjā had to make peace with Husain. To seal the treaty Shāh Shurjā's son Zain al-Abīdīn married Husain's sister. Nevertheless hostilities soon afterwards broke out again. When Ṭāhir Aḥrār, one of Husain's vassals, usually called Sāriḵ Adīl, equipped an army in 781 (1379/1380) to invade Muṣṭaffarī territory, Shāh Shurjā went to Sulṭānīyā to anticipate him, but was surprised and only escaped with difficulty. When he himself took the offensive, however, he succeeded in putting to flight Sāriḵ Adīl's troops, who were busy plundering the camp. He then laid siege to al-Sulṭānīyā, whereupon Sāriḵ Adīl had to surrender. In the meanwhile Shāh 'Alī, a brother of Husain, who had been the murder of the governor of Baghādād, who ruled the city in Husain's name, was proclaimed lord of Baghādād, which again provoked hostilities. To strengthen his position he made an alliance with the governor of Busurāt, Pir 'Alī Bādār, who had been supported by Shāh Shurjā; Shāh Shurjā, 'Alī and Pir 'Alī had however to take flight when Husain and Sāriḵ Adīl approached in 782 (1380/1381); but when the latter had departed, they came back and now it was Husain's turn to fly. Soon afterwards — the usual date is Dijumādī II,
is widely celebrated and the place was called Shahârat al-Amir after him. The Saiyid al-Kâsim b. Muhammad, who raised the Yaman rebellion against the Turks about 1630 was born and lived here. When he had succeeded in expelling the Turks he retained Shahâra as his capital. He was the ancestor of the Imâms of Shâhâra. When the Turks began to regain their hold on the Yaman in 1871—1872 Shahâra was taken by Muṣṭafâ Aṣâm Pasha in a bold campaign and the house of the ring-leader in the anti-Turkish movement, Saiyid Muḥāsân al-Shahâra, destroyed: the latter had for years been at war also with the Imām of Shâhâra Muḥāsân Muhamma. Saiyid Muḥāsân had to retire to Wâda and in 1884 the notables of Habūr, Sa'dâ and Shahâra were forced to submit to the then governor of Yaman, Izzâl Pasha. In the wars following Shahâra was again lost to the Turks and became the centre of all the elements hostile to Turkish rule.

(ADOLF GROHMANN)

SHAHH, a small coin of the Shâhâra of Persia. It was the smallest of the silver coins in the xviiith and xviith centuries and weighed 18 grains (1.17 grammes); it was worth 1/10 of anambah or 4 mahmûd or ten copper kâshâbis. In Fâth Allâh's reformed coinage 20 shâhhs were equal to the silver unit, the hâvân. Under the Timurid the shâhâra coin was 5 centimes; the 2 shâhâra piece and 4 shâhhs were also issued in copper.

(THOMAS ALLEN)

SHAHID (A.), witness, martyr (pl. shâhid), is often used in the Kurân (as in shâhid, q.v.), plural shâhid, from which it is not definitely distinguished, in the primary meaning of witness. The following examples are typical of the various contexts in which it occurs: Sûra, i. 127: "Or were ye eye-witnesses when Jacob was at the point of death and he said to his sons"... Sûra, xxiv. 6: "Those who slander their wives and have no witness except themselves"... Sûra, iii. 137: "And thus we have made you a people in the middle that ye may be witnesses in regard to mankind and that the Prophet may be a witness in regard to you"... Sûra, i. 20: "(On the day of judgment) every soul shall come, with an utter and a witness". (On the expression: to give evidence from belief, etc., see the articles SHAHARA and TAHSÂHID). Shahid frequently occurs as referring to God, e.g. Sûra, iii. 95: "God is the witness of your deeds"; Sûra, v. 117: "Thou art the witness of all things". Shahid is therefore also one of "the most beautiful names" (al-asma‘ al-husnâ, cf. the article ALIH). The meaning martyr is not found for shâhid in the Kurân. It is only later commentators that
have tried to find it in Sûra, iv. 71. The Kur'ân always uses circumlocutions to express this conception, e.g. Sûra, iii. 151: "If ye be slain or die on the path of God, then pardon from God and mercy is better than what they have amassed". Sûra, iii. 161: "Consider not those slain on God's path to be dead, nay, alive with God; they are cared for". Sûra, xlvii. 5—7: "And those who fight for the cause of God, their works He will not suffer to miscarry. He will guide them and bring their heart to peace and lead them into Paradise which He has promised them of".

The development of meaning of shahid to martyr (there is not the parallel development in martyr) would be clearer if one were to examine the use of the term as it is used in Islamic literature and legal sources. In Islam, the concept of martyrdom is closely tied to the concept of jihad, which is the struggle against evil. Martyrs are those who die in the cause of Islam, either through a violent death or through an act of self-sacrifice.

The martyr who seals his belief with his death, fighting against the infidels is shahid throughout the Hadith literature and the great privileges which await him in heaven are readily depicted in numerous hadiths. By his sacrifice the martyr escapes the examination in the grave by the "interrogating angels" Munkar and Nekir, nor does he need to pass through the "purging fires of Isrâm", barzakh. Martyrs receive the highest of the various ranks in Paradise, nearest the throne of God; the Prophet sees in a vision the most beautiful abode in Paradise, the Dar al-shahid. The wounds of the shahid received in the Dîjihâd become red like blood on the day of judgment, and shine and smell of musk. None of the dwellers in Paradise could ever come back to earth, except the shahid; for on account of the very special privileges which are granted him in Paradise he still wishes to tarry with his fellow martyrs another ten times. Martyrs are freed by their death from the guilt of all sins so that they do not require the intercession of the Prophet, and indeed in later traditions we even find them interceding for other men. They are already pure, and therefore alone among men are not washed before their burial, a view which has found a place in the Fîkish (cf. A. J. Wensinck, Handbook of early Muhammadan Tradition, s.v. Martyr).

In the Fîkish books the shahid is dealt with in the section on qâdî in connection with the prayer for the dead, and the differences of opinion in the schools (the reasons for them are sometimes very interesting) centre mainly round the question whether the shahid is washed, whether the prayer for the dead is uttered over him, whether he is to be buried in his bloodstained garments, or not, etc. In them we find the distinction made whether the shahâda has been for this world for the next or for both, for as an ethical action it must be judged according to its niyâr, on the other hand we find the different kinds of shahâda as in the wider sense, detailed below. The case of shahid in the legal sense does not occur if the man concerned survived the battle in spite of his wounds and was able to arrange his affairs before his death. We sometimes find sections, fi fasîl al-shahidâ in the books of Dîjihâd, where martyrdom is praised quite in the style of the hadiths.

The praise of shahidâ led to a real longing to meet a martyr's death and according to some traditions, even Muhammad and 'Umar longed for it. This taleb al-shahidâ, however, was by no means encouraged by orthodox theology but rather deprecated, perhaps—according to a suggestion of Wensinck—because this kind of self-sacrifice looked very like suicide, always condemned in Isrâm. Therefore peaceful moral duties are represented as equal to or even better than voluntary death, such as fasting, regularity in prayer, reading the Kur'ân, gratitude to one's parents, honesty as a tax-collector, learning; these are all deeds on the path of God, fi sabîl Allâh (this expression with the gradual cessation of the wars of conquest undergoes the same change from a war like to a peaceful ethical meaning as shahid), cf. the article sabil) and may enable men to share in the rewards otherwise promised for the shahidâ. But the conception of shahid itself underwent an important extension which may be partly already seen in hadith's, so that in the end almost anyone who had died any violent death and aroused pity was considered by the general public to be a martyr and soon was actually regarded as a saint. An important factor in bringing about this development was the very old tendency of the people to worship holy men generally, cf. the article Walî. In this sense, for example, anyone who dies of disease, like the plague and the "diseases of the stomach", is considered a shahid; anyone who dies a violent death, e.g. from starvation, thirst, drowning, being burned alive, being killed by robbers or wild beasts, or a mother who dies in childbirth; also one who dies during the performance of a meritorious action, e.g. on the pilgrimage or in a foreign land, where no friend or relative is with him, or on a journey which is sâmu'a or while visiting a saint's tomb or while in the act of prayer, or as a result of continuous ablations, or fasting, or in the Friday night, or in the search for the knowledge of the faith: fi taleb imâm al-Dîn, or in defending the right against injustice: of the umr bi 'mawrûf wa 'mushk 'an al-munkar against the gâlîn; whoever loves and remains chaste and does not betray his secret and dies, dies a shahid and anyone who meets his death fighting against his own impulses in the giydâd, is shahid.

The tomb of such a shahid is considered masjih, enjoys the reverence of the pious and becomes an object of pilgrimage. In many of these masjid, it can be proved that we have pre-Islamic local cults which have been continued in this form under Isrâm. This side of the survival of the ancient in the near side has been illuminated by van Berchem's study of the inscriptions, but only after further research is available will a final verdict be possible. The phrase found as early as tombs of the third century A.H.: hâdî le jashûdî bikhî wa 'alâshî, with which the term masjid might perhaps be connected (according to a suggestion of M. Hartmann, Z.D.P.V., xxvi. 652; cf. however, Ritter in Jêsî, xii. 148—150), is interesting. When we further find Sultâns called shahid in inscriptions, the word here has lost its
real significance and is no more than a pious term for deceased. In many cases the name mašḥād was transferred to sites of local cults, which have nothing to do with a shaheed and in Turkish şehidlik and mašḥād (also pronounced mašhoft) is a name for cemetery in general (see Moritzmann, in Isd., xii. 223). The inscriptions also show that frequently the Muslim builders of mašḥād built them in their own lifetime, apparently in order to share in the blessings of their good deed while still here on earth (cf. mašḥād).

In Cairo there used to be celebrated a festival in commemoration of martyrs, in which Muslims took part up to the viii/xivth century (Maqrit, Kāf, p. 68 sq.; Men, Die Renaissance des Islam, p. 399 sq.).

In contrast to orthodoxy the various sects often kept rigidly to the original sense of shaheed; for example the Khawārij fanatically sought death fighting against the government, which they considered unrighteous, while the orthodox theologians taught that rebellion against the government was not a shaheed with a prospect of martyrdom.

Martyrdom plays a special role of peculiar importance for the Shi'a. For them Husain is the shaheed par excellence, the king of martyrs, shahīd-i-shuhada (much as the favourite martyr of the Shi'a is the Alī). In keeping with the character of the Shi'a, Husain is sometimes endowed with features which almost recall the passion of Christ or sufferings of St. Francis (deliberate self-sacrifice, transmission and inheritance of the divine light in the family of the Prophet, immortality etc., cf. the articles ʿgsa, Muḥarram, Ḥusain). There is a rich literature of martyrlogies describing very fully the sufferings of Husain and other members of the family of the Prophet, a specialty of the Shi'a; for example there is a famous work entitled Ṭawāf al-Ṣulṭānī or al-Aṣgharī by Husain b. ʿAli al-Waḡ al-Kāshī, which has been translated into Turkish (by Fuṭṭūlī with the title: Ḥadiḥat al-Suʿūdī) and into Eastern Turkish and several times also abbreviated.

The worship of shaheeds has attained noteworthy developments in parts of India where there is a gigantic shahīd gumbad said to be the tomb of no fewer than 150,000 shahīda.

SHAHĪD (A., pl. shahīdān), witness. The statement (shahīda) of a witness, is a declaration on a legal claim in favour of a second person against a third, which is based on an accurate knowledge of the state of affairs and is made before the judge in prescribed form (ashāda bi-kādīh mašḥād). The following main principles have grown up, based on the Qurʾān and Tradition and perhaps also influenced by the legal opinions in the Talmud and are in the main common to all mašḥād; there are of course numerous differences in points of detail which cannot be dealt with here.

The taking and giving of evidence (shahīda) is a fardʿ alaʿī ʿl-kifāya; but if only one person was present on the scene, there is an absolute obligation on him to give evidence (fardʿ al-aʿman). In the case of a Ḥāfiz Allāh it is, however, left to the discretion of the witness whether he cares to bring the culprit before the Ḥāfiz or leaves his Muslim co-religionist and remains silent; the last course is usually recommended as the more meritorious. The witness must: 1. have accurate knowledge (ʿilm) of what he is talking of and have perceivied it with his own eyes and ears (cf. Sūra, v. 11); 2. be mukhlīf (q.v.); 3. be a free man; 4. be a Muslim (if he is giving evidence in a case brought against a Muslim); 5. be in full possession of his mental faculties; 6. be ʿadī (q. v.) (cf. Sūra, v. 105, and lxv. 27; shahād `adī); he must also not have been previously punished with hadīd for slander (cf. Sūra, xxiv. 4); 7. lead a decent and moral life (murruma); thus for example a witness is rejected, if he enters the bath without a shift or is devoted to gambling (cheese, nared) or eats in public; 8. it is absolutely inadmissible to bring about suspicion; he must not for example get any advantage for himself from his evidence or avert any injury to himself; he must not be on bad terms with the accused, if he is giving evidence against him. Nor can those who have a claim for maintenance give evidence against one another, like parents and children, husband and wife, master and slave.

The following regulations concern the number and sex of the witnesses: 1. In ṭūb four male witnesses are required (cf. Sūra, xxiv. 2 sq. and iv. 19). 2. In all other cases, which do not concern māz, like theft, murder, marriage and divorce, release of slaves etc., two male witnesses are required (cf. Sūra, ii. 282 sq. and tv. 105 sqq.); in cases which, as a rule, women alone are competent to deal with (childbirth, chastity in women, etc.), four women are sufficient according to the Fāṭimī teaching (two for the Mālikī and only one for the Ḥanafīs and Zaidīs). 3. In cases which concern māz, like claims arising out of contracts and bonds or accidental homicide, two men or one man and two women are required as witnesses (cf. Sūra, ii. 282 sq.). In these cases one male witness is usually sufficient along with the oath of the adducer.

Except in criminal cases, it is allowed to replace one original witness (ṣāḥib al-aʿf) by two male deputy witnesses (ṣāḥib al-fār), the
so-called shahāda 'ālu shahāda; but only when the original witness is dead or cannot appear before the court on account of severe illness or is three days' journey or more from the place of trial.

The witnesses may withdraw their evidence before the judge; but if sentence has already been passed, they are liable for the injury done. If a statement is withdrawn, which affirmed sin, the witnesses are punished with ṣādī for slander (ṣādī).

False witness (shahāda al-shādūl) is already censured in the Kur′ān (Sūra, xxv. 72; li. 283) and Trad. It is frequent in the east (cf. E. Lane, Manners and Customs of the Modern Egyptians, 1860, p. 100, 114; Ch. White, Three Years in Constantinople, 1843, l. 103).

The most difficult point in the above rules is undoubtedly the question of ‘ādāla; the witnesses must either be personally known as ‘ad to the ǧādi or their ‘ādāla must first of all be established. From the end of the second (eighth) century an assistant to the ǧādi, the ḥāsh al-muṣādīl or muṣākhi, was appointed to conduct these often tiresome investigations. As Muslim procedure does not recognise documentary evidence as proof but only the oral evidence of eye-witnesses, such people were preferred for the verification of legal matters whose ‘ādāla had already been proved. Thus permanent “witnesses” came into existence: at times their numbers rose to thousands but usually they were only a few. They were officials of the ǧādi, and were appointed and dismissed by him. Thus arose the body of notaries, who were called shuhādā in Cairo and Baghdād, in the east and the Maghrib ‘ādāl. Besides verifying legal matters they also decided smaller disputes independently. They were as a rule young lawyers who later received judicial appointments. Muslim writers frequently complain of the corruption among these people. Their development began in the fifth (viii.) century (the first reference is in Cairo in 174 A.H.): al-Kasāmī, K. Badū' al-Sinā'ī, Cairo 1910, vi. 266—90; Khalīl, Summario del diritto malese, transl. D. Santillana, Milan 1919, ii. 616 sqq.; Querry, Droit musulman, Paris 1872, ii. 451 sqq.; Nic. v. Tornow, Moslem. Recht, 1855, p. 214 sqq.; Ed. Sachau, Mus. Recht, Stuttgart 1897, p. 690 sqq.; 737 sqq.; van den Berg, Principes du droit musulman, Algers 1866, p. 216 sq.; Th. W. Juyntboll, Handbuch des islam. Geistes, Leden, 1910, p. 315 sqq.; W. Heffe ning, Islam. Fremdezeiten, Hanover 1925, § 26. On the development of the shahāda to notaries cf. in addition to the literature quoted in Juyntboll, op. cit., p. 317: Amedroz, The office of hadī in J. R. A. S., 1910, p. 779 sqq.; Bergsträsser in Z. D. M. G., lviii, 1914, p. 409 sqq.; Mez, Renaissance des Islam, Heidelberg 1927, p. 218—220.

(W. Heffening)

SHĀHĪN, shahrī (See shahrī).

SHĀHR (p.) a town. It is etymologically the same word as old Persian xhāhara (cf. tiller, harvest); the old Persian word, however, means only: *dominion, reign* and also: *empire*; this old meaning also: *a district, a large town*. The Armenian—loan word shabakh denotes *a province, a land;* also: *the world* (σαρκαμένος, cf. also the compound shahārkabōl = sarvakāta). It seems to have been borrowed from the older (Aramaic) middle—Iranian. The modern Persian shahar, which signifies *a (large) town*, originally comprised the old meaning (*empire, realm*) besides. It can be seen in phrases like shāhār, shahar-i Kābul, etc., which belong to the poetical style; cf. also the derivates shahārī, shahārīn from xhāhara—, *a ruler, a king*.

It is perhaps no more a certainty, that in old Persian there seems to be a trace of a similar semanticological transition in the case of the word wavartun, — which in that idiom signifies *a town*. In the Babylonian texts of the inscriptions of the Achaemenids, this word is rendered by adu; the old Persian term for *land, district* (da- khun) is translated into Babylonian by wînu; some are found in Bistun 2,6 (= § 25 Weisbach); Babylonian adu corresponds to Persian dākhun and a Babylonian duplicate of a portion of the Bistun inscription (cf. Weisbach, Die Keilschriftener des Achaemeniden, p. xlii.) has 2,12 (= § 31 Weisbach) mānu for Persian wordunam, whereas Bistun 3,13 (= § 49 Weisbach), Persian dāhkun is rendered in the Elamite text by the ideogram for *town*; that the old Persian here may have influenced the Babylonian, is not impossible, as one could suppose, that also the later Babylonian use of the verbal form iddn(w) (lit. *he gave*) for: *he created*, which is found, e.g. in the Elam—inscription of Darius, might have originated by the influence of Persian adu—he created (the Aryan roots ad and dād no more being phonetically different in Iranian); cf. Dellitzsch, Assy. Handworterbuch, p. 451; Weisbach, Keilschriftcr. der Achem., p. 100, note a. The name seems to be, that already in old Persian the meanings *a district* and *a large town* were inclined to fade one into the other. This is not very surprising, taking into consideration the fact, that in later times also several large cities in Persia had their dependent localities, which were reckoned to belong to the town, so that the ideas of *town* and *district* in some cases might cover each other.

The modern Persian, according to the lexicographers, has also the collateral form shahārī.

The word shahr occurs in several names of towns, e.g. shahrābād, and, more often, in the—construction, as shahr-i Biltātsh, shahr-i Kastam, etc; (cf. Le Strange, The Lakes of the Eastern Ciphtpe, Index); in personal names it retains its old meaning: *empire*, as in the (already Pahlavi) names Shahrwāz, or Shahrūn.

The word passed into Osmani under the form of shèhir; town-names, in which it enters, are numerous, e.g. Aškashir, Yenī-shcharg, etc.; see for this word and its derivations Barbir de Meynard, Dictionnaire Turc—Français, s. v.

Shahrang, or Shahrābād, in Turkish and Persian literature, denotes a kind of poetical composition, which satirizes or praises the inhabitants

V. F. Büchner

SHahr-ṣṭān or Shahrīstān (pr.), a derivation from šahr with the suffix -tān. Collateral forms are šahrāšīrān, šahrīstān (and, metri causa, šahrīštān). In Pahlavi the word also occurs, written ideographically .getImage; the meaning is, both in Pahlavi and in modern Persian: a town, especially a fortified one, or a capital (cf. Vullers, s.v. šahrīstān and šahrāšīrān). Le Strange: The Lands of the Eastern Caliphate (p. 203, note 1). The principal part of several Persian towns is therefore named by this term, as was the case with that quarter of Barān (according to al-Muṣḥafāšt, the capital of Dailam), where the governor resided; also with the eastern part of the city of Djurjān, the inner part of the city of Kazvin; the (new) city of Kīf [q.v.], according to al-Muṣḥafāšt, also bore the name of Shahrīstān, and during the Middle ages, the old (eastern) city of Isfahān was known as Shahrāšīrān; otherwise, this latter locality was named Dājī, or simply, Madīma, which term seems to be nothing but the Arabic translation of Shahrāšīrān.

There are some cities and villages, which are designated by this name, either exclusively, or optionally, viz.:

1) Shahrāšīrān-ī Yazdīgīrd, a fortified town, built by the Sassanian king Yazdīgīrd II (439–457 A.D.) against the inroads of the Turks; the king resided here from the fourth to the eighth year of his reign. The town has since been situated in the province of Djurjān.

2) A town in Khurāsān, at a distance of three days from Nāsā (Nisa), on the border of the desert. This locality seems to have been of great importance; it had textile industry, and was the birth-place of the well-known al-Shahrāštānī [q.v.].

3) A village in Siyāvash, situated near the ruins of the medieval capital of the province, Zaranj.

4) Shahrāštān, a village near Hamadān.

5) The city of Shāh-pūr [q.v.] in Fārs also bore the name of Shahrāštān, as was the case with Rūyān, a city in the district of the same name belonging to Tabaristān.

Al-Shahrāštānī, Muḥammad b. 'Abd al-Karīm, the principal historian of religions in the oriental middle ages, was born in Shahrāštān, a town of Khorāsān, in 469 (1076); the date of his birth is also given as 467 and 479. He studied jurisprudence and theology at Djurjānayāna and Nīshābūr; his teacher in scholastic theology was Abū 'l-Kā'im al-Anṣāri. According to Ibn Ḥaflīkān he belonged to the Ṣafarī school but Samani says that he adopted the dreams of the Ismā'īlis and that in his conversations and discussions he only spoke of the philosophers and took no interest in religious law. He made the pilgrimage however and returning after having spent 3 years in Bagdad, he settled in his native town where he died in 548 (1153). He wrote several books, of which the most famous is the treatise on religions and sects: Kitāb al-Musta‘an wa l-Nisāḥ; among the others we may mention, on speculative theology: Nihayat al-ḥulām fī 'lm al-Kalām, another on metaphysics, the title of which: Muṣlima' al-Falāqīf, the dual of the philosophers, recalls that of the Tahāfut of Ghazālī, and one on "the history of the learned": Ta‘rikh al-Humāznī, which has the same title as the well-known work of Ibn al-Kīfī (d. 1248), written about a century later.

The treatise on religions and sects, one of the most remarkable documents of the philosophical literature of the Arabs, was written in 541 (1127). The author in it passes in review all the philosophic and religious systems that he was able to study and classes them according to their degree of remoteness from Muslim orthodoxy. He therefore begins with the Muslim sects, Mu'tazila, the Shī'a and the ḅūtānīs. He next deals with the "people of the book", those who have a revealed book recognised by Islam, i.e. the Christians and Jews; next those who have revealed books either doubtful or false, e.g. the Magi and the Dualists, after whom come the Sabaeans who worship the stars. Leaving the sects founded on a revelation, he goes back to pagan antiquity and gives articles on the principal philosophers and sages of Greece, after which he gives an exposition of Arab Scholasticism as a derivative from Hellenism; the last part of the book is devoted to the religions of India. The book is preceded by prolegomena, of which one chapter, the fourth, is an account of all the differences which broke out in Islam in the last moments of Muḥammad's life and which, influencing religion on the one hand politics on the other, gave rise successively to the sects of Shī'a and Mu'tazila. This is a very fine section. In another chapter of these prolegomena Shahrastani deals with arithmetic and makes some pretensions to be a mathematician; but these are not justified in the result. Shahrastani's mind is essentially and almost exclusively a philosophic one. He is interested only in ideas, he gives few biographical details, almost no titles of books, little chronology and no dates. As an analyst of the systems he is very subtle and in general very objective. He has not the primarily apologetic character which the last work of al-Ash'ari on the sects for example must have had.

The most important parts of the work of Shahrastani are those which deal with the Shī'a, the Dualists and the Sabaeans. For the Mu'tazila, hair-splitting theologians and subtle thinkers, whose works have not come down to us, he is one of the most important sources with al-Idji; the article on Ash'ari and the Ash'ari school which fixed Muslim orthodoxy, is interesting for the same reason. The articles on the Shī'a, Khāṭībī, Mālikī, divided into numerous sects political in character, which differed in the theory of the imām, are very interesting; but the author is rather brief on the Ismā'īlis and ḅūtānīs. He is equally short on the Jews. As to the Christians he knows three principal sects: the Melkites, the Nestorians and the Jacobites; he contrasts St. Paul with St. Peter (Simon al-Sabūs), saying that Paul came to disturb the arrangements made by Peter and to mingle philosophic ideas in the teaching of Christ. He knows a little about the Christian scriptures but does not criticise them so acutely as Ibn Ḥamm.
The references to the Dualists, Manichaeism, Manes, Mardak, Barzanesan, Marcion, are of course very valuable; the opposition between light and darkness plays, a considerable part in them as in the philosophy of Jāfār. It is the same with the long section on the Sabzavans; Shahrustānī puts it in a dialogue in which an orthodox Muslim argues with a Sabzavān, opposing the idea of prophecy to that of the spirits of the stars, disputing the existence of the latter and criticizing the conception of them.

At the present day, Shahrustānī appears quite ignorant of Greek philosophy; but he has quite a good article on Plato, whose theory of ideas he understands and another interesting one on Pythagoras, in which he gives an exposition of the theory of number and of geometrical ideas conceived as principles of beings. The article on Aristotle is derived from Avicenna and the commentary of Themistius. The very long article on Arab scholasticism is in the main a résumé of the Naqšī of Avicenna. Lastly the section on India contains some curious passages. We know that Arab authors as a whole knew very little about India. Nevertheless we find in Shahrustānī some accurate notes on Buddhist psychology and doctrine, on the Bodhisattvas and the successive Buddhas; and on certain practices of Hinduism — the worship of the goddess Kālī, whose idol (Mahākālī) is described, ablutions in the sacred rivers, religious suicides etc. Shahrustānī seems to regard Pythagoras as the founder of intellectual thought in India.

(CARRA DE VAUX) SHAHRĪR, the name of the sixth Persian month, which has 30 days like every Persian month. The older form of the name found also in al-Biruni’s Shahristanī. As the name is also that of the fourth day of every Persian month, the month and day are distinguished by the addition of nāb or rīz. The 4th Shahīrīr, on which the name of day and month are the same is called Shahrud.

(M. PLESNER) SHAHRUD. 1. Name of two rivers belonging to the system of the Kūzīr Uṣān (Safrūd: this other name, however, which in the Middle-Ages designated the whole Kūzīr Uṣān, at present belongs to its lower course, from Mandji to the Caspian, cf. Andreas in Pauli-Wissowa’s lexicon, s. v., i. col. 1736; Monteil, p. 16). The most important of the two Shahrud is that, which at Mandji (± 36° lat., 49° long.) joins the main river. This Shahrud takes its rise in the mountain-system of the Alburz, and its direction is from the South-East to the North-West. According to Mustawfī al-Kazwini, who gives a concise, but tolerably clear description of this river (Naqshat al-Kalbī, text, p. 217/218; transl. p. 210), the Shahrud rises from the confluence of two streams in the Rūdār-district of Kāzvin, one originating from the Tālšīn hills, the other from the „Nār and Tāghmaus mountains”, as Le Strange construes the text, which is uncertain, as it presents some variants. Ḥakīm Khalīfa, who, in his Līthānummu (p. 304), as often, copies the Naqshat, reads here: Rūd-i Sīr (cf. the variants in Le Strange’s edition, p. 217, 184). The Shahrud, according to Mustawfī, passes Alamūt, while flowing through the Rūdār-district, and unites in the district of Bāra, „which is of the two Tārūms”, with the Safrūd. From its origin to its junction with the last-named river it measures 35 leagues (farāb), its water, but for a small degree, is not used for field-irrigation. With these last words, the statement of the same author, that most of the lands of the district of Rustamār are watered by the Shahrud (text, p. 160, transl. p. 157) should be compared or contrasted.

The Shahrud, not being navigable, has no significance for traffic. Although the Kūzīr Uṣān is well-known in antiquity under the name of Amardus, there seems to be no mention of the Shahrud before the Middle Ages. It is noticed by the Armenian geographer, translated and annotated by J. Marquart, in his Enyaqberd, p. 126; this authority mentions its rising in the mountains of Tabākān. On the infrequent mentions of the Shahrud in Arab geographers, Andrea’s article on the name of Amardus in Pauli-Wissowa, Realen., 7, i. col. 1734 etc. may be consulted. In the nineteenth century, the river became known by the travels of Monteith and Rawlinson. The first, the account of whose journey dates from 1832, explored the valley of the Shahrud, starting from Mandji (or, as he calls it, Menjile), in search of the ruins of Alamūt. He first notices the height of Menjile (800 feet above the sea), and gives the names of some localities, situated on the Shahrud: they are (retaining the orthography of the original): at 3 miles from Mandji: Loushan; at 28: Beremzini; 36 miles from Beremzini: Jurandey, “just where the stream from the mountains of Alamūt and Mazanderan joins the stream from Kherzan, coming from the mountains behind Khashne“. In this region there were found ruins, which were considered to be the remains of the renowned stronghold of Al-Hassan b. al-Sabābī. Returning by the same route, Monteith visited, at 12 miles distance from Mandji, the alum-mines near the village of Surdar.

In the account of Rawlinson’s journey from Tabriz to Gilan (1835) the Shahrud is also mentioned, but the last named traveller does not give a distinct account of it.

The other Shahrud, as appears from Kiepert’s Nouvelle vaste générale des provinces asiatiques et d’Empire ottoman, 1854, joins the Kūzīr Uṣān between Senna and Miyunsary; the locality, mentioned by Monteith (pp. 13 and 20) under the name of „Barendeh”, must be the *Barendā* of Kiepert’s map, to the North of Senna. This „Barendeh” might be compared with the „Barnv“ in the passage of Mustawfī, were it not, that the description of that author cannot but relate to the river of Mandji. One might, however, suppose, that Mustawfī has, in this place, mistaken the one Shahrud for the other. The second, or lesser Shahrud, called formerly the river of Shīl, which
receives some small tributaries (of, as it seems, unknown names) from the East, rises in the Shaf hills, and passes some localities, e.g., Shaf (see below), flowing almost parallel to the Kizil Uzen to the east; then, east of Berinda (which lies on what seems to be the western tributary to the lesser Shahrud), it takes a curve to the South-West, to emerge into the Kizil Uzen, joining it, therefore, from the north-east. To assume, as Ritter does, in his Erdhunde, three Shahruds, is not necessary.

II. A district described by Mustawfi as belonging to the Tallah-districts (شطاه). Among its villages, he mentions Shaf, Kalaf, Hima, Darud and Kilwān. We see, then, that it is a region of the lesser Shahrūd. The climate, according to our authority, is temperate, and the soil produces good corn, but not much fruit. The people are Shāfites, but, as the author observes, only by name, for they do not care much about religion. The revenues, in Mustawfi's time (middle of the viith = xivth century), amounted to 10,000 dinārs.

III. Name of a city in the West of Kūrān, not far from the frontiers of the province of Astarābād. It lies to the South of Bāšām; according to Fraser, its geographical position is lat. 36° 25' 20", long. 35° 5' 29"; its height above the sea is 3500 feet. The town is a trade-centre; from it to the city of Astarābād there are two ways. The geographers of the Middle Ages make no mention of it.

SHĀHRUKH MĪRZA, THE FOURTH SON OF TIMUR AND THE FIRST OF THE TIMURIDS SOVEREIGNS, BORN AT SAMARKAND ON THE 14TH RABI'I, 779 (20th August, 1377) AND THUS NAMED, ACCORDING TO THE LEGEND, BECAUSE HIS FATHER HEARD OF HIS BIRTH IN THE MIDDLE OF A GAME OF CHESS, WHEN THE KNIGHT "Rūdā" WAS ON THE POINT OF CHECKING THE KING "Sāhān." He received also the titles of Bahādur, "valiant," Aḥkām-i Sefīd, "fortunate sovereign." Married at the age of eleven, governor of the Empire during the Khvājā campaign [q.v.]; at the age of thirteen, he was sent back to Samarkand during the great Persian expedition, but was called to the army in 795 (1392). At the age of seventeen he distinguished himself at the siege of Kal-e Sefīd [q.v.], cut off the head of the enemy leader, Shāh Mansūr, and acted as mediator at the siege of Takhrit, became governor of Samarkand and of the country around in 796 (1393/1394); and three years later, he took part in the expeditions to Persia, Syria, and Asia Minor, and held important commands at the siege of Aleppo and at the battle of Anycra. Chalcondylas, who calls him Sayyed, speaks of him with admiration. His presence being necessary at Herāt, he did not go to the ādābār, which decided upon the Chinese expedition, and he contracted then a new marriage.

On the death of Timūr, Shāhrūk was recognized as sovereign of the provinces which he was governing (Rāmān 807 = March-April 1405). The other princes, very much divided, finally adopted the proposal of Pir Muḥammad to rally around Shāhrūk, who would probably be content with a formal recognition and certain marks of respect. Shāhrūk showed himself touched by the deference of his brothers.

One of the latter, Khalil Sūlān, dispossessed by the emir Barāndāq, had taken his revenge by seizing Samarkand. Shāhrūk departed at once with his army for Transoxiana; he was conciliatory and his envoy, Shākh Nūr al-Dīn, concluded a peace leaving Khalil sovereign of the country. Soon after, war broke out between Khalil and Mirāzīr Pir Muḥammad. The latter was assassinated by his viceroy, Pir 'Alī Tāz. Rebellions deprived Khalil of any authority. On the other hand, the Dīlaṅgis and Kāra Yūsuf seized Baghdad and Aḥdarbādijān; Pir 'Omar was dispossessed and killed by his kinsman Iskandar. Shāhrūk then intervened, defeated Iskandar and annexed to his states 'Irāq 'Adžami and contrary to the promise he had given, Khalil's lands were given to Ulūgh Beg. Khalil received as compensation the governorship of 'Irāq and Shāhrūk restored to him his love, Dāwar Shāh, who had been insulted and maltreated by the rebels. In the same year (809 = 1406-1407), Mīnāndārān was finally conquered.

In the following year Mīrāngāhā, the brother of Shāhrūk, was killed in a battle against Kāra Yūsuf. The sons of Kāra Yūsuf's enemy, Aḥū Bakr and Muḥammad 'Omar, survived him only a short time, and Kāra Yūsuf, following up his conquests, founded a vast empire embracing Tābris, Aḥdarbādijān and the 'Irāq. Shāhrūk, desirous of avenging his brother, attacked them in the year 823 (1420). Kāra Yūsuf died suddenly at the moment of giving battle, his troops were disheartened and his corpse treated with indignity.

Several expeditions took place in the year 810 (1407-1408); one against Balkh in which Pir 'Alī Tāz was conquered and put to death; one against Pir Pādāshāh, who had rebelled at Astarābād. War broke out between Pir Muḥammad and Rustam, who was victorious, and made his entry into Iṣfahān where he behaved with moderation. Aḥū Bakr and Iskandar were at war in Kerman; Sūrān was conquered by Shāhrūk. Pir Muḥammad had a reconciliation with Iskandar, but 'Alī al-Dawla revolted; his father, Sūlān 'Alāmd, pursued him and Kāra Yūsuf made him prisoner. At the end of 811 (1409) Samarkand was under the power of Shāhrūk.

In the year 812 (1409-1410) there was an expedition against a rebel emir, Khudādīdān, whose presence at Herāt was sent by a Mongol Khan to Shāhrūk. The revolt of Shāh Bahā' al-Dīn in Badakhshān was put down and Transoxiana, after being conquered, was reorganized. Marw was rebuilt, the ancient course of the Mūrghāb was restored and the dikes repaired. During the two succeeding years Shāhrūk had to return to Transoxiana in order to put down in that country the revolts of the
Emir Shāhrūk Nūr al-Dīn, who was killed in Mogolnia. New troubles broke out in Kermān, where Iskandar supplanted Mirzā Rustam. Under the rule of Khāliqi, the Tatars brought back from Asia Minor by Timūr, had fled to Transoxiana into Ḵᵛārīrım, which they laid waste and they wished to conquer their native land. A first expedition sent against them in 815 (1412/1413) was a failure. Much affected by this lack of success, Shāhrūk sent another against them and, once master of Ḵᵛārīrım, handed it over to an able administrator, the Emir Shāh Mulk. In 817 (1414/1415) the revolt of Mīrza Amrāt Aḥmad took place; Ulīḡ Beg departed to besiege Aḵẖūt. The Emirs of Iskandar revolted and placed themselves under the authority of Shāhrūk, who offered Iskandar an honourable peace. This offer was rejected. After a long siege Isfahān was taken by assault and laid waste. Shāhrūk intervened, undertook the defence of the inhabitants and gave them Rustam as governor. He also ordered Iskandar to be treated with clemency. No attention was paid to his orders and the prince was blinded. The latter resisted in the Emir’s ᴷخلق, the city of the Turkomans, had helped the revolt of Ḵᵛārīrım at Shāzān (818 = 1415/1416). Besieging this town, Shāhrūk pardoned Ḵᵛārīrım and sent him into the district of Kandahār; after another revolt, he was expelled to India with Mīrza Amrāt Aḥmad; another suspect, Mīrza Ilānḡar, was sent into remote exile. Two other rebels, Sulṭan Uwais of Kermān and the Emir Bahāʾī Ilārās of Kandahār made their submission.

In 820 (1417–1418) Bāsānḡor, the son of Shāhrūk, was placed at the head of the government and he abolished the hated exactions of the viziers. Saiyid Fakhr al-Dīn, whom he made dispose of some of his ill-gotten gains. The death of this Emir, which took place soon after, was considered a blessing from heaven.

On 23 Rabīʿ II, 830 (Feb. 21, 1427), Shāhrūk was the victim of a plot in the great mosque of Herāt, where the Darwish Aḥmad Ėrū, who had come under the pretext of presenting a petition, tried to stab him. He was immediately lynched by the crowd. The consequence of this plot was that many arrests and executions of suspected people took place. Iskandar, aided by his brother Dīẖāngẖā, had rebelled again against Shāhrūk in 832 (1429). After being in revolt for six years, Dīẖāngẖā submitted and became governor-general of Aḏhābḵadḵūn. Iskandar, who had fled, was assassinated a short time after at the instigation of his son. In Ramadan 838 (March 1435) the plague laid waste Herāt and its suburbs. Hundreds of thousands are said to have died at this time. Shāhrūk died at Fīḡaward in the province of Ray on the 25th Dhu ’l-Ḣijda 850 (March 12, 1447). Of the five sons that he had — Ulīḡ Beg, Abu Ḵᵛāt, Ḵᵛāṯem Bāsānḡor, Suyūrgẖāḏeh, and Mūḥammad Dīḵṭū — only the eldest survived to succeed him.

Historians are of one accord in eulogizing Shāhrūk as a munificent sovereign, peaceful and void of ambition, loving peace without fearing war, in which he was always successful, and endeavouring to repair the damage done by Timūr. He rebuilt Mawz, fortified and embellished Herāt. A session in Muslim, he was believed even to have the gift of working miracles. Himself a poet and artist, he was the patron of writers, of artists and of scholars, whom he attracted to Herāt, where he founded a magnificent library, Djamīʿ and the mystic poets Sayyid Ṣīmānī, Ḵᵛāḥīrī Kermānī and Kāsim al-Anwārī. In 817 he died here. In the year 1899, the city of Shāhrūk was restored to the Emirs of Kermān, and the Darwīsh is still in possession.

With other states Shāhrūk maintained peaceful relationships. He exchanged embassies with China, the suzerain of the family of Timūr, who paid her tribute. India recognized his authority, at least nominally. In 824 (1421) Khāḏẖ Khān, the sovereign of Delhi, sent him an embassy and we have the story several times published or translated of the embassy of Abū al-Ḥasan Samarkhānī to China and India. Referential to China, Shāhrūk was, on the other hand, arrogant with the Turks. His correspondence with Mūḥammad I is the proof of this. With Egypt his relationships were sometimes difficult. In 824 (1421) Tibet sent to him an embassy.

On the death of Shāhrūk the decline began. The Timurid princes, who all aspired to power and found followers, exhausted themselves in struggles which hastened on the rise of the Safawī and the formation of the ʿUzbek Empire.

Bibliography: The Maṭlaʿ al-Sahāla, of Abū al-Ḥasan al-Samarḵānī, is the most important work to consult; unfortunately it has never been published completely. Galland made a French translation still unpublished (Bibli Nat., fonds français, Nos. 6084–6087) and Quatremère has taken from it his Mémorires historiques sur la vie de sultan Schah-rohkh (J. A., 1836, ii. 193–235 and 338–364), which revised and continued until the year 924 (1421) resulted in the Notice de l'ouvrage persan qui a pour titre Malik- ʿAbed-ʿAllāh, Paris 1843 (V. E., 387). Numerous passages from parts of this work have been preserved by the Maṭlaʿ which contains besides the substance of Shārāf al-Dīn Yāzdi and other historians of Timūr. Mirḵᵛānī, vi. 180–223 and Khāḏẖamānī, i, 178–214 are important. The Tāḏḵīra of Dawlaḵḵā gives but very scattered literary information; see on the same subject Mīr ʿAli Shīr, Maḏḡilī, book vii. (J. A., 1861, xvii. 285–286). The story of the plot is found in Barbier de Meynard’s Extrait de la chronique persan d’Herāt (J. A., 1862, xx. 269–272).

Mundijām Bahlī, Behrīf al-ʿAkẖābār, Constantinople 1825, ill. 57 is important for the relations with the ʿOsmānīs. Consult also: Price, Chronological Retrospect, London 1821, iii. 485 ff.; Sédillot, Sur un sciez de Schah-rohkh, Rev. de Turquie, and une quinzaine des Turqueries de la Transoxiane (J. A., 1840, x. 295–310) and reprinted in our Annales pour servire à l’histoire comparée des sciences mathématiques chez les Grecs et les Orientaux, i. 243–269; Browne, Persian Literature under Tartar Dominion, p. 379–387, and Blochet, Introduction à l’histoire des Mongols, p. 248–265 (on the relations of Shāhrūk with China).

(L. BOUVAT)
SHAH-SEWAN, the name of several groups of Turkish tribes in Persia. The term means in Turkish "those who love the Shah": Persian historians write: shahisewan, thus indicating the Turkish accusative (şahâ) and the Turkish closed a.

History. According to Malcolm, Shâh 'Abbâs I (995—1037 = 1587—1628), in order to reduce the turbulent Turkish tribes known as kîšlî-bâşh (= "red-heads"), who played the part of praetorians, invited the men of all the tribes to enrol themselves in a new body which was called Shâh-sewan. Entirely devoted to the Şafawi family, this tribe enjoyed the particular favour of the sovereign. At one time they must have numbered 100,000 families, but this number diminished in time.

Malcolm quotes the Zuhdât al-tawârîkh and his version has been adopted by later historians. The European travellers, who were contemporaries of the Şafawis (R. du Mans, D. Garcias de Silva Figueroa, Chardin, Olearium), however, do not mention the tribe of Shâh-sewan and the known facts somewhat complicate Malcolm's story.

1. The 'Alam ârûyâ 'Abbâs frequently uses expressions like "shahi-sewan" kardan, yazâyî-şahî-sewanî in the sense of "to make appeal to the faithful." Thus the father of Shâh 'Abbâs, Shâh Sulmân Muhammadd, had already used this procedure in the rebellions of 898 and 992. "Shâh Muhammadd", says Iskandar Munshi, "having launched the (appeal) shahh sewanî, ordered that all those of the Turkoman tribe who were servants and partisans of this hearth (shahî sewan) and attached to his Majesty". These ad hoc appeals were always raised by the feudal family (shahi-sewan, shahisewan). The sovereigns of this dynasty not only traced their origins to the Shâh's imams, but even claimed to be the incarnations of the latter (cf. Khatât). In the time of Shâh 'Abbâs there was in Turkey a sect which regarded the Persian sovereign as its murshid. In our own day, the Ahl-i Haqî (cf. the article 'AL-I-iLAM) give a place in their theophrasies to the Şafawi kings.

The formula called of Shâh-sewan thus recalled to political recalcitrants their obligations to their superiors.

2. In 196, in the first year of the reign of Shâh 'Abbâs, the Kîšlî-bâşh rebelled against the authority of the major domo Murshid Kuli Khan. The Shâh had recourse to the process of "shahi-sewan" and the faithful arrived en masse. A few days later the rebels were captured and put to death. This decisive blow dealt to the truculence of the Kîšlî-bâşh must have made an impression on his contemporaries, for in the firm reign of Shâh 'Abbâs, it was rarely necessary to resort to unusual measures. Iskandar Munshi says nothing about the permanent results of the appeal of 996. He only adds that the Shâh-sewan who came at the king's call "mounted guard till morning".

II. On the other hand, Shâh 'Abbâs continued vigorously and successfully the policy of regrouping the great tribes. His grandfather, Shâh Tahmâsîp [q.v.], about 936 (1529) had already reformed one of the most important Kîšlî-bâşh tribes: the Tâkhâlu (Malcolm, 15000, remnants of which are still to be found in Kirman). The new military corps (kullur, tufangûl) made unnecessary the Kîšlî-bâşh Kûrî (Chardin, 292). Another way of weakening the old praetorians was to dilute them with new elements personally devoted to the sovereign.

These newcomers seem to have been particularly proud of the name of Shâh-sewan as is shown by the history of the Shâh-sewan of Ardabil. To sum up then, it may be doubted if a single regularly constituted tribe was ever founded by Shâh 'Abbâs under the name Shâh-sewan.

The Shâh-sewan of Ardabil. Although the inhabitants of this ālummat all use the "Azari" Turkish dialect and are all Shâh's, the Shâh-sewan, even when settled, form a group apart, distinguished by its tribal organisation. According to their traditions the Shâh-sewan came from Atâ Minser under their chief Yusur (I-)pâshâ who had obtained permission to do this from Shâh 'Abbâs I. Yusur is said to have brought 3,500 families (hectars), a section of whom migrated later to Khûrân.

Among these Shâh-sewan three groups are distinguished: (1) the tribe of Yusur-pâshâ, which later broke up into clans bearing the names of the descendants of the chief: Saru-khan (I-), Kojda-bâgh, Band 'Alî bâgh, Pûlî bâgh, Damir bâgh, Kûrât bâgh, etc., with other later ramifications; (2) the tribe brought at the same time by Kûrî bâgh, of which following clans still exist: Tâlah mîkâlu, Kališefu, Mughânlu, Udulîa, Murdâlu, Zargar, etc.; (3) the tribes which arrived in the time of Yusur-pâshâ, but independently from another clan: Inanlu ("Alam ârû: Inanlu, evidently from the Mongol inan "goat") with the clans: Pir-Ewathlu, Kâbîsh, Kûr (Kûr), 'Abbâsîlu, Aq-îlu, Yuhtû, Darsun Khoji, and Bâtûlu with the clans: Adjîrîlu, Khoji-Khoji, Yeddi Olmâ, 'Arabulî, Kabîslu, Kâblulî. As to the Bâtûlu, the Alâm-ârû (p. 762) mentions the different suffix (i-ynûlû) held in Adharbâd-jîlân by the Kîšlî-bâşh chief Gûndu-gûnsîr Sulmân Bâtûlu, who with his tribe and their tents dwelt at Tâlûk near Kûrîk. Having become Shâh-sewan in the first Baghdad campaign (1073 = 1662), he presented himself to the Shâh and received the rank of Sulmân. Alongside of these two tribes, mention is made of isolated groups, the Rûsh bâghlu, Sarwînî ("camel-drivers") and Gâmmulî ("buffalo-breeders").

Saru-khan succeeded Yusur-pâshâ. Among the descendants of the latter is mentioned Bâdî Khan, who accompanied Nâdir Shâh on his campaigns. His sons, as the result of a quarrel, divided all the Shâh-sewan into two parties. The Ardabil section took the side of the Il-bâgh descended from Napâr 'Alî Khan and the Meshkîn section those descended from Kûlûk Kâân.

The arrival of the Russians in Transcaucasia reacted on the fortunes of the Shâh-sewan. Between 1728 and 1732 several clans leading a nomadic life on the Kura (Kur) recognised Russian supremacy. The peace of Gandja (1873) established the Russians north of Mughân. The frontier fixed on the Turkman-cau (1858) and always rigorously maintained separated the Shâh-sewan from a great part of their winter-quarters. The Russians for a considerable time did not prevent the tribes from continuing to enjoy their emigres, but there were continual incidents. In 1867, the Rûsh bâghlu and Kojda-bâghlu were refused access to Russian Mughân. On their side the Persian authorities burned the village of the Kojda-bâghlu, Barzaud [q.v.], and in 1876 the tribe was deported to Urma, from which it has little by little regained its old home.

From 1869 a mixed commission was created on Russian territory at Bilauswâr (on the river
Bolghār) with the task of settling amicably the mutual claims of Russian and Persian subjects. In 1834, the Russian frontier was definitely closed to the Shāh-sewan and at the same time the Russian nomads (Perembel, Darwishlu) were forbidden to descend into Persia. This measure dealt a blow to the prosperity of the Shāh-sewan, but did not put a stop to their incursions. On the other hand, it encouraged the Shāh-sewan to settle down and they had to cultivate their lands more intensively.

The governor of Ardabil had made very little impression on the Shāh-sewan. Only the expedition of 1910 undertaken against the turbulent tribes by the leaders of Persian revolution attained a notable success. Towards April of 1923, Rīš Khān Sardār Sījah succeeded in disarming the Shāh-sewan.

At the beginning of the nineteenth century, there were the following groups in Mughān:

(1) Turākāns (Turkomans) 1,500 families of settlers;
(2) Shānshāki 8,000 families of nomad Kurds (?);
(3) 10,000 families of Shāh-sewan nomads.

The Shānshāki later withdrew into the interior of Persia. Before the Russian frontier was closed, many Shāh-sewan numbering 3,500 families arrived in Russia, while 27 clans with 2,500 families remained in Persia.

Before 1914 the position was as follows: In the canton of Mīshḵūn on the northern slopes of the Sāwālīn [q.v.], N.E. E. of Ardabil, from which it is separated by the river Dugāsh (a tributary of the Kāran-su), there were over 5,000 heaps of the Shāh-sewan divided into 37 clans governed by their hereditary chiefs. The latter in turn were subordinate to an Il-bārīg. The Shāh-sewan of Mīshḵūn are nomads. They spend the summer on the high plateaus of Sāwālīn and winter in Persia and Mughān. The limit of their migration is about 120 miles. On this stretch they have villages inhabited by peasants, who have come from the interior of Ardabīl-Dājūn, where till the soil, receiving a third of the produce.

The number of Shāh-sewan in the canton of Ardībīl was over 6,000 heaps divided into 12 clans, whose chiefs did not have an Il-bārīg in common. Among these clans only two are nomad; they go to Mughān of the eastern road (Barandāl-Bihārvar). Four clans are becoming settled (dagāpa-lūd 3 gates of wood), especially in the S.E. and S.W. of Ardībīl (the strongest clans are the Pālāzī and Yūrūfī). In all there are over 11,000 heaps at Shāh-sewan residing in the šāhīmāt of Ardībīl and they must number at least 75,000 souls.

The Shāh-sewan are Shāhī. The conversion of Yamūr-pālūd, who was at first a Shamānt, is said to have taken place when Shāh Abūhāb crossed through Mughān. Since then the house of Yamūr-pālūd has been regarded as an edāqah ("hearth") by which the tribes swear when taking an oath. The Kočā-bārīg are suspected of Sunni leanings. One clan of Shāh-sewan consists entirely of esfāhānī (Sīyāsdī). Like the majority of nomads, the Shāh-sewan are rather indifferent in matters of religion.

The language of the Shāh-sewan does not differ from the "Kazī" dialect spoken by the rest of the population of Ardībīl, but it is said that the Zargāz also use a "Čagānī dialect.

In the tribes a distinction is made between the clan of biga and that of biqānā, the latter being descended from fraternal lines. The hired peasants who till the earth on behalf of the tribes, are called boqāt ("companions").

The Shāh-sewan of Sāwālīn. This group consists of two tribes: A. Bāgh-dālī, 900 families living between Sāwālīn [q.v.] and Kūn and governed by an Il-bārīg and four Il-bārīgs. The tribe is said to have come from Sīrājū in the time of Shāh 'Abūhāb I. It consists of 14 clans: Kāfīrīn (the most important), Kūshar, 3zā ṭūlūnī, Mīshḵūn, Kūn, Kāshmar, Sījah, Sījah, Kāshmar, Lambānūnī, Yūrūfīnī, Sabīlūnī, Alisānīnī, Alisānīnī, Sījah, Kāshmar, Lambānūnī.

The tribe used to live in Mughān, whence they were transported by Nūrī Shāh (?) to Khamash to form a bulwark against the incursions of the Bīshā Kurda (cf. Sawīy Bulak).

Other groups. In the province of Khamash [q.v.] the Dowestān, who dispute the power with the local Afghāns, call themselves Shāh-sewan and they came from Mughān at the same time they came to Sīrājū. On the other hand, in the province of Māzandārān (Māzandārān, Fāvār-nīmāy Nīzārī, Tihrih 1315, ii. 309: Tih Nūshā, numbering 5,000 families, forms a part of the confederation of the five tribes (Khamash) in the eastern part of Fās. Of at least one of the 25 subdivisions of these Inānī, viz. of the Gōk-pār, it is reported by Hasān Faṣā that, after having proclaimed themselves Shāh-sewan, i.e. "friends of the king (šāhīnāfā)", they had separated from the tribe Gōk-pār in the time of Shāh 'Abūhāb. Zain al-'Abīdīn Shāhīnu mentions the existence of Shāh-sewan even in Kābul and Kāshmār where they had gone in consequence of the policy practised by Nūrī Shāh with regard to the Shāh-sewan (cf. J. Morier).

SHAI (a.), a thing, anything, in Arabic algebra, the name for the unknown quantity in an equation. The expression is first used in the Algebra of Muhammad b. Māhā al-Khwārizmī (about A.D. 820) and probably goes back to the Indian mathematicians. In the medieval Latin translations, it is translated by res, later on by res, Ital. cosa, from which it has been given to algebra. P. de Lagarde’s attempt to trace the word of algebra to Šāhī (which has found some credence among Orientalists) is untenable.

The Ka‘bah (Bani), the name of the keepers of the Ka‘ba (Sāliha, Ḥājirah) whose authority does not extend over the whole of the sanctuary (muzāfi al-ḥarbūm), nor even as far as the wall of Zummam and its annexes. They are the Banū Śa‘ība or Ṣa‘ībiyin and have as their head a wa‘īm or sāliha.

Modern works only give brief references to them. Snouck Hurgronje gives the days on which they open the door of the Ka‘ba: He notes that they only admit the faithful on payment of a fee and quotes the witty Mecca saying: “The B. Śa‘ībia are wreathed in smiles; this must be a day for opening the Ka‘ba.” They find a further source of revenue in the sale of scraps of the covering of the holy house, which is replaced every year by their care. The embalmed parts reserved in theory for the sovereign are given more or less gratuitously to the great personages who represent him at Mecca and on the ḥajj. The remainder in accordance with custom (Chronik d. Stad. Mecca, ii, 72) is the perquisite of the Śa‘ībiyin, who sell it in the little booths at the Bāb al-Salām (Batanūnī, p. 139), the ancient Bāb B. Ṣa‘ība, the principal gate of the mosque. They also sell there the little brooms made of palm leaves, which are all alleged to have been used for cleaning the floor of the Ka‘ba, a solemn ceremony in which the greatest personages of the world are involved in participating (Ibn Dujair, p. 138; Batanūnī, p. 109). They also have the charge and care of the offerings made by the faithful, which adorn the interior of the holy house. This treasure comprises the most diverse objects, articles of gold and of silver, precious stones, lamps richly adorned, foreign idols, the offerings of converts in distant lands. This treasure has regularly been plundered by the Amir of Mecca, by the governors, by its guardians and even by the Śa‘ībiyin themselves (Gautier-Demembry, Le Pèlerinage, p. 57) although according to tradition, the grand-master of the Ka‘ba is said to have defended it against the attacks of the Caliph ‘Umar (Und al-ğāḥa, ii, 8). They have charge of the interior curtilms of the Ka‘ba. They had at one time the care of the Maqâm ‘Ardhīm which was considered a dependence of the holy house; but do I not know what is the present rule.

The possession of these diverse functions by the Ṣa‘ībiyin is now so generally recognised that it attracts no attention. They evoked a more lively interest from earlier authors and especially from the pilgrims. The principal narratives are those of Ibn Dujair in 1183 and of Nāṣir-ı Khusraw in 1276. The visit to the Ka‘ba accompanied by a pilar of two rak‘as made, if possible, at the very spot where the Prophet performed them on the day of the tāking of Mecca, is a pious act, which is not a part of the rites of the pilgrimage, but one from which the pilgrims themselves hope to acquire further merit although the people of Mecca seem to attach but slight importance to it. The dates of the public opening seem to have varied a little (Le Pèlerinage, p. 69 sqq.) but the ceremony has remained unchanged. The wa‘ım alone has the key of the Holy House, the history of which I shall deal with below. When the caravanserai (darajj), which gives access to the door which is above the ground level, has been put into position by the Śa‘ībiyin, their chief advances, and while he is inserting the key, one of his acolytes hides it from the gaze of the faithful. In the twelfth century (Ibn Dujair, p. 93; Pèlerinage, p. 59), he held a black cloth (the Abashid colour) in his extended hands. In the thirteenth century (Nāṣir-ı Khusraw, p. 209), there was a curtain on the door which a Śa‘ībi lifted to allow the wa‘ım to pass and which he let fall again behind him. The Prophet had veiled (intarabīk) the door of opening it (Ya‘qūbī, Tārīkh, ed. Houttmann, ii, 61). In imitation of the Prophet the wa‘ım enters alone or with 2 or 3 acolytes, prays the two ritual rak‘as, then opens the door to the public whose admission he regulates. The Persian pilgrim as well as the Spanish made a visit to the Ka‘ba and they have both noted the miracle, which allows this very small building to hold at one time such a large number of the faithful. Nāṣir-ı Khusraw counted 720 in it at the same time as himself. Ibn Dujair was particularly interested in the Ka‘ba and its Ḥājirah. He was present at the reception of Sulaymān Tughjatkin, the brother of Saladin (p. 146 and 147), on whose right hand the wa‘ım of the Śa‘ībiyin solemnly entered the mosque; the wa‘ım Muhammad b. Ismā‘il b. ‘Abd al-Raḥūm was his chief informant (p. 81). He tells us that during his sojourn the Amir of Mecca, Mukthir, arrested the wa‘ım Muhammad and, accusing him of such baseness of conduct as was "unworthy of the guardian of the holy house," confiscated his goods and set up in his place one of his cousins, whom popular report accused of the same vices. Some time after, he saw the wa‘ım Muhammad, after paying 500 dinars to the Amir, re-established in his office, strutting proudly before the gate of the Ka‘ba (p. 163, 164, 165, 170). This act of violence does not prove that there was any exact custom which regulated the relations of the Amir with the B. Śa‘ība. Under al-Mu‘āwīya III (847–861), they sent deputies to the Caliph at Baghhdād to assert, in opposition to the proposals of the governor of Mecca, their right to decide what works it was necessary to undertake at the Ka‘ba; the master of works sent by the Caliph was to supply only to them. When he came to make his first inquiry the master Ṭāhir was, however, accompanied by the Ḥājirah Ṣa‘ībiyin, and also by the governor, by pious individuals and by the Šāhī al-ţabūr (cf. the art. BAIRD), “the posterior,” in reality the redoubtable intelligence officer of the sovereign (Chron. d. Stad. Mecca, i, 210-211).

The privilege of the B. Śa‘ība is very old; the historians of the ninth century Ibn Ḥibbān, Ibn Sa’d, Ya‘qūbī and the compilers of collections
of bādīhā confirm this; but they pile up proofs of its legitimacy in a way that makes one think it was recent and disputed. We know what obscurity prevails in "spite of the texts" on the history of the "Arab kingdom" at the time when so many things were being organised of themselves.

According to tradition, Koṣaylī, the ancestor of the Koraish, had reserved the guardianship of the Kaʿbah (hājirā) for ‘Abd al-Dār and his descendants. At the time of the conquest of Mecca, it was in the hands of ‘Othmān b. Ṭaḥla b. Abī Ṭaḥla b. ‘Abd Allāh b. ‘Abd al-Uzza b. ‘Othmān b. ‘Abd al-Dār (Tabari, iii. 2378; Ṣud al-ghābā, iii. 7 and 372 etc.). Ibn Saʿd (Talabbāt, v. 331) has a variant story which casts doubts upon the near relationship of ‘Othmān and Shaibah, while the genealogy given by the saʿdi to Ibn Dzhahār (p. 81) intercalates an ancestor Shaibah unknown to the other authors. ‘Othmān by a happy foresight was converted at al-Hoṣaynīya with other notable personalities of Mecca, although several members of his family had perished at Uhud in the ranks of the Koraish (Tabari, i. 1604; Aḥāmi, xv. 11; Ibn Saʿd, v. 331 etc.). On the day of the taking of Mecca, he accompanied the Prophet to the Kaʿbah and the latter demanded the key from him; in general the authorities say that he gave it up, but according to one tradition (al-ʿAnī,ạnhūd, iv. 609; Chronikien, i. 187), ‘Othmān, a new convert, had to get it from his mother, an infidel, who had charge of it and who refused to give it up. ‘Othmān had to threaten to kill himself before her eyes. According to another authority (Chronikien, i. 185), she heard in the courtyard of the house the threatening voices of Abū Bakr and of ʿOmar before she decided to give it up (cf. Ibn Khalid, ʿBarāʾ, ii. 44). But another tradition which does not assume the conversion of ‘Othmān in the year 8, shows him on the terrace of the Kaʿbah holding the key in his hand and shouting to the Prophet: "If I were sure that he is the messenger of God I would not refuse it in him". ‘Abd climbed up, held in his hand out, took the key and himself opened the door; here ‘Abd ibn Hādī is evident (Rāzī, Mafṣūṭī, ii. 400; Kāshānī, ʿUbāb, iv. 264). The general tradition is that the Prophet, in possession of the key, opened the door and entered with ‘Othmān, Bilāl and Usayma, prayed two rakʿas in a spot which is to-day held sacred and went out holding the key in his hand. At this point the traditions differ once more in detail, but end in the restitutio of the key to ‘Othmān; according to one account, the Prophet either on his own motion or because of the protests of al-ʿAbd (or of ‘Abd al-Azz, ʿAbd, at least on the posts of the door of the Kaʿbah and made a speech which ended: "Everywhere under my feet except the saʿdām and the ṣāhiyya of the pilgrims, which are going to be restored to those to whom they belong". He gave the ṣāhiyya to al-ʿAbd and returned the key to ‘Othmān; according to the other tradition, the Prophet came out of the Kaʿbah uttering verse 61 of Sūrat al-Fātīha, according to an opinion which Tabari (Ṭafsīr, x. 86) accepts as only of secondary value, was revealed at this moment and applies to the saʿdām and the ṣāhiyya (Yahyā, Muṣṭaq, iv. 625; Rāzī, Mafṣūṭī, ii. 400; Chronikien, i. 186).

But ‘Othmān, master of the saʿdām and of the key, did not exercise his rights: he followed the Prophet to Medina and died there in the year 42 (662–665) or he was killed at Adjīdīdā in 13 (634). No one mentions him further and authors take the precaution of making the Prophet say that he returned the sidāmān to ‘Othmān and to Shaibah, and to the Banū Ṭaḥla (Abu ʿl-Maḥāsin, i. 138; Nawawi, p. 407; ʿUṣd, iii. 372; Chronikien, i. 184).

This attempt to make the cousin german of ‘Othmān, Shaibah b. ‘Othmān b. Abī Ṭaḥla, he present at the taking of Mecca is unfortunate. Shaibah was not yet a Muslim, although some late authors have tentatively tried to convert him at the taking of Mecca. They are not able to escape the legend, which has grown up round the conversion of Shaibah at Ḥōnaīn a month later. Shaibah searches out the Prophet in the middle of the combat in order to take vengeance for the death of his father, who had been killed at Uhud by Hāmaz, but from the Prophet a light emanates causing him to lose heart. Muḥammad puts his hand upon his heart and causes the demon to depart from him. Shaibah is converted (Yākūbī, ii. 64; Ibn Ḥīṣām, 845; Ibn Saʿd, v. 331; Tabari, Annaler, i. 1661, 3; ʿUṣd, iii. 7; Chronikien, ii. 46; etc.) and without the writers knowing why, Shaibah becomes the keeper of the Kaʿbah; all his family hasten to come to his assistance; his brother Wahh b. ‘Othmān, the sons of ‘Othmān b. Ṭaḥla, those of Muṣāfī b. Abī Ṭaḥla who was killed at Uhud: "It is then", concludes al-ʿAzraḵī (Chronikien, i. 67), "all the descendants of Abī Ṭaḥla who in general exercise the ṣāhiyya (Chronikien, i. 67)". But according to all the traditionists, it is Shaibah who is their chief. It is he who had the power to demolish the houses dominating the Kaʿbah (Chronikien, i. 15). It is he who came into conflict with Muṣāwīya about the sale of a house and who at the time of the second pilgrimage of the Caliph, not wishing to be disturbed, sends his grandson Shaibah b. Džāhirī to open the doors of the sanctuary (Chronikien, i. 85). In the arbitrating between the two hājiji chiefs, the partisans of ‘Alī and those of Muṣāwīya (Tabari, Annaler, i. 3448 and iii. 2352; Muṣāfī, xvi. 56/57); one of his sons, ‘Abd Allāh or Ṭaḥla was a victim of the "abominable" al-Kasīr (Chronikien, ii. 37; 39; 175). It is he who appears in one of the versions of the hadith where ʿAisha wishes to have the Kaʿbah opened (Chronikien, i. 220, 222, 233). There are discussions with ʿAisha which settle that it is lawful for the Shāhibīy to sell parts of the covering (kiwam) but only for the maintenance of the poor (Chronikien, i. 180, 182 and iii. 70; 72; al-Kalkashandi, iv. 283); in spite of the efforts of the makers of bādīhā, the question is discussed by jurists and in 621 (1224) al-Maḏīl al-Kaṇīl, the nephew of Saʿdīn, purchased from the Shāhibīy for an annual fixed sum, the rooms that they drew from the opening of the Kaʿbah and forced them to open it free of charge (Chronikien, i. 266). Shaibah died in 57 (676–677) or under Yazīd b. Muṣāwīya (Tabari, Annaler, iii. 2378; Ibn Saʿd, v. 331; ʿUṣd, iii. 8).

The tradition which gave to the Shāhibīy the ṣāhiyya of the Holy House is an ancient one. It is still perpetuated in the name of the archway, which, beside Zamzam, marks the ancient boundary of the wall of the masjīd al-ḥarām. When the former had been enlarged, the new gate, called at the present time Bāb al-Salām, which was in a line with the Kaʿbah and the ancient arcade, was
called in its turn Bibi Hani Shabka (Feperringe, p. 132 and 133). But for this institution as for many others the period when it was established and merged in an anti-Islamic institution, remains obscure.

Bibliography: See the works cited in the article.

AL-SHAIBANI, Abu 'Amr Iskand b. Mika, who, according to Abū Mansur al-Ash'ari, had the nickname al-Ahwaj, was descended from Persian country gentry, but being a client (manṣūrah) of some person of the tribe of Shabban was called al-Shaibani. He was the foremost of the Kūfi grammarians. We are told that he was called al-Shaibani because he was instructed to those sons of the caliph Harun ar-Rashid who were under the care of Yazid b. Marwan al-Shaibani. The date of his birth can only be ascertained approximately, but if the age at which he is said to have died is correct, he must have been born shortly after the year 790 (719—720). The date of his death is also uncertain, the years 209, 206 and 213 being given; the latter date is probably correct, as he is said to have died on the same day as the poet Abu 'l-Atthiya and the singer Ibrahim al-Mawjil who died in that year. Abu 'Amr was not only celebrated as a gramarian, but he has also the reputation of a trustworthy transmitter of traditions (judaidh), and is quoted as an authority in the Maṣūṣ of Ahmad b. Hanbal. He studied under the most celebrated masters of the Kufi school, and he spent a long time among the nomad Arabs collecting poetry and linguistic data. In later life he removed to Bagdad. Earlier in life he compiled his large collection of the poetry of the Arabic tribes. This collection, which has not been preserved to us, contained the poems of some eighty tribes and was extensively used by later editors of ancient Arabic poetry. We find his name regularly mentioned, especially when poems are cited which were not known to other grammarians. He surpassed his colleagues, with the exception of Abu 'Urais, in taking an interest also in the historical allusions found in ancient poems, about which many others, like the Basrani al-Aṣma, seem to be particularly ignorant or uninterested. Although a pious man, he was at times addicted to drink. It is not surprising that he gives at times in good faith spurious poems as genuine, as for instance the 66th poem in the Dīwan of al-Abāb (ed. Geyer), where the borrowings from the Kurān are too evident. Only one of his works has come down to us, the Kiṣāb al-Dīwān, which was intended to be a dictionary of the Arabic language but was never completed. No doubt the Kiṣāb al-Dīwān of al-Khalil b. Ahmad had given him the impulse for this undertaking. It is arranged according to the ordinary Arabic alphabet, but only completed to the letter dīm. It is preserved in a unique copy in the library of the Escorial and being one of the earliest books in the Arabic language deserves special study (brief description in Cat. Derobernburg, No. 572).

His biographers tell us that he would not dictate his Kiṣāb al-Dīwān to anyone and that in consequence copies were taken only after his death. The scribe of the Escorial MS. whom I have not identified so far, belonged to a much older period than is indicated by Derobernburg; he used a copy made by the grammarians al-Sukkari (q.v.), but as some leaves were missing in that copy he compared it with one made by Abu Muṣāf al-Ḥamdī. The book is not a lexicon as the biographers would have us believe, though in a rough way the words are arranged in four chapters comprising words commencing with the first four letters of the alphabet. There are frequent errors due to the author himself. The particular value of the book lies in the fact that it is a large body of expressions peculiar to certain tribes; on the last 27 pages no less than thirty different tribes being mentioned, and there is not the least doubt that Abu 'Amr extracted the unusual words from the So old Dīwān of Arab tribes which he had collected. This is evident when he quotes e.g. the poet Kuthayr four times in succession. A diligent search in the Liwān al-ʿArab reveals also that the book had not been used by the lexicographers whose works form the basis of that work. The authorities and poets quoted are in many cases not cited elsewhere and I hope to prepare an edition of the complete work, which is the greatest monument of the Kūfi school of grammarians.

Biographers mention in addition the following works of Abu 'Amr all of which seem to be lost: Gharīb al-Maṣūṣ, Kiṣāb al-Khalil, Gharīb al-Judidi, Kiṣāb al-Khalil, Kiṣāb al-Lamūṣ and especially the Kiṣāb al-Nasīḥ, a miscellany which was frequently extracted, generally without acknowledgment, by later authors. Among his most prominent pupils were the Kūfi grammarians Thālab, Ibn al-Sikkiṭ, Abu 'Urais al-Kāsīn b. Sallūm and his own son 'Amr. The indices of the Maṣūṣ of Būṣīn and the Nāṣīḥ give us only a faint idea of how often he is quoted as an authority for the earlier literature. Kūli mentions him several times, e.g. l. 136, 211 and 238.

AL-SHAIBANI, Abu 'Amr Allah Muḥammad b. al-Hasan b. Farkad, Mawlawi of the Banū Shabiban, a Hanafī jurist, born at Wasīt in 132 (749/750). Brought up in al-Kūfa, he studied in the early age of fourteen under Abū Ḥanīfa, under whose influence he devoted himself to ṣafī. At twenty he is said to have lectured in the mosque of al-Kūfa. He extended his knowledge of hadith under Ṣufyān al-Thawri (d. 161), al-ʿAwārī (d. 157) and others and especially Mālik b. Anas (d. 179), whose lectures he attended for over five years in Medina. His training in Fiqh, however, he owed mainly to Abū ʿUsayf, but he soon began to threaten the latter's prestige by his own lectures, so that Abū ʿUsayf tried to get him a judgeship in Syria or Egypt, which, however, al-Shaibani declined. In 176 (792/793) he was consulted by the Caliph Harūn al-Rashid in the affair of the Zaidi imām Yahyā b. ʿAbd Allāh. On this occasion he lost the Caliph's favour through his own fault and became suspected of being a supporter of the Alids (Tabari IV, 619; Kardari II, 653 sqq.). He was, it is true, like some of his teachers a Murdījī (Ibn Kutaibah, Maṣāfīr, p. 301; Shāhriyārī, ed. Cureton, p. 108), but he seems
to have kept clear of Shī'ah activities (Fīrūz, p. 204). It was not till 180 (796) at the earliest — in this year Hārūn made al-Ra'ūṣ his capital (Tab. iv. 645) — that Hārūn made him kāfīd of al-Ra'ūṣ. After his dismissal (187 = 803) he stayed in Baghdaḍ till the Caliph commanded him to accompany him on his journey to Khurāsān (189 = 805) and appointed him kāfīd of Khurāsān (according to Abū Hāşim (d. 292) in Kāndārī, li. 147). He died there in the same year at Rābah waṭ, near al-Rayy.

He belonged to the moderate school of rāy and sought to be base his teaching wherever possible on hadith. He was also considered an able grammarian. Among his pupils are mentioned the imām al-Shāhīn (q. v.), who nevertheless wrote a polemic against him (Kāthīr al-Ra'īs min Muḥammad b. al-Haṣan in K. al-ʿīmām, Cairo 1325, vii. 277 sqq.). It is to Sha'bānī and Abū ʿUṣuf that the Hanafī Madhābiḥ owes its first spread of popularity. His writings, which have had frequent commentaries made on them, are the oldest that enable us to judge the teachings of Abū Ḥanīfa, although they differ in many points from the ideas of Abū Ḥanīfa. The most important are: Kāthīr al-ʿAṣr fi ʿl-Ḥarīr or al-Maḥd bi, K. al-Dāmīr al-ḥabīr; K. al-Dāmīr al-ṣaghr (pr. Būlīk 1302 on the margin of Abū ʿUṣuf, K. al-Khurāṣī); K. al-Siyar al-ḥabīr (pr. with the commentary of al-Sarākhī in 4 vol., Hāzirāšt in 1335—1336), K. al-ʿAṣhr (lith. in India).

We also owe to him an edition, with many critical additions, of the Maʿwūṣa of his teacher Mālik b. Anas, which differs widely from the nusūr version (cf. Goldzaher, Med. Studien, ii. 222, sq; now published in Kazan, 1909).

SHA'BĀNĪ, Abū Naṣr Fāṭ-ḤALLĀ KĀN of Kāḥān, a Persian poet of the sixth century. His father Muḥammad Kārīm was the son of the Muḥammad Sanī Kāṇ who had been governor of Kāḥān, had fought successfully against the nomad Turkmans and was fond of the society of men of distinction. The poet lived at the court of Muḥammad Shāh and then retired from the world. He wrote a work in prose and verse entitled Mahālāli, "delicious" containing dhīrhymes in honour of his patron Niẓām al-Dīn Shâh, the prime minister Hādīd al-Dīn, Māleh, Perīdīn Mirzâ, governor of Khurāsān, etc. A large selection of his poems was published in Constantinople in 1308, for the Akhtar press, 312 p.

(CL. HUAKT)

SHA'BĀNĪD, descendant of the Mongol prince Shāhīn, a brother of Batu Khan (q. v.). The names of the twelve sons of Shāhīn and their earlier descendants are given by Rashīd al-Dīn (Qānim al-Tawārīk), ed. Blochet, p. 114 sqq., with notes by the editor from the anonymous Muḥīz al-Anwār; on its importance as a source see W. Barthold, Tūrkestan v spahīn mongolščego macestvennoi istorii, i, 50). Later writers give information on Shāhīn and his descendants which is more legendary than historical; the bias of these tales is decided by the political conditions of the countries concerned. For example, Utemish Ḥāḍī, writing in Khārīzim under Shāhīn's rule, tells how Čingis-Khan hoped to see his grandson Shāhīn at the same time as Batu, but paid no attention to their brother, Tughū Timur; in contrast to this Mahnād b. Walt, writing in Bukhārā under the rule of the descendants of Tughū Timur, says that Bahadūr, son and successor of Shāhīn, always regarded the descendants of Tughū Timur as his suzerains. (Zap. xv. 232 and 250).

According to Abū ʿĪṣār (ed. Desmoussins, p. 181), Batu granted his brother Shāhīn the land between his own territory and that of his eldest brother Orda-Ikken; the land between the Ergīn and Ural mountains and along the east bank of the Yāvīk was allotted him as summer residence and the lands on the Sīr-Daryā and the lower course of the Čū and Safī-Su as winter residence.

These statements are in general corroborated by the account of Filo Carpin, a contemporary of the three brothers (Engl. transl. by W. W. Rockhill, Hakl. Soc., Ser. ii, N. iv, p. 15).

According to Abū ʿĪṣār, the sovereignty in the house of Shāhīn regularly passed from father to son; for the names of the princes concerned were Bahadūr, Djiči Baghra, Badaḵš, Ming-Timur and Fūlūd. After the death of the latter his kingdom was divided between his two sons, Ibrāhīm and ʿArābghāl, but the brothers remained together. Their summer-quarters were on the upper Yāvīk, their winter abode on the lower Sīr-Daryā.

On the other hand, according to both the Muṣa al-Anābī and the Tūrkhī Abū ʿĪṣār Shāhīn, the sovereignty immediately before the accession of Abū ʿĪṣār (a grandson of Ibrāhīm) was in another line, the descendants of Fūlūd's brother Tughū, according to the Muṣa al-Anābī, in 829 (Nov. 1425/1426) there was ruling there a prince named Yumadāk (in the Tūrkhī Abū ʿĪṣār Shāhīn; Dijamadāk), a great-grandson of Tughū, although his father Ṣafī was still alive. For the names of the two brothers Ibrāhīm and ʿArābghāl, the ancestors of the later rulers of Mīr war al-Nāḥīr and Kūrūnī, the Özbek used the compound Ḥāwar, (according to Abū ʿĪṣār, p. 182). The people ruled by the descendants of the two brothers called themselves Özbek, presumably after the famous ruler of the Golden Horde under whom the rule of Islam on the Volga was definitely established. The conquest of Mīr war al-Nāḥīr by the Özbek took place under Muḥammad Shāh Bakhš or Shāh Bēgh (also Šahbak Bēgh) known as a poet under the name Shāhīn, which is also frequently given him by historians, a grandson of Abū ʿĪṣār Shāhīn. The capital Sāmarqand was occupied by him.
towards the end of the year 905 (1500) and definitely the next year. After Shabānī had fallen in battle against Shāh Ismā'il, the founder of the modern Persian kingdom, at Merw (Rāmseca 27, 916 = November 29, 1510), Bābur succeeded for a brief period in restoring the rule of the Timurids in Mār waṣr al-Nahr, but he was defeated in 918 (1513) and had to abandon Bukhāra and Samarqand and in 920 (1514) also his last possessions in Mār waṣr al-Nahr (cf. Bāber). Mār waṣr al-Nahr now remained under the rule of the Shaibanids (as descendants of Shabānī and not of Shāhānī, after whose death the succession passed not to his sons, but to other princes of the house of Abu l-Khair) or Abu l-Khairids (Howorth, *History of the Mongols*, ii. 1880, p. 866 sqq.). Cf. the names and dates of the members in Lane-Poole, *Mohammedan Dynasties*, 1884 (21925), No. 98; additions and corrections in the Russian translation by W. Barthold; and a few additional facts in W. Wyckin, *Sprawodl. Królika Samarkąd. Oläkl.,* vi. 242 sqq. from the inscriptions on the tomb of the Shaibanids in Samarqand. On the most important ruler of this house, 'Abd Allāh, cf. the articles 'ABD AL-LĀH R. ENKANDAR; on the latter's father, cf. the article ISKANDAR. Central Asiatic ascensions and inscriptions give as the last ruler of Mār waṣr al-Nahr the son of the previous ruler, 'Abd Allāh, 'Abd al-Mu'min, e. g. Abu l-Ghazāl, p. 183; Muhammad Yūsuf al-Munţi in J. Senkowski, *Supplément à l'histoire générale des Huns*, etc., p. 39; Mahmoud b. Wali in W. Barthold, *Est.,* xxv. 260; Welyamun-zernov in his work on the coins of Bukhāra and Khiwa also calls 'Abd al-Mu'min the last Khan of the house of the Shaibanids (*Trudy Vost. Otd. Arkh.-Obsh.*, vi., 1859, p. 402); also W. Barthold, under 'ABD AL-LLAH R. ISKANDAR. On the other hand, in the *Tārīkh-i-Nām* of Abru-i 'Abdu'llāh (ISKANDAR MUNIKH, a successor to 'Abd al-Mu'min) is given, namely Pir Muhammad, "a relative of 'Abd Allāh and a prince of the house of Dājjān Beg". This statement is quoted by Welyamun-zernov in his later work on the Tatars of Kozimow (*Trudy*, etc., x. 345 sqq.) and this Khán identified with Pir Muhammad b. Sulaimān, a grandson of Dājjān Beg, mentioned in the *Abdallāh-nīma*. Pir Muhammad was soon overthrown by Pir Muhammad, the founder of the new (Ardakhān) dynasty, taken prisoner and killed (end of 1507 = June/July, 1599). Therefore in Howorth (i. 739 sqq.) and Lane-Poole the history of the Shaibanids ends not with 'Abd al-Mu'min, but with Pir Muhammad II.

Western European and Russian scholars restrict the term Shaibanids to the rulers of Mār waṣr al-Nahr, and do not apply it to the rulers of Khwārizm, taking 'Abd Allāh (Rahī' 121, 911 = Aug. 22, 1505).

After the defeat of Shaibanī, it passed not to Bābar, but directly to the Persians. Soon afterwards (according to Abu l-Ghazāl, p. 197, as early as the year of the sheep 911 = the Hijra date 911 given it certainly wrong) the Persians were driven out by another branch of the house of Shaibanī, the descendants of Tārakhān. The last ruler was Hāfezūr Shaibanī and his historical work, see the article ABU l-GHĀZĪ R. BĀBĀQADIR KHAH. The son and successor of Abu l-Ghazāl, Anāṣa Khaţīr (1663–1687) also had considerable power; after the conquest of Māshhad, he took the title "Shāhī"; from this the great emal, which he dug and which still exists, takes the name "Shāhābād". He was followed by his two sons, Shāhshāhābād and Muhammad Kranak; the last year of the latter's death is unusually given as 993 (1687); a still unpublished history of Mu'nis, the historiographer of Khwārizm, 1106–1194/1195 is given. After this for a considerable period there was no longer a dynasty, until the foundation of the house of Kungzhrāt. The Šosk aristocracy installed as rulers only for periods princes of the line of Čingiz Khan, known as the "Kungzhrāt" or "Šosk Khanān".

According to Abu l-Ghazāl, p. 177, the princes of Siberia driven out by the Russians about 1503 (1594/1595), were also descendants of Shabānī.

See: *B. B. Faten.*
previously offered him his services. Peace was concluded with Barandaq, who besiegéd Otrar, which was defended by Muhammad Timur, son of Mahmud Sultan; the treaty was sealed by a marriage.

Entering Transoxiana in 900 (1494/1495), Shabání four years later was master of almost the whole of this region as well as of Khorasan; in 906 (1500), the conquest was completed. Bâsânqor Mirza, the Timurid sovereign of Samarkand, having demanded his assistance against Bâbur in 904/905 (1498/1499), he came, but withdrew on seeing the enemy in force and went to raise a large army of mercenaries with which he took Samarkand, abandoned successively by Bâbur and by Sulân ʿAli, brother of Bâsânqor, in 906. Zuhra Begam, mother of Sulân ʿAli, is said to have offered to hand over the town to Shabání if he would promise to marry her. The town was taken by assault, Khâṣâja Yahiyya, who defended it, was executed with his sons and Sulân ʿAli is said to have met the same fate. According to another story, Sulân ʿAli was killed by Shabání. He is also said to have been accidentally killed.

Aided by the inhabitants, Bâbur regained Samarkand by a bold stroke. All the country rose and the Ùbeks were massacred. Shabání, who only retained Bokhârâ and the neighbourhood, resumed the offensive some months later, seized Kara Kül and Dabistân, inflicted a disastrous defeat on Bâbur at Sar-i Pul (9 v.) and starved Samarkand into surrender. By the terms of the capitulation, Khânûnû Begam, sister of Bâbur, was to marry the victor.

In 908 (1502/1503), Shabání quarrelled with his protector, Mahmud Sultan, laid waste the region of Shahrukhâya and Taşkhent and left it before Bâbur arrived. After a raid against Urūq با, he gave his assistance to Sultan Alâmdâd Tumbal, who had rebelled against Mahmud Sultan, and recognised Shabání as suzerain of Farghânâ. Not strong enough to engage in battle, the enemy army stole away. Shabání surprised it and scattered it near Aâshât. Bâbur was escaped, but Mahmud Sultan and his brother Alâmdâd were made prisoners. They were well treated, but had to agree to the cession of Taşkhent and Shahrukhâya, to the incorporation of a part of their subjects in the army of Shabání and to several marriages with the family of the conqueror.

Returning to his estates, Mahmud Sultan died soon after, poisoned, he said, by Shabání.

In the same year took place several expeditions in the south of Transoxiana, in which Khwâsaw Shâh of the Kipâşâ, had taken several towns. Hâlkh, which was governed by the Timurid Hâdi al-Zamân, was besieged. Alâmdâd Tumbal had entrenched himself in Andijân; obliged to surrender, he was executed with his brothers, but pillaging was forbidden. Khwâsaw Shâh fled without fighting, leaving Shitta Cahâr to succumb in Hâjar after a heroic resistance, and abandoned Kandîzâ, which had supplies to last for twelve years.

In 911 (1505) Shabání set out to conquer Khwârim, with an army of 30,000 former subjects of Mahmud Sultan, undisciplined and dangerous, whom he tried to set at variance by suppressing their chiefs. Besieged for ten months, Urgendj, valiantly defended by Ciu (or Hüsain) Ñûfû, was only taken by treachery. Khwâsaw Shâh, arriving too late to help him, was massacred with his seven hundred men. Khâkh Bi was made governor of Khwârim, and the relatives of Shabání were given important posts.

Next year Shabání repelled the incursions of the Kâzâks. The Kipâšâ at that time had two rulers: one de jure, Barandaq, who died in exile in Samarkand, the other de facto, Kâzîm Beg. The latter was so dreaded that the rumour of his arrival caused a panic in the Ùbeks army. At the end of 912 (spring of 1507), Shabání took the offensive against the kingdom of Herât. Husain Bâkshâ summoned the help of his sons, who hurried up, except Muqaffar Mirza, but he died soon afterwards. Coming to the help of the Timurids, Bâbur, indignant at their apathy and their rivalries, soon left them. Crossing the Oxus, Shabání entered Andîkhyûd, which was surrendered by Shâh Mansûr Baksh, defeated Bâbûl Khâšî and routed Dhu ṭûnûn Arqûhn, who was put to death. The Timurids fled to Herât, but left it in a few hours, leaving their harems and treasures in the palace of Ikhîtyâr al-Din. Shabání entered Herât on Muḥarram 11, 913 (May 24, 1507), and levied a contribution of 100,000 bughâs on it, but reassured the inhabitants by his humanity. Two or three weeks later, he entered the palace. Falling in love with Khâṣâja Khânûm, wife of Muqaffar Mirza, he married her by force, without even observing the legal intervals. Timurids were sent in all directions against the Timurids, who were tracked down and put to death; Bâdî al-Zamân alone escaped, through the protection of Shâh İsmâîl.

Two years were occupied in new expeditions against the Kâzâks, a demonstration against Kâbul and the siege of Kandâhâr, held by Nâṣîr Mirâdîn Shâhâkî, which had to be abandoned. At this time Shabání massacred the Dughûtî princes, Saʿîd Čâgshâhî, Mahmud Khân, and his six sons, Muḥammad Husain Mirza, etc. (914 = 1508/1509). Then posing as the champion of the Sunna, he next year summoned Shâh İsmâîl to return to orthodoxy. The Persian ruler paid no heed to his threats and protested against the aggressions of the Ùbeks; Shabání then sent him a dervish's kajîbî (wooden bowl) and ironically invited him to follow the profession of his ancestors. Shâh İsmâîl promised to go on a pilgrimage to Mecca, where he would meet his adversary, and once took the offensive. Shabání at this time was busy putting down a revolt at Firâszûkh; the Kâzhgâh had just indicted a disastrous defeat on his son Muhammad Timûr, and Shabání took refuge behind the walls of Marw. There he received an ironical letter from Shâh İsmâîl on his way to meet his adversary, who had not kept his promise to come to attack him in his own country. The battle was fought on the banks of the Murghâb, surrounded by 17,000 Persians, who had destroyed the bridges, the Ùbeks, having lost half their fighting men, succumbed after a desperate struggle. Shabání left the field to die of his wounds in an abandoned farmouse. It has been said that his skull, mounted in gold, became Shâh İsmâîl's drinking cup, that the skin of his head, stuffed with straw, was sent to Bâyâzîd II, and his right hand and to Aqâ Rashîm, prince of Mâz�andârân, who had always wanted his support. His tomb in the mosque, which he had formed some months before in Samarkand, became a place of pilgrimage. The most probable date of his death is Shabání 29, 915 (December 2, 1510). Cf. Bâbur Nāma, transl. Beveridge, p. 350 note.
Shabānī Khān has rightly been reproached for his complete lack of scruples and for his cruelties; he only thought of extending his dominions and for him the end justified the means. But he was not the unlettered and boastful barbarian, extravagant and coarse, that Bāhirār shows us, giving lessons to theologians, correcting the works of artists and having his own bad verses recited before him. He was a Persian and Arabic well and has left notable productions in Turki. His official poet, Müllā Bīnūt, had ability. He helped and encouraged men of letters, artists and scholars, sought their society and founded several madrasas. The last of the founders of great empires to arise in Central Asia, Shabānī brought Turkish power to its apogee; his successor, Kūkchūning Khān, was able to restore it again and successfully resist the Persians and Bāhirār; but the death of Shabānī, with the separation of the Shi'as of Persia from the Sunnis of Transoxians, marks a far-reaching change in the situation in Central Asia (cf. Vāṁbērī, Gētch. Bochara's ii. 64).

Shabānī had married Menīr Caghaṭā, daughter of Yūnis Khān, Khūndāda Khānum, whose Shī'ī Ismā'īl's sent back to her brother Bāhirār with great honour and Zuhra Begi, who handed over Šāhruṣa to him. In addition to Muhammad Timur, he had a son Khurram, who died young. Bibliography: [vii. 61; gpp. Khândamār, Ḥāshī al-Siyar, iii. 284; Bâber, Mémoires, years 906 up to 915]. This work, often haggled, has much needed complement in the Ta'rīḫ-i Khwāja of Mīr Muhāmmad Ḥaḍir Dāghū (cf. especially p. 116–123, 158–169, 175–180, 189–211 and 221–237); Mrs. Beveridge also calls attention to the importance of the Rawīʾī Gūstā Nūyāt Nāma (British Museum, Or. 3222), a Turkish work dated 908 (1502/1503) of which the Shāhī Nāma publ. by Bérêzine, Kāzan 1849, is only a synopsis. The epic of Muḥāmmad Ṣāliḥ Mirāz with the same title is a long panegyric of Shabānī; it has been published with a German translation by Vāṁbērī, Vienna 1883, and re-edited by Melioransky and Saffro, St. Petersburg 1908. The genealogical history of the Turks by Abu l-Ḳāhār, often trans. or edited from Beśṭān 176 and Desmoulins 1874, devotes its whole book to him: The Taḏqīḥ-i Muḥīn Khānī of Muḥāmmad Yūṣuf al-Munṣīnī, which contains the main events (Milanges asiatiques, iv. 259), Vēlīanoff-Zerconov, Khān al-Khūna, p. 234–248; Erkme, History of India (cf. esp. 184–192, 203–206, 295–325); Howorth, History of the Mongols, ii. 691–713; Vāṁbērī, Gētch. Bochara's, ii. 35–65, 191–193, 250–268.

(L. BOVATY)

**SHAIKH AL-ISLĀM**

This word means one who bears the marks of old age, who is over fifty (cf. Littám, iii. 509). It is applied to aged relatives; the Shāikh is the patriarch of the tribe or family. In pre-Islamic antiquity the title Sa'yid, the chief of the tribe, was frequently given the epithet Shaikh meaning full maturity in years and therefore of prime powers. The moral influence of the Shaikhs over the Beduins was considerable and the term came to mean chiefs having a long career behind them, the glorious veterans.

In the history of the Muslim period, it has frequently the sense of supreme chief, especially among the royal pretenders seeking to revive Arab traditions. Thus in the fourth (tenth) century the reformer Abū Yaḥyā calls himself Shaikh al-Mu'mīna, i.e. Shāikh of the Believers (Dozy, Bayān, i. 235, transl. Fagnan, i. 315). Ibn Battūta (ii. 288–289) mentions a governor of a town with this title. It is also the title of the governor of Mollān Shahī al-Mardī Khān (Mohammed, ii. 14 and 165 of the transl.) tells us that at the Haṣṣāid court of Tunis the first minister, regent of the empire, who appointed all the officials was called Shāikh of the Almohads. Muḥāmmad, the founder of the Waṭṭāfīd dynasty took the title al-Shāikh as did Muḥāmmad al-Maḥbūl founder of the dynasty of Sa'dī Sheftīs.

The title, at the present day, at once a term of polite address and a sign of importance, respected, venerated, which all who govern, administer or hold a share of public authority are happy to have, whether in the spiritual or political sphere, in the mystic as well as the social life, is borne with unreserved pride. It is given to the head of a family, to the political head of the section of a tribe called shawar (in North Africa) and comprising a group of common origin. It is given to high dignitaries of religion, to teachers, scholars, to men of religion without distinction of age, to all persons respected for their office, their age or their morals. Thus we have the Shāikh al-Islām, the title of the Grand Mufti, the Puntīf of Iṣāfān, the Shāikh al-Dīn, Minister of Religion, Shāikh al-Mardī, Chief of police, Shāikh al-Balad, the mayor of a town. Al-Buḥrān and Muḥāmmad are the two Shāikhs par excellence (Ibn Khāldūn, Muḥaddima, ii. 165): the official leader of the pilgrimage is called in Egypt Shāikh al-Djumāl (Perron, Précis de jurisprudence Musulmane, ii. 641).

But it is particularly in the Muslim religious brotherhood or ṣūfī [q. v.] that the title Shāikh has an importance of its own. (A. COUR)

**SHAIKH AL-ISLĀM** is one of the honorific titles which first appear in the second half of the fourth century A.H. While other honorific titles compounded with ʿIlām (like ʿArī, ʿIlām al-Maṣīḥ) were born by religious and secular power (notably the vissiers of the Fātimids, cf. van Berchem, Z. D. P. F. xvi., p. 101), the title of Shāikh al-Islām has always been reserved for ʿulamāʾ and mystics, like other titles of honour whose first part is Shāikh (e.g. Shāikh al-Dīn; the surname of Shāikh al-Faṭyā is given by Ibn Khāldūn to the jurist Asād b. al-Farīd; cf. Muḥaddima, transl. de Slane, i. p. xxvi.). Of all these titles only that of Shāikh al-Islām has been extensively used. Thus in the fifth century the head of the Shāikh theologians in Kūhūsān, Ismā'īl b. 'Abd al-Raḥmān, was called by the Sunnis the Shāikh al-Islām par excellence (cf. also Djuwaini, Darām-Gūchā, ii. 23, where there is a reference to the Shāikh al-Islām al-Khurāsānī), while at the same period the partisans of the new religious Ismā'īl b. ʿAnṣārī (1006–1088) claimed this title for him (al-Ṣubkt, Ṭabāhīt, Cairo 1324, iii. 117; Djamī, Naṣṣāf-ṣī al-Uṣūl, ed. Lees, Calcutta, 1859, p. 273, 376). In the sixth century Fakhr al-Dīn Rāzī was called Shāikh al-Islām. Other examples in the centuries following are the mystic Shāikh Sāfī al-Dīn of Ardshīl (cf. Browne, Persian Literature in Modern Times, p. 33), and the theo-
logian al-Taftizānī. In Syria and in Egypt, however, Shāikh al-Islām had become a title of honour (but not an official one) which could only be given to jurists and more particularly to those who by their fatwa's had attained a certain fame or the approval of a great number of jurists, especially at the beginning of the Mamlūk period. Thus in the polemics provoked by the teachings of Ibn Taimiyya, his adversaries refused him the title of Shāikh al-Islām, given him by his partisans (cf. the article TADIMIYYA, in the Bibliographie, Muhannad b. Abī Bakr al-Shāikh's treatise, al-Radd al-wā'il ʿala man wālima amma man sālima Ibn Taimiyya Shāikh al-Islām kāfīr, is quoted). The modernists of our day who are under the influence of Ibn Taimiyya and Ibn Kašīyim al-Jāsuwīyya, represent these two jurists and religious leaders who realize the title Shāikh al-Islām (al-Maṇīrī, i. 34, according to Goldscheider, Die Richtungen der islamischen Koranauslegung, p. 339). Toward 700 (1300) Shāikh al-Islām had thus become a title which each muftī of some authority could claim for himself. Muhannad b. Sulaimān al-Kaṣāwī (d. 1382) in his biographies of Ḥanafi jurists, al-ʿIlām al-aḥbār min fathāt al-maṣāḥīb al-Nuʿmān al-Muḥammad (Brockelmann, G.A.I., ii. 83) says that among the muftī's those are called Shāikh al-Islām who settle differences and decide questions of general discipline (according to ʿAlt Emīrī in Ilmiyya Sulṭānīyya, p. 306). We thus find that in Egypt and in Russia down to the present day, and in Turkey till the xvith century (cf. Ewliyā Celebi, Siyāḥatnāma, passim) muftī's (Siṣīs as well as Sunnīs) of any importance daily demand the title Shāikh al-Islām. The development of the title has been different; here the Shāikh al-Islām has become a judicial authority who presides in each important village over the ecclesiastical tribunal, composed of Mollas and Mudjāhidās. In the time of the Safawīs he was appointed by the Ṣadr al-Sudūr (cf. Tavernier, Les six voyages, Paris 1676, i. 598, who calls him Scheli el-Selom and Cutch, Persia, London 1893, i. 453, 454).

But the title gained most glory after it had become applied more particularly to the Muftī of Constántinople, whose office in the Empire of the Ottoman Sulṭān in time acquired a religious and political importance without parallel in other Muslim countries. In the early centuries of the Ottoman Empire the influence of the ʿulamaʾ had been greatly surpased by that of the mystic shāfiʿīs and after the reconstitution of the empire by Muḥammad I, we see a furious struggle between the new Sunni orthodox influences and mystic-Shīʿī influences (e.g. the incident of Badr al-Dīn Muḥammad), a struggle that ended in the victory of orthodox under Sulṭān I. Historical pragmatic tradition seems to have ignored this development and must be accepted with a good deal of reserve, while the older sources give but little information. Thus the collection of biographies al-Shāikhī al-Nuʿmānīyya (written under Sulaimān I) is compiled from quite the orthodox point of view, but it is quite evident from it that the majority of the older jurists in Ottoman countries had studied in Egypt or Persia or had Arab or Persian teachers; some of the first muftīs of Constantinople were themselves foreigners like Fakhr al-Dīn al-ʿAdīman (muftī from 1430-1460) and ʿAlī al-Dīn al-Amalī. Later tradition makes Shāikh Edī Bālī, father-in-law of Oṭḥāmānī, already the first muftī of the Ottoman lands (Ilmiyya Sulṭānīyya, p. 315). They also claim that a Muftī al-Anām was appointed as early as under Mūrūd II, with authority over all the other muftīs (ṣīḥīḥīḥ of Oṭḥāmānī, i. 6), and that Muḥammad II after the taking of Constantinople gave the official title of Shāikh al-Islām to the muftī of the new capital, Khīṭer Bēg Čelebi, who was at the same time given authority over the two ʿaṣīr uṣūr (d'Ossian, von Hammer), but there is nothing to show that the muftī was already so important a person at this time. According to the Shāikhī, this Khīṭer Bēg was only ʿaṣīr of Shāμīr, while Fakhr al-Dīn al-ʿAdīman was the muftī (cf. ibid., p. 111, 81). If we later find that the biographer of the Shāikh al-Islām in the Dānaḥāta al-maṣāḥīb (see Bīhlī), begins his biographies with the muftī Muhammad Shams al-Dīn Fenārī (d. 1430), this seems to be purely conventional. It is only under Sūlmān I that the great influence of the Muftī of Constantinople begins to manifest itself during the 24 years in which the office was held by the famous Šāmīlī ʿAlī Dīmālī Efendi [q.v.]. In the time of the latter (he was Muftī from 1501 to 1525), the two ʿaṣīr uṣūr still had precedence over him because they sat in the Imperial Divūna, while the Muftī did not (Shāōminī, p. 305), but on the other hand we are told that the same Dīmālī Efendi refused to accept from Sulaimān the two ʿaṣīr uṣūrīkīs which were granted to him (Shāōminī, p. 307). It is only in the reign of Sulaimān that the Muftī of Constantinople seems to have exerted a real influence. Their development of the title (ṣīḥīḥīḥ) of the Empire includes all grades of judges. According to d'Ossian and von Hammer, this muftī was Čwī Zāde Muḥī al-Dīn Efendi [q.v.]; it should be noted, however, that the latter was also the first Muftī who was relieved of his office by the Sulṭān (in 1541).

The growth in importance of the Muftī of Constantinople was in any case spontaneous and not caused by the sovereign will of the Sulṭān, expressed by the conferring on his part of the title of Shāikh al-Islām, which at this period was borne by many muftī's (see below). To explain this development, we may investigate in several directions. There is the tempting hypothesis of M. Gaudefroy-Demombynes who sees a striking analogy between the position of Muftī of Constantinople and that of the 'Abbasid caliph at the court of the Mamluks, before the conquest of Egypt by the Turks (La Syrie, Paris 1925, ii, p. xxii). On the other hand, the organization of the 'ulamaʾ of the Ottoman empire under a religious chief may be in some way influenced by that of the Christian hierarchy in the empire under the Oecumenical patriarch. Lastly we may perhaps see in the Shāikh al-Islāmat a survival of the ancient mystical religious tradition in the Ottoman state, a tradition which demanded alongside of the secular power, a religious authority having no judicial powers but representing, so to speak, the religious conscience of the people.

This last hypothesis would explain the tenacity with which the Shāikh al-Islāmat maintained his position through the centuries that followed in spite of the power of the Sulṭān to dismiss the holder of the title, a power of which they make frequent use. Oṭḥāmānī II (1618-1623) went so far as to deprive the muftī of all his
The political function of the Shaikh al-Islām was formerly confided to his power of issuing fetuwa's. In supplying the demand for fetuwa's to private individuals, he was soon replaced by the Fetwā Emini (see below) but enormous importance was attached to fetuwa's relating to questions of policy and public discipline. To the first category belong for example the fetuwa of 'Ali Dhī al-Qarnayn on the war against Egypt (1516) and that of Abū Saʿūd on the war against Venice (1570). Under Oghlān II the mufīt Esʿād Efendi declined to authorise by fetuwa the fraticide of the Ottoman princes. Fetuwa's regarding public discipline were for example, that of Abū l-Ṣaʿūd authorising the drinking of coffee (see Ǧawār), that of 'Abd Allāh Efendi on the establishing of a printing-press (in 1727, cf. Babinger, Stammbücher Buchmesse, Leipzig 1919, p. 9) and that of Esʿād Efendi authorising the Niṣāʾī-d Jāmī-d of Selim III (q.v.). By their fetuwa's the mufīt's also collaborated in imperial legislation by legalising by their fetuwa's the different Kānumāt's (e.g. the Kānum of Sulaimān I all had the approbation of Abū l-Ṣaʿūd, cf. Milli tectebular muktaṣaf, 1331, i, Nos. 1, and 2). Besides, it was the custom to consult the Shaikh al-Islām on all political matters of any importance. In the majority of cases the mufīt's thus exercised a beneficial influence on public affairs, although by their personal interference they had often to suffer from the Sultan's arbitrary measures. The decline of the Ottoman empire has sometimes been attributed to the reactionary spirit of the institution of the Shaikh al-Islām; it should be noted, however, that in many cases the mufīt's have shown themselves less reactionary than the majority of the clergy and that through their intervention they were able to prevent fanatical and arbitrary acts (e.g. Abū l-Ṣaʿūd's opposition to the forced conversion of all the Christians). Although in the Ottoman empire of the sixteenth and seventeenth centuries the Shaikh al-Islām no longer played this important political role, appeal was occasionally made to the traditional authority of this institution when policy required it, as on the occasion of the deposition of 'Abd al-Hamīd in 1909, the proclamation of the Ǧībli in 1914 and the fetuwa against the nationalists of Angora in 1920. The fetuwa's of 1914 are not only concerned with the policy of the Ottoman empire but are addressed to the whole Muslim world. This fact reveals a new, and more general, pan-Islamic conception of the function of the Ottoman Shaikh al-Islām. It is a conception which seems to have developed in Turkey in the course of the sixteenth century, probably in connection with new theories of the caliphate. And just as is the case with these latter theories, the idea of the central importance of the Shaikh al-Islām for all the Muslim world is first found in Christian European authors. The sixteenth century travellers (e.g. Ricaut) already compare him with the Pope. Volney (Voyage en Syrie, Paris 1760/1790, ii. 371) regards him as the representative of the spiritual power of the Caliphate to the whole Muslim world. Legally speaking, it is true, the fetuwa of a Mufīt is addressed to every Muslim who wishes to follow it, but it was only in 1914 that the attempt was made to take advantage of the universal spiritual authority, which was attributed at the time by Christians as well as by Muslims to the Shaikh al-Islām in Constantinople (cf. Snouck Hurgronje, Verspreide Geschriften, iii. 372).
As head of the hierarchy of the 'ulama', the Muftis had acquired the right of recommending to the sultan persons, who should be nominated to the six higher grades of the judicature. He himself only very rarely acted as a judge.

When towards the end of the xvith century the administration of the Ottoman empire began to be modernised, there was gradually formed an administrative department with the Shaikh al-Islam at its head. By this time there were already several personages who assisted the Mufti in his many duties, such as the bek-khoda or efîye who could represent the mufti, the urukhâfi, who was his agent in the government, the mekâhâtâfi or general secretary and the fetâwi emirî whose duty it was to prepare and give out the fetâwis asked for by the public. All these functionaries had their own offices. In the period of the taqsimât, this departmental organisation was consolidated. The Shaikh al-Islam was given as his official residence the former residence of the Ağha of Janissaries; it was in this office henceforth called Shaikh al-Islam Kapîsî or Babî Fetâwi (cf. the article Constantinople), that the offices of his department were housed till its abolition. The department dealt with the administration and management of all institutions having a religious basis, except the administration of the evlây. The Shaikh al-Islam thus became the colleague of the heads of the other ministerial departments, which were created in the course of the xitiith century. He became a member of the Ministry and as such his tenure of office was limited by the life of the institution of which he was a member. He retained his precedence over the other ministers; this priority was laid down in Art. 27 of the Constitution of Miâhât Pâsha of 1876, in which it is enacted that the Sultan is to choose the Grand Vizier and Shaikh al-Islam directly while the other ministers are appointed by the Grand Vizier. As early as the xvith century the Grand Vizier and the Shaikh al-Islam were the only officials who received their investiture in the presence of the Sultan.

In proportion as the secularisation of the institutions of the Ottoman empire advanced, the influence of the Shaikh al-Islam in the State declined. The institution in 1859 of a Council of State (Şûret-i Devlet) deprived him of much of his influence on domestic politics; then the creation in 1879 of new civil and military tribunals under a new Minister of Justice ('âdilîye Nâzîreî) took away another large share of his influence. A series of legislative measures was passed which defined the competence of jurisdiction according to the şûrûa and nişâlîya tribunals. This development filled a prominent part in the religious reforms of the Young Turks (cf. e.g. the poem Meşhâhât of Zîbâ Gök Alarm, p. 62 of Aus der religiösen Reformbewegung in der Türkei, by Dr. A. Fischer, Leipzig, 1922) and was brought to its logical conclusion, when in 1916 the Young Turkish government removed the administration of all the mekâhât-i şûrûa to the Ministry of Justice and that of the moderna to the Ministry of Education. This step was justified by appeals to modern public law. The declared object was to avoid the mistakes made at the time of the taqsimât and to make the mekâhât-i îslâmîya a department for purely religious matters (cf. e.g. the Ta'lim of Oct. 31 and Nov. 2, 1916). It was in the same spirit that an office was established in 1917 at the Shaikh al-Islâmât, the dav al-khâmíya al-îslâmîya, of a propagandist character. But after the armistice of Mudros (Nov. 2, 1918) the Young Turkish reforms were revoked by the new government. But by this time, however, the life of the Shaikh al-Islâmât was nearing its end, for in November 1922 after the victory of Turkish nationalism all that remained in Constantinople of the old government institutions of the Ottoman empire was abolished. Their functions were taken over by the officers of the new government at Angora. This government no longer included the Shaikh al-Islâmât. At the constitution of the new government, it is true, a şûrûa'nâzîreî had been instituted but the anti-clerical spirit of the Grand National Assembly did not allow this imitation of the Shaikh al-Islâmât to survive; it was replaced by a modest diyyâmât (çehrî reçîâfiyê), by a law passed on March 3, 1924, the day on which the Ottoman caliphate was abolished.

The fullest description of the office of Shaikh al-Islâm towards the end of his existence is found in the 'Imîye Sûlûnumi published in 1334 (1916) by the Shaikh al-Islâmât which was then under the vigorous direction of Muştafa Khârif Efendi. The principal departments which composed it were the fetâwi-khâmî, the mekâhât-i meydânî şûrûa, a kind of court of cassation for the mekâhât-i meydânî şûrûa, an office for the administration of the medreses (der ze'klâtî ve meydânî ve meydânî şûrûa ve meydânî fethâ), an office which superintended the printing of Kûrâns and legal works (mâfâlî ve meydânî ve 'alîf-i şûrûa meydânî) an office dealing with the mystical orders (mashârî) and the administration of the dik al-mulkr ve movâtû, ve movâtû ve movâtû. There were also administrative departments dealing with the archives, correspondence and accounts. As in other government offices, there was an under-secretary of state (mustârzû). The Shaikh al-Islâm Kapîsî also contained the great şûrûa tribunal of the şûrûa, the 'âdilî ve the Ishâmî. Finally a large number of committees (endûfûmân) whose advice was asked on different matters, including a committee for the nomination of judges had their homes there. For further details see the 'Imîye Sûlûnumi.

Bibliography: The biographies of 108 Shaikh al-Islâm are given in Davûbat al-Myakhi'î by Rif'ât Efendi, lithogr. at Stambul n.d.; the last biography is that of Omer Hûsam al-Dîn Efendi (d. 1288/1871). A şûrûa has been written by 'Ali Efendî Efendi. Following these two sources the 'Imîye Sûlûnumi, p. 322—645 gives the biographies of 124 Shaikh al-Islâm dated from Muştafa Khârif Efendi (held office till Nov. 1916), edited by the historians Ahmad Refik and 'Ali Efendi Efendi. The latter contributed to the same Sûlûnumi, p. 304—320, 3 Ma'akhat-î Islmîye 'arâhî. At Vienna there is a manuscript of the Davûbat al-Myakhi'î of Müstakîm Zûle (Flügel, ii., p. 409 sqq.) Many western writers on Turkey have notices in their books of the Shaikh al-Islâmât: Ricaut, The history of the present state of the Ottoman empire, London 1886, p. 200 sqq.; D'Oissens, Tableau Général de l'Empire Othoman, ii., Paris 1790, p. 256 sqq.; J. von Hammer, Der osmanischen Reiches Staatsverfassung, Vienna 1815 i.ii. 373 sqq.; other descriptions: Dr. Stephan Keule, Über Titel,
have always come to sight. Turkey continued to occupy the place and in time made it a well
defended fortress which, although bombarded by the
English in 1914, was strongly supported next
year by the troops of the Indian Viceroy Hamid
al-Din and was even able to bombard Perim and
close the straits for a time. The military collapse
of Turkey in the world-war resulted in the
restoration of the place to the native population.

Like Mokha, Shaihk Sa'id is an important coast-
town in the independent imamate of the Zaidi
lord of Yemen, which is of all the more value
as coal and iron are found there.

(ADOLF GROHMAN)

SHAIKH, followers of Ajjam Ahsai [q.v.],
dissenting Shi'ite theologians of Persia.
Their teachers are the pupils and successors of the
founder: Sajjaj Kajim of Rejat, teacher of
Hadiji Muhammad Karim Khan of Kirmanshah
and Molla Muhammad Mamasfii, a theologian who
was one of the commission which tried and con-
demned the Báb at Tahur towards the end of 1847.
Their doctrines are definitely prepared the way for
those of the Báb. They are opposed to those of
the Akbars, who follow pure tradition; they
contest against the immoderate number of tra-
ditions and the complete absence of criticism
with which they are adopted; from this particular
point of view they approach the Sunni way of
thinking.

They give new explanations of the principles of
religion and of hadith. The twelve Imams are the
effective cause of creation, being the scene
of the manifestation of the divine will, the inter-
preters of God's desire. If they had not existed,
God would not have created anything; they are
therefore the ultimate cause of creation. All the
acts of the divinity are produced by them but
they have no power in us of themselves; they are
only organs of transmission. Hence we have the
charge of taqafful (delegation of God's powers)
wrongly brought against the Shia' by the Shi'a
theologians. God being incomprehensible: and
therefore the thought of every created being, He
can only be understood through the intermediary
of the Imams, who are in reality hypostases of the
supreme being; to sin against them is to sin against
God. The laww maṣbūḥa is the heart of the Imam,
which embraces all the heavens and all the worlds.
The Imams are the first of created beings and
have preceded them all.
In eschatology the Shâikhi have been charged with denying the resurrection of the material body. They reply that man possesses two bodies; one is formed by temporal elements: "like a rube which a man sometimes puts on and sometimes takes off"; it is this which dissolves in the grave; the other which persists when he first has crumbled to dust, is a subtle body which belongs to the invisible world (dâ'în kawârándiyât); it is this which is resurrected on this earth and then goes into paradise or hell.

Their thought became later more definite for they admitted two dâ'în and two dâ'în (these Arabic words both mean "body"); the first dâ'în is composed of the four visible elements, it is it which is perceptible in this world below and does not share in the future life; the second dâ'în persists and reappears in the other life; the first dâ'în is the body which the spirit rechlores in barâqî (purgatory); from the moment of death till the first sound of the trumpet, the second dâ'în subsists pure: it is in it that the spirit becomes incarnate which directs itself towards the second dâ'în and it is the latter which come out of the grave entirely purified.

Knowledge of God. For God there exist two kinds of knowledge; one is essential knowledge and has no connection with contingencies: the other is a new knowledge created (mubâhâl); this knowledge is the actual being of the known and the Imâms are the gates (kâba) which grant access to this knowledge. The world is eternal in time and in essence, for accidents without substance, forms without any substratum cannot come into existence. Accidents are transitory novelties, sometimes they exist, sometimes they disappear; they were nothing and they return to nothing. Substance on the contrary is not a transitory novelty; in consequence matter is a novelty in essence; it is eternal in the future, but not in the past; otherwise the future life would have an end; paradise and hell would disappear. Paradise is the love of the people of the House, the membership of the family of the Prophet, the Imâms, paradise and hell are created by the acts of men.

The material bodies of the Imâms after their death fall into decay in the grave, while it is true that these bodies are subtle they show themselves under the human form, created of the four elements as soon as their human body is no longer useful to men, they return it whence they have taken it and each of its molecules returns to its source while the Shâiks believe that the bodies of the Imâms are not subject to the injuries of time.

It is not possible for known things to be eternal; they must therefore then be new and contingent; they are different to the essence of God but knowledge existed before the objects of knowledge. There are two kinds of knowledge; essential knowledge and newly created knowledge, the latter is of two kinds, that of possibility hâm imkânî and that of being hâm ahkâmî; first is made of beings before their existence, and the second once they exist. This second acquired knowledge is not an attribute of God, it is present before Him.

They attribute particular importance to the order given by God (umr) which is the first class of created things and precedes the creation in the strict sense of the word (shâbî); the first constitutes a fixed world without change: it is through it that time exists and in consequence the latter can exert no influence on it. The knowledge of other creatures is preceded by ignorance, while this is not the case with God; this knowledge is new in the creature, it cannot be so for God. It is by the reflection of phenomena that man gains the apprehension of the world which surrounds him. This reflection does not exist for God who knows beings by their essence. Just as beings are manifold and varied as regards their existence, so there exists in God's knowledge of beings plurality and multiplication.

They condemn Sûfism and its pantheism with such sayings as: "It is impossible for the essence of God to be the being of multiple things". They explain the miracles of the Prophet (ascension by night, the split moon) not in a material sense but figuratively and with rationalistic interpretation.

At the beginning of the reign of Nâsil al-Jân Shâh, troubles broke out in Tabrîz in 1266 (1850) because a Shâikh was forbidden to enter the public baths as a result of a decision of the Mughalshah. The governor succeeded in quieting the disturbance and made peace between the two parties. Later persecutions were several times directed against the members of the sect.

(Çi. Huaty)

SHAIKHI (pronounced: Shâkhi), in two syllables, isma ' from Shâikh, q.v., nâm de plûme (shâkhal- bâ or mehkhâ), of a considerable number of Turkish poets. V. Hammer mentions sixteen of them in his "Geschichte der romanischen Dichtkunst". (See the index s. v. Scheich). The most important by far was Shâikhzade Celbi, alias Meyeşâ (Mawlawi), Yûsusî Sinân Germûni, a Turkish "Romanticist" poet. Born at Kütahia (Konya) in the 15th century, he is sometimes called Shâikh al-châlî 'ord, "The shâikh of the poets".

It is difficult to form an exact idea of his life. Information is not lacking either from the "reciters" (the authors of poetical biographies) or from the historians, but none of them was contemporary with Shâikhzade, and their information is vague and they are sometimes difficult to reconcile with one another. V. Hammer and Gibb; latter without even citing other sources—have combined the different data in order to obtain a continuous narrative, but one that does not give a great guarantee of truth.

Here we give a résumé of the biography of the poet according to Sehi, an author less often cited than Latif but having, nevertheless, the advantage of being of an earlier date (he wrote between 1520 and 1548); Yûsusî Germûni went to Persia where he studied under Saiyid Shârîf Durjânî [q. v.], showing a marked preference for medicine, whence the name of Hekim (doctor) Sinân by which he was equally well known. The Emir Suleiman (the son of Bayazid I, who ruled at Adrianople, then at Brusa from 1402 to 1410 and who was the patron of letters and of art) having noticed his poetical ability, Shâikhzade entered into favour with
the Ottoman sovereigns and later Murad II wished to make him a vizier. Some envious individuals persuaded the Sultan to put Shakhi's talent to the proof by imposing upon him a very difficult task, the translation of the *Five* Poems (Khamas, q.v.) of the Persian Nizami. Shakhi, having chosen the poem called Khusraw u-Shirin began by presenting the first 1,000 verses of it to Murad who rewarded him generously. On his return into his own country, the poet was assailed and robbed by brigands whom his enemies had placed in wait for him. This was the occasion of his writing a well-known poem, *Khamsa u-Shirin*, *laus sainti*. He was buried at Germán (Kutahia).

According to Taşkıpörazıde, Shakhi had been initiated into *Silas* by Hadži Djibrílm, the founder of the Bäirám order, who was born and buried at Angora, in 853 (1429–1430). Shakhi was actually at Angora, to which he was called to the court of Sultan Mehmed I (according to Rieu, wrongly Mehmed II) in 818 (1415–1416), (according to the Tâfi al-tawârîk of Sa’d al-Din) in his capacity as doctor to the prince of the Germân, who had been seized with a lethargy. The poet-doctor is said to have declared that an entertaining romance would suffice to dispel the melancholia. The following verse taken from a nâtî short of Shakhi, which is quoted in the *Pârîš Khâmâsh* (p. 86) seems to confirm this detail:

*nâ et-tâh miñterî dama-râh s-dîr hâyâ.*

The entertaining word is the remedy for the sickness of the soul*.

Shakhi is said to have been rewarded for his medical services by the title of physician in ordinary to the Sultan (ter tahbîh or ahâm-bâgh) which he is said to have been the first to hold officially. The author of the *Sejfûl-‘Othâmîni* in recounting this anecdote calls our poet Sinâti instead of Sinân (iii. 113 and iv. 721) and also gives the date of his death as 829 (1425–1426), which would make him die at a very early age, if it is true that he was born under Bâyazid I (whose reign began in 1389). An anecdote which almost all the authors repeat and which resembles a folk-lore tale, tells how a patient with a solemn countenance one day doubled the sum which he was giving to "doctor", Shakhi in order to enable him to buy something to cure his own eyes, which were affected.

The sojourn and medical practice of Shakhi at the Ottoman court seem very different to reconcile with the continuous stay which he is said to have made at Kutahia according to Taşkıpörazıde. One is at times given the impression that two persons have been confused: From the point of view of the history, which is so little known of the local Turkish dynasties, which the Ottoman dynasty, particularly jealous of its own greatness, had absorbed and effaced, it would have been interesting to have had more precise ideas on the relations of Shakhi with the Germainoğlu. [q.v. In the preface to his incommensurable *Khamsâna*, Firdaws Tawil, who, having lived during the time of Bâyazid II (1471–1452), is anterior to Sehi himself, tells us that Shakhi had begun Khusraw u-Shirin not for the Sultan Murad II, but for a prince of the house of Germân called Murad. The historian Tawil tells (vii. 191) that the buccolic sovereign (Kâbir and râhîl) of the German, unable to appreciate the beauty of the *jâzîa* of Shakhi wearied quickly of his company. One day he greatly upset the poet by showing, by his generous gifts, his preference for the following verses which an *âsâr* (popular hard) had recited to him.

*Bemîn devolêta Sultânma, ‘aškîzâna (nuq) khâyîr olum, ‘Yedîyûn bâllû hâmak, yârûdîyûn hâyîr olum.*

Fortunate Lord that thy end may be happy, may you have only honey and cream for fare and may you tread on your way, only on the meadows.*

The necessities of the metre (*hârîf*) made it necessary to read *‘aškîzâna* instead of the correct *‘aškîzî* and *khâyîr* (metrical value: --) instead of *hârîf* (—). The pronunciation *khâyîr* was in conformity with the vulgar Turkish usage but indescribably shocked men of letters.

The works of Shakhi: The most important is the poem already mentioned, Khusraw u-Shirin. All the authors say that it was left incomplete and that it was Shakhi’s (Shakhi oğlu) Djemal who finished it. In reality the addition consists of 111 verses, in which the subject dealt with in very vague terms is the death of Shakhi and in which we find a new eulogy of Murad II. The first verse of the addition is: *gelîsh‘u bi bu dînma muriq cedmêr; bu hikmet sêlêrînî gûbî cedmêr.*

According to the MS. Anc. f. l. 32 in the Bibliothèque Nationale of Paris, Djemalî had as his premiers Bâyazid ben Mustafâ (fol. 272). The MS. 328 follows this hint with the words Ağmed al-tarîqûmîn al-Akbahe. It is known that the poem attributed to Ferhâd, the lover of Shirin, the bas-reliefs of Buufter (cf. Hammer: *Hist. ii.* 109). The work of Shakhi is not the first Turkish translation of the poem. See a translation into Kipêk Türkish of 1383, mentioned in J. Deny’s *Gram. de la langue turque*, Paris 1920, p. xxix.

The satîre called *Khamsâna* was due, according to certain authors, to reasons other than those mentioned by Sehi. The district where Shakhi is said to have been the victim of brigands was called *Dobavušu*.

Shakhi also composed *göster*, as well as *na‘et* and *terêfî* bend, and a certain number of *jâzîa* of which a few were dedicated to the house of Germân, others to the Emir Sulîemân, which were discussed above. It seems difficult to admit that there is here, as in the case of the poet Ağmed Paşâ, a confusion between the prince Sulîemân of the family of Germân the date of death († 990 A.H.) of the latter rendering the same hypothesis improbable.

Like his predecessor and compatriot (q.v.) Ağmed [q.v.] but with greater authority, Shakhi naturalized in Turkey the mehtewî metre (which is that of Khusraw u-Shirin). He was, moreover, greatly influenced by mysticism which pervaded the mehtewî par excellence, that of Mawlawi Djâlî al-Din Rûmî. Shakhi was considered the greatest of the Turkish poets of the epoch before Ağmed Paşâ, who accustomed the Turks to a language more refined. You learned for the taste of the prince of Germân, Shakhi was, however, criticized by Lâtîf for his *oghsuânî* style, this ethnic here meaning “vulgar”. Certain Turkish critics, even modern ones, give vent again to these complaints, reproaching Shakhi with the use of Turkish *archaism*. It is certain that in the eyes of Turks to-day these peculiarities are only an
additional merit, and that the relative simplicity of his poetry in which words truly Turkish are not systematically banned, is appreciated more and more. Of other Turkish personalities of this name, there is to be mentioned the author of the supplement (Dokht, 1780) bibliographies up to the reign of Ahmed III to the Ḥadīth al-Ḥaṣāfī by 'Aṭā', who composed a continuation of Taḥkūkprūnād's work (cf. the Bibliography). Another Shaikhi (Abd al-Kādir, 1002) was Shaikhi al-Iṣlām in the reign of Murād III.

**Bibliography:** Oriental authors: the different Tābāghāt al-ṣāḥibār (takbīr-tashaqā'ār) are easy to consult, being arranged in the alphabetical order of the names of the authors. (See those of Ḥāji Ṣelevi, Hānẓūzādī or Kūnlūzādī, especially). Here are, however, a few more precise references for the printed texts: Selh, Ḥaṭṭ biḥāṭṭ, edited by Mehemmed Şukıffff (Library of Amid) 1255 (1909), p. 52; 36th ed. of İmād, ed. Mehemmed ʻUvrıṣ (Library of the ʻIbadān), Constantinople 1314, p. 215 sqq.; do., in German; Laṭtızī or Biğiogrāfičeskehui Nachrhehui von wurhrihui Türkischem Dicthirn, nebst einer Blumenlektuβ von ihren Wurhen, aus dem türkischen der Mevlu Aḥīb Laṭtızī und der Aḥīb Hasan Tebelızī übersetzt von Thoma Chaher, Zürich 1800, p. 219 sqq. (less complete); Taḥkūkprūnād, al-Shāqāfī al-ṣāḥibīnāwī, transl. into Turkish by Edirmel Mehemmed Mejīdī Efendī, Constantinople 1269 (1853), p. 128–129; 'Ali Efendī, Kūnlūzāfī, Aḥṣār, Constantinople 1277, vii, p. 190; Fālq Ḍuḥādī, İslāf, Comp. 1311, p. 16 sqq.; do, Tūrızī al-ṣāḥibār, Comp. 1311, p. 36 sqq.; do., Taḥkūkprūnād, 1268, Comp. 1312, p. 37 sqq.; Mehemmed Thāhrızī, Sīgihāfī ʻurma, Comp. 1308, i, p. 113 and iv, p. 721.

**Shaikhy**

**NAME.** A sub-division of the Shāhīliyya-order [v.], which deserves the name of a brotherhood rather than that of an order. It was founded by ʻAbd al-Kādir b. Māḥmūd (1055–1102 = 1544–1615), who bore the title of Sīdī Shaikh. He was a linear descendant of the caliph Aḥū Bakr and belonged to a branch that emigrated from Arabia to Egypt in the 1st century a.d., and from there to Tunisia where it resided from 609–802 A.H., from this date onward it had its quarters in the Maghrib, where it was known under the name of Bi Bakr or Bi Bi Bakr.

Selh Shaikhy was awadhān of the Shāhīliyya-order. He retained the title of this order with the addition of a thurice repeated fāṭika, at the end of each of the five daily ṣalāt. His piety and character made him the chief of his people in matters spiritual and temporal. In order to procure accommodation for his many visitors, he built a ʿāshūr at al-Abāyīn which to the present day is one of the five ʿāshūrs of the Shaikhy's. His position became hereditary in his family for some generations. In the second half of the xviiith century, however, a schism took place in consequence of which the Shaikhy became divided into two groups, the Sheraga and the Qherzabba. The further history is dominated by this schism.

In the xixth century a certain Bi ʻAmma (‘Amamā) tried to unite the factions under his authority, which he based upon his being divinely appointed successor of Sīdī Shaikh. His personal attitude resembled that of the popular dervishes and was moreover marked by hatred of Christians. He extended the rite by the addition of a ḍikr and a ṣawād.

The Shaikhy has its centre chiefly in the southern borderland between Algeria and Morocco. Apparently it never spread abroad.

**Bibliography:** L. Rinn, Marabout et Khouman, p. 349 sqq.; O. Depont and X. Coppolani, Les confessions religieuses musulmanes, p. 468 sqq. Cf. also the art. TARKA.

**Shaikhzade,** pronounced Sheikhzade, a compound Persian word signifying "son (or descendant) of the Shaikh" [v.], synonymous with the Turkish expression Şehzade-gahı. The word sheikh, pronounced in vulgar Turkish, ʻSheẖ, means according to Turkish usage "preacher in a large mosque; the head of a religious brotherhood". This expression must not be confused with ʻEshbaked (vulgar secondary form for ʻEshbakedeh) "prince imperial".

"Sheikhzade is a patronym of the same kind as İmâmzadeh or İmâmzadeh, Miṣâhızadeh or Miṣâhızadeh, N.Pașa-ı-bahı, N.Bey-ı-bahı, N.Emirzadeh. The Arabic synonym Ibra al-Šeikh is not used in Turkish; expressions like İhs-i-Kemal for Kemal Pașa-ı-bahı are exceptional.

The patronymic Sheikhzade or Sheikhzadeh has been employed as a proper noun in the names of the following Turkish personages:

1. The author of the Khowṣhāh Name, which was completed about May 20, 1387. It is in the prose and in the epilogue of this work that we find information about the poet Sheikhzade or Sheikhzadeh, and at the same time about his patron, Süleyman Şah, the prince of the German. (The quotations which follow are from the manuscript A.F.T., No. 314 of the Bibliothèque Nationale in Paris).

Sheikhzade was born about the year 1340. It was in fact about fifty years of age when he finished this book ʻUlamâlê-elles-yi-yağlıgâhı yağlıgâhı, fol. 304, b, l. 9). By birth on both his father's and his mother's side he was of high descent (gûl hadımîn berem ustum ustum); l. 2). His ancestors were powerful (der mêkii, men of learning (icum icim fâthar haʃer), Muslims of note. Süleyman Şah had absolute confidence in him (Hem ʻi-dibum am hem tash-idhum ber, Ne hâlam ulemesemi tağa (shaikhzade) idhum ber; ibid., l. 6) and had granted him the right of acting as secretary as well as High Treasurer (mešâm u defter u milâ u khaʃar); fol. 6, l. 7). This entirely confirms Selh, who says that Sheikhzade was ni-şâhîngi and defterdar of the prince of the German.
It is also to this prince that he intended to dedicate his poem. He says in fact:

"Suleimān-Shāh semāllā-dī kā rūcel, Uraidh šū kūtū taatūne el, Kī šāhī-dī temāmet Girmiyānu el, Hem uth ughī-yidā Caghisdundel (MS. No. 355: Caghisdundel)."

a) It was in the time of Suleimān Shāh when I first stretched out my hand to compose this book;
b) he was the Shāh of all the Girmiyān;
and the elder son of him who makes the weapons clash!"

But this prince died when the author was in the middle of his work (fol. 16, 1 1). Sheiksh oghlu then entered the service of Yldir̄im Baysīid, the son-in-law of Suleimān Shāh, still prince imperial, having already received as an appanage the capital of the Girmiyān (see article Girmiyānu-gel), and it is to Baysīid that the poem is dedicated in recognition of the benefits which he had heaped upon the author in his turn (fol. 18, 1 1). This combination of circumstances explains how the poet could at the same time write a eulogy of his former master. He could not forget indeed that the latter must be eclipsed and over-shadowed by his powerful namesake, who was equally a patron of the Ottoman House (the Emin Suleimān, son of Baysīid). His name has only been preserved on inscriptions and coins (Khalīl Edhem, Ali Girmiyān kušbāelin, Revue de l'Institut d'Histoire Ottoman [in Turkish], I. 118-128; Ahmad Ţawwād, Kūryāhde Girmiyān [Kirmiyanoğlu Beyler], 305, 51). In the eulogy of the Baysīid, "young in age but old in knowledge!" (Vigil-dūr āmābul, ʿārīlī pīr, fol. 18, b. 1 11), this prince is described in different ways in the different manuscripts. That of Berlin, the oldest, styles him: "Yldir̄im Baysīid, son (= descendant) of Orkhan Bey". In the MS. 314 of Paris (fol. 16, b. 1 1 and 2), he is the son of the Sultan Shāh (Sultan oghīdīr Shāh), these words being followed by this qualification: Ns (N'a) Sultan hūm-ī Sultan hūm-ī Sultan, Shēkshūn Baysīid hūm-ī Murād Shāh. The same name is found in the manuscript 355, fol. 4, b. 1, and in place of Shēkshūn, etc. there is: Celēb Baysīid, of Shīr-ī merdān. It will be noted that the imperial princes actually bore the title of Celēb up to the reign of Mehemed II (Siyūrī-ı ʿeşhāmī, p. 59). The surname Ildir̄im (the form in old Osmania for Yldir̄im) appears in the verse: waqīšuğ śūlūm dir kūta bebe-sur, fol. 16, b. 1 5.

In the same said that the work was finished in the time of Baysīid (demellatun, fol. 17, 1 10) and further on, the author expresses the hope of living long enough to finish under the name of the same prince (Shēkshūn adīl) an Ṣūlīm Shāh. The end seems to be a eulogy of a minister (the Grand Vizier ʿAli Pāshā), cf. fol. 19, 1 10. All these differences and variations make one surmise that the preface was entirely remodelled at a later date, perhaps by the author himself. A critical edition would be desirable, but whatever may be the version adopted as definitive, one can adopt as certain the date of the completion of the work (May 20, 1387) given in the epilogue. This date is thus formulated (fol. 304, b. 13)...... yīlī yūn sejen defanda - Ki ilāhī waqīšuğ-ī Ṣūlīm Shāh dākēd - e in 789 when the sun had raised his throne under (the sign of) Taurus". Then a description of spring follows, which concludes thus... ṣaṣ̄īl ilāhīyu (sic) ʿāhir maḥā nīr - Bu Ṣūlīm Shāh Nāme oğīl vel vel ʿāhir (sic). It was evidently at the end of the Rabī' II (spring). That the Ṣūlīm Shāh Nāme was finished (ibidem, l. 2)² now the lunar month of Rabī' II, 789 extended from 21st April to 20th May, and that corresponds exactly with the passage of the sun to the nodical sign of Taurus. Such an exact coincidence, which is in contrast to the usual lack of precision in Ottoman chronology excludes the possibility of error. The poem then is older than is usually believed.

It follows from what has been said that Suleimān Shāh had already been dead for some time in the year 789 (cf. the article GERMİYANOĞLU). We may notice also that according to the eulogy of him by Sheiksh oghlu, Suleimān Shāh was so devout that the derwishes forgot the respect due to a great prince (ulu Shāh) and did not salute him first (iyām ʿāhirīn-e, fol. 15, b. 1 13). As regards the epithet takhabādān which is given in a passage quoted above to the father of Suleimān Shāh (Girmiyanoğlu Mehemed) and which we have translated by "he who makes the shields clash", it is obviously the regular participle of (y)an of a causative verb of onomatopoeic origin takht-i-xur-balluka (takhabādān), synonyms with the metaphysics of takht-i-ballu (takhabādān) (whence no doubt comes the proper name Fach Schaud, wrongly given by v. Hammer, Gesch. d. osman. Dichtkunst, I. p. 110, note 1; we shall correct the other errors in the same quotation). The verb takhabādān is given by Mahmūd Kāshgharī, Divān inghāt al-Turk, III. 211, below in the sense of "to jingle (little pebbles), to tinkle, in speaking of toys or other objects". (Cf. also J. Deny, Gram. turque, § 380, re. 4 and note; add the words takht-balub, from the birkhan-balub in Turkish, p. 626, b. 24; takht-balub, from the Dict. of Redhouse, p. 722, b.; takht-balub, from Kāshgharī, b. 390, b. 12-15; and takht-balub ṣe-balub, Vambéry, Altime., p. 185).

The Ṣūlīm Shāh Nāme describes the loves of Ṣūlīm Shāh, the daughter of the king of Persia Siyūnā and of Ferahshāh, son of the king of Magrib, (see the analysis in Hammer, loc. cit.). It is a poem of 7,460 verses (with two rhyming hemistichs of 11 syllables), that is to say it is a muhabbat like the Ṣūlīm Shāh and in the same metre, the benefic (-----). This poem is called Ṣūlīm Shāh Ferahshāh by Sehi and Ferāsh Nāme by Ḥādījī Khalīfa (iv. 412), v. Hammer, Gibb, and, following them, other authors pronounce it Ferahshāh, and Gibb corrects the editor of Ḥādījī Khalīfa by reading Ferāsh Nāme. In the Paris manuscripts quoted, this name is always written Ferahshāh and this reading ought always to be retained as the only one compatible with the metre (-----). The word is found indeed either at the beginning or at the end of the hemistich (fol. 70, 72 b., 73, 78, 78 b., 76 etc.) where Ferahshāh and (-----) would be inadmissible.

This last word besides does not occur either in the Suleimān or in Jasti, Ṣūlīm Shāh Nāme, Marburg 1895, and seems due to a confusion with Ferahshāh and Ferugkūt (cf. a analogous confusion in the original story of Ferahshāh, Ferukhīzād, translated into French by the Jean de Langues Maltor in 1742, Bibliothèque Nationale de Paris, Suppl. turco., No. 945).
Seth identifies Sheihkghulu with the "nephew", on his sister's side, and companion of Sheihkbu. The historian Alī who makes the same confusion, calls him Djamal ith Sheihkghulu (Hammer: Djamalī zakład). The dates contradict this identification (Shalihi, who wrote under Murād II, was still alive in 1421), and it is difficult to believe that he could have his companion a nephew born in 1430. Two different individuals must therefore be distinguished.

Köprülü Zade Mehmed Fu'ād notes in No. 124 of the bibliography to his Türk edebiyâtında ifık müteşwäfifler, Stambul 1918, an autograph and unique manuscript belonging to him of a work entitled Qunus ullahâr by Sheihkghulu "extremely important from the point of view of the history of language and literature", but without more detailed information, it is impossible to say if it is here a question of our author.

Bibliography: See especially Gibb, History of Ottoman Poetry, London 1900, p. 422 sqq. The manuscripts of the Bibliothèque Nationale in Paris are: A.F.T., No. 314 (a fine vocalised ma'āli MS. of 852), 315 and 355 (the last two incomplete). The Berlin copy (Pertsch, No. 365) is of Rabī' I, 807 (Sept. 7-Oct. 6, 1404).

II. The author, or rather the translator, of the Kirb Westir (Wastr) hikâyâsî, "the history of the forty viziers". Only the little which is given in the preface of this work is known about this writer. The text also varies according to different manuscripts. In some one finds only Shaikhzade, in others only Ahmed-i Müşir. Gibb thinks it is one and the same person, the translator of the Kirb Westir from Arabic into Turkish, from a work which has been lost, entitled Arbâ’in ma‘âl close, "The Forty Days and Forty Nights". This translation is dedicated in the great majority of manuscripts to Sultan Murad II (1421-1451), and indicates approximately the epoch in which our author lived (according to Pertsch he is said to have written the Kirb Westir in 850=1445). It is to be noted, however, that according to the text of Belletté (which is in agreement with one of the manuscripts of Vienna) Shaikhzade is the name of an author who wrote in Arabic for the Sultan of Egypt (Müşir and Müşir in place of the "sar" of other manuscripts), and it is an anonymous writer speaking of himself in the first person who wrote the Turkish translation, commenting it with diverse flowers of diction and quotations. According to other manuscripts, we might suppose that Shaikhzade (or Aḥmad Muṣir) made the first translation and that an anonymous writer improved upon it. Fleischer, Behrnauer and Gibb reject the reading Muṣir as wrong, but the change of person (which passes from the third to the first) in the text of the preface remains none the less a puzzle. It is important then to set up a critical text from the different manuscripts of the Kirb Westir in order to establish even the name of the author.

Like the Bağhiyâ-nâme [q.v.] or the "History of the Ten Viziers", "The Forty Viziers" is a compilation of the "Sindâd Nâme" [q.v.] or the "History of the Seven Wise Men" (seven viziers in the Arab version). The framework of "The Forty Viziers" may be summarized as follows: There was in Persia a sovereign called Shaikh-i Khâshâyân (of the east and of the west), whose young wife fell in love with his stepson, a prince of marvellous beauty and of great virtue. Solicited by the Queen (Khatun), the prince (Sheikhzade) follows the advice which his tutor (khâshā, aïûd) had given him, who after consulting his horoscope, recommends him to maintain, whatever happens, the silence of a mute, during a dangerous period which will last forty days. Irritated by the indifference of the prince, the queen slanders him to the king, who orders his son to be put to death. It is at this moment that the forty viziers intervene and the first of them in the presence of the executioner tells a story (that of Shaikh Sihiâbah al-Din Maktûl, who died the victim of a woman's ruse), at the end of which the king consents to post-pone the execution of the prince until he has obtained further information. In the evening the queen on her part tells a story calculated to revive the anger of her husband, who again summons the executioner on the following morning. But the second vizier intervenes in his turn and so on until the forty stories of the viziers alternate with the forty stories of the queen. Finally, on the forty-first day, when the king was just going to give credence to the queen by putting his son to death and throwing the viziers into prison, the tutor, who had disappeared during this time, comes back and relieves the prince of the silence imposed by the omens. Then the prince reveals the intrigues of the queen. The latter, confounded by the testimony of her servants, is attached to the tail of a horse, which shatters her to pieces dragging her over stones and rough roads.

The stories of the forty viziers are most frequently localized in Egypt, which is in accordance with the indications in the preface as to the place where the collection is said to have been written (Aṣḥād [Aṣḥād], the Sultan of Egypt, of one of the tales — cf. Chauvin, p. 125 — is probably Ikhâshîd).

4. Abû al-Râmayn b. al-Shâkh Muhammâd b. Sülîmân, called Shaikhzâde (in Hâddîjâ Khâlîfa: Shaikhî zâde); died, in 1078 (June 23, 1667—June 11, 1668), finished in 1077, Mâjudîf al-âhkâm, commentary (Arabic) on the Multûfah al-ahbâr, a treatise on Ḥanâfi law by İübûhim al-Ḫalâbî; see al-Ḫulâfî. The Turkish translation
of this work by Mawgūfī is at the root of d’Ohsson’s Tableau général de l’empire Othoman. This commentary was first published in Constantinople in 1240 (1824/1825) and again in 1305, a tome in one large volume in 4.

ŞAI'T (A.), poet. The word is probably derived from the word َشَأْيَرَ poetry" or "poem," which may be of ancient Semitic origin, for we have in Hebrew שָאָר for a solemn hymn, and it is most unlikely that the derivation is from the Arabic verb َشَأَرَ to "know," as Arabic philologists explain it. The fact that the term is not used in the meaning of composing verses seems to speak against such a derivation. (Goldziher in his Abhāndl s, x. arab. Phil., i., 17, has explained َشَأْيَرَ as the one with inspired knowledge. The origin is lost in the remotest antiquity and though to my knowledge no ancient Arabic inscription contains any metrical verse, we cannot argue from this that poetry did not exist at those times. The remarkable fact remains that the oldest specimens of Arabic poetry which we can consider genuine have already fully developed rules as to metre and rhyme. That a poem must rhyme is imperative, but the َشَأْيَرَ in some of the earliest specimens of his art which are preserved employs metres which the critics of the second century of the Hijrī did not acknowledge and did not know (e.g. poems by َأَهْبَت, َأَمَرَ َأَمُرُ َأَمَرُ َأَمُرُ). Also in early times it was probably more frequent than we can now ascertain that the metre was not always correct, even if it corresponded with one of the 16 metres evolved by َأَهْبَت and َأَحْبَت for one verse of َأَهْبَت has several syllables too many which the grammarians have not been able to amend.

It is also important that the earliest specimens of Arabic poetry are by men who held an honourable position in their tribe; the time had not come when poor men, like al-حَسَّلَة, practised the art. Some authorities wish to emphasize that the َشَأْيَرَ and the َأَحْبَت were probably identical, a view which I cannot endorse, as Arabic poetry as a rule in early times holds aloof from all that is religious. It is a strong point that it is as a rule strictly concerned with worldly affairs. The short َشَأْيَرَ metre may have been the first which was practised in the َشَأْيَرَ or "leading the moving string of camels," but we have no ancient specimens of the َشَأْيَرَ, the earliest being preserved in the َأَحْبَت of َأَحْبَت of the َأَحْبَت who lived during the time of the rise of Islam.

The earliest poets of whom we have any knowledge lived in Eastern Arabia, and in their poetry they employed only very few of the 16 metres, and it is significant that even such late poets as َأَحْبَت and َأَحْبَت never use the shorter metres, which seem to have originated later in the Hijrīa. َأَحْبَت only uses the metres َشَأْيَرَ, َشَأْيَرَ, َشَأْيَرَ and َشَأْيَرَ and َشَأْيَرَ, the poet َأَحْبَت adds to this number only the metre َشَأْيَرَ. As later poets in various parts of Arabia employ all other metres, the fact mentioned might point to the existence of some unknown cause for this peculiarity. The َشَأْيَرَ was considered to be possessed of some special knowledge communicated to him by a kind of familiar spirit which inspired him, and he had in his company one or more real persons whose business it was to remember his verses and to recite them in other camps. While the familiar spirit may only have been fictitious, the reciter of the poet, named َشَأْيَرَ, was very real and we have many names of such َشَأْيَرَs mentioned in the َأَحْبَت al-أَحْبَت and by the poets themselves in their poems. More important, however, is it that in many cases the َشَأْيَرَ himself became a poet of note in the next generation. Among the َشَأْيَرَs of the following the most notable was َأَحْبَت al-Dhulām, who had for his َشَأْيَرَ Aws b. َأَحْبَت, whose َشَأْيَرَ was the poet َأَحْبَت. The َشَأْيَرَ of َأَحْبَت were his son َأَحْبَت, َأَحْبَت and َأَحْبَت. Such chains of poets who recited each other's poems could be mentioned in greater numbers than is generally realised. This points to a kind of school for poets and the َشَأْيَرَ at the same time made attempts at own composition, which he submitted to his master; this also accounts for finding in certain parts of Arabia a prevalence not only of specific metres, but also of special themes. It is not an accident that َأَحْبَت Dhu’l- َأَحْبَت, Sūda b. Dhu’l- َأَحْبَت and َأَحْبَت al-Mutamāshghad, the Hudhali poets, specialize in the description of bees; they were one the َشَأْيَرَ of another and not only used similar metres but also the same subjects which they had learned from their masters. This also explains why we find a line word for word in a poem of َأَحْبَت, Aws b. َأَحْبَت and َأَحْبَت, "The unfettered horses of passion" was an idea which the َشَأْيَرَs of َأَحْبَت could not omit from their verses.

The poet of the early times loved to fill his poems with fine words and it is specially in the earlier times that a large quantity of foreign words were used to adorn the poems, a practice which ceased after the first century of the Hijrī. At this time the calling of the َشَأْيَرَ had altered entirely. In the earlier times the poet stood for the honour of his tribe; he had to mourn his relations or the valiant men of his clan or sing the defiant َشَأْيَرَ against the enemies of his tribe. Now the poet had sunk to be a beggar for favours from the mighty and rich; to this he added lampoons against rivals, who made his work of extorting presents more difficult, and new themes for the edification of drunken gatherings, poems on banquets and obscene ditties. We have no Persian poetry as old, but Ibn Dānīl tells us (َأَحْبَت, 1952) that in Persia also poetry flourished and that they were very diligent in avoiding the use of any Arabic word in their poetry which was by critics considered a serious fault. We do not know the contents of this class of poetry, but we may assume that the lighter poetry in the Arabic language as represented by the poems of Khawfik and Abū Nawās reflects the themes of Persian verse. The earliest authentic Persian poetry dates from the fourth century of the Hijrī and the specimens preserved agree remarkably well with the kind of verse composed in Arabic by their contemporaries like Abū َأَحْبَت al-Busti, who wrote in both
languages. Since then the šā'ir has never died out, but the art which seems so fresh in the earliest specimens has seldom been able to leave the old path and like sheep and cows the poets, whether Arabic, Persian, Turkish or Urdu, have been chewing the cud to this day.

The Prophet took a special stand against the poets. He seems to have been a šā'ir himself, which brought about the answer at the end of Sūrat xxvi, which has been entitled "the Poets" from these verses. "The poets are liars and those who follow them have gone astray." The poets, however, were too well established in Arab civilisation and the traditions know that the Prophet's immediate successors were well versed in ancient poetry; especially 'Ali is credited with many verses, all of which are probably spurious. Though the Prophet would not be called a poet himself, he made full use of several poets, especially Hassan b. Thabit, who composed biting verses against the Mekkan adversaries. The method the šā'ir had to use for such verses to reach the hostile camp was to teach the verses to a rāwi who recited them in another place before a neutral audience, which had, however, sufficient interest to repeat the verses to the enemy attack. As regards the art of the poet I am inclined to doubt that all ancient poems were originally complete poems; often the šā'ir could only get from his familiar spirit the inspiration for part, and, like Zahir, had to work for a whole year on a single poem or recite it before it was completed, according to the rules which Aḥwārī d. g. has laid down for every poem. We have ample evidence that many poems were at all times only fragments, for an Arabic (or Persian) šāfī with the same rhyme going through a great number of verses is a very rare thing. (F. K. KENNICK)

SHAIṬĀN, Satan. (See also ḤAQQ, ILĪS). "Every proud and rebellious one among ḍīnun, men and animals" is the meaning given in the dictionaries. As applied to spirits shaiṭān has two distinct meanings with separate histories. The sense of devil goes back to Jewish sources and that of superhuman being has its roots in Arab paganism, though the two meanings interact. In the stories about Solomon a shaiṭān is nothing more than a ḍīnun superior in knowledge and power to other ḍīnun. But even their powers are limited. Closely connected with this is the use of the word in the sense of genius. He made up his mind, when they died, to hunger and disappointment, but his Demon said to him — Thou hast the charge of a household to meet" (Mishqat al-Tarā'il, xvii, 65). Belonging to the same order of ideas is the belief that a poet was possessed by a shaiṭān who inspired his works. Later writers knew the names of these familiar spirits. There is some evidence that the pagan gods of Arabia were afterwards reduced to the rank of demons. Tāhār says (Taṣfīr) that the shaiṭān are those whom the insidels obeyed while disobeying God. The bow of Qūṣ ṣah was afterwards called the bow of Shaiṭān and the horns of Shaiṭān is a name for a phenomenon accompanying sunrise. Similarly old superstitions are preserved in the belief that a shaiṭān eats excrement and all manner of filth and frequents the borderline between shade and sunlight.

The word is common in the Qurʾān but in the Sūra of the first Mekkan period the indefinite singular alone is found and that only once. It is not till the second period that the definite form occurs, suggesting that the prophet had found or remembered another idea. Shaiṭān is tactfully identified with Iblīs who is obviously borrowed from Judaism. Thus al-shaiṭān is the chief of the evil spirits and shaiṭān is a spirit, though not necessarily evil. There is no fixed tradition as to the relation of al-shaiṭān with the shaiṭāns and other ḍīnun. One account says that he is their father; another makes him produce eggs from which they were hatched and another says that God first created the devil then his wife and from the union came three eggs from which the various sorts of ḍīnun were hatched. The Qurʾān says that Shaiṭān is made of fire; the commentators refine on this and say that the angels are made of light, Shaiṭān of fire or of the smoke of fire. It is not settled whether the shaiṭāns have no bodies at all or have bodies of some very subtle substance. The punishment of Shaiṭān for resisting God is postponed to the end of the world when he will receive his reward in hell-fire. He is not Lord of Hell; according to the Qurʾān Malik is Lord of Hell. His standing epithet raqīḥ is derived from the Abyssinian word meaning a drumstick or cudgel; other names for Shaiṭān are ẓāhir and ḍīnun which is said to mean the father of the ḍīnun. The serpent which helped shaiṭān to tempt Adam was punished by being deprived of its legs but the peacock, the intermediary, seems to have escaped scot-free. Perhaps there is some connection with the Malik Tāb of the Yazidis.

In religious thought Shaiṭān is the power that opposes God in the hearts of men. He whispers his insidious suggestions in their ears and makes his proposals seductive to them. The Qurʾān describes this activity now to one shaiṭān now to several. Later it is said that one shaiṭān is attached to each man so that it is possible for everyone to speak of "my shaiṭān." There are no exceptions to this rule for even Yahyā b. Zakāriyyā (the Baptist) had his shaiṭān though he was too good to listen to its insinuations. The union between a man and his shaiṭān is as close as that between a man and his blood. But there is no hint of dualism for a shaiṭān has no real power over man, he owes his success to craft alone. He cannot exploit that success for he is afraid of God and leaves men in the lurch as soon as he has persuaded them to sin. The activities of Shaiṭān are summarized in the following tale. He complained to God of the privileges granted to men and was thereupon given similar ones. Diviners were his prophets; tattoo marks his sacred books; lies his traditions; poetry his religious reading; musical instruments his maezzas; the market his mosque; the baths his home; his food was everything on which the name of God was not invoked; his drink all intoxicating liquors and the object of his hunting women. The popular view is that every man is attended by an angel and a shaiṭān who guide him to evil and good deeds respectively. Hisan al-Baqri is reported to have said: — They are two thoughts that rush into the minds of men. He thus reduced these spirit forces to mental states.

Shaiṭāns were of both sexes and ugly. They could appear in human form without anything
SHAIYAD—SHAYYAD HAMZA

unnatural, betraying their identity. Many had names. Those of the familial of some poets were known. Farazdak's demons was "Amr. The sha'istas of India and Syria were among the most powerful and the names of their chiefs are given. Diseases, particularly the plague, were their weapons. Some said that the sha'istas were bound during the month of Ramadān and a cock was supposed to be a protection against them.

Attempts were made to reduce these ideas to some system. An unbelieving fitan was a sha'ist; one strong enough to move buildings and over hear the divine plans was a mardī (rebel) and one capable of more than that was an isfit. Spirits who attacked boys were called armāqī. Some men had power over the various kinds of spirits, but this power was not for all. The body of the māqūl had to be a fit temple (kabūl) for spirits if a man was to control them.

The Arab philologists accepted sha'istān as a native word and derived it from the root sh-h-n though some preferred the root sh-g-f. The word was rare in early poetry. Umayya b. Ahi 'l-Sā'it uses it in connection with the throwing of the stars at the devils. 'Adī b. Zaid tells of Ibīs being punished in fire. It might be urged that he was familiar with the idea but not with the word sha'istān. Umayya also has the participle shāstit in the sense of rebellious spirit. It almost looks as if he were experimenting to find a suitable word. The form shāstit used by Belādhīrī seems to be an attempt to represent the Greek form of the word. As the idea is obviously borrowed, it is probable that the word — a regular Arabic form — is also borrowed from the Ethiopic which is in turn derived from Hebrew.

Sha'istān is also the name of a snake and has some metaphorical meanings.

(A. S. Tritton)

SHAIYAD, a term used as a synonym of the word kalender and meaning a certain kind of dervish. The word has been derived from the root sh-g-f, which means "to perish", according to the translation of the 'arūf by 'Aśim. The same author defines ʿayrī as follows: "to cry something with a loud voice; to raise (a building) to a great height; to mention someone loudly, i.e. to praise him openly and make him famous; to cry a war article". Thus etymologically we might translate sha'īyād by "some one who loses himself in the despair that he is not the man of true virtue". This comes near Zenker's translation (p. 554). Tāhir Efendi in his Rekber-i Ghulāsîn (Maṭbūʻ-i 'Amīr, 1308, p. 156) gives the meaning impostor (khalīfub), but this is due to the fact that the word sha'īyād is used as a synonym of ṣayūr — which is also an old šūr term — and is not a translation (the niyār formed a special body which played a part in politics in Baghdad towards the end of the second century A.H. and whose influence long survived; they contributed a great deal to the spread of Sūfism in other lands of Islam and laid the foundations for the development of the šūfis, cf. Ṣāḥib al-Maḥṣūr, transl. Nicholson, p. 100, 1835; Taḥāhriṣ al-Awliyā', ed. Nicholson, l. 332; R. Hartmann, Av-Sulaimān's Risālat al-Malāmātayya, Der Islam, vii. 190—91. In the third century, we find in Khorāsān and in Transoxania similar groups which in Khorāsān are called ḥārīyān or ḥārīyān and in Transoxania īmāḥāl (cf. Köprüü Zade Fu'ad, Türkiye Türkiye, i. 81—82).

We find this term — which is synonymous with kalender, hādari, abādī — in general use from the seventh century A.H. onwards and especially in Asia Minor. We know that there was a Suffi named Sha'īyād 'Abd al-Rahmān Sha'īyād, a contemporary of Djalāl al-Dīn Rūmī, in Konya (Les Saints des Derwischs Tourneurs, transl. Haurz, i. 115); Sādī, in the Gulistān, speaks of a Sha'īyād with dishevelled hair who claimed to be 'alawī and referred a ṣayūr or Ewerti to himself. In the seventh century and later, we find Turkish poets like Sha'īyād Hamza [q. v.] and Sha'īyād ʿIsa, author of a romantic poem called Şalāt-i nūm (in the Biḥl. Nat. there is a Turkish MS. No. 1207, entitled Şalāt-i nūm by a Turkish poet called Ibn ʿYasuf). The references in Faḵrī, a poet of the tenth century, in his Risāle-i tawīfūl (on this book cf. the bibliographical index to my Ilk Mutanawwif) show that these sha'īyāds still existed in his time and that, both in their manner of living and in their mystic life, they did not differ from the groups of heterodox dervishes who had much in common and were closely connected with one another, like the abādīs, hādari kalenders, ʿdāmīs, ṣawāmīs, ṣabīs and bektāshīs (for historical information regarding them, cf. my Anadoluca İslámiyet-i). In the Alam-çrāy-i ʿAbdī, a one of the events of 1029 A.H., there is mention of a Sha'īyād (cf. Dorn, Anzüge aus Mohammedischen Schriftstellern, 1858, p. 370: the note which Dorn gives in his introduction on the word sha'īyād is of no importance, cf. p. 18.)

SHAIYAD HAMZA, a Turkish poet who lived in Asia Minor in the seventh century A.H. He was one of the ʿAbūl [q. v.], Dīlah, who spread throughout Asia Minor in this century under different names like kalender, abādī, ṣawāmī, yeṣevī and hādari, and taking the opportunity of the material and moral crisis caused by the invasion of the Mongols, went from village to village, trying to spread their teaching among the people (on the religious situation and movements in Asia Minor at this time see my Anadoluca İslámiyet-i, p. 36—90). This explains the surname of Sha'īyād [q. v.] which he took. The only information regarding his life is found in certain legendary biographies written in the tenth century. It is certain that he was the author of mystical-religious poems written in the language of the people in syllabary metre (hāf-i nermu) in preference to the ʿarūf but these poems are lost like many of the literary products of this period. The only remnant that survives is a matnawī of 159 hāf-i preserved in the Dīlah al-arf, composed in 918 by Egenderi Ḥ饭ji Kemal (the only known MS. of this work is in the Kitābkhāne-i ʿUmūṣī; for further information cf. the bibliographical index to my Ilk Mutanawwif); this matnawī has been published by me. Sha'īyād Hamza the memory of whom and his works sur-
vived till the tenth century, did not, like Yûnis Emir, have a powerful poetic personality but, like his predecessors and contemporaries whose names are now forgotten, he had an influence on the development of Yûnis (on the character of and formative elements in Turkish literature at this time cf. my İlah Metanetçiler, Ch. viii., p. 205-286). Nevertheless after gaining some fame at the period when this style of poetry was adopted by Yûnis Emir and his successors to the popular taste, the works of Sâidy Ğamza gradually lost their popularity and became completely forgotten from the tenth century onwards.

Bibliography: Besides the sources mentioned above: Köprüli Zade Fuâd, Selçûklu dövründe Anadolu şairleri, I, Sâidy Ğamza, in Kâzîl Caema Cümhter, I, No. 3, 1922, p. 18-19. (KÖPRÜLI ZADE FUÂD)

Sâiza, a town in Northern Syria, the ancient Ḫayyâ, Byzantine _CTXographer. It is mentioned as early as the inscriptions of Thutmose III and Thutmose IV. The table below lists the settled colonists here from Larsein in Thutmose III and up to the time of the name of this town; but the new name could not drive out the old, which soon came into general use again in the Muslim period in the form Shisra. It is mentioned as Shisra along with Hamzû by Imru ʾı-Kais and ʿUbaydallâh b. Kašâyûd b. Kašâyûd b. Idârûd b. ʿUbaydallâh b. ʿUbaydallâh b. Imru ʾı-Kais, Diwan, xx. 40, ed. Ahwardt, The Divans of the six amir. Arab. Poets, ......, p. 130; Kašâyûd b. Shisra, Diwan, liv. 9, ed. Rhodokinias, S. B. Ak. Wien, phil.-hist. Kl., csiv., (Abh. xi.), p. 240).

In the year 11 (638), the people of the town received ʿAbbû ʿUbayda with open arms. They went out to meet him with music, and were satisfied with the same general terms of peace as had been offered to the people of Hamzû, namely payment of the poll and ground-tax (qâza and ᵃʳẖḏâ). Shisra later became a district (ẖim) of the military province (genden) of Hamzû. Towards the end of the 10th century, the people were Kindî (al-Vâʾkhtâ), and Houtama, ii. 324). When Nichephorus Phocas advanced on Halab, Saff al-Dawla retired to his Shisra, but fell very ill there and was brought back dying to his capital (336 = 967). In the following year Nichephorus took Shisra and burned down its chief mosque. In the treaty between him and Kârghîyûa of Halab (Safr 359) the town was included in the latter's territory. (Kamûli al-Dîn, Zabûr, transl. Freytag, Z. D. M. G., xi. 227 = Migne, Patrolo Græcæ, csiv., Col. 1023). On the 16th Rajab 383 (Sept. 6, 993), Shisra, which then belonged to the Hâmidî and Saff al-Dawla, was taken by the Egyptian general Muḥtari who guaranteed the commandant Shisra, who was the office of Saff al-Dawla, security of life and property. When Saff al-Dawla appealed to the Emperor Basîr for help against the Egyptians, the latter came up and besieged Shisra; the commandant appointed by the Caliph, Mansûr b. Kaṭûdû, was bribed by him and handed over the fortress, which received a strong Greek garrison (383 = 994/995). But it again passed — apparently as a result of the defeat of Damascus Dalassenos at Affûnûs (998) — who installed Ḫâmilû (or Halîmû) b. Kaṭûdû as governor there (who can hardly be identified with the above mentioned Mansûr b. Rosâm, Zaptûk İm. Ak. Nauk., xiv., p. 311, note 266 and Schlumberger Épitre byzantine, ii. 151, note 3, supposé; rather his brother). Basîlios however attacked Shisra the very next year (999), began hostilities on October 28 and destroyed the aqueduct which supplied the fortress with water. An attempt to revive the commander failed, but want water finally forced him to offer to surrender, if he and his troops were allowed to march out freely, without the usual proskynèse before the Emperor, and the citizens were guaranteed security of life and property; the Emperor accepted these conditions; in spite of this, many citizens left the town with the garrison, and Basîlios repopulated it with Armenian colonists.

The town remained for the next eighty years in the hands of the Byzantines. In the year 395 (1004/1005) a certain ʿArîmû b. ʿArîmû ʿAṣîr of the tribe of Tabûlîb appeared as a žeʾir and advanced against Shisra with a prominent Arab named al-Ḥamûlî, to drive the Greeks out of it. They defeated a Byzantine detachment and were only driven away by an Egyptian army sent in reply to an official complaint by Basîr to the Caliph al-Nâṣir (Yâḥiyyû al-Anjâjû, in Rosen, op. cit. p. 41 [transl. p. 43]; an Amîrûnûnî, in Ibn Khûlid, I, 347; an Alûgûlûnî, in Mersîdûrûnî, p. 2, Shisra should be read for Cazacûrûnî, cf. his note p. 95). About 1025 Ṣâlih b. Mîrûdû [q.v.] granted the Munkûds the title of the tribe of the Banû Kûfûn the land:round Shisra, which however itself still remained in the hands of the Byzantines. The Munkûdî Muḥkâll was ruling over Kûsâfîyû in 1041; he was the ancestor of ʿUmmî Abu ʾl-Mûtawwâdd Muḥkâll b. ʿAbî b. Munkûdî, who extended his territory down to the Orontes, and probably built the fortress Dîjûr on the bridgehead below Shisra. When he died in January 1059, he was succeeded by his son Irs al-Dawla ʿAbî ʾl-Mulûk Abu ʾl-Hassan ʿAllî, who in 1078, by arrangement with the last Munkûds of Halab, Shûkî, rebuilt the fortress above mentioned and the suburbs of Shisra, Ḫâbil al-Dijûr, in order to cut off the fortress from supplies and support from the Greeks, and thus force it to surrender. In the same year he gave shelter in this fortress to the Greek Arman ʿAbî Mûnîr, who were fleeing before ʾAbîd al-Dawla Tabûtûn (Kamûli al-Dîn, transl. Mûnîr, p. 85, 90; Deringer, Oksâm, p. 30), but was able to win the favour of Tabûtûn again, and later of ʿArîf al-Dawla, who took Halab on June 18, 1080. On December 19, 1081 he succeeded in getting possession of the citadel of Shisra which had hitherto belonged to the Emperor, [Alexius Comnenus, by a treaty with the Bishop of al-Bârû, who resided in it. The Greek garrison were allowed to depart. ʿArîf al-Dawla who envied him the possession of the fortress, and vainly endeavoured to take it from him, was appeased by rich presents from the Munkûdî. He latter died next year (towards the end of 1082); he was succeeded by his pious son Irs al-Dawla Abu ʾl-Mûhrîf Nâṣîr, a peaceful, art-loving prince, under whom the territory of Shisra for a time included Affûnûs, Kûsâfîyû and al-Adhîka, till he had to cede these towns in 1086 to Mâhîb Shûk al-Shîb of ʿIsmâil. Shisra was several times besieged during his rule, but always successfully. He died childless in 1098, shortly after the conquest of Anjâjû by the Crusaders (Oct. 1097). He had destined as his successor his younger brother ʿArîf al-Dawla Abu ʾl-ʿAṣâhir ʿUstâmî.
before them, and razed his fortresses to the ground as he went; Shizar was among these. Baibars had it rebuilt when he ascended the throne, after the expulsion of the Mongols in 1261. He visited the town in 1268 on a tour through the country. Under Sulṭān Káltān, Shizar belonged for a year (1280–1281) to the rebel emir Sungkūr al-Asḥābar of Dimashq. Henceforth it was a miyāba under the miṣāḥ of Ḥalab (cf. the inscriptions of Shizar of the time of Barbarsī, published by Littmann). After the troubles stirred up by Mīnṭāḥ and al-Nāṣirī (1389), nomad tribes occupied this miyāba (Kālqāshandī, jučūš al-ʿĀdī, iv. 277, 17). A. F. 1450 Khalīl al-Zāhirī uses the modern form of the name, for the first time. No deduction can be made from the fact that al-ʿIṣṭāḥānī Abū l-Bakrā in his description of Kāšbātī’s journey (1477) through Northern Syria, does not mention Shizar (cf. Devonshire’s edition in E.I.F.A.O., xx., Cairo 1921), as the Sulṭān’s route did not take him near the town. With Turkish rule or even before it began the gradual decay of the stronghold, which is still going on.

SHAKAK (SHAKAK), a Kurdish tribe on the Turco-Persian frontier. In Persia to the west of Lake Urmia before the war they occupied the cantons of Bûrank, Sonnâ [q.v.], Cêrihî (cf. Salâmâs) and Kottûr; in Turkey, the eastern districts of the vilayet of Van: Surâî (Mahmûdî) and Alâbî (Baghâsh)4, i.e. the territory which in the xviith century belonged to the Dumbull tribe (Sharaf-nâmâ, l. 313–314).

The name of the tribe is written by Yusuf Dîyâ al-Dîn: Shîkak and by Shirwanî: Shâkak; Kûrâsh Efendi writes "Shîkak or Shîkakî". To the south of Lake Urmia in the canton of Bûrûr we have a village Kûnî-Shâkak ("the source of the Shâkak"), which not being far from Bulak-Shîkak (cf. Shâkakî) may be evidence of contact between the two tribes, if it is not a phonetic variant of the same name.

Among the Persian clans, the principal are: Kandîr and Delân (Sonnâ and Bûrank) and 'Awdûl (Cêrihî and Kottûr). There were in all about 2,000 families of Shâkak in Persia who formed the warrior caste (vaqsh-i): their subjects (vaqsh-i) were the villagers who have appeared.

The 'Awdûl have played a prominent part in local politics. Their ancestor is said to have arrived in Dîyâr Bakr at Urmia about 1700. The first known chief was Ismaiîl-Ághâ (l. 1231/1816) whose stronghold and tomb are on the river Nâzû-sâî (N.W. of Urmia). The 'Awdûl harassed by the Afghân then entrenched themselves in Dîyûn (Sonnâ) from which they went northwards to Cêrihî. Dîyûn-Ághâ, sometimes frontier-commissioner and sometimes rebel and brigand, was killed at Tabûz in 1905 by order of the governor-general. His brother Ismaiîl, better known by the Kurdish diminutive of Simkî (Sinmûkî) succeeded him and operated between Cêrihî and Kottûr. He trimmed carefully between Persians, Turks and Russians, holding a practically independent position. As a result of his numerous crimes (e.g. the assassination of the Nestorian patriarch, Mîr-Shimûnî, and the massacres of Muslims at Urmia), the Persian government undertook several expeditions against Simkî who in 1922 was driven towards Turkey and Mesopotamia.

On the Turkish side, the principal clans are: Maqûrî, Millûn, Sâmûltakî and Taqût (Mahmûdî) and Mersakî (at Bash-kulâ). The Turkish government used to recruit 5 "Hamdiyyâ" regiments from among these clans. About 1900 these clans numbered 2,000 families, but the war must have severely reduced their numbers.

SHAKAK (SHAKAK), a tribe of Kurdish origin. According to Yusuf Dîyâ al-Dîn, the word shalak means in Kurdish a beast which has a particular or disease of the foot. According to the Sharaf-nâmâ (1463), the Shalak were one of the four warrior tribes (vehârî) in the shîniya of Fînik of the principality of Dînjar. According to the Ottoman sîl-nâmâ, there were Kurdish Shalakî in the shîniya of Shîkhdar in the haja of Kilis in the vilayet of Aleppo (cf. Spiegel, Erza, Allertânia-

4iime, l. 744). The shîniya Shalak of the Dînjar-nâmâ (between Mînûsî and Dînjar-dîr) is certainly only a mis-reading for Shalakî. As a result of certain circumstances, probably in the time of the Aq-Koyunlu, we find the Shalakî leading a nomadic life on the Mughûn on the frontier of Transcaucasia (cf. Shâh-sewân). At the beginning of the xixth century there were 8,000 families on Russian territory. Dupré speaks of 25,000 heartths of Shalakî among the tribes speaking Kurdish. About 1814 J. Morier numbered them at 50,000 grouped along the Tabûz-Zandîn road and in the districts of Haçtûrê, Garmûtû and Mîyânâ as well as at Ardabîl. 'Abîdâ Mrîzî drew from this tribe the main cadres of his infantry drilled in European fashion. According to Morier, the Shalakî spoke Turkish. Shîrwanî puts the summer and winter quarters of the 60,000 families of Shalakî in the region of Tabûz-Sanû (on the road from Ardabîl) and adds that it is a Kurdish tribe whose language is Turkish, which forms part of the Kûrlî branch (minen tawîsh-i čal-lêg), which evidently means that the tribe is Shû as is also suggested by its association with the Shâh-sewân. The importance of the tribe may be judged from the fact that at the beginning of the xixth century the Persian government recruited four regiments from the Shalakî: we do not know the connections that may exist between the Shalakî and the Kur-

dish Shalakî, but all indications point to their being a Turkishled Kurdish tribe (like the Kûrd of Gandja). In the toponymy of the region south of Lake Urmia (cf. the article SHAWK-BULAK), we find traces of the passage of the Shalakî (the village of Khâlaq-Shalakî at Sûltûn).

(V. Minorsky)

SHAKAK-GANDJA. An Indian saint, whose real name was FARID AL-DIN MAS'UD, was born in 569 A.H. (1173 A.D.). He was a disciple of Khwâ
djâ Khûtî al-Dîn Bâkhîsh Kûki and settled in Adwâdadhan, better known as Pâkpatan, in Mûltan and died there on Saturday, Muharram 5, 664 (October 17, 1265), at the age of 95 years. It is said that by continued fasting his body had become so pure that whatever he used to put into his mouth to allay the cravings of hunger, even earth and stones, used to turn immediately into sugar; hence he derived his title of Shâkak-gandja, "sugar-store".

At the tomb of this saint there is an annual fair on the fifth day of Muharram and Muslims in considerable numbers come there to pass through a narrow gate-way known as the Bihâlî Darvâzâ or "Gate of Paradise", which leads to the mausoleum and is opened only once a year.

His teachings were collected by his famous de

Atâwîlî, p. 166; Rieu, Cat. Pers. MSS. Bâl-

ûz, p. 47; J. C. Oman, The Brahmans, The Hethites and Muslims of India, p. 312; Forbog...
SHAKUR, a Spanish Arabic place-name corresponding to the Spanish Segura. This last name is now only applied to the river which waters Murcia and Orihuela and flows into the Mediterranean near Guardamar. In the Muslim geographers this river is usually called the "white river" (al-muhr al-khayaf). It rises like the Guadalquivir in the range called Djabal Shaikur, but on the eastern slope. The mountains to which this name was given are of considerable extent. They were, according to the Arab geographers, covered with forests and had no fewer than 300 towns and villages and 33 strongholds. They corresponded apparently not only to the Sierra de Segura still called on the maps Sierra de Segura, but also to those called del Velmo, de las Cuatro Villas, de Castielfabib and de Cazorla. The highest points are the Velmo de Segura (6,000 feet) and the Blanquilla (6,100 feet). Shaikur was also the name in the Arab writers of a fairly important town in the district, clustered around a castle reputed to be almost inaccessible.

It was here that Ibn 'Ammar, the vizier of the 'Abbasid al-Ma'tamid, came to seek refuge with Ibn Mubarak, lord of the town, whom he handed over to his master. At the end of the Almoravid dynasty, Segura was the usual residence of Abū Ishaq Ibn Abī Hāmid ibn Hesâbko, lieutenant and vassal of the famous king of Murcia, Abū 'Abd Allâh Muhammad b. Mardanish.

SHALTSISH (sometimes Saltsis), Spanish Saltes, is the name which the Arabic geographers give to the little island situated in the estuary of the river Odre over the modern Huelva (Alt. Walias). A fairly minute description of it is given by al-Idrisi: it almost touches the land on the west coast, for the arm of the sea which separates it is only about a stone's throw in width. This island has no spring of drinking water; there was a little town on it in the period of Muslim rule. It is a fishing centre of some importance; according to Ibn Sād, the fish caught here were salted and sent to Seville. Saltes formed part of the province of Si d'ana (Arab.: Shaljsana) and in the middle ages shared the destinies of Huelva. This island was the last possession of the Almohads, Abū Mus'ab 'Abd al-'Azīz after he surrendered in 1051; he surrender his capital to the 'Abbasid sovereign al-Ma'tamid.

(E. LEVI-PROVENÇAL)
AL-SHALYAK, the usual Arabic name for the constellation of the Lyre (Lyra), is the Arabicized form of the Greek word κύλευ (Lyre), as the Arabs usually reproduce the Greek θ by th (cf. Arshamides, Euthyphro) and are fond of adding a k to such foreign words (R. K. Knobel, see below). The Arabic meaning of shalayak is unknown. The word Sulshath is a second name for the Lyre occurring in Ulugh Beg; it again corresponds to the Greek κύλευ in its original meaning of 'tuttle'. Al-Liura, the form taken from the Greek κύλευ, is also found quite early in the Arab astronomers, e.g., in al-Biruni, in the form γύλωτα ἐν κύλευ φωνής al-qanadi (al-šāliḥ al-maʿṣūrā, Berlin: MSS. Or. 8, 275, fol. 196b) and not for the first time in Ulugh Beg (as L. Ideler thinks). The word al-qanadi (= cymbal, harp) comes from the Persian sang, song or dān (= Persian harp).

The constellation of the Lyre is a northern one, but is not circumpolar in the latitudes of the Muslim world. It thus contains stars, one of which is particularly striking for its brightness and its distance. This is a Lyra or Vega. The full name of the star is: al-mâr al-walâfat ("the falling eagle"). The last component of this expression was changed in course of time into Vega through the influence of the Spanish. The star Vega was classed by the Greeks and Arabs as of the first magnitude; as a matter of fact its magnitude is o.1.

AL-SHAM, Syria. From time immemorial the Beduïns, troublesome neighbours of Syria and Palestine have been attracted by the fertility of this land, "a land of wine and leavened bread". They succeeded sometimes by whole tribes, sometimes by driblets in slipping into the districts bordering on the desert. They founded there from the beginning of the 2nd century before Christ principalities at Hims, at Palmyra and at Petra. They did not take long to adopt the Syrian language and civilisation. In the fifth century A.D. the Ghassanid phylarchs (cf. Ghassan) were entrusted with the defence of the Syrian tribes. They soon embraced Christianity. So also did the tribes, which in the sixth century roved up and down the steppes which separated Syria from Arabia: the Banū Kalb, the Banū Lakhm, the Banū Ḥidschān (q.v.). As is attested of the Banū Kalb (al-Lakhm, xx. 127), these Syro-Arabs spoke a sort of tabir, a mixture of Arabic and Aramaic, related without doubt to the Safaitic dialect. Thus any of these groups before the Hijāra might have given a name to the Arab Pannars. They all believed themselves to be Syrians and had only commercial relations with the Arabs of Najd and the Hijāz. At Māta (q.v.) they fought with the Byzantines against the invaders from Medina.

The Arab conquest: The death of Muḥammad (June 8, 632) and the election of Abū Bakr, was the signal in Arabia for the ridda, the defection of the tribes. A year after that date bands were formed around Medina amongst the Beduïns who had taken part in the bloody sup

pression of this revolt. They undertook the government of Syria, in conformity with an order of the Prophet or simply with the object of ravaging this land now without defenders. Thinking he had only to deal with an ordinary raid of pillaging Beduïns, Sargius, commander in Cæsarea, hurried to meet them with several hundred hastily equipped soldiers. He came upon the Arabs assembled in the valley of al-ʿArab, to the west of the Dead Sea. Overcome by numbers, the Byzantines retired in disorder, and suffered a second defeat at Dāμaṭi, Sargius fell in the battle (Feb. 634). The imperial troops collected reinforcements from Medina. Under the command of Ḥādīl b. al-Walīd (q.v.) who had hurried from the Ḫurraḳ, they inflicted on the enemy the disastrous defeat of Adnānāin (July 30, 634) between Jerusalem and Bāditjūm. The defeated forces tried to reform behind the marshes of Bāsin. Dislodged, they crossed the Jordan, to be again defeated at Fīḥi (Pella). Palestine was definitely lost to the Empire. In March 634 the Arabs took up their position under the walls of Damascus. Abandoned by the Greek garrison, the citizens capitulated in the following September. The army collected by Heraclius to raise the siege arrived too late. The Arabs established themselves in Dāḥbiyya, then retired to entrench themselves behind the Yarmūk, the eastern tributary of the Jordan. A mutiny of Armenian troops broke out in the Byzantine camp. Abandoned by the Syrian Arabs in the middle of the battle, the imperial forces were completely routed. This battle (Aug. 20, 636) settled the fate of Syria. The conquest of the north and of the Phoenician coast was simply a routine-march. Everywhere the towns, abandoned by their garrisons, paid contributions. Nowhere was a serious resistance encountered. This was literally the fatḥ yasir, easy conquest, as Bākhūṭyta tactfully calls it. Jerusalem did not surrender till 738. Cæsarea after a more or less continuous siege of seven years, in 640, thanks to the treachery of a Jew. After the surrender of the last coast towns of Palestine, the conquest could be regarded as complete.

Shortly before the capitulation of Jerusalem, the Caliph Ōmar arrived in Syria, to preside over the congress or "Day of Dāḥbiyya" (q.v.). The question of the organization of Syria was debated. The year 18 was marked by the plaque of Amwā (q.v.), Yazid b. Abī Sufyān, governor of Damascus, perished in the epidemic and was replaced by his brother, Muḥāṣwiyya. Ōmar rigorously maintained the political inequality of the conquerors and conquered. The latter formed the daḥīmīs. The privileged race of Arabs was to furnish the framework of a military and imperial aristocracy. Syria was divided into daḥīm al-muhālibīs, military districts: Damascus, Hims, Palestine, al-Urdān or the Province of Jordan. Yazid I later added the daḥīm of Kinnisīn for the north of Syria. From their military cantonments — the chief of which was Dāḥbiyya — the conquerors controlled the country and collected the taxes. Besides the land tax, the daḥīmīs paid a personal or poll-tax. In Syria, as in the other conquered provinces, organization was confined to a military occupation for the exploitation of the natives. The Arab government was confined to finance; their chancellery was an "audit office" (Wolffhausen, Das arabisches Reich u. sein Sturm, p. 20).
At the beginning of his administration, which under 'Othman extended over all Syria, Mu'awiya realised the necessity of getting the support of the Beduin tribes, politically more developed than the Beduins of the peninsula. For his military operations see the article Mu'awiya.

'Ali, 'Othman's successor, wanted to dismiss him, but the Syrians took the side of their governor. The encounter between Syrians and 'Iraqis on the battlefield of Siffin [q.v.] being undecided, arbitrators were appointed to decide between the two parties. The conference at 'Adhrab [q.v.] proclaimed the overthrow of 'Ali (Jan. 658). Profiting by this diplomatic success, Mu'awiya sent 'Abd al-'Aziz, his lieutenant, to conquer Egypt. On January 24, 651, 'Ali fell a victim to a Khairidji dagger, and the field was left clear for his rival.

Omayyad Syria: Mu'awiya had only been awaiting this day to found a dynasty, that of the Omayyads. The elder branch is called Sufyanid, from Abil Sufyan [q.v.], father of Mu'awiya. The younger line begun by Marwan b. al-Hakam took from him the name Marwanid.

Mu'awiya was acclaimed Caliph at Jerusalem by the troops and emirs of Syria. By taking up his residence in Damascus, he made it the capital instead of Medina, or Kufa. Whether deliberate or not, this step displaced the centre of gravity of the caliphate to the advantage of Syria. It dealt the unjustified supremacy of the Beduins a blow from which it never recovered. Mu'awiya made the Syrian Arabs supreme, and under the Omayyads they held all the principal offices. He twice tried to besiege Constantinople. For a verdict on the policy and character of the sovereign, who was with 'Omar I the real founder and organiser of the Caliphate, see the article Mu'awiya. He died at Damascus in April 680 (aged 75).

His son and successor, Yazid I, had to face a rebellion, which the ability of his father had been able to prevent breaking out. Husain b. 'Ali and 'Abdallah b. al-Zubair [q.v.], nephew of 'Ali, the prophet's widow, refused to recognise Yazid and took refuge on the inviolable territory of Mecca. Husain left the sanctuary to fall in the massacre of Karbala' (cf. Mashhad Husaini), on October 10, 680 Medina quarrelled with Syria, and its inhabitants proclaimed Yazid despised. After futile negotiations recourse was had to arms. Victorious on the day of al-Harra [q.v.], the Syrians marched on Mecca, where Ibn al-Zubair had declared himself independent. His headquarters were in the great mosque. A scaffolding of wood covered with mattresses protected the Ka'ba from the Syrian catapults. The carelessness of a Meccan set it on fire (Nov. 683). The news of the death of Yazid (Nov. 11, 683) decided the Syrian army to retreat. Yazid was not a worthless sovereign, still less the tyrant depicted by anti-Omaya' annalists. He continued his father's policy. The patron of artists and poets, and himself a poet, he completed the administrative organisation of Syria by creating the guirn of Khirmanin (cf. above). He perfected the irrigation of the Ghuta [q.v.] by digging a canal which was called after him. The Caliphate of the Caliphate Arabi calls him

\[\text{Supplication et cunctis nationibus regni sive grattissime habitis... cum omnibus civitatis visut}.\]

Beloved of his subjects, he lived civiliser like a private citizen. "No Caliph", says Wellhausen, "ever had such praise: it comes from the heart".

His younger son, the valetudinarian Mu'awiya II had but a transitory reign. He was apparently carried off by the plague which was raging in 684. His brothers were all very young. The fact that they were minors compelled the Syrian chiefs to give their support to Marwan b. al-Hakam [q.v.], first Caliph of the Marwanid branch (June 22, 684). The Syrian Kaisis having refused to recognise him, were defeated at Mardj Rabil [q.v.]. His reign was a continual series of battles. A rapid campaign secured him Egypt. Excluded with his sympathisers, the septimanejan Caliph returned to Damascus to die on May 7, 685. His eldest son 'Abd al-Malik [q.v.] succeeded him. He had to retake the eastern provinces and Arabia from the anti-Caliph Ibn al-Zubair, and at the same time repel an invasion of the Mardis or Djurdjums [q.v.]. In Jerusalem he owes him the building of the mosque of al-Aqsa. His reign marks the beginning of the nationalisation or arabisation of the administration, which had remained in the hands of the individuals of the conquered races. He succeeded, if not in substituting Arabic for Greek, in getting it used alongside of Greek in the keeping of the official accounts and registers. He was the creator of Arab coinage. 'Abd al-Malik died in Oct. 705, after a reign of 20 years.

His successor, Walid I, brought to the throne an autocratic temperament and a display of ruthless fervour unknown in his predecessors. He was the great builder of the dynasty. According to the earliest evidence it seems that the Christians of Damascus had been allowed to retain the splendid Basilica of St. John. Walid took it from them and turned it into a mosque. In his reign the Arab empire attained its greatest extent. Walid was singularly successful in his enterprises. His autocratic mood revealed itself in a diminution in tolerance to the conquered peoples. The great administrative offices were definitely taken from the Christians. By his fondness for magnificence, Walid secured undisputed popularity with the Arabs of Syria. He died on February 23, 715.

His brother, Sulaiman b. 'Abd al-Malik [q.v.], founder of al-Ramlah [q.v.] in Palestine, succeeded him. He perished at the disastrous siege of Constantinople. He was succeeded (Aug. 717) by his cousin 'Omar II b. 'Abd al-'Aziz [q.v.] who died on February 9, 720, and was replaced by the incapable Yazid II. From the time of Walid I the Omayyads had begun to forsake Damascus; the official capital, it ceased to be the Caliph's residence. The decline of the dynasty set in after the death of 'Omar II. Highkun, who succeeded Yazid II, vainly endeavoured to revive the prestige of the Syrian caliphate. The conquests ceased. In France the Arabs suffered the disastrous defeat of Poitiers, Oct. 732. Highkun allowed the Melkite patriarchs of Antioch to reside in Syria. His greed, the failure of his military plans, and finally the way in which he himself was turned up in his desert palace of Ruafa, made this ruler unpopular, though he was the most hard-working of the Omaya' caliphs. He was succeeded in February 743 by his nephew, Walid II, son of Yazid II. This prince, an artist and poet, lived contentedly in the desert, where he began the building of the splendid palace of Mahatta [q.v.]. He died at the hands of an assassin before finishing it (April 744). His successor, Yazid III, was the
first caliph born of a slave. He died five months later, having designated as his successor his insignificant brother, Ibasim, who did not succeed in getting himself acknowledged.

In the midst of the general anarchy, there came on the scene the energetic governor of Mesopotamia, Marwan b. Muhammed [q.v.], grandson of the caliph Marwan I. The victory of ‘Aindjar in the Hijaz broke the resistance of his adversaries, the Syrian Yemenis. Becoming caliph in December 744; Marwan II made the mistake of moving the capital to Harran (Mesopotamia) which alienated the Syrians from him. He exhausted himself in putting down their rebellions and those of the Kharijites. The ‘Abbasids, now secretly conspiring against the Omayyad dynasty, taking advantage of the disaffection in Syria, Abu l-‘Abbas al-Saffah [q.v.] had himself proclaimed caliph at Kufa (Nov. 749). After his defeat on the great Zab (Jan. 750) Marwan had to evacuate Mesopotamia, and then Syria. Abandoned by the Syrians, he took refuge in Egypt where he died at Abişir in August 750. The Omayyads were everywhere pursued and exterminated, their tombs desecrated, and their ashes scattered to the winds. The Syrians tried in vain to regain their lost ground. They raised the “white flag” of the Omayyads in opposition to the “black flag” of the ‘Abbasids. They found too late that by indifference to the fall of the Omayyads they had thrown away the future and supremacy of Syria. They hoped henceforth for speedy coming of al-Sufyān [q.v.], a national hero and champion of Syrian liberty. As his name shows, al-Sufyān, was to be a descendant of Abī Sufyān. He was to bring back the golden age and the happy days of the dynasty, the memory of which his name perpetuates.

Immediately after the conquest, the tribes of Syria had to learn the dialect of the Kuraish, now promoted to be the classical language. Among the Syrian Arabs, distracted by foreign conquests and the suppression of revolts in the provinces, intellectual activity under the Omayyads had been confined to poetry. The chief representatives of this literary renaissance were, next to the Taghibi Christian Abjāl [q.v.], the Caliphs Yazid I and Walid II. Arts and liberal professions remained the monopoly of the subject races, like banking and commerce. The Kadrāt movement [q.v.] which seems to have started in Syria, shows that the Arabs of Syria were beginning to take an interest in the philosophical problems to which they had been introduced by their Christian compatriots.

Agriculture remained flourishing in spite of the greed of the exchequer. As a result of the war with Byzantium, maritime trade had considerably diminished. On the other hand the fall of the Persian empire had opened up Central Asia to the Syrians, but they were soon to meet the competition of the commercial cities of the ‘Irāq, notably Baghdad. Syrian commerce, so active in the time of Justinian, became dormant under the Arabs. When maritime relations were resumed, it was the western peoples who secured the advantage from it, at the time of the Crusades. From the time of the Marwānids, the great towns of eastern Syria — Damascus, Homs, etc. — began to be Islamised as a result of the abolition of the military cantonments. The subject races learned Arabic, without, however, abandoning Aramaic or Greek. Decimated by epidemics, famine, civil strife and foreign wars, the Arab population of Syria grew slowly. If we neglect local outbreaks of fanaticism, there is no evidence of systematic persecution or proselytising encouraged by the authorities. The latter only exercised pressure on the Christians of Arab race, the Tabib and Taghibī. The Banū Kalb and other Syrian tribes had adopted Islam soon after the conquest.

In spite of their position as political helots, this was a period of marked tranquillity and toleration for non-Muslims, if we compare it with the troubles that awaited them under the ‘Abbasids. For the Arabs, paid and fed by the State, it was a golden age, a continual feast. Their chiefs, growing rich in exploiting the provinces, acquired enormous fortunes. What favoured the success of the ‘Abbasid conspiracy was the incapacity of the latter Marwānī caliphs, excluding of course ‘Abd al-Malik and Marwan II.

Then came the grave and continuous dissensions, after Marjāl Kālib, between Kais and Yemen, and lastly the refusal of the conquerors to grant political rights to the non-Arabs, who were their intellectual superiors.

‘Abbasid and Fāṭimid Syria. With the fall of the Omayyads, Syria lost its privileged position, and ceased to form the centre of a vast empire. It found itself reduced to the rank of a simple province, and jealously watched on account of its attachment to the old regime. The capital of the caliphate was moved across the Euphrates. Straining under a power, the hostility of which they never ceased to nourish, the Christians found themselves systematically excluded from all share in government affairs, as they were henceforth to be under the Fāṭimids and succeeding dynasties. The caliphs of Baghdad only intervened in Syria to make it feel its position of inferiority by inflicting increased taxation on it. Driven to extremes by the exactions of the caliph’s agents, the Christians of Lebanon attempted without success to gain their freedom in 759–760. On the occasion of the pilgrimage or of the war against the Byzantines, the Caliphs al-Ma’mūn, al-Mahdi, Hārūn and al-Ma’mūn passed through Syria. In the midst of the troubles that preceded the accession of al-Ma’mūn (813–833), the position of the Christians became intolerable and many of them migrated to Cyprus.

The misfortunes of their country, the loss of its autonomy, could not decide Kaisis and Yemenis to forget their regrettable differences, which ended by weakening the Syrians and driving them to failure in their efforts to shake off the ‘Abbasid yoke. A descendant of Mu’āwiya, ‘Abī b. ‘Abdallāh al-Sufyān, raised the “white standard” which had become the symbol of Syrian independence. But to get the support of the Kalb, he alienated the Kaisis (809–813). Another rising was no more successful. An Arab of obscure antecedents, named Abī Ḥarīr of Yemen origin, proclaimed himself the Sufyān (cf. above). The indifference of the Kaisis once again brought about his defeat in the reign of the Caliph al-Mu’tasim (833–847). Yielding to caprice, the moody caliph al-Muta-wakkil (847–861) thought of shifting his capital and living in Damascus. A mutiny in his garrison forced him to return to Mesopotamia. His reign was a period of severe trial for the Syrians. From his reign dates for the most part the intolerant legislation, which it has been proposed to attribute
to 'Omar I: the wearing of a special dress, the prohibition of riding on horseback etc. Numerous churches were turned into mosques. At this date there were no longer any Christians of Arab stock in Syria. Under the Umayyads, the Banū Tanikh had resisted all advances of the government. The Caliph al-Mahdi (775–785), however, forced them to apostatize.

It is to the early 'Abbāsid era that the Syrian military marches owe their origin, the 'aṣifia and al-nūkha'īna [q.v.], lines of fortifications built to check the progress of the Byzantine invaders. In 906 an aggrieved Syrian claiming to be the salṭānīn was arrested. This was the last attempt at an Omayyad restoration; it failed before the apathy of the demoralized Syrians. A Turkish Mamlik, Alūs b. Tūlān [q.v.], already master of Egypt, invaded Syria and undertook the task of defending it against the Byzantines. He declared himself independent there. The dynasty which he founded had only an ephemeral existence (875–905), as had that of the Ḳasbātíya (875–905) which replaced the Fatimids in the interval. Syria had been devastated by the 'Amranīya [q.v.] who left behind them the germ of al-maṣūrīn doctrines. From the time of the Ṛūfānids, the country may politically speaking be considered lost to the 'Abbāsid dynasty. Their power was maintained only there during a few brief periods of restoration.

In turn the Bedouin tribes wished to take their share in plundering an empire in decay. A Taghlibī clan, the Banū Hāmadān [q.v.] found themselves entrusted with the reconquest of Syria for the Ḳasbātíya and checking the Byzantine advance. They installed themselves as masters of the south of the country, without however breaking with the 'Abbāsid caliphate. The most famous of these Hāmadānī emirs was Saif al-Dawla [q.v.], who in his court at Aleppo, showed himself an enlightened patron of arts and letters (949–967). After the fall of the Ḳasbātíya (1003/1004) in spite of a brief 'Abbāsid reaction at Damascus (975–977), Syria fell into and remained for over a century (977–1098) in the hands of an 'Atid dynasty, or more accurately Isma'īlī, that of the Fātimids [q.v.].

Having conquered Egypt, the Fātimid armies invaded Syria (969), and conquered Palestine and then Damascus, without encountering any particular resistance. In the centre and north it is difficult to say what form the Egyptian conquest took. The direct authority of the Fātimids was enforced so long as their troops occupied the region. After their departure, the local Emirs did as they pleased without openly breaking with the uṣūrī in Cairo. Fātimid rule was only kept up in Syria by continually dismissing the agents to whom it was forced to delegate its authority, thus perpetuating administrative instability. In Palestine it had to reckon with the Banū 'āl-Djarāk. These Emirs of the tribe of Taiyy arrogated to themselves for over a century a regular hegemony over the nomad Syrians. In the reign of al-Hākim (996–1020), the Banū 'āl-Djarāk amused themselves by appointing an anti-caliph, and then sending him back to Mecca, whence they had brought him. In Tyre a humble boatman succeeded for a time in declaring himself independent (997).

Taking advantage of the anarchy the Emperor Nicephorus Phocas (963–969) had conquered Northern Syria. His successors, Triconocles (969–976) and Basil II (976–1025), easily conquered the valley of the Orontes and the Phoenician coast. Of all these conquests all that the Byzantines were able to keep for over a century was the "duchy" of Antioc, which included most of Lower Syria, except the emirates of Aleppo and Damasc. We have already mentioned the Caliph al-Hākim [q.v.] with whom the Hākimīn was connected the origin of the Druzes [q.v.]. This moody prince quarrelled with the Christians and ordered the Basilisk of the Resurrection in Jerusalem to be destroyed, Syria gradually detached itself from Egypt. In the midst of the political disorders, the pernicious influence of the Beduins increased. About 1023, the Banū Mirḍa of the Kašī tribe of Banū Keith established themselves in Aleppo, and held it with interruptions till 1079.

By this time the Saldākh [q.v.] had already gained a footing in Syria. The provinces of Syria fell into their power, Damascus in 1075. At Jerusalem a Saldākh Emīr, Ortoš [q.v.], founded a local dynasty (1086–1087). In 1084, the Greeks lost Antioc, their last possession in Syria. Syria was now divided into two Saldākh Subhānī, that of Aleppo and that of Damascus. Saldākh Emirs more or less independent commanded at Aleppo and Damascus. The Saracens, all at war with one another. At Tripoli, a humble kābest founded the dynasty of Banū A'mār. To the south of this town the towns on the coast remained in the hands of the Egyptians. Into the midst of this confusion, this piece-meal distribution of territory, came the armies of the Crusaders.

The persistent hostility shown by the 'Abbāsid to the intellectuals of Syria, the political anarchy, the rule of Turkish and Berber adventurers, unlettered and greedy masters, were all circumstances unfavourable to the progress of ideas. A few poets had gathered at the court of the Ḳasbātíya and Mirdāsid of Aleppo. The patronage of Saif al-Dawla encouraged the progress of the celebrated Kītaīb al-Aghāmī. The reader may be referred to the articles on Abu Tammān, Abu 'l-Āla al-Ma'arrī, al-Mutanabbi, a native of Kūfa, but a Syrian by education and upbringing, al-Maḳdisī, one of the most justly esteemed of Arab geographers. Less tolerant, more irritating than the Omayyads, the authorities began to encourage conversion to Islam. Arabic slowly began to take the place of Syriac as the spoken language of the subject races, who began to write in it. Profane sciences, especially medicine, began to be cultivated, mainly by Jews and Christians. The end of this period coincides with the institution of the Madrasas [q.v.] which grew up under the stimulus of the Saldākh, especially in Aleppo and Damascus. The lack of respect into which the 'Abbāsid caliphate had fallen restated on orthodox Ḳalām; it favoured the rapid growth of sects practising initiation and following the Shī'ā: the Druses, Ismā'īli, Naqṣānis and Muṭawallīs [q.v.].

The exactions of the 'Abbāsid and Fātimid agents diminished without however destroying the great vitality of the country. In 311, a governor of Damascus was sentenced to pay 300,000 dinars to the treasury. The country began to become depopulated and agriculture languished. Its complete decline was only checked by the introduction of new crops: sugar-cane and the orange. Cotton-growing was developed and cotton was used for manufacture of paper. In the tenth century there was a paper factory in Damascus. One should
read the sketch of the commerce of Syria in al-Makdisi’s geography, Akīyân al-lāṭālik (p. 180, 184), to get an idea of the various regions of a country which centuries of oppression and the most deplorable administration had not been able to impoverish.

Syria under the Franks. On October 21, 1097, the army of the Crusaders appeared before the walls of Antioch. After a very laborious siege, they entered on June 3, 1098. Then following the valley of the Orontes through the mountains of the Nusairis and along the coast, the Franks, now reduced to 40,000 men, debouched before Jerusalem. The city, which the Fatimids had just retaken from the Ortogols, was taken by assault on July 15, 1099, and Deinrey of Bouillon elected head of the new Latin state (1099-1100). But the first Frank king of Jerusalem was really his brother and successor, Baldwin I. He conquered the towns on the coast, Arsur, Caesarea, Acre, Saida, Birit, and Tripoli (1109-1110). This brave leader, the most remarkable of the crusading sovereigns, died during an expedition against Egypt (1118). His successor, Baldwin II du Bourg, captured Tyre in 1124; he failed before Damascus, but the town had to promise to pay tribute.

It was towards 1130 that the Latin kingdom attained its greatest extent stretching from Deyr al-Bakr to the borders of Egypt. In Syria its frontier never crossed the valleys of the Upper Orontes, nor the crest of the Anti-Lebanon. The great cities of the interior, Aleppo, Hama, Hims, Baalbek, Damascus while agreeing to pay tribute, remained independent. The kingdom consisted of a confederacy of four feudal states: 1. The east, the county of Edessa lay along the two banks of the Euphrates. 2. In the north the principality of Antioch included in its protectorate Armenian Cilicia. 3. In the centre the county of Tripoli stretched from the fort of Margat (Marqab) to the Nahr al-Kalb. 4. Lastly came the royal domains, or kingdom of Jerusalem, strictly speaking. It included all cis-Jordan Palestine and in Transjordan, the ancient districts of Moab and Edom, which became the seigneurie of Cric (Kerak, q. v.) and of Mount Sion (cf. Shawbak) “in the land of Oultre-Jourdain”. For a time it had a dependency, the port of Allâh-Abâ. To defend these possessions the Crusaders built strong castles: the Cric des Chevaliers (Hsîn al-Akzîd, q. v.), Castel-Blanc (Safîkî), Murselas (Marjatya), Marqab (Marqab) and in southern Lebanon, Beaufort (Shakfî Arrîîn). Lastly in Transjordania the two massive fortresses of Cric and Montéflag.

After the death of Baldwin II (1131) the decline of the Latin state began; it was hastened by the isolation of the Crusaders and their lack of unity. The Byzantines claimed the rights of a successor over the north of the kingdom. The Armenians sought to form a national state for themselves in the region of the Taurus. Instead of coming to an agreement with Franks, Byzantines and Armenians only succeeded in embroiling one another to the advantage of the Muslims, who were gathered round remarkable leaders like Zangi, Nûr al-Dîn and Salâh al-Dîn (q. v.). Baldwin III (1144-1162) resumed the siege of Damascus (July 23-25, 1148) without any more success than his predecessors. Already lord of Aleppo, Nûr al-Dîn installed himself in Damascus, Amsuya, king of Jerusalem from 1162, formed the bold project of seizing the heritage of the dying dynasty of the Fatimids. He was anticipated by Nûr al-Dîn. The latter sent his lieutenant, the Kûrd Salâh al-Dîn, to Egypt. On the death of the last Fatimid Caliph, Salâh al-Dîn proclaimed himself independent in Egypt, and founded the Ayyûbid dynasty there, then seized Damascus from the sons of Nûr al-Dîn. On July 4, 1187, at Hattin between Tiberias and Nazareth, the whole Christian army under Guy de Lusignan fell into the hands of Salâh al-Dîn. Jerusalem capitulated on October 2 following. Deprived of their defenders, the other cities, except Antioch, Tripoli and Tyre, had to surrender.

The preaching of the third crusade brought to the camp before Acre, which the Franks had been besieging two years, Philip Augustus of France and Richard Coeur-de-Lion of England. The town surrendered on July 20, 1191. A truce between the belligerents ceded the coast from Jaffa to Tyre to the Crusaders. In default of Jerusalem, which they had been unable to reconquer, Acre was henceforth the capital of the kingdom. The death of Salâh al-Dîn produced dissension among his numerous heirs. The Emperor Frederick II took advantage of the discord to negotiate with al-Malik al-Kâmil, Ayyûbid Sulṭân of Egypt, for the cession of Jerusalem and other places of no strategic importance. Threatened by the sons of Salâh al-Dîn, who had made an alliance with the Franks, their uncle al-Malik al-Kâmil called in the help of the Kâfirim who crushed the combined Syrian and Frankish forces near Ghaza (1244) and enabled the Egyptians to occupy Jerusalem, Damascus and Hims.

The seventh crusade brought St. Louis to Syria after the check to his expedition to Egypt. For four years (1250-1254) he was engaged in fortifying the towns of the coast. It was the Mamlûk Sulṭân, Baibars, Kalaân and al-Malik al-Ashraf, son of the latter, who dealt the last blow to the Latin kingdom. Acre fell (May 31, 1291) after a heroic defence. In the course of the next months, Tyre, Haïfa, Saida, Birit and Tarsus were taken or evacuated. Ḥilîl [q. v.] the imposing fortress between Ḥilîl and Caesarea was the last to surrender (Aug. 14, 1291). The Frankish colonies in Syria were at an end.

The Crusades introduced into Syria the feudal organisation of contemporary Europe. The elective character of the kingship soon gave place to dynastic succession. The king alone ruled directly the Palestinian kingdom of Jerusalem. His authority was limited by the privileges of the three orders: the clergy, the nobility and bourgeoisie. "He cannot", notes Usama b. Munkîjî, "remove by the decisions of the Court of Seigneurs". The authority of the great feudatories within their principalities was circumscribed in the same way. Agricultural servitude was retained, as had been the custom in Syria. The name "poulains" (poolane) was given to the issue of marriages between Franks and natives; the etymology of this word is still obscure. The army was recruited not only from Franks but also from Armenians and Maronites. The Turcopoles were the Muslim auxiliaries. The position of Muslims and Jews recalled that of the dhimmis [q. v.] in Muslim lands, with this difference that they were not so heavily taxed. According to Ibn Dujairî, his co-religionists did not conceal their satisfaction with Frankish rule.

Every principality had its own silver coin.
There were also gold ducats, "besants sarracenats", or "sarrassins" with Arabic inscriptions. Commerce, more or less dormant since the Arab conquest, again became active as a result of maritime relations with the west, which were never greater. The principal ports were Acre, Tyre and Tripoli. In the principalities of the north, the terminus for continental trade was La Ligue (Ladiukiya) or Soudia (Suwaydiya) now called Fort St. Simon. We have to go back to the time of the Phoenicians to find a period of so great economic activity.

The state of war hampers trade but did not put an end to intellectual activity among the Muslims of Syria. In Damascus, al-Kalâmis was busy with his history, and Ibn Asâkir finished his monumental encyclopedia, Ta'rikh Dimyâh, devoted to individuals who had a more or less remote connection with Syria. At the end of his troubled career, the Emir Usâma b. Munkîdî, produced an autobiography which is very valuable for the study of the relations which existed between Franks and Muslims. Barhebîns, Syrian and Mesopotamian, wrote Arabic and Syriac with equal elegance. It was in this last language that the Jacobite patriarch wrote a voluminous Chronicle. Muslims, Christians and Jews studied medicine with success. Never except in the Roman period had there been so much building. The fortresses built by the Crusaders are wonderful specimens of medieval military architecture. Among the churches which they built, we mention that of Djnabl, the monastic basilica at Tarsus, the graceful cathedral of John the Baptist, now the great mosque of Bairût, with its walls once covered with pictures. Many crusading lords had adopted Syrian customs (tabladdh, [Darjma]). In the collaboration of Franks and natives was hailed, as by Pope Honorius III, a "Nova Francia", the dawn of a new civilisation. The destruction of the Latin kingdom destroyed any hopes based on it. The coming of the slave dynasty (Mamlûk) opened a period of anarchy, such as Syria had not yet seen.

Mamlûk Syria. We have already given a résumé of the exploits of the early Mamlûk Sultan against the Frank principalities. Fearing a return of the Franks and the warships of the European navv, which ruled the Mediterranean, the Mamlûks began to lay waste the towns of the coast, not even excepting the most prosperous, Acre, Tyre and Tripoli; they demolished the citadels at Sâdî and Bairût. Tripoli was rebuilt two miles from the coast. From the administrative point of view, they retained the old Ayyûbid appanages and divided Syria into six main districts called mamlaka, or nîshâ : Damascus, Aleppo, Hama, Tripoli, Sa'daf and Kerak (Transjordania).

The past history of Damascus assured its ma'dîb, or viceroy, not only authority over his Syrian colleagues, but a special prestige of his own. This high official had little difficulty in persuading himself that he had the same rights to the throne as his ancestor in Egypt. To guard against the ambition of the Syrian ma'dïb's, Cairo took care to change them continually (Sa'dîb b. Yahya). Never did instability of government and greed of rulers, uncertain of their bow, attain such proportions. Lebanon continued to enjoy a kind of autonomy. The dissenting Muslims of the highlands — Druses and Mutawallas — took advantage of the troubles of the Mamlûks, occupied with the Franks and Mamlûks, to proclaim their independence. All the forces of Syria had to be mobilised, and a long and bitter war endured (1293—1305) which ended in the complete destruction of the rebels and the devastation of Central Lebanon.

The Mongol Khâns of Persia were burning to avenge the military defeats which the Mamlûks had inflicted upon them. The most energetic of these sovereigns, Ghâzîn (1296—1304), in 1299 secured the support of the Armenians and Georgians as well as of the Franks of Cyprus, and routed the Mamlûks near Hîmîs. The troops occupied Damascus, and advanced up to Ghâzza. The Egyptians having again invaded Syria, Ghâzîn reconquered the Euphrates to meet them, but he was defeated in 1303 at Mardj al-Saffar near Damascus. Syria had nothing to gain by the coming of the Burdît, who in 1382 replaced the Bahri dynasty. They "preserved" Ibn Ayûb tells us, "the old laws", that is to say the anarchical rule of their predecessors. Sultan Farâj (1392—1405) had to begin the reconquest of Syria no less than seven times. The year 1401 coincided with the invasion of Tûmûtî [q.v.]. After the capture of Aleppo which they sacked, his hordes appeared before Damascus. The town having agreed to surrender, the Tatars plundered it methodically. The majority of the able-bodied inhabitants were carried off into slavery, especially artists, architects, workers in steel and glass. They were almost all taken to Samarkand. Farâj was then set to the city, to the mosque of the Omayyads and other monuments. Tûmûtî led back his army and left Syria a prey to epidemics and bands of brigands. Meanwhile on the plateaus of Anatolia, the power of the Ottomans was gathering. The capture of Constantinople (1453) had increased their ambition. Death alone prevented Muhammad II from invading Syria. His successors did not cease preparations. Sâlih (1468—1496) and Baysid [q.v.] signed a treaty of peace, but it was only to be a truce.

The destruction of Baghdad by Hûlîgân and the fall of the 'Abûbût caliphate had shifted the centre of the Muslim world to the west of the Euphrates, Arabic literature found in the land of the Mamlûks the only asylum, at best precarious. No encouragement was to be expected from ignorant and brutal sovereigns, many of whom could not even sign their own names. The intellectuals lived in the past, their activity lacks originality. It was the golden age of epitomizers, compilers, authors of handbooks and encyclopaedias. They were interested in collecting knowledge and learning it by heart. Among the encyclopaedists a special place must be given to the worthy Shihâb al-Dîn b. Fu'âd al-A'îmî, author of the Mamlûk al-Ma'ârek, a voluminous compilation of a historical, geographical and literary character for the use of officials of the Mamlûk chancellery. We may next mention Abu l-Fadlî [q.v.], historian and geographer, the geographer Shams al-Dîn al-Dîn al-Dirîshî (d. 1327), markedly inferior to his predecessor al-Mîkurî [q.v.]. The versatile al-Dhababi [q.v.] was born in 1336. He studied in the Mezopotamia but lived and died in Damascus (1353). Ibn 'Arâbîhî (d. 1450) was the author of a history of Tûmûtî. Al-Sâfâdî [q.v.] compiled a great bibliographical dictionary (1296 — 1385), Shihâb b. Yahya (d. 1436), the author of the Tarikh Bartûbî, has left us in this work on the Emirs of the Ghur the best contribution to the history of the Lebanon and a valuable supplement to the annals of the Frankish states. Ibn Talûyî [q.v.]
and his pupil Ibn Kaiyim al-Djawziya are among the most original figures of this period. Their activities covered the whole field of Muslim studies. Indefatigable polemists with a keen scent for heresies, they had had the peculiar good fortune to be exalted both by the Wahhabis and the modernist Muslims of to-day.

The departure of the Crusaders marks the end of a period of astonishing economic prosperity. Syrian commerce fell back into stagnation. Little by little, however, necessity forced the resumption of relations with Europe. The decline of Acre, Tyre and Tripoli, ruined by the Mamluks and the fall (1347) of the Armenian kingdom of Cilicia, to which western merchants had first gone, were to the advantage of Beirut. For over a century this town became the principal port of Syria. Near Damascus and opposite Cyprus, — the kingdom of the Lusignans and rendezvous of the European shipping — Bârît was every year visited by ships of the Venetians, Genoese, Catalans, Provençals and Rhodians. These various communities had henceforth consuls as their representatives, officially recognised by the Mamluks and receiving a grant or şâmâbiya. On the other hand the Cairo government regarded them as “hostages” (rahiya) (Khâli al-Zâhirî); it held them responsible not only for those under their jurisdiction, but also for acts of hostility by Corsairs. The consuls protected pilgrims and intervened if required on behalf of native Christians. Thus we already have the system of capitulations which was to be developed in succeeding centuries.

Syria under the Ottomans. With the opening of the XVIth century the rule of the Mamluks had begun to break up. Their excitations had exasperated the populace. The Ottoman Sultan Selim I. [q.v.] resolved to take advantage of the occasion to invade Syria. Taking the initiative, the Mamluk Sultan, Kânsâm al-Ghûrî [q.v.] mobilised his forces, and marched via Damascus and Aleppo towards Antioch. The two armies met at Dâbîk, a day’s journey north of Aleppo. The Turkish artillery and the Janissary infantry scattered disorder through the Egyptian ranks. Ghûrî disappeared in the disaster of Dâbîk (Aug. 24, 1516). Aleppo, Damascus and the towns of Syria opened their gates to the conqueror who went on to Egypt and put an end to Mamluk rule. The Turks retained at first the territorial divisions or nîyâža. The Mamluk Ghasanî, nîbî of Damascus, had gone over to the Ottoman camp after Dâbîk. The renegade was in return given the administration of the country except the nîyâža of Aleppo, which was reserved for a Turkish Pasha.

On the death of Selim I (1520), Ghasanî had himself proclaimed Sultan under the name of Al-Malik al-Ashtaf. He was defeated and killed at Kâshân at the gates of Damascus (Jan. 1521). Before the end of the 16th century, Syria had become divided into three great pashâlisks: 1. Damascus, comprising ten sandjsaks or protectorates, the chief of which were Jerusalem, Ghaza, Naplus, Saids and Bârît; 2. Tripoli, including the sandjsaks of Hama, Hamâ, Salamiya and Djabal; 3. Aleppo, including all North Syria, except ‘Aintâb, which was included in the pashâlik of Marash. In the century following, the pashâlik of Saids was created to include Lebanon. In its main outlines, this administrative division lasted till the middle of the xviith

century, when the centre of government of Saids was moved to Acre.

The Diwan of Stamboul was only interested in Syria in so far as it enabled it to watch Egypt and Syria, and to levy upon its resources contributions to the expenses of the palace and for foreign wars. The taxes, which were put up to auction went to the highest bidder. According to a Venetian Consular report, the pashâlik was worth 50,000 to 100,000 ducats (probably the silver ducat, the Venetian guadice whence frîgî plus fr. 400, or piastre = 5 francs). The Pasha only administered directly the important towns and their immediate neighbourhood. The interior of the pashâlik was left to the old feudal tenants whose number and influence increased since the Mamluks: — Bedouin emirs, Turkomans, Mutawwâls, Druses, Naṣârîa. The Porte only asked them to pay the tribute or mabri, without worrying if it saw them fighting with its own representatives. Every year the Turkish Pasha at the head of his artillery and janissaries set out to collect the taxes. The force lived on the country and laid it waste if resisted. Is it remarkable that agriculture, the principal resource of Syria declined, the population diminished, the country districts emptied in favour of the Lebanon and mountainous districts where the harassed people sought an asylum?

The instability of their position increased the rapacity of the Turkish functionaries. Damascus saw 133 Pashas in 180 years. This period saw the rise of Ḥakîr al-Din [q.v.], the champion of Syrian independence (1583—1635), the Mutawwâls emirs, the lords of Farîsh, lords of Alâbek and al-Bagî, the Banî Mansûr b. Fâmûkî, Beduin Shâhîks, who carved out for themselves an appanage in Palestine and in the region of Naplos. These feudal lords were fairly well organised in spite of their cupidity, and they were able to defend their gains from the arbitrary Turk. By sending round the Cape the traffic of the middle East, the Portuguese occupation of India proved fatal to Syria. The harbour of Bârît remained empty. Tripoli at first, then — thanks to the initiative of Ḥakîr al-Din — Saids attracted European ships which came for cargoes of silk and cotton, Aleppo, thanks to its situation between Mesopotamia, the sea, and the Anatolian provinces whose market it was, the principal depot on the direct route to the Persian Gulf, remained for three centuries the chief commercial centre of Northern Syria.

In the second half of the xviiiith century, the doings of three individuals suddenly attracted attention to the town and region of Acre. These were Ėhrî (Syrian pronunciation of Zâhirî) al-Omar, Djâzzâr and Bonsaparte. Dâhîr, a Beduin Shâbîk, lord of the land of Saids, extended his authority over Galilee, and settled at Acre which he fortified and raised from its ruins. He resisted the Porte (1750—75) with assistance lent by the Egyptian Mamluks ‘Ali Bey and Abu Djaabab and a Russian squadron cruising in Syrian waters. Besieged in Acre by the Turks, he died there in 1775. His successor Djâzzâr [q.v.] held out for three months (March—May 1779) against the military genius of the youthful Bonsaparte. Pasha of Damascus and of Acre, he remained the arbiter of Syria for nearly 40 years (1775—1814), in spite of his exactions and his cruelty.

The four million inhabitants of Syria and Palestine at the time of the Arab conquest were reduced
to one and a half after three centuries of Turkish rule. The cultivation of cotton, which with that of silk, formed one of the main sources of Syria's wealth had completely declined, when Muhammad 'Ali [q.v.] of Egypt, decided to attract to Egypt the disheartened Syrian planters. It was this state of anarchy that enabled the Lebanese emir Bâghr [q.v.] to intervene in Syrian politics. Down to about 1840 we continually find him mixed up with the history of Syria. Even the great Turkish officials sought his intervention. Yûsuf, Pasha of Damascus (1807-18) obtained his help against a threatened invasion of the Wahhâbi. Bâghr presided in Damascus at the installation of Sulaimân, Pasha of Acre and successor-designate of Yûsuf Pasha. In the middle of the general confusion however Muhammad 'Ali of Egypt was watching for an opportunity of adding Syria to his government of Egypt. 'Abdallâh Pasha who succeeded Sulaimân at Acre (1818) undertook to give it him. He refused to allow the extradition of Egyptian sellûhin and the repayment of a million piastres. Summoned to contribute towards this sum by the Pasha of Acre, under whom the Lebanon was, the Christians of the Lebanon refused to pay. The rising of the Christians was a new feature in Syrian politics, but it was not to be the only one. Through contact with the Europeans the Christians were becoming enlightened and they were learning their own strength. Taking as a pretext the refusal of 'Abdallâh Pasha, Muhammad 'Ali sent his son Ibrahim Pasha [q.v.] into Syria at the head of an army trained on European lines. Acre surrendered on May 27, 1832, after a siege of seven months. On July 8 at Hims, Ibrahim routed the Turks. A little later he forced the pass of Ballûn and entered Anatolia. (A treaty (May 1833) assured Egypt temporary possession of Syria.

The new rule proved tolerant. It admitted Christians to the communal councils; it favoured the abolition of measures humiliating to non-Muslims. It endeavoured to reform the police and the tribunals. On the other hand it provoked discontent by introducing forced labour and conscription even in the semi-independent regions of the Lebanon. Rebellions broke out among the Druses of the Lebanon and of the Hâwrân, among the Nahrân, and in the never properly subjected province of Naplusk. Ibrahim exhausted himself in suppressing three risings. The Turks thought the moment had come for the re-conquest of Syria. They were completely defeated (June 27, 1839) at Nîzîr, north of Aleppo. European diplomacy then intervened at the instigation of England, which was disturbed by the ambition of Muhammad 'Ali. Until the expedition of Bonaparte, England had taken no interest in Egypt. Thenceforth she was continuously occupied with Egypt and the Red Sea. Her agents stirred up the whole of Lebanon. An allied fleet bombarded Bairût (Sept. 1839). On Nov. 2, Acre surrendered and Ibrahim Pasha had to agree to evacuate Syria. Shortly before, the Emir Bâghr had gone into exile.

From the reign of Mahmûd II. [q.v.] the Porte had inaugurated a policy of administrative centralisation and decreed the abolition of local autonomies and feudalities. After the departure of the Egyptians, it moved to Bairût, whose importance was steadily increasing, the administrative centres of the ancient paghaliya of Acre and Suidû, in order to prepare for the annexation of Lebanon. With the same object it declared the old line of princes of the Lebanon, the Shihâb Emirs, deposed. The only result was to perpetuate anarchy there. The Christians who had fought against the Egyptians claimed to be treated on terms of equality to the Druses. In the southern Lebanon several had acquired the confiscated lands of the Druse chieftains banished by Ibrahim Pasha. The latter, coming back from exile, demanded a return to the statuts quo and the restoration of their ancient privileges. In taking their side, Turkey paved the way for new conflicts and sanguinary fighting. The Syrian Muslims showed no less animosity to the Christians, whom Egyptian rule had partly enfranchised. They took no account of the intellectual and material progress made by the Christians, nor of the political equality promised by the khâfûf of the Sultan. The khâfûf-i hâmâyûn [q.v.] of Sultan 'Abd al-Majid [q.v.] communicated to the congress of Paris (1856), and tacitly placed under the guarantee of the Powers, scandalised Muslim opinion, but inspired confidence among the Christians. At Damascus and in the large towns they took advantage of the occasion to enrich themselves. A secret agitation began to stir up the Druses and Muslims, and waited for the events of 1860 to burst forth.

The Druses of the Lebanon combining with their co-religionists of the Wâdî Tâ'îm and of the Hâwrân, scattered fire and death through the villages of the Maronites, who were at sixes and sevens, as the result of an agrarian dispute. The anti-Christian movement reached Damascus, which the Muslims pillaged and then set fire to the prosperous Christian quarter, after massacring its inhabitants. In this city, in the Lebanon, and in Bairût, the Turkish authorities intervened only to disarm the Christians, and watched the butchery inactively, powerless or abetting it. Under a mandate from Europe, France disembarked at Bairût (Sept. 1860) a body of troops to help the Sultan to restore peace;" Taking the initiative, the Porte had sent Fu'âd Pasha [q.v.] with discretionary powers to Syria. He began to inflict summary judgment. Sentences of exile pronounced against the Turkish leaders and the most compromised Druses, faced Europe with the following facts: French intervention, though paralysed by the cunning of the Turks and the distrust of England, nevertheless restored confidence to the Christians, and preserved their native land for the people of Lebanon. The latter, given an autonomous organisation under the direct supervision of Europe (cfr. LEBANON), thus gained half a century of peace and prosperity.

After 1864 Syria was divided into two wilayets: Aleppo and Damascus. In 1888 Bairût, the chief port, the centre of the commercial life of Syria, was made a separate wilayet. Falling into stagnation after the shocks of 1856, the country saw with indifference the fall of Sultân 'Abd al-Azîz and Murât, the coming of 'Abd al-Hamîd [q.v.] and the granting of a constitution in 1876 (then withdrawn). Between 1881 and 1883 we have the foundation of the first Jewish agricultural colonies in Palestine, which paved the way for Zionism. The latter received official recognition by the Balfour Declaration (Nov. 1917). It has since then been incorporated in the text of the British mandate over Palestine (1922).

Under 'Abd al-Hamîd also, emigration began to assume disquieting proportions. Having no room for development at home, exploited by a greedy
and untrustworthy power, the Syrians began to emigrate. Among the just complaints of the Syrians, was the indifference of the Turkish government to public works. France, with its capital, came to the relief of Syria, now left to herself, and having suffered a further economic blow by the opening of the Suez Canal. With the exception of the Syrian section of the Baghdād railway and the Damascu-Medina railway—the work of 'Abd al-Ḥamīd, the Syrian railway system is in the main a French creation. These enterprises have considerably increased the wealth and productivity of Syria, by linking it up with an extensive series of connections, the Taurus, Anatolia and Constantiopole on the north, and Arabia and Egypt on the south.

The Turks took even less interest than the Mamluks in furthering intellectual progress. 'Abd al-Ḥamīd showed himself frankly hostile to Arabic literature, and instituted a system of turkicising. In spite of all obstacles the Christians of Aleppo in the xvith century succeeded in resuming contact with Arabic studies, which had been practically closed to them for centuries. We owe to them the establishment of the first printing press in the Lebanon (1610) and in Aleppo. It is to their beginnings that we owe the literary revival of the xith century when Syria became the centre of Arabic studies. Under the stimulus of foreign missions, French, Americans, etc., Syria became covered with schools and printing-presses which published newspapers, reviews and standard editions. Bairūt took the lead in the intellectual life of Syria, less by its own energy than under the stimulus of Europe. Still more efficaciously than the American mission, the Society of Jesus, with its very well organised printing-press, contributed to the renaissance of Arabic letters and no less to the diffusion of European culture. Bairūt and Syria in general thus produced a large number of young literary men. Their native land soon becoming too small for them (Brockelmann, G. A. L., ii. 492), some migrated to Egypt. Among them we may note the two Yāqūṭī, Nashīf [q.v.] and his son Behārh (d. 1906) and Butras al-Bustānī [d. 1883] [q.v.]. Turkey took no part in the movement for the education of Syria. Here it was again foreigners, particularly French and Americans, who made up for official indifference. They developed education in all three grades. In 1878 the Jesuits founded the University of St. Joseph at Bairūt. The older Syrian Protestant College of the Americans in Bairūt has recently been made a university (1923).

Syria of today. A revolution prepared secretly by the young Turkish party overthrew 'Abd al-Ḥamīd and set up in his place his brother Reṣāḥ (April 1907). The Constitution of 1876 was re-established, and the Parliament which had been closed by the Sultan was reopened. Syria hailed with enthusiasm the revolution as the dawn of a new era. This illusion was of short duration. The young Turks, whom the Syrians had trusted, were not long in resuming once more the process of turkicising begun by 'Abd al-Ḥamīd. With more method and continuity they declared war against all who were Arab by race or language. They insisted everywhere in Parliament and in the government offices on the employment of Turks only, and removed the Syrians from high offices and important military commands. This provocative policy brought together for the first time Muslims and Christians in Syria. It awakened amongst all the desire to come to an understanding in regard to a common policy and to take joint action. Their demands were limited to reforms of a decentralizing nature. They asked that in the allotment of public offices, regard should be had to the progress which had been made by Syria, the most civilised province of the Empire, and that in the imposition and spending of taxes regard should be paid to the needs of their country. They thought the time had come to grant it a certain administrative autonomy. It was the obstinacy of the young Turks in rejecting these moderate demands which opened the door to separatist ideas, and finally convinced the Syrian nationalists that there was nothing for it but to rely upon their own efforts and upon the sympathies of Europe.

On the 29th of October 1914, Turkey entered the Great War. It began by suppressing the administrative autonomy of Lebanon, and imposing on it a Turkish governor. 'Ummāl-Ṭāha took into his own hands the government of all Syria with discretionary powers. He at once proceeded to hang the principal patriots whether Syrian, Muslim or Christian. Hundreds of others were sent into exile. Soon afterwards famine and disease decimated the population, principally of the Lebanon. Energetic but presumptuous, dreaming of the conquest of Egypt, 'Ummāl proceeded very unsuccessfully to attack the Canal of Suez (Feb. 1915). After the repulse of the second attack (August 1916), the English, commanded by Allenby, advanced as far as Jīlābah. By November 1917, they had come to the gates of Damascus and the provinces of Latakia and Hama. On the 11th of December, they entered Jerusalem, which the Turks had evacuated. The latter defended themselves for a further nine months on a line extending to the north of Jaffa as far as the Jordan. The decisive action took place on the 11th of September, 1918, on the plain of Samor near Tulkarm. The forces of Allenby broke the Turkish front. It was a rout. At the end of the month the English, without meeting with any resistance, arrived in the neighbourhood of Damascus. The advance was delayed for a few days, in order to allow the Emir Faisal, the son of the Grand Sheik of Mecca, time to hasten from the remote end of Transjordania and to make on the 19th of October his entry into Damascus at the head of a body of Beduins. On the 31st of October, the Turks signed an armistice. A week later, the last of their soldiers had crossed the Taurus.

The English occupied the country with a military force. The French continued, which had brilliantly contributed to the victories in Palestine, established itself on the Syrian side. During the course of the war the allies, in order to secure the help of Husain b. 'Alī, Grand Sheik of Mecca, had promised to support the establishment of a federation of Arab states "with reservation of the rights acquired by France". The Emir Faisal took advantage of these equivocal formulae to claim the whole of Syria, and organised a form of government at Damascus. This town became a hot-bed of intrigues, from which hordes of bandits and assassins went out to perpetuate the insecurity in Syria. On March 7th, 1920, an alleged "Syrian Congress" at Damascus proclaimed "Faisal I, King of Syria". General Gouraud, appointed High Commissioner of the Republic of Syria, called upon
Faisal to produce his credentials. When the ultimatum received no response, the French, after a few air raids, fighting, scattered at Khūṣ Maisalūn in the Amelouchan, the bands who opposed their advance (24th of July 1920). On the following day they entered Damascus; Faisal had taken to flight. On August 10th following, the Treaty of Sèvres separated Syria from Turkey, in order to form provisionally an independent state, on condition that the councils of a mandatory should guide its administration until such time as it should be capable of independent government. Previous to this, the Congress of San Remo decided that the mandate should be conferred to the French government. On the 1st of September 1920 at Balût, Gouraud solemnly proclaimed the constitution of "Grand Liban" (v. LEBANON). Thereafter the "Federation of Syrian States" comprising the three independent states of Damascus, of Aleppo and of the "territory of the Alawis" (the name officially adopted for the Nusairis) was formed. The administrative centre of this last state is Lādhikīya. A fourth state was formed for the Druses of the Hawrān. Like the people of Lebanon they had been allowed to remain outside the Syrian Federation. The latter had as its chief a Syrian president. Native officials, with the help of French advisers, assumed the government of these states. Representative councils were entrusted with the discussion of affairs of general interest and settling the budget.

Syria, placed under French mandate, adjoins Turkish Anatolia. The Northern frontier is defined by a line running from Alexandretta, crossing the Euphrates to the south of Djarbash, and ending at Dzjarat b. Omar on the Tigris. On the west Syria is bounded by the kingdom of Irāq, on the south by Transjordania and English Palestine. This part of the frontier runs on irregularly from Rās al-Nakhrān between Tyre and Acre. On the east it goes round the Lake of Tiberias, traverses the valley of Yarmūk, leaves the town of Darā (Ahrān) on the north and after crossing the desert reaches the district of Dzjarat b. Omar by way of Abū Kamal on the Euphrates.

The following are the approximate results in round figures of the census of 1921—1922, the first taken in Syria since the Arab conquest. The nomads in the district of Aleppo and of Damascus are not included in it. The state of Aleppo, comprising the independent sandjak of Alexandretta had 604,000 inhabitants. This number was made up as follows: 502,000 Sunnīs, 30,000 "Alawis, 52,000 Christians of diverse denominations, 7,000 Jews, 3,000 foreigners. The state of Damascus contained 595,000 inhabitants of which 447,000 were Sunnīs, 8,000 Isma'ilīs, 5,000 "Alawis, 4,000 Druses, 9,000 Mutawallīs, 67,000 Christians of different denominations, 6,000 Jews, 49,000 foreigners. In the state of the "Alawis, there were 60,000 Sunnīs, 153,000 "Alawis, 3,000 Isma'ilīs and 42,000 Christians of different denominations, in all 261,000 inhabitants. The state of Hawrān was remarkable for the homogeneity of its population. There were 43,000 Druses against 700 Sunnīs, and about 7,000 Greek, Catholic, or orthodox Christians. For the population of Grand-Liban, see the article LIBAN.

Bibliography: This is given in detail in H. Lammens, Le Syrie, précis historique, 2 vol., Balārut 1921.

**SHAMAN (pl. SHAMANs), an idolater.** The word belongs to the poetical language, and is at present obsolete. In Asadu's *Laghaf al-Farq* (ed. Horn, p. 104), it is explained: *'shamana*, while quoting the following verse of RUDAKI:

*shamana gurisa in kuma, no dafa kim but ast a in mā shamana in*

("We have all adopted idolatry; this world is like the idol, and we are idolaters", or, "because this world is the idol, etc.").

The same explanation is given in the *Farhang-i Shahrwī* (*cc.* fol. 132 verso) whereas the verse just mentioned (here reproduced in a somewhat altered, seemingly corrupt form), quotations are given from Sameh, Shams-al-Fahri, and Amir Musa'z by Shams-al-Fahri (*Lexicon Persicum, ed. Seemann*, p. 105); by Abd al-Kadir of Baghdad (*Lexicon Shāhānshāhī*, ed. Seemann, p. 133). The last named author cites Shāhānshāhī, 1074; 155 (Vullers), with which verse may be compared Minūbīhī, *Divān* (ed. Kazimīrski), ii. 2 sq.; and Kazimīrski's note, p. 320, where two passages from Shāhī's poetry are cited, one of which is also given in Shabhī.

In all these passages, shaman signifies nothing but 'idolater', and a term, expressing the idea *shahrwī* (common, but *wrong*) always occurs in the verse also. Shāhrwī, *e. c.*, besides the signification 'idolater', given that of 'idol' (*but* too). It is, however, not probable, that these two ideas would be expressed by the word; moreover, an instance for this signification 'idol' seems to be wanting. This second explanation, then, may be due to a mistake.

Respecting the etymology of the word, the derivation from Sanskrit *gāmasta* a Buddhistic term, seems to be very probable. Words, denoting a religious person of some foreign sect, after passing into Persian, more than once acquired a less definite sense, for instance the word *mīrān* which, while originally denoting the "auditor" of the Manichees, in Persian poetry signifies simply: "an infidel". As to the medium, through which the term *shaman* has been derived, we must look to the East-Iranian countries, where Buddhism once flourished. In Sakian as well as in Sogdian we find resp. the forms *samun* (*a*) and *ghum* (to be pronounced *gham*?), reflecting the Indian *gāmasta*. Most likely, then, the word entered the Persian from the Sogdian. The question, whether the East-Iranian word come directly from the Sanskrit or from some popular dialect, is of minor importance. The Pali form *saṁmāṇa* does not come into consideration, as the East-Iranian Buddhism belonged to the Northern form of that religion; besides, the initial *s* of the Pali word would scarcely have been retained by Sogdian or Sakian. A derivation direct from the Sogdian seems probable for the Sogdian word (comp. R. Gauthier, *Essai de grammaire sogdienne*, 1914—1923, 1, § 177), and for the Sakian one also, for in all Frārista, except Magadhi and one minor dialect, *s* becomes *t*. Moreover, a word like *gāmasta* would rather be taken from the scriptural language of the religion, in this case Sanskrit.

A second question refers to the relation between the Persian word and the modern European term Eng. *shaman*, German *Schaman*, Russian *Shaman*, etc., which designates the sorcerer-priest of the North-American and some North-American peoples. First, we must state, that the Persian *shaman* has no connection with any priestly function, but simply signifies an idolater. Kazimirski, who, in his edition of Minūbīhī's poems, translated the word by "bonze" seems to be led to this interpretation by his supposition that the Persian *shaman* and the Siberian *shamow* were originally the same, cf. his note p. 120. Now, the European word occurs, so far I can see, for the first time in Brand's relation of Eberhard Island's embassy to China, by order of the Russian government, in the years 1693—1695. The passage runs in the original (A. Brand, *Beschreibung der Chinesischen Reise, welche . . . in 1693, 94 und 95 . . . verrichtet worden*, Hamburg 1698, p. 80): "zum fünf oder sechs Tungusen bey einander wohnen . . . halten sie einen Shamah, welche auf ihre Art einen Pfaffen oder Zauberr' bedeutet". The European term, therefore, originally designates the sorcerer of the Tunguses. And, indeed, only the Tungusian dialects (as well those of Siberia as of Mandja) call the sorcerer *samar* (cf. M. A. Castries, *Grundzüge einer Tungusischen Sprachlehre*, St. Petersburg 1856, p. 9; P. R. Schott, *Voyage dans les pays du Nord*, St. Petersburg 1912, p. 3). It is not quite certain, if this word *samar* is originally Tungus; W. Schott (*Abh. Pr. Ak. W.,* 1842, p. 462) is inclined, though hesitatingly, to derive it from a Tungus root; a different etymology, but also from the same language, is proposed by C. de Harles (*La religion nationale des Tartares Orientaux*,
SHAMĀN — SHAMĪNĀN

Brussels 1887, p. 28 sq.) On the other hand, however, it is difficult to assume an Indian (or Iranian) origin for the Tungus word, as the other North-Asiatic idioms designate the sorcerer in a different manner. If Buddhist influence had been at work here, the term might have spread over a wider area. The derivation of the Tungus word from a Chinese one, which itself might be taken from the Indian (though representing rather Close then 3' ranks) seems also to be excluded (cf. Schott, p. 403). The form Shimān in the German work of 1898 presents an irregular aw in stead of ə; we may, however, be sure, that the traveller acquired the word through a Russian medium, and therefore the difficulty lies in the Russian shamān, having aw instead of the Tung. ə. de Harlez (op. cit., p. 28, n. 1), thinks that this fact may be due to Chinese influence.

"The European shaman" therefore, seems to be independent of the Persian shaman, which latter has nothing to do with any definite branch of religion.

(V. F. Büchner)

SHAMĪNĀN), known also under the Kurdish name of Nxiw Cia (between mountains), kāb of the sandžak of Hakkârî, in the vilayêt of Wân, is one of the least explored regions of Central Kurdistan. Its boundaries are: on the north, the kāb of Giuwar; on the south, Baradost and Barzan (mahall of Rawwândî); on the west, Orumîn (nâhiya of the sandžak of Giuwar); on the east, the Persian districts, dependencies of Urmîa: Deyrî, Merguiwar and Uğûn. Situated between 37° and 38° N. and 44° and 45° E. (Greenwich), Shimānān is divided into three nāhiyâ: (a) Zêrân with Nehrî, the administrative centre and seat of a ʧə'ummaštûm; (b) Hamûrî, with the seat of a mudir at Benbûd or Surûnî; (c) Giurdî Herkî (Herkî), mudir at Bitkîr. Giurdî is divided into three parts: (a) Giurdîye Barotâ (against the sun); (b) Giurdîye Nûwarî (middle); (c) Giurdîye Iñ Cia (under the mountain).

The greater part of the population is Kurd with a small Christian (Nestorian) minority. In 1914 there were about 13,000 Kurds and 2,000 Christians. The Kurd tribes of Shimānān are the Herkî, Giurdî and Shimānān. This last tribe is divided into Zêrân and Hamûrî. Every tribe recognizes the authority of its chief and all obey the power of the powerful family of Shîlz of Nehrî (Sadde Nehrî) [see below]. There are in all 126 villages in Shimānān. In view of the importance of Kurdistan, loponymy, it may be useful to give here the names of the principal groups: viz. Nâhiya Hamûrî: Nehrî, Benbûd, Surûnî, Bar, Dezmân Surât, Malânîn Hamûrî, Giurdî, Awlân; Nâhiya Zêrân: Gîrî, Masîrîn, Hofîn, Nowzâlûr (Bendûrîn), Hâmîn, Serûrîn, Ribûnî; Nâhiya Giurdî: Gîrî, Barotâ, Isâtan, Isâtan, Barûbî, G. Nûwarî: Bitkîr, Orê, Maûtân; G. Cia: Stûnî, Sheptanî Coreumînî, Benûnîn, Zewî Rezî, Beûrzûnî, Kevûrî, Keûrûnî; Nâhiya Herkî: Bitkîr, Nefîl Herki (which includes three villages under the common name of Şîha Herki: Gûnû, Zheri, Kerespâni, Zilâni), Bedêwî, Stûnî, Dîrî, Beûrzût, Sate.

A few observations are suggested by the above names. On the subject of the name of Nehrî a suggestion has been made (Minorsky, Zap. Vost. 7, 1917, p. 157) connecting it with that of Naïrî. This name, according to him, may have been brought here at a later date by the Christians. Delattre (Enquête de géographie assyrienne, in La Revue des Questions Scientifiques, July, 1883) expounds at length the controversy on the subject of the site of Naïrî, "which matters is of capital importance in the study of Assyrian geography."

He is against the application of the names of Upper Sea of Naïrî and Lower Sea of Naïrî to the Lakes of Wân and of Urmiya respectively. Note, however, his remark that the name in question is rendered Naïrî, Naïhîr or Naïhîrî, according to the different ways of writing it. He also says: "presumably that must above all be noted is that Samurîmân locates the country of Naïrî to the east of the Great Zab, on the frontiers of Media. On the other hand, according to Thureau-Dangin (Une relation de la 2ème campagne de Sargos, Paris, 1912), there is every sign that Naïrî or Hubûlgîk is the valley of the Bohût-Sa. It is that part of the ancient region of Naïrî which remained independent of the kings of Urartu (op. cit., p. x-, xii.). According to the same authority, "the Guâwar probably forms the centre of the country of Mu'asîr. This localisation is confirmed by the itinerary of the thirty-first campaign of Samanâsir. . . . Up to this time the site of the country of Mu'asîr was placed further south, in the district of the villages of Kälich's and of Tûpwarwa. . . ." If this is so, Shimânîn must have formerly formed part of the country of Mu'asîr. Mention should also be made of the opinion of Th. Reinaud (Un gênele rendu to: Les Mattiènes, in Revue des Études Grecques, vol. 1, 1894): "the territory of the Mattiènes of Herodotus corresponded in the main to the greater part of the present Turkish vilayets of Hakkârî and of Mouyl. . . . it is, in a word, the Turkish Kurdistan of to-day." Besides Nehrî, other names seem to suggest certain links with this ancient epoch. We refer particularly to Bitkîr (cf. Bit - Ka - ri, page 222, M. Streek, Glossen an O. A. Tofthen's Geographical List to R. F. Harper's Assyrian and Babylonian Letters, vol. I-VIII in Amer. J. of Sem. Lang. and Liter., vol. xxii., No. 3, 1900) and some names in -î (Surûnî, Ribûnî) or -ûy (village of nāhiya Hamûrî; the mountain Baski Gâmar, between Helîn and Kätûnî Vâkhtûr). Dr. W. Beleck (Beitrag zur alten Geographie und Geschichte Perserreiches, Leipzig 1901, i. 46-47) points to the importance of such names, saying: "I have discovered a whole series of ancient Chaldaean names among those ending in -î or -îš." It is well to point out, however, in regard to the name Sheptanî, that it might perhaps be connected with Sciba as mentioned by Assenmânh (Salamâs . . . sub Abîmen Patriarcha Anno 853: subjuncta ecclesiâs hexabat . . . Scibaémom . . .). May there be some connection between Gulínâ (Assenmânh, Bibl. Or., iii, l. 3.) and Gulâm, mentioned above?

As regards Kurdish oigraphy of Shimânān the following names are worthy of mention: Shehtân (Kur Shehtân), on the frontier of Debat; Serî Giwêkân, above Nehrî; Kûr Mizgewîn, above Aûlîwîn (Kur means a separate summit); Øyê Keleshîne, above Geleshîm; Øyê Helîn, Øyê Helîn; Serî Salârân at Salârân; Øyê Rûyân (or Rûyîn), at Bemûwî; Øyê Celî, nāhiya Herki; Tastê, at Bedêwî; Gerûr, at Arê, Øyê Hûsûl, between the nāhiya of Giurdî and Herki; Mengûre, nāhiya Giurdî Barotâ; Serî Sûlû,
nearly Reṣāṭ and Begār; Dola Mēhendī, Gēwērtik, Gihēntik and Čāyē Ș ipt Rezi — on the frontier of Guaiwar.

The principal passes, leading into Merguiwar are: (1) the pass of Kāleşhēm, very difficult, which must not be confused with the pass of the same name to the south of Uṣbūn, famous on account of the celebrated stele which was found there; (2) the much easier pass, rendered passable even by vehicular traffic during the war, which is known by three names: Ziniya Sori, Ziniya Pirgounle, Bēd Ḥāštir. Mention must be made also of the pass of Gūrīv Taldīnt between Kāštīn Yūkharī (nāhīya Zeran) and Djerma (Dēšt). Finally, the road from Nehri to Mosul (telegraph line) passes by Begārī (ancient bridge) Ruwān (pass Ziniya Bēti) and Shehīntik. The principal water-course is given by the Turks the name Shamudnān Su, but amongst the Kurds it is known by the name Rubārī Begārī, in its higher regions, and Rubārī Shīn in its lower regions. It is a tributary of the Great Žab into which it flows at the spot called Tengul Bīlna, in the neighbourhood of the village of Sūniya, in the district of Aḵkālīyā. Its source is near the pass of Ziniya Sōrik. Its principal tributaries are on the right: Hūndir (upper course called Dūra); Nāgulān, Herki, Rubārī Shīn (or Ōrārūn Su); Awi Mariḳ; on the left: Sher-weenān (Hūndel), Māwān, Beghīntik.

Holy places. Amongst the places which are venerated by the Kurds mention must be made of the numerous places of sepulture. There is the cemetery of Čel Shehīntik on the mountain of the same name, where it is popularly believed that the remains of the companions of the Prophet are buried. At Madīna Humārāt there is the tomb of Mollā Ḥāštir, the founder of the family of the Shehīks of Nehri. At Nehri itself, there are the tombs of the saiyd ʻAbdallah, the disciple of Mawānī Kḥābd, the propagator of the Naṣīḥībānīya doctrine of the saiyd Ṭa and of the sheikh Sīlīb. These three tombs are found in a family vault called Marbārd Shīna tīta in the northern part of the village. Other tombs venerated are those of Pir Ṭabāhān at Ṭabāhān; Pir Ābū Bhrāt at Gāwīkān; Pir Weṣān at Bāsīyān. The gift of telepathy is attributed to the latter two saints. Harānır, a widow, married one another’s sisters, they were able to communicate with one another at a great distance. The tomb of Sheikh Farāḥ or Farākh at Nehiwa possesses a special virtue in gaining the acceptance of prayers that are offered there. There is also an ancient tomb which is not attributed to any one person, but bears the name of ēm kāk (green lance). He who is buried here, the Kurds say, is continuing in the other world with this lance the fight against the infidel. In the village of Bēltīntik there is a tomb called marbānd Sheik Ḫābd. This sheikh, at the invitation of the angels who appeared to him, is said to have been transported from Guaiwar, where he lived, to Bēltīntik, on a praying carpet, in order to build a mosque there. There is still shown on a stone of the gate of this mosque the imprint of the sheikh’s foot. In order to correct the work of the masons he pushed with his foot and set in line the layer of stones, although other voices had already been placed above it. Under a cupola, at the side of his master, is interred the sheikh’s favourite cat. He always sent him with his little caravan to superintend the muleteers.

Besides the tombs there are other ziyārāt gàd, in the veneration of which we see signs of the ancient cult of the spirits of the mountains. Thus, on the mountain of Serī Sātes, the place called Marnōn is venerated without distinction by Muslims and Christians. This sanctuary is always guarded by a Christian of the village of Sātes, who is exempt from taxes and treated with esteem by the Kurds. We must remember in this connection, with B. Dickson, that on this mountain there are "the remains of Urartian construction." On the other hand, the summits of Kūrī Mīrgēwān at Ašwīya and of Čāyō Rēsh at Hewsāk (a place called Mālī Shīrām) are also considered holy places.

The ruins which have associations of a more or less historical nature, ought next to be mentioned. Near the road between Benkwrī and Nehri, on the hill of Kērī Tāwān, is the Kēl of ʻArūrd Ahmed. Its site is very spacious and the remains of a fountain, to which the water was fed from Dērā Rēsh are found. Gūrīl Ahmed is said to have risen in revolt against the Persians, the masters of Shamīnān at this period, to have been besieged in this fortress and to have perished with all the garrison after having thrown the women from the walls; feminine ornaments have frequently been discovered at the foot of the hill.

It is difficult to pronounce with certainty regarding the exact period of Persian domination in these districts. Did Shamīnān share the destiny of the district of Mosul or on the other hand did it go rather with the district of Hakkārti in regard to this question, no direct evidence is given in history, but it is just this vague frontier zone whose possession was in dispute between Turkey and Persia. Under the Safawī Shamīnān belonged to Persia. It passed to the Turks after the victory of Šāltān Selīm, but returned to Persia under Nādir, etc. All these frontier districts, Shamīnān as well as Merguiwar, Ferguiwar, Barādd-Šomāt, Uṣbūn and Laḥiḏān, were known at first among the Turks by the name of ʼAllamatun ʼāh, then by that of Nawāshīya Shārtīya. The final delimitation, with Anglo-Russian assistance, took place exactly on the eve of the outbreak of the war. It must be added that in all this district on this side of the Grand Žāh, Persia is the language employed by the Kurds.

At Shehī Kēlkī on an isolated rock, the ruin called Khlīk-Kelāti should be noted (khlīk = little mountain in the Herki dialect). This fortress attributed to a certain Mīr Dīwān and it is believed that it was razed to the ground at the Arab conquest. We read in the Sharīf Nāṣīr (q. 177), "A great river passes under the bridge of stone in front of the Chaqmat of the Emir Dīwān." The reference here is to a castle in the neighbourhood of Guaiwar, while the one which concerns us, is in the middle of Shamīnān. Moreover, the name Dīwān is very frequently applied to the remains of the past in this part of Asia. (Cf. for example the groto Dukkāt Dīwān near Sārt Pūl [q. v.; cf. G. Hüssing, Der Zugang and seine Volker in Der Alte Orient, iii, 4, Leipzig 1908].)

In the district round the village of Begūtta on the peak of Begūtta (Kēl Begūtta) are the ruins called Kelāta Timīr Leng, very difficult to access. It is known that the Mongol warriors overran Central Kūhīstān in many directions (Cf. Hammer,
Genealogy. The Kürd tradition traces the origin of the name of Shāmīnān to that of Shaikh Shams al-Dīn, the founder of the very noble and ancient local line of Bekāde 'Abbāsī. It is said to have belonged to an Arab tribe (the Kurds usually show a marked preference for Arab pedigrees) between Mosul and Baghādād. Defeated by Shamsar [q.v.], he is said to have taken shelter in the mountains of Shāmīnān, where his first residence was at Sumāt, in the nāhiya of Herkī. His son, 'Īzāl-Dīn, extended his power over the districts of Mergiwan, Tergiwan, Garīṣ, Harūdust, Dushkūn, Omarūn and Rekūn. Six or seven generations of this family resided at Sumāt and at last abandoned for Birkār in the time of Mīr Za‘īn al-Dīn whose name a mosque at Nehrī bears. After three or four generations the capital, in the reign of Mīr Za‘īn al-Dīn, was transferred from Birkār to Harūnān in the nāhiya of Humartū. The remains of the fortress which he erected at that spot are visible to the present time. One of his sons, Imād al-Dīn, left his father after a quarrel and migrated to the district of Urmīya, where the beligerent Afschār gave him Berde Sūr and Tergiwan as a fief. From him sprang the family of the Bekāde of Deği. The second son, who succeeded his father, was the first to take the name of Mīr of Shamsīnān. For two or three generations the Mūs remained at Harūnān and thereafter they established themselves at Nehrī, where they exercised their power until the time of the Shāh 'Ubāīd Allāh (1870–1883), who imposed his rule not only on Shamsīnān, but on many other Kürd districts, even in Persia.

The Kürd oral tradition, which has only recently been written down, offers only rather uncertain chronological data. Only one reference to Berde Sūr is said to be known. It is given in Minorsky. (Materiāl pe islamini Vostoka, publ. sull. de Minist. des Aff. Étr., St. Petersburg 1915, p. 473), who in speaking of the Bekāde of Deği points out that at first this region was governed by a branch of the Mūsānawī. The line of the latter having for a long time been extinct at Tergiwan, their place was taken by the Bekāde of Deği, who trace their origin to the three 'Abbāsid brothers of Bohtan: Rashīd Beg, who died at Tādžikān, Mūs, Beg, who died at Shamsīnān, and Kalamār Beg at Berde Sūr. The fortress which was erected there in 970 (1562) is still visible. These indications allow us perhaps to assign to the reign of the Shāh 'Abbās the period at which the separation into two lines of the 'Abbāsi Begāsīde took place, for it was not till then that the Afschārs who accepted 'Imād al-Dīn, established themselves firmly at Urmīya and began to exercise authority over the neighbouring Kürds.

On the other hand, v. Hammer (op. cit., l. 55) speaks of the presence at the Kurūnī of Gurguk (August 1745) of "the two rulers of Kürdistan, Shemshedīn and Schikhsbedīn", while according to one story (Shāfīr Nāmeh, ii, 47), "the Hasker princes, who are descended from Shemshedīn, are called Chemushi" (a regular Kürd, etymologically cf. 'Īz al-Dīn = Chos). A confirmation of this is given by G. B. Margarelli. (Dizionario Geografico storico dell'Impero Ottomano, Milan, 1829), who is relying probably on the authority of Père Garson, "the father of Kurdology". (He refers to his name in the second volume under the name Kurgestan, "secondo Garsoni", etc.). Margarelli says

THE ENCYCLOPAEDIA OF ISLAM, IV.
on the subject of the Djuilmerk (ii. 3). Its inhabitants call themselves Sciambo, according to others they have the name of Hakkiari, which is a corruption of the principal family reigning in that place. Djuilmerk on the Grand Zab is not far from Shamdinam. These condescences—Shams al-Din, Shamdinam, Sheno, Sciambo, Hakkiari—seem to establish a certain connection between Shams al-Din and the powerful tribe of Hakkiari, which is well-known in Kurd annals. It should be recalled that, if on the one hand a Kurd (Hakkiari) prince Shams al-Din, was present at the Kuratal of Guguk along with other Mongol vassals; on the other hand at a later date in 1326, under Arghun (cf. Hummer, op. cit., i. 314), a revolt of Hakkiari took place, "after which 16,000 horsemen, commanded by the At wa Masku Kuschabschi and the Djalair Nurinaga, were sent against the Hakari Kurds and their rising put down".

This rather scanty documentary evidence does not permit any definite conclusion to be made, and we are content to note the references.

The Power of the 'Abbasid Begsede, which we have seen to have been very great, had to bow before the family of Nehri Dadate. The genealogy of this family traces its origin to the person of the Shahk 'Abd al-Kadir Giliin (or Djilin; cf. R. A. Nicholson, Studies in Islamic Mysticism, Cambridge, 1921, p. 81, No. 11; contrary to the belief of Nicholson, we are here concerned with the locality called Giliin in southern Kurdistan and not with the province (to the south of the Caspian). One of the sons of this promotor of the Khdritiyya doctrine, Shahk 'Abd al-Aziz, is said to have established himself at Akrir (to the north of Mosul), where his tomb is still venerated. His son, Shahk 'Abd Bakr, proceeded to establish himself in the district of Herkti at the village of Sutin, which had been the capital of Shams al-Din. Of the descendants of the Shahk 'Abd Bakr, Shahk Haidar and three or four generations resided at Sutin, then afterwards in the time of Molla Hddji they moved, some to Melaun, some to Demane Sulta in the Humari, until the time of Molla Sahih. Of the two sons of this latter, Saiyid 'Abd Allah and Saiyid Ahmad, the first was the disciple and successor of Mawlawi Khaidi. After having studied myasbaniyya doctrine under him, he chose Nehri as his domicile which became from that time the residence of this family. At first it was content with purely spiritual influence, but in time it seized upon temporal authority also, which reached its apogee under Shahk 'Ubaid Allah. The ambitions of this great Kurd chief, who invaded the 'Aghehbadjan about the year 1383 and who was overthrown only by the joint efforts of Persia and of Turkey, are well-known (cf. S. E. Wilson, Persian Life and Customs, 1895. See also in the English Blue-Book, Correspondence respecting the Kurdish Invasion of Persia, Turkey, 1881, No. 5). Saiyid Tii and Shahk 'Abd Allah II, grandsons of the Shahk 'Ubaid Allah, are the present representatives of this family.

Besides these two principal families which disputed for primacy in the Shamdinam, we may mention amongst the lords of less importance the 'Aghehbadjan Zerain. This tribe is divided into two branches, one at Ushin in Persia and the other in the district called by its name in Shamdinam. Both of them trace their common origin to Khatid Ibn al-Walid (v.b. another Arab descent). In regard to Guird, the family of the Mira divided in time into two branches, Zeyd Begsede and Sin Cia Begsede. For about a century, power belonged to the former. At Guird as at Zerain besides the Mira, there were paghmiit. The Taiti paghmiit family of Zerain is extinct; that of Guird, known as Kte Begsan, has pretensions to a more ancient nobility than that of the Mira. In the Guird Bador, the Mir Lgekzeri family is well known. Lastly amongst the Herki, the most ancient family is that of Mala Shabe Aga at Shawa Herki. It no longer possessed influence nor wealth, but the prestige which it had formerly won, still remains; in all the assemblies of the Herki Kurds the first place is reserved for it. The Herki tribe has many branches. The settled part, Herki Bashadi (1,000 hearths) constituted the population of the district of this name in Shamdinam; the nomad part (6,000 tents) passes the winter between Rawandiz and Erbil (Hawler in Kurid), the Sidan and Serhatat and at Akrir, the Minand at the summer at Tergulawar and Merginia in Persia. The common ancestor of the Aghlas of Herki was a certain Abul Bakr, a dangerous rival of Zain al-Din, Mir of Shamdinam, who ended by getting rid of him. Abul Bakr had four sons: Mendo, Sidom, Serhatat and Mam Shalikh, from which are derived the names of the nomad Herki clans. Jaba in his Rechits wrongly places a part of the tribe of Herki in Kirkinnah [q.v.].

Amongst clerical families the following enjoy a certain renown: in the Zerain, Shahk Djamal at Sirit; in the Guirdi, the family of Shahk Isk, that of Molha Nabi of Kelit and that of Shahk Parakh at Nehawa. It should be mentioned that the evil spirits, qimam, recognize the authority of the families of Shahk Djamal of Molha Nabi and of Shahk Balik Pirani (in the aghiret of Shirwan), which adjoins Shamdinam.

Bibliography. As has been indicated at the beginning of this article, Shamdinam is a Kurd country very little studied. Apart from certain vague references in the books of the American missionaries of the Presbyterian mission of Urmia, e.g. Dr. A. Grant, Ten Lost Tribes, New York, 1841, there is a comparatively full description only in the works of B. Dickson, Journeys in Kurdistan in the Journal of the Royal Geographical Society, 1910. One can consult also W. A. Wigram and Edgar T. A. Wigram, The Cradle of Mankind (Life in E. Kurdistan), London, 1914, ch. viii; V. Cuinet, La Turquie d'Asie, Paris 1919, t. 177-199.

The author of the present article is believed to be the first to publish details of the geography and history of Shamdinam, which he has been able to bring together during his sojourn at Urmia and his expeditions to Kurdistan. Cf. also his publications, B. Nikitine and E. B. Soane, The Tale of Suto and Tate: Kurdish text with translation and notes in Bull. of the School of Oriental Studies, ill. 1 and Le Kurd et le Christianisme in R.H., 1927; Les Kords racontes par eux-mémes in Ad., Fr. B., No. 231, May 1925; Vue d'ensemble sur le théâtre de la grande guerre dans le N.O. de la Perse, ibid., No. 224. (B. Nikitine)

SHAMIL, a popular leader in Dagestan, head of the dervish order of Nizamshandiya, the last and most successful leader of the rising against
Russian rule (cf. above, i, p. 890). Like his predecessors he belonged to the people of the Avars. Born in the last years of the xvith century in the village of Gimri where the family estate was, he distinguished himself for the first time in 1850 in the unsuccessful attack on the fortress of Khistan. After the murder of his predecessor Hama Beg (1834), he was chosen by the rebels as their leader. In 1857 he was defeated and forced to surrender; he was able to return to power next year and extend his rule over a great part of Dagesthan and over the land of the Chechenen west of it. His institutions (mijmum) were based on the religious law (qur'â''). So that his rule was later known in Dagesthan as the "period of the Sharif''s". His territory was divided into 32 districts, with a nû'âb at the head of each and a muftî for judicial matters under whom were four qâjîs appointed by him. Shahim's armed force amounted to 60,000 men. The mountains of Dagesthan and the still less accessible forests of the Chechenen formed the bulwark of his rule; it was the fortress of Wedeno. Shahim's residence from 1835 till the Russian conquest (April 11/13, 1859).

After several unsuccessful attempts to put down the rising by the superiority of military force, Shahim began in 1845 a slow penetration of the mountains and clearings of the forests. Shahim's attempts, especially during the Crimean War, to get help from the Turks were unavailing. After the fall of Wedeno the struggle was decided. Shahim was forced to surrender in his last mountain fastness Gunib on Aug. 25 (Sept. 6) 1859. After being received by the Tsar Alexander II in St. Petersburg, the town of Kaluga was allotted to him and his immediate relations as a residence. There by his own request he and his sons in 1866, took the oath of allegiance to the Tsar. In Feb. 1869 he was allowed to go to Mecca; he died in Medina in March 1871. Before his death his oldest son Ghâzî Muhammad (local pronunciation in Russian transliteration = Kaz Dzhoma) received permission to visit his sick father; later, he entered the Turkish service and took part in the war of 1877 and in the efforts to stir up the people of Dagesthan. He died in Mecca in 1903. Shahim's second son, Muhammad Shahî, entered Russian service and ultimately settled in Kazan with the rank of Major-General.

(W. Hartshold)

AL-SHAMMÂKHI, Abû 'l-'Abînî 'Abd al-'Ummâran Sâîdî b. Abî al-Wâkidî, 46 learned jurist consultant and Abâdî biographer, died in Dammâdî 928 (= March 29—April 28—May 26, 1522) in one of the villages of the oasis of the Iren of the Djâbal Nafûsa, in Tripolitania. Among his pupils was Abî Yahyâ Zakariyâ' b. Ibrahim al-Hawwârî.

He was the author of the following works: 1. A commentary on the 'Ahdâ, a short treatise on theology by Abî Haṣîn Omar b. Djamî al-Nafûsî; 2. A commentary on his synopsis of the K. al-âdîn wa 'l-bînâ'îf on the sources of law by Abî Yahyâ 'Abdîn Yûbûf b. Ibrahim al-Sadîrî; 3. A. al-şyârî, a biographical collection, spiced with anecdotes and a few historical events, of the principal Abâdî personnages. A few extracts transl. into French have been published by Masqueray in his Chronique d'Alba Zabaria, Algiers 1879, p. 325 sqq.; the Arabic text was lithographed at Cairo in 1301.

(MOH. BEN CHERI)

AL-SHAMMÂKHI, Abû Sâîdî 'Abî 'l-Hâdî b. 'Ali b. Abî. 'Abî b. Isfâwâb, Abâdî jurist consultant, died at a great age in 792 (December 20—1396—December 8, 1509) in one of the villages of the Iren of the Djâbal Nafûsa, in Tripolitania.

After studying with Abî Mûsâ Taštî b. Taštî al-Shâmâkkî, he attached himself to Abî 'Azîz b. Ibrahim b. Abî Yahyâ. On the conclusion of his studies, he settled at Metiwen where he devoted himself to teaching for thirteen years. He then settled in the oasis of Iren in 756 (January 16 1355—January 4, 1356).

His pupils were: his son Abî 'Imâr Mûsâ, his grandson Sulâmîn, Abî 'l-Khâidî b. Ibrahim al-Bârâkî, Abî Yûsuf Yûbûf b. Mişâbîh, etc.

He composed the following works: 1. Al-Dawân, which remained unfinished in four great volumes which has become the fundamental lawbook of the people of the Djâbal Nafûsa; 2. 'Ahdâ, a theological treatise dedicated to Nûbî b. Hâjîm; 3. 'Ahdâ wa 'l-fu'a'mâ.

Bibliography: al-Shâmâkkî, K. al-şyârî, Cairo 1304, p. 559; Motylnski, Bibliographie du Maroc in Bull. de Correspond. afric., 1885, i, ii, p. 44.

SHAMMAR, (a) the plateau containing the parallel ranges of Djâbal Adja'and Djâbal Salmâ, "the two mountains of Tayî". In extent it stretches southward from the Nafûf to the Wâdi l-Rumma and includes Iram, Misma, Hûrân and Rumusîn which shelter Shammar tribesmen. Politically the term is constant. Thus, when the Amir of Hâ'l [q.v.] was at the height of his power Djâfî and Rıyâd were included to Shammar. Inasmuch as the tribe gave its name in the district, like its predecessors, the Tayî, it is best to confine the name to the Djâbal where the tribe is paramount. The capital is cut off from the outside world by its mountain barriers, fair access only being possible from the direction of Taima by the Rif al-Sâf which pierces the mountain to the S.W. of Hâ'l and by a pass through the Djâbal Salmâ. Between the ranges water is plentiful; but outside, the fertile fringe wells are few. The climate is bracing and healthy and epidemics like those recorded by Doughty (l. 296) are doubtless of external origin. In the
oases water is near the surface and cultivation correspondingly easy.

(2) The confederation of tribes in this region and in al-Dhajira. Local traditions as to the origin vary. It is claimed that the Shammar are of Northern stock in the lines of Rebā' and Muqār. Wallin (J.R.G.S., xx. 351) reported that they differ considerably from Syrian Arabs in racial characteristics and resemble in features the Yemenis, and that their tradition is that they were the last to migrate from southern Arabia. The ruling clan, the Diq'far, is a sub-tribe of the 'Abda of Abība, descent from Kahtān, so that they may be Yemenis. They certainly hold that they displaced and in part absorbed the Ta'yī. Ibn Duraid, Kitāb al-līmālāt, ed. Wittenfeld, p. 233, merely says that the Banū Shammar are min Ta'yī. Doughty, ii. 41, reports that Najidian opinion favours a mixed ancestry. There is no good clue as to the date of the Shammar irruption. At the beginning of Islam the Ta'yī were in the Shammar lands and probably their expiation was gradual. Al-Kalqāshandi mentions the Shammar merely as Arabs inhabiting the Ta'yī mountains. He does not connect them with any known tribe.

Their mountains are the 'Anaza; Bedouin war has gone on for at least a century and a half. About a hundred years ago, the 'Anaza succeeded in dividing the Shammar. They forced a large section of them to cross the Euphrates and occupied the intervening dira. By this time the two groups of Shammar are politically distinct, the Mesopotamian section following Ibn Jebra. Nevertheless the blood tie is still honoured in that the pasture land of the Dābāl is open to any of the Jebra Shammar. The Shammar dira extends almost to Najafāt, though the assault of the 'Anaza, the Dhafrī and recently the Amir of Riyāṣ tend to confine them to the Najafāt.

The Dhajira Shammar are practically all nomads, their range being between Tigris and Euphrates. They range far south as Baghālād and Zuhār. A rendez-vous is Dair al-Zor and they move up the Khālār [q.v.] towards Niṣiṣmān. In the absence of an official estimate their numbers may be said to be 10,000.

The Amir, who takes the name of his house and is known as Ibn Rashīd, is not only the paramount shaikh of the Shammar tribes; he is also the ruler of the settled population in the line of cases between the ranges of Adja and Salūn, and outlying settlements like Mustajjīdā. Hai'l [q.v.] and Fa‘id (population about 1,000), Kafr, Aqī⪞, Muqāṣ and Samirah deserve mention.

The renowned Tamīm still form a considerable proportion of the settled population, though they incline to Ibn Sa‘d of Riyāṣ. The townspeople are regarded as superior to the Beduin brethren in courage and military skill. They form the backbone of the army; each man is compelled to furnish his own camel or horse, weapons, ammunition and equipment, and afterwards a summons is sent to the nomads, who, though they turn out in great numbers, are merely regarded as auxiliaries. The great strength of the Shammar in the past has lain in their discipline and they may yet again assert their strength under a capable Amir.

Wallin noted that apart from the Khālit and Kaffīm, man with any knowledge of Arabic literature were extremely rare; and the former knew little but the Korān, the Ḥanbal traditions and the specific tenets of the Wahhābi faith. The Shammar have been some of the most devoted champions of Wahhābi doctrines and they have done much to propagate it throughout western Arabia. Latterly they have revolted against the excessive austerity of the sect, and tobacco and silk are not taboo in Najd. Doubtless up-to-date information of the effect of Ibn Sa‘d’s regime in Hai’ll would lead to a modification of some statements made above.

I refrain deliberately from noticing the work of William Gifford Palgrave, as Philby (i. 117-156) has shown that he was a liar.

(2) AL-SHAMS (α.), the sun. As in Greek astronomy, whose conception of the cosmos the Arabs had taken over, they made the sun go round the earth from east to west in a true (tropic) year. The centre of the sun’s orbit (epicycle = ṣaḥāl al-tawwur) did not coincide with the earth’s centre but was eccentric to it (al-khāṣṣir al-makhtūr) to account for the inequality of the seasons which had already been established by Hipparchus. The sun itself was a ball-shaped solid body sunk into the so-called eccentric sphere of the sun (ṣaḥāl al-shams) in such a way that the ball of the sun now protruded beyond the surface of the sphere. (A pictorial illustration of this idea is given in Rudolf and Hochbein, Die Astronomie der Gegenzeit, Leipzig 1893, p. 13). If we put the radius of the sun’s orbit at 60°, then according to Hipparchus the distance of its centre from the centre of the earth = approximately 2° 30' = 1/8 of this radius, according to al-Battani = 2° 45', while the calculations of Muhammad b. Mūsā al-Khwārizmī result in an eccentricity, the magnitude of which has been variously estimated from 2° 10' to 2° 20' (cf. H. Suter, Die astronomischen Tafeln des Muḥ. b. Mūsā al-Khwārizmī, Copenhagen 1914, p. 45). The two directions at which one looks at the sun from the two centres mentioned thus form an angle calculated by Hipparchus as = 2° 13' as a maximum (by al-Ma‘ṣūn’s astronomers at 1° 59'), by Battani at 1° 58'. This magnitude is called the inclination (ta‘dīl al-ṣaḥāl al-makhtūr). In consequence of the eccentric sun’s orbit which (in modern language) is simply the elliptic path of the earth round the sun projected on the sphere of the heavens, there were two outstanding points for the motion of the sun; that at which it is nearest the earth (ṣarq, ṣurarum, ṣurūf, ha‘ad al-ra’ūf) and that of its greatest distance from
the earth (apogee, apogamum, ʷaḍā, ʷu’d-‘aḍā‘). It is one of al-Battānī’s most important contributions to knowledge, that he discovered the turning movement of the apogee which we can now prove to be a necessary result of the disturbance of the earth’s path by the attraction of the moon (three body problem). Al-Battānī found it amounted to 21° in a year, according to the results of modern astronomy it is about 11° 50’ (cf. e.g. Israel-Holzwart, Die Elemente der theoretischen Astronomie, I., Wiesbaden 1885, p. 17). This movement of the apogee has nothing to do with that which is produced by the precession of the equinoxes and is added in the same direction to the former. While Hipparchus and Pтолemy estimated its annual amount at 56°, al-Battānī came nearer with 54° — 55°, while Nasr al-Dīn al-Ṭārī about 1260 calculated it at 51° which is practically correct. Whether now the introduction of trepidation into this movement of precession in the zodiacal circle, i.e. the assumption of an inequality in it in the form of a see-saw movement (qasat al-ḥāfiz wa l-liddār) is due to lack of agreement in calculations or, as S. Günther thinks, was learned by the Arabs from the Hindus (cf. his Studien zur Geschichte der mathemat. und physisch. Geographie, ii., Halle 1877, p. 75), need not be discussed here. It will be sufficient to refer to the work of Thabit b. Kūra (826—901) which was translated into Latin by Gerard of Cremona with the title Liber Thebit de motu accessorio et revolutionibus (cf. H. Suter, Die Mathematiker u. Astronomen der Araber und ihre Werke, Leipzig 1900, p. 37). Both texts, Arabic and Latin, are in MSS. in the Bibliothèque Nationale in Paris. Delambre has investigated the Latin MSS. He quotes it as Thabit ben Khorrath: de motu aequinoctiali sphere and finds that Thabit introduces a second movable eclipse, which rises and falls alternately above and below the fixed eclipse. The equinoxial points at the same time advance or retire as much as 10° 45’ (cf. J. B. Delambre, Histoire de l’astronomie du moyen âge, Paris 1819, p. 74). The divisions of time are caused by two kinds of solar motion. The first is that which is completed within a tropic year along the eccentric solar sphere, during which time the sun traverses the twelve constellations of the zodiac (eclipse = falak al-burūjāf) to return again to its starting point (beginning of spring = naqat al-tildal). The duration of the tropic year was calculated by al-Battānī at 356° 5’ 40’ 24’ (actually it is 365° 5’ 48’ 47’), i.e. much more accurately than by Pтолemy who put it as 365° 5’ 55’ 12’. Secondly, the sun as a result of the revolution of the globe of heaven around the earth performs its daily round in the heavens from east to west. The Arabs understood by natural day (wan) the day of sunlight and night combined. Muslim religious ceremonies are closely connected with the different stages of daylight: Dawn and twilight (fāqr, ẓaḥafer q.v.) are periods for prayer and it was necessary to define them astronomically. In the meridian or at midday (naṣf al-māḥir), the sun attains its greatest height (ghayyat al-ristīfā) and then begins to sink (ṣawad). The sunr is the period of prayer immediately after noon. The distance of the sun from the meridian is called faṭl al-ḍarīf. The position of the sun in the heavens was usually obtained from the length and direction of the shadow of the ẓaḥāf. The Hakim astronomer Ibn Yūnus (1009) called attention to the half-shadow which is a result of the flatness of the sun’s disc. The shadow instruments of the Arabs i.e. their sundials were of varied kinds. At the moment when the afternoon shadow on the hasita (horizontal sundial) exceeded the midday shadow by the length of the mīqās (shāhās), the time of ṣyah began (afternoon prayer). The hours (al-būṣr, see ẓā’ar) were either equal (al-‘ind al-māwita dilla) or unequal i.e. temporal (al-‘ind al-samāniya). Later the equal hours were also marked on the sundial.

The procedure for ascertaining the beginning and magnitude of the eclipse of the sun (ḥaw奖励 al-shams) among the Arabs is based on the Almagest of Pтолemy. As regards accuracy in calculating the beginning of and observing an eclipse of the sun, the same holds as for the moon (cf. Al-ḥamīr). In such questions as solar parallaxes, apparent size of the sun, its distance from the earth etc., the Arabs also closely followed the Greeks. Ibn al-Haitham notes that in solar eclipses a similar reddish black is seen on the sun’s disc as on the moon, at the time of its total eclipse. He recommends the observation of a solar eclipse in its reflection in a vessel filled with water, in view of the too fierce light, especially in partial eclipses.

Nallino, al-Battānī sive Al-Ḥātami Opus astronomiæ, Milan 1899—1907, i. 41, 43, 77, 104, 135; and the corresponding Adnotationes, Vol. ii. with the plates of the sun; R. Wolf, Geschichte der Astronomie, Munich 1877, p. 47, 160, 173. On Ibn Yūnus’s proof that the shadow (al-qāf) of a mīqās gives the height of the upper rim of the sun and not that of its centre, cf. S. Choc, Über eine arabische Methode, die geographische Breite aus der Höhe des Sonnen im ersten Versitit (Höhe ohne Azimut) zu bestimmen (Annalen d. Hydrographie u. maritimen Meteorologie, 1921, p. 131). On sundials, the division of the days and hours: S. Choc, Gnomonic der Araber, Berlin 1923 and do., Sommernahmen der spätarabischen Astronomie, Isis, vi., No. 18, 1924, p. 332—361. On the greatest declination of the sun or sphere of the ecliptic (ghayyat al-ma‘lī, al-ma‘lī al-dī‘am), cf. the article Al-Sa‘ātan. Ibn al-Haitham’s note on the observation of the eclipse of the sun is in his: Fī Mū‘ayyat al-Aṣr ala‘dāf fi Wālid al-Kamār (Madīlis baldayi in Alexandria). (S. Choc).

SHAMS AL-DAWLA, Abū Ta‘īhir b. Farah AL-DAWLA, a Būyīd. After the death of Fakhr al-Dawla [q.v.] the amirs proclaimed as his successor his four-year-old son Ma‘djid al-Dawla under the guardianship of his mother Saiyida and gave the governorship of Hamadhān and Kirmānshāhān to Shams al-Dawla who was also a minor. When Ma‘djid al-Dawla grew up, he sought to overthrow his mother and with this object made an arrangement with the vizier al-Khalīf Abī ‘Abd Allāh Abī al-Kāsim in 397 (1006/1007). But when they sought assistance from the Kurd chief Badr b. Ḥusayn al-Dawla, the latter set out for al-Ra‘i with Shams al-Dawla and took Ma‘djid al-Dawla prisoner. The government was then given to Shams al-Dawla but as he was not so planta as Ma‘djid al-Dawla, the latter was again proclaimed ruler, while Shams al-Dawla returned to Hamadhān. After Badr had been murdered by the soldiers in 405 (1014/1015), Shams al-Dawla
seized a portion of his territory and when the grandson of the dead man, Thāhir b. Ḥillī b. Badr, wished to dispute the possession of it, he was defeated and thrown into prison. His father Ḥillī b. Badr had already been imprisoned by Sulṭān al-Dawla (q.v.); but the latter released him and sent him with an army to regain the lands occupied by Shams al-Dawla. In Dhu l-‘Qa‘da 405 (April/May 1015), he came upon the enemy but the battle resulted in Ḥillī’s defeat and death. After this victory Shams al-Dawla seized the town of al-Kayy; Madjīd al-Dawla and his mother took to flight, but when Shams al-Dawla wished to pursue them, his troops mutinied and forced him to return to Hamadān, whereupon Madjīd al-Dawla and his mother returned to al-Kayy. In 411 (1020/1021) the Turks rose in Hamadān; Shams al-Dawla appealed to Abū Djafar b. Kākawīb, governor of Ishāfān, and with his help succeeded in driving the mutinous element out of the town. About 412 (1021/1022), Shams al-Dawla was succeeded by his son Sāmih al-Dawla but within two years (414 = 1023/1024), Hamadān fell into the hands of the Kākawībids (q.v.; Kākawīwāls).

SHAMS AL-DIN. [See JUWAINI, ii. 1076, IL- DĪGI, ILTUTMISH, FEHLWĀN, TIRAH)]

SHAMS AL-DIN, IBN ‘ÂD AL-ÂLĪ AL-SAMA‘TĀN (the nisba is variously given, as the pronunciation of the name of the country varies), = belonging to Samastrā < Samuqād, a district in North Sumatrā which in those days formed a part of the kingdom of Pasē; cf. the art. SUMATRA, a Malay mystic author, who was born probably before 1075 and died in 1030 (Kusdjid 12, 1039 A. H.), as we know from Nūr al-Dīn al- Rānī’s Bušṭān al-Silāḥī; his part in question has been edited by G. K. Niemann, under the title Ḥikayat Nagari Atjeh, in Bloemen uit Maletische Geschichten, the Hague 1907, ii. 127.

On his personality al-Ra‘īnī says: *This Shaikh was learned in all branches of learning; especially his knowledge in the field of the ‘ilm tapawwur was well known; a number of books have been written by him*. He is often mentioned along with his contemporary Ḥamza al-Faṃṣūrī (= belonging to Barūs, on the West coast of Sumatrā; cf. the art. ḤAMZA AL-FUQHĪ in the Supplement), whose importance is, however, much greater. Whether Shams al-Dīn was Ḥamza’s pupil, as H. Kraemer suggests (Een Javanse Prachim uit de Zettinge Eeuw, diss. Leiden 1921, p. 28), seems to be not quite certain.

After the conquest of Malacca by the Portuguese (1511), the importance of Acheh as a centre of Muslim economic and religious life had increased. Especially during the reign of Iskandar Muda, al-Rānī left Acheh for some time, but later on, during the reign of Iskandar II, he succeeded in securing the assistance of the public authorities and, by a fauzī, caused the books of his opponents to be burnt publicly (H. Kraemer, op. cit., p. 30; do., Noord-Samarraanse invloed op de Javanesse mystiek, in Djawas, 1924, iv. 30; cf. also H. N. v. d. Tuuk, Kort Verslag der Mat. Handelb. etc., in 3. J. f. F., 1856, vol. 3, p. 457, where Mawlī Naḥj al-Majātī Qādī (another name for Iskandar II).

Kraemer, op. cit., p. 30 nqf, mentions the following works of Shams al-Dīn:

1) Mīrāt al-Ma‘wīn, "Mirror of the Believer," deals with dogmatics in an orthodox manner, written in 1009 (1601). Cod. Or. Leiden No. 1750 (H. H. Juybobil, Cat. Mat., Handelb. Litt., Univers. Bibl., Leiden 1899, p. 31–137) and No. 1952 (Kraemer, p. 30) contain parts of it; the former is provided with a Dutch MS. translation by P. v. d. Vorm (d. 1731), and is therefore the same MS. as has already been described by G. H. Wernald; the complete work contained 211 questions and answers on religious subjects (G. H. Wernald, Maletische Boekentafel, Amsterdam 1738, p. 320–335; the author also says that 'this work was very popular in his days and cites [Introduction, p. I–III] the beginning sentences, according to which Shams al-Dīn wrote this book for those who were not acquainted with the Arab and Persian languages).

2) Mīrāt al-Muḥāʃībīn, "Mirror of those who have acquired a deep mystic knowledge," mentioned by al-Ra‘īnī, seems to be lost. V. d. Tuuk’s identification of this work with Cod. Or. Leiden No. 1332 is, according to Kraemer, p. 31, wrong. 3) Shāhī Rūk<kā’ s Ḥawwāt al-Faṃṣūrī (written in 1611), perhaps a commentary on Ḥamza’s Ruk<ka al-Maḥṣūṣī (Kraemer, p. 20 and note 3), which has not survived to us. Juybobil, op. cit., p. 259, supposes that Cod. Or. Leiden, No. 1953 (2) contains this commentary.

Excerpts of works by Shams al-Dīn are mentioned by Kraemer on p. 31; on p. 32 we find a list of works which are only known by name (cf. also p. 30 above). As it is not always certain that Shams al-Dīn is the real author, and our knowledge of their contents is still very limited, it seems not to be necessary to enumerate them all here. Only scanty notice of Shams al-Dīn’s teachings can be gathered from the fragments preserved to us; even Codex Leiden, Ic. coll. St. H. No. 30, described by Prof. P. H., S. Rinke (Suppl. Cat. Mat., Handelb., Leiden 1921, p. 145, No. 34) as a résumé of Shams al-Dīn’s teachings, has only the character of a collection of annotations which presuppose a fuller account or oral explanation.

Al-Ra‘īnī mentions Shams al-Dīn (Kraemer, p. 28) as a representative of the Wujūdīs (q.v.), and from the information on his teachings given by Kraemer (p. 46–48) we may conclude that there is no essential deviation from the general Muslim mystic conceptions of his day. On the other hand he has exercised a considerable influence on the peculiar Javanese mystic literature which is, however, not yet fully investigated (cf. the art. SULAK). Continued researches will perhaps solve the question whether Indonesian elements, which are so well represented in Je-
SHAMS AL-DIN — AL-SHANFARA

volumes of mystic treatises, are already to be found in the literary inheritance of Shams al-Din and his contemporaries.

According to v. d. Tunk (op. cit., p. 463–464), al-Ra‘i’s [q.v.] Nuhbas fi Da‘wa al-Zill and his Tabyins fi Mur‘ifat al-Adyan are especially intended as polemics against Shams al-Din (cf. also Kramer, p. 32–33).

(C. C. Berek)

SHAMS AL-MAL‘ALI. [See later.]

SHAMSIYA, order of derwish is called after Shams al-Din Abu l-Chanâ’ Ahmad b. Abi l-Barakât Muḥammad Swâş or Swâsh-ráž, also called Kara Shams al-Din and Shams (d. 1099 = 1600–1601). He is mentioned by the historians Nâmâ (Constantinople 1281, i. 372) and Pecčevi (Constantinople 1283, ii. 290) among the saints of the reign of Muḥammad III, and they state (probably on the authority of this sovereign, whose letter is cited by von Hammer, Geschichte der osmanischen Dichtkunst, iii. 286) that he was the author of numerous works in Turkish, enumerated by Hâddîl Khalîfa, who, however, confesses him with other persons; of one called Manâsil al-Arifin there is a copy in the British Museum, and another called Gutakanâhîd is preserved in the Vienna Library. Notices of this order in European works are mainly derived from d’Ohsson, who mentions it in his list (Tabbica, iv. 625), whence von Hammer obtains his information in the Geschichte der osmanischen Reiche, i. 250, adding that the founder lived and died at Medina in the odour of sanctity. In his later work on Ottoman Poetry, loc. cit., he states that this person was head of the Khalwati order in Swâs; and in the Kamûs al-A‘lam he is called the restorer of the Khalwati order. In a pedigree of orders made by a Nâshîhanid and cited by Le Châtelier, Confiriit, p. 50, the Shamshîya is represented as a branch of the Khalwâya and appears to be confined to Swâs. It does not figure in the list of tekâw at Swâs drawn up by Coënet (La Turquie d’Asie, i. 666), whence it was probably a local name for the Khalwâti order which speedily became obsolete. Le Châtelier, loc. cit., p. 179, mentions an order of this name as a branch of the Bedawiyah in Egypt.

(D. S. Marocolo)

AL-SHANFARA was a poet of the time before Islam and is reckoned by the Arabs as one of the great racers, along with others like Ta‘abba’ thumbân. And also one of the ravens (agribba) on account of his black skin. The genealogists know his complete genealogy, but as the various sources consulted are not even unanimous as to his name and that of his immediate ancestors, it is hazardous to attach great credence to the chain of his forebears named. There is, however, perfect agreement that he belonged to the South Arabian clan of the Banu T‘awâ b. al-Hâjir b. al-Hanw b. al-Azd and consequently he is one of the very few South Arabian pre-Islamic poets of whom poems are preserved. As a boy he was captured by the tribe Shabhâ b. Fahm, a clan of Kays ‘Alâhû, and he remained a prisoner among them till he was exchanged for a man of the Banu Shabhâ, the. Banu Salamûn b. Mufarrîdî, a clan of al-Azd, had captured. He remained among the latter as one of their tribe till he began to make love with a girl of the Banu Salamûn whom he seduced, and was wounded and, when he was insulted by the girl of the desert, he ran away to his first captors. When he learned from them his real descent he swore that he would take vengeance upon the clan of Shâbâm by killing a hundred of their men. He succeeded in this in so far that he killed actually 90 of them. The small tribe of Fahm were noted robbers; associated with Ta‘abba’ Sharrân he was for a long time a terror to tribes which often lived very long distances from the home of the clan of Fahr, it is reported that he, like his companion, made all his raids on foot, crossing large stretches of desert, through which he made his retreat sure by burying ostrich eggs filled with water in the sand. As soon as he had made his murderous attack he would, upon being pursued, race back into the wilderness, where his pursuers were compelled to give up their chase for fear of dying of thirst.

When his murderous career against the Banu Salamûn had assumed the dimensions indicated, three men of the clan Ghanâm waylaid him in the night when he was going to a lonely well al-Nasîf near Abîdah and though they wounded two of them by shooting at them as he expired their form in the dark, they overpowered him and after cutting one of his hands off brought him to their camp, where they killed him. It is stated that on this occasion he uttered the defiant verses telling them not to bury his body but to leave it to the hyenas, which are found in the Haumâs of Abî Tammâm and have several times been translated into European languages. Al-A‘in in his commentary on the verses of the Alisiya (iv. 596, sq.) mentions his Divân among the books which he has consulted, but this book is now probably lost.

We have, however, two celebrated poems of some length attributed to him, one found in the collection of ancient odes entitled al-Mu‘athâ‘iyya (ed. Lyall, No. 20; ed. Thorbecke, No. 18) in which he celebrates his murder of Hârâm b. Dâ‘îrî, a man of the Banu Salamûn, but the chief beauty of this poem lies perhaps in the mabk of introductory introduction. This poem is accessible to European readers in the excellent rendering of Lyall. Greater celebrity, however, is enjoyed by his other poem which is generally known under the title of the Lâmiyat al-Arâb, a poem full of defiance and manliness, which since it was made accessible to Western readers by Sylvestre de Sacy has been acknowledged as one of the finest products of Arabic poetry. It has been translated into several Western languages, even Polish. It was also appreciated by Arabic scholars and we possess an early commentary which is attributed in the printed editions (Constantinople 1580 etc.) to al-Mu‘arrab; this is, however, an error as the commentator himself mentions that he derived his text from Abu l-Ablâs in more than one place and once
(p. 26) from Ahmad b. Yahya i.e. the Kufi grammarian Thalib who died in 291 (903). Printed with the same commentary is another commentary, more extensive, by al-Zamakhshari who died in 538 (1143/1144).

While the poem in the Musafiriyat is considered the undisputed work of al-Shanfarar, this is not the case with the Lamiat al-Arab. The earliest scholars appear to have no knowledge of the poem at all; it is not mentioned by Ibn Kutasah in his book on poets, nor is there any reference to this poem in the fairly long account of the poet in the Kitab al-Maghribi (vol. I, 134-143). Though al-Kasdi died 358 = 969 quotes the poem at length in the appendix of his Amali (iii, 208-212) he informs us in an earlier part of his work (i, 137) that the poem, though generally attributed to al-Shanfarar, is in reality the work of Abul Muqir i.e. the Basirian philosopher Khalaf al-Ahorn, he who, who deserves about two thirds of his book from Ibn Duraid, has received this information also from him and probably from this source. It is repeated in later literature. Ibn Duraid was well informed about the activities of the scholars of the Basirian school and only two generations separated him from Khalaf al-Ahorn, his information being as a rule derived from pupils of al-Ahorn from Khalaf. We are consequently compelled to attach some weight to his statement, which is largely corroborated by the internal evidence of the poem itself. The entire lack of names of places and personal names, except such as cannot easily be identified, is so unusual in early poems that it must give rise to suspicion, for we have not a fragment, but a harmonious complete poem. To this must be added that in its diction occurs words and phrases which cannot easily be confirmed from poems which are acknowledged as originating from poets who lived contemporary or near the time of al-Shanfarar and we must come to the conclusion that Khalaf inspired by the fragment found in the Hamasa composed his masterpiece, which truly represented the defunct 'nature of the wild robber and murderer.

Added to this comes the remarkable fact that another poem of equally wild nature and attributed in the Hamasa to Thaliba Sharran, the companion of al-Shanfarar, is also attributed to al-Shanfarar, but by critics vindicated as a forgery of the same Khalaf al-Ahorn. The author of the poem is the same Khalaf al-Ahorn who, according to the author of the Kitab al-Maghribi, cited a fragment of a longer poem, and in several early works are quoted fragments of other poems, which probably are not remnants of longer basha's.

Bibliography: The whole subject is most exhaustively dealt with by G. Jacob in his Shanfarar Studies, Munich 1914-1915, from which it is evident that the poems of al-Shanfarar have attracted greater attention in European literature than any other Arabic poet, and to the works cited there I can only add an edition de-luxe of the Lamiat in German translation, Hanover 1923. Scattered verses by al-Shanfarar are found in several other works besides those used by Jacob, but they add nothing to our knowledge.

SHANT YAHUK (Yahuk, in Abu 'I-Fida'), Arab transcription of the Spanish Santiago, in French St. Jacques de Compostelle, is the most celebrated place of pilgrimage in Christian Spain, the former capital of the kingdom of Galicia, situated 760 feet above sea-level, between Vigo and La Coruna, to the east of Cape Finisterre. It is there that according to the legend are the relics of the apostle St. James the Greater, the patron-saint of Spain, who landed on the coast near Santiago to convert the peninsula. There was, before the eleventh century, a celebrated church dedicated to St. James Compostelle, with which the Arab authors deal with full details. It was for the Christians, says the author of al-Bayan al-Maghribi, what the Ka'bah is for the Muslims.

In 387 (997), the Shatib al-Mansur Ibn Abi Amir directed an important expedition from Cordova against Santiago, of which Dozy has given a detailed account from the chronicle Ibn al-Ijarli. On Sha'ban 2 (10th August), the town, which had been deserted by the inhabitants, was taken by the Arab army and burned to the ground; only the tomb of the saint was respected. The king of Galicia, Bermudo II, recaptured Santiago from the Muslims at the end of the eleventh century and restored all its traditional splendour to the place of pilgrimage. The building of the present cathedral on the foundations of the sanctuary destroyed by al-Mansur, was undertaken in the reign of Alphonso VI in the last quarter of the eleventh century.

SHAPUR (r.), Arabic Sabur (the form Shabur in a verse of Ahsa' quoted in Thalaib, Hist. des rois des Perses, ed. Zonberg, p. 493 is nearer the Pahlavi Shapuhr), the name of severa members of the Sassanid dynasty. The three Persian kings of this name have associations with Muslim tradition.

Shapur I B. Ardashir called Sabor al-Dinamid by the Arabs, the Sapor I of the classical historians (241-379 a.d.) who waged war with the Romans for the greater part of his reign, he continued the offensive which had been begun by his father Artaxerxes. He succeeded in capturing important towns like Nisibis (which were however lost again after his defeat at Resaina in 243). Later (256) he took Antioch and in 260 he even took the Emperor Valerian as prisoner. The Roman wars, waged with varying fortunes, thus seemed to have ended in the definite victory of Sapor, when he discovered an enemy in the king of Palmyra, Odenathus, who forced him to evacuate the conquered territory. Odenathus remained the enemy of the Persians till his death; it was only his successor Zenobia that concluded a treaty with Sapor. On this and other historical facts which cannot be gone into here, see Pauly-Wissowa, ii., Realens, ii., col. 2325 sqq.; here we are only concerned with the Muslim tradition based on an older Persian tradition, which can on the whole claim little real
historical value, although it will not be disputed that it has preserved many historical, important and valuable details, otherwise unknown. The facts of the legendary biography of Šāpūr I as contained in Muslim sources are in the main as follows:

Youth. Ardashīr, Šāpūr’s father, had married a daughter of the Arsacid Ardawān, whom he had divorced and slain. The princess attempted to poison Ardashīr, but the plot was discovered and the king ordered a trusted court official to put her to death. When the latter saw that she was pregnant, he spared her life and when she gave birth to a boy, he called him Šāpūr, i.e. “king’s son”. Šāpūr grew up in concealment. Ardashīr was lamenting that he would have no heir to succeed him at his death; the courtier thereupon revealed the secret and brought the son to his delighted father.

This story is already found in the Pahlavi Kārnameh. Muslim tradition agrees with it in the main, although all the sources do not have the same details. Firdawṣ gives two details, which are lacking in the Kārnameh but can be shown from the rest of the story to be old; in order not to run any danger should the fact of Šāpūr’s birth become known, the official entrusted with the execution of the Arsacid princess acts exactly like the Lycean Combabos; the second is that Šāpūr is recognised as a real prince by the fact that he dares, while playing, to pick up the ball near Ardashīr who is looking on, without showing any awe at the king. Al-Ṭabarī knows this story also, but says nothing of a poison-plot. In his story Ardashīr is bound by an oath to destroy all Arsakids but does not know that his wife belongs to this family; so also al-Dinawarī, only he makes the princess a niece of the Arsacid Farrakhhān.

The legend next deals with the story of Šāpūr’s weaning and the birth of his son Harūnids; it is practically a repetition of the preceding. An Indian sage has predicted to Ardashīr that the throne will be inherited by the family of the Mihrak dynasty overthrown by Ardashīr, therefore the king has all the descendants of Mihrak put to death; only a daughter escapes; Šāpūr meets her while out hunting and brings her home without Ardashīr’s knowledge. When her son, later Harūnids I, is grown up, Ardashīr recognises royal blood in the boy, who is without fear in the presence of the king (the same motif as in the story of Šāpūr); everything then ends happily. This is the story of the Kārnameh and Firdawṣ and al-Ṭabarī agrees. The other sources do not give this story, but Hisma al-Ifshānī says (ed. Gottwaldt, p. 49) that there was a well-known story about the mother of Harūnids I, whom he calls Gusrādī.

The legend preserved by Ṭabarī tells that Šāpūr, before his accession, took an active part in a fight between Ardashīr and Ardawān; Šāpūr killed the dābīr of the Parthian king. Šāpūr succeeded Ardashīr on the latter’s death; the statement in Mas‘ūdī (Mafīrih, ii. 160) that Ardashīr resigned the throne in favour of his son and henceforth devoted his life to religion, does not seem to belong to the old tradition.

Hatra. The conquest of Hatra is ascribed by al-Ṭabarī and Tha‘alibī to Šāpūr I, by Ibn Ḫaṭīb and Eutychius to Ardashīr, and by Firdawṣ and al-Dinawarī to Šāpūr II. The story is as follows:

The Persian king was unsuccessful in taking the stronghold of Hatra, the residence of the prince Sāṭrūn (according to others: Da‘īzan) until the latter’s daughter Naḍīra fell in love with him and put the town in his hands by making her father and his soldiers intoxicated, or by betraying to the enemy the talisman on which the ownership of the fortress depended. The Persian king married Naḍīra as he had promised, but afterwards had her executed, in disgust at her ingratitude to her father.

Our authorities quote Arabic poems in this connection, which are, of course, of much later date and are of as little value as sources as the stories of the historians. They are evidence, however, that the Arabs also had the tradition that the like Sābūr once besieged Hatra. Whether the king who took Hatra was Ardashīr or Šāpūr I, cannot be certainly ascertained. We know from a really reliable source (Dio Cassius) of only one siege of Hatra by a Sāsānīd, namely Ardashīr, and this siege was unsuccessful. It is assumed by many, what is not in itself improbable, that either Ardashīr himself after an unsuccessful attempt, or Šāpūr I soon after his accession took Hatra. But we have no reliable historical information; what we have is a version of the widespread Scylla (Romaihī) story. There may be an echo of history in the name of the king Sāṭrūn; he must have been a Syrian with an original Parthian name (Sūrāk). The name Da‘īzan is an intrusion from another context (cf. Nöldeke, Gesch. d. Perser und Araber, p. 35). The version which places the taking of Hatra in the reign of Šāpūr II (cf. Firdawṣ: Tafsīr, makes the Arab prince Da‘īzan (in Firdawṣ: Tafsīr: Tafsīr) carry off a Persian princess; his daughter by her is the traitress (so in Firdawṣ). Here we find the better known Šāpūr II in this story in place of his earlier namesake and the treachery of the king’s daughter at Hatra excused to some extent because she is of Sāsānīd descent on her mother’s side. Firdawṣ further knows nothing of her execution, which al-Dinawarī inserts from another, apparently older, version of the story (cf. the article HATRA in Pauly-Wissowa, Realen. 4, vii, col. 2516 sqq.).
with native tradition or a non-Persian version. Tha'alilli calls the Roman emperor in question Constantine. His source, therefore, does not seem to have contained the correct name. Eustychius, whose synchronism between the Roman emperor and the Sassanids are wrong, puts the capture and death of Valerian (who appears here as an unnamed son of Gallienus, while in reality their relationships were the reverse) in the reign of Bahram II (Eutychius, ed. Cheikho, p. 113). That, according to al-Tabari, Valerian was besieged in Antioch by Šāh-pūr is a reminiscence of the taking of this city by the Persians under Sapor I (the year is not certain); indeed Antioch seems to have been taken twice: Pauly-Wissowa, op. cit., cols. 2327 and 2329). The name Cappadocia, which occurs several times in the Persian tradition (cf. Nödeke, op. cit., p. 32, note 2) is likewise an echo of the events of 258 A.D. and the following years, namely the capture of the Cappadocian capital Caesarea by Sapor I (c. 260). There is a wonderful story associated with the fall of Niissib. Šāh-pūr is said to have invested the town in the eleventh year of his reign, then to have raised the siege because his presence was required in Khorsān. Later he laid siege to the city a second time and succeeded in taking it because the walls split open by a miracle. The story is found in Tabari and more fully in Eutychius; the interruption of the siege and the splitting of the walls reflect events of the reign of Šāh-pūr II. According to Tha'alilli Šāh-pūr I also took Turus; there is also a historical basis for this in the taking of this city by one of Sapor's generals (c. 260 A.D., cf. Pauly-Wissowa, op. cit., col. 2331 supra).

City-Foundations: Miscellaneous. The oriental writers ascribe to Šāh-pūr I the foundation of the following cities: Shāh-baş-pūr (in Kūshkar), Djamāl-Šāh-pūr (in Ahwāz) near Shattar (with an absurd story that the king settled the Romans taken in Antioch here). Firdawsi's Šāh-pūrgrd is probably the same town; Hamza further mentions the towns of Bahš-pūr (in Fārs), Šāh-pūr Kūshāšt and Ballāgh Šāh-pūr which cannot be exactly located, and wrongly (they are foundations of Šāh-pūr II) Nešāhpūr (also attributed to Šāh-pūr I by Firdawsi) and Firdowsā-Šāh-pūr (an-Abār). Ibn Khallikan says that Šāh-pūr settled his prisoners of war in three cities: Djamāl-Šāh-pūr, Sābūr in Fārs (probably Hamza's Bahš-pūr) and Turas in Ahwāz (cf. also Tha'alilli, p. 494).

Some historians like Tabari and Dinawari, place the first appearance of Māni in the reign of Šāh-pūr I; but the catastrophe did not occur till the reign of a later king (Hormizd I or Bahram II). Firdawsi, who wrongly places the event in the reign of Šāh-pūr II, alone makes a continuous story of it: the painter Māni from Cīn appeared before Šāh-pūr as a prophet and the founder of a sect, but he was arrested by the Mōsēs and executed by the king's orders. Tha'alilli (p. 501) has a similar story: in the reign of Bahram I, Māni had a dispute with the chief mōbād, was worsted and flogged. According to Mas'ūdī (Margūji, ii. 164), Šāh-pūr I was a Manichean for a time; this can hardly be historically, perhaps we have had a reminiscence of the later king Kavāš and his inclination to Mazākān. Šāh-pūr I died, according to the Muslim tradition, after a reign of thirty years, after giving the usual exhortations to his son and successor Hormizd.

Šāh-pūr II, Hormizd, called Dhu'l-Akīf (because he had the shoulders of Arab prisoners dislocated or pierced), is the Sapor II of history (310–379 A.D.), throughout whose long reign wars were waged with Rome. Persian arms were not successful against Constantine and under Julian the Roman offensive threatened to be dangerous to the Sassanid empire. The death of the gifted emperor (363) was the reason that the treaty of peace which his successor Jovian made with Sapor was as advantageous for Persia as it was shaming for Rome. In the reign of the Emperor Valens, also the war with Persia continued; within this period falls the capture of Araxes of Armenia by Sapor and following this the intervention of Rome in favour of Pap, son and successor of Araxes. These wars, which were interrupted from time to time by negotiations, dragged on and had not yet brought about any important decisions when Sapor died in 379. For all details and references to original sources see the Pauly-Wissowa, op. cit., col. 2334 sqq. Here we are only concerned with the oriental traditions. It must be remembered that in Persian tradition, although on the whole it has kept distinct the figures of Šāh-pūr I and II, details originally referring to one have been transferred to the other. Incidents from the Julian story, which has of course nothing to do with Persian tradition, have penetrated some of the sources.

Youth and Arab wars: All sources agree that Šāh-pūr was not yet born when his father Hormizd II died; but in case his mother should give birth to a son, the throne was set aside for the latter, so that Šāh-pūr was born a king. All this must be legend; the older western sources suggest that Sapor II only ascended the throne as a young man (cf. Pauly-Wissowa, op. cit., col. 2334; Nödeke, Gesch. d. Perser, p. 51, note 3). Aškharâzân must also have reigned between Hormizd II and Sapor II.

During the time that Šāh-pūr's youth rendered him incapable of ruling in person, the kingdom was attacked on all sides (say the oriental sources) by enemies, particularly by the Arabs. Among the tribes mentioned are the 'Abd al-Kain, the inhabitants of Bahram and Kāşma (Tabari, Ibn Khallikan, the Ghassânids (al-Dinawari, who also mentions Bahram and Kāşma), and the Banū Iyâd (Mus'ūdī, Tha'alilli). The young king early gave an indication of his foresight by ordering a second bridge to be built beside the bridge over the Tigris at Ctesiphon, so that traffic between the two banks of the river could develop unhindered. When sixteen years of age (according to some fifteen), Šāh-pūr led an army against the Arabs. Here Firdawsi and al-Dinawari place the Hātra episode which belongs to the reign of Šāh-pūr I. The fairly full details of these Arab wars, probably in part at least, became incorporated in the old Persian tradition in the post-Achaemenid period. That the king dislocated or pierced the shoulders of the prisoners (in Eutychius, the captured kings) seems to be based on quite an early tradition: Hamza (ed. Gottwaldt, p. 51) gives the Persian equivalent of the epithet Dhu'l-Akīf as ḍhū yuḥ furnish (I) mūdā. On the whole the account of these wars is unhistorical. Šāh-pūr certainly never advanced so far as some writers say. He is said to have not only conquered Bahram and Yūsufa, but even to have reached Medina. The story of Šāh-pūr's encounter with ʿAmr b.
Tamim b. Murra in Bahrain (Masūdī, Murūǧī, ii. 176 sq.; a connected story in Thā'ālibī, ed. Zotenberg, p. 520 sq.) is an invention of Arab fancy. How far these stories reflect historical happenings, it is difficult to decide; nor can we say whether tradition has here kept Shāpūr II and I quite distinct [of the latter a war of destruction against the Kūda and the Banū Ḥalwān is reported, cf. Nöldeke, Gesch. d. Perser, p. 38. (The Kūda's here appear as allies of Ḥasan of Hatra)]. The Arabic verses quoted in Masūdī (Murūǧī, ii. 176 sq.) which are referred to Shāpūr II's campaign against the Banū Ḥalwān, are of course, of a much later date and seem to have had nothing at all to do with Shāpūr's history. If the other verses quoted here (ii. 178) really date from the time of 'Ali b. Abi Ṭālib, this would be the oldest Arab reference to these events. But all these stories must have some historical background; it is known that Shāpūr II had dealings with the Arabs; the Emperor Constantine negotiated in 338 with Arab tribes and urged them to conduct raids into Persian territory. Julian also had Saracen chiefs as allies in the war against Sapor II. That the Persian king took steps to protect his frontier against the Arabs is very probable (Nöldeke, op. cit., p. 57, note 1).

Shāpūr and the Romans. In the tradition the account of the Roman war is introduced by the well known motif of the king who visits an enemy country in disguise. This is found, for example, in the Greek Alexander romance (Psēdō-Callisthenes, ed. Müller, ii. 14 sq., iii. 19—22; cf. Malalas, ed. Bonn, p. 194, sq.); in Sasanian legend a similar story is told of Bahram Gūr. Firdawsi reports the story as follows: The astronomers prophesied a misfortune to Shāpūr; nevertheless he decided to risk entering the enemy land of Rūm in disguise. He appeared before the emperor as a Persian merchant, but was recognised by a Persian staying at the court, sewn up by the Emperor's orders in an ass's skin and put in prison. A young woman whose duty it was to keep the keys of his prison was herself of Persian descent and aided him to liberty by softening the ass's skin with hot milk. When a great feast was being celebrated and the imperial palace was empty, the two fled to Iran. On their way they stopped at the house of a gardener, who told the king, whom he did not know, that the Emperor of Rūm had invaded Persia and laid it waste in dreadful fashion in the absence of the legitimate king. Shāpūr then ordered the man to take his (Shāpūr's) signet-impression to the chief mobed. The latter saw that the king had returned. An army was soon collected with which the king attacked the Romans in the night, wrought great slaughter and took the emperor himself prisoner. The Romans found the Persian emperor were massacred everywhere. Shāpūr levied a heavy indemnity on the Emperor, but did not release him; on the contrary he had him mutilated and put into prison. The Persian king then carried fire and sword into Rūm, defeated the Emperor's brother and slew many Christians. The Romans then chose a certain Bazānūsh as Emperor; the latter sought for peace which Shāpūr granted on condition that the Roman Emperor rebuilt the destroyed Persian towns, paid a yearly tribute of 600,000 dinārs and surrendered Nisibis. This was done, but the people of Nisibis resisted Shāpūr as they would not serve a fire-worshipper. The king subdued them by force of arms. He then rewarded the young woman who had liberate him and the gardener; he sent to Ṣūm the body of the previous emperor who had died in prison. He settled the Roman prisoners-of-war in towns specially built for the purpose (Khurramābād, Pirūshāpūr, Kūnām-i Aṣrār).

This story is for the most part fictitious. The beginning (the prophecy of the astrologer) also forms the introduction to another story which develops differently, but is no doubt connected, and which is related in medieaval oriental sources of Shāpūr II b. Ardāšīr; the latter king is foretold that he is doomed to be unfortunate for some years. He therefore goes voluntarily into banishment (cf. P. Schwarz, Iran im Mittelalter, p. 544, note 6). We have already called attention to the occurrence of the motif of the unknown king, afterwards discovered. Shāpūr's flight with the young woman recalls the story of Ardāšīr's flight before Ardawān, which is already in the Ahrānāmā. It is quite in the style of Iranian story-telling that the Emperor of Rūm in his request for peace mentions incidents like Mīnūthīr's revenge for the Chaldean. It should further be observed that the representation of military events agrees in some respects better with the deeds of Shāpūr I; the capture of the emperor (which here appears as a kind of revenge for Shāpūr's imprisonment in Rūm) and his death without regaining his liberty, recall the historical facts of Sapor's war with Valerian. Even the name Bazānūsh occurs again although in somewhat different connection. The imposition of indemnities was also found in the story of Shāpūr I. On the other hand, as we saw above, the account of the (historically true) capture of Nisibis by Shāpūr I, has features which belong to the vain siege of this town by the historical Sapor II in 350 (fall of a part of the wall, withdrawal of the king as a result of an invasion of Persia by nomads). The following elements in Firdawsi's narrative may be considered historical: Shāpūr's hostility to the Christians (Sapor II began a great persecution of Christians in 339 A.D.), the ravaging by the Romans of the Persian kingdom (Julian plundered and burned a great part of it) (cf. Pauly-Wissowa, op. cit., col. 2347), thecession of Nisibis (by the peace of 363 ceded by Jovian to the Persians) and the dismantling of the Nisibenes for Persian rule (Pauly-Wissowa, op. cit., col. 2351).

The other sources (apart from the fact that Tābarī and Dinawardī also contain elements of the Julian romance with which we are not concerned here) differ mainly in the fact that they make the Emperor take Shāpūr with him sewn up in a skin on his campaign. At the siege of Dūndān-Shāpūr the king is released by Persian prisoners of war and taken into the town by the garrison. This causes the defeat and capture of the emperor who has to make good the damage done and is sent back mutilated to his kingdom. This version of the story is also found in the poem quoted by Mašūdī, Murūǧī, i. 185, echoes of the phraseology of which seem to be found in Thā'ālibī (cf. Thā'ālibī, p. 525; farātāmanakun Sahūr with Masūdī, op. cit.; farātāma 'l-Parāz, Thā'ālibī, p. 527; vakhrī maṭbāna kull nhāčun xapnāhā satiānān with Masūdī, op. cit.; xaj yughrīnīa min afādirsīn mā 'bāhārī min adīmkhānī).
p. 52, he lived in this city till his thirteenth year and then moved to Ctesiphon, a statement which does not agree with the story of his building the bridge while still young. The new foundations are: Busrurg-Shapur ("Ubarra"), Firdawsi-Shapur ("Ambar"), Iran-Khurra-Shapur, with which Suse is mentioned; he probably restored the latter town under the name Iran-Khurra-Shapur (cf. Noldke, Gesch. d. Pers., p. 58, note 1). Roman prisoners were settled there. Nishapur also was one of this king's foundations; Tabari also mentions a town which cannot be accurately identified with a fire-temple Sarab-Adharan. The rebuilding of Djundai-Shapur formed part of the reparations the Emperor had to make; besides in the stories of these facts, there are confusions between Shapur I and Shapur II (Noldke, cf. cit., p. 66, note 2). The king is said to have sent for an Indian physician and given him a dwelling in Susa; from him the people of Susa learned the art of healing, in which they afterwards excelled all other Persians. Haruni says finally that Achatbar (quite well known from Pahlavi literature) lived under Shapur II. There are no legends associated with Shapur's death.

Shapur III, the historical Sapor III (probably 383-387 A.D.). On the historical events of his reign, his relations with Armenia and Rome, see Paulus-Winsow, cf. cit., col. 3355. Oriental tradition deals chiefly with his accession and his death. Shapur III was a son of Shapur II. According to Firdawsi, the latter at the end of his reign handed on the government to his brother Ardashir, who had to bind himself to give it to the young Shapur when he came of age. This he did as promised. More in keeping with historical truth, Tabari says that Shapur III followed his predecessor Ardashir when the latter was overthrown by the nobles. Al-Dinawar quite wrongly makes Shapur III succeed Shapur II directly. Maxud knows of a war of Shapur III against the Banu Iyad and other Arab tribes. The death of this king is ascribed to the collapse of his tent, caused by a storm, (Firdawsi, The Khuthe) or by a plot of the nobles (Tabari); the latter is probably nearer the truth. That Eutychius makes this ending war on Julian is due to the fact that his synchronism between the Sassanids and the Roman Emperors are wrong.

Bibliography: See the article ASAIUS.

SHAPUR (1) Name of the river of the district of Shapur Khuras in Fars; also called Bigashwar (in Thovenot: Suite du Voyage de Lewant, Paris 1674, p. 295: Bouschaviir; p. 296: Bouchavir), and river of Tawwadji. It must be identical with the ancient Gransis, mentioned by Arrian, India, 39; Pliny. Nat. Hist., vi. 99. The lower course, the proper river of Tawwadji, is formed by the junction of two streams, the Shapur and the Dalak-Rud, rising both on the S.W. border-mountains of the Iran-plateau, which extend along the Persian Gulf. The upper course is called by the Arab geographers Nahr Ratin; this name is, very likely, found in Pliny, Nat. Hist., vii. 133, where Draconis (w/h. d. Ratine) must, however, mean the river down to its mouth. This statement must be due to another source than Tuba, on whose authority the Gransis was mentioned in vi. 99. In his Nasbat al-Kuhut, Mustawfi al-Kaswin seems to indicate, that the Ratin, whose source is, according to him as well as to al-Istakhri, in the Upper Humayyidjan (I斯塔khri: Khumayydidjan) district, is a tributary to the Shapur Rudi (Gibb Mem. Ser. xxix., ii. 217: "It is a great stream, and it flows into the Shapur river, its length, till it joins the Shapur river being 10 leagues"). By this way of putting things, he can but mean, that the river of Tawwadji originates from two different streams, one of which is the Ratin. This, then, must be the older name for either the Shapur or the Dalak-Rud. Al-Istakhri (ed. de Goeje, p. 120) represents these facts in the same manner; there is said, that the Ratin flows through the district of al-Ziriyun (with v. l.) before joining the Shapur.

The other rivers of the system are the Djirra (or Djirshik), which joins the Shapur on the left, below Khakht, and the Ikhshin. The name of the latter (it signifies "blue"); can have originated from the colouring property of its waters, mentioned by the medieval geographers. Djirshik is the older name of the Djurra river, although in the Nasbat Djirshik and Djirra are erroneously described as two different streams. The account which the latter work gives of the Djurra is for the most part copied from Ibn al-Balkhi's Framasa. This states (Gibb Mem. Ser., New Series, i. 151) that the Nahr Djirra, rising in the Masran-district, waters the lands of Musjin and Djirra, and part of Ghandidayn, after which it joins the Shapur. In addition, al-Istakhri mentions the bridge of Sabak, under which the river Djirshik flows before entering the rawad of Khura (Ibn al-Balkhi's Djirra; on the reading Khura in the text of al-Istakhri, cf. P. Schwarz: Iran im Mittelalter, p. 35, ann. 4); after Khura the stream passes into Irud, where it unites with the Ikshin. The Nasbat makes the Djirra join the Shapur and the Djirshik the Ikshin: as its author erroneously splits up the one river Djirshik-Djirra into two, his account is here worthless.

The Ikshin, according to al-Istakhri and Musafir, rises in the Dadeh-hills, and unites with the Shapur at al-Djunkan. The Nasbat calls it a great stream; now at day, it is identified with a little water course to the SW. of the lake of Kazerun. There appears, then, to be a difference as to the question, whether the Djirshik and the Ikshin first join each other, and then unite with the river of Tawwadji, or flow into that stream each apart. Concerning the Shapur itself, the Framasa (p. 152) says, that it rises in the mountain region (Kuhistan) of the Bighapur district, which it waters, as also Khait and Dih Malik. It flows in the sea (Persian Gulf) between Djanik and Mammadshah. This account is repeated in the Nasbat, which only adds: "its length is 9 leagues". In Framasa, p. 142, the Bighapur district is said to have its water from a great river, called Rudi Bighapur. Owing to rice-plantation being there, its water is unwholesome (wakalam a nasawar). A short description of the river in modern times is given in J. Morier's Second Journey through Persia... between the years 1810 and 1816, London 1818, p. 49: "a river which... having pierced into the plain of the Dakhistan, at length falls into the sea at Rohilla. It takes its source near the site of Shapur, and when it begins to flow is fresh. But when it reaches the mountains it passes through a salt soil, and then its waters... become brackish. A lesser stream of the same river branches off before it reaches the salt soil, and flows pure to the sea".
The mouth of the river is at a short distance to the North of Bishur, near the frontier of the district Armadjan. Opposite to it lies the island Khārīk, in the shipping-route from Basīm to India. The name Mündistan in the Persian geographers is connected by Tomasek ("Topographische Er-"luterung der Küstenfahrer Nearch" in S.B. Ak. Wien, cxxxi. 65) with the Dicxomontani in Pliny, Nat. Hist., vi. 99. (The edition of Jan-Mayhoff reads Dēxī montani, in two words). According to Pliny, the river (Græn) is navigable for small vessels. Now at day, the principal mouth presents difficulties to navigation because of its shallows: two minor mouths can be navigated up to some distance. On the present conditions, the delta, and the bitumen wells on the left bank of the river, S. of Dalaki, Tomasek, op. cit., may be compared.

In Shāpurī, there was on the Græn a royal residence, Taaska, 200 stadia from the sea. This must be the same as the medieval Tawwad (or Tawwar), from which place the Shāpur is named river of Tawwad. In early Muslim times it was an important trade-city, which also had a considerable textile industry: the stuffs named tawwadda were well-known. This town belonged to the district of Adashir Khāra (Ibn al-Balkhi, Fārsnāma, p. 114). During the viith/viith century, the place had already declined; in Mustawfi al- karwīnī’s time (viith/viith century) it was totally ruined. Its site can not exactly be determined; nowadays the coast-district of the Shāpur river is called Tawwadd. Le Strange (Gibb Mem. Ser. xxiii., ii. 115, an. 2) thinks, that the site of the town may be identified with the present Dih Kuhna, “the chief town of the (modern) Shābnākāra sub-district of the Dhashhtān District”.

On the other Shāpur (Shāwūr), a tributary of the Dīrīl-Rūd, comp. the article KĀXÜN (li. 833).

(2) Name of the ancient capital of the district Shāpur Khāra of Fars; according to Maγaddašī, it was also called Shahrastan; its older name is Bishūr (from Pahlawi With-Bishūwar). A naive etymology is found in the Nāmrāt, whose author, Mustawfi, says, that the word Bishūr is a contraction of bīna-i Shīpur, building of Shīpur Ibn al-Balkhi on the other hand states, that the first syllable of the original Bishūr (with a long i) may disappear by way of tawanīf.

Shāpur-Khāra, the area, watered by the system of the Shāpur-Rūd, the smallest of the five provinces of Fars, contained besides the town of Shāpur some other important localities, e. g. Kazerūn (q.v.), which was regarded as its chief town after Shīpur had fallen into ruins, moreover Nibandishān and Dīrūr.

The old town of Shāpur was situated on the Shāpur-Rūd, at the road from Shirzān to the sea, to the north of Kazerūn. Mustawfi gives its situation as long: 36° 15′, lat. 20°. Its climate belongs to the garmkīr, but its atmosphere was considered not to be healthy, because the territory of the city was shut up by the mountains from the northern side. The environs were fruitful: they produced, besides many kinds of fruits and flowers also silk; the mulberry-tree being frequent in that region. Honey and wax also came from its territory. The town was founded by the Sasanian king Shāpur I. It was one of the three cities, where he colonized his captives of war. It has been supposed, with much reason, that the king made use of the skill of these Roman captives in the construction of his buildings, and also in the execution of his famous reliefs, that have been found in the ruins. These reliefs relate to the campaigns of Shāpur against the Romans. Tree later kings, Bahram 2, Narsai and Khusraw II have also added each a relief of themselves.

These works of art, who are already described in detail by Morier, have also been noticed by the Oriental geographers of the Middle-ages: at least, they mention a great statue, standing in a cavern, which European travellers could identify. The Orientals have exaggerated a mythical history of the city from before the times of its Sasanian founder. It was, according to these traditions, originally built by Tahrirūs, at a time, when there existed in Fars no other town besides Išṭakhr. Later on, it was laid waste by Alexander, to be only renovated by Shāpur I. The name of Tahrirūs’s foundation had been ʿAlī (Ibn al-Balkhi, Fārsnāma, p. 63, 142).

The Muslims subdued Shāpur Khāra in 637, after the conquest of Tawwad and the battle of Rishahr. Bishūr is mentioned on the occasion of the disturbances which ensued at the beginning of the kalifate of ‘Uthmān b. ‘Affān; the inscription in Fars (25 = 645/646) against the Arabs seems to have been directed for some time from Bishūr by a brother of Shahrūk, the governor of Fars, who had fallen in the battle of Rishahr. After the submission of the rebels, the inhabitants of Bishūr once more broke the treaty; in consequence thereof it was reduced by Abu ʿAbdallāh al-Asbagh and ‘Uthmān b. Abī l-ʿĀs.

In the time of the geographer Muγaddasī (end of the ivith/vith century), the town of Shahrastān or Shāpur was already decaying, its outskirts being ruined; the environs however were well cultivated. He notices the four city-gates and the ditch, also the musījid al-qanī, outside of the city. Perhaps this may be the musījid-i gāmī mentioned by Ibn al-Balkhi, whose words seem to imply, that it still existed when he wrote (beginning of the viith/viith century). In the end of the Bayḍr rule, the Shābnākāra chieftain Abdul Saʿd b. Muhammad b. Mamāl destroyed Shāpur, but, as Ibn al-Balkhi remarks, in his time the (Sabūk) government tried to restore the damage. These endeavours may have had effect as regards the district as a whole, but the city of Shāpur never has been raised from its ruins. As Morier visited the site (1809), he found only a poor village, Darsī, in the neighbourhood of the remains. The opinion of this traveller, that the town may have existed till the vīith century of the Christian era, because its name occurs in a table of latitudes and longitudes in the Fīn- Akhbarī carries no weight, for such a table may have been composed from older sources.

On the other foundations of Shāpur I, which were called after his name, comp. the article on that king, in addition to which it may be remarked, that the town of Shāpur Khāra, according to the Fārsnāma (p. 63), was situated in Khūstān, near al-Asbagh.

Bibliography: (Besides the authorities quoted in the article): The articles Draṭīnūs and Graṇīs in von-Wissowa, Realis, 2 (v. 1668; v. 1813); Le Strange, The Lands of the Eastern Caliphate, p. 259—263, 267; Barber de Meynard, Dictionnaire de la Perse, p. 142 sq.;
him to Samarqand. Sultan Muhammad, who became lord of Khurāsān after the death of Shāh Rukh, allowed him to return to Yazd (853 = 1449–1450), where he died in 858 (1454). He was buried in the Shāhārafa' madrasa, which he had built in the village of Taft.

In 828 (1424/1425) he wrote the history of Timur under the title Zafar-Nāmah, in a vigorous style, on materials apparently taken from an unpublished work with the same title written by Nūsām al-Dīn Shamsī under Timur’s orders in 804–806 (1401–1403), of which there is a unique M.S. in the British Museum. This history was translated into French by Félix de la Croix (1722) and from French into English by J. Darby (1725). The text has been published without the preface in the Bibliotheca Indica (Calcutta, 1887–1888). He also composed under the taqāṣṣāūl of Shāhār a treatise on enigma, another on magic squares, a commentary on the fables of Bāhīr and various poems.

AL-SHĀ'RĀNĪ, a nisba by which several individuals are known; it is usually derived from shār’s hair and is applied to any one with a strong growth of hair or with long hair (cf. al-Samānī, Kitāb al-Anwār, G. M. S., fol. 334b, Wright, Arabic Grammar, i. 164); in the case of the best known bearer of the name, it is a nisba from a place like the form also found, indeed more frequently, AL-SHĀRĪ (which has however a different origin: Vollers, Z.D.M.G., 1890, p. 390) but came to be interpreted as above.

al-Mawāni (ideal Kurna, also ABū 'ABD-AL-RAHMAN from his son; his family still existed in modern times) ABūDALLAH 'ABD-AL-AZHAR (d. 907) B. 'Ali b. M. at-Tirmidh, MUSAYYIBI (d. 970) B. M. MAWLAYI B. 'ABD-ALLAH al- 'ADM (d. 1073) B. ZANGALDI B. TIMĪNĪ (d. 1132) B. AL-'ANJARĪ B. 'ABD-ALLAH AL-MIJĀMIRĀNĪ, a famous Sufī, born 807, lived in Cairo from his early youth and died there in 973 (other dates given are wrong). Since 1188 his favourite mosque beside which he is buried, has borne his name. He earned his living as a weaver. He belonged to the tarīqa founded by al-'Abbās al-Shāhī (d. 656: Brockelmann, G. A. L., ii. 449, no. 29, and the article al-Shahābī) and himself founded al-Tarīqa al-Shāhābiyya (cf. Lane, Manners and Customs of the Modern Egyptians, 1899, p. 353) but not mentioned in Kahle, Islam, vi., p. 154. Among his Sufī teachers the most important was al-Khwāsawī (d. 941), whose maqāṣīs he attended for ten years. A number of other teachers are mentioned by him in various works, e.g. in al-Fahār al-mawrūd, al-Dhawāhīr al-muṣārith wa l-Ṭir al-markhūm and in the Lajūf al- Mu'amun; a full list of the shāhīs whom he knew and whose lectures he had attended is given at the end of his Taḥfīṣ. Like many Sufīs he had to endure persecution but was successfully in overcoming all hostility.

His literary activity was mainly concerned with mysticism, but he also dealt with learning, generally Kuranic sciences, dogmatics, šīb, grammar, and medicine; further we may mention his Taḥfīṣ al-
Besides his intellectual importance, which must not however be over-estimated, he owes his far-reaching influence on the Muslim world to his extremely prolific pen, writing in an easily intelligible form, which has contributed to the popularity of his works. His books were already popular in his life-time and are still very highly esteemed as may be seen from their numerous reprints. In spite of his insistence to the contrary there is hardly any originality in them; in mysticism especially he simply repeats the ideas of Ibn al-'Arabi [p. v.]. No. 8, for example, is a synopsis of his al-Futuhat al-makkiya, printed in 1166. In passing with reference to passages from the Futuhat itself, No. 9 an explanation of the verses of the Futuhat, No. 10 a defence of Ibn al-'Arabi; he tells us for example in No. 2, that he has used the terms used by Ibn al-'Arabi and not those of other Sufis. Al-Sha'arani endeavoured to bring about a synthesis of Sufism and Fikih in his person and was therefore in no wise hostile to the Sharif. Several of his writings show this strikingly, notably, No. 7, 21, 28, 43–51, 55–58.

2) Abu Muhammad al-Fadl b. Muhammad b. al-Mu'ayyib b. Zuhair b. Yazīd b. Kārān b. Badrān (the Persian governor in Yaman in the time of Muhammad): a traditionist who travelled widely to collect traditions; he also studied with the Kūfa grammarians Ibn al-A'tā'ī (d. 231); Brockelmann, i. 116, No. 6); learned Kūfī reading with Khalaf (d. 229): Nöddke, Geschichte des Qorān 1), p. 291, No. 9; Ibn Sa'd, Tahābāt, vii.iii. 87; al-Sam'ānī, fol. 771, 30) and heard the lectures of 'Abram b. Hantul (d. 241; q. v.); he did not however obtain general recognition and died in 282. His epithet which he received from his habit of wearing his hair long, was transferred to his descendants, his son Abu Bake Muhammad al-Baihaqī and his sons Abu 'l-Hasan Ismail (d. 347) and Abu 'l-Hasan Muhammad al-Tūsī. Al-Sam'ānī, fol. 334b, 16–16 and 101b, 13–13.

Constantinople 1720, p. 181); Ahkwart, Verzeichnis der arabischen Handschriften Berlin, s. v. al-Shara\'a.

(J. Schacht)

AL-SHARA\'A, from the Latin serra through the Spanish sierra, is the term applied by certain geographers of Muslim Spain to the mountains which stretch from the east to west in the centre of the Iberian Peninsula. The most definitive is given by Ibn Fadl Allah al-Umari. According to this author, the mountain range called al-Shar\'a stretches from the country behind Madrid Saltim (Medinaceli) to Córdoba. This term therefore describes the mountains now known under the names of Sierra de Guadarrama (Ar. Wâdî 'l-râmâ), Sierra de Gredos and Sierra de Gata in Spain and Sierra de Estrella in Portugal. In the time of al-Idrisi, however, it was applied only to the Sierra de Guadarrama, to the north of Madrid. The geographer Abu 'l-Falak, quoting Ibn Sa\'d, described the mountain system of the centre of al-Andalus under the name of Qasab al-Shara. According to him, it divided the peninsula into two well marked divisions, the north and the south.

Al-Idrisi, in his description of al-Andalus, gives the name of al-Shara to one of the twenty-six chains of this country, the twenty-second in his classification; this region, which embraced all the Sierra de Guadarrama, included the towns of Talavera de la Reina, Toledo, Madrid, al-Fahrum, Gualajara, Ucles and Huete.

SHARJA, name of three places in Arabia: 1. Sharja al-Kari, a port on the coast of the Yamun, where there were storehouses for the jarrah which was shipped to Aden; the native town of Sirad al-Din 'Abd al-Latif al-Zabidi, the famous grammarian who taught in Cairo and died in 802 A.H. (1399-1400).

2. A place near Mecca.

3. A port on the Pirate Coast, on the Persian Gulf between Omani and Bahrain.

(G. S. Colin)

SHARA\'A (a), opening, commentary; shar\'a means to enlarge, expand, open, thus to explain, comment upon; tahr\'a, dissection of bodies, anatomy.

1. The word shar\'a was taken as the title of the Shar\'a xciv. of the Kur\'an, as the first verse is: "Here we not opened, expanded your heart!." A legend has grown up round this verse. Mahommed, while still in the arms of his nurse, had his chest opened by two angels, who took out his heart and replaced it after washing it. This is why it is called the *opening of the heart*.

2. Shar\'a, commentary on a work which is being studied in different branches of knowledge; next come the glosses, tafsir. The greater part of the famous treatises or poems in Arabic and Persian literature have had commentaries written upon them; e.g. commentary on the Madhhab (Arabic polymath); on the Masnavi (Persian poetry); on the Mo\'a\'tir (law); on the Alfayy (grammar); on the Bibliography, phil\'a; on astronomical treatises; the great, middle, and little commentaries on Aristote by Avicenna. For the commentaries on the Kur\'an, a special word is used, tafsir [q.v.]. (CARRA\' DE VACA)

SHARA\'A (b), also SHAR\'A (originally, infinitely), the road to the watering place, the clear path to be followed, the path which the believer has to tread, the religion of Islam, as a technical term, the canon law of Islam, the totality of All\'ah\'s commandments (also used as the term for a single commandment = hukm, the plural shar\'ah = hukum, which is also used as identical with shar\'al); shar\'a, which was also used for custom and later became obsolete, is synonymous. Shar\'a is also used as a technical term for the Prophet as the preacher of the shar\'a, but it is frequently it is applied to All\'ah as the law-giver, shar\'a, what is laid down in the shar\'a. Anything connected with the canon law, or anything in keeping with it, or legal is called shar\'a. Shar\'a is also used in opposition to hadith ("purely sensible"); the former means the outward perceptible actions, which come under the cognizance of the law; the latter, all those in which this is not the case and so they have no significance in the shar\'a (offence and acceptances are, for example, in concluding a bargain, shar\'a, in other circumstances hadith). Similarly shar\'a and hukum are in contrast to hadith, the actual relations, from which those created by the law may be divergent.

The technical use goes back to some passages in the Kur\'an, xlv. 17 (of the last Meccan period) on the dialogue of Nuh\'le-Schwell, Geschichten der Qura\'ams, i. 58, n., and Grävner, Mohammed, i. 24 sqv., where we gave the name of shar\'a (a path to be followed) in religion; follow it and not the wishes of those who have no knowledge; ali\' (the same period, perhaps somewhat later): "To you be hath prescribed the religion (shar\'a), which," etc.; ibid. 20: s. gods, who have prescribed a religion for them (shar\'a\'), which All\'ah hath not approved"; v. 52 (Medina, perhaps of the first Medina period): "To every one (people) of you, we have given a hukum (a path to be followed) and a min\'a\'\'ah (a clear path)." Here shar\'a and hukum are not yet technical terms.

An old definition of shar\'a is given by Tabari on Kur\'an, xlv. 17: the shar\'a comprises the law of inheritance (f\'ar\'\'d), the hud\'d-punishments, commandments and prohibitions. In the later system shar\'a and hukum are considered All\'ah\'s commandments relating to the activities of man, of which those that relate to ethics are taken out and classified together as hadith (cf. ADAM, ALEKHEH). Fik\'h (along with the sciences of tafsir and hadith and the ancillary sciences) is the science of the shar\'a or the shar\'a\' (cf. FIKH) and can sometimes be used as synonymous with it, and the wa\'i\' al-fik\'h are also called wa\'i\' al-shar\'a. According to the orthodox view, the shar\'a is the basis (wasara\') for the judgment of actions as good or bad, which accordingly can only come from All\'ah, while according to the Mu\'a\'tia\' [q.v.], it only confirms the verdict of the intelligence which has preceded it.
for him than edifying literature. But it is not everyone who is able himself to ascertain from the șfih books with sufficient technical knowledge how the law affects particular cases; the laity rather require instruction from experts. This is done through fâzâda’s (legal opinions) and a scholar who gives fatwa’s is therefore called mufti.

Allâh’s law is not to be completely grasped by the intelligence, it is șa’bubî, i.e. man has to accept it without criticism, with its contradictions and its incomprehensible decrees, as wisdom into which it is impossible to enquire. We must not look in it for causes in our sense, nor for principles; it is based on the will of Allâh which is bound by no principles, therefore evasions are considered as admissible use of means put at our disposal by Allâh himself. Muslim law which has come into being in the course of time through the interworking of many factors, which can hardly be exactly appreciated (cf. Bergström, Islam, xiv. 70, nqq.), has always been presented to its followers as something elevated, high above human wisdom, and with justice, in so far as human logic or systematic has little share in it. A modest enquiry into the meaning of the divine laws so far as Allâh himself has indicated the path of enquiry is also not prohibited. There is therefore frequent reference to the deeper meaning and suitability (bi‘ma) of a law. But one must always guard against placing too much stress on such theoretical considerations.

For this very reason the šar’âa is not “law” in the modern sense of the word any more than it is on account of its subject matter. It comprises as an infallible doctrine of ethics the whole religious, political, social, domestic and private life of those who profess Islam, to the fullest extent without limitation and that of the tolerated members of other faiths as far as their activities are not inimical to Islam. Only one who has attained years of discretion (î’tifâd) and is in full possession of his mental powers (âshir) is bound to obey the ritual law (mutallâf). The prescriptions of the šar’âa may be classified under two main groups according to their subject: (1) Regulations relating to worship and ritual duties; (2) Regulations of a juridical and political nature. The first of these, similar, from the Muslim point of view (although it of course felt that the former, the so-called șhîâ‘, are more closely connected with Allâh), and this is also true of the numerous regulations scattered everywhere through the șfih books regarding the most varied matters, which have hardly been brought under the heads of the two main groups, e.g. permitted and forbidden musical instruments, the use of gold and silver vessels, the relations of the sexes, racing and shooting for wagers, the copying of living things, clothing and ornaments for men and women, etc. The fundamental tendency in the growth of the šar’âa was the religious evaluation of all affairs of life and legal considerations were only secondary (cf. Bergström, i.e.). A systematic division of the šar’âa was never reached. The Sunna sometimes classified it quite formally into șhâbūt (obligations regarding worship), mâ‘âmulât (civil and legal matters) and șu‘âbî (punishments), without any special stress being laid on this. We shall more systematically worked out among the Shî‘a Twelve Imâms an equally formal division and one not logically carried through to its con-

THE ENCYCLOPEDIA OF ISLAM, IV.
A collection into ḥadīth, 'ubūd (legal matters affecting two parties), ḥaḍār (legal matters affecting one party), ḥādhim (the remaining laws).

Among the early generations of Muslims, no unanimity prevailed as to what were the main duties of Muslims. Muhammad himself had laid special weight on the ṣalāt (ritual worship), suḥūk (charity), and ṣawm (fasting). Many further regarded participation in the ḥijāb (war for the faith) as one of the first duties of a Muslim, a view still held among the Khādijis. The Mahdi Muhammad Ahmad also adopted the ḥijāb as one of the main duties as revised by him (cf. Islam, xiv. 285). [The Shi'a regard recognition of the imāmat as one of the main duties. But according to the view that has come to prevail among the Sunnis, Islam is based on five pillars (asrūn, sg. ruh): ḥaḍār (the profession of faith), ṣalāt, suḥūk, ṣawm (fasting in the month of Kūmādān). The profession of faith is not dealt with in the Fīsh books. Questions connected with the creed were so numerous that the teaching of the first pillar soon became a special branch of study, the science of kalām. The other four arūn are sometimes classed together with ṣaddā (ritual purification) as the five 'sūrah. In the traditional arrangement of the Fīsh books, which is already the basis of the oldest books that have survived to us, but regarding whose origin, which must be earlier than the formation of the modern madhhis and probably belong to the second century, nothing is definitely known, the first five chapters are always devoted to these five 'sūrah, usually followed by the following subjects in succession: contracts, inheritance, marriage and family law, criminal law, war against unbelievers and attitude to unbelievers generally, laws regarding food, sacrifices and killing of animals, oaths and vows, judicial procedure and evidences, liberation of slaves.

All the prescriptions of the Fīsh are not to be taken as absolute commands or prohibitions. In many cases it is regarded, from the religious point of view, only as desirable or undesirable to do or permit something. Finally the law also regulates actions which it neither recommends nor condemns, but regards with indifference. In keeping with this, the following five legal categories (ahkām al-khamsa) are distinguished: (1) "duty" (fard), or "necessary" (wajib; cf. below), i.e. prescribed actions, the performance of which is obligatory, whose performance is rewarded and omission punished; of the further divisions of fard (wajib), the most important is that into fard 'ain and fard kifay (cf. Fard kifay), a similar division being made in the following category; (2) meritorious (maṣūba) (an action recommended, wajib ' ordained custom); (3) sunna in this meaning is not to be confused with the sunna of the Prophet, one of the maṣūba, although these two senses are connected; sometimes, however, the meaning of sunna as quality of an action did not remain un influenced by the other one; maṣūba "desirable", naft or maṣūba "voluntary" meritorious action; the performance of such is called ( ṣawlīma); i.e. actions the neglect of which is not punished, but the performance of which is rewarded; (3) permitted or indifferent (mūhā, rarely ṣawlī; cf. below), i.e. actions the performance or neglect of which the law leaves quite open and for which either reward or punishment is to be expected; (4) reprehensible (makrūh), i.e. actions which although not punish-
regard to persons; but they also showed a rabbinical turn for dialectic in continual new deductions and in stating cases. Thus a more learned body developed the school out of the council of the first Caliphs. It was only after many fruitless attempts to regain power that the pious became resigned and concluded a kind of truce with the temporal powers, a truce which is not laid down in any document, the terms of which are nowhere expressly formulated, but which was observed by both sides under the pressure of circumstances; they obeyed in practice, retaining full liberty to use theoretically, and thus we find everywhere learned men about the "present age" and warnings against "the princes of this world". The latter in their turn recognised the law in theory and did not claim for themselves the right of legislation in the field of Shāfī'ī, but when they thought fit, put the latter practically out of action by regulation in a contrary sense (fālihāt; cf. below). This did not prevent them when they wished to be considered particularly pious, from sometimes—usually at some one else's expense—enforcing one or another regulation of the Shāfī'ī, especially penal laws, but without themselves fulfilling the demands of the Shāfī'ī or being able to do so. One must not imagine too sharp a line drawn between the influence of the schools and the power of the state. This is particularly evident in the office of jāhār, the religious judge who is at the same time a state official (cf. e.g. Amedros, J. A. S., 1909, p. 1138; 1910, p. 761; 1914, p. 635; 1913, p. 821; Bister, "I. D. M.C. G., 1916, p. 395; Margoliouth, J. A. E. S., 1910, p. 307). Finally there was only left to him public worship, the law of marriage, family and inheritance, vows, in part also pious foundations (huqūq), all fields which in the popular mind are more or less closely connected with religion, and in which the Shāfī'ī always prevailed. So far as circumstances permitted, sins in the proper sense did not so much come under his consideration; as for example, invalidity of contracts, yet the religious character of the separate sections of the Shāfī'ī was already emphasised from the first (cf. Bergsträsser, Islam, etc., cit.). In the field of commercial law, practice therefore went its course unencumbered; only the Shāfī'ī never really prevailed. Constitutional and criminal law, law relating to war and taxation and all the more important suits regarding property, were more or more appropriated by the temporal power and cases were settled by a mixture of arbitrariness, local custom (dālā; cf. below) and a feeling of equity, and latterly also according to laws on the European model. Thus everywhere in Islam, quite independent of western influence, a twofold legal practice has grown up, which may be called the religious and the temporal. It is true that with the coming of the Ottomans a new wave of appreciation of the Shāfī'ī even in practice sets in, which found expression, for example, in the office of Shāhīd al-ālim [q.v.] and ultimately in the codification of the madhhab [q.v.]; but even here we do not have an actual enforcement of the Shāfī'ī according to the Shāfī'ī even the madhhab is illegal and the temporal jurisdiction continued to exist in this case also. This period is not only long past (cf. the words quoted above on Turkish modernism), but an attempt is being made to drive the Shāfī'ī entirely out of public life even out of the spheres reserved to it hitherto. European codes have been bodily adopted (cf. the articles in the Oriente Moderno and in the Revue du Monde Musulman).

Of the impossibility of enforcing the Shāfī'ī under prevailing conditions the Shāfī'ī themselves were quite aware under the pressure of the facts. Even their truce with the temporal power was based on a recognition of this. To brand almost all Muslims as sinners or heretics, because they had continually to break the law, if they were not prepared to withdraw from the world entirely, was not feasible; on the contrary, these things had rather to be taken as arranged and even wished by Allāh. Thus the Shāfī'ī was rendered virtually powerless in so far as it could not be enforced in practice; the way was even pointed out to evade its rules; appeal was made to the principle that necessity breaks the laws; it was emphasised that one does not become an infidel by breaking the law, but only by doubting its eternal validity. The conviction that the Muslim community would steadily become corrupted till the coming of the Mahdi and that the breach of Allāh's commands, which had been deduced in the course of development, would still increase, were expressed in traditions which were invented and even put in the mouth of the Prophet as prophecies; these conditions were thus sanctioned as a fulfilment of his prophecy. To sum up, the law in the convinced opinion of the Shāfī'ī themselves is intended only for the ideal community of the early decades of Islam and for the time of the Mahdi; this was a confession of the impotence of the pious in face of the circumstances of the age. The Shāfī'ī, essentially academic in character, hes at the same time always been a considerable educational force and is still ardently studied; in spite of al-Ghazālī's advice to the contrary, it is still regarded in wide circles of Islam as the only subject of true learning. But as it was held up as an unattainable ideal and became the doctrine of the infallibility of the ʿulamā' together with the conviction of cessation of the ʿighāthā forbade any divergence from what had been formally customary, it has become quite rigid: the jurists are opponents of all progress; even yet many prescriptions are still considered which only referred to the early Arabis and can have no longer any practical significance even for the most orthodox Muslim of to-day.

The heads of the law which are of practical importance for the Muslim (not regarding the later developments in Turkey) have already been mentioned; the following notes are now added and it should always be remembered that there may be considerable differences in detail in different periods and countries and that strictness and slackness in following the prescriptions of the Shāfī'ī has nothing to do with the degree of intolerance. Even in ritual and the religious duties in the narrower sense, which mean most to Muslims, ignorance and gross neglect is never general, but nevertheless throughout the whole Muslim world there is perceptible a striving to perform some at least of the main obligations as closely as possible. The usages especially, by which Muslims are externally distinguished from members of other creeds, are in general very closely observed and considered very important even if they are not quite in accordance with the letter of the law, while, on the other hand, many religious obligations imperative
in theory are generally quite neglected. In the law relating to marriage, families and inheritance, which usually can be quite closely followed in practice, we have already the limitations enforced by 'aḍa [q. v.] or 'urf, the local customary law that has existed from time immemorial in the different Muslim lands. The other parts of the law have no practical significance although everywhere and in every period we find concessions, pious men who endeavour to take account as far as possible of the teaching of the shari'a even in commercial affairs; but here the 'aḍa everywhere outweighs the rules of the shari'a, although according to the fiqh books the former only has binding force in cases where the law definitely refers to it. But this low estimation is not quite in keeping with the position which the 'aḍa had in the history of the shari'a. Muhammad himself allowed the Arab 'aḍa's to remain, so long as no uniform regulation was necessary or if the 'aḍa didn't conflict with his principles. He only laid down a few rules, and the 'aḍa was to be in no wise despised, although of course he did not lay down this as a principle. Islam then married the Arab 'aḍa's into foreign lands and even foreign 'aḍa's were at first partially recognised to a far-reaching extent; later this doctrine was given up in theory, although the 'aḍa always retained great influence, as the fiqh's have continually lamented; even the recognition of the 'aḍa as the fifth of the equal al-fikr was rejected. But public opinion knows only the 'aḍa; even the obligations of the law, which are actually observed, are observed simply because they belong to use and wont, and in the Dutch East Indies, for example (apart from the theologians proper), the 'aḍa is recognised among authoritarian Muslim circles as being even in theory equal in every way to the shari'a.

The position of the ḍiynūd [q. v.] with regard to the shari'a is similar to that of the 'aḍa's. The word is sometimes used in the sense of 'aḍa; generally, however, it is applied to the (in part based on the 'aḍa) regulations laid down by temporal princes of Islam; in this way ḍiynūd is the opposite of shari'a. The best known are the Kohnānī's of the Ottoman Sultan (cf. Kohnānī, Murād al-Ṣalāṭīn al-Ṣāliḥ, ed., Beirut, 1906, 163, 165, 1126), the Diyarbakır's, the Kohnānī's of the Sultan (cf. Kohnānī, Murād al-Ṣalāṭīn al-Ṣāliḥ, ed., Beirut, 1906, 163, 165, 1126).

The collection of ḍiynūd's from the Fikhi literature along with other sources for 'aḍa and ḍiynūd are important for ascertaining the actual practice; from the questions of those who seek ḍiynūd's we see in what parts of the law the people of a country are most interested, what heresies and abuses are most prevalent and what conditions arouse misgivings regarding their legality among pious laymen. At the same time the ḍiynūd (stratagem) literature has to be considered, which describes evasions of the law (cf. above) and deals fully with the actual practice; finally the documents, original documents as well as collections of forms and precedents (Sharī'a books, cf. Sharī'a) because in them more notice is taken than elsewhere of actual practice.

(Joseph Schacht)

SHARĪ'A (SHARĪ'A) (plur. aṣhāf, aṣhāra' [aṣhāf], "nobles, exalted", the root of which expresses the idea of elevation and prominence, means primarily a free- man, who can claim a distinguished position because of his descent from illustrious ancestors (cf. Lit. Ar., xi. 70 sqq.). It is of course assumed here that the meritorious qualities of the fathers are transmitted to their descendants. The possession of several illustrious ancestors is the requisite condition for a aṣhāf (also ḍarāb) ḍakīma, a "solid" nobility (Goldschmidt, M. Stutt. Stand., Halle a. S., 1808—1809, i. 41 sqq.; Lamennis, Le Droit de l'Islam, Rome 1914, p. 289 sqq.). Although in Islam the doctrine - based on Kurān xlix, 13, Verily the noblest among you in the eyes of God is he that fears God most - of the equality of all Arabs and ultimately of all believers grew up (Goldschmidt, op. cit., i. 50 sqq., 69 sqq.), it never quite displaced the old reverence for a distinguished genealogy.

The aṣhāf were the heads of the prominent families, to whom were entrusted the administration of the affairs of the tribe or alliance, cf. Ibn Hibāni, Sūr, ed. Wüstenfeld, p. 237 f.; 295, 17; al-Ṭabarî, Aḥkār al-Nawār wa l-Mudāf, ed. Leiden, i. 1110; the Aṣhāf of al-Yūn, ibid., i. 2017; the Aṣhāf of Aḥkār, ibid., ii. 541, 17; the Aṣhāf in Kūf, ibid., ii. 631 sqq. passim; the Aṣhāf of Kūrāzān, ibid., iii. 714; Aṣhāf al-ʿAlām, al-Yaḥṣūb, ed. Houtsmas, ii. 176. The aṣhāf regarded themselves as the aristocrats (aṣhāf al-ʿAṣfīf) with whom were contrasted the rude and unlettered masses (ʿarāfī, ruṣafī, ḍakhītsī) (al-Ṭabarî, ii. 631, 23). Aṣhāf also means a person of prominence in contrast to one of low social status (aṣhāf, muʿāṣir, Rukhāni, Bad al-Wahy, b. 6, al-Madīn, b. 11, 12). In this sense the word is frequently found in the older literature of Islam, e.g. in the very title of al-Baludjari's history, Ansār al-Aṣhāf and in chapter-headings, for example in Ibn Kūtayba, Aṣf al-Ṣalāḥ wa al-Aṣhāf (Uṣūl al-ʿAṣf), Cairo 1343, p. 332, in Ibn Aḥb Rabbī (al-ʿAlā, al-Ṣalāḥ, Hilāl, 1293, i. 29; Marājī, al-ʿAṣf, Aṣhāf al-Kutab al-Nāṣir, ii. 311; Novi, b. 406; muḥammad musa wa al-ʿAṣf) and in the Thulūt (Sīnā bi al-Aṣhāf, Lūfīt al-Mudāf, ed. de Jong, Leiden 1867, p. 77); cf. also L. Massing, La Faison d'al-Ḥallāf, Paris 1922, i. 830, note 6.

In Islam under the influence of ḍaḥāna's view and the increasing veneration for the Prophet, membership of the house of Muḥammad became a mark of special distinction. The expression Abī
This special position of the Banū Ḥāshim, among whom the Ṭālibīs are already celebrated by al-
Kūnaytir as ṣafarāwī and ṣāḥib (cf. al-Ṭāhir, text, p. 19, L. 29, p. 56, L. 80), led in the later 'Abbadid period (about the eighteenth century) to a limitation of the title of honor al-ṣafarāwī, which is also said to have been a ḍābah of 'Abbās ibn Ḥādī al-
Ṭābirī, al-Riḍāfī al-ḥāṣibī (Cairo, 1327, ii. 155, 18) to the descendants of 'Abbās and Abū Ṭalib.
Al-Tābirī (ii. 155, a) also mentions the ṣafarāwī as a special group alongside of the Banū Ḥāshim.

In al-Muwāridi (al-Ṭāhir al-nuṣrāfī, ed. Enger, Bonn 1853, p. 157, y) the ṣafarāwī are divided into Ṣafarāwīyūn and 'Abbāṣānūn. From the literary history of the second half of the eleventh century we know of the two brothers al-Sharif al-Riḍā and al-Sharif al-Murtada (cf. Brockelmann, G. A. L., i. 85). According to al-Suyūṭī, Rīs. al-Sulṭān al-Zainabīya, f. 90 eq. (= al-Sabbāh, p. 112 eq.), the name al-
Ṣafarāwī was used in the earlier period (al-qadīr al-
ʿawāfī) of all who belonged to the Abī Ṭalib, whether a Ḥāṣim, Ḥāṣib or Ṣafarāwī, i.e. a descendant of Muḥammad b. al-Ḥanāfīya or of another of 'Abbās’s sons, or a Djiḍī, Ayīl or Ab-
bāṣī. He points out that in the chronicle of al-
Dhahabī (cf. x), we often meet with titles like al-
Ṣafarāwī, Abī Ḥaṣib al-Sharīf, Abī Ayīl, al-
Ṣafarāwī, Djiḍī, al-Ṣafarāwī, al-Ṣafarāwī, which however proves very little for the older period. The Fāṭimids however, as he observes, restricted the name al-
Ṣafarāwī to the descendants of al-Ḥasan and al-
Ḥusayn and this had remained the custom in Egypt down to his time. Although this does not seem quite to agree with the very brief note that he quotes from the Kākūl al-Ṣafarāwī of Ibn Ḥadīr (al-Ṣafarāwī), according to which abṣafarāwī was used in Baghda and is a ḍābah of every Ḥāṣib and in Egypt of every Alawī, we may assume that the word al-
Ṣafarāwī in the strict sense was at that time applied only to a Ḥāṣim or Ḥāṣib. For, as al-Suyūṭī notes in another connection (p. 65b, al-Sabbāh, p. 150 eq., similarly Ibn Ḥadīr al-Haitamī, al-
Fāṭiḥi, al-ḥāṣibīyya, p. 142 eq.), a waṣf or a testamentary deposition in favour of the ṣafarāwī is only awarded to the descendants of al-Ḥasan and al-
Ḥusayn for such depositions are decided by local usage (ʿurf) and according to the usage in Egypt, dating from the Fāṭimid period, this term was applied only to the Ḥāsims and Ḥusaynids. In conclusion al-Suyūṭī observes that according to the linguistic usage of Egypt the noble blood (ṣafarāwī) was divided into different classes, namely al-
Ṣafarāwīs which included the whole of the Abī Ṭalib, another which contained only the Ḥāṣib, i.e. the descendants of 'Abbās which included the Zainabids, the descendants of Zainab bint 'Abbās and also all sons of 'Abbās’s daughters, and finally a still smaller class the ṣafarāwī al-misbaḥ which only admitted the descendants of al-Ḥasan and al-
Ḥusayn. Among the historians the title ṣafarāwī is first used for the 'Alids in the period of the domination of the 'Abbadid empire, when the 'Alids were re-
belling everywhere and attaining power in Tabaristan and Arabia (Snouck Hurgronje-Mekka, i. 56 eq.).

The case of al-sawādī "lord" is similar to that of ṣafarāwī. Al-sawādī means the master in contrast to the slave (cf. e.g. al-Bukhārī, al-Ṭāhir, b. 1, etc.; i. al-
Mirmidhī, al-Bīrū, b. 53), and the husband as opposed to the wife (e.g. Kūrān, xii. 25). Al-sawādī was also the usual name for the head of a tribe or clan (cf. Kūrān xxxii. 67; Ibn Ḥāshim, p.
295. 157, whose authority was based mainly on personal qualities like discretion (ilm), liberality and command of languages. Ibn Kutanab, in his Kitab al-Abhur, I. 223 ascribed G. Jacob's, Altnachral, 2. ed., Berlin 1857, p. 223 sqq.; Lammens, Le Bureau de l'Islam, p. 206 sqq. Certain physical qualities are also said to mark a man as a sayyid (Ibn Kutanab, loc. cit.; Mez, Die Renaissance des Islam, p. 144). The Khurān praises the prophet Yahyā as a sayyid (ill. 34). Sayyid may have become particularly used as a title for "Alī and Tālibids at about the same time as sharīf. This development was probably not unaffected by traditions which describe al-Husayn and al-Husayn's parent as sayyids. The Prophet is recorded to have said of al-Husayn, "this my son is a sayyid and perhaps Allāh will bring about reconciliation between the two parties of Muslims through him" (al-Bukhārī, al-Ṭabarī, b. 20, No. 2, Fadl al-Sabāha, b. 23; al-Tirmidhī, Manaqib al-Hanāfī, b. 30). Al-Husayn appears in the Hadīth as Sayyid Sabāha al-Ūlama, "lord of young men among the inhabitants of Paradise" (al-Nabābī, p. 64, sqq.) and along with his brother he is celebrated as Sayyid Sabāha etc. "the two lords of the young men" etc. (al-Tirmidhī, op. cit.; al-Nasāī, Khidrī's Amīr al-Muwāminin, 'Ali b. Abī Talib, Cairo 1908, p. 24, 26), while their mother Fātimah is lauded by the Prophet as "mistress of the women of my (this) community" or "mistress of the women of the world", "mistress of the women of the dwellers in Paradise" (Sayyidat Nāīr al-Insāniyya, and Muhākima 'l-Umama, S. A. al-Isfahānī, al-Sayyidat, S. A. al-Ūlama, cf. Ibn Sa'd, Tabaqāt, III. 7, 7 sqq.; al-Bukhārī, Fadl al-Sabāha, b. 29; al-Nasāī, op. cit., II. 3 sq.; al-Nabābī, p. 54, sqq.). The Prophet is said to have called "Ali Sayyid al-Ārāb and Sayyid al-ムシフィン and to have once said to him: "Thou art a sayyid in this world and a sayyid in the next" (Maḥbūb al-Dīn al-Tabarī, op. cit., II. 277). In a verse in al-Bukhārī, op. cit., p. 96, 97, "Ali is described as sayyid al-nabī, but as a rule such expressions are only applied to the Prophet (Sayyidat Wulad Adam, Ibn Sa'd, op. cit., II. 1, and 3; Sayyid al-Ḍiyār, Ibn 'Abd al-Rabbī, op. cit., II. 246, 17). In the beginning the term sayyid may have been first applied to those who possessed some authority in their own sphere. In the genealogical work of the Hanāfī Ibn Maḥmūd, 'Umdat al-Ṭalibat fī Anbāb Al-Ārāb, individual 'Alīs are often described as sayyids (Boukhoury edition 1318, 56: p. 51, 56, 57, 58, 59, 64, 70, 76, 81, 96, 97, 98, 103, 104, 112, 117, 118, 127, 137, 142, 149 sqq.). Al-Qabābālī, Ẓāhir al-Islām, MS. Leyden, 1721, II. 65a gives this title to the Twelve Imāms 'Ali b. Maḥmūd. We also find this combination as al-Sayyid al-Sharf or vice versa (al-Numayr, Nāṣir al-ʿArāb, Cairo 1342, II. p. 777, 78); al-Khaṭṭār, al-ʿUṣūl al-Istiqāf, l. Gibb Mem. Ser., iii. 4, Leyden—London 1913, p. 324, 327). The word sayyid also came to be applied to Sufi authorities, saints and notable theologians, e. g. al-Sādi al-Šīfī, al-Sādi al-Ārāb (al-Sharfī, Tabaqāt al-Khayrāt, Cairo 1321, II. p. 2, 3, 195, 31; al-Sādi al-ʿArāb (Ibn Ḥadījr al-Haṭṭāmī, al-Sādi al-ʿArāb, l. p. 124, sqq. u. s.). The term sayyid or šīfī (especially in al-Shafi, Ẓabākh al-Anwar fī Tabaqāt al-ʿArāb, Cairo 1315), became very popular for persons regarded as holy, and is the expression used by the slave in addressing his master.
The green turban which became usual as a mark of the aṣḥāf, especially in Egypt, owes its origin to an edict of Sulṭān al-Aṣhāf Shāh-bān (1647–78 = 1063–1076) who ordered in 1773 (1371/1372) that the aṣḥāf should wear a green badge (ṣulṭān) fastened to their turbans to distinguish them from other people and as a honour for their rank (Ibn ʿUyayn, Ṣalāṭīn al-Ṣubḥ, Cairo 1311, l. 237). “Ali Dede, Muḥammad al-Aṣhāf al-Muḥāsin ar-Riṣāqa, Bülkic 1300, p. 85; Docy, Dict. des noms des sultans chez les Arabes, Amsterdam 1845, p. 308; Men, op. cit., p. 59). This edict which is commemorated by the poet of the time recalls that of al-Maʿmūn which replaced in Rāmnān 1001 (507) the black colour of his house by green, when he designated the Ḥusainī “Ali b. Mūsā al-Riḍā as his successor (al-Tahārī, II. 1012 sq.). The Ḥasanī Muhammad b. Ujjār al-Kattānī in his treatise on the turbans (al-ʿĀṣaṣa wa-miṣrīf at-shāqīm nasiḥat al-sulṭān, Damascus 1542, p. 97 sq.) supposes that the descendants of the ʿĀṣaṣa and Fītmān bequeathed retained green as their colour, but confined themselves in practice to wearing a piece of green material on the turban. This, he thinks, fell into disuse in time, until Sulṭān Shāh-bān revived it by his edict. According to the work Durr al-sulṭān which is quoted by al-Kattānī, the wearing of an entirely green turban dates from an edict of the Fatih of Egypt al-Sayyid Muḥammad al-Shārī (cf. in al-Ḥāfiz, Abūl-ʿUwwāl, Ṣulṭān al-ʿUqūs, fī muṣn wa ar-ṣūd al-sulṭān, Cairo 1311, p. 164 infra) of the year 1004 (1596). When he had the khamsa for the Khan el-Atrash exhibited, he ordered the aṣḥāf to come before him, every wearing a green turban. Al-Sayyid al-Muṣṭafī observes that the wearing of this badge is a permissible innovation (khudn, nushkha) which no one, whether a šarīf or not a šarīf can be prevented from following, if he wishes to do so, and cannot be forced upon any one who wishes to omit it, as it cannot be deduced from the law. At most it can be said that the badge was introduced as a distinction for the aṣḥāf, it is therefore equally permissible to limit it to the Ḥasanīs and Ḥusainīs or to allow it to the Zainibāys also and to the wider circle of the remaining Aṣla and Ṭilībās. An endeavour is made to connect this custom with Korān xxvii. 59 in which some scholars see a suggestion that learned men should be distinguished by their dress, for example, by wearing long sleeves or by the winding of the μuḥāshā, so that they may be really recognised and honoured for the sake of learning (al-Sayyīf, p. 56-58, complete in al-Sulṭān, p. 183 sq., abbreviated in Ibn Ḥadīr al-Ḥalīmī, at-Ṭarāfī, al-ṣulṭānīya, p. 124 and al-Nabātī, p. 41 sq.). With regard to the Korānic verse above mentioned, it should, according to al-Sulṭān (p. 101), be held that the wearing of the green badge or green turban is recommended for the aṣḥāf, and blameworthy for others than they, because the latter by wearing it would put themselves into another than their real genealogical category, which is not permitted. (On this account according to al-Kattānī, even the Ṣulṭānī authors considered the wearing of a green turban forbidden to a non-šarīf. With regard to tradition transmitted by ʿAbd al-Rahmān ibn Ḥanbal, according to which the Prophet on the day of resurrection is clothed by his Lord with a green turban, Shāfīʿī teachers are said to incline to the view that this headgear is desirable for the aṣḥāf (al-Kattānī, p. 98 below, cf. 95). Other authorities like to insist that green is the colour of the garments of the dwellers in Paradise (cf. Kurān, xxviii. 30, lxxvi. 21), and that it was the Prophet’s favourite colour (al-Kattānī p. 95 sq., with references to Ḥadīth). The green turban did not become the general headgear of the aṣḥāf throughout the Muslim world. In Arabia they rarely wear other than white turbans (Šamūk Hurgovitse, Vorles. Gesch., T. 65). The green colour was preferred in Persia (Charīn, Vorles. Gesch., loc. cit.), according to P. M. Sykes, Ten Thousand Miles in Persia, London 1903, p. 24; note 1, the aṣḥāf is distinguished by a blue turban and a green linen-cloth. In India aṣḥāf’s wear green; they are therefore occasionally called: aṣḥāfī: “green-robed” (jafar Shāhīz Horkelts, op. cit., p. 303). According to al-Nabātī (p. 42 sq.) the green turban is not a mark of noble blood in Constantinople. It is worn there not only by learned men and students but also by artisans and street merchants, especially in winter as it does not show dirt so quickly. On this account many aṣḥāf are said to avoid the colour green.

The colour of the Prophet’s blood are also distinguished in other ways according to orthodox views. For example the sharing in the ḍāba (ṣekh, q.v.) is forbidden them. The Prophet is recorded to have frequently said of the ḍāba: “It is the blood of men (cf. Kurān, ix. 104) and permitted neither to Muḥammad or the family (ṣe) of Muḥammad”. The legal authorities differ on the question whether this rule applies not only to the Bān Ḥāshim but also to the Banū Ḥiṣaib and the clients of these families, and whether also free-will offerings (ḍāba al-ṣafī, ṣalāfījum) are included under it (al-Nabātī, p. 33-34).

The sons of Fītmān have the privilege of being called “sons of the Prophet of God” and thus having their descent traced directly to the Prophet. They are therefore frequently addressed as Ibn Rasūl Allāh. From the work of al-Ṭabarānī sayings of the Prophet are quoted in justification such as: “All the sons of one mother trace themselves back to an agnate, except the sons of Fītmān, for I am their nearest relative and their agnate” (Wâlid ibn am Ṣalāḥ ibn Abū Tālib, from Ibn Ḥadīr al-Ḥalīmī, al-Farāw, al-ṣulṭānīya, p. 123, sq.).

The sons of Bāzin are the noisetest in descent it results that the female members of the family have no one of equal birth to them (luf). According to al-Sayyīf (p. 56 sq., al-Sulṭān, p. 188; cf. Ibn Ḥadīr al-Ḥalīmī, op. cit., p. 123, sq.) it is a very old opinion that the son of the marriage of a šarīf woman with a man who is not a šarīf, is not a šarīf. As al-Sulṭān, p. 192, points out there are many people who consider him a šarīf. In practice however marriages of a šāyid’s daughter with men not of their equals are extremely rare (Šamūk Hurgovitse, The Arakheen, Leyden 1906, p. 158; D., Vorles. Gesch., l/v. 297 sq.; Mrs. Meer Ḥasan Ali, Observations on the Muriżmān of India), with notes by W. Crooke, London 1917, p. 4 sq.).

al-Shafrānī (in al-Nabātī, p. 89 sq.) notes that it is not considered seriously to marry the divorced wife or widow of a šarīf; one may only enter into matrimony with a šarīf woman, if he knows
he is in a position to afford her all that is due to her, will obey her pleasure and consider himself her slave.

The following saying of the Prophet refers particularly to the Aḥl al-Baʿīt: "Every bond of relationship and consanguinity (nabūba wu-maṣūmū) will be severed on the day of resurrection except mine". They are therefore the only ones whose relationship can avail them (al-Nabhaṇī, p. 22, 30, 39 sq., 47).

A weak tradition makes the Prophet say: "The stars are a security (āmūn) for the dwellers in the heavens and my aḥl al-Baʿīt are a security for the dwellers on earth" (or 'For my community'). According to the commentators by the aḥl al-Baʿīt are here meant the descendants of Fāṭima. Their existence on the earth is a security for its inhabitants in general and for the community of the Prophet in particular against punishment or against overwhelming by 'temptations' (fīṣṭām). It is not the pious among them that are specially meant here; this distinction is solely based on their descent from the Prophet (al-ṣaḥāba al-nabhaṇī) apart from any qualities, meritorious or otherwise, which they happen to possess as individuals. An allusion to this opinion is also sought in Kūrān viii. 33 (al-Nabhaṇī, p. 28, sq., 30 and 47; cf. al-Sabbān, p. 119 sq.; Ibn Ḥadījar al-Haṭaimī, al-Saʿūdī, p. 144; al-Ṭabarī, al-ḥadīthiyā, p. 122, 1199).

None of the Aḥl al-Baʿīt will suffer the punishment of Hell (al-Maṣṣūrī, f. 109b; al-Nabhaṇī, p. 24, 12 sqq., 33, 37, sq. 45), and Aḥl al-Hasan, and Aḥl al-Hussain with their families will be the first to enter Paradise along with the Prophet (al-Nabhaṇī, p. 48, 11 9sq.).

The "sons of the Prophet of God" may be certain of divine forgiveness and any wrong inflicted by them must be accepted like a dispensation of Allah, if possible with gratitude. Ibn al-ʿArabi, who takes the verse of purification in connection with Kūrān xlvii. 2, in which the Prophet is promised pardon for his sin, observes, inter alia: "It behoves every Muslim, who believes in Allah and in which he has revealed to recognise the truth of the word of Allah: 'Allah will remove the stain from you. O people of the house and purify you completely', so that he may be convinced with respect to everything done by the Aḥl al-Baʿīt that Allah has given them pardon for it. It is therefore not fitting for a Muslim to criticise them, neither for what is not in keeping with the honour of those of whom God has testified that he has purified them and removed the stain from them nor for pious works performed by them, nor for good deeds which they have performed, but always to remember God's watching care over them (al-Faḍlul al-Maʿkūli, Cairo 1349, Chap. 29, f. 196, 17-195, v. 33, esp. 196, 31 sqq.; cf. 197, 14 sqq.; in al-Maṣṣūrī, f. 108b, 13 sqq.; in al-Nabhaṇī, p. 11-13, 76-79).

A sharīʿah who has received good punishment for incontinence, taking intoxicating liquor or theft may be compared with an amūn or sulṭān whose feet have become soiled but are wiped clean by one of his servants. He is likewise likened to a refractory son, who is however not deprived of his inheritance (Ibn Ḥadījar al-Haṭaimī, op. cit., p. 122, 11 sqq.; al-Nabhaṇī, p. 46).

The duty of love for the Aḥl al-Baʿīt is based on Kūrān xiii. 22, where barāk is referred to relationship with the Prophet (Ibn Bīrī, Kāfīr al-Maṣāḥ, p. 51 sqq., 20, 21, v. 22; al-Maṣṣūrī, f. 112b, 16 sqq.; Ibn Ḥadījar al-Haṭaimī, al-Saʿūdī, p. 104, 14 sqq.; al-Shabrāwī, p. 4 sqq.; al-Sabbaḥ, p. 96 and sqq.; al-Nabhaṇī, p. 72 sqq.). It is further pointed out that the conclusion of the ṭaḥābād (q. v.) contains a prayer for the Al-Muḥāmmad (Ibn Ḥadījar al-Haṭaimī, al-Saʿūdī, p. 143; al-Nabhaṇī, p. 75 below). A saying attributed to al-Shāfiʿī (q. v.) is as follows: "O ye members of the house of the Prophet, love for you is a duty to God, which he has revealed in the Kūrān". It is a great honour for you that any one who does not say the ḥaṭīya (q. v.) over you has not performed the gāfūl (op. cit., p. 85). There are further a large number of traditions, which urge this affection, represent it as a proof of belief, and promise in return for it the sharīʿa of the Prophet on the day of the resurrection and a heavenly reward, forbid signs of hatred and even describe the latter as infidelity (Ibn Ḥadījar al-Haṭaimī, al-Saʿūdī, p. 141 sq.; al-Shabrāwī, p. 3 sqq.; al-Nabhaṇī, p. 81 sqq.).

Reverence and respect ought therefore always to be shown to the sharīʿah, especially to the pious and learned among them; this is a natural result of reverence for the Prophet. One should be humble in their presence: the man who injures them should be an object of hatred. Unjust treatment from them should be patiently borne, their evil returned with good; they should be assisted when necessary; one should refrain from mentioning their faults, on the other hand their virtues should be lauded abroad; one should try to come nearer to God and his Prophet through the prayers of the devout among them (al-Shabrāwī, 7, 117 sqq.). According to al-Shāfiʿī, one should treat a sharīʿah with the same distinction as a governor or a šayṣ al-ṣābīr. One should not take a seat if a sharīʿah is without one. Special reverence should be paid to the sharīʿa; one hardly dare look at them. Any one who really loves the sons of the Prophet will present them with anything they wish to buy. Whoever has a daughter or sister to give in marriage with a rich dowry, should not refuse her hand to a sharīʿ even if he has no more than the bridals gift for her and can only live from hand to mouth. If one meets a sharīʿah or sharīʿa on the street, who asks for a gift, one should give him what one can (al-Nabhaṇī, p. 89 sqq.).

One should not refuse marks of respect even to a sharīʿah whose conduct is contrary to the law (fāṣīb), because one knows his sin will be forgiven him. This high esteem is due only in account of his pure origin (al-ṣaḥāba al-ṣalihā) and faith does not affect his genealogy (al-Nabhaṇī, p. 45). If it is doubtful whether a man is a sharīʿ or not there is nothing to object to in his genealogy from the legal point of view he should be treated with the proper respect. Even if his pedigree is not legally established, one should not assume he is lying without being absolutely certain on the point (Ibn Ḥadījar al-Haṭaimī, al-Faḍlul al-ḥadīthiyā, p. 122, 17 sqq.; al-Nabhaṇī, p. 46). There are a number of anecdotes in which an individual who has been neglectful of respect to a sharīʿ or who has irritated one has been corrected in a dream by the Prophet or by Fāṭima (al-Maṣṣūrī, f. 144b, 11 sqq.; Ibn Ḥadījar al-Haṭaimī, al-Saʿūdī, p. 148; al-Nabhaṇī, p. 45; 95 sqq.).
The numerous sáveis and sharifs are represented throughout the whole Muslim world. Several families have attained ruling power for longer or shorter periods, e.g., in Tabaristan and Dauin, in western Arabia, Yemen and Morocco. Other families have exercised local influence but by far the great majority lived and live in poor circumstances. The genuineness of an ‘Alid pedigree has for long not been unassailable. The genealogical tradition has survived in its greatest purity in western Arabia and Ḥadramawt. The family of ‘Alawi’s in Ḥadramawt, which has produced many notable jurists, theologians and mystics, regard only the west Arabian sharifs as their equals in birth.

The saiyid, who distinguishes himself by a pious life, readily comes reverenced as a saint. His blessing is expected to bring good fortune, while his wrath brings misfortune. By vows and gifts it is hoped to secure his auspicious intercession and his tomb becomes a place of pilgrimage. On the tomb visited by saiyids and sáveis in Cairo al-Shalshaliy’s work cited below.

In the Yemen as in Ḥadramawt, the saiyid who is to be distinguished there from the armed shirf carrying a staff (uškār) and rosary, acts as intermediary between two disputing parties. He also drives away the locusts and his prayer puts an end to infertility while his curse makes it continue. Many saiyids are also visited for their healing powers. Reverence for the saiyid frequently finds expression in presenting him with lands (H. Jacob, Parfumier of Araby, London 1915, p. 45, 173, sqq.).

For a fuller description of the sharifs and saiyids and the reverence paid to them see Snouck Hurgronje, Mekka, I, 32 sqq., 70 sqq.; on the saiyids of Ḥadramawt, who are also strongly represented in the Malay Archipelago and to whom belong the founders of the sullāmakē of Siak and Poutanakan, cf. do., Vesper. Geschr. iii. 166 sqq., and The Alchemists, L. 153 sqq.

For the history of the Sharifs who ruled in Mekka and the Hijāz from the 4th (4th) century till 1244, see Snouck Hurgronje, Mekka, I, and the article Mekka (history); cf. also the sketch in al-Barāṭinī, al-Nikāḥ al-Hijāzīyūa, Cairo 1329, p. 73 sqq. — Information on the families of ushrif in Arabia is given in A Handbook of Arabia, I, comp. by the Geogr. Sect. of the Naval Intelligence Division, London n.d., Ind. and Aṣhrif.

On the Sharifs of Morocco cf. the art. Aṣhrif, BANAN, HUSAYN; SHARIF; on the Sāiyids of India cf. art. IVIRA (Brit.) II.

The genealogy of the Tālibīds is discussed in Aljumā’a b. Ḭan... Ibn Muḥammad al-Di‘ūdī al-Hasani, ‘Umdat al-Tālib fī an-Nābi Al-ʿAṭī Talīb, Bombay 1918.

Ahl al-Balīq. Al-Sarafṣ al-ʿAṭībī, Abu ʿl-Ḥasan al-Murqab b. Abī Tahār al-Muḥāammad b. Abī Talīb al-Ḥasan b. Musa descended from al-Ḥasan b. ‘Alī through Biṣāb al-Ka‘im and on account of which he and his brother Abī al-Muṣābīdān [q. v.] were given the family name al-Muṣābīr. His father who was born in the year 307 (919/920) was under Bayād rule in Baghdaḍ, Naṣīḥ of the Tālibīn, an office resembling that of a herald’s-college for the descendants of the Prophet through ‘Alī’s wife Fāṭima, al-ʿAṭībī was born in Baghdaḍ in the year 359 (970) and appears to have been very precocious; we are told by Tha‘alibī, his contemporary, that he composed his first verses when he had hardly passed the age of ten years. The earliest dated poem in his Diwān was composed in the year 374, when he was 15 years old. Tha‘alibī, and the authors who copy him, assert that al-ʿAṭībī was undoubtedly the greatest poet of the Tālibīn, perhaps even the greatest poet the tribe of Kurājah had produced. If we take the measure of so much inferior poetry composed at that time, for the times were prolific in poets, the Ta‘alibī may be right, and we cannot but admit that some of his elegies upon friends have a touch of genuine feeling. The quantity of poetry composed by him in his short life is also remarkable, as his Diwān filled originally four volumes. Al-ʿAṭībī must have been of feeble constitution and he tells us himself in one of his poems that he began to show grey hair at the early age of 21 years. Several other poems tell us of his recovery from serious illness. Perhaps the anxiety for his father who for a long time was imprisoned in Shīrāz for some offence which I have been unable to elucidate, and the agitation in Baghdaḍ due to the marked preference given by the Bayād amirs to the Shi‘a and the consequent rancour of the Sunnis, may have contributed to undermine his health. His father had retired from the office of Naṣīḥa and al-ʿAṭībī was honoured with the appointment to this important office. Tha‘alibī, and other biographers who copy him, state that he received this post in the year 388, but the introduction to the poem which he sent to Bahāʾ al-Dawla thanking him; for his favour tells us that the diploma was sent to him from al-Bayrūt, together with the command to serve as leader of the pilgrim-caravan, and arrived in Baghdaḍ on the 1st of Jumādā II in the year 397. The following year, Bahāʾ al-Dawla honoured him further by conferring upon him the title of al-ʿAṭībī by which he is generally known. Three years later in the month Dhu ’l-Qa‘da 401, he received from the same amir the further title of al-Sarafṣ. Bahāʾ al-Dawla continued to confer other honours upon him and on Friday the 16th of Muḥarram 403, he was appointed Naṣīḥ over the
descendants of the Prophet in the whole dominions of the amir, but in Djiunmâd I. of the same year he felt so seriously ill, that his life was despaired of.

However two months later in the month Radja' there had so far recovered that he was able to send another poem to Sultan al-Dawla who was then in Arradji, where Bahê al-Dawla died in Dju-
mâd II. His last poem composed in praise of any prince was a poem he addressed to Sultan al-Dawla in the month Safar 404 and the last dated poem in his Dîwan is an elegy upon the poet Ahamd b. 'Ali al-Ratti who died in the month Sha'ban 405. He himself died on Sunday morning the 6th of Muhamarr 406 (26th of June 1016). His brother 'Ali al-Murtaja was so overcome with grief that he could not stay in Baghâd to attend his funeral and the wazir Fâkhr al-Mulk said the prayers over his grave. He was buried in his house in the quarter of the Anâbât in the suburb al-Keâkh of Baghâd. In the time of Ibn Khallîkân the house as well as the grave had been demolished. From occasional references to al-Ra'ji found scattered we can form the opinion that he was of an amiable character and broad-minded as is proved by his friendship with al-Sâbî, whom he honoured with two elegies though he was not a Muslim, and even the reproaches of his brother on account of the first of these did not deter him from composing a second one in which he pronounces his grief even more. His poems as already stated are very numerous and were collected by several friends; manuscripts are not rare and we actually have two printed editions (Bombay 1889 in one volume and Baqir 1892/1893 in two volumes). Both these editions are in alphabetical order; this is also the case in the two MSS, in the British museum (Add. 19410 and Add. 35350) consulted, except that in one manuscript the Elegies are separated from the other poems. It is of value that both in the MSS. and the printed editions many of the poems are precisely dated and these dates have furnished some of the details of the biography, but as many poems are elegies upon eminent persons who died in Baghâd, these dates have additional historical value. There are poems for every year from 374 to 405 and a full analysis would require too much space. In addition to his poems al-Ra'ji is credited with two works dealing with the exegesis of the Kurân entitled Ma'dni al-Kurân (obscurities of the Kurân) and Ma'dnî al-Kurân (Metaphors in the Kurân), these works have not come down to us. In his Catalogue of the manuscripts in the library of the Escorial, Dérénbourg describes under No. 348 a manuscript of a work entitled Ta'if al-
Khayâtal as being by al-Ra'ji. Whether the error is due to Dérénbourg or to the scribe who wrote the codex, there can be no doubt that this is a mistake. The brother of al-Ra'ji, 'Ali al-Murtaja, certainly wrote a book of this title and another 'Aliid author, Hibat Allah b. al-Shâjâ'î quotes in his Idrâsî (Paris, MS. Arabe, No. 9257, fol. 96 verso) from the Ta'if al-Khâyâtât of al-Murtaja; further in the introduction of the Escorial MS. the author mentions that he had previously written a book on *grey hair* (I'dé Shâ'î). This latter book we possess in a printed edition (Constant-
inople 1302) and it certainly is by al-Murtaja, who tells us at the end that he finished it in the year 421, or fifteen years after the death of his brother al-Ra'ji. We cannot possibly admit that the two brothers wrote two books with exactly the same titles and the same, or similar contents, and we consequently have to attribute the work in the Escorial MS. to al-Murtaja.

**Bibliography:** Tha'âlib, Yâzîma, Damascus, ii. 297—315, with many extracts of his poems; Ibn Khallîkân, ed. Wîsântenfeld, p. 659, Cairo ed., ii. 2; Yâsîn, Mir'ât al-Djâimân, ii. 18—20; Brockelmann, G. A. L., i. 82. — Poems by al-
Ra'ji are found in nearly every anthology.

(F. KREKHO)

**SHARIF PASHA**, an Egyptian statesman in the reigns of the Khedives Ismâ'il and Tawfîk. He was of Turkish origin and was born in 1853 in Cairo where his father was then acting as kâfi 'l-îmâma sent by the Sultan. When some ten years later the family was again temporarily in Cairo, Muhammad 'Ali had the boy sent to the military school recently founded by him. Henceforth his whole career was to be spent in the Egyptian service. Sharif was a member of the "Egyptian mission" sent to Paris for higher education (cf. the article EGYPT) which included the future Khedives Sa'id Pasha, Tawfik Pasha and 'Ali Mustârik Pasha. He then took a military course at St. Cyr (1843—1845) and served in some time in the French army until the mission was recalled by 'Abbas I in 1849. For the next four years he acted as secretary to Prince Halim, then took up military duties again in 1853 and attained the rank of general under Sa'id Pasha. During this period he was much associated with the commander-in-chief of the Egyptian army, Sulaimân Pasha (de Sèves), whose daughter he married.

In 1857 Sharif Pasha began his political career as Minister of Foreign Affairs and he acted as deputy for the Khedive Ismâ'il when the latter went to Constantinople in 1855. He later filled in succession all the high offices of state. It was he who in 1866 drew up the plans for the new Ma'dîla Niyyâ'.

After the inauguration of constitutional government in Egypt in 1878, three cabinets were formed by Sharif Pasha. When in February 1879 Naftul Pasha's cabinet (which included two Europeans) had been overthrown by the nationalist parliament, a constitutionalist movement was begun under Sharif Pasha, the leader of which in Parliament was 'Abd al-Salâm al-Muwaïlî. This party drew up a plan of financial reforms, which was laid before the Khedive who in April 1879 entrusted Sharif Pasha with the formation of a cabinet composed of purely Egyptian elements. This new cabinet (see the list of members in Sabry, p. 153, note) instituted a Conseil d'Etat and had a new organic law passed by the Chamber (promulgated on June 14, 1879). After the accession of the Khedive Tawfik Pasha, Sharif Pasha's cabinet was remodelled, but the new government was not so national as the preceding. In August of the same year the new Khedive refused to approve the constitution drawn up by the Prime Minister and on the 18th of the same month Sharif Pasha resigned and was succeeded by Riyâd Pasha. Sharif then took part in the formation of the "National Party" at Hulwa, which published a manifesto against Riyâd Pasha on November 4. Two years later after the nationalist military revolution of Sept. 9, 1881, Sharif Pasha was the only statesman in whom the military party had sufficient confidence to entrust with the formation of a new cabinet.
SHARIF PASHA — SHARKAWA

(Sept. 15). Sharif then called together an assembly of notables intended to counterbalance the influence of the military. This assembly met on Dec. 26, but the nationalists in it soon combined with the military against the Khydive and his cabinet, who were thought to be too much under the influence of the political and financial control by the Great Powers. Sharif Pasha was unwilling to co-operate with the Mafjils in the modification of the rules on the budget vote and he resigned in January 1882. His successor was Mahmud Pasha Sämt. On Aug. 10 of the same year, after the Khydive had taken up a definitely anti-'Arabi attitude, Sharif Pasha again became Prime Minister (Aug. 18, 1882). He held this office after the defeat of 'Arabi and the English occupation but in the end came into conflict with the English cabinet and its representative, when they demanded the evacuation of the Süddan. Sharif Pasha thought the evacuation a political and economic danger to Egypt but he had to yield to English pressure (Jan. 1884). He then retired from politics and died three years later at Graz, to which he had gone on account of a malady of the liver. He was buried in Cairo in April 1887.

By birth Sharif Pasha belonged to the Egyptian-Turkish class and was of course a khedivialist rather than nationalist. The nationalists, however, never doubted his sincerity. He sincerely endeavoured to make Egypt a constitutional state under the Khydive's dynasty; as a political figure he occupies a position intermediate between the tendencies represented by 'Arabi, Nûbah and Riyâd.

(J. H. KRAMERS)

SHARISH (adjective: Sharishi) was the Arabic name for the modern Jeres de la Frontiera, an important town in Spain, in the province of Cadiz, a little north of this town. It has been distinguished from Jeres de los Caballeros, the Sharisa, of the Muslim period (cf. al-Idriîsî, Deser de l’Esp, p. 175, 186, 211, 226), a little town in the province of Badajos, south of this capital and west of Zafra. Jeres de la Frontiera, from its position in a country blessed with remarkable fertility, was while under Muslim rule as at the present day a rich and prosperous city. According to some geographers it formed part of the province of al-Bahaira (Lago de la Janda), according to others of Shadhûnîn (Sidonia). Its vineyards were already renowned in the middle ages, like its olive-groves. A speciality of the town was the making of尊严 (a kind of cheese-pastry).

Muslim Jeres never rose to a capital. It was too near its great neighbour Seville, whose political fate it usually shared. It used to be thought that it was in the district of Sharish, on the banks of the Guadalete, that the first encounter between Christians and Muslims took place at the time of the conquest of Spain but we now know that this battlefield should be located in the valley of the Rio Salade farther east. The town plays little part in subsequent history and not even the names of its governors have been preserved. After the fall of the Umayyad Caliphate, it formed part of the kingdom of 'Abdallad [q.v.] and in 650 (1253) it submitted to the Nasrid rulers of Grenada after having successively rejected Almoravîd and Almohad suzerainty. Jeres was taken by the Christians for the first time in 1251 three years after Seville, but in the years that followed, it was never retaken by the Muslims in spite of the efforts of the Castilian leaders Gari Gomez Carrillo and Fortun de Torre. In the end it was definitely retaken by Alfonso the Wise on Oct. 9, 1264. The Marinid Sultan then tried in vain to recapture it, notably Abû Yûsuf Ya'qub b. 'Abd al-Ĥakkî, who made it and Seville his main objectives on his various campaigns in Andalusia and several times laid waste the whole district.

Among celebrated Muslims born in Sharish, we may mention, besides the commentator on the Ma^hadîmat of al-Harîri (see the next article) the jurist Djamal al-Din Abû Bakr Muhammed b. 'Abd al-Bakr al-Sharishi born in 601 (1204/1205) and died in Syria in 685 (1286) after declining the post of Malikî Kishlûn al-Sâmil of Damascus.

(E. LEVI-PROVENÇAL)

AL-SHARISHI, Abû 'I-Abrès Ahmad b. 'Abd al-Mu^min (or 'Abd al-Mu'imm), according to al-Suyûtî, followed by Brockelmann s. Mîshr li Kîli b. 'Abd al-Mu^min al-Kâmil, Kalam al-Din, Arab author of Spain, a native of Sharish [q.v.], where he died in 619 (1222). He wrote a commentary on the al-Ishâq of al-Fârisî and another on the al-Djamal of al-Zâdîjâdî and wrote also a treatise on prosody. He also compiled an anthology of ancient Arabic poems and made a synopsis of the Nawa^dir of al-Kalî but he is best known as a commentator on the Ma^hadîmat of al-Harîri. He wrote three commentaries on the Assembly, a large one, literary, a medium, philosophical and a small one, a résumé. The first was published at Bûlak in 1284, 1300 and in Cairo in 1306; the second is in the Library at Leiden, N°. 415.

(E. LEVI-PROVENÇAL)

SHARKAWA, or Serekawa, the common ethnic of a Marabout body in Central Morocco, belonging to the Shadîlit-Djanîlît brotherhood through the intermediary of the mystic Abî Farih 'Abd al-'Arîs al-Tabbâ [q.v.]. The singular is Serekâtî, synonym of Serekî (sharkî, pl. shérâqû), a geographical ethnic (cf. on the other hand râdîl, ethnic from Tâdil confined to the sharbî of this name, while the geographical ethnic is Tâdîlîn). The principal Zawiyah of the Sharkawà is in the town of Abu 'I-Djâ'd (modern spelling:

331
Boujdour, in the Tafilalt, between the Middle Atlas and the Atlantic coast. It attained importance at the end of the xviiith century and henceforth became one of the most frequented sanctuaries in Morocco.

Among the more notable of this Marnoh family may be mentioned: 1. the founder of the Zawiya of Abu l-Dja'd, Mahammad (with initial is vocalised in a) b. Abu 'l-Kasim al-Sharki al-Sumaski al-Za'ki al-Dirahi, d. 1010/1011 (July 601); a monograph was devoted to him by one of his descendants, Abu Mahammad 'Abd al-Khaliq b. Muhammad al-Ar'asi al-Tadili al-Sharkawi, entitled al-Muraja fi ilah al-qiyam manasik al-ghahir sayyidi M. al-Sharki; 2. the latter's son, Muhammad al-Mut'ak, d. Rabä' II 102/ April—May 1611; 3. his son Muhammad al-Sukki, who was the patron of the historian al-Ifrini (or al-Wafsi), q.v.; a monograph entitled al-Rauq al-aswan al-fadhi fi manasik al-shahid 'Abd 'Abd Allah M. al-S., was devoted to him by a scholar of Fas who was kadi of Meknes (Miknas al-zaiyun) in the reign of the 'Alawid Sultan Mawlây Isâm, 'Abd Allâh al-Hassan b. Ra'hal al-Madani al-Tadili, d. 1140/1728; 4. the son of the preceding, Muhammad al-Mut'ak, who restored the Zawiya and wrote a collection of prayers in no fewer than 40 volumes entitled Dha'farat al-ghani wa l-manasik fi ilah al-mowl wa l-rijal (there is one volume in the Bibliothèque Générale de Rabat, No. 100, cf. E. Lévi-Provençal, Les Mémòries Arabo de Rabat, 1, p. 36); he died in Muharram 1150/June 1766. A monograph has been devoted to him by his secretary Muhammad b. 'Abd al-Karim al-Asadi, d. 1189/1775-76, entitled Yattamal al-ahdud al-umru fi manasik al-shahid al-Mut'ak.

(E. Lévi-Provençal)

SHARKI, the name of a dynasty which reigned at Djawwar, so called from the title of Malik al-Sharki (Lord of the East) conferred upon its founder, the enunsh Malik Sarzar, Khdâja Djâhân [q.v.], who, having in March, 1393, placed Nasir al-Din Mahmud of the Tughlak dynasty on the throne of Dhih, suppressed the Hindu rebellion in the Gangetic Doab and Awadh, and assumed independence in Djawwar. He died in 1399, leaving no direct dominions to his adopted son, Malik Karsanf, who assumed the title of Mubarak Shah. Mahmud Shah of Dhih made two abortive attempts to recover Awadh, and Mubarak Shah died in 1402, and was succeeded by his younger brother, who assumed the title of Shah al-Din Ibrahim Shah. Ibrahim was a patron of learning and art, and it was during his reign that Djawwar was adorned with most of those buildings the remains of which excite our admiration to-day. He annexed some districts in Katchr which had belonged to Dhih, invaded Bengal, where he protected the Muslim from persecution, and an unsuccessful attempt to annex Kali, and was succeeded, on his death, in 1436, by his son Mahamud. Mahamud Sharki quarrelled with Mahamud Khaled I of Maha over Kali, and an indecisive campaign was closed in 1445 by a peace not altogether honourable to Djawwar. In 1452 he unsuccessfully attacked Dhih, then held by Baholi Lodh, and in 1457 he died just as he was about to meet Baholi Lodh in the field, and was succeeded by his son Bikan, who styled himself Muhammad Shad. His tyranny was so galling that his nobles, even while confided in the field by Baholi Lodh, dehronized him and proclaimed Husain, his younger brother. Husain concluded peace with Baholi and then led a successful expedition against the Hindus of Urja. In 1466 he failed to take Gwalior but compelled the Kali to pay tribute and do homage. In 1473 he invaded the dominions of Dhih and during the next three years strove to subdue it. He was on the threshold of success, but as often failed owing to carelessness or want of confidence, and in 1476 Baholi Lodh occupied Djawwar, and with Husain's flight to Bengal the Sharki dynasty came to an end. Husain lived for twenty-four years after his fall, and although he made no serious attempt to recover his kingdom, lost no opporunity of fomenting dissension and rebellion in the south-eastern provinces of the kingdom of Dhih. He died in 1500.

(T. W. HAM)

SHARKI. As opposed to the Turkish popular ballad which has arisen among the people and is composed by the national system, syllabic (isnavi äsnavi) not metric and is found in various forms notably the turkî and also the zuwarî, zuwarî, hânîâ, bâzi bâzi, maâd and tanûg (on the latter cf. Samoilowicz in Musulmânîî Mûsî, Petrograd 1917, i, No. 1, p. 899), the shârî is a poem regularly composed by a poet on an literary lines in more or less accurate agreement with the laws of Persian and Arabic prosody, following the quantitative system of metre: the shârî is the turkî adapted to literature.

While the popular song as regards matter, imagery and phraseology is quite feet from restrictions, the shârî is usually a gay love-song and follows the model of the traditional love-lyric in metre, language and contents.

It is distinguished from the ghâsî, which is intended only for recreation and reading, by the fact that it is intended to be sung. In contrast to the double verse system of the ghâsî with the monorhyme running through it, the shârî stanza form, taken from the folk-song, is peculiar to the shârî. The separate stanzas, of which the third (mâyûkhâne) is traditionally meant to be the most impressive, are linked together by a refrain of one — sometimes two — line (called mawâîrah, chorus) which recalls the rhyme of the ghâsî. The rhyme scheme is usually as follows a a b (and more frequently a a b; c c e e; d d d b or a a a, b b b, c c c, in the case of a two line refrain, a a a, b b b, c c c).
The language is elevated in the šahrık, free from dialectic forms; the rhyme is more strictly observed than in the türkî. But although it is free from extravagant language, it is nevertheless much too literary to be at once intelligible to the common people.

The link between the türkî and šahrık was probably formed by the popular poets and mystics, notably the tařeq, the successors of the Arab and Persian poets, who very early recognised this intermediate form, the ballad with a literary flavour suitable for single facts, as a form of literature admirably suited for dissemination, which could also be to some extent used as a chant to accompany the exercises of the šahrık. But it was long before the šahrık won itself an official position in the traditional “regular” Divâns of the classical poets. The fact that the Divâns of poets of the people so rarely contain šahrık is simply explained from the literary intolerance with which non-classical forms of verse were rejected.

The first poet in whose Divân we find šahrık’s seems to be Naşîm (d. 1107 = 1695). The šahrık is the characteristic poem of the period of transition which begins with Sultan Âmîd III (1703–1730) and marks a concession to popular taste and a reaction from Persian influence, Nâmî (d. 1143 = 1730) and Enderûn Oğlû Nasîr (d. 1240 = 1824/1825) are the most famous of šahrık writers.

The many printed and lithographed collections of šahrık are evidence that they are still very popular.

AL-SHARKIYÂ, name of a küra and of a province (formerly ‘ummal, now mu’diriya) in Egypt.

1. The küra of al-Sharkiya, which replaced the Byzantine pagarchy of Aphroditopolis, was one of the few districts which received an Arabic name; the latter is explained by its situation on the eastern bank of the Nile. It is difficult to estimate the extent of its territory, which lay immediately south of the capital of the country, Fustat. The first capital of the küra, situated on the right bank of the river, was Anajîk (Antinòe), but the small number (17) of villages in the küra of al-Sharkiya allows us to suppose that the next küra, Dallâs (Nilepolis) or at least at-Kais (Kynopolis) lay on both sides of the Nile. The capital of the küra was very probably Atfîh since one of the censuses quoted by Makrizî gives it in addition the name of Aţfîhia. It should, however, be noted that Dimashq, very late for information of this kind, distinguishes a küra of al-Sharkiya and a küra which, lying beyond the district of Atfîh, included also that of Wasiium the north-west of Fustat, which is exceedingly improbable.

In the Fustât division into provinces, there was a province of al-Atfîh, larger than the old küra (50 villages at the time of İlî al-Dîjîn) and now forms a district (mu’diriya) of the mu’diriya of al-Dijà. The capital is now al-Saff, a few miles to the north of Atfîh.

In the time of the governors of the Caliphs, the küra of al-Sharkiya enjoyed at times a certain prosperity. On account of an epidemic of plague, ‘Abd al-Azîz b. Marwân transferred the government offices to Húlûwâ; a little later and for the same reason another governor transferred his seat to Akûr (or Sukur) towards the south. To the north of the küra lie the quarries of Tûrê.

2. The Eastern province of the Delta of Egypt, situated to the east of the province of al-Dâkkaîlîa and bordered towards its south-west by that of Kâlûbîâ. Now it has 749,170 inhabitants (in 1897), 393 towns, villages and hamlets, and is divided into 6 districts (mu’diriyât) which are as follows: (1) Bîbûs, (2) Fâlûs, (3) Hîthîs, (4) Kafîr-Sükh, (5) Mînâl-Kâm, (6) Zâkhîzî, The capital is Zâkhîzî (41,741 inhabitants in 1917, against 135,700 in 1897).

The present area of the mu’diriya of al-Sharkiya corresponds roughly to the following pagarchies of the Byzantine epoch, divisions retained by the Araqi under the name of kûra; Bubast (Baṣṣa), Arabic (Tarîbû), and PharÂbîthos (Farbâ). The Delta was at this time divided into three large divisions not administrative in character, which are mentioned by the historians: the Hâwî Shârî, situated to the west of the Rosetta arm, the Baṣṣa al-Rîf applied to the territory lying between this arm and that of Damietta. All the land which extended to the east of the latter district was called the Hâwî Shârî and it is probably this name which gave rise to that of al-Sharkiya. The Hâwî Shârî followed the two Augustanmics. It included 11 or 12 kûras and 529 villages.

At the time of the division into provinces under the Fâtimids the Hâwî Shârî included those of al-Sharkiya, of al-Mûrûthîyût, of al-Dâkkaîlîa and of al-Abwaûamîa. Thus delimited, the province of al-Sharkiya, which extended farther than at the present time in the direction of Cairo, still included 452 towns and villages (the three other provinces together accounted for 165). It brought annually to the Treasury 694,121 dinars. The southern part of al-Sharkiya was separated from it in 715 (1315) at the time of the survey of Malik Nâşir Muhammad, and received the name of al-Kâlûbîâ. From this time the province of Sharkiya must have shown little variation. Thus reduced it contained, according to Ibn al-Dijîn, 380 towns and villages and the taxes were valued at 1,417,675 dinars. The capital was Bûbûs in the Middle Ages and it was also in this town that the Turkish Kûshîrî resides. It was only during the nineteenth century that Zâkhîzî supplanted Bûbûs.

This eastern region of lower Egypt plays a considerable role in the history of Muslim Egypt, for if we except the Fâtimid conquest, which came from the north of Africa, the Crusaders’ attack on Damietta and in modern times the French occupation by Bonaparte, all the invaders of Egypt entered the country by this route. The anonymous military memoir called the *Dessert de chemins de Babûlîn*”, which is simply an exposition of the different plans of attack upon
Cairo, shows in the first place the itinerary of an army setting out from Ghazza with the object of menacing the capital through the province of al-Sharkiya (Susiargue).

This region offered the difficulty to the owners of Egypt for the time being that it had no natural defences. The Byzantines had made up for this by stationing several garrisons in the Augustanuic, the sites of which we know from references in the accounts of the Arab conquest. The Arabs, avoiding the fortresses in the neighbourhood of Rhinocorua (al-'Arish), advanced on Pelusa (al-Farama), near which they were held up for two months. The defences of the region of Farhat (Farhat) and Bubaste (Baṣja) did not inconvenience the conquerors, who, turning their route southwards and following the valley of the Wadi Tanaiq, attacked Philbes (Billbais), which only held out for a month.

If we review the military events of which the province of al-Sharkiya was the scene, it will be seen that the main resistance was offered by the successive defenders of Egypt round the town of Billbais. As early as the end of the period of conquest, we find — in obedience to some instinct for security — the Djūdhum in the army of 'Amr b. al-'As, given some towns in this district, notably Farhat and Baṣja, as fiefs (tīgh). A century later portions of the tribe of Kais were settled in Billbais, then sparsely populated, who had also the task of organizing the caravans for Kūzman intended to provision the Ḥiṣān. We further know that Billbais was in time provided with another chain of fortresses (Makriat, Kāfīt, publ. in *M. I.F.A.O.*, iii. p. 188; Sulīk, tracial, Blochet, p. 358).

It was by this route that Marwān I came from Aila to Fustāţ to regain Egypt, which had been stirred into rebellion by the partisans of Ibn al-Zubair. At a later date the Dā'ir Sharkī was the scene of the Coptic rebellions which shook the Delta in blood in the second century A.H., especially towards its end: in 107 (725) at Nati, Tumair, Farhat and Taṣilikiya: in 178 (794) in 186 (802) and on this occasion the tribe of Kais joined the Copts, who were overcome at Djjub ʿUmair, halfway between Fustāţ and Billbais. In 191—192 (807—808) a new rising was put down; in 214 (829) a series of rebellions began which lasted with varying success till the arrival of the Caliph Maʾmun in 217 (832). In 469 (1076) the Salīḥi Emīt Attās, who had reached the outskirts of Cairo, suffered a disastrous defeat at the hands of Bādir al-Qasamāt; the chronicles do not give the exact site of the battle. In 558 (1163) the Franks under Amasty 1 occupied Billbais; next year near this town Shawar, coming from Syria, defeated Dūrgham and later Shīrkh was besieged in Billbais by Shīrkh, helped by the Franks. In the course of the Saladin's wars with the Crusaders, the latter, on at least one occasion, attempted a diversion on Fūṣās. The Suliṭan of Egypt, who did not fear an attack by the north of al-Sharkiya, but was more anxious about the Franks of the principality of Montferrat placed advanced lines of defence at Kūzman and at al-Sawās (Sues) and even farther to the east at Saydā, where his fortress had just been identified (Bartus and Wiet, *Découverte d'une forteresse de Saladin à Surya*, ill. 44—65, 145—152). We also know from official documents that Kāfīr Sadr was administered by the governor of al-Sharkiya. When in 593 (1195) Malik 'Aḍil and Malik Aḥfāʿ resolved to dethrone Malik 'Aḍil, the plot was begun with a siege of Billbais. It was in the same region that the last serious rising of the Arabs in Egypt ended (631 = 1253). Their leader, Ḥiṣna al-Dīn ʿAbd ʿAbd al-Malik, was taken at Billbais where gallows were erected from here to Cairo. Lastly it was by this, the natural route of invasion from the east, that the Ottoman army reached Cairo in 923 (1517).

This province was of course traversed by the post route which connected the capital with Ghazza. The following are the stages in Egypt as given by Ibn Khordādhbeh:

In the Mamluk period, the post stages for the same stretch were: Sīrāṣ (which took the place of al-Uṣūb, which was too far from Cairo), Bīr al-Baṣja, Bilbais, al-Salāhiya, al-Kharīrat, al-Kharīrat, al-Ṭabāna, al-Qādiriya, al-Salāhiya, Bīr al-ʿAbad (or al-Baṣja), ʿAbd al-Malik, al-Qaṣr and Kāfīr ʿAbd ʿAbd al-Malik (cf. also *Devise des chemins de Besançon et des analyses in Schefer*, in *Arch. Or. lat.*, ii. 94—95).

It may be also mentioned that there were dovecotes for carrier-pigeons at Bilbais, al-Salāhiya and Kāfīr ʿAbd ʿAbd al-Malik (Gaudefroy-Debomybne, *La Syrie*, p. 255).

The pilgrim route also passed through this province, in the south of it; it was only abandoned for about two centuries between 450 and 660 A.H. Some stages are difficult to determine, for the names have become much corrupted by the copies of manuscripts; the known points are Birat al-Djīb (Birat ʿAbdar mentioned above), ʿAbd ʿAbd al-Malik and Kūzman (cf. the article in *Syria*, iii. 128—149).

In conclusion we may mention that Trajan's canal passed through the province of Sharkiya; it was renovated by order of the Caliph ʿOmar, whence its name of Canal of the Commander of the Faithful; the Caliph Ṭurban had it partly filled in.

(G. Wiet)

**AL-SHARRĀT** (the manufacturer of string from palm-leaf, dhīrīf), Aḥḥ ʿAbd ʿAllah Mūsām a Mūsām a Ṭāhir, son of a mawālik, slain in battle which the Spaniards at al-Muriq (al-Mahāzin — San Miguel de Ulzamar) was born at Fās in 1035 (1625/1626) and died there in 1190 (1697) after having adopted Shiism. He is credited with the authorship of a hagiographical collection, but this has sometimes been disputed by his contemporaries; it is entitled: *al-Rawd al-ʿAbrīr Anfās bi-ʿAbbār al-Shīrāzī min Aḥkām Fās*. According to al-Kattāni it was really the work of Mūsām a Ṭāhir al-Kādiri. In it among the biographies are a synopsis of the *masālik* of 99
SHASH. [See TASHKENT.]

SHATH, a place celebrated in the Middle Ages, situated a few miles from Damietta, on the Western shore of the Lake of Tinns, now called Lake Manzala.

This town existed before the Arab period, since it is mentioned as the see of the bishop (Zera). There is no reason for giving credence to the romantic story of the pseudo-Wajih, which gives as the founder of this town a certain Shaht b. al-Hammik (var. al-Hamirak), a relative of the famous Mukawwās. This Shaht is presented to us as a deserter from the garrison of Damietta who helped to secure the possession of Burullus, Damira and Ashmūn Tāmār for the Muslim army and who was killed at the capture of Tinns, on Shahtān 15, 21. Every year at this date, it is the custom to celebrate the anniversary of his death. To this origin the writers attribute the pilgrimage which still took place at Shaht in the time of Ibn Batūta.

To guard against the maritime attacks of the Greeks the Arabs stationed regiments of troops on certain parts on the coast, and Shaht was amongst the number. This port became in the Middle Ages a very active industrial centre, in this region sharing with Damietta, Dubāj and Tinns, the manufacture of valuable materials. Each of these towns probably manufactured a special article since the materials which they exported bore a name indicative of their place of origin. Travellers and geographers never tire of praising the goods of Shaht called shāshūq. Very probably there was at this place in addition to the private industry a government workshop, a Dār al-fitrūs, analogous to those of Alexandria and Tinns. The historian of Mecca, Fikihī, has preserved the text of an inscription embroidered on a cover intended for the Ka′ba. It was the Caliph Ḥarūn al-Rašīd who ordered it to be made in the year 191 at the tisrāt of Shahtā.

We do not know the port which Shaht played in the two occupations of Damietta by the Franks. Certain writers have tried to place at the spot the site of the encampment of Jean de Brienne, but this view has been disputed. Between the two crusades, Tinns had been razed to the ground by order of Malik Kāmil in the year 624, and as military reasons had probably induced this destruction, Shaht perhaps suffered the same fate.

But while the ruins of the former have survived under the name of Tell Tinns, a miserable hamlet of shepherds now bears the name of Shaikh Shaht. Their huts surround the mosque in which the relics of the hero of the Arab conquest, who became the Shaikh Shaht, are venerated. But the town is no longer a port on Lake Manzala; the waters have receded to a distance of 5 or 6 hundred yards. The depth of the lake in this district is insignificant, and the inhabitants use flat-bottomed boats for navigation.

Biblilography: Bakri, Muḍjīm, ii, 811; Liūnas al-ʾArab, xix, 162; the bibliography, given in J. Maspero and G. Wiet, Matīrīana, M. J. F. A. O., xxvi, 112—113; Makrīnī, Khībat, in M. I. F. A. O., iv, 80—82. (G. W.)

SHATH (pl. sharāf) or (al-Mahāf) (shāshūq) is a technical term in mysticism, signifying an "ecstatic phrase" or more exactly a "divinely inspired utterance".

Etymology: This term, which was probably a Syrian loan-word (shāshūq = expands) is derived
from the root ṣḥ-ṯ in Arabic: "disturb, agitate" (misḏḏaḥ = place where flour is ground). Adopted in the tenth century A.D. by the Shi'a it is applied to the sudden perturbation of the consciousness, into which divine grace suddenly penetrates them to the "divinely inspired utterances" which this supernatural commotion extracts from the subject.

The Muslim mystics are unanimous in seeing in the ṣḥḥāfī, following preparatory anagogic graces (ḫafṣurāt, faṣūli, muḥāf), the sign of a perfect purification reaching the soul of the mystic. But the majority of theorists — at first from scroful of orthodoxy, later from monistic conviction — consider that this state is transitory and is only a stage before the definitive annihilation of personality in the divine silence. Some, notably Muḥāfīz and Ḥalāfī [q.v.], on the other hand consider that these divine touches transfigure the faltering voice of the lover, give him an interminable divine investiture, which will make him constant for ever to the dialogue of love (muḥāf-dāthā) "between These and me the lovers".

The first "ecstatic sayings" were incorporated by tradition in the classical collections of Ḥadīṣ, not as utterances of the mystics but as "words of God" (ḥadīth kauṭ, q.v.).

From the third century A.D. Muslim orthodoxy excluded this source of traditions and the ṣḥḥāfī circulate under the names of those responsible for uttering them. Here we give the most famous, arranged according to two tendencies, the one class referring rather to an immediate psychological commotion, the other which betrays a scholarly reconstruction, or at least a retrospection influenced by the prejudices of the school, sometimes showing an insolent and cynical familiarity.

Abū Yūsuf Abū-Ṭayyib Abī-Bīṭāmī (d. 261 = 875): "Praise be to Me! (Sūḥālassa). My intercession is greater than that of Muhammad! Thou obeyest me no longer than I obey Thee. Adam sold his God for a mouthful. Thy Paradise is only a child's game". — Ḥalāfī (d. 309 = 923): "I am the Truth (ṣināʾal-ḥākīm). It is Thou, or is it I? That would make two gods. Ah! for mercy sake take away this amor ("it is 1") from between us! I do not desire thee for my joy but for my hurt. Pardon them and do not pardon me. Pray for the perfect lover becomes impotent". — Abū Bākī Naṣṣādī Tātī (d. 487 = 1094): "Guide of those who have gone astray, lead me still farther astray". — Abū Ḥanīfī (d. 517 = 1125): "God alone understands God. There is no one more persuasive than Desire. The call for the union is the essence of the beloved; the call for separation is the essence of the lover whether We torture him in desire, whether We kill him by severing him from contemplation".

Ibn Saḥāl Tūsī (d. 283 = 896): "I am the Proof of God, in face of the saints of my time. Divine omnipotence has a secret; if it is revealed there is an end of the prophetic mission". — Al-Waṣṣī (d. 320 = 932): "Religious acts are only impurities," Al-Shahī (d. 334 = 945): "I am the diacritical point under the letter ʾāl! In Paradise there is no person except God. Mysticism is only polytheism, since it is engaged in purifying the heart of that which is not God, when God alone is". — Khorāsānī (d. 426 = 1034): "I am only two years younger than God. God is my constant (my unity of psychological time)". — Ibn Abī ʾl-ʿLāh (d. 440 = 1048): "Under my robe there is only God". — Ghazzālī, the elder (d. 505 = 1111): "There is nothing more in the possible than in the created".

— Ibn Ṭārīq (d. 638 = 1240): "The slave is the lord and the Lord is the slave; who can tell which of the two is the debtor?" — Al-Ḥāfīz (d. 645 = 1247): "The perfect poor man is not he who has a heart, nor a lord". — Ibn Sīrāj (d. 1268 = 1659): "There is nothing but God (laṣa ʾllāhā, the dīn of his order). — Abī al-Tūsī (d. 690 = 1291): "The whole Korān is simply polytheism".

Whole monographs have been devoted to elucidating, criticising or justifying one or other of these ecstatic utterances. Dūrī and Sarrāfī were the first to perceive their theological importance, and we possess in three books by Rābhān Abī Bālī (d. 606 = 1209) a full treatise on the question.

SHAṬĪBA (adjective ʿṣḥḥāfī), the Arab name of Jātīva, the Sarabī of the Romans, a town in the East of Spain, in the province of Valencia, 35 miles to the South-West of the last town, at an altitude of 500 feet. Jātīva, which has at the present time about 12,000 inhabitants is built on a splendid site above Mount Bernosa on whose steep slopes the Muslim city was built. The latter was celebrated in the middle ages for its manufacture of paper which was sent not only throughout the whole of Spain but also as far as Egypt. This paper can still be recognised in old Arab manuscripts, on account of the watermarks bearing the name of its place of origin and in Morocco the name ʿṢḥṣḥā ʿJātīva paper is still given to a kind of coarse grained paper. There still remained at Jātīva at the time of the Muslim occupation remains of the Roman occupation. Al-Maḳṣūṭ quotes the verses of a poet called Abī ʿUmar al-Buryāmi about an ancient statue which was to be seen in his day in the town, no longer in the Muslim town. On account of its strategic position of the first order, Jātīva was one of the most important fortresses of the whole of Andalusia from the height of its rock it dominated and guarded the whole of the very rich and fertile plain which stretched below it. There still exists at the present time remains of the wall and of the dīn of the Muslim Jātīva of very great archaeological interest, in spite of alternations and unfortunate restorations to which it has been subjected since the reconquest. Abī ʿl-Fihīrī has preserved the names of three pleasure resorts near Jātīva: al-Baṭḥūr, al-Ghadrī and al-ʿĀhin al-Kalīra.
Játiva is too near to Valencia not to have shared the latter's political history. In the Muslim period it was the second town in the district of Valencia, and its population was without doubt larger in those days than at the present time. Mention is hardly made of it during the Umayyad caliphate of Spain, and its history commences, when with Valencia, it formed a part of the independent principality founded at the end of the 12th century a.d. by the grandson of the celebrated alfí al-Ma'adur Ibn Abi Amir, 'Abd al-Azzar, after the reign of the two 'Slaves' (see above), by Muhammad and Muqaffar. When the kingdom of Toledo and al-Andalus was divided among the Christian sovereigns of Castile, took possession of the kingdom of Valencia, Ibn Ma'adhur, who was at that time governor of Játiva, refused to come in person to Valencia to pay homage to his new master. An expedition was therefore decided upon against the town. But it miscarried; the Heddi prince al-Ma'adhur b. al-Muqaffar who reigned over Leida, Denia and Tortosa, came to the rescue of Ibn Ma'adhur and took possession of Játiva for some time. The town was also taken by the troops of the Almoravid Sultan Yusuf b. Tashfin at the time of the expedition, which was crowned by the victory of Zalaka; Játiva was finally conquered in 1329-1330 by the king of Aragon Jaime I and the last Moslems were driven out of the town at the end of the year 1328.

**The Encyclopedia of Islam, IV.**

part which the Kādi 'l-Fādi had given; and Ibn Khallīkhā tells us that he had visited the grave of al-Šāthṭī several times. He was a man of very humble and devout character and during his last illness, when he was suffering very much, he always replied in an answer to enquires that he was recovering. He was renowned for his extensive learning in the sciences concerned with the reading and interpretation of the Qur'an and his reputation as an author rested upon his two didactic poems, or better rhymed prose, dealing with these matters: 1) A poem rhyming upon the letter l consisting of 1173 verses, which the author entitled Hīr al-Ma'adhur al-Tahštī, but which is generally known by the name of al-Shāthṭīya after its author. It is a verisimilitude of the work on the same subject by 'Uthmān b. Sa'd Abī 'Amr al-Dānī (born 371, died 441 A.H.) entitled al-Tuṣīr. As Yākuti in the *Irušād* says that the verses of al-Shāthṭī are awkward and difficult to understand, it is no wonder that they are not easy for us and that the poem has been the subject of numerous commentaries. The author after the introduction begins with the explanation of the correct way of reading the letters when unvocalised, when to read a word *mālik* or *māmuṭād*, how to pronounce the Hamza especially if two should occur in one word; then follow chapters on *Tawāni*, *Imā'ī*, etc., till at last he comes to the chapters of the *Kur'an* indicating the various readings of the seven *Readers*. To understand the seemingly endless rhyming is only possible with a commentary, or by comparison with books in prose dealing with the same subject. The great popularity of the book is undoubtedly due to two reasons, first a student according to the old method could more easily learn the whole thing by heart, whether he understood it or not; but here the second reason for its popularity came in, as this gave the teacher ample scope for displaying his own learning in commenting on the obscure verses. The poem is found in many manuscripts in most libraries of Arabic literature and there exists a printed edition (Cairo 1928 a.h.) which contains also the second poem of al-Shāthṭī. As regards the commentaries, these are very numerous, the best is said to be that by 'Abd al-Rahmān al-Dānī Ibrahim b. 'Umar al-Dīnārī who died in 732 (1332) and who finished his work in 691 a.h.; this commentary was amplified by Shams al-Dīn Ahmad b. Ismā'īl al-Kawrānī who died 803 a.h. Another commentary is by a pupil of al-Shāthṭī, Abu l-'Hasan 'Ali b. Muhammad al-Sakhwā, who died in 643 a.h. This was the first commentary written upon the poem and has the title al-Sāli al-Wastā'ī fi Sharḥ al-Qadīf; a third commentary is by Abu Shams 'Abd al-Rahmān b. Ismā'īl who died 665 and called his commentary Dhū al-Ma'adhur al-Tahštī, of which manuscripts are in several libraries. To enumerate more commentaries would take quite a page, but the existence of such an abundant literature shows that the poem was after the taste of the following generations. 2) A poem rhyming upon the letter J in about 300 verses which has the title Abu 'Ali Aṭā'ī al-Qadīf fi Amr al-Maḥājīd, also on the reading of the Kur'an, but this poem is far more concerned with reading the holy writ elegantly than with the variants as was the case with the poem rhyming upon l. It is, like the other poem, not an original work, but a verisimilitude of a book on the same subject by al-Dānī (see above) which
has the title al-Makhtūb. This poem is composed in the same obscure language as the Hīra al-Awāni and has found numerous commentators for the same reasons and the earliest commentators are the same as for the other poem, namely al-Dī'a b. al-Salāḥ and al-Saḥhāwī; the first called his commentary Qisas al-Arba'ah al-Masā'ik, while the second named his work: al-Waṣīl bi l-Riyāḍ al-Aṣālī. Both these poems have in the eyes of the pious another merit i.e. that they are cherished against all kinds of evil influences. 3) A poem of about 500 verses rhyming upon the letter b, which is a veritableisation of the work al-Tamā'īd by Ibn 'Abd al-Barr. Abd al-Rahmān b. 'Abd Allah al-Kurtī on the last (Fīb) as found in the Traditions. This poem I have not seen, but according to Vāqīt it is also very obscure. Fragments of other religious poems of al-Shāhī has occasionally cited in anthologies, but all are of little literary value. — The name of al-Shāhī's father is explained as meaning in Spanish "iron" and we must read Ferro, because at that time the word was pronounced so and not ferro as in modern Spanish. There are rather many errors in all biographies of the author consulted as regards the proper names, but I hope I have been able to correct them.

### SHĀTRANDJ, the game of chess.
The game of chess was known in Greek antiquity when Ptolemy was said to have invented it. From there it spread through various countries. The Musalm are said to have invented it from Persia, but the stories are not sure; it is seen from these are seen from these that it was later to them from ancient Persia. In the middle ages there were several games in the East played with a board, notably, the game (strictly speaking) is to be found in the Indian (Sanskrit) origin; as to the word itself, it has been derived from the Persian yā sīl, "O King," so when the king is threatened; but this etymology is not very satisfactory.

The legends relating to the origin of chess have a Pythagorean character. According to Mas'dūd, the king of India invented the arts and discovered the principles of the sciences. The first was Brahmas, the second Bāhūdī under whom word was invented; the third Dāhilīn who is connected with the book of Kīla von Dīnāmār, the fourth Bāhūdī and it is in his sign that chess was invented; even at this time there was a treatise on the game entitled Tarsikh Senāsī which has remained popular among the Hindus. The pieces were figures of men and animals and were thought to be representations of the signs of the zodiac. The game was not yet fixed in the time of Mas'dūd (fifteenth century). He knew six mass forms of the game, two squares with 64 or 100 squares, one, one or two, one attributed to the Byzantines and the other called sodalik; the latter invented in the time of the author had twelve pieces played with six on each side and representing the different organs of the human body. Even then there were treatises on chess and celebrated players.

Al-Balštān became acquainted with the several forms of this game in India. That which he describes as the custom was a regular game of chance and played with dice. It is the dice that settle the movements of the pieces and not the skill of the player. Thus 1 and 2 move the king or the pawn, 3 moves the rook; 4 the knight whose move is already what it is now, the 6 and 8 move the elephant which goes in straight lines and which is king among the Arakhs which replace the castle. The pieces had values which were counted up and the total decided the victory.

Firdawsī has written charming pages on chess and describes a game in poetic language. He puts the king in the centre with the vizier who plays the part of our queen; on either side of them are two elephants, next dromedaries, then knights and lastly two rooks. This rōk is an animal; it is the same as the fabulous bird mentioned in the Archimedes' Night and it is from it we get the term "rook." Another variety, mentioned by the same poet, is still nearer our modern game; this board has 64 squares; in the middle is the king with his minister, on either side are elephants, horses and rooks, in front are the foot-soldiers, or pawns.

The game of chess has an interest in arithmetic, in which it has given rise to a question of some importance: that of the summation of the successive powers of 2. The story is well known in which an inventor asked his king his reward, a grain of wheat on the first square, 2 on the second, 4 on the third and so on, doubling each time. The result is a number in 20 figures beyond possibility of fulfilment. This legend is given by al-Sadat; al-Balštān in trying to shorten the calculation led to interesting observations.

Chess was a noble game in the middle ages both in east and west. During the Crusades it was played in both camps. Hārūn al-Rashīd sent a chessboard as a present to Charlemagne. The Old Man of the Mountains presented a very handsome one to St. Louis. Qamar al-Rūhaydān has taken a beautiful image of Smalis from the game:

> "Fis all a Chequers-board of Nights and Days,
Where Desiny with Men for Pieces plays,
Hither and thither moves and makes and slays,
And one by one back in the Closet lay."
SHATT al-ARAB. The word shatt, properly the bank of a stream, is used in Mesopotamia for a large river, as tigris is in Egypt and such in Merv, Shatt al-Arab is the name given to the tidal estuary formed by the united streams of the Euphrates and the Tigries (Dr. Grenfell and Arthur), known in the middle ages as the Blind Tigyes (Du Tillet al-Aswad), the Fadil of B 같은, and, in Persian, Mahanaghir. A modern name is the Bageh River. It is generally reckoned as extending from Kusa to Alshush (q.v.) to Fao. The confluence of the two streams took place at Kusa during five or six centuries; and quite recently, but now past, sixty miles further down, at Garmut Al, called above Bageh (so W. Wintleguard in Journal of the Royal Geographical Society, 1910, p. 11). In addition to the two great rivers, the Shatt al-Aswad receives also the water of the Karthen (q.v.) River (Dr. Saffuri of Al-Ashada) and its tributaries. The Shatt al-Aswad is some 100 miles long and about 1,200 yards wide. It is navigable by vessels of 15 feet draught. The obstacle to navigation is the bar at the mouth (whereupon the epithet "blind"). Vessels which can pass it (drawing 17 to 20 feet) can reach Bageh, 70 miles up. The lights and buoys on the coast are kept up by the British Government. The country on both sides of the estuary is practically level, Bageh, where the tide rises and falls nine feet, being only five feet above and below. The land along the banks is higher than that at a distance, owing to the silts brought down by the current. In the middle ages the streams met the sea at Alshush, but now some 20 miles further south at Fao, where there is a fine light. The land is therefore encroaching on the sea at the rate of 20 miles in every 1,000 years. Plantations of date-palms line the banks of the estuary for its whole length.

SHATTARIYA, SHATT order included in the list of 161 orders furnished to S. Anderson by the Imperial Board of Derwishes at Constantinople (Moslem World, 1922, p. 56). It is called sattārīsh, a neighbouring order, in the Persian work cited above; since a person named Shattari is not mentioned in the chief biographical dictionaries of authors, the former vocalisation may be correct, as the plural of shattari, according to Redhouse "a wayfaring man who has broken with the world," though this name is not recognised by Sadi Pashe. The order is mentioned by Abu T-Abbad (Abu T-Abbad, trans. Jevons, iii. 472) as one which provided his father with Khutbah (that is, he does not deal with it in his lists of orders, ibid. 349—356), and he suggests that its headquarters in India were at Jamnagar (ibid. 373). Allusions to it in Shiite literature are rare.

Some notice of its doctrines is to be found in the Ishbaish al-Arsheen of Shihab Muhammad Balkhi Gharuni (13th cent.) as a contemporary of Jangani (trans. Khazm El Shihabi, translated by Prof. Nicholson). The following are the chief passages: The sect of Shattariya despise with negation and adherence to affirmation, it is waste of time in Murrah, (meditation) to attend to negation, for it is nothing, to be prudent in the religion of Shattariya there is no self-effacement. There is nothing in it, except its name."

Tawhid is understanding one, saying one, seeing one, and being one. "I am one and no partner with me." With the Shattariyah there is neither opposition to fana, nor nafsah; neither is there Fana, nor Fana (and), for Fana requires two components; the one above to be annihilated, and the other the one is the name in which this one is to be annihilated, which is opposed to Tawhid. The Shattariyah affirm Tawhid and observe the Dhu’a with its isla in all stages and ti’ajilat. The Shattariyah do not complain, they set what they get, keeping the real Gif-wiser in view.

Consider your that, isla and ala as the Dhu’a, isla and ala of God and become one. This is one of the stages of the Shattariyah and not of the other colleges (shurah and ala’,). who adopt the practices and manjishahat, and say consider your nafs in the way of fana, and God’s is the way of isla’a; your nafs in the way of Unshriyatt (serentship) and His in the way of Rayshriyatt (ruleship)."

SHAWAR. SHAWAR from Murgi, AL-BIN F. Murgi, AL-Sain, a Pashai merchant, writer of the last caliph al-Aswad and in this capacity bore the honorary surname of Malik Murgi.

At first in the private service of the vizier Malik Shalib Fadil, Shwar obtained from his master the government of Upper Egypt with Kaq as his residence. This office was then the highest in the administrative service and the fact that Shwar is said to have asked for it shows his ambition. On his deathbed Fadil is said to have express regretted that he had thus contributed to the rise of Shwar as he feared he would cause trouble to his son Ruzaf, who was going to succeed him. But, knowing the man, he had advised his son to exercise great caution and to deal carefully with this possible rival. The two adversaries, who were never to meet, must not to make a mistake. The first slip was made by the minister who recalled Shwar from his government, shortly before Shawar (1162) Oct. 1162). Shwar had been expecting this and in anticipation had collected numerous troops and put into a state of defence a territory which he had practically owned as if it were a fief. Without awaiting the arrival of his successor, he resolved to attack the offensive fort was defeated at Talhja in Middle Egypt and took the road of the scenes, thinking Egypt and took the road of the scenes, thinking that it was becoming forgotten until suddenly in Muhammad 538 (Dec. 1162) he appeared in the Delta and by promises of booty rapidly recruited an army of ten thousand men. Ruzaf was unable to resist and fled from his capital. Shwar installed in the vizinate in Safar (Jan. 1163) had or allowed his rival to be put to death. His first period of power was to be of short duration on account of the unpopularity of his three sons, Talal, Shu’afa and Sulaiman, whose savior and excesses alienated even the officers of his immediate entourage from their father, Dorgani, an emir whom Shwar himself had just raised to the office of grand chamberlain, put himself at the head of the rebellions, who were secretly supported by the Caliph. Shwar did not attempt
to fight but fled to Syria in the course of the month of Ramdân (August).

He went to Damascus to the court of Nûr al-Dîn and was given an army by him to help him to return to power: Shâwar in his turn promised to hand over one third of the revenues of Egypt, to pay the expenses of maintaining the army. The troops sent by Nûr al-Dîn, who had entrusted the command to Assîd al-Dîn Shîrîkh marched on Cairo and inflicted a serious defeat near Tell Baţţa on the unreliable soldiers that Dirghâm had been able to collect. On entering the capital in Liwwât al-Adâb, 1559 (May, 1164), Shâwar resumed the viceroyalty. Difficulties immediately broke out between Shîrîkh and Shâwar: some accused the former of treachery while others accuse Shâwar of not fulfilling his engagements to Nûr al-Dîn. In any case after some skirmishes which jeopardised his authority, Shâwar appealed for help to Amaury, pointing out to the Franks the danger of allowing their enemy Nûr al-Dîn to establish himself in Egypt. The Franks, whom Shâwar had promised to indemnify, accepted the terms offered with pleasure in the hope of conquering Egypt for themselves. Shîrîkh, besieged in Bilhais, when his provisions were almost exhausted, accepted the terms offered and returned to Syria. The Franks on their side, impressed by Nûr al-Dîn's capture of Hûtim were not long in leaving the country.

In 562 (1167) Egypt was again invaded by Shîrîkh, who defeated Shâwar, again allied with the Franks at Bâbîn in Middle Egypt near Asûtûn in Liwwât al-Adâb, 1562 (April 18, 1167). This defeat did not lead to a definitive decision and Shâwar was able to rally his troops and besiege Shîrîkh in Alexandria. On capturing this town he succeeded in getting Shîrîkh to leave the country once more. But the treaty with the Franks was onerous for the Fâtimids, who besides paying an annual tribute, had to allow certain points in Cairo to be occupied by troops and to have a kind of High Commissioner (shikha) quartered there.

In 564 (1168) Shîrîkh was sent into Egypt for the third time by Nûr al-Dîn with the avowed object of driving out the Franks, whose demands had provoked a rupture with Shâwar. Besieged by them in the two towns of Cairo and Fustât, Shâwar was forced to leave the area which he could no longer defend. He got out of his difficulty once more by negotiation and purchased the departure of the Franks. But his own position was becoming precarious, the policy of balancing between the Franks and Shîrîkh being no longer possible; besides, the Caliph al-Axîd had in the meanwhile made a personal appeal to Nûr al-Dîn. Shîrîkh began by calling upon Shâwar to fulfill the terms of the treaty concluded between them and, in view of his shuffling, his death was decided upon by Shîrîkh's entourage notably by his nephew Salâsîn.

Shâwar was brought into an ambush near the tomb of the Imam al-Shîfâ and assassinated by Salâsîn and the officers of his suite on Rabîʿ II, 1564 (Jan. 18, 1169).

He was, strictly speaking, the last statesman of the Fâtimid dynasty, the decline of which was signalled by the rise of Shîrîkh. Shâwar, although praised by the poet Ŷûhût al-Muwafîq of Yemen, has left the reputation of being crafty and cruel; a Christian writer sums him up as very able, experienced in wars, tricks, plots and stratagems.
and al-Shawbak are known from inscriptions of Umar at Mura of the years 717 (1323) and 722 (1328) (de Laynes, Voyage, p. 205, N° 23 sqq.; Brünnow and Domanszki, Provinciae Arabiae, l. 105). About 1549 Umar says of al-Shawbak: “its circuit is now emptied of men, its gate is closed” (R. Hertzenmann, in Is., ii. 138). In the country round at this time the Luit ‘Utha, who now dwells around al-Karak, lived in tents (op. cit. p. 137).

The present al-Shibuk (Musil also writes al-Shibuk) adorns greyish walls still surround gardens and terraces which were formerly covered with vines, is a miserable village. In the castle are ruins of baths and other buildings, also (according to Socin-Baecker) an underground passage, which leads by 375 steps down to a well. The thousand line of defenses of the Crusaders’ castle mentioned by William of Tyre and Thietmuart no longer exist; the existing remains rather date exclusively from the time of Hattus and Jadlu, to whom belong the foundation inscription running along the outside of the enclosing wall.

Inscriptions: Safwain in De Laynes, Voyage d’explorer, ii. 209-213; Brünnow and Domanszki, op. cit., l. 118-119.

(E. Horschmann)

AL-SHAWI (n. via from Shawiya; q.v.) Abu ’l-‘A’rak Ahmad Muhammad, one of the most popular saints (na’ibs) of Fés, died there on Ma’rib 26, 1014 = June 13, 1605 and was buried in the Shawiya which still bears his name, the Al-Mubtak (el-Sakh) quarter. Many notices of him are given by the Moroccan hagiography, and a collection of his manahí is written by the famous Abu Mahammad ‘Abd al-Sallam al-Kâdiri (1058-1661), entitled al-Manahí al-’Arabi fi manahí wa’l-Athk ranceh Ahmad al-Shawi.

SHAWIYA (plur. of shawak, “sheep-breeder”) a name, originally applied in contempt in several groups in the Maghrib, of which the most important are in Morocco, the Shawiya of Tmamna
and in Algeria, the Shāwiya of the Awrâs. E. Douâté (Menzâd, p. 4–5) mentions several other groups of less importance. An endeavour has also been made to connect Choa, the name of a district in Abyssinia, with Shāwiya.

Wherever it is found, the term is applied to Berbers of the Zanâta and Hâwârâ, more or less arabised, mixed with purely Arab elements; almost always, moreover, these ethnic groups seem to have schematic tendencies.

The massif of the Awràs occupied by the Shāwiya of the department of Constantine, was in the viii. century the centre of resistance of the Abâdâ (q.v.) Khâridjîa as the Mâs still is at the present day. Now among the Shāwiya of Morooco, the successors to the heretical Baraghâwatâ (q.v.), we find the province of Mâqâï and the adjacent part of the territory of Bârak; conquered and oppressed by the Arabs, they had scattered through the whole of the Maghrib where, crushed by taxation and having lost that pride and independence which once characterised them, they devoted themselves to sheep-breeding, whence the name ultimately given them. As to the Zanâta, they were nomadic Berbers, like the Auras, living in tents on the produce of their flocks and spending the summer in the Tell and the winter in the desert (Ibn Khaldûn, Hist. des Berbères, i. 1; transl., ill. 179–180).

The name of Shāwiya seems to be first found in Ibn Khaldûn (Problèmes, i. 226, 256; Hist. des Berbères, i. 179, 21); transl. i. 278; ii. 254; transl. i. 31); the Shāwiya mentioned in this last passage do not seem to correspond to those of Tamaânt but to some people of Eastern Morocco, neighbours of the tribes of Hâwârâ and Zakkâra.

Next, Leo Africanus (i. 83–84) who calls them Shurûw tells us that they are African (i.e. Berber) tribes who have adopted the Arab way of living. The majority live in the Atlas or in the mountain range itself, living by cattle- and sheep-breeding. Wherever they dwell they are always subject to the local dynast or to Arabs. This author already knew two main groups: one in Morocco, in Tamaânt, the other on the borders of the kingdom of Tunis and the "land of Dâten" (Hilâd al-Madâr).

It will be easily understood that in the Arab world, the term "sheep-breeders" would have a contemptuous significance. As M. W. Marquis observes "in ancient Arabia a certain disgrace seems to have been attached to the breeding of the smaller domestic stock. North African opinion has retained a prejudice against the eaters of sheep. The great camel-rearing nomads have nothing but contempt for them. In the middle ages the feeling may have been strengthened by racial antagonism, real or imaginary. But in general at this period, to abandon the camel and adopt the sheep was an avowal of a terrible downfall for a tribe. It

meant renouncing the long free travels, the secure refuge of the desert, and independence, to submit to local rulers, endure their blows and tolerate their fiscal exactions."

2. Shāwiya of Tamaânt. They occupy the N. E. the lower course of the Oum al-Khîr; vast fertile plains which extend to the latitude of the little harbour of Fesâla. They are descended, according to Leo Africanus (iii. 9) from the Zanâta, and Hâwârâ whom the Marâid sovereigns settled there and who mixed with the remnants of the Baraghâwât (q.v.), the ancient heretical inhabitants of the region, as well as with the Arabs brought from Ittâ'sya by the Almolâh Sultân Yâbûb al-Mansûr. These Shāwiya now speak Arabic; the modern tribes which seem to be of Berber origin are the Zanâta, Medîyât, Mâaï, Mellila, Zirzâta, and the Ulid Bû-Zirû.

3. Shāwiya of the Awrâs. They occupy this mountain mass, in the south of the department of Constantine, between Bata and Biska. Ibn Khaldûn (Hist. des Berbères, ii. 1; transl. ill. 179–180) already mentions sections of the Zanâta settled in the Awrâs alongside of the Hiilîf Arabs who had conquered them. It is no doubt to their living in a mountainous country that these Shāwiya have preserved a Berber dialect to the present day.

SHAWWAL, name of the tenth month of the lunar year. In the Kūrān (Sūra ii. 2) four months are mentioned during which, in the year 9 A.H., the Arabs could move in their country without exposing themselves to attacks (cf. "the sacred months" in verse 5). These four months were, according to the commentators, Shawwâl, Dhū l-‘Ikâda, Dhū l-‘Hijja and Muhârîram. In Ḥadîth Shawwâl is therefore mentioned among the "months of pilgrimage" mentioned in Alîth's Book" (al-Bukhâri, Ḥadîth, bāt 33, 37).

In pre-Islamic times Shawwâl was considered illomened for the conclusion of marriages (Liṣān
al-'Arabî, c. v.). In order to prove this opinion
baseless, Kâfîa emphasised the fact that Mu-
hammad had married her in this month (Tirumûrū,
Nîlân, hâl 10). In the modern Muslim world there
is difference of opinion concerning this point.
Among the Muslim Tigré tribes Shawwâl is one
of the months suitable for celebrating marriages,
and in 'Unmân, on the other hand, it is considered
illomened in this respect.

The law recommends fasting during six days
following the 'ad al-fitr (q.v.); cf. Tirimûrû, Simûs,
hâl 52. Whosoever fasts the month of Ramadan
as also six days of Shawwâl, has reached the
law al-dhâha; cf. also Muslim, 'Umar, trad. 203).
Nevertheless these days usually partial, and
solemn character of the "lessers festival".

For the same reason: Shawwâl bears not only the epithet
of al-nukarram ("the venerated"), but also such
names as al-fitr & al-tîmî (Tigré), hâlân (Turkey),
Ifîr-i-tâlî (Unmân), urâs râyân (Acheh).

(A. J. WESSEYNICK)

SHA'AYA, Isâhâ, son of Amûs, a prophet sent
by the islaams in the reign of Sadûq (Seddacis,
by confusion with hezekiah), took part in the
siege of Jerusalem under Sassanpûsiri, summoned
by the king that his death had been postponed
for fifteen years; the besiegers all perished except
their king and five of his secretaries who took
refuge in a cave. For 66 days the king made the
people walk round Jerusalem, giving them two loaves of barley each day as their food.
According to Muhammad b. Isâhâ, Isâhâ fleeing
from the islaams who had turned against him
on account of his prophecies, came in the course
of his flight to a tree which bent down and he
took refuge in it. Satan having caught the hem
of his garment which remained visible, betrayed
him by this means and the islaams saved the
tree through the middle. Tabari gives as his
authority Wâli b. Munabbih, an echo of the
Talmud (Jerem. 4009, v. 636) which places
the event in the reign of Naamseh. The book
of Isahâ is quoted by Mutahhar b. Tâhir al-Mâshî, Livre de la Creation, ed. and transl. Huart, l. 188;
d. l. 172.

SHEBIB BILÂT. [See SHA'BâN.]

SHEBEK. [See SHABA.]

SHEBISTARI. Sâ'd al-Âlam MAHMÔD b. 'ABD
al-Qâhir b. Yâqûb, author of the Persian
mystic work entitled Gûshân-i Rûs, was
born circa 650 at Shahistâr (Cahabûr), a village
near Tabrîz, and died in 720. He composed the
Gûshân-i Rûs in 717 in answer to fifteen questions
which had been sent to him by an eminent Sufi of
Khurânân, whom Dâmarî (Nafisi, p. 705) identifies
with the celebrated Mr Fâhîr al-Sâhîb. Hânnân
of Gîrîr. These questions, written in rhymed verse,
form part of the mawzûhû, each one standing at
the head of a separate section. The popularity
of the poem is attested by the large number of
commentaries upon it (Ethb, India Office Lib. Cat., 996
N. 41816). Within the compass of little more than
a thousand verses Shahistâr explains concisely
and in simple language the doctrine of wâjdat al-
waqîfât, the descent and ascension of the "perfect
man" (see Ind. al-Kâmîl and H. H. Schaedler,
Die islamische Lehre vom vollkommenen Mannehen,
Z. D. M. G., 1925, p. 233, sqq.), and other leading
ideas of the later Persian mystical poetry, which
was deeply influenced by him al-'Arûsî — as well
as as the terms used in the erotic symbolism "where-
by the 'Sâfîs express their conceptions of God and
the universe and their ecstatic experiences". The
author refers to his want of practice in vernifi-
cation, but though some traces of this are appa-
rent, he shows himself to be a true poet. Besides the
Gûshân-i Rûs he has left three prose treatises on
Shâûn, namely: (1) Hotâk al-yâzân fi Masâ'îf-râb
al-Âlamûn; (2) Sab'âdat-nâmâ; (3) Rûsîl-i
Shâûn.

(R. A. NICHOLSON)

SHEFIK MEHMED EFEENDI, called Ma帅气
shâde, Ottoman an imperial historian
and stylist. Not much is known of his life. He
was born in Stamboul, received an appointment as clerk
in the Dwan (dwan khâtîb), later became one of the
khânçes, i.e. head of one of the 28 chancel-
leries (cf. J. von Hammer, G. O. R., viii. 431),
was next appointed chief of the smaller
audit office (muâshâhîsî-khâtîb) of the pious
foundations (waṣâfî), and ultimately was appointed
imperial historian (waṣâfî-nâmâ). He seems to have
died not long after his appointment to the office,
the date of his death is given as 1127 (1717/1718).
Mehmed Shefik Efendi is not prominent on the
roll of official imperial historians as the author
of the waṣâfî-nâmâ Muṣâfa Na'ma (4 vols) who
died in the Morea in 1125 (1716) was immediately
continued by Mehmed Rakhîd, the former dealing
with the years 1090-1707 and the latter with
1071-1134. Mehmed Shefik Efendi only described
— by command of Sultan Ahmud III — the
important events of the year 1115 (1703), that is
practically the fall of Muṣâfa II and accession
of Ahmud III, under the title Ta'âvîkî-Abâlîh (by
which he meant himself). There is a good
manuscript of this short work (c. 75 folios) in the
Vienna National Library; cf. G. Flügel's Katalog,
ii. 278 sqq. Mehmed Shefik also describes the
same revolution in a work entitled Shefîk-nâmâ, which
has become famous on account of its involved
allegorical style; the difference between the two
works is that, as it was not advisable in the former
work to discuss quite openly the secret workings
of the rising and its course, in the latter he used
a secret, allegorical style and at the same time
gave his political and historical creed (cf. Flügel,
Stam., ii. 471; according to J. von Hammer, G. O. R., ix. 207, N. 92). The Shefîk-nâmâ has
been several times printed (Stamboul 1282 (1865),
small 8°, p. 112; Stamboul 1289 (1874); p. 154,
SHEFİK MEHMET — SHEHRIZUR

small 8°, with a commentary (Şefik'hâne sherifî) by ession ed-Din Mehmed Paşa Kurnat-ı-kâmilî under this title also published separately 1269, p. 312, 8°, Stambul) and several times annotated; besides the above commentary, mention may be made of that by Abdallah Mehmed b. Ahmad (of Khalis in the Yedi Bâmi'L Library in Stambul cf. Brusel Mehmed Tâhir, "O'zemanî Mü'ellifleri, ii, 426, Hâddîji Khalîfî, Kâ'}îf al-Zâmî, vi, 600, No. 14822). A French translation planned by Arthur Alric does not seem to have been printed.

Bibliography: Si'djîli‘-i ‘osmâni, illi, 152, (brief); Djamal ed-Din, ‘Ozemanî ‘Tevâhî me-Müherşerbânî, Stambul 1314, p. 50 sq.; Sâlim, Tadrîsî, Stambul 1315, 385 sq. (where he is wrongly called: Ahmed); Brusel Mehmed Tâhir, "O'zemanî Mü'ellifleri, illi, 75.

(Franz Babinger)

SHEHR. [See ŞAHÊR.]

SHEHRI SER.B. [See KAŞI.]

SHEHRÎZUR (Şehrârîzur, in the Şehêr-i-nâmé: Şehrârîzûr), a district in Kûstânê. Şehrîzur, strictly speaking, is a beautiful and fertile plain (36 X 25 miles) situated to the west of the plain of Ahrâmên (cf. Sannû). To the south-east it adjoins the Persian district of Ahrâmên; to the north it adjoins the plain of the Irânian (Kenza-Üzûr). On the south the river Siriân is the boundary of the district; on the south-west Şehrîzur extends as far as the pass of Darâmîn-i Khân, by which the Siriân (Diyâla) makes its way to the south. On the west Şehrîzur is bounded by Arbet which belongs to Salâmâniya. To the north a buttress of the Ahrâmên (Kurra-Kâşû) separates it from the district of Kosta-Ewânî (Şehrî-erbûrê).

The plain is watered by the tributaries of the Têdjerî (Têdjerî), which coming from Salâmâniya flows into the Siriân; the chief of these tributaries is the river Zalâm, which in turn receives the Çewînî from the north.

The mountains Nalîrî and Bâlbâmî rising on the right bank of the Siriân separate the plain from the right bank of this river (the district of Şât-malîita). The district of Şamirîn situated on the left bank in the bend of the Siriân is also considered a dependency of Şehrîzur.

The old centre situated where the river Zalâm enters the plain, is Gûl-anar, whose real name seems to be Gihâmî (Khîlîmî-bar), to which the Kurd name Kherrîmî corresponds phonetically. The present chief town is Ala-bâ (Alâheh Halaîba), a township of 500 houses, 25 being Jewish and there are a few Christian families.

The plain belongs to the Dîr Kurds. In the time of Rich (p. 107) there were Afghan colonies in the province of Şehrîzur; these were the remains of the troops of Ahrâmîn, who during his struggle against Kermî Khan Zand (q. v.) besieged Semî (in 1168).

To the south-east of Şehrîzur, in the two parallel gorges formed by the spur of the Ahrâmên amongst vineyards and woods are situated the villages of Bâyêr and Tawîlîs belonging to Nakhî-banî; Sişîkîs. Numbers of pilgrims come thither from all parts, even from Russia and India. At Tawîlîs there is a beautiful mosque built by Shahîq ‘Omar, who is himself buried at Bâyêr. The two villages form enclaves in Ahrâmên-i-ubahîn and the Ahrâmên dialect is spoken in the north. It is said to extend even as far as Fandînî.

The district of Şehrîzur is closely associated with the beliefs of the Ahâf-i ‘Çakî (q. v., ‘Çakî-kal‘î), the initiates of the sect await the last judgment which is to take place in the plain of Şehrîzur, "in the threshold of Şehrîzur (Şehrîzûr-i Muhammadâ) all the faithful will receive their due." In the wide sense of the word, Şehrîzur served to denote the eyelet of the world whence, as one can see, there resulted a considerable amount of confusion in geographical terms.

History. For the epoch of the Assyrians, Billerbeck places at Şehrîzur the centre of the Zama country, inhabited at the time of Assur-nâsîpat by the Luîla people. Streek seems to agree with this localisation of Zama (Z. A., xv. 1900 p. 284). The Arâb (Ibn Mulshîhîl) associated with Şehrîzur (more precisely Duzdîn) the biblical legends concerning Saul (Tâlût) and David, which suggests the presence in these districts of strong Jewish colonies.

The numerous tumults in the plain of Şehrîzur confirm the testimony — of Theoephanes as well as of Mu‘îr b. Muhaîlît — regarding the number of settlements in this region. The most important town bore the name of Nîm-âs-tî (Nîmêtî) i.e. "half-way" between Ctesiphon and the great fire-altar of Shîr (q. v.) (Tâlût-i Salâmîn in Ardaşîrîn). Cirikov and Hertfeld (on his map) identify Nîm with Gûl-anar, and this corresponds with the situation of Mîsam (in Ya‘kût) regarding the proximity of the town to the mountains of Şehrîzur and Zalâm. The most persistent tradition (Ibn al-Fâkhî, p. 199, Mustawîf, p. 107) attributes its construction to the Sâsâmî Kawaiâ, the son of Pîrîc (488—531). The ruins of a Sâsâmî bridge on the Siriân protected by the fort of Şamirîn (Cirikov, 438) indicate the line of communications of Nimrâh with Kaşr-i Şîrîn. At this latter point the route coming from Ctesiphon forked: to run towards Hamadân and towards Şehrîzur (Ibn Rusta, p. 164, Edrisî, ed. Jaubert, p. 136). On the other hand, according to Rawlinson (J. R. Â. S., 1868, p. 296—300), the monument of Pî-kullî on the right bank of the Siriân not far from the foot of Bûkîl-baî Àrak marked a station on the road from Nimrâh, which the great explorer thought was to be found at Vâsîn-tapâ to the North-West of the plain of Şehrîzur. As the monument dates back to the epoch of the first Sâsâmîs, the road, before the construction of Nimrâh, might well have followed another direction in the plain. According to Ibn Khurîdahî (p. 120) the Sâsâmîs, after their accession to the throne, made a pilgrimage on foot to Shîr. The monument of Pî-kullî may mark the road. Hertfeld promises to publish separately the geographical part of his new explorations in this district. Finally, the Kurds told Rich (i. 269) that the ancient town of Şehrîzur? was at Kêlakà to the south-east of Arbet (cf. Hausknecht's map).

Şehrîzur, forming part of the diocese of Bîth Garîmî (Bâ-Dîrmaî) is often mentioned in the history of the Nestorian Church. The Syriac Orientale (ed. Chatot, 1902, p. 266) gives the names of its bishops between 554 and 605.

During his third Persian campaign the Emperor Hormizd spent the month of February in 628 in Şehrîzur "laying waste the district and towns by fire" (Theophanes Chronographes, ed. de Boor, p. 325; q. v. Zadour; Chronicon Paschale, ed. Dindorf, i. 730; les an Ephraïmos — the two graphics indicate the pronunciation -eir and not -em).
The Arabs had reached Shehriyar soon in Saharan times (Ibn al-Fakhr, p. 150). The remote situation of Shehriyar frequently attracted rebels and rebels and its location (Khartoum, Khartoum). The district is often mentioned along with Dimaqahan and Dinar (Kuräa, p. 233) the exact sites of which are unknown. In the time of Ibn Malahid (330944) there were in Shehriyar 60,000 (7) tents of Islam. Djidji (Rich, l. 250, Gebel-like), Bulsäm, Habob, and Shit (Shiite).

The same author (in Yaqut) counts Shi'a (perhaps a misleading of Hofmann, p. 254) among the town names of Shehriyar and mentions a little town Darân (7) between Nimrâd and Shu'a. The other names of places in the region of Shehriyar were Tanjâm (Ibn al-Atîr, Kamsi (7) and Dilmamast (Yâku), Between 400 and 434, seons of the Kurdi dynasty of the Hanawithiules ruled at Shehriyar.

In the eight (seventh) century the Turcomans and the Zangid Atâbeg held the district. In the time of Yâku, Maqsâf al-Din Kuîbî, Atâbeg of Arbil had settled himself there. In 693 (1296) an earthquake raised the road. According to al-Umari (7. 249 = 1348) Shehriyar "before its depopulation" was inhabited by Khul Kurda (Ritch, l. 254), a few remnants of them in this region; cf. also place-names like Kons-maalina, Manum-Kons). After the capture of Baghdad by Huluj, all these Kurds migrated to Egypt and Syria and their place was taken by the Hanawithiules (7) who are not true Kurds.

Shehriyar was inhabited by the modern name Avrâmîn, who still occupy the western slope of the mountains. On the other hand, a Khul whom A. von Le Coq met in 1901 at Damascus spoke the same dialect (7-7) which is not a proper Kurd one.

Timur crossed Shehriyar in 503 (1401) on his way from Baghdad to Tabr (Zafar-un-nâm, ii. 370; as Shehriyar von Kalâgîh).

Shehriyar played an important part in the Turco-Persian wars. According to the Shârâf-al-nâm, the Ardûl family (cf. Shârâf-un-nâm) had been at first settled in Shehriyar. The local history of Sinai even claims that the fort of Zalm was built by Bâba Ardûl in 504 (1158). Sulhân Sulamâân about 944 (1537) sent the governor of Amâdu to conquer Shehriyar but although a fortress was built at Gûl-anbar, the Ardûl re-established their authority in the district (Shârâf-al-nâm, 84). Shah Âhmad dismantled this fortress but it was restored during the Persian campaign of Khusrâw-pažâh (7-7) in 1630. The treaty of 1049 (1639) allotted to Turkey the western slope of the Avrâmîn with the fort of Zalm. Changes, however, must have taken place slowly, for Tavernier on his journey in 1644, seems to place this Turco-Persian frontier much further west. The representatives of Sulamâân-Khân, Wall of Ardûl, maintained a garrison in a "large town", the situation of which corresponds to that of Gûl-anbar. We may note here that Tavernier seems to mention the town of Alum-serek (7) under the name "Shehriyar".

The Ardûl being finally removed from Shehriyar, the district was governed by local hereditary chiefs who received their investiture from Constantinople. At the beginning of the eighteenth century the governor of the 'Irâq, Hasan-Fâhâ, was allowed by the Porte to have southern Kurdistan placed under his control. The eyalit of Shehriyar was then formed containing the sandîks of Kerân, Arbil, Kôn-sanâêt, Kora-colis (Shârâf-un-nâm).

Rawanduz and Harî, the mutessilims of which were appointed from Bâghdâd (Khurâf-al-END, p. 199-263). But soon the Bâhân chiefs (cf. Sulamâân-Yâku) attained to power and Shehriyar was placed under them. After the administrative reforms of 1857 and the creation of the wilayet of Mawsil the name of Shehriyar was given to the sandîk of Kerân (the kurân were: Kerân, Arbil, Kônî, Rawanduz, Kôrî and Sanâût). In order to complete the confusion the plain of Shehriyar proper was included in the sandîk of Sulamâân-Yâku (v. Cuvet, La Turquie en Asie, ii. 764).

From the sixteenth century a branch of the tribe ofelay (cf. Sena) had been established in Turkish territory. The plain of Shehriyar, as well as many villages in Khur, Pandjavân, etc., belonged before the world to the powerful Dîlî chiefs, Othmân Pâshâ and Mâmûd Pâshâ. This family exercised administrative functions of which the Porte gradually tried to deprive them. For a considerable time the effective administration of Shehriyar was in the hands of the widow of Othmân Pâshâ, the energetic Adîla-Khânum, a native of Senne. Senne has given an interesting description of her little court at Alâbe.

Archaeology. Among the half score of tombs on the plain of Shehriyar (Hassdnacht's map) the most important are: Bakrêwa (Ciricov: 120 feet high), diameter 450 feet, remains of walls, ditch 60 feet broad) and Yûstapâ (F. Jones; square in shape 90 feet high, surface sloping from N. to S. 320 feet). Important ruins exist at Gul-anbar (Ciricov: walls of trimmed stone, towers and an ancient aqueduct). In the ravine of the river Zalm above Gul-anbar lies the fort of Zalm. Karwint (Aâhîr-e-Râbî, ii. 266) explains that these are called a kind (kashâ) possessing aphrodisiological qualities and not found elsewhere. Tavernier mentions lilies between Shehriyar and Senne having similar properties. The Dzâhânunâm (p. 442) gives the gorge at Zalm the epithets, "habitation of the blue sorcerers" (așâq-rotâz) and "care of the confusion of speech" (Aîlî-7-khân). He mentions the local sights: the fort of 'Ali Zalm (apparently for Zalm), another ruined fort of Yezdegerd and a cave (natural) with a staircase and windows carved out of the rock. We may recall in this connection the Christian tradition of the monk Sabishî who had built a cell in the mountains of Shârān (Labeur, Le christianisme dans l'Empire Persan, Paris 1904, p. 310). The number of fortifications on the river Zalm show the importance of the place. Their object was to protect Shehriyar from invasion from the east. The usual routes of communication with Akbarbûldûn were however by the more convenient passes more to the north (Câlahn Giri, Nawkhausan, the passes of Bûnû).

Cartography: Map by F. Jones; Hanshnecht, Kipert, Reis in Orient, i1; Kuristan and Jarr. H. Hertfeld, Pavlial, Monument and Inscription of the early history of the Sassanian Empire, Berlin 1924, map 1: 200,000.

(See 'al-Fitr.)

SHEKHK BAI BAKRI. Shekhk is a district in Eastern Transcaucasia. In Armenia, it is called Shekht, in Georgian Skhakha (and Shekha); the Arabs write Shakhkal (Busu Bakhladzhi, p. 123, 124, 125; Balchard, p. 205), Shakhk (Yakub, iii. 311), Shakhkha (Ibn al-Fakih, p. 293, Balchard, p. 194). Shakhk (Muhammad, Musli, i. 68).

The usual boundaries of Shekht were: on the east, the Gokji which separates it from Abw zam (cf. v.); on the west, the Aklan (Turk. Kazkh) and its left tributary the Kazhly, which separates Shekht from Georgia (Kakhkhtia) and the Georgian counties later occupied by the Djaghatsuks (Elbasan, now Zekeri Aish); in the north the southern slopes of the Caucasus (Salawat-Dagh), the passes of which, however, are within the confines of Djaghats (Djaghats), to the south the Kura (Kur). Shekht is named by the tributary of the Alakan, Agi-kai (river running diagonally) i.e. from east to west and the river Alqij (Gilan) and Turlyan which run towards the Kur. Shekht consists of three regions, one of high valleys covered with forests and orchards; a central one, a treed and desert plateau; lastly a fertile plain declining to the Kur.

The variety of the factors which have influenced this remote region is responsible for the remarkable character of its local history in which we see how, before us in succession, the Albanians (Aghjowats), Armenians, Georgians, the people of Daghats, Russians, Turks and Russians.

In ancient times it formed part of Caucasian Albania (cf. Arman) which was a confederation of 26 tribes speaking different languages (Strabo, xi. 4). The remnants of one of these tribes are believed to survive in the Ulus, who are still to be found at Shekht (Balchard, p. 203, Ulus). From their name they must have originally come from the region of Oti (Strabo, xi. 7; Ov low); Fliny, xi. 138; Crito) lying on the right bank of the Kura (the modern Gandja, Shameki, Talat). It is first believed to have belonged to Armenia Major but was later occupied by the Albanians (cf. 11th Armenian geography of the 8th century translated into Russian by Palanov, 1877, p. 54). The present language of the Ulus is related to the S.E. group of languages of Djaghats (Khinchakh, Baniakh, etc.) and has been subjected to very heterogeneous influences, especially Turkish (Marqam, Ostertag'sche Stud, p. 49). The Albanians were very early converted by the Armenians and according to the Armenian legend the church of Gal (now Kish) was built by Rish, a disciple of the Apostle Thaddaeus.

Among the places mentioned in Albania by Polonya Kaskha and al-Kuba (vokh) occupying the same position, long. 50°, lat. 47°, must correspond to Kabala and to the passes which allow a free access to the valley of Samur (Khoin and Kakeh roads). The ruins of Kabala lie near the confluence of the two branches of the Tirtiyan-kai. "Arnav (long. 77° 30', lat. 44° 45') may correspond to the town of Shekht which has now disappeared (Yanovski places it S.W. of Nukh, the present village of Shikh). The other villages of Skiht (Sirn = Nukh) still has its name connected with the ancient town. The present capital Nukh or Nukh (on the river Kish) is said to have taken its name from a village more to the east (Sultan-Nukh, now Nukh); its name is only found from the xvth century onwards, unless it is connected with Tekin (name of an Albanian canton according to the Armenian geographers).

When the Arabs talk of towns of Arnav built by the Sasanians they probably only refer to the rebuilding of ancient sites; thus Kabi b. Faruk (488-531) is credited with the building of Kabala (Ibn al-Fakih, p. 286; Yakub, iv. 32) and his son Kherarsh Ashshawru (551-579), with al-Bakht, Kambtihan (Raghaberfe, Kambtihan in Kakhkhtia) and Al-Bakht, al-Dhulani (Balchard, p. 194).

Under the Caliph Uthman, Salman b. Rabab having crossed the Kur conquered Kabala, but continued himself in concluding an advantageous peace with the chiefs of Shikhy and Cambtihan. Later Djarzah b. 'Abd Allah al-Hakam halted at Shikh on his return from the Djaghats campaign.

The Christians of Shekht remained for a long time in the majority. According to Ma'addi (ii. 85) the principality of Skhik, adjoining that of Samal (Polonya, v. 91, Simak, Damir in the valley of the river Samur), was inhabited by Christians and the Musulins who worked as merchants and artisans. The king was called Adamaros b. Humam. The next district on the east was Kabala, "a haunt of robbers and bandits", a town of which had a Muslim population while the environ were inhabited by Christians. The king (M'adid) of Kabala was called 'Abaasatu al-Awar (the "one-eyed"). The identity of these is still uncertain. Towards the end of the 6th century, Georgians and Armenian sources mention a mysterious Adsmart, the Blind (Broset, i/4, 249); in the 8th century the name of Armenia was falsely transferred to the family of Mikhail (Albanian princes of Samur origin, Broset, i/2, 480). According to Mokaddese, p. 51, Kabala and Shekht were little towns.

Shekht later belonged to the Shirwanis, with whom, however, the Georgians disputed its possession. In 1117 King David conquered Gish (Kish above Nukh) on one of the tributaries of the Agrjali. This little town was the residence of the governor (czarxan) of Tankh (district of N.E. of Alasan) and of the bishop whose diocese comprised.
Elfen (Ellen), Tarkhan and Shakhli. Bossest, t. 17, 550, thought the latter name identical with Shakhli. In 1622 (1625) we again have the Shvrszhkhsh Shekki called on to complain to the Khv-Srimshkh Djalil al-Din of the loss of Shakhli and Kabala which had been taken by the Georgians. Towards 626 (1229) Djalil al-Din established his authority over both towns simultaneously. (Nasawi, ed. Housius, i. 146, 176).

It is the time of Timur we find Sidi 'Ali of the Arlit tribe acting as wali of the wilyet of Shakhli. (Aril is the name of one of the four chief tribes of the Uilz of Caghatti, q.v.) A punitive expedition sent by Timur (1790-1393) drove him from his office. Although a "good Muslim" he joined the Georgians and perished in a skirmish under the walls of the fortress of Alingjik (near Nakhalzawan). About 801 (1398) through the intervention of Amir Shakh Hisham of Shirvan (who had originally been a humble landowner in Shekki) Sidi 'Ali, son of Sidi 'Ali, was restored as chief of that tribe and governor of Shakhli. Ibranum and 'Aliy afterwarwards acted in concert (Zafar-nama, Calcutta, i. 731; ii. 204, 218, 222).

To judge from the dates upon tombstones found by Yanovsky in the cemetery of Kabala (890-901 = 1447-1485), this town must have no longer existed towards the period of the Kara-Koyants and Ak-Koyants dynasties.

At the beginning of the Safawi period Shakhli was ruled by the hereditary chief Husain Beg, a son (according to the Gultamir-nama) of the Shirvanshsh dynasty. Hard pressured by the Georgians, he appealed for help to Shah Tahmasp, but was killed in a battle against Lewan I, king of Kakheta (1520-1574). When Shirwan was conquered by Shah Tahmasp (in 943 = 1538), Darwish Muhammad, son of Husain, sided the last Shirvanshsh against the Persians. In 958 (1551) Shah Tahmasp with the help of King Lewan besieged Kakh and the fortress of Gulsanpur ("see and set it") near the modern North. Shakhli was annexed by Persia.

When in 898 (1578) the Ottoman troops under Lala Mustafa Pasha fought a battle at Kakh against the Khans of Gudia, Erivan and Nakhalzawan, King Alexander II of Kakheta, an ally of the Turks, occupied Shakhli without striking a blow, and it became an Ottoman sandjak. The Turks re-established at Shakhli the son of the former governor, Ahmid Khan (Hammer, G.O.R. ii, 484), but an Ottoman governor (Kariy Pazha) was placed in Arslan.

When the Safawi again became masters of Transcaucasia, Shah 'Abdul appointed the Georgian prince Constantin-Mirza (son of Alexander II of Kakheta) vizier (in 1014 = 1606). Shahmiy Khan of Shakhli became his faithful vassal. Later the Safawis removed their protection from the kings of Kakheta who were turning towards Moscow, tried to reduce their possessions and towards 1643, Shakhli fell into the power of local madirs and razgas. Under 'Abdul Ewliya Celebi visited Shakhli (li. 286-293). At this time (about 1657 = 1697) the Sultans of Shakhli were under the Khans of Arslan. The town had 500 houses, although he puts the stronghold of Shakhli in the city of Shirwan Ewliya and states it is considered to belong to Georgia, "because the Georgians had founded it". Ewliya's works on the tribe of Kaliash whom he met near Mahamulabol (Khalka) are very curious; these people talked pure Mongol (li. 291) which has now completely disappeared from these regions.

Nadir and his troops several times traversed the territory of Shakhli and Kabala (in 1147, 1154). To be able the latter to resist him the local petty chiefs chose as their leader 'Abdul-Allah (Abdul-Kadir) the former tax-collector Hajiidy Celebi, son of Kurban. In 1157 (1744) Nadir Shah besieged the fortress of Gulsanpur without success. After the death of Nadir (1160 = 1747) local dynasties arose again throughout the Eastern Caucasus. Hajiidy Celebi consolidated his position and only allowed authority to the sultans of Arslan and Kabala. On two occasions he inflicted defeats on King Frakel of Georgia. This energetic man, whose character is not without chivalrous features, played a considerable part in Transcaucasia (Bossest, ii. 2, 88).

Hajiidy Celebi, a grandson, we are assured, of the priest (Karabakhsh) of the former church of Kakh, was a zealous Muslim and converted to Islam forcibly a large number of his Christian subjects. He died in 1172 (1759). His descendants (Agha-Keshi, Husain, Abd al-Kadir) relying alternately on their neighbours in Darband (Fath Ali Khan) or Karabakh (Ibranum Khan) expended their energies in intrigues and internal struggles. Finally in December 21, 1755, Muhammad Hasan, son of Husain Khan, established himself at Nakhla after having massacred the whole family of 'Abd al-Kadir (who had murdered Muhammad Hasan's father). He proved an able administrator. He annexed to Shakhli the cantons of Arslan and Kabala, colonised the open lands and drew up a written canon of laws (dastur al-walas) by which the population were divided into five classes: the beg (3 categories; in all 1560 of whom 51 were Armenians), the monks, the waqf (masqar) — 700 mm at arms excepted from taxation, the amir (peasant-proprietors) and the sandjar (peasants).

About 1209 (1795) Salim Khan, brother of Muhammad Hasan, seized Shakhli and invaded the seat of government to Gulsan-Gudia. Muhammad Hasan, taking refuge with Agha Muhammad Kadir was blinded by his orders and sent into exile in Russia. In May 1805 Salim Khan submitted to the Russians and promised to pay tribute but soon rebelled against his new sovereigns. On Dec. 10, 1806 the Russians invested l'ignu Kuli Khan Dumbait, the former governor of Khor Nhật Khan, son of Djanar Kuli, General Yermolov, and Shakhli as a separate province in the Russian empire. At this date (1814) the khanate covered 7,600 square miles, contained 200 villages and had a population of 93,500 of whom 80,000 were Adhadrakhsh Turks, 15,300 Armenians, 1,500 Ulli and 1,000 Jews.

Since 1846 Shakhli, divided into two districts (viceroy: Nakhil and Arslan (capital: Ak-dash) has been under the governor of Elivanetpol (Gandja). According to the census of 1896, the district of Nakhil (1600 square miles) had a population of 49,797 of whom 66,600 were Turks, 14,500 Armenians, 7,400 Ulli, 4,400 Greeks and 1,500 Jews. The town of Nakhil had 25,000 inhabitants (81/4
Turks and 18% Armenians). Among the villages of Nakhchivan may be mentioned the two last refuges of the Udi: Wattaghin (majority Jewish; the Udi half Armenian-Gregorians and Orthodox) and Nif or Nis (5000 Udi, Armenian-Gregorians). The village of Nakhchivan, Yolm (Vakhsh, iii. 314) still exists west of Wattaghin. The district of Nakhchivan produces raw silk, fruits and wine. The district of Aresh covers 1000 square miles, has 125 villages and 52,372 inhabitants, of whom 37,577 are Turks, 12,278 Armenians and a few Gregorians, Kurds and gypsies. The district consists of steppes and flat lands where rice is grown. Many of the inhabitants are semi-nomads.

Since the Russian revolution the old khanate has formed part of the Acharbaddjan republic (at first affiliated to the Transcaucasian federation, later independent and finally, since 1920, Soviet).

ELIZA, in the texts of the middle ages, Shafo, title of the Marathi Shahis of Mogov, S. E. of the Acharbadda fortress of Ribat al-Fath (Bush), 70 yards below the gate now called Bub Jax. It occupies the site of an ancient Persian settlement, later the Roman Sala Colonia (cf. Rabat), some distance above the mouth of the Wadi Bit-ragragh. With Salai (Sale) on the other side of the river and the Almohad Ribat al-Fath, it formed from quite early times a centre of mobilization for the holy war.

At the end of the xinith century, the Maralid princes decided to use this site for their dynastic necropolis. The first member of the family to be buried there was the prince Umm al-Izz (d. 693 =1258); she was the wife of Suljan Abu Yaqub Ya'la b. Abi al-Hajjaj and the mother of Suljan Abu Ya'la Yaqub. On his death which took place at Algecras in 682 (1286), Suljan Abu Ya'la Yaqub was taken to Shella to be buried; 706 (1239) his son Abu Ya'la Yaqub after his assassination at Tlemsen and in 708 (1308) Suljan Tshuli 'Amir who was poisoned at Tangier were likewise buried there.

Down to this time the necropolis seems to have been a simple sanctuary of modest size. It was the Suljan Abu l-Hassan 'Ali who gave it the appearance which it has retained to the present day. He enclosed the original sanctuary within a vast enclosure of cement, with three gates, one of them monumental. The work was finished, as the inscription testifies, at the end of 739 (1339). Within the necropolis, various restorations, extensions and decorations were undertaken at the same time. A new mosque was built with a splendid funeral chamber. In the lifetime of the Sultan, his son Abu Malik (d. 740 =1340) and his wife Shamsa al-Dinah (d. 750 =1350) were buried at Shella. On his death in 752 (1351), on the mountain of the Hinat in the Great Atlas, the Sultan's body was brought here for burial by order of his son Abu Tashin.

No Maralid Suljan was buried here after Abu l-Hassan; the enclosure however continued to receive the remains of members of the royal family. It was for some time a splendid sanctuary, some idea of which may be gathered, not only from what remains of the present day, but also from the enthusiastic descriptions written in the xivith century by the celebrated Andalusian writer Lisan al-din Ibn al-Khatib. With the fall of the Maralid dynasty, the necropolis of Shella began to fall into ruins as it was no longer cared for. Since the French occupation, the remains that still exist are preserved against any further injury.

An architectural, epigraphical, monumental and folklore study, with numerous illustrations has been devoted to Shella by Henry Benoit and E. Lévi-Provencal, entitled Shella: Une necropole Meridio, collection Besire, vol. i. Paris 1915. The bibliography — rather limited — of the subject is collected there.

(F. LÉVI-PROVENCAL)

SHEMAKHA. [See SHEWARWAN.]

SHENDI, SHUNDI, 18° 41' N, 33° 59' E., a town on the right bank of the Nile, about 125 miles north of Khartum, on the old caravan-route between Egypt and Sennar, it also gives its name to a district in the Berber Province. Nowadays it is an important station on the Wadi-Halfa-Khartum Railway, with many locomotives and leather and iron works. Although still a thriving city, in the olden times it was one of the outstanding marts in the whole of the Eastern Sudan with over 50,000 inhabitants. In the course of history it has suffered at the hands of ruthless invaders and merciless marauders. The
result has been that it has shrunk from its former greatness. It is the centre of a district that has been noted for its tall, beautiful women, and it is significant that this region in past ages was ruled by a succession of queens. A vague relic of that period lingers in an eighteenth century traveller's tale of his meeting a "Queen of Shenid" in 1772 (Bruce, Travels, vi. 448). Until modern times the town was a busy market for slave-traders and other traffickers. The neighbourhood, north and south, contains many remnants of ancient splendour, ruins of Mecca and its crumbling pyramids. In 1882 a dreadful catastrophe befell the town. The native Governor, who is called the Meh, and given the sobriquet of Man or Panther, invited landladies, the sons of Muhammad Ali, who had been sent by his father to quell the rebellious tribes and punish the fugitive Mamlitk Beys, to a splendid banquet. When the Egyptians were in a drunken stupor the building was set on fire and burnt, and his suite perished in the flames. In retaliation the place was bombarded by Muhammad Bey of the Defterdar, and thousands of the inhabitants massacred in the most revolting fashion. In 1884 the Gordon Relief Expedition passed by Shenid. Ever since the Anglo-Egyptian occupation in 1898 the town has developed to a great extent.

Bibliography: Prince Ibrahim Hilmy, Bibliography of Egypt and the Sudan, ii. 233; James Bruce, Travels, Edinburgh 1813; Backer, Travels, p. 277-301; Wallis Budge, The Egyptian Sudan, ii. 402 seq.

SHERCHEL (French Cherchel), a town in Algiers, 60 miles W. of Algiers; long. L. 10° E., 36° 37' N. lat. — Population: 5500 of whom 1400 are Europeans. — The town is built on a plateau 1000 yards broad lying between the sea on the north and wooded hills, the outer Butresses of the massif of the Saul Menasser, in the south. The calcareous rocks of the plateau provide excellent building materials, the fertility of the soil and humidity of the climate are conducive to the growth of all kinds of produce. The country round is covered with gardens and vineyards. The harbour, sheltered from the west winds by the little island of Joinville and from the east by Cape Tifnine is small but safe. Its annual trade is about 30,000 tons and it exports the agricultural produce of the region.

History. The advantages of the site of Cherchel were remarked in very early times. The Phoenicians had a trading station here called Iol, which later passed to the Carthaginians. After the Second Punic War, Iol became the capital of the King of Mauretania, Bocchos, and his successors. Placei. the throne of Mauretania in 25 B.C., by Augustus, king Juba II gave the town the name of Caesarea and adorned it with monuments and works of art. When, after the death of Ptolemy, successor of Juba, Mauretania had been annexed to the empire the town was raised to the rank of a Roman colony (Colonie Claudia Caesarea) and was the capital of the province of Mauretania. It was considerably extended and in the second century A.D. had about 150,000 inhabitants. Its walls were about 5 miles round. The ruins of baths, theatres, the amphitheatre, statues and mosaics discovered since the French occupation attest its wealth. Having previously lost its importance by the partition of the two Mauretania in the time of Diocletian, it was burned during the rebellion of Firmus (371) and at the beginning of the next century was sacked by the Vandals. The Byzantines reoccupied it in 515, but never restored to it its past prosperity; at a date which is not accurately known, but probably in the early years of the viiith century A.D., Caesarea fell into the hands of the Arabs who completed its ruin. It was perhaps not completely abandoned. The harbour in any case still existed in the time of Ibn Hawkal (Description de l'Afrique, transl. de Slane, f. A., 1842, p. 184). In the time of al-Bakri (Masala, transl. de Slane, Algiers 1913, p. 165) it was in ruins. According to this author there was nothing left at Sherchel but an *anchorag q commanded by an enormous town of ancient buildings and still inhabited*. Bakri, however, mentions the existence of several *ribāt* where a large crowd of people assembled every year. Idrisi describes Sherchel as a town of small extent but well populated (transl. de Goeje, p. 103). The country round was occupied by Beduin families who devoted themselves to cattle-rearing, to growing vines and figs and they harvested more plentiful and barley than they could consume. This circumstance explains the descent made on the town by the Normans of Sicily in 1144. According to Leo Africanus, Description de l'Afrique, bk. iv., ed. Schefer, iii. 52 the town was continuously inhabited during the five centuries that followed the Arab conquest. During this period Sherchel was held in turn by the various dynasties which disputed the possession of Central Maghrib. After the disruption of the Almohad empire, it fell to the Abi al-Walid of Tlemcen, who was taken from them by the Marinids in 1300 A.D. It became a part of the ephemeral kingdom founded about 1350 by the Ulad Maita until it was ultimately recognised the authority of the Ziyânids in the reign of Abi Tabet. In the xvth century fugitive Moors from Spain settled here in large numbers and built 2000 houses (according to Leo Africanus, op. cit.). The newcomers devoted themselves to agriculture and industry, especially to silk growing, and commerce but also to piracy. In the first years of the xviith century A.D. a Turkish corsair named Kara Hassan settled at Sherchel, but was put to death by Atibij [q.v.] who made himself master of the town and placed a garrison in it. Temporarily liberated from the authority of the Turks as a result of the defeat of Khoir al-Din [q.v.] by the Kabyls, the people of Sherchel had again to recognise the Turkish government and this time finally in 1528. An attempt made by the Spanish to seize the town and make it a base of operations against Algiers failed in 1531. Andrez Doria had to reembark after losing 600 men.

During the Turkish period, Sherchel simply stagnated. The population never exceeded 2500-3000 men occupying a limited part of the old town. The depredations wrought by the corsairs who settled out from it, led to its bombardment by Deuxness 1882. Turkish authority was represented by a kaid, aided in the administration of local affairs by a council of six notables and supported by a garrison established some distance south on the al-Hashim. The mainstay of Turkish power, however, was the Marabout family of Chebri, whose ancestors had come from Masegor the end of the xvth century and who had acquired considerable influence throughout this region. At
the beginning of the sixteenth century, the Turks quarrelled with them. Al-Hajjali b. Awda al-Ghobrini was put to death by order of the Dey and his relatives had to take refuge in al-Dhara.

The disappearance of Turkish government in 1830 enabled the Ghobrini to return to Shershel and become masters of the province. But they found their influence assailed by that of another Marabout family, that of the Brakou who lived among the Bani Menaser. Firstly Abd al-Kadir who had established a sheikh at Meknasa forced the people of Shershel to submit to him. He tried to use the harbour of Shershel for an attempt to revive piracy. An attack by a Shershel corsair on a French warship decided the governor-general Valèe to occupy the town in 1840 and to establish there a colony of a 100 European families. The new settlement prospered rapidly and by 1850 had over a thousand inhabitants. They began the development of the country round and this has been steadily continued. An attack on it in July 1871 by the Bani Menaser who besieged it for a fortnight is the only incident that has occurred since the occupation.

Shī'ah, the general name for a large group of very different Muslim sects, the starting point of all of which is the recognition of 'Ali as the legitimate caliph after the death of the Prophet.

THE MOTIVES OF THE SHI'AH AND THE EARLIER PERIOD

Islam is a religious and a political phenomenon as its founder was a prophet and statesman. The development of the community of Islam into separate sectional groups was therefore a natural result of the different possible relations which the political constitution and religious belief might bear to one another. Three main schools may be distinguished. The middle line was taken by the Sunnis. Their leading principle that the imamate belongs to the Karahīs is a simple expression of the historical fact that the world of Islam in the early centuries was ruled by Meccan families. The intelligible demand that the ruler who represented the state which was founded upon religion should be really religious personalities very early led among the Sunnis also to the unhistorical glorification of the first four pious caliphs and further faced them with the problem of finding formulas to explain that it was also a religious duty to owe obedience to caliphs of little worth and even to foreign Sulṭāns, so long as the exercise of religion and the maintenance of order was afforded by them. How little, however, such principles grew out of a pleased approval is best shown by the constant warnings, not only from pious circles, to be careful in dealing with secular, though Sunni rulers. If we have here on the Sunni side less a clear theory than rather the attempt to reconcile a religious ideal with political reality, on the other hand on the two flanks of Islam we find two fundamental theories. The one demands an elegant separation of the constitutional question from the religious one, the other has interwoven the two. The former question, although already in existence, only obtained greater publicity in the first civil war among the Khāridjīs (q.v.) for whose salvation the question of the person of the caliph was a matter of such indifference that he might "even be an Abysinnian slave." The Shi'is on the other hand lay religious value on the question of the imāmate and their dogmatic books contain a special section, the leading idea of which is the traditional principle "whoever dies without knowing the true imām of his time dies the death of an unbeliever".

There was a political Shi'ah, more accurately a Shi'ah Alī i.e. a party of Shi'ah (q.v.) at the very latest immediately after the death of the Prophet. If we may believe the Shi'ah stories the original Shi'ah consisted of three men: Sulṭān al-Fārisī, Abū Uṣūl and al-Mīqāīdī b. al-Awān al-Khāndī. They were the only ones — some stories give a few more names — who championed 'Ali's succession on the death of the Prophet and therefore did not falter from their faith. For the other companions of the Prophet are credited by the majority of the Shi'ah with 'idda (q.v.) for paying homage to Abū Bakr. But the stories, especially about Sulṭān al-Fārisī — if he ever really existed (cf. Horovitz in Islam, xii. 178, 194) — are quite legendary. A large number of the later Shi'ah traditions and prophecies regarding the future of 'Alids are associated with his name.

The desire that the imāmate in Islam should be kept for the 'Alids (q.v.) as the family of the house (of the Prophet) (Abū al-Ḥair) has not been fulfilled. The brief reign of 'Ali from 35-40 (656-661) was only a strongly contested partial caliphate while his son Ḥasan (q.v.) can hardly be seriously considered to have been caliph. The first 'Alid independent principality was founded in 726 (780) in Morocco by the Ḥasanīd Idrīs I b. 'Abd Allīh (q.v.). But his territory was entirely Sunni, that is to say we have not here a Shi'ah state but simply an 'Alid kingdom. At the present day there still exist a few small states with 'Alid chiefs, all more or less under European Christian powers, of whom however the Imām of San'ā in Yemen alone is Shi'ī and indeed a Zaidī (see below).

As the energies of the Shi'ah forces met with too much resistance in the political field they devoted themselves to the religious. The political experiences of the Shi'ah had been particularly suitable for this development. The martyr's death of one 'Alid succeeded that of another. Much more than the blood of 'Ali who was murdered by a casual Khāridjī, it was the blood of Ḥasan (q.v.) who perished under the swords of the government troops that was the end of the Shi'ah's creed. The passion motive was thus restored to the religion among the Shi'ah; it had been lost to official Islam since the turn of fortune which after the Ḥijīrā set the Prophet's career on the path of worldly prosperity and excluded all possibility of it by a peaceful death, devoid of any tragedy that might have borne fruit in this direction. The insistence on the idea of a passion has so thoroughly penetrated the Shi'ah that it has formed legends full of difficult historical problems, which make even the lives of 'Alids, who never attained any prominence, end in martyrdom, usually through poison at the instigation of the caliphs, as in the case of Ḥasan I, Dja'far al-Sahlī, 'Alī al-Rijālī, etc.

That this feeling of passion, which can remain
mordidly and among the Zaidis who are closest to the Sunnis, has remained very worldly, was transformed to something completely religious in the majority of Shi'a, i.e., to that of the Shi'a the death of Husain paved the way to Paradise, is a result of the fact that another religious idea came into play, which is, as the history of religions shows, often associated with the passion motive, namely the idea of the manifestation of the divine in man (epiphany). It was not strange to Muhammad, led to him for example, Jesus was "a word of God" (Kor'an iii. 40). But he had not placed the intermediation between God and man in a person and certainly not in his own (Kor'an, xviii. 110; xi. 5; xvii. 95) but in a revelation, the Kor'an. From this point of view the characteristic of the Shi'a can be thus defined:— to the First Article: "I believe in God the One" and the Second Article "I believe in the revelation of the Kor'an which is uncreated from all eternity"—is added a Third Article:— "I believe that the Imam especially chosen by God as the bearer of a part of the divine being is the leader to salvation". But if such an Imam possesses in the eyes of his believers any quality or more frequently a substance of divine origin, then when faced with his decease, they do not consider themselves with the "right hand of his living" in paradise, in which he only share although in a higher degree, with all believers, but to them the death of an Imam is rendered void by the idea of "Bay'a" [q.v.], belief in "concealment" and "parousia." The Imam becomes Mahdi [q.v.]. Many indeed abandon the earthly part of the Imam but make his divine element pass into the next Imam, after the manner of the doctrine of transmigration. The mutual interaction of the idea of passion and epiphany again shows that the expectation of parousia arising from the latter, which, as the example of the hidden Mahdi, Muhammad b. al-Hajjaj, shows, can also arise independently of a martyrdom, was increased by martyrdom.

The state of our sources does not enable us to have a reliable insight into the confines of the various Shi'a motives. It must for example remain an open question how far the Shi'a ideas of epiphany and the intermediation of the Imam are the direct continuation of the similar ideas which, according to Ibn Ishak, certain singers of primitive Islam, already associated with the person of Muhammad: i.e., the question arises how far these religious ideas of the Shi'a were within Islam before the year 11 (632). Under 'Ali, however, they appear as important dogmas of religion. If the tradition through "Abd Allah b. Said [q.v.] is still obscure, we find it somewhat clearer in the many poems of Shi'a mentality. One Abu b-Awwad al-Di'ali [q.v.] who fought by the side of 'Ali at Siffin praised him with more than ordinary infatuation: "When I looked into the face of Abu 'I-Husain, I saw the full moon, which filled the spectators with reverence and wonder. The Koran now know, wherever they may be, that they are their noblest in merit and religion." His attitude to 'Ali is therefore ascetic-religious. In accordance with traditions referring to him, therefore already current (see below), he calls him "our scourge and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf." Phrases like "I seek God and my friend and warf."
forms may be distinguished within the Shi’a: The Zaidis [q.v.], who are nearest akin to the Sunnis, limit the manifestation of God in the Imam quite rationalistically to mere divine “right guidance” and deny the miraculous influx of the divine portion of light into a definite Alid individual. The martyrdom of the Imam finds expression almost exclusively in the political field in constant endeavours to attain with the sword of man and help of God the goal of Alid supremacy. They have successfully resisted various chiliasmic expecta-
tions of the Mahdi that have appeared among them. On the other wing, the epiphany becomes completely inherent, absolute zulfiqar [q.v.]; the mortal in the Imam is entirely swallowed up; in the end God himself has no place beside him. The representatives of this school are ardently fought by the Zaidis and Imamis, the representatives of the middle school, as people who have brought the Shi’a into discredit and have fallen away from Islam— they call them Ghulat (sg. ghail, q.v.). To the Imamis the Imam remains mortal but a divine light-substance is inherent in him by partial zulfiqar. The death of the Imam, which among the Ghulat e.g. the Druses, is simply the withdrawal of the deficient, becomes with them the religious experience which makes it a joy to die. Its voluntariness is emphasised with dogmatic intention. In the battle of Kerbelä God sent the angel of victory to Hussain; but he preferred “to approach to God”.

In the course of history each of the three divisions had possession to divide into many subdivisions, simply on account of the specifically Shi’a ideas of each. Thus, as a result of the Zaidi agitations, small principalities arose in Tabaristan and Dailam from 250 (864) and in Yemen from 288 (901) which from the distance between them could not form a unity nor even possess uniformity. The Zaidis of the Irak, who never attained independence in a kingdom of their own, but were often able to make up for this by exerting considerable influence in the Caliph’s empire, had to adapt themselves to conditions there by a greater use of the ta’ziya [q.v.] or of the hajj. The school of the Ghulat, who went furthest beyond Muhammad’s inheritance and gave the greatest play to individual initiative, found a very varied expression in the Karb Mean groups, the Ismaiilis and the Druses and ultimately in the Nusairis and the Al Baki [q. v.]. These groups also to a great degree cut themselves away from the members of the holy family. This is already seen in the Kalyanis [q. v.], whose Imam, Muhammad b. al-Hanafiya, is not a descendent of the Prophet; this is also expressed in a tradition: “Salmân al-Farsi belongs to the family of the house”. It led for example in the 5th (9th) century among the Harität [q. v.] to the exclusion of the Alid Imam in favour of the deity incarnate in Fádi Allâh al-Ashtarabadi. But the very principle of the Ismaiya had the seeds of diaspores within it. For the contact between God and man is not at a point of intersection but in a continuous line, nor is a single individual but in an uninterrupted series of Imams, among whom the divinely inspired father appoints the son on each occasion or— according to others—the divine element is transmitted directly to the eldest son, whose mother also comes from the holy family. But religious adherence to an Imam might become so fervent that one could not abandon him even after his death; or the successor might be a person of very doubtful character, or he might be quite defective. Thus arose the subordinate group of the Waqifsya and Kifsya or Kifia. The former “hesitates” regarding the death of the Imam, therefore “stands” by him and see in them the Mahdi; the latter regard the death of the Imam as “destined” and therefore continue the line. There are a whole series of such. Waqifsya, like the Dja’farîya with Dja’far al-Ṣadiq, Mâsaâyiya, the Râjîâyiya etc.; in the narrower sense only the term applies only to the Dja’farîya. For the reasons mentioned, however, the line could not be continued endlessly among the Kifia. It is very doubtful whether these even elenent of Islam—al-Ḥasan al-Ḵâlid left a child at all at his death in 260 (873), but the belief has prevailed among the Imamis in the existence, the mysterious disappearance and the Mahdi character of a son Muhammad Ḥudjîj Allâh. Thus the Imamis become “Twelvers”, Isma’ili ‘Abârîya [q. v.], although it was for a period still disputed whether there was not a thirteenth Imam.

If we thus see among the Shi’a denominations, simply in so far as they are Shi’a, a range which corresponds to that in the Christian church history which separates the Theopaschites from the Socinians, we must remember we are only considering one of the principles that have gone to form it. For the Shi’a belongs to Islam and is therefore faced with all the problems that agitate Islam generally. But Islam does not look at the world from the point of view of religion only, but has its cultural, economic, and social and through the question of the šu‘ab its political problems also, and for the Shi’a can only be briebrly indicated here. In dogmatics we find besides the Mi‘arûs [q. v.] predestinarians like the Zaid Sulaîma’n b. Djarî and anthropomorphists like the already mentioned Isma’il Hîshâm b. Salîm al-Djassali’dî, and how much the dispute common to all Islam regarding the nature of the Kûrân was also a disintegrating danger for the Shi’a is shown by the tradition attributed to Dja’far al-Ṣadiq, said to have been uttered to the above mentioned Yûnus b. Abd al-Râhîm, a saying which suggests a provisional formula: “The Kûrân is neither creator nor created; it is the word of a creator”. In relation to philosophy both attraction and repulsion are considerably stronger than among the Sunnis. For on one hand their richer theological speculation required to a greater extent the categories of philosophy and its dialectic for dogmatic stabilisation, on the other hand the Shi’a was here particularly sensitive, indeed vulnerable, like every religious community, which sets out from pure metaphysical postulates, as it does with the belief in the Imamate. Apart from epistemological antagonistic principles which philosophy, called in to its aid, introduced into the Shi’a, the latter had also to settle well known disputed points within Islam on the fundamentals, the Uṣûl al-Din and the Uṣûl al-Fikr, for example on the binding force of a single tradition or on ûkâya [q. v.]. In the same way there were in Shi’i law disputed points from the Zahiris to the Ḥanafis. In worship there was at all groups a strong impulse to satisfy the tendency towards adoration by the reverencing of Imams and places of pilgrimage at the graves of their martyrs, which was in conflict with the conservative tendency to remain Muslims.
The dividing line between the Sh'ites and domestic policies i.e. nationalism is very intricate and much broken. It is not simply that the conquered people like the Persians from the first had sided with the Sh'ite opposition. The oldest of the principal leaders were genuine Arabs, of the south, it is true. Among those around Riḍá for example, Yáns and Hítham al-Djwáilí were clients, but Débíl a race-pride proud South Arabian and an opponent of the North Arabs. Two hundred years later we still find Mufíd (see below) priding himself on his South Arabian descent from Yaṭṭán, the first man to speak Arabic". Social disputes were brought into the Sh'ite as early as al-Mughír when he mobilized his clients and slaves. Among some Ghulíti, like the Karmátíjí, socialist demands increased to communism, which however here in view of the authoritative attachment to an imám or his representative was only a mask for a despotic oligarchy.

A more obvious aristocracy was formed by the circles of higher administrative officials at the 'Abbasid court, who, for the most part, imhäuser, and bound together by ardent devotion to the imámate, among whom the local was a part of the family of the Najúbhí. As regards women also the Sh'ite had to deal with all aspects of the problem. Some of the Karmátíjí are accused — at least — of having community of women; the Imámí allow temporary marriages (see MÁTA') the Zaidí construe themselves to polygamy as defined by the Sunnís; the 'Alí Sh'ites decided on monogamy.

As the numbers of possibilities in the fields of dogma, epistemology, law, worship, politics and social sciences are not additional to but multipliers of the figures of possibilities in the question of the Imámí, the result is that, although we do not have in practice all the possible combinations, we have a number of Sh'ite subdivisions, which far exceeds the well-known 72 sects. At the same time this possibility of variation explains the many discrepancies in the usual Muslim books on the various sects, as the latter, as can easily be understood, divide one and the same community into several groups according to the special feature they emphasize.

In view of the elemental force with which the Sh'ite creed, in itself full of problems, made its appearance in the world of Islam which was already full of its own problems, we can understand that the personalities who are considered heads of schools in the present Sh'ite communities were less creators than connoisseurs, but we can also see that the consensus each time became limited to a smaller circle. In the language of the Sh'ite, the 'aš'íja' affects only the individual ecclesiastics, which alone will be blessed. In dogmatics this limitation has never attained very great success; Zaidís, as well Imámís, finally joined the Mu'tázíli.

This is not mere accident, as the example of the Qur'án already shows: of the above mentioned six sects of belief, the third was bound to drive out the second. The hasmíta of an uncertain Qur'án had in the long run no place beside an imám as a guarantor of the true faith. It is also logical that the Imámí for the purpose of its classification among the beliefs of the imamate undertook an allegorical explanation and that on the extreme wings the Ghulíti fought it, made interpolations or even rejected parts and because themselves Bátíns (cf. BÁTHÍNA). The Mu'tázíli was not simply the first step; but through these borrowings from philosophy, primarily only seeking the formal, it penetrated into the space left vacant by the supernatural belief in revelation; theology thus became theosophy and gnosticism.

The origin of the Sh'ite motives is not explained if we again emphasize the fact in itself illuminating after what has been said above that Gnostic Neo-Platonism, Manicheism and old Iranian ideas have intermingled. But in the present state of our knowledge, we cannot go far beyond this statement, as the literary modes of approach have not yet been indicated. With the echoes of Christianity also, one must for the time being content with the general remark that Islam spread over countries formerly Christian and made many converts whose forefathers had been Christians. Still more general but not less important is the observation that motives so fertile from the religious point of view like passion and divine epiphany need not be lost, at the foundation of a new religion like Islam.

THE LATER PERIOD

The consolidation of the separate groups begins in the second half of the third (10th) century. Signs of this process were earliest noticeable among the Zaidís. Al-Kásím b. Ibráhím b. Ťábát Charity. Al-Rasúl (d. 246 = 860) selected the dogmatic and legal foundations for an ecclesiastical state, which his grandson Yahyá b. al-Husain carried into effect in Yemen in 288 (901). His teaching also found recognition in the territory of the older Zaidi state which had been founded in 250 (864) on the Caspian Sea. In 297 (909) the kingdom of Isámi Yáfítídís arose in Africa and at the same time bodies of the Karmátíjí held small tracts in N. E. and S. Arabia. Here we may refer to the reference to the special articles for the lateral branches but we shall consider the main branch somewhat more fully, the Imámí or "Twelvers". It is of them one usually thinks when using the term Sh'ites generally. They form also numerically by far the majority of Sh'ites, with their 4–5 million Persian followers and in addition to sporadic groups also considerable bodies in India and in the 'Irák. Their literature, which is still the most easily accessible of all Sh'ites, also forms the best approach to Sh'ite problems, on account of intermediate position of the Imámíyá.

Even the old 'Alíids, like Dí'far al-Sádíf, Ali al-Ríhá had not themselves been the real leaders. Envoyos and plenipotentiaries (su'far and wakti, plur. su'far and wakfát) acted on their behalf — or alleged behalf. The office of shákh became still more important when the Imámí had disappeared. He claimed to be the only one who knew the concealed Imám. Four men have one succeeded since 260 (873) in establishing this claim for themselves. When the fourth, Ali b. Muhammad al-Samárí died in 334 (939) the so-called "Little Ghaibá" was at an end and has been succeeded to the present day by the "Great Ghaibá", in which for example the Friday service dependent on the cooperation of the Imám is in abeyance. A clerical aristocracy took over the leadership, many representatives of which claimed to base their teachings on miraculous occurrences with the hidden "Lord of the Age". It is true that the modern Persian theologian can still be a Mu'tázíli or a Sh'ite; but in all essentials he still remains like the Sunní, bound by what that aristocracy has made canonical. The literary deposit of the process of forming a
He was Shaikh of the Shī'ā in Kumm, which already was strongly 'Alid in sentiment in the second century but down to late in the fourth century was still exceptional in Persia which was mainly Sunnite. Of his works the Ruhūš fi l-'Irshād to his son was used by the latter in his Man la yaḥšubun fī l-Faṣīḥ. In Baghdād the son became associated with the Bāyiḍ Rukn al-Dawla, who was able to make good use of his teaching of the imāmīte for political purposes. Among the many pupils of the younger Ibn Bābyṣa was the father of Naḍjīzāh (see Bihār). Rāyi is mentioned as the place of his death, but the tomb now honoured in Teherān was only discovered in 1328 (1812) by the members of the court of Fath 'Alī Shāh following an alleged miracle. There was a necessity for graves of saints in Persia proper, besides those in Meḥmud Tūs and 'Kūm especially as Naḍjāf, Kerbela, and the great Shī'ite cemeteries of al-Kā'imān of Baghdād lay in foreign lands under Turkish rule. The tomb of the father and sister of the eighth Imām al-Riḍā, was, we know, very much visited even in ancient times. Of the some 300 writings of the son a considerable number has been printed, e.g. the Hījaq on good and bad qualities (Teherān 1502), the 'Ittā' al-Sharāʾī and the book on the concealment of the Mahdī Kamāl al-Din wa-Tamām al-Nawā (ibid. 1501) (on the latter cf. E. Möller, Beitrag zur Mohedehre des Islam, Heidelberg 1901). His Naḍjīzāh is very popular, notably his 'Cyām Aghār al-Riḍā (Berlin MS. 9665 etc.). While these already contain besides theological, legendary, exilic and polemical matter, many questions of a special comprehensive Fī ḥl al-Riḍā (2 vols., Teherān 1911) was first compiled by Mufīd Muḥammad b. Muḥammad al-No'mān b. 'Abd al-Salām al-Ukhrāt al-'Arabī. His conscious pride in his Arab descent did not prevent his close association with the Bāyiḍ 'Aṣāl al-Dawla. His funeral service was conducted by the Shafi'ī Murtuza 'Alī al-Husain. In him the Shī'ā in Baghdād reached its zenith. A direct descendant of the seventh Imām Mūsā al-Kā'im, he was, as official naṣīḥ, the recognised representative of the 'Alids and also held the offices of chief-secretary and leader of the pilgrim-caravan. His authority gave his lectures and his participation in the business of the court great theological and political importance. He conducted a vigorous correspondence with the faithful in Mūsā, Dālam, Djarīḍ, and as far away as Syria in Ḥabab and Tripolis, the latter of which was wholly Shī'ite according to the testimony of the contemporary Naṣīr al-Khosrow (Nafsū, ed. Scheber, 12 ult.). The discourses held at the halting-places with his pupils on a journey to Mecca, Charbūr al-Fardāw wa-Durar al-Fardāw were printed at Teherān in 1312; the Iṣābāt dedicated to the vizier 'Amīr al-Din, ibid. 1315; the Amūsā also at Cairo in 1325. On the fundamental question of the Shī'ā he published his attack on the three first caliphs in al-Sharāʾī (Teherān 1301). A-Naḍjīzāh had died before Murtuza and was laid to rest in the burial-place of his ancestors in al-Kā'imān. For another 28 years the pupil of Murtuza and of Mufīd, al-'Uṣūl, Abū Ja'far Muh. b. Ḥasan, called the 'Shāḥk' or the 'Shaikh of the (Shī'ā) people (Shaikh al-Talâfa'), worked in Baghdād alongside of Murtuza, who lived to be over 80. When the Sāliḥū Toghril...
Beg entered Baghdād (447 = 1055), the position of the Sha'i became more difficult. This and the desire of being buried in the holy Mshshid "All induced Ťis to migrate to Naqšābān, where he died between 458 and 460 (1065–1068).

The enormous Shi'a literature of the fourth and fifth centuries, of which only a few authors and books can be mentioned here, seems at the first glance to be very one-sided. The same traditional themes crop up again and again: the imāmate; the estimation from the theological and legal point of view of the earliest caliphs and of the opponents in the battles of the "camel" and of Šīfī; the "muhājir" and all that is connected with the concealed Imām; then along with Fīlṣ in general, special imāmite subjects like the *mur'ā marriage or the *muhājir marriage and the *tawātir on the pilgrimage; besides complete exegeses of the Korān, special interpretations of favourite Shi'a passages like Sūra 37, 12 and 13, 13, 33 and notably the "light-verse" xxiv, 34; finally, continuously recurring polemics against opponents within the Shi'a. But a development cannot be denied, as a reference to the main problem may show. Ibn Bīṣāya, the younger had still greater the possibility in Prophets and Imāms of sahī ("pilgrimage") in secondary matters and even described the opponent view in the last step to *pilgrimage (heretical exaggerations). Against him for example, Muḥāf had urged in a special pamphlet their absolute infallibility (*tiwār), although later the position is still often discussed. But that on the other hand the gates were not at once closed against extremes is shown by the estimation in which the principal book of the *ismā'īl, the *Daw'ā' al-jirām long continued to be held. The author, Muṣ'lmān b. Muhammād h. Muṣ'lmān b. Ṭalā'ī (d. 437 = 947), the "Abū Shabān al-Maṣārālānī (d. 588 = 1192) (see Bihār) says simply: "he is not an Imām" and is followed by later writers like Tārīkh al-Duḥāy." In the centuries following arose for example the great commentary on the Korān (printed in then as the Imām of the Sevener was also left. But Iṣhārāt al-Mazārānā (d. 588 = 1192) (see Bihār) simply: "he is not an Imām" and is followed by later writers like Tafrīkh al-Duḥāy.

In the centuries following arose for example the great commentary on the Korān (printed in then as the Imām of the Sevener was also left. But Iṣhārāt al-Mazārānā (d. 588 = 1192) (see Bihār) simply: "he is not an Imām" and is followed by later writers like Tafrīkh al-Duḥāy.

Ahmad ibn Idris al-Dhahī al-‘Ujlī, who appeared to him to destroy the ‘Idjīthād arbitrarily, in the xth (xviii) century a reaction came from the opposite side through the Mullā Muḥammad Amin al-Aṣṭariḥā, (d. 1033 = 1623), whose views are still much disputed. As he only allows the ‘Uṣūr Sunnī as a source of law beside the Kāfān, although he also worked on commentaries to the “Four Books”, he and his followers are called Akhbarī in opposition to the Uṣūrī who favour the ‘Idjīthā. In his polemics which he conducted from Mecca he was very severe. He refused to rate the ‘Uṣūr higher than the consensus of the Jews, Christians or philosophers. His activities however enlivened the discussion on ‘Idjīthād, ‘Uṣūrī, ‘Uṣūrī and on the legal force of a unique tradition in the same way as the attacks of Ibn Ḥanbal or Dā’ūd al-Zahiri had done among the Sunnis. The matter of the disputed principles among the Shī’īs is of course put by the background in keeping with the system: A is the rejection of the authority of the dead, tā’īdd al-ma‘ājī, the subjection to the principles of the holy Imāms laid down in the Sunna.

The conception of the passion has also remained alive in the Shī’ī. Out of the multitude of Shī’ī learned men special honour is therefore given to one who combines the fame of an author with the glory of martyr. Four martyrs are particularly famous. The first shahid is Muhammed b. Makkī al-‘Amili al-Dīzmī, the author of the Fīqh book al-Luma‘ al-Din-maṣīhīya. Betrayed by seducers, he was imprisoned in Damascus and executed with the sword on the orders of the Shī’īs and notably also of the Mālikīs, Ḥadd, impaled and burned, according to most authorities, in 768 (1364). The second shahid is Zain b. Din b. ‘Alī b. Ahmad b. Taqī al-‘Amili al-Shāmī. After fruitful activity in Damascus, Baalbek and Halaib and after much travelling, he was put to death about 966 (1557) in Cairo. In Akhtūrūd, (Agra), the honours of being the fourth shahid is given to by Muḥammad Mahdī b. Ḥiṣamī al-Maṣūmī al-Dīzmī, (d. 1035 (1629)), who expounded his theology in Sunnī al-Islam (printed in India in 1839). In more recent times Mullā Muḥammad Taqī al-Karwīnī, attained martyrdom, an opponent of Shaikh Ahmad al-‘Abādī (see below) and of the Bāhis, from among whom came his murderer in 1263 (1847).

The first two shahids were Sunnīs, the third lived in India. But Persia had become the centre of the Shī’a under the Safawīs from 907 (1502). The temporary persecutions under the Aḥḡānī from 1135—1142 (1722—1729) and under Nadīr (1148—1160 = 1736—1747) made no difference to this. A man whose family had the same native place and the same Shī’ī tendencies as the ancestor of the new ruling house, Ḥusayn b. ‘Abd al-Jāhī al-‘Ardayfinī al-‘Ujlī (the theologian) immediately adopted Persian culture as such and wrote his tracts and commentaries in Persian. In the still mainly Sunni country he was often forced to lead the life of a muḥadījī (wanderer) between Tabriz, Shirāz, Herīst etc. The necessary vitality was imported into the Persian ‘Uṣūrī from outside which is also important for the problem: Persia and the Shī’a. Those concerned were mainly Shī’īs from the Southern Syriac mountains of Amīl (Muṣṭaffa, p. 161, 162, 184, always writes: Amīl). The last Serbēdī ‘Abī Mu‘āyir of Sabawwī is said to have offered an asylum to an Amīl, the First Shahīd. These rustics scholars, because of the Safawī kingdom in increasing numbers. They settled there and receiving innumerable accessions to their number, retained the traditions of their home. Further Shī’īs came from Bahrain. This is why we find so frequently in the nisbas of Persian Shī’īs, Amīl or Baharīn, or names showing the origin more definitely like Karakī in the one and Ḥaṣīrī in the other. We can mention very few names for this later period here. Muḥammad b. Ḥusayn b. al-Hur al-‘Amīl al-Maghīrbī had a great success with his first book al-Dīn-wādir al-Sanīya (Tabriz 1202) because in it he collected, for the first time it is said, the Shī’ī ‘hadīth ‘aṣāsī’ (utterances of God not in the Kūfīn). But later the extravagance, volume and speed of his literary output, brought upon him sharp criticism even from theologians used to wholesale production; his 6 volume Taṣawwuf Wāḍī al-Shī’a ila Maṣūmī al-Shī’ī (Tabriz 1288) with a special index he has μαθηματικά ‘a-ndan is still however of value on account of the great mass of tradition that he worked into it, the fact that he gives the authors, al-Hur only migrated at the age of 80. After long pilgrimages he settled in Tūn and Isfahān. Among natives the leading family in its day was the Maṭīlī. Their most notable representative Muḥammad Bākī r b. Muḥammad Taqī, d. 1110 or 1111 (1608—1700), was appointed Shaikh al-Islām by Shaikh Sulaymān I. He aimed at reaching the people and wrote about half his works in Persian; he also translated edifying writings in Arabic by Abu l-Ḵāsim al-Turānī. His own largest work is called Bākī al-’Tawwīr, a great encyclopedia of law and theology in 25 volumes, which has been printed in Tabriz and Tehran. Several were translated into Persian, for example the thirteenth on the Malāḥī, by order of ‘Abī Ṣafīr al-Dīzmī.

The attitude to these Shaikhīs, who do not require an imām as mediator, and to whom the spiritual union with God attainable by every believing lover is something at the opposite pole from the inheritance of the ‘Divine part’ in the chosen imām, is naturally a hostile one, and also the reverencing of saints in the two schools is of course very different in origin and aim. The most notable encounter between the two was the active part taken by the
In the destruction of Hallaj, who indeed had severely injured the Shi'a by his claims to be the wali of the hidden lord of the age (see the article HALLAJ), the attitude of the philosophers is at least one of suspicion, since, as the case of the Ghulat warned the Imams, scholasticism might undermine them. But there are many offshoots, mystics and philosophers who profess to be conscious Shi'is and are not to be disposed of simply by the usual polemics. All the centuries therefore show examples of a fundamental revision together with that of mutual attraction. Khadija Najji al-Din himself the author of the mystical Shi'i work Angaf al-Ashraf (Teheran 1320) is in spite of the verdict of Ibn Babuya, Mu'af, Shaikh Tust and Ibn-al-Mahbar, an admirer of Hallaj; Radjab b. Muhammad al-Qasir al-Bursi is, it is true, censured as the "renewer of Shiism" since he built up his system on "deceitful fanciful interpretations" and ultra-Shi'i "exaggerations", but his books like Mas'udi al-Sam'awati written about 800 (1397) were used even by such an enemy of the Shi'a as Mardjas, although with caution, for the Bihari; and the fair-minded concede to Mullah Sadr i.e. Muhammad b. Ibrahim al-Shirazi, d. between 1040 and 1050 (1630-1641), that in the "Explanation of the Throne-Verse" (Sura ii. 256) he has kept himself free from Shi'i fancies; his commentary on the Surat al-Kafirun of Kalimi, the Mafath al-Dhahab (Teheran, n.d.) is also used and his version of the fourfold ascent to God in al-Ashraf al-ardhe or al-Ham al-madheb al-Sa'yi (Teheran 1882) is tolerated, but it is always objected to him that his commentary on the Surat al-Ish'ara of the mystic Subrawardi has too much of the language and sentiments of the mystics, his pupil Muhammad b. Muhammad al-Kahashi, called Muhe'mimi Faid, author of the Shi'i commentary on the Koran al-Safi (Teheran 1276) vigorously defended himself against similar approaches in Irqaf fi Bayan Tarikh al-Shi'a Arar al-Din (in the collected Rauh, Teheran 1301) and as a matter of fact he is cited by his pupil Saiyid N l'mat Allah al-Din'iri against the Shi'a. There is a better foundation for the orthodoxy of the two teachers of Mullah Sadr i, the two friends at the court of "Abbas I, Muhammad b. Husain Bahat al-Din or Bahat al-'Amili (d. 1030 = 1621) and Muhammad Bakir al-Astarhabadi (d. 1041 = 1631) called Mr Dama'd, as the son of the "son-in-law" of 'Abd b. Abd al-'Amir al-Kakaki, i.e. also an 'Amili and one of the many commentators on the Shura'i al-Islam. In spite of his many sided interests, Bahat's, who was also Shaikh al-'Amil, as a true Shi'i revives a very old Shi'i feature, the ritual interdiction of meat killed by the "people of a book", in the Rasa'il fi Tahriim al-Safi al-Khithe. His Li'mat al-Old al-Shaikh (Teheran 1309, Bombay 1319) contains decisions in the vernacular on all heads of the law relating to the kafir. Mr Dama'd although he also reverenced Hallaj showed himself a good Shi'i in his al-Rahle al-warniafis fi Sharh al-Shafi'i al-Mu'atta by (pr. 1311), and in al-Ka'baat (Teheran 1314) he reconciled his philosophy with orthodoxy, acknowledging that God existed from all times and is eternal and that the world is transitory. Philosophical discussions were further enlivened by the fact that they were interwoven with specifically theological problems. There were therefore both U'tifs and Akhbaris among the scholastic Mutakallimun. The conflict occasionally became so fierce, as recently as last century, that, for example in Kherbeh, books were only handled in a wrapper of cloth lest a member of another school might have used them. One of the chief leaders in the feud was Shaikh Ahmad b. Zain al-Din al-Habibi, a Bahri as his name shows. A theologian, poet, astronomer, and mathematician he fought against Shi'a philosophers and especially against the 'Abbadids and the 'Abbadis against the Akhbaris (cf. his Jawi(2) al-Khithe or Haiyat al-Nafa, Tabriz 1276). A much too philosophical belief in the resurrection which to the rigidity orthodox seemed ill founded, brought him on and his school, the Shagahiyya (cf. Shaikh Ali), the reproach of sectarianism, and as was later the case with Radjab (see above) the responsibility for the heresy of the baha'i. They themselves like their offshoot, the Bahai's, saw to it that even in quite recent times, the feud was vigorously maintained by means of pen. Nor was there a lack of other polemics. Mada'i was not the last to write against the Jews. War was waged on Christianity after the arrival of missionaries beginning with H. Martyn in 1195 (1781) and later C. G. Plunder's missionary pamphlet Mabn al-'陛下 in and in recent years the activities of the societies for distributing the Bible. Popular expression of the Shi'a creed is found in the legends of martyrs, maftulis, and passionists, ak'ab. The apocrypha are also numerous; the frequently printed songs and sayings of 'Ali (cf. Fleischer, 'Alia ten Sprachte, Leipzig 1837); the collection of his utterances in the Nukhji al-Balagha of Muhammad al-Rida', a brother of Shaikh Murtada; also many little books of prayers like the Sha'i of 'Ali, those of the fourth Imam 'Ali Zain al-'Abidin and those of the eighth Imam 'Ali al-Rida; also the Hadith buqsi of 'Ali collected by Bahat al-'Amili and finally commentaries on the Koran, which are attributed to the sixth Imam Dja'far Sadiq or the eleventh like the Tafsir al-Ashar (Teheran 1315), which the younger Ibn Babuya still used freely, though many later authorities express doubts as to their authenticity.

Bibliography: There is no thorough account of the Shi'a. Besides the works here quoted and those mentioned in the articles referred to, the catalogues of Arabic and Persian manuscripts should be consulted (cf. also Brockelmann, Gesch. der Arab. Lit., E. G. Browne, A History of Persian Literature in modern Times, 1924, p. 353 sqq., where also Shi'i biographies and bibliographies are utilised; Goldrider, Vorlesungen, ed. Babinger, Heidelberg 1925, p. 196 sqq.; Golubne, Les religions et les philosophies dans l'Arme Centrale, Paris 1866, p. 63 sqq.; Mer, Die Renaissance des Islams, Heidelberg 1924, p. 55 sqq.; Babinger in Z. D. M. G., xcvii, 126 sqq.; Noldke in Jb. xlvii. 70 sqq.; Andrae, Die Person Mohamedis in Lelt und Glauhen seiner Gemeinde, 1918, see also: Buhl, Altertumliches Stilling in Schrift oder Bild, Berlin 1910, 30, 5). As a systematic introduction the following are recommended in addition to sources mentioned in the text: Muh. b. Omar al-Kashshi, Marifat al-Kashshi al-ridad, Bombay 1317; al-Najadi, d. 1058, Marifat 'Imam al-'Rida, Bombay 1317;
also on the eastern slope of the Djebel Dufta' close against the rocky wall.

The town is separated by the Wadi Nahfah into a southern and northern part and according to the Defers is 8500 feet above sea-level. It is surrounded by a wall and has 2500 inhabitants but it is said to have been much larger formerly. The inhabitants told Glaser that several places which now lie outside the town were once within its limits and had been markets, namely El-Lejâr (the poultry-market), 500 yards from the town in the direction of Shâb, El-Herat el-lisâf (oil-market) on the road to Ayâl Sâbd in the north, two red mounds which are supposed to have been ancient palaces of the Himyars, and El-Malâbî (salt-market) on the road to Amrân, ed-Deftâ (butter-market) between the modern Jewish quarter, which lies on the north slope of the Lubâkhâ, el-Djaâr (a little higher and built against the Djebel Dufta'), el-Ader (pottery-market), consisting of a temple with a poorly housed school and mud-houses. The town is said to have had at one time four gates (Bâb el-Fedjûm, Bâb el-Ahjûr, Bâb el-Shykh, Bâb Mathâr). The chief mosque is a splendid old square building which in Glaser's opinion is as old as the Sabean period.

The tower is now much decayed and crooked but marvellously hewn black blocks 18 inches by 15 are used for the mosque which the natives say was a palace of the Himyars. The other mosques are also said to be ancient. Glaser mentions Khabâl Shemali on the road to Kawkabân. Mesejîd el-Geût, Mesadjîl el-Lejâr near the Jewish village with old walled cisterns, Mesadjîl el-Ziâyîd, Mesadjîl el-Hajest el-Khalike, Mesadjîl el-Dejût. The three gates of the town are Bâb el-Iasakh and two smaller ones called Bâb el-Maghâr. On the southern slope of Lubâkhâ are numerous chamberlike caverns of sandstone, reached by broken narrow steps along the cliff. They lie in tiers above one another, of different sizes, some large, some small, and are hewn out of the sandstone, quadrangular in shape. The entrance is formed by a door 3 feet by 2 and the floor of the chamber is 3 feet below the entrance. In one of these chambers Glaser found a grave so that they were probably used for burials. Shabâm is connected with Kawkabân by an old artificial path formed of steps. The country round the town is very fertile. Cereals, barley, maize and dîra, beans, mustard, clover, and the better kinds of fruit grow very well here and a mine here still yields the famous Yemeni carmelian, amethyst and alabaster.

The settlement is undoubtedly very old. The ancient south Arabian inscription Glaser, 110, s. speaks of the Akâyân of Shabâm and the later name Shabâm Bait Akâyân mentioned also by Al-Hamadân and others is no doubt connected with this. The town is also mentioned in the great inscription of Sîrwa (Glaser 1000 a. 15). The citadel of Shabâm was the original centre of the Hubar-Ramhân. The town is said to have been originally called Yabbeh and then to have been called after Shabâm b. Abd Allah b. Amr d. El-Hamadân. The town's history is complex, with later dates lived there who were descended from Abyah b. Bâbî b. Dhabit, who lived there. The Yabbeh at a later date lived there who were descendants from Yabbeh b. Bâbî b. Dhabit. From them the town gets its epithet of Sukhur. Al-Hamadân was still able to see in the town splendid columns of ancient date which supported a throne. The fortress was still considered impregnable after his time.
Yafūr ibn 'Abd al-Rahmān al-Hujwīrī was besieged in it in the raid by the generals of al-Mu'tāsīm al-Walīd and al-Mu'tawakkil. Ibn Rosta's statement that the district then contained 300 villages and at least 40 villages is of course an exaggeration. A silver mine was also worked here at this time. When Hānān b. Taghā ruled in the Yemen, the castle was in ruins. He built the village of Ghīrāt from the masonry of the ruins.

4. Shīhām in the ʿAwd al-Kasr in Ḥadramīt. One of the largest towns in the country, which is now under the Sūltān of Makāla. Th. Bent estimates the number of inhabitants at 6,000, while it is at 20,000, but the latter figure is certainly much too high. The town lies in the lowest part of the valley, on an eminence which has arisen out of the ruins of a series of earlier settlements, the brick buildings of which have supplied the material for its formation. The eminence commands the whole surrounding country and forms one of the best strategic points for miles around.

In the south lies the plain of Sūltān el-Bilād which is enclosed by the Djebel Khibba which runs in a west-southwesterly direction a good distance across in front of the town. The southern half of Sūltān el-Bilād is well covered with palm-trees but at an earlier date the palm-groves were considerably more extensive. Cereals grow in the fields and excellent fruit and vegetables are grown while indigo is also much cultivated. The town contains not less than 30 mosques and 2 palaces.

The settlement of Shīhām undoubtedly goes back to a very ancient date. The name of the town appears on a fine ancient South Arabian inscription which Bent brought back from Ḥadramīt which came from Sūltān on an inscription during the third century A.D. A number of graffiti scratched in the rocks about a few hours journey from Shīhām are further evidence that the town was inhabited in ancient times. A cave with South Arabian inscription, probably a tomb, is said to exist in the region. Shīhām is said to have been founded by the people of Shabwā, who abandoned the latter and settled in Ḥadramīt (cf. Shihawa). Al-Bakri knows the town by the name of Djarīma, "the large", as the most favoured town in Ḥadramīt. Its inhabitants however did not have a very good reputation, if we may believe Ibn al-Mudījāwī in the wars which the Banū Kinda waged in Ḥadramīt, Shīhām suffered a good deal and a considerable part of its mosques were destroyed. Idrīsī and Abu al-ʿFādī have confirmed Shīhām in Ḥadramīt with Shīhām Kawkāhān, as C. Niebuhr long ago pointed out.

(Adolf Gromann)

SHIBARGHAN, called by the Arab geographers Shiburkan and Saburkan, is a town of northern Afghanistan, situated in 36° 35′ N., and 65° 45′ E. It was formerly one of the three chief towns of the district of Darájan, the others being Yâhüdiya and Fâryâb. The oldest form of the name is Asparagán, from which it has been conjectured that it was an ancient seat of the Aza, or Asargarî. Aszari describes it as the capital of Dárájan, but this position is usually accorded to Yâhüdiya.
It lay on the old high road from Balkh, from which it is distant nineteen parasangs, or sixty-five miles, to Marw al-Kûd and Herat, and is frequently mentioned in the Zafar Nâma and other historical works. According to Mustawfi, its climate was temperate, and grain was sold cheap in its market, but he adds, somewhat disparagingly, that some little corn and wheat were grown there. Marco Polo, on the other hand, says: “It has great plenty of everything, but especially of the very best melons in the world. They preserve them by paring them round; and round into strips and dry them in the sun. There is also abundance of game here, both of birds and beasts.” The dried melons of Shibarghan were exported not only to Herât, but also to India and China, where they were famous.
The town and its neighbourhood are watered by underground channels (fânâr) from the mountains. Early in the nineteenth century, when Afghanistan was in disorder, Shibarghan was the capital of a small Uzbek state, but it long since lost its independence and is now a mere district of the kingdom of Afghanistan. It contains some 12,000 inhabitants, and the land about the town is richly cultivated, though it is on the verge of the desert.

(T. W. Hahn)

SHIBIL, AL-DAWLA NÂŞR B. ŞÂLÎH B. MARDÂS, the family of Mirdâsîd (see the account of them in the article on the history of Aleppo [Jalal, ii. p. 230] and also the article MIRDAS B. ŞÂLIH), inherited the town of Aleppo after the death of his father Şâlîh in the battle of UKhusâna on the Jordan in 420 (1029) while his brother Thimâl received the citadel. Nâṣr has won a place in history by his victories over the Byzantines in the defence of the northern marches. After Shibli’s death the Byzantine governor Spondîl (not Niketar, as the Arabic historians say) of Antioch thought the moment had come, by destroying the two Mirdâsid rulers to free the southern province of the Byzantine empire from the continued attacks, the so-called summer campaigns (âlîfîya) to which the Arabs felt themselves bound in fulfilment of the Holy War ordered by the Koran. Spondîl, who in spite of his incapacity held the important post of governor of Antioch was completely defeated by the brothers Nâṣr and Thimâl in the same year (420). In this year the Emperor Basil died and his ambitious successor the Emperor Romanos III hoped to gain glory from a campaign against these two princes and set out for Syria with a large army which included Bulgarian and Russian auxiliaries. In the meanwhile Nâṣr was not able to hold sole control of Aleppo and had taken advantage of the absence of his brother to seize the citadel. Thimâl, thoroughly roused at this act of violence, won the Arab tribes over to himself and advanced on Aleppo. Thus threatened Nâṣr sent his nephew as an envoy to the Emperor in Antioch and asked him for assistance, promising to recognise him as suzerain and to pay him tribute. But it did not come to fighting between the two brothers, as the tribes, who saw the necessity of uniting in face of the danger threatening from the Emperor, negotiated a peace between them. Nâṣr remained, as was only right from the political and military point of view, sole lord of Aleppo, and Thimâl was given Rabîba and Bâlis in compensation. Strengthened by the help of the Arabs, Nâṣr withdrew his allegiance to the Emperor. The latter therefore (421 = 1030) advanced on Aleppo via Antioch and pitched his camp north of the town in Tabbâl. A body of cavalry which he sent out to reconnoitre was wiped out by the Arabs. Thus encouraged, the Beduins began to harass the camp itself, to intercept the grain sent to bring provisions and water, so that the Emperor was ultimately so hard pressed that he had to retire hurriedly and leave vast booty to the Arabs. He is said to have been in such danger on the flight that he put off his tiara to avoid recognition. The victory of the Arabs brought no great results. The new garrison of Antioch was, it is true, also defeated but Nâṣr preferred to make terms with the Emperor. He sent an envoy to Constantinople, who was well received and sent back with rich presents for Nâṣr. The latter bound himself to pay the Emperor tribute of 500,000 dirhems. Peace ensued; henceforth between the two rulers. Nâṣr was also able later to gain the favour of the Fâtimid Caliph al-Zâhir and his successor, or of his vizier, in 427 (1035) by rich presents from the Byzantine booty so that he was confirmed in the possession of Aleppo and could rest in peace and security. Only the old enemy of the Mirdâsîd, Anashtikin al-Dâhirî, intrigued against Nâṣr and succeeded in gaining a promise of the Emperor’s neutrality in a war against Nâṣr; Anashtikin again succeeded in uniting the Arab tribes of Tay, Kabîl and Killâb. Thus reinforced he took the field against Nâṣr. In the battle of Lâmiâh Nâṣr was killed, his head brought to Anashtikin, who is said to have deeply lamented his death. Anashtikin became lord of Aleppo and it was not till four years later, after his defeat and death that Thimâl regained it for the Mirdâsîd.

360

SHIBÂM — AL-SHIRLI
he died there in 334 (948). At first an official (and vati or deputy-governor of Dammuwa) at the age of 40 he became a convert to asceticism under the influence of Khair Nasabī, a friend of Djamālī; he brought into mystic circles in Baghdad the enthusiasm, at times cynical, of a dilettante, holder in words than deeds. The tragic end of the trial of his friend al-Hallājī [q.v.] frightened him; he denied him before the vizier and went, it is said, to accuse him at the foot of the scaffold (309 = 922); in the end whether deliberately (though remorse not to avoid possible persecution) or unconsciously (through an excess of asceticism) Shībīlī affected a bizarre mode of life, cultivating eccentricities of speech and action which caused his imprisonment in the lunatic asylum in Baghdad; these he used to discourse readily on mysticism in presence of distinguished visitors. 

He has left no works, but his sayings (or al-fadūn, ṣāḥāli) figure in the classical collections of Shībīlī [q.v.] as do his deliberate eccentricities, his ridiculous penances, humiliating or painful, such as putting salt in his eyes to prevent himself from sleeping. In the legend of al-Hallājī the part attributed to Shībīlī is very important. He seems to have revered him in secret after denying him in public. In dogma, his ideas are those of Djamālī; in law he followed the Malikī school, which saved him in his lifetime and caused him to be canonised after his death in legal circles, as a rule very hostile to Sūfīsm. In the classical transmission of khūrja (or ṣāḥāli) Shībīlī figures as a link in the chain, between Djamālī and Naṣrābādī, the latter indeed was his pupil. His tomb is still venerated at the Aṣāmya in Baghdad, beside the maqṣūd of Abī Hašīm.

AL-SHĪBĪLĪ (from al-Shībīliya, a village in Ummehāsan in Tumuskhāna) SEHER AL-DIN ABD AL-ḤAFIZ UMAR I SHAHK I AḤMED AL-GEZNAWI AL-DUWALATĀBĀDI AL-HIZI AL-DJAH BUDDI, celebrated Fāṭih. He was born about 714 (the date 704 must be wrong). He studied Fāṭih with Wadīj ibn Djin al-Dīn al-Dīnahwi al-Rāzī, šama al-Din al-Dīnj al-Khāṣṣah, Sīrād al-Din al-Thaqafi al-Dīnahwi, Rukn al-Din al-Dīnahwi and al-Fāhūn, pupils of Abu ʿAbd al-Malik al-Tanābi (d. 760), Ḥaddīth with ʿAbd al-Majīd al-Dīnahwi and others. In 740 he came to Egypt and became deputy for Djamāl al-Din al-Turkmanī al-Habīs; through the influence of Yūhḥubī he was then appointed Kadi ʿAlī b. ʿAskar; after the death of Turkmanī in Shāhān 769 he became chief Kādi (al-Kādi ʿAlī b. ʿAskar) of Egypt and held the office till his death. Kādi ʿAlī, 773: He had also Staff tendencies; in Mecca he was associated with Kādi ʿAbd al-Fārīd; he was later a follower of Ibn al-Fārīd (cf. below).

His best known works are: 1. al-Tawāṣú, a commentary on the al-Hidāya al-Marghānī (cf. Brockelmann, l. 376, No. 24); 2. a second commentary on the al-Hidāya in syllogistic form;
during the past years of his life. In 1892 he undertook a journey to the Near East to get acquainted with the literary and educational conditions there, and visited Constantinople, Beirut, Jerusalem, Cairo and other places. He was given a literary pension by the Nigun of Haidarabad in 1341 (1896) and resigned his Professorship in 1898; was Director of the Department of Ulum-ud-Urdu, Haidarabad (April 1901—January 1905), Hony. Secretary of the Dar ul-Ulum of the Nudwat-ul-Islam, Lahkna (1905—1913); was also, for sometime, Hony. Secretary of the Akbar Sahib-ud-Urdu, the monthly journal *Mufahi*t as its organ. Shibli's works are: *Urdi, Misrul-Masul*, a biography of the Khalifa, Agra 1887; *ul-Ma'min*, a biography of the Khilafah, Agra 1887; *Sirat al-Ma'min*, a biography of Abu Hanifa, Agra 1891; *al-Dizya* on the origin of the Agra 1891 (Eng. translation, *Aligarh*); Kutubshahi-i-Istakbariyya, Agra 1891 (Eng. translation, Haidarabad); *Safar-nama*, Agra 1893; *al-Farid*, Umar's biography, Kurnur 1909; *al-Qasari*, the illness's biography, Kurnur 1903; *al-Um al-Kalim*, *al-Aghir* 1903; *al-Kalim, Kurnur 1903; Smirshahi-Mahsuli Rahm, Lahkna 1902; *Mumtaz-munawar Al-Abdi*, a criticism of two Urdu poets, Agra 1906; *Sir al-Adhiam i-I.v.*, *al-Aghir* 1909—1912, *unpublished*, Aaghur 1919; *Sirat al-Nabii*, i—ii, Kurnur 1919—2020, *unpublished*, Aaghur; *Kulliyat-i-Urdu* (Poems); *Rasul-i-Shahid*, *Mabhibat-i-Shahid*, *Mabhibat-i-Shahid*; *Shahid, 2 vols.* (all published lately, Aaghur). Persian: *Kulliyat* (Poems), Aaghur. Arabic: *al-Dizya*, *al-Aghir*; *al-Ishtihab ila l-Tamaddun al-Islami li Qurdi Zaidan*, Lahkna.

SHIHAB AL-DIN [see Shihab Al-Din].

SHIHAB AL-DIN. [see MAHIKH].

SHIHAB AL-DIN AHMAD B. MAJID. An Arab Navigator of the 13th Century, Author of Navigating Instructions for the Indian Ocean, the Red Sea, the Persian Gulf, the western China Sea and the waters of the Malay Archipelago.

When Vasco da Gama had reached Malindi on the east coast of Africa in 1498, he was able to get a pilot there who took him direct to Calicut. This incident is briefly recorded by one of the sources in the expedition (Retrato da viage de Vasco da Gama in MSCCXXCXXVII, 2nd ed., ed. by A. Hereulano and Castello de Paiva, Lisbon 1661, p. 49); and in greater detail by the Portuguese historians of the 17th century, notably by Damião de Goes (Chronica de verissimmo Ret D. Manoel, Coluna 1798, i, Ch. xxxviii., p. 57), Castanheda (Historia de descobrimento i conquista da India peloos Portuguezes, 1833, Bk. 1, end, of chap. xxxii and beginning of chap. xli., p. 41) and Barros (Da Descoberta da Índia, Bk. iv., Ch. vi., p. 319—320 of the little edition of 1778) who give the name of this pilot as: *Malome Canama in Castanheda and Goes, Malome Cana in Barros, Malome al-Samarra-* an admirer of *master of navigational geography*.

This story is confirmed by an Arabic text; *al-Bahr al-ya'mani fi 'Isfah al-Oglumini* (MSS. nos. 1644—1650 and 5927, Arabic collection of the Bibl. Nat. [1]) by Kajbl al-Din al-Nahwawai (1541—1582, cf. above), but the pilot there is called Ahmad b. Majid. Kajbl al-Din records that, after several unsuccessful attempts, a Portuguese caravel arrived in the Indian Ocean. "Before they reached the west coast of India and while they were on the east coast of Africa, the Portuguese continued to search for any news of this sea [of Western India] until a skilful sailor named Ahmad b. Majid put himself at their disposal," the leader of the Franks called Almuni (Portuguese *Almirante*: "Admiral") had become friendly with him and he used to become intoxicated with the Portuguese Admiral. This sailor being intoxicated showed the route to the Admiral, saying to the Portuguese: "Do not approach the coast in this part [of the east coast of Africa of Malindi], steer straight for the open sea; you will then reach the coast of India and be sheltered from the waves." When they followed these directions, a large number of Portuguese ships avoided shipwreck and many ships reached the shores of western India" (MS. 1644, fol. 50r. l. 9 sqq.).

The story of the intoxication seems to be a complete invention; it seems that it was a pious fiction intended to excuse an action which the Muslims of Mecca where Kajbl al-Din lived must have regarded as treachery. On the contrary it is more likely that the Arab *mu'allim* agreed to pilot the flagship of the Portuguese squadron on the promise of a handsome reward for his services. The Portuguese reports, which had no reason to conceal the fact, give quite a different story to this Arabic text.

Barros, who gives the most detailed account of the event, says that while Vasco da Gama was at Malindi some banyans from the kingdom of Cambay in Gujarat came to visit the Admiral. These Hindus, who paid homage to an image of the Virgin (taking her for a Hindu goddess) were thought by him to be members of one of the Christian communities which existed in India in the time of St. Thomas. With them came a Moor [i.e., Muslim] of Gujarat (truly) called Maleno (*mu'allim*) Cama (*Benaka*). The latter was much for the pleasure he took in the company of our men as to please the king (of Malindi) who was looking for a pilot for the Portuguese, agreed to set out with them (to show them the route to India). After discovering with him, Vasco da Gama "was very satisfied with his knowledge, especially when the Moor had shown him a map of the whole coast of India arranged as those of the Moors are with meridians and parallels (i.e., degrees of latitude and longitude) in great detail without indicating the names of the winds. As the squares (formed by the intersection) of these meridians and parallels were very small (the direction of the coast by
the two thumbs N. S. + E. W. was very exact without the map being overloaded with the quantity (of signs indicating the direction) of the winds and the needle, as on our Portuguese map which served as a basis for the others. Vasco da Gama showed the Moor the great wooden astrolabe which he had with him and other astrolabes in metal, with which the altitude of the sun was taken. The Moor displayed no astonishment at seeing such instruments. He said the (Arab) pilots of the Red Sea used instruments of brass, triangular in form and quadrants to take the height of the sun; and of the (polar) star which they used most in their navigation. But he added, he and the sailors of Captains and the whole of India sailed with (the help of) certain stars, southern as well as northern, and other notable stars which crossed the centre of the heavens from east to west. They did not take their altitude with instruments like those (that Vasco da Gama showed him) but with another which he used himself, and he brought it at once to show him (on this instrument cf. Reinaud, Introduction Générale à la Géographie des Orientaux in Géogr. d'Abensfeld, i. p. cix, 199); it was an instrument made of three plates. As we are dealing with the shape and method of using this instrument in our Géographie (universelle), a work unfortunately now lost in the chapter devoted to instruments of navigation, it is sufficient to mention here that the instrument in question is used by the Moors for the operation for which we use in Portugal the instrument called by the sailors astrolabette, which is also dealt with, along with its inventors in the chapter just mentioned (of the Géographia Universall). After this discourse and others which they had with this pilot, Vasco da Gama felt the feeling that he had found a great treasure (paucaque ter nelle bune gum gia thcescor). In order not to lose him, he put to sea as soon as possible and sailed for India on April 24, 1498 (Da Asis, Decades i., BK iv., Ch. vi., p. 308-341, of the edition of 1748). According to Gosse and Castanheira (loc. cit.) the pilot in question was "a Gujarat pilot"; according to Barros "A Muslim of Gujarat," the description of him by the two Portuguese historians is a bilingual expression: volunta = Arabic mu'allim, in nautical language = "master of navigation" and Conunqua = Naukhi, the Tamil form of the Sanskrit ganaqna = "astrolabe" (cf. The Book of Duarte Barbosa, ed. M. Longworth Dames, Hkdl. Soc., 1921, ii. 61-62 with v. Kromel's correction in Museum, 1925, N°. 1, p. 18). On the other hand this volunta conunqua is undoubtedly the same person as Ahmad b. Majdil of the Al-Ba'i al-yamani; and we know from himself that the celebrated mu'allim was an Arab of Arab descent, and born at Djalil. The mistake made by Goes, Castanheira and Barros or rather by their sources is obvious but I am not able to explain it. We know Ibn Majdil from other sources also. In the preface to his collection of sailing instructions entitled al-Ma'khut, the Turkish Admiral Sidi 'Ali says: "During a stay of five months which I made at Ba'in (in 554) which lasted till the beginning of the moon, and during my three months voyage from Ba'in to India, from the beginning of the month of Shawwail to the end of the month of Shawwail (July 2 = Sept. 27, 1554), during these eight months I never missed an opportunity of talking day and night on nautical matters with the pilots of the coast and the sailors (of the country) who were on board my ship. Thus I learned how the old pilots of Hormuz and Hindustan: Lajit b. Kahlun, Muhammad b. Shidkh and Shahl b. Atbin used to sail in the Indian Ocean. I also collected the books that had been written by modern (pilots), like Ahmad b. Majdil of Djufar in the province of 'Omran and Sulaiman b. Ahmad (cf. the article SULAIMAN AL-MAHRI) a native of a town called Shibir in the land of Emirs (Southern Arabia), as well as the books entitled: Faw'lid, Jami' (by Ibn Majdil, see below), Tabyat al-fauhul, Minayl, Fadil al-ta'mim (by Sulaiman al-Mahri); and I studied each one thoroughly. For as a matter of fact it was exceedingly difficult to navigate the Indian ocean without these works. The (foreign) Captains, Commanders and sailors do not know how to sail here and a pilot is always indispensable for them because they have not the necessary knowledge. I therefore have thought it at least a duty to write down all that is best in these books and to translate it into Turkish and then to write a good book so that those who consult it may attain their goal without needing a pilot and not have to seek advice from a pilot. My translation from these Arabic documents was finished in a short time with the help of the Ottoman King (Allah). As my books contain all the extraordinary things about navigation it has been entitled al-Ma'khut, "what surrounds our coasts, what includes all in itself" (Die topographischen Kapitel des Indischen Seereises, Mu'lah, transal. M. Bittner, with frontispiece and 30 maps by W. Tomaschek, Vienna 1897, p. 55). Sidi 'Ali mentions Ibn Majdil later (p. 31) and speaks highly of him; he calls him the "reliable among the sailors, the mu'allim of the sea of India, most worthy of belief among modern (writers of sailing instructions)." So far as one can judge from the published extracts, the Ma'khut of Sidi 'Ali is only the Turkish version, often mediocre, of a part of the route-book and sailing instructions of Ibn Majdil and of Sulaiman al-Mahri. Neither Maximilian Bittner nor his predecessor, von Hammer, endeavoured to trace the Arabic texts, the titles of which are briefly given by the Turkish admiral and their authors. No literary history mentions them but they appear in the Catalogue des Manuscrits Arabes de la Bibl. Nat. under 2292 and 2559 (the former was acquired by the Bibliothèque Nationale in 1860, the latter according to a note made by the Syrian priest Joseph Ascri was already in the Arabic collection in 1732); these two valuable manuscripts contain all the works used by Sidi 'Ali and other texts which he does not appear to have known. The MS. 2292 which is a copy of the original is in 18½ folios of 270 x 180 mm, 19 lines to the page and contains 19 route books and nautical treaties by Ibn Majdil copied in the following order by a scribe who troubled little about chronology: 1. Kitab al-faw'lid fi nafiz 'ilm al-bahri wa 'tawfiqih, folio 1-88 (It is the text called Faw'lid by Sidi 'Ali). This work in prose, divided into xii. chapters, is dated 894 (1489/1490). The early pages deal with the legendary origins of navigation and of the magnetic needle. Ibn Majdil then deals with the 28 lunar mansions; the stars corresponding to the 32 rhums (bahri, pl. ahshiyun) of the compass; of the sea-routes of the Indian Ocean; the latitudes of a number of harbours in the Ocean and Western China Sea;
the landmarks (sūrā, dāgha) formed by birds and the outline of the coast; the landsfalls (mutahdha, class. Ar. madalāh) of the west coast of India; the ten famous large islands (Arabian Peninsula, island of Kom or Madagascar, Siamatra, Java, al-Chāhir or Formosa, Ceylon, Zanzibar, Bahrain, Tim Gan) in the Persian Gulf and Socratea); monsoons favourable for the voyage with the date in the Persian computation of each monsoon. This treatise concludes with a description of the Red Sea which gives in detail its anchorages, shallows, banks and reefs. "The style of the work", says du Sall (Caucas., p. 401), "is very prolix and full of technical terms the meaning of which was only known to those who sailed the Indian Ocean": This is only partly true. The texts of MSS. 2292 and 2559 have been certainly prepared by sailors and for sailors. Technical terms abound in them, as might be expected, and the nautical vocabulary which they have yielded to me will be an important addition to the Arabic dictionaries (2).

II. حمیسی al-کیسیر f. ۱ کلیم al-کیسر (this is the text mentioned by Sidi Ali under the title حمیسی) occupies ff. ۸۸۹—۱۱۷۹. The text in قِدیس verses is divided into 81 sections (قِدیس). After a brief prose introduction of 20 lines the first section begins, dealing with signs of the proximity of land which pilots ought to know. The second section deals with the lunar mansions and rhaps, the third with the knowledge of the years, Arabic, Coptic, Byzantine and Persian, the fourth with the knowledge of the معین on correction to be made in the position of certain stars, the monsoons (نیئ) of the معین, the months in which the stars appear, the fixed character of their latitudes, and their disappearance, the dates being represented in the Persian way; the fifth, the sea-routes on the coasts of Arabia, of the Hijāj, of Siam (i.e. in the language of Ibn Madjid, the west coast of the Malay Peninsula which in those days all belonged to Siam), of the extremity of the land of the negroes (lit. of the negro coast); the sixth, the sea routes on the coast of Western India, down to the countries situated below the wind (i.e. according to Ibn Madjid, east of Cape Comini), like the island of Bilinton on the east coast of Sumatra, [the land of the] Maharattā = Sumatra (cf. ff. ۱۰۱۰—۱۰۷۹) and China, Formosa; the seventh, the sea-routes along the coast of the eastern islands, Sumatra, the Malacces, Madagascar, Yemen, Abyssinia, the land of the Somalis, of al-Atvād in southern Arabia, and of Makrān; the eighth, the distance of the seaports of the Arabian coast from those of Western India; the ninth, the latitudes of the harbours of the Surrounding Sea (بکر al-مکب) which runs deeply into the north, i.e. of the sea of Western India; the tenth, on navigation in the strict sense of the word, on the knowledge of currents of deep seas and of the Surrounding Sea which runs far in between the coasts of the land of the negroes, India and China, i.e. the Indian Ocean of our maps; the eleventh deals with nautical astronomy. The حمیسی, which is frequently cited in the preceding treatise (3), is thus dated on folio ۱۱۶۹; this poem was finished in the month of the pilgrimage at Hajjāf (in the S. W. of the Persian Gulf), the native land of the یون (surname of Ibn Madjid), among countries on the day of the Ditch (نام al-Chāhir) (3), the finest of days which is specially consecrated to good works and to fasting, and it was my friend, in the year 866 A. H. (i.e. 18 Dhu 'l-Hijja 866 = Sept. 13, 1462).

Folios ۱۱۷۹—۱۳۵۸ are blank.

III. An urūfija on the navigation of the Gulf of Biber, the Gulf of Aden of our maps, from folio ۱۲۲۵—۱۲۵۸; it is dated ۸۹۰ (1485).

IV. A treatise in verse preceded by an introduction of 33 lines in prose entitled "Book on the sciences of Islam for the whole world". This poem, says the author, has been prepared especially for those who sail the Persian Gulf and its shores by travellers. It is dated ۸۹۳ = 1488 and occupies ff. ۱۲۸۵—۱۳۷۹.

V. An urūfija on navigation along the Arabian coast of the Persian Gulf, fol. ۱۳۷۳—۱۳۹۸; n.d.

VI. An urūfija on the Basant naḥ (۱۳۹۱) of the Great and Little Bear, fol. ۱۴۳۶—۱۴۵۴; dated ۹۰۰ = 1۴۹۴.

VII. An urūfija entitled "The treasure of the μαθηματικοὐχοι and masters of navigation and treasurers of the science of unknown things about the sea, the stars, the planets, their names and their poles". This is not dated but from the context it is before ۱۴۸۹, fol. ۱۴۵۴—۱۴۷۹.

VIII. An urūfija dealing with the landsfalls (یوک) on the west coast of India and the coast of Arabia from ۲۵ ن. to ۶۰ N.; n. d.; fol. ۱۴۷۹—۱۴۵۴.

IX. An urūfija rhymed in ن, n. d., dealing with certain northern stars, fol. ۱۵۲۴—۱۵۶۹ inclusive.

X. An urūfija entitled "A hand in the hands of the Commander of the Faithful All b. Abi Talib, dealing with the knowledge of Lunar mansions, their exact position in the heavens, their form, their number; a complete description"; before ۱۴۸۹: fol. ۱۴۵۹—۱۴۵۹.

XII. An urūfija entitled "The obligation of obligations" dealing with its utilisation of certain stars for navigation; n. d.; fol. ۱۴۸۹—۱۴۵۳.

XIII. An urūfija entitled "Urūfija attributed to the Commander of the Faithful All b. Abi Talib, dealing with the knowledge of Lunar mansions, their exact position in the heavens, their form, their number; a complete description"; before ۱۴۸۹: fol. ۱۴۵۹—۱۴۵۹.

XIV. Rhymed poem in ن entitled "The Mecen Poem", dealing with sea routes from Djiisd to Cape Fair (South Arabia), Kālikī, Dīblé, the Konkan, Gujarat (Western India); to al-Atvād, Hormūz; . . .; n. d.; fol. ۱۴۶۹—۱۴۶۹.

XV. Rhymed poem in ن entitled "The Rarities of the Generous" or al-Weiṣl, Dhakhaib and al-Ulayf; fol. ۱۴۶۹—۱۴۷۹ (before ۱۴۸۹).

XVI. Poem rhymed in ن entitled "The Golden Poem", fol. ۱۴۷۹—۱۴۷۹; before ۱۴۸۹. It deals with the investigation of reefs, great depths and what one should do there and shallows; signs indicating land like birds and winds, landsfalls on capes during the monsoon from the South-West, landfalls in wind from the West". It is mentioned on fol. ۴۰۷, ۱. ۱۰ and dated from the reign of the Sultan Abū Saif al-Dīn Kā'īl Bey (۸۷۳—۹۰۱ = ۱۴۶۸—۱۴۹۵).

XVII. An urūfija dealing with the observation of al-Dāfīdī, "the Frog" = ن of the Southern Placid or β of the Whale according as it is said to be the first or second. This poem rhymes in ن, and is called al-Fākā; it occupies ff. ۱۷۵۶—۱۷۸۶ and was written before ۱۴۸۹.

XVIII. Urūfijah rhyming in ن, entitled "Sulāfjāh, the eloquent", dealing with the observation of the stars Canopus and Arcturus; it occupies ff. ۱۷۸۸—۱۷۹۶; n. d.
XIX. Nine brief sections (fay) in prose, not dated, dealing with soundings in different parts of the Indian Ocean, &c.; ff. 179b-181b and last.

The second MS. in the Arabic collection in the Bibliothèque Nationale, No. 2559, is a small 4° of 215 X 150 cm., 187 folios of 15 lines to a page; it contains the following treatise by Ibn Mādič:

XX. Ṣūfīn ṣaltāna (divided into seven sections) because it deals with seven branches of nautical lore; ff. 93a-105b; dated 588 (1483). At the end it is referred to as the "Great Ṣūfīn ṣaltāna." The Golden poem (cf. XVI above) is reproduced on ff. 105b-109.

XXI. A ḫāṭība rhyming in ḫ dealing with astronomy; ff. 109b-111a; before 1489.

XXII. ḫāṭība entitled " ... and (in) observation regarding it and the stars which are useful for landfalls and the description of the landfall points and of the coasts from Dīn to Dabūl"; ff. 111a-115b. The proper title of this nautical poem is given on f. 115b in the following verse: "I have called this ḫāṭība "The good path of the muwālim because it is faultless." At the end he says: "End of the ḫāṭība called al-Ḥādiya (which directs into the good path)"; before 1489.

The first nautical treatise in prose (I) contains also quotations of verses taken from ten other treatises by Ibn Mādič which have not come down to us (XXIII-XXIX).

Chronologically these three treatises may be classified as follows:

(a) 1462. Ḥāwiyya (II).
(b) 1483. al-Ṣūfīn ṣaltāna (XX).
(c) 1485. The poem on the Gulf of Aden (III).
(d) 1488. The poem on the Kibla of Islam (IV).
(e) 1489-1490. The Book of Useful Information (I).

(1) 1494-1502. The Ṣūfīs (VI).

The texts VI, XI, XIII, XVII, XXI-XXX are quoted in z and w which places them in the period before 1489. XV is earlier than XVI and XIV which refer to it. IX is earlier than XV and XVI and XII than XIV. VIII, X, XVIII and XIX contain no hints to date them, even approximately.

The period during which Ibn Mādič published his thirty nautical texts lies between an uncertain date before 1462 and 1489/90. The most important work of the celebrated muwālim, for size as well as its practical nature is undoubtedly his Book of Useful Information (I). It contains 178 pages (folio 1b-88b with 48 lines) of 19 lines to a page, i.e. 3382 lines, in which are to be added marginal notes of one or several lines on 27 pages. Concluded in 1489/90 this book seems to be a compendium of the known knowledge of theoretical and practical navigation. It is therefore more and better than the result of personal experience and labour; we must regard it as a kind of synthesis of nautical science of the latter years of the middle ages. Ibn Mādič is at the same time the earliest of modern writers of nautical guides. His work is admirable. The description of the Red Sea, for example, has never been surpassed or even equalled, neglecting the inevitable errors in latitude, by any of the writers of nautical guides for sailing boats. The information given on the monsoons, local winds, routes and latitudes for crossing the whole Indian Ocean are as precise and detailed as could be expected at this period.

Indonesia is less well known to him than the continent and islands of the Indian Ocean. By an error, which is inexplicable, Java is placed lying north to south, contrary to its real orientation; and this same error appears again in the nautical texts of Sulaimān al-Mahri (MS. 2559) who lived in the first half of the xvth century, from which it passed into the Turkish translation of Ṣaltāna al-ʿAlī. It is the only important rectification necessary.

MS. 2392 incidentally contains some biographical information about Ibn Mādič and his family. He was called Shihāb al-Dīn Ahmad b. Mādič b. Muhammad b. ʿAmr b. Faḍl b. Bawik b. Yānūb b. Ḥasan b. Ḥusain b. Abī Maʿṣūk b. al-Sāliḥ b. Abī l-Raḥlāb b. al-Nāḍī (f. 2v, infra). He gives himself the title of "poet of the two Kibla's (Mecca and Jerusalem), who has performed the pilgrimage to the two noble sanctuaries, the descendent of the Lion (ḥusn) of the sea in fury (f. 88v)." He also says on f. 117b: "I, Ahmad b. Mādič, am the Arab muwālim!"

According to certain passages in MS. 2392 the father and grandfather of Ibn Mādič were muwālim, authors of nautical treatises and their son and grandson continued their work. "He who (sails in the southern Red Sea) sails on the route of the pilgrims to Mecca," he says on p. 784. *My grandfather knew it with accuracy and in detail; he yielded to no one in this respect. My father added the results of his revised personal experiences. His knowledge surpassed the knowledge of his father. When our hour came and when we had in our turn gone through these experiences for nearly 40 years, when we had corrected the scientific work of these two exceptional men, when we had put into writing the results of our own experience and our written observations, we saw appear facts and principles which no one had combined in our time and which are only found scattered through different writers."*

My father, he tells us on p. 785, was called by the pilots, "the pilot of the two coasts" (of the Red Sea). He prepared the famous nāfis called al-nāfis al-kabīr containing about 1000 verses. We have corrected the errors we found in it and have completed it methodically. There is another reference to this poem on f. 81v.

Regarding a reef on the eastern coast of the Red Sea, adjoining the island of Māma which lies to the south of the 20° Lat., Ibn Mādič says (f. 87v) that most people call it "Mādič's reef" because his father had moored his ship to it. This is evidence of his fame among seafaring people of his day.

On several occasions Ibn Mādič shows full confidence in statements made by his father, differing with the usual practice of the pilots of the xvth century. "I have own my safety," he says on f. 84v, "to the information given me by my father rather than to that of the pilots." Further on he shows by an actual incident that his confidence in his father's knowledge was justified. "When we were moored there (between Asmā and Masnad, two islands on the Arabian Coast of the Red Sea to the south of the 17°) in 1485, he says on p. 34v, the nabādūk and the pilot were agreed upon passing between the islands of Asmā and Masnad, but I did not agree with their opinion because I had read in a poem compiled by my father that *there is no
passage in the neighbourhood of these islands; therefore (he advised) keep away, avoid these islands, there are only reefs there and there is only one passage two fathoms deep". We discussed the question with one another, Ibn Madjid continues, after quoting this from his father's book and I said to them "The best thing to do in my opinion is to send the sambūk (a kind of skiff) to go a day in front of us". The sambūk set out with the sounding lead and found two fathoms of water. The sambūk confirmed what I had said and returned passing between Masnad and Sūthū. It found the passage and came back to us at the end of the day. And (the statements made in) my father's poem proved to be, in this place, the best part of my inheritance".

Regarding the legendary origins of navigation, the needle, the compass, the astrolabe, Ibn Madjid says: "The first to build a ship (f. 2 v. infra of MS. 2929) was Noah. He built it on the advice of the Angel Gabriel, who had been sent to instruct him by the Almighty Creator. The ark was built in the shape of the figure formed by the five (sic) stars of the Great Bear; the stern of the ark corresponds to the third star (f. 37), the keel to the fourth, fifth and sixth stars and the stern to the seventh. Even now (1489) the people of Zang (eastern coast of equatorial Africa), of Ḫumār (Madagascar), of Mirna (the African coast opposite Zanzibar) and of the land of Sofīta call the fifth and sixth stars of the Great Bear al-dārāb, "the keel of the ship". These two stars are observed for the determination of latitudes, at the moment of the culmination of al-Serfa (ε of Leo), in the absence of the foṣāid (β and γ of the Little Bear) because they have the form of the keel of the Ark of Noah. Traditionists differ as to the length and breadth of the Ark. It is said to have been 400 cubits long, 100 cubits broad and 100 cubits deep, not including the height of the masts. It had two oars (in the stern to act as rudder). When the ark was finished and the flood came, Noah embarked with those who were to accompany him. It carried them and saved them from the deluge and shipwreck. The Ark is said to have sailed seven times round the site where the Kaḥa of Mecca was later to stand. This place was then a region of red sand where nothing was built. The deluge did not reach it."

When (f. 3) the Ark was built and men had learned the art of navigating along the shores of the sea in all the climes [of the earth] which Allah divided amongst the children of Noah: Japheth, Sen and Ham [Son of Noah], who built the second Ark, each began to build ships in the maritime countries, the gulf and shores of the sea surrounding the earth until the world reached the epoch of the 'Abbāsids (103 = 750) which dynasty had Baghdad as its capital in Irāq Arābi. All Ḫorasan belonged to them. The road from Ḫorasan to Baghdad is three or four months' journey in length."

"At this time (i.e. under the 'Abbāsids) there lived three famous men: Mūḥammād b. Shāhān, Sahl b. Abīn and Mūṣā b. Kahlān (not Ibn Kamīl). I have heard that he wrote in a work [by Ismā'īl b. Ḥasan b. Sahl b. Abīn], the Bāb al-Mulūk [of Samarra] in a rāhmatī (or rāḥmatī) Fakhralī rāḥmatī, "book of the route") (9) dated 880 a. h. (1184/1185). They exalted all their efforts in composing this rāḥmatī which begins "We have expounded to thee that... None of it is in verse and the subjects dealt with are not linked together, which is not the case with a well composed work. Their book has neither finitude nor authority. It can be added to or have parts cut out of it. These men were compilers and not original authors. They only sailed on the Red Sea from Surāf to the coast of Makra (f. 4). They sailed from Surāf to Makra in seven days, from Makra to Kūsāsan in a month. They shortened the way, for before their time, it was a journey of three months. They had to disembark on every coast of the people of these seas and they have left a narrative [of their voyage]." In their time among the celebrated Mā'allūm were Ibn 'Abd al-'Azīz b. Aḥmad al-Maghribī, Mūṣā al-Kandarīn, Mā'mūn b. Khaṭīb and, a thousand before them (sic), Aḥmad b. Tahirīya [who had written nautical books]. They borrowed from the works of the latter and from those of the Mā'allūm Khwājg b. Vāsīf b. Šāhī al-Afrikī who had travelled in the year 400 (1009/1010) and the years adjacent to this date (and who had written a narrative) of what he had seen in travelling on the ship of Sūfībā the Indian. Among the famous Niḥāyāt of the time were Aḥmad b. Mūḥammad b. 'Abd al-Rahmān b. Abī 'Iṣāfī b. Abī Mūḥābir (or Mughīrī). Their principal knowledge lies in the description of their coasts and their extent. The majority of the countries described formed part of the lands situated under the wind (i.e. lands east of Cape Comorin) and on the coast of China. Now these ports and towns (which they described) have disappeared. Even their names no longer exist. The indications given by them are no longer of any use for our period (xvth century), lacking as they do the solid basis of our modern knowledge and experience and our discoveries which are recorded in this book. For it is a book in which everything has been checked and verified by experience and there is nothing superior to experience. The point reached by the predecessors should be followed from which their successor starts and here we are prejacent considerably their knowledge and their works. We have paid tribute to their work in saying "I am the Fourth after the Third". Sometimes in the work we have produced in what concerns the sea, there is a single leaf which contains more perfection, accuracy, utility, valuable advice than [all] they have composed" (f. 4b).

The Three borrowed their good points and their ability from the above mentioned individuals and others also. They took from each his knowledge of the coast and sea with which he was familiar; they made a story of it but they are compilers and not writers recording their own experiences, and I know no Fourth (who could be mentioned alongside of them, except myself. I honour them when I say: I am the Fourth [after these three famous authors]."

I have honoured them by taking into account the fact that they are before me in the era of the Hijāra. Certainly, after death another will come and there will be men who will put each of us in our place. When I studied the work of my predecessors and found it feeble without reality or certainty, without order, I adopted what was worth keeping and recorded the discoveries I had made; my corrections and the results of my experience, year by year in the verses of the (nautical) poems and in this book [which has been published or finished] in the year 880 a. h.
They have recorded it in the story of the City of Copper (9) and the astrolabe was included among instruments of navigation by others than the Three, Muhammad b. Ṣāḥibīn and his (two) companions; for the ships sailed the ocean by sighting by astronomical observation (with the astrolabe) in the time of the Prophets — on whom be peace! — Our Three (predecessors) only lived in the time of the 'Abbasids. Such is the story given in histories written by their hands."

Ibn Mājdīdh pays a tribute to his predecessors, by saying on several occasions that he is the fifth after the Three or the fourth of the Lions but he does not fail to warn sailors against the gaps and errors in their works, with which he contrasts the extensive documentation of his own Nautical Instructions. "Canopus, he says (f. 31b of MS. 2292), rises far from the south pole on the 22nd day of Nūrūs at dawn and sets on the 45th day of Nūrūs. If you ask a sailor, he will never know that; unless he has studied this book, he will not be able to answer the question, even if he had read for a hundred years the works of Muhammad b. Ṣāḥibīn and his two companions". It seems from a passage in 2292 p.5 (f. 126b, l. 5 seq.) that the works of the Ancients, i.e., of the Three, were still consulted in the first half of the 12th century.

According to the text of Ibn Mājdīdh, the Three, Muhammad b. Ṣāḥibīn, Sahl b. Alān and Luṭfī b. Kahīn, were neither maḥallīm nor masters of navigation nor sailors, but only learned authors of route-books and nautical instructions who had used for their works the stories of sea-voyages. The passage in question in the Book of Useful Information (1), besides, gives two definite statements.

— The Three or at least Sahl b. Alān lived in the first half of the 12th century a.d. and the above mentioned records of voyages contained more particularly the descriptions of the countries under the wind (East of Cape Comorin and of China), We can imagine that the works of the Three were based on records of travels in India, Transagantic India, Indonesia and China, like that of the merchant Sulaimān, published in 851 which was revised and expanded by Alī Žaid Ḥasan about 916 (10).

An amateur of geographical science, the latter lived in Baghdad and there collected all the information he could find in manuscripts or gathered from the sailors of his time, and it seems that this is what the Three did, whose continuator Ibn Mājdīdh calls himself, for he expressly points out that he differed from the others in writing of seafaring matters from a long personal experience.

According to Ibn Mājdīdh, the works of the Three mentioned towns and seaports which had disappeared in the 12th century. This reference is to ancient place-names which would have been of great use to us in identifying the geographical names preserved in Chinese text and in Ptolemy's Geography. But we have now lost this source of information it is nevertheless important to know that it once existed. Anything is possible in the east, even the chance discovery of a manuscript of the Three, of Almād b. Tabrūṣa, or Khawāṣir b. Yūsuf b. Sahl al-Afrikīt. The acquisition by the Bibliothèque Nationale of the MSS. 2292 and 2559 is a lucky chance which one can always hope may repeat itself.

The Khawāṣir (1), the importance of which can be seen from the résumé and extracts given:

1475/1476 (?). Men experienced in nautical science have approved my work, used it and taken it as a basis to solve the difficulties presented to them, such as, for example, the aspect of mountains, astronomical observations, names and knowledge of the stars, and the way to steer by them. The people of my time know very little more than what the ancients had handed down to them regarding, for example, the proper sea-routes, the ḍīfāt (co-efficient indicating the length of the route to be traversed to a given cape to obtain the same displacement in latitude as in the route to the north) and the ṣalāḥīd. As to distances, they did not know them.

We have already spoken of this in the commentary on the nautical poem entitled al-Dhahābiyya (8) and we shall refer to them again.

In reality, the people of the early ages had plenty of courage in their hearts, but they only sailed with the help of the sailors of the coasts who were endowed with considerable energy, while the others feared the sea and had an aversion for it. The sailors equipped their boats excellently; they never allowed the (favourable period of the) monsoon to pass; they did not load their ships above what was usually done. We however know more and have had more experience than they.

Every improvement in seafaring matters had an inventor. The maker of the Ark was, as we have said, Noah. As to the lodestone to which one trusts oneself, the art of navigation was not complete without it. It was David who invented it; it is the stone with which he killed Goliath. As to the lunar mansions and the signs of the Zodiac, the prophet Daniel wrote on this a book which was completed by [Nasr al-Ďīn] al-Tūsī (d. 1261).

But let us come back to our first subject, the stars (which correspond) the compass of the compass. Their names are found in an old book earlier than the work of the Lions, our predecessors. But these names and these ẓāw (3 hours sailing) are not absolutely exact data (i.e. the direction of the courses which they give and their duration expressed in ẓāw are only approximations and not certainties). As to the description of the courses (f. 5v) which we know from experience, we have written it with care and we only give it after reported personal experience. Our description of the coast is better than that of our predecessors..."

"As to the making of the house of the needle with the lodestone (i.e. the compass) it is said that Daniel was its inventor for he knew how to make use of iron and the properties of this metal. Others say that it was al-Khūdīr (cf. As-Khūdīrī) who invented the compass, when he set out to look for the well of life, when he penetrated into the land of darkness and the sea of darkness and when he travelled to one of the poles up to the place where he no longer saw the sun. It is said he found his directions with the lodestone. Others say that he found his direction with the help of light. The lodestone (f. 6v) is a stone which attracts iron. This is the only thing that it attracts. It is said: that the seven heavens and the earth are held in suspension by the lodestone and the omnipotence of Allah. Many other things are said on this subject!"

"The first inventor of the ʿAṭīlay (or astronomical observation) with the astrolabe", Ibn Mājdīdh goes on (f. 14v, l. 3 ḫira), "was Idris [q.v.]. He was the inventor of the astrolabe with degrees. The ancients] changed these degrees into ṣalāhat (finger)."
above seem to be the work of Ibn Majid’s ripe experience. We do not know the date of his birth.
If he was 25 or 30 in 1463 when he wrote the Hafta (II) he would be 52 or 57 when the Book of Useful Information appeared (I) and 53 or 63 at the time when he finished the poem (VI) which is dated 1494-1495. Three or four years later, in April 1498, Vasco da Gama arrived at Malindi where Ibn Majid embarked as his pilot. We do not know the date of the ma’alim’s death.

According to James Prinsep, the memory of Ibn Majid was still alive in India and the Maldives in the first half of the 18th century.

“I endeavoured therefore, says Prinsep to procure an Arabic compass, but not one could be met with in all the vessels—at length my friend Sayyid Husain Sidi found a drawing of it in one of the practical works on navigation—called the Maalim Kitab, *book of Maalim* or, as my Maldivian friend facetiously expressed it, the *John Hamilton book of the Arabs* in possession of a mahdi, and without ceremony, tore out the leaf to show it to me, as the captain was afraid of parting with the volume, without which doubtless he would have been greatly at a loss on his return voyage”. (*Note on the Nautical Instruments of the Arabs*, in *J.A.S.B.*, 1836, i., p. 788). The reference here is evidently to a nautical work analogous to MSS. 2292 and 2559, with the addition of plates showing the instruments used in navigation and perhaps charts; or perhaps it was even a copy of MS. 2292, whence it would have its name of Maalim Kitab or “Book of Maalim”.

In his *First Footsteps in East Africa or an Exploration of Harar* (London 1856, p. 3-4), R. F. Burton says: On Sunday, the 29th October, 1854, our manifold impediments were pronounced complete. Friend S. threw the slipper of blessing at my back, and about 4 p.m. embarking from Maala Bunder (the port of Aden reserved for foreign boats), we shook out our “muslins”, and sailed down the fiery harbour. Passing the guard-hunt, we delivered our permit; before venturing into the open sea we presented the Faith-harp in honour of Shaykh Majid (sic), inventor of the mariners’ compass, and evening saw us dancing on the bright clear tide...”. Burton adds in a note: “It would be wonderful if Orientalists omitted to romance about the origin of such an invention as the Dayrah or compass. Shaykh Majid is said to have been a Syrian saint, to whom Allah gave the power of looking upon earth, as though it were a ball in his hand. Most Moslems agree in assigning this origin to the Dayrah, and the Faith-harp in honor of the holy man, is still repeated by the phrase ‘mariner’. There is every reason to believe that Shaykh Majid is not a saint belonging to Syria but simply the maalim Ibn Majid who has found a place in Muslim hagiography for the eminent services which his nautical works have rendered to navigators since the 15th century. The process is obvious and many similar cases are known.

In 1913 my regretted colleague and friend Paul Ottavi who lived for some fifteen years at Zanzibar and Masehi, had a search made in these seafaring centres for nautical texts by Ibn Majid and Sulaiman al-Mahri, but the very names of these two maalim were unknown to the Arab sailors there.  

**Bibliography**

**Notes:**

1. There are numerous copies in Europe and in the East.

2. A second copy of MS. 2292 has just been accidentally discovered in Damascus and has found a home in the Arabic Academy; cf. *Revue de l’Académie Arabe*, Feb. 1921, Damascus I, p. 33-35. Another copy but incomplete of MS. 2559 was found at Djiada where our colleague Ahmad Zeki Pasha had kindly had enquiries made on my behalf.

3. The use of this specifically Shî’ite expression in place of the ordinary Arabic word seems to show that the author was himself a Shî’ite or at least had an inclination towards the partisans of ‘Ali.

4. Land-fall is here to be taken in the special sense of reconnaissance of a cape or land to enable one to ascertain the route.

5. Play of words on the name of his predecessor, Lailh ib. Khalil (lailh = lion in Arabic).

7. The book in question is however dated in all cases 965 A.H.

8. This commentary has not come down to us.

*(Gabriel Ferrando)*
The name of a town and district on the coast of South Arabia, which is still known as the Shebhrat coast. The learned Nasibin gives also al-Shihr as the dialectic pronunciation for al-Shihr, which latter he calls the correct form. This form is of interest because it recalls SABA, first suggested by A. Sprenger as the basis of the corrupt SABA in Theophrastus and Pliny; when the latter says the word means mysterious, this recalls Ibn al-Mudakhir’s derivation of the name Sabra, which is applied to the Mahra people, from sabr “magic”. That SABA is the coast district now called al-Shihr, which classical and Arab authors know as the land where the frankincense trees flourish, is in any case certain. The name Saba and Sibai given by the Portuguese to this region, recalls the apparently older pronunciation Sabra, which means “coast”. To the Arab geographers the name al-Shihr is synonymous with Mahra, the strip of South Arabian coast, which, extending from Toq Hwakal, is 400 parasangs long and about 3 broad, the eastern end of which is 500 parasangs from Maskat, while the western end is the same distance from ‘Adam. Al-Ashgha and Sam’an are given as old names of this territory, which was not reckoned a part of Hadramuit proper, and the names al-Ashghal and al-Ashkal are also of frequent occurrence. That the inhabitants, as is still the case, spoke a peculiar, unintelligible dialect, was already known to the Arab geographers. The South Arabian expedition of the Vienna Akademie der Wissenschaften in 1839 studied this language thoroughly, and the comprehensive works of D. H. Müller and M. Böttcher, also of W. Hein, A. Jahn and N. Rhodokanakis give us a complete survey of this peculiar idiom.

The coast of al-Shihr with its hinterland, has passed through various vicissitudes. At the beginning of the 19th century, A.D., it was taken by Hafiz h. Twakalik al-Khaleeli from the Ghassanid Amir h. Abd al-Wahlid, then king by the Portuguese who occupied the whole coast from ‘Adam to Maskat. After holding this stretch of country for thirty-five years, the Portuguese were driven out by the Banu Khajjan and all attempts to re-establish them failed. A fleet of twenty ships, sent to reconquer the lost territory, was sunk with every man on board, in a fearful hurricane. The Khajjan ruled the country for forty-five years, and then the coast was conquered by Muhammad b. Ahmad b. Amir b. Abd al-Wahlid b. Alhumairi. Various owners held the much disputed coast in succession until in 1866 Sulaiman Ghali b. Mulsplit al-Khaliji seized al-Shihr, but lost it the very next year to the Khajjan, who gradually won the whole coast.

The town of al-Shihr, which lies in the centre of a sandy desert, is surrounded by a clay wall, with square watch-towers and round forts. Formerly one of the most important ports of Hadramuit, from which were exported the precious frankincense and the amber known as ambar shajr, and which conducted a busy trade with Mokha, Aswan, Maskat and al-Hasa, it is now completely overshadowed by the much more favourably situated port of Makalla, as it only has an open roadstead for shipping. Remains of ancient civilization and former prosperity are still to be found. The houses, now much ruined, as nothing is ever renovated, frequently show beautifully carved stonework in the floors and windows. The mosque has a very picturesque situation, but has been much neglected; the minaret has a decided inclination to one side. The population is about 8000—10,000, and is mainly industrial. Dyed cottons are woven on primitive looms and loom-cloths, with gay and pretty patterns. White cottons imported from India are dyed here with indigo and madder. Smiths make all kinds of weapons, notably strong knives, which have a particularly good reputation. Silversmiths, of whom there are many, find plenty of employment in decorating these arms with silver, according to the local custom, and making the ornaments beloved by the women. More elaborate articles are imported from India, notably valuable sword hilts. The bazaars of the town are quite insignificant. Coloured cottons and other goods of European origin like soap, candles, ironmongery, Indian cottons and silks, petroleum, matches, dried dates, rice, durra, wheat, coarse wheat-flour, imported from India, coffee and tobacco are also dealt in here. At the flesh of goats and sheeps is relatively dear, the main food is the small sardine-like ‘alid fish, which is also used as manure and to make oil. Al-Maakkaddi long ago emphasized the wealth of al-Shihr in fish, and he reports that fish in his time were exported to ‘Oman, ‘Adam and even al-Hasa and the lands of Yemen. The ‘alid fish is probably identical with the little fish called mark, which according to Ibn Hawkal was the principal food of the inhabitants, and according to Idrisi was dried and given to the camels as food, which Th. Bent also saw done in Hadramuit. At the present day, salted and dried shark is an esteemed article of export into the interior. The trader of merchants, however, has few wealthy members, and the foreign connections are mostly with India (Makhes), Central Africa and al-Hasa. Gum-arabic and resin, especially frankincense are brought to the market by the Beduins and exported from here. The trade in these articles is, however, now quite insignificant, compared with what it was in antiquity.

In conclusion we may note that al-Agham in al-Bakri mentions a palace named al-Shihr in Hadramout; how far this is correct cannot be ascertained. There is probably a connection with the town on the coast, which however, as noted above, never belonged to Hadramuit proper.

**THE ENCYCLOPAEDIA OF ISLAM, IV.**

SHIKĀRĪ, a word formed from the Persian word šikārī ("sport"), in the sense of hunting or shooting) and meaning a hunter. There are many castes in India whose occupation is the hunting, trapping, tracking, or pursuit of birds and beasts, but the caste which has adopted or received the word Shikārī as its tribal name is found chiefly in Sind. A writer in 1822 said: "Shecarries are generally Hindus of low caste, who gain their livelihood entirely by catching birds, hares, and all sorts of animals," but the Shikārīs of Sind seem to have abandoned the occupation from which they take their name. They are described as outcast immigrants from Rādīpurā, found from Bangāl to the Khākhā, the origin of whose honourable appellation is unexplained, though they probably possessed, like other aboriginal races, a knowledge of wild animals and skill in tracking and were employed by the Mūsalmān nobility in quest of sport. They are now engaged in making baskets, and as sweepers and scavengers, and appear to correspond, in most points, to the Bhagīs of Bangāl and Hindūstān. They eat carrion, and, even when professing Islam, are considered unclean, and not allowed to enter a mosque, unless they undergo a ceremony of purification by fire, after which they are classed as Mādībīs. Those whose occupation is the taking of life are naturally held in small esteem in a land which has been permeated by the principles of Buddhism, D имени, and Brahmānism, but the purification ceremony demanded by Mūsulmān before admitting Shikārīs to their worship is an example of the extent to which Islam in India has been infected by the prejudices of Hindūism.

SHIKĀRṔṔṔ, a town of Sind, situated in 27° 57' N. and 68° 40' E., was founded in the seventeenth century by the Dādiputras, a tribe of warriors and weavers, who established their supremacy in Upper Sind and made their new town their capital. In 1701 it was captured by Vār Muḥammad Khān, the founder of the Kalhara dynasty, with the aid of the Sīkī or Tālpīr tribe of the Bāltī, and became, in turn, his capital, but the district in which the town is situated remained in the hands of the Dādiputras until it was conquered in 1719 by Nūr Muḥammad, the son and successor of Vār Muḥammad.

In 1739 Thatha and Shıkăṛ, with all that part of Sind lying to the west of the Indus, were ceded by Muḥammad Shāh of Dīlī to Nūrī Shāh, who in 1740 invaded Sind to punish Nūr Muḥammad Kalhara for concluding with Muḥammad Shāh's governor of the province an agreement which

Infringed his sovereign rights. Nūr Muḥammad was obliged to surrender and to relinquish his possession of Shıkăṛpūr and Sīhī, which Nūrī Shāh handed over to the Dādiputras, but in 1754 Muḥammad Murūd Yār Khān was recognized as governor of the whole of Sind by Ahmad Shāh Durātā, to whom the province was tributary, and remained thereafter in the hands of the rulers of the province.

Shıkăṛpūr has long been famous, both under British and under native rule, for the enterprise of its merchants, who carry on an extensive trade not only with other parts of India, but also with Persia and Central Asia, where many of them reside for long periods. The import trade of the Kīrānī province of Persia, in tea, sugar, and other commodities is almost entirely in the hands of Shıkăṛpūr merchants, who have taken advantage of the situation of the town on one of the great routes from Sind to Khorāsān via the Bolāt Pass, but since the middle of the nineteenth century, it has lost much of its importance owing to the construction of the North-Western Railway and its extension to Khetta (Quetta). It is still, however, a considerable entrepôt. Its great covered bazar is famous throughout Asia, and is continued by a modern structure, the Stewart's Grand market.

SHIKESTE. [See l. 391.]

SHĪK. Shīk (from the Arabic shīk) is the name of two diviners who lived shortly before the rise of Islam. According to the Syntaxis of Marco Polo, Shīk the elder was the first diviner among the Arabs of 'Arab. He is quite a familiar personage. Like the Cyclops, he had only one eye in the middle of his forehead and a fire which split his forehead into two (štāk to split). He is also mixed up with Dājjāl, Antichrist, or at least Dājjāl is of his family. He is said to have lived chained to a rock on an island where volcanic phenomena occurred. The second Shīk called al-Vaghtavari was the most famous of his time along with Šaṭī; he expounded a vision of Rabh's son of Nāṣr the Lakhmid prince of Yemen, foretelling the conquest of Yemen by the Abyssinians, its liberation by Ibn Dhi Vazan and the coming of the Prophet. According to Ka'amint the Shīk are a kind of Shafīi forming part of the group of Musalayjava; they are in the shape of half a man with one arm and one leg. The Nasānī, other half-men, of men, are produced from Shīks and whole men. These Shafīis appear to travellers. It is said that 'Alkama b. Sa'fwan b. Omayya met one of them one night near Ḥawmān and after an exchange of high words, the man and the djinn killed one another.

SHILLUH (in Berber: masc. n. shilha) is the name given to the Berber-speaking people of the High and Anti-Atlas (South of Morocco). This is the name they give themselves; the word is widely used in Morocco; it
The language called transitional, like the Berber language generally, is found in the form of many local dialects closely connected with one another, none of which has risen to the level of a language of culture. These dialects are among the most conservative of the Berber dialects; in phonetics they are occlusive, with however a tendency in the dialect of affrication (e.g. llaé gomid), in morphology they show many clear traces of archaism (cf. the verb of quality in particular). M. Lévi-Provençal has recently discovered an Arabic manuscript 800 years old containing a number of Berber expressions from this region. This valuable manuscript, in view of the scarcity of old Berber texts, gives confirmation of the stable character of these dialects.

This region, especially Sis, is one of the most studied in Barbary from the literary point of view. The poets there are particularly renowned and one of them, who may however be quite a legendary individual, Sidi Hamoud, has to speak become the symbol of poetry and all the poetic values are attributed to him. This literature is mainly oral; there are however a few Berber manuscripts in the Arabic alphabet; this is one of the few districts in Barbary in which they are found.

This region has had no unity from the point of view of historical continuity. A few places are known from the part they have played at particular periods, e.g. Timmel, Tazerwalt (cf. the separate articles).

Bibliography: A. Study of the language: there are a certain number of books all practically of the same period by H. Simumme. The chief is Handbuch des Schriftenkern von Tazerwalt, Leipzig 1889. M. Destain has undertaken a study of the dialects of the Id-El Semlou in five volumes, one of the best enquiries into the Berber language — only the first volume has so far appeared: Tachistit du Semlou, treveuclaire Francois-Berberis. Paris 1920: By Lévi-Provençal, Documents d'Histoire Almolide (in the press).

SHIN, thirteenth letter of the Arabic alphabet, whose numerical value is 300. It is distinguished from sin by three diacritical points, cf. I. 381 sqq. For linguistic particulars see SHN.
